Baltimore and Ohio Magazine

May 1920

What the Baltimore and Ohio Magazine Stands For

BEGINNING with this issue, the style and size of the MAGAZINE are changed for the purpose of making it more attractive, and, it is hoped, more interesting and helpful to its readers. The new name, "BALTIMORE AND OHIO MAGAZINE," is adopted because it more exactly describes the MAGAZINE itself, published, as it is, by The Baltimore and Ohio Railroad Company and at its entire expense.

The BALTIMORE AND OHIO MAGAZINE will stand, first and always, for unqualified Americanism:

Americanism which believes that our democracy is the fairest government on earth, because it gives to its citizens protection without paternalism, and at the same time the largest measure of liberty, because it is liberty supported by just laws.

Americanism which recognizes these fundamental principles of national well-being: Full religious liberty and the integrity of our public school system. The conservation of our human resources through advanced laws, carefully prepared for the purpose of properly safeguarding working and living conditions, and for the proper enforcement of Safety regulations.

Americanism which bestows the rights of citizenship upon only such as are qualified to exercise them properly and defend them.

Americanism which holds as its finest attribute a cheerful willingness to be loyal to its ideals, no matter what the cost to the individual.

The BALTIMORE AND OHIO MAGAZINE stands opposed to the so-called "Nationalization of Industry;" opposed to any change in the fundamental principles of private ownership of property.

The BALTIMORE AND OHIO MAGAZINE takes this position because it believes that the individualism which insures the independence of character and action of every citizen, and which has been largely responsible for the material, intellectual and spiritual growth of our country, is for the greatest good of the greatest number.

The BALTIMORE AND OHIO MAGAZINE seeks earnestly for the truth in all things, and to this end it will open its pages to

any subject, the free discussion of which will tend to the enlightenment and benefit of its readers, and for the better service of The Baltimore and Ohio Railroad Company's patrons. To be more specific: Articles on any helpful and important subject, written by Baltimore and Ohio employes or others, whether they conform or are contrary to the policy of the MAGAZINE as above outlined, will be printed, and will be answered in the same issue by some person competent to deal intelligently with the subject.

It is obvious, of course, that such subjects as partisan politics and religion have no place in this MAGAZINE. Again, the desirability of excepting "Wages," "Hours of Service" and such other subjects as might lead to personal and acrimonious discussion concerning officers and employes, will appeal, we feel sure, to the good and fair judgment of every reader.

The old New England Town Meeting helped solve the social and political problems of colonial times. Indeed, the Town Meeting is still the successful organization of self-government in many New England communities. Like it, it is hoped that the MAGAZINE will become the place where, once a month, we may all meet for the free and frank discussion of our mutual interests and those of the people we serve; that the MAGAZINE can be made a vital factor in the solution, or at least in the better understanding, of the complex industrial problems of the day; that through the agency of the MAGAZINE a better understanding can be brought about among the officers and employes in all branches of the service.

To do this, articles and suggestions intended to improve the service are cordially invited. The BALTIMORE AND OHIO MAGAZINE will be as good or as bad as we unitedly make it, and the assistance of all is desired to the end that we may realize the greatest good from the opportunity afforded through its open pages.

The Burlington

21 Jewels - Rubies and Sapphires

*Adjusted to the Second - Adjusted to Temperature - Adjusted to Isochronism - Adjusted to Positions
25-Year Gold-Strata Case - Genuine Montgomery Railroad Dial - New Art Designs - Extra Thin Cases,*

Only \$3⁵⁰ a Month

YOU pay only this small amount each month for this masterpiece, sold to you at the direct rock-bottom price, the lowest price at which a Burlington is sold. This masterpiece of watch manufacture is adjusted to position, adjusted to temperature, and adjusted to isochronism. Send the coupon today for free book on watches.

Send the Coupon

You do not pay a cent until you see the watch. Send the coupon today for this great book on watches, and full information of the \$3.50 a month offer on the Burlington Watch. Don't delay. Act right NOW!

Burlington Watch Co., 19th St. and Marshall Blvd., Chicago, Ill.

Burlington Watch Co., Dept. 5145, 19th Street Chicago
338 Portage Avenue, Winnipeg, Manitoba

LEARN DRAFTING

At Home—In Spare Time—As You Would in Actual Practice

Get into this constructive branch of industry where big salaries are paid. No previous training is necessary to become a capable draftsman with the help of the Columbia School of Drafting. You can master the practical lessons of our famous home study course, at home, in spare time. You will be personally coached and instructed, by mail, by Roy C. Clafin, president of the school, whose long experience as a draftsman and teacher, especially qualifies him to give you the training you need to become a successful Draftsman.

Become a Specialist We not only give you thorough and practical training in Mechanical Drafting, teaching you to make actual drawings as you would in any drafting room, but the additional benefit of a post-graduate course in some special branch of drafting. A big field of opportunity is thus opened to you as a trained specialist in this profession.

CHIEF ENGINEER \$21,000 TO \$50,000 A YEAR

How "Columbia" Students Succeed

Students of the Columbia School of Drafting often secure positions at \$2,000 or more a year to start before completing the course. Hundreds of men and women with "Columbia" training are now making good with big concerns all over the country. Many more are needed for splendid positions now open. Here is what "Columbia" training is doing for some of our graduates: Laurence Johnston, over \$5,000 a year; George Murray, \$45 a week to start; G. Tangorra, \$2,800 a year; A. L. Gash, \$140 a month to start; W. S. Burfoot, \$150 a month to start; T. R. Brown, \$2,860 a year; R. Fowkes, \$3,700 a year. These are only a few of a great number of similar cases.

CHIEF DRAFTSMAN \$50 TO \$150 A WEEK

Big Concerns Employ Columbia Graduates

The best concerns in America employ Columbia graduates in their drafting departments because of the thorough, practical training we give which enables them to step right into important drafting positions. Our diploma is the entering wedge into big drafting rooms everywhere. As a Columbia graduate you are recognized as an experienced Draftsman, not as a mere apprentice. Our training spells Success for you. Why be satisfied with a grinding, underpaid position when there are hundreds of promising positions open to you in the big field of Drafting. We are called upon to place trained draftsmen more rapidly than we can produce them. General construction companies, manufacturers, railroads, ship building concerns, engineering projects, etc., need Draftsmen today in greater numbers and at better salaries than ever before.

Draftsmen Get \$35 to \$100 a Week

Because of the importance of his work the draftsman is paid a big salary and is always in line for advancement. The draftsman's pay is from \$35 to \$100 a week. A knowledge of drafting is the stepping stone to big technical positions in the industrial field, paying as high as \$50,000 a year.

DRAFTSMAN \$35 TO \$100 A WEEK

Send This Coupon Today

Let us tell you the fascinating story of Drafting and how you can master this lucrative profession of big salaries and steady advancement through our help. Write today to

Provisions in Esch-Cummins Bill Concerning Relations Between Railroad Companies and Their Employees

Sections 300 to 316 of the Act, inclusive (printed in full on page 28 of this issue), as stated in the title, deal only with disputes between carriers and their employees and subordinate officials. Some of the outstanding features of the Act are as follows:

In Section 301 it is provided that—

"It shall be the duty of all carriers and their officers, employees, and agents to exert every reasonable effort and adopt every available means to avoid any interruption to the operation of any carrier growing out of any dispute between the carrier and the employees or subordinate officials thereof. All such disputes shall be considered and, if possible, decided in conference between representatives designated and authorized so to confer by the carriers, or the employees or subordinate officials thereof, directly interested in the dispute. If any dispute is not decided in such conference, it shall be referred by the parties thereto to the board which under the provisions of this title is authorized to hear and decide such dispute."

Section 302 provides that—

"Railroad Boards of Labor Adjustment may be established by agreement between any carrier, group of carriers, or the carriers as a whole, and any employees or subordinate officials of carriers, or organization or group of organizations thereof."

Section 304 provides for the establishment of a board to be known as the "Railroad Labor Board," to be composed of nine members as follows:

Three members constituting the labor group, representing the employees and subordinate officials of the carriers;

Three members constituting the management group, representing the carriers; and

Three members constituting the public group, representing the public.

All appointments to be made by the President, by and with the consent of the Senate.

Section 307 provides that—

(2) "The Labor Board shall hear, and as soon as practicable and with due diligence decide, any dispute involving grievances, rules, or working conditions, in respect to which any Adjustment Board has failed or will fail to reach a decision within a reasonable time, or in respect to which the Labor Board determines that any Adjustment Board has so failed or is not using due diligence in its consideration thereof."

(d) "All the decisions of the Labor Board in respect to wages or salaries and of the Labor Board or an Adjustment Board in respect to working conditions of employees or subordinate officials of carriers shall establish rates of wages and salaries and standards of working conditions which in the opinion of the board are just and reasonable. In determining the justness and reasonableness of such wages and salaries or working conditions the board shall, so far as applicable, take into consideration among other relevant circumstances:

- (1) The scales of wages paid to similar kinds of work in other industries;
- (2) The relation between wages and cost of living;
- (3) The hazards of the employment;
- (4) The training and skill required;
- (5) The degree of responsibility;
- (6) The character and regularity of the employment; and
- (7) Inequalities of increases in wages or of treatment, the result of previous wage orders or adjustments."

Realizing that the people as a whole require and must have an uninterrupted transportation service at all times, Congress has endeavored to so provide by law that railway employees shall be assured just and reasonable treatment and wages at all times and under all circumstances, thus making it unnecessary for railway employees to resort to the use of the strike in the future in order to obtain just and reasonable wages and working conditions. To this end Congress not only provided for the Labor Board, but it also gave definite instructions to the Board concerning the things which it should take into consideration when fixing fair and reasonable wages and working conditions.

While it was the purpose of Congress to provide legislation of such a character as to make it unnecessary for railroad employees to strike in the future in order to obtain just and reasonable treatment, Congress did not in any way restrict the right of the men to leave the service of the Companies either individually or collectively, nor did it in any sense restrict the personal freedom of railway employees. It did, however, say that, *"It shall be the duty of all carriers and their officers, employees and agents to exert every reasonable effort and adopt every available means to avoid any interruption to the operation of any carrier growing out of any dispute between the carriers and the employees or subordinate officials thereof."*

Railroad employees under the Esch-Cummins Bill are the only body of workmen in the United States who are guaranteed by law just and reasonable wages and working conditions, with suitable agencies also provided by law, charged with the duty of seeing that wages and working conditions are just and reasonable at all times. Under these circumstances the public may reasonably expect that interruptions of the railway service, with the inconveniences flowing therefrom, such as have taken place in the past, will be unnecessary and therefore unknown in the future.

The Baltimore and Ohio Company will endeavor to comply fully with the spirit and intent of the law, and earnestly desires the cooperation of all its officers and employees in that effort.

April 30, 1920

David Willard, President,
The Baltimore and Ohio Railroad Company

George M. Shriver, Senior Vice-President, and in Charge of Accounting, Claim, Treasury and Relief Departments

[Although our Executive Officers as individuals need no introduction to the readers of the MAGAZINE, it seems appropriate at this time to publish short sketches of their careers, this article on our Senior Vice-President being the first of a series which will appear]

BACK of the rolling of cars and engines; back of the activities in the shops and terminals; back of the receiving and distribution of traffic and the accumulation and distribution of material; back of the new construction and constant rebuilding,—back of all the bustle and energy in providing and carrying on transportation, is the less noticeable but none the less essential factor—Finance. Finance, expressed in the vast number of accounting operations, in the receipt and disbursement of millions of dollars annually, the collection and conservation of the monies necessary to meet the pay checks distributed twice each month to the more than sixty thousand employees; expressed, in fact, in every receipt and in every expenditure which day by day records the progress of the railroad business.

The Operating Department struggles with its operating ratio, now, on practically all railroads, higher and more onerous than ever before. The Traffic Department is ever alert for new and more business, constantly concerned in reporting each month and year a larger amount in gross than for the preceding similar period. But Finance, surveying the whole situation, is, in the last analysis, responsible for the health of the railroad structure; for the blood stream which carries vigor and life into all the component parts of its enormous, yet complicated and delicately adjusted body.

Say what you will about the importance of Labor, for good

operations; of Material, for good upkeep; of Traffic, for good business;—Finance includes all three in its survey, correlates their activities and progress, and, in addition, must constantly survey trade conditions, must keep its hand on the pulse of the money market to see that necessary funds for support are available, when needed, and as cheaply as they can be obtained.

Though Traffic be heavy and Operations efficient, Finance, after all, is the determining factor in making them realize their greatest possibilities.

What has been the net result of operations in relation to the investment? What must it be in the future to justify further expenditures? How are we going to furnish the funds to take care of this or that maturing obligation—what is the best form of refinancing? Is it cheaper to borrow money now for future requirements or to wait? Will it cost more in the long run to hold off repairing this block of equipment or to provide for its renewal immediately?

These are but general examples of the enormously important questions which affect the blood stream of the

Railroad's life. Their diagnosis and treatment are affected by a multitude of conditions—by the status of business in general, with all its ramifications—and it is the business of Finance to know all these things accurately in relation to the Railroad's condition.

"Finance" on the Baltimore and Ohio is personified in George M. Shriver, our Senior Vice-President, and in charge of the Accounting, Claim, Treasury and Relief Departments, another notable example of the self-made railroad executive.

Mr. Shriver is the son of the late Rev. Samuel S. Shriver, a Presbyterian minister, and was born at Hightstown, N. J., in 1868. After receiving an education in the public schools of Baltimore, Mr. Shriver entered the employ of the Company in 1887 as a clerk in the Accounting Department, and was later in the service of the United States

George M. Shriver, Senior Vice-President

Express Company, which operated over this Company's lines.

In 1888, Mr. Shriver became Private Secretary to Charles F. Mayer, then President of the Consolidation Coal Company, and when Mr. Mayer became President of the Baltimore and Ohio in the Autumn of 1888, Mr. Shriver reentered railway service as Private Secretary to the President.

When, in 1896, John K. Cowen became President, Mr. Shriver continued as his Secretary and also filled the same position under President L. F. Loree. In 1901, shortly after President Loree took charge, Mr. Shriver was promoted to Assistant to President, and filled this position during Mr. Loree's administration and the term of President Oscar G. Murray. A year after Mr. Willard became President, Mr. Shriver was elected Second Vice-President at the meeting of the Board of Directors, held January 12, 1911.

Effective July 1, 1916, the Board of Directors eliminated the numerical designations of the four Vice-Presidents theretofore used, and assigned various departments of the Company's organization to each. In this change Mr. Shriver was elected Vice-President in charge of the Accounting, Claim, Treasury and Relief Departments, which position he has continuously filled except, of course, during the 26 months the roads were under Federal control. During that time, however, he continued with the Corporation as the only Vice-President of the Baltimore and Ohio Railroad Company, the other Vice-Presidents being made Federal officers.

During Mr. Cowen's administration Mr. Shriver had much to do with the financial reorganization of the Company and since then has taken a large part in the financial arrangements which have rendered possible the great enlargement of the property and the extension and improvement of its facilities.

During the period of Federal control, great responsibility rested upon Mr. Shriver, particularly with respect to the Company's claims for compensation under the Act of Congress which turned the Railroad properties over to the Government. Here he did extraordinary work in the preparation and presentation of the Baltimore and Ohio's requirements, and their successful conclusion must have been to him a most gratifying reward.

When the President of the United States announced that the roads would be turned back to their owners on March 1, 1920, a period of reorganization was necessarily imminent which involved considerable thought

and detail work in order that the properties could be taken back with the least possible interruption or confusion. In anticipation of the change, the Board of Directors took the whole matter under consideration and, under date of February 25, 1920, appointed its official staff for the handling of the Company's business. In recognition of Mr. Shriver's great ability, constantly exemplified during his whole career with the Company, he was elected to the rank second only to that of the Chief Executive, namely, Senior Vice-President, and in charge of Accounting, Claim, Treasury and Relief Departments.

Notwithstanding his many important duties as an officer of the Company, and fully realizing the vast amount of additional work that would be imposed upon him, Mr. Shriver has nevertheless willingly responded to the call of the Eastern Carriers to act as Chairman of the Accounting Committee and to supervise and present statistical data in their several cases before the Interstate Commerce Commission in connection with the applications for advances in rates, and he has just submitted to the Commission summaries and statements of the requirements of the railroads under present conditions. The importance of his work in this connection can only be measured by the far-reaching effect of the pending rate case itself, not only to the railroads but to the whole industrial and commercial structure of the country.

We are sometimes disposed to feel that men who carry on their shoulders weighty problems such as those just discussed, lose contact with the men on the road, and the men in the shop and office. In the cases of most so-called "big men," this supposition is entirely erroneous. It is certainly erroneous so far as Mr. Shriver is concerned, for, despite the large amount of work which directly devolves upon him, he has always managed to maintain a very direct contact with the work of the various departments under his supervision, and close personal relationship with the officers in direct charge.

Mr. Shriver's associates say that he has but one hobby, and that, work—work—work. And if this be indicative of a man of simple and modest taste, so also is the way he gets his recreation. His home is in Pikesville, Md., and there he enjoys with his family the charm of country life, the supervision of his farm, taking particular interest in the growing of hard yellow corn to be fed to glossy black Berkshire hogs.

The simplicity of his home life is

reflected in his business surroundings. He receives visitors in his office with a quiet cordiality which inspires immediate confidence in his sympathy and judgment. He is a Baltimore and Ohio man through and through, always interested in each and every one associated in its activities. His friends on the Railroad are legion, as will be attested by many who read this paragraph and can vouch for its accuracy by their own personal and pleasant experiences with him.

Do You Qualify for a Raise?

"I KNOW I'm worth forty dollars a week," complained Bronson to the Boss; "because you pay Wadsworth forty, and I'm just as good a man as —"

Just then there came a resounding crash from the street below. The Boss jumped to his feet. "Find out about it!" he commanded Bronson.

Bronson left without delay and returned with this information: "Some truck ran into one of our trucks."

"Whose truck was it?" urged the Boss.

Bronson said he would find out, and at the end of seven minutes came back to advise, "One of Dorsey's."

"Who was at fault?" urged the Boss with some heat. Again Bronson was gone, for five minutes, and he reported thus: "Dorsey's man was at fault."

"Won't you be seated," said the Boss, with a trace of sarcasm; and he rang for Wadsworth.

"Wadsworth—an accident has just occurred in the street below. Find out about it, please."

"Yes, sir!" said Wadsworth.

Only that. "Yes, sir!"

When he returned in five minutes he had this to say to the Boss, and to Bronson:

"One of Dorsey's young boys backed a truck into the truck that 'Mike' Bannon drives. It broke one of the wheels off our truck, but the horses did not run. Mr. Dorsey admits it was his boy's fault and says he will foot the repair bill. The horses were not hurt; no one was hurt. Bannon has hitched his team to one of the reserve trucks, and there will be no delay in the shipment."

"Thank you!" said the Boss.

And when Wadsworth withdrew: "There's your answer, Bronson. When you can look me in the eye and tell me you're 'just as good' a man as Wadsworth, come back for that raise."—*Thermoid News*.

Cars Are Only Earning When Wheels Are Turning

Turning Waste Into Money

By-Products of Alcohol Manufacture Developed in Fifteen Million Dollar Plant by United States Industrial Chemical Company

By Margaret Talbott Stevens

WHEN Milady fills her dainty handkerchief with fragrance from a tiny bottle of cologne, we wonder if she ever realizes the enormity of the industry which produces the alcohol that forms the basis of this kind of perfumery. Yet, important as the manufacture of cologne may seem to her, it is an almost insignificant one of the hundreds of uses of alcohol. Perhaps its greatest industrial use is as a solvent such as is used in the manufacture of dyes, soaps, varnishes and enamels, lotions and liniments, flavoring extracts, disinfectants, drugs and chemicals.

The increased production of alcohol alone, by means of the discovery of new processes of manufacture, has been a source of enormous importance to the industrial world. Interesting, too, is the value now arising from former wastes of production, and affecting not only the conservation of materials but also the efficiency of the human factor. For every new by-product successfully manufactured and marketed means an increase in the individual average of production, and more useful things available for human consumption and comfort. Without capital for scientific investigation (often carried on at a loss), material, labor and production would all suffer.

Ten or fifteen years ago industrial plants were concerned only with the manufacture of their respective principal products. This was largely true in the production of steel, coke, chemicals, etc., and an enormous amount of material, the by-products of the industries, was thrown away.

This waste material science has now learned to utilize so that it becomes useful to both the manufacturer and to the public. Let us take, for example, alcohol and its allied industries in Baltimore.

When the United States Alcohol Company at Curtis Bay was at first interested only in the manufacture of alcohol, the waste from the processes of its production was dumped into the bay. The Government's objection to this method of disposition, which caused the pollution of the waters and, among other things, the poisoning of the fish, stimulated scientific investigation and resulted in the discovery of a variety of industrial uses for the waste as well as for the alcohol itself. Herein lies the "why" of the existence of the United States Industrial Chemical Company at Stone House Cove, just across a little inlet from the Alcohol Company on Curtis Bay.

Connecting these two plants is a large pipe through which flows the waste, or what they call the "slop."

All of the alcohol is produced from molasses, which is itself a by-product from the cane sugar refineries of Cuba and Porto Rico. It is brought to Baltimore in tank steamers and stored until needed. The storage capacity here for this article is 18,000,000 gallons, 150,000 gallons of which can be used in a single day. The production of pure alcohol is the first step. This having been accomplished at the Alcohol Company's plant, by means of fermentation, distillation and rectification, the residue or "slop" is sent over to the Chemical Company,

whose job it is to render this waste marketable. The products to be worked up from this material are determined by the laboratory.

(Right here, parenthetically, we pause to inject a paragraph not directly related to the subject of this story. The very existence of such enormous plants as the United States Industrial Chemical Company, with its large investment of capital, its large consumption of raw material and its large employment of labor, proves the need for the scientific investigator. Without him there would be no reason for such plants. Without him useful by-products would not be discovered. Without his theoretical training, gained in the schools and colleges of our country, in physics, chemistry, and other practical sciences, it would be impossible for him to conduct the experiments which lead to useful discoveries. We are not pleading for recognition for the scientist in the industrial laboratory, for he is well paid for his useful work. But we do want to put in a word for the men and women and institutions—the teachers, the professors and the colleges, which taught him how to do it. They are miserably underpaid as compared with the rest of us and they deserve our support for greater remuneration.)

The Yeast Bug in the Laboratory

The laboratory has two branches, the general chemical laboratory, where each man has his particular problems relating to the composition of some product, and the bacterio-

Efficiency and employe comfort go hand in hand in the construction of this modern plant

Just a little corner in a still house showing a bit of the apparatus

logical laboratory, where methods of fermentation are worked out and where yeast is "grown." The ordinary person knows, perhaps, of two or three kinds of yeasts, but according to the chemists here there are "57 varieties" or more. Experimental colleges throughout the country make a specialty of "raising" certain kinds of yeast bacteria and of supplying it to these industrial plants. One little yeast "bug" placed on the end of a platinum needle can serve as the basis for thousands of gallons of an yeast substance which may be turned into alcohol.

Each chemist works for a definite result. If his little experiment in the test tube appears to be successful, the idea is tried out on a larger scale by means of copper retainers, larger tubes, beakers and jars. At the left of the main laboratory is a building in which the test may be carried out still further. Finally, if this experiment is a success, the development of the apparatus for the manufacture of the article for commercial purposes is simply a duplication of the little test tube affair, but on a larger scale.

Calorine

One of the scientific discoveries of the last few months is a product known as calorine. In spite of its having been but recently put on the market, the demand for it has grown rapidly. It is used like acetylene, to provide the intense heat needed in welding hard metals. There is still a possibility of its being used for lighting and heating, although its purpose as such has not yet been developed.

Alcogas

Perhaps there is no motor fuel which is attracting more attention in this section of the country than alco-

gas. Just across the Baltimore and Ohio Railroad tracks, in the rear of the laboratories, stands the Alcogas building. Scattered about it are about eight immense tanks. This plant, a part of which is still under construction, will have a capacity of over 300,000 gallons of motor fuel per day. It is a question whether alcogas will ever supersede gasoline, but it is fast becoming its rival. The plant is unable to keep pace with the demands of the motoring public. Alcogas is being used also for airplane fuel, the Post Office Department having adopted it for use in its airplane mail service.

Potash from Molasses

Potash salts, such as potassium sulphate, chloride, carbonate, decolorizing carbon, glycerine, and ammonia, are all manufactured here. These are also molasses products. The

raw material is carried by pipes through three big boilers and subjected to intense heat. Each of these boilers is large enough to allow a man to work comfortably inside of it whenever the small pipes need cleaning. These pipes are about two inches in diameter.

By the time the liquid is ready to be taken from the third boiler it has become a thick, dark mass, not unlike boiling molasses taffy in appearance and odor. They tell us, however, that its taste is very bitter. This substance is stored in tanks and set aside until ready to be turned into potash. This is accomplished by another heating process, which is continued until only an ash remains. When we consider that about 90 per cent. of the raw material before boiling is water, we can realize why such a great amount of boiling is necessary. Some of these boilers register as high as 3,000 degrees, Fahrenheit.

Machinery Built in Plant Shops

Because of the enormous amount of apparatus that is used, there is a corresponding amount of repair work to be done. The company maintains its own shops at both plants, the one at Curtis Bay being known as the Copper and Iron Works. The shop at the chemical plant is divided into two sections: the copper and iron section, and the carpenter shop. These shops not only make and repair the apparatus used by the two plants, but are also concerned with much outside work, the greater part of which is repair work on the many ships that arrive in Baltimore.

"He Made His Wife a Washerwoman"

On nearly every post in the shops is a Safety warning. Some of these

Here are the 60,000 gallon stills; the two together would make a good sized swimming pool

are done in attractive colors, and each is a vivid picture of some result of carelessness. There is one of a woman bending over a washtub that bears the inscription, "He made his wife a washerwoman;" another which says, "You can go to the First Aid Stations, if you wish, but who wants to go to a First Aid Station?" These First Aid Stations, however, are very attractive miniature hospitals, clean and white, and well fitted to care for the injured. That there are comparatively few accidents is a remarkable record for an industrial plant of this size.

Some Other Buildings

Order is the first law of the power house; the great, shining mass of machinery, cleaned and oiled to perfection, moves along with such seeming ease that there is scarcely a sound to tell of the tremendous amount of work that it does.

The great storehouse, with its thousands of kinds of material systematically arranged, shows that it is one of the most important factors in the operation of the plant.

In a little group to the right of the laboratories we find a dwelling known as "The Hotel," an apple orchard, garages, a number of great empty tanks, and the "Vinegar Building."

The empty tanks were formerly used in the manufacture of acetone for the Government during the war, while the "Vinegar Building" supplied the vinegar from which the acetone was made.

All of the buildings are of steel and concrete construction throughout.

Manufacturing Facilities

The water necessary to manufacturing at the Alcohol Plant is obtained from a well which supplies 5,000,000 gallons of fresh water per day. There are ample facilities for barreling and shipping in barrels, drumming and shipping in drums, or shipping in tank cars. The barreling facilities permit of barreling and shipping 1,500 barrels per day; the company owns and operates its own tank car line, consisting of about 500 steel tank cars.

The still house has an equipment consisting of four eight-foot continuous stills, six 30,000 gallon intermittent rectifying columns, and four 10,000 gallon intermittent rectifying columns. There is a molasses storage of 18,000,000 gallons, a capacity for working up approximately 150,000 gallons of molasses per day, and warehouse storage capacity for 1,000,000 gallons of alcohol.

Improvements

During the last ten years the industry has increased in size about 700

per cent., until at present the quantity of industrial alcohol used in the United States amounts to approximately 75,000,000 proof gallons annually. During this period of growth of the industry, rapid strides have also been made in the development of processes of producing the alcohol and its by-products, and also in the perfecting of apparatus for the recovery and purification of the alcohol produced. Plans are still under way for many improvements. Additional room has been provided in the laboratories for more intense microscopic work and for the incubation of yeasts.

With all of the extensive apparatus which is being changed continually; with all of the laboratory experts and the large forces of men employed in this work; with the business-like manner in which they manage to dispose of the waste, some results worth while must be brought about. We ask the final question, "Do they ever waste anything?" They answer "Almost nothing."

What Time Is It?

By W. C. Donnelly

Supervisor of Time Service

WE have at present a perplexing question to solve when we consider the many different times in use today; we have the Standard Time, comprising Eastern, Central, Mountain and Pacific time, and in addition to this, the Daylight Saving Time in New York and other states and cities. It behooves a railroad man to have a standard watch, to have it inspected by our local watch inspector in April and October, and also to have it compared semi-monthly. Each railroad man should see that his watch is correct with the standard clock which is found at all trainmen's registering stations and which maintains the correct time for the division. By following the above, confusion will be avoided and perhaps serious accident prevented.

American Legion Posts?

ARE there any American Legion Posts of Baltimore and Ohio men on the Railroad besides the one recently organized in Baltimore, for which a charter is now being granted? If so, we would appreciate information concerning them as we feel that the MAGAZINE would be neglecting one of its most important privileges and duties if it did not keep its readers in touch with the activities of our employees who served in the World War and thereby helped perpetuate the fame of "The Baltimore and Ohio for the Nation's Service."

Patented November 12, 1919; Copyrighted 1919
The American Legion

Mr. Superintendent or Supervisor, What Do You Think of Suggestion Boxes?

To the Editor:

Many large corporations have adopted workmen's suggestion boxes with gratifying results. Why not adopt them on the Baltimore and Ohio Railroad?

The scheme consists of boxes under lock placed at various points where all employees have access to them and can deposit any suggestion they wish to make pertaining to betterments or any unsafe conditions they observe. I am satisfied that it would produce some good recommendations covering improvements, conservation of material, Safety, etc.

The scheme affords an excellent opportunity for the man in the ranks to make his ability known to his superiors and thereby aids his future advancement. Realizing this, employees will become more interested in their work. What we need is interest and earnest cooperation. No matter what position we occupy, let us feel that we are important parts of a big machine and that our employers' interest is our interest.

(Signed) M. E. MARTZ,
Locomotive Inspector,
Somerset, Pa.

Welcoming Miss Stevens

My Dear Mr. Editor:

As the dean of the women employees at Mount Royal Station, upon me devolves the extremely pleasant duty of welcoming to our daily habitat the new associate editor, Miss Margaret Talbott Stevens.

We have all been regularly enjoying her cheery prose and poetry in our MAGAZINE, and we hold ourselves doubly fortunate in gaining her daily presence.

Yours truly,
(Signed) ELIZABETH P. IRVING,
Librarian.

Below: It is an old custom of the seas that when a ship crosses the equator King Neptune with his entourage comes aboard and initiates all landlubbers as his subjects. Photo shows sailors of U. S. S. Idaho "paying the price of being a real sailor" by diving into the "mysteries of the deep" for the amusement of King Neptune. Officers and men alike bow before him.

Above: "Jennie," the New York Hippodrome elephant, under the guidance of Mrs. George Powers, wife of "Jennie's" owner, doing her Easter shopping in Fifth Avenue.

Below: "Beer-Sheeba," a Barnum & Bailey-Ringling Brothers camel, with "Two Seventy-Five," the baby camel born on the train while the circus was coming from winter quarters at Bridgeport, Conn., to New York, to show in Madison Square Garden.

Above: View of a section of one of the refugee trains on the Trans-Siberian Railroad, showing the poverty-stricken conditions under which the Siberians live and travel. Note the A. E. F. Doughboys who have been guarding the Siberian Railroad.

Right: Architect's drawing of the new United States Navy Hangar, the largest in the world, on which construction

has been started at Lakehurst, N. J. It will house two dirigibles more than twice as large as the English R-34. Its length is expected to be 1,000 feet, its width 318 feet and its height 200 feet.

Critical Car Shortage Can Be Relieved by

(1) More Car Miles Per Day

(2) Increased Car Load

By W. G. Curren
General Superintendent Transportation

The average freight car works only one day in eight. If we can increase this proportion to one day in six, we can save the millions otherwise needed for new cars. Mr. Curren tells us how it can be done in this article.

Fellow Officers and Employees:

This country is experiencing one of the greatest car shortages on record, and I am appealing to everyone to do his or her bit to help relieve the critical situation.

There are approximately 270,000 miles of railroads in the United States. The freight equipment owned is about 2,700,000 cars and the average capacity is about 40 tons.

For obvious reasons the new freight equipment built during the past six years has not kept pace with the increase in traffic. To take care of the current traffic and, in addition, the normal increase in traffic, there should be provided not less than 500,000 additional freight cars during the next 3 or 4 years. Considering the financial situation, the labor and material costs, it is a serious problem as to how many cars can or will be built, and no matter how many are built the immediate necessity is to take care of the present volume of business with the available cars. It is manifest that a much greater use must be secured out of equipment in order to avoid a serious situation; in other words, it is going to be necessary for everybody to put their shoulders to the wheel.

What 20 Per Cent. Increase Will Do

An increase of 20 per cent. in the average miles per car per day by reason of quicker handling is equal to an increased ownership of about 500,000 freight cars in the United States, while an increase in the net carload of 2 tons per car is equal to about 200,000 additional freight cars per year in service.

On the Baltimore and Ohio it will be our endeavor to relieve the present situation by making 3 cars do the work of 4. Let us assume that the average miles per car per day is 27. If that is increased by one-third, or 9 miles, equaling 36 miles per car per day, it would bring about the result desired.

On the basis that the average miles per day for the average car is 27, and assuming that the average speed of

a freight train is 9 miles per hour, this means that cars are actually moving in trains but 3 hours out of each 24, or one day out of 8. Therefore, in order to make the increase desired, the time in yards, waiting classification, movement to or from the consignee, loading or unloading, etc., will have to be reduced 2 days; i. e., the actual time in trains will have to be 4 hours out of each 24, or one-sixth of the time, so that the average car will be in motion one day out of each 6 instead of one day out of 8. This does not appear to be a difficult task and it should be possible to accomplish by MORE PROMPT (1) Classification in train yards; (2) movement to or from train yards to point of loading or unloading; (3)

placement for loading or unloading; (4) loading and unloading by shippers.

Appeals for cooperation should be made to the public through the various industrial bureaus and trade associations of the larger cities and in addition, with the individual shipper along the lines mentioned.

If shippers do not load promptly and are not loading cars to their full cubical or physical carrying capacity (according to commodity), or are slow in the release of inbound cars, their car supply should be restricted.

It should be remembered that cars were built FOR TRANSPORTING AND NOT STORING FREIGHT, and that cars ARE ONLY EARNING WHEN WHEELS ARE TURNING.

George H. Emerson, Chief of Motive Power

From Boilermaker Apprentice in 1883 on the Great Northern Railroad to Chief of Motive Power on the Baltimore and Ohio in 1920, George H. Emerson's career is an inspiration to every man who believes in his own future and is willing to work for it. Big-framed and broad-shouldered, democratic and good-natured, Mr. Emerson's recent important work as head of the Russian Railway Service Corps has not spoiled him as a good locomotive fireman or engineer, should the occasion arise. He is a member of the American Legion, prefers a pipe to cigars, and likes men.

IT was my pleasure to meet George H. Emerson before I knew of his connection with the Baltimore and Ohio Railroad. Our casual acquaintance was impromptu and informal—as we happened to find seats together in the waiting room at Camden Station. Without being told, I would have said that he was a railroad man. I imagined him as the type who sits on the right hand side of the locomotive, controlling the courses of our freight and passenger trains. And my guess was not so far off, after all, for when I later had occasion to talk with him for the *MAGAZINE* I found that about thirty years ago—in 1891, to be exact—he was a locomotive engineer with the Great Northern Railroad.

George H. Emerson was born August 12, 1869, of a railroad family. In fact, his father was a locomotive engineer on the Great Northern Railroad and enjoyed the friendship and respect of such men as Mr. Frederick D. Underwood, now President of the Erie Railroad, and of Mr. James J. Hill, late President of the Great Northern Railroad, generally considered to be the greatest railroad builder and genius of his time.

Mr. Emerson's material inheritance gave him no more than a common schooling. But his birthright carried with it the privilege which is denied to few Americans, namely that of private study. And of this he has taken full advantage.

In 1883 he became a boilermaker apprentice at St. Paul, Minnesota, with the Great Northern Railroad. After that promotions with the same System came to him with pleasant and persistent regularity, as follows:

1887, Journeyman Boilermaker,

1891, Fireman and Engineer,
1895, Locomotive Foreman,
1897, General Shop Foreman and Master Mechanic,
1900, General Master Mechanic,
1903, Superintendent Motive Power,
1910, Assistant General Manager,
1912, General Manager.

During this long service with the Great Northern Railroad, Mr. Emerson had the inspiring leadership of Mr. James J. Hill, then the dominating factor in the development of the great North West through his system of railroads.

On October 20, 1917, Mr. Emerson was called into the Government service, and was placed in charge of the organization of the Russian Railway Service Corps, with the rank of Colonel of Engineers. His intensely

interesting account of his experiences in Russia will be found in the June issue of the *MAGAZINE*. The size of the job which he tackled in Siberia may be well imagined when it is known that he was the commanding officer of fourteen complete superintendents' organizations, comprising general superintendents, superintendents, master mechanics, trainmasters, chief dispatchers, train dispatchers and shop foremen, all commissioned officers. From Vladivostok and Harbin, Manchuria, he traveled for several thousand miles across Siberia, through the heart of the country being fought for by the Czechoslovaks and Bolsheviks, using passports signed by Lenin and Trotzky.

Mr. Emerson became Chief of Motive Power on the Baltimore and Ohio Railroad on March 1 of this year, soon after his return from Russia.

Education the Surest Way to Stamp Out Waste of Material

By M. E. Martz

Locomotive Inspector, Somerset, Pa

ON account of the high cost of material of all descriptions it is important that all employes economize in its use. All second-hand parts should be used before resorting to new.

During my railroad experience of 23 years in different capacities I have had the opportunity of observing many irregularities in the handling and waste of serviceable material. By careful study I have come to the conclusion that one of the greatest factors responsible for these irregularities is that employes do not realize or consider the cost of the new parts they draw from the storehouse, when in many cases the old parts removed could be repaired at a minimum cost and used again, serving the purpose as well as new parts. In looking over the scrap bins at some of the locomotive and car repair shops we find much serviceable material, such as pipe fittings, nuts, bolts and many other parts, which are good as new and were probably replaced by new material. In order further to substantiate my belief I have on a number of occasions questioned employes who drew new parts

George H. Emerson, Chief of Motive Power

from the storehouse, such as brass valves, pipe fittings, nuts, etc. I asked them to estimate the value of such parts and invariably the values given were from one-quarter to one-half of their actual cost. I believe if these men were given an opportunity to learn the actual cost of material required in their line of work it would create in them a deeper interest and result in a substantial saving.

I would suggest that a price list of important parts be prepared and posted in conspicuous places, each department separate, for example: airbrake department, tender department, car department, etc. Employees would see these high prices and become familiar with them. Interest would be created and good results follow in the shape of reduced cost of maintenance.

Chief Clerks! Please Note Critical Paper Shortage

ALL readers of the MAGAZINE must be aware of the critical paper shortage now facing the country. Many newspapers have been compelled to make drastic cuts in the size of their editions, and the same shortage applies on all grades of paper.

Our stationer, E. E. Herold, wrote all department heads in this connection on April 5, and urged the strictest economy in our paper stock.

There are many, many ways in which we can save if we will but give this subject proper supervision.

Don't demand particular kind of type. It limits competition.

Don't demand pen ruled forms when printed lines will answer all requirements.

Reduce multiplicity of all carbon copies on all forms or statements.

Don't use letterheads for scrap paper. Use the back of a used envelope.

Don't use a large envelope when a small one will serve the same purpose.

Don't put one address all over the face of a *multi-address envelope*. Use carefully each address space given so as to help have the envelope used the full number of times.

Don't use white envelopes when manilla envelopes can be used.

Don't throw away any paper that you can use for writing in any way. When sold, scrap paper brings but a fraction of its original cost. And it costs more for a new supply now than it ever did.

Don't use full size letter head when half will answer every purpose.

Don't write or use paper at all if conferences can be had without inconvenience. More information and

An Appreciation

The Baltimore and Ohio Company makes grateful acknowledgment of its appreciation of the efforts made by its officers and employees who loyally stood by the Company during the unsettled period since April 10, last.

Conditions all over the world have been disturbed and upset by the great war. The high cost of living, which bears heavily upon all, is one of the direct results of the war; in fact, it is part of the price which we must pay for our victory. The war involved practically the whole world, and the whole world is now paying the cost; but heavy as our share of the payment may seem, it is infinitely less than it would have been, in lives, money and comfort, if the war had been lost. For more than four years in their efforts to terminate the conflict the principal nations of the world devoted their utmost energies to the destruction of lives and property. Now we must build up again, and we must all bear our share of the burden, and the burden on each will be lighter if we all work together.

Congress has provided a method for adjusting all disputes arising between the railroad companies and their employees concerning wages and working conditions, and I am confident that it will be much better for all in the end if we try to adjust our differences in an orderly manner as prescribed by law.

I wish also to add my personal thanks and appreciation to all those who loyally supported the Baltimore and Ohio Company in its effort to perform the duty resting upon it as a common carrier, under the trying conditions we have just passed through, as well as take advantage of this occasion to extend to you all my best wishes.

April 30, 1920.

President, The Baltimore and Ohio Railroad Company

satisfaction can be had at times than can be secured through barrels of correspondence.

It would be instructive—and probably embarrassing—to many of us to have our attention called to the paper waste which occurs in our own offices each day. We want to help the Company save, but our supervision is not always the best. Chief clerks, *in particular*, would do well to take a look at their mailing desks once in a while and see if stationery supplies are being properly handled.

Two Dollars and Twenty-eight Cents

By M. E. Tuttle

Division Operator, Cleveland, Ohio

TRY for a while, every time a tonnage freight train stops at your station, to throw away the above amount and see how the pay check will look by the end of the month.

Recent tests show that every time a tonnage train is stopped it costs the Railroad Company \$2.28.

Each of us sees comparatively few trains of the hundreds run daily by our Company, which also employs hundreds of Telegraph Operators. Suppose each operator stops one train a week unnecessarily; how many \$2.28's would be thrown away?

One of the causes for unnecessary stops developed at the tests was "Failure of Operators to give signal promptly." If you were paying the \$2.28 how many would be stopped?

Answer the Dispatcher promptly, giving him time to get his orders ready. Answer other offices and give them clearance on passenger trains before it is necessary to stop trains following. When your orders will allow a train to keep going, get out and hand them on and assist in every possible way in saving the \$2.28.

The tearing down of anything is easy. It is the building of it that is hard.

The Task That Bolshevism Faces

You know that it takes an artist to paint a picture.

You know that it takes a clever mechanic to make a watch.

And you know that anybody can ruin the picture or the watch by a kick.

The tearing down of anything—whether a watch, or a house, or a government—is easy. It is the building of it that is hard.

This is the task that Russia under Bolshevism faces today. Read what Lenin says about it in the following summary of his latest statement, "The Soviets at Work:"

The Bolsheviks have destroyed capitalism, nationalized industry and formed workers' soviets. But Russia is still far from communism and a socialist soviet republic.

What the Bolsheviks have done so far was the easiest part. It was the destructive part. It required only force and decrees. The hardest part is still before them. Bolshevism will fail unless it can rebuild Russian industries and get maximum production.

This cannot be accomplished under the original plan of Bolshevism. The workers' soviets don't know how to run the factories and keep order. And the workers aren't yet willing to work for the same rate of pay for different kinds of work. The machine worker still wants more than the man with a pick; and the brain worker still wants more than the machine worker. Russia will not have communism until human nature is changed and each man is willing to work for the good of all instead of for personal gain.

Lenin is *doing* all this. He has unlimited authority. He is taking away the powers of the factory soviets and placing his bourgeois experts in charge. He is giving these new bosses what they never had before—absolute power over the workers. They cannot strike. They cannot even complain. Lenin compels their obedience by cutting off bread cards or calling in the Red Guard. His latest words to the Russian workers are: "Obey and don't listen to those who say our theories are wrong."

Some people say we ought to have Bolshevism in America. But we ought first to learn how it is working out in Russia. Lenin can tell us better than the Bolsheviks in America. *They say what Lenin USED to say; not what he says NOW.*

And Lenin says now that Bolshevism has failed as a means of government and a means of production because human nature is stronger than his former ideas.

It will take years to change human nature by education and to teach workers to run factories by soviet methods. But in the meantime industry must be reorganized and maximum output by both factory and the individual worker maintained.

The only course before the bolshevist leaders is to take a step backward from the soviet state—to return to the old order. They must call in bourgeois experts at large salaries to run the factories. They must adopt the factory methods of "capitalistic" America.

And the bolshevist leaders must go back still further. They must place the workers under iron discipline. They must make the hundreds and thousands of workers in each factory subject to the will of one man—the bourgeois manager. The workers must be compelled to work their hardest.

Freight Claims—the C. Q. D. of the Railroad World

JACK BINNS, you remember, was the 18 year old wireless operator who first buzzed the C. Q. D. (Come Quick—Danger) signal from the operating room of a sinking ship. He got a quick and satisfactory response and the human freightage, whose plight he flashed out through the ether, were saved.

The plight of the railroads, caught between the upper millstone of increased operating costs and the nether millstone of a revenue return which, under the law, has not kept pace with these increased costs, is put to it to flash the C. Q. D. to all its employees.

Every department is making a drive toward increased efficiency and the responses given on coal saving, Safety and other phases of operation, are generous and encouraging. One item still bulks large under the debit of inefficiency, namely, Loss and Damage, although some improvement was shown during the last year. Now, when everyone gets interested, a remarkable showing can and will be made.

The transportation of freight enlists the services of all employees in our Transportation Department. Hence everyone along the line can help. But let's consider first—

The Receiving Clerk

He is, perhaps, the most important single individual in the safe handling of our commodities. And let's suppose that Mr. Receiving Clerk were entirely concerned with the receiving of his own property instead of the property of hundreds of shippers, every day in the year. Would he

refuse to accept improperly crated or packed commodities? Of course he would, because every shipment not so packed runs the risk of being a partial or total loss on his hands. Would he be very careful to see that he did not sign for goods which he did not actually receive for transportation? He would, indeed, for

The Office Staff—Left to right: Seated, F. L. Schepler, Assistant to General Freight Claim Agent; C. C. Glessner, General Freight Claim Agent; W. C. Bowhay, Special Agent. Standing, E. H. Brewer, Secretary to General Freight Claim Agent; W. R. Heartt, Chief Clerk.

his personal resources could not stand for long the loss of packages which would otherwise ensue.

The Opportunity for the Good Receiving Clerk

The difference between a good receiving clerk and a poor one means thousands of dollars in revenue to the Railroad each year. The good receiving clerk must be an all-around man. On the other hand, hardly any position open to beginners in railroad service offers a better opportunity for

learning the essentials of the business thoroughly or of promotion more quickly than this very job.

Essential Qualities

The receiving clerk should, of course, be familiar with freight classification. He must be something of a student of human nature and know the drivers of the trucks making the deliveries, the good and the bad, the scrupulous and the unscrupulous. He can be an asset to both the Railroad and the shipper. For the interests of each are identical. And a diplomatic receiving clerk can per-

sue shippers in a pleasant and resultful way of the best method of packing and marking their shipments so that no loss will result either to them or to the Railroad.

The Loading Clerk

The loading clerk is the next important factor. First, he must be a good diplomat and able to get a cheerful and responsive cooperation from his truckers and loaders. Their interest in their work is usually a reflection of his attitude toward his job. Although rules and suggestions without number have been made for loading and stowing, the best rule is that of common sense. Men can easily be trained to use this quality if they have the right attitude toward their work.

Specifically, the loading clerk must see that shipments are loaded into the proper cars and recorded correctly so that revenue billings will be issued to cover safely to points of destination.

The Mechanical Department Steps In

Right here another factor, seemingly one indirectly but actually directly related to the safe handling of freight, namely, the car repair gang—the mechanical department—

Monday morning sees over 10,000 pieces of mail, envelopes, etc., each containing an average of four communications

agent and consignee a good turn. Furthermore, he realizes that what helps his employer helps him, and he is, therefore, boosting his own game.

The unlocated loss of entire packages is another big problem. The thoughtless receiving clerk signs for more than he gets. Or the car door is left open and the package drops out and is never heard from again. Or the delivery clerk fails to get a receipt. The consignor is disgusted with the railroad service. The consignee feels likewise, plus a lot of indignation about the poor service he is getting from his consignor. Finally, the Railroad is put to large expense for investigation and finally for payment of claim.

We have not touched upon certain other important factors in this business. Upon the necessity of the receiving clerk sending revenue billing promptly to agent at destination. Upon the necessity for the latter getting out his arrival notice

Accounting and Suspense Division

on the Railroad who are directly engaged with the movement of freight.

From the mail room shown in the accompanying picture claims go to the record room. Here proper record entries are made and claims are distributed to the various bureaus, according to the kind of commodities and the amount of the claims.

We have experts on grain claims,

shipment inspected by a Government inspector, who finds that the peaches have rotted because of a disease inherent to the territory from which they came. The claim investigator knows immediately that this is a valid reason for refusing claim, provided that shipment has had prompt and reasonable handling while en route.

These experts handle claims amounting to \$100.00 or more. Other claim investigators, less experienced, handle claims of smaller amounts, all of which are classified as to commodity and the nature of the claim.

Each claim investigator is charged each morning with a debit representing the number of claims given him for investigation that particular day. In the evening he gets a credit for the investigations he has completed.

If he establishes the Company's liability for the claim, he passes it for payment. In then goes to revisors, who are experienced claim investigators, for further investigation. If they confirm the validity of the claim, the distribution of the charge against our own Road and connections for joint responsibility is made. The cause to which the claim is chargeable is also determined, whether to defective equipment, rough handling, derailment, or other typical causes. The claim then goes to the Voucher Bureau, where voucher is issued and sent to the claimant.

Dictaphone Operators—Every efficiency device is employed in the Freight Claim work, yet the cost is enormous

promptly and winning the cooperation and interest of shippers along the lines of prompt delivery of their shipments.

Clerical Expense Involved

Nor have we mentioned the enormous amount of clerical detail essential to the proper handling of loss and damage claims. Three hundred and twenty-five officials, investigators and clerks are busy about this business in our home office building alone. Forty thousand communications arrive each day for handling. More than six thousand letters go out every twenty-four hours. The average claim has to pass through the hands of 15 clerks and officials before it is finally settled. And as there were 239,132 claims during 1919, you can see what this means.

How Claims Are Handled

A brief account of the method of handling claims in the home office will interest thousands of employees

live stock, perishable shipments, household goods, shipments short, damaged and miscellaneous. Each of them is trained specially on the type of claims he handles and the laws governing them.

For instance: a claim comes in for loss on a shipment of peaches, refused by consignee at destination on account of deterioration. We have the

Reconsignment Bureau, Voucher Writers, Correspondence Clerks, Claim Prevention Bureau

Record Division—Thousands upon thousands of essential records pile up the expenses of costly claims

steps in. For, if the car, containing its perishable cargo of freight, often valued in the thousands of dollar, is not in good condition, loss and damage are bound to result.

Good railroad practice demands that an agent refuse a car if it is not tight. A good agent will do this. On the other hand, if the mechanical department does its part in supplying satisfactory cars, the agent's work and worry are decreased and much time is saved.

A good tight car supplied, again we can emphasize the fact that if the stower loads the car as if he were loading his own property, the goods will be carried to their destinations safely, provided only everything goes well with—

The Transportation Factor

You who have had experience in railroad terminals perhaps remember the first time you saw and heard a freight train being made up for dispatching. The booming of car against car makes one not used to the performance wonder how the equipment ever stands such usage. But it is built strong. And if our operating men will only give it a fair chance, the equipment itself will do its part. Again comes up the whispered injunction:

"Wonder what I would do if I owned it?"

If we could all think of that, how few flying switches would be made, with their consequent destruction of equipment and freight; how few sudden stops and hard applications of brakes; how few sudden and jerky starts when they could possibly be avoided!

Up to this stage of the game, however, let's assume that all of the fac-

Claim Investigators—Men and women who must give a most conscientious and personal interest to the exacting detail of their work

tors have done their work well; that the train is safely standing alongside the terminal and that the freight is unloaded and ready to be handled by the delivery clerks.

The Delivery Clerk

Mr. Delivery Clerk is ordinarily a very busy man, but it is unfortunate, indeed, when he is so busy as to make

it necessary for him to hand over valuable goods to truckers without getting receipts from them.

There are some unscrupulous people who will never believe that honesty is the best policy. Drivers of delivery vehicles are known to take more packages than their bills of lading call for; also to fail to give proper receipt for goods delivered and then to make false claim for loss. So the delivery clerk must be ever watchful for the unscrupulous trucker, constantly on the job to protect the shipper and the Railroad.

Largest Leaks

If one should specify one or two particular operations in the handling of freight, the improvement of which would help most in cutting down loss and damage, he could say "better packing," and "decreasing loss of entire package."

Take the first and see how everybody wins and nobody loses when freight is properly packed:

John Jones, in Pittsburgh, carelessly packs a shipment to John Brown, in Baltimore. At some time during the journey the shipment breaks and a part or all of the goods are lost or damaged. Brown, in Baltimore, is waiting for the merchandise to supply his customers. Instead of getting what he needs, he gets only a small part of what he needs, and has to go to the trouble of getting further shipments by quick, expensive delivery, and then of filing claim with the Railroad for the balance of the shipment. Jones, of Pittsburgh, puts the blame on the Railroad and runs the risk of losing his customer in Baltimore, simply because he was not sufficiently educated along the lines of good packing to see that his merchandise is properly prepared for transportation. Hence Mr. Receiving Clerk, who persuades Jones, of Pittsburgh, that it is to his best interests to pack properly, is doing consignor, transportation

Revisors and Investigators—Over, Short and Damage Division

Outbound Mail and Statistical Room

Claims Are Decreasing

The 239,122 claims made against the Baltimore and Ohio during 1919 showed a substantial decrease as compared with the figure of 275,736 for 1918.

The payments made during 1919 were, however, about \$1,500,000 more than during 1918, this being largely due to the increased cost of the commodities handled—to our old friend H. C. L.

Our officials, however, consider that the showing made is encouraging and that further efforts along the lines

already started will bring marked results.

The question resolves itself wholly into one of personal interest on the part of all employees involved in the shipment of commodities. A section foreman recently wrote an article for the MAGAZINE in which he said, "I know that I do not own a single spike on the Railroad. But in doing my work I feel that I own every bit of property I handle, and take care of it accordingly."

If we will all get his viewpoint, claims for loss and damage will come down.

Quote File References and Save Your Time, Temper and Religion

By C. F. Enoch
Agent, Boswell, Pa.

IF I had the job of counting up the lost hours, of ironing out the ruffled tempers, and of listing up the variety of cuss words that are the result of the failure to quote file numbers when answering correspondence, I am afraid I should have to employ such a large force of statistical clerks as would give an ordinary agent the "walk-outis."

I have been in the employment of the Railroad for so many years, in fact, half my life—I confess to 37 years—and have talked to so many railroad people about the importance of quoting file references that I am convinced that there are many who insist upon others doing the very thing that they themselves neglect to do. It is not that the writers do not know that file numbers should be quoted, but they need an occasional reminder to jog their memories and to arouse their interest. I have been watching my mail for some time back and note that there are just three points which quote regularly the references as given on my letters, namely: the offices of the Auditor of Revenue, Auditor of Merchandise Receipts,

and the Superintendent of Car Service. There may be others which are just as careful, but the majority of them need to be waked up.

Take for example the following:

Blank Town, February 11, 1920.
Dear Sir:

In reply to yours of recent date, we would say that the cars mentioned moved out of Blank on the 5th.

Yours truly,
X. Y. Z.

Now if mine happened to be a large office and X. Y. Z. a Superintendent, I would doubtless have written any number of letters to that gentleman. "Of recent date" means almost nothing; "the cars mentioned" is of little value; the only definite thing about the whole thing is the location. Pray tell me where I ought to look for this letter, memorandum, or telegram—I know not which—if there is no file number to guide me? Who will help me to make up for lost time spent in hunting for it? Who is to blame for the delay in notifying consignee of the movement of his cars?

Correspondence seems to have reached the point where we are made to feel that we are just a little less than the cog in the machinery, and sometimes it seems as if we are treated with less consideration, care and courtesy than would be extended to machinery. I am sure a little personal attention to correspondence would cause a warmer feeling among the officers and employees of the Company.

The quoting of a file reference seems a little thing to do and it takes such little time that we cannot realize how important a practise it is. But, as Michael Angelo said, "Trifles make perfection, and perfection is no trifle."

PICKED UP HERE AND THERE

By "Ernie" Baugh
of the Dining Car Department

DIED

Of kidney trouble, at his home in Baltimore, Md., "Tom" Billups, colored chef, Dining Car 1029, 22 years with the Baltimore and Ohio Railroad Dining Car Department. His record is as clean and as white as the day we put the card in the rack.—Adios.

Clipped from the Baltimore Sun of March 4:

PAGE JESSE JAMES, PLEASE

The simple homely spud now wears a 25 cents a pound ticket and smoked brisket of beef sells for \$2.10 a pound. Some cheese costs \$4.20 a pound, and the best eggs \$1.60 a dozen.

Very ordinary Broadway restaurants charge 25 cents for a cup of coffee and 5 or 10 cents extra for cream. It costs \$1.25 to sit down in even the cheapest places, and \$5.00 is not an unusual cover charge where there is music. There was a man who paid \$3.40 for a dinner for three and then went to a cafeteria for a meal.

Why don't you try our Commercial Travelers' Special Club Meal at 75 cents? Or a Baltimore and Ohio Special Dinner at \$1.25?

Are You Fully Protected?

In the past three years building costs have nearly doubled. Have you increased your fire insurance to the amount it would cost you to replace your property in case of loss by fire?

You should be protected!

If you are a borrower from the Savings Feature of the Relief Department, and wish to have your insurance adjusted to meet present conditions, write to W. J. Dudley, Superintendent, Relief Department, Baltimore, Md.

Old Put's Fire Boy

By Charles W. Tyler

"AND you think you can fire a locomotive, eh?" demanded Nolan, glaring at the youth before him.

"Y-yes, sir," muttered the newcomer without much enthusiasm, "I guess so."

"Guess so!" roared the foreman. "Huh! Another guesser. What's your name?"

"Broderick. Tom Broderick." A bit sulkily.

"All right," turning to the crew dispatcher, "fix him up. We'll see how the last one Todd sent us sticks it out." And to Tom again: "We need firemen, young feller, but we are pretty well fed up on dubs and quitters. It's up to you to show what you are made of. You'll get all the chance in the world if you start out *trying*, but if you are inclined to lay down on the job when the going gets a little bit hard you might just as well go home. Got a place to stay yet?"

The youngster shook his head.

"Well, I guess you can get a room over to the Boston House. Find out; then let us know."

The foreman went out and slammed the door. He had not been favorably impressed by the new man, and Nolan was not one to hide his feelings.

Tom Broderick's student trips were not the hardest things in the world. The first two trips were on a helper, where he studied the art of handling a scoop and hook from the fireman's seat. His last student run was on the local freight, and, other than to poke the iron into a lazy fire a few times and bale in a little coal occasionally, he did no real work.

Tom's courage and confidence had mounted considerably by the time that he was "first out" on the spare board. He felt that after all railroading wasn't going to be such a hard old grind. He had no doubt but that he would get along as well alone as he had breaking in with another man. He was inclined to feel a bit chesty, and it was in this state of mind that he drifted into the Boston House basement restaurant at about ten o'clock for a cup of coffee and a piece of pie before going to bed.

The place was deserted, and for this fact Tom was not sorry. Mollie King was on the counter nights, and Mollie would have stood out just as prominently in a beauty show as she towered head and shoulders above the dingy surroundings of which she was a part.

Mollie King, besides being possessed of bright eyes and pink cheeks and trim lines, had a personality that was all her own. She, also, was endowed with considerable more common sense than is generally accredited the usual beauties of the garden. Mollie divided railroad men into three distinct classes—good, bad and indifferent.

The first she accorded good fellowship; the second absolutely nothing but cold courtesy; the third she held to be a class that must sooner or later revert to either the first or the second rank, hence she tolerated them pending their baptism of fire.

Tonight Tom climbed onto a stool and immediately began to unburden his soul. "All set for my first trip out alone," he confided, allowing his eyes to rest on Mollie in an unconcealed quest for encouragement mingled with open admiration.

"Say, do you know I have been scared to death of firing. But, by gorry, it's coming dead easy. If I got called tonight I'll bet I could fire the meanest old hog they have got—and come back fresh as a daisy. I guess I got the knack of keeping 'em hot quicker than a lot of fellows did."

Mollie poured the milk into the coffee mug; then moved to the steaming urn. When she placed the coffee and pie before Tom Broderick, that young gentleman suddenly became aware of the fact that her cool, gray eyes were studying him with a strange quizzical light showing in their sober depths.

After a little Mollie said slowly:

"I've heard lots of the boys say that—just before they went out on their first regular road trip." She paused, moved a small pile of greasy menu slips toward her and began copying the items from a rough, penciled draft. At

length she concluded dryly: "But most of them never even came back to use up their pie check."

Tom set his coffee down suddenly and looked at the girl long and earnestly. "What do you mean?" he asked after a little.

"Potted beef and onions, 35 cents," wrote Mollie slowly. Then she said with a saucy little drawl:

"Well, you see after a little while the going got a trifle rough and they got a cinder in their eye, or blistered their hands on a hot hook, or the hogger cussed them out, or the coal got back in the tank and the shack said, 'Kick it down yourself, you darned farmer, I ain't getting paid for firing the goat,' or some little thing like that, and they yelled for relief, or else, maybe, climbed down and quit the job at the first stop. Their holler was that they were nobody's nigger waiter, and they wouldn't stand being sworn at like that by the King of England. That's why a lot of them never came back—there was too much saffron under their skin. They'll never make good at anything."

(Continued on page 64)

A blistering hot hook fried grease from the leather gloves he wore.

The Job Destroyers

SINCE the signing of the armistice a door has stood open to save for our masses the benefits of the great stimulus the war gave to industry and to life.

We had before us a great object lesson which taught not merely that individual workers could do more, but that harmonious social cooperation could achieve miracles. A great opportunity beckoned to our people to apply their energy more intelligently. To keep the dollar at its old purchasing power while maintaining wages at the new levels but one thing was needed, and that was to swell production.

Alas! it was not done. The delusion seized hold of our labor organizations and those responding to their leadership that men could create less and at the same time get more.

This can't be done—never has been done and never will be done. It is no more possible to set aside the law that the sum of distribution cannot exceed the total of production than it is to suspend the law of gravity. Complain of this law as much as you please; there it stands, irrevocable and indifferent to all railing.

Back of all the industrial disturbances lurks the unfounded assumption that the way to get more is to do less. From every part of the country comes the report of a decline in per capita production despite the rise in nominal wages. Of course, men often find that the new wages do not buy as much in food, in clothes and rent as did the old.

It could not be otherwise. A decline in real wages is the inevitable consequence of the failure of the average worker to create as much as formerly. No strike, legal or illegal, is able to increase real wages over any considerable period. Only by enlarging per capita production do real wages rise.

Our people—for our laboring masses are our people—have been guilty of great folly and must pay the price folly always collects. Industrial equipoise now promises to come another way. The highway of increased production not having been taken, it looks as if we must flounder through the mire of smaller demand and lessened consumption, which is another way of describing a lower standard of living.

Unless those commanding the confidence of our wage-earning masses have the intelligence and the courage to provide a different sort of leadership than they have revealed during the last eighteen months we cannot hope to escape seeing in the not dis-

tant future a lessening of consumption whose effect will be non-employment. It is impossible for prices forever to spiral upward. The higher they go the greater will be the subsequent fall. Every true friend of labor will adjure it to get on its job and stay there until such time as production is normal once more.—*N. Y. Tribune.*

A Lot of Union Carpenters

IT IS the fashion just now to find a lot of fault with the labor unions.

They are said to be greedy, grasping, irresponsible, quite regardless of the rights of other people. They enforce unreasonable demands with threats of violence. They are selfish, lawless, unscrupulous—a menace to orderly government.

A certain type of man talks even more wildly about organized labor whenever he happens to bark his shin on one of the sharp-edged facts of which the world is at present unpleasantly full. And, doubtless, officials and members of some labor unions, in fighting for higher wages

and shorter hours, have not altogether followed the Golden Rule, which the rest of us are always so careful to observe.

But a public which wishes to be fair will not confine its attention to labor activities of a single kind. It will, perhaps, be interested in a striking and remarkable labor demonstration which occurred Saturday and Sunday a week ago in Melrose Park, a suburb of Chicago.

It will be recalled that a couple of weeks ago a cyclonic storm swept through the Middle West, destroying thousands of buildings, killing some 65 people and injuring many hundreds. Melrose Park, which is a suburb of small frame cottages, was one of the communities worst hit by the storm. Scores of its little homes were unroofed and blown to pieces. Heads of some families were killed and their other members carried off, badly injured, to the hospitals.

Saturday noon, when the short working week, of which some of us complain, was over, no less than 1,500 union carpenters of Chicago mobilized and marched in a solid column out into the ruined suburb. The procession was headed by business agents and other union officials. Its members carried with them their hammers, saws and other tools. All Saturday afternoon and from sunup to sundown on Sunday the 1,500 experts worked like mad on the rebuilding of the ruined homes of Melrose Park. There was no question of wages or working hours involved. Every man gave the best that was in him, freely and without price.

All day Sunday the sound of hammer and saw filled the air with its unselfish paean. All day great crowds of people stood in the streets of the village and cheered the volunteer workers. When the sun rose Sunday morning the house, from the ruins of which William Selk had been taken out dead, lay level with the ground. Just seven hours and fifteen minutes later it stood whole again, rebuilt and complete, and the Stars and Stripes floated from the gable end. The fatherless family had again a roof over their heads. Surely that was a work worthy of the day!

Before nightfall on Sunday that busy regiment of union carpenters had changed Melrose Park from a region of ruin and desolation into a suburb of trim and well-built homes. After which they ate a sort of housewarming supper with the restored residents, wished them the best of luck, and went back to the city to get ready for their regular jobs.

Next time one feels like cursing organized labor for claiming so much,

This Page Has An Interesting History

This page has an interesting history. The first article which appears, "The Job Destroyers," was sent to our Printing Department at Mount Clare to be set up in type for the MAGAZINE. The union compositors there saw it and wrote to the Editor requesting that the other article which appears on this page, "A Lot of Union Carpenters," be published with it.

We are glad to accede to this request, for the BALTIMORE AND OHIO MAGAZINE, in line with the announcement in this issue, will aim to present both sides of all questions of interest to Baltimore and Ohio employes not only in their capacity of employes but also in their finer relationship as citizens of our common country.

We are glad to publish the article commending the union carpenters because, while it may sometimes be our duty to point out instances in which it may seem to us that the activities of organized labor are not conducive to the best interests of the country, it is always a more pleasant duty to recognize activities inspired by sympathy for our fellow creatures and conducive to the common welfare.

perhaps, he will remember that it knows how to give also on an equally generous scale.—*Baltimore Sun*.

Better Service Needed

IF THE new demand of the Railroad Administration for nearly half a billion dollars is granted—as it probably must be—our little experiment in Government operation of railroads will have cost the public treasury not far from two billion dollars.

On top of that the big four brotherhoods of railroad trainmen are now demanding another increase in wages which will amount to \$1,000,000,000 annually.

Apparently the public is finally waking up to the fact that these enormous sums of money come directly out of their individual pockets. They represent a very considerable part of the burdensome higher cost of living.

In the face of that fact the American people are inclined to be not only fair and reasonable, but generous. They would more willingly, however, consent to another large boost in railroad wages if they could see some signs of an improvement in railroad service.

They make due allowance for the strain of war, which has come to take the place of charity in covering a multitude of sins. They know that the equipment of the railroads is not in good condition and that there are other difficulties in the way. But they still fail to see why it should take, on the average, a full month to get a box from Chicago to, say, Charlottesville, Va. A slow passenger train makes that run in less than twenty-four hours. Any half-way efficient, even endurable, service, should be able to deliver a freight shipment in a week or ten days at the outside.

Everywhere the complaint is the same. There are such intolerable delays that the only reasonable explanation is that railroad employees are not half trying to do their jobs.

It is the same way in the passenger service. On a recent trip from Washington to Chicago the train was twice stopped with such a sudden jerk that passengers who happened to be walking in the aisles were thrown into the plate glass doors with such force that their faces were painfully cut on the broken glass.

For such specific instances there may easily be reasonable explanations. But the complaint of poor and apparently careless and indifferent passen-

ger service is general. Ask any man who has recently made a long journey in a sleeping car how many times a night, on the average, he was slammed and banged around the railroad yards.

The ordinary man asking a big boost in wages would try to show that he deserved it by doing the best work he knew how. The public would listen more kindly to the demand of the railroad men if they were assured that better service would follow the boost in wages.—*Baltimore Sun*.

"And the Greatest of These is Charity"

MANY Baltimore and Ohio employees in this city can point with pardonable pride to the fact that they have contributed, through the various organizations with which they are affiliated, toward the erection and completion of the new Free Hospital of The Volunteers of America, on Lexington Street, near Paca.

I Wonder!

Are we fair when we refuse to talk over the differences of opinions we have and to find some way of adjusting them to the benefit of the property and ourselves?

Are we fair when we allow outside influences to stampede us into forgetting our duty as officials and employes to the extent that we set aside the question of the actual life of the Public and the Company?

Are we fair, as employes and officials, when we fail to see or admit that there are two sides to questions and that either side may be right; when we fail to settle them along that line of thinking?

No!

Then why aren't we big enough, square enough and clean enough to reach out and find the way?

The dream is Utopian—perhaps—but I would rather have such a dream than face a blank wall.

I would rather believe in "As ye would that men should do to you do you even so to them;" rather send out a smile than a tear; rather hope they can say of me: "His friends were legion," than to die a millionaire.

Wouldn't you?—E. V. BAUGH.

Organized labor especially has responded generously to the plea of Captain John Logan, of The Volunteers of America, for aid in this project. As an instance of the help being given, Baltimore Typographical Union No. 12, to which the compositors who get out the MAGAZINE belong, has donated \$1,000.00 to the free hospital. Our employes generally are invited to visit this new institution, which will open early in May; they will find it modern in every respect and the finest thing about it is that it will be absolutely free—from ambulance service down through operating room, bed, nursing, medical attention, board, etc.

It will be non-sectarian in character, and as an evidence of the high class personnel of the hospital staff, we mention Dr. Robert P. Bay, of Maryland University Hospital, who is doubtless known to a number of our employes, and who will give of his valuable time to this worthy charity.

Where the Money Goes

AN interesting computation has been made by *The Railway Age* showing how the earnings of the railroads by days of the month are disposed of. On the basis of 1919 earnings, it says:

"The earnings of 17½ days of each month were paid to labor in wages 58.4%.

"The earnings of 3 days were paid for fuel 10.3%.

"The earnings of 5 days were paid out for materials and supplies . . 16.8%.

"The earnings of 1½ days were paid out for taxes and equipment and facility rents 4.2%.

"This consumed the earnings of 27 days of each month.

"The earnings of the remaining 3 days went to net operating income and were used by the government to pay the guaranteed standard return to the companies. The net operating income was insufficient for this purpose and in consequence there was incurred a deficit which had to be paid from taxes 10.3%."

MORALE, whether in the mailing room of a railroad office, or in an army of a million men, is the most important essential for success. If YOUR morale is good, Mr. Supervising Officer, nine times out of ten that of your subordinates is good also. And when things go wrong, a little self-examination won't do any harm.

Foreword

By E. V. Milholland, M. D.
Medical and Surgical Director

HAVEN'T you known men, working untiringly through many years, impelled to thrift and self-denial by the prospect of a day when they could rest and enjoy the fruits of their labor, to be disappointed when in sight of the goal by the onset of some disease or physical affliction which blights their coveted happiness and eventually carries them off?

Haven't you heard of men of wealth and affluence who, envied for their apparent happiness and indifference to the cares of the world, were actually afflicted by chronic and incurable bodily ailments, which involve the sacrifice of most of the pleasures that fortune offers?

Do we not see daily many examples of premature physical decline, broken constitutions, anatomical wrecks—derelicts along life's pathway; men who, ignoring the fundamental principles of healthful living, and those who boast of their defiance of these precepts, have meanwhile deceived themselves with the idea that they were getting the most and best out of life and were physically impregnable to commonplace ills?

Can you imagine anything more

intimately related to the destinies of a race, the prowess of a nation, the accomplishments of an organized body of men, or the unalloyed happiness and mental and physical vigor of an individual, than the inestimable treasure of good health?

From the cradle to the grave is the measure of our human existence. And the length of this period, as well as the degree of comfort, cheerfulness and well-being embraced in it, are matters that lie largely in our own hands, for the measures most efficient in prolonging life are identical with those that make it more livable.

Years of patient investigation in the sphere of preventive medicine, and knowledge as to the effect of habits of living upon the human system, have evolved very definite rules for the preservation of health and prolongation of life. To such an extent has the efficacy of personal hygiene or anti-disease precaution entrenched itself in the minds of the public, that physicians now-a-days are frequently importuned by their patients to keep them well, instead of curing them after disease has overtaken them. It may be that we are tending towards the revival of a Chinese custom under which physicians were paid when the people were well, but were not paid when they became sick. Good health ordinarily is a cheap commodity, but

disease drains the purse, saps vitality and shortens life.

Reasonably assured that readers of our MAGAZINE will welcome advice and suggestions on this all-important problem of health preservation and life extension, based on the latest advances in medical science, it will be the purpose of this section of the MAGAZINE to present brief and instructive articles each month by members of the medical staff of the Relief Department. We trust our efforts will appeal to our readers. If only a few profit by the advice offered, our contribution to the sum of human happiness will be considerable, and our service of value. The addition of one, five or fifteen years to a life, here and there, is well worth the task.

Brakeman A. C. McGinnis on First Aid

Brakeman A. C. McGinnis, one of our Safety committeemen on the Indiana Division, prepared for the MAGAZINE a comprehensive and interesting article on First Aid. Space does not permit of the placing of this article in the MAGAZINE, although from time to time interesting notes on First Aid, as prepared by our Relief Department staff, will appear.

First Aid is one of the most valuable adjuncts in the preservation of the health of our employes and we are glad to see Brakeman McGinnis take so much interest in the subject.

W. W. Wood Now Chief of Welfare Department; John T. Broderick, Superintendent of Safety

ON March 15, C. W. Galloway, vice-president Operation and Maintenance, announced the appointment of W. W. Wood as Chief of Welfare Department, and of

Safe after forty years' service and—

John T. Broderick as Superintendent of Safety.

After taking a post graduate course at Johns Hopkins University, in Baltimore, Mr. Wood took charge of the department of English and Literature in one of the state schools of the West. In 1899 he came with the Baltimore and Ohio as industrial agent, and continued this work until 1916, when he was appointed special representative in the President's office. He continued this work under Federal control, reporting to the Federal Manager, Eastern Lines.

During the war Mr. Wood did invaluable work in putting the many war drives "over the top" on the Baltimore and Ohio. His splendid training as an economist, and his originaive thinking, his gracious yet forceful personality, and his rare gift as a public speaker, made a deep impression on the thousands of our employes who had the privilege of hearing his addresses in behalf of the Liberty loans and the other big campaigns during the war.

Mr. Wood is a keen student of economics and sociology, and plans which he has already made for the extension of the welfare work will be of great importance and benefit to the employes of the Railroad.

John T. Broderick has been with the Railroad for a number of years and his experience in different departments has given him a knowledge of the various phases of railroading which will be of distinct advantage in handling the Safety work.

Before his appointment as Superintendent of Safety and Welfare in 1917, Mr. Broderick was engaged as Secretary and Chief Clerk to several of our executive officers. He was selected as one of the supervising committee, who, during Federal control, organized the plan of Safety followed by the railroads under the jurisdiction of the Safety Section. As head of the Safety movement on our Railroad,

he perfected a comprehensive organization and stimulated an individual interest in Safety on the part of both officers and employes which has counted heavily in the success of this important work during the last few years.

Now that Mr. Broderick can devote his entire attention to Safety, a new standard of accomplishment may be looked for.

Safe After Forty Years' Service

THE picture on these pages portrays better than any word description how safe it is to work for the Railroad—provided only that you are a Safe man. Each of these Mount Clare employes has been in the service over forty years. Each is doing a big day's work every day, now. Each is able to reap the benefits of a lifetime of service for the Company, because he has refused to be a chance taker.

Just before this picture was taken on April 3 at Mount Clare, John T. Broderick, superintendent of Safety, addressed these Veterans of the Rail as follows:

My Dear Friends:

We have asked you to assemble here today so that a group photograph could be taken of employes who have been in the service of the Baltimore and Ohio Railroad, forty years or more. Some of you, I understand, have been with the railroad over fifty years. This is certainly a record of which you can be proud and serves as a splendid example to prove that accidents have not shortened your lives and that accidents can be avoided. The combined years of service that all of you have given the railroad represents approximately 2,500 years.

The proud record which you have made should, and I am sure, will have a marked influence on other employes to serve the Company faithfully and well, as you have done. I congratulate you. We will have this photograph published in our MAGAZINE so that other employes may know what Mount Clare has accomplished.

The Veterans in the accompanying picture are numbered consecutively,

from left to right, top row first, then bottom row, viz.:

No.	NAME	OCCUPATION	LENGTH OF SERVICE IN YEARS
1	W. T. Garber.....	Watchman.....	40
2	C. J. Weber.....	Foreman.....	43}
3	G. E. Weber.....	Machinist.....	42
4	R. F. Mercer.....	Carpenter.....	47

W. F. Braden Becomes Safety Representative

Under the new organization of the Safety Department, W. F. Braden, formerly Editor of the MAGAZINE and later Welfare Agent, becomes Safety Representative, reporting to John T. Broderick, Superintendent, Safety Department.

"Hitting the ball" hard every day

Obsolete Methods

I got to talking with a fellow-employee the other day and I pass this along as he gave it to me:

"System? Ye gods! Some of our people don't know the first principles of it. Take an office organization which until a couple of months ago had its entire headquarters right opposite ours. Mind you, it was an important cog in the big wheel. Supervising a certain phase of work all over the Railroad, employing an office force of half a dozen and a road force of twice that number.

"In fact their work was so important that it required many commercial telegraph messages and I soon began to wake up to the fact that during the noon hour, twelve to one, all such messages intended for that office had to be delivered to my office because they closed shop during that period and all went to lunch.

"I didn't mind the bother of handling the telegrams nor the nuisance of hearing the telephone frantically ringing between twelve and one. But it did get on my nerves to think how far back they were in the modern procession of efficient workers. So, one day I asked the Chief Clerk in a casual way, 'Why?'

"'Oh,' he said, 'so-and-so lives about two blocks from here and his wife wants him home at 12.15 sharp for lunch. The two stenographers claim they get better service at the nearby restaurant if they get there early. I have to get a car leaving at 12.10 or I get back too late.' And so forth.

"Still I am glad to say the inquiry *did* make a difference because their office is open during the noon hour now."

Peanut Politics

Have you read the findings of the many recent Congressional investigations of the graft, inefficiency and waste of war expenditures? Some peanut politics!

Here seems to be the procedure: The majority party has a majority of one on all the big committees, and the same majority on the sub-committees making the actual investigations. Expert witnesses are called (at expert prices per day), charges are made—then counter-charges. The majority of the sub-committee reports wilful, woe-ful waste. The minority of the sub-committee files a minority report giving a clean bill of health. The two reports are forwarded to the larger committee and the same *fol-de-rol* is repeated.

Aside from the splendid opportunity for newspaper headlines in bold face type, and for campaign fodder, looking to the all important proceedings of November 2, next, what happens? Nothing but a waste of the taxpayers' money. Isn't there some way we can junk this kind of buffoonery?

Our New Associate Editor

Miss Margaret Talbott Stevens, who, beginning with this issue, becomes Associate Editor of the MAGAZINE, needs no introduction to our readers. For many months scarcely an issue of the MAGAZINE has been published without one or more delightful contributions from her pen. These she prepared after her busy working day as File Clerk in the office of the General Superintendent Transportation. That they have been enjoyed, has been amply evidenced by the fact that Miss Stevens has received many letters from correspondents, not only among our employes, but among others who happened to see copies of the MAGAZINE, thanking her for the pleasure her poems and articles have given them.

Miss Stevens particular work will be the building up of the Woman's Department. We want the MAGAZINE to be read as widely as possible in the homes of the employes because the home circle should know something of the activities and ideals of the Big Railroad which employs the family bread winners.

Miss Stevens can be written to direct, as Associate Editor of the BALTIMORE AND OHIO MAGAZINE, Mount Royal Station, Baltimore, Md., by anyone who is interested in the special work which she will cover.

We Felt Flattered

A recent request for the MAGAZINE came from a news dealer at Granite, Okla., hundreds of miles from the nearest point on our lines. He said that he had a call for the MAGAZINE and that if we would send him a copy he would arrange to stock it in order to take care of the demand. I felt much like the darkey stevedore who was asked to change a twenty dollar bill—

Until——

I happened to meet an old Railroad friend in the consolidated ticket offices in our Baltimore and Ohio Building. I had not seen him for fifteen months and was glad to renew acquaintance until—he said:

"By the way, is the Railroad still publishing the MAGAZINE?"

A Baltimore and Ohio man of many years' service, working each day in the Baltimore and Ohio Building—and not knowing that the MAGAZINE is being published!

There is something rotten in the state of —— well, I will let you complete the sentence, and I could not feel much worse if you used "the Editor" to do it.

A Secretary of Aeronautics

Why not a Secretary of Aeronautics in the Cabinet at Washington? The United States produced the first successful flying machine, but largely because the new science and industry was given such poor support by the Government, we were compelled to work at extravagant speed and expense during our participation in the War to provide our forces with flying craft. Even then reports indicate that we failed rather dismally in manufacturing satisfactory machines.

The men now in the air service are almost a unit in asking for a separate cabinet department for aeronautics, controlled by neither the Army nor the Navy. They tell of the important commercial aspect of the business of flying; the fact that flying machines are demonstrating their dependability for certain kinds of transportation; for scouting purposes in the prevention of forest fires; in the fishing industry in locating schools of fish; as substantial aids in making better maps of our coast line, etc.

All of these uses, practicable and valuable in themselves, are, however, subsidiary to the supreme purpose

of putting our aircraft manufacturing industry in such shape as to insure our competing with other countries on a parity or better in case of war.

Nothing developed during the World War faster than the science of aeronautics—except, perhaps, chemical warfare. And the future increasing possibilities of the aeroplane in war are so tremendous that nothing should be left undone in this country to insure our being perfectly prepared in this branch of the service.

Leading unbiased opinion is that our aircraft industry can be stimulated by the leadership of a separate cabinet department devoted to its development; that it is not wise to make aeronautics an adjunct of either the Army or the Navy; that in warfare the aid which aeronautics can give to both Army and the Navy can be best utilized if aeronautics is made an independent department.

Official jealousy and narrow-visioned bureaucracy have impeded the progress of many worth-while reforms. We hope our country is alive to the importance of the development of our aircraft industry and that such obstacles as these will not be permitted to stand in its way.

Intensive Salesmanship

On the little way train which runs from Yarmouth to Halifax, Nova Scotia, on the north coast of the peninsula—and there is only one train a day—I sat behind a traveling salesman. He was evidently vending milking machines, for as I glanced over his shoulder I saw an important-looking document with this full page title: "The Construction of the Udder Pulsator."

If gentle, old brown Betsy, quietly chewing her cud in the green, grazing meadow, knew that scientific dairying had produced this masterpiece, how she would begin to look up in the world!

How Do You Like the "New" Magazine?

To most of our readers the changes in the size and style of the MAGAZINE shown in this issue will be a surprise, and, we hope, a pleasant one.

These changes have been made in the belief that they will make the MAGAZINE more readable. Certainly the new size has the advantage of being able to be folded once and placed in the pocket, much more conveniently than the former smaller size with its larger number of pages.

The Editor will be glad to hear how our readers like these changes, not with the idea of publishing any comments in the MAGAZINE, but simply for information purposes.

Let No Man Forget!

The very idea of the power and the right of the people to establish government presupposes the duty of every individual to obey the established government. All obstructions to the execution of the laws, all combinations and associations, under whatever plausible character, with the real design to direct, control, counteract or awe the regular deliberation and action of the constituted authorities, are destructive of this fundamental principle, and of fatal tendency. They serve to organize faction, to give it an artificial and extraordinary force; to put, in the place of the delegated will of the nation, the will of a party, often a small but artful and enterprising minority of the community. . . . However combinations or associations of the above description may now and then answer popular ends, they are likely, in the course of time and things, to become potent engines, by which cunning, ambitious and unprincipled men will be enabled to subvert the power of the people and to usurp for themselves the reins of government, destroying afterward the very engines which have lifted them to unjust dominion.—From Washington's Farewell Address.

Kipling at Princeton

In the usual compilation of senior statistics the Princeton class of 1920 has selected its favorites. The Princetonian of 20 years ago who scans the list to see how the gods of his day have fared, notices one striking fact, the abiding popularity of Rudyard Kipling. Brown eyes give place to blue, Norma Talmadge has succeeded Maude Adams, the one time idol of the undergraduate world, but Kipling remains unchallenged. He was the favorite poet of 1900 and is still the favorite of 1920 with "If" as his best liked poem. Time has obliterated old land marks, a new generation has sought new favorites, but the author of "Danny Deevee," "Kim" and "Mandalay" has the same human appeal today that he had 20 years ago.

By Their Fruits Ye Shall Know Them

I followed Brakeman Genn off the steps of train No. 64 at Mount Royal Station one morning during April. Turning down the platform toward the gate I saw that he had made the intervening distance of 50 feet in the proverbial hop, skip and jump and was already on his way back to the car step, carrying a big, heavy suitcase. Behind him trailed a woman passenger of ample avoirdupois, radiating a smile which showed her pleasure over the courtesies shown.

No; Brakeman Genn did not know the woman. It is a good habit he has and he works at it consistently and well.

How Nature Teaches

J. M. Byrne, our Railroad Gardener, who lives at Relay, Md., has prepared a most interesting article on the history of Relay, particularly in connection with the development of our Railroad. We hope to have this in the MAGAZINE at an early date.

Mr. Byrne is a veritable nestor of wisdom in the pleasing and fruitful practice of horticulture. He knows gardens, shrubbery and trees as do few men, and much of his learning is from painstaking and long continued personal observation. He told me a little story the other day which suggested the title for this paragraph:

"A good deal of our work is in making our station properties look attractive by the planting and cultivation of hedges. Several years ago we got a new variety and expert opinions differed radically as to the number of times a year these should be trimmed to get the best results. One of the hedges of this variety happened to be along a solid board fence, on the other side of which cows were out in pasture. They took a liking to the hedge and in that particular spot kept it trimmed down neatly all along the top to the level which they could reach over the fence. This hedge quickly grew to be stronger and much more luxurious than any hedge of the same variety on the System. When experts failed to determine how it should be cut, the cows proved it instinctively and conclusively."

The Telephone—the Faithful Servant of the Railroads

By Della M. Hain

Telegraph Department

The telephone is one of the strongest threads which serve as communicative links between the departments of the railroad. The interesting tale of the beginning and of the rapid development of the telephone is told in every American history, but there are many of us who have not followed the story of the Baltimore and Ohio telephone lines since the early history of the road.

Our American telephone lines have been severely criticized—by Americans. But those who have seen service in foreign countries and who have had any dealings with telephones in other sections of the world can appreciate that the highest development of the telephone service is in our own land and at the command of everybody. The war was a big factor in retarding the growth of the telephone, a hindrance to both public and private exchanges, a delay to constructive changes; the technical phases of installation and of operation suffered; progress was at a standstill. Now, however, we may expect great advancement through science and an accompanying improvement in service. The cooperation of the public must be met through the counter responsibility of the operators; the result will be a mutual satisfaction and appreciation.

IN 1899 a Private Branch Exchange was installed in our main office building, Baltimore and Calvert Streets, Baltimore, Md. The telephone facilities consisted of a single position board located in the annex of the office building which was situated over the shop of the "Five Little Tailors" adjacent to the Baltimore and Ohio Building.

In 1902 our telephone service had increased to such an extent that a two-position

board was installed. This was used until the Baltimore and Ohio Building was destroyed in the disastrous fire which occurred in 1904. It was then necessary to arrange quickly for temporary Private Branch Exchange service, which was installed in the private office of the Superintendent of Telegraph, then located on the second floor of Camden Station, it being convenient to our lines extending to Locust Point, Mt. Clare, Riverside, Curtis Bay and Carrolls. A tem-

porary cable was dropped from the window and connected to the terminal located in the cellar of Camden Station. Trunks were arranged over Baltimore and Ohio private lines to Mt. Clare, thence by C. & P. circuits into the Gilmore Exchange, the St. Paul exchange having been destroyed by the fire. This exchange was utilized until other quarters could be obtained, when it was installed in a room on the second floor of Camden Station. This was used until after the erection of the new Baltimore and Ohio Building at Baltimore and Charles Streets, as the General Manager and other officials continued their offices at Camden Station until the completion of the new building.

The new exchange was installed in the Baltimore and Ohio Building in 1906 and contained at that time six positions, each position being operated during the day. At night only one operator was employed. Later it was found necessary to enlarge the exchange on account of the increased number of telephones, and on November 17, 1917, there was placed in service in the Baltimore and Ohio Building a new Private Branch Exchange consisting of ten regular and two toll positions. This was a "rush" installation, due to war emergencies, and is especially arranged for railroad service. The switchboard is the largest Private Branch Exchange in the State of Maryland.

HERE THEY ARE! OUR OWN "HELLO" GIRLS

Left to right: Misses Bessie Sprinkle, Kathlyne Cavanaugh, Victoria Sabiston, Mary Ripple, Viola West, Anna Culberston, Gladys Rinter, Elnora Dean, Elizabeth Harre, Madelaine Gary

There are at present 609 stations connected with the exchange, 535 being located in the Baltimore and Ohio Building, and the balance at outlying points such as Camden Station, Mt. Clare, Locust Point, Curtis Bay, Canton, etc.

The Size of the Job

Fifty-eight trunk lines afford communication with the public, over which approximately 660,000 calls per annum are made. All of these trunk lines are equipped with visual signals so that the operator at any position on the board can tell whether any of the trunk lines are busy. One hundred and eighty conversations can be held at the same time, and, including intercommunicating calls within the exchange, an average of 10,000 are made per day. It can be readily understood that in handling this large volume of business, in order to give prompt service, it is very important to have the cooperation of all persons. We should all "*Call by number invariably.*" This will give more prompt and efficient service than when calls are made by name, because of the fact that while an operator may be familiar with a certain position of the switchboard, on account of sickness, vacation, reduced force, etc., it is frequently necessary for them to work in other positions.

And the Expense

We also wish to call attention to the large number of outgoing calls to the public from our Private Branch Exchange. It should be understood that the Railroad is charged for each call, this particular service now costing a considerable amount per month. Not only is each call charged for, but after the conversation is held for a duration of over five minutes another call is assessed, so that a prolonged conversation may cost considerably more than the charge for one call.

We have tie lines connected with the Pennsylvania Railroad, Western Maryland Railroad, Camden Station, Riverside and Mt. Clare Exchanges, which give us direct service with these points.

We also have composite trunk lines which connect through Baltimore Private Branch Exchange with similar exchanges at Washington, Philadelphia, Cumberland and Brunswick, each trunk line consisting of two copper wires which afford two Morse telegraph circuits and one metallic telephone circuit (or three circuits over two wires). This is accomplished by bridging condensers across the two Morse telegraph wires, through which the alternating current, used in the operation of the telephone circuit, can pass, but the direct current used in the operation of the telegraph circuits cannot pass. Thus the two Morse circuits are prevented from becoming crossed with each other by the bridge.

We are able to talk from any station within our Private Branch Exchange at Philadelphia over our trunk line from Phila-

She straightens out our telephone tangles—
Miss Ethel Binau, manager of Exchange

delphia to Baltimore, over a second trunk line from Baltimore to Cumberland, and a third line extending from Cumberland to Keyser, a total distance of 295 miles. At the same time we are talking over this pair of wires between Philadelphia and Keyser, we use the same two wires as Morse circuits to Cumberland.

The number of toll calls made over our trunk line between Baltimore and Cumberland, at the same rate charged by the Telephone Company, would amount to approximately \$15,000 per annum. You will see from this that it is necessary to reduce the conversations over our trunk lines to a minimum, thus making the lines available for others and avoid routing the excess calls over the Telephone Company's lines at regular rates. Our bills from the Telephone Company for long distance tolls aggregate a considerable amount per annum; therefore we would respectfully ask our patrons to be brief in using the telephone. Kindly bear this in mind.

Make your conversation as concise as possible; this is especially important when using the Railroad Company's trunk lines to other cities, as the applications to use these lines are heavy, it not being unusual to have fifteen on the waiting list. We have had frequent cases where a party connected over one of our busy lines would ask the party called to look up some information or locate another party. This results in the line being held from ten to fifteen minutes, during which time many others are complaining to the operator because they want the line for vitally important business. Also bear in mind that when your telephone is tied up there is often some one being delayed who wants you.

A very important part of a telephone conversation is the tone of voice used; speak to the person to whom you telephone as though you were talking to him face to face; answer your telephone promptly; advise the Manager as to changes in department or office personnel. When it is necessary to recall

the operator, do so by moving the receiver hook up and down *very slowly*, for the quick jerky movement of the hook does not properly signal the operator.

To sum up, let us say that our telephone service is a big door, larger than any of the entrances to our offices; consider, just for a moment, the result if all telephone conversations were held by visits to our offices.

We believe these suggestions will be found helpful, for it can readily be seen that with the number of calls handled, not only at Baltimore but at other points where we have Private Branch Exchange service, our operators are indeed very busy. It is our desire to render the very best service. We can only do our part—and will do it cheerfully—if you will do yours.

John H. Milburn, Office Engineer, Honored

JOHN H. MILBURN, office engineer connected with our Engineering Department for 21 years, has been appointed by Mr. H. R. Safford, President of the American Railway Engineering Association, as a representative of that Association on the Advisory Council to the United States Board of Surveys and Maps.

This Advisory Council will be composed of one representative from all the major Engineering Associations, and will function in behalf of the public with the newly created Board of Surveys and Maps of the Federal Government, by Executive Order dated December 30, 1919.

The Board is composed of representatives from the following Agencies and Executive Departments of the Government, to co-ordinate and standardize all surveying and mapping activities of the Federal Government and to harmonize these with similar non-Federal activities in the interest of efficiency and economy:

Corps of Engineers, U. S. Army; U. S. Coast and Geodetic Survey, Department of Commerce; U. S. Geological Survey, Department of Interior; General Land Office, Department of Interior; Topography Branch, Post Office Department; Bureau of Soils, Department of Agriculture; U. S. Reclamation Service, Department of Interior; Bureau of Public Roads, Department of Agriculture; Bureau of Indian Affairs, Department of Interior; Mississippi River Commission, War Department; U. S. Lake Survey, War Department; International (Canadian) Boundary Commission, Department of State; Forest Service, Department of Agriculture; U. S. Hydrographic Office, Navy Department.

Mr. Milburn will represent all railroads, not only of this country but of Canada and foreign countries, through the American Railway Engineering Association.

—•—
**Unload a car promptly,
Send it on its way,
Then we'll save a car
Each and every day.**

Extracts, Esch—Cummins Bill*

Title III—Disputes Between Carriers and Their Employes and Subordinate Officials

SECTION 300. When used in this title—

(1) The term "carrier" includes any express company, sleeping car company, and any carrier by railroad, subject to the Interstate Commerce Act, except a street, interurban, or suburban electric railway not operating as a part of a general steam railroad system of transportation;

(2) The term "Adjustment Board" means any Railroad Board of Labor Adjustment established under Section 302;

(3) The term "Labor Board" means the Railroad Labor Board;

(4) The term "commerce" means commerce among the several States or between any State, Territory, or the District of Columbia and any foreign nation, or between any Territory or the District of Columbia and any State, or between any Territory and any other Territory, or between any Territory and the District of Columbia, or within any Territory or the District of Columbia, or between points in the same State but through any other State or any Territory or the District of Columbia or any foreign nation; and

(5) The term "subordinate official" includes officials of carriers of such class or rank as the Commission shall designate by regulation formulated and issued after such notice and hearing as the Commission may prescribe, to the carriers, and employes and subordinate officials of carriers, and organizations thereof, directly to be affected by such regulations.

SECTION 301. It shall be the duty of all carriers and their officers, employes and agents to exert every reasonable effort and adopt every available means to avoid any interruption to the operation of any carrier growing out of any dispute between the carrier and the employes or subordinate officials thereof. All such disputes shall be considered and, if possible, decided in conference between representatives designated and authorized so to confer by the carriers, or the employes or subordinate officials thereof, directly interested in the dispute. If any dispute is not decided in such conference, it shall be referred by the parties thereto to the board which under the provisions of this title is authorized to hear and decide such dispute.

SECTION 302. Railroad Boards of Labor Adjustment may be established by agreement between any carrier, group of carriers, or the carriers as a whole, and any employes or subordinate officials of carriers, or organization or group of organizations thereof.

SECTION 303. Each such Adjustment Board shall, (1) upon the application of the chief executive of any carrier or organization of employes or subordinate officials whose members are directly interested in the dispute, (2) upon the written petition signed by not less than 100 unorganized employes or subordinate officials directly interested in the dispute, (3) upon the Adjustment Board's own motion, or (4) upon the request of the Labor Board whenever such board is of the opinion that the dispute is likely substantially to interrupt commerce, receive for hearing, and as soon as practicable and with due diligence decide, any dispute involving only grievances, rules, or working conditions, not decided as provided in Section 301, between the carrier and its employes or subordinate officials, who are, or any organization thereof which is, in accordance with the provisions of Section 302, represented upon any such Adjustment Board.

SECTION 304. There is hereby established a board to be known as the "Railroad Labor Board" and to be composed of nine members as follows:

(1) Three members constituting the labor group, representing the employes and subordinate officials of the carriers, to be appointed by the President, by and with the advice and consent of the Senate, from not less than six nominees whose nominations shall be made and offered by such employes in such manner as the Commission shall by regulation prescribe;

(2) Three members, constituting the management group, representing the carriers, to be appointed by the President, by and with the advice and consent of the Senate, from not less than six nominees whose nominations shall be made and offered by the carriers in such manner as the Commission shall by regulation prescribe; and

(3) Three members, constituting the public group, representing the public, to be appointed directly by the President, by and with the advice and consent of the Senate.

Any vacancy on the Labor Board shall be filled in the same manner as the original appointment.

SECTION 305. If either the employes or the carriers fail to make nominations and offer nominees in accordance with the regulations of the Commission, as provided in paragraphs (1) and (2) of Section 304, within thirty days after the passage of this Act in case of any original appointment to the office of member of the Labor Board, or in case of a vacancy in any such office within fifteen days after such vacancy occurs, the

President shall thereupon directly make the appointment, by and with the advice and consent of the Senate. In making any such appointment the President shall, as far as he deems it practicable, select an individual associated in interest with the carriers or employes thereof, whichever he is to represent.

SECTION 306. (a) Any member of the Labor Board who during his term of office is an active member or in the employ of or holds any office in any organization of employes or subordinate officials, or any earrier, or owns any stock or bond thereof, or is pecuniarily interested therein, shall at once become ineligible for further membership upon the Labor Board; but no such member is required to relinquish honorary membership in, or his rights in any insurance or pension or other benefit fund maintained by, any organization of employes or subordinate officials or by a carrier.

(b) Of the original members of the Labor Board, one from each group shall be appointed for a term of three years, one for two years, and one for one year. Their successors shall hold office for terms of five years, except that any member appointed to fill a vacancy shall be appointed only for the unexpired term of the member whom he succeeds. Each member shall receive from the United States an annual salary of \$10,000. A member may be removed by the President for neglect of duty or malfeasance in office, but for no other cause.

SECTION 307. (a) The Labor Board shall hear, and as soon as practicable and with due diligence decide, any dispute involving grievances, rules, or working conditions, in respect to which any Adjustment Board certifies to the Labor Board that in its opinion the Adjustment Board has failed or will fail to reach a decision within a reasonable time, or in respect to which the Labor Board determines that any Adjustment Board has so failed or is not using due diligence in its consideration thereof. In case the appropriate Adjustment Board is not organized under the provisions of Section 302, the Labor Board, (1) upon the application of the chief executive of any carrier or organization of employes or subordinate officials whose members are directly interested in the dispute, (2) upon a written petition signed by not less than 100 unorganized employes or subordinate officials directly interested in the dispute, or (3) upon the Labor Board's own motion if it is of the opinion that the dispute is likely substantially to interrupt commerce, shall receive for hearing, and as soon as practicable

* See Page 4, Article by President Willard.

and with due diligence decide, any dispute involving grievances, rules, or working conditions which is not decided as provided in Section 301 and which such Adjustment Board would be required to receive for hearing and decision under the provisions of Section 303.

(b) The Labor Board, (1) upon the application of the chief executive of any carrier or organization of employees or subordinate officials whose members are directly interested in the dispute, (2) upon a written petition signed by not less than 100 unorganized employees or subordinate officials directly interested in the dispute, or (3) upon the Labor Board's own motion if it is of the opinion that the dispute is likely substantially to interrupt commerce, shall receive for hearing, and as soon as practicable and with due diligence decide, all disputes with respect to the wages or salaries of employees or subordinate officials of carriers, not decided as provided in Section 301. The Labor Board may upon its own motion within ten days after the decision, in accordance with the provisions of Section 301, of any dispute with respect to wages or salaries of employees or subordinate officials of carriers, suspend the operation of such decision if the Labor Board is of the opinion that the decision involves such an increase in wages or salaries as will be likely to necessitate a substantial readjustment of the rates of any carrier. The Labor Board shall hear any decision so suspended and as soon as practicable and with due diligence decide to affirm or modify such suspended decision.

(c) A decision by the Labor Board under the provisions of paragraphs (a) or (b) of this section shall require the concurrence therein of at least 5 of the 9 members of the Labor Board: *Provided*, That in case of any decision under paragraph (b), at least one of the representatives of the public shall concur in such decision. All decisions of the Labor Board shall be entered upon the records of the board and copies thereof, together with such statement of facts bearing thereon as the board may deem proper, shall be immediately communicated to the parties to the dispute, the President, each Adjustment Board, and the Commission, and shall be given further publicity in such manner as the Labor Board may determine.

(d) All the decisions of the Labor Board in respect to wages or salaries and of the Labor Board or an Adjustment Board in respect to working conditions of employees or subordinate officials of carriers shall establish rates of wages and salaries and standards of working conditions which in the opinion of the board are just and reasonable. In determining the justness and reasonableness of such wages and salaries or working conditions the board shall, so far as applicable, take into consideration among other relevant circumstances:

- (3) The hazards of the employment;
- (4) The training and skill required;
- (5) The degree of responsibility;
- (6) The character and regularity of the employment; and

(7) Inequalities of increases in wages or of treatment, the result of previous wage orders or adjustments.

SECTION 308. The Labor Board—

(1) Shall elect a chairman by majority vote of its members;

(2) Shall maintain central offices in Chicago, Illinois, but the Labor Board may, whenever it deems it necessary, meet at such other place as it may determine;

(3) Shall investigate and study the relations between carriers and their employees, particularly questions relating to wages, hours of labor, and other conditions of employment and the respective privileges, rights, and duties of carriers and employees, and shall gather, compile, classify, digest, and publish, from time to time, data and information relating to such questions to the end that the Labor Board may be properly equipped to perform its duties under this title and that the members of the Adjustment Boards and the public may be properly informed;

(4) May make regulations necessary for the efficient execution of the functions vested in it by this title; and

(5) Shall at least annually collect and publish the decisions and regulations of the Labor Board and the Adjustment Boards and all court and administrative decisions and regulations of the Commission in respect to this title, together with a cumulative index-digest thereof.

SECTION 309. Any party to any dispute to be considered by an Adjustment Board or by the Labor Board shall be entitled to a hearing either in person or by counsel.

SECTION 310. (a) For the efficient administration of the functions vested in the Labor Board by this title, any member thereof may require, by subpoena issued and signed by himself, the attendance of any witness and the production of any book, paper, document, or other evidence from any place in the United States at any designated place of hearing, and the taking of a deposition before any designated person having power to administer oaths. In the case of a deposition the testimony shall be reduced to writing by the person taking the deposition or under his direction, and shall then be subscribed to by the deponent. Any member of the Labor Board may administer oaths and examine any witness. Any witness summoned before the board and any witness whose deposition is taken shall be paid the same fees and mileage as are paid witnesses in the courts of the United States.

(b) In case of failure to comply with any subpoena or in case of the contumacy of any witness appearing before the Labor Board, the board may invoke the aid of any United States district court. Such court may thereupon order the witness to comply with the

requirements of such subpoena, or to give evidence touching the matter in question, as the case may be. Any failure to obey such order may be punished by such court as a contempt thereof.

(c) No person shall be excused from so attending and testifying or deposing, nor from so producing any book, paper, document, or other evidence on the ground that the testimony or evidence, documentary or otherwise, required of him may tend to incriminate him or subject him to a penalty or forfeiture; but no natural person shall be prosecuted or subjected to any penalty or forfeiture for or on account of any transaction, matter, or thing, as to which in obedience to a subpoena and under oath, he may so testify or produce evidence, documentary or otherwise. But no person shall be exempt from prosecution and punishment for perjury committed in so testifying.

SECTION 311. (a) When necessary to the efficient administration of the functions vested in the Labor Board by this title, any member, officer, employee, or agent thereof, duly authorized in writing by the board, shall at all reasonable times for the purpose of examination have access to and the right to copy any book, account, record, paper, or correspondence relating to any matter which the board is authorized to consider or investigate. Any person who upon demand refuses any duly authorized member, officer, employee, or agent of the Labor Board such right of access or copying, or hinders, obstructs, or resists him in the exercise of such right, shall upon conviction thereof be liable to a penalty of \$500 for each such offense. Each day during any part of which such offense continues shall constitute a separate offense. Such penalty shall be recoverable in a civil suit brought in the name of the United States, and shall be covered into the Treasury of the United States as miscellaneous receipts.

(b) Every officer or employee of the United States, whenever requested by any member of the Labor Board or an Adjustment Board duly authorized by the board for the purpose, shall supply to such board any data or information pertaining to the administration of the functions vested in it by this title, which may be contained in the records of his office.

(c) The President is authorized to transfer to the Labor Board any books, papers, or documents pertaining to the administration of the functions vested in the board by this title, which are in the possession of any agency, or railway board of adjustment in connection therewith, established for executing the powers granted the President under the Federal Control Act and which are no longer necessary to the administration of the affairs of such agency.

SECTION 312. Prior to September 1, 1920, each carrier shall pay to each employee or subordinate official thereof wages or salary at a rate not less than that fixed by the decision of any agency, or railway board of adjustment in connection therewith,

established for executing the powers granted the President under the Federal Control Act, in effect in respect to such employe or subordinate official immediately preceding 12.01 a. m. March 1, 1920. Any carrier acting in violation of any provision of this section shall upon conviction thereof be liable to a penalty of \$100 for each offense. Each such action with respect to any such employe or subordinate official and each day or portion thereof during which the offense continues shall constitute a separate offense. Such penalty shall be recoverable in a civil suit brought in the name of the United States, and shall be covered into the Treasury of the United States as miscellaneous receipts.

SECTION 313. The Labor Board, in case it has reason to believe that any decision of the Labor Board or of an Adjustment Board is violated by any carrier, or employe or subordinate official, or organization thereof, may upon its own motion after due notice and hearing to all persons directly interested in such violation, determine whether in its opinion such violation has occurred and make public its decision in such manner as it may determine.

SECTION 314. The Labor Board may (1) appoint a secretary, who shall receive from the United States an annual salary of \$5,000; and (2) subject to the provisions of the civil-service laws, appoint and remove such officers, employes, and agents; and make such expenditures for rent, printing, telegrams, telephone, law books, books of reference, periodicals, furniture, stationery, office equipment, and other supplies and expenses, including salaries, traveling expenses of its members, secretary, officers, employes, and agents, and witness fees, as are necessary for the efficient execution of the functions vested in the board by this title and as may be provided for by Congress from time to time. All of the expenditures of the Labor Board shall be allowed and paid upon the presentation of itemized vouchers therefor approved by the chairman of the Labor Board.

SECTION 315. There is hereby appropriated for the fiscal year ending June 30, 1920, out of any money in the Treasury not otherwise appropriated, the sum of \$50,000, or so much thereof as may be necessary, to be expended by the Labor Board, for defraying the expenses of the maintenance and establishment of the board, including the payment of salaries as provided in this title.

SECTION 316. The powers and duties of the Board of Mediation and Conciliation created by the Act approved July 15, 1913, shall not extend to any dispute which may be received for hearing and decision by any Adjustment Board of the Labor Board.

For the Lover of Books

Interesting New Blue Print on Common Defects on Locomotives

L. S. CUNNINGHAM, mechanical engineer, Western Lines, Cincinnati, recently prepared a very interesting diagram showing common defects on locomotives which are violations of the Interstate Commerce Commission laws. This has been blue printed under No. 38300, and copies of it can be had by writing A. G. Sandman, mechanical engineer, Mount Clare.

Mr. Cunningham took all of the reports of the Interstate Commerce Commission on locomotive defects over a period of years, eliminated the duplications, and found that there were several hundred typical defects called to the attention of the Commission by inspectors.

The blue print shows an outline drawing of the Baltimore and Ohio locomotive and each of these defects is pointed out by an arrow, at the other end of which is printed a caption describing the defect in question.

This chart has been warmly commended by the officials of our Motive Power Department. Mr. Cunningham, the originator, seems to be the sort of fellow who is constantly on the lookout for opportunities to advance the interests of the Railroad, even though it calls for extra work on his part, sometimes outside of the sphere of the daily routine. This spirit is particularly appreciated by the writer, for Mr. Cunningham has done some very interesting and admirable pen and ink work for the MAGAZINE, the cover of the March issue being from his pen, as is also the table of contents design in this number.

Problem in "Glamour" Attracts Discussion

A BOOK just published, entitled "Glamour," is attracting discussion because of the black and white manner in which it handles a very human problem. The book is by W. B. Maxwell, the noted English novelist, whose "Devil's Garden" created an almost equal stir among literary critics several years ago. His present book, "Glamour," published by Bobbs-Merrill, tells the story of a man in middle life, happily married, with every good thing that life can offer his own, who suddenly comes under the spell of the girl he had loved in his youth and who is for him always "the unattainable

delight." The glamour of things unattainable which may either establish a high vision for a man or may lure him to his doom form the title and theme of the novel. Whether it would not have been better for Vaile to have married Diana in the first place rather than Mabel, whether Diana could really have done more for him had he married her than Mabel, a man's genuine love for his wife and his eternal quest after an elusive love whose spell is oddly genuine—these are some of the points involved in the book which make it at once grippingly interesting and full of food for discussion.

The story cannot be read hurriedly or lightly. It is a high-powered melodrama which borders on tragedy in spots and is saved from that tragedy only by a family confessional and a wife's keen insight into the heart of her husband. The statement that the story "turns out all right" is being assailed by some critics, who declare Vaile should have married Diana to begin with and no future of his can be complete without her. Have it as you will, the novel "Glamour" contains a plot to grip the interest of all readers and a problem which will start those same readers into a serious discussion of the story.

Lenin, the Man and His Work

SO much of the information which we get from Russia is censored, changed and misinterpreted that it is very hard for one to form an honest opinion about conditions there. In one paper we read an article written by a so-called eye-witness and we immediately conclude that all Bolshevism and Sovietism and everybody and everything connected with them are unqualifiedly bad. Again we may see what purports to be the story of reputable witnesses who are not, by any means, willing to admit any such thing to be the case.

In order to be fully and fairly informed on Bolshevism, which now seems as never before to be shaking the very foundations of government in many parts of the world, one should be willing to read everything he can on the subject, either pro or con. For that reason I have just finished reading the subject of these paragraphs. I cannot recommend it as the truth, except as the publishers state that the authors are telling the story as they saw it. I can recommend the story, however, as an interesting history of a man who appears to be one of the most remarkable characters in modern history.

Don't Delay!
Load all Cars to Capacity!
Load and Unload Quickly!

Mechanic Tomlinson

Wounded five times, and decorated with the Croix de Guerre and the Distinguished Service Cross, the subject of this story is a Baltimore Division Trainman and says there's no job like railroading.

OF ALL the Baltimore and Ohio boys who saw service in France during the war, the most interesting we have met is the subject of this story. For Mechanic Tomlinson did more than a man's share of fighting, was severely wounded, and still speaks of his service in the Army as a wonderful experience. To put it in his own words—"I wouldn't take a million dollars for the twenty months in France."

Tomlinson was one of the first of the Baltimore and Ohio trainmen to volunteer for the great adventure. He enlisted July 17, 1917, and was sent to Fort Slocum, N. Y., for his equipment. After two months of preliminary training in Syracuse, N. Y., he took ship to England with his division, the Second, and on October 2 arrived at Havre, France.

The training on the other side consisted of seven months work with the British and French armies, preliminary to the first engagement in which his regiment, the Ninth Infantry, was engaged with the French on March 17, in the Verdun sector.

The Ninth Infantry, Tomlinson says, is the oldest American regiment in existence. It was the first to go over the "Wall at Peking" during the Boxer uprising and has a long and distinguished record.

This regiment fought four engagements with the French before being sent in with other units of the Second Division to the Chateau Thierry sector on May 30, when we were celebrating Decoration Day in this country.

Wounded at Vaux

They stayed there until July 9, when, in the famous battle of Vaux, in the general engagement of Chateau Thierry, Tomlinson was hit in five places, three of the wounds being from machine gun bullets and the other two from shrapnel.

He was invalided back to hospitals in Paris and Vichy, but returned from a reserve unit in time to be at the battle of St. Mihiel in early September. Tomlinson's battalion was in reserve here, although his regiment was engaged in the fighting.

On October 1, his regiment reached Rheims and fought there for nine days, using the headstones in a graveyard as makeshift protection trenches. This engagement took the regiment with the other units of the famous Second Division through the Hindenburg line and into territory which had not been occupied during any part of the war up to that time by any Allied troops.

After this battle and a period of rest for about two weeks, interspersed with short marches to get the division to its next

objective, he arrived at the Argonne front and fought from November 1 until November 11, Armistice Day. His division was then within striking distance of Sedan, the great objective of Pershing in this sector, and the place where the American general hoped to bring about a great second battle of Sedan, this time turning the tables on the Germans who, it will be remembered, conquered Napoleon III and the French army here in 1870, closing the Franco-Prussian war. After its eleven days fighting in this sector the Second Division was relieved by

Mechanic Raymond W. Tomlinson

the First Division, and it was for this reason that the First Division shortly afterward were the first troops to reach the city of Sedan.

His Decorations

Tomlinson was awarded two medals for extraordinary valor during his service. The citation for the first, given him during the battle of Rheims, and signed, it will be noted, by the great Marshal Petain, then Commander-in-Chief of the French Armies of the East, reads viz.:

Mechanic Raymond W. Tomlinson, No. 398965, Company H, Ninth Regiment Infantry, U. S. A.:

"On October 3, 1918, in the attack on Blanc-Mont, he assured the transmission of messages under a violent artillery and machine gun fire. Two of his comrades received bad wounds, and he gave them first aid, and remained with them until the arrival of the stretcher bearers."

At Grand Headquarters of the General, February 16, 1919.

The Marshal,
Commander-in-Chief of the French
Armies of the East.
PETAIN.

Tomlinson laughs now when he tells about the French ceremony at the presentation of the *Croix de Guerre*. It was handed to him by Petain in person, who planted, in true French custom, a kiss on both of his cheeks after pinning the medal on his breast. His *Croix de Guerre* carries a silver star, which indicates a higher rank of merit than this medal without any additional decoration.

For his heroism in carrying messages over a period of nine days (on the second of which he was shot through the knee) under heavy artillery and machine gun fire, he won the American Distinguished Service Cross. His citation for this medal reads as follows:

Raymond W. Tomlinson (Army Serial No. 398965), mechanic, Company H, Ninth Infantry, Second Division. For extraordinary heroism in action near Vaux, France, July 1st to 10th, 1918. During the attack on Vaux, Mechanic Tomlinson received a rifle ball wound in the right knee. Although suffering great pain he made no mention of his wound. Later, during the attack, he assisted in the capture of two officers and five men. During the nine days that his company continued on duty in the front line, Mechanic Tomlinson carried numerous messages to front line platoons, while exposed to heavy artillery and machine gun fire.

In addition to these medals and citations, Tomlinson was again cited in General Orders No. 40, A. E. F., as a member of Company H, Ninth Infantry, for heroism during the battle of Belleau Woods on the nights of June 6 and 7, 1918.

Tomlinson's enlistment record gives the names of the engagements of the Toulon-Tryon sector, Verdun; the Aisne Defensive; Chateau Thierry; and the Champagne and Meuse-Argonne Offensives. Tomlinson's regiment was in the line for 162 days altogether. When his battalion, with a normal strength of about one thousand men, came out of the battle of Rheims, the four companies, E, F, G and H, had been so badly decimated that they had to be combined to make a single company. Of sixty officers who started with the regiment but nine returned to this country. When the regiment paraded on Fifth Avenue, N. Y., after reaching the United States, there were but 471 men of the 3,000 who started with it.

Only One Man in Company Not Wounded

But one man of Company H, in which Tomlinson was mechanic, was neither killed nor wounded, and he, it is interesting to note, is a Baltimore boy, living on Falls Road. Tomlinson went into his first engagement and fought as a private until wounded in the Chateau Thierry sector. He was then made mechanic because it was impossible for him to drill.

Tomlinson's hobby while in the Army was writing. He contributed frequently to his division newspaper and his stories of the reception given the American troops in the liberated towns of France and Belgium are especially graphic.

Tomlinson came to the Baltimore and Ohio as a brakeman in 1916 and is still working in this capacity on the West End of the Baltimore Division.

All Chapters of the Veteran Employes' Associations were requested by the Editor of the MAGAZINE to submit the names and addresses of all their officers, so that these might be published for record purposes. The results of this request follow. Where the information given is not complete the Secretaries of the Chapters are requested to advise the Editor, so that corrections can be made in a future issue.

O'Neil, district supervisor of transportation, Youngstown, Ohio; Treasurer, P. Colligan, agent, Allegheny City, Pa. Executive Committee: James Aiken, agent, Youngstown, Ohio; M. Dempsey, conductor, Youngstown, Ohio; J. Houston, terminal trainmaster, Painesville, Ohio.

Baltimore Chapter

By C. R. Weir
Secretary

THE regular meeting of the Baltimore Division Veteran Employees' Association was held March 1 in Jr. O. U. A. M. Hall. The attendance was unusually large. Before engaging in the regular business, the assembly stood for one-half minute in respect to the memory of Brothers Sinnott, Wholey, Hooper, Morrow and Shea.

The leading feature of the occasion was two-fold, first, the presentation of prizes for the largest number of new members secured by the Veterans and by the Ladies' Auxiliary, respectively; secondly, a supper to the Veterans, given by the Ladies' Auxiliary.

The business of the Association was hastily handled so as to allow plenty of time for entertainment and supper.

Previous to the presentation of prizes, President Bowers introduced President Fauver, of the Martinsburg Veterans' Association, who, in a much appreciated talk, explained the causes that brought friendly and social success to his Chapter. President Bowers then presented to retiring Secretary Shaw, in behalf of the Association in appreciation of his five years' service, a handsome gold watch chain, which Brother Shaw accepted with sincere thanks. Brother Riley presented to Brother Harrigan \$10.00 cash as prize for selling largest number of entertainment tickets. Past President Covell presented to Past President Galloway a gold emblem ring for securing the largest number of new applicants. Owing to the illness of Brother Galloway, Mrs. Galloway accepted with appreciation this handsome award. Grand President Sturmer presented to Brother Hobbs an emblem button for the next largest number of new applicants. Mrs. Pennell received an emblem button, presented by Past President Pennell, as prize to the lady of the Auxiliary securing the largest number of Veteran applications.

Now for the feast! The dining room was decorated with bunting, American flags, palms and ferns, with festooning of red, white and blue crepe paper. President Mrs. C. H. Chipley had general supervision, Mrs. C. R. Weir had charge of the dining room with a creditable corps of assistants. Mrs. G. A. Bowers had charge of the guest table. The supper consisted of oysters, salads, pickles, rolls and coffee, followed by cigars.

The visitors were: President H. W. Fauver, Vice-President W. A. Burkhart, Secretary C. E. Auld, and Brothers C. P. Martin, Harvey Peer, Thomas Rockwell, John Young, J. W. Gantt, A. J. Criswell, and ladies, all from Martinsburg.

Pittsburgh Chapter

By C. A. Richardson
Chairman, Executive Committee

ABOUT 200 Veterans attended a meeting of the Veteran Employees' Association of the Pittsburgh Division in Odd Fellows Temple on Monday evening, April 12.

Among the out of town notables present were Robert M. Sheats, P. Harrington, James Wardly, Dennis Lowney and Anthony King. The following program was very enjoyable: A solo by Mr. Friel; a duet by the Dunnire Brothers; a solo by Mr. Elrick; a solo by Mr. Dunnire, with piano accompaniment by Mrs. Neilson. Their efforts to entertain us were much appreciated, and we hope to have them with us again.

Our President, William C. Cox, announced in a feeling manner the death of one of our members, Mr. Plant, who had been ill for nearly two years.

Some of the old Veterans spoke of railroading as practiced some forty or fifty years ago. It is wonderful what a reminiscent mood these old fellows get into at a gathering of this kind. The younger element likes the old stories and it does the youngsters good to attend.

Our Association is growing quite rapidly. Our meetings are always interesting, and we have appointed a committee to confer with the Veterans at Cumberland and Conellsville, with the object of having an outing at some convenient point some time during the coming Summer. Somerset, Pa., is being considered. We expect to have a membership of not less than 500 before the end of the year.

Grafton Chapter

THE regular monthly meeting of the Monongah Division Veteran Employees' Association was held on Monday night, April 12. The Veterans were addressed by Grand Vice-President Garvey and greatly enjoyed the fine talk he gave.

At this meeting three delegates were elected to represent this Association at the convention to be held in Baltimore at some future date. The delegates elected were: F. M. Keane, J. B. Kimmel, and Thomas Beall.

Resolutions of respect were drawn up and passed by this Association in honor of our deceased brothers, J. W. Grinnan and Robert Anderson.

Brother Grinnan had been in the service for 40 years. His death was brought about by an attack of acute indigestion. He was a faithful employe and was well liked by all who knew him.

Brother Anderson also was a faithful and a well beloved employe, having been in the service for 28 years. Both of the funerals were well attended by the Veterans, and resolutions of respect were sent to each of their families.

After passing on the above, the meeting was adjourned. The next meeting will be held on the second Monday in May.

Old Switch at Relay

THE several articles recently published in the MAGAZINE in regard to Baltimore and Ohio history at Relay, have stimulated a good deal of interest among our Veterans. One of these, Engineer J. E. Way, of the Baltimore Division, gives us another chapter on this historic place, in the accompanying photograph.

This shows Upton W. Howser standing at the penstock between the old Main Line and the Metropolitan Branch. The penstock was arranged so that engines on the Washington Branch and the Main Stem could take water in either direction by crossing from one main track to the other.

The hill in the background will be remembered by only a very few of our oldest active employes and pensioners. This had to be levelled for the substantial old stone station which still helps to make Relay one of the most attractive stopping points on our Railroad, and which was built and occupied in 1873.

John E. Spurrier, Jr., vouches for the accuracy of this information.

Old Switch at Relay—Original photograph loaned by Engineer J. E. Way, Baltimore Division

E. L. Weisgerber

Honored Career of Edward L. Weisgerber Ends

THE eventful life of Edward Ludwig Weisgerber, age 80, terminated on March 19 at his home at Newark, Ohio. This marked the passing of one of the best known and most respected officers of the Baltimore and Ohio. He gave the Company 46 years of loyal and vigorous service, and his memory will be honored by all employes whose good fortune it may have been to work for or with him during his long career as a railroad man.

Mr. Weisgerber was born in Wheeling, W. Va., on September 16, 1839. He entered the service of the Railroad as machinist apprentice, February 23, 1856, at Wheeling. Completing his apprenticeship he served as machinist from 1860 to 1866. He was made General Foreman at Wheeling in 1867, and Master Mechanic at Connellsville, in 1872. He was transferred to Wheeling in the same capacity in 1873, was promoted to Master Mechanic at Grafton in 1877, transferred in the same capacity to Newark in 1877, and in that year was made General Master Mechanic at Mount Clare shops. Here he served until 1902, when he retired from the service.

The Rose Beyond the Wall

By N. H. Davis

Chaplain, Philadelphia Veterans

WHILE attending the Twelfth Annual Banquet of the Veteran Employes' Association of the Philadelphia Division, I was much impressed by the appearance of my fellow-men there who had borne the burden and heat of the day for 20 years and more. That these men had bright eyes, active minds, and, to all appearances, strong bodies, proves beyond a doubt that men can care for both body and soul even while the storms of life toss them hither and thither.

I beheld men there who had passed the middle mile-stone of life and who still maintained their strength and youthful appearance.

True, the hand of affliction has touched and is still touching men in all walks of life. But the majority of these men are still in active service and able to maintain their families.

It has been said that men cannot come in contact with evil without absorbing it. But as the lily of the old mill pond, planted there by the hand of God in the mud and decomposition of vegetation, is cared for and brings forth a beautiful flower, so God in like manner cares for man, whom He has planted in this world of sin, and keeps him from absorbing the evil around and about him.

The men whom I saw at the banquet have come up from a life of toil. Yet each seemed to be satisfied with his lot, though some may have felt that their lives have not amounted to much after all. But I can say to any brother Veteran who has a like thought, that no man who has done his part and followed his vocation free from evil, has labored in vain.

There is always a time in the life of every man when the cup of cold water spoken of by the Master can be given to those who thirst. "Give me to drink," said the Master at the well. The fruits of our labor may be blossoming somewhere unknown to us. A lady once received a beautiful rose plant and planted it in her yard beside a stone wall. She watered it and dug around its roots and kept it free of insects. But she was much disappointed when it did not bloom. She thought her care for it had all been in vain and was very sad over what seemed to be a failure. But just before Autumn, while cleaning some undergrowth from around the wall, she discovered a crevice which admitted a ray of the setting sun. There, to her surprise, she beheld a

branch leading from the rose bush to the other side. And when she climbed up and gazed over she saw that her labors had not been in vain, for her bush had sent out a tender and beautiful branch which had brought forth the fruits of her labor. It had blossomed on the other side of the wall. So, my dear brothers, keep in good heart, for your labors will be sure to bloom on the other side of the wall. Be not weary in well doing, for we shall reap if we faint not.

Death of Dispatcher

B. M. Tharp

By A. R. Lanker

AGAIN has death come into our circle, leaving many saddened hearts. Benjamin McCormick Tharp, senior train dispatcher of the Toledo Division, succumbed at his residence in Dayton, Ohio, on Friday, March 12, after an illness of six days.

Mr. Tharp was born at Washington Court House, Ohio, April 30, 1867. He began his railroad career in June, 1881, as Telegraph Operator on the T. C. & St. L. Railroad at Washington Court House, Ohio, Chillicothe, Ohio, and Wellston, Ohio. In November, 1882, he went to Waverly, Ohio, as Joint Agent for the O. S. and S. V. Railways. He left this position in April, 1884, going to the Santa Fe Railroad, where he worked as Telegraph Operator, Agent, Clerk and Relief Agent at various points in Kansas, Colorado and New Mexico for five years and six months, returning to Ohio in October, 1889, where he was engaged as Telegraph Operator, Assistant Agent, Yard Clerk and Chief Clerk to Superintendent Gimperling on the Wellston Division of the C. H. & D. Railroad. In December, 1893, he went to Celina, Ohio, on the Delphos Division as Train Dispatcher, which position he retained until he was transferred to the main line of the

First Baltimore and Ohio Time-Table Published in Newspapers

Contributed by H. R. Howser

(Baltimore American—June 17th, 1830)

A sufficient number of Cars being now provided for the accommodation of passengers, notice is hereby given that the following arrangements for the arrival and departure of carriages have been adopted and will take effect on and after Monday morning next, viz.:

A brigade of Cars will leave the Depot on Pratt street at 6 and 10 o'clock A. M. and at 3 to 4 o'clock P. M., and will leave the Depot at Ellicotts Mills at 6 and 8½ o'clock A. M. and at 12½ and 6 o'clock P. M.

Way passengers will provide themselves with tickets at the office of the Company in Baltimore, or at the Depots at Pratt street and Ellicotts Mills, or at the Relay House near Elkridge Landing.

The evening Way Car for Ellicotts Mills will continue to leave the Depot Pratt street at 6 o'clock P. M. as usual.

N. B.—Positive orders have been issued to the Drivers to receive no passengers into any of the cars without tickets.

P. S.—Parties desiring to engage a Car for the day can be accommodated after July 5th.

Gross receipts for the first four months of operation, \$20,012.36.

B. M. Tharp

C. H. & D. Railroad as Train Dispatcher at Lima, Ohio. He held this position until the Dispatcher's office was moved to Dayton, Ohio, in May, 1902. Here he worked almost continuously as Train Dispatcher up to within one week of his death. His connection with the Baltimore and Ohio Railroad dates back to the acquirement of the old C. H. & D. Railroad by this Company.

Mr. Tharp possessed more than ordinary ability and bore the reputation of being exceptionally careful and painstaking in his work; and he enjoyed the confidence of all his associates and co-workers.

He is survived by his wife, Eleanor Tharp, one son and two daughters, to whom is extended the heartfelt sympathy of his host of friends and associates among the officers and employes of the Toledo Division, by whom he will be greatly missed.

New York Division

ON Tuesday evening, April 20, the clerks of the New York Division, under the auspices of Harrison Lodge No. 783, Brotherhood of Railway Clerks, held a social and dance at New Amsterdam Hall, New York. The affair was a good-fellowship gathering, the motto being "Everybody welcome and everything free." This waiving of an admission fee was made possible by having a drawing for a \$50.00 Liberty Bond, tickets being 25 cents each. Members sold as many tickets as they could among their friends.

Through the kindness of John Pagliucca, Lighterage Department of the Produce Exchange, the committee was able to secure the services of a first class Jazz Band, in which he is trap drummer. These boys were warmly congratulated on the fine program which they gave.

The entertainment was ably handled by the committee: C. F. Santagata, chairman, assisted by the Messrs. J. Cherny, T. Bradley and T. Baccalini. F. Santagata

and his brother, Louis, sang several of the latest song hits and several encores. One of the fair visitors, a Miss Schwartz, contributed a song and recitation. Another feature was an impersonation of the famous Jazz King, "Frisco," given by Mr. Reynolds.

In the drawing for the Liberty Bond, M. A. Boyan, head of the Eastbound Department, held the lucky number, No. 3.

In the prize dancing contest the judges, J. Lynch, T. Bradley, C. Speckman, awarded a handsome prize to "Al" Fox and his fair partner, Miss Margaret Cronin, for the best fox trot. Perhaps the name of Fox had something to do with "Al's" wonderful showing of foot work.

C. J. Speckman was of course on hand but it took a long time before the greater part of the membership were aware of this fact, because he had his best "gal," and naturally had to be on good and quiet behavior. After enjoying the refreshments the party disbanded at about midnight. This is the best evening our committee has given us to date.

Clarence E. Roache Still Climbing

QUITE a few good things come out of the old Baltimore and Ohio. To some men it is a University—a training for higher things—even things outside the Railroad.

Take the case of Clarence E. Roache. Not a few of us know him from days before the war when he was Chief Clerk in the Employment Bureau. Today he is Assistant General Sales Manager of the F. S. Royster Guano Company, at Norfolk—and he's still going.

Like some other successful men, he began as a waterboy on a track gang. Must be something to that waterboy stuff.

Baseball Fans Busy at Keyser

DURING the latter part of April about 25 of the baseball fans at Keyser got together to launch the season. Trainmaster

Carney called the meeting to order. P. G. Ervin, chief clerk to Assistant Superintendent, was elected temporary manager and "Batch" Fazenbacher was made captain. Keyser has always had a good Company team and is out to beat all comers. Write the manager for games.

Judicial Reflections of a Granddaddy

By George W. Haulenbeek

Law Department

How to Get a Husband

I once heard a gentleman say that young women could easily get husbands if they would show a desire to aid mother and the household by devoting a portion of the Saturday half holiday to doing some of the marketing. This seems simple enough and I have often wondered why a goodly number do not avail themselves of the privilege.

Coming down town in a Guilford Avenue car last Saturday morning, I saw a young lady with a market basket, which she intended, no doubt, to use at Lexington market in the afternoon. She was not on her way to market then, for she possessed the stenographic demeanor and poise. I therefore inwardly ejaculated as she alighted at one of the big office buildings, that this young woman, according to my friend's belief, would certainly land a husband.

Boosting Baltimore

I am always glad to meet Baltimore and Ohio employes on our very satisfactory train, No. 524, on my Saturday trips to Bethlehem; glad, because there are so many people, especially in New York, who have an idea that Baltimore is a little bit of a place. When I go to the Metropolis, I give them Baltimore data right from the shoulder. I tell them we have the finest harbor on the coast; a population of 800,000, and when the census enumeration is concluded, we expect to record one million. One might as well be killed for a sheep as for a lamb.

The Veteran

E. B. Rittenhouse
Agent, Wilmington

His was the dauntless energy—the will that blazed the way
Through the chaotic insufficiency of yesterday;
His was the faith—through the long night—to work, to prophecy
The fashioning of mighty thunderbolts—the dawn of day.
His path is toward the evening sun—the coming night;
A passing scroll of sleepless hours—of blinding light;
Today is filled with memories of the past,
And loyalty—that bore him through the wintry blast.
Destiny—and the drift of fruitful years, ere now
Hath touched with frost the locks above his brow;
His heart and brain are woven in the web that holds us fast,
And where he trod we follow to the last.

Women's Department

Edited by MARGARET TALBOTT STEVENS

May

*Adown the fields of morning light, all glistening with the dew,
I met a dainty maid who wore a gown of wondrous hue.
Her hair was made of sunshine, and her eyes of diamonds bright
Were sparkling like the lanterns of the fireflies in the night.
Her breath was of the southern clime, more fragrant than the rose,
And she danced along as lightly as the silvery brooklet flows.
Of wood and hill and meadowlands, she sang that livelong day,
For she was Queen of Fairyland, this lovely Maiden May.*

Ladies' Auxiliary, Baltimore Veterans

By Mrs. George T. MacMillen
Recording Secretary

The Ladies' Auxiliary of the Veteran Employees' Association was organized September 6, 1916, with 14 charter members. The Association now numbers 161 active members. Meetings are held on the first Wednesday of each month at 2.00 p. m., at Jr. O. U. A. M. Hall, 100 N. Paca Street, Baltimore, Md., and are well attended, luncheon being served at each meeting. A cordial invitation is extended to out-of-town

members of the various auxiliaries of the Veteran Employees' Association and a most pleasant afternoon awaits those who accept the invitation.

Mrs. Bertha G. Bond *She Did Her Part for Humanity*

By H. Irving Martin

It would be hard indeed to write an appreciation of the life of Mrs. Bertha George Bond, wife of Doctor James A. Bond, and the work done by her which would measure up to its real value to Humanity.

Here was one whose life was a living fulfillment of the Divine command, "Thou shalt love thy neighbor as thyself."

A charming conversationalist, a good listener, broad and liberal-minded, and possessing a highly developed personality that made friends of all with whom she came in contact, her death is deplored by all who knew her and her husband. She was deeply interested in all movements for the advancement of her sex. Sharing fully in all of the occupations in which her husband was interested, nothing that pleased him was too small to secure her fullest cooperation.

Mrs. Bond died on Friday, April 2, following an operation at St. Joseph's Hospital, Baltimore, and was buried at Westminster, Md., on Sunday, April 4.

Besides her husband, who is the son of former Judge James A. C. Bond, of the Fifth Judicial Circuit, now of the firm of Bond & Parke, counsel at Westminster, Md., for the Baltimore and Ohio Railroad, Mrs. Bond is survived by a sister, Mrs. George J. Parke, of Norfolk, Va., and a brother, James B. George, of Sykesville, Md.

Through his long service with the medical staff of the Relief Department, Doctor Bond's associates have realized that the two were true comrades in every sense and their sympathy to him is full and heartfelt.

We reproduce from the Baltimore Sun a tribute to Mrs. Bond which voices the esteem in which she was held by her associates:

OFFICERS OF THE LADIES' AUXILIARY, VETERAN EMPLOYEES' ASSOCIATION, BALTIMORE DIVISION

Front row, left to right: Mrs. J. F. Epsy, sergeant-at arms; Mrs. G. T. MacMillen, recording secretary; Mrs. William Riley, financial secretary. Back row, left to right: Mrs. W. T. Holmes, treasurer; Mrs. William Hanson, vice-president; Mrs. G. A. Bowers, chaplain; Mrs. C. H. Shipley, president; Mrs. J. F. Tucker, organist; Mrs. G. W. Galloway, ex-president.

SOME OF OUR MOUNT CLARE BABIES—WHERE ARE THE OTHERS?

1—Howard Christy, grandson of C. E. Gibbs, foreman, Paint, Hardware and Pipe Shop. 2—James Junior Welker, son of J. H. Welker, machinist. 3—Robert Wesley Fairman, 18 months old son of Robert W. Fairman, electric welder, in service 4 years. 4—Hilbert L. Fianagan, age 4 years, John G. Jr., age 2 years, sons of John G. Fianagan, blacksmith helper. 5—Charles E. Fromm, 20 months old son of Edgar J. Fromm. 6—Hazel May, age 2 years, daughter of Oliver Hands, boilermaker, in service 11 years. 7—Mary, age 6 years, William, age 4, and Sophia, age 2, children of W. E. Heiland, flue tester. 8—Eva Weiner, age 15 months, daughter of P. N. Weiner, machinist, in service 5 years. 9—Gordon William Kostens, 6 year old son of William Kostens, machinist, in service 11 years. 10—Charles H. Stowman, Jr., son of Charles H. Stowman, boilermaker, in service 15 years. 11—Margaret Frances Hyman, age 4 years, daughter of F. C. Hyman. 12—Evelyn Pauly, 6 year old daughter of William Pauly, machinist. 13—Mary Jane Street, age 3½ years, daughter of William L. Street, in service 14 years. 14—Martha Hands, age 3½ years, daughter of Oliver Hands, boilermaker, in service 11 years.

Mrs. Bertha G. Bond was active Red Cross Worker

Mrs. Bertha George Bond, wife of Dr. James Bond, was an active worker in the American Red Cross. She was among the first to offer her services, and worked untiringly in the Lawyers' Hill Auxiliary for any of the needs of the Baltimore Chapter. She was one of the earliest to realize the necessity for tireless efforts in the successive and successful "drives."

Young, beautiful, and possessed of a charming personality, her presence influenced others at once. When, after the war, the Auxiliary was sending delicacies to the wounded at Fort McHenry, Mrs. Bond was always ready, not only to prepare them, but often driving her car on the many errands for which she was called. Her services to her country, rendered so cheerfully and so efficiently, should be an example to others.

She gave that others might fight on, and in her heart was the courage that wins.

(Signed) LETITIA E. LOWNDES.

Women Win In Business

By George W. Haulenbeek

Adverting to my frequent references in my monthly letter to the work of qualified and efficient women in our service, those possessing an education and a willingness to render the best service, let me observe that the Capitol Theatre at 51st Street and Broadway, New York, employs a young lady as its press representative. With an orchestra of eighty musicians and other important and novel features, this is the largest theatre in the world, the sum of five million dollars having been expended in its construction. Think of a woman being at

the head of the publicity department of such an immense organization!

Who Will Volunteer to Teach Him?

By W. R. Irving

"He" and "She" both work at the Central Building. He had it as bad as anyone ever did. She might have.

The time was late evening. The place was her parlor. He had just been handed the mitten for various reasons. The setback reacted on his vocal chords, and he began:

"It used to be the custom to don armor and fight to prove your love. I have no such chance, but I can devote my life to you. Is there anything I can humanly do for you? Do you need a champion? A protector? How—is there anything you

Dear Women Readers:

A pair of blackbirds were chattering away noisily in the top of an old walnut tree. They were in search of a suitable location for their summer home, and they twittered and chirped for a whole morning. Although I could not interpret their language, I was sure from their actions that they were conversing on this wise:

"My dear, do you realize that it is apple-blossom time?"

"Ycs, indeed! And summertime is right at the door. We must certainly hustle up and get this nest ready."

Now, there is little doubt but that this pair of blackbirds built their nest in the top of the same walnut tree and in the selfsame manner as did their parents, their grandparents, and their great-grandparents—stick upon stick, straw upon straw, and a few feathers from the breast of the mother bird to line the inside.

Man, however, when he begins to build himself a home, does not take his axe and hew down a tree, nor does he place the logs one upon another to build the sort of cabin which his great-grandfather made. He forms his own idea for a house, arranging it according to the needs of his family, and leaves the rest to the architect and to the contractor.

The needs of the blackbird never change from year to year; man's wants change daily. The result is that we have new ideas. Moreover, if there be a thousand persons, each having the same duties to perform, no two of them will accomplish the task in exactly the same manner. How do you do your work? Will you tell us? It is for this purpose of discussing methods of doing things that we are to use these pages; we can help each other by the exchange of ideas. This is how we can do it:

I want you to write me all about the things in which you are particularly interested. It is not necessary to be an experienced writer in order to do this; the best things in the world are told in a few simple words. Just write me plain, everyday, "homey" letters, if you will, and tell me how you are going to furnish that new bungalow or what you know about canning vegetables. What plans have you for educating your children? What is your favorite dessert, and how do you prepare it? How about that literary club in your community? How did you make that dainty gown out of last year's suit? How do you arrange your flowers, your hair, the dining-room table?

These are just a few suggestions, but there are a thousand things that you can tell me of. Perhaps you have a little chicken farm, a vegetable garden, a window garden, or a peach orchard that you can tell about. Maybe you can write a little poem or a short story. Just send me anything that you feel will be of interest to womenfolk—and to menfolk too, for that matter. You would be surprised if you knew how many men read the women's pages. We want them to read our section; in fact, we want to make our pages so interesting that whenever a housewife feels like taking a vacation all she will have to do will be to put the Magazine in a conspicuous place in the kitchen and leave home with the satisfaction of knowing that friend Husband will need no other cookbook or manual of housekeeping in order to keep everything spik and span and not die of indigestion during his wife's absence.

I am sure that you would laugh with me, and perhaps at me, if I should tell you of some of the amusing experiences that I have had through writing for the Magazine. But try it and find out for yourselves, and incidentally help other folk by telling them your ideas. Personally, I need a great deal of help. I know as much about housekeeping as I do about building a Chinese pagoda; so it is up to you to teach me. Just think what a calamity it would be if that little blind god should some day aim at my heart with his sure-shot arrow and say: "Lay down your pencil immediately and take up the tea-towel!" Alas for me if I knew not the difference between the tea-towel and the table-cloth!

Let us make good use of this Women's Section. It is yours and mine. Will you help to make it worth while?

Yours very cordially,

Margaret Talbot Stevens

want that I can get you; is there anything I can do to show my love?"

She gets an idea. "Ycs," she evenly and sweetly replied, "kiss me."

After recovering, he reverently kissed her on the forehead.

Silence followed, then: "Is there any other way to prove my devotion?"

"Yes," she said, "learn how to kiss."

Practical Dishes for Practical People

Pie Crust

No matter how carefully the filling for a pie has been prepared; no matter how appetizing its appearance; if the crust of that pie be tough and unpalatable, the whole is a failure. On the other hand, a light, flaky pie crust will make almost any attempt at pie making worth while. The following recipes are the result of careful experiment; the first one is particularly delicious crust for lemon filling.

No. 1

3 cups flour.
1 cup shortening.
1 teaspoonful salt.
Enough cold water to make the dough barely cling together.

Roll thin. If for a lemon filling bake first for about ten minutes, or until a very light brown. This will make two large pies.

No. 2

1 ½ cups flour.
½ teaspoonful salt.
½ cup shortening.

Mix ingredients well, adding enough ice water to hold together in a stiff dough. Roll this out and fold over. Repeat this three times, taking care to roll very thin each time. Before putting on top crust spread it with a thin covering of butter or lard. Bake in a hot oven. This will make one pie.

No. 3 (Adella Crust)

1 cup shortening.
3 cups flour.
½ cup boiling water.
1 ½ teaspoonfuls salt.
½ teaspoonful baking powder.

Heat a mixing bowl with hot water. Place the lard in the bowl, pouring the half-cup of boiling water over the lard. Beat until it becomes a creamy mass. Sift flour, into which has been placed the baking powder and salt, into the mixture. Mix well and roll thin. This will make two pies.

Two Oatmeal Recipes

The war taught us to use many cereals in cooking which before we had only known as breakfast foods. Oatmeal, however, has long had its place as an all around food. The flavor which it lends to the cookies and the rolls in the following recipes is not unlike that of coconut.

Oatmeal Cookies

2 cups oatmeal.
Whites of 2 eggs.
2 level teaspoonfuls baking powder.
1 teaspoonful salt.
1 cup sugar.
1 cup molasses syrup.

Put the oatmeal, salt, and baking powder into a mixing bowl. Add the syrup, then the sugar, mixing thoroughly. Add the well-beaten whites of the eggs, stirring lightly. Drop from a large spoon on buttered tins. Bake in a moderate oven.

Oatmeal Rolls

1½ cups oatmeal.
2 cups boiling water.
½ cup brown sugar.
1 tablespoonful salt.
5 cups flour.
1 yeast cake (dissolved in one-third cup of water).

Put the oatmeal into a large mixing bowl and pour on it the boiling water. Add the sugar and salt. Mix thoroughly and let set until cool. Add the dissolved yeast cake and the flour. Knead until very smooth. Set in a warm place and allow it to rise well. Knead, form into small rolls, and let rise again. Bake in a moderate oven for about half an hour, or until a rich brown.

Hot Biscuits

Often we would like to have hot biscuits for breakfast, but hesitate about making them because of the time and trouble. These biscuits are made with ease and are baked quickly.

1 quart flour.
3 teaspoonfuls baking powder.
1 teaspoonful salt.
¾ cup shortening.

Sufficient milk to knead this mixture quickly into a stiff dough. Roll out to the thickness of a half-inch. Bake in hot oven 15 to 20 minutes.

MY WISH

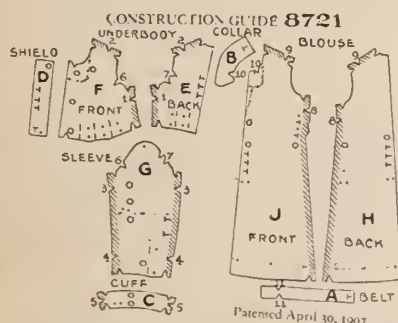

By Edith H. Coplan
Transportation Department

I wish I were a fairy bright
In the Baltimore and Ohio,
Cheering all where'er I light;
Then, dancing to and fro,
I'd chase O. G.'s and all glooms freeze,
And then I'd plant some smiles,
'Till they'd spread and o'er the Railroad grow,
Covering endless miles.

A New Blouse Model Straight from Paris Suited to the Abilities of the Amateur Sewer

THE blouse holds a commanding place in the world of style and greater energy is being put into its development this season than ever before. Straight from Paris and adapted to the ability of the home dressmaker is this model, which may be developed in almost any material. It closes at the left shoulder and under the left arm, is trimmed with embroidery and has a neckline which may be finished in square, V-shaped or round effect. The front of the blouse is laid in plaits under the arms, the fulness at the waistline being held in with two narrow belts. Medium size requires 3½ yards 36-inch material with one yard lining for under body.

The front and back of the blouse should be laid with the triple "TTT" perforations along the lengthwise fold of material when

cutting, to save seams. If the neckline is changed to make a shield necessary, this is also placed along the lengthwise fold with the collar. Sleeve and belt have the large "O" perforations arranged on a lengthwise thread of the goods.

The line of the neck is regulated in the cutting, as there are small "o" perforations indicating three different styles. In making the underbody, face around the armhole

edges of front and back about three inches deep. Close under-arm and shoulder seams as notched. Turn hem in front, then plait, creasing on slot perforations.

To make the sleeves, plait and stitch as indicated. Leave plait free below the large "O" perforation and finish for closing. Gather sleeve between "T" perforations. Close seam of sleeve as notched. Sew sleeve in armhole of underbody as notched with small "o" perforation at shoulder seam. Bring seam of sleeve to under-arm seam, easing in any fulness between the notches.

Hold the sleeve toward you when basting it in the armhole.

Now, take the blouse and plait the front at under-arm edge, placing "T" on the corresponding small "o" perforations above and tack. Close under-arm and shoulder seams as notched, leaving under-arm edges free below the double small "oo" perforation in back section. Leave left shoulder edges free, also the left under-arm edges above the single small "o" perforation in back section. Arrange blouse on underbody with center-fronts and center-backs even and if desired, tack neck edges of backs together. Fold belts through centers and stitch notched edges together. Adjust upper belt, tacking lower edge over large "O" perforations at center-front, center-back and under-arm seam. Adjust lower belt, with lower edge 1½ inch below and finish for closing at left side. The embroidery is done in darning stitch.

Pictorial Review BLOUSE No. 8721. Sizes, 34 to 44 inches bust. Price, 30 cents.

SKIRT No. 8728. Sizes 24 to 30 inches waist. Price, 20 cents.

EMBROIDERY NO. 12531. Blue or yellow. Price, 15 cents.

Models for Grownups and Youngsters

THE styles to which Fashion has given her endorsement will please women of all tastes. There are extremely simple effects for conservative women, while for those who like fanciful creations there are straightline models upon which one can ring in any number of original ideas. Two features which have been with us so long that they have become as faithful friends, are the tunic and the overblouse. These are emphasized again in dresses styled ahead of the hour. Skirts, as a rule, are straight, and while they remain narrow, they are wide enough for comfort in walking.

Serge and tricotine are the materials most in demand for tailors and semi-tailored dresses. They are combined with a number of fabrics and, if the quality of the material is good, a model can be made to look almost as well without trimming as with it. The sleeveless overblouse is going to be an exceedingly fashionable garment during the Spring and Summer. One finds it featured in wash materials as well as the serges and silks. A design which may be carried out in any two fabrics has the rever collar and lower edges of serge, while the back and side fronts are of satin. It is held in with a belt of the serge, of which material the skirt is also made.

The French influence is reflected in black and white effects and there are some charming checks and plaids in these colors. A dress suitable for all-day wear is in black and white flannel, the skirt trimmed with a straight gathered tunic stitched about the lower edge with a band of black silk braid. There is a belt of self-material, cut on the bias and the blouse, which fastens in surplice fashion, has short sleeves finished with turn-back cuffs.

Black serge is demanding a prominent place in the styles of Spring and Summer and the compromise which it has to offer to advocates of brilliant colors are trimmings of yellow, wintergreen and henna satin. These embellishments appear in the form of pipings about the neck and sleeves and on the belt. One delightful design has a skirt trimmed with a tunic which is divided at each side and stitched with deep straight bands to simulate tucks. Not only are the neck, sleeves and belt outlined with pipings of yellow satin, but the buttons are of the same trimming.

Another pretty model for a black or dark blue serge shows a sunburst skirt with plain bodice out in points reaching well down on the hips. The neck is round and the sleeves long in this instance, and through bound buttonholes at the normal waistline is drawn a soft sash of wintergreen tricolette hanging in fringed ends at the sides. With this is worn a fetching turban of wintergreen straw with velvet brim and jade eartabs.

An interesting sidelight on the trend of fashion is to the effect that by the end of Summer there will be some decided changes in the silhouette. They will not affect the straight line, however. It is predicted that the number of distended hiplines will be decreased, side draperies going toward the back in much the same effect as the bustle of a few years ago. Just what comfort followers of fashion will be able to extract from this prediction remains to be seen, but taffeta will be the vehicle through which the mode will find its best expression, its quality of crispness rendering it suitable to a degree.

A little dress that is sure to attract attention among the advance styles is done in taupe crepe de chine and trimmed only with accordion plaited frills of self-material stitched about the neck and short sleeves under bands of self-colored velvet ribbon. The skirt is gathered and tucked under at the lower edge, the simple blouse being joined to it under a belt of taupe crepe.

LADIES' DRESS No. 8744. Six sizes, 34 to 44 bust. Width at lower edge about $1\frac{1}{2}$ yard. As illustrated in first view, size 36 requires $4\frac{3}{8}$ yards 36-inch material. Price, 25 cents.

LADIES' DRESS No. 8749. Eight sizes, 34 to 48 bust. Width at lower edge about $1\frac{1}{2}$ yard. As illustrated in large view, size 36 requires 6 yards 36-inch material, $\frac{3}{8}$ yard 36-inch lining for underbody. Price, 25 cents.

MISSSES' DRESS No. 8812. Four sizes, 14 to 20 years. Width at lower edge about $1\frac{1}{2}$ yard. As illustrated in large view, size 16 requires $4\frac{3}{8}$ yards 36-inch material. Price, 25 cents.

MISSSES' DRESS No. 8816. Four sizes, 14 to 20 years. Width at lower edge about $1\frac{1}{2}$ yard. Size 16 requires $4\frac{3}{8}$ yards 36-inch material, $\frac{3}{8}$ yard 36-inch lining for underbody. Price, 25 cents.

LADIES' ONE-PIECE DRESS No. 8758. Eight sizes, 34 to 48 bust. Width at lower edge about $1\frac{1}{2}$ yard. Size 36 requires $4\frac{3}{8}$ yards, 36-inch material. Price, 25 cents.

LADIES' DRESS No. 8834. Eight sizes, 34 to 48 bust. Width at lower edge about $1\frac{1}{2}$ yard. Size 36 requires 4 yards 36-inch material, 1 yard 36-inch contrasting material, $\frac{3}{8}$ yard 36-inch lining for underbody. Price, 25 cents.

MISSSES' DRESS No. 8771. Four sizes, 14 to 20 years. Width at lower edge about $1\frac{1}{2}$ yard. As illustrated in large view, size 16 requires 4 yards 36-inch material, $\frac{3}{8}$ yard 36-inch lining for underbody. Price, 25 cents.

GIRLS' AND JUNIORS' DRESS No. 8780. Four sizes, 8 to 14 years. Size 12 requires 4 yards 36-inch material. Price, 20 cents.

CHILD'S ONE-PIECE SLIP-ON DRESS No. 8354. Four sizes, 1 to 4 years. Size 4 requires $1\frac{1}{8}$ yard 36-inch material, $1\frac{3}{4}$ yard ribbon 2 inches wide for sash. Price, 20 cents.

JUNIORS' DRESS No. 8770. Three sizes, 13 to 17 years. Size 13 requires $3\frac{1}{4}$ yard 36-inch material, $\frac{3}{8}$ yard lining. Price, 25 cents.

ROLL OF HONOR

Baltimore Division

On February 20, as extra east, engine 4522, was a short distance east of Van Bibber, Conductor A. P. Offutt noticed fire flying from under train. Train was stopped by applying air from the rear. Examination of train disclosed a broken arch bar on truck of Baltimore and Ohio 95185. Conductor Offutt has been commended for his close supervision of equipment in his charge. In this case Conductor Offutt prevented the occurrence of a more serious derailment.

As No. 97, engine 4116, passed Frederick Junction on March 6, Operator C. A. Remsberg observed roof off of a car in train. He succeeded in having the train stopped. Front Brakeman J. H. Peters with No. 97 flagged No. 408 at Doubts. Cooperation on the part of Mr. Remsberg and Mr. Peters prevented damage or injury which might have occurred. Both have been commended.

Conductor C. H. Shipley, running on train No. 5, has been commended for courtesy shown passenger while riding on that train on March 8. We trust the patron will enjoy further trips on "Our Line."

Brakeman A. G. Crummitt has received commendatory notation on his record for discovery of broken flange under car while switching at Gaither, Md., March 19, extra east, engine 4547.

On April 2, Agent H. H. King at Gapland, Md., observed C. M. & St. P. No. 28524 in train of extra east, engines 1285 and 1345, with both center sills broken. Conductor was notified and car set out of train. Mr. King has been commended.

BALTIMORE, MD., March 24, 1920.

C. E. ORNDORF, Operator,
Care H. E. Hartman,
Philadelphia, Pa.

Dear Sir—I have been advised that on March 16 you were instrumental in stopping extra west engine 4088 at Chester, notifying them that they had a car with a broken flange in their train. Although the train wire was in trouble you made an extra effort to get hold of Chester on the telephone. I commend you for your action on this occasion.

Very truly yours,
(Signed) R. B. WHITE,
Superintendent.

BALTIMORE, MD., March 25, 1920.

J. F. ELSTE, Operator,
Poplar, Md.

Dear Sir—It has been called to my attention that on March 4 you observed car with broken arch bar in train of extra east 4069 when passing Poplar. You flagged this train and the defective car was set off. Your prompt action undoubtedly prevented an accident, and I commend you for your action on this occasion. Suitable notation will be made on your service record.

Very truly yours,
(Signed) R. B. WHITE,
Superintendent.

Cumberland Division

On March 14, Conductor M. A. Newman, with extra 7109 east, going back to flag near pump house west of Piedmont, noted broken rail east of Bloomington Bridge. He informed Operator at Piedmont by telephone. Trackmen were called and rail repaired.

While extra 7124 west was passing Side Cut just west of Strickers on the morning of March 12, about 9.25 a. m., Brakeman J. C. Welling observed two large rocks lying in the middle of No. 2 track. He had train stopped and stones, which had fallen from the bank, removed.

Keyser Division

Extra east 7116, Conductor Arnold, March 22, Newburg grade just west of Hiorra Station, R. S. Fromhart, running helper engine 7045, noticed about one foot broken out of rail on eastbound main track. No. 2 was overdue. Engineer Fromhart told Fireman B. C. Hinkston to get off, run back and flag No. 2, which was coming in sight at Brams curve. Fireman Hinkston ran back and stopped train No. 2. Engineer Fromhart stopped train he was helping east of Hiorra and told Conductor Arnold, who went back where rail was broken. Engineer W. W. Davis on train No. 2 and Conductor Arnold, after examining track and finding piece that was broken out of rail and fitting it back in track, got train No. 2 over damaged track with little delay. Note was thrown off to track men at 83 fill, who repaired rail at once and report was made to West End. J. Burk found broken rail. All interested are commended.

Pittsburgh Division

Engineer C. F. Harvey, while coming west from Connellsville on March 22, noticed that the hill was slipping at Reduction. He immediately went to West Newton and 'phoned the Dispatcher, thereby averting accident. Mr. Harvey is commended for his prompt action in this case.

Found by P. H. Handel, car inspector, in Glenwood transportation yard on March 10, C. N. J. car 84247 having a wheel cracked through its entire diameter and deep enough to show entirely across tread of wheel. This discovery indicates the class of inspection rendered by Mr. Handel, who is among our best. The car was in train coming in off the P. & W. branch and Mr. Handel's finding this defect no doubt averted a serious accident.

Monongah Division

On March 14, while Car Repairman R. M. Satterfield was on his way home from work, he discovered 24 inches of cap of rail broken off on bridge that crosses the Monongahela River at Hoult, W. Va., near Fairmont. This happened shortly before arrival of No. 68. Mr. Satterfield notified Operator, who had train stopped, and re-

pairs were made to track. Mr. Satterfield's prompt action probably prevented an accident, as this is a high bridge. Mr. Satterfield has been commended for his promptness and suitable entry will be made on his service record.

On March 15 Extra Operator C. M. Hill, while on his way from the office at Hammond, found broken rail on eastbound track about three rail lengths east of tool house at Valley Falls. He immediately notified Track Foreman A. E. Shaffer and repairs were made to track. Appropriate entry will be made on Mr. Hill's service record.

New Castle Division

A. J. Mace, lampman, Kent, Ohio, on March 1 noticed brake beam down on car in train of extra 4214. Operator was notified and as a result train crew were made aware of this condition so that repairs could be made. Mr. Mace received the usual commendatory letter from Superintendent Stevens and in addition to this, suitable entry was formulated for placing on his service record.

F. R. Gault, signal repairman, Lodi, Ohio, on March 5 discovered broken truck on car in train of extra 4098. This condition was reported to the Operator, who in turn notified the train crew, and car was set off before any damage occurred. For his close observance of dangerous conditions and interest displayed in connection with his duties, Mr. Gault has been commended by the Superintendent. Entry will also be made on his service record.

M. W. Herrick, pumper, Burton, Ohio, on March 8, while on duty, discovered two broken rails in main track west of Burton. This situation was brought to the attention of the Agent for the protection of train movement and section men were secured to make repairs. The discovery of this condition undoubtedly prevented an accident. Mr. Herrick has received the letter of commendation from the Superintendent, and entry will be placed on his record.

C. F. Delong, track foreman, Hereford, Ohio, on March 16 signalled a passing train that there appeared something wrong with car in the train. After crew had made stop inspection developed brake beam dragging. Repairs were made. Mr. Delong has been commended for his observance of this condition and entry will also be made on his record.

Newark Division

On March 21, Brakeman C. D. Pearson, while off duty, discovered a broken rail just west of Shelby, Ohio. He took prompt action to notify the Section Foreman and Supervisor, protecting the location until repairs could be made. He has been commended and merit entry has been placed on his record.

Cleveland Division

CLEVELAND, OHIO, March 24, 1920.

O. P. WILSON, Yard Conductor,
Akron, Ohio.

Dear Sir—My attention has been called to the fact that on March 20, while you were working west end of hill yard, Akron Junction, you found a badly broken rail on westbound main track and reported it immediately. Also understand that it was necessary to reverse No. 9 from "BD" Tower to Akron Junction, on account of rail not being safe for No. 9, to run over. I assure you that I appreciate the interest

you are taking in your work and hope that it will continue. Am forwarding copy of this letter to the Employment Bureau to prepare entry.

Very truly yours,
(Signed) H. B. GREEN,
Superintendent.

On March 22, at 10.35 a. m., while train of 1st 83, engine 4046, was passing Freeport Passenger Depot, Extra Gang Timekeeper Harry Bierie noticed 12 inches of flange broken off of lead wheel on rear truck of Baltimore and Ohio 225057. He immediately got on caboose and notified Conductor, who set car off. He has been commended for his prompt action and interest shown in his work.

On March 23, Agent Frank McCormack, Brooklyn, Ohio, flagged passenger train No. 31 because of broken rail. He has been commended for thus averting an accident.

Chicago Division

J. K. Clemens, third trick operator at Alida, has been commended for his care and watchfulness in observing bad condition on engine 4316 west. Through his efforts the train was stopped and condition remedied, possibly preventing an accident.

F. M. Thornton, first trick operator at St. Joe, has received a letter of commendation from the Superintendent for finding a broken rail and protecting trains until repairs could be made.

Ohio Division

On March 1, Engineer E. O. Brown, while in charge of yard engine 1500, switching in the vicinity of oil house at Chillicothe, discovered blaze in oil house. He went immediately to the scene of fire and turned on steam jet, which was the only available means of extinguishing the fire, and then turned in the alarm for shop fire department. His immediate action and interest no doubt prevented total destruction of oil house, as well as possible damage to other property. He has been commended.

Indiana Division

On April 5, James Long, switchman, North Vernon Yard, when switching B. L. E. 9964, discovered broken arch bar on this car, and had it placed on repair track where necessary repairs were made by applying a new arch bar. The close observation of this Switchman is commendable and appropriate entry will be made on his service record.

On March 24, when 1st 94, in charge of Conductor A. Hodapp, was passing "CE" Cabin, Perry Kerr, operator, noticed brake beam down on P. F. E. 15247, and communicated fact to the crew. Train was stopped at Culloms and brake beam removed. This, no doubt, averted derailment and appropriate entry has been made on Mr. Kerr's record.

On March 6, Operator T. R. Scoopmire, working at Nebraska, discovered rail broken in main track near Kirschners, pole 50-30. Matter was promptly reported and section men notified and repairs made. The close observance of Operator Scoopmire is commendable and appropriate notation will be entered on his record.

At 5.10 p. m., March 29, when Agent J. V. Huffington, Holton, was off duty, he noticed westbound block at east end of

Holton passing track, also block at west end passing track, standing red. He immediately reported same to Dispatcher's office, and thus enabled prompt action in notifying Maintainer and preventing delay to trains. The interest manifested by Agent Huffington in returning to office shortly after this time is commendable. Appropriate entry will be made on his record.

At Hayden, February 26, Conductor O. Hartman, in charge of extra 2653-2672, was in siding for extra 2695 west. As the latter train passed, Conductor Hartman discovered brakes sticking about middle of train. He at once communicated signal to westbound extra. Train was stopped at west switch at Hayden, and it was found that brake shoes were hot. This would probably have caused trouble before train had reached Seymour. The close inspection of train by Conductor Hartman is commendable, and appropriate entry has been made on his service record.

On April 3, Lee Chaille, bridge carpenter, while working on bridge 71-36, "Muscatatuck," noticed brake beam down on extra 2924 west, about 8 cars from engine. He notified Conductor, who took brake beam off at North Vernon, possibly preventing an accident. Mr. Chaille has been commended for his close observance and interest displayed on behalf of the Company. Appropriate entry will be made on his service record.

Toledo Division

CINCINNATI, March 22, 1920.

C. C. CASON, Car Repairer,
Storrs, Ohio.

Dear Sir—On March 19 my attention was directed to G. A. T. X. car 13453, a tank car of gasoline, which had been found

at Brighton New Yard by a number of employes, leaking very badly at drip pan pipe, and necessitating immediate action to prevent loss of contents. Your prompt action in removing your jumper and forcing same in the valve to stop the flow of the gasoline is very commendable and I want, in this way, to convey to you my personal gratitude. I am glad to know that we have men of your calibre in the Terminals who have the interest of the Company in their work.

Thanking you, I am

Sincerely yours,

(Signed) J. H. MEYERS,
Superintendent of Terminals.

Ticket Clerk R. A. Thompson at Middletown observed brake beam down on P. R. R. 27111 in passing extra north 4181. By prompt action he succeeded in having train stopped at Carlisle, where trouble was corrected before accident occurred. Mr. Thompson has been commended for his observation.

Second trick operator at Miamisburg observed brake beam down on car in extra 4552 north. He succeeded in flagging train and brake beam was removed, thus preventing possible accident. He has been commended for his observation.

Third trick operator at Cairo discovered brake beam down on west side of Baltimore and Ohio 135453 while train was pulling by office. He notified crew, train was stopped and brake beam removed, thus preventing possible accident. His action has been commended.

Not 'Appily

Minister: "But Hooligan, can't you live with your wife without fighting?"

Hooligan: "No, sir, I can't. Leastways not 'appily."—London *Opinion*.

THE AMERICAN'S CREED

I BELIEVE in the United States of America as the government of the people, by the people, for the people; whose just powers are derived from the consent of the governed; a democracy in a republic; a sovereign nation of many sovereign states; a perfect union, one and inseparable; established upon those just principles of freedom, equality, justice and humanity for which American patriots sacrificed their lives and fortunes. I therefore believe it is my duty to my country to love it; to support its constitution; to obey its laws; to respect its flag; and to defend it against all enemies.

Among Ourselves

BALTIMORE AND OHIO BUILDING

Office of Vice-President—Maintenance and Operation

Correspondent H. H. HARTLOVE
Chief Graphic Clerk

Walter Spurrier has been transferred to the Traffic Department as secretary to Mr. Fries. W. L. Fowler has taken Walter's place in our office.

M. J. Hitchcock is now secretary to W. W. Wood.

Our "Billy" Doughaday leaves for the General Freight Department but still retains his membership in several musical organizations—the Baltimore Opera Society and the Baltimore and Ohio Glee Club. Music charms the savage breast; so civilization will now take an upward spurt. On with the song! Hark to the roar of lions!

Miss Rawlings passes from the Pass Bureau to the General Claim Agent's office. Put in your claims fellers! The members of the Pass Bureau send best wishes for your continuous progress, Miss Martha, and so do I. Miss Albert takes Miss Rawlings' place in the Pass Bureau.

If you want to know something about something, ask Miss Mercer. Ah, ha!

George Sturmer, was elected honorary member of the Pittsburgh Division Veterans' Association and was to make a welfare speech at Hazelwood, Pa., on April 12. By the time you get this MAGAZINE his speech will be finished. Woof! Woof! P. S.—Mr. Sturmer's bunion is doing well as can be expected.

Miss Virginia Smith solves the high cost of living problem by moving to Relay to join the vast employes' colony stationed there. Order your eggs early so the hens will not be compelled to "Relay" any.

Elmer Ruddy will try out as pitcher on the Maryland Swimming Club's team in the Inter-Club League. Elmer is highly qualified for this position as he was No. 1 man on their tennis team recently.

VERY PROBLEMATICAL QUESTION! What connection has swimming and tennis with baseball? To the exact solver of this problem will be given a solid silver ivory mounted tooth pick. Solvers are limited to 8,000 words and answers must be in my hands by April 1, 1920.

ADVERTISING SECTION: For Sale—R. P. Mackenzie offers a first class tennis

racquet as he will not have daylight enough this year for following this elusive sport, owing to the change of policy (and of heart) of the Daylight Saving Commission.

Lost—Alfred Wieneke became disattached from his gold banded fountain pen recently and had to write numerous letters to his best girl in pencil.

Found—Frank Hermann strolled into Room 508 more recently and returned the above Alfred's aforesaid gold banded fountain pen, which "mightier than the sword" article he had borrowed surreptitiously* to finish his voluminous correspondence.

In conclusion let us all congratulate T. M. Bohanon—the reason is obvious!

"Steamboat Doc." His arrangements make one dipply! Hark ye! Anyone desiring to travel southward soonly will please consult Dr. Feezer, our steamboat agent extraordinaire. As it took him about three weeks to arrange a trip to Pensacola, Florida, for a pal of his'n, all folks wishing to travel by boat to Highlandtown, Md., should give "Steamboat Doc" ample time—say about one month for the preparatory ceremony, and implore the telephone company to keep all wires open.

*Foot Note.—Surreptitiously is used only in the sense of unauthorizably and is not supposed to convey any other meaning.

Offices of General Manager and Superintendent Motive Power

Correspondent G. F. ZIMMERMAN

T. J. O'Connell is now stenographer, vice Miss Helen G. Guilford.

Am reminded of the numerous trips recently by our friend Mr. Healy to New York City, which leads me to believe there is quite an attraction at that end of the line. It's all right, "Charlie," but don't forget to come back to Baltimore in time for work on Monday morning.

Law Department

Correspondent, GEORGE W. HAULENBECK

The Income Tax

This paragraph is not intended as a dissertation on the enormity of the income tax, but as a reference to my observations during the period in which returns were made. I never knew before there were so many young ladies in our big Baltimore and Ohio building; so many patriotic girls, so many bright and well behaved maidens.

I had no trouble in having them sign in the proper place on their tax returns. It was the men, mainly, who persisted in signing on the wrong line; but the girls—well they were just *au fait* in every particular.

My income tax week was strenuous indeed. It was a week freighted with generous financial results. If I had resolved to devote my income during that week to foreign missions, every native of Senegambia and the benighted Congo region could have revelled in a brand new red flannel shirt and a resplendent wrist watch. With every deposit in the Relief Savings Fund of the accumulations, my friend Parkin Scott Browne, the receiving teller, was courteous and polite as usual, and my visits did not disturb his equanimity in the slightest; indeed I was made doubly welcome.

Charles W. Galloway

I am glad Mr. Galloway received his deserved promotion. In my address book I have made this note—

Charles W. Galloway, promoted Vice-President in Charge of Operation and Maintenance, March 1, 1920. Began as Messenger Boy in August, 1883.

This promotion I comment on, specially, because I have followed this gentleman's career since he entered our service, and if I can get our messenger lads interested to the extent of taking Mr. Galloway as a guide, I will feel that I have accomplished something.

There is a trolley car conductor on the 1700 line who always calls out "Baltimore and Ohio station," when his car crosses Mt. Royal Avenue. He is the only one who does it.

There is a trainman on the Reading Railway who, when his train approaches W yne Junction and when calling out the changes to be made at that point, adds in a clear, distinct and rather stentorian tone, "and all points on the Baltimore and Ohio." He is also a man after my own heart.

One of the clerks in the Law Department, who is full of optimism, always declares to the young gentlemen of the building elevators on inclement days that the sun will shine before the day is over. This is the verse he quotes—

"This critical world is a pretty good place
If you take all your woes with the right
kind of grace,
And learn to find good in your sorrow and
pain,
And to watch for the sunshine that follows
the rain."

Misfortunes never come singly, we have now lost one of our very best stenographers in the person of Melville Gemmill. He has taken the position of secretary for W. F. Richardson, general freight agent. Mr. Gemmill has been in the Law Department for some little time. He served on the other side and made a good record. On his return from rainy France he settled down in his old place in the Law Department, and just as we were fully appreciating him, left for his new position. In filling the vacancy we ought to have some one equally as good as Mr. Gemmill, if that were possible. If a woman, a high school girl, but better still, a Goucher graduate. Nothing is too good for the Law Department.

Car Service Department

Correspondent, GRACE PLACEDÉ BERGHIOFF

One tranquil afternoon our Mildred and Henry (frequently referred to as Romeo and Juliet) were busy getting rid of some dead leaves. Henry, being an artist and

Henry (Our Artist.)

knowing something about most everything naturally drifted in the direction of Dryad, and, characteristic of one living within another world, was oblivious to his environment when he was startled by the melodious voice of his sweetheart as she gracefully approached the conflagration, saying:

"My dear, look!"

The angry fire had burnt the hedge and part of the henery, causing a premature hatch. They were about to call the Fire Department of Arlington. However, Juliet immediately organized a bucket brigade and the fire was soon extinguished. After the excitement was over and Henry was affectionately admonished, the two sauntered toward the woodland, arm in arm, watching the long, sharp and stately shadows gradually disappear.

The races are on! And Cupid played lucky "600." Valetta Galloway and Grace Erdman are wearing the laurels. Our best wishes followed along with silver teaspoons.

A Tip

"Charlie" Bayn and "Joe" Neukum are about to head the next race. "Buck" is seething over with joy, making everybody think Victoria has said "Yes," while "Joby" is visiting all of the good furniture houses.

The accompanying picture shows our little "Shorty" wearing his new hand-

(See above note)

painted tie. He has been elected to a higher office in the Warpoose Club.

With the awakening of Spring, when the atmosphere was crisp and balmy, "Mack" and Lillian, George W. and "Cally" strolled in the beautiful Blue Ridge Mountains and spent part of the time with little Eva at the Summit. With them they brought back the glad news that she is rapidly improving. And some pictures, too!

J. H. Bell, one of our genial traveling car agents, has returned to the service after a furlough to the Eastern Freight Inspection Bureau as General Car Inspector.

Pauline Foster has returned to her duties after an operation for appendicitis. She will ever have pleasant reminiscences of the roses and carnations which filled her sick room with fragrance.

The writer was handed a clipping recently showing the names of the Baltimore and Ohio Car Service Department baseball team. This aggregation of youngsters is anxious to go to the mat with all uniformed comers. The manager of this superlative composition of athletes is J. J. Neukum, Esq., who is emphatic in that all comers must wear uniforms. "Joe," as he is known from the first to the thirteenth floor of the Baltimore and Ohio Building, is a rooter from way back, and when on the coaching line at a critical moment he can coach with such pep to the square inch as to make the illustrious "Hughey" Jennings look like a piker.

There are 22 players in all. The writer has not the space to eulogize each player, but with some practice and the pretty girls of this office to inspire them, they should pound the leather all over the garden. And when the foliage is beginning to change its complexion and the atmosphere becomes a tonic, we hope they will not only carry off the olive branch of peace but that they will win the championship.

Office of General Freight Claim Agent

Correspondent, Miss E. T. MURRAY

We are glad to have with us again J. H. Eisenreich, of the Loss and Damage Division, who was confined to his home for six weeks with bronchial pneumonia and neuritis. Here's hoping for a continued improvement.

A wedding of interest to the employees of our office took place on Wednesday, March 24, at 4 o'clock, at Babcock Memorial Church, when Miss Helen E. Paulus, formerly of the Loss and Damage Division, became the bride of Russell D. Welsh, of Pittsburgh. Immediately after the ceremony the couple left for Jacksonville, Fla., and points south. Upon their return they will reside in Pittsburgh, where the groom is engaged in business. Our congratulations and very best wishes for a long and happy married life!

We note that one of our investigators has purchased a Ford of the vintage of 1910 and that various adventurous trips are taken in same. We have heard of one down in Glenburnie in which "C" was accompanied by a little dame. Apparently the car misbehaved, for both found themselves stuck in the mud before they had proceeded very far. Since then we have heard that "C" spent considerable time at an auto school learning the intricacies of the management of a Ford and that now he is a skilled chauffeur. We must say, however, that, being strong for "Safety First," we would prefer walking to entrusting ourselves to his care.

It doesn't matter much, after all, whether you go through life in a limousine or a jitney bus—it's what you have the eyes to see and the heart to enjoy along the way that makes the journey worth while.

Knockers, naggers and bluffers belong to the same lodge and they meet in continuous session. They have no friends, their dues are high and there are no death benefits. Who would volunteer to be a member?

"SMILE"—IT DOESN'T COST A RED.

Meet little Miss Margaret Talbott Travers in the accompanying picture, daughter of G. N. Travers of the O. S. & D. Division. Margaret is 9 months old and weighs 30 pounds and her "dad" is just about the proudest father in the Baltimore and Ohio Building.

Concert Given by the General Freight Claim Department

"How Dry I Am." Male chorus—leader, W. C. Bowhay; assistant, J. E. Tyson.

"The Wild, Wild Women." "Bob" Townsend, assisted by J. C. Roberts. Encore number, "I Love the Ladies; They're All Sweeties to Me."

"Lonesome for You, That's All." Miss S. P. McKee. (One day when "B" didn't appear on the scene.)

Margaret Talbott Travers

"My Heart is My Home." J. M. Wheeler. "Take Me to that Land of Jazz." Miss Edna Foster.

"I Hear You Calling Me." Miss S. Morris. (Another bulletin or circular to be run off.) "Tell Me" (why everybody appears at 8.30 nowadays). W. F. Aro.

"Till We Meet Again" (after she leaves him on Childs' corner at 8.15 a. m.). Miss N. V. Moler.

"It was my Last Cigar." By Male Quartette ? ? ? ? (Not while J. W. Schumacher is around.)

"PAY DAY." Complete chorus, 200 voices, male and female.

Relief Department

Correspondent, H. IRVING MARTIN

We are all glad to learn that Mrs. William M. Kennedy, wife of our Assistant Superintendent, is recovering her strength at her home after some weeks spent at the University Hospital.

Charles Comegys is about to return to us from the hospital after a short stay. We have missed his contagious smile and his cheery "all right."

"Brer" Parkin Scott is thinking of entering his collection of old-time photos in the "Beauty Show" contest. Some of the boys don't recognize their faces when they look at themselves in these pictures.

If Ariel would again propound his query: "Where, oh, where, can all this music be?" and would visit the homes of John Jaeklein and C. C. Lloyd, he would have no trouble in locating the source or sources of the sounds that charm the ear. One with a saxophone, and one with a banjo; both together probably laying low to make a Friday night debut. Eh, what?

"Sam" Griest tells us that his wife is recovering slowly. We are glad to hear it, but we have been wondering how "Sam" makes good on the "eats" without Mrs. G. on the job of supervising the cuisine. Some "eats" there when she is watching that end. We tasted them at Relay in the days when the Relief Department was anchored on the banks of the Patapsco. The memory lingers. The boys used to say that the "Griest" brand of soup was even better than that which mother used to make.

J. Ernest Buckheimer, Jr.
Three months old son of J. E. Buckheimer,
Relief Department

We have not previously recorded the existence of J. Ernest Buckheimer, Jr., but he is here and speaks for himself. He is a live, healthy chap and does everything except talk understandable English; however, he'll grow.

Elmer Wright presents his daughter, Irma, on this page. She is not "The Goose Girl" of the movie world, but a youngster who takes interest in the poultry side of the home farm and garden. Look out, you Freight Claim picture people; we are close on your heels when it comes to pictures of good-looking children.

H. Webster Erdman, whose likeness we also reproduce, entered the service of the department at Relay in the Spring days of 1900, and is now sitting on the threshold of the office of the Secretary of the Veterans' Association waiting for the time clock to record the finish of the 20 years of service that will qualify him for membership among "The Immortals." Webster isn't on the ball team now but keeps himself in condition by working on the lawn and by barbering the hedge. When you are out on Wood-

land Avenue look him up and get a view of that new roof and fresh paint.

"Willie" Schuppner has left an "aching void" in our memory which only time can heal. Luck to you, William, in your new job. If you are only as conscientious and faithful in your new work as you were here, nothing can check your upward climb.

"Uncle Charlie" Pence (medical examiner at Philadelphia) reports that he is still interested in *farming*. Some day he will be known at the "Cote House" as the leading scientific farmer of the district. Sheep raising should be his money maker and we believe that he should devote all of his spare time to this phase of the stock-raising question.

Printing Department

Correspondent, M. J. CONROY

Rush! There is a word we have met up with quite a good deal in our time and have always had a desire to have its meaning made clear. So I took down my trusty dictionary and drank in with avidity, as it were, this definition: 1—To drive, push, or perform with violent haste; 2—To move with tumultuous haste or violence. From the Anglo-Saxon "hriscan," to make a noise; from the the German "rauschen," rush. Well, it is very plain that the German warriors now know that the boys in khaki knew what "rauschen" meant and consequently "moved with tumultuous haste" is quite clear and convincing. But we haven't been able to find a satisfactory explanation of the different degrees of relationship between a "Plain Rush," a "Big Rush," and a "Special Rush." My trusty friend John Hilleary came to the rescue with about as good a solution as could be found anywhere. He said they bear the same degree of relationship one to the other as the word "good" does according to the rules of grammar in "good, gooder and goodest." That is, they look different and have a different sound, but they don't mean anything. Just like the rain drops that patter on the roof—just a noise and nothing more.

Article Ten of the Fourteen Domestic Peace Points is still before the members of this chapel for solution. Not much progress can be reported, as no compromise will be accepted. So it looks as though a state of war will still continue to exist despite the efforts of our chairman to bring the matter to a happy ending. The following are the sections that have caused much thought and long debate: (a) Flat irons, rolling pins and other instruments of warfare shall be junked. (b) Relatives shall not be invited except by mutual consent of both powers. (c) The old man shall not hold out two bits on the 6th and the 21st and claim that he lost them. (d) Ports of entry shall be free—the wife shall not lock the front door and all the windows when the husband is out late. Then something happened and the meeting broke up in great confusion. George Beecher arose and said: "Mr. Chairman, will the mourners be allowed to pass the bier at a funeral?"

We bade "good-bye" in April to our quiet and efficient little stenographer, Miss Sarah

Irma L.,
Daughter of Elmer P. Wright, Relief Department

Dorsey, who left us for other fields of endeavor, and extend a cordial greeting to her successor, Miss Lena Rosenthal.

Two of the six best cellars:

George Yeager has five tons of coal stored away. Come on, Winter!

"Gus" Reuter has several hundred bottles of home-made brew with a "kick" in it. In fact he believes they must contain an extra "kick" because when he opened one the contents hit the ceiling. Too many raisins, "Gus."

Hail and Farewell

A real surprise was handed the members of this chapel on Thursday, April 15, as the day was slowly drawing to a close, in the form of the following announcement:

"Effective April 16, L. B. Frey is appointed Foreman, vice S. J. Girvin, resigned. I ask of you, one and all, your loyal support (and I feel sure it will be given) towards making his foremanship a successful one, and I feel sure he will be fair and just to all.

GEORGE R. LEILICH, *Manager*."

A few days after the above appointment was announced, the Lord placed additional responsibility upon Mr. Frey's shoulders by presenting him with a little bit of heaven in the person of a baby girl. Congratulations!

H. W. Erdman, Relief Department

Hazel R. Hanson

The accompanying picture is of Miss Hazel R. Hanson, the bright little daughter of James P. Hanson, of the Printing Department. Miss Hazel is very musical and helps brighten the home with her selections on the piano.

Purchasing Department

Correspondent, S. J. O'NEIL

The accompanying photograph is of Authur Laupus, the 14 year old son of C. J. Laupus, accountant in the Lumber Agent's office. Authur is in the eighth grade, and will enter the Baltimore Polytechnic Institute next fall.

Telegraph Department

Correspondent, DELLA M. HAIN

We compliment the Mt. Royal baseball clique on having a diamond on which to practice during lunch time. However, as such facility isn't to be had at Camden Station, our sportsmen have taken to shooting rabbits. Yes, we know rabbits aren't in season, but this poor animal came from the haunts of a ten cent store. It was unanimously agreed that there was only one sharpshooter in the party, as the rabbit was lucky enough to be hit only once.

Don't "forget to remember" that by calling by number our telephone operators are enabled to give much more efficient service.

Farmers are in abundance around here—at least we presume that the fertilizer which has been bought in wholesale quantities means business. We expect that in the fall we can go out to Bishop's to a corn huskin' party.

Position isn't everything in this life. When Supervisor of Time Service Donnelly curls up in his office chair we wonder if he is double jointed or—oh, you know, we just wonder *how* he does it; but, come to think of it, we might ask him.

On Sunday, March 28, a severe wind storm, reaching the proportions of a cyclone, blew down a large number of our telegraph poles on the Chicago Division. We are glad to say, however, that wire service was quickly restored.

Mr. J. S. Calvert, superintendent, Philadelphia, and Mr. W. W. Olheiser, district plant superintendent, Pittsburgh, two Western Union officials, recently visited this office on business.

And talking about gardens, etc., in the summer time, John E. Spurrier has been weeding all winter. He weeds wordy

messages, carelessly written messages, messages without symbols, and messages in which code words should be used. His garden of properly written messages is growing, and the discarded weeds are proving to be less each succeeding month. This shows that the zeal of our gardener is bringing the results anticipated.

When the second baseman of the Chicago team, in the Riverside Y. M. C. A. Membership Campaign, Miss Della Hain, went to the bat, the umpire called the game because she was clad in other than the regular uniform. He said that if Della, in harem skirt, struck a four bagger, she could not complete the run around the diamond before dark. So they called in a pinch hitter by the name of Donnelly, who took her place and brought in four home runs.

Transportation Department

Correspondent J. B. EGERTON

Our office can certainly boast of a porter who is a live wire when it comes to soliciting business for the Railroad. Six traffic men, representing various automobile concerns, came into the office one day and, while waiting for some information, casually

Arthur Laupus

remarked to our porter, George Swan, that they intended proceeding on their journey via a competing line. George suggested their taking our No. 6, saying that he could easily arrange to have their baggage transferred from Union Station to Mt. Royal. Being convinced that this was the better route and that it gave them a longer time in Baltimore, these gentlemen readily assented and the change was made to the satisfaction of all. This is but an example of the many suggestions of this kind that George gives to daily visitors at the office. Good work, George!

When you see tombstones on the file desk do not become alarmed. It simply means that the file clerks take stock of their resources and make good use of everything. Acting upon the suggestions of a fellow worker they asked Mr. Loeblein to secure for them some chips from tombstones to be used as paper weights. No, George did not have to rob the cemetery; his father is of the firm of Loeblein Brothers Marble and Granite Works.

Employees of the Transportation Department:

Your former File Clerk and Correspondent wishes to express her gratefulness to each of her old friends and fellow-workers, both in the Transportation and Car Service Departments, for their many kindnesses to her during her recent illness. She thanks you for the beautiful gifts of fruit and flowers, for the sympathetic letters and cheer-up cards, for the handsome box of stationery, and, most of all, for the greatest of gifts—your prayers for her recovery. To have worked among those the strength of whose friendship, through prayer, is able to recall to life one who stands on the brink of eternity, is a privilege which few may enjoy. Because this blessing has been granted her, it will ever be remembered and appreciated by

"AUNT MARY."

Owing to the delay in obtaining the photograph of our deceased fellow-worker, Michael Joseph Shea, we are a little late in telling of his sudden death, which occurred on February 18. "Major," as he was known to us all, was born on December 22, 1856. He entered the service of the Baltimore and Ohio in April, 1898, as clerk in the Agent's office at Locust Point. He came to the Transportation Department as clerk in July of the same year. "Major" was a familiar figure about the office and was well thought of by all who knew him. Shakespeare says "The evil that men do lives after them; the good is oft interred with their bones." Not so with "Major"; he will ever be remembered by our clerks because of his pleasant smiles and the little witticisms that he had for everybody.

Valuation Department

Correspondent, G. B. SAUMENIG
Accountant

We are all pleased to note the recovery of Mrs. G. W. White, Jr., wife of our historian.

C. M. Wilkinson, assistant engineer, visited the office several days ago. We hope it will not be long before he returns to work.

The Secretary to the Valuation Engineer, who is away for her health at Hot Springs, Ark., is recuperating. Mrs. Larmore, stenographer to Chief Draftsman, is holding down the Secretary's chair these days.

L. C. Smart, accountant, has left us to go into private business and our best wishes go with him. Let him do your moving and hauling.

Mrs. F. H. Wilson, wife of Supervisor of Small Tools, who is away for her health, is recovering. This accounts for the smiles of F. H. and F. E.

The late M. J. Shea, Transportation Department

Our Hagerstown representative, M. S. Alvey, has entered the poetic field. His first effort in the MAGAZINE is especially interesting to our department.

Ode to the Abstractor

We get up in the morning, and if it's not too late
We walk down to the office and are there at half-past eight.
We do not stay, however; there are deeds that we must get,
And over to the Real Estate we trot through dry and wet.
We come back to our tables feeling very much alive,
But horrors! When we start to write those Forms 135!
"What are the new instructions?" is the cry most every morn,
On the writing of that complicated darned old D. V. Form.
Last week we had to write one clause of construction cost, no doubt;
But if the track is on our land, this week we take it out.
And so it goes from day to day, and when our work is through,
We'll have a fine instruction book, and will then know what to do.

But this is not the worst of it, for there's another form,
Which taxes our intelligence until our brains are worn.
For these must have the cost of land upon their red-ruled faces,
Areas and recording, all in their respective places.
And when you come to column twelve there's a consideration
Followed by a mark which shows the date of dedication.
And if a little piece is sold, then we must write a thesis:
"Cost shown in column eighteen is on an area basis."
Oh! the instructions and the arguments that are thrust through our young heads,
Until we get so darned balled up we wish that we were dead.
And I hope that when I really die and, maybe, go to Heaven,
I won't be made to write those sheets, Forms D. V. One-O-Seven.

The cartoon of our friend James Garfield Russell of Equipment Pilot's force is true to life. What does the faraway look mean?

Is he thinking of machinery or other things? This is the work of E. B. Pearce, junior assistant pilot.

Our friend Fuller steers clear of ladders in the Real Estate Department. Ask him why.

On February 24 Mary Eulalia Pryor arrived, and G. H. Pryor, Jr., of the Cost Engineer's force, appears to be the happiest father of all.

On March 13 there arrived in the Armour household, Eleanor Virginia. Our friend William seems especially happy these days. But why the mustache?

James Garfield Russell

Auditor Coal and Coke Receipts

Correspondent, JOHN LIMPET

If some of the young ladies of this office continue to develop, or spread, as they have been doing for the past year, the mirror which has been doing service in this office for quite a while, a puny 2x6x4 arrangement, will necessarily have to be relegated to the scrap heap and a broader one secured, as we notice these persons are having quite a time seeing all of themselves at one time in the present "looker."

The old saying "What goes up must come down," was literally demonstrated recently by "Will" Helm, who climbed a ladder in the office to put some records in the top of a case, and, having completed the job, just fell off said ladder. It's a good thing the floor is made of concrete, or a serious accident might have happened.

The accompanying picture is that of Miss Ida May Donovan, one of the young buds of this office. Miss Donovan is there in more ways than one, but when it comes down to beads and earrings, she is in a class all by herself.

Miss Ida May Donovan

Coincident with the general reorganization of the Road upon return to corporate management, March 1, one of the changes in the official family of the Accounting Department was the appointment of Walter B. Dudderar as Assistant Auditor Coal and Coke Receipts.

Mr. Dudderar began railroading at the age of 19, when he became identified with the Western Maryland Railroad at Hillen Station, Baltimore, as Billing Clerk. After 6 years with that road in various capacities he resigned to accept a position with this Company as Rate Clerk, since which time, by close application to work and a seemingly endless amount of energy, there is hardly a phase of the accounting end of the game with which he is not familiar. Furthermore, there is no reason why the good work he has been performing as Chief Clerk, for the past 7 years, should not be carried on with wider scope, putting into practical use the knowledge stored up in his many years' grind through the mill.

Mr. Dudderar's many friends, both in and out of the service, are glad to hear of his promotion and join the office force in extending congratulations and wishes for further success. As a further manifestation of their good will, a beautiful basket of flowers was presented him by the Clerks of the office when the appointment was announced.

The following appointments were also made in the personal office force: F. B. Milnor, chief clerk; A. B. Seidenstricker, accountant; C. C. Rettberg, assistant chief clerk; J. L. Reigle, assistant chief clerk; G. E. Pritchard, assistant chief clerk; J. Linper, secretary to Assistant Auditor; Miss M. Walter, secretary to Chief Clerk; G. D. Johnson, head clerk; W. H. Reichert, head clerk; A. R. Lehman, head clerk; F. L. Miller, head clerk; J. P. Williams, head clerk; M. L. Dell, head clerk. With the addition of O. R. Lutz, who remains secretary to the Auditor, this comprises the entire personal force.

Some one has discovered the Super-fool who changed tires on a railroad crossing and nothing happened to him. Wonders never cease. Eighteen seconds is the time the average individual "takes a chance." In this same space of time a train moves a quarter of a mile and you think you are safe. Suppose you stumble; suppose a thousand other things, and then maybe you're out o' luck. Do the safe thing first.

Edward and Walter

Fine boys of W. T. Ahrens, head clerk, Coupon Department, Office of Assistant Comptroller

Just "Our Harry"

We are pleased to present Harry Doron, whose acquaintance extends considerably beyond the realm of this department. A fraternalist, good mixer and convincing speaker, he can reach some altitudinous heights at times. Did you ever hear of a volcano blowing its head off? Whew! you tell 'em. Well, that's Harry, who loves us all; just our Harry.

"Eddie" Schneider, reconsignment clerk, has returned from a trip to the Pacific Coast, much wiser from his journey.

Thoreau, a friend of the tall timber, who responded to the call of the wild and who said that nature is real and can't be camouflaged, "traveled much in Concord." But suppose some one asked you if you had traveled much in Baltimore, what would your answer be? The average individual, male or female, needs sunshine and fresh air. Here are just a few hikes that may appeal to you for your Sunday afternoon stroll. Walks start about 2.15 p. m.

May 16: Carney—a very beautiful cross-country trip. A long ride, so start early.

May 23: Ellicott City, west end of bridge, to River Road, to Relay and Halethorpe. Nine miles.

May 30: Mt. Washington to Green Spring Avenue, Park Circle. Five miles.

May 31, Decoration Day: All day trip with Washington Wanderlusters from Laurel. Meet at Camden Station in morning; time will be announced later; bring lunch.

June 6: Windsor Hills to Gwynn Oak. Five miles.

June 13: Great Falls, Washington. Meet at Georgetown, D. C., car barn, about 11.00 a. m.

June 20: Edmondson Avenue Bridge to Gwynn's Falls Park. Four miles.

June 27: Druid Hill Avenue entrance to Park to Woodberry. Four miles.

The ball teams are active and we have some choice dates still open.

Thanks to the kindness of John T. Broderick, superintendent Safety Department, and Dr. E. V. Milholland, chief medical examiner, who arranged for the new rest room in the Lexington Building, and C. S. Roberts, of the Tariff Bureau, in giving space from his office allotment, we now have an up to date and well equipped hospital, where our sick can get good care. While we are not anxious to use this room, yet it is good to know that we have been so well provided for.

The first practice game of baseball resulted in a real battle ending in a 3-2 score. Although on the short end of the score, Manager Finn feels gratified at the prospects, and is confident that the team will

Cartoonist Lynch's conception of "Special Delivery" at Pier 22, N. Y.

Auditor Passenger Receipts

Correspondent, GEORGE EICHNER

When the bulletin revealed Louis M. Grice's name among those recently adopted into the official family, the best wishes of his clerks were expressed in the form of American beauty roses. Mr. Grice was greatly surprised and said that the flowers represented the good will prevalent, and that he hoped the same spirit would continue in mutual efforts to make the office force a loyal unit of the system.

G. W. Jentner was appointed Chief Clerk, with J. M. Finn, R. W. Norris and E. N. King, Assistant Chief Clerks, and A. O. Whitehorne, accountant.

make things lively for their opponents. A few open dates, which he is anxious to fill with teams along the road, still remain.

George J. Germershauser has the best wishes of his former fellow clerks in his new position, as Clerk to City Ticket Agent.

Corrections—Miss Rowena Lathron says she and Horace will not be married until the Fall, as *he* is still a wee bit nervous.

NEW YORK TERMINALS

Correspondent, JOHN J. DUFFY

Here we have the squad of our rapid despatch messenger service: In the center is William Carey, otherwise known as

Flowers graced the desk of L. M. Grice on the morning he was made Assistant Auditor, Passenger Receipts

"Freckles." "Will" is one of the best impersonations of Mark Twain's immortal "Huckleberry Finn" ever. With red hair and a generous supply of freckles, his pleasant disposition has made him numerous friends. From left to right are Raymond Hoagland, better known as "Hinges." "Ray" is the son of D. K. Hoagland, one of our efficient tug boat captains, and is following very closely in his daddy's footsteps, by keeping in with the popular motto of the day: "Going Up." Patrick Histon, known as the B. V. D. T. messenger, delivers the mail to and from the Brooklyn Eastern District Terminal Company, where he evidently received his nickname. Frank Dolan, known as the "Speed King," has a "rep" of covering ground like greased lightning. Frank is a nephew of Miss Helen Dolan of our Accounting Department. Last, but not least, is Thomas Baccalini, who is the head of the department (if you don't believe it ask him). He is otherwise known as "The Macaroni Bender." "Tom" receives his orders from the Chief Clerk, and is there when it comes to carrying them out.

A. G. Volp, Yardmaster, Staten Island Lines

A Tip

Have you met Miss Margaret G.? She's just as pretty as can be, With hair of brown and eyes so blue, That always twinkle and wink at you. That she is jolly you'll agree, Wit is hers in great degree, Here's a girl who is a "find," Take a tip, take Margaret's kind.

STATEN ISLAND LINES

Correspondent, G. F. GOOLIC

Everyday Sayings of 295 Broadway**Interline Department**

E. P. W. (10.30 a. m.): "Gee, I have to see what I have for lunch today."

A. M. C.: "Who wants a drink?" (Water.)

M. A. L.: "Gee, 4.55; pack up, time to vacate."

"Rob." S.: "Whose dis?"

"Art." R.: "Anna, do you still love me?"

Rate Department

Wm. B. (over the phone): "Yep, Yep."

Hannah K. to "Tommy": "Aw, go wan, you Irish mick."

L. H. C.: "Any express to be delivered today?"

Miss Lillian Breidenbach and her three nieces

Wm. W.: "Hello, Division Accountant?" (Answer—"Wire busy.") "Darn it."

E. B. G.: "Anna, I want a loan of your machine."

Anna: "Ask Mr. Range."

Oh! the Ladies

Now down in our office are girlies,
All sizes, all kinds, there you'll find;
There are nice ones, there are fresh ones,
and—Oh, what the dickens
The use of my naming the kinds.

There's one named Miss Aurich, a flippant young girl,
Who can argue with you till your head's in a whirl:
There's also Miss Gaynor, who calls you pet names,
And winks pretty eyes that sure dazzle your brains.

Then there's Miss O'Mara, who handles a book
That's too doggone large for a girl of her size.
Miss B. is the girl with the real vampire look,
She's fond of "Joe" Covell, who falls for her eyes.

Then there's the "stenog"—gosh! I can't spell her name,
But she sure can "typefight" and chew gum as fast.
"Bill" Ivers is Sultan o'er our vast domain;
And now I shall quit, for the main dope I've passed.

Here is Adrian Canlon, son of Hugh J. Canlon, employed as Inspector, Maintenance of Way Department.

Adrian Canlon

This attractive picture is of Miss Lillian Breidenbach and her three nieces. Lillian is employed as Clerk in Car Accountant's Office, Pier 6, St. George. Whenever Lillian is spoken to, she smiles, and she sure can "smile." This picture was taken at her home at Annadale, S. I.

The fifth annual ball of the Staten Island Railroad Club was held at the Stapleton Club Rooms on Saturday evening, March 20. This was the most successful ball the Railroad Club has ever held. The music, the best on the island, was furnished by Professor N. P. Vice, a former trainman of the S. I. R. T. Those serving on the committee for arrangements were: B. F. Kelly, E. E. McKinley, H. W. Ordeman, G. J. Goolic and J. V. Costello.

Miss M. Gaynor, clerk in Car Record office, has resigned to take up various duties in the kitchen. Her former position will be taken by Edward McBreen, of the Car Record office.

The accompanying picture is of Trainman R. E. Decker, "Sheriff" as he is generally known, is some trainman. He has never missed a day and will soon become a Conductor if he keeps up the good work.

Trainman R. E. Decker

E. Goolickson is employed as stenographer in Superintendent's office.

The Auditor's office occupies a prominent space in the *MAGAZINE* by announcing the engagement of Miss Gladys Journey to Mr. Henry Mayor, a former employe at 295 Broadway. We extend our best wishes.

The office is looking forward to the announcements of Miss Lillian Hortense Connery and Miss Elizabeth Bridget Graham, two pretty stenographers of the Auditor's office.

We now have the pleasure of working with Mr. James Thomas Roach, the (movie) star of Brooklyn.

Locust Point

Correspondent, E. S. MIDDLETON

The Baltimore and Ohio Junior baseball team has been organized at Locust Point with the following line up: "Johnnie" Sutton, Henry Prenger, "Hughie" McCall, "Billie" Sable, "Pete" Wolfe, "Gus" Leimbach, "Jack" Poe, "Billie" Seigel, "Tommie" Williamson.

This is "some" lineup and you will doubtless get good reports of their future activities. They would like to arrange games with strong uniformed teams; those having grounds that may be used when Oriole Park is not available are preferred. Application will be made for admission to the Baltimore and Ohio League.

Alias "Pop" Anson.

Mount Clare Shops

Correspondent, MISS MOLLIE ALBRECHT
Secretary to Superintendent

Miss Goetzinger and Miss Davis took a trip to Canada, over Washington's birthday, presumably to see some of the beauty Nature has wrought, but as the dry law has not been enacted there yet, we are still waiting for an invitation to a "real party."

Some time ago, Baker, one of our time-keepers, made a trip to Salisbury. On his way back, he changed cars at Wilmington, and there his watch left him. The accompanying sketch is our cartoonist's version of how he lost it.

Stores Department

The clerks of our department, who have been working on inventory three nights a week, had a very pleasant surprise on March 31, when Chief Clerk Harry E. Litchfield very thoughtfully presented a large box of chocolates to the ladies and a box of cigars to the men.

In appreciation thereof, this was sent him:

If this were tomorrow,
Instead of today,
We would have accused you
Of April Fool's play.
With chocolates for girls,
And cigars for men,
You'll find us all saying,
"Oh Night Work, Don't End."
The Office Force.

We have talent at old Mt. Clare,
In the Stores Department—'tis hidden there.

Our little William
O'Neill

Mt. Clare knows him

Wonderful voices, soft and low,
Soprano, alto and deep basso.
Pianists? Oh, yes, there are many
Who play grand opera, in fact, any
Kind of music—old or new,
With technique perfect, clear and true.
Cartoonists, who with stroke of pen,
Draw human chickens, a bull or hen.
The minstrel man is with us too,
And funny stunts he sure can do.
Maybe some day we'll let you see,
In electric lights quite brilliantly,
"A Revue of Music, fine and rare,"
Under the name of "STORES, MT. CLARE"
If you do go to it and you'll get wise,
Take it from me, you'll be surprised.—J. C. G.

"Oh, see the tall buildings!"

Miss Fisher and Miss Heinekamp, two of our young ladies at Mt. Clare, visited New York recently. They came home with stiff necks.

We are glad to welcome our new Store-keeper, Harry Shoemaker, and his family to his new home in Baltimore. Mr. Shoemaker, who comes from Cincinnati, Ohio, is living at 1652 Ruxton Avenue, Walbrook.

John O'Connor of Martinsburg, has accepted a position as Work Report Clerk in the General Foreman's office.

W. L. Gamble, Car Foreman's office, has been appointed Assistant Chief Clerk, vice Mr. Moyer.

G. F. White, formerly disposition clerk and night chief, has severed his connection with the Railroad and accepted a position with The J. G. Brill Company of Philadelphia. J. C. Farr is holding down the night job in place of White.

F. Brennan has been transferred from the Crew Dispatcher's office to Yard office.

R. L. Gatchell, formerly of the L. P. Department, Superintendent's office, Baltimore, has resumed duty with the Railroad as Yard Clerk.

The positions of Day and Night Assistant Terminal Trainmasters have been re-established, with S. M. Hoy as assistant during the day and R. J. Woods as assistant at night.

LOSING TIME

Miss Edna Stickley and C. T. Harrington

Correspondent R. E. Sigafosse, Brunswick Shops, gives us the accompanying photograph of Miss Edna Stickley and C. T. Harrington, clerks in the General Foreman's office.

F. S. Bowman was reappointed Agent at Hagerstown, Md., effective March 5. Following is personnel of office force: J. T. Hartle, rate clerk; Charles E. Santman, cash clerk; H. R. Potter, claim clerk; J. H. Mullendore, yard clerk.

Philadelphia

L. F. Kirk, chief clerk to Terminal Trainmaster, has returned to duty after a siege of illness. Following are items of interest sent us by Mr. Kirk:

J. D. Gallary, terminal trainmaster, and his force have moved from 24th and Chestnut Streets Station to East Side, and have established headquarters on the second floor of the Yardmaster's building.

E. H. Moyer, formerly assistant chief clerk, has been assigned to the Agency at 58th Street Freight Station.

Wilmington Freight Office

The end of the consolidation of the freight departments of the Baltimore and Ohio and the Reading at Wilmington came on April 1. The freight business of the two roads handled at this point, as a unit, for the period of government control and under the supervision of Joint Agent E. B. Rittenhouse was highly satisfactory, both to the patrons of the roads and government and railroad officials. It has been the privilege of your correspondent to read several highly commendatory letters to Agent Rittenhouse from various railroad officials, notably of the Reading. Pictures have been taken of Wilmington headquarters and employees of our Company, which, together with a picture of Agent Rittenhouse, will appear in an early number of our MAGAZINE.

Following the removal of the Reading employees from the offices of the Baltimore and Ohio at Wilmington, George W. Bumpus, city soliciting freight agent removed from former quarters to the Baltimore and Ohio freight office building at

Left to right: John, Paul and Russell, sons of R. E. Eader, Supervisor, Washington Branch

the foot of Market Street. Mr. Bumpus is pleased with the new location and the freight employees located here are glad to welcome him.

A social event of note was the recent house party given to the joint office employees by Mr. and Mrs. James S. Evans. Almost the entire force was in attendance. Dancing was greatly enjoyed. A delightful luncheon was served by the kind and genial host and hostess and their son, Edward. A feature of the evening was the fine exhibition of hornpipe dancing and solo, by Edward Evans, which won an outburst of applause. Mr. J. S. Evans was chief clerk for the Reading in the consolidation until promoted to the Reading Montchanin, Delaware, Agency, lately.

We were honored, recently, by a call from our President, Daniel Willard, with a company of officials. This call was made at our freight offices. It is certainly a

D. M. Fisher, Sr., Freight Agent, Washington, D. C.

Assistant Agent at Washington, D. C., C. R. Grimm and Grandchild

great pleasure to report that he could and did heartily commend us for clean and neat surroundings, offices and grounds. That's good, Mr. Willard. Come again soon.

WASHINGTON, D. C., FREIGHT STATION

Correspondent, W. L. WHITING
Chief Clerk

It is seldom that our good friend Frank Hanschumaker, who is now located at Philadelphia, pays us a visit that he fails to leave us feeling better for having shaken hands with him. On the occasion of his last visit he left a souvenir in the shape of an excellent snapshot of our Agent, D. M. Fisher, sitting on the chair of authority in his private office. This is a fine photograph of Agent Fisher, showing the welcome smile that is always visible, and we are glad to be able to send a copy to the MAGAZINE.

Our Assistant Agent, C. R. Grimm, is very proud of the home that he purchased through the Relief Department, and the accompanying photograph shows that he has good cause to be proud. His home is situated in a pleasant part of Parkersburg, W. Va., and his Saturday evening trip home has been something to look forward to with pleasure during the early days of the week. But perhaps a greater attraction than even the pleasant home was there to greet him on his arrival. This attraction is shown in the other photograph of the group, and indicates "Pop" Grimm holding fast to the "greatest baby on earth." The pretty little round, plump face on the picture, full of health and fun, is assuredly something that a fond father can well be proud of, and a source of great happiness and joy to the devoted parents.

In the March issue we suggested a possibility of something of interest to report in accordance with the spring opening of the line of business conducted by that busy little fellow, "Dan" Cupid. Things progressed more rapidly than were looked for at that time, and on Saturday, April 3, our Extension Clerk, R. W. Price, and Miss Ruth Warwick, were united in the holy bonds of matrimony by Rev. C. C. McLean.

The wedding took place at the fashionable hour of "high noon," and the "newly-weds" started at once on an extended wedding trip through the Middle West, to visit Memphis, Carthage, Hot Springs and other points, and finally to end the trip in the bridegroom's home at Jackson, Tenn. Our

Home of Assistant Agent C. R. Grimm at Parkersburg, W. Va.

very best wishes for their health and happiness go with the happy couple in their travels and on their return to Washington, D. C., a hearty welcome awaits them.

We are glad to welcome Miss Hazel L. Bowen, who has been sick for several weeks, back to her desk again. We trust that her health will continue to improve and that she will soon regain her old time strength.

To say that business is fine would be to put it mildly; it is simply great, and keeps us all on the hustle. No danger here of getting into mischief on account of having "idle hands."

There have been some changes in our office force lately; several have left us to seek other fields of usefulness, and others have come to take their places. J. C. Krieger, who was with us for several months, resigned recently, and Miss Ethel M. Irwin, C. M. Webb and W. O. Layton, have joined our forces.

We extend a heart welcome to the newcomers, and hope to see them with us for a long time.

Brunswick Transfer

A meeting of the check clerks was held in the office W. E. Shannon, transfer agent, on March 10. Matters relating to proper checking of freight were discussed. These meetings produce good results. This is the first meeting held since return of the railroads to private ownership. Everyone present voiced his cooperation by the enthusiasm displayed. Other meetings will be held in which new matters will be discussed in the interest of general work and welfare of the whole department.

March was the biggest month in the handling of freight at the transfer shed for a long time. On some days, as many as 126 cars were loaded out besides the transfers and work in the yard. Cars loaded for the month were 2,300. This was brought about by cooperation.

E. C. DRAWBAUGH, *Division Operator*
R. G. ALLAMONG, *Secretary, Y. M. C. A.*
P. M. PENNINGTON, *Crossing Watchman*
RUTH M. CHEVYRONT, *Office, Mechanical Engineer*

The following irregularities were detected by Operators on the division during the

past month and prompt action taken to correct.

NATURE OF OBSERVANCE	NO. OF CASES
Broken arch bars.....	1
Brake rigging down.....	4
Hopper bottoms down.....	3
Hot car boxes.....	2
Car doors insecure.....	1
Broken spring hangers.....	1
Broken train line.....	1
Obstructions removed from track.....	1
Total.....	14

Four cars set off on above reports after examination was made.

A. Gineran, watchman, who has swing turn from William to Frederick Streets, and who has been on the sick list for a long time, is back on the job, working half time until he gets stronger.

Walter House, extra gang foreman, has been laying new hundred pound rails from Frederick Street to Viaduct; also putting in new crossovers, switches, etc.

Wilbur Hardy, foreman of Section 27, moved his tool box to the West End. That looks like business over there.

South Cumberland Y. M. C. A.

Sunday Services

Every Sunday afternoon at 4.00 o'clock a service has been held in the auditorium. The religious director has been assisted by the ministers of the city. Some of the finest musical talent of the community has been utilized in making the meetings attractive; addresses have been delivered by ministers, lawyers, bankers and railroad workers. The attendance has been good.

Father and Son Week

During the month of February, seven meetings were held in the interest of the Father and Son idea. There was a different speaker for each evening. Special music by choirs and soloists made the meetings delightful.

Address by E. V. Baugh

The service on Sunday, March 28, was addressed by E. V. Baugh, superintendent Dining Car Department. The subject of his address was "The Square Deal." This was a practical and helpful message. The speaker made a strong plea for a square deal in the home and made it clear to every man present that his first duty as husband and father was to get himself right with

God. Give God a square deal and the joy and usefulness of our own lives will be unbounded.

Baseball

The Y. M. C. A. has reorganized its baseball team for another season. Following are the names of the officers: C. Rowan, captain; C. Weaver, treasurer; H. F. Cole, field manager; C. F. Hare, business manager.

Stores Department

Correspondent, CHARLES H. SIZER

W. M. Hinky, formerly Division Storekeeper at Cumberland, Md., has been appointed Superintendent of Company Materials, with headquarters at Baltimore, Md. He has been succeeded by C. A. Marshall, formerly General Foreman at Glenwood. We wish each success in his new position.

N. B. Taylor, formerly O. & R. Clerk, Storekeeper's office, has been transferred to the Ticket Agent's office. We all wish him success.

I fear that we are going to lose a good clerk, as I see our friend Margaret wearing a diamond on that fateful finger on her left hand.

Another love affair! Our Stenographer, Miss Hannah Love, has fallen in love with a certain gentleman by the name of Harry, who works in the Storekeeper's office, Keyser, W. Va. Well, we all wish them luck.

MARTINSBURG SHOPS

Correspondent, W. L. STEVENS, *Assistant Foreman Martinsburg, W. Va.*

The kindly stork smiled upon the home of Conductor Bruce Miles and left a bouncing baby boy. Did you see Bruce grin?

Machinist James Dailey has resigned to take the sales agency of a Cleveland oil firm.

Bridge Helper D. H. Dodd has joined the "back to the farm" movement. May these young men win success in these new fields of endeavor.

Mrs. Lydia D. Creak, wife of Engineer H. M. Creak, died at the City Hospital, this city, after an illness of several weeks, aged 61 years. A brief funeral service was

Superintendent Thomas Stewart and some of the "boys." Taken when the new shops opened at Cumberland

Conductor Lewis Hess
Morgantown and Kingwood Branch

held at the late home, 310 West Race Street, after which the remains were taken to Winchester, Virginia, and laid to rest in the Mount Hebron Cemetery.

Joseph A. Welty, hostler at Cumbo, and Miss Mabel Morrison were recently married at the United Brethren parsonage in this city. The groom is a son of Car Repairman John B. Welty. He spent several years in the army with the State Guard on the Mexican Border, and later in France. The young couple were given a nice reception at the home of the groom's parents. After a wedding trip they will make their home with the father, John B. Welty.

Timber Preserving Plant

Correspondent E. E. ALEXANDER

All previous March records were broken at the plant this year when we treated 95,301 cross ties in addition to other miscellaneous material. Our best previous March record was 91,578, made in March, 1915. Only three hours' delay to treatment operations during the 31 day period ending April 1 established another record.

Have you heard the news? Charles P. Houck and Miss Mildred Hamilton were married at the Methodist Episcopal parsonage at Oldtown, Md., by Rev. W. N. Michael, on Friday evening, April 2. Mr. James C. Newcomb of Cumberland and Miss Ida Hamilton, sister of the bride, were attendants. The groom is one of our efficient young Cumberland Division operators, who was for some time located at Green Spring, but who is now at Evitts Creek. The bride is the popular and estimable daughter of Mr. and Mrs. C. W. Hamilton, of North Branch. Good luck we wish for them through all the years to come.

The home of Supervisor and Mrs. Alexander was the scene of an impromptu old-fashioned (and we have been informed sticky) taffy party, April 23. Among those engaged in pulling were Mr. and Mrs. C. L. Kittle and daughter Carolyn, Mr. and Mrs. E. S. Crawford, Misses Mary Robinson, Edna Montgomery, Lucy and Georgie Gurtler, Alpha Moreland, May Teeters, Hazel Lenhart, Hazel Crabtree, Minnie Catlett, Elizabeth Sisler, Messrs. W. F. Kesler, H. M. Whitford, C. W. Short, G. R. Day. Mr. and Mrs. J. C. Alexander were "charges des affaires." (Note—Supervisor and Mrs. Alexander were not invited, the former having been called to Cincinnati and the latter visiting relatives in Cumberland. Consequently the lid was off.)

Second from the left is the late James W. Riley, Tunnelton, W. Va.

Mrs. G. W. Robinson and grandsons, Roy and Earl, accompanied by Mrs. C. W. Gurtler, spent a few days in the early part of the month visiting their daughter, Mrs. A. E. Irving at Holyoke Farm, Anne Arundel County. Mr. Irving was formerly truck gang foreman at the Plant.

C. E. Tebby, treating inspector, Central Creosoting Co., Finney, Ohio, was a recent visitor at the Plant while on his vacation.

Owing to the decrease in our tie receipts, R. Meeks and Roy Ambrose, two of our banner tie men, have been handling ties at Pittsburgh Wood Preserving Plant, at Adelaide, Pa.

Mr. and Mrs. Roy Keister were the recipients of a rocker from the boys. Another wedding present.

Stein Kowalski, one of our good tie men, who recently underwent an operation for appendicitis at the Allegheny Hospital, is again on the job and handling them faster than ever.

Death has again visited us and this time called a young mother, Mrs. Eva Kenny, aged 23, wife of Patrick C. Kenny, March 22, at the Allegheny Hospital at Cumberland. Our heartfelt sympathy is extended to the bereaved husband and father.

Keyser

Correspondent H. B. RIGHT

While cleaning between the tracks recently, James Alvaro was instantly killed by an engine in west yard. He is survived by a widow, three daughters and two sons. His son "Larry," weighmaster, is the one who sent the cartoon of the man and his daughter astride a pocketbook, which appeared in the MAGAZINE several months ago.

Robert Frazier, brakeman, was recently taken to the Hoffman Hospital, badly injured by having been struck by an overhead bridge near Terra Alta. He is reported as doing nicely.

Do you read Miss Margaret Talbott Stevens' contributions to the MAGAZINE? If you don't, you should, because she always has something good, and they help to turn the dark clouds inside out, and show you their silvery linings. Miss Stevens has been ill for some time, but is reported now as on the road to recovery, and we hope that she may soon be herself again, and help to scatter sunshine and good fellowship among our big family, as she has in the past.

The "Man with the Shovel," second from the left in the accompanying group picture, is the late James W. Riley, of Tunnelton, W. Va. Mr. Riley was born on February 17, 1854. He first entered our service in June, 1873, and was one of those who helped to widen the grade from Rowelsburg to Newburg. He was known to be ever faithful to his duties and was retired from service on August 1, 1919. His death occurred on March 3.

Matthew Dowling, a Baltimore and Ohio pensioner and respected citizen of Westernport, died at his home on Tuesday, March 9, aged 78 years. Mr. Dowling was a veteran of the Civil War and had four sons in the late war. The sympathy of our employes is extended to the bereaved family.

John H. Mohler, retired, died at his home on Orchard Street, on Monday, March 6, after a prolonged illness. He leaves one brother, Conductor D. W. Mohler; two sisters Mrs. Annie Kimes of Cumberland and Mrs. W. H. Jackson, of Keyser; two daughters, Mrs. M. E. Akers and Mrs. W. L. Harmon, of Keyser; and one son, William Mohler, of Wheeling. Mr. Mohler belonged to Olive Branch Lodge No. 25, Knights of Pythias, of which he was a member for 40 years.

Some of the shop boys, inspired by a recent writeup in the MAGAZINE regarding the Maryland Rifle Association, are anxious to form a similar rifle club here. We have some "crack" shots among them, and are anxious to see their club started. Any employe who is interested in such a club is welcome to come in and help get things moving. Leave your name with the correspondent and we shall try to arrange for a meeting.

Captain John Carr has been busy lately looking over and replenishing his fishing outfit. Don't be surprised to see him bringing in a big "catch" soon.

The Keyser wreck train crew is to be commended for the pains taken in keeping their cars and equipment in the condition which they do. A visit to their cars, and especially their dining car, shows that they are interested in their work. The dining car has hot and cold running water, gas lights and on the walls are hung good pictures, pictures one would like to have in his home. The kitchen is equipped with a range, refrigerator, cupboards, etc., which makes one think he is in the kitchen of a hotel. A good supply of all kinds of canned goods, meats, potatoes, etc., is always on hand. Everything is spotlessly clean. The

tool car has large cupboards on each side of the aisle, with the name of the contents stencilled on each door. They have "a place for everything, and keep everything in its place." "Bill" Broome, old "Leather-neck Bill," has an office fitted up in one of the cars which is up-to-date in every particular. His filing system, first aid kit desk, lighting, etc., are most complete.

Here it is that he turns out his "copper plate" reports, written in a beautiful hand and containing all information required to make the reader see the wreck just as if he had been there. "Tom" Stanley, a genial good fellow, is in charge of the train as Wreckmaster, and Morgan McIlwee has charge of the dining car. The fellows all say he is *some* cook. If you have a chance, have Morgan show you through the car. "You'd be surprised."

"Joe" Heneke, formerly Chief Clerk to Assistant Master Mechanic Hodges, has been transferred to Connellsville. C. V. Welch, who has been located at Gassaway has been appointed Chief Clerk, vice Mr. Heneke.

CONNELLSVILLE DIVISION

Correspondents

S. M. DeHuff, *Manager of Telegraph Office*, Connellsville, Pa.
J. J. Brady, *Office of Division Accountant*, Connellsville, Pa.
EARL E. SHANK, *Office of Superintendent*, Connellsville, Pa.

On March 9, S. L. West, claim agent on the Connellsville Division, was transferred to the same position on the Pittsburgh Division. By his courtesy and geniality, Mr. West won a host of friends while on this division, all of whom are pleased at his deserved promotion. He has been succeeded by O. P. Garrett.

The continuous vigilance of railroad train crews was again demonstrated at Connellsville on the night of March 13, when the yard crew of Conductor Welling, engine 1109, discovered an unknown intoxicated man prone across a track that was being shoved by their engine. But for the care and watchfulness of our men on this occasion one more serious railroad fatality would have occurred and another unfortunate would have gone to an untimely death unprepared.

Miss Minnie Rottler and William Rush are new clerks in the Superintendent's office. We trust that they will remain with us for a while, as clerks come and go these

days with such rapidity that we do not have time to form acquaintances.

O. P. Moser, time clerk in the Master Mechanic's office, and Miss Anna Mary Colborn, of this city, were married on March 6. The happy young couple were taken to the Baltimore and Ohio station in a spring wagon by a number of their young friends, and it must have been some ride, for the happy-groom wrote from Southern Pines, N. C., that it was one thing that would remain in his memory forever.

James J. O'Brien, chief electrician for the Connellsville Division for the past three years, died April 4 at his apartments at the home of F. R. Moon. The deceased was 33 years old. He came to this station from Washington, D. C. He is survived by his wife and two children. Mr. O'Brien was known to the majority of railroad men at this place and his early death is sincerely mourned by all.

Born to Mr. and Mrs. Homer Kearns, on March 12, a daughter, Betty Lorain. The proud father is Bill Clerk in the Master Mechanic's office. This is the first arrival.

Master Mechanic F. W. Rhuark resigned March 13 to accept a position as Mechanical Superintendent of the Pittsburgh and West Virginia Railroad, with headquarters in Pittsburgh. Mr. Rhuark was engaged as Master Mechanic on this division for the past fourteen months and always enjoyed the respect and confidence of his entire force, who presented him with a fine gold watch on his departure. The following poem was written by one of the clerks at the roundhouse, W. C. Wyncoop:

Goodbye, Mr. Rhuark, we hate to see you go,
For you have been a faithful man to this old B. & O.
And we are so sorry that you are leaving here,
It really is as sad a blow as 2¾ beer.
But never mind, old scout, we sympathize, you know,
For none of us can tell when we will leave the B. & O.
We hear you are getting a watch and really hope it's so;
But the only watch that we will get is when they watch us go!

Announcement has been received here of the marriage of Miss Emma J. Grove, clerk in General Foreman's office, Somerset, and J. J. McMoil, of Pittsburgh. They will be at home after May 1 in the Linden apartments, Pittsburgh.

M. R. Powell has resigned as Chief Clerk in the Master Mechanic's office to accept a position with the Pittsburgh and West Virginia Railroad Company at Pittsburgh. His departure has caused many expressions of regret, for during his stay here he has enjoyed a large number of friends, each of whom esteemed and respected him for his qualities of courtesy, consideration and frankness, as well as for his earnest efforts to assist those with whom he labored. Before his departure he was presented with a handsome gold watch and chain by the employees at the shops.

PITTSBURGH DIVISION

Correspondent, E. N. FAIRGRIEVE, *Car Distributor*, Office of General Superintendent

Regret to learn of the death of the father of W. E. Mohler, chief clerk to the District Master Mechanic, which occurred at his home in Keyser, W. Va., during the latter part of March. We extend our sympathy.

Homer Strome, formerly assistant chief clerk to Superintendent Gorsuch at Pittsburgh, has severed his connection at this end of the line and removed to Garrett, Ind., there to become Chief Clerk to the Division Accountant. Mr. Strome was well liked by all with whom he came in contact, especially the fair sex, and his going away has saddened many a heart and caused many a teardrop among the ladies. When about to leave to take up his new

W. H. Collins

Terminal Road Foreman at Glenwood, and two friends, with big string of fish caught last year

duties, Homer was presented with a silver pen and pencil by the employees of the office as a token of the esteem in which he was held.

We extend to Miss Kathryn Newman, telephone operator at Pittsburgh, our sympathy in the loss of her brother, who was taken by death during the latter part of March.

Glad to welcome Miss Nan Maloney, another one of our nifty "Hello Girls" who has been absent for about three weeks nursing a sick one at home.

Miss Terese O'Hare, another member of the switchboard, until recently on duty at Pittsburgh exchange, has been transferred to a similar position at Glenwood. Her voice sounds just the same—only a little farther away.

Rudolph Walters, from West Newton, formerly employed in the Division Engineer's office, has been transferred to the office of the Coal Freight Agent at Pittsburgh. Good luck to you, "Rudy."

Division Claim Agent G. J. Maisch has been transferred to Cleveland, Ohio. He

Dodd, of the Valuation Department, Pittsburgh, Plunges

has been succeeded by H. L. West of Rockwood, Pa.

H. M. Grantham, who has held the agency at Butler for some time, has been transferred to Braddock. He has been succeeded by "Tommy" Stoops, who returns to Butler after a sojourn of many weeks in the Northern District, acting in the capacity of Relief Agent.

Miss Spring, who announced her arrival some time ago, is doggone slow about getting here.

Sure sign of Spring—a dusty carpet. Can you beat it?

Valuation Department

As Mr. Balliett, the drafting room philosopher, says: "In the heppy peppy Springtime a young man's fancy lightly turns to thoughts of love," so it was with O. E. Dodd, otherwise known in the office as "Cap'n Dodd." A few months ago he swore allegiance to the band of women haters. Recently we were aware of draggy love songs being whistled with feeling, and of the whistler's purchasing sentimental

Scene at Number One Tunnel and Wheeling Creek Bridge, Old Hempfield Railroad. Engine 1346, in charge of Engineer James Morris and Conductor P. T. Ellery

take place in June. Mr. Chillcott is employed as repairman of speed recorders.

"Kid" Merkel, who was boiler clerk in office of Master Mechanic, has been transferring his "manpower" to a drill press in the machine shop. Ralph ought to be a good machinist for he "machined" a good deal when he took unto himself a better half—and outside of leap year, too.

It was with great regret that we had to lose the services of our faithful and worthy Superintendent of Shops, J. Howe, for a month at least. Mr. Howe has been feeling poorly ever since he had the "flu" and was ordered by his doctor to take a month's vacation and go South. We all hope that the vacation will do him good and that when he returns he will be in good health.

C. A. Marshall was recently transferred to Cumberland as Storekeeper at that location. The girls at Glenwood made up a little token for "Doc" and sent it to him at Cumberland.

On February 11, C. E. Wilson, boiler-maker, took unto himself a wife. She was Miss Geraldine Welsh. We wish both of them the best of success in their new field.

"Dan" Cupid has just started in the office of the Superintendent of Shops. Miss Gillespie left our service on March 31 for matrimony. "Sam" Rock, brakeman, is the lucky man.

Ralph Rodgers, of the blacksmith shop at Glenwood, and recently out of the U. S. Army, is doing as well for his country on this side of the water as he did on the other. A little over a year ago Ralph was released from service, whereupon he became a benedict. Now there is a youngster in the new family.

Mr. and Mrs. Charles M. Boyle are the proud parents of a boy. He must have come to stay, for the little girl told her mother "he has his clothes off." Charles McKinley Boyle, Junior's daddy, is a Brake-man on the P. & W. Buck Local. Our best wishes to Mrs. Boyle and junior "Charlie."

G. H. Burggraf, roundhouse clerk on the second trick, has been transferred to the office of the District Superintendent Maintenance of Equipment, Pittsburgh, where he will have charge of the boiler reports. He succeeds H. M. Davenport, who now is man hour clerk at Glenwood.

We were sorry to learn of the sudden death of the father of Gang Leader Charles

Barnes, which occurred on March 9. Mr. Barnes was Watchman on the P. & L. E. He was struck by a moving train and killed instantly. The sympathy of all Glenwood employes is extended to members of his family.

Born to Mrs. H. C. Barnett, wife of Machinist Helper, a 10 pound baby. Both baby and mother are doing well.

This picture is of the children of Painter Foreman William McMurtry: LeRoy, age 8, Frank, age 5, and William, Jr., age 2. "Mac," as he is known about the shops, was with the American Locomotive Company prior to coming with the Railroad, in charge of the painting gang. Mr. McMurtry entered our service August, 1919, and is well-known and liked.

CHARLESTON DIVISION

Correspondent, M. W. JONES

Secretary to Superintendent, Weston, W. Va.

Nothing has been heard of the Charleston Division in the MAGAZINE for some time. Naturally, we suppose a number of our friends have the idea that we have ceased to exist. Far be it from so. This is to notify all and sundry that we hereby demand "our place in the sun," and intend to take it.

In December last, the headquarters of the Charleston Division were moved from Gassaway, W. Va., to Weston, W. Va., to the great joy of all of us, especially those who were seeking houses and could not find them. Weston is a lively little West Virginia business town of some 7,000 people, not counting us and our families. We make quite an addition to the population, and we are now all nicely settled and have become real "Westonites." We have located in Weston the offices of the Superintendent, Division Engineer, Division Accountant, Chief Train Dispatcher, Master Carpenter, Trainmaster West Virginia and Pittsburgh District, and Road Foreman of Engines. Many of our number, especially the ladies, left fond recollections behind them in Gassaway, but judging from appearances, when we take a walk on the highways and byways of Weston, and when we go to the movies (we have 2 here—count 'em, 2) it seems to us that it is a case of "out of sight, out of mind" so far as any one left behind in Gassaway is concerned.

LeRoy, Frank and "Billy" McMurtry
(See Glenwood notes)

Victrola records, but little did we suspect the truth until "Cap'n" announced that in the first week in April he would take unto himself a bride. If he makes as good a husband as we know him to be an abstractor, he will be a model. The accompanying sketch is self-explanatory.

Not so long ago, W. L. Nichols and J. D. Clark preceded "Cap'n" Dodd to the altar. Who's next?

During the month of February, two of our employes were called to the Great Beyond: Miss Dorothy Folpe, clerk, and W. G. Fay, transitman. Pneumonia was the cause of both deaths.

Well, boys, what do you say to a ball game or two this year between the benedicts and the young hopefuls? Years ago these classics used to be annual affairs at which we had barrels of fun. The games were exciting, and many comic situations loomed up, such as a fellow knocking the ball over the grandstand and dashing for second, and the hunt by the whole bunch, audience and all, through the tall and uncut weeds for the horsehide after some fellow's murderous wallop. Those were the good old days. Two or three contests of the same nature this year will sort of liven things up.

Glenwood Shop

Correspondent, FRANK RUSH, Shop Clerk

Glenwood roundhouse Leap Year Committee announces the engagement of Miss Ella Marshall and George Chillcott, both residents of Becks Run. The wedding will

The only offices now remaining there are those of the Assistant Superintendent, Trainmaster and Road Foreman of the Elk Linc.

C. L. West having given up the post of Chief Dispatcher, John T. Staples, 1st trick Weston, has been appointed in his place. John has been in the service of the Company more years than he will admit, principally on the West Virginia District. Now that he has an official job, we think that a "Mrs. Chief Dispatcher" would add to the dignity of the position.

C. M. Criswell, freight claim representative, and J. P. Ryan, agent at Weston, represented us at a claim meeting of Baltimore and Ohio K. & M. employees and shippers of Charleston, held in the K. & M. R. R. freight offices at Charleston, W. Va., April 15. The meeting was in the interest of claim prevention.

A meeting of the Division Staff was held in Weston, April 16, Superintendent Trapnell presiding. All members of the Division Supervising force were present.

Has any one heard anything of car miles lately? Ask "Charlie" Dixon, our car distributor. We were just well started on our campaign to show you other divisions what we could do, when, like a bolt from the blue sky, the strike struck us. We have had to postpone our activities a little, but wait and see what we will do to you when conditions again become normal. Did you read the letter Mr. Ennes wrote in the last number of the MAGAZINE? We did, and

we thought it so fine that we sent a bulletin broadcast over the division telling everyone to get a copy of the MAGAZINE and read it. **We are after car miles. We mean to get them, too.**

The question of reviving the old system ball teams is up for consideration. We are with it, and in fact our ball park at Gassaway is already being fixed up. For this division, W. H. Schide, chief clerk; J. C. Kinton, assistant superintendent, and Relief Agent J. M. Davis, have been appointed as a committee to make things hum. You will hear more from us and get our challenges when we are ready to get to work.

The following changes and promotions have taken place: Samuel Strachan, of Baltimore offices, appointed Division Freight Agent at Charleston, vice S. J. Lamoreux; F. H. Remalay appointed Storekeeper at Gassaway, vice H. C. Miller, promoted to same position at Grafton; H. A. Hayes appointed Shop Clerk in Master Mechanic's office, vice J. M. Cracraft, resigned; F. A. Baldringer, former Assistant Master Mechanic at Holloway appointed Master Mechanic at Gassaway, vice O. B. Street, resigned; W. J. Dixon, former General Foreman at Weston appointed Assistant Master Mechanic at Holloway, vice F. A. Baldringer, promoted; O. J. Kelley, appointed General Foreman at Weston, vice W. J. Dixon, promoted; Kenneth Leeson, of Parkersburg, appointed File Clerk, vice Miss Helen Lloyd, resigned; Miss B. Tierney, of Weston, appointed L. P. I Clerk, vice R. Baker, resigned; Miss Hoke

appointed Trainmaster's Clerk, vice Miss Juanita Lockhart, transferred to Fairmont; O. C. Lehmer appointed Agent at Blue Creek, Elk Line; E. M. Caperuse, of Coal & Coke R'y, at Elkins, appointed Agent at Centralia, Gauley Line; J. M. Davis appointed Agent at Gassaway, vice N. Rexroad, appointed Agent at Allingdale; J. N. Godman appointed Captain of Police Department, vice C. E. Stanley, resigned.

J. P. Ryan, our popular agent at Weston, has just recovered from a serious attack of typhoid fever. His smiles were missed by the public at large, and by his fellow employees in particular.

Superintendent Trapnell has just returned from a 2 weeks' trip to Florida, where he met many old friends, and reports having spent a most enjoyable vacation. His appearance on his return to Weston makes us wish we could go down there "where the grape fruit grows" for a couple of weeks' trip also.

Has anyone seen Boyer? You know who I mean. W. C. Boyer, the able representative of Mr. Egan, on this division. When last seen, he was walking on the track, miles from home, looking for sparks said to have been dropped by an engine about a week ago between Orlando and Roanville. We hear he had found a few of them when last seen.

The division offices here have recently been re-painted and generally cleaned up. When you come to visit us, you will see real offices. As a matter of fact, our friends in Baltimore had better look to

SUPERVISING FORCE AT BENWOOD SHOPS

Front row, left to right: M. Stevens, car foreman, Holloway; F. M. Garber, general car foreman, Benwood; F. Baldinger, master mechanic, Holloway; C. E. McGann, division master mechanic, Benwood; "Matt" Walsh, road foreman engineer, Benwood; "Nick" Hoffman, car foreman, Brooklyn Junction.

Second row: T. H. Bonsell, master mechanic, Brooklyn Junction; Robert Nolan, machine shop foreman, Benwood; Paul Riedle, blacksmith foreman, Benwood; "Dave" Hull, erecting shop foreman, Benwood; C. F. Kunze, car foreman, Bridgeport; O. F. Stoneburner, tank foreman, Benwood; A. J. Kettlewell, car foreman, Benwood; Henry Haberfield, air brake foreman, Benwood.

Back row: "Joe" Diebold, electrical foreman, Benwood; "Jerry" Donovan, roundhouse foreman, Benwood; Edward Eberle, pipe fitting foreman, Benwood; J. H. Duffy, general foreman, Benwood; R. Lough, labor foreman, Benwood; W. E. McCombs, painter foreman, Benwood.

Benwood Shop Employees

Top row: T. J. Cooper, G. N. Miller, F. Finnegan
Lower row: H. Muldrew, L. Heil

their laurels from the standpoint of appearance. The Charleston Division serves notice that it is on the map and time-table of the Railroad in big letters, and will be heard from ere long.

We have just had our Spring "house-cleaning" on the division. The "scrap" train was on the line for about a week. Practically all our division officers accompanied this train, looking after their several interests, and seeing that nothing of any value was left lying around. As a consequence, the whole division now bears a striking resemblance to your house and mine after the good wife has finished her Spring cleaning. Any one who wants to see a real Railroad is invited to visit the Charleston Division. Division Engineer Brooke was everywhere like a "cat after a mouse." His section foremen claim he can "smell" a piece of scrap a mile away. Relief Agent Marshall can see surplus stationery through the walls of the cases, while Division Accountant Severns and Chief Clerk Schide can tell you where every hotel on the division where there are any "eats" is, and they can find it with their eyes shut.

Every one here knows S. W. Pickens, the Superintendent's Assistant Chief Clerk. We have wondered of late why he wore such a solemn air, and why he was apparently carrying the cares of the world on his shoulders. Murder will out. "Pick" has been dabbling in the real estate business. He has taken unto himself a house and expects to move in shortly.

We understand that Miss Sylvia Miller, stenographer to the Car Distributor, is leaving us. She says she has another job and a better one at that, somewhere near Kenova. We can't imagine any one thinking that part of the State more desirable than Weston, even for more money, and we have our own ideas as to the real cause of her leaving us.

On April 15 a large and enthusiastic meeting of the Charleston Division Safety Committee was held in the Superintendent's office at Weston. We had practically all our division officers present and representatives from all departments to the number of 25. Safety is a matter of great interest on this division, and we are working for it all the time.

WHEELING DIVISION

Correspondent, A. N. GANTZER

Benwood Shop

Correspondent, ANGELA APPLIGATE

Thomas A. Edison has nothing on our old friend J. A. De Bolt. Wearing a happy

Benwood Shop Employees

Left to right: T. J. Shaw, F. Sigler, J. H. Jones, H. L. Knapp, R. Orum

smile and dressed in his Sunday best, "Joe" recently arrived with the announcement that on the morning of April 1, a second Thomas A. Edison arrived at his home. The cigars and candy were duly passed around. "Joe" will soon be seen pushing a new buggy, which he is going to buy with the bands of the cigars which he distributed.

George W. Selwood, car foreman at the Wheeling Coach Yards, has been granted a leave of absence on account of his health. He will spend it in Florida. Best wishes for your speedy improvement, George.

"Dan" Wilson, of the Paint Department, has fallen a victim to Cupid's arrow. On April 1, he and Miss Keller, of Boggs Run, were quietly married. Congratulations.

One of the most popular young men of the Eastern Lines is Thomas H. Hollen, master car builder, West Virginia District. The number of friends that he has made in this territory speaks well for the manner in which he is handling business.

W. J. Dixon, former general foreman at Weston, has been promoted to Assistant Master Mechanic at Holloway, vice F. A. Baldringer, now Master Mechanic at Cassaway. Sincere good wishes to both.

New Martinsville, one of the busiest stations on the Wheeling Division, and one which is always neat and tidy, has a slogan: KEEP THINGS MOVING. And New Martinsville lives up to its slogan. Trainmaster J. W. Bull has been given much credit for the fine performance at that terminal.

Although there were a sufficient number of chairs in the Master Mechanic's office on March 27, a certain young man insisted on standing up all day. The news finally leaked out that "Bill" had joined the Elks at Moundsville on the night before.

It was a lucky day for August, the photographer, when he visited us, as all of the supervising officers from Benwood and outlying points had gathered at Mr. McGann's office for a parley. The photograph on the opposite page shows them.

It would not do to tell too much about the occasion when "Nick" Hoffman chased the bull from Brooklyn Junction to Proctor. Nor would it be wise to talk too much about Zanesville. However, they are all first rate fellows and we like to work with them.

The young ladies decided that the best looking man in the picture is Mr. McGann, with "Stoney" as a close second. Mr. McGann is a promising bachelor, while "Stoney" has a wife and nine. We vote for "Stoney" on looks, but not on his ability to hide brake beams in the arch brick shed.

Now, we hate like thunder to say this, bein's we work for Mr. Garber, but we heard that the Mail Pouch people paid him for getting into the picture.

Mr. Bonsall's position, as we see it here, is like his pleasing personality—it stands out prominently. The writer is not personally acquainted with Mr. Baldringer, but the photographer, who works Holloway now and then, predicts big things for him.

Somebody asked why A. J. Kettlewell's face shows so dark in the picture. "Cat" says he was the only foreman who had done any work that day.

We would like to have had in this group the face of our old General Foreman, H. J. Burkley, who has been recently made Master Mechanic at Connellsville, but we can show you his successor, Mr. Duffy. Mr. Duffy has promised to have our office cleaned up some day, and that, at least, is a good beginning.

Visitors from other points are always made welcome at Benwood by this "bunch" of Mr. McGann's and "Mac" is glad to have the "bunch" perform at any time.

WESTERN LINES

CINCINNATI TERMINALS

Correspondent, JOSEPH BEEL, Chief Clerk to Superintendent of Terminals

C. P. Burrus, supervising agent in the Terminals, left on April 15 for Springfield, Ill., to become Commercial Agent for the Company at that point. Mr. Burrus has left many staunch friends, who wish him every success in his new position.

The old adage, "Two can live as cheaply as one," seems to be an inspiration to the yard clerks in the Cincinnati Terminals, particularly at Stock Yards, for it has leaked out that Earl Schindler is about to set sail on the "Sea of Matrimony."

We are all glad to see "Pete" Furcy back on the job after being off a month on account of sickness.

It is understood that the new oil special is causing our genial Assistant Trainmaster a great deal of anxiety.

Walter H. Bachmann, file clerk in the Superintendent's office, has left our midst to become Rate Clerk in the local Freight office. We all miss you, Walter, but here's wishing you luck.

Everybody at Ivorydale is wondering just who the young lady from St. Bernard is who declared that she was going to set

Two "Freds" and their better halves

her eye on George Stappe as a Leap Year possibility. Who is she, George?

Since Elmer Pabst is back on day work, we know there is joy in the hearts of many young ladies in the vicinity of Westwood, for, as Elmer puts it himself, "he is surely a demon with the ladies." When he is not holding down a chair in the parlor, he is occupying space in some other fellow's "Marmon." How do you do it?

John Jordan, one of our car repairers, got a so-called "hot tip" from Frank Smith, another one of our box car surgeons (the kind he usually puts out), and John immediately hocked his sewing machine to bet on the horse. Out of 9 entries John's horse ran ninth, which was pretty good, considering who picked it.

Of course, this is no concern of ours, but we do not think that the Cumminsville barber ought to embarrass any of our Railroad family. Some one said Albert Booth went into said shop and requested a shave. The barber said, "What are you doing, kidding me? All you need is your face washed. You cannot get that blush off, it is natural."

"Tommie" Moon, of the Storrs repair track, asked that the following sign be put up. "Say, the ? # # # : / * - * * / . . whoever stole my lock can have the keys by calling at the office."

Sure signs of Spring: "Doc" Cook's 1900 model straw hat has again put in its appearance.

Miss Clara Schulte, stenographer in the Superintendent's office, now has an "excuse for traveling" located in Akron, Ohio, and she certainly is taking advantage of it.

John Julian Johnson

The two "Freds," Oehlschlaeger and Kirchner, of the Superintendent's office, recently took in the sights of Dayton. Our Dayton correspondent advises that he understood when they visited the Soldiers' Home, one, we do not know which, was asked for credentials. We cannot agree, as we do not think either of them look like veterans of the war of '61, but maybe they do when they are away from home. The attached was taken on this memorable day. Reading from left to right: Mrs. F. Oehlschlaeger, "Fred" Kirchner, Mrs. "Fred" Kirchner and "Fred" Oehlschlaeger.

Here is a picture of Car Juggler Robert Jennings at a promising young age, which, as the Bard of Mill Creek has sung below, shows what may happen to us in later life: Herewith a picture of a bright little boy,

Taken, we judge, at the young age of four; Which shows that a boy, though bright and so coy

Can turn out to be Car Distributor.

—By Brethouse.

"Car Juggler" Jennings—"As you were"

"Joe" O'Donnell recently made a hurry-up trip to Marion, Ohio, and while there made a few negotiations, the extent of which he has not made known. We know, however, that "Joe" will spring another surprise. "Bob" Jennings said he bought a post hole factory. There may be something to this, as "Fred" O. was trying to buy some post holes the other day.

It looks as though "Al" Vonderheide, the well-known rate clerk at Ivorydale, must have received a Leap Year proposal, if we are to judge from the way he has been watching the bridal ring advertisements lately. How about it, "Al"?

"Mose," the caller at Stock Yards, recently took a flier in steel and Covington is expecting any day to have a new business man added to its commercial family.

We want our readers to have a glimpse at the John Julian Johnson smile, which constantly illuminates the Storrs Yard office. Some smile, we think! The other picture is of Jasper J. Johnson, who takes good care of all the icing at Storrs. Next picture will introduce the famous Car Inspectors of Storrs, John and David Streitenberger, who see that the rip track is more than filled each day.

The Rekop Club held its annual "Who is Who" election at the Toledo Division

John and David Streitenberger

local office on April 5, with the following clerks named winners: Prettiest girl, Lucille Baumgartner; most popular girl, Sue Elmere; best dancer, Mildred McGinn; handsomest man, Stanley Beck; most popular man, Frank Ruwe; best dancer, Irwin Kennedy.

Heard at the Rekop Club

John Crowe—"I never hear that saying, 'Wine, women and song,' any more."
"Bill" Dean—"No; now they say, 'Near beer, chicken and jazz.'"

"Tommie" Hilton, machine operator, appeared at work a few days ago with a beautifully discolored left lamp. "Tom" says he couldn't lick all 12 of them.

A new member has been added to the Maintenance of Way force, Miss Bertha Goetz, who is a very jolly and likeable girl.

Speaking of Beau Brummels, what do you say about Frank, the boy with the beautiful hair, working on the third trick at Elmwood?

"Charlie" Gest and George Ford, of Storrs, are holding an eating contest every day at noon hour.

NEW CASTLE DIVISION

Correspondents

A. C. HARRIS, *Assistant Chief Clerk to Superintendent*, New Castle, Pa.

P. W. ADAMS, *Telegraph Operator*

O. C. BEDELL, *Telegraph Operator*

L. H. Browning, now Agent at Wooster, Ohio, expects to take over the agency at Cuyahoga Falls, Ohio, because of the dissolution of the consolidated agency with the Pennsylvania Company at that point. As usual in such cases, there will be considerable work necessary to restore the business to the former standard, but Mr. Browning and force are fully capable of performing this feat.

Jasper J. Johnson

Switch Crew at Millersburg, Ohio

Back row, left to right: Shafer, conductor; Jackson, engineer; Jenkins, fireman. Front row: Victor and Butler, brakemen

Agent G. W. Taylor is busy getting his Summer work clothes ready for service and overhauling the machinery to handle the Lake business that will develop shortly. With the Lake navigation season about to open, it is certain that the Painesville force will as usual be found on the job ready to handle the greatly increased business that will naturally result. The dredge for use in cleaning the channel has been overhauled and is in good shape and the force required for the operation is gradually being organized. General Yardmaster Huston at Painesville is also busily engaged in co-ordinating the various yard functions essential to successful operation and both branches of the service will be ready to start off with a bang when the word is given.

Many employes forget they are a part of the "makcup" of the Company and that when they aim a "kick" at the Company they are liable as not to kick their own anatomy.

With the advent of favorable weather, baseball is again coming into prominence. At New Castle the organization of the 1920 team is progressing rapidly. With the 1919 team practically intact and a number of new stars available, the situation is very satisfactory. It is expected that the record of 1920 will be better than that of 1919, when only 3 games were lost throughout the entire season. A dance and euchre party has been planned as a means of financing the team so that it will not be handicapped during this season. As usual, J. A. Jackson and A. C. Harris will be in control of the baseball affairs and will be found working strenuously for a winner.

Storekeeper W. C. Guthrie has left the New Castle Division to accept appointment as Storekeeper at Glenwood. H. F. Schwab has already arrived on the division to take over the duties of Storekeeper at New Castle Junction.

D. R. Bowman has been assigned to the New Castle Division as first assistant on the engineering corps, taking the place of W. P. Ball, transferred to Baltimore.

Agent F. H. Knox is getting his force in readiness to take over the freight business at New Castle because of the breaking up of the co-ordination of freight facilities at this point. For some time Mr. Knox has been acting as Outbound Agent at the Pennsylvania Station. He seems greatly pleased to be back with us again. The station force at New Castle intend to demonstrate anew to the people of New Castle that the BEST SERVICE is Baltimore and Ohio service.

"Freddie" Bohlen, one of the youngest agents in point of service on the division,

and but recently assigned to Munroe Falls, Ohio, seems to be making good with a vengeance. "Fred" is a very ambitious and hard working chap and there is no doubt that affairs at his station will be handled properly and the business developed to the limit of its capabilities.

Resumption of branch train service on the New Castle Branch is one noticeable result of the return of the railroads to private control. Formerly, employees of the Company at New Castle Junction used the P. & L. E. branch train in getting to and from their work, but March 1 brought an end to this privilege and our own branch train is now being operated.

Cecil Winifred Geldbaugh

Four year old son of H. A. Geldbaugh, General Foreman at Painesville
"These words I stand for: The Baltimore and Ohio Railroad Company"

There is no use talking, the Company cannot use as a means of exchange anything except what you as an employe manufacture for them. If you furnish good service, the Company has a valuable commodity for exchange and is enabled to furnish good service. The resultant benefit is not only to the Company, but to you.

Agent F. M. Mantz, at New Castle Junction, has been exhibiting recently a card pass that is probably one of the oldest card passes in existence. Away back in 1854, one Thomas Beckett, locomotive engineer, was given transportation from Cleveland to Erie on the C. C. & C. and C. & C. Railroad, and this pass was counter-

signed by M. Bryan, master of transportation. Mr. Beckett, who was the father-in-law of Agent Mantz, served for many years as locomotive engineer on the Baltimore and Ohio Railroad, entering the service years ago when horses were used as motive power, and continuing in service down through the years that witnessed the radical changes in transportation methods that brought in the steam engines to handle the trains. Mr. Mantz states that some years ago a local newspaper commented on an old pass that had come to their attention and made the claim that this pass was the oldest known. This claim, however, was withdrawn when Mr. Mantz produced his 1854 pass. This souvenir of bygone days is jealously guarded, as it is thought to be the oldest available pass of today.

The accompanying photograph shows Thomas J. White, retired Newark Division Switch Tender, and his grandson, Frank White Meyers. On April 5 "Tom," as he is better known among his many railroad friends, celebrated his 66th birthday. In spite of the 3 score and 6 years, he is hale, hearty and active, and is very proud of his grandson and "chum," Frank.

Mr. White served continuously in the service of the Company from 1880 in the capacity of Caller, Yard Clerk, Brakeman and Switch Tender, until the time of his retirement in 1913. However, at heart he is still one of the "boys" and loses no opportunity to visit with them and to keep himself in touch with what is "doing" in railroad circles. Prior to his long term of service, his father, Dennis White, served 40 years as an Engineer on the old Sandusky, Mansfield and Newark Branch (now known as the Lake Erie Sub-division), having entered the service in 1850.

T. J. White and Grandson

John Doyle

The accompanying photograph is that of John Doyle, one of the leading Veterans of Newark, Ohio. In a letter to G. W. Sturmer he tells of a very pleasant trip which he recently made through California, going by way of New Orleans and returning through Salt Lake City and Chicago. Mr. Doyle thinks that the Baltimore and Ohio Railroad is second to none.

Announcement was made recently of the marriage of Ray L. Redman and Miss Clara Reed. The wedding took place some time during the month of January. We extend to them our best wishes.

H. C. Wilson has resigned his position as shop order clerk and accepted a position with the Holophane Glass Company.

Charles Dolan has accepted a position as messenger in the Division Accountant's office.

"Bob" Pryor reported at the office recently with a highly discolored eye, but says he doesn't care since the other fellow is in the hospital and anyway his girl just adores black eyes.

John Thornburg, one of the best known residents in the vicinity of Sundale, Ohio, recently celebrated his 85th birthday by entertaining a number of his friends and neighbors. Despite his advanced years, he is enjoying the best of health and is able to perform light work about his farm.

Familiarly known as "Jack" Thornburg, he was for many years an Engineer on the Baltimore and Ohio, and an expert in hauling heavy trains over Sundale Hill. Before coming to Sundale he was an Engineer in Belmont County, and while practically his entire life was devoted to railroading, he never had an accident.

At the birthday dinner he recounted many reminiscences of his early life which were particularly interesting to his railroad friends and which contributed toward making the occasion an enjoyable one.

Zanesville Reclamation Plant

Correspondent, CHARLES B. L. HAHN

We are sorry to advise that Miss Gertrude A. Shoemaker, stenographer for the Locomotive and Car Department at this station, entered the Good Samaritan Hospital for a serious operation on March 2. This is the second operation in the past 3 months. The employees extend their sincere wishes for a speedy recovery.

With the object of establishing a Welfare Association or a Community Center for the employees of the Baltimore and Ohio at

Zanesville, a meeting was held in the Signal Plant on March 17, between the hours of 12.00 and 1.00 o'clock. H. W. Booth, material supervisor at the Reclamation Plant and the man who first helped to organize the Y. M. C. A. of Zanesville, made the opening address. He emphasized 3 dates: June 24, 1918, February 2 and March 17, 1919, as commemorative of the day on which John Roberts, blacksmith at this station, entered the Government service as a soldier, the day he returned home and the day he returned to his work. During the address Mr. Booth, on behalf of the Brotherhood of Blacksmiths, presented Mr. Roberts with a medal in token of his overseas service.

An interesting feature of the program was a 4-round boxing contest between D. C. Riley of the Reclamation Plant and P. D. Howard of the Car Department. Before the close of the meeting the following were appointed as a committee to form the Welfare Association: H. W. Booth, Charles B. L. Hahn, John R. Roberts, Glenn Williamson and Charles Lewis from the Reclamation Plant; S. F. Graham, P. D. Howard, Leo Himmelspace, R. G. Waggoner and Charles Barnett from the Locomotive Car Department. This committee met at a later date and organized by electing the following officers: H. W. Booth, chairman; S. F. Graham, secretary, and Charles B. L. Hahn, treasurer.

"Boosters' Meeting"

A Boosters' mass meeting was held in the Signal Plant on March 25, at noon, for the Welfare Association. The meeting was opened by an address by H. W. Booth, chairman of the Welfare Association committee, on "Zanesville." Next on the program was a letter from the United States Government on Welfare Work on Railroads, which was read by S. D. Snedeker, local secretary of the Y. M. C. A.

A 4-round boxing contest was staged between P. D. Howard and Leo Himmelspace, both of the Locomotive Car Department. The referee gave no decision on the affair. At the close of this meeting about \$100.00 was subscribed by the employees to carry on the work of the Welfare Association.

CLEVELAND DIVISION

Correspondents

A. F. BECKER, *Secretary to Superintendent*, Cleveland, Ohio

AMY A. FORD, *Clerk to Pilot Engineer*, 621 Sloan Building, Cleveland, Ohio

Top picture, next page, is of Charles Edell, commonly known as "Silent Charley." This title was derived from his

conservative ways, always holding his good counsel and advice until the most appropriate time. He is one of the "Old Timers" in the Boiler Department and has eliminated many delays by his watchfulness. Locomotives have to pass his efficient inspection before departing upon their various duties. He practices the same pugilistic spirit upon his work as he did in his younger days when he eagerly faced his opponents in the ring. Later on, he left the strenuous game and took charge of the Boilermakers' Athletic Association, whose bowling team made such a fine showing last winter in the shop league. During recent war times, when the patriotic spirit of the entire country was manifested by raising flags over homes, buildings and shops, "Charley" was instrumental in prosecuting a vigorous campaign to secure funds to purchase an emblem of freedom for Cleveland Shop. Mayor Davis of Cleveland delivered an address on Flag Day, and in the absence of local musical talent, "Charley" prevailed upon a German band to render the "Star-Spangled Banner" when "Old Glory" was flung to the breeze. His influence was felt in the Red Cross, Victory Chest and Y. M. C. A. drives and the 100 per cent. Liberty Loan issue may be credited to him. Last but not least is his personal interest in Safety. This is foremost in his mind at all times, not only for himself, but for his fellow workmen. He is never so busy that he cannot spare time to warn others of conditions that might be injurious to them. He was also very prominent in his activities in the recent National Prohibition Campaign.

Massillon

We have another Yardmaster at Dover. On March 7 he arrived at the home of "Ben" F. Wilcoxon and is now getting along very nicely. "Ben" says he will soon mark him up on the extra board. We hope he is a chip off of the old block.

Brakeman Nash has gone to Willard to work in Willard-Holloway Pool service with Conductor Billingsley.

On March 17, Trainmaster Fitzgerald's father, Dennis Fitzgerald, passed away at his son's home in Massillon. He was taken to his old home at Silver Springs, New York, for burial. We express our sincere sympathy.

The accompanying picture is of the first district run crew at Massillon. Reading from left to right: Brakeman C. Legg, Fireman C. P. Himmel, Engineer M. H. Carpenter, Brakeman H. U. Brugh and Conductor J. W. Griffin.

First District Run Crew at Massillon

"Silent Charley" Edell

Ticket Agent and Operator G. H. McCoy has been complaining about a stiff back. Since the old haymaker started to shine, he probably got spring fever and over-worked the spade. Maybe we can furnish him with a little dope and oil for his ailment when the weather gets too warm.

Operator "Dad" Landis has returned to his old post at "CO" Tower, after a trip to Florida, where he was called on account of the sickness of his daughter. While there he also was taken very ill.

CHICAGO DIVISION

Correspondents

F. N. SHULTZ, *Division Operator*, Garrett, Ind.
 BERTHA PHELPS, *Clerk*, South Chicago
 MARGARET GALLOWAY, *Assistant Shop Clerk*, Garrett, Ind.

F. R. JENKINS, *Secretary*, Y. M. C. A., Willard, Ohio

P. H. CARROLL, *Signal Supervisor*, Garrett, Ind.

GARRETT, April 5, 1920.

Dear Ed:

Why is it you don't say nothin' much no more about the good ole Chi. Div.? You jus' hand all them bokas to them divs. down east, which looks like narrer gages along side of the Chi. Div. I got a lot a news but I aint goin' to tell it all cuz it wood on'y make them other divs. jelus an' they aint no use cawsin' no trouble, cuz we must all work together fer a common caws, even if our caws aint so common as thern. Lissen, Ed, I don't want to 'pear egotistical, or whatever you call it, but I can't help but brag jus' a little about our div. an' officers an' men an' etc. I aint goin' to get personal an' mention no names, cuz I dun it onet an' got one of them growlers tied to me an' didn't have no job for 7 months. There's our Supt., for instance; he's a regular Prince Albert of a fella, an' you bet your boots we all like him, even if he did come off'n that Ohio Div. Then there's our chf clerk what tuk a furlo to go into the butcher shop bizness. Somebody musta killed the fatted calf for him. Hope he don't get no bum steer. We wisht our private secy would fall air to the job, but they is a job in heaven awaitin' her, which is better. An' our T. M.'s is both hale fellas, one of which wares dimons an' aint married. That is why he wares dimons. The other one we is skeert of losin' him, cuz ever sinse the 18th commandment he has ben ritin to the mare of Cuba for a job. An' our M. M. is a expert mechanical man, an' can't be beat, cuz he worked for Mr. Ingersol onet in his watch factory. An' our genial general foreman is the man what always explains them failures was do to the fac' that the eng. didn't have no steam, or nothin', which aint no fault of hisen.

Then there's our hard workin' road foremen of engs. what spends all their time an'

a lot of the Co.'s money a ridin' Nos. 5 an' 6 an' kickin' cuz the porter 'lows people in the observation, 'side themselves, which bother them so's they can't find no lo joints. An' our noble chf dispr what is fuller of suggestions than Mr. Bryan is of grape juice. Then cums our asst chf what raises chickens for a liven—they kind which lays eggs—jus' beccuz he loves Nature so, an' works nites fer recreation.

There's our div. opr what is a handy man an' does ever thing on the div. 'cept operate. An' last but not least cumes our disprs. what is all swelled up cuz Mr. McAdoo sed they wuz officers. Guess he wuz kiddin' em, an' ment on'y from the neck down.

I cud dwell four hours discussin' the merits of the Chi. Div. an' its officers an'

Ida Dudley Crow, two year old daughter of Division Claim Agent Alex. Crow

men, an' cussin' the demerits of them other divs. an' etc., but I aint goin' to do it, cuz I aint got neither the time nor inclination.

Yours truly,

D. S. PATCHER.

Camden Ratrie, who has been Chief Clerk to the Superintendent at Garrett for the past 10 years, has resigned to go into business for himself at Garrett. Mr. Ratrie has been connected with the Baltimore and Ohio for almost 20 years, and the best wishes of his office associates and of his large circle of friends go with him in his new enterprise.

S. V. McKennon, formerly Chief Clerk to the Division Accountant, has been promoted to Chief Clerk in the Superintendent's office to succeed Mr. Ratrie.

Homer Strome succeeds Mr. McKennon as Chief Clerk to Division Accountant. Mr. Strome was Timekeeper Clerk at Garrett until a few years ago he was sent to Pittsburgh as Clerk in the Division Accountant's office. His many friends here are glad to see him return to Garrett.

F. M. O'Haver has been appointed Agent at Commercial Avenue, South Chicago. Mr. O'Haver had been Agent at Wellsboro for a number of years and for the past three years has been in the Telegraph Department at Garrett.

G. J. Park, Chief Clerk in Train Dispatcher's office at Garrett, is ill at his home in Chicago. He has not been able to work for three or four months. We all hope, however, that he will be able to report for duty soon.

W. T. Spencer from Fort Mitchell, Va., wishes to express his appreciation of the kindness of the employes of the Chicago Division during his sad mission among us while trying to find the body of his brother, a fireman on the road, who fell from an engine in the St. Joe River. The body has not been recovered.

At Willard the employes are considering the improvement of the Y. M. C. A. recreation park by installing a swimming pool. A local welfare association has been organized with the following officers: President, J. P. Coats; Vice-President, K. E. Floeter; Treasurer, W. E. Mehl; Secretary, B. L. Johnston. They will make an extensive drive to increase the membership.

The many friends of E. B. Miller, who was with the United States Railroad Administration as Supervisor of Freight Car Repairs, headquarters at Washington, D. C., will be pleased to learn that he has resumed his former position as General Car Foreman, Chicago Division, with headquarters at Garrett. D. L. Gibson who was General Car Foreman during Mr. Miller's absence, resumes his position as Car Foreman.

The accompanying photograph shows Colonel J. W. Sellers, who, after serving 46 years as line man, Chicago Division, has been placed on the pensioned list and retired by the Western Union Company. Mr. Sellers has been a faithful and valuable employe for the Baltimore and Ohio as well as the Western Union; has faced many storms and performed creditable service under trying conditions, where a younger man would have failed. He is without doubt the youngest man for his age on the System. Too young and active to be considered idle, the Baltimore and Ohio has given him a position as crossing flagman at his home town, Fostoria. Mr. Sellers began his career as Switchman in the Newark yard in 1873 under W. H. Hoffman, general yardmaster. At this time W. C. Quincy was General Superintendent and William Franklin, Master of Transportation at Newark, Ohio. In 1874 Mr. Sellers went to work with line gang and remained in that service until retired, February 1, 1920.

Colonel J. W. Sellers

G. W. Brunk, fireman on this division, departed from Garrett on March 28 for Boston, where, we are told, he was to embark on the sea of matrimony.

There is a great shortage of machinists and boilermakers at Garrett. Men of both crafts can be used.

We are pleased to announce the marriage of Miss Pauline Bennett, a daughter of Boiler Gang Foreman and Mrs. O. Bennett, and A. J. Hassett, boilermaker helper, Garrett enginehouse. The marriage took place at the home of the bride on West King Street. Hearty congratulations!

Passenger Fireman Albert Carlson and Miss Marion Novinger, daughter of Engineer George W. Novinger, surprised their many friends recently when they went to Chicago and returned to Garrett as Mr. and Mrs. Carlson. Best wishes for a long and happy married life!

Ernest Crowe, stenographer to Division Engineer Batchellor, has resigned his position and accepted a position as Secretary to General Manager of Wayne Oil Tank and Pump Company, Detroit. Miss Clarice Horn has been promoted to position vacated by Mr. Crowe.

Miss K. Ann Skilling, of the Division Accountant's office, appeared at work on March 29, wearing a new diamond ring. Ralph Hoffman, of the same office and whose home is at Auburn, Ind., is the lucky man. Good luck to them!

G. W. Hesslau has been appointed Claim Agent, in charge of Claim Department matters between Gary and St. Joe, Ind., headquarters at Garrett. Mr. Hesslau comes from Chicago, where he has had much experience in the same line of work. All departments extend to him a hearty welcome and will assist him in every way.

E. B. Henslee has resigned as Claim Agent, Chicago Division, to become a member of a well known law firm at Garrett, where he expects to follow his profession as a lawyer.

D. W. Koons from Hoytville, Ohio, has been appointed Agent at Republic, Ohio, in place of M. S. Seeley, who has resigned and moved with his family to California.

OHIO DIVISION

Correspondent, A. E. ERICH, Chillicothe, Ohio

The accompanying picture shows part of the yard office force at Chillicothe. Left to right: O. E. West, general yardmaster; G. G. Wilson, interchange clerk; Wayne Wilbur, Howard Williams, yard clerks; Horace Williams, patrolman; E. R. Fisher, assistant yardmaster; Earl Jaynes and P. P. Stockman, yard clerks.

Yard Office Force Chillicothe

Renicks Yard Engine and Crew

The D. T. & I. freight force at Washington Court House, Ohio, returned to their depot March 1 with M. F. Lahey as agent, and all freight for their line is now handled at their depot. Congratulations, "Mike."

Foreman Orihood, at Washington Court House, and several of his men who have been ill with the "flu," are back with us again.

The many friends of Miss Bertha Dunlap, clerk in Freight office, Chillicothe, who was operated on for appendicitis several weeks ago, will be glad to learn she is getting along very nicely, and we hope to welcome her among us soon.

Supervisor P. Clark, at Washington Court House, attended the Supervisors' Convention at Chicago in March. Foreman Shinkle of Midland City was looking after things during Mr. Clark's absence.

J. P. Clark bid in the second trick ticket job at Washington Court House, but "Jimmy" says there is no place like Athens. We wonder why?

We are glad to report that Shop Accountant Edgar Somerset, who has been confined to his home with the "flu" for several weeks, is again with us.

The accompanying photograph shows Renicks Yard engine 2500 and crew: Left to right: C. S. Michaels, conductor; W. E. Loney, switchman; C. W. Ramsey, fireman; "Mac" McCollister, switchman; W. Davis, car repairer, and H. Ankrom, engineer.

H. F. Schwab, assistant storekeeper, Chillicothe, has been promoted to Storekeeper, New Castle, Pa. We congratulate him.

It is with regret that we heard of the death of Mrs. J. L. Kennedy, wife of Section

Foreman at Martinsville. He has the heartfelt sympathy of all his friends.

D. B. Thurlow, 73 years of age, died at his home, March 8. Mr. Thurlow entered service as Freight Brakeman March 1, 1871, was later promoted to Conductor, serving in that capacity until January 1, 1915, when he was retired on pension.

Everet Newman is again able to be on the job after a five weeks' battle with the "flu."

Trainmaster "Dick" Mallen has returned from Martinsville, Ind., where he spent several weeks for his health. "Dick" certainly improved his looks while gone, so much so that "Bill" Graf, road foreman, is also thinking seriously of making a visit to Martinsville.

INDIANA DIVISION

Correspondent, H. S. ADAMS, Chief Clerk to Superintendent

Spring is here. We noted the first signs the other day when Division Engineer's forces were at work leveling and rolling the tennis court in rear of the office building. The court has been put into fine shape, and the first game of the season was played by Division Engineer and his Secretary. From all indications, they both need lots of practice. This court has afforded ideal recreation for the office force and has been enjoyed by many. Former Superintendent E. W. Scheer, an ardent admirer of this sport, enjoyed many a game here, as also did former Trainmaster S. U. Hooper, now Superintendent of the Newark Division, and R. S. Welch, assistant to Engineer Maintenance of Way. Mr. Scheer, when he was at Seymour, won many a hard fought game, and now we have some players who think they can put it all over him. We would like to try him out.

While looking over one of our daily papers we notice that another brakeman of the Baltimore and Ohio picked up another North Vernon young lady, the one in the limelight this time being Maurice Corryea, the other, Miss Doris Lattimore.

On April 1, the C. T. H. & S. E. again took over their agency at Seymour after its being operated by us since October, 1918. They will reopen their passenger office and will have a two-trick telegraph office also. This relieves the operators at "JO" of considerable worry, for they handled C. T. H. & S. E. trains in and out of Seymour. We have made many friends with the C. T. H. & S. E. employes while in the discharge of our duties during the World War. Chief among these was the local conductor, Mr. Thompson,

better known as "Uncle Bing." "Charlie" Frey, operator at "JO," is one of the employees who regrets the loss of the agency because of the loss of extra work. We don't know how "Charlie" will get his fresh country butter now that "Uncle Bing" will get his orders over at the C. T. H. & S. E. building.

Mr. and Mrs. R. A. Temple have just returned from a very pleasant three months' visit in the Southwest.

B. A. Phillips bid in the second trick yard clerk position in Seymour Yard. We understand he is learning the whys and wherefores of the job by this time. We hope he will not hold up any more of our freight trains as he was reported as having done in his student days.

Miss Ruth Kaufman has just returned from a two months leave of absence, having undergone an operation in the Olney Sanitarium.

Robert White, who was formerly employed as temporary clerk in the Division Accountant's office, assisting in the compilation of man hour data for the United States Railroad Administration, has just announced his candidacy upon the Republican ticket for County Auditor. Prior to the World War, Mr. White was Deputy Sheriff of Jackson County. Mr. White has a good following in this county and we hope for his success.

Floyd P. Green, brakeman, better known as "Boots," is the proud father of a 9-pound son, born on March 29. Congratulations. Ten cent cigars, please!

ILLINOIS DIVISION

Correspondent, OMER T. GOFF, *Secretary to Superintendent*

Office Assistant General Freight Agent,
St. Louis, Mo.

Correspondent, FRANCIS PIGLOSKY

We are pleased to announce the promotion of Edward Hart, Jr., from Assistant General Freight Agent to General Freight Agent, and that of J. G. Fry, our former City Freight Agent, to General Southwestern Freight Agent.

William F. Bollman, one of our commercial representatives, has been appointed Commercial Freight Agent.

It is with pleasure that we welcome back our former co-workers, Arnold Farrer and C. W. Browder, listing them among our freight representatives.

We regretted the resignation of E. C. Schlag, our former trace clerk on March 27.

Just a little information:

The rate on one horse, *carload*, from Odin, Ill., to Henderson is \$1.60½. (Rather a large horse.)

Evidently our office force is a prosperous-looking one as inquiries have been made by automobile salesmen as to the "automobile owners" among us. Getting down to "brass tacks," I doubt if a majority of us could own anything better than the following indicates:

For Sale

One ——— car, with a piston ring,
Two rear wheels, one front spring.
Has no fenders, seat made of plank;
Burns lots of gas, hard to crank;
Carburetor busted half-way through,
Engine missing—hits on two.
Only three years old, four in spring;
Has shock absorber 'n ev'rything.
Ten spokes missing, front axle bent;
All tires punctured—not worth a cent.
Got lots o' speed, runs like the deuce;
Burns either oil or tobacco juice.
If you want this car, inquire within—
Helluva good car for the shape it's in.

However, some of the men feel prosperous enough to buy rag hats.

TOLEDO DIVISION

Correspondent, I. E. CLAYTON, *Division Operator*

J. W. Stevens has returned to duty after a six weeks' battle with the "flu."

D. J. Bergan, switchman, has returned to duty after a month's illness.

Mrs. W. A. Parks, wife of one of our pioneer switchmen, died on March 3 and was buried March 6. We extend to Mr. Parks our sincere sympathy.

Justus Burnett, conductor, has returned to duty after a two weeks' vacation.

Frank McManus, chief clerk to Assistant Superintendent Kelly, had a wonderful experience on the battle line for Uncle Sam, but it is now time he was having more serious experience. Girls, this is Leap Year; Frank is a mighty fine fellow and willing to make some girl happy.

East Dayton

Correspondent, EDWARD M. MANNIX

One of the signs of the welcome Spring is the brightening up of one's self and his surroundings. With the anticipation of fishing, baseball and vacations, it makes us feel and enjoy the wonderful blessings of Nature. The roundhouse looks bright and cheerful, and with its new coat of paint and whitewash, seems to be magically transformed.

In a short chat with Robert O'Neil, car foreman, and Walter Jackson, assistant car foreman, I learned they have about 12 different nationalities under their jurisdiction. These are only descendants, however, for the census kept in the office shows them to be 100 per cent. Americans.

Word was received recently from our old "Freight Bill" Stricklin, who was injured at the shops a short time ago, that he was convalescing nicely and would soon be back to the old routine.

If a shop roll of honor were established at this place we could point with pride to such men as: Robert O'Neil, John W. Riley, Pearl Shepherd, Frank Proctor, Harry Campbell, Robert Doudican, John Aveyard, A. J. Kight, and several others who have devoted more than a quarter of a century of their lives at this one place. Ever faithful and diligent, they are setting an example of

loyalty that will live for ages. To these men let us say: "You commanded the respect of your associates; may you be spared for many years of usefulness."

Not to be outdone, East Dayton shops are organizing a baseball team. Preparations are already made for new uniforms, and spring practice is progressing nicely. Let us hear from the boys at points along the line for games, as we are open to book games immediately. We want to get acquainted with all the boys, and we assure our opponents that they will meet a gentlemanly bunch of ball tossers, who will make it interesting for them.

Address Edward M. Mannix, Manager, Baltimore and Ohio Ball Club, East Dayton Shops.

SANDY VALLEY AND ELKHORN

From Our Office Cracks

(With apologies to Margaret Talbott Stevens)

By H. L. Graham

Telephone Maintainer, Jenkins, Ky.

When the evening train comes reeling in,
shooting sparks from out the stack;
When the loafers and the hackmen block
the doorway and main track;
When the frost is on the panes, obstructing
views of nature's splendors;
Views of mountains, valleys, streams, scenes
that only nature renders;
We need not pause to see them, tho' of
beauty there's no lack;
We miss nothing of the grandeur—we can
see it from a crack.

When the doors are closed, the windows
down, the wood piles 'round in stacks;
When over the holes where glass once was
we've put paper, glue and tacks;
When we have wrapped ourselves in over-
coats and turned to the fire our backs;
'Ve wonder whence the feathers come—'tis
snow blowing through the cracks.

We have our dreams of winter days in an
office, years away;
With walls of paint and plaster, where the
rats do not hold sway;
Where the snow and rain fall outside, where
roaches do not play,
Where cold north winds are never known,
where heat has come to stay;
We dream our dreams of a paradise, a place
where nothing lacks;
'Til wakened by a chilly draft from the
knot holes and the cracks.

Terminal Station, Jenkins, Kentucky

Old Put's Fire Boy

(Continued from page 19)

Mollie tossed her head, poked back a rebellious strand of wavy brown hair and, without looking up, wrote: "Small steak and French fries, 45 cents."

Tom Broderick was silent for a long time. He was thinking. "You don't seem to have a very good opinion of our green men," he said, finally. "Can't most of 'em stand it, or what?"

"It isn't so much a case of standing it, I guess," stated Mollie, still busy with tomorrow's menu; "it's just a case of some *do*, some don't. Mostly don't lately."

The door opened and the caller shambled in. "Broderick?" he interrogated. Mollie nodded her head toward Tom. The boy shoved his book onto the counter at the fireman's elbow. "Want you to relieve a fireman on the Buckland job. Extra 2324. They'll be in about half-past ten; they're up on the third iron waiting for a chance to cross over and get coal. Put your 'John Hancock' there."

Mechanically Tom entered his name in the caller's book. The caller went out. The fireman pushed his pie back, half eaten. The girl glanced at him.

"They are always after relief firemen for that job," she said.

"What's the matter?" demanded Tom.

"It's a *rawhide* for one thing, and I guess old Put Rowland rides them pretty hard for another."

Slowly Tom climbed down off the rickety stool. His face was very white and there was a peculiar glitter in his eyes. He fished in his pocket and dug out three crumpled bills.

"I guess you'd better give me a— a meal ticket," he said.

"You want a pie card?" Mollie raised her eyebrows and glanced at him with something in her gaze that hinted of a desire to laugh. "Hadh't you better wait till you come back from Buckland?" she suggested, with a sort of disquieting certainty.

All his life Tom Broderick had been a quitter, morally and physically. Never had he stuck at anything after the going got stony, and it was in his face. He felt a slow flood of crimson creeping up across his cheeks. A girl, a bright-eyed, clean-limbed young thing with an understanding of the railroad game and of the men it breeds, was flaunting the doubt that he had it in him to make good out there in the hills on the footplate of one of the Midland's big freight

pullers. She didn't believe he could go out on that Buckland rawhide—and stay.

For an instant, Tom's eyes met those of the girl. He shuffled his feet uneasily, but crowded the three grimy one dollar bills toward her. "No," he said, "I'll take that pie card *now*."

At the door he paused, glanced back uncertainly, mumbled a half sullen, "Good night," and went out.

"Good night," said the girl—and smiled.

CHAPTER II.

"Fireman, hey? Well, by gad, you don't look like one!" Old Put Rowland, a flaring, smelly torch in one hand and a long-neck oiler and some greasy waste in the other, paused in the gangway of the big 2324 and carefully examined the newcomer. "And how long have *you* been firin'?"

"This is my first trip—alone," admitted Tom reluctantly.

"*First trip!* Maud, Lucius, Jeremiah, Pat, another *stugent!* Jumpin' Judas Priest, all they been handin' me for a month is first trippers. Ain't they got anybody but hams? Where the Hades is Nolan?"

"I don't know," said Tom.

"Know! Know! Of course it ain't likely you would know! All alike! All alike! Don't know nothin'! Don't know a hook from a garden rake! Don't know any more about firing a engine than a two-year old! Shovel in green coal till they put the fire out; then hook it till it's clinkered to the arch. And you're the fourth weehawkin' yahoo I've had since we left Buckland. Not a fireman in the lot! No; nor the makin's of one!"

And Mr. Rowland slid to the ground, still rumbling ominously.

"If I was you, son," said a voice somewhere beyond Tom's immediate range of vision, "I wouldn't waste no time standing there looking mournful; I'd get terrible busy with that fire. It's awful dirty."

The speaker was the extra's head-end man, grabbing a bit of ease on the fireman's seat before heading the freight hauler back across the road. He went on:

"We come in here with a hundred and twenty-five pounds of fog and a prayer. Dig out some clinkers, shake 'er down and wind on the blower; then bale coal to the old fossil. If you ain't got a good heavy fire in her when we hit the pull up around the Bank Wall, Put will have half your grates bare when he starts to hit 'er."

Just what it was that induced Tom to remain after his discouraging reception in the cab of the 2324 we will not attempt to say. Far be it from us to accuse a man of getting his back

up and carrying on in a fight just for the sake of proving to a bright-eyed girl whom he had never seen but half a dozen times in his life that he was *not* a quitter. Tom Broderick *may* have had it in him to tackle the job of firing the 2324 just for the satisfaction there would be in succeeding where others had failed. However, it can safely be asserted that *one* of the reasons which caused this student fireman on the Midland to grab for the long, heavy hook on the tender of the freight engine was the pie card in his pocket.

Forty miles of "hill" were ahead of extra 2324. Grades and flats, curves and grades, grades and sags, and then more grades—and always up. It was shovel to get them running; it was shovel to keep them going; it was hook and dig and fume to keep the black slack burning, and it was always more coal over from the back of the old-type of low-sided tender.

A roaring, belching blast of white heat burned the face of Tom Broderick; a hook, blistering hot for half its length and red and shapeless for the remainder, shrunk and fried grease from the new leather gloves which he wore; a number five scoop, much too large and with a sadly tattered edge that was forever catching against a loose bolt-head or picking up a sliver there in the ragged floor beneath the coal gates; an unquenchable thirst that frequent gulping swigs from the water jug did not allay; weak at the knees, a cavern in his stomach, a stitch in his back and his fingers cramped and so stiff that they were almost as useless as wooden ones—that was the fireman's story when extra 2324 went in at Coons to let No. 4 by.

Tom's eyes were bloodshot and his hair was full of cinders (his cap had been snatched away by a savage, darting eddy during one of those dizzy, plunging flights through a sag) and something deep inside of him begged him to quit. It may have been utter weariness, or it may have been a little touch of yellow, or it may have been a little of both. He climbed onto the seat on the left, thankful for a moment's respite, and began gulping in great gobs of fresh, cool air.

Again, however, the honeyless voice of eagle-eye Rowland disturbed his peace, as the latter gentleman grabbed his long-neck oiler and torch, which he lighted by the simple process of jabbing its black snout at a glowing coal inside the fire door.

"That gosh-blasted old blower ain't goin' to get her hot for you, kiddo!" stated Put, flatly. "Shake the grates; then get down and dump

\$95 An Hour!

"Every hour I spent on my I. C. S. Course has been worth \$95 to me! My position, my \$5,000 a year income, my home, my family's happiness—I owe it all to my spare time training with the International Correspondence Schools!"

Every mail brings letters from some of the two million I. C. S. students telling of promotions or increases in salary as the rewards of spare time study.

What are *you* doing with the hours after supper? Can you afford to let them slip by unimproved when you can easily make them mean so much?

For 28 years men in offices, stores, shops, factories, mines, railroads—in every line of technical and commercial work—have been winning promotion and increased salaries through the I. C. S. Over 110,000 men and women are getting ready *right now* in the same way for the better jobs ahead!

Your Chance is Here!

No matter where you live, the I. C. S. will come to *you*. No matter what your handicaps, or how small your means, we have a plan to meet your circumstances. No matter how limited your previous education, the simply written, wonderfully illustrated I. C. S. textbooks make it easy to learn. No matter what career you may choose, some one of our 280 Courses will surely suit your needs.

One hour a day spent with the I. C. S. will prepare you for the position you want in the work you like best. Yes, it will! Put it up to *us* to prove it. Mark and mail this coupon *now*!

INTERNATIONAL CORRESPONDENCE SCHOOLS BOX 8482-B, SCRANTON, PA.

Explain, without obligating me, how I can qualify for the position, or in the subject, before which I mark X.

the ashpan. You gotta get it bright underneath; she's black as your hat."

By repeatedly flinging the whole weight of his aching body against the stubborn shaker-bars, Tom at last was able to move them slightly. Once the rickety bar of one set of grates slipped, with the result that the fireman banged his head and knocked a great ragged piece of skin from the knuckles of his right hand. The ashpan, also, was fully as stubborn a factor, and yielded its portion of bangs and bruises.

Then he scrambled onto the tank and began to shovel over coal. He was somewhat surprised when the shack came climbing up through the gangway and began working at the sadly clinkered fire. Yes, and working with a certain deft ease that bespoke considerable familiarity with a hook and scoop.

"Right after those back corners," coached the brakeman, "all the time. Keep 'em full of green coal, buddy."

A few minutes later No. 4 came batting by. The head-end man slipped down through the gangway, lined the D-rail and headed the extra out. Tom sopped the perspiration from his grimy forehead and slumped up against a corner of the cab for a moment's respite. And then it was to begin all over again.

And always the "clock was walking back"—always the needle on the gauge creeping lower, never gaining, never even holding its own up there in that bit of illuminated space in front of the gauge light.

Twenty minutes later the 2324 died on a bit of heavy going, while again the fireman stubbornly fought through that weary task of getting her hot.

Followed many a weary mile that Tom Broderick will never remember. And yet never for an instant was there the thought of giving in, of admitting that he couldn't fire this condemned black old hog. He rather believed that he was going to show old Put, Nolan, the grinning crew dispatcher, and Mollie King, that he wasn't made of quitting stock. By the eternal shades of fire and brimstone, he would take their old mill over the hump or they could carry him off on a stretcher.

He hadn't been able to see the steam gauge for ten minutes; he hadn't tried to. They were moving, just moving. That was all he knew. Everything was blurry and there were other noises in his ears besides the ceaseless hum of the "gun." Suddenly he missed the fire door with a shovelful of slack by a foot, while the dust-like coal shot all over the deck.

"Damn!" gritted Tom, reaching

painfully for another scoopful across the apron.

And then, from somewhere above him, there came the touch of a coarse, time-seamed old hand, from that somewhere there on the right a voice said evenly:

"Climb up here, son. Watch out for the blocks; keep 'em all green. If she shows yellow holler, and then look sharp for red eyes. There ain't no danger though of there being anything ahead of us. We're the last job on the road. But you're all right. You'll make a fireman. You've got the grit. This old kettle never was any good making steam. I'll see what I can do with the old scrap."

Silently Tom obeyed. Even as he climbed over the quadrant and past the huge reverse lever his knees buckled under him. And yet as he sagged from the cab window and drank thankfully of the refreshing night air, his eyes studying the blackness ahead, clear and alert in their new responsibility, there flitted through his mind that day-dream of tomorrow, of himself, Tom Broderick, the man who had won his first real battle in life, *some* day pulling his own train up here through the hills.

For hadn't he a right to dream his dreams now? Hadn't old Put Rowland, the harshest old engine driver on the worst old rawhide on the Midland, given his approval to a youngster, to a new-born man who had suddenly found that he didn't know how to say quit?

He rested at Ayer, and twelve hours later the Buckland job started west. There was another engine, a gloriously free steamer and a load of lumpy, snappy coal that crackled when it was touched by fire—and extra 2425 went home with a white feather and a red stack.

* * * * *

That was four years ago.

Tom Broderick is firing No. 4 and No. 1, two of the Midland's big crack fliers now. The other day he completed his time-card examination, and the chances are that soon he may be set up during the fall rush and will get an engine of his own for his first taste of the reward he won that night on the Buckland rawhide.

A little over a year ago Tom was married, and in the little home, which has for a presiding angel a bright-faced, happy-eyed personage known as Mollie, there is a soiled bit of meal ticket. Its rim has been perforated to the full extent of its face value. It reposes in a bit of a frame and is hung in a place of honor over the mantel. It signifies a battle that was won the night Tom Broderick went over the hump as old Put Rowland's fire boy.

The Personal Equation

By R. Garrigus

Clerk, Lima, Ohio

WHAT is the propelling force behind the SAFETY movement? Why does the Baltimore and Ohio Railroad spend thousands of dollars every year to spread the gospel of SAFETY? There must be a reason—a strong one, too. Let's think it over.

Where is a greater reason than the man who, through carelessness, very possibly his own, has lost his sight? Imagine yourself in his place. Close your eyes and put your hands over them. How would you like to go through the rest of your life in darkness? Still, you do not experience one-tenth of the darkness that he would.

Where is a greater reason than the man who has lost an arm or a leg because he took a short cut between or under cars and thereby tried to save a minute? That was a pretty big price.

Where in all the world is a greater reason than the man who has sacrificed his life on the altar of carelessness? For what IS greater than life? There is nothing else under the sun that cannot be made in the world's vast factories and shops. There is absolutely nothing else in the world of which man, with all his knowledge and wisdom, has not at least made a fair imitation.

Life is the one thing not quoted in the markets of the universe; it is the one thing that cannot be bought and sold at will. Would YOU throw dice with YOUR life at stake? No—decidedly, no! Then why persist in unsafe practices? Life, your life, your partner's life. That's the personal equation, the propelling force behind the SAFETY movement.

Building Business Boosters

THE SECRETARY OF WAR

March 19, 1920

My dear Mr. Baugh:

I constantly have a feeling that patrons of railroads ought to help the management by expressing their pleasure when they find good service. I have just returned from a journey on which I received very satisfactory service on dining car 1023, and I am glad to write of the fact to you.

Cordially yours,

(Signed) NEWTON D. BAKER.

Mr. E. V. Baugh,
Superintendent Dining Cars,
Baltimore & Ohio Railroad,
Baltimore, Md.

Look Into These Almond Profits You Railroad Men

Look into the character of the men who head our Association—shrewd level-headed business men who have invested large sums of their own money in almond orchards in the Paso Robles district, California.

Verify from any authoritative, disinterested source the facts regarding the profits now being made and the assurance of still greater profits to be made in the future from our big co-operative almond orchard development plan.

Apply the same rigid tests to this investment that you would to any other—and you will say just as emphatically as we do, that every claim we make is 100% fact—that we are offering by long odds and in every way the BEST investment opportunity that has ever been brought to your notice.

\$2,500 to \$3,000 a Year From Only 10 Acres

Mail the coupon below right now—today—or write to Major Paul Hevener, former Superintendent of Insurance of the Rock Island, now our Assistant Sales Manager. He will write you personally and tell you about his trip of investigation to Paso Robles and why, as a result of his investigation, he regards the ownership of one of these Orchard tracts as one of the wisest, best paying investments a railroad man can make to insure for himself and family a life income when he retires from active railroad work.

We will also mail you a free copy of our wonderfully interesting and beautifully illustrated book "A Life Income plus California" which gives full particulars regarding this remarkable investment opportunity and proves by indisputable facts and figures that, on most conservative estimates, a ten acre almond orchard planted and brought into bearing by our Association will yield you net profits of from \$2500 to \$3000 or more a year for life.

Air Pumped Direct to Boiler?

We were very glad to get the following letter from Mr. Barr:

STAUNTON, VA., March 1, 1920.

To the Editor—In these times when we are trying to save fuel, I would like to ask our mechanics for a little information which might be of service to them as well as to me.

If an engine can be run by mixing air with the steam, why can't an air pump be fastened to the frame of an engine under the boiler, so as to be geared up with the axle of the main drivers to furnish the power to operate the pump? Then this pump could pump air direct to the boiler with a check between it and the boiler. Of course, I understand it would only be of service while running; but when standing you don't use much fuel.

Don't you think a page should be set aside in our MAGAZINE for the asking of such questions?

Yours truly,

(Signed) W. T. BARR.

Many readers will remember that several years ago we had a "Question Box" in the MAGAZINE. An unusual amount of interest was shown in it for a time. This department can be made intensely interesting if we will but use it for information purposes—information about the hundreds of questions that occur to most employes about the work of his or other departments. As stated in the April issue of the MAGAZINE, a number of our officials have promised cooperation in handling these questions with authority and dispatch. C. A. Gill, superintendent, Motive Power, Eastern Lines, sent us the following complete and satisfactory answer to Mr. Barr's question:

It would be possible to design and build a pump to be driven by gears on a locomotive driving axle for the purpose of pumping air into the boiler. But it would not be practicable, for the air would cause the steam to condense, reducing the pressure. The mixture of air with the steam would also cause a loss in pressure in the transmission from the boiler to the cylinders on account of the cooling effect of the air, and the air not having the heat sustaining qualities of the steam. The loss in power in the cylinders would also be tremendous on account of the reduced expansion qualities of the steam—caused by the injection of air.

The dead-weight to be carried and the power lost by the operation of the pump, would alone take at least twenty-five per cent. more power than would be gained, and this, together with the reduction in steam pressure and power, would result in a greater loss of fuel and efficiency in the operation of the locomotive than under the present method.

Here's a Poser—Can You Do It?

E. N. Fairgrieve, car distributor in the office of the General Superintendent, Pittsburgh, and MAGAZINE correspondent there, sent in the following problem several weeks ago. Half a dozen or more of our technical men had a look at it and several of them promised to send in the solution. To date they have not "arrived." Can you solve it?

Pat and Mike, two energetic employes of a railroad, one time met at a little social gathering, and, after a while, the conversation drifted to the discussion of service records. Pat, being the older, was very proud of his record and keenly resented the assertions of Mike, who was prone to exaggerate, with a head full of knowledge, supposedly. The argument waxed warm, and Pat's feathers became somewhat ruffled.

"Begorra," said he, "Oiv been wurkin fer the road so long it's every tie Oi know from here to the sea coast. The two of us together have wurked forty-four years. Oi wurked twice as long as you whin Oi was in the service half as long as you will be whin you have wurked three toimes as long as Oi have whin Oi wurked three toimes as long as you."

"Be jabbers," replied Mike, "it's a foine scholar yez are."

Who can tell how long Pat and Mike worked? The answer will appear in the next issue.

A Winning Combination

A BOOST from a railroad man of a foreign line is always appreciated.

On March 12, Mr. Joseph J. Hooper, general claim agent of the Southern Railway Company, dined on our No. 6. After giving the order for his dinner he picked up a copy of the BALTIMORE AND OHIO MAGAZINE. At first he glanced at it casually, then became more and more interested, until finally he became so absorbed in

its contents that he hardly noticed that his dinner was ready and waiting for him. When he was about to leave the dining car, he said to the Steward, E. H. Sherman, "This is the best railroad magazine I have seen. I have enjoyed it thoroughly and was deeply interested in all of the articles. Would you mind if I took it along with me?"

The Steward readily consented, and Mr. Hooper remarked as he passed out of the car that the MAGAZINE was comparable in excellence with the meal that had just been served him.

You Can Cut the Size of the Big Coal Bill

By F. Kerby

Supervisor Locomotive Operation, Cumberland, Md.

It's the little leaks that always count,
Make the fuel bills jump to a large amount.
The holes in the fires and netting, too,
They sure raise Cain with the CO'2s;
But you can stop them—help make them nil,
You can take a shot at the big COAL BILL.

Don't go along with a listless head,
But be wideawake and think instead.
You have entered the service, fit and true
And the Company puts it up to you
To find these leaks. Don't rest until
You have cut the size of the big COAL BILL.

Prepare your fires and keep them bright,
Watch the netting and see that it's tight,
Carefully watch the smoke at the stack,
Have it just colored and not jet black.
Just use your head with a right good will,
To trim the size of the big COAL BILL.

Repair the joints that are leaking steam,
Have valves reset, flues good and clean.
Your chance is good for better pay,
If you roll up your sleeves and start today
To stop the leaks. Keep trying till
You've cut the size of the big COAL BILL.

As your goal grows nearer every day,
Monotony will soon give way
To interests new and to keen delight,
In keeping clean fires and joints good and tight.
And your work and mine will be easier still,
When you help cut the cost of the big COAL BILL.

In Railroading, as in every-
thing else, the most people
go where the most
satisfaction is given

Be a Master of Traffic Management

There is a big and ever-increasing demand for men trained in Railway and Industrial Traffic Work. The salaries offered range from \$50 to \$100 a week and up. Hundreds of ambitious men have trained themselves successfully at home by mail under the guidance of LaSalle experts.

Every big business organization must have its traffic expert, its interstate commerce director—and yet not enough really competent men are available. In many places, "second-raters" are trying to direct the shipping while their employers are looking, inquiring, advertising for efficient men able to handle the complicated traffic problems which come up many times every day. This is your opportunity to get into an uncrowded profession—to make quick advancement—to step into a specialized calling—to be the man always needed and to earn a salary which many men do not reach after years of patient, plodding service.

Train by Mail

The LaSalle traffic experts will give you a thoro, specialized knowledge of the methods used by great shippers, railroad and steamship lines; instruct you in rates, classifications, routing, bills of lading, claims, demurrage, railroad accounting, organization, management, interstate commerce laws, etc. Every phase of the subject under the direction of a specialist. You get in months what years of experience alone would not bring, because you profit by the combined experience of many men acknowledged as traffic authorities. Every point made clear. The whole ground thoroly covered. You are prepared to act as a traffic manager because you have a grasp of the entire subject—ready to direct all phases of traffic work.

You need not leave your present position. LaSalle training is given by mail. You can become a traffic expert in your spare hours by the LaSalle method—thoroly prepared to hold a high salaried industrial or railway traffic position. You can pay for your training on our easy terms—a little each month if you wish.

Salaries Raised

Mr. Fred Hoffman took LaSalle training in traffic and reports 500 per cent profit on the

cost of his course. Harold Watson got 400 per cent salary increase. B. S. McMullen rose from freight checker to General Manager. Reports like these come to us daily.

Already over 200,000 ambitious men have profited by LaSalle training. More than 35,000 enroll annually in our various courses, getting the benefits offered by an organization of 950 people including 450 business experts,

instructors, text writers and assistants. Thousands of LaSalle men are employed in the offices of great corporations like the Pennsylvania R. R., Armour & Co., Standard Oil Co., U. S. Steel Corp., etc. Not only men seeking advancement but many prominent executives have found in these courses the way to larger success.

Send the Coupon

Get information about the profession of Traffic Management.

The coupon or a letter will bring this—also catalog and all details about LaSalle training—and our famous book, "Ten Years' Promotion in One," the book which has been an inspiration to thousands of ambitious men.

Doesn't It Make You feel Good All Over When A Passenger Gets On And

A First-Rate Engineman

WE NEVER get tired of telling a story like the one told by the following letters. This is the kind of work that is appreciated; it not only establishes a record for the man himself, but is a credit to his officers and a reflection on the policy of the Railroad and its Safety education:

VIRGINIAN RAILWAY.

St. Louis, February 2, 1920.
Superintendent, Illinois Division,
Baltimore and Ohio R. R.,
Washington, Ind.

Dear Sir—I wish to express a word of appreciation of the engineer who hauled the first No. 1 in this afternoon from Washington. His thoughtfulness in notifying section forces, especially in obscure places, by the usual signal of a following section, was a delight to listen to. He also notified the conductors of long freight trains, waiting on sidings, in the same way. At the crossing just west of the Wabash River, where there was an approaching auto, I never heard an engineer using greater care to tell them of his coming. As my work on the Virginian is largely with section foremen, I could not help but appreciate his care, and

think that if the great body of railway workmen would bring to their work such kindly thoughtfulness, it would make our individual and national experience much more peaceful and happy.

Yours truly,

(Signed) A. B. PICKELL.

Care of Agent, Virginian Railway,
Roanoke, Virginia.

FLORA, ILL., February 6, 1920.

MR. A. B. PICKELL,
Care of Virginian Railway,
Roanoke, Virginia.

Dear Sir—Referring to your letter of February 2, dated St. Louis, I want to thank you for complimenting our engineer. However, in all probability, if you make a return trip over our line with a different engineer you will find him doing the same thing.

We were one of the pioneers in the SAFETY movement and our men have been educated along these lines. Engineer W. A. Borders, who was pulling first No. 1 on February 2, is one of the oldest engineers on the Illinois Division and this is an everyday occurrence with him. He was simply obeying our rules, which require him to whistle signals to section men and both ends of freight trains. However, I thank you for your letter, as I am glad to hear from outsiders that our men are complying with our rules.

In order to show Engineer Borders that things like this are noticed by outsiders and also for the benefit of other railroad men on the division, I am going to have your letter published in the BALTIMORE AND OHIO MAGAZINE.

Yours truly,
(Signed) C. G. STEVENS,
Superintendent.

W. A. Borders entered the service of the Company as a Fireman, January 17, 1881, was promoted to Engineer on March 25, 1884, and to Passenger Engineer on April 27, 1903. He is one of the best engineers on the Illinois Division and several reports of his good handling of passenger trains have been received.

Keep Up the Good Work,
Mr. Smith

CHICAGO, February 4, 1920.

To the Editor:

In a recent issue of our MAGAZINE, my attention was drawn to the encouraging remarks made by passengers on the service rendered on the car which I had the honor to be in charge of during the month of November. That was a big reward, indeed, for my little endeavor to make passengers feel at home on our Railroad, and I am proud of it.

If every employe who is a buffer between the public and our Railroad would show the public our appreciation of their patronage, and would study to please and to be courteous, half the battle would be won.

If they would only think quickly before the tongue slips and antagonizes the patrons, it would eliminate a great deal of dissatisfaction and censure on the part of the public. During the two years I have been in our Dining Car Department, I have found that our trainmen, our dining car men and our sleeping car men are very superior, always ready and willing to do their utmost in the interest of the service, the comfort and the convenience of the traveling public.

Yours very respectfully,

(Signed) J. E. SMITH,
Steward D. C. 1020

Sunday School in a
Pullman Car

WE HAVE heard many stories of resourceful conductors, but the following incident as told by S. W. McNabb, district superintendent of the Pullman Company in Baltimore, is quite a variation from the ordinary. The conductor in this case is a Baltimore man, R. L. Hamilton, who has been known to demonstrate his thoughtfulness for patrons in many unusual circumstances.

On Sunday morning, February 29, a lady passenger in car Naunkeag, Baltimore and Ohio train No. 7, en route Washington to Chicago, accompanied by her son and daughter, informed the Pullman Conductor, R. L. Hamilton, that both of the children held records for regularly attending Sunday School and that each received a gold bar for each year of such attendance. But, as No. 7 would not reach Chicago until too late for Sunday School service, she was anxious to see where they could get off the train, attend Sunday School, and then catch a later train into Chicago.

The Conductor informed her that Willard would be about the best place; that they could leave there on No. 9 for Chicago after attending Sunday School. However, he suggested further that it might not be necessary to do this and that he would discuss the matter again a little later. The party then went to the diner for breakfast. Mr. Hamilton was resourceful and looked over his passengers. Finally he approached a gentleman and asked him if he saw anyone on the car who might be a Minister of the Gospel. The gentleman replied "No, but I teach a Bible class in Minneapolis." The Conductor explained the situation and the gentleman agreed to teach the Sunday School lesson.

An Italian weekly, *The Gazzetta del Massachusetts*, pays this tribute to Lincoln:

"Let us honor the name and memory of Abraham Lincoln, the most beautiful American figure the world ever saw. Humanist and literary man; statistician and diplomat; man of steel mind and with a heart as soft as that of the Nazarene; rigid as a soldier at his post and honest to exaggeration as president; an American in all his veins and in every throb of his heart, but a brother in spirit of all the oppressed and of all the races and creeds—he was predestined; and was the greatest liberator of all times."

On the return of party from the diner, the Pullman Conductor made known the result of his investigation; sections 9 and 10 were made ready for service, and Mr. D. M. Graham of 1210 Twenty-fifth St., Minneapolis, Minn., taught the lesson to Mrs. Jake Haman, Mr. Jake Haman, Jr., and Miss Olive Bell Haman, all members of the family of Vice-President Haman of one of the western railroads. The Pullman Conductor then gave a signed statement to Mrs. Haman attesting that the service was held in car Naumkeag, Baltimore and Ohio train No. 7, somewhere in Ohio on Sunday morning at 9.30 a. m., on February 29, and that the lesson was taught by Mr. D. M. Graham, so that this certificate could be presented to their home Sunday School and the children get credit for attending Sunday School even though traveling at the time.

Democracy and Socialism

DEMOCRACY and socialism are becoming confused in the public mind.

To treat individuals equally is the essence of democracy. To make individuals equal in substance, largely by unequal treatment, is the essence of socialism. There has been too much of the latter and too little of the former in recent legislation and in labor union practice.

The socialists would first destroy capital, the third one of the inalienable rights of man—life, liberty and property—and then the second one, liberty, for each individual, fearing he may do more than his share of work, slackens his pace until the mass finds there is not enough produced to even sustain life, not to mention the conveniences of civilization. Then the mass, through themselves or through a dictator, find it necessary to force themselves to work. Virtual slavery is thereby established and liberty vanishes.

Fortunately, in an enlightened state the instinctive feeling that the laborer is worthy of his hire and that one is entitled to own what he may rightfully acquire, coupled with instinctive hatred of slavery, will ward off full socialism, communism, Bolshevism, etc., but it is well not to flirt too much with these ideas, as is the present tendency, or the whole population will be made miserable and degraded.—Edward P. Casey, in *N. Y. Tribune*.

Passing the Buck

WE are told that a broker, en route to Palm Beach, stepped out on a station platform during a stop to change engines, carrying, for certain reasons, his traveling bag, which he set down beside

him. Presently a man bore down upon him and demanded, "Is that your bag?"

Although his interrogator was not in uniform, the broker, remembering the bag contained 3 bottles of whiskey and fearful of prohibition sleuths, promptly answered, "No."

On this the stranger seized the bag and disappeared. Bemoaning the loss of his favorite beverage, the broker strolled to the other end of the platform. There stood another traveler with a bag at his feet. Seized with a sudden inspiration, the broker stepped up to him and asked, "Do you own that bag?"

"No," came the reply.

So the broker seized the bag and boarded the train. After a while he opened the bag. It contained 5 bottles of liquor.

—*Coast Banker*.

Sharp Shots

By Dinty Moore

Men won't admit it, but a great majority of them are expert dish-washers.

Every married couple who have a son think that he ought to be President.

What has become of the o. f. milk wagon that used to come around and ring a bell?

Why is it that it will take a girl about four hours to paint and powder and then put on a knee-length (m. or l.) skirt? Who does she think is going to look at her face?

Did you ever see a person act as foolish as a girl who is just engaged?

It sure gets your goat when you stop in at your favorite cafe and the barkeep, who formerly dished out the red eye, asks you, "What are you going to have, milk or sarsaparilla?"

A woman can come out in January with low cuts and a straw hat and get away with it, but if a man tried it he would be put in the strong ward.

Cars Are Only Earning When Wheels Are Turning

Magazine Correspondents Attend Veterans' Meetings

Some of our Veterans' Associations invite the Magazine correspondents of their respective localities to attend their meetings. This enables our division people to keep in touch with the activities of the Veterans through the Magazine and, if generally adopted, would be of assistance to the various Veterans' chapters. Our correspondents will be glad to help the secretaries of the chapters in preparing notes of meetings, interesting articles, etc., for the Magazine. It is a good thing for the old boys and the young boys to get together once in awhile, anyhow.

If You Want To Be Loved

Don't contradict people, even if you're sure you're right.

Don't be inquisitive about the affairs of even your most intimate friend.

Don't underrate anything because you don't possess it.

Don't believe everybody else is happier than you.

Don't conclude that you have never had any opportunities in life.

Don't believe all the evil you hear.

Don't repeat gossip, even if it does interest a crowd.

Don't jeer at anybody's religious belief.

Learn to hide your aches and pains under a pleasant smile. Few care whether you have the earache, headache, or rheumatism.

Learn to attend to your own business—a very important point.

Do not try to be anything else but a gentleman or gentlewoman, and that means one who has consideration for the whole world, and whose life is governed by the Golden Rule, "Do unto others as you would be done by."

CHECK YOURSELF UP.—Exchange.

It Makes Quite A Difference When You Have to Get Off Yourself

Misuse of Registered Stamps, Form 578—Spl., on Railroad Business Mail

By J. C. McCahan, Jr.

Manager Mail and Express Traffic

UNDER date of March 1, 1920, the following circular was issued by this office:

TO ALL CONCERNED:

Registered stamps, Form 578—Spl., will not be affixed to any matter, except they may be used for transmitting pay checks, pay rolls, vouchers, tickets, coupon books, meal checks, important documents of the Relief and Savings features and for transmitting packages of mail and mail pouches by officers between their offices and themselves when on line. They will not be affixed to mail addressed to other railroads and when mail covered by such stamps is received from other railroads it will not be signed for or recorded but treated as ordinary mail. Currency, coin and Liberty bonds will not be transmitted by train mail, either registered or non-registered.

The purpose of curtailing the use of these stamps is to eliminate unnecessary use, an abuse which still continues, and which works a hardship upon baggagemen, agents

and others in handling such mail. The use of registered stamps does not expedite the handling of R. R. B. mail because of the time consumed in the preparation of waybills, recording of stamp numbers, taking receipts, etc. On heavy baggage car runs the handling of so many of these stamps interferes with other work of baggagemen.

The abuse has been one of long standing and seems to have grown into general practice; in many instances apparently no consideration is given to character of mail in the use of registered stamps. We know of a recent case where four registered stamps were placed on the back of one envelope. The sender evidently thought the stamps were some kind of sticker for fastening envelopes. There are thousands of pieces of important mail handled in and out of Baltimore each day without being registered and which reach destinations

safely and promptly. There is no reason why all mail cannot be so handled and it is only upon matter of extreme importance, such as that indicated in the circular referred to, that may warrant special record.

Instructions are now in effect that where baggagemen are in a position to observe mail matter being sent out under registered stamps that is of such character as to not warrant their use, to report each case to the Manager Mail and Express Traffic, giving character of contents, where known, and the stamp number. In this way we hope to reach the office at fault for the misuse of registered stamps.

Cooperation on part of all offices toward restricting the use of these stamps to only important matter indicated will aid us in giving ordinary mail quicker attention and will assist in the efficient handling of traffic in baggage cars.

A Good Universal Military Training Plan

A SMALL Regular Army supplemented by a large Citizen Army is the ideal sought in The American Legion Army Reorganization Bill (Senate Bill 3792) to which the support of the Legion is pledged through its National Legislative Committee in accordance with resolutions adopted at the Minneapolis Convention.

The provisions of the bill may be summarized as follows:

The large citizen army would be composed of all young men between the ages of eighteen and twenty-one, who would take a four months' course in intensive training—vocational, educational and military.

Veterans of the war would not be called upon to serve these four months or to take any other training, although provisions probably would be made to accept veterans who volunteered to assist in the training program.

Young men could elect, if they so desired, to substitute for the four months of intensive training an enlistment of three years in the National Guard. This National Guard service would be under rules specified by the Federal Government, requiring weekly drills and certain standards of proficiency.

The training proposed would not interfere unduly with the regular occupations of the young men enrolled because there would be both Winter and Summer periods of which they could make their choice. This would enable the youth working on a northern farm to select the Winter training period and be assigned to a training camp in the South. In any event, he would be away from home a comparatively short time and he would not be absent during the harvest season.

Furthermore, young men would be placed in training according to the service for which they are best suited. For example, negro youths of the South who had not gone far in schooling might be enrolled in labor battalions. In these they would acquire the rudiments of drill, but more important, would learn habits of right living.

Are Present Property Prices Based Upon Real Values?

For thirty-five years the Relief Department has given Baltimore and Ohio employees the best possible advice on the values of real estate. Now, when rentals and selling prices are higher than they have been for years, is the time for the prospective buyer of a home to seek unbiased advice.

Some real estate men and dealers in building materials think that high prices will stay; others, equally experienced, think that the high prices will drop. No prediction seems to be based on anything more than an individual opinion. There are so many factors to be considered that there is much guess-work to it.

(Here is a home at Relay, Md., which we are helping one of our employees buy. A comfortable house, with enough ground for garden, chickens, etc. This man writes us that he wouldn't go back to his rent-consuming apartment for anything!)

One thing, however, the Relief Department can do. It can judge fairly of the circumstances in a particular case. It will tell the prospective purchaser whether the price demanded seems fair or shows evidence of profiteering. The Relief Department will help Baltimore and Ohio employees, but cannot lend money on speculative values. To do so would be to help the borrower to a poor bargain. Isn't that true? Isn't it fair?

We wish to protect the employee who buys, and must protect those whose money we are investing.

Our building inspectors are familiar with costs of material and property values along the entire Baltimore and Ohio System. The service of these men is yours for the asking. Address

Stifel's Indigo Cloth

Standard for over 75 years

STIFEL
REGISTERED

This is Mr. Charles Broll, one of the oldest engineers of the Baltimore and Ohio, who runs the famous "Royal Blue." Mr. Broll wears and swears by "true blue" Stifel's Indigo Cloth.

Since the time of the first railroads, strong, sturdy, fast-color, never-break-in-the-print Stifel's Indigo has been the popular garment cloth for railroad men. Before you buy

OVERALLS, COVERALLS, JUMPERS or UNIFORMS

look for this trade-mark on the back of the cloth inside the garment. It is the

guarantee of the genuine Stifel's Indigo Cloth, which never has been successfully imitated. Garments sold by dealers everywhere. We are makers of the cloth only.

Makers of The Flag

THIS morning, as I passed into the Land Office, The Flag dropped me a most cordial salutation, and from its rippling folds I heard it say: "Good morning, Mr. Flag Maker."

"I beg your pardon, Old Glory," I said, "aren't you mistaken? I am not the President of the United States, nor a member of Congress, nor even a general in the army. I am only a Government clerk."

"I greet you again, Mr. Flag Maker," replied the gay voice, "I know you well. You are the man who worked in the swelter of yesterday straightening out the tangle of that farmer's homestead in Idaho, or perhaps you found the mistake in that Indian contract in Oklahoma, or helped to clear that patent for the hopeful inventor in New York, or pushed the opening of that new ditch in Colorado, or made that mine in Illinois more safe, or brought relief to the old soldier in Wyoming. No matter: whichever one of these beneficent individuals you may happen to be, I give you greeting, Mr. Flag Maker."

I was about to pass on, when The Flag stopped me with these words:

"Yesterday the President spoke a word that made happier the future of ten million peons in Mexico; but that act looms no larger on the flag than the struggle which the boy in Georgia is making to win the Corn Club prize this summer."

"Yesterday the Congress spoke a word which will open the door of Alaska; but a mother in Michigan worked from sunrise until far into the night, to give her boy an education. She, too, is making the flag."

"Yesterday we made a new law to prevent financial panics, and yesterday, maybe, a school teacher in Ohio taught his first letters to a boy who will one day write a song that will give cheer to the millions of our race. We are all making the flag."

"But," I said impatiently, "these people were only working."

Then came a great shout from The Flag:

"The work that we do is the making of the flag."

"I am not the flag; not at all. I am but its shadow."

"I am whatever you make me, nothing more."

"I am your belief in yourself, your dream of what a People may become."

"I live a changing life, a life of moods and passions, of heart breaks and tired muscles."

"Sometimes I am strong with pride, when men do an honest work, fitting the rails together truly."

"Sometimes I droop, for then purpose has gone from me, and cynically I play the coward."

"Sometimes I am loud, garish, and full of that ego that blasts judgment."

"But always, I am all that you hope to be, and have the courage to try for."

"I am song and fear, struggle and panic, and ennobling hope."

"I am the day's work of the weakest man, and the largest dream of the most daring."

"I am the Constitution and the courts, statutes and the statute makers, soldier and dreadnaught, drayman and street sweep, cook, counselor, and clerk."

"I am the battle of yesterday, and the mistake of tomorrow."

"I am the mystery of the men who do without knowing why."

"I am the clutch of an idea, and the reasoned purpose of resolution."

"I am no more than what you believe me to be and I am all that you believe I can be."

"I am what you make me, nothing more."

"I swing before your eyes as a bright gleam of color, a symbol of yourself, the pictured suggestion of that big thing which makes this nation. My stars and my stripes are your dream and your labors. They are bright with cheer, brilliant with courage, firm with faith, because you have made them so out of your hearts. For you are the makers of the flag and it is well that you glory in the making."

Delivered on Flag Day, 1914, before the employes of the Department of the Interior, Washington, D. C., by Franklin K. Lane, Secretary of the Interior.

There Is Where You Can Own a Big Paying Almond Orchard

Buy NOW for Next Season's PLANTING

Don't wait. Make your reservation for an almond tract now. Available acreage for next season's planting is being rapidly taken up. Quick action is now necessary. Investigate this wonderful opportunity at once. Get all the facts. Read the whole story in our wonderfully interesting illustrated booklet, "A Life Income Plus California." Mail coupon for your free copy today. We can still arrange for a planting for next season, if you hurry.

Major Paul Hevener, former Superintendent of Insurance for the Rock Island and now our Assistant Sales Manager, has thoroughly investigated this proposition and strongly recommends it to his railroad friends.

Just see how rapidly the Rock Island family at Paso Robles is growing. These men have eagerly grasped this wonderful opportunity which insures for them financial independence for life when they get ready to quit railroading. It's just the chance you have long been waiting for.

\$2500 to \$3000 a Year for Life From a 10-Acre Tract

You owe it to yourself to find out why such surprisingly big profits can so easily be made from 10 acres of almonds. You may think that we are overshooting the mark when we say that from \$250 to \$300 an acre is a very conservative estimate. But we are not. We have facts and figures to present to you which positively prove that our estimates are far below the actual returns. Let Major Hevener tell you about it. He will give you absolutely straight facts.

While out at Paso Robles he investigated every phase of the almond industry. He looked all along the road to see if he could find any loose spikes in the whole proposition—and *he could not find a single one!* He bought two 10-acre tracts for himself and considers it the wisest investment he ever made. He figures that, come what may, he is fixed for life, just as are many other railroad men who are putting aside a part of their earnings for the purchase of one or more of these almond tracts.

Small initial payment—easy monthly payments—half the purchase price taken from the crops—700 pedigreed bearing almond trees to each 10-acre tract—your funds safe-guarded by one of the largest Trust Companies on the Pacific Coast—these are just a few of the features of this remarkable opportunity.

FREE Illustrated BOOK!

His Idea of a Phenomenon

A darky being asked the meaning of the word phenomenon, answered in this manner:

"De oder day Ah was walkin' down a country road admirin' de scenery. Ah seen a thistle growing by the roadside. A little further on Ah heard a bird singin' in a tree. Now, if Ah seen dis cow sittin' on dat thistle like a bird, Ah'd call dat a phenomenon." —Springfield Union.

LEARN WIRELESS

At Home, Quickly and Easily By Marvelous New Method

A combination course in Wireless Telegraphy and Telephony perfected by the National Radio Institute that will fit you in a few months for a position paying approximately \$175 a month to start, if you consider that living expenses are included.

Men with experience or trained as telegraphy operators have a decided advantage over the beginner and will be able to complete the course and qualify as a trained radio operator in about one-half the usual time required. This means more rapid advancement for you to the bigger positions paying better salaries.

Future success assured our graduates. Hundreds of attractive and interesting positions in Commercial Radio Service on Land, Merchant Marine, Railroads, Radio Supply Factories and Laboratories, Lake and Ocean Steamship Lines, Telegraphy Companies, and Aerial Mail Service always ready to be filled. Because of the efficiency of our graduates, they are given first choice, and positions are guaranteed to those who complete the course and secure a license.

Salaries Up to \$15,000 a Year

Few professions offer the opportunities found in Radio. Any young man with ambition and energy can soon be qualified for an exceptional position by taking our course in Wireless. Your first position will pay you the equivalent of \$175 a month—\$125 in salary, plus living expenses, which by a conservative estimate we place at \$50 a month.

There are exceptional chances for rapid promotion to Radio Mechanic, Electrician, Government Inspector, Radio Aid, and Radio Engineer, some positions paying as high as \$15,000 a year.

No previous knowledge of wireless or electricity is necessary to take our course. Our course is easy and comprehensive, and with the help of our Natrometer, you can master Wireless in a marvelously short time. Right in your own home, the National Radio Institute way, in your spare time!

Travel Around the World Your Expenses Paid

If you are eager to travel, anxious to visit foreign countries, and increase your knowledge of world affairs, Wireless offers you the biggest chance you will ever have. You travel on shipboard with an officer's rating, living the life of an officer, eating at the captain's table, and mingling with the passengers. All without one cent's expense to you!

If you prefer to locate permanently at or near your own home, Wireless again offers the opportunity, for you may secure an equally attractive position at one of the many land stations, with Radio Companies, Steamship Companies, or Commercial houses.

Regardless of how big your desires and plans for your future, Wireless is always in the foreground, offering advantageous and attractive opportunities. Look into it and plan your life accordingly.

Get Your Instructions from Washington—Center of All National Wireless Activities

The National Radio Institute was established in 1914, and was the first in America to successfully teach Wireless by mail. It is established in the heart of national interests—in Washington, the home of the United States Shipping Board—centre of all official Wireless activities—and the home of the United States Department of Commerce (Radio Department) which passes upon every first grade government license granted in America, and also issues all permits to erect and operate radio stations.

Our location in the nation's capital, together with the high standing of our school and instructors, and our close communication with government officials connected with Wireless activities, naturally places us in the position of giving our students the very best instruction obtainable. We are also able to be of the utmost help in assisting them secure high type positions paying substantial salaries.

Special Privileges to National Radio Institute Students

Students of the National Radio Institute receive the following:

- Complete combination course in Wireless Telegraphy and Telephony—
- Special post-graduate course at our large Washington school, if desired—
- Five text books, one hand book, forty-six special lessons and eighteen personal examinations—
- Membership in the N. R. I. Radio Relay league and handsome blue and gold membership pin presented immediately upon enrollment—
- Large handsome diploma suitable for framing—
- Complete automatic Natrometer outfit and carrying case—
- Personal help in securing wireless position and endorsement of Institute officials.

This Fine Natrometer Given to You

This wonderful Natrometer automatically sends you wireless messages as though coming from a radio station thousands of miles away. It is a complete improved sending and receiving set, embodying the same type of instruments as used by the United States Bureau of Navigation in testing applicants for official license. Made especially and exclusively for National Radio Institute students.

Send For Free Booklet

We have prepared a book telling all you want to know about wireless and the future it offers you. Startling facts you are interested in are freely discussed. It tells how, during the past six years, we have helped hundreds of ambitious men and women and how we will help you. Send the coupon today, or write to the

F. C. Batchelder, Vice-President of the Baltimore and Ohio Railroad and Executive Representative in Chicago

THERE is one outstanding impression given the traveler first entering Chicago, namely—Railroads. To paraphrase the lines of the poet and with more than a suggestion of truth in the figure:

Railroads to right of you,
Railroads to left of you,
Volley and thunder.

Railroads and railroads; switches and crossovers; track elevations and track depressions; fast main tracks and mazes of yard tracks; round-houses and machine shops; small crossing shanties by the hundreds and big freight houses by the dozens; busy humps and grimy coal chutes; small engines switching short trains and great Mikados panting from their heavy tonnage; trains *de luxe* swiftly gliding past miles of weatherbeaten freight cars; bascule bridges and grain elevators rearing their masses of steel and concrete high in the air; great passenger terminals thronged with busy people—this is Chicago, the largest and most important railway transportation center in the world.

Twenty-three trunk lines have their terminals in Chicago, with nine switching lines and five small industrial lines to help serve their needs. The aeroplane picture of the network of rails is a spider web, closely spun at the center, with numerous connecting bands in the heart of the terminal section and radiating outward in gradually thinning lines of steel to the production and distribution reservoirs of the North, East, South and West. And back in the heart of the

city, in the center of this swarm of rail traffic, in busy terminal and general railroad offices, are the controlling factors of the situation, the railroad managers—traffic, maintenance, transportation, financial—who make of this vast transportation plant a well regulated machine and keep order from becoming chaos.

Chicago won its rail transportation preeminence because of many factors. It is, of course, the country's greatest rail transfer point, the West

in particular sending to the population centers of the East, grain, live stock, ore and heavy timbers. Chicago is also a great originating source of traffic. The city itself manufactures almost everything which can be manufactured, while around it have grown up in such industrial centers as Indiana Harbor, Gary, and South Chicago, numerous plants producing iron and steel and the thousands of finished articles of commerce made from them. By its very situation,

conveniently located on Lake Michigan in respect to rail transportation facilities, Chicago has become the natural meeting point of the East and the West. Once the railroads reached it from the East, new roads were pushed out into the West by the empire builders of the last few decades of the nineteenth century. Railroad men of the East met railroad men of the West in Chicago and there pooled their experiences. And if the East contributed in a large way to the financing of the roads from Chicago west, these roads in turn produced a new breed of railroad men, many of whom have since won their way to the front on important Eastern trunk lines.

Chicago is the center of the railway supply markets of the world. Many of the most important railroad publications are produced there. And if anything else were needed to indicate the ever-increasing importance of the city as the railroad center of the country, it would be the fact that the Railroad Labor Board, provided under the Transportation Act of

F. C. Batchelder
Vice-President and Executive Representative in Chicago

1920, is now holding its hearings there, Chicago having undoubtedly been chosen as most convenient to the many factors which enter into the important investigations of the Board.

In charge of this important field for the Baltimore and Ohio is Mr. F. C. Batchelder, who is President of the Chicago Terminal Railroad, Vice-President of the Baltimore and Ohio and Executive Representative in Chicago.

Mr. Batchelder was born on a farm in Wisconsin in 1857. Between the months of hard work which fell to the lot of the farmer's son in those days, he got what education the district school afforded until he was sixteen. In 1874, he entered the service of the C. M. & St. P. R'y as a Telegraph Operator, later becoming Train Dispatcher and Chief Train Dispatcher. In 1888 he went with the M. St. P. & S. S. M. R'y Co. as Chief Dispatcher, later becoming an Assistant Superintendent and then Superintendent.

On July 1, 1899, Mr. Batchelder came with the Baltimore and Ohio as Superintendent of the Chicago Division. Later he was Superintendent of the Newark Division and then went back to Chicago as Superintendent. From 1907 to 1910 he was General Superintendent at Baltimore. In 1910 he was made Vice-President of the Baltimore and Ohio Chicago Terminal Railroad, later becoming its President and in 1917, under Federal control, its General Manager. On March 1, of this year, he was made Vice-President of the Baltimore and Ohio and Executive Representative in Chicago.

In 1910, soon after Mr. Willard became President of the Baltimore and Ohio Railroad Company, we acquired by purchase the properties of the Chicago Terminal Transfer Railroad Company, consisting of about 75 miles of main tracks within the Chicago Switching District, and the Grand Central Passenger Station, located at Wells and Harrison Streets, in the City of Chicago. Speaking in this connection, Mr. Batchelder said to the writer:

"The importance of this purchase is, I presume, not generally understood by the readers of our MAGAZINE. Before this the Baltimore and Ohio had no trackage in Chicago (except about two miles of line connecting the Chicago, Rock Island and Pacific tracks with those of the Chicago Terminal Transfer), entrance into Chicago being effected by leases over the tracks of other companies. The Baltimore Company under the old leasing arrangement was unable to make the industrial development

which is so important to a trunk line, particularly in a great industrial center like Chicago. The Baltimore and Ohio Chicago Terminal and the territory adjacent to it have great possibilities in this direction, and it has been the policy of the Management to encourage them in every possible way. In 1910 there were located on the lines 230 industries; at this time there are 410, all of which are shippers over the Baltimore and Ohio, both inbound and outbound.

"Since 1910 the Baltimore and Ohio Chicago Terminal has expended for improvements such as track elevation, new roundhouses, coach yards, additional tracks, etc., \$7,870,198.00, and will be obliged to spend several millions more within the next ten years to complete track elevation, and for other necessary improvements, thus giving the Baltimore and Ohio as good terminals in Chicago as those possessed by any other Chicago lines with perhaps one or two exceptions.

"In 1909 there was employed on the Terminal an average of 28 small switch engines per day, and the earnings for that year were \$1,044,067.00. In 1919, 39 engines were worked, and the earnings were \$2,058,947.00.

"The Baltimore and Ohio Chicago Terminal also furnishes an entrance into Chicago under trackage arrangements to the Pere Marquette, Chicago Great Western, Minneapolis, St. Paul and Sault Ste. Marie, and the Chicago, Terre Haute & South Eastern Railroad Companies."

In one corner of Mr. Batchelder's office hang four autographed photographs of men under whom he served his apprenticeship and who have since become the executives of trunk lines. One is of A. J. Earling, who was Chief Dispatcher of the C. M. & St. P. R'y when Mr. Batchelder was a Telegraph Operator on that system. Mr. Earling afterward became President of that railroad. Another picture is of F. D. Underwood, who was General Manager of the Soo Lines when Mr. Batchelder was a Superintendent of the same road, and who is now President of the Erie Railroad. Another is of E. Pennington, who became General Manager of the Soo Lines while Mr. Batchelder was a Superintendent there, and who is now President of that system. Finally there is the picture of our own President, Mr. Willard, whose first railroad association with Mr. Batchelder was that of Locomotive Engineer to Chief Dispatcher on the Eastern Division of the Soo Lines. Later, while Mr. Batchelder was Superintendent of the Western Division of this road, Mr.

Willard was Superintendent of its Eastern Division.

In speaking of this group Mr. Batchelder said:

"These men started their railroad careers in positions of relatively small importance. Their opportunities for advancement were not comparable with the opportunities facing the young railroader of today—with his better facilities for systematic training in technical and apprentice schools, extension universities and correspondence schools, and with the far greater variety and extent of railroad literature at his disposal. Merit counts more today than ever because there is a greater demand for the well-trained man, more scientific and careful supervision of working forces, a keener study by executives of the rank and file to discover unusual talent and reward it. The square deal is in the saddle and the large number of young men who are being chosen for executive positions in the railroad world show that it is working 24 hours a day."

Wear Your Goggles! Save Your Eyes!

The accompanying picture is of W. Savchuk, tender repairman at our Locust Point car shops. Savchuk was holding the cutter and his partner was swinging the maul when the clipped bolt head flew against the tender, rebounded and shattered one glass of his goggles. His eye was not injured at all.

Eye injuries bulk heavily in the total number of accidents. They are certainly most serious because of the supreme value of the eye of the worker.

Don't take chances. Wear your goggles.

W. Savchuk
He's glad he "took the trouble"

Curtis Bay Pier All Coal Cargo

Baltimore American
AND COMMERCIAL ADVERTISER

FRIDAY, MAY 21, 1920.

Employees Smash Loading Records

JUST after our men at Curtis Bay had smashed all world records in loading coal carrying steamships, by putting 7,222 tons into the S. S. "Malden" at the Coal Pier on May 20 in 1 hour and 58 minutes, Frank Boyer, Chief Mate of the ship, stepped up to a group of our officials and said:

"Boys, I am getting tired of this life. We no sooner get our boat into the harbor than you fellows load her up and out we go again. I like the sea, but I also like a breathing spell ashore between trips."

But Mate Boyer wasn't really in earnest in what he said. On the contrary, he was almost as pleased over the performance as were our own men. For if it hadn't been for the active and cordial cooperation of Captain Richard J. White, Chief Engineer M. T. Bare and Mr. Boyer, all of the "Malden," in doing everything they could from the boat end, it is doubtful if the new record could have been made.

How It Was Done

As a matter of fact, the value of team work has seldom showed to better advantage than in this performance. The other two factors were enthusiasm and organization. The mechanical facilities had to be right, of course, and they were. But it was principally a question of personnel, not materiel—the pier was there before, and so were the boat and the coal.

Officials and employees responsible for this performance had a previous record well worth while trying to beat. On May 10, the "Malden" was loaded at the rate of 2,748 tons per hour. And when E. W. Scheer, general superintendent of the Maryland District, called an organization meeting in his office a few days prior to the successful final trial, he and Superintendent Hoskins, of the Baltimore Terminals, and the men there knew that they had a job on their hands. Indeed, one of them announced at the beginning of the meeting: "It can't be done." It took some pretty close figuring to convince him that it could.

The Mechanical Problem

The accompanying reprint of the article which appeared in the Baltimore American to cover the record loading on May 21, gives the details.

WORLD'S COALING RECORD IS BROKEN

STEAMSHIP MALDEN LOADED
AT CURTIS BAY.

7,222 TONS TAKEN ABOARD

Work Is Completed In One Hour and Fifty-eight Minutes—This Is at a Rate of More Than One Ton a Second—Hubbard, Jr., Which Aided Pershing's Ship, Reaches Hampton Roads In Command of Baltimorean.

The Baltimore and Ohio Railroad yesterday afternoon surpassed the world's record made last week at Curtis Bay in the quick loading of coal-carrying steamships. Its former world record was made on May 10, when the steamship Malden was cargoed with 6,967 tons of bituminous coal for Boston in two hours and 44 minutes, or at the rate of 2,748 tons an hour. That record was 23 per cent. in advance of the best previous showing. But yesterday's record makes all previous performances look like pigmy operations. The same steamship was in berth—the Malden—and she took in 7,222 tons in one hour and 58 minutes. This is at the rate of 3,672 tons an hour, and more than one ton per second. The operation exceeds that of May 10 by 33 per cent. and that of the best record previous to May 10 by 43-10 per cent.

The Malden made fast at the pier at 2:03 P. M.; the movement of the coal from the dumpers at the land of the pier began at 3:05 P. M., and the last of the 151 cars had deposited its contents into the hold of the Malden at 5:03 o'clock.

It must be understood that as the cargo nears its finish the operation is somewhat retarded by comparison with the first hour or so. This is due to the fact that the flow of coal into one of the hatches must be lessened or altogether stopped so that an uneven strain may not be placed upon any portion of the vessel, the object being to maintain the vessel's equilibrium in the water as nearly as possible.

During the first hour, for example, 101 cars containing 4,545 tons was dumped into the ship. Had it been possible to maintain this rate of speed the entire cargo of the Malden would have occupied only one hour and 36 minutes. The pier could have easily done it, but the vessel had to be considered.

The wonderful achievement of the Curtis Bay pier last week stirred up attention of railroad men, coal men and shipping men throughout the country so much that the pier was a mecca for visitors from New York and Philadelphia and elsewhere. These included three civil engineers from the South Manchurian Railway of China, who said that they had visited all the great coal piers of the world, but none of which compared with those at Curtis Bay. Doubtless, therefore, yesterday's performance being superior to last week's record by nearly one-third, will cause them to wonder if there be any limit to Curtis Bay's capacity for speed and endurance and the quick get-away of ships coming to this harbor for coal cargoes. The Malden will sail for Boston this morning, just exactly 10 days since she previously left Baltimore for her home port with 6,967 tons aboard.

HUBBARD REACHES PORT.

To be delivered to its new owners, the small wooden Japanese fishing boat H. B. Hubbard, under command of Capt. John DeWitt, arrived at Hampton yesterday.

The two pictures on these pages, showing the "Malden" while being loaded, indicate something of the mechanical problem and its solution. It was essentially the nesting or the close grouping, while working at capacity, of the four towers delivering their streams of coal into the cargo space on the boat.

This required careful study of blue prints of pier machinery, vessel measurements and other mechanical factors, and was worked out at the organization meeting, so that everything was in readiness when the vessel was finally alongside the pier and the word was given for the starting of the big machinery units.

How Machinery Operates

To those who have not seen the Curtis Bay Coal Pier in operation, a glance at the accompanying pictures, with the following description, will help clarify the way they work.

The coal cars are picked up by the Mc. Iyer dumpers, which turn them upside down, pouring the coal into hoppers, which, in turn, automatically feed it on to the belts shown in the picture. The four belts in the centre are the main loading belts. Three of these are shown loaded with coal, the other having completed its job of loading the bow of the boat, each belt feeding through its respective tower to that place in the cargo space opposite which it is working.

The two belts on the extreme south and north sides of the pier are fed from large storage bins built of concrete. The coal handled over these belts is loaded mostly into scows for bunker purposes. This allows the operation of the main belts for the exclusive purpose of loading into ships—the smaller belt, and machines taking care of the scows and smaller craft. In this record loading of the "Malden," however, the belt on the south side was pressed into service and was operated at a speed of 450 feet per minute. At this rate it delivered coal into the boat at practically the same number of tons per minute as did each of the four main loading belts.

The large belts drop their loads of coal on other continuous belts, working in the towers and operated in a lateral movement across the pier. From these lateral belts the coal drops into the boat.

THE MEN WHO MADE THE RECORD LOADING

Right to left, first row: C. P. Kuhn, superintendent pier; M. L. Padden, general foreman; J. H. Kenny, night general foreman; F. J. Brady, chief clerk; F. S. Price, barney foreman; G. J. Doherty, assistant chief clerk; A. J. Trogler, dock foreman, night.

Second row: H. Conrades, car checker; M. Tubbs, tower operator; T. Wincies, trimmer operator.

Third row: A. Sulin, engineer; J. H. Hammill, oiler; William Gardiner, dock foreman, day; R. Johnson, tower operator; H. Machen, tower operator; A. Feathers, tower operator; L. Huster, barney operator; A. Schumacher, cradle operator; F. Cwalina, oiler; P. Youngbar, tower operator.

Fourth row: G. Landes, tower operator; L. Wolgemuth, foreman old pier; William Feeney, engineer; E. Reddington, trimmer mechanic; F. B. Davis, electrician; J. H. Jones, machinist; R. E. Kelly, machinist; M. J. Ryan, trimmer mechanic; H. Krause, machinist; W. Rogalski, trimmer operator and C. Weinhold, trimmer operator.

Each main coal tower is controlled by an operator, stationed in a little house, one of which can be seen in an accompanying picture. He can move the tower forward and backward the long way of the pier and can also move the bridge, which is a part of each tower, vertically or up and down, and in addition, laterally or across the pier.

Mechanical Trimmers

Although the mechanical trimmers are not needed for the loading of a boat of the "Malden" type, which is a self-trimmer with open cargo space, they are very efficient in loading types of coal-carrying boats having separate cargo compartments. Here they distribute the coal in accurate quantities into the corners

of these compartments. At the bottom of these trimmers is a continuous belt which operates at a speed of about 2,600 feet per minute. The coal is dropped from the lateral belts on these fast revolving belts and by them is thrown into the corners of the cargo space. The man controlling the trimmer can move it in a radial motion or so that the opening through

A good picture of the four loading towers. The boat was loaded so fast that the crew had just five minutes leeway in getting rid of its water ballast

These men had a big part in the job, too. In the front row are Trimmer Foremen A Graham, W. Z. Rice, D. Brown, John Myer and A. Parker

which the coal is thrown can be turned to all points of the compass, facing any direction inside the boat and thus reaching all inaccessible places. The trimmers can also be operated up and down, higher or lower, as necessity may demand. Before the installation of the mechanical trimmers it was necessary to have this trimming done by hand labor, and a very hard and dirty job it was, so much so, in fact, that the men employed as trimmers were accustomed to use a type of gas mask, similar to the ones so widely used during the war, to prevent inhalation of the coal dust. The men operating the mechanical trimmers, one to each

trimmer, are supplied with these masks when working the trimmers in the dusty cargo spaces of the boats.

The main belts are sixty inches wide, the trimming belts forty-eight inches wide.

President Willard Congratulates Responsible Employees

The article in the *Baltimore American*, shown in the accompanying reproduction, was widely reprinted in newspapers all over the country, particularly in cities where coal carrying vessels are loaded. Our officials were very much pleased with the performance, President Willard

writing Vice-President Galloway as follows:

WASHINGTON, D. C., May 21, 1920.

Mr. C. W. GALLOWAY, Vice-President.

Dear Sir—I have just received your message announcing a new record made at Curtis Bay in connection with the loading of the Steamship "Malden."

So far as I know, the record made in loading the "Malden" at Curtis Bay on the 20th instar has never been exceeded at any other port. I have no doubt, however, that you will some day do even better at Curtis Bay.

My hearty congratulations to you and all others connected with this excellent demonstration.

Very truly yours,

David Willard

Three of the main loading belts and the belt of one of the trimmer's carrying coal. The empty belt had finished loading forward cargo space of the "Malden." Note size of belts as compared with men on pier, and different elevations of belts to reach respective towers

Results to Railroad

This performance means much more than the mere hanging up of a world's record. It means that through the enormous capacity of this coal pier, thus demonstrated, and with our facilities for the loading of coal boats at New York, the Baltimore and Ohio will now be able to take care, with its own facilities, of practically all the coal mined for export on its own lines.

Those in Charge

The work was done under the direction of Mr. Scheer, assisted by Mr. Hoskins, and particular credit should be given to Assistant Trainmaster Riley, stationed in Curtis Bay Yard, for seeing that the coal was

kept up to the dumpers; General Foreman M. L. Padden, in charge at the dumpers; Pier Superintendent C. P. Kuhan for looking after the general mechanical operations, and Assistant General Foreman J. H. Kenny, who supervised dumping and trimming on the boat.

Their pictures, taken with a number of our other employes who put over this big job, are shown on these pages.

Expect to Beat this Record

The machinery on the coal pier gave excellent satisfaction and it is the confident belief of the officers in charge at the making of this record that the limit has not been reached. As Mr. Scheer said: "I believe we

have reached about 85 per cent. efficiency and we are certainly not going to be satisfied with that."

The Public Must Pay

An unwelcome by-product of the outlaw strikes will be a further mulcting of the taxpayers of the nation to make good an increased deficit in the railroad accounts. An interruption, if only for a few days, of a traffic paying a revenue of many millions a day, while expenses go on almost unchanged, makes a perceptible difference in the balance sheet. And in this, as in pretty much everything else, it is the public that has to pay.—*Harvey's Weekly*.

Companions in Progress

The Press and the Railroads Cooperated in 1830 as in 1920 in Service to the Public

By James T. Doyle

IT SEEMS a fitting coincidence that the oldest newspaper of continuous publication in America, the *Baltimore American*, should be the one to have featured, editorially and in advertising, the first published time-table of the oldest railroad in America, the Baltimore and Ohio. Hand in hand these two organizations have "grown up" together, comrades in industrial development, associates in patriotism.

A few days ago, when in search of some information bearing upon the early part of the nineteenth century, I entered the file room of the *Baltimore American*, containing historical information which is beyond price. General Agnus, the publisher, guards this section with double locks, for therein is carefully kept an unduplicated record of notable events; a history of the City of Baltimore, of the State of Maryland, and of the United States, daily written and daily published from August 22, 1773, down to today—with not a day's record missing.

A search of these files discloses many things, quaint and curious. There are advertisements from the hand of George Washington for runaway slaves;

there are notices of commodity sales, wherein the medium of exchange was a certain number of pounds of tobacco. But the article that appealed to my fancy as bearing a deep interest, not alone for railroad executives and operatives, but for all men engaged in commerce and industry, and linking the past with the

present in an unusually significant manner, was a combination news item and advertisement. It was the first advertisement of a railway passenger train in the world, and appeared in the issue of the *Baltimore American* for May 21, 1830, signed by P. E. Thomas, the first President of the Baltimore and Ohio Railroad, which at that time was operated between Baltimore and Ellicott's Mills, Md., 13 miles distant.

Here was a union between the oldest railroad and the oldest newspaper of the country, manifesting a mutuality of hope and confidence; of good will and helpfulness.

This shows that at the very inception of its career, the Baltimore and Ohio appreciated the value of the press as an agency for bringing the public and the Railroad into closer relationship, with the great objective of developing this virgin continent—an objective realized in its twentieth century magnificence and power. The policy that the Company thus inaugurated in 1830 has been continuous throughout the nine decades that have passed, and this is evidenced by the constant use of the advertising columns of the news-

General Felix Agnus, Publisher of the Baltimore "American"

papers of the country. Furthermore, its early trust in the enterprise, patriotism and fairmindedness of the press has been vindicated and justified.

There has never been a period in the history of the country, certainly during the last three or four decades, when the real railroad situation has been presented to the public by the newspapers with such clearness, insistence and strong support as now. In fact, on April 22 last, at the Annual Convention of the American Newspaper Publishers' Association in New York, the needs of the railroads were emphasized in a series of preambles, and the following resolution was then unanimously adopted:

RESOLVED, That the members of the A. N. P. A. secure and publish fully the essential facts with regard to the car shortage, and the legitimate necessities of the railways, so that the public may be intelligently advised, and also use every endeavor to cooperate in the present emergency, in conducting campaigns for expediting the unloading and dispatch of freight cars, and in such other proper ways.

The May issue of THE BALTIMORE AND OHIO MAGAZINE contained a copy of what was thought to be the first time-table of the Baltimore and Ohio, dated June 17, 1830. The records of the Baltimore American, however, show that this first advertisement appeared on May 21, 1830, and the accompanying reproduction is a facsimile of this, which was written in the form of an editorial. It is evident that America was interested in the developments of the railroad and that the editor considered it the real topic of the day.

We are fortunate in securing and present to our readers a fine likeness of General Agnus, a veteran of the Civil War as well as in the publishing world.

Dignity

By John Newman

Terminal Timekeeper, Pier 21, New York

TRUE dignity exists, but, like true modesty, it does not advertise itself. Dignity implies modesty with elevation of mind, integrity, generosity, and the serene self-consciousness that the possession of these qualities imparts, creating a demeanor that commands deference.

But there is a mock dignity—a curious attribute that should puzzle students of mind philosophy—a queer kink in man's makeup that, instead of inviting admiration and reverence, provokes ridicule and contempt.

Many varieties of this fraudulent order of dignity, such as ostentation,

AMERICAN AND COMMERCIAL DAILY ADVERTISER. BALTIMORE: FRIDAY MORNING, MAY 21, 1830. PUBLISHED EVERY MORNING BY BOBBIN, MURPHY & BOSE, NO. 2, SOUTH GAY STREET.

We stated in yesterday's American that the Railroad would be opened for travelling between this city and Ellicott's Mills on Monday next, the 24th instant, and we have now the pleasure of publishing an official announcement of the fact. This information, we are assured, will be received with sentiments of unmingled satisfaction by our fellow citizens, and also by the friends of internal improvement in every part of the Union. When a practical experiment on so extended a scale is so soon to be hourly exhibited, it is scarcely worth our while to speak of its results in anticipation; but we will nevertheless venture to assert that it will prove perfectly satisfactory to every one who visits the Road, and establish conclusively the fact of the superiority of this mode of intercourse and trade over every other.

Office of the Baltimore and Ohio Railroad,
20th May, 1830.

NOTICE IS HEREBY GIVEN, That the Railroad between Baltimore and Ellicott's Mills will be opened for the transportation of passengers, on MONDAY, the 24th instant.

A brigade, or train of coaches, will leave the Company's Depot on Pratt-street, and return, making three trips each day—starting at the following hours precisely, viz:—

Leave Baltimore at 7 A. M. and Ellicott's at 9 A. M.
" 11 A. M. " " 1 P. M.
" 4 P. M. " " 6 P. M.

The price for the trip of twenty-six miles, will be seventy-five cents for each person. Tickets to and at the Depot. Should the demand be found to exceed the present means of accommodation, passengers will be under the necessity of going and returning in the same coach, until a sufficient additional number of carriages can be furnished. As soon as this can be effected, of which due notice will be given, provision will be made for travelling a shorter distance than the whole trip.

P. E. THOMAS, President

Baltimore and Ohio Railroad Company.

May 20, 1830.

The editors of the National Intelligencer and Telegraph, Washington, will publish the above three times.

The First Railroad Timetable—run as a leading editorial

arrogance, conceit and self-exaltation, are encountered, masquerading in a cloak of dignity, but, as in the case of Aesop's ass, the camouflage is penetrable and betrays the faker. The garment does not fit. A more befitting costume would be a lemon-colored domino with holes like those provided in a horse's sunbonnet, and for the same purpose.

Dignity knows no inferiors but recognizes inferiority and attracts it. Pomposity sees inferiors everywhere and is repellent. Dignity is noble; mock dignity stalks abroad in the person of the poseur.

There is also a species of dignity which, though very real, often assumes a ludicrous aspect. "Professional pride," it is called. It affects

men otherwise quite worthy and is more to be pitied than scorned. We have heard of the literary genius who would rather starve than write "ads;" we know of a barber who would "be d—d" rather than clip a poodle; a house painter who threw up his job in preference to using a paint sprayer instead of a brush; a freight tallyman who would not touch a hand truck because "he was a clerk;" and we recollect an incident where a shipwrecked sailor, clothed in little else than his dignity, scornfully refused a livery coat with gilt buttons, exclaiming, "Me—an able seaman—wearing a coachmans coat? NEVER!"

What is it Puck says, or quotes, in regard to us mortals?

Mr. Schwab's Six Rules for Success

IN an informal talk to the undergraduate students at Princeton, recently, Charles M. Schwab gave these young men the points which he considers necessary in a man's character in order to make life successful.

"Boys, you can have a good time in life, or you can have success in life," said Mr. Schwab, "but you cannot have both.

"The thing you want to do is to make up your minds what you are going to drive for and to let nothing stand in the way of its ultimate accomplishment. I am going to try to give now what seems to me to be the fundamental requirements for a successful life:

"First, unimpeachable integrity; second, loyalty; third, a liberal education in the finer things of life, of art, of literature, will contribute toward a success in life. Man needs imagination, and these are the sources for it.

"Fourth, make friends; fifth, concentrate; sixth, go at your work. You may not find yourself the first year. Don't hesitate to change from distasteful work, but don't change because difficulties come up or troubles arise."

Picked up Here and There

By "Ernie" Baugh

Fisher's Beach, Miami, Fla.

Three opinions of the Lady Life Safer in an Annette Kellerman:

Young fellow about twenty-five—"Here is where I take a chance on drowning."

Boy (?) with a Maryland License on his car—"S-o-m-e Peach!" His wife a good fellow very quickly, "In Maryland we leave better than that on the tree."

By Special Invitation

By Francis Lynde

NINE o'clock, and the orderly decorum of a well-regulated railroad office reigned in Superintendent Elbert's quarters. The chief clerk's chair was still unoccupied, but the stenographer was at his typewriter, and Roy, the office operator, was sitting at his table on the opposite side of the room.

"Is Burwell coming down this morning?" Roy asked, tossing the query over to the stenographer.

"Sure!" said Beard. "Don't suppose a little thing like a wedding would stop him, do you?"

"Didn't know but it might—so long as it's his own."

"Don't you believe it. He'll be here, and he'll stay till the last minute—till the church bell begins to ring."

Roy laughed. "Charlie does stick pretty close," he said, turning to his key to answer his office call. For a few minutes his pen kept pace with the tapping of the sounder. Then: "Here's a wire from President Mayhugh at Ute Springs. Wants his car *Argyle* taken on 7 tonight to Mountain Junction, and an engine at the Junction to run him special over the Extension."

"All right," said Beard, "I'll give the order to the despatcher," and he filled out the form.

Roy yawned, tilting in his office chair. "Inspecting the Extension: the president can have that job for all of me—200 miles without a place where they can get a square meal."

"Well?—the *Argyle's* got a cook and a kitchen."

"That's so. I tell you what, Beard, that's the way to travel. When I take my wedding trip it'll be in a private car."

"Humph!" said Beard; "it won't be the president's car. Imagine Mr. Mayhugh asking Charlie!"

"Can't; because I've never seen Mr. Mayhugh."

Beard chuckled. "I have—just once. I think he has gout, or something. Came in here one day to ask why an engine wasn't ready to take him out to the shops, and I thought he'd bite my head off before I could explain anything."

The clicking sounder was calling again, and as Roy turned to his table Burwell came in. He nodded pleasantly to Beard, and sat down to his desk as calmly as if it were merely the beginning of an ordinary day's work.

He was a clean-cut young fellow of the alert type, smooth-shaven and neatly clothed, and he carried a certain air of precise and efficient energy that fitted his position to a nicety.

While he was rapidly sorting the mail and dictating to Beard, an elderly ranchman came in. Burwell broke off in the middle of a letter, and turned to the caller with an affable: "Well, what can I do for you?"

"Thort I'd drop up and see what 'd been done about that there cow you fellers killed for me," said the farmer.

"What was the name?" Burwell asked.

"Hackthorne—Jabez Hackthorne. Thort ye knowed me."

Burwell looked at his ticker. "Your claim is being investigated, Mr. Hackthorne. Come in in about a week and we may have it ready for adjustment."

"All right," said the farmer. "She was a mighty good cow." Then seeing the water cooler at the far end of the counter-railing: "I s'pose this here's drinkin' water, ain't it?"

"Yes; help yourself," said Burwell, taking up the broken thread of dictation with Beard.

The ranchman took the cup, holding it in one hand while he experimented patiently with the other on the spring faucet. Roy was watching him furtively. At the precise instant when the man raised the full cup to his lips, the operator inserted his pen point between two bits of wire on his

A tiny spark snapped, and the ranchman, starting as if he had been shot, dropped the cup

table's edge. A tiny spark snapped, and the ranchman, starting as if he had been shot, dropped the cup and sank back against the railing, trembling like a leaf.

"Oh, Lordy, Lordy, but I'm sick!" he gasped. "Somebody run for a doctor, quick! I'm struck with death, sure's a gun!"

Roy and Beard were both choking, and it was Burwell who went to the rescue. When he had reassured the victim of the practical joke and had gotten him out of the office, he turned sharply upon the operator.

"That's enough, and more than enough, Roy!" he snapped. "It's cowardly to play tricks on an old man like that; and besides, it isn't business! You cut that wire out, and keep it cut out. If you've got to play jokes, take somebody who can get back at you!"

Roy brazened it out. "All right; I will," he said.

Burwell sat down and plunged into the letters again, but it was eleven-fifteen when he dictated the last one and came to the president's telegram. He glanced at his watch and called to Roy.

"Fred, slip down-stairs and get me a cab, will you? I'm running a bit short on time." Then to Beard: "You've fixed this with the despatcher?"—meaning the president's order.

Beard nodded.

"All right: take a telegram to President Mayhugh—ready?"

"Your wire today. Have arranged for movement of car *Argyle* as instructed. Train 7 reaches Mountain Junction 2 a. m. Is it your desire to proceed at once on Grand River Extension?"

The message dictated, he closed his desk. "I believe that's all," he said, as Roy came back and reported the cab as waiting. "When Mr. Mayhugh answers, make whatever arrangement is necessary to carry out his wishes. If anything comes up that you can't handle, you can reach me any time this afternoon on 7. So long."

When Burwell was gone, Roy executed a grotesque war dance before the closed desk.

"What's the matter, Fred?" Beard asked.

"Oh, nothing much—I just thought of the most corking—er—Gimme that message to the president and I'll send it."

Train Number 7 was about ready to pull out when the gay wedding party gathered in a lively group at the steps of the rear sleeper. The newly minted husband had handed his bride up the steps, excusing himself instantly to run upstairs for a

final word to Beard. The bride, a pretty girl with brown eyes, turned on the steps and added her voice to the Babel of small talk hurled up at her.

—"do hope you'll have a sweet time, Min."

—"and don't you know really where you're going?"

—"me hear from you."

—"bride the sun shines on."

—"Charlie 'll get left if he doesn't look out, and then what *would* you do?"

And the pretty bride, tossing down replies to the Babel:

"Thank you so much, Archie; the sun does shine good and hot—No, Charlie won't tell me where we're going—Yes, I'll be sure to drop you a postal, Jessie"—and more of like import and less importance. Minnie Gaylord was popular, and the wedding guests were chiefly her classmates and school friends.

Meanwhile, Burwell was giving last-minute instructions to Beard. "No; I don't know yet just how far we'll go—I'm sorry Mr. Elbert had to go to New York, but you must do the best you can until he gets back—Yes, I'll keep you posted so you can reach me. Did you hear from the president?"

"Yes; wants his car taken up the Extension as soon as it reaches Mountain Junction."

"All right; fix it, and for Heaven's sake don't fall down. Mr. Mayhugh isn't a patient man. That's all, I guess: I'll have to run for it." And by running he managed to swing up to the steps of the Pullman as 7 rolled out of the station.

Business was dull in the superintendent's office that afternoon and Fred Roy spent much of his time experimenting with the telegraph switchboard, setting and resetting the plugs, and then testing out the connections with his key. When he finally found the combination he wanted, he spent an industrious quarter of an hour trying to raise Ute Springs over one of the Western Union wires which he had plugged in, Ute Springs being a station well out toward Mountain Junction. Roy's industrious callings over the commercial wire—calls which he signed with the first fictitious signature that he happened to think of—got no answer; but when he shifted the plugs to connect with one of the railroad wires, his call was answered at once. This proved two things: that the Ute Springs operator was on duty; and that he was paying no attention whatever to his commercial wire.

"That's about what I figured on."

Roy mused. "Now, if I can raise Grand Butte over the commercial wire, I'm safe."

A minute later he had changed the plugs again and was calling Grand Butte, the supper station for Number 7, over the Western Union wire, signing the call "U-S" as if it were coming from Ute Springs, and pausing a moment now and then to see if "U-S" would challenge its own signature. It didn't; and presently, when the Grand Butte operator answered, he was shocked to hear his instrument click out the snappy query: "How long do you propose to keep President Mayhugh's business hanging up?"

Knowing that the *Argyle* was at Ute Springs, and having no reason to suspect that the call signed "U-S" came from the superintendent's office, the Grand Butte operator thought he was in for trouble and began to apologize. A break cut him short. "Never mind excuses. Take this:

"To Conductor Train 7, Grand Butte.

"Understand you have Mr. Burwell, of Superintendent's office, on your train. Say to him that the president invites him and Mrs. Burwell to continue their wedding journey as members of our party in car *Argyle*. Signed, R. Penfield, Private Secretary."

Burwell got this message as he and his bride were seating themselves at the Grand Butte supper table.

"What is it, Charlie?" asked the bride when she saw his look of shocked perplexity.

He handed the message to her without comment, and was wholly unprepared for her enthusiastic outburst of approval.

"Isn't that kind and perfectly splendid!" she exclaimed. "I've always wanted so much to take a trip in a private car. What a dear, thoughtful old gentleman Mr. Mayhugh must be!"

Burwell didn't say what he thought; that the general opinion of the C. & G. R. rank and file was to the effect that the president was a fire-eater of the most pronounced type.

"I can't begin to understand it," he said; adding: "I wish the wire had fallen down before this thing ever got over it."

"Why, Charlie Burwell! that's positively ungrateful!"

"Yes, but—don't you see, we don't know any of the party socially, and—"

"But you've met Mr. Mayhugh, haven't you?"

"Not in your meaning of the word, no. Just seen him a few times."

"That makes it all the more kindly. And about the social difficulties; if he ignores them, I'm sure we ought to."

The meal stop being short, there was no time for more talk, but when they were back in their Pullman, Burwell began again.

"I wish I knew some way to dodge," he frowned.

"But you can't, Charlie, dear; what would he think?"

"No, I suppose we can't; coming from the president it's mighty nearly an order."

"Where is the *Argyle*?"

"At Ute Springs: we're due at eleven, and everybody'll be in bed and asleep."

The pretty bride paled a bit at the thought of a midnight introduction. "Can't we go on and join them tomorrow?"

"No. We take the *Argyle* to Mountain Junction, where there is an engine waiting to pull her over the Extension."

"Then I suppose we must join them tonight. Who is there in the president's party?"

"I don't know even that much. Miss Bessie Mayhugh is along, and I believe there is an aunt and two or three young women."

When 7 pulled into Ute Springs, Burwell saw the *Argyle* on the siding. While the train was switching to get the private car, Burwell ran to the telegraph office. "Did you send this?" he asked, handing the invitation to the night operator.

"No, that must have been Johnson, the day man. I don't come on until seven," said the night man.

Burwell had to run to catch his train, and as he did it a gust of wind made him snatch at his hat, and as he did so he did not see the square of yellow paper escape from his pocket and flutter away in the darkness. When he rejoined the bride, he said, rather ruefully: "We're in for it. The *Argyle*'s as dark as a pocket, and I guess everybody's asleep."

A colored porter met them at the door of the private car.

"Scuse me, sah, dis is a private cyah," he said.

"I know," said Burwell, "but we are invited guests. My name is Burwell, and I'm chief clerk in Mr. Elbert's office, Mountain Division."

"Oh, yes, sah; I 'membehs you puffickly—done been in yo' office many's a time. Come right in; I'se take yo' baggage. Dey's all gone to baid, but I'se give you all de li'l' room." And a few minutes later they were in their little box of a state-room and the porter was gone.

The sun was up and the *Argyle* was

lurching heavily over the rough track of the new Extension when Burwell opened their door and told Minnie how to reach the dressing-room. He saw three strange ladies sitting in wicker chairs in the big central compartment, and held his breath when his wife cannoned helplessly into one of them in her effort to reach the end aisle. The lady was portly and severe of aspect, and Burwell shuddered when she put up her lorgnette and stared after the retreating figure of the offender.

"Humph!—a cheerful beginning!" he muttered, as he went back to the men's end of the car. Here he found the small washroom already occupied by a stout, elderly gentleman in slippers, trousers and undershirt, who was sluicing his face in the one basin and growling out moist imprecations upon the rough track.

Burwell waited patiently in a corner. The stout gentleman appeared to be in no hurry, and while Burwell was regarding him furtively a violent surge sent the bather against the wall. Straightening up, with the water dripping from his bushy eyebrows and white mustaches, he glared at Burwell with one eye, while he groped for the towels in the rack. Then Burwell saw that it was the president, but he was totally unprepared for the wrathful question that was hurled at him.

"Well, who the devil are you?"

For a brief moment Burwell actually forgot his own name. Then he stammered: "I—I'm Burwell, of Mr. Elbert's office."

"Oh, you are!"—with fine irony. "Well, Burwell of Mr. Elbert's office, what are you doing here?"

Burwell's helpless consternation

When the President got his breath he shouted: "I want to know what you're doing in my car?"

made him take things very literally, so he said, "I'm waiting for a chance to wash my face."

The president seemed about to have a fit of apoplexy. When he got his breath he shouted: "I want to know what you're doing in my car! Who told you to bring your infernal impudence here?"

The question let in a flood of light and Burwell saw the hideous cruelty of the joke that some one had played on him and Minnie. None the less, he attempted to explain, brokenly.

"Telegram—your private secretary—last night—invitation for my wife and me to join you on our wedding trip. Thought it strange, but—"

"Your wife!" roared the irate gentleman, sawing his neck with the towel as if he meant to behead himself. "How many of you are there? Why didn't you bring your mother-in-law and your sisters, if you've got any, and a few more of your female relations, while you were about it? And what's this gammon about a telegram? I didn't send any telegram—and I haven't any secretary. Don't believe a word of it!"

Burwell knew how to be respectful to his superiors, but he had never before been quite so severely tried.

"I'm sorry you don't believe me," he returned with some little warmth. "I'll show you the telegram when you are good enough to allow me to wash my face and hands."

When the president left the wash-room Burwell made his toilet with the careful precision of a man about to be hanged. A little later he re-entered the sitting-room. The scene was anything but reassuring. The severe-looking lady was gazing out of a window; the president was sitting in a corner, surrounded by three young women who seemed to be expostulating with him, and his bride of a day was cowering in the smallest possible corner of the most uncomfortable seat in the place.

"Oh, Charlie, dear! what have we done?" she murmured when he took his place beside her.

"Committed murder in the first degree, I should say!" he blurted out desperately. "What did you do with that telegram last night?"

"The telegram?—I haven't it! Don't say you've lost it!"

"Afraid I have," he admitted sheepishly. Then he arose and started toward the group in the opposite corner, but before he had taken three steps she was beside him. "I'll help," she said bravely.

The three young women saw the movement and stopped them midway. One of them, whom Burwell

recognized as the president's daughter, slipped an arm around Minnie's waist. "We know all about it," she whispered, "and you are to have nothing whatever to do with it—you are *our* guest." And the three surrounded the bride and led her out of the compartment.

Burwell gave a sigh of relief and turned to the president.

"Sit down," was the order given abruptly; and then: "Now what was it about that telegram?"

Burwell obeyed the order and gave the facts in the case.

"Where is the message?"

"I don't know. I had it at Ute Springs, but I must have lost it. I can't find it now."

The president scowled and looked at his watch as the porter came in to lay the breakfast cloth. "Tell the cook we don't want to wait all day for something to eat," he said irritably. Then to Burwell: "What name was signed to the message?"

"Penfield or Penfold—private secretary."

"That ought to have told you it was a hoax. My secretary's name is Carrington, and he went home sick two days ago." Then: "Well, what are you doing to do about it?"

"I'm afraid we're entirely at your mercy, Mr. Mayhugh. There are no regular trains running yet on the Extension, but I presume we can make our way back to civilization some way if you have us put off."

The president smiled. "That would be a nice ending to your wedding trip, wouldn't it? Who the devil hates you badly enough to play such a trick on you?"

Burwell suspected Roy, but the announcement of breakfast saved him from having to reply. The young women brought the bride of a day in and Miss Mayhugh looked at her father and Burwell. Then: "Father—Auntie—this is Mrs. Charles Burwell; Mrs. Burwell, my father, and my aunt, Mrs. Prendergast."

Minnie rose bravely to the occasion and introduced her husband all around. Miss Mayhugh arranged the seating at table, putting the bride between her father and herself, and Burwell between Kate and Lettie Brandon, a bit of tact that kept whatever smouldering volcano of embarrassment there was from coming to the surface during the rather silent meal.

After breakfast the president shoved one of the wicker chairs into a corner and lighted a dubious-looking cigar, throwing it away with a muttered malediction after two or three whiffs. Burwell saw his chance and extended a handful of his own cigars.

The president took them and lighted one.

"What business have you with such good smokes as these?" he demanded.

Burwell smiled. "I haven't. The box was one of my wedding gifts. Do you like them?"

"Very fair cigar. Now if it wasn't for that damnable correspondence, I could be measurably comfortable."

Burwell saw another opportunity and snatched at it. "Have you some letters to write?" he asked.

"Yes; a hundred or so."

"I don't wish to be officious, but I'm a stenographer, and if I can be of any service to you—"

"The devil you are! Why didn't you say so at first? Come along into my stateroom."

A few minutes later the president was seated at his desk with a pile of letters before him, and Burwell's pencil was flying over the pages of a notebook. When he had taken two or three letters at top speed, the gratified president handed him one of his own cigars. "Better light up," he said. "You beat Carrington, two to one. Can you run a typewriter?"

"I can."

When the final letter was written it was nearly noon and the one-car train was approaching the end of the Extension. Burwell took his wife to the rear platform to show her the view, but she deliberately turned her back upon the grandeurs. "Tell me, Charlie, quick! what did he say to you?"

Burwell smiled. "It's all right now, I guess. He was needing a shorthand man. We've been writing letters all forenoon. How have you been getting along?"

"Splendid! They've all been just as good as gold to me, and Mrs. Prendergast laughed till she cried when I told her how we'd been victimized."

A shrill whistle announced the arrival at the end of track, and Burwell hurried in to the president's office stateroom.

"We're at the end-of-track," he announced; "I can get your messages sent over the engineer's wire, if you wish. Have you any others to send?"

"Not now, no."

Burwell hesitated a moment. Then he said manfully: "Mr. Mayhugh, you know how sorry I am that this thing happened—our butting in on you this way. There'll be a material train going to Mountain Junction today some time, and we can go back on that. I hope you will—"

The president interrupted him with a grim laugh. "No you don't, my boy," he said. "I guess I know a

good thing when I see it. Get your notebook and take another telegram," and when Burwell was ready he dictated.

"To Superintendent Elbert:

"I have your chief clerk with me in car *Argyle* and intend to keep him through entire inspection. Make your arrangements accordingly.

"Just sign my name to that and send it with the others."

When Burwell handed the bunch of wires to the chief engineer's operator he had added one to which he signed his own name.

"To Fred Roy, Superintendent Elbert's office:

"Much obliged for your thoughtfulness. We are having a royal time. Until further notice you can reach me care car *Argyle*."

(THE END)

Section Foreman Wins Carnegie Hero Medal

Section Foreman Dominic Fanno

ON AUGUST 12, 1918, Dominic Fanno, section foreman at Ellwood City, rescued two boys and saved them from drowning in a creek near Zelenople, Pa. Recently he received the following letter:

"Through the courtesy of an employee of the Baltimore and Ohio Railroad, the attention of the Carnegie Hero Fund Commission has been called to an act performed by you, by which, on August 12, 1918, you saved Edward and Alexander Nagy from death by drowning in Connoquenessing Creek, near Zelenople, Pa. Your case, after a thorough investigation, was considered at a meeting of the Commission held this afternoon, and I have much pleasure in informing you that in recognition of your heroism on that occasion, the Commission awarded you a bronze medal and the sum of \$1000.00, to be applied toward the liquidation of the mortgage on your property, or to such other worthy purpose as may be approved by the Executive Committee.

"I shall be obliged if you will kindly advise me without delay, by a letter bearing your own signature, whether or not you wish to accept the Commission's awards. If your reply is affirmative the medal will be ordered and will be forwarded you as soon as it has been received from the manufacturers, and I will write you further regarding the pecuniary award."

We take pleasure in announcing Mr. Fanno's act of heroism through

the columns of the MAGAZINE. His reward was undoubtedly the realization of the service he did to the rescued and their loved ones. Yet his friends will all join in congratulating him on this further reward—one which should mean much to him and his family.

Not always do our actions accord with the poet's line:

"For courage mounteth with occasion."

It is, therefore, a pleasure to learn of the heroism of Section Foreman Fanno, who measured up to his occasion, every inch a man.

Some of the best workers and most loyal employes on the Railroad are (like Mr. Fanno, we take it) of foreign birth. The stuff that men are made of is of no particular clime or country, nor does it usually manifest itself in the dramatic manner illustrated by this case. There are hundreds of our employes whose lives are veritable epics of faithfulness to their ideals. Some of them carry burdens of private sorrow, which, but for their courage, would overwhelm them. Others with physical handicaps, give

the finest service through determination to accomplish something worthwhile—to be true to their trust. Still others, in the face of insidious propaganda and the clamor of the unthinking mob, stand fast in their places and exhibit a loyalty to conviction and conscience that is as firm and magnificent as a great tree lashed by the tempest.

We are proud of such men in our railroad family. On them depends much more than the transitory fortunes of the day, or of this or that class or community. Their faith is building institutions and ideals that will be the bulwarks of true progress for all time. We are proud to think of them as our fellow workers, to welcome them to the finest comradeship the world has ever known, that of true Americanism.

Your Liberty Bond

THE United States Government borrowed money from you to finance the war. You hold the Government's promise to pay you back. This promise is called a

WHAT CARLYLE THOUGHT OF WORK

By FREDERICK C. SYZE

Supervisor of Transportation

To the cursory reader or thinker, to the reader of ephemeral literature, anything written so long ago as in the time of Carlyle might be considered old-fashioned and quite out of date. And, when time is measured by the span of human life, it does at first blush seem to be in the distant past. But when we consider the eternal truth of much that Carlyle has written on the very problem that this generation must solve, the span between his day and ours is as but a tick of Time's clock. Here are three of his ideas about work.

"No man has worked, or can work, except religiously; not even the poor day-laborer, the weaver of your coat, the sewer of your shoes. All men, if they work not as in a Great Taskmaster's eye, will work wrong, will work unhappily for themselves and you."

"For there is a perennial, and even sacredness, in Work. Were he never so benighted, forgetful of his calling, there is always hope in a man that actually and earnestly works: in idleness alone is there perpetual despair."

"Work is of a religious nature—work is of a brave nature; which it is the aim of all religion to be. All work of man is as the swimmer's; a waste ocean threatens to devour him; if he front it not bravely, it will keep its word. By incessant wise defiance of it, lusty rebuke and buffet of it, behold how loyally it supports him, bears him as a conqueror along."

Liberty Bond or Victory Note. On this bond is stated the conditions under which the Government borrowed the money from you.

For instance: If you hold a bond of the Third Liberty Loan, it states that on April 15 and October 15 of each year until maturity, you will receive interest on the amount you paid for the bond. Other issues bear other rates of interest and other maturity dates, all of which are clearly stated on the bond.

Now, if you keep your bond until the date when the Government pays you in full for it, you do not need to worry if, in the meantime, the price is low one day or high the next. You and Uncle Sam are living up to your agreement with each other, and neither will lose by it.

On the other hand, if you sell your Liberty Bond now, you will find that the man you sell it to will not give you a dollar for every dollar you paid

for it. The price has been brought down because so many people are offering to sell their bonds. If the market is flooded with tomatoes, you can buy them cheap, but if everyone is clamoring for tomatoes and there are few to be had, the price goes up. The same is true of Liberty Bonds. *Short-sighted people are dumping them on the market, and wise ones are buying them.*

The best advice that can be given to the owner of a Liberty Bond is this: Hold the bond you bought during the war; it is as safe and sound as the United States Government itself.

Buy as many more at the present low rate as you can afford. If you hold them to maturity, you are bound to make the difference between what they sell at now and their face value. You will also receive good interest on your investment.

Hold on to your Liberty Bonds and buy more.

respond to their need by enrolling his name as a member of the Guard.

Previous to the Great War, membership in the National Guard meant not only splendid training in discipline and military science, but also the enjoyment of good fellowship. These same advantages are now offered men joining. In addition, a number of the large business institutions of the state, including the Baltimore and Ohio Railroad, have agreed to give to any of their employes who enlist and who are called into active duty, the difference between the pay they receive from the state for their service and what they would receive if they continued in their regular business positions.

To every right thinking young man in this country the privilege of calling himself an American means more than the fulfillment of his ordinary duties as a citizen—obeying the law, interest in civic betterment, voting, etc., on the one hand, and the opportunities and protection afforded by American citizenship on the other. It means a spirit quick to respond to the highest needs of the state and nation, whether military or otherwise. Maryland needs men in her National Guard, and no young man, whether or not he has seen military service in the uniform of his country, can more honorably earn the name of "patriot" than by joining now.

The duties and privileges of membership are well understood by our readers and full details can be secured and enlistments made in Baltimore, at the Fifth Regiment Armory, and at the armories in the following towns and cities: Frederick, Hagerstown, Cumberland, Westminster, Hyattsville, Annapolis, Cambridge, Bel Air, Elkton and Salisbury.

Maryland Needs Real Men for Her National Guard

THE State of Maryland is now engaged in a campaign to recruit 3,200 men in its National Guard 1,800 from the City of Baltimore and 1,400 from the rest of the state.

The history of the Maryland National Guard in the service of the state and the country is an enviable one. In any catastrophe such as that sustained in the great Baltimore fire of 1904, the Guard has responded unselfishly and adequately for the protection of the people and the property of the commonwealth. Thousands

of Maryland boys gave unstintingly to the public service during the Mexican trouble on the border and the history they made for the state during the Great War will always be imperishable.

After the police organizations of the communities of the state, the Guard is the first to be called on by the Governor for help when danger threatens, and there is no finer way in which a man can show his loyalty to his friends, his state and his country, than in declaring himself ready to

THE TRANSPORTATION ACT OF 1920 How It Affects Railway Financial Returns and Valuation

By JENKS B. JENKINS
Valuation Engineer

1. All railroads get a guaranteed return, the same as for the three year test period, for six months from March 1, 1920, ONLY.

2. For a period of two years, the Interstate Commerce Commission is to fix the rates so that each group of railroads, covering such territory as the Interstate Commerce Commission may determine, shall receive an average return of 5½ per cent. on the value of the property, with a further provision that the Interstate Commerce Commission may allow one-half per cent. additional; there is no guarantee that any one road will earn 5½ per cent. or any other rate, or that it will earn enough to pay its fixed obligations.

3. After the two year period, the rates are to be fixed by the Interstate Commerce Commission to give what they may consider to be a proper average return.

4. Any railroad earning over 6 per cent. shares half the excess with the Government.

This Act places an importance upon valuation work which never before existed and attaches a direct money value to the thoroughness and accuracy of the valuation work. Every dollar lost on valuation will mean a perpetual loss of 5½ cents per year to the railroads in this country.

Commercial Development Means Business Insurance for the Railroad

"The best solicitor a railroad can have is a smokestack working in a plant located along its tracks"

By H. O. Hartzell

Manager Commercial Development

THERE are two general methods by which a railroad may develop and expand its business. One is to extend its lines to reach new territory, to serve a larger area, and consequently a greater population. This, which may be called the extensive method, is important in opening up undeveloped lands and providing easy communication where it was difficult before. The early railroad history of this country or of any country affords an example of this sort of development. The problems to be met are largely those of financing and engineering and it is those two departments of the Railroad which bear the burden of expansion.

Intensive Development

The second method is one which naturally follows and depends upon the first, and which becomes more and more important as the area of undeveloped lands diminishes. Rather than add any great amount of new mileage, the plan is to develop intensively the territory already traversed by the railroad, by fostering the existing industries, inducing new ones to locate along the lines, opening up latent natural resources and industrial areas, helping the farmers market their products to the best advantage, and by cooperating with the people along the railroad in numerous other ways.

It was to administer this intensive method of development that the Commercial Development Department of the Baltimore and Ohio Railroad was formed in 1916, and subsequently reestablished last March when Federal operation of the roads terminated.

It will be seen from the above that the scope of this department's activities is exceedingly wide, and that its intrinsic importance increases as the area of unused land decreases. It is preeminently, therefore, a department which provides for the future.

To obtain the best results an organization of this kind requires the full cooperation of every employe in every department of the Railroad, because from the very nature of its duties, the Commercial Development Department must work closely with

all the other departments, especially with the departments of Traffic, Engineering, Operation and Real Estate.

No less important is the contact with the public. The department must keep in close touch both with the present shippers and with prospective shippers. The further development of existing industries is of as much importance as to secure new ones. Inasmuch as it is one of the fundamental aims of the Commercial Development Department to assist in every practicable way in the development of the communities traversed by the Railroad, special attention is given to cooperation with Chambers of Commerce, Agricultural Associations and similar organizations. Some of the most progressive Chambers of Commerce on our lines never undertake to put through an industrial proposition without consulting this department and securing our aid.

Expert Service in Industrial Economics

The location of new industries on Baltimore and Ohio rails and the arranging of side track facilities for expanding industries constitutes one of the principal divisions of the department's activities. To handle these propositions, we have Industrial Agents, with headquarters at Baltimore, Pittsburgh, Cincinnati and Chicago. These men are thoroughly trained in the science of factory location, are conversant with industrial conditions in their respective territories, and at the same time, have a background of practical business experience. They have at hand recently compiled industrial surveys of various communities, containing complete and accurate data covering factory sites and buildings, labor conditions, fuel and power costs, raw materials, tax rates and other factors affecting operating costs. These studies are available to the prospective manufacturer, and if he requires further information, the department is prepared to make a specific report meeting his individual requirements.

Locating Industries Economically

Investigations have developed that a considerable percentage of the manufacturing plants in the United

States are not economically located from the standpoint of assembling cost of raw materials and fuel supply and the marketing of the finished products at minimum expense. Such locations often have been chosen when the industry was small, chiefly from sentimental reasons. To assist manufacturers so located, to overcome losses through continued operation in their present plants, the Commercial Development Department prepares reports which are available at all times, covering kinds and sources of raw materials, fuel, etc., to be secured on our lines.

At the present time, a special effort is being made to induce manufacturers using large quantities of coal, iron, steel and other commodities produced in Baltimore and Ohio territory in large quantities, to locate on our rails where these materials may be obtained with a minimum haul. Besides the advantages of low rates and better service to be derived from a location near the sources of supply, the Baltimore and Ohio is so situated as to be able to offer unsurpassed facilities for nation-wide distribution, satisfactory climatic conditions throughout the year, cheap power and numerous other operating advantages.

Insuring Business Against Lean Years

But, it may be asked, how can a railroad justify its efforts to expand its business and acquire more industries, when it is unable to care satisfactorily for its present shippers? To such a question the answer is, that a progressive railroad cannot afford to disregard the future, but must adopt a farsighted policy. The country is now enjoying a period of marked prosperity and industrial activity, while the railroads have, at best, remained stationary during the two years of Federal operation. This unbalanced condition cannot last. The railroads will expand to handle the increased business, and the wave of prosperity will, at least partially, subside. In the years of plenty, therefore, the railroads must prepare for the lean years when equipment and facilities will be abundant, and production will be limited. It has

The foregoing outlines briefly some of the aims and present activities of the Commercial Development Department. The keynote to its success is cooperation—cooperation between this and every other department of the Railroad and the general public.

Cars Are Only Earning When The Wheels Are Turning

President Willard confesses that this cartoon is a true representation of his youthful ambition. That the young Engineer in the picture is feeling the same kind of pride and importance which he, President Willard, felt thirty years ago as he made his first run on the old Connecticut and Passumpsic River Railroad into the station in the old home town and made his initial appearance as a full fledged Locomotive Engineer among the neighbors and acquaintances of his boyhood.

Above: Room occupied by the Czar when a captive of the Bolsheviks at Ekaterinburg. Iron bed, cold, gray walls and uncovered, rough board floor—a strange contrast, indeed, to the splendors of his former apartments.

Above: Jewelry, personal mementos, and other religious regalia of the Czar's family which the Czechs collected and photographed after their capture of Ekaterinburg.

Former Czar of Russia, Nicholas II and his family: Czarina Alexandra, the Grand Duchesses Olga, Titania, Anastasia and one other; the Czarevitch (heir to throne) Alexis. This picture was found in the death house at Ekaterinburg.

Left: The logs shown covered the hole in the ground into which the bodies of the members of the Czar's suite were thrown after they had been slain by the Bolsheviks. Powerful acids were poured in to effect rapid disintegration of the bodies.

Right: Against this wall the victims were placed as they were about to be executed, the broken plaster and the holes showing the results of the assassins' bullets after their deathly work was done.

Through Soviet Russia with the Czecho-Slovaks

By Colonel George H. Emerson
Chief of Motive Power

One of the most dramatic and far-reaching events of the World-War was the Russian Revolution. If Kerensky, who assumed the role of political and military dictator, had been a Caesar, a Napoleon or a Foch, it is probable that he could have stifled German intrigue and treason among the Russian forces, been a decisive factor in the earlier termination of the conflict—and engraved his name on the list of immortals. But he failed because he was unable or unwilling to establish discipline among his troops, and the freeing of several millions of German soldiers on the Eastern front, caused by the collapse of the Russian forces soon after the revolution, demanded quick action by the Allied powers. Kerensky said that if he could get supplies through Siberia, he could again engage large forces of the Central powers on the Russian front. This required the safe transport of these supplies via the Trans-Siberian Railroad, and it will be remembered that Mr. John F. Stevens was dispatched to Russia as head of the Russian Railway Commission, to see what could be done.

His recommendations called for the organization of a complete railroad staff to supervise the maintenance and operation of this railroad, and it is of the activities of this staff that the following story tells, in the words of its leader, Colonel George H. Emerson, now Chief of Motive Power of the Baltimore and Ohio.

WE SAILED from San Francisco on November 11, 1917, with 288 commissioned officers in the party, constituting 14 complete superintendents' organizations. These included general superintendents, superintendents, master mechanics, trainmasters, chief dispatchers, train dispatchers and shop foremen.

Just previous to our departure we learned that the Kerensky government, from which so much had been expected, had fallen. The Bolsheviks were said to be in complete control, and such indeed was the condition we found when we arrived at Vladivostok on December 14, and the Bolsheviks refused to permit us to land.

We were unable to get instructions from the United States Government, either by cable or otherwise, and our position at Vladivostok being untenable, we secured the government transport "Thomas" and proceeded to Nagasaki, Japan. It was thirty days before we were able to find accommodations there and release the transport.

Mr. John F. Stevens and I then decided to go to Harbin, Manchuria,

via Korea. We arrived there on January 22, 1918. A few days later the Minister of Ways and Communications of the Siberian Railroad, under the Kerensky regime, arrived and advised us that the Soviet government proposed to carry out the original agreement which Kerensky had made with the Allies, namely, of engaging the forces of the Central powers on the Russian front. He therefore urgently requested that we follow our original plan of surveying the Trans-Siberian Railroad and trying to put it in shape for heavy movement of men and material, the agreement which had been entered into with Mr. Stevens.

Mr. Stevens agreed to this proposition and I arranged to move our corps of officers to Harbin, whence I expected to assign them westward to assist in the operation of the railroad. Half of them left Nagasaki for Harbin and the rest were prepared to leave a few days later. Mr. Stevens then went to Tokio, the capital of Japan, and on the day following I was advised through the Kerensky Minister of Ways and Communications that conditions in Siberia had

changed and that the authorities which he represented, railroad and political, had decided not to work with the Soviet government.

I immediately issued an order cancelling the movement of the balance of the corps officers from Nagasaki, and the first contingent which arrived at Harbin from that point a few days later were held at Harbin for 30 days. In the meantime I had secured authority to assist in the operation of the Chinese Eastern Railroad, which runs from the Manchurian line east to the Manchurian line west, a distance of about 1,100 miles. The Bolsheviks had just been driven out of Manchuria by the Chinese troops.

On April 26, however, I got instructions from the State Department in Washington, through Mr. Stevens, to proceed west into European Russia and connect up with our ambassador, Mr. David F. Francis, at Vologda, in regard to transportation.

On May 4, seven officers of the corps and I left Harbin for Vladivostok and arrived there on the following evening. I had with me passes issued by the Soviet government and signed by Lenin and Trotsky.

Captain (later Colonel) Kadlets, of Czecho-Slovak Army, a warm friend of Colonel Emerson

Guida, of the Czechs, a General at 28 years of age, and later Lieutenant-General in charge of All-Russian Army

During our delay in Vladivostok, awaiting transportation, we were called on by representatives of the Soviet government and a note, which appears in my diary of the trip, is significant of the disorganization in their industries and their early recognition of the fact that manufacturing and transportation could not proceed efficiently without management. The note follows:

"There was very little work being done at the Navy yards and the authorities seemed to realize that they must have assistance in perfecting an organization which would assist them in maintaining railroad equipment and at the same time give work to a large number of idle men; in fact, they stated they would be much pleased to have Americans take over the plant and operate it."

Finally, on May 19, we left Vladivostok on the Amur line of the

Siberian Railroad. About the only traffic being handled on the railroad

On May 24, I met Colonel Raymond Robbins, who was representing the American Red Cross in Russia. He said that he had just returned from a successful visit to the Soviet government in Moscow and that although there was some trouble between the Czecho-Slovaks and the Bolsheviks further west, he did not think we would have any difficulty in getting through.

At Irkutsk, the American Consul General, Harris, informed me that the Czechs and the Soviet government were having serious trouble. However, we pushed on to Krasnoyarsk, 300 miles west of Irkutsk, arriving there on May 27. The president of the local Soviet and the governor of the province, Mr. Weinbaum, confirmed the rumor of serious developments between the Czechs and the Bolsheviks. I then got in connection by telegraph with the Consul General at Irkutsk, was advised that the trouble was general, that the commander-in-chief of the Czecho-Slo-

Peasant girls at Irkutsk, May 26, 1918. Despite their holiday attire, it was but three hours after the picture was taken on the station platform that a battle was raging between the Reds and the Germans, and the Czechs, there

vaks was located at Marinsk, 300 versts (200 miles) west, and I was instructed to push on west and offer my services as mediator between the Czechs and the Soviet forces.

On our arrival at the front at Marinsk, we found 3,000 Bolshevik troops under the command of German officers, strongly entrenched and supported by field artillery and machine guns.

We consulted with their commander-in-chief, in regard to the terms under which they were willing to permit the Czecho-Slovaks to proceed east. Then followed a long period of negotiations between the Czecho-Slovaks and the Bolsheviks, in which we were the mediators, we moving on a hand car between their lines and those of the Czecho-Slovaks under a flag of truce.

The commander of the Czecho-Slovaks, Captain E. B. Kadlets, was a smart, intelligent fellow who informed us that the Czecho-Slovak

Street side of handsome station of the Trans-Siberian Railway at Vladivostok

when the Russian revolution came and the Kerensky regime broke down, they fought a memorable rear-guard action against the forces of the Central powers, protecting the retreat of a part of the Russian armies.

had been made with the Soviet government to move them eastward through Russia to Vladivostok, whence they were to be sent to the fighting line on the western front in France.

At the time I met Captain Kadlets, the Czecho-Slovaks had been disarmed. Shortly afterward, and during my mediation between the Bolsheviks and the Czecho-Slovaks, I met General Guida, commander-in-chief of the Czechs in Russia. He was aware of the fact that the Bolsheviks had considerable forces, supported by artillery, at all points east on the Siberian Railroad, but said that he proposed to arm his forces and did not expect much trouble in getting through. That same night the 800 troops in his local force, armed only with clubs, axes and a few hand grenades, took the arsenal at Marinsk, defended by 3,000 trained Soviet troops and protected by walls 25 feet high. Making human ladders, the Czechs performed marvelous feats of strength, agility

Building in which Russian Royal family was confined previous to their slaying by Bolsheviks

forces consisted of about 45,000 men, distributed at various stations along the railroad from Penza all the way east to Vladivostok. He said that he had received reliable advice that the Bolsheviks had agreed, after the Treaty of Brest-Litovsk, that the Czecho-Slovaks would be delayed as much as possible in their movement east and would finally be made prisoners and returned to Austria.

At this point it should be remembered by the reader that before the World War the Czecho-Slovaks, better known to us as Bohemians, were ruled by the Austro-Hungarian monarchy. That for years they had been chafing under this despotism, having practically all the elements of an independent nation except that of the power to coordinate their forces in such a way as to effect their independence. That they were drafted into the Austro-Hungarian army, but that during the war they deserted in large numbers to the Russians and fought valiantly for the Allied cause. That

They then volunteered their services to the Allies, wherever they were needed, through the French ambassador in Russia, and arrangements

Type of water tank on Trans-Siberian Railway. At many of the smaller stations there are two of these, one at each end of the station grounds, with from three to eight stand pipes

Street in Krasnoyarsk, principally interesting because it shows the construction of telephone poles

and courage in scaling these walls and capturing the arsenal. They took no prisoners and the next morning had two platoons of artillery, 500 machine guns, 5,000 stands of rifles and 3,000,000 rounds of rifle cartridges.

This was but a single illustration of the splendid spirit, training and fighting ability of the Czechs, for on May 26 and for the several days following, at every point on the Siberian Railroad at which they were located, they captured the railway stations and arsenals. After this coup, and when the Czechs were well supplied with arms and ammunition, the Soviet representatives finally agreed to allow them to proceed to Vladivostok, fully armed, provided they would not cause trouble en route or interfere between the forces of the Bolsheviks and the so-called White Russians, who, at that time, were

ating it practically without resistance. Several days later he moved further west and captured Toumin and Chilyabinsk.

He then struck east from Toumin and captured Ekaterinburg, just after the finale of one of the most dramatic and tragic episodes of the war. For it was in this city that the Czar and his family had been imprisoned by the Bolsheviks, and had been assassinated the day before the Czechs captured it. I have numerous photographs in my collection to substantiate this, a few of which are reproduced on these pages. Some of these show the rooms of the members of the Czar's family, with such pictures on the walls and other evidences of royal ownership, including dozens of pieces of personal property belonging to them, as to make the identification quite convincing. One of these pictures shows the hole in the ground

Contrasts

Russia as a part of the Allied armies and that a military expedition was to leave Vladivostok shortly for their relief.

On July 15, I was requested by the French officer accompanying the Czechs to return to Omsk, and as we had received no advice from the outside world since early April and the Czechs had decided to fight their way east to connect with the Allied relief expedition, we volunteered our services with the Czechs. We received instructions to report to General Guida, who assigned us to his engineer forces.

His troops then numbered 1,500, fully equipped with artillery, machine guns and a few armored cars. He decided to work east over both main lines of the railroad, the Siberian Railroad being double-tracked here. The armored cars were in the lead, followed by the engineers, and the infantry brought up the rear.

(The story will be continued in the July issue.)

At Zavtynaya, a good example of the Trans-Siberian Railway Station in the small city and town

opposed to the Bolsheviks and favorably inclined toward the Allied cause.

Finally, after many days of offers and counter offers, and continuous mediation on our part, the Czechoslovaks agreed to a six-days' armistice from Marinsk east. Their farsightedness in agreeing to these terms was shown in the fact that they were left freehanded to operate west for the relief of their forces in that direction while the Bolsheviks were forced to remain inactive east of Marinsk.

General Guida immediately entrained with his entire force, started west and had a heavy engagement with the Bolsheviks, working east about 100 miles west of Marinsk. He cut their forces to pieces, captured considerable supplies of ammunition and pushed rapidly west to connect with isolated bodies of Czechoslovaks. He then moved on Omsk, one of the most important cities in that region, the large Soviet forces evacu-

into which the bodies of the royal family were thrown and into which acid had been poured to effect quick dissolution.

At this point in the story it should be remembered that for five months, ever since I had left Vladivostok, we had had no word from the outside world—knew nothing of the great developments in the World War. We had been told that Paris had been captured and the war won by the Germans. Meantime, I was still trying to get in touch with the American ambassador.

From Chilyabinsk, I proceeded beyond the summit of the Ural Mountains to Zlatosk on the south line of the railroad. Large forces of the Bolsheviks were moving eastward to engage the Czechs.

During the latter part of July we received word from a French army officer that the Allied governments had recognized the Czech forces in

One of the magnificent churches at Krasnoyarsk

Sleep

By Dr. J. E. Hurley

Medical Examiner, Pittsburgh, Pa.

IF you ask, "Why do we sleep?" the answer is: "We sleep to rest." During sleep the whole body rests; the brain, the heart, the lungs, the stomach, the muscles; indeed, all of our organs are benefited. While awake, the fatigue products of our muscles and nerves accumulate faster than they are removed; hence, tissue wear is greater than repair. In sleep the reverse is true—constructive processes go on in all the cells of the body, which is thus restored and refreshed.

So slight a sound as the wind in the chimney, or a fluttering leaf against the window-pane, may make us dream; but the most frequent disturber is our stomach. If we eat too much before retiring, or the food is not easily digested, the brain is disturbed and part of it awakens, which causes us to dream. As one hour of deep sleep is more beneficial than many hours of light or troubled sleep, it behooves us to guard our stomachs carefully before bedtime, eating only that sort of food which we know agrees with us. There was a time, not so long ago, when it was considered inadvisable to eat anything before retiring; but many physicians now believe that a light repast of readily digestible food is beneficial rather than harmful, if it be taken at bed time. The argument advanced for this theory is that by taking some food, the blood necessary to bring about the changes incident to digestion is drawn to the stomach, relieving the brain of any surcharge it may have, and thereby inducing sleep.

To those whose duties require them to sleep away from home—in camp cars and resthouses, for example—a few words of caution may be applicable in regard to avoiding damp places when selecting a site for their cars or cabooses. One of the prominent characteristics of water is the

quantity of heat it can hold, and the rapidity with which it absorbs heat from anything else. When we sleep in a wet place the body quickly loses a large quantity of heat. This means that the temperature of the body is reduced by radiation of its heat. Following out this line of reasoning, a reduction of the temperature of the body and blood likewise lowers its power of resistance to all sorts of germs or microbes, such as those which cause pneumonia, rheumatism, bronchitis, influenza or a common "cold."

The necessity for fresh air in the sleeping room cannot be too strongly emphasized. Notwithstanding the importance of this advice, many people continue to sleep in close, stuffy, unventilated rooms. Windows should be open—the wider the better—in all seasons, winter as well as summer. If this were done there would be fewer "colds;" for this condition is a result of hot, close, unventilated rooms in a large percentage of instances, rather than from cool, well ventilated rooms, as is imagined by so many people. The bed should, of course, be supplied with enough covering of the sort which combines the greatest warmth with the lightest weight. The pillow should be small, as a large one holds the head in an unnatural position which hinders the free circulation of the blood. The more nearly straight and horizontal the body is in sleep, the more perfect will be the relaxation and rest. A good mattress is preferable to a feather bed.

The proper amount of sleep varies with the individual. It is quite generally accepted, however, that the average person should spend not less than eight hours of each twenty-four in sleep. We read, it is true, that some mighty brain workers do with less, but for most of us eight hours is probably the proper amount. Too little sleep is plainly shown by the pale face, dull eyes, irritable temper, lack of concentration and loss of

efficiency. Too much sleep is not to be desired either. In this case the brain becomes sluggish and incompetent; the functions of the kidneys and intestinal tract are disturbed. Night is the best time to sleep because it is quiet, cool and dark. Noise and light stimulate the brain.

Under no circumstances should we countenance the use of drugs to induce sleep, for such sleep occurs at the expense of vital energy and the offending cause of sleeplessness is masked instead of removed.

Overheard at the Medical Quiz

Professor Sapio: "Dr. Brown, what is the difference between scarlet fever and scarlatina?"

Dr. B.: "None whatever."

Prof. S.: "Well then, doctor, how is it that we hear intelligent people, and frequently physicians, say that Johnnie or Mary has not scarlet fever, but simply scarlatina?"

Dr. B.: "Scarlatina is the technical or medical term, for scarlet fever, and the disease may be of mild or severe form. Old time physicians were under the impression that they were separate and distinct diseases, but that idea has long since been exploded. Scarlatina is scarlet fever, and whether the attack is mild or severe it is contagious, and may be followed by serious consequences unless proper treatment is obtained."

Prof. S.: "Exactly so, gentlemen. And how unfortunate it is that such an impression exists."

John: Are you still working for "Jim" Conway?

"Pat:" Oi'll work no more for that man Conway!

John: And why not?

"Pat:" Shure, an' 'tis on account ov a remark he made.

John: And what was that?

"Pat:" Says he, "Pat," says he, "Ye're discharged."

Do You Know of an Older Baltimore and Ohio Relic than This?

THE badge in the accompanying picture was one that was worn in the procession celebrating the laying of the cornerstone of the Baltimore and Ohio Railroad, on July 4, 1828. It was worn by Thomas Turner, a carpenter's apprentice for the Baltimore and Ohio, and a son of John and Martha Turner, who was born on April 12, 1811. From the possession of the Turner family, the badge passed into the hands of Turner's nephew, Charles Oliver Conley, who prized the relic highly until his death in 1916. H. O. McAbee, grandson of Charles Conley, and chief of our Pass Bureau, now has the badge, and it is through his courtesy that we have been able to get the picture of it. The badge consists of a single strip of white ribbon, its edges yellow with age, but still preserving remarkably well the original inscription. That the badge is an honored relic in this old Baltimore and Ohio family may be known from the fact that it is carefully pasted on the inside cover of the family Bible, itself almost a hundred years old.

This is a souvenir worthy of preserving, for the laying of the Baltimore and Ohio cornerstone was certainly one of the most important epochs in the history of the United

Badge worn at laying of cornerstone of Baltimore and Ohio

States and the progress of world industry.

The Value of Encouragement

By C. E. McDonald,

Chief Night Clerk, Clark Avenue Office, Cleveland, Ohio

ENCOURAGEMENT is the great stimulus to great effort. You can take the heart out of the best man on earth through fault finding and discouragement, a fact to which many employes can testify. On the other hand, you can, by proper encouragement, stimulate almost any employe to greater efforts. Fortunate is the man who has learned the value of encouraging his fellow workers and associates in business, for he has made a step toward leadership.

The great leaders of the world have always been men who made it their business to encourage others and thereby urge them on to greater endeavors.

The American army in France was an encouraged army. The German army was a discouraged, brow-beaten army. See what happened. The thing called "morale" in the army, can be developed properly only through encouragement. The same is true of individual morale.

Let the other fellow have the discouraged, brow-beaten force of worker; we prefer one which has been developed through encouragement, inspiration, kindness and fair dealing. Also, we will be a good deal happier working with such a force.

John Wanamaker's Service

John Wanamaker did a great service to the American people when he inaugurated his 20 per cent. reduction sales in his two big stores in Philadelphia and New York. Hundreds of thousands of people are many dollars to the good because of this act, the influence of which spread rapidly to all parts of the country and is still bearing fruit in sharp reductions on all kinds of merchandise that can be purchased in the department store. Some newspaper comment said that Mr. Wanamaker had only hit old H. C. L. a light tap on the nose—that he had not struck him a body blow. We are inclined to think otherwise, especially if consumers will investigate carefully all so-called reduction sales, and use their own good judgment on the subject of fair prices. Aside from the increased turnover, the quicker and larger use of invested capital and the greater production which Mr. Wanamaker tried to stimulate, perhaps the most important result accomplished is the fact that people who a month ago were freely spending their money for commodities held at inflated prices, now realize how they were being “stung” and will hold off from all except absolutely necessary purchases until they feel sure that an era of fair prices and profits is with us again.

Rates and Wages

No matter what we think about wages—our own wages, if you please—we've got to admit this fact:

Wages today—yours and mine, and those of all the rest of the wage earners in the country—can buy more transportation than ever before, for the simple reason that since the beginning of the War, when our railroads were selling the cheapest transportation in the world, wages have been increased a much greater percentage than have rates. Any wage earner, even the unskilled worker, can ride further now on a day's wages than ever before. In other words, you and all other railroaders are producing a service which the public is getting relatively cheaper than almost anything else they can buy.

In Italy, rate increases have averaged about 100 per cent. since the beginning of the War; in neutral Switzerland freight rates have gone up 180 per cent. Here they have increased only 40 per cent. during the same period.

A suit of men's ready made clothes, costing \$45.00 in Baltimore, has less than six cents added to its cost for sending it by rail to Chicago for resale there.

As railroaders, we may feel gratified that we are selling our transportation service so cheaply as compared to what they get for it in other countries and as compared with the prices of other commodities in this country.

The Railroads to the Public

A publication has just come to my desk, illustrating the interesting trend of thought of railway managements in their public service capacities. It is called “A Statement of Facts,” and is published by the Long Island Railroad for free distribution to its passengers and shippers. It is a concise collection of facts, which, after covering the function of transportation generally and the position of the Long Island Railroad, contains, among others, the following suggestive paragraph headings:

“How Can We Continue the Growth of the Long Island Railroad Facilities?”; “Past Performances”; “Growth of Long Island Railroad in the Past and Plans for the Future”; “Additional Capital Required for Next Ten Years to Keep Up With Growth of Traffic”; “Plan of the Management to Meet the Situation.”

In other words, the Long Island Railroad, in a statement signed by its President, has taken into its confidence all the factors affecting its existence, service and growth, namely, the management, the employees and the public. It does not require an unusually clear or prophetic vision, nor, again, an unusual optimism to forecast that with such frankness obtaining among all the factors in the railroad situation as this pamphlet illustrates, the railroad problem will be solved to the satisfaction of everybody who is interested in it, and to the permanent progress and prosperity of the country as a whole.

Live Wires on Charleston Division

Least pressure of other material prevent our using them soon we hasten to acknowledge three good articles just received from Charleston Division employees. Two of these, the one on the progress our Charleston friends are making in cutting down Loss and Damage, and another on Economical Coal Consumption, are by N. W. Jones, secretary to the Superintendent. The other is on “Old King Coal,” and is by C. H. Carpenter, train dispatcher, Gassaway, who, it will be remembered, was first prize winner in the No-Accident Campaign, Eastern Lines, during 1919.

With our thanks for the desire on the part of these authors to use the MAGAZINE to present interesting and important facts to our readers, go also our congratulations to the division for having in its personnel, live wires who are so intensely interested in the success of the Railroad's operations.

The Coldwater—A Hog Islander

So much has been published, favorable and unfavorable, about the great Hog Island ship building plant, that I was more than pleased to have the opportunity recently of inspecting the Coldwater, one of the last freighters launched there. She was lying at our Locust Point water front loading a miscellaneous cargo for Genoa and Naples, Italy.

Her Captain, H. R. Laster, and her Chief Officer, were cordial hosts and gave our party the privilege of a thorough inspection. What impressed me most, however, was the fact that there did not seem to be much to inspect. For this huge freighter is a marvel of simplicity, the most complicated and biggest part of her equipment being, of course, her oil-burning boilers and the turbine engines, set almost amidships. And even this great power plant seemed most compact—even small—for a vessel of her size.

Aside from this engine plant and the long, narrow and shallow waterproof compartment set in the bed of the ship, and just large enough for a man to walk through

alongside the great propeller—aside from these and the space devoted to quarters for officers and men, the whole inside of the ship yawned deep and wide with cargo space.

On her last trip, by the way, this vessel made the quickest turnaround of any Hog Island ship yet built. She left our pier at Baltimore on March 9 and touched at Oran, Algiers, Philipoille, Bova and Tunis in Algeria, Piraeus in Greece, Genoa in Italy, and at Gibraltar, and arrived at Hampton Roads on May 9, just two months after leaving.

Our shipping interests did marvels at building ships during the war and it is hoped that whatever legislation is necessary to keep our merchant marine in a healthy and vigorous condition, will be done, so that we can continue to deliver our own goods in our own bottoms.

Blends

Humanity is irrevocably wedded to the idea of improving on an original article and a "Mixer" or "Blender" in any business is important.

A blend of Mocha and Java makes a better drink than if either were brewed alone. By the same token the friendly blending of the views of employes and officials on the Baltimore and Ohio will create an unbeatable combination.

And when the "Acid Test" comes, this blend should be seasoned with "That ye love one another as I have loved you," so as to avoid any possible failure.

Label that blend with "Love for Humanity," and the partnership and corporation, officers and employes, will be working in three eight-hour shifts, all for one another.—E. V. BAUGH.

In a Nutshell

The most dangerous folly in America is the idea of many workers that when they do a half day's work they cheat the employer and help fellow workmen to a job.

They cheat themselves, putting up the high cost of living and preparing a day of reckoning. We shan't see fifteen million men idle at one time, but we shall see a good many hungry, many breadlines formed unless the day, once more, produces a day's work. And the workers, not the employers, will be in the breadlines.

The women of the country should impress upon their sons, husbands and brothers one fact that men ignore.

One workman for a day's pay gets only what another workman produces. Cut the day's production in two and you cut your own pay in two in the long run.

—ARTHUR BRISBANE in New York American.

This Is Education

The index to class and trade publications just published by N. W. Ayer & Son, Advertising Agents, Philadelphia, Pa., shows literally hundreds of publications devoted to the various arts, sciences, industries, commercial and agricultural pursuits. Here are some of the subjects covered: Cordage, Anti-Tobacco, Bee Keeping, Clay, The Deaf, Ginseng, Oology, Peanuts, Sewing Machines, Trapping, Zionism.

"Railroads" are credited with 74 different publications. Certainly with the treatment of subjects so diverse as those given above, and with an important subject like railroading covered by not less than 74 publications, an intelligent man in any capacity in life can hardly find an excuse for failure to achieve self-improvement.

Wrist Watches and Worry

Several months ago one of our officials met W. C. Donnelly, supervisor of Time Service. He took him apart from the group of men standing around and whispered:

"Say, Donnelly, how do you think a wrist watch would look on me?"

The upshot of the conversation was that Mr. Donnelly secured one of the best in the market for him. When the new timepiece was being fitted, the official almost reneged. He tried to locate some part of his anatomy beside his wrist where it would be convenient yet concealed. He suggested his upper arm, but there were two objections to this, the high cost of cutting holes in sleeves and the muscular expansion of that part of his body. (And be it said here that this official has *some* expansion, for he is one of the many who started at the bottom and worked his way up through some of the jobs where brawn counts with brain; now, in a comparatively sedentary position, he still keeps in good health by regular exercise.)

A good looking watch now adorns his wrist each day. We suppose that he has been the butt of many jokes and jibes from other "practical" railroad men. But what, in the last analysis, is more "practical" than "convenience" and "utility"? The war completely riddled the old idea that the wrist watch and the "sissy" were regular partners. Once worn, a man never wants to go back to the old timepiece unless he happens to be in the position of our trainmen, who are obliged to carry watches conforming to certain construction and regulation standards.

Tell This to Your Friend Who Is Against Rate Increases

Relatively speaking—and that is the only fair way to consider it—it costs less to buy railroad service now than ever before. Viewed alongside the race between wages and commodity prices, freight and passenger rates look as if they have been standing still.

The next time anyone tries to jolt you because you are a railroad man—and the railroads are asking for an increase in rates—just tell him that you are helping produce about the least expensive thing sold in this country today. And you can add this, too, for example:

"The freight charge on a straw hat from Baltimore to Chicago is \$.00457, less than half a cent, less, as a matter of fact, than the smallest tip that anyone would think of handing to the hat boy for checking the hat at the dining-room door in any first-class hotel or restaurant."

"Even men who are not professedly religious must, if they are frank, admit that no community permanently prospers, either morally or materially, unless the church is a real and vital element in the community life."—Theodore Roosevelt.

Timely Tips Tell Truthful Tales, Let Safety Span Our Shining Rails

By Frank M. Keane

Locomotive Inspector, Grafton Shops

TO MAKE the Baltimore and Ohio the safest Railroad is a task in which every Railroad man may share. There are so many elements entering into this attainment that coordination of these alone will accomplish the end.

One of the principal requirements, according to my mind, is for employes to begin the day by considering the tasks that lie before them, each one at this time asking himself, "How can I perform my day's work in safety?" When we bid mother, wife, sister or children "good-bye," as we start out for our places of duty, a word of warning and solicitude for our safety during the day coming from them will ring in our ears all day and be the beacon that will keep us in the safe path.

Upon starting work, keep Safety in mind. Consider that you are to associate with your fellow employes and that a careless moment on your part may endanger their lives and limbs. Remember that into your hands have been intrusted the lives of those who have selected Baltimore and Ohio trains on which to travel.

It is the duty of every man engaged in transportation to inspect carefully the cars and engines that move along our road. A signal of a member of a train crew to proceed is assurance that the equipment is in safe condition. Not only are lives preserved by this precaution, but Company property is saved from damage or destruction.

The train runner should be careful in giving out orders. When he gives a conductor orders to set off a car on a siding at a station, he should insert, at the bottom of the order, a note that care should be exercised.

I believe much good could be accomplished if there were placed in all engine cabs a red metal sign with this white lettering on it:

"RING THE BELL WHEN RUNNING
THROUGH YARDS AND
APPROACHING CROSSINGS"

The observance of this warning by our engineers would prevent many automobile accidents at crossings and would reduce considerably the casualties to employes in yards.

In giving orders to those under their jurisdiction, foremen and others should always add to their orders:

"And Don't Forget to be CAREFUL."

Employes should never jump on engines or cars that are moving very fast. They should not ride the front end of an engine that is moving. A very dangerous practice is riding cars with the feet resting against the journal box. Men should keep from beneath engines and cars outside the shops

unless cars are protected by blue flag. Extreme care should be exercised whenever it becomes necessary to walk along the tracks during a snow storm or a wind storm.

Those walking in the vicinity of dangerous places should not cover their eyes and ears in bad weather. All couplers, truck bolsters, brake shafts, cross ties and rubbish should be kept at a distance from the tracks. Material should never be piled close to the running tracks.

There are more ways of being killed and injured than there are remedies. Statistics show that there are less persons being killed

and injured in industry each year, and if each and every employe of the Baltimore and Ohio would give the attention to Safety that it should have, there is no reason why we could not cut the casualties for 1920 far below those of 1919.

There should be more meetings on Safety at which would be present track and station men. They do not get the real meaning of Safety as do we who are employed at or near the terminals. We must also have the cooperation of the public if we are to make the Baltimore and Ohio the safest road and it is for this reason that I urge meetings at which outsiders would be present and where speakers of ability and note and other entertaining and instructive features would be provided.

Finally, it is the duty of every one of us to see that the orders and requests of our President, Vice-Presidents, General Managers, Superintendents, Master Mechanics and other officers are carried out to the letter.

Fine Automobile the Token of Friendship from Maryland District Employes to Former General Superintendent Cahill

THE accompanying photograph shows a Chandler coupe, which, on Sunday, May 9, was presented by the employes of the Maryland District to their former General Superintendent, M. H. Cahill.

Mr. Cahill has left the services of the

Baltimore and Ohio, and is now with the Seaboard Air Line. His friends, wishing to give him a suitable remembrance in appreciation of his long service with them, appointed a committee to look after the subscriptions and to select the gift. This

The gift car snapped in front of memorial to Union Forces of Civil War at entrance of Druid Hill Park, Baltimore

committee was composed of the following: Superintendent R. B. White, chairman; F. G. Hoskins, superintendent of Terminals; J. K. Faherty and E. P. Welshonce, assistant superintendents; A. K. Galloway, general master mechanic; M. J. Doyle, chief clerk to General Superintendent.

The automobile was presented to Mr. Cahill at his office in Norfolk, Va. The committee on presentation consisted of the following: R. B. White, superintendent; W. W. Calder, master car builder; M. J. Doyle, chief clerk to General Superintendent; T. D. Dodds, chief clerk to General Master Mechanic; G. A. McGinn; chief clerk to Superintendent Deneen.

Following is a copy of Mr. Cahill's letter of thanks:

NORFOLK, VA., May 15, 1920.

To My Friends,
The Employes, Maryland District,
Baltimore and Ohio Railroad:

I wish to extend my most sincere thanks and hearty appreciation for the automobile which was presented to me by your Committee on last Sunday.

While the gift is of value, and will give to me and mine many hours of pleasure, the assurance of love and good will of my fellow men, which the gift conveys, stirs within me a depth of feeling and appreciation which I find words inadequate to express. So, thanking you again, I am,

Yours most sincerely,

(Signed) M. H. CAHILL.

Those Who Want to Attend an Accounting School, Hold Up Your Hands!

Weston Has Organized One; Let Us Have Others

By M. A. Jones

Secretary to Superintendent

W. E. SEVERNS, division accountant at Weston, W. Va., who is always on the lookout for some way to help the other fellow, has organized an Accounting School.

The sessions of the school will be held on the 14th and 28th of each month, from 7.00 p. m. to 9.00 p. m., in the office of the Division Accountant.

The primary object is to instruct the clerks in the Division Accountant's office, but it is thought that the junior officers, shop foremen, and others will also be glad to follow this course of instruction. There is nothing compulsory about attending the school, but it is an excellent opportunity to study railroad accounting in all its branches, including timekeeping.

The school was organized on Wednesday evening, April 18. Among those in attendance were: Superintendent W. Trapnell, Chief Clerk and Mrs. W. H. Schide; C. M. Criswell, F. C. P. R.; J. P. Ryan, agent at Weston; J. T. Staples, chief train dispatcher; C. W. Dixon, car distributor; M. W. Jones, secretary to Superintendent; Division Accountant and Mrs. W. E. Severns.

Mr. Severns called the meeting to order, and, in a short talk, explained the object of the school. He was followed by Mr. Trapnell, who expressed his pleasure because of the attendance of so many division people. The interesting keynote of Mr. Trapnell's address was "Records—the Importance of their Accuracy."

Chief Clerk Walus spoke of the fundamental principles of the Accounting Department. Other interesting talks were given by Messrs. Schide, Criswell, and Ryan.

The school, aside from its technical value, is a splendid opportunity for all of us to become better acquainted. At the close of the session a luncheon, furnished by the office force of the Division Accountant, was served by Mrs. Schide and Mrs. Severns.

It has been decided to submit a Form 703 for a new position in connection with the Accounting School, namely, that of "Official Mouse Catcher." The appointment will go to Mr. Anderson, who has demonstrated his ability in this capacity (he catches 'em and puts 'em in his pocket).

We are going to do everything to make the Accounting School a success, for we feel that it is filling a long-felt need. Watch our progress!

Changes in the Dining Car Department

H. W. Browne, Assistant Superintendent of Dining Cars at Pittsburgh, Pa., has resigned, to enter other business. Mr. Browne was with this department for 11 years, and filled the positions of Dining Car Steward, Inspector of Service, and Assistant Superintendent of Dining Cars. The department is sorry to see him leave and only our best wishes go with him.

W. H. Eversman has been appointed Assistant Superintendent of Dining Cars at Pittsburgh, Pa., vice H. W. Browne, resigned. Mr. Eversman comes from the Cincinnati District, and has been with the Baltimore and Ohio Railroad for 10 years as Dining Car Steward and Inspector of Service.

John Weis, inspector of service in the Baltimore Territory, has by his own request been transferred to the Cincinnati Territory in place of Mr. Eversman.

J. J. Reiser, who has been with the Baltimore and Ohio Railroad 11 years as Dining Car Steward, has been appointed Inspector of Service in the Baltimore District, succeeding Mr. Weis.

A passenger who had just dined on one of our cars handed to the steward a slip of paper on which he had written this question:

Why is it that the Baltimore and Ohio Diners Are Always the Best?

Just below he answered his own question:

Better Menus,
Better Stewards.

The passenger was Francis H. Sweet, Capt. Q. M. Corps, U. S. A. The steward was K. H. Ackerman, Car 1027.

It certainly pays!

SAVINGS BY TRACK WALKERS ON TOLEDO DIVISION

The picture shows 4,140 pounds of hex and square nuts gathered by our section men on the Toledo Division and delivered to our supply train on its March, 1920, trip. These nuts are collected by our track walkers on their daily trips, taken to their tool houses, strung on wires, and held until supply train comes through their station. This is a great saving to the Company, and we commend them for their efforts, and hope they will keep the good work up.

May Ball of Mt. Clare Welfare, Athletic and Pleasure Association

By George W. Smith

Director of Publicity

THE Association held its second annual May ball on Thursday evening, April 29, at the Fifth Regiment Armory. More than 4,000 people were in attendance, this being the first occasion on which special invitations were extended to the employees of Riverside and of the general offices.

The Armory was tastefully decorated; a large grandstand had been erected in the center of the floor of the auditorium, and, trimmed with the colors of the Association and American flags, it presented a spectacular appearance. A May pole, having a hundred streamers, stood in the center of the stand.

Among the guest were Vice-President and Mrs. C. W. Galloway; Vice-President and Mrs. Archibald Fries; George H. Campbell and James S. Murray, assistants to the President; General Manager S. Ennes; J. T. Carroll, general superintendent of Motive Power; Carroll Roberts, secretary to the President; W. J. Dudley, superintendent of Relief Department; Dr. E. V. Milholland, chief medical examiner; H. Irving Martin, special representative of Relief Department; J. T. Broderick, superintendent of Safety; Leo Finegan, superintendent Mt. Clare Shops; W. W. Wood, chief of Welfare Department.

During the intermission Mr. Wood was introduced, and after a few remarks on Welfare work, distributed the prizes to the winning teams and to the high average men of the Mt. Clare Bowling League.

The committee of arrangements consisted of J. S. Scharnagle, chairman; M. V. Kemm, assistant chairman. Dance committee: W. F. Mahaney, chairman; W. McKensie, J. M. Paulus, R. V. Hickman, E. Cathahart, J. Gibbs, William Carroll. Committee at door: M. V. Pascal, chairman; William Gordon, J. B. Carroll, J. T. Catagon. Refreshment committee: W. F. LaBonte, chairman; T. J. Craft, William Crew, O. Frotling, B. Scheckels, Charles Grams, J. M. Hittle. Hat box: B. Douglas, chairman; I. G. Gicc, J. W. Bollinger.

The grand promenade was led by W. F. Mahaney. The music was furnished by the Mt. Clare Band, William Cracht, director, and W. Englehardt, manager. Dancing was indulged in until a late hour.

This occasion was the most successful in the history of the Association and President James Tatum and his staff of officers and committeemen should be complimented.

Sixth Annual Concert of the Baltimore and Ohio Glee Club

ABOUT 800 people gathered at Lehmann Hall, Baltimore, on the night of May 17, to hear the Sixth Annual Concert of the Baltimore and Ohio Glee Club. They were first greeted at the door by Baltimore Division Conductors, J. A. Bell, J. E. Garry, W. M. Jenkins, and N. E. Reese, who, in uniform, kindly acted as ushers. The program boys were J. Albert Wieber and Raymond A. Hefferman, Company messengers, also in uniform. C. A. Thompson, assistant signal

The Welfare Association is now a mighty popular institution among the employees at Mt. Clare.

The Bowling League

The Mt. Clare Bowling League closed a most successful season, with D. W. Baker, high average man, 98.69 for 61 games; L. A. Beaumont and M. Bull, high individual score, 128 pins; S. Losinsky, high individual score, 3 games, 352 pins.

High Average Man on Each Team:

DEPARTMENT	MAN	SCORE	GAMES
Accountant's.....	Bloomfield.....	96.333	75
Pipe and Tin.....	Cook.....	94.942	84
Iron Foundry.....	Heckwolf.....	97.095	84

The Welfare Association at Mt. Clare held its annual excursion to Tolchester Beach on June 12. It attracted an unusually large number, the day was fine, and the affair most successful.

Prettily decorated hall filled with friends of the Club

There are two GOOD places to eat—at home, and on a Baltimore and Ohio dining car

Women's Department

Edited by MARGARET TALBOTT STEVENS

June

*Do you see the hills of Junetide, thru the fields of daisies white?
Do you hear the bluebells ringing out their songs of love and light?
Do you feel the gladness 'round you as the breezes, soft and sweet,
Whisper softly to the flowers and the grasses at our feet?
Oh, the roses breathe their fragrance as the raindrops 'round them play,
When June comes up the valley and makes the whole world gay.*

Dear Women Readers:

Of all the old-fashioned flower gardens in the world, I think Susan Green's garden was the prettiest.

Susan Green was only a black woman, but she was the neatest and the cleanest black woman that ever you heard of. A little bit of a person, a relic of the times when every white person was known as "Massa" or "Missus"; bedecked in the bluest of blue dresses, the whitest and starchiest of white aprons, and the reddest of kerchiefs about her head, she looked as if she had tried to impersonate the American flag. But she was only displaying her in-born taste for colors. And as she stood in the doorway of her little whitewashed house on that summer afternoon, bowing and courtesying to every passerby, you would have thought that she owned the whole world, so happy was the smile on her little wrinkled face.

We had been to Marlboro Fair, which father and mother had taken us 15 miles to see, and when brother and I, with our little tongues almost parched with the heat and the dust from the passing vehicles, begged for a drink of water, father promised to let us stop at the next house we saw to get a drink. As soon as we had turned from the long lane through the pine forest, we caught sight of the little white house with its green shutters. Out of the carriage we both bounded, before the horses stopped, and ran as fast as we could up the lane and through the wicker gate, and up the pebble walk to where we met Susan Green.

"You po' children, I bet you wants a drink o' water, doan' yo' now?"

"You bet we do," we answered.

"Well, yo' jes' come along wid me, honey, an' yo' kin drink jes' ez much ez yo' want."

Then we went around back of the house and across the vegetable garden to where stood a huge oak tree, at the foot of which bubbled a little spring of water, whose bed was lined with pebbles, and into which ran the clearest, coolest water imaginable. Beside the spring, on a post, hung a drinking cup, made of a cocoanut shell.

When we had satisfied our thirst, Susan led us back to the tiny front porch and bade

us sit on one of the rustic benches and rest ourselves while she went into the house for a few minutes. There in the shade of the dark green leaves of the Madeira vine, which hung its clusters of white flowers above our heads, we saw a beautiful sight. All down on each side of the pebble walk was a border of mignonette. Down near the gate, on either side, was an old wooden washtub, which had been painted green and filled with Mexican roses, or portulacca. In the middle of one side of the yard stood an old-fashioned rockery, about four feet high, and built to represent a stone well. In this grew the spicy petunias, while from between the crevices of the rocks peeped wild ferns and mosses.

On the other side of the yard was a peculiarly shaped wooden trough. This had outgrown its usefulness as a drinking place for

cattle, and had been set upon three substantial legs; now it held a mass of nasturtiums of every color. On a tripod near the porch hung an old copper kettle, filled with red geraniums. Marigolds, verbenas, zinnias and snapdragons grew in abundance, while all around the garden fence tall hollyhocks nodded their heads in a fitting background for this riot of color.

While we sat there, swinging our feet and feasting our eyes on the picture, Susan reappeared, carrying a platter of little cakes. These filled our cup of happiness to overflowing, and as we ran back and climbed into the carriage munching them delightedly, Susan followed us and made her best courtesy to our parents.

"Susan," said mother, "you must feel like a flower yourself, living in such a paradise as this."

"No ma'am," answered Susan. "But if I is a flower, I mus' be one o' dem black ginger-root blossoms, what grows close to de groun' in de big woods."

And she stood under the archway of the wicker gate, which was hanging with clusters of seven-sisters roses, bowing again and again, until we were clear out of sight.

In the recipe column you will find the recipe for Susan's cookies, just as she gave it to us. If you want to know whether these little cakes are good or not, ask anybody on the MAGAZINE staff—except the Editor. We had some of them at lunch one day while he was out, and we ate every crumb of them before he got back.

Yours sincerely,

Margaret Talbott Stevens

Associate Editor.

Women Who Have Made Good—Our Three Women Veterans

TAKE a walk through a half-dozen of our general offices today and you will find the number of men and women workers to be about equal. Twenty years ago, a woman who held a railroad position was considered fortunate indeed. Few of

our women can boast of a record of twenty years of service, but the accompanying photograph shows our three Women Veterans at Baltimore. They are (left to right): Miss M. Elizabeth Bell, file clerk, General Superintendent's office; Mrs. Louise

Twenty years in service and ready for twenty more—Our Women Veterans

Mrs. Housewife, What Do You Think of This for Ninety-six Cents?

Not many years ago you bought material enough to make a nice summer dress for 96 cents; you purchased a good pair of silk hose, or gingham enough for 4 kitchen aprons for 96 cents; a respectable-looking shirtwaist cost you less than 96 cents, while that same amount of money would pay your expenses for a day in a good boarding house. Then, too, 96 cents would bring over 100 pounds of butter all the way from Chicago to Baltimore.

Today, however, you pay about 96 cents PER YARD for your little summer dress; your silk hose cost you now at least 3 times 96 cents; you pay 96 cents for one gingham apron instead of for 4; the shirtwaist that you could buy for 96 cents would stand about two washings, while for this sum you might now manage to buy a dinner. **BUT 96 CENTS STILL BRINGS 100 POUNDS OF BUTTER ALL THE WAY FROM CHICAGO TO BALTIMORE.** Can you figure out how they do it? Don't you think that the railroads are justified in asking for a freight rate increase? Talk it over with John tonight.

A. Sagle, day matron, and Miss Selina C. Crone, night matron—all located at Camden Station.

Whenever we break in a new file clerk at the Central Building, particularly if it be a young lady, that person must always run the gauntlet of a bit of advice, *i. e.*, "You ought to try to be as good a file clerk as Miss Bell at Camden. She is one of the best that we have ever had." These are words of wisdom, for they represent what our Railroad thinks of "Miss Lizzie," as she is affectionately known. Miss Bell entered the service of the Baltimore and Ohio on May 4, 1891, as file clerk in the office of General Manager Odell. In November, 1897, she was transferred to the office of the General Superintendent at Baltimore, where, she says, "I'm still there and they can't get rid of me." That's her story; we never heard of anybody suggesting such a thing and we are sure that nobody would want to. Miss Bell was the first President of the Ladies' Auxiliary, Baltimore Chapter of Veterans.

Everybody who has done much traveling from Camden Station, knows Mrs. Sagle. It is she who keeps a trained ear and a keen eye on all the women who enter the Women's Rest Room at that station. She has an ever ready word of good advice and is a sympathetic listener to your troubles. She knows her business and attends to it. She tolerates no loafing or foolishness. Mrs. Sagle began work with the Company on October 5, 1899, in the position that she now holds. Her hobby is to boost the Baltimore and Ohio at every opportunity. "The best thing that I ever did in my life," says Mrs. Sagle, "was to join the Veterans' Association last October."

With the exception of two years, Miss Selina C. Crone has served the Baltimore and Ohio as Night Matron at Camden for the past 29 years. She is a sister of George Crone, a pensioned gateman. For a long time the two worked together at Camden. A woman like Miss Crone, who is willing to work in such a capacity during the weary hours of the night, deserves a vote of

thanks. Those who know her, speak only in terms of praise for her services.

We are proud of these women. From their present ability and appearance, we are sure of the pleasure of having them work with us for another 20 years, at least. If, at the end of that time, they will do us the favor of posing for another photograph, we shall endeavor to use our influence to secure for each one a pass to California in an airplane, for we understand that to take such a trip is the mutual aim of this trio.

Don't Let Him Spoil Your Meals

THERE are so many ways in which She can fool Him. Sometimes Little Brother says, "Sister told me to tell you that she is not in," or "She is ill and forgot that you made that engagement," etc. (they all sound familiar). But, suppose that He is at the house at supper time, Mother will not have Him come in for the meal, and you are starving for your supper, what can you do? Here is an idea that was carried out by one of our popular girls of the Freight Claim Department.

He and She are sitting in the living room. Mother rings a small bell in the kitchen and calls, "Telephone!" The girl is sure that it is her married sister who is calling her, and begs to be excused for half an hour, as her sister is an awful talker. Of course He politely urges her to take all the time she

wants, picks up a magazine, and makes himself comfortable.

P. S.—Answering the 'phone is camouflage for eating her supper.

NOTE—If the poor fellow is so unpopular as this with the family, why not tie a brick around his neck and drop him overboard the next time you go down the Bay? 'Twould certainly be more humane.

What to Do with an Old Trunk

A LADY who recently moved into an apartment, has an old trunk, which, because of its unsightly appearance, she was for a time at a loss where to hide. She finally devised a plan to make a window seat. The trunk had a flat top, so she fashioned a cushion to fit the top and fastened it all around with small furniture tacks. Then taking a piece of cretonne she placed it over this cushion and fastened it in the same manner, but drew the ends of the cretonne below those of the cushion, until the entire top was covered, as far as the opening. Then she made a deep ruffle of the cretonne, long enough to reach across the one side and the two ends of the trunk. By means of a drawing string, this was fastened to the trunk itself, just at the corners, so that the ruffle met the cushion just at the opening. When she had arranged a pair of curtains of the same material and moved the trunk up to the window with the uncovered side next to the wall, the effect was charming. A little fern in the window completed the picture. The cretonne that was used matched the wall paper—a pink rose design with a black stripe.

An Engaging Candidate for Popular Favor among Modes of the New Season

THIS design for a dress is so simple and engaging that many misses and small women will want to reproduce it in voile, gingham or chambray. It is even very attractive in serge, taffeta or satin. Medium size requires $4\frac{1}{2}$ yards 36-inch material so that it is not at all expensive. There is no lining required and the round neck and short sleeves provide two exceedingly attractive features. Embroidery braid or fancy stitching may be added to the front of the waist if desired. The side front, back and short sleeves are out in one piece. Attached to the waist is a two-piece gathered skirt.

The cutting and construction guides solve the hardest problems for the home dress-maker, for they assure good lines and save material. To properly cut the dress place the front and back gores of the skirt along the lengthwise fold of material, with triple "TTT" perforations right on the edge of fold. Next, take section "R," which comprises the side front, side back and short

Next join skirt gores as notched, leaving side seam free above the single large "O" perforation in front gore. Finish edges for closing and gather upper edge of skirt. Sew skirt to lower edge of waist, bringing side seam to under-arm seam. Leave skirt free from center-front to left side edge. Draw gathers to the required size and finish for closing.

Now, form plait in sash and bring folded edge to corresponding small "o" perforations and press. Adjust over the right end of girdle and tack to position. Adjust girdle around the waist and close at left side, lapping to the small "o" perforation when closing.

Pictorial Review DRESS No. 8859.
Size, 14 to 20 years. Price, 35 cents.

"Who is Queen of Baby-Land?
Mother, kind and sweet;
And her love
Born above
Guides the little feet."—Eugene Field.

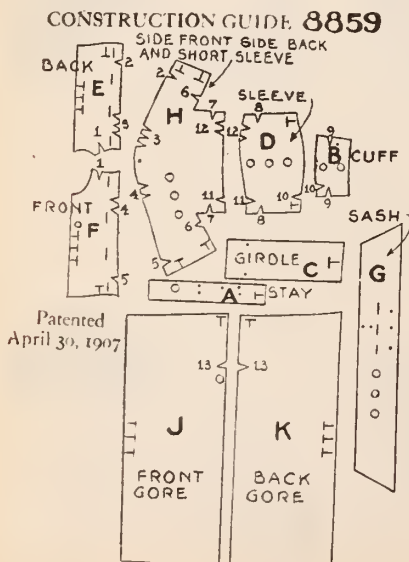

8859

sleeve and lay on the goods, large "O" perforations resting on a lengthwise thread. The back and front of the waist and the girdle are placed along the lengthwise fold of material. Sash stay and cuffs have large "O" perforations on a lengthwise thread.

The side edges of the front and back sections of the waist are turned under on lines of slot perforations, as the first step toward making. Press and keep the lines straight. Next, close right shoulder seam as notched and finish the left for closing. Lap front and back on side front and side back, with the notches and edges underneath even and with shoulder seam at small "o" perforation in section H. Stitch to position one inch from folded edges, leaving the edges to the left of center-front free and finish for closing. Close under-arm and sleeve seam. Gather lower edge of blouse between "T" perforations and adjust stay underneath gathers, with center-fronts and center-backs even. Leave upper edge of stay free.

Practical Dishes for Practical People

Susan Green's Walnut Cookies

- $\frac{1}{2}$ cup shortening.
- 1 level cup sugar.
- 1 egg, well beaten.
- $\frac{1}{2}$ cup milk.
- $2\frac{1}{4}$ level cups flour.
- 1 level teaspoon baking powder.
- $\frac{1}{2}$ teaspoon salt.
- $\frac{1}{2}$ cup black walnut meats.
- 2 teaspoons vanilla.

Cream the shortening, add sugar, egg, milk, and vanilla.

Sift thoroughly the baking powder with the salt and flour, then add. Toss on a floured board, and roll as thin as possible, using a small portion of the dough at a time. Cut into fancy shapes, pressing a few nut meats into each cookie. Bake in a moderate oven until a light brown. Watch carefully, for these burn very quickly.

Here's another good biscuit recipe:

Dixie Biscuit

Sift, then measure 2 cups flour. Add $\frac{1}{2}$ teaspoonful salt, one rounded teaspoonful baking powder. Sift again. Add one tablespoonful lard. Rub into flour until smooth. Beat well the white of one egg, stir into one-third cup of milk. Pour this into the other mixture and stir briskly with spoon until well mixed. Toss out on a board. Roll thin, cut with biscuit cutter, rub over with melted butter, double each over and prick with a fork. Bake in a quick oven.

Sea Foam Cup Pudding

Sift 2 level teaspoonfuls baking powder into one pint flour. Add one teaspoonful salt. Stir in slowly $\frac{3}{4}$ cup of milk. Put a teaspoonful of this mixture into a cup, then a teaspoonful of jam or marmalade, then

another teaspoonful of the batter until cup is nearly filled. Steam for 35 minutes. Serve with sugar and cream or with any good pudding sauce.

Potato Salad and Mayonnaise Dressing

With the ripening of our own fruits and vegetables, the possibilities for making dainty salads are almost unlimited. Potato salad is one of our old standbys, but it may be taken out of the commonplace by the manner in which it is served. Have you ever tried it with green vegetables? Boil the potatoes and cut into small cubes. Add the usual seasonings, salt, pepper, a tiny bit of onion, and a green pepper chopped finely. Take a few cooked string-beans and slice each in four lengthwise sections. Marinate in a little mayonnaise dressing and mix with potatoes. Serve on water-cress with mayonnaise dressing, prepared as follows:

- 2 teaspoons salad oil.
- 2 tablespoons cornstarch.
- 1 tablespoon lemon juice.
- 1 teaspoon salt.
- 1 egg yolk.
- cup olive oil.
- cup salad oil.
- teaspoon pepper.
- teaspoon mustard.
- cup scalded milk.

Mix cornstarch, salad oil, lemon juice, and vinegar in a measuring cup or small bowl. Add the scalded milk and cook over hot water until very thick, beating thoroughly to prevent lumping. Beat well the egg yolk and stir it into the hot sauce. When mixture is cool, beat in the olive oil, a teaspoonful at a time, together with the seasonings until the mixture is thick and smooth. This will keep well in a glass jar. Stir well each time before using.

Summer Frocks for Home Dressmakers to Duplicate at Moderate Cost

TO the average woman, the most interesting styles are those which give her the assurance of duplicating them without overestimating her ability as a seamstress or exceeding her budget for dress. An original design may be ever so much a work of art, but its success is measured largely by its adaptability.

Each of the models featured with this description may be duplicated by the home dressmaker. Even where embroidery is used as a decoration, the motifs are so simple that they require only the plainest stitches to develop. The great variety in summer styles indicates more than anything else, the desire of Dame Fashion to cater to all tastes and meet all demands. Of especial interest to conservatives is the fact that not for several seasons have so many models shown the waistline poised at normal.

Sometimes the regularly adjusted waistline is offset by the unexpected treatment of skirts, but here, too, there is wide latitude, the straight, gathered skirt being quite as much in demand as the draped or plaited one. One never can tell what will come next in skirts. As a matter of fact, there are heard faint rumblings of the return to the puff and bustle effect at the back.

Expressing impressive simplicity and irresistible chic at one and the same time is a dress in figured dimity. The skirt closes at the left side seam and has a deep plait at the back which is stitched down part way. The blouse has a deep open neck finished with a fichu collar. The fronts are crossed and closed in surplice style. Dainty turn-back cuffs trim the short sleeves, while bands of plain organdy and frills of lace enhance the effectiveness of both fichu and cuffs. The belt is of satin striped ribbon in black and white. In fact, black and white combinations are interposed in many of the smartest decorative effects of the season, despite the reign of gay colors. They supply the French note and are generally becoming.

Blouse, long and short, are among the most adaptable features of the mode. Used separately or as part of two or three-piece costumes they enjoy a commanding position. For summer there are many designs that reach barely to the hips, their length being further abbreviated by narrow belts which hold in the fulness at the waistline. A white wool jersey is exceedingly

effective made with such a blouse, accompanied by a plain gathered skirt. The blouse is stitched about the neck, cuffs and lower edge with white silk soutache braid. Sleeves are short and neck square in outline.

The Baltimore and Ohio Veterans—and Their Wives

By Aunt Mary*

THE custom of standing with bowed heads as a mark of respect to a deceased brother is a beautiful ceremony which has been adopted by the Baltimore Veterans.

On Monday evening, May 3, at their regular monthly meeting, about 500 members of this mighty army of the Railroad bowed their heads for a half-minute of silence in honor of James M. Adams. There they stood; some were young men who had begun their railroad careers while they were yet in their early teens; some were fellows in the prime of life through whose hair glistened here and there a thread of silver that told of twenty years or more of honest toil; there were grandfathers with white hair but with eyes that still sparkled with the fires of youth. These were the men that I saw—honest, whole-hearted men, the sweat of whose brows and the toil of whose hands have fashioned a mighty Railroad.

Nor was this only a picture. The stirring words of their President as he addressed them, calling them "Dressed-up Sons of the Baltimore and Ohio," seemed to fill them with a desire to prove their worth; and they did it. When one of them, J. W. Riley, was presented with a \$5.00 gold piece as a reward for having secured 25 new members for the Association, did he drop it carefully into his pocket and take his seat? He did not.

"Here I have five dollars," he said, stepping to the front of the platform. "I am going to double it and turn it over to be used for a worthy cause—to help any old employe who may be in need."

"I'll add five more to that," came a voice from half-way down the hall.

"Here's one more," echoed another from the front row. Then came the ones, "twos, and the fives, until the gold piece l

multiplied itself 13 times. What a spirit! These people know the real definition of loyalty.

A Home for Veterans

"What we need," said President Bowers, "is a home for Veterans." Then he gave one of his popular heart-to-heart talks in which he spoke of the plans for the home. The present meeting-place at the Jr. O. U. A. M. Hall, on Paca Street, will not accommodate more than 500 members comfortably, and since there are about 1,500 Baltimore Veterans, it is desirable to provide more roomy quarters for their meetings. They propose to buy a hall and to make a "real" home of it. The question of location is now under consideration. Said Mr. Bowers, "We will just keep working away until we get it."

Then Came the Women

We had often heard reports of the fine "spreads" which are served to the Veterans at the close of their meetings, and we wondered how they managed it. But on this occasion, when the meeting had been turned over to the entertainment committee, the secret was out. The Veterans, like all other men folks, found that in order to make a success of their Association, they must enlist the services of the ladies; hence the Ladies' Auxiliary, which is made up of the wives of the Veterans. When this was explained to me, I saw the point! When Friend Husband leaves home in the evening, saying that he is going to the Veterans' Association meeting, then he has just got to go to that meeting—because Wifey goes along with him to the meeting.

And the women they all came up and joined forces with the Veterans in order that they might all enjoy the rest of the program together. What fun they had in getting seated! The hall was filled to overflowing, and every man whose wife was there arose and gave that lady his seat; but (Sh-h-h-h!)

every man whose wife wasn't there wanted to sit next to the other fellow's wife. (Moral: Wives, accompany your husbands to the Veterans' Association meetings.)

The Cooperative Stores

Interesting as well as instructive was the talk given by William F. Braden, Safety representative, in which he set forth the plans for the establishment of the Cooperative Stores of Baltimore. Mr. Braden also distributed application cards for membership in the Cooperative Stores Association, and leaflets which explain the principles and aims of these stores. These leaflets tell the story of a good investment, which ought to bring results, not only in a reduction of the cost of living of Baltimore and Ohio employes, but in the opportunity to make your money work for you. Everybody has a chance to become a stockholder, and we are depending upon our Veterans to help encourage the movement. (Mr. Braden later advised the writer that the employes of the Pennsylvania and Western Maryland Railroads have been asked to join in the enterprise and that many are responding.)

Mr. Wood Speaks

Our newly appointed Chief of Welfare Department gave an address on "Friendship," and he gave it as only Mr. Wood can. He emphasized in particular the fact that man lives not to himself alone, but there are certain duties that he owes to his fellow man. "Remember," said he, "the man who cheats his brother, cheats himself."

I wish that more of our railroaders could hear Mr. Wood; many of us have already met him through the talks which he has given from time to time in behalf of the Relief Department, but he has not been half-way around yet. He is truly the "Patrick Henry of the Railroad;" having heard him once, you will want to hear him again.

Ice Cream and Woman Suffrage

After listening very attentively while "Aunt Mary" told how the MAGAZINE could be made more useful to the Veterans, and while we were yet engaged in lively discussions concerning man's place in the kitchen, the assembly was very forcibly informed by J. W. Riley that "The ice cream is meltin'!" This announcement being solemn enough to bring tears to the eyes of the strong Veteran present, President Bowers immediately asked that a motion be made.

And the ladies served the delicious ice cream and home-made cake. Cigars were passed around among the men, and then, led by Mr. Bowers, a series of stump speeches on Woman Suffrage added greatly to the amusement of the evening. Whether the remarks of these gentlemen are to be considered as representing the consensus of opinion of the Association, or whether these kind words were spoken out of gratitude, born of fear that the

*"Aunt Mary" is the pen name under which Miss Margaret Talbott Stevens, our Associate Editor, has written several stories for the MAGAZINE. Though requested to report her own talk at this meeting for the MAGAZINE, she gives it but a phrase in this article. Those who had the pleasure of hearing her need not, however, be reminded either of her modesty or her interesting address.

ladies might hesitate in preparing future banquets, we do not exactly know; at any rate these would-be-voters seem to have a strong ally in the Veterans' Association.

Said Past President Holmes: "Why do you ask if we are in favor of women voting? Women will vote whether we say so or not. Why, the women are always voting; the members of the Ladies' Auxiliary do nothing but vote."

Whereupon, this sally was very cleverly answered by Mrs. Shipley, President of the Ladies' Auxiliary, who gave us to understand that women will vote and will continue to do so until they get what they want. To this the rest of us echoed "Amen."

The Women Veterans

Of the 1,497 Baltimore Veterans, there are 1,494 men; the rest are women. We are mighty proud of these women, and their names are—but, that's our little secret. If you would like to meet them, and I know you would, turn these pages until you come to the Women's Department.

Brunswick Veterans' Association

By J. E. Glenn

MAGAZINE Correspondent

THE Brunswick Veteran Employees' Association holds its regular monthly meetings in the auditorium of the Baltimore and Ohio Y. M. C. A. As a rule, all of these are well attended and the members enjoy many instructive and interesting addresses. Each meeting seems to be the means of bringing closer together those who have given to the Railroad their loyal support, and makes each one say, "I am glad that I was there."

Our Chapter has about a hundred members, and is growing steadily. President W. Ray Smith, chief train dispatcher, and Secretary W. C. Compton, are both old-timers in service; they are up-to-date, and are the right kind of workers, filling the right places.

It would be a great pleasure to the Brunswick Division to enroll as members every eligible employe in and around this section. Remember that the word "Veteran" does not mean "old age," but rather, "strong man;" it means "years of service with the Railroad," as we interpret it; the roster is wide open, and an invitation is heartily extended to all those who are eligible to enter their names thereon.

Connected with these meetings is a social feature, and on each occasion the Veterans spend an enjoyable evening. The last meeting was held on Tuesday evening, May 18. A special program had been arranged by C. B. Brett, Brock McBee, and T. A. Sigafosse. Promptly at 8 o'clock, W. R. Smith arose and introduced the speakers of the evening: Messrs. W. T. Ault, John T. Martin and Dr. H. S. Hedges.

At the conclusion of their addresses, the following program was rendered:

Pipe Organ Selections—
Cupid's Message - Valse.
Medley - - - Sullwit.
March in C - - Williams. Mrs. N. E. Conway
Solos—"You're a Million Miles from Home," "Granny", Mrs. C. F. Vanosdale
Recitation—"Seeing Things at Night", Miss G. Hood
Trio—"Aisle of Golden Dreams."
"I'm Forever Thinking of You."
Miss Wable, Mrs. McDonald, Mr. Good
Reading—"Selling the Violin", Miss Bertha Kellert
Solos—"I'm Longing for You," "Daddy."
You Have Been a Mother to Me", Mrs. F. Troxell
Recitation—"The Inventor's Wife" Miss Lerina Hood
Special Selection—
Banjo and Guitar.
Violin and Guitar Mr. Lake and Son

A rising vote of thanks and appreciation was extended to all those who participated in the entertainment.

At the conclusion of the above program, refreshments were served, and the meeting was closed by the singing of the "Star-Spangled Banner."

Cumberland Chapter

By H. Allison
President

THE Veteran Employees' Association of Cumberland, Md., held its regular monthly meeting in the I. O. O. F. Hall, Virginia Avenue, on May 18.

At the close of the business meeting, the Veterans entertained the Ladies' Auxiliary of the Association with the following program:

Piano selection—Medley Brother Lang
Duet (violin and piano).... Miss Fannie Brubaker
and Master Brubaker
Piano solo..... Miss Evelyn Bloss
Song—"Till We Meet Again".... Miss Brubaker
and Brother Wilson

Recitation—"Footprints of a Veteran"

Brother H. Allison
Song—"Afton Water"..... Brother J. W. Miller
Address—"Woman's Power in Organization"
Brother J. Lucas (The Man Behind the Anvil)

INTERMISSION

Refreshments
"A toast to the Balmy Spring,
We'll fill our cups and sing."

Song—"Mary o' Argyle"..... Brother J. W. Miller

Selection—"Troubles with Limburger Cheese"
Brother A. Y. Wilson

Comic Sketch—"Bathing at Atlantic City"
Brother H. Allison

The meeting was closed by the singing of "The Star-Spangled Banner" in unison.

The writer wishes to thank all of those who contributed towards the success of the evening, and express his appreciation of the splendid attendance.

"Good night, good night,
Parting is such sweet sorrow,
That I shall say good night,
Until it be tomorrow."—J. W. Miller,
Chairman of Entertainment Committee.

The membership of both the Veterans and of the Ladies' Auxiliary are showing an encouraging increase and interest in this open shop of friendship.

Connellsville Chapter

THE "Spirit of the Baltimore and Ohio" pervaded a meeting of the Connellsville Veterans' Association on May 12, when members from Connellsville, Glenwood, and Cumberland, shared in welcoming the visit of the officers of the Grand Lodge.

The greater part of the program consisted of instructive and entertaining talks by the visiting officers. Grand President Sturmer cautioned the Veterans about the use and

abuse of their liberal pass privileges, calling attention to several cases in which employes have lost their positions because of infractions of the Interstate Commerce Commission rulings governing the use of passes. The membership question was also considered; the enormous growth of the Veterans' Association has made it necessary to devise a means for separating the organization into several classes, according to the length of service. It is expected that by September there will be 15,000 members of the Veterans' Association.

Grand Vice-President J. N. Garvey, of Wheeling, impressed upon the men the necessity of living strictly up to the contracts entered into by their employers and the officers of the brotherhoods. He predicted also that the Veteran movement will shortly become a national organization, extending from the Atlantic to the Pacific.

President Bowers, of the Baltimore Association, gave an inspirational talk, in which he asked that a stronger feeling of fellowship be manifested among the Veterans. He announced that a project is under way in Baltimore to hold a grand picnic of all the Baltimore and Ohio Veterans at Harpers Ferry, sometime during the summer.

Other addresses were made by President Allison, of the Cumberland Division, who recited some famous railroad verses; G. A. Richardson, of Glenwood, and by John L. Gans, a local guest of the occasion. All of these brought encouraging messages, looking to the progress of the Association.

Ephraim F. Provance—the Engineer Who Saved Annapolis

ANNAPOLIS, the quaint little Maryland city on the Severn River, has been the scene of many fires. With its many little frame houses interspersed with those of crumbling brick and stone, it is remarkable that it still holds its own among the oldest cities of our country. But Providence seems to have blessed the place, and very few of its ancient buildings have been destroyed. At one time it was a common occurrence for the inhabitants of Annapolis to be awakened in the middle of the night by the pealing of church bells and the sound of the siren whistle in the Navy Yard, which proclaimed that there was another fire and that those who valued their lives had best be in readiness to run in case the fire should get beyond control. Out on State House Hill they would gather to watch the flames—men, women, children; society damsels wearing their hair still in "frizzes," and students of Old St. John's who were still in their night clothes.

On one of these memorable occasions when the Fire Department, which then consisted of one volunteer hook and ladder company, whose members drew the fire engines through the streets by means of a

Wheeling Chapter

THE Wheeling Division Veterans' Association held its regular April session at their hall in the McMechen Bank Building.

A considerable amount of business was transacted. The President and the Secretary were instructed to take up the question of organizing an Auxiliary to the Veterans' Association at this point, having the Auxiliary offices at Fairmont, W. Va. The immediate cooperation of all members in this project was requested.

The report of the Treasurer, J. J. Cusack, shows a balance of \$248.23, and applications for new membership are coming in at every meeting. Grand Vice-President J. M. Garvey, Sr., gave a fine practical talk, in which he outlined the aims and policy of the Veterans' Association. A very interesting letter from Brother G. W. Sturmer, Grand President, in which was set forth some of the plans of the Association, was read.

Chairman Schultz, of the Ball Committee, made his final report, which showed the splendid sum of \$125.00 realized. M. M. Connors was elected delegate, and J. J. Cusack as alternate, to attend the Baltimore convention in May. Several members spoke with gratification of the progress that the Association is making in a number of its projects.

Arthur Burton, former machinist at Benwood Shops, died at Waycross, Pa., on April 13. He was the father-in-law of Train Dispatcher H. G. Woodward of the Wheeling Division.

more. He has been retired for 11 years, but his activities from the time of his early childhood are fresh in the minds of all of the old railroaders.

He has the interesting distinction of having served in both the infantry and the cavalry divisions of the Army of the Potomac. While in the infantry he fought in the Battle of Gettysburg, in which encounter he captured his cousin "Dave" Provance, who had enlisted in the Confederate cause. Once, while serving in the cavalry and stationed at Hagerstown, he had gathered together a quantity of army clothing with the intention of shipping it to his home. He had packed it in a box and stored it in the old Thompson home, where the Baltimore and Ohio station now stands. But alas for his plans! Before he could get a chance to send his package, the Confederates drove the cavalry out of Hagerstown, and Ephraim lost his treasure.

At the time of his retirement in September, 1909, Mr. Provance received a letter from the late President Oscar G. Murray, who congratulated him on his long service, which dated back to the end of the Civil War.

He ran on what was known as the second division, between Martinsburg and Piedmont, W. Va. During the whole time that he served the Baltimore and Ohio he experienced but one wreck, and that was caused by a windstorm.

An Old Freight Bill

THE accompanying reproduction of receipt to consignor for revenue received for freight transportation will interest many of our veteran readers, especially those who may have been employed in station service.

Agent F. G. Hadley, at Mount Vernon, Ohio, writes us that the present charge for shipping 120 pounds from Sandusky to Mount Vernon would be 51 cents; since class of commodity is not shown on this, this charge represents the rate on first class basis. Mr. Hadley writes us further as follows:

"The item of \$1.98 evidently covers transportation charges up to Sandusky, although in the past the railroads did advance charges other than for transportation; but this practice was discontinued a number of years ago."

Relief Department Saved His Home

McMECHEN, W. VA., March 4, 1920.
MR. W. J. DUDLEY, Superintendent,
Relief Department,
Baltimore and Ohio Railroad.

Dear Sir:

We do not really know how to thank you and the Relief Department for the quick action you took in our behalf at the time when our home, or what we called home, was about to be sold. I tried all means to get financial support but failed, as at that time money was tight; the Fifth Liberty Loan was about to be floated and there was no money to be had.

A friend of mine said, "Why don't you try the Relief Department?" So I did and the action which this department took was very helpful to us, and we would be very ungrateful to you and your department, and especially the building inspector for his good services, if I did not acknowledge this. I know, down deep in my heart, that the name Relief Department should be praised and well cherished by all who have dealings with it. It is the best friend I ever had; it built a home foundation for me, so strong that it would take great force to disrupt it. We thank you all for the consideration given us as strangers to your department and shall show our appreciation by our recommendation of it to others.

Respectfully,

(Signed) URIAH M. FITZPATRICK,
Machinist.

Duplicate of Express Receipts Required

ON and after July 1, the American Railway Express Company will keep a duplicate copy of every receipt it issues when receiving business from shippers. The duplicates will be retained by the express company for the purposes of record and reference, and will be held at the shipping office.

Shippers who have been accustomed to prepare their own receipts or who have their own forms have been requested to make provision for supplying duplicates of such receipts to the express driver or receiving clerk who signs them.

As a matter of convenience to shippers, the regular receipt forms of the express carrier will be revised to permit their use in duplicate form.

In cases where prepaid receipts are now being issued in duplicate, the extra copy being used as a record of charges paid, a third copy will be required under the new system, and in such instances prepaid receipts will be issued in triplicate.

One of the objects of the new system is to bring about better protection for and methods of recording the movement of express packages in transit.

**Cars Are Only Earning
When Car Wheels Are Turning**

Safety Roll of Honor

Baltimore Division

On March 25, Engineer H. M. Evans, in charge of helper engine 4523, while returning from Mt. Airy Junction to Reels Mill, discovered a pile of angle bars and scrap iron on eastbound track near Burgees Crossing, east of Ijamsville. He removed the obstructions from the track, preventing what might have been a serious derailment. Mr. Evans has been commended.

Conductor G. H. Delashmuth, in charge of extra east, engine 4536, March 26, discovered a broken rail on eastbound siding at Reels Mill. He has been commended.

On April 7, Agent L. E. Ogle, at Elkridge, reported brake rigging down on Baltimore and Ohio 15447 in train of extra west, engine 4508. Conductor J. C. Dwyer with work train at Murray's siding also observed it and attracted attention of crew on extra west, engine 4508, who stopped their train. Defect was made safe. Agent Ogle and Conductor Dwyer have been commended.

Commendatory notations have been placed on the records of Crossing Watchman H. Baumgart at Cowenton and Agent Miss M. Corbin at Loreley for their action in the case of broken arch bar under Baltimore and Ohio 225249 in train of extra east, engine 4016, April 22. Mr. Baumgart noticed the defect and called Miss Corbin over the telephone at Loreley. Miss Corbin flagged the train and notified the Conductor. Examination of the broken arch bar showed all new break. Their action removed the possibility of a derailment.

BALTIMORE, MD., April 29, 1920.

MR. H. FLATTERMASH, Engineer,
Care J. E. Sentman,
Philadelphia, Pa.

Dear Sir—It has been called to my attention that on April 5 you were in charge of extra east engine 4518 and on entering the Susquehanna Bridge you noticed a car roof lying on the castbound track and brought your train to a stop before running over it. With the assistance of the train crew you removed this obstruction.

I wish to commend you for your alertness on this occasion as your action probably averted an accident.

Very truly yours,

(Signed) R. B. WHITE,
Superintendent.

Baltimore Terminal Division

At 9:07 p. m. on March 15, G. W. Pilson, crossing watchman at Warner Street, Baltimore, heard a very loud noise in track at that point as No. 17 passed. Upon investigation he found a piece of rail broken out of westbound track. His promptness in notifying Operator at Baileys Tower probably prevented a serious accident. Proper commendatory notation has been placed on his record.

G. T. car 12888 was recently seen by W. F. Potce, warehouse foreman, Tobacco

Warehouse, with door open and one hogsh-head of tobacco protruding. The moving of this car would possibly have caused a serious accident, but same was averted when Mr. Potce secured some help and put the hogshhead back into the car and sealed it. An entry, suitable for the occasion, has been made on this gentleman's service record.

On March 2, W. F. Berrett, track supervisor, while passing through Camden passenger shed, noticed vertical worn flange on passenger car 4083, and upon examining wheel found piece chipped out of inside of flange, about 4 or 5 inches. Mr. Berrett notified Chief Car Inspector, who had coach set off and shopped. Mr. Berrett's eagle eye prevented possible derailment and proper entry has been made on his record.

As extra 4521, west, passed North Avenue on March 23, George W. Fowler, operator at North Avenue Tower, observed brake rigging dragging under Grand Trunk car 61973. He took the necessary steps to have train stopped at Mt. Royal, where repairs were made, thus possibly preventing an accident.

Cumberland Division

At 12:50 p. m., March 31, while extra 7132 east was passing Hutton Track, Foreman I. Lambert observed broken wheel under Baltimore and Ohio 138167. He got on caboose and notified Conductor who, upon examination, found it necessary to set car off at Hutton. Mr. Lambert is exceptionally watchful for defective equipment or other irregularities, as was shown in a previous issue of the MAGAZINE which contained reports of other similar observations to his credit, as well as his picture.

During April operators on the division observed the following irregularities and exercised prompt action for correction:

NATURE OF OBSERVATION	NUMBER OF CASES
Wheels sliding.....	3
Brake rigging down.....	1
Hopper bottoms down.....	4
Loose ladders.....	1
Total.....	9

CUMBERLAND, MD., May 14, 1920.

JAMES HINES,
Great Cacapon, W. Va.

Dear Sir—I find that when No. 10 passed Great Cacapon on the morning of April 29, you heard an unusual noise, made investigation and found a broken rail on No. 2 track near Great Cacapon station. We are informed by Mr. Widmyer, the Operator at the tower, that you reported the matter to him and that arrangements were made that enabled prompt repairs.

I express my appreciation of your interest and watchfulness on our behalf and thank you for your action in the matter.

Yours truly,

(Signed) J. W. DENEEN,
Superintendent.

Pittsburgh Division

On the morning of May 14, at 6.10 a. m., while Sectionman William Winkler was on his way to work on Section 25 at Wildwood, Pa., he discovered a broke rail about 15 rail lengths east of Bryant Station. He flagged the first freight train that came along and asked the engineer for switch key to open telephone box and put out a five mile an hour order.

Monongah Division

At 2.30 a. m. on February 5, No. 80, engine 4096, Conductor W. A. Coffman, was stopped on eastward main track west of "MD" Tower, Clarksburg Yard, on account of a rock fall on interlocking switches. Conductor Coffman made examination of switches and found that signal could be given to eastward trains out of "Block Track" while points of switch facing west stood about half open. Signal had already been given extra 1889, Conductor W. C. Cooper, light with caboose for movement from "Block Track" to eastward main track. Conductor Coffman immediately flagged extra 1889, which would have possibly derailed caboose and engine. Meritorious notation has been placed on the record of Conductor Coffman for his prompt action.

GRAFTON, W. VA., April 27, 1920.
J. J. CLAUSON, Operator,
Lumberport, W. Va.

Dear Sir—I have your note of the 26th in regard to your action in notifying conductor of train No. 71, engine 2640, of fire flying from top of wheel on Baltimore and Ohio 144509 in his train and examination showing crosshead key had come out and car set off in No. 2 east siding. I certainly appreciate your interest in this matter and will submit item for a place on the Honor Roll in our MAGAZINE.

Yours truly,
(Signed) C. W. VAN HORN,
Superintendent.

The Baltimore and Ohio has many loyal men. On April 29, No. 38 with double header derailed trucks or tank of engine 5122, three-quarters of a mile west of Ellenboro, near the home of Conductor Charles H. Frederick. Mr. Frederick, hearing of the trouble, went to the derailment and materially assisted in rerailling trucks.

Newark Division

On May 3, while third No. 70 was passing the shops at Zanesville, Coach Repairman W. A. Combs noticed a broken flange on U. P. 70916. Mr. Combs promptly notified the train crew and had car set off. Upon investigation it was found that 15 inches of flange was missing. This defect was detected just as car was approaching Zanesville Bridge across the Muskingum River. Mr. Combs is commended.

Cleveland Division

On April 24, as extra east engine 4191, in charge of Conductor Mann and Engineer Brumback, was passing Dover, Yard Clerk T. B. Adams noticed brake beam down on second car from engine. He immediately took steps to notify crew, who had train stopped before any serious damage was done. He has been commended for his watchfulness.

On May 5, Conductor T. McDermott noticed brake beam down on third car from engine 4296, train No. 74, Lorain yard, and immediately notified Engineer, who had train stopped, thus eliminating a possible derailment. He has been commended.

Mr. J. D. DRENNAN,
Section Foreman, Section No. 29,
Elyria, Ohio.

Dear Sir—Understand that at 1.50 p. m., April 13, you noticed broken flange on westbound train, engine 4250, between Erhart and Lester, and notified the Conductor immediately, who had car set out at Erhart. No doubt your watchfulness in this case averted an accident, as there was 20 inches of flange gone on this car. Proper entry will be made on your record in this case.

Very truly yours,
(Signed) H. B. GREEN,
Superintendent.

South Chicago

On April 26, Yard Brakeman Melvin Frame discovered four cars on three different tracks on fire in west end of South Chicago yard. He immediately notified the Yardmaster and Conductor and they were able to save all but one car, an empty, which was completely destroyed. One of the three cars saved contained lumber, the loss of which would have been great but for the quick work of the men and the aid of the fire department.

G. E. Baker, Operator, at "HK" Tower, observed a fire in train extra 4243, west, at that point and succeeded in stopping the train and having the fire extinguished.

Ohio Division

On April 18, engine 2041 was derailed at Guysville, by bent axle on tank of this engine. This condition was discovered by Brakeman E. R. Maple, who immediately reported it. In all probability this averted another derailment after leaving Guysville. He has been commended for close observance and interest displayed.

On April 26, Operator C. M. Scott at Sabina, noticed brake beam dragging in extra 2901 west. He immediately reported this to dispatcher and beam was removed at Wilmington. A few days previous to this Mr. Scott noticed a refrigerator car door standing open, which might have caused injury to crew or passengers on No. 32, due to meet this train at next station. He had train stopped and door closed. On several occasions Mr. Scott has made similar observations on different trains, and has taken immediate action in each case. He has been commended for his watchfulness and interest taken in Company's welfare.

On March 14 it came to the attention of Operator P. R. Sperry at Sabina, that rail was broken on Pennsylvania main track at Oakland Avenue, Washington Court House. He immediately notified dispatcher of Pennsylvania Lines, through operators at Newark and Zanesville, and later, fearing that Pennsylvania dispatcher would not receive the information, had clerk of the Pennsylvania office call dispatcher direct and talked to him personally. Superintendent of Pennsylvania Lines, commenting upon this, said: "Mr. Sperry's action was highly commendable, and I would appreciate it if you would convey to him my compliments and thanks on behalf of the Pennsylvania System." Entry has been made on record of Operator Sperry for his interest in safety of a neighbor line.

Indiana Division

On May 7, James Long, yard brakeman, North Vernon, noticed broken arch bar on

W. T. L. 15574 in extra 2026, which was pulling by him in North Vernon Yard. He immediately notified Conductor, train was stopped and car set out. The close attention of Mr. Long to passing equipment, possibly averted an accident, and appropriate entry will be made on his record.

On April 9, Willard Campbell, trackman, North Vernon, was looking over extra 2776 standing on main track at North Vernon, and noted that C. R. I. & P. 35454 was leaning considerably to one side. Closer observation and examination of car developed that truck bolts were broken. He notified crew of extra 2776, which was in charge of Conductor O. E. Henderson, and train crew set car out at North Vernon for repairs. The interest manifested by Trackman Campbell is very commendable. Appropriate entry will be made on his service record.

Toledo Division

Operator B. J. Krebbs, Carlisle, noticed car with bent axle in train of extra 4044 while passing his station. He had train stopped at Hamilton, where car was cut out. He is commended for this thoughtfulness and his quick action.

Operator E. E. Shaffer, Erie Junction, noticed broken wheel on D. & H. 8933 in extra 4138, north, while passing at speed of about 8 miles per hour and stopped train when wheel with about half the flange broken off dropped off rail. Mr. Shaffer's watchfulness and prompt action possibly prevented more serious accident. He has been commended.

While extra 4556, north, was passing North Switch at Middletown, Foreman "Mike" Riccalo discovered broken arch bar on P. L. 93817. He was successful in attracting Conductor's attention and the car was set off at Carlisle Gravel Pit. Foreman Riccalo's act in observing this dangerous condition possibly averted an accident. He has been commended.

We have two Crossing Watchmen at First Street, Dayton crossing gates, William Wilson and James Hart. From May, 1919, until May, 1920, there was not an accident on this crossing, nor was there any damage done to the crossing gate. These men deserve credit for their faithful and careful work, and we take pleasure in complimenting them in order that all fellow workmen may know that their good work is appreciated.

Salesman—Pardon me, lady, does Mr. Smith, the brakeman, live here?

Lady—No. This is only his address. He lives on the road.

Among Ourselves

Baltimore and Ohio Building

Offices of General Manager and Superintendent Motive Power

Correspondent, G. F. ZIMMERMAN

Miss H. G. Guilford was recently granted a leave of absence and we have received several encouraging letters from her, advising that she is improving gradually where she is staying, just outside of Cincinnati. Miss S. Lazarus is her substitute here.

Charles O. Healy has also left us, having accepted a position as Secretary to Superintendent Hoskins, Baltimore Terminal Division. Success to him!

Spring Fever is here—the correspondent included. Soon our vacations will be at hand, the time of the year we all welcome. Dr. Craig, our Assistant File Clerk, says she enjoyed her trip to the West so much last year that she has already made plans for another trip this Summer, together with Miss Russell, file clerk in the Transportation Department.

Law Department

Correspondent, GEORGE W. HAULENBEEK

It was Mrs. Virginia Walter, the stenographer, to whom I made allusion in my last communication to the MAGAZINE. Her work was most acceptable, and regret was expressed in the department that on account of sickness in her family she could not remain with us.

The retirement of Melville Gemmill from the Law Department, and his acceptance of a position in the Traffic Department, left our office in such a state that Edgar W. Young, our Chief Clerk, requested Mrs. Walter to return to the department to take Charles R. Webber's accumulated mail. Mrs. Walter responded promptly, and remained until the advent of Ronald Horsey, who became one of us on April 12. Mr. Horsey's work has proved him to be the kind of worker that the Law Department wishes to retain.

And now Charles Scip Stout has left us. He has gone up one flight of stairs to the fourth floor to act as Secretary to Freight Traffic Manager Golder Shumate. Mr.

Stout came into the Law Department in 1902, took up shorthand, mastered it, applied himself, and soon became Secretary to R. Marsden Smith, general attorney.

The place made vacant by Mr. Stout's retirement has been filled by Miss Loretta Schott. Her stenographic work is fully up to Law Department requirements. Miss Schott has been in the Baltimore and Ohio service for about five years. She acted as Secretary to Mr. Bernstein, in charge of the Commercial Development Bureau, later entered the Federal Manager's office, and after that had a desk in the Safety and Welfare Department.

Junior Clerk William Bruce Berry declares that while the subject of overalls is so generally discussed, the following poem, clipped from an exchange, would be relished by the readers of the MAGAZINE.

Tune, "Over There."

"Overalls! Overalls!

For the stouts, and the shorts, and the talls;
Oh! we all can't tear 'em,
We all can wear 'em
In private homes and public halls.

Overalls! Overalls!

Worn at work, worn at night paying calls;
Oh! we'll all look funny, but we'll all save money
And we won't take 'em off 'till the price of clothing falls."

Car Service Department

Correspondent, GRACE PLACED BERGHOFF

We were glad to see Eva Callis when she visited Baltimore for ten days after having spent six months in the Blue Ridge Mountains. She has fully recovered her health and expects to return to Baltimore, to remain permanently, in the early Fall.

On May 25, Katherine Warfield of this office, and Leo Molloy were married at St. William's Church, Ten Hills. Mr. Molloy, who is secretary to Mr. S. Davies Warfield, President of the Seaboard Air Line, is a former Baltimore and Ohio man. Mrs. Molloy entertained her friends of the Car Service Department early in May and a linen shower was given in her honor at the home of Aline McKnew.

Our heartfelt sympathy is extended to Edith Burgess in the loss of her father on May 16.

Margaret Windsor, after having undergone an operation at University Hospital, has returned to her duties.

Florence L. Bargar and Myrtle Calder left us last month to become matrons. Our best wishes followed along with silver teaspoons.

Lillian was busy figuring demurrage when the "Colonel" appeared in the vicinity of her desk to talk some real business concerning the MAGAZINE. As he looked admiringly upon her, he said sweetly and in an undertone, "I wish she would wear her hair parted in the middle instead of on the side."

Inflated wages and inflated prices are buddies.

The clerk who has never made a mistake is a fly-leaf between the Old and New Testaments.

A booster is all right, but a knocker hangs on the outside of a door.

Office of General Freight Claim Agent

Correspondent, Miss E. T. MURRAY

On Wednesday morning, May 5, the stork visited the home of L. J. Sturn, of Suspense Division, leaving a 9-pound baby girl. Congratulations, L. J.

"What do you mean by keeping me standing on the corner like an idiot?" demanded an angry husband whose wife had kept him waiting to go shopping with her. "Now, really, dear," she replied sweetly, "I can't help the way you stand."

The sudden death of Mr. Lozon on April 16, cast a shadow of sadness over the whole office. He had been ill with diphtheria for only a week and his death was a shock to all.

Mr. Lozon entered the services of the Baltimore and Ohio Railroad Company on October 1, 1913. At the time of his death he was an investigator in the Loss and Damage Division.

The entire office expresses its heartfelt sympathy to his bereaved widow and family.

The accompanying picture is of James D. Hagerty of the Suspense Division. "Jimmy," as he is known to the boys, was one of the members of the American Expeditionary Minstrel Troupe, which played before General Pershing and other Generals of the Allied Army and before thousands of soldiers in France during the World War. Before going to Europe he was the director of the annual minstrel show of the St. John's Athletic Association, and after three years of absence from that post on account

James D. Hagerty

of his military duties, he has resumed his old job. He directed the "Old Towners" for the minstrel show which was given by them on Friday, May 8, at Lehmann Hall.

We are glad to know that our friend and fellow clerk, J. A. Downey, of the O. S. & D. Division, who underwent an operation at Mercy Hospital is home again and steadily improving. Here's hoping he will fully recover soon and return to us again.

Our old friend J. W. Schumacher, Investigator of Perishables, has been promoted to Traveling Inspector of Perishable Freight. The Department now "knows him no more" because he is out on the line all the time. "J. W." has the fourth longest service record in our office, having entered the service on January 19, 1885, as Delivery Clerk. In the old days "Willie," as he was affectionately called, knew it all, and when anybody wanted to find out anything about the "incoming side" he had to come to "Willie"—and "Willie" set them straight. Now we call him "Bill," and we say "Good Luck, Bill!"

W. F. Braden, Safety representative, visited our office May 5, and gave a brief talk on the Cooperative Stores Association of the Baltimore and Ohio Employees. His purpose is to raise sufficient funds through the sale of stock to insure the prompt opening of the store in Baltimore. He outlined briefly and concisely the benefits we hope to derive therefrom and expects hearty support from this department, in line with our previous high standing on the list of past affiliations with worthy causes.

Mr. Braden also urged that we lend our generous assistance to the Baltimore and Ohio Young Men's Christian Association.

"Tom" Littig, Suspense Division, has been granted a month's furlough account of ill health. Here's hoping we shall receive good news of a turn for the better and that he will soon be back on the "job."

Keep the Ball Rolling

The season is now on. Coach Heartt has called the team for work and has announced the following line up: Rover Bowhay, c.; Garner, Love and Fink, p.; Taylor, 1st b.; Downey, 2d b.; Zenter, ss.; Littig, 3d b.; Hilton, lf.; Tyson, cf., and Schepler, rf., all of last year's team. Roden, Kenne and Shea are the reserve players. William Bittner will act as mascot.

Already several challenges have been received, one from Baltimore Dry Docks, and another from Maplewood Athletic Club. Somebody is "laying down" on the job; a little "pep" should be injected into the team; then they can rest assured that the girls will do their share and root for the winners.

Remember:

Many a person has dug his grave with his tongue.

Discourtesy hurts the person who uses it more than the person at whom it is directed.

One discourteous action over the telephone to a patron or a prospective patron does an injury to every man whose name is on the pay roll—and a place on the pay roll beats one in the bread line.

It is not always what a man knows, it is what he does that counts. Opportunity plays no favorites.

Chickens come home to roost: so do harsh words.

Engineering Department

Correspondent, OSWALD EDEN

"Spike" Schanze was in an automobile(?) accident the other day, but luckily was uninjured. A friend of his, who had quite recently purchased a Ford machine, was bringing him down to the office. As they approached a certain street crossing they saw an electric car bearing down upon them, but alas! it was too late. The remainder of the story follows in his own words: "We saw that the car would hit us, so we just lifted our feet and the engine went under the seat. The "can" was a wreck. The only things that were not smashed were the wheels and a musical whistle on the rear mudguard. We waited awhile. Presently a coal wagon came along, shoveled the debris up and carried it to a garage, where we were offered as much as \$125 for the remains."

"They all flop sooner or later." It occurred Thursday, April 15, when Gasson M. Davis, of the Cost Department, took unto himself a wife. The girl in the case was Miss Ruth Virginia Peddicord of Laurel, Md. They were united by the Rev. Joseph A. Meyers, and the ceremony was performed in St. Mary's Catholic Parsonage. On their honeymoon they visited New York and Atlantic City, after which they returned to Elkridge, Md., where they will make their home.

A. A. Jackson, assistant engineer in the Cost Department, recently resigned to accept a position with the Federal Railroad Administration at Washington, D. C.

The engineers in Mr. Milburn's office are very particular about their appearance now that a new lady "stenog" has arrived.

"Joe" Kemp has composed a new piece to play on his fiddle. It is entitled "Only a C. O. D." and is dedicated to his friend "Spike" Schanze.

Miss Georgie P. Simpson, file clerk to Engineer of Buildings, left us May 1, and is now working for the M. A. Long Company, contractors. Her place was filled by Miss Anna May Lavak.

Beal Helm, draftsman in the Office Engineer's Department, was recently transferred to the Valuation Department. "Ted" Ziegfeld, another draftsman, was granted a leave of absence on account of his health.

"Jits" Fleagle came into the office the other morning holding a pasteboard box, which was about six inches square and four inches deep. There were several small holes in the top, and when you peeped in, you received an icy stare from several large eyes within. Upon closer observation, we found that he was transporting some live stock to the slaughter house. But, we didn't know that "Jits" was French.

Miss Landsdowne, a tracer in the Office Engineer's Department, was confined to her home for a few weeks with a severe attack of bronchitis. We are glad to see that she weathered the storm and is now back on the job.

"Alvie" Weston has entered the poultry business. As he tells us, he has twenty-three of the dearest, fluffiest, fattest, most innocent little "peeps" you ever saw. Nine of them were hatched in an incubator, the other fourteen by the more ancient method. We feel that he may be justly proud of this, his latest achievement.

Now that "Ted" Ziegfeld is away on leave there is no one to look after the windows.

W. H. Collings, formerly clerk to the Signal Supervisor, is now in the Cost Department. C. M. Whittaker, who was with the Treasury Department in Washington, D. C., is also on the Cost Engineer's force.

Printing Department

Correspondent, M. J. CONROY

I know there will be some MAGAZINE readers who will be envious of us when we tell them that we had the great pleasure of a visit recently from our new Associate Editor, Miss Stevens. It will probably also be disappointing to many to know that she looks very much unlike a poet—just a plain, smiling, joyous and gracious woman.

We record with great pleasure the honor that has come to one of our compositors, William Groves, in being chosen an Elder in his church. It is quite a compliment to the craft that one of its members should be found to possess the necessary qualifications to entitle him to a seat amongst the elect. It is an accepted fact that once a man selects the printer's trade as an occupation he is foredoomed, along with proofreaders, editors (associate editors excepted) and notaries public, to wander in the opposite direction from which the heavenly choir is enthroned. All who know "Bill" can vouch for his sincerity and honesty and his willingness to observe the golden rule, "Do unto others as you would be done by."

Eugene Washington Weems, our young colored factotum and "hocus-pocus," (mostly "hocus-pocus") has a roving commission to execute orders for the men at lunch time and he very carefully and laboriously writes out the various items he has to purchase. I thought I would take a "peek" at his list one day just to see how he worked his system. Here is what I read:

1—Beloney.....	15—R
2—Hot weanys.....	20—H
1—Rizen cak.....	10—P
1—Bottle mulk.....	10—C
1—Apul pye.....	10—W

William Norman Keller, Jr.
Two Year Old Son of William Norman Keller,
Printing Department

The accompanying picture is of the pride and joy of Mr. and Mrs. Norman Keller. The little fellow, though only 2 years old, can always find something for his busy hands to do. "Daddy" is one of our keyboard operators.

We have recently had two new additions to our keyboard force, Messrs. Roscoe Hall and Charles H. Ogle. Mr. Hall is full of speed and Mr. Ogle is full of the fire of youth, being the youngest of our keyboard staff. Let us hope they will decide to stick around long enough to get acquainted.

We held an election in May for International officers and also for local officers of the Typographical Union, of which the 36 men of this chapel are members.

Most all of the men here became converts and ardent supporters of the Progressive ticket and the results showed a clean sweep for that ticket in this chapel. Nicholas Huckle, chairman of our chapel, had everything arranged in splendid shape and the election was carried out according to program, the voting being done before commencing work in the morning and during lunch time.

The judges of election were three of our veteran composers, Messrs. Harry Reay, William Groves and George Yeager, which again proves that character and ability will win every time. Mr. Reay is a leader in the Bible class in his church and Mr. Groves was recently honored by being made an Elder, while Mr. Yeager represents the liberal or wet wing of the chapel.

This reminds me that one summer in the happy days that are now but bitter-sweet memories, George and I spent a delightful afternoon on board Oscar Sherman's yacht and we anchored at a shady spot well-known to the bibuli of those days and had several bottles of cold Pilsner and the best soft crabs that it has ever been our good fortune to eat. George says every time he thinks of that afternoon he feels like shouting "Halleluia!" It takes a lot of courage to smile sometimes, but when we think of that trip and the sight of "Ots" pulling the oars, with the thermometer up around 100°, George still beams, and wonders if the time will ever come when it will be a crime to allow cock-tails to grow on farmers' roosters!

Telegraph Department

Correspondent, DELLA M. HAIN

We are sorry to report the death of Mrs. G. D. Ward, wife of the Assistant Manager, Baltimore Relay Telegraph office. The grim reaper has also claimed Miss Jessie Day, sister of E. W. Day, Assistant Superintendent Telegraph. The bereaved have the sympathy of the entire department.

Remember that when your 'phone rings there is someone at the other end of the line who wants to talk to you. Don't keep this party waiting; answer promptly and avoid the necessity of the telephone operator ringing longer than necessary.

Did you ever see Cupid driving a car? That is just what happened when "Ed" Wyant, wire chief, rushed to Ellicott City and took unto himself a wife. This mixes up family relations a little at the telegraph office, as the new Mrs. Wyant is an aunt to Pauline Flayhart, which automatically makes Mr. Wyant Pauline's uncle. But somehow Pauline finds it funny to call the Wire Chief "Uncle Ed."

William C. Donnelly, supervisor time service, has left again on business on Baltimore and Ohio Lines West. He didn't admit it, but we all know he has gone in

search of that old gum shoe he lost in Cleveland.

This office was recently the focus of a conference of the following Western Union officials: E. P. Totman, district plant superintendent, Philadelphia, Pa., and E. P. Murphy, his Chief Clerk, W. W. Olheiser, district plant superintendent, Pittsburgh, Pa., and E. J. Colwell, district foreman.

Some of our linemen located at 213 West Camden Street have commented because of not seeing their names under the notes of this department. Send in your news to the Correspondent and see what happens. A word to the wise is sufficient.

It is suggested that certain members of this department consult Mr. Donnelly, supervisor of time service, before visiting New York; it is rumored that they (we mention no names) recently paid real money to see a good show on Broadway and missed the first act on account of the "Daylight Saving" time. Some people will never get out of the "Rube" class. How about it, Uncle Frank?

Valuation Department

Correspondent, G. B. SAUMENIG, *Accountant*

Baltimore Office

New faces constantly appear. Now we have with us Miss N. E. Shaefer, clerk to Chief Draftsman; Miss E. H. McMann, clerk, office of Equipment Pilot; F. E. Wiles and H. C. Dews, accountants, office of Cost Engineer; Gilbert Murphy, messenger. To these we extend a most hearty welcome.

Speaking of competition, no one doubts the accuracy and speed of the various calculating machines in the office, but it seems that the one with the most admirers should be the best. A question arises: Is it the machine or is it the operator we admire?

We mourn the loss of our youthful "Caruso," now connected with office of C. F. Bennett. Our best wishes go with "Ed."

Miss Tucker, clerk to Equipment Pilot, was away from the office for sometime account of sickness. She is with us again and appears very happy. Why?

Miss Gregor, of Chief Draftsman's force, has just returned from a visit to her home in Springfield, Ky.

P. Gallimard, who until a short time ago was associated with Bridge Pilot, has left for France, where he will act as administrator for a large estate. In case the funds are distributed according to his directions, will we be remembered?

Our sympathy is extended to Miss Graham, clerk to Assistant Engineer Duncan, in the loss of her father.

Why not appoint a Ventilation Committee, as well as a Valuation Committee? We all know that fresh air is essential to health and that health is the chief asset to efficiency. Where have the ventilators gone? Have they been taken home? The majority, I believe, want fresh air all the time and it should be the rule of the office the same as being on time, etc.

When is Pay Day? This is the most important question and one that no one can answer. Who is to be the next President does not alarm us, as much as when the Ghost walks.

The stork begs to announce the following arrivals: Doris Elizabeth Miller, daughter of Assistant Chief Draftsman; June Vir-

FROG HALL
ONE OF THE VALUATION
DEPARTMENT CELEBRITIES

ginia Bratt, daughter of Wallace Bratt, Draftsman; A. H. Hendrickson, Jr., son of Topographer Hendrickson.

Pittsburgh Office

During the recent strike trouble, those connected with Pilot Engineer's office at Pittsburgh volunteered for train service and between April 13 and 24 the entire force, consisting of eleven men, was called into active service as firemen, brakemen, flagmen and baggagemasters. This is 100 per cent. loyalty.

Wheeling Office

C. T. Duffield, rodman, sprang a pleasant surprise when he made known the fact that he had been a married man since July, 1919. This announcement was made when he requested leave to take his belated honeymoon during the first part of April. Mrs. Duffield had quite an extensive honeymoon with "Duff" in "No Man's Land" of West Virginia.

F. X. Peterson, transitman, recently transferred to the Wheeling office, cannot stand the monotony of male company any longer, or does not fancy the company of the Wheeling girls, as he has decided to become a benedict. He left on his honeymoon May 17 and took his bride to the Wheeling metropolis with him.

H. J. Campbell, assistant pilot engineer, resigned from the service on April 30 to accept a position with a local engineering concern. We all regret his leaving and wish him success in his new undertaking. G. F. Clark, from the Baltimore office, has been promoted to position of Assistant Pilot as of May 1.

Cincinnati Office

Have you seen our Bonney boy from Baltimore?

One man out here surely is Noble; then there is one just like Stone.

Some of the Valuation men seem to think that freight cars should be handled on boats in the Brighton Yards. This idea is caused by the incessant rains during the time they assisted in switching recently.

Chicago Office

H. E. Gregory, abstractor, lost a bet this month. He had to treat the office to cigars

and candy. Now he carries his lunch with him. Her name is "Lois Jane" and weighs 7½ pounds. Too bad, Harry, we're sorry it couldn't be Joseph.

Those who know "Ossie" Norman (celebrated transitman in our midst) have wondered if by some chance he fell when quite young and hurt his head. Let me put you straight: he fell about a year and a half ago, when he promised to "love, cherish, honor and protect" and he's never been quite right since. He has our sympathy for a speedy recovery to good common sense.

Attention of all Offices

Several WEEKES ago, PRYOR to Easter, the following incident took place on Train No. 5 and is vouched for by the Pullman PORTER.

It was a WHITE SUNDE and the train was in the midst of a STORM. As it pulled out of RICHMOND, a wealthy BREWER, with MOORE money than brains, entered the Pullman, accompanied by a KYDD, carrying several BAGGS of ARMOUR'S fertilizer. The BRATT'S name was MICKEY and he was too SMART for his age. He reminded one of a female fox TERRIER trying to BARKER head off.

The BREWER was sleepy, being FULLER of LAGER than ever before. As his berth was not ready, he started a RAU and went KLIER out of his head. He pulled the wrong BELL, which stopped the train suddenly, causing a shower of hot COLES and a large STONE to come through the window. This made the BREWER GREEN in the face and he looked like a FABER pencil that had been sharpened by a BUTCHER. His talk sounded like COHAN on the telephone and he wanted to BOYCOTT everybody on the train. In the midst of the excitement, in walked BRYAN and WILSON, the latter closely followed by Dr. GRAYSON.

Even the COOK from the Diner started to SMYRK. In the next seat a TAYLOR and a BAKER started to fight and wanted JUSTICE. The KYDD by this time started to tell of his past life.

When quite young, he traveled with Sophie TUCKER, Fannie BRICE and the WATSON sisters, demonstrating "There's a Service STARR in our window."

At ten years of age, he drove a CRAWFORD car from COURTLANDT Street to JONES Falls and thence to GEORGE Street in five minutes.

When only 12, he sold WILBUR'S Buds, CARTER'S LITTLE Liver Pills and WELCH'S Grape Juice, trying to make his ARMSTRONG.

He mentioned his NOBLE sister, who has studied the McKEE system of shorthand and operated an OLIVER typewriter. She a PIERCE-Arrow car, which she had bought at a big PRICE, but one day while trying to TURNER around, in order to get past an old FORD, her little brother very nearly knocked her BLOCK off. This made the KYDD laugh and he told her to buy a CAMPBELL next time. To keep him quiet she gave him two NICHOLS to WARNE him.

Auditor Merchandise Receipts

Correspondent, P. H. STARKLAUF

A dollar spent in railroad transportation today has greater purchasing power than any other money. Think it over.

Culminating in a romance started in the Interline Settlement Division of this office several years ago, Miss Alice M. Gill was married to R. J. Drechsler on April 28, Rev. Father Callahan at St. Cecilia's Church, Walbrook, officiating. A brother

of the bride and sister of the groom acted as best man and bridesmaid, respectively. After a wedding breakfast at the home of the bride, the newlyweds left for a trip to Niagara Falls.

Here's another! W. S. Donaldson, Interline Settlement, to Miss Mildred Carpenter, on April 5, by Rev. Father O'Conner, St. Luke's P. E. Church. Best wishes.

The duties of the Interline Chief Clerk periodically compel his presence on the outside, and in order to economize on stationery (spirit of the times) he was presented with a leather brief case by the Assistant Head Clerks.

The Librarian, who is ever solicitous of our welfare as readers, surely deserves our attention when it comes to doing little things to prolong the life of books, such as a new paper cover now and then or a daub of glue here and there. It creates a more favorable impression on the next reader who gets the repaired book.

The usual fraternal spirit prevalent here was again demonstrated when fruit, etc., was tendered our boys who were so unfortunate as to have been seriously ill recently. Those so afflicted were: J. B. Massicott, S. T. Newton and G. S. Moore.

Our sympathies go out to fellow clerk James Scharf because of the death of his sister.

When two young ladies of our Revision Division tell us they are going to visit relatives of one of them at Blanchester, Ohio, and then go and spend most of their time in Cincinnati, its high time to be observing. The Weller-Gustin twins know all about it.

There was quite a little excitement among the boys at Mt. Royal the other morning when Miss Michel assumed duties as stenographer in the Correspondence Bureau.

A singular thought struck me the other day when one of the wounded overseas boys from the Base Hospital at Fort McHenry, entering a local theatre on a complimentary ticket, paid war tax. After being maimed, probably for life, for the sake of Democracy, why should a wounded soldier pay war tax? Why pay any bill twice, when you have the first one receipted?

Manager Everhart's dance came off splendidly on the evening of April 15 at the Automobile Hall. It was just the kind of an evening to have a dance; the music was fine and pretty girls were very much in evidence. Everyone seemed to have a good time.

For the sake of unity and harmony, the three baseball teams have picked their best players and formed one strong team under the direction of Mr. Everhart, who has entered his team in the System League. With the lineup as promising as it seems to be, success is probable. Dates have been secured with several teams in Washington, D. C., Connellsville, Pa., New York, N. Y., Philadelphia, Pa., York, Pa., Savage, Md., and Cumberland, Md. New uniforms were ready on May 15, the gift of a friend. The Club is out to win, and their aggressiveness is evident. Several changes have again affected the organization. Success to them.

Auditor Miscellaneous Accounts

Correspondent, MARY E. PEARRELL

Mr. Stork paid a week-end visit to the home of Mr. and Mrs. George Fromtling on April 16 and left a baby girl. Mr. Fromtling is surely a proud daddy and we feel sure that the baby will be just as proud of him when she grows up. Congratulations, George!

We wish to welcome into our midst Miss Estelle Bankard, who is acting as General Stenographer in the office. Miss Bankard first made her appearance on April 5, and has not yet become thoroughly acquainted with the entire force. She has been accused of having "Vampy Eyes," so you married men and bachelors had better take a little advice and "steer clear."

It has been rumored that Mr. Homrighausen is giving instructions in regard to growing mustaches. Mr. Homrighausen himself has a very poor specimen of one, but maybe he didn't follow the instructions carefully enough. Anyway he is not really guaranteeing results. Better start a new one, Mr. Homrighausen.

Miss Hazel Shipley has again resumed her duties as Clerk under supervision of B. A. Lippert, after having been confined to her home for two weeks with a bad case of measles. We are glad to see you back again, Miss Shipley.

The old saying, "early to bed and early to rise," makes a man healthy, wealthy and wise," applies in other ways as well. Our Chief Clerk is retiring early and rising early with the hopes of downing the H. C. L. From what we can learn he is very much interested in his garden. Best of luck to him!

Auditor Passenger Receipts

Correspondent, GEORGE EICHNER

"Base-ballitis" has gripped the fair sex. Their interest was manifested when they presented a large and beautiful pennant, suitably inscribed, through L. M. Grice, Assistant Auditor, to our manager, J. M. Finn. Much is expected of the team, especially when the fanettes throng the lines.

Misses Luttmann and McCubbin are wielding the racquet in great style and threaten to make Snyder and Machin go at top speed for tennis honors of this office.

The A. P. R. Welfare Association dance of April 30 was quite a success. Our office committee lived up to expectations in furnishing merriment galore.

Much has been heard of Frank Lucian Snyder, alias "Snitz," alias "Pollyanna," concerning his ability as a racquet wielder. He recently stated that he holds no fears from "Williams," alias "Bob Machin." Naturally all are anxious to see the pair matched. "Snitz" believes in advertising, hence the cartoon.

"Snitz" Tuning Up

Led by the honorable Albert Hiltz, a mourners' brigade has been formed, composed of Messrs. Cook, King, Lewis, Mewshaw, Plunkett, Patterson, and Schwatka. They are ready for bookings anywhere and anytime. Rates reasonable.

New York Terminals

Correspondent, SARAH ROLMES

Because of pressure of work, John Duffy, our former correspondent, has been relieved of this assignment. He was one of the best correspondents we've ever had. We are sorry to lose him as our correspondent, and trust that should his duties at some future time permit, he will again serve us in this capacity.

It is rumored that Patrick Sullivan, clerk, is engaged to a pretty blonde, also employed at Pier 22 and who resides at Coney Island. At last the mystery is solved as to why "Patty" takes the Coney Island boat on Saturday nights. This gentleman came out number one in both the physical and mental tests for the Police Department.

"Speed King" Patty, Mail Department, so named because of his lightning speed in doing his routes, seems to jump at the chance to look up something in the record room for Kathryn, our new File Clerk. This despite the fact that everything in there is piled high with dust. Oh, well, "there's a reason."

We have with us in the Cashier's Department, E. J. Levy, ex-member of the New York Consolidated Stock Exchange. Mr. Levy must be competing with "Bob" Hilliard in his dressing, for he is never seen without his "spats" and the rest of such paraphernalia.

F. W. Garlich is contemplating a delayed honeymoon to Denver, Colo., for he has asked for a 60 day furlough. His request for transportation also included a Pullman. Some class to the fellow!

F. O. McArdle, payroll clerk, has left the service to become connected with the International Mercantile Marine. As May Tobin, who also resigned a few months ago, is stenographer there—just put two and two together.

Everyone will be glad to hear that Betty Loughlin and "Tom" Duffy, both former employes of Pier 22, have taken the vow "For better, for worse."

Miss Harriett Shirley, who wears a Tiffany sparkler on the proper digit, was caught counting her fingers in this manner: "May-June-July-August-September, 1-2-3-4-5." Why not ask your Ouija Board, Hattie?

Mrs. Miller, stenographer, has returned after a two-weeks' illness, caused by a nervous breakdown. Glad to see her on the job again.

"Nat" Fowler, who recently recovered from a long spell of illness, has resumed, with his duties, his old chirpy ways. "Nat" is a regular Romeo among the ladies, yet unlike the Shakespearian hero, he does not concentrate on any central object.

Michael J. Sullivan, stenographer, and a crackerjack at that, is now connected with W. P. Tanner-Gross & Co., as is R. M. Frey, our old-time Traveling Claim Agent.

Did you know that we have a real, live hero in our office? Yes, and he's "Jim" Bradley, in the Mail Department. A short

time ago he stopped a runaway horse on that most crowded of thoroughfares, Broadway, and received \$5.00 for his bravery. Then what does he do with the five bucks but blow them in on getting each boy in his department a pound box of candy.

The "Spotlight" on Our Men

- F. W. G. has a baby face, but will you tell me why
 C. F. S., our sweet Bill Clerk, should make him heave a sigh?
 A. H. B. is a talker sure, but how sarcastic, too!
 V. R. C., nice as can be, will fix things up for you.
 J. F. W., slow but sure, will manage to get there,
 J. J. D.'s ambition's high and as deep as his red hair.
 C. J. S., no shining star, but dances like a breeze;
 I. C.'s a fiddler grand, who also loves pink teas.
 J. L. likes girly, too; he's such a ladies' man;
 M. K. M. doth follow on, and shouts when'er he can.
 B. V. J. would be O. K., with his temper in control;
 J. A. C. our friend is he, a thoughtful, willing soul.
 D. A. H. would make a handsome hero of the movie screen,
 T. B.'s a reg'lar Vamp, the worst we've ever seen.
 A. J. M.'s a pleasant chap, and happy, as you know;
 W. T. E., so good is he, we'll give him our first row.
 C. H. W., "Our Gentleman," as you will all agree;
 J. W. O. will always wear a smile for you and me.
 C. R. is meek and gentle, he's just a little dear,
 F. R. D., gay as can be, and full o' joy and cheer.
 W. J. L., is quite obliging, though he may be somewhat shy,
 P. J. O'C., is modest, too, and O, we wonder why!
 F. W. N., although the last, is not the least, by far;
 If bosses went upon the stage, he'd be their leading star.

Staten Island Lines

Correspondent, G. F. GOOLIC

W. H. Hill, clerk in Division Accountant's office, has been promoted to Assistant Conducting Transportation Timekeeper, vice R. Tilson, resigned.

W. S. Yerks, paymaster, 295 Broadway, has resigned to work the trucking business for himself. The boys all wish him the best of luck.

J. V. Costello, clerk to Trainmaster, has been promoted to Assistant Chief Clerk to Superintendent, vice J. DeLaPena, resigned.

I. Houseman has been promoted to Clerk to Trainmaster, vice J. V. Costello, promoted. "Ike," why don't you get the 5-43 any more? Kept busy? Don't let the job get the best of you!

J. Goodsky has been employed as Stenographer to Trainmaster, vice I. Houseman, promoted.

Cars Are Only Earning When the Wheels Are Turning

Standard track over A. K. Bridge, which runs from Staten Island to New Jersey

Baltimore Terminal Division

Correspondent, F. H. CARTER, *Secretary to Assistant Superintendent*

"Tommy" Ferkler, who has been with us for quite a while as Secretary to the Superintendent, has accepted same position with the Division Freight Agent. F. H. Carter succeeds Mr. Ferkler. Both have our best wishes for success.

A delightful evening was spent Friday, May 14, by your correspondent at the residence of F. W. Melis, chief export clerk at Locust Point, who with his wife and friends were celebrating the twenty-fifth anniversary of their wedding. His good wife and charming daughter put forth every exertion to please and entertain the many friends who called, and to say they succeeded in their efforts would be putting it mildly.

This was the silver wedding anniversary of Mr. and Mrs. Melis and they received quite a number of handsome tokens of remembrance and friendship.

May they live to celebrate their golden wedding and may your correspondent be one of the invited guests, is his sincere wish.

As they travel down life's pathway,

Lovers always as of yore,

May the good Lord in his mercy

Guide them safe to that Bright Shore.

J. ROSS GOULD, *Accountant*.

Agent's Office, Camden

Correspondent, W. H. BULL

John F. Fosbrink, chief abstract clerk, was recently appointed Agent at Camp Meade. While we regret the loss of Mr. Fosbrink's services, we are quite happy in his appointment, won by his high standard of loyalty to the Company.

Entering the services of the Company on December 3, 1906, as a messenger at Mt. Clare, Mr. Fosbrink was steadily promoted until he became Abstract Clerk at Camden Station.

On May 29, 1918, he entered the Army at Camp Meade and went overseas with the 313th Infantry, participating in all the battles in which this famous regiment took part.

He re-entered the service of the Company immediately upon his discharge from the army on June 6, 1919. As Chief Clerk of

Chambers, Cole and Fosbrink—in order
and—smiling

the Inbound Manifest Department he leaves with the best wishes of all at Camden Station for his continued success at Camp Meade. Upon his departure on April 16 he was presented with a handsome ring by the members of his department. Frank Chambers made the following presentation address:

"Fellow members of the Inbound Manifest Department and others: We are assembled here today to do honor to our mutual friend and co-worker, John G. Fosbrink. During the several years that we have been together we have formed a great admiration for Mr. Fosbrink. He has performed his duties in a manner creditable to himself, and in such a way as to set an example to the rest of us. His unselfish loyalty to the Company should furnish stimulus to those of us who may be lagging. It is natural that such devotion should not go unrewarded. Therefore, it is with a degree of pleasure that we are informed of his appointment to the position of Agent at Camp Meade. We feel that this promotion is but a step in the ladder of success. We are naturally saddened at his going, but extend our best wishes for his continued advancement and good health."

The accompanying photograph is of Mr. Fosbrink (right) and two of his former fellow-workers, Frank Chambers (left) and James Cole (center).

Melvin S., age 3, Thomas J., age 4, sons of M. L. White,
Accounting Department, Camden Station

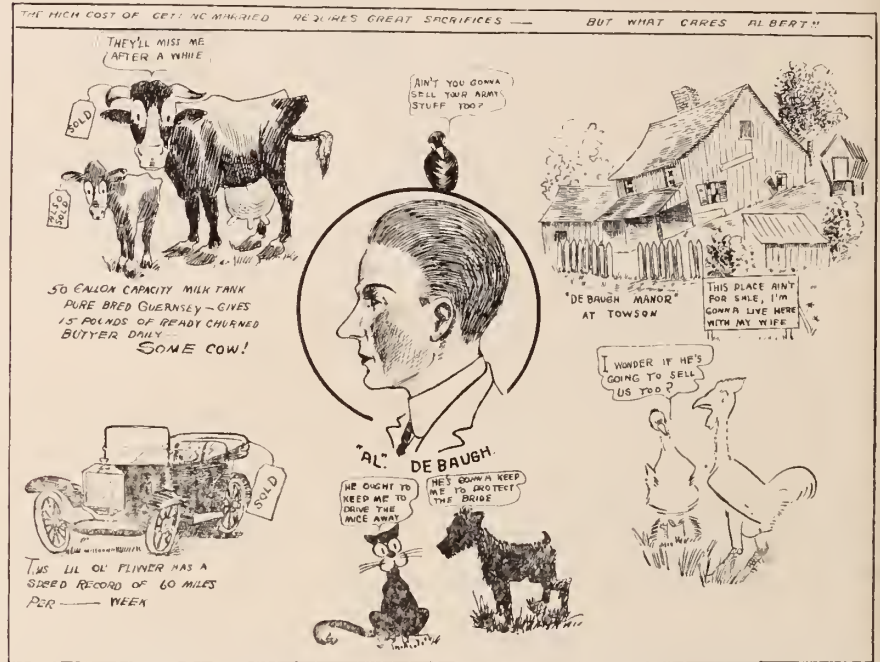

Overheard in Rate Department

L. E. L.: Oh me! oh my!
F. W. H.: Waiting for Saturday at race track.
S. G. H.: Good garsh! too much work!
E. H. F.: My, my, more correspondence!
J. R. L.: Gee willikens! nothin' doin'!
N. A. H.: Oh, I'm so tired!
E. E. C.: Gotta dig up the garden tonight.
N. S.: Never talks.
H. B.: Longing for noon.

Mount Clare Shops

Correspondent, MISS MOLLIE ALBRECHT
Secretary to Superintendent

Your correspondent recently heard some very complimentary remarks about the service rendered by the Baltimore and Ohio to its patrons on passenger trains and praise of our conductors and trainmen for their courteous treatment of patrons. This was from a territory not directly served by the Baltimore and Ohio and your correspondent was pleased in hearing it, as on former visits if one contemplated making a trip East, it was via so-and-so line. Now they leave this line to ride over "Our Line." The pleased attitude assumed by passengers was also noticeable on the trip home (Baltimore) on one of our through night trains. So, let your slogan be, "It pays to be courteous."

Mt. Clare cartoons the marriage of Albert De Baugh and Miss Bessie May Tapscott during early May

Baltimore Division

Correspondent, W. H. TARR, *Superintendent's Office, Camden Station*

Assistant Correspondents

H. A. DIETZ Shop Clerk, East Side Shops, Philadelphia
C. W. HAMILTON Clerk, Freight Office, Wilmington (Joint Philadelphia & Reading and Baltimore & Ohio)
V. J. HUEGLE Cash Clerk, Pier 22, Philadelphia
E. A. DUFFY Clerk to Freight Trainmaster, Camden Station, Baltimore
N. E. REESE Passenger Conductor, West End, Camden Station
H. H. RAYMOND Conductor, East Side Yard, Philadelphia
Miss ETHEL E. STICKLEY Clerk, Transfer Shed, Brunswick
R. E. SIGAFOOSE Shop Clerk, Brunswick Shops, Brunswick
W. S. WILDE Chief Clerk to Terminal Trainmaster, Philadelphia
E. H. ZIEGLER Special Representative, Freight Office, Hagerstown
S. R. BOSLEY Clerk to Road Foreman of Engines, Riverside

The joint agency at Camp Meade has been dissolved and F. J. Fosbrink has been appointed Agent for the Baltimore and Ohio; the joint agency at Benning has been dissolved, and D. L. Selke appointed Agent.

C. M. Phipps, motive power labor distributor, Division Accountant's office, had the honor of being the first to enter upon the scene with a straw hat of the 1920 model. We were told "Charlie" contemplated following this up with a "mohair."

Agent E. B. Rittenhouse has received several complimentary communications on conditions at his station. "The more the merrier."

Washington, D. C., Freight Station

Correspondent, W. L. WHITING, *Chief Clerk*

Since the last notes were sent in from Washington, D. C., the Supervising Division at this Freight Station has undergone some important changes. C. R. Grimm, who has been with us for two years as Assistant Agent, was transferred on April 6 to Cumberland, Md., at which station he was recently appointed Freight Agent. It is a somewhat curious coincidence that on April 6, 1918, Mr. Grimm undertook the duties of Assistant Agent here and served in that capacity for exactly two years. Our best wishes follow him in his new responsibilities.

Mr. Grimm is succeeded here by M. T. Hill, formerly with the Station Service Bureau. We extend to Mr. Hill cordial welcome, and the assurance of our loyal support.

Among other changes that have taken place in our force is the transfer of our Extension Clerk, R. W. Price (whose marriage, by the way, was reported in the May issue of the MAGAZINE), to Cumberland, Md. Here he will assume the duties of Chief Clerk to the newly appointed Agent, C. R. Grimm.

Whether we can attribute it to Leap Year, or to the much discussed (and also "cussed") H. C. L., one thing is very certain, the little love-god, Cupid, is getting in some fine work among our force. Only last month we had an unexpected marriage to report, and here we are at it again. Our Government Settlement Clerk, Miss Bertha Henry, decided that she would change her name, so on April 17, she became the happy wife of Ralph Perry, Jr., of this city. The newlyweds spent a delightful honeymoon at York, Pa., and Rockville, Md., with relatives of the bridegroom, and returned to this city where they will reside at No. 2304 Fourteenth Street, N. W. Our heartiest congratulations are extended to the happy pair, and we wish them a long, long, happy life together.

Tallyman Edgar Miller, one of our returned soldier boys, is at present on the sick list. He contracted an illness while at the front, and has not been able to combat it successfully since his return. However, with a good rest, and a little time in which to forget about his work, we hope to see him back in his accustomed place on the platform before long, with renewed strength and health.

Cumberland Division

Correspondents

E. C. DRAWBAUGH, *Division Operator*
R. G. ALLAMONG, *Secretary, Y. M. C. A.*
P. M. PENNINGTON, *Crossing Watchman*
RUTH M. CHEUVRONT, *Office, Mechanical Engineer*

L. W. Hewitt, formerly General Foreman, Stores Department, Cumberland, has been promoted to Assistant Storekeeper. He has been succeeded by P. J. Hopkins. We wish success to both.

Effective May 1, a supply train is operating on the Cumberland Division instead of the one supply car which was formerly operated. This train carries a complete line of all supplies used at all outlying points and collects all surplus material and scrap which is stored along the division. A new supply car has been furnished, to operate on this train, and it is complete in every detail. It is equipped with all modern conveniences, including electric lights. The train will be in charge of E. F. Rizer, who has been operating the supply car on this division for a number of years, and is well known to all men along the division.

F. D. Pendergast has accepted a position as Outbound and Receiving Clerk in the Storekeeper's office, succeeding C. H. Sizer, transferred.

A. I. Smith, formerly Section Stockman has been promoted to Stock and Material Clerk, Storekeeper's office. This is a well-earned promotion.

On May 2, extra 4868 east, Conductor G. L. Payne and Engineer George Shipper, with 79 loads, 6,964 tons, left Cumberland at 12.30 a. m. Following is its record: Sixteen minutes at Sir Johns for coal and water, 36 minutes at Millers delivering 25 loads, 1,969 tons, to Western Maryland Railroad, and taking water; pulled Low Grade alone and was given helper up Nine Mile Grade, train at that time consisting of 54 loads, 4,995 tons. Passed Weverton at 6.39 a. m.; time consumed from Cumberland to Weverton, 6 hours and 6 minutes.

The jurisdiction of J. L. Hayes, division freight agent, headquarters at Cumberland, has been extended to include the entire Cumberland Division and the Morgantown & Kingwood Railroad.

Station Lineman A. E. Whitlock of Cumberland, Md., has made what appears to be a record in the operation of his motor car. He received the car on December 20, 1918, and up to April 25, 1920, ran the car 7,500 miles at a cost of less than one cent per mile.

A record of its operation in detail is as follows:

TRIPS	MILES	EXPENSE	COST PER MILE
173	5,700	\$70.99	.0095

Track foremen will be supplied from Keyser, West End of Division, and from Cumberland, East End of Division. Distribution will be made from Cumberland for agents and operators on the division.

Y. M. C. A. Activities

Safety

This slogan has made deep impressions upon the minds of railroaders ever since it was first sounded. Many lives have been

V. L. Connel, Chief Clerk to General Yardmaster, Cumberland (First Trick)

C. F. Vanosdale (standing), Chief Clerk to General Yardmaster (Second Trick)

saved because of the recognition of this principle. It needs to be continually repeated. It is so easy to be careless. One becomes accustomed to danger when he faces it every day. This slogan not only applies to the body—it also applies to heart and mind. In facing opportunities for pleasure and profit, the first consideration should be Safety. No one will question the fact that in the pursuit of pleasure many a soul has lost its bearings and gone to wreck and ruin. Pleasure is to be sought, but remember—"Safety." Every man should seek to better his condition and increase his property, but should beware of the quick-rich schemes or the opportunity to appropriate that which does not rightfully belong to him. "Honesty is the best policy." Play safe in business and for the industrious and thrifty man there will be comfort.

Making a Home

"Be it ever so humble, there's no place like home," sings the poet. Our noble army of men, flying over the shining rails from day to day, turn in loving thought to the little woman who makes the home so bright and pleasant. The faces of the little children flash before the father as he makes his run. The making of a home is the greatest occupation on earth. The woman has much to do with its success or failure, but no less responsibility rests on the man. The great thought that every railroad man

Station Lineman A. E. Whitlock, efficient in Motor Car Operation

should have is that of owning a comfortable house and in making it a real home. This is possible for every man.

Jennie Smith

For nearly 60 years Sister Jennie Smith has been traveling the rails in the interest of her railroad boys. She loves God, and she wants all her boys to love Him. As an Evangelist she has spoken to thousands of men, and they all listen to her with great interest, for they know she loves them. This good woman addressed a large audience in the Baltimore and Ohio Y. M. C. A. Auditorium on April 25.

Correspondent, W. L. STEVENS, *Assistant Foreman, Martinsburg, W. Va.*

Mrs. Clara Josephine Aldridge, aged 61, wife of Foreman James H. Aldridge, died at her late home in this city, on May 12. Though for a long time Mrs. Aldridge had been in ill health, she was seriously ill for only a few days. When realizing that the span of life was about to end, this patient sufferer looked into the dawn of the Great Day without fear, and amid the ministrations of family and friends, spent the final hours of suffering with calm fortitude.

Mrs. Aldridge was always interested in the affairs of the Railroad. Her husband had served faithfully for so many years, and when her son, James H. Aldridge, Jr., grew into manhood and entered its employ, the mother, no doubt, felt that she had given her best to the service of the Baltimore and Ohio.

The funeral services were held at the house on West Burke Street on the following Friday, and the remains laid to rest in Green Hill Cemetery.

The Ladies' Auxiliary of the Veterans' Association, of which Mrs. Aldridge was a member, sent a handsome floral tribute.

A Young Railroader

Virginia M. Twigg, age 14 months, Daughter of Vincent D. Twigg, Second Trick Operator, Green Spring, W. Va.

"Spooks" Lytle
Manager of Keyser Collegian Basketball Team

The fellow employees of Mr. Aldridge feel a deeper sympathy for him, in this darkest of hours, than words can express. The "boys" sent a floral design to soften the blow by some tangible evidence of their brotherly sympathy and respect.

Brakeman John H. Miller and Miss Hattie R. Shipper were recently married at the First United Brethren Church of this city. Mr. and Mrs. Miller are residing on Liberty Street.

Our MAGAZINE grows more interesting each month. Each issue contains good articles from the various departments as well as from other contributors. Complaints are coming to the Editor of failures to receive copies of the MAGAZINE. Copies can be secured here at the office of the Superintendent of Shops or in the Yardmaster's office. Pensioners and other Veterans who have difficulty in obtaining MAGAZINES can be supplied by calling upon C. E. Auld, secretary of the local Veterans' Association. The MAGAZINE is free to you, but to take a MAGAZINE and not to read it is to abuse your privilege. If you do not want your copy, leave it for some other fellow who does. They are too expensive to waste.

Our Veterans will regret to learn of the death of one of their members, Edward A. Bowers, conductor. He was stricken with paralysis while sitting in his automobile at the funeral of a neighbor. He never recovered consciousness, and died a few days later. "Ed" Bowers has been an employee of the Railroad since his boyhood. He was a member of the O. R. C., of the Fraternal Order of Eagles, and of our Veterans'

Association. He is survived by a mother, one daughter, and several brothers and sisters. Mr. Bowers was 61 years old.

A Mule and a Car Chain

From the Berkeley Springs Branch comes the story of how Conductor G. C. Cline lost his best and only car chain.

One day, when Conductor Cline's train was coming up the Branch, an old mule came loping out of the bushes, taking the right-of-way, and challenged the train to a race. All went well for Long Ears, who was running ahead, until he came to one of the many trestles which span the little creek. Alas! all four of his feet went through the trestle.

Then came Conductor Cline's problem, how to get the mule out of the bridge. Finally he thought of his car chain. He got it out and proceeded to chain up the mule after the manner of chaining a broken car. Giving the engineer the signal, the pull began, and out came Mr. Mule dragged by the neck. Thinking that the mule had died of a broken neck, Mr. Cline waved for slack

Mr. and Mrs. Crites have our heartiest good wishes.

John W. Twigg, treating engineer, has one this year, too. If you don't believe it come up and he will demonstrate how to negotiate the high spots. It's a nice, new one, electric starter, and everything! A regular 1920 Ford Tourer

J. R. Myerly, treating engineer, has been granted leave of absence, to attend school. J. C. Alexander, was appointed Treating Engineer, April 16, to fill the vacancy.

Keyser

Correspondent H. B. KIGHT

Dr. I. C. Iber of Cincinnati, has been appointed Assistant Medical Examiner here, vice Dr. Gustav Ludwigs, resigned.

William Hoffman, one of our section men at M. & K. Junction, was caught in a ditcher while in the performance of his duties a few weeks ago, and had his jaw broken in three places. He was rushed to the Hoffman Hospital at Keyser, where he

Members of Keyser Collegian Basketball Team. See Note.

in order that he might retrieve his chain. But Long Ears had ordered things differently, for when he felt the chain slack from the car, he rolled over, jumped to his feet, and made off into the hills with Captain Cline's chain still hanging to his neck. Neither the mule nor the chain has been seen since. Captain Cline says he wouldn't have minded killing one dern mule, but that he surely did hate to lose that chain.

Timber Preserving Plant

Correspondent E. E. ALEXANDER

We are busy smashing records. In March all previous records were broken and new records established both for output and delays. During April all previous Plant records were smashed with a big "S" when 114,115 cross ties were treated, in addition to more than 1,000 switch ties and other miscellaneous material.

The previous high water mark was established in August, 1914, when 113,131 cross ties were treated. Plant delays were reduced during the same month ten minutes less than the record for March.

The "Stork Express" has brought the following arrivals: to Truck Foreman and Mrs. R. H. Corbin, a daughter; to Fireman and Mrs. P. J. Brill, a son, Charles Marshall; to Retortman and Mrs. W. M. Mayhew, a daughter, Vera Vivian.

Guy William Crites, retortman, and Miss Pearl Rosaline Alderton, of Oldtown, Md., were united in marriage on Wednesday, April 14, by Rev. H. Eugene Richardson. Jesse Athey, of Oldtown, and Mrs. George Taylor, of Green Spring, were attendants.

received medical attention, and we are glad to report that he is better.

Olin F. Wilt, west end brakeman, died at his home on D Street, Keyser, April 1, after a short illness. He leaves a wife, to whom we extend our deepest sympathy.

"Cal" Filler, formerly Chief Clerk to Storekeeper here, has been transferred to Baltimore to do special work. W. L. McFarlane has been appointed Chief Clerk, vice Mr. Filler. Good luck, fellows.

W. H. Virts has recovered from a recent operation and is back on the job as Terminal Trainmaster, with offices in the depot. Mr. Virts was General Yardmaster here before his promotion. H. D. Burkhart succeeds Mr. Virts as Yardmaster.

When you look around and see the "young" fellows who are working every day do you ever stop to wonder just how long they have been in the service? It is interesting to know that on April 20, Conductor John W. Christman finished 50 years' service with the Company and is still on the job, running his turn every day. Mr. Christman is one of our most highly respected citizens and we wish for him many more years of life among us.

Colonel W. J. LaVelle, our oldest Train Dispatcher, now examiner on the Book of Rules, sustained a bad fall at his home at Tunnelton a few weeks ago. We are glad to report that he is improving and we hope to have the genial Colonel back with us soon again.

We desire to thank the Pickwick and the Liberty Theatres for their cooperation in helping us to reduce the number of auto-

Mrs. C. L. Kittle, wife of Tie Treating Inspector, and her charming little daughter, Caroline

mobile accidents at grade crossings, by running the slide which was furnished by the Welfare Department.

The much heralded Keyser Collegian Basketball team is made up of Baltimore and Ohio men with but one exception. Under the leadership of Mr. "Spooks" Lytle, a local business man, as manager, they have won 33 games out of 35 played, and the two lost were on foreign floors. They are a clean bunch of sportsmen and are the pride of Keyser and of the Baltimore and Ohio. Following is the line-up: Shaffer, one of our painters, guard; Slocum, warehouse foreman, forward; Montgomery, car repairer, guard; Gibson, locomotive fireman, captain, forward; Chesire, car repairer, substitute; Dorsey, machinist helper, substitute, and "Big" Hoyt, formerly an employee, center.

(Lack of space prevents our running the extended and appreciative individual comment and the record of games and scores, sent in by Mr. Kight.—Ed.)

On May 10, a fire of unknown origin totally destroyed the right wing of our Rest House. This same building was badly damaged some time ago, and was just repaired and fitted up for occupancy again in March.

One of the most essential things at our passenger station is an invalid's wheel chair, placed there some time ago for the use of our passengers. It seems as though it is not generally known that we have this chair, and, therefore, we wish to say through the MAGAZINE, that this chair is always at the service of those who need it.

We regret that our old friend Adam Douglass, of the Stores Department, continues ill at his home.

Ebert Ross, section man at Rowlesburg, sustained a broken leg when the hand car on which he was riding jumped the track. We are glad to say that he is coming around all right under the attention of Dr. Hoffman at the Hoffman Hospital.

A picture of the Hoffman Hospital, owned by one of our Railroad physicians, Dr. Hoffman, has been already shown in our MAGAZINE. We are proud of our Doctor and of his institution. Living in the railroad terminal of Keyser, and for many years Keyser's leading physician, Dr. Hoffman deserves much credit for his splendid work, not only in building the hospital, but in the care that he has given so many of "our boys." Skilled nurses assist him in his work here, and many of their patients testify that the kindly dispositions of these trained women have brought them many a ray of sunshine. We take off our hats to Dr. Hoffman and his staff.

Miss Edythe McLakin has been transferred from the Master Mechanic's office here to the Superintendent's office at Cumberland.

G. W. Stell, agent at Keyser, has been appointed Relief Agent. Mr. Stell's former position has not yet been filled.

Connellsville Division

Correspondents

S. M. DEHUFF, *Manager of Telegraph Office*, Connellsville, Pa.

EARL E. SHANK, *Office of Superintendent*, Connellsville, Pa.

On February 3, W. G. Carter, our well-known agent at Somerset, and Miss Elsie Taylor, a nurse on the staff of the City Hospital, Cleveland, Ohio, were quietly married.

The marriage was kept secret until April 8, when it was formally announced. Mr. Carter and his bride are assured of the cordial wishes of all their Baltimore and Ohio friends for a future of happiness.

Our sympathies are extended to Yard Conductor L. E. Welling in the death of his little daughter.

Our sympathies are extended to Engineer M. H. Butler and family in the death of the former's father, John Butler, on April 29. Mr. Butler was over 80 years old.

Our "foxy li'l fren" Stanford A. Marshall, whose engagement has been generally known for a few weeks past and whose marriage was consequently anxiously awaited, pulled a clever little trick and moved the date up a week, being quietly married on the evening of May 7 at the home of his bride, Miss Margarita Wishert, of Connellsville. Our best wishes to the happy couple!

R. Carson Paine, C. T. time clerk in the Division Accounting office, has obtained an indefinite furlough because of ill health and will join his father in Florida. Paine's going will leave a gap in "Jim" Creedon's organization that will cause that young man many perplexing moments until he succeeds in closing it.

Trainmaster J. F. Miller, Master Carpenter H. L. Forney, General Supervisor T. F. Donahue, and Track Supervisor P. Miller, on bridge inspection trip, Northern District, Pittsburgh Division

Baltimore and Ohio baseball enthusiasts are already at work organizing teams on our division. Present indications are that at least four good teams will be in the field this season, Connellsville, Smithfield, Rockwood and Somerset.

Captain "Steve" Beucher has banded his team of Baltimore and Ohio shopmen and has already played a few games.

On April 17, P. A. Jones, assistant chief clerk to the Superintendent, resigned to accept the position of Chief Clerk to the Trainmaster on the Pennsylvania Railroad at Uniontown. Percy has served the Company in various clerical positions for the past 16 years, and his departure has been generally regretted, although we are glad to learn of his obtaining a better position.

On April 15, J. D. Trump, C. T. time clerk in the Division Accountant's office, Connellsville, resigned to accept a similar position with the Pennsylvania Railroad at Uniontown.

Pittsburgh Division

Correspondent, E. N. FAIRGRIEVE, *Car Distributor*, Office of General Superintendent

The accompanying photo shows Trainmaster J. F. Miller, Master Carpenter

"Time!" Tovey and Lavelle at Glenwood

H. L. Forney, General Supervisor T. F. Donahue, and Track Supervisor P. Miller on bridge inspection on Northern District.

William Fellows, for a number of years Manager of the Telegraph office at Pittsburgh, has sent his last message. Mr. Fellows was taken sick some time ago and went West for his health, but his condition did not improve. He returned to Pittsburgh, where he died on Friday, May 14. Mr. Fellows was a faithful employee, and we extend our sympathy to his widow in her loss.

It is desired that each and every employee get a copy of the MAGAZINE and if this is not being accomplished, we would be glad to know, so that the matter can be corrected. Magazines will be sent to the various distributing points as usual for distribution to the employees.

Glenwood Shops

Correspondent, FRANK RUSH, *Shop Clerk*

The above picture is of "Jack Dempsey" Tovey, clerk to Assistant Shop Superintendent, left, and "Jess Willard" Lavelle, on the right. Both of these young men have had considerable training along this line and no doubt you will soon find them out in fast company. It is a very hard matter indeed for either of them to obtain a fight in Hazelwood in their own class. Tovey is also the star shortstop on the Glenwood baseball team.

Miss Frances Leeper has been appointed secretary to Superintendent of Shops at Glenwood. We wish her good luck in her new position; we know that she can handle the position to satisfaction. Miss Leeper was formerly Statistician Clerk in the office of the Superintendent of Shops.

The accompanying picture is of J. S. Sipe and his grandchildren. Mr. Sipe first entered our service on Pittsburgh

J. S. Sipe and Grandchildren

Division as fireman in August, 1884, and was later promoted to engineer, which position he held until 1886. He is now our faithful Night Watchman at Glenwood.

Our officers are showing a sympathetic attitude toward First Aid which will result in it becoming an institution if the committee will but hold up its end. There have been installed in the Foreman's office of each shop, new style stretcher cases, each of which is provided with sufficient space for a well regulated supply of First Aid material.

Miss Jean Dorsey, clerk in the office of the Superintendent of Shops, and E. J. Myers, locomotive inspector, are to be married this month. Before Miss Dorsey left the office she was presented with a handsome and useful present.

A. C. Plante, clerk in roundhouse at Glenwood, died recently. "Al," as he was known throughout the shops, was a veteran in the service. He had been sick for some time prior to his death, but refused to give up. Our sympathy is extended to his widow and daughter.

Born to W. Benoit, leading car inspector at Dennison, a baby boy. Congratulations!

It was with regret that we heard of the death of J. J. Dillon, layerout in the boiler shop at Glenwood. "Jack" was well known throughout Glenwood shops and was well liked. His family has our sympathy. On the day of the funeral, the boilermakers marched in a body from the corner of Glenwood and Second Avenues to the home of the deceased.

"The Big Noise"

Joseph Bolder, known as "The Big Noise" began his career on the Baltimore and Ohio Railroad as Telegraph Operator at Vista Tower on June 20, 1902. Six years later he was transferred to "WJ" Tower, where he still holds forth and issues orders. He knows his business and everybody who knows him knows that he knows his business. He points with pride to a record of six years during which he was neither absent nor late. Now, however, since the Railroad has decided that a man shall spend as much time at home as he does at his work, "Joe" spends his leisure hours at home with his children, teaching them that "Be on the job" is one of the greatest of virtues.

"Louise"—He Carries a Lazy Man's Load

Louis E. Barr, foreman in charge of signal maintenance at "WJ" is a counterpart of the famous Pollyanna. You can't make him mad. Girls, here's your chance. One of you get busy and give "Little Louise" your heart and hand. He is part owner of a confectionery store which he and "Sunny Jim" Lannon operate as a side line. "Louise" launched into Railroad work at "WJ" Tower on April 1, 1909. From here he was transferred to Bessemer in August, 1915, remaining until the latter part of 1917, when he returned to "WJ" tower. He does not give a job the "Good-bye" just because it has work connected with it; on the contrary, he often doubles over, working an extra ten hours for some fellow worker who happens to be ill. We Glenwood folks compare "Louise" to a good dinner of ham and cabbage—agreeable to everybody.

That "good goods are put up in small packages" is proven by Mr. Dashiell, agent at Glenwood. Although he has not been in the service of our Company for an extraordinary length of time, yet he is a friend of every Baltimore and Ohio man at Glenwood. Mr. Dashiell was appointed Agent here on January 15, 1904, by former Superintendent Bruce W. Duer. He served

Benwood Shop Employees

Left to right: L. H. Patrick, F. P. Reilly, R. Richards, G. W. Grow, W. J. Burge, J. T. Reilly

faithfully under Superintendents Duer, Peck, Gorsuch, Brady and Beltz, and is now again under Mr. Gorsuch. On March 9, 1918, Mr. Dashiell was promoted to Relief Agent at Glenwood, but our officers saw fit to change his title again, and so, on September 30, 1918, his position became that of Ticket Agent and Paymaster. Messrs. A. L. Muirhead, now relief agent of the Pittsburgh Division, and D. B. Painter, assistant to the Agent at Braddock, are two promising young men who received their training under Mr. Dashiell. Our Agent does not consider that his 8 hours are up until his desk is cleared. This is evidenced by the accuracy of his records and by his willingness to be of assistance at all times. He is always on the job, and can be found and marked "present" when needed.

Monongah Division

Correspondent

E. S. JENKINS, *Secretary to Division Engineer* Grafton, W. Va.

E. Pepper, of Akron, Ohio, has been appointed Chief Clerk to Division Engineer in place of F. Warder Tutt, resigned. The many friends of Mr. Pepper are glad to welcome him back after four years absence from the division.

Miss Blanche Bartlett, stenographer in Trainmaster's office, Fairmont, stole a march on her many friends by becoming Mrs. Grover Stewart on March 30.

"Dan" Cupid is whispering that Stephen M. Boyd, one of the Engineering Corps, is about to become a benedict. Congratulations, Stephen.

R. E. Zepp, supervisor, spent a couple of days with his family at Wilmington, Del., during the last of April.

D. J. Fury, first trick operator at "MD" Tower, who spent the winter with his family in California, returned home much improved in health, and resumed his duties April 1.

Charleston Division

Correspondent, M. W. JONES, *Secretary to Superintendent*, Weston, W. Va.

"Tonight's the night!" All our girls are away at the Leap Year Dance. The Chief Clerk is studying baseball rules; the "Boss" is down the line; the "Chief Train Delayer"

is figuring out new schemes for delaying trains; the "Car Disturber" is trying to place one car in three places on a 33½ per cent. basis; the Assistant Chief Clerk is packing up, ready to move into his new palace in the McGary addition; "Charlie" Criswell is in the "Marble Palace" figuring out how he can get away from charging so many claims to the Charleston Division; the office is peaceful and quiet. On with the knitting!

The Charleston Division is very much alive. Business is beginning to pick up, and with the coming of normal conditions, which we all hope will be in a very short time, we expect to send out circulars to our agents, warning them not to allow cars to stand on side tracks for fear of flattening their wheels, and also to increase CAR MILES. We have had a pretty strenuous time during April. Old King Pluvius has reigned (and rained) supreme. He has kept us busy cleaning up slides and washouts, etc., but none of them of a very serious nature. "Major General" Richard Brooke, our Division Engineer, has asked for this gentleman's resignation, and has requested that we appoint in his stead King "Sol."

Our Car Clerk at Gassaway, C. K. Welsh, has accepted a position as Shop Clerk in the office of A. H. Hodges, assistant master mechanic at Keyser. We are sorry to lose him, but wish him success.

One of our young ladies owns an automobile. Recently we saw her driving a representative of the Maintenance of Way Department through Weston in this car. We respectfully suggest that we have plenty of good material in the Superintendent's office, without going outside. "Charity begins at home," my friend.

A meeting was held on April 16 at Weston for the purpose of forming the Charleston Division Baseball Club. The following officers were elected: P. D. Marsh, president; L. G. Berry, vice-president; J. P. Ryan, treasurer; C. W. Dixon, captain; F. H. Remalay, assistant captain; W. H. Schide, manager of the team for the division, and Miss V. B. Hickman, secretary. Another meeting was held April 29, when all matters in connection with the Charleston Division team were considered. A list of players and the positions they can play was made up. Committees have been appointed to report on grounds, uniforms, finance, etc. About \$200 has already been collected towards expense of uniforms, etc. The question of raising money was brought up, and the

finance committee was instructed to ascertain the attitude of the authorities on Sunday ball games, and also to consider the question of holding a dance, the proceeds of which will be devoted to the ball club expenses.

W. H. Schide represented the Charleston Division at the meeting of System Baseball Team Managers at Pittsburgh, Pa., on May 7.

Road Foremen Marsh and Davidson have recently purchased new hats, several sizes larger than the ones they now wear. Did I hear you ask "Why?" The answer will be found in the statement of Fuel Performance in freight service for the month of March. The Charleston Division heads the list in savings effected. We did not do quite so well, however, in passenger and yard service. Now, Messrs. Road Foremen, it is up to you to uphold the honor of the division; keep your first place on freight service, and at the same time to bring your passenger and yard engines up to No. 1. We know you'll do this without delay.

On Sunday evening, April 18, fire broke out in the Richwood station about 10:45 p. m. Fortunately it was observed and an alarm turned in promptly, and after about an hour's work was completely out. The fire apparently started from defective electric light wiring in the record room. A few old records were destroyed by the fire and damage to the extent of about \$2,000 done to the building. Repairs are being made by Master Carpenter A. W. Walters and his gang.

The Gassaway boys promise us some real baseball this season. The shop boys may be seen any evening after 4:00 o'clock levelling off ground, putting in stakes, building the grandstand, etc. Frank Henretty and Samuel Lemons are looking after the shop interests. Assistant Superintendent Kinton, Supervisor J. E. Conley and Agent Davis are doing their share also.

We regret that two of our popular mechanics, James Martin and James Chalmers, have left us.

The recently formed cooperative store at Gassaway has been incorporated for \$20,000 and stock has been sold to the amount of \$7,000, practically all of which is held by our employees.

Work is going forward rapidly on several new dwellings in Gassaway, among them being one for Machinist Jankey. When completed these dwellings will certainly assist in alleviating the scarcity of houses which is being felt very keenly by many of our employees who wish to have their families with them.

Our joint office at Elkins, with the Western Maryland, is under the efficient care of C. H. Alderton, as Joint Freight Agent, and to him is due the credit for the following information:

"You know what Sherman said about war. He was right, but J. F. L. of our joint office says that suspense is worse than that. His very best friend went home for the Easter holidays. On arrival she found a nice bunch of Virginia red roses awaiting her. She immediately wrote "Jack" a nice little note, thanking him for the American Beauties. If you know the difference in price, you will appreciate the point. Poor "Jack," he realizes now that some one did not know the difference between the two kinds. But he knew; he paid the bill."

Miss Bess Lyon, our midget stenographer, returned recently from a month's leave of absence which she spent in Florida. She says she had a fine time, but is mourning the death of her pet alligator. Our sympathy.

Gassaway friends advise us that H. Brinkman, former General Foreman, has accepted a position as General Foreman with the Chesapeake and Ohio Railroad at Russell, Ky.

A. D. Wainer, yard and demurrage clerk for the past two years in our Elkins office, has resigned to accept a position with Armour & Co. He is succeeded by M. B. McPhillips.

General Superintendent J. M. Scott and Chief Engineer Maintenance of Way and Structures E. Stinson recently made a trip over the line from Charleston to Elkins.

accompanied by Superintendent Trapnell and Division Engineer Brooke. We had hoped to see our General Manager with them, but business called him back to Baltimore before he reached our territory.

H. Brinkman, general foreman at Gassaway, has resigned. He is succeeded by H. V. Helmie, who hails from Parkersburg.

Where the Trained Man Wins

"Arrangements have been made with the International Correspondence Schools to conduct their system of instruction among the employees of the Canadian Government Railways, as they have been doing for years among the employees of other railroads throughout the Dominion with great success. Years of observation have convinced the management that the work of the Schools is beneficial to railway employees and the service generally."
—CANADIAN GOVERNMENT RAILWAYS. Circular No. 11.

Whether you are in the engineering, operating, maintenance or clerical departments, your advancement will depend largely on the thoroughness of your training. And whether you are going to be a trained man or not—whether you are going to advance or stand still—is largely a matter for *you* to decide.

If you really *want* a better job and are willing to devote a little of your spare time to getting ready, the **International Correspondence Schools** can help you. More than two hundred and fifty of the railroad systems of the United States and Canada have endorsed the **I. C. S.** method of instruction and recommended it to their employees.

You're ambitious. You want to get ahead. Then don't turn this page until you have clipped the coupon, marked the line of work you want to follow and mailed it to the **I. C. S.** for full particulars.

Marking the coupon is simply the act of investigation—in justice to yourself you can't afford to do less—and it doesn't obligate you in the least.

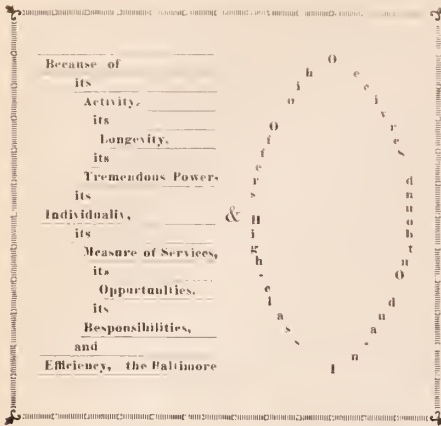

Mark the Coupon NOW

INTERNATIONAL CORRESPONDENCE SCHOOLS Box 8483-B, SCRANTON, PA.

Explain, without obligating me, how I can qualify for the position, or in the subject, before which I mark X.

wood Shop Team under his leadership is going to have a successful season. Mr. Gandy was Captain of this same team in 1917, prior to the War, and many of the lovers of this sport will recall the strong aggregation that this team represented.

Miss Mary Malooly has accepted a position in the Valuation Department. She was formerly employed in the D. S. M. P. office.

M. J. Hartwig, one of the oldest laborers on this division, is spending a few months with friends at Indian Head, Md. Maurice will be greatly missed by his many friends in this locality.

Miss Nell Fletcher, who recently accepted a position at this station as M. C. B. writer, has been transferred to Fairmont

Holloway

The accompanying picture is of H. E. Van Fossen, assistant yardmaster; H. D. Hunter, receiving yard clerk; H. M. McFadden, caller, and G. F. Frady, caller, Holloway Yard. The smile on their faces is just put on for the camera man, as at most times it is rather hard to get a smile out of any one of them.

Much interest is being taken in organizing a baseball team and it is hoped that ours will be entered in the Baltimore and Ohio League. The team will consist of some mighty good ball players and they will give some of our teams a run for their money.

The many friends of Engineer D. L. Jones will be sorry to learn of the death of his wife, at her home in Holloway, after a brief illness, on April 27.

Machine Shop Force at Benwood Shops

Left to right, standing: J. Fullerton, H. Biffie, A. Ionne, R. Schubert, J. R. Burkley, A. Schaff, R. P. Nolan (foreman), W. Wiedle, W. Seelbach, G. Hasenaur, J. L. Hughes, J. T. Kelley. Second row: E. Simon, M. Wilson, H. A. Alpanalp, W. Henry, W. J. Schaefer, J. W. Haerfield. Front row: I. B. Fette, A. O. Kettlewell

M. E. Cartwright has accepted the position of District Terminal Trainmaster, West Virginia District, with headquarters at Grafton, W. Va. Employees of the Wheeling Division are more than pleased to see our old friend moved up a notch as there is no one that is more deserving of a promotion than he. Although he is still in our district, we will miss him very much, and the Wheeling Division will lose one of the strongest advocates of Safety First.

Our old friend Charles Smoot, popular fuel inspector, is the proud daddy of a 10-pound boy, which arrived at his home on April 30. "Charley's" friends all gave him the glad hand when he reported it at the office on May 1 and he was right on the job by passing out a few of his favorite El Verso cigars. Attaboy, "Charley!"

Ralph H. Gandy has accepted the position of Captain and Manager of the Benwood Baseball Team and from all accounts Ben-

wood Shop Team under his leadership is going to have a successful season. Fairmont is Miss Fletcher's home town and although we will miss her smile, we hope to see her quite frequently.

C. W. Shields, who was recently elected County Chairman of the Non-Partisan Campaign Party, is deeply interested in politics. We feel that if he tried he could beat W. J. Bryan and get nominated for President at the next election. Keep it up, old boy.

C. C. Morris, chief car index clerk, has been elected Mayor of McMechen. Congratulations!

The sudden death of Samuel C. Stillwagon, former Roundhouse Foreman at this station, cast a gloom over the entire shop. Mr. Stillwagon at the time of his death was Roundhouse Foreman at Clarksburg. His jovial disposition made him friends everywhere and we all send deepest sympathy to his widow and mother.

Western Lines

Cincinnati Terminals

Correspondent, JOSEPH BEEL, Chief Clerk to Superintendent of Terminals

R. I. Surface, rate clerk at Winton Place Freight office, left the service to take a position with The M. B. Farrin Lumber Company. After 35 years in the Railroad Company service, it was like leaving his home, but the inducement was so great he could not resist. He is the eighth man selected by this firm from railroad companies, and almost all of these are Baltimore and Ohio men. This is an indication that our boys are "live wires."

We are told that "Charity covers a multitude of sins." Note this: Our beloved co-worker and efficient Chief Clerk, "Joe" O'Donnell, plants the seed of charity in such an humble and unostentatious way

Four Smiles from Holloway

that we cannot refrain from mentioning one of his recent noble deeds. On the morning of April 20, "Joe" encountered at the busy neighborhood of 6th and Walnut Streets, an elderly man, very shabbily clad, who was endeavoring to fish his breakfast out of a refuse barrel of a restaurant. "Joe," touched deeply by the pathetic scene, straightened the old gentleman up, put his cane on his arm and headed him into the restaurant with the necessary amount of money to buy a meal and to clothe himself in a fitting manner. But what we are curious to know is, what was "Joe" doing in this alley at this time of morning, and was this old man hemming in on "Joe's" beat in his careful perusal of the garbage barrel?

Since we have commented on the love affairs of two of the young ladies in the Superintendent's office, and in order that the remaining two will not be offended, we will tell what we know of them regarding their knowledge of the creed of "Diana." The demure young lady wearing the diamond ring, is, of course, completely gone; everything is set; all that remains now is for the preacher to say the word. But we think that the little brown-haired maid from the City of Norwood could apply her time more advantageously than entertaining fifteen young ladies on two gallons of ice cream. Why not get into the old "band wagon" like the rest of the bunch and fish around while the fishing is good? The latest news, however, from R. J. J. is to the effect that this "Dove Party" did not in any way interfere with a permanent Wednesday and Sunday engagement that a certain young Norwood man keeps.

This is "Eddie" Welsh, caught in the act of posing for an advertisement for

Fatimas, Eight Hour, or Red Cross Fly Catchers. "Eddie" was formerly a yard clerk, but at present is Passing Report Clerk in the Local Car Record office.

A double farewell party was recently held in the Girls' Welfare Room, in honor of Frederick Oehlschlaeger and Frederick Kirchner, both of the Superintendent's office, who left the services of this company to enter into business for themselves. Both of these young men were well liked by everyone who came in contact with them, and it was indeed a farewell party. They had both been in the service of this company for several years and had made a host of friends throughout the Terminals. These men have gone into the transfer business and their trade name of the O. K. (Oehlschlaeger & Kirchner) Haulage Company, is very fitting. Here's success to them in their new career. Frank Nock succeeds Frederick Oehlschlaeger as Assistant Chief Clerk; McDill Spurgeon succeeds

Frank Nock as Night Chief Clerk, and Kathryn E. Weber succeeds Spurgeon as Secretary to Superintendent.

"Eddie" Welsh, who sometime ago was one of the force of the Superintendent's office, could not overcome his "homesickness" and again joined the bunch.

Miss Sue Elmore has been transferred from the Local Freight office to Superintendent's office permanently, as Chief File Clerk.

One of the sad occurrences of the past month has been the passing of Old Jack, the well-known and faithful mule of the Baltimore and Ohio. Jack entered the service of this company in 1900. Since that time he has rendered most efficient service. He had charge of practically all the hauling in the Cincinnati Terminals, with headquarters at Storrs. About every employe around Storrs has come "in contact" with Jack. He has had quite a reputation in the Ter-

110-Piece Dinner Set Bluebird Colonial Design

\$100
Down

Amazing value. Record breaking offer. In each piece the highest type of color harmony and exquisite design has been attained. Set is in popular Colonial shape, decorated with Bluebird design, blending perfectly with the pink, lavender and green flowers. Lovely blue bordering on each piece. Each piece is fired in the glaze and guaranteed not to check or craze. That splendid Old English finish is applied in the clay before firing, giving each piece the finish of rich snowflake white. This wonderful set can be yours for only \$1.00 down and then \$2.70 monthly. Price in all \$29.95. Complete satisfaction guaranteed.

Complete Service—110 Pieces

This splendid set consists of 12 dinner plates, 9 inches; 12 breakfast plates, 7 1/2 inches; 12 coupe soups, 7 1/2 inches; 12 fruit saucers, 6 1/2 inches; 12 cups; 12 saucers; 12 oatmeal dishes, 6 inches; 12 bread and butter plates, 6 inches; 1 pitcher, 11 1/2 inches; 1 platter, 12 8-4 inches; 1 covered vegetable dish, 12 inches; 1 oval open vegetable dish, 8 1/2 inches; 1 round vegetable dish, 8 1/2 inches; 1 gravy boat; 1 sugar bowl; 1 stand; 1 bowl, 1 plot; 1 sugar bowl and cover, (2 pieces); 1 cream pitcher; 1 pickle dish; 1 butter dish, 7 1/2 inches. This set is one that will add tone and beauty to any dining room. With ordinary care it will last a lifetime. Weight shipped, about 100 pounds.

Order by No. G5979A. Send \$1 with order, \$2.70 monthly. Price of 110 pieces \$29.95. No C.O.D.—no discount for cash

Small amount down, easy payments on all articles in our big bargain catalog. 30 days' trial—money back if not satisfied. No discount for cash; no C.O.D.

J. "Eddie" Welsh

minals and since his death many stories have been told of him, and much added to his long line of achievements in the way of kicking. It is stated by many that "he could kick a fly off a person's head and not disarrange his hair." The rebuilding of Jack's stable at Storrs was a semi-weekly occurrence, as Jack seemed to delight in seeing just what kind of a record he could make in kicking the rear wall out. The list of Jack's drivers is too long to mention here, but he certainly led them a merry chase, although he has never been known to kick a man.

The death of Jack marks the last of the old regime. Horses and mules, not only on the Baltimore and Ohio, but throughout the country, are fast being replaced by the motor. But, no matter how good the motor, it can never incite the love and esteem which has always been showered on these faithful servants.

There are many people in the Terminals by whom Jack's absence will long be felt, among these being his veterinary surgeon, who did everything during the past few years to prolong Jack's numbered days. But the archangel had sounded his trumpet and it was too late for human aid.

The vacancy at Storrs created by Jack's death has been bulletined, but at this time we are not in a position to advise to whom it has been awarded.

C. H. Dreiver

Carl H. Dreiver was on a recent visit to his home in Colorado, where his father resides on a large farm just west of Elbert. The picture is Colorado Springs, with Pike's Peak in the back and Mr. Dreiver in the foreground.

"Love's Young Dream" will soon materialize. "Gus" has gone to far off Akron to seek his fortunes and eventually build that "home for two." Gloom, however, surrounds a certain young lady in the Superintendent's office from Tuesday until Saturday. The joys and pleasures of "Gus" Sunday visits have as completely faded by Tuesday that gloom prevails till the next Sunday. We guess the fellow that said, "Absence makes the heart grow fonder," knew what he was speaking. Oh, when, oh, where, are all our girls going? So strange too when we stop and divide 1920 by four and find that it is that kind of a year!

New Castle Division

Correspondents

A. C. HARRIS, *Assistant Chief Clerk to Superintendent*, New Castle, Pa.

P. W. ADAMS, *Telegraph Operator*

O. C. BEDELL, *Telegraph Operator*

The appointment of R. A. Mason to a position on the staff of E. T. Horn, supervisor of terminals, was announced recently.

Mr. Mason will be located at Willard, Ohio, and will have jurisdiction over the Northwest District. While he has not been on the New Castle Division very long, he has had, nevertheless, ample opportunity to demonstrate his ability. He has set a high standard of yard operation at New Castle Junction that will make his successor step lively. We are sorry to lose Mr. Mason, but appreciate the fact that exceptional merit means continued promotion. Mr. Mason takes with him our best wishes.

Agent R. H. McKinley at Ravenna, Ohio, reports that business is booming at his station. There are certain peculiar conditions found at Ravenna station, but Mr. McKinley has apparently solved the problem of proper handling and is making good with a vengeance.

Lloyd W. Strayer, assistant division engineer at New Castle, has announced his retirement from the service to take a position with the Johnson Limestone Co., at New Castle. Mr. Strayer for sometime was Division Engineer. He was also employed for a number of years on the Pittsburgh, Baltimore, Monongah, Chicago and New Castle Divisions in the Maintenance of Way Department. During this period of his employment his duties in connection with engineering matters brought him into contact with many of the employes on the various divisions. His pleasant disposition and friendly manner brought instant response and his friends grew as rapidly as his circle of acquaintances widened. A farewell supper was given by the New Castle Division employes in honor of Mr. Strayer at the local Elks' Club. At the close of the supper he was presented with a gift from his railroad friends, all of whom join in wishing him the success in the new venture that he so richly deserves.

Navigation season on the lake has opened and Fairport Harbor is getting in shape for the rush season. One grain boat has already docked, the cargo of which is to be unloaded into the grain elevator at that point. The dredge, under Captain Kulnane, is now at work getting the channel in shape for the big boats.

Chief Clerk W. W. McGaughey is busy inviting his friends to call at his home to view the new boy that recently arrived.

The plans for the organization of the New Castle Junction ball team are now completed and practice is being held as the weather permits. A schedule has been arranged and as soon as the team is in condition the regular schedule of games will be started. A dance was held by the ball team and an exceptionally large crowd was in attendance. This bade fair to take care of the finances for a time, at least so far as the purchase of equipment is concerned. Consideration is also being given to placing a team in the System League.

The May Day parade in New Castle demonstrated anew the wonderful solidarity of the American people and presented concrete evidence of the splendid spirit predominating among all classes and colors; Americans all, upholding American ideals and institutions. The Baltimore and Ohio Railroad was represented in this parade by one of the largest delegations of Railroad employes ever assembled for a parade of this nature. Superintendent D. F. Stevens had the honor to be the first Superintendent to head the Railroad delegation. The Kiltie Band, of Youngstown, Ohio, furnished music for the occasion and they certainly made a splendid appearance in the national costume of the Scot. The parade was one of the most important events scheduled for May Day in New Castle. The long

line of marching men and women, indicating a new consecration to American citizenship, should have had a sobering influence upon anyone possessing "Radical" or "Red" tendencies.

Newark Division

Correspondents

W. E. LAIRD, *Chief Clerk*, Newark, Ohio
A. D. LIST, *Newark (Ohio) Shops*

J. H. Dickerson has been promoted from position of M. of W. Material Clerk, to M. P. Shop Order Clerk, Division Accountant's office, vice Howard C. Wilson, who has accepted a position with the Holoplane Co.

L. J. ("Doc") Savvy has a complete set of instructions on "How to Run an Auto." Any of the force interested in autos should see "Doc."

Ray L. Redman has been promoted to Assistant Motive Power Timekeeper, and Thomas M. Brooks to M. P. Timekeeper, Division Accountant's office.

Charles Dolan has been appointed Messenger in office of Division Accountant.

Philip Puckett has accepted the position of Motive Power Clerk.

Miss Lucille Callahan recently entertained the C. A. B. (Gab) Club at her home in Sixth Street, Newark. We have not been furnished the minutes of this meeting, but from the title of the club there must have been some discussion.

Ray L. Hines has recently been compelled to resign his position in the Accounting office, on account of ill health.

Frank E. Cole has been promoted to position of Maintenance of Way Clerk.

On account of the necessity for additional office room, the Division Engineer's office force and engineering corps have been transferred to the newly fitted up quarters in the Railway Club building, northwest of the station at Newark.

For some time past, and especially during the past three or four months of wet weather, this slide has been the source of frequent and unexpected trouble and the cause of some "sleepless" nights on the part of the O. & L. K. Maintenance forces. The slide is of considerable magnitude and at times appears to involve the entire hillside. In its freakish moments it has virtually "walked" toward the track, taking trees and whatever else happened to be in the course of its movement. The photograph shows the track opened for traffic after a hard "round" between the ditcher outfit and one of the recent slides.

Newark Shops have turned out some good mechanics, a half-dozen poets, etc., but it has just been called to our attention that we have at least one musician, B. H. Holtschulte. "Ben" has written both words and music of a song entitled "IRELAND." This song will be on the market very soon. From the advance copy which we have received, it is our opinion that it will make a big hit.

Frank Strear, popular and well-known Blacksmith in Newark Shop, will leave within the next few weeks to join the John W. Vogle minstrel show. "Pete" has made quite a hit with the people round about this part of the country and there's no reason why John's gate receipts shouldn't go up when Frank gets behind the foot-lights.

**You Can't Make Time Or
Money Standing Still—
Neither Can Cars**

Jakes' Wild Ride

The silence was terrifying, broken only by the sharp crack of a motor cycle exhaust; its rider being no other than our amicable Roundhouse Gang Foreman, Frank Jakes. Frank is the owner of an automobile, built in the pre-historic ages, which he is thoroughly familiar with, but the ride to which we refer was taken on a motor cycle which belonged to a friend.

With perfect grace (you would have thought that he was demonstrating a velocipede) he mounted, kicked the starter and pulled the machine down out of the rack with the ease of one who has made a business of training motor cycles to stand in the straight and narrow path, pulled his cap a little closer over his eyes—and this is where the story begins.

It was a tense moment. The onlookers had stopped breathing. Frank opened the throttle, dropped the clutch in low and made a bee line towards the twenty-four sets of tracks across the Newark Yards. The machine hit the first rail, the front wheel clearing the second rail about 18 inches, while the back wheel only went over it by about 10. The only thing that Jakes had on the machine was his hands on the grips. We have never seen the Flying Squadron, but we are willing to make a bet that Jakes can teach them something.

Riding in between two tracks, on the ties, is not the easiest thing in the world, but Frank did it for about a hundred yards, and we suppose that on account of not wanting to wear the seat out, rode part of this distance on the rear mud guard. It is the opinion of some of the spectators that he tried to stop it, but either from muscular trouble, or lack of familiarity with the workings of his iron steed, turned the grips the wrong way and immediately slid off the seat onto the mud guard. He tries to tell us that he was practicing a new stunt, but we can't get him to say that it was easier riding on the mud guard than on the seat; however, we do have his assurance that the next time he does a rough riding act he will get out in a ten acre field.

Zanesville Reclamation Plant

Correspondent, CHARLES B. L. HAHN

On May 10 at 8 o'clock p. m. Mrs. Walter Leach presented to her husband a 14-pound baby girl. Mr. Leach is a brakeman in the Zanesville Yards and also Local Safety Committeeman. All Zanesville employes join in extending hearty congratulations to Mamma and Daddy.

Albert Heffly, our well known Passenger Conductor, wants to be sheriff of this great and glorious county of Muskingum. We frankly believe that Mr. Heffly would make a good man for the position; if he once caught a prisoner he sure would hold to him, but if he should have to run in order to catch his man, he would be out of luck, because Mr. Heffly weighs 330 pounds. Nevertheless, his Baltimore and Ohio comrades have pledged themselves to his support.

The birth of a 7-pound baby boy, Charles William, has blessed the home of Section Stockman and Mrs. William H. Alexander. We extend heartiest congratulations.

A. F. BECKER, *Secretary to Superintendent*,
Cleveland, Ohio
AMY A. FORD, *Clerk to Pilot Engineer*, 621
Sloan Building, Cleveland, Ohio

We regret to announce the death of the son of Trainmaster Fitzgerald. Our sympathy is extended to the family.

The clerks in the Superintendent's office and Division Accountant's office at Cleveland, held a May Dance at Brecksville, Ohio, on May 15, "down on Gasser's Farm," as they call it. From all appearances, the

buss line from Brecksville to Cleveland was very busy in the weeks of the following morning.

Chicago Terminal

Correspondent, T. H. WILLIAMS
Maintenance Clerk

Edward F. Doubek, abstract clerk in the Revenue Division of the Accounting Department died on May 2. Mr. Doubek left the office Thursday afternoon for a minor throat and nose operation when a hemorrhage set in and he passed away. The

Hamilton Watch

"The Watch of Railroad Accuracy"

Engineer F. J. Mink of the New York Central Lines is known as "The Chief" on the New York-Albany run, because he's handled a throttle for thirty-one years. For ten years he drove the Twentieth Century Limited on his division, with the Hamilton he carries, and established an enviable record for running on schedule.

Are you being handicapped with an inaccurate watch?

THERE'S probably no line of work where punctuality has more to do with a man's success than in railroading. If your particular job must be done to a time schedule, then your efficiency record is at the mercy of the watch you carry.

There are two very real reasons why the Hamilton has become the most popular watch among America's railroad men:

Its day-in-and-day-out dependability—its ability to stand up under

railroad work and give long years of unvarying satisfaction.

Have your jeweler show you Hamilton No. 940 (18 size, 21 jewels) and No. 992 (16 size, 21 jewels). These famous railroad models make time inspection a mere matter of routine.

Write today for "The Timekeeper"

An interesting booklet that pictures and describes all the Hamilton models. Prices are given and they range from \$22 (\$25.50 in Canada) for movements alone, up to \$200 for the Hamilton Masterpiece in extra-heavy 18k gold case.

HAMILTON WATCH COMPANY, Lancaster, Pennsylvania

General Foreman N. R. Butler, Inspectors and Clerks at Garrett, Ind.

entire office was very much shocked at the news of his death and extends its sympathy to his bereaved parents.

Victor Hansen, I. R. C. A. clerk, had a happy surprise this morning when his wife called him up on the telephone and said the baby had a tooth. The entire office congratulates him on the wonderful progress the baby is making. Just think, he is only five months old!

W. E. Buckmaster, former correspondent of the Chicago Terminal, has been going around with a smile that won't come off. Upon investigation we find that the stork visited his home a few days ago and increased his family with a 12-pound boy. Congratulations!

It was great satisfaction to our officials and employees to read in the various Chicago newspapers that during the worst blizzard of the winter, which reached Chicago on Easter Sunday, April 4, all passenger trains were handled in and out of the Grand Central Station with practically no loss of time, while at other stations trains were reported from one to six hours late. This shows that our men believe in loyalty and are efficient in case of emergencies.

H. E. Gregory failed to show up for work on April 10. Why? A baby girl. Smoke up, boys!

H. E. Hansen's many friends are glad to see him back after being confined to his home for a few weeks.

Otto Lozzo, manager of the news stand in the Grand Central Station, has just returned from a trip to Seattle, Wash., where he took his wife, who is recovering from a serious illness. We sincerely hope Mrs. Lozzo will be benefited by the change of climate.

The employees extend their heartfelt sympathy to H. White, Jr., who recently lost his father.

John Werkowski, assistant car foreman, has joined the benedicts, and according to a post card which we received from him, he must have spent a gay time among the white lights of Broadway. He wrote us that he and his wife were in New York on their honeymoon, and that they were staying at the Astor Hotel. We extend our best wishes for their conjugal bliss.—Ed.

D. W. Koons, formerly Agent at Hoytville, has been appointed Agent at Republic, Ohio. He is succeeded by H. A. Hesse, formerly Operator at Auburn Junction.

D. C. Krider, who has been located at Republic as Agent for several months, was taken very sick and at the present time is in the Hospital at Ann Arbor, Mich. We all hope for his speedy recovery.

With the advent of 52 beautiful broilers, comprising the Grand Trunk Car Record office in the room formerly occupied by the C. T. H. & S. E. Accounting Department on the second floor, the clerks in East Wing of Grand Central Station have developed

strained necks. It has been suggested that arrangements for strapping them to their desks be made in order to prevent them from doing a jackknife dive to the second floor.

Edward Coan, formerly stenographer in Mr. Burg's office, has resigned and accepted a position with the Traffic Department.

"Jack" Murray, Conductor, Chicago Division

Now that the Spring air has given the boys the fever, it is presumed that the Fishermen's Quartet, composed of White, Hansen, McDonald and Lozo, will be searching for new lakes to drain of all the big fish. No brainy fish will jeopardize his life by looking at their bait and it is a wise one that says "Goo Bi Gas" when he sees them approaching.

Conditions are again normal in the Accounting Department and there seems to be a little more breathing space since the United States Railroad Administration representatives completed their check and audit of Federal Accounts. The Administration's representatives, in charge of Mr. A. R. Seler, spent over six months in revising the Federal Accounts. During the same time the Interstate Commerce Commission representatives checked the Corporation's Standard Return figures and the Accounting Department had their hands full, taking care of both sets of accountants.

P. H. CARROLL, *Signal Supervisor*, Garrett, Ind.

George Ward, veteran engineer, died at Sacred Heart Hospital on May 9. His death followed an illness of about 10 years from complication of diseases. He is survived by two sons, William of this city, and Russell of Pennsylvania.

Effective May 1, N. R. Butler, general foreman, at Garrett, was transferred to the same position at New Castle Junction. General Foreman H. Rces, of New Castle Junction, was transferred to Garrett as General Foreman.

The accompanying photograph is that of General Foreman N. R. Butler, supervising officer, inspectors and clerks at Garrett. This was taken just prior to Mr. Butler's departure for New Castle Junction.

Left to right, rear row standing: J. T. McSweeney, blacksmith foreman; Miss N. McCully, clerk, M. M. office; Miss M. Grischke, stenographer, M. M. office; N. R. Butler, general foreman, and Miss T. Schunk, stenographer M. M. office. Second row, standing: C. Hooper, boiler inspector; W. L. Clark, leading boilermaker; O. Bennett, boiler gang foreman; J. Hollis, assistant car foreman; L. W. Eberle, boiler foreman; A. B. Galloway, pipe and tin shop foreman; B. H. Groves, mill foreman; J. H. Lantz, shop clerk; B. O. LaRue, general foreman's clerk; F. C. Moses, day enginehouse foreman; G. M. Teal, superintendent shop schedule; H. H. Vanderbosch, night enginehouse foreman; J. F. Gordon, assistant day enginehouse foreman; A. E. Treesh, wreckmaster; L. E. Smith, leading machinist; O. M. Rankin, car shop foreman. Rear row, seated: D. H. Weaver, crew dispatcher; A. D. Johns, crew dispatcher; and M. B. Miller, enginehouse clerk. Front row, seated: Allen Smith, boiler foreman's clerk; F. W. Fouch, erecting shop foreman; J. A. Grant, painter foreman; L. S. Ziegenhein, tool foreman; A. K. Hickman, file clerk; G. A. Leisinger, leading electrician; J. H. Schunk, machinist shop foreman, and H. O. Rentz, leading carpenter.

The accompanying photograph is of "Jack" Murray, one of our pioneer passenger conductors. He runs on Trains Nos. 9 and 6 between Willard and Chicago.

A son was born to Pipefitter Helper and Mrs. Stanley Potter on Tuesday, May 11.

We are proud to state we have one, if not the youngest of telegraph operators on the System, in the person of Loran Loomis, age 12, son of operator and Mrs. E. H. Loomis. Loran is able to handle a trick along with an experienced operator. He learned operating while he was employed as messenger boy at the local Western Union office.

Allen Smith has accepted position as clerk to Boiler Foreman Eberle in General Foreman's office, this station, vice A. D. Johns, made crew dispatcher.

We wish to extend our heartfelt sympathy to Car Foreman Gibson and to his family in the death of Mr. Gibson's father in Chicago on May 7.

Blacksmith A. D. Ober, who suffered a stroke of paralysis during the early Fall, has recovered sufficiently to permit of his being out on the streets again.

Pipeshop Foreman and Mrs. Galloway announce the approaching marriage of their second daughter, Miss Wilma, to Chalmers J. Spahr, son of Mr. and Mrs. Elmer Spahr of Defiance, Ohio. Miss Wilma has been employed in the Division Accountant's office as tonnage clerk for the past three years and Mr. Spahr is a Fireman in this division. They have a large circle of friends who will wish them much happiness.

Miss Margaret A. Galloway has resumed her duties as Assistant Shop Clerk after an absence of two weeks, on account of an operation for removal of tonsils, adenoids and correction of gland trouble. It will be

remembered that she underwent an operation on August 6 last for removal of goitre and thyroid gland.

Enginehouse Clerk M. B. Miller, Garrett, Ind., has been noticed visiting numerous jewelry shops lately. We understand that he is negotiating for the purchase of a diamond.

Miss Nordica McCully, clerk in the Master Mechanic's office, will head a party of prosperous clerks on a vacation trip to California June 14 to 28. The boys of the Golden State should look out. What is the the matter with Michigan, Nordica?

"Fred" Nagle, chief man hour clerk, in Division Accountant's office, was transferred to South Chicago as Shop Clerk, vice C. R. Pilgrim, who left the service to take a position in Car Record office of Pennsylvania Lines at Chicago. Best wishes for success.

Work is now under way on improvement of the grounds surrounding the passenger station at Garrett, and in a short time we will have as nice station grounds as are in this district.

GARRETT, IND.

Dear Ed—You ast me to rite agin an' sed my spirit wuz fine. Thanks for them bokas, but honces' Ed, I aint had no spirits sense last july, cuz if I had, that 1st letter wot I rote woodn't never ben dun yet an' I woodn't never had to rote no more, cuz it wooda covered ever teckniekle point an' person on the Chi div., even them hobos, an' owin' to the shortage of paper it never wooda ben printed. I saved up a lot o' Chi div. boys wot I didn't menshun in my last letter, owin' to the lack of space and spirits. The 1st one I wish to menshun is our new chf clerk, wot got a new Barney Hunsel' hat with a rubber band sense his promotion, an' he also walks on his heels to save his soul, cuz his wife wont let him get no more shoes til he gets a chancht to go to N. Y. an' buy sum of Mr. Woolworth at his 5 an' 10 cent store, cuz he don't never profictee. An' his asst. wot is a nice little, bright little lad, wot luvcs his own wife and she stays in Hicksville mos' of the time an' we all feel sorry for him, cuz he waits long an' longingly an' offen in vain for No. 9. An' there's our dere ole car distributor, wot works so hard and fast the cars cant keep up with him, an' he files mor'n a dozen migs about each car, wot makes them oprs in "G" offs say things wot woodn't sound nice in this. We are more than proud of our chf accountant; every time he passes the City hall, the Marshall sets "ole Glory" at haf' mast, cuz he looks so much like "ole Abe." Gess you've herd of "Old Taylor." He's our boss carpenter, wot builds air castles an' dreams of Cuba an' fairies an' things. An' our div. Engr. is so ambishus he cant never stan' still even wen he has a chancht. Our asst. div. Engr. makes us all cheerful jus' to be in his presents, he reminds us so much of Bill Nye. An' that m of w chf clerk always tells us a funny story about his cow, wot had wof in its tale. We calls him hard boiled cuz he raises plymouth rock chickens. Dere Ed, my heart swells with pride wen I menshun our m of w supervisors. They shure is hard workers, an' keep that stone ballas' so white an' clean that lookin' from the observashun on moon-lit nites, it looks jus' like a great big silver ribbon, an' even that little ditch 'long side of the track looks like a beutiful "Sunny Brook." An' Mr. Christy gets most of his artistik tastes from the Chi div. dinin' cars. Almos' fergot to menshun our signal supervisor.

His name is Pat,
But he cant help that.

He's shure a fine fella an' luv'es everybody
an' aint got no fault to find with this dere

ole world, on'y England ought to be located
in Ireland an' Dublin the capitol of the
U. S. A.

Yours Truly,

D. S. PATCHER.

The Dandelion

Little yellow flower, you are dear to us all,
We will pluck you this year from Spring
until Fall.

We will cultivate you in the garden and
lawn,

And an army of admirers will greet you at dawn.

Just a short time ago you were heartily despised,

But since last July you are 'most idolized.
For sweet golden petals, my dandelion
bright,

Make wines that will sparkle like yellow
moonlight.

D. S. PATCHER.

South Chicago

Car Distributor Paul Wegener has left us and will engage in farming near Crown Point, Indiana. We are sorry to lose such a capable employee and wish him success in his new undertaking.

The Noon Rush Hour at Our Endicott Restaurant

Over 11,000 meals are served daily in our restaurants at Endicott and Johnson City, N. Y. A full course dinner is served for 20 cents. There is also a lunch room in connection; separate dishes are served at a small price.

F. A. Nagel, formerly of Garrett, Indiana, has been appointed Chief Clerk in the General Foreman's office, vice C. R. Pilgrim, who has resigned to accept a position with the Pennsylvania Company. Henry Bergstrom, machinist in the shops here for several years and a well known "First Aid Man," has entered the service of the Illinois Improvement & Ballast Company.

Willard, Ohio

Clifford Puneell, machinist helper, is improving very nicely after suffering a broken leg on March 21.

Fireman Spangler, lately married, had a very sorry mishap while on his honeymoon

They have played the strongest teams of High Schools and Colleges of their section of the State, and because of their excellent playing L. A. Pausch, supervisor at Leesburg, has awarded them each a medal. In the accompanying picture, reading from left to right, top row: Miss Delight Ladd, V. V. Preston, coach (third trick operator, Leesburg), Miss Esther Henderson. Bottom row, left to right: Miss Henrietta Browder (sister-in-law of F. F. Maloney, second trick operator at Leesburg), Miss Bertha Barrett (cousin to first trick operator at Leesburg, Truman Murphy), and Miss Elizabeth Pausch (daughter of Supervisor L. A. Pausch).

Undeclared Girls' Basketball Team of Leesburg, Ohio, High School

in Oklahoma. Someone relieved him of his transportation and, in fact, almost everything except his bride.

Firemen Jennings, Graback and Schwab have been temporarily transferred as machinists helpers in the Willard Roundhouse.

Ohio Division

Correspondent, A. E. ERICH, Chillicothe, Ohio

The Leesburg, Ohio, High School Girls' Basketball Team has played fourteen games this season without a single defeat.

I. C. C. Boiler Inspector Charles Michaels has recently taken unto himself a wife. Congratulations.

It is with regret that we announce the resignation of our efficient and popular Assistant Division Engineer, Samuel H. Pulliam, who has accepted a position with The Van Blarcom Co., at Cleveland, Ohio. We wish him success in his new connection. He is succeeded by James W. Purdy, who also has our best wishes.

Philip Hixon, fuel clerk in Division Accountant's office, was successfully operated on for removal of adenoids and tonsils.

We are sorry to learn of the accident to Alva Shoemaker, signal repairman at Loveland, who had his ankle badly injured by a piece of timber falling from passing train.

C. L. Hutt, clerk to Trainmaster, has left for Hot Springs, Ark., Denver, Col., and other western points, for a sixty-day rest. Be sure and get the "rest," "Curt."

Clarence Wickline, steel car helper, has taken the marriage vow. Congratulations!

J. F. Sowards, air brake repairman, on triple valve rack, has taken to himself a wife, Miss Riley, formerly of Chillicothe. Mr. Seward gave cigars to his fellow workmen, and when the lady clerks were very much disappointed that they did not receive any compliments from him, he presented them with a box of candy and sent with it the news that by the first of July one of the stenographers will be following in his steps. More candy and cigars.

Brother Stork, a popular visitor here, left a baby boy in the homes of each of the following employees: J. N. Gunning, air brake inspector; Edward Shepherd, machinist helper, and Watson Sykes, machinist helper. We extend our congratulations.

F. R. Gelhausen, general foreman, has been off duty with relapse of influenza. We are glad he is again able for duty.

J. O. Keegan has succeeded W. B. Noland as Assistant Night Roundhouse Foreman. He was formerly Machinist at North Vernon, Ind. Mr. Noland has taken the place of Mr. Barrett as Assistant Day Roundhouse Foreman. We wish them both success.

F. W. Reynolds, storekeeper from Chicago Terminals, has succeeded C. F. Erich as Storekeeper at Chillicothe. Mr. Erich has taken the place of Mr. Schwab as Assistant, Mr. Schwab being transferred to Glenwood. They have our best wishes for success.

We welcome back Electrician Charles E. Woods, who, for the past ten months, has been in Georgetown, British Guiana, South America. Mr. Woods returned account of the climate not agreeing with his health, but states that Mr. Wilkerson, formerly electrician, and Mr. Wagner, formerly Roundhouse Foreman at Chillicothe, will remain there for the present. Mr. Wagner is now General Trainmaster and Foreman over the mining road which runs in and out of Georgetown. Mr. Woods says that Chillicothe, Ohio, is good enough for him; he has had enough of the jungle life of South America.

Our efficient Car Distributor, "Bill" Rardin, is thinking of going in for "big time stuff" since starring in a local amateur production of "Johnny Get Your Gun," which was given at a theater in Chillicothe and "The Liberty" at Camp Sherman. We are informed that "Bill" had quite a "touching" scene with one of the young ladies of the cast.

The girls in the Freight Department aren't at all slow. 'Tis rumored that eight of them are going to "hit new trails" ere the Leap Year privileges are no more. On March 3 their first ventured forth. Miss Ethel Thomas, daughter of Engineer D. C. Thomas, of Hamden, Ohio, became Mrs. Harry McClain. We miss Ethel, but extend to her and "Clainey" our best wishes. Eight more months, girls! Who's next?

We are glad to welcome Miss Bertha Graves, who is home again after an extended leave of absence.

Common expressions in the Freight Office:

Lang: "Now who left the door open?"

LEARN DRAFTING

At Home—In Spare Time—As You Would in Actual Practice

Get into this constructive branch of industry where big salaries are paid. No previous training is necessary to become a capable draftsman with the help of the Columbia School of Drafting. You can master the practical lessons of our famous home study course, at home, in spare time. You will be personally coached and instructed, by mail, by Roy C. Clafin, president of the school, whose long experience as a draftsman and teacher, especially qualifies him to give you the training you need to become a successful Draftsman.

Become a Specialist

We not only give you thorough and practical training in Mechanical Drafting, teaching you to make actual drawings as you would in any drafting room, but the additional benefit of a post-graduate course in some special branch of drafting. A big field of opportunity is thus opened to you as a trained specialist in this profession.

Draftsmen Get \$35 to \$100 a Week

Because of the importance of his work the draftsman is paid a big salary and is always in line for advancement. The draftsman's pay is from \$35 to \$100 a week. A knowledge of drafting is the stepping stone to big technical positions in the industrial field, paying as high as \$50,000 a year.

CHIEF ENGINEER \$25,000 TO \$50,000 A YEAR

How "Columbia" Students Succeed

Students of the Columbia School of Drafting often secure positions at \$2,000 or more a year to start before completing the course. Hundreds of men and women with "Columbia" training are now making good with big concerns all over the country. Many more are needed for splendid positions now open. Here is what "Columbia" training is doing for some of our graduates: Laurence Johnston, over \$5,000 a year; George Murray, \$45 a week to start; G. Tangorra, \$2,800 a year; A. L. Gash, \$140 a month to start; W. S. Burfoot, \$150 a month to start; T. R. Brown, \$2,860 a year; R. Fowkes, \$3,700 a year. These are only a few of a great number of similar cases.

CHIEF DRAFTSMAN \$50 TO \$150 A WEEK

Big Concerns Employ Columbia Graduates

The best concerns in America employ Columbia graduates in their drafting departments because of the thorough, practical training we give which enables them to step right into important drafting positions. Our diploma is the entering wedge into big drafting rooms everywhere. As a Columbia graduate you are recognized as an experienced Draftsman, not as a mere apprentice. Our training spells Success for you. Why be satisfied with a grinding, underpaid position when there are hundreds of promising positions open to you in the big field of Drafting. We are called upon to place trained draftsmen more rapidly than we can produce them. General construction companies, manufacturers, railroads, ship building concerns, engineering projects, etc., need Draftsmen today in greater numbers and at better salaries than ever before.

DRAFTSMAN \$35 TO \$100 A WEEK

 Vida Dixon: "I don't care."

Shop Carpenter Nelson Bochard, while taking his new Chevrolet out of the garage, which was close to the river bank, made a plunge over the embankment. The car turned over three times before striking the water. The next thing Mr. Bochard knew, he was under the car in the water. Fortunately he was not injured by the mishap, but was left in such condition that it would not have been well for him to have been seen in company. The only damage done to the car was that the cushions were lost and the top crushed in. At the time of the accident, the river was at a fifteen foot stage. Mr. Bochard is to be congratulated on his fortunate escape.

The correspondent desires to thank Miss Helen Beyerly, Miss Ruth Bickel, Frederick Darling and Roy Lee, who contributed several items, helping make this month's notes "noticeable." Would also appreciate any help or any item from other employees, at any time.

Standing, left to right: Miss Georgia Northcraft, P. L. Hixson, Miss Osma Foster, C. F. Steele, J. T. Caldwell, R. J. Conner, Miss Cornelia Gilsdorf, "Don" Sullivan, Charles Ross, Everett Miller, Ruth H. Bickel, J. E. Caldwell, George Seffens, C. E. Francis, O. E. Sorgius, George E. Neal, O. G. Erich. Seated, lower row, left to right: Kenneth Conrod, W. A. Rea, Miss Susan Masters, Miss Nellie Scharenburg, Miss Bernice Bowdle, Miss Mildred Curtis, Charles A. Conner, Robert Myers, W. K. Schreck, A. L. Buskirk.

Indiana Division

Correspondent, H. S. ADAMS, *Chief Clerk to Superintendent*

The employees of this division can obtain copies of the MAGAZINE at the offices of the Trainmaster and General Foreman at Seymour.

J. A. Wilcoxson, after 24 years' service in local freight office at Louisville, Ky., 15 of which he served as Chief Clerk, has resigned to accept a similar position in the office of J. D. Marney, assistant general freight agent at Louisville. He has the best wishes of all of the office force.

C. N. Turns, who for the past 2 years has served as Secretary to the Local Freight Agent, J. E. Sands at Louisville, Ky., has been appointed Chief Clerk. John H. Zeigler, former Counter Cashier, has suc-

ceeded Mr. Turns. Both are deserving young men and are entitled to their promotion.

Henry Zimmerman, abstract clerk, is wearing a Sunny Jim smile, all on account of the arrival of a new boy, the first visit of the stork to his household.

We are glad to welcome T. W. Jocelyn back again to Louisville Local Freight office. For the past month he has been working in New Albany, straightening out the old items in the accounts at that point.

The accompanying photograph is that of Miss Lillian M. Osterman, stenographer in Superintendent's office. Miss Osterman is quite popular with her associates in division office building, as well as with a number of friends in the western part of the State. Congratulations would be premature, but interest is at high-tide.

Machinist W. P. Clements is expected to arrive from New Mexico with his bride 'most any time. "Bill" didn't have nerve enough to face the music in his home town and thought it advisable to go to New Mexico to pull off this stunt.

Machinist Frank King purchased a new flivver. A few days ago, while returning

A Seymour Lassie, Miss Lillian M. Osterman

and shows Track Foreman M. Stoner and gang.

Machinist John Cannary purchased a new home on North Broadway at Seymour, and is figuring in this way to escape the profiteering landlords.

Car Foreman A. J. Keene, at Seymour, has been confined to his home account of sickness.

Robert ("Bob") White, future Auditor of Jackson County, is now working temporarily in Division Accountant's office.

Regular assigned crews on preferred runs, which were cut off early in April on account of the Switchmen's strike, have been restored. This made some of the "Old Timers" happy.

Dewey Niester, operator, bid in second trick at Seymour, and has also been working as Extra Dispatcher for several days.

We are glad to note that J. E. McKay, dispatcher at Seymour, is back on the job again after having undergone an operation.

R. O. Huntington, dispatcher at Scymour, is still making trips to Osgood right along. "Beginning to look like a habit."

Illinois Division

Correspondent, OMER T. GOFF, *Secretary to Superintendent*

Office General Freight Agent
 St. Louis, Mo.

Correspondent, FRANCIS PIGLOSKY

We take pleasure in adding to our office force C. E. Bradley as Freight Representative and Layman A. Brewer as Stenographer.

W. F. Bollman has now been appointed District Freight Agent.

Discovered!—Why Miss Frances is falling away to a ton. Good thing there is a

Stoner's Gang on Section 71, Indiana Division

In keeping with the popular movement, the clerks in division office building at Seymour organized an overall club, and practically 100 per cent. of the force appeared in overalls or khaki on Monday, April 19. The young ladies designed a very nifty uniform of blue denim. With these new outfits, some of the force conceived the idea that considerable enjoyment could be had at an overall dance, and such an entertainment was held in Eagles Hall, at Seymour, on Tuesday, April 29. All present enjoyed the evening so well that no doubt another dance will be held in the near future.

The accompanying picture was taken on mile 44, Section 71, Louisville Sub-Division,

UNION MADE
 "Service"
 Suits and Overalls

NO MAN ever spoiled his disposition by wearing work clothes that fitted—when he could get them.

"Service" Suits and Overalls fit from trouser turnup to collar turn-down. The shoulders slope right and the seat is shaped to conform to the body in all positions—standing, sitting, bending.

"Service" garments are as modern in the field of work apparel as the latest device in the shop is modern in the department of mechanics.

Say "Service" to the dealer.

KOHN MANUFACTURING COMPANY

Makers

BRADFORD, PA.

chop house close to our office for she has an unflagging appetite for Chinese dishes, chicken chowmein being her favorite. (\$1.25 a throw.)

We wish to thank Mr. Bollman for the services he has rendered through his "Agency," but I think he will agree with us that "It doesn't mean anything." (How about it "Tony"?)

Pet expressions of some of our force:

- J. G. F.—"Gol darn it."
A. H. H.—"Tha dickens."
C. P. B.—"? ? -" (Unprintable.)
H. J. C.—"Did jew eat?"
D. C. W.—"No, did jew?"
A. J. C.—"You're goofy."
M. H. F.—"That would be telling."
A. O. L.—"He's busy."

Toledo Division

Correspondent, I. E. CLAYTON, *Division Operator*

George Long, correction clerk in Local Freight office, has accepted an agency on the D. T. C. R'y, at Delphos, Ohio. George has always had a longing for the country, and now that his dreams have come true, we know he will "deliver the goods."

Miss Maud Veidt, stenographer to Agent, has been transferred to Division Freight Agent H. E. Warburton's office. Let us hope that Maud will not forget her "up town" friends.

Joseph Wheeler, assistant claim clerk, has accepted a position with Captain Molter, as Patrolman. We all wish "Joe" much luck and hope that he will make good.

Miss Helen Zimpher, stenographer, has been transferred to Agent's office.

Daniel Webster, revision clerk in local Freight office, has been transferred to Division Freight Agent H. E. Warburton's office.

Lester Underwood, collection clerk in Mr. Hockett's office, has been given a thirty-day leave of absence on account of ill health. We wish him a speedy return.

We welcome J. F. Dobson and H. T. Conn, who are new additions to Engineers' Corps at Dayton. They have been transferred from the Valuation Department at Cincinnati.

Division Accountant's Office, Dayton, Ohio

The McNamara Comedy has all of the Mack Sennet Comedies beaten when it comes to real acting. The following is a sketch of the latest movie as staged by Mr. McNamara and a friend:

Arthur and his "buddy" were coasting—yes, coasting—down Indiana Avenue, in a "Ford." The machine stalled. The driver got out to crank it, giving Arthur instructions as to what to do—but Arthur failed to obey—and "Lizzie" started off with a jazz! When Arthur thought she was getting too speedy for one who knew nothing about how to stop her, he jumped out, falling on one knee and hurting it quite badly. However, he was so glad to get out of the machine that he didn't mind the bump at all. "Lizzie" was caught by a spectator, three squares away. She was in tip-top condition, even though she had hit water plugs, climbed perpendicular terraces, and had see-sawed back and forth down a steep graded street. We are sorry to say, however, that Arthur is still limping. He has given up the "Movie Idea," preferring to keep his position in the Division Accountant's office. Arthur has

just purchased a car and we hope it will prove to be more tractable than his friend's "Lizzie."

P. W. Elmore, Seymour, Ind., has taken the place of C. R. Adsit as Assistant Division Engineer to H. R. Gibson, Division Engineer at Dayton, Ohio. We welcome Mr. Elmore and hope that he will feel at home with us. C. R. Adsit was transferred to Cleveland. We regret his departure, but wish him good luck.

East Dayton

Correspondent, EDWARD M. MANNIX

J. G. Lyons was the representative chosen to arrange the baseball schedule for the Toledo Division. Let's go after "Jerry"! We expect to be playing the national game day and night.

Our baseball team is all ready for the opening game, which will be played at Dayton, Ohio, with the Lima team, on May 16. Manager Mannix has secured beautiful McKinley Park and our players will surely give a good account of themselves. To all who so liberally helped us in outfitting the team, we extend our sincere thanks.

They tell us Wilbur Potters, machinist, third shift, has just purchased a new Dodge.

We hear our old friend, "Bill" Stricklin, is convalescing nicely and will be back soon at his old job. Hurry up, "Bill," we will be glad to see you.

All employees of the Shops and Roundhouse will hereafter receive copies of our MAGAZINE at the check board, from either of the clerks in charge. We are sure that we will not miss anyone.

Here's the Answer to the Pat and Mike Problem

E. N. Fairgrieve, car distributor in the office of the General Superintendent at Pittsburgh, sent us a problem which was published in the "Question Box" of the May issue. This is the answer, submitted by F. C. McCaghey, a former employe of the Valuation Department:

Let x = the number of years that Pat worked.

Let y = the number of years that Mike worked.

(1) $x + y = 44$, total number of years that both worked together.

(2) $x = 44 - y$.

(3) $2y = 3x - 3y$.

Substituting the value of x in terms of y of equation (2) in equation (3), we have:

(4) $2y = 132 - 3y - 3y$.

(5) $8y = 132$.

(6) $y = 16\frac{1}{2}$, the number of years that Mike worked.

Substituting the value of y of the equation (6) in equation (2), we have:

(2) $x = 44 - y$.

Then $x = 44 - 16\frac{1}{2}$, or $27\frac{1}{2}$, the number of years that Pat worked.

Answer: Mike worked $16\frac{1}{2}$ years.

Pat worked $27\frac{1}{2}$ years.

Selby, Laurence A	Engineman	C. T.	Philadelphia	April 6 1920.	27

* Exact date of death unknown.

Back to the Home

All day long the thought thrills—back to the home at night.

Poets sing of Home, and sometimes it seems that the ownership of a home is something too good to be true. Every night we come back home and always we find a welcome from the loved ones there.

In the morning it's up again and off to work, after the home-cooked bacon, eggs and coffee.

"Good-bye, Daddy, come home early!"

A home isn't built in a day, neither can you pay for one in a day.

But you can pay for a home, if you wish, on the quickest kind of an installment plan by the aid of the Savings Feature of the Relief Department.

Don't keep on paying rent. Don't live in a rented home, but write to

SEVEN 8 PICES

A Home and A Happy Family

The future of the American family is based upon the home. No amount of money has any real value to a man unless his home life is happy and healthful.

A chance to bring up his children in healthful surroundings, a home that will make his wife happy; these are the things that every man wishes for. These will go far in the creation of the home life which will make sure the future of the nation.

In the picture are some of the members of a substantial Baltimore and Ohio family, and the home which has been a comfort to them all of their lives—the home which a far-sighted father secured for them years ago through the Relief Department.

A HOME AND A HAPPY FAMILY

Timothy G. Donovan, engineman at Brunswick, Md., father and home owner, is the center of group in the insert. In front of him is Juanita, between the twins, Frances and Josephine. On his right are Florence and Alvin; on his left, Lillian and Garland.

A Happy Father, a Happy Family, a Happy Home!

Is it not a pleasure even to look at such a picture?

But the real question to you is this: if you have a family that needs more room or better surroundings, why not place them where they can enjoy these advantages? Write to

LEARN WIRELESS

At Home, Quickly and Easily By Marvelous New Method

A combination course in Wireless Telegraphy and Telephony perfected by the National Radio Institute that will fit you in a few months for a position paying approximately \$175 a month to start, if you consider that living expenses are included.

Men with experience or trained as telegraphy operators have a decided advantage over the beginner and will be able to complete the course and qualify as a trained radio operator in about one-half the usual time required. This means more rapid advancement for you to the bigger positions paying better salaries.

Future success assured our graduates. Hundreds of attractive and interesting positions in Commercial Radio Service on Land, Merchant Marine, Railroads, Radio Supply Factories and Laboratories, Lake and Ocean Steamship Lines, Telegraphy Companies, and Aerial Mail Service always ready to be filled. Because of the efficiency of our graduates, they are given first choice, and positions are guaranteed to those who complete the course and secure a license.

Salaries Up to \$15,000 a Year

Few professions offer the opportunities found in Radio. Any young man with ambition and energy can soon be qualified for an exceptional position by taking our course in Wireless. Your first position will pay you the equivalent of \$175 a month—\$125 in salary, plus living expenses, which by a conservative estimate we place at \$50 a month.

There are exceptional chances for rapid promotion to Radio Mechanic, Electrician, Government Inspector, Radio Aid, and Radio Engineer, some positions paying as high as \$15,000 a year.

No previous knowledge of wireless or electricity is necessary to take our course. Our course is easy and comprehensive, and with the help of our Natrometer, you can master Wireless in a marvelously short time. Right in your own home, the National Radio Institute way, in your spare time!

Travel Around the World Your Expenses Paid

If you are eager to travel, anxious to visit foreign countries, and increase your knowledge of world affairs, Wireless offers you the biggest chance you will ever have. You travel on shipboard with an officer's rating, living the life of an officer, eating at the captain's table, and mingling with the passengers. All without one cent's expense to you!

If you prefer to locate permanently at or near your own home, Wireless again offers the opportunity, for you may secure an equally attractive position at one of the many land stations, with Radio Companies, Steamship Companies, or Commercial houses.

Regardless of how big your desires and plans for your future, Wireless is always in the foreground, offering advantageous and attractive opportunities. Look into it and plan your life accordingly.

Get Your Instructions from Washington—Center of All National Wireless Activities

The National Radio Institute was established in 1914, and was the first in America to successfully teach Wireless by mail. It is established in the heart of national interests—in Washington, the home of the United States Shipping Board—centre of all official Wireless activities—and the home of the United States Department of Commerce (Radio Department) which passes upon every first grade government license granted in America, and also issues all permits to erect and operate radio stations.

Our location in the nation's capital, together with the high standing of our school and instructors, and our close communication with government officials connected with Wireless activities, naturally places us in the position of giving our students the very best instruction obtainable. We are also able to be of the utmost help in assisting them secure high type positions paying substantial salaries.

Special Privileges to National Radio Institute Students

Students of the National Radio Institute receive the following:

Complete combination course in Wireless Telegraphy and Telephony—

Special post-graduate course at our large Washington school, if desired—

Five text books, one hand book, forty-six special lessons and eighteen personal examinations—

Membership in the N. R. I. Radio Relay league and handsome blue and gold membership pin presented immediately upon enrollment—

Large handsome diploma suitable for framing—

Complete automatic Natrometer outfit and carrying case—

Personal help in securing wireless position and endorsement of Institute officials.

This Fine Natrometer Given to You

This wonderful Natrometer automatically sends you wireless messages as though coming from a radio station thousands of miles away. It is a complete improved sending and receiving set, embodying the same type of instruments as used by the United States Bureau of Navigation in testing applicants for official license. Made especially and exclusively for National Radio Institute students.

Send For Free Booklet

We have prepared a book telling all you want to know about wireless and the future it offers you. Startling facts you are interested in are freely discussed. It tells how, during the past six years, we have helped hundreds of ambitious men and women and how we will help you. Send the coupon today, or write to the

LEARN DRAFTING

At Home—In Spare Time—As You Would in Actual Practice

Get into this constructive branch of industry where big salaries are paid. No previous training is necessary to become a capable draftsman with the help of the Columbia School of Drafting. You can master the practical lessons of our famous home study course, at home, in spare time. You will be personally coached and instructed, by mail, by Roy C. Clafin, president of the school, whose long experience as a draftsman and teacher, especially qualifies him to give you the training you need to become a successful Draftsman.

Become a Specialist We not only give you thorough and practical training in Mechanical Drafting, teaching you to make actual drawings as you would in any drafting room, but the additional benefit of a post-graduate course in some special branch of drafting. A big field of opportunity is thus opened to you as a trained specialist in this profession.

Draftsmen Get \$35 to \$100 a Week

Because of the importance of his work the draftsman is paid a big salary and is always in line for advancement. The draftsman's pay is from \$35 to \$100 a week. A knowledge of drafting is the stepping stone to big technical positions in the industrial field, paying as high as \$50,000 a year.

How "Columbia" Students Succeed

Students of the Columbia School of Drafting often secure positions at \$2,000 or more a year to start before completing the course. Hundreds of men and women with "Columbia" training are now making good with big concerns all over the country. Many more are needed for splendid positions now open. Here is what "Columbia" training is doing for some of our graduates: Laurence Johnston, over \$5,000 a year; George Murray, \$45 a week to start; G. Tangorra, \$2,800 a year; A. L. Gash, \$140 a month to start; W. S. Burfoot, \$150 a month to start; T. R. Brown, \$2,860 a year; R. Powkes, \$3,700 a year. These are only a few of a great number of similar cases.

This Complete Drafting Equipment Furnished

to students of our school. The instruments are of standard American make of best quality, fully guaranteed, and become your property on completion of course. Every instrument needed for course is included.

Big Concerns Employ Columbia Graduates

The best concerns in America employ Columbia graduates in their drafting departments because of the thorough, practical training we give which enables them to step right into important drafting positions. Our diploma is the entering wedge into big drafting rooms everywhere. As a Columbia graduate you are recognized as an experienced draftsman, not as a mere apprentice. Our training spells Success for you. Why be satisfied with a grinding, underpaid position when there are hundreds of promising positions open to you in the big field of Drafting. We are called upon to place trained draftsmen more rapidly than we can produce them. General construction companies, manufacturers, railroads, ship building concerns, engineering projects, etc., need Draftsmen today in greater numbers and at better salaries than ever before.

Send This Coupon Today

Let us tell you the fascinating story of Drafting and how you can master this lucrative profession of big salaries and steady advancement through our help. Write today to

Seventy-five American Railroads Join in Plan to Aid Transportation

President Willard Named Chairman of Advisory Committee of Nine

In a vastly important, possibly crucial, move for the future of American railroads, the chief executive officers of 75 of the principal carriers of the country met in New York on July 1 and took momentous action for the relief of existing transportation difficulties. The meeting was the largest in the history of the railroad systems of the United States, and, as one of the leading executive officers expressed himself after the gathering, "may well go far to decide the question of private ownership versus public ownership of the trunk lines of America."

The meeting was held in the board room of the New York, New Haven and Hartford Railroad in the Grand Central Terminal, under a call of the Association of Railway Executives, and resulted in the appointment of a committee headed by Daniel Willard, president of the Baltimore and Ohio Railroad, to work out a solution of the vital problems before the roads.

At the close of the meeting, Thomas DeWitt Cuyler, chairman of the association, authorized the following statement:

"The Association of Railway Executives met today in New York to consider problems growing out of the present transportation situation. It was the largest meeting of railroad executives that has ever been held.

"By unanimous action the association authorized the appointment of an Advisory Committee of nine to deal promptly and effectively with transportation emergencies through the cooperative action of all the roads of the country.

"Daniel Willard, president of the Baltimore and Ohio Railroad, will act as chairman of this advisory committee. The other members of the committee are: General W. W. Atterbury, vice-president and general manager, Pennsylvania Railroad; C. H. Markham, president, Illinois Central Railroad; W. H. Truesdale, president, Delaware, Lackawanna and Western Railroad; Hale Holden, president, Chicago, Burlington and Quincy Railroad; E. J. Pearson, president, New York, New Haven and Hartford Railroad; W. B. Storey, president, Atchison, Topeka and Santa Fe Railroad; Howard Elliott, president, Northern Pacific Railway Company; B. F. Bush, president, Missouri Pacific Company.

"This action by the association was taken after a full discussion of the report of a special committee, of which Mr. Willard was chairman. In its report this committee said:

"It was clearly the purpose of Congress, as expressed in the Transportation Act of 1920, that private ownership and operation of the railroads should continue to be the established policy in

this country, but your committee is firmly of the belief that in the final analysis the test of private ownership which the public will apply will be the ability of the carriers to render efficient service to the country as a whole and under all conditions. While we believe that the best results from private ownership can only be realized under conditions which permit the fullest opportunity for individual initiative and action under normal circumstances, we also believe that in order to preserve private ownership it is incumbent upon the individual companies by voluntary action and cooperation to establish an agency authorized to deal promptly and effectively with such emergencies as contemplated in Section 402 of the Transportation Act."

"The advisory committee will advise concerning matters relating to transportation, maintenance and operation brought to its attention by the Interstate Commerce Commission, the American Railroad Association, or from any proper source. It will establish cooperative relations with the Interstate Commerce Commission. Subordinate to the committee there will be local committees of executives at leading railroad centers, such as Boston, New York, Philadelphia, Chicago, St. Louis, Atlanta, etc. These local committees will seek to assure the largest measure of cooperation between the carriers in order that the best possible public service may be obtained from the railroads."

Pertinent discussion of this action, probably the most important ever taken by the railroads of the United States, will be found on page 9 of this issue.

Charles W. Galloway, Vice-President in Charge of Operation and Maintenance

By Margaret Talbott Stevens

IF I were an artist," said a young man who is employed as File Clerk in the office of the Vice-President, "I would draw the finest cartoon that I could think of and label it *The Man Behind the Gun*; the man would represent the Baltimore and Ohio Railroad Operating Department, the man, Mr. Galloway."

Do you know of a finer appreciation of an official than for one of his own men to speak of him that way? And this clerk spoke not only for himself but for all who know Mr. Galloway, either personally or through business transactions.

For generations the Galloway family has been represented in the service of the Baltimore and Ohio; the story of what it has accomplished for the rebuilding of the Railroad is familiar history to the Veterans, who claim Mr. Galloway as their personal property. Everybody knows that he began his railroad career early in life, but does everybody now just how young he was when he started?

"Fourteen!" answer a dozen voices.

No, you are all wrong, my friends; it was long before that.

When "Charlie" Galloway, as he is affectionately called by thousands of his friends on the Railroad, was about five years old, he spent much of his time with his grandparents at Andy Hook, which was then the railroad terminal for the old Harpers Ferry & Valley Railroad (now the Shenandoah Sub-division of the Baltimore Division), and the Washington County branch, his grandfather, John R. Smith, having charge of the shops there. He was a very inquisitive child,

so inquisitive that he wanted to find out what the locomotives were made of and where the noise came from. His people had a difficult time trying to keep him off the railroad tracks. When he got a little older, he would frequently run away from home and hop on the engines around the terminals in Baltimore, if only to ride a short distance, just to ring the bell, and in this he found encouragement from many friendly engineers and firemen. He was a born railroader and had inherited the instincts of the locomotive engineer.

Mr. Galloway's grandfather, William Galloway, drove the first horse car between Baltimore and Ellicott's

Mills, then became an engineer and served as such for 50 years. His father, Charles B. Galloway, followed the same occupation and was killed while serving as passenger locomotive engineer. His great-uncle, Christian Smith, on his mother's side, was the originator of the sand box for the locomotive. (This man lived to be 96 years old. Not long before his death he made a trip to Baltimore to attend the big celebration here, Home Coming Week, in 1907, but he insisted upon being taken back home on the same day, saying that he was afraid to be away from home at night.)

At the age of fourteen, on the death of his father, Mr. Galloway became the head of the family. He was the eldest of six children and it was up to him to help provide for the others. As a messenger boy he began work in 1883 at \$12.00 a month. Think of that! A small enough sum, as compared with the wages of messengers entering the service today and, even in those times of cheap living, quite inadequate for the Galloway family. So the breadwinner was forced to get additional remuneration and this he did by securing employment as a newspaper carrier with a Mr. Webb Snyder, who owned a route in the southwestern section of Baltimore, covering generally the territory surrounding our Mount Clare Shops.

Mr. Galloway was then living at 457 W. Lombard Street and had to get up at two o'clock in the morning and walk to the publication offices of the *Baltimore American*, there being no street cars running at night. There he re-

Charles W. Galloway, Vice-President in Charge of Operation and Maintenance

ceived the one hundred and fifty papers for delivery on his route, folded them by hand and took them out to the section he covered, starting his delivery between four and five o'clock. His route started at the corner of Baltimore and Fremont Streets, thence north on Fremont to Fayette, to Carey, to Patterson Avenue, to Gilmore Street, thence to Ramsey Street and back on Poppleton Street, ending up in the vicinity of our Mount Clare Shops. He was awakened by the rap of the club of a friendly policeman on the wall of the home in which he lived, and during the four or five months he was performing this stiff job, in addition to the daily duties of messenger with the Railroad, the policeman never had to rap more than once.

Mr. Snyder, who owned the route, lost his sight 23 years ago, but continued to own the route for the Baltimore *American* until 1911, when he took a similar route with the Baltimore *Sun*. He recalls that he paid the newsboy handling this particular route about \$3.00 a week, the daily newspaper of that time being not larger than 6 or 8 pages. This extra remuneration was a welcome addition to the slender income of the Galloway family.

Mr. Galloway recalls gratefully many of the rewards which seemed to come to him even in those early days, in return, it seemed, for the big responsibilities he shouldered and the manly way in which he carried them. One was the fact that the elder John T. Ford, a dominating figure in the theatrical world during Mr. Galloway's boyhood, had his home on this route, took an interest in the newsboy and each week left a pass for him for Ford's theatre. Another good friend was a baker. He, too, took an interest in the newsboy and left a pie each morning in the grating of the bakeshop basement window for him. Pie for early morning breakfast! But hard work agreed with the youthful railroader and indigestion was never one of his worries.

And yet, with all his work, he did not get enough railroad. In later years, many a time while working as messenger and clerk, he would spend the whole day in carrying messages (trolley cars were scarce then), and at night he would stay in the tower at Carrolls, helping the operator, "Mose" Mullinix, throw the switches, studying telegraphy and, incidentally, learning the job.

A little later, he decided that if he could stay up at night to throw switches, he could stay up long enough to study shorthand. He bought himself a set of books—the

Ben Pitman and the Pitman-Howard systems—and set out to teach himself. After he had spent many a weary night, burning the midnight oil and applying himself laboriously to his studies, he came to the conclusion that he had got the "pot hooks" so mixed up with the "hangers" that it was necessary to enlist the services of a teacher to straighten out his tangles. After about two months, he dispensed with the teacher and finished the course alone. He remembers many a time when his good mother came downstairs in the wee, sma' hours of the morning and found her boy asleep, his head resting on the table beside his books.

At last he mastered the subject and sought a position in which he could use his recently acquired knowledge. You all know the rest of the story of how this young man climbed the ladder of success—from stenographer to secretary, to trainmaster of the Baltimore Division, assistant superintendent to superintendent of the Cumberland Division, superintendent of the Baltimore Division, superintendent of transportation, general superintendent of transportation, general superintendent of Southwestern Lines, general manager Baltimore and Ohio Lines East, vice-president of the Baltimore and Ohio Southwestern Railroad and general manager of the Baltimore and Ohio Lines West, Federal manager, then vice-president of the Operating Department of the Baltimore and Ohio System. Is it any wonder that they call him a "Real Railroader?"

A good conversationalist, of a warm and kindly disposition, pleasing in manner and appearance, Mr. Galloway has endeared himself to all of the "boys" on the Railroad, and to the "girls," too, for he has become one of our most popular officials. He has one hobby—the Railroad—and he rides it. Next to his family, he loves it best. Anything and everything about it interests him; he has spent many a vacation in seeking new ideas on other roads. He is not a club man, although he is a member of a number of clubs. He is an enthusiastic golfer and also has a regular course of exercises that he follows every morning in order to keep himself physically fit. He does not believe in worrying, stewing, or fretting; he tries to hold a good opinion of everybody, for, as he says, he finds troubles enough without looking for them.

"The successful railroad man," says Mr. Galloway, "is generally the man who starts at the bottom. I heartily believe in education; it is a splendid thing, but in our line of work it is experience that counts. The man who

would make something of himself must have enthusiasm, snap, push, vigor, energy; must concentrate his thoughts on his job rather than on the number of hours he may have to work. He can expect no returns unless he pays the price. And, remember this, a man cannot go sliding into an official's chair on influence. Influence may help to get him started in a job, but he must do real, honest, earnest and enthusiastic work if he expects to keep it. He must make good use of his time while the other fellow is idle; he must keep his eye on the job ahead of him. Some day the other fellow will be promoted or may leave his job—and somebody is going to get it. The same theory applies to the women employes, whose work deserves much commendation; they, too, if they would gain success, must work for it.

"My greatest pride is in the success of the Baltimore and Ohio: in trying to help make it a safe road, a good neighbor and a law-abiding citizen—for that is what a railroad ought to be—and a road that serves the public as well as it is possible for a railroad to do.

"Here is a little rhyme that I picked up from a newspaper some time ago; it appeals to me, for it expresses my sentiment:

Plan for more than you can do,
Then do it,
Bite off more than you can chew,
Then chew it.
Hitch your wagon to a star,
Keep your seat—
and there you are!

"Yes, I'm proud of Our Railroad and WHEN YOU SEE ME LEAVING IT, I'M FIRED!"

They'll Need More Cars, All Right!

"I'LL show you an economy of 30 per cent.," said the effervescent one who had managed to get in through a window behind the chief clerk's desk.

The "old man's" eyes twinkled over his glasses as he reached in the drawer of his desk and pulled out a memorandum.

"This is a list of the economies that have been offered me by various good fellows in the last two weeks," said the S. M. P. "We'll add your promise of 30 per cent."—and he added it up; it totaled about 429 per cent.!

"That looks promising, doesn't it?" he asked the hopeful one whose heart was in his mouth at the prospect of an order. "You know," continued the "old man," "if we adopt all these devices, we will have to add an extra car to haul the coal they save!"

—*Railway Age*.

The Miracle of Oil

Modern Methods Save Waste Down to Last Drop

From The Girard Letter

Centered in the Philadelphia District are manufactories of a widely diversified character. Among the largest is The Atlantic Refining Company, the magnitude and scope of which is very interestingly presented in the following article reprinted from the June "Girard Letter," a publication of the Girard Trust Company of Philadelphia.

The plant is in what is known as the Point Breeze section of the city and is divided into two units—the Philadelphia Works and the Atlantic Works. The Philadelphia Works are served by the Baltimore and Ohio Railroad and the Pennsylvania Railroad, and we obtain access to the Atlantic Works under the South Philadelphia Improvement Agreement. At the Philadelphia Works, the Baltimore and Ohio performs all switching service for both roads, and as illustrative of the volume of business handled, this occupies the entire time of two switching crews. The plant handles an average of 350 to 400 cars daily. And this is exclusive of the principal raw material (crude oil), which, as explained in the article, is pumped in through pipe lines from distant fields.

To provide for the efficient handling of their extensive shipping, The Atlantic Refining Company maintains as part of their organization a Traffic Department, under the management of Mr. E. H. Porter, as Traffic Manager, and this unit, responsible for the production of "transportation," is quite an essential link in the chain to prevent "even the odor of the petroleum" getting away.—C. H. PUMPHREY, District Freight Agent.

THE great difference between American manufacturing and the manufacturing in other countries is that here we use every conceivable machine and tool to increase output. Nowhere else does money aid labor so prodigiously in production as it does in the United States.

So, wherever you find a mill or factory which more nearly than the average one reaches a state of mechanical perfection, it is worth study.

Among its more than ten thousand industries, Philadelphia has but few which can be compared in this respect to The Atlantic Refining Company.

In that plant, wherever a dollar can save a human muscle, it does it.

Armour said that nothing but the squeal of the pig escaped in his slaughter houses. In the 700-acre plant of The Atlantic Refining Company, not even the odor of the petroleum gets away.

It is one of the largest refineries of crude oil in the world and yet most of our people know nothing about it.

In five hours The Atlantic Company could distill every quart of oil which poured out of Pennsylvania's first gusher during the entire first year of its pioneer history.

The romance of petroleum has been one of the classic chapters in America's rise to industrial supremacy, but nothing which a spectacular "Coal Oil Johnnie" ever did matches many of the wizard things done in the way of extracting from oil a hundred different products.

* * * * *

Pennsylvania first put the United States on the petroleum map and Oil Creek in this State was the scene of the world's first great well. That began to gush 61 years ago this

summer. But petroleum is no new thing.

Herodotus wrote about the oil pits near Babylon, and Pliny described how the Sicilians, a couple of thousand years ago, used oil lamps.

Plutarch mentions "pitch springs" and ancient Japanese literature refers to "burning water."

Before America was discovered, Marco Polo, the first globe trotter, visited the "oil springs" at Baku, now one of the premier oil fields of the world. And more than four centuries ago, Sir Walter Raleigh made the first mention of American petroleum when describing that famous Trinidad "pitch lake."

Indeed, before the French and Indian War, Peter Kalm had located on a map of America the Pennsylvania oil field. But it was more than a hundred years after that, or in August, 1859, that E. L. Drake bored along Oil Creek and shot the initial oil well in America.

As wells now go, it was small potatoes and ran but 25 barrels a day, but it was quite enough to startle the country and the world. Drake's discovery not only charted a hitherto unsuspected realm of natural wealth underlying our country, but it necessitated an entirely new industry which has now grown to stupendous dimensions—the refining of petroleum and the manufacture of a vast number of incidental by-products.

It was in the domain of refining oil, not in owning the wells, that the Standard Oil Company long ago reached that pinnacle of commercial eminence which made its very name the synonym for industrial success.

* * * * *

The richness of that original Pennsylvania oil field has been surpassed by others since discovered, but for a

decade it was virtually the only one in this country.

At the end of ten years, America's output of petroleum was only 4,000,000 barrels, but that seemed a gigantic production.

The second decade's output multiplied the first one nearly five times and that again was doubled in the third decade. But even up to the Spanish-American War, the United States got only 50,000,000 barrels of oil a year.

By the time Taft became President in 1908, the amount had jumped to 178,000,000 barrels and as new fields have come in the output has continued to climb to higher totals. (In 1919 United States production was 377,000,000 barrels.)

As it pours from the earth, petroleum is a thick, blackish fluid and for years the only thing worth while which the refiners could get from it was kerosene. Today, that is a by-product.

The automobile has made such a colossal demand for a new fuel called gasoline that it has become the biggest one thing which the refiners are able to extract from petroleum. But it is because of the wide variety of seemingly unrelated products which can be made from the crude oil that the art of refining has become one of the most interesting industries on earth.

A visit to The Atlantic Refining Company's plant is a round of eye openers and a succession of surprises. The bigness of the works, and the astonishing things which are done there besides refining oil are dazzling.

There are more than a thousand oil tanks. From two big pipes flow unceasing streams of black fluid, much of it having come from far off Oklahoma, a distance of some 1,300

The J. W. Van Dyke, one of the first turbine tankers, with a capacity of 77,000 barrels, was launched at San Francisco November 26, 1916. It is now used in trans-Atlantic service

miles. Some of the oil delivered into these Philadelphia pipes travels by pipe line a distance of about 1,700 miles.

It takes about a month for a barrel of oil to run through a pipe from the Oklahoma field to Philadelphia and it is pushed along the way by some 25 different pumping stations.

The Atlantic Refining Company handles 45,000 barrels of crude oil every day.

It comes in through those pipes a greasy, viscous fluid, but it goes out of the plant in actually a thousand different varieties from snow-white paraffin to jet-black coke and from shiploads of kerosene to millions of wax candles.

* * * * *

Once a part of the mighty Standard Oil Company, The Atlantic Refining Company is now operated wholly as an independent unit. And those who think the separation is a mere financial camouflage would be disillusioned were they to learn of the keen rivalry and competition that exists between the various refining companies.

"Get business" is the order of the day at Point Breeze, and from President Van Dyke down to the truck drivers the order is obeyed.

Nowhere can be found a more self-sufficient and self-sustaining industrial plant. No American industry carries on a more far-flung trade than The Atlantic Refining Company.

It owns a fleet of fine steamers and charters many others which carry its output to every corner of the globe.

Part of the refined oil is shipped away in five-gallon tin cans. But does The Atlantic Refining Company buy them? Not much. It makes 48,000 cans a day in its own factory.

To carry the cans, 24,000 wooden boxes are needed and that many boxes are turned out daily in another factory within that great enclosure.

Right there in those two departments, mossback manufacturers might learn a useful lesson. Labor-saving machinery is developed to a high degree.

The tin cans solder themselves together and the wooden boxes are nailed by automatic hammerers and stenciled by self-operating printing presses.

Barrels by the thousands are made in still another plant. The company has made

autotrucks and even builds its own barges and floats.

* * * * *

There are some 250 stills in which the petroleum is converted from the crude to various forms of refined oil.

A little more than a fifth of the bulk goes into gasoline.

There are hundreds of different kinds of lubricating oils made by The Atlantic Refining Company and about 500,000 pounds of grease is another valuable by-product which was once poured down the waste pipes as a thing of no marketable value.

Today, you could carry away in a tin cup all the oil that escapes in a day from that 700-acre field of activity. Should a bit of oil appear floating out upon the Schuylkill, it would be immediately salvaged.

Everywhere the fact that nothing escapes is impressed upon the visitor. All over the plant run drain pipes which connect with every spot where oil is handled and from the mouth of these pipes there are gathered some 300 barrels of oil daily, which otherwise might be wasted.

The extreme care to let nothing get away is decidedly impressive and stimulating. It is thrift on a big scale and is one of the secrets of the Atlantic's immense financial prosperity.

System and order are developed to the top degree. There is a premium on brains in the plant, which is encouraging to the 6,000 employees.

* * * * *

After seeing the inside of the wax works

down at Point Breeze, you are convinced there will never be a shortage of candles for birthday cakes.

They make about 5,000,000 candles in a month. There is a limitless demand for the paraffin products of petroleum and that is one of the most interesting departments of the great plant.

The wax comes out white as milk and is cut into cakes two feet long, a foot wide and two inches thick. An official of the company has just invented a new way for cooling the wax by floating it around a big room in troughs of cold water.

"Got the idea," he said, "from watching tooth paste come out of a tube in a nice ribbon. So we rigged up a machine from which the wax is squeezed out in an endless ribbon and is cut in the proper lengths and then floats away in the cooling bath."

Another and splendid example of labor saving at the expenditure of the dollar!

But the human side of the Atlantic is not neglected. The company has introduced a first rate pension system and death benefit plan for its employees. There is quite an army of men, say 250 or more, who have worked there for more than 25 years.

* * * * *

Big and busy as The Atlantic Refining Company is, it will be 50 per cent. larger in the near future. There are few refineries in the world that equal its capacity of 45,000 barrels a day, which it is planning to increase to 60,000 barrels daily.

To keep the wheels in motion, 2,000 tons of coal are consumed daily and 20,000 boiler horse-power is required.

You hardly expect to extract from oil a substance that looks, feels and burns like ordinary coke, but they do

A section of the barrel filling room

it. This coke is used chiefly for the manufacture of electric carbons.

You scarcely think of cooping as a part of oil refining, but the Atlantic turns out thousands of big barrels a day.

If you were to ask why this company should be singled out for special notice, the reply would be: Because it points the way to all manufacturers to a system of utilizing every ounce of

raw material to get the most out of it and has developed, to an amazing degree, labor-saving devices which cheapen production and increase output.

Appointment of Powerful Committee of Nine to Handle Car Distribution a Far-reaching Step Toward Perfecting Transportation Service

THE appointment by the Association of American Railway Executives of the Advisory Committee of Nine, with President Willard as its chairman, to handle car distribution, as set forth on page 4 of this issue, is a move of far-reaching importance and possibilities in American Rail Transportation. This action, taken by unanimous consent of 75 roads, will place car distribution in the hands of this committee or its representatives, with absolute power, under approval of the Interstate Commerce Commission, to distribute cars on American railroads.

Full administrative offices will be established, probably in Washington, with a former railroad president acting as chief operating official.

What Action Means

A leading railroad man of Baltimore, who is familiar with the situation facing the railroads and leading up to the appointment of the Committee of Nine, said in the Baltimore Star of July 2, in this connection:

"Before the great war, as the question was raised subsequently, there was a doubt as to whether the American railroads were adequately meeting transportation problems. Whether this was true or not, when the war came it was necessary in order to advance war preparations and the delivery of war supplies to tremendously upset the existing order of things and the War Labor Board, followed later by the Railroad Administration, created order after order as to priority, embargo and general preferential treatment, which had the effect of stopping or curtailing particular lines of shipments, such as building material, road construction, material, etc., and, at the same time, caring for a greater volume of transportation along other absolutely essential lines.

Great Deterioration

"I am not criticizing the government war operating agencies when I

say that in the 26 months of government war control there was less rolling stock for freight and less motive power added to the American roads than was usually the case in an ordinary 12-month period under prewar conditions.

"During the 26 months, also, there was practically no passenger service added to take the place of deteriorated and discarded cars. Also, during the war period, the extra strain on rolling stock, added to the fact that the same amount of effort in repair was not expended as was the case in peace days, made toward a greatly increased deterioration and brought about a badly stricken national system of railroads for efficient operation when the day of returning to private ownership came.

"Again I want to say I am not criticizing—war emergencies may have made this a necessity.

"Under these and numerous other serious problems, both financial and constructive, of the reconstruction period following the war, the railroads have struggled more or less as individual units, although under Interstate Commerce control, to reach a normal basis. The fact has been forced home that under a decreased transportation capacity, as created from conditions outlined above, and an increased production period for the country as a whole, as compared with production before the war, the railroads must find some other method than that of individual control, even under Interstate Commerce Commission direction, to adequately meet the situation until extra cars and locomotives can be added. It takes months to build new rolling stock and repair old cars and locomotives, especially when every car and engine that can be used at all must be kept in service to meet the emergency of the hour.

"I am convinced that if private ownership is to be maintained, the railroads must act for the national

common good as against any local or sectional efficiency system, and that is the purpose of the naming of the Advisory Committee of Nine. The Interstate Commerce Commission will, of course, under the law, retain its rights of general direction, such as priority, as in the case of specific orders for delivery of fuel, etc. The advisory committee, however, through direct touch and cooperation of all the railroads, will be in the position to act quickly for relief of any particular congestion, or to recommend sweeping action by the Interstate Commerce Commission to bring about such relief.

"For instance, the Interstate Commerce Commission has ordered a priority on coal movements, and this is an absolute necessity, especially in view of the recent 'outlaw' strikes on the railroads, which have come close to causing industrial shutdowns and general business stagnation. The advisory committee will be in position to at once see that the orders of the Interstate Commerce Commission are effectively carried out. Again, for instance, today an appeal came from a melon growing district of the South, stating the crop there would spoil unless cars were quickly furnished. The advisory committee will see that the cars are furnished in proportion to the true justice of the demand and irrespective of individual railroad ideas of car distribution, no matter from what roads the necessary cars are taken.

"You can thus see what a tremendous step has been taken when 75 of the great railroad systems of the country agree to abide by the decisions of an advisory committee in central location which will consider and act upon all questions of transportation distribution. To my mind, a vital step in the right direction has been taken by the American railroads for efficient operation under private control."

In His Father's Stead

By Charles Wesley Sanders

WARNER found the Chief's door open. He walked through it and up to the Chief's desk. His manner was almost truculent and his eyes held a cold, hard look. The Chief leisurely finished what he was doing and then he looked up.

"Ah, Warner," he said.

Warner said nothing for the moment. He felt his resentment against this big man, with the calm, assured manner, growing stronger. The five years which had passed since they had last met had touched the Chief lightly, Warner saw. His hair was perhaps a little grayer, the wrinkles about his eyes a little more pronounced, but, in spite of his 50 years, he was far from being an old man. Damn him, thought Warner, life had treated him royally, giving him of its best, while Warner had been through the mill of hard experience.

"Well," said Warner, "I'm back. I told you I would come back."

"I see you're back," the Chief said noncommittally.

"I want to talk to you privately," Warner said. "I thought you'd be quitting about now. Maybe you can dine with me. We could talk then."

Warner's tone was not such as a man uses when he invites another man to dine with him. There was hostility in it instead of hospitality. The tone might have given the Chief grounds for declining the invitation, but he only turned back to his work, saying, "Have a seat, Warner. I'll be through in a minute. Then I'll be at your service."

Warner sat down in a chair some distance from the desk. He was rather taken aback. Certainly the Chief must know what his errand was. He had expected the Chief to show anger on his own part; instead, he was, as Warner phrased it, as cool as a cucumber.

Anybody'd think that Warner had stepped out of the office for five minutes instead of having been gone for five years. Why, the Chief hadn't even sized him up. He hadn't scrutinized him to see whether he was prosperous or otherwise. For all the Chief seemed to care, Warner might have been a ragged, broken boomer drifting in to plead for a small loan. But the Chief had always been like that. He was a human icicle, caring for no one but himself. Well, Warner would show him. He had traveled nearly a thousand miles to show him.

After a while the Chief rose from his desk, put on his hat and coat and turned to the younger man.

"Where do you want to go?" he asked.

"We'll go to the Harrington Hotel," Warner said.

"All right."

Warner had eyed the Chief closely when he had said this; he had expected the Chief to show surprise that Warner was able to afford two dinners at the Harrington. It was a new hotel, built since Warner had gone away. Its specialty was to serve as little food as possible for as high a price as could be charged. The Chief must know that Warner was well supplied with money, and yet he had coolly said "all right."

They walked the five blocks to the hotel in silence. It was a sullen silence on Warner's part. He had failed initially to get "the rise" out of the Chief which he had expected to get. On the Chief's part it was a cheerful silence. He nodded and smiled when he met a friend or acquaintance.

"Same old bunk," said Warner to himself. "If they knew him as well as I know him, they'd see he's as crooked as a dog's hind leg. His cheerfulness is only to cover him up."

During the meal Warner's sullenness increased and the Chief's cheerfulness grew. He ate heartily, and lighted and puffed a good cigar contentedly when the meal was done. He was looking at his cigar out of narrowed eyes when Warner pulled out a roll to pay the check. He didn't seem to notice the roll at all.

Warner took his own cigar out of his mouth when the waiter had withdrawn. He leaned across the table to the older man.

"Graves," he said, in a low, tense voice, "I've traveled nearly a thousand miles to meet you face to face."

"So?" said the Chief, flicking the ash from his cigar. "That's quite a little trip just to see me."

Warner's anger came to white heat.

"And I've traveled that far to tell you to go to the devil," he gritted. "You interfered with me once. If you do it again, so help me high Heaven, old as you are, I'll punch your face."

"I'm not so old," said Graves equably. "Just how was it I interfered with you?"

"As if you didn't know," said Warner in so loud a voice that the guests

at a nearby table turned to look at him.

"Well," the Chief said in his easy tone, "it was five years ago, Warner. I've been pretty busy. I remember I discharged you. But the details are a bit hazy. You might refresh my memory."

"I'll refresh it," Warner declared. "That's what I'm here for. I learned telegraphy on your railroad, didn't I?"

The Chief nodded.

"I learned it as fast as anybody you ever knew learned it," Warner went on. "You gave me a job. You let me work for three months and then you fired me. Not only that but you had the 'dicks' looking me over. My work was all right but you didn't give me a chance. You wouldn't be square with me. My father—"

"Yes, I remember your father well," Graves interrupted. "He and I were good friends. He started firing about the time I took my first 'OS' job. That was a good many years ago. He got an engine when I went up into the dispatcher's office. But we saw a good deal of each other even after that. Nothing ever came between us till he died."

"Yes, and when he died, what did you promise him?" Warner said thickly, for this was as great a grievance as he had against Graves.

"He sent for me," Graves said. "He asked me if I wouldn't look out for his son a little. He said you were a good boy but that you liked your fun. I told him I'd do what I could for you."

"Yes, and you did it!" Warner scoffed. "You certainly did it! You called me into your office and tied a can to me. You told me not to see your daughter again, not to write to her. Well, I just said to myself that I would see her once before I went away. I did, too. She said she'd wait for me. And I think she has. Five years! And never a word, never a line. A man who can wait like that has some good stuff in him, hasn't he, Graves?"

"Well, what has all this to do with me?" Graves asked, with a hint of a smile in his eyes.

"Nothing, absolutely nothing. I'm just serving notice on you that you're not to butt in on my business."

"You didn't bring me here just to tell me that," Graves said.

"Didn't I? Why did I then?"

Graves squared away at the table and leaned across it as Warner was leaning.

"I'll tell you why you brought me here," he said, and his tone had a quality of sternness in it which many men knew well. "You brought me

here to show off. You brought me here to show me that you had a roll of money. I'd already noticed your good clothes, though I didn't seem to. You've got a prosperous air. Apparently you've landed a good job somewhere. What is it?"

"I'm night chief on the Oregon and Western," said Warner.

It was his big moment, but somehow it didn't seem to come up to his expectations. His announcement seemed to fall flat. The Chief was looking at the end of his cigar again. When he spoke he reverted to the older happening.

"When I gave you the night job at Oldham I kept my eye on you from the start," he said. "I kept asking the third trick dispatcher how you were making it. At first you were right on the job. Then one morning a month or two after you started I

was told that the dispatcher had had to put out an order at another station because he couldn't raise you toward morning. I don't deny that I had you looked up. Why shouldn't I? That's part of my business. I found you were pounding your ear now and then. You weren't getting enough sleep daytimes. I couldn't stand for that, could I? The Company wasn't paying you to trot around daytimes and look at the scenery. It was paying you to rest so that you'd be Johnny-Wide-Awake at night. That so?"

"That's so," Warner assented. "But you know damned well that if you had called me on the carpet and had given me a bit of fatherly advice; if you had been a father to me as you promised my 'dad' you would be, I'd have braced up. I suppose I was the first operator that ever slept on duty in your experience."

"No-o," Graves conceded. "And I'll go further than that; I'll say that I haven't fired every operator that pounded his ear a bit. I don't countenance it—no man does if he knows his job—but I was rather more severe with you than I would have been if the circumstances had been otherwise."

"Sure!" said Warner. "That's the point I'm making. You had promised my father, when he lay dying, that you would give me a square shake. You didn't. Why, you didn't give me as square a shake as you would have given an entire stranger. That right?"

"That," said Graves, "is perfectly right. And I'll add something to it: I said to myself, when I sent you to that office, that I would fire you the very first time I got anything on you."

Anger seemed to lie hot between the two men now. Graves' tone had been angry. Warner could not see that there was a twinkle in his eyes.

"And the reason you fired me was because you knew that your daughter and I planned some day to marry," Warner gritted. "You knew we had been sweethearts ever since we had been in school. You fired me on your daughter's account. You wanted to part us. You started in this business just exactly as I started. Yet you thought I wasn't good enough for your daughter."

"I admit I fired you on my daughter's account," Graves said. "I intended to protect her. I wasn't going to have her hooking up with a man that wouldn't give the road the best there was in him. And that's all there was to that."

There! Warner had made him confess. Now to the climax. He got to his feet.

"No, you needn't come with me, Graves," he said harshly. "You can stay here or go wherever you damned please. I'm going up to your house. I'm going to see your daughter. I'm going to ask her to marry me. I know she'll do it. I know she's been waiting for me. I'm as good a man as you are. Comparatively, I've got as good a job. It's a better job than you had when you married Grace's mother. If you interfere with me—well, you'd better not!"

Graves did not look as if he were going to interfere with him or with anybody else. He had taken another cigar from his pocket and was lighting it. Warner grinned sardonically. He thought he had bluffed the Chief. It had been easier than he had expected. He started to walk away from the table.

"By the way, Warner," Graves called after him.

"Graves," he said, as he leaned across the table, "I've traveled nearly a thousand miles to meet you face to face"

Warner came back. Graves was again annoyingly looking at the burning end of his cigar.

"How's Jack Hedges getting along out there?" Graves asked.

"My Chief?" Warner wondered.

"Your Chief," Graves assented.

"Why, he's getting along fine," Warner said. "He's the best friend I have in the world. A squarer, better man never lived. You know him?"

"Um, slightly," Graves answered. "He and I pounded brass together years ago. I—"

"No, you don't," Warner interrupted. "I see what you're up to. You think you'll get me to talking about Hedges and then you'll hand me some salve and turn me away from what I came here for—to see your daughter. But it won't work. Nothing'll work. You can't wheedle me. You can't bluff me. I'm on my way. By the time you get up to the house I'll have seen Grace and fixed things with her. She won't listen to any argument you put up. We'll marry in spite of you."

He wheeled and went definitely away from Graves. The Chief sat there alone at the table for a long time, smoking, his head bent, the look which memory brings in his eyes.

He thought of his own marriage, when he had had only an "OS" job. He thought of the death of his wife after five years of such happiness as few men know. He thought of Warner's father dying. He recalled the promise he had made Warner.

"And I reckon," he murmured to himself, "I kept that promise better than the boy knows."

In thirty minutes he arose and went out of the hotel. He walked home under the summer stars. His head was bent. There was a look of sadness in his eyes. He was like a man who gazes upon scenes long past. It was a moving picture of life. Sad scenes there were and glad scenes; scenes to warm a man's heart or to fill it with a longing which, for him, could never be satisfied.

"Life is like that," he said to himself as he opened his front door. "I hope there is more of joy than sadness in it for these two."

He went noiselessly into the hall. At his left was a curtained door. He put the curtains aside and stood in the doorway. Warner and his daughter were sitting at the opposite side of the room. They got to their feet quickly, the girl a little confused, the man defiant.

"Hello, Grace," said Graves and there was a twinkle in his eyes, "got your beau back, have you?"

They stared at him blankly. There was no mistaking the fact that he was

no longer opposing them. The girl took a step toward him.

"I'll be back in a minute," he said. "I don't want to intrude, but I've got a letter upstairs that I want to show to this youngster. Maybe it will enlighten him."

He went upstairs and took an envelope out of the drawer of his desk. From the envelope he took out a sheet of tissue paper. It was a copy of a letter he had written five years ago. He smoothed it out and read:

"Dear Jack—I want you to do a little favor for me. A youngster named Henry Warner is headed out your way, looking for a job. In fact, I am heading him your way. I want him to fall into your tender clutches. I've just fired him for pounding his ear on duty. Nothing serious, but a bad beginning. I'm interested in him because he has the nerve to want to marry my daughter. I don't suppose I can stop him even if I wanted to. When I fired him, I relieved one of my best men. Warner doesn't know him and he will fall in with Warner and

tell him there are plenty of jobs on your road. When you place him, watch him like a hawk for my sake. Let him understand that at the first slip he'll be fired. He wouldn't lose this second job for all the gold in the western hills. I think it'll make a man of him. I've got to make a man of him, Jack, for two reasons: I don't want to break my daughter's heart, and I must keep a promise I made to his father. Let me know how things turn out.

Sincerely,

THOMAS GRAVES."

The letter was addressed to Mr. John Hedges.

Graves went downstairs with the tissue paper in his hand.

"I guess he won't be so high-and-mighty when he reads this," he chuckled to himself. "If he is I'll just show him all the letters I've had from Jack, tipping me off as to how he was getting along. He broke the news that he was night chief as if he thought I would drop dead. As if I didn't know about it the very first night he sat in on the job!"

Through Sleeping Car Service Between Washington and Detroit

Have You Told Your Friends?

AN additional train service not only affords new traveling advantages for our patrons, but also establishes a prestige for our Railroad and furnishes interesting points of conversation for its employees.

With the Summer Schedule of the Baltimore and Ohio, effective June 13, a new sleeping car line was established between Washington, D. C., and Detroit, Mich., via Pittsburgh, New Castle, Youngstown, Akron, Deshler and Toledo over our own rails, thence to Detroit over the Pere Marquette.

The through cars westbound are attached to No. 5, the "Chicago Limited," leaving Washington at 1.35 p. m., arriving at Toledo at 5.10 a. m., and at Detroit at 7.25 a. m. Eastbound, the cars leave Detroit at 12.10 p. m., Toledo at 2.15 p. m., arriving at Washington, D. C., at 9.00 a. m., on the "Chicago Special," No. 8.

The cars will enter and depart from Detroit at Fort Street Station, located in the very heart of the business and hotel district.

The establishment of this line of sleepers was deferred for some time until the train service could be so ad-

justed as to afford the very best service through the cities named. It will be a boon to dealers in automobiles and in automobile accessories, rubber goods, etc., and will be a direct line from the great automobile manufacturing centers to the distributing cities of Baltimore, Washington, Richmond, Norfolk and the South.

An additional line of sleepers was established at the same time between Pittsburgh and Detroit, leaving Pittsburgh on No. 15 at 6.45 p. m., New Castle at 8.45 p. m., Youngstown at 9.15 p. m., Akron at 10.50 p. m., arriving at Toledo at 5.10 a. m. and at Detroit at 7.25 a. m. Returning, leaving Detroit on Train No. 16 at 10.15 p. m., Toledo at 12.15 midnight, arriving at Akron at 8.15 a. m., Youngstown at 9.45 a. m., New Castle at 10.24 a. m., and Pittsburgh at 12.30 noon.

"Our Passengers are Our Guests."

Colonel Emerson's Story

The conclusion of the story "Through Soviet Russia with the Czecho-Slovaks," by Colonel George H. Emerson, Chief of Motive Power, will appear in our August number.

Opportunity! Is It as Big as Ever for the Railroad Man?

By C. W. Galloway

Vice-President, Operation and Maintenance

OPPORTUNITY! Is it as big as ever for the railroad man?—Bigger, better and more numerous. That is my answer. BUT—there are a lesser number of men, unfortunately, who hold themselves in a state of preparedness to grasp Mr. Opportunity by the hand when he honors them with a visit—and hold him. For, in order to hold him you've got to be deserving of his friendship and favor, and as he is a very sagacious old gentleman you can't fool him. He can sight or nose a camouflage a mile away.

When one expects a guest one makes due and decent preparation for his reception and entertainment. Now Mr. Opportunity is a guest, one who means much, very much, to you. He ought to be more than welcome. He is the rich old uncle. Your future well-being, your contentment and happiness, your place in the world, depend upon the reception that you accord to him, the preparations you have made for him in your house. The contents of that house will determine his future relations with you and gauge the length of his stay. He doesn't care a finger snap about gimcracks and gewgaws, for he is a practical old fellow; but he delights in the well ordered and the practical. I don't mean to imply that he objects to beautiful things in your house. He doesn't. He not only admires, but awards to them a very decided, a high value in the arrangement of his scheme of life. In doing this he is simply following the example of a Higher Power, Who peoples His soil with poppies as well as potatoes. But like the Lord, Mr. Opportunity cares not a fig for gewgaws.

Dropping the figurative, let me repeat that there are more and greater opportunities today than ever before. There is always room at the top, and there always will be. But no man can attain to the upper rung or any other rung, head-high, if he merely stands at the ladder's foot and gazes up at the top, as though he were in a state of stupefaction, beholding Jacob ascending through the clouds of Heaven and vanishing into the invisible and impenetrable Beyond.

He's got to climb himself. He's got to endure the heat and sweat of the day, and betimes, too, he's got to burn the midnight oil, and then some.

The young railroad man (and this applies to every other vocation)—whether he be employed on the line, in the shop, on the station platform, at a draftsman's table or a clerk's desk,—in order to succeed, must have will, determination and vision, purpose and plan. He should have charted in his mind the line of positions stepping upwards along the line from his own place, his own rung on the ladder, clear on to the President's chair. Of course, we can't all be Presidents, but the ambition neither hurts nor hinders; on the contrary, it's a big help. His campaign for promotion must embrace acquisition of knowledge and information of, and a thorough familiarity with the duties, not only of the position he now holds, but of the position next above and the one next above that again, together with the cultivation of self-reliance and self-confidence. These latter are the more readily acquired, and insensibly come of themselves in the practice of the simple plan outlined above. In other words, when a vacancy occurs in the class just ahead he must be competent and ready to move up and fill it satisfactorily.

I cannot too strongly dwell upon the importance of possessing self-confidence, absence of timidity. Please differentiate between what is commonly called "cheek" and self-confidence. The one is offensive and repellant; the other is pleasing and attractive, and of itself induces and begets confidence and trust in those with whom it is brought in contact. Self-confidence is born of and is synonymous with possession of positive knowledge, which can be imparted with promptness and stated with a directness and certainty which cannot be refuted or successfully attacked. He who is so fortified is invulnerable and his progress cannot be stopped. Remember what old General Dumouriez reported to the Council at Paris after the young Corsican stripling, Napoleon, had driven the English out of Toulon: "Promote him or he will promote himself."

Set down as unworthy that young man who rails, as many do, at the lack of opportunities for advancement today as compared with 25 years ago. So many men do not get ahead because they are utterly indolent do-

nothings; and this curse of sloth is apparently on the increase, concurrent with the constant effort toward reduction of work-day lengths. Some of these whiners remind me of the fellow who won the prize for laziness. Lying in the sun with other sluggards, he told the seeker after a horrible example, to put the dollar prize in his pocket, as he didn't want to undergo the exertion of rolling over or changing positions to do it himself. Like this sluggard, their conception of opportunity is that it be thrust into their hands with a copper riveted guarantee that their fortune shall be made without effort on their part.

OPPORTUNITY is enlarged in any avocation in degree with the growth and expansion of its business. The greater the business, the greater the opportunities for the advancement of the individual. In this year of 1920 the railroads comprise a vastly more expanded and important transportation machine than it was a quarter of a century ago. Why, within my own time I recall that the annual gross earnings of the Baltimore and Ohio were only between 16 and 17 millions of dollars; now its annual gross earnings are in excess of 200 millions. The growth of the business alone has greatly increased the opportunities, in breadth, in bigness and in numbers; while the advance of scientific methods in the handling of traffic has thrown open the door of opportunity so wide as to give it dimensions of an entire barn wall compared with the narrow entrance to a cow byre; of a 10-wheel Mallet locomotive compared with the little Atlantic of revered memory, which now reposes in a quiet corner of the Martinsburg roundhouse.

Anything worth having is worth striving for, worth fighting for. The royal road to Success is broken by many rough places. It is studded with jagged rocks and strewn with many a broken bit. But these are not insurmountable and will yield before the persistent hammering of diligence and courage and steadfastness which make smooth the way.

At the feet of efforts such as these, reward is laid freely, ungrudgingly, by Mr. Opportunity, who willingly becomes friend and servitor and rejoices.

Importance of Book of Safety Rules*

By R. N. Begien

General Manager, Western Lines

WE HAVE a new Safety book here. It says exactly the same things that we have been saying in these meetings, and we are all familiar with every word there is in it. Its publication and distribution among our employes is a good thing. It brings to their attention in a very personal way the things they ought to do to make themselves and their fellow workmen safe.

We have other books of rules—the Maintenance of Way Book of rules, the Maintenance of Equipment Book of Rules and the Transportation Book of Rules. These are our laws, which govern the running of this Railroad. But this book of rules is just as important as any other. In fact, it is more important, because these other books of rules really tell us how to accomplish what is in the Safety book. The Transportation Book of Rules tells us how to operate trains with Safety; the Maintenance of Way Book of Rules, how to maintain our track in Safety, and the Motive Power Book of Rules, how to load cars safely and operate our engines safely, etc.

In carrying out the Transportation Book of Rules each division officer is supposed to make a certain number of tests, and we even go to the extent of designating just what those tests will be, and we check up to see if he did personally make these tests, record the results of the tests, and follow up from month to month failures to carry out the designated tests.

There is a tendency to suppose that the Safety Committee is the only agency for carrying on the Safety work. They have done a great deal. They have done a great deal more than I thought was possible when we first started our Safety work. I had no idea that we would secure anything like the results which have been attained in carrying on this work. I didn't believe it possible. I thought we were safer than the results indicate that we were.

Men Must Be Taught Rules

It is not necessary to go into the details of the rules; that is not what we are here for. We are a committee organized to provide ways and means for carrying on the work. The adoption of general standards of Safety are part of our work, but the most important thing of all is to carry on the

teaching that is necessary to spread them to the men who really get hurt and who hurt others. The men down the line who switch the cars and who use the lathe and who tamp the ties must be taught and must be made to understand not only how they should do these things properly, but also that their fellow workmen are entitled to a certain amount of attention and care to see that they are not hurt by the actions of any careless employe or one ignorant of the rules. That is the job of you gentlemen here—to pass the word down the line, and unless you do that, there isn't a chance in a million of our being as effective as we otherwise might be.

Violations Mean Either Lack of Instruction or Respect

We know very well what is contained in this book, we understand the subject ourselves, but I know that this word is not being passed down the line as well as it might be, because as I go over the line I see violations of these Safety rules. I see men violating these Safety rules when they know that we, who are their officers, are looking at them, and when men do that, they are either lacking in respect for their officers or they have not been properly instructed.

Great Progress Possible

I consider it entirely possible to make just as much progress in the next year or two as has been made in the past year or two, and I hope everyone here will think about it and feel about it just as strongly as I do, and pass the word along. That is

* This is a part of Mr. Begien's address at the meeting of the General Safety Committee, Western Lines, at Cincinnati, Ohio, June 11, 1920!

the big thing for this committee to do.

Think how the attitude on this subject has changed in the past few years. Only 15 or 20 years ago on railroads accidents of all kinds were considered a usual part of railroading. We used to have horrible accidents, and apparently they were taken as part of the game.

Today bad accidents on a railroad are rare compared with what they used to be. This has not been brought about by chance, but by a carefully planned campaign. The Baltimore and Ohio has every reason in the world to feel that it was a pioneer in this campaign of Safety work. It was the first railroad cast of the

Mississippi River, and the second in the country, to take up this work. I believe we are entitled to say more than that. I remember the facts quite well about the western campaign. I believe that, whether the campaign on the western road started sooner than ours or not, it is a fact that our campaign took a definite form first and began to get definite results first.

Safety Is First at Staff Meetings

As soon as we bring our division superintendents in to the next staff meeting we will devote our first hour to this subject, and it shall be the first order of business to consider the Safety work. This is one thing we

are not going to let lag around here if we can help it.

I think it would be a good plan if the General Superintendents could find it convenient to attend some of the Safety meetings on the divisions.

Pass the Word Along

The word is to "pass it along"—that is the main thing, "pass it along." As a General Committee we are assured we are getting some results, and these results are the fruits of a planned campaign. If we "pass it along" down the line we will get better results. Nothing is so good for the Safety campaign as the rigid enforcement of the rules which are laid down for the Safety of our employees.

A Lesson from Australia

THE experience of other countries with state-owned railways is of especial interest to Americans in these days of socialistic suggestion and Plumb Plan propaganda. The Commonwealth of Australia furnishes a case in point. Both physically and as to the character of its population, Australia resembles America more closely, perhaps, than any European nation in which the experiment of government ownership of railways has been tried; and while, as a Kansas City contemporary points out, there is no positive assurance the outcome of the plan in the United States would be the same as it has been in Australia, still the comparison is more logical than would be a comparison with results in smaller and more densely populated nations. Here is what the Australian representative of the London *Times* has to say on the present Australian railway situation:

"It is not surprising that the state railway services of Australia, where practically the whole mileage throughout the commonwealth is owned by the different states or by the federal government, are in a state of non-progression. It could not be said that they are stagnant, for they are used, especially during our frequent shipping disturbances of the peace, to their full capacity. But, mainly owing to the cessation of the influx of loan capital during the war, new construction languishes or has ceased.

"Owing to the large and repeated demands of labor, the prices of coal, material, and workmanship have all advanced, with reflected increases in all classes of freight and passenger rates, and owing to a rule-of-thumb administration by men not of the highest type of administrative knowledge and vigor, the railway services are not now so fast, so convenient,

or so cheap as they were 10 to 20 years ago.

"Difficult as it may be to credit it, railway traveling in Australia on the main lines is actually slower than it was 15 years ago; the rolling stock is less adequate, the permanent way is no better, if not worse, and the human service rather more independent and casual. And all is far dearer. So that if the British railway traveler is sometimes apt to wish that he had a different regime of administration, let him be advised by an Australian rather to bear those ills he has than fly to others that he knows not of.

"It is true that sooner or later the people in Australia do contrive to

make their opinions felt in Parliament and in railway administration. But it is a long, slow process, for bureaucracy is at all points mutually supporting, and no individual has the patience to conduct the interminable official correspondence necessary to secure some reasonable amelioration."

We have had a taste of railway bureaucracy in the United States in late years, and as Senator Lodge so aptly said the other day, "there was universal dissatisfaction with the government management and it was a just dissatisfaction. The experiment failed and should not be renewed."—*Railway Review*.

The Railroad Problem

How a Rate Increase Affects the Public

From The Girard Letter

RAILROADS of the country need a billion dollars more income a year. To get it they have asked the Interstate Commerce Commission to increase freight rates 30 per cent. What would such an increase mean to the average person?

For a family of five, a 30 per cent. advance in freight rates would represent for all the food eaten in one week just the price of a shoe shine. Ten cents would be the maximum increase on the cost of food, while the increase in the cost of clothing for a week is too small to be figured out in any coin now minted by the United States.

Let a hundred men each order a good steak at a first class hotel and the bill will be not less than \$150.00 for the dinner. How much more would those hundred steaks cost the Philadelphia meat dealer were the railroad to get a 30 per cent. increase for hauling them from Chicago? Just twenty cents for the lot.

The after-dinner cigar of one man at the table would equal the whole extra cost of the beef for the entire party of one hundred!

A rise in freight rates might be used as an excuse by dealers for boosting food and clothing prices to consumers, but in reality, it would be almost impossible to translate such an increase to individual cases because it would be so small.

Thus, a man in Philadelphia who buys a pair of shoes made near Boston would have to be taxed exactly one-half a cent for the extra freight rate; that being the additional cost of carrying a pair of shoes to him from there.

A man will pay \$5.00 for theatre tickets, plus the 50 cents war tax and regard the transaction as an evening's amusement.

But that war tax alone on those tickets would just pay for the extra freight charge in carrying 100 suits of clothes from the Philadelphia maker to their Baltimore wearers. Precisely half a cent for the best suit of clothes is what that 30 per cent. increase spells when the suit is carried by a railroad, say 100 miles.

Go to a baseball game any afternoon and you will see men stand in line for the privilege of buying a ticket for a good seat to see the game. Just the war tax alone on one such baseball ticket equals the proposed additional freight rate on all the hats worn by 150 St. Louis baseball fans, whose headwear was made in Philadelphia and shipped 1,000 miles by rail.

In other words, 37 cents will pay that 30 per cent. freight increase on more than 500 Stetson hats sent all the way to the Mississippi.

Vice-President George Dallas Dixon, of the Pennsylvania Railroad, figured from the rate schedule a few years ago exactly what a 15 per cent. increase in freight rates at that time would mean to your table.

For a family of five, it meant 3½ cents in one week. And Mr. Dixon took a family of good average size for the basis of his calculations.

It is astonishing what a small fraction of the cost of what you eat and wear and read goes to a railroad for bringing the things to you.

A 30 per cent. raise in freight charges now would add only one-tenth of a cent to the cost of an ordi-

nary book brought from New York to Philadelphia—a sum too small to make any difference in the price you would pay for it.

Twenty-two cents, which is what a 30 per cent. increase would be, would just pay for the increased cost of the two eggs you will eat every morning for the whole of next year—even supposing the only eggs you could get had to come all the way from a Chicago warehouse to Philadelphia.

For the flour that goes into a family's bread, the extra charge would be negligible—only 12½ cents for 100 pounds of flour transported from Minneapolis to Philadelphia.

The railroad carries 100 pounds of butter from a creamery in the West for the sum you pay at the corner grocery for one pound of it.

A Montgomery County farmer who needs 100 pounds of nails for building a new barn could get them under the advanced freight schedule, hauled from New Britain, Conn., where they are made, for 9½ cents extra.

* * * * *

But, some people say, why pay anything more to the railroads, even though the sum be small?

Our answer is that if railroad freight rates are advanced, the cost of living will be reduced a good deal more than the small amount involved in the increase.

The big trouble today is that the railroads are unable to handle the nation's business. In four years, that business jumped more than 40 per cent., but the railroads had only enough money to increase the cars and locomotives to handle it by two per cent.

Thus, railroad poverty has brought a transportation famine upon the United States and added greatly to the cost of commodities through inability to move them.

"Let every mine have all the cars it needs for two weeks," said a Pennsylvania state coal operator, "and the price of coal at the mine will drop \$4.00 a ton. Only our inability to ship coal to our customers, which creates a constant scarcity, keeps the price of coal up where it is."

The only thing which railroads sell is transportation. Therefore, make transportation so plentiful that every shipper can buy all he requires of it, and this artificial famine in almost every commodity we use will disappear and prices must decline.

* * * * *

Lack of funds for years past has prevented all the railroads, rich and poor, big and little, from manufacturing enough transportation to supply America's demands.

They have not had the capital to pay for cars, locomotives, tracks, and station facilities and have not been able to get capital because their business has been made unprofitable by law!

Hence, if America wants more transportation and a return to normal living costs, it must help the railroads to get the money needed to build cars, tracks, and locomotives. The only way that can be done is to advance freight rates, in order thus to enable the railroads to secure the capital required.

President Willard of the Baltimore and Ohio was exactly right when he testified that an increase in freight rates would decrease the cost of living.

He knows, as every other student of the railroad problem knows, that as soon as there are sufficient cars and tracks and enough motive power to pull all the trains, the output of commodities all over the country can instantly be speeded up; and that will bring down the cost of your clothes and your table.

Instead of taxing the people more, a higher freight rate will reduce taxes because the revenue from those higher rates will immediately be

spent by the roads to supply more and more transportation, which is the first essential for carrying on our country's business. It is more, it is the one vital necessity.

* * * * *

If builders had sufficient funds to erect in Philadelphia 10,000 new houses, the general selling price of houses would fall and the size of rentals decrease.

Had the farmers of the United States enough labor to cultivate all their fields economically, the prices of all food would shrink.

Had the banks unlimited funds to lend, the rate of interest would go down.

In every case, an increase in quantity of a commodity tends to lessen its selling price.

It cannot be too often repeated that the only commodity which a railroad sells is transportation. But a Federal law prevents an increase in the price of this commodity, otherwise under the law of supply and demand it would be double the present rate because of the keen competition to obtain supplies. No Federal law, however, prevents a rise in the price

of everything a railroad company is compelled to buy.

The railroad is a nationally restricted industry, and has been restricted to a degree where it has ceased to be able to serve the people as they wish their railroads to serve them.

It seems incredible that a nation of sensible business men should acquiesce any longer in these conditions. The new Transportation Act, if carried out in its spirit by the Interstate Commerce Commission, will change this; but public approval must support the Commission.

The figures of the few illustrations given above show the trifling sums involved for each person were the nation to stop paralyzing our railroad systems and keeping from consumers the things they need in their individual lives every day.

People pay gladly an increased price for diamonds, but groan when the railroads ask for a third of a cent more to carry food for them a distance of 200 miles.

That handsome new limousine, which is 100 per cent. luxury, will cost the buyer \$3,000 more than a similar car five years ago, but never a protest from the purchaser who has the price. Then why should he consider that he is being robbed if a railroad collects \$32.00 more to bring that car to him all the way from Detroit?

The same feeling has existed relative to street railway fares in cities. Attempts to increase the charge have been denounced as robbery. Riding in a trolley car is for millions a daily necessity, and the difference between good and bad service affects everybody.

To promote better accommodations by a slight increase of a penny or two in fares is fought against as an outrage; while at the very same time no organized protest is heard against increases for admission to all forms of amusement. People pay a dollar or two more for theatre tickets, but object to an increase of a penny or two in the fare on the trolley car which carries them to the theatre; although they know that an increased car fare is necessary to promote their own accommodation and comfort. It seems a curious twist in human nature to object to the penny added to the cost of a necessity and acquiesce in the dollar when it comes in the form of pleasure.

People seem to forget that the common phrase formerly in use relative to transportation rates "to charge all the traffic will bear," can be misunderstood and misapplied under differing circumstances—like many other sayings.

The time has come when it should be recognized by everyone that traffic

When th' Drag Hangs Up at Baileys

By Robert L. Heiser

Third Trick Dispatcher, Baltimore Terminal Division

Oh! how'll we get 'em through, boys?
How'll we get 'em through?
Th' drag is down at Baileys
'N number twelve is due.
A hundred cars from Locust Point
'N ten more down at Camden,
'N Marshall says "Th' drag has up 'n
Gone to work 'n rammed 'em!"

Oh! how'll we get 'em through, boys?
How'll we get 'em through?
Th' drag is down at Baileys 'n
Biddison's down there too.

Th' dispatcher bows his head in prayer
'N the 'phone begins to ring,
"Oh Lord, give me a pair of skids,
A track, or some new thing."

Browning's got 'em into clear,
Smitty's in th' hay,
Th' chief has got his dander up
'N there is—well, I say,

Th' drag is down at Baileys
'N number twelve is due,
Oh! how'll we get 'em through, boys?
How'll we get 'em through?

ought to be charged all that it will bear—that is, all it is right it should bear; because unless it is so charged the means of transportation for the people who pay it and for all their manifold individual needs and business cannot be furnished.

The only alternative is government

ownership of railroads and all other public utilities and allied business, with a consequent enormous increase in general taxation and with the certain paralysis also of American individual activities which have hitherto developed this great and growing country.

The Flag

"Thou hast given a banner to them that fear Thee, that it may be displayed, because of the truth."—PSALMS LX-4

THE striking conception, "The Flag," on the cover of this issue, is a beautiful symbol of the place the National Emblem should have in the consciousness of every American.

The engineer, guiding his train along the winding reaches of the Patapsco as it parallels our Old Main Line, emerges from the shelter of the sloping hills and the darkness of the night, and, as the turn in the road gives him a clear sweep of vision to the Relay Viaduct and the eastern horizon beyond, the flag, painted by the Creator with the rays of the rising sun upon the palette of the cloud-flecked sky, proclaims the new day as it bursts in all its glory upon him. The flag, born of the lofty idealism of our forefathers, upheld by the sacrifice of their sons even to our own generation, and that shall mean, please God, the New Day to the millions who seek its protection and own its sway, until the end of time.

The flag is the outstanding symbol, the one rallying point of our nation. Other nations have their kings and emperors—and they pledge allegiance to "the Crown." In Napoleon's time, the French—mad for conquest—worshipped his far-famed Eagles. We have only the flag, the Stars and Stripes, emblem of our national unity and allegiance.

The Great War, with its rekindling of patriotism among our people, brought with it a more universal use of the flag than ever before in our history, and with it, almost inevitably, a tendency to such forms of display not worthy the flag itself or the ideals for which it stands. What, then, was the original conception of the flag? What does it mean? How should it be used?

The Origin and Development of the Flag

Prior to 1777 each of the 13 colonies had separate designs of flags. The need for a uniform flag representative of the struggling states was generally recognized and many designs were presented to Congress.

"Old Glory"—the Stars and

Stripes—was born on June 14, 1777, when Congress resolved "That the flag of the United States be 13 stripes, alternate red and white, the union be 13 stars, white in a blue field, representing a new constellation." The Father of our Country, assisted by a committee appointed by Congress, directed the preparation of the first flag. Living in Philadelphia at that time was Mrs. Elizabeth Ross and to her was intrusted its actual making. She was a manufacturer of flags for the Government for many years, her children succeeding to the business.

The "Betsey Ross House" is still standing in Arch Street, in Philadelphia.

Our present flag differs from the first design only in the number and arrangement of stars in the field. At first they were arranged in the form of a circle. The blue field, it is believed, signified the league of the united colonies against oppression, and symbolized Vigilance, Perseverance and Justice.

Congress ordered an important change in the flag to take effect May 1, 1795, namely, that the flag contain 15 stars and 15 stripes, one of each to be added with the admission of every new state. The two were added because of the admission of Vermont and Kentucky. It was soon evident, however, that with the admission of new states the beautiful symmetry of the flag would be destroyed and on April 4, 1819, Congress restored the number of stripes to 13, typifying the original 13 colonies, and ordered a new star added on the Fourth of July following the admission of every new state. The first flag made following this order had the 13 stripes, and 20 stars arranged in the form of a large star.

Traditions of the Flag

I never think of the flag that I do not recall the beautiful tribute always paid it by the Union veterans of the Civil War. As they pass it, displayed from staff or pole, if in civilian clothes, they raise the hat reverently; or, if in their uniforms on a patriotic holiday, they give it affectionate salute.

The regulations and traditions of our Army and Navy hold the flag above every other symbol of national consciousness—standing with the National Anthem as worthy of our highest respect. No matter what the rank of the officer, even to the commander-in-chief, when the flag passes by, or the ensign (as the flag is called in the Navy) is hoisted to the peak, he comes to attention and salutes.

The color guard in the Army is the assignment sought by every smart soldier, for it is the greatest honor he can have. The color sergeant who carries the flag is spick and span, erect, proud, vigilant, as he presents it to the regiment, or directs its raising at Reveille or its lowering at Retreat. Carefully, tenderly, reverently, the flag is handled, and so that it never touches the ground. It is folded in a prescribed way at Retreat and deposited for safe keeping in the quarters of the commanding officer.

Readers of this article who have had the privilege of Army service will agree that no matter how fatiguing the soldier's daily grind, no matter how much trouble to spruce up for Retreat at the close of the day's routine, the inspiring ceremony itself, the lowering of the flag, while the National Anthem (irrevocably wedded to the Star-Spangled Banner itself through the immortal poem of Francis Scott Key) or "To the Colors" is being played, and rifles are clicked to the "Present," has an uplifting and thrilling effect that never fails to rejuvenate the body and fill the soul with a new baptism of patriotic pride and feeling.

What the flag means to the men of our Navy has been well expressed in a beautiful tribute to the flag written by Charles William Bowers, a former Baltimore and Ohio employe, in 1918.

It reads, in part viz.:

I have stood upon the deck of a man-of-war at the end of a harrowing day, with the smoke of infantry fire rising in the distance on the mountainside, as our land forces drove the enemy back, and fortress guns frowning from rocky heights before us. It was at that moment preceding the setting of the sun, when the blast of the bugle and passing of the word meant "Colors" and informed us that night was about to settle and the Stars and Stripes flowing above our deck would be lowered.

I turned aft and faced the Flag, like every other sailor and marine on deck and every other man above and below, on lookout in the crow's-nest, passing coal in the bunkers or whatever his place and duty and whether or not he could see the Flag. The notes of the bugle diminished as the Flag came down the staff, ceased when it was furled away; and soon only their reverberations lingered over the deep. Every hand, which had been lifted and held in position of salute, was dropped; we turned away filled with the solemnity and grandeur of the occasion and veneration for the Flag we served.

There was no twilight, no enchanting

period when day and evening flirt with one another and give the soul an intermediate hour of vanishing rays and deepening shadows in which to recline and contemplate. Night was upon us at once—black night. Not a light shone above water. Silent activity, restless vigil, darkness.

* * * * *

In the morning—ah, what a glorious recompense for the preceding hours of nocturnal anxiety and hardship amidst the rolling and pitching of the ship, the shriek of the gale and crash of giant waters! The storm had blown itself and its horrors away. The darkness was receding down the mountains, followed by the gray of dawn.

We were on the *qui vive*. The first call to "Colors" had sounded. Suddenly the lowering of the horizon exposed the edge of the sun and the sea was agleam.

The Flag mounted the staff and burst forth in all the glory of its Red, White and Blue; the bugle pierced the silence, its notes being repeated from the deck of every other ship in the fleet, the whole re-echoing across the water and among the hills in a glorious anthem of Democracy, while simultaneously above every vessel appeared in majesty the Stars and Stripes!

* * * * *

As the Stars and Stripes go down, darkness, tumult, chaos and misery creep forth. As the Flag rises, Light and Liberty shine forth to brighten and uplift mankind.

Not one but millions of men on land and sea have felt the same inspiration so beautifully described in this tribute. And not they alone but all of our people, and all through our history, have felt this reverence for the flag.

Misuse of the Flag

Several years ago certain thoughtless or unscrupulous men used the flag in unworthy ways to advertise their wares. Their practices were soon brought to a stop, however, by some of our patriotic societies, who had legislation enacted to prevent the commercializing of the flag.

We all love it and, when we wish to

show our special pleasure or pride in any event or holiday, we are prone to make a too indiscriminate use of the flag. We paste flag stickers on the doors of our work shops, and the beautiful emblem soon becomes dirty and unsightly. We are handed miniature flags to place on the lapels of our coats—and they fall off and are soon lying in the dirt at our feet. We place flags on our porches, schools, clubs, shops and roundhouses, and leave them there—the targets of wind and smoke and bad weather. We fly the flag from barns and out-houses, from cabooses, engines and sheds, and permit it to become tattered and torn. We paint it on cylinder boxes on our locomotives and it becomes faded, forgotten, a mere stain of color and a disgrace to its original purpose and meaning.

Such practices tend to cheapen the flag in our sight and our esteem. A too liberal use of its beautiful design makes it a mere commonplace—and we soon become forgetful of its great history and what it really stands for.

Worthy Use of the Flag

The flag should never be permitted to fly in bad weather. In the Army during bad weather it is usually lowered and put in its authorized place under cover. Its surroundings should always be worthy of it. It should be hung in a dignified way (and not used for decorative effects) on the porches of our homes, on our churches, our public buildings, our offices and workshops, preferably on poles or staffs where it will not be soiled by surrounding objects. Its most fitting place is at the top of a pole where it can be flung to the breezes and where, in the clear upper air, we can,

literally as well as figuratively, look up to it and pay it reverence.

It is a remarkable fact that although ours is the youngest of the great nations of the world, our flag is one of the oldest, so rapid have been the changes in the dynasties and territories of the older powers. The greatest changes have, of course, been brought about as the result of the Great War, with Russia's proud flag but little more than a memory and the royal standards of Germany and Austro-Hungary supplanted by recently adopted designs of these so-called republics.

There is, moreover, no flag on earth that has the spotless record of the Stars and Stripes. Born in the infancy of our Republic, it has never been the rallying point for an unworthy cause. The War of 1812, the Civil War, the Spanish-American War, the Great War,—in all these conflicts, Old Glory, undefeated and unsullied, has led the defenders of Liberty and the lovers of Humanity.

Symbol of Liberty and Democracy, it stands for truth, righteousness, honor and loyalty. Beloved by all who own its sway, it carries to the oppressed beyond its domain a message of hope and helpfulness. It's untarnished history of almost a century and a half is a challenge to us to rededicate ourselves to the great principles of humanity which have been developed and preserved under its protecting power, and to renew our vows of loyalty to it and to the Republic.

—

A Socialist Speaks

ONE of the wisest writers in England is *Alexander M. Thompson*, well known as "Dangle" of the *Clarion*.

He is a Socialist, but not one who believes in the almightiness of any program, Socialist or otherwise. He sees the humanities. He is one of the many in England and America who are battling with great ability to save industry from the stupid men of Capital and the wild men of Labor. Recently Mr. Thompson said:

"Above all, we must restore the human relationship between the captains and the rank and file of industry.

"Too long has it been the function of the one side to exploit and of the other to resent and resist.

"This bad, old way leads to friction, bitter strikes, mutual hostility, and eventual ruin.

"The common people are not all slackers and strikers, who care for nothing but beer and wages.

"The employers are not all idle parasites, conscienceless profiteers and greedy blood-suckers.

"Our business—on both sides—is to restore and develop the humanities."

—*New York American*.

Flag Pledge

(As Used by Millions of Our Public School Children)

I pledge allegiance to my flag and to the republic for which it stands; one nation indivisible, with liberty and justice to all.

I give my head, my heart and my hands to my country; one country, one union, one flag.

Flag of our great republic, whose stars and stripes stand for bravery, purity, truth and union, we salute thee.

We, the children of many lands, who find rest under thy folds, do pledge our lives, our hearts, and our sacred honor to love and protect thee, our country, and the liberty of the American people forever.

Seventy Empty Coal Cars Moved 415 Miles in 32½ Hours— A World's Record

When this article was shown to President Willard he said that it gave him the utmost satisfaction to know that the efforts which he and the Advisory Committee of the Association of Railway Executives were making to help relieve the coal shortage by a better car movement, had been so promptly and effectively backed up by Baltimore and Ohio employees

IN THE last issue of the MAGAZINE we had the opportunity of telling the story of the world's coal cargo loading record of the steamship "Malden" by our employees at the Curtis Bay Coal Pier. Now, just as we are going to press, comes another story of a record performance—a world's record, we believe, to the credit of Baltimore and Ohio men.

Our readers know that the newspapers have carried distressing statements to the effect that on account of the car shortage there was a possibility of the closing down of industries, particularly in the New York District, through lack of coal for power purposes. These reports reached their climax at about the time the announcement was made in regard to the appointment of the Advisory Committee of nine railroad executives, with President Willard as chairman, with plenary powers to handle car distribution on the American railroads. It was gratifying, indeed, therefore, that this record movement of empties back to the coal fields for loading was made by Baltimore and Ohio men to help relieve the shortage of coal and to set the pace in operating efficiency looking to a general betterment of the situation.

About July 1, our freight trains began to be operated from Philadelphia over the Philadelphia and Reading and Central Railroad of New Jersey into Jersey City, by our own crews, a new departure in our operating methods on the Eastern Lines, and at first opportunity General Superintendent Scheer, of the Baltimore District, planned to start this record movement to the coal fields to show how efficiently and quickly empties could be gotten back to the mines for loading.

The following tabulation tells the story of the movement in detail:

Called Jersey City 12.30 a. m., July 11,
engine 4590, 70 coal cars.
Left Jersey City 1.50 a. m.
Arrived Carrolls 4.47 p. m.
Left Carrolls 5.53 p. m., engine 4521, 70
coal cars.
Arrived Brunswick 9.53 p. m.
Left Brunswick 10.05 p. m., engine 4870,
70 coal cars.
Arrived Evitts Creek 3.14 a. m., July 12.

Crews Handling Record Run

	Engine	Engineer	Fireman	Conductor	Brakemen
Jersey City to Baltimore...	4590	O. Welsh	R. E. Cox	W. T. Byrd	G. F. Ward, J. J. Grove, W. T. Martins
Baltimore to Brunswick...	4521	H. Hobson	J. A. Bryan	W. D. Levy	G. Kouch, W. T. Lantz, W. Bozel
Brunswick to Cumberland...	4870	G. T. Nield	A. Fanelli	C. H. B. Strailman	L. R. Crabtree, C. C. Graham
Cumberland to Rockwood...	7145	E. L. Collins	J. L. Walsh	S. R. Ringler	L. H. Rice, J. C. Crosby, W. Reynolds

Passed Viaduct Junction 3.34 a. m., engine
7145, 70 coal cars.

Arrived Rockwood 8.31 a. m.

Arrived Somerset coal region 9.00 a. m.

We were unable to secure pictures of all of the trainmen who helped make this record movement, but are glad to be able to show our readers the pictures of some of those responsible.

The most remarkable feature of this movement was the record time in which it was made, an average of 12⁸/₁₀ miles per hour for the entire distance of 415 miles. The train was main-tracked at Carrolls, Brunswick and Cumberland, which means that instead of being run into the yards for changing engines or crews, it was given the main track straight through. This, however, did not interfere in any respect whatsoever with other traffic. There was not a single hot box, nor a broken brake beam, showing that the train was well inspected and in good condition mechanically before it started. Of particular interest was the fact that Conductor Byrd and Engineer Welsh, whose pictures are in the accompanying cut, handled the train from Jersey City to Carrolls, a distance of 190 miles.

Here is a great mark for us to shoot at. We are proud of the men who made this record and of the officials who engineered it. We would like to have a story like this to tell in every issue of the MAGAZINE. Who will give us the next one?

Left to right: Fireman R. E. Cox, Engineer O. Welsh, Conductor W. T. Byrd, Brakemen J. J. Grove, G. F. Ward and W. T. Martins

Allow Us to Introduce Our New Annex

By L. P. Kimball
Engineer of Buildings

EVERYBODY has heard about the new Annex, into which a number of our departments are moving, but those who are not being transferred there will be interested in knowing something about the building and the whys and wherefores of the change.

Located on the corner of Liberty and Lombard Streets, the "Sutton Building" will henceforth be known as the "Baltimore and Ohio Railroad General Offices—Annex," or, simply as the "Annex Building," as distinguished from the "Central Building."

The Annex Building was purchased for two reasons: to relieve congestion in the Central Building and to effect a saving in the high rents which we were required to pay for office space in outside buildings.

The structure is of brick, with eight stories and basement, and has available on each floor for office purposes, after necessary allotment of space to stairways, elevator shafts, private offices, toilets, etc., about 15,000 square feet, or 1,000 square feet more than we have on each floor in the Central Building. In addition to the furnishing of the interior and

building necessary partitions, the Annex is being equipped with new stairways, fire escapes, electric elevators, adequate toilet, heating and ventilating facilities.

The occupancy of this building will be beneficial in bringing together in one structure the several large groups of the Accounting Department, which have been badly scattered.

By the time that this issue of the MAGAZINE appears, the following offices will have moved to the Annex:

EMPLOYEES	
Auditor Passenger Receipts.....	196
Auditor Coal and Coke Receipts.....	125
Freight Tariff Bureau.....	76
Total.....	397

At the same time the Auditor of Freight Claims office, 103 employees, will be moved from the Central Building, a total of 500 employees occupying the Annex Building on July 1. These departments will occupy the second, third and fourth floors. It is expected to have the entire building ready for occupancy September 1, at which time there will be a total of about 1,400 employees assigned to the building.

OFFICE GENERAL SUPERINTENDENT OF TRANSPORTATION—Baltimore, June, 1920.

H.O. Hartzell Elected President of American Railway De- velopment Association

THE twelfth annual convention of the American Railway Development Association (formerly Railway Development Association), was held at the New Gibson Hotel in Cincinnati, June 16, 17 and 18. The membership comprises industrial, agricultural, immigration, publicity and real estate representatives of the various railroads in the United States and Canada, who meet twice a year to discuss methods, and to exchange ideas pertaining to the different phases of development work.

The program included a trip for the association members and local business men affiliated with the Cincinnati Chamber of Commerce, to the Procter and Gamble plant at Ivorydale, and the factory colony at Oakley, as guests of the Baltimore and Ohio Railroad.

The election of officers resulted in the unanimous vote of the Association for Harry O. Hartzell, manager, Commercial Development of the Baltimore and Ohio Railroad, for President during the ensuing year. Other officers chosen were: First Vice-President: D. C. Welty, commissioner of agriculture, Missouri Pacific Railroad; Second Vice-President: George E. Bates, assistant to the general manager for Industrial Development, Delaware and Hudson Railroad; Secretary-Treasurer: J. B. Lamson, agriculturist, Chicago, Burlington and Quincy Railroad.

At the annual dinner of the association, Vice-President Fries made an interesting address on the activities of the Baltimore and Ohio Commercial Development Department and the general problems confronting the railroads today: Mr. John N. Coverdale, secretary of the American Federation of Farm Bureaus; Mr. John L. Shuff, general manager of the Union Central Life Insurance Company of Cincinnati, and President Hartzell, were the other speakers. Governor James M. Cox of Ohio was to have been a guest, but was prevented from attending by illness.

The Baltimore and Ohio Railroad was represented at the convention by H. O. Hartzell, manager, Commercial Development; W. I. Bishop, industrial agent, Baltimore; C. M. Gosnell, industrial agent, Pittsburgh; J. M. McDermott, industrial agent, Chicago; G. W. Arnold, industrial agent, Cincinnati; and P. S. Phenix, industrial survey agent, Baltimore.

To bring the inaccessible parts of Switzerland within reach of everybody, was the task that Switzerland undertook when she began to build her railroads. Long stretches of wild and mountainous country now bow in homage to the iron rail. This picture shows one of the quaint, though imposing, little houses of the railway guards in Ardez. Strongly built to withstand the avalanches of snow and ice that slide from the neighboring mountains, this house beside the railroad track, with a background of lofty heights, is peculiarly characteristic of the work of the Swiss people—combining the artistic and the utilitarian.

Scattered about the green carpet of an Alpine meadow, we find Ilanz, Switzerland, the first town on the Rhine, with its mass of old-fashioned houses and beautiful churches. On nearly every peak in Switzerland there is a little chapel, and all about the mountain sides are herds of goats, whose gay, young keepers whistle and "yodle" to their hearts' content. Miles away are the snow caps that appear to be within a stone's throw of the village. Note the thick forests that seem to protect the little town like the moat around the ancient castle. This is a place of small, but luxuriant gardens, beautiful bridges, and picturesque highways.

Here we take a peep at the idyllic little village of Lavin, situated on the railroad leading from Bevers to Schuls-Tarasp. In the distance are the sunny heights of Engadine, where many ruins of ancient strongholds and castles dot the landscape—silent reminders of the day when Switzerland endured the yoke of Austrian tyranny. Here also we find the mountain stream that separates the plateau from the cliff. The railroad, too, enters the village and brings with it tourists from all over the world. Some of these small villages are being continually threatened with falling rocks. Fine clouds of mist often hover about the river beds, and a native whispers to us that any phantom-like shadow that we may see is probably the ghost of an inn-keeper's wife, who committed some awful crime in the vicinity of these mountains, and whose spirit still haunts the misty streams.

The Vala Mela Viaduct is one of the many of its kind over which the engines of the Rhaetian Railway puff their way. The total length of the Swiss tunnels and viaducts is 33,350 feet. Here the mountain torrents come gushing down and cut deep gorges into the rocky plateaus. Almost any kind of a bridge would seem beautiful in a situation like this, but notice with what great care this one must have been built. See the small archways that span the great one, and the smaller ones, like doorways, that stand yet within these! Compare the houses with the mountains and get an idea of the dizzy heights that one must climb before he reaches even the edge of the timber line.

Assured that our readers will welcome advice and suggestions on the all-important problem of health preservation and life extension, based on the latest advances in medical science, it will be the purpose of this section of the MAGAZINE to present brief and instructive articles each month by members of the medical staff of the Relief Department. We know our efforts will appeal to our readers. If only a few profit by the advice offered, our contribution to the sum of human happiness will be considerable, and our service of value. The addition of one, five or fifteen years to a life is well worth the task.

The Marines of the Human System

By Dr. R. D. Sykes

Assistant to Medical and Surgical Director

YOU have, doubtless, heard of a battle royal, if you have not witnessed one, in which a number of contestants are placed in a ring and struggle for supremacy, victory going to him who is most vigilant and endowed with the greatest resisting power.

From the time the lungs expand preparatory to the first lusty cry, until, touched by the finger of death, we pass into the Great Beyond, we are in the midst of a battle royal—a contest between health and disease; and the span of life varies in accordance with individual resisting power and the strength of the invading foe. Many a battle is fought and won by the vital forces, but frequently the invading horde sweeps down upon a weakened fortress and death gains the mastery; or, if by reason of one's strength and endurance, life grows into the "sere and yellow leaf," the vital forces eventually fail and the delicate human mechanism wears out and finally stops—like a storage battery ceases to function—because the powers of recuperation cannot keep pace with the requirements and demands of life.

How, then, may we increase our powers of resistance; what are the powers of defense; who are the invading foes, and how and where are the battles fought?

The resisting powers may be fortified and increased by observation of the established rules of hygiene and sanitation. These have been con-

eisely summarized in the following couplet occurring in an article in our February number:

"Give heed to your diet,
Surroundings and toilet;
And add to your health,
Or else you will spoil it."

It is shown by recent statistics that $12\frac{1}{2}$ years have been added to the average length of life by improved hygienic and sanitary conditions.

The power of defense is an inherent capacity of the body to cope with an invading force. Its most active and efficient agents are the white corpuscles, the phagocytes. The invading foe is legion; almost as innumerable as the sands of the sea, and in greater variety. All of them may be embraced in the comprehensive term "baeteria."

Before we tell how and where the battles are fought, we will ask whether you have seen the "whiskers" on a crab? They are not merely decorative, but perform the definite functions of feelers or listeners, and are scientifically known as antennae. It is not an accident, but a natural sequence that the term "antennae" is likewise applied to the highly sensitive listening auxiliary of the wireless telegraph.

On duty in the central office at Washington, with his wireless antennae extended, is the Commander-in-Chief of our national forces of protection and defense. At the first inkling of disturbance or invasion in any quarter of our extensive country—

even among the islands of the seas—the marines, "the first to fight," are dispatched to put down the uprising or repel the invading foe. Though our bodies are wonderfully constructed and endowed, counterparts are often found under commonplace conditions. Hence, our forces of defense—the phagocytes—the first to fight, we style the marines of the human system.

Our foes surround us on every side, approaching from without and within. Our human citadel is armor plated on the outside by the skin and its appendages, and on the inside by the mucous membrane (modified skin), or lining of the digestive or respiratory tracts. Our body has its being between and in these protecting envelopes, and everywhere through it courses the life-giving blood stream—the rivers and waterways of the body—upon whose currents ride the red and white corpuscles. The red corpuscles are carried along in the middle of the stream by the rapidly flowing current, performing a double duty: the delivery of material to repair and rebuild tissues, and also to collect and convey wornout particles to the incinerator (the lungs), where they are eventually burned and carried out of the body by the exhalations in breathing. The phagocytes (or white corpuscles), which are not nearly as numerous as the red corpuscles, hang along the side of the streams like lazy marines on patrol duty.

Our human fortress, through the nervous system, is more delicately wired than any invention the mind of man ever conceived.

The armor must be penetrated before the foes, that constantly lie in wait, can find entrance. As long as entrance is not obtained the rivers with their flotsam and jetsam flow on undisturbed; but, let one of the assaulting foe penetrate the armor of defense, and immediately the antennae of the nervous system flash a signal to the Commander-in-Chief (the brain), and there is immediate activity among the marines (the phagocytes), and they are dispatched in increasing numbers to the point of invasion.

Like our marines, the phagocytes neither ask nor give quarter, and they fight on both land and sea, attacking bacteria within the blood stream, and, when necessary, they penetrate the tissues and there wage relentless warfare on the elusive enemy. When the phagocytes are produced in sufficient numbers by a body which has conserved the vital forces through proper nourishment, exercise, rest, and strict observance of the recognized laws of

hygiene and sanitation, they will be the victors in battle against disease, and thus make us fit to cope successfully with the problems of life, while enjoying that happiness which only good health can guarantee.

Overheard at the Medical Quiz

Prof. Sapio: "Dr. White, is pain in the chest usually an indication of pleurisy?"

Dr. W.: "As a general rule it is not."

Prof. S.: "But is it not a fact that people having this complaint for a few days, and not confined to the house, are led to believe, and are occasionally told by physicians, that they have pleurisy?"

Dr. W.: "No physician should convey such an impression. Pleurisy is an inflammation of a membrane covering the lungs and separating them from the chest wall, is accompanied by fever, cough, pain, rapid breathing, and the individual is quite ill and confined to the house and bed for two to four weeks. A competent physician can find other definite symptoms by an examination of the chest."

Prof. S.: "Precisely. But tell us, what ails those having pain in the chest for a few days, particularly on taking a deep breath, and who are up and about?"

Dr. W.: "They usually have what we know as pleurodynia, or intercostal neuralgia—a rheumatism of the muscles or neuralgia of the nerves between the ribs, mostly due to drafts or exposure, not at all serious in character, and benefited by hot applications, mustard plasters or liniments."

Prof. S.: "And thus we dispel another common error regarding medical topics."

Around the Circle

"THERE was an old man and he had a wooden leg, and he hobbled all about on this artificial peg. He hobbled to a bar (this was many moons ago) and he stayed there longer than he'd really ought, you know.

"In the wee small hours he essayed to travel home, all unsteady on his legs and bewildered in his dome; but he hadn't got far when his arborescent pin struck a hole in the pavement and slipped right in.

"Yes, it slipped right in and stuck right tight, and the owner of the limb was anchored for the night. Did he holler for help? He assuredly did NOT; for he never knew what happened, this befuddled old sot!

"But he hobbled right on with his one good prop, and he never stopped to think and he never thought to stop. And his ligneous limb still stuck right tight, and he walked around himself through the holdam night!

"He was sick the next day and he died next week, and he passed, we trust, to the haven of the meek; and the folks back home soon dried their weepy lids, for he'd left a little widow and about a dozen kids.

"And the kids grew up (this was long, long of yore) and had kids in their turn who had kids still more, till the land was covered with a progeny vast of the tipsy old gent whose leg got stuck fast.

"His descendants still abound and their origin they prove by the way they do their work in the same old groove; using methods that were good back in Eighteen Eighty-four, they walk around the circle every time they think once more.

"No—it's not with any HOPE that we're writing of this crew, nor with any sly suspicion that they're relatives to YOU. But our tender hearts are touched by so piteous a plight. Yea, it really is to weep—

"Boo-hoo!

"Good night!"

With Apologies

The author said a great deal, yet he hasn't said enough, for the peg legs that he spoke of in his very clever stuff, fall in lots of other holes than the ones of which he said; in fact, you'll find those circles in most every kind of head.—*Ax-I-Dent-Ax.*

"Each morning is a fresh beginning. We are, as it were, just beginning life. We have it entirely in our own hands. And when the morning with its fresh beginning comes, all yesterdays should be yesterdays, with which we have nothing to do. Sufficient is it to know that the way we lived our yesterday has determined for us our today. And, again, when the morning with its fresh beginning comes, all tomorrows should be tomorrows, with which we have nothing to do. Sufficient is it to know that the way we live our today determines our tomorrow.

"Simply, the first hour of this new day, with all its richness and glory, with all its sublime and eternity-determining possibilities, and each succeeding hour as it comes—but not before it comes. This is the secret of character building."—RALPH WALDO TRINE.

"Young Man, the Machine at Beardstown Is Now Running. Don't Stop It Until You Are Sure You Can Start It Again"

When J. D. Bessler, father of W. C. Bessler, president of the C. R. R. of N. J., was general superintendent of the C. B. & Q. R. R., E. M. Herr, then about 30 years old, was in the Mechanical Department of the same railroad. When he was appointed superintendent in charge of the Beardstown Division of the Burlington, under the elder Bessler as general superintendent, he went to this veteran railroad man before leaving Chicago to take his new assignment and asked him if he had any special instructions to give. Mr. Bessler said:

"Young man, the machine at Beardstown is now running. Don't stop it until you are sure you can start it again."

Mr. Herr followed the advice and since that time has been occupied in keeping running, from year to year, bigger, bigger and still bigger machines, until he is now president of the Westinghouse Electric Company and an executive officer and director of other important industrial and financial institutions in the Pittsburgh District.

J. D. Bessler became a trackman with the Burlington in 1856 and was successively a foreman, roadmaster, superintendent and general superintendent of the same railroad. While Mr. Willard was second vice-president of the Burlington, from 1904 until he became president of the Baltimore and Ohio in 1910, he appointed Mr. Bessler as his assistant. Mr. Bessler is now over 80 years old and has the respect and affection not only of all of the employes of the Burlington, but also of many other men who have come in contact with him during his long railroad career. And his advice to Mr. Herr has been of value alike to that eminently successful leader of men, and to many others who have made names for themselves in the railroad and industrial world through hard work, loyalty and common sense.

Rigorous adherence to Mr. Bessler's advice is needed in this country as it has never been needed before. There are too many theorists about us complaining that our industrial system is all wrong and offering overnight book solutions to the problem. There are too many discontented radicals who, unwilling to work, sacrifice and succeed on their own efforts, as have so many of the leaders of our business world, profess to think that Sovietism and other cure-alls will produce an industrial structure insuring plenty of everything for everybody, without experience, without management and with a minimum of work. There is another, a larger class, who listen to the advice of these sirens and, if they don't get

back to sound thinking and common sense, will go a long way toward putting us on the rocks.

Deserving to rank with that other axiom, "One workman for a day's pay gets only what another workman produces," is Mr. Bessler's advice: "Young man, the machine at Beardstown is now running. Don't stop it until you are sure you can start it again."

Bridging the Gap

In the campaigns of Life we need bridges for many purposes. And we always think of them as a part of our journey forward, not for going back. When Caesar crossed the Rubicon he did not tell us what kind of a bridge he used—he was the inventor of the ten word message and didn't go into details when he did anything. Once he flashed a vibrant message in three words. Whatever he did, he did well. And we know that when he needed a bridge he built one at once, just to fill that need.

Primeval man crossed a chasm by using a fallen tree. Robert Stephenson built tubular bridges almost by instinct. But in business life there are too many kinds of chasms to be bridged for us to trust to instinct for a knowledge of bridge building.

To "cross the gap" to business success we must have a bridge, but we have been saved the necessity of organizing a construction gang. Our bridge is ready. Every timber is in place, and it only remains for us to test it, and cross the gap to business success.

The name of that bridge is EDUCATION, the "bridge across the gap" that represents the concentrated experience and knowledge of bridge building possessed by the whole race of business engineers.—H. IRVING MARTIN.

The "Thank You" Club

It's great. The "Thank You" Club. No initiation, no dues, no long-drawn-out meetings, and no reports. Anyone can join, and so small a number as two make a quorum to do business. No stated meetings nor any stipulated place of meeting. Anybody can start a "Thank You" Club.

One carries the by-laws around in his head. The password is "Thank you." And that's all there is in the whole book of rules. That's all it means, the "Thank You" Club—just a thank you for the little services performed daily as well as the big ones.

There's a big field in this world for Thank You Clubs. Their members take the edge off rough places. If Thank You is the password, the genuine smile of service is the open reward for its application.—Cleveland Press.

The Story of a Barrel of Flour

From Minnesota, one of the greatest flour markets in the world, a barrel of flour, worth about \$15.00, may be shipped by freight to Baltimore for 64½ cents, less than the price of a good dinner. Think of 200 pounds being carried 1,250 miles for 64½ cents! During the past few years the cost of that barrel of flour has nearly doubled, but the cost for its transportation has gone up only a little. If freight rates were increased enough to pay the railroads a living wage, the resulting cost advance in the price of commodities would be so small as to be hardly noticeable, so cheap is transportation as compared to other things.

As railroad employes, helping furnish the cheapest transportation on earth, we are just as much interested in the railroads' living wage as in our own. For in the end they are one and the same thing. You can't impoverish the railroads indefinitely without impoverishing all their workers.

High Honor for Our President

On July 1, the executive officers of 75 of the leading railroads of the United States met in New York and, as outlined in detail on page 4 of this issue of the MAGAZINE, appointed an advisory committee of nine to handle the important problem of car distribution through the cooperative action of all the roads of the country, the president of the Baltimore and Ohio Railroad Company being made chairman of this committee.

Our president's honor is the honor of the Baltimore and Ohio Railroad. His opportunity is the opportunity of every Baltimore and Ohio man—to help our Railroad set the pace in meeting the traffic demands made upon it, in responding without question to whatever requirements are made for cooperative action with other railroads, in realizing the high ideals of public service in transportation which have always been voiced and followed by our chief executive.

Great Men Speak Not For a Day But For All Time

There are persons who constantly clamor. They complain of oppression, and speculation and the pernicious influence of accumulated wealth. They cry out loudly against all banks and corporations, and all means by which small capitals become united in order to produce important and beneficial results.

They cry out mad hostility against all established institutions. They would choke the fountain of industry and dry all streams. In a country where property is more evenly divided than anywhere else they rend the air shouting agrarian doctrines. In a country of unbounded liberty they clamor against oppression. In a country of perfect equality they would move heaven and earth against privilege and monopoly. In a country where the wages of labor are high beyond parallel, they would teach the laborer that he is but an oppressed slave.—*Daniel Webster.*

What Brings the Big Ones to the Top?

When a shovel of gravel is thrown into a handsieve or box and shaken, the larger rocks immediately commence to work to the top, the smaller towards the bottom. And it is even so in the affairs of men. The shakes and jars of life send one man up, and another down. Our calibre—the size of soul and breadth of vision—determines the course we are to travel.—*Exchange.*

The High Cost of Low Rates

Sounds like a paradox, but it's a fact. It is admitted that our freight rates are the lowest in the world, a gratifying situation insofar as it proves the efficiency of our operations. But it is regrettable that these low rates really help increase ultimate costs because they are starving the transportation machine that made them possible. A starved machine can't work efficiently any more than can a starved man!

Inadequate motive power, cars and terminals are only three of the principal causes of transportation delays, and it would take a superhuman mind to register all the wastes, stretching in every direction and touching practically everything with the blight of higher costs, that these delays cause. Every one of them means more money—from you, from me, from everybody, for practically everything we eat, wear and enjoy. For scarcely anything reaches us that has not, in whole or in part, travelled in a freight car.

The cure is in higher rates, which farsighted railroad men believe will so rehabilitate the transportation machine as ultimately to minimize delays and reduce costs.

From An Old Railroad Man

I met him in Washington Terminal. He worked for the Baltimore and Ohio for a number of years until the Government took him for the war emergency, and he has never gotten back to his old love. He said:

"I never realized the importance of the human factor on the Railroad in pleasing the public until I got away from the Baltimore and Ohio." When I was with the Road I knew all our principal trains, their numbers, schedules, etc., and understood the characteristic short, concise answers which trainmen are accustomed to make to passengers. Now it is different.

"The other day I asked a question of one of your trainmen. He was nice enough, but from the standpoint of my getting information, the trouble was that he assumed that I knew as much about your trains as he did. So I said to him:

"See here, old man, you have been in this business probably all your life, and because you know it so well, it is unreasonable for you to think that other people do, too. Yet you answer my questions as if I knew as much about this train as one of the crew. On the contrary, I am only a passenger—I don't know a thing about your train numbers nor how this train is to be made up at this terminal."

"He got the point right away and was good enough to explain sufficiently at length to put me at my ease."

Of all the complaints against railroad men, most come because the typical railroader forgets that the typical passenger is naturally ignorant of the railroad business. There are mighty few men in train service who are intentionally impolite, inattentive or unobliging. Most of them like their work, and especially the older men to whom it has become life itself, and under normal conditions have the right spirit toward the passenger. This is notably true of our own trainmen. It pays, certainly, both from the standpoint of pleasant personal relationships with the passengers and from the standpoint of the reputation of our train service—in fact, it is almost a cure-all for a passenger's trouble, to explain situations and answer questions fully and pleasantly.

There's a Difference

When a plumber makes a mistake, he charges twice for it.

When a carpenter makes a mistake, it's just what he expected, because chances are ten to one that he never learned his trade.

When a doctor makes a mistake, he buries it.

When a judge makes a mistake, it becomes a law of the land.

When an electrician makes a mistake, he blames it on induction—nobody knows what that is.

When a preacher makes a mistake nobody knows the difference.

When a compositor makes a mistake, the boss says, "The damphul otta know better."

But when an editor makes a mistake, *GOOD NIGHT!*
—*Exchange.*

Charleston Division Setting the Pace in Freight Claim Prevention

By M. W. Jones

Secretary to Superintendent, Weston, W. Va.

The Question

WHAT have we done, and what can we do, to reduce the enormous sums which are being paid out year after year for loss, damage and robbery of freight entrusted to us for transportation?

The Answer

On December 12, 1918, the Charleston Division held its first Freight Claim Prevention meeting, at Gassaway, W. Va. Superintendent W. Trapnell was temporary Chairman, and 14 agents and junior officers were present. All branches of the service were represented and an organization was perfected for the continuance of the work. This organization is today operating on our division. Superintendent Trapnell is still on the committee, and is as active as at the start in his daily appeals to our men in all branches of the service to "Do their bit."

The Results

They speak for themselves and are encouraging. Yet a short review may influence some of our boys to exert even greater efforts in the furtherance of this very important work.

Did you ever think how many box cars our claim payments would buy? How many locomotives would what we waste in claims buy? Figure this out.

How to Do It

We have all read our General Manager's statement that we need cars, locomotives,

etc., and that by increasing our miles per car per day just a small amount, we can add 9,500 cars to our present equipment without the expenditure of one cent. The saving on one-half of one year's claim payments on our Road would pay for probably 1,000 of the box cars mentioned. Do you realize that the claim payments on the Baltimore and Ohio for 1919 amounted to some \$4,200,000? One-half of this is \$2,100,000. These figures are appalling.

If we all work together to cut the claims on each division in half, you can see what we could accomplish. We, of the Charleston Division, are only "Little Fellows," but we are going to do our share; if we "take care of the pennies, the dollars will take care of themselves." Stop and think. Are we not all working for the interests of the Baltimore and Ohio Railroad, no matter what department we are employed in? This being true, then we are each and every one of us vitally interested in the results as a whole. Let us pledge ourselves to work in every possible way for Claim Prevention, no matter to what department we belong and resolve to walk always with our eyes wide open. If we see anything that we think could be improved upon, let us tell the nearest chairman or member of the Claim Prevention Committee. Remember that our officers are all broadminded men of wide experience, and that they are always willing to hear any suggestions from the

rest of us. "The strength of a chain lies in its weakest link." If we see a "weak link," let's not pass it by on the other side and say, "Oh, that's not my department." Let's tell the other fellow what we saw; he will be glad to know it. Many valuable suggestions in regard to Claim Prevention have come from some of our boys at the smaller stations. They know our committee is always willing to listen to them and they don't hesitate to tell us what they see. That's one big reason why the Charleston Division shows up where it does on Claim Prevention.

Stopping Oil Leaks

One of the first things taken up was the shipment of oil in wooden barrels. Claims were pouring in on us for leakage, and damage to other shipments. The Agent at Weston, J. P. Ryan, one of the original committee, made a drive on this subject. What was the result? Today the wooden barrels which used to cause us so much grief are practically a thing of the past. Oil comes along in steel drums, is delivered intact, and does not damage other shipments. Everyone is satisfied and the Company is saving money. Having settled this matter to their satisfaction, our committee again got their heads together and decided it would be a good scheme to set aside a "Sailing Day" for oil only, once or twice a week. We now get all our oil from Clarksburg, Charleston and Elkins on certain days, and we figure as far as possible to use these same cars for returned oil empties. Claims for losses on this account are practically nil.

Sifting Flour Losses

Observation told the committee that we were paying more than we should for damaged flour, because of the loading of this commodity in cars with leaky roofs and doors and with protruding nails, and other similar defects. For months there was not a meeting on this division at which the subject was not brought up; we pounded at it all the time on the theory that "continual dropping wears away a stone," and for some three months past we have not had a claim from this source.

Other Specific Improvements

Our General Freight Claim Agent, C. C. Glessner, says that if you start a shipment right, you go a long way toward delivering it right. Form G was inaugurated. This, as all know, shows list of packages rejected for improper marking and packing. The Division Committee made a vigorous drive on this form and we now stand, as we have stood for some time, 100 per cent.

It was found that many transfer records were incorrectly made and others were illegible. The Freight Claim Committee is now engaged in making a drive to correct this evil.

The Charleston Division was probably the first to take up the question of the proper

Car Seals

The car seal is most important. Under private control an incomplete record is likely to cause us to be penalized by other lines in pro-rating loss and damage claim payments, and it is important that instructions contained in Form 774, addressed to Agents, Yardmasters, Yard Clerks, Conductors and others concerned, governing the use of automatic, self-locking, consecutively numbered car seals, be complied with.

Photograph No. 1 shows car that has been properly sealed. But the seal appliance is defective and car can be entered without breaking the seal by removing the 20 penny wire nail which is extended and supposedly holding the hasp in place.

Photograph No. 2 shows car sealed, but the pin being missing, the hasp can readily be released and car entered without removing seal.

Photograph No. 3 shows car sealed, but not properly, because the seal is not run through the pin. Hence car can be entered without breaking seal by simply raising the pin and entering car.

Many other instances along the same lines could be mentioned, but this is sufficient to impress upon all the importance of seeing that car doors, seal fastenings and seals are in proper shape before leaving their station.

All concerned have been furnished with extract of Freight Claim Association Rules, concerning seals and seal records, by which we are governed in the settlement of loss and damage claims and your cooperation is requested in the matter of a complete seal record.

packing and marking of household goods, as outlined in Rules 3-a and 8. Much has been accomplished along these lines, and they are still after it.

Another important matter to which the committee has given much attention, is that of watching for under-weights. Considerable revenue has been saved the Company by their efforts in this direction.

It has been our practice to make a special endeavor to have local conductors and brakemen present at the meetings. The efforts of the men, after visiting our meetings, have been of inestimable value to the Company; also, their experiences are valuable when related to the agents who have under their charge the loading of the cars which the conductors and brakemen have to unload. Consideration is given to all circulars and instructions issued by our officers in Baltimore in connection with freight handling, and these are explained to those who do not thoroughly understand them.

At the last meeting an article written by F. L. Schepler, assistant to the General Freight Claim Agent, in the March MAGAZINE, was read, and, from the interest aroused, it is felt that a great deal of good has been accomplished. We make it a point to watch all Railroad publications and the minutes of meetings of other divisions very closely.

Among those who are much interested in Claim Prevention and who were on the original committee are: L. W. Peters, agent, of Richwood; J. P. Ryan, of Weston; J. M. Davis, of Gassaway, H. P. Bankhead, of Burnsville, and E. J. Hoover, of Buckhannon.

Credit is also due to C. M. Criswell, representing the General Freight Claim Agent's office on this division, for his untiring work in helping our men. He is always ready to explain and to help those who need it.

The real reason of the success of the Claim Prevention movement on the Charleston Division is the unswerving loyalty of the men to their chief. Superintendent Trapnell is always willing to listen to suggestions, always ready to lend a helping hand, always willing to act on any man's advice when he feels it is good. The respect of the men always means success on a division. Hundreds of little matters are brought to his attention every year along the line of Claim Prevention and are taken up and corrected. No public report ever appears, but we know what is being done.

Let's all get together again, then, like the big family we really are and work with all our heart for the *one big interest* we have, namely, success of the Baltimore and Ohio as a whole. There is no surer way of showing our President, our General Manager, our General Superintendent, and the rest of our chiefs, that we really want to do so than by handling freight entrusted to us as if it were our own. For only in this way can we really prevent the claims and save money for our Company.

Commencement of Employee Apprentices at Baltimore

THE Mount Clare and Riverside apprentices who became full-fledged mechanics by virtue of their graduation from apprentice school on the night of June 21 at West End Hall, Baltimore, know how to make a good time out of such an event. By far the larger part of the hall was set aside for dancing, a good orchestra was on hand and yet there was plenty of room to seat the graduates and their friends for the exercises.

The apprentices and their genial Chief Instructor, J. E. Cromwell, rightfully felt that it was their turn to have some fun after the hard work of the apprentice year—and they did. It took less than an hour, therefore, to complete the following program:

Selection.....	Orchestra
Introductory Remarks.....	W. Bell President Mt. Clare Apprentice Association
Violin Selection.....	Miss M. Summers and V. Buckingham
Address.....	R. M. Van Sant Editor BALTIMORE AND OHIO MAGAZINE
Selection.....	Orchestra
Address.....	T. R. Stewart Superintendent Mt. Clare Shops
Add s.....	W. W. Wood Chief of Welfare Department
Selection.....	Orchestra
Awarding of Prizes.....	J. E. Cromwell Instructor Apprentice School
Selection.....	Orchestra
Closing Remarks.....	H. A. Beaumont General Car Foreman, Mt. Clare

The first prize of twenty dollars in gold was awarded to R. J. Davis, helper apprentice at Mount Clare, the presentation being made by George Kapinos. Mr. Cromwell presented the second prize to R. A. Gallo-way, regular apprentice at Mount Clare, and third prize was awarded to C. F. Whitson, regular machinist apprentice at Riverside, and was received and acknowledged for him by Ralph Cline, general foreman at Riverside.

Other apprentices whose work entitles them to special rating, follow:

Special Mention

W. M. East.....	Boilermaker Apprentice...Mt. Clare
E. B. Bruns.....	Machinist Apprentice....Mt. Clare
E. R. Kenney.....	Machinist Apprentice....Mt. Clare
H. B. Whitson.....	Machinist Apprentice....Riverside

Honorable Mention

E. M. Boylan.....	Machinist Apprentice....Mt. Clare
A. E. Myer.....	Machinist Apprentice....Mt. Clare
W. G. Watson.....	Machinist Apprentice....Mt. Clare
S. L. Roth.....	Machinist Apprentice... Mt. Clare
L. Nagel.....	Machinist Apprentice....Mt. Clare

C. E. Ste. Grice.....	Special Apprentice.....Mt. Clare

Delicious refreshments and enjoyable dancing topped off the interesting evening.

A Time Saver

Mistress—I want a maid who will be faithful and not a time-waster. Can you promise that?

Bridget—Indeed'n that I can. I'm that scrupulous, ma'am, about wastin' time that I make one job of prayin' and scrubbin'.

No. 1

No. 2

Rough Handling

During the year 1919 we paid out \$139,582.59, damage to shipments because of rough handling of cars at initial points, terminals, on the road, etc.

Much of this damage to merchandise is caused at stations and transfer points in what is known as set-back cars, i. e., cars not containing sufficient tonnage to permit them to go forward that day, and in switching the house car is pulled out and re-set with other empties. In such instances, it is frequently found that the freight is damaged from rough handling in switching. Further, considerable damage is caused to shipments by reason of Agents permitting them to go forward without being properly broken down, i. e., car properly stowed in each end. Nearing the close of the day, the freight is not sufficient to completely block the doorway, and instead of breaking the freight down to meet conditions, car is allowed to go forward, resulting in damage to shipments.

Photograph No. 1 shows the result of rough handling to car of lumber. Had the contents of this car been merchandise, you can imagine what the damage would have been.

Photograph No. 2, showing broken coupler, is the result of poor switching.

A large percentage of this rough handling in switching can be eliminated with a little more care and attention on the part of employees handling.

Telegraph-Typewrite the Message in Baltimore—the Copy Is Made in Cumberland

THE Potts Printing Telegraph, an invention for the transmission of messages, has been temporarily installed in the office of Division Operator E. C. Drawbaugh, at Cumberland.

This machine, though little different in size and appearance from the ordinary typewriter, is most interesting. The machine at Cumberland was connected by wire with a similar one installed in the telegraph office at Baltimore, 180 miles away. The demonstrator in Cumberland touched a key on the instrument which rang a bell in the Baltimore office. The keys on the Cumberland machine then began writing, of their own accord, it seemed. This was the answer coming from Baltimore. The Cumberland operator wrote, in the same manner as if he were using a typewriter, "Please send something for the *Daily News*." Immediately came the response from Baltimore.

The machines were in charge of H. I. Robinson of the Potts Company and F. G. Adams of the Railroad Company at Cumberland, and Dr. L. M. Potts, inventor of the machine, and W. H. Hoffman of the Railroad Company at Baltimore.

Several hundred words came over the wires and transcribed themselves on the paper roll at Cumberland just as they had been written in Baltimore, letter for letter, including all mistakes as made by the operator. And thus the messages traveled back

and forth between the two cities, with almost as much rapidity as if they had been telephoned, and with probably more satisfaction.

The keyboard on the instrument is like that of a typewriter. Attached to the back is a large roll of paper about four inches in diameter and of the width of the ordinary letter head. Even the shifting of the carriage or the back spacing of one machine was accompanied by a corresponding movement on the other.

The letters and characters are placed on a wheel whose diameter is about two inches. This takes ink from an ink roller placed just above it.

On the day the test was made, the two machines worked with entire satisfaction. Business men at Cumberland were much interested in the procedure. Just to what extent the Printing Telegraph will be adopted for use in our Railroad offices is not known, but it has been recognized as a helpful invention that will, no doubt, prove to be very useful. The copy coming from the machine is so well written that it might be used for almost any purpose for which it would be needed without being recopied. The results of the trial will be worth noting; meanwhile, the operators in the main offices at Baltimore and Cumberland continue to use this means of handling the regular business of the Railroad.

The instrument that typewrites telegrams

Of Special Interest To Pump Men

By Alfred J. Beal
Iola, Ill.

NO DOUBT a great many of you men have had no end of trouble with leaking piston and stuffing boxes. Well, here is a remedy:

Take one of your old rubber pump valves, and enlarge the hole in the centre until it will fit snugly over the piston rod. Now get a measurement of your stuffing box. After you have gotten the size, shave down the valve from the outside until it will just fit into the stuffing box when placed around the piston rod, with binding.

Of course, you will have to cut the ring which you have now made in order to get it over the piston rod. Do not cut square across. Cut in a long diagonal direction.

A small amount of hemp packing should now be wound closely around the piston rod on the outside of the rubber. Always moisten with coal oil.

A stuffing box packed in this way will not leak.

Old valves also make exceedingly good packing for the jamb nuts or globe, and angle valves.

If you will try this method of packing your leaky stuffing boxes you will find that it will greatly cut down your packing bill as well as keeping the air around the pump station from taking on that terrible blue haze with such ominous portent.

Sharp Shots

By Dinty Moore
Of Cincinnati Terminals

It doesn't look right to us, but a little woman always picks a big man and a little man always picks a big woman.

When we see some of the marriages that take place we don't know whether they get married for sympathy or for spite.

Did you ever see some sweet-young-thing hang on a phone and gab to some bird on the other end for about an hour, then hang up the receiver and say, "I do wish that fellow would stop calling me up?"

The war was bad in some ways and good in others. One good thing was the doing away with the O. F. German Band that used to play on the corner.

We don't know much, but the bird that wrote the piece, "Early to bed, early to rise, makes a man healthy, wealthy and wise," was wrong. Did you ever see a milk man that was wealthy and wise?

The Passing of One of the Pioneers of Our Relief Department

By W. E. Laird
Chief Clerk, Newark, Ohio

DR. S. C. PRIEST, one of Newark's best known and prominent professional men, and retired Medical Examiner of the Relief Department, died at his home in that city, May 31. He was active in his practice and personal affairs up until within a few days of his death, which resulted from a stroke of paralysis.

Dr. Priest was born in Steubenville, Ohio, December 26, 1847. After an elementary schooling at that point, he entered and was graduated from Bethany College of Medicine and Surgery, Philadelphia, Pa. Following this, he attended and was graduated from Cincinnati Medical College, Cincinnati, Ohio. He then located in Newark, Ohio, and practiced medicine and surgery there from 1870 until 1880, when he was appointed Medical Examiner for the Baltimore and Ohio Railroad. He continued in that capacity for 33 years, and retired from the service in 1913.

He is survived by his wife and five children, Misses Anna, Verne, and Frances, and Ralph and John T. Priest. The funeral services were held from his home in Newark, and burial made in Cedar Hill Cemetery, that city, Wednesday, June 2. The Relief Department was represented at the funeral by W. M. Kennedy, assistant superintendent, and Dr. M. H. Koehler, medical examiner at Newark.

Dr. Priest entered the Relief Department while that organization was in its infancy,

and its present efficiency and substantiality have largely been contributed to by 33 years of his loyal and zealous efforts.

The doctor was possessed of an unusually active and vigorous nature, which evidenced itself up to the time of his death at the advanced age of 72 and one-half years. He loved the outdoor life, was fond of athletics, and took personal pleasure in seeing everybody and everything around him prosper. He had a host of friends over the entire System.

The late Dr. S. C. Priest

Baltimore and Ohio Handles Movement of the Largest Single Importation of Olive Oil Ever Made to America

THE following letter from Musher and Company, addressed to our Assistant Freight Traffic Manager at New York, Stuart A. Allen, tells how well the Baltimore and Ohio handled an immense shipment of olive oil from New York to Baltimore.

"Our Traffic Manager reports that on May 19 the final car of olive oil in bond to Baltimore went forward from St. George, S. I. This shipment represents the final movement of the largest single importation of olive oil ever made to America.

"Inasmuch as the entire cargo totaled 3,176 casks and barrels, valued at more than two million dollars, and required nearly 100 cars, we wish to take this opportunity of commending the Baltimore and Ohio and all of its employees who took part in completing the transfer of this immense shipment. Particularly, we desire to commend Mr. Mickelson, Mr. English and Mr. Riddle's office for their cooperation during a period when every railroad in this vicinity had its full quota of obstacles in taking care of any business at all.

"We thank you for your assistance in the past and hope that you will continue to render Musher and Company the same kind of service in the future."

Mr. Allen's reply to this letter of commendation says, in part:

"While the Company and its officers fully realize their responsibility as common carriers and are at all times willing and anxious to serve the shipping public in the most able and efficient manner, it is, nevertheless, a great source of satisfaction to receive such commendable expressions from a concern which has for so many years maintained its standard as one of the largest and strongest of its kind in the country and which has enjoyed the confidence and support of the commercial and financial world for such an indefinite period. To perform such satisfactory service on a shipment of the magnitude of the one in question during the period of congestion and difficult operating conditions, is an accomplishment of which the Baltimore and Ohio has a right to feel justly proud and on behalf of the Company, I take this occasion of expressing to you my sincere appreciation for your letter and I

trust you will always feel it will be the pleasure of all connected with this organization to do their utmost to handle in a satisfactory manner any business which you may entrust to us."

Exhaustive 4-6-2 Locomotive Chart

A COMPREHENSIVE chart with two illustrations of the Pacific or 4-6-2 type of locomotive has just been published by *Railway and Locomotive Engineering*. The two illustrations show the parts numbered and at the bottom of the chart the numbers are correlated to a brief description of each particular one of the 667 parts. This chart will be sent by *Railway and Locomotive Engineering*, 114 Liberty Street, New York, N. Y., to any employee forwarding 50 cents to cover cost.

'TIS NOT AMERICAN

By Edgar A. Guest

'Tis not American to lie,
Or mean advantage take;
I'm a traitor to the flag if I
Have cheated for a stake.
In honor I must walk my way
Nor over-proudly brag,
If I have stained myself today,
I've also stained my flag.

'Tis not American to play
A craven coward's part;
I cannot be untrue today
And true if war should start.
I must be loyal to a friend,
In thought and deed, a man
On whom the whole world can depend
To be American.

'Tis not American to be
Disdainful of a trust;
All men who'd keep this country free
Must first of all be just.
And am I false to any man
In what I seek to do,
And wrong him by some selfish plan,
I wrong my country too.

I must respect that starry flag
Each minute of the day;
I must do more for it than brag
Or cheer it on the way,
Despite what wealth may bring to me
Or fame or conquest can;
My noblest duty is to be
A real American.

The First Horizontal Boiler Coal-Burning Locomotive

From Railway and Locomotive Engineering

IN THESE days of rapid improvement that have brought into use automatic stokers, oil fuel and pulverized fuel burners, it is interesting to look back at the earlier improvements, momentous in their day but now mere matters of course, and almost forgotten. It may not be generally known that the first successful coal burning engines with a horizontal boiler appeared on the Baltimore and Ohio Railroad between October, 1844, and December, 1846, and that a substantially similar engine was built by the Company in 1847. They were constructed from designs by Ross Winans, an eminent engineer of his time, and were also distinguished by being the first of the o-8-o type on the Baltimore and Ohio Railroad, and were known as the "Mud Diggers." Their weight, in working order, was $23\frac{1}{2}$ tons, and were equipped with cylinders $17" \times 24"$.

As shown in the accompanying illustration, the main connecting rods were coupled to cranks on a shaft extending across the frames, in the rear of the firebox, and geared by spur wheels to the back driving axle. The driving wheels were $33"$ in diameter, and the driving axles carried end cranks that

were coupled by side rods. As the main and side rods moved in opposite directions, by reason of the interposed gearing, these engines presented a novel and peculiar appearance when in motion, and attracted much attention from the bewildered on-lookers.

Twelve of these Winans engines were furnished between the dates referred to, and the one built by the Company in 1847 was known as the "Mount Clare." All of these engines were in active service during the Civil War, and some of them continued in yard service for a number of years later, and a number of their cylinders and main connections were used as parts of stationary engines in the shops of the road after their road service was terminated.

Ross Winans is credited as the leader in advocating powerful locomotives, and undoubtedly had the clear conception of the economy that would result from the use of engines as large as the track would carry, and, as is well known, it is only within the present century that railroad managers have endorsed by practice the wisdom of his policy. The light track which his engines had to run upon kept down the weight, but

with all the restrictions imposed by weak structures and prejudice against heavy loads, he built engines that compared fairly in efficiency with those of recent times. Mr. Winans was for a number of years employed as assistant engineer of machinery on the Baltimore and Ohio Railroad, and aided in the construction of many of the early locomotives on that road. He also introduced new designs of valve gear which, at that time, were considered the nearest approach to an ideal cut-off ever made on locomotives.

Time-Tables Don't Count in Russia

"OH How I Hate to Get Up in the Morning" means nothing in the life of a South Russian commuter. Time is no object in his favored land, for there is no such thing as synchronization of timepieces, and though there is an alleged "official time," known as "Petrograd time," every city has its own local standard, which lies—the word is used with due reference to its double meaning—anywhere within 2 hours before to 2 hours after the Petrograd time. Though the commuter's alarm clock may proclaim the rising hour of 6, the children next door may already be lagging along in response to the 9 o'clock school bell.

Literally whole days have been lost to the American officers still engaged in relief work at the South Russian Mission maintained by the American Red Cross because no Russian official was ever known to meet an appointment on time.

The "five-fifteen," or its Russian equivalent, may rumble into the station at any old time between sunset and midnight and no one would ever dream of registering a kick, because no one could absolutely swear that the train was not on time.

Train service, however, in all European countries, is demoralized to such an extent that no matter from what point of view one contemplates conditions, one glaring fact stands out pre-eminently: Railroad construction must precede reconstruction. To paraphrase the familiar American by-word, "The Constitution follows the flag," in war-tossed Europe. The locomotive must "go before the human motive." For whether the object in view is the distribution of supplies to a perishing people by American Red Cross or the mobilizing of troops, without railroad facilities the most prodigal resources and the best drilled armies are useless. Unless railroad communication is speedily built up and developed throughout Europe, a regime of famine, disease, the utter disruption of countries already distracted, and eventual paralysis of the whole world's trade relations are inevitable.

But, as suggested in the opening paragraph, the difficulties confronting the civil engineer and railroad magnate overseas are on a scale that would dampen the

A Baltimore and Ohio "Mud Digger"

ardor of any but the Yankee brand of ingenuity and initiative, and not the least of these is the free and easy attitude toward time which prevails all through South Russia.

Planning railroad schedules and time-tables

to meet such exigencies would have been Job's finish. Though perhaps, after all, the reorganization of train service along lines of American efficiency would be the simplest of child's play. For it is not that the people of South Russia do not realize the inconvenience of missing trains, engagements and dinners through their lack of synchronized clocks, but rather their radical apathy which prevents them from getting together and doing something decisive about it.

The Sturmer Oil Gun

WHAT is more troublesome to the railroad engineer than to find, when he thinks that he is ready for his trip, that there isn't enough oil in the lubricator to make his run?

The inconvenience and loss of oil caused by filling lubricators in the old-fashioned way, by using a can with a small or broken nozzle, has meant a loss of time and money to the railroads. To overcome this, the Sturmer Oil Gun was invented by George W. Sturmer, special representative of this Company.

The Sturmer Oil Gun was demonstrated at the last Road Foremen's Convention at Chicago, and, through the delegates to this meeting, it has been advertised throughout the United States. It does away with the oil can, screens the oil and measures it by half-pints; it can be filled in two ways, and can be carried over the shoulder. In a test

The Sturmer Oil Gun

of two months' use at one of our round-houses, the oil gun gained for itself a record of draining and filling three lubricators in fifteen minutes, without the loss of a drop of oil.

Excerpt from the report of the Committee

on Standard Appliances for Locomotives and Cars, United States Railroad Administration, reads:

"The device has been tried in service and has given satisfaction after limited trial."

The First Smoking Compartments

Until Provided Special "Railway Pipes" Were Made for Quick Concealment

By Henry Prosser Chanter
In Modern Transport

THERE need be no speculation as to the original first "smoking" carriage on railways, as it is a matter of record. The first one was introduced on the Eastern Counties Railway, England, in September, 1846. As early as 1839 Lieutenant Peter Le Count, inspector of rolling stock on the London and Birmingham Railway, recommended attaching a smoking carriage to every train, "as this habit has become almost a necessary of life with many people."

It was not until 1868 that the Legislature stepped in to stop the breaches of peace which were always arising. Why, there were "railway pipes," craftily contrived for instantaneous concealment.

We smokers should hold in reverence the name of Mr. H. B. Sheridan, M. P. for Dudley. In the debate on the Railway Bill in July, 1868, the last session of Disraeli's dying Parliament, Mr. Sheridan moved an

amendment making the provision of smoking compartments compulsory. This was opposed by the Attorney-General, but John Stuart Mill, making his last speech in the Commons, upheld it as giving mere justice to smokers. He made the suggestion that the rearmost carriage in a train should be reserved for tobacco. The amendment became law by a majority of 22 in a division in which only 54 voted. Section 20 of the Regulation of Railways Act states:

All railway companies except the Metropolitan Railway Company shall in every passenger train where there are more carriages than one of each class provide smoking compartments for each class of passengers unless exempted by the Board of Trade. The Metropolitan Railway Company obtained an exemption on special grounds, but yielding to pressure that company provided compartments in 1874.

Special Meeting. Baltimore Veterans, Moose Hall, 410 W. Fayette St., August 2

OFFICERS OF BALTIMORE DIVISION, BALTIMORE AND OHIO VETERANS' ASSOCIATION

Left to right: Charles B. Snapp, 1030 N. Fulton Avenue, Treasurer, passenger car painter, Mt. Clare, 40 years service; H. A. Beaumont, 21 N. Fulton Avenue, Vice-President, general car foreman, Mt. Clare, 36 years service; "General" George Armstead Bowers, 23 N. Fulton Avenue, President, in charge Locomotive and Car Departments for Baltimore Terminals, 35 years service; Charles R. Weir, Recording Secretary, 1533 Poplar Grove Street, clerk in Freight Claim Department, 35 years service; W. H. Harrigan, 432 E. Fort Avenue, Financial Secretary, machinist at Riverside, 31 years service.

E. B. Rittenhouse, Representative Employee of the Baltimore and Ohio

LAST summer one of the young ladies in our Multigraph Department in Baltimore, brown as a berry, reported for work one Monday morning after her two weeks' vacation.

"Fine time?" I asked her—though her appearance made the question unnecessary.

"Fine time?" she repeated, "you bet we did! And we met the nicest man on our trip."

I pictured Atlantic City, its fine boardwalk, broad beaches, splendid bathing—and the moonlight. But my guess was wrong. She continued:

"When we were getting off the train at 24th and Chestnut Streets—we were all carrying heavy suit cases and bags—a nice looking gentleman asked me if he could not carry my bag off the train. I was glad to have him do so. Then we asked him the way to Wanamaker's, and as he was going in that direction, he carried my suit case all the way to the Market Street car, and, as he was going that way himself, went as far as the store with us, and introduced us to a nice, inexpensive restaurant for lunch. Before leaving he said:

"I saw you hand your transportation to the conductor on the train and knew you were a Baltimore and Ohio girl and I thought I would help you on your way if I could." Then he gave me his card."

And saying this she handed me the card, on which I read:

BALTIMORE AND OHIO RAILROAD

E. B. RITTENHOUSE
FREIGHT AGENT

WILMINGTON, DEL.

That was a most gratifying introduction to a fellow employe, and here I am just getting to a story about Mr. Rittenhouse, who, personal contact as well as the original introduction, have taught me is an altogether representative Baltimore and Ohio man.

Mr. Rittenhouse was born April 18, 1870, the son of the Pennsylvania Railroad agent at State Road, Delaware.

His old home there still has the electric and telegraph wiring installed by the youthful Rittenhouse when he was learning to become an operator. For his batteries he

another large paper mill. During Mr. Rittenhouse's long service at this point, many offers of advancement came to him as just recognition of his ability but none of them seemed to him to promise so much in the way of usefulness and he chose to remain there, making friends for the Company and himself, until placed in charge of the Agency at Wilmington, Del., in July, 1918.

Business there was enormous, the war demand for supplies being at its height. There followed immediately upon this, in

Passenger Station at Wilmington and Some of the Force

Left to right: Francis Murphy, assistant supervisor; J. B. Ward, clerk and operator; W. J. Russell, news agent; W. S. Hartman, agent and operator; W. C. Minker, baggage agent; J. S. McDaniel, lineman; I. Washington, porter

used glass fruit jars and the zinc was sheet zinc melted and molded by himself.

In June, 1888, or when barely 18 years old, Mr. Rittenhouse first entered the service of our Company as an Extra Operator and Agent, under the jurisdiction of Superintendent J. Van Smith, working in that capacity on the old Philadelphia Division for six weeks. Following came the appointment to the agency at Childs, Md. At that time this was one of the least important of our agencies, with a revenue of about

\$250.00 monthly. Later it became the most important point for business on the line outside of the cities, showing a revenue of about \$15,000 monthly. This was largely because of resumption of the output of an old paper mill and the building of another, together with the construction of the L. C. & S. Branch of 5 miles' length to

September, the consolidation of the P. & R. and Baltimore and Ohio freight departments' work for this city; an added volume of business, totaling nearly half a million dollars per month, the joint office forces coming together under the Baltimore and Ohio roof and Mr. Rittenhouse's jurisdiction as Joint Agent. This volume of business, and the bringing up to date of much confused and disorganized work fallen in arrears from war conditions, was successfully handled by the constructive methods of Mr. Rittenhouse and the staunch and loyal cooperation of his helpers. This particular accomplishment at Wilmington put to a severe and successful test many of the theories and practices of his life as to how the highest efficiency can be obtained through team work between supervisor and subordinates.

Mr. Rittenhouse believes in the practical application of the Golden Rule, both in his personal and business life—that exceptions which may arise from its persistent use only prove the Rule. He is of the type that had rather do things than talk about doing them. He is "long" on cleanliness and order. He believes absolutely in the effectiveness of "team work." He had rather suffer wrong than do wrong. He conducts all business in "the open"—absolutely above board. He constantly considers the welfare of those working for him. Finally he persistently voices his enthusiasm for the Baltimore and Ohio Railroad as developing everything

E. B. Rittenhouse, agent at Wilmington

that is BEST in railroading, and endeavors to impress this upon all those with whom he comes in contact. Our patrons know that we are their friends and have their welfare at heart. That, so far as the merchants are concerned, we are in the same line as they are, *i. e.*, we are selling a commodity and realize that the satisfied customer is our best asset.

The success of Mr. Rittenhouse in holding old business and getting new business for the Baltimore and Ohio comes principally from the fact that as the representative of the Railroad he is sincerely interested in giving its customers the best possible service. That he is not unmindful of the value of advertising and keeping in close personal contact with the shippers in his territory, however, is shown by the following slogans which he has had printed on attractive business cards and has sent to his customers as an evidence of his constant interest in handling their transportation problems. He calls them "Baltimore and Ohio Optimisms" and they seem to be well worth the study of other of our agents.

People are either Optimists or Pessimists. We are confirmed Optimists where our Business—or yours—is concerned.

Business is Sensitive. It Goes where Invited and Stays only where Well Treated.

The secret of Success in Business is Service. He Profits Most who Serves Best.

Claims, 90 per cent. of which result in annoyance and loss, mean Liability, but we figure the Satisfied Claimant as an Asset.

The cheapest and most effective lubricant for the Business Machine is Courtesy. We know. We use it.

We differ from the Merchant only in the character and magnitude of our Business. We are actuated by the same desire to attract, please and retain our customers.

None too Large for our Capacity. None too Small for our Attention.

In Business, Error and Human Element are inseparable. We are Always Glad to Acknowledge and Rectify our Mistakes.

Although young in years and spirit, Mr. Rittenhouse came with the Baltimore and Ohio so early in life as to be doubly qualified in years for membership in our Veterans' Association, and holds his card in the Philadelphia Chapter.

J. T. Rockwell, Martinsburg Veteran

THE accompanying picture is of pensioned Conductor J. T. Rockwell, Cumberland Division, better known by the Railroad boys as "Uncle Tom." Captain Rockwell entered the service of the Company in 1881 as a Brakeman. He was promoted to Conductor in 1891, in which capacity he served until 1917, when he was retired and pensioned. "Uncle Tom" was one of the Company's most loyal employees, and at his advanced age is still young in looks. Brother Rockwell is one of the

charter members of the Martinsburg Veterans' Association. He is a faithful member, and always enjoys chatting with the "boys" and giving some of his railroad experiences. He is proud of the fact that he is from Morgan County, where most of the best railroad men on the Cumberland Division come from.

A Soldier of the Road— Robert Gray

HERE we have a photograph of one of our Veterans, Robert Gray, a pensioned Passenger Conductor, aged 80 years.

Mr. Gray came to us in 1874 as Yardmaster at Connellsville, Pa. Two years later he was made Local Freight Conductor on the Pittsburgh and then on the Cumberland Divisions. When, about 1886, the Philadelphia Division opened, he was transferred to that section and remained there until he was retired, in 1907.

Judicial Reflections of a Granddaddy

By George W. Haulenbeek
Law Department

The Law Department is now well equipped with a force of capable stenographers, four young ladies and five gentlemen. When I came into the department 39 years ago, there was but one clerk; no typewriting machines, and men only in all the departments. Oh, my!

The train lad on No. 524, who, by the way, is a man of forty summers, does not display a very lavish or tempting stock of train reading matter, unless one regards "Mutt and Jeff," "Bringing Up Father," and stuff of that sort as entitled to a place in that category. If a passenger should ask for a copy of "Scribner's" or "Harper's," he might collapse.

Is it worth while making a request in one's letter to the Magazine? Some one ex-

Robert Gray

pressed a doubt in my hearing. In a recent number of the Magazine, my contribution referred to the practice of lighting cigarettes in our elevators, crowded with our young ladies, with a request for its discontinuance. The practice has been abandoned almost entirely, showing that the smokers in the building noted my desire, saw its reasonableness and gave it heed. Does it pay?

Again, I received a very polite and courteous note from a young lady in our service commending my endorsement of the work of our telephone operators, adding that my commendatory remarks had had a good effect throughout our building. So the conclusion that these things do pay, may be accepted.

I have been permitted to peruse an English Railway Gazette, printed in the interest of the London and Northwestern Railway. I find many things in it to commend. Throughout the whole issue is a spirit of loyalty; real, genuine loyalty true to plighted faith or duty. Our Magazine possesses this same characteristic, but I would, if possible, have it stronger. I firmly believe in "praising the bridge that carries me over."

Mike: Yis, Sor, I was in the charge but a bullet bit me.

Zeke: Were you incapacitated?

Mike: No, Sor. I wus in Flanders

For the Book Lover

Editor Wrote Greatest Editorial After Reference to Eliot Books

THE editor of a great city daily sat at his desk wondering what he should write that would drive home to the hearts of his readers the awful meaning of a great disaster that had just happened.

Mechanically he reached out for the dictionary and, glancing over its pages, stopped at the word "pity." There was a definition, to be sure, but only a bloodless one. No thrill of feeling warmed him as he read it; it was chilled, cold-cut, scientific. He turned to the encyclopedia. There was "pity" again, but it was only the "pity" of the dictionary, amplified, but still uninspired.

As a last resort he reached to the shelf above his desk and took down volume 50 of Dr. Eliot's Five Foot Shelf of Books. He looked for "pity" there. To his eager surprise he found it. Here was Bacon's word on "pity," and Blake's, and here was what Burke had said, and Hobbes, and Pascal.

One by one he ran the references down in the other volumes, reading no mere fragmentary quotations, but the real throbbing thought of the great men of all times in its original context, the source and meaning

and nature of pity. He sat down and wrote what proved to be the greatest editorial of his career.

Dr. Eliot's Five Foot Shelf of Books helped this man to write a great editorial. They are daily helping over 20,000 men and women to think straight and talk well.

What are these few great books that liberalize and inspire the mind and lead busy men and women to a clearer way of thinking, greater personal power, wider influence among their fellows?

Dr. Charles W. Eliot, from his lifetime of reading, study and teaching—40 years of it as president of Harvard University—has answered that question for us in his Five Foot Shelf of Books. "It is my belief," says Dr. Eliot, "that the faithful and considerate reading of these books will give any man the essentials of a liberal education, even if he can devote to them but 15 minutes a day."

Every man and woman should at least know something about this famous library. The publishers (P. F. Collier & Son Co., 416 West 13th Street, New York, N. Y.), have brought out a valuable booklet which tells all about the Harvard classics and Dr. Eliot's plan of reading. It is called "Fifteen Minutes a Day." The publishers will send it free to any reader of this MAGAZINE who applies to them for it.

Homes Without Books

Sign of the Intellectual Slump

By H. Addington Bruce, in "Rock Island Magazine"

(Copyright, 1919)

WILLIAM HARRIS ARNOLD, communicating through the *Atlantic Monthly*, announces the unpleasant discovery that there are fewer book stores in the United States than there were half a century ago. He is inclined to put on publishers much of the blame for this regrettable fact.

They do not, in Mr. Arnold's opinion, cooperate as they might in promoting the business of the bookseller. Especially does he think they err in refusing to allow the return of unsold books.

Yet one should not, after all, condemn the publishers for this. Shopworn books are not a first-class asset to any publisher. Neither, for that matter, are they a first-class asset to a bookseller. And if people handle books on counters, yet allow them to remain unbought, it is not surprising that booksellers become discouraged and quit business.

The fact is that the book-buying population itself has been on the decline. Hence the book stores have suffered, as every store must suffer when the demand for its wares falls off.

And that book buying is not what it used to be, despite the claims for various "best sellers," is apparent to anybody whose memory goes back even a scant twenty-five or thirty years.

When I was a boy there were comparatively few bookless homes. Nearly every home I then knew, whether in city or in country district, boasted a book collection, small or large. Today I feel safe in saying that bookless homes are in the majority.

Certainly they are in the majority when one includes homes where the "library" of other days is left with no modern additions, is left unread, mayhap is transferred to the ignominy of the garret. Again and again of recent years I have unexpectedly come upon these garret collections. Downstairs I would see only a novel or two, perhaps not even that. Upstairs, remote, untouched, dust-covered, my gaze would be caught by substantial volumes testifying to the bookloving fervor of a generation that had gone.

Now, bookless homes are at once a symptom and a cause. They are a symptom of

intellectual torpidity. They are a cause of unrest, nerve strain and unhappiness.

For the mind requires food no less than the body. It needs to be exercised equally with the body. And only through the reading and rereading of good books can the mind gain all the food and all the exercise that it ought to have.

It is not enough to take books from a public library or to borrow books from friends. At least a few books of real worth must be constantly available. Otherwise semi-starvation and flabbiness of the intellect are an almost certain result.

Publisher friends tell me that there are signs of a renewal of activity in home library making. They speak glowingly of the book business of the past twelve months. They are far more optimistic than was their wont.

I sincerely trust their optimism is justified. The fewer bookless homes we have the brighter our prospects for the future will be.

New Pocket Edition Air Brake Instruction

The Westinghouse E-T Air Brake Instruction Pocket Book, by William W. Wood, Air Brake Instructor, is one of the handiest and most practical books that have

ever been sent us for review. Printed in large, clear type, on good paper, and well bound, it is, nevertheless, so compact as to slip into the pocket and be carried easily.

Among the contents of this book are: The No. 6 E-T Equipment—the Valve—the Piping—the Gauges. The theory of the Triple Valve, and its principle in application to the E-T Locomotive Brake. The Distributing Valve—Colored charts showing each and every phase of its action accompanied by colored piping diagrams indicating the contained pressures. Theory of the Quick-Action Triple Valves, its importance—principle in application to the Quick-Action Distributing Valve of the No. 6 type. The E-6 Safety Valve. The H-6 Automatic Brake Valve—theory and principle of the automatically acting brake-pipe pressure Equalizing Discharge Valve—Construction of the H-6 Brake Valve. Transparency plates in color tints showing the Rotary Valve, and through it the Rotary Valve Seat, Ports, etc., in each operative position of the Brake Valve Handle. The S-6 Independent Brake Valve—its construction. Transparency plates similar to those of the H-6 Brake Valve, showing the arrangements of Ports in Rotary Valve and Seat in each position. The Double-Pressure B-6 Feed Valve. The Duplex Automatically Controlled Excess and Maximum Pressure Pump Governor. The C-6 Reducing Valve. The "Dead Engine Feature" of the No. 6 E-T Equipment. Combined Air Strainer and Check Valve—its application to the Train Air Signal System.

Operation of the No. 6 E-T Locomotive Brake—Freight Service—Passenger Service—Switching Service—General Braking Service—Grade Work, etc. Reporting Work on the No. 6 Equipment. Testing the Equipment. Leaking or broken pipes of No. 6 Equipment.

The No. 5 E-T Locomotive Brake Equipment—Its distinctive features as compared with the No. 6 Type—Its Operation—Leaking or broken pipes in the No. 5 Equipment. Filled with colored plates, showing various pressures.

This book is on sale through the BALTIMORE AND OHIO MAGAZINE office, Mt. Royal Station, Baltimore, Md., at \$2.50 per copy. Send check or money order.

Daily Delay Sheet

We have just received a very interesting report published by the American Railroad Association, under Section III—Mechanical. It is on Scheduling and Routing Systems for Locomotive Repair Shops, as prepared by the committee of which Henry Gardner, mechanical engineer of the Baltimore and Ohio Railroad, is the chairman. Among the interesting exhibits is the Daily Delay Sheet used by the Schedule office of our Motive Power Department. The report also includes standard forms used for other kinds of work on different railroads.

Hinky: Did you hear about the new tiers they're puttin' in at the jail?
Dink: No, what are they?
Hinky: Profiteers.

Women's Department

Edited by MARGARET TALBOTT STEVENS

*A song of the wood on a midsummer morn,
Tra-la-la, tra-la-la, la,
As the crow takes his flight o'er the green fields of corn,
Tra-la-la, tra-la-la, la,
When voices of wild folk are heard high and low,
Keeping time with the blossoms that nod to and fro,
And resound through the valleys, wherever we go,
Tra-la-la, tra-la-la, la.*

*How merry the cat-bird who calls to her mate,
Tra-la-la, tra-la-la, la,
Who swings with the breeze on his bush by the gate,
Tra-la-la, tra-la-la, la,
And the sound of the katydid rustling her wings,
As high in the treetop all morning she sings,
"O, come, let us see what the summertime brings,"
Tra-la-la tra-la-la, la.*

*Hear the woodpecker tapping a hole in the tree,
Tra-la-la, tra-la-la, la,
In harmony sweet with the hum of the bee,
Tra-la-la, tra-la-la, la,
O they sing as they work on this midsummer morn,
From the wood, from the dell, from the hedge and the thorn,
And the crow takes his flight o'er the green fields of corn,
Tra-la-la, tra-la-la, la.*

Come on Girls!

HERE is a letter from one of Our Girls, who suggests that we give more space in the Women's Department to the girls of the offices. This is a fine idea, and, while in the May and June issues of the MAGAZINE we have been guided by the kind of material that we had to work on, yet there are hundreds of Railroad Girls who can help make these pages more interesting. Let us hear from them. We are not afraid of being swamped with letters; worse things than that have happened, and we'll find a way to manage. Let us have more suggestions; send us your problems and we'll try to solve them. Thank you, Miss Gessner.—ASSOCIATE EDITOR.

BALTIMORE, June 19, 1920.

My Dear Miss Stevens—

Your "Women's Department" in the May number (which, by the way, is a mighty good one) is all right, and I'm wishing you all kinds of luck with it; but, why couldn't you find a little corner for the hundreds of women employees who are now on the pay rolls?

Of course, we're all interested in the household problems, hoping that some day we may have need for all the "dope" you're going to get for us on those subjects, but just at present our time is pretty well taken up trying to make a success of the railroad business and there's a lot of things we would like to know about that. I am sure that if you could find enough space in the new

section for the women workers of the Baltimore and Ohio to use as a letter column, or something of that sort, you could get some very interesting matter to use.

This letter isn't a criticism—far from it. Since you used to be "one of us" (of course, you still are, for that matter) and realize the problems we are up against, I'm sure you'll realize just what I mean.

Sincerely yours,
(Signed) MABEL T. GESSNER.

Welcome the New Girls

By a Stenographer

PERHAPS your first impression on entering the beautiful corridor of the Baltimore and Ohio Central Building is that of space, but, on entering one of the busy general offices anywhere throughout the building, you feel entirely different; it seems as though there are just folks, and folks, and then more folks.

You, who recall your first day with the Company in one of these large general offices, will know that a sensitive or timid person will probably find out very little about anyone or anything there, for at least two or three weeks, except her own niche in the office and the man or men for whom she works. And you who have felt this way, will you not make it your privilege to extend a word of greeting to the new members of the Baltimore and Ohio family who come to

work with us? Tell them it will make you glad if you can be of any assistance, show them, if they are stenographers, the various kinds of stationery for the different kinds of work; explain how office and building memoranda are written as distinguished from correspondence to outside concerns or Baltimore and Ohio offices in other places. For example, there is the telegram, which, as you know, is worded in the most concise way possible to convey its meaning. You who read this know, I'm sure, how much easier it would be if we should do our bit to help, not only in the office, but everywhere.

I am reminded of a poem called "Life," which is rather apropos:

"What's life? A story or a song?
A race on any track,
A gay adventure, short or long,
A puzzling nut to crack?
A pit where fortune flouts or stings,
A playground full of fun?
With many, any of these things,
With others, all in one.

"What's life? To love the things we see,
The hills that touch the skies,
The smiling sea, the laughing lea,
The light in women's eyes.
To work, and love the work we do,
To play a game that's square,
To grin a bit when feeling blue,
With friends our joys to share.
To smile though games be lost or won,
To earn our daily bread,
And when, at last, the day is done,
To tumble into bed."

When we are in bed, these things having been done, sleep will come to us as naturally as to a child. Let's try.

Sticking to One Job

By George W. Haulenbeek

Law Department

A GENTLEMAN in Chicago has five daughters who are eligible for the sea of matrimony. The five young men who wish to become their husbands must satisfy the father of these young ladies that they will make good 100 per cent. The applicants are expected to measure up to certain requirements.

The first requirement is to be ambitious to succeed in life.

The second, an old fashioned one, willingness to stay by the home fireside.

Third, each candidate must be reasonably good looking.

The fourth requirement, he must be a veteran of the army or navy.

The fifth and most important of all, he must be the sort of a man who sticks to one job and makes the most of it.

The sixth, health and intelligence.

As I have held on to one job in the good old Law Department for over 39 years, and continuously at that, I feel that I can measure up to the fifth requirement. So it is just possible that I may in due time be located in Chicago and perhaps become the correspondent of the BALTIMORE AND OHIO MAGAZINE from that section. You never can tell. I firmly believe in destiny.

Dear Women Readers:

Once upon a time—and it wasn't so many years ago—a woman was considered quite out of date unless she followed a certain prevailing style in the choosing of her hats and gowns.

During one summer that I remember, it was supposed to be very fashionable to wear what was known as a "mushroom" hat. Almost every woman had one, and she who had none felt like crawling under the seat when she went to a public gathering, for she was certain to appear conspicuous. I have seen whole rows of women dressed in these hats and looking for all the world like rows of prim little cabbages, each one just like the one next to her—until you got a peep at the faces under these hats. Just because Mrs. Smythe-Jones, who had a round, smiling face, wore a "mushroom," Miss Arabella Brown, who was very large and sharp featured, sat right next to her and wore a "mushroom," too.

Modistes and tailors vied with each other in trying to produce the ONE leading fashion, and the first of these who succeeded in getting the recognition of the foremost newspapers was the only one who was able to get all his goods on the market; other styles had to be remodeled to conform to the prevailing fashion. But now, thanks to common sense, times—and clothes—are mended, and individuality is the keynote to fashion.

Almost anything that is becoming is in style. Scan our fashion books of today. There is the tight basque of grandmother's time; the gay Russian blouse that hangs loosely from the shoulders; the shirtwaist with the high collar and long sleeves, the flat collar with three-quarter sleeves, with the low neck and short sleeves, or, as in the evening gown, with no sleeves at all. Skirts are wide, narrow, tucked, plaited, short, long, piped, gathered, frilled and quilled. Hats are large, small, with and without brims, with and without crowns; there are floppy sunshades, poke bonnets, turbans, and sailors. There is almost no limit to the styles from which we may choose. Moreover, Anne, who makes her own clothes, can afford a greater variety than Marie, who must buy her's ready made.

There is a little girl who works in the Car Service Department at Baltimore who once set me to wondering how she could afford so many dresses; one day I asked her. The answer was simple, "I make them myself," said Matilda. She designs them according to her own fancy and they truly "belong to her." We have asked Matilda to give us some hints on dressmaking for our Women's Department; meanwhile, if you have any of your own, send them in.

Yours very sincerely,

Margaret Talbot Stevens
Associate Editor.

How Do You Like My Dress? I'll Tell You How to Make One

By Matilda Baer

Demurrage Clerk, Car Service Department

GIRLS who make their own clothes can afford to be well dressed at all times.

The frock in the accompanying picture was made of white voile, heavily dotted, over a slip of pale pink taffeta. The slip is cut straight, just of two pieces; the overskirt is on the same plan, of two straight pieces, but cut shorter than the underskirt. The bottom of the overskirt is hemmed and the lace is stitched about $3\frac{1}{2}$ inches from the bottom. When the lace is securely fastened in place, the material under it is cut away, leaving the double hem and single overskirt.

The body of the dress is a kimono effect, a straight piece of material being folded and the sleeves cut perfectly straight at the desired length. It is often a wise plan to fold the material into four parts in order to get both body and sleeves exactly alike. The lace is put into the sleeves in exactly the same manner as is the lace in the skirt. The collar is a straight piece about ten inches wide, hemmed and with the lace also stitched in and the material under it cut away. This is placed on the body of the dress, perfectly straight.

Use a piece of the voile or of any stiffer white material for the vest. Upon this are stitched strips of lace, one just above the other, until the effect is that of a lace yoke. Then both of the skirts are gathered to a belt. Almost any kind of a girdle that suits your fancy may be used; with this dress I use a girdle of pink satin ribbon.

The Hat

The frame for the hat may be purchased for a very small sum, and the clever girl may have a hat to match each of her summer gowns. This one is of white organdy. The frame is laid upon the material to determine the size and shape of the pieces to be cut. Two pieces are cut exactly alike, the one for the top of the brim, the other for the underneath. These are basted together and the centre for the top is cut out, but leave the bottom until the whole has been thoroughly basted and secured. The crown is a small oblong piece, just cut large enough to cover the very top. The sides are perfectly straight pieces, turned in at the top and stitched. Be sure to baste everything first so as to make sure that you have

the effect that you wish before you stitch it. There is no trimming on the hat except the small, black French knots and a narrow piece of black ribbon that goes around the crown and forms streamers in the back.

White slippers and stockings complete this costume of the Summer Girl.

Hail, Monongah Mermaids!

THE young ladies employed in the Superintendent's office of the Monongah Division are well known, locally, for doing things new and novel. The Monongah Division baseball team, having been organized, the girls did not propose to be outdone, and forthwith proceeded to organize the Baltimore and Ohio Ladies' Swimming Club. Grafton being located on the shores of the picturesque Tygarts Valley River, and being blessed with a park just at the edge of the city, which boasts of a first class beach for bathing and swimming, the girls at Grafton are more fortunate than some of their Baltimore and Ohio sisters. The officers of the club are: Miss Margaret Byers, tonnage clerk, President; Miss Katie Tucker, stenographer, Secretary; Miss Eva Gerkins, file clerk, Treasurer; Miss Ethel Bradford, secretary to Superintendent, Royal Costumer. The club starts out with ten members and promises to create a sensation in swimming circles.

Here's the industrious little lady who designs and makes her own clothes, Miss Matilda Baer, demurrage clerk, Car Service Department

My New Stenographer

I have a new stenographer—she came to work today,
She told me that she wrote Graham system;
Two hundred words a minute seemed to her, she said, like play;
And word for word at that—she never missed 'em.
I gave her some dictation—a letter to a man,
And as I recall it, this is how the letter ran:

"Dear Sir—I have your favor, and in reply would state
That I accept the offer in yours of recent date.
I wish to state, however, that under no condition
Can I afford to entertain your freelance proposition.
I shall begin tomorrow to turn the matter out;
The copy will be ready by April 10, about.
Material of this nature should not be rushed unduly.
Thanking you for the favor, I am, Yours very truly."

She took it down in shorthand, and with apparent ease and grace;
At last, I thought, I have a girl worth having 'round the place.
She didn't ask me to repeat, nor jump up in a flurry.
I said, "Now go write it out; but don't be in a hurry."
The Underwood she tackled—now and then she hit a key,
And after thirty minutes, this is what she handed me:

"Dear Sir—I have the fever, and on the fly I sit,
And I except the offer as you have reasoned it.
I wish to say, however, that under no condition
Can I for to take your free lunch preposition.
I shall be in tomorrow to turn the mother out.
The cap it will be red, and cost ten dollars about.
Material of the nation should not rust.
N. Dooley.
Thinking you have the fever, I ame, Yours very truly."—*Exchange.*

Our Pattern Service

Not only may the patterns shown on these pages be ordered through this office, but also any *Pictorial Review* pattern as given in the *Pictorial Review* Fashion Book, or as advertised elsewhere.

Style Programme for New Season Includes Soft Picturesque Frocks

By Maude Hall

STYLES for the new season disport themselves under the most favorable auspices. They seem to have the whole-hearted approval of every woman who loves clothes that are loyal to the best traditions of correct dressing. There is something daintily fastidious about many of the latest models that makes them peculiarly appropriate for summer wear. Duplicated in inexpensive cottons, they help to bring the wardrobe up to its vacation quota, without drawing upon the allowance set aside for other things.

Indeed, the woman who does her own sewing is not nearly so alarmed over the reduced production in clothes as is her sister who has to buy everything ready made. Her only drawback is in the limitation of her allowance for shopping when she starts out to select new frocks and waists. But even with a curtailed budget she can do well, if she is patient and painstaking.

Favorite Summer Fabrics

One could not do better this season than to invest as liberally as possible in the soft cotton fabrics—voile, marquisette, the muslins, gingham, etc. There are numerous exclusive models in these materials which may be copied with utmost ease and within a short time. Some are so simple that they easily can be made in a day. Under this head comes a pretty blue and green check gingham, trimmed with white mercerized poplin. The front of the dress is slashed at center-front and finished with an inset vestee. Tiny rows of blue mercerized braid outline the round neck and front, though this trimming may be omitted if desired. At the side seams there are inserted pockets, emphasized by distended trimming pieces. A narrow belt of poplin holds in the fulness at the waist. The majority of the checks

and plaids for summer wear are developed in straight line effect, the variations being rung in on the details.

Palm Beach Red

Fancy runs riot in the design of the delicately tinted organdies and swiss novelties. We are promised a great vogue of red this year. The shade is a rather becoming one and is known as Palm Beach red. Childhood reminiscences bring to mind a similar color known as Turkey red. White, the Oriental influence, is strong in the world of dress. It is doubtful if anything Ottoman even in name could get very far in fashionable preference at this time. A Palm Beach red dotted swiss frock patterned with circles of white features a tunic blouse with large fichu collar. Fine white net outlines the edges of the tunic and collar, the fastening being in surplice effect. There is a vest of white organdy but the sash is of the dotted swiss.

Seasonable Toggery for the Kiddies

The little coats shown here are Fashion's tributes to girls between one and eight years. They lend themselves to development in pique, taffeta, satin, pongee, serge or velvet. They are *Pictorial Review* designs, numbers and sizes following:

No. 8940. Sizes, 1 to 4 years. Price, 25 cents.

No. 8648. Sizes, 1 to 6 years. Price, 20 cents.

Defined

Miss Wilson had been giving the class an elementary talk on architecture. "Now," she said, "can anyone in the class tell me what a 'bustress' is?" Little Walter arose, his face beaming with a quick flash of intelligence. "I know," he shouted, "a bustress is a nanny goat."—*Buffalo News*.

Safety First

"Madam, the feather in your hat is getting in my eye," said the man on the crowded car.
 "Why don't you wear glasses?" snapped the woman.

Tomatoes!

Tomato time is with us again, and with it comes the question of the most appetizing ways of serving this wholesome and nutritious vegetable. A gentleman remarked the other day that he preferred to eat his tomatoes right from the vine, but, like the famous pudding of the Mother Goose Rhyme,

"Some like them hot,
 Some like them cold,
 Some like them in the pot . . ."

Put tomatoes are good, no matter in what style they are served. The next time you are looking for something new and unusual, try the recipe for tomato gravy.

Tomatoes

Select large, red, firm tomatoes. Dip for a half-minute into boiling water. Remove the skins with a sharp knife; slice $\frac{1}{4}$ inch thick and serve on leaves of lettuce with crushed ice.

Tomato Gravy

Put six slices of bacon in a deep frying pan. When cooked, remove to a large gravy bowl, chop fine, and set aside. Into the hot fat in the frying pan put one large very ripe tomato and one onion, both of which have been chopped fine, and a sprig of parsley. Let simmer for about five minutes. In a cup mix two tablespoons of sifted flour, $\frac{1}{2}$ teaspoon salt, and $\frac{1}{4}$ teaspoon pepper, in enough water to make a thin batter. Fill the cup with water, stir thoroughly and add to the ingredients of the pan. Stir briskly, adding more water as the mixture becomes thick. Pour into bowl containing the bits of bacon and serve hot.

Tomato Salad

- 4 large firm tomatoes.
- 1 large cucumber.
- 2 sweet peppers.
- 1 onion.
- 1 head lettuce.
- 1 tablespoon vinegar.

Cut tops from tomatoes, hollow out, and scallop the edges. Put the tomato pulp into a mixing bowl. Add the cucumber, onion, sweet peppers and heart of the lettuce, all chopped fine; then add vinegar. Mix well and add pepper and salt to taste. Put back into tomato cases; serve on lettuce leaves with mayonnaise dressing.

Fetching Frock Built upon the Slender Lines Fashion So Warmly Approves This Season

TO APPEAR slim is the aim of every woman and the dress that helps to realize her aim is the one that is sure to attract her. This model with long waist and two-piece shirred skirt is suitable to development in any of the tub materials now in such great vogue, or the non-washable silks and satins. The model is designed to be slipped on over the head, the closing being on the shoulders. Short kimono sleeves and a round neck are features of the waist and since simplicity is the keynote of fashion, one does well simply to finish these parts without trimming. Medium size requires $3\frac{1}{2}$ yards 40-inch material to make.

With the exception of the little vest or shield, and the piecings for the sash, all of the sections of the dress are laid along the lengthwise fold of materials, which means that seams are almost entirely eliminated. After each section is cut and notched and perforated, as directions require, take the waist and close under-arm, sleeve and shoulder seams as notched. Leave shoulder seam free from small "o" perforation in front section to neck edge and finish for closing.

Next, take the skirt and join gores as notched. Gather upper edge between "T" perforations. Gather along crossline of small "o" perforations and make three rows of gathers below, $\frac{1}{4}$ inch apart. Sew skirt to lower edge of waist with center-fronts and center-backs even and bring side seam of skirt to under-arm seam.

Hold in the fullness at the waistline with a string belt of self-material or a belt of suede.

Pictorial Review DRESS No. 8930. Sizes, 34 to 46 inches bust. Price, 35 cents.

BALL

Grouches! Don't Pick on the Locust Point Juniors. They Have Troubles Enough

When the catcher gets his whiskers caught in the meshes of the screen, it is high time to ask spectators to "have a heart"

By "Pop Anson"

IN REPLY to numerous inquiries concerning the doings of the Locust Point Junior Baseball Team, we would state that in the following explanation of the reason for the postponement of our match games, we humbly beg the indulgence of our friends and the attentive ears of our enemies.

First, let it be known, the Baseball Public is made up of two distinct factions, the Loyal Fans and the Grouches. Moreover, it grieves us to admit that at our last practice game, Old Man Grouch and all of his ancestors and descendants were present. We appreciate, however, the interest and enthusiasm that was shown by our Loyal Fans, and we leave the following facts in your gentle hands and submit to the mercies of your criticism.

Our ball, having been "Babe Ruthed" all over the lot, has burst with pride, and is now at the harness maker's shop being knitted and purled into shape.

Our Left Fielder unintentionally left his glass eye on the buffet at his home, and as ours is a sun field, we make sincere apologies for his lack of "Ty Cobbiness." But, a hint to the wise being sufficient, we wish to add that we have met and have made confab with a certain mysterious guy who wears smoked glasses and who is more than anxious to accept terms.

The Short Stop is having new ball bearings put into his cork leg; he melted the old ones while running for infield bunts. We expect a great deal from him later on.

Mr. Center Fielder showed up in the garden with a crabbing net. As this was not intended to be a La Crosse game, we feel obliged to make a ruling that hereafter no crabbing net or domesticated market basket will be given admittance.

The thrilling point of the game presented itself when our nearly famous catcher made a masterful attempt to capture a pop foul and succeeded in catching his whiskers in the meshes of the screen. There he hung, suspended in mid air. One of the spectators ran to a clothing shop for a pair of scissors, but alas, the clothing workers were on a strike and the shop was closed. Then, one of our Loyal Fans bethought him of a brilliant idea; he lighted a blow-torch and singed the Catcher loose. (Notation will be made on his service record for the heroic act.)

Now, folks, remember that these boys are new; it will take them a year or two to

show you the stuff that they are made of. Look back upon the early records of other stars, such as Rusie, Mulane, Robertson, Delehanty, and Spaulding, then give these boys a chance. You will be proud of them before the season closes.

And now, for the benefit of Speaker, Huston, McGraw, Moran, et al., we wish to add that if these aforesaid gentlemen wish to save themselves time and expense, they will do well to keep their scouts away from Locust Point; we have no players that we wish to trade, sell, or exchange. We are satisfied with our lineup and we intend to keep it. Moreover, we can point with pride to our record, which is (to date):

GAMES LOST.....0

Come out to our next game and decide for yourselves whether or not we are entitled to membership in the Baltimore and Ohio System League.

Auditor Merchandise Receipts Team

We are presenting in this issue our Baltimore and Ohio Baseball Team of the System League, which, at the present writing, has won six out of the seven games. Meet also our Blue Ribbon Babies and some who were Blue Ribbon Babies, and the echo at the other end of the room wants to say "full-blooded, blue-blooded," or as

Maeterlinck would have it, "Blue-Bird-ed," for the Blue Bird does, indeed, bring happiness to those who would search for it.

From left to right are, back row: R. Gretzner, L. Vinci, A. Ashmeier, O. Brandall, F. Schaake, A. Beck, and J. Fogarty. Front row: V. Walters, R. Hall, A. E. Everhardt, Manager C. Davis, H. E. Kruse.

Note to Baseball Writers!

We would like to publish full box scores but lack of space forbids. Please get your scores in as soon after the games as possible.—EDITOR.

Grafton-Weston

Weston, W. Va., June 19

In the best game of the season, the Monongah Division team lost to Weston on Saturday, June 19, by the score of 3 to 2. Both teams were in rare form and it was anybody's game until the last man was out in the ninth. Gilmore's pitching for Monongah Division was very effective; in pinches he tightened up, in the sixth inning striking out Chenoweth with three men on, but made an error in the fourth inning—after two men were out he let in two runs. Feeney hit for three sacks in the third and with a little more energy could have reached home on the hit.

Monongah Division Defeats the Pittsburgh Division

June 26

Before the largest crowd that ever saw a baseball game at Glenwood, Pa., the Monongah Division team of the Baltimore and Ohio System defeated the Pittsburgh Division team on June 26 at Glenwood by the score of 8 to 6.

To pick a star on either team would be some job; every man was a star. Jones was easily the star batter; in the sixth inning with two men on he pulled a "Babe" Ruth. Hopke at first base covered himself with glory. Ringler at third played his usual good game and at the bat he hit the ball hard, getting a triple and single bender, scoring three runs. Fischer, at short, brought the crowd to its feet in the fifth inning by getting a line drive for the third

out with two on. Hankey, Feeney and Mathews played the outfield as it should have been played. Slack was never in better condition, stopping three batting rallies, especially in the ninth inning with three on and one out, when he struck out White and made Zuillen fly out.

Score by Innings

	Pittsburgh Division	0	0	1	1	0	0	2	1	6	7	2
	Monongah Division	0	0	0	1	3	0	3	1	8	11	3

Summary

Two-base hits—White, Feeney, Hopke, Jones. Three-base hits—Zuillen 2, Ringer. Home runs—Jones. Stolen bases—Tovey 2, White 1, Zuillen 1, Bennett 1. Sacrifice hits—Mathews, White. Double plays—Jones (unassisted). Base on balls—off Slack 3, Hudson 2. Hit by pitcher—by Slack 2 (Tovey, Mathos). Struck out—by Slack 7; Hudson 4. Umpire—Moran. Time of game—1.35.

The lineup follows:

Pittsburgh Division—Tovey, 3b; Meehan, 2b; Mathos, 1b; Seaney, 1b; White, lf; Zuillen, cf, rf; Conley, ss; Lewis, cf; O'Malley, rf; Bennett, c; Hudson, p; *Gisbert.

*Batted for O'Malley in the 8th.

Monongah Division—Feeney, cf; Mathews, rf; Hopke, 1b; Ringler, 3b; Jones, 2b; Fischer, ss; Hankey, lf; Rodebaugh, c; Slack, p.

Toledo

The Toledo team of the Baltimore and Ohio has hit its pace. After losing one game to Cincinnati, Dayton and Lima, it has defeated Dayton and Lima and made Cincinnati quit when Cincinnati realized that they were in for a trimming.

Strange Power of Colored Man Employed as Car Repairer for the Y. & M. V. at Memphis

From Illinois Central Magazine

FOR several months past murmurings have been reaching Chicago about a very remarkable colored man, Rev. Willis Watson, who is employed as car repairer for the Y. & M. V. at Memphis. It was said that this man possessed a strange power in that he could blow his breath upon a handkerchief and set it afire, or that he could set fire to other materials by simply holding such materials in his hands and blowing his breath upon them.

Louis Ogilvie, Special Claim Agent at Memphis, was the first member of the Claim Department to discover this remarkable man. He saw him burn handkerchiefs by blowing his breath upon them, and he told the story to his friends, and although they had great faith in Louis, they rather doubted what he said about the power of the colored car repairer, who, while not on duty as a car repairer, devotes his spare time to performing the duties of minister of the gospel.

When Mr. Ogilvie found that his friends rather doubted him, he produced the colored man, who demonstrated his peculiar power in their presence.

General Solicitor Burch heard of the remarkable power of this man and later witnessed a demonstration of it. He then told some of his friends about it, and although Mr. Burch is never doubted about other matters, his friends thought that he must be mistaken in this case. Mr. Burch then had some of his more intimate friends, including doctors, lawyers, bankers and others, assemble at his office and there he produced the Rev. Willis Watson, who showed his power in a manner which, although baffling to those present, could not be doubted in any respect whatever.

President Markham happened to be in Memphis recently on the same day Judge

Dickinson, formerly General Counsel of the Illinois Central, was in that city, and they were told about the remarkable powers of the colored man, and like others they were dubious about it. The colored man was produced and demonstrated his powers to them.

Judge Dickinson was so interested that he reported what he had seen the colored man do to the members of the Wayfarers Club at Chicago, a club composed of very eminent professional men and scientists. The members of the club expressed a desire to see for themselves what the colored man could do and accordingly arrangements were made to have him attend a meeting of the

club at Chicago on the evening of the 25th ult. Messrs. Burch, Sivley, Sprague and Ogilvie accompanied the colored man to Chicago.

When this remarkable man arrived in Chicago, he was first brought to the offices of the Claim Department, where he burned several handkerchiefs by blowing his breath upon them in the presence of the members of the department. He was then taken to the offices of General Counsel Horton, where he did the same thing in the presence of the members of the Law Department.

On the evening of the 25th ult. he appeared before the members of the Wayfarers Club and was introduced to the members of the club by Judge Dickinson and Mr. Burch. They explained the remarkable power of the man and he demonstrated that power before the club.

A committee of scientists who were at the meeting of the club looked the man over, but could make no explanation whatever of his strange power. This man will give no demonstrations for money. He is interested in a church which he is helping to build at Memphis and accepts contributions for his church, but that is all. He has been employed by the Y. & M. V. for twenty-four years. At one time he was employed as fireman for W. H. Watkins, locomotive engineer, who later became master mechanic at Water Valley, Miss., and at Memphis, Tenn., but who is now deceased. He is a very plain, humble and unassuming man. He does not understand his power, nor does he seem to attach much importance to it. His mannerism indicates that he thinks it strange that other people should be so much interested in him.

This man has been offered a salary, I have been told, of \$400.00 per week to go upon the vaudeville stage, but he claims that it is a "Power that God has given him," and he does not think that he should prostitute it by using it to his financial advantage.

Shoes—Two Pair—Shoes

A work shoe and a dress shoe at practically the price of one pair. Sent to you without one penny down. All you have to do is pay your postman \$7.37 and postage when the package arrives. It's a money back proposition, too. Of course, you don't expect full details of an amazing offer such as this in such small space and you are right. If you look for our big six and a-half inch illustrated ad in this issue, you will get full particulars. Wolpers—Department 61 at 1201 W. Van Buren Street, Chicago.

How Is This for a Day's Record?

Here is one of our fine passenger train reports, that of May 8. "This is the way to run trains," says our friend J. A. Latchford, of the Passenger Bureau, Transportation Department.

Safety Roll of Honor

Staten Island

After the arrival of train No. 92 at New Dorp, on May 16, Material Clerk George H. Styles discovered westbound platform on fire. He extinguished the fire as well as he could and notified agent to bring water and assist him.

Baltimore Terminal Division

On May 15, while on extra west 4916, Brakeman W. E. Beiber discovered broken rail on new line on eastbound track east of Pike crossing, Mt. Clare Junction. His promptness in notifying trackmen, who put in a new rail, possibly averted a serious accident, and commendatory notation has been placed on his service record.

On May 20, while on duty at Huntington Avenue Tower, Operator G. W. Fowler noticed brake rigging dragging under first car from engine of extra 4599, west. He had train stopped at North Avenue Tower and necessary repairs made. This incident adds another commendation to Mr. Fowler's service record; it was last month that we reported his action in a similar instance.

Crossing Flagman J. Buchner, at Russell Street, has been commended for removing a brake rigging he noticed on the track between Race and Leadenhall Streets while on his way to work on May 18.

Baltimore Division

On May 9, while extra, engine 4516, was using No. 4 low speed track in Wilsmere Yard, an unusual jar was felt in the caboose. Train was stopped and Flagman H. W. Aro went back to make investigation and found section broken out of top of rail. Conductor C. T. McCleary notified the Yardmaster's office. Protection was arranged for track until repairs were made. Both Conductor McCleary and Flagman Aro have been commended.

On May 12, as extra east, engine 4543, was passing Aberdeen at 5.20 a. m., Operator E. C. Jobes observed car in train with broken spring hanger. Crew was notified and train stopped. Car was set off for repairs. Operator Jobes has been commended for his close observation of passing equipment.

Operator F. Phillips has been commended for his observing blazing journal box under car in train No. 14, engine 5086, May 14, at Barnesville. Train was stopped at Boyd and examination developed the car had journal box too hot to handle. Car was set off.

On May 16, extra east, engine 4516, had second car from the caboose with broken arch bar. The break was all new and was found by Brakeman C. W. Bailey, who notified Conductor A. Harmon. Train was stopped by applying the air from the rear and possible derailment prevented. Conductor Harmon and Brakeman Bailey have been commended for their alertness and prompt action.

On May 16, Conductor H. Pierce, in charge of extra east, engine 4512, discovered

a broken arch bar under car in train approaching Van Bibber, where train was stopped. Investigation developed that the break was 90 per cent. old defect and the bolster of car riding on the rail. Car was placed on the siding with little delay and without its being derailed. Conductor Pierce has been commended for close attention to the running of the train.

Fire was observed flying from driver of engine 4016, train No. 94, by Operator E. L. Shipley, as train passed Watersville Junction. Train Dispatcher was notified and train stopped at Woodbine. Examination of engine developed loose tire. Operator Shipley has received commendatory entry on his record for the prevention of an accident.

On June 2, Brakeman E. J. Welsh, with extra west, engine 4565, noticed a steer partly working himself out of door of car in Wilson stock train, engine 4026. Brakeman Welsh notified the Conductor of the stock train, who stopped the train at Sykesville. Mr. Welsh has been commended for his observation of this condition on passing train.

When extra west, engine 4521, was pulling in on passing siding at Newark, Del., Brakeman C. E. Grail, who was riding in engine cab, noticed galvanized iron roof of G. N. 120941 had worked loose and that it was protruding out over side of car roof. This extra was going in on siding for a special west, which was following the extra close. When Grail saw it coming he got out on the roof of the car, and held the projecting roof back to clear the westbound track, which probably averted serious injury to the engineer of the special west. His quick action is commended.

BALTIMORE, MD., June 2, 1920.
MR. JOHN SEFORD, Trackman,
Care E. Corbin, Section Foreman,
Loreley, Md.

Dear Sir—It has been called to my attention that on May 18 you were working near Loreley, and when extra 4546 and 4521, a double header, passed, you noticed a car in that train with a broken truck. You attracted the attention of the flagman on the caboose, who applied the air brake and stopped the train. Your action undoubtedly prevented an accident, and I am writing to commend you for your action. Suitable notation will be made on your service record.

Very truly yours,
(Signed) R. B. WHITE,
Superintendent.

Cumberland Division

The following irregularities were detected by operators on the division during the past month and prompt action taken to correct:

Brake rigging down.....	3
Close clearances.....	2
Broken rails.....	1
Shifted loads.....	1
Car doors displaced.....	1
Obstructions removed.....	1
Unsafe practices.....	1
Total.....	10

Keyser

On June 1, while train second No. 1, engine 4156, was passing M. & K. Junction, Engineer J. M. Buckner noticed the left main tire loose on engine. He immediately went to telephone and reported the matter to M. & K. Tower. By his prompt action he was just in time to get train stopped at the advance signal, where engine was examined and tire found loose. Engineer Buckner is 71 years old, has been in the service of this Company for 48 years. For his close observance and prompt action an entry of commendation has been made upon his record.

Connellsville Division

On March 21, at about 5.15 p. m., a large rock fell on our tracks just east of watch box at east end of Montana. E. J. Hunsaker, who is employed by the Consolidation Coal Company at Montana, had just crossed the river and was on his way home when he heard the noise of falling rock. He immediately recrossed the river and notified the section men, thereby averting a serious accident. Mr. Hunsaker has received a letter of commendation for his action, and we take this opportunity of again expressing our appreciation to him.

Monongah Division

On June 2, M. M. Morrison, section foreman, while working around station at Bridgeport, noticed 18 inches of flange on G. T. 15557 cracked and about broken off. He immediately notified agent not to move car until inspected by Car Inspector. By his prompt action a derailment was possibly prevented.

On June 18, Operator D. L. Coyne, at Salem, noticed fire flying under Salem turnaround when coupling up to go east. He notified Conductor L. Burg, who made inspection of train and found brake rigging down between wheels of west truck of car. He had rigging removed before the train left Salem and possibly averted a serious accident.

Charleston Division

The following employees have been commended for meritorious services on this division during the past month, and suitable entries have been made on their service records. We congratulate these boys on the honor they have done themselves, the Charleston Division and their Company.

For discovering car with both side sills broken, thereby averting a possible serious wreck: Brakeman D. B. Curtis.

For assisting in clearing main track derailment and averting serious delay to passenger train: Engineer R. E. Smith, Engineer W. L. Criss, Conductor P. J. Condry, Conductor O. J. Heater, Fireman R. P. Cutlip, Fireman B. T. Boyd, Brakemen C. F. Cole, J. C. Taylor, J. D. Fury, W. M. Smith, and Baggage-master J. B. Brown.

For excellent work in connection with clearing up congested conditions at Richmond, W. Va., in short time: Engineer J. C. Smith, Engineer J. H. Shea, Conductor J. M. Claypool, Conductor E. Heckert, Fireman S. L. Collins, Fireman R. P. Morgan, Brakemen R. D. Williams, R. C. Mathers, J. S. Perkins and H. R. Taylor.

For clearing rock fall off main track, no trackmen being available, thereby averting delay to traffic: Engineer G. F. Purkey, Conductor B. R. Bragg, Conductor W. R. Forinash, Fireman J. C. McTheny, Fireman R. P. Morgan and Brakeman C. W. McMorrow.

For using good judgment in handling of freight, thereby avoiding loss of revenue and claims: Conductor O. J. Heater.

New Castle Division

On May 27, Track Foreman B. Shatto, of Willard, Ohio, discovered a piece of broken flange at the advance signal east of Willard. The operator was notified of this discovery and, as a result of prompt notification to trains en route, extra east 4287 was located with broken flange. Superintendent Stevens has written to Mr. Shatto in recognition of his prompt action in this case and arrangements have been made for suitable entry on his service record.

On May 25, Operator E. C. Forney, located at Lodi, Ohio, noticed hot box in train of extra 4310 and notified crew so that car could be set off. While setting off this car another car was discovered by the train crew with a broken arch bar strap. In this instance Operator Forney also displayed good judgment. His careful observance of unusual and dangerous conditions indicates a high degree of interest in his work. A letter of commendation was sent him by Superintendent Stevens and, in addition, an entry will be placed on his service record.

Cleveland Division

CLEVELAND, OHIO, June 8, 1920.

Mr. H. C. CHANEY,
Second Trick Operator,
Freeport, Ohio.

Dear Sir—Your careful observance on June 3, when you noticed brake beam down on extra east, engine 4314, and had train stopped, after which car was taken care of, has been brought to my attention and I want to assure you that your watchfulness and actions are appreciated and that you are commended.

Very truly yours,
(Signed) H. B. GREEN,
Superintendent.

CLEVELAND, OHIO, June 14, 1920.

Mr. J. W. STARNES,
Third Trick Operator,
Seville, Ohio.

Dear Sir—It is very gratifying to me to commend you on the interest you are taking in your work, especially so this morning, when you observed the condition of C. & T. car 12911 passing in train No. 91 and notified this train, after which car was set off at Chippewa Lake. Proper entry will be made on your record.

Very truly yours,
(Signed) H. B. GREEN,
Superintendent.

Indiana Division.

At Delhi, on June 13, Operator F. Vawter noticed something dragging when extra 2506, west, in charge of Conductor Haas, passed that station. He immediately notified operator at Griffiths, stopped train, and crew found St. L.-S. F. 71390 off center. Car was set off at Griffiths. The close attention of Operator Vawter, as well as prompt action taken, is commendable, and entry will be made on his record.

F. W. Kline, operator at Milan, Ind., noticed brake beam down on C. M. & St. P. 93092 when this car was being handled by his office in extra 2924, east, on June 15. Information was communicated to crew, train was stopped, and brake beam removed as this train was just starting down grade Milan to Cochran. The close observance of Operator Kline possibly averted a serious derailment on hill. Appropriate entry will be made on Mr. Kline's record.

Toledo Division

Third Trick Operator E. C. Allison, at "XN" Tower, discovered brake beam drag-

ging on extra 4039, south. He notified the dispatcher and train was stopped and brake beam removed, thereby averting a serious accident. Mr. Allison has been commended for his close observation.

Third Trick Operator W. A. Snyder, at Cairo, observed brake beam down and dragging in a very serious condition on a car in extra 4193, south. He succeeded in flagging this train and defect was remedied,

possibly averting a serious accident. His action has been commended.

We desire to commend Third Trick Operator J. Hammond, at Kirkwood, for his thoughtfulness in preventing a possible derailment. On the morning of May 15, he noted brake beam down on extra 4151, south, as it was passing his office, and immediately set distant automatic signal. He has been commended for this.

D. S. Patcher Accepts Invitation of Poetic File Clerk

GARRETT, INDIANA, May 30, 1920.

Dere Ed—My conshuns is hurtin' me tonite. It mus' be cuz i went to Sunday School this am an' that flyin' parson looked rite at me an' sed love yore nabor jus like you do yourself an' I sed I done that once an' her husband' got sore an' then he sed that ment don't never say no harsh words about nobody or nothin'. Gess some guy musta told him about me slammin' them eastern divs. I'm goin' to 'polygize 'n everything, cuz i didn't mean no harm an' i got a gentle spirit jus' now what aint even gotta kick no more. I wanta rite a lotta nice things about them divs down East; i aint never been down there yet, i started onct, but them YM's at Willard held me out of the yards so long i had to turn around an' come back from Attica 'cause i only had 15 days vacashun. Sum time wen they get some new YM's at Willard what wont hold me there more'n a week, i'm goin' to try it again. Cuz my heart jus' yearns to see them beautiful spots what can incite a file clerk to poems an' pros. Her description is so vivid that as i set here with my pen an' ink in hand, i jus' close my eyes an' visualize the paradise of the Shenandoah Valley. I here the waters singin' them lulabys an' them "mountains in the distance" a-joinin' in the korus. An' as the 1st streaks of dawn peeps o'er the mountain top, the trees bark to wake up the earth

witch had been soundly snorin' wile the darkness rained supreme.

I can see them bul rushes out on the bank an' the Cow slip in the stream. An as i set myself down on the green sword to eat my dainty dutch lunch, i can use a blade of that beautiful grass to cut my limburger cheese.

That file clerk sed she wuz goin' to ast some of us guys to spend their vacashun an' bank roll in that wonderful haven of rest. Well, i'm shy an' modest an' everything but i don't care if she does no my name an' address.

An' I don't even know what a file clerk is but i gess its one o' them dames what works in a barber shop an' files rich guys nails one day an a breach of promise suit the next. Whatever it is i'm bettin' some day she will be the poet laret or wat ever you call it of the Shenandoah Valley an live in that house where George Washin'ton cut down the cherry tree. An' spend her declinin' years a-restin' in reclinin' chairs, a-watchin' the little lambs gambol on the green. An' her bark of life will be launched on that "little mountain stream," what will carry her peacefully onward o'er them mossy rocks, an' at the end she will find awaitin' to welcome her a beautiful Crim-son Sunset.

Yours truly,

D. S. PATCHER.

P. S. My conshuns feels better.—D. S. P.

THE AMERICAN'S CREED

I BELIEVE in the United States of America as the government of the people, by the people, for the people; whose just powers are derived from the consent of the governed; a democracy in a republic; a sovereign nation of many sovereign states; a perfect union, one and inseparable; established upon those just principles of freedom, equality, justice and humanity for which American patriots sacrificed their lives and fortunes. I therefore believe it is my duty to my country to love it; to support its constitution; to obey its laws; to respect its flag; and to defend it against all enemies.

Among Ourselves

Baltimore and Ohio Building

Office of General Manager

Correspondent, G. F. ZIMMERMAN, *Assistant Chief Clerk*

"Strik-e-e two!" bawled the Umpire. Which reminds me that Captain Seeds has been quiet of late regarding his baseball team. Our Captain called practice the other evening, but it seems that something interfered with the "regulars" showing up, as only one appeared rigged out in baseball togs from head to foot. Our Captain, however, has succeeded in getting that kink out of his arm that was so prominent last year, and he is showing up in mid-season form. We wish you and your team the greatest of success this year, George, old top.

Charles G. Cavey has been accepted to fill position made vacant by the promotion of T. J. O'Connell. We will have to be careful when we say "Mr. Cavey" now, as this makes the second one in the office—they are brothers. Watch your step, Edward, or Charles will be telling tales on you at home.

The Correspondent received a letter the other day from Miss Guilford, who is at present recuperating at Newport, Kentucky. She states that she is feeling much better and hopes to regain very shortly the fifty pounds that the Correspondent wished on her.

Our automobile speed king, Mr. Kohlerman, is having the time of his life this summer. For quite a while we were wondering why he was in such a hurry to get out of the office on Saturday afternoons, but the truth was out when he stated that he wished to take a ride in his machine. For a few days he would not tell us what make of car it was, but it is understood to be a Buick. He and "Barney Oldfield" Andersen are in the same class now; perhaps the former is getting good practice going up and down the grades with Benjamin at Avalon.

Virginius R., where did you get that tie? This question has been asked several times of our Secretary; in fact, since Mr. Healy left us, he has been quizzed quite often regarding his style of neckwear, as it seems "Charlie" must have awakened or broadened his intellect in bow ties. We have been wondering whether or not he has filed his application for membership in the Smart Set; at any rate, his cravats almost talk to you.

Law Department

Correspondent, GEORGE W. HAULENBEEK

Paul A. Trageser's Promotion

Readers of our MAGAZINE will be glad to learn that Paul A. Trageser, for many years in our service, and recently acting as Private Secretary to the Traffic Manager of the Bethlehem Steel Company, has been promoted to a new position, that of Superintendent of Cars, Bethlehem Steel Company.

Mr. Trageser entered the service of the Baltimore and Ohio as a messenger, precisely as others have done, his last position in the Baltimore and Ohio service being as Assistant Secretary to former Vice-President A. W. Thompson.

At the time of Mr. Thompson's retirement from the Baltimore and Ohio service, an official of the Bethlehem Steel Company came to Baltimore in search of a competent man for employment in the Traffic Department. Mr. Thompson's office without hesitation nominated Mr. Trageser. His work was so acceptable at Bethlehem, Pa., that when the new position of Superintendent of Cars was created, the Company selected Mr. Trageser for the post.

New cars are being constructed for the Steel Company, and the new Superintendent will have a busy time in giving attention to matters of this character.

The selection of Mr. Trageser is a case of the office seeking the man, and this, to his many friends, is very gratifying.

Our affable and polite junior clerk, William Bruce Berry, has discarded the knickerbockers that have graced and adorned his person since his advent into the Law Department, and he now very properly assumes a new and striking attitude, a different status. He is without question the youthful Berry Wall of smart dressing fame; indeed, he may be safely regarded as the Adonis of the Law Department.

I shall advise William, however, to stick to the old ship, and not to permit himself to be absorbed by some other department. The Law Department trains the young men and off they go to other fields and pastures new.

Frank Barringer

Frank Barringer, of our service, has received a well merited promotion in going from the file room of the Motive Power Department to the office of Vice-President Galloway.

This is not strictly a Law Department item, but I feel it proper to insert it in my offering, because Mr. Barringer really commenced his railroad career with us. He is

a fine boy and we are all very fond of him. I like him for several things. He thinks there is no one like Mrs. Barringer and his two lovely children, and I believe he is right. A man with views of this kind can usually be depended on.

Whenever I go away on a week-end trip I think of the employees who rarely have such an opportunity, and I hope others have similar views. There are several young ladies at the different gates at Camden Station who are on duty when I take No. 524 on Saturdays.

How would it do for some of us to trade off with these young ladies; take their places for a day, and let them have and enjoy a week-end. I know very well that I could not do half as well, for their work seems to be satisfactory in every respect.

If by any chance my watch should fail to record the time on my return from a week-end trip, I could safely set it at 9.10, as our No. 527 rolls into Mount Royal Station on Sunday evening. Mark that.

Office of General Freight Claim Agent

Correspondent, Miss E. T. MURRAY

The old proverb "that still water runs deep," was proved once more by Miss Olive Creighton, stenographer in O. S. and D. Division, who quietly disappeared from our midst and took unto herself a husband, namely, Mr. R. Eckenrode. They were married at St. Ann's Catholic Church, Baltimore, on June 1. After the ceremony the happy couple left for Niagara Falls and points north, where they spent their honeymoon. Our congratulations!

Miss T. Johnnesen spent several days in New York recently. It is reported that New York department stores did a rushing business while she was there. Ah, be a good girl and tell us when, Teresa.

S. I. Thompson, Loss and Damage Division, has been transferred to Coal Freight Traffic Department. We all wish you continuous success, "Tom," in your new undertaking.

J. A. Downey is back with us again and looking fine after having been away from his usual post for several weeks on account of sickness.

In the accompanying picture are W. C. Bowhay, special agent, and E. W. La Motte, L. & D. Division.

The fat one shall eat no fat,
The thin one shall eat no lean;
So 'twixt them both together
They lick the platter clean.

Besides a number of recent visits to our office from that little "Cupid" fellow,

Left, E. W. La Motte; right, W. C. Bowhay

another most interesting visitor known as the "Stork" made his appearance on several occasions, leaving at the home of our Timekeeper, W. F. Aro, on June 5, a fine 8-pound boy, Vernon Wesley, with a little note advising that Vernon be trained to keep "Time" with his "dad." A package was also left at the home of C. Keene (better known as "Fatty") on May 19. It contained a fine girl weighing 9½ pounds. She was named Margaret Anna.

J. E. Jubb, Clear Shortage Division, has been granted a leave of absence on account of ill health; he has the best wishes of the whole department for a speedy recovery.

You have often heard the old lullaby entitled "A Mother was Chasing her Boy Around the Block." Well, one surely would have thought "N. C." was trying to put it into action when she was seen in the vicinity of Mosher Street and Park Avenue, tripping rather rapidly up and down the street, scrutinizing every nook and corner in eager search for her lost doggie. Becoming tired and fatigued after a fruitless chase she decided to return home. There sat "Palm" on the front steps, anxiously awaiting her return.

Engineering Department

Correspondent, OSWALD EDEN

George Norris, formerly Rodman with District Engineer A. C. Clarke, was transferred from Pittsburgh to Baltimore, and is now Secretary to Engineer of Buildings. He succeeded H. C. Harrison, who was promoted to Chief Clerk to District Engineer Richard Mather, with headquarters in Baltimore.

Meyer Street, File Clerk in Chief Engineer's office, left us on June 1. His place was taken by Albert Schnitzer, formerly Mail Clerk, whose position was filled by Norman Norris, a recent graduate from McDonogh School.

Friday, May 28, 1920, will go down in history as one of the happiest days for E. L. Gosnell, assistant to Chief Engineer. For on that day friend Stork presented him with little Robert Edward, nine pounds. The department extends to Mr. and Mrs. Gosnell their heartiest congratulations.

A. L. Sanders and Frank Nichols are two new additions to the Cost Department.

J. F. Waters, Cost Department, has announced his candidacy for the coming election for Mayor of Haleshorpe. His friend and co-worker, G. W. Gaither, is also in the running for the same office in Linthicum Heights. Maybe if both of them promise their respective districts to be strictly wet they will be appointed.

James A. Kelley entered the Cost Department June 1 as Assistant Engineer.

It is rumored that there are to be some more benedicts in the Cost Department. J. C. ("Froggy") du Bay says he is going to be married some time—maybe this coming July, but he doesn't know yet. If he or "she" doesn't know, who does? C. M. Whittaker also says he is going to be married; eventually—why not now?

"Colonel" Fryc is now wondering if the white raven gang is going to eliminate the use of Pittsburgh stogies, and is endeavoring to corner the market. The hot spell we just endured caused our friend the "Colonel" to remove his collar. We trust that cold weather will now continue for his benefit.

M. L. Riley, Cost Department, started off the month of June just right by becoming

a benedict. His wife was formerly Miss Florence de Sales Armiger. The ceremony was performed in St. Ann's Catholic Church, by the Rev. Father Flannigan. After a brief honeymoon, which included Niagara Falls, New York and Atlantic City, the couple returned to Baltimore where they expect to make their home.

Our opera tenor, Mr. Jendrek, was confined to his home for several days on account of losing his wisdom teeth.

O. L. Sanders continues to wear his silk gloves to work every morning.

C. F. Bennett, cost engineer, has been giving testimony before the War Claims Adjustment Board in Washington, D. C., in regard to settlement of Camps Meade and Sherman.

"Crown Prince" Evander has left the Cost Department and is now with the Valuation Department.

"Alvie" Weston has been eating regularly at John Bopp's of late. We understand he is in training for the pie-eating contest at the old church picnic. Here's to you, "Alvie"!

Our veteran, Colonel H. B. Browne, was confined to his home for several weeks with a severe attack of rheumatism. We are glad to say that he is with us once more.

Printing Department

Correspondent, M. J. CONROY

A long, long while ago Diogenes cried out "Oh, for an honest man!" Well, we've got one here—at least he was here when this incident happened—and he is a young man at that. His name is Clement J. Bienlein and he was a helper in the press room.

Norman Keller, one of our keyboard operators, lost his wallet in the lavatory and never missed it until he reached home. It contained upwards of \$70.00. He at once came to the conclusion that some one had picked his pocket on the street car. The next day he was to be engaged in the delightful pastime of moving to Ellicott City and the money was to be used in paying for the hauling of his household goods and he was thus placed in an embarrassing position. When young Mr. Bienlein found the wallet he promptly reported it to the office and Mr. Lehmen got in touch with Mr. Keller and from the account of the manner in which he received the good news, Briggs' "Ain't it a Grand and Glorious Feeling" wasn't in it.

There is a sequel to this story and with it a moral and a prediction. Some few months since I met this young man at the Peabody Conservatory of Music where the students were presenting "Cavalleria Rusticana" and was delighted to know that he was interested in and liked good music. As soon as I learned that he was the one who found the wallet I was equally delighted, because I have a theory that a man who has the love of good music in his soul is an honest man. It has proved itself in several instances to my knowledge and I am thus a sincere believer in the refining and elevating influence of good music. They are good people to tie to and can be implicitly trusted—and will never beat their wives.

We had some very busy days during June when the semi-annual change of time on the System was made effective on June 13. When the gentlemen from the various divisions make their appearance in our midst they are about as welcome as a mother-in-law when she announces that

she is going to remain for two weeks and help disturb the usual calm of the family household. After they are here awhile we begin to warm up to them and by the time they are ready to leave we are sorry to see them go. The first three or four days after the time-tables are issued are the hardest to bear, for it is then that the "snake hunters" and the "bull chasers" get in their work. We have been very fortunate in not having any serious "slip-ups" for a number of years and so we hereby, on behalf of all the brothers and sisters concerned, proceed to "knock on wood."

Well, I've been bawled out orally many times before in my young life, but this is the first time that I ever received a written one, and I was just tickled over it, and couldn't resist the opportunity of letting all hands in on it. The whole letter was "perfectly lovely," but I am only going to let you read the high spots. Here they are:

"If you don't stop bawling me out in the MAGAZINE I'll use my influence to get your cerebrum busted and likewise your cerebellum and medulla oblongata." (Wow!)

"I heard you sing 'Ha! Ha!' at that Glee Club concert and I know you have a musical ear. But beware, I am some pumpkins on the mandolin." (I can make more noise than you can. I play the trombone in the Relay Cornet Band. 'Ha! Ha!' again.)

"P. S.—Don't think I'm through with you; if you get to making any further remarks about me, you can get yourself ready to get your left eye so nigh busted that you won't recognize yourself thereafter nor hereafter." (Choose your weapons—I'll take cherry pie for mine.)

As we were leaving the shop one evening recently we passed a mother and her young hopeful on Poppleton Street. The weather was very warm and the little one evidently had a sudden inspiration that an ice cream cone would go very nicely and immediately started to cry as if its little heart would break. The mother turned on her sharply and in a loud voice exclaimed: "Shet up! Every time I look at you, you got that poor man's organ o' yours a-going. Shet your trap!"

Of our two fellow employees, Leonard Heron, who has been absent for a couple of months taking the "back to Nature" treatment, and James P. Bortell, who has been away for more than a year, and who is at present confined to St. Francis Hospital, New York, we sincerely trust that we may soon be able to report their entire restoration to good health and have them back with us once again. Cheerio, boys!

Also glad to welcome back again our little hustler, Minnie Clifford of the press room, after a siege of sickness.

If you would obtain prompt recognition from our Mr. Lehmen, all that is necessary now is to say: "Hello, Grandpop."

Relief Department

Correspondent, H. IRVING MARTIN

Our two absentees, Miss Lillian C. Gerhold and Reuben L. Gray, are reported as improving in health; we shall be glad to see them back at their desks.

The father of Samuel L. Connor died after an illness of several months. Words seem stilted and unexpressive, but we know that "Sam" feels that our hearts are with him.

Recent changes in the Savings Feature have resulted in the promotion of John L. Brooks to the mortgage desk and Walter W. Lannan to the new correspondence

desk. All of us are "rooting" for these boys on their new work, and now watch them make good.

Since the breaking of the drouth, all of the Relief Department "farmers" are wearing smiles. Sundry knuckles, which were shy of skin, seem to be healing by the aid of iodine, and their owners feel that their wounds will be more than earned in the crops of roses, sweet peas, strawberries, tomatoes, etc., now poking their heads above ground. Some have planted for beauty, others to please the stomach; but all look happy and satisfied. Your scribe believes that when it comes to intensive farming, our departmental agriculturists can keep ahead of the experts of Europe.

Invitations are being passed along to "Come out and sit on my front steps when my garden begins to bloom." Moles, weasels, rabbits, ground squirrels, chickens and other predatory game fond of young vegetables are invited to emigrate to other states.

Telegraph Department

Correspondent, DELLA M. HAIN

I wanted to have a sketch of Mr. Spurrier, popularly known as "Uncle John," hurrying down the fire escape about 6.30 in the morning. He had to hurry to get out, as what the fire didn't damage the water did, and I understand that he was all that was saved.

Miss Audrey Jones is cited as one of those lucky girls. She even has a limousine to go home from work in.

Norman Ardilius Murphy again steps into the lime-light. He is the proud owner of a new wrist watch, and he zealously watches the time since that day in June when he had the misfortune to miss a train to Hancock because of a clock that was ten minutes behind time. Besides missing his train someone in Hancock missed him.

Raymond Dawson took his vacation the later part of May instead of in June, as was planned. June weddings are nice, but perhaps Cupid rushed things a little in view of the fact that marriage licenses went skyward on June 1.

Material Man Murphy also reports an additional lineman in Foreman Yost's camp. The stork knew that the camp needed men and left a seven-pounder at Lineman Youngblood's house. Congratulations!

Did you ever laugh until you cried? Well, that is exactly what Margaret Nortrup did on her birthday; anyhow, she says she likes surprises.

THINK before using the 'phone and always CALL BY NUMBER.

Cupid's arrow has even hit the Manager of our Telephone Exchange, and the best wishes of all the department are heartily given, though it is with many regrets that Miss Binau has left us.

Transportation Department

Correspondent, J. B. EGERTON

We regret to report this month the departure of one whose busy ways and smiling countenance has added cheer to our office for many a year. We allude to D. M. Fisher, formerly of the Fast Freight Bureau, who was unable to resist the flattering call of the Bell Concrete Construction Company, notwithstanding that its acceptance meant the severance of a long and varied service with the Baltimore and Ohio. The experience of thirteen years of railroading

will undoubtedly serve him well and make him valuable to his new employers. We wish Mr. Fisher every success and happiness in his new sphere of activity and usefulness.

We take pleasure in reporting the appointment of Miss Sarah Bercowitz, of the Passenger Bureau, as personal stenographer to Terminal Trainmaster C. A. Mewshaw. We are also glad to announce the promotion of Miss Esther Daley, assistant file clerk, to the L. C. L. Desk, and the advancement of smiling "Gus" Schweizer to fill the vacancy thus made. (Between you and me, Mr. Editor, this "Gus" was, I believe, the only regret "Aunt Mary" had in leaving the Transportation Department to take up her duties as your associate, and you may tell her if you like that "Gus" is growing handsomer every day.)

We take pleasure in introducing to your many readers, Miss Gay Page DuBois, age one year and six months, the daughter of B. M. DuBois, Supervisor of Passenger

Miss Gay Page DuBois and her Daddy

Transportation. Miss Gay, as the accompanying photo will attest, is not at all backward for her age, and is the apple of her father's eye.

We also take pleasure in announcing the appointment of the following new stenographers: Miss Lillian Foster, Coal Car Distributor's Desk, Misses Isabella Bryan and Ora Mars, Passenger Desk, and Misses Margaret Hettrich, Katherine Louise Kepler and Rhoda Elizabeth Mulcahy, Embargo Department, and hope they will be pleased with their new surroundings and find the work of the Transportation Department both agreeable and profitable.

If the ship started to sink, would the Maitland (mate land) D'Bois (de boys) safely? No, but "Phil" Wood.

Wonder who fashioned that latest style dress from Paris.

It is rumored that George Loeblein has entered the International Motorcycle contests to be held at the Indianapolis Coliseum shortly. Good luck, George, old boy! Hope you finish in the running. Better practice up with Mansfield awhile to keep in trim.

"Uncle Johnny" Joynes has deserted the night force of this department and has taken up his new duties with the Embargo Bureau. On the first day that he entered his new abode, he was greeted by T. A. McCann in the following familiar words:

"What's your name?" To which "Uncle Johnny" answered, "Mister Ed." "That can't be true, there is some extenuous error in them statements; 'Mister Ed.' is away!" P. S.—Mr. Mac uses Funk & Wagnalls—as a clothes press.

Valuation Department

Correspondent, G. B. SAUMENIG, *Accountant*

Baltimore Office

The new faces in the Valuation Department make it necessary to organize an Introduction Department in order that the rest of us will know all employees of our Baltimore office. At this time we take pleasure in introducing the following: Miss G. M. Waugh, Mrs. P. M. Carter, Messrs. J. E. McCann, W. E. Stevens, R. M. White, M. R. Hicks, J. M. De-Shields, R. K. Compton, Jr., J. H. Gaule, T. P. Johnston, E. H. Baker, B. J. Myren, Bernard Evander, W. J. Keller, W. R. Edwards, Jr., W. R. Nugent, W. T. Dye and J. L. Tobin.

One new arrival in the office in the person of Gilbert Murphy needs special mention. You all know him. He is called "Speed King," "Lightning," the "King of Ambition," and others. If he keeps up, it is suggested that the office rise and chant the Funeral March as mail is delivered.

Our congenial friend Baggs won favor with the fair sex by his generous distribution of flowers.

It is indeed wonderful the rapid progress that is being made in farming by those of our office who reside at Irvington, Ellicott City, Woodlawn, Overlea, Halethorpe, Relay and Havre de Grace. The stories that they tell are hard to believe. It might be well to submit samples to the correspondent.

Ask "Bill" Brewer about the charms of Locust Point and Curtis Bay. Also have him tell you about the dog.

H. C. L. has also advanced the cost for shaves. If any of our boys have trouble with their Gillette's, Durham-Duplex or Gem razors, see the correspondent, who will gladly secure necessary funds. Melvin will now take the stand.

Horses may come and horses may go, but Price goes on forever. What is the idea of the hobby-horse?

Cupid has not visited the office lately and there are no prospects of any June brides.

Poet Alvey just returned from Holloway, Ohio, where he has been acting as switchman and brakeman. is marvellous that our Hagerstown boy can do almost anything.

Pryor lately celebrated his second anniversary in the matrimonial field. He is a regular married man now, but he still remembers her with Martha Washington's.

H. C. Dews, accountant, Cost Engineer's office, paid a short visit to Chicago. He reports that the Convention City was buzzing with excitement. He was rather puzzled about sleeping accommodations while en route and it was only after he returned to the office that he found out that the small hammock in each berth was not intended for sleeping purposes. No wonder he looked worn out when Monday morning came.

Assistant File Clerk Terrier, who has been home sick for several weeks, is back at his work and we hope that his health is O. K.

Cartoonist Pierce submits for your approval another one of his celebrated cartoons. This boy certainly has the right idea.

Wheeling Office

You all can readily appreciate the great joy which our friend A. H. Hendrickson, draftsman, and his family are experiencing because of his recent transfer back to Wheeling office. Shortly after getting married Arthur was transferred to the Equipment Pilot's force, and as his work necessitated his being on the road most of the time, he could not take his wife with him. Since he left, he has become the proud father of a baby boy. The Wheeling office is very glad to have him back.

F. X. Peterson, transitman in the Wheeling office, was transferred to Baltimore June 1. He was married in the early part of May, and while his transfer will mean a promotion, he regrets very much the fact that he spent three weeks of hard labor and about two weeks pay in advertising in order to secure an apartment so that he might bring his bride to Wheeling. He finally found a very suitable home but was notified when returning from his honeymoon that he was to be sent to Baltimore. We all regret his leaving.

You have all heard of the recent "Overall Club" movement. The employees of the Wheeling Passenger Station decided they would help carry out the good work. They secured the signatures of practically all of the employees in the building, signifying their intention to knock out old H. C. L. The day set for donning the denims was May 1. However, when the morning of the first came it seemed as though everyone got cold feet until our friend V. J. Armbruster, rodman, better known as "Shorty," blew in, wearing a brand new \$6.00 suit of overalls. Much to his surprise he noticed that he was the only blue coat in the building and consequently decided that he would shed his uniform at once. This he did, and carried them back home. While the agreement called for a fine of not less than \$1.00 or more than \$5.00 for any one not living up to it, we are at a loss to state definitely the reason for his loyalty. Anyway he deserves due credit for not being a slacker.

A number of employees from the Wheeling office are assisting the Transportation Department in moving cars over the "Hump" at Holloway, Ohio. Barry also volunteered. All those desiring light on previous sentence, address any member of the Wheeling organization.

Chief of Party Hassler, the flower girl of the Wheeling force, has been transferred to the Cleveland office. When last seen at Sterling, Ohio, he was rejoicing that the season was three weeks late in the Cleveland territory, thus prolonging his favorite out-door sport of picking flowers.

The Wheeling organization has lost one of its best friends. It was with great surprise and regret that the office learned of the death of R. W. Davenport, Chief of Party. He was better known as "Davey" and everyone that knew him treasured his friendship. He had been confined in the Ohio Valley General Hospital, at Wheeling, W. Va., for some time because of typhoid fever. Words fail to express our feelings, but our sympathy goes out to his family in their sorrow.

Auditor Coal and Coke Receipts

Correspondent, JOHN LIMPET

By the time this article appears in print, we will probably be safely stowed away, bag and baggage, on the second floor of the Sutton Building, to be known as the "Annex." Quite a come down from the 20th, the highest in the city, to the 2d floor. While we regret exceedingly to be compelled to give up our fine space in the Lexington Street Building, which we have occupied since September 1, 1917, and which office, we dare say, for location, ventilation, light and heat, the year around, cannot be surpassed in town, we expect in the course of a short while to be as much attached to the new location as we were to the old one, and will welcome the fact that we are once more surrounded by fellow workers and that we are again connected with the Company, physically as well as by other ties. The return of the prodigal, as it were.

A fresh air society has been formed by the clerks of this office. They have pledged themselves to give a certain amount each month of June, July, August and September, the total monthly being \$27.00, which is to be turned over to the Fresh Air Society of Baltimore to be used by them for sending the sick and poor children to the country, during the heated term. This is a mighty fine spirit, and is worthy of being emulated by other departments.

While the wedding bells did not ring until June 23, the 15th saw the actual passing from our midst of poor "Til." "Til" made the remark that her work would cease on

the 15th, but we contend that her work will just begin, and those in a position to know will bear me out in the statement. However, we wish the Tuckers much wedded happiness.

The wedding announcement of George F. Schuster and Miss Marie Catherine King, stating that the ceremony had been performed in Philadelphia, on February 28, came as a distinct surprise to the folks of this office. Mr. Schuster is one of our boys who saw active service in France, and if there is anything in the old saying, "better late than never," we all wish the newly-weds lots of happiness. A beautiful mahogany eight day clock was presented by the employees of the office. This clock has a set of chimes which may keep George at home every night just to hear them ring.

When we get down to the Annex (Sutton Building), it is to be hoped that certain of the young ladies of this office will not be placed at or near the windows, thus preventing the free and easy circulation of the air and the obstruction of the light.

Ekas, Burns, Ritterbusch, Link (Edward), and several other "stalwarts" of the office, not being able to take part in a regular baseball game because of its being too strenuous, will possibly issue a "defi" to the ladies, challenging them to a ball and jack game.

Anyone interested in helping reduce the high cost of living cannot afford to overlook the wonderful opportunities offered by the Baltimore Cooperative Store. If you have not heard about it, make inquiry.

Miss Esther Robinson, who underwent an operation for appendicitis, is now back on the job. We hope she left all her troubles in the hospital and will enjoy good health in the future.

Auditor Disbursements

Correspondent, JOHN C. SVEC

E. Frank Thomas, head clerk Liberty Bond Department, Auditor of Disbursements office, and better known as "Frank" all over the System, is broadly smiling after his trip to Chicago, where he went as delegate to the Relief Department Convention, held there on June 24 and 25. In fact, "Frank" is always smiling—his motto being "Smile and the world smiles with you."

E. Frank Thomas

ALL ABOARD FOR BABYLAND!

Their Daddies work in the office of the Auditor of Merchandise Receipts

1—W. E. Rittenhouse, Jr., son of Auditor Rittenhouse. 2—Lucy and Helen Starklauf, daughters of P. H. Starklauf. 3—John and Savina Strohecker, children of John Strohecker. 4—Dorothy Elizabeth Hornick, daughter of J. H. Hornick. 5—James E. Varina, son of J. E. Varina. 6—Joseph Gilmor and Dolores Elizabeth, children of Gilmor R. Rowley. 7—Charlotte Carolina Lollman, daughter of Frank F. Lollman. 8—Robert, Elizabeth and Virginia, children of R. C. Gray. 9—Warren H. Eckels, son of Louis H. Eckels. 10—William H. Eckmeyer, son of W. C. Eckmeyer. 11—Mahel Starklauf, daughter of P. H. Starklauf. 12—Winifred A. Varina, daughter of J. E. Varina. 13—Norma L. Eckels, daughter of Louis H. Eckels.

He has been with the Company for 28 years, starting as clerk in this office on July 1, 1892. During this time he has made many friends, who helped put him over the top in the election. We have a letter from him as follows:

EDITOR EMPLOYEES MAGAZINE:

Sir—Desiring to express my appreciation to the many friends who cast their ballots in my favor, electing me as a Delegate to the Relief Department convention, and knowing no better way to reach them all than through the columns of our MAGAZINE, may I ask you to publish this communication in order that those who voted for me may know that I am grateful for their support.

Yours very truly,

(Signed) E. FRANK THOMAS.

Auditor Merchandise Receipts

Correspondent, P. H. STARKLAUF

The philosophical noon-time lectures under the auspices of the Y. M. C. A. have come to a close for the season. The Inter-line Division has had an exceptionally good speaker in the Rev. W. C. Bayless of the Northminster Presbyterian Church, who has won the admiration of his hearers, who presented the minister with a silver-handled umbrella as a remembrance. The presentation speech was made by Assistant Chief Clerk H. W. Hohman, and an appropriate acknowledgment was made by Mr. Bayless.

Now that we're vacationing, week-ending, etc., and the young ladies of the Local Settlement are spreading "Joy," etc., at Willow Grove, isn't it really delightful to be a railroad employee and to be able to enjoy all the sights of nature, etc., etc.

'Tis said that February 14 is Valentine's Day, but a certain Mary of our acquaintance evidently isn't going to wait that long for her Valentine. Just think! He came all the way from the Pacific Coast to tell her "Love's old, old, yet ever new, sweet story!" No, we're not of the sort to be surprised.

Charlotte and George went dandelioning, properly chaperoned, recently in the neighborhood of Ellicott's Mills. Charlotte evidently knows a man's strong point, and had eight sandwiches and all the other eats for George. It seems as though the appetite route counts for something after all.

Our sympathies go out to one of our senior clerks, Frank Tinsley, on the death of his wife. This dear woman was the mother of three sons who saw active service and were wounded in France.

Our Wedding Bells

Miss Medora Kuehne and Edward Kaltenbach were married at St. Mary Star of the Sea Church on April 14. The ceremony was performed by the Rev. Francis Ryan.

Robert A. Fleming and Miss Sarah M. Reed, at St. Paul's P. E. Chapel on May 19, by the Rev. F. H. Staples. George L. Donoho acted as best man.

Auditor Miscellaneous Accounts

Correspondent, MARY E. PEARRELL

Our Auditor's Secretary, George H. Fromtling, has accepted a position with the Philadelphia Company at Pittsburgh, Pa. We have not heard from Mr. Fromtling since he left, but we presume he is still alive, and just a little too busy to write.

George Edmund Sweitzer, one of our young boys, is hunting for a nice girl to go into life-long partnership with. Mr. Sweitzer says she must be a live wire and at least 12 years his junior. George claims that he is 27 years old, but as far as we can learn he is 34. From his statement we think he wants to "adopt" someone. Well, George, this being Leap Year, surely you will have some applicants. Here's luck!

New York Terminals

Correspondent, SARAH ROLMES

One of the daily bulletin readers commented peevishly on the fact that she had been here nearly three years and only received \$102.00 per month. "Oh," re-

marked the veteran, "I WORKED thirty years for the Company before I got the sum that you get for just being here."

M. A. Boyan, Eastbound Department, finds that Piermont, N. Y., his present address, is no longer desirable. He has expressed his intention of moving out to Long Island, somewhere in the "Millionaires' Row," as Forest Hills, the Kew Gardens or Pandone. "And that ain't all." He is also thinking of getting a new automobile; hasn't decided whether it'll be a Rolles-Royce or a Packard.

There is a subscription going 'round to purchase an alarm clock for a certain stenographer (located in a corner) who can't seem to get in on time. Contributions thankfully received. When it is presented to her, she will not have any cause for saying "I can't understand why I'm late."

Pier 22, North River

Hattie Malick is flashing another sparkler. This time it's on the right hand. Let's in on it, Hattie. How does Friend Husband-To-Be do it?

Congratulations, Irene! Dame Gossip has whispered to us that you are going to take the big leap in the matrimonial game. My! You certainly surprised us, as you never intimated that it was coming off so soon. Here's wishing you happiness and lots of luck.

Did you ever see "Jimmy" Lynch wearing his sleuth hat? You haven't! Let me tell you, you've missed something. Its color is pepper and salt, made of a woolen mixture, of a style something like the fedoras, and the size—oh, boy, that's the thing, the size! I should judge it might fit a boy of ten, but when put on "Jimmy's" worthy dome (not a small one by any means) it's enough to keep one in smiles for the rest of the day.

Carl Reiman, who has been with us for about 12 years, has resigned to join The American and Foreign Banking Corporation. We are sorry that he has left us, as he was always cheerful, friendly and ever ready to lend a hand. He takes with him our sincerest wishes for success in his new work.

"Ain't it a grand and glorious feeling" when your best girl presents flowers to you every morning to brighten up your desk? How about it, Francis?

The Eastbound Billing Department now runs about fifty-fifty in the number of male and female clerks. Here's your chance, A. H. Bayer, to form a matrimonial agency as a side line, and with the money realized from dues, offer a prize to the first couple to go to the altar.

With H. S. M. it seems to be a case of "the more the merrier," as far as sweethearts are concerned. Not contented with one, as evidenced by the third finger of her left hand, in the mornings we meet her strolling arm-in-arm with "Nat" Fowler and E. J. Levey.

Staten Island Lines

Correspondent, G. F. GOOLIC

St. George

On Monday evening, May 17, a regular meeting of the Staten Island Railroad Club was held at Livingston, S. I. The following officers were elected for year 1920-1921:

J. S. Fabregas, president; W. W. Jarvis, vice-president; J. S. Sharp, treasurer; H. C. Barry, secretary. The house committee was not appointed at this meeting.

Miss M. Berry, ticket agent at St. George, asked to be transferred to South Beach. St. George is not lively enough for her. Madeline, why South Beach? Isn't there

any other place on the line besides South Beach? How about Tottenville?

Frank Martin has been transferred from St. George Yard office to Clerk in Lighterage Department.

Miss Helen Decker has been employed as stenographer in Superintendent's office.

Miss May Ashley has been employed as Clerk in Car Record office at Pier 6, St. George, vice Miss M. Gaynor, resigned. May has a few friends working with her.

Thomas M. Murray, inspector Maintenance of Way Department, has arrived from his vacation, spent in Denver, Colo. This is the first time "Tom" ever took a ride outside of New York and Redbank.

J. V. Ryan, claim agent in Law Department, is back again on the job after enjoying a very pleasant vacation in Indianapolis, Indiana.

Auditor's Department

Correspondent, ANNA M. CODY

295 Broadway has the honor of announcing the engagement of Miss Lydia L. Dryden to Christian A. Salvesson, both employees of the S. I. R. T. We all extend our best wishes.

May O'Neill, who has just arrived from Ireland, accepted a position as secretary to A. Hibby in the Claim Department.

A party of old maids consisting of Lily Connery, Bessie Graham, Virgie Austin and Mabie Grant spent the holidays in Boston looking for a husband. They were sadly disappointed.

Edith P. Wilson and Anna M. Cody spent the holidays visiting the historical places of Boston. (Anna, what is the matter with Rochester?)

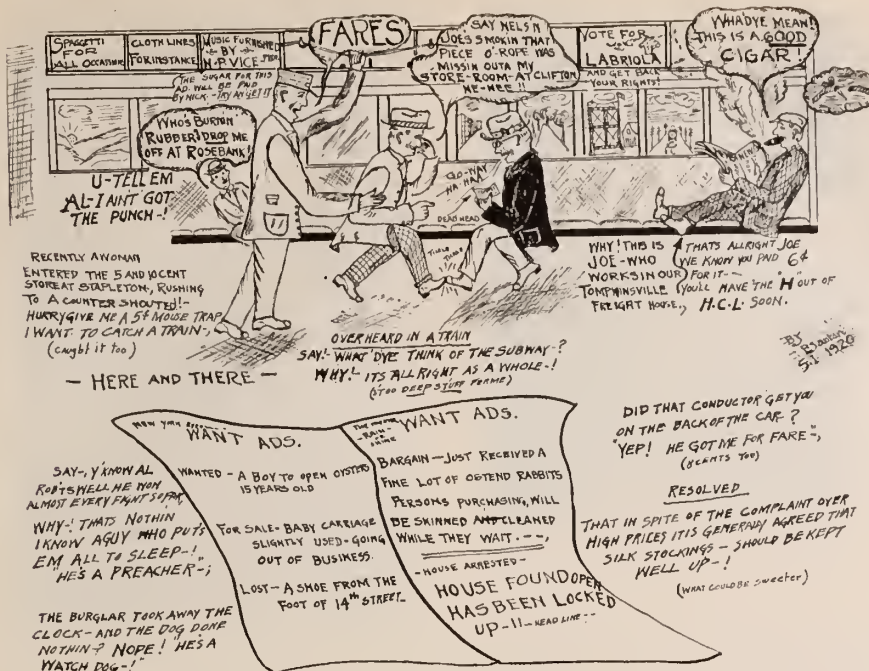

We all extend our sympathy to John Holland, who planned a trip to Buffalo.

WE ARE THE BABIES OF PIER 22

Left to right: (top row) May Mylet, nine-year-old daughter of Thomas Mylet, chief W. B. rate clerk; James Ryan, six-year-old son of James Ryan, Sr.; John, Margaret and May, children of John Whalen, clerk, Lighterage Bureau; Vincent Cheney, Jr., son of V. R. Cheney, reconsignment clerk; Jean O'Reilly, daughter of J. P. O'Reilly, lighterage agent.

(Bottom row): Dorothy Garlichs, six-year-old daughter of F. W. Garlichs, accountant; Edna Ledwirth, daughter of Float Foreman Daniel Ledwirth; Julia Gorman, six-year-old daughter of T. R. Gorman, agent; Anna Nelson, five-year-old daughter of F. W. Nelson, terminal cashier; Vivian, Paul and Robert, youngsters of J. W. Olson, chief accountant.

Santoro Cartoons His Pals

His wife planned differently for him. He had to stay home and care for the kiddies. However, "Jack" had a wonderful trip through the parks of Jersey City.

Three act comedy to be given by the members of office force at 295 Broadway: "Above the Line" or "An Explanation."

Allow me to introduce Mr. Roche, our expert usher. At night he ushers people to seats in the movies and in the daytime he ushers waybills to and from the closet.

We have the extreme pleasure of the company of J. Hasslebrook (known as Archibold Perceival), who has joined our bookkeeping department.

While "Babe" Ruth is batting home runs, Warren Corson is batting out copies of waybills in the Auditor's office.

Mary Loughlin captured first prize as Mary Pickford at her club's entertainment last week. Three cheers for Mary!

While Miss Edith Wilson was in Boston she learned that beans grew and were not manufactured, as she had thought; poor child wasted half her stay there in looking for the factory where they were made.

Baltimore Terminal Division

Correspondent, C. O. HEALY, Secretary to Superintendent

Barrett Weis, formerly stenographer for the Division Engineer, has accepted a position with the Superintendent.

Our Chief Clerk, J. W. Sparks, who has been riding the Washington Branch trains to and from Elkrige for several years, will leave his suburban home very shortly and occupy an apartment overlooking Druid Hill Park. We are sure he will enjoy his new home in the city.

Speaking of moving, we must not fail to mention the fact that "Fred" Groom has purchased a nice new home in Govans, where he moved last week. We admit Govans is a nice little place to live, but we must not lose sight of the fact that baby carriages run easier on North Wolfe Street.

From experience regarding a recent trip around the Terminal with Secretary Carter in his "Lizzie," I would say that he could

easily qualify as a Fayette Street jitney bus driver. Railroad tracks and cinder piles proved no barrier.

Attention! Any young man contemplating matrimony, and who feels he will be in need of such information, can get some first class pointers on how to do a week's marketing in 20 minutes from our friend "Abe" Lincoln. Might add that he has no small appetite, either.

ACT I. On Monday morning, May 14, File Clerk Higgs was noticed hobbling into the office very slowly. Upon closer observation it was found that he was wearing a bedroom slipper. His description of how he was spiked the previous day in a ball game was very interesting.

ACT II. On Monday morning, May 28, a note reached the office from File Clerk Higgs asking for the loan of a pair of crutches, adding that he had sprained his ankle and would not be able to get to work

for a week. He did not say that he had been playing ball, but that would be our first guess. We feel sorry for our File Clerk, but it surely does take some people a long time to realize their childhood days are o'er.

Acting Assistant Agent Burns at Canton is some ball player. Considering his performance the other day I think we will have to sign him up for the division team.

The dumping of 7,222 tons of coal into the steamship "Malden" in one hour and fifty-eight minutes at the Curtis Bay Coal Pier on May 20, as was noted in the June MAGAZINE, was not the only record made during May by the Baltimore Terminal Division. On May 27, 1,363 cars were released by the Baltimore Terminal Division. We are out for records.

Misses F. Louise Neilson and Mary S. Dale, of the Accounting Department, and Mrs. Florence Tisdale, of the Cashier's Department, recently made an enjoyable weekend trip to Niagara Falls.

Miss Emily E. Brown, Accounting Department, and Charles Davidson, Billing Department, will be married some time in the early part of July.

Locust Point Car Shops

Correspondent, J. V. HAUCK

Locust Point has organized a baseball team, with M. Hoffmann as manager. Look out, all of you baseball fellows. Recently Locust Point played Curtis Bay with F. Ristan in the box. He pitched two innings, in which the Bay scored six runs and won the game. The exertion caused Ristan to lose two days. Don't lose your nerve, boys, we are going to show them that we're still on the map.

Our genial Car Foreman, E. B. Cox, who has been with the Company for quite a number of years, has again made a new record for himself by turning out one of the finest camp trains on the System. He, with his co-workers, who had a share in getting up this train, are to be congratulated.

F. Umfried, who is going to Buffalo, is speaking very seriously of extending his trip to Toronto in order to get something wet. It is to be hoped that he will remember his friends at this station.

H. Freeman, formerly bandmaster at Mt. Clare, has left Baltimore to take a trip to the other coast. We wonder what "Heinie" is doing? Is he trying to get new recruits for a band for Locust Point? Go to it, "Heinie," we need more noise.

R. J. Doll, steel car foreman, got off for two days to repair his fliyer. He must expect to take a long trip; probably to Highlandtown.

Mt. Clare Shops

Correspondent, MISS MOLLIE ALBRECHT
Secretary to Superintendent

The accompanying picture shows Robert Edward Kapinos, the adorable little son of our G. H. Kapinos, general foreman. This was taken on the Annapolis Bridge, so we believe that Robert is starting rather early on his walk to the Naval Academy. If Robert's daddy will bring him to Mt. Clare, we have several young ladies who have volunteered to teach him how to salute, and will be very glad to give him the first lessons in military training.

Robert Edward Kapinos

Miss Offutt, quite a frequent visitor to our office, and my especial friend, came in one Monday with the most woe-begone look on her usually smiling Monday morning face. We were very much worried, because Sunday night usually brings such joys that Thelma's face holds "the smile that won't wear off" until Tuesday morning. After some moaning, we finally got the following explanation:

Eight young ladies (including Miss Offutt) decided to hike to Loch Raven on Sunday morning, May 22. When they were half way there they suddenly became painfully aware of their feet, and if it hadn't been for the arrival of a young Lochinvar from out of the West, with a motorcycle, they would probably still be half way to Loch Raven. But our eight young damsels hailed him to no avail. Lochinvar refused to be beguiled by sweet smiles and endearing names into stopping. He simply smiled sweetly in return, and went sailing by.

Nevertheless, the old proverb "He who laughs last, laughs best," came true. They were nearly up the hill when what should they see but the dear young thing standing in the middle of the road, trying to fix his motorcycle. (I honestly believe there was nothing at all the matter with his machine, but something was the matter with his newly awakened conscience.) He was very gracious this time, and nine heads must have been better than one, for we are told that the cycle was fixed in short order, and he consented to take them up

The Heavy Working Local Crew of the Metropolitan Branch way train, W. F. Hendricks, foreground; H. J. Miller, E. M. Cavan, H. S. Burgess

the hill. (I believe several of the young ladies have lived to regret this step.) If I only could have gotten a picture of all eight of them piled on his twentieth century steed! Miss Offutt and another young lady were allowed to have the back of the cycle (without any seat, cushion, or pillow!), and the other six were piled on the side box of the car. The road could have easily been called "The Rocky Road to Dublin." The cries of the two very-much-bumped young ladies were in vain, for the cruel wind carried their cries down the hill instead of to the driver. Miss Offutt says they only came down to the ground to touch such things as large stones and tree stumps.

Can you blame our young lady for the woe-begone expression? Kindly accept our sympathy, Miss Offutt—and our advice: Use Sloan's Liniment.

Baltimore Division

Correspondent, W. H. TARR, Superintendent's Office, Camden Station

Assistant Correspondents

H. A. DIETZ Shop Clerk, East Side Shops, Philadelphia
C. W. HAMILTON Clerk, Freight Office, Wilmington (Joint Philadelphia & Reading and Baltimore & Ohio)
V. J. HUEGLE Cash Clerk, Pier 22, Philadelphia
E. A. DUFFY Clerk to Freight Trainmaster, Camden Station, Baltimore
N. E. REESE Passenger Conductor, West End, Camden Station
H. H. RAYMOND Conductor East Side Yard, Philadelphia

Josephine Elizabeth, Daughter of Fireman R. M. Stallings, Brunswick, Md.

MISS ETHEL E. STICKLEY Clerk, Transfer Shed, Brunswick
R. E. SIGAFOOSE Shop Clerk, Brunswick Shops, Brunswick
W. S. WILDE Chief Clerk to Terminal Trainmaster, Philadelphia
E. H. ZIEGLER Special Representative, Freight Office, Hagerstown
S. R. BOSLEY Clerk to Road Foreman of Engines, Riverside

The accompanying picture is of the Metropolitan Way Train crew, entitled, "Nothing too heavy for us to move." Conductor W. F. Hendricks is in center, with, from left to right, H. J. Miller, E. M. Cavan and H. S. Burgess.

Operator C. T. Rogan recently went to Texas and returned with a bride who had captured him while he was serving at the Kelly Aviation Field during the war.

The Shriners' delegation from Baltimore to the convention at Portland, Oregon, left Camden Station over the Baltimore and Ohio. We are told that one of our office force was seen on the platform about the time of its departure. We will have to ask "Eddie," whoever he may be.

R. I. Peltz, Maintenance of Way timekeeper, has left the service of the Company to accept a position as Assistant Cashier with the Baltimore Wholesale Grocery Company. We wish him success.

F. Hartman has been appointed Maintenance of Way Timekeeper, vice R. I. Peltz.

Sergeant Robert Bruce Mouat, of the 106th Engineers

J. R. Mulligan, who has been studying at the Catholic University at Washington, has returned to the service of the Company at East Side.

Conductor H. N. Constantine has improved somewhat in health and is spending the summer on the Magothy River.

We learn that, by the time this paragraph appears in these columns, Miss P. V. Sauerhammer of our office force will have become Mrs. H. S. Hinkle.

The Southern Railroad News Bulletin for June, 1920, had this to say about the efficient work of the man who handles our engines between Harrisonburg and Lexington, Va.:

"Here is a record which speaks well for the efficiency of Southern Railway employees. General Foreman Morris Spiro, of Harrisonburg, Va., reports that Southern Railway trains on the Harrisonburg-Manassas line were handled during the period from July 24, 1918, to March 1, 1920, without an engine failure, freeze-up, or

Frances May Cannon, Daughter of Passenger Engineer W. T. Cannon, on Shenandoah Division

breakdown, without one minute's terminal delay for an engine, and without a single personal injury."

Riverside

The accompanying photograph is of Sergeant Robert Bruce Mouat, of the 106th Engineers. "Bob" was employed at Riverside until called to join his company, the First Florida Regiment, which was later merged into the 106th Engineers. He was one of the youngest of the "non-coms" in the service. He was wounded in France and invalided home, and received his final discharge at Camp Meade in May, 1919, when he returned to his work at Riverside after having served Uncle Sam for 25 months.

Brunswick

At our monthly meeting of check clerks at the Transfer Shed on May 3, many subjects of interest were discussed. These meetings are also attended by the foremen from the platform.

Messenger Rice has provided himself with a motorcycle and side car. We are told that he has become quite popular.

We are pleased to learn of the recovery of the mother of Miss Fisher, who has been ill at her home at Keedysville.

Miss A. Stickley, mail clerk, spent June 6 at her home in Virginia.

On account of the heavy run of freight, the Transfer Shed has been working ten hours daily. Hard on the "Movie Fans."

Miss C. Jones, who obtained a leave of absence last fall in order to resume her studies at Hood College, Frederick, will be with us again this Summer.

Washington, D. C., Freight Station

Correspondent, W. L. WHITING, Chief Clerk

At this time of the year the fair City of Washington is perhaps at its prettiest. The wide avenues and open streets are lined with flowers and foliage of the brightest hues and one can imagine himself in a conservatory because of the fragrance of roses, peonies and other blossoms that greet us. It is no wonder that the trains from all sections come in loaded with sight-

seers. Our Freight office also feels the effects of the beauty from outside, as there is scarcely a desk that does not have some floral decoration on it, brought in by those who come from Brentwood, Mount Rainier, and other neighboring places.

In spite of all the embargoes that are in force all around us, no embargo has been placed upon the activities of "Dan" Cupid—at least not in the neighborhood of our station.

On May 29 our Trace Clerk, Miss Doris J. Beall, left us to become the happy bride of George Duvall, of Laurel, Md. The surprising event took place in Baltimore. The newlyweds will take up their permanent abode in Laurel. The bridegroom is in the service of Uncle Sam, holding a good position at the United States Navy Yard in this city.

We congratulate our Collection Clerk, Steward F. Mehlfelt, upon the visit of the stork to his home. On May 14, a little baby girl arrived to bless the happy parents. The surprise in the affair consisted in the fact that the good folks in the office were unaware that Steward was married. This event took place, it appears, about a year ago, and the secret was most certainly well kept. Well, it had to come out sooner or later, and our best wishes for a long life of happiness are extended to the happy parents and to little Miss Dorothy Bender.

An arrangement has been made by which our office force is enabled to enjoy the benefits of "Saturday afternoon" off. One half the force are away one week, and the

other half the next week, those staying taking care of the work of the absentees. This is a plan that meets with the approval of all concerned and it is much appreciated.

Business is still booming in the District of Columbia, and although it is the season of the year that is usually quieter than at other times, yet there is plenty of work to keep all hands busy, and indications point to a busy Fall and Winter.

Cumberland Division

Correspondents

E. C. DRAWBAUGH, Division Operator
R. G. ALLAMONG, Secretary, Y. M. C. A.
P. M. PENNINGTON, Crossing Watchman
RUTH M. CHEUVRON, Office, Mechanical Engineer

We desire to call attention to a mistake made in the Cumberland Division notes for June. In the statement of the operation of the motor car by A. E. Whitlock the figures under the caption "Miles," should have read 7,500, instead of 5,700. The corrected statement is as follows:

TRIPS	MILES	EXPENSE	COST PER MILE
173	7,500	\$70.99	\$.0095

—EDITOR.

During the first five months of this year 317,199 cars were moved over the West End of the Cumberland Division.

The nearest approach to that record for the first five months of any year was made in 1916, when 311,715 cars were moved.

A Back Pay Comedy

J. G. Lester, Signal Supervisor

During the month of May, this year, on the East End of the Cumberland Division, 529,289,000 gross ton miles were made. This was a record, the best record previously made being 514,128,000 gross ton miles in October of last year.

In May of this year a total of 135,522 cars were moved, including 85,900 loads. The loaded car movement, while not breaking any records, is greater than that for any month of any year with the exception of October, 1919, when 87,051 loaded cars were handled.

Cumberland Yard for the month of May also surpassed all previous records by handling 85,465 cars.

On May 6, the Division Accountant's office at Cumberland closed its night school classes for this season, when over 50 employees and their friends were entertained in the office of the Queen City Building.

C. W. Shaffer
Division Accountant's Office, Cumberland

Through the kindness of the W. F. Frederick Piano Co., a victrola and many beautiful records were procured, adding much pleasure to the affair. The evening was concluded with a dainty lunch, served by the girls of the office.

The night school accounting class was organized by F. L. Sheakley, division accountant, on last September, for the purpose of educating the employees in railroad accounting, and also to promote good-fellowship among them. The school has been a success and the employees have decided to resume the class in the Fall.

It is with regret that we announce the death of Extra Operator A. M. Shewbridge, of Harper's Ferry, W. Va., on May 30. He had been ill for some weeks and later developed a fatal attack of typhoid fever.

J. Thomas Talbot, who has for the past year and a half been connected with the new Locomotive Erecting Shop at Cumberland as Outside Foreman under T. R. Stewart, left Cumberland on June 15 to become connected with the Ford-Macon and Johnson Co., Structural Engineers, 115 Broadway, New York, N. Y.

Mr. Talbot is well known to all the railroad men in this city and during his short stay has made a host of friends. He is also well known in musical circles, having been connected with several of the leading orchestras. At the present time he is playing the trombone with the Bygset Orchestra.

We are all sorry to see him go and wish him all the luck in the world in his new venture.

Master Mechanic's Office

Miss Grace Heron, work report checker in Master Mechanic's office, and Mr. Belmont Kerns, of this city, were married on May 27, by Rev. Dr. Moffatt. Mr. and Mrs. Kerns spent their honeymoon in the West. On their return they will reside on Williams Street.

E. W. Dawson, A. R. A. clerk, has left us to accept a position with the Postoffice Department.

On June 1 the Cumberland Baseball Team held a successful dance in Chaney's Hall, South Cumberland.

We clerks are glad to welcome T. E. Mewshaw to the fair and growing city of Cumberland. Mr. Mewshaw is Assistant Master Mechanic, Cumberland Roundhouse.

Accounting Department

R. M. Bernhard, Division Accountant's office, is confined to his home in Pulaski Street with illness. Best luck, "Barney."

Misses Gertrude Smith and Ora A. Bauer, Division Accountant's office, spent Decoration Day motoring to Chambersburg, Pa.

John Gornall, addressograph operator in the Division Accountant's office, with a number of friends, motored to Baltimore and Washington on Decoration Day.

Miss Mollie Bowden, Accounting Department, spent her vacation visiting her brother in Baltimore.

Miss Letha Ambrose visited her home in Berkeley Springs, Decoration Day, accompanied by Miss Blanche Clark, Master Mechanic's office.

The accompanying picture is of Chester W. Shaffer, Maintenance of Way accountant, in the office of F. L. Sheakley, Cumberland, Md. True to the facial expression in the picture, Mr. Schaffer believes in starting the day with a smile. We have it from him, it's 99 per cent. of the battle. Chester has seen 12 years of service with the Baltimore and Ohio, and a fond saying of his is that he hopes to see that many more. He hails from Keyser, W. Va., where he entered the

Charles H. Sizer
Correspondent, Stores Department, Cumberland

service as a messenger. By his ability and endeavor, he has climbed to his present position. Mr. Shaffer is the father of two beautiful little girls, and enjoys nothing better than spending a pleasant evening with his family.

Stores Department

A party of young ladies, composed of the Misses H. Love, M. Pendergast, M. Burns, M. Mouse, and L. Zihlman, recently spent several days in New York City.

R. R. Baird, timekeeper, has been promoted to Accountant, succeeding P. J. Hopkins.

Two little boys from the Storekeeper's office, named Vince and Warner, were found crying in the Pennsylvania Station, New York City, the other day. When asked what was the matter, they said that they were lost. They were taken in charge by a conductor, and brought safely home again. This should teach little boys a lesson, not to run away from home in search of adventures in a big city like New York.

The accompanying picture is Charles H. Sizer, our local correspondent. I wonder if it was his mother who pinned that rose on him? Miss Mouse was heard to make the remark that it must have been Margaret.

H. M. Whitford, Agent, Green Spring (left), W. F. Kessler, Switchman, Tie Plant. Kessler is Captain and Whitford Short Stop of the "Cross Tie-Gers."

It was with regret that we lost a good clerk. Miss Mary Pendergast was married on June 9, after two years' service in the Storekeeper's office. We wish her much happiness in married life.

Timber Preserving Plant

Correspondent, E. E. ALEXANDER

Two more of our employes, R. H. Corbin, truck foreman, and E. F. Bean, retortman, are buying homes at Green Spring through the Relief Department.

J. H. Sterns, tieman, has moved into the Company house formerly occupied by Mr. Corbin.

Our pipefitter, J. J. Foley, accompanied by Mrs. Foley, enjoyed a two weeks visit with relatives at Republic, Missouri. We have heard lots about the Ozarks since Foley got back, but he says he found no railroad equal to the Baltimore and Ohio.

Our baseball team, the "Cross-Tie-Gers," have livened things up a little and considerable interest is being manifested. Through the courtesy of Hon. W. W. Carder, we were able to secure a diamond and have had four games and one social to date, winning three games and the social by good scores. Games played to date: May 23, Paw Paw at Green Spring, double header, winning both, scores 15-1 and 10-3; May 29, Moorefield at Green Spring, losing to Moorefield 8-3; May 31, Green Spring at Paw Paw 12-11, in favor of Green Spring. The social and box supper held May 29 for the benefit of the team was a big success and we are now negotiating for some uniforms.

W. P. Wiltsee, assistant engineer, N. & W. Railroad, accompanied by Messrs. J. H. Giboney and H. C. Bell, visited the plant on May 21, after covering quite a number of plants through the country, and they rank our plant at the top.

A tennis court has been laid out on the school ground and we are advised that J. C. Alexander and E. S. Crawford have issued a challenge to all comers.

Dr. J. H. Mayer, medical examiner, examined and instructed our first class in their duties on May 26.

Our Supervisor and Yard Foreman, accompanied by J. C. Alexander, made a motor car trip to Petersburg June 3 in the interest of the plant.

We regret to report the serious illness of Mrs. E. Allen, wife of Night Foreman Allen. Mrs. Allen is still confined in the Allegheny Hospital at Cumberland, having undergone a serious operation. She is also being given radium treatment. We all sincerely hope that before this item appears in our MAGAZINE Mrs. Allen will be again restored to health.

Keyser

Correspondent, H. B. KIGHT

To Baltimore and Ohio Employees at Keyser:

For several years I have been the Correspondent for the MAGAZINE for Keyser. During this time I have tried to give to our readers the news of the West End of the Cumberland Division, and have seen to it that every employe was furnished each month with a copy of the MAGAZINE.

I have been associated with the Railroad for a long time—in three more years I would be a 20-year veteran—and during my association with the boys in the shops, in the offices, and on the road, I believe I have made a friend of every man whom I have met. I want to say to you that I appreciate your friendship, and I shall look back with much pleasure upon the times spent with you and upon our mutual dealings in helping to make ours the best Road.

It is with a feeling of deep regret that I break away from railroad work, but I feel that Opportunity has knocked at my door and I must answer. I go now to take a position with the West Virginia Pulp and Paper Company, located at Covington, West Virginia.

You will now have a new Correspondent. Help him, whoever he may be, to get the news for the MAGAZINE.

As I shall be unable to see each man to clasp his hand and to tell him good-bye, I take this means of doing it through the columns of the MAGAZINE. So long, fellows, all of you, and good luck to every one.

HARRY B. KIGHT.

Pittsburgh Division

Correspondent, E. N. FAIRGRIEVE, *Car Distributor*, Office of General Superintendent

Principal Assistant Engineer Paul Didier and wife are at present visiting relatives in France. They sailed from New York on the good ship Lapland on May 8.

We are glad to welcome W. M. Ray, assistant engineer in charge of Allegheny River bridge construction, who has been absent on account of illness.

The days of the good old summer time have at last arrived, and the base ball season is on. Look out for the gang from Glenwood who represent the Pittsburgh Division in the Welfare League this year. They are rounding into form rapidly, and will give a good account of themselves, or we'll miss our guess. They have lots of "pep" and a great "rep."

While we're on the subject of athletics, let's not overlook the fact that we have a few stars outside the realm of baseball. Take the Division Engineer's office for instance; Harsh, Donahue and Suesserott are some sprinters, and did you ever see Nelson play tennis? He's some pumpkins and there with the service.

In these days of strenuous political conventions, frenzied finance, and the H. C. of L., some of the girls in the yard office at Glenwood are learning to ride the cars. Bye and bye when the women get to voting, we'll be right up to snuff and have some "Brakeladies" to represent the suffragette cause in our service. Cut off two and let her go. Attaboy, "Jamie"!

R. M. Wooley, field engineer, was recently transferred from A. C. Clarke's staff to the office of Engineer of Buildings, Baltimore. We wish him the best of success in his new field.

We now have the new Division Freight Agent, W. E. Magill, and his official family in our midst. Mr. Magill's office was recently moved from the Oliver Building to the Passenger Station at Pittsburgh. Judging from the way he is starting out, we feel sure good results will be secured by having him near us.

George Norris, the popular young roldman on Mr. Ray's corps at the Allegheny River bridge, has left the service to accept a position with L. P. Kimball, Baltimore. This accounts for the sad expression worn by a couple of well-known young ladies in the local Engineering Department. Cheer up, girls, "Georgie" has promised to return for a short visit occasionally.

Some time ago Division Operator Day was given instructions to have his picture taken, but it has taken the photographer three months to develop a good likeness. My goodness, George, you ought to try a little rouge and some Mary Garden powder. You'd be surprised what a difference it makes.

The Honorable Jacob J. Arenth, Councilman from Etna, is serving his regular turn on the Jury. Nothing to do but to sit around, and sit around. Pretty soft, "Jake"!

Miss Louise Bayonnett, formerly of the District Engineer's office at Pittsburgh, now in the office of the Division Engineer at Cleveland, Ohio, recently paid Pittsburgh a visit. Louise is a very charming young lady, and we wish her all success in her new home.

"Hank" Donnelly is our time-table expert now, and he's right there with the dope. Frame 'em up, Henry!

There must be some attraction down in the Central Lunch Club besides the satisfaction of the inner man. Know it to be a fact that a lot of the boys go down pretty often for lunch; some, in fact, daily. There's a nice looking cashier down there, and she passes out the smiles occasionally, and you can get free tooth picks at her desk. Maybe this is the cause of the pilgrimage. The reason I happen to know is that I was down there the other day myself. Honest to goodness, I thought it was an employes' convention.

Chief Dispatcher Weaverling says he's going fishing soon. This is to notify all you poor fish to lay low when the "Chief" appears on the scene with his bait. He's got some "line"—Minnow, Ha! Ha!

Glenwood Shops

Correspondent, FRANK RUSH, *Shop Clerk*

Born to Mrs. S. Kempinski, wife of Foreman in car yard, a bouncing 10-pound boy. We extend our congratulations.

It was with great regret that we learned of the death of one of our oldest employes, M. J. O'Sullivan, pumper at Glenwood. Mr. O'Sullivan had been in the service of the Company for a number of years and at one time was Power Plant Foreman at Glenwood. He was later transferred to Connellsville.

O. F. Stoneburner has recently been transferred to Glenwood as Car Foreman on heavy wood end, vice H. W. Wageley, transferred to Connellsville. We wish both men success in their new field. Mr. Stoneburner is not new at Glenwood.

R. C. Clem, wreckman at Glenwood, has just returned to work after spending some time out West.

H. F. Lodgston has been promoted to Foreman of Valve Motion Gang at Glenwood, vice J. Callahan, who has left our service.

Wake up, Glenwood shop employes, and give your correspondent some items for the MAGAZINE! One man cannot get all the news for Glenwood and it is hoped that every employe, including those in the roundhouse, will do his share in contributing.

Rumor says that our old friend E. V. Gisbert, pipefitter in the roundhouse, is to be married shortly. (Go to it, "Vince"; it is some life.) Mr. Gisbert is third baseman on the Glenwood baseball team.

Miss Ethel Irwin, formerly clerk in Superintendent of Shop's office, paid us a visit recently. Miss Irwin is now employed by the Company at Washington, D. C.

We were sorry to learn of the death of the son of Machinist S. Charubin. His family has our sympathy.

It is with deep regret that we record the death of Mrs. Sikes, wife of Engineer Sikes, Glenwood Back Shops. He has our deep sympathy.

"The Slave"

James A. Lannon, the efficient Leverman, really does the work at "WJ" Tower. He began his Railroad career with the Freight Department in September, 1900. He was transferred to the Signal Department during 1901 as Car Repairman. In November of that year he was detailed to "WJ" Tower as Towerman, which position he still holds. With the exception of the time he was on the Relief, a period of one month, he has an exceptionally good record of being "on the job." James is married and has four children, all of whom have evidently assimilated the cheer and mirthfulness displayed by their "daddy." When it comes to work, he is "Serving Jim" Lannon.

Monongah Division

Correspondents

E. S. JENKINS, *Secretary to Division Engineer*, Grafton, W. Va.

MISS MARY C. LEEDS, *M. P. Clerk*, Grafton, W. Va.

A large force of trackmen are employed in getting the Fairmont yards ready for the huge Mallet engines which will soon be operated from Grafton to Fairmont and the east.

Our Wedding Bells

Pipe Fitter Helper W. F. Campbell and Miss Josephine Wolfe, daughter of Painter Foreman S. S. Wolfe, were the first to start the ball rolling. This mating of the Cam(p)bell and the Wolfe is an indication of the harmony existing in our shops.

Their wedding was followed by that of Machinist Helper E. Travis and Miss Ethel Knight, at the home of the bride, early in May.

Later in May, J. W. Cooney, machinist helper and Miss Thelma Martin, were quietly married at the U. B. Parsonage by the Rev. Waters.

And last, but not least, Machinist Russell Ridenour and Miss Genevieve Bowmaster slipped away to Oakland, the local "Gretna Green," and came back "one." That reminds us:

A popular machinist named Russell,
Says "I surely will now have to hustle—

This taking a wife

For the rest of my life

Means with old H. C. L. a great tussle."

We hear whispers of several more weddings to follow soon but the whispers are too faint for publication at this time.

Here is the picture of the office and supervising forces at Fairmont shops:

Left to right, bottom row: George Sperling, yard checker; Norman Long, car repairman; R. F. Peters, car foreman. Second row: Mrs. Mary Paulson, janitress; Bailey Hupp, assistant car foreman; "Joe" Stretchberry, gang foreman. Top row: Mrs. L. J. Poe, M. C. B. clerk; Eleanor A. Peters, M. C. B. clerk; Mildred Keener, chief clerk.

Office and Supervising Forces at Fairmont Shops
(See Note)

R. B. Sinclair, clerk in Master Mechanic's office, has accepted a similar position in the local freight office. While we were glad for "Bob's" promotion, we were sorry to lose him.

We miss Bob's lively whistle of "jazz" tunes, bright and gay,
We miss his bounding in the office door.
Things are "sorter" quiet since Bobbie went away;
The office isn't "Mary" any more.

C. E. Grinnan finished his apprenticeship May 20 and is now a full fledged blacksmith. Congratulations, Clarence.

Miss Edna Warden, clerk in Master Mechanic's office, and sister, Miss Mildred, stenographer in Superintendent Van Horn's office, spent a two weeks vacation in Meridan, Conn., their former home.

Miss Ruby Wolfe, the genial check booth clerk, is enjoying a well earned vacation. Hugh Church is handling out the cards while Ruby is away. The boys say that though he gets the cards out promptly, yet they miss Ruby's smile, and will be glad to see her back again in her accustomed place.

Miss Bertha Bishop, stenographer, wears a smile all the time now; her parents and all the family, including Don, have moved from Buckhannon to Grafton, and Bertha now has all the comforts of a home.

Charleston Division

Correspondent, M. W. JONES,
Secretary to Superintendent, Weston, W. Va.

Weston, W. Va.

The May number of the BALTIMORE AND OHIO MAGAZINE has just arrived, in its new dress, and with its new name, and we are all much pleased with its appearance and contents. We are particularly impressed with the article written by W. G. Curren on the subject of the present serious car shortage. We have directed the attention of every employe on the Charleston Division to this article, and we will do our share to remember that CARS ARE ONLY EARNING WHEN WHEELS ARE TURNING. Another item in the MAGAZINE, which in our opinion deserves the careful attention of every one, is that on the subject of "Freight Claims." We doubt very much if any of us realized before reading this article what a tremendous organization was necessary to handle this part of the work. We read with much interest the messages from our President, and we consider worthy of special mention the articles written by our new Associate Editor, Miss Stevens.

One thing which the writer noted with special interest was the description of the career of our Senior Vice-President. We believe that such articles will prove of great value. While we all know our executive officers by name and title, we really know very little about them personally. It seems to us that a little story of their lives, who they are and what they are doing, will tend to increase our respect and loyalty for them all, and we hope that they will continue to let us have these articles.

The only criticism we have to make is that we should like to see more of our divisions represented among the writers of special articles. On a big railroad like the Baltimore and Ohio, there must be lots of talent, and we think it is about time they quit "hiding their light under a bushel" and came out in the open.

While on this subject, we want to draw attention to the fact that MAGAZINES may be had at the Superintendent's office, the Trainmaster's office and Shop office at

W. H. Schide, chief clerk, Charleston Division

Weston, and the Assistant Superintendent's office at Gassaway. We have about 1,500 employes on this division and we would like to see each one have a copy of the MAGAZINE. If any one does not get it, and he will advise his immediate superior, or drop a note to the Superintendent, we will see that he gets it.

The item of prime importance to us was the visit of S. Ennes, our General Manager, who, accompanied by C. A. Gill, and J. M. Scott, general superintendent, made a trip over our entire division. We hope they enjoyed their trip as much as we did having them with us. Then we had for a short time Mr. Willard, our President, who was accompanied by Mr. Galloway, Mr. Fries, and other officers from Baltimore. Unfortunately Mr. Willard did not have time to visit us at Weston, and thereby disappointed us very greatly. We hope he will come again soon and stay longer. By the way, have you read some of the fine speeches Mr. Willard has been making throughout the country? We hope every employe has had an opportunity to do so, because they are well worth careful attention and study. They show you just where we are.

On May 19, we held our regular Safety meeting, and were particularly fortunate in having with us J. T. Broderick, superintendent of Safety. There were 40 members of the committee and visitors present. Mr. Broderick gave us an interesting talk on the work of the Safety Department and of the various committees, which was interesting to all of us.

On May 26, a well attended meeting of the Charleston Division Freight Claim Prevention Committee was held in the Coal and Coke station at Burnsville, W. Va. The meeting was of special interest and continued from 9.00 a. m. to 4.30 p. m., members coming and going all day long. One of the special subjects which was discussed was "Seals, and the Importance of Keeping Proper and Accurate Record." Another item of interest was the fact that at

this meeting we had before us and were able to present to the Committee a report from practically every agent on the division, giving his views on the question of Claim Prevention, and also making recommendations on matters which should be given attention as Claim Preventatives. Two local conductors were also present. They, too, gave us valuable information. Conductors Heater and Barrett have shown that they are particularly interested in Claim Prevention, as also have Conductors Jeffries and Miles; we hope the others will come along and fall in line. Amongst the permanent members of the Freight Claim Committee on this division, to whom matters relating to this subject may be reported, are J. P. Ryan, agent, Weston, Chairman; M. W. Jones, secretary to the Superintendent, Secretary; C. M. Criswell, F. C. P. R.; W. Trapnell, Superintendent; K. O. Wade, agent, Heaters; Master Mechanic Baldinger; General Car Foreman Tull; Trainmasters Deegan and Nicholas; Road Foremen Marsh and Davidson; Assistant Superintendent Kinton; Agents Peters of Richwood, Hoover of Buckhannon, Richardson of Charleston, and Relief Agents Davis and Marshall.

Arrangements are being made to string electric wires to the Y. M. C. A. Building at Gassaway for the purpose of operating a moving picture machine. We are sure this will be much appreciated by all our people in Gassaway as there is not much in the way of amusement there.

Miss Hoke, stenographer in the Trainmaster's office at Gassaway, having resigned, Miss Bertha Van Dyke of Parkersburg has been appointed in her place. Miss Hoke has accepted a position with a Coal Company near Charleston, and while we are sorry to see her go we wish her success in her new place.

Charleston, W. Va.

H. N. Greenlee, cashier, has just returned from a 90 days' leave of absence.

Miss Clara Pierson, now Mrs. Basil Lowe, has left the service, having gone to Parkersburg to join her husband, who is employed in the Division Freight Agent's office at that point.

Mrs. Eva Day of the Cashier's office has resigned, and Miss Elsie Lynch has been appointed in her place.

Miss Edith Lanham of the Cashier's office has left on a vacation for North Carolina.

The Baltimore and Ohio and Kanawha and Michigan joint employes have organized a baseball team and soon expect to be ready to meet all comers.

Kenneth Leeson, file clerk in Superintendent's office has resigned, to return to his home in Parkersburg. We are sorry to learn he is at present in the hospital suffering from appendicitis, and hope he will soon recover. Miss Inez Young is temporarily holding down the desk where they say "I can't find it." Miss Dovie Justis of Weston has been appointed in place of Miss Young, as stenographer to the man who proves we didn't violate the hours of service law, the Assistant Chief Clerk.

Miss Marguerite McCormick is temporarily engaged in putting those black marks against our records, while Miss Madeline Hayden takes her place as stenographer to the Chief Clerk.

E. V. Shores, chief clerk to Superintendent Lyon of the K. & M. at Charleston, who looked after our interests there, has resigned and will open his office in Weston shortly, as Secretary of the South River Coal Operators' Association.

We congratulate Mr. and Mrs. J. D. Nicholas of Gassaway on the recent arrival of a baby daughter.

Supervisor "Mike" Harrington of the Pittsburgh and West Virginia District came very near losing some of his religion lately, trying to get all his slag dumped and thus to shove up the CAR MILES. However, he says you never saw an Irishman yet who didn't get there, and he will do it. Supervisor John Conley on the south end of the Elk Line is busy putting his track in shape for the new Grafton-Charleston flyer, which goes on with the new schedule. John tells us that he will show the through travellers a real piece of railroad when they come over his track. Supervisor "Joe" Conley seems to have become lost somewhere in the woods near Pickens. We have not seen or heard of him for a long time. However, we understand he says that when the flyer comes over his part of the road, he will be right on the job "watching them." Passengers from other divisions can rest easy when they know the two Conleys are watching them.

We regret to learn that Supervisor B. W. Straw, who has charge of the Elk Line territory between Gassaway and Adrian, has been transferred to the Baltimore Division. We are sorry to lose a good friend and a good man from this division, but we wish him every success in his new work. E. L. Tyo, of Section 18, Frametown, has been appointed Acting Supervisor in place of Mr. Straw.

The accompanying picture is of W. H. Schide, chief clerk and Manager of the baseball team. This photograph was taken before (we do not say how long) his recent trip to Pittsburgh.

G. C. Flint, Chief Clerk to Division Freight Agent Strachan at Charleston, has resigned to become Traffic Manager of the Baldwin Tool Works at Parkersburg. Our hearty congratulations and good wishes go with him.

Miss Viola B. Hickman, Trainmaster's clerk at Weston, has now entirely recovered from her recent attack of typhoid fever. We understand she is becoming quite familiar with the road between Weston and Clarksburg, and its condition, in connection with automobile driving. When asked for an expression of opinion, however, she declined to reply.

The circus came to town this month, and there was great joy. All the boys in the office went out and spent their hard earned cash on peanuts and pink lemonade for the girls, and had a perfectly bully time.

The following comments are given us by the famous "Boy Baseball Umpire" in the Division Accountant's office: Miss Janet Longwell, tonnage clerk, has been promoted to Fuel Clerk in place of her father, who was very happy to go back to his old home town, Gassaway, as roundhouse clerk. Miss Nell B. Copley, of Weston, took the place of Miss Longwell in the 2520 department, and we feel sure she will soon run away with the job. (Not the trains.)

Miss Agnes Craig, formerly a Red Cross worker, came to us as Stores Material Clerk, vice George Canfield, who resigned to enter the service of the Pennsylvania Railroad. At least, so we are told by a young lady in the office who should know. Miss Craig only stayed with us about a month, and then, deciding that she liked the Red Cross better, went back to it.

Mr. Meadows, Distribution Clerk, was transferred to Richwood station, as Cashier, on his own request. His place has been filled by Miss V. Erwin of Weston.

Baseball is king. It is in the air. We eat baseball, we drink baseball, we talk baseball. The Gassaway and Weston teams have lined up for the Inter-Division games. Gassaway beat Weston in the first game, score 8 to 1. Weston came back strong on Decoration Day with a score in their favor in a game lasting 11 innings, of 7 to Gassaway's 6. The battery for the visitors was Henrietta, Otto and White, while for Weston we had Carden and Murray. Henrietta struck out 8 men and Carden 16. A large and enthusiastic crowd of fans from Gassaway and Weston was present, and kept up a noisy accompaniment to the game. Gassaway has beaten Bowers and Stouts Mills already and is going strong.

Fuel conservation is getting its proper share of attention on the Charleston Division now. We are out to save that shovel full in force, and we are looking for results. From our fuel bulletin issued for the month of May, we find the following men made 100 per cent. or better: Engineer F. Kerrigan, A. J. Lawson, J. B. Poling, W. P. Paxton, A. F. Vorholt, and J. H. Shea. More power to your elbow, boys! We hope to put more of your names in this column next month.

Talking of coal, read the MAGAZINE for June, showing where the Baltimore and Ohio broke the world's record loading 7,222 tons of coal at Curtis Bay in one hour and fifty-eight minutes, or at the rate of more than one ton per second. Mighty good reading! Let's all get together and see if the Baltimore and Ohio can't break the world's record in some other ways, boys, such as Safety, Claim Prevention, Fuel Conservation and so forth. We can do it if we try. Shall we try? We say "Yes." Go to it!

Wheeling Division

Correspondent, A. N. GANTZER

Benwood Shop

Correspondent, ANGELA APPLGATE

"Doc" Brown, on a summer's day,
Went to a ball game at Holloway.
Knowing him to be "some live wire,"
They chose "Doc" Brown to be Umpire.
When he returned (ah, sad surprise!),
The sun had blistered his nose and eyes.
For, you folks know, a checkered cap
Won't take the place of a big straw hat.
And we hope that next time these teams play
They won't choose such a sunny day,
Or else that they'll play in our home town,
Where a parasol can shield poor Brown.

"Bill" Keffer has just returned from his vacation and reports a fine time. He traveled through Union, Washington, and Clay Districts and spent quite a bit of his time in Glendale and Moundsville.

The crepe is taken off the door,
The voice we loved to hear
Is back again in our midst once more
With it's welcome smile and cheer.
For fourteen days we were lonely,
Everything looked so blue,
But June the first brought back our "Bill"
And we started life anew.

Miss Blanche Fankhouser, stenographer to the Storekeeper, tendered her resignation and has gone back home to Parkersburg. Blanche says she is homesick for the cows and chickens and back to the farm for her. Miss Youst has accepted Miss Fankhouser's position.

Jack of the Coach Yards poses for Jiggs,
It makes us laugh the way he rigs;
Jack with a white shirt, Jiggs with a green,
And all loud colors so he can be seen.

One wears diamonds, the other none,
But a sapphire sparkles in the sun,
They wear low cuts that look real nifty,
Jack's size five and Jiggs' fifty.

We again have one of our old clerks back with us in the person of Miss Della Davis, who is employed in the Storekeeper's office temporarily.

When Tony comes down to see Aina,
He's as happy as a lark,
For he has to stay 'till morning light,
He's 'fraid to go home in the dark.

John Kady, as you all know,
Never misses a burlesque show,
And if there you happen to go,
You'll find him in the very front row.
He sits there so the jokes he'll get
And he remembers them all, you bet.

Miss Ruth Vernon, clerk in the Storekeeper's office, has been granted a furlough and has gone to the mountains for her health. We all wish her a speedy recovery.

To put Harold Schafer, the village lad,
To work night turn was sure too bad.
For he's the ladies' man, you know,
And from the office hated to go.
We miss him, oh, we miss him so!
It was real sad to part,
But now he can spend each moonlight night
With Thelma, his sweetheart.

George Selwood, coach foreman at Wheeling, is back again after having been away on a sixty day leave of absence. We are glad to hear that his health is much improved. J. B. Gatrell, who performed Mr. Selwood's duties while he was gone, has returned to Weston, W. Va.

Kathryn Cooper sure yells "Yes,"
When a telephone call comes from Ches.
Her laugh Bernadine helps to share,
For she knows Chess and Riggle will both be there.

Ralph Gandy, our baseball sport,
Has a sweetie who is very short,
Where she lives we'll never tell,
But Ralph is continually murmuring "Nell."

Clarence Kerr, from Mozart Pike,
Came down Main Street on a bike,
And for all the danger he was in,
His face still held a cheerful grin.

"V" is for Vic,
Who goes and comes late,
And stands and lingers
At Sara's gate.

Paul Crampton, General Foreman's clerk,
Does his work without a shirk,
With the face of an angel, the ways of a lamb,
He runs from the ladies as fast as he can.

"Jimmie" Crogan, formerly of Mr. Gorsuch's office, Pittsburgh, has been promoted to Trainmaster's clerk at Wheeling.

Della and Bernadine have begun to talk,
After into the private office they had to walk.

And then like babies they began to cry,
Chewed their fingers and looked quite shy.
But now they say they'll fight no more,
But be as they were in days of yore.

"Tommy" McMahan has accepted a position as Messenger at the Wheeling Passenger Station. Success, "Tommy"!

Angela, with her laugh like a chime,
Talks on the telephone most of the time.
Yet in dictation she's getting slow,
Since under a brain test she had to go.
But whether she passed, we cannot tell,
But from her actions, we know very well—

Western Lines

Cincinnati Terminals

Correspondent, JOSEPH BEEL, *Chief Clerk to Superintendent of Terminals*

Our office force and repair trackmen are holding a Bean Eating Contest every day at noon. All honors were bestowed upon Chief Clerk Harry Swepston, who gallantly eats a pound or more each day without fear.

Frank ("Feedbox") Smith, the race horse kid, is laying off, spending those \$3,000 (?) which he won. Last reports are that "Smittie" was seen scouring the hills of Kentucky with a lantern, looking for his "winners," as Jockey Hattersley says they couldn't stop them after they got started; the bad feature of it was to get them started.

Our boys on the sick list are all reported to be getting along nicely. "Tommie" Moon, who has been seriously ill with pneumonia, was down to see us. "Tommie" says it was worse than prohibition, for his coat now fits him like an overcoat. "El" Howard has again returned to duty, having recently recovered from an operation. George Ford is reported to be rapidly recovering from a broken wrist, which he suffered in an accident a few weeks ago.

Miss Hazel Greb

The accompanying photograph is that of Miss Hazel Greb, granddaughter of our Wreckmaster, Mark Longdon. Although she is hardly qualified to handle steam cranes, we understand that she is following in her granddaddy's footsteps to a certain extent. She is a pretty good little "table wrecker" and we feel assured that in the future her beauty will cause a lot of hearts to be wrecked.

Between Blacksmith George Baker and Machinist John Highhouse, honors are evenly divided for furnishing the boss's desk each morning with flowers.

J. Weithoff, Elmwood Yard clerk and veteran World War soldier, is reported a victim of Cupid's arrow, shot from the direction of Mt. Healthy, with telling effect. We hope there is no shortage of homes out that way.

William ("Bill") McGinley has come back into the fold, having recently taken over the duties as Trainmaster's stenographer at Elmwood. "Bill" is an oldtimer, having been employed at 8th Street for several years as Trainmaster's stenographer, and is well known in the Cincinnati Terminals.

The "Jolly Seven," Misses Sue Elmore, Leafy Wiltsee, Florence Darling and Clara Schulte, of the Superintendent's office, Helen Farmer, of the Local Freight Office, and Bertha Goetz, of the Division Engineer's office, recently added another "cruise" to their list, by visiting Niagara Falls. The

visit was not in vain, as we now notice several letters coming through the mails postmarked "Niagara Falls."

The "tall, handsome gentleman from Kentucky" walked into Storrs Yard office on a recent rainy day, crowned with a straw sky piece. Remarks were made about the hat that it was not fitting to the occasion. The wearer, however, explained that the "Katy" was thoroughly rainproof as it was built like a shingle roof and would shed the water. Anybody who wears a rough straw hat can easily appreciate this.

"Cleanliness is next to Godliness." The maxim is well exemplified by Mrs. C. A. Pollack, the efficient operator on the first trick at Storrs. Mrs. Pollack's office is a credit to the Cincinnati Terminals and her endeavors to have Storrs Yard office in the same condition are highly commendable. While it is impossible to keep a yard office thoroughly clean, her efforts have helped greatly and Storrs Yard office shows the results.

The yard office at Storrs had quite a shock recently and the employees had gone so far as to order flowers and place suitable notice on the door, but it developed that their preparations were a little premature. "Tom" Grady did not pass away; he nearly had a touch of ptomaine poisoning. "Scotty" claims that "Tom" was testing some "H. B.," but Grady insists it was not the case—that he took an overdose of cream puffs.

Sir Thomas Lipton should wander over to the "Beautiful Ohio" and take a survey of the craft "Francis L.," a handsome launch, the valuable asset of our genial yard clerk, Frank Lang, at Storrs. We are told that Frank's boat can be truthfully called a floating palace.

When it comes to picking winners, anyone interested in the "sport of kings" should consult "Pete" Hussey, car smasher at the east end of Storrs Yard. We believe that "Pete" would fit in pretty handily as a handicapper, and W. J. Scott, an exponent of the racing game, has assured us that he will lend his best endeavors to have "Pete" assist in the Latonia meet.

The sympathy of the employes of the Cincinnati Terminals is extended to Yard Clerk Clarence Henderson at Stock Yards, in the loss of his wife.

To hear "Dad" Rousch of Stock Yards tell about his young son you would think he and the son are both eligible to places in the "Hall of Fame." We are for him and his young hopeful. Here's trusting he turns out to be as beloved a character as his dear old "Dad."

John Bell and Henry Ford have recently come to terms and John is emblazoning the highway around Cincinnati with a bright new "flivver."

Julius Johnson, the versatile car checker at Storrs, has moved to Eighth Street to act as Crew Dispatcher in place of "Fred" Ulrich, who has taken a position as Conductor.

Allen Montjar, Trainmaster's chief clerk, after trying to fight off an attack of quinsy for several days, was forced to give in and spend several days at home under care of a physician. "Monti" is O. K. now and back on the job.

"Spider" Welsh, ex-yard clerk, has become a demon of the keys. Mr. Underwood in his brightest days had nothing on "Eddie" picking on the typewriter. The "Hunt, Find and Hit" system that Edward has created for himself is a wonder. He thinks that he could do a great deal of good to humanity if he would have it copyrighted and spread

over the country, as it can be worked out advantageously by any man, woman or child that has only one digit.

We don't like to get personal but we do think that one of our chief clerks, who enjoys all the pleasures of his country home, including chickens, eggs, cow, butter and cigars, and has been making a friend's mouth water for months by telling him he was going to bring him fresh country butter, cottage cheese, eggs, etc., ought to come across and not hold his friend in suspense.

Elmwood Yard office has again come to the front. Mr. Martindale has taken unto himself a bride. Good luck and best wishes! Any man that has nerve enough to bind himself to such a contract in these days of H. C. L., with "spuds" \$6.00 per and ham and— 70 cents, surely ought to be encouraged. We think the man has enough nerve to try for the heavyweight championship of the world.

New Castle Division

Correspondents

A. C. HARRIS, *Assistant Chief Clerk to Superintendent*, New Castle, Pa.

P. W. ADAMS, *Telegraph Operator*

O. C. BEDELL, *Telegraph Operator*

L. H. Browning, formerly Agent at Wooster and Cuyahoga Falls, has been transferred to the Baltimore Division. The Baltimore Division is fortunate in securing the services of Mr. Browning. He is an exceptionally good man, thoroughly familiar with all details of agency work, and is ambitious to make a success of his work.

Business on the New Castle Division continues heavy, taxing to the utmost the facilities required to handle properly the cars offered us, and demanding unusual effort on the part of all employees in order to avoid excessive delays. The men have responded nobly to the call and have been able to keep the division in good shape.

C. D. Updegraph has taken over his new duties as General Yardmaster at Haselton, Ohio, in place of W. H. Yeager, transferred to New Castle Junction as Terminal Trainmaster. Mr. Updegraph has been on the division for many years and his friends are certain that his success in the new position is assured.

Business at Newton Falls is increasing by leaps and bounds and it is only through strenuous effort on the part of H. H. Smith, agent, and his capable force, that they are able to keep up with the work. For many years this station was one of the ordinary country stations, not handling any great amount of business, but the construction of a new steel mill, rubber works and other industrial concerns has greatly increased the business handled and added to the responsibilities of the Agent. Mr. Smith and his force deserve credit for their splendid efforts.

We are told that if we increase production we will surely reduce high costs. This does not apply to conversation, as there is entirely too much of this commodity on the market now.

The New Castle Junction shop baseball team won the first game of the season, by defeating the Standard Engineering Works team of Ellwood City 11 to 3. The shop team seems to be headed for another record this year and with the players available there would seem to be no good reason why we should not head the list at the close of the season.

Work will cure many ills but we can't expect any benefits if we take only half a

dose. Contentment, satisfaction, pleasure, joy and happiness will surely follow any extended use of this medicine.

Newark Division

W. E. LAIRD, *Chief Clerk*, Newark, Ohio

A. D. LIST, *Newark (Ohio) Shops*

The news of the sudden death of Miss Agnes Anderson, stenographer to Captain of Police, Newark, Ohio, on May 28, was a severe shock to her many friends. She had been employed in the clerical department of the railroad, in various divisional offices, for several years, and was in the performance of her duties up to within a few days of her unexpected death.

Miss Anderson made friends of all with whom she came in contact. Her untimely death is deeply grieved by the large circle of acquaintances that she enjoyed. The railroad has also lost a conscientious and faithful employee.

The depot offices and divisional quarters have undergone a number of changes in the last month.

In order to provide additional room for the divisional engineering corps the Division Engineer's entire office and engineering staff have been transferred to the Railway Club building, opposite the Freight Station on First Street.

The transfer of the Division Freight Agent's office from Columbus, Ohio, to Newark has necessitated the moving of the Division Accountant's force from the depot building to the Gymnasium building, just northwest from the station.

Division Freight Agent Kendall's force has just finished moving into their new quarters in the depot, formerly occupied by the Division Accountant.

During the process of these changes, "Springtime House Cleaning" has been the watchword.

Division Accountant's Office

Miss Lucille Callahan, efficient stenographer, Division Accountant's office, has tendered her resignation, and is taking up a new line of work, that of "Housekeeper." We extend congratulations and best wishes.

Miss Mary B. George, M. P. labor distributor, Division Accountant's office, reports spending an enjoyable vacation in Mt. Vernon, Ohio.

Ray Shaw has accepted a position in the Division Accountant's office.

Robert Baker has been appointed to the position of Maintenance of Way Clerk, vice Otto Reichert.

"Jim" Grady has been promoted to the position of Motive Power Clerk.

Newark Shops

It is with the deepest regret that we announce the death of Noah Ward, who was crushed between two cars in the Newark Yards at 10.30 p. m., on May 29, while inspecting the coupling on a car in an out-bound train. His abdomen was pierced by a piece of the coupler, which caused his death a few hours after the accident.

Mr. Ward entered the service of the Company in September, 1907, as Car Repairman, later being promoted to Leading Car Inspector. During the past thirteen years that Mr. Ward has worked with us he has made scores of friends, who extend their sympathy to Mrs. Ward and the children.

We got to wondering t'other day why our congenial brother clerk, B. A. Oatman, came to work wearing one black and white and one blue and white striped sock. They're pretty that way, but we don't

SMASHING SHOE PRICES

\$2.48

Work Shoes Send No Money

And Dress Shoes at \$4.89

A Blow at Profiteering

\$2.48 for a pair of real honest built work shoes. Sounds impossible but it is true, and the best part of it is that you do not have to send any money to prove it. Let us tell you how we can do this.

You know that shoes are going up every day, also you know that when you buy thousands of pairs of shoes at one time the prices are considerably lower.

The dress shoe we are offering at **\$4.89**, just think of it, **\$4.89** for a dress shoe. This in itself is the greatest bargain of the season, but in addition with every pair of dress shoes sold we will sell a pair of these work shoes for **\$2.48**. A price that sounds like the days before the war. Imagine for a total expenditure of **\$7.37** actually less than the value of the dress shoes you will have two pairs of shoes.

Send No Money, Just Send Your Order

and pay your postman \$7.37 and postage when the package arrives. You take no risk as the shoes will be sent to you under our iron clad guarantee of money back including postage if you are not fully satisfied.

We Positively Cannot Sell Either Pair of Shoes Separately

When ordering be sure to mention the size required on each pair of shoes.

WOLPER'S, CHICAGO

Dept. 61 1201-1209 West Van Buren St.

know just what the idea is and would like to have someone, who knows, explain.

Our bald-headed Material Man, Leon Stanford, has had the management of the baseball team wished on him again this year. He has the boys out nearly every night doing their bit. This, together with the Sunday schedule and two games each week in the City Twi-Light League, should put them in form to make a fine showing in the System League.

"Joe" Dennison, our star second baseman for several seasons past, had the misfortune to lay the middle finger on his left hand down the other day and crack it with a hammer. The doctor pronounced it broken and it will no doubt be some time before he will again be in the game. We all wish him a speedy recovery as the team doesn't seem complete without him.

An Up-to-Date Accounting Department

Our friend, "Jim" Johnston, division accountant, and his force have moved their quarters from the depot building to that formerly occupied by the Baltimore and Ohio Employees as a Club Room, on South

(See page 56, June issue)

Monkey Run Slide, Culebra Cut No. 2

First Street, to make room for the Division Freight office, moved from Columbus to Newark.

We have not been on any inspection tours over the System lately, but we are willing to make a bet that it is the only Accounting Department that is equipped with a gymnasium. In fact, the room occupied by them has a trapeze in the center dangling from the roof, swinging rings from one end of the room to the other, horizontal bars, and the walls are adorned with punching bag racks and other wind developers too numerous to mention. We didn't notice any dumb bells or chest developers, but we were informed that it was the intention to install these later, also a folding pool table, make a race track around the outside of the building—in fact, make everything home-like. The English sparrows are decorating the sills with their nests and making the best of it, so why shouldn't the clerks?

Last reports are that they will shortly lose two of their lady clerks, who will embark upon the matrimonial seas. We don't know for sure, but we are of the opinion that this was caused by the cooing, or whatever it is, of the sparrows.

Marietta

Baltimore and Ohio interests have again been placed on an individual standing at Marietta, Ohio. During the war period our business at that station was in the hands of the Pennsylvania Railroad under a unification of facilities, which has now been dissolved. Bert L. Waller, formerly our efficient representative in Marietta, has again been placed in charge of our own operation, which has been transferred back to our Freight house. With his usual vigor Mr. Waller has accomplished the reorganization in record time, and we are already handling a business in excess of that which we enjoyed at the time the unification was effected.

The Baltimore and Ohio has lost another faithful and loyal employe in the death of Agent E. A. Wright, Bethesda, Ohio. Mr. Wright had been in charge of this busy agency for a number of years, where he had the respect of the entire community. His passing is indeed a loss to those whom he served.

Division Accountant's Office, Cleveland
(See Note)

Cleveland Division

Correspondents

A. F. BECKER, *Secretary to Superintendent*, Cleveland, Ohio

AMY A. FORD, *Clerk to Pilot Engineer*, 621 Sloan Building, Cleveland, Ohio

We understand that Terminal Trainmaster Gensley's Secretary, Miss Edythe Stephenson, let the cat out of the bag. Of course you all know she is to be the happy bride of "Jack" Wenzel, formerly weighmaster at Cleveland.

On May 29, Arthur W. Gienke, ticket clerk at Cleveland Passenger Station, and Miss Evah Armentrout, were quietly married in Cleveland. They left on C. & B. boat for Buffalo, Niagara Falls and Toronto. The bridal chamber was especially arranged for them, through the compliments of the Cleveland & Buffalo Transit Company. We extend to Mr. Gienke and his bride our best wishes.

Picture, left, below, is a happy throng of Division Accountant's office at Cleveland. Reading from left to right: Miss M. Beggs, Frank Hert, Miss L. Beil, Miss L. Wesner, Robert Gymer, Miss M. Smith.

Clarence Rodenberger, yard clerk at Massillon, has returned to work after being off sick for five months. Glad to see you back, Clarence.

George Ackerman has returned to work after spending several weeks in the Southwest. He says he had a fine time among the mountains. Any moonshine out there, George?

"Red" Barner, fireman, made the remark one day, "The more I see that girl, the more I like her." No hope for you, "Red"; that disease is hard to cure.

Brakeman H. U. Brugh has taken a trip through the West, stopping at Chicago, Omaha, and then going to Denver, Colo., and Colorado Springs for his health. We hope for his rapid improvement.

Conductor "Jack" M. Dechant has moved from Massillon to Crystal Springs. He can now get his daily exercise on a small piece of ground, and can also help to fight and dethrone old H. C. L. A little girl arrived at his home in April. We can't make a brakeman out of her, "Jack," but we congratulate you, anyway.

Conductor C. E. George, of Dover, Ohio, was to have an operation performed in a Columbus hospital, but while there received news of the death of his mother. We extend our sincere sympathy.

Yardmaster Benjamin Wilcoxen, Dover, Ohio, has been Acting Trainmaster during the absence of J. Fitzgerald, and has been successful in his new duties.

Brakeman Sherman Naylor and some young girl about his own age (51 years,) signed a life contract at Dover, Ohio, in May. You are a little late in starting, Sherman, but we wish you all kinds of success. Those cigars were pretty good, too.

BERTHA PHELPS, *Clerk*, South Chicago

MARGARET GALLOWAY, *Assistant Shop Clerk*, Garrett, Ind.

R. R. JENKINS, *Secretary*, Y. M. C. A., Willard, Ohio

P. H. CARROLL, *Signal Supervisor*, Garrett, Ind.

Clerk to Trainmaster at Massillon
W. E. Brugh, in his latest 1920 Model Ford

V. N. Dawson, division storekeeper, F. K. Moses, master mechanic, and E. H. Mattingly, joint general car foreman, attended the A. R. A. Convention at Atlantic City during the week of June 14.

"Dan" McNeil, of the Auditor's office, is wearing a smile that doesn't even fade since he became the proud papa of a twelve-pound boy. "Dan" says the first thing the young Democrat said was, "Say, 'pop,' what'd'ya think of 'Bill' Bryan's chances for President this time?" "Dan" hasn't answered yet.

W. E. Buckmaster, chief electrician at Lincoln Street, has returned from Wilmington, Del., where he was called on account of the serious illness of his father.

A pretty but quiet wedding was held on May 12, when F. J. Rosenberg, Jr., and Ruth Gillis were joined in wedlock at the Thorburn M. E. Church, Paulina and 64th Streets. The bride was attended by Miss Elsie Voss, and the groom by his brother, G. H. Rosenberg. After an elaborate wedding dinner Mr. and Mrs. Rosenberg left for Lake Wawasee, where they spent their

Brakeman W. L. Phillips
Champion lightweight boxer of Massillon

honeymoon. Mrs. Rosenberg is a popular young lady, being a member of a number of clubs, while Mr. Rosenberg, who is Roundhouse Foreman at the Lincoln Street, is well liked by his associates. Mr. and Mrs. Rosenberg will be at home to their many friends at 7417 Eberhart Avenue after June 30. Their many friends join together in wishing them life-long happiness.

Information received at the office of the Master Mechanic: W. T. Kennedy and Miss Helen Smith, of the General Car Foreman's office, made a hurried trip to Albert Lea, Minn. Come on, "Bill," and tell us why you went to Minnesota when Crown Point is so near.

Cupid has been doing some accurate shooting of late. His last shot was at East Chicago, when Assistant Cashier Mabel E. Sterling became the bride of Mr. Robert Burell, of East Chicago. During her connection with us Miss Sterling was regarded as a competent and faithful employe, all that her name implies. Mr. Burell holds a responsible position with the Hubbard Steel Company. After their wedding trip, which included Cleveland, Detroit, Buffalo and other points of interest in the East, Mr. and Mrs. Burell will be at home to their friends in East Chicago.

E. H. Mattingly, joint general car foreman and his wife, were called to Baltimore recently on account of the death of Mr. Mattingly's grandmother.

The popular "Joe" Wagon, Pullman storekeeper, located at Lincoln Street, was transferred to the N. Y. C. R. R. The boys are sorry to lose "Joe."

His fellow employes extend their deepest sympathies to Machinist J. McCurdy, who lost his wife on June 4.

WANTED—To exchange a furlined overcoat for a one piece bathing suit. See M. W. in the Engineering Department.

Several of the young ladies around the Grand Central Station have been rigidly inquiring about and investigating Mormonism. Can any one help them out?

Ohio Division

Correspondent,
A. E. ERICH, Chillicothe, Ohio

The death of Engineer John B. Cadden, which occurred on June 8, came as a great shock to his many friends. Mr. Cadden had been relieved on that date for the purpose of attending the Safety Committee meeting, of which he was a member. He had been holding a turn on No. 12, and, as was his daily custom, had laid down for a few min-

utes in the morning, apparently in good health. At about 10.30 his wife tried to arouse him and then discovered he was unconscious. Medical aid was immediately summoned, but before any attention could be given, he entered his last long sleep, death being due to apoplexy. Mr. Cadden entered the service of the Baltimore and Ohio Railroad as Freight Fireman on September 1, 1881; he was promoted to Freight Engineer on February 11, 1885, and to Passenger Engineer June 8, 1909, in which capacity he served until his death. He had a large number of friends who extend to his family their deepest sympathy. The members of the Ohio Division Safety

Committee also extend their condolence to Mrs. Cadden.

We are pleased to announce that Fireman Ray Rambo, who was operated on for appendicitis at the City Hospital, Chillicothe, is getting along nicely.

Owing to numerous complaints received recently from employes who are unable to secure the MAGAZINE, it has been decided to place them in the office at the Roundhouse, where they can be secured. Also a small number will be sent to other points about shops and to Car Department.

Ernest Gilmore is with us again as Steel

"\$100 a Week, Nell!" Think What That Means To Us!"

"They've made me Superintendent—and doubled my salary! Now we can have the comforts and pleasures we've dreamed of—our own home, a maid for you, Nell, and no more worrying about the cost of living!"

"The president called me in today and told me. He said he picked me for promotion three months ago when he learned I was studying at home with the International Correspondence Schools. Now my chance has come—and thanks to the I.C.S., I'm ready for it!"

Thousands of men now know the joy of happy, prosperous homes because they let the International Correspondence Schools prepare them in spare hours for bigger work and better pay.

Why don't *you* study some one thing and get ready for a real job, at a salary that will give *your* wife and children the things you would like them to have?

You can *do* it! Pick the position you want in the work you like best and the I. C. S. will prepare you for it right in your own home, in your spare time—you need not lose a day or a dollar from your present occupation.

Yes, you *can* do it! More than two million have done it in the last twenty-seven years. More than 100,000 are doing it right now. Without cost, without obligation, find out how you can join them. Mark and mail this coupon!

INTERNATIONAL CORRESPONDENCE SCHOOLS

Name _____
Occupation and Employer _____
Street and No. _____
City _____ State _____

Car Builder, after an absence of 12 years. Welcome!

Pearl Boyer is able to be on the job after being off duty for several weeks with a broken foot.

We are glad to announce that Supervisor "Pat" Clark of Washington Court House, who has been off duty on account of sickness, is reported as much improved at this time.

Griffin Wilson, cashier at Washington Court House, has resigned his position to accept a position in California. Good Luck "Griff!"

William Schreck, tonnage clerk, has resigned to accept employment in Columbus. We wish "Bill" success in his new position. Miss Mildred Curtis has been appointed in Mr. Schreck's place, and Ray Ortman is the "new" clerk, taking position vacated by Miss Curtis.

Effective June 1, J. E. Fahy was transferred to Assistant Superintendent at Cleveland. Mr. Fahy started his railroad career with the Pennsylvania Lines on September 10, 1885, as Operator. He came to the Baltimore and Ohio in 1888, as Operator; he was later promoted to Car Distributor, Chief Dispatcher, Trainmaster, Assistant Superintendent Transportation, and came to the Ohio Division on September 1, 1919, as Assistant Superintendent. We are sorry to see Mr. Fahy leave us, as during his short stay he made quite a number of friends on this division, all of whom wish him continued success.

Indiana Division

Correspondent, H. S. ADAMS, *Chief Clerk to Superintendent*

We understand that "Steve" Rogers, road foreman of engines, is contemplating joining some vaudeville circuit, as he has been hitting the larger cities only in the mid-west, such as Chicago, St. Louis and Cincinnati. "Steve" recently returned and his expressions were such as to indicate that he did not care to locate in Chicago or St. Louis, and would prefer to confine his traveling to the Indiana Division.

Glen Prall, formerly clerk at North Bend, Ohio, has bid in position of Third Trick Caller at Seymour, and is now calling the men out when sleep is best—in the early morn.

Harry Fink, caller at this point, has just returned from a visit through the West at such points as San Francisco, points of interest in Colorado and Utah. We understand that he had an enjoyable time.

E. W. Sargent, motive power timekeeper in Division Accountant's office, Seymour, has resigned to accept a position with a construction company at Dayton, Ohio. "Ernie" has the best wishes from his fellow employees in his new work at Dayton.

Russell J. Sanders is enjoying his vacation at this time. John McKay, Second Trick Operator, "JO," is relieving R. J.

President Willard and party made a trip over Indiana Division recently, going down the branch to Louisville for a stay of one night. Extra Passenger Engineer Walter Lemen, on engine 5113, piloted the Chief safely over out territory. Leave it to Walter!

Conductor Frank Cook, regular conductor on 90 and 97, also extra passenger conductor, has been off duty for sometime having an operation performed on one of his "lamps." We all hope for complete recovery.

G. V. Copeland, chief dispatcher, is a real sport. Instead of issuing cash for the fish he eats, he purchased a pole and reel, also some artificial bait. From recent reports he has had some real luck pulling the bass and crappies out of White River up around the dam at Rockford. To have the sport you have to stake something for it.

Toledo Division

Correspondent, I. E. CLAYTON, *Division Operator*

The offices of T. J. Daly, trainmaster, W. B. Kilgore, M. P. Hoban, road foremen of engines, and I. E. Clayton, division operator, have been moved from our Freight Depot to Union Station, Dayton.

We are glad to have the happy, smiling face of Edward Morrissey back after ten days' vacation spent in Chicago. "Ed" says the girls in Dayton are good-looking enough for him.

Division Freight Claim Agent H. E. Warburton is now located in our Freight Depot. We are glad to have Mr. Warburton and his staff of helpers lined up with us. "The more, the merrier."

Miss Margaret Kureth has entered the service at Toledo as stenographer to the Assistant Superintendent, J. W. Kelly. Watch your step, Miss Kureth, or the MAGAZINE will have to make the announcement for you.

Misses Verna Wiehl, Veronica Dell and Esther Voight apparently find attractions in the small towns south of Toledo, as it is there that they spend nearly every Saturday afternoon and Sunday. Possibly the girls became alarmed when they discovered that there are 10 girls to every 8 boys in Toledo.

If Mlle. Dreamer would only write a few articles for the MAGAZINE, then one would say that the time spent in dreaming was not mis-spent.

Wonder if Doctor Hutchinson's duties require him to prescribe remedies for sunburned shoulders and backs. On general principles the Doctor would be justified in doing this.

General Yardmaster Farling states that if he had his choice between a job as an umpire between two baseball teams of railroad employees and a machine gunner in the front line trenches, he would choose the military job.

Miss Verna Wiehl spent her vacation in California. She overlooked requesting transportation from Portland, Oregon, to Washington. A post card, dated June 15, reported that she was traveling via the "hobnail route," that the roads were not crowded, and that she was reducing in weight.

WANTED—One remedy that will positively cure a double chin.

Definition of "Wife" as shown in "Pat" Kelly's dictionary, revised 1920, is: "Storm and Strife"; "Ball and Chain."

Kentucky District

(S. V. & E. R. R.; L. F. R. R.; M. C. R. R.)

On the S. V. & E. R. R. and L. F. R. R., one year of successful dispatching of trains by selective ringing telephone equipment has just been completed. Previous to the installation of the selective ringing equipment on these roads, trains had been dispatched partly by telegraph and partly by magneto telephones of the bridging type. All parties concerned are very much pleased with the efficient operation of the

new system. The operation of both roads is directed from the offices of the District Superintendent, H. R. Laughlin, at Jenkins, Kentucky.

A. W. White, formerly Track Supervisor on the S. V. & E. R. R., has recently been promoted to the position of Civil Engineer for the Kentucky district. Mr. White is a very efficient engineer. He was one of the corps of engineers employed by the S. V. & E. R. R. while the road was under construction, and is a graduate of one of the leading universities of Indiana.

George Dixon has recently been reappointed Trainmaster for the S. V. & E. R. R. and L. F. R. R. Mr. Dixon's many friends throughout the System will be pleased to learn of his good fortune; he has been in the employ of the Company for several years, many of which were spent in the Baltimore offices. During Federal control Mr. Dixon was temporarily dropped back to the position of Chief Clerk to Division Superintendent.

John Hamlet (not Prince of Denmark), formerly Bill Clerk in freight house at Jenkins, has had the good fortune to be promoted to the position of Agent, located at Van Lear station on the Millers Creek R. R. We haven't heard anything of those wedding bells yet.

We have with us, and have had for several months past, L. Y. Glessner, traveling auditor. Mr. Glessner's health has improved considerably since coming to the hills of "Old Kentucky;" he says that the climate, altitude and other things to be found in these hills are invigorating, to say the least.

The Matter with America

What's the matter with America, these days?

Too many diamonds and not enough alarm clocks.

Too many silk shirts and not enough blue flannel ones.

Too many pointed-toe shoes and not enough square-toed ones.

Too many serge suits and not enough overalls.

Too many décollete and not enough aprons.

Too many satin-upholstered limousines and not enough cows.

Too many consumers and not enough producers.

Too much oil stock and not enough savings accounts.

Too much envy of the results of hard work, and too little desire to emulate it.

Too many desiring short cuts to wealth and too few willing to pay the price.

Too much of the spirit of "get while the getting is good" and not enough old fashioned Christianity.

Too much class consciousness and too little common democracy and love of humanity.

—Exchange.

Just 15 Minutes a Day

But it will mean a tremendous difference in their positions and earning power fifteen years from now.

HERE are two men of equal position and business income. Which of them represents you?

They read about the same number of hours each week. But one has no plan for his reading; at the end of the year he has little or nothing to show.

The other talks like a man who has traveled widely, though he has never been outside of the United States.

He knows something of Science, though he had to stop school at fifteen. He is at home with History, and the best biographies, and the really great dramas and essays. Older men like to talk to him because he has somehow gained the rare gift of thinking clearly and talking interestingly.

What's the secret of his mental growth? How can a man in a few minutes of pleasant reading each day gain so much?

Dr. Charles W. Eliot, from his lifetime of reading, study and teaching, forty years of it as president of Harvard University, has answered that

Send for this **FREE** book

It tells how and why Dr. Eliot selected the 418 books essential to a liberal education, and compressed them into fifty volumes.

It tells how to read and absorb what you read.

It explains the wonderful encyclopedic index and an effective method of systematic reading.

This valuable little guide book to reading, called "Fifteen Minutes a Day," will answer every question about the "Five Foot Shelf."

Your copy is Ready. Send for it Now.

P. F. Collier & Son Co.

*Publishers of Good Books
New York*

question in a free booklet that you can have for the asking. In it are described the contents, plan and purpose of

Dr. Eliot's Five Foot Shelf of Books

The pleasant path to a liberal education

EVERY well-informed man and woman should at least know something about this famous library.

The free book tells about it—how Dr. Eliot has put into his Five Foot Shelf "the essentials of a liberal education", how he has so arranged it that even "fifteen minutes a day" is enough, how in pleasant moments of spare time, by using the reading courses Dr. Eliot has provided for you, you can get the knowledge of literature and life, the culture, the broad viewpoint that every University strives to give.

"For me," wrote one man who had sent in the coupon, "your little free book meant a big step forward, and it showed me besides the way to a vast new world of pleasure."

Every reader of The Red Book is invited to have a copy of this handsome and entertaining little book. It is free, will be sent by mail, and involves no obligation of any sort. Merely clip the coupon and mail it today.

Think of it. The satisfaction of being a marked man or woman in any company. And all for a few minutes of pleasant reading each day.

This is the promise of the Five Foot Shelf. Two hundred thousand Americans have proved that promise; they have tested the value of Dr. Eliot's guidance.

P. F. Collier & Son Company
416 West 13th Street, New York

Mail me the 64-page Free Book, "Fifteen Minutes a Day," telling about the Five Foot Shelf of Books and containing the two valuable articles by Dr. Eliot and Hamilton Wright Alabie, on what and how to read for a liberal education.

A large sailboat with a massive white sail is the central focus of the image. The sail is billowing and takes up a significant portion of the left and center of the frame. The boat is moving across a dark, choppy sea, leaving a white wake. The sky is filled with soft, white clouds. The overall tone is classic and nautical.

This Picture and These Letters Tell Why Employees Are Glad They Bought Homes Through the Relief Department

Several communications that have recently reached us show in as many ways how the Relief Department has helped employes secure homes.

The picture is of O. M. Brooks, machinist, at Bridgeport, Ohio, and his family. Mr. Brooks was more than glad to send us a photograph of the home which he secured through the Relief Department and which has meant so much to him.

The other communication is from one of our veterans who is well known by the employes located in the General Offices at Baltimore. Mr. Haulenbeck contributes frequently to the newspapers and his monthly letters in the MAGAZINE are quaint, convincing bits of philosophy from a man who has passed the allotted three-score years and ten and still looks on every expression of life with the attitude of enthusiastic youth.

The first letter is typical of many communications the Relief Department receives, expressing gratitude to the Railroad for the easy and convenient way it enables employes to purchase property.

NEW CASTLE, PA., July 6, 1920.

Mr. W. J. DUDLEY,
Superintendent, Relief Department,
Baltimore, Md.

Dear Sir—

Yours of June 11, 1920, and of June 28, 1920, containing mortgages, fire insurance policies and abstract of title received, and I certainly thank you as Superintendent of the Relief Department for the many favors shown me and for the opportunity of becoming the owner of a home.

Very respectfully,

HALLETT H. MCCOMBS,
Yard Conductor,
New Castle, Pa.

The following, sent by him to the *Baltimore Sun*, is worthy of thoughtful consideration.

Now, Start a Savings Bank Account

TO THE EDITOR OF THE SUN—Sir: And now that everybody in the railroad service will get more money, I hope that something will be done by men and women employes to put some of it away.

The "rainy day" is bound to come sooner or later, and it is vitally important that some of this extra money be deposited in bank for use at some future time when it may be sorely needed.

I have been through some rocky periods in my life; in my railroad experience I have seen the payday without a paymaster, or rather when the paymaster existed, but, as we say in handling attachment cases, he was without funds.

I wish I could take every man and woman into a savings bank the day the back pay comes and prevail upon them to save it. Save it!

I am perfectly willing to be designated as a tightwad in my continued advocacy of the saving habit. My summer home at Deer Park, on the top of the Allegheny Mountains in Maryland, is the result of carrying out the very thing I am urging, and summer and winter homes as well are possible to every railroad man and woman if they will heed this advice.

Don't be afraid to take this step; don't hesitate to step up to the savings bank desk under the heading "new accounts," and commence to save, and, commencing, keep at it, and see it grow.

Baltimore, July 21.

GEORGE W. HAULENBECK.

THE BALTIMORE AND OHIO RAILROAD COMPANY
BALTIMORE, MARYLAND

Find out how you can secure a better home

LEARN WIRELESS

At Home, Quickly and Easily By Marvelous New Method

A combination course in Wireless Telegraphy and Telephony perfected by the National Radio Institute that will fit you in a few months for a position paying approximately \$175 a month to start, if you consider that living expenses are included.

Men with experience or trained as telegraphy operators have a decided advantage over the beginner and will be able to complete the course and qualify as a trained radio operator in about one-half the usual time required. This means more rapid advancement for you to the bigger positions paying better salaries.

Future success assured our graduates. Hundreds of attractive and interesting positions in Commercial Radio Service on Land, Merchant Marine, Railroads, Radio Supply Factories and Laboratories, Lake and Ocean Steamship Lines, Telegraphy Companies, and Aerial Mail Service always ready to be filled. Because of the efficiency of our graduates, they are given first choice, and positions are guaranteed to those who complete the course and secure a license.

Salaries Up to \$15,000 a Year

Few professions offer the opportunities found in Radio. Any young man with ambition and energy can soon be qualified for an exceptional position by taking our course in Wireless. Your first position will pay you the equivalent of \$175 a month—\$125 in salary, plus living expenses, which by a conservative estimate we place at \$50 a month.

There are exceptional chances for rapid promotion in Radio Mechanic, Electrician, Government Inspector, Radio Aid, and Radio Engineer, some positions paying as high as \$15,000 a year.

No previous knowledge of wireless or electricity is necessary to take our course. Our course is easy and comprehensive, and with the help of our Natrometer, you can master Wireless in a marvelously short time. Right in your own home, the National Radio Institute way, in your spare time!

Travel Around the World Your Expenses Paid

If you are eager to travel, anxious to visit foreign countries, and increase your knowledge of world affairs, Wireless offers you the biggest chance you will ever have. You travel on shipboard with an officer's rating, living the life of an officer, eating at the captain's table, and mingling with the passengers. All without one cent's expense to you!

If you prefer to locate permanently at or near your own home, Wireless again offers the opportunity, for you may secure an equally attractive position at one of the many land stations, with Radio Companies, Steamship Companies, or Commercial houses.

Regardless of how big your desires and plans for your future, Wireless is always in the foreground, offering advantageous and attractive opportunities. Look into it and plan your life accordingly.

Get Your Instructions from Washington—Center of All National Wireless Activities

The National Radio Institute was established in 1914, and was the first in America to successfully teach Wireless by mail. It is established in the heart of national interests—in Washington, the home of the United States Shipping Board—centre of all official Wireless activities—and the home of the United States Department of Commerce (Radio Department) which passes upon every first grade government license granted in America, and also issues all permits to erect and operate radio stations.

Our location in the nation's capital, together with the high standing of our school and instructors, and our close communication with government officials connected with Wireless activities, naturally places us in the position of giving our students the very best instruction obtainable. We are also able to be of the utmost help in assisting them secure high type positions paying substantial salaries.

Special Privileges to National Radio Institute Students

Students of the National Radio Institute receive the following:

Complete combination course in Wireless Telegraphy and Telephony—

Special post-graduate course at our large Washington school, if desired—

Five text books, one hand book, forty-six special lessons and eighteen personal examinations—

Membership in the N. R. I. Radio Relay league and handsome blue and gold membership pin presented immediately upon enrollment—

Large handsome diploma suitable for framing—

Complete automatic Natrometer outfit and carrying case—

Personal help in securing wireless position and endorsement of Institute officials.

This Fine Natrometer Given to You

This wonderful Natrometer automatically sends you wireless messages as though coming from a radio station thousands of miles away. It is a complete improved sending and receiving set, embodying the same type of instruments as used by the United States Bureau of Navigation in testing applicants for official license. Made especially and exclusively for National Radio Institute students.

Send For Free Booklet

We have prepared a book telling all you want to know about wireless and the future it offers you. Startling facts you are interested in are freely discussed. It tells how, during the past six years, we have helped hundreds of ambitious men and women and how we will help you. Send the coupon today, or write to the

His Average Income

Mrs. Russell: "What is your husband's average income, Mrs. Harper?"

Mrs. Harper: "Oh, about midnight."
—Life.

His Real Motive

As the crowded car jolted and swayed, the stout woman standing up lurched against a seated passenger, tearing his newspaper and knocking his hat over his eyes. Immediately he arose and offered her his seat.

"You are very kind, sir," she said panting for breath.

"Not at all, madam," he replied. "It isn't kindness, it's merely self-defense."

Published monthly at Baltimore, Maryland, by the Baltimore and Ohio Railroad to promote community of interest and greater efficiency among its employees. Contributions are welcomed. Manuscripts and photographs will be returned upon request.

LEARN DRAFTING

At Home—In Spare Time—As You Would in Actual Practice

Get into this constructive branch of industry where big salaries are paid. No previous training is necessary to become a capable draftsman with the help of the Columbia School of Drafting. You can master the practical lessons of our famous home study course, at home, in spare time. You will be personally coached and instructed, by mail, by Roy C. Clafin, president of the school, whose long experience as a draftsman and teacher, especially qualifies him to give you the training you need to become a successful Draftsman.

Become a Specialist

We not only give you thorough and practical training in Mechanical Drafting, teaching you to make actual drawings as you would in any drafting room, but the additional benefit of a post-graduate course in some special branch of drafting. A big field of opportunity is thus opened to you as a trained specialist in this profession.

Draftsmen Get \$35 to \$100 a Week

Because of the importance of his work the draftsman is paid a big salary and is always in line for advancement. The draftsman's pay is from \$35 to \$100 a week. A knowledge of drafting is the stepping stone to big technical positions in the industrial field, paying as high as \$50,000 a year.

Big Concerns Employ Columbia Graduates

The best concerns in America employ Columbia graduates in their drafting departments because of the thorough, practical training we give which enables them to step right into important drafting positions. Our diploma is the entering wedge into big drafting rooms everywhere. As a Columbia graduate you are recognized as an experienced Draftsman, not as a mere apprentice. Our training spells Success for you. Why be satisfied with a grinding, underpaid position when there are hundreds of promising positions open to you in the big field of Drafting. We are called upon to place trained draftsmen more rapidly than we can produce them. General construction companies, manufacturers, railroads, ship building concerns, engineering projects, etc., need Draftsmen today in greater numbers and at better salaries than ever before.

How "Columbia" Students Succeed

Students of the Columbia School of Drafting often secure positions at \$2,000 or more a year to start before completing the course. Hundreds of men and women with "Columbia" training are now making good with big concerns all over the country. Many more are needed for splendid positions now open. Here is what "Columbia" training is doing for some of our graduates: Laurence Johnston, over \$5,000 a year; George Murray, \$45 a week to start; G. Tangorra, \$2,800 a year; A. L. Gash, \$140 a month to start; W. S. Burfoot, \$150 a month to start; T. R. Brown, \$2,860 a year; R. Fowkes, \$3,700 a year. These are only a few of a great number of similar cases.

This Complete Drafting Equipment Furnished

to students of our school. The instruments are of standard American make of best quality, fully guaranteed, and become your property on completion of course. Every instrument needed for course is included.

Send This Coupon Today

Let us tell you the fascinating story of Drafting and how you can master this lucrative profession of big salaries and steady advancement through our help. Write today to

Association of Railway Executives Sets New Standards for Operation and Maintenance

No group of men in the United States today knows better than the Association of Railway Executives the true railroad situation. No men realize more keenly the inadequate transportation service and the extraordinary difficulties in the way of its reestablishment on a satisfactory basis within the near future. And with full recognition of the fact that the economic prosperity and progress of the country are threatened with temporary impairment by the present inability of the carriers to handle efficiently the demands of shippers, they have responded with marked sagacity, broad vision and united effort to solve the problem at the earliest possible moment. The interests of the carriers, as individual properties, have been made secondary to the primary consideration of the transportation necessities of the country as a whole. Red tape has been cut and every effort has been made to cooperate with the government and the shippers to get maximum efficiency out of the present transportation machine.

In the last issue of the MAGAZINE, on this page, we told of the appointment of the Advisory Committee of Nine, with President Willard as Chairman, to deal during this emergency with plenary power in cooperation with the Interstate Commerce Commission and other railroad agencies in matters relating to transportation, maintenance and operation. Already, beneficial results of immense importance have resulted from this action.

Further action calculated to produce immediate and large improvement in the transportation situation is described in the following resolution passed by the Association of Railway Executives at their meeting in New York on July 15:

WHEREAS, It is apparent that the existing transportation facilities of the railroads in the United States, with particular reference to the cars and locomotives, are inadequate to handle the unusually large volume of business offered for movement in the country as a whole at the present time; and

WHEREAS, It will be impossible to overcome immediately this deficiency by increasing the number of cars and locomotives, and it is clear that prompt relief can be obtained only by a more intensive use of the existing facilities; and

WHEREAS, It is recognized that upon release of the carriers from Federal control, not only were the cars and locomotives in the country as a whole inadequate and in an impaired condition, but the distribution of cars as to ownership was such as to prevent the greatest efficiency in their use, and that since the termination of Federal control, constant interruptions due to disturbed labor conditions, which it is believed will cease with the announcement of the wage award, have seriously interfered with the movement of the traffic and the relocation of cars.

THEREFORE BE IT RESOLVED, By this Association, that all members thereof and all other common carriers, be urged to devote forthwith their utmost energy to the more intensive use of the existing equipment, and that, as a program to be followed in this connection, they should undertake to secure for the country as a whole:

- (1) An average daily minimum movement of freight cars of not less than 20 miles per car per day;
- (2) An average loading of 30 tons per car;
- (3) Reduction of bad order cars to a maximum of 4 per cent. of total owned;
- (4) An early and substantial reduction in the number of locomotives now unfit for service; and
- (5) Should make more effective efforts to bring about the return of cars to the owner roads.

RESOLVED, That all railroad companies shall forward to the Advisory Committee or such agency as the latter may designate, reports that will enable a check to be kept currently of performance under this resolution, and the Advisory Committee shall arrange for comparative compilation of such reports and make distribution to the individual companies.

RESOLVED, That the Advisory Committee be instructed to acquaint the Interstate Commerce Commission with this action.

NOTE: While the car performance proposed has never before been attained, it is believed that such a performance is not impossible of attainment, if all and each will diligently apply themselves to that end, and if the full cooperation of the public can be secured.

What Baltimore and Ohio Men Are Going to Try to Do in Support of This Resolution to Increase Transportation Efficiency Will Be Found on Page 9 of This Issue.

Archibald Fries, Vice-President of Traffic and Commercial Development

GETTING business for the Railroad today is a far different job from what it was ten years ago. As in other kinds of trade, on the railroads the question of salesmanship has become more and more a question of service. The *quid pro quo*—the “you scratch my back and I’ll scratch yours” idea—which made the getting of orders for transportation largely a matter of lavish entertainment, of influence, of the affiliation of rail interests with trade interests dominated by the same control, has given way to a new kind of reciprocity. The shipper still says, “What will you give me in return for my business?” but the shadowy background of rebates and free transportation and other abuses has been cleared away, and out in the open stands the single and unequivocal answer, “Service.”

Yet today that single word “Service” embraces its meaning a chain of obligations never before contemplated. Progressive and broad-visioned railroad officers and employees hold transportation as the big brother of agriculture and the industries. They know right now that if coal cannot be delivered in unprecedentedly large quantities to the Northwest and New England before the Lakes freeze and the snow flies, it will mean intense economic—perhaps personal—suffering next winter in these sections. They know that the present shortage of cars is cutting the hard earned income of Silas Brown, wheat grower, of North Dakota. For Brown and thousands of his fellow tillers of the soil can’t get their products to the best markets at the best time. They know that the vegetables and fruits wasted each year, if saved in tins or glass or cartons, would make a big cut in

top-notch winter prices in city stores. It is their task to find out how the wheat fields, the truck farms, the coal mines, the orchards, the stock ranches, can be brought nearer, in effect, to the cities and export centers. It is their job to show the way in solving these important economic and social questions. It is their privilege—certainly on the Baltimore and Ohio—to prove the truth of President Willard’s ideal and injunction that we of the Railroad should be a good neighbor to the people and communities served by our lines.

So, the railroads have caught the new vision of service. The traffic solicitor is no longer merely a smooth talker, an eloquent promiser, an expert rate man or an industrious salesman. He may be all of these and yet fail to measure up to the finest conception of his calling. But add a real desire to place a car for the shipper when he wants it and to stay by it in emergen-

cies until it is moving to destination; add a willingness to help the shipper find a more profitable market for his product or cheaper raw materials for his plant; add a perception of the great economic value of the return haul for his railroad and, generally, a comprehension of how cooperation among all shippers and between them and the railroads will eliminate wastes and increase prosperity—add all these things and you have an ideal traffic man.

Growing up on the Baltimore and Ohio during the years that these new ideas were taking shape, in fact, by his long service, the ground he has covered, the positions filled, and the responsibilities handled, being part and parcel of them, is Archibald Fries, vice-president of Traffic and Commercial Development.

Mr. Fries was born in Cincinnati, Ohio, on February 27, 1864. He attended the grade and high schools of that city and later supplemented his education with a special college course.

When he started work as an entry clerk at Storrs Transfer Station at Cincinnati in October, 1882, the Baltimore and Ohio did not reach from the Atlantic Ocean to the Mississippi River as it does now. What is today the Baltimore and Ohio Southwestern line from Parkersburg to St. Louis was the Marietta and Cincinnati from Parkersburg to Cincinnati and the Ohio and Mississippi Railroad from Cincinnati to St. Louis. In fact it was only a year or two before he began railroading on the old Ohio and Mississippi that this line had been changed from the old gauge width of six feet to the present standard gauge of four feet eight and one-half inches.

Storrs Station was one of the busiest transfer points in the Middle West, trains on the Ohio and Mississippi,

Archibald Fries, Vice-President of Traffic and Commercial Development

the Marietta and Cincinnati, and the Cincinnati, Hamilton and Dayton railroads meeting there. Hence Mr. Fries' first job at this point put him in intimate touch with the perplexities of terminal operation, that phase of railroading which has, as the years have rolled by, assumed a greater and greater importance in the science of transportation. His young manhood was spent in close association with switchmen, trackmen, engineers, firemen and all other classes of employes who are brought together at a big terminal transfer point, and as he moved up the line from entry clerk, to yard clerk, to bill clerk, to chief clerk, and then to cashier at Storrs Station, from 1882 to 1890, he got a first hand knowledge of terminal operation which has been of great value to him in his chosen work in the Traffic Department.

When the Ohio and Marietta Railroad and the Cincinnati, Washington and Baltimore Railroad (the successor to the Marietta and Cincinnati) were united and called the Baltimore and Ohio Southwestern, the Continental Fast Freight Line, operating over its tracks, had as its general manager S. T. McLaughlin, now assistant freight traffic manager at Cincinnati. He had known Mr. Fries as chief clerk at Storrs Station and offered him the position of chief rate and claim clerk in his office. Peculiar and unfortunate conditions made the job an unusually tough nut for the newcomer to crack, but, after hammering it hard night and day for a number of months, he got the tangle straightened out, with the result that the Continental Line office was held up as a model general office.

Promotions to accountant, chief clerk and acting manager soon followed, and when the Continental Fast Freight Line and the Fast Freight Dispatch were consolidated in 1894, Mr. Fries became chief clerk to the general manager, Thomas H. Noonan.

Two years afterward he returned to the general freight office of the Southwestern in Cincinnati as chief clerk to Mr. McLaughlin, then general freight agent. He was later made general agent of the Baltimore and Ohio Southwestern at Cincinnati and after three months in that position was made assistant general freight agent there. With the taking over of the Cincinnati, Hamilton and Dayton by the Baltimore and Ohio his jurisdiction was extended over that line also.

During his long apprenticeship in the general freight office, Mr. Fries was a member of the Central Freight Association and took an active part

in framing rate legislation during that rather stormy period of railroad history when volume of tonnage rather than revenue seemed to be the goal most desired. He was twice asked to serve as representative of the Pennsylvania and New York Central Railroads on the Uniform Classification Committee and was also offered membership on the Public Service Commission of Ohio. His belief in the future of the Baltimore and Ohio and in his opportunity with it caused him to decline these attractive offers, and with good reason.

For when the position of general freight agent at Pittsburgh, the senior freight agency of the Railroad, with jurisdiction from Cumberland west through Pittsburgh to and including Chicago, was made vacant during the closing days of 1912, Mr. Fries was pleasantly surprised with the following laconic telegram from Baltimore: "Report for duty general freight agent Pittsburgh January 1." He had only 24 hours to make the change but he was on duty at his new desk bright and early that morning.

On October 21, 1916, he was made freight traffic manager of the Baltimore and Ohio Eastern Lines, with headquarters at Baltimore, and on January 1, 1918, his jurisdiction was extended over the entire System.

With the coming of Federal control on December 28, 1917, he was made traffic manager over the freight and passenger traffic of the Baltimore and Ohio Eastern Lines, Western Maryland, Cumberland Valley, Coal and Coke, Cumberland and Pennsylvania and Morgantown and Kingwood Railroads, Wheeling Terminal Railroad and that part of the Philadelphia and Reading Railway south of Harrisburg, all of these roads being located in the Allegheny Region.

It will be remembered that one of the greatest problems facing the country during this period of enormous transportation activity in connection with the shipment of war supplies was the congestion of the ports on the Eastern seaboard. Mr. Fries was one of six railroad officials given membership in the Eastern Freight Traffic Committee and it was their task to reduce this congestion and to open up the seaports from Boston to Newport, inclusive, for a free flow of traffic. The work of the committee was well and expeditiously done and it was not long before food and clothing and war supplies were reaching the seaboard as fast as vessel tonnage could handle them. The system of permits which they evolved proved to be the satisfactory solution for the congested conditions which

had almost paralyzed traffic to the eastern ports.

Shortly before the proposed return of the railroads to corporate control on January 1, of this year, the services of Mr. Fries were again secured by the Baltimore and Ohio Railroad Company. He was made general traffic manager and given the task of reorganizing the Traffic Department. On February 25, following, he was elected vice-president in charge of Traffic and Commercial Development.

The opportunity of filling so many positions, of greater or less importance and over so wide a stretch of territory on the Baltimore and Ohio, which Mr. Fries has had, is given to few men. The result is that there is scarcely a transfer, siding or team track on the Railroad that he does not know. And it is perhaps this knowledge, coupled with his youthful intimate experience with employes of the Operating Department—the yard clerks, switchmen, trainmen, etc.—that has counted much for his success. For, not many years ago, but on many railroads, the unpleasant condition of operating and traffic men clashing in their efforts to achieve the same end of service to the shipper, was common. Knowing from his early youth the difficulties which the Operating Department at all times faces, Mr. Fries has never asked for the impossible, has never failed to give his cooperation, in patience and helpful effort. And his own attitude in this respect has done what cordial, considerate relations with another department will always do—greased the wheels of transportation wherever his jurisdiction extended, with resultant benefit to shippers and to all departments of the Railroad. Furthermore, he has managed to enthruse the men working with and subordinate to him with the same ideals of cooperation, with unusually harmonious and satisfactory results.

During the recent strike of the miners and, later, the switchmen's strike, our Traffic Department stopped solicitation and to a man jumped in to help the Operating Department. Rate men became switchmen, clerks dropped their pens and pencils and picked up brake sticks, solicitors quit pounding pavements to handle coal shovels, and the Traffic Department in general bent every effort to facilitate the loading, movement and unloading of cars.

Mr. Fries was recently asked if the Traffic Department could cooperate to help the Operating Department increase its car miles per day.

"By all means, we can," he said. "We are all working toward the same

end of making the Baltimore and Ohio a more efficient transportation machine and giving our customers the best possible service. There are many ways in which we traffic people can help. We can educate the shippers to quicker loading and unloading, to a heavier loading of cars and a greater movement, wherever possible, of car-load freight. Our principal stations are even now being carefully watched by our traffic men, and shippers are being urged to cooperate in keeping cars moving in every possible way.

"With the return to corporate control a new responsibility devolved upon railroad management—that of proving for all time the fallacy of a method of operating our railroads, practically tantamount to government ownership. After a service record with the Company of 38 years, I am confident that the Baltimore and Ohio, with its present progressive and far-seeing leadership, will be one of the first railroads to prove the

efficiency and desirability of private ownership and management."

Though a veteran in years of service, Mr. Fries makes an unusually strong appeal to young men. He looks young, talks young and acts young. Years of active indulgence in water sports of all descriptions on the Ohio River, when he was located at Cincinnati, laid the foundation of the rugged constitution which he still keeps in shape by living as much out-of-doors as he can, especially through his devotion to golf.

In his office there is a kindly greeting for anyone whose business is calculated to help the Baltimore and Ohio. And for new ideas he confesses a weakness, provided only they come well recommended. He is a man of fine independence of thought and action, respectful of authority and reputable opinion but not subservient to any dictum with which he cannot honestly agree.

It has been noticed and remarked by his fellow workers and subordi-

nates that he is an unusually appreciative man. Efforts in his department to play the game hard and well do not go by unheeded. Perhaps he recalls the uphill road he has traveled and remembers how a smile, a handshake, a word of congratulation or a pat on the shoulder would have made the climb so much easier and more pleasant. And now-a-days he doesn't forget.

Many of us who see the enormous responsibilities carried by railroad officials wonder how they stand the resulting mental and physical strain. Mr. Fries learned the secret when, almost 30 years ago, he jumped in to untangle a nasty situation that had developed with a new position given him. He worked and worried and won. Then, recasting the whole situation in his mind, he found out an invaluable lesson. For since then and now, at desk or on line, he cuts out his own unnecessary overhead expense. As he tersely puts it, "I don't worry."

"Increase Car Miles," the Slogan of the Railroads

Backing President Willard as Chairman of Advisory Committee of Nine, Baltimore and Ohio Sets Out to be Pacemaker

SOME time before the Association of Railway Executives, on July 15, set 30 miles as the average car miles per day as a standard for all railroads in the United States to reach within the next few months, our own operating officials had inaugurated an intensive movement looking to the same results. They recognized the impossibility of handling satisfactorily the business of the country with the present inadequate car supply, unless car miles per day were sharply increased.

In the April issue of the MAGAZINE there was an interesting and instructive article by S. Ennes, general manager, Eastern Lines, outlining a competitive car miles per day campaign on a basis similar to the No-Accident campaign held last year. His illuminating statements in regard to the increased car supply which could be made effective on the Baltimore and Ohio by a greater average movement of cars was supplemented by a similar article by W. G. Curren, general superintendent of transportation, in the May issue of the MAGAZINE. Unfortunately, labor conditions made an intensive prosecution of the campaign impracticable at that time.

Now comes the official statement of July 15 from the Association of Railway Executives to the effect that all of the railroads will immediately begin an intensive effort to relieve car shortage and help handle pressing traffic needs by endeavoring to reach as soon as possible an average of 30 miles per car per day for the railroads as a whole.

Men who study railroad operating efficiency realize the supreme importance of this factor. Like the life-giving blood stream of the human body in its relation to the health of the individual, the life-giving stream of transportation, the average of car miles, when it becomes sluggish, de-vitalizes and makes inefficient the whole machine.

It will interest our readers to know that there is a marked disparity in the factor of car miles per day on many of the railroads in the United States. While the Baltimore and Ohio was making a record for the month of May of only 26.2 miles per car per day, other railroads were making a greater average car miles per day. The difference, however, lies not nearly so much in relative operating efficiency as it does in other factors.

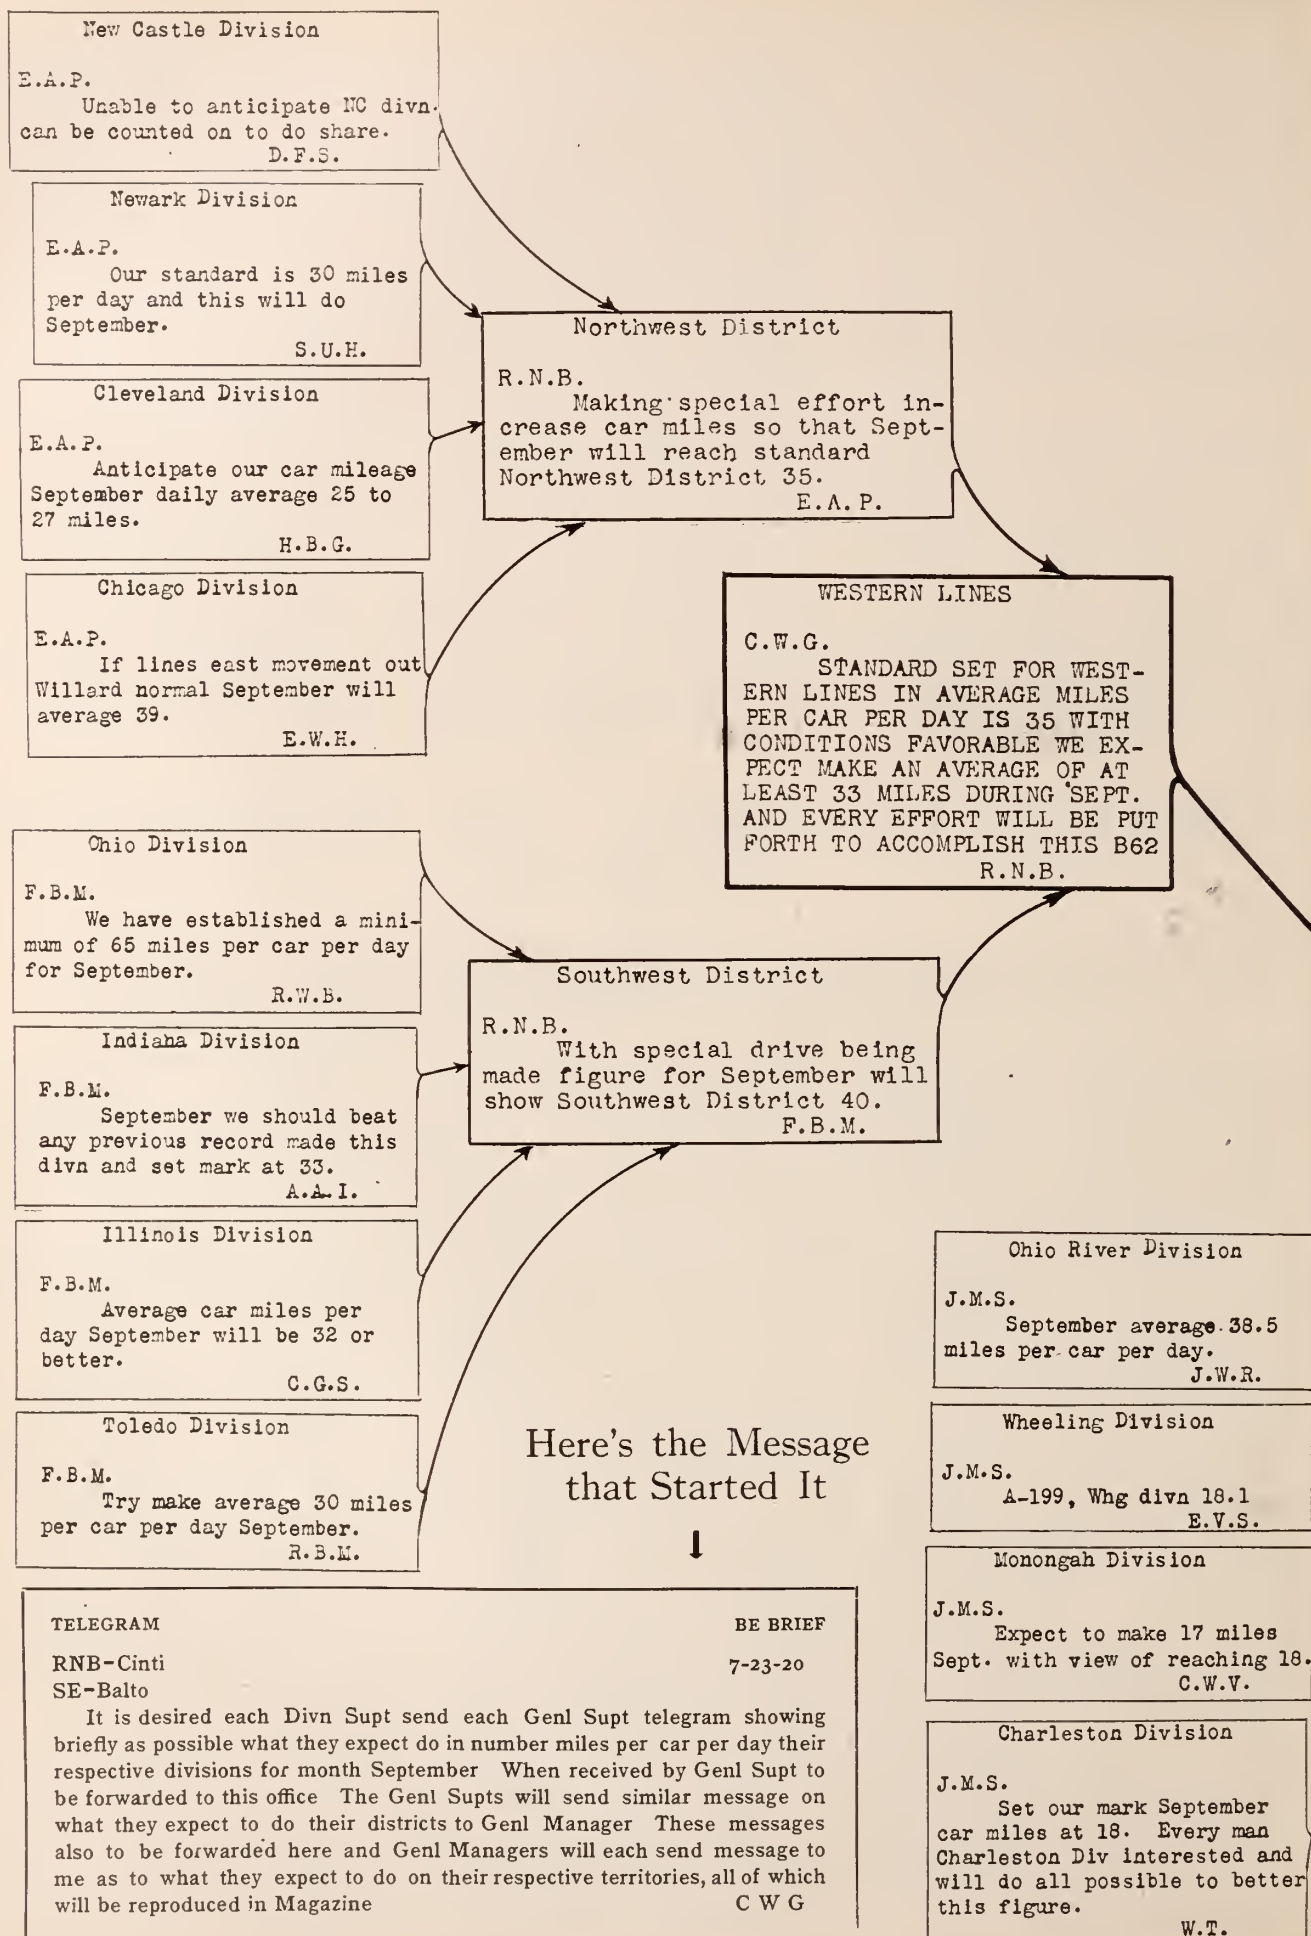

The Baltimore and Ohio is one of

the greatest originating lines; viz. it begins the transportation from point of origin of a large percentage of the total traffic it handles. This means initial loading delays totally out of proportion to those sustained by other railroads. Again, the Baltimore and Ohio's operating problem, particularly through the mountainous Alleghenies, is a factor, the like of which some other roads do not have to consider.

Delivery delays, however, caused by our service to the large industrial centers, with reconsignment privileges and an enormous amount of terminal switching, are the principal factors in holding down our average car miles.

Generally speaking, the roads which traverse the great plains of the West and Southwest, with their long level hauls, and which do not have much business to originate on their lines, are in the best positions and make the best records on car miles per day.

Naturally, however, when the findings are made as to the accomplishments of the railroads in what has now become practically an inter-railroad drive to increase car miles per day, the grading will be done on a percentage basis. And the Baltimore

C.W.G.

and Ohio therefore starts, in this respect at least, on an equal footing with other systems. Six months from now, when results are tabulated, there will be a number of railroads with a considerably larger average of car miles per day than ours—and others will show smaller averages—but if our percentage increase ranks high in the list, it will be a matter of pride to every Baltimore and Ohio man who will have had a part in it.

Thus far this year the Baltimore and Ohio System has made the following average monthly car miles per day:

January.....	24.3
February.....	24.5
March.....	26.8
April.....	20.0
May.....	26.2
June.....	22.3
July.....	27.5

The marked recessions in the months of April and June were largely the result of the labor troubles then obtaining. All of which proves that if we are not working together we cannot get results.

During these months the Western Lines had a slightly better record for January, February, March and June than did the Eastern Lines, while the situation was reversed for April, May and July. This indicates possibilities of an interesting competition between the two main operating units of our System, not only from a percentage increase standpoint, but also from the actual record standpoint. We understand, also, that with the intensive renewal of this drive, a prize inter-divisional competition will be started on both the Eastern and Western Lines.

In March, 1912, the entire Baltimore and Ohio System made 31.9 miles average per car per day, the outstanding best record in this respect in our history. With this as an indication of what has been done, we ought to be contented to do nothing less. A united effort should certainly realize the 30 miles per car per day average mark which has been set for us to reach.

In his address at the Veterans' meeting at Edgewood Park, Somerset, on July 29, as elsewhere reported in detail in this issue, Mr. Galloway said that because of the fact that Mr. Willard had been appointed as the chairman of the Advisory Committee of Nine of the Association of Railway Executives, a signal honor to him and to the Baltimore and Ohio, there should be no doubt about our being willing and able to measure up to the standards proposed by this committee; further, that it should be our purpose and practice to keep the other railroads working hard to keep pace with us.

With this idea in mind, Mr. Galloway sent to the general managers of Lines East and Lines West, the telegram which is reproduced on the second page preceding, and with the results shown in diagramatic form on the two preceding pages.

It may seem early in the game to promise for the month of September such a handsome increase as Mr. Galloway has indicated in his message to President Willard. But our operating vice-president believes in Baltimore and Ohio men and in their willingness to go the limit to put the Railroad in the front rank in operating efficiency—and he has grown up

with and among them and knows thoroughly the human material which in the rank and file will be responsible for whatever results are obtained.

More important than any other operating campaign in which we have been engaged—always excepting the Safety efforts for the saving of human life—more of a test for us as Baltimore and Ohio men and capable railroaders, is this campaign. It will show how strongly and ably we are willing to back President Willard, not only as chief executive of our Company, but also in his capacity of chairman of the Advisory Committee of Nine.

Ignoring a Prophet

By H. Irving Martin
Relief Department

THE modern craze for ouija boards is but another proof that man by nature is inherently superstitious, that he can be led to give partial or full belief to almost any plausible short cut into the future. The appeals to oracles, sibyls, soothsayers, witches, fortune tellers, through the ages, serve to demonstrate that mankind is gullible.

In another class from the soothsayers we put the prophet whose reading of "the signs of the times" causes him to utter predictions which do not please his hearers, as the great majority seek only for favorable omens. Prophets find little favor when their predictions become warnings. "The Handwriting on the Wall" was shown to eyes unwilling to believe the evidence forced upon them.

The prophet thus becomes without honor in his own country.

America has had many political prophets but most of their predictions of national disaster have been proved to lack foundation. A superabundance of political prophets has caused us to disregard the warnings of students of national problems whose admonitions were based upon sound economic principles. Let us consider what would be the present condition of our railroads had the warnings of America's greatest railroad builder been heeded during the decade between 1910 and 1920.

Had a copy of "Highways of Progress," written by James J. Hill in 1910, been in the possession of every legislator, every state railroad commissioner, and had Mr. Hill's arguments and prophecies been given proper consideration and thought, the railways of America would have been granted freight rates sufficient to finance improvements

and equipment imperatively needed to handle the traffic of growing America.

The needs of the railways became acute during the World War, they were the excuse for government control, they exist now and will never be cured unless the railroads are permitted to expand by the aid of adequate rates.

Had the "billion a year" for new equipment and terminal development, which Mr. Hill said was absolutely necessary that the railroads might prepare for the growth in traffic, been spent, we would now hear little of embargoes, congestions at terminals, and lack of motive power.

The writer does not feel that he can improve or add to the language of Mr. Hill; therefore, he asks consideration at this time for some of Mr. Hill's own words. Let us throw off our nearsightedness and accept Mr. Hill's message. He said:

Our Country

Nations, like men, are travelers. Each one of them moves, through history, toward what we call progress and a new life or toward decay and death. As it is the first concern of every man to know that he is achieving something, advancing in material wealth, industrial power . . . so it is vital to a nation to know that its years are milestones along the way of progress. . . . To erect here and there, along the road the nation travels, certain signboards where the roads diverge and mark them "Highways of Progress." . . .

The highest conception of a nation is that of a trustee for posterity. The savage is content with wresting from nature the simple necessities of life. But the modern idea of duty is conservation of the old and modelling of

the new in order that posterity may have a fairer dwelling place. . . . The problem of the future material condition of our country, of an inventory of its assets and liabilities, of the inevitable demands upon its resources and the careful adjustments by which alone they may be preserved, has thus far been a subject for little more than a passing thought. National security calls for a just accounting of the business affairs of this great nation.

Let us try to cast our minds 20 or 25 years ahead and see what will then be our condition. . . . As the prudent man, about settling himself in life, sums up his possessions, his opportunities for earning income and the demands upon him of a family to be fairly cared for and left in a position to begin the world at least as advantageously as he did himself, so the people of the United States should know with reasonable exactness just where we must stand half a century from now. . . . It is highly probable that . . . the population of the United States in the near future will show these totals:

Population in 1920, 117,000,000.

Population in 1930, 142,000,000.

Population in 1940, 170,000,000.

Population in 1950, 204,000,000.

These figures announce the magnitude of our problem. It is not even a problem of tomorrow, but of today. . . .

The country needs more workers on the soil. Not to turn the stranger away, but to direct him to the farm instead of to the city—this is the necessary task of . . . an intelligent patriotism. . . .

No nation in history was ever confronted with a sterner question than this certain prospect sets before us. What are we to do with our brother, whose keeper we are? How are we to provide our own children with shelter and their daily bread? . . .

The two great resources of the under earth, economically speaking, that are indispensable to human comfort and growth, are coal and iron. Our inheritance of these was princely. The most wonderful achievement of this age is the incredible activity with which we are exhausting them. . . . Only one-half of the land in private ownership is now tilled. That tillage does not produce one-half of what the land might be made to yield, without losing an atom of its fertility. Yet the waste of our treasure has proceeded so far that the actual value of the soil for productive purposes has already deteriorated more than it should have done in five centuries of use. . . . If the earth, the mother of humanity, is to 'wear

out,' what is to become of the race? The fact is that soils, properly treated, maintain their productive-ness indefinitely under cultivation. . . . The productive capacity of the soil must be sustained at its highest point or the world will suffer want. . . . The people have neglected the preservation of the soil. They take away all and give nothing back. . . .

The country is approaching the inevitable advent of a population of two hundred millions within the lifetime of those now grown to man's estate, with a potential food supply that *falls* as the draft upon it *increases*. How are these people to be fed? . . . If I could have my way I would take five million or six million dollars a year and start at least one thousand agricultural schools in the United States, at \$5,000 a year each, in the shape of model farms. . . . This farm would furnish to all its neighborhood a working model for common instruction.

Our Railroads

When the History of Transportation is written it will be equivalent to a History of Civilization. . . . The railroad has outrun the settler and beckoned him on; has opened up new territory, brought in population, created new industries and new wealth. It has served not as a mere connecting link between communities but as a creative energy to bring them into existence. . . . While the railways of the United States may have mistakes to answer for, they have created the most effective, useful and by far the cheapest system of land transportation in the world. This has been accomplished with very little legislative aid, and against an immense volume of opposition and interference growing out of ignorance and misunderstanding. . . . The final product must be a number of strong systems, each competent to give to the people of the territory served by it the best service, and all competing against one another for the better development of the areas served by them. Each railroad system can prosper only by increasing its traffic. It can do this only by increasing the number of its customers and increasing the volume of their business. . . .

The immense transportation system of the United States has grown to about 40 per cent. of the mileage of the whole world. Its rise has been at every point the index of all our boasted national development. . . . Every item of material growth means more work for the railway, since almost everything that ministers to

human comfort must be moved for a longer or shorter distance on the railway. . . . More miles of track, more equipment must be provided. . . . Each cog in the big railway machine, each mile of track, each engine and each car must be made to do more work. . . . The public, on its side, has done very little toward providing increased facilities for loading and unloading. In some cases it actually lessens them by unnecessary and time-consuming restrictions. Congestion rules in most of the great traffic centers of the country. The national transportation system as compared with the work assigned to it will grow more and more inadequate. What can be done? . . .

This can be cured only by great and continuous investment in railway construction; by enlarging terminals, double-tracking and four-tracking lines most heavily used, building new feeders from territory recently developed, and in all ways keeping open the channels through which courses the life-blood of the nation. It can be done only by a hearty coalition between the public and the stored capital of the world; all available means being none too great for the purpose. It will be done only when there is the same inducement to such investment, the same assurance of fair treatment under the law and the same freedom to earn an honest and even a generous return upon capital that is granted in any other form of enterprise. . . . Give the railroads a square deal and allow them to earn a fair return on their value. . . .

It is time for the country to sober down and think out the issues before it. They are serious enough to demand the most earnest effort. They are vital enough to elicit the most generous patriotism. This country has become the most prosperous in the world, not by any magic of legislation, but by the cooperation of all its people in the development of natural resources more abundant than were ever before placed at the command of any people. Constructive statesmanship must now reestablish and confirm disturbed relations between the activities engaged in the production of national wealth. A hearty union of all interests, a broad and genuine understanding and a deliberate, honest and tolerant attitude on the part of the people will do most to promote success in industry and sanity and permanence in the nation.

Car Mile Rhyme

*Tom, Tom, the piper's son,
Loaded cars and made them run,
He sent them east and sent them west;
Of all good records, his was best.*

Murphy Burns the Beans

By Frank Kavanaugh

MURPHY stuck to the job as train dispatcher of the Obispo Railway until all but the last locomotive had been wrecked and junked by the rebels, and his sole duty was to deliver each day an order to the crew of the one train to the effect that "Engine 12 will run to San Sebastian regardless, etc." There being no other trains on the road and no other engines to handle them, and no other crews, had there been motive power, the order was easily obeyed. But one day the rebels, or the rebels against the rebels, caught the 12-spot at a point some 20 kilometers from San Sebastian, robbed the engineer of a real pair of shoes and a shirt Murphy had willed him, and ended the career of the 12 by letting it run wild down a grade, at the bottom of which was a sharp curve. The old locomotive failed to hold the rails at the curve and ended her days of usefulness at the bottom of a 90-foot canyon. When the operator nearest the point of the "accident" told the tale to Murphy over the wires, the latter, recollecting his days on the Associated Press wire, replied "OK 30." Then he buckled what gold he had in his belt around his waist, tied an extra pair of shoes to a clean shirt and started on the trek toward the Rio Grande—and God's country.

Railroad transportation was, to quote Murphy, "shot all to pieces." Hand-cars were plentifully strung along the right-of-way, however, and Murphy utilized them when walking was bad. Slowly he was extracting the remains of his gold to pay natives for the elbow grease they used in pumping the hand-cars, when he reached Horcacitis. From there on north transportation was spasmodic and Murphy felt assured he could ride somehow.

To his surprise, Murphy was welcomed into Horcacitis like a profiteer into Hades. The commandante wrung his hand and would have kissed the American had not Murphy saved him by sneezing at just the right time. Finally he was ushered into a clean room and a warm meal was served. A soldier was also stationed at the door. Murphy ate and changed shirts, presenting the sentry with the soiled garment. An hour after he was summoned into the presence of the commandante. There were a dozen or more gaily uniformed army officers present. Murphy was seated directly opposite one of the

junior officers and was much amazed to read the legend upon his cap: "San Antonio Street Railways." Underneath the legend was the number: "2323." The commandante opened the conversation:

"Can you do us one great—" He hesitated and turned to the ex-street car man. American was too much for the old official. Number 2323 took up the conversation:

"The old ginny with the billy-goat wants you to help us out in a pinch. He was going to say 'Can you do us one great favor,' but he forgot all the words."

"If it will assist me in getting to Chihuahua and then to El Paso I'll do most anything," Murphy assured the assemblage. The 2323 officer interpreted.

"The commandante he say," explained the street car man, "that he want to send three cars frijoles (beans) to a part of his army a few kilometers north. There's some enemy mens between it and here. He say the enemy they be asleep tonight and you take an engine and run the cars of beans through the enemy mens and he see that you get to be general or corporal or whatever you want."

"I'd sooner be a private walking the street in El Paso," Murphy replied.

More conversation in Spanish.

"Commandante he say you go on and get beans through; he give you pass to El Paso all right, muy bueno."

Murphy realized that to the natives, all Americans were supposed to be experts in all branches of railroad operation. While he knew he could open and close the throttle of a locomotive, he was not well versed in running. But with an experienced fireman he thought he might bluff the matter through and thereby land several kilometers farther north on his route. At least it would beat riding a hand-car. So he merely nodded and said:

"If you will furnish me a fireman who knows his business I will do as you wish."

Dinner was served at sundown, after the American had slept through the afternoon. Half an hour later he climbed aboard the engine, to which was coupled two box cars. There was no caboose attached, but that did not surprise Murphy. He had seen many strange things in Mexican rail-

roading and he was prepared for anything.

The fireman, a native, greeted Murphy with a friendly grin as the American climbed aboard, and one of the native officers waved a "high ball." Murphy pulled at the throttle and the train started. Before they were fairly out of the switching limits Murphy was giving the engine about as much speed as he thought safe, and then he looked things over.

Save for the fireman, he was alone on the train. It seemed foolhardy, but he was going north, at least. He thanked his stars that at one time he had held a job whose duties, besides that of telegraphing, had been to run a steam pump with which to fill a water tank. He recalled enough from this experience to work the injector and he amused himself by keeping the water at a higher point in the glass than that needed for safety.

It may have been an hour, and it may have been only 45 minutes that Murphy merrily piloted the bean train northward. He was mentally figuring what he would do when he reached the States. An experienced telegraph operator was always in demand, he knew, but he was mapping the country north of the Rio Grande to determine what part he would locate in, when the engine slackened speed. The throttle was still where he had set it. One look at the steam gauge told him the trouble. The gauge read 80 pounds, and while he watched it fell to 75, then to 70. He cut off the injector and turned to the fireman:

"You imp of Satan, you traducer of the holy shrine, you son of a pig, shovel in some coal!" he cried in the vernacular.

The fireboy said something and pointed first to the firebox door and then to the tender, which was more than half full of coal.

Murphy shut the engine down, slipped off his seat and looked in at the fire. What was "alive" burned with a dull glow. There was coal enough on but it did not seem to burn. He turned, picked up a chunk of coal and hit it with the coal pick. The dent he made in the chunk showed white. He touched the tip of his tongue to it.

"Salt! By all that's holy! What sort of a game are those fellows trying to play on me?"

Then Murphy remembered the salt deposits around Horcacitis. The natives had played it well. They had filled the coal bin of the tank with salt blocks and covered them with enough coal to last possibly an hour.

He had stopped the engine on the top of a grade. He turned the air

brake handle to "release" and a shudder ran through the locomotive. Slowly it began to head down the grade. Not knowing the length of the grade he motioned the fireman to the cars to set the brakes if the speed became excessive.

For ten minutes the bean cars and the engine coasted. Then it slowly ceased moving, ran back a little ways and stood still. The fireman climbed over the salt-coal and down into the gangway.

"You got cigarette, Meester?" he asked.

"Don't smoke 'em," Murphy replied. "What'n'll do you know about this?"

"Know nothing," the Mexican replied. "I go north; get job on section in Missouree. Eat lots time; here no eat at all."

"You've been in Missouri?"

"Si, senior; there was a good boss on the section I work; nearly blind."

"How far have we come? There were no kilometer posts on the right side of the track."

"They have been burned for firewood, senior. Cui bono? We are more closer Missouree than we were in Horcacitis, is it not?"

They waited. The native curled himself up on the seat box and slept. Murphy watched the desert and hills. Finally he, too, slept. It was dawn

when he was roused from slumber by the yells of a hundred men. They came from all sides of the train and were upon them before the two engine men could resist. There was much conversation and the American explained, as well as he could, that the cars contained beans. There were yells of satisfaction at the news and the doors were hurriedly opened and sacks tumbled out. But as soon as the first one was opened, yells of anger arose.

Murphy and the fireman were jerked from the engine and handled roughly as they were propelled to the scene of the opening act. The first sack had contained some beans and inside boxes of cartridges.

"You were smuggling ammunition to the hated General Murchirio de la Scrimario!" an officer exclaimed, hot with anger.

"I did not know," Murphy said simply.

It was then that an officer came up to the one who was berating the American and whispered in his ear. The man brightened and loosed the engineer.

"He says the cartridges will fit our rifles," he explained. "Perhaps you have done us a favor, after all."

The sun had risen. The excitement was somewhat cooled by the appearance of a host of men coming over the desert from the direction of Horcacitis.

"It is our enemy!" the officers exclaimed, as they prepared their men in battle array, issuing them rounds of cartridges from those concealed in the coffee sacks. It was a sanguinary battle on one side. Volleys from the force coming from Horcacitis mowed down the men who had captured the bean train. Volleys from the other side seemed to have no effect. Finally the force of the desert was routed and Murphy again clasped the hand of the commandante from Horcacitis. Number 2323 was on hand to interpret.

"You have won the decisive battle for us!" the general exclaimed, trying to kiss the American.

"I do not understand," that individual said, registering surprise.

"It was all the coup," 2323 explained. "The general he say he could not lick the other men without they are at—what you say—disadvantageousness. So he send you with the blank cartridges. They were out of ammunition, he knew, but they had a little, maybe, he thought. So he send you with the beans in which were the no-good cartridges. The general he say, it make him laugh all over to see the other men shoot and shoot and no

"You were smuggling ammunition to the hated General Murchirio de la Scrimario!" an officer exclaimed, hot with anger

soldiers of his fall. The others they fall when we shoot. The general say you come now and he make you colonel and give you decoration of the Knight of Popocatapetl."

"I'd rather he'd give me a pass to El Paso."

"Maybe he will. Cui bono?"

A week later a bedraggled American and a dirty Mexican were stopped at the international bridge at El Paso by the American sentry.

"No one is allowed to pass after nightfall except officers and their servants," the doughboy explained.

"I'm General Patricio Murpheio and this is my servant and we are going to—"

"Missouree," interrupted the Mexican, "where they work some and eat lots. Down there," he pointed to the country of his nativity, "they work never and eat only sometimes."

F. J. Couse Leaves the Service. Is Succeeded by W. T. Moore as Foreign Freight Agent

THE resignation of F. J. Couse, who for the past six years has held the position of foreign freight agent at Baltimore, is a source of regret to his many friends. Mr. Couse leaves us to go with the firm of Wilbur F. Spice and Company, shipping agents, of Baltimore, Md.

Mr. Couse was born in Jersey City, N. J., September 8, 1885. He entered the service of the Railroad in June, 1901, as messenger on one of the New York Piers. He served in every branch of the Traffic Department up to 1912, when he was appointed assistant foreign freight agent at New York. In August, 1914, Mr. Couse was appointed foreign freight agent at Baltimore, and at that time enjoyed the reputation of being the youngest traffic official in the Baltimore and Ohio.

With the entry of the United States into the World War, Mr. Couse's opportunity came in the way of his being appointed a member of the Freight Traffic Committee, a body of railroad officials then stationed at New York, who controlled through

W. T. Moore, Foreign Freight Agent

the permit system the movement of all export traffic through the North Atlantic ports; Mr. Couse represented the port of Baltimore.

After peace was declared the control over the movement of export

traffic was still maintained, but at the individual ports through traffic control managers. Mr. Couse was appointed traffic control manager for Baltimore with headquarters in the Baltimore and Ohio Building. This work, together with his position of foreign freight agent, brought him in contact with many persons among whom he gained a host of friends, especially in Baltimore shipping circles.

Mr. Moore entered the services of the Baltimore and Ohio in June, 1871, as clerk at Chase's Wharf, Baltimore. A few months later he was appointed agent at that point and held that position until March, 1882, when he was transferred to Locust Point to take charge of its westbound business. Shortly afterward he was appointed chief clerk, and in June, 1897, was made assistant agent at Locust Point, becoming agent there in December, 1897. Mr. Moore has held this position since then, with full charge of the Locust Point Terminals, a large portion of his work being the handling and supervision of the import and export business.

During the extraordinary conditions that prevailed during the period 1917-1918, Mr. Moore was a prominent figure in handling overseas business. He was appointed assistant to Colonel Amos W. Kimball, who was in charge of the Expeditionary Quartermaster's Department at Baltimore.

Mr. Moore is unusually popular among his friends on the Baltimore and Ohio, is well and favorably known in shipping circles in Baltimore and in his new position should prove a strong addition to our traffic forces.

We wish both Mr. Couse and Mr. Moore continued success in their enlarged fields of opportunity.

Maryland District Breaks Another Record

THE Maryland District has come through with another fine performance. Following the record-breaking loading of the steamship Malden at the Curtis Bay Coal Pier, as published in the June issue of the MAGAZINE, and the record-breaking movement of coal empties to the Somerset coal fields, as published in the July issue, comes now the report of the unloading in the Baltimore Terminals for the week ending July 31, of 7,152 cars.

(Just as we are going to press we learn that the following week's record

was even better, 7,429 cars being unloaded.)

The strenuous efforts of the Baltimore Terminal employees to make this fine showing would not have resulted so well had it not been for real cooperation on the part of a number of our Baltimore customers, who kept their forces on the job on Saturday afternoon and Sunday in order to help relieve the congested conditions.

Among these were the following: Globe Shipbuilding & Dry Dock Company, Weyerhaeuser Timber Company, Standard Guano Com-

F. J. Couse, former Foreign Freight Agent

pany, John H. Geis & Company, American Refractories Company, Baltimore Car & Foundry Company, United States Asphalt Refining Company, Prudential Oil Company, Greenwald Packing Company, D. B. Martin Company, Edwin Bennett Pottery Company, William C. Dorsey, A. Weiskittel Sons, Empire Engineering Company, Inc., Columbia Graphophone Company, M. A. Long Construction Company, Kimball, Tyler Company, Inc., Phillips Bros., Levering Coffee Company, Isaac Benesch & Sons, Chevrolet Motor Company of New York, Inc., Crown Cork & Seal Company, Consolidation Coal Company, and Dietrich Brothers.

We appreciate greatly the support of these industrial interests in helping overcome the car shortage handicap under which our Railroad and others are laboring. Wideawake shippers are fully alive to the fact that the best interests of business in general are largely dependent on the efficiency of transportation and that whatever helps the railroads is now doing double duty for them.

At a Boarding House Table

By J. E. Spurrier

A lady, in speaking of the trip to and from the recent Shriners' Convention, said that in the whole journey of more than a thousand miles the Baltimore and Ohio gave the best service.

"Tell that to a Baltimore and Ohio man," said a fellow-boarder.

She did not know that there was a Baltimore and Ohio veteran seated at the next table, one who wants to pass her word along the line so that all of us may be encouraged.

A System Record Broken!

On August 7 and 8, Saturday and Sunday, the employes of the Railroad, in endeavoring to get equipment released and in cooperation with shippers at many points, unloaded a total of 7,095 cars as against a normal for Saturday and Sunday of 4,401 cars. This is a gain of 61%, a splendid effort and accomplishment, appreciated by every officer of the Railroad, and by business in general—which it will help so much.

From the Governor of Pennsylvania to the Baltimore and Ohio

COMPLIMENTS on our service continue to reach our officers in large numbers. Each month hundreds of letters are received by our Dining Car Department alone from appreciative passengers, and we could fill the MAGAZINE with these and with similar expressions to our Operating and Traffic Departments. They tell of courteous trainmen, on-time trains, beautiful scenery, comfortable rides and, as a reward to the Railroad, they often say "we're going to tell our friends."

We Baltimore and Ohio folks appreciate these letters—it's always nice to be told when you've done a good job. We appreciate them from whatever source, but we're especially happy when they come from individuals whose public positions lend weight and wings to their words. Of such the following is a good illustration. Thank you, Your Excellency!

Commonwealth of Pennsylvania
Executive Department
HARRISBURG

THE GOVERNOR

June 17, 1920.

MR. R. C. HAASE,
Division Passenger Agent,
Baltimore & Ohio Railroad,
24th & Chestnut Streets,
Philadelphia, Pennsylvania.

Dear Mr. Haase:

I want to thank you particularly for the care and attention shown by you and your associates in the Passenger Department of the Baltimore and Ohio Railroad to my party and myself upon our recent trip to the Chicago Convention.

We went on your train No. 7, on June fourth, and returned on train No. 8, June thirteenth. We had excellent service; arrived at the terminals promptly, and, all in all, had a most comfortable and enjoyable trip.

The Baltimore and Ohio is certainly a fine road to Chicago, with its good stone-ballasted roadway, comfortable cars and excellent dining car service.

With congratulations and appreciation,
Very sincerely,

(Signed) WM. C. SPROUL,
Governor of Pennsylvania.

To the Wage Board

By Edward M. Mannix
East Dayton, Ohio

Much has been said in anger about what the railroads pay,
Much has been heard in kinder vein on this from day to day;
While the Wage Board as appointed by our progressive laws
Have toiled hard and unceasingly for the railroad man's just cause.

They have considered fully, from every point of view,
The merit of the workers' claims and what to them was due.
The award which they have rendered is for everybody's good,
The Board has done for us as only real and true men would.

All crafts that work on railroads in North, East, South and West,
Are grateful for the increase and will banish all unrest.
We'll work on with an eagerness and discontent will fall
Before this era of true peace and true goodwill to all.

BALTIMORE AND OHIO MEN WHO WERE MEMBERS OF THE
RUSSIAN RAILWAY SERVICE CORPS

These men were on their way to Vladivostok when the photograph was taken. They are, left to right: Lieutenants Watson, Philadelphia Division engineer; White, of Mount Clare; Murphy, son of R. H. Murphy, Philadelphia Division conductor, and Bottack, of Riverside

Statement of President Willard before the Interstate Commerce Commission, July 8, 1920

It is important that railroad employes have a clear understanding of the present railroad situation, such as may be obtained from the following statement. In this President Willard describes the railroad plant taken over by the Government on January 1, 1918, the number of cars owned by the railroads and their condition, and how the present car shortage has been largely caused by deterioration and inadequate renewals during the war. He states that despite the decrease in car miles per day during Federal control, he believes that with the proper support from shippers, the average can soon be increased, resulting, in effect, in a greater car supply. He mentions the unprecedented car congestion caused by the recent strikes and expresses the hope that the authority to adjust wage disputes given to the Labor Board by the Transportation Act of 1920 will eliminate further strike trouble. Finally, he affirms his confidence in the future of the railroads under private ownership and management, provided only all factions recognize present handicaps and cooperate toward their solution.

IT IS undoubtedly true that under existing conditions the railroads as a whole are not able to furnish, or at least they are not furnishing, the transportation necessary to meet the present requirements of the commerce of the United States, and this situation presents a serious and difficult problem which must be dealt with; but like all other problems, it can be dealt with more effectively if first of all there is a full understanding of the entire situation. It may be helpful in that connection to review some of the things that have happened in connection with the railroads in the somewhat recent past.

When the Government of the United States took possession and assumed control of the railroads on the first of January, 1918, the carriers so taken over owned at that time approximately 2,260,000 freight cars, of which number 5.7 per cent. or 128,780 were reported as in bad order and unfit for service. During the 26 months' period of Federal control the Government purchased roundly 100,000 freight cars and 2,000 locomotives, which was somewhat less than the number of freight cars and locomotives which the same railroads had been in the habit of buying during each 12 months' period previous to Federal control. At the termination of Federal control, on March 1, 1920, the same railroads reported ownership of 2,362,000 cars or about 102,000 more than at the beginning of Federal control. They also reported 6.7 per cent., equal to 153,727, as in bad order, or 25,000 more bad order cars at the end than at the beginning of Federal control. During the period of Federal control the Government did not retire as great a number of cars as the companies had been in the habit of retiring during similar periods of time in the past, because of obsolescence and for other reasons.

Previous to the period of Federal control it was customary for the

railroads generally to be governed by the Master Car Builders' Rules in connection with the interchange movement. During the period of Federal control this practice was changed and cars were exchanged freely between the carriers, providing the running gear, safety appliances, air brakes and draft gears were in good shape, regardless, to a large degree, of the condition of the cargo carrying box. The result was that the general condition of the freight cars when considered as carriers of freight was perceptibly lower at the end of Federal control than at the beginning, and much lower even than was indicated by the condition reports which I have already quoted. Investigation made since the termination of Federal control has developed that thousands of cars are running today and reported currently as in good order—meaning that they are safe to run—while at the same time they are unfit to perform the service for which they were designed. This fact is particularly noticeable in connection with the box car equipment. One large western carrier has recently reported that at the beginning of Federal control there were on its lines 15,000 box cars suitable for carrying grain, while at the end of Federal control there were only 3,000 box cars on its line suitable for that purpose. It is the general impression among railway officers, based upon a somewhat incomplete survey, that from one-fifth to one-third of the box cars in this country have been permitted to deteriorate from the floor upwards to such an extent that they are actually unfit to carry a general merchandise business, such as grain and flour, etc. The same condition obtains, but probably to a less extent, as regards open top equipment, and particularly coal carrying cars.

At the beginning of Federal control the records showed that each of the railroads in the United States

had upon the average about 44 per cent. of its own cars upon its own line, while at the end of Federal control the reports showed that each railroad had only about 22 per cent. of its own cars on its own lines.

For the reason above mentioned, that is to say, because of the relatively small number of home cars on the individual railroads, it has been impossible for the different companies during the short period that has elapsed since Federal control, to find out definitely the actual "condition of their own cars. One of the eastern coal carrying roads has recently developed that it had on its own line upwards of 1,000 of its own coal carrying cars reported as in good order, but which were actually unfit to carry coal or heavy material, and were so marked. These cars, it is true, were safe to run with a light load such as cinders, but were unfit to carry the business for which the cars were designed.

The last monthly report submitted by the carriers shows 7.4 per cent. bad order cars in the United States as against 5.7 per cent. at the beginning of Federal control, an increase of 50,000 cars unfit for use and actually out of service. The increased percentage of bad order cars shown on last report is probably due in large part, if not entirely, to the recent re-establishment of Master Car Builders' interchange and inspection rules. It should ordinarily be possible to keep the number of bad order cars below 4 per cent. of the total number owned, and if that condition could be brought about today, it would result in immediately making effective on the railroads as a whole in the United States more than 75,000 cars that are now out of service because unfit to run. This is one of the first and most important problems confronting the carriers at the present time.

This particular phase of the problem has been made more difficult

because of certain things that happened during the period of Federal control. To be specific, previous to Federal control much of the freight car repair work on the railroads in the United States was done on a piece work basis. During the period of Federal control piece work practice was discontinued on all of the railroads by order of the Director General, and it is commonly believed that this change in practice has had the effect of reducing the efficiency of the car repair forces and plant by at least 30 per cent.

During the period of Federal control national agreements were entered into between the Director General and the different crafts employed in the railroad service, and the agreement which applies to men employed on freight car repairs contains certain limitations and restrictions which interfere seriously with the employment and efficiency of the workmen in that department. This also has cut down the capacity of the railroads to repair cars.

However, the outside car building companies in the past have generally been organized on a piece work basis and are so organized today, and they are free from the restrictions of the railroad national agreement above referred to, and not having new work sufficient to keep their plants in full operation, they are in position to undertake repair work for the railroads, and many thousands of freight cars are now being repaired by such outside concerns. This arrangement will result in making fit for service much more quickly than would otherwise be the case, many of the cars now unfit for service, and for the reasons above mentioned, at a considerably lower cost than if the same work were to be done by the railroads themselves. Notwithstanding every effort that can be made, it will probably be six months or a year before it will be possible to get the existing equipment of the railroads in as good and serviceable condition as it was at the beginning of Federal control, or in as good condition as it ought to be under existing circumstances.

Another important phase of the problem is the use that is actually made of the car when it is in condition fit for service. It is customary to measure the use of railroad cars by the average load carried and by the average miles per day which the cars travel. The low average miles per car per day made by the American railroads in the past has invited constant criticism on the one side with unsatisfactory efforts to explain on the other side.

During the fiscal year ending December 31, 1916, the freight cars on all the railroads in the United States as a whole made an average of 26.9 miles per car per day. This was the highest annual average miles per day shown for the American railroads as a whole at any time within the last ten years. I have not examined the records previous to that date. During 1918, under Federal control, the average miles made by freight cars per day was 24.6 and in 1919 it was 23.1. No reports have been submitted since the termination of Federal control.

While upon the face of it an average movement of only 27 miles per car per day seems inexcusably small, especially in times of car shortage, like all other questions, there are also two sides to this. When we say that a car makes 27 miles per day, we mean that if the total miles made by any given car during a year should be divided by the number of days in the year, the result would be 27. Not infrequently it has been said, in criticism of the railroads, that a man could walk faster than the average movement of a freight car. Of course, such comparisons are without justification and misleading, and are certainly not helpful. The average freight car is probably loaded at least 25 times each year. Under the rules generally in effect the shipper is permitted 48 hours free time in which to load a car, dating from 7.00 a. m., following the hour of actual placement. The free time so allowed does not include Sundays and holidays, and there are more than 60 Sundays and legal holidays each year. After a car is loaded, it is taken from the loading track to some terminal, put into a train and started on its way. If the movement is all on one railroad, there ought not to be much delay in transit, but sometimes the car moves over several different railroads and there are always some delays incident to the transfer between the different lines. When the car has finally reached its destination, the consignee is also given 48 hours free time in which to unload it, and if the car is loaded with coal for tidewater or the Lakes, an average of five days free time is permitted, and if it is loaded with export freight for tidewater points, a free time allowance of ten days is permitted. Owing to the nature of the service, cars are frequently damaged in transit or when switching, and occasionally, if not frequently, the load must be transferred from one car to another, and then the damaged car must be placed on the proper track for re-

pairs. Customarily no repairs are now made on Sundays or holidays, and the repair forces are all now upon an eight hour basis.

Calculations that have been made in the past would seem to indicate that the average freight car is actually in a train moving between one terminal and another 2.6 hours out of the 24, or about 11 per cent. of the time; that it is actually placed at the service of the shipper or receiver about 37 per cent. of the time, and that the rest of the time it is in the process of being moved to or from the place where loaded or unloaded, to the terminal where it is put into trains, or is on transfer tracks or being repaired, etc.

Undoubtedly much can be done by the railroad itself to bring about a better use of the cars that are actually fit to run, but the railroad alone cannot do all that is possible to be done in that connection. The maximum efficiency of freight cars can only be realized by means of effective and sympathetic cooperation between the railroad and the user. While the highest annual average movement per car per day upon the railroads as a whole during the past ten years was only 26.9 miles, I believe it should be and really is possible to obtain an average movement of 30 miles per day under normal circumstances. Some railroads do make as high as 40 miles per car per day, but it seems hardly probable that such results can be obtained immediately on all roads and particularly by the railroads serving the large industrial centers and the coal mines, but I do believe that as a whole an average movement of 30 miles per day is or ought to be attainable. To accomplish this the individual railroads should first of all keep their cars in the best possible condition, and this is desirable from every point of view for reasons of economy as well as of efficiency. I believe it is possible to keep the total bad order cars as low as 4 per cent., certainly as low as 5 per cent. of the total number owned.

It is important, especially in times of car shortage, that the shippers should load cars as quickly as is economically possible and practicable after they are received. The shipper also should furnish prompt and definite billing instructions, and the instructions so furnished should take the car if possible to its ultimate destination. Much delay is caused by the practice of billing cars subject to ORDER OR RE-CONSIGNMENT in transit, and numerous other devices that have come about from time to time. All arrangements

of this kind serve to retard the movement of cars. All arrangements of this kind are in effect a special privilege aside from the service of transportation, and in times of car shortage such privileges are at the actual expense of those whose business is interfered with because of their inability to ship at all.

Railroad statistics show that the average carload on all the railroads in the United States is only about 70 per cent. of the carrying capacity of the car, and in addition to that about 32 per cent. of the total car mileage is made with empty equipment. A great deal can be done towards getting a more effective use of cars by increasing the carload, and this is a matter almost entirely within the control of the shipper, and serious consideration should be given among other things to the revision of minimum carload regulations, to the end that a more effective use be made of all cars.

It is of course incumbent upon the railroads to do everything that is economically possible and practicable at all times to reduce all delays to a minimum. I need not at this time discuss in detail what the railroad can and ought to do, but I am sure if the carriers and the shippers will all cooperate, very great benefit will result therefrom. The extent of the benefit may be indicated somewhat by the fact that an average increased movement of one mile per car per day for all of the cars in the United States based upon present performance, would in effect add 100,000 cars to the available equipment, and an average increase of one ton per each loaded car would also add in effect 80,000 cars to the available equipment.

Assuming that the carriers will do all they can to put the existing equipment in serviceable condition as soon as possible, and assuming that the carriers and the shippers together will do everything they can in co-operation to make the best possible use of the equipment available, there will still be a shortage of cars for some months to come, and until such time as the railroads can provide, by purchase or construction, the number of cars and engines necessary to take care of the peak-load, what else ought we do to meet the situation? Fortunately under the new Transportation Act of 1920, the Interstate Commerce Commission is authorized to deal promptly and effectively with emergencies of the kind just mentioned, and I would suppose that the Commission would be governed by the desire at all times to follow such a course as would seem to promise the greatest good to the greatest number. Of course, such a test is only relative, although in times of emergency it ought not to be difficult to decide, if there is only one car available, whether it should be used to move foodstuffs and fuel which may be immediately needed, or something else of less immediate importance to the welfare of the public as a whole. The Commission, being fully informed, it will undoubtedly use its best judgment under any given circumstances.

There is one other phase of the problem which I have not so far referred to, but which has had a very definite bearing on the situation during the last three months. I refer to the numerous strikes of railroad men that have been taking place since early in April. There are, I suppose, approximately 2,000,000 men employed by the American railroads. I do not know how many have actually been on strike at any one time, or, as they have preferred to put it, on vacations, since the movement started in April, but I should judge from such reports as I have seen that probably at no time have more than fifteen or twenty thousand, perhaps thirty thousand employees been out of service, a relatively small percentage of the total number employed. It so happens, however, that the strikes have occurred chiefly in terminals and at other points where a minimum number of men, by withdrawing from the service, would cause the maximum amount of inconvenience. One effect which the strike in Chicago had is clearly shown by figures kept by the Car Service Commission in Washington. When the railroads were turned back to the owners at the end of

Don't drift. Stay aboard the good ship "Steady Job" and get somewhere!

Federal control, reports showed that in the United States as a whole about 100,000 cars were awaiting movement. At the end of March the number so held had been reduced to 90,000. The Chicago strike began early in April and by the middle of that month the number of delayed cars awaiting movement in the country as a whole had reached the unprecedented figure of 288,000. These cars were not only unnecessarily delayed, but they were in effect absolutely withdrawn from service. It is true that since the middle of April the number so held has been gradually reduced until today it is substantially the same as it was the first of March, but even so, the number of cars now held awaiting movement is 60,000 or 70,000 greater than it ought to be, and in my opinion greater than it would be if the labor difficulties which have interfered so seriously with the freight movement for the last three months should be cleared away.

You are all more or less familiar with the labor situation and I need not discuss the matter in detail. It may be fairly hoped, I believe, that when the award is announced by the Labor Board, now sitting in Chicago, the difficulties that have confronted the railroads in this respect will disappear, and if thereafter the yardmen and other employees having had their pay and working conditions satisfactorily adjusted, will then take hold and work as well as American railroad men know how to work when they want to, I am hopeful that the railroads will be able to make the existing equipment, by virtue of increased mileage, much more efficient and in that way gradually bring about a normal condition. In the meantime the fullest possible cooperation should be had between the railroads and the

Copyright, 1920, New York Tribune

shippers. The railway managers appreciate the responsibility that rests upon them under existing circumstances. I myself believe that the institution of private ownership and operation of the railroads is at stake, and that the test which the public will apply to the question of whether or not private ownership is to continue, will be the test of service. The railway managers are willing to meet that test. They appreciate that the railroads as a whole must furnish the transportation needed by the country as a whole, and that it will not satisfy the requirement if some of the railroads furnish ample transportation while others are not able to do so. It is the definite purpose of the railroads, by voluntary effort and cooperation, to see that in times of emergency all facilities are used in the most effective manner, in order that the public as a whole may realize therefrom the greatest measure of transportation service. It should, however, be kept in mind that at the present time the railroads are called upon to move an unprecedented amount of business with an impaired and insufficient plant. I do not wish to be understood as criticising the Government because of the condition of the railroads; I prefer rather to think that their condition is one of the by-products of the war. In any event, if the war had not happened, I believe the railroads would have been able to perform the transpor-

tation service of the country as well today as they did generally before the war, but regardless of the cause, the problem confronting us, as I see it, is this—with a certain limited amount of transportation plant under the conditions of private ownership, how can that plant as a whole be used so as to perform the greatest amount of transportation in the public interest. I believe it can be done by sympathetic and active cooperation between the shippers and the railroads, and I believe further that for a time it will be necessary for the Interstate Commerce Commission in the exercise of the emergency authority given it under the Act to order priority of service in favor of certain commodities. I do not think it will be necessary to wholly curtail the movement of any particular kind of business. I do think it will be necessary for a time, however, to give preference to certain particular kinds of business more important than others from the public standpoint. I also believe, if a way can be found so that the railroads can in the near future place orders for such additional cars and engines as seem necessary and so that the new equipment will be available for next year's business, that by another summer the railroads will be able to take care of all the business of the entire country. This, they understand, is what they will be expected to do. This is what they are attempting to get in shape to do.

Giovanni Cugini, Model Sectionman, Awarded Prize

By A. E. Dwire
Supervisor

GIOVANNI (JOHN) CUGINI, sectionman, Wells Creek, Pa., has been awarded a prize of \$25.00 for the splendid condition in which he kept his section on the Somerset and Cambria Branch during the whole of the year 1919. The accompanying photograph shows

Sectionman Cugini and his gang. They are, left to right, front row: Louis Gusbar, Charles Peterson, Nicholas Cugini, Charles Kregar. Back row: Carmine Cugini, Giovanni Cugini, Dominico Cugini. Carmine and Nicholas are the sons of the sectionman, and Dominico is his brother.

Sectionman Cugini and his gang

Mr. Cugini is 43 years old and has charge of the maintenance of the tracks and the protection of the property between Geiger and Coleman, a distance of six miles of single track and six miles of siding, making a total of twelve miles, with 32 switches and 12 road crossings to care for.

Over this section the trains must travel at the rate of 40 miles an hour, and during the past year, no accidents of any kind have been attributed to his work, or those employed under his supervision. During the year 1919, Cugini and his men renewed 2,500 cross ties, 16,716 board measure switch ties, made frog and rail renewals, and was able to assist other sections on 90 days of the year. The prize has been awarded him for having the best kept section on the Connellsville Division. His fellows call him "a model employe," and John says he is going harder than ever on the race for the 1920 prize.

The Price of Forgetting

THERE is time in the day's work for being human. Affection, kindness, genuine friendships—these sometimes are the things that are forgotten. Sometimes, for forgetting, we pay dearly—but always we pay.

A Chicago business man has paid in suffering. He told of it in a letter to a friend, reproduced in *Lumber*.

"One year ago today," he wrote "I sat at my desk busy with the month's bills and accounts when a bright-faced, starry-eyed lad of 12 rushed in and impetuously announced: 'Say, Pa, this is your birthday; you are 55 and I am going to give you 55 kisses, one for each year!' and he began to make good his word when I exclaimed:

"'Oh, Andrew, don't do it now; I'm too busy.'"

"His silence attracted my attention. Looking up, I saw his big blue eyes filled with tears, and apologetically said: 'You can finish tomorrow.' He made no reply, but was unable to conceal his disappointment, his face wearing a grieved expression as he walked away.

"The same evening I said: 'Come and finish the kisses now, Andrew,' but he did not respond to the invitation.

"Two months later, in consequence of an accident, the waves of the Fox River closed over his body, and we carried him away to sleep near the village where he loved to spend his summer vacations. The robin's note was never sweeter than his voice, and the turtle doves that coo to their nestlings, where he sleeps were never so gentle as my little boy who left unfinished his love-imposed task.

"If I could build a ladder to the skies and find him there; if I could only tell him how much I regret the thoughtless words spoken, and could be sure that he understands how my heart is aching because of my unkind request, there would be no man in this wide world so inexpressibly happy as the one who sits today and thinks how he prevented an act that love inspired, and how he grieved a little heart as tender as the mercies of God."—*The Log of the Long Bell.*

Assured that our readers will welcome advice and suggestions on the all-important problem of health preservation and life extension, based on the latest advances in medical science, it will be the purpose of this section of the MAGAZINE to present brief and instructive articles each month by members of the medical staff of the Relief Department. We know our efforts will appeal to our readers. If only a few profit by the advice offered, our contribution to the sum of human happiness will be considerable, and our service of value. The addition of one, five or fifteen years to a life is well worth the task.

Colds

By Dr. A. J. Bossyns

Medical Examiner, Baltimore, Md.

OF ALL ailments to which mankind is subject, perhaps none is so common and so little understood as colds. The term "cold" is popularly but wrongly used to cover any ache, inflammation or indisposition that comes along, and a cold is usually attributed to drafts, exposure to dampness, or to sudden changes in temperature. As a matter of fact, most, if not all of the so-called colds are infections due to living organisms; are highly communicable and spread rapidly through homes, schools, or wherever numbers of persons congregate. Sitting in a draft, getting wet, or experiencing a sudden change of temperature, cannot, in the absence of germs, produce colds, but they tend to lower physical vitality and thus make infection easy should the germs be about.

Persons having colds in the early stages, cough and sneeze, and thereby liberate millions of germs which are carried by air currents in all directions. Susceptible persons quickly become infected and in turn spread more germs. All such individuals should stay at home, cover the mouth and nose with a handkerchief when coughing or sneezing, use their own towels and drinking cups, and at least once a day, sterilize their towels and handkerchiefs by boiling.

A typical infectious cold begins with an inflammation of the air passages, with sneezing and a "stopped up" feeling of the head. The secretions from the nose are at first watery and profuse, but they soon become thick and purulent. Sometimes the infection is limited to the nose, but more often it involves the throat and extends down the chest to the bron-

chial tubes, causing the very common bronchitis.

While colds are usually harmless in themselves, the danger lies in the frequent complications of ear trouble, pneumonia, tuberculosis and organic diseases.

To prevent an infectious cold, it is necessary either to avoid the germs or to build up a body resistance to withstand them.

The attack of micro-organisms and the way to combat them have been described in the preceding issue of the MAGAZINE. It might be well to repeat that resistance is developed by careful attention to hygiene. Sufficient sleep in well ventilated rooms, eating of plain, wholesome foods in moderation, daily bathing, outdoor exercise and sunshine will so strengthen the body and increase resistance that there will be little difficulty in combating colds.

The cure of a cold is easily accomplished by going to bed for three or four days, spraying the nose and throat with an antiseptic solution, keeping the bowels open and by the use of simple home remedies. In severe attacks the services of a physician should be promptly secured. As an ounce of prevention is worth a pound of cure the development of an immunity by proper living is the only way of avoiding or combating a cold, or for that matter, any other disease.

Overheard at the Medical Quiz

Prof. Sapio: "Dr. Jones, many people believe that poultices of bread, onions, flaxseed, elm bark, potatoes, etc., possess individual merit. Is there anything in this impression?"

Dr. Jones: "No, sir! Poultices are only of value from the fact that they

retain heat and moisture for a long time, and are accordingly helpful in allaying pain and hastening recovery from boils, abscesses, etc."

Prof. S.: "But how do you account for this impression?"

Dr. J.: "As necessity is the mother of invention, our grandmothers used these ingredients as the best means at hand, and each was efficacious from the heat and moisture afforded and not on account of any healing power of the ingredient."

Prof. S.: "In modern times what is the best poultice?"

Dr. J.: "Hot towels, or a hot water bag, covered with a moist towel. They are clean, easily obtained and furnish all the requirements of a poultice."

Prof. S.: "Quite true, and further, this method has not the disagreeable odor and other objectionable features of the old style poultice."

Safety Ideals

By William D. Lenderking

Safety Agent

IN THE general scheme of things today, waste has no standing in any modern organization. The extravagance of which we as a nation have been guilty has been brought home to us as a nation and as individuals and we now find ourselves confronted with conditions which give us many misgivings when considering our future needs.

Many of us, no doubt, are thinking of where we can conserve our resources, where we can prevent WASTE in order to supply our material comforts. How many of us, let me ask my readers, are striving to eliminate the HUMAN WASTE with which we are still so recklessly extravagant? How many are striving to prevent this with the same insistence that we expect of our wives and children to prevent waste in the home? How many are conscious of individual effort to prevent unnecessary waste of life and limb? How many realize that man's best asset is a sound body? Human waste (there can be no line of cleavage between human and economic waste) is appalling. There is no excuse that can be offered to justify the great amount of lost human energy nor to justify the great number of cripples who today represent a by-product of industry.

Much, if not all of this WASTE, is due to the neglect of obeying old established rules governing certain conditions and for failure to accept and heed advice given by experienced men who gained their knowledge under trying and adverse conditions

as compared with those under which similar service is performed today.

What can we do to prevent this loss to the community? I am convinced, in order to obtain results that will be permanent and self-sustaining, that we must not stop with words of advice to the grown-ups. We must, besides, begin the training of young minds in the homes and schools in order to inculcate the Safety Ideal—an ideal which cannot be restrained but rather will gather force and go forward when the unbounded enthusiasm of youth grasps the motive which actuated the pioneer in this humanitarian work.

The world owes no man a living. On the other hand every youth owes the world a life of usefulness. The world has witnessed many deeds achieved by the youth of the ages. At the age of 15 Mozart composed an opera, and at 30 he was the best known composer in Europe. At 27 Napoleon led his armies across the Alps into Italy. At 24, Marconi, with unbounded faith, discovered the law which gave us the wireless. Many more could be cited. There awaits, however, for the youth of this nation, the consummation of one of the greatest ideals ever striven for; the SAFETY IDEAL. When this is thoroughly instilled into the hearts and minds of the present generations, it will eliminate carelessness and thoughtlessness, the two greatest enemies of mankind. And when this becomes an accomplished fact HUMAN WASTE will be reduced to a minimum. When youth is aroused to the importance of the part he must play in this humanitarian work, then and not until then will "Safety First" become a slogan which will bear the fruit that will benefit all posterity through the elimination of needless waste.

Saving the Little Things

By M. B. Wild

Statistician

WHEN one observes the attention being paid to the saving of nails he realizes that times have changed. Some years ago, particularly when efficiency engineers of all sorts were active and were carrying great prestige, it was not uncommon to read paragraphs to the effect that if a workman dropped a nail or a sliver of wood or some other cheap piece of material, it was uneconomical for him to stop to pick it up because he lost time in so doing. Of course, in the case of a good, conscientious man he would pick up what he had dropped when he had got through with his job. But, in all industry, we have to deal with the average and not with the superior man.

Efficiency has been looking too much at output and not sufficiently at the waste in connection with the output.

Under the above caption the *Railway Storekeeper* for May, said:

"Maybe you have heard that old poem of seventeenth century design:

Because of a nail, a shoe was lost,
Because of a shoe, a horse was lost,
Because of a horse, a rider was lost,
Because of a rider, a battle was lost,
Because of a battle, a Kingdom was lost.

"While we hope it won't go quite that far with the railroads, there is a direct application of this little story right here in railroad operation. It is the little things that count.

"Materials are real money these days, and old material picked up off the right of way and reclaimed is often as good as new material and sometimes better.

"Do you realize, Mr. Railroad Man, that

A track spike costs.....\$.02½
A 1-inch nut costs..... .04
A track bolt costs..... .08
A tie plate costs..... .31
A steam hose costs..... 6.36
A brake shoe costs..... .75
A track shovel costs..... .97
An engine oiler costs..... .71
A lantern costs..... .91
A broom costs..... .48
An air brake hose costs..... 2.44

"Would you believe that during the past year, over TWO MILLION DOLLARS (\$2,000,000) has been expended for the eleven above items by one of the mid-western roads? Think of what it would mean to your road to save even one per cent. of this.

"Remember, that even an apprentice boy who picks up a nut that would be lost, is 'doing his bit,' to possibly the same degree of real efficiency as the executive who saves thousands of dollars through some brilliant feat of reorganization and management."

The volume of both freight and passenger traffic exceeds all previous records and its prompt handling is vital to a successful solution of our present economic difficulties.

The Baltimore and Ohio, therefore, decided to utilize its full resources of power, equipment, fuel, facilities and personnel in the handling of transportation of regular, rather than unnecessary traffic.

The service provided by our regular passenger trains is of primary importance and no matter how unfortunate the discontinuance of excursions may be from the standpoint of those discommoded thereby, the public as a whole must agree that the Baltimore and Ohio took a far-sighted and public-spirited step when it insisted on "Business Before Pleasure."

Americanism

"True Americanism is not something to be exhibited on special occasions, but something that plays a part in our everyday life. It is the kind of loyalty to liberty, justice and law, to our flag and our country, that finds expression in our work, our recreation and our religion. It is something that demands and gives 'a square deal.' It carries with it not only an obligation of passive loyalty but of aggressive loyalty; an obligation to help crush every power that opposes the principles of Americanism.

"These principles are being menaced today as never before by organizations whose influence it is a grave error to underestimate. Their propaganda has spread poison through other organizations which profess loyalty to the Constitution while acting in defiance of it. It makes no difference what these enemies of Americanism call themselves, nor does it matter what purpose they may claim to have in view, for if their efforts were successful it would mean placing the red flag, and all the evil it represents above the Stars and Stripes and all it stands for."

"No true American believes for an instant that these enemies of our country can succeed in undermining the loyalty of our people, but confidence in the steadfastness of a vast majority of the nation to the principles that have made us great and strong, has often led us to assume a too lenient attitude towards public enemies. We cannot meet our problems better than with a firm resolution to think and preach and practice aggressive Americanism."—*The Wire Message*.

Drifting

To do anything successfully, we must first have a definite purpose in mind, or else trust to luck to accomplish it. Luck wins only once in a thousand times and will probably never win for you and me at all. Yet few of us realize the necessity of a definite purpose for every successful undertaking!

A college student, who, on the eve of his graduation had no idea as to his future, carelessly dismissed the subject from his mind by saying, "I'll wait until tomorrow to worry over that; 'Sufficient unto the day is the evil thereof.'" Ask the lawyer, the successful business man, wherein the path of success lies, and the answer will be the same, "In preparedness; we must think today and act today with a definite purpose, not only as to *what* we are going to do tomorrow, but *how* we are going to do it."

The old adage, "A man without a purpose is like a ship without a rudder," has been proved too often for us to doubt its veracity. The question as to why a purpose is not firmly fixed in the mind of every individual is only too quickly answered by the fact that it is so easy to drift aimlessly, so easy to be indifferent, and, above all, so easy to become lazy.

Can You Concentrate?

Here is a chance for you to test yourself and see how you compare with the average person's power of concentration.

Get the second hand of your watch at sixty. Then cross out every letter A in the following jumble of letters.

How long has it taken you? You should be able to perform this test in 90 seconds.

Now figure your percentage. Deduct one per cent. for every five seconds you required over ninety. Count the number of A's you have crossed out. There should be 100, so deduct one per cent. for every one you missed. Did you cross out any letters other than A's? If so, deduct two per cent. for each one.

The result will give to you your ability to concentrate reckoned in percentage.—*The Thermoid News*.

Many People Don't Know

Just to satisfy yourself, ask your friends who don't work for the Railroad what they know about the Railroads' rate problem—you'll be surprised to find how many of them don't know the real facts.

A man on the train recently said to me: "The service you people give is good, especially after the strain of the War. But I can't see why you need this big rate increase." He wasn't a shipper or he would have been better posted. But he was intelligent and fair, and when I told him that while the average cost of other commodities had about doubled in the last few years, the cost of transportation had only gone up about a third, he began to see the light. It was news to him and now he's a booster for the rate increase instead of a knocker.

Meat selling in Chicago at \$23.00 a hundred pounds costs only 66 cents to send to Baltimore—about two thirds of a cent a pound. That charge won't keep any family from a square meal.

In Belgium railroad rates have gone up 100 per cent. since the beginning of the war—in France, 140 per cent. more than two and three times the increases we had up to August 1.

This railroad rate problem is our problem—as well as the Managements'—to educate our friends to the true facts, to remind them that as railroaders, we are producing about the least expensive commodity on the market.

Maintenance and Operation of Air Brakes

By F. Kerby

Supervisor of Locomotive Operation

SINCE the first installation of the air brake, expert demonstrators and instructors have assisted in the education of railroad employes in the proper methods of maintenance and operation of this equipment, and instructions covering all features of this work have been distributed to the employes engaged in maintaining and operating the air brake equipment.

In the limited space available for an article such as this, only the most important features of the subject can be touched upon. But it is to be hoped that employes who handle the air brake will be encouraged to seek further detailed information from the books and circulars of instructions which they can obtain upon application to their officers.

Installation and Maintenance of Air Brake Equipment on Locomotives

To insure good operation the air brake equipment on locomotives must be properly installed with the air gauges in the proper location, so that they may be seen plainly by the engineer, and must be kept in good condition at all times. The engineer's brake valve should be located conveniently, so that it can be operated properly by the engineer. Feed valve, reducing valve, and air signal devices must be maintained in good working order. The air pumps must be in good condition, the main reservoirs drained daily of moisture, pipe connections well clamped and braced, pipes kept free from leakage and brake pipes and cylinders kept tight and free from leakage. Piston travel must be maintained to standard, so as to obtain the proper braking power on the engine and avoid the possibility of harsh slack action and damage to draft gear.

Very often trains part because of the fact that the modern locomotive is only braking at about 40 per cent. of its weight at full braking power. With a long piston travel it requires a greater length of time to obtain the maximum brake cylinder pressure, and would require more air to do the work than with the shorter or standard travel, which results in waste of air and fuel. The rods and levers must not foul on the trucks and connections.

Passenger Train Equipment

The triple valves, brake cylinders, slack adjusters, dirt collectors, and screens should be cleaned and oiled in accordance with instructions. Brake pipe and brake cylinders should be free from leaks. Piston travel should be uniform on all cars in train.

The brakes should be adjusted equally on both trucks and all wheels. The foundation rigging should be examined regularly to see that the levers and rods do not foul in frame slots or on trucks, and that wheels of the same diameter are used in trucks when renewed, if possible.

On baggage, express, and mail cars it has been found that the piston travel is excessive on a large number of the cars. In some cases this is due to the cars not being provided with slack adjusters. Cars in mail and express service do not get to the repair yard as often as they should, to be kept in good condition. If the piston travel is long on these cars, the brake cylinder pressure will build up more slowly, in proportion, because of the excessive length of piston travel. Furthermore, the mail, express, and baggage cars are heavily loaded and the percentage of braking power per ton is reduced. This results in the cars on rear of train having the best holding power per ton of weight and very often causes rough handling of trains, as well as the breaking of knuckles and couplers. The importance of keeping this equipment in good condition is easily seen.

It is also important that the spring slack in couplers be reduced to a minimum, to avoid slack running in and out while making stops.

All couplers should be taken apart and the springs examined every time a car passes through shop for repairs, or at least once every six months or year.

Passenger Train Handling

It is not only the rough stop, but the rough start as well, that brings about complaints or unfavorable comments. Rough handling is very often caused by improper manipulation of the throttle in starting, as well as of the brake valve in stopping. The engineer should be careful to make a study of his train in both starting and stopping. After the engineer makes the first start and stop or slow down, by careful observation he can tell how he must do his work in both cases, afterwards, to avoid complaint and criticism.

The throttle should be opened up gradually until the slack is all taken up in drawbars and couplings and the entire train started, then opened more as it is required. When it is necessary to take the slack to start a passenger train it should be done as gently as possible. In making stops on passenger trains, the engineer should know the characteristics of the road and use the air brakes accordingly.

A stop with a passenger train should be made with one application, when possible, and by using the split reduction method. The initial reduction should not be made too heavy, not to exceed 6 pounds; then a wait for slack action to take place before making any further reduction; then light reductions until the required braking power to stop the train is obtained. When it is necessary to make a two application stop, sufficient time should elapse between the applications to allow the brake cylinder pressure to be fully discharged before making a second application. To insure a satisfactory release of all brakes, the total brake pipe reduction must not be less than 10 pounds. And in releasing the brakes the engineer must use the release position of the brake valve a sufficient length of time to insure the brake pipe's pressure being raised and equalized above the pressure in the auxiliary reservoirs before returning to running position.

It has been indicated by charts that have been taken recently, that some of the engineers do not leave brake valve in full release position a sufficient length of time to insure release of all brakes in train. This results in stuck brakes.

In making water station stops with a passenger train, sufficient time should be taken to make a good smooth stop, without the use of the emergency application, or the independent brake, as it is not an emergency stop and cannot be accepted as such. When it becomes necessary to apply the brakes in emergency, the brakes should not be released until the train has come to a full stop; if the brakes should apply from any other cause, the engineer should immediately place brake valve handle in lap position and allow train to stop, before attempting to release brakes.

Careful manipulation on the part of the engineer will result in smoothly handled trains, even with poor equipment. But this is no excuse for neglecting the equipment and it should be maintained in good condition at all times.

Freight Train Equipment

In order to do good work and get good results, it is necessary to keep the air brake equipment in good condition on freight engines and cars, as well as on the passenger equipment. The engine must be kept free from leakage, especially on brake pipe and brake cylinders. The triple valves, cylinders, and distributing valves should be oiled and cleaned according to instructions.

Defective triple valves on freight cars, due to neglect of maintenance, very often result in an accident and damage to equipment and track. Leaky brake pipes and cylinder packing leathers permit a waste of air and power and are very expensive. The loss of power in a brake cylinder on any car or cars in a train adds so much more weight to be held by the cars that have good brakes. This results in a longer distance being required to make a stop, and in an

emergency case the accident may be serious.

The piston travel on engines and cars should be maintained within the limit of travel, as shown in book of instructions, Form 1118-D. The pressure in brake cylinders and pressure of brake shoes against the wheels is greater with the short piston travel than with the long travel, on cars and some engines and tenders. With the short piston travel, the maximum brake cylinder pressure is obtained in less time and the brakes can be fully released in less time, because of the smaller space to be filled with air and less volume to be discharged.

For grade work it is necessary to give the retaining valves and piping special attention. The retaining valve is connected to the exhaust port of the triple valve and when the handle of retaining valves is placed in the holding position, it retains a certain amount of pressure in the brake cylinder, while the auxiliary reservoir is being recharged.

There are two types of retaining valves in use, the single and double retaining valves. Some valves are of the weight balance and some of the spring balance. The single pressure valves hold 15 pounds pressure when handle is set for holding. The double pressure valves hold 15 and 30 and 25 and 50 pounds. When handle is set in the horizontal position it will hold the low pressure. When set at an angle of 45 degrees it will hold the high pressure. When the handle is in vertical position, it is in direct release.

Handling Freight Trains on Level or Low Grade Divisions

The air brakes on the engines and tender must be in good working condition before leaving the shops. The brakes on at least 85 per cent. of the cars in train must be in good working order, with the brake pipe free from leaks and piston travel not to exceed 8 inches, nor less than 5 inches.

After the engine is coupled to train and the train brakes have been charged to the maximum pressure throughout the train, and where the train has been worked with pressure from yard plant, after receiving the proper signal, the engineer will proceed to make a test of brakes, as follows: He will blow one long blast of whistle and make a 10 pound brake pipe reduction and hold the handle of engineer's brake valve on lap for one minute after exhaust stops blowing, and note the black hand on No. 2 gauge for brake pipe leakage, which should not exceed 7 pounds per minute. After receiving the signal to release brakes, the engineer will do so by placing handle of brake valve in full release position, until brake pipe pressure reaches to within 5 pounds of maximum pressure. Then, after brake valve handle is returned to running position for a few seconds, engineer will return brake valve handle to release position for a few seconds and back to running

again. This is to kick off any of the brakes on front part of train that may have applied by an overcharge.

On freight trains of more than 25 cars, engineers will stop train short at all water stations and coal tipples, leaving air brakes applied, and cut engines off while taking coal or water. If on grade, hand brakes must be set. With long freight trains, stops should be made with one application, but with not less than 2 reductions, the initial reduction to be not less than 8 pounds, followed up with light reductions. When about 40 feet from stop, a further reduction of 6 to 8 pounds should be made, and the brake pipe exhaust blowing at time of stop. The effect of final reduction is to start the slack in at a time too late to run out again, and to have train bunched from front end at final stop. To release brakes promptly after making couplings, following cutting off for coal, water, or switching, the main reservoir pressure should be made as high as possible. In order to obtain this the handle of the automatic brake valve should be placed on lap position a sufficient length of time before coupling is made to have obtained maximum main reservoir pressure, before air is cut into train. It is wrong to have the automatic brake valve handle in running position when coupling to train. After cutting air into train, place brake valve handle in full release position and let it remain there until the brake pipe pressure has reached to within 5 pounds of maximum, then place in running position and charge brake pipe pressure to maximum through feed valve.

After using the full release position to charge brake pipe and returning to running position, brake valve handle should be placed in full release again for a few seconds to release any brakes that may have applied, because of an overcharge on front end of train. But valve handle should not be moved from running to release position when brake pipe is fully charged, for should the brake pipe pressure be raised above adjustment of feed valve, some of the brakes on front part of train are liable to set, because of an overcharge. Brakes on a long train should not be released after an emergency application until train is stopped, no matter how high the speed may be. In case the brakes are applied from train, the brake valve handle should be placed in lap position and steam shut off, until cause is ascertained. A hose may have burst or the train parted.

Grade Braking on Freight Trains

All trains leaving terminals should have the brakes tested and put in condition to be handled down the grades. The brake pipe leakage on train and engine should not exceed 7 pounds per minute and piston travel should not exceed 8 inches. All retaining valves and pipes should be in good condition before leaving terminals and descending heavy grades.

The condition of the air brakes must be determined immediately before starting down, by making a road test. When making this test, engineer will signal train crew by one long blast of the whistle, after which he will make a full service application of brakes and when man on rear of train observes the brake apply on rear car, he will signal to release brakes. After the brakes have been released and the caboose gauge registers a pressure of not less than 90 pounds in brake pipe and the required number of retaining valves have been turned up to holding position, he will signal to proceed. The conductor must know the number of good brakes in train and before starting down the grade he must advise the engineer the number of good brakes in train, also the actual tonnage of train. The higher the tonnage per good brake the harder the train will be to hold.

As the use of hand brakes while running increases cracked and slid flat wheels and interferes with good air braking, the use of hand brakes should only be to the extent of assisting in holding the train on grades in emergency and the hand brakes should only be set sufficiently tight to do the work and avoid heating of the wheels.

In starting over the summit the engineer should make the first application of the air, as soon as practicable, without stalling the train. This is to test out the holding power of the brakes while speed is low, and to charge cylinders and retaining valves, to hold train under control, while recharging auxiliary reservoirs.

The speed of trains on heavy descending grades should not exceed 15 miles per hour. The applications should be made light and as often as necessary to keep train under control. The air pressure on brake pipe and main reservoirs should be as near the maximum as possible at all times. The engineer must exercise good judgment to avoid slack bunching and running out harshly.

Handling of Power Brake Trains

All trains to be handled with power brakes alone on descending grades, should be prepared and put in proper condition at last originating or assembling terminal before reaching grade where it is to be handled as a power brake train. The condition of the air brake equipment must be determined by testing the equipment on each car to see that the brake cylinder packing leather is not leaking, that the retaining valve and pipe connections do not have any leaks and that the piston travel is adjusted so that it will not exceed 8 inches.

The engine must be tested out and repaired, if necessary, so that main reservoir leakage is less than 3 pounds per minute, brake pipe leakage less than 3 pounds per minute, brake cylinder leakage less than 5 pounds per minute, feed valve fluctuation is not more than 2½ pounds, and that air gauges are in working order and register the proper pressure.

Before the engine is coupled to train the engineer will see that the main reservoir pressure is pumped up to the maximum, by placing the brake valve handle on lap position, or by cutting out low pressure governor head with cock at brake valve. After coupling to train, when engineer receives signal to test brakes, he will place handle of engineer's brake valve in full release position to charge train and let it remain in this position until the brake pipe pressure on brake pipe indicator on No. 2 gauge registers to within 5 pounds of maximum pressure carried, when he will place handle of brake valve in running position, and wait until the maximum brake pipe pressure is obtained and equalized throughout the entire train. He will then blow one long blast of the whistle and apply the brakes with a 10 pound reduction, and when blow stops at brake pipe exhaust port, he will note the brake pipe pressure on No. 2 gauge for one minute by watch. If leakage does not exceed 7 pounds per minute, the train is O. K. to proceed, but if the brake pipe leakage is more than 7 pounds per minute, engineer will notify conductor or air brake repairmen and they will repair the leaks or switch the defective brake cars out.

Before descending the grade there will be a retaining valve test made to determine the number of retaining valves that are holding the required $2\frac{1}{2}$ minutes, and if the test develops that the tons per good brake do not exceed 95 tons, or the amount specified for the different grades, the train will be handled with power brakes alone as per special instructions for this work. If the tonnage per good brake exceeds 95 tons, or the amount specified by instructions for the different grades, it will be necessary to use some hand brakes to assist in holding the train on heavy grades; this to be decided on by the conductor and engineer at the expiration of test. Before starting down grade, all retaining valves will be set in holding position.

When trains are handled by power brakes alone on descending grades, after the entire train is over the summit of hill and before speed of train becomes too high, the engineer will make an application of air, of about 10 pounds, to charge up the brake cylinders and retaining valves. As soon as it is found that the brakes are holding, the engineer will release the brakes by placing the handle of engineer's brake valve in full release position and let it remain there until the maximum brake pipe pressure is obtained. Then brake valve handle can be placed in running position until it is necessary to apply brakes again. During the release of train brakes, with the handle of brake valve in release position with the E. T. equipment, the engineer must note that brakes on engine do not hold too hard and overheat and loosen the tires. This can be avoided by releasing the engine brake with the independent brake valve. The running position should not be used on grades to release brakes and recharge same, as feed

valve is only used on level or low grade divisions and will not pass the air back into train fast enough for grade work.

In handling trains on descending grades the speed should be maintained as uniform as possible, by making the applications often and as light as possible. With the uniform speed it does not require high cylinder pressure to hold train and this prevents high wheel temperature and burst wheels, and very often a bad accident. By making light applications, just enough to keep the retaining valves charged up, the speed can be kept at a more uniform rate and less air will be used. It must be remembered that the longer the time between applications the lower the cylinder pressure retained, and it will take more air to build up the cylinder pressure again. By permitting the speed to get too high, it will take more air to reduce speed again and less time to pump up the air pressure and recharge the train before making another application. The air brake is more powerful than the hand brake when fully applied, even when the hand brake is applied with a club.

The retaining valves are practically the same as a hand brake when they are set up, except that the holding power of the retaining valve fluctuates in accordance with the time between applications of the brake. The hand brake, when once set up, has practically the same holding power at all times while set up, and for this reason we have the excessive heating of wheels. Where the hand brakes are set up, in addition to using the air brake, it is very difficult for the engineer to regulate the speed of the

train uniformly, and very often it will be necessary to use steam to keep train from stalling. The use of steam under these circumstances results in excessive fuel consumption and is very expensive.

When handling trains with power brakes alone, it is only necessary to use a drifting throttle at any time on the grade, and this does not consume much steam. It is more satisfactory to leave the control of the train in the hands of one man than it is with 4 or more.

The more trains that are handled on descending grades with power brakes alone, the less accidents we will have, due to broken and slid flat wheels, and the expense of the operation will be reduced, providing the instructions for maintenance and manipulation as herein outlined are carried out

L. Finegan Leaves Service

By H. T. Beck
Mt. Clare

ON JUNE 15, our former General Superintendent of Shops, L. Finegan, informed us of his intention of severing his connection with the Railroad and entering the commercial world.

It is difficult to express the feeling of his fellow workmen in parting with one who has worked hand in hand with them, throughout the most trying period of history, for our Country and for our Railroad. In Mr. Finegan we found a "man of men," broad, liberal, conscientious, and ever ready to help the needy ones.

OFFICE OF GENERAL SUPERINTENDENT OF TRANSPORTATION—BALTIMORE, JULY 17

Mr. Fingcan was born in Chico, California, in 1878. He worked for the Santa Fe and the Delaware & Hudson Railroads, the General Electric Company, American and Baldwin Locomotive Works and the Boston & Albany Railroad before he came to work with the Baltimore and Ohio, May, 1911. From the position of master mechanic at Glenwood Shops, he was promoted to superintendent of shops at the same station. On December 1, 1915, he came to Mt. Clare in the capacity of superintendent of shops and has been with us until this time.

The esteem in which Mr. Fingcan was held by his employes was manifested by their presenting him with a beautiful diamond ring and stick pin. The girls in the Electric Welding Department also surprised him with gifts of a gold penknife and a fountain pen.

In order to define him as the man that we knew him to be, we compare Mr. Finegan to the man in Kipling's poem "If." This poem is quoted below, for we know of no better comparison.

"If"

By Rudyard Kipling

If you can keep your head when all about you

Are losing theirs and blaming it on you;
If you can trust yourself when all men doubt you,

But make allowance for their doubting you;

If you can wait and not be tired by waiting,
On being lied about, don't deal in lies,
Or being hated don't give way to hating,
And yet don't look too good, nor talk too wise.

If you can dream—and not make dreams your master;

If you can think—and not make thoughts your aim,

If you can meet with Triumph and Disaster
And treat those two impostors just the same;

If you can bear to hear the truth you've spoken

Twisted by knaves to make a trap for fools,

Or watch the things you gave your life to,
broken,
And stoop and build 'em up with worn-out tools.

If you can make one heap of all your winnings

And risk it on one turn of pitch-and-toss,
And lose, and start again at your beginnings
And never breathe a word about your loss;

If you can force your heart and nerve and sinew

To serve your turn long after they are gone,

And so hold on when there is nothing in you
Except the will which says to them:
"Hold on."

If you can talk with crowds and keep your virtue,

Or walk with kings—nor lose the common touch,

If neither foes nor loving friends can hurt you,

If all men count with you, but none too much;

If you can fill the unforgiving minute
With sixty seconds' worth of distance run,

Yours is the earth and everything that's in it,

And—what is more—you'll be a Man,
my son!

Next to His Bible—The MAGAZINE

BALTIMORE, Md., July 7, 1920.

THE EDITOR,

BALTIMORE AND OHIO MAGAZINE,

Baltimore, Md.

Dear Sir—Please change the address to which you have been sending my copy of our MAGAZINE to No. 16 Rosedale Avenue, Hamilton. Am living in the city again. Received numbers for May and June, a favor I appreciate very much. Next to my Bible, I believe I would rather read the MAGAZINE than any other reading matter I have.

Again thanking you for your kindness to an old pensioner, I am, with much respect,

Very truly yours,

(Signed) DANIEL W. DUVAL.

Car Mile Rhyme

Little Bo Peep

Shipped two of her sheep

On our Q. D. train from the West,

And Nanny and Billy

Brought good prices at "Philly"

For they reached there ahead of the rest.

The Veterans' Picnic at Somerset

THERE was an old story told at beautiful Edgewood Park at Somerset, Pa., on July 29; an old story of old experiences, old anecdotes, old railroaders and old friendships. Old in point of years and service were the principal characters in the story—those veterans of the Baltimore and Ohio—some of them as old as many of the beautiful trees under which they rested and lunched and talked. Like these full-leaved trees also were they in their renewal of youth on this particular occasion, for their minds and hearts harked back to earlier times, and they drank at the fountains of boyhood and youth and sturdy maturity as they recalled the scenes and friendships of bygone days.

One of our Maintenance of Way officers put it attractively that morning as we were

running along the beautiful gorge cut in the mountains by the Castleman River:

"We don't have to worry about our track up here—somehow it takes care of itself. It seems to grow along the mountain side just like the families of our trackmen do. Grandfather, son, and grandson sometimes work on the same section, the young generations born with railroading in their blood, and with a mark of perfection in track maintenance always before them in the work of their elders."

Of such a strain of steadfastness, hardihood and Baltimore and Ohio ancestry and relationship were the hundreds of veterans from Cumberland, Connellsville and Pittsburgh who, with their clans running the attendance to more than five thousand, made their pilgrimage to Somerset that day.

And what a day! An unclouded sky, the air cool, bracing, sparkling, the greensward so clean and soft and well tended that any spot on its broad expanse beckoned one to a comfortable seat; great, clean limbed, healthy trees; attractive pavilions for the speaking, dancing, restaurant and the concessions; charming little cottages for vacationists; a splendid baseball field; a wonderful fountain of delicious spring water;—all these things make the park an ideal rendezvous for a holiday.

Pittsburgh sent 13 coaches in its special, Cumberland 9 and Connellsville 7, and by eleven o'clock these had arrived safely at the park. Connellsville brought a band of 30 pieces and Cumberland its band and shop quartet with the veteran, "Ed" Warner, in charge.

Meantime, the inspection train of President Willard from Baltimore had arrived, and gone up the branch to Somerset to see the most attractive little brick station of the Railroad at that point and to make a brief inspection of the engine house facilities and yard. Everything looked as spick and span as could be, even to the long trains of gondolas, carefully and neatly loaded with the precious product of the hills above and about the town. While the veterans were beginning their reunion and many officials of the Railroad had come to make holiday with them, the great coal trains reminded one that other men of the rail were doing their best to speed up the movement of the much needed fuel to the big cities for the industries and for export.

With President Willard on the special were Vice-Presidents Galloway and Fries; J. S. Murray, assistant to president; S.

The Cumberland Band welcoming the veterans at the park entrance

Part of the crowd at the Cumberland-Connellsville ball game—there were as many more spectators under the trees beyond the outfield. This play, on a two-bagger, gave Cumberland its first two runs toward their winning score of 7 to 2

Ennes, general manager, Eastern Lines, and his assistant, C. G. Martin; George H. Emerson, chief of motive power and C. A. Gill, superintendent of motive power, Eastern Lines; Earl Stimson, chief engineer maintenance, and S. A. Jordan, engineer maintenance; W. B. Calloway, passenger traffic manager; L. C. Sauerhammer, assistant to operating vice-president; J. F. Keegan, general superintendent, Pittsburgh District, and T. J. Brady, superintendent, Connellsville Division.

The official party was met at the station by a delegation of the veterans headed by George H. Sturmer, their Grand President, Harry Allison, President of the Cumberland Division Association, George A. Bowers, President of the Baltimore Division Association, and others. The Cumberland band

led off and a parade was formed, with veterans, officials and a generous mingling of younger folks, even to babes in their mothers' arms, in line, to the auditorium.

After a few minutes of informal handshaking on the platform between the veterans, and President Willard and Vice-Presidents Galloway and Fries, the Rev. I. H. Wagner, secretary and treasurer of the Somerset Chamber of Commerce, extended a cordial welcome to the veterans. Mr. Wagner spoke with pride of the park which within the last year has been taken over by Somerset as a municipally owned property and in that period has been considerably beautified and improved. He welcomed the veterans and their friends in the name of the city, of the trustees of the park, of Somerset's women folk and of its families.

He spoke of the cordial relationship between the Railroad and the city and said that the Baltimore and Ohio was always willing to cooperate in every way possible for the advancement of the interests of the city. He also referred to the fact that our employes living in Somerset had been among the most ready and liberal contributors to the fund necessary to secure and maintain the park.

In fact, everything that he said indicated that in this city, at least, the ideal neighborhood relationship between community and Railroad which Mr. Willard has set for Baltimore and Ohio men along the entire Line, is splendidly realized.

Grand President Sturmer graciously acknowledged Mr. Wagner's welcome and, after referring to the great public service of

The Pittsburgh Special, the crew in white suits in the foreground. Note coal train left on its way to the Main Line

President Willard, not only as a railroad man, but also as a public-spirited citizen, standing high in the councils of the nation during the World War, he presented him to the visiting Somerset folk, to the officers and employes of the Railroad, and their families.

Mr. Willard was in high spirits; he is thoroughly at home among men of the rail, with whom he has spent the more than 40 years of his business life. He was humorous and serious by turns, took the veterans into his confidence as he never has done before, and inspired their frequent and hearty applause. His address is so frank and persuasive a plea for the rekindling of that old time loyalty that he knew as a young man in the ranks, that we are glad to be able to print it, beginning on this page.

C. W. Galloway, vice-president, operation and maintenance, followed Mr. Willard. As a real Baltimore and Ohio boy, born in the service because of his direct railroad ancestry of two generations, well-known to many of those who listened to him because he had shared the same tasks and accomplishments with them in earlier days, Mr. Galloway received a rousing welcome.

He spoke in part as follows:

"There is little I can add to the comprehensive talk of our president. He has spoken to you frankly, as man to man, and set forth the true ideal of relationship between the Railroad and its men. There is just one point of importance which Mr. Willard, in his modesty, failed to emphasize, and that is this:

"Under the Transportation Act of 1920, the law under which the railroads are now operating, greatly increased powers are conferred upon the Interstate Commerce Commission.

"Working with the Commission in the closest relationship is the Association of Railway Executives, representing practically all of the railroads of the United States. This Association has recently conferred a great honor on Mr. Willard and,

because he is our president, a great honor on the Baltimore and Ohio, by making him chairman of their Advisory Committee of Nine to handle in an executive capacity with the Commission the important problems of car distribution, maintenance and transportation in general.

"This makes our responsibility as Baltimore and Ohio men greater than it has ever been before. As we have a just and natural pride in the leadership which this appointment confers on President Willard, we also have a consequent privilege and duty in seeing that the Baltimore and Ohio stands in the front rank of railroads from the standpoint of operating efficiency.

"We will try to perform our task so well that we will keep other railroads hard at it to measure up to our standards. Without the cordial support of you men and our other employes we cannot do this, but with you, we can."

If the applause and cheering which greeted Mr. Galloway's brief talk is indicative of the real spirit of our men, there is little doubt but that we are about to enter into an era of unprecedented good feeling and be one of the first railroads to reach the high operating standards which have been set by the Association of Railway Executives.

Following Mr. Galloway's address, Mr. Sturmer declared the speechmaking over and bid the crowd disperse to enjoy themselves.

Instead of having their lunches on their official cars, all of the officers at the picnic brought box lunches into the park and in many happy groups enjoyed the lunch hour with the veterans, their families and friends.

Somerset had taken Cumberland into camp at baseball by a score of 1 to 0 in the morning, but Cumberland got back handily by beating Connellsville in the afternoon session by 7 to 2. At the second game the first ball was thrown by President Willard. Before tossing it to the catcher he said:

"I declare the ball in play. Play square, play hard, play fair. Be good sports, and may the best team win."

No better keynote could be sounded as a guide for us in our everyday work. The man who learns the pleasure of carrying that spirit into every job he tackles, on the Railroad, in his home or on the field of sport, can literally make out of every task that is set for him a real joy, the feeling of having played the whole game of life dead on the level, of having been fair in every relationship, of having the gratifying satisfaction of honest and helpful accomplishment.

Extracts from Remarks Made by Daniel Willard, President, at Picnic Held by Baltimore and Ohio Veterans' Association at Somerset, Pa., July 29, 1920

IT HAS given me very great pleasure to be here today and to have the opportunity of meeting so many of the members of the Baltimore and Ohio family, and particularly the members of the Veterans' Association. The Baltimore and Ohio family is a very large one, consisting at the present time of approximately 75,000 persons, and I want to tell you why I think we all ought to be proud that we are members of this great family.

The Baltimore and Ohio Railroad was the first railroad started in the United States to do a general railroad business. Its charter was granted by the Legislature of Maryland in February, 1827, and the actual work on the project was started in Baltimore 92 years ago this month. At that time the locomotive was almost unheard of in this country and was only in the experimental stage in England. For some years the cars that first ran over the Baltimore and Ohio Railroad were drawn by horses, although some experiments were made with sails and one car was actually equipped to be operated by horse power, but that experiment was not a success. In 1832 a small locomotive equipped with an upright boiler was built

for the Baltimore and Ohio Company, and while very crude, it was a distinct advance in the direction of the use of steam for locomotion purposes. Several engines of this particular type were built and were run on the Baltimore and Ohio Railroad for many years. One of these engines, named the "Atlantic," is still in existence, being stored at the present time in the roundhouse at Martinsburg, W. Va. It is still in condition fit to run, and occasionally is fired up and actually run under its own steam for exhibition, or perhaps I should say historical, purposes.

The science of railroading was new and undeveloped when the Baltimore and Ohio Railroad was started. The early reports of that Company are filled with accounts of interesting experiments conducted for the purpose of determining some of its fundamental principles. For instance, experiments were made for the purpose of determining whether the flange should be on the outside or the inside of the car wheel. As you all know, it was finally determined that it would be better to have the flange on the inside, and that is the standard practice the world over today.

The Folks on the Opposite Page

1—They came in trucks and all sorts of conveyances. 2—These did not get to the Picnic: H. Hause, brakeman; M. F. Heller, brakeman; W. M. Walker, extra conductor; all of Connellsville Division. 3—President Willard chatting with President Allison of the Cumberland Chapter. 4—J. P. Duane, machinist helper, Glenwood, 27 years' service; P. J. Harrigan, mechanical examiner and President of Connellsville Chapter, 52 years' service; John McCabe, machinist helper and Notary Public, Glenwood, 22 years' service. 5—Mr. Ennes and Mr. Keegan admiring Somerset station. 6—At the spring. 7—By special request. 8—F. T. Robinson, engineer, 22 years' service; A. R. King, general foreman, Connellsville shops, 35 years' service; D. G. Wagner, machinist.

The four wheel engine truck which was for a long time a distinctive feature in American locomotive engine design, was invented by a mechanical officer of the Baltimore and Ohio Railroad Company. The first practical use of the electric locomotive was made by the Baltimore and Ohio Company, and the first Mallet locomotive used in the United States was also built for that Company and is still in service. The first message ever sent by the electric telegraph was sent from a Baltimore and Ohio building still standing near our Mt. Clare shops. I believe I am correct in saying that the first school for apprentices was also established by the Baltimore and Ohio Company, and many other important practices have been inaugurated and developed under the direct charge of the officers of our Company. The Boldman Bridge and the Fink Truss were invented by Baltimore and Ohio officers and both designs were used with satisfaction for many years, and until the requirements of heavy modern service necessitated a change in design.

I am glad to be associated with a Company that has contributed so much to the advancement of the science of transportation.

During the war between the States in 1861, the Baltimore and Ohio Company, because of its geographical location, was called upon in numerous cases to render most valuable service to our Government, and in no case was either the Company, the officers or its army of employes in any sense found wanting.

During the great World War, which ended in November, 1918, the Baltimore and Ohio Company was again called upon to render a very important service. As you know, all the railroads in the United States were taken over by the President on January 1, 1918, in order that they might be used in such a way as to render the most effective service in connection with the war program.

Are Any of Your Friends Here?

On the opposite page you will find: 1—Howard Brockey and F. A. Dick, painters, Cumberland, both very happy; do you blame them? 2—The fine family of William McMann, Somerset, electrical helper. 3—The children were there in great numbers. 4—Cumberland's Safety rooters, J. T. Williams and family at the ball game, the Mr. and Mrs. taking turns with the megaphone in warning good railroad Safety boosters to "keep away from behind the bat." 5—E. N. Fairgrieve, car distributor, office of general superintendent, and MAGAZINE correspondent, Pittsburgh, his wife and friends. 6—Flagman H. E. McClure, and Conductor E. Zearfoss, 29 years' service, who handled President Willard's Special to Somerset. 7—Frank B. Appleby, engineer, 41 years' service, and C. A. McGinn, chief clerk to superintendent, Cumberland, and manager of the Cumberland Baseball team. 8—"Smile, please," and they did.

The Baltimore and Ohio Company was called upon during the war to move an enormous quantity of coal, steel and iron required for munitions, and food stuffs necessary for our Allies, and in order to do this the long haul class of business which ordinarily moves over the Baltimore and Ohio rails between its western and eastern termini was largely diverted to other lines. The Baltimore and Ohio officers and employes of every grade and station rendered most important service in connection with the winning of the war.

In addition to the work done by Baltimore and Ohio officers and employes in line with their ordinary duties, nearly 7,000 Baltimore and Ohio employes entered the service of the Government and put on the United States uniform. Nearly 3,000 of that number went to France and all would gladly have gone if called upon to do so. Of those who went to France 51 lost their lives on the battlefields and double that number were wounded. This also is an honorable and creditable record of which we may all justly feel proud.

During the period of Federal control the Baltimore and Ohio property was divided into a number of sections or regions, and its organization was very much disarranged. On that account and because of the diversion of business, which the Company had spent many years in developing, the Baltimore and Ohio probably suffered more as a result of the war than was perhaps the case with any other railroad. Yet no one complained, because whatever was done was thought to be necessary in order that we might the more quickly win the war. But the changes which I have referred to have left many difficult problems to be worked out now that peace has been restored. However, with the hearty support and co-operation which I feel confident we will have of all the members of the great Baltimore and Ohio family, I have no doubt that we will successfully overcome our difficulties in the future as we have always done in the past.

During the period of Federal control it was claimed by many that the magnificent railroad system of the United States, which had been built up on the theory of private ownership and operation, could not in the future be satisfactorily managed on that basis and that either Federal control or Government operation would finally come about. Concerning such an important subject as this there was, of course, a wide divergence of opinion. Personally, I always have been and still am a firm believer in private ownership and operation of railroads because I believe this method assures the best and most economical service, and I always have been and am now opposed to Government ownership and operation of the railroads. Certainly it is clear that Congress, after a very full investigation of the matter, reached the definite conclusion that it was better to continue the system of private ownership and operation, and the

Transportation Act of 1920 was framed with that end in mind.

There is one provision in the Act of 1920 which I wish to discuss briefly at this time, and that is the provision which refers to the settlement of labor disputes which may arise between the railroad companies and their employes. The Act provides, first, that railroad companies and their employes shall make every possible effort to adjust their differences between themselves, but foreseeing that occasions might arise when it might be impossible for the companies and their employes to reach an agreement concerning such matters, the law provides for the creation of a Labor Board to act as a court of arbitration in such cases. The Labor Board consists of nine members, three of whom are to be nominated by the railway employes and appointed by the President, three to be nominated by the railroad companies and appointed by the President, and three to be selected by the President direct—all members, however, to be confirmed by the Senate. You will note that the Labor Board so created consists of the same number as the Supreme Court of the United States and its members are appointed in the same fashion; that is to say, they are appointed by the President and confirmed by the Senate.

It was clearly the intention of Congress to provide, so far as it was possible to do so, a well qualified and intelligent body of men to pass upon the merits of all disputes which might arise between the railroad companies and their employes concerning wages and conditions of employment. The law specifically states that the Labor Board shall fix wages which shall be just and reasonable; not only that, the law lays down certain definite instructions for the guidance of the Labor Board when considering such matters. For instance, the Board is directed to consider the cost of living, the wages paid men engaged in similar undertakings, the hazard of the employment and any other fact or circumstance which ought to be considered in connection with such matters. In fact, the Transportation Act of 1920 places the railway employes in a preferred class, because never before has Congress legislated, so far as I know, in the interest of any particular class of citizens. Never before has Congress said that the workmen engaged in any particular occupation shall always and under all circumstances be paid wages that are just and reasonable, and also be given working conditions that are just and reasonable.

It is true that this action on the part of Congress was not taken primarily in the interest of the railway workers themselves, but in the interest of the people as a whole. Congress recognized the importance in the public interest of uninterrupted service on the railroads. It recognized that a cessation of work on the part of the railroad employes would inflict great suffering and injury upon the public as a whole. Congress apparently also recognized that it would not be fair to

A REPRESENTATIVE GROUP OF VETERANS

Left to right: James A. Schuck, carpenter, Vice-President, Pittsburgh Chapter; Hugh McLaughlin, engineer; C. A. Richardson, engineer, Chairman Executive Committee, Pittsburgh Chapter; William C. Cox, smoke inspector, President, Pittsburgh Chapter, 55 years' service; D. L. Burns, passenger conductor, Treasurer, Pittsburgh Chapter; H. A. Ketzner, yard conductor; M. J. Fleming, train clerk, Cumberland Freight House, 48 years' service; H. Allison, President, Cumberland Chapter, 51 years' service; John Ketzner, carpenter at Cumberland, 51 years' service; W. F. Duncan, painter at Pittsburgh, 35 years' service

the railway workers to deprive them of their right to strike in order to secure for themselves just and reasonable wages and working conditions unless at the same time it provided some other means which would secure for the railway workers equally satisfactory results, and even then it did not forbid the railway employees to cease work in a body, or in other words, it did not forbid them to strike. What it did do, however, was to provide methods and agencies which it believed would secure to the railway workers everything that they could reasonably expect to secure even as the result of a successful strike, and having made such provisions it was hoped that the men would not want to strike, but would accept the arrangement and abide by the decisions of the Labor Board so created.

While there has been some criticism of the labor provisions of the Transportation Act by spokesmen claiming to represent labor, I feel confident that when the Act is more clearly understood, railway employees will realize that they have been given a preferred status and will willingly accept the provisions of the law; further, that in the future the public as well as the men themselves will be spared the suffering and inconvenience certain to be associated with all interruptions of the railway service. If the railway employees can obtain by virtue

of the Transportation Act and by peaceable and orderly methods all that they could possibly hope to obtain as the result of a successful strike, there would seem to be no reason why they should want to resort to such methods of warfare in the future and

HATS OFF, PLEASE!

Left to right: G. A. Schmoll, district master mechanic, Pittsburgh; "Andy" Moore, secretary to general superintendent, Pittsburgh; L. C. Sauerhammer, assistant to operating vice-president; S. Ennes, general manager, Eastern Lines; J. L. Strohmer, secretary to superintendent motive power, Eastern Lines; Archibald Fries, vice-president, Traffic and Commercial Development; J. F. Keegan, general superintendent, Pittsburgh District; Charles L. Todd, passenger conductor; W. W. Picking, district passenger agent, Cumberland

every reason why they should feel glad because Congress has created such agencies as will guarantee to them just and reasonable wages and working conditions without the necessity of resorting to the strike.

The statement is frequently seen in print

the Board of Directors, to appoint the President and all other officers, and in fact, they could own and manage the property themselves. While it is not likely that such an arrangement will be carried out, it is at least interesting to consider how it might be carried out if all of the members of the Baltimore and Ohio family were of one mind and desired to do so.

I have already said that I am a firm believer in the private ownership and operation of railroads and all other forms of property as a general policy, but railroad property is unlike most other kinds of property. The courts have said that it is affected with a public use, meaning that the service performed by the railroad is so closely related to the welfare of the public that the interest of the public must at all times be given first consideration. In some lines of business, in fact in most other lines of business, those who own a property have the right, if they see fit, to stop operations and shut down their factory or business if it does not pay and to start up again if they desire at some other time if they think it

A HAPPY GROUP FROM BALTIMORE

Left to right: J. L. Hayes, division freight agent, Cumberland; J. S. Murray, assistant to president; H. A. Lane, chief engineer; Colonel G. H. Emerson, chief of motive power; C. A. Rausch, secretary to president; J. J. Tatum, superintendent Car Department; W. B. Calloway, passenger traffic manager

will pay. This cannot be done by the railroads. They are required by their charters to maintain not only a constant service, but such a service as will meet the reasonable requirements of the public. They are required to do this at times even if it does not pay them, even if they cannot make any profit by so doing. The Constitution of our country, however, provides that the Government shall not take from any person his property without due process of law, and the recent Transportation Act provides definitely that the railroads shall be permitted to charge rates that will yield what is considered an adequate return upon the value of their properties devoted to the public use, but at the same time and at all times the railroads are required to give first consideration to the interests of the public and character of the service which the public requires. This makes it very necessary that the relations between the public and the railroads should at all times be friendly and that they should rest upon a basis of full understanding.

A group of veterans and officers at the entrance of the park. Right to left: S. Ennes, general manager, Eastern Lines; G. W. Sturmer, Grand President of the Veterans; C. W. Galloway, vice-president operation and maintenance

frequently said in the past when discussing this matter with officers of the Company that I wanted the Baltimore and Ohio Railroad to be looked upon as a good neighbor in all the communities which it serves, and

joined the Association up to the present time, or approximately one-third of the number eligible. I do hope that those who are eligible will soon become identified with the Veterans' Association. It is something that has been created by yourselves. It is an honor to belong to it. The officers of the Company have absolutely nothing to do with its management and I believe that a great influence for good can be exerted through the Veterans' Association. An agency which may be helpful in this connection is the BALTIMORE AND OHIO MAGAZINE. This also is your agency, for, while the entire cost of printing and publishing is borne by the Company, it is, in fact, an open forum and through its columns any member of the Baltimore and Ohio family may send, and is invited to send, his message. We want the Veterans to take an interest in the MAGAZINE and, in fact, we want all employees of the Company to send to the Editor any items that in their opinion will be of interest to the other members of the Baltimore and Ohio family.

I am most happy to be with you today. I have enjoyed the opportunity of meeting so many who have spent their lives largely in the service of our Company. I have been glad to meet their wives, their sons and daughters, and I hope you will have a most enjoyable outing. I trust it will be my good fortune to have many more opportunities to meet with you under similar circumstances. As a parting word, I want once more to urge you all to keep in mind the relationship which should exist between all Baltimore and Ohio officers and employees. It should be a family relationship. I do not want you to feel, for instance, that you are working *for* me; I want you rather to feel that together you are working *with* me and *with* the other officers of the Company and that we are all interested in making the Baltimore and Ohio not only a useful agency to the public, but also a sound and reliable institution in which people may invest their money with full confidence that the great property entrusted to our charge will be managed honestly and efficiently at all times.

Left to right: S. A. Jordan, engineer maintenance of way; J. F. Keegan, general superintendent, Pittsburgh District; his secretary, "Andy" Moore; T. J. Brady, superintendent, Connellsville Division; C. A. Gill, superintendent motive power; G. A. Schmoll, district master mechanic, Pittsburgh District; J. L. Strohm, secretary to Mr. Gill

When I first entered the railway service more than 30 years ago, very rarely did one ever hear anything said about the public character of the railroads. As a matter of fact railroads at that time were considered generally to be very much like any other kind of private business. That theory has been entirely changed within the last 20 years, and I repeat that today it is definitely understood that the public interest is paramount. I am anxious on that account that the Baltimore and Ohio Company should at all times render such a service as ought to meet and satisfy the reasonable requirements of its patrons. This, however, cannot be done unless there is a full and complete understanding on the part of all the officers and employees, of the duties which they owe the public as semi-public servants, which we all are. I hope you will all keep constantly in mind the semi-public character of your employment. I believe it is now the clear intent and desire of the people as a whole that the railroads should be treated fairly, but at the same time the public will expect to be well served in return. I have

I hope you will bear that constantly in mind and endeavor to so perform your duties, to so conduct yourselves as citizens of the community in which you live, that the people will realize that the Baltimore and Ohio Company is in fact a good neighbor and is in fact anxious at all times to do anything that it properly may do to promote the interests of the people and of the communities which it serves. This, in fact, is neither more nor less, as I view it, than our duty under the law, and, furthermore, it is selfishly in our best interests.

So far in my remarks I have not referred to the Veterans' Association because I have left the best until the last. I am proud of the fact that I am an honorary member of the Baltimore and Ohio Veterans' Association and that I am permitted to wear the button or emblem of the Association. We have in the employ of the Baltimore and Ohio Company about 20,000 men who have been in the service more than 20 years, and on that account are entitled to membership in the Veterans' Association, but I understand that only about 7,000 have actually

Women's Department

Edited by MARGARET TALBOTT STEVENS

August

Where the trees their shade are spreading,

Summer's footsteps softly treading,

August comes, a jolly fellow,

Changing earth from green to yellow.

Through the glen the reeds and rushes

Play their tunes on cat-tail brushes;

Tall fox-glove, her arms entwining,

To the sun her bells inclining.

Searching all the wide world over,

Resting now on hay and clover,

Yellow moon is smiling, beaming,

Like a maiden, sweetly dreaming.

Summer apples, sweet and mellow,

Marigolds and sunflowers yellow;

While upon the South wind flying,

August through the land's a'heing.

Dear Women Readers:

I once knew an aged minister who was very fond of preaching about Lazarus. On every Sunday the congregation listened while he told of how Lazarus was raised from the dead. Now, there was nothing at all wrong with the sermon; nothing at all wrong with his delivery; nothing at all wrong with the subject; the only trouble was that he talked about the same thing so often that at each successive service there were fewer members present. They knew what they would hear if they went, for they had heard the same thing on the week before. But—and here lay the trouble—nobody felt that it was his duty to let the minister know the reason why his little flock dwindled away to only a few faithful followers. Finally, the old man was taken away from this charge and put on the pension list. It was because the congregation had had "too much Lazarus."

Now this minister, though approaching 70 years, was a broad-minded man; he always welcomed new ideas. Lazarus was one of his favorite scriptural characters, and he naturally, though quite unconsciously, compared every other person to Lazarus, every miracle of today with that of the healing of Lazarus. But, why under the sun didn't somebody tell him about his shortcomings so that he might have corrected them to the satisfaction of all?

Of Course I Smiled at Him

I AWOKE this morning with a start, the sun was bright and shining; the clock had fallen clean apart and showed its inside lining. 'Twas later than I thought it was, I had no time to lose, I grabbed a towel off the rack and hunted for my shoes. I burst three buttons off my blouse, I tangled up my hair, I broke a shoestring, bumped my head and tumbled down the stair. I lost the soap and couldn't find my toothbrush or my hat; I thought I'd surely lose my mind in such a plight as that. I had no time for breakfast, but I thought I'd take a bite; the milk was sour, the coffee cold, the toast as black as night. I ran to catch the trolley car—alas! I was too late; it left me standing in the street, and I—I had to wait. I got into the office as the clock was striking nine; "Good Morning, Miss," the Time Clerk said, "I hope you're feeling fine!"

I believe in giving bouquets where they belong, but "brickbats" are like spankings; they serve their purpose well and are always remembered. It would have been far better for the members of the congregation to have told their opinion to the minister instead of talking it over among themselves and deciding to remain away from the services.

Did you read that letter from one of our girls in the July issue? Of course you did, and so did I, a half-dozen times. It was a good one, and it woke me up to the idea that this is not only a "Woman's Department," but a "Girl's Department" as well. That letter is not exactly what I would call a "brickbat;" yet it is a splendid suggestion; it is a sample of the letters I want: letters from the girls in the offices, from the women in the homes, from those in the shops, and in every branch of our Railroad work; letters that tell me what you would like to read in the Women's Department. These letters will not be published without your approval, but they will be a mighty big help to the MAGAZINE. If you don't like what we have, say so; but say it to me, for I don't want my congregation of readers to dwindle away and my name put on the superannuated list because of "too much Lazarus." Let's hear from others.

Yours very truly,

Margaret Talbott Stevens

Associate Editor.

Choose Your Topics, Girls

BELOW you will find some topics that may suggest something for you to write about. Opposite the odd numbers are subjects for the Railroad woman in the home; the even numbers are for the girl in the office, shop, or elsewhere. Take the one that appeals to you, write your letter and send it in. Who'll be the first?

1. The Passing of the Gingham Apron.
2. Mary Jones, and Why She Has Succeeded.
3. House-cleaning Day.
4. Stories That I Like to Read.
5. The School Lunch.

A Couple of "Really Truly" Ones

Little Edna, daughter of one of our Mt. Clare men, was having serious trouble with spelling the words in a composition which she was writing. After much squirming around in her seat, she arose, and with her pencil in the corner of her mouth, approached her teacher.

"Please Miss, will you tell me how to spell 'gunner'?"

"Why, Edna, you must mean *hunter*, don't you? H-u-n-t-e-r; that is a much nicer word," answered the teacher.

"No'm, it aint that kind of a *gunner*," stated the wise little judge. "I mean *gunner*. I want to say 'My mother's *gunner* make me a new dress.'"

Hilbert, whose daddy also rides the "5.15" every evening, has a very lively imagination. One morning he came running into school, almost breathless. "Oh, I just saw a bear—a big black one. He scared me so bad that I hit him with my history book. I reckon he thought he was in the Civil War, 'cause I knocked him down and he ran back through the woods singin' 'Marchin' Through Georgia.'"

"Anyway," he added, as he noted the smiles on the faces of his schoolmates, "he made me forget my history lesson."

African Belle

In Africa a crop of the blackest, curliest, closest hair imaginable makes a girl the belle of the kraal, especially if she be plump, with piggy eyes, thick lips, a nose like an India rubber shoe and a skin that shines like a cooking stove.—*Ladies' Home Journal*.

Two of Our Women Veterans Take a Trip Through the Golden West

FOR a long time Miss Elizabeth Bell, file clerk, and Mrs. Louise Sagle, matron, Camden Station, had planned to take a trip to the Western Coast. This year their dream was realized and the middle of July saw them speeding across the plains. Not content with the customary vacation of two weeks, they arranged to spend a whole month. And—but let them tell it.

"We are now in California," writes Miss Bell, "after a wonderful trip to the Northwest. We first went to Seattle, a lovely city that has a superb climate and magnificent scenery. We rode around beautiful Lake Washington, a trip of 40 miles and took a number of journeys through the surrounding country. From Seattle we went to visit my cousin, who has a farm at Mt. Vernon, Washington. This is one of the finest farms that I have ever seen. There is every labor-saving device, including a milking machine that can milk from two to four cows at once, and they don't kick (the cows, I mean). One day I shelled one and one-half pecks of peas for dinner, while Mrs. Sagle made the butter.

"We spent one day in Vancouver, an Americanized British town. There we rode for miles along Puget Sound, the Gulf of Georgia, English Bay and Frazer River. Then we went back to Seattle. There we noticed two first-class restaurants which were named, respectively, 'Puss-In-Boots' and 'Pig-'n'-Whistle.' We had a fine lunch

at 'Pig-'n'-Whistle,' which advertises itself by a pig and a whistle in brilliant electric lights.

"From Seattle we took another trip to the country, where we picked oodles of raspberries and loganberries, enough to make us sick—but we didn't get sick, and gathered loads of flowers all along the way.

"Perhaps the most beautiful city of all was Portland, Oregon. There were roses everywhere—trailing on houses, stumps, along sidewalks; there were even rose hedges and in every nook and corner large enough to grow roses, roses were there. Portland is rightly called 'the Rose City.'

"Two days ago (July 21) we left Portland on a Southern Pacific train. We rode for hours in full view of snow-capped Mt. Shasta. At Shasta Springs we stopped for a treat—a drink of the spring water, but we found it the vilest stuff, worse than Epsom salts. We are now in one of the largest hotels in San Francisco. It is true we are living high—on the seventh floor—but the room is handsomely furnished and has twin beds, which gives Mrs. Sagle a chance to sleep comfortable and me the satisfaction of knowing that she will not roll over on my half of the bed.

"We will be in San Francisco for two or three days and then journey further south. Please be sure to save us two copies of the MAGAZINE."

The Firelight

By Jean Rushmore

(Contributed by M. Alice Hamilton, Wilmington, Delaware, Freight Offices)

The future years for us—two,
What cares and troubles shall they brew?

Ye dying embers, answer make.
Some pity on our blunders take.
Shall lilies white our pathway strew?

Shall each to each be ever true?
Are they of bright or somber hue,
The future years?

Thou flickering light, reveal to view
The hidden deeds that shall ensue.

Shall we from dreaming present wake
To feel some dull and throbbing ache?
Or shall they bring us joy that's new,
The future years?

Our Pattern Service

JUST a word to those who send in pattern orders. Be sure to fill out the regular blank in full. If you wish to order more than one pattern, follow the same plan on plain paper, giving the exact number and size of each pattern desired. It gives us pleasure to say that our pattern ser-

vice is growing more popular every week. Do not forget that your friends may also order patterns from us, and that we can get for you any *Pictorial Review* Pattern at all.

What One Woman Did

Mrs. L. M. Montgomery, operator at Loogootee, noticed a car of leaking wheat in train No. 88 as it was passing her office. She immediately took up the matter with the crew and the car, M. C. 80624, enroute Sharpsburg to Baltimore, was set off for repairs. Mrs. Montgomery is commended for her watchfulness. We are proud to have her name on our Women's Honor Roll.

The Red Stamp

I'm a stamp.
A postage stamp—
A two-center;
Don't want to brag, but I was never licked
Except once; by a gentleman, too;
He put me onto a good thing;
It was an envelope—
Perfumed, pink, square.
I've been stuck on that envelope ever since.
He drops us—the envelope and me—
Through a slot in a dark box;
But we were rescued by a mail clerk
More's the pity;
He hit me an awful smash with a hammer:
It left my face black and blue;
Then I went on a long journey
Of two days, and when we arrive I—
The pink envelope and me—
We were presented to a perfect love
Of a girl,
With the stunningest pair of blue eyes
That ever blinked; she's a dream!
Well, she mutilated the pink envelope
And tore one corner of me off
With a hairpin; then she read what was
inside
The pink envelope.
I never saw a girl blush so beautifully.
I would be stuck on her—if I could.
Well, she placed the writing back
In the pink envelope;
Then she kissed me. Oh, ye little godlets,
Her lips were ripe as cherries
And warm as the summer sun.
We—the pink envelope and me—
Are now nestling snugly in her bosom;
We can hear her heart throb;
When it goes fastest she takes us out
And kisses me,
Oh, say, this is great; I'm glad I'm a stamp—
A two-center.—*Scott Circle*

Commanding Variety Gives One-Piece Frock First Place in World of Dress

By Maude Hall

THERE is a fine but sound distinction between being well-dressed and dressing well and no one knows better how to determine it than the woman who gives discriminating attention to her clothes. It is easier to be well-dressed on a limited income, with good taste and clever management, than it is to dress well, with plenty of money to spend, if one selects clothes for their value instead of their effectiveness.

Women selecting frocks that will carry over from season to season are giving preference to one-piece models or models in one-piece effect, even though skirt and blouse be made separately. It is its commanding variety that gives first place in the world of dress to the one-piece model. There are almost as many designs as there are makers, and each design offers some novelty of construction or of trimming that makes it individual.

One of the newest effects features the new long-waisted blouse with straight belt cut in one with the front of the waist. It fastens at the back and the belt effect is emphasized at the sides only, where there is usually a decoration of braid or embroidery.

A taupe serge made in this way has the skirt gathered to the blouse and trimmed about the lower edge with fruit designs which may be either appliqued or embroidered.

Braiding makes a charming garniture for the one-piece dress, especially when two materials are combined in developing the model. Take, for instance, a black satin skirt and white silk crepe de chine blouse. The braiding is used in deep girdle effect on the blouse and stitched upon a background of white crepe de chine, also forms an effective trimming for the lower edge of the skirt. In high contrast with the design on the waist and skirt is the single line of braiding on the short sleeves and round collar.

Milady revels in silks and satins, giving

much attention to the foulards, which are delightful fashioned into one-piece frocks. A black and white affair has the waist made with open front which is filled in with white satin and a vest of good lace. There are revers of satin turning back from the lace, while collar and tiny turnback cuffs correspond with the vest. The hat is of white satin with crown formed of small daisies and pink geraniums.

White foulards with polka dots in various colors and of conservative size, boast an allure which is piquant rather than picturesque, although they are affected by many women with a predilection for picturesque clothes. A model in blue and white with round neck and less than elbow sleeves has the gathered skirt trimmed at the sides with bands of self-material stitched on in panel effect. The belt is of dark blue moire and the waist is trimmed with a panel front in white organdy hemstitched in blue, the cuffs matching this bit of decoration in material and adornment.

One of the old-world designers faces the tunic of a blue and white gingham frock with a band of self-material, then stitches above this band a deep fold of plain blue organdy. To be more exact, the tunic is the lower part of a long blouse which is held in at the waist with a narrow leather belt. Collar, cuffs and pockets are of the blue organdy and a bit of black velvet ribbon is tied under the collar at the front. The skirt is finished with a deep hem and is both full and short.

Because it is youthful and generally becoming, the one-piece frock may be counted upon to appear among the first offerings for early Fall. Of course, it will come first in serge—the dark blue and browns, with a decided sprinkling of dark green and gray.

Several smart new ideas are expressed in lace, which is used to adorn panels, finish

Blouse 8926, Skirt 8962

tunics, peplums, etc., form sections of sleeves, or for vests and collars, to say nothing of the hundred and one ways of stitching it in plain bands upon skirts and draperies. A formal frock for afternoon or dinner wear is carried out in gray satin, the skirt being trimmed at the lower edge and about the hips with bands of wide and narrow lace. Streamers of ribbon, caught about the hips, above the lace, fall to the lower edge of the skirt where they are caught under the hem. The blouse is a kimono model, with a lace band around the back and front. Ribbon binds off the square neck and supplies a daintily decorative touch for the short sleeves.

Lace figures again in a frock of soft white batiste trimmed with a panel arranged in apron effect. The lace finishes the lower edge of the panel at the front and forms the collar, vest and upper part of the flare sleeves. At the waist the fullness is held in with a narrow ribbon belt, the panel above the belt, extending in tabs around to the sides where they are secured with ribbon ornaments. At the sides of the skirt there are separate panels, looped at the hips, but so arranged that they may be omitted, if preferred.

Home Dressmaker's Corner

Simple and Attractive Model for a House Apron with Front and Straps Cut in One

VERY dainty are the aprons designed for the use of the housewife this season. They are made up in a variety of attractive materials, cretonne being in great demand. A new and simple model is pictured here, the front and shoulder straps being cut in one. The apron closes at the back, the three-piece gathered skirt being attached to the lower edge of the waist. There are large patch pockets for trimming, as well as service, but these may be omitted, if desired.

In medium size the apron requires $3\frac{1}{4}$ yards 36-inch material. Two sections of the pattern, the front gore of the skirt and strap of the waist, are so laid on the material that the triple "TTT" perforations rest along the lengthwise fold. The back, back gore of skirt and pockets have the large "O" perforations laid on a lengthwise thread of the goods.

As the front and shoulder straps are cut in one, there is no shoulder seam, so in making the apron, first close the underarm seam as notched. Turn hem in back section next (on right side) on large "O" perforations, which indicate center-back and allow left back edge to extend for an underlap. Sew back edge of strap extensior to upper edge of back section A, matching double notches.

Next, take the skirt and join gores as notched. Turn hems at lower and back edges of skirt on small "o" perforations. Gather skirt at upper edge between "T" perforations. Sew skirt to lower edge of waist with centerfronts and back edges even and bring side seam of skirt to underarm seam.

Turn hem in pocket at upper edge on small "o" perforations. Adjust to position on skirt between the indicating small "o" perforations in front and back gores. The edges of the neck, armholes and pockets

8976

may be scalloped and buttonhole-d or bound with braid, if preferred.

APRON No. 8976. Sizes, small, medium, large. Price, 25 cents.

Recipes Summer Drinks

WHAT is more welcome on a hot day than a nice, cooling drink? Summer drinks are best prepared at home; not only have the prices of sodas gone up, but at many fountains they are of an inferior quality. Those made at home are pure and wholesome and they cost a good deal less. Root beer is one of the favorites this year. For about twenty cents you can purchase a bottle of the essence which, with the addition of yeast, sugar and water, will produce about five gallons of root beer, which may be placed on ice and used as needed. Others, like fruit punch, are a little more expensive, but are always liked. Lemonade is the old-time standby.

Grape Juice

Pick and stem the grapes. Weigh them. Put into a kettle with enough water to cover. Boil until the pulp and seeds sepa-

rate. Strain. Add three pounds of sugar to ten pounds of grapes. Let simmer until sugar dissolves well and the mixture boils. Bottle hot. When serving add a few teaspoons of orange or lemon juice to each glass. Dilute with crushed ice.

As a fitting accompaniment to any of the above refreshments, the following recipe for date cake is one that you will like.

Date Cake

One package Dromedary dates, cut into bits. To one cup of hot water add a teaspoon of baking soda. Pour on dates and let stand until cool. Add 1 cup sugar, 1 tablespoon butter, 1 egg, a pinch of salt, $1\frac{1}{2}$ cups flour, flavoring to suit taste, preferably vanilla. Bake in loaf and ice with any plain, boiled icing.

NOTE: We are indebted to one of the best housekeepers in Baltimore for the recipes for grape juice and date cake.

Grape Sweetmeat

Eight pounds grapes, $1\frac{1}{2}$ pounds seedless raisins, 2 oranges, 4 pounds sugar. Skin the grapes, put pulp in kettle and bring to boiling point. Boil a few minutes, then strain it; take through press to remove the seeds. Add skins and boil 15 minutes. Add 4 pounds sugar, oranges sliced thin and raisins; boil gently until it is of the consistency of marmalade.

Iced Chocolate

2 squares chocolate.
 $\frac{3}{4}$ cup granulated sugar.
 $\frac{1}{4}$ teaspoon salt.
1 cup boiling water.
3 cups ice-cold milk.

Melt the chocolate by placing it in a pan over boiling water. Add the sugar, salt and boiling water, stirring constantly until mixture comes to a boil. Let boil 5 or 6 minutes. Set aside to chill. When ready to serve, add milk. The addition of a tablespoon of vanilla ice cream or whipple cream to each cup improves the flavor of this delicious refreshment. This recipe makes four glasses.

Grape Juice for Winter Use

Sterilize a quart jar. Put 1 cup grapes and 1 cup sugar. Fill jar with boiling water and fasten tops securely. Put away in cool dark place. When ready to use you will find that the grapes have settled at the bottom, and the juice on the top. The grapes will be in almost the same condition as when put into jar, and may be served with the juice or eaten separately the same as ripe grapes. The juice is excellent. Be sure that the tops of the jars are perfectly air-tight.

Monongah-Charleston

Weston, July 17

Monongah Division won another game at Weston when it defeated the Charleston

Division team by the score of 10 to 6. The game was fought up to the eighth inning. Fischer started the eighth with a single and before the inning ended had batted the second time. Monongah scored six runs in the meantime, and Feeney got a two-base hit with three on. In the fifth, Boyce hit a line drive for two sacks, scoring three men.

The pitching of Slack, fanning 12 men, was one of the features of the game. Hankey made two running catches that would have been a credit to Cobb. Van-Horn got two singles out of three times at bat. Schountz caught his usual good game. Baltimore accepted four chances at second without a slip.

Safety Roll of Honor

Staten Island Lines

Passenger Conductor L. J. Hills, while going west, 5.35 p. m., on May 15, noticed east end trucks of car off track in drag which was being handled on coal dock lead, St. George Yard, by engine 1918. Prompt action on Conductor Hill's part in bringing engineer of 1918 to a stop, no doubt averted a serious derailment. He is hereby commended.

Baltimore Terminal Division

At 7.00 a. m. on June 14, W. Callery, section foreman, found several pieces of flange on No. 2 track between North and Huntington Avenues. He immediately reported condition to "DO." Yardmaster at Bay View was instructed to inspect train of extra 4537, east, arriving at 11.32 p. m., and car was found to have broken flange. There is little doubt but that the detecting of this flange on the track by Mr. Callery averted an accident.

Baltimore Division

Engineer C. Schwinn and Fireman C. M. Miller, in charge of engine 4524, and Engineer J. H. Morsberger and Fireman C. E. Thomas in charge of engine 4519, received commendation for their performance with these engines on April 28 while passing through Washington Terminal in the elimination of smoke. These engines are stoker-fired and the observation by the Committee on Smoke Elimination was that their performance was perfect. These gentlemen have demonstrated that stoker-fired engines can be operated through restricted zones without smoke violations when properly handled.

While extra east, engine 4271, was passing Gray block office on May 20, Operator J. M. Cunningham noticed brake rigging dragging under Baltimore and Ohio car 14769, second car from the caboose. Train was stopped at Halethorpe Tower and brake rigging removed. Mr. Cunningham has been commended for observance of passing equipment.

Operator C. A. Brady, on duty at Boyd, noticed a hot box under Soo Line car 131606 in extra west, engines 4542 and 4564. Train was stopped at Barnesville and car backed off. Operator Brady has been commended.

On June 10 Brakeman G. R. Carey discovered a broken flange on lead wheel, rear truck of Baltimore and Ohio car 136413, while walking alongside of his train at Lansdowne. Car was set off without being derailed. Mr. Carey has received commendatory notation on his record.

Cumberland Division

CUMBERLAND, MD., July 13, 1920.

Mr. L. LINTHICUM,
Yard Brakeman,
Martinsburg, W. Va.

Dear Sir—It has been brought to my attention that on the morning of June 17, while No. 97, engine 4861, was passing

Martinsburg, a broken arch bar was observed in the train by you, and necessary action was taken to have car set off.

Picking up defects of this kind is very commendable, and I express my appreciation of your interest and watchfulness in the matter.

Yours truly,

(Signed) J. W. DENEEN,
Superintendent.

We consider the action of one of our men, H. C. Mauk, in flagging Petersburg No. 65 on the evening of June 25 at Donaldson, after a heavy rain had submerged the tracks and washed out cinder ballast, worthy of mention. His watchfulness possibly prevented a derailment.

On June 16, while R. J. Schooley, John Fresh and H. M. Davis, of Oakland, were on their way to work at Offutt Mine, they discovered a broken rail and flagged extra east, engine 7137. An appropriate letter has been written each of these men commending them for their action in discovering and reporting this dangerous condition.

On June 4 while Newburg Yard engine 1607 was going from Newburg to West End, Conductor E. Lewis noticed a broken rail on No. 4 track at Austen. After arranging for proper flagging protection he called the trackmen, who applied a new rail. Conductor Lewis has been commended for his action in this case.

On June 1, while train Second No. 1, engine 4156, was passing through M. & K. Junction, Engineer J. M. Buckner noticed the left main tire loose on engine. The matter was immediately reported, train stopped at advance signal, engine examined and tire found loose. Engine was cut off and another engine moved train to Grafton. Engineer Buckner is 71 years old and has been in the service for 48 years. He has been commended for his watchfulness on this occasion.

Pittsburgh Division

PITTSBURGH, PA., July 8, 1920.

Mr. J. L. PARSONS,
Road Brakeman,
Millvale, Pa.

Dear Sir—I am advised that while engine 2600 was making push up the hill at Wildwood, on July 3, you re-threaded broken main line on P. M. 39467, saving considerable time account of not having to switch car to rear of train; car also being O. K. to move to destination; a very nice, neat job of car plumbing.

I acknowledge my appreciation of this splendid performance of yours, and thank you on behalf of the Company. A copy of this letter is being sent to our MAGAZINE correspondent; also arrangements are being made with the Employment and Record Bureau to place a commendatory entry on your record.

Yours truly,

(Signed) C. B. GORSUCH,
Superintendent.

Monongah Division

GRAFTON, W. VA., July 6, 1920.

M. TYSON,
Conductor,

Parkersburg, W. Va.

Dear Sir—I have advice that on July 1, while acting as conductor of third 86, engine 2257, in siding at Salem for Nos. 29 and 39, you noticed something wrong with car in 29's train; that you immediately notified operator at Salem by phone and that the train was stopped at Long Run, where brake beam was found to be down and in bad shape.

Your prompt action in this matter probably averted a serious accident and I assure you it is appreciated. We are glad to place your name on the Honor Roll.

Yours truly,

(Signed) C. W. VAN HORN,
Superintendent.

GRAFTON, W. VA., July 2, 1920.

C. D. HOFFMASTER,
Track Foreman,
Colfax, W. Va.

Dear Sir—I have your letter of July 1 in regard to brake rigging dragging on extra west 4147 while passing Colfax, and your prompt action in notifying operator to stop at Benton Ferry. I am certainly glad to see the interest you displayed in this case and I assure you your action in notifying operator, also in removing brake rigging from frog, is very much appreciated. Have arranged to have your name placed on the Honor Roll in the MAGAZINE.

Yours truly,

(Signed) C. W. VAN HORN,
Superintendent.

Charleston Division

The following engineers have been complimented for showing more than 100 per cent. performance in fuel consumption:

J. C. Jordan, A. Marshall, J. L. Davis, M. T. Hall, W. T. Spencer, F. Kerrigan, R. E. Murphy, G. E. Smith, P. Shea, R. K. Ankrum, W. E. Paisley, W. A. Stalnaker, R. N. Jeffries, G. E. Ramsburg, P. W. Toms, J. H. Shea, R. Malone, A. Tierney, H. Robinson, O. W. Gum, B. H. Paxton.

This shows that they are going after the fuel proposition in the right way, and we hope to see more of our boys register 100 or more each month.

While extra 75 was passing his station, L. A. Rollyson, agent at Frametown, noticed N.Y.C. car 401963, sand, leaking badly. He had train stopped and made temporary repairs, thereby preventing a claim. He has been commended for his alertness and interest in the Company's welfare.

"Bob" Paxton, section foreman at Elkhurst, recently noticed brake rigging down as a freight train passed him. He had train stopped and repairs made. He has been commended for his interest in the Company's business.

Newark Division

On June 3, Coach Cleaner W. A. Combs, Zanesville, Ohio, discovered broken flange on car in train starting over Muskingum River bridge. He promptly signaled train crew, who stopped train and had car set out. His prompt action undoubtedly averted a serious accident. He has been commended for his vigilance.

New Castle Division

On the night of June 13, Operator J. O'Connor at XN Tower observed something wrong with one of the trucks of a car in No. 5. This information was furnished

Akron Junction, where train was stopped for inspection. On the same night Brake-man A. W. McCreery of No. 5, when stop was made at Akron Junction, observed the condition of the truck of the car in his train before the information of Operator O'Connor was transmitted to the crew. Both these men observed the condition of this car and furnished information to enable repairs to be made. They have been commended by Superintendent Stevens for their close attention to such details while on duty. In addition, suitable entry will be placed on the service records of both.

Cleveland Division

CLEVELAND, OHIO, July 2, 1920.

D. ROBINSON,
Brakeman,
Lorain, Ohio.

Dear Sir—My appreciation is due you in connection with the report I received the other day, advising that on June 19, while engine 4349, west, was passing engine 2371 at Lake Junction, you discovered brake beam down on P. R. 25778, got red flag, got on top of caboose and signalled for train to stop. This was accomplished and resulted in repairs to car that in all probability averted an accident.

I assure you that your watchfulness deserves commendation and will see that entry is placed on your record to that effect.

Very truly yours,
(Signed) H. B. GREEN,
Superintendent.

Ohio Division

On June 14, William H. Graves, agent at Harpers, while going to his home at Lyndon, noticed washout in track about one mile east of Lyndon. He immediately notified dispatcher from Lyndon, then flagged No. 88, which was due at that point in a short time. He also notified section men and washout was repaired. He has been commended for interest displayed.

Indiana Division

At 1.45 a. m. on July 2, G. H. Meyerman, Big Four operator, Fern Bank, Ohio, noticed brake beam down on I. C. car 110575 when Baltimore and Ohio extra 2551 passed that point. He immediately notified conductor when train passed his office and train was stopped and defect remedied.

The interest manifested by Mr. Meyerman in Baltimore and Ohio operation is commendable.

On June 30, at Marysville, Ind., J. R. Cassady, son of our agent at that point, a boy about 16 years of age, noted something wrong with car in extra 2651, east, passing that point about 7 p. m. He called attention of flagman to defect and train was stopped and crew found brake beam down and in bad shape on P. L. car 533997, two cars ahead of caboose.

The prompt action of young Mr. Cassady is thoroughly appreciated and he has been commended for the interest displayed.

Toledo Division

C. F. Surface has been commended for his quick action when, in passing Sulphur Lick Springs, the crew on Toledo Division 88 discovered that ties and guard rail of bridge one mile west of RK Tower were on

fire and blazing about two feet high. Train was stopped and fire extinguished.

W. A. Snyder has been commended for his thoughtfulness and quick action. He observed brake beam down on car in extra 4193 and dragging in a dangerous manner. He flagged the train and defect was remedied, thus averting a possible accident.

E. C. Allison observed brake beam dragging on extra 4039, south, and notified dispatcher. Train was stopped and brake beam removed. Mr. Allison has been commended.

On July 6, while extra 4171, north, was passing Miamisburg, Second Trick Operator R. C. Manning observed brake rigging down on the fourth car from engine. He notified the conductor on the rear of the train and the train was stopped, thus averting a possible accident. Mr. Manning has been commended for his close observation.

Engine 5125, Dressed in Holiday Attire, Carried the Shriners over the Monongah Division

By F. M. Keane

I. C. C. Inspector, Grafton, West Virginia

WHEN the members of the crew of Engine 5125 learned that on June 8 they would have the pleasure of hauling a special train of Baltimore Shriners over the Monongah Division, they promptly set about to dress up their engine in holiday clothes in honor of the Boumi.

William Wolfe and Lewis Horneline were the artists for the occasion, and it was through the cooperation of Superintendent Van Horn and Master Mechanic Porterfield that the plans were carried out. On the sides of the cylinders were painted the emblems of the Boumi, strips of bunting were stretched along the tank, and American flags floated in every direction. To complete the picture, Engineer F. J. Walter, who is a Shriner himself, appeared on the scene wearing his little Fez cap.

The train left Grafton at 6.35 p. m. and arrived at Parkersburg at 10.05 p. m. The engineer was praised for his skill in handling the train and the fireman for doing away with smoke and dust through the 23 tunnels

between Grafton and Parkersburg. Road Foreman C. F. Dotson, along with Mr. Porterfield, rode the engine. The journey was made without a hitch. Trainmaster McWilliams, also a Shriner, saw to it that his brothers were well cared for.

Five days later, when the Acca Lodge from Richmond, W. Va., passed over the Monongah Division, the same engine with its decorations was used to carry them. On this occasion, Road Foreman Dotson and I. C. C. Inspector Keane rode the train to Parkersburg. Trainmaster McClung, another Shriner, rode the train and kept the delegation in a good humor with his famous anecdotes.

The members of both delegations praised our men very highly and expressed their appreciation of the manner in which they had been treated. They were enthusiastic about the beautiful scenery along the way, and when they passed over the Ohio River Bridge, they gave cheer after cheer for the Baltimore and Ohio and for the Monongah Division.

Engine 5125, "all dolled up," ready to take the Shriners over the Monongah Division

Among Ourselves

Baltimore and Ohio Building

Law Department

Correspondent, GEORGE W. HAULENBEEK

Although the new typewriting machines seem to have all of the latest characters and devices for their manipulation, I often notice that where a direct question is propounded at the close of a communication, the period is employed instead of the interrogation point. For instance, in a letter in which the following sentence was used, "Will you please supply me with three copies of the print?", the period was erroneously employed instead of the interrogation point. This mistake I attribute to the absence of the proper mark of punctuation on the machine and not to the failure of the operator. As I pass by a shorthand school on my way to the office and see the number of young people swarming in, I often wonder if they understand the proper uses of the marks of punctuation and the other essentials necessary to a well equipped operator.

Spelling, I understand, is not given much consideration. Why should it be? Who wants to be a good speller, anyway?

Summer Points on the Baltimore and Ohio

I have frequently refretted, in my correspondence, of my week-end trips to Bethlehem, Pa., to spend Sunday with my little four year old sweetheart, Susan Anne Trageser, and of the splendid running time and other features of service in connection with our No. 524, also of the Reading train from Wayne Junction. I do not wish to become tiresome, but I do like to advert to good things that I observe, not only on our own lines but also on connecting lines.

Little Susan is now spending the summer at Deer Park, Garrett County, Maryland, and I have abandoned my Pennsylvania trips to take No. 1 from Baltimore on Saturdays. I expect to find many things to commend in my summer meanderings. On my first trip on June 10, the train passed over the six million Magnolia Cut-Off, and Susan, as little as she is, was told all about this great undertaking.

There is no summer resort in the broad land like Deer Park. When I remark that I have been going to Deer Park since 1884, and that my summer home there, obtained through our Relief Department, is still enjoyed by the family, it becomes apparent that there must be something in the mountain air, in the place, and in the railroad transportation afforded by the Baltimore and Ohio, to induce such a prolonged stay.

Indeed, Mountain Lake Park, just three miles further west, is now actively employed as a religious center, and I have begun to act as a volunteer passenger agent on train No. 1 every Saturday, reminding new visitors that not only is the scenery on the seventeen mile grade unsurpassable, but also that from Harper's Ferry, as the train follows the course of the Potomac River, it is beautiful indeed. As I take my weekly trips to Deer Park, I want to see a greater number of passengers going to our delightful Maryland resorts. I am doing my share to help things along by riding in the smoker. I do not smoke, but I am willing to do this to give the other fellow a chance, bearing in mind the years of good transportation that I have enjoyed.

While Melville Gemmill is not now in the Law Department, it is a pleasure to record important events in his life. On July 3, he was presented with a nine pound son. When he told me of the little fellow's arrival, his countenance was suffused with smiles and every indication pointed to unalloyed comfort and happiness.

From Atlantic City to Chicago

William Bruce Berry, the junior clerk and rising genius of the Law Department, spent his vacation at Atlantic City and Chicago. He visited both places alone. In Chicago the visitor at once becomes enamored of the big city and very properly, because it is a wonderful place, although it is not quite up to little old New York. William endorses this sentiment.

Office of General Freight Claim Agent

Correspondent, Miss E. T. MURRAY

It is with heartfelt sorrow that we chronicle the death of "Jack" C. Truitt, our former co-worker of Loss and Damage Division, who died at his home in Blue Ridge Summit on July 3, after a lingering illness of almost a year and a half, with congestion of the lungs. He is survived by his mother, Mrs. M. W. Truitt. The funeral services were conducted at Ascension Church, Baltimore, by Rev. J. D. La Motte, pastor. The body was then taken to New York City for private burial. The sympathy of his fellow workers was expressed in a floral design and by the presence of Misses L. Creamer and M. Messick, and Messrs. C. F. Biemiller, J. I. Waters, J. Kratz, A. C. Keene, C. A. Miller, H. C. Yingling, G. F. Garner and H. F. Itner at the funeral services.

Mr. Truitt was born in June, 1896, and entered the services of the Company August 20, 1917. During the World War he served several months and shortly after his return to the office, was taken seriously ill, necessitating his going to the mountains, where he remained until his death. Our sympathy is extended to his bereaved mother.

W. H. Bitner, head clerk, Reconsignment Division, has been granted an indefinite furlough on account of his health. Here's a wish from the whole department that the rest will greatly benefit him and that he will soon be among us again.

There seems to be a great attraction down the bay for our old friend "Tom" Littig, Accounting Division. Some say he has been down so often that he knows the names of all the streets from here to Tolchester Beach. "Tom" also suggests that he could save the boat company some money if they would only abolish the individual life preserver and make one big preserver and put it all around the boat.

Miss Teresa Johannesen, General Division, has resigned from the service to prepare for a happy day as yet not announced. We hope to publish further details in our next issue.

We note some of our men seem most interested in the "Women's Department" of the MAGAZINE. Which "profession" will it be, "Bob," the Fashionable Dressmaker or the Economic Housekeeper?

Relay, Maryland, seems to be the center of attraction for one of our popular young men of Suspense Division. Surely it is not the fishing that attracts him.

"Charlie" Perry, Reconsigning Division, is wearing a bandana and "buns" these days. He makes a real cute telephone operator and we are thinking of changing his name to "Sadie."

Wedding Bells

Miss M. Resley and W. H. Ellerfritz, Loss and Damage Division, were quietly married on June 24 at the parsonage of North Avenue Presbyterian Church by Rev. William Harkey, pastor. Their witnesses were Miss G. Johnson, cousin of bride and J. R. Murphy, of this office. Their honeymoon was spent at Niagara Falls. Our congratulations.

Another victim of Cupid's rampages is S. Gaynor, Loss and Damage Division, who let it be known after his return from a two weeks' vacation that he had for the second time plunged into the Sea of Matrimony. "Shad," as he is better known, and Mrs. Eleanor E. Waffle, were married on June 26 at the home of Rev. F. H. Huffman, pastor of Babcock Presbyterian Church. Their only witnesses were the Misses Marjorie Gaynor, daughter of the groom, and Gladys Waffle, daughter of the bride. Immediately after the ceremony a reception was held at the home of the bride, after which the happy couple left for New York and points along the Hudson. Our congratulations and best wishes for a happy future. Mr. Gaynor is the third oldest employe in point of service in this office, having come with the Company, July 8, 1878.

Some months ago we read an article in the notes of the "Auditor Passenger Receipts" office stating that their Matrimonial League continued to lead all offices by a large margin. Let it be known henceforth that we are right on their heels.

Worth Passing On

Don't argue with the inevitable. The only argument available with an east wind is to put on your overcoat.

Don't preach too much. None preaches better than the ant, and she says nothing.

Don't pick up your worries. You can get them anywhere as you go along.

Don't let your stream of life be a murmuring stream.

Don't measure success by accumulation, for this measure is false.

Don't talk over "prevailing conditions." Just make friends with your luck.

Don't waste your feelings. Feelings are creams, too rich to be skimmed for nothing.

Engineering Department

Correspondent, OSWALD EDEN

We all want to know to whom Miss Lansdowne was waving the other day when she caught someone's attention in the Fidelity Building. Imagine! she had the nerve to say it was her "daddy."

Miss Josephine McCarthy, our demure little "stenog," took a week off during the early part of July as part of her vacation. We wonder if she went fishing, as the Surveys Department lacked a "Pertsch" that week.

During the June vacation of the yardmen at Locust Point, the inducted men from Office Engineer Milburn's office were called to duty. "Ted" Ziegfeld, in new overalls and a straw hat, served as switchman; "Spike" Schanze, partly in overalls and partly in "civics," as brakeman, and "Joe" Kemp as fireman.

"Gus" Hauser, the perpetual checker of the drafting room, is getting ready to move again. He is looking for a large piece of land, unencumbered by any buildings whatever, near some railroad. It is immaterial how far it is from any car line, stores, or other conveniences. We imagine he will live in a tree this winter as the tent of last year was too close to the ground. Land-owners, please note, and send in your offers.

"Bill" Pinschmidt has just returned after basking his wife, son and himself in the spray at Niagara. "Bill" took the daylight trip to get "fed up" in scenery. We hope he received his fill.

Mobilian Maximillian McCracken deserves special mention for serving much longer on actual duty as brakeman and flagman during the recent strike.

"Alvie" Weston has just returned from a strenuous week's outing on the Magothy with his Boy Scout troop.

Our chief clerk, E. R. Sparks, recently received a very interesting letter from Lieutenant A. H. Schaeffer, formerly with the Russian Railway Service Corps, which was ordered to return to the United States a short time ago. Instead of returning, however, Lieutenant Schaeffer accepted a position with the Chinese Railway Commission, under Mr. F. H. Clark, former general superintendent of motive power of the Baltimore and Ohio. Lieutenant Schaeffer is stationed at Peking, and will probably remain there for six months or more.

Survey Division

Correspondent, D. W. TILMAN, *Field Engineer*, Morgantown, W. Va.

W. J. Judson, transitman, left the services of the Company on July 31 in order to return to Lehigh University for one year to complete the course in civil engineering there. We are sending Judson away with our best wishes and hope the year's absence will be of great benefit to him. He expects to return to us after graduation next June.

P. Wagner, levelman, left the services of the Railroad on June 30, to return to his home in Baltimore. His associates stationed at Morgantown, tendered him a surprise dinner and dance a few nights before he left. The entire party, which consisted of twelve engineers from Baltimore and twelve ladies from different parts of West Virginia, were delightfully entertained at the home of Prof. Patterson of West Virginia University. We are very sorry that Wagner has left us, but hope he will meet with much success in his new field of work.

Printing Department

Correspondent, M. J. CONROY

He has arrived! Who? The "printer's devil!" His star is in the ascendancy. No matter how the national election goes a retired member of the profession will be the next President of these glorious United States of America. Both Cox and Harding were "printer's devils." There are two necessary adjuncts to every printing establishment—a "hell-box" and a "devil." The "hell-box" is the inanimate and the "devil" the animate end of the combination. The dictionary defines the "devil" as "an errand boy in a printing office; originally the boy who took the printed sheets from the tympan of the press." But Moxon, who lived in the earlier days of the art preservative, says "They do commonly so black and bedaub themselves that the workmen do jocosely call them devils." But Moxon says nothing of other things that they were called. That was the custom in the days when Cox and Harding were "devilings," but not now. Like everything else, the price of "devils" has gone up and they are also scarce. They are no longer the butt of the men, and are not even denied the privilege of using the office towel.

May Fortune smile her sweetest and bring success into the lives of our own two "devils"—Henry and Martin.

The following note explains itself:

July 24, 1920.

BALTIMORE NEWS FRESH AIR FUND.

Gentlemen—I am enclosing herewith forty dollars (\$40.00) to be used in sending the kiddies to the country. This donation is from the employees of the Printing Department, Baltimore and Ohio Railroad, Pratt and Poppleton Streets. It is given with their best wishes and with the hope that they may have a royal good time.

Sincerely,

GEORGE R. LEILICH, *Manager*.

Eugene Washington Weems, late factotum of this chapel, has been relieved of his duties and has joined the forces of the Coahuila and Zacatecas Railway, where "speed" is not one of the necessary qualifications.

The sympathy of the press room employees is extended to Paul Cook, pressman, in the recent death of his mother.

Nicholas Hucke, chairman of our chapel, was taken suddenly ill in July. He has the sympathy of all the boys and best wishes for a speedy recovery.

We regret to report that William Rice, one of our veteran compositors, has joined our sick list since last month. Let's hope that a good rest will be beneficial and that he will be with us soon again.

Just before he was taken ill, "Bill" told me a tale about a Hebrew friend of his who kept a small tailoring establishment. One day recently he discovered that he had his window decorated with a gorgeous new blind.

"Nice blind you have there, Isaac," said "Bill."

"Yes, Mr. Rice. Some necessary improvements."

"Who paid for it, Isaac?"

"My customers, some of whom are your friends at the print shop—Mr. Simms, Mr. Harmeyer, Mr. Fogle, Mr. Reay, Mr. Toft—fine men, fine men!"

"You don't say so! That's mighty nice of the boys," said "Bill."

"Yes, Mr. Rice, I'll say so, too. I just put a little box on my counter 'for the blind.' And they paid for it."

Telegraph Department

Correspondent, DELLA M. HAIN

ATTENTION MR. BROWN: In your locker you will find a shelf on which to place your hat. Don't hang it on the key nail—we need that for the key.

The attached photograph is of Mr. and Mrs. Raymond Dawson, recently married. Mr. Dawson has been a Telegraph Department employe for a number of years and was also one of the men returned from "Over There." The entire department joins in wishing the newlyweds the best of futures. How about it, Bullock?

Mrs. and Mrs. Raymond Dawson

When speaking over the 'phone, talk into the mouthpiece so that the listener at the other end of the line will be able to hear distinctly.

Our supervisor of Time Service, W. C. Donnelly, again comes into notice, or rather is still on the cast. He fell over a box and hurt his foot and it was ludicrous—not his foot—but the way he walked on it. His foot is a "Jonah;" it is always getting hurt or losing a gum shoe. Look out for your rudders, "Bill."

It is reported that some of our prominent officials seemed to have considerable difficulty in regard to securing spoons recently, while at a rural hotel. It is interesting indeed to hear from them as to the troubles experienced in handling the proposition.

B. F. Thompson, telephone engineer, doesn't want us to tell about him in the MAGAZINE. Well, I won't, except to state that he had better look out for his conduct when on Camden Street or he might see a glaring picture of himself on the page with the Telegraph Department notes.

The men in this department are as much like kids as their own sons. The day after school closed they came in with broad grins and said "He passed," as much as to say. "Takes after his father, see!"

Miss Pauline Playhart has been transferred to the office of G. F. Malone, super-

intendent Car Service. We know the telegraph office is sorry that she has left that office and are sure that the Car Service Department will appreciate their new member.

Valuation Department

Correspondent, G. B. SAUMENIG, *Accountant*

It has been impossible to continue our Introduction Department on account of the numerous changes. It is a case of "On again, off again, gone again, Finnegan." However, to those who have recently entered our department, we extend the glad hand and bid them welcome.

A number of our office force have moved to a temporary location, 106 W. Fayette Street. We miss them and especially him, don't we, "Bill?"

On July 1 our pay checks were received on time. Hats off to those responsible for this thoughtful and generous act. Let the good work go on.

Quite a number from the Baltimore office were actively engaged in assisting the Transportation and Operating Departments in June on account of freight congestion caused by strike troubles. Because of their modesty, we refrain from mentioning names.

Cost Engineer Davis, assistant to Cost Engineer McCrone, and Assistant Engineer Beaumont recently went on a fishing expedition. Result, 40 fish. Now, gentlemen, take the stand and tell his Honor the Judge and the gentlemen of the jury—Were they caught or were they bought?

On August 2, Miss Katherine George, secretary to our chief clerk, and George H. Schmidt, Auditor of Passenger Receipts office, were married. The entire office is sorry to see Kitty leave us, but it is another case of the big part the Company plays in helping make two hearts beat as one. We all wish her good luck and prosperity.

All desks, tables and cases have been numbered. We must be going somewhere. Possibly it is to prevent them from disappearing like the ventilators.

Why not a welfare or social organization in the Valuation Department? It would foster sociability and friendliness. An occasional get-together affair would not be amiss. That we have talent in our office cannot be disputed and it could well be used in this direction. Most of the other departments have carried out this idea and it seems that we should also get in line. Valuation Department employees might talk about it.

At this writing, we regret the serious illness of J. F. Rau, who has charge of the blue print file. He is now at home after several weeks at Franklin Square Hospital. The office remembered him while at the hospital with flowers and also presented him with a useful gift on his 21st birthday. We all treasure "Fred" because of his everlasting desire to please. His smile and helping hand have been greatly missed. It seems that it often takes sickness to make us realize the value of our friends. An occasional word of cheer and appreciation does a world of good in helping the other fellow over the rough spots in the road.

Our friend, Micle, of Equipment Pilot's force, makes occasional trips to Cleveland. His excuse is that it is his home. Sometimes when visiting other points, the same reason is given. It must be a large family.

Pittsburgh Office

That vacation time is at hand is quite evident from the supply of traveling requisites S. C. Gebert is purchasing. Indications are that there will be enough for two. Time will tell.

Wonder what happened to Mr. Dougherty's "Piedmonts."

What are the after effects of sleeping on your porch on a hot night? Ask Matthews; he knows. We would advise him further to turn his watch one hour ahead. Pittsburgh is observing "Daylight Saving Time."

M. E. Gebert spent the "Glorious Fourth" visiting in Detroit. We wonder whether he is coming back with another Maxwell or a Ford.

From the weight that Captain Dodd is taking on and judging from the way he speaks of his menus, Mrs. Dodd must be some cook. Keep up the good work, Mrs. Dodd.

If you want to know what kind of creatures spend the night enjoying themselves in Connellsville station, ask Scott. We suggest that he carry a gun the next time he stops there and reports wild tales about the casualties.

H. D. Boycott is "boycotting" the "H. C. L." by camping on the banks of the Allegheny for the summer months.

Camus, our "Ownership Artist," is very much interested in the women on No. 6. Lookout, or one of them is liable to invite you to a trip to Cumberland. By the way, did you ever find Matthews?

See following note

On account of having to do a good deal of traveling lately, "Joe" Shellaby, our "Ladies' Man," recently purchased a traveling bag. After the bag had been thoroughly inspected on the outside by everybody in the office, they wanted to see what it looked like inside. The above sketch will explain with what ease the bag was opened. You'd better not lock it again, "Joe."

Cincinnati Office

Mrs. Edward Keller, in former days Miss Emma Klaphake, keeps us posted on "Happy though Married." She is now living in Cleveland, where other than office duties keep her busy. Our sincerest wishes for continued happiness are extended.

Questions and Answers

1. If it takes a wood pecker 3 days to peck thru a 3' log, making 20 planks 12' x 3' x 1 1/2", how long will it take a Jersey mosquito to swim thru a barrel of Mississippi molasses?

(NOTE: The above is one type of question which is now being pro and coned by the Cincinnati members of the Baltimore chapter of A. A. E.)

2. Why oh why is he called the "Brown Eyed He-Vamp of floor 6?" 'Nobody knows and nobody seems to care'—but he is just the same.

3. Can you tell me why E. Johnson wore a full dress suit and silk hat while switching at Ivorydale?

Sports and Their Stings

It is very unfortunate that the Latonia Race Track is so close to Cincinnati and incidentally to the Valuation Department, for owing to the fact that the boys and girls want to help a good thing along, they are now eating only two meals a day, providing one of those is an invitation.

The Reds are still high in first division, helped there by the constant "Saturday" attendance and cheering of members of our department. Oh, yes, Mr. Taylor is a fan; but even at that the Reds lose sometimes.

Owing to the fact that the Reds are playing at home and using Our diamond, the practice of our "intended" baseball team ceased. Somebody is always taking the joy out of life.

What We Would LIKE TO SEE

Mr. Taylor—Married.
Bonney—Coming out of the Olympic.
Harry—Without a toothache.
Jess—Without a paper.
Johnny—Without a timetable.
Jus—With a dirty face.
Miss Mac—Shooting paper wads.
Mac—Sitting down; though it does put knees in his trousers.

Fisherman's luck in the Valuation Department

MacLaurin—Coming late.
 Mickey—wearing a turban.
 Pete—Without a cigarette.
 Ray—Without a racing form.
 Bobby—In need of a feather-e-ige.
 Russell—in overalls.
 Temp—Frowning.
 Mr. Weekes—Without his briar.

What We Would LIKE TO HEAR

Miss Ruth—Sneeze.

Auditor Coal and Coke Receipts

Correspondent, JOHN LIMPET

We predict a great peanut taffy and gum drop famine during the next few months, due principally to the fact that French has at last got in his new set of "hash grinders." We also predict that more than one young lady will ask "Who is that good looking young fellow?" when he makes his nightly visit to Frederick Road Park. We admit that the change is wonderful and hope that proper precautions will be taken the next time a raid is made on the old jug in the cellar.

Some people go to great expense to keep before the public. "Joe" Heine, prominent Ellicott City resident, of Rclay minstrel fame, belongs to this school. Since the first part of the season (it might have been since 1915 or 1916), "Joe" has been looking over the straw hats displayed by the leading dealers of Baltimore, but apparently can not be suited, as he claims that the old one looks better each year. But being flush one day, "Joe" rides over to Washington, throws all precaution to the wind and dikes himself out with a brand new NEAR PANAMA at the fabulous price of \$2.95. He says that a near Panama is like near beer—both look like the real article from a distance. The transformation must have been marvelous as we understand

several people passed him with remarks such as "How are you today, Senator?" etc. The next thing "Joe" threatens to do is to buy one of those silk shirts with a broad red stripe. Be careful, young man; "lay off" the shirt this season, be content with the dicer, and wait until next year to pull the shirt stunt on the home folks.

With the stage all set for our third annual Field Day, Saturday, June 12; with all the details worked out for a big afternoon, and with the multitude on hand to enjoy themselves, old J. Pluvius took a hand in the party and when that old boy finished pouring water all over South Baltimore, and Westport Baseball Grounds in particular, the playing field would have made an ideal spot for a boat race.

We are, however, deeply indebted to Messrs. Spedden and Brauer for their generosity in allowing us the use of the grounds, and for furnishing, without price or without stint, refreshments for all hands. Too much cannot be said about these two gentlemen and we can only assure them of our sincere thanks and appreciation.

Not being able to make use of the ball grounds in any manner, the only thing left to do was consume everything edible and drinkable in sight, which same was done with great gusto; "hot-dog" sandwiches disappearing at an alarming rate. It looked dreadfully natural to see "French" handing Bis-Mac over the mahogany. If his dad could only have seen him! A later date will be set for the picnic.

Auditor Disbursements

Correspondent, JOHN C. SVEC

John A. Zimmerman has returned from a trip to the Western Coast with the Boumpi Tour. He seems to have had the time of his life.

Miss Coster recently made a visit to her home town, Solomon's Island, and from the packs of films she brought back with her, it looks as if she had "Vamped" the whole island.

The stork paid a visit to the home of James L. Sherwood on July 6, and left a bright ten pound bouncing boy. Congratulations!

Auditor Merchandise Receipts

Correspondent, P. H. STARKLAUF

June Weddings

August F. Barley, Statistical Bureau, and Miss Marie McCourt, on June 15, at St. Thomas' Church, by the Rev. J. Leo Barley, brother of the groom. Boston, by the sea route, was their choice.

Harold Willis and Miss Jeannette Bautz, Local Settlement Bureau, June 17, at the rectory of St. John the Evangelist Church, by the Rev. Leonard Ripple.

Edwin Valentine and Miss Mary Lillian Ganzhorn, Interline Division, Wednesday, June 23, solemn nuptial High Mass at 9.00 a. m. at St. Martin's Church, ceremony performed by the Rev. Leo Otterbein. A brother and sister of the bride acted as best man and bridesmaid, respectively. They will reside in Tacoma, Washington, where the groom is engaged in business.

Robert Clarke, Jr., and Miss Sadie Robinson, Local Settlement Bureau, at Luther-ville, Md., June 23, 1920, by the Rev. Dibble of the Methodist Church.

William Edward Pfeifer and Miss Lillian Huber, stenographer in the Interline Settlement Bureau, June 30, 8.00 p. m., at the home of the bride, by the Rev. L. M. Zimmerman, of Christ Lutheran Church. Miss Vertalee Nieman, friend and fellow clerk, acted as bridesmaid.

SOME MORE OF THE AUDITOR OF MERCHANDISE RECEIPTS OFFICE'S BABIES

Their names are, left to right: Upper row—Charles H. Dannetell, III, son of C. H. Dannetell; Mary Elizabeth, Caroline Anna, Charles Joseph and Frances Anthony, children of Edward J. Napfel; Doris Louise, daughter of Assistant Chief Clerk H. W. Hohman. Lower row—Charles and Robert, sons of Mrs. Edith Henneman; Douglas, son of Head Clerk Randolph Laudeman; Ruth Maxim, daughter of Mrs. Marjorie Graham.

John Arthur Noel

Son of Mr. and Mrs. J. P. Noel, of Washington, D. C. Mrs. Noel, prior to her marriage, was known to the office of the Auditor Merchandise Receipts as Miss Louise Peddicord.

We are also apprised of the marriage of Miss Virginia Harris of the Comptometer Bureau and Mr. Walter Gimble during the early part of January. Best wishes.

Travel, they say, is an education in itself. We ought to have some wisecracks around here. There's Miss Clea Wood, who is doing Jersey and Asbury Park; Talbott Booth, who did the Hudson River Landings, but didn't get to Orange Lake near Newburgh on account of trolley trouble; and a group of mermaids who went to the seashore, Misses Derwart, Pokorny, Groves, Tobias, Cain, Ebert, etc.

There are different kinds of trunks—elephants' and "going away," and the trunks all packed ready to go away to Portland, Me., are the property of the Maries—Dahm and Weber. A horrid man hopes that they lose their trunks.

It's not quite according to Hoyle to talk across the desk, but who could resist the temptation of a pleasant word to Beatrix? And "Joe," across the way, a gallant soldier boy, applies himself diligently at the overtime, preparing, no doubt, for happier days to come.

"Bob" Rynehart, with his mother, is visiting Southern Canada and the St. Lawrence River country, including St. Anne de Beaupre. From all gossip, they are having an enviable trip. Also is "Phil" Wallace. Why, "Phil"?

With the variety of promising young women hereabouts, we are at a loss to understand why two young men have taken up Bachelor Apartments.

Chronometer Edward Jones still has the correct time if you want it. Maybe the Lieutenant got the o'clock idea from the target when "a-soldiering."

It is with real sorrow that we learn of the death of Miss Ada Williams of the Comptometer Bureau. Miss Williams died on June 7, 1920, at her home on Tangier Island. Funeral services were conducted by the Rev. C. E. Godwin of the Methodist Church on June 9. Interment in the family burying ground. The family has our condolences.

Auditor Miscellaneous Accounts

Correspondent, MARY E. PEARRELL

A wedding of interest to this office as well as many other offices in the Building took place on Friday, July 2, when "Al" Rothman took for his lawful wife Miss Evelyn

Flinkman of this office. Evelyn was quite popular with both sexes and is greatly missed by her many admirers. We extend our congratulations and best wishes for a long and happy married life.

Owing to the resignation of George L. Vink, Ira C. Kelley and J. Charles Burgess have been promoted. We hope each of these young men will make just as good clerks as their predecessors.

Miss Ruth V. Schafer is filling the position left vacant by Miss Estelle Bankard, who accepted position with an outside concern.

Miss Louise Neilson, formerly of the Freight Agent's office at Camden, has taken a position as clerk in the Government Bureau.

Carl Holland, our former messenger, has been promoted to clerk on Baggage Desk. Stuart Fuld succeeds Mr. Holland. We hope Stuart will be just as good and faithful a messenger as his predecessor.

Mr. William Schuppner is now acting as secretary to our auditor, C. G. Pollock.

On Saturday morning, June 12, at the home of our former correspondent, there arrived a baby girl weighing six pounds. Mr. Lippert says she can walk and talk, but we doubt it very much.

Auditor Passenger Receipts

Correspondent, G. FRED. MILLER

Secretary to Auditor

Upon looking over the Baltimore newspapers you may come across the following advertisement:

"Office Space—Lexington Building."

There's a reason; we did not have sufficient space to carry on our ever increasing business, and it became necessary to seek larger quarters. We made a record move from the Lexington Building at Lexington and Liberty Streets, to the Annex Building at Liberty and Lombard Streets. We evacuated the Lexington Building on July 16, and were doing business at the new headquarters on the following day. Pretty snappy work. Ringling Brothers and Barnum and Bailey have sent for information as to our moving system.

We extend an invitation to our railroad friends to pay us a visit and witness a modern Passenger Receipts office, of a large railroad turning out work in a speedy, accurate and noiseless manner.

The Auditor Passenger Receipts' office, cooperating with our good friends of the Auditor Disbursements office, held an excursion to Tolchester on July 16. The day was ideal, and the night—well, anyone taking a little stroll around the decks, would have found the answer. Quite a representative crowd made the trip and had an enjoyable time. The two offices staged a ball game, which resulted in a four to two decision in favor of the Auditor Passenger Receipts' team.

When it comes to preparing lunches, I'll stick to the girls of the office; Mrs. Childs and the chef at the Ritz-Carlton are "has-beens," and could secure some good recipes from our fair cuisine artists.

Miss Lola Arnold chaperoned a party of girls from the office, and led them a merry chase. They censored all the bathing costumes on the beach, and finally Miss Lola overpowered Miss Helen Kirkwood and the other little girls of the group and got them all off on the bosom of the beautiful Chesapeake Bay in a tiny row boat. Since seeing Lola row, some athletic directors have decided to send her to the Olympic games to contest with representatives from all other countries.

The Auditor Passenger Receipts' handicap was run off at the Tolchester Beach race track. After a desperate struggle down the home stretch three horses were so closely bunched that the judges were unable to decide who really was the winner. It is said the horses will never look the same. Miss Aggie Hofmann's poor horse thought he was being vamped and did not have his mind on the race at all. He walked the full distance.

The Auditor Passenger Receipts' Welfare Association will shortly have an outing at some beach and is now endeavoring to secure a suitable place.

One of our splendid girls, Miss Helen Foulke, recently joined the order of housewives. It was a very pretty church wedding, and of course all the girls finally broke up the ceremony by rushing up and making the poor groom all nervous, etc.

Our office team is going strong and recently defeated the Auditor Merchandise Receipts' team at Druid Hill Park. The latter team had been selected to represent the Baltimore and Ohio Central offices in the Railroad League. This was the second defeat administered to the Auditor Merchandise Receipts' team. The Auditor Passenger Receipts' team will not be permitted to play in the league because of the fact that two of their members were not in the service on May 1. Our team will follow out a schedule they have arranged for the summer.

George Eichner, former MAGAZINE Correspondent of the office, has resigned. We regret to lose such a good companion and trust his future will be successful.

Summer vacations are now getting in full swing, and the vacation sweetheart will have his hands full. Niagara Falls and Atlantic City are the two popular places. They go to Niagara Falls to find all the pretty nooks to lead the poor innocent men, and then to Atlantic City to pick out the most expensive hotels. Leave it to the ladies.

"Jim" Zim's wife had two baskets of lunch on the excursion mentioned above, but when "Jim" got through there wasn't enough left to tease the tinniest ant at Tolchester.

The accompanying picture, taken at Tolchester, shows Miss Arnold and some of the girls she chaperoned. Miss Vane is doing the strong man stunt. This form of exercise is being taught at the swimming club this season.

Messrs. Jenkins and Mewshaw recently went to Ellis Island to perform some important railroad work. They were stopped by the guard at the Ellis Island laning, but no one seems to be able to find the answer.

We have missed of late the beautiful and inspiring poems of our assistant auditor, Louis M. Grice, and hope that his absence from the pages of the MAGAZINE is but temporary. We feel that we are well within the bounds of good taste and propriety when we claim Mr. Grice as the Poet-Laureate of the Baltimore and Ohio.

Girls from office of Auditor Passenger Receipts on an outing

Miss Gladys Kreuger, daughter of Westbound Night Clerk Arthur Kreuger

Grandmother Kreuger

New York Terminals

Correspondent, SARAH ROLMES

Vincent R. Cherney, well-known and well-liked by all, has left the Railroad to woo Dame Fortune elsewhere. Mr. Cherney is one of our veterans, having "seen service" for 20 years. He takes with him our best wishes for success in his new field. That we miss him goes without saying. But cheer up, folks, "Vince" has promised to step in to see us every now and then.

With the summer days in full swing, we note our fair girlies are trying to outdo each other in their summer apparel. Pink, pale blue, Nile green and lavender seem to be the preferred shades of the frocks. The simplicity and daintiness with which each one is fashioned lends a touch of charm to the wearer. Look out, boys, or you'll each have your hearts pierced by Cupid's arrow before long.

Seems as though some of the boys won't let up on playing their little pranks on "Joe Coffee," our famous pie provider. If they're not pulling his tie out of place, they're tipping his hat off his partly bald dome, calling him back when he's halfway out, and doing as much mischief as they can. Good old "Joe," however, takes it all in the proper spirit, even when carried a little too far.

Ding-dong, ding-dong, ding-dong, ding,
How sweetly the wedding bells ring!
For whom do they chime? Now you shall know.
For pretty Irene and her beau.

Many of us had the pleasure of being present at the wedding of Irene Sparks to "Casey" James F. Connell on Wednesday evening, June 23. The ceremony was held at the Church of the Sacred Heart, West Brighton, S. I., and was followed by a reception at the home of the bride. As a rule, brides are very pretty, but Irene, with her blue eyes, blond hair, and her gown of white satin and silver lace, not forgetting the crown of orange blossoms, was a vision of loveliness. No less handsome was the groom. The office presented the couple with a beautiful dinner set that pleased them very much.

On June 11, Dr. Stork visited the home of Daniel Ledwirth, float foreman at West 26th Street Station, and this time surprised with a gift in the shape of a baby boy. That Daniel, Jr., is a bouncing baby is indicated by its weight on arrival, 8½ pounds. We extend our congratulations to Dan, Sr.

Most thrills come once a lifetime, but ours come twice a month. Need I say more?

Jersey City, N. J., had the honor of entertaining our popular chief clerk, H. O. Duffy, for one week. That he "painted the town red" as the saying goes, is shown in his remark that he forgot the existence of the Baltimore and Ohio. Fancy that!

The night force complains that they have never got into the MAGAZINE yet. Well, night force, why don't you do the necessary and give your notes to N. V. Cosgrove, who will hand them to the correspondent? Here's something for a start from one of your mates:

The pictures above are those of Mrs. Eva K. Kreuger, mother of Arthur Kreuger, westbound night clerk, and his daughter Gladys. Mrs. Kreuger came from St. Louis recently to visit Arthur. The picture of Gladys may be suggestive of a June bride, but she hasn't reached that stage yet. It was taken a few days after she made her first communion.

Staten Island Lines

Correspondent, G. F. GOOLIC

We are pleased to announce the marriage of Miss V. C. O'Neil, stenographer to division engineer, to Mr. O. Nelson. The marriage took place at the home of the bride at Mariners Harbor. We all extend our congratulations and good wishes to both.

George Styles has been appointed supervisor of crossing watchmen, vice C. Wilson, resigned.

H. J. Goolic was employed as material clerk, vice Mr. Styles.

D. Reynolds was employed as fire inspector, Maintenance of Way Department, vice T. Murray, resigned. "Dan" worked in the Maintenance of Way Department before, as carpenter helper.

R. McCullan spent his vacation at his home at West Brighton.

Arrangements are being made for the Sixth Annual Ball of the Staten Island Railroad Club, which is to be held at Selmers Park, Grant City. We all expect to make this picnic the best ever held on Staten Island.

"Al" Rauscher is now enjoying his well earned vacation at Baltimore.

There isn't a day that passes by that Miss G. Whalen hasn't a bag of candy after each meal. She will turn into candy if she doesn't watch her step.

J. F. Langford, car dispatcher, Superintendent's Office, Pier 6, St. George, is rejoicing over the arrival of "Friend Stork," who left a bouncing baby boy. Congratulations!

"Joe" King, operator at Mariners Harbor, took a trip to Sullivan County and brought home a bride. We did not expect "Joe" to do this without letting us know about it. Anyhow, we all extend hearty congratulations.

H. Koenig, clerk, St. George, is enjoying his vacation at Glen and Niagara Falls.

C. J. Martins, operator, Cranford, takes off the Fourth of July every year. We didn't know the reason for this until Mr. Martin told us that the Fourth is his birthday, and he wants that day off to have a good time. Mr. Martins is now 65 years old and is still going strong.

Miss I. McCarthy, stenographer in Superintendent's office, has enjoyed her vacation at Oswego, N. Y.

Canal boats at New McMyler Coal Dumping Machines at Arlington

Don't Send a Penny

The shoes offered here are such wonderful values that we gladly send them, **no money down.** You will find them so well made and so stylish and such big money-saving bargains that you will surely keep them. So don't hesitate—just fill out and mail the coupon and we will send you a pair of your size. No need for you to pay higher prices when you can buy direct from us—and no need sending money in advance before receiving the shoes. Why pay out \$6, \$8 or more for shoes not nearly so good? Act now. Mail the coupon today while this special offer holds good. Pay only when shoes arrive.

Great Work Shoe Offer

We can't tell you enough about these shoes here. This shoe is built to meet the demand for an outdoor city workers' shoe and for the modern farmer. Send and see for yourself. Built on stylish lace Blucher last. The special tanning process makes the leather proof against acids in milk, manure, soil, gasoline, etc. They outwear three ordinary pair of shoes. Most comfortable work shoe ever made. Very soft and easy on the feet. Made by a special process which leaves all the "life" in the leather and gives it wonderful wear-resisting quality. Double soles and heels. Dirt and waterproof tongue. Heavy chrome leather tops. Just slip them on and see if they are not the most comfortable, most wonderful wearing work shoes you ever wore. Pay only **\$3.98** for shoes on arrival. If after careful examination you don't find them all you expect, send them back and we will refund your money.

**Remarkable
Bargain**

To order these shoes mark X in the ☐ by number AX15105 in coupon. Be sure to give size and width when ordering.

Send No Money With Order

Stylish Dress Shoe

Special bargain to close out a limited stock of these smart Dress Shoes. Act quickly if you want a pair. Made in classy lace Blucher style. Splendid quality calf uppers. Splendid solid leather soles and heels. Come in black only. At our price these shoes challenge all competition. Make your own decision after you examine and try them on. Sent absolutely on approval. You must see them to appreciate the fine quality of material, workmanship and astonishing bargain value. No money with order. Pay only **\$3.98** for shoes on arrival. And that returned if you don't keep the shoes.

Mark X in ☐ by No. AX15106 in coupon. Be sure to give size wanted.

Send Coupon

Keep your money until shoes come. Not a cent to pay now. Sent direct to your home on approval. Then let the shoes themselves convince you of their bargain value or return them and get your money back. This is the modern, sensible way to buy—the way thousands are buying their shoes today direct from us—getting satisfaction—saving money. Fill out the coupon and send it now.

"MULLIKIN'S FIRST LOVE." HOW DOES HE GET THAT WAY?

Miss Marie Vitter has been employed as clerk, Car Accountant's office, Pier 6, St. George, vice Miss M. Ashley, resigned.

Mr. and Mrs. F. Van Name took a trip South on their vacation.

P. Mahoney has been employed as east-bound clerk, Lighterage Department, Pier 6, St. George.

Baltimore Terminal Division

Correspondent, C. O. HEALY, *Secretary to Superintendent*

Sometimes a secret is a secret and then again it is not. I have reference to Conductor Joseph R. Turner, Camden Yard, who recently took unto himself a fair one. Her name is Mrs. Juanita Copper, of the Freight Claim Department. This for the information of Conductor Turner's fellow employes, who might, unknowingly, try to lead him astray.

No ill luck is intentionally wished upon him, but we are in hopes that on the next trip that "Abraham" Lincoln's bright pink shirt takes to the laundry, it will become mislaid.

Our office boy, George Crocker, was the first one of us to enjoy a two weeks' vacation. About all he has to say is to emphatically denounce the charge of \$1.00 per day for room and board at a certain Betterton hotel, and claims he was soaked unmercifully and will not visit that resort again. Read up on old "H. C. L.," George.

"Charlie" Healy, and one of his friends at "Verities"

It is with regret that we note the serious illness of Car Distributor C. E. Fowler. His speedy recovery is anxiously looked for by us all.

We have noticed a certain young man at Camden Station walking around absent-mindedly and burning his tongue with the wrong end of his cigarette. We have been unable to account for it, but when he took to wearing polka dot ties and shining his gold tooth—well, that settles it, it must be his first love affair. See Heiser's cartoon, left, for further explanation.

F. H. Carter leaves the office occasionally to switch a car out down on No. 7 track or to act as conductor on a motor through the Belt Line Tunnel. Barrett Weis likes to deliver messages in the Curtis Bay district after midnight.

"Fred" Groom, who has been assistant chief clerk in this office for some time, has accepted a position bearing the same title in the office of the General Superintendent. F. H. Carter succeeds him. Success to you both!

Albert Louis Folks

Year-old son of Albert F. Folks, upholster helper, Mt. Clare, in service two years

The acceptance of the position of assistant trainmaster by F. W. Stringer, former assistant chief clerk, office of the General Superintendent, adds great strength to the supervisory staff of our division.

Miss Pearl Berrett's pretty collection of dresses always keeps us guessing, wondering which one she will don on the following day.

We don't like to see the Riverside messenger boy get sick, but we do like to see "who takes his place."

B. E. Dean, formerly employed by the Baltimore Division, has accepted a position in this office as secretary to assistant superintendent.

Miss Annabelle Smith, our Riverside "hello" girl, just returned from her vacation in Washington and points in Virginia.

We don't agree with the Correspondent in the General Manager's office, regarding "Charlie" Healy's ties. They don't talk, they shriek. (See sketch.)

Margaret Galloway Miles

Mount Clare Shops

Correspondent, MOLLIE ALBRECHT
Secretary to Superintendent

Here is a baby of railroad ancestry—Margaret Galloway Miles. She is the daughter of William W. and Elsie Galloway Miles; the granddaughter of George W. Galloway, foreman at Mt. Clare Shops; the great-granddaughter of the late Jessie F. Galloway, one of the early passenger conductors of the Baltimore and Ohio, and the great-great-granddaughter of William Galloway, who was one of our first engineers. We naturally expect Margaret to become a railroad girl as soon as she grows up.

Locust Point

J. C. Galloway, statement clerk, Time-keeper's Department, will shortly leave on his annual trip to Harrisburg, Pa. As we have been wondering who she is, let's hope that "Joe" will bring her back this time. Also hope he will not forget his umbrella in order that he may run no chance of getting a newspaper to cover his 1905 panama hat.

Peter Dudley and his friend Aquilla Johnson, both of whom have very large farms somewhere near Herring Run, have each put up a ten spot to see who will grow the largest pumpkins.

Mr. Tewey has the congratulations of all his fellow clerks in the office upon the occasion of his recent promotion.

I. Silverman and his wife have found out a way to beat the high cost of living. For the past month they have been spending the week-end as guests on the farm of A. Johnson.

Delivery Clerks, Pier 22, Philadelphia

Agent's Office, Camden

Correspondent, W. H. BULL

We are just in receipt of news that F. G. Casler formerly of the Accounting Department, and who sailed last year for Russia with the Russian Railway Corps, is expected to land in California in mid-July. We will be glad to see Mr. Casler, as we are sure that he will have some interesting stories to tell of his trip abroad.

Miss Emily Brown, Accounting Department, and C. E. Davidson, Billing Department, were married in Washington, D. C., on June 26. Hearty congratulations are extended.

S. H. Hatton has left on his vacation for a trip to San Antonio, Texas. He has promised to return—married.

N. A. H., Rate Department, is longing for a trip to Florida. It's up to someone to get busy.

Baltimore DivisionCorrespondent, W. H. TARR, *Superintendent's Office, Camden Station*

Buildings on the Washington Branch are receiving a coat of paint under the supervision of our veteran Painter Foreman, M. H. Higginbotham.

While at Washington Junction recently, your correspondent paid a visit to Operators W. Q. Stouffer and O. B. Sigafosse. This is a busy junction point and the handling of operations by these gentlemen was very interesting to the spectator. The correspondent regrets he did not have a kodak as he could have filled several pages of the MAGAZINE with interesting sights and the homes of these gentlemen.

We chronicle in these columns the death of Charles T. Rogan on July 7. Mr. Rogan was seized with a hemorrhage at 3.00 o'clock, an hour before the time for his going on duty. He started in the service of the Company as a messenger at Locust Point and within about a year had become an operator. He served in this capacity ever since, a period of about 12 years. He was a student of the key and knew both the Morse and Continental codes and during the War served the Government as a radio instructor. He belonged to a family of railroaders, his father being T. M. Rogan, passenger conductor. His brother, T. J. Rogan, is also an operator.

Brunswick

Correspondent, ETHEL E. STICKLEY

Heard daily in the Freight office:

R. R.—It's a beastly nuisance.

M. F. W.—Let's tap off the rolls.

M. S.—Oh, I am so hungry.

Kelley—Gee! I just had a bottle of pop.

C. M.—What is the situation?

Pete—Ten hours tomorrow.

Squirley—Nothin' doin'.

R. F. S.—Big night tonight.

L. M.—Did I do that?

J. G.—Are you in good shape?

G. M.—Well, I do think.

E. S.—I wish it was lunch time.

A. S.—Yes, indeed!

R. F.—My hair is not red.

N. M.—Oh, we'll never get out.

R. M.—Wait a minute.

C. J.—Hope we get out early.

The new time clock for registering employees in and out from work is now in operation.

The Transfer Department was closed on July 5, and all employees enjoyed the one day holiday.

Washington, D. C., Freight StationCorrespondent, W. L. WHITING, *Chief Clerk*

Washington is at present at its quietest period of the year, when most of the big houses are boarded up for the summer. This affects the general business of the city, and is felt in railroad circles as elsewhere. We expect some sort of a let up on the usual rush about this time of year, and therefore what may be truly called the vacation season is in full swing. Things all work very happily in this connection at this station, and several of our force have

already availed themselves of the opportunity offered.

Collection clerk S. F. Mehlfelt did not travel far from home. The recent visit of the Stork provided him with all the fun and enjoyment that he could wish for.

Cash Clerk I. E. Catterton spent a few days at the old home at Bristol, Md.

File Clerk J. H. Huhn is having the time of his life at his extensive farm at College, Md. We expect to see that he has gained many pounds in weight while providing the neighborhood with good fresh vegetables.

**"Another \$50 Raise!"**

"Why, that's my third increase in a year! It just shows what special training will do for a man. When I left school to go to work I couldn't do anything in particular. All I could hope for was just a job—and that's what I got, at \$60 a month for routine, unskilled work. I stayed at it for three years, with one small increase each year.

"Then one day I woke up. To tell the truth, I wanted to get married. Of course I couldn't on what I was making and that made me do some serious thinking. I found I wasn't getting ahead simply because I couldn't do any one thing well. Almost anyone could step in at any time and do what I was doing. I decided right then to put in an hour after supper each night preparing myself for more important work. So I wrote to Scranton and arranged for a course that would give me special training for our business.

"As I look back now, I wonder why I didn't realize before that this was the thing to do. Why, in a few months I had a whole new vision of my work and its possibilities. You see, I was just beginning to really understand it. I made some suggestions to the manager and he was immensely pleased. Said he noticed how much better I was doing lately and wished he had more like me.

"Just after that an opening came and he gave me my chance—at an increase of \$25 a month. Then I really began to grow. Six months later I was put in charge of my department and my salary went up again. Since then I've had two increases of \$50 a month and now I've got another \$50 raise!

"This will be great news for Mary. We'll have a home of our own with the comforts and enjoyments we've dreamed of. And I've only just begun. I can see a real future ahead now with more money than I ever hoped to make."

For 29 years the International Correspondence Schools have been helping men and women everywhere to win promotion, to earn more money, to have happy, prosperous homes, to know the joy of getting ahead in business and in life.

More than two million have taken the up road with I. C. S. help. More than 110,000 are now turning their spare time to profit. Hundreds are starting every day. Isn't it about time for you to find out what the I. C. S. can do for you?

You, too, can have the position you want in the work of your choice, you can have the kind of a salary that will make possible money in the bank, a home of your own, the comforts and luxuries you would like your family to have. No matter what your age, your occupation or your means—you can do it!

All we ask is the chance to prove it—without obligation on your part or a penny of cost. That's fair, isn't it? Then mark and mail this coupon.

Our notice clerk, Miss Isabel Hawkins, enjoyed the sea breeze at Chesapeake Beach. This is a favorite place with Washingtonians as it is not so far away, and you can come back home if it rains too hard.

Chief Waybill Clerk P. S. Smith enjoyed a few days rest at his home in Beltsville, Md. He has not been very well for some time, and the rest has been beneficial to him.

Tallyman Edgar Miller is still on the sick list. We are hoping to see him back again soon.

Miss Elizabeth Taylor has returned to her desk after being at home for several days nursing a lame foot. Miss Taylor had a little argument recently with a motorcycle, in which, as is usually the case, the motorcycle took first prize. We are glad to welcome her back and she promises not to attempt the same performance again.

Wilmington Freight Office

Correspondent, CHARLES W. HAMILTON

The following announcement marks a very happy event, and one in which our office employees interested themselves and manifested a measure of their appreciation and deep regard always felt toward Agent Rittenhouse.

"This will announce the marriage of Miss Marie O. Grah to Mr. Ellis B. Rittenhouse on Thursday, May 13, 1920, Wilmington, Delaware."

Miss Grah is a Baltimore lady, a fine and engaging personality and Mr. Rittenhouse is truly fortunate and to be congratulated.

Following the extended honeymoon trip of the happy couple to several of the western cities was the presentation of a silver service of 32 pieces, by the Wilmington Freight office employees. In reply to the felicitations of the donors as set forth in a suitable address, Mr. Rittenhouse gave expression to his deep appreciation and mentioned the tact of the givers in keeping the gift until the return and presenting it as a complete surprise.

Little Dorothy, daughter of Mr. and Mrs. R. J. Simmons, lately arrived to take a welcome place as member of their happy family. Mr. Simmons is a valued member of our local Freight House team.

Matthew Cameron, Depot Force, Delaware Avenue Passenger Station, is happy in the advent of a fine new son. We have not, at this writing, learned the name of this new Baltimore and Ohio boy, but we are sure that Matthew will line the little chap for early promotion with our peerless railroad forces.

Cumberland Division

Correspondents

E. C. DRAWBAUGH, *Division Operator*
R. G. ALLAMONG, *Secretary, Y. M. C. A.*
P. M. PENNINGTON, *Crossing Watchman*
RUTH M. CHEVRONT, *Office, Mechanical Engineer*

Lawrence, son of Watchman Pennington at Polk Street, who enlisted in the Marine Corps last December, has been at home on a ten-day furlough from Paris Island.

NOTE: The MAGAZINE office was honored with a visit from Mr. Pennington and his two sons, Lawrence and Leonard, on July 8. We are always glad to see our correspondents, and now and then when one does drop in to see us, we feel more than ever that we belong to the big family of Railroaders.

Martinsburg Shops

Correspondent, W. L. STEVENS, *Assistant Foreman, Martinsburg, W. Va.*

Brakeman Dayton E. Keesecker, of Brunswick, and Miss Sarah Shields, of Martinsburg, were married in this city. They will make their home in Brunswick.

The sad and untimely death of Section-man William S. Athey was the cause of great sorrow to all of the railroad men in this section. Mr. Athey, with several of his fellow workers, was coming east from Cumbo to Martinsburg when an engine, running light, overtook the hand car. All but Mr. Athey succeeded in escaping.

The deceased was 44 years old, a native of Berkeley County, and had been in the employ of the Baltimore and Ohio since he was a young man. He was a member of the Jr. O. U. A. M., and was popular with his fellows. He is survived by a widow, Mrs. Mary Athey.

Mrs. Catherine Lucinda Light, 57 years old, wife of veteran Engineer P. M. Light, died at her home in this city, after a lingering illness. The sympathy of his friends is extended to Mr. Light in his hour of bereavement.

Another of our aged and retired railroad men, William H. C. House, of Magnolia, has answered his last roll call, and now sleeps in death on the hills of Magnolia, near the Railroad which he served for so many years. He was a member of the Martinsburg Veterans' Association and was always interested in its affairs and in the progress of the Railroad. Brother House was a member of Company D of the second Maryland Infantry, during the Civil War. He served the Baltimore and Ohio during the whole of his active life. See further note under "Green Spring."

Brakeman George Penn is wearing a glad smile these days. Ah! A boy? Yes, the great State of Pennsylvania has nothing on this town; we have a Father Penn, too.

Keyser

Correspondent, P. G. ERVIN

Harry B. Kight, day ticket agent at Keyser, resigned from the service on June 16 to accept a position with the West Virginia Pulp and Paper Co. at Covington, Va. Mr. Kight has been ticket agent at Keyser for the past six years and previous to that time was employed in various capacities in and around Keyser. In severing his connection with the service, the Baltimore and Ohio has lost one of its most efficient ticket agents. While we regret his leaving, we wish him all the success possible in his new position.

A wave of matrimony seems to have struck Keyser recently. On June 19 Marshall Virts and Mrs. Estella Salyards were married by the Rev. Garrett at the Methodist parsonage. Mr. Virts is employed as yard brakeman and his bride is yard clerk at Keyser.

On June 29, at the home of the bride's parents, the marriage of Marshall Orndoff and Miss Gladys Michaels, both of Keyser, took place. Mr. Orndoff is employed as M. C. B. accountant and Miss Michaels is the daughter of one of Keyser's merchants.

EMPLOYEES OF FORMER JOINT OFFICE, BALTIMORE AND OHIO AND PHILADELPHIA AND READING, WILMINGTON, DELAWARE

Left to right, front row: Miss Catherine McNally, Mrs. Jennie C. Wright, Miss Catherine August, Miss Alice McNemar, Miss Rosena Ford, Miss Mamie George, Miss Hannah Crumlish, Miss Ethel Fisher, Mrs. Genevieve Knoch, Miss F. Martina Carroll, Mrs. M. Alice Hamilton, Samuel Green.
Back row: Lawrence A. Weldin, Miss Catherine Collins, Millard V. Petticord, Wilmer R. King, Miss Alice Moynahan, Mrs. Mary S. McKee, J. Oakford Lambson, E. B. Rittenhouse, agent, D. B. Hendricks, Elmer E. Townsend, Madison B. Lynch, Raymond Spindler, Philip Kienle, J. H. Davis, William T. Sawyer, Frederick Kendall, Charles W. Hamilton, Martin J. Lawless.

The late John Oliver Saville, under X

July 5 was a big day in Keyser and an occasion of much pleasure to all. The festivities were under the auspices of the American Legion and were well conducted. At ten o'clock in the morning there was a grand parade through the main streets of the city. The parade was composed of marching ex-soldiers and floats of various kinds. It is interesting to note that the float which took first prize was a "First Aid" display, prepared under the supervision of Safety Inspector G. E. Sirbaugh of our shops. The writer was privileged to see the parade (although he had been in Washington the previous day attending a ball game, and had just got up out of bed when the parade went by) and, in his opinion, the judges certainly knew their business in awarding the prize. Mr. Sirbaugh is a real "Safety First" man and too much credit cannot be given him for the good work that he is doing at Keyser.

Charles Steiding, clerk in Assistant Superintendent's office, is taking his vacation. The other night he sneaked in the office and left a note stating that he was having a good time in Keyser. It is hard to believe that he is having a good time when he would sneak around the office after all the other clerks have gone home and are thinking of going to bed. Charles can probably be found in his back yard, working the garden daily, with his wife looking on and telling him how everything should be done. Beware, "Charley;" the next time you want to tell us how you are enjoying your vacation, do it in the day time, when the bunch can hear you.

Timber Preserving Plant

Correspondent, E. E. ALEXANDER

Mr. and Mrs. Guy Crites, whose wedding was recently reported, received a beautiful set of Rogers silverware as a present from the boys at the Plant.

Mrs. E. M. Stottlemeyer, wife of our general foreman, wife of our general foreman, spent ten days with friends and relatives at Frederick, Plane No. 4, Mt. Airy and Baltimore. E. M. S. spent the 4th and 5th at Plane No. 4. "Ed" says "Oh, my! how he did enjoy country ham, fried chicken and chicken potpie!"

Mr. and Mrs. Roy Keister announce the birth of a daughter, Lucille Alberta Keister, born June 10.

Mr. and Mrs. Archie Haines are proud parents of a son, Archie Arnold Haines, born June 24, 1920.

On the afternoon of Tuesday, July 6, with scarcely an hour's warning, another highly respected and widely known Baltimore and Ohio Veteran passed through the valley and shadows to the Great Beyond.

John Oliver Saville, son of the late Jacob and Elizabeth Saville, was born at Levels, W. Va., on October 25, 1848. He entered the service of the Baltimore and Ohio May 10, 1871, as trackman on Section 23, where he worked continuously until April 23, 1917, when he was retired with the remarkable record of 46 years on the one section. He was proud of his acquaintance with nearly every railroad man on the east end of the Cumberland Division, by whom he was familiarly known as "Dad." Several beautiful floral offerings silently attributed this friendship. Mr. Saville's boast, verified by many of his friends, was that he could put up a prettier border and straighter edge than any trackman on his division.

Funeral services were held in the M. E. S. Church at Green Spring on July 8 and the body tenderly laid to rest by old Veterans and comrades in the service, in Oldtown Cemetery, at Oldtown, Md. The pallbearers were all old Veterans, proud of their service: M. Skelley, G. W. Robinson, George Teeters, I. N. Saville, L. V. Twigg and Henry Davis.

Mr. Saville is survived by his wife, Mrs. Amanda Saville, two sons, J. S., agent at Relay, Md., W. K., of Thomas, W. Va., and one daughter, Mrs. C. M. Lewis, of Green Spring, W. Va.

In the accompanying picture from left to right are: E. B. Saville, M. Skelley, Bert Montgomery, G. N. Teeters, the late J. O. Saville, Grant Dorsey and Foreman M. C. Miller.

GREEN SPRINGS, W.VA., June 30, 1920.

To Our Friends—I want to thank all my neighbors and friends through our BALTIMORE AND OHIO MAGAZINE for their kind attention given me while in the hospital, and especially for the interest shown my children. Also for the donation given us and the burden those neighbors lifted from me by caring for my house during that time.

Words fail me to express my full appreciation. May their pathway be of sunshine and their future reward be great.

(Signed) Mrs. LINNIE ALLEN.

(Wife of Night Foreman.)

Charles C. Ricewick and Miss Beulah Virginia Shaw were united in marriage on July 2 at the home of Mr. and Mrs. "Sol"

Please mention our magazine when writing advertisers

Zimmerman at Old Town, Md. Reverend W. F. McFarland officiated. Our wishes for a happy future.

We have some fine truck farms this season, about 20 of the boys using idle ground to fight the H. C. L. We expect some potato growing records to be broken with Conley in the lead, Kittle and Gross close seconds, and one or two dark horses who may yet beat them all.

EARN REAL PHONOGRAPH

Beautifully finished, nickel winding crank, spring motor, speed regulator, stop lever. New improved sound box with mica diaphragm, makes perfect reproductions of all kinds of music. A MARVELOUS Machine in every way delighted thousands of homes.

The late William H. C. House, marked by cross

During the early morning hours on Monday, June 28, 1920, the spirit of another highly respected and well and favorably known retired Baltimore and Ohio employe, after an illness of a few weeks, answered the last summons.

William H. C. House, son of the late William and Susan House, whose ancestors were the earliest settlers of Morgan County, W. Va., was born at Magnolia, on March 6, 1839. During the Civil War he served three years with distinction in the Union Army, as a member of Company "B," Second Maryland Regiment, Potomac Home Brigade. One of his greatest delights was in relating his experiences in and near Winchester during the Valley Campaign.

He entered the service of the Company October 1, 1864, serving as fireman and brakeman. He was appointed pumper at Magnolia in 1881, being retired about 1905, after 41 years' continuous service. Loyal to his country, faithful to his duty, his was a life well spent.

Funeral services were held at his home on June 30, Veterans and comrades laying the remains to rest in Cedar Hill Cemetery. The pall-bearers were, A. T. Kesler, "Mike" Sharon, John Appold, James Mercer, J. R. Albright and C. A. Kifer.

Mr. House is survived by two sons, John R. of Magnolia, fireman at Timber Preserving Plant, William Nicholas of Cumberland, two daughters, Ida and Blanche, and one sister, Mrs. E. F. McAdams of Cumberland.

The floral tributes were many and beautiful.

We regret to report that owing to ill health, Earl S. Crawford, treating engineer, has been granted a leave of absence. Our hope is that Mr. Crawford may speedily regain his health and again be in the service.

Connellsville Division

Correspondents

S. M. DEHUFF, *Manager of Telegraph Office*, Connellsville, Pa.

J. J. BRADY, *Office of Division Accountant*, Connellsville, Pa.

EARL E. SHANK, *Office of Superintendent*, Connellsville, Pa.

On page 66 of the October, 1918, issue of the MAGAZINE there appeared a photograph of a happy couple standing on the station platform at Border, Pa. They were Section Foreman and Mrs. W. M. Hutzell; but, there was a good bit of controversy as to which was which. The riddle has been solved by the accompanying photograph, which simply proves that Mr. and Mrs. Hutzell had exchanged clothes for the former picture.

Pittsburgh Division

Correspondent, E. N. FAIRGRIEVE, *Car Distributor*, Office of General Superintendent

Glenwood Shops

Correspondent, FRANK RUSH, *Shop Clerk*

"Some Boy"

Let us proceed to analyze our friend, C. H. Trichinger. He has nice, big, Spokane apple cheeks, deep, dark blue eyes, and dimples that would make a six-month's old baby hide his face. He made his debut on the Railroad at Glenwood Tower on December 11, 1918, as Signal Repairman Helper. In March, 1919, he was transferred to "WJ" Tower as Lampman. He still holds this position. When any of his friends wish to

The puzzle is answered
(See Connellsville notes)

inquire about his health, they usually say, "Well, how's tricks?", and C. H. replies, "I haven't any new ones today, but I haven't been home yet."

"Steve Petey"

"Steve" is no high brow but neither is he a low brow. Being of foreign birth, his name, of course, embraces practically 26 of the 37 letters in the alphabet, so we used some "Rumford's" and his name is now as above. "Steve" started at Laughlin Junction as lampman on December 17, 1917, but was shortly transferred to Pittsburgh Junction Railroad as lampman and worked there until about April, 1918. After a short absence from service, he returned to the Signal Department in July, 1918, and was assigned to WJ Tower as signal repairman helper. "Steve" is unmarried and thinks he will remain so, though 1920 may decide in his favor.

William A. (Alonzo) Miller

This young gentleman is the prize of the year when it comes to moving. He has a three horse van tied to a tree. Put on your shells and hold your hats; don't stand up; give me your money, for this is his record: January 5, 1917, clerk at Glenwood station, then interchange clerk at Bessemer, re-

ceiving clerk at Glenwood store room, to WJ Tower as signal repairman helper—all within the time between January 5, 1917, and February 27, 1918—but probably his excuse is a good one. He is married and has two boys. His fellow workers admire him for his mild manner, which quickly reaches the hearts of all who meet him; he is every ready to do his share of the work. Mr. Miller says he is ready to receive instructions relative to telegraphy from any nice telegrapher. (Of course this sets male telegraphers back a peg.)

Monongah Division

Correspondents

E. S. JENKINS, *Secretary to Division Engineer*, Grafton, W. Va.

MARY C. LEEDS, *M. P. Clerk*, Grafton, W. Va.

B. Z. Holverstott, assistant superintendent, with his wife and son, spent two weeks enjoying the breezes at Atlantic City.

G. F. Wiles, shop draughtsman, recently returned from a business trip to Pittsburgh, wearing a broader smile than usual. He had brought with him a dandy new camera. Guy has always been popular with the "bunch," but we predict for him a greater popularity now that he has such a "taking way." He has promised us a number of "close-ups" of the men, shops, office force, etc., for the MAGAZINE.

Miss Bertha Bishop, stenographer, Master Mechanic's office, has been absent from her desk for some time on account of illness. She is now improving and we sincerely hope to have her with us soon again.

"Jinks," official score-keeper of Monongah Division Baseball Club, and erstwhile machinist helper in the erecting shop, says: "Since the recent game with Weston on the local diamond, I know that I could fill a position in the Accountant's office. Why, I actually kept that score without the aid of an adding machine."

W. E. Hodell and W. E. Parkhill were Grafton delegates to the Relief Convention held in Chicago in June. They report a very interesting and profitable session.

The accompanying photograph shows Labor Foreman W. T. Bartlett taking a brief rest from his arduous duties of rounding up his "Malted Milk Kiddies." Boss Bartlett is popular with his gang, all of whom agree that there is nothing "little" about him.

Foreman W. T. Bartlett

To some of us, during these warm, sultry days, come visions of "shady trees near babbling brooks"—but not to all. Our Gene-ial timekeeper says she much prefers the Son, and resting in an Oldsmobile beside a *Bush* is good enough for her.

J. H. Colebank, business manager of the Monongah Division Baseball Club, is a new member of the Master Mechanic's official family. He fills the chair of boiler clerk.

We have only three weddings to report this time. Perhaps Cupid is taking a vacation.

Machinist Helper C. V. Messenger and Miss Davis of the South Side were married early in June.

On the evening of June 29 the wedding of Stores Department Clerk Percy E. Robinson and Miss Nettie Smith, a little "School-Marm," took place in the Christian Church, Grafton.

On June 30 at the home of the bride, Miss Margaret Cassell, assistant file clerk, Superintendent's office, and Mr. Joseph Gifford, of Fairmont, West Virginia, were married. All extend congratulations to Margaret, although we miss her smiles—and files.

Ohio River Division

Correspondent, Miss M. M. MOORE

C. E. Matheney is the new shop material clerk in the Division Accountant's office, vice Miss R. F. Busch. No, Miss Busch isn't married, she was promoted to tonnage clerk.

A Fire Prevention meeting was held at the Y. M. C. A. on July 8. It was largely attended.

Harold Liggett received instructions to report at Camp Perry near Chicago. We wonder how he likes being a soldier.

It has been noted that John Rood of the Superintendent's office has gone to smoking cigarettes. What will he do next?

"Happy" Arnold and "Kactus" Harrison enjoyed a vacation trip to Canada. Why go to Canada, "Happy?"

After Edward Fortner returned from his vacation in the South, he received a copy of "the fourteen points," which have benefited the entire force.

The accompanying photograph is of "The Big Three" of the Division Accountant's office, Parkersburg, W. Va. Reading from left to right, M. H. Mohler, transportation timekeeper; R. E. Waid, motive power accountant; and G. B. Spencer, division accountant. This was snapped just before a basket lunch was spread at a picnic enjoyed by the employees of the Division Accountant's office on Blennerhassett Island on May 12.

The Big Three

C. H. O'Neal, transportation time clerk, is somewhat improved, although he is still unable to return to work.

Miss Marguerite Biddle has returned from a very exciting trip to Cincinnati, Ohio, on the pretense of seeing the "Zoo." We are of the opinion that there is a man in the case (not in the "Zoo" however). How about it "Mike."

R. E. Waid, motive power accountant, has returned after a much enjoyed vacation.

Our baseball team is doing excellent work. They defeated the Charleston Division boys on the local grounds on July 10 by a score of 4 to 0. They have a game scheduled with Baltimore and Pittsburgh, on local grounds for July 14 and 17, respectively.

Our superintendent, Mr. Root, has returned from his vacation, on which he took an extended trip through the South. His intentions were to return by steamer from New Orleans to New York, but after being informed that steamers did not run on "City Car Schedule" and after waiting three days for one to appear, he returned by rail. Has he told you about his steamer trip?

Miss Agnes Spradling, secretary to Division Engineer and a popular young lady of Weston, W. Va.

Charleston Division

Correspondent, M. W. JONES, Secretary to Superintendent, Weston, W. Va.

It is our aim each month, while giving our readers events of a social nature, to call attention also to any important questions which may be before us. Perhaps the most important duty of every one now is to watch "Car Miles" and see that coal cars are kept moving. All of us know what the present coal situation is, and all that has been said about "Car Miles." Mr. Curren says that "Cars are only earning when wheels are turning." A statement in the June MAGAZINE shows that the Charleston Division dropped from first to second place. It is up to us now to "get busier" still and get back to the old stand.

Charleston Division boys, lets get together and do it.

If you see a car containing slag or ashes, or other company material, get after it, no matter whether you are trackman, laborer, conductor, brakeman, dispatcher, fireman or anything else. It is just as much to your interest and mine to see that that car gets on its way as it is to the interest of the shipping public. During the 24 hours that a coal car stands idly on a siding, it might be working, IF one of us would take the trouble to drop a note or a wire to the

supervising officers of the division. Do you recall what the Charleston Division did in the "No Accident" campaign? Do you remember that two of our boys, Pickens and Carpenter, got the prizes for what were considered the best articles written on this subject, and thereby showed their great interest in the welfare of their fellow employes on the division? Now, let us all get into the car miles and coal car proposition and show that we are ALL interested. Quite a little sermon, isn't it? However, if it results in awakening more interest in these important matters, who will say that time and space have been wasted?

Earn Genuine Watch

THIN MODEL. Lever Escapement. STEM WIND. STEM SET. Handsome. Unmasked movement, fully guaranteed. Regulated to keep perfect time. Not a small clock, but a genuine watch, in size and appearance equal to a \$75 watch. SEND NO MONEY. Just name, and will send you 14 of our new Art Pictures to dispose of at 25c each. Send us the \$3.50 you collect and as a reward we will send you this new thin model, lever escapement, stem wind and stem set watch, just as described, also choice of fob or chain as extra present. Write today. J. D. J. CHICAGO, 137 W. Madison St., Dept. 8A45

SMASHING SHOE PRICES

\$2.48

Work Shoes

Send No Money

And Dress Shoes at \$4.89

A Blow at Profiteering

\$2.48 for a pair of real honest built work shoes. Sounds impossible but it is true, and the best part of it is that you do not have to send any money to prove it. Thousands have been satisfied.

Very durable, made of high grade oil tanned leather. Comfortable, with soft soles.

The dress shoe we are offering at \$4.89, just think of it, \$4.89 for a dress shoe. This in itself is the greatest bargain of the season, but in addition with every pair of dress shoes sold we will sell a pair of these work shoes for \$2.48. A price that sounds like the days before the war. Imagine for a total expenditure of \$7.37 actually less than the value of the dress shoes you will have two pairs of shoes.

Men's fine dress shoe of high grade black leather. This quality leather shoe is a real comfort too.

Send No Money, Just Send Your Order

and pay your postman \$7.37 and postage when the package arrives. You take no risk as the shoes will be sent to you under our iron clad guarantee of money back including postage if you are not fully satisfied.

We Positively Cannot Sell Either Pair of Shoes Separately

When ordering be sure to mention the size required on each pair of shoes.

WOLPER'S, CHICAGO

Dept. 99 1201-1209 West Van Buren St.

The June MAGAZINE contains many interesting articles, so many that all cannot be mentioned. But—did you see the photo of the Charleston Division girl on the cover? (The writer will not say *which* one, for fear of getting "in bad" with the others.) Then there is a very interesting little story of what we are doing in the way of coaling steamers and loading them up at Curtis Bay. Quite a record, and our people in Baltimore should be proud of it. Mr. Emerson's article shows what has been going on in far away Russia, and we are sure that it is being read with great interest; we look forward with pleasure to the remaining chapters.

The MAGAZINE can be obtained from the Superintendent's office, Weston, the Assistant Superintendent's office, Gassaway, and in various other places. If you don't get it, drop the correspondent a note and he will see that you do.

We notice Miss Sylvia Miller, Car Distributor's office, is learning to "check baggage." Undoubtedly she will be an apt pupil.

Ask Chief Clerk Schide to tell you the story of the umbrella that blew inside out. Keep the desk between you when you ask it, however.

General Car Foreman Tull of Gassaway has gone on his vacation. He will probably visit friends in the middle and extreme west, besides attending the Mystic Shrine Convention in Portland. Road Foreman Marsh, accompanied by his wife and family, has left for Colorado on a two weeks' trip. We suppose P. D. will come back chock full of new ideas on "how to save a shovel full of coal" on the Charleston Division.

Our new scrap dock at Gassaway is nearing completion and will undoubtedly effect considerable saving in the handling of material.

On June 14 a well attended meeting of the Charleston Division Safety Committee was held in the Superintendent's office at Weston. We were particularly fortunate in having with us Mr. R. J. Holmes, inspector of the Bureau of Explosives, who gave us a most interesting address on the handling of explosives. This was particularly appropriate on account of the large number of cars of gasoline we handle on this division.

On June 22 we had a well attended meeting of the Charleston Division Freight Claim Prevention Committee at the Y. M. C. A. at Gassaway. There were a number of visitors: W. A. Kraft, office of General Superintendent of Transportation; J. L. Ernest, agent at Belington; T. S. Richardson, joint agent of the K. & M. and Baltimore and Ohio at Charleston; T. L. O'Connor, foreman at Clarksburg, and a large number of our own staff and agents. The principal subject discussed was the loading orders for the handling of L. C. L. freight. A satisfactory arrangement was made, whereby we may expect better service and reduction of claims. Chairman Ryan, of the committee, is always anxious to receive suggestions on the line of claim prevention as is also Mr. Glessner's representative on this division, C. M. Criswell.

The offices at Weston recently held a picnic at Jackson's Mill, near Weston. Everybody was there. The girls and the boys, and the fellows with their wives and their wives to be, and the children, all spent an enjoyable evening. We went out on the five o'clock car, carrying our lunch with us. Division Accountant Severns favored us with his same old song, and his wife

went along to take care of him. Chief Clerk Schide and his wife were there, but they forgot to bring the baby.

Mrs. M. W. Jones and her little son spent a couple of weeks in Kane, Pennsylvania, visiting relatives. This explains why the correspondent lost ten pounds in weight.

We congratulate Assistant Chief Clerk Pickens and his wife on the arrival of a baby girl at their house on June 29.

Captain P. J. Condry, trains 61 and 62, Clarksburg to Richwood, day in and day out, year in and year out, recently took a couple of days' trip to Baltimore. Condry has been in the service since 1890, passenger conductor since 1898, and if you want to see how to run a passenger train, just come down here and take a ride with him.

J. H. Workmeester, assistant claim agent, is at present in Garrett, Indiana, helping the Claim Department there. Funny, isn't it, when they want good men they always come to the Charleston Division for them?

Mrs. W. W. Young, wife of our dispatcher at Gassaway, has been seriously ill in the hospital at Charleston. We are very much pleased to hear she is improving and extend our best wishes to her for prompt recovery.

"Sam" Fox, clerk to the Storekeeper at Gassaway, has resigned to accept position with the Bank of Gassaway. We wish him success in his new work.

Master Mechanic Baldinger attended the A. R. A. convention at Atlantic City.

Road Foreman N. H. Davidson has our sympathy in the recent severe illness of his father, who, we are glad to learn, is recovering.

V. B. Houghton, rate clerk in the Agent's office at Weston, has accepted a position in the Division Freight Agent's office, Charleston.

Famous Sayings of Famous Men on the Charleston Division

Superintendent Trapnell: "How many loads did we move yesterday, and how many gross ton miles did we make?"

Chief Clerk Schide: "Don't you know that eight o'clock does not mean eight five?"

Trainmaster Deegan: "I want yard clerks and tracks at Buckhannon."

Road Foreman Marsh: "Put on the injector, and quit popping off."

Road Foreman Davidson: "Can't take coal in less than ten minutes, what do you expect?"

Trainmaster Nicholas: "There are no cars being delayed on my district."

Chief Dispatcher Staples: "I have no wires to Gassaway."

Car Distributor Dixon: "Oh where, oh where are those little coalers gone?"

Division Accountant Severns: "When do we eat?"

F. C. P. R. Criswell: "Where's your Form G? Nothing less than 100 per cent. goes with me on Form G."

The Correspondent: "Give me some dope for the MAGAZINE, quick."

Assistant Superintendent Kinton: "I want more time on 57 and 58 at Gassaway. How can I make ten switches in five minutes?"

Division Engineer Brooke: "I unloaded 50 cars of slag today. Why don't you give me some more ties?"

Mike, "The Boy Umpire": "OUT."

Chorus, lead by the Superintendent and sung by the entire staff as noted above: "WE WANT CAR MILES EVERY DAY"

Wheeling Division

Correspondent, A. N. GANTZER

Benwood Shop

Correspondent, ANGELA APPLEGATE

A pretty wedding was solemnized at Sts. Peter and Paul Church, Cumberland, on June 15, when Miss Margaret Wegman became the bride of Charles E. McGann, master mechanic, Wheeling Division. Mrs. McGann is the daughter of Locomotive Engineer Henry Wegman. She is an accomplished young lady and is prominent in the social circles of that city. Mr. McGann is the son of Locomotive Engineer Thomas McGann. The attendants were Miss Emma Maurey, bridesmaid, and Charles Wegman, brother of the bride, as best man. The ceremony was performed by Father Marcellus, formerly of Wheeling, W. Va., and brother-in-law of "Dan" Hayes, a former employe at Benwood Shops. After a wedding breakfast at the bride's home, the couple departed on No. 2 for an extended honeymoon in the East. They are now at home, 838 Main Street, Wheeling, W. Va. Mr. and Mrs. McGann received many useful and beautiful presents, among them a 70 piece silver set, from the employes of the Baltimore and Ohio Shops at Benwood, which was presented with our heartiest congratulations and best wishes.

Another pretty wedding took place at Cumberland on June 29, when our Boiler Foreman, W. E. Mouse, also became a benedict. At the present writing we do not know the details of the affair, only that "Bill" and his bride are enjoying a honeymoon in Cuba. "Nuf ced."

Tony Michels, our man-hour clerk, On his time cards loves to work; From seven a. m. to setting sun, He toils away and never gets done.

We all extend our heartfelt sympathy to Machine Shop Foreman R. P. Nolan, in the sickness and death of his little son, Robert, Jr. It will be remembered that Mrs. Nolan underwent a serious operation at the Glendale Hospital. We are pleased to report that she is getting along as nicely as can be expected.

The Baseball Team is doing fine, We hope they'll win while out on line, And to help the cause called "Welfare Work,"

Only one of us appeared to shirk. He'd hate to have us note his name, As that of one who won't "play the game."

R. W. Tedrick, who has been absent on a two months leave on account of sickness, has returned to his duties.

If there were no jokes, There would be no fun, And if it weren't for Kady, We would have none. John took a vacation, And we wish to say, He was missed by us all Throughout every day.

The office force of the Car Department has moved from the Master Mechanic's office to their new headquarters in the Car Foreman's office. We hated to see the Old Bunch go.

"Fred" Ackerman, fuelsupervisor of Western Lines, was called home from the fuel meeting at Chicago on account of the death of his father. Mr. Ackerman has a host of friends on the Wheeling Division who extend their deep sympathy in his sad bereavement.

Miss Etta Cooper has accepted a position in the Storekeeper's office as stenographer, vice Miss Bertha Youst, resigned.

Nick Hoffman and Bill Bull, right through a dismal shower,
Rode on a Speeder, making quite fifty miles per hour,
They were going so fast that with a loud crack,
The darned old machine jumped clear of the track.
When down Bill's neck Nick's cigar did fly,
And then there was heard a terrible cry,
Gee Whiz! How poor Bill and the cigar did suffer!
He says than such riding there is nothing rougher."

Holloway

Officialdom arrived in grand array
In the staid old town of Holloway;
Donned Hobs and gloves, brake clubs and jumpers,
Climbed the footboards, rode the bumpers.
There was Mitch and Shriver and ol' fr'en' Crede,
Switching cars on the eastbound lead.
Cavey, Kellar, and Babcock, too,
Who kept the westbound moving through.
Whistler, Hig, Burgess and Bull,

Emergency Crew, East Side, Holloway Yard

To relieve the yard when it was full.
They all did well, you'll agree, no doubt,
But that's not what this tale's about.
What little of interest I have to say,
Is of midnight frolics in Holloway.
Cavey held three aces and a pair,
Thought he was settin' on the world, for fair.
Mitch held two pair—but they both were trays—
Now Cavey is trying to mend his ways.
Whistler would sing and play the piano
And pass the time of day with sister Anna.
Kellar left the game all in a heap
To properly inspect a carload of sheep.
Crede rode the speeder up to Flushing
And then came back all smiles and blushing.
What the attraction was I don't know,
Probably found her at the picture show.
Patrolman Davis lost his shirt
Cost \$7.50—Gee, it hurt!
But you should have seen the racing match,
When Babcock went through the onion patch.
Events are posted up to date,
Nothing more of interest to relate.
Except old Hig was sore clean through,
When he couldn't go home as he wished to do.
MORAL: How do you like them apples?

The accompanying photograph is of engine 1683 and emergency crew now working on the east side Holloway Yard. Reading from left to right, front row, are: Engineer

G. J. Ballenger, Locomotive Inspector
O. E. Shepherd; back row, Conductor
A. R. Dean on left and W. C. Whistler,
superintendent of Power Plants on right.
This crew cannot be beat and have been
doing fine work switching on the eastbound
lead.

Western Lines

Cincinnati Terminals

Correspondent, JOSEPH BEEL, Chief Clerk to
Superintendent of Terminals

Louis Husman is back after spending the week-end in Cumminsville. "Louie" says the climate up north is more agreeable than in Cincinnati.

Shoes—Two Pair—Shoes

A work shoe and a dress shoe at practically the price of one pair. Sent to you without one penny down. All you have to do is pay your postman \$7.37 and postage when the package arrives. It's a money-back proposition, too. Of course you don't expect full details of an amazing offer such as this in such small space and you are right. If you look for our big six and a half inch illustrated ad. in this issue, you will get full particulars. Wolpers, Dept. 99 at 1201 W. Van Buren Street, Chicago.

Hamilton Watch

"The Railroad Timekeeper of America"

Twenty-seven years at the throttle has shown Engineer Jesse J. Brooksby that an accurate watch has a great deal to do with keeping on schedule. For the past ten years he has run his trains over the New York Central lines with a Hamilton.

Be fair with yourself when you buy that new watch

As a good railroad man you ought to have the best watch you can get—and the Watch of Railroad Accuracy would really cost you no more, because of its extra long life.

There may easily come a time when your safety and that of many others depends upon the accuracy of the watch you carry. In any emergency a good watch to have is the Hamilton.

Ask some of your many friends who own Hamiltons what sort of a watch they would advise you to get. You'll find them enthusiastic over the Hamilton Watch because it combines remark-

able accuracy with long life, even under the difficult conditions of railroad work.

Before you make a selection, have your jeweler show you Hamilton No. 940 (18 size, 21 jewels) and No. 992 (16 size, 21 jewels). They have become the most popular watches in use on America's railroads because they make time inspection a mere matter of routine.

Write today for "The Timekeeper"

All Hamilton models are pictured and described in this interesting booklet, and prices given. They range from \$22 (\$24.00 in Canada) for movements only, up to \$200 for the Hamilton Masterpiece in extra-heavy 18k gold case.

HAMILTON WATCH COMPANY, Lancaster, Pennsylvania

Frederick A. Duvall

George Dishon is again the proud father. (Right here is a good time to announce to the prospective daddies that the office force has been sadly neglected recently in the passing of cigars.)

The accompanying photograph is of one of our former veteran employes, Frederick A. Duvall. "Fred" was well known around Storrs. He is now located at Balboa Heights, Canal Zone, Panama, with the Fire Department.

On June 26, an 18-inch spreading viper was killed in front of the Car Foreman's office. Snakes of this variety are very rare and it is uncommon to find them almost in the heart of Cincinnati. It sure was an "ornery looking cuss," and it could flatten out its head to a width of two inches. We hope there are no more of these unwelcome poisonous visitors lurking around in the vicinity.

Did any of you folks have the misfortune to miss that startling piece in the *Enquirer* of June 26, that tells of Earl Decker's wonderful proficiency in the art of dancing? Earl is carried on the pay-roll as a machinist helper, but we know that his title should be "Jazz Baby" (this term was supplied by "Joe" Coones, the ladies' man at Storrs).

H. Brendel, yard clerk, much poorer and wiser, has returned from a three-week vacation spent in California. "Herb" contemplated staying a month, but a few hours at Tia Juana changed his mind.

J. W. Crist, yard conductor and wife, returned recently from a tour of the Western States.

Ross Kane, yard clerk, is going to open a summer home on the Miami River and hang the "Welcome" sign out.

Herman Franz, private secretary to L. A. Cordie, is wearing a smile that will not come off. July 1 his wife presented him with a fine baby girl. Congratulations!

Miss Rose Knowles, assistant cashier to G. H. Pyne, was tendered a shower by her friends in the Welfare room on June 30. After a delicious dinner the girls presented her with a beautiful silver baking dish and a large fern to beautify her home. The best wishes of all her associates go with her.

C. E. Fish, terminal agent, Cincinnati, was unanimously elected President of the American Association of Freight Agents at the convention held recently in Minneapolis. The Association is to be congratulated upon its selection.

Our Chief Clerk, "Andy" Harr, went to Chicago to attend the Relief Department convention. Did you say that the roof of your mouth was sunburnt, "Andy"?

How is it that "Ed" Massmann, machinist apprentice at Storrs, cannot read the ruler straight on Thursday mornings? It must be "The Morning After the Night Before" with "Ed."

Frank Nock has been keeping "Bachelor Quarters" for several weeks on account of Mrs. Nock and Nock, Jr., spending their vacation in Illinois.

Another one of our yard clerks has joined the benedicts—"Joe" Wagner at Wood Street.

Everybody has noticed that A. Eisman, acting roundhouse foreman at Storrs, seems to be very happy of late. Could this be explained by that old song "My Wife's Gone to the Country?" or is it, perchance, "Home Brew Smile."

Ralph Diamond and Harry Fisher, yard clerks at Elmwood, are each convalescing and we hope that they will be back on the job soon.

"Eddie" Schmalz, timekeeper in the Superintendent's office, accompanied his wife and family to Xenia, Ohio, and left them there. We understand that "Eddie" is trying to "dim the lights" around Knowlton's Corner in the suburb of Cumminsville. We hope that he has a good time but we have appointed one of our Cumminsville friends to keep an eye on him as we do not want to see him take too much advantage of his freedom.

We are glad to have Effie Haynes with us. Effie has been transferred from the Local Freight office to the Superintendent's office as car trace clerk.

The elopement of "Bob" Kemper, the popular chief clerk at Ivorydale, was an interesting surprise to everyone. When "Bob" returned from overseas, he was showered with congratulations on having successfully resisted the advances of those lovely French mademoiselles. The fact that he has now fallen a victim speaks well for the charms of a certain lady from Corryville. The happy couple are now at home to callers, at their new bungalow in Hartwell, Ohio.

Frank Kroetzsch, in charge of the Over, Short and Damage work at the Smith Street Depot, Cincinnati, passed away April 27, 1920. He came to the office that morning in apparent good health and left at noon to go to lunch, when he was suddenly stricken with apoplexy. Mr. Kroetzsch was born on June 14, 1860, and entered the employ of the Local Freight Department at Cincinnati in February, 1884, being, at the time of his death, one of the oldest employes in that department. He is survived by a wife, three sons, two daughters, and two grand-children. Frank Kroetzsch was ever a faithful employe and in whatever sphere of life he moved, he was always conscientious and loyal to the minutest detail. He was prominent in Knights of Pythias work in Cincinnati and a member of the Odd Fellows, Brotherhood of Railway Clerks, and a number of other fraternal organizations.

The funeral services took place on Saturday afternoon, May 1, from the Oakley Evangelical Reformed Church, of which he was a faithful member and worker. In his passing from the Church Militant to the Church Triumphant, his family and his host of friends will miss him, but his faithfulness and conscientiousness will ever be a shining example to them.

F. Hildebrand, better known as "Snookums," former train clerk at Elmwood, is back on the old job, after three years' service with Uncle Sam. "Snookums" was on the Mexican border during 1917 and at the front in France for over a year, having been wounded twice in the Argonne.

Interesting indeed is the early history of one of our esteemed co-workers, William J. Maloney, general chief yard clerk. "Will" was known in the Kanawha Valley coal fields as William J. Coaloney. Entering the mines at the age of eight years, as a mule boy, he worked himself up to the position of purchasing agent. Called away to California to take care of his uncle's ("Jazzbo" Monahan's) plant, the American Vasoline and Bean Blower Corporation, he remained there until this company was taken over by Edward Schmalz, promoter. After purchasing a \$20.00 Panama hat he returned to Cincinnati, where he entered the service of the Baltimore and Ohio. "Will" takes delight in telling about the destruction of his Panama hat. A mule in the ash cart service of the city, recognizing him on the street as his former pal in the mines, kicked him in the head-gear and now "Will" wears a straw Kelly of the market basket type.

We very seldom have the pleasure of hearing about our correspondents, as it doesn't seem to be quite *au fait* to write about one's self. However, with the Editor's permission, we will break this rule.

It is rumored that "Joe" Beel, the genial chief clerk to Superintendent Meyers, has decided to postpone his vacation trip until later. "Joe" wants to visit his friend Dominico Santodomingo, the wealthy sugar planter and mine owner, who has his winter residence in Havana, Cuba. Christmas time will, no doubt, see "Joe" in Havana. This will be the second time "Joe" has planned this trip. Eight years ago he started for Cuba but due to the high water and the flooding of the Union Depot, he was compelled to anchor in Cincinnati.

New Castle Division

Correspondents

A. C. HARRIS, Assistant Chief Clerk to Superintendent, New Castle, Pa.

P. W. ADAMS, Telegraph Operator

O. C. BEDELL, Telegraph Operator

After closely inspecting some of the devotees of the fad, the suspicion will not down that there are ways of acquiring patched pants other than by hard work.

It may be due to the fact that the division is practically all within the state known as the "Birthplace of Presidents"; it may

The late Frank Kroetzsch, Cincinnati Terminals.

UNION MADE "Service" Suits

TRADE MARK REG. U.S. PAT. OFF.

For Your Protection
Every Button on a
"Service" Garment
Bears This Design.

HAND-BRAKING was all right before Westinghouse invented the air brakes. "Just overalls" were good enough in the old days but—

"Service" Suits and Overalls are the modern and improved work clothes. They are designed and tailored to fit the man like street clothes. They are painstakingly sewn to outlast the whole tribe of thrown-together overalls.

The dealer will point out as many points of "Service" superiority as you have time to listen to.

KOHN MANUFACTURING COMPANY

Makers

BRADFORD, PA.

be due to the air we breathe or the water we drink, or it may be the training we get, but on the New Castle Division we feel that at any time a really good man is needed for a difficult job, we can produce the very man to make good. As an illustration we cite the promotion of A. D. Griffith as inspector of stations on the Northwest District. Mr. Griffith was agent at Warren, Ohio, for many years. When the Freight Claim Prevention work was instituted he naturally drew the assignment as supervising agent on New Castle Division, and as his splendid work brought him into closer touch with various officials, his worth was recognized and resulted in his recent appointment. Mr. Griffith is the ideal type for a position of this nature, thoroughly familiar with every phase of agency work and with the rarer gift of forming and retaining the friendship of the men with whom he associates. We know he will succeed.

Agent R. R. Barnes, Homer, Ohio, in addition to being a real live representative of the Company, is also a ball player, one of the stars on the Homerville team. This team has beaten all comers and finds difficulty in getting suitable opponents. Superintendent Stevens has threatened to send the New Castle Junctions team to Homerville with instruction to lower the colors of the team at that point.

Rumor has reached us that General Yardmaster J. O. Huston is interested in a new venture connected with raising and marketing a new type of bean. Supervisor F. C. Green of Warren, Ohio, is associated with Mr. Huston and it would not be surprising to learn that B. F. Crolley of Cincinnati, temporarily located at New Castle Junction, has joined in promoting this affair. If the prospectus is to be believed, there is a vast fortune within the grasp of these three estimable gentlemen.

The two boys in the Storehouse looked at the heavy piece of metal that "Jim" Glenn had told them to move. One boy reached down and pulled and tugged trying to move the heavy object. "Too much-a da heav'" said one little Italian, "no lif-a you'-self—maybe in-ta-rup-a you'-self."

Assistant Terminal Trainmaster J. A. Young, Shop Foreman Sturdevant and Kirkwood, Agents W. S. Brown and G. W. Taylor and Cashier Jolly returned from the recent Relief Department Convention and reported having a splendid time. They, no doubt, also learned a lot of the politics as practiced at the Convention, as they state the Democratic and Republican Conventions were tame affairs as compared with this one.

Two marriages came to our attention during the month and are listed for the benefit of the many friends of the interested parties. Walter E. Rupert, operator at SU office and Miss Fielding of New Castle, Pa., now make up the family known as W. E. Rupert and wife. Everybody knows Rupert and also knows that he is a good judge of "smokes." Fireman H. B. Garlich of New Castle Division visited the engine house at Haselton. As a result the Company has lost a good engine house clerk, as Miss Mabel Wharton has left the service to accept a position as Chief Boss in the Garlich household.

Newark Division

Correspondents

W. E. LAIRD, *Chief Clerk*, Newark, Ohio
A. D. LIST, Newark (Ohio) Shops

Cupid has been working overtime at Newark, as will be noted by the following:

Chief Dispatcher and Mrs. G. F. Wright spent their honeymoon in Boston, New York and other Eastern cities.

Last month we announced that Miss Lucille Callahan, stenographer in Division Accountant's office, had resigned her position in that office in order to devote her time to "housekeeping." Post cards are now reaching Newark signed "Mrs. Bernard Fell." We learn that their future home will be in Zanesville, Ohio.

Miss Mary B. George has tendered her resignation as Motive Power Labor Distribution Clerk. The new name and address will be "Mrs. Donald Snow, Mount Vernon, Ohio."

Assistant Chief Clerk "Tony" Roll recently surprised the force in the Superintendent's office by passing the cigars and chocolates. There was a reason, however. He weighed eight pounds, and has been named "Richard Harding Roll."

Harry Woltjen has accepted a position in the Division Accountant's office.

Conducting Transportation Timekeeper "Orie" Reel reports a very enjoyable vacation spent on the Great Lakes.

W. F. Howell has accepted a position as Man Hour clerk, Division Accountant's office.

Frank Cole, accounting force, spent his vacation in Washington and New York City.

Observations of the Newark Yards

By Dippy Dope

If you give a little thought to some facts that are observant to all who are familiar with the Newark Yards, you will get a "Shock" when you realize that we have two men who are always "Idle," yet they have never been reprimanded; it has never been known to affect their pay checks. There is also a "Drone," who gets by equally as well. But, lest you form a wrong impression of these yards, I want to inform you that we have two that are "Strong." No matter how urgent the needs, no matter how scarce they are at other points, the Newark Yards can always furnish a "Carr."

The South Side crew is considered the most dependable, for should every clock in the city stop, they always have a "Dial." Another crew gives itself a few airs, because it is never without a "Rose." Shippers of live stock should make a special request to be routed by way of Newark, for here they can procure "Hay." We are noted for our hospitality; if you are hungry you can count on a "Fry," with a "Raisin" or a "Rambo" for dessert, served by a "Welsh" "Stewart." Should anyone wish to locate here, you can find "Holmes" by inquiring at the office; and if needs require, a "Parson" will be furnished for the asking. You should have little difficulty in securing furniture; we can furnish you with "Green" or "Brown" "Wicker."

There is some talk of establishing a zoo here, as we have a "Kuhn" and a "Drake." Time to quit now, I'm tired and all a-Trimble."

Zanesville

Correspondent, CHARLES B. L. HAHN

For the second consecutive year Miss Gertrude A. Shoemaker, stenographer-clerk for the Locomotive Car Department at this station, was honored by being elected as a delegate to the Relief Department Convention to represent the Newark Division at Chicago. Miss Shoemaker has been in poor health since being operated on twice recently and was forced to give up going to

the convention at the last minute. Her many friends at Zanesville sincerely wish her a speedy recovery.

At the time of going to press P. H. Reeves, general foreman, Locomotive Car Department at Zanesville, is suffering from a nervous breakdown at his home on Maple Avenue, Zanesville. The many employees under his supervision and also his other Railroad friends hope that he will be with us again soon in much better health.

Any one entering the Reclamation Plant office these days will find one of the young ladies all smiles. Her fellow workers are at a loss to understand what this means unless it is because that a certain young man named Smith, from Cincinnati, is spending his vacation visiting in our city.

Cleveland Division

Correspondents

A. F. BECKER, *Secretary to Superintendent*, Cleveland, Ohio
AMY A. FORD, *Clerk to Pilot Engineer*, 621 Sloan Building, Cleveland, Ohio

The accompanying picture is not a reproduction of Dr. Jekyll and Mr. Hyde, but a remarkable resemblance of J. J. McDonough, air brake foreman, and B. Malasky, pipefitter, who seems to be very much afraid he is going to miss something. Mr. McDonough has been air brake foreman at Cleveland Shops for a number of years, and with due respect we must add that his knowledge and use of "air" is not limited strictly to the Westinghouse variety. He is a firm believer in cooperation, his motto being "cooperation plus efficiency equals production." A good illustration of the results which may be obtained by this formula is manifested by the close relationship which exists between him and Foreman Bradley of the Boiler Department. In explanation of the expression of interest which rests on "Mac's" countenance, we might suggest that this photo was snapped immediately after he received the information that three colored girls were approaching the shop to accept positions as engine cleaners. In his leisure moments his accomplishments wander to the literary field, his latest success being offered to the public in the form of a comedy-tragic melodrama, entitled "The Mystery of the Roundhouse" or "Who put limburger cheese in 'Dan' Bradley's coat?"

J.J. McDonough and P. Malasky

Engine of No. 36 at Willard platform before leaving time. Engineer Moore on left, Fireman "Joe" Hardwick on right

J. C. Fluck, chief clerk to superintendent at Cleveland, had the pleasure, if it could be so called, of being elected Secretary at the Relief Convention held at Chicago the latter part of June. He says he had a good time while there and blames it on the division employes for electing him, as he received the highest number of votes and was not listed on the ballot.

Miss T. Heller and Mrs. G. Saxton had a delightful visit to Washington on June 13.

Another hero! We understand that G. J. Elford, relief agent on the Cleveland Division, while at Warwick the other day, noticed a platform truck backing up. The truck was piled high with baggage and the trucker evidently did not see what was before him. However, George was on the job and pulled a woman away from in front of the truck just in time to save her. The woman thanked him very courteously for his heroic act.

E. C. Mishler, operator at Cleveland, desires to thank the employes for the beautiful floral offering sent at the time of the death of his wife.

Massillon

W. E. Brugh, clerk to trainmaster, can now get his exercise at night. A big boy weighing about 7½ pounds has arrived at his house. Yes, he looks like dad, also takes after him—very quiet.

Trainmaster J. Fitzgerald was released from switching duty in Cleveland on June 24 and is now back on his old job. Glad to see you back, "Jim."

Brakeman Harold U. Brugh was granted a three months' leave of absence and started west on June 29. He intends to land in Denver, Colorado, where he hopes to improve his health by breathing the western atmosphere. We hope you have a good time, Harold, and also that you succeed in improving your health. U. H. Wallace, who was temporarily transferred to yard clerk at Massillon some time ago, is back on the job firing. Can you still keep 'em hot, Urban?

Car Foreman "Tom" Morgan had his first summer vacation in a good many years and started out by going fishing. Did you catch any big fish, "Tom"? No fish stories, now!

W. F. Krage, car foreman at Dover, Ohio, was at Massillon in "Tom" Morgan's place while Morgan was on his vacation. This is a good town to work in, "Bill."

"Mike" Visnich, car inspector, has returned to work after being off for about three months traveling through the West, stopping off at Chicago, Gary, Milwaukee and St. Paul.

Carl Kemerly, yard clerk, who has been working at Dover, has taken a position of yard clerk at Massillon Yard office. All "Dutch" has to do at Massillon is work.

Chicago Division

Correspondents

F. N. SHULTZ, *Division Operator*, Garrett, Ind.
 BERTHA PHELPS, *Clerk*, South Chicago
 MARGARET GALLOWAY, *Assistant Shop Clerk*, Garrett, Ind.
 R. R. JENKINS, *Secretary*, Y. M. C. A., Willard, Ohio
 P. H. CARROLL, *Signal Supervisor*, Garrett, Ind.

O. E. Lane, telegraph operator at Willard, Ohio, died suddenly on the morning of May 22. He had been a faithful employe of the Company for about 20 years.

H. A. Smith, telegraph operator, age 21, died at his home in Kimmell, Indiana, on June 9. He had been in the service for about two years.

The accompanying photograph is of F. M. Thornton, first trick operator at HK Tower, St. Joe, Indiana. Mr. Thornton has been commended for unusually good service on several occasions during the past three years. He has been in the service as an operator on the Chicago Division for 18 years.

Clarence Samuel Streely died at his home on June 27, at eight o'clock, after an illness that extended over five years.

Mr. Streely was born at Maple Park, January 28, 1860. He was the son of Frederiek and Samuel Streely. In 1881 he entered the employ of the Baltimore and Ohio Railroad, and two years later began 32 years' service as an operator. On May 13, 1884, he was married to Miss Rose Woerner. Their entire married life was spent in Fostoria. Five years ago his ill health made it necessary for him to retire from his position.

Mr. Streely was a member of St. Wendelin's church. He also belonged to the Railway Telegraphers' Union, the Old Time Telegraphers and Baltimore and Ohio Veterans' Association.

He is survived by his widow and son, "Fred" Streely.

Willard, Ohio

Engineer Clarence Sell started to work on July 1, after a long illness.

Assistant Road Foreman of Engines "Mack" McCuen, who has been doing special work at Cleveland, has returned to his regular duties at Willard.

Engineer Recce has returned to work after having been out of the service for nearly three years.

Fireman Hutchinson and family are taking a three months' vacation trip through Michigan. We expect to hear some "big fish" stories when he returns.

We notice that Miss Purcell, Roundhouse office, is wearing some new jewelry. Do you suppose that Albert has decided already?

The Division Freight Claim Prevention Committee Meeting was held at the Sargent Hotel, Lake Wawasee, Indiana, on Wednesday, July 7. H. E. Heller, agent, Willard, acting as Chairman. There was a good attendance and special interest was shown in the proceedings. The families of nearly all the Committeemen were in attendance and after the business was handled they enjoyed a pleasant day in boat riding, bathing, etc. I wish to specially note that Local Conductors C. E. Lightner, R. W. Springer, and J. W. Todhunter have not failed to miss one meeting since they have been on this committee.

Ohio Division

Correspondent, E. A. ERICH, *Secretary to Superintendent*

We extend our sincere sympathy to W. R. Moore, agent, Chillicothe, in the death of his mother, Mrs. Sarah Moore, on Monday, May 31, at the age of 86 years, at the home of her son-in-law and daughter, Rev. and Mrs. R. C. Beechley of Akron. Mrs. Moore was the widow of the late Frank E. Moore, for 45 years agent of the Big Four Railroad at Delaware, and the mother of E. E. Moore, present agent of the Big Four at Dayton, Ohio. Burial took place at Delaware, Ohio, her former home.

F. M. Thornton

John Wilkins, Jr.
Son of Inspector of Fuel Service J. C. Wilkins,
Ohio Division

Joseph Fisher, car repairer, is a very happy man. The cause? Twin baby boys!

Charles Steinhour, car builder, who has been on the sick list for a year, is again able to be on the job.

C. I. Novinger, day roundhouse foreman, has been appointed as night general foreman, R. Barrett, night roundhouse foreman, taking Mr. Novinger's place; W. G. Noland, Mr. Barrett's place; J. P. Harward taking Mr. Noland's place as assistant day foreman; and H. H. Howard, of Washington, Ind., taking Mr. Harward's place as assistant night roundhouse foreman.

The matrimonial bug is reaping its harvest among the young machinists at Chillicothe. During the first part of June, J. H. Geiger, Gilbert Smith, and Walter Hyson became benedicts. May unalloyed happiness meet them at every step.

Roy Franke, Storekeeper's office, came to work with a smile that just wouldn't come off. Finally the cause was explained—the stork had visited his home and left a fine girl. Congratulations! The young lady has been given the name of Helena Marie.

We are glad to announce that Patrick Clark, supervisor of Fourth Ohio District, who has been off duty for several months, is again on the job. J. Long, who has been looking after Mr. Clark's duties during his absence, has returned to his former occupation as track foreman at Pleasant Plains.

J. M. Wakefield has been transferred from Newark to Ohio Division, as assistant on Engineering Corps.

Miss Bernice Bowser, stenographer to master carpenter, took a trip to Akron, and did not return at the stated time. She states she became confused in the timetables; however we are inclined to believe otherwise? ? ?

Tire storage, Illinois Division

Pipe and flue racks, Stores Department,
Illinois Division

Maintenance of Way carpenter forces are rebuilding station at Vigo, which was destroyed by fire about two years ago.

Miss Lillian Flynn, stenographer to chief clerk, and Miss Elnora Sherrow, general clerk in Master Mechanic's office, were planning to spend a vacation at Atlantic City. Transportation was duly requested, but after it arrived, they learned that it was necessary to contribute the sum of one dollar to the railroad which runs from Philadelphia to Atlantic City. Owing to the high cost of living (at least that is what they blame it to) they have decided to cancel this trip and instead take their plunge in Norfolk Creek (just west of Chillicothe) instead of the Atlantic. It is suggested that they purchase a bag of "sea salt," which may add to making a near imitation of the Atlantic. However, we wish them a most enjoyable time.

It is with regret that we announce the death of W. Maddox, brakeman, who was instantly killed on June 25, while switching at Athens. Mr. Maddox was on end of tank when it suddenly jumped track, side-wiping cars and crushing him. His many friends extend their sympathy to the stricken mother.

Freight Claim Prevention meetings, which are held at Chillicothe on the second Friday of each month, are well attended. Good work is being done by this Committee. Any employee interested in this work is privileged to attend.

Master "Stork" visited the home of Engineer and Mrs. W. T. Alexander, and brightened it and them with a promising boy. Congratulations, "Tom!"

Illinois Division

Correspondent, OMER T. GOFF, *Secretary to Superintendent*

The above picture shows No. 2 tipping over the "bluffs," approaching Furman, Illinois: engine 5114 in charge of Engineer Borders and Fireman McColl. Picture taken by Fireman B. D. Telford.

Work on motorizing our Machine Shops has started and is progressing steadily. In a few months we will have a plant completely motor driven, as the motors in the Car Department were recently installed. C. J.

Casting platform, Stores Department,
Illinois Division

No. 2 approaching Furman, Ill.

Treffinger of the Electrical Department is here from Baltimore in charge of the work locally.

We are showing three views of the method of storing material in the Stores Department. The first is the tire storage, second the pipe and flue racks and third the casting platform, all the pride of Storehouse Foreman J. J. Wangler. Foreman Wangler is seen standing in the left aisle. He is commonly known among his friends as the "Pirate."

We are glad to welcome Miss Mayme Zinkan, stenographer, back to the Storekeeper's office, after undergoing an operation for appendicitis at Olney Sanitarium.

James Jasper Rose, T. C. & P. foreman, purchased a Buick automobile recently and has progressed so far in the mysteries of chauffeuring that he can turn a corner without tearing down the telegraph poles. William Bix, "Japs" assistant, refuses to ride, claiming there are too many "Safety First" warning signs around the shops. "Jap" says the car is equipped with a cold storage battery and a self commender.

Division Master Mechanic W. L. Robinson, attended the Master Mechanics' Convention at Atlantic City June 8 to 12.

What has become of the old fashioned City Councilman of Flora who used to emerge from the alleys at midnight carrying a chip basket on his arm?

L. A. Smiley, shop clerk, is ready to receive bids for a steam bicycle with the following equipment: puncture proof tires, Weed non-skid chains, snow plow, wind shield, Pyle National electric headlight, Hunt-Spiller gun iron side rod bushings, Detroit flange oiler (used in turning corners when scraping curb stones), King type piston and valve stem packing, H. W. Johns-Manville brake cylinder gaskets and

"Fred" Fitts, Painter

pipe covering materials, Industrial works steam wreck crane boiler with a Franklin Pneumatic fire door, Lagonda tube cleaner, Ragonett Power reverse gear (used in backing out of chuck holes), Westinghouse Air Brake No. 6-ET equipment and an Ochse improved bell ringer. As a matter of information Smiley wants to know if he has to keep his bicycle up to I. C. C. requirements.

Office of General Freight Agent
St. Louis, Mo.

Correspondent, FRANCIS PIGLOSKY

San Antonio has decreased its population by one because he (needn't mention any names, huh, Dewey?) has already done, been, gone, went and got married. I told you to watch him; now look what you did. Another good man gone to —.

Since she returned from her vacation Miss Elsie said she doesn't think much of pig-iron sandwiches, having treated herself to the best for two weeks.

Mr. Bollman is learning to speak French quite fluently. He can order "ham and two eggs" 'n everything. Ask him all about it.

Even though it was 102 in the shade in St. Louis (and no shade), Mr. Fry declared it was a treat to get back from Texas last week.

"Oranges, oranges, everywhere, but not an orange to pick." Miss Frances has now learned to believe in "signs" as it was a little sign "\$500.00 fine for picking oranges" that taught her it meant something. (It was little, but oh my.)

We were "watching her step" but it only developed into a step that took her on the other side of the wall instead of one taken with that pretty melody: "Here comes the ———". We didn't think she was a "quitter."

Toledo Division

Correspondent, I. E. CLAYTON, Division Operator

Mrs. Eunice Smongeski, secretary to the superintendent, accompanied by her little daughter, Louise, spent a part of her vacation visiting her parents at Hays, Kansas.

Ray Craft, car distributor, spent most of his vacation down among the hills of Kentucky. Ray says "Kentucky is the only place for pretty girls."

Miss Mary Lacker has resigned her position as stenographer to the car distributor and has gone out into other fields. We wish her success.

Miss Gertrude McBride, who left the railroad service during the war to join the rank and file in Washington, D. C., and to help Uncle Sam keep track of the boys, has returned again to us. She is now employed with the chief clerk to division accountant. Miss McBride says that not even Washington with its gay society life has the attraction of the Baltimore and Ohio Freight Depot. There is no place like home, after all. Everyone welcomes Miss McBride's return and her happy "good morning."

East Dayton

Correspondent, EDWARD M. MANNIX

As the summer advances, it finds East Dayton away out in front, everything moving serenely, no dissensions of any kind, and all living as one big family. This surely speaks well for our point.

It is with sad regrets that we announce the death of Edward B. Childs on May 10

in Columbus, Ohio. "E1" had spent nearly 40 years of his life on the Railroad in various capacities and his lovable character had endeared him to all. He went to visit his son at Columbus, where he was suddenly seized with heart failure. He was laid to rest in the family lot at Jamestown, Ohio, by his shopmates. We say in unison "Peace to his ashes, and rest to his soul."

The baseball season has closed for the boys on our division. While Dayton was not successful in securing the honors, it tried hard and died hard, and our thanks to the management would take more than a page for expression. It is needless to say that we will redouble our efforts to repay the management in every possible way.

Martin F. Duffey, one of our machinists on the first shift, took a little quiet sneak up to Newark, Ohio, early in June, and annexed to himself one of Newark's most lovely young women, to whom he gave the name of "Duffey" forever.

The writer recently ran across one of his old contributions to the Prints which were assembled in Cincinnati several years ago. It ran as follows:

"Will you give me a kiss, my pretty maid?"
Said she: "You have permission."

They went to press immediately and got out the first edition.

"Will you give it back?" she shyly said.

He answered: "Without a pout."
They went to press the second time, and got an extra out.

A letter was sent recently to all engineers and firemen entering the Dayton roundhouse, warning them against putting green coal in the engines when going to the roundhouse for repairs and turning. This

was great forethought by our Road Foremen of Engines, M. P. Hoban and W. B. Kilgore, as it saves the Company several thousands of dollars in coal.

Good eye, "Mart" and "Bill"! It is also easier to clean the fire, and a saving of time and labor. That's the kind of real stuff the Baltimore and Ohio wants. Attention, other Roundhouses!

The Welfare, Safety First and First Aid Committees have held interesting meetings lately and we are alive to every point of interest relating to our shops and roundhouse. They have adopted as their slogan:

"May we live to learn well,
And learn to live well."

About the most broken-hearted of the ball players is little "Bob" Mannix, the mascot of the Dayton team. It's hard to knock when "Bob's" around for he generally has an answer for all questions, and the answer is usually on "Bob's" side.

We are always pleased to see the good-natured and smiling faces of our road foremen of engines, M. P. Hoban and W. B. Kilgore. The boys will willingly put themselves out a good bit for either of them. Come often, "Mart" and "Bill."

We don't get to see as much of our master mechanic, Alfred E. McMillan, as we would like; he is rather busy these days, jumping in and out all the time. He sets an example for those who would succeed.

Inspector Charles Lough, second trick, has applied for leave of absence for a few days. We are wondering whether it's Seyn ur, Indianapolis, or some place else. Is there a woman in the case? Wonders never cease at East Dayton.

A Perfect \$96.50

Contributed by the Valuation Department

Don't spend your time in talking, if your check is ninety-six,
Don't hang around in idleness or carelessness or tricks;
A shabby bit of work may win a shabby bit of pay,
But a trusty ninety-six will win out every day.

So be on time tomorrow, be sure you're never late,
The time to get to work is your most important date;
And while you're in the office, keep eternally in mind,
That you're there for working only; that's business, you will find.

If you must begin complaining, then think it over well,
Go see the Chief, for really he's the only one to tell;
Don't whine around about it like a rusty creaking door,
You want to be successful and a whiner's always poor.

And keep your work in order, be as neat as rows of pins,
System means good business, one of the things that wins;
Of course you know, in office hours, talking is a waste,
And wasting other people's time is awfully bad taste.

You must never get excited when the Chief is on a grouch,
Just let him have a time of peace, give him his old "Mail Pouch";
Best try to be considerate, it really always pays,
For it keeps away the wrinkles and it helps in other ways.

And if you need encouragement, perhaps a bit of praise,
A half-day off, a trip pass, or best of all—a RAISE;
It's well to have for "Friend at court" that you have done your best,
And then you know quite jolly sure the Chief will do the rest.

Baltimore Division-Brunswick

St. Denis, June 16

By W. H. Tarr

Magazine Correspondent

Baltimore Division and Brunswick Terminal Baseball Teams crossed bats at St. Denis, Md., on June 16, with a score of 11 to 2, in favor of Baltimore. Umpires were Hall and Sigafosse. We are told that "Shorty" Tuttle made a hit with his wife's stockings. The winning of this contest put the Divisional Team in the Baltimore and Ohio System League.

Freight Claim Department-Jessups Athletic Club

Jessups, Md., June 12

By Miss E. T. Murray

Magazine Correspondent

On Saturday afternoon, June 12, the baseball team of the Freight Claim Department journeyed to Jessups, Maryland, and there dropped a game to the Jessups Athletic Club, by a score of 2 to 1. Following is the lineup of the Freight Claim Department:

Goeller, c; Brubaker, p; Fink, 1b; Chaney, 2b; Barker, ss; Alker, 3b; Smith, rf; Itner, cf; Bryant, lf. Umpire—Clayton Keys.

Morton Bond, Loss and Damage Division, is manager of the Jessups team and had his best on the field to challenge the fast-going railroaders. Not a run was scored on either side until the fifth inning, when Goeller, with one of his "Babe" Ruth swings, knocked a ball down to deep center and scored a home run.

Brubaker pitched a fine game, striking out eight, allowing five hits. Itner made a good one-hand catch. Our boys had the game until the last inning, when three errors gave Jessups two runs. The girls did their share of rooting and still believe that if our manager, "Johnnie" Kratz, had kept his hat on, it would have been a sure case of our "bringing home the bacon."

The Cross-Tie(gers)

Green Spring, W. Va.

The Cross-Tie(gers) have their uniforms now and look more like a regular team. They are gray, trimmed with green. Games last month include, June 12 at Moorefield, lost 5-1; June 22 at Burlington, won 8-5; June 26 at Romney, won 5-1; June 27, Carmen at Green Spring, lost 7-3; July 5, two games Great Cacapon at Green Spring, won 7-6; Green Spring at Paw, won 5-4.

L. A. Cordie's (Cincinnati Terminals)-Southern Railroad

By Joseph Beel

Magazine Correspondent

The L. A. Cordie's, of Second and Smith Streets, defeated the Southern Railroad in an exciting contest at Deer Park Grounds on July 4. The game was replete with sensational plays and had the crowd on its toes throughout the game. The Southerners threatened several times in the latter innings, but Pitcher Shedd was invincible in the pinches.

Any Baltimore and Ohio teams desiring to play this fast bunch can do so by writing Manager Brinkman, care L. A. Cordie, Agent, Cincinnati, Ohio.

Score by Innings

L. A. Cordie's	1	0	0	0	0	2	1	0	4
Southern R. R.	0	0	2	0	1	0	0	0	3

Summary

Two-base hits—Matz, Brinkman, Williams. Stolen bases—Minor, Hille, Brinkman, Lee, Bidlingmeyer. Double play—Matz to Brinkman to Hille. Left on bases—Baltimore and Ohio, 4; Southern, 6. Bases on balls—by Shedd, 2; by Berter, 4. Hit by pitcher—B. Hille by Berter. Struck out—by Shedd, 11; Berter, 8. Time of game—1.47. Umpires—Carl Sturm and L. Blank.

MT. CLARE BASEBALL TEAM

Left to right, standing: F. J. Mernaugh, property man; A. Dove, 2b; W. F. Mahaney, manager; J. Darnell, rf; W. Bergman, pitcher; J. Little, utility fielder; J. T. Moran, umpire. Sitting: O. Emerick, utility fielder; E. Williams, 1b; H. L. Eyerly, ss; R. B. Calder, captain and 3b; J. Kreh, utility infielder; A. J. Robinson, catcher; J. Bolend, pitcher; L. Robinson, pitcher.

IMPORTANT

This set is guaranteed not "knock down" furniture. In other words, the four chairs, tabouret and book ends come to you set up ready for use complete in every detail and guaranteed made with **solid glue block construction**. The sectional table you set up in 5 minutes. We mention this fact because a "knock down" 7-piece set of furniture would come to you in many pieces for you to set together. We challenge the furniture industry to offer such a set as Hartman's at our great bargain price. Ready for use.

Solid Oak

Bigger and Better Than Ever

Brings the New Hartman 7-Piece Solid Construction Living Room Suite

Even better than ever is this famous suite—made more massive, still more sturdy in construction—a marvelous work of the furniture makers' art—the masterpiece for 1920-21—sent for only \$1 now and on 30 days' free trial.

Full Year to Pay

Tell us to ship now—then if after the 30 days' trial you don't find this splendid suite just what you want and a world-beating bargain, send it back and we will refund the \$1 and pay freight both ways. If you keep it, pay balance, only \$3 monthly—a whole year to pay (see coupon). No fairer, more liberal offer ever made. You don't risk a penny. Hartman's, backed by \$12,000,000 capital, guarantees you satisfaction, protects you in every way. Send only \$1 now for this superb suite of furniture. Complete suite consists of large arm rocker, large arm chair, library table, sewing rocker, desk or side chair, tabouret and book ends. Genuine mission, rich brown finish showing the beauty of the grain of the wood.

Solid Oak

Ornamented with richly embossed carved design on panels of chairs, rockers and table, giving a wonderfully pleasing rich effect. The chair and rocker seats are constructed in a strong, durable manner and upholstered in imitation Spanish brown leather. Most comfortable, lasting and beautiful. Large arm chair and large rocker stand 36 inches high over all from floor, are 26½ inches wide over all and have seats 21x18 inches. Other rocker and chair have seats 17x16½ inches. Handsome table is 24x36 inches and tabouret has octagon-shaped top about 12 inches wide, standing 17 inches high. Book ends just the right size and weight to easily support large books. Shipped from factory in central Indiana or factory in western New York state. Shipping weight about 140 lbs. Order by No. 110BBMA8. Price \$38.85. Pay \$1 down. Balance \$3 monthly.

FREE Bargain Catalog

Even if you don't send for the suite, mail us a postal for this great book. Filled from cover to cover with stonning bargains in furniture, carpets, rugs, stoves, ranges, watches, silverware, dishes, washing machines, sewing machines, aluminum ware, phonographs, farm implements, etc. See how you can save money on anything you buy—and get it on Hartman's easy terms, too. This wonderful bargain catalog is FREE. Don't buy anything for the household or the farm until you get your copy. Post card or letter brings it.

HARTMAN FURNITURE & CARPET CO.

Stifel's Indigo Cloth

Standard for over 75 years.

This is Mr. Charles Broll, one of the oldest engineers of the Baltimore and Ohio, who runs the famous "Royal Blue." Mr. Broll wears and swears by "true blue" Stifel's Indigo Cloth.

Since the time of the first railroads, strong, sturdy, fast-color, never-break-in-the-print Stifel's Indigo has been the popular garment cloth for railroad men. Before you buy

OVERALLS, COVERALLS, JUMPERS or UNIFORMS

look for this trade-mark on the back of the cloth inside the garment. It is the

guarantee of the genuine Stifel's Indigo Cloth, which never has been successfully imitated. Garments sold by dealers everywhere. We are makers of the cloth only.

Baltimore and Ohio Magazine

September 1920

These Rugs all full room size, 9 ft.x12 ft.

Very attractive patterns.

\$1 Brings Splendid Rug

Send only one dollar for any one of the four wonderful rug bargains shown above for 30 days' trial in your home. If you are not thoroughly satisfied to keep it, return it to us and we will refund your dollar and pay transportation charges both ways. If you decide to keep rug, take nearly a year to pay.

Amazing Rug Bargains

It is practically impossible to do justice to these extremely handsome and attractive rugs by mere descriptions and cold black and white illustrations such as shown above. That's why we offer to send your choice of any of these four beautiful rugs for 30 days' use in your own home. Read the descriptions carefully, then make your choice for the 30-day trial test at our risk.

Rug No. 1 This is a gold seal "Congoleum" one-piece Art Rug. You know that the name "Congoleum" means quality in floor covering. It is sanitary and very easy to keep clean. There is no hurlap so water will not injure it. A damp mop keeps it bright and clear at all times. It will lie flat on the floor and is sun and storm-proof. Comes in 9x12-foot size.

Order by No. 51BBMA45. Price \$19.00. Send only \$1 down. Balance \$2 monthly.

Rug No. 2 A splendid reversible stand-fibre rug made of carefully selected vegetable fibre and wool, woven into a rarely artistic oriental pattern of unusually rich coloring.

Order No. 17BBMA20. Price \$23.65. \$1 now; balance \$2.50 monthly.

Rug No. 3 Big value in full size 9x12-foot Tapestry Brussels Rug with mitered corners in rich pattern. An extra serviceable floor covering that will give splendid wear and make a handsome appearance in any room.

Order by No. 22BBMA8. Price \$28.95. Send only \$1 now; balance \$2.75 monthly.

Rug No. 4 A Medallion Pattern Tapestry Brussels Rug. Beautiful combination of colorings. The medallion center very rich and pleasing, neatly arranged border; closely woven yarns; 9x12 ft. size. Order No. 22BBMA17. Price \$29.85. \$1 now; balance \$2.75 monthly.

Nearly Full Year to Pay

With other rugs selling at much higher prices, you will wonder how we can give such stunning values on such liberal credit terms. Use it for 30 days at our risk and take nearly a full year to pay for the rug.

FREE Bargain Catalog 432 pages—mail us a postal for this great book—it will save you many dollars. Filled from cover to cover with stunning bargains in furniture, linoleum, rugs, stoves, ranges, watches, silverware, dishes, washing machines, sewing machines, aluminum ware, phonographs, gas engines, cream separators, etc. Hundreds of articles to select from—30 days' trial. This wonderful bargain catalog is FREE. Don't buy anything for the household or farm until you get your copy. Post card or letter brings it.

Dont Send a Penny

The shoes offered here are such wonderful values that we gladly send them, **no money down**. You will find them so well made and so stylish and such big money-saving bargains that you will surely keep them. So don't hesitate—just fill out and mail the coupon and we will send you a pair of your size. No need for you to pay higher prices when you can buy direct from us—and no need sending money in advance before receiving the shoes. Why pay out \$6.00, \$8.00 or more for shoes not nearly so good? Act now. Mail the coupon today while this special offer holds good. Pay only when shoes arrive.

Work Shoe Offer

We can't tell you enough about these shoes here. This shoe is built to meet the demand for an outdoor city workers' shoe and for the modern farmer. Send and see for yourself. Built on stylish lace blucher last. This special tanning process makes the leather proof against acids in milk, manure, soil, gasoline, etc. They outwear three ordinary pairs of shoes. Most comfortable work shoe ever made. Very soft and easy on the feet. Made by a special process that leaves all the "life" in the leather and gives it wonderful wear-resisting quality. Double leather soles and heels. Dirt and waterproof tongue. Heavy chrome leather tops. Just slip them on and see if they are not the most wonderful wearing shoe you ever wore. Pay only **\$3.98** for shoes on arrival. If you don't find them all you expect, send them back and we will return money. Mark X in the ☐ by No. AX18068.

One New York Newspaper Finds Out that the Baltimore and Ohio Railroad Is Not a Profiteer—on the Contrary That It Is Trying to Be a Good Neighbor

The following letter from President Willard is self explanatory:

THE BALTIMORE AND OHIO RAILROAD COMPANY
OFFICE OF PRESIDENT
BALTIMORE, MD.

At New York, July 22, 1920.

THE EDITOR,
New York American,
New York City.

Dear Sir—On the editorial page of the New York American this date the following words appear:

"Ellis Searles, editor of the *Mine Workers' Journal*, recently charged that the railroads of the country were obtaining control of all the bituminous coal possible and reselling it to dealers because of the opportunity to make big profits due to present high prices of coal." He added: "The railroads take all of this coal. They do not burn it, nor are they storing it, but are reselling it at a huge profit. . . . By such a plan the railroads not only make a profit on hauling the coal, but they can make an outrageous profit on the resale. By refusing to allow other mines to have cars they compel the public to buy the coal which they sell at outrageous profits."

So far as Mr. Searles' statement may have reference to the Baltimore and Ohio Railroad Company, it is false, and I believe it is also false concerning all other railroad companies because I cannot imagine that such a practice as he describes would be permitted to continue if it were a matter of common knowledge, and it would be a matter of common knowledge if it were true.

It has been the practice of the Baltimore and Ohio Company since I have been its president, to undertake to see that no public utility, school house or hospital depending upon the Baltimore and Ohio for its fuel supply, should be permitted to shut down or be rendered unfit for occupancy because of lack of fuel, and when it has come about, as it sometimes will, that such institutions have been temporarily short of coal, the Baltimore and Ohio Company has loaned to them sufficient coal from its own fuel supply to tide them over the temporary emergency, and in settlement has usually, if not always, accepted an equal amount of a similar kind of coal in return. In such cases no money whatever has passed in connection with the transaction. In some cases

cash settlement has been made, and in such instances the Baltimore and Ohio Company has invariably collected for coal so disposed of, the exact amount which it was obliged itself to pay for the identical coal. There has never been any profit at all in the transaction.

The course above outlined has been followed in the belief that by so doing we were serving the public interest, and it has been a matter of some satisfaction to the Baltimore and Ohio officers to be able to say that no public utility, school or hospital depending upon the Baltimore and Ohio Company for its fuel supply, was ever compelled to cease operation because even temporarily out of coal. I repeat that this has been done from a sense of public or civic duty—call it what you will—and absolutely without a single cent of profit to the Baltimore and Ohio Company in the transaction.

I may add that unless it should be decided by some competent authority that our practice in this particular respect is inimical to the public good, we shall endeavor in the future as in the past to protect the activities of the kind mentioned so far as they are dependent for transportation service upon the Baltimore and Ohio Railroad Company.

Very truly yours,

(Signed) DANIEL WILLARD.

Commenting on Mr. Willard's letter and with a commendable desire to place all the facts before its readers, the New York AMERICAN, on July 31, 1920, said editorially:

One Railroad Which Is Not Profiteering in Soft Coal

This newspaper recently noted the charge by Ellis Searles, editor of the *Mine Workers' Journal*, that railroads were obtaining control of bituminous coal and reselling it at a big profit. A letter from Daniel Willard, president of the Baltimore and Ohio Railroad Company, brands this accusation as false so far as that company is concerned, and adds:

(The editorial here quotes substantially the last four paragraphs of Mr. Willard's letter.)

Mr. Willard's statement will carry conviction, for he is a man whose word is always good.

It is not likely that the practice he mentions will be declared inimical to the public good. On the contrary, it is more likely to be endorsed as an example for all railroads.

It is interesting to observe that the following statement was made by President Willard to the officers of the Baltimore and Ohio at the Deer Park Convention on June 24, 1916, more than four years before the above letter was written.

"It will be the policy of the Baltimore and Ohio Company first of all, to endeavor to do efficiently all of the things that a public servant should do. It will earnestly try to satisfy the reasonable requirements of the public for transportation.

"It is our desire that the people living along our lines should feel that the Baltimore and Ohio is a good neighbor, and if they are visited by fire, flood or epidemic, they should instinctively call upon us first for assistance, because of our potential strength and our willingness to help them.

"We will treat our shippers and patrons with absolute fairness and full consideration. When we make a contract we will do our utmost to live up to it. We want to deal with our patrons, shippers and passengers as two honorable men deal with each other."

Railroad Drives on Carloading, Car Miles and Bad Order Equipment in Full Swing

WHILE everybody on the Railroad knows of the drive now being made by the railroaders of the country generally on car miles, carloading and bad order equipment, it is possible at this time to report only hopeful indications on the Baltimore and Ohio. We do know that all our operating people are backing Mr. Galloway in his prediction to Mr. Willard that the month of September would show a 31 mile per car per day record, a handsome increase over recent averages. The System-wide Saturday and Sunday unloading campaigns initiated by the Operating Department, the unprecedentedly large loading of cars and the new records being made each week on movement of cars—all these and other signs indicate satisfactory progress.

We should remember first, in this connection, as has been previously stated, that the public, through its representatives, has granted the railroads and their employees increased remuneration for their service; that the public realizes the unsatisfactory condition of the railroad plant, but that supplies of coal, oil, agricultural products, machinery, etc., are so much needed at consumption points, that they are asking us as railroaders, with reason, to speed up our efforts to handle the business offered; that it is only fair play that we should do this, demonstrating that we know our trade, and that under private management and control, the railroads can show an efficiency impossible under Government control. Incidentally, this latter contention is being substantiated month after month by our transportation machine.

Secondly, we of the Baltimore and Ohio have a special reason for making a good showing in this drive from the fact that we not only want to make a good record for our Road, but that also we wish to make successful the country-wide campaign now being directed by our President, Mr. Willard, as chairman of the Car Service Commission of the Association of Railway Executives, toward the greater utilization of equipment.

It is all a question of turn-over. If the peddler of peanuts who pays, perhaps, \$10 for his stock, sells all in one day, and works every day in the year, he turns over his capital 365 times in that period. The railroads, on account of the enormous cost of their plant and the low rates at which

they do business, do not make a capital turn-over once a year. Increasing car miles and car loading are simply means of increasing the turn-over, utilizing capital more intensively and making the same machine in the same period give a greater service and earn more money.

We have keen competition during this drive, other railroads using every available method to increase efficiency. They are getting out cir-

culars and bulletins, and through their magazines urging employees to see that they are in the front rank when the record of this competition is written. One of them has made a remarkable record, increasing its car miles per day from 20.2 in March to 22.4 in April, to 25.3 in May, to 26.6 in June and to 32.8 in July. It is a much smaller road than ours, but there is no reason why we cannot make a comparable record.

The Association of Railway Executives is issuing a special bulletin—"More Transportation," which is being reprinted widely in the daily press. This is keeping before shippers the necessity of their hearty cooperation in prompt loading and unloading of cars. The help of Chambers of Commerce is being enlisted, our own Commercial Development Department, having recently circularized all of these bodies on our lines, urging them to keep before shippers the big part they can play in increasing transportation facilities. The *Railway Age* has announced a prize contest on "Means of Increasing Average Miles Per Car Per Day." We would like to see some Baltimore and Ohio entries and prize winners in this contest.

As a practical illustration of how our Management is showing the way in increasing efficiency, so far as operating conditions are concerned, attention is called to the brief article in this issue on the change in the line between Fairmont and Keyser, enabling through freight trains to make this run without stop at Grafton for changing engines and crews and assembling trains at that point.

Some of the notes in the Among Ourselves department of this issue show how this drive is being prosecuted on divisions. On the night of September 13, the Veterans of the Baltimore Division, assembled in their new meeting place, pledged to Vice-President Galloway, through

OFFICE GENERAL SUPERINTENDENT OF TRANSPORTATION—Baltimore, August, 1920.

their president, George A. Bowers, their whole-hearted support in the greater movement of freight.

Signs all along the line, therefore, point to the fact that the railroads

are making an enviable record of efficiency, that the Baltimore and Ohio will be well up among the leaders and that our duties to the public are being capably performed

Mallets Now Haul Fifty Car Coal Trains Direct from Fairmont to Keyser

ONE of the most interesting changes recently made in our operations, and one that has already resulted in a marked improvement in operating efficiency with a corresponding increase in earnings, has been put into effect between Fairmont and Keyser in the West Virginia District, a distance of slightly over 100 miles. For a number of years the line and track and bridges have gradually been improved, with the result that during the recent summer it has become possible to operate Mallet engines through between the two points, without change.

On August 31 the first Mallet pulled into Fairmont, and the next day the movement of coal trains, hauled by Mallets, was in full swing from that point to Keyser, seven east-bound and eight west-bound trains

going through. Since then we have had a minimum of four trains in each direction each day, and a maximum of nine eastbound and seven westbound.

Formerly this coal loading was brought into Grafton in trains of 50 cars each, hauled by two drag engines, the cars assembled there and hauled east to Keyser by the Mallets.

Now a single Mallet can haul 50 loads direct from Fairmont to Keyser, with the usual helpers on the Newburg grade from Hardman to Tunnelton, and on the Cranberry grade from M. & K. Junction to Terra Alta, with the economies resulting from the elimination of switching, of making up trains and changing engines and crews at Grafton, and the consequent delay.

The Transportation Act of 1920, under which the railroads are now

working, directs that the railroads shall do everything possible to bring about increased efficiency and economy in the interests of the public, while maintaining at the same time the welfare and safety of their employes. This change, therefore, has the effect not only of reducing operating costs and in that manner helping to offset the increase in cost of labor and materials, but also of increasing the earning capacity of the engineers, firemen, conductors and trainmen handling this operation by giving them increased mileage between these two points. It also shows how an alert and progressive management, with but a comparatively small outlay in new plant and structures, is making changes which are already improving important operating factors such as car miles and car load.

Through Soviet Russia with the Czecho-Slovaks

(Continued from June issue)

By Colonel George H. Emerson
Chief of Motive Power

Since the printing of the first chapter of Colonel Emerson's story in the Magazine, two related stories of very great interest have appeared in the newspapers. The one is the confirmation by the former Petrograd correspondent of the London Times, Robert Wilton, and by Captain Francis McCullough, of the British Army, of the murder of the Russian royal family. These two men worked independently of each other, each spending several weeks in Ekaterinburg, and authenticating the story as told by Colonel Emerson, to whom it was reported by the Czechs, who arrived in Ekaterinburg the day following the assassination. The pictorial evidence of this, as shown in the June issue of the Magazine, will be recalled.

The other event concerns the repatriation of the Czechs, and, both because it will recall some of the facts set forth in our first chapter and because of the epic qualities of this great adventure, we are reprinting a part of the story as it appeared in a recent editorial in the Sun and New York Herald, under the caption, "The Allies Keep Their Promise to Czecho-Slovakia," as follows:

A dispatch from Vancouver reports the arrival there of 3,000 Czecho-Slovak troops from Vladivostok and the expected arrival in a few days of as many more. They represent almost the last contingents of the Czecho-Slovak army in Siberia, and with their transportation across Canada to Quebec, where they will take passage for Europe, they will bring to an end one of the most remarkable incidents of the war.

The journey around the world which they will thus finish, a journey replete with struggles, privations and thrilling adventure, began with their mobilization into the Austrian army six years ago. With the collapse of the Russian empire, the setting up of the Soviet rule and the signing of the armistice of Brest-Litovsk they were stranded in Russia, some as prisoners of war, others as members of the army corps which they had joined rather than continue in the service of Austria. They refused the Austrian offer of amnesty, even though coupled with the condition that their country would have an independent government. A free Czecho-Slovakia had been proclaimed by President Masaryk and they offered their services to the Allies. Cut off from all communication on the west with France, they began their journey across Russia and Siberia, hoping to reach the Pacific coast and from there to be sent to the front.

Practically for the entire distance they were forced to fight their way, at times against the Bolsheviks and again against Siberian forces organized by German prisoners. They were able to defend themselves because they were supplied with munitions of war which they had collected after the disorganization of the Russian army. They kept a strict discipline. They won the confidence of the peasants because they did not loot them and they were thus able to secure food supplies where other armies in Russia failed.

They were scrupulously correct in their attitude toward the existing governments in Russia; at Samara, the first city they entered, "they restored order and turned the town over to the local authorities;" they did the same in Orenburg and all cities they occupied. They helped Denikine and Kolchak fight the Bolsheviks because they believed in that way they were helping the Allied cause. They took possession of and held the Siberian railroad as a means for furnishing supplies to the All-Russian armies. How many of the original 50,000 or 60,000 men that started on the expedition finally reached Vladivostok is not definitely known. It is said, however, that scarcely more than half the number completed the journey.

It will be remembered that our first chapter told of the parley between the Bolsheviks and the Czechs, as arranged by Colonel Emerson, of the Czechs' decision to fight their way east to Vladivostok and of Colonel Emerson's decision to offer his services to them and share in their adventure.

ON JULY 16 I received instructions to report to General Guida, commander-in-chief of the Czechs, then operating east of Marinsk.

We left Omsk the same day by special train, to connect up with the van of the Czech forces, and reached Bjelaya at noon of July 20, our journey taking us through Soviet territory, which had, however, been put in some semblance of control and order by the Czech forces which had preceded us.

The retreating Bolsheviks had destroyed both bridges over the Bjelaya River, as shown in the accompanying picture. The bridge consisted of four spans, each about 175 feet long. High explosives had been placed at the end of the superstructure and the effect of the explosion dropped both spans into the stream. Our forces jacked up the eastbound span into position, and made it passable after 48 hours of work.

Several other bridges of the three-girder type were also encountered and we made these passable with as little delay as possible by cribbing them up. On our arrival at the Kitoi River bridge we found the span on the east

main line completely demolished, the one on the west main line blown off the abutment and one end of it down in the stream, as shown in the accompanying picture. Temporary repairs were made by blocking up one end of this span and cribbing to the track level. The territory through which we were working was rich in forest resources and there was plenty of timber available for cribbing.

As I had instructions to report to General Guida at Irkutsk at the earliest possible moment, we left our special train west of this bridge and proceeded east on a hand car on July 20, without any escort and through hostile territory, arriving at Irkutsk at 10.30 p. m. the next day.

We found both bridges over the Irkut River badly damaged, the east end of the center spans of both main lines having been blown into the river, and the west ends remaining on the abutment. There were two 240-foot spans to the bridge, as indicated in the accompanying picture.

Soon after arriving at Irkutsk, I had a conference with General Guida, who accepted our services and instructed me to take charge of the Czecho-Slovak engineering depart-

ment and to work out all necessary details with Colonel Ushakoff, his chief of staff.

On the following day, July 22, I met Colonel Ushakoff and was fully advised in regard to his program. As all of the Czech equipment was west of the Irkut River bridge, the important thing was to make temporary repairs on this structure at the earliest possible date so that their armored trains could be moved east quickly to keep in touch with the retreating Bolshevik forces and prevent their doing any damage to the railroad tunnels along Lake Baikal.

A close examination of the damaged bridges developed that the east main line structure could be repaired for movement of trains in three or four days, by working three eight-hour shifts a day. A large force of German war prisoners was assigned to the work of cribbing up under the span and the bridge was made passable on July 28.

Our engineering corps was made up of two trains of 30 cars each, with 250 German war prisoners, who had been taken from prison camps by the Czechs, as our laborers. One hundred Czech soldiers, commanded by a

Left to right, top to bottom: 1—Czech band formed in Siberia and sent to Chicago to stimulate recruiting there, one half of them later wiped out in battle with the Bolsheviks. 2—Type of Mongolian family and mud and grass hut found in Siberia. 3—Remains of Bolshevik ammunition train and railroad station exploded by small group of Czechs, disguised as Bolsheviks, by fire from captured machine guns. 4—A few of the Bolsheviks found after the explosion. 5—Typhus patients frozen in freight cars in which they were being carried.

lieutenant, guarded them and we used such tools as we could secure from the railroad shops and other manufacturing plants in the vicinity. There were seven officers, including myself, on the engineering staff. Arrangements were immediately made for the armored cars to lead off across the bridge eastward, followed by the engineers. Our entire forces consisted at that time of about 1,500 Czech soldiers and 400 White or anti-Bolshevik Russians, who had been recruited in Irkutsk. These forces followed the engineers.

We left Irkutsk on July 30 and arrived at Sludianka the day following, where I again had the pleasure of meeting Colonel Kadlets, in charge of the Czech forces there. He informed me that tunnel No. 39, about three miles east of Sludianka along Lake Baikal, had been destroyed by the retreating Bolsheviks. It was very important, therefore, that this tunnel be cleared quickly since all the Czech equipment was still west of it.

Process of reconstruction work on Kitoi River bridge. Note the cribbing up with railroad ties

sent out a small scouting party from Irkutsk with the purpose of flanking

When this small party reached Lake Baikal, themselves disguised as Bolsheviks, they found that the main forces of the Bolsheviks had moved rapidly eastward, leaving one train of engineers to destroy the tunnels and then follow up the main body. They also discovered that for this purpose they had four cars of high explosives and ascertained where they were located in the train. By a quick move they succeeded in capturing some machine guns from the forces of the Bolsheviks around them, directing their fire against these cars and exploding them. The result of this brilliant action is shown in the central picture of the group accompanying this article, the railroad station, the town and the entire engineering force of the Bolsheviks being destroyed.

Engineering corps of Czechs, Colonel Emerson in foreground, taken in front of a wrecked Bolshevik train at Kuchenga, August 25, 1918

A close inspection of the tunnel disclosed the fact that two sections, each about 50 feet long, had been destroyed by high explosives. The Bolsheviks had driven a small tunnel through the side of the mountain and about 100 feet west of the east portal, had charged it with over 50,000 pounds of high explosives, the resulting explosion raising the entire overburden about 50 feet over the arch, dropping it and blocking the passage.

Before proceeding with the story of the clearing of the Baikal tunnel, I should perhaps relate, parenthetically, one of the most interesting adventures of any of the Czech forces during the march eastward.

When we arrived at Baikal station, about 35 miles east of Irkutsk, we found that the village and the station had been completely destroyed.

Colonel Kadlets informed me that, recognizing the strong possibility of the Bolsheviks destroying many of the 42 tunnels along Lake Baikal and seriously impeding our progress, he

and cutting off the Bolsheviks and preventing their doing this damage.

Two views of Irkut River bridge showing fallen span and process of cribbing up to track level. The River here is deep and swift

A nasty job left by the Bolsheviki at the Bjelaya River bridge

In executing this flank movement the Czechs were obliged to make a five days' forced march through a wilderness of woods and mountains in a country entirely unknown to them; yet notwithstanding this fact they got back safely.

It should be remembered here that all of the Czechs in Russia numbered not more than 50,000 and that they were surrounded literally by millions of the enemy. There were, for instance, over 1,000,000 prisoners of the Central Powers in Siberia who had been set free by the Bolsheviki and who hated the Czechs worse than they did the Nationals of any of the Allies. This was especially true of the Magyars, who had in pre-war years tyrannized over the Czecho-Slovak peoples in Austro-Hungary.

Lake Baikal is about the size of Lake Michigan. The Bolsheviki put guns on the two boats in the picture and used them to bombard the operations in reconstructing the tunnel along Lake Baikal. The Czechs destroyed them, the larger boat, the Lake Baikal, being built of steel with a capacity of 22 steel cars and a locomotive

Тоннель № 39.
после взрыва.

The retreating Bolsheviki did this job well—the blowing up of the railroad tunnel No. 39 along Lake Baikal. Over 50,000 pounds of powder were used for this explosion

When the Czecho-Slovaks decided to make their adventurous march eastward through Siberia, they thought there was but the slightest chance of their getting through. It was simply a case of fighting out their destiny rather than surrendering and being sent back to Austro-Hungary to be executed.

When the work on tunnel No. 39 was started, I called for 250 more prisoner-laborers and worked them in six four-hour shifts, the job of clearing the passage taking 28 days. It was all handwork, since there were no cranes or other kinds of machinery available on the Siberian Railroad.

Sludianka is located at the foot of Lake Baikal and from it, east, the railroad skirts the shores of the lake for 140 miles. It is a beautiful route,

the lake being about the size of Lake Michigan and also said to be the deepest lake in the world.

At Sludianka the Bolsheviki had captured the car ferry and seized both the ferry boats, pictures of which are given in one of the accompanying pictures. They mounted field artillery on these ferry boats and during our work on the tunnel they made things merry for us with an intermittent bombardment, causing serious interference to the work.

Again the Czechs showed their wonderful ingenuity and initiative. They built a raft at Baikal station and equipped it with five-inch pieces, raised a sunken tug and put it into commission to pull the raft, ferried their equipment across the lake and attacked at 2.00 a. m., sinking the steamer Lake Baikal, the larger of the two vessels, and destroying the Bolshevik forces in charge.

During the process of the work at the tunnel some of the prisoner-laborers started a movement which looked like a strike, in order to delay

the work and give comfort to the Bolsheviks. The movement was reported to Colonel Kadlets, who immediately took the situation in hand. He issued a bulletin stating that it was a military necessity to clear the tunnel as soon as possible and that anybody convicted of hindering the work would be immediately court-martialed and shot. He called attention to the fact that these prisoners were being paid double the money of other laborers in the vicinity and only had to work four hours a day.

The ringleader of the mutiny openly ridiculed the bulletin and said in a braggadocio manner that he would take no notice of it, quit work and went to the shore of the lake to wash his clothes. Two soldiers were immediately ordered to bring him in, he was asked a few questions, his guilt proved and an order was quickly given to the soldiers. They in turn ordered him to step to one side against an embankment and a single shot from one of the Czech rifles finished him.

While work on the tunnel was in progress, General Guida detrained his troops and started 1,000 of them on a flank movement into the wilderness, the 400 Russian troops who had been recruited at Irkutsk being left to guard the work at the tunnel. It was the purpose of the move to flank the Bolsheviks, who had nine trains ten miles east of the tunnel. Several days were required in making the movement which finally cut into the rear of the Bolshevik forces, cutting the main line of the railroad, and de-

Hole prepared for explosive charge at other end of tunnel; unused because of rapid advance of Czechs

railing a train, completely blocking all the Bolshevik trains west of the derailment.

The Czechs then moved on the main forces of the Bolsheviks, completely exterminating them and capturing all their equipment, consisting of nine trains of 40 box cars, nine locomotives and two armored cars. With this material for transportation and advance and attack to aid them, the Czechs were again in shape to advance east before the tunnel was completed.

(The third installment of Colonel Emerson's story will appear in an early issue of the MAGAZINE.)

Costly Telephone Talks

By B. F. Thompson
Telephone Engineer

THE telephone companies have increased their rates for long distance and local calls in all territories in which they operate.

At one point we are using 640,000 calls a year. At one cent increase each, this amounts to \$6,400.00, which is the interest on \$128,000 at five percent. This amount, \$6,400.00, will purchase 640,000 postal cards and these could be used to notify patrons to remove freight from our congested freight houses, thus creating space to unload freight from cars and saving per diem charges. Therefore, if each employe only saves one call you can see the possibilities of the economy. It is the small leaks which grow to large amounts and any way you can save money for the Company makes you a more efficient employe.

A record kept of calls on our trunk line between Baltimore and Cumber-

land shows that if we paid for them at the same rate charged by the telephone company the cost would be \$12,000 a year. This line is a good investment, but it is overloaded, which is also true of all our trunks, and if calls were shortened or reduced in number, it would effect a saving in tolls paid to the telephone company and also eliminate the expense of furnishing additional facilities until absolutely necessary. To build another line between the points mentioned would cost \$24,000.00, but it is not desired to do so while the present circuit will meet the requirements of the service.

Some of our employes make unnecessary long distance calls over the lines of the telephone company because the operator reports our line busy and they do not wait to get in on it; however, if they were to pay the cost out of their own pockets they would probably be willing to wait. In some instances, of course, the investment is necessary.

Telephone calls are frequently made and then verified by telegraph. This should be avoided, as the telephone is just as reliable as the telegraph, being used for dispatching trains. It is also much quicker in most instances as you get your answer at once.

They Increased Car Miles

Every minute saved any employe in his work helps increase car miles. The following is a particularly interesting and commendable example of employes with the right outlook on their everyday work. No time-wasters, these fellows, but real men, who are keeping the wheels moving.

On July 15, Ohio Division, engine 1500, Engineer F. Moore and Fireman C. C. Graves were called in work train service to leave Chillicothe at 2.00 p. m., in order to arrive at Gravel Pit in time to wash boiler of steam shovel and start work at 6.00 p. m. On arrival at Gravel Pit, it was found that none of the steam shovel men had reported and Engineer Moore and Fireman Graves immediately removed plugs from steam shovel boiler, connected hose to branch pipe of engine 1501 and washed boiler. When steam shovel men arrived all that was necessary was to replace plugs, fill boiler and start fire, which was done, and work started at specified time. Action on the part of Engineer Moore and Fireman Graves saved considerable delay in starting work and for interest displayed they have been commended.

Does Luck Make Success?*

"They themselves are makers of themselves"

By G. S. Crites

Division Engineer, Baltimore Division

MAN was in the dark and little, if any, removed from the beast until it began to dawn on him that he moulded his own life, built his own destiny and made his own success. He was a pitiable thing when he believed himself to be the creature of chance, the pawn of fate and the plaything of luck.

Of all the beautiful truths pertaining to life which have been brought to light, none is more gladdening or fruitful of strength and confidence than this—man is master and the shaper of condition, environment and success. He holds the key to success within himself and this key is his to use or not as he wills.

The drone, the sluggard and the indolent, seeing only the achievements of the successful, talk of fortune, of chance and luck. Seeing a man grow rich, they say, "He is the fortunate one!" Observing the promotion of another, they exclaim, "He has had all the chances in the world!" And noting the happiness and prosperity of another they cry, "Ain't he the lucky guy!" Never do they see any of the trials, failures or struggles these successful men have gone through to gain their experience and strength. They cannot see the sacrifices made, the long hours worked, the passing pleasures given up, the heart-breaking discouragements lived down, and the undaunted effort and courage put forth to make the success. They do not like the things that make success, so the success they see is not success at all; it's luck.

You know a man who is poor, who does not get along. He is very anxious to improve his condition, provide more comforts for his family and "be somebody." But he will not put his best efforts into his work; he says he is not paid enough and trusts to some happy chance or stroke of luck to get him what he is too lazy to work for. Such a man does not know the first principles of success. He should not let his imaginings, fancies

and crude desires rule his being. His first aim should be to give a dollar's work for a dollar's pay. This will gain him his own self respect. By so doing, he gains a foothold on the road to success and soon finds it easy to strengthen his resolves and get that which he has longed for.

We all have our own ideas of success. The difference lies in the objects sought to be attained. To my mind, one of the most successful men I ever had the pleasure of meeting

was an old trackman on the Cumberland Division. He was about 55 years old and had given daily, for over 25 years, a carefully thought out honest day's work for his day's pay. From his earnings he had obtained a fertile plot of ground and on it had a substantial and well kept home and necessary other buildings. He had \$800 in Liberty bonds and over \$1,000 in the bank. When I met him, he had just sent two clean sons to help fight our battles in France. He was proud of being a clean, clear thinking American and was glad to have with the Baltimore and Ohio a position he liked and in which he could earn every dollar paid him. Luck never visited him. He made his own way. He found the key to success within himself and willed it that the key be used.

Start Your Shipments Right

By C. C. Glessner

General Freight Claim Agent

Most shippers are reasonable when urged to start their shipments right. If told that proper crating, protection and marking will save them trouble and money in the end, they are usually glad to cooperate. It is up to agents to protect them and the Railroad from unnecessary losses, which would be avoided by starting shipments right.

CLASS 1 roads under Federal control for the year ended December 31, 1919, paid out in settlement of Loss and Damage claims \$103,078,862. The roads in the Eastern District were responsible for \$54,380,599, more than one-half of the total. The Baltimore and Ohio Railroad participated in these payments to the amount of \$4,420,077, which means that for every \$1.00 of freight revenue received, we paid out 3 1/4 cents in settlement of Loss and Damage claims.

During our claim prevention campaign we have come up with a number of interesting items that have heretofore resulted in complaint, loss, unsatisfactory service to the shippers and Loss and Damage claims against carriers. In every instance where such matters have been taken up with shippers they have promptly seen the importance of cooperating with us, of seeing that their shipments are clearly and legibly marked and in containers sufficiently strong to carry to destination and that the marks on

The agent who accepted this shipment knew that it was so crated and loaded as to reach consignee safely

* This is one of a number of subjects suggested by the writer to several hundred officials and employees for discussion in the MAGAZINE. Although Mr. Crites has handled his theme in an unusually concise, interesting and helpful way, it is entirely probable that there are readers of the MAGAZINE who would like to say something further on the same topic, perhaps taking issue with the opinion expressed in this article. If so, we will be glad to hear from them, the only condition of publication being that what they say is honest, interesting and helpful. There are honest positions on almost any subject.—THE EDITOR.

shipment agree with bill of lading and shipping order before leaving their shipping rooms. Such shipments promptly reach destination and are satisfactorily delivered, avoiding complaint, and usually bringing forth further orders.

Most of our employees are cooperating, and when shipments are tendered not properly marked, crating not sufficiently strong to carry to destination or marks on bill of lading and shipping order not agreeing with the marks on shipments, our agents, receiving clerks and others are calling the attention of shippers to the irregularities.

During the month of July, 1920, our agents arranged for 3,306 packages tendered for transportation improperly marked and 1,086 packages insecurely packed, to be properly marked and securely packed before

The agent who accepted this shipment did so with little regard for the interests of the railroad and the shipper

Contrasts

The pictures on these pages show two shipments of household goods originating at different points on our line, for which our agents signed bills of lading. They speak for themselves. One is in accord with the Classification and the other completely ignored the Classification. There can be no question as to which shipment reached destination properly, was delivered without complaint or claim, and resulted to the complete satisfaction of shipper and carrier. The other shipment should never have been accepted in the condition in which it is shown.

they would sign the bill of lading to cover, and it is gratifying to say that such diligence is reducing our Loss and Damage claims for damage on L. C. L. shipments materially. At the same time it is felt that a further improvement is possible if our agents, receiving clerks and others concerned will watch this matter closely.

The decreased number of shipments now offered for transportation not properly marked, containers not sufficiently strong to carry to destination or marks on shipments not agreeing with bill of lading and shipping order, clearly show that shippers appreciate the importance of starting their shipments RIGHT. They will cooperate if we will show them how.

Car Mile Rhyme

OLD KING COLE
WAS FOND OF HIS BOWL,
BUT A FAR GREATER HOBBY HAD HE;
HE WOULD LEAVE ON OUR CARS,
AT TWO-THIRTY, FOR MARS
AND RETURN AT A QUARTER OF THREE.

Baltimore and Ohio Handling Largest Business in its History

BOTH freight and passenger business on the Baltimore and Ohio are now running heavier than ever before in the Railroad's history.

Since our return to corporate management on March 1, 1920, each month has seen a very large increase in gross ton miles over the corresponding month during Federal control in 1919.

For the five months, March to July, inclusive, the figures stand:

1920.....	16,369,866,000
1919.....	13,658,822,000
Increase...	2,711,044,000

This is an increase of almost 20 per cent. and is bringing into action every

(Figures just available show gross ton miles for August, 1920, as 2,099,692,723, the largest in the history of the Company, and an increase over the previous largest monthly record, July, 1920, of 158,758,447 tons, slightly over 8%.)

resource which the Railroad can muster to handle it satisfactorily.

If during the month of September we can increase our average miles per car per day to 31, the figure which Vice-President Galloway has indicated to President Willard that we will be able to reach, we will then have been able not only to handle this 20 per cent. increase over last year's business but also to handle another 20 per cent. increase added to that, provided only the business is offered. And with the coal shortages still existent in New England and the Northwest, among other factors, there would seem to be no lack of business to be offered.

Changes and Promotions

On September 1, 1920, the following changes and promotions were made:

C. W. Van Horn appointed superintendent, Cumberland Division, headquarters Cumberland, Md., vice J. W. Deneen, assigned to other duties.

B. Z. Holverstott appointed superintendent, Monongah Division, headquarters Grafton, W. Va., vice C. W. Van Horn, promoted.

J. D. Beltz appointed superintendent, Pittsburgh Division, headquarters Pittsburgh, Pa., vice C. B. Gorsuch, assigned to other duties.

G. W. Martin appointed superintendent, Pittsburgh Terminal Division, headquarters Pittsburgh, Pa., vice J. D. Beltz, promoted.

Home Buyer Praises Relief Department

BALTIMORE, Md., July 14, 1920.

Mr. W. J. DUDLEY,
Superintendent Relief Department,
City.

Dear Sir—I desire to thank you for the information granted me in connection with property at 1216 Longwood Street recently purchased by writer and appreciate the courtesy shown.

It is a real pleasure to transact business with a company that meets you more than half way and that has been the attitude of your officers.

Sincerely yours,
(Signed) EDW. T. MILLER.

Another Railroad and Its Employes

The Baltimore and Ohio is not alone among American railroads in going to its employes and frankly asking them to help produce greater efficiency and more satisfactory service. It is the spirit of the times, based on a clear understanding of the big problems facing the transportation interests of the country and the knowledge that without teamwork between management and men, these problems cannot be solved. In such spirit the following circular, which we commend to the thoughtful attention of our readers, was issued:

PERE MARQUETTE RAILWAY COMPANY

FRANK H. ALFRED,
President and General Manager

DETROIT, MICHIGAN, August 1, 1920

TO ALL CONCERNED:—

A railroad's success can rise no higher than its organization wills it. Too often, in the consideration of what constitutes a transportation system, the appraisal is made in terms of steel rails, locomotives, cars, other equipment and stations and terminals. I have, on another occasion and under different conditions in congratulating you for a good showing made, comprised in my appraisal another element of more importance—the human factor—and in the case of the Pere Marquette Railway the human factor represents over 10,000 persons contributing to the operation of Michigan's intimate, home, railway.

For some time, however, I believe we have all of us been "asleep at the switch."

For instance, during the month of June last, our 24,914 cars averaged only 16.2 miles per car per day. This is a very poor showing and a costly one. Now a little greater effort on the part of those who were responsible for the movement of these cars would have easily enabled us to make a showing of 24 miles per car per day, which in the aggregate would have resulted in 194,329 car miles per day more. Taken in another way, we could have performed the same transportation service for the communities we serve—under a 24 car mile average performance—with 16,817 cars, which at the 90 cent per diem rate, would have effected an economy of \$7,287.30 per day—or \$218,619.00 for the month of June—a saving worth while.

Can we not all work together to attain this standard? It represents but a smaller individual effort on the part of all of us. The success or failure of the Pere Marquette Railway spells the individual success or failure of each and every one of us. Upon the individual efforts of each and every one of us depends the success or failure of the railroad investor, the management and the public generally whose communities we are serving.

In this connection, I also desire to ask of the men in the transportation service to see that cars are properly placed at stations on the line to assure a speedy and convenient loading or unloading by the shipper, and this being done, I further appeal to the station agent to notify the shipper immediately, so that when cars are held beyond the time allowed under the law the proper demurrage charge may be made. Only in this way can we prevent our cars from "loafing" and the "loafing" car is of no greater value to a railroad and the community served than is the "loafer" in our complex society with its urgent problems of "after-the-war" reconstruction.

I have never yet appealed to you for assistance to improve our conditions that you have not responded and I am confident that you will not disappoint me in this. I likewise appeal to every one in engine and train service to cooperate in an effort to reduce the consumption of coal and to make a better record than has been heretofore made. This appeal I make in the public interest as well as on the substantial grounds of individual welfare.

(Signed) FRANK H. ALFRED,
President and General Manager.

The Pere Marquette Railroad has had an enviable record of efficiency and prosperity during the last few years. And, judging from this statement, the President and General Manager of this railroad knows his men, and the confident belief which he expresses that they will respond to his request for greater efficiency is a commendable illustration of the kind of relationship which should exist between a company and its employes.

After all, no matter what the size of the organization, this relationship can be made a partnership in the best sense of the word. We of the Baltimore and Ohio must admire the confidence which the letter of Mr. Alfred indicates that he has in Pere Marquette men, but we of the Baltimore and Ohio will not yield to the Pere Marquette or to any other railroad one jot when loyalty is the challenge. Too many of us are part and parcel of the Baltimore and Ohio structure, proud of its history and of the part it is playing in the transportation business of the country. We congratulate our friends of the Pere Marquette, but we say to them at the same time that when you speak of a Baltimore and Ohio man you speak of a loyalty which is willing to support to the uttermost every thing for which his Railroad stands.

The Red Signal

By Edgar White

THAD FLINT was depot agent at Coal City. That introduces the character and his job, and also indicates the size of the town. If Coal City had really been a city it would have been proper to say "station agent," perhaps. But in the country the place where the trains stop is the depot. A station is a structure where you kick over the price of oil to make the auto wheels go 'round.

Thad Flint was a cog in the great railroad machine that roared over a continent, an humble cog. Outside of Coal City nobody knew him. His record for the road was good, but his responsibility was not great. Dead or alive, the train would scoot through Coal City just the same. He put out signals, hustled freight, saw to the delivery of express and sold tickets when trains were due. He started in as an operator, but now a boy relieved him of most of that work. When on duty Thad Flint wore a cap on which had once brightly shone the words "Depot Agent." They were a bit tarnished now, having served so long. Hats, like men, grow faded and seedy. And Thad was getting along in years.

The curious thing about it was that Thad was proud of his job. He attached more importance to it than the railroad did. When business was heavy he would often go down to the little depot and work late at night on the bills and accounts, asking nothing extra. Once a masked man entered the office with a wicked looking revolver and told Thad to throw his hands up. It had been a hard day on the agent, and he was not in a cheerful mood. Raising up from his desk he cried:

"Look out!"

The robber turned and before he could wheel around Thad was giving him the bunny hug. Thad hadn't tossed freight about for 20 years for nothing. He was hard as nails, despite the fact that he taught a girl's class in Sunday school. The robber, with no room to use his gun, stood no show. Thad pulled his mask off and found it was one of the town boys. Putting the pistol in his pocket, Thad said:

"Come around tomorrow, Charley, and I'll see about giving you a job in the freight office—we're shy a man."

He never mentioned the matter to

a living soul. The "robber" now has a responsible position at the division, is married, and writes regularly to Thad.

One pleasant moonlit night Thad sauntered down to the depot to see if things were running all right. He was off duty, of course. Ridings, night man, was working at the clicking keys. Several autos were near the depot. From the west, down in the the valley, came the road crossing signals of the Chicago Limited, which did not stop at Coal City. It was the best train on the road, running on an average of 40 miles an hour.

The big engine was puffing up the grade, rushing in with its heavy load like a charge of cavalry. It gave the regulation signal to indicate it was going through without stopping. As the cars swung by, Ridings, the operator, ran out of the office, frantically swinging a lantern. But the engine had passed and the men in the cab were looking ahead. Thad Flint took in the situation.

"You had orders to hold 56?" he asked.

"Yes," groaned Ridings, "and the semaphore went out—he didn't see it! He's gone against 55!"

No. 55 was the train coming west. The orders to hold 56 indicated 55 was late. How far it was down the road Ridings couldn't tell, for many of the towns did not have operators.

Thad Flint's mind ran over the problem swiftly, a problem of life or death. He wasn't at all excited—the excitement was to come later.

"Pull yourself together, Jack," he said quietly and clearly. "Get the long distance and put in hurry-up calls for Hawkins, Finnisterre and Smith's—over east, you know. Tell any who answer to get a lantern, if handy, if not, a newspaper, touch a match to it and run out on the track—stop anything on the line—explanations to follow—understand?"

"Yes, sir."

The boy jumped to the telephone. Thad walked over to the edge of the depot platform, where the autos were, and stopping at a long, low car he spoke to a thin, weazened-faced boy standing by it.

"Joe, do you know the road to Haverly's crossing?"

"Yes, sir."

"Start your engine. We're to get there before 56!"

In a moment the engine was roar-

ing fiercely. The car was the most powerful in Coal City, used in emergency cases about the mines.

"Put on everything you got," directed Flint.

"Semaphore wrong," said the boy as he climbed in and took hold of the guide wheel.

"Yes, and No. 55 is coming! Take every chance, Joe—you understand?"

Joe Kelly nodded. In his time he had operated an electric locomotive in the mine, and had been in some tight places. The old-young face had looked at death in its worst form. Flint knew that, and that he had stood the test.

The long, low car glided through an avenue of trees, somber in the night. Everybody in Coal City had gone to bed. The way was clear. Joe steadily increased the speed, holding plenty of power in reserve for the crisis. A flood of moon-light bathed the world. They were out in the open. Far ahead, sweeping across the lowlands, the flashlight of the Limited could be seen, rushing eastward. The night was still, bringing clearly the roar of the wheels.

A few turns and the auto was on the highway paralleling the track, a five mile tangent. Kelly's eyes narrowed as he threw on the limit.

The race was on!

* * * * *

"No 56 will hold main line at Coal City for 55, which will proceed with all possible speed to meeting point."

Barney McMasters, engineman on 55, held the yellow tissue to the shaded light in the cab so Dan Leigh, his fireman, could read with him the order just handed up by the conductor at Creighton-on-the-River. A station helper climbed up on the tender and shoveled some coal forward, bringing it closer to the fireman. In the cab the air whistle shrilled—the signal to start. Barney's gloved hand grasped the lever. The six large drive wheels took hold of the rails. The train was in motion. From the open cylinder cocks came a cloud of steam, like a sheen of silver, curtaining the way ahead. As the long train swung around the curved viaduct leading to the bridge the wheels of the coaches scraped harshly.

The lever came out a little further. Sparks shot out on the big boiler. The automatic bell tolled slowly and solemnly, bringing up echoes from the lowlands near the river. Here and there on the bluffs were electric street lights shining like stars on the black night. Along the levee were the sleeping tugs and ferry boats, their day's work done.

"Proceed with all possible speed."

The bridge cables rattled as the heavy train rushed across, making a pleasant lullaby to the drowsy ones in the safety of the coaches. In one of the smoking rooms a bunch of traveling men were talking politics. The negro porter was busily arranging berths for some of the passengers who had come aboard at Creighton, and explaining why the train was so late. A dark-eyed boy tossed restlessly on his couch in a private compartment. His young mother sat on the edge of the couch, stroking his curly hair and fevered brow, for he was very ill.

"Papa is waiting," she soothed; "we will soon be there."

* * * * *

There was a brief stop in the yards at the other side of the river while a long freight train pulled in and took the siding to await its turn to cross the bridge.

The red light on the semaphore gave place to the white. The big engine tramped angrily around the curves and rocky bluffs, and then struck the upland with a sort of satisfied growl. Dan Leigh swung open the furnace door, and a blood-red glare colored the tender and forward car. The brawny arms of the stoker glistened with sweat as he tossed in great scoopsful of coal.

On the wide reaches of the prairie the great superheater took the bit in its teeth. With its volcanic power the ten heavy coaches were no handicap. White mile posts, like ghostly sentinels, came trailing out of the night until the indicator recorded the passage of 60 to the hour. The heavy rails, resting on rock-ballasted ties, seemed like silvery strands in the glow of the electric headlight's rays. The wind swept with cyclonic fury through the long, narrow windows on either side of the boiler. With the fierce pounding of the heavy drivers, the steady roar of the exhausts through the short stack, the spiteful hiss of steam, speech in the cab was impossible. On the right hand seat box, in the narrow space between the boiler and the side of the cab, sat Barney, his body partly out of the window, one hand on the lever, and the other near the air control, a figure in bronze. Short, angry barks came from the whistle to warn the chance traveler on the highway who might fail to heed the "Stop, Look and Listen" caution on the white painted pole. Every man deserves a chance for his life.

The men in the smoking room had settled their political discussions and they were reclining drowsily on the cushions. The porter had put all his

Creighton guests to bed. The little dark-eyed boy, his hand resting in his mother's, murmured in his sleep, "Papa."

No. 55 entered the "blind cut."

* * * * *

The two men in the long, low car, their heads bare to the cutting wind, watched the red tail lights on 56 grow larger and more distinct; watched them as the speeding car came up even, and then left them behind as it crept inch by inch toward the engine. Everything was working smoothly, the road was hard and level, the moonlight swept down like a benediction to earth.

The car was making 70 miles an hour. When it was abreast of the engine Flint arose in his seat and waved his hat backward and forward,

the code signifying to stop. The engineer took it as a challenge and crowded on more steam!

Flint sank back into his seat.

"You'll have to beat the best he can do!" he said.

Joe Kelly nodded.

"Kingston hill!" he muttered.

A man started from a farm house swinging a lantern.

It was Hawkins, just a minute late. The other farm houses, where the calls had been made, had been passed without result.

It was up to the men in the car.

Joe Kelly eased off his power a little as he took the Kingston Hill, knowing the value of a reserve in a pinch. The hill was not steep, but it was long, reaching up to the ridge. While making the ascent the train, running on the level, gained on the

The robber turned and before he could wheel around Thad was giving him the bunny hug

car. Kelly had figured on this, knowing he would overcome the lead going down from the ridge. Half way up he put on full power, the car bounded ahead, negotiated the short level of the ridge, and started down.

"Hold tight! If anything breaks—" "Give her everything you got, Joe," urged Flint.

Kelly's lean face seemed to grow animated; the narrow eyes became narrower, until they appeared almost closed. Small pellets, too small to be seen, struck against their faces, along with the hurricane.

The car went down Kingston hill in what would have been a winning record in an international speed contest. The men had quit looking at the indicator. It was the train they were running against. On the lowlands again the car was well ahead, but Haverly's crossing was only a few miles further on. The railroad and the highway ran east and west. Haverly's crossing ran north and south. Just before the highways intersected there was a jog to the east and west highway to the south to get around a patch of timber that stood next to the right-of-way.

The car was far enough in advance to have allowed for this variation, but glancing to the south Kelly and Flint spied another car coming from that direction—the only car they had seen since leaving Coal City. Here was a new and terrible problem. If they could strike the north and south highway ahead of the approaching car the chances were good to reach the grade crossing safely ahead of 56 in time to flag it. There was no way by which the men in the other car could be acquainted with the situation. They were much closer to the highway intersection than the car in which Kelly and Flint were coming with terrific speed, and they may have figured that by getting in ahead they would prevent the eastbound car from a disaster on the track. Anyhow they passed over the east and west highway a moment before Kelly's car reached it! Kelly had to reduce speed to make the turn and avoid a collision.

The headlight of 56's engine was already sweeping the grade crossing.

For the first time since starting out on the desperate run Kelly looked questioningly at his companion.

"Ease against them gently," directed Flint, who got out on the front of the car. The car ahead slowed up, to wait for the train to pass. Flint ran forward and jumped on the running board. Pointing a pistol at the driver he commanded:

"Drive on the track and stop, with the tail lights west! Quick!"

In all his life Flint had never harmed a living thing, but the driver looked into his stone-set face that night, and knew he would die if he disobeyed that order. He supposed he was dealing with a mad man. So he threw on the power. The car shot ahead, leaving Kelly behind. Kelly's job was finished.

The car with the two strangers and Flint, still holding his gun close to the driver, jumped forward.

"On the track! Head east . . . Stop!"

Flint himself didn't know how to run a car. So he made the driver stay in until the car was on the track, its tail lights facing No. 56, which was almost on them. The two men lost no time in leaping from the car, at Flint's signal. Flint stood up, waved his hands and jumped out. The pilot of the engine struck the car squarely and sent it flying high in the air, but the engineer had put on the emergency brakes and was bringing his train to a stop. Flint ran ahead and climbed into the cab.

The engineman blazed wrathfully:

"Were you one of those lunatics in that car?"

"Yes," replied Flint. "It was a stop signal, Felix. Whistle out your flagman to stop 55, and get back to Coal City quick as the Lord will let you! Semaphore was wrong!"

An engineman doesn't stop to argue over a statement of that sort. The flagman rushed out with his lantern, and Flint ran east with him to the long trestle over Muscle Creek, just west of the blind cut, the trestle on which the trains would have met head on.

* * * * *

In due course of mail Superintendent Mulhern perused this communication from Coal City.

"Dear Sir—I recommend allowance to Charles W. Fitzpatrick, civil engineer of Yarmouth, Mo., sum of \$3,250 for destruction of motor car night of 15th inst., said car being used for good of service.

"Please notify Signal Department. Semaphore at Coal City needs repairs.

"Yours,

T. FLINT, Agent."

Railroad Men! This Farmer Needs Your Help

Haul his machinery and supplies to him safely and his products to market without damage—then you will pay less yourself at the butcher's, the baker's, the grocer's

ANOTHER RAILROAD DIFFICULTY

A farmer in the Baltimore District has been in the habit for some years of receiving freight shipments of various kinds and weights at the rate of, perhaps, one a month. Sometimes these shipments were of heavy farm machinery, sometimes of lighter household or farm supplies. Before the war they arrived with reasonable promptness and almost always in good condition.

For the last year there has been shocking delay in the transportation of all his shipments. Not infrequently more than a month beyond the normal time has elapsed before the goods were delivered, even when the distance of shipment was only a few hundred miles. Once or twice there have been embargoes, which, for weeks at a time, prevented shipments from being even started on the way.

What such delays mean to a farmer, who is particularly dependent on the seasons, is plain. Seed and fertilizer received a month after they should be in the ground are almost worthless. But this particular farmer is a fairly reasonable man, who attempts to make proper allowance for what he knows to be a world-wide condition of demoralization in transportation. He realizes

that the vexatious delays may, under the circumstances, be almost inevitable.

But there is a circumstance about the condition in which all his recent shipments have been received which is not so easy to understand or to excuse. Without exception, the goods received in the last half dozen shipments have been badly damaged in transit, or, if delivered without breaking, parts of the shipment have been lost. The leather seat of a buggy has been badly torn, the heavy cogwheel of a pumping jack has been cracked in a half dozen places, holes have been ripped in bags containing cowpeas for seed, parts of various farm machines have been lost or not delivered.

We were glad to see railroad men get the advanced wages recently awarded them. But we should be happier about it if there were more signs that railroad men are ready and anxious to do a good job, to treat the public fairly, to handle goods entrusted to them carefully, to make a return in better service for the bigger wages they have demanded and received.—Baltimore Sun of August 9, 1920.

Preventable Accidents Cause Largest Number of Fatalities for First Half of 1920

By William F. Braden
Safety Representative

IF YOU were in a trench facing an army of soldiers armed to the teeth, would you stick your head above the parapet to see what your adversary was doing?

If a half-wit were roaming around the neighborhood of your home with a loaded shotgun, would you step out without caution or allow your wife and children to venture forth?

You would not.

Yet we venture upon the tracks of our railroad with as little thought of the impending danger as we do upon the sidewalk in front of our homes.

Hundreds, yea thousands, of times daily our employes step upon the tracks without looking in the direction from which trains usually approach. Seldom do we look in the direction opposite to the current of traffic.

And we are paying for our neglect. The toll in the first six months of this year was 18 employes killed; 18 lives snuffed out when a little foresight and caution would have conserved this man power and prevented much sorrow and suffering among those left to face the resulting loneliness and deprivation.

A summary of fatalities in the first six months of this year shows that 56 employes met death in the performance of their duties. Of these, 30 were killed on the Eastern Lines and 26 on the Western Lines. This gives the Eastern Lines a percentage of 54 of the fatalities. Not an envious place to hold and one that we can attack with determination by the rigid observance of the Safety Rule which requires that we glance in both directions before venturing upon a track.

Of these 56 fatalities, 18, or 32 per cent., were the result of employes being struck by trains. This seems inordinately high in view of the fact that day after day we see these same rails alive with moving engines and cars and we cannot be oblivious to the fact that at any moment some train or engine is sure to come speeding along.

It is a sad, sad story that the official reports tell in accounting for these accidents. In nearly every case we read that the victim was walking along, apparently deep in thought, stepped upon the tracks for no ap-

parent reason in the world and was mangled by a train or a cut of cars being shoved into a siding.

Nothing hard or unusual is asked of those whose duties take them along the tracks. It is the easiest thing in the world to look ahead and behind us before we set foot upon the rails. Yet we FORGET.

A moment's reflection would save our families a life-time of regrets.

The second cause for the greatest number of deaths is "Falling under trains." In the six months mentioned 10 of our men lost their lives. This means 18 per cent. of the total

Some "Post-Mortems" That Could Have Been Prevented By Forethought

Here are some accounts of recent accidents that actually happened on our lines and which could have been prevented by the practice of Safety:

When the bearings on an air fan in the power plant at the Glenwood yards worked loose, a boilermaker was sent to repair it. He had done the same job in the same way each day for many months, sometimes four or five times a day. He declared he had seen others use the same means as he had to tighten up a nut on the front of the fan. When he did the job the last time he did not stop the whirring fan. The wrench he was using slipped when he attempted to turn the nut. His hand was dashed against the blades of the fan and he lost a finger. He says he knows what he will do the next time he is sent to repair the fan—he will stop it.

When a passenger engine became disabled at the Pittsburgh station, a yard engine was sent to give assistance. A brakeman was riding the front step of the yard engine to make the coupling with the passenger engine. As the engines were about to come together he put up his foot to shove the knuckle on the coupler. His other foot slipped and the one against the coupler was mashed as the engines came together. This brakeman had been warned not to do this several times by the conductor in charge of the crew. An hour before the accident the final warning was given. He was taken to a hospital and now he is walking around the terminal on crutches. "I expect to go back with the Railroad," said the brakeman after the accident, "but I will not take any more chances like that." Too bad he didn't decide this way—the safe way—sooner.

A carpenter at Chillicothe was on the coal tippie repairing the tops of barrels that are placed there for emergency use in case of fire. He found a barrel that needed a whole new top and after he had made it he took the old top, weighing about 16 pounds, to the edge of the tippie and dropped it to the ground, a distance of 40 feet. As he dropped the lid, a laborer walked from beneath the coal tippie and was struck on the head and knocked unconscious. The carpenter declared that before he let the barrel top drop he had looked below to make sure no one was there. Which indicates he expected someone and should not have dropped the heavy piece of lumber.

Seeing a train approaching when he was at work on the tracks at Rowlesburg, W. Va., a trackman stepped clear of all tracks and into some bushes on the side of the track. When the train had passed he leaped from the bushes on to the tracks and a train coming in the opposite direction from the one he had just evaded, struck him. The cylinder hit him on the forehead and mashed it. He practiced Safety *some* of the time, but not *all* of the time.

In order to get a laugh from his fellow workers, a foreman in charge of laborers in the stores department of a certain shop used the air hose that led from the oil room into the waste room for ventilating purposes in his "horse play." The victim of the practical joker caused much laughter by his antics. The victim was sent to the hospital after the "playful" stunt and there he died. A coroner's jury held the foreman liable for the death of one of the men of his gang. When a foreman does not play the game safely, how can the men be expected to do so?

fatalities, likewise a very high percentage. The reports of these accidents indicate that the majority of them were caused by trainmen failing to be cautious in moving about in the yards and stumbling over permanent appliances and casual obstructions.

Next in order comes "Falling from train." Under this classification there were six fatalities, or 11 per cent. of the total. It seems evident that the majority of these deaths came to men who stood on the ends of the box car roofs instead of seeking

a safer place near the centre and thus being prepared for any unexpected jarring of the train. The Safety Rules are specific in providing against such mishaps, but trainmen "take the chance" now and then and pay the awful penalty.

Only five men were lost to us by being crushed between cars, whereas formerly this number was large. Our men are learning that death lurks near when they go between cars to adjust couplers with their hands and feet. Many are injured in the course

of the year because they gingerly venture to handle or kick the couplers when cars are about to come together, but the casualty list is falling low. It should be zero.

There is a record of two lives snuffed out that should not have been recorded. That comes under our classification "Working under cars without flag." In both cases recorded in the six months' summary, the victims deliberately went under the cars when they knew the cars likely would be moved and without placing a blue flag at the end of the string of cars to give engineers warning that they were beneath the cars. One of the victims was a car repair foreman who was called to make minor repairs on a freight train which was being made up. He asked the conductor to watch the west end of the string of cars so that the engine working there would not kick a cut of cars into the track. But he did not guard the east end of the train and the engine working there kicked in a cut of cars, moved the car under which the car foreman was working only a few feet, but a sufficient distance to crush the life out of him.

The summary below indicates just how the 56 employes lost their lives in the first six months of this year:

Burned.....	1
Crushed between cars.....	5
Crushed by falling ice.....	1
Collision.....	1
Derailment.....	3
Drowned in stream.....	2
Electrocuted.....	1
Fell from train.....	6
Fell under train.....	10
Fell from ladder.....	1
Operating hopper door (suffocated in coal).....	1
Scalded.....	1
Struck by train.....	18
Struck by overhead obstruction.....	1
Struck by side obstruction.....	2
Working under car without flag.....	2
Total.....	56
Total fatalities Eastern Lines...	30
Total fatalities Western Lines...	26

Pays One Loan—Will Ask Relief Department for Another

GARRETT, PA., August 4, 1920.

MR. W. J. DUDLEY,

Superintendent, Relief Dep't.

Dear Sir—I received the papers and am glad that my house is paid for. In the Spring I am going to ask for another loan.

I must say the Baltimore and Ohio Relief Department has treated me fair and square while I have dealt with them, and I am very thankful for what they have done for me.

(Signed) SAMUEL C. TRESSLER,

Watchman.

Total Injuries by Months:

January, 302; February, 239; March, 303; April, 282; May, 313; June, 307.

Assured that our readers will welcome advice and suggestions on the all-important problem of health preservation and life extension, based on the latest advances in medical science, it will be the purpose of this section of the MAGAZINE to present brief and instructive articles each month by members of the medical staff of the Relief Department. We know our efforts will appeal to our readers. If only a few profit by the advice offered, our contribution to the sum of human happiness will be considerable, and our service of value. The addition of one, five or fifteen years to a life is well worth the task.

The Patent Medicine Evil

By Dr. Fuller Nance

Assistant Medical Examiner, Baltimore, Md.

EVERY physician is frequently asked to express an opinion about the value of some patent medicine. The manufacturers and distributors of these articles have so thoroughly learned and extensively employed the art of advertising that it is almost impossible for us to avoid reading somewhere and almost everywhere that somebody's pills or potion will cure every disease with which humanity is afflicted. And the worst feature about this promiscuous advertising is that some of us finally accept as true the extravagant claims that are repeated day after day, without challenge, through every conceivable publicity medium.

Every patent medicine sold as a cure for any of these diseases is dangerous, and is the direct cause of many people losing their lives each year. It is difficult to emphasize strongly enough the great danger to which people are exposed today through the indiscriminate and extensive use of patent medicines and nostrums. The gravity of the problem has been recognized by our Federal government, which has passed laws that at least help the public to learn what they are pouring into their stomachs. It was, as a consequence, interesting to note the scramble among patent medicine manufacturers to change formulas and labels, decreasing the quantity of habit-forming drugs and altering labels to read—"A REMEDY" instead of "A CURE" for cancer, tuberculosis, etc.

Why are patent medicines not only worthless, but in many cases danger-

ous as well? In the first place, one of the most difficult branches of medicine is to make a proper diagnosis, and when a patient treats himself with a patent medicine, he makes his own diagnosis. To illustrate:

One of the most frequent early symptoms of tuberculosis is "stomach trouble." Now, when a man tries to be his own doctor, he makes a diag-

nosis of stomach trouble, visits the corner drug store and buys some Bunko's Syrup of Pepsin (60 per cent. alcohol), which he takes for six months, always feeling better after each dose, because of the stimulation of the alcohol. After spending many dollars, during which time the disease is gradually but surely spreading, he finally consults a physician and learns the truth, too late to arrest its progress, and another murder is chargeable to the manufacturer of Bunko's Syrup of Pepsin. For, had the patient gone to a competent physician and paid a fee of about one-tenth what he spent upon the patent medicine, his disease might have been arrested and his life prolonged for years.

Or, perhaps it is soreness in the throat: he buys somebody's sore throat remedy, and after the system is saturated with poison learns too late that it was a case of diphtheria which was mistaken for tonsilitis, and another life is charged to this nefarious traffic.

When you are sick, visit your family physician and get proper advice and treatment, and you will find that both money and health will

Statement of Pension Feature

Statement of employees who have been honorably retired during the month of July, 1920, and to whom pensions have been granted.

Name	Last Occupation	Department	Division	Years of Service
Lacey, William H.	Engineer	Cond'g Transportat'n	Wheeling	29
Manely, George P.	Engineer	Cond'g Transportat'n	Newark	42
Mitchell, Charles S.	Freight Agent	Cond'g Transportat'n	Illinois	48
Skilman, John R.	Shipper	Elevator	Baltimore	44
Weber, Christina	Scrubber	Cond'g Transportat'n	B. & O. C. T.	29
Williams, Thomas	Carpenter	Maintenance of Way	Newark	47

The payments to pensioned employees constitute a special roll contributed by the Company. During the calendar year 1919, \$333,807.10 was paid out through the Pension Feature to those who have been honorably retired.

The total payments since the inauguration of the Pension Feature, October 1st, 1884, to April 30th, 1920, amount to \$4,032,546.35.

The following pensioned employees, after serving the Company faithfully for a number of years, have died:

Name	Last Occupation	Department	Division	Date of Death	Years of Service
Conley, James F.	Sheet Tinner	M. P.	Baltimore	July 14, 1920	51
Davis, Ananias	Watchman	M. of W.	Monongah	July 19, 1920	40
Hanly, Patrick	Watchman	M. of W.	Pittsburgh	July 26, 1920	53
House, William H. C.	Water Pumper	C. T.	Cumberland	June 28, 1920	33
Wachter, E. A.	Carp. Foreman	M. of W.	Baltimore	July 2, 1920	40
Orth, Andrew	Laborer	M. P.	Ohio	July 17, 1920	52
Saville, John O.	Trackman	M. of W.	Cumberland	July 6, 1920	45
Stredly, C. S.	Ticket Agent and Operator	C. T.	Chicago	June 27, 1920	34

be preserved; don't feed your cash and hope to the Patent Medicine Monster, for both will be eternally lost.

"Every man who trades in this market, whether he pockets the profits of the maker, the purveyor or the advertiser, takes toll of blood. He may not deceive himself here, for here the patent medicine business is nakedest—most cold hearted. Relentless greed sets the trap, and death is partner in the enterprise."

The writer, having had an extensive experience as a retail druggist, has had an excellent opportunity to observe the blind and unquestioning confidence of otherwise intelligent people, and the liberality of their expenditures for all kinds of worthless and harmful concoctions which unscrupulous manufacturers put upon the market, who are absolutely ignorant of the properties and uses of drugs, or of the proper treatment of diseases.

The average person has an idea that any disease may be cured by taking something out of a bottle three times a day; but when they try to purchase relief from chronic diseases at the corner drug store, they are doomed to disappointment, for every physician knows there is no known drug that will cure Bright's disease, diabetes, cancer or tuberculosis.

The intelligent physician employs every proven agency in the treatment of disease, such as the correction of errors of diet, breaking of old habits, and a readjustment of the patient's life; and these, with the persevering cooperation of the patient, will usually result in the arrest of disease. But, as this causes some discomfort to the patient, it is no wonder that when he reads the boastful advertisement of the patent medicine fakir who declares—"My Remedy CURES Kidney Disease," "Sure CURE for TUBERCULOSIS," etc., he throws discretion and professional advice to the dogs, and grabs at the patent medicine like a drowning man does at straws, and with the same result.

Overheard at the Medical Quiz

Prof. Sapio: "Is appendicitis a new disease?"

Dr. Green: "No. It is an inflammation of the vermiform appendix, and as every one has an appendix, it is safe to assume that Adam and every human being since could have had the disease."

Prof. S.: "Then why is it that we have heard of it only in recent years?"

Dr. G.: "Because the doctors of the old school did not recognize it but called it 'strangulated bowels,' 'inflammation of bowels,' etc., and as a rule the patient died."

Prof. S.: "What should the patient do in a case of suspected appendicitis?"

Dr. G.: "The essential thing is to immediately place himself under the care of a competent physician and follow his instructions."

Prof. S.: "You are right, Doctor, a patient with appendicitis gotten early by the doctor practically always recovers, and in no other disease is delay more dangerous."

Dictation

By Edward Hart, Jr.

General Freight Agent, St. Louis, Mo.

THE ability to clearly express one's self in a letter is one of the most important things for a railroad employe to acquire, that is to say, if he is ambitious to rise in the service.

Many letters do not convey their true meaning to the reader; some contain more words than are necessary; there are those which are not confined to the subject matter supposed to be covered; in others the statement of fact and the argument are mixed, and therefore do not conserve the time and thought of the reader, who is often forced to exercise his own ingenuity or knowledge to determine what is meant.

All of us, therefore, should study English composition, and, having mastered a few of its elements, should think for a minute before writing or dictating a letter, not only what should be said but the shortest and clearest way of saying it. There should first be an introduction, to prepare the mind of the reader for the statement of fact that is to follow; then the explanation and the argument for or against the matter presented and, last, the recommendation or decision based thereon. Repetition should be avoided, except

to emphasize some point. Such phrases as "I wish to say," "beg to state," "for your information," and the like should be omitted. When a short word will convey the meaning it should be used instead of a long word; simplest words are often the most emphatic.

Stenographers can be of great assistance, and should be on such terms with their employers as will permit them to correct or modify the verbiage of dictation, and those who dictate should welcome intelligent suggestions from their stenographers, rather than require them to follow like a parrot the language as dictated.

It is said that the best way to make a speech is to "Stand up, Speak up, and Shut up;" that is also the way to dictate a letter.

He Increased Car Miles

When one of the dumping machines at the big Curtis Bay Coal Pier is put out of operation for any reason it cuts down the pier's capacity about 50%. And this pier, as most employes know, is one of the biggest outlets on the system for relieving our rails of freight and keeping our cars moving. Read the following to see how one employe did his bit in this campaign:

CURTIS BAY, July 28, 1920.

MR. JAMES MATTHEWS,
Car Rider, Curtis Bay Piers.

Dear Sir—It has been called to my attention that on or about July 23, an accident was narrowly averted by your alertness. When car was coming up to be placed on cradle, in tightening brake, the chain parted. You saw the immediate danger, jumped from car and secured chock, thereby preventing car from running down incline and striking another car on kick-back on No. 1 dumper.

I take this opportunity of expressing my appreciation of your interest and watchfulness on this occasion, and thank you for your action in the matter.

Yours truly,
(Signed) W. M. HAVER,
Superintendent.

He Increased Car Miles

Passes

The Baltimore and Ohio maintains a liberal policy toward its employes in the matter of free transportation, and, partially because of this, is now confronted with a serious problem in handling its passenger business. During Federal control no new passenger equipment was purchased and some of the old equipment has been taken out of service because of age or obsolescence. With these reduced facilities and the present heavy passenger travel, taxing our facilities beyond any previous record, it is unfortunate that letters of complaint received from passengers indicate that certain employes have occupied an unnecessary number of seats, and in this and other ways have prevented our passengers from being properly seated.

Although the giving of free transportation by the Company to its employes is a long-standing practice, most of us understand that it is a purely voluntary courtesy and that it should invariably be used in such a way as not to interfere with the duties of the Company to its passengers.

A large majority of our employes use their pass privilege in a wholly unobjectionable manner. There are only a few, more thoughtless than inconsiderate, who have so used their pass privilege as to bring embarrassment not only to our officers but also to many of their fellow employes.

Every employe should so regard and appreciate the pass privilege as to feel an individual responsibility that its use does not reflect any discredit on the Railroad in its duty to the public, for it is only in this way that the liberal policy of the Baltimore and Ohio in this respect can be maintained, unrestricted.

One other thing: When the ticket taker comes through to collect, don't smile knowingly at him in lieu of presenting your pass. Please have it ready to show so as not to delay him. The conductor of a commuter train reported recently that he was unable to collect a number of tickets because, in working his train, pass holders delayed him so long that he was unable to reach pay passengers before they had gotten off at their stations.

It is eminently fair and just to all concerned that the Railroad should expect and secure the hearty cooperation suggested from every employe.

Watch the Individual Car

In making a trip of inspection over his lines recently, the president of a large railroad chanced to notice a car standing at the end of the track which showed evidence

of having been there for some time. On questioning the division officer he was informed that the car in question had been placed there only recently. Later investigations showed that it had been standing for ten days, although the purpose for which it was set could have been accomplished in a day. This incident is not cited to imply that the superintendent should have known how long this car or any other individual car had been standing at any one place on his division, but rather that he should have known that no serviceable car was standing at any point on his division longer than was necessary to accomplish the purpose for which it was placed. The problem of car movement is that of keeping *every* car moving. It involves close supervision at each siding and station on the division. It is self-evident that if all unnecessary delays to each car are eliminated and it is kept moving to the maximum practicable extent, the maximum mileage will be secured from *all* cars and the problem of handling the traffic of the country will have been solved insofar as it is possible to solve it with the equipment now available.—*Railway Age*.

Too Polite

Street railway facilities, along with the railroads, are way behind in the public service requirements of the day. They, too, are suffering from malnutrition and their plight is working quite a hardship on the strap-hangers in the big cities.

I happened to be one of these in the street car the other day where this amusing experience took place:

An agreeable-looking but apparently absent-minded gentleman gave his place on one of the longitudinal seats on the car (built for four) to a young lady. She was profuse in her thanks and the passengers were obviously interested in the episode. She had hardly become seated comfortably when she reached over the lap of the lady next to her and, addressing her mother, who occupied the next seat, said:

"Mamma, please lend me your handkerchief; I forgot mine."

Hardly were the words out of her mouth than the absent-minded gentleman in front of her made a dive for his pocket and said:

"Oh, won't you have mine, Miss?"

You can imagine the resulting embarrassment.

I once had a brusque acquaintance in the person of a salesman. He knew life from having had some pretty hard knocks and was certainly not an idealist. His cousin, another gentleman of just the opposite type, polished, cultured and polite to a fault, quite got on his nerves to the extent that when someone would say a kindly thing about the cousin, his invariable rejoinder was:

"Oh, yes, 'Vint' is all right, only he's too d—— polite."

The question is, can we be too polite? The fine deference which, only a few years ago, was paid to our women folks seems to be disappearing. It is a rare thing now-a-days to see a man giving his seat to a lady. Rare also, even in our own Baltimore and Ohio Building, where respect from men to women should be somewhat of the same type paid within a family, to find men taking off their hats in the elevator when women are present.

I can hear some readers of this paragraph saying, "Rubbish; the women don't appreciate it anyway." And I agree that that often seems to be the case. But we are losing one of the finest things which life offers when we fail to observe those marks of respect which it has been the privilege of our men to offer to the peerless American woman. The argument that woman has thrust herself into man's sphere in business, politics and indus-

try, is specious. She is still woman, with her delicate physical nature, her inborn and inalienable right to look to man as her protector, still the mother of our children.

Politeness as thin as a veneer is as unsubstantial. But politeness which recognizes the superior fineness of true womanhood is still one of the finest prerogatives of true manhood.

Great Enough to Be Humble

Walks a man along a street of Springfield, Ill. "What are you crying about?" This to a 12-year old girl, standing by a gate. "The drayman hasn't come for my trunk, and I shall miss the train." "Dry your tears, sis; I reckon we can fix this." Up goes the trunk on the man's strong back and off to the station in time for the train. That man is Abraham Lincoln. Big enough to be small enough to serve.

"Heave away, there! yo heave!" It is a corporal giving lordly orders to a squad trying to move a timber. But the timber is too heavy. Rides a man by on a horse and inquires, "Why don't you help them?" "Not I; I'm a corporal." Dismounting, the man lines up with the soldiers: "Now, all together—yo heave!" The timber goes into place, and the man addresses the corporal: "Next time you have a timber too large for your men to move, just send for your commander-in-chief!" The speaker is George Washington.

Two men stand in a corridor of a Cleveland hotel on a wintry night. One of them, wishing some papers, walks out into the bitter, searching wind, and buys them of a shivering newsboy on the street. "Why didn't you buy them at the newsstand?" "Oh, that poor, cold little chap needs the money more than the one inside." The purchaser is Major, Congressman, Governor, President—William McKinley.

No king on a throne appeared more majestic than John Marshall, clad in the robes of his great office, sitting as Chief Justice of the Supreme Court of the United States. Comes to his quarters one day a small boy to obtain some legal papers for his father. The Chief Justice notes the small boy's awe of one so great. "'Billy,' I can beat you playing marbles." And out into the yard they go to have a game. Big enough to be small enough to play marbles with a kid.

One of the most venerated names in the modern history of the Catholic Church is Fenelon. Into his place and to his own table he brought a great company of people made homeless and wretched by the War of the Succession. Observing one peasant, one day, who ate nothing, he inquires the cause. "Alas! my lord; escaping, I had not time to bring my cow, the support of my family." Promptly sets out Fenelon, the great bishop, with his privilege of safe-conduct, finds the cow, and brings her to her owner. "This," says Cardinal Maury, "is perhaps the finest act of Fenelon's life."

Love Divine stooped to be born in a manger; to build hovels in Nazareth; to become the Friend of the lowly and despised; to wash the feet of His disciples. "The Son of Man came not to be ministered unto, but to minister."—*The Barrett Trail*.

An Accommodating Brakeman

On Number 77, the Washington-Hagerstown Express, August 30, 1920, pulling out of Camden Station at 4.00 p. m.:

The clean, steel coach comfortably filled with passengers, many of them women and children, laden with bundles after the day's shopping and on their way to country homes:

Brakeman Elmer E. Walter comes from the platform to the front end of the coach. He is perspiring freely and undeniably hot and sticky, but smiling, a genial smile, one of those philosophical "may as well make the best of it despite the weather" smiles.

After the excessive rainy spell, the tightly fitting window sashes seem glued to the frames. Women and men are tugging at them, but only a few with success.

Brakeman Walter, with the skill and strength born of ten years' service, makes the first little family he reaches a bit more comfortable by opening their window. Still he smiles.

On through the car, to the right and to the left (one, two, three, four, five, six, seven, eight, nine, I counted), he opens windows, mostly for women, one or two for men. He plays no favorites. Still he smiles, now through streams of sweat rolling off his face.

What's that old phrase: "When you and I know how to smile, then there'll be miles and miles of smiles." Brakeman Walter knows how. Do you?

Partisans

When national or state affairs go wrong, and we find ourselves flat on our backs in the middle of a bad fix, we are prone to relieve our feelings by cursing the politicians. So might one wield an awkward hammer and curse it for mashing his thumb.

Politicians are what they are because people have forgotten the art of thinking. Pick up a typical Republican newspaper and read its comment concerning the acceptance speech of Coolidge. Compare it with the comment of a typical Democratic paper. The one is ridiculous because it praises too much; the other disgusting because it wholly condemns. Neither makes an effort to be fair or sane.

Presumably partisan newspapers print this sort of childish rot in an effort to please their partisan readers. If their effort is successful, one cannot escape the conclusion that partisan readers have long since lost the use of their brains and now depend wholly on politicians and the press agents of politicians for their ideas and their convictions.

One may support a politician whose convictions are similar to his own and yet retain his manhood; he cannot blindly support a politician because of his party label and remain worthy of citizenship.

America needs citizens who will think. When citizens think politicians will render service or go into the discard. There can be no government by the people while the people are mere witless partisans.—*Baltimore Sun*.

CAR MILES, CAR MILES, CAR MILES, CAR MILES,
CAR MILES, CAR MILES,
CAR MILES.

The Monongah Veterans Make Merry at the Grafton Picnic and the Young Folks Take a Back Seat

By Aunt Mary

THERE aint nothin' more soul-satisfyin' than to go to a real old-time picnic, an' the one what the Veterans had up there at Grafton jes' gimme somethin' to talk about fer the rest o' my life. I ain't never goin' to forget it if I live to be as old as Uncle Jim Peters' old horse Ned, an' he lived so long that he carried nine generations o' children on his back an' when he died, he died standin' up.

Now, Ezra an' me had been plannin' fer a long time to go to that picnic. We had done got a fine invite, all writ out on a postal card with a stamp already on it. But when the time finally did come, Ezra was took down with rheumatiz so's he couldn't do no more'n hobble around the house.

"Mary," sez he, "do you reckon we'd better go?"

"Ezra Hezekiah Simpkins!" sez I, an' I was mad too. "If you cheat me out o' this picnic, I'll call you the meanest white man what e'er set foot in the town o' Baltimore!"

"Be you afraid to go by yourself?" sez he, hobblin' over to where I was a-settin'.

"I ain't afraid o' nothin'—includin' you," sez I.

"Well, you run along, then, an' I kin make out by myself. I don't s'pose nothin' will hurt ye."

"If it does, it won't matter to you," sez I. (I reckon I wuz jes' a little impatient, but if you e'er been to a Veterans' picnic, you jes' know what 'twould mean to be cheated out o' goin'.) Ezra kept his mouth shut, 'cause he's skeered to sass me. I don't believe in henpeekin' no man, but I do believe in trainin' 'em not to sass back at ye. After a little while when I found out that Ezra really an' truly did want me to go, I got out that little suitcase what Ezra insists on callin' a "travellin' bag," put my tooth-brush an' newralgy medicine in it, an' set out fer Grafton.

Did you e'er see one o' them sleepin' cars? They got a row o' little dog-houses down each side o' 'em, with curtains all

'round; no doors nor nothin'. I got real skeered fer awhile, thinkin' mebbly I hadn't ought to gone away an' left Ezra, an' that jes' to pay me back fer leavin' him, somebody might come along an' peek through them curtains at me.

I reckon 'twas long 'bout ten o'clock, when I had jes' started to snooze, that I hears a man's voice say "Number 3, kindly let me have your ticket."

"Kin you wait jes' a minute?" sez I.

"Hurry, then," sez he, jes' as kind an' obligin' as if he hadn't woke a lady up in the middle of the night.

"Can't you find it?" sez he, presently.

"Tain't that," sez I, "I kin find it well enough, but I ain't finished dressin'."

"Never mind the dressin'" sez he, "jes' hand me the ticket."

"Glory be!" sez I, holdin' on to them curtains tight with one hand an' handin' him the ticket with the other.

In another minute he wuz gone an' I stuck my head out to see what wuz goin' on. There was a man comin' right up the aisle with a ladder, an' if he didn't climb right up in the second story above my head, my name ain't Aunt Mary!

'Long 'bout six o'clock we got into the station at Grafton. The sky was black, the ground was black, an' the rain had jes' started to sprinkle, an' when I got in there the first thing I met was a funeral procession.

"Glory be, I'm doomed!" sez I to myself. "I wish I'd a-stayed home with Ezra. Howsomever, so long as I'm here I'm a-goin' to the picnic, rain or no rain."

Jes' then I spied a pretty little girl in a gingham dress. I asked her if she knowed Miss Jenkins. She sez she did an' that her name was Byers. She took me to Miss Jenkins, who is one of the smartes' gals I ever seen. Why they say she can write 75,000 words a minute on that typewritin' machine

o' hers. She interdoosed me to the chief clerk, Mister Ford, who must be some kin to Henry, fer I seen him with a automobile out at the picnic, an' he had Henry an' Lizzie beat to a frazzle when it come to sellin' it. After that we spied Mister Keane, who, they say, is willin' to work any 364 days out of the year, providin' they will let him off to go to the Veterans' Picnic. An' his family is made up of real people, from the old man down to his little grand-daughter Beatrice. I felt jes' as to home with them as if I was settin' on the front porch with Ezra. They packed me in the automobile along with loads of good things to eat, an' we all set out fer the park.

"Aunt Mary," they sez to me, "our park ain't no fashionable resort. Mebbly you won't like it, but it's a natural one, jes' like the Lord made it."

"Then it's just as I want it," sez I. "I'm so plumb tired o' concrete walks an' artificial lakes that it jes' does my soul good to see a real one."

An' that's jes' what it was—one of the prettiest little groves what I ever laid my eyes on, stretched out alongside the Tygart Valley River, where some people wuz comin' 'cross on the ferry an' some was a-swimmin'. Everything was jes' glorious. Soon after we got there the trains commenced to pull in, bringin' folks from all over the division. There was about 200 from Fairmont alone, without countin' the others. An while I was watchin' the trains, who should step off but Mister Sturmer, who, as everybody knows, is the Grand President of the Veterans. Everybody seemed glad to see him, and judgin' from the way he grinned, I know he was glad to be there. A little later I seen somebody else a runnin' down the hill, an' who should it be but Mister Braden. I believe he was the popularest young man on the grounds. They all called him "Billy," an' when it come to dancin'—oh, my! He was right there.

All the mornin' folks went around, sayin' howdy to each other, an' everybody was tellin' everybody else how glad they was to be there. It was the sociablest crowd o' people what I ever saw; I didn't know nobody when I went there, but before dinner time, I knowed 'em all.

Here they are, talking over old times, two of the Monongah Veterans: Andrew Jackson Blue, of Grafton Shop on right, and H. A. Spiese, retired passenger conductor, left

Over on the left hand side of the grounds, I seen a big sign what sez "MEMBERSHIP DRIVE—BALTIMORE AND OHIO VETERANS."

"Jimminy!" sez I, "Be this a recruitin' station?"

"Yes, Ma'am," sez Mrs. Horan, whose husband is a engineer. "An' let me inter-dooce you to the fair ladies what is conductin' this recruitin' station." An then I met Mrs. Harry Fleming, whose husband is a engineer on the Monongah Division; Mrs. George Swisher, who is the wife of another engineer; an' Mrs. J. Kimball, whose husband is superintendent of water stations. I wished 'em all kinds of good luck an' they had it. Mrs. Keane was there, too, an' I tell you them ladies worked.

I was on my way to the ice cream stand when somebody calls out "DINNER!" I didn't need no second invitation, an' if angels on golden wings had come down an' played music on their harps, it wouldn't a-been no sweeter sound to my ears. An' such a dinner as we had! Mrs. Keane is the best cook on the Monongah Division, there aint no mistake about that. She had brought along about a ton of fried chicken, a barrel of coffee, bushels of potato salad, an' melons, an' pickles, an' pies, an' cakes, an'—Goodness knows what all. An' jest like that Alexander in my Mary Jane's story book, that conquered the whole world, so we got filled up too quick, an' we sighed 'cause we couldn't hold no more. What worried me most was that I had 4 invites an' could only eat 1 dinner.

After dinner the program got started. Christmas entertainments wasn't in it. First of all there was a solo by Mister Douglas Fleming, who is the son of that lady who was at the recruitin' station. His singin' was so good that they made him sing all over again. Then we was led in prayer by the Reverend Crickenberger, followed by a thrillin' speech by Mister James Wardley, Connellsville engineer an' Grand Secretary to the Veterans. Mrs. James B. Moran, whose husband is a machinist, gave us a pretty vocal solo. A big dog, who had been walkin' 'round enjoyin' himself with the nice fat chicken bones, took it into his head that he was a Veteran, too, an' although nobody invited him to participate in the program, decided that he would take a chance on singin' with Mrs. Moran. He opened his mouth an' begun to howl, an' it was some time before they convinced him that it wasn't his party, an' he followed a man who had another chicken bone while Mrs. Moran finished her song in a very pleasin' manner.

Then Mister John Lucas, secretary to the Cumberland Veterans, made a speech that was so pleasin' to the ladies that they talked about it all the afternoon. Followin' this there was another solo by Mister Fleming, an' after that a regular roof-raisin' speech by Grand President Sturmer. Mister George was at his best; he was so plumb inspired by that good dinner that

Frances Beatrice Mantz

One of the little Veterans at the Grafton picnic. Beatrice is the granddaughter of F. M. Keane, locomotive inspector. The background of this picture shows the Tygart Valley River and one of the beautiful mountains of this section

he had just et that he was chock full of compliments for the Veterans an' their wives. The applause what followed his talk made you feel like you had jes' heard Sousa's band play the "Star Spangled Banner." I'll bet that he was so sore from shakin' hands that Missus Sturmer had to set up all the next night a-rubbin' him with Sloan's liniment.

Then come the real fun. The orchestra started up an' the young folks commenced to dance what they called the "Fox-trot." How they done it, I don't know. First they went walkin' along same as if they was goin' somewheres an' didn't care whether they got there or not; then they went sideways, then back again; then they swung their feet out like as if they was goin' to jump a fence (I reckon that's where the fox part of it comes in); all of a sudden they started walkin' on their heels an' toes without gittin' anywheres, an' when I looked again they was turnin' 'round an' startin' all over again. But, alas, as the fellow sez, 'twas not for long. One of the Veterans he steps up to the orchestra an' sez, "Gentlemen," sez he, "this here is a Veterans' picnie, an' I want you to play something what the Veterans kin dance. This here turkey-trot, one-step, moon-shiney fox-trot an' jazz stuff ain't for the likes of us; what we want is "Turkey in the Straw" an' "Arkansas Traveller," an' we'll show these young folks what *real* dancin' is."

Then they started to shakin' their feet. The Veterans got their wives and other peoples' wives together for a quadrille. Some of the old boys took turns at callin' out the numbers. One of them, Mister J. W. McMakin, who is a conductor on the third division, was a past-master on that job, an' when he called out, "Swing yo' partners!" there wasn't nobody there

whose foot wasn't a-shakin' to them old tunes. I sure would liked to got a pictur' of 'em, but there wasn't light enough. They danced to the tunes of "Devil's Dream," "Fisher's Hornpipe," "Irish Washerwoman," "Turkey in the Straw," an' all the old-time ones what you an' me know. Them folks what didn't see Mister an' Missus Louis Rauscher in their artistic dancin', an' Old Uncle Henry Lyman a-shakin' a lively foot, sure missed a treat. Then, who did I see a little later a-trippin' the light fantastic but Uncle Johnny McGlauchlin an' Uncle Johnny Whitman!

The little folks had a good time, too. There was swings for everybody, a plenty of green grass to run an' tumble on, an' the river to go swimmin' in, an' eats enough for every hungry little tummy.

They all stayed there until after it got dark. As for me, I had such a good time I didn't want to come home. When I got back I found Ezra had been livin' on baked beans for two days, 'cause menfolks ain't no hand at cookin' vittles for themselves. When I told him what a good time we'd had, he sez to me, sez he, "Mary," sez he, "rheumatiz' or no rheumatiz, I'm goin' to that there picnic next year or bust."

William C. Riley

On August 3, William C. Riley, 56 years old, spoutsman at one of our grain elevators, was accidentally killed while in the performance of his duties. No one witnessed his death, but it is supposed that his clothing was caught under the belting.

Mr. Riley was a member of the Baltimore Veterans' Association, and his wife the financial secretary of the Ladies' Auxiliary. The sympathy of all of the Veterans and their wives is extended to Mrs. Riley.

John M. Cassell

Shortly before noon on Sunday, August 8, while engaged in placing a chain around the wheels of a locomotive, John M. Cassell, veteran employe at Grafton, W. Va., dropped dead from heart failure.

Mr. Cassell was 62 years old and had been an employe of the Railroad for 48 years. Born and raised in Grafton, he was well known and liked by all of its citizens. He was an active member of St. Paul's Lutheran Church and belonged to the Grafton Chapter of Baltimore and Ohio Veterans. He is survived by a widow and the following children: Ernest Cassell, Mrs. G. H. Colebank, Harry, Frank, and Marie. The funeral services took place at St. Paul's Lutheran Church, interment in Bluemont Cemetery.

**Cars Are Only Earning
When the Wheels Are Turning**

Baltimore Division Veterans Enjoy Picnic at Brandywine Springs

A GOOD, old-fashioned picnic! That was the story that the posters told, and indeed the advertisement was appropriate. By 7.30 o'clock on Saturday morning, August 14, Camden Station was the scene of such merriment that strangers stood in wide-eyed astonishment.

"And you are going, too!"

"I wouldn't miss it for the world!"

"Did your grandmother come?"

"Please help me find my sister; she was to meet me here at a quarter before eight."

These were some of the things we heard as the picnickers began to file through the gates where men were calling out: "Train for Brandywine!" Lunch baskets were the latest fashion, and nobody thought of the few drops of rain that had begun to fall. Fathers and mothers, grandfathers and grandmothers, children and grandchildren, gray-whiskered Veterans and bald-headed babies and all of the "dressed-up sons of the Baltimore and Ohio," as President Bowers called them, made up the jolly crowd. The officers of the Baltimore Veterans' Association were going around, here and there, giving orders, telling folks which way to go, and shaking hands with everybody.

Characteristic indeed of the Veterans was the selection "On the Square," rendered by the Mount Clare Band as we were leaving Camden, and many were the exclamations of delight as the train pulled out and we were on our way to Brandywine.

"I haven't seen anything yet," said one little girl from Dorsey when we had scarcely passed through the Belt Line tunnel.

"Wait 'till you get to the Susquehanna bridge," said her little chum, who had been to last year's picnic at Brandywine.

Brandywine Picnic Personalities

Among those present at the Brandywine Springs picnic, left to right, top row: The Riverside Baseball Team: Captain Roberts, Manager Foster, Warn, Ward, Lewis, Lippincott, Hawkie, Higdon, Magers, Miller, Fekeys, Gosman, Linderman. President George A. Bowers, Baltimore Chapter; Chairman of Entertainment Committee, George W. Galloway; Grand President George W. Sturmer. Baltimore City Quartet: J. Welsh, first tenor; A. Kaufmann, second tenor; H. Putens, baritone; H. Wortman, Bass. Centre row: The dancing partner of Vice-President Shriver, left, and Vice-President Galloway, right, is Miss Carvilla Tolson, seven-months old granddaughter of C. H. Ebberts, machinist, Mount Clare. Bottom: The crew that brought us through: Conductors C. W. Wrede and R. W. Kenney; Brakemen W. D. Cullum and R. B. Smith; Engineers L. J. Webking and W. L. Jeffries; Firemen R. H. Meise and E. E. Coursey.

"Is it pretty?"

"Is it pretty! Well, I guess. Why, the train is way up above the highest treetops."

"Oh, o-o-oh! How does it stay up there?"

"I don't know," shaking her head, "I guess God holds it up there. Papa says that God can run a train better than an engineer—and my papa is a good engineer, too." And we who overheard the conversation knew that papa must be a good engineer.

On we went, by houses, cornfields, forests, and whole towns, and the voices of the happy little folks could be heard far above the rumble of the trains. In the midst of their joy came George W. Galloway with his hands full of little green tickets, which he dealt out generously.

"What are these for?"

"Ice cream."

"Oh! O-o-oh! Ice cream! I could eat it right now!"

In a short time we backed off on a siding, and before we knew it we were off the train and going through a gate over which hung an inscription:

BRANDYWINE SPRINGS.
"LET HIM WHO ENTERS HERE
LEAVE ALL CARE BEHIND."

Up the walk, past the merry-go-round, the lakes, the racer dip, the fun factory, the fakir stands and lunch tables, we followed the band to the top of a big hill. The sun was hot and the photographer was waiting with a big camera to get a picture of the crowd. Although it was still early in the morning, many lunch baskets were opened and goodies were spread upon the tables. Some brought their breakfasts, dinners and suppers; some had lunches and dinners, while some had one meal, which lasted all day long.

Shortly after noon a special car arrived, which brought the following officers: George M. Shriver, senior vice-president and in charge of Accounting, Claim, Treasury and Relief Departments; Charles W. Galloway, vice-president in charge of Operation and Maintenance; S. Ennes, general manager, Eastern Lines; E. W. Scheer, general superintendent, Maryland District; R. B. White, superintendent, Baltimore Division. A delegation of Veterans met them at the station, and, with the United States flag and the Veterans' banner ahead with the officers of the Veterans, they were escorted to the picnic grounds by the Mount Clare Band. A fine luncheon was served the officers by members of the Ladies' Auxiliary, foremost among whom were Mrs. George W. Galloway, Mrs. Charles R. Weir, and Mrs. G. A. Bowers. While we were yet engaged in satisfying the inner man, the sounds of music floated up from the foot of the hill.

"Bring up the songbirds," said George W. Sturmer, grand president of the Veterans. They came, the Baltimore City Quartet,

and they gave a number of fine selections, which proved that they were songbirds indeed.

The officers stood in line for their pictures, which, we regret, did not turn out clearly enough, from an engraving standpoint, to be used in the MAGAZINE. Then came the best part of the afternoon's program: the speeches from our officers. First of all, Mr. Bowers asked all of the people to bow their heads for a half-minute of silence in memory of those of the Veterans who have passed to the Great Beyond; then for another half-minute in honor of the late Thomas Fitzgerald, general manager of the Baltimore and Ohio.

Then Brother Covell announced, to the delight of all of the Veterans and members of the Ladies' Auxiliary, that the next meeting of both associations will take place, through the courtesy and goodness of the Baltimore and Ohio officers, in Moose Hall. A cheer went up and the woods resounded with the echo. Following this, Brother Pennell was called upon to present to Brother Harrigan a fine ring. Brother Harrigan's speech of acceptance was short and sweet; he was much obliged and he'd wear the ring as a talisman for faithfulness and loyalty. Mr. Bowers then introduced one whom he called "Little Eva," who proved to be none other than Grand President Sturmer, who presented the speakers. The first of these was Mr. Shriver.

He extended a hearty greeting to all of the Veterans and their families and assured them that he was delighted to be present. He told what the Baltimore and Ohio is doing for its employees and inspired each one with the desire to do his part in contributing toward the success of the Railroad. At the end of his interesting talk, he modestly expressed the wish that nobody ask him to speak at the next picnic. However, from the murmurings among his listeners, it was evident that the Veterans have no intention of granting this wish. What he had given was a generous sample of what is in store for future picnickers.

Because Mr. Shriver said that his speech had not been prepared, his listeners were of the opinion that an address like this, given off-hand, could come only from one whose heart is in his work.

Next came Mr. Galloway, who emphasized the fact that the obligation of the managing of the Railroad depends upon all who work for it.

"It is a mistaken idea," said Mr. Galloway, "that officers are different from other people. The only difference is in the amount of responsibility. We must all help. The end is only in view when we get the support of the people who run the machine. The job that confronts us now is plain railroad-ing. We recognize that the disturbance caused by industrial contention has been disposed of and we must now get down to business. We must not lose our heads; you would not want the officers to lose their heads and minds."

can play his part. He is a capable and experienced employe and he can help because he *has* had experience. Let's all get together and do plain railroadng. At the present time the Baltimore and Ohio Railroad is moving the greatest amount of traffic in its history; we are on the peak of a tremendous business. We need, and we must have, the cooperation of every employe. The work of one is of just as much importance as that of another.

"The growth of the Veterans' associations is gratifying. I hope to see all of the divisions come into the Grand Division."

Mr. Galloway closed his remarks by saying that he liked to come to the Veterans' picnics and that he wanted to be invited again. His speech was followed by great applause and he was assured that when invitations came around, he would certainly not be slighted.

The next speaker, Mr. Ennes, gave in a short but interesting talk, an explanation of how the prompt moving of both freight and passenger cars would tend to lower the prices of foodstuffs, citing as an instance the exorbitant prices that have been recently charged for potatoes.

"Let's move the cars and cut down the prices!" said Mr. Ennes, and every housewife's ear was strained in order not to miss a word. And if we are to judge by the enthusiasm of his listeners, Mary will see to it that John gets busy and does his share to keep the cars moving and that the problem of H. C. L. will be solved before the winter sets in.

Mr. White and Mr. Scheer followed with short addresses, in which they emphasized the importance of increasing the business of the Railroad through the cooperation of its employes, and expressed their delight at being present at the picnic.

During the intermission that followed each of the speeches, the band played appropriate selections. Much credit is due these boys of Mt. Clare for their accomplishment in this direction, which has been brought about only through continued practice and hard work.

Zachariah Lego, a 70 year old pensioner of 40 years' service as machinist at Mt. Clare, and who is now blind, was brought to the platform, where he told with great feeling of the kindness of his brother Veterans. He said, in part:

"The Veterans' Association does more good than outsiders ever know. It has done everything for me. 'Old Zach' has never wanted for anything and they are more effective workers than any charity organization. God bless the Veterans for their goodness."

The Ladies' Auxiliary was represented by Mrs. Hanson, who made a splendid appeal for membership. All day the ladies were recruiting, and by six o'clock they had rounded up a number of prospective members. Mrs. Hanson stated that there were then 108 members, but that they hope to

Mr. Bowers thanked the officers and announced that the next meetings of the Veterans' Association, Baltimore Division, and of the Ladies' Auxiliary would be held in Moose Hall, on September 13.

Then came the ice cream, and it was fine. Nobody minded the absence of spoons, but each one ate his in true picnic style. The baby in the picture with Mr. Galloway had just partaken of a generous allowance, which accounts for the smile on her face. A few minutes later, however, the young lady began to feel the ill effects of over-eating, and the other picture shows Mr. Shriver in the act of quieting this same little person. Just look at the picture and you will hear him say "Sh-h-h-h!"

Two baseball teams, made up of the boys from the Annex Building and those from Riverside, respectively, were waiting for a

chance to "batter-up." They went into the fight like tigers—and came out with the same spirit. The score was 10 to 3, in favor of the Annex Building, but the losers were not in the least discouraged. Look at the photograph and see how they can smile in spite of defeat.

"Ah," says one of their opponents, "but that picture was taken before the game!"

You just keep quiet, Mister, you didn't have to tell that.

Two trains left Brandywine to carry home the picnickers. On arrival in Baltimore, those who did not go to the picnic were feeling sorry for those who went, because of the heavy rainstorm during the afternoon. But here is where the Veterans had the laugh on the others: all of the rain had fallen in Baltimore and it hadn't rained a drop at Brandywine.

President Richardson, Pittsburgh Chapter Veterans, on Address of President Willard at Somerset Outing

PITTSBURGH, PA., August 4, 1920.

EDITOR,

BALTIMORE AND OHIO MAGAZINE,

Mt. Royal Station, Baltimore, Md.

Dear Sir—The address delivered by our president, Daniel Willard, upon the occasion of the Veteran Association's Outing at Edgewood Park, Somerset, Pa., July 29, was so well received and has carried with it such a wonderful feeling of satisfaction that it would be a great advantage to all employes of the Railroad if each one could be furnished with a copy of it.*

We believe that he touched upon two very important matters affecting railroad men. His reference to the Transportation Act, passed by the last Congress and which is now in effect, offers something not only to the railroads but to their employes, that will be of incalculable benefit to both in the future.

There seems to be a misconception of some of the purposes of this Act, and Mr. Willard explained these features so clearly that all who heard him or who may read his remarks in reference to that Act will feel satisfied that a law of such character is a step in the right direction and will go a great way in removing any friction or dissatisfaction between the railroads and their employes, because it offers an easy and equitable adjustment of questions that may arise between them. I sometimes feel that the Law might go still further and be quite a benefit to the great body politic by embracing in its principles all industries.

I was especially pleased with what Mr. Willard said in reference to the duties of

the older employes of our road as to the position that they should assume in giving advice and counsel, which they have obtained through long years of experience, to the younger element of our road. It is an unfortunate fact that the older employes remain to a large extent passive when matters of great importance to their interests are being discussed and acted upon. They leave their interests largely in the hands of the younger men, who sometimes carry matters too far. I hope that our older employes will think quite seriously of the remarks of Mr. Willard and be guided by them in their associations in railroad life.

All who had any connection with the arrangements or management of the Outing are more than gratified at the results, which went way beyond their expectations, and all feel sure that next year the greatness and grandeur of this Outing will not only be duplicated but will be surpassed.

We were all highly pleased with the attendance of the officials of our road. Their presence had a tendency to develop a feeling towards them that perhaps they little dream of, and we only ask that they will be with us again next year.

The Pittsburgh Chapter of the Veterans will meet the second Monday evening in October. Undoubtedly we will have a very interesting meeting and some entertainment features that will be pleasing, and a cordial invitation is extended to any veteran employe from any part of our road who might be in our vicinity to meet with us.

Yours truly,

C. A. RICHARDSON,

President, Pittsburgh Chapter of Veterans.

* The address was published in the August issue

Martinsburg Veterans Hold Annual Picnic

THE picnic of the Veterans of Martinsburg on August 25, was well worthy the traditions of this splendidly organized chapter of the Association. Attractive Rosemont Park (a tribute, by the way, to the local promoters who have built this nice amusement grounds for the townspeople), situated a mile or two west of the Railroad tracks in the picturesque limestone-encrusted hills, was the scene of the gathering. Many veterans from Martinsburg and places as far east as Brunswick and as far west as Terra Alta, were at the park when the automobile busses, which had been chartered to bring the Baltimore contingent from the station to the park, arrived.

After the usual handshaking all around and the welcoming of the officials of the Rail-

road called together after dinner until 4.00 o'clock. Then the President of the Martinsburg chapter, H. W. Fauver, welcomed the guests with a few appropriate words and introduced as the first speaker Mr. Stewart Walker, former counsel for the Baltimore and Ohio at Martinsburg and now District Attorney there for the United States.

Mr. Walker is a strong booster for Martinsburg, its railroaders and the Baltimore and Ohio. He characterized them all in superlatives and evoked loud applause when he called the Baltimore and Ohio the greatest railroad in the United States. As one of the owners of the park, he also expressed his great pleasure in being able to extend its hospitality to the visitors. His one regret was, he said, that he was not a

Christianity and civilization were unknown. He showed how education and enlightenment have brought about the new and better relationship between men idealized in the Golden Rule, and how strife and antagonism between classes have yielded, especially during the last 25 years, under the pressure of the new social instinct.

He described the rise of the modern business organization called the corporation, showed how naturally its growth had been in the environment which produced it, and championed the humanity of the corporation. For, he asked, "isn't the corporation made up of human beings, human beings who have, as a class, had the same birth-rights and lived in the same environments as their employees?" The corporation, therefore, he pointed out, is but the sum of the characteristics of those who manage it.

Find your friends in this picture of a few of the officers and veteran employees who attended the Martinsburg Picnic

road and the visiting chapters, the guests were invited to a long picnic table, which fairly groaned under its weight of goodies.

Martinsburg's reputation for "good eats" is well known to all who have attended any of its Veterans' banquets or outings. The chickens raised in these hills seem to make an especially tender tidbit, especially after they have passed through the hands of some of the famous cooks boasted by the Martinsburg Ladies' Auxiliary. And the potato salad, and Smithfield ham and home baked pies and cakes, and preserved fruits and jellies and relishes were tempting enough to betray the most confirmed dyspeptic into a perfect carnival of eating. Stomach trouble does not seem to be a characteristic complaint of railroaders, however, at least insofar as can be observed at any of the Veterans' picnics.

In order to permit as many men as possible who work the first shift at Martinsburg shop to get up to the park for the more formal part of the outing, the Veterans were

member of the Veterans' Association, and George W. Sturmer, grand president of the Veterans, immediately relieved Mr. Walker's embarrassment in this respect when in his brief remarks a few minutes later he pinned a Veterans' badge on the lapel of his coat.

Mr. Sturmer said that during the period of ten years the membership of the veterans over the System had increased in numbers from 9 to 8,000. A period of 30 seconds of silence was then observed for the late President of the Martinsburg Veterans, Z. T. Brantner.

Mr. Sturmer then called on C. W. Galloway, vice-president of Operation and Maintenance, for the address of the afternoon.

After expressing his pleasure in reuniting with so many old friends and being able to greet a number of new ones, Mr. Galloway delivered a comprehensive, interesting and helpful address on the Brotherhood of Man. He mentioned the lack of a social relationship in the early ages, when force made right and

and can be as human, as fair, as helpful as all connected with it as can be the individual.

He mentioned the railroads as having been in the vanguard of those organizations which have been trying to create a better understanding between capital and labor. In this connection the Baltimore and Ohio was noted as the first railroad to provide an apprentice school for the instruction of its young men, to establish a Welfare Department, and the first among eastern roads to put Safety work on a solid foundation. The Relief Department, with its many features, potentially of the greatest benefit to the employees of the Road, was also described, as were the pensions which have since their inauguration on the Railroad consumed more than \$4,200,000 of its funds.

"None of these agencies for a better understanding between management and labor," he continued, "can realize their greatest good until there is a proper response from those to whom they are offered; and the unfortunate part of it is the fact

that paid agitators are endeavoring to disrupt a status of comparative contentment and good feeling now existent between the various factors in the corporation, when such disruption can only lead to disaster."

Mr. Galloway then mentioned the Transportation Act under which the railroads are now working, which makes it mandatory for a nonpartisan board of nine men to adjust all wage differences between employer and employe on the Railroad. With such a fair plan for the social relationship on the Railroad, he pointed out that it was no more than fair also for the Railroad to look for hearty cooperation from its employes and for them to respond; that with the present car shortage and the comparatively poor condition of the Railroad machine after

loading and car miles so that greater service to the public can be given.

The paper was concluded with a strong plea to the young men to adopt the habit of saving, as an incentive to greater comfort and prosperity, a good friend in time of disaster, and an evidence of good citizenship and stability.

At the conclusion of Mr. Galloway's address, Mr. Sturmer read letters from President Willard and Senior Vice-President Shriver, both expressing their regret at not being able to be present, and then introduced S. Ennes, general manager, Eastern Lines.

Mr. Ennes' address in part was as follows:

"I thank you, Veterans and members of the Ladies' Auxiliary of Martinsburg,

and others on those of *acne*. Can we contemplate these figures without realizing how important our work is, how vital a factor we and the tasks we accomplish are to the successful progress of our civilization?"

"It is almost two years since we helped complete the biggest job we ever tackled, beating the Kaiser. Now another big job faces us in handling the enormous business which is awaiting transportation over our Railroad machine, badly depleted by the strain of the war.

"Last spring when I was in Pittsburgh, I discovered that potatoes were selling there for \$6.70 a bushel. Telling this to Mrs. Ennes when I returned home, she reminded me of the fact that the beefsteak I was eating cost 65 cents a pound. I mention

Left to right—"Liberty Loan" Barling, a well-known veteran engineer from Baltimore; Michael Leehan and his daughter, Miss Flora, of Martinsburg; Terra Alta visitors, J. A. Smith, water station pumper, and Mrs. Smith; John W. Light of Paw Paw, 41 years' service, and A. J. Henry of Great Cacapon, 50 years' service, both in Maintenance Department; J. P. Deitrick, a veteran laborer from Brunswick

the strain of the war, it is incumbent upon all connected with the Road to bend their energies to help increase efficiency in car

Among Those Present at Martinsburg

On the opposite page you will find:—A few of the bunch from Baltimore. 1—J. G. Davis, machinist in Martinsburg shop, his family and some friends. 3—Marion Chambers, son of Engineer G. A. Chambers of Martinsburg. 4—The officers of the Martinsburg Chapter: left to right, C. Auld, secretary; W. A. Burkhart, vice-president; H. W. Fauver, president; J. H. Aldridge, treasurer. 5—William Burke, son of Boilermaker Robert Burke. 6—The Reeds, a family group from Cumberland. 7—The festive board and some of the Baltimore contingent. 8—Trainmaster Grove, Assistant Superintendent Faherty, Engineer and President of the Martinsburg Chapter Fauver, and Raymond Russler, one of the strongest boosters for the "Vets." 9—Members of the Women's Auxiliary of the Chapter, who made the day so pleasant for the guests by their typical and bountiful Martinsburg hospitality.

for the real hospitality extended to me today. I have been made an honorary member of the Veterans' Association and I am glad of this as well as of the fact that I am connected with the Baltimore and Ohio Railroad.

"The name of the Baltimore and Ohio stands out with the names of the other great pioneers of history. I never think of our lines of steel, beginning to gird the mountains as they wend their way through Martinsburg, without recalling what an epoch the construction and building of this Railroad meant.

"Men love to build things. They like to make monuments in steel and stone which will stand forth as their accomplishments for all time, not alone in the industrial progress of the world, but also in its social progress. And no one will deny that the railroad is one of the greatest factors in the social life of our country.

"Five thousand cars rolled through your city yesterday on their way to deliver the products of mine and field and factory to those who need them. Eight thousand passengers traveled through this city on our Railroad, some on business bent, some a holiday making, some on missions of happiness

these illustrations to bring home to you the fact that one of the biggest jobs for us railroaders is to help break the artificial high prices by so running our business as to facilitate the movement of the ample supplies of food which are produced each year in this country but which, because of lack of transportation, do not reach the consumers' market in sufficient quantities to make the supply equal the demand.

"Don't misunderstand me—the cost of transportation itself is but a small factor in the present high prices. But it is generally thought that the scarcity of cars has a great deal to do with these high prices, because fruit and meat and vegetables, the coal and iron and other products of our vast national resources, cannot be marketed in sufficient quantities and at the proper time.

"Today's Baltimore *Sun* gave figures to prove the very small part which transportation plays in the cost of food products and wearing apparel. It is a fact that we perform our service for a low rate. But we can contribute very largely to the lowering of the present high prices if we will put on a little extra steam, increasing our carloads and increasing our average car miles per day—if we will pull together."

Mr. Sturmer then introduced W. W. Wood, chief of the Welfare Department, who adopted the theme of Mr. Galloway's paper, the Brotherhood of Man, and lent his splendid ability as a public speaker to a further exposition of the helpful thoughts therein expressed.

The other speakers of the day were J. M. Garvey, grand vice-president of the Veterans, and George A. Bowers, president of the Baltimore Chapter.

Organization of Veterans' Association, Ohio Division

By A. E. Erich

MAGAZINE Correspondent

ON June 25 The Baltimore and Ohio Veterans' Association was organized on the Ohio Division, and the following officers were elected: W. R. Moore, president; G. W. Plumley, vice-president; F. E. Eichenlaub, recording secretary; A. G. Morgan, financial secretary; H. Figelstahler, treasurer; C. A. Dulmeyer, sergeant-at-arms. A Board of Directors was appointed as follows: D. R. Sheets, E. Hysen, William Ottman, C. E. Thompson, C. W. Gickler, A. Boltz, J. Botkins, J. Howard, J. P. Fenton, J. M. Ortman. D. R. Sheets was elected delegate to convention to be held at Baltimore with J. P. Fenton as alternate. Charter has been held open in the hope that we may have every Veteran a member of our Association.

Indiana Division Organizes Chapter

By H. S. Adams

MAGAZINE Correspondent

J. M. GARVEY, Sr., grand vice-president, Baltimore and Ohio Veterans' Association, was with us for a week during August in the interest of the Association. A chapter has been organized at Seymour, the following officers being duly elected: P. T. Horan, general foreman, president; Christopher Rau, fireman (retired), vice-president; E. Massman, agent, secretary; J. B. Purkhiser, trainmaster, treasurer.

The members of the executive committee are: J. E. Sands, agent, Louisville, Ky.; F. S. Gilbert, conductor, Mitchell, Ind.; D. Cassin, Supervisor, North Vernon, Ind.; W. H. Howe, master carpenter, Seymour, Ind.; S. A. Rogers, road foreman of engines, Seymour; William Cameron, foreman (retired), Seymour; Andrew McGinty, foreman (retired), Seymour; J. E. Banta, conductor, Seymour; Charles Richardson, foreman, Seymour; Carson Tullis, engineer, Seymour.

R. C. Emery, engineer (retired), is delegate and Patrick Sheron, engineer (retired), is alternate.

As it had not been possible to reach all employes on division eligible for membership prior to the meeting, it was decided to hold charter open 30 days, at which time we should have 150 or 200 charter members.

Cincinnati Terminals Organize a Veterans' Association

By Joseph Beel

MAGAZINE Correspondent

A MEETING was called by C. E. Fish, terminal agent, in the Welfare Room, Smith Street Station, Wednesday evening, July 7, for the purpose of organizing a chapter of the Baltimore and Ohio Veterans' Association. About 75 were present, men who have served more than 20 years in the local offices and depots. Of the number present, two will be entitled to a gold button, one, now a pensioner, having 65 years to his credit, the other 55 years and still working every day in the old C. H. & D. local office. All were pleased with the plans and are looking forward to many pleasant meetings where they can get together and talk over days that have become history. Another meeting will be called shortly by J. H. Meyers, superintendent, to perfect a permanent organization and elect officers.

An Old-Timer

By P. Henry Starklauf

MAGAZINE Correspondent

HERE is Andrew J. Kauderer (an old-fashioned railroader of the old school), who rounded out 50 years of service in the employ of the Baltimore and Ohio Railroad on September 1. Born December 27, 1850, Mr. Kauderer entered the service of the Company, September 1, 1870, at the old shops at Howard and Lee

Andrew J. Kauderer

Streets under Master Mechanic Houssell, as engine examiner. He has held various positions of a mechanical nature with the Railroad at Baileys, Riverside, old and new shops. Mr. Kauderer's father before him was an employee of the Company. Mr. Kauderer resides with his son, Henry C. Kauderer, a claim checker in the office of the Auditor of Merchandise Receipts, at 50 Rosekemp Avenue, Hamilton. Mr. Kauderer is a member of the Baltimore and Ohio Veterans' Association, the K. of P. and the Jr. O. U. A. M. We wish him many years of usefulness. This Road must be some place to work for after all—three generations, and all seem to be happy.

"Billy" Nyland Tells Best Picnic Story

"BILLY" NYLAND, a Pittsburger and enthusiastic Baltimore and Ohio veteran, was among the several thousand who took in the picnic at Somerset on July 29. "Billy" saw everything worth seeing, says he had more fun than anybody else, and came back home with the best story of the day.

"Billy" was taking in the town when he bobbed into a place where a Somerset County Dutchman was telling about being down at the station to see the specials come in. The old man didn't know what was going on and had this to say:

"Mine gracious! I vas schust down by der railroad stashun und pretty quick here comes a drain mit more un a dousant peoples, mens, vimins und kits.

"Everybody's got dags died on to der coats vitch says 'VET,' in big letters. Der engine she's got all kinds of decorations on und on der front ist a big sign vot says 'VET.'

"On der veels, in der vindows and every-ware it says 'VET.' Not von blace on der drain or on der peoples I see 'DRY.' Vot kind of a business ist it, anyvay?"

P. J. Fahey Dies

THE recent death of P. J. Fahey concluded 44 years of his active service with the Baltimore and Ohio Railroad.

Mr. Fahey was born in Ireland on December 28, 1855, his parents being Peter and Mary Fahey, of County Galway. He came with them to America when he was eleven years old, settled in Grafton, W. Va., and became one of the most useful citizens of that town. He was one of the oldest conductors in service on the Parkersburg Branch and was well liked because of his genial disposition.

The funeral was held from his late residence, 329 Beech Street, requiem mass being sung at St. Augustine's Roman Catholic Church, of which he was a member. Interment was made in St. Xavier's and Mt. Calvary Cemetery.

A part of the big shipment of fire apparatus loaded in one day at Columbus

Record Loading of Fire Apparatus at Columbus

ON SATURDAY, July 3, the Seagrave Company of Columbus, Ohio, manufacturers of high grade fire apparatus, loaded at the Baltimore and Ohio Railroad automobile docks, the largest shipment of fire apparatus that was ever loaded by that firm in one day.

The shipment consisted of one water tower, one aerial hook and ladder truck, two pumping engines and one demonstrating machine. These were consigned to three borders of the United States and are valued at \$85,000.00.

It required two forty-foot, full end door cars, one forty-foot flat and two thirty-six foot low-side gondolas to handle and was loaded, blocked and housed in less than eight hours.

The accompanying photo shows only part of this shipment and in the group in front of the mammoth hook and ladder, from left to right, are E. D. Baldwin, local freight agent; E. A. Ferguson, district freight agent at Columbus; R. R. Birkheimer, traffic manager of the Seagrave Company; J. V. Price, chief clerk to Mr. Baldwin, and James Avery, car foreman. The Baltimore and Ohio Freight Station is in the background.

The Death of H. W. Brant

HARRY W. BRANT was born at Carthage, Ohio, April 4, 1882, and learned telegraphy at that point, commencing work as an operator, September 5, 1902, for the Big Four Railroad. On May 6, 1904, he went with the Baltimore and Ohio Southwestern on the Indiana Division, working on that division until February 2, 1905, when he resigned to go with the Cincinnati, Hamilton and Dayton, now our Toledo Division.

Mr. Brant served in various capacities, as operator, clerk, dispatcher, assistant chief dispatcher and division operator, and on October 16, 1917, was promoted to trainmaster of the division. He worked in that capacity until November 1, 1919, at which time he was granted a leave of absence be-

cause of ill health. He located in Redlands, Cal., but the change of climate did not seem to have any good effects, and he continually grew worse until June 1, 1920, when he succumbed.

Mr. Brant's death is attributed to complications that he contracted during his illness from influenza, when he was confined to his home for several weeks. During his illness his wife, who nursed him, contracted the same disease, and died within a short time.

Mr. Brant was very ambitious and devoted to his work, and in his death the Company lost a valuable man. His friends, of whom he had many, always felt that there were bigger things in store for him on the Baltimore and Ohio.

(When the writer became Editor of the MAGAZINE in 1913, one of the most helpful and generous correspondents with whom he came in touch was the subject of this obituary. As correspondent of the Toledo Division, Mr. Brant, despite the responsibilities of his position as operator and the fact that his health was even then none too good, gave of his strength and interest to make the MAGAZINE interesting, especially

to the employes on his division. Besides his regular contributions to our family circle chat in the "Among Ourselves" department, he wrote of his own volition some illuminating articles in regard to our facilities on the Toledo Division. The writer will, therefore, be pardoned, by those who knew Mr. Brant so well, for adding this brief paragraph, expressing his own sense of loss and regret at the passing of so agreeable and helpful a railroad friend.—E. L.)

"If"

If you think you're beaten, you are!

If you think you dare not, you don't!

If you'd like to win, but think you can't

It's almost certain you won't!

Think great, and your deeds will grow,

Think little, you'll drop behind.

Success begins with a can and a will,

Fix this deep and firm in your mind.

Go forward! Your victory's certain,

Falter not, watch your step and take heed!

For constant and valiant endeavor, you'll find,

Will bring you success indeed.

"ALL THE NEWS THAT'S FIT TO PRINT"

WASHINGTON BUREAU
RIGGS BUILDING
WASHINGTON, D. C.

TIMES SQUARE, NEW YORK

June 4, 1920.

Editor, Baltimore and Ohio Magazine,
Baltimore, Md.

Dear Sir:

I wish to express my appreciation of courtesy shown to me by Waite No. 2, on board the dining car on the train leaving Parkersburg, W. Va. May 30, at 7.40 p. m., for Washington and the East. I got on the train suffering from a severe summer cold, and wishing only to be thrown into an ash-can and left there. The waiter's* politeness actually made my dinner taste almost palatable.

It is always a pleasure for me to travel on the Baltimore and Ohio, for I feel, somehow, that its employes are human beings, with homes, families and emotions, instead of cold-blooded automatons. I am,

Very truly yours,

(Signed) LEWIS WOOD,
Washington Bureau, New York Times

* Editor's Note—The waiter was Clarence Lewis.

SCENES AT THE CHAMPIONSHIP BALL GAME

1—Senior Vice-President Shriver leading three cheers for the game losers after the contest. 2—Approaching the grandstand, Miss M. Frances Milholland, daughter of F. X. Milholland, chief clerk to senior vice-president, on right, with two of her friends. 3—Vice-President Galloway tossing the ball into the field, to start the game, W. W. Wood, superintendent of welfare, and G. W. Sturmer, Grand President of the Veterans, with him. 4—R. W. Brown, superintendent, Ohio Division, and Mrs. Brown. 5—C. A. Plumly, superintendent of telegraph, Charles Selden, general inspector of transportation, and F. G. Adams, circuit manager, Telegraph Department. 6—The Ohio Division Team, Champions of Western Lines, Superintendent Brown in back row, Captain Carson on his left

PLAY

BALL

Baltimore Division Wins System Baseball Championship from Ohio Division, 3 0

THE sunshine came just one day too late to make the System Baseball Championship Game, between the Baltimore Division and the Ohio Division, the big show that was intended. The Welfare Department had planned well for the big event to be held on Labor Day, securing through the courtesy of the Johns Hopkins University, the use of their fine athletic field, Homewood, on the new grounds of the university. But rain spoiled the proposed celebration and the crowd which gathered for the game at 3.00 p. m. on the day following, September 7, was necessarily pretty small.

The Ohio Division boys brought Superintendent and Mrs. Brown and a number of other seasoned rooters with them, however, and these, with the home city contingent, made a surprising lot of noise in the bleachers.

After the usual batting practice, W. W. Wood, superintendent of Welfare Department, called the players together and said:

"I congratulate you men of the Ohio Division and Baltimore Division teams on having won respectively the championship of the Western and Eastern Lines. I congratulate you more sincerely, however, on the reputation that both teams have made for clean playing and good sportsmanship. It proves the truth of Shakespeare's, 'Corruption wins not more than Honesty.'

'Centuries ago the Greeks held their famous Olympic games. The difference between them and us however is, that they used to compete as individuals while we compete as teams. And the teamwork, without which no game can be won, is exemplified in every phase of our business life. It used to be that a man could win his victories alone; now he does it with the help of his brothers.

"I regret very much that President Willard is unable to be with us today for the reasons indicated in this telegram:

'W. W. Wood:

REGRET VERY MUCH ACCOUNT ABSENCE ON LINE IT WILL BE IMPOSSIBLE FOR ME TO BE AT GAME. I DO DESIRE, HOWEVER, TO INDICATE MY INTEREST AND IN MY ABSENCE WOULD BE GLAD IF YOU WOULD ACT IN MY PLACE AND PRESENT CUP TO WINNING TEAM. ONLY CONDITIONS ATTACHED TO GIFT ARE THAT THE TEAM SHALL ALWAYS PLAY FAIR AND BE GOOD SPORTS. I HOPE THE BEST TEAM WILL WIN.

D. WILLARD."

Mr. Wood then introduced C. W. Gallo-way, vice-president in charge of Operation and Maintenance, who received a round of applause as he stepped out to address the players:

"Men of the Ohio and Baltimore Divisions teams, I congratulate you on your

successful season. You are to contest for two cups, the one presented by our former vice-president, Mr. A. W. Thompson, and which becomes the possession of the team first winning it three times. The other, the President's cup, the gift of Mr. Willard, goes to the team winning the game today, as their permanent possession.

"I am sure that all you men will be guided by the finest standards of sportsmanship as you contest for these cups, and that the fine business ideals of teamwork and fair play which guide the management of the Baltimore and Ohio in the great activities and service of the Railroad, will stand forth during the game.

"Fair competition in work and play underlies our work on the Railroad. We believe in working hard and playing hard. We believe in the fun and the benefit derived from the series of baseball games now being concluded in this contest. The Baltimore and Ohio has supported the System baseball contest liberally and hopes thereby to help increase the spirit of fair play and good sportsmanship existing among its employees.

"Go out and play, all of you, with the spirit to win."

The Chillicothe boys from the Ohio Division went to bat first.

FIRST INNING—Ohio Division: Cashatt flied out to Peddicord; Tarzee was out on a sharp bouncer, Berrett to Schlimm; Zank, captain of the Baltimore Division team, threw out Skyles at first. Baltimore Division: Koogle popped out to Delburger; Berrett singled to right field and Zank bunted safely, Berrett going to second; Peddicord's scratch hit put him safe on first on H. Fox's error, Berrett scoring and Zank going to third; while Schlimm was striking out Peddicord stole second, but died there when Benjamin was out, Carson to H. Fox. Ohio Division 0—Baltimore Division 1.

SECOND INNING—Ohio Division: Rutherford struck out; Nichols walked Carson, captain of the Chillicothe team; Delburger forced Carson at second but was safe on a close decision at first; Zank handled H. Fox's smash prettily, throwing him out at first. Baltimore Division: Miles singled to left field and was sacrificed to second by Keyser, who was out on his bunt. Nichols struck out and Koogle was out, Moon to H. Fox. No runs.

THIRD INNING—Ohio Division: D. Fox out, Nichols to Schlimm; Moon out, Zank to Schlimm; Cashatt was safe on Koogle's fumble; Tarzee singled to right field but Peddicord caught Cashatt by a beautiful throw to Berrett at third, retiring the side. Baltimore Division: Berrett was out on Delburger's pretty recovery of H. Fox's fumble, Fox getting back to first in time to

take the catch; Zank was safe on Carson's fumble; Peddicord hit safely, Zank going to second; Benjamin hit to center field, scoring Zank, Peddicord going to third and Benjamin to second; Moon retired the Baltimore boys by throwing Miles out to H. Fox at first. Ohio Division 0—Baltimore Division 1.

FOURTH INNING—Ohio Division: Skyles flied out to Koogle; Rutherford was safe on an infield hit but was forced at second by Carson, who was safe on a close decision at first; Delburger was safe on Schlimm's error, Carson beating it around to third; H. Fox was out, Nichols to Schlimm. Baltimore Division: Keyser was out on an infield fly to Cashatt; Nichols got a two-bagger to center field; Koogle flied out to Skyles; Berrett singled sharply to right field, advancing Nichols to third; Zank flied out to D. Fox. No runs.

FIFTH INNING—Ohio Division: D. Fox flied out to Benjamin; Moon was out on a foul fly to Berrett; Cashatt was out, Koogle to Schlimm. Baltimore Division: Peddicord got first on a fly which Skyles tried hard to field and just missed; Schlimm flied out to Delburger; Peddicord stole second; Benjamin flied out to D. Fox, and Miles struck out, retiring side. No runs.

SIXTH INNING—Ohio Division: Tarzee flied out to Benjamin; Skyles was out on a foul fly to Keyser; Rutherford flied out to Koogle. Baltimore Division: Keyser hit to Carson and was safe on his prior throw to H. Fox; Moon then struck out Nichols, Koogle and Berrett. No runs.

SEVENTH INNING—Ohio Division: Carson flied out to Benjamin; Delburger was safe on a pop fly to infield; Bresnahan went to bat for H. Fox and forced Delburger at second, but was safe on first; he was caught napping here and thrown out by Nichols, retiring side. Baltimore Division: Zank flied out to Skyles; Peddicord got first on a hard infield smash; Schlimm got his base on balls, Peddicord advancing to second; Benjamin flied out to Rutherford; Miles singled to center field, bringing home Peddicord and putting Schlimm on second; Keyser was out, Carson to Bresnahan. Ohio Division 0—Baltimore Division 1.

EIGHTH INNING—Ohio Division: D. Fox flied out to Benjamin, who made a pretty catch, and repeated on Moon's high ball; Zank accepted a hard line drive off Cashatt and fielded it prettily, retiring side. Baltimore Division 3—Ohio Division 0.

"Turk," the lineman, after a highball in a dry town

Women's Department

Edited by MARGARET TALBOTT STEVENS

September

*Beyond the gates of Summertime, through lanes of thistledown,
There lies a quaint old village by the name of Autumn Town.
Its streets are paved with goldenrod, its houses built of reeds,
And west winds shake the milkweed pods and blow the ripened seeds.*

*The breezes whisper soft and low and croon a lullaby
To hush to sleep the baby clouds who play about the sky.
The marsh is filled with rushes tall and dew lies on the grass;
A school-bell from a distant hill is calling lad and lass.*

*The folks who live in Autumn Town are friends both staunch and true—
A host of bright-winged dragonflies, in yellow, red and blue.
The old green bull-frog in the stream that runs beside my gate,
A swallow darting here and there to catch his sombre mate.*

*Had I the gold of Croesus or a mine of wealth untold,
I'd buy a house in Autumn Town, just large enough to hold
My friends and me; my lawn would be a field of stubble brown,
And we'd all live there together in that quaint old Autumn Town.*

Why They Want To Vote

MUCH discussion has taken place among the girls of the offices concerning the possibilities for woman suffrage, which seems to be facing us for the coming election. When, on August 19, we learned that Tennessee's vote would probably enfranchise the women of America, arguments were started at the noon hour which threatened to break up the political peacefulness that pervades the atmosphere around the Baltimore and Ohio Building. Explosions of political opinion were forthcoming and arguments were in order. It was started by a man in the lunch room.

"If the women vote," he announced, "I'll quit voting."

"The ideal!" scoffed Virginia, a file clerk. "He doesn't know good company when he gets into it."

"Well," put in Emma, a secretary, "I am going to vote; it will mean only one more if I do, but *one* is *one*, and my one will count as much as anybody's."

"Yes," said Ella, a statistical clerk, "and women know as much about government as men do."

"More," assented Emma. "Why men only know politics, we understand government, and it's government that the country wants, not politics."

"How about you?" we asked two girls from the Car Service Department and two from the Freight Claim Department.

"Sure thing!" answered Lillie, "I'll be right there with bells on."

"Not I," answered Mary and May together. "We're too busy for that foolishness." The Freight Claim girls opened their eyes. "Vote? Are we going to do it? We haven't seen the morning's paper yet."

The girls in the Vice-President's office were bubbling over with enthusiasm.

"Sure, I'm going to vote," said Edna, "and I'll be the first one at the registration office."

"Hurrah!" exclaimed Gladys, "I'll vote for the best-looking candidate, too!"

"You're right," put in Georgia, "I'll vote because I can get the time off to do it. Do you suppose it would take more than half a day?"

Sarah, a stenographer at Camden Station, nodded her head.

"I'm not crazy about it, but I'll vote if the rest do; I'll be ready when the wagon comes."

"You bet!" said Mary, of the Relief Department.

Then came this greeting from one of our popular Transportation Department officers, whom we know as Mr. J. D.:

"Allow me to congratulate you on your victory! I've been hoping and praying, and voting for you, and I'm *mighty* glad you've got it. By the way, I hope you're going to vote the good old — ticket."

Electioneering already! What do you think of that?

Weddings in the Early Days

FROM "The Ancient City," by Elihu S. Riley, we find some interesting accounts of marriages during the "seventies."

"It is but justice to confess," writes Mr. Eddis, who was then the English Surveyor of Customs at Annapolis, "that the American ladies possess a natural ease and elegance in the whole of their deportment; and that while they assiduously cultivate external accomplishment, they are still anxiously attentive to the important embellishments of the mind. There are, throughout the colonies, many lovely women who have never passed the bounds of their respective provinces, and yet, I am persuaded, might appear to great advantage in the most brilliant circles of gaiety and fashion."

"In this country the marriage ceremony is universally performed in the dwelling houses of the parties. The company, who are invited, assemble early in the evening, and after partaking of tea and other refreshments, the indissoluble contract is completed. The bride and bridegroom then receive the accustomed congratulations; cards and dancing immediately succeed; an elegant supper, a cheerful glass, and a convivial song close the entertainment."

Following are some of the wedding announcements as they appeared in the old *Maryland Gazette*.

"On Friday, May 29 (1747), Dr. Alexander Hamilton, of Annapolis, was married to Miss Margaret Dulany (daughter to the Hon. Daniel Dulany, Esq.), 'a well accomplished and agreeable young lady, with a handsome fortune.'"

"On Tuesday, July 28th, last, Mr. Nicholas Maccubbin, of Annapolis, merchant, was married to Miss Mary Carroll, only daughter of Dr. Charles Carroll, a young gentlewoman, blessed with every good qualification, having a handsome fortune."

"On Saturday last (January 1st, 1757), William Murdock, Esq., of Prince George's County, was married to Mrs. Hamilton, of this city, a most agreeable lady, of excellent accomplishments, and a happy temper."

September Letter

Dear Women Readers:

We women are always being accused of liking to make use of a little phrase, which even we ourselves sometimes dislike to hear—"I told you so." It is a phrase which I try not to use, and yet, just at the time I don't want to use it, it's when I feel most like using it. Now is one of those times.

A few months ago I told you that we were going to get some fun out of these pages, also that I'd wager that the menfolks would be reading our columns. Yesterday I saw Walter Kent, of the Car Service Department. "I read your Women's De-

partment in the July issue of the Magazine," he said, "and I noticed that you had a picture of our Miss Baer, who told you how she makes her own clothes. Now, I just want you to know that I press my own trousers; I cheat the tailor and I put a crease in them that lasts three months. If you'll let me get my picture taken for the Women's Department columns, I'll be delighted to press my trousers for the occasion."

At the Veterans' Picnic at Brandywine Springs, I got a picture of the Riverside Baseball Team. One of the members said to me, "If you're going to put that photograph in the Magazine, please put it in the Women's Department. Let the girls know that the best looking ones in the bunch are still single and that we know how to show a girl a good time. If any of them like our looks, why just give them our names and addresses."

On a train to Annapolis a gentleman said: "I got hold of a copy of the Baltimore and Ohio Magazine not long ago, and when I had finished reading the recipes, I was so hungry that I worried Annie, my wife, to death until she made some of those walnut cookies. I cracked the walnuts myself, and the cakes were fine."

One of our readers tells us that he read the whole Magazine, ". . . even the article in reference to the styles of women's headgear, which is a difficult question." Evidently our good brother has had some experience.

And now comes an offer from the head of one of our departments to give us some of the recipes that he had great luck with while his wife was away on her vacation. One of these is a recipe for baked beans and another is for hash. We certainly appreciate his interest, but who will volunteer to eat them after they are cooked?

Yes, we are glad to know that the men are interested in our columns and we are delighted to hear their comments, but—we are particularly delighted when we hear from our girls. Remember that all of your contributions are welcome. How would you like to read an article written by the girl who works beside you each day, or a letter from the woman next door? Well, just watch these columns and you'll see it, and it will be interesting, too. And while you are waiting for her contribution, let us have yours. She wants to see that, too.

Yours very truly,

Margaret Talbot Stevens
Associate Editor.

Early Autumn Recipes

THIS is the season when we have almost everything eatable in our markets. September brings such quantities of vegetables that when the huckster stops at our doors we hardly know what to choose from his large assortment. Happy are they who have gardens of their own from which to pick, choose and refuse. Even the little window garden can be made to produce garnishings and seasonings such as parsley,

peppers, onions, etc., which go a long way toward serving attractive dishes. Following are some delicious recipes which have been contributed by some of our good cooks:

Delicious Creamed Chicken

- 1 cup cold chicken.
- 1 small sweet green pepper, cooked until tender.
- 1 cup rich milk.
- 3 hard boiled eggs.
- 1 tablespoon of flour.
- 1 heaping tablespoon of butter.

Remove yolks from eggs. Mix together whites of the eggs with the chicken. Add to this chopped green pepper. Put in pan with hot melted butter, mix thoroughly and heat, but do not brown. Sprinkle through this the flour and add the milk, to which has been added the egg yolks, thoroughly mashed or put through a ricer. Let boil until smooth and thick. This is very nice when made in a chafing dish and served on thin slices of toast.

Stuffed Potatoes

Bake six potatoes. When done, cut a lengthwise slice, scoop out the potato with a spoon, mash, add 1 tablespoon butter, salt, pepper, $\frac{1}{2}$ cup milk and 2 eggs, the whites beaten stiff. Refill skins with this mixture, pile lightly, do not smooth, and bake until potatoes are puffed and brown.

The following recipe was contributed by Mrs. Clara Weis, Matron, Baltimore and Ohio Building.

Corn Salad

- 18 ears of green corn (to be cooked separate from other ingredients).
- 9 large onions.
- 1 head of cabbage.
- 1 large green pepper.
- 1 large red pepper.
- 2 quarts vinegar.
- 2 cups sugar.
- $\frac{1}{4}$ cup salt (scant).

Mix together one cup water, one cup flour, two tablespoons mustard, and one teaspoon tumeric. Beat until all lumps have disappeared and add rest of ingredients. Let boil half an hour. Seal in jars while hot.

Monongah Swimming Club enjoys last swim of season on the beach. Under the surveillance of the heroic life guard, Luther Ford, not a bathing suit got wet during the entire season

Commanding Variety Gives One-Piece Frock First Place in World of Dress

By Maude Hall

THERE is a fine but sound distinction between being well-dressed and dressing well and no one knows better how to determine it than the woman who gives discriminating attention to her clothes. It is easier to be well-dressed on a limited income, with good taste and clever management, than it is to dress well, with plenty of money to spend, if one selects clothes for their value instead of their effectiveness.

Women selecting frocks that will carry over from season to season are giving preference to one-piece models or models in one-piece effect, even though skirt and blouse be made separately. It is its commanding variety that gives first place in the world of dress to the one-piece model.

A formal frock for afternoon or dinner wear is carried out in gray satin, the skirt being trimmed at the lower edge and about the hips with bands of wide and narrow lace. Streamers of ribbon, caught about the hips, above the lace, fall to the lower edge of the skirt where they are caught under the hem. The blouse is a kimono model, with a lace band around the back and front. Ribbon binds off the square neck and supplies a daintily decorative touch for the short sleeves.

Lace figures again in a frock of soft white batiste trimmed with a panel arranged in apron effect. The lace finishes the lower edge of the panel at the front and forms the collar, vest and upper part of the flare

8742

One of the old-world designers faces the tunic of a blue and white gingham frock with a band of self-material, then stitches above this band a deep fold of plain blue organdy. To be more exact, the tunic is the lower part of a long blouse which is held in at the waist with a narrow leather belt. Collar, cuffs and pockets are of the blue organdy and a bit of black velvet ribbon is tied under the collar at the front. The skirt is finished with a deep hem and is both full and short.

Because it is youthful and generally becoming, the one-piece frock may be counted upon to appear among the first offerings for early Fall. Of course, it will come first in serge—the dark blue and browns, with a decided sprinkling of dark green and gray. Designs with cape attachments at the back are making their appearance, and there is some talk of the return of the redingote. Another few weeks, however, will bring more definite news of Autumn styles, while there will come in reality the first hats in felt and velvet.

No. 8756—Girls' and Juniors' One-piece Dress (25 cents). Five sizes, 6 to 14 years. Size 8 requires 2½ yards 36-inch material. Closed at back. Front of dress is tucked and attached to the band. Long one-piece sleeves perforated for shorter length.

APPLIQUE
No. 12564

8756

There are almost as many designs as there are makers, and each design offers some novelty of construction or of trimming that makes it individual.

One of the newest effects features the new long-waisted blouse with straight belt cut in one with the front of the waist. It fastens at the back and the belt effect is emphasized at the sides only, where there is usually a decoration of braid or embroidery.

A taupe serge made in this way has the skirt gathered to the blouse and trimmed about the lower edge with fruit designs which may be either appliqued or embroidered.

Braiding makes a charming garniture for the one-piece dress, especially when two materials are combined in developing the model. Take, for instance, a black satin skirt and white silk crepe de chine blouse. The braiding is used in deep girdle effect on the blouse and stitched upon a background of white crepe de chine, also forms an effective trimming for the lower edge of the skirt. In high contrast with the design on the waist and skirt is the single line of braiding on the short sleeves and round collar.

Several smart new ideas are expressed in lace, which is used to adorn panels, finish tunics, peplums, etc., form sections of sleeves, or for vests and collars, to say nothing of the hundred and one ways of stitching it in plain bands upon skirts and draperies.

sleeves. At the waist the fulness is held in with a narrow ribbon belt, the panel, above the belt, extending in tabs around to the sides, where they are secured with ribbon ornaments. At the sides of the skirt there are separate panels, looped at the hips, but so arranged that they may be omitted, if preferred.

Milady revels in silks and satins, giving much attention to the foulards, which are delightful, fashioned into one-piece frocks. A black and white affair has the waist made with open front which is filled in with white satin and a vest of good lace. There are revers of satin turning back from the lace, while collar and tiny turnback cuffs correspond with the vest. The hat is of white satin with crown formed of small daisies and pink geraniums.

White foulards with polka dots in various colors and of conservative size, boast an allure which is piquant rather than picturesque, although they are affected by many women with a predilection for picturesque clothes. A model in blue and white with round neck and less than elbow sleeves has the gathered skirt trimmed at the sides with bands of self-material stitched on in panel effect. The belt is of dark blue moire and the waist is trimmed with a panel front in white organdy hemstitched in blue, the cuffs matching this bit of decoration in material and adornment.

CUTTING GUIDE 8959 Showing Size 26

No. 12564—Blue or yellow transfer, 30 cents.

No. 8742. Child's Rompers (20 cents). Sizes 1, 2, and 4 years. Size 4 requires 1 3/4

yard 36-inch material. Closed at back. The front and back gathered to yoke which is cut in one with sleeves. The round collar and patch pockets may be omitted.

Home Dressmaker's Corner

Gathered Skirt with Surplice Bodice Designed to Wear with Smart Overblouses

NOTHING is so smart as the overblouse, when it comes to separate waist arrangements, yet the regulation skirt has been found not to go so well with it as the newest skirt with bodice attachment. Smoother fit and better lines for the blouse are assured by the use of the bodice skirt and many women are adopting it as a necessary part of the season's wardrobe. Taffeta, satin, serge, pongee, crepe de chine or the sports silks may be used for the model pictured, lining being employed for the bodice. Medium size requires 2 3/4 yards 36-inch material for the skirt and 1 yard 36-inch lining for the bodice.

As the front and back gorges of the skirt are seamless, the sections of the pattern marked "D" and "E" are laid on the material so that the triple "T" perforations rest along the lengthwise fold. The lining is then folded in half and the front and back sections placed into position as shown in the cutting guide, the large "O" perforations resting along the lengthwise thread.

To make the bodice, close the underarm and shoulder seams as notched. Lap the right front of bodice on left with center-fronts even, baste lower lapped edges to-

gether and baste along small "o" perforations near waistline. Stitch a casing one-inch wide when finished underneath the bodice, with upper edge of casing along the crossline of small "o" perforations. Terminate the casing at center-back. After the skirt has been adjusted, insert elastic through the casing to regulate the fullness. Lap right back of bodice on left with center-backs even and finish for closing.

Next, take the skirt and slash through the fold at center-back of back gore, from upper edge to the lower large "O" perforation and finish for closing. Join the gorges as notched. Gather skirt at upper edge and adjust skirt, stitching upper edge along crossline of small "o" perforations in bodice with center-fronts even, matching the double small "oo" perforations near back of skirt and bodice. Bring side seam in skirt to underarm seam and bring back edge to center-back. Leave skirt free on left side, from double small "oo" perforation to back edge, draw gathers in to the required size and finish for closing. Arrange pockets into position and trim in any desired way.

If the skirt is to be worn with very sheer material, it would be a good idea to have the bodice of taffeta or tub satin.

Pictorial Review BODICE SKIRT No. 8559. Sizes, 24 to 36 inches waist. Price, 30 cents.

DRESS No. 9032. Sizes, 34 to 46 inches, bust.

JACKET No. 9036. Sizes, 34 to 46 inches, bust.

SKIRT No. 8810. Sizes, 24 to 36 inches, waist.

DRESS No. 9047. Sizes, 34 to 44 inches, bust.

DRESS No. 9057. Sizes, 34 to 50 inches, bust.

DRESS No. 9055. Sizes, 34 to 48 inches, bust.

Bright Women

By George W. Haulenbeck

Law Department

There are a lot of bright and capable women in our service. I called up an office at Camden Station, and a woman took my message and gave proper response; there was no need of spelling out names and all that. Then I was obliged to call up another office at Camden and a young lady answered and gave me just the information desired.

She is on the second floor, thank you. There is an unusually bright young lady in our Central Building who enjoys everything in the BALTIMORE AND OHIO MAGAZINE, and it is a pleasure to converse with her on the advent of each number. Dear me, if I were only 40 instead of 77!

To Our Ladies

We used to make coach step boxes with a slot in the top to serve as a handhold in placing and removing them. This plan had to be abandoned because the heels of ladies' shoes grew so tall and slender that any slot wide enough to be of use in handling the box would be a trap for French heels. We now have to make the boxes without even the slightest opening in the top. Most of the accidents around passenger stations and station or office buildings can be traced to Dame Fashion. It must be admitted that high heels look pretty nifty, but when they are so high as to make wobbly ankles in walking—g-o-o-d n-i-g-h-t! They cost more, too. Think about it, ladies.—*The Safety Message.*

Threatened Profanation

While visiting in the Highlands of Scotland one summer, a little old English lady made use of an ear-trumpet when she attended divine service. Such a contrivance

CONSTRUCTION GUIDE 8959

Patented April 30, 1907

being entirely unknown in these simple parts, it caused much excited discussion, and finally one of the elders was deputed to deal with the lady.

On the following Sunday the unconscious offender again made her appearance, and again produced the much-discussed trumpet, whereupon the chosen elder marched down the aisle and, shaking an admonitory finger at the bewildered lady, said severely, "Ane toot, an' ye're oot!" — *The Bulletin.*

Homes Like This All Over the System Have Been Purchased Through the Relief Department

Homes like the attractive one in the accompanying picture, secured by employes with the assistance of the Relief Department, may be found all over the System.

Homes that represent the safest, most convenient and least expensive method that anyone in the Baltimore and Ohio family can find to purchase property.

Homes which were bought through small installments from employes' salaries over a period of years and which now represent an investment in comfort, convenience and savings, which otherwise might have been wasted.

In this cut Stationary Engineer James McDermott, for 32 years a Baltimore and Ohio employe, his wife and six children, may be seen on the spacious property in Garrett, Indiana, which he secured through the Relief Department. Mr. McDermott writes us that he is more than glad to have this picture appear in our MAGAZINE, because he believes that it may help some other employes to start in this convenient way to become home owners, also.

Wouldn't you like to have as your very own an attractive cottage such as this one, a credit to your neighborhood, your family, and you, and, best of all—your home? If so, write for details to

DIVISION "S," RELIEF DEPARTMENT
THE BALTIMORE AND OHIO RAILROAD COMPANY
BALTIMORE, MARYLAND

Safety Roll of Honor

Every man whose name is mentioned in this department for meritorious service has helped the Railroad increase car miles. Every defect in equipment corrected, every accident prevented, every man-sized job here noted contributed directly and largely to the success of this big campaign, to which we are all bending our energies

Baltimore Terminal Division

CURTIS BAY, July 28, 1920.

MR. JAMES MATTHEWS,
Car Rider, Curtis Bay Piers.

Dear Sir—It has been called to my attention that on or about July 23, an accident was narrowly averted by your alertness. When car was coming up to be placed on cradle, in tightening brake, the chain parted. You saw the immediate danger, jumped from car and secured chock, thereby preventing car from running down incline and striking another car on kick-back on No. 1 dumper.

I take this opportunity of expressing my appreciation of your interest and watchfulness on this occasion, and thank you for your action in the matter.

Yours truly,
(Signed) W. M. HAVER,
Superintendent.

At 12.45 p. m. on July 6, G. W. Fowler, operator at North Avenue Tower, again showed his alertness by observing a piece of brake rigging lying on No. 3 track at North Avenue. He had crew of extra 4532 west examine train at Camden, where they discovered car from which this brake rigging had fallen. Commendatory notation has been placed on Mr. Fowler's record.

On July 3, J. Leonard, of the Police Department, noticed brake rigging down on gondola car in train of engine 4598 which was passing Bay View at 7.30 p. m. He notified the operator at Bay View, who had train stopped at Waverly Tower, where necessary repairs were made. Commendatory notation has been placed on Mr. Leonard's service record.

Baltimore Division

On June 14, Agent C. E. Whipp, on his way to work, discovered a frog in bad shape at Adamstown Junction and reported it through the operator. Mr. Whipp has been commended for the discovery of the condition and thus averting a possible accident.

On June 24, Brakeman J. H. Myers with Conductor John Severn on No. 94, engine 4158, detected odor of burning wood as train was approaching Ogden. Investigation developed a broken arch bar on rear truck of C. P. car 14343, loaded with grain. Train was brought to a stop by Conductor Severn by applying the air from the rear and by careful handling of the car it was

moved to Feltonville and placed on the siding. Both Conductor Severn and Brakeman Myers have been complimented on their handling of the situation.

On June 21, C. E. Soper, pumper, Fredrick Junction, discovered a broken rail on the eastbound track, west of that point. He immediately notified the track foreman so that prompt repairs were made. Mr. Soper has received a letter from the superintendent expressing appreciation for his action.

On July 12, Operator E. L. Miller at "SY" Tower (Singerly, Md.) while on his way home, discovered a broken joint in rail on westward passing siding. He notified operator on duty and trackmen examined track, which was put out of service until repairs were made. M. Miller has been commended for close observance of track conditions.

On July 18, Brakeman H. Bell on extra west, engine 4542, at Gaither, discovered door partly open on load of hogs in train of extra east, engine 4290, which was passing. Train was stopped and door fixed. Mr. Bell has been commended for his observance of passing equipment.

On July 21, Operator W. R. McCardell, at Gaither, observed brake rigging down on car in train of extra east, engine 4547 (Baltimore beef). He notified conductor, who set car out. Mr. McCardell has received commendatory notation on his record for his action in this case.

WASHINGTON, D. C., August 16, 1920.

Mr. W. E. CAVEY,
Supervisor Locomotive Operation.
Mr. J. CAVEY,
Road Foreman of Engines.
Mr. D. B. FAWCETT,
Road Foreman of Engines.

Dear Sirs—On August 13, engine 5217, train No. 8, Fireman C. H. Barger and Engineer W. W. Matthews, backed into the station about two hours late. The engine made the necessary switching moves on the train, and while the engine was waiting for a short time, I got on it. I noted that the engine was not making any smoke and that the safety valves were not open. In this engine was one of the nicest fires that I ever saw in a fire box. There was about six inches of good, solid fire, with the smoke entirely gone out of it. I rode on the engine to the shop, where it arrived with 185

pounds of steam. The safety valves had not lifted once from the time it backed train No. 8's equipment until it reached the inspection pit. This engine could have gone back immediately from the station to Cumberland without any attention whatever to the fire.

I am bringing this to your attention simply to have you know that I am as ready to commend an engine crew as to report smoke violations and the lifting of safety valves while engines are standing at this station.

Yours truly,
(Signed) C. B. CRAMER,
Master Mechanic.

Cumberland Division

During the month of July, operators on the division observed the following irregularities and exercised prompt action for correction.

NAME OF OBSERVATION	CASES
Wheels sliding.....	3
Hopper bottoms down.....	2
Hot car boxes.....	1
Total.....	6

On July 29, while extra west was pulling from cut-off at McKenzie, Fireman M. A. Diehl noted brake shoe wedged between guard rail and main rail of eastward track. He had engineer Monnett stop train and then removed the brake shoe.

Mr. Diehl's observance and watchfulness in this case were commendable as obstruction was removed shortly before the next passenger train was due.

Connellsville Division

On Sunday, August 8, Trackman H. M. Bittner, while going to pump house at Glencoe, discovered broken flange on Baltimore and Ohio 121856, in train of engine 7147, at about 9.45 a. m. Mr. Bittner boarded train and informed the conductor of the condition of the flange and arrangements were made to have car set off at Foley until proper repairs were made. We are glad to make suitable entry of Mr. Bittner's commendable action in the MAGAZINE.

Pittsburgh Division

On July 3, while engine 2600 was making push up hill at Wildwood, Brakeman J. L. Parsons re-threaded broken main line on P. M. 39467, saving considerable time because of not having to switch car to rear of train, car being O. K. to move to destination. For this splendid performance Mr. Parsons is commended.

On July 3, while extra west, engine 2574, was passing Goehring, Operator J. J. Lanning noticed defective car in train and notified conductor, who found it necessary to set the car off at Celia. For his close observance of passing equipment, Operator Lanning is commended.

On July 2, a passenger en route from Chicago to Pittsburgh on No. 16, had his pocket picked and purse containing a large sum stolen. The passenger pointed out to Conductor J. B. Teeple the man who had picked his pocket, and Conductor Teeple, after a tussle, subdued the man and took him to Pittsburgh, where he was turned over to a Company officer. For his prompt action in the matter Conductor Teeple is commended.

Conductor A. H. Atkinson, in charge of work train, while doing work at Herra Island on June 7, noticed brake beam down on third car in train of extra 2554 passing Herra Island. He immediately notified

member of crew, who had train stopped, and repairs made. For his close observance and prompt action in reporting this condition, averting a possible accident, Conductor Atkinson has been commended.

Engineer H. D. McGaughey and Fireman H. E. Pritchett accepted engine 4529 at Wheeling Junction with stoker inoperative. Fireman Pritchett fired engine all the way to Connellsville by hand. Both the engineer and fireman have been commended for their unusual effort and the interest displayed.

On June 12, while running at a speed of about 35 miles per hour, firing engine 1359, No. 62, Fireman C. A. McNaughton, of Pittsburgh, discovered a broken rail just west of Fitz Henry Station, on westbound track No. 1. Mr. McNaughton was instructed by his engineer, J. F. Painter, to flag No. 1 track. Mr. Painter notified Conductor Dixon in charge of train No. 62, who in turn notified the dispatcher, and left one of the brakemen at the point in question to protect against westbound trains. No. 15 was due at Fitz Henry 15 minutes after the broken rail was discovered by Fireman McNaughton, and had to be detoured over eastbound No. 2 track as there was about two and one-half feet of rail broken out. For his prompt action in this particular case, Fireman McNaughton has been commended.

On the night of June 6 at Bessemer, fire destroyed a number of houses close to Bessemer Station. Yard Clerk C. H. McCaulley was instrumental in saving station building. Mr. McCaulley secured a hose from the Union Railroad shanty and protected our building during the progress of the fire. For this faithful and efficient effort he has been commended.

Ohio River Division

Mr. C. W. WAGONER,
Seventh and William Sts.,
Parkersburg, W. Va.

Dear Sir—Please be advised that notation of commendation will appear on your service record because of your vigilance and attention to duty while switching in Parkersburg High Yard on the night of July 24; yard engine 2591, pulling out of West End Track 7, with cut of 30 cars, 10 cars becoming detached because of eye in coupler breaking on B. R. & P. 3026, allowing 10 cars to run east, you personally controlling this runaway cut of cars, after lining switches, by applying the hand brakes.

Yours truly,

(Signed) J. W. Roor,
Superintendent.

Charleston Division

"Bert" Paxton, foreman, Track Department, Elkhurst, recently noticed a brake beam down on passing freight. He had train stopped, repairs made, and thereby undoubtedly averted a derailment. "Bert" has been commended for his watchfulness.

Bridge Foreman J. M. Calhoun has been in the service of the Baltimore and Ohio for many years, and he is just as zealous today in the protection of their interests as he always has been. A few days ago he was walking down Arnold Cut to his work and noted a badly broken rail on the high side of a sharp curve. He and his men made temporary repairs, flagging passenger train 62 safely over it, and averting what might have been a bad spill. The superintendent of the division took pleasure in commending this old time employe for his interest, and a suitable entry was made on his service record.

Another item added to the honor of the Charleston Division Maintenance of Way Department is given us by Conductor Young. While his train was taking water, Pumper R. H. McCutcheon noticed that a car of coal had broken drawhead. The car was switched out, thus averting possible damage. Mr. McCutchen has been commended for his watchfulness.

It is with pleasure that we record another good mark on the record of Conductor Parker Condry, our popular "brass collar" on trains 61-62. On July 3, express at all stations was very heavy because of the holidays. Not content with looking after his own end of the game, at every station, he got into the express car, and personally assisted in loading and unloading express. Through his interest the trains moved practically on time, and he helped prevent serious delays. Mr. Condry has been commended and a suitable entry has been made on his record.

We are glad to note that the following engineers have been bulletined as making 100 per cent. over in fuel performance for June: G. S. Smith, O. W. Gum, W. E. Paisley, R. Malone, R. N. Jeffries, M. T. Hall, J. C. Jordan, A. F. Vorholt, F. Kerrigan, A. Groves, R. E. Smith, E. L. Jarrett, P. W. Toms, H. Robinson, S. H. Haymond and A. W. Pickens.

The man at the head of the list, Engineer Smith, with a performance of 119.8 per cent., entered our service in 1898 as hostler on the Monongah Division, and today is pulling a passenger train on the Charleston Division.

Cleveland Division

J. M. SEELEY,
Section Foreman,
Section No. 22,
Lester, Ohio.

Dear Sir—I have before me a very gratifying report which shows that on August 12, at 5.30 p. m., you noticed a badly broken arch bar on westbound train, car M. C. R. R. 8693, engine 4043, Conductor Wiley and Engineer Tarry; and that you immediately got on caboose and notified crew, who had car set off at Lester.

I want to commend you on your watchfulness and prompt action in handling the above condition and assure you that your interest is very much appreciated.

Very truly yours,

(Signed) H. B. GREEN,
Superintendent.

Ohio Division

On the night of July 14, as train No. 96 was passing "RK" Tower, Operator "Fred" H. Henson observed brake beam dragging. He immediately had train stopped and defect put in safe condition. Appropriate entry has been made on his service record for interest displayed.

On July 20, while extra 2877, east, was passing Blanchester, Operator T. A. Dixon noticed brake beam in train dragging. He had train stopped and car put in condition so as not to cause accident. He has been commended.

On July 15, engine 1500, Engineer F. Moore and Fireman C. C. Graves, was called in work train service to leave Chillicothe at 2.00 p. m. in order to arrive at Gravel Pit in time to wash boiler of steam shovel and start work at 6.00 p. m. On arrival at Gravel Pit, it was found that none of the steam shovel men had reported, and Engineer Moore and Fireman Graves immediately removed plugs from steam shovel

boiler, connected hose to branch pipe of engine 1500 and washed boiler. When steam shovel men arrived all that was necessary was to replace plugs, fill boiler and start fire, which was done, and work started at specified time. Action on the part of Engineer Moore and Fireman Graves saved considerable delay in starting work and for interest displayed they have been commended.

Indiana Division

On August 1, Charles Klingelhoffer, ticket clerk, Aurora, discovered brake beam down on car in 94's train, when train was passing Aurora. He succeeded in communicating information to the crew, train was stopped and brake beam taken down on P. C. O. 2329. The close observance of ticket clerk Klingelhoffer and prompt action taken is commendable, and appropriate entry will be made on his service record.

On August 12, at Milan, extra west had just stopped on siding when Flagman D. P. Stewart discovered that west truck on Baltimore and Ohio car 195858 had become derailed because of break beam being down. Fortunately, the wheels had just dropped on ground at time stop was made, but had this condition not been detected, serious trouble would have occurred on starting the train. The careful inspection of this train in siding made by Flagman Stewart is commendable and appropriate notation will be made on his service record.

Toledo Division.

Commendatory entry has been made on the record of Operator-Agent J. W. Shulte at Kirkwood, who, on August 16, observed brake beam down on extra 4048 and 4246 coupled south. This brake beam was down on car about in the middle of train. He stopped train at south end with automatic signal and the brake beam was removed, probably averting serious accident.

Commendatory entry has been made on the record of first trick Operator E. F. Stenger, Miamisburg, Ohio, who, on August 10 at 12.05 p. m., noticed car in extra 4266 north, N. & W. 13526, which appeared to have bent axle. This car was examined at North Dayton on information from Mr. Stenger and car wheel was found to be 3/4" out of plumb. Mr. Stenger's thoughtfulness probably averted serious accident.

War Veterans—Note!

The Baltimore and Ohio Post of the American Legion has not yet elected officers because of the large number of men in the service in and around Baltimore who are not members of other posts and who have not joined ours. An organization meeting will be held early in October. In the meantime, if you are not a member, send to Magazine Office, Mt. Royal Station, for an application blank. Get aboard the band wagon and let's get things moving!

Among Ourselves

Baltimore and Ohio Building

Law Department

Correspondent, GEORGE W. HAULENBEEK

I consider our train No. 1 a wonder. While my little sweetheart, Susan Anne Trageser, spent the summer at Deer Park, on the very apex of the Alleghenies, rusticated and enjoying the mountain breezes, and sniffing the glorious ozone, I traveled on our No. 1 every Saturday to Deer Park. How I did enjoy it! It is a good long run—about 240 miles—from Baltimore. How well I remember the olden times in our railroading in these parts. Take for instance No. 1 as it served us then. Hot boxes, frequent stops, many station calls, switching to other tracks and often detouring, and reaching destination considerably behind time.

Now all is changed. There must be a master mind controlling these things. Think of No. 1 running from Washington City, without a single stop, to Martinsburg, W. Va.; of walking through a string of sleeping cars to reach the diner. I did not object to that, because the good old Club dinner was appetizing and enjoyable. Mr. Baugh's dining car coffee is a dream, and the generous pitcher of real Jersey cream, as the Keith Circuit people would say, was an "added attraction."

Our Julius Walker Stuart, who is not afraid of a line or two in the BALTIMORE AND OHIO MAGAZINE, but rather courts it, was surrounded by his Law Department colleagues on July 30, reminding him that a birthday celebration was in order. His desk was cleared for several bouquets that lent their fragrance to the atmosphere, and all was merry, blithe and gay. Mr. Stuart modestly informed us that he had attained his fiftieth year on that day. His daughter, Miss Dorothy, a very charming girl, spent the month, with a number of congenial companions, picking peaches in Harford County. Miss Stuart is a Goucher girl who will graduate in 1921.

I commend to the readers of these notes, the monthly magazine called *The Nation's Business*. The August number was denominated the "Midsummer Stranger-than-Fiction Number." It contained no long, tiresome articles, continued on subsequent pages, but short, concise and pointed stories. Moreover, optimism prevailed all through it, with no gloomy predictions between its covers.

The Law Department, early in the summer, enjoyed a visit from an old stager in the person of Colonel Charles L. Jewett. Colonel Jewett is a member of the legal firm of C. L. and H. E. Jewett, who represents the Company at New Albany, Ind. The jurisdiction of this firm embraces the counties of Clark, Floyd, Jefferson and

Please Help Increase CAR MILES

Scott, Ind. Colonel Jewett has been in our service for 50 years and has been loyal and true to the Company in all that period. And the Law Department has other counsel in its service who have rendered splendid service.

For 17 summers, Colonel Jewett was a welcome visitor at Deer Park Hotel in our State of Maryland. The Law Department was benefited by his visit and will welcome its repetition.

Our Ronald Horsey, secretary to Charles Radley Weber, enjoyed his vacation during the latter part of July. Mr. Horsey is from Frederick, Md., where they have fried chicken and things of that kind done up to the queen's taste. Frederick County is one of the wealthiest counties in the United States. Mr. Horsey came back from his leave refreshed and benefited in many ways. We are all fond of this young gentleman.

Edgar W. Young, our chief clerk, spent his vacation in New Hampshire. He and Mrs. Young closed up their residence on Carlisle Avenue in Walbrook, bade good-bye to dear old Baltimore and started off for a two weeks' absence. Mr. Young is a tireless worker and nothing is too hard for him to attack vigorously.

I like to visit Camden Station; it is such a busy place, and moreover, boys, there is where a lot of the money comes from that enables the paymaster to send us checks twice a month. At the first window down there, sits a young man, designated "Information," and he is rightly classed. With a smile he tells you just where to go, and the room, place and stead of the party you want. There are signs at the different windows, one of which I do not care so much about, reading "Credit Clerk." I would rather have it read "Cash Clerk."

If we in the Central Building think that Camden Station is dark and gloomy and sooty, in consequence of the proximity of

engines and so forth, let us pay it a visit and this impression will be effaced. It is a place of much activity and is well worth a visit.

Coal Traffic Department

Correspondent, GEORGE C. BRAUER,
Assistant Chief Clerk

We express our appreciation and thanks for the splendid time enjoyed by those who participated in the baseball game between teams representing the Auditor Coal and Coke Receipts office and our own department, on July 31, at Messrs. Brauer and Spedden's Westport Park.

The Auditor's office won the game, 4-0, but the sting of defeat was taken away by the hospitable manner in which the members of our department were treated. To begin with, Messrs. Spedden and Brauer (who are members of the force comprising the Auditor Coal and Coke Receipts office) loaned the park at Westport for the occasion. This in itself was a treat, as it is a pleasure to play on a field in such good condition. However, this was only a part of the entertainment. The soft drink and ice cream stand was thrown open, throughout and after the game, and no limit was placed on the amount consumed by members of both teams. The refreshments were furnished by Messrs. Spedden and Brauer, without cost, and nothing was left undone to make the occasion one long to be remembered by all.

The game was really good, notwithstanding the score, as only one earned run was made. To the small number of runs made by the hard hitting team of the Auditor's office can be attributed the masterly pitching of Albert Lehman of that department, who volunteered to pitch for the Coal Traffic team, and who was so ably assisted by Howard Kirby, his battery mate.

Mr. Shinnamon, our chief clerk, ran a great risk with his new machine when he placed it in deep right field near the club house. Mr. Shinnamon's object in placing the machine in so precarious a position was to have it serve as a target for his team to shoot at. However, no damage resulted as but very few balls were knocked in the field, and those were quickly "gobbled up."

A number of inquiries were made as to the absence of the fair sex. Let's hope for better luck next time.

"Stephen Henry Ignatius Thompson," our famous second baseman, contributes his usual ditty:

"Every time Thompson took a drink he made an error, and every time he made an error he took a drink."

Engineering Department

Correspondent, OSWALD EDEN

Miss Josephine McCarthy, secretary to Office Engineer J. H. Milburn, has suddenly become left handed. It seems unusual to see one who has used her right hand almost continually to suddenly switch over to the use of the opposite member, but such is really the case. We have noticed that she adjusts her coiffure, powders her nose and does other little things peculiar to femininity with this hand; as a result the office force is wearing smoked glasses to protect their eyes from the glare.

The members of the drafting room force are singing some of the old songs which were so popular a few years ago. The last to be revived was "Pony Boy." In singing the chorus, they come out unusually strong on the "San Antonio." "Love Nest" is also a favorite.

"Velvet Joe" says, "When I get my raise I am going to give it to charity. Charity begins at home."

"Gus" Hauser looked at another house last week. Needless to say he didn't take it because the chicken coop was too small, the roof did not leak and the house was wired for electricity. It was also too close to the car line—five city blocks. He is now planning to open a delicatessen shop on the Reisterstown Road so that the motorists won't feel so lonesome going out that boulevard de luxe.

"Joe" Kemp is planning to go into Canada on his vacation. He has not told us why. Will he hunt the ladies, wild sea lions or "hootch?"

Harry Roebuck, our graceful swimmer of the drafting room, spent the second week of August at Asbury Park, N. J., showing the bathers there how diving and bathing should be done.

A large force of the Engineering Department enjoyed an inspection of the harbor aboard the Latrobe as guests of the Baltimore Chapter, American Association of Engineers and the Harbor Board of Baltimore. The Baltimore and Ohio coal pier was visited and the big fire at Wagner's Point was circled by the voyagers.

Miss "Lea" Lansdown has returned from her vacation, spent on one of Maryland's beautiful rivers. When do we hear the good news, Miss "Lea?"

A beautiful wedding was solemnized on July 15, when Miss Leone Stoffel of Baltimore, daughter of Professor and Mrs. Victor Stoffel, became the bride of Joseph C. Dubay of Mount Clemens, Mich., at St. Martin's Catholic Church, Father McNamara, assistant pastor, officiating. Wedding breakfast was served by the bride's parents immediately following the ceremony. The bride and groom departed at noon on their honeymoon to Detroit, Mich., and through Canada, after which they will make their residence in Baltimore, where the groom is employed in the Cost Division of the Engineering Department. Mr. Dubay was with the American Expeditionary Forces in France and saw active service.

Telegraph Department

Correspondent, DELLA M. HAIN

The old saying goes, "The best way to win a man is through his stomach." Ask "Jimmy" Lean, in the Car Service Department, as he was the honored guest at dinner at Miss Horre's.

Inspector Davis' young hopeful, Wade, recently visited this office en route home from Philadelphia and Chester. Wade reported a "corkin'" good time and followed up with, as his eyes got large as saucers,—"How would you like to have a big piece of apple pie with ice cream on top?"

We have Miss Deane and Miss Ripple back with us after spending their vacations "down on the farm." Miss Ripple says "They have blackberries down on my uncle's farm as big as my fist;" then Miss Deane chimes in, "Down on my uncle's farm they have tomatoes as big as buckets."

One grand place to get a dozen coats of tan is at Remlik, Va.; even going swimming by moonlight doesn't keep the fair faces of maids like our "Frankie" from getting brown.

A number of departments have been moved into the Annex, which looks like a new structure. After all the departments have been located we expect to issue a new private branch telephone directory.

WANTED—A bundle wrapper, to tie up clocks. Apply W. C. Donnelly, clock man.

Do you use your code book regularly? If so, you are doing well; if not, get Transportation Department Form 2664 from the stationer.

B. F. Thompson's antipathy runs toward Pullman cars and hot days; but don't ask him why. A word to the wise is sufficient.

On July 22 a meeting of Western Lines telegraph officials was held at the office of G. E. Sharp, district plant superintendent, Western Union Telegraph Co., Cleveland, Ohio, for the purpose of discussing routine and reorganization matters. Among those present were Superintendent Sharp and his staff, Superintendent Telegraph C. A. Plumly and his chief clerk, R. F. Miller.

Valuation Department

Correspondent, G. B. SAUMENIG, *Accountant*
Baltimore Office

The Valuation Department is now located on the eighth floor of the Central Building. Although the Riddlemoser Building, where we were formerly located, had its charms, yet we are more than glad to be more a part of the Baltimore and Ohio family. One can tell the difference in the bearing and appearance of our office force. All are showing an air of importance and both sexes are aiming to outdo the rest of the building in the matter of dress. One word about moving day. It was a great task, but as the Valuation Department is always ready for any emergency, the job was handled in record time. All worked, that is those who were not having a vacation. Some must have had inside information, as it seemed the most popular day for fishing and other sports.

Two fishing expeditions have taken place lately. What the first party caught still remains a mystery. Unfortunately our Halethorpe representative was not allowed to get on the morning boat with the Salvation Army people. He tried to locate the other two fisherman at Tolchester in the afternoon, but failed and did not see them until returning on the Louise at night. Then he was given several fish as his share of the day's work. None of them will go into details. The other trip was taken one afternoon not long ago but it seems that the fish heard about it PRYOR to the trip and went to other waters.

August 2 was the day and our office was represented by a number of the fair sex. It was the occasion of the marriage of Miss Katherine M. George of our office and George H. Schmidt of Auditor Passenger Receipts office. The ceremony was performed by Rev. L. M. Zimmerman and one incident which cannot go unnoticed was the act of Misses Block and Tucker crossing hands with the minister. It is suggestive and no doubt their minds were

thinking of the day when they will take the step. The office sent "Kitty" and George a beautiful gift of silver. The Valuation Department will miss Katherine but we hope that their sea of matrimony will be smooth and that their voyage will be peaceful and happy.

Mrs. Larmore looks unusually happy these days. For the reason look at her left hand and then keep your eye on her about 5.05 p. m.

Our friend Steele, formerly accountant with cost engineer, visited the office the other day and all were glad to see him. He was always very friendly with G. H. P. Jr., A. K. H., and G. B. S.

The latest news from J. F. Rau, who has been away from the office for some time account of sickness, is that he is at Portland, Me., and is recuperating very rapidly. Quite a coincidence, first a RAU and then a STORM. I wonder what next?

Miss Block, now secretary to chief clerk, was acting secretary to the valuation engineer and assistant valuation engineer for several weeks. Some girl! Here, there and everywhere at the same time. Ask her why she never heard the buzzer.

Miss Cregor and Mrs. Barker are at Atlantic City for their vacations and Miss Bryan is at Wayne Junction for several weeks.

Our cartoonist this month desires to introduce Wilson, "That's All." His platform is a League, not of nations but small tools, as he has charge of the inventory work in all Baltimore and Ohio shops for valuation purposes.

Mr. Wilson and his son, speaking frankly, own a flivver. Price said "How can they 'Ford it'?" The self-starter one day failed to work. "Where will I get a crank," said the father. The son replied, "You had better get out and start it yourself." None of the repair shops could fix it, but finally a mechanical boy they met in the country took it apart and started it going. To make matters worse the son entered a Greek restaurant one day while in their travels and became perturbed because the food was not right. He became hysterical and wildly exclaimed, "Why do they make me mad when you know I have an awful temper?"

More will be heard about the small tool man and the son of the small tool man, also the Ford that runs every time they get down on the farm. See cartoon at bottom of page.

Wheeling Office

This will introduce the following new employees of the Wheeling organization: E. S. Wood, D. F. Pruner, E. M. Callis, Fitzgerald Dunning, C. N. Gaston, N. R. Guthrie, Jr., and P. E. Sutherland.

C. T. Duffield, rodman, has resigned from the service of the Company as of

July 16. Duffield was one of the volunteers for transportation duties at Holloway, Ohio, recently and received the distinction of being the best switchman at that point. He evidently liked his new occupation as he is accepting a similar position with the Pennsylvania Railroad in his home town. We regret his leaving and wish him luck in his new undertaking.

Pittsburgh Office

Assistant Pilot Engineer A. C. Matthews and wife spent sometime in Georgia, enjoying the Southern sunshine and fried chicken.

M. E. Gebert is visiting "friends" in Detroit, Cincinnati, Akron and Philadelphia. That's right "Max," see that the towns are not too close together.

We were honored with a visit from Miss Celia Cregor, formerly of our office, who stopped in Pittsburgh for a day while on her way to her "Old Kentucky Home."

"SPEND THE COMPANY'S MONEY AS THOUGH YOU WERE SPENDING YOUR OWN." Words taken from C. C. D. to J. F. Shellaby 7-26-20.

We wish to introduce Messrs. J. R. Reed, F. L. Asher and S. R. Dipaula, our new employees.

Too bad "SLOPES" are hindering you from receiving that "Tickle Toe" prize at Conneaut, Shellaby. Just practice another year and you'll be sure to get it.

Auditor Coal and Coke Receipts

Correspondent, JOHN LIMPET

Fresh Air Fund collections for the month of August amounted to \$27.60.

We nominate "Bill" Nix as the most successful auto dodger extant. They do say "the good die young."

"If the rod had not hit the car—"

"If his line had not become tangled with mine—"

"If the tide had been high." (Same low.)

"Just as I was about to put him in the live box—"

Etc., ad libitum, and a few more.

(A few of the alibies trying to explain how the biggest one they caught got away.)

In a little friendly, all for glory, ball game arranged between this office and that of the Coal Traffic Manager, staged at Westport on July 31, our boys, with a little outside

help, managed to put it on the opposition to the tune of 4 to 0. According to all accounts, the game was a thriller and was played in the jig time of one hour and twenty minutes. (See Coal Traffic notes.)

Things sure are upside down. Now you take the women. The majority seem to be wearing their hair cut short. (Style.) On the other hand the majority of men seem to be wearing their hair long. (This latter condition is due, no doubt, to their not having the price.)

Auditor Merchandise Receipts

Correspondent, P. H. STARKLAUF

The stork paid his respects at the home of John Parrott and left a daughter. Congratulations!

In "Tin Can Alley" (that's what it sounds like at times),—the place where lockers are kept—you may see "Jimmie" of the South Side and Lillie of the North Side, shying. Now June has gone with its roses and brides. One sees emblazoned in street cars and magazine covers: "Eventually—why not now?"

A question comes to me, "Lorain?" Yes, if a county, then Elyria is its county seat. If a city, yes, a lake port on the line with a multiplicity of railroad and manufacturing activities. Oh well, Bessie, looking at the clear signal on your left fin, the jig is up,

there's a man in the case and you are evidently dreaming of the cozy little cot for two. Take an extra wrap along. It gets cool of evenings up in Lorain way. Peace to you!

Wedding Bells

Cupid's job is done, his dart is broken. Miss Dorothea Pick, machine room, surprised her mother when she gently broke the news that she was the happy bride of Rudolph Benfer. The grand event took place at Alexandria, Va., on June 9.

Miss Sallie A. Taylor, Forwarded Check Bureau, and Mr. Andrew P. Hoffman, were married at St. Martin's Church on July 17 in the presence of the immediate families, by the Rev. Leo Otterbein. Miss Sarah Kane was bridesmaid. The happy couple will reside in Cumberland, Md.

Miss Rita Force, Machine Room, and Millard Barnes, were married on June 27, at the rectory, St. Joseph's Monastery. The ceremony was performed by the Rev. Hyacinth Sullivan, C. S. P.

A romance started here in our midst long, long ago, and the happy service took place on July 12 at the church of Sts. Phillip and James, when Miss Anita M. Russell, a niece of the Bishop of Charleston, became the bride of Edward A. Coady. The ceremony was performed by the brother of the groom, the Rev. John J. Coady, who was recently ordained. This was the first marriage in which he officiated. A number of clergymen were in the sanctuary, and about 50 of our lady clerks told me they "kissed the bride."

In an aggressive age as ours is at the present, when production does not seem to come up to the mark, man power seems under what it formerly was. Some things are readily explained. We are pleased to see the president of our corporation signally honored by his appointment on a

representative committee by the Association of American Railways as to ways and means tending towards better service.

Car shortage is the cry from every conceivable angle—an excerpt from the Interstate Commerce Commission reads:

"The business of a railroad is transportation, not storage. The service of a railroad cannot be efficient unless its cars are promptly released. If a car is detained by a particular shipper for a longer period than is necessary for loading or unloading, the efficiency of a railroad is to that extent diminished, and every other shipper is to the same extent prejudiced."

We are solving the H. C. L. by the furthering of the Roehdale plan for a cooperative store. It is hoped that by the time this publication reaches its readers, the plan will be well under way. However, anyone interested may procure literature from your correspondent.

Steamer Grecian, Boston bound, registers the names of A. L. Wagner and wife and all the little Tonics. Didst have an enjoyable trip? Too sick to write? Hope it wasn't *mal de mer*.

The Friendly Girls' Society conducts a week-end camp for young women at Bush River Flats, near one of our stations on the Philadelphia Division, and it is inspiring to see the good nature existing among some of our girls who take bi-weekly trips to this resort. We note, too, the train stops right in front of the home of "Wash" Wilson, house electrician, popularly known as the "Buzz Man."

Ever get demonstrations in deep sea fishing? Since taking part of their vacation at Betterton, "Bill" Behnken and "Otts" Bromwell believe they know all about it. Another fish story! Next!

Auditor Passenger Receipts

Correspondent, G. FRED MILLER
Secretary to Auditor

The members of the Auditor Passenger Receipts office take this opportunity to express sorrow in the death of their late friend and fellow clerk, John J. Donohue, on July 22. He was a man with a splendid education, having taught at several colleges, and during the War was a sergeant at the Georgia Theological Institute, acting as an instructor. Mr. Donohue gave promise of being quite an asset to the Accounting Department. He took special interest in the welfare work of the office, particularly the athletic end, and was also well known in Baltimore because of his activities in baseball, basketball and other sports. He had a splendid disposition and a fine character, and his life, though short in years, was long in virtue.

We extend to our fellow clerk, Edwin Benhoff, our sympathy in the death of his father, who was accidentally killed in July. This is a part of life's sorrow we all must suffer, and when it occurs it is good to know that we have friends who sympathize in our bereavement.

August—the popular month for summer vacations! Dog days at the ocean and dog-gone days of jiggers and mosquitoes in the mountains. These small matters put no fear into our hearts as we step gaily on the boat or train, with tooth brushes, hair brushes, powder puffs, repair kits, etc., etc., prospecting on the wonderful ten-day vacation before us. Then back to the office with our sunburn, itches and scratches, each having had a better time than the other, and having met the grandest person, with little snap shots to prove it.

Railroads, other corporations and business houses realize that just a few days' holiday during the hot summer months, after a year's toiling, is a wonder worker in the way of rejuvenating a man's spirits (if he goes to Canada) and there is no question but what the work is greatly benefited. The Baltimore and Ohio has always been liberal with vacations, and we wish to express our appreciation and thanks.

Sir Thomas Lipton came to America to take the cup back to England, but Sir Charles Algy Purdy went to Montreal, Canada, to bring the bottle back to America. Both were up against a big proposition.

We should worry about prohibition. The Western Maryland Dairy had laid in a new stock of cows. None are named America, so they can't go dry. You know Wilson T. Jenkins, one of our head clerks, always on the lookout for a cold bottle, caught a glimpse of a pretty white milk-man dashing wildly up the stairs to deliver a bottle of pure (?) milk to some sweltering creature. Wilson (that's all), after a worthy lecture, convinced the dispenser of the unintoxicating beverage that our office was in great need of this character of nourishment, and, thanks to his efforts, we are enjoying a cold bottle each noon time. And, oh boy, you should see the dainty milk maids! "There ain't no use trying to vamp 'em, because if you ain't got nine pennies, you can't git no milk." You pay daily too, not monthly, that's the hard part. Maybe the Western Maryland Dairy will put milk-maids instead of milk-men on their wagons now.

The Auditor Passenger Receipts Welfare Association will hold an outing at Miller's Shore on Saturday afternoon, September 11. The beautiful month of September with the harvest moon, and all that goes with it, and the girls can bring their best "fellers," or mother, or brother, or sister, and we're gonna have a good time—eats and games and everything.

John M. Finn, one of the assistant chief clerks, chaperoned another touring party; the other two were to Luray, Va., and Washington, D. C. This time they journeyed to Niagara Falls, just across the creek from Canada. Why so many people are going to Canada is hard to understand. We have been trying to ascertain if these trips are purely recreative and educational, or if "Dan" Cupid is also a member of the touring parties. Mr. Finn is contemplating opening his own touring company. They are personally conducted, and from all accounts the Cook's Tourist Company might just as well go out of business.

Miss Mabel Cage has resigned. You have to watch these little country girls from Van Bibber and other places along the line of road. Their wise city sisters never put one over on them. Watch these little, quiet, shy and bashful girls; then in a short while look at the great big brute of a husband they are dangling around on an apron string. The best of good wishes to Miss Mabel; the best of health, sufficient wealth and untold happiness; we'll all come out to dinner some Sunday morning.

Our office baseball team made the annual trip to Newburg, W. Va. After a rather warm journey they reached their destination to find a young cloudburst awaiting them. Thinking they would not be able to have a game they went in for other athletic amusements, and when the Newburg folks convinced Manager Finn the game should be played, the Auditor Passenger Receipts team did not display the usual "pep,"

and the game resulted in a victory for the Newburg aggregation. We have hopes of entertaining the Newburg team in Baltimore, and feel sure that the score will be reversed. A splendid lunch was given the Auditor Passenger Receipts team by the Newburg Ball Club.

Miss Ulla Nilson is wearing about the finest diamond ring you ever saw, and it is on the right hand, too. It looks like her left, but she swears it's the RIGHT one.

Miss Guyton and some friends were all fixed for a delightful week-end trip to Chesapeake Haven on the bay. You know, it was one of those old-time pound parties, where everybody brought his pound, and you and I used to sneak in with ten cents worth of ginger snaps. Things went fine after a hot Saturday morning, till they got to the middle of the bay in an open launch. Old man Sun hid his face and brother Pluvius started to weep a bit; then the terrible winds commenced their work. The boat went three feet forward and washed back five. Suit cases, lunches, not to think of summer frocks, were drenched. Finally one of the young men decided to swim ashore. (What his bathing suit consisted of I can't say.) However, he secured assistance, and after reaching shore it was necessary to take a seven mile walk through the nice wet country, which was just a little different than a promenade up Charles Street on an afternoon. We don't know the hero who did the swimming, but if the girl doesn't love him after that stunt, she ought to. We are hoping that the wetting and the walk through the country were the worst to happen. It is not very pleasant to be in an open launch on the Chesapeake Bay during a storm, and we congratulate Miss Guyton and her friends on their safe journey.

Smiles from Pier 22, North River, N. Y.

New York Terminals

Correspondent SARAH ROLMES

The accompanying photographs, taken on the roof of the La Salle Hotel, Chicago, show the delegates who attended the Relief Department Convention. We think you all recognize the members of the jolly party: Frank "Lyric-Tenor" Santagata, Thomas "Flirtatious" Bradley, William "Never-Quiet" Murphy, Arthur "Gleaming Teeth" Tolley, William "Smiling" Olson and John "Catch-a-train" Duffy. Did they "make hay while the sun shone?" The pictures speak for themselves.

The picture above is that of Mrs. E. J. Levey, wife of our car record clerk. Mr. Levey, we take our hats off to you. You surely know how to pick 'em out.

Mrs. E. J. Levey

Staten Island Lines

Correspondent, G. F. GOOLIC

Little "Johnnie" Doyle, messenger, Division Accountant's office, has been promoted to M. C. B. clerk. Good for "Johnnie!"

Division Accountant's force has organized a new club, known as "The Bow Tie Club." The active members are W. J. Murray, C. Hendrickson and C. Anderson. We are looking for members. Want to join?

One Saturday in July the baseball team from Cumberland visited the New York boys. In the morning they were taken to South Beach to see the sights. It was the first time they ever saw such a lively place and they surely had a good time. They did not want to go home on Saturday night, and all insisted upon staying in New York to see that great show, "Irene." Call again boys, we will show you more of the city and some good plays. As you know, this is not the mountains, but a REAL city.

B. F. Kelly, trainmaster, has just returned from his vacation of two weeks, traveling through the wilderness of Canada. We all thought Mr. Kelly would get lost, but Kellys always come back.

We have employed a new Dolan in the Division Accountant's office. This makes the third from the same family. Those now working with us are Edward, Rose and Catherine. Three cheers for the Dolans!

Miss A. Levy is touring Staten Island in the green flivver.

At Relief Department Convention

The accompanying picture is of engine and train crew at South Beach. This is one of the crews that handle the thousands of people that go to South Beach each Saturday and Sunday. From left to right: J. Covell, stationmaster, South Beach; Fireman J. Lee; Engineer Cockshutte; Trainman A. Marote; J. V. Costello; Conductor C. Adams.

"Ben" Levy, special clerk, Division Accountant's office, is rejoicing over the arrival of friend Stork, who left a bouncing baby girl.

Carl Hendrickson is now taking care of the Conducting Transportation payroll with W. J. Murray as his first assistant, vice "Ben" Levy, assigned to special work in the same department. On account of work increasing in the Division Accountant's office the force has been enlarged. The following have been employed: H. Evans, L. Cocheron, C. Barnney (a Barney Google) and Miss C. Dolan.

"Jim" Flaherty, towerman, Clifton, is now on the sick list. We all wish for a speedy recovery.

South Beach Crew

"Willie's" wife was away and he was keeping bachelor quarters. We are inclined to believe that "Willie" had been out all night.

Baltimore Terminal Division

Correspondent, C. O. HEALY, *Secretary to Superintendent*

W. M. Haver has been appointed superintendent of the Curtis Bay Coal Piers.

C. L. Munson, formerly with Chief Engineer Curtis, has been placed as chief clerk to Mr. Haver at the piers.

Miss Pearl Barrett, who has listened to Mr. Rogers talk about cars for so long a time, has accepted a position with the superintendent of the Baltimore Division. Miss N. Furley has filled the vacancy made by Miss Barrett.

F. H. Carter's prosperity has reached a point where he feels an automobile is necessary. He purchased an Oakland last week. He is married, too.

The position of assistant superintendent, Baltimore Terminal Division, which has been vacant for quite a while, has been filled by C. M. Shriver.

Perpetual worries of some of our office force:

J. H. R.—Would you mind staying a little late tonight to get out some of this mail?

B. E. D.—Have you got your form "T's" written up yet?

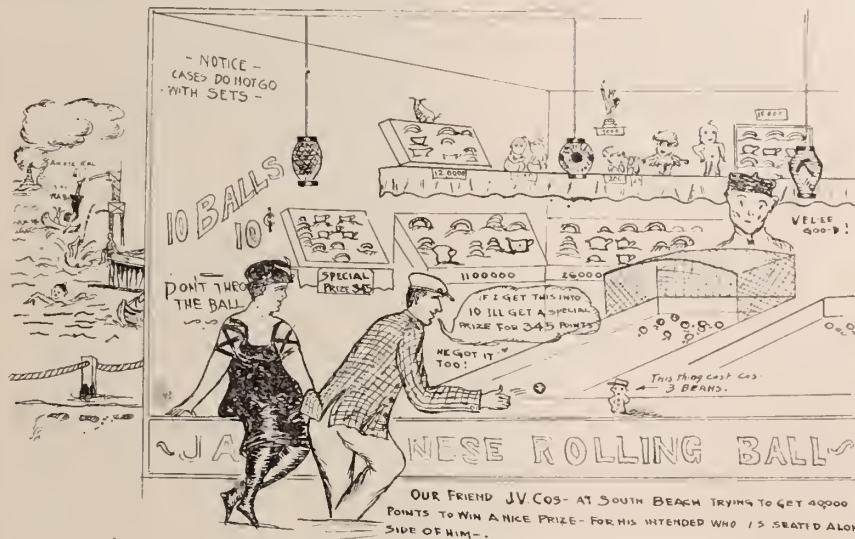

L. M. H.—Can you let me have this file today?

J. W. S.—Is Mr. Hoskins in?

F. R.—Can you let me have three flats by noon?

C. H. E.—Have you got my dope ready yet? (Over the 'phone.)

F. H. C.—Is your machine running today?

This picture is of Stationmaster W. P. Slattery. "Bill" as he is known and called, entered the service in June, 1908, as Trainman. On March 11, 1917 he was promoted to Conductor, and on April 28, 1919, was promoted to Stationmaster.

A number of the office employees are now taking care of the big crowds that travel to South Beach on Sundays and holidays.

While H. J. Schaefer, car distributor, Superintendent's office, was ripping up the board walks at South Beach he got acquainted with two girls and was invited to their bungalow at the Beach. We are anxious to know how he made out and if he would like to introduce us.

I. A. Mill was appointed traveling auditor, Staten Island Division, vice Samuel Yerks, who resigned to go in the trucking business with his brother.

T. J. Oldham and wife are receiving congratulations from their many friends on the safe arrival of a baby girl.

"Tim" Donohue has returned from his vacation, and is now back on the job, cleaning up the offices at Pier 6. "Tim" is well liked by the boys and girls in the office.

On August 5, Car Accountant W. J. Ivers arrived at the office at 7.15 a. m. He explained that he had gotten up at 6.30 that morning. Later on, it was discovered that

Consequently, we are looking for some large dumpings. Mr. Haver was formerly an inspector for the general manager.

Stationmaster W. P. Slattery

In November, it may be Harding or it may be Cox

In Record Car Miles, it WILL be the Baltimore and Ohio

Mt. Clare Shops

Correspondent, MISS MOLLIE ALBRECHT
Secretary to Superintendent

Superintendent of Shops Office

W. A. Whalen, our former chief clerk, has severed his connections with the Railroad to join that of the American Flexible Bolt Company, at Zelienople, Pa., where he will be associated with Mr. Finegan, our former superintendent of shops at Mount Clare. In conjunction with Mr. Whalen's leaving, we are pleased to report the promotion of C. W. Serp to the position of chief clerk; T. J. Collins to assistant chief clerk and statistician. We also wish to report that our genial C. E. ("Buck") Bannon has been appointed chief clerk of the Shop Order Bureau, succeeding Mr. Collins.

T. R. Stewart, recently appointed superintendent of shops at this station, is no newcomer to us, and we are glad to have this opportunity to welcome him into our fold. We are fortunate in getting such an able successor to our late superintendent, L. Finegan, who recently severed his connections with the Railroad Company. Mr. Stewart has served in various capacities in the Mechanical Department, and he is well prepared to fill the position he now takes up.

Mr. Stewart entered the service of the Baltimore and Ohio Railroad Company in 1886, as boilermaker, and was promoted to foreman at Martinsburg in 1892. He served in this capacity until 1901, when he was appointed general foreman at Cumberland, and later master mechanic at Riverside. In 1918 he was appointed superintendent

Thomas R. Stewart,
Superintendent of Shops, Mt. Clare

of shops at Cumberland, and served in this capacity up to the time of his transfer to Mount Clare Shops.

We are all with you, Mr. Stewart, for success on this big Railroad.

William Garber (better known as "Bill"), our gatekeeper at Mount Clare, has been away from duty for quite a time, because of sickness. "Bill" has been a faithful employee for nearly 50 years, and nothing short of a serious illness would ever keep him from attending the "Golden Gates." He is back with us again, and although he doesn't look quite like himself as yet, he is gradually getting better, and we are glad. Old Mount Clare wasn't the same place when we came to work in the morning, without old "Bill" there to greet us. Welcome back, "Bill."

Boiler Shop

A. F. Stiglmeier, our jolly boilermaker foreman, asked for a short vacation. Our detectives have determined the fact that most of his time is to be spent at Manning Square, Albany, New York. What the attraction is we have been unable to determine, but here's wishing you all the luck in the world, "Al"!

Engineer of Tests Office

On July 1, C. P. Van Gundy, our chief chemist, left us to become water engineer for chief of Motive Power at the Baltimore and Ohio Building. We all regret that the "Chief" has left us, after about a 30-year stay at Mount Clare. He is a man with a smile for everybody and was what the boys called a "Prince." We wish Mr. Van Gundy every success in his new position. Our loss is Central Building's gain, and we are sure that Mr. Van Gundy will soon have as many friends at the big building as he has at Mount Clare Shops.

A. J. Bitter, one of our boys, has just returned to work after a two months' leave of absence, during which time he underwent an operation for appendicitis. We are glad that the operation was successful, and that Mr. Bitter is back with us again.

H. C. Delcher (as prophesied previously) has went and done it!

W. M. Stedman has been appointed chief chemist, in place of Mr. Van Gundy. Here's wishing our new "Chief" all the success in the world.

Stores Department

It is with great pride and esteem that we present this article to the readers of the MAGAZINE in honor of the retirement of N. E. Alexander.

In 1870 Mr. Alexander came to Mount Clare and was put upon our rolls as "distributor." For 50 years he was ever the same willing, kind, attentive, manly man, looking out for the Company's interests. A few months ago, because of failing eyesight and poor health, he had to sever his connections with the Baltimore and Ohio. He arose from distributor to foreman of the Lumber yard. He is beloved and esteemed by all his coworkers and frequently comes into our midst to let us know he has the fondest recollections of Mount Clare. The clerks and others in the Stores Department presented him with an easy chair and a box of cigars, as a token of their esteem. Mr. Alexander was deeply affected and highly appreciated the gifts, replying that he knew without any doubt the feeling we had for him at Mount Clare.

So Mr. Alexander,

There is no good-bye, no farewell,

When good friends have to part,

And no words can ever tell

What is in each one's heart.

For, all through life it has to be,

While separate ways we go,

And, still we have sweet memory

Of those we chanced to know.

So while we work, and while you rest,

We will remember you,

And trust the years may all be blessed

With thoughts of you so true.

Accounting Department

The accompanying picture shows our Accounting office force at Mount Clare, composed of the following: J. M. Schuster, Miss Ethel Oursler, Miss O. L. Smith, J. J. Whelan, Jr., A. W. Shipley, H. B. Poet, L. W. Werts, Miss Ruth Banks, Miss Edna M. Garrett, I. I. Whitehill, A. M. Lapp, Miss M. S. Zimmerman, Miss K. Whelan, Miss Mae Granger, A. B. White, W. F. Dasch, Wm. Hummel, W. J. Sands, J. A. Maguire, F. T. Maguire, F. W. Meiser, Leo Gallion, G. H. Heckwolf, G. E. Childs, T. J. Jennings, N. B. Bussard, Gilbert Mercier, G. A. Cole.

We regret the loss, but are pleased to report the promotion of two clerks in the office of the accountant. D. W. Baker, statistician, is now in the office of the special accountant, J. K. Skilling, at the Central Building. R. H. Pentz is to be connected with the office of the chief engineer, L. G. Curtis. Both of these boys

are worthy, and deserving of this promotion. We wish them all kinds of success.

A few days ago, A. W. Shipley, head material clerk in the Accounting Department, walked into the office all swelled up, wearing a grin on his face from ear to ear. Gossip has it that it is a nine-pound boy. Best wishes to both the kiddie and mother are hereby extended.

Baltimore Division

Correspondent, W. H. TARR, Superintendent's Office, Camden Station

O. R. Burroughs, freight and ticket agent, Aikin, Md., has in his possession the following letter which he prizes very highly:

41 South Turner Street,
Victoria, B. C., Canada.
June 9, 1920.

MR. O. R. BURROUGHS,
Freight and Ticket Agent,
Baltimore and Ohio Railroad,
Aikin, Md.

Dear Sir—Just a few lines to express our appreciation of the trip out here from Aikin. We had wonderful treatment and everything went as smooth as a clock. I certainly intend to recommend all my friends to travel that route. I was very much surprised to find the "Olympian" train so perfect and the trip over the mountains handled by the electric locomotive was wonderful.

You can refer anyone to me who is thinking of coming West, so far as the train service is concerned.

The weather here is fine and we appreciate the cool breezes of the Pacific Ocean.

Remember me to all friends and wishing you good luck,

Yours sincerely,
(Signed) R. WATSON.

The route referred to by Mr. Watson is our Baltimore and Ohio Lines from Aikin to Chicago and incidentally the Chicago and North Western came in for a compliment also. Mr. Watson was stationed at Aberdeen Proving Grounds and it was through the solicitation of Mr. Burroughs that he made the trip via the Baltimore and Ohio.

Operator E. B. Mitchell has been busy in "DO" office receiving reports from along the line on the car situation. Mr. Mitchell was a wireless operator in the Navy during the war before taking up railroad work.

The campaign in the 24-hour release of cars has been making good progress and the cooperation of the shippers and consignees has been fine.

Mt. Clare Accounting Department Force

Clerks to the trainmasters and road foremen are busy these days hiring new men for train service incidental to handling the heavy run of business over the division.

Because of increased business, some of our firemen have their eye on the right hand side of the cab for promotion to engineers.

The Baltimore Division baseball team is still unchallenged at the head of the System League. They played the Mount Clare Shop Team on July 17 at Westport Park with a score of 6 to 5 in their favor. J. B. McGovern, freight engineer, and J. F. Schlim, trackman, were the pitchers. W. L. Hall, agent at Jessup, was the umpire. The surprise of the game was when Pitcher Schlim twirled a few balls, which, of course, ended the battle. We wish to congratulate the team on their performance and clean-cut way in which the game was played.

The Baltimore Division team also crossed bats with the New York Division team at St. Denis, Md., on Sunday, August 8, with a score of 11 to 0. On the Saturday previous they played the Wheeling Division team with a score of 7 to 6.

We regret to report in these columns the death of Thomas T. Allen, one of our oldest passenger conductors running in through service to Cumberland; also the death of J. I. Clough, freight conductor, who was found dead on his caboose, and the accidental death of Engineer E. A. Murphy at Reels Mill, Md.

Washington, D. C., Freight Station

Correspondent, W. L. WHITING, *Chief Clerk*

We are glad to have been able to welcome back to their accustomed places Miss W. M. Tyler, utility clerk, and Edgar Miller, tallyman, both of whom have been absent for some time on account of sickness.

We welcome Carlton G. Hardy, who has entered the service as check clerk. Let us hope that he will continue with us for a good long time.

Some of our force have enjoyed short vacations, and have returned with renewed vigor for the coming Fall and Winter campaign. Miss Della Porton, waybill clerk, spent her time at Chesapeake Beach, and Miss Tyler enjoyed the salt air and bathing at Norfolk, Va., and Newport News. Your

Gray's Ferry Tunnel, East Side Yard, Philadelphia

correspondent spent a few days with old friends in Connecticut and New Jersey, enjoying the good old-fashioned shore dinners that the various resorts along the Long Island shores are so justly famous for.

In connection with vacations and traveling it does not seem that it is out of place to mention something that maybe most of the readers of the MAGAZINE know already; but when you know a good thing it cannot be told too often. There is an old saying that you can best reach a man's heart through his stomach; and if this be true, then the dining car service of the Baltimore

PLUS CAR MILES MEAN
PLUS PROSPERITY

and Ohio Railroad is a very sure road to the affections of the most hard-hearted of men, through the medium of what is known as the Baltimore and Ohio Special Lunch and Dinner. If you have not already tried it, hurry up and take a trip some day on one of the Royal Blue trains and get that lunch or dinner! You will not regret it and you will be only too anxious to tell all your friends about it. The price, too—well, you will find that you could perhaps get a sandwich and a glass of Bevo for the sum that one of these lunches will cost. However, the "proof of the pudding is in the eating," and believe me, it is "some pudding."

Cumberland Division

Correspondents

E. C. DRAWBAUGH, *Division Operator*
R. G. ALLAMONG, *Secretary, F. M. C. A.*
P. M. PENNINGTON, *Crossing Watchman*
RUTH M. CHEUVRONT, *Office, Mechanical Engineer*

All previous records were broken on the West End of the Cumberland Division, August 1, for eastbound movement of loads out of Grafton. On that date 32 trains were moved, consisting of 1,449 loads and eight empties.

Wilbur Hardy, section foreman on Section 27, has new ballast on both east and west-bound tracks from Polk to Fayette Streets. It looks like the Great White Way.

John B. Deneen, leverman at Viaduct, "ND" Tower, is spending the summer at his farm on the South Branch near Springfield, W. Va.

"Joe" Deablehauser, yard section foreman, who has been on the sick list for three weeks, went to work on August 9. We are glad to have him back on the job again.

Martinsburg

Among the Berkeley County weddings were several Baltimore and Ohio men who fell victims to Cupid's darts.

Samuel Williams, a young Baltimore and Ohio employe, and Miss Annie Clemmons, of South High Street, this city, were married.

Lemuel Lee Prather, one of our shop employes, and Mrs. Hazel Hartshorn were married at the Winchester Avenue Christian Church parsonage. A few friends and relatives of the bride and groom witnessed the ceremony.

Robert Earl Small, carpenter, and Miss Lucy Bryan were married at the Baptist

EMPLOYEES OF FORMER JOINT AGENCY, WILMINGTON

First row: C. C. Foxwell, John Lawton, Ralph Dunsmore, J. R. Simmons, George D. Boggs, Miss Susan Cathcart, U. S. G. Grason, William Shaw, Samuel Rudolph, Edward Dorsey, E. Williams, P. McLaughlin. Second row: Robert Ball, Harry Zepp, Jesse M. Ranck, W. Johnson. Third row: F. Jones, Jr., J. Jewell, "Gus" Boyer

Church parsonage, this city. The young people will make their future home at the corner of South Queen and John Streets.

Our fellow employe, Car Repairman John Kearns, has been so unfortunate as to lose his little four year old son, Stuart, whose death was caused by tetanus. Several months ago a young daughter was taken away, making the present affliction doubly hard to bear. An all-wise Providence who directs these things has some divine purpose to fulfill in the taking of these little ones. May our brother turn to the only Comforter who can heal the biting wound.

The Baltimore and Ohio men and friends of William A. Chambers, sympathize with him in the loss of his wife, who died at their home on West John Street. Mr. Chambers is a retired veteran employe and has served long years with the Company. Bereavement strikes hard in the December time of life, and our brother has the sympathy of the members of the Veterans' Association and of his railroad friends.

Timber Preserving Plant

Correspondent, E. E. ALEXANDER

Speaking of surprise parties, about the most surprised party we have seen for some time was our supervisor himself on the evening of July 19, when a number of his friends called to celebrate his—birthday. He wouldn't tell, but they did say they counted 36 candles in the cake (they might have made a mistake too).

Cards, various games, music and a most delightful lunch (with punch!) were the evening's fun. You should have seen the ladies playing ten pins (score not to be published). Every one enjoyed it immensely, especially the supervisor, who spent some time after his guests departed opening the elegant presents left by friends.

Those who assisted in making the surprise complete include: Mrs. Julia Montrose, Mr. and Mrs. G. C. Conley, Mr. and Mrs. B. C. Flora, Mr. and Mrs. George Taylor, Mr. and Mrs. J. C. Alexander, Misses Minnie Catlett, Fannie Twigg, and Mary Robinson, Messrs. Paul K. Collins, Charles G. Worthington, Mr. and Mrs. C. L. Kittle and daughter, Carolyn, W. F. Kesler, and Supervisor and Mrs. E. E. Alexander.

Charles G. Worthington, Cornell student, was appointed special apprentice, July 17.

Paul K. Collins, of Cumberland, president of the Liberty Athletic Club, that city, has been appointed manager of the "Cross Tie-Gers." Paul knows the game and the boys are showing up well under his leadership.

We regret to have to include a fatal injury to a well-known Cumberland Division employe, Conductor George Kidwell, who was crushed under a box car when picking up loads in the Plant Yard on the night of July 24.

Mr. and Mrs. G. C. Conley were called to Renton, Pa., July 20, by the death of Mrs. Conley's brother, John Luteman, who was killed in an explosion in the Renton Mine. Mr. Luteman was employed as fire boss at the mine and lost his life with eight others in a terrible gas explosion which entombed them for several days.

Mr. and Mrs. Wilbur Shanholtz announce the birth of a son, Paul Leonard Shanholtz, on Monday, July 26, weight eight pounds.

Much sympathy has been expressed for the little son of Fireman P. J. Brill, Boyd, age two, who was severely scalded when he fell backwards into a pan of boiling water at his home on the afternoon of July 30. Dr. Twigg attended the little fellow and he is doing nicely.

Our pride, Engine No. 16, was given a general overhauling in Cumberland new shops during August. She is all spick and span now.

Mr. and Mrs. Tice Duckworth announce the birth of a son, August 8, while Mr. and Mrs. H. E. Gulick announce the birth of a son, August 9.

The coincidence of these announcements is that Howard and Tice are "buddies," both crack tiemen, hard to beat and when Tice came out smiling August 8, he felt one ahead. Imagine his surprise when the following morning Howard waltzed up to him with "you've got nothing on me."

Well, it looks like a smoke, but who's going to buy?

"The Reason Why," a Safety picture, was shown on July 29 at the Plant, by Mr. Arthur D. Gans. Mr. Gans also gave a delightful sleight of hand performance which was highly appreciated and much talked about.

Miss Edna Montgomery gave a party at her home August 9 for Miss Lucy Gurtler (Lucy won't tell, though) and from all accounts, a time to be remembered by those participating.

Games, music, luncheon and everything that makes a party a success was enjoyed. The boys are looking forward to the next one. Those present were Misses Geneva Kline, Fannie Twigg, Georgia Gurtler, Lavena Nelson, Minnie Catlett, Edith Malone, Elizabeth Sisler, May Teeters, Bessie Teeters, Ezna Montgomery and Lucy Gurtler (the important one); also Messrs. H. M. Whitford, John Smith, C. W. Short, Edgar Glover, William Sherman, Rueben Brown, Ernest Montgomery, R. Smith and William M. Kline.

"Ed" Allen, our reliable night foreman, is in the hospital suffering from a painful swelling in his right hand which the physicians believe is from an old injury. We hope "Ed" will soon be on the job again.

Switchman D. H. Talley and wife were among those from Green Spring who attended the Veterans' picnic at Edgewood Park, Somerset, Pa., on July 29.

Fireman C. C. Ricewick and wife, whose wedding was reported last month, have gone to housekeeping in the rooms over Reese's warehouse, it being the only place available. Charles hopes some one will build and rent to him soon.

Pittsburgh Division

Correspondents:

E. N. FAIRGRIEVE, *Ca. Distributor*, Office of General Superintendent

ELMER H. STOLTZ, Pittsburgh Freight Station

"Andy" Moore likes peaches. See note

We regret to learn of the serious illness of Conductor "Jimmie" Reed, who for years handled trains 5 and 6 between Pittsburgh and Cumberland.

Our old friend, the stork, recently paid a visit to the home of Mr. and Mrs. W. C. Burel, and left a bouncing baby. It's a boy, and you are at a loss to give it a name, why not call it "Mike" in recognition of his daddy's activities on "Big Mike" engines?

J. L. Norris has been appointed road foreman of engines, and A. P. Berg has been appointed road foreman of engines on the P. & W. District.

C. J. Weaverling has been appointed secretary to Superintendent Gorsuch.

Our old friend, Homer Strome, at one time assistant chief clerk to Superintendent Gorsuch, who recently left to take up his duties at Garrett, Ind., in the Division Accountant's office at that point as chief clerk, paid us a visit a couple of weeks ago. Homer looks "fit as a fiddle," and we were all very glad to see him. Homer says he likes Garrett 'n everything, but likes to visit Pittsburgh. Absence makes the heart grow fonder. Why the deuce doesn't he pop the question, then question the pop, and end it all?

Left to right: R. W. Carter, Pullman conductor; A. G. Vannatta, passenger conductor, Pittsburgh Division for 35 years, now living in Los Angeles; Kirk Light, baggage master; picture taken during Shrine convention

The accompanying photo shows "Andy" Moore, the congenial and efficient Secretary to General Superintendent Keegan, surrounded by Mrs. Hetzel and Miss Lucey of the General Superintendent's office. Note the smile of contentment upon "Andy's" face, and the radiant, beaming countenances of his captors. It's Leap Year, you know, "Andy," 'n you can't tell what might happen. You have your hands full here, anyhow, eh boy?

"Old Sol" was just peeping over the hill-tops when engine 5050, gayly bedecked for the occasion, in charge of Engineer George Reed and Fireman David Shafer, pulled out of slumbering Pittsburgh on her way with the "Veterans' Special" to Somerset, the scene of the first annual outing of the Veterans. This train, in charge of Conductor Chenoweth, ably assisted by Brakeman H. Albright and Flagman E. C. Dodd, proceeded merrily on its way and was given a rousing reception upon its arrival at Glenwood, where a large number of veterans,

Jane and Mary

Here are two fine little girls, Jane Passmore and Mary Patrick, Master Mechanic's office, Glenwood

their families and friends embarked for a day's outing.

All railroaders aboard seemed to be there with the intent of enjoying themselves. Our old friend "Sam" Irwin made life miserable for a great many of the ladies. He confiscated a box of face powder and a puff from some unfortunate being and proceeded to decorate the countenances of all with whom he came in contact, causing much merriment and helping to add to the fun of the occasion. There were many, many people there we did not know, and many more that we did know. Everybody was there for a good time, and from the radiant countenances seen everywhere in the Park, it was evident they were not being denied this pleasure. We saw Conductor Hunt and Gateman Van Kirk chatting together under the shade of a stately elm. "Tom" Donahue was there in all his glory. We saw Chief Dispatcher Weaverling, and "Tom" Delahanty, Yardmaster Burtoft, and a host of others we didn't know so well.

When it came time to depart nearly everybody was ready—for the day had been a strenuous one—but one of much joy and pleasure. Our train pulled out of Edgewood Park at 6.45 p. m., and after a brief delay on the S. & C. Branch, we pulled out onto the main line and came to town, and we came, I'm telling you! The boys on the engine sure did give her the gas and we just had a dandy ride.

To Charles Richardson, the local chairman, his aides and assistants, belongs the lion's share of the credit for the success of this first annual outing, and to them we extend our congratulations for the able manner in which they handled this affair, which will be long remembered by the veterans, their families and friends. The day was as if made to order—perfect; the place well chosen, a beautiful park just outside the peaceful town of Somerset; the crowd, immense, jolly and well behaved, everybody bent upon having a good time. Taking it all in all, it was a huge success, and everybody had a good time, except those who stayed at home. Next year there'll be another one. You'd better figure on going.

Pittsburgh Freight Station

J. T. Campbell, assistant terminal agent, left Pittsburgh for an automobile trip to Fort Wayne, Ind., August 2, and returned on August 5. He stopped at Cleveland on his return trip and called on Freight Agent Bell. Mr. Campbell spent his spare moments while in Indiana in digging the butter out of his cars from the roasting cars he devoured.

L. W. Turner, assistant terminal agent, spent his vacation along the New England Coast, enjoying the refreshing breezes of the Atlantic, as well as the invigorating fragrance of the Maine pines. Evidently the fish were biting well, or writing material was scarce.

Miss Beck, Miss Publow, Miss Bitzer and the Misses McKie of the Local Freight office spent Sunday, August 8, in Buffalo and Niagara Falls. On the way over to the P. & L. E., "Marguerite" broke the heel off her shoe. Consequently, she was a little disabled on the trip. Miss Beck and the Misses McKie cannot understand why Miss Publow and Miss Bitzer went to the Canadian side on Sunday evening around six o'clock to spend a Canadian dime which some one had given them (it costs ten cents to cross the bridge). However, Miss Beck was not so fortunate as she brought back a Canadian quarter. Miss Emmaline McKie developed quite a liking for "Lobster" while in Buffalo. In spite of the fact that the

CAR MILES

Are you backing the
Baltimore and Ohio?

CAR MILES

train was three hours late arriving in Pittsburgh, and Miss "Pubie" is hobbling about in one shoe, they all vote they had a grand and glorious time.

We are pleased to note Miss Mildred Clark is with us again.

The employees of the Pittsburgh Freight Station are "slipping away" from Pittsburgh, some on their vacation, some to higher positions and some being captured by Cupid. Mr. Korb, assistant cashier, has been promoted to chief clerk to Division Freight Agent Magill, and R. M. Johnston to the agency at Etna, Pa., and we are all wishing them success in their new positions, although we did not like to lose them from our "family."

Elmer H. Stoltz, stenographer for the Pittsburgh Revision Bureau, has been promoted to secretary to W. F. Deneke, terminal agent.

We regret very much the loss of our faithful employee, Philip Schauerhammer, who has been with us for approximately 45 years, during which period he has served the Company faithfully. He is sadly missed by the employees of the Pittsburgh Freight Station.

Mr. Sherman, of the Pittsburgh Revision Bureau at Pittsburgh, has succeeded L. T. Campbell, and is now chief of the Bureau at Pittsburgh.

Monongah Division

Correspondents

E. S. JENKINS, *Secretary to Division Engineer*, Grafton, W. Va.

MISS MARY C. LEEDS, *M. P. Clerk*, Grafton, W. Va.

Superintendent C. W. Van Horn and family recently visited friends at Boston.

Miss Ethel Bradford, secretary to superintendent, took in the sights at Quebec, Canada. She was accompanied on her trip by Miss Catharine Snively, of the Division Accountant's office.

Miss Agnes Gocke, stenographer in Division Engineer's office, spent a much enjoyed rest visiting friends at Cincinnati.

Miss Margaret Hamilton, pass clerk, visited relatives in Baltimore, Md., and at Old Point Comfort, Va.

This division had the pleasure of a short visit from Miss Margaret Talbott Stevens, associate editor of the MAGAZINE, on Saturday, August 7.

Ohio River Division

Correspondent, Miss M. M. MOORE

You are hereby authorized to call John Rood, of the Superintendent's office, "Uncle John." He is very proud of the title.

"Cactus" Harrison, of the Division Accountant's office, meets all comers with the boxing gloves and all baseballs with the bat. Some kid!

"Happy" Arnold's advice to all young men contemplating a real vacation: "Go to Canada, young man, go to Canada."

We wonder what it is that detains our assistant tonnage clerk at the bottom of the elevator every evening after work. It would seem that it is about time for some of our young men in the office to "wake up."

We must not forget to mention our friend "ing" Bodie, Superintendent's office. How proud he looked the other morning when he drove to work in a new Jewish Packard Sedan! At noon hour he has plenty to do, for the girls from the various offices have fallen in love with—his car.

The retiring office boy in the Division Accountant's office fears he will have to stop work a week or so early to rest up for his vacation trip. We're sure rough on 'em.

We might mention something about our ball team of the Ohio River Division. All of our games have been interesting and we were awfully sorry to have to send the New York boys back feeling so badly, but when it comes to playing ball the boys from the Ohio River Division are way ahead of the times. They all have the "pep."

We all noticed our shop clerk, "Billy" Williams of the Master Mechanic's office, looking down-hearted the other day while attending a ball game. Upon inquiring, we found that his best girl had gone back on him. We are in hopes he will recover as "Billy" is a real good fellow and we hate to see him so blue.

"Joe" Skilling, motive power timekeeper, Chicago Division, while on his vacation, stopped off a few hours on his way from Cincinnati to Baltimore. The Division Accountant's office was glad to have him give us the "once over."

Engineer L. M. Sorrell, candidate for Congress, and Conductor C. B. Riggs, are now conducting a class on the book of rules.

C. M. Deem, car foreman, went out the other day for some cheap blackberries. After paying the Doctor for pulling the thorns from his legs, he now figures the berries cost him a dollar a quart.

"Jim" Fowler, captain of the Ohio River baseball team, is getting his boys in fine shape and expects to pull off the honors at Baltimore on Labor Day.

The bathing beach up the river is doing some fine business this year, and the mermaids are there with bells on. Ask everybody.

People "up street" have the impression that "Ed" Fortner, motive power time clerk, has become a salesman or something, but such is not the case. "Ed" just got tired of carrying his lunch in several packages.

We admire the generous style in which our office boy writes his letters. The other noon he was discovered writing on a large close ruled sheet about 18 by 20 inches. Must not have seen her for some time? Who is she, Graham?

We guess that this rush for nomination for president must have gotten to some of our own fellows here for we were all pleasantly surprised to hear that Arnold McGraw and "Bumpy" Deems had thrown their hats in the ring and started that life-long contest for president. We wish them every happiness.

Charleston Division

Correspondent, M. W. JONES, *Secretary to Superintendent*, Weston, W. Va.

The accompanying picture is of John C. Kinton, assistant superintendent of the Charleston Division, headquarters at Gassaway, W. Va.

Mr. Kinton was born at Shellsburg, Pa., and his first railroad experience was as a student on the Pennsylvania Railroad at Bedford, Pa., where he entered the service on April 1, 1903. He was successively promoted to operator, agent-operator and relief operator. In September, 1907, Mr. Kinton left the service of the Pennsylvania Railroad to accept position as operator with the Chesapeake and Ohio, and in May, 1908, was promoted to operator and claim clerk on the Kanawha and Michigan.

In December, 1909, Mr. Kinton entered the service of the old Coal and Coke Railway, as operator. He was promoted to dispatcher, chief dispatcher, trainmaster, and finally, in February, 1918, to assistant superintendent, which position he retained when the Coal and Coke was absorbed by the Baltimore and Ohio.

Aside from having a thorough knowledge of Transportation Department matters, Mr.

Kinton is an expert telegrapher, and is also an active member of the Safety and Claim Prevention Committees of the Charleston Division.

Of a quiet, unassuming character, Mr. Kinton is known for his fair and just methods in dealing with his subordinates, and for these and other personal characteristics he has the esteem and respect of all under his jurisdiction.

The most important thing we have to record this month is the various unloading drives, inaugurated by Vice-President Galloway. We have received enthusiastic assistance and support from all our shippers on the division, and we believe that every man on the division has done his share. While we are only a small division, so far as cars are concerned, still "Every little bit added to what you've got makes just a little bit more," and if the small divisions clean up a few hundred cars in these drives, the total soon runs into the thousands. Our standing for the month of May on car miles is fourth, two other divisions on the West Virginia District holding first and second places. We are driving after the CAR MILES hard, and hope to get our first place back.

A large and enthusiastic meeting of the Division Safety Committee was held on July 22, there being about 40 members and visitors present. Safety holds a very promi-

Car Miles, CAR MILES, CAR MILES,
CAR MILES, CAR MILES!

nent place in the work of the Charleston Division, and in this connection it is interesting to note that a Charleston Division Shop—Gassaway—stands at the head of the list of shops showing no injuries during April, as against 55,043 man hours worked. Our other Charleston Division shop—Weston—stands seventh with one injury and 32,138 man hours worked. We congratulate Gassaway on its showing and hope to see it remain at the top.

The July MAGAZINE has just arrived, and we find of special interest in it the announcement that the President of our Road has been appointed Chairman of the Advisory Committee of Nine. This is a well deserved honor, not alone for Mr. Willard but for all the employees of the Company, on whom it naturally reflects. Let us do our full share to see that the confidence with which Mr. Willard relies on Baltimore and Ohio men is fully justified. So far as we are concerned, locally, there is no doubt but that it will be. Coal cars must be kept moving, other cars must be loaded and unloaded promptly; no cars must lie by on sidings with hot boxes, or other minor defects, and no cars must be left standing around idle which could be either loading or unloading; we must all do all we can to keep the wheels turning, and the car miles mounting daily towards the 30 per day. The loading and unloading of L. C. L. freight is an important matter also, and every ton added to the loading of a local car just helps the work along that much. Seventy-five of the great railroads of the country have agreed to abide by the decisions of the Advisory Committee of Nine, and there is no question but that an important step has been taken in the right direction to show that American railroads CAN and WILL operate efficiently under private control.

A new bank has been opened at Gassaway, the Farmers and Merchants, and quite a number of our boys have taken an interest

in it. Construction of the building is going forward rapidly. Quite a number of new residences are also nearing completion.

S. R. Hildreth, stenographer, Master Mechanic's office, has been transferred to office of District Master Mechanic, Cleveland. His place has been filled by Ralph Wilson of Parkersburg, W. Va.

We regret very much to announce that Miss Agnes Spradling, stenographer to the division engineer, has resigned to accept a position at her home town, Mullins, W. Va. Miss Spradling was a great favorite here, as well as a member of our Division Safety Committee, and her smiles will be missed by all of us. Before leaving she was presented with a small token of regard by all the boys and girls in the division offices.

Trainmaster W. C. Deegan is a busy man these days. He is here one day and there the next. He sure intends to keep the wheels turning, and says it won't be his fault if we don't get the CAR MILES up to 30 per day on the Gauley Line.

Assistant Chief Clerk Pickens wears the smile that won't come off. He says he has picked 20 gallons of berries so far this season, and is looking forward with joy to eating them. Puzzle; if you pick 20 gallons of berries and ruin one suit of clothes, value \$100, what do you save in the deal?

On the other hand Chief Clerk Schide has lost the smile he wore when he saw his photo in the July MAGAZINE. His ball team has not been doing very well lately. We regret to record that we let even Grafton lick us. Of course we don't feel quite so bad when a big team like that from the Smoky City, and that from the Central Building licks us, but we do feel bad when the Ohio River and Monongah Divisions put it over us. However, we cleaned up Mount Clare in good shape, and we never say die. Other days are coming, and Manager Schide says "While there is life there is hope."

Our friend "Charlie" Criswell, the Claim Prevention man, is very busy these days. In addition to the duties imposed upon him by Mr. Glessner, he has found time to write a little song entitled "Cars are only earning when the wheels are turning." Any evening after supper, during the hot weather, when the windows are open, if you take a stroll past the Marble Palace opposite our passenger station at Weston, you can hear "Charlie's" melodious voice floating out of the window, to the refrain above mentioned. The State Hospital is right opposite "Charlie's" office, and we are told that the patients are charmed to sleep every night by his music.

One of our young ladies here (names not mentioned, but initials *might* be M. H.) seems to find Love's journey somewhat rough and rocky. We notice that some days she wears that pretty little ring on the third finger of her left hand, other days on the right, and even on other days she leaves it at home altogether. Observant, are we not? Well, that's our duty as the historian of the division. We presume that the place to wear a ring, and the place not to wear it must be decided by what happens the evening before. Cheer up, old friend, it will not always be so. We can assure you that he thinks of no one but you, so why worry? If we were in your place we'd put it on the proper finger and let it stay there, come storm or come calm, and it will all come out right in the wash.

Have you read the new "Safety Flashes?" Mr. Begien's "Pass it along" is well worthy of your consideration. If you don't get your copy, let us know and we will see that you do. Read Mr. Begien's speech in the

July number, its well worth your careful consideration. Don't forget that our end and aim is to make the Baltimore and Ohio the best and the safest railroad in the country, and that our motto, day in and day out, is "SAFETY ABOVE EVERYTHING." Keep this before you, and you will see where our list of personal injuries goes to. It will be down to "ZERO," where it belongs.

Passenger Engineer W. L. Criss and his wife recently spent a couple of weeks down in North Carolina. Both report a most enjoyable trip.

Miss Inez Young, file clerk, Superintendent's office, is starting on a two weeks trip "back to the farm" at Milliken. She will have many interesting tales to tell in next month's MAGAZINE.

Last and not least, the car distributor, C. W. Dixon, accompanied by his wife and daughter Gladys, is about to leave on a trip to Cleveland, and other points in that vicinity. The Charleston Division correspondent is going to hold down the desk where they try to make everyone believe they have a good car supply, even when they have none, for a couple of weeks, or at least try to. If, therefore, you do not see any notes under the Charleston Division heading in the next MAGAZINE, you will understand just what has happened, and know that some irate coal mine operator, or lumber dealer, has come in and wiped out the acting car distributor, leaving nothing but a small grease spot to show where once sat yours truly.

On July 24 and 25 we were visited by one of the worst storms which has occurred in this vicinity for some time. The water rose so rapidly at Orlando that a freight train on the Elk Line was caught and could not move either forward or backward, slight damage being caused to contents. The water reached a height of five feet four inches in the passenger station at Orlando, rising so rapidly that all that Agent Allman and his assistants could do was grab a few tickets and money, and hike for the high ground. Track was quite badly washed and damaged, but through the energetic work of "Major General" Brooke, with his assistants, Supervisors Harrington and Westfall and Road Foreman Marsh, the track was soon put in shape and trains running as usual.

Due to the storm, a Freight Claim Prevention Meeting, which we had arranged for Sunday the 25th, with the object of giving all the boys at our smaller stations an opportunity to be present, had to be abandoned. The regular meeting, however, was held on the 29th, and we had about 20 agents, officials, and others present. We were glad to note among others Conductor Kiddy, Platform Foreman Hacker, Delivery Clerk Bock and Trucker Fitzpatrick, which shows that interest in claim prevention is prevalent all along the line. Subjects of interest discussed were: The proper marking of wool (the carelessness in handling this has been the source of many claims in the past); handling of flour in paper sacks (another claim breeder), and how to avoid damages due to defective equipment. Don't forget that Chairman J. P. Ryan, Mr. Criswell, Mr. Hoover, Mr. Peters, and the superintendent are always anxious to hear from you when you notice anything which might be corrected, and so avoid the payment of heavy damages, and reduce the exorbitant toll we are now paying on this account.

The girls say your correspondent does not give them enough space in his notes, and so he has interviewed them, and presents the following "Famous Sayings of Famous Girls on the Charleston Division."

Long after we are gone, these sayings will undoubtedly have become important, and will be carried down to posterity in the archives of the Charleston Division.

Miss Young.—I'd like to be a soldier.

Miss M. McCormick.—There's no place like Orlando.

Miss Keller.—Don't you think it's just *grand* to be a brakeman on a passenger train?

Miss Hayden.—Say those words again!

Miss Tierney.—This is *my* Saturday afternoon off.

Miss Miller.—Yes sir, I find baggage checking very interesting work.

Miss Rice.—Hello, Central, give me Gassaway.

Miss Justis.—Give me just one more derailment report to write Mr.— and I'll die happy. (?)

Miss A. McDermott.—Yes, I was in Wheeling yesterday, my *brother* (?) lives there.

Miss B. McDermott.—Oh where oh, where is that pocket book gone?

Miss Paisley.—I like Gassaway fine, but not while the Transportation Time Bureau is in Weston.

Miss Hickman.—Waltz me around again, "Willie."

GREATER CAR MILES Means Greater Service

The division accountant has about decided to close up his accounting school and open a matrimonial bureau, as little Cupid is raising havoc with his force. Miss Janet Longwell, fuel clerk, and Mr. Karl Lehnies were married recently. Mr. Lehnies is a machinist in Gassaway Shops. Miss Virginia Irwin, of the Motive Power Bureau, and Mr. Bret Bailey of Akron, Ohio, were joined in wedlock. We extend our congratulations to the happy couples, and our sympathy to the division accountant.

Miss L. Printz, stenographer to the division accountant, has resigned and gone to Milwaukee. She is replaced by Miss Mary Pickens.

Relief Agent Davis suffered painful injuries from a fall while in discharge of his duties recently. He has entirely recovered, however, and is back on the job.

We extend our sympathy to Trainmaster J. D. Nicholas on account of the serious illness of his wife. We are glad to report she is making satisfactory progress toward recovery; as also is Mrs. W. W. Young, wife of our dispatcher at Gassaway.

The family of Master Mechanic Baldinger has spent some time camping on the upper Elk River. The master mechanic managed to get a day with them once in a while and reports the fishing good. We hope to hear some fine "fish" stories when the snow flies, and we gather around our fireside, or rather, our gas stove, this winter.

In conclusion, we again appeal to each and every one on the Charleston Division to keep the wheels turning. Drive the CAR MILES up whether they want to go or not, send along your suggestions to the superintendent, report every car you see anywhere. No matter if it is O. K., if you have any suspicion that it is not, tell us, and we will look it up; better to look up 100 cars and find them all right than to leave one standing somewhere for a day when it might have been earning its keep. Let us show Mr. Willard that the Charleston Division to a man is with

him heart and soul in the great campaign he is making, and let's make him proud of his railroad and everybody connected with it. Let's make our slogan:—

FOR THE HONOR OF THE BALTIMORE AND OHIO AND THE CHARLESTON DIVISION, NO CARS WILL BE DELAYED HERE..

Keep this in mind every day and see what the result will be.

Western Lines

Cincinnati Terminals

Correspondent, JOSEPH BEEL, *Chief Clerk to Superintendent of Terminals*

A mistake in the June issue of the MAGAZINE in the announcement we made of the arrival of a son at the home of yard clerk George Ernst of Stock Yards. We have since learned that the new arrival is a promising suffragette. She's just in time!

The accompanying photograph is of "Eddie" Hoffman, better known as "Dutch Eddie," yard clerk at Stock Yards. "Eddie" recently amazed the bunch at Stock Yards by appearing on the job one morning all dressed up in a wrist watch. Elmer had better brush up as "Eddie" is about to take his place in the limelight.

"Eddie" Hoffman

Ralph Diamond, yard clerk at Elmwood, is entertaining his friends in a new machine he recently purchased. Ralph is in daily training to lower the record between Elmwood and Carthage. George Fitzer, caller at Elmwood, who claims to be an authority on speed, concedes that Diamond can easily lower the record. Of course, Fitzer should know as he recently called up the Safety director of the city to get permission to walk an old thoroughbred to Stock Yards. The reason he obtained permission was that he was afraid the horse would fall down and he would be put in the "jug" for tying up traffic.

We are glad to cancel our George Ford's name off the sick list. He has been absent from the repair track since April 7.

We are glad to report the new record established by our noble painters, Charles E. Burke and Milton V. Guard, in restenciling and repainting the entire body of Baltimore and Ohio hopper car 133442 in six hours.

Transfers which occurred within the last month, are as follows: C. Johnson, transferred from Storrs, Ohio, to Brighton, Ohio; H. Hafertepin, transferred from Brighton, Ohio, to Storrs, Ohio; J. Streitenberger, transferred from Storrs, Ohio, to Mill Street.

Our assistant bill clerk, Mrs. E. R. Sweptson, has spent several weeks on the coast and in the wilderness of McArthur, Ohio. She can be placed on the ballot as a candidate for president of the "Corn Fed Club."

John Crowe attended a party in Lick Run the other night and one of the games played was called "making funny faces." The participants in the game each tried to outdo the other by making as funny a face as possible, and after looking them over carefully the host awarded the first prize for the funniest face to John. "And the funny part of it was," says John, "I wasn't even playing."

"Gus" Holzkemper was strolling down Vine Street the other evening, mentally figuring up his back pay, when he was approached by a seedy looking individual who attempted a touch in this manner; "Say, boss, kin yuh gimme a dime fer a feed?" "Well," replied Gus, "show me where you can get a feed for a dime and I'll go with you."

John Holcraft—"Ah, love makes the world go round."

George Maloney—"Two drinks of raisin jack will have the same effect."

Eddie Hoctor—"Do you care for indoor sports?"

Elsie Gang—"Yes, if they know when to go home."

Ruth Grueninger's affinity calls each eve

With his demon of tin

With its rusty works within—

Who was it said Henry Ford never made Happy Hearts?

Frank Nock, assistant chief clerk in the Superintendent's office, was recently roaming around the vicinity of the Union Depot, on Third Street. A large colored woman was standing holding an aluminum cup in her hand. Frank, in his usual charitable way, dropped a coin in the cup and was surprised when the colored lady admonished him for the act. Mr. Nock explained that she was holding the cup in such a manner that he assumed that she was soliciting alms, at which she retorted very hotly, "Alms? Why man, a penny ain't no alms. What can you all buy with a penny? This here cup is my drinking eup which I use when I travel."

A Job for Scotland Yard.—A very fine box of Perfectos missing from "Joe" O'Donnell's desk: Anybody that can add any information regarding the disappearance of the cigars, will please let "Joe" know.

Some people are as much at home at a ball game as the well known pig is in a parlor. Recently several employees of the local Freight office were the guests of "Joe" Beel at a close game between Brooklyn and the Cincinnati Reds. Mr. Cordie at about the seventh inning wanted to know "When 'Babe' Ruth bats." "Joe" O'Donnell explained that Ruth did not play with the Brooklyn team, that he was a member of the New York "Giants" that followed the Brooklyn series. Oh, what a crowd of baseball fans we have in the local office.

"Johnny" Weithoff, yard clerk at Elm-

wood, slipped away one beautiful day in July and joined the happy band of benedicts. "Johnny" is an ex-overseas veteran, and the best wishes of everyone go with his new venture.

Harry Fisher and "Bill" Buckeye, yard clerks at Elnwood, have been off several weeks on account of illness. We are glad to learn that each is convalescing.

Love bees seem to be flittering around the vicinity of the Car Record office. "Eddie" McGinnis and Malcom Hathorn seem to be the flowers, the object of their endeavors, and if we have the correct information, we can anticipate something serious will happen in the future.

As "Bob" Jennings would say, "It is none of our business," but we wonder why Miss "D" is so anxious to keep the door leading from Superintendent's office into the Local office open. Sometimes we look through the doorway and can see a tall man occasionally gazing into the Superintendent's office. We do not know but probably this is the cause of Miss "D's" anxiety. Anyway this has nothing to do with the same couple standing in the hot July sun for a half-hour unmindful of the heat.

Things We Would Like to See

"Veit" Lintner with a crease in his trousers.
Sue Elmore in tights.
Bessie Henry shimmying.

"Find the Man!"

"We'll pay him \$5,000 a year. Go over our list of employees—pick out those who not only have been doing their work well, but have been studying in spare time getting ready for advancement. That's the kind of man we want for this job and for all of this firm's responsible positions."

Employers everywhere are combing their ranks for men with ambition, for men who really want to get ahead in the world and are willing to prove it by training themselves in spare time to do some one thing well.

Prove that you are that kind of man! The International Correspondence Schools are ready and anxious to help you prepare for advancement in the work of your choice, whatever it may be. More than two million men and women in the last 29 years have taken the I. C. S. route to more money. More than 110,000 others are getting ready right now. Hundreds are starting every month. Isn't it about time for you to find out what the I. C. S. can do for you?

Here is all we ask: Without cost, without obligating yourself in any way, simply mark and mail this coupon.

INTERNATIONAL CORRESPONDENCE SCHOOLS BOX 8486-B, SCRANTON, PA.

Explain, without obligating me, how I can qualify for the position, or in the subject, before which I mark X.

 Ruth Grueninger walking fast.
 "Gus" Sands with his mouth closed.
 "Ben" Hofmann as an undertaker.

New Castle Division

Correspondents

A. C. HARRIS, *Assistant Chief Clerk to Superintendent*, New Castle, Pa.
 P. W. ADAMS, *Telegraph Operator*
 O. C. BEDELL, *Telegraph Operator*

Superintendent Stevens has returned from a well earned vacation spent at Crooked Lake. It is a little early yet, but no doubt as the leisure develops and the various adventures begin to properly shape themselves, new tales will be unfolded concerning the wily tribe that inhabits the waters there.

The New Castle Division Safety Committee held its regular meeting in New Castle on August 10. In the absence of Mr. Stevens, Trainmaster C. P. Angell had charge of the meeting. With all the other disturbing factors in connection with the operation of the division, such as labor shortages and heavy movement, nothing has been permitted to interfere with the plans for Safety work and the attendance at the meeting. The enthusiasm of the members and the work accomplished by the committee is gradually having its effect in attracting the attention of the employees over the division and winning support to the Safety movement.

The campaign for increasing car miles has been entered into on the New Castle Division with the hope of setting some new high records. Various plans have been formulated and will be carried out with the intention of keeping the cars moving and eliminating unnecessary delays. It is realized that planning is not enough in itself to bring results and that hard work in carrying out the plans is necessary to success.

The New Castle Division Reserve Corps is increasing rapidly. During the month of August two new members were added to the roster by the arrival of a new boy at the home of Train Dispatcher J. H. Haun, and a new girl at the home of Assistant

J. W. Sharp
Track supervisor, Fredericktown to Sandusky

Foreman "Jack" Urmson of the Maintenance of Way Department. Around New Castle Junction the air is still blue with the smoke of the fancy cigars that were passed.

Agent H. H. Smith, of Newton Falls, Ohio, was suddenly taken ill at his home on August 7. His many friends join in wishing him a speedy recovery, as the station at Newton Falls has a strange appearance with Mr. Smith among the missing.

Everybody else on the Railroad plus YOU means GREATER CAR MILES

R. B. Viehdorfer, formerly agent at Sterling, Ohio, has taken over the duties of supervising agent of the New Castle Division in place of A. D. Griffith, promoted. The work so splendidly carried on by Mr. Griffith has been left in capable hands and it is certain that the New Castle Division will continue to make improvement in the handling of claims. It is a matter of record that through the efforts of the supervising agent and the Freight Claim Prevention Committee there has been a consistent decrease in the number of claims filed and the amount of money paid out. Every effort will be made to continue this work.

"Tony" Burrelli
Four-months-old son of John Burrelli, machinist helper, New Castle Junction Shops

Newark Division

W. E. LAIRD, *Chief Clerk*, Newark, Ohio
 A. D. LIST, *Newark (Ohio) Shops*

The accompanying photograph is of J. W. Sharp, supervisor, Lake Erie Sub-division No. 4. "Johnny" usually wears "the smile that won't come off." However, the camera man was too much for him, as the picture shows him about half inclined to be sober, and he has cap exactly "on straight."

Forrest Stewart has accepted a position as maintenance of way clerk in the office of the Division Accountant.

J. S. Price recently returned from his vacation, most of which he spent riding in day coaches in order to save hotel bills. But we know John can sleep most any place.

L. J. Savey has been transferred to the Wheeling Division.

Melvin Lytle has accepted the position of messenger in the Division Accountant's office.

Gilbert Foley has accepted a position as maintenance of way clerk in the Division Accountant's office.

We are all glad to see "Pat" Hunt back again at his desk after being absent for several months on sick leave.

Ray Shaw has accepted position of stenographer in the office of the Division Accountant.

Cleveland Division

Correspondents

A. F. BECKER, *Secretary to Superintendent*, Cleveland, Ohio
 AMY A. FORD, *Clerk to Pilot Engineer*, 621 Sloan Building, Cleveland, Ohio

The accompanying picture is that of Miss T. B. Heller, pass clerk in the Superintendent's office, taken while on her vacation trip to Niagara Falls.

A. F. Grobarick, chief clerk to Terminal Trainmaster Gensley at Cleveland, joined the army of benedicts on June 29. "Andy" is the man who always claimed that no girl could catch him, but it is the same old story, "They all fall sooner or later."

We believe Cupid is working some overtime in the Clark Avenue office. Each Monday morning several of the clerical force show signs of there having been bon bonning the night before, but we would rather you would not say anything about this to Beulah or Katherine. By the way, "Charley" Berg has a cold that is peculiar for this time of the year.

Massillon

Roundhouse Foreman Emerson Polen had his vacation last month and had some good fishing while he was gone. They say he caught some fish as large as six and eight inches long. Whoppers, Polen!

Conductor J. W. Seiber has been ill for the last few weeks at the Massillon City Hospital with typhoid fever. We want to see you improve quickly, "J. W.," and to have you back on the job soon.

The Freight Claim Prevention Committee of the Cleveland Division held its meeting at Massillon during the month of July in the committee room of the Chamber of Commerce. The meeting was presided over by Chairman A. J. Bell, Cleveland, and E. J. Crampton, Massillon, Ohio.

Numerous matters pertaining to freight claim prevention work were thoroughly discussed by the committee, there being a large representation of agents and other representatives present at the meeting. Luncheon was served to the members at Hotel Conrad.

Miss Ethel Donohoe, report clerk in Local Freight office, has been confined to her home on account of illness. The force is anxiously awaiting her return to duty.

Conductor R. L. Long has taken a three-month leave of absence, and has gone into the automobile business. We wish him much success.

Agent Crampton worked his freight house forces on Sunday, August 1, in order to get equipment released ready for prospective loading on Monday morning. They released quite a number of cars and made a very creditable showing.

The Divisional Safety Committee held its regular monthly meeting at the Conrad Hotel, Massillon, on July 19. J. E. Fahy, assistant superintendent, presided. The

Miss Heller, office of Superintendent

meeting was well attended by the members. Among the visitors were W. J. Head, Safety agent, Northwest District, and Agent Crampton of Massillon. The committee had luncheon at the hotel after adjournment of meeting.

Miss Thelma Nolan, who formerly worked at our local Freight office, but who has been working in the Wheeling and Lake Erie office since the dissolution of joint work at Massillon, has signed a contract, and now has a new partner. We wish you good luck, Thelma.

Chicago Terminal

Correspondent, THOMAS H. WILLIAMS

Every year W. H. Kilbourne, electrician, Grand Central Depot, departs for a place unknown to anyone but himself for his usual fishing trip. Just like Scotty of Death Valley, who goes down into the unknown parts of the earth and, after several days, returns laden with gold, so does Kilbourne drop out of sight and on his return give us such account of the fish he catches and of the trouble he has in carrying them, that it would be well for all fishermen to try and wiggle this secluded spot out of

him. The device he takes with him for catching this unheard of fish was shipped two weeks ago to Wisconsin. It consists of bell, short circuiting coils, circuit breaker and overload coil. It works as follows: after the fish is on the hook, ring the bell, wind in the line and the overload coil trip breaker. If the load is too great in order to bring in fish, more dry cells are added to line, overload coils set lower, and fish are hauled into boat without any effort on Kilbourne's part.

Roymane Whitmer and "Gus" Wilmsen journeyed on their vacation throughout the West. Salt Lake City, San Francisco and Los Angeles were a few of the places visited. While in Hollywood, Cal., they had a narrow escape from being kidnapped and put in the movies. Some of the young ladies in the Car Accountant's office were recipients of priceless souvenirs sent by the young men from Salt Lake and Pike's Peak.

While "Dan" McNeill was spending his vacation in Michigan he won the Derby with his trusty steed, "Sitting Bull." We understand "Dan" is quite a jockey, and has ridden many a horse.

Miss Cort's Fliffer

A change has saddened old Barr Yard,

For no one seems the same;

And no one yet has solved it—

Just who, or what's to blame.

Some say this and some say that,

No matter how we differ,

I'm almost sure the cause is this—

Miss Cort has got a fliffer.

Before, it was a pleasant trip,

To hike across the track,

And meet the smiling office force,

(I hated to come back).

But now it's scowls and grave-yard looks,

(Gee, I'd like to biff her)

For Neff has got a bull dog smile,

And—Miss Cort has a fliffer.

Yard Clerk Jimmie has a grouch

And never leaves his place,

While Parlberg has a hangman's look,

A smile would crack his face.

And poor La Baun is quiet now,

While Barlow's face grows stiffer;

There's no more joy in old Barr Yard,

Miss Cort has got a fliffer.

Martin Schaut, tank foreman, Lincoln Street, who has been on the sick list for the last three months, has returned to work.

It is with sincere regret that we announce the death of Michael Larney on July 5, from a complication of diseases. Mr. Larney had been in the employ of this Company a number of years and during the past 12 years had been supervisor of gates, which position he filled in the most capable manner. Mr. Larney had a host of friends among our employees who offer their deepest sympathy to the bereaved family.

Lawrence Kennedy, brakeman, working out of Robey Street, fractured a leg and broke several ribs July 16 while on duty. He was removed to St. Luke's Hospital.

And still they fall—but then one can't blame Machinist D. Graham, when, on June 12, he married as good a girl as Miss Myrtle Buell. We wish Mr. and Mrs. Graham all the happiness in the world.

The boys are all glad to see the smiling face of Yardmaster Walsh back on the job. Mr. Walsh has just returned after having been operated on at the West Side Hospital.

Harry Litterest, stenographer in the Accounting Department, is wont to sneak away at frequent intervals and take trips to Kalamazoo. Harry says he is interested

BERNARD-HEWITT & CO. Desk F. S. 369 CHICAGO
430 S. Green St.

L. H. Reinke and family spent a week on an auto trip to Lac du Flambeau, Wis., a very delightful trip of about 1000 miles. He could not resist the temptation to do a little fishing and even though the time was short he managed to go out after and land a musky on his last day up there. It weighed only 11½ pounds.

"Vic" Hanson is going to spend his vacation at Dixon, Ill., pushing the "Perambulator." As it is quite hilly there, he will have rest part of the time, at least—going down hill.

Margaret Watts and Rose Welch, Engineering Department, spent the Fourth at Holland, Mich., at the latter's home. Margaret fell hard for the "Vedden Shoes," especially "Bill," whose Ford she drove during the entire visit; however, the interest was mutual if we are to judge by the letters arriving from that source.

On July 12, George H. Rosenberg, general foreman, East Chicago, and Henry Roser, machinist, had a very unfortunate accident. While returning from work in Mr. Roser's machine, they tried to cross in front of a westbound street car, which struck their auto, knocking it in front of an eastbound car. It was necessary to remove Mr. Rosenberg to Englewood Hospital, where he is steadily improving. Mr. Roser was more fortunate; he only received a few bruises.

We regret to announce the death of William F. Rothwell, assistant car foreman, East Chicago. Mr. Rothwell had been sick for some time and a few weeks ago went to Garrett with the hopes of improving. He passed away on June 12. We all extend our deepest sympathy to the bereaved family.

Russell Barron, late of the Navy, and one of the popular young firemen at East Chicago, took a long leap the first part of June with Miss Anna Kwasug, a popular young lady of East Chicago. Mr. and Mrs. Barron are on an extended trip through the East.

Chicago

Thomas J. Slater, our timekeeper for Chicago freight handlers, who recently returned from military duty in Russia, where he fought the Bolsheviks with the thermometer 40 degrees below zero and snow ten feet deep, suddenly disappeared from our midst and was gone for ten days more. When he returned he wore the smile of the small boy eating watermelon. On inquiry we found that on June 23, he and Miss Mary Malone of 6341 Justine Street, Chicago, had been married. All join in wishing them a pleasant and prosperous journey through life.

South Chicago

Office of Assistant Agent

We regret to announce the death of George J. Parks, operator at South Chicago for many years. Mr. Parks was well-known and highly esteemed and his associates at South Chicago feel his loss deeply.

Mrs. Bertha A. Phelps, for a number of years an employe at South Chicago Station, was transferred on July 3 to the office of G. A. Upton, division freight agent at St.

Paul, Minn. Her absence from the office has cast a certain gloom over us all, for we miss her greatly, but wish her much success in her new position. Before leaving the office, Mr. Altherr, our agent, in behalf of the office force, presented her with a beautiful silver mesh bag, and bespoke our regrets at her leaving us. Mrs. Phelps was correspondent for the MAGAZINE for several years and we know that the Editor will feel her loss almost as much as we do. ("Aye, aye," says the Ed., "but we hope to have Mrs. Phelps act as one of our "foreign" correspondents now.")

Edward Murphy, chief clerk to Trainmaster Huggins, is walking around with a broad smile on his face. A dandy little girl made her appearance in the Murphy home on July 29, so why shouldn't he smile?

Still another one has deserted us. Paul Wegener, chief claim clerk, has purchased a farm at Crown Point, Ind., and has forsaken us for the "quiet farm life." We wish him much happiness and success in his new undertaking.

Miss Veronica Pluard is back at her desk again after an illness of some duration and we are pleased to have her with us once more.

J. S. Cusick has succeeded Mrs. Phelps in the position of statement clerk, James Crinion taking Mr. Cusick's position as interchange clerk.

"Andy" Orth, age 72, formerly baggage-master at Chillicothe, passed away on July 17. He was retired on pension several years ago. "Andy" was well-known and had a host of friends who extend their sympathy to his family.

On July 8, C. C. Steinhour, while working in the foundry at Chillicothe, was suddenly stricken with acute indigestion and died before medical aid could be administered. Employees at Chillicothe extend their sympathy to his wife and family.

It is with regret that we report that R. M. Hodges, brakeman, while at work in the Portsmouth yards, had the misfortune to fall under moving cars and get his right arm crushed so badly that amputation was necessary. He is recovering.

William Chandley, blacksmith, who was painfully injured a few weeks ago when a cutter which he was using broke and a piece of steel inflicted two wounds in his right leg, is again back on the job.

It is with great regret and profound sympathy that we announce the death of Thomas P. Bresnahan, on August 1, due to a complication of diseases caused by the influenza, which he contracted a year ago last December. He entered the service as boilermaker's apprentice in January, 1883; was transferred in January, 1885, to freight fireman, promoted to freight engineer in October, 1890, and to passenger engineer in March, 1910, in which capacity he served until he was compelled to lay off because of ill health. Our sympathies are extended to his bereaved family.

O. E. Sorgius, chief clerk, and a disciple of Isaac Walton, while spending the weekend pursuing his favorite pastime, claims to have been the conqueror of a *giant* cat fish. As proof of his prowess he exhibits the accompanying picture of himself and his victim. However, thereby hangs a tale: The day was still and calm, not a sign of a cloud in the sky; the Scioto River was placid. About five p. m., Sorgius claims to have made his catch. He then immediately rowed to the shore and had the picture taken. To make his catch safe it was rigged with yards of rope, fastened to a huge log which was supposed to be securely anchored. Alas and alack, the sky became overcast, the wind blew, the rain came down in torrents, Sorgius scurried to shelter and left his prize in the turbulent waters, which rose with great rapidity. And at last, when the storm had subsided, so that he could venture forth and once again gaze upon his beloved prize, all that greeted him was water, the stream having become seven feet higher. He immediately patrolled the stream in his canoe but without success. This is his story—what is your verdict?

We were indeed fortunate in having J. T. Broderick, superintendent of Safety, with us at our July Safety Meeting. His talk was very interesting, and all the members agreed that it was one of the best meetings held for some time. We would like to have Mr. Broderick visit us often.

D. E. Sorgius, chief clerk to Division Accountant, enjoying his vacation

O. M. Allen, Agent, Butlerville, Ind., and son, John William

Nelson Bochard, car builder, during the recent blackberry season picked a three gallon pail rounding full of the precious fruit. He placed this pail under a tree until time to return home, but unfortunately could not find it again. While he is of the opinion that some one accidentally picked this up, we believe that he forgot which tree he had placed it under, as he states all the trees seemed to look alike when he discovered his loss. Nevertheless, blackberry wine is said to be very fine.

R. R. Kibler, agent at Washington Court House, has been elected chairman of Freight Claim Prevention Committee, and H. E. Coffey reelected secretary of this committee. Standing invitation is given all interested to attend these meetings, which are held at Chillicothe on the second Friday of each month. Encourage the newly elected officers by your attendance and let's stop "Freight Claims."

We noticed that the Yellowstone National Park authorities have had considerable trouble with tourists who persist in carving their initials on the park property, and that some arrests have been made. At the time this was published Miss Eva Eberle, stenographer in Superintendent's office, Chillicothe, was touring Yellowstone. We are wondering if the initials E. M. E. were found and if any trouble was caused thereby.

Indiana Division

Correspondent, H. S. ADAMS, Chief Clerk to Superintendent

Seymour

"Red-haired" Stants, motive power time-keeper, who has been suffering with the barbers' itch, has fully recovered. Everyone whom "Red" met had a new remedy, and-as he has tried them all, he says he can't tell what cured him. Next time he meets a fellow with the barbers' itch "Red" is going to say, "I'll tell you what will cure that; just get some cigar ashes, Vick's salve, flaxseed, blue vitriol, sugar of lead, zinc ointment, night shade, polk berries, ginger, prussic acid, dog soap and Sloan's liniment."

On August 5, the stork, when visiting the residence of A. M. Lucas, freight brakeman on West 8th Street, was quite generous, leaving twins, a son and a daughter.

JUST PUBLISHED

THIRD REVISED EDITION

The WALSCHAERT and Other Modern Radial Valve Gears for Locomotives

By WM. W. WOOD, Air Brake Inspector

245 Pages (5 x 7½)

Fully Illustrated

PRICE \$2.50

WITH the adoption of the Walschaert Valve Gear on nearly every modern locomotive in America, this book fills a place of real interest and usefulness. By a careful study of its pages, one can THOROUGHLY understand the Walschaert Valve Gear, as the author takes the plainest form of a steam engine—a stationary engine—in the rough, that will only turn its crank in one direction—and from it builds up—with the reader's help, a modern locomotive equipped with the Walschaert Valve Gear, complete.

THE CONTENTS OF THE BOOK ARE DIVIDED INTO FIVE PARTS

THE FIRST DIVISION contains an analysis of the Walschaert Valve Gear.
THE SECOND DIVISION treats on the Designing and Erecting of the Valve Gear.
THE THIRD DIVISION has to do with the actual work of the Walschaert Valve Gear on the road.
THE FOURTH DIVISION is composed entirely of questions and answers on the Walschaert Valve Gear.
THE FIFTH DIVISION deals with the Setting of Valves with the Walschaert Gear, the Hobart-Allfree Valve and Valve Gear, and the Baker-Pilliod Valve Gear in its original and improved form.

The book is fully illustrated, and a novel and interesting feature of the book is the folding diagrams with cardboard valve models, by means of which the actual operation of the valve under the influence of the Walschaert motion can be studied.

Dayton

On August 19, George Stoecklein, assistant chief clerk, surprised the Dayton employees by taking unto himself a helpmate, Miss Helen Hammond, stenographer to the chief clerk. The happy couple went to Chicago on a week's honeymoon. We congratulate these young people, and wish them all the health, happiness and prosperity possible.

East Dayton

Our vacation season is about over and all of us have returned to work in good health and fine spirits. If we could but stretch our imagination enough to believe some of the weird tales told by our vacationists, particularly those of Foreman F. G. Sehrt and Inspector J. P. Leahy, we would set about immediately to write some interesting movie scenarios.

On August 4, our city of Dayton was honored by a visit from our president, Daniel Willard, who made an address at the Chamber of Commerce on that day. We were delighted to give him a warm reception, and those who were fortunate enough to hear him will always hold a pleasant remembrance of his visit.

Each of the employees of the office, the shop and the roundhouse, has been presented with a book of instructions on Safety rules. These books will be cherished for their real worth and it is hoped that each man will profit by his study of them.

Dayton's baseball season is closed. Manager Lyons has promised us a better record for next season.

Our old friend, "Bill" Stricklin, who has been absent for a few months on account of illness, is now able to resume his duties. He has the hearty welcome of all of his fellow-workers.

We look with great pride upon the work of our car foreman, Robert O'Neil. Everything is activity just now with "Bob"; he is trying his best to comply with the instructions of Master Mechanic A. E. McMillan to keep everything moving. "Bob" says we need the cars and we will get them. Good work, "Bob," go to it!

Kentucky District

(S. V. & E. R. R.; L. F. R. R.; M. C. R. R.)

Correspondent, H. L. GRAHAM

A real "boss" is L. B. Thompson, yardmaster, Seymour, Ind.

Company Baseball Team at Jenkins, Kentucky

During the switchmen's illegal strike we are proud to state that we remained loyal to a man. When the call came to District Superintendent H. R. Laughlin for relief men to be sent to the yards that had been seriously handicapped, our men responded

CAR MILES

Baltimore and Ohio
versus the Field

BACK YOUR CHOICE!

with a will; more men offered to go than could be spared from the district. Altogether eight crews were sent to the Cincinnati and Pittsburgh yards and from all reports they certainly did make good.

The accompanying picture is of our baseball team at Jenkins, Ky., of which we are justly proud. The team is managed by our District Superintendent, H. R. Laughlin (standing second from left); first base is held down by Trainmaster George Dixon. This team has lost only two games during the entire season.

George Fugate, who was recently employed at Jenkins as clerk to Agent M. C. Thompson, has had the good fortune to succeed E. L. Cook as cashier. Mr. Cook recently resigned to take up other work.

We had with us recently an old friend, John Hamlet, formerly freight clerk at Jenkins, now agent at Van Lear. We didn't hear much from John, but judging from observation, he said considerable during his short stay. We could see his lips move but she wouldn't tell.

Mr. Mace, district claim agent, spent his vacation visiting his home near Baltimore, Md.

Our ball team has lost one of its strongest players, V. E. Goff, left fielder. Mr. Goff's eyes failed him to such an extent that it has become necessary for him to wear glasses. He says he can now see four balls where one ball ought to be. We are sorry to lose Goff; he surely could swat 'em.

"Good morning, madame. I deal in cast off clothing."

"Oh, how lucky! Do you think you have anything that would suit my husband?"

Sad But True

There was a man who fancied
That by driving good and fast
He'd get his car across the track
Before the train came past.
He'd miss the engine by an inch,
And make the train hands sore;
There was a man who fancied this—
There isn't any more.

There was a wise old trainman,
Expert at coupling cars,
He used his feet to push in place
The knuckles and drawbars.
He did it thus for many years,
And thought it was great fun;
He had two feet to push them with,
He now has only one.

Bill Jones on the repair track,
Imagined he could do
A moment's work beneath a car
Without the flag so blue.
Well, yes—he did it many times
In spite of rules and warnings;
One day an engine bumped the car
Bill's wife is now in mourning.

Between the rails of the northward track
Mike smoked his pipe of clay,
As "55" with time freight south
Sped noisily on her way.
'Twould take four steps to clear both tracks,
These steps Mike did not take,
Then Number 2 approached unheard,
Result—"An Irish Wake."

Screw Threads

WHEN we consider the importance and wide use of screw threads it seems strange that only within the last half century has it been thought possible to cut them by any other means than an engine lathe, and still more recent that any attempt at standardization of screw threads has been attempted.

Up to a few years ago most manufacturers worked to their own so-called standards. Gradually they awoke to the futility of such methods and the most progressive ones began to "sap ideas," and finally decided on certain specifications for a standard screw thread.

This was the Sharp V Thread, a step in the right direction, but the faults of the Sharp V Thread were many, the principal objection being that the top and bottom of the thread were theoretically intended to be dead sharp, an impossible shape to produce, and very easily broken. Also the sharp groove at the bottom of the thread was a source of weakness.

Sharp V Thread

Formula

$$p = \text{pitch} = \frac{1}{\text{No. of threads per inch}}$$

$$d = \text{depth} = p \times .866 \text{ theoretical size}$$

Realizing the faults of the Sharp V Thread, each manufacturer began to apply his own ideas of improvements, with the result that one manufacturer made a thread with a broad flat at the top and bottom of the threads—another cut his threads with a flat top and sharp bottom, and so forth,—no two manufacturers working to the same standards. Consequently, the bolts made by one concern would not fit the nuts made by another, and so standardization was still far from being a reality.

This condition existed until 1864 when William Sellers of Philadelphia proposed a standard form of thread which was designed to overcome the faults of the "V" thread. His design was accepted by Franklin Institute and called the "Sellers" thread until 1868 when it was made a U. S. Government standard and became known as the U. S. Standard Thread.

U. S. Standard Thread

Formula

$$p = \text{pitch} = \frac{1}{\text{No. of threads per inch}}$$

$$d = \text{depth} = \text{pitch} \times .6495 \text{ or } \frac{.6495}{n}$$

$$f = \text{flat} = \frac{\text{pitch}}{8}$$

$$n = \text{threads per inch}$$

Even after this Government recognition it was a hard fight to get manufacturers to overcome their prejudice against a change from their own standards, and it was not until 1909 that the leading tap and die manufacturers got together and unanimously decided that a campaign should be instituted to eliminate the "V" thread.

The Sellers or U. S. standard thread is now the most commonly used thread in the United States. When merely the form of thread of the U. S. Standard, but not the number of threads per inch corresponding to a certain diameter is referred to, the abbreviation USF (United States Form) is employed.

Other thread standards employing the U. S. Form are the S. A. E. and A. S. M. E. standards for fine threads and small sizes respectively and the French and International standards commonly used with the Metric System.

The sides of the thread form an angle of 60° with each other and the thread has a specified flat at the top and bottom, the width of the flat being equal to 1/8 of the pitch; the pitch being the distance from the center of one tooth to the center of the next tooth.

In adopting this definite width of flat, William Sellers overcame the faults of the "V" thread in several ways:

1. No sharp crest to wear easily or chip off.
2. Threading tools not needing a sharp point do not lose their "edge" so quickly.
3. A definite measurement of the outside diameter can be established.
4. The fact of possessing this established or basic outside diameter which could be accurately measured, made possible an exact co-ordination between the other proportions of the U. S. form of thread, so that complete uniformity or standardization was easily accomplished.
5. The weakness of the sharp V groove in the bottom of the thread of old style bolt was eliminated.

The Square Thread being just what its name implies was at one time used exclusively on adjusting and power conveying screws and in most cases where strength was needed.

However, on account of its perpendicular walls it is a troublesome thread to cut and for this and other reasons it is being rapidly superseded by the Acme thread, having a 29° wall angle which is stronger and more easily produced.

Acme Standard Screw Thread

Formula

$$p = \text{pitch} = \frac{1}{\text{No. threads per inch}}$$

$$d = \text{depth} = \frac{1}{2} \text{ pitch} + .010$$

$$f = \text{flat on top} = \text{pitch} \times .3707$$

In Great Britain the Whitworth thread, also known as British Standard Whitworth (B. S. W.) is the accepted standard form. This was proposed by Sir Joseph Whitworth and a full Table of Sizes published as early as the year 1841 and was quickly adopted as a standard by the English Government, and was the first recognized thread system.

In the Whitworth standard, the sides of the thread form an angle of 55° with one another, and the top and bottom of the thread are rounded.

Two-base hits—Benjamin, Nichols. Stolen bases—Berrett (2), Peddicord. Left on bases—Baltimore, 6; Ohio, 4. Bases on balls—Off Nichols, 1; off Moon, 1. Hits—Off Nichols, 2 in 9 innings; off Moon, 11 in 9 innings. Struck out—By Nichols, 3; by Moon, 7. Wild pitch—Moon. Passed ball—Tarzee. Winning pitcher—Nichols. Losing pitcher—Moon.

Immediately after the game, the players were assembled for the presentation of the cups by Mr. Shriver, senior vice-president. He proposed three cheers for the Ohio Division team, called them in approved cheer-leader style, and for good measure led the crowd in a rousing "tiger" for the good sports from the Western Lines. He then said:

"Baseball is the most typical game of

North America and has become part and parcel of our American life. Some people say that it is native to our soil and was played by the Indians, but I prefer to think that it is a natural development of the spirit of team work in all phases of American life, for it is the game which ideally exemplifies this spirit of teamwork.

"You boys represent the best of this baseball spirit on the Baltimore and Ohio, winners of the contests on the Eastern and Western Lines, respectively. I am sorry that the boys from the West had to lose, but as they did lose, I am glad it was to the Baltimore Division team. This cup was presented by a former vice-president whom we all admired, Mr. A. W. Thompson, and becomes the permanent possession of the team first winning it three times (Mr. Shriver then handed the cup to J. J. Publow, manager of the Baltimore Division team). This other cup is the gift of President Willard and becomes the permanent possession of the winning team. Mr. Willard is very sorry that he could not be here today to award this cup but I am glad to do so in his stead (the President's cup was then handed to Mr. Publow).

"I congratulate both teams on the fine exhibition of good sportsmanship and good ball playing. We are particularly glad to welcome the Ohio Division boys and hope that they will come to see us here again."

Back President Willard and Vice-President Galloway— Boost Car Miles

Side Lights on the Game

With better support of their pitcher, the Ohio Division boys might have copped the bacon. Moon played an errorless game and made 11 assists. He deserved better luck.

Manager Publow of the Baltimore Division team had his "pep" gallery working overtime and the Baltimore boys showed the ginger. Encouragement always helps.

"Bum" arguments were the exception. In all System games, any player starting one

ought to be ruled out of the game without further ado.

Nichols pitched a heady, hard, winning game and got good support. He also annexed a pretty two-bagger.

We understand that four of the players on the Baltimore Division team are members of Amos Tuttle's carpenter gang. If they handle their tools as well as their bats—well, come on, construction!

"Babe" Ruth was absent, nobody losing any balls in the outfield.

Next year announcement will be made weeks in advance of the date of the championship game and plans laid accordingly for a large attendance. This ought to be a Baltimore and Ohio gala day.

All the players in the System League will do well to carry their competing instinct into their everyday work. The Baltimore and Ohio needs fighting spirit, against carelessness, inefficiency and ignorance.

Some Baltimore rooters tried to get Moon's goat, but the western pitcher didn't bite. They said the "boy" scouts were after him—but he kept right on striking them out for a total of 7.

Other Ball Games

The "Cross Tie-gers"

Some of our famous System League teams may feel rather surprised that such a little burg as Green Spring should organize a baseball team; however, we take pleasure in introducing you to our "Cross Tie-gers" (get that?), as they were snapped at Hancock on August 3, just before defeating the latter team 16 to 6.

Organized in May under many difficulties and with little support, the "Cross Tie-gers" have been going strong, playing fast, snappy ball, with 12 games out of 17 to date to their credit. Not at all bad for a new team! We would like to eulogize each player, but it wouldn't be fair to use so much space, suffice that each has featured in one or more games.

July 17, split double-header at home, defeating Paw Paw, first game 6 to 4, losing second game to Cumberland Yanks, 4 to 2.

BALTIMORE DIVISION BASEBALL TEAM

System Champions for 1920, with trophy cups. Manager Publow is holding the Thompson cup, Field Manager Tuttle the President's cup, and Captain Zank and his mascot baby are between them

THE "CROSS TIE-ERS"

Left to right, sitting: R. Keister, ss., W. Cretchley, p., Paul Collins (manager), 3b., W. F. Kesler (captain), c. Standing: J. C. Alexander, rf., or 3b., A. Keister, lf., H. M. Whitford, cf., or ss., R. Saville, rf., H. L. Smith, 1b., Grover Patterson, 2b., E. E. Alexander (business manager)

July 25 at Great Cacapon, defeating Cacapon team, 15 to 9.

July 31, double-header at home, first game forfeited by Moorefield to Tie-gers, 9 to 0, losing second game to the crack Cumberland L. A. C. team, 8 to 6.

August 1 at home, defeating Cumberland Colts, 13 to 4.

Their last game to date at Hancock, August 3, where they brought home the bacon, 16 to 6. (That's where we snapped them.)

Baseball?—You bet,
That's 'em—All pep.
"Cross Tie-gers."

EIGHTH REVISED POCKET EDITION

Locomotive Breakdowns And Their Remedies

By GEO. L. FOWLER

Revised by WM. W. WOOD, Air Brake Instructor

202 Pages 4 x 6 1/2

Price \$1.50

Fully Illustrated

The new pocket edition of "Locomotive Breakdowns" has been revised by Wm. W. Wood, the well-known railroad expert, which is a sufficient guarantee that this work represents the best practice of the present day and is exhaustive in text and illustrations.

It is out of the question to try and tell you about every subject that is covered in this pocket edition of Locomotive Breakdowns. Just imagine all the common troubles that an engineer may expect to happen sometime, and then add all of the unexpected ones, troubles that could occur but that you had never thought about, and you will find that they are all here, in this Up-to-Date Edition of "Breakdowns," with the very best methods of repair.

CONTENTS:

I—Defective Valves. II—Accidents to the Valve Motion. III—Accidents to Cylinders, Steam Chests, Cylinders, and Pistons. IV—Accidents to Guides, Crossheads and Rods. V—The Walschaert Valve Motion; Accidents that May Happen to the Gear. VI—Accidents to Running Gears. VII—Truck and Frame Accidents. VIII—Boiler Troubles. IX—Defective Throttle and Steam Connections. X—Defective Draft Appliances. XI—Pump and Injector Troubles. XII—Accidents to Cab Fixtures. XIII—Tender Accidents. XIV—Miscellaneous Accidents. XV—Compound Locomotive Accidents. XVI—Tools and Appliances for Making Engine Repairs. XVII—Air Brake Troubles. XVIII—The Pyle-National Electric Headlight. XIX—Rules, Tables and Other Information.

Mt. Clare—Emrich, cf; Williams, 1b; Calder, 3b; Shanahan, lf; Eisenacker, ss; Bergman, rf, p; Robinson, c; Bolend, p, rf.

Score by Innings

	R	H	E
Mt. Clare.....	1	0	0
Monongah.....	0	1	4

Summary

Two-base hits—Ringler, Fischer. Three-base hit—Hoffman. Stolen base—Hopke. Sacrifice hits—Feeney, Hankey, Hoffman. Sacrifice fly—Calder. Double play—Davison to Fischer to Feeney. Base on balls—Off Bolend, 1; off Bergman, 4; off Davison, 2. Hit by pitcher—By Hopke (Emrich). Struck out—By Davison, 13; by Bergman, 6; by Bolend, 1. Passed ball—Robinson. Umpires—Kendall and Colebank. Time of game—2 hours.

On Saturday, August 14, the Monongah Division baseball team, playing Mt. Clare, made a better showing than it has made this summer, Huber going to short and Feeney going to first, while Mills went to the hot corner. Davison was never in better form; he allowed but two hits of the scratchiest kind and struck out 13 men, while his team-mates played good ball behind him. Mt. Clare started Bolend, but after two doubles and a triple in the third retired him in favor of Bergman, who did somewhat better, allowing but three hits the remainder of the game.

(Continued from page 61)

Whitworth Standard Thread

Formula

$$p = \text{pitch} = \frac{1}{\text{No. threads per inch}}$$

$$d = \text{depth} = \text{pitch} \times .64033$$

$$r = \text{radius} = \text{pitch} \times .1373$$

The Whitworth form of thread has two points of merit that commend it quickly where heavy service is required: *first*, screws with this form of thread have all of the strength of the U. S. thread without any edges or corners from which fractures may start; *second*, screws and nuts with this form of thread will work well together after continued heavy service, where other forms of thread would fail.

The objections to the Whitworth thread are that the angle of 55° cannot be measured or simply laid out with ordinary tools, and the rounded corners at the top and bottom of the threads are extremely difficult to produce. Here the United States form of thread has a decided advantage, as the angle is easily obtained, and the flat at the top and bottom of the thread can be easily and accurately made.

The British Standard Fine Screw Thread (B. S. F.) is simply an adaptation of the Whitworth thread for finer pitches and has the same angle and form.

The British Association Standard Thread (B. A.) is used for very small screw threads such as watch screws, in Great Britain and to some extent on the Continent. This B. A. thread is rounded at the top and bottom of the thread but has an angle of 47° 30' or 47½°.

British Association Screw Thread

Formula

$$p = \text{pitch} = \frac{1}{\text{No. threads per inch}}$$

$$d = \text{depth} = \text{pitch} \times .6$$

$$r = \text{radius} = \frac{2 \times \text{pitch}}{11}$$

The Standard Pipe Thread for the United States is known as the Briggs Standard Taper Pipe Thread, after Robert Briggs, who did not originate the thread though he supervised the manufacture of standard gages for pipe threads in 1830, while Superintendent of the Pascal Iron Works, the first large manufacturer of pipe in the United States.

However, few manufacturers adhered closely to the Briggs standard until 1885, when the A. S. M. E. in conjunction with the leading manufacturers of pipe dies and fittings, recognized the Briggs Paper Pipe Gages as the standard for male pipe threads. It was not until 1914 that a definite standard was adopted for female taper pipe gages, and 1915 before standard dimensions were agreed upon for straight pipe threads.

Briggs Standard Taper Pipe Thread

Taper of thread = 1/16" per foot = 1/16" per inch

$$\text{Depth of thread} = \frac{.833}{\text{threads per inch}}$$

The Briggs Standard Pipe Thread has an angle of 60° and was originally intended to be slightly rounded at the top and bottom of the thread, but owing to the difficulty in manufacturing, the bottom of the thread is left sharp and the top is slightly flattened.

The thread is tapered 3/4" to the foot so that when the pipe is screwed into the socket it makes a stream or water tight fit.

The British Standard Pipe Thread has the same taper as the Briggs Standard but uses the Whitworth form of thread with an angle of 55° with the threads rounded at both top and bottom.

There are numerous other forms of thread in use at the present time but they are simply modifications of those already mentioned.

British Standard Pipe Thread

Whitworth Form

Taper 3/4 inch per foot.

$$\text{Depth of thread} = .6403 \div \text{number of threads per inch.}$$

Wanted to See It

"I done heard it read in de paper," said Uncle Raspberry, "dat some o' dese yeah flyin'-machine gemmen says a man kin do anything a bird kin."

"That's what they say," replied Aunt Chloe.

"Well, when any o' dem sees a man sit fast asleep, holdin' on to a tree branch wif his feet, I sho wishes dey'd call me to have a look."—*The Bulletin*.

Too Good

"Well, Dinah, I hear you are married." "Yassum," said the former cook, "I'se done got me a man now."

"Is he a good provider?"

"Yassum. He's a mighty good provider, but I'se powerful skeered he's gwine ter git kitched at it."—*The Bulletin*.

Stifel's Indigo Cloth

Standard for over 75 years

This is Mr. Charles Broll, one of the oldest engineers of the Baltimore and Ohio, who runs the famous "Royal Blue." Mr. Broll wears and swears by "true blue" Stifel's Indigo Cloth.

Since the time of the first railroads, strong, sturdy, fast-color, never-break-in-the-print Stifel's Indigo has been the popular garment cloth for railroad men. Before you buy

OVERALLS, COVERALLS, JUMPERS or UNIFORMS

look for this trade-mark on
the back of the cloth inside
the garment. It is the

guarantee of the genuine Stifel's
Indigo Cloth, which never has been
successfully imitated. Garments
sold by dealers everywhere.
We are makers of the cloth only.

**Only
\$3.50
A Month**

And all of this for \$3.50—only \$3.50 per month—a great reduction in watch prices—direct to you—positively the exact prices the wholesale dealer would have to pay.

Think of the high grade, guaranteed watch we offer here at such a remarkable price. And if you wish, you may pay this price at the rate of \$3.50 a month. Indeed, the days of exorbitant watch prices have passed. Write now.

See It First You don't pay a cent to anybody until you see the watch. You don't buy a

Burlington Watch without seeing it. Look at the splendid beauty of the watch itself. Thin model, handsomely shaped—aristocratic in every line. Then look at the works. There you will see the masterpiece of the watch makers' skill, a perfect timepiece adjusted to positions, temperature and isochronism.

Practically every vessel in the U. S. Navy has many Burlington watches aboard. Some have over 100 Burlingtons. The victory of the Burlington among the men in the U. S. Navy is testimony of Burlington superiority.

Send Your Name on This Free Coupon

Get the Burlington Watch Book by sending this coupon now. You will know a lot more about watch buying when you read it. You will be able to "steer clear" of over-priced watches which are no better. Send the coupon today for the watch book and our offer

What Are Your Children Reading?

ARE your children's heroes the great figures, like Joan of Arc, whose noble lives inspire high ideals? You know, it is their heroes, the men and women who are made to seem wonderful and worthy to pattern after, that form their characters.

You can choose your children's heroes and heroines for them. You can determine their ideals. You can prepare them for happy, cultured, successful lives. The wonderful free booklet shown below tells how.

It contains the advice of the greatest teachers in America about the young folks' reading—priceless counsel for fathers and mothers who care. It tells the fascinating story of

Out of all the stories and essays and poems in the world, these great educators have selected just the ones that are best adapted to form character, make schoolwork easier, and insure success—847 of them. And they are just the ones children love best.

Perhaps you would like to lay the corner stone of a library for your children this Christmas. For this purpose The Junior Classics are ideal. For the boy or girl to be able to point to The Junior Classics and say, "This is my library," is a tremendously important step in the development of a cultivated taste. But before you decide you will want to know more about them.

How these 847 Junior Classics were chosen—what they are—how a reading guide has been prepared by grades to go with them, so that parents can plan their children's reading—and how you may have them for your boy or girl—all this is told in this valuable free booklet. Send for it to-day. "It is worth a hundred dollars to me," wrote one mother.

Yet it is free. It will be sent to you without obligation. All you need to do is to send the coupon to-day.

The Junior Classics

Selected by *Dr. William Allan Neilson*, President of Smith College. With an Introduction by *Dr. Charles W. Eliot*, President Emeritus of Harvard University

**This book free
to every reader of
the
Baltimore and Ohio
Magazine**

Wise Jimmy

"Jimmy," said the fond mother to her smart eleven-year-old, "what became of that little pie I made for you as a treat yesterday? Did you eat it?"

"No, mama," answered Jimmy with a grin; "I gave it to my teacher at school instead."

"That was very nice and generous of you, Jimmy," complimented his mother. "And did your teacher eat it?"

"Yes, I think so," answered Jimmy. "She wasn't at school today."—London Tid-Bits.

Do as He Was Done By

The goose had been carved and everybody had tasted it. It was excellent. The negro minister, who was the guest of honor, could not restrain his enthusiasm.

"Dat's as fine a goose as I evah see, Brudder William," he said, to his host. "Whar did you git such a fine goose?"

"Well, now, Pahson," replied the carver of the goose, exhibiting great dignity and reticence, "when you preaches a speshul good sermon I never axes you whar you got it. I hopes you will show me the same consideration."—Exchange.

No-Accident Campaign, October 18 to November 16; Prizes to the Winners

One of the most notable features of our operations during 1919 were the several No-Accident Campaigns, culminating in the National Accident Prevention Drive, country wide in its scope. These special efforts to reduce accidents, by focusing the attention of railroaders on the appalling waste and suffering that result from carelessness, brought about a reduction in the number of injuries, fatal and otherwise, and a saving in money, which were gratifying to every officer and employe of the Railroad.

Now comes a new system wide drive from October 18 to November 16, inclusive, along the same lines, with prizes to be awarded to the winners on both the Eastern and Western Lines, as follows:

FIRST

The pennant described on this page will be awarded to each winning division.

The pennants for the winning divisions in the "No-Accident Campaigns" are beautiful. They are sixteen feet long and eight wide, the body a deep royal blue in color, with a white border all around, and the letters in white. The SAFETY design is painted in gold, two shades of blue and white. The materials used are the best obtainable and the pennants will long be admired where flown by the winning divisions.

SECOND

Each winning division will be given a banquet and entertainment soon after the close of the campaign. One hundred employes on each winning division, representing all departments, will be chosen by lot to attend this celebration.

THIRD

Three prizes of \$25.00, \$15.00 and \$10.00 respectively, on both the Eastern and Western Lines (six prizes altogether), will be given for the best, second best and third best articles submitted to the Editor of the MAGAZINE on the subject "HOW WE CAN HELP IN THE NO-ACCIDENT CAMPAIGN."

This competition is open to all employes. The trackman or section foreman has as much chance of winning a prize as the division engineer; the freight handler, as the agent; the trainman, as the trainmaster; the machinist, as the master mechanic; the clerk, as the superintendent. It is suggested that each employe who enters the competition treat the subject from the standpoint of his kind of work. This is not a condition of the contest, however.

Wherever possible, the articles submitted should be typewritten, but employes not having typewriter facilities can submit in long hand. Write on one side of the sheet only, allowing plenty of space between lines. Do not place any evidence of authorship of article either on envelope in which article is mailed or on article itself. But with article enclose a blank envelope containing name, position and address of writer. The authors of the articles will not be known, even to the judges, until the winning contributions have been decided upon.

The following officials have again kindly consented to act as judges in the competition:

EASTERN LINES

F. E. BLASER, assistant to vice-president.
J. T. CARROLL, general superintendent motive power.
H. B. VOORHEES, general manager, New York Terminal lines.
EARL STIMSON, chief engineer maintenance.
E. T. HORN, general supervisor terminals.

WESTERN LINES

J. B. CAROTHERS, assistant to general manager.
E. G. LANE, engineer maintenance of way.
G. D. BROOKE, superintendent of transportation.
W. M. MALTHANER, superintendent motive power, North-west District.

The winning articles will be published in the MAGAZINE and contributions must be mailed to the Editor, Mount Royal Station, Baltimore, Md., by November 20.

Stanton Ennes, General Manager, Eastern Lines

THE "G. M." has always been a magic expression on railroads. As the officer to whom the management looks for results in operation and as the officer who has to spend much of his time on line to get these results, with consequent close contact with the officers and employes on the divisions and districts, he has come to be regarded as the touchstone between the "powers that be" and the rank and file.

Also, "the G. M. is on line" has a double significance in railroad parlance. An ordinary one because of the frequent occasions on which the expression is used, by virtue of the general manager's obligation and habit to get around the railroad frequently. An extraordinary one because of the large authority vested in this officer. In this respect "the G. M. is on line" also means "get on your toes."

The theory of organization in the operating department of the Baltimore and Ohio is this: As chiefs of operating units, superintendents and general superintendents are given practically all the authority they are willing to assume and, to borrow from the vernacular, "can get away with." This also applies to the general manager, but its significance is vastly greater because of the large territory, the multiplied operations and the enormous property and personnel under his jurisdiction.

When embargoes are declared in big cities on the eastern seaboard, he has to find room for or make other disposition of the thousands of cars that roll over the Alleghenies each day on our lines.

When motive power is short, as is the case now on nearly all the railroads, he is hard put to it to handle the business offered and to make a nice adjustment of this power between divisions and between districts.

When new facilities are needed it is his

O. K. which carries the recommendation through for final executive approval.

When congestion occurs here, or the efficiency of operations falls below normal there, it is his job to find the remedy by making quick and effective changes in methods and personnel.

On his staff are a superintendent of Motive Power, and an engineer Maintenance of Way, both trained and technical men in their respective specialties. These are in addition to the line officers, the general superintendents and superintendents, who actually handle our operations.

Among the few officers of the Baltimore and Ohio who have not been born and bred on our Railroad is the general manager of our Eastern Lines, Stanton Ennes. Mr. Ennes was born in St. Louis in 1864, in a railroad family, his father having been roadmaster for the Missouri Pacific Railway, as well as a contractor in railroad construction.

On his own initiative and while he was attending high school, Mr. Ennes got a smattering of telegraphy.

The famous dictum of Horace Greeley, "Go West, young man" was the lure which drew many young men, not only in the extreme east, but also in points as far west as St. Louis, toward the pioneering developments then under way still further west. Mr. Ennes was one of them and he went to work as an operator for the Texas and Pacific Railroad as he was finishing his high school course.

The Texas and Pacific was built west across the plains and Mr. Ennes was at the extreme front of this construction work with the terminal agent of this railroad.

After six months in this position, the Texas and Pacific leased trackage rights on the Southern Pacific and many of the employes who had been taken on for the construction work found themselves out of a job. Among them was Mr. Ennes, who then went to El Paso and entered service there as a brakeman, working in Western Texas, New Mexico and Arizona.

The failing health of his father later made it necessary for him to return to St. Louis, where he entered service with the Missouri Pacific. He was made superintendent of their Joplin Division at Nevada, Mo., in 1902.

In 1904 he accepted an attractive offer to go with the Western Maryland as their superintendent. At that time the trackage of this railroad did not extend west of Hancock, and as the only superintendent of the road, Mr. Ennes had immediate charge of all its operations.

With a change in the management of the Western Maryland (changes in railroad managements were common in those days of receiverships, reorganizations and amalgamations on the railroads of the country generally) Mr. Ennes went with the Grand Trunk for a year and three months, serving first as trainmaster and then as

Stanton Ennes, General Manager, Eastern Lines

assistant superintendent. He then became a superintendent on the Great Northern Railroad and continued in this position for seven years.

When Mr. Carl Gray went from the presidency of the Great Northern to the presidency of the Western Maryland, Mr. Ennes came to Baltimore as general manager of the Western Maryland. In 1918, soon after the railroads were placed under Federal control, he was also made general manager of the Baltimore and Ohio, Eastern Lines, and the other smaller railroads under the eastern jurisdiction of the Federal manager of the Baltimore and Ohio Railroad. In March, 1920, Mr. Ennes was appointed general manager of the Baltimore and Ohio, Eastern Lines, after the return to corporate control.

Several months ago the writer prepared a list of 30 subjects which appeared to him as being interesting for discussion in the *MAGAZINE*. This list was sent to a number of officers, among them Mr. Ennes, with a request for suggestions, and his letter in reply contained so much of interest, so much opportunity for study and thought on the part of our readers, that we are quoting it here verbatim:

A Railroad University?

"In asking me to suggest subjects that should be interesting to the readers of our *MAGAZINE* you have opened up a 'floodgate' that is in danger of swamping you.

"For years I have had a thought, only partially developed, of trying to find a way to instruct officers, from the youngest junior to myself, on the basic fundamentals of our transportation business. One of the plans for reaching them that I have at times considered was to make use of the correspondence school idea, and when you suggest a series of instructive letters, you will appreciate the temptation to take advantage of your offer.

"The number of questions that the student of our business would formulate are countless, and, doubtless, some of them would furnish interesting subjects for use in your series of articles.

"I have always had in mind to begin the instructions by asking, 'Why is a Railroad?' and try to make the student understand and appreciate the necessity, importance, and if you please—dignity, of our profession.

"Leaving general subjects of that character, we would ask: Why is a Division Terminal?—It is apparently a place where cars are badly delayed and orderly transportation interrupted; Why should we have Division Terminals? On this subject we

would undertake to instruct in the necessary component parts of the Division Terminal: First—How should the tracks be arranged? What facilities should be afforded? If your Division Terminal included an engine terminal, what should the engine terminal consist of? What style of engine house is preferable? Should we furnish coal and water, and if so, in what manner? What organization would you provide to handle 75 engines per day?

"Leaving the Division Terminal—take up the Local Station. Why is it necessary? What relationship is sustained with the public at local stations? What is necessary to conduct the Company's business with the public at local stations?

"Going to train service—Why are passenger trains usually made up with postal cars next to the engine, followed by express, baggage, coaches and sleeping cars? What is the best way to handle passengers on a local train? What is the best way to assemble a local freight train? Where would you place the way cars, next to the engine, in the middle of the train, or next ahead of the caboose, and why?

"From all of which you will appreciate the suggested danger of your being swamped."

Have these ideas ever occurred to the reader before? The writer is free to confess that they never had to him. Yet it is an extraordinary circumstance that with railroading the second largest business in this country, second only to agriculture, there is not a big and comprehensive school or college of railroad transportation, capable of training young men.

The Railroad in Progress of Civilization

Amplifying on this thought, Mr. Ennes said:

"Practically the only school for the railroad man is the school of experience, where he learns from his own mistakes and those of the men who work with him. The doctor, the engineer, the lawyer and all other professional men have comprehensive college courses for their training. And yet railroading, the second biggest business in this country, has not.

"Looked at from another standpoint also we can see the importance of our vocation and the necessity for trained men to develop and operate it efficiently.

"Man's first desire was for food and he tilled the soil; then for shelter for himself and he raised sheep for wool and spun bark and other fibre to make garments; then for additional shelter, and he cut down trees and built cabins and rude furniture.

"There came a time, however, when the individual desired things different from those he could produce, and he took his overproduction in grain, and meat, and rude timbers, and bartered these things for the refinements of civilization he could get in exchange; for jewels and ornaments, education and entertainment.

"The development of this system of exchange brought about the development of transportation, first by water, probably; then by land on rude sledges and carts, and later by a queer looking vehicle which was pulled by horses along the wooden rails of our own Baltimore and Ohio Railroad between Baltimore and Ellicott's Mills. The railroad is now by far the largest single carrier of freight and passengers.

"I mention this to show how basic, how fundamental in the growth of civilization, and how important in its present development, is the business of railroading. Without it modern life would be impossible, the city of a million people a thing yet unattained.

"And still we have no great school or college of transportation, except that of practical experience.

"Hence, for many years, I have always hoped that we might develop some systematic method of training our young men. I have thought of the correspondence schools and the large uses to which they have been put, or of any other large organization which could train young men against the many mistakes they make when they are thrown into active railroad life without training.

"In many respects railroading is an exact science. There are certain fundamental principles of operation, which have been learned by years of experience and which could be taught as easily and as thoroughly as the tables of multiplication. It seems unfortunate that the young man who feels the thrill and the lure of the railroad business, cannot go to a school which will teach him the fundamental principles of his business, will prepare him against the mistakes that have been made and repented of by others, and generally fit him to become a trained railroad man. What a boon to transportation, to the young man himself, to the railroad for which he works, and to the service of the country!

The Railroad Man's Unwillingness to Accept Increased Responsibilities

"Besides this lack of an adequate transportation school or university there is one other thing often impressed on my mind, namely, the lack of men on the Railroad who are willing to accept the promotions

which entail increased responsibilities and harder study and work. We have so many capable engineers who won't tackle the job of road foreman of engines because it means being out on line so much, in so many emergencies and at such unexpected times. We have so many splendid conductors who can't see a trainmaster's job. They are not willing to stand the gaff which this promotion means, the long hours and the constant digging into trouble and straightening it out."

Here I interrupted Mr. Ennes by saying that I knew a number of trainmasters, and that from what I had heard of their work, the long days or the long nights (and often a combination of both) and the perplexities and emergencies entering into the job, it did not seem to be an envious one. And I asked him if there was any way a man could avoid this and still go up the line.

"None that I have discovered," he replied. "And the further along one gets in the railroad game, the longer his hours and the harder he has to dig."

And the more one knows about the work of our supervising officers, the readier they are to agree with this statement.

Erratum

On page 13 of the September issue it was stated that the gross ton miles for August were 2,099,692,723. This figure was incorrect, and should have been 4,022,323,700.

They Increased Car Miles

The following is chosen from many similar items among the Honor Roll notes in the last issue. It is typical of how many employees, by vigilance, have averted accidents, helped maintain efficiency and increase car miles:

On June 24, Brakeman J. H. Myers with Conductor John Severn on No. 94, engine 4158, Baltimore Division, detected odor of burning wood as train was approaching Ogden. Investigation developed a broken arch bar on rear truck of C. P. car 14343, loaded with grain. Train was brought to a stop by Conductor Severn by applying the air from the rear and by careful handling of the car it was moved to Feltonville and placed on siding. Both Conductor Severn and Brakeman Myers have been complimented on their handling of the situation.

They Increased Car Miles

Car Miles

September's record of average carloads and average miles per car per day is not ready as we go to press. It is expected, however, that the record for August will be bettered, even if the average of 31 miles per car per day, the standard set for September, is not reached.

For several months the Baltimore and Ohio has been carrying, and is still carrying the largest business in its history. For instance, the gross ton miles for August were 4,022,323,700, the peak record to date and an increase of over 16 per cent. over August, 1919. Again, the gross ton miles for September were 3,796,373,600, an increase over September, 1919, of over 8 per cent.

Such a record business with a railroad machine considerably depleted by war time demands and lack of repairs and renewals, taxes facilities to the utmost, and it is difficult to make efficiency records along the line of average miles per car per day and average carloads.

With the decrease in business in September as compared with August, and indications of further monthly decreases, these factors should show a decided improvement during the remaining months of the autumn. Winter is not far off, with its seasonal operating difficulties, and record breaking average carloads and average miles per car per day should be shown during October and November, if at all during the balance of this year.

The Management appreciates the efforts which are being made toward greater efficiency and hopes that the end of this year will see new standards set on our Railroad.

No-Accident Campaign, October 18 to November 16, 1920

*We are trying to better the splendid Safety records made by the Baltimore and Ohio during 1919.
Will you help?*

SAFETY has come to stay in all the industries. Five years ago you might have found every other man on the railroads unconvinced. Today they believe in Safety almost without exception—it is only a question of keeping the subject emphatically and constantly before them.

Hence the No-Accident Campaign, October 18 to November 16, on the Baltimore and Ohio, announced in detail on page 4 of this issue.

In his address at the recent convention of the National Safety Council, Ralph C. Richards, of the Northwestern Railroad, the dean of railroad Safety men, eloquently said that passing time simply served to verify more and more firmly the fact that "Safety" is the most important single element in all industrial life. His remarks were widely quoted in the newspapers and favorable allusion made to them by the responsible heads of many large industries. Officers and employees of the railroads and other big organizations all over the country are beginning to understand that the closer any organization gets to Safety standards, the more successful its operations and prosperous all those connected with it.

If careful planning, forethought and adequate preparation count for much, our current No-Accident Campaign should be the most successful we have ever had. Ten thousand colored posters printed with the design used as the cover of this issue of the MAGAZINE, have been circulated all over the Railroad. The Safety Department and our operating officials have given great thought to the campaign, as to the best time to have it, the length of period which will show the best results, etc., etc. Furthermore, the same prizes which were given during the No-Accident Campaigns conducted at different periods on the

Eastern Lines and Western Lines last year, will be awarded this year.

Last year the Monongah Division was first on the Eastern Lines and the Toledo Division first on the Western Lines. Other divisions gave them a hard fight, however, especially on the Western Lines, and we do not think that they will be permitted to run off with first money again this year.

In order that uniform records can be kept for all divisions, the following regulations to govern the No-Accident Campaign have been issued by the Safety Department:

1. ACCIDENTS TO BE REPORTED—

(a) All train accidents occurring on main, side and industrial tracks, yards, etc., requiring the use of relief train.

(b) Casualties to all employees on duty, regardless of class, the casualties to include those reportable to the Interstate Commerce Commission; that is, employees killed, or dying within 24 hours as a result of injuries, and employees injured where disability is of more than three days' duration.

2. METHOD TO BE USED TO DETERMINE WINNER—

Gross ton mile basis on division; man hour basis in departments referred to in paragraph following, beginning "Superintendents will not include, etc."

3. COMPARISON WILL BE MADE WITH THE RECORD OF THE DIVISION ITSELF DURING SAME PERIOD LAST YEAR.

4. COMPARISON WILL BE MADE WITH RECORD OF SAME PERIOD LAST YEAR IN DEPARTMENTS USING MAN HOUR BASIS.

In arriving at the total accidents chargeable to each division during the campaign, the casualties to employees shall be included with the train accidents.

The No-Accident Campaign will start at 12.01 a. m., October 18, 1920, but the first report of train accidents and personal injuries for that day should not be sent until October 31. The report for October 19, for example, will be sent October 22; the report for October 20 will be sent October 23, and so on until the end of the drive. The reason for waiting is because of the fact that it cannot be determined until after THREE DAYS whether an injury is reportable according to Interstate Commerce Commission rules.

Reports will be sent by mailgram to J. T. Broderick, superintendent Safety Department, in the following code order:

- A—Date for which report is made.
- B—Name of division.
- C—Number of employees killed.
- D—Number of employees injured (off duty more than three days).
- E—Number of train accidents requiring use of relief train.
- F—Gross ton mileage.

The reports to be made as outlined above are not to interfere in any way with the telegraphic reports now made of train accidents on Form 491, or report of personal injuries on Form 491-A—Revised.

Superintendents will not include in this daily report any fatality or injury that occurs among employees at Mt. Clare Shops, Martinsburg Shops, Tie Treating Plant, Police, Signal and Stores Departments, and Tunnel Gangs. Separate reports will be submitted by the

To All Officers and Employees:

We have proved by "No-Accident Campaigns" in the past that we can reduce accidents when we go after them with the determination to show that railroading can be made a safe occupation. You will not relax, I am sure, in your interest and earnest effort to the end of the 1920 drive, which begins October 18 and will continue until November 16, so that it can be said that the men of the Baltimore and Ohio excel in this as in all other tasks.

C. M. Galloway

Vice-President, Operation and Maintenance.

heads of these departments and by the superintendent of the Baltimore Terminal Division, and comparison will be made on the basis of man hours worked with the same period last year.

The above rules and regulations are exactly the same as those under which the campaigns were conducted last year, as worked out by the general superintendents and superintendents of the Railroad.

Last year there were about 80 contestants, all told, in the Prize Essay Contest. The prizes are well worth the effort of submitting an article and it is hoped that we will have at least 100 entries this year.

Interesting and well worth while as the prize features of the campaign are, however, they are but a means to an end. The real goal aimed at is the

reduction in personal injuries and accidents, substantial and immediate progress toward that ideal on the Railroad which, when reached, will mean that as a father says "Good-bye" to his family in the morning as he goes to work, they will know that he is coming home to them at night, safe, and his faculties unimpaired, because the Baltimore and Ohio is the safest Railroad.

There are many important things that we are trying to do now in the interest of the great family of employees to which we belong. None, however, compares in importance with Safety, which, as President Willard said eight years ago, should always be first in importance in the operations of the Baltimore and Ohio.

has run over ever state an' person in this land of the free, and goin' strong for Urope. If this tree-o of sprinters wood on'y start a leeg or a associashun or wot ever they want to call it of brotherly love an' sprint in the same directshun, an' 'low ther oratory to flow as do the waters of the rivers, headed for a common goal, ther wood be 110 millyun happy little tributaries, lecapin' from rock to rock a beatin' it on ward to lend ther strength to the mighty flow in its on ward rush to the goal of piece and prosperity.

It aint the tug o'war we want, its "everlastin' teamwork." It aint beutiful words, its beutiful deeds wot will bring piece on earth good will tor'd men.

Yours Truly,
D. S. PATCHER.

D. S. Patcher on the "Cummin Elecshun"

GARRETT, IND., 9-14-20.

Deer Ed—I'm all upset tonite, cuz in mos' ever' corner i sea a lot of guys an' a fu of the tenderer sexes a standin' aroun' a talkin' about editeers an' mos' of 'em say they aint goin' to vote a tall cuz editeers is jus' like loyers, they aint honest an' i go rite along home an' don't say nuthin' an try to screw up a nuff nerve to ast the wife, wot is a editeer, but cuz haf ben foolin her for 25 yrs bye never askin' fer no informashun i aint got no curage now, an' that is wye she sum times thinks im almos' brite. I sed im goin' to ast Mr. Hamm, wot works on the weakly *Clipper*, sos i went down to the corner drug store an' bot 4 dollars an' 90 cts worth of lemon extract to prime up my nurve an' i went rite acrost the st to the *Clipper* offs an' found Mr. Hamm in, witch is unusual, an' i sed, rite out, wot is a editeer? An' he loked at me kinda beninely, an' sed, a editeer is a cross atween a printer an' a sprinter, cuz they gotta be a printer an' set up type afore they can be a editeer and set up nites. An' editeers has got to be sprinters sos they can run faster than the guys wot they print lyes about.

An' I saw alitewot dawned upon me. An' i sed that is the reason wye them wise ginks nomanated editeers at Chi and S. F. cuz they's both sprinters.

The guy from Chi got a runnin' start over the feller from S. F., but he is like the rabbitt wot sprinted with a turtle, he got so far ahead he stopped to rest in the shade of the ole apple tree, in his home town an' the other guy past him, so he clumb up on his front porch an' wigwagged for us common people to cum an' lissen to his fol-de-rol, cuz he's about all in an' cant get down offen his perch.

But his lil-fren—Newmaan Hay—read a chapter outen that Christshun Scienence booklet wot is entittled "Vim an' Vigor" to him an' he got a flying start offen his perch last Tuesday an' i dont gess he never ought to step morn a couple times afore he runs up against them golden gates where the Sun Kist oranges grown. I gess he's got to go sum to ketch up with the other fella, cuz he borrowed a race horse an' a sulky up in Minny-soty an' gained a mile, an a lot of farmers' votes. Must a ben a trick sulky with a vackuum seat cuz that guy never wood a stuck on a tearin' off a mile in 210 flat footed. They's both chasin' the leeg a nashuns, one of witch is goin' to tye the leeg on to nashuns sos it won't cum off an witch will bring piece and etc. an' we won't never haf no more wars, an' the other of witch is goin' to drive a flyin' wedge atween leeg an' nashuns and hitch associashun in ahead of nashuns cuz leeg sounds like a baseball game an' grates on the sensitive an' highly inteectual nurves of us common people an' associashun sounds a lot more refinded any way.

You mind wot Petey Barnum sed about a sucker wot was born every minute. I'll say Petey wuz rite, on'y he missed it about 9.

Afore i cloths up i must menshun a editeer wot is a grate sprinter wot lives in a little town witch is named after a ded president wot is a hero. Presidents haf gotta snap, all they gotta do is to die to be heroes. This little town is situated about haf way atween N. Y. and S. F. in a beautiful valley, wot is known as grape juice valley an' this editeer wot lives ther don't haf to sprint no more hissclf cuz he has trained the grape juice so it runs for him an' up to date it

Transfers, Appointments, Promotions

Effective September 1

C. Higinbotham appointed trainmaster, Cleveland, Lorain and Wheeling Sub-division, including Holloway Terminal, Wheeling Division, headquarters Holloway, Ohio, vice C. M. Shriver, promoted.

The territory on Indiana Division, Oakley, Ohio, to North Bend, Ohio, both inclusive and Toledo Division, Cincinnati to Glendale, Ohio, inclusive, will comprise the Cincinnati Terminal Division. J. H. Meyers, appointed superintendent, with headquarters at Cincinnati.

J. F. Long, appointed master mechanic, headquarters Connellsville, Pa., vice H. J. Burkley, assigned to other duties.

Effective September 16

H. G. Massman, appointed agent at Seymour, Indiana, temporarily, vice E. Massman, transferred to position of supervising agent.

Effective September 20

W. G. Robey, appointed trainmaster with jurisdiction over Grafton and Belington Sub-division and Grafton and Fairmont Sub-division, headquarters Grafton, W. Va., vice C. Higinbotham, transferred.

T. A. Bailey, appointed trainmaster with jurisdiction over Parkersburg Sub-division, Grafton to Parkersburg and that portion of W. Va. & P. Sub-division between Clarksburg and Weston, W. Va., headquarters Clarksburg, W. Va., vice J. McClung, promoted.

Effective October 1

J. L. Succerott, appointed division engineer, Staten Island Rapid Transit Railway Company, vice H. W. Orde-man, resigned.

Oversight Cost Company \$2,200 on One Shipment

Improper Loading of Automobiles Frequently Causes Loss and Damage

By C. C. Glessner
General Freight Claim Agent

BY assuming obligation of the shipper to carry out requirements of the Consolidated Freight Classification No. 1, which he failed to fulfill, one of our employees cost the Company \$2,200 in settlement of a loss and damage freight claim.

lected to empty the tanks, particularly the water tanks, and because of low temperature, the water froze in radiators, causing the damage.

The above is but one instance of many in which oversight on the part of our employees results in claims which the Company is liable for,

No. 1—Failure to chock automobile to prevent it from jarring loose sideways

Shipments involved in this claim were automobiles and trucks brought to the station under their own power. The shipper, in accordance with Classification requirements, started to empty the tanks, but one of our employees asked him not to do so, saying that he would load the machines under their own power and then empty the tanks. He loaded the machines accordingly but neg-

lected to empty the tanks, particularly the water tanks, and because of low temperature, the water froze in radiators, causing the damage. The above is but one instance of many in which oversight on the part of our employees results in claims which the Company is liable for,

NOTE 1—"Automobiles operated by gasoline, naphtha or steam must, during

No. 2—Insecure lofting of car resulting in this damage to car underneath

the period from October 1 to May 1, have water tanks emptied before being tendered by shippers for transportation, and shippers must certify on shipping orders and bills of lading that water tanks have been emptied (or that this Note has been complied with)."

NOTE 4—"Automobiles loaded on open cars must have readily detachable parts removed and such parts and tools, if any, must be placed in metal strapped wooden boxes, which must be securely fastened to the vehicle or the floor of the open car; or such parts may be placed in compartments under seat, such compartments to be securely closed and nailed."

Photograph No. 1 illustrates the loading of an automobile in car, properly chocked to keep it from going backward or forward, but the trouble is they failed to block it on the sides to prevent it from going sideways.

Photograph No. 2 illustrates the improper lofting of automobiles in car, where bracing broke, resulting in top car coming down on the lower car, causing damage as shown.

Photograph No. 3 shows kind of blocks used by some shippers, which are not proper and they should not be permitted to use same.

I. C. C. No. 15273, Exceptions to the Current Official Classification Item No. 506 provides:

"On automobiles or other vehicles, carloads or less carloads, shipped on their own wheels, when the material and labor for bracing or chocking the vehicles in or on cars is furnished by the carrier, a charge of \$1.00 per automobile or other vehicle will be assessed for furnishing such material and labor."

Photograph No. 4 illustrates the rear of one of three automobiles which shippers endeavored to load in an automobile car 39 feet 8½ inches whereas the three machines measure 39 feet over all, leaving but 8½ inches distributed as open space, between the machines and ends of car, about 2 inches for each open space. This, under normal conditions, is not enough room to insure absolute protection if the machines do not jump their wheel blocking.

Photograph No. 5 is the story of three automobiles moving on an open car, covered by tarpaulins. At point en route it was found that the tarpaulins had caught fire, evidently from a spark from engine, seriously damaging two of the automobiles and slightly damaging the third. We were called upon to pay the bill.

Photograph No. 6 shows one of several cars moving on open car under tarpaulins, which some vandals evidently located, and what they could not carry away they destroyed. It will be noted that all the upholstery was mutilated, engine put out of commission, etc.

No. 3—Insecure and inadequate blocking which should not be used

Photograph No. 7 illustrates side view of wheel, with tire fastened to floor of car.

Photograph No. 8 illustrates wheel with tire on, completely blocked.

Photograph No. 9 explains proper blocking to be used in the loading of automobiles and trucks with solid or pneumatic tires.

No. 4—Results of not leaving sufficient space between loaded cars

Supplement No. 2 to Master Car Builders' Association Loading Rules goes into detail as to the proper manner of loading automobiles, trucks and trailers on freight cars. Doubtless a brief synopsis of this will be of interest to both shippers and Railroad employes.

Lading must be so placed on the car that there will not be more weight on one side of car than on other. The

No. 7 above—Side view of wheel with tire fastened to floor of car

No. 8 below—Wheel with tire on, completely blocked

No. 5—Open car loading. The tarpaulin covering cars caught fire with these results

height and width of lading must be governed by the clearance limits of the roads over which the lading is to pass.

All clamping-pieces, bearing-pieces, braces and blocks must be sound, straight-grained lumber (hardwood

Never load one vehicle only, on a freight car, when it is possible to avoid it. Two trucks, each twenty-two (22) feet long, can be loaded on a thirty-five (35) foot freight car by "tilting" one of the trucks. Three (3) trucks each twenty-two (22) feet

No. 6—Robbing and destruction by vandals of automobile loaded on open car

preferred) and free from knots that materially impair their strength, or may be rolled or built-up steel sections of equal strength. Decking or staging may be of lumber or steel construction.

long can be loaded on a forty (40) foot car by "tilting" two (2) trucks, etc.

There are three methods of loading and staying trucks and trailers on freight cars:

No. 9—Proper blocking to be used in the loading of automobiles and trucks with solid and pneumatic tires

(a) Blocking or chocking on the floor of the car.

(b) Tilting (one end of the vehicle resting on the floor of the car, the other end raised).

(c) Double decking.

Merchandise must never be loaded in the same end of car with automobiles, hearses, or other highly polished vehicles, set up. When necessary to load such vehicles in one end of a merchandise car, package freight in the other end must be braced in front to prevent contact with vehicles.

Place automobiles in car parallel with car sides, 12 inches from end; see that front wheels are in line with back wheels, and set brakes.

Each wheel should be chocked fore and aft with angular chocking, and in every instance, in addition to the fore and aft chocking, a block should be placed to prevent the cars moving sideways.

The "Vamp"

By Peggy

A "cullud lady," boasting of no less than 300 pounds, ambled into Mt. Royal Station the other morning. In one hand she carried a straw suitcase, in the other an enormous bundle, about the size of a family "wash," neatly done up in heavy brown paper and a leather strap. She meandered about the station, looking here and there, evidently in search of someone who might be conversationally inclined. She walked over to one of the long seats which was occupied by a "cullud gent'man," who was reading a newspaper. She planted herself, bag and baggage, beside him.

"Ah, my!" she sighed.

He laid down his newspaper.

"Dat's a heavy package you'se got there, Sistah. Looks like it might be a trunk."

"Lawzee, Mister, dat ain't no trunk, an' it ain't no package, nuther. It ain't no more'n a ordinary Kirkman's soap box, what I paid ten cents fer. Howsomever," she added "taint de box what counts; 'tis what's in it." She smacked her lips and grinned her sweetest.

"An' what's in it, Sistah?"

"Ah, chile, now you's talkin'. Ef dat conductor man knowed how tired I is, he sho' would hustle dat train down de track."

"But, Sistah, that ain't tellin' me what you got in yo' box."

"My goodness, but you men is cur'us critters! Ah wish'n dat train would come on."

"Come on, Sistah, tell me what you got in yo' box. I ain't carin' if the train never comes."

"He, he, he! Ah 'clare to goodness! Well, ef you mus' know, I'se got three dozen roasin' years an' a duppin."

"Three dozen roasin' years an' a duppin! An' have you got any objections to tellin' me jes' what a duppin is?"

"Lawzee, chile, whar is you been raise?" She drew her shoulders up to their fullest height. "Why, whar I come from, we calls 'um *duppins*; I s'posen you-all calls 'um *water-millions*."

"Ah, ah, watermillions! I say, Sistah, is you goin' to treat the homefolks?"

"Homefolks, nothin'! I'se goin' put my duppin on ice an' my roasin' years in my oven, an', I'll tell you, I'se goin' have one evermore dinner."

"Er—a—I s'pose, Sistah, you got a husban' an' chillun?"

"My, but you is de mos' cur'us man! Well, I ain't got a husban', dat

is, I mean I ain't got none jus' at present. I ain't sayin' I won't git one 'fore long."

"Got him picked out?"

"Well, not 'zackly."

He moved as close to her as the division in the seat would allow.

"Er—ah—Sistah—," he began.

"TRAIN FOR WILMINGTON, CHESTER, PHILADELPHIA—!" called the stationmaster.

The "cullud lady" began gathering up her belongings.

"Er, I got a brother what lives up at Childs," remarked the "cullud gent'man," "I b'lieve I'll go up to see him. Lemme carry your Kirkman's soap box; 'tis too heavy for you."

"Lawzee, no!" she exploded. "You might drap it an' bust dat duppin—an' what I goin' do den? I got 'leven childern home waitin' fer a taste. You run 'long bout yo' business!"

He ran.

Mineral Assets of the Baltimore and Ohio Railroad

By G. P. Grimsley

Geologist

The cheaper industries can get raw materials, the more prosperous they will be, other things being equal. If the Baltimore and Ohio could furnish all industries on its lines with a large proportion of the raw materials they use, it would profit them and the Railroad considerably. Our lines run through a section of the country rich in mineral resources and not all of these are being used by our customers to the greatest possible extent. When this is brought about, we will be carrying coal, metal ores, limestone and other raw materials to the manufacturing centres, and bringing back manufactured products on the return haul. Hence, in addition to the economy to the manufacturer, it will mean loaded cars both ways for the Railroad. Wide-awake employes will be interested in the following article which tells of the large developed and undeveloped mineral resources along our lines

THE importance of mineral development on the Baltimore and Ohio Railroad will be appreciated when it is understood that of its total freight tonnage, 67 per cent. is mineral freight.

At present 45.86 per cent. of the freight tonnage is bituminous coal. The coal resources of this Railroad are generally known to be very large, and it is rightfully regarded as one of America's leading coal railroads. It is estimated that the coal reserves tributary to its lines are not less than 25,000,000,000 tons, while the output in 1918 was 46,488,671 tons.

With the exception of anthracite, practically all varieties of coal are to be found in large quantity on the System. Gas coals, cement burning coals, smokeless steam coals, by-product and bee-hive coking coals are all available. There are 944 tipples mines on the Railroad.

While coal is the leading mineral

asset, there are other valuable mineral deposits which add their quota to the total freight revenues.

Near Martinsburg, West Virginia is an area of limestone as pure as any found in this country. It is shipped in train loads to the steel centers of Pittsburgh, Johnstown, etc., to be used as furnace flux. The bulk of this limestone moves westward in the direction of the empty car haul, a movement of advantage to traffic efficiency. This limestone is also adapted to the manufacture of the high grade chemical lime which is used in various processes, as in the paper, leather and other industries.

Deposits of limestone suitable for flux and lime are worked near New Castle and at various points in Ohio and Indiana, with large areas available for future development.

At Millville and west of Harper's Ferry are deposits of dolomite, magnesian limestone valuable for

flux, lime, and refractory linings. Four companies are now located in this area.

Marl beds composed of soft earthy lime, which forms valuable land fertilizer, are found in the eastern portion of West Virginia. So far but two companies are shipping this product, but the extent of the beds would justify greater development. The Railroad would benefit not merely by the additional freight revenue from the marl shipments, but would also benefit by the additional yield of crops from its use, and from the increased prosperity of the farmers, who would have a cheap and valuable fertilizer.

In this eastern portion of West Virginia are found almost ideal natural conditions for manufacture of Portland cement, within 100 miles of tidewater. The essential ingredients for Portland cement—limestone (or marl) and shale—lie side by side. Most of our large cement plants are forced to haul one or the other of these materials for considerable distances to the plants. This item of cost and inconvenience is absent in this location.

At Berkeley Springs and Great Cacapon, West Virginia, are deposits of unusually pure glass sand, and this industry has had a successful history. There are large tracts not yet opened, so that if necessary the output can be doubled and probably quadrupled. This sand is now used at New York in the manufacture of fused silicaware for use wherever extremely high temperatures are required.

Some of the best molding sands in this country are mined near Zanes-

ville and Massillon, Ohio. By combination of sands near Zanesville, there is now produced a very fine casting sand for aluminum and bronze work. This grade of sand was formerly imported.

Quartz sandstone is found in large quantity on Cacapon mountain, West Virginia, suitable for the resistant fire brick required in open-hearth steel furnaces and linings of by-product coke ovens. An important industry now depends on this supply, with additional supply available for new plants. Pure quartz rock is shipped from points on the old main line in Maryland for various chemical uses, as ferro-silicon, silicon, wood filler, etc.

On the Ohio River near Mason City and Hartford are bromine salt brines, where valuable chemicals can be recovered in addition to the salt and bromine. There is an opportunity here for a profitable chemical industry.

Fluorspar is mined in Illinois and shipped from Shawneetown for special flux in the steel industry.

Feldspar is shipped from points on the old main line in Maryland for use as flux in china and pottery plants.

Talc or soapstone, a valuable refractory, is found not far west of the feldspar deposits and awaits development.

Deposits of high-grade fire clays, both flint and plastic, are located in Maryland, West Virginia, Pennsylvania and Ohio, tributary to this Railroad. Some of these deposits are now worked, but many of them are so far undeveloped.

Near Huron and Shoals, Ind., are beds of kaolin or pure white clay, valuable for china, porcelain and refractories. These deposits are used on a small scale, and give promise of future profitable industries.

Iron ores, both brown and red hematites of good quality, are located in West Virginia on branch lines connecting with the Baltimore and Ohio.

Building stones of durable quality and pleasing shades of color are quarried along the Railroad, including the widely known Bedford limestone of Indiana, granites in Maryland, and limestones and sandstones in Ohio and West Virginia.

The present development of these various mineral deposits furnishes 37.4 per cent. of the freight revenues of the Baltimore and Ohio. The undeveloped reserves are natural assets which represent, to a very large extent, the basis of future additional revenues and add inherent value to the Railroad's stocks and securities.

A copy of mineral location map, enclosed in this issue of the MAGAZINE, has been prepared in colors, and may be secured upon request of H. O. Hartzell, manager Commercial Development, Baltimore and Ohio Building, Baltimore, Md.

USE THIS COUPON

Every employe of the Railroad engaged in traffic solicitation should have a copy in colors of the map of the mineral resources of the Baltimore and Ohio, shown in one color on the accompanying pages. Any other employe who is wide-awake to the possibility of securing business for the Railroad, whether he is an active solicitor or not, will do well to have the map for ready reference, also.

There may be an industry in your town that it may pay to develop a by-product. This by-product may need in its manufacture some raw mineral material which exists in quantities on the Baltimore and Ohio within inexpensive transportation distance. To such an industry, to your town, to yourself and to the Railroad, you will do a favor by showing how the Baltimore and Ohio can help in this respect. Use the coupon and send to H. O. Hartzell, manager, Commercial Development, Baltimore, Md., if you can use this map in colors effectively.

H. O. Hartzell,
Manager Commercial Development,
Baltimore and Ohio Building,
Baltimore, Md.

NO SPREE OF HIGH PRICES

Doctor: "This prescription is for medicinal use ONLY!"

—From the New York Times, August 8, 1920

The Little Peacemaker

By Frank A. Halverson

"DIDJA tell her, Jim?"

The question shouted across the street caused Conductor Farel to stop almost in his tracks. He knew that it was Engineer Casey before looking up. Only Casey was aware of the incident of yesterday's run.

"Didja, Jim?"

Again came the taunting interrogation to Farel's ears. A florid flush crept up the conductor's cheeks, for Casey had clasped his hands as if he were holding some one in an imaginary embrace.

"Away with you!" cried Conductor Farel, shaking his fist at the laughing Casey.

"That Casey is the imp of mischief," smiled Farel, his good nature returning when he sat down in the passenger car. "He's a torment. It was just my luck that he should be looking out of the engine window yesterday when the step broke under the weight of that buxom passenger. 'Twas funny from Casey's point of view. Crash went the step and back came the lady into my arms. She weighed something, too. I acted as a cushion and thereby broke her fall. If Casey had been tending his engine he wouldn't have seen it; but he wasn't. He was watching me in my struggles while the passenger had me down with a furry thing over my eyes; and by the time we were straightened up, Casey was tooting the whistle and ringing the bell. Just think of it! Me, Jim Farel, Senior Conductor on the Mountain Division, who has never been on the carpet for inattention to duties, to have Casey saying that if I didn't tell my wife Mary, he'd report me to Superintendent Judson for unbecoming conduct to a lady passenger! I know the heart of Casey. It's all for a joke. He won't tell the wife, but he'll hint at it and—" concluded Conductor Farel yawning as he pulled Clearwater's County paper, *The Advance*, out of his pocket and settled back for a quiet perusal of the local news after having satisfied himself that he still had ten minutes to spare before pulling out.

"My!" exclaimed Farel, his eyes opening wide, his breath retarded while his elevated foot thumped the carpeted floor with great violence. Staring at him was this headline:

THE HEMLOCK SPECIAL CAME IN
FIFTEEN MINUTES LATE
YESTERDAY

The big type danced before Conductor Farel's astonished face.

"Hang that Casey," muttered the conductor, drawing his hand across his eyes. "He must have told the reporter while we waited at Clearwater. My wife will read it and she'll know that it wasn't rheumatism that made me hunt up the liniment bottle this morning. Was ever an innocent man in a worse plight?"

To be sure, Farel, the conductor, was the innocent victim of the trouble between the Mountain Railroad and Editor Lorr of *The Advance*. Today the case was to be called for a hearing. The little community of Clearwater, perched upon one of the Allegheny hills, was quite excited. Editor Lorr, through the printed word, had aroused the mountain populace from mere curiosity to real excitement, and all because of this outrage, to use his words:

"Will the Court of Clearwater County award damages to the Mountain Railroad because an inoffensive old passenger coach, decrepit and time-worn, was hit by a wild flivver? In its exuberant hilarity, the irresistible gas wagon carried away one of the coach's steps. The flivver, regretting its unpardonable assault upon the aged and infirm, hastened away to be hid in a cloud of dust from Conductor Farel's eyes."

Two days later *The Advance* had carried this story:

"Our town, so quiet and unobtrusive, has had honors thrust upon it. No conquering hero has invaded our peaceful domain, but rather a Sherlock Holmes with his Assistant Watson has been pussy-footing around our sachet-scented garages, seeking the rendezvous of the flivver which, to wit, demolished the step of Conductor Farel's coach. While the old thing still creaks its painful way, we are trusting that justice will prevail and that Superintendent Judson's hirelings will apprehend the owner of the irresponsible joy wagon so that the law may take its righteous course. It is vital to the welfare of our community that this case should be settled for all time. Think of it! A peaceful old coach, resting at the Market Street crossing of our county seat, to be struck down in broad daylight by a caroming Lizzie! Had it been a younger coach, one that was just starting in life, our indignation would not be so pronounced. But the old one, built of hemlock of a gone generation, to be thus insulted in its senile infirmity, that's heartless. Others of its class are gone. Only the Mountain Division sticks to its by-gone relics. Every day the Hemlock Special wends its solitary way over the Allegheny mountains. How long, oh how long?"

The next *Advance* carried this message:

"The passengers of the Hemlock Special were treated to a novel sight when Conductor Farel essayed to be a carpenter yesterday. The injured step had been jarred loose while coming up the Allegheny hills. A passenger, who was built on the heavy-weight style, was detained by the ever watchful conductor while he drove a few nails into the step for safety first. While Conductor Farel is an efficient ticket-puncher, he is not so true with the hammer and, therefore, his index finger is now encased in bandages. He missed the nail. While amusement of any sort is forbidden on the Mountain Division, yet Conductor Farel's two-step with his finger in his mouth was quite hilariously received by the passengers. However, it is now rumored that Director Judson will have an expert carpenter on the Hemlock Special so that repairs can be done with greater expediency."

And then this bombshell burst forth on the first page of *The Advance*.

"Ye Editor arrested. His flivver has been accused by Superintendent Judson's fly-cops as being guilty of the unpardonable assault upon the old coach of the Hemlock Special."

Farel looked at his watch. It was starting time. Catching the signal cord, he gave two pulls. Casey answered by starting out. Farel surveyed the passengers. The coach was nearly full. Toward the rear he saw Superintendent Judson in the act of letting his watch slip into his pocket. Farel whistled softly. Judson had almost caught him napping. Farel whistled again. There, almost in front of him sat Editor Lorr.

"Ah, ha!" muttered Conductor Farel. "I've got 'em both on today. If they meet, the fur'll fly. Judson's about ready to pitch into Lorr for ridiculing the Mountain Division. Lorr's seeing red for being arrested, 'cause his flivver broke one of the steps, but they don't know each other. Perhaps they won't meet until we get to Clearwater; that'll help to keep 'em apart."

Farel scanned Lorr surreptitiously. What he saw was a clean-cut, handsome man in the prime of life. His coal black hair was sprinkled with a touch of silvery gray that crept up by his temples; his eyes were penetrating and keen, while on his face, full and rounded, a tantalizing smile played as if his thoughts were quite humorous. Perhaps the incident of the flivver and the coach was occupying his mind. Furthermore, he was, no doubt, framing his defense to the Judge for his car's unpardonable conduct. At any rate, he lifted his hand and let it fall on his knee with a whacking emphasis. Farel noticed that a muscular arm backed it up to a pair of square-set shoulders which rested on a mighty compact body. His bearing, his every motion indicated to Farel that Lorr was a man capable of handling his own affairs

with speed and dispatch and, therefore, he let his appraising gaze rest on Judson for a probable comparison. The likeness of the two men was singularly similar. Judson, too, had a muscular, athletic body and in his grey eyes there lurked a smouldering fire that would flame at the first puff of adverse wind.

"Fighters, both of 'em," concluded Conductor Farel. "Something'll happen when they meet each other. Their blood's hot and it will boil into a quick passion. They won't give an inch. They're not built that way. Ah, ha! Here's a chance for a peacemaker, some hand to smooth down the ruffled feelings of two strangers who are ready to tear each other apart over absolutely nothing. But where's the peacemaker?"

Farel adjusted his glasses. He took a step forward. The lurching coach nearly catapulted him into Editor Lorr's lap. With a laugh, boyish and vibrant, Lorr steadied Farel as he said:

"When will Superintendent Judson advertise the Hemlock Special as the eighth wonder of the world?"

"Can't say," replied Farel pleasantly.

"Listen to this," continued Lorr. "'Up among the grandeur of the Allegheny hills where the cloud-shadows play on the dimpled landscape, there still can be found a sight to thrill the weary sightseer. It is the Hemlock Special.'"

"Enough of that blarney," laughed Farel resting his hand on the editor's shoulder.

"Say, Farel, you don't feel sore

about my kidding, do you? I've been making a fight for better service, for more modern coaches, and all of it has been for the good of the community. I want you to understand the motive back of my sarcasm."

"Sure," agreed Farel, passing on for the next ticket. Lorr wasn't a bad sort, right human after all and Conductor Farel found himself wishing that he would put it over Judson at the trial that day and that he would bombast the Hemlock Special so that he, too, would be given a decent set of coaches rather than the dilapidated relics that he and Casey were now running. There had been a lot of good common sense in Lorr's ridicule. His editorial arrows had driven home the truth that Clearwater was behind the times in railroad advancement and this was the motive that was animating Superintendent Judson in bringing the suit for damages. He wanted to hush up the fact that the Mountain Division was out of date.

"How's the old Hemlock Special, Farel?" asked Judson smilingly.

"Still groaning and creaking at Superintendent Judson for not giving the aged their well-earned rest," quoted Conductor Farel, the mobility of his face never changing.

Judson smiled. "Pretty mess, isn't it?"

Farel did not answer. His mind was busy, however. He could understand that Mr. Judson was heartily sick of the whole affair. Editor Lorr held the upper hand in the controversy. His weekly paper reached most of the people and, of course, passenger traffic on the Hemlock Special had dropped until the train was not a paying proposition.

"Lorr and Judson are like two fighting kids," meditated Farel. "They don't want to keep it up any longer, but they're too headstrong and touchy to quit. They're sort of wishing that the chip on their shoulders would be blown off, so that they could retreat with honors. One is afraid to show any weakening and the other is the same way. If some one bigger and stronger than they would take them by the neck and shake them a bit like my Dad used to do with me, I'll bet they would settle this case before it ever got to the Judge. It would take a giant to handle them and I'm not a giant," concluded Farel, stopping before a little boy, huddled up against the window corner, who shrank back from the approaching conductor.

"Well, my little man, where are you going this morning?"

Timidly, yet trustfully, the little fellow answered:

Crash went the stop and back came the lady into my arms

"To Daddy."

Farel's blue eyes took a quick inventory of the small passenger. He was strong and sturdy with the characteristics of early manliness stamped upon him. His brown eyes were set intently on Conductor Farel.

"Where's your Daddy?" and Farel sat down beside him on the seat.

The boy gave a quick, apprehensive glance at his coat. It was buttoned tightly. Something moved inside of it. A whimpering nose of a small puppy dog was sticking out from the boy's bosom.

"Mercy on me!" exclaimed Farel. "What's that?"

The conductor reached out his big hand and patted the puppy's head gently. The boy gave him an unbelievable look of grateful admiration.

"That's Nige," said the boy, opening a button so that the blue eyes could look out from its prison.

"That's a dandy," said Farel, enthusiastically.

"Yes," said the boy. "His eyes opened yesterday. My Daddy didn't come home to see him."

"Why didn't he come?" questioned Farel, sensing the boy's keen disappointment that his father did not know that his puppy could see.

"A man told my Mamma that my Daddy had been taken to the hospital."

The boy's frankness struck Conductor Farel with the stunning force of a sledge-hammer. His Daddy hurt, and the boy was going to him; also, he was carrying the dearest treasure that he possessed—the puppy—to his Daddy.

Farel instinctively loved the boy. He learned that the boy's father was King Williams, who had the unbounded admiration of the railroad men. The boy seemed made out of the same mould. But was King Williams in the hospital?

"Wait a minute, my boy," said Conductor Farel. He walked back to Superintendent Judson's seat.

"Mr. Judson," began Farel, "was King Williams of 47 hurt yesterday?"

"Didn't you hear bout King Williams? Didn't you know that the air brakes had broken on 34 just after it passed over the top of the ridge last evening, and that the loaded trip of heavy coal cars was pushing it around the little Mule Shoe curve at a terrific speed rate which would pile the train at the bottom of little Trout Run?"

"No," replied Farel aghast.

"That's what happened. 34 was beyond Engineer Carlsen's control when he whistled the distress signal. Coming down the grade, falling, you

might say, with the whistle wide open, Carlsen stuck like a Tartar to his engine. Through the wild roar of the leaping train, Carlsen heard an answering whistle and in one fleeting moment he saw a white cloud of smoke rising from the valley below the little Mule Shoe curve. Madly, Carlsen dashed onward, driven by the heavy cars, helpless, knowing that a crash awaited him at any moment. As he was being forced down the right side of the little Mule Shoe mountain, he saw an engine coming up the left grade, running light to meet him. When about fifty yards separated the two locomotives, the one coming up reversed its course and started back down the grade. On came Carlsen's 34 like the dust before the wind and on drove the engine ahead, but not with the same pace. The distance was lessening. The gap was growing shorter. Masterful driving on the part of the first engineer, whose speed was almost as great as the wildly advancing 34, made the shock almost nothing when the two engines met. Together the two engineers checked the runaway and stopped the train before it reached the yards. And when Engineer Carlsen ran up to the first engine and sprang into the cab, he found King Williams hanging over the throttle insensible."

"Hurt?" questioned Farel quickly.

"Seemingly not. King Williams' nerve snapped when the ordeal was over. He's in the hospital at Clearwater."

The Hemlock Special slowed down for the regular stop at Oldham. But before Conductor Farel swung off the coach he whispered to Editor Lorr that a boy with a puppy dog was stealing a ride and that he would likely be obliged to put him off at the next station. Farel saw Lorr rising and going back to the little passenger in the rear seat and he smiled benignly. Farel could picture Lorr when he saw the little brown and white puppy inside of the boy's coat; he could surmise his feelings and, therefore, Farel sent the following telegram to Mrs. King Williams with a singing heart:

"Your son is on my train this morning. He is taking his puppy to his father. I will bring him back tonight."

"JAMES FAREL, Conductor."

Accordingly Farel sought Judson and told him about the little passenger who was stealing a ride, and not that alone, but that he was carrying his dog with him. Judson flared up as Farel hoped he would.

"Put him off," ordered Judson brusquely.

"I'm sorry," stated Conductor

Farel, "but I've got an unruly passenger in the smoking car and I want to get him off at the next stop."

Farel spoke convincingly and Mr. Judson agreed to see that the little passenger with his puppy should be expedited from the Hemlock Special when Phillipstown was reached. Farel moved into the smoker, but he instructed his brakeman to watch proceedings from the passenger platform.

"My!" Farel uttered this exclamation with a sigh of relief as he sat down in the far corner of the smoker. "Let them fight it out. If I'm not wrong, Editor Lorr will take the kid's part against Judson when he tries to put him off at Phillipstown. They're not acquainted, and as Lorr and Judson are to meet the Judge today, they might as well have their go at each other right now. Of course, if Judson knew that the boy was the son of King Williams!" Farel sprang up; if the boy should tell that his father was King Williams, then Judson would hold Farel responsible for having told him to evict the lad. That would look mighty bad and get him in wrong with Judson. Breathing heavily, Farel hastened back. When half way down the aisle the brakeman, posted as an outlook, motioned for Farel to hasten his speed.

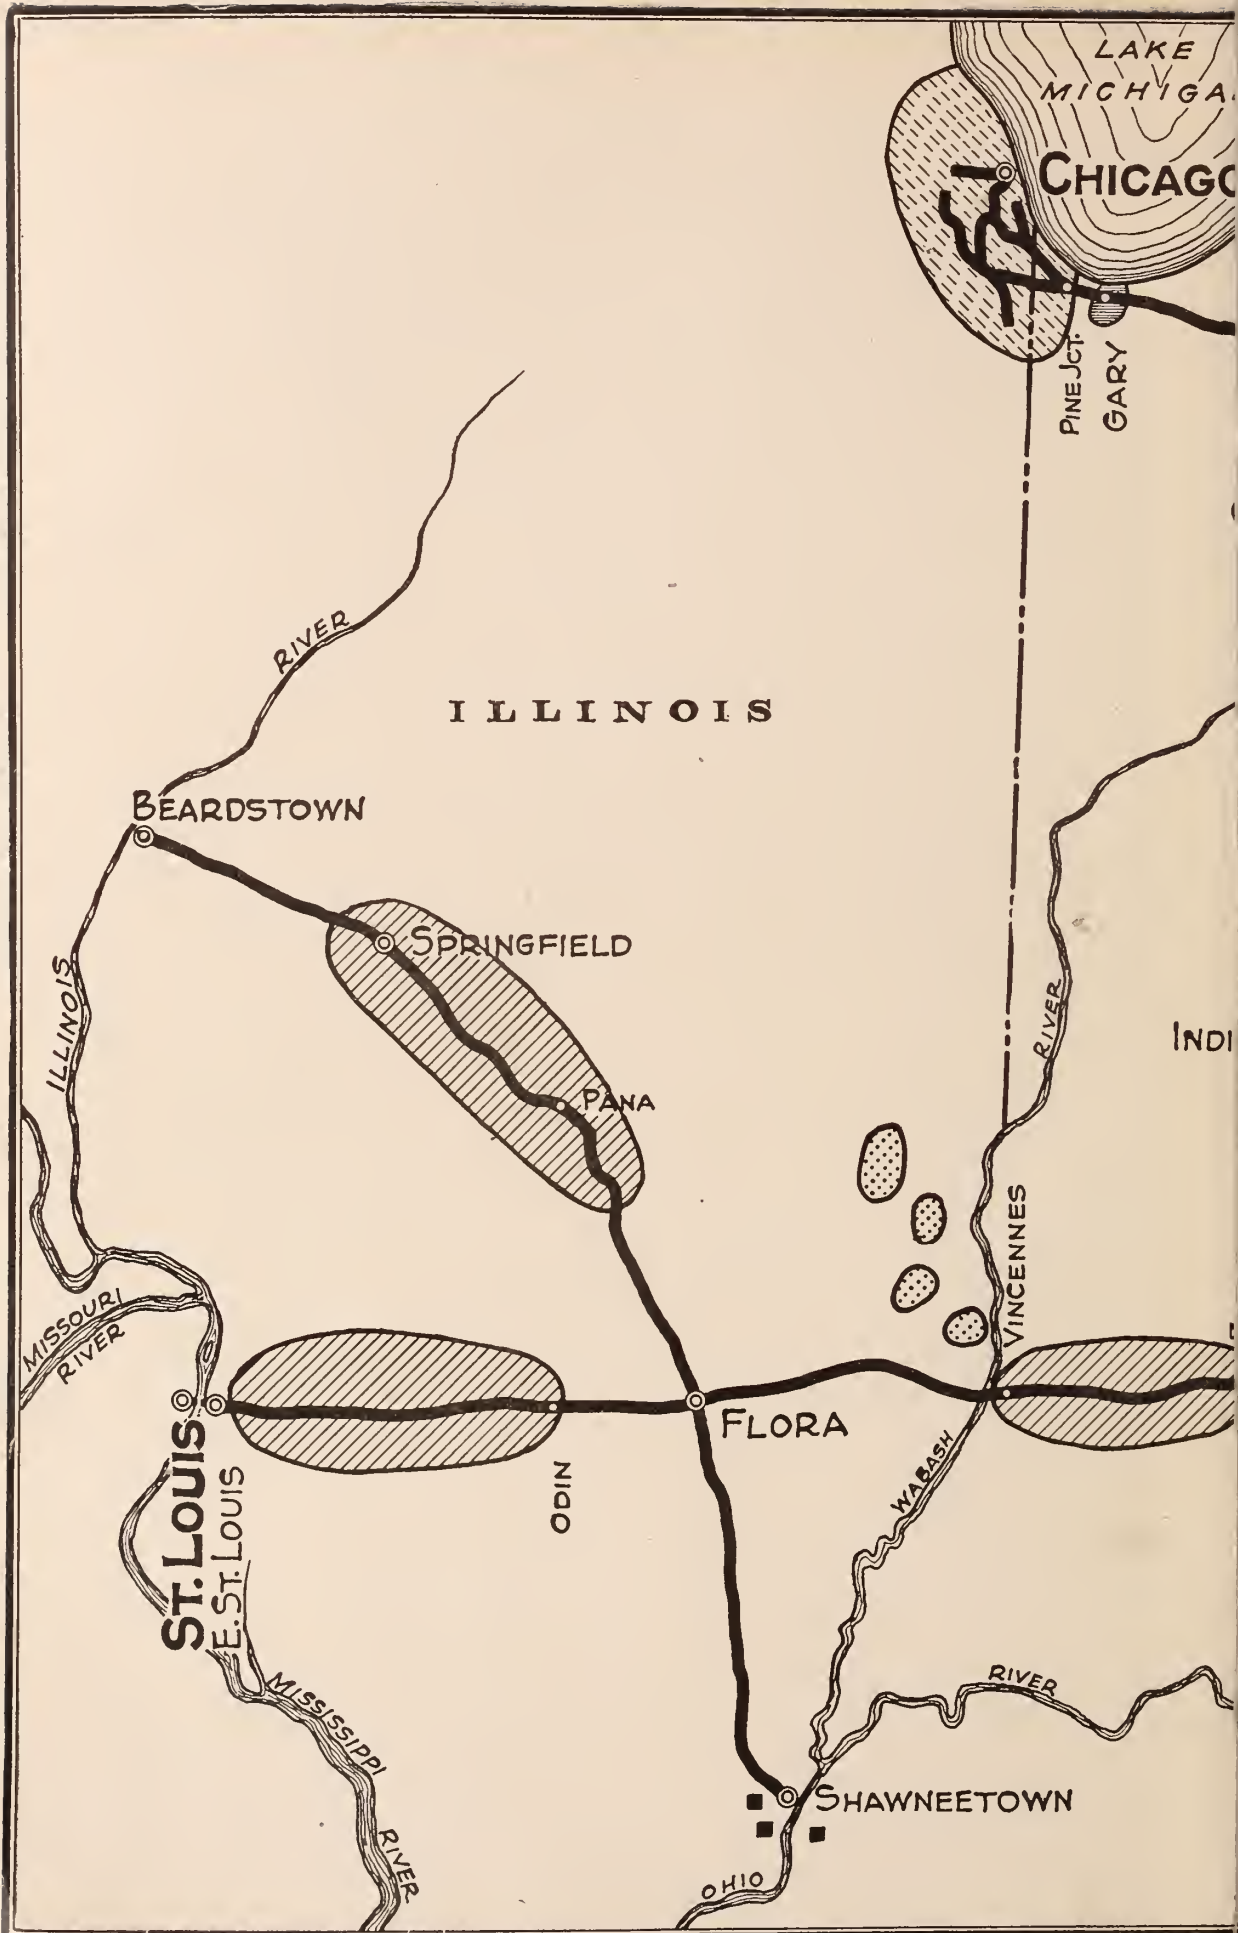

Through the glass door Farel saw Editor Lorr rising and facing Judson. He was gesticulating and talking loudly. Lorr stood calmly shielding the boy. The little fellow was securely hidden behind his broad back, and under his bulging coat he held his struggling puppy.

"Gentlemen!" cried Farel from the doorway.

The men paid no attention. The jolting coach threw Judson toward Lorr. His clenched hand struck the editor's glancing blow on the shoulder. Lorr's face blanched and hot passion surged through his veins. The muscles of his body grew taut, his arm began to move backward for an answering blow when all the fire of rage in Editor Lorr suddenly died. For in closing his hand he found Buddy Williams' little fingers in his hard grip. They had crept into his broad palm for protection, for safety, and what was more, they had saved Editor Lorr from giving a blow for a blow when in anger. Looking at the little hand, Lorr's head sank to his breast and in sitting down he pulled Buddy Williams close to him. Leaning against the scat stood Judson, his face pale, his heart chastised. Sweat, now cold, sprinkled his forehead, for Judson had seen the giant fingers of the boy holding back the

 SEPTEMBER 1920

blow, not by force, but by the subtle power of boyish trust. He felt ashamed, humiliated and beaten in a manner that no bodily punishment could ever hurt him. Buddy Williams and his puppy were the giants—the peacemakers.

"I'm sorry," said Judson, "I—I was too hasty."

Lorr met him manfully by grasping Judson's outstretched hand.

"Me for the smoker," muttered Conductor Farel, beating a hasty retreat without being noticed by Judson or Lorr. "They'll settle with Buddy Williams and his puppy dog sitting between them."

When the Hemlock Special was nearing Clearwater, Conductor Farel came back into the rear coach, keeping a critical eye on the group occupying the last seat. Harmony seemed to be hovering over the party and Farel, becoming bolder, stepped into their midst.

"Farel," said Judson, "did you know that this gentleman was Mr. Lorr, editor of *The Advance*?"

"Yes, sir."

"And that this boy was King Williams' son and that he was taking the puppy dog to the hospital at Clearwater so that his father could see that its eyes had been opened?"

"Yes, sir."

Judson stared a questioning look at the conductor.

"Mr. Judson," said Farel smilingly, "I wanted you to meet Mr. Lorr before the case was called and so when I saw Buddy Williams and his puppy, I sent Mr. Lorr back and then by being busy with an unruly passenger in the smoker, I got you to come back to put the boy off. I sort of figured that you two men would settle up—"

"We have," cut in Judson quickly. "The fight's called off. I'm going to try to secure some new coaches—"

"And I," chimed in the editor, "am going to do what I can through our paper to acquaint the people with the general shortage of equipment on the railroads, brought about through no fault of theirs, so that they will help the situation, rather than hinder with unjust criticism."

Then, turning to Judson with an understanding look, he continued, "Engineer Casey told me a good one on Conductor Farel this morning that I want to print before the Hemlock Special is retired. Casey said that a buxom lady passenger—"

"Casey!" snorted Farel, "well, we're going to settle when we get in to Clearwater."

Depew, the Optimist

CHAUNCEY M. DEPEW, who remains young in his 87th year, retains his optimism and his faith in the republic. Age has not soured his genial nature or weakened his confidence in America. Discussing the situation in the United States, Mr. Depew said:

There will be no panic and the cost of living is coming down. The country is on too sound a money basis for a panic. The cost of living will come down—gradually. I remember when the civil war closed. That was in 1865, but the cost of living did not get down to where it belonged until 1878.

Mr. Depew expresses the belief that the labor situation is improving and that a better understanding between capital and labor is being arrived at. In short, he views the future with supreme confidence and satisfaction.

This is the sort of talk that will do good. Those who view with alarm and go about predicting calamity are spreading fear which cannot fail to be influential in retarding the country in reaching normal conditions. Optimists of the Depew type are needed. —*Washington Post*.

Wilmington Business Man Pleased with First Trip on Baltimore and Ohio

TRAFFIC Manager E. A. Cain, of the Pusey Jones Company, Wilmington, recently took a ride on No. 6 from Pittsburgh. During a business transaction with E. B. Rittenhouse, then freight agent at Wilmington, Mr. Cain remarked that this was his first trip over the Baltimore and Ohio and that he was delighted with the service. He said that no other line between Pittsburgh and the Eastern Coast has scenery comparable with that of our line. He was particularly pleased with the dining car service (add another pleased patron to your long list, Mr. Baugh), and, as a demonstration of the smoothness of the track, remarked that, even in going around the curves, his coffee had not spilled, as had frequently been the case with him on other lines. Mr. Cain says that he is booked for many future trips over our Road.—*Charles E. Hamilton*.

Safety Section

Safe and Proper Handling of Track, Bridge and Building Material

By John T. Broderick

Superintendent of Safety

IF THE rules of the Operating, Maintenance of Way and Safety Departments, which have been issued by the Baltimore and Ohio and by many other lines for the guidance of employes engaged on track and structure work, were strictly observed, probably 90 per cent. of the accidents occurring in the handling of track, bridge and building material would be averted. But it is a difficult matter to keep this constantly before the men. Therefore, it becomes the duty of the supervising officer to continually check the men under his direction to prevent violations of the rules. In other words, the Safety problem in the performance of maintenance work by railroad employes is summed up in the maxim: "Eternal Vigilance is the Price of Safety."

Foremen! Protect New Employes

In hiring men, the foreman should make a special effort to impress upon them the necessity of carefulness and thoughtfulness while on duty. He should explain very clearly the accidents that will result from carelessness. Safety demands this.

When it is necessary to employ foreigners, special care should be taken to acquaint them with the book of rules and the regulations issued for the guidance of employes on or about the track.

Foremen! Inspect Tools Daily

In preparing for the day's work, the foreman should see that an inspection is made of all tools, appliances and hand cars, so that he may have positive knowledge that there are no defects which may result in accidents. This is especially important with respect to the condition of tools, since many accidents occur because the men do not take time to make a few necessary repairs.

Safe Handling of Rails

The improper handling of heavy track, bridge, building and other maintenance or construction materials is one of the principal causes of injury to employes.

Another prolific cause of injury is careless or dangerous methods in handling rails. This is true from the

time the rail leaves the mill until it is placed in the track. Many of the rail mills now load heavy sections of rail by magnet cranes, thereby avoiding the risk that is involved in loading by hand or by skids. Magnet cranes should be used in loading or unloading rails in large quantities. Where rail is stored in small quantities and a crane is not available, the rail should be placed on skids in single layers so as to avoid unnecessary handling.

In unloading rail for distribution along the track a small crane, or, preferably, an air hoist unloader, should be used. Such a device is not only safe, but also economical, and

See the Doctor for Safety's Sake

Many times a minor injury develops into a serious one when the injured man fails to have a doctor examine his wounds. The number of injured employes who fail to take the necessary precautions to have what appear to be minor injuries attended to promptly is surprising "It doesn't amount to much" is a poor excuse. Here's some convincing proof:

A section laborer was helping to lift ties from a coal car and toss them over the side. In attempting to lift a tie that rested on the car floor, it slipped and the laborer's fingers were mashed. He was urged by the foreman to leave the job and go to a doctor. The laborer went to a pump in the yard of a nearby farmhouse and washed the wounds. He then returned to work and told fellow employes that the injury did not amount to anything. Twelve days later he was forced to remain at home. The wound developed blood poisoning and a short time later he died.

While attempting to throw a switch at Cumminsville, Ohio, a trainman was struck on the foot by the switch ball when a train backed into the switch point and caused the lever to be jerked from his hand. He kept on working with the crew. When he went home that night and removed his shoe he found that a blister had formed on his toe. He punctured the blister. Later in the night the pain became so great that the trainman called a doctor. He was incapacitated for several weeks because of the injury, which probably would have amounted to little if he had seen a doctor immediately after being hurt.

While scrubbing the floor in the freight offices at Camden Station, Baltimore a charwoman picked up a splinter in the rag she was using. In attempting to wring the water from the rag, the splinter punctured her hand. Her boss attempted to remove the splinter and partly succeeded. At home that night she probed for the rest of it. The next day she visited the Company's physician. She lost several days from work while her hand was healing.

While he was knocking sheeting from a box car, a car builder at Zanesville Ohio, was injured when a piece of the sheeting fell and a sharp point punctured his leg. After he had pulled the sheeting from his flesh, he continued working. When he went home he told his wife of the accident and she put hot applications to it. After five hours the pain became so intense that the wife insisted on calling a doctor. For two months he suffered greatly from the wound and finally had to leave his work entirely. The injury may be permanent and the delay in seeing a physician is probably greatly to blame.

"This wrench had slipped several times when I got hold of a bad nut. The jaw was worn some and I would call it a defective tool." This was the comment of a car repairman at Chillicothe after he was injured. In attempting to tighten a nut the wrench slipped and he fell backwards and against a jack standing in the pathway. His elbow was skinned. This repairman kept on working. The next day he came back to work, but finally had to quit and go to see a doctor. Blood poisoning developed and he suffered greatly. He was off his job for 35 days.

When a big lump of coal rolled from the tank of an engine and struck a fireman on the Cumberland Division he paid no attention to the injury. Ten days later he called a doctor to look at his leg. He did what the doctor told him to do for a short time and then began trying home remedies. Finally he was forced to go to a hospital for treatment. The injury is improving, but slowly.

is therefore doubly justified. Even with the use of such mechanical unloading devices, there are frequent injuries to the men in separating the rails in the car and attaching them to the hoist. This is especially true where rails are loaded indiscriminately into the cars or nested in close tiers. In order to avoid this, the rail should be loaded "head up" in tiers, with timber strips between each tier. From a Safety standpoint such a method of loading is almost ideal.

Rail tongs should be used for ground work. Where labor is scarce

when rail is being laid and a sufficient number of experienced men cannot be obtained to safely pick up rails, the use of one of the several types of rail laying machines would be advisable. These machines generally embody some form of hoisting device, mounted on a push car and may be handled by a very small gang.

When air-operated rail hoists are used, the foreman should see that all working parts are in proper order, that the cables and rail tongs are safe and that the stay chains extending from the corner of the car to the

boom are properly adjusted and secured. The men employed with rail hoists should be organized in gangs, so that each man shall know exactly what is expected of him.

Men handling rail should themselves be handled carefully. Handling rail is a ticklish job and unnecessarily loud criticism and the yelling of instructions have a tendency to excite the more sensitive ones and to cause them to blunder and hurt themselves and their comrades. Teamwork is a pretty thing to watch in a rail-laying gang. It can make this difficult job run with almost unbelievable smoothness and rhythm.

When it is necessary to load rails upon cars by hand the gang should be divided equally at the ends of the rail. No attempt should be made to throw the rail unless an ample force is at hand. One member of the gang should be specifically designated to call directions. No attempt should be made to load when men cannot get away quickly in the event of the rail falling back. It is also deemed essential in the interests of Safety that the loading of material be discontinued while trains or cars are passing on adjoining tracks.

Orderly Tie Handling Prevents Accidents

While the handling of ties does not cause as large a number of injuries as the handling of rail, yet special effort should be made to insure Safety. When being piled for loading, or in storage yards, ties should be placed in medium size and uniform piles, according to some approved plan. This will add not only to the stability of the pile, but also insure safe and economical handling to cars. At large stores or at tie treating plants, the use of a locomotive crane is justified for the handling of ties, since it is safer and more economical.

When ties are unloaded for renewal, they should be distributed and piled in comparatively small lots, say, from three to five ties. They should be lined up uniformly and at some fixed distance from the track. This will prevent men stumbling over them. In renewing ties, the use of tie tongs, where available, is advisable.

Other Track Material

Other classes of track material presenting difficulties and dangers in handling are frogs, switches and crossings, and to some extent, ballast. Frog and switch material should be handled in much the same manner as rail. For heavy and complicated work, it is often advisable to place the material directly in position with a locomotive or wrecking crane.

Total Injuries by Months:

January, 302; February, 239; March, 303; April, 282; May, 313; June, 307; July, 307.

About the only chance of injury in the handling of ballast is in the unloading and distribution along the track. Where this is done from ordinary cars, such as hoppers or hopper bottom gondolas, considerable difficulty is sometimes experienced in getting the material to run out properly, causing too heavy unloading in some places, resulting not unusually in cars being derailed and men being injured. Care should be used to so regulate the flow of ballast from the cars as to give a uniform distribution along the track. The cars should not be moved without warning being given the men working in the cars.

The foreman should exercise particular care in the unloading of material along the right of way, so placing it as to prevent its fouling the track. He should see that his men do not pile ballast so high in the center or along the side of the track that it will come in contact with the pilot or with other parts of locomotives or cars. Aside from the danger of causing a serious train accident, the material is likely to be thrown with sufficient force to injure persons nearby.

"Pony Cars" Useful
