Brings HARTMAN'S Elegant 7-Piece Suite

Richly Upholstered Backs and Seats, Beautiful New Design

Here is Hartman's latest offering in Mission furniture. A new design in a 7-piece suite—elegant, massive, made on graceful tapered lines. Both chairs and rockers have upholstered seats and backs. Without doubt the greatest bargain in Mission furniture. Sent for only \$1 down and on 30 days' free trial. Then, if not satisfied, send it back and we will refund the \$1 and pay freight both ways. If you keep it, pay balance, only \$3 monthly—over a year to pay.

Take Over a Full Year to Pay

This splendid suite consists of large Arm Rocker, Arm Chair, Sewing Rocker, Side Chair, Library Table, Tabourette and Book Blocks—all beautifully finished,

fumed in a rich shade of brown, neatly waxed.

Very massive and well braced—very durable.

Rocker and chair seats and backs are richly up-

holstered in imitation Spanish brown leather, well padded for comfort. Rears of backs are also up-

holstered with same material as front. Any way you look at them these chairs and rockers have a finished appearance. Chairs and table move easily because they are set on "domes of silence." Rocker and Arm Chair about 36 inches high and have seats 19x19 in. Backs 22 in. from seat. Sewing Rocker and Side Chair about 34 inches high, seats 16x16 inches, back 21 inches from seat.

Extra Large Table stands 30 inches high; legs 2 inches square. Paneled ends and roomy bookshelf. Tabourette top 10x10 inches. Height 16 inches. Book Blocks large and heavy. We can't say enough for this splendid set. Try it 30 days FREE. Shipped without delay (fully boxed, "knocked down" to save freight) from Chicago warehouse or factory in Indiana. Shipping weight about 180 lbs.

Order No. 110CMA15. Price \$39.95. Pay only \$1 down. Balance \$3.00 monthly.

Upholstered Seats and Backs

392 Page Book FREE

FREE Bargain Catalog

The great free 392-Page Catalog offers you choicest styles and amazing bargains in furniture, rugs, linoleum, stoves, watches, silverware, dishes, washing machines, sewing machines, aluminum ware, phonographs, gas engines and cream separators, etc.—all on our easy monthly payment terms. 30 days' FREE trial on everything. Post card or letter brings it by return mail.

HARTMAN Furniture & Carpet Co.

3913 Wentworth Ave. Dept. 3363 Chicago

Enclosed find \$1. Send the 7-Piece Living Room Suite No. 110CMA15 as described. I am to have 30 days' trial. If not satisfied will ship it back and you will refund my \$1 and pay freight both ways. If I keep it, I will pay \$3.00 per month until the price, \$39.95, is paid.

This Thrifty and Prosperous Employee Has Bought Six Houses Through the Relief Department

The man who wishes to buy a home first studies the question from every angle.

He is not satisfied unless he gets a good looking property with plenty of light and air.

If the house is roomy you can be sure that this helps make his family feel satisfied and contented.

He also wants to arrange an easy financial plan through which he can purchase the property.

You can depend on it that David Suter, engineer at Keyser, W. Va., is pleased with the home he now occupies. You can see from the picture of his present home that it has attractive surroundings, is well-kept, and has air and light in abundance. Then, he is buying it on the easy purchase plan by the aid of the Relief Department.

ENGINEER DAVID SUTER AND FAMILY AND THEIR ATTRACTIVE HOME IN KEYSER, W. VA.

This is only part of Mr. Suter's story. He has bought, all told, six houses through the Relief Department, and still owns two of them, the home pictured on this page being one of the two.

Mr. Suter is one of the thrifty fellows among the employes of the Baltimore and Ohio Railroad who are home owners.

Why do you not follow his example and become a home owner? You can find out all about our easy partial payment plan by writing now to

I once heard what is probably now an old story of a young Jap who was hired by a business house largely to oblige a customer, and who was recommended as a bright and intelligent youth. The firm was not particularly anxious to keep him in its employ, so it handed him as tough an assignment as possible.

He was given the account of a creditor who was believed to be beyond all hope as far as a settlement was concerned and told to see what he could do with the matter. Within three days they received a check in full for the amount they never expected to get.

The head of the firm, curious to see how the Jap had dealt with the creditor, looked up the letter file and found the copy of a letter written by the Jap, reading as follows:

"Dear Sir—If you do not settle this account immediately we shall be obliged to take steps that will cause you the utmost astonishment. Yours, etc."—*New York American*.

Light and Dark Shades

A young colored couple were sitting at the foot of the Statue of Liberty. Henry was holding Mandy's hand.

"Henry," said Mandy, "does you-all know why dey has such small little lights on de Statue o' Liberty?"

"Ah donno," replied the Ethiopian swain, "unless it's because de less light, de mo' liberty!"—*California Pelican*.

Not His Job

By Edgar A. Guest

That's not my job, and it's not my care,
When an extra task he chanced to see;
"That's not my job and its not my care,
So I'll pass by and leave it there."
And the boss who gave him his weekly pay
Lost more than his wages on him that day.

"I'm not supposed to do that," he said;
"That duty belongs to Jim or Fred."
So a little task that was in his way,
That he could have handled without delay,
Was left unfinished; the way was paved
For a heavy loss that he could have saved.

And time went on and he kept his place
But he never altered his easy pace,
And folks remarked on how well he knew
The line of tasks he was hired to do;
For never once was he known to turn
His hand to things not of his concern.

But there in his foolish rut he stayed
And for all he did he was fairly paid,
But he never was worth a dollar more
Than he got for his toil when his week was
o'er;
For he knew too well when his work was
through
And he did all that he was hired to do.

If you want to grow in this world, young
man,
You must do every day all the work you
can;
If you find a task, though it's not your bit,
And it should be done, take care of it!
And you'll never conquer or rise if you
Do only the things you're supposed to do.

Yousedit

It happened at a temperance lecture. The lecturer was trying to impress upon his audience the harm done by strong drink.

He had been raving for about an hour, when he said:

"My friends, I will now bring to your consideration the way Nature works in the matter. The beasts of the field do not partake of intoxicating beverages. Now, if I had two buckets on the platform, one full

of water, and the other full of beer, and I brought a donkey onto the platform, which would he drink?"

"The water," came from a dozen throats.

"Of course," responded the lecturer, who had waited the reply. "Now, tell me, why would he choose the water?"

To which a bored voice in the gallery returned:

"Just because he's a jackass."—*Pennsylvania Punch Bowl*.

Railroad Man's Knife \$1.00

Introduction Offer—Full sized sample of this knife with the emblem or design of the order of which you are a member placed under the handle will be mailed you for \$1.00 and this advertisement. For only 25 cents extra your name and address will be shown on knife. Size 3 1/4 inches long.

Easy Money

\$75.00 to \$200.00 monthly. All or spare time. Railroad employees, your spare time can be turned into dollars with a little effort. We want a Sales

Agent in Every Locality

to introduce transparent handle pocket knives and razors. Under the handles can be placed the emblems of any Railroad or Labor Organization, Secret Society or Fraternal

Order. Also the member's full name and address on the other side. Blades, finest steel; handles, handsome as pearl, clear as glass and unbreakable. Every knife guaranteed to be perfect. Every railroad

employee will want one as a mark of identification. We can also give permanent employment and exclusive control of territory to those who can give full time in taking orders from the general public. If you are earning less than \$1500.00 yearly, let us show you how to make more.

THE READER AND ADVERTISING

Circulation of the Baltimore and Ohio Magazine is over 36,000 copies per issue, our aim being to place it in the hands and in the homes of practically all English speaking employees of the Railroad. An examination of our advertising will show that it conforms to the highest standards. We do not guarantee it, but we believe that it means exactly what it says, and for that reason feel free to urge our readers to patronize our advertisers whenever they consistently can

But He's on His Way

Uncle Tom arrived at the station with the goat he was to ship north, but the freight agent was having difficulty in billing him.

"What's the goat's destination, Uncle?" he asked.

"Suh?"

"I say, what's his destination? Where's he going?"

Uncle Tom searched carefully for the tag. A bit of frayed cord was all that remained.

"Dat onery goat!" he exploded wrathfully. "Yo' know, suh, dat ignorant goat done completely et up his destination."

You Need These Books

PRETTY soon you will be called up to take your examination and you will have to face a lot of hard questions. Better brush up a little. Our books contain every question with its answer you are likely to be asked by the examiner. They are the only complete railway books issued giving up-to-date, reliable information. Don't put off until examination day comes, but send for the following books at once:

Westinghouse E T Air Brake Instruction Pocket Book Catechism. By Wm. W. Wood, Air Brake Instructor.

A practical work containing examination questions and answers on the E T Equipment. Covering what the E T Brake is. How it should be operated. What to do when defective. Not a question can be asked of the engineman up for promotion on either the No. 5 or No. 6 E T Equipment that is not asked and answered in the book. If you want to thoroughly understand the E T equipment get a copy of this book. It covers every detail. Makes Air Brake troubles and examination easy. Fully illustrated with colored plates, showing various pressures. **\$2.50**

Locomotive Breakdowns and Their Remedies. By Geo. L. Fowler.

Revised by Wm. W. Wood, Air Brake Instructor. It is out of the question to try and tell you about every subject that is covered in this

pocket edition of Locomotive Breakdowns. Just imagine all the common troubles that an engineer may expect to happen some time, and then add all of the unexpected ones, troubles that could occur, but that you had never thought about, and you will find that they are all treated with the very best methods of repair. Walschaert Locomotive Valve

Gear Troubles. Electric Headlight Troubles, as well as Questions and Answers on the Air Brake, are all included. 294 pages. Fully illustrated. **\$1.50**

Train Rule Examinations Made Easy. By G. E. Collingwood.

This is a book which every railroad man, no matter what department he is in, should have, as it is written by a man who understands the subject thoroughly. Mr. G. E. Collingwood, the author, is a recognized authority on train rules and train orders. For years he has edited the train rule department in four of the foremost railroad magazines in the United States. 256 pages. Fully illustrated with train signals in colors. **\$1.50**

Nearly 500 Questions with their Answers are Included.

Walschaert Locomotive Valve Gear. By Wm. W. Wood.

If you would thoroughly understand the Walschaert Valve Gear, you should possess a copy of this book. The author divides the subject into four divisions, as follows: I—Analysis of the gear. II—Designing and erection of the gear. III—Advantages of the gear. IV—Questions and answers relating to the Walschaert Valve Gear. This book is specially valuable to those preparing for promotion. Third edition, revised and enlarged. 245 pages, fully illustrated. Cloth. **\$2.50**

Air Brake Catechism. By Robert H. Blackall.

This book is a standard text book. It is the only practical and complete work published. Treats on the equipment manufactured by the Westinghouse Air Brake Company, including the E T Locomotive Brake Equipment, the K (Quick Service) Triple Valve for freight service; the L High Speed Triple Valve; the P-C Passenger Brake Equipment, and the Cross Compound Pump. The operation of all parts of the apparatus is explained in detail and a practical way of locating their peculiarities and remedying their defects is given. Endorsed and used by air brake instructors and examiners on nearly every railroad in the United States. Twenty-seventh edition. 411 pages, fully illustrated with folding plates and diagrams. New edition. **\$2.50**

Practical Instructor and Reference Book for Locomotive Firemen and Engineers. By Chas. F. Lockhart.

An entirely new book on the locomotive. It appeals to every railroad man, as it tells him how things are done and the right way to do them. Written by a man who has had years of practical experience in locomotive shops and on the road firing and running. The information given in this book cannot be found in any other similar treatise. Eight hundred and fifty-one questions with their answers are included, which will prove specially helpful to those preparing for examination. 362 pages, 88 illustrations. Cloth. **\$2.50**

Link Motions, Valves and Valve Setting. By Fred H. Colvin, Associate Editor of *American Machinist*.

A handy book that clears up the mysteries of valve setting. Shows the different valve gears in use, how they work, and why. Piston and slide valves of different types are illustrated and explained. A book that every railroad man in the motive power department ought to have. Fully illustrated. New revised edition recently published. **75 CENTS**

Locomotive Boiler Construction. By Frank A. Kleinbans.

The only book showing how locomotive boilers are built in modern shops. Shows all types of boilers used; gives details of construction; practical facts, such as life of riveting punches and dies, work done per day, allowance for bending and flanging sheets and other data that means dollars to any railroad man. Second edition. 451 pages, 334 illustrations. Six folding plates. Cloth. **\$3.50**

Which Wins?

Three small clothiers' shops, owned by an Englishman, a Scotchman and an Irishman, stood side by side.

The Englishman decorated his windows with a large bill—"Great Sale of Fire Salvage Stock."

The Scotchman put out a counter placard—"Great Sale of Bankruptcy Stock."

Pat wondered what he could do, as fire and bankruptcy had been annexed by his rivals. After much thought he put up a sign over his doorway inscribed: "Main Entrance."

The Fresh Ticket Agent

It happened in a little Iowa town. The trains were all late.

The ticket agent was new and fresh.

Wise boy, hat over one ear.

Sporty clothes, cocky air, flirt.

"Such a devil in his own home town."

That song must have been about him.

He was jollying a coy bit of fluff.

An elderly woman questioned him.

She was quietly dressed, unassuming.

"Can you tell me about the train?"

"About how late is it?"

"Dunno, m'm," he sawed her off.

Then he resumed regular business.

"Now, Cutie, them eyes o' your'n—"

The elderly woman persisted.

She was mild, almost apologetic.

"Pardon me, but I must know.

My husband is on this train.

Can you find about where it is?"

"Say, mum!" he winked at Cutie.

"Whadje think I yam?"

One o' these here tellypathists?

Er the Human Weegy board?

How'd I know where the train is?"

Cutie giggled. The woman colored.

"Where can I wire?"

Her voice was not so mild.

"Up stairs," he jerked his thumb.

"Them old dames make me tired,"

He said loudly to Cutie.

The woman heard, from the stairs.

Her wire startled the operator.

Train came, with a private car.

In it the president of the road.

A crowd gathered to see him.

"Where's my wife?" he demanded.

"Here, dear!" the lady answered.

It was the quietly dressed woman.

He kissed her. "I got your wire.

Show him to me. Quick!"

She led the way into the station.

The ticket agent's jaw dropped.

"Let me present my husband!"

Her voice was sweet—too sweet.

"He happens to be the president.

Perhaps your Ouija has told you?"

It had—told him the worst.

And the president told the rest.

It was like a volcanic eruption.

The hottest was at the end:

"You're fired!"

Wise boy is wiser, also sadder.

Especially when Cutie giggles.

For it's at him, not with him.

He's driving an ice wagon now.

Isn't it odd?

Golden Rule to strangers will pay.

You never know who they are.

—By Lillian Paschal Day, in *Baltimore Evening Sun*.

COPIES OF THESE BOOKS SENT PREPAID ON RECEIPT OF PRICE

The Baltimore and Ohio Magazine

Mount Royal Station

Baltimore, Maryland

A STRIKING AIRPLANE PHOTOGRAPH OF OUR 26th STREET FREIGHT STATION AND STORAGE WAREHOUSE IN NEW YORK. Easily visible along the teeming Chelsea Pier section of the Metropolis, and up and down the majestic Hudson itself, the impressive and symmetrical mass of this building is a veritable landmark in the vicinity, and a splendid advertisement for the Baltimore and Ohio.

Business-Getting Campaign Gathering Headway

Traffic Already Secured Proves Sincerity of Enthusiasm in System-Wide Solicitation—Veterans Still Leading the Way

ONE day during the week of April 17, Yardmaster Maloney, at Cincinnati, went into the store in which he buys his clothes. The proprietor greeted him and it was not long before he had heard of the business-getting campaign now in full swing on the Railroad.

"Doing any traveling now-a-days?" said Maloney.

"Yes," replied the merchant. "Going to Washington tomorrow."

"On the Baltimore and Ohio, of course?"

"No, on the ——— (mentioning another road)," was the merchant's reply.

And right then the railroader told the traveler about 100 per cent. Baltimore and Ohio service—on time trains, smooth riding, courteous employes, fine dining car service, beautiful scenery, etc.

The reward came the next day when the merchant sent down to the station for three Baltimore and Ohio return trip tickets from Cincinnati to Washington; one for himself, one for his wife and another for his daughter.

On another day of the same week, in Baltimore, a yard conductor was riding to Camden Station in a trolley car. He overheard a man ask the car conductor the way to the station of a competitor of the Baltimore and Ohio. He interrupted—politely—and the upshot of his appropriate and timely solicitation was that he took the inquiring traveler up to the ticket office at Camden Station and saw him slip his \$7.24 to the ticket seller and depart with his ticket for New York over the "Best and Only."

Again, in Cincinnati; two employes tried teamwork one afternoon of the same week. They worked intelligently, hard and convincingly, the result of their solicitation being 16 carloads of freight over the Baltimore and Ohio, most of it new business.

Back in Baltimore on another afternoon of the same week a young woman employe, working in an office at Mount Royal Station, had occasion to go to the baggage room for mail. A woman and her son were getting some parcels out of the parcel check and asking at the same time the way to the station of a competing road.

Pleasantly, our woman employe interrupted. She had overheard that the travelers wanted to go to the station of a competing road to buy tickets to New York. A few minutes later they were introduced to our Ticket Agent Cromwell at Mount Royal and the Baltimore and Ohio was thereby two more fares, Baltimore to New York, to the good. Then, just to show these travelers that we wanted not only their patronage, but also their good will, the young woman employe took them out and saw that they got on the proper trolley car to reach their destination of the afternoon, for it was their plan to go to New York the next day. Credit two pleasant acquaintances of the

Car Loading Increases

Commercial car loading showed a slight but encouraging increase in April as compared with March.

April, 192,666 cars

March, 190,326 cars

Baltimore and Ohio to this young woman, with the further probability that they will become three fast friends and valued patrons.

These are just a few of the isolated experiences that have come through different channels to the attention of the writer. We mentioned but three employes in Cincinnati and two in Baltimore who secured business valued in the hundreds of dollars. Yet Baltimore and Cincinnati number many thousands of Baltimore and Ohio employes. Can't you see the possibility of this business-getting campaign if we all get on our toes?

The tour of the Traffic Boosters led by H. O. Hartzell, manager Commercial Development, is now over. Three weeks of hard travel enabled the party to put the business-getting messages before thousands of our Veterans and other employes, a brief resume of the meetings being as follows:

DATE	PLACE	ATTENDANCE
April 11,	Pittsburgh, Pa. . . .	250
April 12,	Youngstown, Ohio. . .	140
April 13,	Cleveland, Ohio. . . .	135

DATE	PLACE	ATTENDANCE
April 13,	Lorain, Ohio.	100
April 14,	Connellsville, Pa. . .	500
April 15,	Cincinnati, Ohio. . .	300
April 16,	Lima, Ohio.	150
April 18,	Seymour, Ind.	140
April 18,	Washington, Ind. . .	500
April 20,	Philadelphia, Pa. . .	50
April 21,	Martinsburg, W. Va. .	175
April 22,	Cumberland, Md. . .	200
April 23,	Grafton, W. Va. . . .	275
April 23,	Parkersburg, W. Va. .	150
April 25,	Fairmont, W. Va. . .	350
April 26,	Wheeling, W. Va. . .	250
April 27,	Garrett, Ind.	150
April 28,	Willard, Ohio. . . .	200
April 29,	Newark, Ohio.	200
April 30,	Chillicothe, Ohio. .	1000

All of these meetings were addressed by Mr. Hartzell, and at most of them addresses were also made by W. W. Wood, chief of Welfare Bureau, and G. W. Sturmer, grand president of the Veterans, besides the speakers from the local territories. The Veterans turned out in force at all of these meetings, the officers of the local chapters doing everything in their power to bring out big crowds. At certain places larger numbers of our younger employes were expected, but in view of the quickness with which the tour was organized, all those connected with it are agreed that the attendance of employes in general was most encouraging.

District, division and local officers of both the Operating and Traffic departments supported all the meetings splendidly and became enthused with the hearty reception given the business-getting campaign by the audiences and by the determination shown to secure new traffic for the Railroad.

Veterans and other employes may be sure that they will get full credit for all business they secure, provided only that they report it on return postal cards to the office of—

H. O. Hartzell,
Manager Commercial Development,
Baltimore, Md.

During the two weeks ending April 30, 196 carloads of freight were reported secured on these postal cards, as shown in detail on the following pages. All those who have been closely

Business recorded above totals 196 carloads of freight, secured by 44 veterans and other employes, and representing 72 different shippers or consignees successfully solicited.

Remarks on the cards indicate that this was for the most part new and competitive business, and in many instances additional promises of future shipments were made. In one case a carload a week of new business was promised and in another 8 to 10 carloads a month.

General satisfaction with Baltimore and Ohio service was expressed.

These shipments are being traced through division officials to see that the business was secured, whether it was new, and the Baltimore and Ohio revenue derived.

This campaign is evidently having broader results than indicated by the returns of our solicitation cards, as Division Freight Agents have reported in a number of cases substantial shipments secured by Baltimore and Ohio employes and Veterans for which no cards have been made out or returned.

H. O. HARTZELL,
Manager Commercial Development

Business-Getting Campaign

(Continued from page 5)

identified with this business-getting campaign are agreed, however, that the return postal cards reported in this list do not by any means represent the amount of business secured. The campaign has literally outgrown the postal card idea and although all those having postal cards and getting business are urged to send them in, it is certain that a great many cases of business actually secured have been consummated without any report being made of them.

Our employes in general have undoubtedly seen the mutual benefit which will come to all connected with the Railroad if this campaign finally shows the big results which developments at the present time indicate. They like the idea of getting business. They want to demonstrate to their friends and acquaintances that the Baltimore and Ohio can also be properly spelled "Best and Only." They feel that during this critical time, when a friend gained for the Railroad is probably a friend who will stick by the Railroad, they can get a surplus of result in the rendering of good service and the getting of new business, the good results of which will be multiplied as general business condi-

tions gradually get back to the normal. They remember that about 60 per cent. of the gross revenue received for every carload of freight is distributed back to themselves through the payroll.

There probably never was a time before in the history of the Company when united effort in business-getting will count for as much as it does now. Our facilities are in such condition as to enable us to handle quickly and satisfactorily all business offered. That means that those becoming patrons of the Railroad now will continue to be patrons years hence. And it also means that every new patron of the Baltimore and Ohio will become a missionary for our service and bring other patrons to use it. If we believe in our Railroad—as most of us do—now is the time to prove that belief by doing everything in our power to increase its prosperity. The Railroad needs it and the employes connected with the Railroad need it. In helping the one we help the others. And if we put back of this campaign the earnestness and hard work that some of our fellow employes have been and are showing, it is our confident belief that it will not be long before pros-

perity will again be in the saddle, to the resulting benefit of us all.

Read the illustrations following this article, illustrations that show several of the many angles at which this business-getting campaign can be approached. Each one is an inspiration to the employe who realizes that his own welfare is prospered only as the prosperity of the Railroad increases.

Veteran G. F. Wright, Newark, Ohio, Chapter, Puts His Name on Honor Roll

PRESIDENT D. H. Moriarity of the Newark, Ohio, Chapter of Veterans, reports that on March 19 a return post card was sent to E. N. Kendall, division freight agent, by Veteran G. F. Wright, indicating that on his solicitation the Wehrle Company of Newark had shipped a carload of stoves to Spear & Company of Pittsburgh.

This fine bit of business-getting suggests this interesting thought: Spear & Company are one of the best known mail order houses in the East and do a large mail order business out of Pittsburgh. Assuming that this carload of stoves was handled to their satisfaction by the

(Continued on page 20)

An Anonymous Letter Which is Published and Answered for the Information of All Employes

Here is the Letter

The following letter was received on March 30 by the editor of the BALTIMORE AND OHIO MAGAZINE:

MARTINSBURG, W. VA., March 29, 1921.

BALTIMORE AND OHIO MAGAZINE:

In reply to your February MAGAZINE on page 5, I wish to say that the people of this city beg to differ with your article.

The Blair Stone quarries, two miles east of here, say that they have orders enough to run one year if they could get the cars to load. But claim the Baltimore and Ohio cannot supply them with cars. Why? The said quarries furnish stone to some of the largest mills around Pittsburgh and they are waiting for the stone, but the Baltimore and Ohio Railroad cannot furnish the cars. Why?

Cumby yards are four miles west of this city. There are loaded cars there which have been switched around over three weeks just to kill time. Why?

It took Mr. J. M. Miller seven days to get some potatoes from Hancock to here, a distance of about 23 miles. Why? Most all the shops have closed down and claim there is nothing to do. Why?

Our stores claim they cannot get their supplies over the road. Why?

The Baltimore and Ohio are having their repairs done elsewhere. Why?

I should be pleased to have some of these questions answered through your MAGAZINE.

Sincerely,

(Signed) AN EMPLOYE FURLOUGHED.

There are few anonymous letters received in the MAGAZINE office, most employes apparently understanding that any letter signed by an individual employe and sent to the MAGAZINE will be treated in strict confidence, if that is requested, and that any question affecting the Company and its relationship with the public and with its employes, will, if asked in sincerity, be received in the same spirit and given courteous attention.

There was something about the above letter, however, which made it clear that although signed anonymously, there was back of it a real perplexity on the part of the writer and a sincere desire to have the questions which he had asked and which were undoubtedly worrying him, answered as quickly as possible. Hence, the editor of the MAGAZINE sent copies of the letter to the departments whose activities on the Railroad were the subject matter of the questions asked, with request that these questions be investigated and answered.

It should be explained here that the article referred to in the first paragraph of the employe's letter was placed in the MAGAZINE to let every employe know of

the necessity for curtailment and economy wherever possible and in every department of the Railroad. It showed, for instance, that in October, 1920, the Baltimore and Ohio loaded and received from connections 302,528 cars, and that in January, 1921, this figure had fallen to 194,651 cars, a decrease of over one-third in business handled during the short period of three months. It mentioned many ways in which the Company was attempting to save money and it urged every employe to help. In the caption of the article it said specifically:

"To the employe who for any reason doubts the necessity for the most rigid economy during this period of decreasing business, the facts here presented will be convincing."

Evidently the facts presented were *not* convincing to the employe who wrote this letter, although we believe that if he had given the article thoughtful consideration, he would have understood the real necessity for curtailment and economy in every direction. The facts presented in the article questioned are a matter of open record on the books of the Interstate Commerce Commission in Washington. The original copies of the following letters, which answer point by point the questions raised by the inquiring employe, may be seen in the MAGAZINE office at Mount Royal Station, Baltimore, at any time.

Here are the Answers

Answering question in regard to cars supplied the Blair Limestone Company of Martinsburg, W. Va.

BLAIR LIMESTONE COMPANY

WARD McLANAHAN
GENERAL SUPERINTENDENT

MARTINSBURG, W. VA., March 31, 1921.

MR. J. D. CLARKE, Superintendent of Transportation, (Central Building), Baltimore and Ohio R. R. Co., Baltimore, Md.

Dear Sir—We understand you have had up with Mr. Jud Kline, yardmaster at Martinsburg, the matter of car supply at Martinsburg, about which we complained on March 29 in a letter to Mr. J. L. Hayes, division freight agent.

For your information would say that the writer was advised about 7.30 a. m. on March 29 by our hydrate line foreman that there were no more cars for loading at the hydrator, whereas he had orders for several cars to be loaded during the day. I immediately called the local yard office, and was advised by Mr. Kline that

there had been no box cars brought up from Brunswick the night before, even though we had placed an order for six box and eight hoppers. He further said that they had been getting very few box cars from Brunswick lately. He advised, however, that he thought he could fix us up by securing empties in the local yards, according to statement in our letter to Mr. Hayes. This was promptly attended to by Mr. Kline, and cars were received at Blairton about 11 o'clock. These cars, of course, took care of our requirements for the day, but had special shift not been made, we would have had to load lime in our storage all day. As it was, this was only necessary for about three hours.

It was not so much that we complained regarding the shortage on Tuesday as the fact that we understood that the main bulk of box cars were being moved west for grain, and this led us to believe that if cars were going west, we would have difficulty in securing empties for our prospective lime orders. Our complaint, therefore, in our letter of the 29th to Mr. Hayes covers the shortage of Tuesday, March 29.

As to car supply since we resumed operation February 21, would say that there has not been a day when we have not had empty cars in our yard when we stopped work at 5.00 p. m. There were several occasions, however, when the proper class of equipment was not placed at the proper loading points, and we were held up in loading material until the shifter came into the yards on the next trip.

There were also several occasions when cars were not at the proper loading points when work started in the morning, just like the case of March 29, yet on taking the matter up with the yard office, they very promptly gave us relief when it was possible to do so. We did not complain regarding this matter owing to the fact that our orders were not very urgent, and we were able to either store lime in our stock room, or in extra trucks until the cars were at the proper location.

Therefore, on the whole, the car service since we resumed operation has been very satisfactory except on the occasions as mentioned above.

One thing, however, we do wish to add is that Mr. Judd Kline, yardmaster at Martinsburg, certainly seems to have tried in every way to take care of our requirements when it was within his power to do so, but it seems the trouble, as a rule, has been elsewhere, just as it was on the 29th, when cars were ordered from Brunswick by the local yard office and were not set off for placing owing to the order for movement of cars west for grain loading.

Trusting this is the desired information in this matter, we are,

Yours very truly,

(Signed) WARD McLANAHAN,

WMCL/CMW

General Superintendent.

Editorial Note:

It will be noted that any anxiety Mr. McLanahan may have had concerning car supply given by the Baltimore and Ohio was occasioned by the impression that we were sending all box cars west for grain, as stated in third paragraph of his letter. Having in mind the situation last fall, when there was such a severe shortage of cars, it is quite natural that he would be concerned. However, Mr. McLanahan was advised during the first part of April that we were not sending any box cars west for grain.

Answering questions concerning

a—Switching of cars in Cumbo Yard.

b—Reported shipment of potatoes to J. M. Miller.*

*(There is no J. M. Miller in Martinsburg, the person in question probably being M. J. Miller, grocer.)

BALTIMORE, MD., April 14, 1921.

To the Editor of

BALTIMORE AND OHIO MAGAZINE:

Referring to 'phone conversation with my chief clerk, and your memorandum of April 1, enclosing copy of anonymous letter signed by "An Employee Furloughed," for your information, treating on the subjects referred to, would advise as follows:

1. Cumbo Yard: Check fails to develop where cars laid around for three weeks, as claimed. On the contrary, the yard situation at that point will not permit of such an occurrence.

2. Shipment of potatoes to Mr. Miller at Martinsburg: Mr. Miller claims he received no such shipment. He did, however, order some potatoes at one time, but the party would not ship them.

3. Car supply, Blair Limestone Quarry: General Superintendent McLanahan of that firm states that he experienced no car shortage. The only complaint he made was on March 29, when empties were received late; further advises that since they resumed operations on February 21, there has not been a day when they did not have empty cars in the yard when they stopped work at 5.00 p. m.

Yours truly,

(Signed) E. W. SCHEER,
General Superintendent.

Answering question in regard to Martinsburg stores being unable to get their supplies over the road.

MARTINSBURG CHAMBER OF COMMERCE
APPLE, STONE AND TEXTILE CENTRE

MARTINSBURG, W. VA., April 8, 1921.

MR. J. L. HAYES, Division Freight Agent,
The Baltimore and Ohio R. R. Co.,
Cumberland, Md.

Dear Sir—A report that the merchants of Martinsburg were getting poor freight service on your railroad was called to my attention by the Chairman of our Transportation Committee about a week ago. During the past week I have visited a large percentage of our merchants and I have failed to find any one of them dissatisfied with the service being given by the Baltimore and Ohio. I again called the matter of freight service to their attention at a meeting held yesterday and everyone present appeared well satisfied with the service of the past several months.

Cordially yours,

(Signed) WM. H. PFAU,
Secretary.

Timber Preservation Making Big Savings in Cost of Tie Renewals

By F. J. Angier
Superintendent Timber Preservation

(Additional pictures and charts illustrating this article will be found on pages 36 and 37)

EXCEPTING fuel, the largest single item of material expense on a railroad is cross ties. How many of us give it more than a passing thought? Do you Baltimore and Ohio men know that during the past 20 years the average number of cross ties used annually on our Railroad was approximately 2,000,000; that the average life of those ties was about 10 years? Do you know that today the Baltimore and Ohio has approximately 27,000,000 ties in track and that about 10 per cent. of these, or 2,700,000, fail each year?

Do you know that the cost of ties, like everything else, has increased

and that the best white oak ties cost \$1.75 each and red oak ties \$1.65? A very few years ago these ties could be purchased for one-third of this amount. Do you know that the purchasing price represents only a fraction of the cost in track and that a tie costing \$1.65, when there is added the cost of inspection, freight, treatment, installation, fastenings, supervision, etc., represents an expenditure of about \$3.50? Not all the ties put in track cost this much, however. The ties are graded, the prices of each grade, effective March 1, 1921, being as shown in Table A on this page.

Selection of Ties for Various Conditions

The better grades of ties are used under heavy traffic and important tracks, and the cheaper under light traffic and less important tracks. It is the duty of those who are continually studying such conditions to determine the relative economy of each grade and where each should be used. Tie renewal schedules have been carefully prepared for each division on the System. These schedules show the most economical ties to use under different conditions of traffic, giving first, second, and third choice. Table B, schedule for the Cumberland Division, accompanying this article, will illustrate this.

This schedule was prepared for three reasons:

1. To define the most economical tie for every condition of track and traffic.

2. To assist in the most economical distribution of ties and to locate the producing districts where purchase may be extended with advantage.

3. To locate and define those track districts where, on account of the combination of curves, grades and traffic, treated ties ought not to be used.

The most economical tie for each condition of track and traffic was determined from two factors:

1. The cost in track complete.
2. Assumed life in years.

The assumptions as to how long different classes and grades of ties will last under varying traffic are the result of an extended investigation in which the experience and opinion of 58 engineers and trackmen were made use of. They are men of prominence in matters concerning track and ties, most of them being Baltimore and Ohio officials.

The cost per year is the unit of comparison used; this is the total cost in track, divided by the assumed life in years plus the interest at 6 per cent. on the total cost in track.

EXAMPLE

Class Ta, Grade 5, treated tie costs in track—\$2.72, including tie plates. If it lasts 14 years its annual cost is:

Table A

GRADE	GROUP Ua	GROUP Ud	GROUP Ta	GROUP Tb	GROUP Tc	GROUP Td
1	\$.80	\$.60	\$.70	\$.50	\$.50
2	1.10	.85	.9575	.75
3	1.40	1.10	1.2595	.95
4	1.60	1.25	1.45	\$1.00	1.10	1.10
5	1.80	1.40	1.65	1.15	1.25	1.25

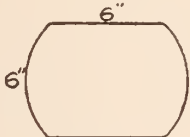

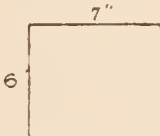

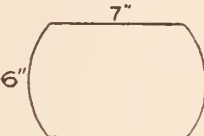

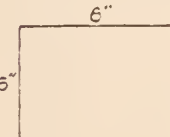

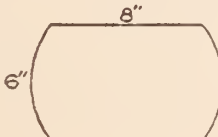

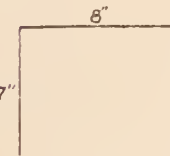

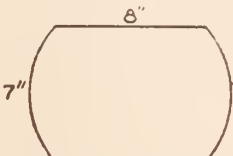

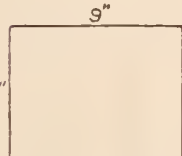

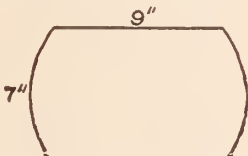

Table B

SCHEDULE OF CLASS AND GRADE OF CROSS TIES TO BE USED IN RENEWALS,
CUMBERLAND DIVISION

	CLASS AND GRADE		
	FIRST CHOICE	SECOND CHOICE	THIRD CHOICE
MAIN TRACKS			
Weverton to Piedmont, Altamont to Terra Alta, Newburg to Grafton, Patterson Creek Cut-off, Magnolia Cut-off.....	Hard treated 4-5 (tie plated).....	White oak 4-5 (tie plated).....	Heart pine 4-5 (tie plated).
Piedmont to Altamont, and Terra Alta to Newburg.....	White oak 4-5 (tie plated).....
BRANCH LINES			
Berkeley Springs Branch, South Branch, Baker Branch, Raccoon Valley Branch, Hardman Branch...	White oak 1-2, chestnut 1-2.....	White oak 3.....	Chestnut 3-4-5.
SIDE TRACKS			
Lead and Passing tracks; yard and industrial tracks....	Hard treated 1-2; soft treated 1-2 (tie plated).....	White oak 1-2.....	Chestnut 3-4-5.
Repair, temporary and storage tracks.....	Treated or non-treatment serviceable culls.		

NOTE—All ties 8½' long, unless otherwise designated.

Sizes of Various Grades of Ties

GRADE	SAWED OR HEWED TOP, BOTTOM AND SIDES	SAWED OR HEWED TOP AND BOTTOM
1	NONE	
2		
3		 OR 
4		
5		

$$\frac{\$2.72}{14} = \$0.194$$

$$\frac{\$2.72 \times 6\%}{14} = \frac{0.163}{14}$$

Annual cost \$0.357

From the data accumulated as to:

1. Annual tie consumption and tie supply, present and anticipated;
2. The relative quality of the same class of ties grown in different districts;

3. The most economical tie, First, Second and Third choice;

4. Minimum haul;
the tie distribution is to be carried on. The districts where grades, curves and traffic conditions combine to make derailments likely, or to cause frequent rail changes from regauging, respiking, etc., have been determined upon by:

1. Inspection on the ground.
2. According to weight of locomotives used.
3. By examination of profiles.
4. By questioning track and operating officials.

Attention has been given to the difference in size of ties both 8' and 8½', as this is of importance.

Ties Bulk Big in Railroad's Expenses

The President's Annual Report shows that the average purchasing price of ties for the year 1919 was \$1.26. To this we may add a like amount for inspection, freight, treat-

ment, fastenings, installation, supervision, etc., making the actual number of ties used in 1919, 2,461,941 at \$2.52 each, representing an expenditure of \$6,204,000.

What is true of the Baltimore and Ohio applies to all other railroads, and you may, perhaps, be surprised to know that all the railroads in the United States use approximately 125,000,000 cross ties annually. Do you know that the timber in this country is fast disappearing, and that we are now using it four times faster than it grows?

Small Percentage of Treated Timber

Mr. A. R. Joyce, president of the American Wood Preservers' Association in 1920, in an address before the First American Congress, said:

"The railroads are using over 90 per cent. of the treated timber today, and yet the figures on cross ties, which represent the largest item of treated forest products, show that for the 5-year

period, 1913-1917, inclusive, an average of 28.5 per cent. of the ties used are being treated.

"Over 2,000,000,000 board feet of lumber is used every year in the construction and maintenance of freight equipment, and practically none of it is being treated."

You will now ask what is being done to conserve our timber. Space will not permit further general facts that could be presented, so we propose to tell you briefly what the Baltimore and Ohio is doing.

Baltimore and Ohio a Leader in Preservation

In a former article, you were made acquainted with the Green Spring timber treating plant. This plant is treating 1,000,000 ties a year. It was built 7 years ago and since that time has treated approximately 24,000,000 cubic feet of timber, consisting of 6,000,000 cross ties, 663,000 cubic feet of switch ties, 2,000,000 square feet of timber, 118,000 cubic feet of piling and 12,000,000 tie plugs.

These figures may be more easily comprehended by presenting a few pen pictures.

If this timber was all in the form of cross ties, laid side by side and touching each other, they would make a solid sidewalk 7 inches thick, 8½ feet wide and 1000 miles long, or from New York to Chicago.

If they were laid end to end, they would reach from New York to San Francisco and back to New York;

F. J. Angier
Superintendent Timber Preservation and First Vice-President of
American Wood Preservers' Association

then again across the United States and some distance out in the Pacific Ocean.

It required more than 50,000 cars to deliver this material to the plant and distribute it over the System. If these cars could be made up in one big train, it would be 400 miles long and require about 500 of our heaviest locomotives to haul it.

If we say that there is a slack of two inches between every car of our big train, the engines would have to move over a mile and a half before the caboose would start.

If the head engine whistled in the flagman, it would take one-half hour for the sound to reach him (assuming it could be heard that distance), and then the flagman could not signal the engineer (because of the curvature of the earth) unless he was in a tower as high as the Baltimore and Ohio General Office Building in Baltimore.

As stated above, we commenced treating at our own plant about 7 years ago. Prior to that time, we purchased a few treated ties from commercial plants, and our records show that the first treated ties put in track on the Baltimore and Ohio System was in 1909. During that year, only 17,534 treated ties were used. In the year 1920, 1,450,961 treated ties and 1,250,820 untreated ties were used, the percentage of treated to untreated being 54 per cent. for that year. At the beginning of this year, the Baltimore and Ohio had approximately 10,000,000 treated ties in tracks, and, if we assume that in all tracks there are 27,000,000 ties, this shows a percentage of nearly 38 per cent. treated ties in track.

Treating Ties Makes Big Savings in Renewals

You will now ask what it cost to treat these ties and what the saving is. For the 7-year period, the average cost was about 30 cents per tie. The cost in the last two years has very much increased, as has the cost of everything else. If we take the average cost of 30 cents and say that the treatment only doubles the life (with most species it will triple or quadruple the life), we then get a new tie for every tie treated. This is due to the fact that the cost of treatment offsets the cost of installation. If all of our ties were treated and the treatment simply doubled their life, then our renewals would be reduced 50 per cent. and we would save approximately 1,500,000 ties a year. Saying that each tie put in track costs \$2.50, the saving on 1,500,000 ties would be \$3,750,000.

Why We Use the "Card Process"

The Baltimore and Ohio has adopted as their standard treatment a mixture of chloride of zinc and water-gas-tar, or what is known among wood-preservers as the card process. Some of us who have made a close study of wood preservation for many years believe this process to be the most economical for our climatic conditions. Coal tar creosote is conceded by all to be the best preservative known today, but this preservative is too expensive with our present track fastenings and the short mechanical life resulting therefrom. In other words, it is not economical to treat a cross tie to resist decay during a period of 20 years or more, when we expect it to fail from rail cutting, spike cutting, etc., in 15 years. To preserve it from decay for only so long as it will last mechanically, seems the logical thing to do.

The Proof of Tie-Treating Economy

You may now ask where we get our knowledge as to the life of the various kinds of cross ties, treated and untreated, and from a decaying and a mechanical standpoint. The answer is, from the observation of maintenance of way men and from experimental test tracks that have been carefully made and watched for a number of years. The Baltimore and Ohio have several such test tracks scattered over the System, some of which are 6 to 10 years old. Other railroads have longer records.

The Forest Products Laboratory made over 2000 tests on about 70 species of timber to determine their resistance to crushing when the force is applied at right angles to the grain, as in the case of cross ties.

The following results are based on wood in green condition:

Crushing Strength of Cross Ties in Per Cent. of White Oak

KIND OF TIE	Fiber Stress at Elastic Limit Perpendicular to Grain. Pounds per square inch	Fiber Stress in Per Cent. of White Oak, or 853 pounds per square inch
Osage orange.....	2260	265.0
Honey locust.....	1684	197.5
Black locust.....	1426	167.2
Post oak.....	1148	134.6

Loblolly pine.....	3	15	10

The card process may be expected to give a life about midway between the creosote and the zinc chloride processes.

The cost of treating with the card process is slightly more than with zinc chloride but very much less than with straight creosote.

The Burlington Tests

The C. B. & Q. Railroad installed experimental test tracks on each division in 1908. In each test track 1000 ties were laid out-of-face. Twenty different kinds of wood were used, treated with three processes, viz.: straight creosoting, Burnettizing or zinc chloride, and card. Also,

untreated ties of each kind were included in the test. These ties were carefully treated and an accurate record maintained.

An inspection of these test tracks made the latter part of 1920, after 11 years, gave the results shown in Tables C and D.

The graphic chart reproduced in another part of this article was taken from Mr. J. H. Waterman's Eleventh Annual Report and the table showing the average years' life at the eleventh year period was compiled from his report. These ties were treated and placed in track in 1909 under my supervision. Mr. Waterman succeeded me as superintendent timber preservation and has very ably and faithfully inspected these ties each year. Every man, from the general superintendent down to the section man, has received very emphatic instructions from the Management regarding these experimental ties and not a single tie is permitted to be removed from the right of way until it is thoroughly inspected by Mr. Waterman or his representatives. The thorough manner in which the ties were treated and installed in these test tracks and the very careful way in which they have been looked after by Mr. Waterman during their 11 years' existence, are proof that the results are probably as accurate as can be made. With this knowledge the results obtained from these test tracks are considered by wood preservers as among the best records

we have today of treated and untreated ties in track.

The table of average years life at the eleventh year period shows very little difference in the treated ties. During the next 4 or 5 years, no doubt, a much greater difference between the processes will be apparent. The percentage of ties still remaining in track shows that with straight creosote 95.3 per cent. are still doing service; with the card process 87.6 per cent., and with the Burnettizing process 79.8 per cent. The story is altogether different with the untreated ties, which shows that the average life is but 5.81 years and only 6.4 per cent. are left in the track. If we exclude chestnut and white oak, which are not usually treated, the average life of all the other untreated ties is 5.24 years. In another year, we can reasonably expect that all the untreated ties will have been removed, while 75 per cent. or more of the treated ties will still be in service. This will show at a glance the wonderful results we can expect by treating our ties.

If we wish to assume that 11 years ago we treated all the ties placed in track that year (say 2,700,000) with straight creosote, our renewals during that time would have been 126,900 ties. Assuming they were all treated with the card process, the renewals would have been 334,800 ties, and if treated with the Burnettizing process, the renewals would have been 545,400 ties. As we are using the card process on the Baltimore and Ohio, we would have used 210,600 ties less each year than we would have if treated with the straight zinc chloride or Burnettizing process.

The approximate cost of ties in track treated and untreated, which includes first cost of tie, plus treatment, freight, installing, tie plates, supervision, etc., is as follows:

Straight creosote.....	\$3.19
Card process.....	2.66
Burnettizing process.....	2.54
Untreated.....	2.18

Assuming that 11 years ago we placed 1000 of each process in track, and as the ties decayed they were replaced in kind at same cost per tie, we could expect the following results:

Straight Creosote

1000 ties at \$3.19 =	\$3190.00
Failed by decay 1.2 per cent. or 12 ties at \$3.19.....	\$38.28
Renewals 1.2 per cent. or 12 ties at \$3.19.....	38.28
Original cost.....	3190.00
Total.....	\$3266.56
Average annual cost per tie....	\$0.2970

-------------------------	----------------

Saving of

Card process over—	
Straight creosote.....	\$106,110.00
Burnettizing.....	44,820.00
Untreated.....	775,710.00

The Future Tie Supply

Where are we to look for our future supply of ties?

The United States Forest Service informs us that the original forests of the United States are estimated to have covered 822 million acres. Over two-thirds of this area has been culled, cut over, or burned. There are left today about 137 million acres of virgin timber, 112 million acres of culled and second-growth timber large enough for sawing, 133 million acres partially stocked with smaller growth and 81 million acres of devastated and practically waste land. Three-fifths of the timber originally in the United States is gone. We are taking about 26 billion cubic feet of material out of our forests every year and growing about 6 billion feet in them.

The American Forestry Association says:

"The bulk of the original supplies of yellow pine in the South will be gone in 10 years, and within 7 years 3000 manufacturing plants will go out of existence.

"Fire destroys over \$20,000,000 worth of timber every year and kills the reproduction upon thousands of acres of forest lands.

"Within 50 years our present timber shortage will have become a blighting timber famine."

Dr. Herman von Schrenk, in an article appearing in the *Railway Maintenance Engineer* for October, 1920, says:

"The conclusions to be reached by a careful study of the Forest Service

figures indicate that the American railroads need not worry for some years to come. There will doubtless be changes in the source of supply, changes in the kinds of woods used, changes in the methods to make certain types of wood better fitted for cross tie purposes and probably changes in first cost.

"The second source of supply will be from countries in Central America and South America. From time to time during the last 30 years there have been sporadic tie shipments of one kind and another from tropical countries, but this field of supply has practically not been touched. At the present time numerous offerings are being made of various kinds of tropical woods. Mexico has a forest area of approximately 20 million acres. The mountain and highland forests are composed largely of pines. The tropical forest extends along the edges of the Central Plateau and contains a large number of tropical hardwoods, there being some 85 different species of oak.

"Guatemala, Nicaragua and the Central American republics have large supplies, most of which, however, are located on the western side. On the Gulf of Mexico side there are considerable pine forests.

"The chief tropical resources, however, are in South America. It is almost impossible to state the actual extent of these resources. The Andes Mountains are forested for practically their entire length and very little of the timber in the mountains has been cut. Brazil has probably

Standard method of piling ties

Employees of our Timber Preservation Plant at Green Spring, W. Va. In the front row on Mr. Angier's right is E. E. Alexander, Supervisor of Plants

the largest area. The woods are all extremely hard with no resemblance whatever to the woods found in the United States. Venezuela and Columbia, although with fewer forests, can also be counted upon for a very large future supply.

"While vast quantities of timber are undoubtedly available in the tropics, attention should be called to the fact that immediate unlimited uses of these resources can hardly be looked for. Tropical timbers grow in dense jungles, and their fitness for use as ties in the United States is as yet almost wholly unknown. Most species have very hard woods which in their native lands may have given excellent service as railroad ties, bridge timber, etc. When brought to the northern temperate regions, however, many of these very excellent woods fail utterly when used in the form of track ties. These hard woods split and check when exposed to the wide extremes of temperature running from zero to 125 degrees F. or more. In other words, they are unable to withstand the expansion and contraction to which they are naturally subject in most of the regions of the United States.

"As there is no means of foretelling what any tropical wood is going to do, it is obvious that the purchase of any particular number of any species must be attended with considerable risk. During the last 30 years a large number of species have been imported, but owing to unfavorable records both as to their names, origin and years of service, correct data as

to their fitness for tie purposes are in most cases wanting. Sufficient is known, however, to indicate that the purchase of tropical woods in the form of ties, irrespective of what country they come from, should be consummated only after the most careful investigation as to their names and after years of trial in small quantities of definitely identified species in actual track service in the United States."

Substitute Tie

While a large number of ties have been invented to replace the wooden tie, none of them have proven entirely successful. About 25 railroads are now experimenting with substitute ties and in time something will doubtless be found, but we may expect the treated wooden tie to be in the lead for many years to come. In fact we may say that timber preservation is in its infancy, and we must look more and more to it for the conservation of our timber.

The Fable of the Four Men

"I got off a street car this morning," said a doctor to me, "and being in no hurry, I began moralizing on the actions and probable character of three men who had alighted just ahead of me. The first one was even then halfway down the block and was going on with such rapid strides that he had already put a couple of hundred yards between himself and the next man. 'There,' thought I, 'goes a hustler—a man who's bound to succeed in life.' The second man was walking slowly, and impressed me as one who would do fairly well in the world. But the last fellow was just dawdling along in the most shiftless sort of way. I very quickly set him down as a loafer. Just then another idea came to me: *All three were ahead of me!*"—New York Times.

Sayings of "Dinty Moore," Car Distributor, Cincinnati Terminals

You can't make a man mad by kidding him, but you can by just laughing at him.

Some girls are so modest that they blush when they see a pile of undressed lumber.

When a girl is going with a fellow she thinks that she has the only fish that is in the sea, but after she gets him, she discovers that she only caught a crab.

For the Hill-Billy's Girl

By Frank Kavanaugh

THE track described a sharp curve. Such a curve on level ground would not have mattered much, but here the tracks were some 10 or 15 feet below the ground; it was one of the worst curves and cuts on the Crosbie Branch of the Great Midland.

Crawford eased the throttle in a bit as he entered the curve, and as the engine heeled over to the track elevation he let his hand slip from the throttle to the airbrake valve handle. The fireman, who was watching him, called across the space between the left and right hand seats.

"It's all right! That country road's not traveled once in a coon's age. None of the yaps ever come this way!"

"This may be the once," Crawford returned. The train, coasting on the level track, was decreasing speed slightly. The engineer leaned far out to get a view of the track from a point as far away as possible. As it was the pilot of the engine was nosing around the curve within 60 feet of the wagon road crossing when the hand on the airbrake tightened and a second later the brake-shoes gripped and half a minute later the engine ground to a standstill with its pilot about two feet distant from a motor car. In the car sat a girl, while down at the front end an old man frantically twisted the crank, trying to start the engines. When he saw the locomotive had come to a standstill he breathed a sigh of relief. Crawford stepped off the engine and came around to the front end.

"Nearly got you that time, old-timer," he said cheerfully. "If I hadn't pinched her down your car would have been junk by now." Then, for the first time he saw the girl. She looked very white and very helpless. "Excuse me, Miss," he hastened to say. "Why didn't you jump?"

"My father—" The girl's lips closed as she looked toward her father. He took up the line of conversation.

"No Clover County Buchanan ever jumped or showed fear of the Great Midland Railroad," the old man said. "You might have killed my daughter, but I'd have killed you and two or three more like you in revenge." He began cranking again.

Crawford motioned to the fireman and one of the trainmen who had come up.

"We'll get your car off the crossing for you," he told the old man. "Be

more careful next time. I used the crossing signal twice back there, and the old No. 80 has a good whistle if it hasn't anything else."

The old man stepped aside, the three railroad men pushed the motor car in the clear and the train went on.

Crawford had been on the run but one trip. He "bid in" the run on the Crosbie Branch more as a joke than anything else, and was determined not to keep it longer than necessary, or until business picked up so that he could have a regular run on the main line.

For the Crosbie Branch was the joke of the system. From the main line it meandered up into the hills for 50 miles. The hills were inhabited by a people who had moved there from England and Scotland when the country was young, and they still clung to most of their traditions. One of these traditions seemed to be that they must fight every innovation, and this included the Great Midland Railroad. Time after time when the one train happened to be late and dark overtook it before it had made the terminal, the "ping" of a bullet was no stranger to the trainman who sat near his light. But the passenger car at the rear of the train was never molested, principally because it might have as a passenger a wayfarer from these very hills.

"We're glad you bid it in," Crawford was told as he prepared to go down to take the new run. "We can't hold men down there and the State won't let us abandon it. No trainman has ever become chummy with those natives, but you might try. Why those people will haul their corn 20 miles sooner than give us a carload. You see, when the branch was built we had to condemn some of their property and they've never gotten over it. Good luck! You may get shot down there and you could get half shot, for it's lore that every man jack in those hills is a moonshiner."

And it was on Crawford's very first trip that he came within four feet of killing a Buchanan of Clover County!

For a week after the near-accident Crawford saw nothing of the Buchanans and little of the other hill people. Then the first frost came over the hills and he saw the men and women in the little cornfields gathering the year's crop. More than one gun leaned against the field fence so that the trainman could see—and heed.

It was at the same cut and curve

and as he was in the habit of doing he "eased up" as the engine poked its nose around the bend. This morning, as he saw the crossing first he thought the occurrence of his first trip would be repeated. Then he saw that Buchanan *pere* and the daughter were safely at one side of the track.

But the old man again was frantically turning the crank. There was no response from the motor car's engines. Crawford glanced at his watch. There would be time. He stopped with the 80 square across the wagon road.

"Some sort of trouble you're having with that old boat, Mr. Buchanan," he said. "I once owned one of the same sort; maybe I can fix it for you. Good morning, Miss Buchanan," he added, touching his cap to the girl.

The old man let go the crank and turned to the engineer, his eyes blazing:

"You—!" He hesitated, as if the proper word would not come.

"Yes, I once owned one. Sure makes you hot turning that crank," he said, ignoring the old man's ire. "Let's see." He pulled open the hood and inspected the inward workings of the car, trying several nuts of the ignition system. Finally he found what he was looking for. The old man stood near, amazement written on his face. No Great Midland man, since he could remember, had ever become familiar with a Buchanan.

Crawford found a loose connection, tightened it, seized the crank, gave it a turn and the engine purred.

"There," he said. "Now we'll pull up and you can go on. Better take half an hour tonight and tighten those connections. If you'll be around here tomorrow I'll bring you a new battery cell or two."

It was the girl who replied. "We do not care to go on now. We wanted to get to the switch before this train got there." She pointed back under the hood. "Aunt Jane wants to go to Crosbie."

"I'll just pull up and let her on here," Crawford said. "You spot the car," he said to a brakeman who had come up. "And don't forget to tighten those loose connections tonight and I'll bring those dry cells tomorrow. They're 40 cents each. The last sentence was added as an afterthought. It might, he thought, be well not to offer a present to a Buchanan of Clover County on such short acquaintance.

"Aunt Jane" made the trip to Crosbie, and Crawford delivered the dry batteries to the old man the next day at the crossing and received a

surly nod of thanks and his pay. The girl did not put in an appearance.

Winter came down over the hills and Crawford saw little of the hill people and nothing of Buchanan or his daughter. One day, when the hills were covered with snow and it stood deep in the gullies, he laid off a trip, deadheaded to the crossing and walked down the wagon road, now a dead white strip of snow through the forest. Half a mile he had walked when a turn in the road brought him almost to the door of a log house, built, as are many in the hills, with a porch or open space between the rooms at the ends. A young lad was crossing the open space but stopped still for an instant when he saw a stranger. Then he retraced his steps and ran back.

About two seconds later Crawford stopped still. And it was well he did so. The door opened about two inches and through the aperture the barrel of a rifle projected. Then a feminine voice asked:

"What do you want, stranger?"

"I am hunting the home of Mr. Buchanan," Crawford explained, standing very still.

"This is it," the woman's voice replied. "What do you want?"

"I am the engineer on—"

"You're the man that crippled pappy and if you don't go away before I can count 10 I'll kill you."

"But, madam, I—"

"One—two—three."

"—haven't killed or crippled anyone—"

"Four—five—six."

Someone ducked out of the door under the rifle barrel. It proved to be the girl.

"You brought daddy some new batteries and when he cranked his car it ran over him and nearly killed him and ran on down the hill and smashed on a tree."

"That wasn't the fault of the batteries—he left the clutch in."

"Seven—eight—nine."

"Dodge around the house before mammy shoots. She can't load for a few minutes."

Crawford dodged and the bullet whizzed near his ear. The weapon was withdrawn and the door closed, leaving the girl outside. She came to where Crawford stood.

"Come down to the stable," she said. "We'll talk about it there and mammy won't follow us down there to shoot. If she does I'll stand in front of you."

Obediently Crawford followed.

* * * * *

Six men were gathered in the general offices of the Great Midland, around a highly polished table. An electric fan, which incessantly turned around and around, kept them cool. Outside, 10 floors below, lay the pavement, sweltering, shining, hot and dusty. The men were comfortable, but the heat had its effect on them. They were short-spoken, and quick retorts were bandied around.

"Let's hear the report of the freight department, now," a big man at the head of the table said.

"And trust to luck it will not be as bad as that of the passenger department," one of the men added.

"The passenger department has no magicians in its personnel," another retorted. "We can't grab passengers out of thin air and make them pay fares."

A clerk began on a voluminous package of papers and read on in a monotonous tone. All at once the man at the head of the table sat erect.

"During the year ending June 30, the Crosbie Branch has—"

"Mr. President, I move you we be spared the anguish of hearing just how much the company has lost on the Crosbie Branch," one of the men said. The clerk had ceased reading.

His companions smiled and the clerk resumed.

"During the year ending June 30 the Crosbie Branch has aided materially in furnishing both local and through freight hauls. The inhabitants of the country through which the branch operates appear to have at last awakened to the necessity of modern farming methods. Corn which was once destroyed or used for fuel now is being fed to cattle and we have a good tonnage from that source. The hostility toward the Great Midland Railroad, formerly a deterrent to our business on the branch, has disappeared and the inhabitants help, rather than hinder the operation of the road through the hill section. It is said—"

"Is that fiction you are reading?" asked one of the men. "I have made several inspection trips over that branch and never without trouble. One time several shots were fired through the car—because we used electric lights and they were brighter than the oil lamps burned by the natives."

"Burwell dictated that report and if Burwell ever thought about anything larger than a dollar mark—you know Burwell."

"What's the matter with those hill-billies, then?"

"They've began to love the G. M., that's all."

Obediently Crawford followed her

"People as clannish as those hill-billies never love nor hate without a reason. They hate all people not of their class because they have had that hatred handed down to them for generations. But as for loving the G. M.—I'd like to know why. Burwell hasn't been sending new men down there to stir up traffic, has he?"

"No. The last one he sent there, when we first took over the branch, left his hat and coat somewhere and ran all the way to the main line."

"We'll go up there on our inspection trip. Those hills are cool, anyhow."

* * * * *

The officials' special pulled around the wye and onto the Crosbie Branch. The smooth-riding rails of the main line gave way to the clickety-click of the joints of the branch. The big cars screeched around the hills, over rivulets and through cuts that turned the daylight into twilight within the cars. At length the train reached the one telegraph station between the terminals of the branch. Here the engineer stopped with the tank under a spout while the men aboard stepped off on to the little platform. There was no one in sight but a solitary child. He stood and gazed at the strange train.

"Where's the agent, sonny?" one of the big men asked.

"He's down at the cattle pens helping load a lot o' hogs."

"I'll go down and get him, sir," the conductor said; "unless we get orders against the regular train we will have to wait here for it. It's due in 15 minutes, and I'm not sure about the capacity of the siding below here."

"We'll wait," the official said. "This is an interesting place. And as the agent is busy I see no reason for interrupting him."

The trainmen backed the special to the switch and headed it into the siding, while the officials stretched their legs. Presently several natives came from the little village and looked with wonderment at the strangers.

"Wonder if Bill brought those furriners here?" one of them inquired of the other.

"Mebbe they own the road," the other remarked.

"Do you live here?" one of the officials asked, seeking an acquaintance with the men.

"Down the crick," the hill-billy replied. Then, seeking information, he returned:

"You-all own this road?"

"We are officials, and own stock, yes."

"Does Big Bill know yer coming down?"

"I don't think I understand."

"Don't you know Big Bill?"

"Not by that name."

For a few seconds the men whispered together.

"Bill Crawford's his name. He's going to marry old man Buchanan's girl next Sunday."

"What position does he occupy?"

"He's the engineer here. When old man Buchanan got hurt with his auto car Big Bill went with him to the city and got him well in one of the hospitals. Old man Buchanan's the boss of these hills and after that the old man said we were not to shoot at the trains any more and give 'em all the freight we could and we done it. Bill's going to marry the Buchanan girl Sunday. She's going to quit teaching down at 32 school house Friday."

A long station whistle sounded and the station agent and several men ran up from where they had been loading the hogs. The car was switched out and the branch train made ready to leave. The official who had made the acquaintance of the hill-billies caught Crawford as he was oiling around.

"You're Big Bill Crawford?" he asked.

"My name is Crawford," the engineer replied, carefully placing a squirt of oil on a link.

"I happen to be general manager of the Great Midland," the man said, "and I've heard what you did to cause the people of these hills to

give us their business and quit shooting at trains. Anything we can do to show our appreciation for what you did?"

Crawford set the oil can in the gangway and turned to the official:

"All that was needed was someone to get the friendship of these people. My mother-in-law shot at me the first time I called, and I had to do some tall explaining to keep from being mobbed. But I've got their friendship and the road's getting the benefit. I'd like—" He hesitated.

"A promotion?" the big man inquired.

"No, sir," Crawford said. "When I'm tired of this I'm going to take over my wife's farm. I've got a tractor working on it already, although I may run an engine for many years yet. But I'd like a pass for two for the honeymoon—just a pass good anywhere on the G. M."

"It will be here Saturday evening—by special messenger," the official said. "And as we operate our own diners on this system the honeymoon will be at our expense entirely. I'll send a man from the freight department down with it, and see that he gets acquainted with the people."

Crawford's conductor gave him a "high-ball."

"I'll marry him to one of old man Buchanan's girls," Crawford said, as he swung on his engine. "He's got three more left after I take mine, and three other farms to give them."

Business-Getting Campaign

(Continued from page 9)

Baltimore and Ohio, as it undoubtedly was, it is not beyond the bounds of probability that they might be influenced by this fact to give our Road some business that we have never had before. As success makes success, so business makes business. The fellow with a large circle of acquaintances has an easy time selling his proposition compared with the stranger in town. The more solicitations that we make for our Company, whether they result in immediate business or not, the more shippers and passengers know that we are anxious to prove to them the superiority of Baltimore and Ohio service and the oftener will they give us a trial.

Are you making friends for the Company you work for? Whether you are a freight handler, a trainman, clerk or whatnot, there is scarcely a move that you make that does not make or unmake friends for the Baltimore and Ohio. Railroad employes are constantly being watched by the traveling and shipping public, especially in these days when the railroads bulk big in public interest. During these critical times hundreds of our employes are trying hard to represent their Company, and the thousands of ways in which it affects the public welfare, in the proper light. Such is the privilege and the duty of every employe.

This Officer Goes After Them in Earnest

SOON after the business-getting campaign started on the Baltimore and Ohio a staff officer in the general offices in Baltimore determined that he was going after his share systematically. First he jotted

down a list of all the people he knew, social and business friends and acquaintances who might be able to bring some business to our rails, then, with all of them in mind, he worked up a general letter, short enough to

make it practicable to send to each of the 70. The gist of the letter was this:

Dear Mr. Brown—Because of your knowledge of railroads you may think that the Baltimore and Ohio is "just another railroad." We, who work for it, however, believe that it is giving just a little better service than other railroads—that it lives up to the nickname we have given it of "Best and Only."

Right now we need business pretty badly, and we have the freight and passenger cars and the engines to handle all that we can get, and employes who are sufficiently interested in handling the business in A-1 shape, to give all of our customers 100 per cent. satisfaction. I know this not only from personal experience, but also from the testimony of many of my friends and acquaintances.

Just a trial or two of our service, passenger or freight, will demonstrate the truth of this, and make you a good friend of the Baltimore and Ohio.

If you decide to give us a trial, I would appreciate it very much if you would let me know what you think of our service.

Yours sincerely,

ETC.

Excellent Freight Service Brings Passenger Business to Railroad

IT HAS been generally recognized that a fine passenger service on a railroad is invaluable in influencing freight traffic to the same line. That undoubtedly is one reason why fast and beautifully-appointed passenger trains have long been considered splendid advertisements and investments for the roads running them, even if they have been expensive to operate.

Not so often do we hear of the less showy service in the freight department bringing passengers to the Railroad, although this probably happens very often. The following letter is a good example of this:

March 30, 1921.

MR. GEORGE S. HARLAN,
Division Freight Agent,
Baltimore, Md.

Dear Sir—We often note articles in our MAGAZINE in regard to some freight traffic secured through the influence of our excellent passenger service and following a pleasing and satisfactory trip over the Baltimore and Ohio by some of our patrons. Consequently I am prompted to relate a conversation had with one of our good freight patrons, Mr. Benjamin Moomaw, president of the Virginia Fruit Growers, Inc., Staunton, Va., when in his office recently.

Mr. Moomaw was dining with a friend at the New Willard, Washington, D. C., a short time ago. The friend remarked that he was taking a trip to St. Louis that evening and when Mr. Moomaw inquired what road he intended to use, he mentioned a competing line. When Mr. Moomaw asked why, he said that line had the best reputation. Mr. Moomaw followed by saying that the Baltimore and Ohio had equally as good Pullman service, better dining car service, and an altogether better atmosphere prevailing, the employes seeming to have a much better idea of, and dis-

P. S.—You may have thought that you have to go to the Rockies and beyond for wonderful scenery, but if you have never ridden the Baltimore and Ohio by daylight from Washington to Pittsburgh, you have yet to discover that right on our line we have something which is just as fine as they have in the Far West. It has an appeal all its own.

To date this official has had many replies, all favorable to his letter, and indicating considerable revenue for the Company. One man wrote him that he expected to go with four friends to New York via a competing road but that the soliciting letter changed his plan and that he could therefore take credit for five fares, Baltimore to New York and return. There was over \$60.00 in this business alone, all "velvet," for it should be remembered in connection with passenger business that it costs only an insignificant amount more to handle 200 on a train than it does 150 or fewer.

position for, service. As you have some knowledge of the power of argument possessed by Mr. Moomaw, it is needless to say that we secured his friend as a passenger to St. Louis.

This gentleman stated that he was prompted to such action by the close and efficient attention given his freight business by our line, whose officers and employes seem to have a better conception of what service means to a freight patron; therefore he felt that he owed us this slight return in recognition thereof.

Mr. Moomaw further stated that he did not believe that he had given our line the freight patronage this season commensurate with the service rendered but that he would see that we received our full share next season.

As the foregoing was entirely voluntary on the part of this gentleman, I was much pleased to note the friendly relations existing between him and our Traffic Department.

Yours truly,

W. F. HARRISON,
Traveling Freight Agent.

Copy, COLONEL W. V. SHIPLEY,
District Passenger Agent,
Washington, D. C.

Here, you will note, that a pleased patron of our freight service has done the unusual in actually soliciting and getting passenger business for the Baltimore and Ohio. This is really a principal reason why any of us are employed by the Railroad. And if all our employes could be imbued with this idea and would practice it daily in the office and out, *i. e.*, to secure the greatest number of dollars each day for our Company, it would not be long before the results would be plainly evident and the benefits shared by all.

Fill 'Em Up

GENERAL Passenger Agent George W. Squiggins, Cincinnati, issued a letter on March 31 under the above caption, which was posted in such places in his territory as to attract the attention of our employes.

Mr. Squiggins mentioned "Billy" Sunday's building his big tabernacle in Cincinnati at a cost of about \$40,000 with the enormous number of small subscriptions which he got for that purpose, and correctly draws the comparison of one more passenger in each Baltimore and Ohio passenger car, and what a big increase in our annual revenue it would mean.

Figure it out for yourself and see if you cannot be one of those to bring this about, boost our gross receipts and help pass prosperity around.

Personal Service Like This is Bound to Get Business

By Charles T. Allen

Janitor, 24th and Chestnut Streets Station, Philadelphia

IN OUR fine old depot here, we have a way of making travelers feel that we are their friends, and that verily they have found the "Road of Hospitality."

Frequently we have passengers who stop over for a few hours, and who desire to see as much of the city as their limited time will allow. In such cases, some of our employes, with whom these patrons of the Road come in contact, give them an itinerary for short trips, based on the amount of time available, making allowance for possible delays, and making as few changes of cars as possible so as to prevent our patrons from going astray.

Our employes spare no trouble in helping passengers who are timid and unacquainted with the city. Not long ago a woman passenger, stopping off here after banking hours and having very little money with her, wished to have a check cashed. One of our women employes located an acquaintance of the passenger, who identified the traveler at one of the night banks. The employee consumed about two hours of her own time in doing this and merely felt that she had done her duty. She has also, on several occasions, escorted girls to their destinations, when she considered them in need of protection.

We believe such help on our part to be our duty to our fellows, and at the same time we know that it encourages passengers to use our Road again.

Picture at top shows Chicago Opera train pulling into Pittsburgh; center, Mary Garden; at bottom of page, unloading some of the 75-foot drops, Pittsburgh Yard; upper left, George Baklanoff; upper right, Lucien Muratore; lower left, Galli-Curci; lower right Rosa Raisa

Ba mysterious fascination for the devotees of the theatre. Connoting the intimate life of the folks of the footlight, their every day humors and the unvarnished realism of their business; piled high with the drops and scenes and props that the genius of the producer transforms from tawdry illusion behind the curtain to amazing actuality before; breathing along with its all too ubiquitous dust and fresh paint the sacred atmosphere of the "stars" that have trod its well-worn board—"back stage" is as much a tantalizing curiosity to the bespectacled old lady matinee fiend in the pit as it is to the sophomoric youth whose idol stands third from the left in the second row of the chorus. And it is "back stage" where starts the job of the transportation manager of a great opera company.

While the principals are still taking curtain calls from an enthusiastic audience, and the gallery gods still acclaim "bravo, bravo," expert stage hands are already tearing down the last set, and with the amazing facility which comes with long years of experience, piling the great forests, gardens, castles and cathedrals (the canvas copies) into the long wagons for transport to the railroad yard.

Moving a single great production is a big enough job, requiring great skill in the handling of scenery, and intimate knowledge of the capacity of railroad yards and baggage cars, and of transportation schedules. The immensity of the task of moving a great opera company like the Chicago Opera Association, with its large repertoire and its numerous personnel, across the continent and back, can therefore hardly be imagined. Handling this important work for the Chicago Association is Edward Kent Bixby, transportation manager, formerly connected with the Pennsylvania Railroad. And associated very pleasantly with Mr. Bixby on a considerable part of this trans-continental movement of his company during the month of March was the Baltimore and Ohio Railroad.

One of the six trains which transported some of the properties of the Chicago Company from Chicago to New York, for the New York season in February, made a splendid record

This Technical Error Needs Correction

On page 34 of the April issue there was printed "Method for Squaring Walschaert Valve Gear" by W. J. Dixon, assistant master mechanic, Holloway, Ohio. Mr. Dixon's drawings, accompanying the article and as received in the MAGAZINE office, were correct, but in having these drawings redrawn for reproduction, an error was made in Figures No. 6 and 7, two figures shown being incorrectly placed. Correct drawing of these diagrams is as follows:

Method of squaring Walschaert Valve Gear

We regret that an error of this kind should have crept into the MAGAZINE.

To My Wife

By E. V. B.

The trees, the grass, the sunshine and
flowers,

In June days make me muse for
hours—

Of a home in the South where dreams
come true,

And Life's afternoon could be spent
with you.

No place on earth could appeal to me
Like a cottage small by a Southern
Sea—

With a shady yard and fragrant
flowers

And you and me through the golden
hours.

You Wouldn't Throw a Hundred Dollars in the Gutter—

Then Why Be Responsible for Any Part of Loss and Damage Claim Payments, a Sheer Waste in Revenue?

By C. C. Glessner

General Freight Claim Agent

WE HAVE yet to meet the man who doesn't make mistakes. And it isn't the fellow who, once in a while, makes the kind of an error of which all men are susceptible, that we are after. On the other hand, we feel confident that if the employees who are responsible for some of the costly and careless errors that run up our claim payments so high each year, could come to our department and go over a hundred or more of these, they would wonder, with us, how it is that so many of them can occur.

So we are here asking some simple and direct questions of the classes of employees responsible in the handling of freight for most of the losses that sap our revenues. Will not those to whom these questions apply give them earnest consideration? It will

help a great deal in conserving our revenues and in "passing prosperity around," if they will.

Mr. Receiving Clerk: Are you responsible for accepting shipments for transportation not in accord with Rule 5 of Consolidated Freight Classification No. 2—specific instance shown in the large picture below?

Do you check all shipments tendered for transportation with bill of lading and shipping order to see that marks agree; that containers are sufficiently strong to carry to destination and that you receive all you sign for?

Mr. Car Inspector: Are you passing box cars for the loading of high grade merchandise with defective roof, sides, bottom, or floor, and sides full of nails and other obstructions to damage the high class merchandise, as

shown in accompanying photograph? During the year 1920 we received copy of 104,552 damage reports which were the result of someone's carelessness.

Mr. Loading Clerk: Are you loading shipments in the proper cars and showing correct information on shipping orders, etc., or are you loading shipments in one car and showing another record? During the past year we received copy of 145,425 astray waybills, indicating many shipments loaded into the wrong car or revenue billing not made or improperly forwarded to meet shipment. Are you responsible?

Mr. Stowman: Has the heavy freight been loaded on floor of car and the light freight on top, carefully stowed, broken down and braced before permitting car to go forward?

Mr. Bill Clerk: Are you billing out shipments in accord with shipping orders or are you making errors in your billing by billing shipments to the Pittsburgh that happens to be in Texas, Kansas, Oklahoma or Kentucky, that should go to Pittsburgh, Pa.; or to the Philadelphia in the States of Tennessee, West Virginia,

Upper left: Thousands of dollars are lost each year in shipments damaged by rough handling of cars—here's where our trainmen can help. Upper right: Protruding nails and other obstacles cause much costly damage and car inspectors can avert a good deal of it by proper inspection. Lower: Shipments tendered for loading in this condition should not be accepted, and receiving clerks can save much by the exercise of good judgment in such cases

Mississippi or Indiana, that should go to Philadelphia, Pa.; or to the Charleston in West Virginia, Utah, Tennessee or South Carolina; or to the Charlestown in Indiana, New Hampshire or Ohio, that should go to Charles-Town, W. Va.? Similar errors are made daily.

Mr. Trainman: Are you responsible for making the flying switch that damaged Baltimore and Ohio 87049, loaded with plate glass, badly breaking it, as shown in picture on preceding page?

Mr. Notice Clerk: Are you responsible for sending arrival notice to John Jones, 6406 Spruce Street, Kansas City, Kan., instead of 4606 Spruce Street, Kansas City, Mo.?

Mr. Delivery Clerk: Are you responsible for delivering a \$1500 shipment to John Doc of Baltimore Street, Baltimore, Md., upon payment of freight charges, instead of a \$15 shipment?

Mr. Yard Clerk: Have you diverted that car or cars originally destined to Baltimore to new destination, New York, and made necessary corrections on revenue billing?

The above are but a few of the causes resulting in loss and damage claims which make a heavy drain on our revenue, and which, you will agree, is the result of omissions and errors that can be and should be eliminated. Will you do your part in eliminating them?

general manager of the Southwestern Lines, at Cincinnati, being advanced to chief clerk to the general manager on February 1, 1906. In July, 1908, the title of assistant secretary was added and his next appointment was to superintendent of the Illinois Division, at Flora, Ill., in 1913. Two years later he was transferred to Seymour, Ind., as superintendent of the Indiana Division, and on July 1, 1916, he was made general superintendent of the Southwest District, at Cincinnati. In October of the same year he was transferred to the Northwest District as general superintendent and in February, 1920, placed in charge of the Maryland District at Baltimore in the same capacity.

Mr. White, was born August 8, 1882, first entering railroad employment as an extra operator and agent on the Cincinnati, Hamilton and Dayton Railway, April 17, 1900. He was made dispatcher on September 19, 1902, and chief dispatcher, January 15, 1908. On November 20, 1909, he became chief clerk to the general superintendent, at Cincinnati, and was then advanced to superintendent at Indianapolis, in March, 1910. He occupied the same position on the Illinois and Indiana Divisions successively, becoming superintendent, Philadelphia Division May 1, 1917. Two years later he was made superintendent of the Baltimore Division, at Baltimore.

Mr. Hoskins, who takes Mr. White's place as superintendent, has also been with the Baltimore and Ohio for a number of years, having first become identified with it August 1, 1907, as bridge draftsman. He became assistant engineer in the

E. W. Scheer New General Manager of Eastern Lines

R. B. White Now General Superintendent, Maryland District; E. A. Peck Succeeds Late J. F. Keegan as General Superintendent, Pittsburgh District; E. W. Hoffman Appointed General Superintendent, Northwest District; F. G. Hoskins Now Superintendent Baltimore Division, and F. S. DeVeny Superintendent of Chicago Terminal

ON APRIL 13, C. W. Galloway, vice-president, Operation and Maintenance, Baltimore and Ohio Railroad Company, announced the appointment of E. W. Scheer as general manager, Eastern Lines, effective April 15, to succeed Stanton Ennes, resigned on January 1. At the same time Mr. Galloway announced other promotions as follows:

R. B. White, formerly superintendent of the Baltimore Division, to succeed Mr. Scheer as general superintendent of the Maryland District.

F. G. Hoskins, superintendent Baltimore Terminal Division, to succeed

Mr. White as superintendent of the Baltimore Division.

Mr. Scheer has been in the service of the Baltimore and Ohio for 31 years, having started as messenger boy at Zaleski, Ohio, when 15 years old. He became in succession clerk and stenographer and, after being with the Company nearly six years, was made chief clerk to the superintendent of the Ohio Division at Chillicothe, in December, 1895. On January 9, 1899, he was promoted to secretary to the vice-president and

R. B. White
General Superintendent, Maryland District

E. W. Hoffman
General Superintendent, Northwest District

E. A. Peck
General Superintendent, Pittsburgh District

F. G. Hoskins
Superintendent, Baltimore Division

bridge department later during the same year, being made assistant division engineer of the Pittsburgh Division on March 1, 1911. He was advanced to division engineer of the Connellsville Division April 8, 1914, afterwards occupying the same position on the Philadelphia Division, being advanced to superintendent of the Ohio River Division, at Parkersburg, March 1, 1916. He has since been superintendent at Wheeling, assistant superintendent at Pittsburgh, general agent at Baltimore and, since June 1, 1919, superintendent of the Baltimore Terminal Division.

On May 1, General Manager Scheer announced the transfer of E. A. Peck, general superintendent of the Northwest District, to the same capacity in the Pittsburgh District, succeeding the late J. F. Keegan. On the same date, General Manager R. N. Begien announced the appointment of E. W. Hoffman as general superintendent of the Northwest District.

On May 1, Vice-President Batchelder announced that the position of general superintendent of the Chicago Terminal was abolished and that F. S. DeVeney was appointed superintendent, vice J. L. Nichols.

Mr. Peck was born February 22, 1866, and on his 31st birthday entered the service of the Baltimore and Ohio at Grafton, W. Va., as trainmaster of the Monongah Division. After several years in similar positions on the Newark and Connellsville Divisions, he became superintendent of the New Castle Division May 13, 1903, in 1907 being transferred to Pittsburgh, where four years later he became general superintendent, the position to which he now returns. On January 1, 1918, Mr. Peck was

made assistant to general manager of Eastern Lines, at Baltimore, becoming general superintendent of the Northwest District at Cleveland, March 1, 1920.

Mr. Hoffman first became identified with the Baltimore and Ohio in 1908 as general yardmaster of the old Cincinnati, Indianapolis and Western, at Indianapolis, later becoming trainmaster there. He was advanced to superintendent of trans-

portation February 10, 1913; to assistant superintendent of the Toledo Division February 15, 1914, and to assistant superintendent of transportation of the Southwestern Lines June 1, 1917. He became superintendent of the Ohio Division, at Chillicothe, February 1, 1918, superintendent of the Chicago Division September 1, 1919, and advanced to general superintendent of the Chicago Terminal August 1, 1920.

No Meals for These Engines While They Weren't Working

Pictures Portray Practical Fuel Economy

THE accompanying photographs were taken at New Castle Junction and Haselton engine houses on the New Castle Division, on March 20, and illustrate forcibly what can be done by a "live" organization which takes advantage of every opportunity to make little savings in all directions.

At Haselton on the date in question there were 7 engines with fires drawn and 7 with fires banked. At New Castle Junction there were 14 engines available for service at the time photograph was made in addition to a number shown on the two tracks at the left which were "laid up." Of the 14 engines avail-

At Haselton

The pictures show the engines laid up at the engine houses on the date in question, with fires drawn or banked in accordance with the standard instructions in Circular L-685. This specifies the conditions under which fires shall be drawn or banked and the method of banking them in order to secure the greatest practicable economy from the coal used under such circumstances.

able for service, 11 had fires drawn and 3 had fires banked. On this date 25 engines were dispatched during the 24-hour period.

The definite evidence shown of the engines with fires banked, with no smoke or waste of steam, indicates excellent supervision and conscientious effort upon the part of the employees who were responsible for the performance.

At New Castle Junction

Safety Section

Think!

First Prize Article, "No-Accident Campaign," Eastern Lines

By M. W. Jones

Secretary to Superintendent, Charleston Division

THE answer to the question, "How can we help in the No-Accident Campaign?" may be given in one word, "Think." Almost every accident is due to one of two causes: thoughtlessness, or the failure of some one properly to perform his duty. Take the man who steps in front of the train and is killed. He did not think, or he would have remembered to Stop, Look and Listen before stepping on the tracks. Take the broken rail or the broken wheel. If you trace back to the real cause you will find that some one failed in his duty. The rail was not properly examined by the track-walker; some car inspector did not properly test out the wheel before it left the last terminal. Which brings us back to our original argument that most accidents may be prevented if we will all *think*.

No one deliberately overlooks something which will cause an accident and perhaps loss of life, but when the attention of an employe wanders from his work at a critical moment, that same moment trouble and sorrow result. Therefore, keep your mind on your work, *think*. There is no surer way to prevent accidents than by thinking, by keeping your mind at all times on what you have to do.

It has been said that "We have no occasion to fear for tomorrow if we fulfill our responsibilities of today." What, then, are our responsibilities today, as railroad employes?

Entry into the service is an assurance that we are willing to obey the rules. What is the first rule that we find on opening our books? "Safety is of first importance in the discharge of duty." Then our responsibility today is first, "Safety Above Everything," to perform our duties in a safe manner and under no circumstances in such a way as will jeopardize either our lives, the lives of our fellow employes, or the lives of patrons entrusted to our care.

Do we ever think of the women and the little ones who place their hands confidingly in ours as they step on the train, with every assurance in their own minds that we will carry them

safely to their destinations? No we realize the great responsibility that rests on us, that they are as dear to someone else as our women and children are dear to us? Think all the time of your duties and your responsibilities, and keep your mind at all times on your work, and there will be no need of a "No Accident Campaign."

Loyalty to our employes is an important factor—in fact, is on a par with Safety. Without one you cannot have the other. How can we better show our loyalty than by making ours the Safest railroad in the world? How can we better show our loyalty than by constantly practicing safe methods, and by insisting that our fellow employes do so also?

When a new man comes to work alongside of us let us constantly instill into him the habit of thinking, and of insisting on his doing his work safely. Whether he does not know or whether he is careless, it is our duty to show him what long experience has taught us to be the safe way.

Do you remember how you felt the first day you entered railroad service? Do you remember how good it seemed to have someone take you by the hand and explain things to you? "Do unto others as you would that they should do unto you," and you will be helping Safety every day and every hour.

"By their works shall ye know them"

Nothing more strikingly accentuates the difference between the safe and the unsafe worker than a walk through some big railroad yard, watching the men at work. One does not get on a flat car on a moving train when there is a box car next to it. The other does. One does not stand in front of an engine coming towards him and step on the pilot. The other does. One follows all the Safety rules. The other does not. Sooner or later the unsafe man will be listed on the casualty list as "Struck by a train," "Fell under a train," "Fell between the cars" or one of the many other ways a careless man may finally end his days.

You cannot read your daily paper, or you cannot—if you are an official—pick up your monthly reports of personal injuries, without coming across the words, "Struck by a train." Do you ever stop to think when you see those words just what they mean? They mean that someone lost his life through not thinking, through letting his attention wander from his duty, or by disregard of the Safety rules which have been made to save life and limb. Do you realize that they mean that some mother is childless, some wife made a widow, some little ones are fatherless, just because someone failed to observe the first and greatest of all Safety rules, *Think*?

"Am I my brother's keeper?" You certainly are, and there is no surer way to be your brother's keeper than to think and make him do the same thing.

The engineer starts out of his terminal with his long train, full of men, women and children, entrusting with all confidence their lives to his care. As he rushes through the night, he permits his attention to wander from the track ahead for a moment, with the result that he fails to see the red light of danger. The next thing his train is a heap of ruins, lives are snuffed out, and why? Because he failed to think of his duty all the time. There can be no greater Safety lesson than to consider these things; there can be no surer way to help the campaign; there can be no surer way to save lives and limbs and avoid suffering than to think at all times of the great work we are trying to do.

Rules are made for your guidance. Those who know have given years of their lives to the study of the best and safest ways to handle the railroad business, and because they have thought of us, of our families and friends, and of our fellow employes, and we should live up to these rules. Take from this homely little article, my friends, this one thought: that no matter what you do, no matter where you are or what you are, "think" at all times, and you will be a safe man, and a valuable man, and you will **MAKE IT SAFER TO RIDE ON THE BALTIMORE AND OHIO THAN IT IS TO STAY AT HOME.**

Does Safety Pay? This Report Tells the Story

By W. F. Braden
Safety Representative

THERE were 144 fewer employes killed and injured on the Baltimore and Ohio System in the first 20 days of April this year, as compared with the same period of

last year, at the 16 points where the Safety Test applies.

There were seven less casualties on the Baltimore and Ohio Chicago Terminal Railroad.

There was a decrease in casualties of 84 per cent. on the Eastern Lines and 75 per cent. on the Western Lines at the 16 places where the special Safety drive is in progress.

These figures are for one-third of the period of the campaign, which continues for 60 days from April 1. The report for the whole period will probably show similarly remarkable results.

In the 20 days mentioned, three places, East Side (Philadelphia), Keyser and Toledo made the unique record of 100 per cent. cut in casualties. Not an accident happened at any of these places in the first 20 days of April, 1921. Garrett was close with a 99 per cent. cut.

The report of accidents to employees for the 20 day periods of April this year and last is as follows:

Disobeying Rules Cost Him His Foot

Cumberland Daily News, February 14, 1921

Francis L. Straub, 20 years old, 243 North Mechanic Street, while at work in the Baltimore and Ohio Railroad yards yesterday morning at about 8.30 o'clock had his right foot so badly mangled that it was found necessary by the physicians at Allegany Hospital to amputate it soon after his arrival there.

At the time of the accident, Straub was switching engines and as two cars

were about to couple he put his foot between them in an effort to complete the coupling. The cars closed on his foot and his cries for assistance brought several of his fellow-workman

to the scene, who extricated him. He was given first aid and later rushed to the hospital.

Proper Clothing

By Dr. J. H. Hodges

Medical Examiner, Dayton, Ohio

WE live in a climate where the changes of the seasons are marked. There are pronounced fluctuations in temperature from day to day, and even in the same day. It is, consequently, no easy task to fortify ourselves by suitable clothing against these variations in the temperature.

What Makes Us Feel Warm—or Cold?

The object of our clothing is to keep our bodies at a uniform temperature for the sake of comfort, and to prevent interruption of the excretory functions of the skin through the influence of heat and cold. The sensation of warmth or coldness is regulated by the amount of blood supplied to the surface of our bodies. When we become warm, a large quantity of blood is carried to the blood-vessels just beneath the skin. Excretory glands take from this blood and secrete perspiration on the surface of the skin, which evaporates and lowers the body temperature. The opposite occurs when we are chilled: the blood is driven from the surface, and the skin is dried. In this manner, bodily heat is conserved within the deeper tissues of the body.

The principal materials used for clothing are wool, cotton and linen. Of these, wool is best suited for use in our climate, because of lightness, pliancy and softness, the slowness with which it conducts heat, its power of preserving the sensation of warmth to the skin under all circumstances, and the readiness with which it allows the escape of perspiration through its texture. During the warm months of summer, cotton is worn because it is then our desire to facilitate the escape of bodily heat.

It is well to wear enough clothing to assure a feeling of comfort; it would perhaps be better to dress so as to be slightly cool, rather than too

warm. It is the sudden chill that often wreaks havoc upon our health. For those spending most of their time indoors, it is best to wear clothing of light weight, as long as they are prepared to don overcoats upon going outdoors.

Our Clothes Should Fit

Our clothing should fit properly no matter what our occupation may be. Loose garments permit freedom of movement and avert interference with the circulation of the blood to every part of the body. To the man at work, loose fitting clothes are a necessity for the reason just given. If he works around machinery, and his clothing is too loose, there is grave danger of serious injury through its becoming entangled in its mechanism, and in turn entangling him.

Many accidents have been caused by ill-fitting and ragged clothing. By ragged clothing is not meant patched clothing, but rather that which remains unpatched. A dangling shred of cloth (a direct violation of Safety

rules) has frequently been the cause of amputation of an arm or some other part of the body which has been drawn into moving machinery. Sometimes it has been the cause of death.

If a man's clothing does not fit properly, he does not work with that ease of mind which allows him to give undivided attention to his work. Ill-fitting clothes for work or dress arouse self-consciousness and this impedes good brain activity, without which no one can work efficiently.

Being Cold Reduces Resistance to Diseases

In many instances such ill effects as colds, tonsillitis, neuralgia, rheumatism, etc., result from a sudden chilling of the body. These ailments are not always the direct result of a sudden chilling but secondary to it. Sudden changes produce a lowered resistance, which enables all kinds of infections to produce their various types of disease. Disease, as a rule, plays no great part in the life of those who take proper care of their bodies.

The most unexpected variations in temperature take place in the Spring and Fall, and it is then that we must be most careful about changes in clothing. We should never be too hasty in discarding heavy under-clothing.

Remember that a chilled or overheated body is a menace to health. It is as necessary to use discretion in our choice of clothing, adapting it to occupation, season and climatic conditions, as it is to follow the other general hygienic rules giving promise of comfort in living and prolongation of life.

The Controversy Over Sunday

THERE are two groups of citizens who, although arrayed in bitter contention, are pursuing methods which on both sides tend to undermine interest in and respect for the institutions of religion and the higher spiritual values of life.

One of these groups is a powerfully organized class intent upon commercializing the American Sunday, not only stripping from it nearly every characteristic which distinguishes it from other days of the week, but debasing it to the uses of a sordid commercialism. The other is a small band of overzealous Sabbatarians, who from unselfish motives, but with deplorable judgment, agitate for laws to compel the nation to conform to their narrow views, and thereby create hostility and prejudice toward the very institution they aim to serve.

Now we yield to none in our belief in proper observance of the day set apart from the rest of the week by the doctrines of the Christian church, by the customs of society and by the laws of the land. We are unqualifiedly for preservation of the Sunday that America knows, and unqualifiedly against its commercialization, likewise against the introduction of the day as it is celebrated in Europe, the so-called continental Sunday. We have slight sympathy with the complaint of foreign elements that American customs in this respect are different from those of their native lands; a decent conformity with the ideals of the country that welcomed them is a small price to pay for the advantages they gained by coming here. Yet despite these things we are aware that it would be futile and

harmful to impose drastic restrictions which overwhelming public sentiment and changed social and economic conditions long ago made obsolete.

Those who agitate for the rigid enforcement or enactment of laws which by consent of the vast majority of Americans belong to a totally different age are weakening the institution of the American Sunday, are unconsciously aiding and abetting those who strive to make it a day of unrestricted profit-making. There are certain fundamentals upon which all who believe in preserving the beneficent characteristics of the day can agree—it should not be degraded to the purposes of commercialism, whether in business, sports or amusements. But in matters of individual conduct and the recreations and pastimes of the people no rigid formula of observance would be rational or tolerable, first, because such restrictions are alien to the spirit of democracy, and, second, because among the most sincere upholders of the Sabbath idea there are wide differences of opinion as to what is permissible.

A persistent propaganda is being conducted to persuade the public that the prohibition forces are behind this crusade, that the abolition of the liquor evil is to be followed by the extinction of all liberty and the infliction of the grimmest of Puritan Sabbaths upon the helpless populace.

For many weeks the newspapers that fought most ardently to perpetuate the saloon have been printing news stories and editorials and cartoons designed to inflame the public mind against this alleged conspiracy and at the same time incite disrespect for the prohibition law. The propaganda is palpably dishonest, for it is supported by the most vicious distortion of facts and statements.

Happily, however, the instinct which makes misguided zeal for Sabatarianism a menace to proper Sunday observance and to the influence of religion operates on the other side likewise. While the blue law advocates are hurting the cause which they design to support, intemperate utterances and transparently sordid aims by the interests striving for a commercialized Sunday are causing a strong current of opinion to set in toward erecting safeguards for the protection of the American customs of restriction and observance.

There is much truth, indeed, in the contention of the advocates of stricter regulations that their movement is not offensive, but defensive; that they are not trying to Puritanize Sunday, but to save it from those who are conspiring to commercialize it.

The clamorous cries that are heard

about a threatened revival of the blue laws and passage of a constitutional amendment to enforce a Puritan Sabbath are merely propaganda by the liquor interests and the promoters of commercialized amusements. Their warning that the crusade may follow the course of the triumphant prohibition movement is absurd. Prohibition was for years the demand of the religious forces, but it came to realization only when the overwhelming facts of economics had created an irresistible sentiment in its favor. There is not and will not be any such force behind any blue law program.

In a word, the movement will get just as far as it deserves."

—The Philadelphia North American.

A Great Help in Acquiring a Home

S. CONNELLSVILLE, PA.,

April 17, 1921.

MR. W. J. DUDLEY, Superintendent,
Relief Department,
Baltimore, Md.

Dear Sir—I received the papers which were sent me referring to my property, and can say that the Relief Department is a great help in acquiring a home for a member. I may avail myself of the assistance it offers again in the near future. There is no debt against the property now, but I may purchase some other which would necessitate placing a mortgage against it again.

Thanking you for past favors, I beg to remain,

Respectfully yours,
(Signed) WILLIAM L. WAGNER,
Conductor.

Rise Early

By Peggy

As soon as the sun begins to rise and shed its radiance in the skies, the birds and bees and flowers, too, arise and set about to do their share in making old Earth bright by turning darkness into light. . . But human creatures lie in bed, and snooze away their time instead of rising early like the flowers and shedding light in early hours. But why should we not get up, too, in time to catch the morning dew, and share the glory of the sun before our day's work is begun? For many a man doth lie in bed until the sun shines o'er his head, and and misses half his life thereby and sees no glory in the sky. And there are other people who forget the work they have to do, and then must hustle like a Turk and miss their meals to get to work. I'll tell you, friend, it does not pay to lie in bed for half a day. If you'll arise at 6 o'clock, you'll beat the sun up by a block; you'll view the streaks of early dawn—a picture by no artist drawn. You'll have the time to brush your hair, to shine your shoes and take your chair at breakfast like a "reg'lar guy," instead of saying, "Gulp! Good-bye!"

If we all arose as early as the Veterans in Getting Business, we'd be further on the Road to Prosperity.

Thin one: My! What a shape!

Thick one: Huh! Shape nothing! You wouldn't have any at all if it weren't for your Adam's apple

It begins on page 11 and is continued here)*

THE AUBURN WAGON COMPANY

MARTINSBURG, W. VA., April 6, 1921.

MR. J. L. HAYES, Division Freight Agent,
The Baltimore and Ohio R. R. Co.,
Cumberland, Md.

Dear Sir—Relative to conversation had with you in Martinsburg on Monday, our Company has no complaint to make on inbound shipments via your lines in the last three or four months, nor has any complaint come to the attention of the writer as Chairman of the Transportation Committee of the Chamber of Commerce, and some inquiry I have made since talking with you reveals no such complaint.

Very truly yours,

AUBURN WAGON CO.

(Signed) R. A. BRADFORD,
Treasurer and Manager.

MARTINSBURG, W. VA., April 18, 1921.

MR. J. L. HAYES, Division Freight Agent,
The Baltimore and Ohio R. R. Co.,
Cumberland, Md.

Dear Sir—After a careful investigation among the merchants of our town I find a very favorable report as to the prompt delivery of freight over your road (the Baltimore and Ohio).

Very truly,

(Signed) A. J. HAMMAN,

Chairman, Merchants Committee
of the Chamber of Commerce.

Answering question in regard to Baltimore and Ohio having repairs done elsewhere.

During the summer of 1920, when business was extremely heavy on the Baltimore and Ohio and it was seen that it was getting heavier, all of the repair shop facilities on the Railroad were working at full capacity in an endeavor to put into running condition the many locomotives and cars which had suffered so much during the war's drain on our transportation facilities.

Our own shops could not take care of all of the repairs that had to be made on cars at that time in order to enable the Baltimore and Ohio to move its share of the traffic offered. Hence the Baltimore and Ohio contracted for the repair of some cars at outside shops. No locomotives or locomotive parts have been sent for repair to outside shops during the past year with this exception:

On a contract dated February 27, 1920, 10 locomotive boilers (E-24 and E-27 type) were sent to the Baldwin Locomotive Company for new fireboxes. The first was sent from Mt. Clare on March 8, 1920, and the last

returned, after having been repaired, on August 23, 1920. The cost of this outside repair work was only \$69,648.00.

Since last summer no further contracts for repair of cars have been made at outside shops, and there are no cars and locomotives being repaired at outside shops at this time, except the balance of those contracted for during the summer of 1920.

As an indication of the condition of our motive power, it may be added that on March 26, 1921, out of a total of 2626 locomotives owned by the Baltimore and Ohio, 78 were in white lead, or were in reserve and in such condition that they were good for six months or more running; 220 were stored and in such condition as to be good for six months or less running. There were thousands of idle freight cars of all descriptions on the Railroad, in good running condition.—EDITOR.

Conclusion

After all the above letters had been received, they, together with the original letter from the employe, were sent to President Daniel Willard, in the belief that he would wish to have the questions asked by the employe promptly answered in the MAGAZINE. His comment, which follows, is self-explanatory.

THE BALTIMORE AND OHIO RAILROAD COMPANY OFFICE OF THE PRESIDENT

DANIEL WILLARD
PRESIDENT

BALTIMORE, MD., April 21, 1921.

R. M. VAN SANT,
Editor, BALTIMORE AND OHIO MAGAZINE,
Mt. Royal Station, Baltimore, Md.

Dear Sir—Referring to the attached papers with reference to anonymous communication received by you on March 29th, signed "An Employe Furloughed": I am very glad that you investigated the matter and I wish you would publish the anonymous letter in the next number of the BALTIMORE AND OHIO MAGAZINE, as well as the authentic information which you have obtained concerning the matters referred to.

I note what you say with reference to anonymous communications, and I appreciate fully that a man who is not willing to sign his name to any statement that he makes, is hardly deserving of a reply. I have no doubt, however, that the man who wrote the letter believed what he wrote, and it may be that others mistakenly believe the same things to be true.

There is no reason why the Baltimore and Ohio Company should not be willing that the truth should be known concerning all matters pertaining to the affairs or business of the Company, and I think it is a very proper function of the BALTIMORE AND OHIO MAGAZINE to tell the truth about the Company's service.

I am glad that you investigated this particular case, and I hope you will treat all such cases that may come to your attention, in the same way. I repeat that if there are any matters in connection with the Baltimore and Ohio service concerning which we would be unwilling to have the truth told, that fact would indicate that something was wrong, which ought to be corrected. The BALTIMORE AND OHIO MAGAZINE stands at all times for the truth, regardless of whom it hits.

Very truly yours,

Daniel Willard

The Other Man's Experience

Eight or 10 years ago when the valleys of Montana, Washington and other Northwestern States began to come into their just fame as apple growing areas, many farmers were persuaded to give up their orchards in Michigan and try their hand at fruit growing in the new country. The lure of the great outdoors and the beckoning hand of Fortune also took many city men to the same region, and there these tenderfoots found themselves in competition with men of years of experience on the soil.

One would have thought that the city men would have been at a great handicap. Such, however, was not the case, for apple growing in Michigan and in the Northwest is quite a different proposition. The Michigan farmers were unable to shake off the habits of a lifetime, while the new methods in growing apples were as simple in theory to the city men as their A, B, C's. The city men had nothing to unlearn. They patterned their orcharding methods after those that had been proved successful in the new country. The farmers tried to make Michigan methods successful in a region for which they were not intended. The Michigan farmers failed in the new country and the tyros made good.

When our own experience does not meet the necessities of a new situation, it is a good thing to forget it for the time being and to take advantage of the experience of other men who have made good under similar conditions.

The Long Pull

It would be refreshing if we could publish a single issue of the MAGAZINE without having to use the word "campaign." But as long as we fail of 100 per cent. in Safety, or fuel performance, or traffic solicitation, or what not, the word will continue to be, as it has been, quite overworked.

There are certain things on the Railroad in which we all are, or should be, interested. The first of these—and here everyone from the highest to the lowest can help—is generally to give our Railroad a good reputation. Safety is another obligation which is common to all of us, as is also, especially in these hard times, soliciting business.

Besides these activities in which we can all have a part, each man's job gives him a special opportunity for a campaign of his very own. For the fireman, for instance, it is saving coal; for the engineer, easy starting and stopping of his train; for the ticket agent, treating all inquiring passengers in a friendly way; for the conductor and the brakeman, seeing that their trains are kept clean, that station names are clearly called, that all transportation is lifted, etc.; for the mechanical man, the saving in materials; for the trackman, keen observation of track conditions and the determination to give our passengers the smoothest road bed possible.

We are constantly campaigning for all these things, sometimes with special emphasis, as during the present campaign for business and the campaign to reduce loss and damage one-half this year. Yet, after the stimulus and excitement of the campaign is over, the tendency is to lapse back into the same old routine, when our performance again becomes poor.

There is one thing, therefore, that we should all remember, namely, that it is not the special spurt which counts biggest when the record is written. It is the long pull! And there is no way in which we can be on the job constantly for the long pull unless we determine to get the habit of efficiency in all our work.

One man has expressed it well when he said that we ought "to sleep with our jobs."

Being economical in handling coal can become as much a matter of second nature to a fireman as wasting it; calling stations properly can be as much a habit with the conductor as calling them improperly.

While we are forming our habits of work, let us make them good ones. Then first-rate performance will become second nature to us, and our work, day in and day out, will be a long pull for efficiency in all directions.

The Crossing Watchman and the Magazine

Ever since the MAGAZINE was instituted it has had no more interested reader than a certain crossing watchman. Scarcely an issue goes by that he does not write the MAGAZINE office at length, expressing his opinion about various articles, why he likes what this man writes, etc. In fact, the MAGAZINE is such an institution with him that when the correspondent of his division fails to send in notes, he asks why.

Recently the division on which this crossing watchman is located had poor representation in the MAGAZINE. His letters to the MAGAZINE office contained clippings from local newspapers and little items which he himself gathered about events in his particular locality. Not satisfied with this, however, he finally brought it about so that a capable man, well located to gather news and interested in getting it, was appointed as one of the division's correspondents. Now we are getting satisfactory representation from that division.

We mention the case not so much because of its bearing on the work of the MAGAZINE, but simply to illustrate what one man, in an humble position, can do to start the ball rolling.

It is safe to say that if every employe of the Railroad had its interests at heart to one-quarter the extent of this employe, within six months the record of the Baltimore and Ohio for general efficiency and progress would be the marvel of the transportation industry. We like to think that we are always on the job to further the Railroad's interests. Fact is, however, that when some of us analyze our own attitude in this respect, we find ourselves wanting.

There are opportunities at all times and on every hand to do something outside of the ordinary routine to help the Railroad. Recommending our passenger service to a friend or casual acquaintance; turning out an electric light which is burning unnecessarily; using old envelopes for memoranda instead of good paper; commending fellow employes, especially those in train service, when we see them do particularly thoughtful things for passengers; telling everybody we meet that the Baltimore and Ohio is trying to get business on the sheer merit of service, and urging them to give it a trial; being considerate of passengers in the way we use our free transportation; making the time fly, and business and our own particular work "hit the ball," not by watching the clock, but by using every minute of our trick on duty to the best advantage; wearing a smile at all times—there is nothing better to keep things moving smoothly.

Preachments such as these make dry reading. Practicing them is not nearly as thankless a task. Give it a trial for two or three days and see how much better satisfied you are with your job and your job is with you.

Toledo Chapter Holds Membership Rally and Organizes Ladies' Auxiliary

By W. O. Wallburg
Secretary

LAST September, Grand Vice-President Garvey organized a chapter of the Veterans' Association, with headquarters at Lima, Ohio, the officers elected being:

W. F. Van Horn, president; J. Sweeney, vice-president; F. E. Snyder, treasurer; O. L. Wallburg, secretary. The directors are as follows: J. R. Harboldt, John Schnable, H. O'Brien and Martin Dibling, representing Lima; R. C. Henderson, E. Ledger and R. O'Neill, representing Dayton; S. J. Cook, Thomas White and George Thomas, representing Toledo.

Later it was deemed advisable to hold a membership rally at Lima for the purpose of affording opportunity to all employees on this division who are entitled to membership to join the Association.

The meeting was held on February 17 at Memorial Hall. The "boys" came to Lima from all over the division, bringing their wives as well as other prospective members.

The program opened at 2.00 p. m. with the organization of a Ladies' Auxiliary. Anticipating Mr. Garvey's coming on this occasion, Mrs. O. L. Wallburg with her corps of workers had got in touch with the wives of many of the Railroad men, and through her efforts a goodly number of the ladies were present at the rally.

Mr. Garvey proceeded to give his usual splendid address concerning the purposes and activities of this Association and the benefits to be derived through the organization of an Auxiliary.

After his address he proceeded with the election of officers for the Ladies' Auxiliary.

The election resulted as follows:

President, Mrs. O. L. Wallburg; vice-president, Mrs. W. F. Van Horn; recording secretary, Mrs. Charles Day; financial secretary, Mrs. Emmett Shank; treasurer, Mrs. John Sweeney; sergeant-at-arms, Mrs. R. M. Lane.

The ladies were then enrolled in the membership of the Auxiliary. The enthu-

siasm and interest displayed were remarkable. They seemed to be imbued with the idea that it was the biggest thing that had ever happened on the Railroad in this particular line, and were to become a part of so great an organization. After taking care of a number of questions which arose in connection with the business of the Auxiliary, Mr. Sturmer closed the meeting with a fine address, enlarging upon the benefits of the organization and the possibilities that lay before all those present.

After an hour's social good fellowship, all adjourned to the main hall and partook of the banquet served there by the Women's Relief Corps, who furnished a splendid dinner and first class service, and who are to be congratulated for having such an efficient organization to take care of a matter of this kind. Then the Baltimore and Ohio Minstrel Troupe gave their performance for the entertainment of this organization. This was originally given at the time of the Safety rally on February 11 and was so successful that the officers of the Veterans' Association were besieged with requests to have them repeat their performance at their rally.

Following the performance of the minstrel troupe, Mayor F. A. Burkhardt, representing the city, gave a delightful address. Mr. Burkhardt was followed by General Manager R. M. Begien, who expressed his delighted surprise at the great number of Veterans present, saying that previous to his coming to Lima he had formulated a different idea of the number of those that would be present. He congratulated the officers and all those that assisted in assembling such a goodly number. Mr. Begien was followed by General Superintendent F. B. Mitchell, who was also greatly impressed by the success of the meeting and spoke with respect to the Veterans and their wives, one and all working together all the time to make "Safety" the motto of their association with the Railroad.

Mr. Mann then followed with a talk on the organization and also on "Safety." I am sure that the presence of the three managing officers of the division mingling among the Veterans and their wives and families was of great value in cementing the feeling of cooperation and loyalty to the Company.

Mr. Garvey closed this part of the program by a most inspiring address, elaborating upon the value of the principles of this Association and the great possibilities before the Veterans in its development. He also brought up the proposition of solicitation by the Veterans from among business men of the city of new business to be handled by the Baltimore and Ohio. This is a fine idea and the Veterans can by this means not only assist the Railroad in this present crisis, but also furnish the means for increased employment among themselves and their fellows.

President W. F. Van Horn, of the Toledo Veterans' Association, acted as toastmaster during the entire program.

The floor was cleared and dancing was enjoyed by a great number present until a late hour. This concluded the program of the day, and every one present expressed himself as having thoroughly enjoyed the meeting.

The results of this meeting can hardly be expressed on paper or brought out in figures, but the spirit that was manifested at that time has spread itself to all parts of the division, and on every hand and everywhere, "the boys" are still talking about the big time at Lima.

This meeting in connection with the "Safety First" entertainment, and the fact that Lima carried away second prize in the essay contest, has certainly put Lima on the map, and employees on other parts of the System will have to recognize that there is a great big section of the Baltimore and Ohio family at this point who are just as much interested in the progress and success of the Railroad as any other terminal on the system.

A Martinsburg Celebrity

ANOTHER celebrity among the Martinsburg Veterans is Thomas Sakeman, pensioned fireman, age 75. Known to the Railroad men as "Shorty," he is possessed of a good temper and a sense of humor.

When "Shorty" was in active service he always knew how to attend to an engine that was not doing its duty. We cannot vouch for the truth of the statement, but his fellow workmen tell us that whenever they found a yard engine that was not steaming as it should, the yardmaster would put "Shorty" on it, giving him at the same time a good plug of chewing tobacco. In a few minutes the pop would go up and the engine would be working normally. If anybody ever mentions the word "seniority" to "Shorty," he says, "I worked for this Company long before that word was ever put into the dictionary."

Baltimore Veterans Have Gay Time at Entertainment and Dance

"TUM-TI-TUM, tum-ti-tum-tum!" hummed President Bowers into President Sturmer's ear, as he kept time with foot to the music of the fox trot as couple after couple of young folk crowded the floor of Lehmann Hall on the night of March 31. And then, his harmonious soul being no longer able to resist the call of music, Brother Bowers put an arm about the graceful form of "Uncle Joe" Covell, and the two glided away, across the vestibule and under the gallery, for there was no other space left in which a fellow could "shake his foot." For this was the night of nights, and fun was the order of the evening.

Beginning shortly after eight o'clock with a minstrel show, which was heartily enjoyed by all who were fortunate enough to get inside the hall, and ending with a dance, in which everybody participated wherever there was foot room, the entertainment held by the Baltimore Veterans was a pronounced success. The only regrettable feature was the lack of space. About 1500 persons were able to squeeze into the hall, and it is estimated that about 1000 were turned away.

"We ought to have had some larger place," remarked Brother Sturmer, "I told 'em so! Moose Hall might have done it, or the Lyric, perhaps."

"Well, as long as we haven't got the Lyric, we might as well make the best of it," replied Brother Bowers, embracing "Uncle Joe" for the second time, and executing another "down and across."

"Hold on, there, you don't suppose you're going to monopolize all of Brother Covell's time, do you? Where do I come in?" And the brother Veterans were then treated to an exhibition of toe dancing—meaning that they danced quite unmindful of how they stepped upon each other's toes.

There were visitors from Willard, Ohio, Garrett, Ind., Cumberland and Brunswick.

Particularly did the Veterans welcome President G. K. Bell, of the Willard chapter. Mr. Bell had come for the special purpose of attending this entertainment, and it is hoped that he will pay us a longer visit next time. We also hope that he will bring the "Missus" to see us. We understand that she started out with him, but that she deserted him at Newark.

The "Temple of Fun and Frolic" was the name of the minstrel show, given by both male and female minstrels. The jokes were many and humorous.

"Bones," said the interlocutor, "you seem to be all down and out tonight, what ails you?"

"Headache, Boss, headache."

"Then, why don't you try my remedy. Why, whenever I have a headache, I go home, stretch out in my Morris chair, and

my wife comes and strokes my fevered brow. Then, I find that the pain soon disappears. Why don't you try that?"

"So I will, Boss, so I will. What time will I be likely to find your wife at home?"

Organization of Ladies' Auxiliary at Grafton, W. Va.

By Mrs. W. E. Hodel
President

At a meeting held on March 7 at the Veterans' Hall, Mr. Garvey, grand vice-president, was present to make arrangements for the date of organizing a Ladies' Auxiliary of the Grafton Chapter of Veterans. To his surprise, we had 60 ladies present, and Mr. Garvey was informed that we were ready for organization. Highly pleased, he proceeded with the organization. The following officers were elected for the ensuing year:

President, Mrs. W. E. Hodel; vice-president, Mrs. F. M. Keane; recording secretary, Mrs. Alvey Wagner; financial secretary, Mrs. C. O. Thayer; treasurer, Mrs. John J. Cassell; sergeant-at-arms, Mrs. Fred McFarland. Entertainment committee: Mrs. William P. Clark, Mrs. Charles

Flanagan, Mrs. Charles Cassell. Committee for looking after the sick: Mrs. W. B. Porterfield, Mrs. Mary Coon, and Mrs. Edward Cassell. Other committees were held open until our organization is permanent.

An interesting talk was given by Mr. Garvey, and he was assured that in due time the Grafton Auxiliary would be as large as any other along the line. As we have already solicited 200 names (Baltimore Chapter, beware!), we are certain of many among them.

Since some of our brother Veterans had set their hearts upon having a banquet on the occasion of our organization, Brother Garvey sent out for a generous supply of peanuts to appease the appetites of these brethren. The big banquet will come later.

Men Play Cooks for Women "Vets" at Newark

By W. E. Laird

An enjoyable occasion was the joint meeting of the Newark Division Veterans' Association and the Ladies' Auxiliary held in the Engineers' Hall, East Newark, Ohio, on the evening of April 7. The hall was filled to capacity, there being about 300 present. During the business session about 15 new members were taken in, and arrangements were made for the use of the Engineers' Hall as a regular meeting place for the two organizations in the future.

The balance of the evening was devoted to various social features, and the serving of

a substantial and choice lunch by the Men's Entertainment Committee, composed of Jesse Walters, E. L. Little and J. E. Powell. After this came the music and dancing. Caterer Walters, who had previously made himself famous as a master-humorist, also entertained and kept the crowd in a continual uproar, which did not subside until sometime after he had left the platform.

Captain John Doyle, Colonel Joseph Robe and President "Dan" Moriarity were the spokesmen of the evening, and the entertainment was an enjoyable one in its entirety.

Pensioners' Roll of Honor

*Oh, blest retirement! friend of life's decline—
Retreat from care that ever must be thine;
How blest is he who crowns, in shades like these,
A youth of labor with an age of ease.*

GOLDSMITH—"The Deserted Village"

Joseph E. Ruby

Joseph E. Ruby, pensioned conductor, Baltimore Division, first came to the Railroad on September 2, 1879. We'll let him tell us his own story:

"I am thankful that I had employment in the service as brakeman and conductor for 41 years, 4 months and 6 days.

"When I started in, they had camels and Jersey engines. A man told me the other day that if he could do as well as I, he'd be glad. Why, I could dance a jig on the running board of a box car now. If he had been braking when I did, he would have had to dance. Nowadays they don't have to dance. When we got the 1200 engines, we just knew they couldn't get any bigger ones, but now they have twins, two engines in one. We were a bit wrong, I think.

"I got \$1.35 per day of 100 miles; if the trip took two days, the pay was \$2.50 per day. After two years running now they get a whole lot more than this, and they have big engines now, sometimes three of them to a train.

"I have been one of the lucky ones; I got hurt four times, but I am still alive, and it is God who has cared for me, and I give Him all the thanks. I hope that the Baltimore and Ohio men and the Company will prosper without me. I don't know that I have any enemies, but I know that I have many friends. I was retired on January 8, this year.

"My life is a wearisome journey,
Oftimes I long for rest,
But He has appointed my pathway,
He knows what is needful and best.

"So, I'll try to press hopefully onward,
Thinking often of this every day:
All the toil of the road will be over,
When we get to the end of the way."

"Yours truly,
"UNCLE JOE."

John T. Selby

John T. Selby, one of our recently retired employes, was born on November 2, 1853, in Montgomery County, Md. He entered the service of the Railroad at Bellaire, Ohio, July 15, 1885, as blacksmith. He was transferred to Newark on September 1, 1890. Here he served the Company faithfully until his retirement on January 9, this year.

Charles H. Rogers

Charles H. Rogers, pensioned tinner, was born in Newark, Ohio, on July 7, 1855. He went to work with the Railroad on December 20, 1886, as tinner, Motive Power Department, Newark. In 1889 he was made foreman tinner in the passenger car shop at Newark, and in 1895 was transferred to Zanesville in the same capacity. At the time of the big flood in 1913, he was transferred to the Maintenance of Way Department, Zanesville, and later in the same year was sent back to Newark as tinner, Maintenance of Way Department. He was pensioned on January 9, this year.

The Wheat Fields of May

*Chuff-a-chuff, rumble,
Chuff-a-chuff, grumble,
Swings the long train 'round the hillsides of Spring,
But far above roar and high above rumble,
As far as the eye of a creature can see,
High on the hills, nodding gaily and free,
Peeping at you and smiling at me,
The waving young plants now their promises bring.*

*Chuff-a-chuff, swinging,
Chuff-a-chuff, singing,
And the green fields of wheat, their rich harvests foretell,
Of long days in Summer with dewdrops a-clinging,
Of the crackle of footsteps when brown stubbles yield,
Of barns overflowing with the wealth of the field,
Of workers who sing to the sharp sickle's wield,
And echoes repeating their songs in the dell.*

*Chuff-a-chuff, hieing,
Chuff-a-chuff, flying,
With raindrops to freshen each thirsty green thing,
With sunbeams to cheer when the brooklets are sighing,
And breezes, all filled with the brine of the sea,
That swing o'er the hilltops and dance o'er the lea—
But the wheat fields of Maytime now beckon to me
To ride on a train 'round the hillsides of Spring.*

Dinner Pail Prize Contest Closes on June 1

IN LAST month's issue there was outlined a plan for a prize contest for our Railroad women on the preparation of lunches for the workingman. Read all about it and send in your contribution if you have not already done so. We are naturally anxious to have a good showing in the contest, but the real aim of the campaign is to help each other.

There are women who prepare lunches every day; there are those who prepare them occasionally, and there are those who never have done such a thing because they have hated to tackle the job. It is a mean job, as many will tell you. You have to think and worry about what to put in. Maybe your husband, brother or son likes only certain foods; maybe you live a good distance from a grocery; maybe it means that you have to get up much earlier in order to put up the lunch, but—

If you can write out the list of things that you put into the lunch pail or box that goes out of your house, you will certainly help young Mrs. Jones, who is anxious to

put up a lunch for her husband but who doesn't know just how to vary the menu from day to day, or how to prepare the little extra articles that go to help make the lunch palatable. Mrs. Smith will see your menu and recall that her son used to like peach tarts or tongue sandwiches like those you told about. Miss Brown will realize that she is putting too much meat and not enough fruit, or vice versa, into her father's lunch box—and don't you see how each of your ideas may help somebody else?

At the April meeting of the Baltimore Chapter of Veterans, there were about 25 or 30 men who told us that they put up their own lunches. Bully for them, we say! If they want to help the "Missus" by doing this and saving her time and worry, why, we take off our hats to them. Now, if they want to help her more, we suggest that John and the "Missus" put their heads together and write up that sample menu for six lunches. Then, when the prize money comes, Hurrah! They can both go to the movies!

Read the April issue for rules of the contest, then send your contributions to: Associate Editor, BALTIMORE AND OHIO MAGAZINE, Mt. Royal Station, Baltimore, Md.

Following are the names of the judges:

- Mrs. G. A. Bowers,**
Wife of general foreman of engines,
Riverside, Md.
- Mrs. Frank Keane,**
Wife of I. C. C. inspector,
Grafton, W. Va.
- Mrs. George B. Luckey,**
Wife of chief photographer,
Hyattsville, Md.
- Mrs. T. Parkin Scott,**
Wife of chief clerk, Savings Feature,
Relief Department,
Relay, Md.
- Mrs. Charles A. Thompson,**
Wife of assistant supervisor, Baltimore
Division,
Relay, Md.

Recipes

Chicken Salad

2 eggs, well beaten; 2 tablespoons vinegar; ½ teaspoon salt; ½ teaspoon mustard; dash red pepper; butter size of an egg.

Put vinegar, salt, mustard, pepper and butter into saucepan and set over fire. As soon as butter is melted, add the beaten eggs. Add slowly ½ cup milk, stirring all the while. Boil until of the consistency of custard.

Wipe dry the celery and lettuce. Chop together the chicken, celery, and hearts of the lettuce. Mix in dressing just before serving. This dressing will keep for several days if put into a closed jar and kept in a cool place.

Strawberry Shortcake

1 egg; 1 cup sugar; 1 cup milk; ⅓ cup shortening; 2½ cups flour; ½ teaspoon salt; 1 teaspoon vanilla. Mix well and bake in two layers.

Crush 1 quart strawberries. Spread between layers and on top of cake. Add whipped cream in another layer on the top, and decorate with whole berries.

Here's something to make for the children when they play circus. Ho, for the pink lemonade!

Circus Punch

1 orange; 2 lemons; 1½ cup apricot juice; ¼ cup prune juice; ¼ cup cherry juice; 1 cup sugar and 1 cup water for syrup; pink coloring, and 2 quarts of water.

Make syrup of sugar and water, cool, add fruit juices to make one pint; any combinations may be used, with the favorite ones predominating. Chill, serve with cracked ice and cherries. A pretty pink color may be obtained by using vegetable coloring. Recipe will make 2½ quarts.

—Milwaukee Magazine.

Jane

AH, HERE she comes, waddling up the steps like a duck in search of his morning meal! Jane, our Monday morning necessity, is coming from her home in the "dark region" of Vincent Alley to do the washing for "de white folks." Her chocolate face reflects the brightness of the morning sun as she moves along, humming the strains of "Dere's One Wide Ribber to Cross." One arm swings to the rhythm of her music, while the other clutches a well-worn bag, which she hopes to fill with some cast-off clothing or whatever else she may be able to beg of the white folks. She wears a rusty-looking hat, trimmed with two equally rusty feathers, which once adorned the occupant of a neighboring hen-roost. Her feet are enveloped in her husband's shoes, which, although of rather large dimensions, are not too great to bear the burden of her 200 pounds avoirdupois.

"Good mornin,' Miss Agnes," she says as she enters the kitchen, "I'se right on de job dis mornin,' an' 'deed I hopes you's got some good beefsteak fo' mah breakfas.' De Lawd's troof, dis nigger aint had nothin' to eat sence de last time I wuz heah, an' I sho' is hongry. Dat lazy Mistah Brown ob mine done got out ob a job, all on 'count ob him sassin' an' givin' back talk to de boss-man las' Chuesday night. I'se got to wuk turrible hard now to keep mah son Willie dressed up so's he kin go wid good comp'ny. Dat boy is gwine on 22 yeahs old now, an' I'se got to keep him lookin' good, so's he kin shine 'round de ladies.

"Look, Miss Agnes, aint you got a extry pair o' pants to gimme fo' mah Willie? I knows you has, 'cause I seed a ole pair what b'long to yo' Mistah Claude a-hangin' on yo' clothes line de othah day. . . . Thank you ma'am. I'll tell you, mah Willie is gwine look some done up in dem pair o' pants. You know mah Willie is a fine lookin' boy, 'deed he is, ma'am. I b'lieve he's bettah lookin' den yo' Mistah Willie; he looks moah like yo' Mistah Claude. Me an' mah Willie went to a pahty de othah night, an' I'll tell you, we sho' did look swell, 'deed we did. You doan know me when I'se dressed up; I tell you I'se got some figger when I gits mah cossets on!

"Now, Miss Agnes, mah sistah's husban's mothah is done died, an' I'se 'bliged to 'ten' de fun'el, an' I'se gwine ax you if you won't please, ma'am, lend me yo' new black coat to weah to dis fun'el. I'se only gwine to weah it dat one time, and de Lawd knows I aint gwine to git it dirty. . . . Well, I'll 'clare to goodness, Miss Agnes, ef you don't beat all! Won't eben lend a po' woman yo' coat to weah to a fun'el. Well, den, mebbe you'll gimme dis ole lace dress. I'd lub to hab it to mek mah baby a christenin' dress outen it.

"Miss Elsie, please, Miss, go down de cellah an' git de wash-tubs. 'Deed I'se got rheumaticks so bad dis mornin' dat I could

hahdly turn out o' bade. Miss Agnes, I knows you's gwine to mek de starch fo' me, aint you? I don't know nothin' 'bout dese fool gas ranges, nohow. Heah, chile, put dis clothes line up fo' me; ebery time I lif' mah hands above mah hade I gits de death rattles in mah yeahs, an' de Lawd knows I don't want to go to no moah fun'els ef I aint got no coat to weah. I aint eben got no coat to weah to chu'ch nex' Sunday to git mah baby christened.

"Goodness gracious, Miss Elsie! You say you aint knowed I'se got a baby? 'Deed I'se got a good-lookin' baby. Ya-as'm, ya-as ma'am, he's mah own baby, he is. I done bought an' paid fo' him. I'se gwine hab him christen' nex Sunday, too, an' dat's why I want you to gib me a dress fo' him. Yas, ma'am, I done got dat baby last week. Wheah did I git him? Lissen.

"Twuz all dis-a-way. You know dat yaller gal name Ethelindy Jones, what come 'roun' heah to he'p me one day? Well, dis heah wuz her baby. Dat gal been boardin' wid me fo' a long time, eber sence she went an' lef' her husban,' dat no-'count Teddy Rosevlt Jones, what shine shoes roun' on Vine Street when de weathah is wahn, an' what is content wid doin' a whole lot less when it aint. No, ma'am, she aint got no divo'ce, she aint had no money fo' to git no

divo'ce; she jes' ups, an' as I say, comes to mah house to board. Co'se I felt sorry fo' her an' let her stay dere. But, what you reckon dat gal done? She stay at mah house clear from de fust day ob December till las' We'nsday, an' aftah I done give dat gale a place fo' to sleep an' somepin' to eat, fo' foah whole months, not one red cent did she gimme.

"Well, den, de othah day, she ups an' tells me dat she wuz gwine to leave an' take up wid some othah good-fo'-nothin' nigger. Den dey wuzn't but one thing lef' fo' me to do. I'se got to habe somepin' to pay for dat board, so I jes' nachu'llly ups an' takes dat baby."

Cookless Mayonnaise Dressing

Contributed by Mrs. Esther Spreenborg, statement clerk, South Chicago.

1 can Eagle Brand sweetened condensed milk (Bordens).

2 eggs, beaten together well.

½ teaspoon salt.

½ teaspoon dry mustard.

1 tablespoon melted butter,

and the last thing add one cup of white vinegar; or three-quarters vinegar and balance water, if too strong, or one-half each to taste.

Dear Women Readers:

One year ago this month our new Women's Department began its career in our MAGAZINE, and it seems as though we ought to have some kind of celebration. Let's have a meeting right away of all those who helped make up the pages during the past year, and of all those who are going to help us during the coming year. Here we are, all present, and each ready to do her share.

First, we'll have a review of our department for the past year. We started in with the news of the doings of the Ladies' Auxiliary, but soon found that it was best to run this news along with that of the Veterans' Association in order to make room for the other contributions that our girls were sending in. With such articles as "Do You Like My Dress?" from Matilda Baer, and "Welcoming the New Girls" from one of our stenographers, the department grew from three to five pages. The pattern section is now becoming quite a department in itself. The Children's Page shows what the little people can do for themselves. Last month they ran nearly the whole of their two pages, and there are a number of contributions of poetry, pictures and stories, which we have not been able to publish because of lack of space.

I want to thank all of those who have helped build up both of these departments, and to express the hope that we may have many new contributors for this volume of the MAGAZINE.

One thing more, remember the "Dinner-Pail Contest." This is open to all of the wives, mothers, daughters, and sisters of our employees, who have ever put up lunches for the men in their families. Of course, there are lots of our girls in the offices who are not eligible to enter the competition, but the time is soon coming for them. Meanwhile, you may help by passing the good word along to some woman who does pack a lunch for her railroad husband, father, son, or brother. You will find the rules of the contest in last month's MAGAZINE. Read them over carefully, then get out your pen or your typewriter, as the case may be, and tell us what goes into the lunch box. Our men must be well fed if they are to do their work properly, and your menus may help some woman who reads these pages and is forever worried with the thought, "What shall I get for John's lunch tomorrow?" Then, too, every woman has the chance to win a prize. The contest closes on June 1.

Now, since there is no more new business, the meeting will adjourn, until the month of June. Meanwhile, on with the recipes, the stories, photographs, poems and articles about your work!

Yours sincerely,

Margaret Talbott Stevens

Associate Editor.

Frocks, Blouses and Capes Exploit Ideas of Unexpected Individuality

THE new modes feature variety because they are individual. Almost every frock, blouse or wrap that one sees exploits some pet idea of its particular

designer, hence it is different. Even the imported models which home dressmakers copy fail to escape the various little rearrangements which make them distinctive to their wearers. So here we find one of the reasons for the increasing popularity of simple styles. A simple frock is always beautiful; but a beautiful one is not always simple.

The combination idea continues to control the development of smart feminine apparel. The most unexpected fabrics are used together, and almost always with charming results. To keep a frock youthful is one of the big purposes of Fashion. A design in black taffeta combined with organdy in both simple and youthful. The blouse is cut with a tunic and has vest,

plain tailored suit without destroying the strictly tailleur idea.

LADIES' SLIP-ON BLOUSE No. 9193. Seven sizes, 34 to 46 inches bust. Size 36 requires 2 yards 36-inch material. Without lining, having round neck and closed on the shoulders. The back of blouse and the sides of front section are gathered to a waistband. Girdle sections are attached to the front of blouse; the girdle is closed at center-back. One-piece flowing sleeves or one-piece sleeves gathered to deep cuffs. Price, 30 cents. No. 12570, blue or yellow transfer pattern, 30 cents.

DRESS No. 9424. Sizes 34 to 48 inches bust. Price, 35 cents.

DRESS No. 9415. Sizes 34 to 48 inches bust. Price, 35 cents.

DRESS No. 9432. Sizes 6 to 14 years. Price, 30 cents.

DRESS No. 9422. Sizes 34 to 48 inches bust. Price, 35 cents.

DRESS No. 9413. Sizes 34 to 44 inches bust. Price, 35 cents.

DRESS No. 9439. Sizes 34 to 48 inches bust. Price, 35 cents.

DRESS No. 9433. Sizes 34 to 44 inches bust. Price, 35 cents.

It is a rare letter from a mother to a son that doesn't tell him to be good; and a rare letter from a mother to a daughter that doesn't express the hope that she is having a good time.

Long-Waisted Dress of Blue Tricotine with Blue and Gray Decorative Scheme

A MODEL that is the embodiment of girlish grace is this long-waisted dress of dark blue tricotine, with vest of gray satin and braiding and sash of self-color. The waist, with turn-down collar, closes on the left shoulder and under the left arm. The front is cut away to show the inset vest, then outlined with braid. The sleeves may be three-quarter length or long and close fitting. Attached to the waist is a two-piece skirt. The sash is slipped underneath the outer waist and tied at the left side. Medium size requires $3\frac{3}{8}$ yards of $\frac{5}{8}$ -inch material, with $\frac{3}{4}$ yard satin, and $\frac{7}{8}$ yard lining for underbody.

The model is reduced to the simplest possible terms for the benefit of the home dressmaker. To cut the skirt and waist so that all the seams possible will be omitted, fold the tricotine in half. Then, along the lengthwise fold, place the front and back gore of the skirt and outer front of the blouse. Above the outer front of the blouse, lay the sleeve, with large "O" perforations along a lengthwise thread. The outer back is also laid along a lengthwise fold of the goods, and the vest should be arranged in the same way, so that it will be seamless. The underfacing of the collar is placed on the tricotine with large "O" perforations along a lengthwise thread. Ribbon may be used for the sash. In cutting the lining,

the back section of the pattern has the triple "TTT" perforations resting along the lengthwise fold, while the front has its straight edge parallel with the selvage edges.

For a foundation, first make the underbody. Close under-arm and shoulder seams as notched, then hem the front. Take the gray satin vest next, and hem the upper edge. Adjust to position on right underbody front with center-fronts, single large "O" and double small "oo" perforations even. Be sure to indicate perforations and make notches when cutting the goods. Finish left side edges of vest for closing.

Next, close both underarm and shoulder seams of the blouse and gather lower edge between "T" perforations. Face the opening and stitch with braid. Face the collar and sew to neck edge as notched. Close

the skirt, with center-fronts, single and double small "oo" perforations even. Arrange the sash around the waist underneath the outer blouse, draw ends out through an opening at left under-arm seam and tie at left side.

DRESS No. 9239. Sizes 14 to 20 years. Price, 35 cents.

Draped One-Piece Frock

Pictorial Review DRESS No. 9185. Sizes, 34 to 48 inches bust. Price, 35 cents. Embroidery No. 12511. Transfer, blue or yellow, 25 cents.

Simple Frock of Satin

Pictorial Review DRESS No. 9196. Sizes, 34 to 44 inches bust. Price, 35 cents.

For the Resort Season

Pictorial Review DRESS No. 9079. Sizes, 34 to 48 inches bust. Price, 35 cents.

BOYS' OVERALLS No. 8035. Five sizes, 4 to 12 years. Size 8 requires $2\frac{3}{4}$ yards $\frac{3}{8}$ -inch material. The front of waist and side-closing trousers cut in one. High neck with rolling collar, perforated for low round neck. Price, 20 cents.

Chlorine, the dusky queen of the kitchen, showed up at the receiving teller's booth with an air of determination on her midnight features.

"Ah wants you should take care of dis yeah cash fo' a while," she remarked, plunking down her savings of several years.

"Why, Chlorine," ejaculated the teller, who knew her of old, "I thought you always said you'd never trust the bank."

"Dat's all right, dat's all right, but de circumferences surrondin' de matter makes me change mah mind. Yo' see, I'se gwine get married an' Ah don't want dat much money 'round de house with no strange cullud man on the premises."—*American Legion Weekly*.

A Circus in the Barn

Dear Girls and Boys:

What is a Jigamaroo? Oh, you don't know? I thought you wouldn't, and that's the reason I'm going to tell you.

Long, long, long ago, when I was a little girl, I had two brothers, one older, the other younger than I. We lived in the country on a farm, 12 miles from the nearest town. There were pigs, cows, three dogs, three or four cats and hundreds of chickens. There was a big barn where we children often played when it was not filled with the long, green leaves or the big, brown piles of tobacco. Lots of boys and girls lived on the farms nearby, and oh, what fun we used to have during vacation and on Saturday afternoons!

One day my older brother, who was then about 11 years old, came running to me.

"Guess what!" he shouted, "Circus is coming to town. I wonder if father will let us go."

"Oh, goody!" I cried, "Who told you?"

"There's a man who is putting signs up all over the barns and fences in the village. He says there'll be elephants, and tigers, and lions, and bareback riders, and *twenty-five clowns!*"

Twenty-five clowns! We had never been to a real circus. At a dog show that had stopped at the village a year before there had been *two* clowns, but *twenty-five!*

"Come, we'll ask father," I said, and we both ran to the garden.

"Please, father, take us to the circus," we begged. Father stopped hoeing, lifted me up on his shoulder, and walked over to the gate where we all sat on a wheelbarrow.

"Sorry, kiddies, but I have to be in Baltimore all next week, and there isn't anybody to take you. I'll tell you what. Why don't you play circus for yourselves? Ask some of the boys and girls to come over. Mother will make you some pink lemonade, and I'll help you as much as I can before I go away. Put up a few trapeze swings in the barn, stretch a tight-rope near to the ground, and there you'll be. Go ahead with your plans, and if you need any help, call on 'Billy.' " ("Billy" was our hired man.)

For the next week we were as busy as little bees. Mother gave us some old strips of muslin and showed me how to make a

clown suit for little John, my younger brother, and a spangled dress for myself. We enlisted the services of Julius, a colored boy, to act as handy man, never dreaming that he, too, had schemes in his little black head. How we planned and worked! How we trained the dogs to do tricks! Many were the good pieces of meat that we stuffed into the ever greedy cats in the endeavor to make them act, too.

At last the happy day arrived. An hour before the circus was scheduled to begin, Julius came running to me.

"Say, Miss Mary, kin you make me a blanket for a jigamaroo?"

"A wha-a-at!"

"He! He! He! I sez kin you make me a blanket fer a jigamaroo? I'm fixin' up a jigamaroo, an' I want a sort of a blanket to use for a saddle. It's got to be about this long" (measuring with his arms) "an' about this wide, an' good an' thick. S'posin' you try to make one out of dese two grass bags. Ef you'll sew it together an' put some red ribbons on it, I'll put de fastenin's on it an' hab dat jigamaroo so pretty he won't know hisself."

Try as I might, I couldn't get Julius to tell me what sort of a beast or bird the jigamaroo is, but I made the blanket according to directions.

Soon the boys and girls began to come. The admission fee was one penny, the proceeds to go towards a moving picture machine. "Billy" had built a half-dozen long benches for the audience, placing two chairs at the very front as "reserved seats" for mother and grandmother. An entrance had been screened off on each side of the barn. A big ring was marked off in the center. Around this, amid shouts from the children in the audience, the big parade started.

Such queer looking creatures you never saw in your life! You all know, of course, that tigers are tawny and black striped. Our tiger, however, was pink and white. The shaggy, white coat of our oldest and least handsome dog had been striped with the deepest pink that poke berries could make it. A very tame tiger he was, lying sleepily in his cage, which was made of a slatted box on wheels.

Next came the giraffe—"Billy"—dis-

guised with a covering made of a yellow horse blanket with black spots sewed all over it. The neck was made of a six-foot plank, covered with the same kind of material; at the end of this perched a little stuffed head with prominent ears. True, the giraffe had only two feet, but that made it funnier.

Then there was the elephant, made in the same manner by the two Jones boys, who had borrowed two pairs of gray trousers and a gray blanket. With their heads bent low, the blanket spread over the two together, a pair of cow's horns for tusks, and the two ends of the blanket wrapped and twisted to represent a trunk and a tail, respectively, we had a noble looking elephant indeed.

All went well until came Pete, the big rooster, hitched to a little cart in which sat little John's stuffed cat. I suppose it would be more appropriate to say the cat hung there, for she had been tied in. Pete wasn't satisfied with walking in like a gentleman, but insisted on flying up to the rafters with the cart and the cat hanging on to him. After him jumped Rover, the dog who was scheduled to sing to the accompaniment of the mouth organ. Alas for his voice! He used it up entirely barking at Pete. It was some time before order could be restored and the program continued.

I wish I had time to tell you all about all of the animals and funny people who took part in the parade, but I must hurry along with the story. Little John, dressed as a clown, came out and sang several funny songs to the accompaniment of a Jew's harp, played by my older brother, who did the double duty of musical entertainer and master of ceremonies. Then came my stunt on the tight rope. I am sure you would have been horrified to see your old Aunt Mary walking on a rope that had been stretched between two of the upright posts in the barn, but you must remember, she was a little girl then, and the rope was not more than a foot high from the ground.

May, the tight-rope walker

Drawn by Ethel Gardiner, Baltimore

Drawn by Gladys Shaw, Fairmont, W. Va.

Then there was Puss in Boots, the Tattoo Man, the Fattest Lady on Earth, and at last—the Jigamaroo.

At the left entrance stood little black Julius, pulling and struggling at the end of a rope.

"Come on, suh! Come on, you Mistah Jigamaroo! Ain't you got no raisin'? What'll all dese white folks think of you? Ain't I done mah beatest to train you, an' heah you is, backin' down on de job at de las' minute. Come on!!" And with a mighty tug that knocked Julius off his feet, on came the Jigamaroo in all his pomp and majesty! He stood about two feet high. Trousers covered his four legs. His head had the antlers of a deer; his tail was about three feet long with a cowbell tied on the end of it. Covering his face and under his horns was a woman's bonnet, tied securely beneath his chin. On his back was the blanket made of bags and decorated with red ribbons.

Where did Julius get it? Where did it come from? What was it? Nobody knew.

Suddenly the Jigamaroo turned, kicked up his hind legs, snorted, grunted, jumped, and raised such a cloud of dust that boys and girls got to sneezing and running to the door. Some of them were really frightened. Several of the girls screamed as the Jigamaroo made a wild dash under the seats and rushed toward the door. Mother and grandmother grabbed up their skirts and jumped upon their chairs.

"Look! Look!" screamed one of the Jones twins as we all made for the door. The deer antlers suddenly flew into the air, the blanket with its red ribbons was being trampled under the feet of the beast, the trousers hung on the fence as he went through, and away across the hill ran our old hog, with Julius' mother's sunbonnet still tied under his chin!

So that was the Jigamaroo. And after we had all had a good laugh, we went to the house where mother gave us all the circus punch that we could drink and all the little cakes we could eat.

The recipe for circus punch is in the recipe column. Perhaps mother will make some for you some day.

For July we'll have the flower page. Try to have your stories, poems, and pic-

tures in by June 5, and I'm sure we'll have as nice as page as this one.

Love to all,

Aunt Mary

My Visit to the Circus

By Geneva L. Costolo
Grafton, W. Va.

Dear Boys and Girls:

I will now tell you the story of the day I went to the circus.

One day in July when it was very, very warm, father told us children that we might go to the circus. My, but we were glad!

Drawn by Ella L. Beckman, Baltimore, Md.

We were eating dinner when mother said, "When you have finished dinner you children go and wash up and get ready to go."

We all flew, washed, and put on our clean dresses. Soon we were ready. We went to the circus in the car.

When we went in we saw the large tents, and oh! so many things that I just cannot tell you all. But the thing that Charles, my oldest brother, and I noticed, was the clown. He took us in and showed us how to clean our teeth.

That evening we went home. What a splendid time we had had. But then we went to work trying to clean our teeth with branches of the trees as we had seen the clown do. Then father came around with tooth brushes for us children.

Then such a time as we had! We cleaned the kitty's teeth, the dog's, the cow's and the chickens'.

All of you try to keep your teeth clean.

Yours truly,

GENEVA L. COSTOLO.

NOTE—What kind of teeth do chickens have, Geneva?

AUNT MARY.

Spring
By James King
Dorsey, Md.

Spring is drawing near,
The robins will soon be here,
The leaves are growing green,
And no more snow is seen.

The bluebirds are coming,
The bees are humming,
The japonica bush is growing red,
And all Spring flowers show their heads.

Little Letters From Little People

NEARLY all the children in the school at Fairmont, W. Va., where Gladys Shaw goes, were ill of the mumps when Gladys wrote. She told us lots of things, but the nicest of all was about a brave little girl in the hospital there. This little girl had her arms burned off by electricity, and after all of her suffering, she let the doctor take some of her flesh to save another little girl who was also in the hospital. Gladys calls her "America's greatest hero," and we agree with her. See the fine elephant that Gladys drew for us.

Geneva Costolo has written a splendid letter about the circus. I'm sure that you will enjoy reading it. I did.

Phaine Bateman is a little girl in Pittsburgh who sent us a poem about her dolly's hair. This we hope to use sometime on our page. I couldn't answer Phaine's letter, for she did not give me her address; I hope that she will write again and tell me what it is.

Ethel Gardiner, Baltimore, wrote again, sending the picture of the tight-rope walker.

M. M. McDONALD

Is a goose a bird?
Well, it has feathers, and Marguerite McDonald ought to know

Spring

By Kathryn Hadden,

Dover, Ohio

Spring is the time for me.
The birds come back,
The flowers grow,
And the flowers are bright and green.
Spring is the time for me.

Charles H. Rogers

(Continued from page 39)

sioned on January 11, this year. Mr. Rogers is a staunch member of the Baltimore and Ohio Veterans' Association.

Hiram W. Derby

Hiram W. Derby, pensioned train baggageman, Toledo Division, was born in Hartland Township, Ohio. He lived on a farm until he was 27 years of age, when he took a position as freight brakeman, Lima, Ohio, on what was then the Dayton and Michigan Railroad, leased by the Cincinnati, Hamilton and Dayton. He held this position until the Spring of 1880, when he was made passenger brakeman until April 13, 1883. Then he was given charge of a baggage car. Because of ill health, he was retired on a pension on September 23, 1920, after having spent 42 years and 6 months in continuous service.

John B. Woolson

John B. Woolson, retired passenger conductor, Newark Division, was born on March 14, 1849. He entered the service of the Railroad as freight brakeman on January 1, 1875, was promoted to freight conductor in 1886, and to passenger conductor in 1913. In May, 1920, he suffered a paralytic stroke and has not been able to work since that time. His baggage run was from Newark to Sandusky; as passenger conductor he ran between Newark and Sandusky, Newark and Chicago, Newark and Cincinnati, Newark and Shawnee.

George W. Callaway

George W. Callaway, pensioned yard brakeman, was born in Salisbury, Wicomico County, Md., on January 3, 1853.

On September 17, 1895, he came to work with the Company as yard brakeman, Philadelphia, continuing in service until April 1, this year, when he was pensioned.

John W. Snarr

John W. Snarr began railroading in October, 1887, as brakeman on the Cumberland Division, out of Martinsburg. Later he bought a house—through our Relief Department—at Brunswick, where he lived until October, 1918, when he moved back to Martinsburg. He had been promoted to run conductor in 1891, remaining on the Cumberland Division throughout his time of service. He was pensioned on April 1.

A. O. Herman

A. O. Herman Made Chief Clerk to General Manager, Eastern Lines

THE many friends of A. O. Herman, who until May 1 had been assistant chief clerk to the vice-president of Operation and Maintenance, will be glad to learn of this promotion on that date to the position of chief clerk to the general manager, Eastern Lines.

Before coming with the Baltimore and Ohio at Cincinnati, as secretary to the general manager on March 1, 1914, Mr. Herman had been in the service of the Southern Pacific Railroad in various capacities for 8 years.

On June 1, 1916 he came to Baltimore as secretary to the vice-president of Operation and Maintenance, and on June 12, 1917, he was made assistant chief clerk in the same office. From July 1, 1918, he continued in the same capacity in the office of the Federal manager and he held the same position under corporate control in the office of Vice-President Galloway from May 1, 1920, until his recent promotion.

Around the Corner By Charles Hanson Towne

Around the corner I have a friend,
In this great city that has no end;
Yet days go by and weeks rush on,
And before I know it, a year is gone,
And I never see my old friend's face;
For life is a swift and terrible race.

He knows I like him just as well
As in the days when I rang his bell
And he rang mine. We were younger then;
And now we are busy, tired men—
Tired with playing a foolish game;

Tired with trying to make a name.
"Tomorrow," I say, "I will call on Jim,
Just to show that I'm thinking of him."
But tomorrow comes, and tomorrow goes;
And the distance between us grows and grows.
Around the corner! Yet miles away . . .
"Here's a telegram, sir." . . .
"Jim died today."

And that's what we get—and deserve in the end—
Around the corner, a vanished friend.

ANOTHER GROUP OF RAILROAD KIDDIES

Left to right: "Sinn Feiners Two"—Thomas and Mary, children of Shane McShane, office of Auditor Merchandise Receipts; Clyde Lester Lewis, six-months-old son of Craneman C. M. Lewis, Tie Plant, Green Spring, W. Va.; Clyde Royce, son of Car Repairer O. H. Royce, Cincinnati Terminals; Marion R. Kopp, four-year-old daughter of George Kopp, stenographer, Engineering Department; Ruth, Inez, Louise and Lena, children of C. S. Mayfield, tank repairman, Cincinnati

Safety Roll of Honor

Baltimore Division

Engineer H. C. Quarles, in charge of engine 4113, extra east, March 11, noticed a rough place in the track at Herring Run Dip and stopped his train. Thirteen inches of the rail were found broken off and missing. Train dispatcher was notified.

On March 12, while extra engine 4857 was passing Hoods Mill, Trackman Samuel Duvall on Section No. 49 noticed something wrong with Baltimore and Ohio 130064 and called Conductor J. C. Dwyer's attention to same. Investigation developed that there were 21 inches of tread missing from wheel under this car. The condition of this wheel would probably have caused a derailment.

Operator C. O. Warfel, Barnesville, on March 22, observed and reported brakes sticking on rear car, "Mizpah," of train No. 5. Train was stopped at Washington Junction, where the condition was corrected.

W. Boyer, operator, Monrovia, on March 30 observed a car off track in train of extra west, engine 4598, which was passing. He notified the crew, who put air on from the rear. The east truck of Baltimore and Ohio 141238 was found to be off the rails, caused by door dropping down.

Cumberland Division

During the past month three unsafe conditions were reported by operators on the division, one being a broken rail; one a hopper bottom down and partly torn off, and one a case of wheels sliding. Fewer trains on the road than usual has reduced the number of observances.

On February 28 Track Walker Frank Seeders, who was off duty, and who lives near Orchard Curve, west of Dan's Run, heard an unusual noise as a westward train passed. He investigated and found six inches broken out of rail on No. 1 track. He flagged the train and called trackmen, who made repairs.

Pittsburgh Division

It was reported to the dispatcher from Knox at 6.20 p. m., on February 1, that the valve rope on the water tank at Shippensburg was broken and engines could not secure water at that point. Conductor C. D. Newman, in charge of extra west, engine 1514, arriving at Shippensburg and finding that no water could be secured, climbed up into water tank, repaired valve rope and reported to the dispatcher that the water was O. K.

PITTSBURGH, PA., March 4, 1921.

MR. A. STIBOR,
Switchman,
Willow Grove, Pa.
MR. CLYDE JOHNSON,
Carpenter,
Pittsburgh, Pa.

Gentlemen—Your observation of a broken arch bar on Baltimore and Ohio 173694,

in train No. 97, while passing Millvale Station, February 28, and promptly transmitting this information to the operator, Willow Grove, who stopped train at Etna, at which point car was set off for repairs, has been brought to my attention.

I want to compliment you gentlemen, and it is a pleasure to do so. Alertness and keen observation are two of the most valuable and important assets in the Railroad man, and upon them rest, in a large measure, successful operation. Again, let me thank you.

Truly yours,

(Signed) G. W. MARTIN,
Superintendent

Charleston Division

Agent F. E. Friend, Gilmer, W. Va., has shown his interest in safeguarding the revenue of the Company by calling attention to violations of the tariff. He has also helped in freight claim prevention, as has Agent W. H. Gross of Porters.

Master Lewey Hoover of Ten Mile, W. Va., recently found a tree across the Company's tracks near Ten Mile. He flagged passenger train 52 and advised the crew of obstruction.

While No. 37 was pulling into Clay, Conductor D. T. Foy noticed, as engine 864 passed him, engine truck brace was down and dragging on rails. He called engineer's attention to it, and possibly averted a derailment.

Agent L. A. Rollyson has again been watchful of the Company's business, in noting coal dropping from a passing car. Examination showed drop doors defective.

Engineer W. P. Paxton, one of our most efficient passenger engineers on the Coal and Coke District, while traveling to Charleston on No. 737 recently, found a tree across the track at Mile Post 45. He secured an axe and climbed up the side of the cut and, with the assistance of crew and passengers, was able to get the tree cut and off the track with but slight delay.

Foreman J. Douglas of Section No. 12, Elk Line, was loading a car of ties recently. In looking over the car he discovered a burst wheel.

February finds the following engineers showing up with 100 per cent. efficiency in our fuel performance:

W. T. Spencer, M. T. Hall, A. B. Nicholas, J. H. Stalnaker, G. B. Ramburg, J. C. Jordan, R. Malone, R. E. Smith, O. W. Gum, A. B. Amos, A. F. Vorholt, M. A. Henderson, B. H. Griffin and W. P. Paxton.

Newark Division

While train 70 was passing his office April 5, Agent-Operator H. W. McKown, Sundale, Ohio, observed car with broken down truck, got on caboose, notified conductor, who stopped train and set car out, undoubtedly averting an accident.

While train 84 was passing his station March 29, Freight Agent F. A. Hannaman, Shelby, Ohio, observed a broken arch iron under car, immediately signaled the conductor, who stopped train and set car out, before any damage occurred.

New Castle Division

On March 31, while extra east 2293 was passing Easton, the crew noticed that Baltimore and Ohio 191598, empty box car, located on the siding, was on fire. The train was stopped, and the members of the crew succeeded in extinguishing the flames before much damage was done. Superintendent Stevens has written a letter of appreciation to each of these gentlemen. This train was manned by a Cleveland Division crew running over the New Castle Division at the time, and was composed of the following: Conductor J. E. Campbell, Engineer J. A. Moore, Fireman R. Metz, Flagman D. Robinson, Brakeman A. Richardson and J. M. Fowler.

Cleveland Division

CLEVELAND, OHIO, April 2, 1921.

MR. W. F. HEIDY,
Engineer,
Dover, Ohio.

Dear Sir—It gives me great pleasure to commend you for your close observance and discovery of a 22-inch piece of flange between the rails on the first curve west of "GI" Tower at 9.55 a. m., March 25, and your prompt report of same to dispatchers at "GI" Tower.

Very truly yours,

(Signed) H. B. GREEN,
Superintendent.

CLEVELAND, OHIO, March 22, 1921.

MR. M. ELLSLAGER,
Flagman,
Cleveland, Ohio.

Dear Sir—I am informed that you were flagman on train of engines 2659 and 2759 on March 22, and while passing over first crossing west of New Philadelphia, east-bound track, felt a jar as caboose passed over this crossing; that you immediately stopped train and went back to see what was wrong. On reaching this point, you discovered that 12 inches of rail were broken off and immediately notified sectionmen, who had rail repaired.

This indicates that you are taking interest in your work and that you are on the job, and I want to commend you for your action in this particular incident.

Very truly yours,

(Signed) H. B. GREEN,
Superintendent.

Indiana Division

Joseph Glabb, signal maintainer, noticed something wrong with Baltimore and Ohio 181025 when this car was passing Cochran, extra 2708 on March 16. He immediately notified crew, train was stopped and it was found arch bar was broken.

The close observance of Mr. Glabb and prompt action in notifying crew, permitted car being set out at Cochran before any damage occurred.

Toledo Division

On March 15, train 51, in charge of Conductor Perry Byers, took siding and met No. 86, engines 4550 and 4140, at Haskins, Ohio. Conductor Byers was standing on rear platform pulling through

siding as No. 86 was passing and noticed broken flange on Baltimore and Ohio 139881. He immediately stopped his train and notified the flagman on train No. 86, who proceeded to stop train when it was discovered that 1 1/4 inches of flange was broken off and car set out at Roachton.

Heroic Rescue in Race Between Man and Train

THE attention of the various yard and engine crews working about St. George Yard, Staten Island, on the afternoon of March 7 was suddenly aroused by the shrill whistle of eastbound passenger train No. 164, speeding along in the direction of St. George.

They immediately observed a middle aged man (later found to be the captain of an outlying schooner in New York harbor), walking heedlessly on the same track toward the approaching train 150 feet away. With his eyes fixed on the ground, the man was approaching what looked like sure death.

Noticing that the trespasser made no attempt to move from the path of the train, the engineer immediately applied the brakes, but being only 100 feet away and

On March 7, Brakeman P. O. Kronberg, on train No. 84, noticed that P. M. car 43163 in train No. 87, passing Belmore, Ohio, had a badly bent axle. Brakeman Kronberg notified the crew and at Leipsic Junction inspection disclosed this car with bent axle, about 20 cars from engine. It was set off.

running 30 miles per hour, it was certain that the train could not possibly stop in time. Luckily there was a man with supreme presence of mind among the on-lookers. Assistant Yardmaster Frank A. Holden, taking the situation in at a glance, dashed from the center of the yard over the network of rails toward the careless trespasser, and although he had but slight advantage in distance over the train, nevertheless, through his great speed and fine nerve he reached the man 10 feet before the train did. Like a flash he plunged into the dazed captain and lifted him bodily from the track against the retaining wall four feet from the side of the cars, while the engine and three cars ran by.

The Grim Reaper had been defeated by a remarkable display of heroism, bringing to the amazed spectators a most thrilling and hair-raising movie in actual life. Only after the train had passed and both men were seen huddled together against the wall was it realized that both were safe.

Alarmed by the sudden application of brakes and shrieks of the whistle, several gentlemen alighted from the train and upon being informed of this remarkable piece of heroism, heartily shook hands and congratulated the hero.

Heroes such as Frank Holden are few indeed, and in the minds of all who witnessed this extraordinary display of bravery, no man has ever been more deserving of the Carnegie medal than "Frank."

Frank Holden

Splendid Work of St. Louis District Train Baggage-men is Commended

THE following letter has been posted on the Illinois Division in such places as the train baggagemen in the St. Louis District can see it and learn of the appreciation of their good work:

Gentlemen—In a recent conversation with Mr. D. O'Toole, general baggage agent of the Terminal Railroad Association of St. Louis, respecting this Company's baggage service conditions in that Terminal, and protecting bad order exceptions against damaged baggage, he stated that the work of the Baltimore and Ohio baggagemen was above the average, and that our service into the Terminal could not be excelled.

There are about 20 Railroads operating in that depot, and the comparison is certainly a great compliment to Baltimore

and Ohio men and service, and I call it to your personal attention with pleasure and appreciation.

This manner of handling business is "REAL" service, and it is largely this spirit of the Baltimore and Ohio trainmen which is making its passenger service so renowned.

Am sure that you will be more than pleased to see how well your baggage work stands among so many lines.

Very truly,

(Signed) J. P. DUGAN,

General Baggage and Milk Agent.

The MAGAZINE office is glad to get from every department and from every section of our lines letters commending the service of our employees. Going up and down the

Railroad and talking to officers and employees in many different kinds of positions, one cannot help but get the impression that our employees are trying a little harder than those of other roads to give good service. It is a fine thing to work for a Company whose employees give it such fine support, and it is but a truism to say that the results of this super-service will eventually become apparent in the greater prosperity of all connected with the Railroad.

Cumberland Baltimore and Ohio Band

THE MAGAZINE office has recently received copies of two interesting programs given by the shop band at Cumberland; one at Cumberland on Easter Sunday and the other at the Piedmont, W. Va., Opera House, on the afternoon of April 10.

The program given at Piedmont included both classical and popular selections, with solos by Raymond Beck and Francis Hodel. Next to the last number was the Baltimore and Ohio Safety March, composed by the band leader, Professor Frank De Luca.

Splendid reports of the good musicianship of this band come from all places at which it performs. This organization should be a valuable adjunct to the Company's activities in Cumberland and a source of pleasure not only to its members, but also to our employees at that point.

We would like to see a band of our employees in every city on the System containing large numbers of Baltimore and Ohio people. Why don't the bandsmen at other places get together and show us the stuff they are made of? Why not have an annual band competition, or something of the sort, similar to the prize contests which used to be annual affairs with well-known singing societies?

James Powell

Among Ourselves

Baltimore and Ohio and Baltimore and Ohio Annex Buildings

Law Department

Correspondent, GEORGE W. HAULENBEEK

I like this. When our through trains reach 24th and Chestnut Streets, Philadelphia, the trainmen in stentorian tones announce "24th and Chestnut, the first stop in Philadelphia; the next stop, Wayne Junction, the last stop in Philadelphia." Heretofore Wayne Junction has not been regarded as a station in Philadelphia, though it is just as much in Philadelphia as 24th and Chestnut, and has always been.

Our stations are clearly and distinctly announced, and any one on train 524 who does not understand the call that Mount Royal is the last stop in Baltimore, needs to have the wax removed from both ears.

The Paymaster

On the first floor of this great Central Building, the paymaster and his force of clerks preside. The clerks are a hard working set of men and women, and they earn all the money they get. We get our checks twice a month right on the minute because this force I speak of has our interest in view. They all work hard to serve us.

Mr. Deverell

Then, again, I like to visit Mr. Deverell's office on the ninth floor. Mr. Deverell, assistant comptroller, is a tireless worker. He is a born accountant, a product of Cincinnati. He has a wide-awake chief clerk, J. W. Sweitzer, whose manner of handling the business convinces me that efficiency is at the very beginning of his vocabulary. Even the junior clerks in this office evince qualification and capability.

A Word from Cumberland

I have received a most interesting letter from a gentleman in our service stationed at Cumberland, Md. He writes enthusiastically of the *MAGAZINE*; of the Safety campaign and in full praise of the saving habit, which he thinks should be more generally observed.

40 Years in the Law Department

On this first day of April, 1921, I am celebrating my advent into the Law Department. I am indebted to the late Dr. William T. Barnard, assistant to the president, for an introduction to the late John K. Cowen, general counsel. I was a clerk in the War Department, standing perfectly still, and so I intimated to Dr. Barnard that a change would be agreeable. An introduction to Mr. Cowen in Baltimore followed and after

my resignation in Washington had been accepted, I began service in the Law Department. Mr. Cowen was one of the nicest men I ever met.

At that time we occupied rented quarters in the old Reverdy Johnson residence immediately opposite the battle monument. The court house, a little brick building, stood down at the corner of Lexington Street; Barnum's hotel was just across Fayette Street, which was as narrow as present day alleys. We had a suite of rooms on the second floor, the detective firm of Smith, West and Lyons occupying the ground floor. Our telephone service was poor enough and we kept the office fully occupied in running to Camden Station in transacting business with the other departments located down there.

When the new Baltimore and Ohio building, where the Emerson Hotel now stands, was approaching completion, we made preparations to vacate our rented quarters and take occupancy on the fifth floor of the big building. Where the Continental Building now stands, there was a little bit of a building in which the American Telegraph Company occupied quarters on the ground floor. The Continental Building was the pioneer in sky scraping structures in Baltimore, but it was not long after that that other buildings of like character were constructed.

John W. Garrett

I remember President John W. Garrett very well. He was a hard worker. Such a thing as office hours was not in his vocabulary. Mr. Garrett would often take his secretary, A. B. Crane, out to the Garrett residence at Montebello, on the York Road, and poor Crane, sitting on the porch in the cool days of the Autumn, would shiver. His pencil, as he often told me, would dance on the paper so that his pot hooks lacked legibility. Mr. Garrett, absorbed in his work, had a comfortable feeling and the work was continued until darkness overtook them. He was large and portly and a good liver. He had a habit of writing instructions on papers, using a pencil, and his writing was so atrocious that he himself could not decipher his own writing, like Horace Greely, after the matter became cold.

Robert Garrett

Robert Garrett, who succeeded his father as president, was a perfect Adonis, polite to a degree, and it was a positive delight to be in his company. It was after John W. Garrett's retirement and the accession of Robert Garrett to the Presidency that Erastus Wyman, of Staten Island, induced Robert Garrett to take an interest in the immense water front of Staten Island with

a view to extending the Baltimore and Ohio to that section of New York. With the endorsement of John K. Cowen and Thomas M. King, this was brought about. Hence our location on Staten Island. The Staten Island property will be of the greatest value in the near future. Other big corporations have had longing eyes on the Staten Island water front, but the Baltimore and Ohio is firmly entrenched and I am mighty glad of it.

When the spirit moves me again, I want to tell the readers of the *MAGAZINE* how in those days we had no typewriting machines and so on.

Car Service Department

Correspondents,

J. T. LEAN and H. V. OBERENDER

It is with regret that we hear of the death of the father of Miss Meyers and the brother of Miss Ethel Beall.

Here's hoping for a speedy recovery of Miss Berghoff's mother.

"Alex" Donal and Irvin Boteler are taking singing lessons. You should hear them. Some BIRDS!

Attention, girls! "Abe" Hawxhurst is still single.

Matilda Baer eats doughnuts and crul-lers for lunch every day now. We wonder where she gets them. Walter Kent and "Mike" know and think it is advisable to save up some dimes. Something coming off shortly.

George Schildwachter is still working on the night force. George says it's kind of lonesome since the boys have ceased working overtime.

Our friend "Chris" Grieb was last seen looking in the window of one of the Baltimore Street jewelry stores. Is it a sparkler for her, "Chris"? The little boy is kind of shy, but I think he is going to beat us all to it.

We were all surprised to see Mr. James at the Veterans' Ball, doing the old time waltz, with HER. Now we know why he likes the Eastern Star.

The ball team is coming along fine. They expect to be at the top from the very start. Luck, boys; keep going.

"Charlie" Bayn and Carl Hornfeck have challenged each other in a pie eating contest. We're betting on "Charlie."

Miss Julia Eierman was given a surprise party on Easter Monday, in honor of her birthday. The affair was a great success. Miss Eierman was unaware of the surprise. Thirty couples, 21 of which were employees of the office, were invited. Everyone was requested to bring something in the line of eats so that nothing would be lacking. Bayne came.

Julia was invited to stay at Miss Poteet's home so that the home could be decorated. The parlor and "lunch room" were handsomely decorated with palms and cut flowers. Games were played, and there was music and dancing. "Eats" concluded the evening.

We hope she will have another birthday soon.

The First Embrace of Spring

By Colonel Fred Schley

Gentle Spring embraces us. The English sparrows are busy building their nests, and the ubiquitous catbird is gossiping in billingsgate, while the dainty robin avoids the society of that plebeian.

On my way to the field of labour this morning, "Old Sol" was strenuously making

his appearance from behind sombre clouds, tinged with silver lining—and seeming to bathe the church spire with roseate splendor. The azure blue dome suggests the skies of sunny Italy. As I approached Monument Square, pigeons were affectionately cooing; and by stretching my imagination I could see a tawny thrush singing rapturously the only song he ever knew. The rivulet—perhaps near the thrush—was finding its way toward the bosom of its mother, Neptune, and underneath trickling cascades I could hear the myriad whispered notes of Nature's awakening.

Coal Traffic Department

Correspondent, GEORGE C. BAUER

History Repeats Itself

It is an old, old proverb that "History repeats itself" and the old dope sure did run true to form on March 19, when we marched into the camp of the Auditor Coal and Coke Receipts bowling team at the Y. M. C. A. Incidentally, we ruined the reputation of another equally tried and true adage, that "Lightning never strikes twice in the same place," for we not only struck in the same place, but we did infinitely more damage this time than last.

As on February 26, our opponents barely won the first game, and likewise we again exhibited our recuperative powers by coming back strong and taking the second and third games. It certainly would be hard to find three more exciting games. We lost the first game by six pins and won the second and third by three pins and five pins respectively. The first game was nip and tuck all the way through, while we were forced to overcome a big lead to capture the second. In the third game, we were far in the lead at the halfway mark, when we suddenly seemed to lose our eye, and before we realized it, our opponents had nosed ahead. Going into the last box six pins behind, victory seemed out of reach, but Mr. Cox, who had not rolled up to his usual standard, pulled off a wicked spare and the beans were spilled.

The score follows:

TRAFFIC SQUAD

C. W. Shinnamon	262
C. N. Cox	277
L. N. Williams	255
G. P. Sauerwein	297
G. C. Bauer	290

Total..... 1381

COKE FIENDS

Poole	263
Lutz	265
Atwell	249
Spurrier	289
Guy Pritchard	313

Total..... 1379

You will remember the little ditty in last's month's MAGAZINE dedicated to the "Spare that Guy blew." Below are a few lines to commemorate the spare that "Coxey" made which won the match.

The day was fair and the air was rare,
But Guy was awful blue,
Because he was there when Cox made that spare

Which Guy had failed to do.

It won the game, but it was a shame
How sad Guy did appear!

It dimmed his fame—it ruined his name,
And wrecked his whole career.

Engineering Department

Correspondent, OSWALD EDEN

With this issue begins the second year of the "BALTIMORE AND OHIO MAGAZINE,"

not only as to name, but as to size. The April, 1920, issue was six and three-quarters by nine and three-quarter inches, bearing the title "BALTIMORE AND OHIO EMPLOYEES MAGAZINE." It was changed, with the next issue, to an eight by eleven inch book with the title "BALTIMORE AND OHIO MAGAZINE." Those of us whose duty it is to chronicle the various facts, follies and foibles of our fellow workers, let us all try to make the MAGAZINE bigger and better in the broadest sense of the word.

A strange coincidence happened to two of our stenographers the latter part of March. Miss Fox and "Jerry" were missing from work one morning. For further information concerning this ask either one.

Through the kindness of a fellow worker, I was the recipient of a ticket from which I derived a great deal of pleasure. The ticket gave me admission to a minstrel show and dance (the sixth annual) given by the Baltimore Chapter of the Baltimore and Ohio Veterans, held at Lehmann Hall, on March 31. Not wanting to get there too early or too late I arrived promptly at 8 p. m. Imagine my surprise to see the hall almost filled. Within 15 minutes after I arrived it was completely filled, with people standing along the aisles and in the rear. For something over two hours I stood and watched and listened. And such a show it was—not a dull moment in the whole two hours. After the show came the dance. What struck me more than either the show or the dance that followed was the way in which the Veterans chummed together, talking and joking with one another. All in all, it was a most enjoyable affair, and those who were either not privileged to or did not come certainly missed a really good time.

When the candidates for baseball were called out during the latter part of March, I was among them. We practised one Saturday at Clifton. The following day I paid a visit to my Alma Mater and while there hit some balls out to some of the boys. During the course of hitting, one of the balls glanced off and hit me on the edge of the left optic. The next day, when I came to work, I was asked "Who did it?" "What sort of new drink was it?" etc. Someone even went so far as to say that "She" had done it. Thus it is when one gets a discolored optic. (The reason this is written is because "Jerry" told me not to forget the incident of my black eye, and I am obliged to obey "Jerry.")

As stated in the March issue of the MAGAZINE that Miss Fox contemplated attending one of the dances at the Naval Academy within the near future, it came to pass, and lo, great was the "wenting" thereof! But in saying that her partner would be attired in a swallow tail and pretty white bosomed suit, with a close fitting pair of trousers, I made an awful mistake, as HE was a "Plebe," or better known as a "square cornered" boy at our famous Naval Academy. Miss Fox intimated that the sophomores treated her "plebe" rather roughly. Never mind, though, Miss Fox, he may yet be one of them.

Miss George Simpson, secretary to Office Engineer J. H. Milburn, is evidently of the opinion that employment in the drafting room calls for the acquiring of a collection of drawing instruments, which she recently purchased. The question now raised is: "Does a stenographer need ruling pens, triangles, curves, protractors, etc., to 'engineer' a typewriter?"

April 2 was a great day in "Joe" Kemp's young life. When wifey asked why he had such a ruddy complexion that evening, he

explained that he had been doing some "field work" that afternoon. Oh, you "Joe!"

Office of District Engineer, Baltimore, Md.

Correspondent, J. F. COLLISON

Messrs. William C. Hart and H. C. Harrison can give a few pointers on slacking lime in glass jars (quart size); they both have had experience. Ask them to tell you about it.

Moving day seemed to be quite popular in our office for a time, only three out of the five employees having moved their place of habitation during the latter part of March and the first part of April. Messrs. Mather, Harrison and I are the accused.

"Joe" Korte (pronounced *cootie*, if you please), rodman, Norton Branch, wants to know how to become a movie actor and how much it costs.

Office of District Engineer, Pittsburgh, Pa.

Correspondent, MISS M. M. WARD

It is whispered around the office that a very pretty romance is budding, having its inception in the construction of the new Allegheny River Bridge. A certain promising young engineer has been known to make many frequent excursions to the Pittsburgh office. If this terminates as we anticipate, we will be delighted to advise further.

One of our "very nicest" engineers, attached to district engineer's staff, is receiving many tokens of tender affection which appear to have their origin in Baltimore. This is causing more or less mystery and we hope it will be solved in the very near future. How about this, Robert M.?

It is reported that one of our transitmen is in the market for an old army tent to cover his family, having sold his home and having no place to go. Our sympathy is yours, Mr. Rodgers.

Office of District Engineer, Cincinnati, Ohio

Correspondent, G. F. DAUBENMERKL

Ask J. E. McKibben what he thinks of whole wheat bread and a quart of milk as a diet.

During practice for the game with Ray's organization at Lawrenceburg, somebody asked Kolker if he thought it was July. Upon asking why, Kolker was informed by the "somebody," "I see you are always fanning."

"Sam" Graham has been appointed custodian of the team's wardrobe.

As a ballplayer, Mr. Southerington makes a fine acrobat.

J. E. McKibben was out with the boys practising and threw a few over the plate. His arm is so sore now that he cannot write any checks to pay the bills due May 1, such as friend wife's Easter bonnet, etc.

A good many of our boys went up in a body to hear "Billy" Sunday one night. From reports it seems as if they all fell for "Billy," as some of them had sawdust on their clothes the next morning.

Mr. Reising has disposed of his property in Norwood View. Norwood View lost a good man, but Oakley profits by Norwood's loss. Mr. Reising will shortly be mayor of Oakley.

H. S. Davis is looking well, even though he is a newly-wed.

P. A. C. has lost his grouch and life is now worth living.

In the opening game of the season, Sunday, April 3, the General Office team, Cincinnati, Ohio, District Engineer's office, met and defeated Assistant Engineer Ray's Bridge Builders at Bridge 19-95, Indiana Division, Big Miami River, with a score of 14 to 13. The features of the game were the heavy slugging of Stellmach, Ray's wonderful one-hand catch of a line-drive in right field for the Bridge Builders and the pitching of Reising and Thompson for the District Engineer's office. The umpiring of C. L. Vang and R. T. Everett was excellent.

Score by Innings

R H E

General Office.....	14	10	3
Bridge Builders.....	13	11	3

Summary

General Office—Reising, p.; Thompson, p.; Daubemerkl, c.
 Bridge Builders—Sparks, p.; Cooper, p.; C. Young, c.
 Umpires—C. L. Vang, R. T. Everett.
 Strike Outs—Reising 7, Thompson 2, Sparks 8, Cooper 2, Base on Balls—Thompson 1, Sparks 5, Cooper 2, Reising 1.

After the game C. L. Vang entertained the boys with a banquet. We all join in giving him a rousing vote of thanks as the boys enjoyed themselves immensely and appreciate his kindness. We also wish to thank "Hank" Towner, the chef. We take our hats off to you, "Hank," when it comes to service.

All right "Jim," let us hear from you when you want another sound beating. A very sad part of the game (at least to the Bridge Builders) was in the ninth inning, when the Bridge Builders were taking their last whacks. With two out and the bases full, J. P. Ray had to do the "Casy at the bat" stunt, thus ending the game (much to the delight of the General Office team).

Freight Traffic Department

Correspondent, DOROTHY RUBENSTEIN

The Freight Traffic Department has at last come to life, and we trust the "Infant" will be welcomed into the fold, and take its place in the affections of the Baltimore and Ohio family.

I am glad to report that a Welfare Association has just been organized in this office, of which our chief clerk, J. H. Graham, has been elected president; C. S. Knight, payroll and voucher clerk, treasurer, and Miss Dorothy Rubenstein, stenographer, secretary. Great things are expected of this Association, as it is our aim to keep alive the spirit of good will and fellowship among our comrades in work.

J. T. Wood, rate clerk, was married on April 23. He was presented with a beautiful chest of silverware by his fellow employes, with their best wishes for a long and happy wedded life. Cupid has been asleep for quite a while in this department, but we hope now that warm weather is on its way, that he will wake up, for "In the Spring a young man's fancy lightly turns to thoughts of love."

We are glad to have with us our friends, C. L. Cole, Jr., clerk, who recently underwent an operation, and C. L. Brown, secretary to Assistant General Freight Agent Roberts, who has just returned from a three months' leave of absence, because of illness. Both are rapidly getting back to normal, and we do hope that sickness will not deplete our ranks as it has in the past.

Office of General Freight Claim Agent

Correspondent, Miss E. T. MURRAY

Some Recently Discovered Definitions of Our Various Sub-Departments

By W. G. Rosensteel
 Claim Investigator

To know how to spell a word you look in the dictionary. Before it may be found you should know how to *spell* it. But this is somewhat of a vicious circle whose circumference envelops us all.

The following definitions are *not* in most dictionaries, consequently don't waste time verifying. Our various divisions are so important, however, that these were located in a *rare* edition that has since been *cooked*, and its identity effaced:

ACCOUNTING: The European quest of certain mames for sons-in-law.

ADJUSTING: Seeing that both suspenders are even length.

CLAIM PREVENTION: Making love without popping the question.

DRAFTS: Something missing since Mr. Volstead broke up the party.

FILE: The manicurist's principal weapon of attack.

MAIL: With the present day feminism, the gentler sex.

O. S. & D.: Some went *over* to Bowie, came back *short*, and with their reputation as pickers *damaged*.

PERSONAL FORCE: Aspiration of most youngsters, a la Dempsey.

RECONSIGNMENT: An after-thought when tempted to tell one to "Go to —."

RECORD: Something we all are ambitious to break.

REVISION: What we all desire of the price of everything, downward except *our* salaries.

TRACING: A tissue paper pastime of children.

TRANSCRIBING: Writing a love note and using the fervent passages of one of the six best sellers.

VOUCHER: When the dictionary was printed, investigators wrote their own vouchers, so there were no definitions given.

The reports of our traveling adjustors, while sometimes too brief, are usually lucid. Occasionally, though, they are a bit perplexing, as one office investigator will testify when he was greeted with the following report on claim B-35690-70.

"The contents of the two empty barrels has never been received."

We are indeed sorry to loose our mutual friend W. H. Ellerfritz, who resigned his position as claim investigator on March 29 to go into business with his father at Thomas, W. Va.

Mr. Ellerfritz was formerly with the old Coal and Coke Railway at Elkins, W. Va., until the railway was absorbed by the Baltimore and Ohio, at which time he came to our office in the Suspense Division. He is greatly missed by each and all of us, especially by the F. C. D. Team "A," on which he was a star bowler. Here's a wish for his success and good luck from each member of the department.

Little Drama of Real Life

Comedy in Five Acts

ACT I

Madame Hyner's delivery auto, highly perfumed and freshly massaged, stops at main entrance of Baltimore and Ohio annex offices.

ACT 2

Attendant enters corridor bearing small parcel, beautifully wrapped, be-ribboned, and sweetly scented, enters elevator and asks to be let off at the office of General Freight Claim Agent.

ACT 3

Messenger inquiring of "Billie Bounce" Waters where Mr. Clarence K. Townsend, otherwise and commonly known as "Bob," could be found.

ACT 4

"Bob" approaches. Upon sight of the parcel his face becomes transformed. After paying the bill, receives the box and trips the light fantastic back to his desk, the happiest man in town.

ACT 5

The be-ribboned parcel is open, disclosing a most wonderful collection of "Complexion Beautifier," "Health Cure," "Massage Cream," "Corn Cure," "GUARAN-TEED HAIR RESTORER" and "Goo Wave," etc.

Curtain

It is a far cry from corned beef and cabbage to love; yet had you visited Lexington Market on Saturday afternoon, you might have seen one of our blue-eyed young maidens leaning against a meat stall and gazing rapturously into the face of a certain young man while he bargained with the butcher for his Sunday dinner.

We are glad to report that Miss V. C. Brown, of the Suspense Division is back

What happened to the general freight claim agent's secretary on April 1

Andrew Carrico, Jr., nephew of Miss E. T. Murray, Magazine correspondent

with us again after an absence of three months because of a nervous breakdown.

Bowling News

Arrangements are being made for constitution and by-laws of the Baltimore and Ohio Duck Pin League for 1921-22 season, and it is hoped that the spirit of the office will be with us again next year. The league opens the first week in September on the Regent and Victoria alleys.

The General Freight Claim Agent's Team "A" still stands first in Division "A" League, and we hope to participate in the championship games between winners of sections "A" and "B" at the Regent alleys on May 10 and 13.

On those nights let us have as many rooters as possible to back up the boys.

Ere this article reaches the *MAGAZINE*, our mutual friend, G. E. Harris of the General Division, will have sailed across the ocean blue to England, where he will sojourn for several weeks. With a two-months furlough G. E. promised himself not to return until he had seen *all* that time would permit.

On the morning of April 6, Morton B. Bond, claim investigator, called on the 'phone and announced that another 9½-pound Baltimore and Ohio Railroad man was born. Congratulations, Morton!

Printing Department

Correspondent, M. J. CONROY, Proofreader

He Got It on the Rebound

In the April *MAGAZINE* in an article entitled "The Way It Works Out," the following sentence occurs: "The two ends attained are inseparable and, generally speaking, it is becoming more and more generally admitted by both management and labor that what redounds to the prosperity of the railroads redounds in equal degree to the welfare of its employees." You will notice the innocent word "redounds," near the end of the sentence. Well, thereby hangs a tale. The typist typed it "redownds" and after passing through several hands here it finally was straightened out. After it was on the press one of our eagle-eyed pressmen spied it and shouted to his helper to "Shut 'er off!" He grabs a sheet and rushes up stairs to the foreman: "Whatinell is the matter with you fellows up here. Are you blind! Can't

you read! Look at that." The foreman looked at it and said he couldn't see anything wrong with it. "You can't! Look at that word there, 'redownds,' twice. That should be *rebound*s." (!)

The sympathy of the Printing Department is extended to Charles J. Lehmen in the death of his mother on April 15. A beautiful floral design was sent as an expression of our sympathy.

Relief Department

Correspondent, H. IRVING MARTIN

The poet sang of Spring and how in that blissful season "the young man's fancy lightly turns to thoughts of love," but Building Inspector "Dan" Shivers and his side partner, "Bob" Graham, claim that the young men of this age spend all of their springtime in thoughts of building houses. The days of our building inspectors are now spent in journeys up, down, and over the System; in scrutiny of maps, plans and specifications.

"Shake" is dividing his time between interviewing Dr. Mathers, and imparting some of his stored-up knowledge to our new front-office assistant, William Luther Jamison. Brother J. comes to us from the General Storekeeper's office to take the desk lately held by Merle C. Bryant, who left us to spend some time studying the scenery in and around Weston, W. Va. Jamison gives us the following biography for insertion in our "Congressional Directory." Born? Yes. Graduated from the Baltimore City College in June, 1920, and immediately thereafter started into hard work with the Crown Cork and Seal Company. Worked for the General Storekeeper from November 22, 1920, to January 31, 1921. He had also spent his summer vacations working for the Standard Oil Company and the Crown Cork and Seal Company.

We are all going to miss Doctor Robb and we appreciate the feeling that lies behind the biographical sketch written by W. H. Ball, assistant to superintendent and chief clerk of the Relief Feature. Ball started his official career with the Relief Department as clerk to Doctor Robb and it is now a labor of love for him to write about Doctor Robb's long and faithful service.

The mention of Spring recalls the days at Relay, Md., when the department was quartered in the hotel building at that station. The accompanying picture of the office force (also the station force), was probably taken in the Spring of 1904. This photograph was resurrected from the dusty past by M. B. Smith of the General Paymaster's office. The officials and clerks whose faces appear are as follows, first row: Ralph Kinnaird, "Bob" Graham, Edgar Wilson and George Mittendorf. Second row: Miss Mabel Wilcox, H. A. Bateman, assistant superintendent; S. R. Barr, superintendent; John P. Hess, chief clerk, and Miss Elizabeth Weis. Third row: R. F. Eddins, J. C. Bredehoeft, Harvey Wilson, W. F. Costello, T. A. Murphy, J. C. Weigandt, Arthur Boteler, D. R. Thirston, Ross Mitchell, A. C. Bowersock, and Robert Baldwin, baggagemaster. Fourth row: J. H. Toomey, ticket agent; T. Parkin Scott, W. C. Loewer, T. W. Fague, S. H. Griest, C. W. Ruddach, R. E. T. Owens, D. A. Brady, and W. R. Smith. Fifth row: E. F. Dempsey, W. L. Silverwood, Paul Ebberman and "Joe" Hellman.

Of these, S. R. Barr, H. A. Bateman, J. P. Hess, T. A. Murphy, J. H. Toomey, W. C. Loewer, C. W. Ruddach, D. A. Brady and Robert Baldwin have "crossed over the river to rest under the shade of the trees."

Telegraph Department

Correspondent, DELLA M. HAIN

And now "Ben" went and done it. Those beautiful tresses which for many a year have adorned his face just under his nose, have disappeared. The big advantage is we can now see what Mr. Thompson looks like; the big disadvantage is that we cannot now see which way he is looking.

When the telephone rings, answer it promptly—"Mr.—'s office, Mr.—speaking."

Supervisor Time Service Donnelly has now taken up chaperoning. Much more interesting, you know. Wait until the Cleveland trip comes off.

Great reductions have been made in telegraphing. Good work—keep it up.

Catherine is at least truthful—she hasn't denied it.

We knew them when — (see Relief Department notes)

Maple Crest Farm, where "Phil" Woods' rabbit lives

"Frankie" Offutt didn't go coon hunting at Annapolis because the moon wasn't out. We take it that she had a *walk* in the "moonlight" though.

When you write a telegram think of four things—NECESSITY, BREVITY, CODE, SYMBOL, and you are going right. Try it, it's like running a flivver, E-A-S-Y.

Murphy likes yellow cats and Bishop likes yellow, too.

Answering correspondence without delay often saves telegraphing—and incidentally time and money.

The "bunch" took a Sunday trip to Washington recently, and among the interesting things picked up was information that "Marriage licenses cost \$1.00; dog licenses, \$2.00" But it's cheaper in the long run.

Transportation Department

Correspondent, J. B. EGERTON

One often meets acquaintances—especially while traveling—who travel a good deal, and the conversation could easily be led into the channels of good traveling, etc. Such opportunities for boosting our Road should never be let slip by. Every little bit helps, you know, and we have so much confidence in the service of our Road that we are sure that if we can persuade our friends to try it once they will never need coaxing again, but will use it always.

The accompanying picture is of "Phil" Wood's pet Bunny, together with a peep at the orchard scenery of his father's farm, Maple Crest, at West Swanzy, N. H. We think this would be a lovely place to spend a vacation, but it never occurred to "Phil" to ask us. Never mind, he's a hard worker in the Mine Rating Bureau, and we can't expect him to have vacations and coal cars on his mind at the same time.

On March 24 a team consisting of the following men: C. L. Correll, H. F. Ittner, Freight Claim Department; W. L. Fowler, Operating Vice-President's office; E. Smith Motive Power office; R. L. Mansfield and P. L. Ackler, Transportation Department, went to Washington with the intention of defeating the Washington Terminals. The scores were, first game: W. T. 476; Baltimore and Ohio, 489. Second game: W. T., 490; Baltimore and Ohio, 487. Third game: W. T., 483; Baltimore and Ohio,

488. Our team won two games out of three also on total pins by 15. On March 29 we again bowled the Terminals, this time on our own alleys at the Regent. The result was, first game: W. T., 478; Baltimore and Ohio, 450. Second game: W. T., 472; Baltimore and Ohio, 488. Third game: W. T., 488; Baltimore and Ohio, 481. They won two games out of the three and on total pins by 19.

'Twas on the night of March 17. Two of the boys went to a mask ball given by the Eastern Star at the Jr. O. U. A. M. Hall. One went as a fat man and the other went as a skeleton. The peculiar part about it was that they *didn't wear masks* and they both won prizes. Draw your own conclusions.

The Inquisitive Tattler

"Why do women spend so much time powdering their noses?"

E. M. W.—It is a well-known fact that when a woman's nose is shiny, one may see his reflection in it. It is also a well-known fact that one may see his reflection in a woman's eyes. Therefore, woman powders her nose.

E. V. McC.—They don't!

E. B.—The actual time spent by women in powdering their noses is really not worthy of notice.

E. D.—I powder *my* nose so that some people will not see how hideous *they* look when peering into my face.

L. C.—Woman is going to powder her nose as long as there is no other way to overcome the great difficulty—of having a shiny nose.

P. L. A.—Most girls use a little Poudre Parisienne to hide spots here and there that might displease the more fastidious of their friends.

J. B. E.—For no other reason than that the Tyrant Fashion, under whose baneful yet beneficent sway I am forced to live, has so decreed. The day may come, however, when a woman with a highly polished complexion will be considered an object of beauty, and then—

(NOTE—Suggestions for pertinent questions are always welcome and should be sent to the Inquisitive Tattler in care of the correspondent. And it will indeed be much appreciated by the "I. T." if the ones to whom these questions are put will answer promptly, as requested.)

Interesting Facts about Interesting Transportationists

The next time Roy Landon takes a girl out to lunch on pay-day it might be well for him to take her to a place that is not frequented by so many Transportationists as C—'s. We have been told by no less than 11 different persons that Roy Landon was seen taking a girl to lunch at — (Still Small Voice: "Aw, have a heart!") We have.

Team! Team!! Team!!!

At any rate, if that isn't what everybody is saying, it is what everybody is thinking these days. And believe me, we've got *some* team. Just wait till we get our suits 'n everything, then we'll show you how cute we look. And we promise to have enough balls to go 'round without having to scrap for them, too.

Now we can all have our "pixter's" took. "Lou" Clark has won a No. 2-A kodak for 13 cents! I always did say that girl was lucky!

Valuation Department

Baltimore Office

Correspondent, E. B. PIERCE

We now have a baseball team in our department. "Joe" Renehan has the spirit to produce a winner. It is up to the players from now on to show up at practice games in order to make good. Other Baltimore and Ohio teams take notice.

Our Baltimore office is so large that it is almost impossible to keep track of the changes going on from time to time, particularly when the correspondent is away from headquarters. Employees can help by collecting good, newsy items and turning them over to the correspondent.

W. J. Freres, of W. C. Cole's force, has accepted a position as resident engineer with the State Roads Commission of Iowa.

S. I. Kahler, of W. C. Cole's force, has taken the position of assistant to the city engineer, Baltimore City.

Mrs. E. M. Barker has completed a course in English at the Baltimore Polytechnic Institute night school. Mrs. Barker was one of the four leading members of the class to receive a special certificate. Exercises were held on the night of March 30, Mayor Broening presenting the certificates. Congratulations, Mrs. Barker.

William Gerhold at Balance Rock, Garden of the Gods, Colorado Springs

Miss Marie Wagner, Passenger Bureau, has been transferred to this office, on W. C. Cole's force. She makes a pretty addition.

Albert Aschemeier left our office to try out for first base with the Reading, Pa., International League team. "Asche" is a hard worker. We wish him success.

Raymond Coulton, of C. A. Davis' force, has been transferred to Washington, D. C. The girls miss the "chocolate soldier," one girl in particular. Raymond lost his ivory cigarette holder in the wash room, just before he left. Will finder please return it to him?

H. E. Schutte, formerly connected with the Electrical Engineer's office, has been made assistant to A. W. Norton, pilot engineer, Equipment force.

W. R. Price was married on April 20 to Miss McCallister, the daughter of Baltimore's leading sporting goods dealer. Price is a good sport and our best wishes are his.

"Snookums" Pohl also expects to become a benedict soon. Good luck to you, "Snookums."

Mr. Warne is a proud daddy; he has reason to be. Didn't the stork bring him a fine little daughter?

Who likes Roquefort cheese? Renehan passed some to Miss Block, who tasted it and passed it on to Miss McMann. Miss "Mac" devoured it with a relish—until "Joe" told her that his wife had found worms in it. The scene was changed.

Allen L. Dell was the recipient of numerous birthday cards, signed "Luther," "Nellie," "May," "Elsie," etc. His nautical luck may change if he slips on the Sea of Matrimony. Dell is a Beau Brummell on land, and he knows what makes wild cats wild.

Excuse us, friends, our work is serious and full of detail. Now and then we resort to foolishness, but wait. A good report about Valuation is being prepared for our readers.

Auditor Coal and Coke Receipts

Correspondent, JOHN LIMPET

The latest atrocity perpetrated on the unoffending citizens of Catonsville was committed by one "French" Gartrell of this office, who during

Easter week, as a member of an organization presenting a cantata, was supposed to sing a solo. All went well until it came to "French's" turn. Then the tragedy came. On the first note, three women fell over in a faint; on the second and third, seven more women and one man with a weak heart were added to the list, and this ratio was sustained until, when about quarter through the song, the lights started to blink and, as if to shut out the terrible scene, slowly went out. Bedlam broke loose and a catastrophe was only averted by someone sending in a hurry call for the Volunteer Fire Brigade. Next time the church has a cantata, instead of paying "French" to sing, they are going to pay him to keep quiet.

Brother "Al" Lehman steps out into prominence for this issue and wrests the laurels, long worn by W. H. Brauer, as the champion overcoat loser. It used to be a yearly event for W. H. B. to lose an overcoat at the Burlesque Boys' Ball, but those days were different. And just to think, a \$60.00 baby at that. Just laid it down to bowl a couple games, and presto! when he goes to look for it—nothing doing. Better keep your overcoat on the next time you bowl, Albert.

On Wednesday night, April 6, the curtain was rung down on the bowling season for this office. For the initial effort, the event was a success from every standpoint. The attendance was exceptionally good and the spirit of friendly rivalry always in evidence.

It was seen early in the race that the Kilkenny Kats had all the class, but the battle for second place was a corker. These two teams—Wild Cats and Sad-as—fought it out to a finish. Just how close the race was may be judged from the fact that the result was in doubt until the final ball was delivered in the last game. These two teams were tied on the last night; Sad-as

won the first, Wild Cats the second, and by consistent bowling, aided and abetted by several lucky marks, Sad-as won the last and deciding game by a 15 pin margin, thereby going into second place. Through the loss of a good player at the very start of the season, the Excelsiors were placed under a severe handicap from which they never did recover, although they showed themselves true sports by sticking it out.

The standing of the teams and individual averages are as follows:

TEAM STANDING

	WON	LOST	PER CENT.
Kilkenny Kats.....	43	20	682
Sad-as.....	32	31	508
Wild Cats.....	31	32	492
Excelsiors.....	20	43	318

INDIVIDUAL AVERAGES

	GAMES	TOTAL PINS	AVERAGE
Pritchard.....	60	6124	102-4
Spurrier.....	63	5988	95-3
Atwell.....	60	5626	93-46
Poole.....	63	5790	92-57
Lehman.....	..	5734	91-1
Lutz.....	60	5433	90-33
Reichert.....	63	5686	90-16
Ackler.....	..	5569	88-25
Limpert.....	..	5531	87-57
Spedden.....	51	4450	87-13
Burns.....	57	4939	86-37
Shakspeare.....	60	5173	86-13
Dudderar.....	63	5370	85-15
Brauer.....	57	4745	83-14
Cann.....	51	4224	82-42
Moore.....	48	3941	82-5
Schuster.....	55	4495	81-40
Milnor.....	57	4593	80-33
Snyder.....	54	4329	80-9
Hartwig.....	57	4558	79-55

P. S.—Just by accident we discovered a brown derby hidden away in a corner and, being in pretty good shape, presented it to F. B. Milnor, who waited until the last night of the season to equal the league record held by George Schuster, i.e., three down the gutter.

AND NOW FOR THE BIG FEED!

Auditor Disbursements

Correspondent, JOHN C. SVEC

The Accounting Department trimmed the boys of the Coal Traffic Department at Duck Pins on March 11, to the following tune—Accounting Department: Beck, 285; Whelan, 280; Ryan, 310; Boring, 317; Baker, 357—Total, 1549. Coal Traffic Manager's office: Sauerwein, 311; Cox, 335; Blake, 252; Bauer, 269; Shinnamon, 244—Total, 1411.

It is with profound regret that we chronicle the sudden death of Miss Margaret Gustin, on March 19. Services were held at her home in Govans by Dr. Clark and at the home of her grandparents in Blanche, Ohio, by the Rev. Dr. Rowland of the Universalist Church. Interment was in the I. O. O. F. Cemetery there. Floral designs

WHO LIVES ROQUEFORT CHEESE?

IN THE NAVY 3 YRS DURING WAR NEVER SENT ON A SHIP BORN APR. 12

MISS MARY HAS MANY ADMIRERS

Miss Margaret Gustin

were sent by the Comptometer Local and Revision, and Interline Divisions. Quite a favorite among the younger set, her bright face will be missed in our organization. The family have our condolences.

James Bander Adams, an old-timer among the men in and around Hancock, passed away suddenly at a local physician's office in Hancock where he had gone to seek relief on the night of March 31. The writer will truly miss him, as "Jim" always had a hearty hand-shake and an old-fashioned greeting for me on my many hiking outfits in and around Hancock and Berkeley Springs. He avoided my kodak, as we often wanted to "shoot him" in order that we might put him in the *MAGAZINE* as a representative employee "who was always on the job." His sisters have our sympathy.

Clerks in this office are endeavoring to put Elkins on the map, now that it is on the System. What's the attraction, Misses Worthington and Taylor? You may evade me for a while, but my trusted lieutenants will get you in the end.

No matter how big and stout Caldwell may get, he will always be Lean. Yes, and as for Ralph, no matter how unfortunate his wife may be, he will always be Lucky. Not so long since he was serenaded by the Agony Five of the Revision Department—"Shad" Gilley, Henry Hudson, James Scharf, John Herpel and "Joe" Simmonds. Shades of Mozart! Jazz and syncopation were so in motion that the latest echoes of the neighbors were that the harmonious five be headed south or some other equally warmer seaport.

We also have another five—seniors this time (not juniors as are the afore-mentioned)—the Terpsichorean Five, who want to be real young again, taking modern ball-room dancing lessons—observe, too, private lessons—lest none but themselves criticize. One of the number is studying steps. (Can't quite get this one, although a half soldier myself). Why should he be reading a military booklet, particularly that section "The School of the Soldier"? Maybe the Lieutenant from Holabird has given him a task for penance. Shake 'em up fellows, right hands to right. Blow the whistle!

Walk is part of my name and some of us love to walk, but walking for sure did outdo the Sisters Lena and Theresa, who recently visited "the City." The Statue of Liberty

steps almost finished them. Enclose self-addressed stamped envelope for remedy for aching feet.

Auditor Passenger Receipts

Correspondent, G. FRED MILLER

Secretary to Auditor

At a pretty surprise luncheon, tendered her at the country home of Miss Mollie Hamlen, Glenburnie Manor, Md., Miss M. Rowena Lathroum was presented with some exquisite china. On March 13, Miss Lathroum was married to Mr. Horace Frederick Rockwell. After an extended honeymoon they will make Baltimore their permanent home. All join in extending congratulations and offer best wishes for many years of happiness.

What a lovely time we had in Washington during the Inauguration! It was splendid, the crowds were congenial, the weather invigorating, and we just had the nicest time going over. Chocolate and everything.

Miss Mildred Eberhart and Mrs. John J. Kavanaugh have fully recovered from operations and have returned to the office. We are happy to have them with us again.

Young married men of the office have discovered that their vacations can be put to very beneficial use. Each Thursday morning their wives present them nice boxes of freshly dug "wiggley worms," and an egg sandwich, and they forthwith rush off to the happy fishing grounds, where they gather in Friday's dinner. Pike are running especially well now.

Are you going on the personally conducted tour to New York with the A. P. R. Welfare Association? Get full particulars from Mr. Finn. They "gonna" ride on the Fifth Avenue busses, see the home for fishes down by the Battery, see the Zoo and Chinatown and all of New York in one whole day.

Full particulars as to the proper manner in which to make journeys to the Middle West can be had by communicating with the three twins of this office. Instructions as to comfort, meals, and best hotels will be gladly given. The use of camp chairs is advocated for all trips.

Miss "Dottie" Wills received quite an expensive Easter basket from one of her many admirers. After presenting the gift, however, the donor was suddenly called home because of a serious accident. We are glad to say he rapidly gained consciousness and has fully recovered.

Now is the time to use some of our new Spring energy to gather business for the Railroad. Go get it, freight and passenger. Just drop a word here or there, and you will be surprised at the result. You know the old saying about "Little drops of water and little grains of sand." Well, the same holds good in business. It's the little things that count. Just a little act of courtesy, or a little deed of kindness may mean much to the Railroad and to ourselves, personally. Tell your friends where you work, why they should patronize this Company, what a fine road it is to travel on, and the splendid fast freight service we operate.

Our baseball team is working out fine, and they expect to be well up among the leaders in the Baltimore and Ohio league at the end of the season.

Come see the office after our recent Spring house cleaning.

YOU Can Get a Ford FREE

Without a Dollar of Cost

You don't have to pay for it—not even the freight. Not a dollar of your money is required. The man shown in the car answered our ad. Now he's riding in the car we gave him. You can get one too. Don't send a cent—just your name and address—that's all. Do it now. A post card will do. I want to send you a dandy auto also.

G. WOODS, Mgr., 203 Capital Bldg., TOPEKA, KANSAS

Cost Department

Correspondent, R. N. FRYE

R. W. Rittenour, special engineer, has been assigned to temporary duty, Washington Terminal.

H. P. Hahn has been stationed at St. George, S. I., in connection with improvements at the S. I. R. T. Company.

J. E. Weilert has purchased the "sparkler," which a certain young lady is wearing, and we expect things to happen around the middle of June. Give us all an invite, "Joe."

Engineer J. M. Russell is wearing the broad smile, the stork having visited his home and left a 9-pound boy. Another engineer for the Cost Department.

G. W. Kelly, engineer, has left us to accept employment with the City Sewerage Commission.

Walter Knell is with us again after a bad attack of the "flu."

On April Fool Day, "Joe" Bohlman called the Druid Hill Park Zoo, and was informed that Mr. Hay was still in the loft.

The spring fever has gotten a grip on the office and you hear all complaints during the day, such as, fishitis, baseballitis, boatitis, bowelitis, golfitis, chickenitis, etc.

R. F. Klebe has returned to his desk after an attack of the "flu."

Frank Nichols is confined to his home with the "flu."

The entire office extends its sympathy to L. E. Emmett, our co-worker, at Cincinnati, who has asked for an indefinite furlough because of ill health, after a very serious attack of the "flu."

Staten Island Lines

Correspondent, G. F. GOOLIC

What Indeed?

When the workmen own the workshops,
And the railroad men the rails;
And the grocery clerks the groceries,
And the mail clerks own the mails.
When the preachers own the pulpits,
And the pressmen own the shops;
And the drillers own the oil wells,
And the jails are owned by cops.
When conductors own the street cars,
And each driver owns his bus;
Will you tell us common people
Whatinell becomes of us?

Thursday evening, March 31, Staten Island Railroad Club held its third entertainment and dance of the season at their club rooms, Livingston, Staten Island.

Two happy Staten Islanders
Miss B. I. Heal and William D. Risch

Messrs. Carney and Brown, popular black-face comedians, made a great hit with their songs and jokes, responding to several encores. Mr. Carney is employed in the Maintenance of Way Department and Mr. Brown is a former employe of the Car Accountant's office. They put over "Floatin' Down to Cotton Town," garbed in appropriate costume.

Charles Donnelly, trainman, gave a good imitation of train No. 697 pulling out of St. George "On Time," followed with another correct imitation of Engineer Michael J. Hanlon trying to get started when the rails are covered with ice and snow. Mr. Donnelly completed his number with a buck and wing dance and was loudly applauded.

Miss Frances Connine, ticket agent, rendered the popular hit "O-h-i-o" and "I Want to Go to the Land Where the Sweet Daddies Grow."

John Howard, of New Brighton, who is making his debut in Keith's Circuit, New York, with "Gus" Edwards, rendered his original jazz dance which was well received by the audience.

Music for this affair was furnished by the well known Staten Island Railroad Club synopators.

Refreshments were served by the ladies, whose home-made cakes were much enjoyed and for which we thank them.

The door prize for the ladies was carried off by Miss Elizabeth Adams, secretary to chief clerk, Lighterage Department, St. George. Joseph Bloom, clerk, Tompkinsville Freight Station, held the lucky number for the gentlemen's door prize.

All enjoyed themselves immensely and it was not until the wee hours of the morning that the professor was permitted to play "Home Sweet Home," which was music to his ears.

M. J. Kubinak recently announced that he was "an old married man." We wish him happiness. Too bad, girls, but there are still a few bachelors.

Did you hear the latest? Agnes Doody, telephone operator, St. George, is now known as Mrs. Blair Kuehn. The lucky fellow comes from the coal regions of Pittsburgh.

The employes of the Staten Island Lines extend their heartfelt sympathy to Clerk Leo Meloy in the loss of his mother, who died recently of pneumonia.

Miss Lillian Breidenback, formerly employed in the Car Accounting Department, Pier 6, St. George, became the bride of Dr. W. J. Higgins on Easter Sunday. The Car Accountant's office presented her with a handsome boudoir lamp.

Frank Shannon, leading laborer, Section No. 6, has been promoted to track foreman of Section No. 1, vice John Carroll, transferred to crossing watchman. John Carroll came into the employ of the Company in July, 1896, as a trackman, and on March 20, 1903, was made track foreman of Section No. 1. He remained in this position until March 31, this year, when his eyesight failed. Mr. Carroll is an old and valued employe, and the Maintenance of Way Department regrets losing him.

The accompanying picture is of Miss B. I. Heal, stenographer, Division Engineer's office, and Traveling Auditor William D. Risch. "Bill" comes from a place you can't find on the map without a magnifying glass (Hackensack, N. J.), and "Bea" comes from a place just as bad (Staten Island). They make a good pair. What do you say?

Baltimore Terminal Division

Correspondent, MARTHA V. FOX, Car
Record Clerk

The elevators at Locust Point now have 100 per cent. membership in the Relief Department.

The new system of cleaning and transferring grain and the high pressure dust collection systems, the most modern and extensive systems of any elevator, are now in full operation. Both driers have been going night and day since February 14, drying at the rate of over 1,500,000 bushels of corn a month.

"Bill" Callery, the ground hog, sees his shadow every day when he comes out of the big hole. That's because there are no shadows where he labors. It takes a Turkish bath to find "Bill" after a day's work.

Cleaning cars at Locust Point is a live subject with Agent White and Supervisor Barrett. Ask them if they will do it again.

Our old friend "Windy" Dunnington tore his pants the other night. He blames it on having to climb over cars. We know better. He is getting fat on the job.

"Doc" Mathers is pruning his vines along the Bush River fishing ground. Wonder what he figures on fishing for. Shades of Volstead!

We know one assistant superintendent who is scheming on how to educate children in Safety. Go to it!

Trainmaster "Gasoline Bill" Hoddinott is getting callouses on his feet. We know why. How much are they charging for gasoline "Bill"?

Agent's Office—Camden

Correspondent, W. H. BULL

Another of those delightful musicales was held in the Men's Rest Room, Camden Station, on March 30, under the direction of Mr. Oregon Milton Dennis, musical director, assisted by J. M. Green, assistant general foreman.

Singing by the men's chorus was a feature of the program. A quartet from the Baltimore and Ohio Glee Club, consisting of R. M. Van Sant, first tenor; W. R. Clymer, second tenor; C. E. Mitchell, first bass, and C. K. Townsend, second bass, rendered several selections which were much enjoyed by those present. Several pretty solos were sung by Miss Bailey.

The picture on the next page shows the group after the meeting.

The Accounting Department is in the limelight, the stork having recently visited the homes of Mr. and Mrs. Robert Barham, leaving a son, and of Mr. and Mrs. C. H. Schmidt, leaving a daughter. Congratulations.

Correspondent, ROBERT L. HEISER

Oh, th' train was coming, coming fast, but how in th' world will th' train get past? For th' wire is broke on th' signal pole and a great big freight comin' out o' th' hole. Ninety cars and th' hill to make—Oh why, oh why, did that signal break! Who'll volunteer to save th' day? "I will, I will!" they heard a young man say. "I'll climb th' pole, I'll save th' day!" Th' wind was blowing a terrible gale and it was no time for a signal to fail; but things will happen down Baileys Way, in fact they happen most every day. "Al" Evans, our hero, with waving hair, stopped his work holding down a chair, grabbed his coat, put on his hat, shed a tear and kissed th' cat: rushed from th' tower and up th' track, around th' pole and met himself comin' back. Th' engineer on th' Locust Point freight bet th' fireman that "Al" was a bit too late. "Al" shinned th' pole, held th' signal clear, and all th' folks set up a cheer. He lost his coat and he lost his hat and th' wind blew his shirt from—where it was at. With a rush and a roar th' train made th' hill, and if it didn't stop it's going still. And our hero bold is th' man o' th' hour as he wrestles switches in Baileys Tower.

The feat performed by Mr. Evans was more than creditable, but under the assumption that all work and no play makes Jack a dull boy, the correspondent can't help but see the funny side of it.

Howard Martin gettin' 'em over the Belt Line

Have you noticed the time the eastbound freights are making on the Belt Line? There's a reason; trainmasters are riding 98's and they're surely getting them over the road.

There have been several changes on the Belt Line; everyone misses "Smitty," who has been bumped from "CA" to Alexandria Junction on second. Mr. Wolfe has been moved to West Baltimore on third, but Francis DeVoughes highly recommends Mr. Wolfe's work while at Baileys.

Percy Asher, dispatcher in "DO," had been sick for a few days, nothing serious, and some one sent him a lot of nice flowers. Among them was a wreath with the words "Rest in Peace" inscribed across it. The flowers were mostly dandelions and johnny-jump-ups. Now what we want to know is this: Was some one remembering him before it was too late, or was some one too soon? We heard the second trick operator at Halethorpe asking Clarence Gosnell for Percy Asher's address. Now I wonder?

Locust Point

Correspondent, JOHN E. GREEN

The old saying that "The best of goods come in small packages" is now exemplified at our office in the person of Joseph Gilbert Rosenzweig, secretary to the assistant freight agent and chief clerk.

He is strictly a lightweight, physically weighing probably about 75 pounds and a water cracker—but oh, boy, not a lightweight when it comes to work. His pleasing address and urbanity have made him quite a force in the office.

Did you see John Pringer in the parade on Charles Street, Easter Sunday? He was surely some Beau Brummell. We expected

by this time to record his departure from the state of single blessedness to the realms of connubial bliss; but there seems to be a halt in the procession. Is he fickle? or has he cold feet. Either is detrimental to peace, after the fatal words are spoken. I hope he is not nervous, for you know there is truth in the old couplet which runs—

He either fears his fate too much
Or his deserts are small,
Who fears to put it to the test
And win or lose it all.

It certainly appears as if matters were getting quite serious with Charles Ecker and his fair inamorato, as the prizes he selects when he wins on the Junior Order punching board run to household articles such as silverware and carving sets. We are afraid "Charlie" has been captured and is beyond redemption.

Dudley claims he has raised strawberries on his farm at Hamilton as large as peaches and has broken the ice at times to pick

"Al" Evans playing hero

them. Oh shades of Ananias! He fails to state, however, whether he picked them out of the crushed ice, placed them in a glass, and whether the glass contained other in-

Harold Lachman Co., 204 S. Peoria St., Dept. 4014 Chicago

gredients; if the latter be as we suspect, we will be compelled to get the boy to page Mr. Volstead.

It is often remarked, that no one loves a fat man; but this is at variance with the feeling at Locust Point for F. F. Berghoff, our agent's secretary, whose bright, cheerful face, topping a body of about 250 pounds avoirdupois, quite often dispels the gloom which at times hovers over the office. His readiness to help, when requested, especially in typing our articles for the MAGAZINE, is appreciated. Here's long life to "Freddie"!

Our friend and fellow clerk, "Joe" Monaghan, saw his fondest hopes realized at the laying of the cornerstone of the new public school No. 76, which is now in course of construction, in the annex of Latrobe Park on Fort Avenue. His well-satisfied look, as he sat on the speakers' stand, at the right of His Honor the Mayor, gave evidence that he was well pleased with his efforts. We extend our congratulations on his well-deserved triumph.

There's a clerk in our office who is cheerful and frisky,
Whose name, by the way, is "Joe" L. Lubinski.

Whose bright happy smile, and gay repartee,
Often lightens our labors when work don't quite "gee."

His "Railway" piano he plays very fine;
In fact that's required, so he'll get off at nine.

In rating and routing, and billing the freight,
His time is well covered in his day's hours eight.

Group of employees from Camden Freight Station who enjoy singing together after lunch

Please mention our magazine when writing advertisers

But still there's a mystery about our friend "Joe,"
Why he's shy of the girls, we'd sure like to know.
If it's a secret with him, 'tis a secret he'll keep,
And yet we keep thinking—"Still waters run deep."

Look out "Joe"—Sherlock Holmes is on your trail—DLUOG.

William B. Amey, divisional representative, Freight Claim Prevention Bureau, has been transferred to Parkersburg, W. Va. The office force regrets his leaving our territory.

The duties of C. E. Bohn, divisional representative, Baltimore Terminal Division, has been extended to cover the east and west ends, Baltimore Division.

Miss Thelma Thomas has accepted position as stenographer to the chief train dispatcher, vice Miss Wright, who resigned to take a position with J. C. Leib, commission merchant, Baltimore.

The position vacated by Miss Thomas has been filled by Miss Schammel of our office force.

Miss Dorothy Kern, of Steubenville, Ohio, niece of Mrs. Lizzie Lawrence of our office, paid us a visit while on a trip East. Since her return home, a number of us have received postals.

Tho those who own victrolas, we suggest the piece "Mammy" as such by "F. X. R." The piece as rendered is pleasing to the ear. If you are buying a Columbia record, get the one by Miss Schammel.

East Side and Brunswick are out for the banner pennant in the "No-Accident Campaign." All departments at these terminals are organized as one unit and are competing against the units at other points on the System.

Brakeman J. C. Barrett and Fireman R. Burke, who were injured on the East End and were in the Delaware Hospital at Wilmington, have resumed duty.

We regret to chronicle in these columns the death of Conductor John Severn, one of our veterans in freight service.

Conductor "Joe" Ruby was retired on January 8, after an active career in train service.

Brakeman Thomas White was confined to his bed for several weeks.

We extend our sympathy to Engineer S. E. Pickett in the death of his wife. Mr. Pickett has only recently returned to duty after a long siege of blood poisoning, which started from a slight injury to his hand.

Meetings for discussion of fuel consumption have been resumed since W. L. Robinson has returned to the Eastern Lines. Engineers, firemen, conductors, trainmen, and others interested, are invited to attend.

Dispatcher A. F. Spurrier, on the last trick of the Main Line, is now on the last trick of the Terminal District.

Dispatcher George K. Seibert returned to duty after a few days' illness.

"DO" Office informs us that Gilbert Stuart, clerk, has become a Prince Charming. We noticed a young lady on his arm going up the steps the other day. We do not know which one needed the assistance.

The fast freight business is standing up well. On some days it runs as high as 100 loads for 97's at Park Junction. Three 94's are run on the East End; two New York, and one Philadelphia.

Weekly meetings of the staff are held every Monday and all employees are invited to attend. A number of engineers, conductors and trainmen have been present at these meetings.

Washington Yard for the month of February established a new high record for cars handled, the number being 11,757.

East Side maintained first rank in February and March on terminal time in the Eastern Lines. Fine, boys; keep it up!

East Side, Philadelphia

Correspondent, CHARLES H. MINNICK

We are very sorry to report the death of the baby boy of our chief clerk on Wednesday, March 23, at the Dietz home in Baltimore. Our deepest sympathy is extended.

During this same week came the news that on Monday morning, March 21, the father of Miss Loretta Jordan had passed away. We hope that the Heavenly Father will send His Comforter to both these, our fellow-workers, in their hour of trial and help them to bear the cross which has fallen upon them.

Prohibition definition of hay: grass in a dry state.

We certainly miss the "Old Dodger" (apologies to "Jim" Simpson), who used to keep us all in a good humor by his pleasant smile and witty remarks. He is now using his talents on the still watches of the night. i. e., 4 to 12 midnight in the roundhouse.

For ambition and pep, our little "Turtle Dove" can't be beat. If you don't believe it, ask "Doc" Pence. If George was a little older he would be smoking some good cigars at the doctor's expense; as it is, we don't want to teach him any bad habits. He kept the "Doc" busy examining candidates for the Relief last Monday.

We wish you could see our "Jack" Ehrig in his new overcoat. Maybe he isn't some sport. Perhaps we can persuade him to send in his picture some day. And, by the way, he parts his hair in the middle!

The door opens and in rushes a hurricane at 60 miles per hour. A voice demands "Helen give me your engine failure book, please!" Guess who it is? None less than our beloved "Smitty," general foreman.

Ever see an old farmer with humped shoulders, overcoat and soft faded hat? That's him, "Jim" Donnelly, our worthy inspector—a diamond in the rough with a heart of gold. We all like him—that fellow would help anybody that needed it.

Morris Heitzer, our coal clerk, has become engaged to Fanny. We congratulate you, Morris, and hope the H. C. L. will drop before you get tied up.

We hear that "Johnny" Dimond, our roundhouse foreman, has a new little daughter; in fact he has had her now some two or three months. If he isn't too bashful he might give us a picture of her to put in the MAGAZINE.

Quiet and inoffensive but getting there by degrees like the thermometer—that's our little Cresse. Be careful of our service records, Elmer.

"Bring in Smith, Dimond, Haines and Tangye to my office at once!" We don't have to tell you who spoke those fateful words. Our Master Mechanic J. P. H. is a real one, with an accent on the master; if you don't believe it, just try to pull one over and see where you get off.

We must not overlook one of our most faithful and efficient roundhouse clerks, "Bill" McMullen. He is not only efficient, but the girls say—ah!—that he is positively handsome! We'll have to snap a picture of him also for the benefit of the readers.

Passenger Station, 24th and Chestnut Sts.

Correspondent, CHARLES A. ALLEN

Washington, D. C., Freight Station

Correspondent, W. L. WHITING, *Chief Clerk*

"CUT LOSS AND DAMAGE IN HALF. IT CAN BE DONE!"

This slogan, coming from the Freight Claim Department, is a good one, and it behooves us all to try and live up to it as closely as it is possible to do so. We are all interested in reducing the amount of

The Capitol at Washington on Inauguration Day

conductors on this division, and we all join in wishing him many more years of happiness. The *Mineral Daily News*, in its issue of March 22, ran the cut shown in the March MAGAZINE of the pensioned employees.

"Jack" Davis, car repairman, and Miss Verda Drake, a trained nurse, both of Keyser, were married on March 20, in Cumberland. Congratulations.

The *Mineral Daily News*, published at Keyser, ran in serial form, during a part of March, the information contained in the Passenger Department folder, "See America." This was run in eight or ten installments, covering a period of that many days and proved to be very interesting. Much favorable comment was made on it by the public, who watched each day for the continuation of the history concerning the Railroad that has never been published in our town. Many interesting things have been brought to the correspondent's attention, by people not connected with the Company at all, but who realize its greatness, and who are anxious to speak a good word for the "Best and Only."

Timber Preserving Plant

Correspondent, E. E. ALEXANDER

"Yesterday, today and tomorrow! You can't erase what you did yesterday and you can't use tomorrow's time until it comes. What you can do—the only thing that even the greatest genius can do—is to make use of today's time, the present hour. Fill the present hour with useful work and tomorrow you'll not only have no regrets about the past, but you will find yourself better fitted for the duty of the hour at hand."—*Selected*.

Let's Go!

In our April items we proudly reported the establishing of a new February record. We are now able to report a new high record for the month of March, 109,423 ties! (Best previous March record was 95,301.)

Several of our employees are securing books from the Baltimore and Ohio Circulating Library. More should take advantage of this. Employees or members of their families may get books by applying to Inspector A. E. Irving, agent at the Plant, for a card.

Our camp boys express themselves as well pleased with our new commissary management under Mr. Carroll R. Passapae. Any of our friends stopping or passing through Green Spring are invited to stop with Mr. Passapae and get a first-class \$1.00 meal for 40 cents. All you can eat. No limit.

Introducing Master Ralph Gerald Smith, son of Express Agent and Mrs. Ralph G. Smith, born on March 15.

Paint Up!

What a difference a new coat of paint makes! Platform Foreman G. C. Conley has just completed painting the Company house occupied by him, and you would hardly believe the improvement it makes in our village. Several owners are hoping to follow suit.

Home Owners

Fourteen of the houses in the village of Green Spring are owned by Plant employees, at least three more by other department employees, and still others under consideration. Not so bad.

Treating Inspector M. M. Rabourn, who was called to Terre Haute, Ind., to relieve Inspector Von Leer, was later assigned to Finney (Ohio) Plant, to assist Inspector

C. L. Kittle. Inspector Kittle writes that Mrs. Kittle is able to be at home again after having undergone a serious operation in one of the city hospitals at Cincinnati.

R. N. Angier, formerly machinist at Mt. Clare, has been appointed special apprentice at the Plant, vice A. E. Irving, tie inspector.

Official Photographer G. B. Luckey, with Mr. Otto, made his first visit to the Plant in March. We believe that at least part of Mr. Luckey's impressions are shown elsewhere in this issue.

Your opinion, please.

The Cross Tie-gers

Some of the boys are making a commendable effort to reorganize the "Cross Tie-gers" for the 1921 season.

While not having the opportunities of the men in the larger shops and divisions, they are anxious to put a good team in the field, and are working to that end. At a recent meeting, when the few possessions of the old team were invoiced, it was decided to have a dance for the benefit of the team. Their first venture, held March 25, was well attended. The boys had a good time and a few dollars were added to their treasury.

The success of their dance inspired further effort, and with only a few evenings practice they crossed bats with Romney on April 2, and returned home with their spirits still further elated by winning their first game of the season; score 4 to 1.

Success to the Cross Tie-gers!

Treating Engineer J. C. Alexander is manager this season; H. M. Whitford and R. Keister, captains.

On the evening of March 27, at the United Brethren Parsonage, Martinsburg, W. Va., Rev. H. E. Richardson officiating. G. H. Whitford of the W. U. T. Co., at Green Spring, W. Va., and Miss Mae Elizabeth, daughter of Mr. and Mrs. G. N. Teeters, Green Spring, W. Va., were united in marriage.

Miss Hazel Crabtree, cousin of the bride was bridesmaid, Mr. H. M. Whitford, brother of the groom, was best man.

Following the wedding the bridal party was tendered an elegant supper by W. U. Foreman C. I. Gay, at his home in Martinsburg.

A reception and supper in honor of the newlyweds was given at the bride's home by her parents, Monday, March 28. Those present include: Mr. and Mrs. George Taylor, Mr. and Mrs. J. C. Alexander, Mr. and Mrs. D. A. Cain, Mr. and Mrs. R. G. Brown, Mrs. James Wagoner, Mrs. S. D. Crabtree, Mrs. Norman Whitford, Mrs. Earle Van Dyke, Mrs. Rebecca Michels, Messrs. William Kesler, Hobart Whitford, Parker Rolston, Worthington Kline, Dudley Crabtree, Jr., Claude Twigg, D. Canon, Jesse Teeters, Jasper Grandle, Howard Lewis; Misses Geneva Kline, Edna Foley, Odessa Allen, Hazel Crabtree, Flora Morgan, Mary Ellen Morgan, and Miss Amy Jewel Alexander.

In order to increase production in the Plant and to show more graphically what this output really means, we make up a daily output chart for each month. This is our "pet" chart, and while it has only been in use a few months it has proved its daily usefulness to such an extent that it has established itself permanently, and we consider it one of the greatest incentives to increased production yet put into effect at the Plant.

Each day's output in relation to production for the month is marked up immediately upon completion of the day's work, keeping our foremen, engineers and all

concerned advised of Plant standing at all times, and great interest is manifested in keeping the Plant output above the production line. A new chart is put up each month, the production line is shown in black ink and the daily output (number of ties treated) actually made, in red ink. Let's go!

Martinsburg Shops

Correspondent, W. L. STEPHENS

Wedding Bells at Martinsburg

Robert Evers Gordon, operator, known to all employees of this division as "Bob," and Miss Marie Shaffer Bowley were married in this city on March 21. The wedding ceremony took place at the parsonage of the First Methodist Episcopal Church. After a bridal trip to New York City, they will reside at their home on West Race Street.

John Dayton Hite, fireman, and Miss Glennie V. Tederick were recently married in this city. Both these young people are natives of Berkeley County. The groom is an ex-service man.

Gilbert Horner Whiteford, lineman, Great Cacapon, and Miss Mary Elizabeth Teeters, of Green Spring, were married on March 27.

Claude Le Roy Hess, one of our employees, and Miss Laura Lillian Rickard were married on March 19. Both are from Hedgesville. Their honeymoon was spent in Philadelphia.

James Banner Adams

The railroad men of this section were grieved to learn of the death of James Banner Adams, assistant agent, Hancock.

Mr. Adams had served the Baltimore and Ohio for many years at Hancock Station, and was one of the best known men on the Road east of the Ohio River. His death occurred suddenly. Mr. Adams had gone to the office of Dr. P. Elwood Stigers for medical attention, and died of heart failure while in the doctor's office. The deceased was 54 years old. Two children survive.

Morgantown and Kingwood

Correspondent, WILLIAM EICHOOLTZ

Since the Baltimore and Ohio took over the Morgantown and Kingwood Railroad, the MAGAZINE has not said a word about us. Now that we are under such good care, we feel that we should have just a little attention paid us.

Our headquarters are located at Sabraton, W. Va., just out of Morgantown. The following are our officers: G. T. Hice, master machinist; C. B. Gossnell, in charge of car shops; Z. D. Hensell, trainmaster; R. W. Harkness, chief train dispatcher; W. M. Eicholtz, second trick train dispatcher; E. J. Carroll, extra dispatcher; Miss Edna Goff, clerk.

At this writing, business on the M. & K. Sub-Division is slack, owing to the fact that most of the coal mines are closed down, but we look for an improvement by the middle of April. We are running but few trains daily, trying to hold our men until business will increase enough to afford employment for them all. The M. & K. train and engine-men are a good set of men and well worth taking care of.

A lover of basketball is William Ryan, messenger

The accompanying photo is that of little William Ryan ("William" since the advent of long trousers some weeks ago), the smart little chap who handles the work of messenger, General Superintendent's office, Pittsburgh. "Bud," as he is more familiarly known, is a great favorite with the girls, and I am sure when they see his picture in uniform for basketball, they will all say, "O, isn't he cute! Isn't he the nice looking kid!"

After a recent trip to Cumberland, little "Bud" was minus on the sleep end when he reached home, but put in 22 hours in the sheets, then sat down for breakfast and got on the outside of the following: 6 eggs, 1 slice of ham, 12 slices of bread, 4 cups of coffee, 3 glasses of water.

Some sleeper! Some appetite! Some kid!

Miss Irma Hoover, of Mr. Martin's office, is not Miss Hoover any longer. She is known now as Mrs. Price, having stolen away one evening to become hitched up. Congratulations and best wishes.

Miss Mary Delahanty, General Superintendent's office, is at present at Mercy Hospital, convalescing after the performance of an operation. We wish her a speedy return to health.

C. S. Kerr, an old-timer in the service for many years, is also at Mercy Hospital, Pittsburgh. "Charley" has been in the hospital for some time and has been missed

by his associates and friends. We all wish him a speedy recovery.

Have you ever passed the Monongahela House on a Tuesday evening between the hours of 5 and 7 o'clock? We saw a lot of people going by the other night, and although the sun was shining and the sky peaceful and serene looking, yet these folk had their umbrellas raised and were scanning the sky for signs of rain. Not a chance. Baltimore and Ohio boys were inside rolling duckpins. Some thunder! Set 'em up again!

Pittsburgh Freight Station

The accompanying picture is of Miss Margie Shiring, daughter of F. J. Shiring, chief of Car Demurrage Bureau, Pittsburgh Freight Station.

NOTICE TO READERS.—Watch this space for "American Beauties" of the Pittsburgh Terminals. The correspondent anticipates receiving a large selection.

One of the social features in the Pittsburgh Terminals is the Welfare League. It is requested by the president that all employees and officials of the Pittsburgh District attend. The dues are small and opportunities big. Make up your mind and come along. This is where the correspondent got his start, boys. If you don't believe this, come out at the next meeting.

Correspondent, FRANK RUSH

Wreckmaster Burchell has more to take care of now than his Ford, as recently a new baby boy arrived at his home.

It was with regret that we learned of the death of Boilermaker "Sam" Jeslowitch; also of the death of his wife, within a short period after that of her husband.

Recently Machinist Albert Brackney died, and several days ago his wife also passed away. We extend sincere regrets to the bereaved.

Assistant Machine Foreman E. L. Hopkins has been off duty for some time because of an injury. We hope to see "Bush" back on the job shortly.

Born to Mrs. "Mike" Puskas, wife of car inspector in Glenwood transportation yard, a bouncing 11-pound baby. Keep up the good work, "Mike."

It is with regret that we note no improvement in business conditions during the past month. In fact, the figures show an even greater falling off. Coal loading—the life of the Charleston Division—has gone to pieces, although we hear it's coming back during April. The big lumber yards seem to have forgotten all the millions of feet we have stacked away down here in West Virginia waiting for shipment, and the price of gasoline having dropped considerably, shipments have fallen off to a serious extent. However, we are still in the ring; what we have we are handling in good shape, and "What we have we'll hold." Just a few days ago it came to our notice that some cars of sugar shipped from New York, billed on the 17th, routed VIA THE CHARLESTON DIVISION, went into Charleston, W. Va., on the afternoon of the 20th. Pretty good service, we'll say, and we have more of the same kind for any one who wants to try our specially prepared brand of Charleston

Little Margie Shiring

Division service. It's up to us to fight for the business now, and every one of us can help by seeing that we don't delay it for a minute anywhere on this division.

WATCH THAT FOREIGN CAR—it costs our Company one big round dollar every day, and 20 such dollars every day mean 600 every month and more than that—7000 every year. Soon mounts up, and there is no one who cannot help to save at least a few dollars every month, which in the aggregate means a large sum.

WHEN YOU PUT THAT AIR HOSE ON THE FOREIGN CAR, MR. CONDUCTOR, did you remember to make out the Form 1116-B? If not your Company lost its value. **WHEN** you went out to lunch, and when you went home for the night, Mr. and Miss Clerk, did you forget to turn out the gas; if you did, then more money, which might have been used to better advantage in paying someone's salary, went up in smoke.

WATCH THE PENNIES, boys and girls, and the dollars will speak for themselves.

health. We understand he is visiting Hot Springs, Ark. We also understand Engineer G. C. Smith has gone the same way, and that our much respected and beloved old veteran "Captain Tom" Smith is thinking of making a short trip down to Arkansas. If they keep moving that way, it has been suggested that we remove the headquarters of our division from Weston to Hot Springs.

General Foreman Helmick, Gassaway, has been confined to his bed for the past week. We are glad to note he is able to be out again.

The very sincere and affectionate sympathy of every one of us is extended to W. E. Severns, our favorite division accountant, on the death of his father. We all feel deeply for him in his great sorrow, and the writer speaks for every man and woman here in taking this public means of expressing a sorrow which we find it hard to express properly to him personally in words.

C. E. Miller, clerk, Storekeeper's office, Gassaway, is the proud father of a boy. Congratulations!

Little daughters of Conductor H. H. Bailes

West is chairman of the committee. Machinist L. S. Sanders has been named Scoutmaster, and Car Repairman Clarence Riffle as assistant. Charter and commissions have been received from Scouts' headquarters in New York.

THERE IS NO SUBSTITUTE FOR SAFETY.

The Y. M. C. A. at Gassaway was again the scene of two delightful entertainments on the evenings of March 14 and 15 when W. F. Braden and A. D. Gans, Safety Department in Baltimore, brought with them the new motion picture "Bulletin 70." Mr. Braden spoke entertainingly at both meetings and Mr. Gans delighted every one in his usual inimitable way with magic. Many of our Gassaway friends helped to fill out the program, and the entertainments were a success in every way, the auditorium being filled to overflowing both nights. Superintendent Trapnell spoke on Tuesday evening.

Mr. Braden spoke on Safety to the students of the public school at Gassaway at 10 a. m. on Tuesday, and in the afternoon, to the great delight of the children, they were shown "Bulletin 70" and Mr. Gans' magic. Much credit is due to General Car Foreman Garber, chairman of the social committee, for the masterly way in which he handled the arrangements.

Try to Discover Your Own Shortcomings Before Your Boss Does

Recently there was an epidemic of rent raising in Weston. About everybody in town who owned a house "jacked up" the rent. Among the unfortunate ones who suffered to the extent of about \$10.00 per month, we find W. H. Schide, chief clerk. List, those of ye who would hear us a marvelous tale unfold. The following dialogue transpired at his home:

Friend Wife: Harry, do you know that awful man told me today that when our lease is up on April 1, our rent goes up?

Harry: ***** (left to the imagination).

Friend Wife: Harry ***** You should be ashamed. Such a nice man as he is, too.

Harry: Well! You may bet your next winter's hat, if you expect to have one, against a cent, that we won't pay it. You

"Joe" Conley

John Conley

Nothing is too small to save, even a sheet of paper, even a small pin. They cost money, and if you save enough of them for your Company, you will have saved very soon a dollar's worth, and dollars saved mount up very quickly.

WATCH THAT LUMP OF COAL, Mr. Engineer and Mr. Fireman. It costs money. And if you waste it you help to put the Charleston Division down the list in fuel performance. **SAVE THAT LUMP**, and you will put our division where it belongs—**FIRST IN EVERYTHING**.

We regret to note that John K. Cogley, but a short time with us, has been furloughed. While a newcomer, Mr. Cogley had many friends on the division who will regret his departure. In another way, the loss is also a gain, as it brings back to the family fold C. M. Criswell, whose jurisdiction has been extended to cover his old stamping ground, the Charleston Division. We welcome him back, and soon expect to hear on the summer evenings his melodious voice floating through the open windows of the Marble Palace in that sad but stirring refrain of better days: "Cars are only earning when the wheels are turning." Perhaps the return of "Charlie" will start our wheels turning some more.

Conductor S. Caudy, Clarksburg-Richwood run, is off on leave on account of his

Engineer W. A. Stalnaker, of the famed Pickens Local, recently took a week's rest. He was relieved by Engineer P. W. Toms, known in Weston for his smile and his size, an enthusiastic SAFETY FIRST man all the time.

Train Dispatchers Rollyson, Carpenter, Young and West of Gassaway are doing a little cooperative gardening. We understand they intend to take a shot at old man "H. C. L." in the line of vegetables.

General Superintendent J. M. Scott was the special guest of the Gassaway Y. M. C. A. on Tuesday, March 1. A committee of business men met Mr. Scott on his arrival and escorted him to the association building, after which he held a conference with them. At 8.00 p. m. an entertainment and reception was held in the auditorium, with a record breaking attendance. Mr. Scott delivered a most interesting and instructive address which was much appreciated by all who were able to be present. He was followed by Superintendent Trapnell. The Boys' Work Committee of the Railroad Y. M. C. A., Gassaway, is sponsor for a troop of Boy Scouts. Dispatcher C. L.

Ticket Agent Brown

start out and find a house for us. I'm busy. Have to work (?) nights now to keep up.

A period of one week elapses, during which Friend Wife wears out three pairs of \$15.00 shoes tramping the streets and by-ways of Weston. Then—one glorious night.

Friend Wife: Harry, I've got it. About six miles from here, in the midst of a two acre field, standing all alone by itself in the middle of 60 or 70 others just like it, is our future home. You can get lots of exercise walking to and from the office, and you can till the fields and cut down on old man H. C. L. on the price of vegetables, and quit kicking on what it costs to run a house.

Then the next day.

Harry: Please, boss, I have some very important business to do today which requires my personal attention. I want the day off.

Boss: ***** Oh, well, what's the use? All right.

Then again, another day. Enter W. H. S., face wreathed in smiles, and says, "Boys and girls. I've got it. My country residence. (Space forbids our going into the details given by our friend.) You are all invited to visit it when you wish. I've put one over on the landlords all right. Now, Mr. — if you have nothing to do tonight after 5.00 p. m. I would like to spend about 6 hours with you conferring on the proper form of lease to absolutely protect my interests."

Time passes. Comes a nice fine wet day, raining in torrents, mud inches deep, and we hear a telephone call. "Mr. — I'm stuck in the mud two feet deep with a wheel off the truck, and the wagon has the last load of furniture, and among it is the bed, the bedding and the kitchen stuff. If you don't come and help me we'll have to sleep on the floor, and we won't have any eats." Like a good charitable citizen we are, we donned our rubber boots, walked several miles through the mud, and finally pulled our friend out. However, the sun shines after the worst storm. Now friend Harry and friend wife are settled down nicely in their new country residence. Everybody's happy, except the man who tried to raise the rent. "Baltimore shall never be trodden under foot by Weston" says W. H. S. and so endeth my story. There's another item, though, of what they did to Friend Severns when he made his first visit to "Lilly Brooke" Hall, and came home with his ankle in a sling—but that's another story.

Manager H. O. Hartzell, Industrial Department, Baltimore, recently visited Elkins, where he addressed the newly formed Chamber of Commerce, explaining to them how anxious the Baltimore and Ohio was to help its patrons, and to be real good neighbors. There were at least 85 Elkins business men present, and a luncheon was served to all. Mr. Hartzell was accompanied by Industrial Agent W. I. Bishop and Division Freight Agent Strachan.

A recent visitor to Weston, at our last last Safety meeting, was our newly appointed Safety Agent, W. L. Allison, Chillicothe, Ohio. Our old friend "Billy" Mitchell has left us for pastures new, and while we speed the parting guest, we welcome the newcomer, with assurances of hearty co-operation and assure him that the Charleston Division is right there when it comes to SAFETY FIRST. Witness the No-Accident Campaign.

Boost—Don't Knock.

In our column of honor this month, we present for your inspection the photos of the brothers "Conley," supervisors on the Charleston Division. John looks after the south end of the Elk Line, and "Joe" takes

in the Cut-off, the Pickens Branch and the north end of the Elk Line. Both are efficient and able assistants of their chief, Major Brooke.

Born in Kingsville, West Virginia, T. J. Conley, otherwise known as "Joe," entered the service of the old Coal and Coke Railway in 1902 as a construction foreman. Many are the tales he can tell of the old days of that line. Through positions as fireman and foreman he finally advanced to the position of supervisor in 1915, which post he has held ever since to the entire satisfaction of his superiors. Of a kind and

straightforward disposition, "Joe" is beloved by his men and fellow employees alike.

J. E. Conley, otherwise known as "John" from one end of the division to another, also first saw the light of day in Kingsville, West Virginia. He, like his brother, entered the service of the old Coal and Coke as construction foreman in 1902. He was promoted to supervisor in 1905, and is still holding down the job after 16 years of as faithful service as any man ever gave to his employer. John—for reasons all his own—said he would prefer not to have his photo shown on the same page as the other two

"I'm as Good a Man as Jim!"

"They made him manager today, at a fine increase in salary. He's the fourth man in the office to be promoted since January. And all were picked for the same reason—they had studied in spare time with the International Correspondence Schools and learned to do some one thing better than the rest of us.

"I've thought it all out, Grace. I'm as good a man as any one of them. All I need is special training—and I'm going to get it. If the I. C. S. can raise other men's salaries it can raise mine. If it can bring a better home and more comforts to Jim and his family it can do it for us. See this coupon? It means my start toward a better job and I'm going to mail it to Scranton tonight!"

Thousands of men now know the joy of happy, prosperous homes because they let the International Correspondence Schools prepare them in spare hours for bigger work and better pay. You will find them in offices, shops, stores, mills, mines, factories, on railroads—everywhere.

Why don't you study some one thing and get ready for a real job, at a salary that will give your wife and children the things you would like them to have?

You can do it! Pick the position you want in the work you like best and the I. C. S. will prepare you for it right in your own home, in your spare time—you need not lose a day or a dollar from your present occupation.

Yes, you can do it! More than a million have done it in the last twenty-nine years. More than 130,000 are doing it right now. Join them without another day's delay. Mark and mail this coupon!

INTERNATIONAL CORRESPONDENCE SCHOOLS BOX 8494-B SCRANTON, PA.

Explain, without obligating me, how I can qualify for the position, or in the subject, before which I mark X.

Canadians may send this coupon to International Correspondence Schools Canadian, Limited, Montreal, Canada

Elk Line supervisors. His reasons are good ones, but with the correspondent are state secrets. John knows every one on the division, and every one on the division knows him and has the greatest affection and respect for him. Rare indeed is the change of foremen on his territory, and the man who has a section to run for John Conley knows he has to "Hit the ball," but at the same time he knows that he has a fair and just boss. For a really enjoyable half hour, when you have the time (provided he has) let us commend you to pass it, very profitably, in the company of John Conley. We cannot say to much for the two brothers, both born of old West Virginia stock, and in our opinion there can be no finer compliment paid to either of them than the esteem and affection with which they are both regarded by every man, woman and child on our division.

Cut Claims in Half. We Can Do It

Owing to business conditions, it has been felt advisable to discontinue the Claim Prevention Committee meetings. The Charleston Division applied its slogan and thought it over. They did not like the idea. They wanted to keep up the work, and so some of them got together and decided they would request permission to continue the meetings, *in the evening on their own time*, which was readily granted. With such a spirit as this, we can look for great results in our campaign against claims, and there is surely no better way to save money than by reducing claim payments. They don't do any one any good. They make the shipper sore because he has lost his goods, or because they have been damaged, and the little sore still rankles even after the claim is paid. To our Company such payments simply mean WASTE. Therefore, the boys on our division are to be congratulated on the spirit they have shown, and we wish them every success.

An interesting little family is shown in our group this month of the three little daughters of Conductor H. E. Bailes of the Cassaway-Weston local. Mr. Bailes is an old time employe, and an enthusiastic claim prevention worker.

Another interesting photo is that of Ticket Agent Brown of Weston. Of a quiet and smooth disposition "Brownie" has endeared himself to the entire traveling public by his kindness and courtesy, even under the most trying conditions.

THINK ABOUT IT. AVOID WASTE. ECONOMIZE.

Connellsville Division

Correspondent, S. M. DEHUFF

An interesting incident took place recently at Piedmont, W. Va., which was of vital interest to one of Connellsville's citizens.

About 17 years ago Mr. and Mrs. William Spence were residents of Piedmont, and at that time their home was brightened with the birth of a son. The joy was soon turned to sadness for the birth of the boy was the cause of the mother's death. Mrs. Spence's mother, Mrs. Miller, took charge of the boy and became so attached to him that she would not part with him.

When the boy was about 6 months old, the duties of Mr. Spence took him west, and he remained there about 7 years. While there he was informed that the boy had died. Later the grandmother died, and as there was no reason for his going back to Piedmont, Mr. Spence came to Connellsville to reside.

William Spence, Jr., of Piedmont, one day casually remarked to a friend that he would

like to locate his father. Upon inquiring the name, young Spence was informed that his friend knew who and where his father was. You may be sure that it did not take William, Junior, long to get in touch with Connellsville. William, Senior, was overjoyed at the news and immediately sent his two sisters, Mrs. William Templeton and Mrs. R. Vaughn, to Piedmont to bring the boy to Connellsville. William Spence was at the station to meet them on their return.

After an affectionate greeting, young Spence was taken to the home of Charles Spence, general foreman of Baltimore and Ohio roundhouse, 11 to 7 track, who is a brother of William Spence, Sr. After the greetings were over the first thing the boy wanted was to go to work for the Railroad as an apprentice to machinist. "Uncle Charley" has promised to help land the job as soon as conditions become normal at the shop.

Young Mr. Spence will make his home at the Stag Hotel, which is conducted by his aunt, Mrs. William Templeton.

William Spence, Sr., is stationary engineer at the sand house at this point.

Our Telephone Operators By Herbert Watterman

Maude Crawford, the chief, is tall and fair, While Miss Irma George is a personage rare; Miss Willa Mobberly has the sweetest of voices,

But piquant Miss Stephens is the choicest of choices.

Now Miss Florence Young leads in queenly graces,

And pretty Miss Peters wins all beauty races;

But happy Miss Schaudig is both fat and sassy,

While little Miss Schillin is our night-work-ing lassie.

Now in the above you have operators all, But upon poor dear me let them vent their gall;

For this was just written in a cute joking way,

As for their efficiency, why just let me say That they couldn't be beaten by the longest mile,

So when you read this, please don't rave, but just smile.

Because the photographer was unable to complete an enlargement of an "Annette Kellerman" picture of one of our fair stenographers by the time this edition went to the publisher, we have to wait—but watch for the June issue!

FOUND—One pair of silk socks (men's), size 11. Owner can have same by applying in person to Miss Helen Lorenz Cost Department.

Things we would to see in the S. M. P. office:

A. Althausen—With a girl.

George Luckey—Quit asking questions.

L. S. Cunningham—Working.

"Chris" Auberger—Not getting into an argument.

W. M. Moorehouse—Keeping his seat when the "boss" leaves the office or when the 'phone rings.

G. W. Bick—Pitching a ball game

J. W. Shea—With a mustache and pipe.
C. E. Winall—Without "Colyer's Eye" and "Harper's."

R. Meagher—Getting to work on time.

G. C. Naegel—Without a grump.

H. E. Duncan—In a bathing suit.

F. X. Drain—Married.

F. L. Weiz—Keeping his shoulders still.

W. C. Garaghty—Without ham and cabbage for lunch.

R. P. J. Moran—In a Lizzie with his Maggie.

We are pleased to have this opportunity to relate a little incident which occurred to a representative of these offices, en route from Cleveland to Cincinnati on a Big Four train. Sitting in the smoking room of the sleeper he overheard two salesmen from a large concern in Cleveland discussing the time they could catch a certain train out of Cincinnati to go to the little town of Middletown, West Virginia. They had contemplated catching this train to Staunton and taking the Baltimore and Ohio train from there to destination. Then they were to proceed to New York and back again to Lexington, Ky., which point they intended to reach via a competing line from Washington, D. C. Our representative asked their pardon for interrupting, mentioned the fact that he was a representative of the Baltimore and Ohio Railroad and advised them that they could make better time and connections by using Baltimore and Ohio trains. He produced his folder and arranged the entire trip for them from Cincinnati on our train No. 4. He also arranged their return trip via Baltimore and Ohio to Cincinnati, thence to Louisville and L. & N. to Lexington. In doing this he advised them where they could purchase tickets and reservations and gave them all the information available. The two salesmen were grateful to our representative for his information and assured him that they would pursue the course he had mapped out.

This little incident is mentioned so that other employes while traveling on the trains and getting in touch with the traveling public will not forget that they are Baltimore and Ohio men and women, and that they may see what they can do toward getting business for the Company. If at any time you can get a shipper or a passenger for the Railroad, do it; if you feel that you cannot get the business or passenger, why not get in touch with one of our passenger or freight men? They will be glad to hear from you and will be out immediately to get the business.

WANTED—A small blonde girl, age not over 18. Must have clinging disposition. Apply Line 88, B. L. H.

Who said "Billy" Sunday hasn't a Christianizing influence? F. M. Duncan attended one of his revivals and hasn't worn his notorious red tie since.

Miss Stockman visited the new Baltimore and Ohio bridge and found the "surroundings" very attractive.

'Tis said "In the Springtime a young man's fancy lightly turns to thoughts of love." Judging from what we can see in the Traffic Department, there are several men affected thusly.

Colors of the Freight Tariff Bureau

Hope for the long tomorrow bright,

Strength for the brief today,

Faith that the green shirts will wash white And the red necktie fade away.

Hurrah for Elmer Schofield, he has joined the Benedicts!

You can't keep a good man down. C. W. Lally has been appointed assistant chief clerk, Traffic Department. Congratulations, Charles.

"Sad But True."

"Tommy Brookes" sat alone in a boat,
But a big fish almost got his goat.
"Tommy" cast his line and pulled like sin,
But the fish was bigger and pulled "Tom"

All the things about a canoe
"Tommy" had often boasted he knew!
But as to his prowess we can't vouch yet,
Suffice to say, he got awfully wet.

O. B. ("Pat") Hunt, more commonly known as "Spider," must be considering the call "Back to the Farm." His mail daily consists of a large assortment of advertising on bug killers, farm machinery, "How to Make Hens Buy Your Groceries," etc.

Robert George, former clerk to assistant master mechanic, has been transferred to the Division Accountant's office.

Mary Gancy, distribution clerk, Division Accountant's office, attending a "movie" with her "steady" a few evenings ago, after watching a picture of a wrecking crane lifting cars out of a ditch, very abruptly inquired of her escort: "John Jacob, is that a ditcher?" Mary, we're surprised!

The accompanying picture is of our yard engine and crew at Marietta, Ohio. From left to right are: Brakeman F. P. Mc-

Donald, Brakeman W. E. Callahan, Fireman B. H. Bell, Conductor J. L. Toller, Engineer G. W. McClure.

New Castle Division

Correspondent, J. A. JACKSON

The last of the coordinated stations in the Mahoning Valley established by the U. S. Railroad Administration was abandoned March 21 when the joint agency of the Baltimore and Ohio and the Erie was dissolved at Girard, Ohio.

R. B. Viehdorfer, formerly agent, Sterling, Ohio, was appointed agent for the Baltimore and Ohio, and everything is now in smooth running order. Mr. Viehdorfer's appointment has met with popular favor among the business men of Girard and the patrons of the Railroad. Girard is one of the thriving towns in the Mahoning Valley, is growing rapidly, and everything points to an increased business for us there.

George Miles, car distributor, New Castle Junction, is the proud father of a baby boy that arrived at his home on March 16. George was a little late in arriving at the office next morning, but when he did come, and explanations were offered, he was surrounded by admiring friends, who extended their congratulations. The new arrival has been named Harold Ruoff. Mrs. Miles will be remembered as Miss Hilda Ruoff, formerly clerk, Superintendent's office, New Castle Junction.

The weekly staff meetings, recently inaugurated on the New Castle Division by

Superintendent D. F. Stevens, are proving of inestimable value to the members of the various crafts who are invited to attend the meetings. Some of the trying problems confronting the officers in the successful operation of the Railroad are more clearly brought to their attention. The closer co-operation of the men in train and engine service, in their daily observation of conditions as they actually exist, will be of mutual interest to both men and officers.

L. L. Wagner, freight conductor, has recovered from a severe attack of typhoid fever, and has resumed his duties on the "River Run" out of Haselton, Ohio.

Perry Eilbeck, "Whan" Poole and Irwin Peebles, time clerks, Division Accountant's office, have returned from a pleasant visit to Lonaconing, Md. "Whan" says the prettiest girls in the world live in Lonaconing, and he's already planning another trip to the Maryland town in the near future. There's a reason.

A. C. Harris, former yardmaster, New Castle Junction, has been appointed chief clerk to the division engineer with headquarters at New Castle. "Al" will be back on the yardmaster's job just as soon as the business depression is over.

New Castle Junction, Painesville, and Hazelton shops are included in the Safety Honor Roll for the month of February, having a total of 103,727 man hours, without a single injury. The mechanical employees of these shops can well feel proud of this remarkable record, and are to be commended for their great interest in establishing the entire New Castle Division on the Honor Roll. The work in the shops can be accomplished with much greater success when there are no personal injuries, and the above results were only obtained by every employee consistently complying with the Safety rules.

Here's hoping that this high standard of Safety will be maintained throughout the entire year.

Charles Crawford, engineer, New Castle Division, has been appointed road foreman of engines, Wheeling Division, with headquarters at Wheeling, W. Va. "Charlie" has a host of friends on the New Castle Division who wish him success in his new position.

The first meeting of the Lotus Club, the members of which are employees of the Youngstown Freight office, was held on the evening of April 1. After the business session an entertainment was held which was much enjoyed by all who attended.

Vocal selections were rendered by the Misses Hazel Chesney and Gladys Rahn, and a piano duet was given by the Misses Isabel Beatty and Josephine Griffin. A solo dance by Mrs. Pearl Schmutz added much to the pleasure of the evening.

The Club was glad to have with them for the evening as guests, Harry Burns and J. L. Depser, traveling car agents of Pittsburgh, Pa.

Mr. Burns possesses a remarkable bass voice and rendered at request (or rather murdered), his latest song hit entitled, "If the Rain Makes Everything Beautiful, Why Don't it Rain on Me." Later, Mr. Depser gave a short talk, taking for his subject, "Styles may come, and styles may go, but me for my Derby Hat, always."

Closing the meeting, Mr. Aiken, our agent, whom we are very proud of, gave a "Safety" talk, explaining that there must be something more than delayed cars and uncollected items in the vicinity of Youngstown, in order to attract so many into our midst.

SPECIAL

Read Our 1921 Offer to You

And unless you already own a Watch that you are sure is just as good as they make them, this is a money-saving opportunity you positively cannot afford to miss. It is a Bargain such as you do not meet every day. For that reason you will have to act promptly. To be sure you get one, suppose you write to me personally, care Santa Fe Watch Co., right Now before you forget it. I want you to have one of these beautiful Standard "Santa Fe Special" Watches.

SAVE YOU MONEY

My sole aim during the year 1921 is to place as many standard, dependable watches, as I can, in the hands of men throughout the land, REGARDLESS OF PRICE OR PROFITS. To do this, I have cut the prices to ABSOLUTE ROCK BOTTOM. I know that if I can distribute 5,000 "Santa Fe Specials" this year on this NO PROFIT PLAN, that every watch will sell another. I am making this **startling watch offer** to those who will tell their friends of this remarkable watch value if they find the watches all or more than I claim for them.

Cleveland Yard Office

In our photograph gallery we have some of the office force at Clark Avenue. Left to right: "Grandpa" MacDonald, Mrs. Edythe Wenzel, Miss Evelyn Metzger, Miss Beulah Stephenson, "Beauty" Herman, "Turk" Murphy, "Slim" Davisson, "Whitey" Weisharr, "Fatty" Singleton. In the lower circle are "Skipper" Weisburg and our stenographer, Evelyn Metzger. No animosity exists between our report clerk, Mrs. Wenzel, and our stenographer, Miss Metzger, as you may note in the other picture.

R. G. Davisson, formerly rate clerk, Clark Avenue, and who left the service about one year ago, has been re-employed in the capacity of chief clerk, Clark Avenue. Glad to see you back, "Dave."

"Beauty" Herman reports that the members of the recently organized West End ball team, of which he was the self-appointed manager, have decided to promote him to the position of mascot. "Beauty" is not at all desirous of accepting this promotion and has decided to resign.

In the early part of November, 1920, a School of Accounting was organized in the Division Accountant's office, Cleveland. President, vice-president, secretary, and treasurer were elected. The object of the School of Accounting was to instruct the younger members of the office force in the work in which they are engaged, and at the same time to prepare them for other work that they might be called upon to do later on; in other words, to equip them for advancement. To the older employees the object of this school was that they might become more familiar with the work in other departments and more efficient in their present line of duty.

It has been the practice to hold these night schools every two weeks. Invariably the first half hour is devoted to some one topic. The remaining hour is given up to forming classes under competent leaders, who explain the various problems of accounting, Motive Power, Maintenance of Way, Fuel Stores, etc., by going through

the work carefully. Any doubtful question as to a correct charge is carried over until the next meeting, when a decision is rendered, if possible.

Some of the members of the Clark Avenue office force

This class in accounting does not confine itself entirely to study. Every few weeks the usual study period is dispensed with and the evening is spent socially; either a

lunch is served in the division accountant's room by the ladies of the class, or the class participates in a supper elsewhere. The funds to cover this expense are provided for by a small assessment from each member.

Up to the present time the night school has confined itself to the Division Accountant's office force, but invitations will be extended to the various offices, such as Superintendent's office, General Foreman's office, Agent's office, etc., so that any employe in these offices who wishes to avail himself of the opportunity to study accounting may do so.

Traffic Department

Correspondent, C. H. GRONINGER

Just to prove to our employes in particular, and the public in general, that we of the Assistant General Freight office, Division Passenger office and Coal Freight office, located in the Park Building, Cleveland, are alive, effective in this issue and continuing ad infinitum, we intend letting you hear from us each month.

As an opening statement, we call your attention to the fact that the offices herein represented have a 100 per cent. representation in the Baltimore and Ohio Welfare Association of Cleveland, and, we assure you, the Association is 100 per cent. Baltimore and Ohio.

We have in our midst one J. W. Freeland, freight representative, who has recently joined the society familiarly known as the "Benedicts." Mr. Freeland has our best wishes for a happy life.

While our minds are running in this channel, which we need not mention is a very dangerous one to dwell on, we recently learned that the newly married S. M. Brown, traveling passenger agent, is a model husband. Mrs. Brown was embarking on a little trip and, fearing that she would get lost between her home and the passenger depot, Mr. Brown dispatched his worthy secretary to escort her on her precarious trip from her home to the station.

J. G. Strickenburg, division passenger agent, is just recovering from a serious illness and we sincerely hope that his recovery will be complete, as he has the respect and best wishes of all the employes on this division.

While the results accomplished by the Welfare Association of this terminal along the line of increased sociability among the

Engineer and Mrs. J. J. Crouch, Massillon, Ohio

"Pete" Monigos, trackman

employees, a greater and livelier interest in our Company, etc., have been noticeable, yet is has accomplished some wonderful results along another line. We recently noticed that a certain tall, blonde young man from the Coal Freight office, was displaying a marked interest in Police Department matters and, wondering at his interest, we made inquiry and uncovered a budding romance. In this connection, we might add that the young man in question is just "wild" about red hair.

Massillon

Engineer and Mrs. J. J. Crouch have taken a trip to Hot Springs, Arkansas, where Mr. Crouch has already taken several baths and tells us that he is feeling fine. The accompanying photograph shows their present mode of traveling—a little different from a trip via the Best and Only.

On March 18 the Griscum & Russell Co., through the influence of Mr. Fitzgerald, trainmaster, shipped Baltimore and Ohio 181118 from their plant at Massillon to Mare Island, Cal., giving us a long haul. Car contained material for the U. S. Navy. That is the kind of work that makes the bell ring. Would like to hear of many more employees doing this kind of work on the side.

E. A. Krier, chief yard clerk, Massillon, received a small shipment from a mail order house at Chicago and requested that the shipment be sent via our line. Request was fulfilled and shipment reached Massillon in good condition and in good time. No matter how small a shipment we get, we should always try to get the business. Our road needs it, and needs it badly, so now let us all pull together and get some. "Every little bit added to what you get makes just a little bit more."

W. E. Brugh, clerk to trainmaster, and E. J. Crampton, agent, borrowed the car foreman's speeder on March 21 and pumped to Crystal Springs in order to get the exact location of the old gravel pit. That is a very poor way to judge distance, hard on the back and hard on the machinery.

"Archie" Seifert, billing clerk, Massillon Freight House, has been doing his bit in soliciting for business for the Railroad. He has been getting a number of carloads in the last few months. Keep up the good work, "Archie."

Austin Sanders, the popular young clerk, Agent's office, seems to be all wrapped up in the Welfare entertainments at Cleveland, having attended everyone so far. He reports having a most enjoyable time. He says toe dancing is his hobby.

Jennie Eckroad, cashier, Freight office, says she doesn't believe in dancing, and that the short skirts the girls are wearing are scandalous. She has not yet been able to convince Charles and Austin to see it as she does.

At its last meeting the Freight Claim Prevention Committee of the Cleveland Division appointed E. J. Crampton, our local agent, as chairman. We all know that Elmer is there with the goods and it demonstrates his popularity among the employees.

"Ed" Richards, demurrage clerk, has received a full supply of tax blanks and advises all the boys to get busy and list their valuables. "Ed" is tax assessor of the third ward, Massillon.

Oliver Seifert, formerly tallyman, has been appointed foreman of the freight house at Massillon. Oliver is a good, reliable employe and his many friends are certain of his success.

Dover, Ohio

Conductor E. C. Pratt and wife went to Hot Springs, Ark., on April 4, Conductor Pratt getting a leave of absence for one year. He intends to spend that time on his uncle's ranch. We hope that the change in climate will be a benefit to Mrs. Pratt's health. We wish them both good luck.

Conductor E. J. McIntire returned to duty after an absence of 90 days. "Ed" claims he intends to "hit the ball" for the rest of the year. We hope so, "Ed."

Conductor J. L. Wilcoxon took an extended trip through the South, spending most of the time at Port Tampa, Fla. "Jim" thought we didn't know what he was going for, but the little "bird" tattled on him. He has settled down considerably since returning. Well, we hope you have much success with your life partner!

R. M. Morrison, known as "Saw Mill Bob," wants to give his automobile away, but no one wants it.

J. A. Keifer, operator at "GI" Tower, is planning to run for sheriff next election. He assisted the Dover police and the county sheriff to round up a Greek that shot another Greek at Dover on March 30. We all wish "Jim" good luck, and will help him get the job.

Canton

"Vince" Kilbow, our esteemed assistant cashier, freight house, has apparently been pluggd by "Little Dan." For the past 5 years "the little old town" has been big enough for "Vince," but lately he has been missing 40 and 41 in and out of Canton.

B. J. Watterson, car inspector, has been transferred to Sandyville because of business depression. "Barney," be careful of the chicken dinners.

Engineer W. J. Diebold decided to join the ranks of the high wheelers, but after putting on the goggles, he decided that it was a rough rider's job and, preferring bucking the extra board out of Canton, he has returned to the fold.

Gertrude Straub has been carrying a red spot on her check for over a week. How come, "Gertie?"

They have Olivia back in the cage again. We mean the cash cage, not the jail.

On March 29, by a margin of 184 pins, Baltimore and Ohio bowlers of Canton Freight House scored a victory on the Y. M. C. A. alleys over the W. & L. E. pin smashers, taking all three contests.

The victors totaled 1981, averaging 657 as against 1797 for the W. & L. E. quintet,

an average of 599. They contributed totals of 627, 689 and 665, their closest shave being in No. 2 game, which they took by 54 pins when the Wheeling went to 635.

The averages were:

Wheeling and Lake Erie Railroad.—L. Deslye, 139; F. Brown, 113; P. Huffman, 82; W. Gassler, 119; H. Swisshelm, 145.

Baltimore and Ohio Railroad.—L. Swanson, 133; W. Lehr, 122; L. Warburton, 134; J. Metzger, 118; W. Swanson, 149.

You have no idea what a fireman can do until he has to do it. "Bill" Ebinger is throwing hash in a restaurant at Willard, and "Babe" Smith is pushing a truck at Willard Freight House.

Business got slow for Ralph Hull, so he asked for a furlough and went home to work in the grocery store there. That's his story, but we believe there's a woman at the bottom of it.

Chicago Terminal

Correspondent, THOMAS H. WILLIAMS

Periodical staff meetings are being held, at which H. M. Jouver, acting general freight agent and passenger agent, presides as chairman. All of the agents and assistant agents on the Baltimore and Ohio C. T. R. R. attend these meetings, which are held to discuss matters of general interest from a traffic standpoint, such as correct application of tariffs and division sheets, quotation of rates, routing, solicitation, etc.

The active work being done in this respect regarding solicitation of traffic, is producing good results. There is still room for improvement, and all of the employees of the various departments should be on the lookout for any available traffic, and, whenever the opportunity presents itself, endeavor to secure additional tonnage.

A quartette from the general offices, Garrett, Ind. Left to right: Vesta Marvin, Marge Olinger, Margaret Hammers and Dorothy Brinkman

The solicitation of traffic for the System need not be confined wholly to that of freight traffic, as there are some splendid passenger trains moving in and out of the Grand Central Station that should be filled to their capacity. A great many of our friends are already planning their vacations, and some will undoubtedly travel East. If we will but remember that our own company is in position to carry them in comfort, and if we emphasize this fact to our friends, it will be to our mutual advantage, especially at the present time.

It gives us pleasure to announce that the essay by D. M. Julian won third prize in the recent Safety drive. Mr. Julian's 10 minute speech at the Safety rally took 45 minutes. Mr. Julian is captain on the Safety Test Drive Team in the Robey Street Zone.

The Accounting Department now has a safe margin in the Bowling League. Nothing more than could have been expected.

Ruth Bercherd is again at the typewriter in the Freight Claim Department. Ruth received a letter from the "home town" and it was too sudden.

Our Bowling League has an idea that it can pick a team that will outclass anything in Baltimore offices.

Clarence Rasmus, Claim Department, has a Maxwell. He says it will go when he don't want it to and stops when it should be going. Recently he offered a young lady on the north side a ride. Clarence got to the appointed place, found the young lady waiting at the curb, but he could not stop. He told her that he would return. He came back in about 15 minutes, but Clarence had to apologize. He had run out of gas.

Charles Johnson, chief clerk, Accounting and Freight Claim Department, was pretty badly used up after making his garden. He wonders whether anyone else ever felt that way.

Joe said to Rose, "How do you propose?"

Rose said to Joe, "I don't know."

Joe said to Rose, "Do you like to take trips?"

Rose said to Joe, "Let's go."

"Charlie" Woods, Car Accountant's office, has resigned and is going to try summer resorting at Antioch Lake. He will be glad to see any of our crowd whenever they are in the neighborhood.

Talking about star bowlers, Clarence Seifert is some classy roller. Clarence can throw a hook that can circle the Lincoln Street roundhouse with great ease. "Jimmy" Smith and "Joe" Shaw have nothing on our Clarence when he gets started, for the can talk a 250 game better than anyone ever saw it rolled. He parts his hair in the middle, girls! AND wears a derby.

Why does Miss Philbin applaud so vociferously when a certain young man on the Transportation Bowling Team makes a strike?

"Vic" Hansen's baby boy now tosses the Victrola around before breakfast for exercise.

Yardmaster F. B. Carr, who has been on the sick list, is convalescing now at Hot Springs.

Martin Schaub, tank foreman, East Chicago, who has been critically ill for some time with erysipelas, is improving and expects to be back on the job soon.

D. J. McCarthy, pensioned section foreman, who has been in St. Anne's Hospital for some time, is slowly improving.

The accompanying picture represents a part of the Agent's office force at East

Misses Susan Whelan, Geneva Ohlstrom, Ruth Brown

Chicago, Ind. They are, from left to right: Susan Whelan, cashier; Geneva Ohlstrom, stenographer, and Ruth Brown clerk. We don't know just who took this picture, but from all the pleasant smiles it must have been our congenial agent, Mr. Hickok. We are sorry to say that Ruth is not with us any longer, and we do miss her. Susan and Geneva are still on the job.

Engineer Wordelman is rapidly recovering from his recent injury.

Engineer Gaboriault is on the sick list.

Yardmaster J. O. Neff has broken a record for the months of February and March, having worked through this time without being put on the sick list.

N. T. Paarlberg, agent, Barr Yard, cleaned the spark plugs on his "speeder" and adjusted the carburetor and, by shoving it from Ashland Avenue to Halstead Street, managed to get speed enough to ride as far as Barnard's Seed House, where he puts it up for the night.

Harvey Zimmer, operator, Harvey Junction, has returned to duty after being on jury service for two weeks. He says from what he saw and learned in the courts of Cook County, he is through with women for life.

Agent W. Weiss, Harvey, visited Barr Yard recently. All of the office force were pleased to make his acquaintance.

Conductor Thomas Earner would like to find the man who "copped" his Spring overcoat from the Yardmaster's office at Barr. This coat has been worn by Mr. Earner for the last 20 years and he doesn't see how he can get along without it.

F. K. Moscs called at Barr Yard recently and what he left was—oh, so sweet!

The graduating exercises of the Safety Supervisors' School, which has been conducted during the past year by the Chicago Safety Council, were held on the evening of March 29.

Three hundred of the 650 students were awarded diplomas. We were represented by: Superintendent J. L. Nichols, Trainmaster F. S. DeVeney, and Chief Coach Yard Electrician W. E. Buckmaster, to whom diplomas were awarded for regular attendance.

The school was attended mostly by Safety supervisors of industrial classes in the Chicago District. The interesting entertainment was given by the officers and employees of the industries.

Ohio Division

Correspondent, A. E. ERICH, *Secretary to Superintendent*

Time Clerk O. G. Erich was surprised by Dr. Stork with another baby girl. Congratulations!

The territory of District Safety Agent W. O. Allison, has been extended to include the Charleston and Ohio River Divisions. Success go with him!

During March, the Ohio Division received on transfer at Thrifton, Ohio, an average of 35 cars of Ford automobiles and parts, per day. This business (as is the case with all business received by the Baltimore and Ohio) was handled promptly, because of which we confidently expect these shipments to increase.

Miss Eva Eberle, stenographer, Superintendent's office, and Miss Edith Woodall, stenographer, Division Engineer's office, recently made a mysterious trip to Roxabel, Ohio, presumably to get eggs; however, "inside information" has the egg part as a "blind." Also a few days later a basket of eggs were shipped to them, and not from Roxabel. These young ladies are very sure that no one knows just what they did on this trip, but they should remember that the proverbial "little bird" tells many things.

We all extend to Roundhouse Foreman and Mrs. Howard our sincerest sympathy in the loss of their only son, "Jack," age 8 years, who, while on his way home from school on April 1, playing tag with companions, was struck by an automobile. His skull was so badly fractured that he died the next morning without regaining consciousness. The body was taken to Washington, Ind., for interment.

The following letter has been sent to all passenger conductors, by Trainmaster T. E. Banks:

"All Passenger Conductors:

"Courtesy shown to patrons of any railroad by the employees is one of the best assets that can be had and with this in mind I am writing you with a view of starting a campaign on the Ohio Division whereby passengers riding on our trains will be so pleased with the courtesy shown by our passenger train employees that their trip will be a pleasure, and the nice things that will be said as to the courtesy shown them will not only be a pleasure to the passengers but will be a pleasure to you as well.

"Courtesy does not cost one penny and I feel sure that the benefit derived will be worth more than words can express. I would suggest to conductors that when taking up collections, they give the impression to the passengers with whom they deal that they are glad they are riding on our train. An expression such as 'I thank you' when accepting the ticket will go a long way toward making the passenger feel at home and the effect will be far reaching. Patrons receiving such courtesy will undoubtedly demand a return ticket reading 'via the Baltimore and Ohio line.'

"By the above I am not inferring in any way that our passenger employees are not courteous to the traveling public, but I desire that a special campaign be made on courtesy. As you all know, the Ohio Division has always ranked among the first in all campaigns that have ever been launched, and I trust that each of you will give your hearty cooperation and support for the benefit of the passenger service."

Let's keep hammering at them. SAFETY FIRST. PREVENT CLAIMS. SAVE FUEL. MORE BUSINESS.

The most important thing on the Railroad at this time, is the getting of more business, to help out during this depression. To this end, we should all bend our efforts.

The first step toward making this possible is courtesy. Apply this to personal experience. In making a purchase you are greeted by an employee, who has a frown and a "grouchy" manner; your inquiries are answered grumpily, no trouble is taken to explain or show you the goods desired, and undoubtedly the purchase is not made or it

is unsatisfactory. On the other hand, you enter another store; the employe comes to you with a friendly greeting and a smile; your questions are answered in detail, and everything possible is done to get the article you desire. To which store do you go back, when again desiring any article obtainable in either?

This same principle applies on the Railroad. If a patron asks you for information or assistance, and it is given in a courteous, pleasing and "call-again" manner, is it not likely that when it is again necessary for him to travel his first thought will be Baltimore and Ohio?

To make others happy by being courteous, costs us nothing. As a matter of fact, it pays a big interest in that it makes us, as well as our associates, happier.

O. J. Pfister, agent, Leesburg, Ohio, recently took unto himself a wife. We all wish him happiness.

John J. Clark, clerk to road foreman of engines, has been promoted to clerk in Trainmaster's office. Earl Schweitzer, Division Accountant's office, succeeds Mr. Clark. Best wishes to both!

Indiana Division

Correspondent, H. S. ADAMS, *Chief Clerk to Superintendent*

The engagement of Miss Stella M. Laupus, clerk to road foreman of engines, was announced a few days ago at an interesting party at the home of her sister, Mrs. Charles Appel. The date has not been announced, but we believe she is to be another June bride. George T. Huffman is the lucky man in this case. He is employed in Division Accountant's office. Both are popular with their co-workers. We extend our congratulations and best wishes for their happiness.

A pretty party was given a few nights ago at the home of Dr. and Mrs. A. G. Osterman, when they announced the engagement of their daughter Lillian to Mr. Paul G. Brunow, of Frankfort, Ind. Miss Osterman has been in the division offices for several years, and at present is employed as stenographer to chief clerk. The wedding will take place the latter part of May.

Miss Osterman is well liked by her office associates, and all are very profuse in their congratulations.

Naturally the bride elects are very happy. It is rumored that there are other announcements to follow at an early date, but we are not privileged to mention names at present.

Accounting Department Circus Side Show Attraction

Ladies and Gentlemen—We have one of the most entertaining, most wonderful and spectacular side show attractions ever witnessed by anyone before in all the world. These people are beyond a doubt the best that money can hire. You will note from the large banners hanging before you, that there are eight great wonders housed under this big top. Starting at the left side we have:

GARRIO, THE EVER-BLUSHING, ROSY-CHEEKED BLONDE BOY

He will demonstrate to you the way to acquire rosy cheeks and the effects they have.

JESSUP, THE PIANO WIZARD

A true rival to Paderewski. Mr. Jessup will give you a 10-minute concert of classical and jazz music.

BOBBO, THE LARGEST GIANT NOW LIVING

This man is 30 years old; was born and raised on a farm in Indiana. He never had shoes on his feet and was never shaved until two years ago. Many times his father would hitch him to a plow and he would do the work of two horses.

MARYE, THE TALKING GIRL

This young lady talks continually—never ceases. She has a laugh that makes all spectators gaze upon her in wonderment.

BARTLETTE, "DEARIE"—OUR CARUSO

Very popular and in great demand, but well worth the admission to entire show to hear him sing "Love Nest."

EARLINGTON, THE DANCER

This is one everybody will enjoy. He will give all the latest dance steps, and will

be glad to answer any questions pertaining to dancing.

BILLECKER, THE BOY OF MANY SURGICAL OPERATIONS

This young man has been on the operating table 12 different times, and will take pleasure in showing you the marvelous achievements of modern surgery.

MIGUEL, THE WORLD'S MOST RENOWNED PENCIL JUGGLER

Last, but not least, we offer this as the greatest of all eight. He will juggle for you, *a pencil*, for five minutes. After that time he invites anyone to the platform to compete with him in pencil juggling. Any person surpassing him in this art, is offered \$25.00 and a year's contract with us.

As the band starts playing, we open the doors and the show starts in five minutes. Get your tickets here. Let 'er go!

Office of General Freight Agent,
St. Louis, Mo.

Correspondent, FRANCIS PIGLOSKY

On invitation of the Cincinnati Bowling Team, the General Office team from St. Louis visited Cincinnati and, as usual, departed with "ALL" honors.

We wish to compliment the Cincinnati team on the manner in which they entertained us at Cincinnati, and there is no doubt that if they had like ability in bowling the final score would have been different.

Well, all the ladies of the office are even now; each of them has a "white rock." Some of them "mean something" and some of them don't. What will be the next craving?

East Dayton

Correspondent, EDWARD MANNIX

Have you said a good word to your friends who contemplate traveling this summer, or to your merchants about shipping, etc., via the Baltimore and Ohio? Remember that just by scattering such seeds as these you become a booster and a business getter for our Road. Try it.

J. H. Dixon, general night roundhouse foreman, who has been laid up for a short while with an injured foot, is convalescing nicely and will soon be back at the old stand.

E. B. Phillians, temporary acting night foreman, has proved himself very adept in the game, possessing qualifications and characteristics that fit him most admirably for the position.

"Bill" Barry, boilermaker, last shift, was transferred to the second shift recently. "Bill" understands the game of boilermaking and we are glad to have him with us. He says he can tell now when "Gene" Lowry goes to Springfield or how Walter Stiner is progressing as a detective. Hawkshaw has nothing on Walter, judging from the stunt he pulled off at Cincinnati recently.

Our recently appointed Safety First and First Aid Committees are making a good start. These men are all valuable acquisitions to our present standing force.

We are not getting enough MAGAZINES here to enable us to give one to each employe, and the large expenditure that the Company is making for so complete a publication does not permit of an increase in our allotment at this time. When you have finished with your copy, therefore, if you do not wish to take it home to the missus and the children (have you been noticing the Children's Page?) please pass it on to some employe who has not had a copy. Thank you!

Miss Stella M. Laupus

Miss Lillian M. Osterman

No Money Down

The Genuine Gold Medal Electric Washing Machine, the world's best machine, the winner of the gold medal at the Panama Pacific Exposition in 1915, on

4 Weeks Trial

Sensational offer—find out free—send the coupon. The famous Gold Medal Electric Washing Machine sent direct to your home for four weeks of washing *without a penny down!* Convince yourself *first*—that's our offer. See how it washes the clothes clean and white; how it takes the back-breaking drudgery out of washing. No risk to you. Not a penny of cost—not even freight charges—if not satisfied. And—for a limited time, on a special factory output, only

\$99.50!

Yes, washing machine prices smashed on the genuine Gold Medal machine—the best of all machines, better than others at \$165.00 to \$225.00—the very best.

The factory price—less than the price dealers have been paying and are paying right today for this same machine, for this exact, identical 1921 model—direct to you on this sacrifice offer. And besides—

Special Easy Monthly Terms—As Low As

\$4.00 a Month!

Easy terms depending upon amount of first payment—but no money in advance—4 weeks' trial first—then, if satisfied, a year to pay!

More than
35,000
Women
have bought
this identical
model
at the
full price
and are
satisfied
users!

Here's the Gold Medal Washing Machine exactly as you have seen it in the windows of the dealers and exactly as we ship it to you. It has the one way noiseless cylinder which makes even the daintiest laces safe in the Gold Medal.

Lovel Electric Swinging Wringer with Automatic Safety Release, adjustable in 3 positions, recognized everywhere as the best wringer ever made. Genuine DOMESTIC ball bearing motor, known as the best for washing machines. Automatic oiling system. All moving parts enclosed—no danger to children. No belt to get out of order—direct shaft drive—simpler. Celebrated Armco Rust-Resisting Iron (used throughout) is proof against any kind of water, soap and alkalis. A good sized family washing done in 90 minutes—about one hour and a half—and at a cost of 2½ cents for electricity. Can be run from any electric light socket or from a farm lighting plant. Every Gold Medal machine shipped on this offer is sold on a

10-Year Guarantee Our absolute written guarantee for 10 years sent with every machine. The longest and most sweeping absolute guarantee ever given on a washing machine. The best—at the factory price—and guaranteed.

Catalog Free

5000 of these Gold Medal Washing Machines must be sold at once. The manufacturer was overstocked; his dealers wouldn't give up their fat profits, so they couldn't sell. So, the manufacturer offered these 5,000 machines to Straus & Schram at the factory cost for quick sale. We offer them now to our customers direct at the factory price, while they last. When these 5,000 are gone, we won't say how much more the price will be.

These machines at \$99.50 are the exact in value of other machines at \$225. We guarantee that these Gold Medal Machines are not priced by the factory, even today, to sell at less than \$150 to any one. Now note this: Lowest price ever \$150; value \$225. And now on a lot of 5,000 finished best machines—\$99.50. Rock-bottom price and a four weeks' free trial and easy terms thereafter. Send coupon—for free catalog.

Send coupon. No obligation. Get our completely illustrated catalog, FREE. Learn about our special factory output offer:—5,000 Genuine Gold Medal Electric Washing Machines, 1921 Model, *while they last*, only \$99.50! The exact equal in value of other washers at \$225. And on easy monthly terms—four weeks' free trial. First come, first served, don't be disappointed—get the free catalog now!

and, like all editors, was obliged to refuse a great many stories. A lady once wrote him:

"Sir—You sent back last week a story of mine. I know that you did not read the story, for as a test I had pasted together pages 18, 19 and 20, and the story came

back with these pages still pasted; and so I know you are a fraud and turn down stories without reading same."

Mr. Page wrote back:

"Madame—At breakfast, when I open an egg, I don't have to eat the whole egg to discover it is bad."—*Writer's Monthly*.

SOLVE THIS PUZZLE AND GET FREE SURPRISE PRESENT

This picture shows one of our friends driving an automobile. In the scenery and around the automobile are six partly hidden faces which it will be lots of fun for you to find. Can you find them? Try it. It will pay you. When you have found four of the faces, mark each with a cross (X), cut out the advertisement and mail it to us and inclose four cents in stamps for packing, postage, mailing, etc., and a beautiful free surprise present will be sent you. You will delight in owning this present.

AUTOMOBILE GIVEN AWAY

We will also make you a present of a Certificate good for 2,000 free auto votes, and tell you all about this splendid touring car which we are going to give away free.

MEN, WOMEN, BOYS AND GIRLS—You can also win an automobile in addition to splendid prizes, such as phonographs, jewelry, silverware, bicycles, watches, cameras, and other things you like. We will also send you a copy of two great national publications worth ten cents. Write your name and address plainly, and inclose the four cents in stamps for packing, mailing, etc., of the free surprise present.

Auto Puzzle Dept. 261, W. D. Boyce Co., 500 N. Dearborn St., Chicago, Ill.

Bread Upon the Waters

"When I was a little child," the sergeant sweetly addressed his men at the end of an exhaustive hour of drill, "I had a set of wooden soldiers. There was a poor little boy in the neighborhood and after I had been to Sunday-school one day and listened to a stirring talk on the beauties of charity, I was softened enough to give them to him.

"Then I wanted them back and cried, but my mother said, 'Don't cry, Bertie, some day you will get your wooden soldiers back.'

"And believe me, you lob-sided, mutton-headed, goofus-brained set of certified rolling pins, that day has come."—*American Legion Weekly*.

Melting Point

We are telling the world, these days, all about Carbosota and Wood Preservation. The fact that the art is a comparatively new one apparently has emboldened some of its devotees to be somewhat emphatic in their public statements, to wit:

Speaker (loudly): "I venture to assert there is not one man in this vast audience who has ever done a thing to prevent the destruction of our vast forests."

Voice from "vast" audience (timidly): "I have shot woodpeckers."—*Barrett Trail*.

Railroad Man's Knife \$1.00

Introduction Offer—Full sized sample of this knife with the emblem or design of the order of which you are a member placed under the handle will be mailed you for \$1.00 and this advertisement. For only 25 cents extra your name and address will be shown on knife. Size 3 1/4 inches long.

Easy Money \$75.00 to \$200.00 monthly. All or spare time. Railroad employees, your spare time can be turned into dollars with a little effort. **We Want a Sales Agent in Every Locality** to introduce transparent handle pocket knives and razors. Under the handles can be placed the emblems of any Railroad or Labor Organization, Secret Society or Fraternal Order. Also the member's full name and address on the other side. Blades, finest steel; handles, handsome as pearl, clear as glass and unbreakable. Every knife guaranteed to be perfect. Every railroad employee will want one as a mark of identification. We can also give permanent employment and exclusive control of territory to those who can give full time in taking orders from the general public. If you are earning less than \$1500.00 yearly, let us show you how to make more.

NOVELTY CUTLERY COMPANY, 335 Bar St., Canton, Ohio

Putting it Over St. Peter

An Irishman who was rather too fond of strong drink was asked by the parish priest: "My son, how do you expect to get into Heaven?"

The Irishman replied:

Double Your Mileage Save Your Money

Long Wear Double Tread Tires have double thickness, which insures them against punctures and blowouts; also weather proof. These tires are guaranteed on a 6,000-mile basis, but often give the user 8,000 miles. Take advantage of this great offer and order at once while our stock is complete.

Size	Tire	Tube	Size	Tire	Tube
30x3	\$5.50	\$1.75	34x4	\$8.75	\$2.65
30x3 1/2	6.50	1.75	34x4 1/2	10.25	2.75
32x3 1/2	7.00	2.15	35x4 1/2	10.50	2.75
31x4	8.00	2.35	36x4 1/2	11.00	2.75
32x4	8.25	2.35	35x5	11.75	2.75
33x4	8.50	2.50	37x5	12.25	2.55

When you order, state whether you want straight side or clincher, plain or non-skid tires. Send \$2 deposit for each tire ordered, balance C. O. D., subject to examination. We allow a special discount of 5 per cent if you send full amount with order. **Refinner free with every tire.** We ship the same day order is received.

"Shure, and that's aisy. When I get to the gates of Heaven I'll open the door and shut the door, and open the door and shut the door, an' keep on doing that till St. Peter gets impatient and says, 'For goodness sake, Mike, either come in or stay out.'" —*Ax-I-Dent-Ax.*

They Couldn't Help It

Two friends met in the Strand the morning after an airplane raid.

"Any damage done your way?" the first asked.

"Damage! Rather!" answered the other. "Father and mother were blown clean out of the window. The neighbors say it's the first time they've been seen to leave the house together in 17 years." —*New York Globe.*

The native of New York had brought his Ozark cousin to see the sights. Together they gazed to the cloud-swept upper stories of the Woolworth building, mounted the Statue of Liberty, and did the weird curb market. Finally they stood at the corner of Fifth Avenue and Forty-second Street, waiting for a chance to dodge the long procession of automobiles and throngs of pedestrians.

The Ozarkian calmly watched the hustling thousands. Then he turned to his friend.

"Picnic in town?" he inquired. —*South-western Telephone News.*

Standard Securities on Monthly Payment Plan

A Safe, Convenient, Profitable and Interesting Way to Invest Savings

Thousands of wage earners and salaried people are buying standard securities on the partial payment plan, investing their savings in stocks and bonds of recognized value, and receiving the interest or dividends which these earn.

It is agreed by most of the quoted authorities in the financial world that securities have touched their lowest levels in the post war reaction. Indications now are that business is slowly but surely picking up and that trade and commerce in the United States are on a more substantial basis than at any time since the war.

We believe that this means a gradual and profitable enhancement in the value of standard securities for all those who now have them.

Until the establishment of the partial payment plan for the buying of standard securities, many people with small incomes were unable to become owners of stocks and bonds. This plan is now giving thousands of such individuals the opportunity of ownership in dividend paying securities. Many such people have invested in the securities of the corporations with which they are connected and in the stability and prosperity of which they believe.

We solicit the accounts of such individuals and will be glad to send them our booklet fully describing our partial payment plan for buying stock in blocks of ten or more and for the purchase of bonds. Please use the accompanying coupon.

Are Baltimore and Ohio Men Loyal?

*Extract from Testimony of Mr. Daniel Willard before the Senate
Committee on Interstate Commerce, Washington,
May 17, 1921*

Senator Cummins, Chairman of the Committee, inquired of Mr. Willard: There is a general feeling abroad, voiced by a good many people, that between the railway companies and the men there is bitter hostility, or a hostile sentiment, which prevents efficiency either upon the part of the railroad companies and their general officers or upon the part of the men themselves. I would like to have your view of that phase of the matter, although it is not very material to the immediate question that you are discussing.

Mr. Willard: I will be very glad to give my views on that matter, Senator Cummins. Unfortunately for two or three, or perhaps for five or six years, previous to Federal control, the railroads were not able in all instances, or at least in many instances, to pay their men wages that were fairly comparable with wages being paid, we will say, by the United States Steel Company and other concerns that we had to compete with for labor. That was due to the fact that during all that period prices were gradually going up, and wages in other lines of employment were going up because prices were going up. And there was a natural effort and desire on the part of railroad employes to have their wages increased also. The companies were compelled to resist that tendency as much as possible because the income of the carriers was fixed, they could not readily raise their selling prices, their freight and passenger rates. The railroads tried to get an increase in 1914, and it was granted in part, but generally their efforts to get higher rates were unavailing.

Therefore, the railroads were forced in a way to hold their wages down, and that had undoubtedly resulted in some little feeling growing up, but which was not evident so far as my personal experience went, in the character of the work done by the men. During the period of Federal control, however, and I say this as my opinion as the result of observation, it seemed to me that there was a strong desire in some directions, in connection with the Federal Administration, to make out of the Federal control a permanent condition of government ownership of railroads. In that

connection it was pointed out, so we read in the papers, by distinguished officers in connection with the railroad administration, that the railroad employes were no longer working for their own railroad companies, but were working for the Government, and would not be permitted to be "kicked around" in the future as they had been in the past, implying that the railroad employes had been kicked around in the past.

Such influences as that certainly did not make for harmonious relations between the companies and their employes. Then, unfortunately, at the end of Federal control the railroads were turned back to their owners with an unadjusted wage situation. The cost of living had continued to go up since the first wage increase made by the Director General of Railroads, and wages in other lines of industry had also gone up. The wages of railroad men had not gone up proportionately, and that unadjusted situation was inherited by the railroad companies—and naturally any discussion involving the wages of two million men, meaning the expenditure of hundreds of millions of dollars, will bring out strong expressions and develop strong feelings on both sides. I rather suspect that there have been criticisms on the part of the management and on the part of the employes that simply reflected the feelings growing out of that situation and that were, perhaps, not wholly justified. And that fact may have given rise, as it undoubtedly does, to the thought that there is a spirit of underlying enmity between railway managements and their employes. But I wish to say as definitely as I can that in my opinion that feeling is not justified by the facts; because, and I repeat the statement—

I have never during my connection with the Baltimore and Ohio Railroad, and I speak of that railroad because I know more definitely about it; I have never seen during my connection with the property a time when the men seemed more loyal to the property and more anxious to do their work efficiently and well than they are doing this very minute. So I do not believe there is any such feeling as stated and to which you referred, Mr. Chairman.

Twelve Hundred Cars of Freight Reported Secured as Result of Veterans' and Other Employees' Solicitation

Slight Increase in Commercial Car Loadings on System do not Permit of Any Let-up in Individual Campaign

FAVORABLE reports of the Veterans' and other employees' campaign in soliciting new freight and passenger business for the Railroad continue to come from all parts of the System. The official records, as tabulated from the postcards supplied the Veterans in reporting business secured, showed that with the week ending June 4, 1194 carloads of freight have been secured during the progress of the campaign. There have also been received quite a number of cards reporting substantial passenger business.

In the opinion of those in close touch with the campaign, however, the postcards represent only a fraction of the actual business which is coming to our lines as a result of this employee solicitation. In many cases the cards have not been available and the business has been secured and never reported. In other cases employees have simply gone out and gotten the business and only mentioned the fact casually to their acquaintances on the Railroad.

At this date there is one phase of the campaign which is distinctly disappointing, namely the number of Veterans and employees reporting business secured with the week ending June 4, as compared with previous weeks. For the week ending May 7, 29 Veterans and employees; May 14, 19; May 21, 27; May 28, 10; and the week ending June 4, 12 Veterans and employees, appeared on the list as having secured business indicated by return of postcards.

This record is, of course, entirely inadequate as indicating the total number of employees securing business from week to week, but it seems that with almost ten thousand organized Veterans on the Railroad, the tabulated postcard results should continue to be larger for a long time to come. The probability is that many of the Veterans are not sending these cards in and it is hoped that from now on they will do this so that due credit may be given them. For reasons explained elsewhere on this page, the names of the Veterans and other em-

ployes returning postcards and received since the lists were printed in the May issue, do not appear in this number of the MAGAZINE. Eventually they will appear so that all employees may know of the splendid work of many of our old timers.

Non-Competitive Business

Quite a number of postcards have recently been received by Mr. Hartzell, manager Commercial Development, indicating solicitation of business houses at non-competitive points. This shows the same fine spirit on the part of the employees responsible as does the solicitation of business at competitive points, but—in the words of the cartoonist, it doesn't mean anything.

Where the Baltimore and Ohio is the only road serving a community, the business there of necessity comes to our lines, and the effort expended on soliciting such business might very much better be used at other places, where other railroads have shipping facilities and where, especially in this period of subnormal business, we need every dollar's worth of traffic that we can get. Keep after the shipper who thinks the other railroad can give him the best service. Ask him to meet the Baltimore and Ohio and its men and see what real service is.

Methods Vary in Getting Business

It is interesting to note in how many different ways business is being secured. Success comes not only to

the employees who take the time to go out and make an earnest and direct solicitation but also to that other employee who constantly has "an eye to business."

A Demurrage Clerk at Lima

One interesting illustration of this is contained in the following report from W. T. Cahill, traveling representative, Transportation department, submitted through G. D. Brooke, superintendent Transportation, Western Lines:

On April 20 a shipment of trucks was offered at Lima, Ohio, requiring a 40 foot end door box car. Two similar shipments of the preceding day had used up all available cars of this type and it looked as if the shipment would be lost to a competing line. Dennis Morrissey, demurrage and interchange clerk, saw a westbound freight train pulling into an adjoining yard of a neighbor line, containing a 40 foot end door car, empty, bound for Chicago. He called the agent of the adjoining line by telephone and suggested that the Baltimore and Ohio would accept this car empty from his line, thereby saving the empty haul to Chicago and two or three days' per diem. The empty car was delivered and the shipment of trucks secured for the Baltimore and Ohio.

This illustrates what can be done by wide-awake employees in securing business for our rails. Dennis Morrissey was employed as demurrage and interchange clerk at Erie Junction from August, 1917, to August, 1918, when he resigned to accept other employment. He was re-employed in the same capacity on May 1, 1920, and has been in the service since that date.

A Yard Clerk at Newark, Ohio

To suggest that in order to make this campaign a success the employee not only has to go after the business but stay with it until he gets it, we quote another interesting illustration received from C. C. Grimm, general yardmaster at Newark, Ohio:

On April 21, a firm called Chief Yard Clerk C. R. MacNealy and requested a 40 foot car to load to St. Louis, Mo. Mr. MacNealy immediately got in touch with Yardmaster C. A. Varner who got proper length and route car and delivered it to firm.

IMPORTANT NOTICE

The strike of the book and job printing and allied trades throughout the country for a 44-hour week, has affected the Relief Department Press at Mt. Clare, where this Magazine is printed. This explains the curtailment in the size of this issue and the omission of many articles which contributors would naturally expect to appear, especially in our regular departments, such as the "Among Ourselves." Omitted articles of sufficient interest will appear in the July issue, which we confidently expect to be of normal size.

Three days later, Mr. MacNealy received a 'phone message from firm that car was loaded and that they wished it delivered to competitive line as quickly as possible. Mr. MacNealy protested, since they had requested the car to load via Baltimore and Ohio, and we had spent approximately two hours yard engine time and three days per diem on car. He maintained that, if consistent, we should have the shipment.

Not getting any satisfaction from the party on 'phone, he took up with Mr. Wilson, chief clerk to division freight agent, who called on the firm and was advised that consignee had requested service via competing line indicated, but that they would immediately ask consignee to accept delivery via Baltimore and Ohio.

As a result three additional cars have moved via our line. Had not this clerk been on the job, the probabilities are that all four cars would have been lost to us.

An Engineer at East St. Louis

Locomotive Engineer George R. Wells, of East St. Louis, Illinois division, has been after both freight and passenger business, as he reports in the following letter to his superintendent, C. G. Stevens:

I am enclosing copy of letter received from Harry Elie, manager of the Schmitz & Shroder Clothing Co. in East St. Louis, in which he advises that he has a consignment of pants ordered from Cincinnati, which will be sent over the Baltimore and Ohio. He also filled out six cards giving names and addresses of firms with which he deals and which he will request to patronize our Road when he orders from them.

I am also enclosing card filled out by George Nugent, vice-president of Campbell Reid Western Sales Stable Co. Another railroad had a special train for the East St. Louis crowd to go to Louisville to attend the Derby, but upon my soliciting Mr. Nugent, who is a personal friend of mine, to go over the Baltimore and Ohio, eight of the men from the East St. Louis Horse and Mule Market made the trip over our Road as did Messrs. Williams, Jennings and Pabst, who are listed on enclosed card. All eleven of these men went on the Pullman both ways, which provided additional revenue for us. I am glad to advise that all of my friends report first class service.

The Agent at Washington, Pa.

President William C. Cox of the Pittsburgh Veterans, reports 15 earloads of freight, most of it giving the Baltimore and Ohio a long haul, secured up to April 30 through the personal solicitation of H. B. Jeffries, freight agent at Washington, Pa. This indicates particularly fine work on the part of Agent Jeffries, because it meant real able soliciting to see all these shippers and persuade them that the Baltimore and Ohio was the road for them to use.

A Pipefitter at Cumberland

General Manager Scheer, Eastern Lines, reports the following interesting solicitation by one of our employees at Cumberland:

Henry Bloss, pipefitter at Cumberland, through his efforts and acquaintance among members of the Plumbers' Association, which held a convention at Cumberland two weeks ago, succeeded in having 15 people attending the convention, who came to Cumberland over another road from New York, return via the Baltimore and Ohio; one who came from Cincinnati via competing road and its connection, return via Baltimore and Ohio, and one from St. Paul who came by competing road return via Baltimore and Ohio.

The Freight Agent at Hagerstown

Service is constantly playing a big part in the securing of this business, an illustration to wit, reported by F. S. Bowman, freight agent at Hagerstown, being as follows:

Herewith enclose letter we received from The Corona Orchard Company, of Hancock, Md., which is self-explanatory. Our promptness in furnishing one iced refrigerator car,

secured seven carloads apples for western points from these people, and besides these seven cars we received three cars from J. M. Guider and Company for our line. Mr. Caspar, of the Corona Orchard, was so much pleased with our service that he solicited the other party's business for our line.

All ten cars were loaded on our competitor's tracks and were delivered us in switching service.

All of our boys here are boosters for the Baltimore and Ohio.

Other employees who have shown especially commendable results in business-getting are:

P. Colligan, agent, Allegheny, Pa., over 500 earloads.

J. S. Montgomery, yard conductor, Newark, Ohio; about 75 cars per month from one shipper.

T. C. Smith, terminal trainmaster, Akron, Ohio; 75 earloads.

S. H. Rhoads, agent, Warren, Ohio; 20 carloads.

F. H. Knox, agent, New Castle, Pa.; 17 earloads.

J. L. Thoman, general yardmaster, De Forest Junction, Ohio; 12 carloads.

Many Employees Helped Write this Splendid Letter

From an executive of one of the large manufacturing concerns on our lines to the President of the Baltimore and Ohio

Mr. Daniel Willard, President,
Baltimore and Ohio Railroad Company,
Baltimore, Md.

May 10, 1921.

Dear Sir:

It is my understanding that recently you and your officials have appealed to all employees of the Baltimore and Ohio Railroad to make a personal attempt to increase the business of the Baltimore and Ohio Railroad, not only freight but passenger business as well.

I have been very much impressed with the manner in which your various employees in this territory have been giving their attention to this campaign. I have been stopped by men from all departments, who formerly showed little interest in increasing the business of the Baltimore and Ohio, as this was not in their line of duty. Yard clerks, claim clerks, billing clerks, in fact it is practically impossible to leave out any certain class of men in this territory who have not been bringing to my attention various reasons why our Company should increase your share of tonnage.

To say the least, this is having an effect, not only with our company but other companies as well in this territory. It certainly leaves you in a happy frame of mind when a billing clerk gets after you for more business for his Company and you know this means increased work for him. I don't believe that there has ever been any campaign conducted by any railroad that has made such an impression on me as this personal campaign now being made.

On account of our plants being located at quite a few different points, it is necessary for me to be constantly talking to some of your men on the long distance 'phone and invariably before the conversation is completed, I have been asked not to forget the Baltimore and Ohio in a very liberal distribution of our tonnage.

I trust that the present spirit which is now being shown by the employees will be maintained and if it is, it will be one of the greatest assets that any railroad could have and I am confident that it will mean an enormous increased business, as the shipping public cannot help but patronize a line where the employees are taking a personal interest in the operation of their Company.

Copy

Yours very truly, etc.

One of the most convincing proofs of the success of this campaign is the fact that so many of our officers have stated that it is not only of immediate help to the Railroad but that it is inculcating a spirit of teamwork between Management and men which will be invaluable in the days to come.

In addition to the several instances above reported of business secured by employes having been brought to the favorable attention of our officers, we have received letters from other officers attesting the permanent value of the campaign. One in particular is from D. F. Stevens, superintendent of the New Castle Division, who writes of his gratification and pride in the efforts to get business and their results, on the part of employes of his division. Mr. Stevens also emphasizes the fact that the campaign has not only produced a substantial in-

crease in business but has also made the shippers who have been solicited feel that there is a fine spirit of teamwork among all Baltimore and Ohio men which will count heavily for good service and satisfaction in the movement of freight and passengers. The result of such an impression among the business men of the communities touched by the Baltimore and Ohio is of incalculable benefit to the Road and all connected with it.

We are glad to report the following substantial increase in commercial car loading:

April—192666
May—199594

The first few days in June just about held their own with the same days in May. A wholehearted effort all along the line will be sure to result in increases before the close of the month.

Just a Word From Stationmaster Long Brings This Substantial Business

SOME of the business that has come to the Baltimore and Ohio during this campaign is remarkable for the ease for which it has been obtained. It has required only the knowledge that the Company needs a quick increase in traffic, the interest on the part of the employe to put himself in line to help get it, and a word

spoken at the right time. Such a case is the one related below, and we add our thanks to those of Superintendent Kruse. Stationmaster Long was certainly on the job and as a result the revenues of the Company will be increased by a number of hundreds of dollars. Note this interesting solicitation, viz:

The Business Getter

By Margaret Talbott Stevens

Oh, the Railroad needed business and it called upon its men
To boost along its service and to praise it now and then.
And most of them were willing, and they told it far and near,
That all prospective patrons might have a chance to hear.
The trainmen and the agents through politeness advertised,
While other folk tried boosting—some pleaded, some advised.

But there were four employes whose stories we'd relate—
How they advertised our service, how they helped to get the freight.
The first was Idle Dreamer, who just sang a little song,
Then Pro Crastinate, who hung around 'til business came along,
Next came old Gloomy Pessimist, who said 'twould never pay—
But the fourth was "Go-And-Get-'Em;" he got busy right away.

Oh, the Railroad needed business, both in passenger and freight,
"A foolish quest," said Pessimist, "we'll fail, as sure as fate."
Then up spoke old Pro Crastinate, "Most any day will do,
"I'll wait until tomorrow, then I'll say a word or two."
And the Dreamer blew his bubbles, and he dreamed that he'd get rich—
But "Go-And-Get-'Em" hustled 'round while these slept at the switch.

And the Railroad got its business, but the man who turned the trick
Was not old Gloomy Pessimist, such folly made him sick;
And it was not Pro Crastinate—he'd let the time slip by,
And Idle Dreamer's visions bright went soaring to the sky;
But the man who got the business was the one who never fails—
For good old "Go-And-Get-'Em" is the man who "shines the rails."

NEWARK, OHIO, April 29, 1921.

Editor—

BALTIMORE AND OHIO MAGAZINE,
Baltimore, Md.

Dear Sir—On April 9, the Lasses White Minstrel Company, 40 people, moved from Newark to Zanesville via our line. Stationmaster C. P. Long at Newark, in conversation with the manager of this company, mentioned the fact that he saw no routing for the company beyond Zanesville and asked how they were moving. The manager informed him there was no routing beyond Zanesville, as the company was breaking up at the latter point. Mr. Long immediately conveyed this information to Division Passenger Agent B. E. White, with the result that Mr. White secured the movement of 25 of these people and a baggage car from Zanesville to Columbus. In addition, he was able to ticket 17 of these people from Zanesville as follows:

One to Oklahoma City, Okla., via St. Louis.
One to Tulsa, Okla., via St. Louis.
One to Paris, Texas, via St. Louis.
One to Dallas, Texas, via St. Louis.
One to Kansas City, Mo., via St. Louis.
Six to St. Louis, Mo.
One to Louisville, Ky.
One to Newport News, Va., via Washington.

One to Pittsburgh, Pa., via Washington.
One to Hamilton, Ohio, via Cincinnati.
One to New York, N. Y.

One to Richmond, Va., via Washington.
I have commended Stationmaster Long for his interest and prompt action in this matter. Cases of this kind are coming to my attention almost daily and indicate that employes on the Newark Division are alive to the situation and are doing something substantial to secure additional business for the Baltimore and Ohio.

Yours truly,
(Signed) H. G. KRUSE,
Superintendent.

Woman Shipper Glad One of Our Veterans Secured Her Business from Competitor

W. C. COX, president of the Pittsburgh Veterans, sends in a business-getting card dated March 31, indicating that Mrs. George S. Heinbach, of Glenwood, Pa., shipped a carload of household goods to Wilkes-Barre, Pa., from Pittsburgh, giving us a part of the haul, instead of giving the business to one of our competitors, as she had intended. In sending in the card Mr. Cox stated that the Veterans of Pittsburgh Division are on the job for more business and will soon begin to show good results. He also wrote:

"The owner of the household goods wanted to give the shipment to a competitor, but I convinced her that we could handle it, so she consented to ship it via our lines, the revenue being \$92.75. The shipment left here on train No. 90 on March 31 and on April 3 was in Wilkes-Barre. The furniture was in her home the next day. In a letter to Mrs. Cox she thanked the Baltimore and Ohio Railroad for the good movement and said that she would always speak a good word for our Road."

Contrasts in Track Construction

To the lay reader the most interesting feature of the following descriptions of track laying in 1830 and 1921 on the Baltimore and Ohio, is the similarity of the general plan. The size and strength of materials have enormously increased, but it is remarkable to note how closely the specifications for today follow those of 90 years ago,—a tribute to the original builders of the Baltimore and Ohio, the pioneers whose work has been the pattern for all railroad construction following their time.

The first article takes us back to the earliest days on the railroad, the second gives the details of present-day construction,—and for all the interesting material and drawings we are indebted to our Maintenance of Way Department.

INFORMATION

AND

DIRECTIONS,

RELATIVE TO LAYING A SINGLE TRACK OF
WOOD RAIL WAY,
ON THE
**BALTIMORE AND OHIO
RAIL ROAD.**

The wood work will consist of cedar, locust, chestnut, mulberry, or oak sleepers, each from 7 to 8 feet in length, and from 5 to 10 inches in thickness, more or less; round, square or angular, which the contractor will lay, or cause to be laid, transversely of the road, at distances from each other of 4 feet from centre to centre.

Of yellow pine, or other scantling

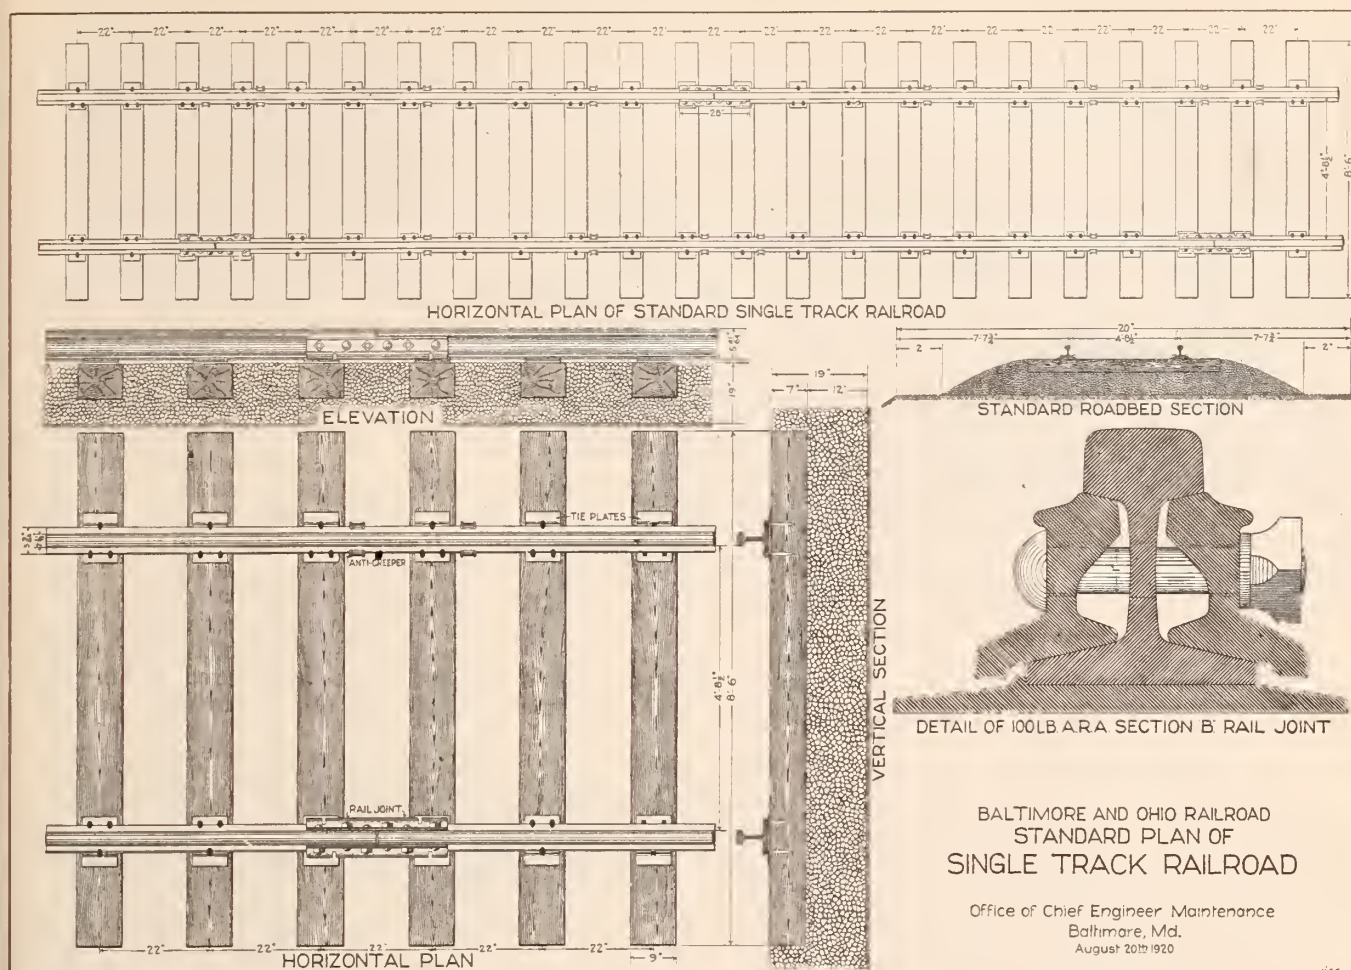

string pieces, about 6 inches square, and from 12 to 40 feet in length, more or less.

The single track will require two continuous parallel lines, of the latter laid lengthwise of the road, 5 feet $7\frac{3}{4}$ inches apart, from out to out, or such other width as the engineer shall direct, resting in notches cut in the sleepers for that purpose, and of wooden wedges or keys driven into the notches to secure the strings to the sleepers. The keys will be about 12 inches long, $1\frac{1}{2}$ inches uniform vertical thickness, $1\frac{1}{2}$ inches wide at the larger end, and taper off regularly to $\frac{3}{4}$ of an inch at the smaller end.

Two notches must be properly formed in each sleeper, from $2\frac{1}{2}$ to 4 inches in depth each, not less than

2 inches of the depth to be clear of sap, and of such width as to admit the string piece and key; that is to say, each notch shall be $7\frac{1}{8}$ inches wide, measured in the direction of the length of the sleeper across the middle of the notch, and to be so formed, that whilst the outer side of the string piece fits throughout one side of the notch, the key before described shall at the same time fit throughout the other side of the notch. The two notches shall be five feet seven and three-fourths inches apart, from out to out, unless otherwise directed by the engineers, and to be free from windings, so as to give a fair bearing to the strings. To accomodate the horse path, each sleeper in the middle part thereof between the notches, and for about $2\frac{1}{2}$ feet in length, is to be reduced in height by cutting or hewing it down to a depth that shall be within one inch of the level of the bottom of the notches, the under side of each sleeper throughout that part, at and near to each end, which is to rest on the broken stone hereinafter mentioned, must be hewn so as to give a fair bearing clear of sap, but not so as to leave the perpendicular thickness of the wood less than $1\frac{1}{2}$ inches in any instance.

BALTIMORE AND OHIO RAILROAD
STANDARD PLAN OF
SINGLE TRACK RAILROAD

Office of Chief Engineer, Maintenance
Baltimore, Md.
August 20th 1920

112

Generally this thickness must be nearly as great as the necessary depth of the notch, and the depth of the part clear of sap, will allow. The whole length of the sleeper on the under side, will, therefore, be hewn as aforesaid, with the exception of about $3\frac{1}{2}$ feet in the middle part, which may be left undressed.

The sleepers having been notched and dressed as aforesaid, or according to such other forms and dimensions as shall at any time be furnished to the contractor for his government therein, he will lay them 4 feet apart as before mentioned, and at right angles with, and transversely of, the road, and nearly coincident with the surface of the ground, but conformable to the levels, surveys, and directions to be given by the engineers, who will designate by marks and stakes, the position, horizontal and vertical, which shall govern the same—the contractor completing the curvature and level between the stakes, as required of him by the engineers.

Under each notch of each sleeper, the contractor will cause the earth to be excavated so as to admit, in the cavity thus formed, $1\frac{1}{2}$ cubic feet of broken stone, which he is to place therein as shall be approved by the engineers, and in a proper and com-

pact manner, 18 inches in length, transversely of the road, and lengthwise of the sleeper, 12 inches in width crosswise of the sleeper, and 12 inches in depth. Provided that should rock, or other hard substance intervene, the depth will be lessened accordingly, in the discretion of the engineers. Each sleeper must be laid so as to rest firmly on two of these stone supports, and so that the central part of each notch shall, as nearly as may be, coincide, vertically, with the central part of the volume of the stone underneath it, and on which it fairly bears. In case the engineers require it, gravel shall be substituted, in whole, or in part, for the said stone.

The contractor shall make such disposition of the excavated earth above mentioned, as the engineer shall direct. Provided that in case he shall be required to remove it a greater distance than thirty feet, he shall be allowed such compensation therefor as the superintendent shall deem reasonable and just.

The sleepers having been properly laid as aforesaid, the string pieces before mentioned, will be correctly laid and fitted in the aforesaid notches of the sleepers, so as to form two parallel and continuous strings of the required level throughout the length

of the road or section, and fastened down in the notches by a key, such as before mentioned, to be driven horizontally, and firmly, at the bottom of the inner side of each notch, but not so as to split or crack the sleeper, or to bruise the parts unnecessarily. The joinings of the ends of the scantlings to each other, must, in every case, be on a sleeper, the keys will be made by the contractor, of wood, found him by the company.

Before the iron is laid, the upper surface of each line of string pieces will be made to present a fair and continuous even plane lengthwise of the road, and on straight lines and slight curvatures, they will be of corresponding levels across the track.

The string pieces having been laid as aforesaid, the iron rails, or bars, being about 15 feet long, $2\frac{1}{4}$ inches wide, and 5-8 an inch thick each, and which are to form the surface of the Rail-Road, on which the carriage wheels will be made to roll, are next to be laid by the contractor upon the said strings of wood, and at about $\frac{3}{4}$ of an inch, more or less, from the inner edge of the same, as shall be directed, and so as to form a carriage track of proper curvature, and of 4 feet $9\frac{1}{4}$ inches width, between the iron rails, or of such other width at

A Baltimore and Ohio Passenger Car in 1830

What an Editor said of Train-riding in 1831

Mr. Gales, Editor of the *National Intelligencer*, wrote on October 31, 1831, giving an account of his journey between Baltimore and Ellicott's Mills on the Baltimore and Ohio Railroad:

"We travelled in a large car drawn by one horse, carrying eight or ten persons.

"In the distance between Baltimore and Ellicott's Mills the horse was changed once, going and coming. In going we did not accurately reckon time, but in returning, the whole distance of 13 miles was performed in 59 minutes—the limit to the speed being the capacity to the horse in trotting, rather than the labor he was asked to perform. The locomotive steam engine, in the train of which cars loaded with persons are occasionally drawn, as well as those loaded with materials of commerce, is propelled at the same rate and might be propelled much more rapidly if it were desirable. But for our part we have no desire to be carried, by any mode of conveyance more rapidly than at the rate of 13 miles the hour. A much greater speed we are satisfied would be attended with considerable liability to accidents and with no little injury to the road. Even at that speed the greatest care and circumspection are necessary, and we do not think that we should feel entirely safe, under any circumstances, in travelling on a railroad by night at anything like that speed.

"As a great highway of commerce the canal is beyond comparison. The canal is far superior to the railroad in reference to economy, accommodation and general adaptation to the wants of the country.

"It will require great care to guard against accidents. For ourselves, we met with no accident of any sort. One of the cows, which we overtook, cast a suspicious glance toward us as the car rapidly passed her, which filled us with a momentary alarm lest she should attempt to cross our path, but luckily, she took a direction from the road."

any place as shall be designated by the engineers; small and thin iron

plates shall be carefully and properly let into the wood immediately under the joinings of the iron rails, and the ends of each two adjoining rails shall each be fastened to the plate by a screw bolt and nut, or by a nail or spike, as the case may be. A small oblong hole to be made in the wood, and charred to receive the nut in like manner as the same was done on that part of the rail road already laid on the city and first divisions of said road, and as shall be required by the engineers.

The ends of the rails to be placed at such distance apart lengthwise of the road, not exceeding one-fourth of an inch, as the engineers shall require, to allow for expansion by change of temperature—the plates will each then be nailed to the wood, with two nails driven perpendicularly down on the top, and two horizontally into the side of the string piece. The iron rail will then be secured to its proper place, in other points of its length, by

West Baltimore Cut, showing wooden railway and horse car as used in 1828 on the Baltimore and Ohio

Standard Passenger Coach, 1921

driving nine other nails, or spikes, into the wood through holes which have been made in the rail for that purpose. The driving of the nails, or spikes, shall be carefully performed, so as not to injure them unnecessarily,

nor to cause an uneven surface or derangement of the parts affected.

The projecting edge, or corner of the string, shall then be neatly cut, or trimmed off, so as to permit the flanges of the carriage wheels which

are to run upon the road, to pass in all places without being liable to touch the wood.

The stone or gravel which are to be placed under the sleepers as aforesaid, will be furnished by the Com-

Main Line Track, Baltimore Division looking east toward Halethorpe from Vinegar Hill Bridge

pany, at its proper cost, by contract or otherwise, on the graduated surface of the road, in heaps convenient for use, or so that the quantity required for each one hundred feet in length of road, shall be deposited within that distance.

And the contractor shall fill the interstices between the particles of stone with sand or gravel, which he shall cause to be well rammed in, with the said stone, as shall be approved by the engineer, and so as to prevent the lodgement of water, in the hole, or amongst the stone. This sand or gravel, shall be procured by the contractor, if found on the surface of the ground within the distance of one hundred feet, otherwise it shall be delivered within that distance at the cost of the Company. The smaller particles of stone or gravel shall be made to occupy the two or three inches of depth next the sleeper, in order that it may be the more easily adjusted to the proper level, and at the same time have a firm bed previously settled with the rammer. No earth, clay, wood, or other improper substance will be admitted to be mixed in the mass of the said stone or gravel, or between the same and the sleeper.

The contractor shall join his work at or near the ends of his section or contract, to the work of the adjoining section or contract, as the engineer shall require.

The sleepers in the rough, of the dimensions stated, as nearly as may be,—the string pieces as they come from the saw mill, and the iron rails prepared ready for laying, will be delivered at the charge of the company, upon the road, on some point, within the limits of the contract. The wood for the keys, and the plates, screw-bolts, spikes and nails, will be furnished by the company. The contractor shall cause the keys to be made from the ends of the scantlings, which may necessarily have to be cut off, so far as they may go.

When turns-out or crossings shall be required, by the engineer, the contractor shall make them, as shall be directed, and shall be allowed, by the engineer, a proportionate compensation for the same. When sleepers are required to be used, which have been dressed in whole, or in part, at the expense of the company, the company will require a fair deduction for the same, to be ascertained by the engineer.

The whole to be performed, as required, and in a correct, substantial, and workmanlike manner, and without unnecessary waste of materials of any kind. The contractor to be paid in full by the company, when the con-

tract shall be completed and approved by such person as the President and Directors may appoint to examine the same—but may receive payment in part from time to time as the work progresses, reserving one-fourth part of the amount which may be due, until the final approval of the work as aforesaid.

Persons wishing to propose for laying the rails, or those who may be engaged in superintending the work, will gain further information by examining portions of similar rail way, already laid, on said road.

Information in Connection With Building Standard Track, 1921

Grading

UNDER this head will be included all clearing and grubbing, ditching and draining, and all excavations and embankments required for the formation of the roadbed, or in any way connected with or incident to the construction of same.

Ditches shall be dug and drainage provided within or without the limits of the Road as the engineer may direct.

The roadbed will be graded from 39 to 41 feet wide at subgrade in excavation for double track, and for single track from 22 to 28 feet. The width of embankments shall be as directed by the engineer, but in no case less than 33 feet wide at subgrade for double track, and 16 to 22 feet wide for single track, except where otherwise directed by the chief engineer, and shall in all cases conform to such breadths, depths and slopes of cutting and filling as he may determine, and no excess excavation beyond the directed widths of depths will be allowed.

The cuts and embankments shall be dressed and sloped in a thoroughly workmanlike manner, brought to the true subgrade and the drain ditches in cuts neatly and evenly finished, as the engineer may require, and the contractor shall not receive compensation for such dressing and finishing of the work, as the price paid for excavation shall cover this cost.

All materials used in the formation of the roadbed will be measured in excavation and shall be distributed and deposited, either in embankment, or for increasing the widths of same, spoil banks or elsewhere, in the manner or in such places as the engineer may direct. No material will be wasted over the sides of excavations, unless so directed, but in no case is it to be wasted on the high or upper

side, where it is liable to be washed down into the excavations.

Where surface ditches are required, the nearest edge of the ditch shall be not less than 10 feet from top of slope in excavation or toe of slope in embankment.

All stone or rock excavated and deposited will be considered as property of the Company, and the contractor will be responsible for its safe keeping until removed by said Company, or until the work is finished.

Sufficient fences for the preservation of growing crops, live stock and other property, shall be provided and maintained by the contractor, at his expense.

Materials shall be distributed and disposed of as directed by the engineer.

It is distinctly understood between the parties hereto that the prices hereinafter agreed upon for excavation, will include all hauling and transporting of such excavated materials and depositing same in such manner and in such places as the engineer may direct.

The contractor is expected to make such personal examination of the work to be performed as will enable him to make such bids for excavation and other work as will cover the cost of hauling the materials and the disposition of same.

Rail

All rails shall be of first quality open hearth steel. They shall be of such section and specifications as submitted by the Railroad Company as a part of the purchase contracts. The Engineer of Tests is responsible for the inspection of all rails at the time of rolling, and he will see that the rails are submitted to the tests and analyses fully outlined in the specifications.

Track Fastenings

Splice bars shall be of heat-treated, oil-quenched steel and shall otherwise conform to specifications No. 295-B.

Track bolts shall be of high tensile steel with hot pressed nuts. They shall conform to specifications No. 204-E.

Tie plates shall be of steel and conform to specifications No. 374-A.

Track spikes shall be of steel and conform to specifications No. 59-B.

Anticreepers or rail anchors shall be of an approved design and specifications.

Stone Ballast

The stone shall be hard, durable and of a quality acceptable to the engineer. It shall break in angular pieces when crushed and be thoroughly screened of all dust, dirt and other foreign matter.

The maximum size of the crushed stone shall pass through a screen having holes not to exceed three inches in diameter. The minimum size shall not pass through a screen having holes one inch in diameter for limestone and one-half inch for trap rock.

Cross Ties

Ties from the following kinds of wood will be accepted:

Ash, beech, birch, catalpa, cedar, cherry, chestnut, elm, cypress, fir, gum, hackberry, hemlock, hickory, larch, locust, maple, mulberry, oak, pine, redwood, sassafras, spruce, sycamore and walnut. Others will not be accepted unless specially ordered.

QUALITY.—All ties shall be free from any defects that may impair their strength or durability as crossties, such as decay, splits, shakes, or large or numerous holes or knots.

Ties from needle-leaved trees shall be of compact wood, with not less than one-third summerwood when averaging five or more rings of annual growth per inch, or with not less than one-half summer wood in fewer rings, measured along any radius from the pith to the top of the tie. Ties of coarse wood, with fewer rings or less summerwood, will be accepted when specially ordered.

Ties from needle-leaved trees for use without preservative treatment shall not have sapwood more than two inches wide on the top of the tie between 20" and 40" from the middle, and will be designated as "heart" ties. Those with more sapwood will be designated as "sap ties."

MANUFACTURE.—Ties ought to be made from trees which have been felled not longer than one month.

All ties shall be straight, well manufactured, cut square at the ends, have bottom and top parallel, and have bark entirely removed.

DIMENSIONS.—All ties shall be 8' 6" long and 7"x9" in section.

All ties shall measure as above throughout both sections between 20" and 40" from the middle of the tie.

These above are minimum dimensions. Ties over one inch more in thickness, over three inches more in width, or over two inches more in length will be degraded or rejected. The top of the tie is the plane farthest from the pith of the tree, whether or not the pith is present in the tie.

Construction of Track

In unloading rails from cars they shall be skidded or otherwise carefully lowered to avoid injury. Whenever it is necessary to drop them, both ends must be dropped together and the greatest care taken to avoid their falling on hard and uneven surfaces.

In laying rail, standard expansion shims shall be used. The temperature of the rail shall be taken by placing the thermometer on the rail.

Ties must be handled with tie tongs and not with picks.

Rails must be laid 4' 8½" gauge in straight track and on curves up to and including five degrees; 4' 8¾" on curves over five degrees and up to and including ten degrees; and 4' 9" on curves over ten degrees. On tangent the rails will be cross levelled, that is, both rails shall have the same elevation. On curves the difference in elevation of the rails shall be made to correspond to the degree of curve. The outer rail shall be given the superelevation specified for curves of various degrees.

The rail shall be laid so that the joints will be staggered, that is, a joint on one rail shall be opposite the center of other rail.

The rails shall be laid without bumping and laid rail by rail.

All ties must be fully tie plated. The tie plates will be given an even bearing on the tie. The rail shall be spiked to the ties in the following manner:

All spikes must be driven vertically with the face in contact with the base of the rail. They should not be straightened while being driven. On tangents and light curves the rail must be full spiked (two spikes per tie per rail) and the spikes staggered so that the outside spikes shall be on the same side of the tie and the inside spikes on the opposite side. On heavy curves three spikes per tie per rail will be used—two spikes to be placed on the inside of each rail. Where only two spikes per tie per rail are used the outside spikes shall be placed ahead in the direction of traffic on double track and on single track, the outside spike must be placed ahead in the direction of rail creeping.

Ties shall be placed 18 to each 33-foot rail. The largest and best ties must be selected for use at the joints. Intermediate ties must be uniformly spaced. Ties must be placed with the heart side down.

All ties must be placed in track square to the line of rail. On double track the ends must be lined on the outside; on single track the ends must be lined on south side, except on curves, where they must be lined on the high side. The ends of the ties on the line side must be 21 inches from the web of the rail.

The track shall be ballasted with crushed stone. Ballast will be placed to a depth of 12 inches under the ties. The cribs between the rails will be filled to a level even with the tops of the ties. At the ends of the ties the ballast shall be 1½" below the tops of the ties. The berm shall slope off evenly for a distance of 5' 7¾" from gauge side of the rails. On double track the space between the inside rails must be filled to the level of the tops of the ties.

The ballast under the ties must be tamped from the ends to a point 18 inches inside the rail, the remainder being filled in and lightly tamped. All ties must be tamped to a uniform bearing and for the full width under the ties.

A sufficient number of anticreepers shall be used to prevent rail creeping. Where anticreepers are used both rails must be anchored to the same tie to prevent the latter from sluing.

The tracks will be put in good line and surface and must be satisfactory to the Railroad Company's engineer assigned to the work. It is understood the track will be given a workmanlike finish.

All surplus material will be assembled at designated points. The right-of-way will be left in a neat and orderly condition.

"On Time"

By Edgar White

WORD leaked out of the Kansas City underworld one wintry afternoon that Barney Branisette, train and bank robber, notorious motor bandit and dangerous gunman, was going to take the night train to St. Louis; that he would meet some pals there and plan another big raid in the South. The gang had cleaned up pretty well in the Fall, but money burns in such hands as those, and the campaign for fresh sinews of war is always on.

A strong force of plain clothes men kept vigil at the Union Station, scanning every face, watching intently for anything like a suspicious move by any in the hurrying throngs.

As the information did not state which road the bandit would take, an emissary of the law was assigned to each train to cross the state that night.

"Bring in Barney dead or alive," was the terse command from detective headquarters.

The snow flurries became fiercer as the night came on. The wind bit with keen intensity. It foreshadowed a night of anxiety for men whose business it was to run trains.

Ben Hearne, the young assistant superintendent of the Burlington, was in his office at Brookfield Station, keeping tab on every train out in his territory. Word had just come to the dispatcher that the St. Louis Limited was losing time on the Kansas City Division because of engine trouble, but was plugging along as best it could. From Cameron Junction came a special message to the assistant superintendent stating that there were three southern railroad officials on the Limited, and that it was a matter of extreme importance for them to reach St. Louis in time to make connection with the Lone Star Express, scheduled to leave at 8 a. m.

The children of adversity travel in droves. An hour before the Limited reached the Brookfield Division the office at the roundhouse called up with the information that Dan Magruder, of the relay engine to be put on at Brookfield, had broken his right arm in falling off a rotten plank into a pit; Dan said he was willing to try to make the run with his left arm, but he was suffering intensely.

Ben Hearne sat with his arms spread out on the desk before him, chewing an unlighted cigar. He might have called up the general superintendent and put the situation up to him, but it wasn't his way to

dodge anything unloaded on his shoulders. There had been an unusual call for enginemen on the lines of the west division all through the day, and there wasn't any available man in the shops. Hearne could run an engine himself, but not for a sustained dash over a division of 175 miles. There was the two miles of curved track around the big hills at New Wales—

Ah! Old Dave Jenkins—"Cap Jinks," they called him, pusher engineer—73 years old, white-haired, but a man of men—taken off the Limited years ago over his vehement protest—never any fault but his years—would he—

Hearne grabbed the telephone. After calling up the house and station the operator at New Wales located Cap Jinks at Joe Heaton's grocery, where he was playing a championship game of checkers with Jerry Murphy, the blacksmith. On such occasions Joe, in deference to the feelings of his customers, kept late hours.

"Can you take the Limited into St. Louis tonight?" asked Hearne over the telephone.

Cap Jinks' old eyes glowed.

"You ought to be ashamed to ask me such a question, Ben Hearne," the old man retorted.

"It's nearly two hours to the bad," explained Hearne.

"What engine will you put on at Brookfield?"

"1908—superheater—and Jack Cowan will fire for you."

"I'm on," returned the veteran. Then to the boys at the checker board: "Fellows, leave the men just as they are till I get back, and I'll show Jerry who's the checker boss of this man's town," and out he strode to his little cottage by the railroad track to get his clothes ready for the night's strenuous job.

* * * * *

In the smoking car a large-bodied traveler wearing a black cap and a rusty coat was curled up asleep. A few feet behind him was a slight man with clear-cut features and keen gray eyes—the Sherlock Holmes of this story, Carl Stamper by name. And he was shadowing the man he had spotted as Barney Branisette, outlaw, whom he had warrant to shoot on sight if he made the least move. Stamper's hand rested on the automatic in his right pocket. He was a man who never took chances. Any minute the bandit might start,

glance around and the battle would be on. Stamper knew the breed he was dealing with.

At the Brookfield Division three men hurried out of a Pullman, made some inquiries and then walked briskly to the forward part of the train. The big black relay engine, its great shining eye piercing through the snow flurries, and bathing the yards ahead in a silvery glow, was panting heavily, like a great horse, snarling to be unleashed. One of the men waved his hand at Hearne, who was handling the machine. The assistant superintendent climbed down to the ground so he could hear above the hissing steam.

"We're three railroad officers," explained one of the men, a large, aggressive individual, with a fighting jaw, "and it's important that we catch the Lone Star Express at St. Louis in the morning. We lost time on the west end—if you fellows could—"

The man tendered a roll of bills. Hearne waved them aside.

"We'll do the best we can," he said; "I'm going to run the engine 20 miles down the line, where we'll take on a man who knows the job better. I'll be in to see you after we get beyond New Wales."

The signal was given and the long train started on its night journey against time. The track was slippery with the falling snow, and sparks flashed from the drivers as they slipped on some of the hills. The run to New Wales was made in 30 minutes. Cap Jinks, bundled up like Santa Claus, was on the little depot platform, surrounded by his comrades of the checker board. His bright old eyes were glowing behind the big goggles he wore.

Hearne smiled. He knew what those goggles meant.

"Now take her, Cap, and do the best you can," he said; "we're late and St. Louis is a long ways off."

The old man climbed up into the gangway. When on duty he was not given to much speech. Quickly he surveyed the intricate mechanism about the gigantic boiler, which extended quite through the cab, and his practiced eye noticed something new—the index on the indicator limiting the speed to 50 miles—a recent rule of the motive power department.

"Huh!" he sniffed contemptuously.

"So long, Cap," said Hearne, starting back.

"S'long, Ben."

The conductor waved his lantern. The old man gently grasped the long, slender lever, the six big drivers took hold, and the train was moving. Further out came the lever, and fiercer the blasts from the short stack

far ahead on the big black boiler. The old man climbed up on the seat, his wrinkled face, rigidly ahead on the two silvery strands that glowed across the rock ballast.

Faster and faster came the blasts until they blended into one continuous roar. The engine leaped ahead like a horse running away with its rider. The big bronzed-armed fireman grasped the chain and swinging open the furnace door tossed great scoopfuls of black food into the white-hot maw. As the door opened a broad glare of red swept out into the night like a conflagration.

Rising out of the gloom, like ghostly sentinels, highway posts brought a warning scream from the bronze throat in front of the cab. Tiny stations, their lights glowing like a star down the line to show someone there was keeping vigil, rushed to-

ward the train, and sank into the darkness behind. Without slackening speed the long train careened around the hills, roared over tall viaducts and swept across the prairie like a meteor.

The Limited was making up time.

Ben Hearne made his way back into the Pullman car where the southern railroad officials had a compartment to themselves. As the superintendent entered the large man arose and introduced himself and his companions.

"We are scheduled to attend a big meeting of railroad men and citizens at Dallas, Thursday night," he said, "and if we miss the Express in the morning the jig's up."

"The weather is against us," declared Hearne, "but we got a good cld-timer ahead, and if anybody can do it he can. We're doing better than 60 miles right now, and when he hits

the straight road by the river he'll let down the bars."

"No danger of being laid out by other trains?" inquired one of the travelers.

"Nothing but a wreck will stop us," smiled Hearne.

Showers of sparks rattled against the ventilators. There was a gentle tinkle of the fancy work about the ceiling lights. The wheels hummed softly and the motion was as smooth as if running on velvet.

"He's breaking the speed limit all right," said Hearne, as he noted the men looking at their watches. "If nothing goes wrong we'll be in at 7.50."

"And we'll sure be under lasting obligations to you and your engine-man," declared the big man; "this thing means a lot to us."

Hearne glanced at the travelers. All of them were well-dressed, alert, active looking men and he felt that no ordinary occasion confronted them. They didn't appear to be the sort of men to get worked up over small matters.

The train stopped at Macon Junction, where it was to detour on the new cut-off. Ten minutes was the normal stop there, but it lengthened out to fifteen. Then Hearne arose to go out and find what the matter was, when the conductor came hurrying in.

"Fireman slipped off the tender while adjusting the water crane," he said in some excitement, "leg sprained badly; what'll we do?"

Hearne went forward to the smoker and rapidly scanned the men there. The big fellow in the cap struck him as about what he wanted. Shoe shook him.

"Hello," said Hearne.

"What's up?" inquired the man drowsily.

"Fireman hurt; you're a strapping big fellow—how'd \$25 suit you to fire the engine into St. Louis?"

The man got up and stretched himself.

"Lead me to it," he said.

The detective heard all this, and as the two men hurried down the aisle, he signaled to Hearne.

"Come back when you're through."

Hearne nodded.

In the cab the injured fireman was sitting on his box seat, a soldier put out of business.

"Jack," said Hearne, "I've brought you a sub—if you give him a few pointers till he gets the hang of the thing I'll come back and help you to a berth in the sleeper."

When Hearne returned to the smoker Detective Stamper said:

"The end of the run"

"That man is Barney Branisette, the bandit."

Hearne whistled. Stamper went on: "There was a tip came into headquarters in the afternoon that he was going to St. Louis tonight, and, not knowing which road he'd take, a man was assigned to the Wabash, the C. & A. and the Burlington. It happened he took this train."

"Certain about your man?" asked Hearne.

"There's just one point I'm a little in doubt about," returned the detective; "when he got on the train I was some distance away and didn't get a square look at his lower jaw. There's a curious scar on it—like a little star that turns red at times."

Hearne started.

"How many men were in that Colorado bank robbery?" he asked.

"Several, but we haven't a direct line on anybody but Barney Branisette. He was the brains of the outfit. If we get him we'll be near the others. It's said he's hiking out for Old Mexico."

"Well, he seemed to take to the job in the head-end all right," said Hearne thoughtfully; "as we approach the city you can go forward and get him before he leaves the engine, if you want."

Hearne went back into the Pullman and rejoined the railroad officials.

"Fireman had an accident at Maccon," he said, "and I had to pick up a sub from the smoker—a big, husky fellow, who seemed glad to get the job."

"Friend," smiled the big man of the group, "you've had some problems to work out tonight."

"Yes," returned Hearne, "and I'm not through with them yet. The snow's falling thicker."

The assistant superintendent sat in the compartment quietly conversing with the officials until the locomotive's shrill blast announced the approach toward old Monro, where a brief stop would be made. Hearne excused himself and went forward. When the train stopped he wrote a message and handed it to the operator, who looked up with startled eyes. Hearne held up a warning finger.

"Stay with that, Harry, until you get word it has been delivered."

"Yes, sir."

Out of old Monro the train rushed across the lowlands, and as it approached the river there was a shade of gray in the east. The searchlight revealed myriads of "diamonds" falling on the land where in the long ago Daniel Boone stalked bear and elk, and where his trusty flintlock ended the career of many a bad red man. Cap Jinks was now "burning up the

trail" where the noted pioneer's moccasined feet had trod their sturdy way.

In the gray dawn the Limited took the long curve, and swung out on the river tangent—tall, rocky bluffs jutting over the track on the west, the mighty mile-wide current on the east. The line here was straight and solid as a rock pier. Cap Jinks, a born sportsman, smiled grimly as he nodded to the new stoker, who seemed to take handily to his job. That smile said:

"Here's where we try out old 1908."

Back in the Pullman three anxious men, watch in hand, counted the mile posts as they shot by in less than a minute and figured—sixty-two, sixty-five, s-e-v-e-n-t-y—s-e-v-e-n-t-y-f-i-v-e—s-i-x—s-e-v-e-n—e-i-g-h-t—

"By the Lord Harry!" cried the big man; "he's making 80 miles an hour with 10 coaches!"

"My money's on the old pusher engineer," remarked a companion; "our friend, the young superintendent, knew how to pick his man."

"If he doesn't land us in the river," remarked the third man, a little uneasily.

"Better the river than to miss connections," returned the large man significantly.

The Limited took the large bridge over the Missouri River at a maintained speed of 65 miles, and then swept across the bottom between the rivers. It was now a straight run to the city, level as a barn door, and Cap Jinks turned the "old girl" loose. By the clock he noted with grim satisfaction that his work had turned back the dial until he had gathered in nearly every moment of the time lost on the west end.

The snow was still falling gently, but it had made no drifts and the big drivers were responding accurately to every movement of the steam control.

There were many grade crossings as the city approached and 1908's warning snarls were almost continuous.

There was a black pall ahead—the pall that always hung over the city in the early morning hours. To the east a thick mist denoted the river. The Limited began clanging over switches, roaring by long lines of freight cars, and suburban industries. A blast furnace shot its red glares against the leaden sky. Men stood in boiler-room doorways as the speeding train swept by, and wondered why the engineman took such a hazard over streets and switches.

The automatic bell clanged weirdly in the morning gloom. Policemen jotted notes in their books to report the flagrant violation of the ordinance. The driver of the heavily

laden truck that missed annihilation by a few inches shook his fist at the train, and said things unprintable.

Great warehouses loomed up and as the Limited took the canyons between them the echoes flung back harshly.

When it seemed the train was about to plunge into the heart of the city, it began a gradual ascent and was on the elevated skirting the river front. Below motors and wagons surged over the granite pavements. Big brick buildings, of a color no one could tell, lined the western side like fortress walls—once alive with business, now tenantless—ghosts of the steamboat days.

The elevated passed, the Limited dropped down to a maze of tracks, dotted with red, white and green lights, and broad searchlights sweeping through the gloom as in maneuvers by a battle fleet.

Ben Hearne was standing in an open vestibule between the smoker and the forward chair car. The conductor came to him.

"Those railroad men in the rear Pullman," he said, "want me to open the vestibule so they can get out before we back into the station; they say they can save time in reaching the Lone Star Express from this side. Guess they're right about it."

Hearne was peering intently across the tracks. Suddenly he spied toward the yard end of the sheds a small group of men. When he got up a little closer he held up his hand, and a man in the group responded.

"Yes," said Hearne, "let them out."

The train moved slowly to a designated point, stopped and then began backing rapidly into the station.

When the air shrilled off the brakes the clock in the midway indicated 7:50.

The Limited was exactly on time.

Detective Stamper came walking up from the engine, having in charge a man in handcuffs—the substitute fireman.

"Came across all right, Hearne," exulted the detective, "didn't try any gun play."

"Just wait here a minute, Stamper," Hearne requested.

A small crowd of men were coming up from the yards. With them were the three "railroad officials," in irons. They stopped on reaching Hearne and his two companions. Hearne spoke in a low tone to the detective.

"Look at that big man's jaw."

As Stamper did so, he started.

"By George! That's Barney Branisette as sure as death!"

The big man grinned.

"Don't you know me, Carl?" he

asked. "I know you well enough. I'd shake hands, only—"

He held up the irons.

The chief of the arresting posse said to Hearne:

"These are the men all right—Branisette, Dinky Murrell and Texas Bob. If you had been late we were going to take the eight o'clock train for Chicago—the old man had a tip they were there, and he told us if you didn't get in on time to pass up—he thought the Chicago tip was best!"

Cap Jinks came waddling up. He knew nothing of train robbers or the drama in which he had played such an important part. The thing that was on his mind was for the good of the service.

"Ben," he said, "this boy here"—indicating Stamper's prisoner—"is a gilt-edged steam producer—you ought to give him a job."

"Puts me in mind I owe him \$25," said Hearne, as he pulled out his pocketbook and handed the man some bills. "By the way, friend, where were you going?"

"I was going to Brookfield to get a job firing but fell asleep and they took me by," said the man; "that's my business—I been working on the Milwaukee."

"All right, my boy," said Hearne;

"we got a job for you. Turn him loose, Stamper; that man's no crook."

* * * * *

When he got his St. Louis *Star* the next morning, and saw the amazing headlines on the first page, Joe Heaton summoned all the checker hounds to his grocery, and as they assembled about the old barrel-heater, he read the big story to them:

"Complete Roundup of the Barney Branisette Gang—Chief O'Hara's Men Mob 'Em in Union Station Yards as they were Heading for Lone Star Express—Were Posing as Southern Railway Officials—But for Wonderful Night Run by David Jenkins, Veteran Pusher Engineer, Officers Would Have Missed Them and Gone to Chicago on Hunt.—Star-shaped Scar Gave Clue to Assistant Superintendent Hearne."

Then followed a thrilling story of the night run, the clever disguise of the crooks, and how Ben Hearne, after his talk with Detective Stamper, became satisfied his "railroad officials" were the men wanted, and foreseeing they would get off in the yards instead of risking themselves on the midway, had notified the St. Louis force where to await the fugitives, who were heading for old Mexico with suitcases full of loot.

When he reported the next night at Joe Heaton's grocery, Cap Jinks took up the checker game where he had left off and beat Jerry Murphy so badly that he had three "kings" and two common "soldiers" left when Jerry was cleaned up.

Now a Property Owner—not a Renter

NEWARK, OHIO, February 17, 1921.
MR. W. J. DUDLEY, Superintendent, Relief Department, Baltimore, Md.

Dear Sir—We received the papers in full and were glad to receive the mortgage and other papers.

We wish to thank you, and also the Baltimore and Ohio Savings Feature, for granting us the loan and also for the easy method of payment.

If it had not been for the easy way of paying, probably we would be renters today instead of having the great privilege of being property owners. Again thanking you and the Baltimore and Ohio, we are,

Yours truly,

(Signed) MR. AND MRS. T. M. TYRELL,
R. 8, Newark, Ohio.

(Mr. Tyrell is employed as a carpenter, Motive Power Department, Newark, Ohio.)

HEISER'S IMPRESSIONS OF THE GLEE CLUB CONCERT

Because of the remuneration received from the large number of concerts that the Glee Club gave for outside organizations during the past season, they were able to make their Seventh Annual Concert on the night of May 23, a complimentary affair, and to have as their guests about 1000 of the officers and employees of the railroad and other friends. "J. O. L." the well known arts critic of the Baltimore *"Evening Sun,"* said in part in his review of the concert, "there is probably no more admirable chorus of men's voices in Baltimore than this one."

Ever Hear of Excess Baggage on a Stock Train?

Fifty Calves Born En Route from the Northwest
Become Orphans at Baltimore

SEVERAL weeks ago the Baltimore and Ohio contracted with J. C. Benson, traffic manager of the American Dairy Cattle Company, to bring about 750 milch cows from Chicago to Baltimore for export. Nature would have its way, however, and as a result the number of the *genus bovinus* which arrived in Baltimore had been increased by about 50 when the run from the Northwest was completed. Huddled together at Claremont, Baltimore, in a pen especially set apart for their use, was this addition to the cooperative

family of cows traveling over the Baltimore and Ohio; a stubborn, bleating, bawling and troublesome lot of orphans, but who were handled with special consideration by the employes at the stock yards and sent down to Locust Point for export along with their mothers and other relatives.

This shipment is of special interest to Baltimore and Ohio men and to those interested in the development of the port of Baltimore, because it

marks the first big shipment of cattle from the port of Baltimore overseas since the World War.

The milch cows comprised in this shipment were given by farmers in the Dakotas, Minnesota and other States in the Northwest, under the auspices of the American Dairy Cattle Company for shipment abroad and for placing on the devastated milk farms of Europe. Farm boys from the Northwest accompanied them to Baltimore and sailed on the steamship "West Arrow" to see that they were properly taken care of and distributed on the other side as planned.

Mr. Benson had these cows assembled at Trippe, South Dakota, and other points and from there they were brought to Calumet Park, Chicago, and turned over to the Baltimore and Ohio at Indiana Har-

EN ROUTE FROM THE NORTHWEST OF THE U. S. A. TO THE DAIRY FARMS OF EUROPE

Upper left: A pen of cows being loaded into stock car from Union Stock Yards at Claremont, Baltimore, en route for export loading at Locust Point. The pens at the stock yards are so arranged as to enable cars in train to be spotted so that doors are opposite entrances to pens. It takes an incredibly short time for trained employes to load cattle on these cars. Upper centre: A part of the excess baggage accumulated during this interesting movement. About 50 calves were born on the stock train between the Northwest and Baltimore. Upper right: Urging Bossie to begin her steep descent into the hold of the boat. Lower left: What space on deck not given over to pens on the West Arrow was taken up by bales of sweet smelling hay. There was no lack of provender provided for the cows, yet with them, as with people on an ocean voyage, we suppose that eating waited on appetite. Lower centre: Fore feet on the boat and hind feet on terra firma—a glimpse of the gangway built across Pier 9 at Locust Point from the door of the stock car to the deck of the West Arrow. Lower right: No lack of fresh air and sunshine for these chosen members on the manifest, quartered in their commodious stalls on the hurricane deck.

EMPLOYEES OF THE BALTIMORE AND OHIO, AND UNION STOCK YARDS, AT CLAREMONT, BALTIMORE

In the center, front row, wearing glasses, is C. W. Pledge, agent, Stock Yards, 42 years' service; on his right W. A. Waltmeyer, chief clerk, 44 years' service; on left of Mr. Pledge is George Habighurst, superintendent of Stock Yards

bor. Accompanying the train of 35 cars of cattle were also 25 carloads of feed, some used on the trip East and some placed for loading at Locust Point on the "West Arrow." The report of our general live stock agent, R. A. Ebe, in regard to this movement is as brief as it is satisfactory, and reads as follows:

"April 13, 1921.

"Thirty-five cars milch cows from the West for export on steamer 'West Arrow' via Baltimore, were fed and rested at Calumet Park, Ind. They were delivered to the Baltimore and Ohio Railroad at Indiana Harbor at 4.45 p. m., Saturday, April 2, and arrived at Connellsville, Pa., 1.00 p. m., April 3. They were fed, rested and reloaded at Connellsville at 7.30 p. m., April 3, and arrived at the Claremont Stock Yards at 8.16 a. m., April 4, which was very good service. Part of the animals were sent aboard the 'West Arrow' on April 12 and the balance on April 13, and embarked from Baltimore that day."

It is interesting also to note that not a cow of the 750 turned over to the Baltimore and Ohio at Indiana Harbor died while being handled by our employes. This is an extremely good record when one considers the hazard attending the loading of the cows into the stock cars, their unloading for feeding, etc. The regulations governing the handling of cattle prescribe that the cows must be fed and watered at least once every 28 hours unless the shipper extends this time limit to 36 hours.

The necessity for dispatch in handling of live stock is apparent at the office of C. W. Pledge, live stock agent at Claremont. He has a special wire there and is kept in constant touch with all cattle trains, which move as Q. D. freight. Copies of all messages relative to the movement of cattle are sent to the operating vice-president, general superintendent of transportation and general live stock agent, keeping all transportation factors fully informed so that such movements can be made without unnecessary interruption or delay.

The accompanying pictures give various views in connection with the handling of this special trainload of cows in Baltimore. After the loading order had been given to Mr. Pledge at Claremont, the cows were loaded into the stock cars awaiting them in an incredibly short time, and within an hour or so were waiting at Pier 9, Locust Point, ready for the steamship people to receive them. The decks and hold of the "West Arrow" looked like a miniature stock yard, substantial pens having been constructed in every available place. The pictures also suggest the large quantities of hay which were taken on board as feed for the cows.

Traffic Manager Benson was unusually pleased with the service which was given him by the Baltimore and Ohio. He used a number of railroads in bringing the cattle into Chicago and said that the service of the Baltimore and Ohio was superior in all respects. He attributed this

largely to the interest which the various officials and employes connected with the shipment took in it, and spoke particularly of the help given him by Mr. Ebe, Mr. Pledge, J. W. Melone, division freight agent, Chicago, and E. L. McWilliams, chief clerk to freight traffic manager at Chicago.

When seen on the "West Arrow" while the loading of the cattle was in progress, Mr. Benson said:

"I owe much of the success of this shipment to the employes and officers of the Baltimore and Ohio. The job had to be done quickly, and I might have had these cows shipped East in smaller lots, hence more slowly and at greater expense. By directing the movements from the various places in the Northwest to the Baltimore and Ohio transfer at Indiana Harbor, we handled the whole lot of cattle in a single movement from there East.

"I have been a traffic man myself for about 15 years and I could not figure any more ideal export point than Baltimore, with the service provided by your Railroad for export at that point.

"Boston, Newport News, Norfolk were suggested, but knowing Baltimore and some of you men, I decided on your line and my whole experience has proved my decision a wise one.

"There will be another similar shipment bound for Europe shortly and you may depend on it that the Baltimore and Ohio will get the business."

BALTIMORE AND OHIO MAGAZINE

ROBERT M. VAN SANT, *Editor*MARGARET TALBOTT STEVENS, *Associate Editor*
Office, Mt. Royal Station, Baltimore, Md.HERBERT D. STITT, *Staff Artist*GEORGE B. LUCKEY, *Staff Photographer*

Hello! Hello!

You remember the old days—not the good, old days—when you took the receiver off the telephone and the operator said: "Hello!" and you said: "Hello!" and then, after these tiresome and perfectly unnecessary preliminaries, the pair of you got down to business and you told her the number you wanted?

The speed and efficiency of the telephone business in this country have relegated such procedure to the galleries of antiquity. Operators in up-to-date exchanges now greet us with "Number, please." Our own telephone operators are complying very generally with the new method of giving numbers as outlined in circulars issued by our Telegraph Department. Among those who have occasion to use the telephone on the Railroad, however, there are still a few antiquarians who persist in the use of the antiquated "Hello!"

In many ways the telephone contact which we have with our business associates on the Railroad and with our customers outside of the Railroad, is the most important contact which we have with them. When a business man uses the telephone it is but fair to assume that he wants quick and satisfactory action. He expects the person at the other end of the wire to observe up-to-date convention. On the Railroad this convention is to give the name of your department and your own name as the bell rings and you take the receiver off. He then expects a pleasant voice to answer his questions and, in fact, the same kind of service straight through the transaction that he looks for when he approaches a ticket window on the Baltimore and Ohio and pays our Railroad the compliment of becoming its customer and using its service.

An up-to-date and successful business house in Baltimore has capitalized the tremendous value of A-1 telephone service in this way: They employ as their exchange operator a young lady who has made a big reputation for herself as an efficient, courteous and attentive business woman. They have capitalized her value to their business by advertising "Call up the voice with a smile. Telephone St. Paul —."

If a concern can afford to advertise—as it can—the courtesy of its exchange operator as a great business asset, think what a tremendous asset courtesy over the telephone means to an organization like the Baltimore and Ohio Railroad, with literally thousands of telephones and tens of thousands of telephone communications daily between its employes and its customers.

When I call a number on the Railroad and a voice at the other end says "Hello," I begin to think things about him and his department, for neither one of them is following the Baltimore and Ohio way and in that

degree, at least, they are out of step with the Company's policy and practice. From such an individual I don't expect much in the way of quick and accurate information. I may get it, but chances are that if he is lax in this particular he is lax in the many other little qualities that go to make up a first-class business man.

On the other hand, when I call a number and the voice at the other end says: "Up-to-date department, On-the-Job, speaking," I am quite willing to believe him and I look forward to getting courteous information, promptly given.

The return which we can get from our service to our customers can be greatly increased by an increase in the spirit of courtesy which we exhibit over the telephone. It is an important thing, important enough for department heads to look into and try to make 100 per cent. Neither an antediluvian nor a chronic grouch can be expected to be called "the man with a smile," either over the telephone or in any other situation. And by the same reckoning neither has a place in positions on this Railroad in which he is obliged to have business dealings—personally, by telephone, or by letter—with his fellow clerks or our customers on the outside.

It has been well said that the man with the smile wins. In telephoning, it is the voice with the smile which wins.

The Antiquarian Jokesmith

The think tanks of the jokesmiths must be running dry. Comes one Frazier Hunt in *Collier's Weekly* of April 2. In his travelogue, the story of "Lightning Carter, Salesman," written in the vernacular and called "Lightning Flashes Around the World," he says:

"So here I am on this fast buzzer with one of those yellow tickets that gives you a top bureau drawer to toss around in. Speaking of sleepers, I just met with a bird all decorated up with a black lamp. Not wanting to be personal, I asked him what it was.

"'It's a birthmark,' he said back at me.

"'Too bad,' I said.

"'Yes, I got it on the B. & O. Pullman last week,' he said."

When Lightning handed that hoary pun to the author, he really didn't live up to his name. That bolt was shot decades ago and is as ancient as the vaudevillians of that day and their custom of telling all their transportation troubles to the audience, often at the expense of the Baltimore and Ohio.

To such humorists we suggest a careful perusal of "Puck" and "Judge" of that period so that they may recognize these ancient wheezes when they meet them. Better still, we cordially invite them to ride the Baltimore and Ohio of 1921 and note how utterly inappropriate it is to visit upon us their eputed imperfections of our railroad forefathers.

To see, among other things, how over \$200,000,000 has been spent during the last 12 years for improvements and additions, and for new equipment, including new track, cars and locomotives:

To note the modern steel cars of the latest and best design with which our through passenger trains are equipped; the double track line extending from New York to Chicago and the 100 pound rail, stone-ballasted, with which nearly all this track is built:

To ride behind powerful modern locomotives, equipped with speed recorders which enable our engineers to run at a uniform, safe and comfortable rate of speed:

To enjoy the smooth riding of our trains, largely brought about by the splendid handling of locomotives

by our engineers, who have really made a reputation for themselves and for the Baltimore and Ohio in the smooth starting and stopping of their trains.

To meet a body of employees unusually anxious to give the very best service and to show our passengers the fine courtesy which that implies.

As we see it, there is only one desirable thing lacking in Baltimore and Ohio service, namely, that not enough people have given it a trial and on that account are not using it regularly because of its superiority.

Such unfortunate allusions to the Baltimore and Ohio as Mr. Hunt made in his article, even though written in the spirit of fun, are certainly not conducive to getting more passengers on our lines. To this extent they are obviously unfair to our reputation and the opportunity which we have of performing a public service, and employees of the Baltimore and Ohio are justified in endeavoring to relegate them to oblivion.

A Splendid Creed For Sportsmen

The Kentucky and Indiana Railroad provides the facilities for the operation of the Baltimore and Ohio at Louisville, Ky. The magnificent record made by their baseball team during 1920 has been duplicated by their basketball team, and their reputation as able and clean sportsmen has been a matter of pride to all their officers and fellow employees.

After the scandal which developed in organized baseball last year and which so often makes professional athletics of various kinds repugnant to the ideals of the true sportsman, it is encouraging to learn that the basketball team of our friends at this point has been so successful, especially because of the fact that each member of the team adopted as his own creed at the beginning of the season the following:

"To live as gently as I can;
To be, no matter where, a man;
To take what comes of good or ill
And cling to faith and honor still;
To do my best, and let that stand
The record of my brain and hand;
And then, should failure come to me,
Still work and hope for victory."

Thanks, Mr. Editor!

In marked and pleasing contrast to a reference to the Baltimore and Ohio from a well known weekly publication, appearing on this page, is the following from the editorial columns of a recent issue of the *Chicago Evening Post*:

Once upon a time we read in the funny column of an eastern newspaper the following joke:

Puck—I want to go to Washington the *worst* way.

Jud—Then go by the B. and O.

Now a new version is written in a serious vein.

Puck—I want to go to Washington the *best* way.

Jud—Then go by the B. and O.

We know this is true because we have just proved it.

When influential newspapers in big cities, of their own volition select our railroad for a nice compliment of this sort, it means a good deal to every one of us employees.

Thanks, Mr. Editor!

Have you gotten your car of freight or your proportion of passengers for our Railroad? The business is moving and if we don't get it some other railroad will. It's a plain case of being up to us employees!

Baltimore and Ohio—Mother of Babies

I was standing in Camden Station about midnight on Saturday, May 7. Passengers for the excursion to New York, leaving at 12.30, were pouring in.

The station was not uncomfortably crowded but all the seats were occupied. It was hot and many excursionists looked tired even before starting their trip.

Especially sorry did I feel for the few women scattered through the crowd who had babies or young children. One mother was alone with three, ranging from two to five. Another was standing in line waiting for the opening of the gate. She carried two big valises, while her husband, a most attractive regular army man in uniform, held a crooning baby.

Then the miracle happened as City Passenger Agent H. E. Lohman, accompanied by a uniformed station attendant, mingled quietly with the crowd, picked out first one mother, then another, and so on, and took them to another exit where he saw them through to comfortable seats in the waiting steel coaches of the train. Seven mothers welcomed his polite inquiry, and, with babies in arms or tugging on their skirts, followed him. Their smiles bore eloquent testimony of their gratitude.

I find upon inquiry that no instructions have ever been issued covering this care of mothers and babies. Hats off to Mr. Lohman for his thoughtfulness and his big heart! And may his example be felt in every relation which our employees have with our patrons.

Perhaps Mr. Lohman remembered that it was the eve of Mother's Day and perhaps he was celebrating. I don't think so, however, for a man of such unusual thoughtfulness and discretion plays the same kindly and courteous part every day of his life. But I do know that he could have honored his own mother in no more fitting way than by his beautiful regard and service to the mothers of others.

There Is Always a Way

Those of us who have children and a real home in which to raise them can sympathize with other parents who are driven to the seeking of a habitation in apartment houses which bear the "No Children Wanted" sign. The bruises and scars on the baseboards and doors of our own homes, however, may permit us to share the viewpoint of the apartment house owner.

Now comes a veritable Lord Bountiful who announces a solution for the difficulty and, incidentally, got some splendid free newspaper advertising in so doing. To the families in his apartments who keep down repair bills during the course of a year, he offers a substantial cash bonus and, just to show that children need not necessarily interfere with the success of this plan, he takes another hazard and offers an additional bonus for every child born in his apartments.

We nominate him for life membership in the Anti-Race Suicide Club.

MORNING GLORIES

*Trumpets of the dawn that waken all the sleeping flowers,
Gleaming in the sunshine of the early morning hours,
Laden with the sweetness that the wild bee takes away—
Heralds of the coming of a glorious summer day.*

*Long ago, when earth was new, there were no clocks to tell
The time of day, so fairies made the morning glory bell,
That when the first white streaks of dawn came darting o'er the sky,
The morning glory might ring out its paean from on high.*

*Though mortals cannot always hear the coming of the morn,
Nor the pealing of the bells that tell another day is born,
All nature hears, and flowers bring their brimming cups of dew
To share them with the first sunbeams that break the darkness through.*

The Business Girl's Lunch

(Continued from the October MAGAZINE)

IN October we gave a series of lunches for the business girl, also a list of the food values of some of the staple articles used in this small, but important, mid-day meal.

"But," protested one of the girls who works at Camden Station, "you give such things as hot tea and hot soup in the menus. Is there any way that we can get hot soup without bringing it from home? We don't have time to go out to restaurants to buy it."

This is the problem that we want to solve in this article. To bring hot foods from home would mean that the girl must either make or heat the soup before she leaves home in the morning. Neither of these, both of which involve considerable time, would be practical, even if the girl possessed a thermos bottle, which is an expensive proposition in itself.

Alcohol as a heat producer has been in use for many years, but its perfection is reached, for the light housekeeper, in the various "canned heat" stoves that are now on the market. There is one of these that is particularly adaptable, because of the space required for its operation and because of its inexpensiveness, to the preparation of the lunches to which we have referred. A miniature kitchen and pantry, including stove, provisions, fuel and cooking utensils for the use of five girls, may be kept in a small wooden box, such as those in which jars of paste or bottles of ink are shipped.

The outfit, excluding the provisions, may be purchased at the 10-cent stores. Here is a list of the articles needed to begin with. Only two cans of heat will be needed for one

week, but there is a saving of five cents on a purchase of three cans. It will keep indefinitely. The provisions given are for a two weeks' supply.

1 stove, 10 cents; 3 cans heat, 25 cents; 1 pie pan (to be placed under stove for protection), 10 cents; 1 sauce pan (quart size), 15 cents; 1 frying pan (small), 15 cents; 1 small earthen teapot, 35 cents; 1 tea-ball, 10 cents; 1 sharp paring knife, 25 cents; 1 small jar peanut butter, 20 cents; 1 small jar jelly, 20 cents; 1/8 pound good mixed tea, 10 cents; 1 package pimento cheese, 15 cents; 1 can sardines or tuna fish, 35 cents; 4 cans vegetable soup at 12 1/2 cents each, 50 cents; 1 pound sugar, 8 cents; 1/4 pound lard (substitute), 6 cents; pepper and salt (mixed), 5 cents.

Bread, butter and milk are purchased from day to day as required, as are also eggs and fruit.

Let each girl bring her own cup and saucer (which can be used for tea on one day and for soup on another), knife, fork and spoon.

Let us take the following menu:

Peanut butter sandwiches,
Hot tea,
Fruit salad.

Ten minutes before you are ready to eat lunch, set up the stove, placing the pie pan underneath. Take the top off the can of heat, adjust the can in its proper place by fitting its grooves to the three sides of the stove, remove the top and apply a match to the contents. Put 5 cups of water into the saucepan, place cover on and let boil. Into the tea-ball put 1 heaping teaspoon of tea, screw on the top and place inside of teapot. At the instant the water boils, remove from fire and pour into teapot. Put cover on teapot and allow this to stand for several minutes before serving. To put out light, simply slide the cover on the can.

While one girl prepares the tea, let another make the sandwiches and another the fruit salad. The last mentioned will take only the time required to peel and slice the fruit and to pour on the dressing, if this is desired. The whole lunch can be prepared in ten minutes or even less. Now we are ready to serve it. Take the pie pan from beneath the stove, lay on it a paper napkin, and we have a serving tray for the sandwiches. A lettuce leaf will camouflage the saucers into dainty fruit dishes, and "Voilà!" as the Frenchman says, "Mademoiselle is served."

There are any number of dishes that can be prepared with this outfit in a short time. All kinds of croquettes are easily made, and any girl who knows how to cook can do a good turn for some poor future husbands by teaching the other girls. Make your own book of quick recipes, as you go on; type-write these on cards and bind with a rubber band; then, when you are at a loss to know what to have for lunch, run quickly through your cards and select according to the provisions you may have on hand.

Each girl may wash her own cup and spoon, or each may have her turn, while another puts the things away. Be very particular about brushing away the crumbs and leave nothing around that will attract mice. If any foods must be kept until the next day, use glass or tin containers. Cheesecloth makes practical dish-cloths and tea-towels, for it can be washed with almost no trouble. When not in use the stove can be folded flat and placed inside the saucepan with the can of heat and the tea-ball.

Here are a few dishes that you will want to try. Each dish will serve five persons.

Corn Croquettes

Take a small can of corn and drain the juice from it. Add 1/2 teaspoon salt, a small lump of butter, 1 beaten egg, and mix with cracker crumbs. Shape into croquettes and fry. Serve hot.

Chocolate Sandwiches

Melt half a bar of sweet chocolate. For each sandwich, spread a teaspoonful between two salted crackers.

Cocoa

Put 5 cups milk into saucepan and let it come to a boil. Take 5 teaspoons sugar and 5 teaspoons cocoa and mix together, adding enough cold water to make it into a smooth paste. Stir this into boiling milk and let cook for 3 minutes.

Scrambled Eggs

Beat whites of 4 eggs until light; add yolks and beat again. Add 1/2 cup milk and 1/2 teaspoon salt. Have frying pan ready with 2 scant tablespoons butter, or butter and lard mixed. Pour in mixture and stir until done. Serve immediately.

Salmon filling for Sandwiches

Take 1 small can salmon and mix with 1 sweet pepper, chopped fine. Add 3 tablespoons mayonnaise dressing and spread on slices of bread or on crackers.

On the Train

THERE was a baby in the day coach. Just a wee bit of a fellow he was, scarcely more than a little bundle of pink in his mother's arms. Everybody knew he was there. No, he didn't cry a bit, but lay just as still as a little mouse.

Baby and mother had boarded the train at Philadelphia. The porter had brought in the suit cases and finding no other seat had led the mother to one just at the division of the coach, a seat whose back went "straight up and down," and, as everybody knew, not very comfortable.

"Here, take this seat," offered one of the passengers. "No, this," said another, "you will be closer to the window." The mother took the seat next the window.

"The light will shine in the baby's eyes," said a kind lady, "suppose you turn him around the other way."

The mother turned the baby around.

"Hey, there, look at the little tacker!" exclaimed a sailor across the aisle to his two buddies.

"Gosh, he's little, ain't he?" remarked one of them.

"How old is it?" asked the grandfatherly conductor, chuckling baby under the chin with his big, clumsy thumb as he waited patiently while mother got her ticket from the handbag.

"Just three weeks," answered mother, proudly.

"It's too warm in here for that baby, take off that blanket," advised the kind-hearted lady once more.

Mother lifted the blanket just a bit. Presently she murmured, "it's a little cooler now," and lay the blanket over baby again.

An old lady with a bag in her hand and the back of her blouse hanging out passed down the aisle. Suddenly she peeked over the back of the seat. Then she came closer and touched the pink blanket with her toil-worn fingers.

"Boy or girl?"

"Boy."

"Thought so, I can generally tell 'em. Always have long legs an' big hands."

And thus the conversation flowed on, but baby, quite unmindful and indeed quite unconcerned with all this ceremony, bowed neither to the left nor to the right in acknowledgment. He slept peacefully through it all as only he could afford to do, for he was King of the Day Coach and we were only his admiring subjects.

it, but was informed by a man in the business that it was only necessary that dry heat be applied. Our friend tried the plan by placing the filter cup over a gas flame for a few minutes, then jarring it vigorously to dislodge the dried up particles, with the result that the percolator is now as good as new.

Recipes

Raisin Cake

2 cups sugar.
1 cup butter and lard mixed.
4 eggs.
1 cup luke-warm water.
3 cups flour.
1 tablespoonful baking powder.
Pinch of salt.
1 pound raisins, dredged with flour.

Beat well together the ingredients to make the batter, adding vanilla to flavor. Mix floured raisins gradually into batter. Bake one hour in moderate oven.

(Contributed by Mrs. Landon, wife of Thomas F. Landon, retired.)

Chocolate Cake

Yolks of 2 eggs.
2 squares chocolate.
½ cup milk.

Beat the eggs and add milk and chocolate. Add ½ cup milk.

1 cup sugar.

Lump butter of the size of a walnut.

2 teaspoonfuls baking powder.

Flour enough to make a batter.

Bake in moderate oven. Cover with white frosting, made as follows:

Boil one cup sugar with ½ cup water until it forms a soft ball in cold water. Remove from fire and beat into this the white of one egg, which has been well beaten. Add vanilla flavoring.

(Contributed by Mrs. M. H. West, Helena, Montana.)

Lemon Pie

1 lemon.
1 cup hot water.
Yolks of 2 eggs.
1 cup sugar.
1 heaping tablespoon corn starch.
1 teaspoon butter.

Boil sugar, water and lemon together. Add well-beaten eggs and butter. Stir well. When cool, put into crust and bake for two minutes. For the frosting, take the white of one egg, beaten stiff. Add one tablespoon sugar. Spread on pie and set in oven to brown.

Dear Women Readers:

At this writing the "Dinner Pail Contest" is in full swing, and, although the entries are not as many as we had hoped for, yet we have had some mighty good suggestions about what ought to go into a man's lunch pail, and I hope that by June 1, all of the divisions will be represented. The results of the contest—that is, the names of the winners—will be published in the July issue of the MAGAZINE; the real results cannot be estimated. We hope that, although there are thousands of women who did not enter the actual contest, there are many among these who have entered into the spirit of it, and who have been, or may be, helped thereby.

What a blessing it is to possess a strong, healthy body! I believe that two-thirds of the bad tempers and mean dispositions in the world may be traced to improper nourishment—either underfeeding or overfeeding; certainly many diseases are traceable to this. Proper exercise and sufficient nourishment are points that should be emphasized in every home.

One of our Railroad women feeds her family scientifically. Her husband works at the Central Building in Baltimore. Each day that he goes to lunch he knows just about what to order before he gets to the table, because he knows the food values required by his system, as well as the number of calories which nearly every staple article of food contains. He has extraordinary health, and his family hardly knows what it means to have anyone ill in the house. The children are healthy, for the mother studies and plans for each meal to this end—and she succeeds. This may sound like a fairy tale, but it is not. Moreover, this mother has promised to give us an article, telling us all about how she feeds her family.

I am particularly anxious that one of the aims of the Women's Department shall be to present to our women in the offices and in the homes such information as will help to keep themselves and their families in good physical condition, for upon this depends the quality of our work and our usefulness in the world. To this end was the "Dinner Pail Contest" launched; to this end are the articles written for our Health Department.

Yours sincerely,

Margaret Talbott Stevens

Associate Editor.

Try This on Your Percolator

Unless your coffee percolator is carefully scrubbed after each time it is used, and sometimes even then, there is danger that the tiny holes in the plate at the bottom of the filter cup may become clogged. One of our Railroad men found this to be the case with the percolator used at his house. He took the filter cup down town with the expectation of purchasing a new one like

Modes for Women Who Demand Simplicity with Smartness

By Maud Hall

SIMPLE models have first place in all of the smartest collections of day-time frocks. And they figure largely in the offerings for evening. Women who demand simplicity combined with smartness are catered to as never before this season and back of their demand is their determination to select models which they themselves can reproduce.

One can pick at random any one of the dainty cottons and make a safe investment. Dotted swiss and cross-barred dimity are enjoying a revival of popular favor which must be surprising even to the manufacturers of these fabrics. Yellow is to be a smart color for summer and one could select nothing more charming than a cross-barred dimity in yellow trimmed with white organdy embroidered in yellow. A model suggested as generally becoming has a simple blouse and skirt joined under a deep girdle of self material. Into the open front is set a vest of white organdy and a trimming piece of organdy stitched on the belt giving the appearance of an extended vest effect. The top of the vest, edges of the collar, cuffs and pockets are scalloped and buttonholed with yellow cotton. At the back the girdle is tied in a sash, giving the dress a very youthful appearance.

The minute care given to every detail of trimming on the dotted swiss frocks makes them creations of distinction. The apron-like panel, introduced on some of the most exclusive importations, meets the most rigid requirements of fashion and appears on a model in dark blue swiss. The waist has an applied front, laid in plaits at the sides. Attached to the side fronts are sash ends, which are tied at the back. The sleeves are three-quarter length and are joined to the underbody in kimono fashion. The skirt, a two-piece model, is attached to the blouse, the closing being effected on the left side. The apron tunic is gathered at the front and outlining this,

as well as the applied front on the blouse, the collar and sleeves, are bias folds of royal purple satin. The finale is unexpected, of course, when one is following the first part of the description, but the result of the combination is as artistic as it is unusual.

No decoration sounds a stronger note in the latest trimmings than does fringe. It is used on dresses, blouses, capes, wraps and all of the little details that contribute to the success of seasonable apparel. As far as wraps are concerned, the deeper the fringe the better. The silk embroidered shawls which our grandmothers prized so highly in their young womanhood are being requisitioned for the development of lovely light wraps to wear over summer frocks, and the favorite method of modernizing them is by the manipulation of the deep

silk fringe borders with which they invariably are finished. The cotton gingham are used with as much success as their taffeta cousins. A design in yellow has the front of the waist and front gore of the skirt cut in one piece. A narrow belt, which extends only to either side of the front panel, is made of brown and white striped gingham, cut on the bias. This trimming reappears on the neck and sleeves. In addition to three deep tucks, a bias fold of striped gingham is stitched along the lower edge of the skirt, and this, too, is a satisfying novelty for the woman seeking the unusual in decorative schemes.

DRESS No. 9481. Sizes 34 to 44 inches bust, and 18 and 20 years.

DRESS No. 9494. Sizes 34 to 46 inches bust, and 18 and 20 years.

DRESS No. 9473. Sizes 34 to 48 inches bust.

DRESS No. 9479. Sizes 34 to 44 inches bust.

DRESS No. 9477. Sizes 34 to 46 inches bust.

A Model that Demonstrates the Continued Prominence of the Tailored Blouse

NOTHING is prettier for the development of this tailored blouse than pongee silk, though it is quite pardonable to prefer dimity. It closes in front through a box plait, has no lining and is trimmed only with accordion plaited frills of its own material. The back of the blouse extends over the shoulders in yoke effect, being joined to gathered fronts. Medium size requires $2\frac{3}{8}$ yards 36-inch material.

Two open widths of the silk, doubled,

with right sides facing (not folded) are required to cut the front and sleeve sections of the blouse. Be sure to place pattern on the pongee so that the large "O" perforations will rest on a lengthwise thread. Now, fold the remaining material and along the lengthwise fold place the "TTT" perforations of the back and the single "T" perforation of the collar. In the remaining space lay the cuff, with large "O" perforations along a lengthwise thread.

WOMEN READERS!

You can get any pattern here shown by filling out the following coupon, clipping and enclosing with price shown (stamps, check or money order) in envelope addressed "Baltimore and Ohio Magazine, Mount Royal Station, Baltimore, Md."

Dress 9481

Dress 9494

Dress 9473

Dress 9479

Dress 9477

35 cents for each of the above patterns

After cutting, carefully indicate all folds and perforations. Then, take the front of the waist and gather at upper edge between "T" perforations. Close under-arm and shoulder seams as notched. Form a box-plait in right front, turning front edge under at notches. Take up a tuck on line of slot perforations. Stitch both sides of box-plait $\frac{3}{8}$ inch from folded edges, catching the free edge in with the tuck. Turn front edge of left front under $1\frac{3}{8}$ inch for a hem.

Sew collar to neck edge, with center-backs even. Bring front edge of collar to center front of blouse. Close sleeve seam as notched, then gather lower edge between "T" perforations. Bind the slashed edges. Face cuff and sew to the gathered edge of sleeve as notched. Bring small "o" perforation at top of cuff to seam in sleeve and bring edges of cuff to slash in sleeve. Roll cuff on large "O" perforations. Sew sleeve in armhole with notches and small "o" perforations even, easing in any fullness between the notches.

Pictorial Review BLOUSE No. 9337. Sizes, 34 to 48 inches bust. Price, 30 cents.

LADIES' DRESS No. 9415. Eight sizes, 34 to 48 inches bust. Width at lower edge about $1\frac{5}{8}$ yards. Size 36 requires 4 yards 36-inch material, $2\frac{1}{2}$ yards ribbon for sash,

$\frac{7}{8}$ yard 36-inch lining for underbody. Closed on left shoulder and under the left arm. Neck is perforated for oval and U-shaped outlines, also to be slashed at center-front and the edges bound. Three-quarter length flowing sleeves perforated for shorter sleeves with flare cuffs, or long plain one-piece sleeves. Front-closing underbody. Two-piece gathered skirt attached to the waist. The wide sash ties at left side. Price, 35 cents.

No. 12574. Blue or yellow transfer pattern. Price, 75 cents.

CHILD'S DRESS AND BLOOMERS No. 9253. Four sizes, 1 to 4 years. Size 2 requires $2\frac{5}{8}$ yards 36-inch material for dress and bloomers, $\frac{3}{8}$ yard 36-inch lining for underwaist. The front and back of dress tucked over the shoulders and laid in inverted plaits under the arms. The front of dress slashed each side of center-front; slashed edges bound and finished for closing. Square neck with a round collar. Long one-piece sleeves gathered to straight bands. Price, 30 cents.

RECIPES

Contributed by Mrs. Gertrude Boyer
Matron, Mt. Royal Station

Chocolate Creams

Two pounds sugar, $\frac{1}{2}$ cup butter, 1 table-spoon cream or milk, 2 teaspoons of vanilla or peppermint, $\frac{1}{4}$ pound chocolate, nuts. Cream butter and sugar, add milk, shape into balls. Dip into melted chocolate and spread on wax paper. Put nuts on while chocolate is soft.

Sea Foam

One pound brown sugar, whites of 2 eggs, $\frac{1}{2}$ cup of water, nuts. Boil sugar and water until it spins from spoon. Pour into beaten whites of eggs, stirring all the time. Add chopped nuts and beat until stiff enough to form into lumps. Drop on wax paper.

Irish Potato Pie

Four eggs, 1 pint of milk, $\frac{1}{2}$ cup of sugar, 3 boiled potatoes. Beat potatoes well, adding the beaten eggs, then milk and sugar. Flour to taste. No top crust is needed.

PURE WOOL SCARF

ANGORA FINISH

Actual Value \$5.00

\$3.49 Postpaid

Send No Money

This beautiful Angora-finished scarf of pure wool worsted is the stylish model New York's best dressed women are now wearing. Ideal for over Spring suits or on cool Summer evenings.

Two patch pockets, patent-leather, fringed ends. Seventy-eight inches long. 18 inches wide. Pockets, fringe and stripes in contrasting colors. Havana brown, turquoise blue or buff tan. State color desired. Money back if not satisfied after examination. Send no money. Just name and color desired. Pay Postman \$3.49 on arrival.

I WONDER

"Good morning, Black-eyed Susan," said a sunbeam yesterday,
 "I've a hundred things to tell you, if you'll only look this way.
 They say that in the meadowland that lies just over there,
 You'll find a thousand cat-tails growing—straight up in the air!
 They say that in the marshy ground, where mud is black and deep,
 With their long tails all sticking out, the cats are fast asleep.

"They say that 'neath the big toadstools that spring up in the night,
 Sit mother toads who blink their eyes and croak there with delight;
 They tell me that real warriors with their feathers and their stripes
 Live underneath the old brown leaves and smoke the Indian pipes.
 And in the deep, dark forest where the lady's slippers grow,
 Old Bluebeard's wives, who wore them, were buried years ago.

"The tall fox-glove was made to fit the Giant-Killer's hands,
 And underneath the milkweed plant a real, live moo-cow stands.
 And do you know the thorns that grow upon the thistle there
 Are fingernails of naughty boys who pulled their sisters' hair?
 But tell me, Black-eyed Susan, if these things are really true,
 Where is the little gypsy girl who gave her eyes to you?"

The Story of the Rose

HUNDREDS and hundreds of years ago, in a strange land, there were no flowers. There were only bare rocks, hot sands, and trees that had no blossoms but only small, green leaves, so that there was very little shade. The people lived in houses built of rock, and, like the Arabs of today, they only ventured from their houses after dark, for the sun was hot and there was little rain.

In this strange country there lived a little girl named Rose. She had neither brothers nor sisters, and she seldom saw any other little boys and girls. Because of this she became very selfish and quite spoiled by her fond parents. She became dissatisfied with everybody and everything.

One night, when the stars were bright and the moon's big yellow face shone in the sky, this little girl came out of the house with her parents to sit on the sand and talk.

"Come, Rose," said her mother, "here's a nice, flat stone to sit on."

"It's too flat," pouted Rose.

"Then come and sit by me on the sand," suggested her father.

"Too low," scowled Rose. "I'm going to run over to that big rock and sit there all by myself." And away she went. Soon she was seated on the rock, gazing up at the stars.

"Why do the stars hang 'way up there?" she asked herself. "And why can't I have

a ladder that will reach up to them? They are pretty in the sky, but they ought to come down and make the earth pretty;

there is nothing beautiful in this country."

"There could be," whispered a voice at her elbow.

"What!" exclaimed Rose, "Who are you, and what did you say?"

"I am called the flower fairy," said the wonderful creature with shining eyes, "and I said that there could be many beautiful things in the world, if people like you really wanted them."

"Why, what do you mean?" asked Rose, astonished for the first time in her life, for nothing before had ever seemed to interest her.

"Just this," answered the fairy, "did you ever hear of flowers?"

"Oh, yes. Father has told me that he has seen them, but that it was in a far-off country, which I shall probably never see. But no flowers ever grow here," she added wearily.

"Have you ever looked for them?"

"Of course not; it would be useless."

"For selfish people, yes," answered the fairy, "but even selfish people may sometimes become unselfish, and then they can see beauty in everything."

"Oh, oh!" cried Rose, beginning to weep, "Do you really think that I have been selfish?"

"I know it," replied the fairy, "for only selfish people never see beauty in anything, and even a little girl may become very selfish."

"Dear fairy," begged Rose, sobbing as though her heart would break, "dear fairy, will you show me how to become unselfish? I do so want to see the beautiful things. I'll look for them ever so hard, and

Upper left: Edward James Coffay, 2 year old grandson of Edward McKnew, blacksmith helper, Mt. Clare; lower left: Henry and Ruth, children of H. A. Kurtz, chief Mail clerk, Baltimore and Ohio Building; upper right: J. Ernest, son of J. C. Buckeimer, clerk, Relief Department, Baltimore; lower right: Clara McClure, Pittsburgh, Pa., whose letter is mentioned on this page; center: Hoyt, Lida, Hazel and "Jake", the four studious children of "Nick" Thinnies, car foreman, East Side, Philadelphia.

Don Kight, whose daddy is ticket agent and Magazine correspondent at Keyser, W. Va.

I'll do anything for you, if you'll only tell me."

"You're beginning to be unselfish already," said the fairy, gently stroking Rose's curls. "Come, dry your tears, and I'll show you something pretty." Rose stopped crying.

"What is it?" she asked eagerly.

"Look at that rock," said the fairy, pointing to the one on which Rose had been sitting. "What do you see?"

"Just a rock," began Rose. "Oh, no! I see lots and lots of lovely colors, sparkling crystals, and oh! oh! I never saw a rock like it!"

"And yet, you've looked at it many a time, and you've been sitting on it tonight," said the fairy. "Moreover you'll find that all of the other rocks around here look just like it. Now, look again."

Rose looked, and growing right beside the rock was something on a long stem with beautiful green leaves.

"Oh, this is beautiful," she said, as she leaned right over and kissed it. As she did this, a lovely bud opened and shone like gold in the yellow moonlight. "What is it? What is it?" she asked.

"That," answered the fairy, "is a flower. Now, look for the third time."

Then Rose saw that there were flowers growing everywhere. The fairy plucked the largest and prettiest one that she could find.

"Here is one," said she, "that is the most beautiful of all. It shall be called Rose, in honor of a little girl whom I know. And wherever you go the rose shall blossom, and roses shall fill the air with their beauty and fragrance. But, since there must be something to remind you that once you were selfish, there shall be thorns on the stem,

and you will feel them when you pluck the flower."

Then the fairy disappeared, but Rose never forgot the lesson. And ever since then, flowers have filled the gardens, grasses have covered the ground, and trees have blossomed and borne such leaves that we now have millions of beautiful shade trees. But, best of all, we have the beautiful and fragrant roses, each one with a thorn to remind us not to be selfish.

Dear Girls and Boys:

We have so much news to tell this time we could almost run an "Among Ourselves" department just for little folks. And your old Aunt Mary has been so busy answering little folks' letters and arranging the Children's Page that she hasn't had time to sneeze. See what interesting things our little folks have to say this month! And how do you like our flower page?

For August we're going to have a pet page. Let me have pictures (photographs, if possible) of your pet cat, dog, rabbit, guinea-pig, chickens or whatever kind of pets you may have; also short stories and poems about them. Don't forget to give their names, for if you don't, how am I going to tell Gale Schachte's banties from James Sampsel's Belgian hare? By the way, James has three new bunnies—but read all about it in "Little Letters from Little People."

Send your letters, pictures, stories and poems for the pet page by July 15. Address: "Aunt Mary," BALTIMORE AND OHIO MAGAZINE, Mt. Royal Station, Baltimore, Md.

Lovingly,

Aunt Mary

Little Letters From Little People

Keyser, W. Va.

Here is a picture of little Don Kight, who is getting 'most as big as his daddy, the ticket agent at Keyser. Don is going to write us a letter some day.

Brunswick, Md.

Juanita Rarnhart wants to know what to name her baby brother. Why not write out a list, Juanita, and let the baby read it, then choose his own name? Aunt Mary looked for Juanita at the Brunswick picnic, but couldn't find her. Where were you, Juanita?

Chillicothe, Ohio.

Her first name is Nancy, her second is Blanche and her last name is Trainor; she lives at Chillicothe and she likes to read the Children's Page. Nancy Blanche says: "My father's name is James Harvey Trainor; he is car inspector. My mother's name is Arminta Brock Trainor and my brother's name is Frank Brock Trainor. He isn't my mother's brother, but they named him Brock in the middle. I haven't any sisters, but I have much fun without any."

Dorsey, Md.

There! I nearly forgot Edna Remsnider! Edna wrote a poem for our school page, and some day she's going to write us some more. Edna knows Harold Dunkerly, Ida Smith, James King, Louise Perry, and all the little folks at Dorsey. She is the little girl who used to say "gunner" for "going to." Because she likes to argue, one of her teachers used to call her "the lawyer." Perhaps she'll be one some day.

Dover, Ohio.

Kathryn and Mildred Hadden live at Dover. Mildred is only six years old, but she wrote a nice letter. She says "I have some white violets. We are going to have a little play in our yard. My birthday is in November."

Kathryn has a new Eversharp pencil, and I am sure she used it when she wrote this little story:

THE ROSE

Dear little Roses, you are so red and bright. Your heart is deep. I love you best of all.

Decoration by Robert L. Heiser, third trick dispatcher, Camden Station

Fairmont, W. Va.

Gladys Shaw wrote again to tell us about Rosic, the little heroine who lost her arms. The Salvation Army is now caring for Rosic. Gladys is going to draw us some pictures.

Marysville, Ind.

Here comes Dorothy Cassady, with a drawing of a wild rose, and a splendid story. The story got in a little too late for this number, but I know you will laugh

Drawn by Dorothy Cassady, Marysville, Ind.

when you do read it. Dorothy is the first little girl from Indiana to write Aunt Mary. Let's have some others. She, too, liked Dorothea Taxis' poem.

Pittsburgh, Pa.

Clara McClure sent us her picture, taken when she was four years old. She is eight years now. She liked the Robin Song in the April number. She liked Dorothea

Taxis' poem about "The Birdie," and she wants Dorothea to write some more poems. Clara's papa is a baggageman.

Staten Island, N. Y.

Marguerite McDonald, who drew the pretty picture for the May page, drew us a picture of a flowery path. We have so many pictures this time that I am not sure if we can get this in or not, but if we don't we'll let you see it some other time. We hope Marguerite will send us her own photograph soon, for we all want to see the little girl who drew the picture of the Dutch children.

Washington, D. C.

James Sampsel has a bran new baby sister and three bran new baby bunnies. He also drew a picture of a steam engine, which we must show you as soon as we can. James' baby sister's name is Ann Harrison. Isn't that a pretty name? We're going to have their pictures, too.

Weston, W. Va.

Mildred Toms' father is an engineer, who has worked on the Railroad for 16 years without a serious accident. Mildred is 12 years old and in the seventh grade. She takes music lessons. She has a brother nine years old who is in the fourth grade. She likes to read the Children's Page.

Flowers

By Ruth Kenneally

The flowers are all so bright and gay,
For this is Spring, Hooray! Hooray!
When our Mother Nature laughs around,
And gladsome breathes from the blossom-
ing ground.

Mother Michel and Her Cat

Little Stories About Books That Children Like

MANY of our little boys and girls have read the charming story of Mother Michel and her famous cat, Moumouth, but I am sure that there are still a great many who have not. It is a tale written for French children by M. Bedolliere, and translated into English for our own boys and girls.

A poor "alley cat" has a tin saucepan tied to his tail and is threatened by the dogs and by sticks and stones thrown by mischievous boys. He is rescued by a rich old countess, who takes him to her home, where he is cared for by a maid, Mother Michel, and where he is given the distinguished name of Moumouth.

But Father Lustucru, a jealous-minded old steward, does not wish Mother Michel to receive the reward which the countess has promised her for taking care of Moumouth during her absence. He contrives many sly methods of getting rid of the cat. But every time that he thinks that he has killed the cat, Moumouth returns, just as if nothing had ever happened. Poor Mother Michel becomes so worried and faints whenever she loses him. Finally,

the countess returns, and after she learns the real truth about the cat's mysterious disappearances, discharges the sly old steward, who runs off and takes passage on a ship. The boat is shipwrecked on a cannibal island. The cannibals cook Lustucru for supper.

Moumouth lives happily ever after, and when he dies, a monument is erected to his memory.

Every year in France, when the people celebrate the festival of the Mardi Gras (Shrove Tuesday), there are surely to be some among the maskers who dress as Mother Michel and Father Lustucru, who go about the streets of Paris calling for their cats. Some day you may go to Paris and see them for yourselves.

The story of Mother Michel and her cat may be had from the Baltimore and Ohio Employees' Free Circulating Library at Baltimore. If you do not know how you may borrow books from the library, write to Mrs. E. P. Irving, librarian, Mt. Royal Station, Baltimore, and she will be glad to tell you all about it.

Employees in Fairmont Help "Billy" Sunday Campaign in Cincinnati

ON APRIL 3 about 75 Baltimore and Ohio men and their families from Fairmont were given special seats of honor on the platform in the "Billy" Sunday Tabernacle in Cincinnati where a revival was being held. Accompanying the railroaders was a telegram from General Superintendent J. M. Scott, which was read from the platform and created a great deal of amusement and applause. We would like to quote the telegram here but, without the permission of a certain yardmaster, believe it best to refer readers to him for it.

Our railroaders made quite a hit at the meeting and were cordially welcomed by "Billy" Sunday and Homer Rodeheaver. Prominent among the Baltimore and Ohio delegation were Captain R. F. Pell, A. L. Hefferman, and "Fred" Brumage.

In sending an account of this meeting to the MAGAZINE, Mr. Hefferman added:

"It is no wonder the traveling public says the Baltimore and Ohio Railroad Company is the best in the United States. I was standing on the platform in Fairmont a few days ago when a Mr. Haller, who has used a good many railroads, approached me and said: 'Well, the Baltimore and Ohio has them all beat, the best railroaders and the best management in the country.'"

Brakeman Meyers Completely Filled His Position

WE ARE glad to pass on to our readers the following enviable commendation of Brakeman J. H. Meyers of the Pittsburgh Division:

HOTEL BELMONT

NEW YORK, N. Y., February 15, 1921.

General Superintendent,
Baltimore and Ohio Railroad Company,
Pittsburgh, Pa.

Dear Sir—On Saturday evening, February 12, I was on your train No. 10 from Pittsburgh to New York. I tried in vain twice to reach the rear coach in an effort to inform my mother, who was a passenger on the day coach between Pittsburgh and McKeesport, that I had reached the station and had boarded the train safely. I then asked the brakeman how I could get to the rear coach before we reached McKeesport. Upon hearing that I wished to reach my mother, the brakeman, whose name I learned later was J. H. Meyers, without further delay escorted me through the sleeping cars, until finally we reached the other end of the train and my mother.

The reason the kindness and courtesy I received from Mr. Meyers was especially appreciated was because I had been out of the hospital only four hours, after having been a patient for 12 weeks.

Although I have traveled extensively, I do not recall having met with any person who so completely filled his position as Mr. Meyers.

Very sincerely yours,
(Signed) Mrs. H. J. Lyons.

Safety Roll of Honor

Baltimore Terminal Division

BALTIMORE, MD., April 20, 1921.

MR. G. E. LANE,
Operator,
Waverly Tower.

Dear Sir—I have report that about 12.35 p. m., April 14, you discovered and extinguished fire on Bridge 9, Belt Line.

I desire to express to you both the appreciation of the management and myself for the prompt action taken by you in this case.

Very truly yours,
(Signed) C. M. SHRIVER,
Assistant Superintendent.

Baltimore Division

On March 20, extra west, engine 4508, was stopped at west end of siding at Dickerson account of hopper car with bottom down. This had been observed by Operator H. C. Meems while the train was passing over the switches at that point.

On April 20, as an extra east passed Lorely Curve, Trackman E. Corbin, Jr., noticed something wrong on one of the cars in the train and signalled the train crew to stop. The crew examined the cars and found a broken bolster under Baltimore and Ohio 78444, which was set out of train at Bradshaw. Car was unsafe for further travel. Mr. Corbin's observance of its condition, no doubt, saved a derailment.

On April 28, as No. 92, engine 4525, was passing Aberdeen, Operator T. E. Christine noticed smoke coming from under cars and signalled the conductor, who went over train and located Baltimore and Ohio 20588 with truck with broken arch. Later, in trying to back car off, it derailed. Operator Christine's timely discovery averted what probably would have been a more serious derailment.

Cumberland Division

The following irregularities were noted by operators during April and prompt action taken by them for correction:

NATURE OF OBSERVANCE	CASES
Brake rigging down.....	3
Wheels sliding.....	3
Bulged cars.....	3
Hopper bottoms down.....	1
Broken rails.....	1
Hot car boxes.....	1
Shifted loads.....	1
Unsafe conditions.....	1
Car doors dangling.....	1
Total.....	15

Charleston Division

Agent J. D. Kennedy of Clendennin has been commended by the superintendent for his interest in freight claim prevention.

Conductor Foy has been commended for his interest on several occasions. The most recent one is for packing a hot box and

taking a car of naphtha to its destination instead of setting car off on line and thereby causing delay and expense. An additional commendation has been received for Conductor Foy for repacking hot box on a load of coal at Porters.

Mr. Weaver Shiflett, Coalton, W. Va., recently found a broken rail in track on Coalton Branch. He immediately notified the agent and had repairs made. The superintendent has written him an appropriate letter of thanks.

The superintendent has written Passenger Brakeman A. M. Carpenter an appropriate letter of commendation for his interest in getting passenger trains over the road. We are glad to note Mr. Carpenter has been commended on several occasions of late for meritorious acts.

The following engineers have been commended in connection with making a record of over 100 per cent. in fuel performance in March: W. T. Spencer, R. E. Murphy, C. E. Stalnaker, W. B. Amos, J. C. Jordan, A. F. Vorholt.

New Castle Division

On the night of May 7, Engineer S. O. Lewis, on first 94, observed that the crossing plank had been torn out on No. 1 track at the west end of Greenwich siding. He filed a message to this effect at "KN" Tower and extra west 285 was stopped.

Investigation developed that this crossing plank was out of place, and that there was a broken brake beam lodged there. This the crew removed, and put the crossing in shape for movement over it. Extra 4020 west, the last train to pass, was examined at Willard and it was found that two brake beams were gone.

Newark Division

Conductor F. W. Deardoff, Newark Yard, discovered 14 inches of flange broken out of wheel on a car about to be placed on unloading trestle of the Ohio Power Company, Newark, Ohio. Derailment of the car on this trestle might have resulted in a serious accident.

Cleveland Division

CLEVELAND, OHIO, April 18, 1921.

MR. "DAN" CONNELL,
Section Foreman,
Grafton, Ohio.

Dear Sir—I have just received information that on April 11, 1921, about 4.30 p. m., you discovered 12 spikes on the rail west of road crossing at Miller's Quarry, in such a position as to almost insure the derailment of passenger train No. 65, and that you immediately removed the spikes and notified supervisor at Elyria, who has taken steps to ascertain the party guilty of this act.

From the above information, it is evident that you are observing condition of tracks, whether on your section or some other part of the road. This is greatly appreciated by me and I want to commend you in this particular case and assure you that information of this kind is very gratifying to me.

Very truly yours,
(Signed) H. B. GREEN, 1
Superintendent.

Indiana Division

On April 10, when extra 2653 west was passing Vincennes Street, New Albany, John McGrath, crossing flagman, discovered brake beam down under Baltimore and Ohio 93059, loaded with wheat. He immediately communicated with Engineer C. B. Lewis. Train was stopped, and while crew was repairing brake beam, Engineer Lewis discovered arch bar broken on opposite side of car.

Had the defective car not been detected by Mr. McGrath, a serious accident might have occurred while car was passing over K. & I. Bridge, or through the interlocking plant at Louisville.

On April 2, Conductor T. E. Ross, in charge of train No. 84 at Loogootee, noticed car of bridge iron moving in extra west 2915, which in his opinion did not clear overhead bridge at Montgomery. Information was communicated to crew through dispatcher's office and train was stopped at Cannelburg, where it was found that N. Y. C. 347653 bridge iron was in bad order, and that it was necessary to set car out at that point for attention.

One stake had been lost from this car and another broken, permitting load to lean to such an extent that proper clearance was not given. The close attention of Conductor Ross probably averted an accident.

On May 1, while train No. 29 was passing over Monon crossing at Mitchell, brake beam came down on express car 1796, en route Kansas City.

This was discovered by Night Yard Clerk W. J. Marshall, who was handling the target gate and standing at the crossing. He immediately notified conductor, who stopped train and took brake beam off.

This train had been inspected while standing at Mitchell and nothing was noticed at that time.

On April 30, when second 90 was passing over crossing at North Vernon, Crossing Watchman Parley Dixon noticed brake beam down on U. P. 40089, and notified conductor after the caboose passed him.

About this time Switchman A. Ormsby, who had also discovered this condition, called the attention of conductor to brake beam being down. The train was stopped and brake beam removed without further damage.

"Helped Him Own a Home"

MAUMEE, OHIO, March 12, 1921

MR. W. J. DUDLEY, Superintendent,
Relief Department,
Baltimore, Md.

Dear Sir—I received the letter of March 8 containing mortgage, abstract and various other papers, all O. K., and want to thank the Baltimore and Ohio Relief Department for the money loaned in helping us own a home.

Very respectfully,
(Signed) EDWARD E. HARTER.

Miss Ruth L. North, Machine Room, was married to Mr. Henry C. Oliver, April 13, by the Rev. William Toolan, at St. Edward's Church.

Miss Caroline V. Miles, Interline Settlement, to Mr. Louis H. Freiling, April 20, by the Rev. W. W. Costin, formerly of the Eutaw Street M. E. Church and Solomon's Island, at the home of the bride, Park

Heights Avenue. They will reside in Germantown, Philadelphia.

Miss Mary A. Mullinix, Statistical Bureau, to Mr. William Wilson, April 20, by the Rev. Edgar Cordell Powers of Harlem Park M. E. Church, at the parsonage.

Miss Ethel J. McKewen, Machine Room, to Mr. Walter J. Steinkamp, April 27, by the Rev. B. J. Lennon at St. Joseph's Church. Best wishes!

Great joy in the Drechsler and Barley families—new arrivals. Congratulations!

We mourn the loss of our furloughed fellow employe, James LeRoy Massicot, who died Friday, April 22, at his home in Westminster, Md., of a complication contracted during the influenza epidemic several years ago. Despite his many efforts to return to work and keep up with his task, he was compelled from time to time to take another furlough. Services were conducted at his home and at St. John's Church, by the Rev. Swift and Rev. McGuigan, on Monday, April 25. Pallbearers were brother members of the Knights of Columbus, of which organization he was a member. Interment in St. John's Cemetery. He is survived by his wife, who is a daughter of former Sheriff Kemper of Carroll County, and a daughter. The family has our deep sympathy.

Printing Department

Correspondent, M. J. CONROY, Proofreader
Bravo, John

A young and unobtrusive colored man by the name of John W. Langford was until recently employed here as porter. No one had any idea that he was possessed of high ideals and aspirations until he tendered his resignation recently. Then it came to light that he had been a student in a Methodist seminary, but through lack of funds, had been forced to seek employment and to study as best he could in his spare moments. He took the examinations before his ministerial board, passed with great credit, and has now been assigned to a charge. His manner and his language impressed everyone with the fact that he was far above the ordinary. He is to be heartily commended for his determination and perseverance. We extend our congratulations and best wishes for a successful career in the ministry.

What Would You Have Done?

I was standing at a transfer corner in front of a drug store on one Saturday afternoon recently, patiently awaiting a car to carry me out to the ball park, when a little miss of not more than five years came along pushing a baby carriage and said, "Please,

Erma L., daughter of Elmer Wright, clerk, Relief Department

Mister, watch my baby carriage 'till I come out." Then she pushed back the top and carefully took out her little baby doll and went into the drug store. My first inclination was not to bother about the carriage at all, but to go about my business, but on second thought, I said I wouldn't destroy her confidence in mankind at such a tender age and I decided to stand guard until her ladyship put in her appearance. Two cars went by before she came out. But her sweet "Thank you, sir!" and the smile on her lovely little face made me feel amply repaid for my trouble.

Safety First—Always

✓ The other morning I saw an auto coal cart coming up Pratt Street. The driver tried to turn into Poppleton Street without slowing up. The asphalt was wet from the early morning rain, and as a result, the car spun around like a top. In fact, the driver had to get out to find his bearings. Had there been another machine coming in either direction at the time, there would have been a serious smash-up, and all that Old Man Durney would have had to do would be to shovel the pieces right into his old junk shop.

Mental Arithmetic

The other day, Norman Keller and I were busily engaged in eating our lunch at the little "bird store" when our attention was attracted to a man who was having trouble with the figure punched on his meal check. He explained to the proprietor that he had ordered a bowl of chicken soup and the waitress had punched the "15" on the check, and that later he had ordered a piece of strawberry pie and she had punched the "30"—indicating, of course, that his total was 30 cents. But Ezra said he couldn't understand why he should pay 15 cents for the soup and 30 cents for the pie. "Ah!" said the proprietor with his sweetest smile, as it dawned upon him that the circus was in town and that Ezra had determined that he would not allow any "city feller" to put anything over on him, "Calm, yourself, dear sir, you do not have to pay for both numbers punched—the highest one is the total of your bill."

"Well, I'll be darn!" said Ezra, "purty slick. You just add up an' then subtract."

Staten Island Lines

Correspondent, G. F. GOOLIC

There is rumor around Clifton Shops that Foreman Conniry and Gallagher are going into the marine shipping business. It is understood that Foreman Conniry has already taken an option on a boat.

Heard in the Division Storekeeper's office each morning: "Good morning, Lady."

Vincent Kennedy, chief clerk to master mechanic, is receiving congratulations from

his many friends on the arrival of a baby girl.

Well, we have another marriage to announce. Miss Mae McBreen, whose engagement we announced some time ago, is now wearing a plain gold band, and is known as Mrs. Frank Lynch. Her many friends join in wishing her happiness.

Locust Point

Correspondent, JOHN E. GREEN

Locust Point has the distinction of having forwarded on April 26, steamship "Artemus," Baltimore Steamship Company, for Glasgow, Scotland, 66 cars live stock, approximately 2000 head. This is the largest consignment ever leaving this port on any one vessel. From Saturday morning, April 30, to Sunday morning, May 1, we loaded on five steamers, 104 cars live stock, destined to European ports.

This operation was performed, without any delay to the steamships, under the direct supervision of Agent J. M. White and Assistant Agent J. J. Geigan, assisted by General Foreman Robert Barkley and Messrs. Johnson, Steen, Wright and Born.

When you have some work to do,
Do it.

Do not fool and waste your time
Or some one else will "get your line,"
And things not turning out so fine,
You'd rue it.

Enter contests with a will,
And "show 'em"
That you're fit to win the race;
Win you will if you "break a trace";
Meet troubles with a smiling face
And "trun 'em."

So when you have work to do,
Do it.

Don't let critics "get your goat";
What they think counts not a goat;
Up your sleeves, take off your coat—
And you've done it.

J. R. G.

We are in receipt of letter from William S. Wood, our former night tallyman, Locust Point, whose furlough on account of depression has proved a blessing in disguise. He writes us that he has obtained a position in the National Exchange Bank of Baltimore as keeper of the safe deposit vaults, with pleasant pay, hours and surroundings. He thanks the officials at Locust Point for courteous treatment he received while employed there.

Mr. Wood has our best wishes for continued success in his new enterprise.

Our friend Dudley is always a welcome patron to the conductors on the Hamilton

Allen Bebe
Storeroom Clerk, Staten Island Lines

Frank Stafford

cars. He is no "Tin Horn Sport" as he has a playful habit of handing the conductor \$1.00 to pay his fare and telling him to keep the change. Some tipster, eh? I beg his pardon, that was a "lapsus linguae;" I intended to say some tipper.

Our heartfelt sympathy is extended to our friend and brother clerk, A. M. Miles, in the recent loss he has sustained in the death of his most estimable wife.

May "He who doeth all things well" help him bear up under this sad affliction.

The accompanying picture is a good reproduction of Frank Stafford, a faithful and loyal employe of the Railroad, who is now acting as bargeman at Locust Point, and as location clerk at Canton and Curtis Bay terminals.

Mr. Stafford is another veteran who has answered "the call to the colors" as issued by President Willard and Vice-President Fries; he succeeded in obtaining for shipment via the Baltimore and Ohio during week ending April 30, 26 cars destined to competitive points.

Mr. Stafford entered the employ of the Railroad in December, 1886, and by his urbane manner, cheerful disposition and loyalty to his employers, has gained many friends, not only with his associates but also with the shipping public.

May this action of Mr. Stafford serve as an incentive not only to the Veterans, but to all other employes to try to pass him if possible in getting business for the Road.

Mr. Stafford informs me he has not finished soliciting—he has merely started. So "watch his smoke." Locust Point feels honored in having him as a representative in this drive.

Go Get 'Em.

The shades of night were falling fast
As up the City Street there passed
A man, who muttered as he ran,
First in one store, then out again—

Go Get 'Em.

He'd worked from dawn till dewy eve
With energy—none would believe,
To get the freight, and have it go
With Safe dispatch, by the B. & O.—

Who Got 'Em.

The B. & O. Vets were on the job;
The fight they made, and the miles they trod
Were many, and they've set the pace,
And welcome others, in the race—

They'll Get 'Em.

So now, together, let's work with a will
And copper the cars, and so fill the till.
As loyal employes, we'll settle this race,
And list B. & O. right in the first place—

We'll Get 'Em.
—DLUGG

Introducing F. W. Melis, a Baltimore and Ohio Veteran, one of the shock troops of the Railroad, who are ever ready in an emergency; a seasoned veteran who has

weathered many a storm at Locust Point and is still on the firing line, able to match any one (half his age) either in efficiency or dispatch. Of German parentage he is known among his friends as "Kaiser Bill."

Mr. Melis entered the employ at Locust Point as a freight handler in 1878, and by his assiduous attention to business and careful consideration of the Company's interests, has risen to the position of chief clerk in charge of Export.

His loyalty to the Company as well as to his adopted country are unquestioned; his pleasant and engaging manner has endeared him to his many friends in the office, and to the public generally.

Hold on tight, or you'll get dizzy
If you try to follow "Izzy,"
The snappy man who keeps our car record.
With his cheerful smiling face,
And entering every car in place,
He keeps a record with which no one e'er gets bored.

He is kind and condescending,
With an energy unending
As he writes his book as others seldom can;
That I seem to have a notion,
When time comes for promotion,
'Tis well to keep an eye on Silverman.

—J. R. G.

Hamilton Watch

"The Railroad Timekeeper of America"

Are You Being Handicapped with an Inaccurate Watch?

Keep to your schedules by a watch whose accuracy is proved by the thousands of railroad men who have tested it. Hamilton Watches are the timekeepers most popular with American railroad men. Their experience points the way for you.

Conductor Dan Mandaville, shown here, has been in Erie service 45 years. His run is between Jersey City and Binghamton—out on No. 5, back on No. 6. He has been carrying for 14 years that Hamilton he holds in his hand.

When you buy, look first at the Hamilton models which are the favorites with railroad men, particularly No. 992 (16 size, 21 jewels). Hamilton Watches range in price from \$40 to \$200; movements alone, \$22 (in Canada, \$25) and up. Send for "The Timekeeper"—an interesting booklet about the manufacture and care of fine watches. The different Hamiltons are illustrated, and prices given.

HAMILTON WATCH CO., Lancaster, Pa.

How they looked in 1905. Supervising, clerical and inspection forces at Locust Point

The Locust Point employes extend their sympathy to Agent J. M. White in the death of his father at McLeansboro, Ill., on May 5. Not having had the pleasure of being acquainted with Mr. White, Senior, we are in no position to present an extended eulogy; yet, from our intimate connection with our agent as a man, we feel confident that the deceased was a "worthy sire of a worthy son."

Washington, D. C., Freight Station Correspondent, W. L. WHITING, Chief Clerk

The Grim Reaper has saddened the homes of some of those connected with this station during the past month.

On April 9, Carroll Hobart Mills, age 23 years, brother of Patrolman William H. Mills, died at Providence Hospital in this city, of pneumonia, after a short illness of about one week. He entered the service as brakeman in January, 1916, and remained for about two years. Since then he had been employed by the Richmond, Fredericksburg and Potomac Railroad at Potomac Yards. The funeral was held on April 12, and was conducted by the Brotherhood of Local Trainmen No. 484, of which he was

a member. Interment was in Glenwood Cemetery. The accompanying photograph shows what a bright young man death has taken away from the community.

On April 16 Mrs. Mary E. Newcomer, mother of our telephone operator, Miss Mattie M. Newcomer, passed away at the home of her daughter, Mrs. E. F. Bunnir, at Kensington, Md. Mrs. Newcomer has been an invalid for about six years, but finally succumbed to the dread pneumonia. The funeral took place at Milford, Bath County, Va. The deceased was 74 years of age, and was highly respected by all who knew her.

Our deep sympathies are extended to the sorrowing relatives and friends of both of the above in their hour of bitter affliction.

Our sick list is still small, for which we are truly grateful. M. F. Kelly, our sealer, met with an accident recently which incapacitated him from attending to his duties. He was unfortunate enough to break two or three ribs and otherwise injure himself internally. As Mr. Kelly is one of the oldest men in the service at this station it naturally will take him some time to recuperate; but he is getting along splendidly, and is determined that such an accident will not keep him out of harness much longer. We hope to see him back on deck again soon.

All who know our genial agent, D. M. Fisher, and his good wife, will be pleased to hear that Mrs. Fisher is well on the road to recovery from a serious illness that has kept her confined to her home for several weeks. She has been under the watchful care of Dr. E. J. Gunning, who has successfully brought her through her sickness. Everybody rejoices in this as such good people as Mrs. Fisher are indeed scarce.

An enthusiastic meeting was held at the Union Station in this city on April 20, the occasion being the annual "get-together" dinner of the Railroad Terminal Young Men's Christian Association, and the laying of plans for the campaign for membership in the Association. This Association is proud of its membership of 1436, and it will not be the fault of those present at the dinner if that number is not added to during the coming year.

A friendly contest was entered into between two teams, captained by Messrs J.

H. Tonge, superintendent, and C. J. Kohlerman, auditor, Washington Terminal Company. Mr. Tonge led the Blue, or Air Line, and Mr. Kohlerman having charge of the Red, or Fire Line. The contest consisted of building sections of the road from New York City to Jacksonville, Fla., each section representing a member of the Association. Of course, the team building the greatest number of sections will be the winners of the contest. No matter which team wins, the Terminal Railroad Y. M. C. A. will be the gainer in the publicity it will receive among those who do not know the great value of such a membership. Those railroad people who do not belong to the Y. M. C. A. cannot appreciate the immense amount of good it is doing among their fellow railroaders.

Just try it once, brothers, and see for yourselves.

Cumberland Division

E. C. DRAWBAUGH, *Division Operator*
JOHN SELL, *L.P. Clerk, Superintendent's Office*

The accompanying picture is of G. R. McKenzie, who has, on previous occasions, been mentioned in the MAGAZINE. Mr. McKenzie has been employed in the M. of W. Department, Cumberland Division, since April 15, 1877, and is now 64 years of age.

He first entered the service as trackman, Rawlings, Md., and on January 8, 1883, was promoted to track foreman, McKenzie. He has served in that capacity up to the present time. After such long and faithful service he feels that he is entitled to retirement and has made application for pension.

Mr. McKenzie enjoys the distinction of being one of the charter members of the Relief Association.

His section has always been known for easy riding track and good appearance. He was exceptionally efficient in his line of work, having held a record for raising track and renewing ties. In one day during 1896, with a gang of seven men, he raised and put in 237 ties for 21 rail lengths. This record, as far as is known, has never been excelled. During the same year he was furnished with two of the first track jacks that were given out on the division. They are still in service in good condition. This speaks well for his care in the use of Company's property.

With his retirement from active service, the Company loses an efficient and faithful employe, but he has the satisfaction of knowing that he takes with him the friendship and respect of the officers and employes on the division with whom he has long been associated.

The accompanying picture is that of Green Spring Tower, east end Cumberland Division. The interlocking is operated

from this tower by air. Operators in charge are: G. W. Kaylor, first trick; V. D. Twigg, second trick; J. D. Rockwell, third trick.

Keyser

Correspondent, HARRY B. KIGHT

While I write this the Safety Campaign, which began on April 1, is drawing to a close, and June with its figures pertaining to this special drive, will show us just how careful we have been and where we stand.

It is pretty fine work for a Company, which, knowing the many dangers that confront its employees every day, in whatever capacity they may be, has taken the interest that our own Baltimore and Ohio has to reduce the number of accidents and loss of life.

Meetings are held, circulars are posted, signs are made and put up, to remind you that our President places Safety "above everything else" and wants you to be careful.

The accompanying picture is of the wrecking crane at Keyser, loading all that was mortal of the T. M. & P. Railroad. The Twin Mountain and Potomac Railroad was a narrow gauge road, which ran from Keyser to Twin Mountain, W. Va., through the peach orchards, and the idea was to handle all the fruit from that territory. Their equipment consisted of two up-to-date narrow gauge engines, two vestibuled passenger coaches and about 20 or 25 freight cars. It was in operation for several years but on account of not being a paying proposition the service was discontinued

about two years ago. The rails were taken up and sold as was also the rolling stock. The engines went to a narrow gauge road at Orange, Va.

Pittsburgh Division

ELMER H. STOLTZ, *Pittsburgh Freight Station*

To Our Old Pal

By J. F. Hines

Today we are honored by one you all know,
A 42-year man on our B. & O.

He has kept Safety First in his mind all the time,
And all feel very proud of Martin Devine.

He has proved to the Company, loyal and true,
And our chairman is always willing to do

Anything in his power, as long as he can
To help him along, for no better man,
Could come to our meetings and give us a line,

Than our faithful old comrade, Martin Devine.

He was our "truck loader" for many a year,
And for doing things right, you never need fear,

He would start each man out with "Hurry right back,
For we want to unload every car on the track,

So don't keep me waiting and stop killing time,
If you want your truck loaded by Martin Devine."

Though he's past 96 there's a smile on his face,
And a look of contentment there you can trace,

He can tell lots of yarns, good songs he can sing,
And give you the steps of the old Highland Fling.

This his wish to the boys when he bids us good-bye
"May you live forever, and I never die."

Our Veterans

You should have seen the grand display
At Pittsburgh Freight House Saturday.
The Veterans of the B. & O.

Were here and made a splendid show.
All the "Old Timers" were in line,
And every one was feeling fine.

The program was quite well prepared,
But the flashlight had a few much scared.

VOSE
THE
Vose Grand
needs no introduction to those who understand real piano values. Its reputation is world-wide, and is based upon generations of scientific piano construction. Investigate its remarkable quality and its low price before buying a piano.
We Challenge Comparisons

Vose & Sons Piano Company
164 Boylston St., Boston, Mass.

But bear in mind—don't be mistaken—
All were there when the "snap" was taken.
There were Madden, McConnell, Melia and White,
With Greenwood and Turner, all filled with delight;
So Verones, Donahue, Kelly and King,
And McCullough and Dierker were anxious to sing.
McDonald and Pollock, Flavin and Joyce,
Posteraro, so quiet you could not hear his voice.
Spangenberg, Lansker, Redman and Keane,
Were running around like chicks in the rain.
Fischer and Mary, Meehan and Schmidt,
With Blumenschein, too, made a very good hit.
Minoque and Leonard were there too, by "Heck,"
Each as proud as a peacock, along with Miss Beck.
And right in the center was Martin Devine,
You will all agree that he looked very fine.
Maloney? You'll find him, standing near Hines,
The whole happy bunch looked like just old times.

EACH OF THESE PITTSBURGH EMPLOYES HOLDS A SERVICE RECORD OF MORE THAN 20 YEARS

Seated, left to right; J. T. Campbell, Patrick Melia, John McClain, G. W. C. Day, Martin Devine (96 years old), S. J. Hutchinson, H. S. McConnell, A. Madden, W. F. Deneke. Standing: S. G. McCullough, John Spangenberg, B. T. Lansker, D. Varones, M. J. Flavin, J. A. Kelly, L. W. Redman, Miss Katherine Beck, R. H. Dierker, W. J. McDonald, Michael White, P. Minoque, M. Pollock, M. A. Greenwood

If you think that the photo was not handled well,
Just look at the end men—Deneke and Campbell:
That will tell the whole story, it's a pleasure to know
They're both right on the job for the good B. & O.
To top off the affair, I'm delighted to say,
We were honored by Hutchison, McClain and Day.
When the pictures are finished, they'll be something to show,
And you'll know why we're proud of the great B. & O.
And there is no place in this whole creation,
That can hold up the candle to Pittsburgh Freight Station.
And the rest of the force that were not in the line,

Said "You can bet your life, we'll be there next time,
For it is surely an honor to be counted here,
With Agents Deneke and Campbell, year after year."
And as time rolls on, if you should look back,
You'll say "I know that I am on the right track."
For just as the bakerman kneads all the dough,
We are needed right here on the good B. & O.

An honor service roll gotten out for the meeting described by the rhymster shows the following:

G. W. C. Day, division operator, 51 years;
S. J. Hutchinson, depot ticket agent, 42 years;
John McClain, claim clerk G. F. office, 42 years;
Martin Devine, truck-loader, 42 years;
A. Madden, warehouse-

man, 40 years;
H. S. McConnell, cash clerk, 54 years;
W. F. Deneke, terminal agent, 33 years;
J. T. Campbell, assistant terminal agent, 33 years;
P. Melia, delivery clerk, 32 years;
W. J. McDonald, chief claim clerk, 31 years;
H. White, station electrician, 31 years;
M. Pollock, delivery clerk, 31 years;
J. L. Kelly, delivery clerk, 31 years;
M. J. Flavin, delivery clerk, 30 years;
D. Varones, sweeper, 30 years;
J. Spangenberg, delivery clerk, 30 years;
B. T. Lanaker, routing clerk (night), 29 years;
L. T. Redman, delivery clerk, 28 years;
S. G. McCullough, abstract revision clerk, 24 years;
P. Minoque, delivery clerk, 23 years;
M. A. Greenwood, chief clerk, 22 years;
R. H. Dierker, cashier, 22 years;
Miss K. Beck, assistant accountant, 20 years;
John Meehan, stower, 20 years;
S. F. Posteraro, accountant special bureau, 19 years;
A. L.

MOST OF THESE PITTSBURGH EMPLOYES HAVE BEEN IN SERVICE FROM 13 TO 19 YEARS, SOME LONGER

Left to right, seated: George Schmidt, W. G. Blumenschein, J. F. Hines (poet), J. T. Campbell, Martin Devine, W. F. Deneke, P. J. Leonard, S. F. Posteraro, A. L. Mary. Standing: J. G. Fisher, John Meehan, W. E. King, C. J. Maloney, J. S. Joyce, J. J. Donahue, William Porter, William Keane

Mary, accountant special bureau, 19 years; J. J. Donahue, yard delivery clerk, 18 years; W. E. Keane, yard delivery clerk, 18 years; W. G. Blumenschein, chief rate clerk, 17 years; George Schmidt, claim investigator, 17 years; J. F. Hines, chief receiving clerk, 16 years; J. S. Joyce, claim clerk, 16 years; P. J. Leonard, foreman, 15 years; J. G. Fisher, assistant rate clerk, 14 years; C. J. Maloney, assistant foreman, 13 years; W. E. King, crane operator, 13 years.
*Pensioned October, 1912.

Charleston Division

Correspondent, M. W. JONES, *Secretary to Superintendent*, Weston, W. Va.

"Think About It."

There's a famous saying on the Charleston Division, which we don't follow, but we notice other fellows take a crack at it once in a while. Here it is:

When you're feeling real disheartened
And your work you cannot do,
When the junk stacks up before you
And you never can get through.
What to do? "Pass the Buck."

When you go to see old Severns
And you want some info' bad,
And he cannot seem to find it.
What's he say?
"You have those papers." "Pass the Buck."

When there is a big derailment
And the cause of it is dim,
And you go to see the T. M.
What's he say?
"You find it." "Pass the Buck."

When you want to find a letter
And you go hunt up the girl
Who's supposed to keep them safely
But this one she cannot find. What's she do?
"You never wrote it." "Pass the Buck."

When you hear about the failure
Of the engine on the train
Pulling all the varnished cars on the Division,
And you go to see dear Dicky. What's he say?
"It is the coal." "Pass the Buck."

When you go to call on Schidey,
And the bowling you discuss,
And you want to know the reason
Why he fell down on the job. What's he say?
"I was tired." "Pass the Buck."

Then there is our old friend Pickens
Personal injuries are his forte
But he cannot find the reason
Why the man has smashed his toe. What's he say?
"Why search me, I didn't do it." "Pass the Buck."

Now we come to Charlie Dixon,
The fellow with the cars,
And we want to know the reason
Why we get no cars at all. What's he say?
"They didn't give me any, not my fault." "Pass the Buck."

We'll now call upon Miss Hayden,
The girl who never smiles,
And we want to know the reason
Why the ring we cannot find. What's she say?
"He took it back." "Pass the Buck."

What's the reason, Mr. Criswell
That this claim you cannot pay?
Charlie follows all the forner,
In the same old-fashioned way. What's he say?
"Up to Baltimore," says Charlie.
"Pass the Buck."

Did you ever see a railroad
Where they didn't pass the buck?
It's just an endless chain,
But no more we find today.
And so unto the Editor, we'll all just
PASS THE BUCK.

(But the Editor is human
And we will likely find a note
Reading "Printer, do the best you can
With this—I guess I'll 'Pass the Buck.'")

Benwood Shop

Correspondent, ANGELA J. APPLEGATE

I don't think this picture needs an introduction, for it shows former Miss Blanche Frankhauser, stenographer to the storekeeper, and Miss Ruth Vernon, also from the Storekeeper's office. This picture was taken at Blanche's home in Parkersburg, and fully explains why Ruth makes so many trips to that city—so Ruth says—but Cupid tells us there is a "he" in the case.

On May 2, Conductor E. J. Bowen stepped in front of engine 2305, at Clarkson Mine, and sustained a sprained ankle and a number of bruises. We all wish him a speedy recovery.

The call of Spring has prompted a number of our shop employes to purchase automobiles. "Jerry" Donovan is the proud owner of a Ford sedan, while Roy Nease has

Blanche Frankhauser and Ruth Vernon,
of Storekeeper's Office at Benwood.

a Stephens, and Harold Schafer, our efficient man-hour clerk, is sporting an Oldsmobile. Coach Foreman Selwood, Wheeling, has purchased a Paige; he told us to tell his Baltimore and Chicago friends that he would soon pay them a visit with his wife (or, if not his, somebody else's).

Calvin Reisinger, stenographer to the storekeeper, recently appeared all dressed up in a new suit, without collar or tie. Upon inquiring about the absence of the collar, we learned the baby had swallowed the collar button, which necessitated daddy using a pin. Cheer up, "Cal," such are the trials of a married man, especially in a small town where they don't sell collar buttons.

About 7:30 p. m. on April 30, Miss Rose Grineage, car preparer, Wheeling Coach Yards, was struck by an automobile. She was rushed to the Ohio Valley Hospital, where it was found she had a fractured skull. At the present writing Miss Grineage is in a very serious condition. We sincerely hope for her recovery.

George Selwood, our prominent coach foreman, informs us that Electrician George Frank is the proud daddy of twins, born on April 11, namely, Marie, who weighed

Correspondent, A. E. ERICH, *Secretary to Superintendent*

Erecting Shop Foreman J. B. Welsh recently returned from a trip to Florida. The southern climate certainly seems to have agreed with "Jack."

We are glad to announce that Boilermaker Foreman F. J. Rahrle is back on the job after being off duty quite a while because of rheumatism.

R. Titus, boilermaker apprentice, who broke his arm while cranking a "Ford," is rapidly regaining the use of the injured member.

S. Dray, machinist helper, is the proud father of a son. Congratulations!

G. W. Seffens, clerk, Division Accountant's office, is smiling over the arrival of a 7-pound girl.

We extend to Conductor W. A. Hall our sympathy in the loss of his mother, who died on April 9.

Andrew Meinfelter, formerly employed as tinner, Chillicothe Shops, and who was retired on pension several years ago, died at the home of his daughter Mrs. W. F. Bauer, on April 18.

If the daylight saving plan is adopted locally, Fireman C. E. Harper states he will

be in doubt as to his young son's age. This young man was ushered into his home on October 26, 1919, just at the hour when the time was changed back one hour, and the way "Harp" has it figured, he has the time beat one hour as it now stands, but if the clocks are turned up one hour again, it will change things around.

Our Business Getters

Miss Margaret Thacker, demurrage clerk, local freight office, while in conversation with a shipper, who had intended to ship a carload of merchandise from Chillicothe to Detroit over another line, spoke to him about letting this car be routed over the

"Keep These Men"

"Brown, I've been putting the axe to the pay-roll. I have cut out a lot of dead wood—unskilled men we can replace tomorrow if necessary.

"But—keep these men whose names I have checked. They draw big pay but they know their work. They are the men who looked ahead and trained themselves to do some one thing better than any one else. We can't afford to lose one of them."

ARE you one of these skilled men who will be kept? Or is the Axe of Unemployment hanging over your head this very minute?

Thousands of men are idle right now for just one reason—they are *unskilled*! They work at any kind of job they can get, and when a slow-up comes, they are the first to be dropped.

You can climb out of the ranks of the unskilled if you really want to do so. You can get the position you want by spare time study in the evening hours you now waste. *Yes, you can!*

For thirty years The International Correspondence Schools have been helping men and women to win promotion—to earn more money—to get ahead in business and in life. More than 2,000,000 have taken the Up-road To Success with I. C. S. help. More than 130,000 are training themselves for bigger jobs right now.

Would you like to be a first-class Mechanical, Electrical or Civil Engineer? A Chemist? An Architect? A Building Contractor? Hundreds of thousands of men have climbed into big jobs in the technical professions through I. C. S. help.

Do you want to advance in Business? In Advertising? In Salesmanship? Many of the country's

foremost Advertising and Sales Managers have won success through I. C. S. training.

Accounting? Commercial Law? All over America bookkeepers, accountants, office managers, private secretaries, are reaping the rewards of time invested in I. C. S. training in these subjects.

Don't let another priceless hour go to waste. Let us prove that we can help you to turn your spare time into money.

Without cost, without obligation, tear out and mail this coupon. It's a little thing that will take only a moment of your time. But it's the most important thing you can do today. Do it right now!

Eight of the office employees in the depot building at Chillicothe

Baltimore and Ohio, mentioning that it was a direct route and assuring him the service would be all and more than he could expect. He immediately consented to have the routing changed, as suggested.

Frank Lang, bill clerk, also through his personal efforts succeeded in having a carload of machinery shipped from Philadelphia to Chillicothe, via Baltimore and Ohio.

Following copy of letter received by Agent Moore, from a large manufacturing concern in Ohio:

My Dear Mr. Moore:

After being told so many times by the management of this company to write you and thank you for the speedy and kind manner in which our wants were handled by you and your efficient office force, I wish to take this opportunity to do so.

I am more than pleased to have the pleasure of having our manager instruct me to write you and express for him the appreciation of this firm for the manner in which our wants were taken care of.

It is certain that you have won a good warm friend in the management of the — Company, as it was entirely through your efforts that our plant was closed only one day instead of three as we at first feared.

Again thanking you and wishing you and your family the best of health, I remain,
Sincerely,

Production Manager.

This is only one of the few that the correspondent could obtain from Mr. Moore, as he was somewhat timid about telling these things, but it only goes to show what he is doing, together with his force, to GET MORE BUSINESS.

Another episode that was brought to our attention in regard to Mr. Moore (or as the shippers in Chillicothe call him, "B. & O. Bill"): He noticed an old lady who seemed somewhat timid about crossing the tracks to get on a street car, went to her and offered his assistance, which was immediately accepted. On parting, she remarked that she would certainly try to do something for him some day. It was learned sometime afterwards that, through her influence, a carload of brass was shipped from Pittsburgh via Baltimore and Ohio, when it had been intended by the shipper to use another road. The revenue obtained by this Company from the shipment of this car was wholly due to a little courtesy shown to this lady by Mr. Moore.

It was noticed that Agent Moore lost all of his hair within 24 hours, preceding May 3. We were somewhat alarmed that this may have been caused by his hustle to GET BUSINESS, but upon inquiry he set our fears to rest, stating that he had discarded his toupee.

Recently one of the officers of one of the largest manufacturing concerns in Chillicothe was induced to use the Baltimore and Ohio in making a trip to New York instead of another road, which he had always used before. After doing so, he remarked that in the future he would always use OUR railroad for this journey, as he found it was a pleasure to ride on the Baltimore and Ohio trains. He said also that the courtesy shown him by all employes was excellent. Another friend for the Baltimore and Ohio, by a little effort on the part of an employee!

On April 30, the Elks' Hall at Chillicothe was well filled with employees, Veterans and their friends, who enjoyed the "get-together" meeting held by the Veterans' Association. W. R. Moore, local president of the Veterans, called the meeting to order and after a few remarks gave it in charge of Superintendent Brown, who engineered the program. George W. Sturmer, grand president, gave a very interesting talk. Local talent who contributed to the musical program were: Messrs. James Emmett and

Edward Brennan, day roundhouse foreman, Lima, Ohio. In service since 1907

Philip Snyder, Walter Thatcher, L. Minch, C. Thompson and Mrs. Thompson. After the meeting the evening was devoted to dancing, etc., until a late hour. Punch and cakes were served throughout the evening.

One of the leading business men of this country once said "LOVE YOUR WORK—then you will find pleasure in mastering it." There is no question but that the bunch shown in the accompanying photograph, who are employed in the several offices of the depot building at Chillicothe, find pleasure in their daily duties. (Note the smiles.) They are, reading from left to right: F. Eichenlaub, Bertha Streitenberger, W. Neal, Edith Woodall, Mildred Curtis, R. West, Osma Foster and Eva Eberle.

The seven deadly "accident" sins, can be named as follows: CARELESSNESS, IGNORANCE, THOUGHTLESSNESS, RECKLESSNESS, SHIFTLINESS, DISSIPATION, UNCLEANLINESS.

Think SAFETY. Remember the wife and kiddies at home and be SAFE for their sake. Don't be guilty of any of the seven deadly "accident" sins.

It is with regret that we have to report the death of Francis B. Brake at his home on April 29. Brother Brake was in service as a painter, for over 40 years. He was well known by hundreds of employees, who extend to his widow their sympathy.

Indiana Division

Correspondent, H. S. ADAMS, Chief Clerk to Superintendent

Miss Mabel Spear, daughter of Mr. and Mrs. J. F. Spear, and Sheldon L. Vanhoy were quietly married on April 11 at Seymour, Ind. The marriage was a complete surprise to their many friends there.

The bride is a popular young lady of this city and attended the local schools. Until a few weeks ago she was employed at The Sparta. Mr. Vanhoy, who is the son of Mr. and Mrs. George Vanhoy, North Walnut Street, is one of our well-known brakemen.

Resolution of O. R. C. Division 281 on the late J. F. Keegan

SUPERINTENDENT BELTZ, Pittsburgh Division, has requested that the following appear in the MAGAZINE:
O. R. C. DIVISION 281

Sunday, April 3, 1921.

At a regular meeting of the O. R. C. Division 281, on Sunday, April 3, 1921, the following Resolution was unanimously adopted by the membership:

Resolved: That, whereas, in the death of our beloved and esteemed General Superintendent, Mr. J. F. Keegan, the Baltimore and Ohio Railroad Company has lost one of its most devoted, loyal and efficient officials, and the men on the Pittsburgh Division a humane, kind and trusted friend; therefore be it further resolved, that we express our heartfelt sorrow at his loss, and extend to his wife and daughter our sincere and deep sympathy in their hour of trial. We echo the thought and prayer that our Heavenly Father may comfort and console them as they travel through the Valley of Gethsemane.

Signed: P. T. ELLERY,
JOSEPH MEEHAN,
T. A. JOYCE,

Committee.

Approved:

J. F. HOMER, Chief Conductor.
J. A. FISHER, Secretary.

Absolutely

Uncle: Only fools are certain, Tommy, wise men hesitate.

Tommy: Are you sure, Uncle?

Uncle: Yes, my boy, certain of it.

—Exchange.

His Vacation

Lazy Mike: I have a new position with the railroad company.

Weary Rhodes: What ja gona do?

Lazy Mike: You know the fellow that goes alongside the train and taps the axles to see if everything's all right? Well, I help him listen.

Passenger crew on S. V. & E. R. R., Jenkins, Kentucky. Left to right: R. Roberts, baggageman; Oscar Arrington, flagman; John Moore, conductor; Leonard Hopkins, fireman; "Ben" Norris, engineer.

President Harding Looks at a Picture

HERE on my desk I am keeping a photograph of a group of my old friends, taken on my front porch one day the past Autumn. It has been a reminder and an inspiration to me many times, a reminder of the unlimited possibilities of American life, and an inspiration to all effort that those possibilities may be preserved and broadened. Let me point out some of them.

Here is a man who started life as a water boy on a railroad construction gang, became a telegrapher, and is now a millionaire captain of industry—head of a great industry which he conceived, built and controls.

Next to him is another with a like beginning; a poor boy who had little education and no chance but what he made for himself out of this country's opportunities. He is one of the most important railroad executives in Ohio today.

Here is one of the men who have made Marion; he was a farm boy in this county, didn't know what it would mean to have a dollar to spend freely. Now he is a dominating figure in one of the largest manufacturing industries in the State—an industry whose products go literally all over the world. Down in the bottom row is a young man who came up by the same route. He had nothing, and imagined himself well started toward success when he became a country telegraph operator and station agent, while yet a mere boy. He has risen step by step to be, today, general manager of one of the country's great railroads.

So on through the list. No man in that group of nine started with, apparently, an even start for success. They all knew the hard ways, the real privations. Their story tells us what America means, and why we must make it continue to mean opportunity and inspiration, and the reward of merit. Every work to that end is to be commended and encouraged.

WARREN G. HARDING.

Trial**

Rug No. 1

Rug No. 2

\$1

Brings Either Splendid Rug

Only \$1 brings your choice of these two splendid rug bargains for 30 days' free trial in your own home. Both are seamless, worsted face tapestry Brussels rugs of stunning beauty and superb quality. Each is an amazing bargain. Use the one you select for 30 days. If not more than delighted with the rug, return it to us. We will refund your \$1 and pay transportation charges both ways. If you keep the rug, take nearly a year to pay on our easy monthly payment plan.

Nearly Full Year to Pay

Send today for one of these magnificent Brussels rugs on free trial. See how beautiful the pattern, how rich the colorings. Note the fine quality of the worsted and how strongly woven. Consider what a bargain at the slashed price. Then make your choice for the 30-day free trial offer at our risk.

FREE Bargain Catalog

392 pages of stunning bargains in furniture, "Congoleum" rugs, linoleum, stoves, ranges, rugs, watches, silverware, dishes, washing machines, sewing machines, aluminum ware, phonographs, gas engines and cream separators, etc. 30 days' free trial on anything you send for—and all sold on Hartman's easy monthly payment plan. Post card or letter brings it.

"Let Hartman Feather Your Nest."

Rug No. 1

Stunning
All-Over Pattern

Elegant "Umballa" Tapestry Brussels. Seamless—with fine worsted face. The ground color is tan with shades of green and brown. Woven to give extraordinary wear. Full room size, 9 by 12 feet.

Order by No. 37CMA36. Price only \$29.85. Send \$1 now. Balance only \$2.75 monthly.

Rug No. 2

Neat, Floral
Medallion Pattern

Magnificent seamless Tapestry Brussels rug. Firmly woven of fine worsted yarns. Handsome colorings of red, green, brown and tan. Floral medallion center is surrounded by harmonizing floral sprays and pretty border. Full room size, 9 by 12 feet.

Order by No. 34CMA13. Price only \$29.85. Send \$1 now. Balance only \$2.75 monthly.

July

1921

The Old "Super" Says:

That is my house on the hill there beyond the track, just to the right of the roundhouse tower. The street cars don't run so often at night and when I am late at the office I usually hoof it in a bee-line right across the yards for home.

The other night I had gotten about half way over when a couple of cuts of cars came together with a crash that made me shiver. If there was any macaroni in them, said I to myself, it would look like flour after that. And I am used to pretty heavy switching, having worked in every yard from Parkersburg east to Brunswick.

The night yardmaster was on the spot before I got there. What he said to the switchman and engineer would not look good in print, but I heard the engineer call back at him as he ran back, this time more slowly to make the coupling over again:

"Well, I didn't mean to hit 'em so hard, but if we did break some draft gears or sills, it will mean more work for the repairers down in the car shops."

* * * * *

Next evening about six o'clock the engineer came into my office. It was Jack Redding, one of the oldest and best engineers in yard service on our division.

I told him how I came to see and hear what happened the night before. Then I quoted his remark about making "more work for the repairers" and I asked him what he meant by it.

"Understand," he said, "I didn't mean to hit the cars so hard, but when that night yardmaster began to ride me I got hot, and half as an excuse and half because I think it is true, I told him about giving more work to the car repairmen."

"Been down on the repair tracks recently, Jack?" I asked.

"Yes."

"Crowded, aren't they? And there is the same condition in every repair yard on the System. Right now the Baltimore and Ohio has about 30 per cent. of all its freight cars on sidings, storage

tracks, team tracks and wherever they can put them, because business is so poor. And ten per cent. of all the freight cars on the System are in bad order and will be rushed to the repair yards just as soon as the Company has money enough to have them put in good order. You didn't know we had so much work waiting for the money to do it with, did you?"

He shook his head slowly as I continued:

"I don't know what damage you did to the commodities that were in those box cars you were switching last night, getting them ready to put on Chicago 97 when she came through. But a bump like that may have caused thousands of dollars worth of damage, not only to the commodities in the cars but also to the cars themselves. And for every dollar's damage that you did, it means that our car repairers all over the System are just that much further away from getting back to work and wages. You didn't mean to keep them out of a job, but you can see how you helped do it, can't you?"

"The Railroad can't pick money off bushes," I went on. "It must get it for carrying freight and passengers. Perhaps you don't know that our Railroad so far this year has failed to earn the interest on its bonded debt by several millions of dollars. It is in exactly the same position you would be in if you had a note due at the bank tomorrow and could not pay the interest on it out of your current wages.

"Every dollar that you save through careful switching, coal economy, upkeep of your engine, preventing delays and in all the many ways you can help, will put those car repairers you were thinking about last night back on the job so much the more quickly. When you have thought it over a bit, come in and tell me if you don't agree with me."

Redding moved over quickly toward the door.

"I don't need to think it over, Boss. I know what you said is the goods. Come down and see me again some night and I'll show you how I can do it when I really want to try."

You Can't Get Far without the Three "R's"

HOW many young men and women in business today are realizing the need for a broader education?

Many boys and girls are compelled to leave school too early in order that their earnings may help support the family. A few are exceptional, and, with the aid of extraordinary ambitions and good environments, reach that point where they can be pointed out as "self-made."

Many are handicapped because they are not well-grounded in the "common branches." Their opinions are discredited because lack of knowledge of the language which we are all speaking in this country prohibits them from giving clearness and force to what they say.

Many times we hear men say, "That was not what I meant. He misunderstood me." But ability to clearly express his thought would have prevented misunderstanding on the part of the other man. These are the little things in business which, when added together, either make or mar the success of the enterprise. There are young men and women holding positions in offices where the responsibilities are nearly equal to those of salesmen; they see the prospect first and his idea of the management is based upon his reception. Do such clerks know what to do under these circumstances?

Evening classes, night schools, specialty work have all been big factors in improving this condition. But unless the employee takes advantage of these opportunities, nothing can be done. No person can be educated unless he comes with an open mind to his work. Opportunity doesn't knock and then go away. But opportunity won't embrace you until you embrace it.

Meter, Liter, Gram

OUR brutally arbitrary standards of feet and inches having no basic relation to our gallons and pounds, what a complex process it is to reduce cubic feet to gallons or pounds? Our foot is supposed to be the length of an English king's foot, although there were some kings more generously endowed than others with both feet and understanding. The gallon and the pound have not even this poor basis to build upon.

How different it is with the metric system in which there is nothing arbitrary and no two things unrelated! The meter, the one ten-millionth part of the quadrant of the Paris meridian, is directly related to the liter, the standard of capacity, which is a cubic decimeter, and the gram, the weight of a cubic centimeter of water at four degrees centigrade. How different are the meter, the liter and the gram when compared with our foot, gallon and pound! How easy it is to reduce meters to liters and grams as compared with the kill-brain process of converting feet into terms of gallons and pounds!

How much more difficult it is to multiply or divide by 62½, 268.8, 537.6, 2150.42 or 1.244, when we wish to reduce a given quantity into pounds, pecks, bushels, gallons, inches or feet, than the mere changing of the position of a decimal point!

How few can tell off-hand how many cubic feet or inches in a peck, a bushel, or how many pounds in a cubic foot of water? How many college graduates can tell you? Recently when an engineer testified in court that a cubic foot of anthracite weighed 54 pounds not a single judge or lawyer questioned the accuracy of the statement until a miner in the audience said in a stage whisper: "He's thinkin' av

Ivory Soap!" Yet a French school boy will convert liters and decimeters into grams at your will. Oh, the brutal waste of the life of holy childhood in learning these endless tables designed by madmen dead and damned!

Let us have the rational metric system, which is as far ahead of our foggy measures as the harvester is beyond the sickle, or the electric motor is in advance of the ox. Why

should we lag behind the Latins under the coercion of custom and the ghosts of other days?

The Unkindest Cut

"It's four years now since he left me," said the deserted wife. "I remember it just as well as yesterday—how he stood at the door, holding it open till six flies got into the house."—*Boston Transcript*.

You Need These Books

PRETTY soon you will be called up to take your examination and you will have to face a lot of hard questions. Better brush up a little. Our books contain every question with its answer you are likely to be asked by the examiner. They are the only complete railway books issued giving up-to-date, reliable information. Don't put off until examination day comes, but send for the following books at once:

Westinghouse E T Air Brake Instruction Pocket Book Catechism. By Wm. W. Wood, Air Brake Instructor.

A practical work containing examination questions and answers on the E T Equipment. Covering what the E T Brake is. How it should be operated. What to do when defective. Not a question can be asked of the engineer on up for promotion on either the No. 5 or No. 6 E T Equipment that is not asked and answered in the book. If you want to thoroughly understand the E T equipment get a copy of this book. It covers every detail. Makes Air Brake troubles and examination easy. Fully illustrated with colored plates, showing various pressures. **\$2.50**

Locomotive Breakdowns and Their Remedies. By Geo. L. Fowler.

Revised by Wm. W. Wood, Air Brake Instructor. It is out of the question to try and tell you about every subject that is covered in this

pocket edition of Locomotive Breakdowns. Just imagine all the common troubles that an engineer may expect to happen some time, and then add all of the unexpected ones, troubles that could occur, but that you had never thought about, and you will find that they are all treated with the very best methods of repair. Walschaert Locomotive Valve Gear Troubles. Electric Headlight Troubles, as well as Questions and Answers on the Air Brake, are all included. 294 pages. Fully illustrated. **\$1.50**

Train Rule Examinations Made Easy. By G. E. Collingwood.

This is a book which every railroad man, no matter what department he is in, should have, as it is written by a man who understands the subject thoroughly. Mr. G. E. Collingwood, the author, is a recognized authority on train rules and train orders. For years he has edited the train rule department in four of the foremost railroad magazines in the United States. 256 pages. Fully illustrated with train signals in colors. **\$1.50**

Nearly 500 Questions with their Answers are Included.

Walschaert Locomotive Valve Gear. By Wm. W. Wood.

If you would thoroughly understand the Walschaert Valve Gear, you should possess a copy of this book. The author divides the subject into four divisions, as follows: I—Analysis of the gear. II—Designing and erection of the gear. III—Advantages of the gear. IV—Questions and answers relating to the Walschaert Valve Gear. This book is specially valuable to those preparing for promotion. Third edition, revised and enlarged. 245 pages, fully illustrated. Cloth. **\$2.50**

Air Brake Catechism. By Robert H. Blackall.

This book is a standard text book. It is the only practical and complete work published. Treats on the equipment manufactured by the Westinghouse Air Brake Company, including the E T Locomotive Brake Equipment, the K (Quick Service) Triple Valve for freight service; the L High Speed Triple Valve; the P-C Passenger Brake Equipment, and the Cross Compound Pump. The operation of all parts of the apparatus is explained in detail and a practical way of locating their peculiarities and remedying their defects is given. Endorsed and used by air brake instructors and examiners on nearly every railroad in the United States. Twenty-seventh edition. 411 pages, fully illustrated with folding plates and diagrams. New edition. **\$2.50**

Practical Instructor and Reference Book for Locomotive Firemen and Engineers. By Chas. F. Lockhart.

An entirely new book on the locomotive. It appeals to every railroad man, as it tells him how things are done and the right way to do them. Written by a man who has had years of practical experience in locomotive shops and on the road firing and running. The information given in this book cannot be found in any other similar treatise. Eight hundred and fifty-one questions with their answers are included, which will prove specially helpful to those preparing for examination. 362 pages, 88 illustrations. Cloth. **\$2.50**

Link Motions, Valves and Valve Setting. By Fred H. Colvin, Associate Editor of *American Machinist*.

A handy book that clears up the mysteries of valve setting. Shows the different valve gears in use, how they work, and why. Piston and slide valves of different types are illustrated and explained. A book that every railroad man in the motive power department ought to have. Fully illustrated. New revised edition recently published. **75 CENTS**

Locomotive Boiler Construction. By Frank A. Kleinbans.

The only book showing how locomotive boilers are built in modern shops. Shows all types of boilers used; gives details of construction; practical facts, such as life of riveting punches and dies, work done per day, allowance for bending and flanging sheets and other data that means dollars to any railroad man. Second edition. 451 pages, 334 illustrations. Six folding plates. Cloth. **\$3.50**

Have you \$521?

"The population of the United States is divided into two classes of people," says the *Vulcan Bulletin*, "those who are contented and those who are discontented. There are men who think that everything is wrong and those who, although not contending that everything is right, believe that things are more nearly right than wrong. The man who thinks that things are all wrong usually has some definite plan to right them. The trouble with him is, however, that he has little knowledge of natural or economic laws and his plans wouldn't work in practice. He's like the man who knows that the quickest way to get to the ground from the top of a ten-story building is to jump, and, knowing nothing about the law of falling bodies, he tries it. He makes the trip but when he reaches the ground he no longer has any use for the hat he went after."

"Sometimes you hear a man say 'large salaries are unjust. All men should get the same compensation for the same number of hours of work.' He feels that if all did, his income would be increased many times. As a matter of fact it would be increased very little and might be reduced. The United States Steel Corporation has been accused of paying high salaries to its executives. There was a time when the president was said to receive a million dollars a year. Perhaps he does now. Undoubtedly there are many salaries of more than \$25,000 a year. But the average salary of all United States Steel Corporation employees including executives was \$5.38 a day in 1918. The average salary of all employees exclusive of executives was \$5.33 a day. So that it all executives were put on a common basis with other employees the average would be only five cents a day more. If the thoughtful direction of executives were eliminated from the management of the United States Steel Corporation, it is probable that the company would have to pay far less than \$5.33 a day."

"So as a matter of fact the small contribution that each workman makes toward executives' salaries is made largely in his own interest. If the boss didn't make money the office boy wouldn't have a job. Consider the Bell Telephone as another instance. If all the salaries which exceed \$5,000 a year were cut to that figure and the amount saved were divided among employees who receive less than \$5,000, the average increase would be less than three cents a day. Highly paid men usually get what their services are worth to the business and if that business did not pay them what they are worth some other business would, because the demand for big men is always greater than the supply."

"The way to get a big salary is to get it out of yourself, not out of somebody else. If you make yourself worth more you will get more. Sometimes you hear a man say 'Capital ought to be equally divided. All the money in the United States ought to be put in a big hat and each man draw out an equal amount.' This man may have \$1,000 in the bank, but he is jealous of the man who has \$50,000 or \$100,000. He does not realize that if his plan were carried out

he would have to sacrifice part of what he has. If he did, he wouldn't be so anxious to divide. If all the wealth in the United States were divided equally, each person would have just \$521. Of course there are a good many persons who don't possess \$521, but those who talk the loudest usually possess a good deal more than this amount."

Purdue Helping Solve Hot Box Problem

One of the big causes of delay in the movement of freight is the heating of the journal boxes of car axles, commonly called "hot boxes." When one journal box in a train gets seriously hot it is necessary to stop the whole movement of traffic until the condition can be remedied. This makes very timely a series of tests now being carried on at Purdue University, to determine accurately the benefit to be derived by using ventilated lids instead of the solid lids now almost universally used on the axle journals. The tests consist of eight hour runs with heavy loads and high speed, during which accurate records are kept of

the temperature attained in each class of apparatus.

The Flavor Lasts

Up in Wisconsin there was a skunk farm adjoining the railroad right of way, where thousands of the pretty little creatures were raised for their skins. On this particular night a large number of them, escaping through a break in the enclosure, started on a moonlight pilgrimage down the railroad track. When, a short time later, the express bore down on them, they bravely stood their ground, and, although many were killed, registered a unanimous and vigorous protest. It being summer time, the car windows were all open, and the awakened passengers emerged from their berths gasping for breath. At the next stop, a division point, even the car inspectors fled precipitately and had to be coerced into performing their duties; and at each station thereafter, everyone in sight suddenly had business elsewhere the minute the train arrived.

gency they may quickly be made use of.

Likewise, a fire alarm or a fire extinguisher is deprived of a good deal of its efficiency through being invisible in the dark. Radium luminous material acts as a quick locator for them. Telephones, which are often necessarily found quickly in the dark in emergencies, various emergency call bells, and revolvers are made more useful through the application of undark. Gun sights, illuminated, insure accuracy of aim in the dark. The need of luminating poison bottles, so that they may stand out warningly in the dark has been demonstrated too often to need further dwelling on. An interesting Safety device is the safe combination whose dial is radium luminated, so that no artificial light need be used for it.

The industrial uses of radium luminous material are many. Bolts that are necessarily attached to the dark under portions of machines and equipment are being touched with dabs of this luminous material with a consequent great saving of bloodshed. In mines where the carrying of oil lamps or the placing of electric lighting equipment is not feasible, radium has been found to be a boon to humanity. There are dark corners in the dark underground channels which miners must traverse, corners where danger lurks—these are made safe through the unvarying luminosity of radium.

The value of radium to mariners is commencing to be recognized. Not only the

SERVICE K.M.CO. **UNION MADE**
"Service" Overalls
Kohn Manufacturing Company, Bradford, Pa.

compass dials, but the steering wheels, the gauges and other instruments which should be instantly and uninterruptedly visible have been touched with radium. Motorists, motorcyclists, and the operators of any machinery which has indicating dials or gauges which tell of the speed of the motor or the quantity and mixture of fuels and oils, are finding the solution of their difficulties in radium luminous material. The hazard of uncertainty has been reduced.

While radium is the most valuable element in the world—a gram of radium, which is about a thimbleful, costs \$120,000, as opposed to \$150 for an ounce of platinum. So powerful is it when mixed with other materials that even the minutest particle is effective in making material self-luminous for years. It is this quality which makes radium luminous material commercially possible.

The great value of radium is due to its scarcity, and to the great difficulty in isolating it after it has been found. Much of the radium of the world is now found in America, in carnotite fields. A great portion of this comes from the Undark Radium mines in the Paradox Valley of Colorado. The ore is found in narrow seams in the ground. It is sorted and packed in 100-pound sacks and transported 60 miles to the nearest railroad station on the backs of burros and mules. Thence it is shipped in carload lots 2,900 miles across the continent to an extraction plant in Orange, N. J.

Two hundred and fifty tons of ore treated with an equal amount of chemicals and water yields one gram, which is about the size of a pin head.

The power of radium lies in the penetrating character of its rays, which disintegrate and travel at the rate of 3,000 miles a quarter of a second.

In addition to the use of radium luminous material on machinery in industrial plants, it is used extensively for the marking of any corner or spot which should be visible in the dark. Angles of tables and chairs, corners in rooms, numbers to indicate cubby holes or doorways on which there is no other illumination, are touched with a spot of undark. Even the valuable electric torch increases its efficiency when it has a touch of radium on it so that it can be reached instantly in an emergency in the dark.

When other lights fail, when fuses blow out, wires break down—radium will glow dependably without danger of explosion or of burning.

The employment of radium to help solve our medical and industrial problems of life safety is as yet in the first stages of its development. What the future will bring, no one knows.

Philological

A colored woman one day visited the court house in a Tennessee town and said to the judge:

"Is you-all the reperbate judge?"

"I am the judge of probate, mammy."

"I'se come to you-all 'cause I'se in trouble. Mah man—he's done died de- tected and I'se got t'ree little infidels, so I'se cum to be appointed der excecutioner."

R. W. McGUIRE,
Charleston, W. Va.

Radium—A New Element in the Safety Movement

RADIUM, the most mysterious and most powerful element known to science, which has the greatest power of all discovered sources of energy, has now been linked with the Safety movement and will lend its power to the prevention of avoidable accidents. So great is its power that one gram is sufficient to raise a ton of water from the freezing to the boiling point. If one ton of it were harnessed to a ship equipped with 1500 horse power engines, the ship would be propelled at the rate of 15 knots an hour for 30 years.

Radium is best known to the world through its curative properties in the treatment of cancer and through its commercial value in making radium luminous material. The power of radium was made known only a few years ago through the efforts of a Polish woman scientist, and a French and an American professor. Radium now treats thousands of cases of cancer annually, preventing death and eliminating a great deal of suffering.

Radium's role in industry as a life saver is less spectacular, but perhaps even more important than it is as a therapeutic agent. The great mass of accidents in factories, in mines and in other industrial institutions where darkness is a creator of danger, are being eliminated through the newest invention of science—radium luminous material. Radium illuminated watches are familiar articles. The same material that illuminates these is now being employed in great factories on all power line switches where fumbling might mean electrocution to the operator.

High pressure gauges, which are installed as an insurance against dangers, are deprived of a great deal of their safety value through inconstant lighting. Their dependability as indicators is increased tremendously through making them safe 24 hours a day by the application of radium luminous material, which is invariably luminous in the dark. Steam gauges and water gauges of all sorts are making use of radium to increase safety.

Electric switches are often set in places which are unlighted. This includes electric lighting equipment, which is usually visible only after the light it controls has been turned on. A spot of radium luminous material on the bottom or switch makes them easily located in the dark, so that in emer-

Not one cent in advance for this combination 7-Window Pass Case, Card Case and Bill Fold

Will show 7 regular size passes, identification cards, and photos, each under a separate transparent celluloid face protecting it from dirt and wear. Also has gusseted pockets for smaller cards and roomy billfold pocket in back. Railroad men tell me it is the handiest thing they ever saw. Over 20,000 of them now being carried. Your name and address (3 lines) and your emblem or insignia (order, brotherhood, lodge—I have them all) engraved in 23K gold absolutely free. This work alone is worth \$1.50 of anybody's money. Case is beautifully made of fine black seal grain genuine leather. Strongly sewed, neat and convenient. Size, 3 1/2 x 4 1/2 inches closed.

Don't send me a single penny in advance. Just send your name and address on the coupon below with the emblem or insignia you want. I will send you this wonderful pass case at once, and when the postman delivers it to you, when you actually have the goods, pay him only \$3.00 and postage. I positively guarantee that if you don't think this is the best buy you ever made, you may return it and I will refund your money immediately. I have been in this business for over 10 years.

You take no risk! Send the coupon TODAY!

“Cast Thy Bread upon the Waters—”

IN FEBRUARY, 1913, President Willard received a letter from Jules Jusserand, Ambassador of France to the United States. In effect it stated that he had gotten a communication from a French theatrical troupe which had moved in part from Kansas City to Pittsburgh, and then to New Orleans, where, because of lack of funds, they were seriously embarrassed; that at Pittsburgh a trunk belonging to the troupe had been lost in the transfer of their baggage and that in view of their being strangers in the United States, of their financial inability to litigate the claim, and of their desire to depart quickly for France, he requested that the customary departmental investigation be shortened and that refund be made on the basis of the appended itemized valuation of the articles lost.

The justice of the ambassador's note appealed to the fair-mindedness of President Willard, who wrote him that his request would have prompt attention. He then asked his assistant, George H. Campbell, to call on the ambassador and make a fair and amicable adjustment. Mr. Campbell promptly saw Ambassador Jusserand at the French embassy in Washington, explained the railroad rules governing the payment of claims for lost baggage, and also called his attention to the fact that the values placed on some of the items lost were probably somewhat sentimental and not actual. He said, however, that in order to make a quick settlement the Baltimore and Ohio would be glad to accept his decision as arbitrator. Ambassador Jusserand agreed, and the check covering his appraisal was immediately sent to him for distribution to the several members of the company interested.

This was in 1913 and during the next eight years the world was seething in the cauldron of the Great War and its aftermath, through all of which period Ambassador Jusserand played a leading, difficult and notable part. Little wonder then, that on the night of April 28, 1921, the prompt and courteous settlement for the lost trunk had been forgotten by all the principals in the transaction—all but one.

It was the occasion of the annual banquet of the Traffic Club of Pittsburgh, at the William Penn Hotel of that city. The diners, leaders in the commercial, banking and railroad world, had heard the addresses of Otto H. Kahn, internationally known banker and financial authority, and of Mr. Willard, when word was passed from table to table that the Vice-President of the United States, Calvin Coolidge, and the French Ambassador

Jusserand, who were in Pittsburgh, were on their way to the banquet hall.

The arrival of the two eminent statesmen was greeted by the playing of the Marseillaise and the Star Spangled Banner, and with great applause and cheering by the guests. Vice-President Coolidge spoke extemporaneously and in his characteristically interesting and concise manner. The toastmaster then introduced Ambassador Jusserand.

After expressing his pleasure at meeting the representative men there assembled, he spoke in a general but most complimentary way of the splendid service rendered by the railroads of the United States as he has observed it. Further, he told in detail, but without mentioning the name of the railroad or the railroad officer involved, the story of the lost trunk. Then, pausing a moment and facing the subject of his remark, he exclaimed in the delightful accent and the gracious manner so characteristic of his people, that the railroad president he had referred to was none other than one of the speakers of the evening, President Willard of the Baltimore and Ohio. Hearty and prolonged applause greeted the dramatic announcement and showed convincingly how this illustration of service and courtesy was appreciated by all the representative men present.

No reward was needed for the prompt payment of the just claim of the French actors. Yet it is interesting to see in this case how the appreciation of one's fellow men can reward a thousand fold a just act done in line of duty.

Mr. Jusserand was appointed Ambassador of France to the United States in 1902, and for a number of years has been dean of the diplomatic corps in Washington.

Distinguished exponent of the finest traditions of his race, scholar of wide attainments, diplomat of marked ability and judgment, close student of American history and ardent admirer of American institutions and ideals—these qualities of his have done much to quicken and strengthen the cordiality existing between the French and American peoples.

And even beyond these notable qualities, one feels in him a more personal characteristic—which has brought to him, perhaps, the intimate friendship of such Americans as Theodore Roosevelt—a singular felicity in his regard for the little amenities of life, aptly illustrated in the episode of the lost trunk.

The Railroad Clean-up

A Neat, Clean, Thrifty--looking Property, Let Us Keep the Baltimore and Ohio That Way

MANY years ago, when the late Mr. J. E. Spurrier was supervisor of trains during his early career on the Baltimore and Ohio, a wreck occurred on his territory on the Old Main Line. The customary clean-up took place and we are sure that under his direction trains were again running over the scene of the wreck as soon as was humanly possible.

But Mr. Spurrier's men did not effect a clean-up at that time comparable to the one which has just been completed over all our lines. For in this more recent clean-up, at the very scene of the wreck mentioned, in examining into every nook, cranny and crevice along the right of way, two "Bullheads" came to light, two old link and pin couplers, the kind used on the old fashioned round steel hopper cars. For proof we offer the picture on this page. And this is only one of the many examples which could be presented to show that the recent clean-up was a clean-up in every sense of the word.

Those of us who were employed with the Railroad before the war will remember that we had periodic clean-ups and after each one felt that there was little that had escaped the eyes of the officers in charge. The railroads were under severe criticism—as they are today—on the score of wastefulness in the handling of supplies; and yet, to the casual observer the appearance of railroad properties in general, as one covered them on a passenger train, was not at all discreditable. Track, stations and yards looked, on the surface, at least, clean as compared with the properties of other industries.

Two "bull heads," old link and pin draw bars of the type formerly used on Baltimore and Ohio round hopper cars, found during the clean-up on the right of way near Woodstock, Md. In how many previous clean-ups had these been missed?

With the coming of the war came the demand for the utmost speed in doing everything connected with our business life, on the railroads and elsewhere. Production reached the pinnacle point and, with the incessant demand for speed, speed, speed—supplies were issued in abundance so that labor would have the wherewithal to keep the trains, the troops and the munitions of war moving in record time.

There was no opportunity for a clean-up in those hectic times. Everybody concentrated on the main issue of supplying transportation in an unprecedented quantity, and the desirability of maintaining a clean railroad became, of necessity, a secondary consideration.

Readers will remember that with only a very brief slowing up of business in this country immediately following the armistice, transportation continued to have difficulty in keeping up with production up to the autumn of 1920. October was the peak month for that period in our business and thereafter came with startling rapidity the slump which we are still feeling. So that with the winter of 1920-1921 over, it appeared to the Management of the Baltimore and Ohio that, with business greatly lessened in volume it was an ideal time to start a clean-up.

As a consequence, on March 25 Vice-President Galloway wrote an exhaustive letter to General Manager Begien of the Western Lines, and to the general superintendents of the Eastern Lines, indicating to them the desirability of proceeding immediately to make the Baltimore and Ohio the cleanest railroad in America. Part of his letter read as follows:

"I therefore desire that beginning on Tuesday, April 6, a "Cleaning-Up" Campaign be started under the supervision of the officers named. These should include the supervisor and any other officers which the division people may feel necessary to insure the job being properly done and the property cleaned up from one end to the other as it has never been cleaned and picked up before, scouring it most thoroughly for every piece of material it is possible to reclaim,

either for further use or for sale as scrap. Please do not overlook the fact that material frequently gets over the bank, into the creeks and under the bridges where it falls through, and all this should be included in this cleaning campaign."

Mr. Galloway also mentioned in this letter the fact that the railroad situation bulks so big in the eyes of the people that it is subject to continuous and careful scrutiny by economists, legislators, business men and other factors entering into the situation; and that with the railroad question so prominently before the country, it behooved us of the Baltimore and Ohio to put our property in so clean a condition as not only not to deserve the censure of those observing the property, but rather to merit their commendation.

It is apparent to everybody that keeping a railroad clean is a much harder job than keeping a factory and its surrounding property clean. The Baltimore and Ohio has over 5,000 miles of right of way and long stretches of this are practically unprotected, and have on either side the properties of many people and concerns not in any way connected with or interested in the Railroad. Away from constant police and watchman supervision and with the necessity of having valuable materials distributed along the Railroad for repairs, renewals, etc., it is little wonder that the public in a sense has come to consider that anything found lying loose along the right of way or near the properties of the Railroad is at their disposal.

You who have had occasion to visit farms bordering or close to a railroad track know what I mean. The tool house of the farmer sometimes contains a section of rail, used as an anvil. Track mauls, shovels, crowbars, lin-

Five tallow pots found buried up to their necks in dirt. Did the engineer who took such care of them think that the oil wells were running dry?

Material assembled for loading on Pick-up Train

ing bars, etc., which were once issued by a railroad storekeeper for building track, may have mysteriously found their way into the tool house. A track jack—an expensive piece of machinery, by the way—sits over in a corner. A careful scrutiny of fence posts might indicate that they were at one time intended for ties in the track, and if the wires on these posts could talk they might say that they were originally manufactured for use in the signal department of a railroad.

This is not, for one moment, to accuse farmers of pilfering. It is rather, in view of the recent clean-up on the Baltimore and Ohio, to make every reader, and particularly those having to do with material on the Baltimore and Ohio property, understand that from the standpoint of our economy it is essential that we keep our property free from all kinds of material which can be picked up and put to other than railroad uses. It is a very exceptional man who, walking along a railroad track and discovering a spike, crowbar, lantern, or any other similar material, can be persuaded that it is his job to take it to the nearest railroad agent and restore it to its rightful owner.

The same slant which city people have on using the facilities of railroad stations, whether they are patrons of the railroad or not, is the very natural slant which people living along the railroad track have on the use of our facilities. The point we must remember is that we should keep such facilities and material available for railroad use only.

Following Vice-President Galloway's letter and beginning on April 6, the clean-up began all over the Baltimore and Ohio System, and what occurred on the Maryland District may be taken as an example of what occurred elsewhere.

Each division had its work train, which scoured the right of way from

one end to the other. The division superintendent, trainmaster, division engineer, and track and signal supervisors accompanied the train, and the general superintendent spent five days on the east end of the Baltimore Division alone, starting at tidewater and coming west.

There were competent car and

trackmen to sort and classify the material as it reached the pickup train, new and second hand material being put into separate cars and eventually reaching the Mechanical or Maintenance of Way Departments for reissue or reclamation. Here all new material fit for reissue was delivered to the storekeeper. And now, when a requisition is received by him for any material, it is issued from the material secured in this clean-up when the items are available. New material is issued only when the item needed cannot be secured from the material collected during the clean-up. Material not fit for immediate reissue but fit for reclaiming was sent to the reclamation plant, and scrap material to the scrap bins for sale. The material which is being reclaimed is being delivered to the storekeepers, who are reissuing as needed and charging for only at the cost of reclaiming. Material which was fit for reissue as collected, is not being charged for by the storekeeper to the departments requisitioning.

Notable Service Record of Engineer George R. Wallace

THE BALTIMORE AND OHIO RAILROAD COMPANY

OFFICE OF VICE-PRESIDENT

OPERATION AND MAINTENANCE

C. W. GALLOWAY,
VICE-PRESIDENT

BALTIMORE, MD., July 1, 1921.

Mr. George R. Wallace,
Engineer, Illinois Division,

The Baltimore and Ohio Railroad Company,
Washington, Ind.

Dear Mr. Wallace:

My attention has just been attracted to your most enviable service record.

It is rare that a man can be in railroad service over 50 years as you have been and not have something occur that might mar his service record. This is particularly true when 41 years of that time have been put in as a locomotive engineer, 27 of the 41, as I understand it, having been as a passenger engineer. In all that time you have not only maintained a perfectly clear record but you have, by your devotion to duty and loyalty to the service of the Baltimore and Ohio, earned two commendatory entries on your service record.

While I have seen little of you since I first went to the Illinois Division during the blockade troubles in 1910, I remember your very good work then.

This is a record of which you may be justly proud and I want to take this occasion to extend to you my heartiest congratulations as well as my best wishes for a long and happy life.

Cordially Yours,

C. W. Galloway

Hence, although the cost of the clean-up all over the System was considerable, it was paid for many times over by the value of the material secured and available for reissue with or without reclamation.

Every piece of the property was gone over with a fine-tooth comb, from attic to cellar and from front door to back. Many were the discoveries made, and some of the stories built around the statement of certain officers that certain places on the property were clean, who, after further investigation was made, admitted that they were far from clean, have already become railroad classics.

An accompanying picture shows five tallow pots. These were discovered buried up to their necks in sand under a store bin, and arranged in such a way that the same person must have placed them there. The days of their several burials must have covered a period of ten years at least and the engineer responsible for the obsequies would certainly have been a surprised man to have seen them dug out of the dirt and put on the pickup train, again ready for service. This was but one of a number of illustrations indicating that employees, in being over-careful that they should have sufficient supplies of one sort or another, had made a collection of models dating into the distant past.

The lockers of some individual employees yielded tools of ancient and modern vintage, many of them valuable and perfectly satisfactory for use today. That these were found in such quantities is due to the fact that in the past, an employee having a particular job to do and not having exactly the right tool immediately at hand, would request and receive another, and then, the job over, would continue to use the tool, leaving the other one in his locker. Or, being called upon for emergency work, it would be quicker for the employee to get a new lot of tools than to go back to headquarters for the old ones, with consequent unnecessary duplication. Such practices, despite the clean-up, are, of course, uneconomical, and although it is the wish of the Management that every employee should have good and sufficient tools necessary for every job, it is also their request that such tools be asked for only when they are absolutely necessary. With 19 carloads of material picked up in a single stretch of 22 miles along the track, the potential current saving of watching the issue more closely is apparent.

And now that the Baltimore and Ohio is a clean Railroad to a degree to which it has never been before, the

Management earnestly desires that we continue to keep it clean. It is easier to do this from day to day by individuals exercising their interest in seeing that there is no overissue of materials or tools, and in picking up and returning to the storekeeper any articles which may be found in the course of the day's work, where it is possible to do this, than it is to let things accumulate for a periodic clean-up.

Today the physical appearance of our Railroad indicates thrift of the highest order. Let us continue to appear thrifty, economical and pains-taking at all times in the future.

Another article to appear shortly in the MAGAZINE will describe the interesting reclamation work now under way on a big scale under the direction of our Motive Power Department, and which is saving thousands of dollars to the property each year.

C. E. Wolford, Cashier and Cartoonist

The accompanying cartoon illustrating in so effective and interesting a way one of the principal problems of freight claim prevention was conceived and drawn by C. E. Wolford, cashier at Dayton, Ohio.

Too Precious to Lose
Drawn by C. E. Wolford (see above)

Mr. Wolford entered the service as chief clerk on the Toledo division in 1911 and has been promoted regularly during the intervening period, his present position having been given him in March of this year. We thank Mr. Wolford for his interest in this subject and congratulate him on his ability in presenting it so well.

Recommends Savings Feature

BALTIMORE, Md., January 13, 1921.

MR. W. J. DUDLEY,
Superintendent, Relief Department,
Baltimore, Md.

Dear Sir—I thank you very much for the splendid manner in which you conduct your business, also the courtesy shown me through your office force at all times.

I am sorry that the ground of my property is not redeemable. I am thinking that in the Spring if I can get a house to suit me I will gladly call on you for a loan.

Trusting that you will not hesitate in calling on me if at any time I can be of any assistance to you through my fellow workers, I beg to remain,

Very respectfully,

(Signed) J. H. VANNOSDELN,
Pipe Fitter, Riverside, Md.

Our Grain Elevators at Locust Point

The New Mechanical System for the Collection, Storage and Shipment of the Dangerous Grain Dust

By L. P. Kimball
Engineer of Buildings

ONE important function of the Baltimore and Ohio Railroad as a common carrier is the movement from the middle west of freight which is to be exported to foreign countries. The principal terminal for the transferring of this freight from cars to vessels is located at Locust Point, where all the merchandise and grain exported from the port of Baltimore is handled. With the single exception of coal, which is handled at the new coal pier at Curtis Bay, grain is the most important commodity which is handled for export.

Some conception of the volume of this class of traffic can be realized from the statement that during the year 1920, 15,625 cars of grain, which was hauled over our lines from Chicago, St. Louis, Fairport and other western points, was delivered to vessels at Locust Point for export to European countries. To handle this grain it is necessary for us to have facilities for the unloading of cars, storage of grain subject to owners orders for shipment, and the loading of grain into holds of ships, as well as for the drying, cleaning and separating of certain shipments when desired.

Pioneer Grain Elevator Builders in Baltimore

The Baltimore and Ohio was the pioneer in providing such facilities in the port of Baltimore, and for this purpose, there was constructed in the year 1872 a structure known as Elevator "A," with a storage capacity of 500,000 bushels. This was destroyed by fire in the year 1891. The present facilities are shown in the accompanying photographs.

Figure 1 is a general view of the terminal for handling cars. It was taken from the Fort Avenue Bridge. This picture also shows the two elevators, the smaller of the two being known as Elevator "B," and which was built in 1874. This is a frame structure with metal covering on the outside, 100 feet wide by 330 feet long, and with a storage capacity in bins of 1,200,000 bushels of grain.

Figure 2 shows the larger house closer up. Known as Elevator "C," this was built in 1881 and is also of frame construction, the exterior of main structure being veneered with brick and the walls of the cupola being covered with slate. This house is 87 feet wide by 410 feet long and

has a storage capacity of 1,300,000 bushels of grain.

When completed, these houses constituted the principal export terminal for grain on the Atlantic seaboard, which position they continued to hold until the development in recent years of the large concrete elevators which have been constructed by other roads.

Baltimore Second Largest Grain Export City

That these houses, 40 years or more after their construction, are still handling their full quota of export grain, can readily be seen from the following figures, which show the total number of bushels of grain loaded for export at each port on the Atlantic seaboard during the year 1920:

New York.....	83,101,000 bushels
Baltimore.....	55,629,405 bushels
Philadelphia.....	24,952,774 bushels
Portland, Me.....	18,196,286 bushels
Boston.....	6,057,742 bushels
Newport News.....	2,398,705 bushels

Total, Atlantic seab'd 190,335,912 bush.

It will be noted that the port of Baltimore handled 29 per cent. of the total grain exported—more than

Figure 1—General View of Locust Point Grain Elevators "B" and "C" and a Part of Storage Yard.

FIGURE 4, CROSS SECTION OF ELEVATOR.

Showing clearly how the grain goes from Cars to Receiving Hopper, by Receiving Leg to Receiving Garner, to Receiving Scale, to Storage Bin, to Shipping Hopper, by Shipping Leg to Shipping Garner, to Shipping Scale, to Shipping Bin, to Boat

double that handled at the port of Philadelphia and second only to the port of New York. Baltimore's share in this business was distributed as follows among the three roads having grain export facilities:

Baltimore and Ohio...	21,874,578 bushels
Western Maryland...	18,071,359 bushels
Pennsylvania.....	15,683,468 bushels
Total.....	55,629,405 bushels

From the above it will be seen that the facilities at Locust Point were called upon to handle and did handle more grain during the year 1920 than the recently constructed modern terminals of either of the other roads.

Employees Modernize Our Facilities Through Skill and Teamwork

To offset the handicap of using today facilities designed and constructed more than 40 years ago for un-

loading grain received in cars which did not exceed 30 feet in length and 500 bushels in capacity, it is necessary to develop a spirit of cooperation among all employees and an extremely intensive use of the facilities provided. That this has been ably accomplished under the supervision of T. H. Seal, superintendent of elevators, and C. E. Wood, general foreman in direct charge of elevator operation, the accompanying figures will readily show.

How Grain is Handled

In unloading cars of grain, it is necessary to switch them directly into the house, for which two tracks are provided in each elevator structure. Each car is placed over a hopper into which grain is unloaded. There were provided in Elevator "B" eight hop-

pers on each track and in Elevator "C" twelve hoppers on each track. As these hoppers are spaced about 30 feet apart, it was only necessary in the early use of these elevators to switch on to each track a cut of cars equivalent in number to the number of hoppers provided on that track, as the average length of the cars was such that no further cutting or spotting was necessary. The increase in the length and capacity of rolling stock, however, now makes it possible to unload a car only at every other hopper and in placing cars for unloading makes it necessary to cut separately and spot each car unloaded.

A Record Unloading

The unloading of cars under these conditions, of course, requires very

Figure 2—Elevator "C" with some of the dust collecting apparatus on top of Screening House to the right

close attention as to switching and to prompt unloading when placed. The present combined capacity of both houses is 20 cars at one spotting and an effort is made to unload these cars and replace them as many times as possible during working hours. It is now a common occurrence to unload 90 or more cars in a single eight hour shift. All previous records were broken, however, on May 6, 1921, when 105 cars were placed by two switch engines and unloaded during a period of 7 hours and 20 minutes. On this particular date, only 18 cars could be placed at a single spotting, as two of the hoppers in Elevator "C" were undergoing repairs. During this same period, in addition to unloading 105 cars, three ships were being loaded and one small schooner unloaded—all of this work being handled with the normal elevator force, 82 men for a day's shift.

When grain is loaded in cars, provision is made against leakage by the placing inside the ordinary sliding box car door of a set of boards known as a grain door. When cars are unloaded it is first necessary to remove this grain door, always a tedious undertaking and destructive unless great care is used. The removal of the grain door permits the grain in the center of the car to flow out the door and into receiving hopper, under track rails. The balance of grain is unloaded by means of power shovels, large scoops with ropes attached, which are carried to end of car by

workmen, embedded in the grain and hauled toward the door by the winding of the rope on drum. The time consumed in removing grain doors and unloading cars by this method is usually about 30 minutes for each.

From Railroad Car to Vessel

Figure 4 is a cross sectional view of elevator on which is shown the method of handling grain from cars to bins and from bins to vessels, which will help to give a clear idea of the operation. The receiving hopper into which each car is unloaded is connected to a bucket elevator known as a leg. This leg consists of a series of small metal buckets attached to a canvas belt, by means of which grain is elevated from receiving hopper to the cupola of elevator and there discharged into a small bin known as a garner. The garner in turn discharges by gravity into a scale, which is in reality a small bin supported on scale beams, and which provides record for checking weight of grain in each car unloaded. The main storage section of elevator is partitioned off into bins approximately 11 feet 6

Figure 3—Interior of Screening House

Figure 5—Typical gravity spout from elevator to hold of ship

inches square and 65 feet deep, and after being weighed, grain is delivered by gravity from scale to convenient bin which has been assigned for its reception. Each scale is arranged to reach approximately 12 bins by means of spouts.

When grain is taken out of storage for loading into vessels, gate at bottom of bin is opened and grain is spouted into a hopper in floor of elevator. Hoppers for this purpose are entirely separate and independent from hoppers provided for unloading cars, as are the legs, garners and scales which are used for the elevation, collection and weighing of grain for shipment—the process being a duplicate of that described for the unloading of cars, except that grain, instead of being discharged from scale into storage bin, is discharged into shipping bin. This is directly connected by long gravity spout on outside of elevator which leads into the hold of ship in adjacent slip. Method of spouting from elevator to holds of ships is shown in Figure 5. As each elevator structure has slip on either side, it is possible to load four ships at one time. During the month of April, 1921, 34 ships were loaded from these elevators.

Export grain terminals are usually so arranged that it is necessary to handle grain a considerable distance on a belt conveyor before same can be delivered to spouts which reach ves-

sels, but in this terminal, due to the direct connection with ships as above described, these elevators are today

unexcelled at any export terminal for speed in loading vessels, as has frequently been demonstrated by the delivery to a single ship of 45,000 bushels of grain per hour.

Other Facilities for Grain Owners

In addition to the mere unloading, storage and shipping of grain, other services are rendered for grain owners—one of the most important of which is the drying of grain. For this purpose modern grain driers have been provided adjacent to each elevator, which include conveyors for the delivery of grain to dryer, steam coils and fans for the drying of grain and its necessary subsequent cooling, and conveyors for redelivery of grain after being dried, into storage bins. These dryers have a combined capacity of 6,000 bushels per hour, and their importance can be realized when it is known that they have been in constant operation day and night since February 23 of this year, a night shift of 22 men being employed for this operation.

Grain From Bay to Elevator

A marine leg with a capacity of 4,000 bushels per hour is provided at the water end of each elevator. These marine legs consist of a telescopic bucket elevator which is lowered into the hold of a vessel and by means of

(Continued on Page 30).

A Letter from E. T. Horn, General Supervisor Terminals, Describing One of the Most Important Improvements Ever Made In Operating Practice on The Baltimore and Ohio

May 23, 1921.

To the Editor,
Baltimore and Ohio Magazine,
Baltimore, Md.

Referring to your inquiry regarding terminal operation and System, Divisional and Through Classification as established on the Baltimore and Ohio Railroad:

Classification for our Eastern Lines was effected in May, 1919, and was extended to cover the entire System six months ago.

The classification now in effect, and which governs the make-up and movement of all freight traffic, including empty freight equipment, over the entire System, westbound and eastbound, is set out in comprehensive form in a book of 107 pages, under the title of "System, Divisional and Through Classification," bearing date March, 1921, included in which is an explanatory map of the main line and branches. In addition, what is called the "Field Classification Book for Yard Masters, Yard Clerks and Yard Conductors" is furnished for the guidance of each yard, detailing the classifications allotted to that particular yard.

As is well known, the beginning of classification of cars and trains occurs at the originating, or receiving point; and to achieve real and lasting results, there is required not only systematic methods of operation of yards and terminals, in every detail, but a complete knowledge of the operation of trains enroute, the territory covered, as well as a familiarity with the volume of business, large or small, received from patrons and connecting lines. With these essential requisites, the formation of any system, to bring about the needed and desired results, must be accompanied by the element of flexibility, so as to readily permit of the addition to or subtraction from the structure, as changing conditions demand.

Full returns from the inauguration of such a system will flow only through a rigid observance of its provisions, and the responsibility for that observance rests primarily upon the district and division officers and employes, with the assistance afforded by the four district supervisors of ter-

minals located one each at Cumberland, Md., Wheeling, W. Va., Willard, Ohio, and Cincinnati, Ohio, under the direction of the general supervisor terminals.

It is more than a pleasure to record that the Baltimore and Ohio is receiving the full value of its classification system, all officers and employes uniting in enforcing and maintaining it with cheerfulness and enthusiasm.

Briefly defined, classification means quick dispatchments, early deliveries, uncongested yards and effective economies, from which must necessarily follow new and increased business, additional revenues and an enviable reputation.

It means improved operation, by obviating unnecessary switching and expense; insures prompt and continuous movement not only of high class, but of all classes of freight traffic, as well as of empty equipment; proves a valuable aid to the Traffic Department by equipping them, in the solicitation of traffic, with the lever of dependable service; reduces freight claims; betters employes by systematic work, increasing their usefulness and enhancing their value to themselves; helps the shipper by delivering his goods on time; benefits the general public through prompt and efficient service; and, more than all, contributes to the success of the Company we serve by the economies incident to and improvements growing out of its operation, such as, for illustration, our ability to handle solid trains for a distance of 300 to 600 miles without "pulling a pin."

Some of the substantial benefits now accruing to the Baltimore and Ohio through the adoption and enforcement of the classification we are using are: Increased engine miles; increased car miles; decreased per diem; decreased overtime; decreased terminal time and minimum switching in all yards; quick and dependable freight service; satisfied shippers; and lessened liability to claims from delays in transit and opportunity for thefts by delays in yards.

Yours truly,
(Signed) E. T. Horn,
General Supervisor Terminals.

System, Divisional and Through Classification

The New Method of Handling Freight Trains Which Has Already Proved Its Worth

A NUMBER of years ago two officers of the Baltimore and Ohio were discussing the operation of freight trains. Said the one: "Freight trains ought to start on schedule time just like passenger trains, and sooner or later the railroads will come to this way of operating them."

"Do you think it can be done?" replied the other.

"Done—of course it can be done. If it can be done with passenger trains, why not freight trains? Today we may schedule a freight train to start at a certain time, but instead of

to move on definite schedules. It is equally well known that until the putting into effect of the System, Divisional and Through Classification, freight trains, including Q. D. and others, did not maintain their regular schedules, and for various reasons. The principal of these was that there was no consist or generally understood plan as to how these trains should be made up. Hence, at the different divisional points they had to be taken off the main track and put into the yards for switching and for being made up over again, largely in accord with the conditions

Baltimore and Ohio, No. 97, is now handled, will be illuminating.

Two consist forms are supplied for the use of the officers and trainmen involved in the handling of this new system. They are Form 871, printed on blue paper, for trains dispatched from yard to yard eastward; and Form 872, printed on yellow paper, for trains dispatched from yard to yard westward. Illustration No. 1 shows the top part of one side of the latter form.

These consists contain various tabulations covering the symbols used for slow freight, roof top equipment, open top equipment, quick dispatch, and a special consist for yardmasters and train dispatchers to show any special equipment moving in the train, such as dead engines, passenger equipment, live stock, etc.

It will be noted that the top of the westbound consist, as shown in Illustration No. 1, gives in the ruled spaces the names of some of the yards on the System from which trains are dispatched. On the other side of this form are printed in the same space the names of all other yards on the System from which important dispatchments are made.

Classes of Freight

This consist shows all classes of loading and equipment under the headings of: Loading (meaning all slow freight), denominated by the symbols shown in the illustration; Roof Top Equipment, taking care of empty refrigerator, box, stock and tank equipment; Open Top Equipment, taking care of empty coal, coke, mill gondolas and flat cars. All of these classes of loading and equipment have characteristic symbols, which are shown on the consist forms. The application of these

starting then it starts about then—which usually means half an hour or more later. If everybody understood that No. 97 was to leave a certain place at 10.00 p. m., it would leave at that time, instead of 15 minutes or half an hour late. In the first place everybody would expect it to leave then and maintain its schedule to destination; and if it didn't a lot of people would get all-fired busy to find out why—and to remove the "why" from further interference with the movement."

It happens that one of the two officers speaking was E. T. Horn, now general supervisor of Terminals. By the way, it was not he who told the writer this little episode. But it is Mr. Horn who has been the wheel horse in the planning and putting into effect of the System, Divisional and Through Classification, by virtue of which the handling by time schedule not only of No. 97, as predicted by the speaker, but also of all other important freight movements on the Baltimore and Ohio has been accomplished.

It is well known to all readers familiar with our Transportation Department that No. 97 and other important quick dispatch freight trains have for years been supposed

obtaining in the yards in question at that time and in accord with the judgment of the officers in charge. Very naturally delays thereby ensued, preventing these trains from making their schedules.

The Classification is built upon the Consist

The Consist is, therefore, the foundation upon which the System, Divisional and Through Classification is built.

A complete description of this new system would be impossible within the limits of space permitted here, but it is hoped that the following skeleton account, illustrating how a certain section of perhaps the best known quick dispatch train on the

symbols is given in full in the book covering the System, Divisional and Through Classification, under the dispatchments therein shown from the various yards on the System.

Illustrating the New Practice with No. 97, Brunswick to Willard and Chicago

As it is impossible, on account of lack of space, to describe the operations of this system of classification for all kinds of loading and equipment, we will take, for example, the consist covering the movement of trains 97 as shown in Illustration No. 2.

It will be noted that this covers the movement of all 97's on the System from Brunswick, which is the main classification yard for all westbound movements.

In order to further simplify our problem we will take from the accompanying consist of 97's (Illustration 2), just that part covering the movement of No. 97 from Brunswick to Willard and Chicago, as given in columns 4 and 5. The question now arises as to how this is used in connection with the actual dispatchment of trains between yards.

Turning over the pages of the System, Divisional and Through Classification to pages 10 and 11, we find the instructions set forth in Illustrations Nos. 3 and 4, showing No. 97 as made up leaving Brunswick for Willard, and as switched at Willard and leaving Willard for Chicago.

Brunswick the Great Westward Classification Yard

The officer handling the making up of No. 97 at Brunswick is Terminal Trainmaster Shields. At other terminals on the System this job is handled by either the terminal trainmaster or the general yardmaster. At Brunswick the terminal trainmaster has a copy of the System, Divisional and Through Classification before him. Before freight trains arriving from the east for westward movement from Brunswick have arrived at Brunswick, the terminal trainmaster there has also received consists of these trains by wire. Knowing what they contain, he is, therefore, immediately on their arrival, prepared to switch the quick dispatch cars together for dispatchment on their various sections to destination.

All of the freight for the various sections of trains 97 originating at New York, Philadelphia, Wilmington, Baltimore and Washington is assembled at Brunswick and there classified into five sections of this train, which leave on certain schedules.

For instance, all of the freight for Chicago or Willard and beyond, is placed in one section and started from Brunswick, and this train is not broken up or switched again until it reaches Willard. It is permissible, however, to place in this train, at intermediate terminals, quick

dispatch cars destined to Chicago, or Willard and beyond

Maintracking Freight

This train is maintracked at all intermediate yards and terminals between Brunswick and Willard (similar to passenger trains, it only being necessary to change engines and cabooses, which is done on the main-track), and is taken into Willard yard and there switched and classified, so that when leaving that point it is made up for delivery at the various points of delivery in Chicago.

This same method is applied to all of our other quick dispatch trains destined to Pittsburgh, Cincinnati, St. Louis, Columbus, etc., as well as in the handling of many of our slow freight trains, and also in returning empty equipment to the mines.

There are pages in the System, Divisional and Through Classification which show how the other various sections of No. 97 and all other freight trains are handled from Brunswick and other dispatching points.

As soon as the section of 97 for Willard and Chicago, which we have chosen for our illustration, is dispatched from Brunswick, the consist of that train is immediately given by wire to the yardmaster in the first yard west of Brunswick, which is Cumbo. If the yardmaster at Cumbo has freight which, under the classification for 97, Brunswick to Willard and Chicago, can be added to that train as shown in Illustration No. 3, he adds it to that train on the main track and wires consist of this section of 97 as it leaves Cumbo, to the yardmaster at the next dispatchment point, which is Cumberland. He in turn follows the same procedure and so on until this section of 97 reaches Willard.

Conclusion

The conservative opinion of our officers is that the System, Divisional and Through Classification is an innovation, the results of which will mean not only a great saving in time and money in the handling of our freight trains, but also, by virtue of regular and quick schedules, an improvement in our service which will bring much business to the Baltimore and Ohio. It may seem to some of the veterans on our Railroad that an innovation of this kind would take a long time to perfect. As a matter of fact, it is hardly putting the case for it too strongly to say that it is now working at almost, if not quite, 100 per cent. efficiency all over the System.

Operating officers and trainmasters who have seen the way the system works out, are greatly enthused over it, and at our large dispatchment yards, and particularly at Brunswick, everyone believes in it absolutely and sees in it a remedy for many of the terminal operating diffi-

culties which have kept down our standard of performance in the past.

It goes without saying, of course, that any system, no matter how good, can only develop its greatest possibilities when those having it in charge are on their toes to give it a fair and thorough-going trial. If

the performance on the Eastern Lines for over a year, and particularly the past four months, when the Western Lines were included, are any indication of how this new system will work out on the Baltimore and Ohio in the future, it is safe to say that it will be an achievement which will be the pride of all our officers and employees.

Any readers of this article who wish to get additional information in regard to the operation of this system may do so by writing Mr. Horn, addressing him at the General Offices in Baltimore.

The Boo-ing of the Boomers

Signed "Boomers 'n Everything," credited to Newhouse, Sanders, Lyles and Frisby, and approved by Sprouse, Kalfas and Thompson.

Everybody works but the brakeman

And he sits around all day,

With his feet up on the boiler,

Forever in the fireboy's way.

The eagle eye looks for the signals

Up the stretch of track.

Everybody works on a hogger,

But the worthless head-end shack,
That darned old loafer.

The grabber gets the numbers,

And the tallow bails the coal;

The shack hangs out of the window

And watches the drivers roll.

When they get to a terminal

The fireman hits the hay,

Everybody has worked in our crew,

But the head admiral today,
That darned old loafer.

Mystic Shriners of Almas Temple, Washington, D. C., about to leave Union Station on June 10 with their families for their National Meeting at Des Moines, Iowa. The Baltimore and Ohio speeded them on their journey with a magnificent special train, a 60-foot baggage car, a coach, 5 twelve-section sleepers, 2 dining cars and a Pullman observation car, most of the equipment being new. They traveled our picturesque route to Chicago and from there went via the Chicago Great Western to Des Moines

Engineer Merkel and the 4401

Showing How a Good Engineer and a Good Engine Can Make a Mighty Good Record

THE table on this page gives the reason for this story. When the new 4400 type Mikados were put to work on the Cumberland Division last spring, the Management wanted to find out just what under test they were capable of handling in increased tonnage, and at a saving in fuel, water and other supplies. Engineer E. E. Merkel was given the 4401 and told that it was *his* engine until the test period was over. She was in no respect different from the other 4400 type engines doing the same kind of work, but special observations were made as to what kind of an efficient record she and her engineer could make.

The table tells the story, showing in brief that the 4401 made a saving of \$460.04 from March 9 to April 15, inclusive, over the other class 4400 engines doing exactly the same kind and amount of work, hauling freight between Keyser and Brunswick.

It also is interesting to note that for the first fifteen days of April the class 4400 engines saved \$3,902.34 for the same work done by the class 4800 engines during a similar period for the month of March. And that if all of the class 4400 engines had done as well as the 4401, the saving over the costs for the same work done by the 4800 type would have been \$6,601.46.

Greatly pleased over this interesting chapter written into the history of Baltimore and Ohio motive power by Engineer Merkel and his 4401, the Management had the record blue printed and sent out to various interested officers and employes as an indication of what was possible in the way of economies in handling tonnage with the new type Mikado. One of these blue prints was given to the writer with the suggestion that Baltimore and Ohio employes, and engineers and firemen in particular, would like to hear what Engineer Merkel had to say about the performance.

So I met him and the 4401 at Keyser at 7.00 o'clock one morning and rode with him to Brunswick, arriving about 2.30 o'clock. This was not the best performance by any means that he had made. We had our share of hard luck, breaking in two twice, each time, however, on account of bad draft gears and each one of them, by the way, caused by inadequate inspection.

On the day we made the run they were testing out a new valve gear. The dynamometer car was right behind the engine, Test Engineer Tappan and some of his men being in charge. All told there were six or seven men riding the engine. But every man had his job to do, Merkel at the throttle, Fireman Blamer sitting on the opposite side and watching the water, the mechanical stokers, the fire and the road, Fireman Jarvis filling up the measuring boxes with coal at inconceivably frequent intervals, and the test engineers sending

back messages to the members of their crew in the dynamometer car.

I have never ridden on an engine where the deck was so big and clean and comfortable. I have never ridden on an engine, not even of the passenger type, which rode the rails so comfortably. I have never made a trip where everybody seemed so unremittingly on the job and anxious to do his bit to make a performance.

We have just had a big clean-up on the Railroad, reaching places and uncovering things never before discovered in the most exhaustive pre-

vious clean-ups. Perhaps, therefore, it was because my mind was thinking somewhat of a clean Railroad that I noticed that every man on the engine was a clean looking fellow. Every man apparently had had a shave that morning. Every suit of overalls fitted well and around each man's neck was pinned a clean, neatly folded bandana. Clean men, these, and they certainly kept the deck of the engine and the cab as clean as they were.

One usually does not find super-efficient work in dirty surroundings.

The crew was too busy to talk to me much on the trip and, being a "rank outsider" so far as locomotive operation was concerned, my observations during the ride perhaps don't explain much. I did notice, however, that Engineer Merkel kept feeding sand almost constantly on the rail, and especially on upgrades, in order to get the full benefit of the tractive power of the locomotive. I also noticed that from time to time he cursed her a bit. But I don't pass this on as a recommendation to other engineers.

This new 4400 type, by the way, is built practically the same as the next heaviest Mikado type, the 4800. The 4400 has more weight on the drivers to accommodate her increased tractive effort, which comes from addi-

tional steam pressure and superheating surface.

Fireman Blamer managed to slip this information to me during the trip about the sensitiveness of the records being automatically recorded in the dynamometer car on the operation of the locomotive. He said:

"If I put a shovelful of coal in the firebox, the instrument back in the dynamometer car shows it. If the steam pressure drops, the record of that is made. If I let the engine pop, the recording pen makes a note of it."

It just happened, however, that during this trip, there was no record made of the engine popping while she was running, because there wasn't a pop from Keyser to Brunswick, except when the engine was stopped because of the breaks in the train.

Reaching Brunswick and after Engineer Merkel had reported on, he told me some of his observations on the 4401:

"The principal thing in my mind in getting the best work out of an engine is uniformity in handling," he said.

"First, in cutting off the steam short and using it with more expansion, you use less fuel per unit of energy developed, as long as the expansion does not go above the lubricating capacity. Here you have to watch those three little gauges which

I showed you near the top of the engine cab, those little gauges filled with water and through which the oil rises drop by drop to lubricate the cylinders. We usually think of lubrication being effected by dropping oil in a downward motion and it is interesting to know that this method of feeding oil in drops upward through water (with its greater specific density than oil has), is the only satisfactory method discovered of lubricating cylinders.

"Second, water must be supplied the boiler in small quantities and frequently as you need it. If there is a sudden oversupply in the boiler, it takes more coal to heat it and then, with the oversupply of steam generated, the pop valves lift and the steam is wasted.

"Third, proper lubrication is most essential, and can only be brought about by a close observance of all oil feeding devices, thus getting free action from the engine.

"Fourth, having an engine given to you as your own, to study, learn and take care of, is in my mind one of the greatest helps in producing engine efficiency. I got to know the 4401 in a way that I couldn't have known it had I been switched from this engine to others of the same class. After her

(Continued on Page 34)

Current Railroad Problems Discussed By Vice-President Galloway at Brunswick Celebration

C W. GALLOWAY, vice-president, Operation and Maintenance, was one of the many officers present on May 10 at Brunswick to help celebrate the thirtieth anniversary of the opening of the Brunswick yards and, after a few preliminary remarks by the chairman, was called upon for the opening address.

He expressed his regret that President Willard, Senior Vice-President Shriver and Vice-President Fries were unable to attend on account of important engagements elsewhere.

He expressed his pleasure at being able to participate in the reunion of the Veterans, especially on the occasion of the thirtieth anniversary of the opening of Brunswick yards, because of the fact that, years before, he had been on the committee which decided on the design and location of the yard.

He touched in a pleasing manner upon the interesting parade of the Veterans and of the people of Brunswick to the picnic grounds and congratulated the citizens on the fine showing they made, and particularly upon the large number of costumed school children who represented with their teachers the fine educational system of the city. And he brought delight to many hearts by assuring them that the Baltimore and Ohio

would be glad to help in arranging for a playground for the children.

He spoke of the unfortunate business depression which struck the country with full force in December, 1920, but said that it was a natural result of the abnormal activity brought about by the war and that he believed that if everybody would keep their heads level and their feet on the ground, it would not be long before a more normal condition would obtain.

Mentioning the propaganda that is frequently spread with the apparent purpose of misleading the workingmen, he said that he did not anticipate serious misunderstandings on the Railroad because he believed the Transportation Act of 1920, under which the railroads are now operating, was a most constructive piece of legislation and, if given a proper trial, it would bring into effect a situation on the railroads satisfactory to all those connected with them.

He mentioned as of paramount importance to the railroad structure the necessity of the carriers earning sufficient money to pay their debts, reminding his hearers that without proper credit the railroads cannot function. And he said that he was sure that if the provisions of the Transportation Act of 1920 were carried out, with efficient management and good service on the part of

employees, it would mean a quick and satisfactory rehabilitation of rail transportation in the country. In this connection he emphasized his belief in the loyalty of the employees of the Baltimore and Ohio and especially of the Veterans, among whom he said he was proud to class himself.

He laid emphasis on the fact that the Baltimore and Ohio had no quarrel with its employees, nor intended to have any, and as to dealing with the communities which it served, he wanted the Road to be looked upon as a good neighbor and a law-abiding citizen.

He mentioned the criticism being directed against the railroads for having contracted for repair of cars at outside shops, and brought some figures on the Baltimore and Ohio to bear upon the subject which could not help but make all his hearers understand that the Baltimore and Ohio had done the right thing. He was particularly convincing in his statement that there was nothing whatsoever dishonest or unfair in this transaction, that arrangements for car repairs were made at outside shops when equipment was badly needed, when the repair facilities of the Baltimore and Ohio were inadequate to handle the necessary repairs, and when the employees of the Railroad objected to working nine hours per

Left to right: O. S. Lewis, Freight Traffic Manager, Baltimore, Md.; Golder Shumate, General Freight Traffic Manager, Baltimore Md.; Samuel House, General Freight Agent, Baltimore, Md.

day, as requested by the Management, in order to increase the number of cars repaired.

In closing he assured the Veterans of his deep confidence and belief in them and of his pride in being a member of their association. He suggested that there were many before him so old in the service as to be eligible for

membership in the Veterans' Association twice over and that with such men handling the work of the Baltimore and Ohio he felt no fear for the future of the property. He said that he was as proud himself to be an employe of the Baltimore and Ohio as he was proud of its employes and the work they were doing.

Golder Shumate Made General Freight Traffic Manager

Other Promotions and Changes

EFFECTIVE JULY 1, the following promotions and changes were made in the personnel of the Freight Traffic Department:

Golder Shumate, general freight

traffic manager, Baltimore, in charge of all freight traffic except coal, coke and ex-lake ore.

O. S. Lewis, freight traffic manager, Baltimore, vice Mr. Shumate.

W. W. Blakely, general freight agent, Pittsburgh, vice Mr. Lewis.

Samuel House, general freight agent, Baltimore, vice W. F. Richardson, who was recently made assistant freight traffic manager in New York.

Samuel Strachan, assistant to general freight traffic manager, Baltimore.

George S. Harlan, assistant general freight agent, Baltimore, vice Mr. House.

A. L. Doggett, assistant general freight agent, Pittsburgh, vice Mr. Blakely.

J. L. Hayes, division freight agent, Baltimore, vice Mr. Harlan.

P. S. Phenix, division freight agent, Cumberland, Md., vice Mr. Hayes.

Charles M. Shriver Promoted to Superintendent, Baltimore Terminals

ON JUNE 1, Charles M. Shriver, assistant superintendent of the Baltimore Terminals of the Baltimore and Ohio Railroad, was

C. M. Shriver
Superintendent, Baltimore Terminals

P. G. Lang, Jr.
Engineer of Bridges

promoted to superintendent of terminals to fill the vacancy made recently by the advancement of F. G. Hoskins to superintendent of the Baltimore Division.

Mr. Shriver is 28 years old, having entered the service of the Baltimore and Ohio 11 years ago as a machinist helper at Mt. Clare shops. After serving his apprenticeship, he was a machinist at the Riverside shops, later becoming inspector of fuel. On April 1, 1916, he was promoted to assistant road foreman of engines at Cumberland and in March, 1917, became trainmaster of the Philadelphia Division, afterwards going to the Ohio Division in a similar capacity.

Mr. Shriver was furloughed in July, 1918, for military service, immediately sailing for France, where he served as lieutenant with the railroad engineers in handling the heavy rush of troops and materials. He returned from abroad in May, 1919, immediately resuming service with the Baltimore and Ohio as trainmaster of the Wheeling Division, at Wheeling. He became assistant superintendent of the Baltimore Terminals July 1, 1920, and continued in that position until his recent promotion.

Philip George Lang, Jr. Now Engineer of Bridges

PHILIP GEORGE LANG, JR., was recently promoted to the position of engineer of bridges, succeeding Walter Scott Bouton.

Mr. Lang was born at Philadelphia, Pa. His education was obtained at the Northeast Manual Training High School and the University of Pennsylvania, where he was graduated in 1905 with the degree of bachelor of science in civil engineering.

His first practical experience in bridgework was acquired at the Pencoyd plant of the American Bridge Company. His railroad service commenced in March, 1906, when, in the capacity of bridge designer, he entered the organization of the South & Western Railroad, now the Carolina, Clinchfield & Ohio Railroad, at Johnson City, Tenn.

In December, 1907, he became a member of the bridge organization of the Baltimore and Ohio, as assistant engineer. In December, 1917, he was promoted to the position of chief bridge draftsman, and, on August 1, 1918, to that of assistant engineer of bridges, which title he has retained until his present appointment.

Since October, 1919, Mr. Lang has been in complete charge of Baltimore

and Ohio bridgework. During this interval, the Lane-Galloway mechanical trimmers in use at Curtis Bay Coal Pier have been installed, and the Allegheny River Bridge at Pittsburgh, Pa., reconstructed.

In addition to the work already mentioned, Mr. Lang has, during the period named, handled current bridgework, which has included several important structures, among which may be mentioned the new bridge crossing the Great Miami River, at Lawrenceburg, Ind., work on which is now under way.

Mr. Lang is a member of the American Railway Engineering Association, and an associate member of the American Society of Civil Engineers.

Operating Department Promotions and Changes

Effective June 1, E. J. Sweeney was appointed division master mechanic, Chicago Division, headquarters Garrett, Ind., vice W. F. Moran, resigned.

Effective June 1, C. M. Newman was appointed division master mechanic, Illinois Division, headquarters Washington, Ind., vice E. J. McSweeney, transferred.

"The cleanest boiler room on the Eastern Lines," said General Manager Scheer of this one, in charge of J. M. Dillon, Stationary Engineer

Though not a smoking car, this one is full of smokes. This picture, with that of another similarly decorated Baltimore and Ohio car, was used as an advertisement for the Cigar Company in the "Cleveland Plain Dealer" of July 9

Wheeling and Ohio River Divisions Consolidated

On June 15, the Wheeling and Ohio River Divisions were consolidated and will hereafter be known as the Wheeling Division. C. B. Gorsuch was appointed superintendent, and the following other appointments were effective the same date:

A. H. Woerner, division engineer, headquarters, Wheeling, W. Va.

L. E. Haislip, assistant division engineer, headquarters, Parkersburg, W. Va.

F. A. Baldinger, master mechanic, headquarters, Wheeling, W. Va.

J. W. Root, trainmaster, Ohio River Sub-Division, headquarters, Parkersburg, W. Va., vice F. C. Moran, assigned to other duties.

C. Crawford, road foreman of engines, headquarters, Wheeling, W. Va.

M. J. Tighe, assistant road foreman of engines, headquarters, Parkersburg, W. Va.

J. M. Dillon is an A-1 Stationary Engineer

On a recent visit to Parkersburg, W. Va., E. W. Scheer, general manager, Eastern Lines, inspected the Low Side Shops and found the Boiler Room to be the cleanest on the Eastern Lines. He was so much impressed by the splendid showing made there by the man in charge of this boiler room, J. M. Dillon, stationary engineer, that he complimented him on his fine work and had a picture of him taken with his "pets" behind him, and sent it to the MAGAZINE for reproduction.

Mr. Dillon entered the service as a fireman on April 15, 1887 and became an engineer in 1892. He went into the Motive Power department as a stationary engineer in 1916 and has been handling his present job for upward of three years. Gas is used as the fuel in these boilers under the supervision of Mr. Dillon. We congratulate him.

Advertising the Commodity and the Carrier

The accompanying picture shows a carload of cigars shipped to the George B. Scrambling Company of Cleveland via the Baltimore and Ohio from Philadelphia. The consignee had the photograph taken and has used it extensively in advertising the cigar in the *Cleveland Plain Dealer*, incidentally giving some nice newspaper publicity to our Railroad. The shipment was arranged by C. H. Pumphrey, formerly district freight agent at Philadelphia and now division freight agent at Youngstown, Ohio, and by Freight Representative H. J. Glancy at Cleveland, third morning delivery being made from Philadelphia.

To the left rear of the picture may be seen a portion of the Superior Avenue Viaduct in Cleveland, for the construction of which the Baltimore and Ohio hauled a large part of the material. The Kirby Building, in which our Traffic Department formerly had its offices in Cleveland, is also faintly shown in the background.

We are indebted to Assistant General Freight Agent J. C. Kimes, of Cleveland, for the picture and the story.

Erratum

On page 15 of the May issue of the MAGAZINE, in Mr. Angier's article on timber preservation, in the table printed at the top of the page, last column, the figure 15 should have been .5. We regret the error.

After Faithful Services Appreciates Pension

DAYTON, OHIO,
June 26, 1921.

Mr. W. J. DUDLEY, Superintendent, Relief Department, Baltimore, Md.

My Dear Sir—I wish to thank the Baltimore and Ohio Railroad Company, Mr. Dudley and the Pension Committee for granting me the favor of a pension after a service of years for them. I have tried to be faithful and now feel that my services have been appreciated.

With regards,
(Signed) FRANK C. PEASE,
Pensioned Engineer,
Toledo Division.

Where in the world have you been?

The Bargain of "Bummy" Blake

By Frank Kavanaugh

THE Western Valley Railroad is, perhaps, not as long as some roads, but it is just as wide. It serves a busy industrial district and its cars are so well known that, to the "stingers" around the various yards, they are known by a nickname. When a road reaches this stage it has slipped out of its swaddling clothes and reached a point where it is a real commercial highway.

The general superintendent, Morris, sat in his office chair the morning after the night before and looked through a bunch of notes he had gathered the evening previous. For it had been a meeting of the road's shippers, ostensibly to talk about rates and services, but really to discuss business in general of the town in which the meeting was held, for it was engineered by the local chamber of commerce. And the general superintendent, like a man who wishes to gather all the information possible, had made notes. He searched through a dozen penciled pages of a small notebook and tore out two of them. Then he touched a bell, and half a minute later a clerk entered.

"Good morning, Jones," he said. "Do you, by the way, happen to know a switchman by the name of 'Bummy' Blake?"

"No, sir," the clerk replied, "I'll look him up if you wish me to."

"Do so, and let me know his whole record." The clerk left the room and Morris talked softly to himself: "When a switchman gets favorable mention in a crowd like that of last night, it's time the executives learn something about him. Not one of them gave me credit for a thing on the whole road, while here is a switchman I've never heard of before, who gets special mention from two of our biggest shippers. Must be a comer!"

An hour later a clerk entered and laid a sheet of paper before Morris. It was neatly typewritten and headed: "Service Record of William McCallister Blake."

The superintendent glanced over it, commenting audibly as he did so:

"Started with us in 1912—umph! Ray Yards, South Yards, Industrial Drag; now at Johnson's Ferry. Born in Arkansas—single—umph!"

Again Morris touched the bell and the same clerk entered.

"Arrange for a pass for Switchman William McCallister Blake, now at Johnson's Ferry. I want to see him here—tomorrow, if possible."

"Yes, sir,"

"And send him right in."

"Yes, sir."

It was almost noon the following day, when the clerk entered the office of General Superintendent Morris and announced:

"Switchman Blake is here, Mr. Morris."

"Show him in."

A freckled-face, red-headed young man entered the office, hat in hand and smiling.

"I'm Blake," he said. "You sent me a perambulating pasteboard and I'm here."

"Sit down, Mr. Blake," the superintendent said. "The other evening, while at a dinner given by the Grant City chamber of commerce, I heard of you."

"It's surely nice of those birds to mention me," the switchman said, meeting the eyes of his superior squarely. "What were they mentioning me about? Was it someone I'd been shooting craps with?"

"No. I heard no mention of you in connection with games of chance. It was—" The old man hesitated. Blake filled in.

"Shooting craps with some men ain't no game of chance—it's exercise in connection with receiving a donation."

The superintendent did not note the interruption. He consulted the two pages he had torn out of his notebook.

"The traffic manager of the Western Automobile Agency told me something about how you criticized his company's manner of unloading cars. You suggested a different way. It resulted in quite a saving."

"Sure!" Blake exclaimed. "Sure! Those ginnies were using those big automobile cars—open at the end and all that—and then taking the sure-death machines out the side doors because they hadn't an end loading platform. So I went up and braced the main guy of the works."

"Don't you want to hire seven or eight more men?" I asked, to start the talkfest.

"Half the men I've got now are not working," he returns.

"They're working all right, all right," I said, "but they're trying to make a seven with a pair of dice that hasn't anything but sixes on them. To talk to you in plain Arkansas, you're trying to shove a needle

through a camel or a camel through a needle's eye and it won't go. The Bible says so."

"The big cheese of the program looked at me as if he was about to exercise his thinktank. 'How would you do it?' he asked."

"Spot the cars about fifteen feet apart; make a three-cornered loading wharf, a false one, so to say, and run 'em out the end."

"He practiced exercising his gray matter a second or so and then said: 'I'll try your plan tomorrow, and if it's good you'll hear from me.' Then he took my name and now he goes and reports me."

"He did," Morris said. "How about the manager of the Sonken Iron Works?"

"A big man with billygoats and a bay window?" Blake asked.

"The gentleman wears a beard, but I am not sure I understand the reference to the window."

"I mean he bulges out at the equator so much that he has to use wireless to find out if his shoe strings are tied."

"He is rather portly," Morris admitted. "He told me something about your volunteering him a good bit of advice."

"I had to. He's skipper of that big plant that buys anything that's iron and heavy and takes it to the yards and cuts it up and classifies it and then ships it to some factory that makes guns or cylinders or bridges out of it. He had two switches. We shoved the loaded cars in on one of them. His men unload the junk and then we go and pull as many cars as are unloaded so as to save him demurrage. Sometimes there's only one or two cars at the far end of the string unloaded and one or two in process of unloading. We have to pull the drag a long way to get the empties out, and the men unloading the cars ride back and forth, loafing like a congressman on an investigating committee. So I blows in one day when we were after pulling the cars. It had taken us about an hour to get out there and back, as we had a long drag and had to go clear up to the "Y" and we were blocked in there by number 12 about twenty minutes. So I blows in and says to the old bird:

"Why don't you save ten of your men's time for an hour each day? At 50 cents an hour you've lost just a nice little clean five-plunk bill."

"The old man pricked up his ears at the mention of the five bones, just as if it had been an anti-fat remedy and felt of one foot with the other to see if he had forgotten to put on his shoes that morning."

"How can I save five dollars? How?"

"I never saw a man so anxious to annex a five spot in my life. I told him:

"You've got plenty of old relay-ing rails here in your junkshop. Lay a track around so that the cars can be shoved clear around after they are empty. Your men can shove a car easy. Then you can load them and pull 'em out. And all the while your men won't be riding up and down in a half unloaded car with their pay going on."

"You're right, my man," he said, feeling with his left heel to see if the corn on his right foot was there or if he was resting his foot on a nail. "You're right; if we can get a curve in there that the cars can make without derauling. I'll see my engineer."

"No," I says. "See the man who squints through a telescope on a kodak stand and wigwags his hand at a kid holding a telegraph pole with red bands painted on it."

"Engineer," he came back with.

"No," says I. "An engineer is a hoghead and a hoghead isn't supposed to know anything but how to strongarm a johnson back and forth. Why, I've seen 'em know so little that they tried to borrow chewing tobacco off a stinger."

"Well, my man," he says at last. "I'll see what I can do and if it proves a success, I'll let you know." And he takes my name and now he goes and reports me. What do I get?"

Morris smiled. "I'm going to give

you ten days—that is, ten day's vacation. Tomorrow there's a sort of railroaders' picnic down at the park. I want you to go out and get acquainted with all your fellow employes. Your pay will go on just the same. You've made two good friends for the road and both these men are big shippers. They appreciated the suggestions you made, and as you are a part of the road's personnel the merit of your interest in the shippers' welfare redounds to the company. So we owe you a little vacation. Meet as many of the others as you can, study out new ways to help our patrons and some day you'll have men under you, too. Be sure and come to the picnic."

"I'll come," Blake said, as he jammed his hat on his head. "I've got a good set of bones here, but I'll leave 'em at home, as I'd hate to see my fellow employes do the pedestrian act."

"Leave your bones at home—why?" asked the astonished superintendent.

"I've got a pair of bones here that'll come seven every time—and it'd be a shame to make all them

guys walk home from the picnic for want of car fare."

Morris touched the bell to summon his stenographer, smiling as he did so.

The afternoon following the superintendent arrived at the park shortly after luncheon. His daughter, with some friends, had arrived earlier and he made the rounds of the picnickers in search of her. His attention was attracted by a small group of ladies under a tree in one corner of the park. Thither he directed his steps. Before he reached the group so that he could see 'over the heads of the ladies he realized they were being entertained by William McCallister Blake. The limb of the tree was his stage props. A hand grasped the limb and the superintendent saw a red head follow it up; then a body curl more or less gracefully up.

"That is a trick I learned while braking on the Oroyo road, down in South America. When they made the cars for that road they intended to train monkeys to do a brakeman's work, so they put only one grab on for a side ladder. You've got to glom the grab, and draw yourself up, swing your feet above your head to where the handle was put for the monkey to catch with his tail; then you're on top of the car."

Suiting the action to the word, Blake put one of his feet over a limb and assumed a sitting posture. Then he leaped to the ground.

"Why didn't they use monkeys for brakemen?" a girl's voice asked, laughingly, and the superintendent recognized the voice as that of his daughter.

"They found the monkeys had too much brains," Blake replied with a laugh that took all the sting out of the words, and Morris caught himself smiling. Just as the switchman was preparing for another stunt, Morris found a way through the throng and Blake saw him and waved his hand.

"Enjoying yourself, Mr. Blake?" Morris asked.

"Sure thing," he replied. "Some real human people here when they get to know you."

The group began dispersing. Blake walked away with Morris.

"Were you ever in South America?" Morris asked.

"No, sir. Never any closer there than Arkansaw. But there was some pretty girls there and I wanted to see that they got some vaudeville mixed in with the picnic."

"I see," the superintendent said.

It was the day following the picnic.

HEISER

"Shootin' craps with some men aint no game of chance—it's exercise in connection with receivin' a donation."

Superintendent Morris telephoned for his car and his daughter drove it to the office. He stood in the office window watching its approach. As it drew near he noted that the seat usually occupied by the chauffeur was held by one William McCallister Blake. As the car parked in front of the office Blake jumped from it, bowed to the girl and walked down toward a switch shanty.

During the ride home, nothing was said of Blake. The next evening the act was repeated.

"Is Mr. Blake amusing?" he innocently asked his daughter, as she guided the car homeward.

"He's delightful company — so original—he says things in a way no other man can."

"H-m-m-m." Morris made no other comment.

It was nearly lunch time the third day after the conversation with his daughter that a clerk entered the office of the superintendent and said:

"Mr. Blake wishes to speak to you. He says it's very important. Wants to see you before he boards the 2.20 for home."

The clerk conveyed the desired permission and Blake entered. He appeared ill at ease, and passed his

hat from hand to hand as he stood nervously by the desk.

"The fact is, Mr. Morris, I want to marry?" he exclaimed.

The usually stern face of the superintendent became sterner. He recollected the incidents of the motor car rides.

"You red-headed scamp—" he began.

"And she says she'll have me if I can get you to transfer me somewhere near this burg. I asked your daugh—"

"What!" Morris rose to his feet, his face white with anger.

"—ter and she said I'd better ask you; that you had a pull, all right, all right."

Morris sat down again, reason cooling his anger. "But see here, Blake," he said. "I've other plans for—"

"It's your daughter's—"

Morris jumped up again.

"—what you call her? Mo-dis-
The lady who fixes your daughter's fine dresses and hats. She's a peach, and if it hadn't been for her that picnic would have been as dull as playing poker with a blind man."

Morris sat down with a sigh of relief.

"Oh, you mean Miss Williams,

Blake. You're lucky, man. She has a good business and a little money in the bank, too, if I'm not mistaken. At least she should have, judging from the bills she sends me. And you want a transfer to this city?"

"Sure thing. Met her first at the picnic. Met her at your house. Borrowed your car from Miss Morris to take her riding. I owe you for the forty quarts of John D's life blood I used while I was hog-heading that car around with one hand, while the other was around—. But let it go. I've got some dough planted, too. Have me transferred here and I'll talk up those ginnies that bother us loading and unloading cars for the poor switchmen to bump about until this road'll have to have shay engines to pull a drag. Do I get the transfer and, paregorically, the girl. That story of mine about shootin' Arkansaw golf with the two little dotted bones was like the story about South America. I've got the first penny I ever had—swallowed it. Am I transferred? What?"

"I think I can arrange a transfer Blake," the superintendent said. "And I wish you luck."

"Thanks. But you can't wish luck on a guy. He's got to go out and get it."

Large combination freight and passenger steamers of the Matson Navigation Company are using our piers at Locust Point as their berths on the Atlantic Coast. The Buckeye State and the Hawkeye State, twin steamers, are seen in the picture, lower left. Lower right, Captain John I. Diggs; upper left, the stewardess and two of the entertainers; upper right, a group of the officers, all of the Hawkeye State. This boat sailed on June 25 for Hawaii, via Havana, the Panama Canal, Los Angeles and San Francisco; it will return to Baltimore by the same route. The Buckeye State will leave for the same trip on July 30. Despite the loss in foreign trade caused by the cessation of the large amount of German shipping that came to Baltimore before the war, this port is attracting the increasing attention of shipping interests all over the world. Its splendid natural facilities, the deep channels to new pier facilities, its favorable freight rates from the large industrial centers of the middle west and the extensive program of harbor improvement projected by its municipal authorities, make Baltimore a port to be reckoned with in the competition for world trade.

Have You a Disabled Buddie in Your Shop?

You May Be Entertaining An Angel Unawares

THERE is a great and natural difference of opinion throughout the country as to what should be done in the way of adjusted compensation for most of those who saw service in the uniform of the United States during the World War.

There is practically *no* difference of opinion as to what should be done for the disabled ex-service men. People are unanimous in agreeing that they should have all that the Government can possibly give them in the way of compensation and training to fit them for a future, useful to themselves and to their fellow men. There are few of us who would not be willing to dig deep in our jeans to help succor a disabled veteran of the World War who needed our help.

Most men worthy of the name are unwilling to accept charity except in the direst necessity. Hence the Government realized even during the war that it would have to make adequate provision for restoring all disabled veterans to a measure of usefulness; to make them as nearly 100 percent men as when they went over the top, or as they were when they were engaged in a trade or other occupation before joining the colors.

As a result, the Federal Board for Vocational Education was given the facilities under a law approved by President Wilson on June 27, 1918, to prepare plans for the training of disabled veterans, as soon as they were ready for this training.

Soon after the work started, it was realized that the many different kinds of disabilities, incapacitating men in so many respects, would cause a demand for a large number of different kinds of vocational training. And this fact developed the further situation that there were not nearly a sufficient number of schools throughout the country to afford the many necessary kinds of training needed.

It therefore became necessary for the Federal board to use the facilities for practical training offered by the industries of the country, and the railroads were naturally looked to for their share.

It was also realized that the question of training men in shops in which labor was organized, should be discussed with the railroad labor organization. This was done and, as a result, the Director General of Railroads, after agreement with B. M. Jewell, acting president of the Rail-

way Employes Department, American Federation of Labor, sent a letter to the Regional Directors of the Railroad Administration, covering the arrangement for the training of disabled men in railroad shops, in the following paragraphs:

1. Only disabled men who are trained by the Federal Board for Vocational Education are covered by this arrangement.

2. Each of these handicapped men will require special consideration in the light of their particular circumstances; every case will be taken up separately by the representatives of the Federal Board with the representatives of the shop employes and the shop management, with a view to reaching a complete understanding of its circumstances and the establishment of thorough cooperation in arranging the details of the training.

3. As these men will require a special character of training they will not be considered as apprentices, but will be admitted to shops for the purpose of such special training as their injuries or circumstances require, irrespective of the number of apprentices in the shop or on the system.

4. If for any reason there is a failure to reach a satisfactory understanding locally, concerning the training of any disabled man, as herein provided for, the case will be taken up immediately with the Railway Employes' Department and the Central office of the Federal Board for Vocational Education in Washington, D. C., for adjustment.

5. Each man while in training under this arrangement will be paid at the rate of twenty-five (25) cents per hour, irrespective of the amount received by him as training pay from the Federal Board for Vocational Education.

6. No man in training under this special arrangement will be permitted to work overtime or on legal holidays, nor will his course of training be governed by apprenticeship regulations, but otherwise he will be required to observe the rules and regulations of the shop.

7. Each man at the completion of training will be as free to accept employment where he is trained as elsewhere, as circumstances may require and opportunity presents itself, but if he continues in the service as a workman he will be paid the prevailing rate from the date upon which his training is completed.

This plan is approved by the Railroad Administration, and beginning at once disabled soldiers and sailors may receive vocational training in railroad shops in accordance therewith, under the direction of the Federal Board for Vocational Education.

It must be clearly understood that men receiving such training will be under the control of the proper officials of the company, will be required to observe the rules and regulations of the shop where employed, and will be subject to the usual discipline when such rules and regulations are violated.

How friendly the representatives of organized labor who had a part in this arrangement were to the plan for the training of disabled veterans, may be seen from the following paragraph in the letter sent by their committee and by Mr. Jewell and Mr. John Scott, their secretary-treasurer, to their lodges:

We are pleased to advise of a satisfactory understanding on this important matter, and feel assured that our membership will gladly cooperate to the fullest extent in making for the complete success of any and all measures having for their purpose a helping hand to those men who have given so much in the service of their country. It is but a small return for the sacrifices they have made. We appreciate the fact that the best we can do is none too good; let us therefore see to it that these men are given every opportunity to place themselves in a position to earn their livelihood, and not have to depend upon public charity.

This arrangement is set forth here in detail so that our employes may understand clearly that the manner of placing trainees in the shops of the Baltimore and Ohio and other railroads, cannot in any way militate against the positions they hold in the shops or against the tenure of their jobs. The case of each trainee is first investigated by the shop committee, and, if it is approved, as it almost

(Continued on page 35)

Were You Disabled During the War?

It is believed that there are a few men working for the Baltimore and Ohio who were in uniform and were disabled during the war and who have not yet gotten in touch with the Federal Board for Vocational Education.

Such employes are urged to write to this board in Building C, Sixth and B Streets, Southwest, Washington, D. C., to describe their disability, and what they are doing on the Railroad.

It is possible that there are opportunities offered through the Federal Board to such men, of which they have not heard, and it is the wish of the Board and of the Government that such men take advantage of these opportunities.

Get your share of the things provided for you by your country. Write the board in Washington today!

Over Fourteen Hundred Carloads of Freight and Many Passengers Secured in Solicitation Campaign to July 2

GOOD progress has been made in the solicitation campaign since the last issue of the MAGAZINE went to press. The Veterans are still in the lead but many other employes have reported results, an examination of the following list showing even the names of a number of women employes who have gone out and done their bit.

The thing to be remembered now is that the campaign is still on and will continue to be on until our business has increased to such an extent that it takes every minute of our time and effort to handle it, and when the necessity for the system-wide effort in solicitation will be over, for the time being, at least.

Have you a friend who ships or receives goods? Have you another who rides trains? Do you believe in the service of the Baltimore and Ohio? There is only one answer for most of

us employes and that is to connect up these factors and put our Railroad in the lead in the securing of competitive business during this period of depression.

BUSINESS SLOWLY INCREASING

Cars loaded and received from connections on the Baltimore and Ohio for May and June are as follows:

Including May 30.....191,618
Including May 31.....199,594
Thirty days of June.....207,466

The 30 days of June as compared with the 30 days of May thus show an increase of 8.2 per cent. It is unquestionably true that the individual solicitation by Veterans and other employes has had some influence in bringing about this encouraging showing.

There are splendid opportunities now for continuing this good work, especially in getting your friends to ride the picturesque route of the Baltimore and Ohio on their vacation.

We are not working without encouragement. The adjoining figures are as refreshing as the sight of a home terminal to a tired train crew, and should speed us up to renewed effort.

There have been other encouraging signs, as witness a letter from a committee of employes in the General Freight Claim Department in Baltimore to C. C. Glessner, their chief, pledging the assistance of everybody in that department to increase business through personal effort. The proof of what this meant may be found in the accompanying tabulated lists, several orders for the shipment of goods coming as the result of this letter.

The Management appreciates this fine spirit on the part of all employes, and our Traffic Department will be glad to help when called on for rates or special information necessary to get business.

We are a long way from normal business, but we will attain it so much the sooner if we will all remember that the employment situation on the Railroad depends almost altogether upon our speed in getting there. Other railroads have gotten busy in spreading this story of system-wide solicitation, but with the start that we have secured, they won't be able to catch us if we only keep going.

Will you be one to help in restoring prosperity to our Lines and our people?

Veterans Lamb and Montgomery, Newark Division, Shine

ONE of the largest single orders secured for the movement of freight over the Baltimore and Ohio during the business-getting campaign was gotten by Conductor William Lamb of the Newark Division.

Mr. Lamb was talking to one of the members of a contracting firm on his train one day and discovered that if certain inexpensive facilities could be provided as suggested by this business, man, 20,000 tons of crushed stone would be given us to haul over our lines.

Mr. Lamb took the matter up with Superintendent Kruse of the Newark Division, the necessary track arrangement was approved and the business, producing a large revenue, came to the Baltimore and Ohio instead of to another railroad.

We believe that this is one of the largest single orders secured by any of the Veterans during this campaign.

Veteran J. L. Montgomery, who has turned in a large number of cards indicating business secured by him for the Railroad, recently made one of his most successful solicitations, the result of which was a movement of several carloads of freight from Kane, Pa., to Toledo, and the promise on the part of the consignee that hereafter they would order all their business between these points routed via the Baltimore and Ohio instead of a competing line.

We congratulate Mr. Montgomery on this splendid work done for the Railroad and wish him further success along the same lines.

The Diary of Our Own "Aunt Mary"

MISS STEVENS, associate editor of the MAGAZINE, also known, especially among the readers of our Children's Page, as "Aunt Mary," recently returned from a week's vacation to the Southland. A freight wreck ahead of her train going down, delaying her almost a day, and a two-day storm at sea coming back on the boat (the effects on her we pass over quickly), did not prevent her from having an eye to Baltimore and Ohio business throughout the trip. As a result she handed me the following notes on her return, with a big "PLEASE" that they be not used in the MAGAZINE. As an illustration of what a woman employe can do on a vacation week to bring business to the Railroad, this is much too good to be buried. Maybe it will make some of us men get busy. Her business-getting adventures helped her meet a number of nice people and in that way enhanced considerably the enjoyment of the trip.

THE EDITOR.

4-12. On train Daytona to St. Augustine, sat with an old man who had wintered in St. Petersburg, Fla. Was on way to New York and intended going to Philadelphia by water and thence to New York. Then back home to Columbus, Ohio. Said he'd always traveled via competing road for no reason whatever, but that he'd heard Baltimore and Ohio service was good. Finally he said: "Well, by jing, if the Baltimore

and Ohio has got people in its service like you, who are as anxious about the welfare of the traveler as you are, I'm willing to try it once. It must be a good road to ride on. Yes, ma'am, I'll take your road back home, an' if I don't like it I'll write an' tell you so."

4-14. Heard one of the stewards on our steamer tell two girls that the best way to get from Baltimore to New York was via the line of our competitor. Very impolitely, but as cautiously as possible, I "buted in," and asked him if he were positively sure of that. He looked at me sheepishly and said: "Well, that's the way most people go." I asked: "What's the matter with the Baltimore and Ohio?" "Well," said he, "personally, I have no fault to find with it. It's all right, as far as I know." "Do you work for the Baltimore and Ohio?" he added. "Yes, and I'm proud to say I work for the finest railroad between Baltimore and New York, too, and its service can't be beat."

"Do you believe that, or are you just boosting your road?"

"Both. I know by experience, and I'm proud to boost it."

"I reckon you're right," he said, walking away, and the girls asked me how to get to the Baltimore and Ohio station.

4-15. Lady and her husband on the boat, Jacksonville to Baltimore. Live in Michigan in summer. Were on way home. Said they were going via Baltimore and Ohio to Chicago, and wouldn't travel any other way.

4-16. Traveling salesman with his wife and dog aboard the steamer said they travel West a great deal, but wouldn't travel on the Baltimore and Ohio. Simply prejudiced against it. I asked them if they'd ever traveled our line. Man said he had, but a number of years ago. I asked them if they wouldn't try it next time they go to their home in Seattle. Said: "Maybe so, we'll see about it."

4-16. Old lady and husband coming from Savannah, Ga.; wanted to go to Fairmont, W. Va., to visit sick sister. Said they knew they had to go to Baltimore, but didn't know how to get to Fairmont from there. I told them they could get a train out Saturday night (it was 8.30 when we docked) from Camden Station and told them how to get to Camden from the wharf.

4-16. Two young ladies, living in Meadville, Pa., had bought their tickets via another road than ours, because "that's what the steamship agent sold us." They had never heard of the beautiful scenery along the Baltimore and Ohio, and when I described to them my trip up the Shenandoah Valley, the elder said: "My, but I wish we'd known that!" They spend all their winters in the South and promised that their next trip to Washington, D. C., from Pittsburgh would be via Baltimore and Ohio.

4-16. While waiting for street car after leaving dock, an elderly gentleman asked me the way to Camden Station. Told him if he'd get on same street car with me, I'd

show him just where he could transfer, or walk just a block to get there. He did and I left him on the corner of Pratt and Howard Streets.

4-16. At the same time a young girl asked if she might go uptown with us. She wanted to go to Washington, D. C. We asked her if she didn't want to go from Camden Station. She said: "No, that road's too dirty for me." By this time I was too tired to argue, but just took her along and put her off the car at the right place, telling her, of course, that we were Baltimore and Ohio employes and that whenever she cared to ride on the Baltimore and Ohio she could be sure of excellent service. She appeared to be grateful to us for showing her the way.

When the Newspapers Praise It, It Must be Good

DAVID J. DAVIES, who writes the popular "Town Tattler" column for the Pittsburgh *Dispatch*, had this to say in his letter of April 14:

We're for the Baltimore and Ohio henceforward, for here's a real boost for the road that used to be considered anything but good. The following letter from a well-known business man explains itself:

"Mr. Tattler: You are not too young, perhaps, to remember the old minstrel gag. Mr. White would say: 'I just loves the city of Washington and I wants to go there the worst way.' Then Mr. Black would reply: Why don't you take the Baltimore and Ohio?"

"Mr. Black may have been right in those days, but not now, for the Baltimore and Ohio is a real railroad and the dining car service 100 per cent. better than some others out of Pittsburgh.

"For the first time in many years I took the Baltimore and Ohio to Washington last week and when I went into the dining car was surprised to find on the menu a special dinner for \$1.25. The dinner consisted of soup, fish, meat, two vegetables, a salad, dessert and coffee, and when the bill was paid I was handed a nice little package of peppermint candy—all for \$1.25.

"This same dinner on any other car would have cost double that amount or more. The dining car steward was most attentive and the waiters polite and solicitous for my comfort.

"It might be well for other railroads to do likewise."

This is but one of three or four similar comments from well-known big city newspapers that have come to our attention in the last few months. The other railroads are simply not getting them this way and there's only one answer—our Dining Car Department is producing the goods.

Don't forget that E. V. Baugh, superintendent, is always glad to have honest criticisms of the service from employes as well as passengers. They help to perfection just as much as do the compliments.

Our Grain Elevators at Locust Point

(Continued from page 11)

which grain is directly conveyed from vessels to storage bins. These marine legs are used in the unloading and placing in storage of a considerable amount of grain which is produced adjacent to Chesapeake Bay.

Safeguarding the Piers

Consideration was given a few years ago to the possible construction of a modern concrete type of elevator for the handling of export grain business at Locust Point, but because of the war and the consequent enormous increase in the cost of labor and materials, this work has been indefinitely postponed. It has, therefore, been necessary to operate the present facilities in the most intensive manner possible, and to safeguard them against destruction by fire with every means possible. The destruction of these facilities, in addition to the causing of a financial loss, would result in an enormous decrease in revenue because of the interruption of transportation of export grain on account of the loss of facilities for handling it.

As a means of safeguarding against fire, there is maintained at Locust Point a permanent fire brigade, both day and night, with necessary equipment for use in any emergency. There is also provided in each elevator a complete standpipe system with hose connections, as well as city fire alarm boxes on each floor and constant watchman service throughout the entire structure. Workmen are prohibited from carrying matches or any of the other necessities for smoking within the elevators.

Disastrous Grain Dust Explosions

During recent years there have occurred in various grain elevators a number of very destructive explosions, the most recent and most disastrous of which took place on March 19, 1921, in the Chicago and Northwestern Elevator at South Chicago, which was operated by the Armour Grain Company. That this explosion was caused by dust is a generally accepted fact, but the manner in which it was ignited and the explosion started is a matter of theory only and probably never will be definitely known. This particular elevator had the largest storage capacity of any similar structure in the world and had only recently been completed at a cost of approximately \$10,000,000. The entire elevator and surrounding structures, including power house, are practically a complete wreck, and six men lost their lives in the explosion.

It is a significant fact, however, and perhaps a strange one that all destructive dust explosions of record in grain elevators have occurred in the more modern structures which have been built of concrete or other masonry, and while a number of elevators of the Locust Point type have been destroyed by fire, there is no record of an explosion in connection with same. In fact, when fires have started from other sources and the elevator has been entirely destroyed, dust explosions have been very unusual. There is also a record of minor damage having been done by dust explosion and the building not burned—the extent of the damage being a hole blown through the wall of the structure.

The most generally accepted theory of dust explosion is that the dangerous element is contained in the very fine, light dust which is carried in the air and which finds an ideal lodging place on the granular interior surfaces of concrete walls and other masonry. This very fine material is the dangerous dust, it being almost as light as air and very inflammable. The smooth surfaces presented by the dressed lumber in posts, walls and bins of the wooden elevator do not readily retain this dust, and such of this dust as settles on horizontal beams and ledges is mixed with the heavier and less dangerous dust. This dust, however, is not considered subject to spontaneous combustion and the ignition causing explosion must occur from some outside source.

Removing Dust Explosion Danger

It is, however, good practice to keep dust removed from the floors, walls and beams in the elevator structures, and to avoid as far as possible the danger from this source. This requires constant and careful attention, as every movement of grain through the elevator, either in the unloading of cars or other handling, gives off a considerable quantity of dust. Prior to the last few months, it has been necessary to remove this dust, when collected, by placing it in sacks and carrying it out of the elevator for loading on cars or other disposal.

To eliminate as far as possible the fire hazard from the collection of dust in the elevators, and in order to provide means for the convenient, economical and quick removal of the dust; it was decided in the spring of 1920 to install a complete mechanical system for the collection, storage and shipping of dust. At the same time there was also authorized the installation of modern facilities for the cleaning of grain. New cleaners were pur-

chased and replaced old cleaners which were located in the cupola of each house, where they constituted a considerable fire risk, were not readily accessible for adjustment and supervision, and where, in many cases, their operation involved an undue amount of handling of grain. The new cleaners, therefore, were located on the ground floor of elevators, being distributed throughout each house so that as wide a range as possible could be served by each machine.

With this in view, three machines were placed in each house, each having a capacity of 4,000 bushels per hour—this being the largest machine that the clearance between bents in the elevators would permit being installed. These machines are of the most modern type, and consist of a combination of fans and screens, by means of which dust and all other foreign materials can be removed from the grain, and which also permit, when necessary, of the separation of one kind of grain from another.

In the cupola of each house is a complete sweeper system with outlets on each floor. The sweeper system consists of a combination of galvanized iron pipes, fans and cyclone dust collectors. A typical inlet or pick-up for the removal of dust is shown in Figure 6. Approximately one pick-up is provided for each 2,000 square feet of floor space, both on the ground floors and on all cupola floors. In the collection of dust, piles are swept to each pick-up and are then readily removed by suction which is placed on the pipe line by a motor operated fan. The suction in these pick-ups is sufficiently powerful to handle, as well as dust, the grain which necessarily collects on the floor and is mixed with the sweepings, and in actual service, it has been found that sweepings can be removed just as fast as they can be conveniently fed into the pick-ups.

In the collection of dust from sweepings, as well as dust and screenings from cleaners, a number of difficult problems were encountered, due to the fact that owing to arrangement of slip between elevators, the actual distance on land between the structures was approximately 1,000 feet. As there was no space readily available where track for loading dust and screenings could be used in the vicinity of Elevator "B," and as it was desirable to concentrate at one location material collected, in the interest of economy for handling in shipping it was decided to make use for dust and screenings room of brick building adjacent to Elevator "C" which was used as a power house before machinery in this elevator was electrified.

The remodeling of this building to suit the purpose for which it was desired, involved the installation of new second and third floors, which were constructed of structural steel and reinforced concrete, and also the construction of a reinforced concrete dust bin, having a storage capacity of approximately two cars of dust.

In Elevator "C" the four fans comprising the power units for placing suction on sweeper system, discharge into a large cyclone which is located on roof directly over dust bin—this cyclone as well as other equipment on roof being shown in Figure 2.

In Elevator "B" there are two dust collecting fans, each of which discharge at land end of elevator into a small intake box, which is connected to a six inch underground pipe line leading to dust room adjacent to Elevator "C." All the accumulation of dust in Elevator "B" is readily handled by vacuum placed on this pipe line with high pressure blower located in dust house, and is discharged directly into dust bin.

Each cleaning operation produces a quantity of screenings, which are separated from the grain cleaned. The grain is, of course, replaced into storage bins, but it is necessary to collect and store screenings subject to orders of the owner of the grain. To provide a convenient arrangement for the removal and storage of these screenings, they are collected in small hopper directly under floor of elevator at each machine and delivery to screenings room is accomplished by means of high pressure blowers and eight inch pipe lines, similar to that described above for handling dust in Elevator "B." At the point of collection, bins are provided for the receiving and storage of screenings from each house. Screenings are then sacked and loaded in cars through sack chute. Some idea of the interior of dust house and screenings storage room may be obtained from Figure 3.

Economy of Operation

Only one man is required particularly for the operation of this system. His duties consist of the operation of machinery in dust and screenings house and attending to the sacking and loading of screenings and dust. Operation of equipment throughout the elevators, including the sweeping up of floors, cleaning down of beams, etc., is entirely handled by the regular elevator force—each employe being responsible for the sweeping and cleaning of the particular section of structure in which his other duties necessitate his presence.

The Dust Goes to the Soil to Grow More Grain

Accumulation of dust in dust bin is loaded directly into box cars by means of special screw conveyor and air blast for the trimming of dust in the car. This dust has been found useful both by feed and fertilizer manufacturers, and each car as it becomes available, is placed upon the market and disposed of to the best advantage.

The installation and successful operation of cleaners and dust collecting systems has proved a considerable forward step in overcoming the handicap of not having completely modern grain handling facilities. It has also resulted in a substantial saving in insurance premiums in the elimination of the hazard which was caused from insufficient means for the removal and collection of dust. Upon completion of the system an inspection was made by representatives of insurance underwriters and as a result of this inspection, new rates were promulgated which represent a net saving of \$16,000 per year to the Company. There is a further considerable saving in the labor necessary to keep the houses clean and in the means provided for the salvaging of grain contained in sweepings. The new cleaners are much more efficient and economical of operation than the old ones. Operating results up to the present time indicate that these savings will amount to \$9,000 per year, or a total saving of \$25,000 per year, including reduction in insurance.

The dust collecting system was installed under the general direction of H. A. Lane, chief engineer, the writer having immediate supervision of detail, design and field installation. Stinson & Godfrey, 29 South LaSalle Street, Chicago, Ill., were the general contractors. Sweeper system was installed by the Cyclone Blow Pipe Co. of Chicago, and the blowers and high pressure pipe line equipment were furnished by the Guarantee Construction Co. of New York City.

**Engineer Merkel and
the 4401**

(Continued from page 17)

first three or four trips I knew her action perfectly, her peculiarities and how to handle her. And I believe that it would promote a saving in fuel and locomotive upkeep if engines could be given to regular crews to keep and run regularly. Then the engineer and fireman would become accustomed to each other and to the machinery and could handle their

engine better; just as much better, in fact, as a mother can handle her own child better than anyone else can.

"I once had the 4177 for a considerable period and the results proved to me that this method of assigning an engine to an engineer or an engine crew produces more economy than the method of pooling engines.

"Of course, a good fireman is half of the battle in getting good work out of an engine. Economy of fuel depends very largely upon the proper handling of the fire. Engineer and fireman must work in close sympathy.

"It is the fireman's job to see that we get good steam pressure at all times, and that the pop valve doesn't go up while the engine is running. And he can do this if he wishes to.

"It usually happens that on the first trip I make with a fireman whose work I don't know, we burn three or four more tons of fuel than we do on later trips. When the fireman gets to know how the engineer handles his engine, he is able to handle his job accordingly.

"In fact the whole train crew contributes to economy of operation. If they understand each other and there is no jarring element among any of the men, the trip goes smoothly and, even in case of a break or any other kind of trouble, there is such a complete understanding among the members of the crew, that good time and economy of material result."

Engineer Merkel has a nice home in Brunswick and he and Mrs. Merkel are mighty proud of their three children. I met the oldest, Robert, who, as indicated in the picture on page 17, resembles his father very closely. Robert is 16, Imogene, 15, and Claudie is the baby of 1 year.

As Engineer Merkel waved me goodbye as he was crossing the track from the roundhouse to go home, he called back:

"And don't forget that the 4400's are the best Mikados ever put on the Baltimore and Ohio and that the Management and the employees ought to be proud of them."

against the placing of as many trainees with the Railroad as would otherwise have been put in training, but it is confidently expected that with the coming of a greater movement of traffic and greater activities in the railroad shops, a considerably increased number of trainees can be accommodated.

There are now about a dozen trainees in the shops of the Baltimore and Ohio Railroad and it is the particular desire of the Federal Board that these men be given a very personal cooperation by the employees associated with them.

The success of the trainee depends on the fellow who works at the same bench with him. This comrade can make it either hard or easy for the World War Veteran who suffered while doing his duty for his country. It is therefore urged upon all employees that they discover if in their shops there are trainees whom they can assist in securing the proper knowledge of the crafts which they have chosen for their life work, and that they give them all the assistance possible.

Trainees are chosen for one craft or another on the basis of:

1. Their adaptability to a particular craft.
2. Previous training and experience.
3. Education.
4. Probable future residence.
5. The employment possibilities in their craft, so that there shall be no overcrowding of apprentices or the craft as a whole.
6. The trainees' disabilities.

It should be clearly understood that the fitting of the trainee for the craft in which he is placed does not interfere in any way with the work available for the members of the craft in a particular shop or on the Railroad as a whole. Further, it does not interfere with the opportunities for apprentices. The training of disabled veterans is not along the same lines as the training of the apprentice; he is not supposed to work on production to such an extent as to take the place of a regular employe of the Company.

The same agreement as made jointly by the Federal Board, the Railroad Administration and the Railway Employees Department of the American Federation of Labor, is in effect on the Baltimore and Ohio today.

In future issues of the MAGAZINE it is our purpose to discuss individual cases of trainees at various places on the System and to tell our readers what progress they are making in their work.

Some Inside Stuff on Gloom Chasing

"YOU can't make a bulldog out of a hound by merely cutting off his tail," Fatty Lewis declared, "and you can't be a Gloom Chaser by merely wearing a button saying you're one."

"What's the big idea?" Hurrah Smith inquired.

"The big idea is that this Gloom Chasing business has got to come from the inside out."

"It's like charity," Lewis added. "It's got to begin at home, be carried to the office and injected into the sour faces."

"You know," Lewis continued, "these birds that's always ready to curl up and quit give me a pain."

"Jes' supposin' old Chris Columbus had quit," Lewis suggested. "He had every reason to act like a crawdad and back up."

"But he didn't," Lewis declared. "The old bird just let the wind keep on blowing him along and finally he made the hill."

"What happened then?" Hurrah inquired.

"Nothing," Lewis replied, "except that Chris had a smarter publicity man than the Indians. Columbus's press agent just grabbed the wire and sent out the story that Columbus had discovered the Indians."

Sidney Seigler, care of gen'l fr't claim agent, Baltimore, Md.	Mr. S. Oppenheimer, Brooklyn, New York, N. Y.	1	New York City, to Baltimore, Md.

"Take our old playmate Robinson Crusoe," Lewis added, "the poor boob got shipwrecked and landed on an island—"

"Did he get all gloomy?" Lewis inquired. "He did not. He set to work establishing the R. Crusoe Co., Ltd., and the first man-eating canni-

bal that came along old Robbie, instead of getting all panicky, said to the Hon. Cannibal:

"I'm going to bed now. Call me at 7.30 and have the water hot for my morning shave."

"What's the moral?" Hurrah Smith inquired.

"Keep on hustling," Lewis replied. "The guys that do, not only get some place but have stories written about them."

—The Gloom Chaser

To All Handling Distribution of Magazine:

Please Note

Observation indicates that the Magazine is not being distributed most effectively. At certain points piles of Magazines are seen where almost anyone can take as many copies as he wants.

The Magazine should be distributed at all points by hand. It is as easy to keep your supply of Magazines on a desk in an office near the counter or rail, where the person in charge can hand a copy to an inquiring employe, as it is to place copies in piles where people can help themselves. It is more economical and more employes will get copies than are now getting them.

The best method of distributing the Magazine (and the plan works in almost all departments of the service, except among the train service employes) is for the officer in charge to designate someone to see that the Magazines are distributed on the day they are received, when employes are leaving for home after the day's work is over.

Earnest cooperation in this important matter is requested.
The Editor.

The Winners in the Special Test Accident Campaign.

THE winners in the Special Test Accident Campaign, which closed May 31 were:

Eastern Lines—East Side (Phila.)
Western Lines—Toledo Terminal.
New York Lines—M. P. Department
Mt. Clare Shops—Boiler Shop.

To each of these there will be presented a banner which can be hung in some conspicuous place as a reminder of the hard fight the winners had to make it a success. These banners are different from awards made in the past. Instead of a large flag which was to be flown in the open, they are smaller and of a good grade of felt and will be an adornment to any office.

A letter from C. W. Galloway, vice-president in charge of Operation and Maintenance, to the winners, commends in warm terms the achievements. After citing the specific figures of each of the winners, Mr. Galloway says:

"The accomplishment of this commendable result has proved conclusively that every employe in and around the terminal took an active and sustained interest in the campaign.

It is with a great deal of pleasure and pride that I offer you my sincere congratulations. The victory banner, which will be formally presented by the General Manager in recognition of the efforts put forth by the employes at I hope, will ever be evidence to you that the observance of Safety Rules means not only efficient railroad operation, but brings happiness to those who practice them. I trust you will preserve for all time what the banner represents and that can only be done by continued practice of the Safety Rules. Your victory was obtained through strenuous competition with other points on the Western Lines, and your fight for success, I am sure, will be an inspiration to your energetic rivals".

It was a trying 60 days that the officers and employes faced. Seldom was a campaign opened more auspiciously than this one. General super-

intendents, superintendents and others in supervising capacity had mapped out the campaign, under the guidance of J. T. Broderick, superintendent Safety Department, and there was a determination to cut deep into casualties. There had been a call for economical operation everywhere, and the elimination of personal injuries was one of the steps. But a higher motive inspired all those engaged in the drive. They wanted to see the human waste stopped.

East Side, winner of the championship on the Eastern Lines, came near putting a stop to injuries, for that terminal, with 310,094 man hours worked in the 60 days, had only one accident. A fireman stepped on a lump of coal and twisted his ankle. It is commendable that it was not a more serious accident, but despite the low mark reached, the officers and employes at East Side were keenly disappointed that they did not make a clear record of no injuries. In the same period last year East Side had 22 casualties.

Toledo Terminal also came through with a single accident, compared with 20 in the same period last year. This terminal worked 260,539 man hours this year. The one accident was caused when a fireman was wetting the coal with a squirt hose and an engineer walked into the stream of hot water. A little more care on the part of this engineer and Toledo would have had a remarkable record.

The three departments, Transportation, Maintenance of Way and Maintenance of Equipment, were in competition on the New York Terminal Lines. They fought every inch of the way for supremacy and the Motive Power employes forged ahead and will have the privilege of displaying the banner. Last year this department had 6 accidents in the 60 days. This year there was only one. The Transportation Department made an enviable record by cutting casualties from 11 last year to 3 this year.

The Boiler Shop at Mt. Clare had to struggle hard throughout the test period to make a record sufficiently good to be declared winner. This department cut its accidents from 20 to

14, with nearly the same number of men working in both periods. The Welding Shop and the Air Brake Shop were pressing close on the heels of the winners and both deserve the highest words of praise.

As this was a test campaign, only a certain number of places were selected for the drive, seven points on the Eastern Lines, seven on the Western Lines, Mt. Clare Shops, New York Terminals and the Baltimore and Ohio Chicago Terminal Railroad. The New York Departments contested among themselves, as did those at Mt. Clare. The Chicago Terminal Railroad was not on a competitive basis, joining in solely with the desire to cut accidents.

Are You Playing Safe with Your Boy?

By Master Carpenter Lewellyn,
Chicago Division.

SAFETY is of great importance to every father, especially every father who has not the privilege of being constantly with his boys. I speak of boys, as I think the mother is more capable than the father of teaching Safety to the daughters of the family.

I expect to give my boys a good education so that they may qualify in a good vocation in life. I desire their education to include good, clean sports that will keep their minds clean and their bodies strong. And I want to see to it that they early understand the advantages of choosing good companions, which, in my opinion, are great Safety items in the development of boys.

Obedience is another Safety factor. They must be taught to be depend-

This banner went to Toledo in the recent No-Accident Campaign. Similar banners were awarded to East Side, which won the championship for the Eastern Lines; the Maintenance of Equipment Department of the New York Terminals, and the Boiler Shop, Mt. Clare, Baltimore, Md.

able. A person in whom no dependence can be placed, is not a safe proposition to his fellow men. Obedience should be taught through love, and not through fear, for love encourages confidence while fear does the opposite. If a father has the confidence of his boys they are not timid in discussing matters with him, thereby giving him the opportunity of submitting good, safe advice to his boys.

In other words, I wish to be a pal

to my boys, so that I may bring them to the realization that good eyes, feet, arms—in short, good, sound bodies are worth millions to them, so that I can teach them the Safety rules by which they may keep their bodies strong.

I want to teach them the importance of being careful and that carelessness is responsible, either directly or indirectly, for a large majority of accidents and a great deal of suffering.

know of anything finer than this? Some say he was lucky, I say "No—just careful." This kind of a record is within the reach of all our men if they will only make up their minds to obey the rules and be careful and cautious. Remember that facts prove that over 90 per cent. of all our accidents are preventable.

About 40 years ago a boy entered the service of the Baltimore and Ohio and in a few years was appointed to a responsible position. He liked the work, it was fascinating to him. In conversation with him one day I asked him how long he intended to keep at that kind of work. He replied, "I would like to do this work 50 years and quit with a clear sheet, and with God's help I am going to try." I have often thought that if every boy or man who starts railroading would make that kind of a resolution, preventable accidents would never happen.

Let us all unite in this great work, letting no chance pass to make the Baltimore and Ohio Railroad the safest on earth, so that we can hear our patrons say, "I feel safer on a Baltimore and Ohio train than at home."

Fifty Years' Service for "Con" Williams with a Clear Record—You Can Do the Same

First Prize Essay, No-Accident Contest, Western Lines

By W. W. Woodward

Dispatcher, Chillicothe, Ohio

ALL employes of the Baltimore and Ohio can help in all Safety movements by familiarizing themselves with all rules and instructions and making up their minds to obey them. These rules were drawn up by capable and experienced railroad men for our guidance and safety and when we disobey them we run into danger.

Obey the Rules

When an order says to reduce speed to 10 miles an hour between Storrs and Culloms, for instance, run 10, not 20. When receiving a caution order or caution block, proceed as the rules say, which is so that you can stop within your range of vision. Don't take a chance of killing yourself or some brother just to save a few minutes' delay. The train ahead of you might delay you for hours, so why take a chance to save a few minutes? Within yard limits, run as prescribed by Rule 93, and if you are working in the yard and the weather is stormy or foggy or if your view is obstructed, apply the rule of Safety and protect the other fellow.

The rules say, "take your time to do your duty safely." No official is going to reprimand a man for working safely. We should train our minds to be always careful. Never make a move on or about a railroad until you are absolutely sure everything is safe. Never allow anyone to take your mind off your work. He probably does not realize the importance of what you are doing. Never hurry at the expense of Safety. There are some men who disregard every Safety rule to get somewhere or get something done. They fail because something happens. The man who gets there is the cool-

headed one who obeys the rules and never allows anything to make him unduly hasty.

Don't Worry!

Never worry, because worry destroys both mind and body. We have no worries that cannot be gotten rid of if we will only make the effort. The wife and children can do much to keep worry out of the home. Live within your income and save something for the rainy day that is sure to come.

When God put this body of ours here, it certainly was not his intention to have it destroyed by our own or someone else's carelessness or neglect, but that we should take care of it until taken by sickness or old age.

We should have the No-Accident Campaign, not only for a few days, but every day, year in and year out. Let us keep this slogan before us whether on or off duty and try and get others to understand that these Safety movements are for their benefit, to try and save their lives and limbs and keep sorrow and suffering out of their homes. Accidents not only destroy lives and property, but they take from the service experienced men who cost the Company time and money to educate. We can't afford to lose men like this. Some men still look upon these Safety movements as a joke. I say this to them: "Get this idea out of your system now before it becomes a very serious joke for you and your wife and children."

"Con" Williams worked 50 years as fireman and engineer on one of our Western Divisions and left the service with a clear record. Not an accident in all these years for which he was held responsible. Do any of you

Are You Taking the Same Chance?

When a coupling did not "make" as two cars came together, a yard brakeman at Dayton, Ohio, signalled the engineer to pull ahead and then back up a second time. As the cars moved the second time the brakeman climbed up the ladder on the end of one of them. They came together with a crash, for the engineer got no signal when to stop. The crash caused the cars to jam together and the brakeman between them was mashed.

"Cleanliness is next to Godliness"

We have recently finished a cleanup on our Railroad, the like of which it has never seen before, and it suggests a line of thought which ought to be of interest to the individual.

Have you ever noticed that successful men are clean-looking men? You never see them unshaven or with dirty collars or unpolished and run-down-at-the-heel shoes. At the same time they may be most economical in clothes and wear them longer than does the ordinary man, the very reason for this being that they take such pains in seeing that they are kept neat and well cared for.

The chief executive of one of the largest trunk lines in the United States was recently talking on this subject of the importance of personal appearance in business life. It might be added that he rigorously practices what he preaches. He said:

"At times when I was an engineer I had pretty hard sledding financially. It was in the days of railroad building and much of the work of locomotive engineers waited on railroad construction in the middle west. First there was a boom and then there was a slump, yet I was never in such hardluck as not to be able to keep clean.

"I shaved myself every day and continue to do so now. It is the cheapest, quickest and easiest personal appearance insurance I know of. I always tried to answer my call for work on a passenger engine looking a credit to my employer and myself. I didn't come in contact with the public as did the conductor, but many railroad patrons saw and knew me; hence my shoes were always polished, my collar clean, my hair neatly trimmed and my clothes decent looking. When I got to my engine I had a second best suit of overalls and I put them on to look over the machinery and do the necessary oiling and other dirty work. When I had finished this I drew a bucket of water from the injector, washed up, put on a clean collar and got up in the cab, ready for my run and looking at least self-respecting. This doesn't mean that in order to look neat an engineer has to put on a clean collar every time he starts his run.

"When my overalls got dirty I used the same little bucket to wash them in, doing the work myself and drying them at an opportune moment in the engine cab. When the day's work was over I washed up again, packed my overalls away, put on clean clothes and made a respectable appearance at my boarding house.

"It wasn't a question of money with me—it was a question of pride. One of my fellow workmen once asked me why I took such pains to keep clean and I told him that I couldn't afford to be otherwise."

Pressed for a statement as to how the appearance of other men associated in business with him affects him, the speaker went on:

"Suppose I was hunting for the best engineer I could find to make an especially important run. Suppose I knew six of them and they were all about equal in ability but one of them was the cleanest and neatest in appearance. Is there any question which one I would choose?"

"I have often been called upon to tell reporters something about the business of the railroad and it has been my experience that those who are neatest in appearance are those who have reported what I told them most accurately.

"If I see a train or station employe who impresses me with the neatness of his appearance, my opinion of him is immediately enhanced and, chances are, it may be of some profit to him.

"In fact all my experience in business has taught me the value of a clean personal appearance. Perhaps I can sum it up by the following:

"I recently addressed a mass meeting of students of a New England University. After the meeting, a group of them asked me if I would talk to them further for the few minutes before my train time on something that I considered of importance to them. So I told them my opinion of the value of personal appearance. I said that if any one of them ever hunted a job on the railroad with which I am connected and happened to get into my office to see me about it, my decision in regard to placing him would be at least one-third made before he got to my desk. For, whether he knew it or not, I would have sized him up pretty well from the standpoint of his appearance and his deportment as he walked over to me from the door.

"That is how much I think of personal appearance and that is how much I like to see every employe of our railroad, and especially those who have to meet the traveling public and our shippers, present a neat and clean appearance."

Don't Forget Your Flag!

On the Saturday before Independence Day this year a letter came to me from my mother. It was filled with chatty news about the old home and the old friends, and had with it a sheaf of little articles from current publications. She called it "My Fourth of July Letter." A typical "Mother Letter," and on the back of the envelope up in the corner in fine letters she wrote: "Don't Forget Your Flag."

It recalled my boyhood days, the celebrations of the old fashioned Fourth, with the midnight vigils of the eve before to greet the coming of the day with appropriate noise from cannon, pistol and firecracker. It was the boys' day *par excellence*, with its incessant racket, streets filled with exploded firecrackers and torpedoes, air heavy with the smoke and smell of powder.

In all of the celebration, the mother had a big part. But there was one duty which was hers alone, one which she regarded with a peculiar reverence and privilege, namely that of hanging out the third story window the old Flag, which had been in her family for years, and which, as she often told me, had been hand-sewn by her own mother during the Civil War.

The little community in which I now live has a notable civic spirit and patriotic atmosphere. This year we had a big celebration. The boys of '65 and those younger heroes of the more recent and more terrible war were well remembered. A band of uniformed soldiers from a nearby camp furnished the music. Races and general community contests were enjoyed by old and young of both sexes. But the Flag—must I say it—was noticeable by its absence.

Only a few of our people displayed it on this the greatest of our national holidays, when its beautiful colors and design should have graced the home of every citizen there. It was no credit to me that my home showed the Flag, because this same mother had sent it to me in time for Memorial Day and had reminded me so forcibly of my privilege and duty on Independence Day that I could scarcely forget.

It is not because we are intentionally neglectful—it is only because we forget. But that hardly makes the omission any less serious in its effect. The Flag is the one outstanding emblem of our national life, of all the proud history and the high ideals of our nation, of the sacrifices which won at Valley Forge, at Gettysburg and in the Argonne, of the hope of America for World Peace and the onward march of civilization.

Don't forget your Flag!

Something to Crow About

During the month of May our four passenger trains, Nos. 15, 5, 7 and 9, made a wonderful "On Time" record going into Grand Central Station in Chicago.

No. 15 was late but once; No. 7 was late but once; No. 9 was late but three times; and No. 5 put her passengers into the station on time or ahead of time without a single failure.

No. 5 was ahead of schedule from one to ten minutes on seventeen different mornings and the other trains were ahead of their schedules much oftener than they were behind them.

For the month of July the record of the above trains arriving at the same terminal shows them only five times late. No. 15 got in a few minutes late on three occasions, No. 5 was only late once and that because of a landslide. No. 9 was late but a few minutes on one occasion and No. 7 had a perfect record!

Talk about teamwork! Such performances require the best efforts of thousands of employees, contributing in greater or less extent to the many factors entering into them. Special credit, of course, is due to the crews handling these fine trains and particularly to the engineers and firemen.

Congratulations!

The Cure—More Freedom of Management

The tragedy of the average railway investor has never been adequately described. Other property went up. His declined. In ten years land, buildings and plants have doubled in value. The railway owner's possessions have been halved. Is it strange he is averse to sending good money after bad?

In former days, when railway investment was not penalized, the public, decade by decade, saw rates lower and service improve. When a paralyzing hand fell on the business and there was no profit in doing specially well came retrogression. *There is the old, old lesson that it does not pay to shackle capacity.*

The country may again expect to be satisfactorily served when the best managed railway makes the most money and this is considered creditable to its managers. To treat symptoms is well enough, but it is wiser to strike at the roots of disease. *Liberty of Action is the Pressing Need of the Railways.*

The greater part of the regulating legislation which Congress and 48 legislatures have enacted must be swept from the statute books. As to our most vital industry we have been guilty of violating a natural law.

—New York "Tribune," June 2, 1921.

An Interesting Old Pass

The name of David Carver appears on a list of employees of the Baltimore and Ohio recently pensioned. When he sent in some information concerning his career with the Railroad, he included a trip pass issued to him on June 21, 1871, by John S. Wilson, master of road. This officer will probably be remembered by some of our old employees.

The pass is printed on common white paper and is substantially the same in its general provisions as the passes issued today. However, it is notable for two restrictions on it, not commonly in effect these days on trip passes issued to employees.

On the face of it is specified: "Good in one direction for one day only and not to return." On the back of the pass it states in long hand that Mr. Carver was returning from a visit to his family for work with the Road, and this restriction was possibly made as an additional incentive, perhaps generally used in those days, to insure employees getting back to work on time. This, however, is only a surmise on our part.

The other restriction appears on the back of the pass and reads as follows: "The holder of this free pass . . . will take such seat as the conductor shall assign to him."

Evidently the custom of issuing free transportation has taken on a more liberal interpretation since those days. Employees now suffering the restriction of being expected to take a seat assigned to them by the conductor would probably consider such procedure an infringement on their personal liberties.

There is, of course, little reason for even thinking of such a restriction in connection with the use of passes by a very large majority of our employees. There are some, unfortunately, upon whom such a restriction could be visited with benefit to their fellow pay passengers, their fellow employees traveling on free transportation and the reputation of the Railroad.

Free transportation is issued by the Railroad Company at its own discretion and it is a favor which should be used and not abused.

He Kept 'em From Slipping Back!

A green brakeman was making his first trip up the Sierras. The grade was steep and they had an unusually hard time making it. At the station, after reaching the top, the engineer, looking out of his cab, saw the new brakeman. Mopping his brow, he said with a sigh of relief, "Well, me lad, we had a tough time making it today, didn't we?"

"You bet we did," answered the green one, "and if I hadn't put on the brakes, we'd have slipped back."

A few like him, jamming on the brakes on the upgrade, would soon have us all hitting the downgrade.

—The Barrett Trail

When a man tells you everybody has always been against him, you have found the loose nut in his machinery.

THE BALTIMORE AND OHIO RAILROAD COMPANY

Relief Department—Advisory Committee

Conducting Transportation Department

Stotelmeyer, Wm. C.....	Fireman.....	Conducting Transportation.....	Baltimore.....	34

The payments to pensioned employees constitute a special roll contributed by the Company.

During the calendar year 1920, \$342,993.35 was paid out through the Pension Feature to those who have been honorably retired.

The total payments since the inauguration of the Pension Feature, October 1, 1884, to April 30, 1921, amount to \$4,379,203.70.

The following pensioned employees, after serving the Company faithfully for a number of years, have died:

NAME	LAST OCCUPATION	DEPARTMENT	DIVISION	DATE OF DEATH	YEARS OF SERVICE
Athey, Elias J.....	Watchman.....	Conducting Transportation	Shenandoah..	April 27, 1921.....	42
Gill, Taylor.....	Locomotive Cleaner..	Motive Power.....	Baltimore.....	May 21, 1921.....	30

Pensioners' Roll of Honor

*Oh, blest retirement! friend of life's decline—
Retreat from care that ever must be thine;
How blest is he who crowns, in shades like these,
A youth of labor with an age of ease.*

GOLDSMITH—"The Deserted Village"

W. L. Alderton

W. L. Alderton, pensioned carpenter, was born on July 11, 1853. He began work with the Railroad at Piedmont on March 1, 1887. While at Piedmont, he worked as a member of the wrecking crew under the late Edward Napier, then wreckmaster. At that time they used a crane, operated by man power, the lifting device being a windlass. Mr. Alderton was married 39 years ago to Miss Anna Dean, of Keyser, West Virginia. He has two sons, Marshall, of Keyser, and Dennis, of Hanover, Pennsylvania.

Mr. Alderton was retired on March 8, this year.

Joseph Connolly

Joseph Connolly, foreman, Maintenance of Way Department, Wheeling Division, was born at Clifton, County Galway, Ireland, on March 14, 1850. He attended the parish schools, and became a farmer.

At the age of 20 he came to the United States, settling first in Steubenville, Ohio, where he was employed by the Pennsylvania Railroad. In 1884, he moved to Holloway, where he was employed as section foreman on the C. L. & W. Railroad. He was subsequently promoted to the position of supervisor, and was holding this position when the C. L. & W. was taken over by the Baltimore and Ohio.

Mr. Connolly now lives at Bridgeport, Ohio, with his family, his wife, one daughter, and three sons. He was pensioned on May 9, this year.

D. B. Riley

D. B. Riley, pensioned passenger conductor, was born at North Vernon, Ohio, on October 2, 1854. His early life was spent in working at a plaster mill and driving teams. He entered the service of the Baltimore and Ohio (that section then known as the Ohio and Mississippi), on May 4, 1884, as brakeman on the Indiana Division. He was promoted to freight conductor on June 1, 1889, to passenger conductor on May 15, 1904. He served in this capacity until April 21, this year, when he was pensioned.

John W. Tracy

John W. Tracy was born at Middletown, Maryland, on October 4, 1854. Here he attended the public school and helped his father on the farm until the age of 18, then worked with a dairy for about four years. Later, when his parents moved to Harpers

Ferry, W. Va., Mr. Tracy entered the service of the Railroad as trackman. Later he was transferred to Brunswick as boiler washer. Several years later, he was transferred to Cumberland, where he worked at the old roundhouse for about 25 years as boiler washer, then was given the job of machinist, in which capacity he worked until this year. He was pensioned on April 1.

Herman Figlestahler

Herman Figlestahler, pensioned roundhouse foreman, Ohio Division, was born in Baden, Germany, on December 6, 1855, but he wants it understood that he is not pro-German.

At the age of one and a half years he came to the United States with his parents, who settled in Chillicothe, Ohio. Here the boy attended school until he reached the eighth grade, then started to work in a shoe store. On January 1, 1870, he entered the service of the Railroad as a machinist apprentice. Through faithful services, he was promoted to foreman of the back shop, and finally, to roundhouse foreman. He held the latter position for 21 years, finally becoming disabled because of rheumatism, which necessitated his giving up his work. He was pensioned on April 5, this year.

Mahlon L. Redman

On December 1, 1866, when the Zanesville bridge fell into the river, killing one man and injuring several others, there was a call for a conveyance to take some of the injured men home. Nearby, at Claypool Mill (now known as Nashport), there stood a two-horse spring wagon, driven by a boy of 13, waiting to carry home some milling. This boy was Mahlon L. Redman, who nineteen years later entered the service of the Baltimore and Ohio Railroad. However, he claims that his service began on this day in December when he offered the use of his wagon to carry an injured man home, and he challenges any of the Newark Veterans to show a longer service record.

Mahlon Redman, pensioned carpenter, was born on July 1, 1852. His mother died while he was still an infant, and he with his older brother was taken to live with their grandparents. These grandparents were members of one of the first Baptist churches in the country; the grandfather being one of a family of 24 children. In December, 1885,

he entered the service of the Baltimore and Ohio, where he remained until March 5, this year, when he was pensioned.

Mr. Redman reminds us of a little romance in connection with the incident of his early "service" with the Railroad. Levi Claypool, one of the injured men whom the boy carried home in his spring wagon, lived in a fine mansion on the hill south of the gravel pit. Mr. Claypool never forgot the favor and invited the young man to visit him. In the family was a young lady, whom the boy became acquainted with. His visits to her soon became frequent and prolonged, and finally, in 1873, the two were married.

Martin Thompson

Born in Norway in 1849 and spending his life on the water, Martin Thompson has had an interesting career.

At the age of 14, he went to sea as a deck boy in a lugger trading between Norway and Denmark. After one year's service, he shipped in a square-rigged vessel trading in the North and Baltic Seas; later as able sailor in clipper ships trading as far north as the White Sea, Russian and French ports. At the age of 22 he joined larger square riggers, and during four years of service on one ship, made trips between England, Canada, Brazil and the Mediterranean. He returned to Norway as second mate on a larger barque.

After marrying in Norway, he shipped on steam vessels trading between Norwegian ports and Hamburg and Bremen. A year later he joined a steamer plying on the Norwegian Fjords. He remained on this vessel for 11 years, going up the ranks from sailor to Captain.

Business becoming slack, he took passage to New York, landing there in May, 1885. During that year he joined the old Baltimore and Ohio lighter, "Success." After six months he left to run on steamers plying between New York and New Orleans, but in 1887 he came back to the Baltimore and Ohio, on the lighter "Murphy." Later he was transferred to the lighter "Miller," then promoted to the "S. J. Clarke." He remained on this lighter for 13 years, then spent 16 years more on the steam hoister "Patuxent." From here he was transferred to the lighter "Number 110," where he spent one year, making a total of 33 years of continuous service in the Baltimore and Ohio Lighterage Department.

Mr. Thompson was pensioned on January 17, this year.

Robert F. Huffman

Robert F. Huffman, pensioned patternmaker, was born in Sonora, Ohio, on March 27, 1854. He first entered the service of the Company on May 1, 1870, as carpenter at Zanesville, Ohio. He tells his own story:

"My first experience with the Baltimore and Ohio before I entered the service was when I discovered a broken rail as I was walking along the track one day. The rail

MANY YEARS OF FAITHFUL SERVICE ARE REPRESENTED HERE
 Top row: James Rowan; John W. Tracy; Robert T. Huffman; Robert Singleton. Second row: George W. Sears; John W. Weakly; Wilbur McKenzie (above); Robert J. Cobaugh; David B. Riley. Third row: Frank J. Donnemeyer; Martin Thompson; W. L. Alderton; B. F. Long; Glen C. Lapham. Fourth row: Mahlon H. Redman; James McLaughlin; John Cull; Herman Figlestahler

was also thrown out of place. I replaced it as best I could, then watched for the first train. Soon I heard one coming from the West. I ran back, and with my red handkerchief flagged the train, for I guessed well what the result would be had the train crossed over the rail. As soon as the train was stopped, I got such a blessing that it would not look well in print. Then, without telling the engineer the trouble, I got up on the engine and slowed him down to the place where an accident might have occurred. When he saw it, he thanked me, spiked down the rail as best he could, slowed over, and told me where to find the section foreman. I ran back and notified Foreman Patrick Traheay, who hurried with his gang and made the necessary repairs.

When I first entered the service of the Railroad, I worked on the incline leading to the new bridge across the Ohio River at Belaire. From there I was sent to the Chicago Division, between Chicago Junction and Garrett, Indiana. Here I worked until the last two rails completing the line between Chicago Junction and Chicago, Illinois, were laid. I was present when the gold spike was driven by David Zell, in the presence of a number of Baltimore and Ohio officers. After several speeches, all of the employes were given a sumptuous dinner and an entertainment.

"In 1880, I went to work for the T. & O. C. Railroad, as carpenter. In 1884, I returned to the Baltimore and Ohio as coach repairer, Newark Shop. I served in this capacity until 1901, when I was transferred to the pattern shop.

"I was pensioned on March 1, this year."

George W. Sears

George W. Sears, pensioned cabinetmaker, Illinois Division, was born on December 9, 1853, at Orleans, Orange County, Indiana. He learned the trade of carpenter and followed this occupation until 1903, when he came to Washington, where he obtained employment in the Baltimore and Ohio Shops as cabinetmaker. He married Miss Catherine J. Tindall in 1866. Four children were born to them, two dying in infancy, one at the age of 22, and one at 21.

James McLaughlin

James McLaughlin first entered the service of the Baltimore and Ohio in 1898 as locator, Indiana Division. His promotions were as follows: loading clerk, November 1, 1898; tallyman, February 1, 1907; delivery clerk, March 1, 1917; tallyman, April 16, 1917. He was retired on December 5, 1920.

John Cull

Born in Chillicothe, Ohio, on October 24, 1853, and one of nine children, John Cull, pensioned car repairer, Ohio Division, entered the service of the Company at the age of 14 years, as water boy, on the old

M. & C. In a few months he was made trackman, and worked in this capacity for four years. For the next 14 years of his life, he worked for the C. C. C. & St. L. Railroad, returning in 1892 to the Baltimore and Ohio at the Chillicothe shops. Here he has worked ever since, with the exception of a few years, during which he served the city of Chillicothe as a member of the city council, and later as street commissioner. During the last few years of his railroad service, Mr. Cull suffered with rheumatism. On April 5, this year, he was placed on the pensioners' list. Mr. Cull's father was one of the pioneer settlers of Chillicothe, having made his home here in 1837.

James Rowan

James Rowan, pensioned laborer, Motive Power Department, Ohio Division, was born in Washington County, Ohio, on March 16, 1854.

He attended school until he reached the fifth grade, then began work as trackman on the old M. & C., now the Baltimore and Ohio.

He continued here for three years, then went to work for the Cincinnati Southern, returning to the Baltimore and Ohio in 1882. Mr. Rowan was pensioned on March 30, this year.

Frank Donmoyer

Frank J. Donmoyer, Flora, Illinois, has been placed on the Pensioners' list after 33 years of service with the Railroad.

Mr. Donmoyer was born on April 17, 1855, in Lebanon County, Pennsylvania. In 1865, he came to Flora as a farmer. He entered the service of the Ohio and Mississippi Railway on April 1, 1888, as laborer on Section No. 12. After five years, he was made extra foreman. Nine years later he was appointed section foreman on Section No. 11, and held this position until the time of his injury. He was given a temporary position as crossing watchman, but being unable to take care of this work, he was granted a pension on April 16, this year.

John W. Weakley

John W. Weakley, retired foreman, Newark Division, was born on February 8, 1854. He entered the service of the Company in August, 1872, and worked for two years. He came back again in 1888 and worked as laborer on Section No. 21, until July 11, 1893, when he was promoted to section foreman at McElroy, Ohio. He held this position at McElroy and at Junction City until April 1, this year.

Wilbur MacKensie

Among the photographs of the pensioners we find one of Wilbur MacKensie, to whom a pension was granted on April 1, this year. Mr. MacKensie was born at Oella, Baltimore County, Maryland, on December 23, 1855. He entered the service of the Baltimore and Ohio on May 29, 1872, as machin-

ist apprentice, Mt. Clare Shops. Here he served his apprenticeship under the late C. T. Turner. He was a machinist at Mt. Clare from that time until his retirement. Mr. MacKensie is a member of the Veteran's Association and a strong advocate of Safety First.

Robert Singleton

Robert Singleton, track foreman, Cleveland Division, was born in Chillington, Somerset, England, on September 21, 1854. He came to the United States with his parents at the age of seven. His early life in this country was spent on a farm in Brecksville until 1882, when he came to Cleveland and went to teaming. The following year he returned to Brecksville and married Miss Ida May Hardesty. He began railroading in 1883 and worked almost continuously on washouts and breaks in old canal bed.

Glen C. Lapham

Glen C. Lapham, pensioned train baggageman, Chicago Division, was born on his father's farm at Republic, Ohio, on February 3, 1851. He worked on the grading of the Baltimore and Ohio in 1873 and 1874, at the time of the building of the Chicago Division, but was first employed regularly as a local freight brakeman in 1875. In 1876 he was transferred to passenger brakeman.

The cars at that time were equipped with straight air, link couplers, and the links had to be blocked with wooden wedges to take up the slack. The coaches were lit up with tallow candles and were heated with wood-burning stoves. They also had to string bell cords from car to car instead of operating with the present air signals.

Mr. Lapham was promoted to train baggagemaster in 1883. This position he held until he was taken ill in December, 1919.

Benjamin F. Long

Benjamin F. Long, pensioned oil distributor, was born on October 30, 1849, in Loudon County, Virginia. At the age of 12, he went to work on a farm. On February 20, 1873, he went to work for the Baltimore and Ohio as trackman. In 1881 he became blacksmith helper; in 1891, oil distributor, Brunswick. He was pensioned on January 25, this year.

Robert J. Cobaugh

Robert J. Cobaugh, pensioned engineer, Pittsburgh Division, was born on October 14, 1851, at Conemaugh, Cambria County, Pa., then a small town on the Pennsylvania Railroad.

He lived and worked on a farm until the age of 15, when he began his career as brakeman on the train of which his father was conductor. Being under age, his father had to sign a release in case of accident. He was

(Continued on page 71)

Memorial Services Held By Monongah Division Veterans

By Charles W. Cassell, Secretary

THE Grafton Baltimore and Ohio Veterans, their families and many friends, attended the memorial services held at the Grafton High School Auditorium, on Sunday afternoon, May 8, in honor of the deceased members of the local chapter.

The services were opened at 2.30 o'clock by the president of the local Veterans' Association, J. B. Kimmel, after which a beautiful discourse on "The Need of Prayer" was given by the Rev. Father John P. White, assistant rector of St. Augustine's Catholic Church. Father White concluded his remarks by reciting the Lord's Prayer. The audience sang "Nearer My God To Thee." Then followed a selection by the orchestra.

Miss Nellie McGrady came fifth on the program in a beautiful rendition of a vocal solo, "Jesus, Lover of My Soul." Mrs. Clarence Strickling then played "Adagio Pathetique" on the violin.

A male quartet composed of Thomas Vance, H. F. Church, Lee Evans and Louis Smith, rendered a selection entitled "The Wondrous Cross." The quartette number was especially pleasing.

Miss Anna E. Remlinger, local musical instructor, gave a solo, "Beautiful Isle of Somewhere." The orchestra followed with another selection. Preceding the roll call of deceased brothers, Miss Lelia Ware sang a pleasing solo.

The roll call was then read by Secretary C. W. Cassell, viz: Robert Anderson, John H. Bennett, James Flanagan, Patrick Fahey, J. P. Judge, Samuel W. Ridenour, John M. Cassell and James W. Grinnan.

"The Place of Pity," a solo, was rendered by Mrs. J. B. Moran, vocal instructor and musical director of the Woman's Club.

A short talk was given by B. Z. Holverstott, superintendent of the Monongah Division, who spoke of his admiration of the service of the men and of the honor that was due them for their accomplishments in the service.

Judge Ira E. Robinson delivered the memorial oration which referred beautifully to the occasion of Mother's Day. He recited several appropriate poems.

Following the memorial oration, the male quartette rendered "Going Down the Valley One by One." Rev. P. T. Crickenberger, of St. Paul's Lutheran Church, dismissed the audience with prayer.

The memorial services were the first of their kind to be held in this state by the Veterans and it is expected that the idea will be adopted and carried out by other chapters.

A number of people from Weston, Clarksburg, Parkersburg, Wheeling and Fairmont attended the services. These included: J. F. Shafferman, president of the Fairmont chapter; Mrs. Frederick Wittman, president of the Ladies' Auxiliary of the Fairmont Association; Mrs. H. S. Fleming, Mrs. H. Horan, and Mrs. John Hession; Grand Vice-President and Mrs. John Garvey, of Wheeling. The committee on memorial consisted of: F. M. Keane, J. J. Cassell and William McFarling.

Biggest Veterans' Picnic at Somerset, August 16

August 16 is the date and Somerset, Pennsylvania, the place for what is expected to be the biggest Veterans' Picnic ever held on the Railroad.

Special trains will run from Pittsburgh, Cumberland and Connellsville, and additional transportation facilities provided elsewhere if needed.

Those who were present at the Somerset picnic last year need not be reminded of the beauty of the park there, nor of the splendid outing enjoyed on that occasion.

All local lodges of the Veterans' association will be kept posted on developments and individual Veterans can secure whatever information they desire from their officers.

Fairmont Veterans' Third Anniversary

ON MAY 21, the Fairmont Veterans celebrated their third anniversary.

Among those present were: Mayor Conner, Judge Hayman, and Superintendent Holverstott, of Grafton. A delegation of 100 Grafton Veterans came in a special car: Brother Kimmel, president; Brother Harrigan, Brother Wardley, 15 of the Ladies' Auxiliary of Connellsville, and a delegation from Wheeling also attended.

A banquet was served by the Fairmont Ladies' Auxiliary. The meeting opened at 7.00 p. m. The members from Grafton had to leave on the 9.45 train, but those from Wheeling and Connellsville stayed on until midnight. Splendid talks were given by Judge Hayman, Superintendent Holverstott, Grand President Sturmer; President Harrigan, of Connellsville Chapter; Grand Secretary and Treasurer James Wardley.

The entertainment was furnished by home talent. The "Veteran Quartette" rendered the old song, "Darling, I Am Growing Old."

Fairmont Memorial Services

On June 12 in the Methodist Episcopal Church of Fairmont, W. Va., an impressive service in memory of deceased Baltimore and Ohio employes was held under the auspices of our Veterans' Association.

Meeting in the K. of P. Hall and preceded by a band, a large number of Baltimore and Ohio employes marched to the church at 2.30 p. m., where they listened to a sermon by Dr. Claude H. King, the pastor, and addresses by J. M. Scott, general superintendent, and B. Z. Holverstott, superintendent of the Monongah Division.

Attractive musical numbers were a part of the program as was the reading of the names of the departed Baltimore and Ohio men. Fred. H. Brumage of the Veterans' Association was chairman of the committee in charge and all who attended were deeply impressed by the beauty and appropriateness of the service.

Thelma, daughter of Conductor H. S. Culbertson. She sings and dances for the Veterans.

Brunswick Celebrates the Thirtieth Anniversary of the Opening of Its Yards

(Aunt Mary tells the story, and Ezra is inspired to verse)

I DUNNO as that there is poetry or not. Ezra made it up, so don't blame it on me. To tell the truth, I went to that picnic up at Brunswick an' left Ezra to home, as usual. An' las' night when I set down to write all about what I seen there, Ezra comes along an' sez that whatever I wrote he wuz goin' to put it into poetry. Some places he got stuck, an' there's where I'll have to take it out of his mouth an' tell it myself. Howsomever, as the fellow sez, "it's more truth than poetry."

'Twuz on the 10th of May, an' all us folks wuz down there at Camden Station, all ready to go, long before train time. The Mt. Clare Band wuz there, an', as Ezra sez:

"We laughed an' talked together, an' shouted an' we sung,
One old fellow got to jiggin'—an' one sister held her tongue."

(Now that wuzn't a-tall nice fer Ezra to say, but some of them Vets is got a grievance against some o' the sisters, so that explains it. Howsomever, if Ezra had a-seen Miss Crone, night matron at Camden Station, dancin' in the ladies' waitin' room, what he writ would-a been more than poetry.)

Brother Holmes wuz shorely happy, but he had some worries, too,
For some other brother Veterans, they had told him what to do:

"Sisters, I've heard tell that your picnic comes in June,
An', Sisters, I'm right here to state you'll sing a different tune
If you don't invite us men-folks, nor let us in that park.
If you stay 'till after supper, what'll you do there after dark?

What will you do with no one to escort you to your door?

Sweet will be our revenge, every man of us has swore

That ne'er a lady will we meet, not even his old woman—

Unless you take us brothers, too, an' act like you be human."

But Sister Shipley shook her head, an' Sister Hanson smiled.

Fer they wuz goin' to Brunswick now, an' wuzn't to be riled.

We took the train a few minutes after eight o'clock, an' we wuz on the way. What a glorious day it wuz! Not a cloud in the sky, an' everybody as happy as could be. It didn't seem like no time a-tall before we got to Brunswick, where the folks there wuz all waitin' fer us.

We got right off an' marched straight up to Brunswick's Red Men's Hall
By twos an' twos, like in the ark, with music, flags, an' all.

"This mornin's sun," sez Sister Stone, "jus' puts me on the bias,

Will you please raise you parasol, so freckles won't come nigh us?"

"The folks from Baltimore is big," sez one audacious feller,

"I'd like to see two folks I know walk 'neath the same umbreller;
If Mrs. Shipley an' Brother Sturmer wuz runnin' fer the train,
Which one of 'em would get the shade, an' which would get the rain?"

The real parade took place at two o'clock, an' them scenes what went down that street on the way to the park, jes' set my heart a-b'ilin. There wuz our officers, all dressed up fine; there wuz the Veteran brothers—but let Ezra tell it:

First come our worthy officers with smilin' faces bright

An' hats come off an' cheers went up, an' folks bowed left an' right;

Then come the Veterans, old an' young, with all their banners, too,

An' I wuz proud o' them big boys, each one as staunch an' true

As sturdy oaks, an' you can bet that they be good an' kind

To them Auxiliary sisters who was follerin' close behind.

Then there wuz all the children from the Brunswick schools, you know,

An' if there had been nothin' else, them kids put on some show—

Some gals in pink sunbonnets, an' some in ribbons blue,

An' little tikes in overalls, brakeman an' firemen, too;

An' they had a baby engine that they carried in their hands—

You could have heard it whistle, if it wuzn't fer the bands

A-playin' up an' down the street—an' of the music there,

There wuzn't none that just could get ahead of Old Mt. Clare.

An' there wuz high school girls an' boys, all dressed in colors gay,

As happy as a hive of bees, 'cause 'twuz no school that day.

Some of 'em carried banners full of sayin's bright an' witty,

Such as, "WE'RE FOR HOME NEWS-PAPERS," or "WE WANT A CLEAN CITY."

But best of all the banners there that towered o'er its mates:

"BRUNSWICK HAS THE LARGEST FREIGHT YARDS IN THE WHOLE UNITED STATES."

Down into the park they all marched, an' if all of the rainbows that ever wuz in the sky had all come together an' spread themselves through that grove, they couldn't a-made a prettier sight. An' then for a half-hour, the boys an' girls wuz runnin' here an' there an' eatin' ice-cream cones, an' lemonade, an' sandwiches, an' bananas, an' cake, an' most everything that their little stummicks could hold; the grown-ups wuz chatterin' away like birds buildin' nests; folks who hadn't seen each other for thirty years wuz havin' love-feasts together.

Soon the officers came on the platform, an' how the people gathered 'round to hear them! Somebody said there wuz a couple o' thousand people there, but it looked like

more'n that to me. Why, the way they pressed close to the stand so's they could hear it all, if any lady had chose to faint, she would had to faint standin' up, fer there wuzn't no room to fall down.

After a prayer, Dr. Hedges, the Company's medical examiner at Brunswick, took charge. There wuz music by the Rohrsersville Band, then the mayor of Brunswick, E. C. Shafer, made a address of welcome. He sez that he had been dealin' with Baltimore an' Ohio men fer a good many years, an' he knowed them to be straight an' honest in their dealins an' fer that reason, he extended to them the keys of the city of Brunswick.

Mister Sturmer, grand president of the Veterans, read a lot of tellygrams an' letters from various officers who wuzn't able to git to the celebration.

John T. Martin, the first yardmaster after the opening of Brunswick Yards, wuz then called upon to give a sort of history of the Yards. Bein' as this is real important, an' 'cause I know 'twill be interestin' to everybody, I am goin' to let you read it jes' as he told it to us, as follows:

"In 1890, Berlin, a village of about 200, was incorporated, and its name changed to Brunswick. John L. Jordan was its first mayor. The adult male population were employed on the C. & O. canal and Baltimore and Ohio Railroad. They had one church and a one-room school house. We now have a population of six thousand (6,000) and almost every denomination represented. They own their own churches, free of debt.

"We have a \$40,000 high school building, and two eight-room school buildings, where the primary grades are taught. The Catholics also have a large parochial school.

"On May 10, 1891, Brunswick yard was officially opened and the division terminal located at Martinsburg; since the road was built it was transferred to Brunswick. The Brunswick yard as turned over to the operating people consisted of 13 tracks, capacity 45 cars each. Our eastbound business then was about 400 cars in 24 hours. Business increased gradually and it soon developed that more room was necessary. The extension of the yard eastward kept up until 1895. We then had 51 tracks, all of the same capacity as the first 13.

"Ten years later, in order to relieve Baltimore, Philadelphia and Cumberland yards, it was decided to build a classification eastbound hump yard. This yard was completed and put into operation in December, 1906. Later a westbound gravity yard for handling westbound fast freight was built. This takes care of the classification westbound and enables us to make up solid trains to Chicago, St. Louis and other western terminals, without re-switching at division terminals, much delay thus being averted.

"The eastbound yard, consisting of 16 receiving tracks and 36 classification tracks, capacity 65 cars each, takes care of all eastbound traffic. This leaves 51 45-car tracks and the westbound hump to take care of westbound when all empties and westbound loads are classified and run in solid trains to different terminals.

"The move to Brunswick also closed Sandy Hook, which was the head center and eastern terminal for the Shenandoah Division and Washington County Branch Districts, all of which are now operated from Brunswick.

VETERANS OF THE PRESENT AND FUTURE AT THE BRUNSWICK CELEBRATION

Top: A group from the Ladies' Auxiliary at Baltimore. Upper left: A visiting "Vet" and his big family. Upper right: The model locomotive with some of its young attendants and their school teacher. Center: John T. Martin, made yardmaster at Brunswick on the opening of the yard on May 10, 1861, and who continued in this position until 1911; on Mr. Martin's right is his daughter, Miss Emma Martin, clerk, Agent's office, Camden; on his left, his granddaughter, Mrs. Richard H. Stevenson, who is also the daughter of G. W. Martin, superintendent, Pittsburgh Terminal Division. Lower left: Engineer John Crummitt, wife and two children; also, in background, Miss Ella Kreis, principal of one of Brunswick's fine schools, and largely responsible for the fine showing of the school children at the celebration. Lower right: Dr. H. S. Hedges, Company surgeon at Brunswick, who presided at the afternoon meeting; F. G. Hoskins, superintendent, Baltimore Division, Mr. Oscar Karns and wife, who is the daughter of W. H. Campbell, dispatcher at Brunswick. Insert: A. G. Lugenbeel, chairman of the Veterans' committee on Advertising and Publicity. Lower center: Future citizens of Brunswick, many of them destined to be Baltimore and Ohio men, telling the story of Brunswick with their transparencies.

Some of these pictures are by courtesy of M. E. Mullen, general foreman

"A most important branch of the service located here is the transfer department. Freight from all eastern terminals for all points west is sent to this point where it is assorted and made up in solid car loads for western terminals and is dispatched on fast freight schedules."

After some more music, Vice President Galloway talked to the people. He told 'em some things that they wuz anxious to hear. His speech, as he gives it, is in another part of this MAGAZINE. Be sure to read it if you wuzn't there to hear him. After he had finished an' had took his seat, there wuz more than one of the old-timers who made their way to the back of the platform to reach a hand through the crowd to shake hands with the boy they used to know at Sandy Hook. "Do you remember me?" an' "I reckon you don't know who I am; I'm the fellow who used to—" an' Mr. Galloway would say, "Sure, I know you, Jim (or Tom, or Harry), why, didn't we work together when—" an' there would follow a regular old-fashioned hand-shakin'. There is one thing about Mister Galloway that "the boys" like; he likes to shake hands with 'em, an' the eyes that have been followin' the rails fer many a year would gleam with a light of gratefulness—for the "Boss" had remembered them.

The band played again, an' then Mister Dudley, superintendent of the Relief Department, told about the work that his branch of the Railroad wuz doin' fer us employes. He sez that the Relief Department is so called becuz it is a relief to rail-rodgers an' to their families, an' that's why we are asked to take membership in it. They pay hospital charges an' disability benefits while folks is livin', an' death benefits to our families when we die. Personally I think it's 'bout one of the finest institutions we have. Why they make it possible for us to buy houses when we might be only payin' rent. But, as Mister Dudley sez, they don't pay fer automobiles fer you. They show you how to deposit your money. They charge you 6 per cent. for what you borrow, but on account of the way they deduct your payments this is really a lower rate than the interest rate allowed depositors. Every dollar what's in the Savin's Feature is owned by the stockholders—an' that means you an' me, who hold pass books. They lend you money to improve your property, too, but not for any improvement like a garage.

Mister Dudley also said a word in favor of the ladies what has charge of the emergency room in the hospital, an' also mentioned the work of the Ladies' Auxiliary, sayin' that he'd like to see a Ladies' Auxiliary in Brunswick.

Mr. Scheer, general manager of the Eastern Lines, wuz the next man to speak. His talk wuz also full of inspiration. He sez as how he wouldn't say what the cowboy said (what Mister Galloway told about), but he would say that he wuz—h'm—glad to be at the celebration. He sez that when he looked at all of them children in the parade

that he wuz shore that there won't be no shortage of railroad men in Brunswick durin' the years to come. He sez that Mister Martin had told us about the tracks an' business in Brunswick in the early days, but that he wuz goin' to tell us what some of the young Veterans done in 1920. They put through more business than has been put through since the Baltimore and Ohio has laid its rails—8000 miles of cars, if somebody had only been kind enough to couple 'em together. In 1905, durin' the heavy corn movement via the Panama Canal, the superintendent—now Vice President Galloway—come here an' with the help of the Veterans, put through 1724 cars in 24 hours.

"One day last year," he sez, the "young Veterans" put through 2400 cars in 24 hours. But, Mister Scheer told 'em, 2400 cars is nothin' to boast about with the facilities what we've got today; it's only remarkable what our boys did do back in them days when they had to work with the shovel. "Boys," sez he, "you made a good job of it, in spite of the fact that you had nothin' but your head and hands to use."

An' right here in the program, Doctor Hedges face growed red; In reachin' fer the water glass, he'd gone an' bumped his head.

An' the folks in Brunswick told me he's had lots of bumps, by gosh! But, because of his good humor, they'd all come out in the wash.

Mister Hoskins, superintendent, Baltimore Division, wuz the nex' man to speak. He told 'em how glad he wuz to be there, not only to meet the railroad men, but the ladies, too. He sez as how he realizes that much of his future is goin' to depend on the cooperation of the railroad folks, an' he asked 'em to give him their help to the limit. The railroad is continually changin', sez he, an' we're expected to do each day a little more than what we done the day before. Fer two years he's been 'sociated with the superintendent of the Baltimore Division, an' with the terminal work, an' he reckoned as how he'd seen more done in Brunswick than most of the other officers. He sez that when 1084 cars wuz dumped as one day's work at the Curtis Bay coal pier, all hats went off, but if it hadn't a-been that these cars wuz dispatched right from Brunswick, that record couldn't a-been made. He sez that Brunswick had put Baltimore, Washin'ton an' Philadelphia on the map, that 50 per cent. of our cars received at Baltimore are "main trackers," an' that there are lots of our Baltimore folks who hardly know what it means to switch cars unless the cars are bad orders. He sez as how Mister Horn, general supervisor of terminals, sez that Brunswick is the greatest classification terminal in the whole United States, an' that there is more new railroadin' goes on here than anywhere else, an' that he, Mister Hoskins, wanted all of us to see the time when there would have to be an increasin' track capacity at Brunswick. He sez as how he'd like to put Bruns-

wick an' the Baltimore Division ahead of all the others.

Then Brother Sturmer he got up an' winked his knowin' eye, The men folks grinned from ear to ear, the ladies jes' stood by; Sez he, "I'm jes' a thinkin' now about a little pun, There's been some darn good shovel work since 1891."

An'then after folks got through laughin', he got to tellin' 'em about the Veterans an' about their organization an' the work they'd done. He sez as how he'd like to see a Ladies' Auxiliary organized at Brunswick. All I got to say is that until there is one there, the men folks don't know what they're missin'. Why the ladies down in Baltimore fixes all kinds o' good things to eat fer the men Veterans on meetin' nights, an' if anybody should ask me, I'd say they wuz what you'd call a valuable addition to any association. Mister Sturmer went on to say that they had found, durin' the three-weeks' business campaign, that the morale of the Baltimore an' Ohio people wuz 100 per cent.

Then, what you reckon Brother Sturmer up an' went an' done?

He sez, "Folks, here's Aunt Mary, now we will have some fun."

But the poor old soul, she turned quite pale an' shook there in her shoes, For ne'er a thought came to her head, tho' she dared not refuse.

She up an' sez "How do ye do?" then came the thought so sweet,

To tell the women what they ought to give their men to eat.

She told about the Dinner Pail, an' one man grabbed her ear,

Sez he, "O, dear Aunt Mary, you've got the right idear,

I'm empty as a whiskey keg, an' to you I want to say

That my good wife she feeds me boiled eggs three times a day."

Well, that ended the program, except fer the dancin', an' that went on long after we folks wuz on the way to Baltimore. An I voices the sentiment of all our folks who wuz there when I sez that we had a bully good time. An' any time that Brunswick wants to have another birthday, jes' let us know an' we'll be there. But for goodness' sake, you Brunswick folks, don't wait fer another 30 years to roll aroun', fer by that time your old Aunt Mary will be sippin' her tea in the Old Ladies' Home.

You Couldn't Fool Him

Patrick, lately over, was working in the yards of a railroad. One day he happened to be in the yard office when the force was out. The telephone rang for some time before Pat came to the conclusion that it ought to be answered. He approached the instrument cautiously, and slowly put the transmitter to his mouth, as he had seen the "boss" often do.

"Hillo, there," he called.

"Hello," answered some one at the other end, "is this eight-six-ought-four-eight?"

"Aw, g'wan; phat d'ye think Oi am, a box car?" replied Pat.—*The Station Agent.*

SOME OF THE PICNICKERS AT AKRON, OHIO

1—The "bunch" from Cleveland; Miss F. Stahlnecker, C. H. Groninger, H. W. Lapp, Miss Tessie Pembroke, Mrs. H. C. Glancy, H. C. Glancy. 2—M. J. Dugan, stationary fireman. 3—The funniest man—Conductor Grice. 4—Two of a kind, E. L. Miller and C. M. Groninger. 5—Caught in the act—Patrolman J. W. Sturgeon. 6—M. F. Musser, who won the high jump for men. 7—Welfare babies. 8—Ready to start: Mrs. W. W. Wood and three children at left; Mrs. O. P. Eichelberger, O. P. Eichelberger, yardmaster; Odin Eichelberger, his son; W. W. Wood, chief of welfare; O. P. Smith the "Hoosier engineer". 9—Misses Jennie Johnson, Catherine Reidy and Pauline Rush, welfare girls of the Trainmaster's Office. 10—The "railroad family" of Engineer F. V. Rahner. 11—"Tessie at the Bat". 12—The ladies were all smiling too. 13—Passed by the board of censorship

Old Fashioned Picnic of Welfare League of Akron

Betty was supposed to stay home to watch the house but she went and now tells the tale

MY NAME is Betty, and I'm the best looking collie in Akron—at least that is what Mr. Eichelberger says, and what he says is true. Mr. Eichelberger is yardmaster at Akron. He has a wife and a little boy named Odin. They live right next door to me, but I spend most of my time at their house, so I know them all very well. I'm telling you this so that you will know all about them when I tell this story of the splendid picnic that the Baltimore and Ohio Welfare League of Akron held on Sunday, June 19.

The first thing that I knew about the picnic was the day before. I was trotting along up Market Street and wagging my tail, for I'm always happy after I've had my Saturday afternoon bath, when I caught the most delicious smell. Yes, it was fried chicken! I didn't know what to make of it. Akron folks often have fried chicken, but not all of them have it at the same time, and it seemed to me as though I got a whiff of it at every door. Something doing, sure—so I ran home. Sure enough, just as I came around the corner to the kitchen door, I met Odin coming with an armful of cabbages and his bathing suit. Cabbages for slaw, I thought and there's only one use for bathing suits. It must be a picnic!

Next morning, bright and early, I was out and sniffing around again. Pretty soon I heard them getting the "Lizzie" out of the garage. Mr. Eichelberger jumped in and rode away, coming back with the machine full of people who went up on the porch. There was W. W. Wood, chief of Welfare, and his family, who had come all the way from Baltimore; O. P. Smith (his middle name is Percy), whom they call "the Hoosier Engineer," because he comes from Indiana; and a woman with a camera, who took a lot of pictures for the *MAGAZINE*. She took pictures of most everybody—even one of me.

Well, they all piled into the machines and set out for Brady Lake. As they left, everybody called out, "Good-by, Betty, old dog, we're sorry we can't take you along."

Sorry, indeed! Well, I'll tell them now, they need not ever worry about my being left behind! Whenever there's somewhere to go, Betty's going. As soon as they had got fairly started, I followed them. They don't even know yet that I went, and they won't know until they read this. I took a short cut across the fields, and arrived at the picnic grounds almost as soon as they did. Among the first ones that I set my eyes on were C. M. Groninger, district freight agent, and E. L. Miller, who is secretary of the Welfare Association. These boys seemed

to have just one idea in mind, and that was to make everybody happy, and if I am to judge from the smiles on the faces of lots of the young ladies there, I should say they succeeded admirably.

What a rush and a clatter there was in getting around the tables! And oh, the good things they had to eat! The tables were set in a kind of pavilion. Several other picnics were going on at the same time, and railroad folks and other folks all sat down and ate together. (I sneaked 'round under the tables and found plenty to eat, although I'll have to admit, I had a good fight with a yellow hound who insisted on following Mr. Wood around. Why, you know, Mr. Wood ate something from each table, and as that hound knew he picked out only the best things, he thought Mr. Wood was nibbling just for fun, and that he would drop a scrap or two wherever he went. But Mr. Wood fooled him; he ate everything. It takes an awful lot of time and patience to teach a yellow dog anything.)

I saw lots of strange sights around there. There was a big, fat policeman named Sturgeon who was drinking a bottle of ginger ale; there was a big, fat lady holding a baby's parasol over her blonde hair; a little girl was trying to eat a big watermelon; a girl named Tessie, from Cleveland, was playing baseball and knocking such flies that some of the boys had to sit up and take notice; there were bathing scenes such as would make Mac Sennett's girls feel like two cents; there was a big man who got scared when a lightning bug got on his arm, and a thin woman who wouldn't go in bathing for fear her presence in the lake would cause the tide to rise. Oh, there are lots of things you can see and hear from under a table if you only keep your eyes and ears open!

I heard somebody say that they were going to have races; so, when I saw Mr. Eichelberger go off with an armful of prizes, I followed him, keeping in the background until I reached the billboard, where I camped, discreetly poking my nose just far enough under the board to see what was going on. First on the list was a hundred-yard dash for men. This was won by Brake-man R. Hannaman, who, for his swiftness, won a turkey red handkerchief. He was so proud of it that he held it up where everybody could see it.

The ball-throwing contest for women was won by Mrs. William Higgins, whose husband is a yard brakeman. She got a box of writing paper for a prize. I heard a lady say that she hoped Mrs. Higgins would write an article for the *MAGAZINE*, now that she has some nice paper to write on. The high jump

Betty

for men was won by M. F. Musser, Acme Office. His prize was a pipe, a genuine Meerschbaum. A lady's leather belt was the prize won by Patrolman C. H. Hazelwood in the fat man's race. He tried it on, and it went just a little over half-way around him; however, I suppose he could piece it out nicely with a pair of shoestrings. My, but I was tickled to see Odin Eichelberger win a race and get a dying pig balloon! Wm. Wood, Jr., also came off with high honors. The women's race was won by Mrs. Laura Hutchins, daughter of Engineer A. McIntosh. Mrs. Hutchins received a lovely, shiny and smooth rolling pin. I heard a lady say that rolling pins could be used for many purposes. Hope that Mrs. Hutchins won't try it out on me the next time I poke my nose into her kitchen door.

There were two races for little girls, and both of these were won by Donna Rahner, whose daddy had the biggest family at the picnic. Donna got a flat iron and a string of pearls—one to make her useful, the other to add to her beauty.

After the races there was a baseball game, played by the Akron team and the Railroad team. The Akrons were the winners, but the Railroaders have declared that they will "get them yet."

Then the folks left the field and went back to the grove, where the Akron Ladies' Symphony Band was holding a grand concert. I sneaked around back of the crowd, for I expected to hear some speaking; they usually have such things at a picnic, but no, there wasn't anything like that, and I have no doubt but that the young folk were mighty glad of it, for most of them went to the beach and took a dip in the lake. Others went to the dancing floor, the skating rink and the merry-go-round.

About six o'clock, the pavilion began to fill up again, and the folks all came back for supper. Again I sneaked under the table. There I heard lots of things. I saw the feet of three girls approaching. Somebody said they were from the trainmaster's office, and that they had done a lot of good work to make the Welfare League interesting. They were Misses Jennie Johnson, Catherine Reidy, and Pauline Rush, and when I'd had a good look at them, I didn't wonder that everybody wanted to join the League. Being only a Collie, I can't join leagues.

(Continued on page 71)

Women's Department

Edited by MARGARET TALBOTT STEVENS

Among the Hills of Cumberland

*Among the hills of Cumberland the trains wind in and out,
And gray and blue the smoky trails rise slowly 'round about,
The air is cool and fragrant and the streets run up and down
And mark the long, green terraces that lie about the town.*

*There stretch the gay, young orchards with boughs all bending low,
With fruits to ripen in the winds that from the valleys blow.
The gardens on the mountain sides like patchwork quilts arrayed
At county fairs among the jars of peach and marmalade.*

*Among the hills of Cumberland, when trains roll by at night,
The firefly flits among the trees and shows his little light,
The stars look down on cottages whose lamps glow from within,
And none can tell where the mountains end and where the skies begin.*

Mrs. C. W. Klein, Lima, Ohio, Wins First Prize in Dinner Pail Contest—Three Tie for Second Place

"A smile and a kiss packed in with the lunch will keep a man well nourished and in a good humor. The way to a railroader's heart is through his dinner pail."—Mrs. Charles W. Shipley, President, Baltimore Chapter Ladies' Auxilliary

THE results of the Dinner Pail Contest of the Women's Department are given in the tabulation on page 57. The first prize was won by Mrs. C. W. Klein, wife of machinist, Lima, Ohio, with a total of 425 points. Three others, Miss Grace Boyer, daughter of Mrs. Boyer, matron at Mt. Royal Station, Baltimore; Miss Addie McCauley, Timber Preservation Department, and Mrs. W. E. Hadden, wife of freight conductor, Dover, Ohio, tied for second prize, with 150 points each. The method used to determine the places of each of these was as follows:

Miss Boyer's entry number was 4, Miss McCauley's 3, and Mrs. Hadden's 7. The numbers 3, 5 and 7 were written on slips of paper and shaken up in a box. One of the girls of the Multigraph Department drew one of these cards to represent the name of the person who was to receive the fourth prize. This number happened to be 7; therefore it fell to Mrs. Hadden to receive the fourth prize; the amounts of the second and third prizes were added together and divided between Misses Boyer and McCauley.

Other contestants who deserve honorable mention are: Mrs. G. Boyer, matron, Mt. Royal Station, and Mrs. F. W. Fritchey, wife of master mechanic, Riverside, 125 points each; Mr. George W. Galloway, wife of foreman, Mt. Clare shops, Baltimore, 50 points; Mrs. Charles W. Shipley, wife

of conductor, Baltimore Division, 25 points.

Altogether there were only 14 entries; however, since this is the first contest which the Women's Department has ever held, we do not feel disappointed, for we believe that this is only a beginning of a wave of enthusiastic cooperation among our railroad women, and that the next contest, whatever it may be, will be represented by responses from all of the divisions. In this connection, it is interesting to note that the state of Ohio has again come to the front, as was the case in the No-Accident Campaigns; Mrs. Klein and Mrs. Hadden both representing this state in the list of winners.

One of the entries was sent in by Lillian Betony, the fourteen-year old daughter of a section foreman, who lives in West Virginia. Although, as she tells us, she did not spend much time in preparing the essay, the paper as a whole shows much good thought. Another, whose author is Mrs. O. L. Smith, Gaithersburg, Md., gave some splendid recipes which we will be glad indeed to use from time to time in the MAGAZINE. Mrs. W. M. Wingrove, Bradford, Pa., gave a full menu for only one day, although there were some excellent suggestions. If this menu had been extended to cover the period of a full week, we feel that it would have been much closer to the winning mark.

There were many things of value to housewives that we learned from the entries;

hints that will be useful items for our department during the months that follow. Most of our women do their own baking; this in itself is something that we are glad to know. One of our judges, Mr. G. B. Luckey, said:

"Most of the menus are equally attractive, and they are surely an evidence that our railroad men have good wives. There is, however, a great oversight in them all—one suggested soup. Soup can be carried in a thermos bottle and varied from day to day by using stock and cream of vegetables. It is a most wonderful help to a cold meal, particularly in winter."

Says Mrs. T. Parkin Scott: "I have given first place to Number 9 chiefly because of the variety of breads suggested. I would like to see emphasis placed on the value of whole wheat, graham, brown and bran breads. Number 2 seems to have made economical use of leftovers with no great duplication of the meals. The suggestion made by Number 11 fittingly concludes a very dainty and satisfying menu. Number 11 was submitted by Mrs. Charles Shipley (see headline of this article). After reading these excellent papers, one should no longer wonder why Baltimore and Ohio men are such splendid fellows."

We did not announce that there would be a fourth prize, but we have one, and thereby hangs a tale. Mr. Francis H. Elms, a representative of the firm of Landers, Frary & Clark, New Britain, Conn., was traveling on one of our trains, when he happened to see a copy of our May issue of the MAGAZINE, which told about the Dinner Pail Contest. He wrote and offered us a Universal lunch kit, fitted up with a thermos bottle, to be used as fourth prize, if we in turn would let him read the prize-winning articles. This is but another proof that men are interested in reading our Women's Department. However, the lunch kit goes to Mrs. Hadden, and we sincerely hope that she may be able to make good use of it.

This lunch kit, by the way, is, in our opinion a big help in solving the dinner pail problem. Handy, neat, easily cleaned, bug and odor proof, it is plenty big enough to hold a good size lunch, and, in addition, has the valuable adjunct in the thermos bottle, which is satisfactory for keeping soups and drinks hot or cold. A carefully packed, clean lunch, in an attractive container, tempts the appetite of the worker, and remember that enjoyment and good digestion wait on appetite. If you are interested in getting a lunch kit for your "man" or boy, and cannot secure one at your local store, a letter to this effect to Landers, Frary & Clark, New Britain, Conn., will bring you information concerning the Universal Kit, and how you can most easily get one.

The prize-winning essays have been sent to Dr. Lockhart, dietetic expert of the Relief Department staff, who will discuss them in respect to food values. This discussion we hope to have for the August issue of the MAGAZINE.

The Prize-winning Menu

By Mrs. C. W. Klein
Lima, Ohio

SEASON: WINTER

Monday

2 roast beef sandwiches
Glass of spiced pears
A few celery hearts
Oatmeal cookies
Milk
Fruit

Tuesday

1 sandwich of whole wheat bread
1 deviled ham sandwich
A glass of stewed prunes
1 slice of apple pie
Milk

Wednesday

1 bread and butter sandwich
1 raisin bread sandwich
A few pieces of pickled beet
Piece of apple cake
1 orange
Coffee

Thursday

2 boiled-ham sandwiches

Suggestions

My husband is a machinist, therefore he requires a heavier lunch than office men.

I find that it is not the amount of lunch but how it is prepared that counts. I generally keep on hand a supply of cookies, fruit and nut breads. I also keep the ham or meat from the evening meal and grind it up, using a French dressing, and adding ground nuts or celery.

Nuts are very nutritious and quite often take the place of meats. Celery is very good for the nerves, so I always add a few pieces to the lunch. Apple sauce and stewed prunes aid digestion. Milk is more desired and also more healthful than coffee. Whole wheat breads, nut and fruit breads are more wholesome than just white bread.

I like the new lunch pails with the thermos bottles.

I always wrap all sandwiches, eggs, cake, and cookies in waxed paper.

I always keep on hand a good screw-top glass for apple sauce, baked beans, stewed prunes, and so forth.

As I have a family of six to cook for, it would be hard to say just what a lunch like any of the foregoing would cost, as I always keep out enough from the main meal; how-

ever, I should say that home baking cuts down on the price of the menu. I should judge that my lunches run from about 15 cents to 25 cents each.

My husband says he always has plenty, and that he feels good and strong to return to work. He has worked 16 years for the C. H. & D. and Baltimore and Ohio.

Detailed decision of judges will be found on page 57.

French Fruit, Salad Dressing

$\frac{1}{4}$ cup salad oil.
1 $\frac{1}{2}$ teaspoons lemon juice.
Pinch of salt.
 $\frac{1}{2}$ tablespoonful melted currant jelly, grape jelly, crabapple jelly, or honey.
2 teaspoons scraped onion.
Combine ingredients, beat well, and serve with any fruit salad.

Baked Tomatoes

Select large, firm tomatoes. Slice off the tops and remove pulp. Mix with the pulp stale bread crumbs, an onion, chopped fine, a little sugar, pepper and salt to taste. Pack into the tomato cases and bake in a pan with about a half-inch of water. Serve hot.

A glass of baked beans
Piece of raisin pie
1 orange
1 apple
1 pint of milk

Friday

2 pimento cheese sandwiches
2 deviled eggs
A glass of apple sauce
1 slice of fruit cake
Milk

Saturday

2 grated cream cheese sandwiches
1 pickle
A few English walnuts
A few fruit cookies
1 banana
1 pint of milk

**THE PRIZE WINNERS**

Upper center, Mrs. C. W. Klein and her twin boys; left, Miss Grace Boyer; right, Miss Addie McCauley; lower, Mrs. W. E. Hadden

Tomato Jelly

2 tablespoons gelatine.
1 teaspoon sugar.
2 teaspoons salt.
3 or 4 large tomatoes.
 $\frac{1}{2}$ cup cold water.
 $\frac{1}{2}$ small onion.
1 bay leaf.

Soak the gelatine in cold water until soft. Mix tomatoes and seasoning together and cook for fifteen minutes. Strain and mix with the softened gelatine until it is dissolved. Pour into ramekins that have been wet with cold water and set in a cool place to harden. This may be served on lettuce as a salad, with mayonnaise or French dressing; or it can be cut into small cubes and used as a garnish for cold meats.

Plain Materials Used for Many of Season's Smartest Dresses

By Maude Hall

THE unprecedented vogue of Canton and other heavy, though soft and supple crepes, has done much to increase the prestige of solid colors, independent of the well-deserved popularity of the

blouse in a fabric of the new season. Simple and artistic is a design in maillard—a lovely soft brown—crepe, made entirely in one material. The waist has an open front, showing a self-vestee with straight upper edge. Turning back from the open front is a large collar, extended to meet the belt, though its length would have to be regulated somewhat by the figure of the wearer. Women of very full figure would probably prefer to shorten the collar at a line even with the vestee. Nothing would be lost in smart effect by this treatment. Turn-back cuffs finish the short sleeves. The two-piece skirt is laid in plaits at the top, closing at the left side seam. Over it is draped a three-piece tunic with open front.

Heavy stitching and novel fringe are the new trimming notes that add to the charm of a number of crepe frocks. A model on which stitching figures, not conspicuously, but effectively, is in straight line effect. It slips on over the head, the front being slashed at the center rather deeply. The sides are then underfaced and rolled with the convertible collar. When worn low, the collar may be finished with a soft tie, something after the manner of the fashionable Peter Pan collars. If preferred high, then it should be slightly supported by wire or boning. The sleeves are three-quarter length, flaring at the lower edge. They are trimmed with turn-back cuffs of self-material. The stitching, in self-color, appears on the front of the dress and at the top of the hem.

season's plain shades. Take, for instance, such tones as Harding blue, maillard, slynx, ostrich, Navahoe, etc. Each has a decorative color scheme supplied in the beauty of its own coloring and would be complete without the aid of contrasting fabric or applied embellishment.

In the overdress effects lie many suggestions for remodelling, for one can use last season's frock as a foundation, surmounting it with an overdress or long tunic

A charming model in dark green taffeta is made with an over-blouse which has the front of the waist cut in one with the front of the tunic, the sides of the tunic being gathered. There is a narrow belt of self-material, faced with tangerine, but this completes the decorative scheme, even the round neck and short sleeves being severe.

A model that is both wearable and adaptable is made of check voile combined with plain satin. The voile is used for the under-blouse and foundation skirt, the overblouse and tunic being of satin. Narrow bias folds of self-material outline the edges of the blouse and tunic, while fine frills of accordion plaited satin are used to edge the round collar and short sleeves.

A new trimming frequently used with the light serges—and dark ones, too—is "caracul," a knitted fabric that is sold by the yard. It makes handsome collars and cuffs of dresses, while smaller quantities are used on the ends of sashes, at the upper edges of pockets, etc.

DRESS No. 9515. Sizes 34 to 50 inches bust.

DRESS No. 9547. Sizes 34 to 44 inches bust.

BLOUSE No. 9508. Sizes 34 to 50 inches bust.

SKIRT No. 9509. Sizes 24 to 40 inches waist.

DRESS No. 9504. Sizes 34 to 48 inches bust, and 16 to 20 years.

BLOUSE No. 9517. Sizes 34 to 48 inches bust.

SKIRT No. 9545. Sizes 24 to 36 inches waist.

DRESS No. 9530. Sizes 34 to 48 inches bust.

Lesson in Home Dressmaking

A Dress of Cotton Voile that Typifies the Trend toward the Simple and Artistic

THIS dress in sand color voile makes a charming addition to the summer wardrobe. The long, supple bodice is cut out in a deep V at the front and finished with a dainty dimity collar. The back extends over the shoulders and joins to the gathered front. Panels, trimmed with self-bands are gathered to the skirt extensions and the sleeves may be long or short, as preferred. Medium size requires $5\frac{3}{8}$ yards 36-inch material.

While the panels, the underfacing for the front and bands that trim the panels are cut from an open width of material, doubled, it is necessary to fold the voile upon which the tissue for the front of waist and skirt, the sleeve and back of waist and skirt are placed for economical cutting. Place sections with triple "TTT" perforations along the lengthwise fold, and the sections with large "O" perforations on a lengthwise thread.

Now, to make the dress, slash front and back along crosslines of small "o" perforations. Gather shoulder edge of front between "T" perforations and gather skirt

extensions on front and back between "T" perforations. Close the under-arm, shoulder and side seams as notched. Terminate shoulder seam at small "o" perforations in front section. Slash front through the fold at center-front, from the upper edge to the upper large "O" perforation. Sew collar to neck edge at back and to front of waist, with notches and center-backs even. Close back seam of underfacing, adjust underneath front of dress and over the collar with center-backs and corresponding edges even. Turn away a $\frac{3}{8}$ -inch seam at upper edge of

front section and graduate into nothing at lower edge of slash. Close center-front seam of underfacing, from the single small "o" perforation to the lower edge.

Arrange bands on panel and hem lower edge. Gather upper edge and arrange on skirt extensions. Adjust with center of stay

under the gathers in skirt. Close sleeve seams as notched and sew sleeve in armhole, with fullness toward you when sewing.

Turn hem of shield at upper edge. Adjust underneath front of dress. Tack right edge of shield to position and finish left for closing. Arrange belt around the waist and close at center-front. Use sash of ribbon about two yards long, if preferred.

Pictorial Review DRESS No. 9424. Sizes, 34 to 48 inches bust. Price, 35 cents.

LADIES' NEGLIGEE No. 9299. Sizes small, medium and large, corresponding with 36, 40 and 44 bust. Small size requires 4 yards 36-inch material. Having long shoulders and straight, short, wide sleeves. Shawl collar. Price 30 cents.

MISSSES' MIDDY BLOUSE No. 9313. Four sizes, 14 to 20 years. Size 16 requires $3\frac{1}{8}$ yards 36-inch material. To be slipped on over head. Front of blouse and yoke slashed and rolled with the square collar. The yoke is perforated to be made without point in front. Price 30 cents.

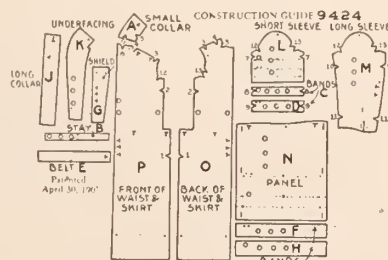

MISSSES' ONE-PIECE DRESS No. 9281. Four sizes, 14 to 20 years. Width at lower edge about $1\frac{3}{8}$ yards. Size 16 requires $2\frac{1}{2}$ yards 54-inch material, $\frac{3}{4}$ yard 36-inch lining for underbody. Price 35 cents.

HICKORY NUT CAKE

Contributed by Kathryn Hadden
Dover, Ohio

2 cups sugar, $\frac{1}{2}$ cup butter, 4 eggs (save white of 1 egg for icing); $\frac{1}{2}$ cup milk, $\frac{1}{2}$ cup water.

Beat the eggs, water and milk together. Add $2\frac{1}{2}$ cups of flour, 2 teaspoons baking powder. Add $\frac{1}{2}$ cup raisins or hickory nuts.

When Ma Goes Away

*It's awful when Ma goes away
To spend a week with my Aunt Sue,
The house seems upside down all day,
An' I don't know just what to do.*

*I'm scared to ask to go to play,
I'm 'fraid to make a bit of noise,
"For goodness sake!" someone will say,
When Ma's gone, home's no place for boys.*

*My Pa he growls an' John gets mad,
An' I keep quiet as a mouse,
For Sis she cooks things awful bad,
An' William won't stay 'round the house.*

*When John an' William spend a week
Away from home, or if Pa goes
With Uncle Jim to Fishin' Creek—
Oh, well, it's different, I suppose.*

*I never mind when Sister takes
Her trunk away—of course I sigh,
I always miss the fuss she makes—
But when Ma goes away—Oh, my!*

The Boy Who Rode Behind

A LONG, long time ago, in the city of Baltimore there lived a little boy named Jimmie.

At that time Baltimore was not a very large city. There were no trolley cars; no "jitneys" nor blue busses to carry folks to market, to work, to church, or wherever they might wish to go. Everybody walked, except those who owned horses and carriages.

Jimmie went to school and sat on a bench with lots of other little boys. Before them was a long desk on which the children spread out their copy books and labored hard to make the perfect A's and R's in the old-fashioned slanted writing. For writing in those days was considered quite as important as history and geography. At recess time, Jimmie and the other boys played I-spy, catcher, and many of the games that boys and girls still play today.

But when Jimmie went home in the late afternoon, he would run errands for his mother. The grocery stores were few and far apart, and the grocers did not have delivery wagons that bring things to your door. After supper the little boy would sit by the dining room table and study his lessons for the next day. Then he would

find his father, sitting out on the front doorstep, talking to some of his friends who had stopped by.

The boy liked to listen to the older men, who talked of so many interesting things. One night, which Jimmie always remembered, he finished his lessons, put on his coat and hat and went to the door. Yes, here was his father, talking to a neighbor, Mr. Stone.

"Ah," said Mr. Stone, "here's Jimmie. Well, Jimmie, have you been a good boy today?" Jimmie laughed, for this is what Mr. Stone always asked. But before he could answer the question, Mr. Stone spoke again.

"I'll warrant you'd like to have a ride on the rail road, wouldn't you?"

"What is a rail road?" asked Jimmie, and where is it?"

"It is a road that has wooden rails laid on each side of it," and on the wooden rails are fastened long strips of iron," explained Mr. Stone. "The coaches that run over it have their wheels made to fit the rails by means of grooves. A company has just been formed to build this rail road. It will take some time to finish it. Your father and

I were just wondering about the speed that such a coach will be able to make. Of course, the horse will be able to travel much faster than if he were running on a hard road; the load will seem lighter, and the whole affair will be a great saving of time as well as a convenience to the people."

"Where will it run?" asked Jimmie.

"They have planned to run the first road as far as Ellicott's Mills, but if it proves a success, as I have no doubt it will, the road will be extended to the Ohio River."

"Then will they carry other things besides passengers?"

"Yes," answered Mr. Stone, "they will be able to carry arm products and packages of all kinds. Yes, I believe that this rail road will eventually become just as important as the canals."

"The schoolmaster says," went on Jimmie, "that there are rich farm lands in the west that raise much grain. Do you think that we will be able to have some of that grain brought here?"

"Without a doubt," answered his father. "The water routes are so long and the stage coaches are so slow. Think what it will mean to have the mails brought to Baltimore in about half the time that it takes now. Perhaps by this time next year we can all afford a ride."

"Oh, goody!" exclaimed Jimmie, "I'm going over and tell William all about it, may I?"

"Yes," answered his father, "but don't stay too long—bed time soon."

So Jimmie ran across the street, kicking the dust from the ground as he went, for at that time there were few paved streets.

"Hey, William," he called, "come out, I've something to tell you."

"What is it?" asked William.

"Have you heard about the rail road?"

"That's nothing new," answered William, "I went to West End this afternoon with some of the boys after school—and by the way, I got a licking for going, too—but we met two men who told us all about it. They showed us where the road was going to start from. On the Fourth of July they're going to have a big celebration and lay the first stone. That's only four weeks off. My, but don't I wish it was tomorrow!"

So Jimmie went home, bursting with more news, all of which he told his father. Then he went to bed, and for a long time he lay awake, dreaming of the wonderful rail road and of the Fourth of July. This was in the year 1828.

During the weeks that followed there were many things for Jimmie to think of, and a few days before the Fourth the whole town was alive with visitors who came from distant points to see the laying of the cornerstone of the Baltimore and Ohio Railroad.

On the morning of the Fourth, Jimmie arose early. Already the flags were flying from the houses and everybody seemed to be awake and ready for the celebration.

Jimmie was dressed in his best Sunday clothes, a velvet suit that his grandmother had sent him from England, and a white lace collar. Although he was then only 12 years old, his trousers were long and his waistcoat short, and he wore a little round hat that would make the boys and girls of today laugh to see it. Soon after breakfast the people began to fill the streets and move toward the western section of the city, to the place now known as Mt. Clare Junction. Jimmie's mother packed a lunch for the family, for they were to have a picnic. Some of the people rode in carriages, some in coaches, and in small spring-wagons known as "carry-alls," while hundreds of others walked. (In those days people never minded walking a few miles). Jimmie's father wore his high hat, and Jimmie's mother her best Sunday bonnet and frock.

When they reached the place the crowd was so great that Jimmie thought that surely he would never be able to get close enough to see or hear, for he was too small to see over anybody's head. Soon the bands began to play and people waved flags and sang. A man in the crowd spied Jimmie. It was Mr. Stone.

"Here you, Jimmie," he called, "come over here and I'll lift you up where you can see."

In another moment Jimmie was on the back of Mr. Stone's old gray horse, Kate, who wore a bridle all wound about with red, white and blue bunting, with little flags over her ears. She held her head high and she pranced about whenever the band played, so you may be sure that Jimmie was the happiest and the proudest boy at the celebration.

Soon he saw them move the big stone into place. On its side in big letters were the words: FIRST STONE of the BALT. & OHIO RAIL ROAD. Then an old man with a spade in his hand stepped forward.

"Who is that?" asked Jimmie.

"That," whispered Mr. Stone, "is Charles Carroll, of Carrollton."

"Not the one who signed the Declaration of Independence?" asked Jimmie, who had just begun to study the history of the United States.

"The very same," answered Mr. Stone, "and he's the last living signer."

"Whew!" whistled Jimmie to himself, for here was a great man whom he had never expected to see.

Soon the stately old gentleman lifted the spade, then pushed it down into the ground and lifted the first bit of earth that marked the beginning of the building of the track. As he did this, he said: "I consider this one of the most important acts of my life; second only to the signing of the Declaration of Independence, if second even to that."

Then the band played the "Star Spangled Banner" and all of the men took off their hats and shouted. Jimmie threw his hat up into the air. Old Kate gave one leap, and Jimmie went sliding off her back. Mr. Stone and Jimmie's father laughed heartily, for the boy wasn't hurt a bit.

"Never mind, my boy, in another year you'll be riding on a railroad, and you won't slide off so easily," said his father.

"Oh, Father, are you going to ride on the first day that the rail road runs? And may I go with you?"

"We'll see," laughed his father.

And so it happened that on one of the very first coaches, drawn by horses from Baltimore to Ellicott's Mills, Jimmie rode along with his father and mother. You can see them in the picture on this page; a picture of our first rail road coach (or "rail-road" coach as we call it now), Jimmie's mother sitting in the coach, wearing her best Sunday bonnet; Jimmie's father in his high hat, reading a newspaper, and Jimmie himself, riding on the step of the carriage, the proudest boy in the whole United States.

A few years later Jimmie saw the first steam engine that was put on the railroad to be used instead of the horses, and when he grew up he learned how to make out re-

ports and to punch tickets, for he became one of the best conductors on the Baltimore and Ohio.

Dear Girls and Boys:

Well, well, aren't you glad that you have a vacation? I think that it is just splendid that so many of us can go away to visit our cousins, our aunts, and uncles, and grandparents. And even those of us who do not go away from home can have such a nice time at picnics and parties.

By the way, girls, did you ever go to a doll's party? If you never did, then I can tell you that you have missed something indeed. Perhaps I'll tell you next month how to have a doll's party, then you can have one for yourselves. Once upon a time I went to one of them and they gave prizes for the prettiest doll. One girl brought seventeen dolls, all of them very pretty and beautifully dressed. But the doll that took the prize was a little home-made rag doll that a little girl's mother had made for her.

Kathryn and Mildred Hadden wrote to me and said that they were going to visit their grandma for two weeks. They live at Dover, Ohio, and their grandma lives at Painesville.

Beulah Hoar, of Brunswick, Maryland, says that the weather has been very hot there, but that there are lots and lots of daisies there to make everything pretty.

We already have enough material for the August number, so you need not send in anything for that, but let me have your letters for the September (School page) number by August 15. I am sure that by that time everybody will be glad to get back to school and our little boys and girls will have lots of nice poems, stories, and pictures for that time. I wish that every little boy and girl who is going to school this September for the first time would send me his or her picture.

With love,

Aunt Mary

Vacation

By Clara McClure,
Pittsburgh, Pa.

Vacation time has come at last,
Away to the hills we are going fast,
In an automobile we'll speed away,
This beautiful, bright and sunny day.

To the house and garden, field and lawn,
To the meadow gates that we'll swing upon,
No matter how changed, it's the same old place,
To see dear Grandmother's smiling face.

Jimmie's first ride on the Baltimore and Ohio in 1830

The Flowery Path

Drawn by Marguerite McDonald, Staten Island, N. Y.

The Little Girl and the Seed

By Beulah Hoar,

Brunswick, Md.

Note: Beulah sent the picture of a house to go along with the story, but it was so large that we didn't have room for it.

In a little cottage there lives a little girl. She is crippled.

One day her mother went to town. When she came back she brought the little girl a flower seed. The little girl put it into a little red flower pot, then watched every day to see what kind of a flower it was.

One morning when she got up there was a little green plant sprouting out from the pot. She watched it then more than ever. In a few days there was a little red tulip in the pot. She watered it every morning and put it on the step. After that she was very happy to think that God sent the sunshine and rain to make it grow.

Kathryn Hadden, Dover, Ohio

When I Went Visiting

By Dorothy Cassidy

Marysville, Indiana

Once upon a time when I was about six years old I asked my mother if I could go visiting. She said she didn't care. So the next morning I went and my aunt Loretta was there to meet me.

When I got to my aunt's house she said: "Do you want to feed the chickens while I get the dinner?" I thought that would be very nice. So I went and by the time I got to feeding the chickens here came a horse. I was scared and I ran to the house and told my Aunt Loretta a horse chased me. So she said: "My dear, that horse won't hurt you." I went again and then I took a basket to gather some eggs. When I got my basket full of eggs, about four or five pigs came chasing me. I ran until I came to a big log and I fell over the log. I broke all my eggs and I mashed my basket all to pieces. I went to the house and Aunt Loretta asked me what was the matter. I told her. I had my dress all dirty with egg yellow. So I had to change my dress. In two weeks I went home, but before I left I told Aunt Loretta that was the last time I was going to come to see her unless she moved off of that farm.

ENGINE-GOING-DOWN-HILL

John Whopper

Little Stories About Books That
Children Like

BOYS and girls who have studied geography will find that they will have to stretch their imaginations to the limit if they would keep from laughing at the strange adventures of John Whopper. However, the story is very interesting, and I am sure that you will enjoy following John on his perilous journeys. Although the story is an old one, there are many of us who have not read it.

John Whopper is a Boston newsboy, who accidentally discovers an underground passage to China. He takes his newspapers there and makes a fortune selling them to rich American business men at the hotels in Canton.

On one of his famous journeys back home, he makes a mistake in entering the underground passage, and tumbles through the darkness into the center of the earth, where he goes whizzing around until he finally arrives at a state of perfect equilibrium in which he does not move at all but is suspended in midair. By waving his cap he

Leonard Lippy

Whose Big Sister Dorothy is a Multigraph Operator,
Mt. Royal Station, Baltimore, Md.

makes his way along until he comes to a kind of honeycombed wall. Through this he gains access to the very axis of the earth, coming at last to the surface just at the North Pole. Here he lands on an iceberg, from which he is later rescued and is taken back to his home in Boston.

This book may be had from the Baltimore and Ohio Employees' Free Circulating Library. If you do not know about this library, write to Mrs. E. P. Irving, librarian, Mt. Royal Station, Baltimore, Md. She will be glad to tell you how you may get the books to read.

A Mac Sennett Beauty

Drawn by Ella L. Beekman, Baltimore Md.

J. R. Orndorff Leaves Service

J. R. Orndorff, formerly division storekeeper, Riverside, Baltimore, Md., accepted a position with the United States Government Railroad Administration, Liquidation Claims Division, effective July 1, 1921.

On June 18 the employees of the Stores department at Riverside sprang a little surprise by presenting him with a handsome traveling bag, the presentation speech being made by Frank J. Taylor, chief clerk. Many nice things were said regarding his courteous treatment and the cordial relations existing between him and his subordinates.

In response, Mr. Orndorff stated that it was due entirely to their hearty cooperation and loyalty to him that he had been able to improve conditions and get the storehouse working on a 100 per cent. efficiency basis; that during the past year the stock value of unapplied materials on the Baltimore division had been reduced over \$200,000.00 without affecting or delaying the shops' output, employees voluntarily agreeing to share in the reduction of expenses by working short time, and thereby enabled him to maintain a high state of efficiency at all times without having exceeded the monthly appropriation at any time.

Mr. Orndorff is a Baltimore and Ohio Veteran, having been in service about 30 years. He is also a World War Veteran, having served as a commissioned officer in the U. S. Engineer Corps in the A. E. F. A host of friends on the Baltimore and Ohio wish him success in his new field.

Death of Dining Car Inspector F. A. Kraft

F. A. KRAFT, Inspector of Service, Dining Car Department, who served the Company for 20 years, died suddenly on June 27 at his home in Pittsburgh.

Mr. Kraft was extremely popular with the employees of the Dining Car Department, and also with the traveling public. For years he was a first class dining car steward, and was well known to officers and employees over the entire system.

He was born in Baltimore, Md., February 19, 1864, and his remains were brought to Baltimore for interment. He leaves a widow, and 4 sons. Owen, the eldest, is secretary to Mr. Arthur W. Thompson, formerly a vice-president of the Baltimore and Ohio, and was also at one time connected with our Company.

Those who knew Mr. Kraft will remember the dignity which he gave to his position. He looked at it as a splendid opportunity for service, both to the traveling public and to the Railroad. His car was always a model of cleanliness and the spirit of the crew was patterned after his own.

One other thing that will be recalled by those officers and employees who had occasion to talk with him, was the consuming interest which he took in the training and education of his sons. This was his passion, amply rewarded in their progress in their studies and work. To Mrs. Kraft and to them we express the sincere sympathy of his many friends on the Railroad.

Winning and Losing

A speculator sometimes makes it, but more often he doesn't. The man who works and saves always makes it. All the great fortunes were started on the working and saving plan. Men who work and save are usually happy. Men who are "blowing in" all their earnings are seldom happy. The man who has "salted down" his pile in government savings securities or in other standard investments doesn't have to worry.

Old King Coal

By An Employee

DID you ever stop to think, when you see the thousands of cars of coal passing over the Baltimore and Ohio Railroad, day after day, what a vast amount is handled? Did you ever stop to think that this has been going on for years? Did you ever wonder what became of this mighty bulk of black-stored energy? Did you ever wonder what prevented there being a glut of coal after seeing so much of it being dragged over the hills and down the valleys day after day and week after week?

But still the cry of the land is: Give us coal, more coal, and more coal! The ever

increasing numbers of factories, furnaces, plants and homes demand more and more fuel as the months and the days go by. The need for coal has become so great in this country that a stupendous amount is being mined and consumed.

According to figures issued by the United States Geological Survey the production of bituminous and anthracite coal in 1918 in the United States amounted to 678,211,904 tons, an increase, compared with 1917, of 26,809,530 tons. Of this total output 579,385,820 tons was bituminous and 98,826,084 tons was anthracite. It is esti-

mated by the Geological Survey that the production for 1919 (estimates only have been published by the United States Geological Survey in connection with production in 1919) fell over 100,000,000 tons below that of 1918, on account of conditions that were detrimental to a high production and of the miners' strike in the latter part of the year.

It is a difficult matter for the mind to grasp such figures as 678,211,904 tons, the tonnage of coal produced in 1918, and form an accurate conception of their vastness. When we speak of thousands of tons we may see clearly enough, but when it comes to millions of tons and hundreds of millions of tons the thing is getting beyond our mental grasp. To get a conception of so vast an amount of coal, let us put it into railroad cars of fifty tons capacity each. Approximately 13,564,238 such cars would be required to hold this product. With an average of 40 cars to the train, this would make 339,105 trains, the combined length of which would aggregate, when adding the length of the locomotives, 342,722 miles, or equal to 13 times the distance around the earth at the equator.

The extraction of this fuel left a hole in the earth equal to over 23,000,000 cubic feet. If the entire production of coal in 1918 was built into a wall 100 feet high and 100 feet thick it would extend nearly 94 miles.

Pennsylvania ranks first among the coal-producing states; West Virginia, Illinois, Ohio and Kentucky follow in order of production. Thirty two states and Alaska contribute to the total output.

Growth of the Coal Industry

Some idea of the wonderful growth of the coal production in the United States is shown by the fact that in 1915 the production was more than double that in 1900, and three and one-half times that of 1890. The production of 1918 was nearly three times that of 1890.

The increase in coal production, when considered in connection with the increase of population, gives another interesting comparison. Go back to the middle of the last century. In 1850 the coal production of the United States was 6,445,681 tons, while the population in that year was 23,191,876. From this it appears that the per capita production was 0.278 tons. In 1870 it was a little less than one ton. In 1880 the per capita production jumped to a little over a ton and a half, and in 1890 it was up to two tons and a half. In the last year of the nineteenth century it had increased to something over three tons and a half for each inhabitant. In 1915 the per capita production amounted to a good bit over five tons. The year 1918 showed over six and a half tons to the person.

It is true that in the early years of history we consumed a good deal of wood for fuel, but the consumption of wood and bituminous gas at the present time for fuel is comparatively much greater proportionally

THE KNOWN WORLD SUPPLY OF COAL AT THE PRESENT RATE OF CONSUMPTION SHOULD LAST ABOUT 3400 YEARS, BUT BASED ON THE POSSIBLE INCREASED USE OF COAL SHOULD LAST ABOUT 1500 YEARS.

THE WORLD'S KNOWN COAL SUPPLY IN BILLIONS OF TONS BY NATIONS

THE WORLD'S PRESENT PRODUCTION OF COAL IN MILLIONS OF TONS ANNUALLY SHOWN BY NATIONS

than it was 50 years ago. Other materials such as oil and alcohol are also used extensively for fuel, but, notwithstanding this fact, coal production is rapidly increasing in the United States.

Why Per Capita Consumption Increases

The question naturally comes to one's mind: why has there been such an extraordinary increase in the coal production per capita? The answer is that from an agricultural nation we have become the leading industrial nation of the world. And without our coal we could not have become the great nation that we are. Coal is of the greatest value as a domestic commodity or as a factor in the development and maintenance of great industrial enterprises. It is the power that lies at the foundation of all our manufacturing interests. It enables the factory, the furnace, the locomotive and the steamship to create and transport the constantly growing wealth of the land.

The greatest nations in the world are the largest coal producers. The United States stands first, then comes Great Britain, and, before the war, Germany was third. The United States output even before the war equaled that of Great Britain and Germany combined. Since the beginning of the World War the production of Great Britain and Germany has naturally declined greatly. As recently as 1899 Great Britain was the leading coal producing country of the world. But each year since she has fallen further and further below the United States.

Coal and Our Railroads

The heavy coal tonnage of our country has made our railroads the finest and most efficient transportation system of the world. We have the largest cars and the most powerful locomotives built. We have many more miles of railroad than all Europe combined. We have cheaper freight rates than are found in any other country. In the United States the average car capacity is about 48 tons. The steel hopper car, "big as a house," has taken the place of the old wooden car. In Europe the average freight car capacity is about 15 tons. Our locomotive building has even gone ahead of our car construction. We have locomotives so large and powerful that they cannot be used to pull trains to their full load because of excessive drawbar strain, but must be used as mountain pushers on the rear of trains. There is nothing in any other country to compare with these railroad dreadnaughts.

Coal has made these things possible. It has not only made them possible but it has made them necessary. We could not begin to handle the coal production of this country with the facilities of 15 years ago or even a decade ago. Transportation facilities must of necessity keep in progress with the industrial development of the country. Without such progress the industrial growth of the country will become stunted. Without our great system of railroads we would be a less important nation. Without our coal we could have few rail-

roads and comparatively little manufacturing.

Mining Revolutionized

Mining methods have also had much to do with the phenomenal increase of our coal production. Improved methods in mining and mining machinery have greatly lessened the cost of coal by increasing the yield per miner. Electricity has been the great revolutionary factor in modern mining. Electric power has had its influence on every branch of mining from coal cutting machines down hundreds of feet in the bowels of the earth to the delicate testing instruments of the assaying laboratory. Coal cutting machines are now used that do the work of many men; powerful little electric locomotives drag trains of heavy laden mine cars along through drifts where mules were formerly used. Some of these tiny locomotives are not more than two and a half feet high and haul trains in very low and narrow passages, much lower than can be entered by even small mules.

The electric coal cutting machine has practically supplanted the pick miner in all big coal workings. These machines can be worked in veins as low as 24 and 28 inches, and will cut 100 tons or more a day, at a cost much below that of the pick miner.

That is why these machines have become so numerous. Coal loading machinery is used to some extent, but it is not yet fully developed. The power houses that furnish the current for these mining machines and hauling motors also furnish electricity for lighting, pumping, ventilation, etc.

Will Our Coal Be Exhausted?

Now and then we hear an alarmist come forth with startling warnings of the fast diminishing of our coal resources. Recently a well known geologist surprised the public with an array of figures along lines of scientific investigation. He brought out the fact that if present wasteful methods of coal mining are not improved and if the consumption increases in the same ratio as it has during the past few years, by 1940 at least one-eighth of the country's available supply of fuel will be exhausted; and if there is not a careful husbanding or revolutionizing invention in the meantime, that the greater part of our original heritage of coal will be used or wasted by the middle of the next century, or at the most 200 years hence.

But many propositions involving a mathematical progression strike snags, so to speak, before going far. It is well that it is so, for mathematical progression soon runs into absurd figures. So, while there is perhaps no imminent danger of an early exhaustion of our coal resources, there must in the future be substitutes for coal to some extent to avoid us from plunging into a veritable debauch of coal exploitation. It is within a comparatively short time, the lifetime of men still living, that the demand for coal has increased from practically nothing to over six and a half tons per capita. Con-

sider what such steps of future progress would attain! Is there any wonder that even scientists should become alarmed to some extent?

Magnitude of World's Coal Supply

But, lucky for future generations, everybody does not see the coal situation in the same gloomy light. In a report from the Secretary of the Interior, Franklin K. Lane, in 1914, a diagram was shown illustrating the coal resources of the United States. (*National Geographic Magazine*, February, 1914.) Our total supply of coal was represented by a block of coal ten miles high, ten miles wide and ten miles thick. In other words, a block of coal of 1,000 cubic miles would equal our resources. Of this supply of coal only about two cubic miles had been extracted, a mere corner of the mighty cube.

Great Britain and Ireland are said to have a great store of coal. Belgium, France, Germany, Austria and Russia have a much greater supply. The deposits in Asia are so vast that even an approximation is not possible. China is supposed to have inexhaustible veins. Geologists have estimated the deposits of the province of Shansi, with an area less than that of the State of Missouri, at 1,200,000,000,000 tons. Siberia is also credited with deposits of inestimable extent.

With such vast deposits one would suppose that all of the coal of the world could never be used up, or at least not until all of our institutions of today have crumbled into dust.

Telephones versus Telegraph

By H. L. Graham

Telephone Maintainer, Jenkins, Ky.

WILL the telephone ever entirely supersede the telegraph? This question is often asked, and, in the light of the great progress made within the past decade in the improvement of telephones, it is a question to which anyone who is well informed on this subject will hesitate to give a positive answer.

The manufacturers of telegraph equipment have made great improvements in their products, as have the manufacturers of telephone apparatus, and there are to be found many enthusiasts on both sides. One thing is reasonably sure—the telephone will not seriously interfere in the field that the telegraph now occupies at any time in the near future.

When the railroads first began the installation of the selective ringing systems of telephony for the purpose of train dispatching, there were many who felt that this innovation meant the beginning of the end of the telegraph. So successful did the telephone prove for train dispatching purposes that many jumped at conclusions and predicted that the telephone would eventually super-

sede the telegraph in general as a means for the satisfactory transmission of messages. Such, however, has not been the case.

The telephone is admirably adapted to the work of train dispatching, partly because the forms used in this work are standardized, partly because the form number or letter itself signifies the meaning of the body of the order, and partly because the transmission of train orders must, of necessity, be comparatively slow because of the great accuracy with which they must be transmitted and received.

In addition to the above there are many advantages to be obtained by direct communication between dispatcher and crews when crews are on the road and unable to reach or communicate with a telegraph office. On the telephone, as a means for the transmission of messages, such favorable comment cannot be made, because, on account of the great volume of message work that must be handled daily, repetition in every case is out of the question. The telephone is used considerably for message work, but comparisons have shown that for

this class of work in general the telegraph is quicker because greater accuracy is possible at high speed, especially for long distance work.

The failure of the telephone in this respect is principally due to two causes—the faulty diction of the average operator and the confusion of sound waves sometimes reproduced in receivers by electrical disturbances along the lines. These disturbances are sometimes produced by the proximity of power wires and sometimes by the varying activities of the elements, and are familiarly known to almost everybody as “induction.” For long distance work the telegraph is still the most satisfactory medium of communication, principally because extreme variations of the elements but slightly affect, comparatively, the telegraphic currents.

On long distance circuits where line conditions, because of length of circuit and number of instruments cut in, limit the working margin—this margin being less in wet weather than in dry—instruments known as repeaters are introduced into the circuit, their function being the synchronous control of a second circuit. This arrangement may be carried out as many times as the distance or conditions between points may require.

SOME OF THE "BOYS" OF THE AUDITOR OF REVENUE'S OFFICE, BALTIMORE, TAKEN ABOUT THE YEAR 1900

Left to right: Calvin Howard, now out of service; "Dan" Roach, deceased; "Bill" Fentress, deceased; George S. Smordon, now out of service; W. F. Seabold, office of Vice-President Galloway; "Ed" Carlisle, now out of service; J. N. Rhodes, retired, who was then in charge of the Statistical Bureau; D. C. Gibson, E. C. Hanson, Comptroller's office

Another very practical reason is the fact that by the action of the relay a secondary or auxiliary circuit is closed in each office, through a sounder, by means of which a maximum of sound is produced with a minimum consumption of line current, as the amount of current necessary to operate a relay is very small.

The reinforcement or reproduction of voice currents by means of the telephone relay is not so simple. This subject has for several years been an attractive one for inventors and numerous patents have been recorded for apparatus, the purpose of which has been to reinforce the voice currents on long lines and in this way to extend commercial talking limits. To date, however, the telephone repeater has been only partially successful and those that have proved of some value have not been adopted for general use, principally because of their high cost of manufacture and maintenance as compared with their slight commercial value. At one time, railroad officers were elated with the prospect of telephonic communication for all purposes throughout their railroad systems, but practice soon disillusioned them and for a long time past the telegraph departments of various railroads have been striving to increase the efficiency of the telegraph as well as that of the telephone. In many instances both the telephone and telegraph instruments are operated simultaneously over the same line wires.

There need be no fear that the telegraph operator will be overlooked when officials are casting around for a man to fill the job higher up; it is as true today as when first remarked, "there is always room at the top for the efficient." The man who, while on duty, "pounds brass" and not his ear, who keeps his eye on the next higher position and works toward it, will "get there," regardless of obstacles.

Here's a Man Who Rises Early

In the May issue of the MAGAZINE, there appeared a little rhyme about early rising and its advantages. In one of our local newspapers we find a record of one of our own "homefolks," who delights in walking in the early hours of the morning. We present herewith a clipping from a recent edition of *The Sun*, incidentally calling your attention to one of our foremost correspondents, Hon. George W. Haulenbeek:

Permit us to Decorate You, Sir, With the Distinguished Service Medal, With the Order of the Legion of Honor, With the Summa Cum Laude of the University of Life—You Richly Deserve Them All.

TO THE EDITOR OF THE SUN—Sir: While nearly everybody is still snug in bed with a disinclination to get up and tackle the duties of the day, I am downstairs by the range fire, with my little old Sunpaper in my hand; with glasses properly adjusted and commencing to feast on the good things laid out before me, beginning with the editorial page and letters and so on through the entire paper.

Then after a good breakfast, with the young men clinging to the straps in the 17 line of cars, all the women being seated, as I walk down Charles Street to the Baltimore and Ohio Building, I possess a feeling of contentment and satisfaction that is really worth while; and in a little over two years I will be an octogenarian.

GEORGE W. HAULENBEEK.
Baltimore, May 6.

Squelched Him

Mrs. Brown: Bridget, was that grocery boy so impertinent when you 'phoned the order this morning?

Bridget: He was that, Mum, but I shut him off proper for I sez, "Say! Who the devil do ye think you're talkin' to? This is Mrs. Brown."

Hit the Mark

Youthful leader of the Red-Skin Braves: "Oh, if you please, Mrs. Brown, can I have my arrow? It's come over into your garden."

Mrs. Brown: "Certainly, my boy. Whereabouts did it go?"

Leader of the Red-Skin Braves (timidly): "I—I—think it's in your cat!"

Electricity

Learn At Home

THERE is a wonderful opportunity right now for young men who like electricity. If you are ambitious and will train yourself in spare time you can step into a good position and get experience that will give you a real start towards success in life. Good salaries are offered with rapid promotion.

For 29 years the International Correspondence Schools have been training young men for success in electricity and over 200 other subjects. They will help you prepare right at home for a position in the line of electrical work you like best—or in any other work that appeals to you. Thousands of men, through I. C. S. training, have stepped into fine jobs, but never were opportunities as great as now.

Let the I. C. S. help you. Choose the work you like best in the coupon below, then mark and mail it today. This doesn't obligate you in the least, and it will bring you information that may start you on a successful career. This is your chance. Don't let it slip by. Mark and mail this coupon now.

"I have watched the progress of the International Correspondence Schools. To me their rapid growth is easily understood, because I realize the practical value that is back of them and know something too of the success attained by many ambitious men who have taken their courses.

"May your institution continue to so grow and flourish that the world will come to appreciate the actual worth of the I. C. S. trained men."

—THOMAS A. EDISON.

"I am familiar with the textbooks and method of instruction used by the International Correspondence Schools in their Courses in Electrical Engineering, and I also know of a number of young men who have taken these Courses with great benefit. I believe that any young man will find it a practical and economical way to acquire a knowledge of the profession."

—DR. CHARLES P. STEINMETZ.

Safety Roll of Honor

Cumberland Division

We are glad to take this opportunity to thank Mr. W. T. Leary, manager of the Berkeley Springs Milling Company, for discovery of and prompt action taken by him to extinguish a fire started in our warehouse at Berkeley Springs on June 21, and in this manner to indicate our gratefulness for his aid in time of emergency.

Pittsburgh Division

PITTSBURGH, PA., June 30, 1921.

MR. HARRY SIGAFOOS,
Fireman,
Glenwood, Pa.

Dear Sir—My personal attention has been called to the fact that you were fireman on No. 5 from Connellsville on the night of June 25 when your engine was derailed at Emblem by slide coming in at that point; also of the prompt manner in which you fulfilled your duties in protecting other trains moving eastward in that vicinity.

I understand you were unusually prompt in protecting eastward trains, taking flagging equipment and proceeding ahead of your train immediately for the purpose of flagging any approaching trains and avoiding further accidents that might have resulted had prompt action on your part not been taken.

Your actions in this instance were certainly commendable and I express my appreciation of your handling of this emergency.

Yours truly,
(Signed) J. D. BELTZ,
Superintendent.

On June 25, extra 1282-1288, east, on the Northern Sub-Division, arrived about 1.25 P. M. at Bridge 515, first bridge east of Blairs, Pa., and crew found it on fire. Two boys, J. L. Stover, of R. F.D. No. 2, Knox, Pa., and Roland Garriss, of Blairs, Pa., had previously discovered this fire and had it under control on arrival of our train, and as a result of their prompt action little damage was sustained. Superintendent Beltz has written each of these boys an appreciative letter, thanking them for their prompt action and we are glad to note this fact here.

Cleveland Division

CLEVELAND, OHIO, May 25, 1921.

MR. F. PARKER,
Section Foreman,
Erhart, Ohio.

Dear Sir—I am in receipt of information that when engine 4195 with train of coal for Lorain on May 20 passed Stone's crossing, you noticed broken flange on car and immediately got on hand car and pumped it to Lester, a distance of about one mile. Here you notified the brakeman and had the train set off on rip track where it was found that two pieces, 10 inches and 19 inches, respectively, had been broken out.

This is indeed meritorious service and I want to commend you

Very truly yours,
(Signed) H. B. GREEN,
Superintendent.

CLEVELAND, OHIO, May 26, 1921.

MR. A. J. MILLER,
Flagman,

Cleveland, Ohio.

Dear Sir—I understand you were flagman on train of engine 2595 on May 19, and that while pulling out of Clark Avenue Yard, Cleveland, with a drag for the New York Central, you discovered about four inches of flange gone from Baltimore and Ohio 138121; that you immediately stopped drag and had car set out. This undoubtedly averted a bad derailment.

I want to commend you for your close observance and prompt action in handling this situation.

Very truly yours,
(Signed) H. B. GREEN,
Superintendent.

CLEVELAND, OHIO, May 19, 1921.

MR. W. N. JEFFREY,
Conductor,

Lorain, Ohio.

Dear Sir—I understand that you were conductor on train of engine 4287 on May 15, and while on siding at Lake Junction, you noticed car in passing train extra 4003 west with truck broken down; that you immediately notified Conductor Runge in charge of the 4003 with request to set off at Lake Junction, which he did, averting a probable accident.

It is very gratifying to me to receive information of this nature and I want to commend you for your watchfulness and prompt action.

Very truly yours,
(Signed) H. B. GREEN,
Superintendent.

Indiana Division

On May 14 at Holton, Ind., first 97 was in siding for first 88, and Brakeman T. J. Langan was at the west switch. As first 88 passed him he discovered brake beam down under O. S. L.—10621. He notified crew of first 88, train was stopped at the east end of siding where it was found that brake beam was in bad shape and probably would have caused serious trouble had it not been detected and removed.

On May 19, Conductor Lyn Robertson, with extra 2849-east, picked up Southern 73751 car of stock at Milan and while setting off some cars at North Bend, Brakeman Whitely found journal box lost off this car, the head car in train.

There was nothing to keep the journal in truck frame other than weight of car. The brass, however, was still in place, so the conductor informed the dispatcher that he felt that by careful running he could handle car to Stock Yards. This was done with a delay of about one hour, which was much better than setting out car of stock.

The careful inspection of train by Brake-man A. B. Whitely is commendable and if condition of this car had not been detected we would possibly have had an expensive accident.

On June 2 when W. O. Guthrie, agent, Rivervale, Indiana, was enroute from his home at Tunnelton, Ind., to Rivervale for duty, he discovered broken rail at Mile Post 120, Little Tunnel Cut. He immediately reported the case to the section foreman, who replaced the broken rail.

Tramps and Trespassers Are Expensive Luxuries

They Cost Us \$45,000 for Fires Alone During April

By B. S. Mace

Superintendent of Insurance

The enormous trackage of American railroads, extending over areas of greatly varied population density, makes our trespassing problem a particularly difficult one. The expense of completely protecting the track either with fences or by police guard is prohibitive, and characteristic American disregard for certain laws, makes the problem increasingly difficult.

The contrast in England and in Continental Europe is marked. There railroad property is almost as inviolable as the precincts of a private home. Greater general density of population and better material protection of track account for this in part. It is due more, however, to the greater observance of the no-trespassing laws which, to the people of those countries, mean just what they say.

During the month of April fires caused by trespassers and tramps cost the Baltimore and Ohio Railroad alone \$45,000. Tramps are notoriously careless of railroad property and are a menace whenever they secure access to it. The fires which they start to cook their "chow" with, are dangerous. Gaining entrance to box cars for shelter and transportation, they throw burning matches and cigarette and pipe ashes about and cause many costly losses.

They and trespassers are an unmitigated menace, and sentiment should play no part in the attitude of railroad employees toward them. They have no right on our property and when seen on it by employees, should be arrested and punished.

In addition, conspicuous "No Trespassing" signs should be posted on our property. Efficient watchman service should be maintained in yards, and car doors should be properly closed and secured when not in use. In large storage yards cars should be stored in drafts of six to eight cars with separating drafts 60 to 80 feet. Tracks containing wood cars should be separated by a track containing steel cars.

Among Ourselves

Baltimore and Ohio and Baltimore and Ohio Annex Buildings

Law Department

Correspondent, GEORGE W. HAULENBEEK

Judge James A. C. Bond, of Westminster, Carroll County, Md., who has served the Baltimore and Ohio Railroad Company in a legal capacity for 48 years, has gone abroad. The Judge told me before his departure that he contemplated spending his entire vacation in England; that he had no desire to visit the Continent to see the devastation and carnage wrought during the late conflict.

Judge Bond is a positive wonder. Into every case in which he is engaged he puts his whole being. He believes that his client, the Baltimore and Ohio Railroad Company, is entitled to his best efforts, and the Judge is generally on the winning side. He is ably assisted by his law partner, Francis Neale Park.

Judge Bond was a classmate at Princeton of the late John Kissig Coven, our general counsel for many years, and later our president, and they were close friends.

And then again—the Law Department has in its employ George Conrad Zink, and he too is a wonder, in that he is the embodiment of politeness. This is a requirement with the young gentlemen who receive visitors, and Mr. Young, our chief clerk, is particular in this regard and very properly so. Moreover, his work at the telephone is fraught with courtesy, and if you can get a lad who will control himself and be civil and obliging at the telephone, that is the boy you want to retain.

I am not giving my young friend this generous space because he says he is lost if Mr. Haulenbeck has no story in the MAGAZINE, but because he is true and faithful. I can size up a person pretty well, and that is about all I can do. George was born in Baltimore in 1904 and if he sticks, he may be at the head of the department ultimately, but it will be long after I am on the other shore.

Mail and Express Traffic Department

Correspondent, T. E. REESE

Miss Jewel R. Hilton changed her name on April 26. We wish her happiness, and congratulate George.

Miss H. M. Spedden, the "baby," took Jewel's place with the understanding she would not follow her predecessor.

Secret: When Miss Mabel H. Cross came to us, she said she was "also" a singer. We haven't heard a "hum" so far. This is, of course, due to a cold.

C. H. Bircly is going to put a chicken wire fence around his place to save his counting the children every night.

"Dave" Greene has about one more year to go, after which all flies diving from the ceiling on his dome will slide right off.

Telegraph Department

Correspondent, DELLA M. HAIN

Our able correspondent, Miss Della, was in New Jersey recently, out walking with her red-headed friend. She dropped her "cootie garage." A dog grabbed the rat and ran away with it and she was lop-sided on one side of her head. Poor girl!

Transportation Department

Correspondent, J. B. EGERTON

Dere Ant Mary,

I now take my pen in hand to tel you bout the doins at the baseball game twixt the married men an the singel men in that ere Transpertation Dept. were uncle Ezry werks.

It waz out to that place where the animals goes wats called Drude hil. The wimmin fokes waz all there an they waz some visters by name of Mis Ruth an Mr. Wright an Mis Stevens an Mis Coplan wat uster werk in that ere T. Dept. an a lady by name of Mis Belt wat werks fer the Sun office.

Mr. Miller hes a nice man. He brung us some candees. I hope he gits a invite wen them fokes plays agen.

You no Ant Mary I aint no scandel monger but the way them gurls screeched an hollered fer the married men waz scanlus. An yore Ezry bein among em to. Course I woodnt make im stay to home the next time but leestways Id give im a good talkin to.

The players waz perty good players most of em hittin the balls with the bats so hard they went clean over the batters head an come rite down behind im. They ony had bout 6 cashultees (aint that a good word I got it from the mager wat waz in the war) all told. Mr. Faustman he hert his foot rite wen he started to run home which mabie it waz wished on im coz he waz goin home in the middle of the game him bein such a good player. Luke Burns he got a sprained finger an Mr. Jackson he got a sore arm. I fergit the names of the other gentmen wat waz hert.

Dont let this go eny ferther but I heerd some tel as how them ere Dieny an Evans stold a lot of bases whichever they be. They dont look like that kind do they. But you never can tel.

Course it waznt the falt of the singel men their losin. That ere pitcher George Loeblein (I didnt no he waz married) kept throwin the balls to the man with a muzzel on wat waz Seibert an didnt give the batters a chancet to hit em a tall they properly bein to perlite to say enything to im bout it bein as hes married. Carter wat jus come back from Urope hes a perty good player ony he waz out of practise bein as how baseballs a American game.

Ed Wright he could of hit the ball but he waznt lookin so of course he missed it. An that ere Mansfield he kept exercisin his arm evry time the ball come his way soacourse he didnt hit it. But that ere Scharney hes some hitter. He hit the ball so hard it went cleen over to the other side of the park. I gess he got sceered then coz he started to run like somebody waz achasin im bein as he musta lost the ball but when he got neerly aroun to where he started from somebody foun the ball so he stopped runnin an looked sorter shamed wen somebody sed he waz put out.

Mr. Widernman he must no a lot bout baseball. He kept tellin the married men wat to do but I guess they didnt heer im coz they didnt do it.

Nex time that ere T. Dept. plays ball I wil let you no sos you can go to watch uncle Ezry.

Yore respectful neece,
Mag.

Pier 22, North River, N. Y.

Correspondent, FRANK A. J. MANTHEY

Valie

"Valie," although a Latin word, should mean a lot to us. It means "be strong." Let us all "be strong" in our efforts and our ambition in securing the necessary business for the Railroad during this period of sub-normal traffic. It is within the power of each individual employe to aid in this cause by giving good service on the job assigned to him. Satisfaction is the best advertiser, and good advertising will always bring more business. An example to illustrate this statement presented itself this morning:

The traffic manager of a local paint manufacturing concern called the Trace Department on the wire, and after the information had been satisfactorily given to him he remarked that he had been an employe of this Railroad for a number of years, and that he

In the accompanying photograph we find the members of the Staten Island Maintenance of Way Carpenter Gang. They are, left to right, standing: George Benedict, Charles Schiebe, Louis Delmar (foreman), Ernest Benthe, Charles Orlando. Sitting: Charles Sparks, Charles Pearsoll,

Joseph Polomeni (helper), William Schultz, Louis Delmar, Sr.

According to official conversation, this is one of the best gangs this division has ever had. George Benedict is an old timer of Staten Island. Charles Schiebe is an old Baltimore and Ohio man who hails from Baltimore, where he was a foreman. Benthe is our "Big Dutchman," and Orlando our "flivver" mechanic. "Charlie" Sparks is the old baldheaded boy, but with his hat on you would believe him to be quite a young and dashing cavalier; he even acts and speaks like one, and is the jolliest fellow in the gang; he cracks jokes all day long and keeps us all in the best of humor. Pearsoll is said to be a descendant of the first settlers in New York—a long lost relative of Father Knickerbocker. "Joe" is our baby, the youngest member. "Bill" Schultz is our dare-devil, he's Steve Brodie himself. Old "Pop" Delmar, known to us all as "Daddy" is the best man of the bunch. We forgot to say that "Charlie" Sparks has managed, thanks to the prohibition law, to save enough money to buy himself a home.

Baltimore Terminal Division

Correspondent, MARTHA V. FOX, Car Record Clerk

H. L. Minton, our "live wire" operator at North Avenue, is shown in the accompanying picture. Herman is doing some splendid work. He has discovered a number of brake riggings and shifted loads of pipe, which he promptly had switched out of trains, in this way making our Road safe between Mt. Royal and Huntington Avenue. Keep up the good work, Herman!

Locust Point

Correspondent, J. ROSS GOULD

Readers of this department in the MAGAZINE will be glad to know of the appoint-

Operator Herman L. Minton

George W. Brower

ment of J. Ross Gould as correspondent. Many of the interesting sketches recently appearing here in the last few issues of the MAGAZINE have been from the pen of Mr. Gould, who is a veteran employe of the Railroad, highly esteemed by all who know him.

Mr. Gould has taken great trouble to make interesting the notes in this department and employes wishing to keep Locust Point on the map in the MAGAZINE can send to him notes in regard to any events in their respective localities, notably those affecting the business of our great piers and yards, with the assurance that he will see that they are submitted to the MAGAZINE for publication. Ed.

William Hartig, brakeman, of the ferry crew, was awarded first prize at the annual growers' convention, held at Annapolis Junction, June 3, for the most peculiar grafting. He crossed a head of cabbage with a potato and got two eyes; crossed the potato with corn and got two ears; crossed the corn with a squash and got a neck; crossed the squash with a cocanant and got hair. We are all now wondering what he will cross with the cocanant to get a nose and mouth.

While the train crew of the hill job at Locust Point were enjoying their dinner a few days ago, they were held spellbound by Charles Davis, yard foreman's helper, who told them one of his numerous experiences in Cuba during the Spanish-American War.

While doing pick-et duty in Cuba one night when the darkness was so dense that he could not see a hand before him, he heard a shifting in the grass. Upon putting on his smoked glasses, he observed the grass, which was about one hundred yards from his post, moving, and thinking that this was caused by a spy, he placed his trusty Winchester to his shoulder. After emptying the chamber of its 20 shots, he noticed that the grass was still and felt assured that he had gotten his object. He went out to investigate. Upon arriving at the scene, much to his astonishment, he observed that he had shot a bull. He carried it into the encampment unaided, and fed the entire regiment on beef for a week. (Some bull!)

Captain A. C. Gray, of the tug "Transfer," has finally managed to reorganize the Marine Department baseball team, and would like to arrange games with teams of other departments playing Sunday afternoon ball. The lineup consists of all old professional ball players as follows: M. Artka, r. f.; J. J. Schmidt, 3b.; G. W. Bradley, 2b.; F. J. Stafford, 1b.; A. Nowak,

c. f.; W. Woolford, s. s.; J. J. Schott, l. f.; J. T. Lycett, c.; and J. Z. Woods, p.

Charles Francis Ecker, our bright and noble timekeeper at the Agent's Office, after six years of hard labor has finally succeeded in maintaining an accurate check on the time of Thomas H. Mitchell, fireman on the "Transfer."

Brakeman Welsch is being severely criticized by Chief Engineer Woods of the tug "Transfer." Welsch sold the chief seven dozen leghorn eggs for hatching. A few days ago the chief found seven dozen bantam roosters in his incubator and not one leghorn, as Welsch had guaranteed the eggs to contain.

The Barge office at Locust Point can boast of having the best Veteran freight solicitor on Locust Point, in our esteemed friend Frank J. Stafford, who has secured 60 cars of freight to date. Keep up the good work, Frank.

In the accompanying photograph we have one of the principal assets of Locust Point Station, who is worthy of more than passing mention—our old friend, George W. Brower. Familiarly known as "Cap" Brower, chief of the Claim Department, his ready smile and natural wit has endeared him to all his associates. The title "Captain" is no empty honor as he won his spurs in many a hard fought battle on the ball-field as Captain of the Baltimore and Ohio baseball team at Locust Point, now extinct. Yet we have the satisfaction of having had one of the team, "Buck" Herzog, make his mark in the major league.

"Cap" Brower entered the service at Locust Point 32 years ago as a freight handler, and has, by close attention to business and loyalty to the Company, risen by degrees to the responsible position he now occupies.

He is a Veteran and true to the principles of that band, and is ever ready to respond to the call of his Company.

His past record and present intelligent system of working may well be cited as an inspiration for younger clerks to follow.

We sincerely hope to be honored with many more years of his pleasant companionship.

Riverside

Master Mechanic Fritchey honored by his son

The Baltimore American recently held a contest among the young men of Maryland for the selection of four of them to be guests of the Baltimore Steamship Company on a cruise to the West Indies. Among the winners we find the name of Clayton Willis Fritchey, son of Master Mechanic F. W. Fritchey. The contestants were required to write a 100-word letter, setting forth their reasons for wanting to visit the West Indies. One of the objects of the contest was to arouse the interest of young men in the shipping business. Young Mr. Fritchey stated in his letter that while working in a bank, he had been studying Spanish, preparatory to seizing such an opportunity to learn something of the shipping business. We congratulate our master mechanic on the success of his son.

Morgantown and Kingwood Railroad

Correspondent, D. R. FLEMING

The Morgantown and Kingwood Railroad Shops, Sabraton, W. Va., are interesting, efficient and productive. Due to the efficient and direct manner of supervision of Master Mechanic G. T. Hice, the able assistance of Roundhouse Foreman T. F. Cassell, and Boiler Foreman W. C. Johns, together with the activities of Car Foreman C. B. Gosnell, Storekeeper V. E. Farrell and Shop Clerk R. E. Sigafosse, there is a perpetual emanation of energy, with the resultant efficiency of operation. However, we are conscious of the fact that the harmonious atmosphere of the shops is due, to a large extent, to the cooperation of the workmen, and to the friendly spirit which prevails in the shops.

On May 31, A. D. Gans, exhibitor of Safety motion pictures, gave us an instructive exhibition of "Bulletin 70." This

Prof. Frank De Luca, leader of Cumberland Shop Band. Professor De Luca recently brought his band of 35 pieces to Baltimore to entertain the Veterans here. The concert was thoroughly enjoyed.

"Eber K. Cockley and some friends," he says. And both fishing! Well?

method of instruction is indeed effective in stimulating the exercise of the utmost caution, and some valuable lessons were learned. We are very glad to say that up to June 1 we have had no accidents at our shops this year. The instruction afforded us by the Safety pictures will certainly help us to maintain this record, and we wish to express our sincere appreciation of this favor.

WANTED: An automatic device for the pursuit of rabbits to succeed the beloved canine creatures of Boiler Foreman W. C. Johns.

Connellsville Division

Correspondent, S. M. DEHUFF

The accompanying picture is of Eber K. Cockley, who entered the employ of the Company in January, 1910, since which time he has rendered satisfactory service as telegrapher, clerk, station agent and train dispatcher. In the view shown Mr. Cockley and some friends were enjoying a day's outing in the Allegheny Mountains near Meyersdale, Pa., the occasion being his 29th birthday anniversary.

Glenwood Shops

Correspondent, FRANK RUSH

The accompanying photograph is of Engineer C. W. Caven and his two grandsons, Robert Wilson, left, and Charles E. Caven, right. Mr. Caven entered our service on October 9, 1874, and has been in service continuously since that date. When Mr. Caven entered the service he first worked under E. K. Hindman, and since that time has worked under many superintendents. He has always paid strict attention to business. He is well known by both shop and road employees on this division and is well liked by all.

It has been rumored that "Andy" (Chief) Bennett, the tinner, won a wife while on his furlough. We extend to Mr. and Mrs. Bennett our heartiest congratulations!

A short, stout gentleman of the Legal Department complains that his automobile was red-tagged twice in one night. Our shop clerk on the second trick, also a native of Braddock, advises that the ancient vehicle should get a Form 5.

C. E. Rider has been promoted to Assistant chief clerk to the master mechanic. Mr. Rider is succeeded as boiler clerk by J. J. Elmore, of Versailles, Pa.

Many friends of George Jones, boiler foreman in the roundhouse, were surprised to note that Mr. Jones appeared on the picture of "Camden Station Employees of 1883," published in the February number of this MAGAZINE. Mr. Jones occupied a very conspicuous place in the third row and seemed to be very highly elated over the occasion.

If any of our friends feel slighted because we have not mentioned them in this column, would refer them to the Sand House Committee, Wylie Evans, chairman.

The Correspondent Gets a Bump

On the morning of May 6 I received, in a C. C. C. & St. L. envelope, a letter, advising me that there had been formed among the various railroads in Cincinnati a Railroad Fellowship Club, in which my name had been proposed to represent the Baltimore and Ohio. A card was enclosed which would admit me to a meeting and banquet held by that club at the Gibson House on that evening. Accordingly, I swallowed hook, line and sinker, and at 6.00 p. m. presented myself at the Gibson House, only to find that I had made a mistake and that the meeting was to be held at the Sinton. Of course I went over to the Sinton. Here they advised me that they had had nothing on it. I went back to the Gibson, and had

talked with the clerk for awhile, when it suddenly dawned upon me that I was the goat for somebody's good time. It had been originally planned to have me go from one hotel to the other, but the people at the Sinton fell down on the job. Of course, the next day—but everybody who has ever had a joke played on him knows what the next day means.

We have just received a little poster from W. C. Addy, formerly MAGAZINE correspondent at Willard, Ohio, noting the fact that he is now selling a device for Ford cars called Nitrolite. This is calculated to be of great service to Ford owners in making uniform and more satisfactory the lighting arrangement on their cars. Mr. Addy can be reached at P. O. Box 97, Nevada, Mo., and Engineer F. L. Maurer, of 629 Clark Street, Willard, is handling the device for him in the local territory.

"Ike" Scanlon, Train Caller and Depot Porter, Butler, Pa.

South Chicago

Well, Cupid is still working overtime. This time it's one of the boys. "Jack" Kendrick, our genial westbound clerk, and Miss Estelle Boltz were married on June 2, the Rev. Johnston Meyers of the Emmanuel Baptist Church of Chicago, officiating. Immediately after the ceremony, they departed for Wausau, Wis. Congratulations, "Jack."

"Jack" Kendrick is not the only happy person. Chief Clerk "Jack" Hufton is smiling, too. Reason? Why, a dandy baby girl, and "Daddy Hufton" sure is happy. How about the cigars and candy, "Jack?" We're waiting.

Ethel Poole, our freight bill clerk, is now back with us again after an absence of about eight months because of an injury received from a fall in October, 1920. Glad you're back, "Poolie."

A Clean-Up Committee has been organized at South Chicago, with Mr. Altherr as the chairman. A number of sub-committees have been appointed. From appearances, in the offices and outside, they are working wonders. Keep it up! We need it at South Chicago, and no doubt at many other stations.

Our "boss," Mr. Altherr, distributed some cards issued by the Veteran Employees' Association and after a very interesting talk, we have all pledged ourselves to do our bit and endeavor to secure additional business for our Company. We are now anxiously awaiting the return of some of the cards.

On Monday, May 16, "Bulletin 70" was shown at the South Chicago Shops during the noon hour and was well attended. Safety First Always!

Indiana Division

Correspondent, H. S. ADAMS, Chief Clerk to Superintendent

In line with the general retrenchment policy, the division freight terminal at Seymour was abolished June 6, various runs changed and new division terminal established at North Vernon, Ind.

The same date Bedford Branch runs were discontinued and this work now handled by local freight train crews operating between Mitchell and North Vernon.

Slow freight crews are now running east and west out of North Vernon instead of Seymour. The change in operation will save several thousand dollars per month.

General Yardmaster L. B. Thompson, General Foreman P. T. Horan, Yard Clerks Harry Fink and Travis Spear, together with several yard and engine crews, were transferred from Seymour terminal to the new terminal at North Vernon.

E. W. Sargeant, clerk to road foreman of engines and division operator, and Miss Thelma Wheeler were married on June 28. Best wishes!

This is the third wedding from Division Offices during the past month and it is rumored we will have at least two more within the next 60 days.

Honor for Brakeman W. T. Duvall

Vice-President Galloway Has Commended Him for the Courtesy Which Prompted This Letter

JACKSON CHAMBER OF COMMERCE

Jackson, Michigan, U. S. A.

June 1, 1921.

Mr. C. W. Galloway,
Vice-President in Charge of Operation and Maintenance,
Baltimore & Ohio Railroad Co.,
Baltimore, Maryland.

Dear Mr. Galloway:

In the office of Counsel of one of the Eastern roads some time in March, he made the remark that he liked to ride on the Baltimore & Ohio because of the courtesies he always received. He mentioned particularly the manner in which your conductors approached the passengers for their tickets and other little courtesies which your employees extend to the travelling public.

I have been back and forth to Washington several times lately, and following this conversation I noticed particularly these courtesies on the part of your employees and it even extends to the porters in the Pullman cars.

A very concrete illustration was in going through Harpers Ferry one morning—there were some 10 or 15 passengers in the Observation Car, and the brakeman, whose name I understand is Duvall, courteously explained all the points of interest at Harper's Ferry to these passengers in the Observation Car and they were consequently not only much impressed but naturally grateful.

No doubt you receive complaints from time to time—possibly some commendation. I have reason to believe this expression on my part may give you some considerable satisfaction.

With kindest regards, I am

Yours very truly,

(signed) J. C. GRAHAM,

Traffic Manager.

Accounting Department

The calendar has been overworked. First we refer to it for posting time; then for figuring if we will be off on next Saturday afternoon; then everyone figures his days for vacation, and the old calendar receives some very ugly scars. After that we count the number of days before we promise to love, honor and obey. If you are in doubt about this, ask our motive power time-keeper.

We understand that one of our ladies celebrated her birthday by giving a party. They had lots of fine "eats," oodles of fun, and before they parted, a huge birthday cake was placed before them with—candles on it. How many were on it, Miss Bertlia?

Has anyone noticed how "Jo" has been all "prettied up" for the last few weeks? Look out, fellows, or someone will be around for another collection.

We have often heard that old familiar "Button, button, who's got the button?" but the question now arises, "Who's got the electric fan?"

Wouldn't it be wonderful if we all had 35 different shirts?

When Seymour terminal was discontinued on June 6 and the mechanical forces were furloughed or transferred to North Vernon, the Queen of the Roundhouse fled to the Accounting Department for refuge.

As one of our SMALL girls was passing the Rotary Club last Tuesday, the men therein began singing, "Let the Rest of the World Go By."

A few days ago we read of a man 65 years of age marrying a young girl of 26. Cheer up girls—while there's life there is hope.

It is a well known fact that Miss Fox is always on the job, and it was further evidenced the other day when, at the close of working hours, in concluding a note to her friend Herbert, the following entry was made in the lower left hand corner:

"Office of Division Accountant Seymour, Ind., June 24, 1921.
cy—

S. W. HILL."

Toledo Division

Correspondent, EDWARD M. MANNIX

Among the other live subjects being discussed by Superintendent R. B. Mann, in his staff meetings, is the effort of employees to secure more business. Excellent results are shown each week. All classes of employees are sending in reports of business secured for the Baltimore and Ohio by personal solicitation. Keep it up, boys!

Edward M. Mannix has been appointed division correspondent for our MAGAZINE by Superintendent Mann, and he has taken hold with a whole heart. He has surrounded himself with a very capable staff of newsgatherers, whose personnel is a safe assurance that the Toledo Division will be well represented: Ray Garrigus, Lima, Ohio; Frank J. McManus, Toledo, Ohio; John Rowekamp, Hamilton, Ohio, and our local contributors.

The Safety meeting for the month of May was held at Lima, Ohio, May 10. The arrangements were complete and the hall at the Coach Shop was tastefully arranged. The meeting was marked with the same spirit of activity so characteristic of the past. "Bulletin 70" was again vividly called to our minds by Assistant Superintendent J. W. Kelly, who warned us not to open an account in the Bank of Carelessness, as payment in full may be demanded

and then you are at the mercy of the old game once too often. The meeting was interesting and instructive. Many compliments were heard concerning the excellent condition of our shops and yards.

A familiar figure well known to the traveling public is Timothy O'Neill, depot master, Union Depot. Courteous and attentive, he is the real type of a business getter for our Railroad.

As predicted, "Jim" Rhodes, pipefitter, second shift, has said "Yes" and signed a life contract. "Jim" gets the exemption on income tax next year alright.

Martin Duffy, air inspector, second shift, has an heir to the throne, which the stork deposited a few weeks ago—a great big boy. Congratulations from all, Mr. and Mrs. Duffy.

I. E. Clayton, former division correspondent for our MAGAZINE, was compelled to relinquish this position because of pressure of his duties as train dispatcher.

Our master mechanic, A. E. McMillan, blew around the corners a short while ago with a brand new sedan. Of course, we all had to rubber, and it was pleasing to see "Mac" looking her over. No brake shoes, bell cord or whistle, but chances are we will have to equip her with a pilot to make it feel natural.

Talk about smiles! Look at our chief clerk to master mechanic—yes, Roy E. Morris, the proud possessor of a queen. Thanks, Mr. Stork, and good luck and best wishes to Mr. and Mrs. Morris.

Jokes of our Dayton Roundhouse Minstrels

Leahey: "Who was that young lady I saw you with today?"

Conway: "Why, that was my wife, she used to work in a bottling factory, she's a corker, but I had to stop 'er."

Doudican: "Did you hear of the new Jewish drink on the market?"

Nash: "No, what is it?"

Doudican: "He-brew."

Simmons: "Can you tell me who is the greatest consumer of tobacco in the world?"

Phares: "Yes, a Baltimore and Ohio railroad engine."

Simmons: "Please explain."

Phares: "It takes a choo to make her go, and another choo to back 'er."

Kincaid, our electrician, listening to an answer to his proposal: "I could not marry you, Lee, because you are an electrician."

"But, what difference does it make, Nellie?"

Nellie: "I am afraid that when you went out, you would come in-so-late."

Parker: "Did you hear about my watch being stolen last night?"

Todd: "Yes, I see that the lawyer got the case, and the fellow got the works."

Barry: "Do you like girls with a beautiful complexion and dreamy blue eyes?"

Proctor: "No, I like girls with green backs."

Toledo

Assistant Correspondent, FRANK J. McMANUS

The lake coal season has opened at Toledo, and during the first month of the season there has been an unusually heavy and good movement. The machine, on one occasion, during the first month of the season, dumped a total of 659 cars in 22 hours, 45 minutes, working time.

The first ore boat of the 1921 season arrived on May 15, and was unloaded May 16-17. The ore movement from dock during the winter season 1920-21 has been light, but indications are that there will be a gradual pickup in the movement.

Business conditions in the vicinity of Toledo have passed the convalescing stage, and are now more normal.

A. R. Zink, chief engineer, Toledo coal machine, has again plunged into the sea of matrimony.

Stanley A. Zion, alias "Slim," crew dispatcher, Toledo, has been worried lately because of a threat of congressmen of Ohio to place a tax on bachelors. As a matter of fact, Stanley has found himself a girl. Take a tip, "Slim," it is much easier and less expensive to pay a dog tax than to be spliced forever and a day.

H. N. Schoenberger, agent, Toledo, has purchased a "Jewish showcase," alias "Galloping Elizabeth," alias Ford sedan. Mr. Schoenberger finds his car very convenient to get him to the Y. W. C. A. to take his daily exercise. However, it took him but a few days to discover that his machine would not crawl up the back of a big truck.

In a recent issue of our interesting MAGAZINE there appeared an article entitled "Thoughts of a Box Car." The box car reported having been in Toledo for 12 days, but, in a recent conversation with the same box car it admitted that it had failed to mention that it had made 12 trips into Toledo to have enabled it to spend 12 days here.

Things one never sees at Toledo:

"Johnny" Phares, general foreman, getting thin.

"Shorty" Farling, general yard master, getting peeved.

"George" riding by a street car stop when Veronica is walking.

"Al" Tieman passing more cigars. (To be investigated by "Mort" Riker.)

"Joe" Blasius looking for a salesman to sell him modern glass or cooperative grocers' stock.

Claude Pund and Hobart Hardin admitting that they are married. This goes double for "Bill" Schoof.

Storekeeper Wrangler in anything but a good humor.

"Art" Fournier moving fast. Arthur is a pupil of Dr. Einstein and is studying the doctrine of reactivity. Judging from the speed he makes the Doctor has a real subject in Arthur, not a pupil.

Everyone breaking his neck to contribute articles for the MAGAZINE. A fellow would have to be a combination of an Indian guide, as in the divorce case; army officer looking for a pot of gold, as in the slacker case; and a regular he-woman, to get items from some departments.

Division Accountant's Office, Dayton, Ohio

Assistant Correspondent, G. M. McBRIDE

We regret to announce that our co-worker Lawrence O'Connell, C. T. time clerk, Division Accountant's office, left for the Mayo Brothers' Institute, Rochester, Minn., to undergo a serious operation for the removal of some enlarged glands on his neck. We hope he will soon be with us again. Before going he expressed his heartfelt thanks for the help rendered by his co-workers in making it possible for him to go to this institution and desires to thank all through the columns of this MAGAZINE.

Cupid's Call

While toiling and plodding and plugging along,

Let us stop just a moment to see what's gone wrong,

There's a breeze in the air of something to be,

But nobody knows, for certain, you see.

'Tis said when the bell sheep jumps over the fence,

The others will follow without recompense, Indications are fair and Cupid's at work Let's hope that his duties he never will shirk.

'Tis a hint of some diamonds floating around, Now, Jessie, don't blush, for the package was found.

We know what they stand for—Oh mercy—Oh me!

A big chest of silver, a beauty, I see.

New sidings which are under construction on the Toledo Division at present are the American Can Co., North Side; Worthington Pump & Machine Co., Elmwood Place; and Garford Motor Truck Co., Cincinnati, Ohio.

A number of the employees in the Division Accountant's office have been taking advantage of Sundays and holidays by visiting shops and other interesting points on line of road. This has proved beneficial in their work at the office: in fact, Miss Blanford insists she can qualify as a section boss. At last women are beginning to assert themselves!

On April 7, Miss Frances Barr, the pretty fuel accountant, stole a march on the other employees and, with Mr. Clyde Townsend, slipped out of single bliss into everlasting love, the romance having started in the Division Accountant's office where Mr. Townsend was formerly employed. Mr. and Mrs. Townsend spent their honeymoon in Chicago. They have the best wishes of a host of friends.

Lima

Assistant Correspondent, RAY GARRIGUS

Lima Shops is organizing a baseball club that bids fair to rival the Cleveland Indians before the season is over. Several good men have been signed and we are expecting to see Lima on the baseball map when the team gets into action. Following is our lineup:

J. Lawrence, p.; W. Conkle, c.; G. Sobers, 1b.; J. Grubb, 2b.; J. Coffey, 3b.; P. Foley, s. s.; R. Ireland, 1. f.; W. E. Baker, c. f.; P. Finn, r. f.; Koch and Koch, umpires.

We understand that Mrs. N. H. Tunks, wife of our steel car foreman, has been taken to a Columbus hospital. We extend our sympathy to Mr. Tunks and hope that Mrs. Tunks will soon be back in her home.

Much is heard about the "last will and testament" of our genial blacksmith foreman, Mr. Woodworth. If "General Rumor" is to be believed, it seems that the estate was to be divided equally between the stenographer, Miss Fitzgerald, and the chief clerk, Barrett. Ask Barrett: he knows.

One of the miracles of railroading happened recently—a tank car in shop with all eight wheels burst because of sliding and heating, cut out of a "QD" freight and only about 10 cars from the caboose! Luck? You may call it luck if you want to but—do you suppose that the conductor's wife, at home with the children, even imagined as the train rolled along in the night that her chance of seeing her husband again alive hung by a thread so slender that it might snap in a second? But, the train came into the yards safely and it wasn't luck either.

Thoughts while strolling around the yards in Lima

Business picking up again.

Yard blocked with coal cars.

"Red" Ireland, 37 years old, auburn hair (get the auburn), no teeth, a new Ford and last but not least, a bachelor. Here's your chance, girls.

It's odd how some men will persist in wearing celluloid collars.

Yardmaster Murphy, with an overcoat.
Temperature 95 in the shade.

If it weren't for the Koch twins, the old yard would resemble a country graveyard at midnight. Otto selling strawberries, and Oscar picking the wild flowers.

A. R. A. clerk Holmes went fishing and caught a cold that lasted two weeks longer than any fish he might have caught.

A bright pink shirt with Storekeeper Britt somewhere on the inside. Heard the shirt before I heard Britt and I'll tell the world that's going some.

Five engines on the ready track.
Black, sullen, outwardly lifeless looking monsters ready for another day's work.

Edward Tschuor all smiles. Cigars a plenty. Yes, it weighs eight pounds.

Medical Examiner Hutchinson s(up)porting a new car.

Mr. O'Brien, taking a vacation. Reminds me of a newspaper advertisement: "Spend your vacation in California and the National Parks."

There I go dreaming again. Hey! get off the track!

Jack Harholdt and his toy 93 almost ran over me again.

Guess I'd better watch my step.

I never did like to shovel coal.

Robert J. Colbaugh

(Continued from page 45)

the youngest employe in train service on the Pittsburgh Division, and was known as the boy brakeman. This position he held until 1871, when he was transferred from the Transportation Department to the Mechanical Department as fireman. In January, 1875, he was promoted to engineer; in October, 1886 he came to Pittsburgh and applied to Master Mechanic Kalbaugh for a position as engineer. He was given a run from Glenwood to Wheeling, where he ran on a freight train until July 12, 1889, when he was transferred to the Pittsburgh Division, which took in all of the territory between Pittsburgh, Connellsville, Fairmont and Cumberland. In 1902 he entered the regular passenger service. He ran a local accommodation between Pittsburgh and Versailles until March 22, 1920, and on April 1, 1920, he was retired from active service.

Akron Welfare Picnic

(Continued from page 51)

However, I can run away and go to picnics, and I have made up my mind that I'm not going to be left behind any more, even if I do have to spend my time under the tables.

About half-past seven o'clock some of the folks began to make ready to leave, so I hustled up and sneaked away across the

fields again. When I got home I sat up on the porch and waited for the family to come. Sure enough, in a little while they arrived, tired, but happy. They came up and petted me on the head.

"Dear old Betty, you had to stay at home all by yourself and take care of the house, didn't you?"

And I felt so ashamed that all I could do was to put my head between my paws for I couldn't look them in the face. If I only could have told them what a nice time I really had! A little later I went around to the kitchen porch. There sat a nice big plate of picnic food for me. Of course, I was so filled up already that I couldn't think of eating anything, so I just took the big ham bone and hid it under the porch until the next day.

THE BALTIMORE AND OHIO GENERAL OFFICE DUCKPIN LEAGUE

We closed a very successful season with the bowling of the championship games on the evenings of May 10 and 13. The standing of the two sections is as follows:

Section A

	GAMES	WON	LOST	PERCENT.	TOTAL PINS	AVERAGE

Chief Engineer.
Maintenance of Way.
Fuel Agent.
General Freight Claim Agent.

Sidelights on the Cleveland Division

By J. E. Fahy

Assistant Superintendent

ISOLATED somewhat from the main line of the Baltimore and Ohio Railroad, or what might be said, "Up the lane and away from the beaten path," runs the no less important Cleveland Division. Little about it is seen in print except a few general items each month and our neighbors may therefore feel justified in not knowing much about our performance.

A news writer would say that we are situated on the shores of Lake Erie, both in Cleveland and Lorain, and extend toward the Ohio River and the famous West Virginia Coal Mining territory. In addition to nearly all classes of industries located on the line, we have a direct coal route to the Great Lakes and one of the most important coal shipping ports of these wonderful lakes, *i. e.*, Lorain. We are therefore a freight and coal division with very little claim for distinction in passenger service. Yet our passenger earnings in 1920 ran from \$41,000.00 to \$65,000.00 per month, with about \$1,200.00 per month earnings from milk, or \$633,069.72 passenger earnings for the year. The first two months of 1921 show an increase in milk earnings and are about \$5,000.00 per month over the same month last year in passenger earnings. This may be partly due to the Passenger Department slogan "Fill them up," but is more probably due to the increase in passenger rate, as travel is numerically less than last year.

Our station earnings for 1920 were \$31,707,935.00. The first three months of 1921 show a decrease in this of \$542,151.00 over same period in 1920, all of this having occurred in February and March, as January, 1921, exceeded 1920 by \$128,482.00.

With a very slight improvement of our track conditions, and with reduction of delays due to less congestion in traffic, and getting trains started from terminals, our average time of trains between Lorain and Holloway has been reduced better than two hours.

Overtime, which ranged from 29 to 30 per cent. in 1920, has been reduced to 21 per cent. in the month of March.

During April we operated so successfully that we did not have a main track accident: this record is the best for at least five years and probably more, as that is as far back as we have maintained a ready record. You will naturally say that this record is due to the decrease in business. True, this has had great bearing on it, but it does not entirely answer the question, for during this period we have averaged eight bad order cars set out on line daily. Had any one of these cars been overlooked by watchful trainmen, our record could easily have been spoiled. This indicates closer attention to duty.

Damage to equipment in yards is much lower per car handled than in the past. Cars are being better handled by switchmen, this also being reflected in the decrease in our damage to freight. In general the Cleveland Division is now headed the right way and can, by careful watching by all, be kept in the improving columns. What we must all strive to do is to prevent leaks from injuries, loss and damage and inattention to duty, so that every dollar taken in will not have to be divided except between our employees and the Company.

I regret that we cannot say that business is rushing or that the indications are as satisfactory as could be desired. The lower lake dock and furnace yards are still well

loaded with last year's ore shipments and the opportunity for ore and grain tonnage "down bound" is combining with the small demand, keeping the coal movement on the lakes far behind a normal year. This may gradually improve towards the close of summer.

Activities in Cleveland are generally quiet with better business conditions advocated and hoped for by all business interests.

His Limit Reached

"Now, Mary, I don't want to be misunderstood in this matter. I am willing that you should be a suffragette, I am willing to get up in the morning, split the kindling, light the fire, cook the breakfast, wash the dishes and dust the parlor, but I'll be doggoned if I'm going to wear pink ribbons in my nightg to fool the baby!"

R. D. STOCKDALE,
Columbus, Ohio

The Railroad Clerk

By Charles H. Minnick

Boiler Clerk, East Side, Philadelphia

He was only an humble railroad clerk,
And he worked for the B. & O.,
He wrote up reports and checked engine snorts
From morn till eve's siren's hoarse blow.
'Twas mere paper work, but he didn't shirk,
Full well their importance he knew,
Tho' derided by some, "The time may yet come,"
Said he, "when I'll manage the crew."
"On the job" every day, right into the fray
He goes where his work it requires;
Be it office or shed, he uses his head,
Well fulfilling his boss's desires.
At times, every day, he must hasten away—
From his desk to the roundhouse he goes—
There in smoke-filled big shops, 'midst the roar of valve pops,
Hunting "Smitty" to order steam hose.
If the staybolts break loose, or uncoupled caboose
Runs down hill and falls into the brook,
All these facts, clear and right, must be entered by night,
By the clerk in his "Bad Order Book."
Keeping track of the men who are off now and then
Is enough quite to tax a man's brain,
But the thing that takes thought, is to say just who ought
By seniority come back again.
These are facts, by the by, which you cannot deny
And are shared in alike by clerks all,
Paper work it may be, but important you see,
Or the Road wouldn't have us at all.
So, when thinking of clerks, don't pick out one who shirks,
On the Railroad—or one who's too slow.
Those who work all the time for the good of the Line
Are the ones who advance B. & O.

*A Railroader
in the Making*

No Money Down

The Genuine Gold Medal Electric Washing Machine, the world's best machine, the winner of the gold medal at the Panama Pacific Exposition in 1915, on

4 Weeks Trial

Sensational offer—find out free—send the coupon. The famous Gold Medal Electric Washing Machine sent direct to your home for four weeks of washing *without a penny down!* Convince yourself *first*—that's our offer. See how it washes the clothes clean and white; how it takes the back-breaking drudgery out of washing. No risk to you. Not a penny of cost—not even freight charges—if not satisfied. And—for a limited time, on a special factory output, only

\$99.50!

Yes, washing machine prices smashed on the genuine Gold Medal machine—the best of all machines. Washes as well as any make at any price—the very best.

The factory price—less than the price dealers have been paying and are paying right today for this same machine, for this exact, identical 1921 model—direct to you on this sacrifice offer. And besides—

Special Easy Monthly Terms—As Low As

\$4.00 a Month!

Easy terms depending upon amount of first payment—but no money in advance—4 weeks' trial first—then, if satisfied, a year to pay!

More than
35,000
Women
have bought
this identical
model
at the
full price
and are
satisfied
users!

Here's the Gold Medal Washing Machine exactly as you have seen it in the windows of the dealers and exactly as we ship it to you. It has the one way

noiseless cylinder which makes even the daintiest laces safe in the Gold Medal. Lovel Electric Swinging Wringer with Automatic Safety Release, adjustable in 3 positions, recognized everywhere as the best wringer ever made. Genuine DOMESTIC ball bearing motor, known as the best for washing machines. Automatic oiling system. All moving parts enclosed—no danger to children. No belt to get out of order direct shaft drive—simpler. Celebrated Armco Rust-Resisting Iron (used throughout) is proof against any kind of water, soap and alkalis. A good sized family washing done in 90 minutes—about one hour and a half—and at a cost of 2½ cents for electricity. Can be run from any electric light socket or from a farm lighting plant. Every Gold Medal machine shipped on this offer is sold on a

10-Year Guarantee Our absolute written guarantee for 10 years sent with every machine. The longest and most sweeping absolute guarantee ever given on a washing machine. The best—at the factory price—and guaranteed.

5000 of these Gold Medal Washing Machines must be sold at once. The manufacturer was overstocked; his dealers wouldn't give up their fat profits, so they couldn't sell. So, the manufacturer offered these 5,000 machines to Straus & Schram at the factory cost for quick sale. We offer them now to our customers direct at the factory price, while they last. When these 5,000 are gone, we won't say how much more the price will be.

These machines at \$99.50 are the exact in value of other machines at huge prices—\$150 to \$165 and up. We guarantee that these Gold Medal machines were formerly priced by the factory to sell at \$150 up. Now note this: Formerly priced \$150 and up, and now on a lot of 5,000 finished best machines—**\$99.50**. Rockbottom price and a four weeks' free trial and easy terms thereafter. Send coupon—for free catalog.

Send coupon. No obligation. Get our completely illustrated catalog, FREE. Learn about our special factory output offer:—5,000 Genuine Gold Medal Electric Washing Machines, 1921 Model, *while they last*, only \$99.50! The exact equal in value to the best washer you ever saw at \$150. And on easy monthly terms—four weeks' free trial. First come, first served. Don't be disappointed—get the free catalog now!

Madam: It is time to get through with the drudgery of the washboard which has killed more women than war has killed men. Surely thy family can save enough for the small monthly payment to keep the mother well and happy. Send this coupon for free catalog NOW!

\$1 Brings Hartman's Richly Upholstered 7 Piece Suite

Quarter-Sawn and Solid Oak

Send only \$1 for this complete suite of library, parlor, or living room furniture—seven splendid, massive pieces. Use it 30 days, on free trial, then if you don't say that it is even more than you expected, ship it back and we return your \$1 and pay transportation charges both ways.

Over a Year to Pay

Only by seeing this splendid quarter-sawn and solid oak suite can you realize how it will add to the appearance of your home. Only by examining it can you appreciate what a record-breaking bargain it is at our smashed price. Furniture like this—elegant, comfortable, massive—can be bought nowhere else at anywhere near the price, nor on such liberal terms.

Handsome Fumed Finish! TABLE, solid oak with top 24x36 inches. ARM ROCKER, solid oak with quarter-sawn top panel and arm rests; seat 18x19 in. SIDE ROCKER, solid oak with quarter-sawn oak top rail; seat 16x14 inches. ARM CHAIR, 37 inches high, and SIDE CHAIR, 36 inches high, with seat 16x14 inches.

Table and chairs stand on noiseless glides. Backs and seats upholstered in durable imitation Spanish brown leather. Comfortable spring seats. TABOURETTE, 16 1/4 inches high with 10-inch top, is solid oak. BOOK BLOCKS, heavy enough to support a liberal number of volumes. Shipped (fully boxed, "knocked down" to lessen freight charges) from factory in Central Indiana, Western New York State or Chicago warehouse. Send the coupon.

Order by No. 112CCMA5. Price, \$39.95. Send \$1.00 now. Pay balance \$3.00 per month.

Important!

Do not confuse this fine Hartman suite with furniture which may look like it in pictures, but is inferior in construction and finish. Every Hartman piece is made to give lasting service as well as to have an elegant appearance. Note also the handsome upholstering, spring seats, ornamented backs, rounded arms, and quarter-sawn oak in this special suite. See if any other house offers anything like this at near our price.

"Am They a Hell?"

Submitted by B. F. Thompson
Telegraph Department

THE newly appointed pastor of the colored church announced that the subject of his first sermon would be "Am They a Hell, or Am They Not? And I will prove They Am." The church was packed as the new parson arose to prove his assertion. "Brethern," he said, "the Lord made the world round like a ball." "Amen," cried the congregation. "An the Lord made the world so it could turn round and round." "Amen," was the response. "And the Lord made two axles for the world to go round on, and he put one axle at the North Pole and one axle at the South Pole." "Amen," agreed the congregation. "And the Lord put a lot of oil and axle grease in the center of the world so as to keep the axles well greased and oiled." "Amen," said the congregation. "And then a lot of sinners digs wells in Pennsylvania and steal the Lord's oil and grease. And they dig wells in Kentucky, Louisiana, Oklahoma, Arkansas and Texas and in Mexico and Russia, and steal the Lord's grease and oil. And some day they'll dig so many wells that they will have all of the Lord's oil and grease and them two axles is going to get hot. And that will be Hell, brethern, that will be Hell."

A Joke that Recoiled

A young man was walking up and down the platform of a country railroad junction in England trying to see a car that had a vacant seat. He didn't find it, and assuming an official air, he walked up to the last car and announced in stentorian tones: "All out here; this car isn't going."

There were exclamations loud and deep from the occupants of the car, but they all piled out and made their way to cars ahead. The smile on the young man's face increased as he took possession of a seat and appropriated another for his luggage.

"Ah," he murmured, "It's a grand thing to be born clever! Now I wish they'd start."

By and by the stationmaster put his head in the door: "Are you the smart young man who said this car wasn't going?"

"Yes," said the clever one, smiling.

"Well, said the stationmaster, with a grin also, "it isn't. The brakeman heard what you said, and he uncoupled it. He thought you were a director."

—Pittsburgh Chronicle-Telegraph.

Had a Fellow

The country pastor made it a point to welcome any stranger cordially. One evening a Swedish girl, employed as a domestic in one of the fashionable homes, was present. The minister welcomed her to the church and expressed the hope that she would be a regular attendant. Finally he said that if she would be at home some evening during the week he would call.

"T'ank you," she murmured bashfully, "but Ay have a fella."—Speed-Up.

Slight Accident

A Chink by the name of Ching Ling, Fell off a street car, bing, bing!

The con turned his head,

To the passengers said:

"The car's lost a washer, ding ding."

—United Railways Bulletin.

Nobody sees a big hole in a little girl's stocking.

But a little hole in a big girl's stocking will start a parade!—A-x-I-Dent-Ax.

Published monthly at Baltimore, Maryland, by the Baltimore and Ohio Railroad to improve its service to the public and to promote a greater community of interest among its employees. Contributions are welcomed. Manuscripts and photographs will be returned upon request.

THE READER AND ADVERTISING

Circulation of the Baltimore and Ohio Magazine is over 36,000 copies per issue, our aim being to place it in the hands and in the homes of practically all English speaking employees of the Railroad. An examination of our advertising will show that it conforms to the highest standards. We do not guarantee it, but we believe that it means exactly what it says, and for that reason feel free to urge our readers to patronize our advertisers whenever they consistently can.

Easily Routed

Sir: Speaking of embarrassing moments, I was talking to a few sweet young things at Virginia Beach, and the subject of sunburn came up. I mentioned that my face and neck were badly burned, and one of the s. y. t. replied: "That's nothing, you should see me; I'm sunburned all over." That scattered the crowd, and I grabbed a handful of boxcars and left town.

You Need These Books

PRETTY soon you will be called up to take your examination and you will have to face a lot of hard questions. Better brush up a little. Our books contain every question with its answer you are likely to be asked by the examiner. They are the only complete railway books issued giving up-to-date, reliable information. Don't put off until examination day comes, but send for the following books at once:

Westinghouse E T Air Brake Instruction Pocket Book Catechism. By Wm. W. Wood, Air Brake Instructor.

A practical work containing examination questions and answers on the E T Equipment. Covering what the E T Brake is. How it should be operated. What to do when defective. Not a question can be asked of the engineman up for promotion on either the No. 5 or No. 6 E T Equipment that is not asked and answered in the book. If you want to thoroughly understand the E T equipment get a copy of this book. It covers every detail. Makes Air Brake troubles and examination easy. Fully illustrated with colored plates, showing various pressures. **\$2.50**

Locomotive Breakdowns and Their Remedies. By Geo. L. Fowler.

Revised by Wm. W. Wood, Air Brake Instructor. It is out of the question to try and tell you about every subject that is covered in this pocket edition of Locomotive Breakdowns. Just imagine all the common troubles that an engineer may expect to happen some time, and then add all of the unexpected ones, troubles that could occur, but that you had never thought about, and you will find that they are all treated with the very best methods of repair. Walschaert Locomotive Valve Gear Troubles. Electric Headlight Troubles, as well as Questions and Answers on the Air Brake, are all included. 294 pages. Fully illustrated in colors. **\$1.50**

Train Rule Examinations Made Easy. By G. E. Collingwood.

This is a book which every railroad man, no matter what department he is in, should have, as it is written by a man who understands the subject thoroughly. Mr. G. E. Collingwood, the author, is a recognized authority on train rules and train orders. For years he has edited the train rule department in four of the foremost railroad magazines in the United States. 256 pages. Fully illustrated with train signals in colors. **\$1.50**

Nearly 500 Questions with their Answers are Included.

Walschaert Locomotive Valve Gear. By Wm. W. Wood.

If you would thoroughly understand the Walschaert Valve Gear, you should possess a copy of this book. The author divides the subject into four divisions, as follows: I—Analysis of the gear. II—Designing and erection of the gear. III—Advantages of the gear. IV—Questions and answers relating to the Walschaert Valve Gear. This book is specially valuable to those preparing for promotion. Third edition, revised and enlarged. 245 pages, fully illustrated. Cloth. **\$2.50**

Air Brake Catechism. By Robert H. Blackall.

This book is a standard text book. It is the only practical and complete work published. Treats on the equipment manufactured by the Westinghouse Air Brake Company, including the E T Locomotive Brake Equipment, the X (Quick Service) Triple Valve for freight service; the L High Speed Triple Valve; the P-C Passenger Brake Equipment, and the Cross Compound Pump. The operation of all parts of the apparatus is explained in detail and a practical way of locating their peculiarities and remedying their defects is given. Endorsed and used by air brake instructors and examiners on nearly every railroad in the United States. Twenty-seventh edition. 411 pages, fully illustrated with folding plates and diagrams. New edition. **\$2.50**

Practical Instructor and Reference Book for Locomotive Firemen and Engineers. By Chas. F. Lockhart.

An entirely new book on the locomotive. It appeals to every railroad man, as it tells him how things are done and the right way to do them. Written by a man who has had years of practical experience in locomotive shops and on the road firing and running. The information given in this book cannot be found in any other similar treatise. Eight hundred and fifty-one questions with their answers are included, which will prove specially helpful to those preparing for examination. 362 pages, 88 illustrations. Cloth. **\$2.50**

Link Motions, Valves and Valve Setting. By Fred H. Colvin, Associate Editor of *American Machinist*.

A handy book that clears up the mysteries of valve setting. Shows the different valve gears in use, how they work, and why. Piston and slide valves of different types are illustrated and explained. A book that every railroad man in the motive power department ought to have. Fully illustrated. New revised edition recently published. **75 CENTS**

Locomotive Boiler Construction. By Frank A. Kleinhans.

The only book showing how locomotive boilers are built in modern shops. Shows all types of boilers used; gives details of construction; practical facts, such as life of riveting punches and dies, work done per day, allowance for bending and flanging sheets and other data that means dollars to any railroad man. Second edition. 451 pages, 334 illustrations. Six folding plates. Cloth. **\$3.50**

How It Sounds to Read Proof on Poetry

Proofreader: As flowers without the sunshine fair—comma—so—comma—without you—comma—do I breathe a dark and dismal mare—

Copvholder: Thunder; not mare—air.
Proofreader: I breathe a dark and dismal air—comma—as flowers—comma—

Copvholder: Shoot the comma.

Proofreader: 'Tis done. As flowers without the sunshine fair—semicolon—confound slug seven, he never justifies his lines—no joy in life—comma—no worms—

Copvholder: Warmth.

Proofreader: No warmth I share—comma—and health and vigorous flies—

Copvholder: Blazes; health and vigor fly—

Proofreader: Health and vigor fly—Comma—full stop.

That's about the sound of it when poetry is on deck.—*Des Moines Register*.

Send No Money

Not one cent in advance for this combination 7-Window Pass Case, Card Case and Bill Fold

Will show 7 regular size passes, identification cards, and photos, each under a separate transparent celluloid face protecting it from dirt and wear. Also has gusseted pockets for smaller cards and roomy billfold pocket in back. Railroad men tell me it is the handiest thing they ever saw. Over 20,000 of them now being carried.

Your name and address (3 lines) and your emblem or insignia (order, brotherhood, lodge—I have them all) engraved in 23K gold absolutely free. This work alone is worth \$1.50 of anybody's money.

Case is beautifully made of fine black seal grain genuine leather. Strongly sewed, neat and convenient. Size, 3 1-2 x 4 1-2 inches closed.

Don't send me a single penny in advance. Just send your name and address on the coupon below with the emblem or insignia you want. I will send you this wonderful pass case at once, and when the postman delivers it to you, when you actually have the goods, pay him only \$3.00 and postage. I positively guarantee that if you don't think this is the best buy you ever made, you may return it and I will refund your money immediately. I have been in this business for over 10 years.

You take no risk! Send the coupon TODAY!

Olaf Halvorsen, The Pass Case Man
Dept. C401 Masonic Temple, Chicago

You may send me your genuine leather 7-Window Pass Case with my name, city, state and emblem engraved in 23K gold. I will pay the postman only \$3.00 and postage when he delivers it. If I am not entirely satisfied with the case, I will return it and you will refund my money at once. I take no risk.

MISS MARGARET GRAMMES

*Clerk, Agent's Office, Camden Station, and Winner of First Prize,
Beauty Contest, Baltimore Fashion Show*

IN THE recent Beauty Contest conducted by the *Baltimore American*, one of Baltimore's largest daily papers, one of our own Baltimore and Ohio girls, Miss Margaret Grammes, clerk, Agent's office, Camden Station, was awarded first prize. The second prize went to Miss Elsie Ziegler, a model in one of Baltimore's leading importing establishments, and, singularly, the third went into another Baltimore and Ohio home, that of Miss Irma Knabe, whose brother and sister are former employes of the Baltimore and Ohio.

Miss Grammes, a Western High School girl, has been with the Company for two and one-half years as export clerk, and although she has always been considered an unusually pretty girl, the announcement that she had won the first prize came as a surprise to her. A hundred of the prettiest girls selected were asked to appear at the Hotel Belvedere for a final decision.

"Here," says Miss Grammes, "we were marched around and around a room to the tune of a fox trot. It was certainly embarrassing.

Then, after the final decision, there were a half-dozen reporters who nearly frightened me to death."

(Continued on page 41)

Senior Vice-President Shriver Explains the Financial Status Existing between the Government and the Railroads and How It Affects the Employment Situation

GEORGE M. SHRIVER, senior vice-president of the Baltimore and Ohio Railroad Company, who has been attending the hearings at Washington before the Senate Committee on Interstate Commerce in connection with the pending legislation providing for the funding of certain obligations of the railroads to the Government, stated that there was apparently a good deal of misunderstanding as to the purposes of the legislation and how it comes to be necessary.

"Briefly stated," said Mr. Shriver, "the situation is this: the Government during the period of Federal control expended large sums of money upon the railroads for additions and betterments and improvements, with or without the consent of the corporations, and largely from the standpoint of war necessity. The Transportation Act, 1920, and the contract with the railroads, clearly contemplated that such expenditures would be funded; that is, that these expenditures would be considered advances to the railroads which they would repay over a period of ten years. The appropriations so far made were not sufficient to provide these funds and consequently the Director General was compelled to withhold from the carriers as an offset large amounts due to them on account of compensation, depreciation, etc., which should have been paid over to the corporations when their properties were returned to them on March 1, 1920.

"The lack of these funds," said Mr. Shriver, "has prevented the railroads from going ahead with their repair and improvement work, which they would otherwise do and thus add to the employment at a period when it is most needed."

Mr. Shriver said that roughly the balance due to the Baltimore and Ohio Company, on account of compensation, depreciation and other cash items, subject to final accounting, was something like \$13,000,000. That the Company has on its tracks, awaiting repair, over 700 locomotives, compared with, say, 325 in normal times, and is holding about 10,000 bad order cars, as compared with 3,000 or 4,000 in normal times. It is estimated that to put these cars and engines in condition would call for an expenditure of \$8,000,000 or \$9,000,000. If the Director General could pay the Company these funds, it would be in position to undertake the repair of this bad order equipment and in that connection to re-employ at once probably 5,000 or 6,000 additional men. This would not only aid in reducing the number of unemployed, but at the same time would put the equipment in good order so that the Railroad would be ready to take care of the demands of traffic if, as is expected, it should gradually revive. Otherwise it might happen that when there is a resumption of business the Baltimore and Ohio, in common with other railroads, will find itself unable to meet the requirements.

"The facts, as I glean them from the statements of the Director General and others before the Senate Committee," said Mr. Shriver, "are as follows:

The Director General owes the railroads on account of—	
Unpaid compensation.....	\$ 459,609,114
Depreciation, property retired, etc.....	313,239,824
Total.....	\$ 772,848,938
Less amount due to the Director General by the railroads in open accounts.....	196,486,079
Balance.....	\$ 576,362,859
In addition, the Director General estimates there will be required payment to make up the difference in inventory between the material taken over by the Director General on January 1, 1918, and that returned to the railroads at the end of Federal control.....	
	48,396,00
Making total estimated balance due the railroads of.....	\$ 624,758,859
subject to adjustment in final account.	
Section 207 of the Transportation Act provides that the President may, in his discretion, fund the additions and betterments payable by the railroads over a period of ten years.	
During Federal control the Government expended and charged to the railroads—	
A—For additions and betterments.....	\$ 763,031,625
B—For equipment, purchased by the Director General and allocated to the railroads....	381,649,957
A total of.....	\$1,144,681,582
In settlement for a large proportion of the equipment the Director General accepted, as provided by Act of Congress, equipment trust obligations of the railroads payable over a period of 15 years to the amount of....	
	\$332,068,950
There has been paid by the railroads on account of final settlement.....	55,352,120
And there has been funded through bonds and notes running over a period of 10 years.....	60,925,000
Total.....	\$ 448,346,070
Leaving a balance due the Government and for which final settlement has not been arranged.....	
(It is the opinion of the Director General that it will not be necessary to fund in excess of \$500,000,000, the balance being carried by the roads themselves.)	\$ 696,335,512

"There being no funds from other sources to cover the expenditures made by the Director General for additions and betterments, he has been compelled to withhold from the railroads the balance due them as an offset against the expenditures for additions and betterments. Some of these expenditures were strictly for war purposes, and the extent to which the Government should assume responsibility therefor is a matter for settlement with the Director General in final negotiation, and all of the expenditures were made for purposes which it was believed were proper and necessary and primarily for carrying on the war activities.

"Ordinarily the railroads themselves would not undertake expenditures of such magnitude unless and until they were able to provide for the financing of the same through the issue of bonds and stock or were able to get the funds from other sources. Because their properties were in the hands of the Government, and because the money market was largely monopolized by the Government during the period of the war, the railroads were unable—and indeed were not called upon to any extent—to

finance expenditures for additions and betterments. And the natural assumption was that the expenditures made by the Government would be funded in accordance with the authority contained in the Transportation Act, 1920. It is proposed now that the Director General fund these expenditures and to the extent judgment dictates accept properly secured obligations of the railroads, running for not exceeding ten years, in settlement. Had this been done originally, then at the end of Federal control when the railroads were turned back to their owners the Director General would have been able at the same time to have paid over to the carriers the balance due them on account of compensation, depreciation, etc., in the approximate amount of \$624,757,000.

(Special attention is called to the fact that, contrary to the contentions in some directions, these claims do not include a single dollar reflecting the much mooted question of inefficiency of labor—certainly the Baltimore and Ohio Company has made no such claim.)

"The failure of the carriers to receive these funds has prevented them from paying currently for materials and

supplies purchased since the end of Federal control, or to undertake the thorough repair of much of their equipment which was in bad condition at the end of Federal control, or has since become so. It is estimated that the railroads owe currently for materials, supplies and fuel \$300,000,000 to \$350,000,000.

"There are over 300,000 bad order cars on the railroads of the country, which is approximately 200,000 above normal; in addition there are a large number of locomotives held awaiting repairs, and it is estimated that to put these cars and locomotives in good working condition would require from \$300,000,000 to \$350,000,000.

"The pending legislation purposes to authorize the War Finance Corporation to purchase from the Director General obligations which have or may be given to him to cover additions and betterments and equipment in the amount of \$500,000,000. If this is done, the Director General will be in position to accept the notes and obligations of the railroads for the balance due on account of additions and betterments, or so much thereof as he finds necessary in his discretion to fund, and there will then

They Helped Get the Picture for the Cover of This Issue

When it comes to arranging the setting for a magazine cover design, Timothy Donovan, veteran engineer of Brunswick, Md., classes quite as high as he does when pulling a throttle.

The above picture shows his pretty camp on the Potomac at Weverton, whither repaired one fine June day Miss Carlyn Oehm, clerk in the Treasurer's Office, Louis Beck, secretary to superintendent, Fuel and Locomotive Performance, and George B. Luckey, chief photographer of the Railroad. And the striking cover of the canoeists attests the art of the trio—embellished by a typical bit of Baltimore and Ohio scenery as the background.

Mr. Donovan was the boss of the expedition, and, with his son, his son's friend, J. E. Dunn, and J. A. Van Pelt (all employees at Brunswick and appearing from left to right in the camp picture), handled the details in *Art* style, even to the soup served at lunch, which was made from a 12 pound turtle caught by the party the night before in the Potomac

be owing to the railroads, and the Director General will be in position to pay them, balance on account of approximately \$500,000,000.

"The receipt of these funds will enable the railroads generally to pay off their current obligations for materials, supplies and fuel, thereby placing these industries in better position to expand their business. It will also enable the carriers to promptly undertake the abnormal repairs to equipment which it is estimated will call for the reemployment of some 200,000 to 250,000 additional men. Directly and indirectly, the settlement proposed should enable the giving of employment to more than 500,000 men.

While the bill contemplates what in effect is a loan to the railroads of some \$500,000,000, this loan is to pay for additions and betterments made as part of the war program and is such an advance as was contemplated in the original Transportation Act, and the purpose of it is to place the Director General in funds to pay the railroads what is due them; the railroads in turn will then be able to pay their obligations and undertake the extensive repair and

improvement work so urgently necessary. This will involve the employment of large numbers of men and it

is believed will be most helpful in accelerating the revival of business activities and general prosperity."

The Marine Show and Export and Import Exposition in Baltimore

DURING the week of July 11, the shipping, export, transportation and other business interests of Baltimore held an exposition in the Fifth Regiment Armory. Admission was by complimentary ticket, but it was possible for anybody interested to secure one and as a result it is estimated that approximately 100,000 people saw the exposition during the week.

The dominant note was the importance of the merchant marine of the United States to the future prosperity of the country. When the World War started 90 per cent. of the water-borne commerce, export and import, of the United States, was carried in foreign bottoms. Seventy years ago, in the days of the famous Baltimore clipper, the fastest sailing commercial vessel and one of the

most famous types of vessels which ever sailed the seas, these figures were reversed and 90 per cent. of the water-borne commerce of the United States was carried by American owned ships.

The intensive program carried on by the Shipping Board during the war was one of the monumental achievements of our country, but notwithstanding the fact that we now have an enormous tonnage of American ships available for our commerce, the shipping interests are in a most critical condition. This is due largely to the slump in the demand for shipping facilities; to the sharp decrease in freight rates; to the competition offered by the shipping of other countries, largely because of their lower costs of operation, particularly in respect to labor; and to certain laws

The Baltimore and Ohio Exhibit at the Baltimore Marine Show and Import and Export Exposition. Handsome photographs of notable scenes on the Baltimore and Ohio made our exhibit an attractive and interesting one. Some of the views—the Baltimore and Ohio Building in Baltimore, the grain elevators at Locust Point, the Curtis Bay Coal Pier and others—can be distinguished in the accompanying cut. Interesting pamphlets in regard to the facilities offered by the Baltimore and Ohio in Baltimore and particularly in regard to the Curtis Bay Coal Pier, were distributed.

In the insert above a part of the exhibit of the United States Shipping Board is seen. The world map shows trade routes and was the background for the speakers' platform from which addresses by men of prominence in the business and shipping world were made daily.

governing shipping now in effect in this country and which shipping men declare are inimical to the best interests of our merchant marine, are impractical and unnecessary.

It was to bring all these facts before the general public and to educate them to the true knowledge of the importance of our merchant marine to the prosperity of the country, that this exposition was held.

Notable exhibits were made by the United States Navy, Westinghouse Company, the Bethlehem Steel Company and the cities of Newark, N. J., and Baltimore, Md. From an artistic standpoint, the exhibit of the Baltimore and Ohio ranked high, as may be seen from the accompanying picture showing typical views of the Railroad. These were printed in a beautiful sepia finish and effectively framed, and although our exhibit was not large, it was attractive and creditable.

On the night of July 15 a subscription banquet was held in Baltimore in connection with the exposition. Business men of the city attended in large numbers and listened with deep interest to the exposition of the shipping situation of the United States by such men as Edward C. Plumer and Myer Listner, new members of the United States Shipping Board, and P. H. W. Ross, president of the National Marine League.

It was made clear to everybody that there is a most difficult task facing our Government and our shipping interests in placing our merchant marine on a profitable operating basis, on a basis on which it can compete successfully with the shipping facilities offered by other countries. The note of confidence and optimism was not lacking, however.

The importance of such an exposition to the business interests of the country may be gauged to a degree from the importance which export trade means to the Baltimore and Ohio. Our lines serve the greatest industrial communities of the country, located in 13 different states. Our traffic possibilities in coal alone are enormous. In order to maintain our prosperity the products of these industrial cities and particularly the coal mines, not to mention the great surplus of agricultural products which are raised each year in the country, must be exported.

The Baltimore and Ohio has unequalled advantages for this export business because of the superior facilities offered by the port of Baltimore, its nearness to the industrial centers of the country and to the coal regions,

its freight differentials and the natural advantages of the port, beside the great grain elevators and coal export pier owned by us in Baltimore. A good deal of the future prosperity of our Railroad depends upon how big a

part America is to play in the development of the world's commerce, and it is to bring these facts before the readers of the MAGAZINE that this brief description of the exposition appears here.

Economical Stoker Firing

Fireman E. M. McCuen and Engineer J. J. O'Connor, Chicago Division, Make Good Performance

By W. L. Robinson

Superintendent Locomotive and Fuel Performance

MUCH has been written and said of the possibility of economy in fuel performance with stoker fired locomotives when engineer and fireman bring careful cooperation and skillful, conscientious effort to bear to accomplish this object. The Baltimore and Ohio has over 600 stoker fired freight locomotives in its equipment stock, out of a total of about 2000 locomotives used in freight service. Most of the heavy power is stoker equipped and it is estimated that about 65 per cent. of the coal used in our freight service is stoker fired. This amounts to 2,500,000 tons of coal per year under normal conditions.

\$850,000 in the Balance

Careful observations have led to the conclusion that there is an average difference of at least 10 per cent. in the fuel consumption between a stoker carefully and properly handled and one operated without skillful care. On the Baltimore and Ohio, therefore, there is a margin of \$850,000.00, or more than three quarters of a million dollars in operating expense to be saved or wasted dependent entirely upon whether the interest and skill of our engineers and firemen are

equal to the task of every day co-operation for continuous maximum efficiency in the firing of stoker equipped locomotives.

On the Chicago Division, Fireman E. M. McCuen, running with Engineer J. J. O'Connor, regularly assigned to trains 94 and 97 and running both east and west out of Garrett, Ind., for some time past has been demonstrating what can be done with the stoker. On 15 trips, totaling 2150 miles, the pop was up only three times, two of which were due to the indicator on the steam gauge sticking at 175 pounds. On five round trips the engine never popped. Grates were not shaken at any time on these trips and the engine arrived at the terminals with three to four inches of fire on the grates. Steam pressure was never below 175 pounds nor above 185 pounds, except the three times mentioned above.

Engineer O'Connor estimates that at least four tons of coal and 12 per cent. of water have been saved on each trip as compared with the average performance under similar conditions. This is equivalent to a saving of \$14.00 per round trip in fuel alone. If five hundred Baltimore

Left to right: W. E. Frazier, road foreman of engines, Chicago East Division ; Fireman McCuen, Engineer O'Connor

JERRY ON THE JOB

"Always Save Something from the Wreck"

(Registered U. S. Patent Office)

and Ohio Stoker fireman making ten round trips over their divisions in a month, should, through their efforts and the cooperation of their engineers, make one half as good a reduction in waste of fuel as that indicated above, our Company would benefit in reduced operating expense to the extent of \$35,000 per month or over \$400,000.00 per year.

Individual Pride Will Do the Job

How can this be done? It requires skill, the result of careful effort directed continuously along the right lines. The incentive for the effort must come from the individual pride of the man in doing a good job, and experience in the work will go far toward developing the right methods for the man who learns from his experiences by thinking about them and comparing the results obtained from the various methods he tries.

Every stoker fireman on our railroad can improve his performance to the benefit of his Company and therefore of himself by following the methods such as outlined by the Committee of the Travelling Engineer's Association in 1920, which are quoted below:

"Operation of the stoker is the vital point when discussing same from the standpoint of efficiency and economy. Frequently we are able to get a very creditable performance from a stoker which is not in first class condition mechanically with skillful operation while on the other hand a stoker may be in first class condition and with unskillful operation we are unable to make a good performance.

"In the preparation of fires for the road too much care cannot be taken in order that the stoker has a fire in proper condition on which to start firing. The stoker is only a machine, not an automatic one either, and will do only what it is made to do by human hands; so if the fireman starts it to work without having first put the fire in proper condition the stoker is in no way to blame for a poor performance.

"In the preparation of fires at terminals hand firing only should be used and under no conditions should the stoker be started until the fire has been built up by the use of the shovel. All banks should be leveled off

by using the rake and the fire be allowed to burn through uniformly over the entire grate area before using the stoker.

"Many delays due to having to clean fires on the line of road are caused by no reason other than that the fireman did not get his fire in condition before starting and clinkered fire was the result.

"Light fires are recommended for stoker fired engines but regardless of whether the fires are light or of medium thickness it is necessary that they be burned uniformly over the grates before starting.

"After starting, the fireman should endeavor to starve the conveyor trough with coal whenever this is possible as this will enable him to better observe any foreign matter which might enter the trough with the coal. Practically all firemen have been instructed and are practicing the art of starving the fire while the engine is working, and this method of handling this style of firing has proven entirely satisfactory.

"Firemen should be able to foresee the steam requirements of their engines and handle the stoker in such manner as to maintain an even steam pressure with regular operation of the stoker rather than indulge in running the stoker fast for a few minutes and then closing the throttle and stopping same until the fire has burned through. The latter method of operation is very wasteful of fuel.

"The use of the stoker for replenishing the fire when rolling down grade, standing on passing track or when switching, should

be discouraged as the fireman should avail himself of this opportunity to become acquainted with the condition of his fire.

"Firemen should not speed up the stoker in an attempt to build up certain parts of the fire which have become burned out but should use the shovel for this purpose.

"When any foreign matter gets into the stoker the fireman should try to locate same and remove it rather than try to force the obstruction through the machine, as it is liable to cause damage to various parts in this way.

"Excessive waste of steam from pop valves and black smoke in dense volume from the stack are evidence of improper stoker operation and firemen operating under these conditions should receive the necessary instructions to be able to eliminate same.

"When delivering an engine at the terminal all coal should be allowed to run from the conveyor trough, and slides over same be closed in order that the engine will not be coaled with the slides in the back of the tender open, and the trough become jammed with coal in the operation. The fireman should not wait until the engine is detached from the train and about to reach the cinder pit before closing the slides over the conveyor trough, for in this case he wastes the coal by putting it into the firebox when it is not needed and makes the task of the fire knockers much harder than it would be otherwise."

C. W. Galloway Thirty-Eight Years in the Service of the Baltimore and Ohio

On August 23, C. W. Galloway, vice president Operation and Maintenance, celebrated the thirty-eighth anniversary of his entering the service of the Baltimore and Ohio Railroad.

His first job with the Railroad was as a messenger boy at Camden Station, and since then he has done, or had immediate supervision over, practically every kind of work which the Operating Department offers. Yet the years have been kind to him, indeed, and despite the fact that he is now doing the biggest and hardest work of his whole career, he is the picture of health and a veritable dynamo of energy.

In wishing him many happy returns of the day—with a bigger and better Baltimore and Ohio—the Magazine is but expressing the earnest thought of the whole personnel of the Railroad.

Campaign Against Accidents—Eastern Lines— August 15 to September 15

E. A. Peck, J. M. Scott, R. B. White, General Superintendents:

During the years 1918, 1919 and 1920, our loss by reason of accidents resulting in damage to locomotives, cars, track and structures and cost of wrecking, was as follows:

Eastern Lines

YEAR	LOCOMOTIVES	CARS	TRACK AND STRUCTURES	COST WRECKING	TOTAL
1918	\$113,502	\$531,925	\$236,163	\$241,919	\$1,123,509
1919	97,612	636,857	316,608	277,049	1,328,126
1920	164,663	971,453	309,752	409,712	1,855,580

During the first six months of 1920 our loss from damage to property resulting from accidents was \$520,637, or at the rate of \$1,041,274 per annum.

These figures do not, of course, include the loss resulting from damage to freight, which during the first five months of 1921 amounted to \$121,541, or at the rate of \$291,696 per annum.

From the above it will be noted that our loss directly chargeable to accidents during the period mentioned has averaged approximately \$1,822,836 per annum.

While most remarkable results have been obtained from the efforts of our people, particularly members of the Veteran Employees Association, in securing new business to our rails, it should be borne in mind that the most effective way to reduce our Conducting Transportation Expense is to reduce the number of accidents resulting in damage to equipment and property, for the reason that \$1,000 worth of new business will place in our Treasury but \$200; whereas, \$1,000 saved by avoiding accidents, leaves that amount in our Treasury available for other purposes. In other words, \$1,000 saved by avoiding accidents is equal to \$5,000 worth of new business.

At our conference in my office yesterday it was decided to inaugurate a thoroughly organized campaign for a period of 30 days for the purpose of reducing the number of accidents on Eastern Lines, and with that end in view it was arranged that you would hold staff meetings with your officers tomorrow, Monday, August 8—the campaign to become effective August 15, 1921 and continue to September 15, 1921.

The organization to be arranged on each Division for the purpose of conducting this campaign will be as shown in this table:

General Chairman		Superintendent	
TRANSPORTATION DEPARTMENT		MAINTENANCE OF WAY DEPARTMENT	
Assistant General Chairman.....	Assistant Superintendent.....	Division Engineer.....	Master Mechanic
Captains—	Train Masters..... Division Operator.....	Assistant Division Engineers... General Supervisors..... Signal Supervisor..... Master Carpenter.....	Road Foremen of Engines General Car Foremen General Foremen
Lieutenants—	Assistant Train Masters..... General Yard Masters..... Assistant General Yard Masters Yard Masters.....	Supervisors..... General Foremen..... Section Foremen.....	Round House Foremen Gang Foremen Shop Foremen Car Foremen

Each captain and lieutenant may form such sub-committees as may seem desirable.

All General Superintendents' Districts, as well as the Divisions on each District are to be on a competitive basis.

In order that there may be a friendly spirit of rivalry in this campaign the following is suggested:

Baltimore Terminal	versus	Pittsburgh Terminal
Keyser Yard	versus	Holloway Yard
Grafton Yard	versus	Connellsville Yard
Parkersburg Yard	versus	East Side Yard
Fairmont Yard	versus	Cumberland Yard
Wilmers Yard	versus	Benwood Yard
Washington Yard	versus	Demmler Yard
		(Glenwood Yard
Brunswick Yard	versus	Holloway Yard
		Keyser Yard

At the conclusion of this campaign the rating of each District and Division will be based on the percentage of improvement that has been effected during the 30-day period, as compared with the operations which were obtained during the first six months of 1921, as follows:

1. Districts and Divisions; damage to locomotives, cars, track and structures and cost of wrecking per 1,000 gross ton miles.

2. Yards; damage to locomotives, cars, track and structures and cost of wrecking per 100 new cars handled.

Immediately following your meeting tomorrow, superintendents, train masters and division engineers should

arrange to hold meetings in each terminal with the yard, road and maintenance forces, outlining in detail the object of the campaign, and perfect divisional and local organizations.

It is suggested that meetings be held weekly in each terminal on each Division by the division superintendent or the train masters, soliciting their continued cooperation in this direction and keeping them advised of the results which are obtained.

It should also be arranged to have the division superintendent forward daily to the general superintendent (with a copy to the general manager), a report showing the number of accidents which have occurred on line of road and in each yard, together with damage to locomotives, cars, track and structures and cost of wrecking. This information should be shown separately for the road and each yard.

At the end of each week I will have prepared in my office a statement showing the standing of each District, Division and each yard mentioned above.

The general superintendents should cooperate closely with the Division staff officers during this campaign, bearing in mind that while the primary object to be obtained is a reduction in our Conducting Transportation Expenses, the net result, viz.: fewer accidents, reduction in amount of damage to freight, less delay, more regular service and satisfied patrons, cannot be measured in dollars and cents, but will be reflected in all the features of our operations.

Every Dollar Saved by Accident Prevention Means a Whole Dollar Put Back into Property and Pay Roll.

(Signed) E. W. SCHEER,
General Manager, Eastern Lines

August 13 Brings Total Business Secured by Employees to Seventeen Hundred Carloads

THE Business-Getting campaign among the employees of the Baltimore and Ohio has given us a good deal of favorable publicity in outside quarters. Our officers have received a number of letters from prominent men, congratulating the Railroad upon having started this interesting development of employee cooperation with the Management.

The June 7 issue of *Printer's Ink*, the standard advertising publication of the United States, contained quite an extensive article on the subject of employees helping employers in securing business. It was based almost entirely upon the series of articles which have appeared in our MAGAZINE, and quoted freely from them.

This is another illustration of the value redounding to the Baltimore and Ohio through the by-products of the campaign. Every favorable mention which we get from newspapers and magazines means that more people will be persuaded to use our service.

The enterprise which has been so largely responsible for the remarkable industrial and commercial growth of the United States, and of which our business drive is a good example, is a matter of surprise and keen admiration of business men from foreign countries. As an illustration of this the following is offered, a part of an address of a London business man on a visit to the United States, submitted to the MAGAZINE by G. W. Squiggins, general passenger agent, Cincinnati:

"I am always impressed when I visit the United States, with the spirit of effort on the part of everyone engaged in the distributing business in America. It always seems to me to be diametrically opposed to that old and ridiculous adage: 'What was good enough for my grandfather is good enough for me.'

"Nothing in America is good enough if it can be made better. The whole spirit of business seems to be conducted and is in fact conducted on the principle of doing things better.

"In America competition is extremely severe in every part of the country. A man goes to his business in the morning knowing that he will have a difficult game to play during the

day and knowing that the other fellow will try to beat him at the game called 'business' just as he would try to beat him at lawn tennis or golf. Therefore, in business in America, one must be up and at it—on one's toes, as they say over there—all the time.

"For example, the buyer of a distributing house must consider every fresh novelty—he must learn to say 'Yes' rather than 'No.' He must be indifferent to what has been and, instead, consider what should be. In other words, he must take advantage of every opportunity to make the portion of the business he controls better and stronger."

In commercial parlance we don't think of the railroad as a distributing house, but as a matter of fact the

railroad is the biggest distributing factor in the commercial world. And although we may rightly feel that our passenger and freight service is as good as any railroad is now offering, we must constantly remember that we are up against stiff competition and we should always be on our toes to discover new methods of handling our business better, more economically, and more to the satisfaction of the traveler and the shipper.

The following short stories are printed, not alone to give credit to a few employees who have done especially meritorious work in the business drive, but also to suggest how they are truly exemplifying the spirit of American enterprise by seeking to strengthen their Company's resources, in getting traffic for our lines and proving to shippers and passengers that we have the service.

Illinois Division Nominates General Yardmaster Davis as Their Premier Baltimore and Ohio Solicitor

A NEW slant was given our employees' solicitation campaign during the latter part of June by General Yardmaster Davis, of Washington, Ind. He attended a meeting of the City Council, who were considering bids for the coal supply for the year for the operation of the municipal light and power plant. Two bids were received, one from a mine located on the Baltimore and Ohio and another from a mine located on another railroad. When the bids were opened the prices were found to be the same.

The City Council were about to give the contract to the mine located on the line of another railroad when Mr. Davis asked permission to speak. It was granted, and he set forth so concisely and clearly the logical reasons why the business should be given to the mine located on the Baltimore and Ohio that he secured the tonnage for us.

His argument was that the Baltimore and Ohio has a heavy payroll at Washington; that many of the miners employed in the mine located on the Baltimore and Ohio live in Washington and patronize the dealers there;

that the Baltimore and Ohio has been a good neighbor to the people of Washington by running special trains to accommodate them, loaning them emergency supplies of coal and preventing the shutting down of their municipal light and power plant, and giving them engine cinders for road building, etc. He concluded his argument by saying that if the business went to the mine on another railroad, the Baltimore and Ohio would get a revenue of only about \$3.00 per car for switching service, whereas, if it went to the mine located on the Baltimore and Ohio, we would get a revenue per car of about \$27.50. His logic won out, and as a result approximately four cars a week will move from the mine to Washington during the next year, with a total revenue to our Road of about \$5,720.

Hearty congratulations to General Yardmaster Davis! His example will be an inspiration to his fellow employees of the Illinois Division as well as suggesting another unusual way in which Baltimore and Ohio employees can help the Railroad increase its revenue.

B. R. C. Office Committee, Freight Claim Department, Pledges Support In Business Campaign

ONE of the most convincing illustrations of how the effort of the Management to secure the interest of our employes in getting business for the Company, has succeeded, is offered in the following letter:

EDITOR, BALTIMORE AND OHIO MAGAZINE,
Mt. Royal Station,
Baltimore, Md.

Dear Sir—Upon the suggestion and with the encouragement of Mr. Glessner, our general freight claim agent, every officer and employe of this department has become a solicitor of freight and passenger traffic, and is issuing the cards of the Baltimore and Ohio Veterans Association. The mutual trust and confidence existing between Mr. Glessner and the office force impel willingness to live up to his expectations, and that is what makes our office a smooth running and highly efficient organization. We'll back our department against any other.

We have always, undoubtedly, been solicitous of the Company's welfare in a degree, but, boys, what we do in a merely receptive mood, isn't a circumstance to what we can do in an active mood. We're calling on our membership to bring all the other crafts into line. We cover a wide field and come in contact with the Company's patrons at many points, and are a source of great potential revenue to the Company. What we do for the Company we'll be doing for ourselves. We of the Freight Claim Department can promise prospective patrons excellent service in general, and prompt and efficient handling of their freight claims in particular. You of other departments can offer excellent service in general and something particular in your own line. And we can individually and collectively strive to make that service as nearly perfect as it is possible for anything with the human element in it to be.

The head of your department or your division superintendent can procure cards for you from Harry O. Hartzell, manager Commercial Development, Baltimore, Md. Remember that those of us who are not yet Veterans, will be; and falling in line now with the good old Baltimore and Ohio Vets will make us better Veterans when the time comes. It is a little late in life to begin to develop *esprit de corps* after we become Veterans—we can better develop their splendid loyalty now.

Let us think of President Willard as the friend we know he is, and make the Baltimore and Ohio an example of 100 per cent. loyalty, efficiency and cooperation.

Yours truly,

(Signed)

R. P. HENNESSY,
J. H. KOEHNLEIN,
S. C. SPARROW.

Freight Claim Department,
Office Committee, B. R. C.

In the name of the Railroad we thank the employes represented by this committee for their fine spirit and interest. Such a letter will be treasured by the Management as an unusually convincing illustration that our employes feel it is trying to do the square thing by them, and that they

in turn are glad to reciprocate.

We have no doubt also that Mr. Glessner and his staff are proud of this letter and the support which it suggests—convincing proof that the employes of the Freight Claim Department are an unusually happy section of a happy railroad family.

Glad He Took Picturesque Route

William C. Cox, President of the Pittsburgh Veterans, sent us an interesting letter from a recent passenger

on the Baltimore and Ohio to William H. Ott, operator at Pittsburgh, who had persuaded the passenger that Baltimore and Ohio means "Best and Only." The letter follows:

In accordance with your recent request, on May 13 I used the Baltimore and Ohio from Akron, Ohio, to Martinsburg, W. Va. I had my wife and son, three full fare tickets. Took your suggestion of going to Martinsburg and motoring to the Endless Caverns at New Market instead of using other railroads. All trains were on time and the service was good, especially in dining car. I used No. 8 going and No. 7 coming back from Martinsburg to Akron.

(Signed)

Agent P. Colligan at Allegheny Goes after the Big Ones—and Gets Them

DURING the month of June, Agent P. Colligan at Allegheny, Pa., secured through his personal solicitation competitive tonnage for the Baltimore and Ohio which had a money value to the Railroad of \$11,643.94. This was all inbound business—we have no idea how much other freight Mr. Colligan was responsible for bringing to our rails. We do know, however, that he has also been active in passenger solicitation. He recently sold three tickets to a gentleman in Pittsburgh for his family, Pittsburgh to New

York and return, a revenue to our Passenger Department of \$102.36. How much this passenger and his family appreciated the interest shown by Mr. Colligan in sending them over the Baltimore and Ohio, is indicated by the following letter:

BROOKLYN N. Y. July 13, 1921

My Dear Mr. Colligan—My daughter, niece and I have just made a trip to New York City over the Baltimore and Ohio Railroad. We left Pittsburgh July 2 on the 10.45 p. m. train and arrived in New York City, July 3, at 1.15 p. m.—exactly on time.

It was impossible for us to get a Pullman so we had to ride on a day coach. We found the coaches to be very comfortable and enjoyed a very good night's rest considering the circumstances. We enjoyed the trip immensely.

We intend to return to Pittsburgh via the Baltimore and Ohio Railroad and hope to enjoy the trip as much as we did before.

Our motto is to travel on the Baltimore and Ohio Railroad whenever possible.

Wishing you prosperity and success in the future, I remain,

Yours very truly,

(Signed) R. E. BEHM

The underground wires recently brought us another interesting bit of information concerning Mr. Colligan. It seems that he is a member not only of the Pittsburgh Veterans Association but also of the Association on the New Castle Division, on which he was formerly employed and where he knows many of our employees. And the story has it that in several communications sent by him to them, he has taken opportunity to point with considerable pride to the record which he has made in business solicitation and to ask them if they will not go and do likewise.

Trainmaster Fitzpatrick Commended.

ALTHOUGH we have had few specific illustrations of competitive business having been secured by our officers, we know that many of them have been doing their bit in the solicitation campaign. Only a week ago a staff officer in the Operating Department told the writer of a half dozen passengers he secured for the Baltimore and Ohio from Baltimore to New York and return, when they expected to use a competing line.

Now comes the following letter to H. O. Hartzell, manager, Commercial

Development Department, commending the interest taken in the campaign by Trainmaster R. B. Fitzpatrick:

My dear Mr. Hartzell—During the recent campaign among the members of the Veterans' Association, several of our Operating officers in Cincinnati have been more than active in their cooperation with us in securing new business, this being especially true of R. B. Fitzpatrick, trainmaster, having

jurisdiction over the Toledo Division side of the Cincinnati Terminal Division.

Mr. Fitzpatrick was recently instrumental in securing two cars of watermelons which originated in Georgia and which were routed by one of our competitors from Cincinnati, S. A. L. 20077, melons for Detroit, and A. C. L. 22930, melons for Alma, Mich.

Yours very truly,

(Signed) F. Z. STURTEVANT,
District Freight Agent

Unique Advertising Idea for Railroad Put Over by Ticket Clerk Harry B. Kight

ONE of the best correspondents that the MAGAZINE has ever had is Harry B. Kight, ticket clerk at Keyser for a number of years, but for the summer months of 1921 agent at Deer Park. Kight is one of our many employes on the Railroad who do their work well, and one of that rarer contingent, who, having done this, look around for new fields to conquer. To illustrate:

When Dr. Grusendorf, proprietor of the Keyser Pharmacy, in conversation with Mr. Kight, informed him that he was receiving a new shipment of Eastman Kodaks, and that he anticipated having a window display of them, Kight suggested that he be allowed to advertise our railroad in connection with the Kodak display.

This was agreed to, and when, in a few days the Kodaks arrived, the window was trimmed. The trademarks of a number of railroads were cut out of the different timetables and other advertising matter, and were pasted on the window. Beautiful booklets, schedules, etc., were used and placed in the window among the

kodaks by Dr. Glover, of the Keyser Pharmacy; and with the "ad" to "Take a Kodak with you on your vacation," and the literature of the railroads suggesting where to go, the window attracted much attention and favorable comment. Mr. Kight did not forget the MAGAZINE in the display, copies of the first and last issues being featured.

While this display may not have been the means of directly getting a large amount of new business for us, it certainly helped stimulate vacation travel. It showed the public that our Keyser employes are on the job, and are always at their service.

We appreciate very much the use of the Drug store window, and extend thanks to Dr. Grusendorf for its use and to Dr. Glover for his part in trimming the window. In addition to the use of the window we were allowed to use a table in the drug store, to display timetables, booklets, etc.

Mr. Kight has it in mind to try to get similar publicity for the Railroad at the county fairs in his vicinity

O. K. Quivey, General Agricultural Agent

during the coming autumn. Such displays cannot help but give a good deal of favorable publicity to the Railroad and we commend Mr. Kight's work and hope to see illustrations of similar initiative on the part of our agents elsewhere.

96.8 Per Cent Perfect On Time Arrival

The Baltimore and Ohio's four through trains from the East to Chicago arrived at destination on time 96.8 per cent. during the month of July.

The four trains covered a total mileage of 115,726 miles. Each train was late on one day, the delays being as follows:

July 31, No. 15—25 minutes late,
July 29, No. 5—20 minutes late,
July 11, No. 7—30 minutes late,
July 15, No. 9—25 minutes late,
a total delay for the four trains of only 100 minutes.

Passenger Revenues Increased by Conductor John Stewart

Following is copy of letter written to Passenger Conductor John Stewart of the Ohio Division by Superintendent Brown, under date of June 3:

My Dear Mr. Stewart—I have just learned that through your personal efforts, two passengers for Philadelphia, six for New York and two for Louisville were routed over the Baltimore and Ohio, when it was the intention of these people to travel over other lines.

I wish to congratulate you on your good work. So long as the Baltimore and Ohio has employes in its service who perform work of this kind, there is no road in the country that can compare with it or make any better showing."

Very truly yours,

(Signed) R. W. BROWN,

Superintendent

Keyser Pharmacy Window a Lure to Vacationists

O. K. Quivey Appointed General Agricultural Agent

On July 15, H. O. Hartzell, manager, Commercial Development, announced the appointment of O. K. Quivey as general agricultural agent, Baltimore and Ohio Railroad. Mr. Quivey was formerly chief of our Agricultural Bureau and will put into execution the program begun by the Road in 1916 and interrupted by the war.

Mr. Quivey will be especially interested in making the facilities of the Baltimore and Ohio available in the maximum degree for the farming interests in the counties on our lines. We want our service in their behalf to be such that their operations will not only be more pleasant and profitable, but we want to make every farmer near our lines feel that his best neighbor is the Baltimore and Ohio Railroad.

Mr. Quivey has had years of experience in agricultural work and is a graduate of Purdue University, Indiana State Agricultural College. His headquarters are Baltimore and Ohio Building, Baltimore, Md.

Important Articles on the Railroad Situation

William J. Cunningham, James J. Hill professor of Transportation at Harvard University, is writing a series of articles on the railroad problem for the *New York Evening Post*. Professor Cunningham is a man of undisputed authority in this field, yet one entirely free from any bias. One of the articles recently appearing was on the financial prospects of the Baltimore and Ohio for the next year.

Readers of the MAGAZINE who wish to see these articles can secure information from the *New York Evening Post* as to their subscription rate.

President Samuel Rea Has Been with the Pennsylvania Railroad for Fifty Years

On July 17, Samuel Rea, president of the Pennsylvania, completed 50 years service with that company, and the Baltimore and Ohio Magazine congratulates him on his long, successful and useful railroad career.

Contrary to some published reports, Mr. Rea was never directly connected with the Baltimore and Ohio, this impression having gained credence because in 1889 he became chief engineer of the Baltimore Belt Railroad, which he located and put under construction for the Baltimore and Ohio. Mr. Rea resigned from this position, however, shortly before construction work actually started.

Mr. Rea is a notable example of the many self made men who are in executive positions on American railroads. In its comment on his career, the *Altoona Mirror* said:

"Mr. Rea's life is an example for other ambitious boys to emulate. . . . He was a good deal like the average boy. He enjoyed playing tricks on the teachers and on the other scholars as well.

"But when he got his first job on the Pennsylvania Railroad, he began to take life seriously.

"He applied himself with intelligence and energy to his tasks.

"HE STUDIED HIS JOB AND MADE THE MOST OF HIS OPPORTUNITIES. WHEN PROMOTION CAME, HE WAS READY FOR IT."

Samuel Rea, President, Pennsylvania Railroad

Somerset Has Become a City of Employe Home-Builders

While Others Talk, They Are Acting—Their Enterprise an Outstanding Example of Helping the Country to Prosperity

NO LESS an authority than Herbert Hoover, Secretary of Commerce, has recently stated that there is a shortage of over a million houses in the United States. The cause, as almost everybody knows, was the practical cessation of house building during the war, because of shortage of material and labor and high prices. The result is that almost every community throughout the country has its housing problem. Rents and costs of houses and apartments are still high, and housing facilities are so restricted as to make living—in some places at least—inimical to health and happiness.

Numerous methods have been adopted by different states and cities to relieve this shortage. Housing commissions have been appointed, agreements have been entered into among such interested factors as the contractors, the supply men, labor and those building properties; the old idea—familiar in the West some years ago—of the people of communities getting together and putting up a house or barn for one of their number, has been resurrected and put into use in the emergency. Yet we doubt if a better or more resultful plan has been developed than that started by some of our Baltimore and Ohio men at Somerset, Pa.

The idea came largely as the result of the desire of J. E. Dice, yardmaster at Somerset, to build a new home for himself and family last spring. At least, he has been one of the leading factors in working out this big idea, so we'll get him to tell the story:

"When I talked the idea over with some of my friends, most of them said that I was crazy, that building and labor costs were so high that I would never get back the value of my investment. This set me to thinking and to talking with some of our Railroad people here, among them our agent, W. G. Carter, and our assistant superintendent, S. C. Wolfersberger, whom most of us railroaders in Somerset know as "Sam."

"We knew of several Baltimore and Ohio men who had the same home

building idea that I did, and both Mr. Wolfersberger, who has been an active and interested supporter of this building boom, and Mr. Carter, thought that we could accomplish what looked like the impossible by teaming up our friends and building our homes on a sort of cooperative plan.

"Of course, it wasn't easy sailing, for labor and material costs were still high. But we knew that we could get the backing, the advice and the financial aid of our Relief Department and that was a big factor in giving us courage. We first went around quietly among our own boys, found out which ones were interested in building homes, told them of our plan for teamwork and our hope of cutting down costs through buying material in carload and greater lots and generally in starting a building boom. Then, after lining up all the interested men we had a meeting along about the first of April at which Conductor Martin R. Bauman was elected president and the name of the Somerset Home Builders' Club given to the organization. They made me secretary and Conductor L. M. Shaffer was given the job of securing prices on materials. There were 32 men present who said they wanted to build homes and a further solicitation of our Railroaders indicated that there was about \$100,000 in sight for home building purposes.

"The next thing was to look around to see what we could do with the supply people and the contractors in the way of prices. Here our first fears were realized, for the quotations of our local people were high, although in keeping with conditions which then obtained all over the country. So we decided that in justice to our enterprise we would look around further, and we outlined our plan to supply men and contractors in nearby centers of population, with the result that we got quotations which were more favorable. This set our local people to thinking and the upshot of it was that as we wanted to patronize our neighbors, we finally decided that we would purchase our materials through the Somerset Door and Column Company, in which some of our local Baltimore and Ohio people are interested. They made us a good proposition by offering to buy all our building materials for us and to sell them to us at a reasonable profit, the understanding being that we were to pay cash for what we got. Their example was followed by other local factors in the building line who made similar advantageous offers.

"By this time our local Chamber of Commerce, of which, by the way, we are very proud, had gotten wind of our project and had decided to extend its possibilities to the citizens of the whole community. As a result, all of Somerset got the building spirit and there has now been completed, is in process of building or in sight, \$800,000 worth of new homes in this city of about 5,000 people.

"One of the principal savings that has been made is the result of buying in big quantities, in carload lots, and the building boom has already caused to be moved over the Baltimore and Ohio over 200 carloads of building material since it started. Many of these carloads have come from points as far distant as St. Louis over our lines and the revenues have been considerable.

Some Employes Now Building Homes in Somerset

J. E. Dice, Yardmaster.....	\$6,500.00
John Ryan, Train Dispatch'r	6,000.00
M. R. Bauman, Conductor..	6,000.00
L. M. Shaffer, Conductor...	6,000.00
Wiley Ringler, Car Inspect'r	4,500.00
Harry Shaffer, Conductor...	5,000.00
Charles Smith, Engineer...	5,300.00
H. Leydig, Engineer.....	5,000.00
W. S. Kurtz, Engineer.....	5,000.00
Harry Blades, Engineer....	5,000.00
Robert Brandt, Machinist...	5,000.00

NOTE: These prices are exclusive of the cost of land.

Homes of (1) Engineer W. E. Alexander; (2) Conductor Harry Shaffer; (3) Brakeman L. M. Shaffer; (4) Dispatcher John W. Ryan; (5) Conductor M. R. Bauman; (6) Fire Inspector W. O. Ringler. In (7) we see our beautiful Somerset station with, from right to left, W. G. Carter, agent; J. C. Lafferty, baggageman; O. M. Beeghley, clerk; William Bailey, janitor, who has been in the service 32 years and is known to have one of the cleanest stations on the System

What the Building Boom Has Done

1. Built or is building upwards of a dozen homes for Baltimore and Ohio employes in Somerset, the completed value of which will be nearly \$100,000.

2. Started a building boom in the community as a whole, the total value of which when completed will reach about \$800,000.

3. Started a "paint-up" campaign which has eliminated practically every shabby-looking house in this beautiful town.

4. Given employment to every Somerset man who wants a job. Placed skilled workers of the building trades, who had been working in the mines, back at their original vocations at better wages. Eliminated the labor problem in and around Somerset.

5. Been a strong factor in developing the already splendid civic spirit of Somerset.

6. Reduced material and labor costs through cooperative buying and building.

7. Stimulated business generally and already brought to the Baltimore and Ohio a large movement of building materials, thus increasing the Railroad's revenue.

"In fact, the Railroad has been getting quite a good return as a reward for the interest which it has taken in our enterprise. I have already mentioned "Sam" Wolfersberger, who has been our most enthusiastic backer and also has done everything possible to see that our material has reached us in good time. I have also spoken of the Relief Department, which sent its building inspectors out here to advise with us. A couple of months ago the assistant superintendent of the Relief Department, W. M. Kennedy, paid us a visit and was carried away with the enterprise shown and the possibilities of the plan.

"We have also gotten splendid co-operation from all our local people. We have some of the best carpenters and other artisans in the building trade right here in Somerset, and we have been keeping them busy. If you will look around the town and see how spick and span even the old houses look, you will also see another result of the boom in the "paint-up" campaign which came as a natural result of our getting busy in building.

"There are 40 homes now in course of completion in our little community. We are a prosperous and happy people. Our men are all employed

and we have done our bit to help along the revival of business which the country as a whole needs so badly. Furthermore, we have helped kill the boomer spirit which is always quite a factor in the railroad organization in our community."

I suggested to Mr. Dice as I was leaving him that he would make a splendid man to send around the Railroad to encourage our employes in other communities similar to Somerset to start building booms.

"That is just what I would like to see done by the Company," he asserted. "There are other towns, Baltimore and Ohio Railroad towns, on our lines, which need homes quite as much as—and some of them probably more than—Somerset. And I don't know anything which would promote so much happiness and contentment and prosperity among our people as a similar plan adopted by the Baltimore and Ohio men in these communities."

The situation at Somerset is not peculiar. Similar conditions obtain in other Baltimore and Ohio cities and towns. Somerset has set the example and it ought to be easy for other places like it to follow.

The Baltimore and Ohio Relief Department will be glad to hear from any employe or group of employes on the Railroad who think that such a building boom would be feasible in their community at this time. It is willing to help to the limit, with advice, planning and money. During the building campaign in Somerset, either D. J. Shivers or J. R. Graham,

building inspectors, has visited the city at least once a week to help keep things moving.

It is not only in terminal cities that the Railroad wishes to encourage the building of homes by employes, but in all the communities along our lines.

My visit to this beautiful town in the Alleghenies was but a brief one. Yet during it I got tangible evidence of what American citizens can do to help themselves, their communities and the country as a whole. And it made me feel that I would like to pitch in and help. Agent W. G. Carter had been good enough to pilot me through the community to get the photographs of the homes in process of building which accompany this article. As I was saying a hurried "good-bye" to him to catch my train, he slipped into my hand a little booklet issued by the Chamber of Commerce at Somerset. The story it contains is eloquent of the civic spirit and progressiveness of the residents of Somerset. Yet I fancy that nothing in the history of the town has been of more tangible value in the building of good citizenship than this building boom started by our own Baltimore and Ohio men.

As I was turning the corner leading to the pike which runs down to Rockwood and our main line, the jitney driver said to me:

"This is where Somerset Borough starts."

Sure enough, up on a tree was a sign, "Somerset Borough—Live and Let Live." And Somerset and its people know how to do this in earnest.

Other Industries Should Not Profit at Railroads' Expense

By Henry Haslitt, in the New York Mail

There is an idea abroad, which grows and flowers under each new sprinkle of precedent, that the railroad industry has duties and that all other industries have rights. Upon an investigation of railroad rates on live stock, it was recently discovered that the rates were "not unreasonable from a purely transportation standpoint," but, apparently, with the present depressed condition of the live stock industry, they were too high from an "economic standpoint." This high-sounding distinction meant, in plain language, that the live stock industry ought to be helped, and that it ought to be helped at the expense of the railroad industry, already suffering under deficits.

If this precedent were established, it would lead to agitation on the part of one industry after another that freight rates should be reduced, regardless of costs of transportation, in order that the particular industry agitating could be "set on its feet." If the prosperity of the live stock industry is necessary to general prosperity, so, certainly, is that of the railroads.

"Why, man, she's a cross between an angel and something better."

By New Methods

By Frank Kavanaugh

FOR three years Osborne had endured the monotony of the Minden Branch uncomplainingly. Each evening he made up his train at the Junction and hitched it to a squat little "hog," which trundled the drag slowly up through the desolate mountains to Minden Mines. There he spotted the cars at the various loading spurs, after having pulled the loads therefrom. By that time it was midnight. He ate his lunch with the rest of the crew and a crowd of third-shift miners at the mine "cafe" and then finished switching, got his waybills from the mine office and helped the hog-head let the train down to the main line junction again. By that time he counted it a day's work and went to bed. A gasoline-propelled car carried what passengers and mail there happened to be over the branch during the daylight hours, when people traveled. Osborne's train hadn't a thing to do but switch six or eight mines and get the cars down to the main line before the "hog law" caught him. It was a pleasant and mole-like life, and he learned to know every mine tippie in the dark, although he probably would have been lost had he landed at Minden Mines in the glaring light of the sun.

One evening he walked from the spur to the main line stations for his waybills. It was part of his schedule to do this while the brakemen were carefully examining the drag, for a faulty car on the curves of the branch meant a derailment, if not something worse. This evening he pushed open the door of the inner office of the little station and walked over through the semi-darkness to where the agent-operator was bent over the telegraph desk, under the light cast by a single oil lamp. He waited until the operator looked up.

"Let's check 'em," he said, "so's I can leave town."

"You'll have a passenger up tonight, Os," the operator said. "She's down at the boarding house now. Came in on Number 8."

"She?" Osborne echoed. "I'm running no passenger train. Let her wait till tomorrow."

"She's got a real good pass with the old man's 'sig' at the bottom and she said she was going up tonight. It's good on 'any train,' too."

"That hog'll shake her false teeth out," Osborne said. "Which one of the G. M.'s wives is she?"

The operator swung around in his chair. "Say, boy," he said, "if that red-headed hog-head even jars the furs around her neck tell him I'll burn him at the stake as soon as I hear of it. Why, man, she's a cross between an angel and something better. I'll go over now and get her. Back your drag so she won't have to walk past the coal chute."

"Since when have we been backing drags to the platform for passengers?" Osborne inquired sarcastically.

"You'll be sorry if you don't," the operator said, as he disappeared in the darkness.

Osborne made a circle in the night with his lantern. Finally someone near the head of the train saw it and the target lights on the caboose came slowly up to the platform. Osborne signalled a stop and went in to check over his waybills. When he came out the operator was there with the girl and introduced her. She boarded the waycar. Osborne swung a long high-ball and the drag of empties started slowly up the hills.

Osborne assisted her into the cupola and sat opposite. The light of the head man showed that he was chewing cinders up near the spitting little hog; that of the rear man was half

way over the drag. There was no one but Osborne and the girl in the caboose, and as the little squat hog trundled the empties around the hills the man learned that she was going to her first position, that of agent and clerk for the mining and railroad companies combined. As the office was next door to the eating house maintained by the mining company and manned by Mistress O'Leary, Osborne assured himself that she would be safe, although he made a firm resolve that she would not remain there long if he had his way.

The second night following, Osborne was eating his lunch, when Mrs. O'Leary ran into the dining room, her face aflame, wild-eyed and excited.

"Th' Lord help us!" she cried.

Osborne leaped to his feet, thinking of the girl next door. "What is it?" he asked.

"Th' paymaster's been robbed again and they are after thinking the poor man's kilt entirely."

Osborne sat down again. "Oh, is that all?" he said. "As long as they bring money out here by motor car and at night, they'll get he'd up in those mountains right along."

"'Tis the fourth time in as many months," Mrs. O'Leary said. "Ever since the express company's refused to carry the money up from the junction it's been dangerous to get the money up here. 'Tis closin' the mines they will be."

"They'll not close, Mrs. O'Leary," Osborne said. "Pretty soon they'll get wise to themselves and bring it up on my train and they'll have no trouble."

The night superintendent of the mines entered and heard the last sentence.

"Why man, your train would be the easiest thing in the world to rob."

We'd have to have a dozen guards with it. And Number 6 doesn't connect with the gasoline car and that's the only one we can bring it in on and make the bank in the city."

"Next time you have a payroll to bring down let me have it and I'll get it through all right. I've been with the road here all my life and they know I'll not abscond."

"You may have a chance to try it," the superintendent said. "Since the station at the junction has been held up so often the express company won't agree to be responsible for it there overnight. How many guards will you need?"

"Nary a guard."

"If they agree to your plan we can keep the time of the coming of the money secret."

"I don't care for secrecy. No one knew the paymaster was coming out tonight—payday's three days off—yet there was a leak somewhere."

An hour later when Osborne entered the office to get his waybills, the girl was on duty.

"They've been telling me you have offered to bring up the pay money," she said, anxiously. "Are you really in earnest about the matter?"

"Yes; I'll bring it up all right. I'll tell you why I made the offer: I'm tired working nights. For a certain reason I don't want to leave the branch right now. There'll be a vacancy on the gasoline day-train before long. The mine company, if it's friendly, can ask for me and I'll get that run. I'll wear white shirts and clean collars and see daylight and the little birdies and——"

"What?"

Osborne blushed. "I'll tell you some other time," he said.

The girl laughed. "Why not now?"

"I—I—can't," Osborne stammered.

It was not until the next pay time at the mines drew near that Osborne heard from his offer. Every night he had a few words with the girl, after she had given him the waybills. Once he had cautioned Mrs. O'Leary to watch over her during her shift at night. The old lady laughed.

"Sure an' tis little lookin' after she needs, with ivery man in camp in love wid her. If she'd let one man take her home, there'd be a dool or two, but she don't. She goes home whin I do, after breakfast. She rooms wid the family of the weighmaster, nixt door to my house."

It was three days before payday. The paymaster seemingly had not been injured as badly as was first reported, for he was still on the job, between paydays his duties being that of cashier and head bookkeeper of

the mining company. That night, as Osborne stopped to chat a moment with the girl, a man came into the office, went behind the desk and faced Osborne.

"I'm Burns, resident manager of the mining company, one of my men tells me you made an offer to get the pay money up here without trouble. I've looked you up, Mr. Osborne, and find you have an excellent record. Do you mean to say you can get the money here each month without fear of robbery?"

"If the money is in currency; yes," Osborne replied.

"We had four guards with the cashier, Burton, last time, but they were taken by surprise," Burns continued. "If you want guards, you can pick them as you wish."

"The county officers are not Johnny-on-the-spot, eh?" Osborne asked.

"They are on the other side of the mountains. This, as you know, is a small corner of a big county and while they are willing to give all the help possible, they are few and have many miles of territory to cover."

"I'd rather have no guards. My

two brakemen are pretty husky young fellows and absolutely reliable."

"I'll arrange with the railroad company to have your train held at the Junction tomorrow evening, then, until the arrival of Number 6. That will mean a delay of but two hours. I'll—"

"I'll want half an hour after its arrival—that's all," Osborne said. "Of course you'll take care of the money after I deliver it to you?"

"Certainly. We tried once paying in checks, but as money must be forthcoming to cash the checks it took as much money as the payroll in the company's store and so we did not gain by it. You are certain to bring it."

Osborne laughed. "I'll make a boast," he said. "The money will come up tomorrow night with me—dead or alive."

The girl turned away.

Number 6 pulled into the junction on time the following evening and Osborne was on hand when the express messenger handed the package to the agent, who handed it to Osborne, holding the bill out to him for

A forehead and a pair of eyes above the transom—as he looked they disappeared

him to sign, as if glad to get the responsibility off his hands. Osborne carried the package leisurely across the tracks to the railroad eating house, mounted the steps to his room and opened the package. He was counting it when he instinctively felt another presence near. He looked behind him and saw a forehead and a pair of eyes visible above the bottom of the transom. As he looked they disappeared.

He completed the count of the bills, checked his count and a few minutes later reappeared in the lighted eating house carrying a small satchel. For safety he had a strap run from the handle to his shoulder. He walked across the tracks, over to where the caboose of his train was standing, swung a highball and a few moments later was alone on the hind end of the train, while his brakeman sat a few cars ahead. For Osborne had not seen fit to inform anyone that he was carrying a fortune with him on the mine drag up the hills. He was very careless, for when he climbed to his seat in the cupola he left the satchel on a bench below.

Burns the manager, Burton, the cashier and the girl anxiously awaited the coming of the train. They had been apprised of its leaving the junction and the four hours it usually made the run up the hill in passed slowly. The secret had leaked out in some manner that the freight conductor was bringing up the payroll money, and a number of the miners, as they left their shifts from eleven o'clock to midnight, did not retire but gathered about. After an almost interminable wait the whistle of the squat hog was heard. As the last of the train drew into the camp a man, carrying a satchel, dropped off the rear end of the caboose and was swallowed in the darkness.

A few minutes later Osborne entered the office. He answered a look of inquiry from the girl with a smile of assurance, and spoke to Burns:

"Have you a place here where I can wash my hands?" he asked. "We broke in two back there and my hands are too dirty to handle currency. We hadn't a bit of soap in the waycar. I forgot to purchase some yesterday."

"Right back there in the rear of the office," the manager said, pointing.

A few minutes after Osborne came back, bearing a package that showed signs of having been put together hurriedly.

"We will count this, now, Mr. Burns, and you can give me a receipt."

"You got it through all right, then?" the manager asked.

"Yes, I had no trouble, whatever." The money was counted and put away. As Osborne passed out a dozen questions were hurled at him from the crowd gathered about.

"I got through all right, boys," he said. "Whenever you want a few thousand dollars carried up, let me know. I'm now running the million-money special."

The following night he came in on time, and after doing his switching and eating lunch, he went into the office for his waybills.

"You've paid out all the money?" he asked, smiling, as the girl came forward.

"I almost had to pay it out," she said seriously. "Mr. Burton was sick this morning, but he got down at last."

Osborne sniffed. "Been using some medicine, eh?"

"Yes. He came in this morning smelling of assafeotida. He says he uses it for colds, or for the prevention of colds."

"An excellent remedy," Osborne said. "I've used it myself—for other things."

"You'll bring up the next payroll?"

"If Mr. Burns wishes me to," Osborne said. "Now let's have the waybills."

Things went on as usual for the month, and when payday again approached, Manager Burns met Osborne in the office one night.

"Want to bring the payroll up tomorrow night," he said.

"Be in at the same time."

"Yes. I went down the other day and brought up enough change to do us. It will all be currency as before."

"I'll bring it up."

"Be careful."

"I will. I want you and Mr. Burton to be here to count it, however. There'll be a lot of switching to do tomorrow night, as there were few empty cars to bring up tonight."

"We'll be here, never fear."

It was a rainy, blustering night when Number 6 pulled in the following evening. Osborne, his raincoat buttoned tightly around him, met the train, secured the package, signed the receipt and, thrusting the package into his pocket, ran for his caboose, signalling the engineer as he did so. The signal relayed through the storm by the two brakemen, was answered, and with a great slipping of wheels on the wet rails the Minden drag started slowly up the mountains.

For a time Osborne busied himself in the caboose and then, after having extinguished the lights and locked the rear door, climbed to the cupola. It was too dark and the rain was driving too fast to see even as far

away as the point where the rear brakeman stationed himself. Once in a while, during a lull in the storm, the lone man could see the flare of the engine's exhaust against the lowhung clouds.

Osborne fingered the bulky package in his outside overcoat pocket and smiled. The man on the day passenger was due to leave for another run within ten days and he was going to ask Burns this very night to put in a good word for him. And on the same train the money had traveled had come a smaller package, which he had signed for at the same time, and the package contained a diamond ring, a golden circlet containing just one big diamond. He smiled as he thought of it.

The rain ceased a little, and far around a gulch he could see the little squat hog throwing a stream of sparks against the clouds. The man pulling the latch was having a hard time of it on the wet rails, as the conductor could tell by the speed of the train.

Four men, unseen by the conductor, dropped of a car several lengths from the caboose, stood a few moments on the side and then caught the caboose as it came by. Two climbed aboard the front platform and two on the rear; those catching the front platform entered the car and the first Osborne knew of their presence was when he looked down from his seat into the muzzles of two wicked looking revolvers.

"Just hand us that package in your pocket," one of them said.

"Make him step down here and we'll search him," the other said. "No flimflaming'll go this time."

Seeing the futility of resistance, Osborne swung down. As his feet touched the floor, one of the men hit him across the head with a gun. He fell to the floor. The two stripped the overcoat from him, searched his pockets and finding nothing more of any great value, unlocked the rear door with the conductor's keys, allowing their two confederates to enter. The conductor on the floor was given a couple of kicks, but he did not move.

By the light of a small flashlight the four opened one end of the package and a sight of green bills assured them. Half an hour later, when the engineer whistled for Minden Mines, the four dropped off and disappeared in the darkness.

It was the rear brakeman who found the conductor and had him carried over to the eating house. Word flew through the camp that the payroll had again been taken, and the inhabitants gathered. Osborne, recovering slowly, was helped to the

office, where he was seated in a chair. As he sat down, he groaned, reached up and drew himself to a standing posture. He looked around and noted the absence of Burton.

"Where's Burton?" he asked.

"He was here a few minutes ago," the manger explained. "I think he went into the eating house."

"Find him! Find him quickly!" Osborne said. "Get him here at once. His life depends on it!"

A hundred yards from the office was the tool house of one of the mines. As the manager went to the door of the office to call the cashier, he saw a flash come from it, accompanied by a dull report.

"What's that?" he asked, drawing back quickly.

"You may find Burton there," Osborne said. "At least you will find his confederates there. I loaded the package they robbed me of. Your night superintendent got me the explosive. I loaded the first 'pay-roll' with assafoetida. Burton got it. I loaded this with a little explosive and I think you'll find some badly injured men over there. Burton may be one of them. Send over right away. Now let me wash some of this blood off my face."

The manager went, while Osborne went back to the washroom. Within a few minutes they returned.

"Now, Mr. Burns," Osborne began. "If you're ready, we'll count this money."

"You weren't robbed?" the manager exclaimed with surprise.

"They took a package I had fixed for them, and my overcoat. They must have searched me pretty carefully, too, for I find my bunch of keys missing. But here's the money."

Half an hour later, the money counted and a portion of it already paid out to the second-shift men who had gathered, the manager called Osborne into his private office.

"They've got Burton and two others. Two have escaped it seems. Those we have are burned badly, but not seriously. How did you connect Burton with the robberies?"

"By the fact that he was always slightly injured, at first, and last month he opened a satchel I had fixed to give someone an assafoetida bath. The scent lingers, as they say about perfume."

"And where did you secret the money?"

"Don't say anything about it, but I sewed a false seat to an old pair of trousers and placed the money in there. That accounts for the fact that I had to wash before I could produce the currency. And, by the

way, I almost exposed myself to-night when they sat me in that chair as they brought me in from the eating house."

"Why?"

"There was a solitaire ring in there with the money, and say what you will, rings of that sort have a few sharp points."

"A ring? For whom?"

Osborne pointed to the office where the girl was busy with the waybills.

"You haven't proposed yet, have you?"

"No, sir. Why?"

"I just thought, if she hesitated, you might tell her you're going to quit railroading and take a new job with the mining company. In other words I'm going to break you in to fill Burton's position at about three times what you've been making as a freight conductor."

But the girl did not hesitate.

This Letter Comes Highly Recommended—and We Have Never Seen a Better One on Railroad Service

WICHITA NORTHWESTERN RAILWAY CO.

OFFICE OF THE PRESIDENT

O. P. BYERS
PRESIDENT

HUTCHINSON, KANSAS

May 4, 1921

Mr. C. W. Galloway, Vice Pres.,
Baltimore and Ohio Railway Co.,
Baltimore, Maryland.

Dear Sir:

I left Washington on your Number One last Saturday, April thirtieth, for Saint Louis. There were about ten cars in the train, which was never one minute late on the entire nine hundred miles. Not once was the train jolted or jarred, the pusher engine was scarcely felt if at all, nor did I feel a rough spot in the track anywhere. Employees were uniformly courteous to everyone, diner service excellent and when I left the train at Saint Louis, I felt that I had traveled over a railroad just about as nearly perfect as will be found in this generation.

In my more than forty years of railroad service, which has been in about every capacity, from section laborer up, I am certain I have never before observed such uniform excellence anywhere.

It is unfortunate that the public does not more fully appreciate its high grade transportation service.

Yours very truly,
(Signed) O. P. BYERS,
President

Mr. Burgess Said He Would Be Glad to Have Our Engineers Read His Opinion of Their Train Handling

BROTHERHOOD OF LOCOMOTIVE ENGINEERS

EXECUTIVE DEPARTMENT

FREDERICK A. BURGESS

Assistant Grand Chief

Washington, D. C., July 27, 1921.

C. W. Galloway, Vice-President,
Baltimore and Ohio Railroad,
Baltimore, Md.

My dear Mr. Galloway:

It is not my intention to burden you with unnecessary correspondence, but since Railway Board of Adjustment No. 1. concluded its labor, my duties have caused me to make frequent trips between Washington-Chicago and return, and I have usually traveled over the Baltimore and Ohio Railroad, leaving Washington at 1.35 p. m. The trips referred to have been so pleasant, the train pulled with such regularity of speed, and all stops made so free from jar or jolt to the passenger, that I cannot refrain from advising you to that effect.

I have no object in giving you this information other than as an appreciation of splendid service to the traveling public. I do not personally know one of the engineers, or for that matter, a member of the crew engaged in handling this train between Washington and Chicago. It is my opinion, however, that the service cannot be excelled in any particular and I have heard others riding on the trains, whom I do not know, speak in like manner, and I thought it would be pleasing to you and only fair to the employes to so advise.

Very respectfully,
(Signed) F. A. Burgess

The Baltimore and Ohio Railroad Company

OFFICE OF VICE PRESIDENT
OPERATION AND MAINTENANCE

C. W. GALLOWAY,
VICE PRESIDENT

BALTIMORE, MD.

At Cincinnati, Ohio, July 30, 1921.

Mr. F. A. Burgess, Assistant Grand Chief,
Brotherhood of Locomotive Engineers,
Washington, D. C.,

My dear Mr. Burgess:

Your letter of July 27 pleases me very much. It is most gratifying to receive such splendid commendation of our service, particularly when it is from one so well qualified to judge, as yourself.

I feel that we can be justly proud of what is being accomplished in this direction. In bringing it about we have had the most splendid cooperation from our passenger locomotive engineers in the matter of regularity of speed and smooth handling of trains. I look upon our passenger locomotive engineers, particularly those in the through service, which is the most important, and which I ride the most, as "Crack Runners."

I recall the handling of Marshall Joffre, when he was here from France. I was on his special train, and it would be impossible to experience a more perfect piece of running. On the Chicago Division, for instance, the speed was so steady at 50 miles an hour, which was the limit set, that I really jarred the speed recorder with my hand to see if it was stuck. This run brought most favorable comment from the French Commission.

Many of our through passenger locomotive engineers hold letters of congratulation for their good work, and we have taken special pleasure in encouraging them. I know many roads that do not have the same high standard of train handling as that accomplished by our men, and I really believe that none can offer anything finer.

Again thanking you for your interest in writing us, and with all good wishes, I am,

Cordially yours,
(Signed) C. W. Galloway

P. S. Would you have any objection to my reproducing your letter in our Baltimore and Ohio Magazine, because I know it would make the boys feel good, coming from you?

What Do You Know about Your Railroad?

Despite the ridicule which has been heaped upon the widely discussed "Edison Questionnaires," the idea of mental tests for workers is far from being on its way to the discard. Mr. Edison was not at fault in giving his tests, but in the kind of tests he gave. The War Department used the so-called "Alpha" and "Beta" tests in the army with remarkably good results during the late war. Even on our own railroad some interesting disclosures were made through similar tests several years ago as to the mental equipment and knowledge of the employes of a certain department.

Much can be said in favor of such tests in any organization like our railroad. Suppose, for instance, that the supervising officer of a large force of clerks finds that the output is decreasing, that more errors are being made than usual. Ordinary investigation to locate the cause of the trouble failing, an application of some mental test will, if properly prepared and conducted, often indicate where the weak links are.

The test idea is not new. It has been used successfully by many organizations. It is essentially fair, treating one and all alike. And it uncovers indications of ability in an organization with the same precision that it points out indications of incompetency.

In justice to Mr. Curren it should be added that these introductory remarks are not a comment on his experiment, the purpose and result of which we do not know, but merely a detached opinion as to the value of any mental tests for clerical workers.—EDITOR.

TO SET people to thinking is to pour oil on the wheels of progress, and there is, perhaps, no more effective way of setting them to thinking than by asking questions.

An innovation in the form of a general quiz, presented with the idea of stimulating purposeful thinking among the employes of the Transportation Department at Baltimore, has been introduced by General Superintendent of Transportation W. G. Curren. This quiz, or examination, took the form of a set of questions, distributed so that each employe in the office received a copy with a request that the questions be answered and turned in before the close of the day. These questions covered railroad topics of general interest, as well as those with which the Transportation Department has to deal. The employes took the quiz in good spirit, and not a little good natured rivalry was stimulated among them.

Unless a person is particularly curious or unusually ambitious, there are certain kinds of routine work which, if he handles continuously, have a tendency to create within him a certain amount of indifference. Unless he realizes how important a part his bit of work plays in the big scheme of things on the Railroad, his job is apt to become monotonous, and consequently, uninteresting. On the other hand, the job which, because of its interesting phases of work, compels the attention of the worker, is the one which serves as its own inspiration to the worker to acquaint himself with other work incident to his own, at the same time, perhaps, fitting himself for something higher

up. This does not, of course, apply to the familiar figure who would "nose" into the affairs of others at the expense of neglecting his own. As for the routine man, there is always something interesting about his work if he cares to look for it.

Take for example a new employe of the Car Record office. It is quite possible that he (or she, for much of this work is handled by girls) can advance from the assorting desk to that of foreign records without realizing the importance of his daily work in the operation of the Railroad. He knows that certain records must be assorted into certain boxes, or that these records must be listed into certain books on specified pages; that a certain amount of this work must be done by a certain time, etc. He may do the work and do it efficiently, and yet, unless he wants to make it so, it means nothing to him. However, if he is a person who asks enough questions to find out what each of these "slips" means to the Railroad, he would know why the conductor must make accurate reports, why these must be dispatched immediately, assorted correctly, and recorded intelligently.

A young man, formerly employed as an assistant file clerk, used to get into his office a little ahead of time and stay a little late in the afternoons, just to ask questions about the work handled on a certain desk in which he was particularly interested. He made himself agreeable to the men by running errands or them, addressing envelopes, etc. Noon hour would oftentimes find him asking questions about the work. "George Curiosity,"

they laughingly called him. One day there came a vacancy in that bureau. "Why not let George do it?" suggested one of the older men, "he knows how, for he has helped us with it." The result was, George did it.

This is merely an illustration of the benefits of knowing what is going on around you.

"I had no thought of Mr. Edison's in mind when I gave the test," said Mr. Curren laughingly when asked his reasons for presenting it. "I wanted to find out just what our employes are thinking about along the lines of railroading in addition to those phases covered by their own particular work; also to know how they keep in touch with current events.

"The results were interesting. There were some surprisingly good papers, quite a number of fair ones, and a few surprisingly indifferent ones.

"Of course, there were several questions asked that everybody would not be expected to know; we allowed for these in marking the papers. There were also some which could have been answered in several different ways; these we also allowed for. We did not grade the papers according to percentages, but marked them 'Good,' 'Fair,' 'Poor,' and 'Very Poor.' After the examination was over, we gave each person a copy of the questions, together with the correct answers.

"We believe that the experiment was a success and that the examination set the employes to thinking; at least, it has stimulated some interest.

"There are many people who are peculiarly constituted; some of these might get into a terrible rut working at a desk. These are the ones who need to have their powers of observation developed. Our railroaders should be able to impress outsiders with the idea that they are railroaders and not cigar store or candy factory employes."

Voila!

Le Petit Dejeuner!

The Baltimore and Ohio Dining Car Department has inaugurated a new feature in their service—the serving of a coffee demi-tasse as an appetizer for breakfast—now in effect on our more important trains.

The demi-tasse is placed on the table before each guest at breakfast, the service being rendered gratuitously.

This service was tested on No. 5 going into Chicago for a period of 20 days, during which it was extended to 908 guests, 747 of whom drank the coffee. A great many extended their compliments on the new feature.

Safety Section

In Perpetual Darkness, Robert Gannon Urges Men to Wear Goggles

ONCE upon a time, not many moons ago, there were three Railroad men, one of whom was a master mechanic at Staten Island, one a steel car repairer on the Ohio Division, and the third a shopman on the Connellsville Division—all of the same Railroad.

No, it is hardly possible that any one of the three knew either of the others, yet—at just the same time in the year, the same thing happened to each of them. But wait.

It so happened that this Railroad which employed these men was possessed of many strange ideas, some of which might be regarded as peculiar. Foremost among these strange ideas was the theory that the best way to prevent injury to the eyes is to wear goggles. Now, of course you must know that there is a little trouble involved in the wearing of goggles. They must be put on in the morning before beginning work; they must be removed in order to wash one's face before lunch; then it is necessary to put them back on again, and to take them off again before leaving the shop. Then, too, you may say that goggles are not particularly becoming to most men. I agree with you, they are not—but this Railroad never asked its men to wear goggles to a dinner party or to a formal dance; they are asked to wear them only while working, and then not from a standpoint of beauty, but merely for the protection of the eyes from flying chips, sparks, etc.

Master Mechanic Deems, Staten Island, Knows Why It Pays to Wear Goggles

Now, the first of these men, Master Mechanic Deems, Clifton, Staten Island, whose photograph is shown here, is an advocate of this peculiar goggle-wearing idea. The picture shows what happened to him while he was at work one day; moreover, it also shows how a pair of these little "beauty chasers" saved him many weeks of suffering in the hospital and the loss of an eye.

And verily the second of these men, Elba Seymour, car repairer, Ohio Division, met with a similar experience. While bucking rivets on a caboose,

his hammer slipped off the rivet, the snap came out and cut a gash over his left eye and on the side of his nose. But he, too, wore goggles, which saved his eyes for himself and his family.

But brass chips are treacherous. The third man, Robert W. Gannon, of Connellsville, did not realize it when he went to work one fine morning without his goggles—but he found out before the day was over. He lost his sight entirely. Now he warns others to beware. In this connection, he wishes to thank through the *MAGAZINE* the boys who have been so good to him on various occasions; he also begs them to be careful, lest they meet with a misfortune such as his. He says:

"Boys, let my case be a warning to you. Guard your sight with goggles, for when you lose your sight you lose your means of earning a proper living; besides this, you are in perpetual darkness."

Safety Eventually—Why Not Now

A conductor and his two brakemen were riding on the tank step of a locomotive on the Baltimore Terminal Division as the engine was backing into a commercial siding to pick up a car that the same crew had placed there the night before. It was a foggy night and the conductor saw the outline of the car looming up. He signaled the engineer for a quick stop. Emergency brakes were thrown on, and the engine slid along the rails and crashed into the car. One of the brakemen was killed and the other brakeman and the conductor severely injured. The Safety Rules specifically forbid more than one man riding on the footboard of the forward end of an engine and stipulates that he shall stand with his body outside the rails.

A freight house employe at Clarksburg, W. Va., was breaking seals on car doors, prying them off with an iron bar. A piece of seal struck the employe in the eye. Two days later he went to a physician for attention, and a little later went to a hospital. The doctors say that he will lose the sight of one eye and that it might have been saved if he had sought medical attention immediately after his eye was injured.

Finishing up a job in the Painesville Shop, an employe tossed a piece of lumber on the floor and went to other tasks. A machinist's helper, carrying one end of a plank, came along and fell over the piece of lumber left in the pathway. The plank fell upon his fingers, mashing two of them, and he lost a month from work.

A group of negro track hands were at work on the Baltimore Terminal Division when they were warned to clear all tracks as a train was approaching. One of the negroes, with some bravado, stood on the end of a cross-tie and refused to move, although fellow workmen called to him. He thought he would clear the train. He was killed.

His work finished for the day, a trackman on the East End of the Baltimore Division went to a station to await the arrival of a local passenger train. A freight train came along and the trackman attempted to board it. He missed his step and fell. His leg was broken and he was cut on the body and face.

When shoveling sand at Benwood, Wheeling Division, one laborer asked another what time it might be. The latter replied: "Time you were at work." There was a friendly tussle and one of the men was thrown to the ground with force. He struck his forehead against a rivet and his skull was injured.

A cut of cars did not make coupling when shoved together at Defiance, Ohio, and a brakeman went between the cars to adjust the knuckles. At another place in the same train a second coupling had failed to make and a second brakeman went between the cars to adjust these knuckles. He finished and gave the signal for the engine to pull ahead. The other brakeman was still at work between the cars and was injured when they were moved.

On his way to the supply room on the Toledo Division, a car oiler saw a woman acquaintance picking up coal. He climbed upon a car and threw off some lumps of the fuel for her. An engine backed into the cut of cars and the oiler was thrown from the coal hopper, rolled beneath it and his arms were cut off. Quick retribution, this!

American Railway Association Establishes Safety Section

CARRYING out the recommendation of Daniel Willard, president of the Baltimore and Ohio Railroad, which was approved by the board of directors of the American Railway Association, of which he is chairman, a safety section of that organization has been created, under whose auspices railroad safety work will be conducted. This action grew out of a meeting here between R. H. Aishton, president of the Association, and 25 safety representatives of the leading railroads of the country.

Through this affiliation with the American Railway Association, regarded as the premier organization of its kind in the country, railroad safety men anticipate that their work for the preservation of life and the elimination of accidents will be greatly stimulated. Co-ordination of methods now in use on various individual roads will be the prime object of the new safety section, under whose direction unified plans will be carried out on the railroads.

Although permanent officers for the safety section of the Association will not be elected until the next meeting in Boston on September 26, temporary officers have been chosen. E. M. Switzer, of the Chicago, Burlington and Quincy Railroad was named chairman; John T. Broderick, superintendent of safety on the Baltimore and Ohio Railroad, first vice-chairman, and Isaiah Hale, of the Santa Fe Railroad, second vice-chairman. A board of direction and committees to map out a program for preliminary work were also appointed.

They Ought to Resign or Be Fired

By Lewis Pilcher

The Piedmont & Northern Railway, Freight Claim Committee, has just notified all concerned of the resignation of the following characters, in the event they are later found to have appeared on other railroads:

M. T. Head.
E. Z. Worker.
Bill M. Wrong.
Load M. Hasty.

Additions to list:

I. M. Careless.
N. O. Marks.
Lee Key Roof.

Post these names as characters not to be allowed on the right of way if we are to cut loss and damage in half. It can be done.

The "Why" of Food

By Dr. G. Carroll Lockard

Medical Consultant, Relief Department

WE can easily surmise that man has always been interested in food. We may mark epochs in his growth from the time he secured his first food from the animals, birds and mussels, together with such grasses, herbs, fruits and roots which his early instinct taught him were not poisonous, to the discovery of fire by means of which he could cook food, and thereby improve its taste; to the period in which the Nomads partially settled down with planting of the grains and grasses, thus providing for future sustenance; and again to the acquisition by capture and trading of food substances of other tribes and peoples.

Consider now the present, where, with rapid transportation, ice and heat, we can have in a large center, fresh food stuffs from practically every clime; and what is even more astounding in the perfection of commercial preservation, one can, say in West Virginia, secure from a Chicago mail order house a veritable Roman profusion of foods and delicacies.

In this country, at least, we have no great nutritional problems except those arising from poverty and lack of knowledge. Foods, especially the fundamental foods, are still produced in sufficient quantity, and transportation is such that there are accessible in every community a sufficiency and a variety to maintain healthy standards of life and living. It may not be available to individuals by reason of poverty, inexperience, or lack of knowledge. It is the purpose of this article, therefore, to talk about food in its relationship to health and not merely as something that can be eaten.

The Human Engine is Different

Physicians always compare the body to an engine, but it should be remembered that it is a peculiar engine; it repairs itself; it grows—and

in its growth becomes greater in capacity and efficiency. So we must not only have fuel to provide energy and to make heat, but fuel which can be turned into tissue-cells, both repairing them and making new ones. Then, it is a peculiar engine in that it can store up for its future use certain of these food fuels, while of others there must be taken in every day, that day's needs. Woe be unto the efficiency of the engine if these needs are not satisfied. Again, it is a peculiar engine in that it must get rid of its own waste products, ashes, if you will, and also of the waste products of the food taken in excess over its daily needs, which eager hands often throw into its firebox (stomach) in response to the false signals of certain appetites.

Human Engine is not Standardized

Also, when we consider the varieties of human machines, how they profit or suffer by heredity, by infectious diseases, by negligence, by poverty, by ignorance, we can begin to appreciate that the human engine is not standardized, that each one is not just like the other.

Nevertheless, the engine idea is a good one to build from—both human and mechanical engine requiring certain supplies.

The human engine needs:

1. Building or repair fuels or foods.
2. Fuels or foods to make heat and energy (power or work).
3. Water.
4. Certain mineral substances that enter in mysterious ways into the make-up of the human machine.
5. Certain foods which, in addition to their fuel, seem necessary to keep the engine (the body) running smoothly.

Before going any further, let us first understand that in speaking of the fuel value of foods, we use as the standard or unit of measurement the

"calory." A calory is equivalent to the amount of heat required to raise the temperature of 1 kilogram (about 1 quart) of water 1 degree Centigrade. This may better be appreciated when we say that 100 Calories represent the heat required to raise the temperature of 1 quart of water from freezing to boiling. We cannot tell by the appearance of food, or by any rough measurements, the number of calories it contains, but the caloric content of foods is available to all in various government publications.

The average daily requirement of a man of average size, in an average occupation, is about 3,000 calories, and if this be distributed among the food fuels in right proportions, then nutritional health will be preserved. Common experience shows that many, if not most American diets, strike nearly to this average, provided the foods are mixed. As a matter of fact, many average portions served at the table will approximate 100 calories, for instance, a large egg, a small lamb chop, an ordinary thick slice of bread, a small side dish of baked beans, a baked potato, a large dish of oatmeal, a shredded wheat biscuit etc.

Class I—The Proteins

Let us now look at these food groups separately to see what is the relationship of each to good health. The first group, or the building and repair foods, are called "proteins." Never mind why, or of what fearful chemical make up they may be. It is enough to know that they are found in lean meat of all sorts, including fowl, fish and shell fish; in milk (3.5 per cent.); in cheese; white of egg; in short, in the animal foods, so termed. We must not forget that these proteins likewise are found to a considerable extent in all cereals (grains); in many so called vegetables, especially those technically termed Legumes, as beans and all varieties of peas; in the tubers, as potatoes; and in the nuts, as peanuts, etc. As a matter of fact, because nearly all foods of the so-called vegetable-cereal class contain this valuable fuel element, a generous mixed every day diet supplies about one-fifth the body's protein needs.

The Use of the Proteins

These fuel "bricks" or proteins are worked into the very "warp and woof" of our body; they repair the damaged cells, replace the worn out cells (up to a certain point), and in the young body make new cells, thus providing for growth. Such food fuel therefore is of essential or vital value to the body machine.

You would think that Nature would have made some provision for

the storage of this important substance in the body. Such is not the case. We must supply a certain minimum amount of it every day to our body machine, else it suffers from lack of repair, becomes weakened, and hence faulty in its action. But here there is also a curious thing: while Nature makes no provision for storage of protein, she made the instinct of growth so powerful that the young human machine will grow even though provided with insufficient food. This growth is not as much as would occur under plentiful food conditions, but it seems remarkable that it should occur at all.

This minimum requirement of protein for health is about 10 per cent. of the fuel value of the food. Mind you, not 10 per cent. of the bulk, or of the weight, but of the fuel value (about 75 grammes or 2½ ounces of pure protein).

What Becomes of Excess Proteins?

A question of great interest is what happens to the excess of meat food (protein food) that is put into the human engine. We have already seen that it is not stored up in the body. All protein food undergoes the same changes of digestion and absorption; a certain portion is utilized in the needs of the body, and the end-products or ashes are finally eliminated, chiefly through the work of the kidneys. The unused portion (the excess) is disposed of in the same way, even though it has performed no service to the body. The important point is that the handling of this excess simply and clearly puts just so much extra work on the kidneys. Now, in health, and under good conditions of living, this may not be of much moment. But in ill health, or under faulty living conditions, especially with lack of exercise or bodily effort, then this excess may be a factor in the production of diseases of the kidneys and blood vessels. Certain it is that the presence of such actual diseases should mean the reduction of these food substances to the minimum daily allowance, so that this excess work may be avoided.

Technically, we should take in not less than 10 per cent. of our food requirements as protein, thus 300 calories. Actually most of us take this much and many very much more. Thus, for example, on a generous diet, including bread, potatoes, vegetables, etc., we take in nearly 100 calories of protein in such food, exclusive of the almost pure protein or meat foods. The remainder will be more than supplied in two eggs at one meal, with an ordinary "helping" of almost any meat at another meal, and a glass of milk with the lunch. Anything more than this represents

an excess which may or may not be harmful to the individual so taking.

Remember, however, that this represents the minimum allowance for a man of average size, upon very moderate work. The man whose work is physical exercise requires more. The growing youth likewise requires relatively a greater supply than the matured adult, and the ageing adult less. As a rule a proper balance is struck by average appetite, provided it is furnished with and has been taught to require mixed foodstuffs, especially vegetables of all kinds, cereals, bread, etc. Excess is more apt to occur in those who "don't like vegetables" and whose diet consists of bread, meat and "fried potatoes."

(To be continued in September issue)

C. A. Plumly Back on the Job.

After an illness of about eight months, C. A. Plumly, superintendent

of the Telegraph Department, is now able to come to his office each day and expects that by September he will be able to handle his accustomed full trick.

Mr. Plumly was operated on and thought to be progressing nicely, when he had a setback, with serious complications. His recent convalescence has been slow, but steady and sure. His many friends throughout the service will be glad to hear of his recovery.

Use Your Head

In order to reduce the number of accidents to a minimum, and to insure safety at all times, just follow the daily pursuits of the woodpecker.

Use Your Head

LaPorte Heinekamp Motor Co.,
Baltimore, Md.

Dining Car Steward Sampselle Turns Freight Solicitor

New York, N. Y.

May 10, 1921.

Editor, Baltimore and Ohio Magazine,

Mt. Royal Station,
Baltimore, Md.

My Dear Sir:

Through the efficient and unusual cooperation that exists between all departments of the Baltimore and Ohio toward the end of producing revenue for our Company, we are constantly hearing of employees in departments foreign to their particular line of work, through one means or another, going out of their way to attract business, freight or passenger, to our rails, and to them the Management always indicates its full appreciation. I think I have an instance that is so exceptional, and has had such beneficial results, that you will be indeed glad to give it mention in the Magazine.

We are all familiar with the superb service as furnished on the dining cars of the Baltimore and Ohio, the reputation of which, with the traveling public, is becoming national, but it can hardly be expected, although desired, that the stewards of our dining cars will in detail explain to the traveling public the superior freight service of the Baltimore and Ohio. Such, however, has been the case of Steward Aubrey R. Sampselle, who explained it to Mr. Sidney Gould, member of the firm of the Service Equipment Company, this city, converters of cotton piece goods.

Mr. Gould was so impressed with the information he received from Mr. Sampselle that upon his return to New York, he got in touch with me over the telephone, all of which resulted in three or four carlots of textiles from Columbus, Ga., for the Schuylkill Arsenal (U. S. Government), Philadelphia, being routed via the Baltimore and Ohio at Potomac Yards.

This is new business for us, and our several visits with Mr. Gould since the beginning of this episode encourage us to firmly believe that in addition to his being wedded to our Passenger and Dining Car Service, he will become one of our many staunch friends from a freight traffic standpoint. I might add that Mr. Gould travels back and forth between New York and Washington about twice a week, and always uses our line.

I would appreciate it very much indeed if you would, through the medium of our Magazine, thank Mr. Sampselle in behalf of the Freight Traffic Department for his valuable cooperation, and as an inspiration to our other employees for their continued efforts in "boosting" the Freight and Passenger Service of the Baltimore and Ohio.

Yours very truly,

(Signed) W. F. Richardson,

Marooned without the Railroad

The newspapers recently stated that a railroad between 300 and 400 miles long in the West was to suspend operations. It had been in the hands of a receiver for some time and various reasons were advanced for discontinuing its operation, depending largely, we suppose, upon the viewpoint of the persons advancing them.

We will not attempt to discuss these explanations. We merely wish to call attention to the fact that only a day or two after this statement was made, the newspapers carried another announcement to the effect that the people living along the line of the railroad had organized a Citizens' Protective League to raise sufficient money by popular subscription to offer the railroad an adequate maintenance fund. The question of how the road had been run was of secondary interest to the 100,000 people living along its tracks. They were concerned with the possibilities of their being cut off from rail communication with other great arteries of traffic. The prospect of no transportation for themselves and their products aroused them and they took immediate action to prevent it, no matter what the cost.

This emphasizes the necessity of maintaining the transportation system of the country generally on a sound financial basis, and that when put to a test, a community finds it desirable to support by direct taxation in order to maintain a line of communication and to have the products of their farms and work shops moved to market. It is equally essential to the whole people that the transportation system be properly maintained.

Railroads are identical with any other industry. Their product is transportation and they can only exist when they can sell this product at rates which, when measured by normal volume of traffic, will provide funds to maintain and operate the roads and assure a reasonable return on the value of the property. Under the Transportation Act of 1920, this return has been nominally fixed at 5½%, and in instances 6%, but there is no assurance or guarantee that this return will be realized, and as a matter of fact under present conditions little more than half this rate is accruing to the railroads.

It should also be remembered that for several years before the war, and during the war, the railroads were impoverished by the additional costs piled upon them by legislation and by the rapid increase in commodity and labor prices, against which they could balance only small and wholly inadequate increases in rates.

The railroads cannot indefinitely pay out with their right hand for the materials they use to produce transportation, more money than they take in with their left hand for the sale of this transportation, and still function.

Yet this is what they have been forced to do in recent years, and have been able to do only by virtue of drastic economies, increased efficiency and the practical cessation of building programs. Now they should be given the opportunity to apply to their business such reasonable adjustments demanded by economic laws as have been permitted to apply to other forms of industry.

The financial failure of the little road in the West may not have perturbed the people dependent upon it. But when it appeared that the trains might not run they were perturbed—even to the extent of putting up their money to prevent this threatened calamity. Fair dealing on the rate question, and only fair dealing will prevent a similar threat to the railroad structure of the entire country. Fair dealing on the rate question, and only fair dealing, will enable the railroads to perform their important part in promoting the prosperity of our people.

How Vauclain Got the Hammer Head

In an intensely interesting article "Is Your Business a Debating Club?" in Collier's Weekly for April 2, S. M. Vauclain, president of the Baldwin Locomotive Works, suggests that the executive whose tendency in business is to defer all his important decisions for conference with other executives, is really not on the job. Mr. Vauclain's idea is to give a man something to do and to expect him to do it.

Writing along these lines he nevertheless admits that sometimes a particularly difficult problem, which his subordinates can't handle, reaches him for solution. He says:

"Sometimes it does get up to me because, of course, a president must do something. I well remember one election day when a foreman came in to tell me that he had just broken the big steel head of the only hammer in the shop that could forge certain driving wheels. We were working on an export order that required drop-forged wheels. The ships to take the locomotives overseas had been chartered and were due within a few days. If we held those ships for long, we should have to pay a demurrage that would very quickly wipe out our profit. I called the builders of the hammer on the telephone. They thought they might get new heads through within 30 days. They might have said 30 years for all the good it did us. I told the foreman, and he seemed very much of the opinion that I ought to have at least one or two of those hammer heads in my vest pocket. There was no use talking to him about it, so I told him to stop blaming me and go home and vote.

"We had no steel in the shops big enough for those hammer heads. Casting over in my mind the stocks of the various steel mills in the country, I could not recall one that would have such a big chunk in stock. That night I went to the theatre—which I find is a pretty good thing to do when one is upset. During the show I remembered that a junk dealer in town had about a year before bought an old monitor from the Navy Department, and that the centers of the turrets ought to be just about what we needed. Perhaps he had not sold them. There was no way of finding the junkman that night, but by four o'clock in the morning I was out with a team on my way to his yard. There was no one there—not even a watchman—so I climbed the fence, and, burrowing through his stock, came across those big centers. They were just what we wanted. By seven o'clock I had the junk man down, had bought the centers, and had them on the way to our shops. By noon the hammers were running."

Trying to Please Everybody

The seat hog is not the only problem which our trainmen are up against. With passengers who violate the demands of common sense and consideration, often to the discomfort of people riding with them, it is some-

times difficult to know exactly what to do. Failure to remonstrate with those who are inconsiderate usually results in considerable discomfort to others. On the other hand, insistence that a passenger consider the rights and privileges of others, even though exercised diplomatically and in the most courteous way possible, sometimes develops a useless argument which accomplishes nothing but unpleasantness.

The ideal conductor or trainman is he who is blessed with an abundance of tact and good nature and who exercises them freely in the performance of his duty.

It is unfortunate that some of our veteran conductors still have occasion to complain of the attitude of pass riders; that they are slow in presenting their transportation, that they try to save seats in crowded trains for other pass riders, that they pile luggage on seats to the exclusion of pay passengers, etc.

It is related that one hot day recently a woman pass rider took a seat in the front of a coach, the smoking car being immediately preceding. She asked the brakeman to close the door because some of the smoke in the smoking car was coming into the day coach and was offensive to her. He objected to doing this because of the warm weather and the fact that he felt that the other passengers in the coach would be more comfortable if the front door was left open. The rebuke which the woman administered to the trainman did not help matters any, and the unpleasant episode made it very uncomfortable not only for the principals but also for all those around them who had to listen.

It has been found necessary on infrequent occasions to revoke the pass privilege of certain employees who did not know how to appreciate it.

Such occurrences are unpleasant not only for the employees in question, but also for the officials whose duty to the Company and whose interpretation of their duty to the customers of the Railroad, have made them take such action. The lack of consideration on the part of certain pass holders also sometimes makes it very unpleasant for the vast majority of our employees, who use their pass privilege judiciously and with full consideration of the rights of others.

Three Friends

There are precious few people in the world who can get along without friends. Fortunate is the man who has a friend or two that will stick through thick and thin. Times like these are a real test.

Here are three valuable friends. If you've got them, stick with them—treat them fair.

The first one is a Job. It's a real friend these days. Business has slumped, shops closed, jobs become scarce. The man with a job has a Real Friend. And real friends deserve good, fair, above-board treatment. If you talk mean about a friend behind his back, you're not a true friend of his. It's the same with a job.

The second friend is Health. It requires fair treatment to be kept on the list of friends. Health stays by us when we treat our bodies right—chew our food and choose our food, get plenty of fresh air and exercise, bathe and get enough sleep.

Third on the list, but not least in importance, is Optimism. Optimism sees the silver lining of the clouds, the doughnut as well as the hole, the sweet as well as the bitter, the good in people as well as the bad, the Future as well as the Past, the skies above as well as the dirt beneath. Optimism is a Spirit. You can have it without cost to yourself in money. And it's the most valuable of the Three Friends.

—The Barrett Trail

President Willard on Politeness

We recently told here the story of the messenger boy who went into a railroad office and, without removing his hat, abruptly addressed a young lady; and of her statement to the boy that his conduct was unbecoming and that when President Willard had had occasion to come into the same office, he had always removed his hat and kept it off as long as he stayed there.

This little episode was absolutely true in its detail. It occurred in the office of the MAGAZINE, and was published without having been seen by President Willard. After the issue containing it had been distributed on the Railroad he saw the item and asked the writer if it was just a story, or the report of an actual experience. On being told that it was an accurate report of something that had happened and in which he was a factor, he commented on it in this wise:

"I am glad the article was written because it represents exactly how I feel on that particular subject. I think I have always been more or less careful about removing my hat upon suitable occasions, but if I had not been I would have become very careful in that respect after an experience I had shortly after coming with the Baltimore and Ohio as assistant general manager in 1899.

"I hadn't been with the property long enough even to have met the president, Mr. John K. Cowen, who was, in all respects, one of the most magnificent men I have ever known. Of unusual size and stature, of wide repute as a scholar, and of the highest attainments in his profession of the law, he was at the same time a man of the most pleasing personality and graciousness.

"I was working at my desk one day when I glanced up and saw his commanding figure in the doorway. *Removing his hat*, nodding pleasantly and asking if I was Mr. Willard, he came over to my desk and talked for quite a while on the business of the Railroad. His manner was all graciousness, of a kind that few men are endowed with. When he had finished with me he walked over to the door, nodded a good morning, *then placed his hat on his head* and went his way.

"That, as I said before, was a lesson in deference from a superior to a subordinate that I didn't have to experience twice to learn.

"I don't like servility or foppery in connection with the matter of fact business which we are called upon to transact on the Railroad, nor under any circumstances. Yet I do like the evidence of good breeding and politeness. And the writer of the little episode in the MAGAZINE office exactly interpreted my feelings in this respect.

"When I go into any office on the Railroad, it is my invariable habit to remove my hat. It is the least mark of respect that I can show to the men associated in business with me. How can I expect the officers and employees of the Railroad to have a decent respect for me if I myself do not show the feeling of respect that I have for them?"

The payments to pensioned employees constitute a special roll contributed by the Company.

During the calendar year 1920, \$342,993.35 was paid out through the Pension Feature to those who have been honorably retired.

The total payments since the inauguration of the Pension Feature, October 1, 1884, to May 31, 1921, amount to \$4,409,351.60.

The following pensioned employees, after serving the Company faithfully for a number of years, have died:

Pensioners' Roll of Honor

*Oh, blest retirement! friend of life's decline—
Retreat from care that ever must be thine;
How blest is he who crowns, in shades like these,
A youth of labor with an age of ease.*

GOLDSMITH—"The Deserted Village"

Hubert J. Smith

Hubert J. Smith, pensioned cabinet maker, was born in Centerville, Md., in 1851.

At the age of 19 he had learned the trade of coach body building. He continued in this work until he secured a position with the Harlan-Hollingsworth Company as cabinet maker.

In 1884 he entered the Mt. Clare Shops as cabinet maker. Shortly afterward he was placed in the upholstering shops as cabinet maker. This position he held for 35 years. He was pensioned on May 16, this year.

Mr. Smith has purchased a nice home through the Relief Department.

John W. Jaco

John W. Jaco was born on a farm in Preston County, W. Va., on December 13, 1852.

In 1880 he was married to Miss Alice Miller, who died six years later. In 1898 he was married to Miss Keturah Holt, who

died in 1903. In 1905 he was married to Miss Lillian Athony.

Mr. Jaco entered the service of the Railroad in 1872. His first work was with the Road Department, in making wooden splice blocks. From there he went to braking on the Cumberland Division, then back braking in Grafton yards, then on the Parkersburg Division. In 1880 he came to the boiler shop at Grafton. He was out of the service for two and a half years. Since then he has been at the boiler shop, until March 16, this year, when he was pensioned. Mr. Jaco met with several accidents while on the Road: his finger was cut, his toe cut off, his shoulder knocked out of place, and he fell off the tank, but each time he came up smiling. He says he has always tried to treat his fellows square and found that the Golden Rule always worked. He only regrets that he has not made a record of 50 years of service.

Philip Neudorfer

Philip Neudorfer was born in Chillicothe, Ohio, on January 1, 1854. He attended school and finished the eighth grade, then he

went to Kansas and worked at farming for 18 months. He returned to Chillicothe and entered the service of what was then the M. & C. Railroad as coppersmith apprentice. Here he has served ever since.

His wife is now dead; three children are living, one in Detroit, one in Athens, Ohio, the other at Chillicothe. This pensioner is loud in his praises of the Baltimore and Ohio. He was pensioned on May 13, this year.

George E. Heckathorn

The splendid record of 50 years of service and never late for work is the pride of George E. Heckathorn, who was placed on our pension list on May 13, this year.

Mr. Heckathorn was born on August 6, 1849. He entered the service of the Railroad in June, 1871, as car repairer at the old Hopper Shops, which were then located at Leadenhall Street and Fort Avenue, Baltimore. When these shops were closed, Mr. Heckathorn was transferred to Mt. Clare. Here he has filled various positions. Mr. Heckathorn has rounded out 50 years of service and has never been late once during that time.

James A. Mullin

Following is an extract from a letter received from James A. Mullin, pensioned machinist helper, Newark Division:

"Through our MAGAZINE I wish to thank the officials of the good old Baltimore and Ohio for their many kindnesses to me during my humble service with the Company since April, 1897, and especially those of the Re-

(Continued on page 43)

Baltimore and Ohio boys who have served the Railroad faithfully

First Annual Outing of the Equipment Branch of The Baltimore and Ohio Railroad Valuation Department

By E. B. Pierce, Magazine Correspondent

ABOUT fifty of our members assembled on Pier 4, Pratt Street, June 11, at 8.00 a. m., where Equipment Pilot Engineer A. W. Norton, familiarly known in nautical circles around Baltimore as "Skipper," greeted us before boarding the yacht "Geisha."

James Garfield Russell arrived at the wharf in a taxicab, much to the amusement of all; in fact this and other humorous incidents, such as the sporty regalia exhibited, put us in good spirits and we were off to a flying start. The skipper soon donned his sailor garb, took charge at the wheel and we sailed away.

The notables present were "Admiral" Von Schutte of the German Navy, who, with "Clan" McCoubrey, the eminent Scotchman, made life for our party. "Lady" Barnes, sometimes called "Mother," "Prince Pilsen," "Lord" Stewart, "Count" Turner (you can always count him), the "Rev." E. B. Pierce, the Misses Tucker and Claypoole, were there; also Gilbert Murphy, our hero, the Emmerick twins, "Unk" Wilson and son; that's all.

The girls gathered in the cabin to feed the "Skipper" caramels; Miss Bryan, who

made them, was taken sick on deck and Mr. Baggs looked pale sitting beside her. He said he was equal to the emergency however. Strains of music could be heard on the upper deck as Murphy danced the goose step. Finally the delightful sail ended when we landed at the wharf at Fairview. Of course, we had our pictures taken, before but not after, and then prepared for the ball game, the biggest event on our program, between our married and single men. It behooves us to mention the fact now that Armstrong, Hendricks, "Uncle" Gimmel, and Porter stole away from the crowd to indulge in that exciting pastime, fishing. They showed up late for dinner.

Shutte started to pitch fast ball for the single men but weakened under the spell of Pilsen's hooting. Broomfield, for the married men, pitched steadily and the "Skipper" played like a veteran behind the bat. Russell played with a "regular" suit on and Turner, the college champion from the west, played close to the ground. No one distinguished himself except Pilsen. Price found a horseshoe in right field but the married men lost when Pierce tried to

steal two bases instead of one. Final score 11-9.

Our appetites whetted by the fun, after Miss Minnie Claypoole, our official water carrier, had bathed us, we partook of a delicious chicken dinner in the cool dining room, thanks to the efforts of Stewart, our steward.

The athletic program began shortly after dinner and was most enjoyable, with running, jumping, three legged races, etc. The tug-of-war teams were evenly matched with some fat men and some lean on each side, until suddenly the rope broke and down went the large men, and the earth shook. Turner remarked that the ground was hard. Our skipper, always on deck and anxious to show his ability as a sailor, soon spliced the rope together again. These events ended with Frank Wilson, J. G. Russell and McCoubry showing supremacy. It's marvelous the strength Russell displayed in a baseball suit, with the girls looking on. 'Twas nothing for him to hold several men on his chest.

For those who cared to participate, water sports were next on the program. Some preferred to dance, others fished and many rested. Miss "Minnie-ha-ha" Claypoole took the lead and was soon spotted in her quite becoming bathing suit with Miss Ruthie Tucker. Oh me, oh my! Quickly the card players, McCoubry, Price, Shutte, Roberts, Turner and Mr. Norton, followed suit while "little Ruth" splashed in the water and played around with a rubber doughnut or inner tube, contenting herself with making the tide come in.

Just before our evening meal, the only time our party was quiet, a small girl tried to jump on our boat from the wharf, missed her footing and landed in the water between boat and wharf. Murphy sensed the situation at once, realizing her great danger, and jumped in after her with all his good clothes on. When she finally rose to the surface Murphy pulled her out with difficulty and said he thought she never would come up. Surely he saved the little girl's life.

Our Notables at Fairview on June 11, at the Outing of the Equipment Branch of the Valuation Department

At the outing of the Equipment Branch, Valuation Department, Fair View, on June 11

About this time the five "reel" fishermen, wearing a look of satisfaction, made an appearance with the day's catch, a mess of small fish. "Mother" Barnes had his camera and took a picture of the small fry, I mean the fish.

When we all gathered for supper, Mr. Norton suggested we give three cheers for Gilbert Murphy and present him with the swimming prize for his forethought and bravery in rescuing the little child. The suggestion was adopted unanimously. The poor fish game was played during our evening repast. The object was to present everyone with a souvenir of the occasion. "Skipper" Norton received a toy boat. Shutte was made master of schooners and warned to steer clear of bars, while "Baldy" Baker accepted a hair net. Someone was knocking when they presented Turner with a little toy bull and "Unk" Wilson, the small tool man, with a hammer.

We soon sang our supper down and just before our trip up the bay in the moonlight, "Prince Pilsen," with Miss Claypoole helping, gave an exhibition of shimmy dancing that was hard to beat. On the boat, ice cream cones were served, and dancing and more dancing indulged in, until suddenly a thunder storm arose. The boat

pitched furiously, lightning flashed continuously. (Some were sick, especially those who lost playing dominoes and poker below.) We thought sure the boat was in danger until Shutte shouted, "Have not a fear men and girls; the boat wharf is in

sight; our faithful skipper has piloted us through the storm safely back to Baltimore."

When we finally landed all gave three cheers for "Skipper" Norton and the boat's captain, then made for home, tired but happy.

Married—Single Ball Game the Big Hit at Outing of Office, Auditor Coal and Coke Receipts.

By John Limpert

Magazine Correspondent

THE fourth annual Field Day for the employes of this office and their friends was held Saturday afternoon, June 11, at Maryland Park. Quite a large number were on hand and had a delightful time.

As usual, the most interest was centered in the ball game between the married men and the single men. "Hughie" Poole had the "young sprouts" in charge and performed wonders. As a baseball manager, friend Poole has a great future behind him. With the firm intention of putting the guffus to the long winning streak of the married men, "Hughie" ordered his charges out for secret practice about four weeks before the game and about three or four times a week. Things were apparently in apple pie order, with a first class battery, sterling infield and a hard hitting and fast outfield. And with all the practice, never a word about the "Find" in the way of a pitcher who was going to make the married men look foolish. While all this preparation was going on, never a practice did the married men have; in fact, at least six are willing to make an

affidavit that they had not thrown a baseball this year previous to participation in the game. So knocking all hopes of an alibi on the coco, the teams squared off for action, with the single men on the field. "Wee" Johns, who proved to be the dark horse, undertook to serve up the shoots to Tolson. Johns is built very much like our old friend Burns, and as a pitching possibility, is in about the same class, which is minus.

The day was sweltering and at game time clouds began to gather. The first married man up struck out. This was a signal for great demonstrations. Wild cheers and great predictions were made. Next man up got his base on balls; ditto next. At this point there was a decided depreciation in the cheering and friend Johns began to wear a worried look. Brauer then clipped one on the nose for a single and brought a run in. Limpert busted one on the seam for a double, sending in two more. "Old Man" Spedden followed with a single. Johns tried to dust off "Kid" Maccubbin and plunked him on the arm. This appar-

Employees Who Are Taking the "Curt" out

They Met President Harding in Washington

Forty-five Clevelanders Say Baltimore and Ohio Gave Them a Perfect Outing in Capital City

AN ALL-EXPENSE party tour of 45 people from Cleveland to Washington and return was handled on June 20-26 by our Passenger Department under the direction of J. G. Strickenburg, district passenger agent, Cleveland. F. M. Brown, traveling passenger agent, accompanied the party, which thought so much of the fine personal service he gave them that he went back to Cleveland richer by ownership of a very handsome umbrella, the gift of the members of the tour.

In Washington and environs most of the many side trips made by the party were handled by motor busses and despite the very hot weather, every minute of the stay was enjoyable. The short visit with President Harding was an unusual pleasure given these visitors to the Capital from his home state.

On the return trip Miss Eleanor Margaret Freeland, of the *Cleveland Plain Dealer*, whose articles during the Republican national campaign, conducted from President Harding's home in Marion, were widely circulated under the caption "The Girl Next Door," prepared the letter of appreciation to the Baltimore and Ohio.

The Baltimore and Ohio certainly feels fully repaid for the splendid service and personal attention given this party, in being able to reproduce here the following unusual testimonial of their appreciation:

A Bow to the Baltimore and Ohio

We, the people of the Baltimore and Ohio party visiting the nation's capital, being of happy mind and body, filled with fried chicken, delicious salads and dainty delicacies, invigorated by cool breezes blowing through our lovely, comfortable rooms and suites provided by the Hotel Cairo, with roses and carnations in our buttonholes and boxes of candy under our arms, do hereby pause in our whirl of interesting sight-seeing, to make a bow and express our satisfaction and appreciation to our hosts, Mr. J. G. Strickenburg, division passenger agent, and Mr. S. M. Brown, our personal conductor, for all these many courtesies and comforts, the pleasure of an instructive and interesting tour of sight-seeing in and about Washington, for automobile rides and boat trips, the provision of capable guides, the thoughtful care of baggage and all the otherwise annoying details of travel, and most of all, for the personal interest and care extended to each and every guest.

Three cheers for the Baltimore and Ohio! (Signed)

Isabelle Virginia Freeland, *Cleveland Plain Dealer*, Cleveland; Eleanor Margaret Freeland, "The Girl Next Door," Marion; Dr. and Mrs. W. F. Emery, Ashland; Mr. and Mrs. E. H. Ford, of Ford's Auto Sales, Ashland; Mr. and Mrs. B. L. Rigel and daughter Jeanette, 1417 Lakewood Avenue, Lakewood; Mrs. S. Peterka and Edna Peterka; A. M. Smith, Cleveland; Mary E. Alexander, Toronto; Lillian B. Culp, Toronto; Hilda Lebold, Bolivar; Margery Brandt, Scio; Flora Brandt, Scio; Mabel Culp, Toronto; Mrs. Watterson and Miss Laura Watterson, 1432 W. 74th Street,

Cleveland; Miss Florence B. Tilt, 7103 Detroit Avenue, Cleveland; Miss Helen Hart, West 85th Street, Cleveland; Mrs. C. A. Hopper, Gladys Avenue, Lakewood; Mrs. Myrtle E. Grigsby, 727 Garfield Street, Akron; Antoinette Larson, 412 N. 3d Street, Montevideo, Minnesota; Mr. and Mrs. Charles H. Hasse, 1372 Webb Road, Lakewood; Bess Norton, Lodi; Genevieve Clement, 1517 Grand Avenue, Superior, Wisconsin; Loretta M. Sonnhalter and Hilda I. Sonnhalter, 14 N. Cedar Street, Massillon; Laura B. Assistant Baggage Agent J. W. Robertson

April 30, 1921.

Mr. J. B. Dodd, Baggage Agent, Cumberland, Md.

Dear Sir—When in Frederick Wednesday, Mr. J. M. Crouch, a traveling salesman who had heard I was in town, asked to see me, and said that he wanted to commend the night baggage agent who so nicely accommodated him in checking his baggage so he could make No. 10. This he very much appreciated, as he was late in reaching the room, and said that the baggageman would have a perfect right to decline to check the baggage if he had chosen to be unaccommodating.

Educational Vacation Tour from Cleveland, Ohio, on visit to

of "Courtesy" on the Baltimore and Ohio

Mr. Crouch also remarked that the Baltimore and Ohio was to be congratulated upon the splendid personnel of its baggage-men, as they were generally most courteous and obliging wherever he went, and that this was one of the reasons he always favored this Company with his patronage wherever it was possible for him to use our rails.

Such a compliment as this, coming entirely unsolicited, is certainly most pleasing and gratifying to me, and would like the assistant baggage agent to know that the Department greatly appreciates it.

MR. B. E. WHITE, District Passenger Agent,
Baltimore and Ohio R. R.,
707 New Hayden Building,
Columbus, Ohio.

My dear Mr. White—As you are aware, I took sick on December 6, and was very, very ill, and it was thought advisable to send me to French Lick Springs. Now I want to write and tell you how nice your people were to me both to and from the springs.

At the Union Station here, they were kind enough to get me into my drawing room early and made me very comfortable.

On my way home, when I arrived at Mitchell, they had the drawing-room ready for me, which made me comfortable to Cincinnati. At Cincinnati the sleeper was not ordinarily put in the depot until about ten o'clock, but your depot managers saw to it that the car was placed, the heat turned

on and my drawing room made up, so that I was in bed at a quarter after nine.

The conductors on the train and all employees were very kind and considerate, and what they did for me was much appreciated by me and my friends. We are all boosters for the Baltimore and Ohio Passenger Department, and assure you that when it is possible to use your lines, they will be given preference over all others.

With kind personal regards, believe me,
Sincerely yours,

(Signed) J. M. ROAN,

MR. S. U. HOOPER, Superintendent,
Baltimore and Ohio Railroad,
Garrett, Indiana.

Dear Mr. Hooper—I want to thank you for stopping the west bound train for me Monday night at Wawasee.

During the summer I make week-end trips to and from Wawasee, and I think without an exception the trains crews with whom I have come in contact, have been unusually courteous and accommodating to Mrs. Sinclair and myself as well as to my friends who ride back and forth. I have ridden on a great many Railroads in the United States and I have yet to find a Road whose employees are as courteous and accommodating as they are on the Baltimore and Ohio.

I mention these things because it must be the result of a certain policy of management,

and as most of my riding is done on the division under your charge, I thought you would like to have me tell you this.

MR. W. D. HANCHER, Agent,
Baltimore and Ohio Railroad,
Washington, Pa.

My Dear Mr. Hancher—I wish to take this opportunity of thanking you for inducing us to use the Baltimore and Ohio Railroad on our recent trip to Washington, D.C. It is impossible to conceive of a transportation company doing more for the comfort of its patrons than the road you represent did for us. The coach assigned us was the finest I have ever ridden in; the service was beyond reproach; all the employees with whom we came in contact were courteous gentlemen, and I want especially to pay tribute to Mr. Foust, traveling passenger agent, Pittsburgh, whose accommodating spirit and desire to please were in no small degree responsible for the success of our trip.

It is scarcely necessary for me to say that next year when we are planning to repeat the trip the Baltimore and Ohio will be our preference.

Very truly yours,
(Signed) J. C. MCGREGOR

President Harding on the White House grounds, June, 1921

all right, only having given three bases on balls, allowed seven hits, struck a batter, thrown one ball over the grand stand, one under it and made two errors. "Snitz" Snyder then went in to pitch and in order to encourage him a little, not to say anything of being nearly exhausted, the married men went out in one, two, three order. The singles got a run in their half of the third. Two more were pushed over by the benedicts in the fourth and with the score standing at 9 to 1, it was decided that the poor boys be allowed a little fun and they were permitted to score six runs in the last half of the fifth, putting it at 9 to 7. The little boys again began to throw out their chests, claiming they would forge into the lead the next inning. This illusion was also shattered when the Hubbies pushed over four more in the 6th, thus completely taking all the fight out of them; and, being leg weary, arm sore, short of wind and many other

Auditor Coal and Coke Office Outing

(Continued from page 35)

ently was too much for J. Pluvius, who kindly opened the skies and let the rain descend for about five minutes. It was a good thing that Umpire-Coach Poole was not a bench manager during the attack, because in all probability he would have had to buy another pair of trousers; as it was, he only had to buy another pair of shoes, as he wore one pair out pacing up and down behind his "great" pitcher.

After the rain stopped, play was resumed, but sad to relate, the shower of base hits was not over. After several more hits and two runs, the married men, beginning to feel the strain, allowed themselves to be put out.

The single men went out in one, two, three order in their half. Then the parade started again and two more runs were scored by the married man in the second inning. At this point "Wce" Johns was "pulled," after considerable protesting that he was

Employees of the office of the Auditor of Coal and Coke Receipts and their friends at their Annual Field Day Outing. Above, the victors in the big game; the married men. Below, the losers; the single men

things, not to mention the fact that the Assistant Auditor W. B. Dudderar was complaining of writers cramp, trying to keep tab on base hits and runs, a halt was called and attention was turned to the rest of the program. Every man on the married men's team got a hit, while Schuster, Brauer, Limpert, Spedden and Lehman got two each. Seven hits were made by the single men. "Al" Lehman struck out seven while Johns and Snyder only had two between them. The line up was as follows:

Married Men: Shakspeare, 3b; Schuster, s.s.; Landerkin, c; Brauer, 2b; Limpert, 1b; Spedden, r. f; Maccubbin, c.f; Pritchard, l. f; Lehman, p.

Single Men: Lutz, 2b; White, 3b; Snyder, s. s.-p; Atwell, 1b; Spurrier, r. f; Luken, l. f; Massicott, c. f; Tolson, c; Johns, p.-l. f;

Score—Married Men 13; Single Men 8.

New Castle Division Veterans and Employes Combine for Big Picnic at Brady Lake

By J. A. Jackson,
Magazine Correspondent

THE first annual outing of the New Castle Division employes was held at Brady Lake on Saturday, July 9, in connection, with the annual meeting of the Veterans' Association.

Early Saturday morning found jolly crowds of employes and their families wending their way to the various railway stations along the Division, all bent on boarding the early trains to take them to the beautiful park. More than two thousand were in attendance. This was one of the largest gatherings of Baltimore and Ohio employes and their families on the New Castle Division.

Arriving at the Park in the early hours of the morning, a royal welcome was extended to the picknickers by the tenants of the summer cottages, which line the entrance to the Park, and no time was lost in seeking out the various places of amusement which were placed at the disposal of the committee in charge for the day. Bathing, boating and dancing were the favorite amusements for the younger set, while the kiddies and their mammas were frequent patrons of the merry-go-round, roller-coaster and the sand beach. Horse shoe pitching, bowling and swimming were the favorite pastimes of the men; but the feature of the day, for everybody, was the big "EATS," served at noon in the beautiful grove which is especially adapted for this purpose. The way the "EATS" disappeared would lead you to believe that everybody was possessed with the idea of seeing who could store away the most food.

The "EATS" being disposed of, everybody hied to the baseball park, where a fine program of athletic events had been arranged. These included fat man's race, running race for boys under 15 years of age, running race for girls, shoe race for boys, young ladies race, and three legged race.

The other races and contests resulted as follows:

Juvenile 75 Yard Dash for the little girls—Winner, Anna Bickel; Juvenile 100 Yard Dash for the little boys—Dead Heat, "Jimmie" Spedden and Young "Al" Lehman; Ladies' Gold Digging Contest—Winner, Miss Edith Garner; Misses' Juvenile gold digging contest—Winner, Anna Bickel; Boys' gold digging contest—Winner, Young "Al" Lehman; "WEENIE"-EATING CONTEST—W I N N E R — "French Meditation" Gartrell—22 Hot Dog Sandwiches; Men's 300 Yard Dash—Winner, W. H. Brauer; Second—Snyder.

Once more we take our hats off to Messrs. Spedden and Brauer for their kindness in not only permitting us to use the ball park, but in actually providing ice cream, soft drinks, bis-mac and hot dogs in abundance.

All the games were hotly contested, and the winners were awarded handsome prizes, donated by the Veterans Association.

At 2.30 p. m. the big ball game between the clerks and the staff officers was called. Mayor Barnes of New Castle, a special guest of the day, handled the indicator for the first inning; his decisions gave evidence of his early experience in umpiring during the days of the old "Neshannocks." "DOOK" Morrissey was selected to do the twirling for the pencil pushers, the selection being made on the strength of an unconfirmed rumor that he had at one time during his youthful career won a ball game. After the smoke of battle had cleared away in the first inning, and the staff of skilled accountants had counted 7 runs and 9 hits on the score board, the "DOOK" was derrick in favor of Glenn, who fared little better than his predecessor, as the staff officers had sworn vengeance on the clerks for the many insults heaped upon them during the week preceding the game, and continued their attack unmercifully, battling the offerings of Glenn to all corners of the lot, and piling up a score of 18 runs to the clerks' 9. Road Foreman of Engines J. L. Shriver was on the mound for the staff officers, and Superintendent D. F. Stevens donned the mask behind the bat. Both performed like big leaguers, and, as they were heard to remark after the game, would not ask for anything better than to eat up the clerks' team every morning before breakfast. Trainmaster C. P. Angell on third played a bang-up game, and landed on one of Glenn's fast ones for two bases.

The clerks were clearly outclassed in every department of the game, the well deserved victory going to the staff officers. It was a tired but happy crowd that all too reluctantly wended its way back to the homeward bound train, all satisfied that

the day was one of the most enjoyable they had ever spent, and all hoping that the next annual outing will be as successful. Credit is due the following committee: C. P. Angell, chairman; W. W. McGaughey, R. E. Pyle and E. H. Meckstroth. The Veterans' committee was composed of: G. W. Taylor, chairman; W. P. Kennedy, S. H. Rhoads, G. H. Hammer and F. C. Green.

Line up of the ball game:

CLERKS	R	H	E
Monica, c. f.	1	1	0
Geddis, r. f.	2	2	1
Glenn, 3-p.	1	2	0
Eilbeck, 2-3.	1	1	1
Updegraph, 1.	0	1	2
McWilliams, ss.	1	1	1
Bollard, l. f.	1	0	0
Burnett, c.	2	2	0
Morrissey, p-2.	0	0	0

STAFF OFFICERS	R	H	E
W. H. Yeager, 3-c.	2	2	1
D. F. Stevens, c.	1	1	0
N. R. Butler, 2.	2	2	0
J. A. Tschuor, 1.	1	1	0
J. A. Phelps, ss.	2	2	0
O. L. Murphy, l. f.	2	3	1
H. F. Schwab, c. f.	2	2	1
C. M. Trussell, r. f.	1	2	0
J. L. Shriver, p.	1	3	0
C. P. Angell, 3.	1	2	0
C. C. Robinson, ss.	3	3	1

Summary—struck out; by Shriver 6, by Morrissey 1, by Glen 2. Three base hit, Shriver; two base hit, Angell, Stevens, Murphy, Tschuor. Stolen bases; Angell, Tschuor, Yeager, Geddis. Hits; off Morrissey, 9 in one and one third inning; off Glenn, 14 in five and two third innings. Umpires, Mayor S. A. Barnes, "Joe" Williams, J. A. Jackson. Time of game, 2 hrs.

Heard in the Bleachers

Trainmaster C. P. Angell, despite his 225 pounds, "done some tall sprintin" in the 4th inning, when he stretched his drive down the third base line into a two sacker.

"Dook" Morrissey's tears almost turned the water in the lake salty when he was knocked off the mound in the second inning.

Geddis, Bollard, and Monica, outfielders for the pencil pushers, were run ragged, chasing the long drives from the bats of the staff officers.

Superintendent D. F. Stevens showed that he has not forgotten how to play the great Americam game; he caught the bend-ers of Shriver like a big leaguer.

"Big Jim" Glenn, who relieved Morrissey in the second, was seen to offer a prayer as he stepped into the box, but outside of that and the glove he had on his hand, nobody accused him of having anything.

"Joe" Williams handled the indicator, and not one kick was registered by either side. His famous "strike 'tuh'" made a big hit with the crowd.

Yeager, Butler, Tschuor and Schwab certainly had Morrissey's number in the first inning, when they each smacked the old pill for extra bases.

"Jack" Shriver knew what he was talking about, when he said the Kids would keep

their mouths shut. Not a word has been uttered by any of them since the old timers showed them up.

Trussell, Phelps and Murphy had a big day both at bat and in the field, but they were just living up to what they said they would do. How about that Morrissey?

"It was some Picnic, and you can bet your boots we're not going to miss it next year." That is the way those attending were heard to express themselves.

Three cheers for the officers of the New Castle Division! It was they who planned the outing, and everybody showed appreciation by being on the grounds early. Come again. We just love to go to the Baltimore and Ohio Picnic.

Big Doings at Annual Outing of Office of Auditor Merchandise Receipts

By P. Henry Starklauf

Magazine Correspondent

OUR annual outing was held Saturday afternoon, July 23, at Miller's Park, Dundalk. As per schedule, at 1.05 p. m., five chartered cars were filled with many of our force and their families, sweethearts, etc. Horns and balloons were distributed to all the kiddies, big and little. On arriving at the park, light lunch and ice cream were served.

Twenty splendid dance numbers were rendered by Prof. F. W. Lieder's Maryland State Orchestra. How the youngsters stepped off the foxtrots. And those not so young went at the old time waltzes as though they were young.

There were attractions for all ages and sizes in abundance, and that everybody was made happy is due largely to the

Among those present at the Outing of the Office of Auditor Merchandise Receipts, July 23

excellent management of James W. Collars, assisted by Messrs. Kroeger and Weber.

Among those of the official family present were: George M. Shriver, senior vice president; J. S. Murray, assistant to president; J. J. Ekin, comptroller; F. A. Deverell, W. D. Owens and J. P. O'Malley, assistant comptrollers; T. C. Roberts, chief clerk to president; W. E. Rittenhouse, C. G. Pollock, C. H. Poumairat and L. A. Lambert, auditors; L. M. Grice and W. Dudderar, assistant auditors.

The ball game between the married and the single men resulted in victory for the better halves, score 2 to 0. The reason for this was the spectacular twirling of "Jimmie" Scharf.

Buffet luncheon was served at 6.00 p. m. by John Bopp and his staff, and how we did enjoy it out in the open under the shade of the oaks with the waters of the beautiful

Patapsco just ahead! Mr. Bopp has our hearty thanks.

The committee to whom praise is to be accorded for their untiring efforts in a most successful outing are: R. E. Mitchell, chairman; A. F. Beck, E. R. Childs, J. W. Collars, H. E. Doron, G. L. Donoho, C. W. Feinour, O. N. Goudy, J. F. Hornick, R. B. Hall, F. O. Kemp, F. J. Kroeger, J. C. Mullinix, F. J. Kelly, F. Otto, A. M. Seldner, G. Slack, H. F. Schneider, O. E. Weber and A. L. Wagner.

It is hoped that members of our organization will bear in mind the various firms who were kind enough to favor us with an "ad" in our program of events, thereby assisting us in making this affair a big success, and return the compliment by their patronage.

The events and their results are given in the following table:

EVENT	QUALIFICATIONS	PRIZE	WINNER
A—Children's race....	Girls 9 and under....	Large red ball.....	Helen Starklauf.
B—Children's race....	Girls over 9 and under 15.....	Kewpie doll.....	Anna Givvines.
C—Children's race....	Boys 9 and under....	2 large blue balls....	Paul Hohman. G. S. Moore Jr.
D—Children's race....	Boys over 9 and under 15.....	Tennis ball.....	Harry Hohman.
D (a)—Children's race.....	Mixed race—boys and girls.....	Tennis ball.....	Miss H. Manning.
E—Base running contest.....	Thin men.....	Silk tie.....	Victor Walters.
F—Base running contest.....	Fat men.....	Silk hose.....	F. A. Deverell.
G—Foot race.....	Ladies.....	Stieff silver bar pin..	Mrs. H. A. Huetcher
G (a)—Feature race....	J. P. O'Malley and F. A. Deverell....		F. A. Deverell.
H—Potato race.....	Open to all.....	2 pounds Martha Washington Candy	Victor Walters.
I—Bag race.....	Open to all.....	Fountain pen.....	Stuart Fuld.
J—Three-legged race..	Open to all.....	2 Eversharp pencils.	Arthur Barget. M. W. Foster.
K—Blindfolded walking race.....	Open to all.....	4 oz. Azurea perfume	Mrs. H. A. Huetcher
L—Bowling contest....	Ladies.....	Stieff bonbon spoon.	Mrs. Fred Otto.
M—Bowling contest....	Men.....	Pen knife.....	Harry Schalizki.
N—Ball throwing contest.....	Children 9 and under.....	Rubber ball.....	Earl Mirchell.
O—Ball throwing contest.....	Children over 9 and under 15.....	2 Tennis balls.....	Anna Givvines. Frank B. Weber.

Miss Margaret Grammes

(Continued from page 4)

"And you get a \$1,000 trousseau as a prize?" we suggested.

"Yes, and \$500 worth of merchandise. This just means that I'm going to have some clothes this winter that will be just a bit better than I'd have otherwise. No, I don't expect to use the trousseau right away," she laughed. "I'd been looking for some excitement for a long time. Now I have it.

"I certainly appreciate the manner in which my Railroad friends have treated me, particularly those of my own office. I like to travel and I think it's splendid to be able to travel on a pass. Then, too, since I won out in the Beauty Contest, the folks at the office have been exceptionally kind. I have had time off when I needed it. My friends gave me a most wonderful basket of flowers

on the morning after the contest, and sent me home in a taxi. Oh, I'm just full of praise for the Baltimore and Ohio. I have never worked anywhere else, for I like it here."

Miss Grammes consented to have our photographer make several pictures of her. When she visited us, she wore the little green voile dress which she wore on the occasion of the meeting at the Belvedere.

"She made it herself, too," supplemented her brother, "and that's the prettiest part of it. She makes nearly all of her own clothes and hats."

"Yes," went on Margaret, as she turned her large brown eyes admiringly toward her brother, "everybody wants me to wear this dress so they all can see it. Pretty soon it

will come to the point where I'll have to wash and iron it every night so that I can wear it on the next day."

"Do you like housekeeping?" we asked.

"Not particularly."

"Oh, but she makes the grandest fudge, and cake, too," chimed in her brother again. He, by the way, is a Baltimore and Ohio employe, too.

"No," she continued, "I am not especially fond of housework; I like outdoor sports, swimming, canoeing, tennis, hiking, and—" "Eating!" finished Brother triumphantly.

The following extract from the *Baltimore American* will give a further idea of what the judges thought of Miss Grammes. Among the judges were Henry Hutt and James Montgomery Flagg, who made pen sketches of the prize winners.

A Little Wood Nymph

Margaret Grammes, to whom the judges awarded the first prize, might have been a little wood nymph in her cool little frock of reseda green, which acted as a foil to a clear, beautiful skin, lovely dark brown eyes and hair that waved back naturally, without any apparent coaxing and fixing, from a fine forehead.

She did not stand out immediately when the judging began and the ranks were still full. There were many there whose beauty was a little more insistent to the casual observer. Miss Grammes has the kind of beauty that grows upon you. She was not the first or second or even the third choice of the judges during the first promenade before them. But as the ranks began to thin out when an intensive study had to be made of each form and face her beauty proved a magnet that instinctively and more and more often drew the eyes of the judges toward where she sat or stood.

Unused to Posing

There was more sophistication, more art and poise shown by some of her rivals. The very fact that she was so unspoiled, so girlish and natural, so unused to posing, it is believed, won for Miss Grammes the golden apple of the first choice. She will be arrayed in glistening white satin as a bride at the Fashion Show, and one has only to think of the soft, dark eyes and hair, the sweet mouth, the beautifully drawn lines of nose and chin and forehead to realize that the picture will be one of unquestioned loveliness.

The Fashion Show was held in the Fifth Regiment Armory, Baltimore, from August 9 to August 19, and thousands who saw Miss Grammes declared her to be all that the judges acclaimed her—sweet, unsophisticated, lovely—and certainly most fitted of all who took part to portray the ideal American bride. Other girls of the pageant smiled, but the beauty of our little prize winner needed no smile to enhance it. With the grace and stateliness of a queen, gowned in white satin, Miss Grammes presented a picture that made many a girlish heart in the audience throb with the hope that they, too, might appear as lovely and fresh on a certain eventful day as did this maid from Fairyland.

Fun a Plenty at the Grafton Picnic, an' I Wuz on the Inside, Lookin' Out

By Aunt Mary

OLD Deacon Persimmons useter own a old white mule named Jinny. Now, when Jinny took a notion to go, she'd go or bust. But when she made up her mind to stop, stop she would. You could build a fire under her an' she'd jest move outen the blaze; you could beat her hide 'till it was raw, an' all she'd do wuz kick up her hind feet; but oh, if you'd ever hold a armful of hay in front of her, or a couple of ears of corn, old Jinny would foller you to the end of the world! Now sometimes my Ezra 'minds me of Jinny. I kin beg an' plead 'till doomsday fer a new dress or a kitchen range, an' he won't listen; but if I set a rattlin' good dinner in front of him, he allers comes across.

Last pay day, when Ezra come home from work an' wuz gittin' washed up fer supper, he sez: "Mary," sez he, "I wisht I had time to go to that picnic at Grafton."

"When's it goin' to be?" sez I, turrrible curious.

"Next Saturday, the twenty-third."

"O, then I kin go, pervidin' you gimme the money to buy a new frock."

"There you go ag'in," sez Ezra, bristlin' up like a Tom cat an' knockin' the ashes outen his pipe agin' the side of the rockin' chair, "you allers wantin' somethin.' Wisht I hadn't said nothin' 'bout the picnic."

"Shame on you, Ezra Hezekiah Simpkins Creosote!" sez I. Then a thought struck me. "Come on in," I adds, "supper's ready."

"Jiminy! but them cabbages smells good," he sez as he picks up the knife to carve the ham. I held my peace. Presently he sez: "Whar'd you get them new per-tatoes? They sure are jim dandies."

Still I kept quiet.

"Mary," he went on presently, "if you git this twenty dollar bill changed, I'll give you half of it—" I opened my mouth in astonishment.

"—an 'another twenty, if that'll help you out. An' I reckon you might as well go to

Grafton, if you wanten. Give my best regards to all the folks up there."

So that's how I come to go.

I reckoned that we had a big crowd there last year, but that warn't nothin' to the folks that crowded in Grafton Park this time. There wuz grandmothers an' grand-fathers, great-grandmothers an' great-grand-fathers, husbands an' wives an' children; some little babies what wuz too little to know what wuz goin' on except that fer that day, life wuz one grand feed after another.

The park itself wuz in splendid condition fer a picnic, clean as yer ma's parlor carpet, with plenty of green grass to set on. There wuz water bareils full of real ice water, an' barrels to hold the trash sech as chicken bones an' ice cream plates. Fer the children there wuz a set of big swings, a slidin' board, an' a merry-go-round, all with white sand spread underneath of 'em. The children had the time of their lives, jest as Mayor Cather an' the city commissioners of Grafton intended they should when they put in all these improvements.

Special trains come from Fairmont, McMechen, an' Parkersburg an' brought folks from every direction, not only Veterans, but Railroad folks an' their friends. I dunno jest how many wuz there, but I reckon as how it would be safe to say there wuz about 3,000 to 3,500.

The young folks wuz druv clear off the dancin' floor, fer Ma an' Pa wanted to dance; likewise Grandma an' Grandpa. The younguns took to the water like fish, an' sech swimmin' an' divin' you never secd. Then there wuz the canoes an' row-boats an' a ferry to bring folks across the river.

Most as soon as the folks arrived at the park they commenced thinkin' about some-thin' to eat. Fires wuz built an' coffee pots wuz set a-bilin', an' everybody whet up their appetites fer the dinner that follered. Chicken? Fer once in my life I had all the livers I wanted. Judgin' from the invites I

got to dinner, I musta looked like a starved tabby cat. I wisht I coulda e't all of 'em, but that one I had with the Keane's filled me nigh on to bustin'. Bless my soul, I could tell you all of the other good things we had, but I don't wanten make them folks feel bad what couldn't get there.

About half-past two o'clock, the speakin' begun. Mrs. J. M. Garvey, wife of the Grand Vice-President of the Veterans, gave a splendid talk to the women about joining the Ladies' Auxiliary to the Veterans' association. There is now over 1,800 members of the Ladies' Auxiliary, an' a lot of 'em wuz present to hear Mrs. Garvey, an' they all sez as how they enjoyed her talk. She sorter reminded me of our Sister Shipley, president of the Baltimore Ladies' Auxiliary, when she talked about wimmen's rights an' sich things.

Superintendent Holverstott wuz the next speaker. He brought with him Mr. Scott's regrets at not bein' able to be present at the picnic. He sez also as how proud he wuz to be a Veteran, a Monongah Division Veteran, an' a West Virginia Veteran. He told the folks to enjoy theirselves an' sez he hoped they'd all be together again next year.

Mr. Garvey then took the stand an' give a sorter record of his stewardship in organizin' the chapters of Ladies' Auxiliaries an' Veterans' Associations. He sez as how he was anticipatin' the fact that wimmen will soon be the governin' power. He appealed to every Veteran to get busy an' get freight an' passenger business for the Railroad. He sez that there's a financial crisis all over the U. S., an' this is one way that the Railroad can help overcome it. He then paid a fine tribute to the Baltimore an' Ohio an' the folks who work fer it.

Then comes Brother George Sturmer with his coat off like as if he wuz ready to go to work. He told the folks that he believes in solid comfort an' everybody sez, "Amen." Mrs. Garvey she had said that wimmen never grow old. Mister Sturmer up an' sez that when he looked at the men-folks gathered there that he didn't believe that men growed old neither. Then he went on to say that the Baltimore an' Ohio ain't only progressin', but that she's been a-teachin' other railroads, too. He told about the meetin' at Columbus, Ohio, where so many of the folks what are now Veterans in another railroad got their start on the Baltimore an' Ohio. Then he spoke of meetin' a engineer an' his wife on the train that mornin' who wuz the parents of five sons, all Baltimore an' Ohio men. He sez the Railroad wuz proud of such folks an' wished ther wuz lots more like 'em.

He sez that the Baltimore an' Ohio did more to help win the late war than any railroad in the U. S.; that with the cooperation of its employes it can be made the greatest trunk line in the country, barring none. He laid pa'ticklar stress on the fact that no manidgment in the U. S. has got a set of more appreciative officers than them of ours. Then Mister Sturmer made a special

drive among the business getters, which your old Aunt Mary added a "Amen" to, tellin' the wimmen folks that men ain't the only folks what kin get business.

Why, you wimmen oughter heard what Mr. Fries told the ladies in Baltimore. When you folks go into the stores to buy your groceries or your new bonnets, go up to the manager of the store an' ask him how he has his goods shipped. If he doesn't ship via the Baltimore an' Ohio, find out why, an' see if you can't persuade him to change his mind. That's the way to go after it. Ask your next door neighbor where she's a-goin' on her vacation, then advise her to travel via our Road. The prosperity of the Railroad means prosperity fer you, so go to it, wimmen. Let's see what we kin do.

After the speakin' wuz over, the Veterans all went up to the dancin' floor an' the fun started. Now don't you go tellin' it, but I seen Mr. P. J. Harrigan, president of the Connellsville Veterans, dancin' aroun' with Mister Wittman's wife; I seen Mister Harry Fleming's wife a-waltzin' off with Mister Sturmer; Conductor Fletcher had a sore hand, but that didn't stop him from cuttin' the pigeon wing with—well, I can't name 'em all, so I won't name none of 'em. Howsomever, if anybody should ever hear tell that your ole Aunt Mary wuz shakin' her foot, for goodness' sake don't go tellin' Ezra, fer I know he won't let me go no more.

Pensioners' Roll of Honor

(Continued from page 33)

lief Department since 1915. I wish to thank also my co-workers in both the shops and the offices of the Motive Power Department at Newark for their many kind favors and pleasant associations at all times."

Mr. Mullin was born at Fairmont, W. Va., on June 7, 1850, of Irish parentage. His father was at that time an employe of the Company. In 1851 the family moved to Wheeling, and two years later to Mason City. In 1881 Mr. Mullin went to Bellaire, Ohio, to begin work as a shipping clerk. In 1882 he was married to Miss Mary Hanihan. In 1885, he moved with his family to Shamokin, Pa., where he was engaged in the clothing business. Not making a success of this venture, he moved to Newark, Ohio, in 1886, where he bought a half-interest in the Newark Business College.

On April 20, 1897, Mr. Mullin entered the service of the Railroad as machinist helper; two years later he took charge of the machine shop office, under Foreman Martin Farrell. He continued work here until December, 1914, when he was afflicted with rheumatism. Since this time, he has spent most of his time in hospitals, trying to rid himself of this ailment. At present he is in St. Francis Hospital, Columbus, Ohio.

Louis Minefelder

Louis Minefelder, blacksmith helper, was born in Chillicothe, Ohio, on October 16, 1850.

He attended school until he was ten years old, then went to work on a farm. He followed this occupation until he came with the Baltimore and Ohio, where he has worked for 27 years. He was pensioned on April 3, this year.

Matthias C. Sterling

Matthias C. Sterling was born at Uhrichsville, Ohio, on July 29, 1853. His parents were George and Hester (Mitchell) Sterling. At the age of 13 he moved with his parents to Martin County, Indiana. Here he learned the carpenter's trade. In 1903 he obtained employment with the Baltimore and Ohio as carpenter. He was pensioned on March 7, this year. He has a wife and two daughters living.

Manford L. Capehart

Manford L. Capehart was born at Otwell, Pike County, Indiana, on December 23, 1854. His parents were James and Nancy (Thomas) Capehart. He attended the public schools until he was 18 years old, then started work as an apprentice carpenter.

(Continued on page 48)

At the Grafton Picnic. Top: A group of women who know how to put up the famous Grafton lunches. Upper left: A famous quartette; Blacksmith J. F. Shoemaker, 46 years continuous service; Mayor Thos. H. Cather; Yard Conductor J. C. Kearns; Machinist Frank Keane. Upper center: Boy, page Mrs. Sturmer and Mr. Fleming; this looks suspicious. Upper right: three more of 'em: Patrick Hayden, retired master mechanic; P. J. Harrigan, president, Connellsville Veterans; Dennis Lowney, retired engineer, 46 years service. Lower left: Conductor and Mrs. H. G. Fletcher. Lower center: another group of old timers. Right: a couple who didn't get to the picnic, but who were just as happy: Water Station Foreman and Mrs. D. D. Nicholas, the parents of 5 railroaders, on their way home from a long stay in a Baltimore hospital

The Romance of Miss Best and Only and Mr. Works Magic

A Drama in Three Acts

Setting Forth the Events of the Picnic of the Baltimore Veterans

TIME, AUGUST 10

PLACE, PEN MAR

Dramatis Personae: Miss Best and Only; Mr. Works Magic; Officers of the Baltimore and Ohio; President of the Western Maryland; Miss Jennie Smith, railroad evangelist; Veterans; Entertainers

ACT 1, SCENE 2

At Baltimore, about two weeks before the time set for the picnic.

A Railroad office in early morning. Mr. Works Magic seated at desk. Enter messenger with card.

Mr. Works Magic: Show her in immediately. (Boy goes out; returns, and shows lady visitor into the office.) Good morning, Miss Best and Only. How are you today?

Miss Best and Only: Good morning, Mr. Works Magic, I have come to beg a favor of you. Our boys, the Veterans, hold an annual picnic. This year they have decided that they would like to go to your playground, Pen Mar. But the problem of transportation has come before us. Is it possible that you might be able to allow our trains to run over your lines, or would this be inconvenient?

Mr. Works Magic: The pleasure is all ours; we turn the park over to you for the day. Bring your trains over to our lines at Westport. How many trains do you wish to run, and when do you start?

Miss Best and Only: Three sections will carry them, I think. We wish to leave Camden Station at between seven-thirty and eight o'clock. Each section will carry about 12 coaches.

Mr. Works Magic: Fine! Anything that I can do to help you enjoy yourselves, I shall be to glad to do.

Miss Best and Only: You have already made me very happy, but there is one thing more. We want to borrow your president for the day. He will be the guest of our officers, and we should be happy to have him with us.

Mr. Works Magic: Why, I understand that he is a relative of yours. If this be true, I don't think that he will refuse the invitation of one of his old family.

Miss Best and Only (rising): It will be a great pleasure to have him, and I don't know how we are going to show you our appreciation. We——

Mr. Works Magic (extending his hand): Just have a good time and take good care of our president. (They shake hands heartily.)

Miss Best and Only: We'll do that, and we'll remember you. Good morning.

Mr. Works Magic: Good by. I hope to see you again. May I call on you some evening?

Miss Best and Only: Do, I shall be glad to see you. By the way, I'll probably see you after the picnic when we're coming home.

Mr. Works Magic: I shall be waiting for you. (Exit.)

ACT 2, SCENE 1

On the train going to Pen Mar. Ma and Pa and their Veteran friends with their families enjoying the mountain scenery. Mt. Clare band going from coach to coach, serenading according to their usual custom.

Ma (wiping her spectacles): I'll declare to goodness, we couldn't a-picked out a better day.

Pa (filling his pipe): Sarah Ann, you ailers wuz right, but tell me, that aint—it can't be Miss Jennie Smith, the railroad evangelist who I useter hear preachin' an' prayin' with the boys some thirty odd years ago?

Ma: Yes sir, that's Miss Jennie, and I'm goin' right over and speak to her now. Let's both shake hands with her an' see if she remembers us.

Pa: Wait a minute, Sister Shipley's talkin' to her now.

Ma: That aint nothin', Sister Shipley don't care who hears what Miss Jennie tells her. Why, just now I heard Miss Jennie say "Sadie, are you as bad as ever?" an' Sadie, hearin' the band playin' jazz, jes' commenced to tappin' her foot on the floor, throwed her head back an' laughed a laugh that wuz good to hear. Then she sez: "Yes, Miss Jennie, just as bad." Wuzn't that funny? 'Cause everybody what knows Sister Shipley knows that she's one of the finest winmen there is, an' that Miss Jennie wuz just alludin' to Sister Shipley's childish pranks. Howdy do, Miss Jennie, do you remember Pa an' me?

Miss Jennie: Remember! Well, I should say. And how is Pa? Why, here he is. (Shakes hands.) Isn't it splendid to be with you all again?

Pa: Yes, indeed, Miss Jennie, and do you remember the day you came into the

yards, talked to the boys, who gave you a big bouquet of flowers?

Miss Jennie: Never shall I forget it. Now who is this good lady?

Sister Shipley: Oh, you mean this woman in the red hat? Why that's Mrs. G. A. Bowers, wife of the President of the Baltimore Veterans. Her husband is afraid he'll lose her in the crowd—hence the hat.

Miss Jennie: And who is this good man?

Mrs. Shipley: Oh, don't you remember Mr. Holmes? Of course you do. Mr. Holmes is the entertainment committee. What's on today, Brother Holmes?

Mr. Holmes: A fat women's race. We were goin' to give a pair of silk stockings as a prize, but we couldn't tell the size, so we're going to give the price of the stockings. But, I'll tell you what I think they ought to do. They ought to buy a pair of stockings and let all the ladies try 'em on, and whoever they fit ought to get them.

Ma: Well! What I'd like to know is, who'd help 'em with the tryin' on?

Mr. Holmes: Me! Ain't I the committee?

Pa: Humph! What would Mrs. Holmes say about that?

Mr. Holmes: Ha, ha! She'd be tickled to death. Don't you reckon I got sense enough to see that they bought her size?

ACT 2, SCENE 2. PEN MAR PARK

Trains unloading. Everybody speaking to everybody else. Some on way to hotel for dinner. Baltimore and Ohio officers being welcomed by employes. Vacationists enjoying the sight of the crowds. Miss Jennie Smith holding a reception. The ice cream man and the "hot dog" man doing a rushing business. Newspaper reporter running around after information for local papers. Mr. Holmes rounding up his talent for the program. Glee Club boys sporting their white trousers and whetting up their appetites for fried chicken. Families seated around white tablecloths spread on the ground while mothers and sisters are passing the sandwiches. Ginger ale and coca cola bottles popping all around.

Johnny (on the sliding board): Gee! But aint this great?

Jimmy (coming down behind him): You bet!

ACT 2, SCENE 3. THE AUDITORIUM

President of the Western Maryland, Officers of the Baltimore and Ohio, Officers of the Veterans' Association, Officers of the Ladies' Auxiliary, Miss Jennie Smith, all on platform. Veterans, their families and friends filling the seats in the auditorium. Mt. Clare Band in front, playing favorite airs.

Brother Holmes: The meeting will be opened with a prayer by Brother Zachariah Lego.

Brother Lego (a blind Veteran) offers prayer.

John C. Bohl (musical director, Pen Mar Park): I extend to the Veterans of the Baltimore and Ohio, on behalf of the Western Maryland Railroad, a hearty welcome to Pen Mar. The Western Maryland turns the park over to you and bids you one and all enjoy yourselves.

(Baltimore and Ohio Glee Club, led by Hobart Smock, enters from left. On invitation of Mr. Smock, the audience sings America.)

Glee Club (singing): Do ye ken John Peel, with his coat so gay, etc. *(Later):* If I but knew etc.

G. A. Bowers (president of Baltimore Chapter of Veterans): The first and most important part of the program is for us to thank God for sparing our lives and allowing us to be here and enjoy this outing. We will now stand for a half-minute in honor of those who have answered the last call. (All stand with bowed heads. Mr. Bowers gives signal, and all are seated.) We now wish to extend our thanks to the entertainment committee, to those who have made possible this enjoyable day, and to the Veterans, their families and friends for this splendid turnout. I will now endeavor to outline to you the policy of the Veterans' Association and our methods of conducting it. (Gives splendid outline, in detail, of what the Association stands for, etc.). Now I wish to introduce to you a man whom you all know, a man whom we honor, the man who made the famous Baltimore and Ohio, Charles W. Galloway. (Applause.)

C. W. Galloway, vice-president in charge of Operation and Maintenance: I do not think that this is an occasion on which to take up your time with long addresses, and what I am going to say will not take very long.

A lady just asked me a few moments ago if I was proud of my big railroad family; I told her I wished it were my family; however, I can best answer that question by telling you a story which I have told to some of you before. Two Englishmen of royal blood visited our wild and woolly West. When they returned to their own country they took with them one of our cowboys of whom they had become particularly fond. Now this cowboy was a big, fine looking, strapping fellow, who was, of course, quite unaccustomed to life in high social circles. By way of introducing him to their royal friends, the two Englishmen took him to a grand dinner party. A number of lords and ladies and others holding various titles of royalty were present. The Englishmen had had no end of trouble in getting the cowboy into suitable clothes for the occasion, but had finally managed to get him buttoned into a full dress suit. It so happened that at the dinner party there was a famous duchess, and the cowboy was introduced to be her escort to dinner. The American was ill at ease. Finally he said to her, "Well, Duchess, I've never seen a real duchess before, but I'll say you look mighty good to me."

And, as the cowboy said to the duchess, I say to you all, "You look mighty good to me."

I am happy indeed to be present at this outing with the Veterans and their friends. Your president, Mr. Bowers, has just outlined to you what the Veterans' Association stands for, and it stands for a great deal, among other things, the happiness of its members.

The Railroad wants a happy family. It is only natural after being engaged in the World War in destroying life and property, that there must be a period of reconstruction. That period is with us now and in order to successfully pull through, we must keep our feet on the ground. The depression is really a part of this readjustment, and it is unfortunate that there are so many out of work today, but fussing, quarreling and striking will not help matters. We must keep a level head and our feet on the ground even though many things are to be righted before normal conditions are restored. I feel things are improving. The railroads are in a fair way to have a settlement with the Government which will bring a substantial payment to the Baltimore and Ohio and when that is accomplished, we expect to re-employ some 8,000 or 10,000 men in repairing engines and cars.

We frequently hear talk that somebody on some railroad here and there contemplates a strike. Don't get stampeded because of such talk, the problems to be worked out need your cooperation and with such help everything is bound to come out right in the end.

The Veterans have done good work. They have not only spread good fellowship and a better understanding, but in the recent campaign for freight they have brought to our rails over 1600 carloads of freight which would have been routed via other lines, or more than \$100,000 in revenue to our Company. This is splendid work, and I hope it will go on. During the past few weeks the amount of business to be handled has not increased as we hoped. I suggest that you get start on another 1,600 loads. If you go after them I am sure you can get them.

Your presence here today—and I am sure you have enjoyed yourselves—has been made possible through the courtesy of the Western Maryland Railway. When we said, "Our Veterans want to go to Pen Mar," Mr. Byers said, "Here, take the railroad." We are certainly deeply grateful for this courtesy, and we are going to have Mr. Byers talk to us in a few minutes; in fact, he is very anxious to talk to us, and I am sure we shall all be glad to hear what he has to say.

It makes me happy indeed to see here so many Veterans, *real* Veterans, some double and triple Veterans, of two or three times twenty years, who have served the Baltimore and Ohio faithfully, efficiently and well. I am glad that we can shake hands and mingle with you and call many of you by your first names. I hope that you will

all have many happy returns of this day.

Mr. Bowers: If you love your vice president as you say you love him, now is the time to give him the full value of your love by heeding his advice. Remember also that the Veterans stand for an honest day's work for an honest day's pay. (Introduces President Byers, who is elected honorary member of the Association. G. W. Sturmer, grand president of Veterans, presents Mr. Byers with the Veteran's emblem.)

President Byers: Members of the Veterans Association, Ladies and Gentlemen: Mr. Galloway did not mention the reason why I wanted you to come to Pen Mar. For a number of years I was associated with the Baltimore and Ohio. In 1904 I severed my connections with that railroad. Since coming to this section of the country, I have had many opportunities to come into contact with you again. Today I appreciate this honor of another opportunity, and I am glad to participate with you in your celebration at Pen Mar. I hope that you will enjoy the scenery from our bluffs; I think our great generals appreciated this scenery on their way to Gettysburg, and I hope that it looked as good to them as it does to you now.

There are some interesting features about the Western Maryland in connection with the battle grounds. In those days the skill of the soldiers was not so good. About three miles west of here you can see where they entered a cut and tried to make their way through, but were not successful. When President Lincoln made his Gettysburg speech, he rode on the Western Maryland from Hanover Junction to a point east of Gettysburg.

When I was called on to speak, I was cautioned that it was necessary to be brief. It reminded me of an old darkey in a court at Memphis, Tenn. A colored man had been run over by an engine. The man who accompanied him was called upon as a witness. He started out by telling the story of how he and his friend were on their way to go fishing, what they were going to do with the fish that they caught, and what they would do if they didn't catch any. Impatiently the judge told him to confine his remarks to the cause of the accident, and not to his fishing expedition. Again and again the negro was stopped in his story and told to be brief. Finally, he said: "Well, Wash set on de railroad track and de train tooted an' tuck him." (Applause.)

Mr. Sturmer: I propose that we extend to Mr. Byers a rising vote of thanks. (Audience responds with alacrity.)

Mr. Bowers: Mr. Byers was taught by the old masters—and raised by the Baltimore and Ohio fathers. Now I shall introduce to you one whose name corresponds to that of a cutting instrument in our homes, and he is just as clean as a pair of shears. If you don't believe it, come into contact with him. If you come with the truth, he will give you a square deal; if you come with

(Continued on page 47)

Snapped at the Pen-Mar Picnic of the Baltimore Veterans' Chapter, August 10
(For description, see opposite page)

(Continued from page 45)

anything else than the truth, you'd better stay away. Mr. Scheer.

E. W. Scheer, general manager, Eastern Lines: Really, I am a bit flustered by what Mr. Bowers has said. I wonder if he wants me to tell the story of why he knows that I know when a man lies. (Laughter.)

Having been a member of the "family" for 31 years, and knowing your president, I feel that I am at liberty to say that I have spent 20 months with you folks, and during that time I have eaten with you twice. I appreciate your invitation to be with you today. There is one thought that I want to give you to take home.

On page two of the JULY ISSUE OF OUR MAGAZINE you will find a story entitled, "The Old Super Says." Now I've been called lots of names, but nobody ever called me a "super" when I was superintendent; however, the story goes, the old super went into the yards and found his men bumping the cars together with such force that it made him shiver to hear the crash. Then he heard the engineer remark

The Pictures on the Opposite Page

Top center, left to right: Vice-President C. W. Galloway; Miss Jennie Smith; Mrs. C. W. Galloway; Maxwell C. Byers, president, Western Maryland Railway. Upper left: members of Veterans' Entertainment Committee, left to right: F. A. Whitson; William T. Holmes, Sr.; G. T. MacMillen. Below: Martinsburg visitors—W. G. Edwards, storekeeper; S. C. Tanner, superintendent of shops; C. E. Auld, clerk; J. A. Holpp, foreman of frog shop; J. H. Aldridge, foreman of bridge shop. Below: Sisters three; Mrs. Mary A. Deems, Mrs. Annie R. Fowler, Mrs. Sarah E. Pyfer, all widows of Veterans. Below: C. A. Thompson, former signal supervisor, Baltimore Division; his grandson, Foanes, and his son, William H., of the Valuation Department. Upper right: B. H. Andersen, chief clerk to general supervisor Terminals; H. O. Fankhanel, improvement clerk, office of operating vice-president; their wives, children and children's friends. Below: John Hall, car cleaner, Camden, with the Veterans' "Old Glory." A. E. Morrison, freight representative, Baltimore; Hobart Smock, director of the Glee Club; some of the boys in the Club. Below: two former editors of the MAGAZINE, Frank O'Connell and W. F. Braden; between them Conductor N. E. Reese of the Baltimore Division. Below: John McAleer, for 48 years an employe at Mt. Clare, with his daughter.

The center picture shows one of the three engines used to haul the excursion trains, this one with the picture of Mr. Byers on the pilot; pictures of President Willard and Vice-President Galloway were similarly arranged on the other two engines. Below: the Mt. Clare Band. Below, left to right, back row: F. G. Hoskins, superintendent, Baltimore Division; G. A. Bowers, president Baltimore Chapter of Veterans; Mrs. Bowers; R. B. White, general superintendent, Maryland District; E. W. Scheer, general manager, Eastern Lines; C. W. Galloway, vice-president, Operation and Maintenance; M. C. Byers, president, Western Maryland Railway. Front row: Mrs. Charles Shipley, president, Women's Auxiliary, Baltimore Chapter of Veterans; Miss Jennie Smith; William T. Holmes, Sr., chairman, Entertainment Committee; Mrs. Holmes.

that if the cars were damaged, it would only mean more work for the repairers down in the car shops. But more damaged cars do not mean more cars on the repair tracks. It does not mean the hiring of more men when we cannot afford to hire them; it means equipment out of service and consequent loss of revenue. However, I do not think that this incident ever occurred on the Baltimore and Ohio.

During the last four years, we have spent \$1,822,000 per annum for repairs to damaged cars. Carelessness and neglect are responsible. We are now beginning a campaign to bring about a reduction of accidents. This campaign has already been started, and within the next 30, 60 or 90 days, we will receive a larger allotment with which to put to work in our machine and car shops a greater number of men. Under present conditions, more bad orders mean fewer men in the shops.

The Veterans' Association has accomplished more than any other association in attracting business for the Railroad. One dollar's worth of new business means 20 cents in the treasury, but one dollar's worth of accidents prevented leaves one dollar in the treasury for other purposes; in other words, \$1000 worth of accidents prevented is equal to \$5000 worth of new business. I want to ask for the cooperation of every employe.

I am glad to have been with you today, and I look forward to the pleasure of being with you next year.

Baltimore and Ohio Glee Club: (Sings "More and More," and "Ole Uncle Moon.")

Mr. Bowers: (Introduces R. B. White, who is voted in as a member of the Veteran's Association, and presented with a Veterans' button by Mr. Sturmer.)

R. B. White, general superintendent, Maryland District: This is an honor that I had not expected. At the Brandywine picnic I was called upon, and I admit that I felt about the same as a lady auto driver felt when she ran down a man. She stopped her machine and called out, "Oh, what a careless man you are! Why, I've been driving this machine for four years, and I never had an accident before." The man replied, "Lady, I don't doubt your story, but I've been walking for 50 years."

I want to thank the Veterans' Association and your president for the invitation, making it possible for me to be here with you today. I want to take the opportunity of saying a word concerning the "No Damage" drive that begins on August 15. Tomorrow the organization will be completed, and I am confident that great results will be accomplished by this drive. The general manager has made this a contest; Baltimore Division will compete in a friendly rivalry with the Cumberland Division, Brunswick Yards with those of Keyser, Holloway and Glenwood, etc. I am confident that the Maryland District will rank first. We did it before, we can do

it now. I have never asked for anything before that you did not give it; I ask it now.

Mr. Bowers: (Introduces Mr. Hoskins, who is also made an honorary member and presented with a button by Brother Covell.)

F. G. Hoskins, superintendent, Baltimore Division: I deeply appreciate this honor, and I want to thank the members of the Veterans' Association for the invitation to be with you. I am only sorry that I can't do some circus act to carry out Brother Bowers' suggestion, "The bigger they are, the harder they fall."

Our vice president spoke of the reconstruction period. In my experience I have never found a time when so many new conditions were pulling against each other as there are today. And yet, a member of the traffic department of a commercial company said to me recently, "What are you doing to give us such splendid service?" I replied that our men were giving more attention to their business. Our operations are better, and the Veterans are carrying their share of the load. You men are doing work. We have a big, responsible burden to carry as a railroad. And as a division, we will have to show what we can do. I believe that we have better facilities, tools and methods than ever before and we can produce a job better than we are producing it today.

The new competition which begins on Monday is one in which I know the Baltimore Division will come out on top. Let us show the other divisions just how we do the trick at Baltimore.

(Topical songs about the Veterans and their friends by Mr. Michael Smith. Solos by Mr. Gayhart of Washington. Songs by Miss Thelma Culbertson, daughter of Conductor H. S. Culbertson. Reading of letters from President Willard, Vice President Shriver, J. T. Carroll, J. J. Doyle, H. O. Hartzell, G. H. Campbell, James S. Murray, Governor Ritchie, expressing their regrets at not being able to be present and extending their best wishes for a happy day.)

G. W. Sturmer, grand president of Veterans: We have welded a friendship with the Western Maryland. (Makes further remarks concerning the work of the Veterans.)

Mrs. Charles Shipley, president of the Ladies auxiliary: We have heard so much about the "real man," that I just want to say a word about the "real woman." For the first time in the history of the Railroad, we now have women voters. (Discussion of women's work.) Mr. Galloway has been called the "father of the Association;" Oh, but I am glad that there is somebody else to "grow old along with me!"

Mr. Holmes: If you want to talk about real women, I will now introduce you to one whom we railroad boys all know as a real woman, Miss Jennie Smith, railroad evangelist. (Miss Jennie tells about her experiences with the railroad boys; how that during her first year's railroad work, she

had 1276 converts, 19 of whom entered the ministry: she feels always at home on the Baltimore and Ohio, and why not, for she is nearly a "double Veteran," having been in the service for nearly 40 years.)

Applause. Curtain.

ACT 1, SCENE 3

CAMDEN STATION, MIDNIGHT OF THE SAME DAY.

(Veterans and their friends getting off trains. Everybody saying good night to everybody else. Sleepy babies and empty lunch baskets being carried in the arms of daddies and granddaddies. Everybody tired but happy. After the crowds leave, the three engines begin a conversation.)

First engine: My, what a fine day I have had. A long, long rest up there in the shade of those trees at Pen Mar! I hope that they'll send us on another picnic soon.

Second engine: Me, too. That's a pretty hard pull up those mountains, but what a fine rest coming home. Why, all we had to do was to slide. My engineer had his hands full to keep me from exceeding the speed limit. By the way, who were those distinguished looking individuals that we passed down at Westport?

Third engine: Where have you been during all these years? Why they were our own Miss Best and Only and Mr. Works Magic. Didn't you hear somebody say they were going to have frequent meetings now that the picnic has opened up the way?

Second engine: Go on! I didn't know them when I saw them, but I do know that they're not just getting fond of each other. Why, if you've heard the gossip that I've heard, you'd know that they've been good friends all along.

First engine: You don't say! Er-a-do you think-er-a—?

Second engine (patronizingly): Of course not, Silly! Platonic friendship, purely platonic!

Third engine: And yet, you can't doubt the old saying that 'tis love that makes the world go 'round.

Second engine: There's not the least doubt of it. In my case it's love that makes the wheels go 'round.

First engine: Romance in the yards, eh? Ha! Ha!

Second engine: Somebody please put that child to sleep before I spank him with the piston rod. Why, if I didn't love Miss Best and Only as I do, do you suppose I'd wear and tear my wheels and all my machinery to run for her as I do? You know the same is true with yourselves. Run along now and sleep while you can. In another hour or two, we'll all be out on the road again. There'll be another picnic next year

First engine: I hope so

Third engine: Amen

All three: Good night! Good night! Good night!

Pensioner's Roll of Honor

(Continued from page 43)

He worked at house and barn building until November, 1907, when he moved his family to Washington and obtained employment as car builder for the Baltimore and Ohio.

His wife and one son are living; one child died in infancy. Mr. Capehart was pensioned on March 7.

Andrew J. McDougal

Andrew J. McDougal was born on January 16, 1851, in Marion County, W. Va. He attended school for only a year, for in those days schools were scarce and he did not have many educational advantages.

Mr. McDougal worked on a farm until he was 20 years old, then secured a position as driver of a delivery wagon for a hardware company in Marietta, Ohio. Here he worked for about 20 years, then began service with the Baltimore and Ohio as laborer in the yards at Chillicothe, Ohio. Later he was made locomotive cleaner, then tool room attendant. He was pensioned on March 6, this year.

Andrew J. McCulgan

Andrew J. McCulgan was born on May 21, 1847, in Jackson County, Ohio. He attended school until the age of 15, when he obtained a position chopping wood for fur-

naces. Ten years later he made charcoal for the furnaces. His first railroad experience was with the N. & W. in 1875, when he worked as trackman at the time that this road was built through to Columbus. In 1886 he came to work with the Baltimore and Ohio. He was pensioned on March 6, this year.

Mr. and Mrs. McCulgan are now living in a pretty home in Chillicothe.

Colored Veterans Organize

On July 17 a meeting was held to perfect a permanent organization of the colored Veterans of the Baltimore and Ohio Railroad at Philadelphia, and the following officers were elected: president, James E. Johnson, Sr., Philadelphia, Pa.; vice-president, Jacob Harris; secretary, Philip Gaines, Kiamensi; treasurer, John Giles, Newark, Del.; executive committee, Messrs. John Harris, Edward Lee, William Coleman Peaker and Charles Kennard.

The Constitution and By-Laws were adopted and arrangements made for all necessary details of permanent organization. The present enrollment consists of 20 with all signs indicating a more extensive membership.

Practical Politics

"Are you in favor of votes for women?" "Why ask such a question at this late day?" inquired Senator Sorghum in return. "How can a statesman hope to get 'em if he isn't in favor of 'em?"—*Washington Star*.

We Cannot Afford to "Burn Our Bridges Behind Us"

"He burned his bridges behind him" is a favorite way of describing a man who, on making a high resolve to accomplish something, casts all other considerations to the wind and presses toward his goal. It is well enough to be a man of this type and yet—on the Baltimore and Ohio—it is a fact that we have been burning too many of our bridges behind us, real bridges, which carry people and freight across them and along to their destinations.

The report of B. S. Mace, superintendent of Insurance, on fire losses on the Railroad for the month of July, indicates a total loss from this cause of \$7,381.86. And standing out as the most general cause of all this is, "hot coals falling on bridges and igniting them."

In his recommendation as to how these fires can be prevented, Mr. Mace suggests:

"Rigid and proper inspection and maintenance of ash pans on engines, and proper fire protection, such as water barrels and pails on bridges."

There is a job for our Mechanical Department and our engine inspectors. Losses from hot coals dropping from locomotives total almost \$1,000 for July. Think of the good work which could have been done with this money and the good wages paid, if it had been saved.

It does not seem to be asking too much when we request those having charge of locomotive inspection to give particular attention to examining ashpans. The terrible danger of a bridge being so weakened by fire as not to carry a train safely over, is sufficient to make us all feel the need of greater care in this respect. Can't we hope to see an improvement in this factor during the next few months?

The Late Philip Taylor Spence

A life steeped in the earliest traditions of the Baltimore and Ohio

PHILIP TAYLOR SPENCE, whose death on February 21 was recorded in a recent issue of the MAGAZINE, was a man whose strength of character and length of service on the Baltimore and Ohio make an account of his life worthy of more than passing notice.

Mr. Spence was born on a farm near Winchester, Virginia, on May 3, 1848. His father, Patrick Spence, had been identified with the Railroad since its inception; he was present at the laying of the cornerstone in Baltimore in 1828, and assisted in the building of the first 12 mile track to Ellicott Mills. He collected fares on the first horse cars and was one of the first conductors on the train pulled by Peter Cooper's little steam engine, "the Rocket." He was the first roadmaster on the Martinsburg Division, then on the Winchester Division, holding the latter position at the time of the Civil War, and rebuilding this branch after the war. He died in 1873, at the age of 64 after 45 years of service on the Baltimore, and Ohio.

His son Taylor was born and reared almost within a hundred feet of the Baltimore and Ohio tracks, so that nearly all of the recollections of his childhood are connected with the Road. Naturally he took to railroading, and in March, 1865, then a lad of nearly seventeen, Taylor began his career as water boy to the hundreds of men employed by his father in the rebuilding of the Winchester Branch. Soon he was advanced to the position of timekeeper and track inspector. When the job was completed, Taylor made up his mind to try western life, and set out for Ohio. He landed in Newark on June 1, 1870.

Here he worked on a farm for a few months, returning to railroad work again in the transportation department. He became a brakeman on a freight train running between Zanesville and Columbus. A few weeks later he was promoted to passenger brakeman, then to baggagemaster, which position he held until four years later when he was given his first train, a mixed passenger and freight, running between Newark and Chicago Junction. Strictly passenger trains were soon given him, and with the inauguration of through service between Chicago and Wheeling, Mr. Spence took the initiative runs for three years, or until they were well established, the longest runs extant, 470 miles with no change of trainmen for 14 consecutive hours, except of engineers and firemen, of which there were 5 for each run. Mr. Spence asked for a shorter run and was given the Zanesville-Columbus accommodation, and sometimes the Cambridge-Columbus run, a morning and evening train.

When the electric line between these two cities began to supplant the local steam travel, Mr. Spence was transferred to the

limited between Cincinnati and Wheeling, making his home in Columbus. Ill health finally compelled him to leave the Road, and in 1909, when he was granted his pension, he sought a milder climate in Redland, California, where he remained until his death.

In all of Mr. Spence's years of railroad service he never had a serious wreck of any importance, nor, save one, was any person on his train ever injured or killed. This one instance was of a Barnesville lad, who, while riding on an excursion train, carelessly attempted to pass from one coach to another by way of the lowest step on each. He fell and was killed instantly. Many close calls of disaster came to Mr. Spence, but his quick wit and good judgment always saved the day. Some of the "boys" often accused him of railroading too hard and of wearing himself out unnecessarily, but Taylor Spence practiced Safety First before it even became a motto. Although often exhausted because of his assiduous duties, he always said that he felt fully repaid when all went well with his train. He almost revered the Company which he said had fed him and his good father for nearly a century, and its highest interests were always his. When the call came to arms, he volunteered but was excused because of his physical condition.

On May 24, 1877, Mr. Spence was married to Miss Catherine Boner, of Newark, Ohio. Five years later she died, and his second marriage to Miss Emma Jones, of Champaign, Illinois, took place in 1887. His second wife and one daughter, Virginia Gracybel, a high school student, a sister, Mrs. John Murnan, of Winchester, Virginia, and several nieces and nephews survive him. His remains were brought from California to Winchester, Virginia, during the early part of June for re-interment.

Mr. Spence's life was filled with historical experiences. Many of the presidential candidates were conducted by him in

special trains during campaigning tours, particularly through the state of Ohio. President McKinley, when governor of Ohio and a resident of Columbus, was a warm friend of Mr. Spence, as were also Senator Foraker, Mark Hanna, Governor Nash, and Phil Sheridan, whose famous ride into Winchester town Mr. Spence witnessed when a boy.

So many of the Civil War engagements taking place around his home town, Mr. Spence, as a lad, came into contact with some of the leading generals of both sides as he peddled his eggs, butter, pies, etc. to the soldiers in camp. General Love gave him his own beautiful saddle horse, which had become disabled because of a split hoof.

Among his earliest remembrances of the Railroad was that of a conductor of the "burden" (freight) trains going up and down the valley, seated on a sheaf of wheat or straw placed over the rear bumpers of the last car, in lieu of a caboose, then unknown. The old grasshopper engine and the strap rail were yet not out of existence in Taylor's early days. He witnessed the destruction of the Road by the Rebels; saw the rails and ties piled around the trees, the whole set fire to, and the rails, red hot, pulled out and twisted into collars around the trees. He saw the rails soft-soaped and made unfit for use; the stealing of the Baltimore and Ohio engines, when "Tom" Sharp dragged them out of the roundhouse, 26 horses to an engine. His father was beaten and robbed by soldiers in ambush as he was on his way from Martinsburg to Winchester on Company's business. He was left for dead by the roadside, where friendly hands found and ministered to him. When the cornerstone of the Railroad was laid in Baltimore, Taylor's father was present and stood beside Stephen Girard on the occasion, Girard being the only millionaire in the United States at that time, except John Jacob Astor.

Taylor Spence antedated the wearing of uniforms by trainmen. He received his first conductor's uniform in 1877, and wore it on his first train charge. When the service stripes were inaugurated, Taylor received six of them.

Taylor Spence was a model husband, father, friend and Christian gentleman, a patron and lover of the Railroad Y. M. C. A., charitable to a fault, sympathetic and kind to the poor and down-trodden. He has passed on, without fear, and with expression of highest trust.

Two More Women on the Honor Roll

Turn to the Honor Roll pages of this issue and read how the Misses Marie Brandon and Eena Nolte saved the life of a baby on the main track at Wheeling, W. Va. The action of these women is particularly commendable, and we want them to know that we are proud of them.

The Harvesters

*White, silky milkweed and dew-covered thistle
Bow in the dust before trample and din,
High on the morning air shrieks the loud whistle,
Calling the toilers their tasks to begin.*

*Long before daylight the fireman is prodding
The glaring, red cinders and heaping on coal;
Where lately the stalks of the green wheat were nodding
The voice of the threshing machine calls for its toll.*

*Gasping and grasping, its iron teeth grinning,
Writhing and groaning, the great open jaw
Draws in the golden sheaves, its work beginning,
Swallowing the grain and discarding the straw.*

*Strong, heavy Percherons, nostrils distended,
Men, brown and brawny, swing into the lane,
Shouting and whistling, their songs never ended,
Lost in the sound of the measuring of grain.*

*"More coal and more water!" the engine's repeating,
Wide kerchiefs are tied on, all coats flung aside,
For though from the heavens the sun's rays are beating,
The harvesters toil on—the grain fields are wide.*

*Oh, men of the fields, gathering food for the nation,
Who send down rich grains to the seaports and mills,
Yours be the glory, the crown of creation—
Who toil in the valleys and reap on the hills!*

Ye Adamless Eden

*Being The Tayle Of A Picnic Held By Ye Baltimore Chapter Of The Ladies
Auxiliary To Ye Ancient Tribe Known By The Name Of Veterans*

IN THE high and far off times, there lived in a place called the Garden of Eden a man named Adam and his wife, Eve. And behold, for many moons these two humans dwelt together in harmony and peace and unity. Each day as the sun rose above the walls of the garden, Adam would open his eyes.

"Arise thee, Eve" he would speak unto his wife, "for I have an hunger. Arise thee I say, and bring me to eat." Then would he turn over on his bed of leaves for a second snooze, while Eve, the wife, busied herself with gathering the fruits of the garden for Adam's breakfast.

And verily, as the day wore on, and the sun rose high, Adam would also arise and go forth into the garden. And behold, Eve would follow him to see that his toes would not be pierced by the thorns that fell from the trees, and to drive away the mosquitos that dared approach his bare shoulders.

But it came to pass one day that there appeared unto Eve a serpent. And he said unto her:

"Eve, for what reason dost thou deign to wait upon this man? He is indeed much larger and stronger, and should indeed wait upon thee. Get thee gone from the garden and forget him; there are many things without the garden that thou hast not seen."

Eve listened but dared not heed this advice.

And it came to pass, as it has been recorded, that once more the serpent appeared unto her and also unto the man. And he tempted them, and they yielded, for Eve's curiosity was great. And always hath Adam insisted that it was the fault of Eve that they were cast out of the garden, for verily, Eve was anxious to see the things outside of Eden.

So centuries passed, and behold the descendants of Eve were many. And among

them was a tribe of women known as the Ladies Auxiliary to Ye Ancient Tribe of Veterans. And it happened that this tribe met frequently and held pow-wows at each moon.

But verily, it came to pass that at one of these pow-wows there appeared unto these daughters of Eve a serpent, yea, even the very serpent which had tempted Eve, centuries before. And the message he brought to them was this:

"Wherefore do ye remain at home and look after your respective Adams? Leave them alone for a day. They are indeed capable of caring for themselves. Search ye out for yourselves a Garden of Eden. See that it is rendered absolutely Adamless; then hie yourselves hitherward and enjoy one day of freedom."

And some of the daughters of Eve listened not, and were averse to such an enterprise. Yea, they even shook their heads. But there were others who were in accord with this advice.

"Yea, verily, I am tired of the kitchen," saith one sister among them. "Let us seek just one day of rest." So it came to pass that at last they were all persuaded to her way of thinking. And great plans were made for the feast. And the Garden of Eden was one Benkert's Park, near Frederick Road, in ye town of Baltimore. And the day was set, June 15.

And forthwith the womenfolk set out, bedecked in their best bibs and tuckers. In truth, Sister Collingsworth wore the most unique costume of the day; far beyond description it was, but when she dispensed sodas to the thirsty ones, the observer could realize its usefulness; and behold, Sister Galloway's was of gingham, and of a most becoming style that fitted her figure superbly; and covering Sister Bowers' dainty dress was a white apron bedecked in ruffles; one of muslin with flowers and fruits embroidered on it belonged to Sister Billmeyer. And great was the variety thereof.

And by chance, the writer cometh upon this assembly as they were in the midst of a pow-wow. With weeping and wailing and gnashing of teeth Sister Espey began a sorrowful tayle of a small type of the species homo, who was possessed of a moustache, but for some unaccountable reason, he had become attached to a woman who, although of the species known in the present time as bachelor girl, was rich in this world's goods. And thus ended the mournful tayle.

And the next on the program was a songe, rendered by four women, a combination ordinarily known as a quartette. And the songe that they gave was a lengthy arrangement by which Sister Shipley was consigned to be punished, along with Sisters Riley, Hanson and Holmes. The songe ran somewhat as follows:

Suspend Sarah Shipley from the branches of
the arbor prunifolia,

Suspend Sarah Shipley from the branches of
the arbor prunifolia,

Suspend Sarah Shipley from the branches of the arbor prunifolia,

As we approach our respective destinations.

Then, as if to add to their severe discomfort by torturing them,

Answer us, Sarah, are you not at present in a blissful state of mind,

Answer us, Sarah, are you not at present in a blissful state of mind,

Answer us, Sarah, are you not at present in a blissful state of mind,

As we approach our respective destinations.

And it came to pass that the next woman to speake was Sister Lewis, whose husband is a worthy member of ye office of the Auditor of Passenger Receipts. And the subject of her talk was "Government;" and verily did she chide the daughters of Eve because of any lack of interest they might evidence in politics, settling forever any doubt in the minds of the sisters concerning the positions suitable for their occupation in the sphere of governmental affairs. And behold, the sisters listened with rapt attention, and the very walls shook with applause. Then devolved upon Sister Shipley the duty of explaining her reason for not occupying a more prominent place in the world of politics.

"At the present time," she began to relate, "my Adam never knows when he may discover, upon his arrival at our place of abode, an abbreviated epistle telling of my disappearance—a journey to the land of Washington—or to some other famous scaport; consequently, if your humble servant should deign to enter politics, she would never have time to inscribe her reasons for leaving, for verily, she would be absent forever."

"Love's Old Sweet Song," was the title of a melodye by Sister Lawrence, and truly the trees of the forest echoed in reverberation. The gentle art of dancing was indulged in, and behold, the grande march was such as was never seen nor known before. For, in truth, some sisters were wont to advance in exactly the opposite direction to that in which they were supposed to turn. Thus the lines were crooked, and thus indeed did the ladies receive many bumps for which they had not reckoned. However, there came a final straightening out of the lines, and the grande march proceeded, and the style was remarkable, and all was well.

But first among the sports came the fat ladies race. For behold, the contestants were exceedingly stout, and their gowns were not of sufficient fullness to allow them to run with ease. And verily the ladies did run regardless of the positions of their gowns but this was an Adamless Eden—and it mattered not. And one Sister Collins won the race, and received as her reward, an ebony necklace set with diamonds.

And the second race was that of the thin ladies; and Sister Lena Brillhart wore the seven-leagued boots, for it was she who won the race. As her guerdon there was a bottle

of delicate perfume, and forthwith she became the object of envy.

And behold there was a contest in which the ladies were required to sew on buttons. And straightway every sister began to wish that she had brought along her Adam's shirt, whose buttons had been missing for a week. But Sister Rose settled the matter by running away with the laurels. The balloon race, won by Sister Dill, was indeed a sight to behold. Six of the sisters carried toy balloons on a string, exchanged these with six other sisters, then returned they to the judges. The last and most undignifyde of the races was known as the "hop, skip, and jump," and was won by a sister who asked that we witholde her name, for the prize which she received was a pair of cork screws.

And beholde, there came the eatables. And every woman did eat her fill, even so much that one of them became intensely ill, and called for others to rub her. And great was the rubbing thereof, for the sisters came from miles around, and indeed her pain was soon eased, for 'tis reported that she re-

turned to the festive board and did eat again. And he report may be true, for there were manye who could scarcely climb the hill when the repast was over. But there were none in the garden who enjoyed not themselves. And there was more dancing, and more singing, led by Sister Espey. And all of the sisters pronounced the event a success.

And when the day was done, beholde, the writer witnessed a sight that caused her eyes to be overflowing with tears of surprise, for indeed there was a sister who had a part of the feast in her apron. And she was in the act of smuggling it home to her Adam for his supper. All of which goes to prove that women, though they be daughters of Eve, and susceptible to the temptations of the serpent, do not forget their husbands—even though they be miles away from their abodes, and wandering around in the garden of Eden. Above all, let it be recorded, that when they arrived at their dwelling places, each one found Adam waiting patiently on the threshold.

Barbara Fritchie and Barbara Fritchey

*"Shoot, if you must, this old gray head,
But spare your country's flag," she said.*

WHETHER we are inclined to believe all of the circumstances in connection with the story of Barbara Fritchie, as told in Whittier's poem, or not, we cannot help admiring its spirit of patriotism.

We are told by those who knew the real Barbara Fritchie that she was a woman of strong convictions and one who would probably have risked her life in defense of any one of them. As it was, however, she lived to the ripe old age of 96. After the death of her husband, Dame Barbara practically gave her life to the service of her country, whose flag she always kept flying from her window. Many of these years

were spent in caring for the sick and wounded soldiers.

Two literary women, Miss Dix and Mrs. Southworth, are credited with having told the tale to Whittier, who knowing little about the town of Frederick, decorated the poem to suit his fancy. However, the opening lines of the poem,

Up from the meadows rich with corn,
Clear in the cool September morn,
The clustered spires of Frederick stand,
Green-walled by the hills of Maryland,

give a romantic setting to the poem and picture a fitting dwelling place for Dame Barbara.

(Continued on page 57)

Doily made from one of Dame Barbara's own linen sheets

Frocks that Harmonize with the Spirit of the Season—the Length of the Skirt?

By Maude Hall

THE frocks that hold one's attention longest and give the most distinct impression of excellent grooming, are those which express the greatest simplicity. Never was the array of materials used in their development more intriguing, and the most stubborn of us must admit reduced prices for several favored fabrics make it possible to replenish the wardrobe more liberally than for the past few years.

These are veritable harvest days for the home dressmaker. Cotton voiles and organdies which make up into dresses of expensive appearance cost as little as 35 cents a yard, while good-looking gingham and lawns are obtainable for a quarter a yard.

A model which will stand out among the

season's offerings for its style and crisp, cool effect, is in black and white organdy. The black takes the form of small dots sprinkled in groups over the surface of white. The front of the waist and front of the skirt are cut in one, the sides and back of the skirt being gathered to the lower edge of the sides and back of the blouse. An unusually dainty feature is the trimming on the skirt. This consists of two insertions of puffed net put on with narrow frills of Valenciennes lace. Where the skirt is gathered to the blouse, there is a narrow belt of self-material, which is tied in a bow at the back. The front of the waist is cut into a deep V, and finished with a collar of white organdy edged with lace and tied with a bow of black cire ribbon. Cire ribbons and braids are extensively used to supply a brilliant black note where it is telling. In fact, ribbons abound for all trimming uses, particularly smart being the narrow plaitings which are twisted, scrolled and turned in numberless ways to ornament simple frocks of silk, sheer muslin or crepe.

A dainty one-piece dress for summer is designed of bisque color cotton voile, with four straight frills of self-material on the skirt. The blouse is long-waisted and quite

plain, except for tiny plaitings of Harding blue ribbon above the narrow vest, collarless neck and turn-back cuffs. The skirt is a wee bit longer than usual. It remains to be seen how many inches the followers of Fashion will add to their skirts, despite the edict which has been sent out from Paris. Suffrage has made women assert their independence of dictums in more things than in politics, and it is doubtful if they are content to wear a skirt of any style that does not make its appeal on the basis of comfort and youthful appearance.

All black and combinations of black and white are the craze of Paris just now. Simple as to line and graceful in effect is a black and white gingham trimmed with fine white pique. The lines are distinctly chemise, the fullness at the waist being held in slightly with a narrow belt of pique. The front panel is of the pique also and above the belt it is cut in a deep V, then rolled back to form revers. White organdy forms a dainty vestee, the collar being of gingham. From shoulder to hem, down either side of the white front panel, are groups of small black taffeta buttons. The sleeves are elbow length and cuffless.

Dark blue and white check are combined in another charming gingham frock of French inspiration. The kimono blouse has an applied front, which is rounded away at the neck in conformity with the neck line and buttons onto the blouse proper. The lower part of the applied front is cut in one with

the sash, which is tied in a smart bow at the back. The skirt is just a straight, gathered model, with deep hem.

Graceful long lines are emphasized in a design in watermelon pink voile, patterned with small black figures. The vestee, cuffs and collar are of pink organdy outlined with narrow frills of lace. With this dress are worn stockings that match the background of the voile, while the shoes correspond with the black figures. It is quite the thing this season to have the footwear harmonize with the costume, and as a result the shops are showing a variety of pretty things hitherto unheard of both in materials and color combinations. It's the feet this season that make or mar the costume, more, perhaps, than any other accessories.

LADIES' DRESS No. 9315. Nine sizes, 34 to 50 bust. Width at lower edge about 15½ yards. Size 36 requires 4¾ yards 36-inch material, 3¾ yards 6-inch ribbon for sash, ⅞ yard 36-inch lining for underbody. The waist having open front, with inset vest and a large collar. Long, plain one-piece sleeves, perforated for short sleeves with turn-back cuffs. Price, 35 cents.

DRESS No. 9549. Sizes 34 to 50 inches bust. Price, 35 cents.

TUNIC BLOUSE No. 9581. Sizes, 34 to 48 inches bust. Price, 35 cents.

SKIRT No. 9308. Sizes, 24 to 40 inches waist. Price, 30 cents.

DRESS No. 9580. Sizes, 34 to 46 inches bust. Price, 35 cents.

Boy's Sport Suit

Khaki is the logical material for the development of this sport suit. It is ideal for hikes and other activities of the outdoor

9010

season. It consists of a shirt with open neck and turn-back collar, and knee-length trousers. The sleeves of the shirt may be made long, with straight cuffs, if preferred.

Medium size requires 3 yards 36-inch material.

Pictorial Review—Boys' SUIT No. 9010. Sizes, 4 to 14 years. Price, 25 cents.

Lessons in Home Dressmaking

A Charming Dress of Dark Blue Taffeta that is both Wearable and Adaptable

A DARK blue taffeta is almost as serviceable as a blue serge, and a little more dressy. The model pictured here is thoroughly wearable and adaptable. It is self-trimmed, though some embroidery may be added, if desired. The fastening is at the left side. A panel effect is gained by cutting the back in one piece. At the front, however, the blouse and skirt are joined under a belt of self-material. The sleeves may be long or short. Set into the open front is a vestee of self-material, while a round collar finishes the neck. Medium size requires 4½ yards 36-inch material.

In order to make as few seams as possible, the front gore of the skirt and the entire back section of the dress should be laid along lengthwise fold of material, as shown in the cutting guide. The collar and vestee are arranged in the same way. The fronts of the blouse, sleeve and sash sections are so placed on the silk that the large "O" perforations rest on a lengthwise thread.

To make the blouse, gather the shoulder and lower edges between "T" perforations. Turn edge of front under on line of slot perforations, then hem the upper edge of vestee. Lap front on vestee with notches and edges underneath even. Stitch the right side edge to position and finish the left for closing. Adjust stay over gathers with large "O" perforation at center-front and with under-arm edges even. Cut off the front end of the left stay at small "o" perforation. Close under-arm and shoulder seams as notched.

Sew collar to neck edge and underneath the front of waist, with center-backs and small "o" perforations even. Next, close sleeve and cuff seams as notched. Sew cuff to sleeve with notches and seams even. Sew

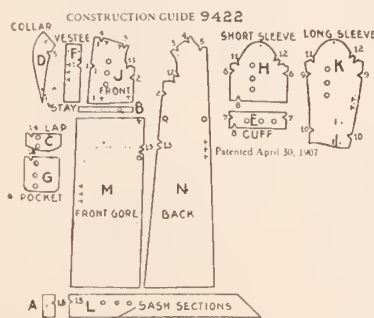

sleeve in armhole with notches and small "o" perforations even. Bring seam of sleeve to under-arm seam, easing in any fullness between the notches. Hold the sleeve toward you when basting it in the armhole.

Now, join front to back gore of dress as notched, leaving the left side seam free above the single large "O" perforation in front gore. Finish the edges above the perforation for closing. Gather upper edge of front gore between "T" perforations. Sew front gore to lower edge of waist over the stay with center-fronts and side edges even. Leave front gore free on left side, from small "o" perforation to left side opening, draw gathers to the required size and finish for closing.

Join lap to upper edge of pocket with notches and edges even. Adjust pocket on front gore with the upper edge indicating small "o" perforations. Join two sections of sash and arrange around the waist as shown, if desired, the ends of the sash may be lined with Georgette crepe of contrasting shape.

The Doll's Party

*I gave a party to my doll, whose name is Nancy Blake—
My mother promised that she'd make some lemonade and cake.
The invitations read: "Be sure to bring your nicest dolls,
All dressed up in their Sunday clothes, and lace and folderols."*

*I had to ask the girls, you see, for dolls can't come alone,
For they'd be sure to fall and break all of their china bones.
The day arrived, and Mother made the lemonade and cake
For this great, wondrous party for my darling Nancy Blake.*

*Oh, goodness me! I'd never seen so many dolls at once,
There were baby dolls and mamma dolls, two brownies and a dunce;
Papa dolls and grandpa dolls, and Dinahs dressed in red—
So much excitement quite completely turned my Nancy's head.*

*We played all sorts of lovely games, then sat beneath the tree
And talked about our dollies' clothes until 'twas time for tea.
But then, alas! While Nancy and her friends sat 'neath the shade—
We greedy girls ate all the cake and drank the lemonade.*

The First Raindrops

ONCE upon a time there were no raindrops. All of the water that there was came from the sea and the rivers, and the rivers were few. Little stars shone in the heavens and every night the moon looked down upon the earth. Every day the sun shone as brightly as could be, and there were no clouds. The earth was very dry, as you may suppose, and few were the trees and flowers that grew there. In the daytime the people stayed inside of their houses, for it was too hot for them to come out, but at night the air was cooler and they came outside to do their work and to rest in the cool breezes.

One night the moon looked down upon the cottage of a poor peasant who lived a long way from the shores of the nearest river. He and his wife found it very hard to make a living or to raise things to eat, and they could not afford to live nearer to the water. On this night of which we speak, the man and his wife were sitting on a bench outside the door.

"What shall we have to eat tomorrow?" asked the good wife.

"Woe is me, I know not," answered her husband. "The lands are so dry. If I might only take the river and draw it up over the land for just a few minutes, the earth would be wet enough to cause the vegetables to grow. As it is, I fear we shall starve."

"Is there no one who can help us?"

asked the woman.

"No one," answered her husband, "unless it be the great sun himself, and surely he would never listen to a mortal."

"I know! I know!" shouted the woman, "I shall ask the moon; the moon will speak to the sun for us."

"No, do not do that," said the man, "for the moon and the sun seldom see each other and it would be asking too much of her to wait for him in the morning."

"It will do no harm to ask," declared the woman, "we would better do that than starve." And she waved her hand to the moon who was then sailing in her silver ship across the sky.

Of course the moon could not speak to mortals either, but she stopped her ship and winked her one eye to let the woman know that she heard.

"Oh, dear good Lady Moon," began the woman, "I come to beg a favor of you." The moon winked again and the woman went on.

"Won't you please ask the sun to see what he can do to help us? The ground is hard and hot and dry. The whole earth is dry. We'd like just a few more rivers, even tiny ones would help. Perhaps the sun could find a way to spread one big river over the land for a little while, if he could not give us a river of our own."

Lady Moon winked her eye again and

bade her sailors anchor her silver ship in the sky. Then she sat down to rest and to look over the tired world. There sat the peasant and his wife by the door; there stood a few tall trees, whose leaves were parched and withered; there sat a gaunt, shaggy dog with his tongue hanging out, dying from thirst.

"I must do something to help them," said the moon, "I shall wait here in the sky until the sun arises. He will be very angry, perhaps, but I shall speak to him for I must help these poor people."

So she kept her ship at anchor and waited.

Morning came, and in the eastern sky the great sun arose and rubbed his eye.

"Can that be the moon's silver ship anchored there in the sky?" he exclaimed to his charioteer.

"It is, O King," answered the charioteer, humbly bowing.

"Drive at once and find out the cause."

The golden chariot sped so fast across the sky that the people on earth began to wonder what was the matter. Soon it was beside the silver ship.

"What ho!" called the sun. Lady Moon came out to the bow of her ship and knelt before him.

"First, oh good King Sun," she pleaded, "I beg you to forgive me for waiting for you. Have I your permission to speak further and explain?"

"Proceed," commanded King Sun.

"The earth is dry and hot. Mortals are finding it hard to live there—" she began.

What do I care for mortals?" cried the king. "Mortals mean nothing to me!"

"Oh," said Lady Moon, tactfully, "but if you only knew how much they admire your strength, you would not say that."

"How do you know that?" asked the king, suddenly becoming interested.

"I have heard them," she declared.

"Why just last night I heard a peasant say to his wife that you were strong and powerful and able to do almost anything. For that reason I wanted to speak with you."

They had a good time at the welfare picnic at Akron, O. Viola Mains, whose grandpa is a yard conductor, and Bruce Hutchins, whose grandpa is Engineer A. McIntosh

Sarah Anne ("Bobby") Pennington,
our new contributor

Would it be possible for you to cause a river to spread over this section of the earth and water it so that the people might grow their grain and vegetables? I am sure that you can, if you will."

Then Lady Moon knew that she had touched King Sun's heart, for above all else, she loved flattery. She waited. Presently he spoke.

"I shall do something for them," he said. "Do you sail ahead as fast as you can now, for the other half of the earth is waiting for your light. Tomorrow you shall see what will happen."

The sailors drew in the anchor, the sails were hoisted, and Lady Moon in her silver ship went sailing away.

Then the king gave orders to his charioteer.

"At the first town that we reach today," he said, "stop the chariot and tie the horses to the tops of the tallest trees. Get out of the chariot and let yourself down into the town. There go to all of the potteries and ask for the largest pots; then go to the rope-maker's and get the longest rope you can find. I shall take a nap while you are gone."

Now this was a strange thing for the sun to say, for his servants had never known him to fall asleep. And the charioteer did not know what to think, but when they came near to the first town, he did as the king had commanded and went in search of the pots and the rope. And strange enough, the sun fell asleep.

Down upon the earth the people had begun to wonder what had happened. First, the sun and the moon were seen talking together, then the moon had set off in her silver ship faster than they had ever before seen her sailing; now the earth was growing dark. In truth, the sun was lying in the bottom of the chariot, and the only light the people had was the reflection of his flaming body against the sky. But the people did

not know this and they were afraid.

By and by, the charioteer came back with the great pots, seven of the largest that he could find in the town. Indeed they were so large that any one of them could have held a good sized river. The charioteer tied ropes to them, took hold of the ends of the ropes and climbed the tree to the chariot, then drew the pots up after him.

The sun awoke and they drove off toward the West. Then he gave his orders.

"As soon as we come to the ocean," he said, "let down the pots and fill them with water. Then, when we get around the world again to the place where Lady Moon waited for us, I shall take a nap again while you empty one of the pots. We shall do this each day, or as often as is necessary, until the pots are empty. Then I shall sleep while you fill them up again."

So, on the next morning, when the peasant and his wife awoke, the earth was dark again.

"What can it mean?" they asked each other.

Soon the water began to pour out of the skies in millions of tiny drops.

"Oh, oh!" exclaimed the good wife, "it is the river that the sun is bringing to us. I knew the moon would help! I knew the moon would help!" And the two seized each other's hands and danced about like happy children.

For a long time it rained. Then, when at last the sun came out, the peasant and his wife saw that between the hills there flowed little brooklets. Then the leaves on the trees became green again, the poor sick dog got well and all were glad. Now they knew that the crops would grow and that they would not die of hunger nor thirst. Straight-

way the peasants went to work in their fields, for the earth was cooler and they were able to work in the daytime.

On that night, when the moon came up again, the man and his wife looked up and thanked her. Lady Moon heard them, for she winked her one eye and smiled. Then she went sailing across the sky in her silver ship, watching over all the world while the people slept.

The Unwise Father

By Sarah Anne "Bobby" Pennington

(See "Little Letters from Little People.")

LITTLE Anne Flanders lived with her father and mother in a large city.

Her mother was loving and gentle, but her father was different. He gambled and said bad words; he smoked and drank very heavily. His wife tried to persuade him to stop, but it was all in vain.

Little Anne was like her mother. She had beautiful violet eyes, light golden curls, and even rows of white teeth. Her tenth birthday would be in June, but she would not receive any presents, she knew, because of her father.

One night the father, Jack Roland Flanders, came home and went straight to his room. He drank and was soon out of his mind. He lit a cigar and started to smoke; he laughed and threw the cigar on the bed. Then he drank more as the flames leaped higher. Then he threw himself on the bed among the flames.

Anne was with her mother in the room below. She was suffering with a toothache and her mother was trying to comfort her. After awhile they began to feel heat coming from overhead. Anne stayed in her bed

Left, Beatrice Mantz, granddaughter of F. M. Keane, I. C. C. Inspector, and daughter of Machinist J. R. Mantz, Grafton, W. Va. Upper center, Erma L. and Herbert C., children of Elmer S. Wright, Relief Department, Baltimore. Right, James Sampelle, Jr., Washington, D. C., and his pet bunnies. Lower center, James Alfred, little brother of Beatrice Mantz

while her mother went up to see what was the trouble. Soon Anne heard the people in the street calling and shouting. She jumped from her bed and ran to the street. There she could see the flames leaping from her father's window. The firemen rushed in and got Mrs. Flanders, but her husband was too far gone. Anne and her mother were taken to the hospital and placed under the care of Dr. Lynch.

In a few days Anne was well, but her mother never recovered. A week later Anne

kissed her mother, then Dr. Lynch led her gently from the room. A few minutes later Mrs. Flanders closed her eyes in slumber sweet.

Dr. Lynch and his wife both loved Anne. After the death of her mother they took Anne home to live with them. There she had everything that a child's heart could desire. In young womanhood she became a trained nurse, and was loved by every living creature.

Little Letters from Little People

GALE SCHACHTE, Mt. Pleasant, Pa., writes to tell us that her pet Bantam hen, Biddy, is dead, and poor Dick, the little rooster, is all alone. Gale is going to get another little hen and will call her Biddy also. She has a little kitten named Beauty. Gale has been visiting her little cousins, Mildred and Geraldine Arvin.

Kathryn and Mildred Hadden, Dover, Ohio, have been down to visit their grandma. They had a lovely time and brought Grandma home with them. One night they went on a little picnic. Mamma packed the lunch, and she knows just how to pack one, for she won a prize in the MAGAZINE Dinner Pail Contest. They had sandwiches, potato chips, a big jar of lemonade, pickles, a big cake that Kathryn made, and a dandy big watermelon. They took an old lady who lives across the street and all went out in Papa's new automobile.

Anna Kalous lives in Baltimore. She didn't tell me her address so I could not write to her. But she sent a funny picture of a chicken and wrote a story about it. Thank you, Anna, come again.

Now I must tell you about Sarah Anne "Bobby" Pennington, who lives at Cumberland. One day Sarah Anne Bobby (Bobby isn't her real name; she has her hair bobbed, that's all) came right into the MAGAZINE office with her daddy to see Aunt Mary. She has lived since she was a tiny little girl in a home in Baltimore. Here she came into contact with ever and ever so many little children whom she learned to love. Recently she had to spend some time in a hospital, but now at last she is back home in Cumberland. I am telling you all of this so that you will know where Sarah learned so much about poor children whose fathers drink and are mean to their families. Sarah herself has a splendid father who is crossing watchman at Polk Street, Cumberland. He had been without his little girl for so long that he came to get her and to take her home. They were on their way home when they came to see us. We are going to have some more stories from Sarah, so look out for them.

Phane Bateman, of Pittsburgh, also forgot to give Aunt Mary her street address. We hope she will let us have it. Her uncle Billy works for the Baltimore and Ohio and brings her the MAGAZINE.

Margaret Kelly, of Baltimore, likes to

read the MAGAZINE. She sent in a copy of Tennyson's beautiful "Bugle Song," which we will use on our Page some day.

Dear Girls and Boys:

I am sure that most of you have read all about Hiawatha, the little Indian boy; those of you who don't know about him will know something about Indians anyway. So, for the October Children's Page, we're going to have stories and pictures of Indians, wigwams, birch bark canoes, pretty autumn leaves, camp fires, and everything that you can tell me about Indians. There will be an Indian story, too. If anybody wants to tell me how to play Indians, that will be great fun, for we can tell all of the others about it. Now, get busy right away, before school begins, and let me have your letters, stories, poems and pictures. If you have a picture of yourself dressed in an Indian suit, let's have that, too, for we're going to make this the finest page ever.

Now, little girls, I'll tell you how to have a doll's party.

For the invitations, ask Mamma to give you an old last year's fashion book. Cut from it as many of the colored paper dolls as you wish invitations. Paste each of these on thin squares or oblongs of cardboard. On a piece of cardboard of the same size, write your invitation, which is only a little letter to your friends, asking them to come to your house on a certain day, at a certain time, and bring their dolls. Tie this sheet with a bit of ribbon to the back of the other, and there you are.

Now for the games. Place all of the dollies in a row on the porch or on a shelf, mantlepiece, or wide step. Then have Mamma or Auntie, or someone who is grown up, say which is the prettiest, which the funniest, and which the oddest doll. Give as prizes for these a doll's fan, a doll's washing tub, and a doll's tin cup and saucer.

Next have a guessing contest. Have Mamma write on a piece of paper and place in an envelope the name of a doll whose name is to be guessed. Then let the girls take turns in guessing, the lucky one getting the doll as a prize.

Have on hand as many of the little china penny dolls as there are girls. Give one to each, then let all go to a table where there are scissors, glue, crepe paper, needles and thread. Let each girl dress her doll. Offer

a larger doll as a prize to the one who makes the prettiest dress. Each girl keeps the doll that she has dressed.

For refreshments, Mamma will make you some ginger cookies cut into shapes of dolls and animals; lemonade or fruit punch, and home-made peppermints. This menu will be just right, for it is guaranteed not to make any doll ill. It can be served at a big table, or a number of little tables, but be sure to use large sized doll's dishes to eat from. If a large table is used, use for a centerpiece a small tree, planted in a pot. Around this all of the dolls may be placed, for dolls love to watch their little mammas eat. If there is anything else that you would like to know about this or any other kind of party, write to Aunt Mary, who will be glad to help you with yours.

Now don't forget about the Indians. I want lots of pictures, poems and stories about them.

With love,

Aunt Mary

My Pet Chicken

By Anna Kalous

ONE day in Summer my sister Louise went out to the country. She is fond of chickens, and while she was feeding them, out of the coop came a little peep. Louise ran after it but could not catch it. Then she began to cry. I laughed at her. Then she went in and told my aunt.

On the next day they went out to look for the little peep, but could not find it. I went down to the old apple tree and there it lay dead. It was my pet chicken.

I told my aunt and uncle, who told my little sister. Then she went out to find it. There she buried it just where she found it. My uncle then told her never to chase a chicken again.

"My old home is not what it used to be."
Drawn by Anna Kalous, Baltimore, Md.

Barbara Fritchie and Barbara Fritchey

(Continued from page 51)

"God bless you, may you live long, you dear old soul," a Union soldier is said to have called out to her as she stood leaning on her cane and waving her flag from her window.

So much for Barbara *Fritchie*; now for Barbara *Fritchey*, the 13 year old daughter of Master Mechanic F. W. Fritchey, Riverside. Little Barbara holds in her possession the doily, pictured on page 51 which was presented to her by a relative of this patriotic lady of Frederick. The following letter accompanied the doily:

413 S. MARKET STREET,
FREDERICK, MD., September 2, 1920.

Dear Miss Barbara Fritchey—

You will, no doubt, be surprised to receive this note. Yesterday my mother received a letter from a friend living in Baltimore,—Mrs. Marion H. Howarth, 3605 Forest Park Avenue—in which was enclosed a newspaper clipping, showing a picture of your mother as the first Baltimore woman to declare her intention of voting, and saying that she intended preserving her certificate for her daughter, Barbara, who had just celebrated her 13th birthday.

Your name attracted Mrs. Howarth as being the name of mother's great aunt, Mrs. Barbara Fritchie, whom Mr. Whittier has made famous in his poem, and we wonder if you are her namesake.

I am sending you a little souvenir, made from one of Barbara Fritchie's linen sheets, for which she spun the flax at least 100 years ago.

My mother has in her possession the flag which Dame Barbara waved to both the Confederate and the Union soldiers, also a number of articles which belonged to Barbara Fritchie: the coffee pot from which she poured coffee for General Washington in 1791; the comb that was in her hair when she was buried. When her remains were re-interred, after resting in the old church graveyard for about 51 years, the comb was sterilized and placed in our cabinet with the other relics.

My mother celebrated her 81st birthday yesterday, September 1. She wanted to write to you, but she cannot concentrate her mind sufficiently to write a letter, although until recently she has been able to write very interesting letters.

I trust that this note will reach you and that you will like the little doily. I feel sure that you are as patriotic as your namesake, Barbara. Perhaps some time you will come to Frederick and we will have the pleasure of meeting you.

Mother joins me in kind regards and we hope you will have many happy returns of your birthday.

Very sincerely yours,
MISS ELEANOR D. ABBOTT.

Recipes

Following are some of the best recipes selected from among the entries in the recent Dinner Pail Contest:

Cheese and Pimento Sandwiches

Mrs. W. O. Smith, Gaithersburg, Md.

Take 1 pound of cheese and a small can of pimentos. Run through a food chopper and moisten with Mayonnaise dressing. Spread between home made rolls, crackers, or baker's bread.

Apple Sauce Cake

Mrs. W. O. Smith, Gaithersburg, Md.

2 cups sugar
1 cup compound lard, creamed
2 cups apple sauce
2 teaspoons soda, dissolved

Mix with the lard and sugar 1 teaspoon nutmeg, allspice, cinnamon, and lemon extract. Have 1 pound raisins, well floured. Add 2 cups sifted flour. Mix all together and bake for 1 hour in a slow oven.

Island Float

Mrs. J. A. Engstrom, Garrett, Indiana

1 cup granulated sugar
2 eggs
1 tablespoon cornstarch
1 pint milk

Save out the white of one egg; mix sugar, eggs, and cornstarch, then add to heated milk. Add flavoring to suit. Cook until thick and pour into pudding dish. When cool spread on the stiffly beaten egg white. If desired, shredded cocoanut may be added to both pudding and meringue. This pudding is both delicious and nutritious

Dear Women Readers:

One Saturday afternoon recently I met two of our girls from the Baltimore and Ohio Building at Baltimore on their way to the station.

"Where are you bound today?" I asked them.

"Atlantic City this time," answered Ruth. "You see, it's this way," she added, "Betty and I have made ourselves two perfectly stunning bathing suits, and we thought it a pity not to wear them while the bathing is so good everywhere."

"Quite right, of course," I laughed, "are you holding good that resolution of yours to go somewhere every week end?"

"Yes," answered Betty, "and we've found out some beautiful places on Our Railroad. I don't know what we'd do if we didn't get free transportation. Why, do you know, before I came here to work I had never been farther north than Philadelphia, nor farther west than Washington, D. C." She looked at the other girl and laughed. "Shall we tell her about the history woman?"

"Go ahead," assented Ruth, smiling.

"We were on our way to Cumberland. On the train and in the seat opposite sat a little old lady. Well, if anybody new history and scenery, that woman knew it. Before we had gotten past Harpers Ferry we had history poured into our ears by the yard. And as for the scenery and places of interest—well, I never heard anything like it. As soon as she was gone, Ruth and I wrote down in our notebooks what we remembered. Now whenever we go up the Line, we try our new-found knowledge on some woman or girl who looks as though she'd like to be entertained. Several weeks ago there were two old maid school teachers who were dying for fear they'd pass John Brown's monument without seeing it. But we heard what they said and saw that they didn't miss anything. They asked us all kinds of questions, and we were glad that we were able to answer most of them. The schoolmarms were so delighted that they asked us to visit them in their home in the mountains. Of course, we may never see them again, but it's lots of fun for us to be able to speak to the passengers about *Our Road*. Sometimes an old lady will open her eyes and say, 'What! Do you mean to say you work for a railroad? Are you brakemen, firemen, or conductors? Oh, dear! What is the world coming to!'"

"Anyway," added Ruth, "we're learning the Railroad 'by heart' and they can't fool us much on questions now. Everywhere we go we find somebody's willing ears, and we have lots of fun in the bargain."

"Come, Betty, I hear the train coming," and the two were gone in a flash.

What a fine way to advertise the Railroad. I wish that we all might be as well informed as these girls, for I am sure that they are "business getters" without knowing it.

Yours sincerely,

Margaret Talbot Stevens

Associate Editor.

Jolly Party Attends Presentation of Championship Safety Banner at East Side

THE presentation of the Championship Safety Banner to East Side Terminal employees at Philadelphia on Wednesday, June 29, was the occasion of the gathering of many officers. The entire working force at East Side Shops assembled at the foot of the flagpole and heard their efforts extolled by General Manager Scheer, General Superintendent White, Division Superintendent Hoskins, Superintendent Safety Department Broderick, Terminal Trainmaster Gallary and Master Mechanic Hines.

A surprise was sprung by Mr. White, aided and abetted by Mr. Scheer. After the formal presentation by Mr. Broderick of the official banner, at a signal from Mr. White there was run aloft on the flagpole a white pennant with deep green border and green letters. It was a gift from Mr. Scheer and Mr. White to the employees in recognition of the superb record made. For some reason or other, the employees at East Side have a fondness for green and before the campaign was started Mr. White promised the winner on his territory a green pennant. So, to carry out his promise, Mr. White had the extra pennant made and it will be flown from the flagpole. The other banner will be hung in the office of Mr. Hines.

Mr. Scheer was host to the party that went from Baltimore to Philadelphia. They arrived there at 2.30 p. m. The shop's band, under the direction of "Tom" Cooper, played a few selections. Mr. Hoskins, who was presiding, opened the exercises by expressing his appreciation of the record the employees had made. He then introduced Mr. Scheer.

"When I came to East Side the latter part of March," said Mr. Scheer, "to ask you men to give your fullest cooperation in the 60-day Safety Drive, I had an idea you would be the victors. I am here today to extend the congratulations of the operating officers of the Baltimore and Ohio. And these congratulations are well deserved. In the 61 days that the Safety test lasted you had only one accident. That is the best record made anywhere, at any time, on the Baltimore and Ohio. What appeals to me most is the fact that in those 61 days of April and May there was not a moment of sorrow in the home of any of our Railroad men in Philadelphia. The same cannot be said of some other places on the Eastern Lines of our Railroad.

"So you see, it is worth while to be careful. While I bring you the congratulations of the operating officers, I want to extend to you my words of personal appreciation of your accomplishments. Your record, I feel, will stand for a long time without being excelled. Let me call your attention to some of the accidents that occurred on the Eastern Lines during the drive."

Mr. Scheer then read some of the more distressing accidents and pointed out the way they might have been avoided and sorrow kept from Baltimore and Ohio employees' homes. "In closing," he then said, "I want you to give me the assurance that you will give Safety the same attention in the future as you did during the 60 days of the campaign. You owe it to yourselves and to your families. Always be safe."

The banner was then brought forward by Mr. Broderick. He read the letter from C. W. Galloway, vice-president, to the superintendent of the division, as follows:

The Safety Campaign, which was conducted for 61 days, beginning April 1, at designated points on the Baltimore and Ohio System to demonstrate

by intensive work what could be accomplished in reducing casualties to employees, was concluded May 31.

During the period, East Side Terminal, including Maintenance of Way, Mechanical and Transportation Department employees, from the reports received, has made the best record among the points which were selected for this test on the Eastern Lines. These reports show that for the 61 days of this year there was 1 employee injured, compared with 22 injured during the same period last year. There were 310,094 man hours worked this year, compared with 411,408 last year. The man hours per casualty this year were 310,094, compared with 18,700 in 1920. The percentage of increase in man hours per casualty was 1,558 per cent.

The accomplishment of this commendable result has proved conclusively that every employee in and around East Side took an active and sustained interest in the campaign.

It is with a great deal of pleasure and pride that I offer you my sincere congratulations. The victory banner, which will be formally presented in recognition of the efforts put forth by the employees at East Side, I hope will ever be evidence to you that the observance of Safety Rules means not only efficient railroad operation, but also brings happiness to those who practice them. You will, I trust, preserve for all time what the banner represents and that only can be done by continued practice of all Safety Rules. Your victory was obtained through strenuous competition with other points on the Eastern Lines and your fight for success, I am sure, will be an inspiration to your energetic rivals.

After reading this letter, Mr. Broderick said:

"I come to praise Caesar, not to bury him. Some men achieve honors; some have honors thrust upon them. I am in the latter class today. Mr. Scheer delegated me to present this banner to you, and I appreciate the honor he has bestowed upon me. You have heard the figures as the result of the drive you so capably carried on here for 61 days. Only one accident this year, and that a very minor one, against 22 last year, is something that you should feel very proud of. As Mr. Galloway, our vice-president, points out in his letter of congratulation, the man hours per casualty went from 18,700 during the period last year to 310,094 this year. That represents a gain of 1,558 per cent.

"Now, a 100 per cent. gain is usually regarded as creditable. You men of East Side improved that 15 times. I cannot recall anything done equally as well and I believe you have set a new high mark that may stand for a long time. Toledo, your nearest rival, made a good record, but did not come up to East Side.

"It is not a new thing for Philadelphians to do the unusual. You all recall the noble act of Joseph Sweeney, who gave his life blood in an effort to save the life of a fellow employee run over in these yards by a train. Nothing is more commendable than that a man give his blood to save a fellow being. The management thought so well of this brave deed that he was presented a gold medal.

"I regard the secret of your success in the No-Accident Campaign as teamwork. Never for a moment did you lose sight of the

necessity for cooperation. There was, likewise, cooperation at the other places engaged in the drive, for accidents were reduced from 611 in the two-month period last year to 143 this year, or a reduction of 76 per cent.

"This occasion affords me an opportunity to solicit your assistance in another matter, and I feel that I can count upon you for help. On the Delaware Branch many children play upon the tracks and jump on and off moving trains. We have seen several distressing accidents from this cause. Each man here should constitute himself a committee of one to handle the situation. If you see the children risking their lives, warn them. If you know their parents, urge them to keep the children off the Railroad property.

"And, now, it gives me great pleasure to present to you the victory banner that you won and which is in recognition of the wonderful record you made. May it ever be the means of inspiring you to preserve for all time what the banner represents and that can only be done by continued practice of the Safety Rules."

Mr. White was then introduced and as he arose to speak two employees approached the flagpole with a very mysterious bundle between them.

"When my good friend Mr. Broderick notified us that East Side had won in the No-Accident Campaign," said Mr. White, "I was not surprised. I have yet to see the time when you men made up your minds to get something that you did not get it. You made up your minds to rid this terminal of accidents and how well you succeeded is evidenced by the remarks of Mr. Scheer that no other place on the Baltimore and Ohio ever has made such a record as you made. Reflect back and recall the 22 accidents this terminal had in 1920. Those accidents meant much suffering for many. Many of them were unnecessary. The one accident you had this year was a very minor one, a fireman stepping upon a piece of coal and turning his ankle. You have shown what you can do by united action.

"In preparing for this drive, I recall addressing you men and promising that East Side would get a green banner of victory if it won. The banner presented by Mr. Broderick has no green on it. Some of the other officers and myself felt that we must keep our word, and, therefore, I present this green banner to the employees of East Side."

Amidst cheers from the crowd, the secret bundle was opened and there was run up on the flagpole an American flag, with a triangular pennant beneath it, a wide green border and green letters on a white field. The pennant bore the following: "Safety Champions, Eastern Lines, April-May, 1921."

Mr. Hines next spoke. He plainly showed that he was elated because his men had come out ahead in the drive.

"I am very grateful," he said, "for the two banners and assure you that East Side will cherish them. You employees have heard all the praises of our officers. I knew when the campaign started that victory was as good as won for East Side, for I knew the spirit in which the men set out to win. I take no personal credit for the winning. I thank you men for the good work you have accomplished and I want it to continue for the remainder of the year."

Mr. Gallary made a few remarks, saying that he was glad to know that East Side at last had "come into its own." He added that he was particularly gratified at the showing made at the terminal and that it was accomplished solely through cooperation and because the men realized the true value of Safety.

(Continued on page 71)

Safety Roll of Honor

Baltimore Terminal Division

Superintendent Shriver has written congratulatory letters to Patrolman Stortz and Operator H. L. Minton, covering the following honor performances:

On May 30, while train of engine 4443 was passing West Baltimore, Patrolman Stortz observed broken arch bar on Wabash 16101. He notified the yardmaster at Mt. Clare Junction who had the car set off for necessary repairs.

On April 28, while train No. 92, engine 4522, was passing North Avenue Tower, Operator H. L. Minton observed that Baltimore and Ohio 149643, loaded with pipe, had shifted. He had this car set off at Bay View.

Baltimore Division

On March 9, as extra east, engine 4595, was passing Harmony, Delaware, Section Foreman Philip Gaines noticed broken wheel under Baltimore and Ohio 230707. He signalled to conductor to stop the train. Two feet and six inches of wheel were found gone.

On the morning of April 28 as No. 94 was pulling past icehouse at Brunswick, W. Jennings, in charge of icing cars, noticed Baltimore and Ohio refrigerator 15233 in an unsafe condition. He called the operator at "WB" Tower on the telephone and No. 94 was stopped. Car was inspected, found to be unsafe, and was set out.

On May 5 while second 13 was passing through Brunswick, Machinist J. C. Riser noticed car with brake shoe, hanger, and head down. Operator at Weverton was notified promptly and the train was stopped for examination.

About 6.07 p. m. on May 24, W. E. Crouse, trackman, at Mt. Airy, observed rod dragging under engine 1321, No. 72. He had train stopped and condition remedied.

Cumberland Division

On May 14, while No. 94, engine 4403, was passing Martinsburg, Operator J. L. Schroder noted all wheels sliding under 41st car in train and brake shoes red hot. He sent word to conductor by helper and brakes were looked after before starting up the hill.

On May 26 while extra 4420 west was passing Green Spring at 6.47 a. m., Operator J. D. Rockwell noted brake rigging down under Baltimore and Ohio 135432. He notified Conductor Eversole who gave the defect attention at Green Spring.

While extra 4413 east was passing Martinsburg on May 24, Operator J. L. Schroder noted brake rigging down under B. M. I. X. 6313, 20 cars from caboose. He informed crew as rear passed and sent word by helper called to assist train up the nine mile grade. The defect was given attention at Opequon.

While 2nd 55, engine 5068, was passing Bond on May 7, Operator H. M. Comp noted high and low coupler between 6th and 7th cars from engine. He stopped the train at advance signal where trouble was corrected with seven minutes delay.

At 8.03 a. m. on May 16 while extra 7133 east was passing McMillan, Operator C. W. Michael noted some defect under car about middle of train. He informed the crew and helper. The train was stopped and investigation developed brake rigging down. This was removed by crew.

On June 21, while at telegraph office at Martinsburg, Section Lineman H. O. Collison, while extra 4413 east was passing at 7.05 p. m., noted brake rigging down under car in train. He investigated and found part of rigging wedged between guard rail and track No. 4 at Burke Street bridge. He notified operator not to permit trains to use track; removed long piece of rigging from track, and got trackmen to assist.

At the time this occurred, double header 2858 and 4408 was on the approach circuit and was held until the track was clear. This is the fourth case in which Lineman Collison has picked up bad conditions, which were promptly cared for through his activity.

On May 9, as train No. 2 was passing Independence, Fireman Felton noted broken rail in No. 4 track. He promptly reported the matter. Trackmen made repairs.

On June 6, Operator J. D. Rockwell, before it was necessary to use interlocking switch No. 25, found switch instrument and covering badly damaged. Alongside of the switch he found piece of oak timber about 5 feet long by 6 x 2 inches. The maintainer was called and repairs were made without delay to traffic.

As No. 4 passed Green Spring on June 11, Operator J. D. Rockwell noted brakes sticking badly on rear truck of second car from rear of train. He informed dispatcher who notified No. 4 to look after the defect at Okonoko.

On July 3, First Trick Operator H. M. Comp, at Bond, noted track indication in tower go red. He made investigation and found rail broken in two, 12 telegraph poles west of office. He secured a pair of angle bars east of the tower and plated rail, running a bond wire around the break, which cleared up the indicator and restored the track to service for regular speed.

At 12.43 a. m. on May 13, while extra 4430 east was passing Martinsburg, Operator J. L. Schroder noted piece of pipe projecting from 10th car from caboose. The helper following to assist the train up nine mile grade was notified to inform conductor before starting up the grade.

On May 23, as extra 7040 east passed McMillan, Operator C. W. Michael noted car door swinging on 7th car from caboose. Being unable to notify crew at McMillan, he informed train dispatcher, who had necessary attention given the matter at Rodemer to correct the trouble.

Connellsville Division

While motoring home from work recently, E. T. and N. M. Harclerode, brother telegraphers, Hyndman, Pa., discovered enough stones and other debris piled on the main track near Foley to have derailed a whole train. They have been commended for their interest in observing and having obstruction removed.

Wheeling Division

On Wednesday, June 15, while train No. 53 was passing 39th Street, Wheeling, a child of two or three years came out from the alley between 37th and 38th Streets and lay down upon the main track. The crossing watchlady, Miss Marie Brandon, at 38th Street, observed the child and shouted to it, but it would not move. She immediately flagged No. 53.

Miss Edna Nolte, crossing watchlady at 37th Street, also noticed the child on the track and ran to get it off, but because of her excitement, fell just before reaching the child. However, she was able to get hold of him and she rolled with him off the track. No. 53 stopped about 15 feet from where the child lay.

Cleveland Division

CLEVELAND, OHIO, July 17, 1921.

MR. F. B. MORRIS,
Operator,
Lester, Ohio.

Dear Sir—I have before me information that while extra 4066 west was pulling by the telegraph office at Lester on July 12, you noticed broken flange on Baltimore and Ohio car 133784, 13th car from rear end of train, that you ran out and jumped on caboose and informed the conductor, who stopped train and had car set off.

It is evident that your careful observance averted a serious accident, as with 13 inches of flange broken off on this car, there is no question but what there would have been a derailment before this car had traveled much further.

I want to commend you for the interest you have shown in observing the condition of cars in trains passing that station.

Very truly yours,
(Signed) H. B. GREEN,
Superintendent

Real heroines are Edna Nolte, (left) and Marie Brandon (right), who saved the life of a child. (See Wheeling Division note)

CLEVELAND, OHIO, August 1, 1921.
Mr. D. E. HALE,
Brakeman,
Lorain, Ohio.

Dear Sir—Understand you were brakeman on extra 4066 on July 24 and, while waiting at Seville, Ohio, for eastward train, in inspecting your train, discovered wheel on Baltimore and Ohio car 128607 with broken tread, and had car set off for necessary repairs.

Of course I appreciate that it is your duty to inspect your train while waiting for other trains. However, it is evident that this was given very close inspection and had it not been detected, it would have probably resulted in a derailment.

I want to commend you in this particular case and certainly appreciate what you have done. While this was a matter of "Safety First," it was also in line with economy. If a derailment had occurred, there probably would have been some heavy expense connected with it.

Very truly yours,
(Signed) H. B. GREEN,
Superintendent

CLEVELAND, OHIO, July 9, 1921.

Mr. W. E. BUTTS,
Conductor,
Lorain, Ohio.

Dear Sir—Referring to your letter of July 2, reporting your discovery of broken rail between Wye switches west of "CO" Tower on westward main, about 12 inches broken out, on July 1, while you were conductor in charge of engine 4310:

There is no question in my mind as to your deserving a commendatory entry placed on your record for your watchfulness and the prompt action you took in this case, as no doubt had it not been discovered by you, we would probably have had a bad accident at this point.

This is indeed meritorious service and I have arranged to place the proper entry on your record.

Very truly yours,
(Signed) H. B. GREEN,
Superintendent.

Ohio Division

Mr. C. H. WOMACK,
Train Baggageman.

Dear Sir—I have received information to the effect that on July 17, preparatory to your coming out on train No. 3, you were walking eastward on the platform when train No. 3 pulled into the station at Parkersburg; that you noticed a little girl about six years of age, walking westward on the edge of the curbing of the platform. Observing this while you were about twenty-five feet away from the child and seeing that she was not aware of the danger of the approaching train, you dropped your handbag and train box, rushed toward her and grabbed her just in time to avert being struck by the on-coming train. As a matter of fact it was thought that the pilot did strike the child but this was not the case.

For your gallantry in saving this child's life, I cannot find words to express my appreciation. While there is no question but that you jeopardized your life in performing this service, I feel that you appreciate that the good feeling caused by this heroic deed will ever remain with you.

Very truly yours,
(Signed) T. E. BANKS,
Trainmaster.

Commendable entry has been placed on the record of Brakeman W. Brooks, for discovering a burst wheel on C. & O. 33751, loaded with coal, while train 102, in which this car was loaded, was switching at Blanchester. He made arrangements

immediately to have the car set off and repaired.

On June 3, S. H. Baer, South Webster, Ohio, discovered a broken wheel in extra 2772-2724 west, while the train was at Bloom Junction. On the same date he also discovered a brake beam dragging on one of the cars. The interest taken and the prompt reporting of these conditions no doubt resulted in averting a serious accident.

Passenger Brakeman L. M. Wade has had commendatory entry placed on his record for his attention to duty, his alacrity and courtesy recently displayed on train 48, which resulted in congratulatory letter from Mr. C. E. Bell, President, C. E. Bell Manufacturing Company, Hillsboro, Ohio, to the trainmaster.

On July 11, a lady passenger on train No. 12, became suddenly ill. Another lady passenger on this train, upon noticing something wrong, made inquiries of the conductor and learning of the illness of the other, immediately offered her services, stating that she was a trained nurse, rendered valuable assistance and remained constantly with the sick woman from Chillicothe to Parkersburg. It was later learned that this nurse's name was Miss Lulu Werring of Lowell, Ohio. Such humanitarianism on the part of Miss Werring is certainly worthy of mention and commendation. A letter of thanks from the Baltimore and Ohio Railroad has been written her by Trainmaster Banks.

Indiana Division

On July 14, Samuel Hodapp, car repairer, while off duty, noticing C. M. & St. P. delivering cut of cars to the Baltimore and Ohio, observed that something was wrong with P. R. R. 36549. He inspected car and found that it was in bad order and off center. He immediately notified chief dispatcher and car was held for repairs.

Baggageman C. H. Womack Saves Life of Little Girl

By J. M. C. Martin, T. P. A.

Parkersburg, W. Va.

ON JULY 17 Clyde H. Womack, train baggageman, Ohio Division, while walking along the platform at Sixth Street Passenger Station, Parkersburg, observed a little girl of about six years, leisurely strolling along the curb of platform. Regardless of the possibility of personal injury to himself, he hurriedly dropped his handbag and train box, and rushed to the rescue of the child, carrying her to a point of safety just as No. 3 came into the station.

This was witnessed by a number of passengers and by employees of the Railroad and Express Company, all of whom were very loud in their praises of Mr. Womack. Unfortunately in the excitement it was not possible to learn the name of the child.

Having witnessed the affair and helped Mr. Womack recover his property so that he could continue to the baggage car of No. 3 for his run to Cincinnati, I can vouch for the facts as related. I understand that this heroic act has been called to the attention

Master Mechanic Fritchey Encourages Riverside Employees in Safety

THE most important change in the growth of Safety work on the railroads is the increase of interest recently noted, not alone on the part of employees, but also of supervising officers.

When Safety started, some divisional and mechanical officers did not realize how big Safety bulked in importance as compared with the many other things they were called on to look after. And, lacking the stimulus of enthusiastic interest on the part of their supervisors, the interest of employees at certain points also lagged.

Master Mechanic Fritchey, at Riverside, addressed the members of the Safety Committee of the Riverside shops on July 13 and his talk to the men was most encouraging and enthusiastic. He spoke generally of the results already accomplished by Safety at Riverside, and the much better results looked for in the future. As an indication of how big Safety bulks in his mind in the operations there, we quote the conclusion of his address:

"When I received the report of a campaign ended May 30, and saw that for the month of May Riverside Shop was placed, on the Honor Roll, I do not believe that there was a happier man on this earth than I. And that is one of the reasons why I feel mighty proud of our Safety Committee at Riverside Shops for this splendid achievement."

of the proper divisional and district officers who have expressed their pride in being associated with a man of the calibre of Mr. Womack; also that Trainmaster T. E. Banks of the Ohio Division has written an appreciative letter to him in behalf of the Company and that a merit note has been placed on his record.

C. H. (Cliff) Womack, train baggagemaster

Among Ourselves

Baltimore and Ohio and Baltimore and Ohio Annex Buildings

Office of General Freight Claim Agent

Correspondent, Miss E. T. Murray

BALTIMORE, MD., July 27, 1921.

To my Friends in the Freight and Claim Departments:

I wish to express my appreciation to you, one and all, for the many kindnesses extended me during my recent affliction.

Having been at the mercy of my friends for such a long time, I naturally felt that I could not expect them to be as good to me as during the two previous occasions on which I was confined to my bed, and when they were so good to me. This made me feel that during the busy, everyday life, somewhere, someone was interested in my welfare. This was a sense of great comfort to me.

During the weeks of my convalescence after my operation, my many friends never seemed to tire of looking after me. They were exceptionally faithful to me, showering me with tokens of love and sympathy and visiting me, all of which helped to keep up my spirits during the long spell.

I am now glad to say that I am feeling better and hope that before long I shall be well again.

Again thanking you one and all for your many kindnesses, and trusting that you will be blessed with a long, healthy, and prosperous life, I beg to remain

Your sincere friend,

(Signed) WILLIAM E. PLITT, JR.

General Freight Department.

The School of Instruction for all members of the General Freight Claim Agent's office has held ten meetings. There have been lectures from the assistant to general freight claim agent, the chief clerk and the assistant chief clerks of this department, which have all been instructive. We have also been favored by the following gentlemen: Messrs. P. J. Trueschler, assistant agent, Camden Station; F. M. Hanshumaker, supervisor station service; J. D. Clark, superintendent transportation; and G. S. Harlan, division freight agent, who have given us talks on the work performed by their particular branches of the Railroad. This should be helpful and enable the investigators to better understand the functions which that branch has to perform.

Several of our young ladies have said "I will" and are in the realms of engaged couples.

Yes, siree; "Shad" Gainor and "Tom" Littig certainly display some creations in socks and ties—SOME colors—SOME size—SOME styles! Can you imagine socks the color of a blue sky sprinkled all over with black dragons? That's "Shad's" latest edition, and ties of tangerine with lizards lazily lying here and there is "Tom's" newest fad. Quite fantastic, I'll say.

Wonder why "Jim" Love is eating so much candy these days? Can it be a substitute?

We have heard that our friend "Hoggie" Brown recently went into the bird business—raising canaries. "Hoggie" says, "the only trouble is that the birds won't build their nests where you want them to, and if they do start, they get the nest half finished and then tear it down."

Hard luck, "Hoggie." Why don't you consult "Bill" Chance? He is an old hand at the business.

That the stork pays no heed to the high cost of living is evidenced by the arrival of an 8 pound baby boy on April 21, at the home of Roy Moore, of the Reconsigning Division. And his name is Adam Henry. Can you beat that?

It was on February 22—Washington's Birthday—that Miss Helen Buxton, O. S. & D. Division, decided to take the "fatal plunge," with Miss Janice Vick and Mr. John Rier as witnesses. Helen and "Eddie" boarded an early train for Elkton, Md., where the "life-long knot" was tied. The next morning Helen (pardon, please) Mrs. "Eddie" L. Beatty, was at her usual place in the office and nothing was revealed until three weeks later, when it finally leaked out.

Real Optimism

Whatever else may happen,
Now that the country's dry
The sailor will have his port
The farmer have his rye.
The cotton still has got its gin,
The seacoast has its bar,
And each of us will have his bicr,
No matter who we are.

"Stagge," "Bill" and "Sam" and "Jim"—
All four handsome, neat and trim.
Three as jolly as can be—
"Sam," he steadies up the three.
A picture taken on the street,
Watch the "birdie," smiling sweet,
Standing on the corner there—
Answer to a maiden's prayer!

Relief Department

Correspondent H. Irving Martin,

Then the class in Progressive Poetry spoke up. At first the verse submitted by the office poet (F. B. V., Jr.) read thusly:
Our jolly file clerk, Baker Tall
May not be back until next fall
He's going where the weather's damp
To the National Guardsman's Camp
He'll come back black as a —
And, we hope, a little bigger
We give him credit for his pluck
So long, Baker, we wish you luck.

Then the censor of all poetry submitted it to the *Atlantic Monthly*, and *The North American Review* got into the ring and, after reading the verse, the result, behold, brought B. T. back and busted up the camp:

The subject cannot but appeal,
And in my heart I deeply feel
That it would merit efforts great
To do it justice. Ah, but wait,
If I but knew this cavalier,
I'd wildly rave of his career,
His raven locks, his golden curls,
His eyes of blue, his teeth of pearls,
His knapsack strong, his Roman nose,
Or how he wears his soldier's clothes.
But tell me, where in all creation,
Am I to get an inspiration
To write real poetry, as you say,
Unless I know the guy some way.
I'll take the poem you submit,
And boost the meter up a bit,
I'll add a comma here and there,
Or change the wording, if I dare.
But otherwise, I can't help one bit,
So I leave it standing as 'tis writ.
Perhaps you'll say, "My, she's contrary!"
But pray respect my age (Sweet Sixteen)
—Aunt Mary.

Take your choice, ladies and gentlemen. B. T. says, "Cut out the poetry—none of it in camp life." I'll tell it in his own words:

"On July 3 I set forth on my trip to Saunders Range, after having enlisted with the Fourth Regiment, Hospital Company No. 1, Maryland National Guard. We reported Sunday morning at 6.30 at the Fourth Regiment Armory, and received our instructions regarding camp duties. We arrived at Saunders Range at 11.00 a. m. Sunday, unloaded trucks, and pitched our tents. We chopped down stumps which were blocking our territory, then had to make our bunks, which were not bad ones at that. Following this, we were called to "chow," which I certainly did enjoy—nix. Take it from me, if you have never been in service, you are lucky. Worked all day Sunday and retired about 9.45 p. m. At 10.00 p. m. taps could be heard all down the line; "all lights out" came the welcome order; and my first day at camp was ended.

On Monday morning reveille was sounded at 5.15; gave us just about 8 minutes to be in line and answer roll call; then we had to police the grounds. When that job was done, we had a few minutes to ourselves. Whistle was heard "all out—fall in" and the day started. We then had breakfast on the

H. B. Stagge, William McCallum, "Jim" Haggerty, Samuel J. Pasovsky

The only pebbles on the beach. "Swarzy" and "Ott" (left) being the largest pebbles. The tide arose when "Ott" appeared. From Auditor C. & C. Office

lawn at 6.00 a. m., after which we hiked out to the drill field, and had setting up exercises. Then came the drilling until 12.00 o'clock; then came stretcher drills until 12.30; chow was then served. Well, the worst was over for the day. At 1.30 we hiked up to a shady spot under a spreading walnut tree, and listened to lectures until 4.30—then off until 5.30; that time allowed for shaving, shining shoes and dressing for regimental parade; inspection followed by Colonel Bowie. Well, outside of myself having to serve two days on kitchen police duty, the trip proved very helpful to me, and all those who were fortunate enough to enjoy it, I'm sure. My title:

Private H. Baker Tall,
Fourth Regiment, Field Hospital Co. No. 1,
Maryland National Guard."

The young man in the Savings Feature, whose mother called him Stewart, hasn't been working for a varnish company. No indeed, that mahogany tint was applied by the sun god, while said Stewart was floating around the Chesapeake in a canoe. Then the final and finishing touches at Atlantic City. Says he is feeling fine and work has no terrors for him. He looks fit enough to eat up all work offered, in less than four and a half innings.

Miss Elizabeth Helfrich, one of the Savings Feature "song birds," has flown westward to join her aunt and uncle at Colorado Springs. Something grand to have a voice and have a chance to go to Colorado. We'll bet "the rocks their silence break" with joy in that state before she leaves it. She is no timid thing, and each year tries to land the belt in the Vacationist's Long Distance Contest. Nothing, she thinks, like the joy of going into the boundless west where the trans-continental trains climb around the dizzy sides of the mountains like cats on a tin roof. George Fitch said that out in that country a man could climb far enough in five minutes to fall 800 feet in no time at all.

Frank Dorr made some near studies of shredded wheat and can demonstrate just what it costs to produce electricity at Niagara Falls. He and "Reggie" Forgan

Do you know 'em?

can now swap problems in cost accounting and can go each other one better in their studies of higher accounting, and in their determination to be 100 per cent. chaps. You remember the soap which jumped into fame by its 99.44 per cent. record? Well, "Reggie" Forgan started out to beat that percentage record in his home study course in higher accounting. When the record was tallied and his diploma engrossed and delivered to him his score tallied 99.3 per cent. We'll say that's something to be proud of, and he possesses knowledge that is an asset for all time.

"Uncle" John Bredehoeft reported a pleasant time at Atlantic City. He's all ready for another trip and doesn't need dark glasses, either, thank you.

Our friend who presides over the destinies of the check printing machine, to wit, Miss Beulah Kendall, spent her vacation at Rock Hall looking over the ancestral acres, and dusting off the cider press.

Miss Margaret Schutte is back at her desk after a long stay at the Church Home and Infirmary and a period of recuperation at Denton, Md. Nobody likes to be ill and we hope that all of the coming months and years will be well ones for her.

Gee up, Dobbin—(See A. M. R. notes)

Office of Assistant Comptroller Deverell Correspondent, JOHN RUPP

Mr. Haulenbeek, of the Law Department, can no doubt recall when the trolley routes in Baltimore were known by the names of various colors, viz.: the North Charles St. Line was the "Blue" Line; the Gay St. was the "Red" Line; the Madison Ave. was termed the "White" Line; the Pennsylvania Ave and Canton Route known as the "Green" Line; and the Hall's Springs, the Orleans St., and the Lauraville Extension were known as the "Yellow" Lines, all so called by the Baltimore City Passenger Railway Co., in 1898. There were two other car companies in those days, namely, the Baltimore Traction Co., and the City and Suburban Railway Co. Subsequently they were all merged into one corporation—the present United Railways and Electric Company.

We note with satisfaction the comments of Mr. Haulenbeek in the May issue of the MAGAZINE, which are highly complimentary to our office. We assure Mr. Haulenbeek that he is always welcome here.

Major Theodore Lang tells us in his "Loyal West Virginia from 1861 to 1865," that the Baltimore and Ohio was, from its geographical position, the principal theatre of military operations during the Civil War

and that for four years the road was the main artery which conveyed all the forces from the West for the protection of the Capital; that in turn, as necessity may have required, carried them back to the field of operation all along the border states. In the author's own language, "Admitting then the fact of the favorable geographical position of the road and the importance which both the Unionists and Dis-Unionists assigned to it, let us pause to inquire what would have been the result had the road been disloyal to the Government, and abetted the cause of the secessionists? The personality that determined the policy of the Baltimore and Ohio Railroad at that time was President John W. Garrett—his was the masterhand that opened the throttle and lever of her engines and sped them on their patriotic work."

Further on, where the author touches upon the personal relationship of Mr. Garrett to Mr. Lincoln and his Cabinet, he says: "Mr. Garrett was one of Mr. Lincoln's trusted advisors; his relation to Secretary Stanton was of the closest character. He was as much a part of Mr. Lincoln's cabinet as any man in it, and was often called to Cabinet counsels when questions of great moment were discussed."

P. HENRY STARKLAUF
Wedding Bells

Miss Opal Mayme Taylor, Statistical Bureau, was married to Mr. Chancellor F. Moschell on June 1, at her home in Elkins, W. Va. Rev. F. H. Barron, D. D., of Elkins Presbyterian Church officiated. After a trip to the Pacific Coast they will reside in Baltimore.

Miss Martha E. Bye, Local Settlement Bureau, to Mr. Lay Thornton Jones, on the afternoon of June 15, at the home of the bride.

Miss Grace H. Miller, Statistical Bureau, to Mr. Milton Storm on June 21, at the Concordia English Lutheran Church by the pastor, Rev. Dr. P. H. Miller, father of the bride.

Miss Beatrice M. Addison, Interline Settlement, to Mr. John T. Potts on June 22 at St. Edwards Church, by the Pastor, Rev. James B. Kahler.

C. J. Wagner ("Dave"), Local Settlement, to Miss Marie Doyle of the Auditor Passenger Receipts Office at Ellicott City, June 25. Best wishes for a happy future.

Newly arrived—to C. J. Kane, a son; Charles Schwartz, a daughter. Congratulations!

And they called themselves the "Milk Babies," because they stole this ride on a milk wagon—Cecelia Stern, Lillian Boughner, and Addie McCauley, Office of Superintendent of Timber Preservation, Mt. Royal Station

For some time past we have had several gentlemen from the Federal Government reviewing our accounts. We bid them welcome and trust that their sojourn and business relations with us will be most cordial.

Here is poor old Dobbin all festooned up with Mrs. Ella Priester, Mrs. B. Swikert, Misses Gladys Erdman, Bessie McCormick, Ethel Bennett and Nellie Connolly.

Here they are, girls—look 'em over: the trooper sergeant and R. S. M. at Gwynn Oak Park at 10.30 p. m. on July 4. Evidently a barrage was being set in action; in the meantime, cut yourself a piece of cake. 'Tis to smile.

As for the subscription for the Charities' Alliance Drive at the rate of a dollar a minute, this Department subscribed 125½ minutes.

The following are a few of our attractive young ladies who recently visited Long Island Sound—to listen to the murmurings of the wild, wild waves: Vlasta and her little sisters, Bessie and Irene, Agnes, Mary, Marie, Margaret, Helen, Fannie and Angela.

Three of our boys, Frank Quinn, Ray O'Brien and Steve Serunas witnessed the fight between Jack Dempsey and Carpentier. They have many tales to tell. How about the pictures, Serunas?

The girls in Mr. Altherr's office had a theatre party on June 17, witnessing "Romance," starring Doris Keane at the Garrick Theatre. Our next party will be a Beach Party. C'mon in, the water's fine.

Baltimore Terminal Division

Correspondent, MARTHA V. FOX, *Car Record Clerk*

Famous Words of the Superintendent's Office Force

Leach: Did you hear anything about cutting out vacations?

Hughes: Say Joe old boy, did you see what Ty Cobb did yesterday?

Lincoln: Where have you been all morning, Adam?

Higgs: Nick, have you got the file on this?

Dean: Mr. Stringer? Get him on 411.

Zimmerman: Have you got your savings worked up yet?

Crocker: Haven't got time right now.

Carter: Say Joe, want to take a chance on a watch? Only 10 cents.

Sparks: Mr. Shriver's Office, Sparks speaking.

If the jewelers of Baltimore continue having auction sales, it is reasonable to conclude that the assistant chief clerk will remain in a state of bankruptcy, as it seems he cannot resist the red flags. The rest of us hope for a cessation of such sales as we cannot be expected to contribute to raffles forever.

Hamilton Watch

"The Railroad Timekeeper of America"

On Time

You buy a watch to tell you accurate time. Nowhere are watches more carefully checked up for accuracy than in railroad service.

We show here Conductor G. W. Valentine and Engineer W. S. Robinson of the Pennsylvania Eastern Lines comparing their Hamiltons. They run the Manhattan Limited between Harrisburg, Pa., and Manhattan Transfer Station—right outside of New York City—an important run. Engineer Robinson recently received the following letter:

PENNSYLVANIA RAILROAD
Eastern Lines

Office of Superintendent Philadelphia Division

Harrisburg, Pa.

Mr. W. S. Robinson,
Passenger Engineman

Dear Sir:

I am pleased to note the fact that you have made a perfect record during the month of March, 1920, as all trains you were in charge of made schedule time, or better than schedule time, and I desire in this manner to commend you for this excellent performance.

(signed) E. J. Cleave, Superintendent.

This splendid record was achieved by men who run their trains by the Hamilton Watches they hold in their hands.

Hamilton Watches are the favorite timekeepers of American railroad men. When you buy, inspect the Hamilton models that railroad men favor, particularly 992 (16 size, 21 jewels). Hamilton Watches range in price from \$40 to \$200; movements alone, \$22 (in Canada, \$25) and up.

Send for "The Timekeeper," an interesting booklet about the manufacture and care of fine watches. The different Hamiltons are illustrated, and prices given.

The picture at top of the right column shows young Arthur M. Lapp, Jr., in his twentieth-century Limited. Junior looks as if he is intent upon reaching his destination quickly, and his team won't have much chance of slacking on him. This little kiddie is the son of Arthur M. Lapp, Sr., of this department.

Locust Point

Correspondent, ROSS GOULD

An interesting game of ball was played on the diamond at Latrobe Park, on June 28, between the clerks in the Assistant Trainmaster's office at Locust Point, and the trainmen employed in Locust Point yards. There were about 5000 spectators.

Following is the line-up:

Clerks: Anderson, L. F.; Owens, C. F.; Richards, C.; England, S. S.; Garrity, R. F.; Link, 1B; Barrett, P.; Richenburg, 2B; Green, 3B.

Train Crew: Vogel, R. F.; Johnson, L. F.; Aldridge, 1B; Shakespeare, C. F.; Hepburn, S. S.; Wentworth, 3B; Gause, 2B; Lungenbeal, C.; Craig, P.

By carefully scanning the list of players, it will be observed that some of them are professionals and play on the various semi-pro teams throughout the city.

The score by innings was as follows:

	1	2	3	4	5	6	7	8	9	R	H	E
Train Crew	0	0	2	0	0	1	1	0	4	8	12	0
Clerks	0	0	1	0	0	2	0	1	0	4	6	3

At the critical stage of the game, in the ninth inning, the score being four all, and the bases loaded, the star batter of the train crew, Shakespeare, drove the ball into the harbor for a home run. Anderson, star batter of the clerks, had a very bad day at the bat, striking out three times. B. Craig, famous spit ball pitcher, of the train crew, had the clerks at his mercy, striking out 11 men. John Link, of the clerks, would have made one of the most beautiful running catches of the day, but his feet got in his way and he turned a somersault, missing the ball by 2 inches.

The participants of the game and the spectators extend their esteemed thanks to Assistant Trainmaster G. T. Clark, for the excellent manner in which he umpired the game.

J. J. Schott, J. L. O'Brien, M. Artka and A. Nowak, are contemplating going into the banana business. We extend to them our best wishes. J. T. Lycett has made a great success of the banana trade, since he was given the title of "banana king."

Captain A. C. Gray of the Tug Transfer, has been telling of the large fish that he caught off Mud Island, in the Choptank River, on his vacation.

Baltimore Division

Correspondent, W. H. TARR, Superintendent's Office, Camden Station

Baltimore and Ohio Night and Relay

The Methodist Episcopal Church of Relay, Md., which is composed largely of employees of the Railroad, devoted Sabbath evening, August 7, to a Baltimore and Ohio night. The auditorium was crowded with employees, their families and friends. The music was furnished by a double quartette from the Baltimore and Ohio Glee Club.

Arthur M. Lapp, Jr. His daddy works
at Mt. Clare

The speaker of the evening was C. W. Egan, general claim agent, who delivered a most interesting and impressive address on "The Supremacy of Love." The pastor, Rev. W. A. Carroll, presided over the service.

Philadelphia, Pa.

Correspondent, J. A. McDEVITT,
Chief Rate Clerk

The picture atop next column shows three of the clerks in the General Foreman's office at East Side. They are, left to right: Mrs. Duffy, Miss Marie McAleer and "Joe" McGovern.

Our little turtledove has flown from the ark; that is to say, George, our messenger, has left us and is now imparting his usual pep and vigor in the Division Accountant's office at Chestnut Street. Now he will be nearer to his old friend, "Doc" Pence, and perhaps he will get some free cigars.

Our former general foreman, C. B. Smith, who was transferred to Glenwood Shops last month, dropped in to see us last week. Just to show how much we missed him and as proof of his popularity here, he was presented with a fine diamond ring, which he now proudly wears.

What happens when an irresistible force hits an immovable object? See "Johnny" Dimond and let him explain what happened when he got into the pathway of one of our heroes who was responding to the fire drill.

Did you ever hear of our little engine, the "ham sandwich?" No? Well, it's little 718. Just note the "ham" (Fireman Hamil-

Jacob Decheff, 15 years service at Locust Point

Mrs. Duffy, Miss McAleer and "Joe" McGovern

ton) between the engine and the tender. We had hoped to secure a photograph of this phenomenon, but "Ham" was too busy shoveling coal to pose for our beauty show. We'll get him yet.

We like our general foreman, J. M. Applebee, and we trust that this feeling is mutual. He has our best wishes for a successful career.

Morris Heitzer and "Fanny" finally got married. Wise boy! He is making his vacation serve as a honeymoon.

Cumberland Division

E. C. DRAWBAUGH, Division Operator
JOHN SELL, L. P. Clerk, Superintendent's Office

Keyser

Correspondent, HARRY B. KIGHT

The accompanying picture is of the "first trick" coal billing agent's force at Keyser, W. Va. Those in the picture are: H. W. Tucker, coal billing agent, Raymond Davis, Lela Kercheval, Wessie Merryman, Bertha Wells, Katie Lark, Carroll Gillmore and Howard Phillips.

On May 25, when the cornerstone of Keyser's new high school was laid by the Masonic Fraternity, there was deposited in a tin box one of the complete passenger schedules of the Baltimore and Ohio Railroad, and other papers, etc.; this box was placed in the cornerstone. This is Keyser's third school building and will be a magnificent structure when finished. We are proud to know that the cornerstone contains some mute evidence of our Railroad.

In addition to the Baltimore and Ohio timetable, there were placed in the box in the cornerstone copies of newspapers, lists of the high school and public school graduates, high school teachers and coins of different denominations.

First trick force, Coal Billing Agent's Office, Keyser

In the centuries to come, when the building is razed or done away with in some manner, it might be interesting to the folks who are then living to get out this box, and to read the jokes in the time table. You know if there is anything doing in town the Baltimore and Ohio must have a place.

Mrs. Mary Catherine Madore died on May 23 in the home of her son, Ralph H. Madore, Pittsburgh. She was born in Frostburg and in 1879 was married to George Madore, of Cumberland.

Among her surviving children is W. A. Madore, a third division brakeman, to whom and to whose brothers and sisters we extend our sincere sympathy.

Connellsville Division

Correspondent, S. M. DEHUFF

The World War didn't originate any more "songs of hate" than has the rivalry existing between the various teams in the division ball league.

"Bennie" Beal, Car Distributor's office, has changed the name of his club from "The Soibusters" to "The Kildares." Please don't assume from the name, however,

"I Can Succeed!"

What other men have accomplished through I. C. S. help, I can. If the I. C. S. have raised the salaries of other men, they can raise mine. To me, I. C. S. means 'I CAN SUCCEED.'

Get the "I Can Succeed" spirit, for the International Correspondence Schools can raise your salary—whether you're a dollar-a-day man or a dollar-an-hour man. No matter where you live, what you now do, or how little time or money you may have, the I.C.S. have

a Course of Training to fit your needs. Hundreds of thousands of ambitious men have achieved success through I.C.S. help in the past 25 years—over 100,000 are now studying, getting ready for the big jobs ahead. Join them and make your life something to be proud of—you can do it.

Just mark and mail the coupon TODAY and find out how; it won't obligate you in the least.

They enjoyed the "big eats" of Prize Winning Supervisor Hanna

recently. George states it was the second time such a calamity has befallen him, and George has voted for several presidents.

Yes, Mary Hart still graces a desk in the C. D.'s office; but her name isn't Hart any more. No, she altered it sometime during the month of brides, roses, etc. The lucky chap hails from Dunbar. Why slight your home village, Mary?

Medical Examiner Dr. H. H. McIntire, with his wife and son James, Connellsville, Atlantic City during the "A" period of July. They report the water just as salty, the sun just as tanning and the pier ball-room floors just as glassy as of yore.

While attending a convention in Savannah, Ga., in company with his wife, S. M. DeHuff, wire chief, Connellsville, lost about everything save his reputation. Money and transportation were among the items mislaid in the Sunny South.

Trainmaster W. E. Boyland witnessed the "battle of the Century" at Jersey City, incidentally William witnessed the passing not only of a good Frenchman, but also of sufficient of his worldly possessions to have kept him in Palm Beach uniforms for several seasons.

They say a good automobile is one that will bring you back from wherever it takes you. Can't say this of Superintendent Brady's railroad Ford. It seems to want to leave home well enough but generally balks on the return trip.

Our art gallery for the current month reveals the pictures of Trainmasters M. L. McElheny, J. P. O'Donnell, C. Schuh; Supervisors B. F. Hanna, A. K. Long, P. Thornton; and Section Foremen Morrison, Nicholson, Liphart, Fidler, Walters, Yunkin, Derry, Baker, Bittner, Schrock, Hayman and Wolfersberger. All of these gentlemen were guests at a sumptuous feast dispensed by Supervisor Hanna in celebration of his having won the Grand Prix in the "best section contest" for the year 1921. The fact that said banquet was staged in the Lutheran Evangelical Church at Rockwood, Pa., and presided over by the good ladies of that parish, does not mean that all hilarity and good time were dispensed with. With the experience gained by Supervisor Hanna in banqueting during his 21 years of prize-winning supervisorship, he proved that an abler host would be difficult to locate. In addition to those appearing in the picture, Mr. Hanna showed his versatility as an entertainer by including in his party some 22 members of a Sunday School class of which he is also supervisor—I mean president.

Glenwood Shops

Correspondent, FRANK RUSH

J. A. Shuck, carpenter, Glenwood, has been pensioned, effective July 23. He

entered our service at Connellsville as carpenter December 28, 1872 and was transferred to the Pittsburgh Division about the year 1886. He has been in our service continuously since then. He has always been a faithful worker and we do not like to lose his services, but wish him good luck.

Though "Tom" McCusker is only an apprentice he surely knows how to handle the tools.

Speaking about good times; what about a real live shop picnic? Everybody's doing it. Why not we?

It has been rumored that "Shop Order John," better known as "Gander Neck," is about to take unto himself a wife. How about it, John?

We have been given to understand that while off on a furlough, a baby girl was born to Machinist and Mrs. B. Sedler. Congratulations!

We are glad to see E. L. Hopkins back at work. Mr. Hopkins was injured while on duty several months ago and has just returned.

Glenwood may not get in here every month but there is a saying that it pays to advertise. We all agree, so let us see some of you strangers come around and give us the once over and you will all learn what we are mixing with a churn. First of all we have system, a clean shop, good workmen with careful methods, and last but not least, a good supervising staff.

Berger, what are you going to do with your bonus?

"Jug Head" Brecn is now taking on all comers. He will also clean up at the next sanitation meeting.

J. L. Bowser has been assigned to other duties and J. J. Smith has been transferred to Glenwood from Mt. Clare as general foreman of the back shops. We wish both of them success.

Miss Flynn has been presented with a fine "headlight." Good luck, little girl. But we will miss your smiling face.

Demmler Quiz

G. J. McDonough, assistant trainmaster, has made some remarkable changes about the yard office. He has had the steam heating system removed and a couple of hand stokers installed. He thinks this was a very good idea, because steam is not good for the rheumatism.

We also have with us at Demmler the champion weiner eater, the "hot dog" consumer, O. P. Dom, car foreman. If any of the fellows doubt it, communicate with his manager, George Fisher, who has a few dates open. Don't apply unless you can furnish a good record, as he knocks them cold.

Brakeman James J. Sweeney is our prize jazz dancer. Mr. Sweeney has just published the latest in jazz known as the "Sugar Walk of 1922." If any of the boys care to learn this step, James is very friendly and will assist all comers. After a few lessons he will be the main attraction at all dances. James is without question a wonder on his feet. He can be found any day at Demmler yard.

We don't want to sidestep the favorites such as A. P. Berg and his fireman J. G. McConnell. "Jim" is well known by that everlasting smile of his.

We have one more distinguished person who has come to light during the past year. Assistant Yardmaster Clay is a hunter and trapper. He has been a member of the Wild Life League for some time. He has been appointed a special officer and wears a badge.

William Mimnaugh, car repairman, has figured that two can live as cheaply as one, and has taken unto himself a wife. Good luck, "Bill," ole' boy. That leaves only one single man in Demmler yard, Helper Ernie Pritz.

Michael Mimnaugh, better known as "Jake," on his return home from work the other day, found that he was the proud father of a nine pound hostler. Atta boy, "Jake," keep up the good work.

Charleston Division

Correspondent, M. W. JONES, Secretary to Superintendent, Weston, W. Va.
"Think About It"

Left to right: Clayton Hale, son of Boiler Maker Foreman W. C. Johns, Sabraton, W. Va.; Virginia and Maxine, daughters of Chief Clerk R. E. Sigafosse, Sabraton, W. Va.; Gertrude, daughter of Roundhouse Foreman T. F. Cassell

Mrs. D. D. Nicholas, wife of water station foreman, Weston, W. Va., and her grandson, Glen. Mrs. Nicholas is the mother of five Baltimore and Ohio men—two conductors, a trainmaster, an engineer and a clerk

The accompanying picture is of Mrs. D. D. Nicholas, wife of water station foreman, Weston, West Virginia, and her little grandson, Glen.

Mr. and Mrs. Nicholas are the parents of five Baltimore and Ohio men: two conductors, a trainmaster, an engineer, and a clerk, who sometimes acts as extra yardmaster. Mr. Nicholas has been in the service of the Company for 29 years. During this time he has taken only one vacation, and has never missed a pay day until several months ago, when both he and Mrs. Nicholas came to St. Joseph's hospital, Baltimore. Mr. Nicholas received treatment and Mrs. Nicholas underwent a serious operation. Both are much improved in health and were able to return to their home in Weston on July 23.

Wheeling Division

"What is so rare as a day in June?
Then, if ever, come perfect days."

On June 22, Mr. and Mrs. T. J. Ball celebrated their 35th wedding anniversary at their home on George St., Parkersburg, W. Va. About 50 guests called at their home during the afternoon and evening to extend congratulations. The bride and groom of thirty-five summers were presented with a handsome fibre rocker (big enough for two) by their friends.

"Tom" is the indispensable time and onnage clerk at the Fourth Street Freight

Mr. and Mrs. T. J. Ball
Through the fields of clover
We will ride to Dover
On our golden wedding day."

House, Parkersburg, and has been in the service of the Company for the past 31 years. Beginning as yard clerk he has worked as rate clerk, assistant cashier, in fact, for anything that "Tom" has been called upon to do, he has been on the job.

The accompanying photograph was taken of Mr. and Mrs. Ball a short time after their wedding. Come on out from behind the bush, "Tom", we know yuh.

Western Lines

General Offices, Cincinnati

Correspondents

E. W. SPILLE, *Pass Clerk*, General Manager's Office

E. H. HENKEN, *Assistant Chief Clerk*, Division Freight Office

On July 10, Joseph F. Noewer, chief clerk to assistant to general manager, Cincinnati, Ohio, died after an operation at the Good Samaritan Hospital. "Joe" as he was well known by all employes in Cincinnati, started as messenger boy in the Accounting Department of the C. H. & D. and P. M. R. R., Cincinnati, at the age of 16, and worked ahead in that department until May, 1917, when he was promoted to chief clerk to general auditor of the C. H. & D. Railway. He held this position until the offices of the general auditor were moved to Baltimore. Desiring to remain in Cincinnati he accepted the position of chief clerk to assistant to general manager in August, 1918, which position he held at the time of his death.

He won respect because of the efficient manner in which he discharged his responsibilities. His cordial manner and disposition to be of service caused him to be one of the best liked men on the Western Lines.

Apparently enjoying robust health, his death was unexpected and came as a shock to his friends and associates. He is survived by his wife and mother, to whom we extend our sincere sympathy.

A Tribute to the Late J. F. Noewer

J. F. Noewer, late chief clerk to the assistant to general manager, entered the service of the Cincinnati, Hamilton and Dayton Railway as office boy in my office at Cincinnati, Ohio. It was his first position, and by diligent application to his work and loyal, conscientious and efficient service, he worked himself up to the position of chief clerk.

He had a particularly lovable disposition and all who knew or came in contact with him will regret to learn of his death.

The affection and esteem in which I held him during the 15 years he was associated with me, in which I saw him develop from a boy to a clean cut, efficient, honorable man, makes me feel deeply the loss we have experienced. He served the Cincinnati, Hamilton and Dayton Railway and the Baltimore and Ohio Railroad with every ounce of energy and ability he possessed and the Company has lost a faithful servant through his untimely end.

partment in the Master Mechanic's office at Gest Street, as assistant timekeeper; timekeeper at Ivorydale; he also served in the Car Service Department at 5th and Baymiller Streets. When that office was moved to Baltimore, he went with it in the capacity of chief record clerk, which position he held for seven years. At the expiration of this time, Mr. Hopkins returned to Ivorydale to his old position, where he served until his retirement. Mr. Hopkins was a charter member of the Veterans' Association and one of his greatest pleasures is to visit the sick and injured Railroad men in the various hospitals, thereby creating many friends. Sorry to lose the services of Brother Hopkins, but faithful service receives a just reward. We wish him and his good wife many more happy years together.

They Know It All—Famous Sayings

T. Selhorst, Ivorydale, says, "It goes in one ear and the other out."

See Paul Haaf about the trains. He has made inquiries of the agent at Ivorydale as to whether the down train has gone up yet.

James Gilligan: Has my pass come in yet?

Charles Everly: Gimme a pencil, Charles.

Machinist Apprentices: Heard anything of my shortage yet?

Shop Foreman: Has Liebe been in here lately?

"Bob" Miller: Hello, everybody happy?

"Ben" Hesselbrock: H-O-W?

George Donnelly: No such of a thing?

Paul Haaf: Gimme. Have you got? Let me have.

Charles Arnold: It's in the book. It must be done.

Hurrah!!!! T. H. Barker has discarded his yellow raincoat and hip boots.

Harry Howden, veteran engineer, is certainly doing great work in increasing the membership of the Veterans' Association. Harry never comes to a meeting without one or more new applicants. Good work, Harry! You have the pep.

George Ernst, our handsome and accommodating yard clerk, is cooperating with all departments for the best service to our patrons. George is a great help in picking out nice big cars to fill the orders for industries in the West End manufacturing district.

The accompanying photograph is the first passenger engine turned out of Stock Yards Roundhouse, after having undergone class repairs. The engine took out a train of 17 cars express to Washington, Ind., having never been tried out before, and there was no trouble experienced whatever.

Cleveland Division

Correspondents

A. F. BECKER, *Secretary to Superintendent*, Cleveland, Ohio

E. L. MILLER, *Chief Clerk to Division Freight Agent*, Akron, Ohio

H. B. SMITH, *Supervising Agent*, Cleveland, Ohio

W. E. BRUGH, *Clerk to Trainmaster*, Massillon, Ohio

We regret to announce the death of W. Osborn, one of our oldest passenger conductors on the Cleveland Division, May 23. He was born on March 18, 1869, entered the service as brakeman on August 8, 1895, promoted to freight conductor on August 18, 1897, and worked continuously as passenger conductor from April 10, 1904 up to the time of his death. He ranked in seniority as the third highest passenger conductor on the C. T. & V. District and was well liked by everyone. Funeral services were held at his home at Cleveland, Ohio, after which his remains were taken to Mineral City, Ohio. The cause of his death was attributed to kidney and heart trouble. The employees of the Baltimore and Ohio purchased a beautiful floral piece for him. For this and other kindnesses rendered, Mrs. Osborn desires to express her appreciation.

The School of Accounting, which includes all employees in the Division Accountant's office at Cleveland, closed its season on May 26. Instead of the usual evening of study, a dinner was given by the Division Accountant's force at Hotel Winton, followed by a theatre party. Special invitation had been tendered to S. W. Hill, assistant auditor disbursements and in charge of division accounting offices, by Mr. Jewett, division accountant at Cleveland. Of this the office force was unaware, and it was therefore a surprise to them when Mr. Hill appeared at the dinner. A very agreeable evening was spent and in a few well-chosen words, Mr. Hill explained the benefits to be derived by the employees in the Division

Accountant's office as well as other offices, by attending these night classes of accounting. In his usual happy manner he added to the evening's enjoyment.

Akron, Ohio

766 Hazel Street, AKRON, Ohio.

July 31, 1921.

Editor, BALTIMORE AND OHIO MAGAZINE, Baltimore, Md.

Dear Sir—May I ask through our MAGAZINE to convey to the Baltimore and Ohio Welfare Association of Akron my appreciation of the beautiful flowers sent me during my sickness.

(Signed) F. H. WILLARD,
Engineer.

Dover, Ohio

C. D. Powell made his first trip as conductor on May 18. "Hiram" said, "It is a great life if you don't weaken."

Conductor C. Walters just came to life when he found out he could dance at the tender age of 45. "Shorty" said he could have been a sport for the last 25 years if he had only known it.

Night Yard Master "Mike" Reidy and his family spent their vacation at Muncie, Ind.

Brakeman C. A. Thompson, who has been working out of Dover, has resigned.

Canton, Ohio

Mr. Metzger, our rate clerk, has been instrumental in securing several routing orders for shipments over the *Best and Only*. Keep up the good work, "Jesse."

E. J. Crampton, our most esteemed and genteel agent, spent Sunday, June 19, at the Welfare Picnic at Brady's Lake. This man whom we thought was so genteel and reserved, picked up enough nerve to take three young ladies, Olivia K, Marie B, and Doris L. L., along and kept them out until 11.30.

The accompanying picture of the five girls shows us the peaches and cream of the freight office, Canton.

Massillon, Ohio

Mr. and Mrs. William E. Brugh and son William, Jr., spent their vacation down in old Virginia, "Where the corn and 'tatoes grow." We hear they had SOME eats down on the farm.

First engine turned out of Stock Yards after having undergone class repairs

T. Morgan, car foreman, and C. R. Adsit, assistant division engineer, Massillon

L. T. Kegler, formerly agent at Elyria, has been appointed agent at Massillon, vice Agent E. J. Crampton, appointed agent at Canton, Ohio. We regret to have Mr. Crampton leave us, but wish him much success at his new duties at Canton. We also promise our cooperation with Agent Kegler to make his work a success here.

Mr. Brown, trainmaster of The Hagenback and Wallace Circus, reports that he had the best night's sleep on his trip from Massillon to Elyria on the night of May 25, that he has had in a long while. He states that during the last two years, their train has not been handled as nicely as it was on that night. We are glad to say that the engineer was J. Barnhart, Dover, Ohio.

Section Foreman C. Koontz, Crystal Springs, has resigned. J. A. Smith has been assigned to this section.

Conductor Long, who has been on the night yard job at Massillon for so many years, has been displaced, and has taken a daylight job with Conductor Burns. "Shorty" did have a little difficulty in seeing in the daytime at first, but has just about recovered his sight.

Toledo Division

Correspondent, EDWARD M. MANNIX

East Dayton, Ohio.

LOYALTY—This was ever the watchword at East Dayton and let it still be. Let us consider the responsibilities that confront the Management of our Railroad, and with renewed energy assure them of our assistance and support. Business is rapidly adjusting itself to normalcy, our Government's attitude towards railroads most pleasing, our foreign affairs showing marked improvement day by day. Let us do nothing to impede the progress of our Country; on the contrary let us hold out the right hand of fellowship and assure our management of its full meaning.

Don't lose that "Get More Business Habit." This is one of the essentials of success, not only for the Company, but for ourselves.

East Dayton feels proud of its record in its continuous No-accident Campaign; we realize the benefits derived from its teachings. Be ever alert to what the word "Carefulness" means to you and your fellow man.

It is pleasing to the writer to note the interest manifested by our correspondents at Dayton, Lima and Toledo, Ohio, and it is his desire to see them cultivate this spirit and keep these respective points fully covered. The editor of the MAGAZINE

W. E. Jr., year old son of W. E. Brugh, clerk to trainmaster

is confronting a situation over which he has no control, but 'ere long the notes will appear and things will move as smoothly as ever. The old adage—"No news is good news"—seems to hit the writer right now, as some of the boys are away on their vacations and some on furloughs. Let me say to those away and those remaining:

"I wish them health, I wish them wealth,
I wish this o'er and o'er,
I wish them Heaven when they die,
What can I wish them more?"

Peaches and cream of the Canton Freight Office

Division Accountant's Office, Dayton, Ohio

Assistant Correspondent, G. M. McBRIDE

The first annual picnic of Baltimore and Ohio employees of this division was held at Chester Park, Cincinnati, Ohio, on May 28.

The Division Accountant's Office was well represented. Out of all the competitions in running, dancing and swimming, this office was honored with one of the prizes.

The Division Accounting Department was unaware of any prize being captured. What was it Daley, a "chicken?"

We note that we have with us another poet, to whom a cordial invitation is extended to contribute to our own columns. Come on G. B. S. Don't act innocent—you're too big a man to hide. We can find G. B. S. any place, it appears.

Something we would like to see—
Somebody swipe that file of Mygatts.
Winnie wear the ring that John gave her on the left hand.

Eddy Velter chew tobacco.
Pay day moved up to suit the convenience of Mr. Harker.

"Sam" Payne comb his hair.

Eugene McKenna chew gum.

L. A. Daley, assistant maintenance of

Please mention our magazine when writing advertisers

"Hank" Kirk, Newark Division supply man with his supply car at Massillon

way accountant, was granted a leave of absence on account of a nervous breakdown and is recuperating in Los Angeles, California. We are hoping that Lawrence will come back feeling like new.

Louis D. Kinzig, maintenance of way timekeeper; Francis Townsend, fuel accountant; George Mygatt, C. T. time clerk, and C. G. Ronk, C. T. timekeeper, are taking advantage of vacation time during the hot weather. Upon his return to the office "Bill" Ronk was questioned as to where he spent his vacation and he said at home. It is very evident that "Bill" appreciates his wife's cooking. That's the way to keep peace in the family.

Lawrence O'Connell, C. T. time clerk, has returned from the Mayo Institute where he went sometime ago for special treatment. After undergoing an operation, he says he feels like a new man.

The twenty round vocal bout between "Knock-em-Cold" Harker and "Put-em-Away" Kinzig, scheduled at the least provocation, has again been postponed indefinitely.

There is no mystery about CARTOONING

ALL of the famous artists and cartoonists of this country are making thousands and thousands of dollars yearly from their pens.

They earned their success through years of work and tedious search for "the right way."

Today, the I. C. S. courses in Cartooning and Illustrating, by showing you the short cuts, will save you years of work and bring you success much sooner than if you stumble along alone.

This I. C. S. Course will not only teach you how to draw, but it will also develop your originality. It is acknowledged to be the best and most modern course in cartooning being offered today.

Master Robert Schurr

By Special Request

I have been asked to write a little article for the benefit of other employes of the Best Railroad system in the United States and I know of no other subject of more vital importance than loyalty to the Company with which we are employed.

The time has come when all employes should again shoulder the responsibility of bringing the country back to normal conditions. We realize that business must be adjusted to meet the requirements of modern times and we are going to put our shoulders to the wheel, regardless of reduction in wages, which is necessary under present conditions.

The Railroads were loyal to the country and flag during other trying times in recent years and we are not now going to shirk our duty to our superior officers, who by persistent effort have guided us through the dark into the light of a new existence.

Let us not falter at our duties. A little sacrifice on our part will help materially and morally.

Keep smiling,

E. M. B.

Lima

Assistant Correspondent, RAY GARRIGUS

Around the yards in Lima.

Old faces back again: Churchill, graduate of O. N.'s famous school of table etiquette; Baker with his yellow goggles; Bowdle with grouch. Coal dock out of joint again; wreck train bringing in a string of cripples; carrier iron bolt broken, let a coupler down and the pile up started. Comes "Herb" Miller, a veteran of the old C. H. & D., J. Suydan with his section gang. They keep the tracks in first class shape. General Rumor has it that a certain clerk in the Car Foreman's Office is seriously considering matrimony. Yes, these warm moonlight June evenings certainly are effective. Here is Koch, preaching Safety First; Brewer, busy with the blue flags. Comes John Coffey, better known as "Skinny"—weighs two hundred and ten. "Pat" Finn tips the scales at about the same weight. I've always wondered what would happen to a ball game if "Skinny" played third and "Pat" came sliding into the bag. I think I'll keep on wondering. George Sobers, the handsomest man in the yards; no one seems to have the courage to tell George, however. "Mike" Shea wearing a white shirt. Now I know something is wrong. Better get back into the office before the "CC" comes out to hunt me. Take another stroll next month.

The car foreman's office has been moved into more spacious quarters in the old upholstery shop. 'Twas decidedly a good move and congratulations pour in from all sides. However, no one seems anxious to claim the honor. It's a cruel world indeed.

The division staff meeting was held in the hall over the new coach shop. R. B. Mann acted as chairman. An interesting meeting was held to which employes were invited.

Brakeman Harry Turner, more commonly known as 'Pig Iron Turner' to fight fans, is gaining quite a reputation in local fight circles.

Mr. Perry, A. R. A. accountant, was a visitor for several days. He had a cheery smile and a pleasant greeting for all. It is always a pleasure to have Mr. Perry with us.

Novelties in the News

Jack Harboldt has turned Republican.

Holmes bought a can of smokin'.

Baker confined to his home for three days due to worry over the 'Bad Order' situation.

Rev. and Mrs. Frank Jordan

Barrett in a pair of overalls. Face as black as a boilermaker. No, it wasn't trouble with his Ford. Just cleaning out some old records. Barrett is of the opinion that several of Noah's old records were in the bunch he resurrected.

Ireland stopped playing the "Jitney Machine."

Among the more recent benedicts are "Joe" Klett, car inspector, and Jacob Gerstenlauer, car repairer. We wish the happy couples many joyful anniversaries of their wedding day.

"Will" Clover, freight conductor, and Engineer David are both riding around in new machines.

Who said the country has gone dry? Callboy Helmig will vouch for the fact that it is still very wet, McCollough Lake especially. 'Tis said that while he was all dolled up in his Sunday best, the boat decided that the wrong side was up. You know the rest.

The accompanying photograph is of little Robert Schurr, year and two months' old son of Fred Schurr, division claim agent. Fred reports that the little one is picking up the business quickly by claiming all of the surplus pennies.

We extend our sincere sympathy to our general foreman, T. C. O'Brien, in the death of his brother, Patrick O'Brien. Mr. O'Brien was well known in Lima and his death will be mourned by many friends.

Middletown, Ohio

The accompanying photograph is of Mrs. Frank Jordan (nee Hermina Sixt) and her husband, Rev. Frank A. Jordan, who were married at the Lutheran church on June 10.

Mrs. Jordan filled the position of rate clerk in the freight office at Middletown, Ohio, for three years. She was known as the most efficient rate clerk in the city and was a valuable employe of the Baltimore and Ohio because of her conscientious work at all times. She is greatly missed by the office force and all with whom she came in contact.

Mr. Jordan was valedictorian of his class at Capitol University and was graduated in June, 1921, with high honors from Capitol Theological Seminary, Columbus, Ohio.

They are now living in Clyde, Ohio, where Rev. Jordan has recently been installed as minister of the Lutheran church.

We extend to them our best wishes for a happy and prosperous future.

The accompanying picture is of the Middletown, Ohio, Freight Office force. Reading from left to right they are: P. V. Martin, cashier; D. Emley, agent; John Wick, trucker; Clifton McGohan, assistant cashier; L. D. Arkill, receiving and delivery clerk; Margaret Thompson, rate and bill clerk; and Edith Grimes, accountant.

Railroading over Fifty Years and still at It

By A. B. Hedges

Brunswick, Md.

The accompanying picture is of Engineer Jefferson M. Buckner and Fireman F. Myers, of Rowlsburg W. Va. Mr. Buckner was born July 24, 1849; entered the service of the C. & O. R'y., as fireman April 1, 1870. He came to the Baltimore and Ohio as fireman at Parkersburg, October 9, 1872; was transferred to the Third Division—west end of Cumberland Division now—April, 1873, and has been in continuous service since. He works almost every day, helping passenger trains up the Cheat River grade; he says he can dance a "horn pipe" yet, as well as any other man.

When Mr. Buckner entered the service his first experience was with the Ross Winans "camel" engine and he has seen service on every other type the Company has had since, including the "Mallet." At present he runs engine 4309 and was preparing to help No. 11 when this picture was taken.

Freight Office force, Middletown, Ohio

Engineer Buckner and Fireman Myers

When Mr. Buckner entered the service of the Baltimore and Ohio he was 283 times for a regular turn; he has been the oldest engineer in point of service on the Division for the past four years. He has never had a serious accident.

When he entered the service the president was John W. Garrett; superintendent of motive power, John T. Davis; master of road, John L. Wilson; chief adviser to Maintenance of Way Department, John W. Bradshaw. It will be noted that they were all "Johns."

Mr. Buckner has kept a diary of all the important events on his division since he entered the service and it makes very interesting reading.

An Opportunity For All To Secure A Home

MARTINSBURG, W. VA., June, 1921.

Mr. W. J. DUDLEY, Superintendent,
Relief Department,
Baltimore, Md.

Dear Sir:—I acknowledge receipt of all of the papers and receipts which you returned to me promptly. In regards to the loan which I have paid in monthly installments by deductions from my wages, I have nothing to regret at all. It is a grand way for all employees to secure a home and I have advised lots of my fellow workmen to take the opportunity while in the Company's service. I can say for one that it is all right, and I praise our Relief Department.

I thank God that He has spared my life all these years with the Baltimore and Ohio and I feel proud and thankful that He has blessed me, that I have been successful and have prospered and have had good luck; that God has given me health and strength to work and to make my payments as they have come due on my home; also to make a living for my family of myself and wife and nine children.

If it should become necessary for me to get a loan, I will be sure to call on your department, as I have nothing to say against the Relief Department, for it is a good thing for us all. The grand old Baltimore and Ohio and its officials, from the bottom to the top, are good enough for me. I have been with them over 32 years, and I thank God that I can speak for you all as gentlemen. That prosperity and good luck may reign with you and the Baltimore and Ohio Railroad and all of its officers, is my best wish to you. May God bless you all.

Respectfully yours,
(Signed) T. R. HARDY,
Conductor.

Jolly Party at East Side

(Continued from page 58)

Large bouquets of flowers were handed to Mr. Hoskins. He gave one to each of the officers present. The flowers were the gift of the employes at the East Side Shops. The word had passed down the line that the young women in the offices were responsible for the presentation and Mr. Hoskins duly thanked them. Mr. Scheer took particular care of his flowers and when he reached his car he called his porter.

"Joe," he said, with quite an impressive air to the porter, "I was presented with these beautiful flowers because I made the best speech at the meeting. Put them in water and take good care of them until we get to Baltimore."

With a "straight face" Joe took the flowers and remarked: "Yes, sir. Mr. White gave me his bouquet a few minutes ago and I put them on the ice."

When the hard work is all over it's fun to be with the winners—But the greatest individual satisfaction belongs to that man who has done his part, whether he won or not.

Deshler Loads Many Cars of Agricultural Products

By W. W. Aycock
Agent

DESHLER does not show up very big on our System map yet we help fill up the holes in our earnings. For the season 1920 we produced 516 cars of sugar beets, 1500 to 2000 cars of grain, hay and straw and 100 cars of live stock.

We have a daily transfer of l. c. l. merchandise 15 to 25 cars running any where from 5 to 7 million pounds per month, in connection with daily interchange of car load traffic between the two divisions of 150 to 200 cars. This has reached as high as 500 car loads, which keeps a bunch of 25 to 35 men right busy.

The following item from our village paper shows what the farmers of this section think of suffering humanity, and what the Baltimore and Ohio did for the same cause:

"When the voice of the starving children of Europe came to Henry County Farm Bureau members two weeks ago a special meeting of the Board of Directors was called.

"Chas. B. Krohn of Deshler and Manager of the Farmers Elevator at Deshler, put the largest co-operative farmers marketing organization plant in the state of Ohio at the disposal of the Henry county farmers. Mr. Krohn was elected chairman of the County Corn Gift committee.

"To facilitate the need of hauling, every elevator in the county received and weighed the corn free of charge and gave the chairman the selling value of the corn in money. Mr. Krohn took the money and bought good milling corn, ran it over the driers at Custar and Deshler without service charge and loaded it into cars last Wednesday afternoon. The cars were switched into a train and five car loads shipped to Akron, where it was milled free of charge by the Quaker Oats Milling Company. The Baltimore and Ohio Railroad hauled our corn to Akron free of charge. The total corn gift amounted to nearly 7000 bushels."

Farmers' Elevator Co., Elevator "B"; daily capacity, 5000 bushels. Elevator "A" has about the same capacity

You Can Make More Money As a Salesman

"THE demand for efficient salesmen is greater than the supply," says one prominent sales manager. "There isn't a single house in the United States which has all the first-class salesmen it wants and needs."

All you need to get out of the rut of office drudgery is the same practical I. C. S. course in Salesmanship that has brought success to so many other men situated just like yourself. You can learn easily at home in your spare time without losing a day or a dollar from your present work.

Here is all we ask: Without cost, without obligating yourself in any way, mark and mail the coupon. It takes but a moment of your time, but it is the most important single thing you can do today or any day. *Do it right now!*

The Late William E. Fazenbaker

An engineer who had no superior

By W. J. Lavelle
Rules Examiner

William E. Fazenbaker was born in the year 1847 and died on May 10 this year. He entered the service of the Baltimore and Ohio in 1864 and voluntarily retired in 1914, after a half-century of service.

I regret my inability to pay the tribute to the memory of William E. Fazenbaker which it so richly deserves. He was one of the best known trainmen on the System. To know him was to love and esteem him. Those who knew him as intimately as I accepted his word as his bond. Even though I held a personal acquaintance and association with him during a period of forty years, I cannot now recall that I ever saw "Bill" Fazenbaker angry—and surely this is something unusual in railroad circles.

He possessed a genial and sunny disposition, had a keen sense of humor and his companionship was always sought by the boys of the rail. In times of trouble, his advice was considered invaluable. He was known to be conservative and never arrived at a decision until he thoroughly analyzed a situation from every angle. His associates used to say that he rendered his decisions impartially; his sense of honor would not permit him to do differently.

Having been train dispatcher for 30 years, I had ample time to study his ability as an engineman. In that capacity he had no superior and few equals; his judgment in handling a train was par-excellent. He was ever on the alert, and particularly vigilant when the weather conditions ad-

The late William E. Fazenbaker

monished "Safety First." It was a common remark among the patrons of the Road that they were never afraid to sleep when "Bill" Fazenbaker was at the throttle; they knew that if an accident occurred, it was only because it was beyond the power of a human being to avert it. "Bill" was a man who left nothing to chance which forethought could provide. As far as I can

remember, he never had an accident, and I believe I am safe in saying that his superiors never had cause to reprimand him.

As an illustration of his judgment of speed, I recall what an engineman, Edward Creel, who preceded him to the Great Beyond, told me when they attached a car to No. 3 to record the speed on the train. Creel rode in the car in order to observe the speed. He made notations of the rate at which the train was going at different points along the road between Cumberland and Grafton. When the train arrived at Grafton, he met Mr. Fazenbaker and told him the speed at which the train was running at each point where he had noted it. He said that his record corresponded accurately with that of Mr. Fazenbaker.

Mr. Fazenbaker was a member of the Masonic Order, of the Brotherhood of Locomotive Engineers, and of the Baltimore and Ohio Veterans' Association. The Masons had charge of the funeral services. The Brotherhood of Locomotive Engineers attended the funeral in a body, as also did the Veterans' Association.

"Bill" Fazenbaker is gone, but his memory will ever remain with his associates.

Once a Dumping Ground—Now a Park

By J. Hewes, Jr.

Division Engineer, Flora, Ill.

THE accompanying photograph shows what is known as Reed Park, O'Fallon, Ill. The park is located on our right of way, just west of O'Fallon Depot, and is kept up by Crossing Watchman Charles Reed, of Noble, Ill., who, aside from performing duties of operating the crossing gates at either end of this park, which duty he performs in a highly satisfactory manner, keeps the park in splendid condition, as you will see from the picture.

Three years ago when Mr. Reed assumed the duties of crossing watchman at O'Fallon,

he commenced the work of beautifying the surrounding landscape; this park was then a veritable dumping ground. Instead of the roses shown in the picture there were brush piles and tin cans scattered all over the premises. Mr. Reed, by his untiring efforts, has transformed the brush piles into rose bushes and the tin cans into violets, and in place of rank growth of weeds he has now smooth lawn grass. Mr. Reed takes great pride in this park and always insists upon officials stopping to view the attractions in detail.

O'Fallon, Illinois, where crossing watchman Charles Reed (insert) built a park from a rubbish pile

Please mention our magazine when writing advertisers

A RAILROAD is not the unfeeling and relentless devourer of automobiles and little children at grade crossings described by impassioned advocates in crowded court rooms. The whistle of danger is an engineer's use of a piece of machinery, but it is also the echo of a man's thought for his own babies left at home.

A railroad has been likened to an octopus by those who do not know the flesh and blood and personality of railroads. The soul of a railroad is Fidelity, and if a railroad is an octopus, it is an octopus with a soul.

A railroad is a disciplined power; owning rails and cars and locomotives; engaging the highest quality of mechanical skill and expert knowledge; *but the glory of a railroad is the united adjustment of its living nerves to patience, courtesy, speed and safety.*

EDWIN S. JACKMAN.

 1 Sugar Bowl with cover (2 pieces)

1 Brings this 110-Piece Gold Decorated Martha Washington Dinner Set

Send only \$1 and we ship the full set—110 pieces in all. Use it 30 days. Then if you are not so delighted that you would not part with these superb, gold decorated dishes, return them and we will refund your \$1 and pay transportation charges both ways. If you keep them, take nearly a year to pay on easy terms.

Your Initial in 2 Places on Every Piece—5-Color Floral Decorations and Gold

Wonderful artistic effect is given not only by the new and attractive shape of every dish, but by the wreath and the rich design surrounding the initial. The one initial with these superb decorations of scrolls, leaves and roses in natural colors, put on by special fired process, appears in 2 places on every piece. As handsome as enameling you see on fine jewelry.

All Handles Covered with Gold

Every handle is covered with polished gold. The ware itself is beautiful, lustrous, snowy white. No other pattern to equal the famous "Martha Washington."

Important!

Hartman guarantees that every piece in this set is absolutely first quality. Don't confuse these with "seconds" or "run of kiln" dishes which show imperfections. This is a standard or "open" pattern. Replacement pieces can be had of us for three years.

Order No. 326CCMA15. Bargain price, \$34.65. Pay \$1 now. Balance \$3 monthly.

A Smoky Romance

"Lord Salisbury" and "Philip Morris," both accustomed to "London Life," were coming "Pall Mall" down the street on their "Camel," bound to see "Mecca," wherein the "Turkish Trophy," known as "Fatima," was making her appearance. At the door "Mogul," the keeper of the "Sweet Caporals," said: "This is a 'Lucky Strike' for you." Answered they, "'The Egyptian Prettiest' girl in the world is the 'Light of my Life,'" whereupon "Chesterfield" answered, "'Piedmont,' page 'Bull Durham.'"

—*Railroad Red Book.*

Mallet, Mikado or Mule

The Conductors of Hinton Division are telling this story on Gene McClandish.

As he spotted his mogul with a string of 80 loads at a water tank to give 'er a drink, he spied an old negro with a mule hitched to a mine dump car, and the following conversation ensued through the cab window:

"Uncle, that's a fine mule."

"Yas sir, he sho is a fine mule."

"Do you drive him all the time?"

"Yas sir, I drives him mos' all de time."

"Uncle, you got a mighty fine job, haven't you?"

"Yas sir, I 'lows hits a pretty fair job."

"Uncle, I reckon you get more pay for driving that mule than I do for running this engine, don't you?"

"Yas sir, I spec's I does, but boss, let me tell you sumpin—hit takes a man wid a heap of sense to drive a mule."

—*Chesapeake & Ohio Magazine.*

A Matter of Locomotion

A book agent approached a farmer. "Sir," said he, "those are mighty fine boys of yours."

"They are, stranger. The finest in this part of the world."

"I reckon you buy them anything they want."

"Why, sure, stranger; I buy them anything they need, whether they want it or not."

"Then, sir, let me sell you an encyclopedia for them; there's nothing else that will benefit them so much."

The farmer looked at the agent in astonishment. "Why, stranger," said he, "them boys of mine don't need no cyclopedias. They ride hosses!"

WILLIAM. TRULSON,

"Where He Go"

"What time next train go to Washington?" a traveling Chinese asked the railroad clerk.

"Two-two," replied the official.

"You no understand," insisted the Celestial. "I know the train go too-too. I no ask how he go. I ask when he go!"

—*Locomotive Engineer Journal.*

"Powerful Sick"

In the bright sunlight on a railroad station platform in Georgia slept a colored brother. He snored gently, with his mouth ajar and his long moist tongue resting on his cheek like a plush necktie. A Northerner climbed off a train to stretch his legs, unscrewed the top of a capsule and dusted the grains of quinine on the surface of the darkey's tongue. Presently the negro sucked his tongue back inside his mouth and instantly he arose with a shout and looked about him wildly.

"Mistah," he said, "kin yo' tell me whar I kin fin' a doctah."

"What do you want with a doctor?"

"I'm powerful sick."

Published monthly at Baltimore, Maryland, by the Baltimore and Ohio Railroad to improve its service to the public and to promote a greater community of interest among its employees. Contributions are welcomed. Manuscripts and photographs will be returned upon request.

THE READER AND ADVERTISING

Circulation of the Baltimore and Ohio Magazine is over 36,000 copies per issue, our aim being to place it in the hands and in the home of practically all English speaking employees of the Railroad. An examination of our advertising will show that it conforms to the highest standards. We do not guarantee it, but we believe that it means exactly what it says, and for that reason feel free to urge our readers to patronize our advertisers whenever they consistently can.

Now comes a concern big enough to loan *furniture* free while you leisurely decide on it

Forget About Buying Ask for Our Free Book, Anyway

We invite you to have a free copy of our Home Lover's Bargain Book. It comes to you for the asking, without the slightest promise to buy.

Sooner or later you will need some home necessity, no matter how trifling. Our book shows everything.

So please don't think of it merely as a book of furniture. When your particular need arises we like to have you look everywhere else first. All we ask is to look in our book, too, and compare our display.

Then let us take all the burden of proving that in one way or another, we can please you better. Our way of proving it is to loan the article free of all cost or risk to you. We loan it to you long enough so that you have plenty of time to leisurely make up your mind.

SOME DEPARTMENTS

FURNITURE	RANGES	DISHES
CARPETS	SEWING	SILVERWARE
RUGS	MACHINES	ALUMINUM and
LINENS	WASHING	ENAMEL WARE
BEDDING	MACHINES	TRUNKS - BAGS
PHONO-	CRIBS	DIAMONDS
GRAPHS	BABY CABS	WATCHES
STOVES	TRUNKS	JEWELRY

You will find in it prices, amazing for their lowness. No greater display of house furnishings is shown anywhere. It is probably the largest book of its kind published. A great many things are shown in their actual colors.

Our new Home Lovers' Bargain Book is absolutely **Free** to you. In it we show many thousands home needs all **loaned free**. Entirely as an extra advantage, we bring the most agreeable and longest credit—**free to all**.

No matter how clearly and simply we state these **facts**—it's all so different, so entirely new—that some folks will go right on thinking it cannot be so. For fear the least shadow of a doubt can remain in anyone's mind, we go way beyond mere promises. We guarantee every statement we make here. This free loan guarantee comes with our free book. It is legally binding.

Your own postmaster, or station agent; any bank in Chicago, New York or other large city; or any bank in any town in the United States, no matter how small, will vouch for the fact that Spiegel, May, Stern Company will keep its every promise.

Read This Out Loud

We realize that before you decide on any purchase, even though the article seems to be exactly what you desire, there are several questions to be finally answered. Above everything else comes

price; then quality, service and appearance. Nobody can tell how a rug, for instance, is actually going to look and fit **on the floor** in your home.

You never know a person till you live with them; you never know furniture till you live with it and **use it**.

So again we say before you actually get right down to buying anything, **let us first loan it to you free** to be compared anywhere and used freely. This is the only test that means anything.

Credit Free to All!

Without Asking—Pay Little by Little!

With our free book comes a credit certificate that opens your account **in advance**. This credit is offered freely to everybody. No matter where you live, what your position may be, or what your earnings are, it makes no difference.

There is never any annoyance; no bother before you order or afterwards. We have no collectors; we hate red tape. After all, our credit feature is simply an added advantage. You don't need even to think of it when you ask for a free loan. We loan things to everybody alike, whether they pay cash or use their credit. But because we offer credit so freely—we are able to make this loan **without the cash in advance**—merely a trifling deposit.

That is what makes our plan so different. That is why our offer is so new. That is why credit here cannot ever mean extra costs, nor annoyances. We simply say, try your selection leisurely. Use it freely. Test it in any manner.

After you decide to keep it, begin to pay little by little. If not satisfied we bear every expense—all freight and hauling

charges. You see we have done away with all formality; all old-fashioned rules and embarrassing practices. It's just a friendly arrangement. We never write to your neighbor or employers. Don't have the least fear that we will ever try to pry into your affairs.

Our free loan guarantee is bonded by the National Surety Company, whose security is accepted in any court in the land. The Corn Exchange National Bank of Chicago, will tell you we'll live up to every statement. This magazine would not print this message unless it was true.

The United States Government would not allow us to misuse the mails by making false statements.

If you are the least likely to need the slightest thing for your home now or in the next six months or year, have our free Home Lovers' Bargain Book on hand for comparison purposes, **if nothing else**.

Baltimore & Ohio

Trains will continue to arrive at and depart from

Pennsylvania Station *New York City*

ARRANGEMENTS have been made for the continued operation of Baltimore and Ohio trains to and from the Pennsylvania Station (7th Avenue and 32nd Street), New York City.

This station is located just one block from Broadway, in the midst of the shopping, hotel and theatre districts. Underground passageways connect station with Pennsylvania Hotel, Seventh Avenue and Broadway Subways to all parts of Manhattan and Brooklyn, also direct service by bus lines, elevated and surface cars.

In announcing its terminal arrangement in New York City, the Baltimore and Ohio also directs attention of the public to its centrally located terminals in other important cities reached by direct passenger service—Philadelphia, Baltimore, Washington, Pittsburgh, Akron, Cleveland, Columbus, Toledo, Detroit, Cincinnati, Louisville, St. Louis and Chicago.

Baltimore and Ohio trains are operated on convenient schedules between stations in over 1000 cities and towns. All through trains carry sleeping and parlor cars, first class coaches, and dining cars noted for their excellent meals.

Baltimore & Ohio Railroad

The noteworthy announcement made in this advertisement received wide publicity in the newspapers and through other media during the forepart of September.

Are the Carriers Doing Their Part?

Business men all over the country are asking what the railroads are doing to reduce their transportation costs; here is the answer from one of their officials

By Daniel Willard

President, Baltimore and Ohio Railroad Company,

in *The Nation's Business*

SINCE the return of the railways of this country to private ownership and operation, they have made large economies, and are continuing to make them. Certain other savings, which would require greater capital investments than are available at this time, are impracticable for the present; and I have been asked by *The Nation's Business* to indicate the direction in which economies are being practiced, and to tell why certain improvements in plant and rolling stock, however desirable, cannot be undertaken now.

American railways generally are buying their material and supplies from hand to mouth. The high price levels now prevailing make it more economical to follow this course than to buy in quantities. They are reducing coal consumption wherever practicable, they are reclaiming scrap material to an increasing extent, they are inviting and obtaining the cooperation of shippers so as to reduce loss and damage claims, and they are increasing whenever possible the average freight tonnage per car, the average movement of cars, and the average number of cars per train. Some of them, in more sparsely settled areas, are discontinuing temporarily unprofitable stations and unnecessary passenger trains.

Cutting Fuel Costs

In the economy of fuel, for instance, modern devices are being installed in large locomotives which increase their power in proportion to the coal consumed. There are about 65,000 locomotives in the United States, and during the last ten years, since the devices in mind were developed, about 35,000 locomotives have been equipped with superheaters, 43,000 with brick arches, 37,000 with automatic fire doors, and 15,000 with power reverse gears. On the Baltimore and Ohio Railroad all new locomotives of the Mikado and Mallet type are equipped with superheaters. It has been estimated that at 200 degrees superheat a saving of upwards of 20 per cent. in fuel is thus effected. When it is remembered that the railways use about one-fourth to one-third of the coal mined in this country, the im-

AT A RECENT Senate committee hearing, Mr. Willard was asked about the charge that the cost of shipping a barrel of apples a hundred miles to Washington was greater than the cost of the fruit in the orchard.

"I think that might be true," Mr. Willard said, "I think the service of the railroad is rather more than the service of the tree or the picking of the apples." Which appears logical enough when you look at it from the railroad man's viewpoint.

It has become the fashion of late for everyone to point out economies to railway officials. The assumption seems to be that the roads are doing little or nothing for themselves. Mr. Willard tells here what the carriers are accomplishing and what they hope to accomplish.—The Editor.

portance of the saving made in this way can be appreciated.

No new material is being purchased by the Baltimore and Ohio Company if it is possible to make use instead of material salvaged from the scrap heap. We have 79 reclamation plants, one with every repair plant, and if scrap material can be repaired at a net saving over the purchase price of new material, it is done. When this is impossible it is sold as junk. Substantial savings have been made in this connection.

I raise no issue, however, with those who claim that there are possibilities of still further savings on the part of the railroads. If a condition could be conceived of wherein the railroads had available all the money that was necessary — first, to provide safe and regular transportation as demanded by their patrons; second, to provide a constantly increasing carrying capacity to take care of the growing business of the country, and in addition thereto a sufficient sum to replace all facilities wherever it was shown that by so doing economies could be effected — if such a condition could be conceived of, there would perhaps be no real excuse for the railway managers if they failed to effect additional economies.

It is highly desirable that all preventable wastes should be avoided in

every line of human endeavor, in case, of course, the cost of prevention does not exceed the value of the saving. At the hearings held by the Senate Interstate Commerce Committee I compared the situation of the railroads with that of the farmers, who, if they were to raise their business to the highest point of efficiency and equipment, could, so we are told, make vast savings. There are in round numbers 6,500,000 farms in the United States, and it has been estimated that the annual losses from rodent pests sustained by the farmers in the United States amount to fully \$300,000,000 per year, and in addition to this, it is claimed by the manufacturers of steel storage bins that the yearly loss by American farmers is over \$200,000,000 through improper storage of grain on the farms. No doubt very large savings in this respect could also be accomplished by a greater and more effective use of carnivorous animals trained to capture or kill the destroying rodents, but in spite of improved bins and other suggested methods, the wastes, we are advised, continue to go on.

There are roundly in the United States, as reported in the latest official circulars, 23,000,000 milk cows. It is a safe estimate that if they were all thoroughbreds the entire herd would have an enduring value of at least \$10.00 per animal in excess of the present valuation, which is stated at approximately \$65.00 per head. An increase in the value of milk cows on all the farms in the United States of as much as \$10.00 per head would mean over \$230,000,000 enhanced value, and this would be a continuing value from year to year and would be reflected in large economies, not here enumerated.

As a matter of fact, we know very well the difficulties with which the average farmer has to contend, and upon the whole I believe it is only just to say that if they have not availed themselves as a class of the opportunities that have so frequently been pointed out to them by economists, writers in the rural papers, Chautauqua speakers, and others, it has not been, I am certain, because of indifference on their part, but is due

rather to controlling influences of a very human character, which they have been obliged to take into account in their own domestic economy.

The railroads have probably accomplished more in the way of possible savings and economies in connection with their operations than is the case with the average farmer, and it is due largely, in my opinion, to the fact that the railroads have been obliged by force of circumstances to give more careful thought to methods of economy than has usually been the case with the men actually engaged in agriculture.

Possibly a brief reference to the practice of the Baltimore and Ohio Company in this particular during the last 10 or 12 years may throw additional light upon the problem.

Since July 1, 1910, and up to December 31, 1920, the Baltimore and Ohio Company has spent for additions and betterments to its property more than \$197,000,000. Of this amount \$98,000,000 roundly was spent for new equipment, and a substantially equal amount for new construction and additional facilities.

The Need of New Equipment

During the year ended June 30, 1910, the Baltimore and Ohio Company carried 13,870,883,868 ton miles. During the year ended December 31, 1920, the same property carried 21,661,448,095 ton miles, an increase of 56.2 per cent., and in spite of the large capital expenditures and the resultant increase of facilities, the Baltimore and Ohio Company was unable during the last fiscal year to carry currently all of the business which it was offered. It could not, in short, perform the service demanded of it as a common carrier. It is clear, therefore, that it has not increased its facilities beyond the reasonable requirements of its patrons. The expenditure of new capital by the Baltimore and Ohio Company during the period mentioned, as I have stated, was approximately \$18,000,000 per annum, about one-half of which was spent for locomotives and for freight and passenger equipment.

All of the officers of the Company familiar with the subject, from the president down, have given careful thought to the design and suitability of cars and engines whenever new purchases were being considered, and it is believed that the equipment purchased during the period mentioned was in accord with the best practice of the period when the purchase was made. In order, however, to operate the new and heavier cars and engines, it was necessary during the period

under consideration for the Baltimore and Ohio Company to spend more than \$10,000,000 strengthening and rebuilding bridges and culverts, so that they might safely carry the heavier load.

One Dilemma

It would appear upon investigation that if the Baltimore and Ohio Company could have arranged to handle its entire freight business over all suitable divisions of the line with engines of the Mallet or Mikado type—these engines being of the most improved pattern for heavy freight service—it would have been possible for the Baltimore and Ohio so equipped to handle all the business it actually did handle last year with a saving of 10,000,000 freight train miles, and it may be roughly estimated that the saving so effected would have been at least \$10,000,000. * * * * * But in order to procure the necessary heavier engines and to equip the road generally for their safe operation, it would have required a capital expenditure estimated at approximately \$165,000,000, almost as much, in fact, as the Company spent for all improvements, additions, betterments, and equipment during the last 11 years, and even after this great additional expenditure had been made, the Company would not have been able on that account to handle a very much larger volume of business than actually was handled.

Certainly the increased carrying capacity resulting from an expenditure of that character would have been relatively insignificant. It is true that the Company would have been able to handle the same volume of business at a much less expenditure of money, but would it have been wise to have expended so large a sum, assuming such a sum were available, simply for the purpose of performing substantially the same service at a lower cost and ignore the constant demands of the public for increased transportation facilities?

A case in point will make clear the dilemma which confronts many railroads at this time: We move a considerable amount of coal from the Sandy Valley region in Kentucky to Cleveland. The economical way to move it is over the river grade via Parkersburg to Wheeling and thence over a very moderate grade to Cleveland. But at Point Pleasant there is a bridge over the Kanawha River, and at Parkersburg there is another bridge. These structures were put up before the day of the Mallet and Mikado engines, and to make them capable of sustaining the greater loads which are moved nowadays would require an

expenditure in each case of \$2,000,000. As a result we must move the coal by a roundabout way over a much heavier grade, at considerably greater cost of operation, until funds are available for rebuilding the two bridges above mentioned.

Our roundhouses on many portions of the line, in fact, are not large enough to accommodate engines of the Mikado and Mallet types. Our turntables are not large enough for them. Before we can put modern engines onto such parts of the Baltimore and Ohio System there must be large capital expenditures in modifying and remodeling the plant, and the funds for these changes are not now available. Such funds as are available can be spent to better public advantage in other directions.

Another case in point: If the Baltimore and Ohio Company were to dismantle such of its repair shops as are not completely modern and replace them with new structures equipped with modern tools and facilities at an expenditure estimated roughly at \$6,000,000, it would be able to save about \$1,250,000 a year in connection with the repairs to its locomotives.

As a matter of fact, the chief executive of the Company has been urged on frequent occasions to authorize large expenditures for shops and shop facilities in order that the engines might be repaired more economically, and on one particular occasion the question presented itself as follows:

Is it desirable at this time to spend for new shops \$2,000,000, which sum is available and which expenditure, if made, would enable the Company to repair its locomotives at a lesser cost, or should the money be used for the purchase of new steel coaches which will mean no economy in operation, but on the contrary mean an increased cost of transportation because of the greater weight of steel equipment as compared with equipment of wooden construction? It was decided that the public in this particular instance would be better served by spending the money available for steel coaches rather than for new shops, inasmuch as it was possible to maintain the power in the existing shops, although at a somewhat higher cost.

I do not wish to appear as in any sense minimizing the economies possible in railway operation, nor do I wish to be understood as saying or believing that there are not substantial economies to be made without the expenditure of excessively large capital sums. On the contrary, I believe there are many things that can be done; changes made in operation, in

methods of maintenance, in care of materials, etc., which will mean constant and increasing economies. What I do mean to say is that I believe the railway managers are not unmindful of the possibilities of the situation.

Moreover, it is a fact that the railroads of this country moved last year 25 million passenger train miles, and 53 million ton miles, *more* than the Director General of Railroads moved

the year before, with practically the same facilities. This, I take it, may be regarded as evidence of efficiency in operation. We did more business than was ever done with the same facilities over the same period of time in any form of control. I have never seen the men do better railroading than they are doing today, never before in my experience of 40 years.

New Castle Junction Shops Boast Real Hero in John Gallagher, Pipe Fitter Helper

Only eighteen years old, he rescued three persons from drowning

THE New Castle News of August 6 told the story of the heroism of Pipe Fitter Helper John Gallagher, of the New Castle division shops, as follows:

Only the heroic action of John Gallagher, aged 17 years, of North Cedar Street, on Monday afternoon prevented one swimming fatality and possibly two more.

It is the result of his efforts that Miss Alberta Emery, a nurse at St. Francis Hospital, Pittsburgh, is now recovering at the New Castle Hospital, after having been rendered unconscious by her experience in the water of the Mahoning River near the six-span railroad bridge of the Pennsylvania Company at Lawrence Junction. Anna Gallagher, aged 13 years, and Francis Gallagher, aged 11 years, sister and brother of the rescuer, are none the worse today as the result of their near-drowning experience at the same time.

The near-drownings occurred Monday afternoon at 2.30 o'clock in the deep water of the swimming hole of the Mahoning River at the six-span bridge. Miss Emery, Miss Gallagher and Francis Gallagher, had just waded into the water, when a whirling of the waters caused by two currents swept them off their feet at a point where the water is about 20 feet in depth.

John Gallagher noticed their plight and being a first class swimmer at once went to their rescue. Both Miss Emery and his sister grabbed him about the neck. He was returning toward the bank with considerable difficulty, both girls clinging to him, when Miss Emery lost her grip and sank back into the water. The rescuer kept on to the shore and having taken his sister Anna to safety immediately returned to the hole to rescue Miss Emery and also the brother.

The latter could swim fairly well and with a little aid from his brother, was able to swim out of the whirl of waters caused by the currents and to reach land himself. In the meantime, Miss Emery had disappeared in another direction from that in which she was last seen as she lost her hold on her rescuer.

The rescuer continued to search and finally her body was brought to sight in a ripple a short distance away. He immediately secured the now-unconscious body and brought it to the shore. Here the boys of the party rendered first aid, while help was sought at the Seventh ward fire department and from the police. The lung motor at the Seventh ward department was put in use immediately after its arrival a few minutes after the rescue of Miss Emery and signs of returning life were noticeable, when an engine and caboose of the Pennsylvania Company arrived near the scene and she was placed in the caboose and taken to the West Washington Street station, where an ambulance was in waiting and hurried her to the New Castle Hospital.

This is one of the most remarkable tales of heroism performed by one of our employes that it has ever been our privilege to publish in the MAGAZINE. Mr. Gallagher is the son of Richard Gallagher, labor foreman at the New Castle Division shops. Young Gallagher deserves the highest praise for his remarkable exhibition of heroism and we are glad to extend to him the hearty congratulations of our whole Railroad fraternity.

John E. Gallagher

A Fine Way to Pay for a Home

FLORA, ILLINOIS, September 7, 1921.
MR. W. J. DUDLEY, Superintendent,
Relief Department, Baltimore and
Ohio Railroad.

Baltimore, Md.

Dear Sir—I am enclosing herewith receipts for loan papers returned to me for my loan with the Company. I sincerely thank you for the loan and the excellent way it was handled by your department. It is certainly a fine way to make a loan and pay for a home. I paid for this and hardly knew it was being done until it was paid out. There is no better way that I know of to purchase a home than through the Baltimore and Ohio Relief Department.

At the time the papers were received I was on my vacation. This is the reason for not acknowledging receipt sooner.

Yours very truly,
(Signed) MCMERRECE B. JUDY,
Train Dispatcher.

Circus Stuff

By Robert L. Heiser

Operator, Camden Station

Oh! The night was dark and lonesome, the telegraph was still. The fast express and high wheeled freight were stuck on Gay Street Hill; when all at once the instruments resounded loud and long; then an "Op." in "DO" office answered quickly to their song;

"Here, take a message, take it now and hand it to the chief—our train of eighty circus cars has come to awful grief. A journal 'busted' on a car of educated fleas, and all the other circus cars are piled as high as trees. Lions are loose in "Philly," the snakes coiled in the wheels; the elephant's on Camden Street and the tank is full of seals. The engineer's gone hunting for the prowling grizzly bears; the tigers have the ladies treed up on the depot chairs. The ape's got the flagman's lantern and the wild man's chasin' him south; the conductor caught th' kangaroo and got kicked in th' mouth. Th' monks have charge of the telegraph wires and th' Op's up on th' roof, th' fireman tried to capture a mule and lost a big jaw tooth. Oh! send th' riggers, send 'em quick, so we can clear th' road, and send a lot of trackmen out to help round up th' load—"

It must have been near morning when th' "Op." fell out of bed, and found that he'd been sleeping with an ice bag on his head.

"Rest is not quitting the busy career,
Rest is the fitting of self to its sphere,
'Tis loving and serving the highest and best,
'Tis onward, unswerving—and this is true rest."

General Foreman Thomas J. Nee, Connellsville, Commended for Unusual Courtesy

NUMA F. HEITMAN
LAWYER
734 NEW YORK LIFE BUILDING
Home Phone 1887 Main

Kansas City, Mo., June 13, 1921.

Mr. Daniel Willard, President,
Baltimore and Ohio Railroad Company,
Baltimore, Md.

My Dear Sir:

I have just returned home to Kansas City, Missouri, from a trip to Washington, D. C. I went and came by way of the Baltimore and Ohio.

The object of this letter is to call your attention to the courtesy shown me by one of your employes, Mr. Thomas Nee, who informed me that he was your General Foreman at Connellsville, Pa.

While coming through Pennsylvania on my way home, the car was crowded and I had an inside seat, and was endeavoring to view the scenery, when Mr. Nee, who had a seat next to the window, from which the principal scenery could be viewed, observed me and kindly got up and changed seats with me, remarking that he had often observed the scenery and that it was well worth seeing. This act of courtesy on his part impressed me as rather remarkable and unusual, and as deserving of appreciation.

I enjoyed the scenery along the Baltimore and Ohio both going and returning, very much, and your Mr. Nee was kind enough to furnish me with a good opportunity to view this beautiful scenery on my way home. I had quite a little conversation with him and found that he was thoroughly interested in his employer and took pleasure in promoting the interests of his employer. I liked this spirit in Mr. Nee, which indicates what I hope is a growing spirit of friendship and loyalty on the part of employes to their employers. My sympathy has always been with the under dog in the fight, but I think all men should be reasonable. I am opposed to hatred and Bolshevism. I am glad to encourage and commend a spirit of good feeling on the part of the workmen of this country for those for whom they work. I believe there is a growing disposition on the part of employers to be fair and just, and I think that this disposition should be responded to on the part of the workers of the country. If this were generally done we would soon get back to normalcy and it would be better for all concerned.

Yours very truly,
(Signed) NUMA F. HEITMAN.

The Baltimore and Ohio Railroad Company

OFFICE OF VICE PRESIDENT
OPERATION AND MAINTENANCE

C. W. GALLOWAY,
VICE PRESIDENT

BALTIMORE, MD.

June 23, 1921.

Mr. Thomas J. Nee, General Foreman,
Connellsville, Pa.

Dear Sir:

Recently, Mr. Numa F. Heitman was a passenger on one of our trains and was treated with unusual courtesy by you in exchanging seats with him that he might have a view of the scenery along the Baltimore and Ohio.

Mr. Heitman has written the President, acknowledging this courtesy, and I have had photostat copy of this letter made which I have the pleasure of enclosing to you herewith, and at the same time to add my personal and official appreciation of your interest.

Your service record indicates that you entered the service of the Baltimore and Ohio in 1889 as water boy, and that you have a very enviable record, being promoted to various positions until you reached that of general foreman.

It is a pleasure to note the great interest the old employes take in the service. I have, as you have perhaps heard, taken much interest in the Association of Veteran employes, of which I am glad to be a member. I presume you are also. We all have the Company's interest at heart and the courtesy which you extended to this passenger is most helpful along these lines.

Again expressing to you our appreciation, I am,

Cordially yours,
(Signed) C. W. GALLOWAY.

Some Concerns Have Made New Selling Records Despite Hard Times

And many veterans and employes of the Baltimore and Ohio have put themselves in the same class of star salesmen by securing business for us in the face of keen competition

Total of Employees' Solicitation to September 3, almost 2200 Carloads

A YOUNG man has just left my office after an hour's visit which filled me brim-full of optimism concerning the possibilities of our business getting campaign. He is the secretary of a progressive, successful and well advertised manufacturing company engaged in producing a commodity which is an essential to the proper handling of their jobs by many, many railroad men. We discussed advertising principally, (his company having been a regular advertiser in our MAGAZINE during the last five or six years) and during the course of our conversation I said to him: "How's business?"

"Bigger than ever before in the history of our company. We have 15 per cent. more employes working now than we had at this time last year. Individual production is higher and hence our total production is larger than ever before per individual employe in our plant. We are oversold on every model we manufacture, with a single exception. Last year was the biggest in the history of our business but thus far this year we have already beaten the record made in 1920 and we expect to finish 1921 well ahead of the 1920 high water mark."

And in proof of the prosperity of his company and his optimism for the future he left with me an agreement for advertising, the largest the MAGAZINE has ever had, for a full page for each issue during the year, October 1921—September 1922.

This is a remarkable illustration of how a sound business policy, hard work and good advertising of a standard and reputable product will increase business in the face of a general business depression. My caller suggested no peculiarities about his business which have enabled his concern to beat previous records during these hard times. And I do not believe that they are being favored by any unusual economic conditions which do not now obtain in other industries. It is probable that competitors of this particular concern are feeling the business depression as are other lines of trade. It is superior organization, superior product, superior marketing methods—superior service, if you will—which enable them to go ahead when others fall behind.

And isn't the same thing true to a greater or less extent with our own business? The number of Veterans and others who have shown results in our business getting campaign are few as compared with the number of employes on our Road. Yet these few have secured over 2,000 carloads of competitive business during the last six months—business which probably would not have come to our lines had they not gotten out and hustled for it. If instead of the one or two per cent. of the men and women on our payroll, we had 15 or 20 per cent. of them putting the same energy, loyalty and enthusiasm into getting freight and passengers for our Road, we could be boasting of a much more favorable showing in business than we are now able to record.

To be sure, there is only a certain amount of freight and a certain number of passengers to be carried in the section of the country in which we operate. But, judging from the amount of business which a mere handful of employes can get through their individual interest and loyalty, we are not getting the share of the available business that is potentially ours.

All honor to the Veterans and other employes who are still plugging away to increase our revenues! And may their example be a quick and compelling inspiration to the rest of us!

To show that the above case of the successful manufacturing concern is not unique, we quote from a recent article concerning the remarkable showing made by the National Cash Register Company, a concern which has a world-wide reputation for pro-

gressive business policies, a super-trained sales staff and up-to-date and consistent advertising, as follows:

How One Firm Overcame the Slump of Business

"When we began to feel the pressure of the business slump last fall, we knew that we must do something unusual to meet it," said F. B. Patterson, president of the National Cash Register Company, Dayton, Ohio, during an interview with Albert Sidney Gregg, as reported in *Trained Men*.

"In place of slowing down we intensified our efforts. Executives went into the field to enthuse the selling forces, and agency managers were brought to the factory, filled with optimism, and sent back, fired with a determination to win. And win they did.

"Our men sold more cash registers during the first six months of 1921 than in any other half year in the history of the company!"

The lists of the recent successful solicitations by our own men appear on these pages. Lest any reader should think that this business has been easily gotten and would have come to our lines without solicitation, we wish to emphasize the fact that all of these solicitations are checked over carefully and do not appear in the MAGAZINE unless it has been established that the business obtained is competitive.

Other illustrations of good salesmanship, either in the way of direct solicitation or in the giving of especially good service, follow in the subjoined brief articles.

The Army "Birds" Needed Gas Quick and We "Delivered the Goods"

By E. W. Scheer

General Manager, Eastern Lines

AT the request of the War Department, U. T. L. car 36041, loaded with gasoline by the Atlantic Refining Company, Philadelphia, consigned Air Service, U. S. A., Charleston, W. Va., was handled special Philadelphia to Charleston.

We promised the War Department that we would get the car to Charleston sometime between midnight September 2 and 6.00 a. m. September 3. The actual movements of this car follow:

Left Philadelphia. 6.36 P.M. Sept. 1. Arr. Baltimore... 9.48 P.M.

Left Baltimore... 9.53 P.M.
 Ar. Brunswick... 2.29 A.M. Sept. 2
 Left Brunswick... 2.32 A.M.
 Ar. Cumberland. 5.47 A.M.
 Left Cumberland. 6.03 A.M.
 Ar. Grafton..... 9.50 A.M.
 Left Grafton..... 10.25 A.M.
 Ar. Buckhannon. 12.30 P.M.
 Left Buckhannon. 12.45 P.M.
 Ar. Gassaway... 4.30 P.M.
 Left Gassaway... 4.47 P.M.
 Ar. Charleston... 10.00 P.M.

As the result of the prompt handling of this car of gasoline, I quote below communication from Major W. F. Pearson, Administrative Executive, Air Service, dated at Washington, September 13:

"(1) The Chief of Air Services desires to express his appreciation for the quick delivery made of one car of gasoline to Charleston, W. Va., from the Atlantic Refining Company, Philadelphia.

"(2) The courtesy extended by the Baltimore and Ohio Railroad Company to the Air Service assisted materially the Commanding Officer of Air Service Troops, Charleston, W. Va., in having quickly available the necessary fuel to operate air craft in connection with the recent disturbance in that locality.

"By authority of the Chief of Air Service."

The Leaven is Working

IT HAS taken years of patient, conscientious and enthusiastic effort, to bring our dining car service to its present high standard. What we need most now to make it a magnet to draw passengers to our road is an enthusiastic body of employes to spread its fame among their friends and acquaintances.

The following letter appeared in the Letter Column of the Baltimore *Sun*, one of the most widely read sections of that paper. It is the best kind of advertising for our Road and an avenue of publicity for us which is open to thousands of employes and friends who want to boost our passenger traffic.

Says You Can Dine Cheaper on the Baltimore and Ohio

To the Editor of the *Sun*—Sir: Replying to a letter published in the Baltimore *Sun* June 24, headed Annapolis, Md., June 22, signed J. J. F., regarding exorbitant prices charged on diners by the——Railroad, permit the writer to say if this party had used the Baltimore and Ohio Railroad he would have found a material difference in prices on the Baltimore and Ohio Railroad diner.

The Baltimore and Ohio Railroad specializes in what might be called a commercial club lunch for 75 cents, which is unsur-

passed. It consists of coffee or iced tea, meat or fish, a large potato or mashed potatoes, beets, relish, beans or peas, hot or cold bread and a dessert. I am sure when you are through eating this meal your appetite has been satisfied. Oh, yes! They also give you, in addition to the above, after-dinner mints. Again allow me to say the courtesy extended you by the steward and waiters is unexcelled.

Therefore, I wish you and all other good Marylanders, when it is necessary to travel, use the Baltimore and Ohio Railroad and take advantage of the fine diner service they afford. The Baltimore and Ohio Railroad is a product of Maryland and should be supported always by Marylanders. What I have just said is from my own personal experience.

JAMES R. MURPHY.

Baltimore, June 29.

Will you be one to use this and other similar means to let the public know that we have an unsurpassed passenger service?

Agent Arnold—Hearing a Rumor He Made a Sale

DURING the early part of September Agent George B. M. Arnold, Hyattsville, Md., heard a rumor that a fellow townsman of his expected to leave shortly for Oakland, Cal., and that he intended to go via a line competing with the Baltimore and Ohio.

He immediately called up Baltimore to send him the proper ticket. The same afternoon the ticket arrived and, armed with it and an official railroad guide, Mr. Arnold saw the prospective passenger and in 25 minutes had introduced him via the pasteboard to the picturesque route, Baltimore to Chicago.

This man was laboring under some delusions as to the way we handled our passenger trains. There are lots and lots of people who haven't used the Baltimore and Ohio for years simply because they don't know how sterling its passenger service is. This is why, if every one of us would be a voluntary missionary, just telling the plain, honest facts about the superiority of our service, and urging people to give it just a single trial, it would result in the accession of a great deal of competitive business to our lines which we are not now getting.

Almost 55 per cent of the gross revenues of the railroads for the first six months of 1921 went directly back into payroll. Of every one hundred dollars received in revenue, fifty five dollars was paid in wages to employees.

Accurate Weights Insure Correct Freight Charges

Baltimore, Md., September 1, 1921.

To All Agents:

Are you attaching Scale Card Form 346-K-Rev. (the color of it is blue) to waybills for carload freight (other than coal and coke traffic) showing the scale station, as outlined in Weighing Circular No. 660, at which a car will be weighed enroute?

Are you receiving return report of the weights from those in charge of the scale to which car was carded to be weighed?

If return report of the weights is not received, our patrons, who were kind enough to give us their business, cannot render bills for goods sold to consignees, as shippers depend upon you to give them this information promptly, and, if this is not done, we have a dissatisfied customer

R—Railroad Scale

A—Weighing Bureau or Agreement

T—Tariff Classification or Minimum

S—Shipper's Agreement or Tested Weight

Do they observe the rule to show no weights (except for engine rating) nor extensions on waybills for cars to be weighed at a distant scale enroute? When, contrary to instructions, unauthorized estimated weights are shown on waybills for such cars, they frequently go to destination unweighed and contents are delivered on basis of these unauthorized estimated weights, generally at a loss in the freight charges for transportation service performed.

Our plan for check-weighing carload freight has developed that many of you are not familiar with the use of the symbol "T," the true meaning of which is, the car con-

who may divert his business to a competing railroad. Furthermore, Mr. W. E. Rittenhouse, Auditor of Merchandise Receipts, is being delayed in the adjustment of his accounts.

If you do not receive, within a reasonable time, return report of the weights of cars to be weighed at a distant scale enroute, write to Mr. G. F. Malone, Superintendent Car Service, copy to Mr. Rittenhouse and Mr. W. G. Curren, General Superintendent Transportation, telling them all about it, giving reference to waybill number and date, car number, scale station to which car was carded for weighing and destination (if in inter-road movement, give initials of delivering railroad). Mr. Malone will gladly trace for the weights, advising you so that shippers may render bills and collect their money for goods sold with as little delay as possible; Mr. Rittenhouse will have advance information as to why you cannot tell him the amount of freight charges to be collected for transportation service performed, and Mr. Curren will take the subject up with those failing to send you report promptly, so our service in regard to weights may be improved.

Are your waybill clerks observing the rule which requires that every waybill shall show authority for the weight used by one of the following symbols?

tains less than the minimum weight required by the tariff, that freight charges will be collected on the tariff minimum weight and there is no need to weigh car enroute. Many agents are using the tariff minimum weight as an estimated weight, carrying out the extensions on this weight, when, as a matter of fact, by weighing the car enroute it is frequently shown that the car contains two or three times as much weight, and had not such cars by chance been check-weighed enroute there would have been a serious loss in revenue of the Company. The tariff minimum weight, as indicated by the symbol "T," must not be shown in the weight column on waybill, unless it is *definitely known* that car contains less than the minimum weight required by the tariff.

Prompt and efficient service in regard to accurately weighing carload freight is essential and will undoubtedly attract shippers to give us more of their business and increase the revenue of the Railroad. Money is needed and the full amount of freight charges should be collected on every pound of freight that is moved.

Drop me a friendly line and tell me all about your troubles in regard to weighing carload freight. It may be I can help solve your problem.

(Signed) A. E. DAY,

Chief of Weighing Bureau, Transportation Department.

Louisville Live Stock Exchange Helping Kentucky Improve Its Cattle

AN INSPECTION of the stock yards or an examination of the various qualities of meats will be sufficient to convince the average person that the difference between the meat produced from the so-called "scrub" or inferior cattle and that from selected stock would warrant the support of the Railroad in any movement toward improvement in the breeding of beef cattle. The same principle applies to hogs, sheep, and other live stock.

During the year 1920, the Baltimore and Ohio handled, via the L. & N., 1333 cars of live stock from Louisville, including the Bourbon Yards. It is impossible to figure exactly what percentage of the business from the

Bourbon Yards this is, but, figuring as closely as we can, it is approximately 27 per cent. of the business that went to the East from that point last year. The record of the movement for the first half of 1921 indicates that the amount of this year's business will be about the same.

The Louisville Live Stock Exchange, Bourbon Stock Yards, Louisville, Ky., is using every facility to advance this movement for the better breeding of cattle throughout the state. With the creation of the demand for more and better meats, there comes the corresponding demand for better cattle, and this will eventually mean more business for

the Baltimore and Ohio. It is therefore to our own interests that we give our fullest cooperation to the furtherance of this movement.

The accompanying pictures give an idea of what is meant by "scrub" cattle; animals that are of impure or of no distinct breed, oftentimes of a stunted growth and known as "runts." This is the type of cattle that the Louisville Live Stock Exchange is endeavoring to get rid of. The campaign is being backed by the Kentucky Pure Bred Live Stock Association, the United States Department of Agriculture, and a number of business men and members of other live stock associations of the state. In the autumn, it is expected that the rural schools of Kentucky will lend their aid. County superintendents have signified their intention of supporting the movement insofar as the school regulations will allow.

Top—Types of "Scrub" Cattle. Center—Lambs, ready for market. Lower—Bird's eye view of Bourbon Stock Yards, Louisville, Kentucky

Through the schools, calf, pig and sheep clubs will be organized and prizes awarded to stimulate the interest of the children. Essays will be written, literature distributed, and every possible effort made to encourage the future cattle raisers.

At present the campaign of the Exchange includes a series of Better Sire Sales as well as a Fat and Feeding Cattle Show and Sale, the latter being open to farmers and breeders of Kentucky and Tennessee. The sales are being held at the Bourbon Stock Yards. The first sale of 300 pure bred registered bulls took place on June 2. The animals were from some of the best herds of the state. The prices were fixed, as will be the case in all of the future sales, by the farmers themselves, the animals being sold at auction. There are a sufficient number of animals on hand to prevent the bidding forcing the prices to a prohibitive range. The second sale took place on August 11, when 200 pure bred bucks and ewes were disposed of. All of the principal breeds were represented in this sale, and in all cases the animals were guaranteed for service.

On the mornings of September 15 and 16, during the week of the Kentucky State Fair, the fat and feeding cattle show and sale took place and prizes amounting to \$5,500 were distributed. An added feature was the Junior Judging Contest of beef cattle, dairy cattle, sheep and hogs, by the boys and girls of the state. This was in charge of a representative of the University of Kentucky College of Agriculture. Following the contest, trucks were assembled at the fair grounds and the children and county agents were taken to the Bourbon Stock Yards, where the latest scientific methods of handling live stock were explained to them. Here also a demonstration was given of the relative merits of scrub and pure bred cattle, and actual carcasses were cut up into their various meat cuts.

Special efforts toward the success of the movement are being made by county agents as well as the agents of the Live Stock Exchange. For several months they have been in the fields visiting farmers and encouraging the grouping of scrub bulls for shipment to the Louisville market to be sold, the proceeds of the sales to go toward the purchase of pure bred stock.

Our assistant general freight agent, J. D. Marney, at Louisville, has been most active in the advancement of this splendid movement and we are indebted to him for the material from which this story was written and for the pictures accompanying it.

Magazine of Mutual Benefit Association of Pennsylvania Employes Began A Good Story—But It Did Not Finish It

THE Mutual Magazine is published by the Mutual Beneficial Association of Pennsylvania Railroad Employes. It is an interesting and comprehensive publication, but it recently began a story which compared certain stock train runs on the Pennsylvania and the Baltimore and Ohio, a story which, so far as we have been able to find, has not yet been finished.

The story is called: "Yes, the Pennsylvania is the Standard Railroad of the World."

It is by R. N. King, who is agent at Claremont, Baltimore, Md., of the Pennsylvania Railroad. It mentions a railroad, 62 miles long, running from Harrisonburg to Lexington, Va. (this is the old Valley Railroad of Virginia, now a part of the Baltimore and Ohio) and it pays tribute to the beauties of the country through which it runs, to its ample resources for stock raising and to the charm of the people living there. It then tells of the live stock special which starts at Lexington, picks up cattle as far as Strassburg, and from there runs as a limited express to Potomac Yards, Va., near Washington, D. C.

Here, the story goes on, the Pennsylvania and the "other railroad" (i. e. the Baltimore and Ohio) begin their competition for hauling of these stock cars, and it says that during the early part of this year there was keen rivalry between the two roads to see which could make better runs from Potomac Yards to Baltimore.

The story mentions a run on January 9, when the Pennsylvania made it in 35 minutes better time than the "other railroad;" and the run made

on January 16, when the Pennsylvania was 22 minutes the winner. But the big test, it maintains, was set for January 23.

The author states that more than purely local interest was aroused by this test, and that the engines were primed (parenthetically we would modify this to the effect that the Baltimore & Ohio engine was a standard one in regular service and that priming it for this occasion was unnecessary). He further states that engine crews were chosen carefully and that operating representatives of the respective railroads had studied every detail which could have a bearing on the performance of the trains. The author also says, "unfortunately the competitor, which left first, did not allow the Pennsylvania Railroad to get an even break, but struck out for home via the junction from which both roads left for their respective main lines."

For the sake of accuracy we also quote the last two paragraphs of the article:

"The Pennsylvania Railroad boys were proud not only of their efforts, but also that their Company was successful; they said the boys of the other railroad tried hard and deserved credit and later when they gather together as lodge and railroad chums they will explain the reasons, but above all stands out the fact that during a test on January 23 the Pennsylvania Railroad was victorious over the other railroad 16½ minutes from Potomac Yard to Baltimore.

"After having made a run with no mishaps, a run which will stand unequalled for many days, and made by

The Little Things

By Ray Garrigus

Clerk, Car Department, Lima, Ohio

We are glad to have the privilege of printing this story by one of our own employes. The reader will discover that it is not the type of fiction that has recently been appearing in our Magazine, but we hope will agree with us that it is a thoughtful, interesting and truthful delineation in its more philosophical phase, of the great subject of SAFETY, and well worthy a place on these pages. A brief sketch of the author follows the story.—The Editor.

Prologue

IN RAILROADING, more than in any other industry, the little things are of prime importance. True, it is the little thing that counts everywhere, but in railroading, the little thing is EVERYTHING. A misspelled word in a train order might cause the loss of a hundred lives. A repairman might forget to tighten a certain nut, an inspector overlook a little crack in an arch bar—and either case might bring disastrous results.

I remember the rhyme of how a kingdom was lost because a nail in a horse's shoe was loose. Picture it in this wise. Instead of on horseback as in those storied days, the general is speeding toward the front in his private car. The result of a battle rests upon his getting to the scene of action in time to put a newly formed plan into operation. There is a cracked truck pedestal under his car. The pedestal breaks, the train is wrecked, the general is killed, the battle lost, and a nation is snuffed out in consequence.

Again, I recall how a flagman forgot to put oil in his lantern. He returned to his train, leaving the rear unprotected while he filled the lantern. There was a crash. Possibly ten drops of oil would have averted this catastrophe.

Too much stress cannot be laid upon the importance of the little things. In line with the old saying, "An ounce of prevention is worth a pound of cure," and applying it to railroading, we have, "Pay attention to the little things and the big ones will take care of themselves."

The Story

The advent of spring with all of its enchantment was at hand. The birds sang their praises from the rapidly budding trees and the earth breathed forth a warmer, new born air. Even little Millie was conscious that some unseen force was at work. To her the full beauties of spring were like a fairy book and its fairy land, a thing merely to be read about and with only a wish that some day her Prince Charming might come and take her

to that wonderland. True, Millie saw the snow melt away and an occasional sunbeam steal into the dirty tenement streets, but in tenement land the spring of the fairy book was just another day in a life of drudgery. It was just ten hours a day of standing before a big machine on the fifth floor of Eikman's overall factory, a long walk home, an occasional visit from a friend, once a week a picture show. And every Saturday meant a day of reckoning on which she must give up her week's earnings to help support an invalid father, who was one of the many victims of the great devil—Carelessness.

I have pictured for you Millie's environment that you will not censure her too unjustly for what transpires in the story. For not one of us knows what effect our every action has on the lives of those about us. When you drove to the office this morning, did you not very stupidly stall your machine on the street car track? And did you not, while in an angry mood, tell that somewhat insistent motorman that just for his "back talk" he could wait until you got good and ready to move, all the time pretending that the starter wouldn't work. And finally, thinking the motorman had been amply repaid, you leisurely started the car and, feeling very satisfied with yourself indeed, enjoyed the rest of the ride as you never had before!

But that street car arrived at the railroad station a minute late, and five wrathful men watched the 8.10 pull out just as they rushed up to the train gate. The first man muttered something to himself about missing an important engagement. The second, a young man, hastened to the telegraph office and dispatched to a certain young lady the sad tidings that the wedding would have to be put off until the next day. The third man, with quite an audible oath, shook his fist at the fast receding train. For some strange reason the fourth seemed somewhat pleased at having missed the train. While the fifth, a self important little fellow, reported the motorman and conductor for

bringing their car into the station late, and both were discharged by their employers.

Now the motorman had a wife and four little children to support. Work was hard to find and after weeks of hunting in vain, the cry of a starving babe tempted him to steal. He was caught and in an attempt to escape, shot a policeman. The law took its merciless course and he was sentenced to die in the electric chair. And while the wheels of organized charity were moving slowly, the mother and babe died, leaving the three orphans to the care of the State.

You, who delayed that street car for one minute and took only selfish pleasure from your action, threw the entire universe out of order for all of those people and countless hundreds of others, whose actions depended on theirs.

Perhaps you will not now, then, condemn little Millie for looking out of the window and neglecting her machine when the sun happened to peep over the top of the adjacent building and proclaim the coming of Spring, even in that crowded, dirty factory? And you will not blame her because as she reveled in the glorious sunshine, she did not see that little steel tooth break from her machine when the steady flow of scrap cloth became jammed as it was being torn into shreds. Truth is, Millie did not even know what became of this by-product after it left her machine. She only knew it was called waste.

* * * *

Train Number 8 was the pride of the X. Y. & Z. Her steel-tired wheels, as they sang over the rails, repeated over and over their old song:

"I'm never late-e-e-e. I'm never late-e-e-e."

Tonight, as she hummed along, they sang sharp and clear in the still summer air and as Engineer Davis looked back over the splendid train he opened the throttle a little wider, and felt the thrill as she continued to pick up, faster and faster.

To an interesting couple back in the coaches, however, never had a train seemed to travel so slowly. The farm houses appeared to be miles apart.

Every minute dragged like an hour.

"Dick, I'm beginning to believe we'll never get to Merlin. It seems like a month since we left Columbia."

Mrs. Dick Cantor (the name was actually less than 48 hours old) turned from the window to the man at her side, who appeared to be about 23. He sat straight in the seat, shoulders back, his rather boyish face square jawed and muscular, and with an air about him that spoke plainly of the military.

He smiled at his wife as only a lover can.

"You are too anxious to get there, Helen. It is almost a five hour ride yet. Wasn't it great of Jack Dalton to make that offer? It's going to be a great start for us. Did I ever tell you about the collision we had over in France?"

"No, do tell me, Dick," Helen answered eagerly. "It will make the time pass more quickly."

"The story isn't a long one. We were both in the same regiment. I was running a big American locomotive and Jack had a little French switcher, the kind with no cab and only hand brakes instead of air. It was awful to hear Jack scandalize that little engine. The rest of the fellows called it the 'frog.' One night I had a long drag of ammunition cars and we were taking a pretty good grade. As we neared the top of the hill the little 'frog' came over, heading for us, it seemed, at full speed. I whistled, but he didn't stop. I slammed on the air but before we could stop he had hit us. The 'frog' turned over and went into the ditch, hardly even jarring the American engine. We pulled Jack and his fireman out of the mud and they rode back with us. It seemed that he had orders to take a siding near the top of the hill and was speeding along in good old American style when the hand brake chain broke and he just kept on going until he hit us. Shortly afterwards he was assigned an American engine and I didn't see much of him until after the scrap was over."

"Did you answer his letter when he asked you to come out here?" Helen asked.

"No. I thought we would surprise him. He didn't know I was going to be married and he invited me to stay with him."

The conductor, a veteran who had ridden Number 8 since its inception, was coming through the car.

"When are we due at Merlin?" Dick asked him.

The conductor looked at Dick and smiled, a kindly old smile.

"That question is rather undiplomatically put. Number 8 will arrive at Merlin at 1.53."

Helen laughed heartily at her crest-fallen husband.

"He is rather confident, isn't he? Just the same I'd like to see his face if we were a minute late."

"I'm never late-e-e-e. I'm never late-e-e-e."

The wheels sang out their accustomed song, but an unknown and in-harmonious voice now seemed to join in the chorus.

"I'm never late-re-re-e-e. I'm never late-re-re-re-è."

And the engineer looked back and saw a little blaze spurt from the first journal box on the third car.

"Got a hot one," he called to the fireman.

Little Millie, in New York, a thousand miles away, was returning from the once a week picture show. She did not know how that little steel tooth, which months before had broken from her machine, had found its way with a wrapping of oily waste into the first journal box of the third coach in Number 8. Even now it was scratching the smooth, glasslike surface of the journal, working under the edge of the journal bearing and scratching deeper and broader. Hotter and hotter became the journal until the oily packing began to burn. The weird chorus to the wheels' song became louder. The journal began to glow red, the babbitt to melt and run to the bottom of the box. . .

Little Millie tiptoed up the stairway to keep from waking the invalid father.

Helen, swaying gently with the movement of the car, grew sleepy, her pretty head finally dropping over on Dick's shoulder.

"I'm never-re-re-e-late-re-re-re-e."

Engineer Davis looked back again, a shade of anxiety coming over his face. It was still 30 miles to the next stop. . . Two minutes passed. . . The journal bearing began to crumble and break, the while Millie knelt at the side of her bed in prayer, and Helen dreamed about the little home that was to be. . .

Re-re-re-e-e-e."

The song now filled the still night air. The last of the journal bearing fell to the bottom of the box. The journal changed from red to white. A mile passed. Then, slowly the journal twisted and broke. The side of the truck held suspended for a second, then, with a sickening roar, it ploughed into the ties. The truck turned over and the end of the great steel coach shot into the air. There was a grinding of brakes on the wheels as the air set, and, with a roar, half of the second coach crumpled into splinters as the end of the third coach crashed through its roof.

Being railroaders all, we can picture the resulting scene—

Engineer Davis, mechanically, almost as in a nightmare, cutting off the engine and, quickly gathering speed, disappear into the darkness toward the next tower.

The operator frantically calling for the relief train.

A dispatcher cancelling train orders and substituting siding orders to give the relief train right of way.

A sweating, swearing yardmaster trying to switch three trains and the relief train at the same time with one engine.

Then, smoke pouring from the great wrecking derrick, the crew ready, and doctors and nurses hurriedly getting on the relief train as it pulls slowly out onto the main track'

Thus ends the story of a "little thing." It may not please those who expect the "happily ever after" ending. But railroading is a grim game and in railroading, the little thing is EVERYTHING!

The Author, Ray Garrigus

Ray Garrigus, clerk, Car Department, Lima, Ohio, and author of the story "The Little Things," began his railroad career during a

high school vacation in 1916. He started in as a laborer, but was promoted successively to mill helper and coach repair helper; then in 1918 he was transferred to the Car Foreman's office, where he has worked continuously ever since. Mr. Garrigus tells us that he has "never taken to writing seriously" and that this is only his second or third attempt. We believe, however, that our readers will find much of interest in his story.

Ray Garrigus

Safety Section

What They Think of "Safety Drives" on the Western Lines

In an effort to learn from the employees themselves their opinions concerning the benefits of the special safety campaign in April and May last, R. N. Begien, general manager of the Western Lines, asked some of those who took part to write their sentiments regarding it and the benefits that would accrue. The replies were illuminating, some extremely interesting. Here are a few of those sent in:

By S. A. Regan

Bridge and Building Dept., Newark, Ohio

SINCE this last Safety Drive I notice that the men take more interest in Safety. In handling heavy material they do better teamwork, notifying each other of any danger as they handle each piece. They are more careful when working on or about tracks. They also pay more attention to the time trains are due. While trucking material or operating motor cars, the men who showed little interest before this drive have begun to realize that the Company is in earnest, and are impressed with the fact that it is the proper thing to observe Safety.

Some of them still say they are "from Missouri," meaning that they want to be shown by the foreman and others setting them an example by practicing Safety.

By W. B. White

Leading Car Inspector, Newark, Ohio

Now that the campaign is over, I want to express myself as being very much in favor of these special drives. They create an impression upon each employe that is not soon forgotten. It is with pleasure that I can say that we had no accidents in the Transportation Yard. However, we had two violations reported, viz.: a man loading scrap air hose into a wheelbarrow and standing with his back to a cut of approaching cars; also the wheelbarrow was too close to the track; and the other was an inspector getting on a moving train. All of the men are fully in accord with Safety and I feel confident the campaign has made many converts to the Safety cause and its good will be reflected in the future Safety reports of the Railroad.

By F. Dernier

Yard Conductor, Lorain, Ohio

The different employes I meet every night seem to have Safety more impressed on their minds than before this drive started. I think the work in Lorain Yard is being done in a

much more safe and satisfactory way than ever before. Most of the men are taking it seriously and if the new men that come on now as work picks up are instructed and drilled as we are drilling the men now at work, I see no reason why there should not be a great improvement.

Taking the new men in groups and drilling them in Safety as they return to duty this season should be one of the most important duties of the Safety Committees and should give Lorain Yard a good percentage of improvement.

By Ed. Rollins

Road Foreman's Clerk, Garrett, Indiana

We have been able to interest in Safety a class of men who heretofore were blind to the benefits to be derived from such a movement, those who said that the Company alone was benefitted thereby and was proposing the movement from a selfish standpoint. This particular group take more kindly to the suggestions and talks of their fellow workers than they would to that which is suggested to them by the supervising officers.

What "Bulletin 70" Means to Me

By R. Malone

Engineer, Charleston Division

THERE are two thoughts which strike the thoughtful man and woman as they watch the film unfold the story of what "Carelessness" does in the world. First, the tremendous material loss occasioned by failure to Think, and second, the untold suffering brought not alone on railroad men, but on their innocent wives and families. The figures are appalling, and as scene after scene unfolds, with the deadly total mounting higher each month of the year, the careless man must be impressed and must go away firmly resolved in his own mind to practice SAFETY at all times hereafter.

A man is shown in the prime of life, enjoying good health, a good position,

It has been developed that living and working along the lines of Safety is a habit which each one can cultivate if he only makes the effort, the majority of unsafe practices being indulged in by the older and more experienced employes who are hardened to the dangers attending their duties and get into the habit of reckless and unsafe practice. I have generally found that the newly hired and inexperienced employe realizes the dangers accompanying his duties on the Railroad and is on the alert at all times. He is continually cautioned by the employing officer and the rules examiner (on taking his first examination on the rules) about the importance and necessity of observing the Safety Rules. This instruction generally leaves an impression—until he gets out among the older employes in point of service and observes their reckless railroading, with a consequent belief that they are saving time and that he should follow suit.

Our men have been placed on various sub-committees and have been made to realize that the Company has a personal interest in their welfare, that they are important factors in the establishment of Safety practices and in the correction of unsafe practices through proper report to their superior officers.

The greatest benefit derived from this drive, in my opinion, has been the personal contact that has been established between the Company, its supervising officers and its employes, from which the majority of the men will develop the personal interest in Safety which is so essential to the success of the movement.

has a good salary and a comfortable home, happy with his wife and family. Then one day "Thoughtlessness" creeps in, and there's another story to tell of the man who had been doing the same thing for years, caught at last in his own trap. It's wisdom to practice SAFETY first. The Company, as is shown by the film, makes rules and regulations to protect its men from their own careless acts. Disregard of the rules set up as a result of many years' study, brings its own punishment. The Company provides goggles; if a man does not use them, and loses an eye, who is to blame?

Safety is so much a matter of common sense that I cannot see why it

Total Injuries of all Shops Reporting:

January, 200; February, 129; March, 116; April, 78; May, 133; June, 150; July, 207.

should need any argument in its favor. The lesson to be taken from the film is:

Carelessness is more powerful than the combined armies of the world. It has destroyed more men than all the combined wars of the world. It has wrecked more homes than the deadliest guns used in the World War.

Do you know that carelessness costs in the United States alone over \$300,000,000 each year? The victims are taken alike from rich and poor, old and young. Every year thousands and thousands of wage earners are its victims. Your worst enemy and mine is carelessness, and this is simply the result of **THOUGHTLESSNESS**.

In a recent newspaper I read the following, which to my mind is about as near the entire story in a nutshell as anything, and therefore I quote it in full:

You are enjoying good health. That's fine.

You want to remain well. That's natural.

You may be careless. That's possible.

You may have an accident. That's probable.

You sincerely hope not. That's obvious.

Then practice **SAFETY** first. That's wisdom.

Talk Safety

LIKE advertising, Safety, in order to be effective, must be kept continually before us. One advertisement won't forever keep the name of the product before the public. Neither will one Safety drive forever keep us reducing accidents. We've got to talk it all the time.

The need for intelligent cooperative Safety work is greater today than ever before. When we consider that 10 per cent. of all deaths in the United States is due to accidents; that, on the average, someone meets death by an accident every 8 minutes, we cannot help but feel that our own past efforts should be redoubled in the interest of humanity to save suffering and sacrifice.

It is not only necessary for each of us to keep constantly before him the fact that eternal vigilance is the price of Safety; but, further, by always being on the alert to keep another free from danger, we shall feel that we have done all we could to carry out the thought, "**THOU ART THY BROTHER'S KEEPER**."—Anon.

The "Why" of Food

By Dr. G. Carroll Lockard
Medical Consultant, Relief Department

(This is the conclusion of the article on this subject begun by Dr. Lockard in the August issue. The first installment mentioned the five different kinds of food which the "human engine" needs, and discussed in some detail the first class, the proteins, or, as the author called them, "the repair fuels or foods." The other four kinds of food are described here.—Ed.)

Class II—Starch Foods, Sugars, Fats

The second group of fuel foods are those that are burned up in the body, producing heat and energy. These are divided into three sub-groups of (a) starch foods, (b) sugars, (c) fats.

The first two are technically carbohydrates; and a well-known scientist stated that, "the work of the world is done by carbo-hydrates."

(a) Starch foods:

Wheat flour	Rye
Corn meal	Barley
Hominy	Spaghetti
Rice	Potatoes
Oatmeal	Bananas
Macaroni	Beans
Buckwheat	Peas

Besides, the so-called green vegetables, fruits and nuts contain anywhere from 5 to 20 per cent. carbohydrates.

(b) The sugars, as cane sugar, milk sugar:

Corn syrup	Molasses
Candy	Most fruits

(c) Fats:

Cream	Peanut butter
Butter	Lard
Bacon	Oleomargarine
Milk	Olive oil

There is also a very considerable amount of fat in various meats, as pork, lamb, duck, etc.

The need of the body for these fuels depends upon many factors; size, age, amount of work to be done, the air temperature, whether hot or

very cold. For the most part (including some fats) they are readily digested, quickly absorbed, and if not entirely used up by the body, may be stored about the body as fat, or in the organs and muscles as a sugar. The great bulk of the food is made of these substances, and provided that a *generous mixed diet* be eaten, a harmful excess is not apt to be taken. If an excess is supplied, *in the absence of disease*, then the storehouses of the body will become full and the individual will put on weight, and when he becomes over-weight for his age and height (if he is over 35 years) he will thereby shorten his life. "Every inch added to the waist line is a year from the life line." The scales should be frequently consulted, and if over-weight threatens, less fats and sugar, and more vegetables of the green variety should be taken, as:

Lettuce	Cauliflower
Cucumbers	Eggplant
Spinach	Cabbage
Asparagus	String beans
Sorrel	Turnips
Sauer kraut	Squash
Beet greens	Beets
Celery	Carrots
Tomatoes	Onions
Brussels sprouts	Green peas

Those who are under-weight, especially if young, should eat freely and largely of starches, sugars and fats. It should be their effort to get up to their average weight, because under-weight often means under-nourishment, and this frequently affords the "good ground" for bacterial infections such as tuberculosis.

Class III—Water

It seems strange to speak of water as a food, yet it makes up by far the largest part of our bodies, and it must be supplied else we cannot live. As a matter of fact, however long a man may live without food when supplied

freely with water, if he be deprived entirely of water or fluid his end usually occurs in 11 or 12 days, and with great distress.

How much water should be taken depends upon the body build, work and the temperature. A safe minimum would be from 2 to 3 pints; i. e., from 5 to 8 glasses. In health there need be no maximum limit. Modern physiology has shown that there need be no fear of drinking water with the meals. Water taken too freely with meals, does, however, promote insufficient mastication, and rapid eating, both bad habits. And it is a very prevailing mistake to use ice water, as we customarily do in this country, guzzling down several glasses at a time. This cannot but injure the mechanism of the stomach, while as a matter of fact, it affords not as much relief to the thirst as water drunk slowly, thus allowing it to be partially warmed in the mouth.

Class IV—Minerals

Mineral substances form an integral part of the human frame. They enter into the make-up of all the cells, fluids and tissues. They are of numerous kinds and are freely supplied in all of our foodstuffs; so that if any variety at all is taken, enough mineral substances are likewise absorbed.

Certain minerals are of the greatest importance in infancy, and we must be sure to supply them by adding adequate vegetable foods, especially green vegetables, which contain the necessary mineral compounds. Take a single example: the new-born infant will have stored up in its tissues (chiefly in the liver), a supply of iron sufficient to carry it through the major part of the first year or period of exclusive milk feeding. You may know that milk, both mother's milk and cow's milk, does not contain iron. It is rational and right therefore, to give the year old infant other foodstuffs than milk, like broths, green vegetables, etc. If this is not done and exclusive milk feeding is persisted through the second year, then the child becomes pale and flabby, and may have quite a serious anemia, or blood deficiency, due entirely to lack of proper mineral substances, chiefly iron, and this in spite of the fact that it was getting enough food, merely considered as food.

Class V.—Regulating Foodstuffs

These are peculiar in that they have in addition to their properties of nutrients, certain other functions which in some instances are absolutely essential to maintenance of health; in others, acting merely as assistants, useful but not vital.

Naturally, the first group are of the greatest importance. Let us illustrate

from the painstaking and careful experiments made in various colleges upon stock. It has been found that if you fed animals on food selected simply for its chemical valuation, giving them the proper amounts of protein, fats, carbo-hydrates, salts and water, the animals (rats, guinea pigs, calves) in certain instances, would not thrive; they became stunted in growth, or showed other nutritional changes in their furry coat, developed inflammations of the eyes, paralyses, and even death. Yet, if to this same diet certain additions were made, as leafy green vegetables or more especially milk, eggs, outer shell of wheat or the germ of corn, etc., then the animals would live and thrive in a normal manner. These additions did not add materially to the food value, as estimated in calories, but furnished something vital and absolutely necessary to health. Hence these necessary substances have been termed "vitamines," and nutritional diseases arising from their absence in the food, are called "deficiency diseases."

Thus, the scurvy of the old sailing ship days was a "deficiency disease," and experience taught that it could be not only cured, but prevented from occurring by the addition of lime or lemon juice to the diet of "salt horse" and "ship's biscuit." Indeed, the British as early as 1795, required its use on British naval and merchant vessels. In 1897 it was definitely shown that beri-beri, a prevalent disease of the Orient, was due to the extensive use of "polished" rice, and could be prevented by the use of "unpolished" rice. In other words, there was something in the outer covering of the rice grain, making it indispensable as a healthful food.

There is much belief that "pellagra," a disease which has been prevailing for several generations in certain sections of the South, is a deficiency disease. Certainly it seems to arise from a diet poor in proteins, made up chiefly of corn bread and syrup, and without enough milk, butter and green vegetables.

Diets which are liable to produce deficiency diseases are those consisting of preserved foods, canned legumes, like peas and beans, corn, cereals, breadstuffs and with little fresh meat. Wholesome diets should include milk and milk products in generous amounts, eggs and especially leafy vegetables, as cabbage, beet tops, sprouts, kale, spinach, etc. Thus there will be supplied a sufficiency of these mysterious vitamins, for no one knows how they work when present, although the result of their absence is quickly seen.

For this same reason there should be added to the diet of infants, orange juice or tomato pulp, strained, during their first year, especially if artificially fed; and green vegetables early in the second year. Certainly this should not be neglected if pasteurized or boiled milk is used.

The other type of regulating foods are those which aid the proper functioning of the intestinal movements. Man is not supposed to be a strictly carnivorous or flesh eating animal. Neither were his intestines planned for food so highly selected that it leaves little residue after absorption, as bread, potatoes, cereals, which often form the diet of many people. The intestines must have a certain

bulk to act upon, proper intestinal motions, and hence, proper bowel evacuations cannot occur unless this bulk is furnished. In other words, food must not be entirely digested, some must be left over, and foods supplying this non-digestible portion in large amounts are called "fodder foods." Practically all vegetables and fruits belong to this group, principally those like cabbage, sauer kraut, beet greens, spinach, Brussels sprouts, kale, cauliflower, string beans, apples, pears, prunes, dates, figs, oranges, grape fruit; and especially should they be used as an important part of the food intake of those inclined toward constipation.

Cinder Business

(A true story)

Yesterday
The wind blew
A cinder into my eye.
It was the kind of cinder
That gets
Right under the lid
And makes you think
It's as big as a rock.
I pulled the upper lid
Over the lower,
But the cinder remained.
A man came along,
A big, fat man.
He offered
To get the cinder out.
I was reluctant,
For it was my eye
And not his.
Presently he said:
"I godt a clo-ding fact'ry,
"Und my gels
"Gedt many t'ings
"In deir eyess.
"I gedt him out lots of times."
And so, I concluded
To let him try.
In a minute
He had it out.
When I thanked him I saw
He was a kind faced
Hebrew gentleman,
Well dressed,
And he looked as though
He might well be
A factory owner.
I asked him:
"Where did you say
"Your factory is?"
"Fredericksburg, Virginia,"
He said.
"And how
"Do you ship your goods?"
"By water."
"Um-m, hm-m. And do you
"Travel much?"
"Jah, I travel lot,

"Tomorrow I go
"Bei Chicago."
"Baltimore and Ohio?"
I asked him,
"No!" he shouted,
"I don't like dot road!
"I don't rode on him
"For five years, mebbly more."
Then I started to argue
And to boost
The Baltimore and Ohio.
I talked him to the end
Of the block
And around the corner.
At last he said,
"I goin' try him,
"Dot B and O,
"Schust for fun,
"Und if I like him
"I let you know.
"But if I don't—
"I goin' to write
"Your PRESIDENT,
"Und tell him
"Vat a bum rooter
"You iss,
"Und dot you won't
"Let a poor man
"Rode on anudder railroad
"In peace.
"My name is Herr,
"I told you vhere
"My fact'ry vas.
"Rememper vat
"I told you;
"I goin' ride
"Bei your railroad
"Tomorrow!
"Oh, my,
"Budt I go'n'
"To have fun!"

I'll bet so too,
And I'll bet that letter
Comes to me

"Baltimore and Ohio Specification"

Writing in *System* for June, William Hamlin Childs, of the Barrett Company, manufacturers of Tarvia, roofing compounds, etc., in describing the growth of this great business in which he has been a leading factor, says in part:

"A pitch and gravel roof depends for its permanency upon both the material and the workmanship. A careful and efficient workman with poor materials will put on a better roof than a careless and inefficient workman with the best materials in the world."

He then describes that phase of the growth of the business during which the term "Barrett Specification" was adopted and after which the selling of their product under this name meant that they were not only selling roofing materials, but also that they were selling specifications with the materials, and thus guaranteeing to their product proper workmanship and application when used. As Mr. Childs put it:

"Thus an architect or owner could order not merely paper and pitch and gravel but also our specifications as to the manner of laying. This permitted us to see our product into use."

* * * * *

Any railroad can sell transportation. Just this means the mere surrender of money on the part of the passenger or shipper for, respectively, a ticket or freight receipt and getting the passenger or freight to destination. The "specification" as to how the contract shall be carried out—how quickly, how comfortably, how safely, how courteously—depends on the personal interest in handling the contract by the army of employees on the railroad in question.

In some respects at least on the Baltimore and Ohio travelers and shippers appreciate the fact that there is a high standard specification which accompanies the contract. For instance, travelers who have eaten meals on our trains, the superiority of which compels insistent mention in our MAGAZINE, go into our dining cars knowing that the service there has a high standard specification. We fancy that the coal operators along our lines put great faith in the ample facilities of our Curtis Bay Coal Pier against a time of excessive transportation of their product. We know that travelers who use our trains frequently favor our Railroad because they can count on the courtesy of the employees in the Operating Department.

It is possible that every contract made between our Railroad and its customers should carry with it a definite "Baltimore and Ohio Specification," meaning the highest standard of transportation service possible. But this contemplates a personal interest in their work by many,

many employees. In the passenger business it starts with the information bureau and goes through the ticket office and on to the train to the last smooth stop at the passenger's destination. In our freight service it means traffic representatives well posted on rates, routes, etc., and an unbroken line of courteous, careful service from the receiving platform where the Railroad takes the goods to the delivery platform where it surrenders them.

Practically every employe on the Railroad is, consciously or unconsciously, helping define just what "Baltimore and Ohio Specification" means. And the increasingly good opinion which people have of our service is the best encouragement we could ask in making "Baltimore and Ohio Specification" stand for better and better service.

Enlightened Selfishness

We all want to get on. We all want to earn more. The way to earn more is to *learn* more—and then *do* more. Sooner or later, the good worker pulls ahead of the poor worker, just as a well-managed company makes more money in the end than a badly-managed company. The world, after all, pays for results. Knowledge is not only power, but leads to profit.

There is a world-wide trend towards freer competition among labor and towards payment according to output, that is, some form of piecework or extra payments for production over a certain standard. The consequence is that it will be less easy for lazy or incapable men to hold their jobs or to get decent wages. The worker who will fare best will be the one who studies his job most intelligently and acquires the knack and the habit of doing his work most rapidly and efficiently.

Don't make the mistake of imagining that if you throw yourself heart and soul into learning to become a more productive worker all the benefit will go to the company. True, it may appear to, for a time. But just as water seeks and finally finds its level, so will a superior workman. Although it may strike you as very unselfish on your part to increase your ability and your output without extra compensation, it cannot but prove to be enlightened selfishness, since you will have increased your own worth, your own capacity, and your power to command better pay than the fellow who cannot earn as much as you.

Aren't we all willing to pay more for a good suit of clothes or a good pair of shoes than for a poor suit or poor shoes? Very well; employers are buyers of labor, and they, too, are willing to pay more for good labor than for poor labor. Qualify yourself to supply high grade labor work and in time you will get high grade pay.—By special permission of *Forbes Magazine*, N. Y. (Copyrighted 1921 by B. C. Forbes Publishing Co.)

Fire—Servant and Master of Man

Among fire stories the classic of modern times is that of Mrs. O'Leary and her cow, the cow that kicked over the oil lamp that started the fire that burned the City of Chicago in 1871. The moral which we wish to draw from it is that when it started, it could have been put out with a teacupful of water. Once started it defied the efforts of all the people of Chicago and the ample water resources surrounding Chicago, to check it before it did enormous damage.

All fire prevention is built around speed. It was the speed of spans and trios of magnificent horses in the days of the still alarm. Often it has been the speed of the railway train, as in the case of the fire in the City of Annapolis, when fire trucks from Baltimore were rushed to the scene over the Baltimore and Ohio. Now it is the amazing speed attained by motor trucks in the hands of super-trained employes of the fire departments.

Everywhere, always, the demand has been for speed and then more speed.

On the Baltimore and Ohio at places where property values are large, such as at shops and terminals, we maintain permanent night and day fire fighting forces, with headquarters, apparatus, regular inspections, etc. These men never know when they are going to be called upon for a trial test or for a real one, and the records which they have made are most commendable.

But the thing to remember at all times is that the prime essentials in control of our fire losses are, first, super-care in preventing them; and second, alertness and speed in quenching them before they have gotten uncontrollable headway.

A recent newspaper article said that "the fire bringer is the first and greatest of all pioneers on the paths of progress," and a survey of the omnipresence of fire in some form or another in the preparation of all the things which have to do with man's existence, proves this. Fire is man's greatest servant when under proper control. But when it gets the upper hand it is a hard master.

As you see a fire hazard on any part of the Railroad, don't think that it won't affect you personally. You can never tell where such a hazard, unless removed or protected, will strike at the job you are holding down. When you see the fire hazard anywhere or any time, don't fail to remove or report it. It doesn't pay to temporize with fire, servant and master of man.

A Peppy Division

During the No-Accident Campaign on the Eastern Lines, 30 days, August 15 to September 15, the Charleston Division got out two bulletins each day. One kept all employes informed concerning the progress of the campaign. The other was a quotation from remarks of division employes or officers, calculated to stimulate interest in the campaign.

At this writing we do not know how the Charleston Division is going to come out, but if living things up from headquarters and keeping your personnel posted on developments, mean anything in maintaining enthusiasm, Charleston ought to come out on top.

The members of a baseball or football team can't work either intelligently or enthusiastically if they don't know the score. Neither can a team of earnest railroaders striving to cut down accidents. One of the most essential prerequisites to accomplishment is knowledge.

When Lightning Strikes

Of course you recall the old gag about the teacher who asked her class how it was that lightning never strikes twice in the same place and the reply of one bright little boy to the effect that it doesn't "becuz after it hits onct the same place ain't there." Well, Opportunity is something like that. Sometimes it hits you all of a sudden, and if you're the right kind of man you "won't be there" when it comes around the next time, if it ever does. Only, instead of being annihilated when you're struck, you'll be electrified into action and seize your chance in a strangle-hold. The man who discovered lightning hasn't anything on the man who discovers his opportunities in the seemingly petty routine of his every-day job.

—Jerome P. Fleishman in "Uncle Jerry Says."

Bittersweet

Along the public road that meanders in crooked fashion through the county in which I was born, there stands an old mill-pond, surrounded by a grove of trees. Several of these trees are tall and misshapen, but of a growth sufficiently luxuriant to provide shade for the country folk who often stop there on hot summer days to rest themselves on the way from town; and sometimes the check-rein of the harness is loosed and a tired horse is allowed to munch the tufts of grass that are found there.

Two of those trees grow close together, and both are partly covered with vines. About one twist themselves the strong arms of both the Virginia creeper and the poison oak; on the other there hangs the graceful, clinging vine of the bittersweet.

When I was a child, at Christmas time I would take my basket and walk two miles to this spot in order to gather the beautiful red bittersweet berries. And for a long time I wondered why they were called by that name. Finally, I learned that on first tasting the berries or the twigs, they seemed quite bitter, but in a moment more, the bitter taste seemed to turn to sugar in my mouth. This was indeed a strange discovery, yet—when I think of it now—how much this plant is like life's experiences; how much it reminds me of some of the things that have come into my own life; how much like the crimson berries that decorate that gnarled old gum tree by the side of the road they are! Bitter? Yes—but oh, how sweet!

Personal Experience with Government Efficiency

The MAGAZINE office was on the mailing list of one of the principal bureaus of the National Government during and for a number of months after the World War, and through the publicity material it circulated we were enabled to keep our readers apprised of certain developments of interest to all of us.

In some way the MAGAZINE office became listed three times in the addressing cards of the bureau in question and the attention of the bureau was called no less than four times to this unnecessary expense of printing and mailing. But the material continued to come, three pieces of each letter and bulletin arriving as regularly as the mailman.

The MAGAZINE name has also been duplicated on the mailing lists of several corporations, but when their attention has been called to it, a reminder has not been necessary to get them to eliminate the unnecessary mailing expense.

Privately managed concerns are on the jump to take advantage of every possible economy. Not so, apparently, certain bureaus in the Government, where individual initiative and a reward for doing things economically are unknown. If a simple matter like that described cannot be handled more quickly than it was by this particular bureau, may the withering hand of Government ownership never fall on so enormous and complicated a structure as the railroads!

Read the story, "The Transition of Joe Higgs," beginning on page 38 of this issue.

Daniel Henry Jackson, Vocational Board Trainee, Has Found "Bill" Kenneally a Good Pal

DANIEL HENRY JACKSON was born in Terra Alta and went to work for the Baltimore and Ohio in 1909 as a bridge builder in the maintenance of Way Department. He was made a brakeman the same year in Fairmont yard; in 1910 was transferred to Rowlesburg as a fireman; was promoted to engineer in 1914, and with a slump in business was furloughed.

May 25, 1918 found him enlisted in the infantry and a member of the 155th Depot Brigade at Camp Meade. In six weeks he was made a top sergeant and sent overseas with a casual outfit in the infantry branch. He thought he was going to become a member of the famous 42nd or Rainbow Division.

Arriving in France he was spotted as a railroad man, passed the examination for engineer, became a sergeant in the 36th Engineers and was sent to Gievres, France, and put in the transportation service.

One night he was given charge of a train taking materials and men out from an area which had suffered severely from a gas attack. His destination was Saint Nazaire and on the trip down he caught a bad cold. A doctor told him to quit, that it would be dangerous for him to proceed further, but he doped himself up liberally with quinine, got his train through to Saint Nazaire, got his receipt for the 30 cars in the train and was then sent to Field Hospital No. 1. Three weeks later he was dismissed, supposedly cured, and returned to Company C of his regiment. After the Armistice he was transferred to the 25th Transportation Corps and remained in France until June 1919.

Since he has been home he has continued to be in bad health because of his inter-

rupted convalescence in France from the touch of gas which he got in the episode mentioned.

When he got to Camp Lee, Virginia, he was sent before the Director of the Federal Board of Vocational Education there and by him instructed to fill out certain papers which would have enabled him to take up vocational training with compensation. He decided that he wanted to make his own living, however, and went to work at a saw mill at Terra Alta. He lasted only seventeen days before his breakdown. Then he got his papers fixed up with the Federal Board, and as he expressed it, "the first thing I knew I was in training in Baltimore."

His case then became an illustration of a number of cases of men who have been placed for training in vocations for which they haven't had special adaptability. They tried to make him an architect at the Maryland Institute and he was getting more and more discouraged when, in April of this year, the Board decided to look further into his qualifications and see if he

could not be trained for something more suited to him.

"On April 6, 1921," said Mr. Jackson, "they took me over to see S. M. Elder, your lumber agent, who found a place for me to get my training out at Wicomico Lumber Yard. Here I fell in with my good friend, Lumber Inspector William R. Kenneally, a Veteran of 42 years in Baltimore and Ohio service, and who has been unusually kind and helpful to me.

"He tells me that I would now be able to qualify as a competent lumber inspector and although I did none of the actual lumber inspection at Wicomico I have been through all of the ropes and know just how the job should be done."

Mr. Jackson has a high regard for the work of the Federal Board. He is a family man and has been paid a sufficient monthly income by the Government to enable him to keep his wife and children comfortably.

The Federal Board is placing disabled ex-Service men constantly with the railroads and other industries and is making it possible for them to get such training in these jobs as to enable them to work into good paying positions after their training is completed.

How to Analyze Over and Short Reports

By L. M. Brown,

General Foreman, Chicago, Ill.

THE analysis of Over, Short and Damage Reports is very essential for any freight house foreman, as by thoroughly analyzing them, he is always in close touch with the work under his supervision and has an almost perfect knowledge of the efficiency of the forces working with him.

Not only are the results of close analysis interesting and beneficial, but the moral effect on the freight house force is invaluable to the Company as well as to the men themselves.

We have endeavored to get our force at Chicago interested by calling together all receiving clerks and tallymen and holding 10-minute meetings every week, at which we read to them the results of our analysis. We explain to them how this or that man was charged with errors in checking, loading, etc., and how the analysis proved that they were not to blame. It is wonderful to see how pleased those men are to know that they are being "backed up" by their foreman. Of course, at these meetings we show them any errors properly charged against them and take the means to correct them.

Similar meetings are called separately for stevedores or stowmen after analysis of Damage Reports. The various causes of damage are brought up and discussed and the knowledge acquired from these discussions put into practice for future improvement.

Our method of analyzing O. S. & D Reports is as follows:

All reports are held until a week's accumulation is on hand. We first take up the reports covering Overs. These are separated as between shipments found over while moving in the proper route toward destination, and shipments found over while moving in wrong route. The former are usually caused by waybills being mailed to wrong point and the latter are errors in loading by the platform force. The reports covering the overs in proper route are checked against the shipping tickets. This is accomplished easily because at Chicago the tickets are separated according to out-bound cars and filed accordingly.

The car number on the astray waybill is compared with that shown on the ticket. If the car numbers are the same, it indicates that the receiving clerk put correct car number on the ticket and that he balloted the shipment to proper car. The receiving clerks at this station run gangs. We next refer to office copy of waybill. If no irregularity is found, we check against the mailing record. If anything wrong is found, action is taken to avert it in the future. If nothing is wrong, it is reasonable to suppose that the original waybill was mishandled after leaving this station.

Reports of freight over out of route are more easily handled. All that is necessary is to refer to the Shipping Ticket, obtain

Trainee, Jackson and "Bill" Kenneally

Ballot Symbol number, locate the trucker who put the freight in the wrong car, charge the error against his record and check up the ballot clerk to see if he has a record of the error on his check of L. C. L. ballots against billing, and if he made any attempt to correct the error before the car was pulled out of the house.

Short reports are analyzed by first checking up forwarding, seal record against seal record on short reports, but this can only be done on through cars. Reports issued at stations beyond the break-bulk stations can only be checked by referring to loading ballots. If seal records check O. K., we then refer to copy of billing to determine if any notations of shortage at Chicago appear on it. It very often happens that the station issuing the report overlooks these notations and erroneously charges the shortage to us when, in fact, it is an error in expensing on themselves.

If after referring to the billing and shipping ticket, the error is not located, we then refer to the loading ballots, which will show how many truck loads the shipment consisted of and how many packages went on each truck. We can then form a fairly accurate idea as to where the error actually took place.

A great many short reports are issued on account of cars not being made empty at transfer stations. This is proved by the fact that we very often receive short reports from stations and a few days later receive copies of astray waybills showing the freight checked over at some other station loading via the same transfer station and showing the same car number from which short report was issued.

However, the greatest number of reports charged to us in error are due to expense bill clerks at destination points not showing our "Short at Chicago" notations on their expense bills from which the tallymen check the freight.

Analysis of Damage Reports is more or less guess work. There are so many causes that it is very hard to determine the actual cause. O. S. & D. clerks at various stations have their own certain way of showing cause of damage and this same cause appears on nearly all of their reports, proving guess work and that the actual cause is not properly investigated. A great many damage reports are issued showing the goods O. K. and only the container damaged. Such reports should not be issued as they may invite claims that would otherwise not be filed against the railroad.

Our study of the situation develops that the principle causes of damage are rough handling of cars and insecure packages, such as are used for macaroni. It is almost impossible to transport this commodity without damage unless segregated in the car and securely braced to keep it from working its way between other rougher freight while in transit.

However, we go over all reports as ren-

dered with our stowing force and try to correct our mistakes to the best of our ability.

Robbery reports are analyzed in almost the same way as Short reports. The seal records are first checked and if the original seals are not on the report we charge the robbery to the point at which the police seal or other seal is applied. These reports are segregated according to stations, each station's robbery reports being kept together. By doing this we can come very

close to the true facts. We have developed that certain stations show certain commodities, which in our diagnosis indicates that the pilfering was done at these stations. Of course, this is only supposition, but we work on these theories.

We have found this analysis of O. S. & D. reports very fascinating. The further one goes into it the more interesting it becomes and we hope that all freight house foremen get the same amount of satisfaction out of it that we do.

Was Superintendent Brown Trying to Put One over on Us?

WE recently thought that we had received a most valuable picture to add to the Baltimore and Ohio history now running currently in the MAGAZINE, the suggestion coming in the form of a letter dated June 18, from R. W. Brown, superintendent of the Ohio Division. Addressed to the editor, it read as follows:

While at Zaleski, Ohio, a few days ago, the attached print was handed me by a personal friend of Mr. E. W. Scheer, now general manager of the Eastern Lines.

He advises me that it is a very good reproduction of a print taken at the time Mr. Scheer was receiving his first lessons as a mail carrier between post office and depot at Zaleski, this being the first work he performed for the Baltimore and Ohio Railroad.

The old gentleman to his right, Mr. Dan Moriarity, is still living, and breaking in future generations via the mail carrying route.

I thought perhaps you might wish to use this in the next issue of the MAGAZINE. The plot of ground shown in the foreground of the view is known as Scheer's park.

A good reproduction of a photograph accompanies this article and although the figure of the diminutive urchin bears no resemblance to that of Mr. Scheer, we felt that a reading of Mr. Brown's letter describing the picture justified us in believing that this was really a bonafide picture of Mr. Scheer when he started as a mail carrier at Zaleski.

It occurred to us, however, that there was some discrepancy between the fact that this park should have gotten the name of our general manager, Eastern Lines, and that in its attractive setting he should appear as very much of a boy. So inquiry of Mr. Brown developed the fact that Mr. Scheer was instrumental in changing the former indifferent appearance in the surroundings of the station at Zaleski to the pretty view seen in the picture.

This is, however, the scene of the first work for the Railroad of Mr. Scheer. When fourteen years old he started as a mail boy here at twelve dollars a month and his next boost in salary was to 7½ cents an hour.

When he became a general superintendent with jurisdiction over the Ohio Division, former Vice President Thompson suggested to him that the surroundings of the station be beautified, and it was not long after that he arranged to have sod brought from nearby places and the grounds laid out attractively.

The larger figure in the picture is Daniel Moriarity, who started as a trackman on the Baltimore and Ohio, then became track foreman, then pumper and was pensioned in 1912. Mr. Moriarity is still much about the Railroad property and remembers well the early days of Mr. Scheer's apprenticeship at Zaleski. The boy next to him is his grandson.

Scheer's Park, Zaleski, Ohio, with "Dan" Moriarity and his grandson

SEEN AT THE VETERANS' PICNIC AT SOMERSET

1. Anna Scabora and Esther Kish, car cleaners, Pittsburgh Yard. 2. Left to right: R. L. Whittaker, brakeman, Pittsburgh Division; Mrs. Whittaker; William Stanley Whittaker; Mrs. George Zurawski, wife of engineer, Connellsville Division; the mother of Mrs. Whittaker. 3. E. F. Augustine, passenger engineer, Parkersburg, West Virginia, who, with his wife and three children, Virginia, Carl and Russell, motored all the way from their home to Somerset for the picnic; J. M. Garvey, grand vice-president of the Veterans. 4. The Pittsburgh excursion engine, with President Willard's picture on the pilot, and in front, from left to right, George K. Reed, engineer; "Ike" Wood, fireman; W. C. Cox, smoke inspector and president of the Pittsburgh Chapter; H. H. Stork, engineer, Charles Durant, clerk to superintendent; F. Burg, assistant road foreman of engines. 5. A happy luncheon party including Superintendent Van Horn, Cumberland Division; George J. Bell, retired engineer and president of the Willard Chapter, and Mrs. Bell; W. P. May, baggagemaster and J. C. Michaels, engineer, S. and C. Branch; T. R. Brown, Confluence, Pa.; J. R. and "Ed." Zearfoss, conductors, Connellsville Division, and members of their families; Mrs. Heimbaugh. From personal experience the editor of the Magazine can vouch for the ability of the ladies of the party as cooks.

Sing A Song of Somerset

How the Veterans Celebrated at Edgewood Park on August 16

*Sing a song of Somerset where the trains run to and fro,
Four and twenty Veterans all seated in a row.
When the program opened and the bands began to play,
These four and twenty Veterans did make a grand display*

FROM far and near they came, these Veterans of the Rail, and the gates of Edgewood Park opened wide to receive them. Practically every large town on the Baltimore and Ohio was represented among the thousands who assembled here on August 16. Grandfathers and grandmothers; railroad babies—future Veterans—holding tightly to their bottles of milk; mothers and fathers, carrying substantial baskets of lunch; young railroaders with their sweethearts, and those who had none; gay old widowers and sweet young things; firemen and brakemen, conductors and engineers, clerks and trackmen, machinists and superintendents—no walk in railroad life went unrepresented. Coach after coach yielded up its overflowing load, and the on-looker might have wondered if anybody in the whole world had been left at home.

Pulling a train from Pittsburgh came a monstrous engine, decorated in flags and bunting and a large photograph of President Willard; from Connellsville came another, similarly decked in honor of Vice President Galloway, while Senior Vice President Shriver's picture smiled from the front of an engine on the Cumberland train.

As if to interrupt the steady march of the Railroaders from the gates of the park to the auditorium, a dark cloud overspread the sun and extended to the faces of a few doubtful countenances. "Oh!" exclaimed a little maid who was dressed in her best organdy frock, "Do you think that it's going to rain?"

"No," answered an old timer who knew, "John Layton says it's not going to rain today, and you can bet your last box of powder that what John Layton predicts about the weather is all right." And sure enough, when the little lady peeped up at the airplane that went whizzing over her head, she saw a big patch of blue sky, quite large enough to make a pair of overalls for the biggest engineer at the picnic.

Entering the auditorium the first thing that met the eye of the visitor was a group of little boys in white, with band instruments in their hands. Surely these little fellows did not belong to a band! Oh, but they did, for these were the members of the Meyersdale Boys' Band, whose leader is Professor U. D. Miller. The band was organized shortly before Christmas of last year, by Mr. W. P. Dively. Professor Miller says that these boys were fine little fellows to train. Their ages range from 11 to 16 years.

Soon the Veterans' officers and the officers of the Railroad began to assemble on the platform. The band began to play and the

program was under way. The "Star Spangled Banner" brought the audience to its feet, and everybody felt the thrill of expectation that hushes the spectators at a theatrical performance when the lights go out and the curtain rises. Then, as if to add to the handsomeness of the "Baltimore and Ohio boys" who were seated on the platform, Grand President Sturmer announced that the Ladies' Auxiliary of Connellsville wished to present to each one a rose. Proudly these were fastened into each coat lapel, and each man looked as though he had grown fully a foot taller when Brother Sturmer remarked, "Now we are all roses."

The address of welcome was given by Reverend White. Mr. White spoke of the substantial and respected citizenship of Somerset that is represented by the Baltimore and Ohio men of that town. He told of the improvements that had been made in the park itself, mentioning particularly the fact that the drinking fountains had been made sanitary.

"The Veterans," said Mr. White, "need no welcome to Edgewood Park, for we all remember the picnic of last year * * * * * yet, on behalf of the community, the Chamber of Commerce, and of the trustees of the grove, I bid you hearty welcome. I trust that you will have the finest time, the best day imaginable, and I extend to you a welcome back for next year."

Mr. Sturmer thanked him for his welcome, adding that Somerset has become a word to conjure with in the Veterans' household. He then introduced Rev. J. L. Proudfit, who offered a prayer.

President Willard to the Veterans

On account of an important engagement in New York, President Willard was unable to repeat this year the pleasant visit he had with the Veterans at Somerset on July 29, 1920. However, he and some of our other officers were running west on August 17, the day following this year's outing. When they arrived at Wheeling Junction, Vice-President Galloway asked Mr. Willard to go out on the observation end of the business car in which they were riding. He did so, and there, at the place at which they had stopped, was the beautifully decorated engine with Mr. Willard's framed picture on the pilot—the engine which had taken the Pittsburgh Veterans and their friends to Somerset. And in front of and around it were 50 Baltimore and Ohio Veterans, who, on the appearance of the President, raised their right hands to their hat brims in a salute of respect and esteem. Immediately after receiving this gracious tribute, Mr. Willard wrote the following letter, which is reproduced here so that all of our Veterans may see it:

On Line— August 17, 1921.

My dear Mr. Peck:

I am writing this letter to you because I do not know to whom I ought to address it, and I hope you will see that it finds its way to the proper person or persons.

I was very much impressed by the beauty of the decorations on the engine which hauled the Baltimore and Ohio employees' special train yesterday from Pittsburgh to Somerset. I feel especially pleased and complimented because of the manner in which my photograph was used on the front of the engine. The way in which the engine was prepared for the trip indicates not only an interest and pride in their work, but a feeling of loyalty and friendship toward the Baltimore and Ohio Company and its officers, which is most gratifying.

I have always believed that the best results would be obtained when officers and men work together with mutual understanding and confidence in each other, and I have constantly tried since I have been President of the Company, to promote such a relationship. I am confident that such a condition will not only bring greater happiness and contentment to all who are in any way connected with the Baltimore and Ohio service, but will also very greatly promote the interests of the Company itself.

I would like particularly to have the men who took part in preparing and decorating the engine, know of my appreciation of what they did.

Very truly yours,

(Signed) D. WILLARD,

President.

Mr. E. A. Peck,
General Superintendent,
Pittsburgh, Pa.

One of the excursion trains with its outpouring of picnickers

Our vice president in charge of Operation and Maintenance, was next introduced as "a messenger boy of 38 years of service; a man who is still carrying messages, and who today brings to you one of his messages of inspiration and joy—Mr. Galloway, a Baltimore and Ohio Veteran."

Address of Vice-President Galloway

"Brother Veterans, Ladies and Gentlemen," began Mr. Galloway, "I saw a sign, posted near the entrance to this pavilion, which reads, 'Don't Talk.' And it is a good sign for this occasion—you came here to enjoy yourselves. I am glad to be with you today, and hope that you will all have a good time. I shall not detain you long, for I want to give you a chance to meet your friends."

"I am proud to be a Veteran; indeed, I am almost a 'double Veteran,' for on August 23, I shall have been in the service of the Baltimore and Ohio for 38 years. I hope to be here long enough to become a 'triple Veteran.' I love the Railroad work, and as I have told you before, when I leave the Railroad I'm fired."

"Many changes have taken place during the past year. A year ago, I should say, we were in 'high gear.' But at this time there are many men who are unemployed. It has been necessary to curtail the amount of work; this is but a natural result of the readjustment period through which the country is now passing—but—we shall never get through this period of readjustment unless we realize what it means and keep our feet on the ground."

"In the adjustments between the Government and the railroads we hope soon to get enough money to enable us to pay our bills and reopen some of our shops. This means the employment of more men. We expect the Government to settle with us and when this is done, we will take on eight to ten thousand additional men for repairs to locomotives and cars. The Railroad has not the money in hand to do this and this Government settlement is necessary to bring about this stimulation of repair activities. However, I am optimistic about the whole situation, for I believe that we have weathered the worst of the storm, and that we are making a substantial and steady gain. I have every reason to feel encouraged that the situation will improve."

"The Veterans have been a great help. I only wish it were possible to show to the world a photograph of the Baltimore and Ohio family as it is gathered here today. It would be impossible for anyone to be here with you and not to appreciate what you have done. As an officer and as a Veteran, I am proud of the Baltimore and Ohio family. I hope that there will be many more picnics and that I shall receive many more invitations to be with you."

Praise for Business-Getting Veterans

"I want particularly to compliment the Veterans of the Pennsylvania District. I have here statistics which show that nearly 50 per cent. of the business solicited and obtained by the Veterans, was gotten by men on the Pittsburgh and Connellsville Divisions. I wish to compliment especially our Veterans—Harrigan, Wardley, Colligan and Deems. This work of these men has brought to the Railroad over one hundred thousand dollars in revenue. But we are just as hard up for business now as we were when the campaign started; I am afraid that you have drifted back into 'low speed.' See if you can't get in 'high gear' and secure another 1600 loads."

"We are constantly receiving compliments on our service, particularly concerning our passenger service. Recently I had a letter from Mr. Burgess, Assistant Grand Chief of the Brotherhood of Locomotive Engineers, in which he spoke of a

fine, smooth ride that he had taken on the Baltimore and Ohio, adding that he was delighted with our service. I told him that the ride he got was only typical of a ride on the Baltimore and Ohio; that he could get that kind of a ride on our Railroad at any time. Personally, I have ridden on many railroads, and also on railroads in countries other than in the United States, and I can justly say that the ability of our men to handle passenger trains smoothly, is equalled by a few and excelled by none."

"The courtesy of our employees toward the public has won lots of friends and much business for the Baltimore and Ohio. Courtesy is a valuable asset, and we appreciate it."

"I regret that Mr. Willard could not be with you today; had it been possible he would have been here."

"We are proud of our Baltimore and Ohio family and I hope you will enjoy yourselves. I hope to meet many of you while I am here today."

After much hearty applause, E. W. Scheer, general manager, Eastern Lines, was introduced. He said:

"Mr. President, Ladies and Gentlemen, and fellow members: It gives me great pleasure to be with you today at Somerset. A year ago when you held your picnic, my jurisdiction extended only to Cumberland; today it extends a little farther and I am glad to be here and to see so many Railroaders; I never realized that it was possible to get so many people together."

"Your vice-president has told you something of the costs of operation and of the great number of bad order cars and engines that we have. And I believe that you will all be interested in some figures about our operating expenses for 1920. But I won't speak of them in terms of the millions into which they actually run, for when I speak of millions I am like the little boy who came home from Sunday school and asked, 'Dad, how much is a million dollars?' His father looked at him

An attractive view of Edgewood Park and the crowd of Veterans and their friends

The Connellsville Division team trimmed the Cumberlanders, 4 to 0, in a fast and exciting game

a minute, then said, "That's a h— of a lot of money." The next time he came home from Sunday school, he went to his father again. "Dad," said he, "your answer was all wrong; I told the teacher that you said a million dollars was a h— o' a lot of money, and she sent me home."

"For every dollar earned on the railroads there was expended \$.599 for labor, \$.11 for fuel, \$.173 for loss and damage, \$.03 for depreciation and repairs, \$.02 for taxes, \$.045 for hire of equipment, \$.013 for rental on joint facilities, return on investments, \$.01. As a result of the insignificance of this latter figure, the Baltimore and Ohio has no money to get ready for the heavy business which we hope will come this autumn.

"Largely through the leadership and work of our Veterans' Association our employes have secured about 1,600 carloads of freight for the Railroad. This has opened up the way and other railroads are following in our footsteps. Now I am going to ask you to help me in something else. Yesterday we started in on a campaign for the prevention of accidents. One dollar's worth of new business puts 20 cents into the treasury. But one dollar's worth of accidents prevented leaves a whole dollar in the treasury for other purposes; in other words, a thousand dollar's worth of accidents prevented is equal to five thousand dollars worth of new business.

"The campaign to reduce accidents has been started on the Eastern Lines. Each general superintendent is pitted against the other general superintendents; each superintendent against the others; division against division, and yard against yard. Along with this, another effective feature is a "Think and Act Drive," which will include each and every employe who has anything to do with the handling of freight. This drive will be started during this week and will be handled on practically the same basis as the No-Accident Campaign. I ask your hearty co-operation in both campaigns. I have

never appealed to you without receiving your support, and I ask it now.

"I wish you a pleasant day and I am looking forward to another reunion next year."

At the conclusion of Mr. Scheer's address, the Veterans, without any urging, went straightway to the dinner tables. Someone remarked that the speeches must have had a particularly appetizing effect; we cannot vouch for that, but we do know that wherever a dinner was in progress, no Veteran has ever been known to lag behind.

Such a time as they had! Fried chicken, baked chicken, chicken salad, and just plain chicken; jellies and pickles, rolls and biscuits, hot tea and iced tea, coffee and lemonade, fruit punch and ice cream, cakes and pies, and all of the things that go into a hungry railroad man's lunch pail—and then some!

"Don't pass me the cake yet," commanded J. M. Garvey, grand vice-president of the Veterans, "I haven't finished, I'm just getting started."

"I never saw a man eat as much as you do," began John H. Doyle, of Newark.

"Keep quiet, John Doyle, or I'll never name another Ladies' Auxiliary after you," growled Mr. Garvey, while Mrs. Garvey gave her husband a sidewise glance, as much as to say, "Eat as much as you please, J. M.,

but don't ask me to run for the doctor tonight."

"Who is that fat man going along over there?" asked one of the ladies.

"That man," answered another, "is one of the members of Cumberland Shop Band. They're going to give a concert presently, and he will b'ow a big horn. That's what has made him so fat."

After dinner the real fun began. There were so many things going on that one hardly knew whether to go to the baseball game between Connellsville and Cumberland, to listen to the splendid music rendered by the Cumberland Shop Band, or to witness the games, races, and other contests.

The Cumberland Shop Band, under the management of our old friend, "Ed" Warner, gave a fine concert, consisting of about 12 numbers, which were heartily enjoyed. This band deserves special credit for its splendid work, under the able leadership of Frank De Luca. Cumberland is and ought to be proud of these men. At the close of the concert, Mr. Sturmer introduced Miss Jennie Smith, railroad evangelist, who gave an interesting talk in which she made some comparisons of the old and new methods of railroading. "No other boys on any other railroad can excel our boys in courtesy and kindness," said Miss Jennie; "I am as big a tramp as ever, and my boys always take care of me."

Out on the baseball field, the rooters were tearing their very lungs out in honor of their respective teams. Connellsville, however, managed to put it over on Cumberland to the tune of 4 to 0. It was a great old game, and the thousands who watched it felt as though this alone was worth a trip to Somerset to see.

W. F. Underwood, general secretary of the Baltimore and Ohio Y. M. C. A., Connellsville, was in charge of the sports program of the day. Beginning at 1 o'clock on the ball field, and later back of the field, there were contests going on almost continuously from 1 o'clock until train time. There were prizes galore. In addition to the large number contributed by the merchants of Connellsville, 38 were brought
(Continued on page 37)

First Annual Outing of Cincinnati Terminal Employees Attended by 3500

AN epoch in the social activities of the Cincinnati Terminals took place recently, when about 3500 employees, their families and their friends gathered at Cincinnati's famous recreation center, Chester Park, at their first annual outing, General Manager Begien having granted a half holiday in order that all the employees might attend.

Arrangements for the outing were made by a committee consisting of Joseph Beel, chairman; J. J. O'Donnell, W. C. Fisher and W. J. Maloney. Much credit for the success of the picnic was due to the untiring efforts of the chairman and committee in arranging in detail the program for the day: first a popularity contest, and second an elaborate athletic program.

In order to have representation from each department it was arranged to hold a "primary election" prior to the outing, and the employees selected by ballots the candidates, a man and woman from each department. The result of the primary election was that C. E. Pierret and Miss Kathryn Weber were selected to represent the Transportation Department; C. Terhune and Miss Florence Young, Traffic Department; J. M. Burke and Miss Mary Ryan, Mechanical Department, and Thomas Eddings and Miss Helene Herron, Maintenance of Way Department. Through the management of Chester Park it was arranged to have tickets presented for each candidate individually, which would serve as an admission tender on the day of the outing, candidates receiving the largest number of votes to be awarded appropriate prizes. Much enthusiasm was shown in the election, which resulted in the selection of J. M. Burke, general car foreman, as the most popular male employee. His prize was a handsome watch. The popular lady was likewise made the recipient of a beautiful present in the form of a diamond ring, which was won by the truly popular secretary to the superintendent of Terminals, Miss Kathryn Weber. The final result of the ballots cast was as follows:

J. M. Burke.....	620
Miss Kathryn Weber.....	515

Thos. Eddins.....	403
Miss Helene Herron.....	334
Miss Mary Ryan.....	299
Miss Florence Young.....	162
C. E. Pierret.....	140
T. L. Terhune.....	93

The second important feature of the day was the athletic program, which developed the fact that there are many athletes in the Cincinnati Terminals. Added to the events were competitive feats to add humor to the occasion, such as the egg rolling contest which was won by Miss E. Krieger; the peanut rolling contest, won by Miss Gertrude Wehage, Miss Florence Darling receiving the booby prize. The honors in the athletic contests were carried off by B. H. Prinn, signal supervisor, who won the men's running race; hop, skip and jump (running start); and hop, skip and jump (standing start). Miss Clara Schulte, stenographer, superintendent's office, excelled in the ladies' running race, beating Miss Florence Darling to the wire by a few inches.

Running races and sack races were arranged for the boys, 15 years of age and under, and much enjoyment was gotten out of these races by the young hopefuls.

In the Baby Beauty Contest, prizes were awarded, first to Thomas Horton, and second to Helen Horton, who, strange to say, are not related.

Much interest was taken in the ladies' marksmanship contest, Mrs. Thomas Eddings defeating all other contestants. In the gentlemen's marksmanship contest B. H. Prinn beat all comers. The prize waltz honors were rightly bestowed on George Venneman and Miss Mary Ryan, who had to show true form to defeat James Daley and Miss Lucille Baumgartner.

A special program was arranged for the Baltimore and Ohio Veterans. James Hughes, president of the Cincinnati branch, carried off most of the honors, winning prizes awarded for oldest Baltimore and Ohio employee, oldest railroad man still in service, and employee having the longest record of continuous service.

W. L. Allison, 37 years of age, having 21 years' service with the Company, was

awarded the prize for the youngest veteran.

Invitations were extended to the superintendents of the Ohio, Indiana and Toledo Divisions. Many of the officials and employees took advantage of the invitation and added to the success of the outing. Particular mention must be made of R. W. Brown, superintendent at Chillicothe, who won the fat men's race, and the hop, skip and jump. In addition to Mr. Brown we were honored with the presence of G. R. Galloway, O. E. West, "Jack" Maher and W. L. Allison.

Felicitations were received from Vice President Galloway and W. W. Wood, chief of Welfare Department, who expressed their regrets that they could not join the employees on this day.

Observations from the Gyroplane

Mr. and Mrs. J. H. Meyers and daughters, Helen and Margaret, arrived too late to have Margaret compete in the Baby Contest. However, the employees of the Terminals can vouch for the fact that Margaret would certainly have made the winners of the Baby Contest speed up to gain their laurels.

C. E. Fish, Terminal agent, and wife, together with friends, enjoyed the open air vaudeville.

L. A. Cordie, freight agent, was there. It was observed that the piazza in front of the Club House was adorned with his presence. We presume it was Larry's intention to give the young ladies a treat; if so, he succeeded well.

Assistant Agent G. R. Littell won the booby prize in the balloon blowing contest. After trying his hand twelve successive times he gave it up as a lost art.

G. R. Galloway, district master mechanic, and O. E. West, district supervisor of Terminals, were entries in the Rifle Marksmanship contest, Mr. Galloway defeating Mr. West by one point, hitting the extreme corner of the target. Mr. West did not hit the target at all.

Wonders of the Silvery Subway were enjoyed by F. T. Sturtevant, district freight agent.

F. L. Hall, roundhouse foreman, and O. P. Cox, conductor at Stock Yards, took prominent parts in the prize waltz. However, the judges decided they were not prominent enough, consequently they were not awarded prizes.

W. P. Abbott, terminal engineer, George Maloney and W. J. Maloney, tried their arms at making the pig slide. After throwing one hundred balls, one of the little porkers slid down the slide. Maloney claimed he hit the mark, but "Doc" Abbott is sure that the concessionaire manipulated the wire to make the trio really believe they did hit the mark.

R. B. Fitzpatrick, Toledo Division trainmaster, breezed into the park and was the object of a questionnaire presented by a little lady on the grounds. Wonder if "Fitz" answered all inquiries?

Charles Layman spent most of his time at the miniature railroad and went into conference with Toney Damico. The result was that they are going to suggest to the Park Company a number of improvements in the cross-over switches.

Frank J. Nock, major-domo of the day, could not be found, and "Bob" Jennings, generalissimo, was appointed chief of a posse to search for him. He was found at a late hour in the dippy house shaking hands with the wooden lady.

P. C. Stanhope and Fred Stuck arrived early. Fred was carrying something in his arm that resembled an icy-hot kit, but "Pen" explained that it was Fred's athletic raiment and so embarrassed him that he refused to put on his running togs and consequently did not compete in the races.

Walter Darling, road foreman of engines, and family were there—all of them!

P. Marsand, oh, yes, we know him—he is the big fellow that helped Henry Oldenburg win the tug of war. Horrors! We know some one who thought he had the prize tucked away.

The tall slender fellow we see in the distance on the boardwalk around the lake, is George Perry. We cannot say just what he is doing, but we can also see some bathers. Enough!

Trained alligators and seals seemed to attract Frank Rowe and Jimmy Garner, who spent most of their time at this concession.

Anyone that missed Eddie McGinnis' special attraction did not get full enjoyment out of the outing. We saw her. Some girl!

Willie Richter has every indication of a man enjoying an outing, but what we cannot understand is why he walked so slowly around the lake.

Any more? Misses Goetz, Herron, Schulte, Darling, Weber, Bates—yes, some

more—all riding at one time on the Blue Streak. But oh, you Thriller!

George and Harvey Tripp made a careful inspection of the Silvery Subway and as a result of their finding Miss Helene Herron and Gertrude Wehage, refused to ride through the canal unaccompanied. However, the necessary was applied and "all is well that ends well."

"Jim" Kinney gave a demonstration of a French general bestowing the Croix de Guerre, when he congratulated "Jim" Burke on winning the popularity contest.

For some weeks before the outing William Bybee congratulated himself to the extent of telling everyone he met how easily he would win the marksmanship contest, but Bert Prinn trimmed his feathers in such easy fashion that we do not believe that "Bill" now enjoys the odor of gun powder.

Jim Flanagan dropped in the back gate, took a survey of the park and decided that the lights were too bright for a country boy and set sail for Hoovers.

"Tom" Gibbons, Mrs. Gibbons and the little Gibbons enlarged the crowd. Although Tom's candidate was defeated, he appeared to be in good spirits.

What worried "Patty" Donnelly was that not enough of his candidate's votes were falling, but Pat's in good humor.

T. J. Murphy and family were present, representing the Transportation office.

Horace Mueller, the crimson domed Lochinvar from Elmwood Billing Office, became interested in the fish pond and forgot to participate in the prize waltz.

Had the Committee arranged for a prize for the youngest old man on the grounds, "Bill" Fisher would surely have run the gauntlet.

No introduction was necessary—everyone knew the Chairman, who had such a busy day he almost forgot the mess call.

"Merry-go-round" for children, but Joe O'Donnell glued himself to the tall wooden horse and we think had not "Joe" Beel sent out an S. O. S. he would still be riding.

Miss Weber also found untold excitement on the merry-go-round and, as a subterfuge for herself, took Virginia Crandall, the beautiful daughter of C. Crandall, to accompany her. We know that even though Miss Weber's heart does go out to children, her idea of pleasure is centered on a wooden horse.

Charles Pierret, though a defeated candidate at the ballot, was most popular on the grounds.

The defeat of C. L. Terhune as popular candidate was no doubt chargeable to his publicity manager, H. N. Bauer, who was conspicuous by his absence from the grounds. However, we believe if four more of the Traffic Department had been present they would have had enough there to hold a jury box.

On Monday night prior to the outing, Miss Florence Young took a hazardous ride in the thriller and had it not been for the chivalry of "Bill" Fisher and the forethought of Miss Weber, Miss Young would no doubt have met her doom. To thwart any occurrence of this kind on the night of the outing, we noticed Miss Young accompanied by Mr. (?).

Brakeman G. E. Glover

BALTIMORE, Md., May 2, 1921.

MR. C. B. GORSUCH, Superintendent,
Wheeling, W. Va.

Dear Sir—While riding on train No. 43, Wheeling Division, on April 26, I noticed one of the best examples of co-operation and courtesy that has come under my observation for many a day. I was in the smoking car where there was an old man, scarcely able to walk and nearly blind, sitting ahead of me, who was to get off at Hundred Station, W. Va. Before the train reached there, the brakeman, G. E. Glover, came up to the old man and in a kindly manner told him the next station was Hundred, and to take his time in getting off, and that he would carry his large grip and help him off. When the train stopped the brakeman picked up the grip, carried it off the train and assisted this old man off the train as gently as possible. It is so refreshing to see such kindly treatment between men that I thought it no more than right and just to tell you of the actions of Brakeman Glover.

With best wishes, I remain,

Very truly yours,
(Signed) C. W. EGAN,
General Claim Agent.

FROM COAST TO COAST

The growth of the automobile industry is strikingly shown by the recent shipment of a full carload of piston rings all the way across the country, from Baltimore to the Pacific Coast. This car, which contains more than a half million piston rings of nearly five hundred different sizes, was loaded at the factory of the American Hammered Piston Ring Company in Baltimore, and the shipment handled by the Baltimore and Ohio Railroad. This is the first full carload of piston rings ever shipped across the continent, and the manufacturer used the picture of the car extensively in advertising, 10,000 post cards showing the car having been distributed

First Annual Outing, Baltimore and Ohio Welfare Association of Cleveland, Ohio, Chippewa Lake, Ohio, August 6, 1921

By C. H. Groninger, Secretary

ON SATURDAY afternoon, August 6, a bustling, good natured crowd of 300 Baltimore and Ohio employees gathered in the Passenger Station at Cleveland, burdened with baskets laden with all kinds of good things to eat.

At 1.00 p. m. the special train, consisting of seven passenger and one baggage coach, pulled out of the station, amid the shouts, hurrahs and goodbyes exchanged by those who were leaving and the unfortunate ones who were forced to stay and look to the operation of the Railroad.

The First Annual Outing of The Welfare Association of Cleveland had begun.

At Clark Avenue Yard Office, the special picked up 50 additional picknickers, and again stopped at South Brooklyn to augment the happy crowd.

The first event of importance was the distribution of "checkers," first to the kiddies, and then, as the supply was more than adequate for them—to the young ladies, all of whom generously divided with the men.

Good natured bantering, singing and exchange of visits between coaches were indulged in and the trip ended at Chippewa Lake at 3.00 o'clock.

The train was met at the station by 50 fellow employees who had preceded us in their automobiles (we'll be magnanimous and include the Fords). We had arrived. On with the fun!

After the lunch baskets had been put in safe keeping, the crowd gathered to view the program of athletic events, which was in charge of "Tom" O'Hara, our esteemed foreman, Columbus Road Freight Station, with J. C. Kimes and G. R. Littell, as judges, and Captain Rowe as official starter.

The younger blood competed in the first event, a 100-yard race for men, and out of a field of 25, Charles Metro proved the speediest, winning \$2.00, with L. K. Hobson as second, winning \$1.00.

Let us draw the curtain long enough for the ladies (some of them) to remove their shoes and we will allow you to view a scene unrivalled for beauty and color—15 beauties lined up for the 50-yard dash.

Out of the riot of color, red began to creep forward, with light blonde a close second. Miss Tessie Pembroke, carrying the red, proved to be the fleetest of foot and won the first prize of \$2.00, while Miss Betty Horkey, the blonde, received the second prize of \$1.00.

It was then up to the committee to convince 10 or 12 men that they were really fat and entitled to enter the fat men's race, which you will agree is a mighty delicate proposition to handle. John Pluck, chief clerk to the superintendent, despite the fact that he was the fattest man to enter, won

handily, with our friend "Bill" Carpel a close second. First prize, \$2.00; second prize, \$1.00.

Convincing men that they are fat may be a delicate matter to handle, but anyone who succeeds in inducing 18 or 20 women to admit the fact before a crowd of people, is in our minds a genius in the art of gentle persuasion. Brother George H. Smith pulled this little stunt and the 50-yard race for fat ladies was on. Miss Helen Dunlap crossed the tape first, closely followed by Miss Franz. First prize, \$2.00; second prize, \$1.00.

The tumbles of the contestants in the sack race for men afforded quite a bit of amusement, and Charles Metro, winner of the 100-yard race, hopped across the tape first, winning \$2.00, with Mr. Stobbe second, winning \$1.00.

The ladies' 25-yard egg race was delayed while the ladies looked for teaspoons with which to carry the eggs, and to give "Tom" O'Hara time to dethrone an enterprising hen who saw a chance for a family in the dozen of eggs lying in the grass.

The race was finally run, Miss Franz arriving at the tape first, with her egg intact (it wasn't hard boiled, either), and Miss McLaughlin second. First prize, 1.00; second prize, \$.50.

The first prize of \$2.00 in the three-legged race for men was won by Messrs. Stobbe and Riley, with Messrs. Krogg and Carpel dividing the second prize of \$1.00.

The tug-of-war was won by the Shopmen's team, composed of Messrs. Riley,

Keeley, Hobson, Stobbe, Postance, Steiner, O'Callahan, Homen and Fish. The victory netted each man and the coach \$1.00.

The ladies' tug-of-war was won by the team composed of the following: Miss Bennett, coach, Misses Smith, Gasser, O'Malley, Karr, Lowen, Stauffer, McLaughlin, G. Stauffer and Franz. Each lady got \$1.00 for her effort.

The 50-yard race for boys under 16 was won by George Littell, son of our terminal agent. Prize, \$1.00.

The next race, open to girls under 16 years of age, was won by Miss Ella May Anderson, prize, \$1.00. The committee had a rather difficult time preventing some of the girls (?) who have been 16 years old for about 5 or 6 or 8 years, from entering this event, but thanks to the diplomacy and tact of this same committee, no feelings were hurt and the eligibility list was not tampered with.

Mr. Hobson won first prize and Mr. Riley second, out of a field of 18 in the men's ball throwing contest. First prize, \$1.00; second prize, \$.50.

Thirteen must be Miss Esther Elsner's lucky number, for it was out of a field of contestants of this number that she won the ball throwing contest for women, adding one dollar's worth of things to her "hope-chest." Miss F. Bennett won the second prize of \$.50.

Two indoor baseball teams, one from the shops and the other from the Passenger-Freight Station, hereinafter known and designated as the office team, then played a hotly contested five-inning game.

The score was 0 to 0 in the first part of the fifth, when "Tom" O'Hara came to bat. He singled, stole second, took third on an infield out by Agent Littell. "Tom," on his toes as usual, scored on a short passed ball by the catcher, making an excellent

"Inasmuch as Ye Have Done It unto One of the Least of These—"

By G. Fred Miller

Magazine Correspondent

In June of this year, we received through J. S. Murray, assistant to the president, a circular regarding the Family Welfare Association, listing ten cases of families in need of help because of unfortunate home conditions. The circular was bulletined, as usual, and immediate voluntary contributions by the office force amounted to \$61.00.

An entirely voluntary movement was then started by the clerks to adopt one of the families, that is, to contribute sufficient funds each month to take care of their wants. The plan was suggested to Mr. Grice, our assistant auditor, who in turn informed Mr. Murray. Mr. Murray pronounced the plan a splendid one, and advised that it was sincerely appreciated by all concerned.

The plan calls for a monthly contribution of twelve cents per capita on the part of the clerks interested, and takes care of family No. 10, as shown on the Family Welfare Association Circular, as follows:

"Family No. 10. A widow with seven children aged 14, 12, 9, 7, 4, 2 years, and 2 weeks, takes in laundry by which she earns \$2.00 a week. The oldest child, a boy, earns \$7.25 a week. The family must have an additional \$5.00 per week."

fadeaway slide into home base, which proved to be the only and winning run of the game. Three cheers for "Tom!" And he was playing right-field for the office team.

Charles Metro, on the mound for the office team, pitched excellent ball, allowing but two or three scattered hits.

The 1 to 0 victory for the office team netted each player on that team \$1.00.

A drizzling rain fell all during the game, and immediately after it the storm broke, rain falling in torrents, turning the picnic grounds into a small lake, the crowd scattering for shelter. It rained steadily for about an hour, then cleared up quickly, and the ardor of the picknickers was not destroyed. After the supper had been eaten, dancing and boating were enjoyed until 9.00 o'clock, at which time the special train left for Cleveland.

But the fun was not over.

On the way home, the spirit of the crowd soared, little groups gathering in the coaches where song after song wassung. The Welfare Association made pleasant the end of a very enjoyable day by distributing, on the homeward journey, roasted peanuts in generous quantities, and a little later, presenting each person a box of delicious chocolates.

Have You Heard of the Freight Claim Department's School of Instruction?

There May Be a Suggestion in This for Other Departments

By Margaret Talbott Stevens

Associate Editor

ON THE occasion of my first visit to a session of Congress, when I was about 12 years old, I came home sadly disappointed because of the behavior of the congressmen. Why, they sat there laughing, talking, gathering about in groups to discuss something, and came to order only when it was time to vote. And the poor speaker, so it seemed to me, was doing his very best to endeavor to gain the attention of these listless men. Indeed it was disrespectful, to say the least. And these were the men who made the laws for our great country! Indeed when I grew up I was going to do something about it. I would be a suffragette, and by all that was good and gracious, I'd show them something. The very idea!

It was with great dignity and determination that I carried my troubles to my teacher on the next morning. And that good gentleman, promptly and without respect to my feelings, proceeded to relieve my poor little brain of its illusion, laughing at my plans and wholly upsetting what had seemed to me a great inspiration. He told me about the wonders of the *Congressional Record*, the paper published each day, which gives the details of the bills passed. Then he said that, although the congressmen did not appear to be giving their attention, they all knew just what was going on, and many of them had almost memorized the bills.

The special arrived in Cleveland about 11.15 and after joyous goodbyes had been shouted, the merry crowd slowly drifted to their homes, tired but possessing that satisfied feeling that only comes after a full and pleasurable day.

Too much cannot be said in appreciation of the efforts and success of the Picnic Committee, composed of: George H. Smith, chairman; "Tom" O'Hara, T. F. Koons, E. M. Tuttle, F. Seitz, W. McCormack, John Hack, Miss M. Lorenz and Miss G. Totten.

To the chairman, Mr. Smith, goes the biggest share of the credit, for it was his untiring efforts and labors which made possible the great success of the outing.

We want to take this opportunity also of expressing appreciation, on behalf of every employe of the Cleveland Terminals, to our officials who enabled us to secure the special train—Messrs. Kimes, Green and Hoffman. The picnic committee and the whole bunch thank the voluntary train and engine crew for their services. They were: Engineer Carr, Fireman Wood, Conductor Hert, Brakemen Bumgartner and Carpenter.

It was a great day and we all look forward to our Second Annual Outing next year.

where there would be only a few people present and interested, because they knew that they could get the information in tomorrow's record. But such was not the case. These pupils are anxious to get the information first hand, and if there is a more attentive group of listeners on the Railroad than the members of the Freight Claim Department, we'd like to know where to find them. There is every indication that they derive much benefit from these weekly lectures, which they must find interesting, or you would never see men and women willing to spend an hour of their own time at that period of the day when mind and body are most fatigued. Moreover, in order to get this information, they delay their own dinner hour, for the school begins at 5.00 p. m. and usually lasts for an hour. The men and women who will stand up, as many must do, for that length of time on a warm afternoon to listen to a lecture are the kind of people that we can depend upon to be thoroughly interested in their work.

On this occasion, there were about 75 present. There were young men so interested—but let me illustrate with the case of one of them—one young claim investigator, who escorted a certain lady home from the meeting on that evening, and who entertained her all the way by explaining the various methods used by investigators to cut down claims. And the journey was 25 city blocks! And they *walked* all the way!

There were men in their prime who were already graduates from the school of experience, and there were a few of the younger boys of 50 years or more, who appeared to be more keenly interested than ever in learning new phases of their work.

(Continued on page 37)

Coal Consumption, Passenger Trains, Cost about \$4,000,000 for 1920

Engineer Wayman and Fireman Williamson saved more than 50% of average consumption on their run. Think what this would mean if equalled by every engine crew!

By W. L. Robinson

Superintendent Fuel and Locomotive Operations

On April 12 Engineer Wayman and Fireman Williamson, Wheeling Division, engine 5007, train 56 with five cars, made the run from Wheeling to Grafton without taking water enroute. No coal was taken at Grafton and the return trip was made on train 51 with eight cars, Grafton to Fairmont, and seven cars, Fairmont to Wheeling, on a total consumption for the round trip of 14,500 pounds. This included the coal used in maintaining the fire at Benwood from time of coaling on arrival from previous trip, and the coal used in maintaining fire in terminal at Grafton during the layover.

This record indicates a performance of 11.9 pounds of coal per car mile, which is less than half the average coal consumption in passenger service for the division as a whole, as shown by the records of past performance. Good terminal performance as well as good road performance is indicated by this record and all concerned are to be congratulated on the results of their good work.

THE BALTIMORE AND OHIO RAILROAD COMPANY

Relief Department—Advisory Committee

Conducting Transportation Department

L. W. GRAHAM	Operator	Kanawha Station, W. Va.
C. H. CRAWFORD	Yard Brakeman	Gibsonia, Pa.

Wagner, Conrad	Machine Operator	Motive Power	Cumberland	July 1, 1921	51

* Exact date of death unknown

Pensioners' Roll of Honor

*Oh, blest retirement! friend of life's decline—
Retreat from care that ever must be thine;
How blest is he who crowns, in shades like these,
A youth of labor with an age of ease.*

GOLDSMITH—"The Deserted Village"

William C. Monroe

William C. Monroe, colored, was born in Gloucester County, Virginia, on May 8, 1852. He is the son of James and Betsy Monroe, who, during the Civil War, were taken to Richmond and sold. There were three brothers and three sisters. William's master was a Baptist minister, William Wyatt. Later he was sold to a Mr. Winston, of Bedford, Virginia. Then he was taken away from him for four years.

William rode General Lee's horse on the tow path from Lynchburg to Richmond. Of his life William says:

"I was married three times. My first wife was Mary Henderson. This union gave us four boys and three girls; one boy

died, the others are working for the Baltimore and Ohio.

"My second wife was Elizabeth Barnes, and my third and present wife is Bridget Berryman.

"As a boy, I often played in General Washington's cave at Yorktown.

"When I grew up I went on the sea until 1893, when I went to work for the Baltimore and Ohio."

William served as janitor, truckman and stevedore. He was permanently injured in January, 1914.

Herbert S. Armor

After having spent more than fifty years as agent-operator, Herbert S. Armor has been granted a pension.

Mr. Armor was born in Laughlinton, Pa., on August 19, 1851. He attended the winter schools of his home town until he was 13, when he was sent to an academy, where he spent two years. After his graduation he entered his father's store at Laughlinton as clerk and assistant postmaster. A chain of circumstances arose during his 19th year, which presented him with an opportunity to enter the field of railroading as a telegrapher at Oil City, for the Allegheny Valley Railroad. After a year at West Penna Junction, he was transferred to Foxburg, Pa., then a new oil town. Here he acted as assistant to the agent. Six years later he was appointed joint ticket agent at that point, for the Allegheny Valley Railroad and the Foxburg, St. Petersburg, and Clarion Railway, with extra duties of train dispatcher for the St. P. and C. R'y, then a narrow gauge.

On May 1, 1878, he became agent at St. Petersburg, where he has been ever since. During this half-century of service, Mr. Armor has never been reprimanded. When asked for the principal reason for the unusual fidelity which he always displayed, he replied:

"The brotherhood of man is responsive to call in whatever field of endeavor you

OUR HATS OFF TO THESE PENSIONERS!

1—David F. Carver. 2—James P. Raney. 3—Benjamin F. Sigafoose. 4—Herbert S. Armor. 5—A. R. Sperry. 6—Amos Bryner. 7—George W. Way. 8—Joseph H. Spicer. 9—William C. Monroe. 10—P. J. Mulqueeny. 11—Eldridge M. Dustin. 12—L. Brill.

may enter. When I was a boy, I discovered that I was a servant in my father's store, and that his success depended upon my faithfulness to his interests; in that I have never faltered. Now the secret is yours."

Mr. Armor is reminiscent of the many events that occurred during his railroad career; he has promised a series of articles for the MAGAZINE which deal with that great army of men with whom he worked in the early seventies.

Abraham R. Sperry

Abraham R. Sperry, retired ticket agent, entered the service of the Baltimore and Ohio in May, 1882, as agent at Mountain Lake Park, Maryland. He held this position for 29 years, or until March, 1911, when at his own request, he was transferred to Harpers Ferry, where he served as cashier. In 1915 this position was abolished, and Mr. Sperry was transferred to the passenger department as clerk. He retained this position until he was made ticket agent, on March 1, 1920.

Although Mr. Sperry is hale and hearty at the age of 70, he believes that he is entitled to a rest. He and Mrs. Sperry will visit among their children. Mr. Sperry's long service on the Cumberland Division has won him many friends, all of whom wish him many years of happiness.

Benjamin F. Sigafoose

Benjamin F. Sigafoose, pensioned machinist, was born at Brunswick, Md., on August 7, 1851. He attended school, then worked on the canal until 1891, when he entered the shops at Brunswick as machinist. Here he has worked until this year, when he was pensioned.

Mr. Sigafoose has a wife and 11 children living.

Joseph H. Spicer

Joseph H. Spicer, pensioned tool room man, was born in French, West Virginia, on October 6, 1855. Here he attended public school, then worked on his father's farm until he reached the age of 26. Then he went to Piedmont, West Virginia, where he entered the service of the Baltimore and Ohio as blacksmith helper. A month later he was transferred to Keyser, as tender repairman. Here he worked for about 15 years, when he was transferred to the Cumberland roundhouse, where he worked for about 18 years more. He was made machinist helper, and soon was given charge of the tool room, where he continued to work until he was retired on July 1, 1921.

James P. Raney

James P. Raney, former section foreman, was pensioned on June 15, this year.

Mr. Raney was born near Hancock, Maryland, in 1854, the eldest child of Michael and Mary Raney. He worked on a farm until his eighteenth year, when he entered the service of the Baltimore and

Ohio as trackman at Rockville. In the autumn of 1879 he was made foreman and sent to Point of Rocks. In 1884, he was transferred to Kensington as track foreman. In 1917, he was made tie inspector between Parkersburg and Philadelphia. In 1919, he went back to his work as track foreman.

When Mr. Raney's name was placed on the pensioners' list, he received the following letters, of which he is justly proud:

THE BALTIMORE AND OHIO RAILROAD
COMPANY

Office of the Vice-President,
Operation and Maintenance

BALTIMORE, MD., July 8, 1921

JAMES P. RANEY, Esq.,
Kensington, Md.

My Dear Sir—It has come to my attention that you have been placed on the retired list of the Baltimore and Ohio Railroad Company after having served the Company for a period of forty-eight years, and I wish to express to you my personal appreciation of your long and faithful service.

While you are no longer actively identified with the railroad work, I hope you will feel that you are still a part of the Baltimore and Ohio family.

With best wishes for health and contentment, I am,

Very truly yours,
(Signed) C. W. GALLOWAY.

THE BALTIMORE AND OHIO RAILROAD
COMPANY

Operating Department,
Maryland District

BALTIMORE MD., April 25, 1921

Mr. JAMES P. RANEY,
Section Foreman,
Kensington, Md.

Dear Sir—It was a source of much pleasure for me to approve and forward to the Management today, for their favorable consideration, your application for pension.

I note that you have been with the Company for forty-eight years, which is, indeed, a splendid record and one of which to feel proud, and I desire to take this means of extending to you my sincere congratulations and to wish you much health, happiness and prosperity.

Yours truly,
(Signed) R. B. WHITE,
General Superintendent

Patrick Mulqueeny

Patrick Mulqueeny, pensioned car inspector, was born in County Claire, Ireland, on March 13, 1851. He came to America in 1871, where he entered the service as water boy at Niles, Ohio. The next year he was made watchman; in 1876, fireman; in 1881, night foreman; in 1887, brakeman. He worked both ends of the train, but because of the ill health of his wife, he had to give up this work. He was made car inspector in 1889. He worked in this capacity until 1914, when he was furloughed and placed on relief, because of his eyesight.

Amos Bryner

Amos Bryner, pensioned signal lamp tender, was born on March 5, 1855, at Ohio Pyle, Pennsylvania. He first entered the service of the Baltimore and Ohio as laborer on the gravel train, under Foreman Michael Hogan. Eight years later he was transferred to the section as trackman. In 1889 he moved to South Connellsville, where he was employed as trackman, foreman, assistant foreman, and lampman, successively. In 1916 he became disabled.

Loftus Brill

Loftus Brill, pensioned track foreman, was born at Salesville, Guernsey County, Ohio, on December 18, 1855. He attended public schools here. At the age of 18, he began work as section hand on the Newark Division. In 1890 he was promoted to foreman at Eldon, Ohio. This position he held until the time of his retirement.

Mr. Brill has been married twice, his first wife being Miss Rose Johnson, who died in 1888, leaving three children. His second wife is Miss Rhoda Johnson.

Eldridge M. Austin

Born in Monongalia County, West Virginia, on April 26, 1856, Eldridge M. Austin, came to work with the Baltimore and Ohio in 1886, as laborer, at Little Falls, West Virginia. He helped build up the roadbed of his section for 35 years. He says that he finds it hard to give up his life's work, and that his heart is still with it. Whenever he sees a fire on the track, or anything happening in which he can be of service, he gets right on the job as he did in years gone by.

David Carver

David Carver, pensioned track foreman, was born on December 22, 1854. He came to work with the Baltimore and Ohio as bridge hand, on November 15, 1873, on Bridge No. 117, Mt. Crawford, Shenandoah District. Here he served until June 12, 1883, when he was promoted to section foreman on the same section, remaining here until January 31, 1920.

George W. Way

George W. Way, pensioned trackman, was born on May 24, 1854, near Turkey City, Clarion County, Pa. In 1865 he made the acquaintance of a Miss Manda Berlin. He liked the name of Manda, but was not particularly fond of the name of Berlin. He disliked this name more and more as time went on, so, one day he decided to do away with it by changing it to Way. This he did in 1875.

After hustling along for eight years, he concluded that he would better make a little better provision for his family. This resulted in his employment with the Baltimore and Ohio (then the Pittsburgh and

Western), at Turkey City, as laborer, under Section Foreman Edward Murphy, in May, 1883.

After 12 years of faithful service as track laborer, he was promoted to the position of relief foreman. Two years later he was placed in charge of the Knox section as foreman. This position he held until June 1, this year, when he was retired.

During his many years of faithful service, Mr. Way has seen many changes in the vicinity in which he was born. Back in the "narrow gauge" days, it was a common occurrence to see the roads in that section tied up for several days because of heavy snows; those days are now but memories.

Three children were born to Mr. and Mrs. Way, two boys and a girl. One son is deceased. Mr. and Mrs. Way are the proud possessors of six grandchildren.

School of the Freight Claim Department

(Continued from page 33)

Then there were the girls, bless their hearts! We're not going to tell their ages, but we were mighty proud to see them there.

The meeting was called to order by Freight Claim Agent Glessner. He introduced the writer, who endeavored to thank those assembled for their cooperation with the MAGAZINE and to tell them of the benefits that might be derived from a school such as this one.

Mr. Glessner then gave a talk about the prevention of freight claims, setting forth extracts from the American Railway Association, Freight Claim Division, Circular No. F. C. D. 68. Of particular interest were his remarks concerning losses through robberies, rough handling, loss of entire packages, defective equipment, and delay.

F. L. Schepler then called attention to Bulletin No. 32, issued September 11, 1919, concerning the damage to shipments because of rain and because of improper handling. He urged the importance of careful checking at storage warehouses and the proper protection of shipments in the interest of the carrier as well as that of the shipper. He also called attention to a pamphlet issued by the general superintendent of transportation concerning the proper loading of automobiles.

Mr. Schepler then introduced J. D. Clarke, superintendent of transportation, who addressed the school on the subject of Transportation. He gave the definition of the word "transportation" as follows: "Transportation in its limited and departmental application generally relates to car handling, supply, restrictions, freight, passenger and express train movement, and the regulation and supervision of car use . . . Transportation in its broad sense relates to the whole scheme of hauling commodities and peoples and necessarily embraces construction, finance, law, operation—including traffic accounting and executive direction."

This being such a broad subject, Mr. Clarke was only able to touch upon some of the vital points which might be of interest in claim prevention. These included Car Use, Condition of Cars, Car Supply, Less Carload, and Claims on Carload Shipment of grain.

Sing a Song of Somerset

(Continued from page 29)

from Pittsburgh and others from Cumberland. It finally came to the point that the supervisor ordered those of the indestructible kind tossed into the air for free-for-all scrambles. And the prizes were worth contesting for, too.

Winners in the events which were listed by the record keeper were the following:

Fifty yard dash, boys 11-16—First, Walter Shoffle, Somerset; second, Chester Apora, South Connellsville.

Seventy-five yard dash, boys 16-20—First, X. C. Reese, Pittsburgh; second, John Crouse, South Connellsville.

Fifty yard dash for girls, 8-11—First, Martha Calomar, Cumberland; second, Catherine McCoy, Connellsville.

Fifty yard dash for girls, 11-16—First, Farrella Weaver, Connellsville; second, Katherine Hopper, Pittsburgh.

Fifty yard dash for girls, 5-7—First, Thurza Keile, Pittsburgh; second, A. Dale.

Fifty yard dash for women under 30 years—Mrs. J. Bittner, Connellsville.

Fifty yard dash, stout women over 30 years—First, Mrs. W. H. Gilben, Somerset; second, Mrs. W. J. Curtis, Connellsville. The winners are sisters.

Fifty yard dash for men over 60—First, T. H. Edmonds, Connellsville; second, J. W. Pile, Coleman, Pa.

Seventy-five yard dash for men over 200 pounds—First, S. J. Burns, Pittsburgh; second, H. L. Ashe, Connellsville; booby prize, A. H. Patterson, Connellsville.

Marshmallow race for women—First, Madeline Gregg, Connellsville; second, Mildred Dawson, Connellsville.

Girls' hoop race—First, E. Weiser, Connellsville; second, T. Kerlen.

Blind-folded race, girls from 10 to 15—First prize, Rita Cripelfield, Rockwood; second, J. Gaskel, Connellsville.

Three-legged race for men and boys—First, Walter McClintock; second, Raymond McClintock.

Needle-threading and button sewing contest for men—First prize, H. Ansell, Connellsville; second, E. H. Gearhart, Connellsville.

Needle threading and button sewing contest for women—First, Mrs. G. Baer, Meyersdale; second, Mrs. A. C. Glessner and Mrs. Wiltrout, both of Connellsville.

Nail driving contest for women—First, Ida Sheeser, Mrs. Mortimore, Mrs. E. W. Heavener, all of Connellsville, and Mrs. Baker, of Somerset; second, Mrs. Marie Brindlinger, Pittsburgh; Mary Scabora, McKeesport; Mrs. H. G. Lepley, Meyersdale, Mrs. R. D. Cunningham, Mrs. Jessie Graft, and Mrs. J. A. Weissel, of Connellsville.

Nail driving contest for men—First, C. Brindlinger, Pittsburgh; second, M. H. Kuhlman, Poplar Grove, and W. J. Ward.

He Told the Congregation About It

Mr. E. V. BAUGH,
Superintendent Dining Cars,
Baltimore and Ohio Railroad,
Baltimore, Md.

My Dear Sir—Dr. E. F. Lee of New York City, associate secretary, Board of Foreign Missions, Methodist Episcopal Church, a great speaker and leader in the Centenary movement, a man with a great experience in the world-war over seas, and an extensive traveler of the States, filled the pulpit at First M. E. Church, Garrett, recently.

In his introductory remarks, he praised the service of the Baltimore and Ohio Railroad, and added that in all his traveling he has found the "BEST DINING CAR SERVICE" on the Baltimore and Ohio Railroad.

Being an employe of the Baltimore and Ohio Railroad, his favorable remarks pleased me greatly and Dr. Lee gave me the privilege of sending on this good word.

Respectfully,
(Signed) J. A. ENGSTROM,

Engineer, Chicago Division.

P. S.—If you so desire, this letter may be used for the Baltimore and Ohio MAGAZINE.

Women's Department

Edited by MARGARET TALBOTT STEVENS

September

*All the glory of the Autumn seems to gather 'round today,
All the colors from the woodland, all the fragrance of the hay,
All the fruits are ripe for harvest, all the skies are blue and clear,
All the purple asters blooming, when September days are here.*

*Then you hear Bob White a-calling through the early morning air,
Waking up old Neighbor Cricket from his home just over there.
Humming birds a-sipping nectar from the primrose by the hedge,
While the dragon-flies are hovering o'er the milkweed and the sedge.*

*Goldenrod is heavy laden, wild grape clusters scent the breeze,
As their fragrance from the woodlands comes a-floating through the trees.
Oh, September is a gay time when the harvest moon grows bright,
When old Autumn comes a-stealing, and the stars peep out at night.*

The Transition of Joe Higgs

or

"Cleanliness is Next to Godliness"

Cartoons by Robert L. Heiser

ACCORDING to custom, Joe Higgs closed his grocery and general merchandising store at seven o'clock, or thereabouts; that is, he locked up his dusty show-case and drew a faded green cambric cover over the equally dusty shelves, on which he kept everything from cold cream to mousetraps. Then he would proceed to ensconce himself behind an old bamboo screen on the store porch to wait, as he expressed it, "for whatever might turn up."

Of course, if some young lady of the village would come along and declare that she was awfully sorry, but indeed she had forgotten to purchase a spool of thread in the afternoon, and that she needed it for her new gown, and wouldn't Mr. Higgs please let her have a spool of number 60, white, that gentleman would straightway enter the store, push aside his green cambric curtains, and search among his cans of Best-Ever Syrup until he found the desired article. Of course, he flattered himself that the young lady had purposely postponed her trip to the store in order to have a chat with him.

Situated on a branch railroad, about twenty miles from a large terminal, the village of Kingston, of which Joe Higgs' store is the social center, was able to provide its inhabitants with all of the news of politics and fashions that was talked of in the big outside world. Here also lived a number of railroad men, who were able,

through their contact with the travelling public, to introduce many new ideas into the life of the village. To these men were due the building of the new school and the addition of many like improvements which greatly added to the general uplift of the community. In spite of such modern changes, however, there was one institution that remained. This was Joe Higgs' store. Facing the railroad station, many a stranger took himself hither to inquire the way to a certain farmhouse or cottage, and thither he went, after having obtained this information, with a prediction on his lip that the village would soon witness the passing of the store. But Joe Higgs' store never passed.

One evening, early in September, Joe had performed his customary duties incident to "shutting up shop." Then he brought out an old round-backed chair, whose cane seat was sadly in need of repair, and whose joints squeaked whenever Joe chanced to lean back in it. With his feet propped up on the porch railing, his shirt bosom partly open because of the lack of buttons, and a two-day old newspaper in his hand, Joe was ready for his hour or two of chatting with anyone who might happen to pass by.

"Hello, Joe!" called his neighbor, William Curtis, taking a seat on Joe's top step, "Are you goin' to vote for that Fess Amendment this Fall?"

"Me?" asked Joe, "Naw." He refilled

his pipe. "What's the use o'trainin' wimmen to be housekeepers? Folks is either born with a nachural instinct that tells 'em how to keep house, or they ain't. It don't take no brains to keep house. All this tommyrot about cleanin' house reg'lar is foolishness. Clean it as it needs cleanin'; that's my motto."

"Yes," remarked his neighbor, casually refilling his pipe, "it seems to be."

"Seems to be! Whaddy ye mean? Don't I keep my place clean enough to suit you an' such folks as Charlie Brown?" And Joe's face grew quite red to the roots of his light hair.

"Keep quiet; here he is now," said Curtis, "Hey, there, Charlie, come on up!" Conductor Charles Brown, noted for neatness in his personal appearance and for his recent promotion, was coming up the path from the station. Joe transferred his feet from the railing to the floor so quickly that he nearly went through the bottom of his chair.

"Did you ever see anybody as neat as Charlie?" asked the neighbor, bantering, so that Charlie might hear it.

"Don't get him nothin'," growled Joe.

"Doesn't it, though?" asked Curtis, "Well, it seems to have gotten him a promotion last week."

"Humph!" sneered Joe. Brown was on the steps.

"Well, what are you two wrangling over?" he asked, "It seems that you manage to find something new every day."

"It's all over you, 'Bonnie Prince Charlie,'" sneered Joe.

"Joe and I started in by discussing the Fess Amendment, Charlie. What do you think of it?" asked Curtis.

"I'm not as familiar with it as I ought to be," declared Brown, but from what I understand, it's a bill providing for the teaching of home-making to girls. Great business, this home-making."

"Humph!" said Joe, "Housekeepers are born, not made."

"I don't believe that I mentioned 'housekeepers,'" went on the conductor, "I said 'home-makers.'"

"I reckon she gives you your bath."

"Well, what's the difference?" argued Joe, "I don't see none."

"That's because you're not married," declared Curtis.

"I ain't arguin' with you," said Joe, gruffly.

"Curtis is right," said Brown, "but we won't argue over that. Now a housekeeper is one who keeps house just for the sake of keeping it clean and tidy and having meals ready on time; but a homemaker not only keeps the place looking nice—she allows her family to use it; she makes a real home, not just a clean place for company. A woman who is both a housekeeper and a homemaker is a jewel. Esther, that's my wife, is both. She has a knack of knowing just how to keep things moving smoothly. 'Charlie,' she said to me the other day when I was sitting on the porch, 'do you mind spraying the lawn? I sprinkled it this morning, but we'll have to keep after it during this hot weather to keep it fresh and green.'"

"I don't want to do this too often," I told her, 'or somebody'll be taking me for Mr. Guggenheim, that copper king, whose property up there in New Jersey gets sprayed three times a day, and the fence gets washed just as often.'

"Never mind about that," said Esther, 'but I think it's just as well to have a clean, green lawn as it is to look neat yourself.' She's great, Esther is."

"Humph!" grunted Joe again, even forgetting his pipe for a moment, "I reckon she gives you your bath in the mornin', manicures your nails, an' then pins a rose in your buttonhole before she sends you off to work, eh?"

"Ha, ha! You forgot something," laughed Curtis, "You forget that our wives always kiss us before they send us off."

"Well, she doesn't do all of the things you mentioned, Joe," went on Brown; "seriously, however, she's responsible for whatever neatness I'm credited with. For example, she gets up ahead of me in the morning. When she's ready to go down to get breakfast ready, she turns on the water in the bathroom, then calls me. By the time I'm fully awake, the bathtub is full and ready for me."

"Gee whiz!" exclaimed Joe, whose idea of a bath was a hard scrub in hot suds on Saturday nights.

"A little later," went on Conductor Brown, "she calls up to ask me if I have finished shaving. She knows that it's a failing of mine to get out of shaving every day, if I can. I might be able to get by on the railroad, but I couldn't put it over on Esther."

Joe rubbed the day's growth of whiskers that spread over his chin. Mentally he compared himself with Brown. Then, almost unconsciously, he fished around in his hip pocket until he located a brass collar button. When neither of the others was looking, Joe's hand went stealthily to his neck, pushed the button through the collar, then fastened it. Curtis glanced around.

Joe's hand quickly dropped. Then he spoke.

"Charlie, did you say your wife manicured your nails, too?"

"No," laughed the conductor, "but if I forget them she reminds me that it is just as important to have clean finger nails as it is to have your shoes polished. Most people see a conductor's shoes and it is necessary to have a good shine, but everybody can see his fingernails when he lifts the tickets. I heard incidentally the other day that neatness is one of the first things our officers look for in a trainman."

"Talking shop, Charlie?" asked Engineer Bigley, who, with Ed. Jefferson, the stationmaster, was coming up the path.

"Hello, there!" called the others. "Come on up," added Joe, "a couple more won't hurt this one-sided argument." And as he said this, Joe took the opportunity to run his hands through his hair, thereby parting it quite respectably.

"We were kidding 'Bonnie Prince Charlie', explained Curtis; "he always looks as though he just jumped out of the bandbox. Charlie says all the credit goes to his wife. What do you think of that?"

"Sure, she deserves the credit," declared the engineer. "Of course I can't afford to wear white collars on duty, but you bet your life my daughter Annie wouldn't think of letting me go outside without a bath, a shave, and a shoe shine, any more than she herself would dare go up in an airplane; and you know Annie's ideas of soaring."

They all laughed heartily; they knew Annie, a short, chubby, wholesome little lady, with rosy cheeks, who had refused to have her photograph taken in an airplane a few weeks before, for fear that it might start off.

"More than that," went on the engineer, "whenever I get home, the first thing I do is to hand Annie my overalls. If they need darning, she darns them; if they need washing, she washes them. Never am I ready to go out on my run but there's a clean, neatly folded pair of overalls."

"For the love of Pete!" thundered Joe impatiently, "Can't you fellows find something else to talk about besides your wimmin folks?"

A general laugh followed, while Joe aimed one of his shoes at a stray dog that poked its nose around the corner of the store.

"Joe," said the conductor, "I suppose you never contemplated matrimony." Joe didn't answer, but got up and went in search of his shoe.

"Because if you didn't," went on Brown, "you'd better get busy. You'd have a good future here if you had a wife to give things the finishing touches once in a while. There's money in storekeeping, but the town is leaving you behind. You've got to know the art of window decorating and showcase displays, if you expect to keep up with the people of Kingston. In another year your store'll be a thing of the past if you don't get a hustle on." Joe looked at him blankly.

"So I applied for the job as station agent."

"Daddy!" called six-year-old Billy Jefferson, "Mother wants to know if you can come and help her put up the shelves in the new cupboard."

"I'll be there in a minute, Billy. So long, fellows," and the stationmaster was gone.

"There it goes again," muttered Joe Higgs; "it seems as if every blasted one of you has to go an' mind what the old woman says."

"There's no case of mindin', there," declared Curtis, for no man *has* to do that if he doesn't want to. Jefferson wants to, for if there ever was a home-lovin' man, it's Ed."

"Well, I'm goin' home, too," said Curtis, "Good night!"

Joe watched them all go, watched them with evident satisfaction. Then he lit his pipe again, and leaned back to think.

What had Brown meant by the insinuation about the store? What did they all mean? Was this some trick they were going to put over on him? And all this stuff about womenfolks in the home—Joe wondered if a woman really would do all that for a man. Well, he reckoned that she'd have to love him a whole lot. He wondered if a woman could really help him in his business. If so, who could it be? He thought of the girls in the village. There wasn't one that he would shake a stick at, not one—unless—no, it couldn't be. Anne Bigley wouldn't turn her head to look at Joe Higgs. He had always thought that. Now he seemed to know it. But why? The question came to him forcibly. He had always admired Annie. She wasn't like the other Kingston girls who forgot to make their purchases until after the store had been closed. No, sree, Annie Bigley always came in around eleven o'clock in the morning, made her purchases and went home. Nor did she linger a minute to talk with him. Annie was a fine girl. The more he thought of her, the more he came to the realization that he worshipped her. But why wouldn't she—why, perhaps Brown and the others were right. His store didn't look like a city store, and Kingston was growing; he didn't dress like a city fellow, nor even was he as clean and as neat as most of his neighbors. That night Joe Higgs made a tremendous resolve.

On the following morning, as Engineer Bigley was on his way to work, he was surprised to see Joe Higgs standing at the top of a stepladder on his porch. It was only six o'clock, and Joe never opened the store before seven or after.

"What you doin' Joe?"

"Found an old Japanese screen up in the attic. Looks a whole lot better'n this one," said Joe, "I thought I'd dust it up a bit and put it up."

"Good!" called out the engineer, "Wipe it with an oiled rag; that'll shine it a bit."

"Um, Hm," was all the answer that Joe gave him.

Seven o'clock found Joe's screen up and a big boiler filled with water on Joe's stove in the kitchen. He went into the store to

wait on a few customers. Then he dragged a large tub from under the counter. On the other side of the store he found a box of scouring powder. He emptied this into the tub. He thought a minute. No, his mother had always swept before she scrubbed. He got his broom from the kitchen. That wouldn't do; he got a new one. Then with painstaking care, he swept every crack and crevice in the store, under the counters and in the corners. He even moved sugar and molasses barrels, disturbing spiders and ants from their haunts. Truly Joe had a fever. The few neighbors who came in marvelled at the cloud of dust that greeted them.

What a difference even a good sweeping made. It looked like another place entirely. Funny he'd never noticed it before. Gee! wouldn't it be great to have a wife who would do these things for you? Annie—but he didn't dare let himself think about Annie, for he'd never get his task finished.

Eight o'clock, and the perspiration was running down the back of his neck, but Joe didn't notice it. He brought the hot water and emptied it into the tub with the scouring powder. Then he tore up some strips of cheap calico that he'd not been able to sell. A scrubbing brush and another box of scouring powder, and he was ready. Then he got another idea. It wouldn't do to have everybody know what you were doing. He got a piece of paper and made a sign to tack on the outside of the door: "Closed Until 11 O'clock." He locked the door from the inside and began.

It was a hard job, this cleaning business. He didn't know that it wouldn't be so hard if you did it often enough. Gosh, did it give wimmen the backache to scrub like this? If it did, Annie should have a maid—oh, darn Annie! He was getting his floor scrubbed. More washing powder was added to more water, and 9.30 o'clock found the store floor in a condition that would have done justice to a woman's hand. Gee, whiz! The porch ought to be scrubbed, too. Dared he go out and scrub before the neighbors? He dared. A few of the village boys yelled at him, women stuck their heads out of their windows and smiled at each other. But Joe never saw them. He went on scrubbing. Finally, the task was done. But there were the windows, the door frames, the showcase. Joe heaved a sigh, for hard work and an empty stomach do not agree, and Joe hadn't taken time to prepare breakfast. He would get some crackers and milk. He leaned against the counter utterly exhausted.

Just at this moment the door opened and in walked Annie. She carried a covered basket.

"Here you are, Joe," she said, "I saw you working hard over here, and I guessed that you wouldn't feel much like cooking yourself anything to eat when you finished your scrubbing, so I brought you over a bite. She dusted off the counter in front of Joe's startled eyes, and spread out some tempting sandwiches, a bit of home-made preserves,

a small pot of coffee, and—heavens above!—a half of an apple pie!

"Lord bless your soul, Annie!" cried Joe, astonished at his own boldness, for he dropped his scrubbing brush and seized her in his arms. Evidently his morning's work had wrought a change in him as well as in his store.

I don't know who it was who said that the nearest way to a man's heart is through his stomach, but evidently Annie had found that way. A few minutes later a customer started to enter the store. He stopped on the threshold, gasped, smiled, then turned away, closing the door behind him. Neither Joe nor Annie had heard him.

It was Annie who broke the spell.

"Joe, dear," she said, holding his big hands up to the light, "washing powder works wonders when it comes to cleaning finger nails." Joe looked. Sure enough, his nails no longer held the black lines under them that would bar him from a "clean job."

"Gee whiz!" he laughed, "if I ain't gettin' to look like Charlie Brown!"

It was a month later. Conductor Brown was taking up the fares on a northbound train. He stopped before a well-dressed man and woman, and held out his hand for the ticket. The man pulled out a pass and presented it. This is what he read:

"Pass: Mr. and Mrs. Joseph Higgs—"He got no further.

"Hello, there, 'Bonnie Prince Charlie!'"

"Joe Higgs! Where on earth did you come—and bless my soul, it's Annie Bigley!"

"Annie Higgs," corrected Joe, smiling.

"Well, I'm dumbfounded!" declared the conductor.

"Serves you right for moving out of Kingston," declared Joe. "Ed. Jefferson was promoted, so I applied for the job as station agent. I got it. Annie and I are keepin' house, that is, we will be when we get back from our honeymoon. I've had to hire a man and a boy to run the store. Business is gettin' brisk. Reckon I'll have to put in a cash register next week. Thought I'd look 'em over while in New York, on my way back."

"Well, all I can say is, you surely have my congratulations!" He extended his hands to them both.

"Much obliged," said Joe. "I forgot to say that Annie's teachin' me a whole lot at nights about 'rithmetic and grammar."

"But," said the conductor, "you certainly have changed in your looks, er, that is, I mean I wouldn't have known you."

"Then it's your own fault and Annie's," went on Joe, and I'll tell you you'd better look to your own reputation as a neat railroad man, for believe me, I haven't more than just got started!"

"I reckon, daughter, that young man's watch must be fast."

"What makes you think so, pa?"

"Why, when you were seeing him out the door last night, I heard him say, 'just one', and it wasn't much past 12 o'clock."

Recipes

By Mrs. H. F. Reddig,

Wife of Division Superintendent, Rock
Island Railroad

NOTE: This is the time of the year when church suppers, festivals, etc., demand the test of the housewife's skill. The art of cake baking is an accomplishment of which any woman ought to be proud. The author of these recipes has taken any number of prizes in state and county fairs for her cakes, and we are indebted to her for her kindness in giving them to us for the MAGAZINE.

By the way, if there are any of our women who would like to see any particular recipes published in these columns, we shall be glad to try to secure them, if they will write and specify which one they want to see.

—Associate Editor.

Angel Cake

- 11 egg whites
- 1 ¼ glasses of granulated sugar (use measuring glass for this.)
- 1 glass Swansdown flour
- 1 level teaspoonful cream of tartar
- Salt to taste
- ½-teaspoon each of vanilla and lemon
(This gives a delicious flavor.)

Put whites into a large bowl. Whip until stiff. The wire spoon is best for this; it seems to drive the air into the mass more effectively than any other kind of beater. Sift the sugar before measuring. This also applies to the flour and cream of tartar. Add the sugar to the beaten whites, then the salt, flour, cream of tartar, and flavoring.

In making a cake, the baking is the most important part. For this cake, have the oven very hot. Reduce the heat before putting in the cake. Bake 40 minutes, when this should be a golden brown.

For the icing, take the white of one egg, 1 cup of sugar, 1 ½ cups water. Boil sugar and water until it strings. Beat in the white then the flavoring. If you wish a small cake, use eight eggs instead of eleven.

A Bouquet for Our Recipe Column

The MAGAZINE has received any number of helpful letters, but one which we particularly appreciate, because of its reference to our Women's Department, comes from W. J. Spaul, cost accountant, Cincinnati, Ohio. A part of Mr. Spaul's letter reads as follows:

"On behalf of my wife, I want to express our appreciation of the Women's Department. While we have been housekeeping for approximately twenty-two years, many helpful household suggestions have been found therein. Our whole family, as well as several of our neighbors and friends, are simply 'crazy' over the grapefruit marmalade made from a recipe published in the MAGAZINE several months ago."

The Art of Reducing

ARE you too fat to be comfortable? Do you want to get rid of any of that excess flesh?

Time and again rules for reducing or how to gain weight have been published in newspapers and magazines. Many readers have made resolutions to follow these explicitly, and just as often they have failed to carry them out. It takes a lot of perseverance to adhere strictly to a set of rules and regulations on diet or exercise. Exercises, when practiced regularly and conscientiously, are very important factors in reducing; however, one certainly cannot reduce flesh by exercise alone.

Use reducing exercises daily without fail. Drink a glass of hot water before breakfast and before retiring. Take a hot bath at night and cold bath in the morning. Swim and ride horseback if possible, as both are excellent reducers. Avoid fats, sweets and starches; instead, eat fruits, non-starchy vegetables, greens and meats, with the exception of pork. Do not drink water with meals. Eat bran instead of white bread.

With the above, reducing exercises taken faithfully are effective. Many people believe they are really meant to be fat or thin; they continue to eat heartily and then

complain of their weight. Follow your rules and you'll see and feel the desired change.

It is far better to leave the table before satisfying one's appetite than to have a stuffy feeling for an hour or so after a meal.

Often we have enough to eat before we reach the dessert course, but eat it because it is placed before us and is tempting. As a result, we have that uncomfortable, too full feeling. This is sometimes due to unwise planning of the meal, probably too great a variety or extra large portions.

When cream is omitted from coffee the drink is not always popular. A good substitute for coffee is a cup of boiling water in which a bouillon cube is dissolved. In the middle of the morning or afternoon, a teaspoonful of beef extract dissolved in boiling water will satisfy that desire for food.

Canned fruits, with bran, for breakfast are not only appetizing, but make a good beginning for the day's menu.

At noon canned soups are nutritious, stimulating and nonfattening. Canned fish, spinach with eggs, and a salad of mixed vegetables are the foundation of a good dinner, supply a balanced meal, and, at the same time, conform to the reducing diet.

Dear Women Readers:

Many of you who have been to the seaside this summer have seen the gay little bags, made of paper twine, which are made to hold anything from your knitting to a half-peck of apples. At the Young Women's Christian Association at Wilmington, Delaware, the girls showed me how to make them. I pass the word along to you.

First, decide on the shape. You may make them long and narrow, deep or shallow, square, round, or oblong, or triangular-shaped, like the conventional flower baskets. At the 10-cent store you may purchase a 15-cent ball of paper twine. Be sure that it is of paper; no other kind will do. If you want an extra-large basket, get two balls. You can tell the difference in the twines by unravelling just the tip end; you will find that this twine is made of a strip of brown paper, about 1 inch wide, and twisted.

Get out your largest crochet hook. Soak the ball of twine for half an hour in water. This makes it pliable and less liable to become knotted. For a small, oblong basket—capacity about two quarts—make a chain of about 30 stitches. Turn. Double crochet across and back for 12 or 14 inches. This forms one side. Make the other side exactly like it. Join together with twine, buttonhole stitch.

Chain 25, turn, and come back double or triple crochet. This makes the handle. Now for the decorations. Make simple flowers by crocheting some of the bright colored wools that you had left from your sweaters. Orange and dark brown, blue and black, yellow and brown, are some of the good combinations.

Sew these flowers on the sides of the baskets, making stems and leaves with the darker wool in outline stitch. Six or eight flowers will be enough to decorate one bag.

If you would like to know more about these bags, or how to make the other shapes, write me and I'll be glad to help you.

Yours sincerely,

Margaret Talbott Stevens

Associate Editor.

Unusual Dresses that Home Dressmakers Can Copy

Frocks Both Sophisticated and Demure, Yet Always Simple

By Maude Hall

GROWN-UPS and Growing-ups freely borrow their fashions from one another this season, making such adaptations as are naturally demanded by the difference in years and purposes of utility. In the creation of new styles, matron, maid

9496

9473

and miss share alike in the distribution of smart ideas.

There are many clever designs that skilful home dressmakers can copy. Some are sophisticated, some are demure; but all are simple. Cotton voile, which has met every test of good taste and durability, is used for an inexpensive, but exceedingly smart frock. The two-piece skirt is gathered at the top and trimmed at the lower edge with two deep tucks. The blouse has a round neck, outlined with fancy picot braid, and short sleeves. The back of the blouse and sides of the front section are gathered to a waistband. The girdle sections are attached to the front of the blouse, the girdle closing at the centerback. This is a style of unusual adaptability, for it looks equally well in several other materials as in voile, and can be worn all during the day with perfect ease.

A pleasing note of contrast is struck in a one-piece frock of copper color georgette trimmed with large rosettes of valenciennes lace, dyed a very dark green. The rosettes are placed at frequent intervals about the lower edge of the skirt, which is cut in two pieces and gathered to a straight band under a belt of copper georgette and green satin. The blouse falls gracefully over the girdle and has short sleeves with flare cuffs, the cuffs being feather-stitched to the sleeves.

A dress that typifies correct style for all-

day wear is fashioned of dark gray Canton crepe, trimmed with self-color embroidery. The lines are long and straight, of course. The trimming, arranged in border effect, appears upon the front of the blouse and about the waistline, above and below a narrow cord of gray satin. Turn-back cuffs finish the short sleeves, while the V-shaped neck has a round collar. This same model, reproduced in black satin, is very pretty. While crepes and sheer stuffs are the rule this season, satin is the exception, and a very chic exception has it proved itself to be.

When simplicity is the aim of the dressmaker catering to the needs of the younger generation, a one-piece frock of gingham is splendid to decide upon. The vested rights of one such model are expressed in white pique which is picoté at the upper edge. The front is cut into a deep V, the pique forming revers and collar as well as the vest. The sleeves are elbow length, with slashes at the lower edges. They are faced with pique and turned back, giving an unusual touch, at the same time getting away from the usual cuff effect. The dress of gingham never loses its popularity either for the small girl, or for her larger sister or her mother.

Among the prettiest of the new designs for the slim, girlish figure is a dress of tomato red dotted swiss trimmed with filet insertion, with edging to match. The waist closes at the back, having the neck finished in round outline. Bands of insertion outline a long, narrow yoke, while straight bands of edging run from shoulder to belt on either side of the front of the waist. Insertion and edging finish the short sleeves. The skirt has two straight frills, each trimmed with a band of insertion, and

is joined to the long-waisted blouse under a belt of grosgrain ribbon.

Dresses of the sailor type are always popular and becoming. One of natural color linen varies from the usual decorative scheme in its trimming of braid, in that green soutache, instead of red or blue, is used to outline the deep collar. The necktie is also of green ribbon. A deep yoke, front and back, trims the blouse, the open front being filled in with a removable yoke. The skirt is laid on plaits, three being at the front and three at the back, with the sides gathered.

Lesson in Home Dressmaking

The Popular Slip-on Dress Designed to Wear with Guimpes or Separate Blouses

ONE may face the coming season with assurance with this smart little frock in the wardrobe. It looks well in almost any material and can be worn with a guimpe or separate blouse. It has open front, large armholes, patch pockets, which may be omitted, if preferred, and a narrow straight belt. Medium size requires $3\frac{1}{4}$ yards 36-inch material for the overdress and 2 yards, same width, for the blouse.

Fold the material in half to cut the dress, placing the tissue sections marked by triple "TTT" perforations along the lengthwise fold, in order to avoid seams. The belt and pocket sections are laid along the selvage, as shown in the cutting guide. Then take the material for the blouse and lay the back and collar of the tissue along the lengthwise fold. Place the remaining sections with large "O" perforations on a lengthwise thread.

Make the blouse first. Form a box plait in right front, turning front edge under on small "o" perforations. Take up a tuck and stitch on both sides of box-plait, $\frac{1}{4}$ inch from folded edges, catching free edge in with tuck. Turn front edge of left shoulder under $1\frac{1}{2}$ inch for a hem. Trim the neck edge of left front to correspond with right front. Close underarm and shoulder seams as notched. Adjust a

casing $\frac{3}{4}$ inch wide when finished underneath the blouse and insert tape or elastic to regulate the fulness. Sew collar to neck edge as notched, with center-backs even.

Close sleeve seam, gather lower edge, then face cuff and sew to gathered edge of sleeve as notched. Bring edges of cuff together at lower edge of the sleeve,

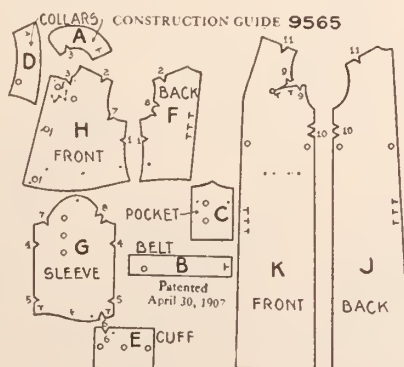

9317

5846

roll cuff on large "O" perforation and finish for closing. Sew sleeve in armhole, easing in fulness between the notches. Hold the sleeve toward you when basting it in the armhole.

9565

9441

To make the dress, slash the front in at the armhole edge to the large "O" perforation. Gather lower slashed edge between "T" perforations and sew to upper slashed edge as notched. Take up $\frac{3}{8}$ inch seam at outer edge of slash and graduate seam into nothing at inner edge. Close under-arm and shoulder seams as notched.

Turn upper edge of pocket under and stitch to position. Arrange pocket on front of dress with upper edge between indicating small "o" perforations. Fold the belt through the center, lap to large "O" perforation and finish for closing.

Pictorial Review SLIP-ON DRESS NO. 9565. Sizes 34 to 42 inches bust and 16 to 20 years. Price, 35 cents.

Frocks Both Sophisticated and Demure, Yet Always Simple

Stayin' In

*I ain't been bad at all today,
But I'm stayin' in;
Waited out too long at play,
Now I'm stayin' in.
Scared Nell Brown with a bumble bee,
An' pulled Susanna's curls, you see—
That red-haired girl in front of me—
So I'm stayin' in.*

*Just stuck a pin in Billy's back,
Teacher's kept me in,
And knocked six books down off the rack,
But I'm stayin' in.
Sometimes I feel as if I'd cry,
But I'm no girl, and that's just why
I go on writin' an' blink my eye
While I'm stayin' in.*

*I've got a thousand words to write
While I'm stayin' in;
I feel all warm an' my collar's tight
While I'm stayin' in.
My hand's all cramped, my back's most broke,
The crickets chirp, an' the bullfrogs croak!
Guess they think it's quite a joke
'Cause I'm s'ayin' in.*

*I wouldn't be a teacher's pet
And never be kept in;
But some day I'll grow up, you bet,
And then I'll not stay in.
Sometimes I'm wrong, then I forget
That Teacher's right—oh, say, I'll bet
The only fun they ever get
Is makin' me stay in.*

Why the Apple's Cheeks Are Rosy

LONG, long ago, before anybody ever heard about the Old Woman Who Lived in a Shoe, there lived an old mother apple tree. There were many little baby apples on the ends of her branches. These babies were very green and very small, and there were so many of them that I couldn't think of telling you their names. When they grew

up they would still be green, but ever and ever so much larger. Whenever the rain fell from the skies, Mother Tree would gather the water with the roots and carry it up to the baby apples. She also took them food from the ground in this manner. They breathed the pure fresh air, and basked in the morning sunshine. Soon they grew quite large.

One day, however, the sun did not shine. "Don't cry, my dears," said Mother Tree, "perhaps 'twill shine tomorrow." But tomorrow came, and the clouds were just as dark as before. Soon the baby apples began to cry. Mother Tree did what she could to comfort them, but in vain.

"We shall never grow ripe and soft and mellow," they said, "we shall turn black and nobody will want us."

One little apple, 'way out on the very tip end of a bough, shook off her tears, and said, "I shall weep no longer, for I feel that the sun will come back."

"How do you know that?" asked her brothers and sisters.

"Because Mother Tree says so," declared the little one, "and I shall wait for King Sun, for she says he always comes. I shall not leave Mother Tree."

"Silly!" the others called her, "and do you suppose that King Sun will come just because you are waiting for him? We do not believe it, and rather than stay on the tree and fall off in disgrace, we shall jump down now and die on the ground where nobody will see us."

"Oh, please don't do that," begged Mother Tree.

"Please don't," begged the Little Apple. But the others would not listen. By and by one apple left his twig and jumped to the ground. Soon another followed, and another. By nightfall the ground was covered with apples, and only one, the little one who said she would not leave Mother Tree, was left.

Mother Tree was very sad. Soon came the hard winds and the rain. They beat upon the branches; they tried to shake the little apple from her twig.

"Hold on tightly!" called Mother Tree.

"I am here," shouted the little apple, "I shall not leave you, for the sun will come tomorrow, I am sure."

Mother Tree felt happier. She steadied herself and held her branches out straight. Presently the rain ceased and the wind

The Latest in Dolls' Lingerie
Drawn by
Fannie Keith, Baltimore, Md.

stopped blowing. When the moon and the stars came out, the little apple was fast asleep on the topmost bough.

When the night began to fade and the sky grow lighter, Little Apple awoke.

"Oh, Mother Tree," she called, "do look! The sun is coming!" And sure enough, the red streaks of dawn could be seen in the East; and slowly they could see the great sun coming over the hilltops.

The First Day at School

By Anne "Bobby" Pennington

SO this is September! I thought I'd write and tell you about the fun we had in school. I suppose you will wonder why I have used "had" instead of "have," but you must understand that I went to school in Baltimore, and this year I shall go to school in Cumberland.

"Hurrah!" cried Little Apple. But then she added, "Oh, what a pity that my brothers and sisters did not wait for him. I told them that he would come, I told them!" And the other apples lying on the ground, fast decaying on the damp earth, were very sad.

Soon the sun was high in the sky. He looked down upon Mother Tree.

"Ah," he cried, "where are your apples?"

Mother Tree told him the sad story.

"That is indeed unfortunate," he said.

Then, pointing at Little Apple he cried, "but why did this one stay?"

"Because she said that you would come, and that she would wait for you."

"Bless your heart, Little Apple," said King Sun. Then as Little Apple looked up and smiled, the great King Sun leaned down and kissed her.

How Little Apple did blush, for this was a great honor. The sun looked at her and smiled.

"Hereafter," he said, "your cheeks shall be rosy, just where I have kissed them."

And so it happened. In the days that followed, Little Apple grew very large and beautiful, so beautiful indeed that other apples of the orchard who looked at her became beautiful, too. Soon the whole orchard was filled with rosy-cheeked apples. People liked these apples so well that they saved and planted their seeds. Now we have millions of rosy cheeked apples in the world. And ever since then, most of Mother Tree's children have had red cheeks, although there are a few who still have so little faith in the sun that they leave their twigs before it is time. But they are always sorry afterwards.

HERE ARE SOME OF THE BALTIMORE AND OHIO GIRLS AND BOYS FROM DORSEY SCHOOL

1-(Read left to right)-Standing: Mabel Reimsnider, Louise Perry, who wrote the poem about school, Edith Reimsnider, Laura and Ernst Lapp, Elizabeth Bergie, Melvin and Harold Dunkerly, Lawrence King; Sitting: Edna Reimsnider, the pet doggie, James King and Ida Smith, Harold Dunkerly and Hazel Reimsnider. 2-Edna, Ida and the doggie: 3-"Open the gates as high as the sky." Six of these have contributed to the Children's Page

On the first day at school, the books were distributed. After writing my name in each of mine, I would sometimes add such rhymes as these:

Whoever steals this book of knowledge,
Shall graduate from Sing Sing College.

I pity the kaiser, I pity his cook,
And I pity the one who steals this book

Don't steal this book, for if you do,
You'll feel the sole of my old shoe.

(I wouldn't advise any of you to try these rhymes in your school books, however, for teachers don't like them.) I rarely opened the books until the teacher gave the command, so you can see for yourself why my reports were poor.

At recess we played "Little Sally Ann" and other ring games. We played these games in winter to keep warm, but I suppose you will think that we were pretty big eighth grade babies, for you remember the little saying, "Babies will play."

My conduct mark was never lower than 85 per cent, and never higher than 97 per cent. Composition and history were my favorite studies. I never made much headway in grammar and algebra, but I'm going to try hard this year. Are you?

Rosemary's Flowers

By Myra Gill

IN ROSEMARY'S garden there grew flowers of all kinds, among them a great many roses. One rosebush was covered with blooms of deep crimson, another with pale yellow blooms. The crimson rose was open wide, while the yellow one was a beautiful bud. Crimson Rose was very proud, always scoffing at the other roses for being so pale and so small.

One day there came a great rain storm. It washed deep gutters in the flower bed.

A quartette of Baltimore and Ohio youngsters: left to right—Grace Elizabeth, daughter of Nelson Smith, freight handler, Camden Warehouse; Mary Louise, daughter of L. R. Nease, second trick operator, Shattuck, Illinois; James Donald, who can say "Please" and "Thank you," son of Yard Clerk J. R. Wagner, Parkersburg, W. Virginia; Marvis Miriam, 4½ month old daughter of Material Clerk J. M. Darlington, Jr., Martinsburg, West Virginia, Repair Shop

The crimson rose, whose petals were outspread, was washed to pieces, but the petals of the yellow bud were folded together so snugly that they were not harmed at all. When the sun came out there were the yellow roses, not buds now, but pretty yellow flowers.

Rosemary and her mother came into the garden. "Oh, my pretty crimson rose is all destroyed," cried Rosemary.

"Well, dear," said her mother, pointing to the yellow roses, "these are very much prettier, in my opinion."

So Rosemary cut enough to make a large bouquet and took them into the house.

What did the roses see? That there was going to be a party on that night!

Soon the time arrived for the merry-making. Oh, such a buzz! The children came and played games of all kinds. After a while a little bell tinkled and everybody fell into line and marched out to the dining room. In one corner there was a huge paper bag, suspended from the ceiling. Rosemary stood underneath it. She took a stick and

hit the bag, which burst, letting a shower of paper flowers of all colors fill the room. Each selected the flower which he or she liked the best and matched it at the table. This was the way they found their places.

"Just think," murmured the yellow roses which formed a part of the decorations, "if Crimson Rose had not been so proud, the rain would not have beaten her to pieces. Then she could have seen these pretty things and the happy children, too."

Back To School Again

By Louise Perry
Dorsey, Md.

Our dear old school days are here once more, With pencils, and books, and everything, Children are playing, singing, saying, "Hurrah for schooltime!" their voices ring.

The teacher says, "Oh, Children, dear, How happy you must be!"

Now, we're going to study for another year, And play 'neath the old oak tree.

Dear Girls and Boys:

Last Spring, when a friend and I took a trip to the South, we visited a teacher in Barnard School in Savannah, Georgia. Now this teacher had the nicest class of fifth grade boys and girls. We went into the school room and heard a spelling lesson. Then the children gave us a real entertainment of recitations and stories. One little fellow recited some fine verses that he had written all by himself. He said that he would send me some for our page, but I have not heard from him yet. He had a friend named Cecil, who recited Joyce Kilmer's beautiful poem "Trees." How we enjoyed that day! Sometime we're going to visit them again.

Now I shall tell you about a visit to another school. You remember the splendid poems by Ida Smith and James King; the story of how to build a bird box, by Harold and Melvin Dunkerly. I know you will be glad to see their pictures on the preceding page. One afternoon in August I took my camera and went out to visit these boys and girls at Dorsey. All of the children whom you see in the picture met me at the station. We went down to the schoolhouse and took some pictures. Then we played lots of games: "Open the Gates as High as the Sky," "Farmer in the Dell," "Drop the Handkerchief," and several others. One picture shows how they played "Open the Gates as High as the Sky." What fun we had! I wish that all of you might have been there.

Next month we shall have the Indian Page. For November we want a Poetry Page. Thanksgiving comes in November, and we want lots and lots of poems. They may be on any subject, but I think it would be particularly nice to have Thanksgiving poems, don't you? Be sure to let me have them within five days after you receive this MAGAZINE. I'd like to hear from all of the little girls and boys who read this page. If we can't get all of the contributions in one issue, we can use them in another. The first ones that are sent in will be the first to be published.

With love,

Address:

Aunt Mary,
Baltimore and Ohio Magazine,
Mt. Royal Station, Baltimore, Md.

Aunt Mary

The balloon girl of the Follies

Drawn by Eleanor Hills, daughter of Conductor L. J. Hills, Staten Island, N. Y.

Safety Roll of Honor

Baltimore Terminal Division

The following from a letter from the superintendent, addressed to Yard Clerk N. L. Rickerds, explains itself:

"It has been brought to my attention that on the morning of March 4 when broken rail was discovered at Locust Point during the movement of special inaugural trains from that yard, you, on your own initiative, performed work other than your regularly assigned duties. In the absence of sufficient trackmen, you endeavored to get new rail laid with minimum delay to the movement of these special trains.

"Such performance as you showed on this occasion is indeed gratifying, as you have shown that you have the interest of the Baltimore and Ohio at heart.

"I wish to take this opportunity to express my appreciation for the interest you have displayed."

Baltimore Division

BALTIMORE, MD., July 15, 1921.

MR. R. BOWERS, Operator,
Care of Hollofield Tower.

Dear Sir—I learn with interest of your co-operation in the handling of the situation at Hollofield on July 8, caused by extra east, engine 4448, which had broken loose.

Your action, which was unsolicited and voluntary, is much appreciated, particularly in view of the fact that there were two 94s behind this extra.

I have arranged for a formal entry to be placed on your record.

Yours truly,
(Signed) F. G. HOSKINS,
Superintendent.

On July 13, Fireman E. M. Lipscomb, with Baltimore and Ohio extra engine 4512, discovered and promptly reported switch partly open on track No. 6, North Side, Elizabethport, N. J., while operating over Central Railroad of New Jersey tracks. A letter was received from Superintendent A. D. Edgar at Jersey City commending Mr. Lipscomb for his close observance of track conditions.

On August 2, M. Sweet, fireman, discovered a broken rail in the eastward track a short distance east of Marriottsville Station. Attention of conductor of extra west, engine 4860, was called to the fact and trackmen were notified and the rail repaired.

On August 3, Agent C. C. Hite, Fredrick Junction, found a joint of rail on east-bound track open about six inches and bolts broken and rail not safe to run over. Trackmen were notified and rail repaired without delay to traffic.

Flagman John Ebert with extra west, engine 4400, noticed piece of flange on east-bound track at Sykesville which showed fresh break. Mr. Ebert called on the phone, and extra east, engine 4593, was stopped at Hollofield and train examined. It was found that S. V. E. car 226745 had two feet of flange broken on wheel.

Cumberland Division

CUMBERLAND, MD., August 3, 1921.

MR. P. RIZER,
Trackman,
Piedmont, W. Va.

Dear Sir—I have just learned that on July 30 you flagged train of engine 4254 at Bloomington when a cow had its leg down between the ties on Bloomington bridge, thereby averting a possible accident.

Prompt action of this kind on the part of our employes is always appreciated, and I want to extend the appreciation of the Baltimore and Ohio as well as my personal appreciation for your prompt action in this case.

Yours truly,
(Signed) C. W. VANHORN,
Superintendent.

Charleston Division

The following train and engine men have been commended for assisting in removing large rock from main line, averting bad delay to passenger train: Engineer B. H. Griffin, Conductor H. E. Bailes, Flagman E. F. Sands, Brakeman P. Bazzle, and Fireman J. Buckner.

W. H. Naylor found a tree, fallen across the track near Charleston, notified crew and assisted in removing obstruction. He has been thanked by the superintendent.

Conductor A. Kiddy has been commended for his good work on through passenger trains.

Conductor P. J. Condry, Baggage-man Brown, Engineer F. F. Bailey, Fireman M. Radcliff and Lineman Hewitt have been commended for assistance rendered in handling heavy express during holidays, averting delays to passenger trains.

Oscar Weese, Wainville, has been thanked by the superintendent for assistance rendered in clearing main track of trees, etc., during a recent storm.

The following members of a train crew found a house on fire near Centralia recently, stopped and assisted in saving it: Engineer M. T. Hall, Fireman Carpenter, Engineer W. J. White, Fireman McQueen, Conductor Haney, Brakeman J. K. Hoover and Brakeman J. Workman.

Engincer B. M. Shears has been commended for his interest in making suggestions for improvement in the service.

Conductor G. B. Green has been commended for his interest in claim prevention.

Engineer E. W. Hall has been commended for close observation in noting brake beam down on passing train.

Conductor Foy has been commended for close observance and attention to duty.

The following engineers show over 100 per cent. in fuel performance in May: W. T. Spencer, N. H. Davidson, G. C. Smith, E. L. Jarrett, T. J. Wilson, M. E. Morrison, J. A. Daugherty, G. F. Purkey, C. U. Skiles, Scott Mullins, W. B. Amos, W. J. White and T. Wilmoth.

New Castle Division

NEW CASTLE, PA., September 4, 1921.

MR. F. E. BARNHOUSE,
Brakeman,
Care of Crew Dispatcher,
New Castle Junction, Pa.

Dear Sir—I am advised by Conductor Bradley that on September 2, while your train was at "TF" Tower, you found a broken truck frame on ear Baltimore and Ohio 95688. You arranged to have repairs made and no doubt your vigilance in inspecting cars along the line resulted in avoidance of an accident and I wish to take this means of thanking you for it. Commendatory entry will be placed on your service record.

Yours truly,
(Signed) D. F. STEVENS,
Superintendent.

NEW CASTLE, PA., September 2, 1921.

MR. T. J. HAYES, Superintendent,
C. C. C. & St. L. Railroad Co.,
Bellefontaine, Ohio.

Dear Sir—On the morning of August 29, at 1:52 A. M., while extra west 4225 was passing over the crossing at Boyd Tower, Operator Kilgore observed something dragging and notified the operator at our "KN" Office to hand on a note to the crew. In the meantime Operator Kilgore went down on the tracks at the crossing and found a brake beam lying on the crossing and removed it just in time to prevent your passenger train No. 18 from hitting it, and possibly causing a derailment.

It seems to me that this is a very commendable thing on the part of Operator Kilgore and were he an employe of the Baltimore and Ohio he would have a commendatory entry placed upon his service record.

If you have a similar system on the Big Four, will you kindly have it cared for, and will be glad if you would notify Operator Kilgore that we appreciate what he did.

Yours truly,
(Signed) D. F. STEVENS,
Superintendent.

On May 14, as local west was passing Niles, Ohio, Foreman Domenic Muzdeko noticed brake beam down on car and immediately notified train crew, who had train stopped, and brake beam removed.

On May 3, as engine 4045 was backing in DeForest Junction Yard, Brakeman H. H. Steed discovered broken flange on a wheel of car which was in his train. He immediately had the train stopped and car set out.

Conductor C. V. Underwood, while in charge of engine 1652 at Ohio Junction on July 27, noticed that spring hanger was down in car of extra west 4037, which was passing. He immediately notified crew in charge, who had train stopped and the unsafe condition corrected.

Foreman Muzdeko, Brakeman Steed and Conductor Underwood have received letters of appreciation from Superintendent Stevens, commending them for their close observance and prompt action in the cases noted above.

On July 9, as extra west, engine 4123 was passing through Niles, Ohio, brake beam came down on car and tore out guard rail of frog at crossing. This condition was noticed by George W. Swegan, foreman at the Niles Ice Co., who immediately notified the crossing watchman, who made the necessary report to section foreman, and repairs were made before there was a possi-

bility of an accident occurring. Mr. Swegan's action in this matter is to be commended, as the interest displayed by him is an evidence of his keen observation of unsafe conditions. The officers of the Baltimore and Ohio take pleasure in extending their personal thanks to Mr. Swegan.

Cleveland Division

CLEVELAND, OHIO, September 2, 1921.

J. W. GRIFFIN,
Conductor,
Massillon, Ohio.

Dear Sir—On August 9, while you were in charge of yard engine at Massillon, Ohio, you discovered a brake beam down on Baltimore and Ohio car 58558 in train of engine 2908 extra west, which was passing "CO" Tower, and you immediately notified crew, who stopped train and took brake beam off.

Your close observance in this particular case probably averted an accident and I want to commend you.

Very truly yours,
(Signed) H. B. GREEN,
Superintendent.

CLEVELAND, OHIO, August 10, 1921.

MR. M. R. REESE,
Operator,
Lake Junction, Ohio.

Dear Sir—My attention has been called to the fact that on August 1, you found about eight inches broken out of ball of rail, on cut off a short distance west of your office at Lake Junction; that you immediately notified dispatcher and section foreman and had repairs made without delay to trains.

I appreciate your prompt actions and observance in this case, and want to commend you for same.

Yours very truly,
(Signed) H. B. GREEN,
Superintendent.

CLEVELAND, OHIO, August 13, 1921.

MR. A. BONACCI,
Section Foreman, Section 19,
Berea, Ohio.

Dear Sir—I have before me report that on Saturday evening, August 6, after the severe rain and wind storm had subsided, you called a man and started over your section to ascertain what damage had been done; that about two miles east of Parma you caught up with a freight train which had stopped because of a tree being across the track, and assisted in removing this tree, allowing train to proceed; and that later you found three telegraph wires hanging and immediately made temporary repairs to them.

This is certainly commendable service and I desire to express my appreciation for what you have done and have also arranged to place a commendation mark on your record.

Very truly yours,
(Signed) H. B. GREEN,
Superintendent.

CLEVELAND, OHIO, August 10, 1921.

MR. E. G. FISCHER,
Section Foreman,
Beach City, Ohio.

Dear Sir—My attention has been called to the fact that on August 1, you noted hopper bottom rod dragging on rail, in train of extra 4324, east; that you immediately notified conductor to stop train, and had necessary repairs made to car.

Your careful observance and prompt action are most commendable.

Yours very truly,
(Signed) H. B. GREEN,
Superintendent.

CLEVELAND, OHIO, August 10, 1921.

MR. S. STANCU,
Section Foreman,
New Philadelphia, Ohio.

Dear Sir—I have a report before me which shows that on July 29, while you were working on Eastbound track, just east of New Philadelphia Station, you noticed something dragging on Baltimore and Ohio car 25653, in train of engine 4283, west; that you immediately notified conductor and had car set off and necessary repairs made.

You probably averted a derailment by your careful observance, and I want to commend you for your prompt actions in this case.

Yours very truly,
(Signed) H. B. GREEN,
Superintendent.

CLEVELAND, OHIO, August 10, 1921.

MR. F. MCCORMICK,
Agent,
Brooklyn, Ohio.

Dear Sir—We understand that on August 4, you noticed a big tractor steam shovel coming to cross the track at your station, which you interested yourself to protect. This showed that you were looking after the Company's interest and that you were on the job.

I wish to commend you in this particular case.

Yours very truly,
(Signed) H. B. GREEN,
Superintendent.

Indiana Division

Conductor Green, in charge of extra 2838, west, reports that on August 12, William Singleton, car inspector from shops, was on

his train enroute from Shoals to Shops, and was riding in M. & C. gon. 13913. A brake beam came down on this car just west of Martin. Singleton stopped train and repairs were made.

At Seymour, on August 2, it was necessary that Car Inspector Hodapp meet local passenger train 66 for the purpose of forwarding some supplies. While on the platform he discovered brake beam down and wedged under lead wheel on tank of engine. The wheel at this time was very hot and smoking slightly.

Mr. Hodapp was not at the station for the purpose of inspecting this train, but by reason of his close observation detected this condition and removed brake beam.

On August 2, when train 97, engine 2685, in charge of Conductor J. B. Moritz, was passing Hayden station, Agent Padgett noticed car about in the middle of train pounding the rail and bouncing badly. He succeeded in stopping train. It was discovered that N. Y. C. 217232, loaded with automobile parts for Sheffield, Mo., had broken wheel on rear truck. About one-fourth of wheel was broken out, and upon investigating, this piece of wheel was found by Conductor one-fourth mile east of Hayden station. Car was set out in station track at Hayden and necessary repairs made and no doubt a serious accident averted.

Toledo Division

On August 5, Operator Louis Snell, "NX" Tower, observed six inches of rail missing just south of D. T. & I. crossing at the above point. He quickly reported the matter to Division Operator I. E. Clayton, and the conditions were immediately corrected.

These Gentlemen Speak With Authority

TRANSCONTINENTAL PASSENGER ASSOCIATION

MR. E. V. BAUGH,
Superintendent Dining Cars,
Baltimore and Ohio Railroad,
Baltimore, Md.

Chicago, Ill., July 7, 1921.

My Dear Mr. Baugh:

If you have time to listen to a word of commendation I should like to add mine to the other tributes you must have received in regard to the food furnished on your dining cars and the service that goes with it.

Recently four of us sat down to a dinner enroute from Washington to Chicago and the food was so bountiful and so well served that before we had proceeded very far the four *simultaneously* gave expression to their pleasure and satisfaction. From this you will note that the praise from each was voluntary and spontaneous. I make this point so that you may understand that it was not evoked because one uttered it first and the others merely echoed it in an effort to be congenial or sympathetic.

We all agreed that the steak was the best that any of us had encountered in many moons. The "fixtures and accessories" were equally good.

I said at the time that I did not see how I could restrain myself from writing you a few words of compliment, and the other gentlemen said that I should not be permitted to sing a solo and that they would join in the hymn of praise; hence I am speaking for them as well as for myself.

The quartet was made up of Mr. C. A. Fox, Chairman, Central Passenger Association; Mr. W. H. Howard, Chairman, Southeastern Passenger Association; Mr. W. J. Cannon, Assistant General Passenger Agent, Chicago, Milwaukee & St. Paul Railway, and the undersigned.

We left Washington at 1.35 p. m., Wednesday, June 29th, and the car was in charge of Mr. H. Schluderberg.

Yours truly,
(Signed) E. L. Bevington,
Chairman.

Among Ourselves

Baltimore and Ohio and Baltimore and Ohio Annex Buildings

Law Department

Correspondent, GEORGE W. HAULENBEEK

I rather like and enjoy the admonition or injunction of "ye editor" to send a modified contribution to the MAGAZINE on account of lack of space. I appreciate it because it helps one to practice concentration and abbreviation, essential requirements in the preparation of matter for a newspaper or magazine.

Harry B. Kight, the Keyser correspondent of the MAGAZINE, acted as summer agent at the Deer Park Hotel station. He proved to be one of the very best agents the summer hotel station ever had. I met him every Saturday and Sunday during the heated term, and observed his work.

Hugh L. Bond, Jr., our general counsel, spent his vacation with his family at North Hatley, Province of Quebec, Canada. R. Marsden Smith, ditto, and Duncan Kenner Brent, at the same place, where each of these gentlemen has a cottage.

A. Hunter Boyd, Jr.; Mr. Preston; Mr. Bowie; Mr. Penniman; William Irvine Cross; Mr. Young; Mr. Stuart; Mr. Horsey; Mr. Gosnell; Mr. Swearer; Mr. Silkman; Mr. Dwyer; H. Duncan Boyd and John William Rich have all enjoyed a rest from their labors and benefitted.

Charles Radley Webber and Francis Ralston Cross have been so much occupied with hearings before the Interstate Commerce Commission in important cases, that their respites have been very much curtailed.

I wish I could enumerate the outings of the remainder of the office force, but I cannot, because of the oft repeated injunction: "Don't put me in the MAGAZINE; if you do, I will never speak to you again."

Despite my limited space I wish to remark that the young ladies composing the telephone force are very polite and considerate whenever I have occasion to use the wire. I give heed to their request to call by number and not by name, and I have no trouble.

The Law Department had a very pleasant visit from Mrs. Joseph W. McGrain quite recently. We remember Mrs. McGrain as Miss Loretta Schott, the secretary to one of our officers, and it was a pleasure to meet and converse with her. She advises every girl to enter matrimony and I rejoice that she shares my views that a girl in making a selection should place character before money or anything else. Mr. McGrain is in our service, and he, too, is all right.

I am trying to reduce my seeming loquacity and let others talk, but then see what George Eliot says on the subject:

"Comprehensive talkers are apt to be tiresome when we are not athirst for information, but, to be quite fair, we must admit that superior reticence is a good deal due to the lack of matter."

Engineering Department

Correspondent, OSWALD EDEN

The accompanying picture shows Dorothy, aged 2 years, and "Jack," aged 8 months, children of chief clerk to district engineer Griffith J. E. McKibben, Cincinnati, Ohio. Mr. Mc. can well be proud of his off-springs.

Dorothy McKibben, age 2 years, and her little brother Jack

Because of the printers' strike which commenced the latter part of May, and which is still in force, our department, among others, was left out of the succeeding issues of the MAGAZINE, thus necessitating the holding of items that would have gone into the MAGAZINE in their order. However, as I think that they are of sufficient importance to be printed now, I call attention to two incidents that happened during the month of June which will be of more or less interest to the employees who know the "victims" personally.

On Wednesday, June 8, George W. Steinmetz, otherwise known as "Bill," formerly draftsman in the office of Office Engineer, but now with the Real Estate Department, took unto himself a wife, Miss B. Marie Sauer. They were married by the Rev. L. M. Zimmerman, rector of Christ English Lutheran Church. For the honeymoon they visited Niagara Falls and other northern points of interest—in fact, as a co-worker put it, they went everywhere they could

possibly go within a short time. They are now residing at Catonsville. Even though late, we congratulate you "Bill," on your new undertaking, and wish you the best of luck.

On Friday, June 10, Herman C. Harrison, chief clerk to District Engineer Mather, was presented with 8½ pound Herman C., Jr. As the "colonel" says, Mr. Harrison, "You are a hero!" which we echo.

During the month of August two men who were, in one way or another, connected with our department, died. I refer to C. L. Vang, brother of George Vang, president of the Vang Construction Company, Cumberland, Md., member of one of our contracting firms, who died suddenly of apoplexy; Mr. James F. McCabe, prominent civil engineer and head of McCabe & Co., contracting engineers, another of our contractors, died at his home of congestion of the kidneys. On behalf of the engineering department, I express sympathy to the families of both these men in their bereavement.

"Velvet Joe" says: "let's all sing the bootleggers' song, 'Open wide your mouths and let the moon shine in!'"

Boys, page the yeast man. It seems that somebody has been eating yeast, for a member of the Engineer of Buildings department has had the nerve to try to prove that two can live as cheaply as one. This chap seems to think that his vacation was allowed him so that he could be a special guide on a sight-seeing trip to Boston, Niagara Falls and some other northern towns. Go north, young man, go north! for we are having too hot weather here for honeymooners. Until we heard about this sight-seeing tour we could not understand why this young man appeared several mornings with white paint marks on his face and hands. It was also noticed that on several Saturday afternoons this same young man had to be excused from bowling as he had a date with a pipeless furnace, which, after a number of fingers were mashed and temper scratched, was reported as being ready for service. But where, oh where, is he going to get the coal to fill the blamed thing? Nevertheless and notwithstanding, Mr. MacKewin is receiving exhortations, felicitations and advice.

The accompanying picture is of R. T. Everett, Jr., who is the life and joy of Papa Everett, building engineer, Cincinnati, Ohio. R. T. Jr. is two years old now, and according to Mr. Everett, already can identify a building plan from a bridge plan. Some boy, is R. T. Jr.

Fingers help a whole lot when you're just learning to count. So thinks 2 year old R. J. Everett, Jr.

W. F. Aro, Freight Claim Department, does his own hauling, thus eliminating all unnecessary expense

From all outward appearances "Herbie" gets a lot of enjoyment out of life. We wonder if the smiles and occasional chuckles are due to his ability to tell jokes to himself? For humorous soliloquy "Herbie" has them all beaten.

"Joe" Weaver, efficient cook and porter to Chief Engineer Lane, was relieved from his duties to go with the president of the Washington-Southern Steamship Company, in the capacity of cook on a tour that included southwestern and northern America and Canada.

Miss George P. Simpson, secretary to Office Engineer Milburn, has been ill ever since she returned from her holiday, having had two successive cases of typhoid fever. By the time this note appears, we hope that she will be well on the road to recovery.

Office of General Freight Claim Agent

Correspondent, Miss E. T. MURRAY

Our column this month might well be termed "A boat Adrift on the Sea of Matrimony;" they all go mad in June. Our first big surprise was the marriage of our smiling, talkative, bass-singing "Bob" Townsend, who, after chirping himself into the object of his heart, decided to take unto himself wife No. 2, for the remainder of his natural life. "Bob" took a quiet little trip to Washington, where the ceremony was performed, the lucky lassie being Miss Gertrude Snyder of Pittsburgh, Pa.

Next to fall was Earl Redding, Suspense Division, who was married to Miss Myrtle Cresswell on June 5.

G. A. MacDonald, Loss and Damage Division, and Miss Zile were quietly married at the home of the bride, Baltimore, on June 21.

C. L. Biemiller, Revision Department, and Miss Mary Reth slipped over to Alexandria, Va., on June 23, where the ceremony was performed.

Last but not least was C. E. Horn, file division, and Miss Aimy Kelsay, who were married on June 24 at the Bride's home in Baltimore.

Ruth, John and Janice, Freight Claim Department. "Ain't we got fun?" At Ocean City, Md.

Our best wishes for life long happiness is extended to each.

The office remembered them in the usual way.

That the stork pays no heed to the high cost of living is evidenced by the arrival of a 9½ pound baby girl on August 12, at the home of A. V. Dwyer, Personal Department.

The home of F. A. Neville of the Revision Department was also visited on August 6 by the "Old Bird," who left a 7½ pound boy whose name is James Nolan.

T. J. Murphy, assistant purchasing agent, his family, and their home at Overlea, Md.

The very becoming bright red glow which overspreads the faces of our genial W. T. Bradburn and W. C. Chance on their return from their annual vacations, caused much speculation among the various clerks. The uneasiness was, however, soon set at rest by the announcement that W. T. spent his holiday on the Severn River under a boiling sun, while W. C. was deeply engaged in putting the finishing touches on his new home at Halethorpe—making cement walks, planting trees, flowers, etc.

Purchasing Department

Correspondent, J. B. DEHOFF
Terrence J. Murphy

On September 21, Terrence J. Murphy, assistant to purchasing agent, rounded out 30 years service with the Baltimore and Ohio.

In 1891, Mr. Murphy entered the service of the Company as a messenger in the Stores Department at Mt. Clare under G. W. Valiant, then general storekeeper. Through the passing years, step by step, his advancement has been gradual from that of messenger to clerk in the Storekeeper's Office at Mt. Clare, then order clerk, assistant chief clerk and chief clerk in the Purchasing Department, until on September 1, 1915, he was appointed assistant to the purchasing agent, which position he still holds.

The object of this article is not to introduce Mr. Murphy to Baltimore and Ohio folks, for he is well known by hundreds of them both in and out of Baltimore, and all who know him, admire him for his congeniality and sociability.

He is one of the most democratic of officers, and every employe will testify to his willingness at all times to lend the helping hand in whatever way possible. He is never too busy to give advice, always ready to inconvenience himself to confer a favor.

Mr. Murphy has a family that any man could be proud of, consisting of wife and ten children. Two other children are dead.

The accompanying cut of Mr. Murphy's home and family will give a better description than words. His home is in Overlea, one of Baltimore's suburbs, and there amid the trees and flowers, he and his family enjoy real life, when the duties of the Purchasing Department do not demand his attention.

Freight Traffic Department

Correspondent, DOROTHY RUBENSTEIN

Vacation time is over, with its wonderful days of rest and recreation, and the time is once again with us to do things worthwhile. Let us all settle down and put our best efforts into the coming year, so that when next we put away our work, pack up our holiday raiment and hie ourselves away to seashore or mountainside, we can do so with the feeling that we have truly earned the right to play, and thus greatly enhance our pleasure.

T. E. Hentz went home the other evening, expecting to enjoy a juicy steak for dinner. To his consternation and sorrow, his pet dog devoured the meat from the frying-pan while the cook's back was turned, and we are advised that Mr. H. had sausage instead.

Our esteemed correspondent went horseback riding while on her vacation and established a new record for speed. Distance covered was two miles. Time—two hours. Average—one mile per hour. This marvelous feat of horsemanship has never been equalled in the history of the world (to our knowledge) and anyone desiring to prove otherwise will please communicate with the writer, who is willing to hand over the honor (?).

Miss Catherine Morse has a new pair of shell-rimmed glasses, and not being accustomed to same, is wearing them on the tip of her nose. The effect is that of an infant wearing Grandma's spectacles. This certainly does not correspond with the assumption of dignity. However, we know you Catherine, we know you!

Hearty congratulations are extended to Miss Maud S. Todd, on coming in second best in the swimming race of the South Atlantic Amateur Athletic Association, held under the auspices of the Washington Canoe Club on August 6. We consider this an exceptionally good showing, in view of the

fact that Miss Todd was the only Baltimore girl in the race, as against six from Washington. Keep the good work up, Maude and bring home some more medals.

Hamilton Watch

"The Railroad Timekeeper of America"

You Might as Well Own a Watch with a Record

From steam to electricity, from the invention of the first engine to the air-brake, inventors have constantly sought two things—speed and safety.

The speed and safety of modern railroad traffic are made possible through carefully prepared schedules. Back of these schedules is the Hamilton Watch, the favorite timekeeper of American railroad men.

The engineer shown above is S. W. Powers. He has been with the Boston & Albany R. R. for 25 years. He runs his trains by a Hamilton Watch—has for years.

You might as well choose a watch that will show you time with day-in-and-day-out accuracy.

When you make your choice, ask to see the Hamilton models most popular with railroad men, particularly No. 992 (16 size, 21 jewels). Hamilton Watches range in price from \$40 to \$200; movements alone, \$22 (in Canada, \$25) and up. Send for "The Timekeeper," an interesting booklet about the manufacture and care of fine watches. The different Hamiltons are illustrated, and prices given.

HAMILTON WATCH CO., Lancaster, Pa.

Tariff Bureau

Correspondents, F. W. RUPPERT and C. A. WAGNER

Our former chief clerk, James R. Brown Jr., was recently appointed division freight agent, Grafton, W. Va. Congratulations, Mr. Brown. Our wishes for your further success!

W. L. Herpel, better known as "Lew," and Miss Marguerite McKee, travelled the "I do" route on June 29, at St. Elizabeth's Church, Lakewood Avenue and Baltimore Street. The "boys" wish you the best of luck.

"Mike" Robinson and "Joe" Kernan also contemplate testing the theory that two can live as cheaply as one, and have each bought a nice, cozy home for the prospective "Mrs." What we are trying to find out is, when does it come off? In this respect they are both as communicative as the proverbial clam.

G. S. Osborne, Sr., has returned to the office, after a furlough of three months, and is feeling much improved.

E. A. Lenz returned after a six month's leave of absence in the desert and gold mining districts of northwestern Arizona and southern California. He has some remarkable stories to relate, which we swallow with the customary amount of sodium chloride.

THE TARIFF CLERK

Once long ago God said as how,
We'd earn our bread by the sweat of our brow;
That for the sins of Adam and Eve,
We'd toil and sweat without reprieve;
That in the future the hideous work
Would be assigned to the tariff clerk.

H— being too mild for the T. B.,
They organized the I. C. C.
From early morn till evening late
They're making statements and fixing rates.

"The work is finished, we'll get a rest"—
When in there comes an I. & S.

One rate's too high, another low,
And they work at night a month or so.
Then comes a business man's complaint,
"Chicago's getting rates we ain't."
I. C. C. says give all a chance,
But we won't reduce, and we can't advance.

Another week at night they figger,
The printer leaves off an important "jigger,"
The devil pokes his fire and laughs,
As the tariff clerks make mimeographs
To undo the work they've already done,

Tariff Bureau, please note!

While the letters pile up, one by one.
Oh, when God told Adam we'd have to work,
He sure had in mind the tariff clerk.

—Anon.

The accompanying picture is of some of the employes of the Tariff Bureau. They are, left to right: J. F. Bain, C. C. Swartz,

E. M. H. riding to work on his bike. It's good exercise for Elmer

M. F. Robinson, A. G. Barnett, R. B. Hager, P. E. Miller, W. P. Roberts, W. J. Kernan, L. S. Eichner, G. W. Presgrave, C. A. Wagner, F. J. Casey, G. B. Hoyt, M. E. Prenger, W. H. Webb, L. L. Bawsel, R. O. Griffith.

We have been reading with great interest the stories in recent issues of the MAGAZINE of the business which has been obtained by our employes outside of the Traffic Department, for the Railroad.

Transportation Department

Correspondent, L. K. BURNS

It is with regret that we report the resignation of an employe from the office of General Superintendent Transportation who, though still a young man, has spent twenty-two of the best years of his life in the service of the Baltimore and Ohio. On April 1, 1899, Benjamin Maitland DuBois began his railroad career as a messenger boy in the office of General Superintendent Transportation. On June 1, this year, he resigned as supervisor of Passenger Transportation, to which position Mr. DuBois had mounted by gradual steps, the first of which was that of file clerk in 1900; then to clerk and stenographer in 1903, followed by secretary to General Superintendent Transportation in 1910, and supervisor of Passenger Transportation in 1914. Then came the War and our friend was transferred in February, 1917, to the office of the Vice-President in charge of Traffic. He returned to the Transportation Department in December, 1919, and was again made supervisor of Passenger Transportation. During this long service Mr. DuBois made many friends and his genial countenance will be missed by his associates. All congratulate him, however, on his new position as district manager of the Commonwealth Fuel Company, Clarksburg, W. Va. We all wish Mr. DuBois success in his new undertaking, as also his successor as supervisor of Passenger Transportation, his old friend and assistant, R. E. Roberts.

During the recent violent thunderstorms some of our "Equal Rights" have been taking stock of sins of omission and commission, resolving, with fluttering hearts, to be better—until after the storm.

Let us introduce to you the newest arrival in this branch of the Baltimore and Ohio family, Miss Edith May Bramble, daughter of Mr. and Mrs. J. Howard Bramble. At this writing, August 4, the little lady is 2 months, 17 days old.

Clerk (to Geo. Loeblein who is purchasing a license for his dog): "What is your name, please?"

George (nervously): "Trixie."

And the office force got lined up for the picture

Auditor Passenger Receipts

Correspondent, G. FRED MILLER
Secretary to Auditor

Recently G. W. Jenner, chief clerk to auditor passenger receipts, was in the company of several gentlemen, when he heard one of them speak of making a trip to Cumberland, Md., via a line other than the Baltimore and Ohio. He suggested that the Baltimore and Ohio Railroad be used, because of its good train service, comfort, beautiful scenery, etc. The gentlemen replied that they had already made arrangements. Not disheartened, Mr. Jenner secured a Baltimore and Ohio timetable, and prepared a special statement showing the train service, etc.

Sometime later he again saw the gentlemen, and they informed him that upon the strength of his letter, five men made the trip to Cumberland via the Baltimore and Ohio, and were so pleased with all conditions in connection with the going trip, that they returned the same way.

You will see that by a few words and a little time, ten fares were secured between Baltimore and Cumberland, which was clear Baltimore and Ohio revenue.

These men are interested in some new industry at Cumberland. They advised Mr. Jenner that they intended to make frequent journeys to that city, and will in the future use the Baltimore and Ohio.

Staten Island Lines

Correspondent, G. F. GOOLIC

Thru the Eye of the Needle—
the Superintendent's Office.

"Puss in the Corner," alias Miss Grace Whalen. Grace is the original "Candy Kid;" it is said that she was raised on lollypops. Grace has the best known system in the civilized world for misfiling letters. It is her contention that if she files a lemon drop with the file on wrecks, and a marshmallow with the pass requests, a chocolate drop with the telegrams and so on, it will make her work so much pleasanter and then she can find files by the flavor. I once found some spearmint stuck under her desk. I wonder if that was put away for future reference. Grace is the girl with the musical sneeze.

"Kitty the KOP," alias Mrs. K. O. Purcell. Nope, she isn't a policewoman. K. O. P. are her initials. I've often won-

Fresh from her morning bath is fair Frances, daughter of Edward McCann, special investigator, Police Department, Pier 7

dered if tortoise-shell glasses are an affliction with some people or can the habit be acquired by anyone. I've heard lots of stories bordering on the uncanny, of how "Kitty" can make people sing by placing them in a state of "soporiferousness." It might be so, but I'm afraid that I'll have to adopt Missouri as my home state this time. I was always of the opinion that the merry mulch was the only thing that could provoke a level headed, honest American to burst forth in sonorous ejaculations.

"Irene," alias Miss I. McCarthy. It is said that Irene is terribly worried over the number of typhus cases reported. She dreads anything like that disease. It is necessary for this poor girl to make in-

numerable trips down stairs just to wash her hands so that she may not become infected with the dreaded disease. Isn't it terrible? According to my statistics and daffy comparisons, a hobo riding the rods is an industrious citizen compared to Irene.

Miss Decker, who hasn't any alias. Long Neck made this wonderful contribution to the Railroad World. For the benefit of those who don't know, Long Neck is just the other side of the Bullshead and is situated between two blades of grass. A little thing like writing letters is nothing in this girl's life. They might just as well be wrong as right. What's the difference, anyway? Some people say that Helen is a stationary clerk, too. I don't think that I could cor-

The Warning of the Desert

by
William Lawrence

THIS is the story of Bill Andrews—plain Bill Andrews. He was twenty-six years old—married—the father of as fine a baby boy as you have ever seen.

But Bill was just like thousands of other men. He had been forced to leave school and go to work when he was still young.

He had taken the first thing that came along and he had worked as hard as he knew how. But somehow or other, he didn't seem to be getting anywhere.

It was hard—terribly hard, sometimes—to make both ends meet. Sickness came—doctor's bills—the rent was raised—and all that sort of thing.

Above everything else in the world, Bill wanted to go home some night and tell his wife of a raise in salary—of a promotion that would mean a happier, better home.

I wonder if there is a man anywhere who hasn't had that same ambition, that same hope!

But that increase in salary and that promotion never came. Indeed, once or twice Bill came mighty near losing his job.

And then, one night, Bill came across an advertisement that told how men just like himself had gotten out of the rut and had gone ahead—how men with no more education than himself had studied at home in their spare time—how the International Correspondence Schools would come to him and help him to develop his natural ability.

Bill had seen that advertisement and that familiar coupon many, many times before. For two years he had been promising himself that he would cut it out and send it to Scranton. He knew that he ought to do it—that he should at least find out what the I. C. S. could do for him. But he never had.

And he might not have sent in the coupon this time, either, but for the few words under a picture called "The Warning of The Desert":

"On the Plains of Hesitation bleach the bones of countless millions who, at the Dawn of Victory, sat down to wait—and waiting, died."

Bill read that over two or three times. "The Plains of Hesitation!" "The Dawn of Victory!" These two phrases kept ringing in his ears. They worked their way into his very soul.

So he clipped that coupon, marked it and mailed it to Scranton. The literature that he wanted came by return mail.

Bill told me the other day he was surprised how interested he became in his lessons—of the personal interest the teachers at the I. C. S. took in him—how his employers learned about his studying and saw evidence of it in his work.

"The most important moment in my life," says Bill, "was that moment four years ago when I sent in that I. C. S. coupon. And the happiest moment of my life was when I went home with the news of my first real increase in salary and my first real promotion. If I hadn't sent in that coupon I'd still be working at a humdrum job and a small salary."

HOW much longer are you going to wait before taking the step that is bound to bring you more money?

The way is easy. Without cost, without obligation, mark and mail this coupon. It takes only a two-cent stamp and a moment of your time, but it's the most important thing you can do today.

Santoro's Monthly Review

roborate that exactly for she does move occasionally but she has charge of the cabinet. Oh, I see—stationery. Oh?

"Joe," alias J. Langford. This young man is a member of the Alumni of Mr. McKinley's Finishing School. Some people seem to think that he didn't get the proper finishing for he is still with us and his pleasant (?) baritone may be heard in most any portion of Pier 6. "Yes, this is Mr. (?) Langford" (Ask "Bill" Ivers). "Joe" hails from Eeltown and it is there that he enjoys life in the company of his better half.

"Ike," alias I. Houseman. "Ike" is a glutton for punishment; recently he signed his own death warrant. He is about to agree to "LOVE, HONOR and OBEY." We mourn our loss for he was such a nice fellow. At present "Ike" is starring in a drama with Mr. Kelly with a cast of a hundred shacks or so, entitled "Write the answer in the Book," "Sign the Paper or drink the Ink." It is a powerful tear-jerker.

"Pete" alias J. V. Costello. "Coss" is "Ike's" predecessor. When "Coss" was on that job he used to run the Railroad Club and the E. M. B. A., and in his spare moments, if there were any, he would take care of Mr. Kelly's affairs. "Coss" doesn't mind working but at present he has the spring fever. The truth about the thing is

it hasn't left him since he contracted it last spring. In other offices they don't call it spring fever, but "passing the buck." Oh! well, us girls have our troubles.

"John" alias John Goodski. We watched this fellow for several months to try to detect a weakness but we failed to find any. He is short and fat and would not crack a smile or permit himself to partake of any idle banter for anything. We found a

"Frenchy", the Prince of South Beach,
Frank Avezac

minor weakness just before going to press however—he eats up statements.

"Henry" alias Henry Kiehn. When President Wilson selected Burleson for postmaster general he thought he had made a choice that would stand the acid test of time but that was one mistake he made. He never saw Henry. Mr. Deem's mail is routed via Alaska by this young man to give it the benefit of the air. Mr. Groeling's mail is sent around the Horn and back through the Panama Canal just for the fun of it. We here in the Baltimore and Ohio are mighty lucky that Goddard isn't sending freight carrying rockets to the moon. Not that he might route the yard office mail via the moon route, but you never can tell.

AUF WIEDERSEH'N.

James McKiever, the "lionhearted" fireman from Mariners Harbor, has forsaken the ladies and has taken to breeding canaries. It is now a common sight to see him promenading on the prominent streets of his home town with several of his prize winning canaries on a leash.

Engineer Thomas May, the "Irish aviator," who several years ago changed his domicile from Rosebank to the more desirable Jersey Street, and whose palatial residence now bears the sign "Polski Sklep," has acquired the habit of claiming time for all days taken off by engineers ranking him on the seniority roster. He must be related to Ponzi.

Apparently Aleck Conley's auto now burns fuel oil. It makes more smoke than any Arlington engine and attains a speed of ten miles per hour. On May 8, a motorcycle policeman was seen telling Conley to keep near the curb and let automobiles pass.

The accompanying picture is of Night Yard Master E. Weissner and Eastbound Clerk John J. Larkin, of St. George Yard.

We also have a picture of "Frenchy, the Prince of South Beach," otherwise Frank Avezac.

The engagement of Division Engineer J. Louis Suessero to Miss Anna M. Bones of Tompkinsville, Staten Island, has been announced. Congratulations!

Just me and John—E. Weissner and John J. Larkin

May I run in the fat ladies' race? Margaret O'Connell, 9 months old

Baltimore Terminal Division Agent's Office, Camden Station Correspondent, W. H. BULL

This office is to be congratulated—particularly the Cashier's Department—for one of its clerks, Miss Margaret Grammes, won the first prize (\$1,500.00) in the News-American Fashion Show Beauty Contest. The prize, a \$1,000.00 gown, was worn by her in the Fashion Show at the Fifth Regiment Armory; besides she got the equivalent of \$500.00 cash. In the August issue of the MAGAZINE there appeared a clipping from "The News," which told what the judges thought of her.

Miss Grammes owes her triumph to her brother, who persuaded her at the last moment to enter her name and photograph in the contest, and it was he who escorted her to the contest at the Belvedere. The fact that she came out first, she said very candidly, was a complete surprise; so much so, in fact, that when she called up her mother from the Belvedere to tell her the wonderful news, she "couldn't make her believe it."

The friends of Miss Grammes were very much elated at her winning the prize, and at the close of business gathered to congratulate her. P. J. Treuschler, the assistant agent, in a happy little speech on behalf of fellow-employees, presented her with a large basket of flowers.

The friends of Miss Gladys Schoal, formerly of the Cashier's Department, will be pleased to learn of her recent marriage at Indian Neck, Va., to Dr. Christudulo Constantine. Dr. and Mrs. Constantine will make their future home in Jacksonville, Florida.

F. D. Green, Cashier's Department, is to be congratulated. The stork recently left at his home a fine boy, who has been named Merrill.

The accompanying picture is of Miss Margaret A. O'Connell, age 9 months, daughter of Ray J. M. O'Connell of the O. S. & D. Department.

Around the Terminal with Heiser RED HEAD

Whim! Wham! red headed Sam.
Bim! Bam! that's who I am—
Throttle puller. Grease on my coat;
Reverse bar expert on a big iron goat;
A hundred cars and a little red hack,
Pay day's gone but she's comin' back.
Whim! Wham! old tallow can.
Bim! Bam! I'm a railroad man.

Bing! Bing!
"Officer, bring the man out of number 17!"

Bing! Bing!
"Francis DeVoughes, you are charged with stealing a cow, valued at 30 cents, from Mike Mitcheal, operator, at Camden Cut. What have you to say for yourself?"

"Judge Locheal, your honor, I didn't steal the cow."

"But Officer "Shorty" Wolfe charges that he found the cow in your back yard."

"It's this way, your honor; I was walking peaceably along the tracks when I saw a piece of rope, I picked the rope up and dragged it home; when I got there I found a cow tied to the other end."

"It's my cow, your honor, and I've been missing my chickens, too."

"Silence in the court, Mr. Mitcheal—fifty dollars and costs, Mr. DeVoughes. The next time you find a piece of rope, look on both ends. Take him away, officer, and bring the man out of number 12."

Bing! Bing!

On Thursday, July 28, the boys from Camden Yard, with their wives and children, spent an enjoyable day on "Shorty" Weber's shore on Bear Creek. The party met at Camden Station at 10 a. m., and after loading up on an automobile, arrived at the shore about 11 o'clock.

After raising the flag, they all donned bathing suits and spent the rest of the day in them. Bathing and pitching quoits were among the sports of the day. At 7.30 in the

Some of the boys and their families on an outing at Bear Creek

evening the party voted that an extremely hot day had been put in in a very pleasant way, and all were ready to go home. The bathing suits will be put away among the moth balls until another summer comes.

The accompanying picture is of Elizabeth Kelley, the little daughter of Dispatcher "Ed" Kelley. We wondered why "Ed" seemed so proud. Now we know!

Mount Clare Shops

Correspondent, MISS MOLLIE ALBRECHT
Secretary to Superintendent

Superintendent of Shops Office

It was quite amusing to see how poor old Davis tried to stop chewing tobacco. The spirit was willing, but the flesh was weak. After a three-day trial he said he couldn't stand it any longer and started to make up for lost time. During the trial, he claims he was so sick (although he didn't look as though he needed an undertaker), and that tobacco was essential to his health! We'll give him Lawrence's watchword: "Don't give up the ship!"

John Henry Pool is always yelling over the telephone to some poor fellow in the shops, but there is a certain young lady (we don't know her name), who has the happy faculty of being able to make even John Henry talk like a "regular feller." We'd like to know her; she is a charmer, to say the least.

Some call her just Elizabeth, And others call her Bess, But Dispatcher Edward Kelley is Right proud of her, we guess

Baltimore Division

Correspondent, W. H. TARR, *Superintendent's Office*, Camden Station

Miss Pearl Berrett and Miss Emma Timmerman, clerks, spent a week of their vacation period at Atlantic City. In the group picture standing, left to right, are: Miss Pearl Berrett, Miss Emma Timmerman, Miss Berrett's sister.

A record was established on the East End when the East Side relief train was not called out on line of road from May 26 to July 11. The relief train on the West End was called out only once during the month of June; this was for the derailment at Savage, Md., on June 11.

We regret to chronicle in these columns the sudden death of Brakeman O. L. Blyler on the night of July 20, at his home. Mr. Blyler was also a promoted conductor and in the prime of his life.

We also regret to record the death of Brakeman Robert Manko, who died on Saturday, August 5. Mr. Manko had been reinstated in the service and was on his first trip on July 16, when, while coupling cars, he met with the injury which terminated in his death.

Misses Emma Schleisenger and May Schammel, clerks, spent part of their vacation in the wilds of New Jersey and some interesting photographs were taken. One was of Miss Schammel as a milk maid, but as the cow was shy of the picture we are not able to reproduce it in these columns.

Passenger Station, 24th and Chestnut Sts.

Correspondent, CHARLES A. ALLEN

Our new entrance on Market Street at 24th, gives us a prominent entrance which cannot fail to increase our passenger traffic and bring to this portion of Market Street an era of prosperity in keeping with the other portions of this busy thoroughfare. This is a great improvement over our former entrance on Market Street, which was through the 24th Street Station of the Philadelphia Rapid Transit Co.

The passengers will now go through a short arcade with a store on either side, and then along a balcony of concrete whose dignified simplicity will be admired by all who use it. The Chestnut Street end is just far enough from the station to allow a fine view of our artistic building.

We must congratulate the designer of this entrance on the appearance of this piece of work, which adds greatly to the charm of this gateway to the "City of Brotherly Love."

After five months of patient suffering, Miss Anna Krumm, Division Accountant's Office, passed away July 28. Age 21 years.

Washington, D. C., Freight Station

Correspondent, W. L. WHITING, *Chief Clerk*

Our efficient Fire Department had an opportunity recently to display its ability, and well did they measure up to the occasion.

Shortly after returning from lunch, one of the office force, whose window faces the automobile unloading platform, noticed that one of the Ford machines that were being assembled was on fire, and in danger of being badly injured. The Fire Marshall, Foreman J. T. Mathews, was in the office at the time and his attention was immediately called to the matter. He rung in one of our private alarm boxes, which immediately called the members of the department to the scene. In less than five minutes the fire was out, and the Ford Machine, which was only slightly damaged, was being carried in state off the platform to the repair shop. In the meantime, one of the

Ford employes, anxious to prevent the conflagration from spreading, and not knowing of the proficiency of our fire department, sent in an alarm from the city fire box, located just outside our building. The result was that very soon several of the city departments responded to the call; but of course when they arrived, they found nothing to do but take notes of the occurrence. There is no doubt that the prompt action of Fire Marshall Mathews and his men prevented what might have been a very serious affair, as the burning Ford was standing between two lines of freight cars, any one of which might have taken fire and started something that could not so readily have been extinguished. Our department does not often have an opportunity to show its ability (speaks well for the watchfulness displayed by our force), but when it does, it comes right up to the scratch every time!

Speaking of efficiency, the following from a well-known furniture house in this city is worth repeating:

WASHINGTON, D. C., June 17, 1921.
Baltimore and Ohio Railroad Co.,
Freight Department.

Gentlemen—We are well pleased with the management of this department.

Where there are competing lines we give your road the preference.

We are,

Very respectfully,
(Signed) E. P. TAYLOR Co., Inc.
By W. H. Spragg, President

Claim Clerk J. T. Carr and the best granddaughter in the world

Some of our force have enjoyed short vacations, and have returned with many interesting things to tell about.

Our claim clerk, J. T. Carr, spent some time in Sioux Falls, South Dakota, visiting his daughter and son-in-law, and, last, but by no means, least, his GRAND DAUGHTER! This granddaughter is "some baby" as is evidenced by the accompanying photograph showing Grandpop holding on to her with all his might. In the rear of the picture Grandma Carr appears, holding up her arms in horror at the possibility of a slip on Grandpop's part. The photograph is one of the best of our veteran claim clerk that it has been our good fortune to get hold of.

General Foreman and Mrs. J. T. Mathews spent two or three days at Niagara Falls, and came back with the enthusiasm regarding that wonderful place that most people have on their first visit to the falls.

The Misses Clara and Della Porton spent their vacation partly in Port Jervis and partly in the Catskills. They chose a beautiful spot to rest in.

Mrs. Bertha Perry, abstract clerk, enjoyed a few days at Montour Falls, N. Y., and also made a first visit to Niagara Falls.

Who'll smoke the "peace pipe" with little "Bobby" Peach?

Engineer of Tests

We all enjoyed Willie Hokemeyer's efforts to balance the platform scales with a four pound bucket on them; and yet, Willie still declares he never saw the bucket on the scales! Come to think of it, it mightn't be the weather, but Elsie again.

Barnes would like the paymaster to know that his name is Hosea Barnes, and NOT MOSES! He says his last check was made payable to Moses Barnes. Well, anyhow, Barney, both the names came from the Good Book, so there is no occasion for worry.

The accompanying picture is of little "Bobby" Peach, son of "Eddy" Peach of the Chemical Laboratory. "Bobby" has the pipe, but no tobacco; hence the frown.

Storehouse

During the hot weather in July, we noticed in a Chicago paper that all the ladies were wearing bathing suits to do their shopping in, although some of the suits had never seen the water, and never would. We even heard they were wearing these garbs in restaurants (good ones, too), and it was quite a daily occurrence to hear a lady remark that she was going to step into her bathing attire for dinner. We do not doubt now why certain people went to Chicago!

Cupid must be asleep at the switch! Maybe he's on his vacation.

One, two, three,
Who are we?
Read the notes
And you will see

Cakes an' caramels, an' peaches, an' oh, what a picnic!
(See Pittsburgh Freight Station notes.)

One of our force, who has been with us for a number of years, Steward F. Mehl-felt, has left us to engage in the lumber business with one of the largest lumber dealers in the city. We were sorry to lose "Stew" but wish him all success in his new venture.

Martinsburg Shops

Correspondent, W. L. STEPHENS

Horace P. Tabb, operator, Martinsburg, has retired from active duty after a service record of 53 years. Mr. Tabb started in as operator on the Valley Branch. Later he came to this station, where he has been in active service for 40 years. Mr. Tabb retires to a well earned rest. May he enjoy many more happy years!

A. R. Sperry, local ticket agent, has retired after 39 years of service. He started with the Baltimore and Ohio as agent at Mountain Lake Park. Several years ago he came to the office at Martinsburg from Harpers Ferry. Mr. Sperry proved to be a capable and efficient agent, popular with his fellows, and held in high esteem by the traveling public. Mr. Sperry will spend the remainder of his life in the Southland.

Mrs. Rosa C. Brown, wife of Veteran Martin L. Brown, died at her home in this city after a long illness. Mrs. Brown has been an invalid for several years. She was formerly Miss Rosa Berlin, and the last member of the Berlin family, her brother having preceded her to the grave about a year ago. Both Mrs. Brown and her brother will be remembered by many of our railroad folks who moved from Martinsburg to Brunswick when the terminal was moved. Brother Brown has the sympathy of a wide circle of friends in his bereavement.

Hurrah for the new section gang!

Miss Nellie G. Comer, former posting clerk, Freight Office, was transferred to the position of clerk in the yardmaster's office.

Miss Mary Grosscup, who has been absent for some time, is now, we are glad to say, back on the job again.

Mr. and Mrs. W. E. Summers are the proud parents of a daughter, born on June 3. The little girl's name is Betty Jane. Her daddy is general yardmaster here. We extend our congratulations.

James R. Foster, assistant claim agent, who has been located here for several months, has been transferred to the Philadelphia Division. Good luck, "Jimmie!"

Charleston Division

Correspondent, M. W. JONES, *Secretary to Superintendent*, Weston, W. Va.

"Happiness comes from doing ones work well, being busy, doing something for others, improving one's ability to do things, and increasing one's knowledge, so that the opportunity for service is greater each year."

"Use The Baltimore and Ohio."

One of the most important things today is to get busy and secure all the freight and passenger traffic we can for our Railroad. Therefore, it seems appropriate that the place of honor in our notes this month should be given to a picture of our esteemed friend and co-worker Samuel Strachan, recently division freight agent, Charleston, W. Va., and lately promoted to assistant to the general freight traffic manager.

Samuel Strachan was born in Parkersburg, W. Va. He spent his younger days as a printer's "devil," typesetter, etc., on a country newspaper in eastern Kentucky. (See how these newspaper men get ahead?)

Daddy is Cash Clerk Porter, and I sign my name "W. J."

Cartoon by E. B. Pierce, Valuation Department

Samual Strachan, now assistant to general freight traffic manager

We have one in the White House now, and who knows but that some day "Sam" won't be there to?) He commenced railroading with the old Chattaroi Railroad, now a part of the Chesapeake and Ohio at Louisa, Ky. Here he worked his way up as operator, agent, clerk, chief clerk and soliciting agent. He came to the Baltimore and Ohio as soliciting agent at Memphis, Tennessee, later being promoted to traveling freight agent. From 1911 to 1916 he was traveling freight agent at New Orleans, and from October, 1916 to August, 1917, commercial freight agent at Pittsburgh. He was then promoted to the Commercial Development Department in Baltimore, where he remained until February, 1920, when he was appointed division freight agent at Charleston.

Of a diplomatic and good natured disposition, Mr. Strachan made every one on the division, employees, officials and shippers, his personal friend, and though we regret to see him leave, we congratulate him on his promotion, and we congratulate the general freight traffic manager on securing so able an assistant.

F. M. Jordan, former division freight agent, Grafton, has been appointed to fill the place vacated by Mr. Strachan. We welcome him to our family.

Superintendent W. Trapnell underwent an operation for appendicitis early in June. After leaving the hospital at Elkins, he spent a couple of weeks in Ocean City, Md., with his family recuperating. We are glad to say he is now with us again, entirely recovered.

Mrs. W. H. Schide, wife of the superintendent's chief clerk, is in St. Mary's Hospital, Clarksburg, having recently undergone an operation for appendicitis. We are glad to have favorable reports and all extend our sincere good wishes for her early and complete recovery.

Conductor W. F. Miles, of the Buckhannon-Pickens drag, spent a month traveling through California and Western Canada. From the cards he sent us, we surely would like to have been with him.

Foreign Cars Cost Your Company One Dollar per Day. Watch Them

We take pleasure in printing a picture of Conductor D. T. Foy, one of our old timers, and a man who is always looking for a chance to help the good work along.

Conductor Foy, Gassaway

Entering the service in 1914 as brakeman, he soon became a conductor, and has earned for himself an enviable record for efficiency, hard work and prompt movement of his train.

The Elk Line Club at Gassaway, which is made up principally of Baltimore and Ohio employees, recently gave its last dance of the season. This club has given a number of card parties and dances during the past few months and has added much to the gaiety of the town.

C. E. Shephard, Wheeling, has been appointed general foreman, Gassaway. We are glad to welcome him to the Charleston Division.

YOU WILL FIND THESE ON THE CHARLESTON DIVISION

1. A busy day at Orlando; the hustlers are: Truckmen E. S. and R. M. Riffle, and W. H. Mills, clerk. 2. Dispatcher A. C. Mason, the Weston "heart-breaker." 3. The "Marble Palace," home of Trainmaster Deegan, Road Foreman Marsh, Captain Rieman, John Workmeister, "Charlie" Criswell and "Doc" Fleetwood. 4. Yard Clerk "Bill" Hefner, "our old pal." 5. Byron, two year old son of Conductor W. W. Bright, challenges any locomotive on the division to a race with his kiddie kar. 6. Well, well, well! Here are Conductor Berry and Attorney Fleisher. 7. Ronald and Donald (sounds like poetry, doesn't it?), but we call 'em "Pug" and "Don"—sons of Dispatcher W. W. Young. They are four and six years, respectively. 8. And bless his heart, here's the "Pride of the Force," Lieut. H. H. Huff, from down thar at Weston

Save Coal

The Charleston Division held a fuel saving campaign during the last two weeks of July. Everyone was much interested in this work, and we await the figures showing results obtained, with much interest.

Save a Claim a Day

During the past two months, owing to the absence of our superintendent, Claim Prevention meetings have not been held; now that he is with us again, the meetings will be resumed. This also applies to our safety meetings.

General Superintendent J. M. Scott recently spent a day in Weston, inspecting the offices, shops, etc., and holding a meeting with the division staff.

We have lots more to say, but as our editor, on account of conditions in the printing department, has limited us to three pages, we will have to stop. We hope that conditions will soon be such that the usual correspondence may be resumed. Meantime, we want to advise those who have been kind enough to send photographs, notes, etc., that they have not been overlooked, but will be printed as opportunity offers.

Business continues dull, and we hope every one on the Division will continue—as they have been doing—to hunt up business for our Company, and AVOID WASTE.

General Offices, Cincinnati

E.W. SPILLE, *Pass Clerk*, General Manager's Office

E. H. HENKEN, *Assistant Chief Clerk*, Division Freight Office

Lieutenant Edgar B. Ritchie

Funeral services for Lieutenant Edgar B. Ritchie, former private secretary to George W. Squiggins, general passenger agent, Cincinnati, who was killed while serving with the 355th Infantry, A. E. F., at St. Mihiel, France, September 15, 1918, were conducted on Friday, August 5, by the Rev. H. B. Sanders at the First Presbyterian Church, Ludlow, Ky.

Services were in charge of the Edgar B. Ritchie Post, American Legion, of Ludlow, Ky., and soldiers from Fort Thomas. His remains were buried in Highland Cemetery, Fort Mitchell, Ky., with full military honors. Members of the Edgar B. Ritchie Post and of the Norman-Barnes Post, Covington, Ky., acted as a guard of honor.

As a mark of respect to the fallen hero, Mayor Thomas Balsly, of Ludlow, issued a proclamation calling upon all business houses to close for a period of three hours on the afternoon of the funeral.

Edgar B. Ritchie entered the service of the Baltimore and Ohio at Cincinnati in the office of general passenger agent, as junior office boy. His studious nature and untiring efforts won for him rapid promotion until he attained the position of private secretary to the general passenger agent, Cincinnati, which post he held at the time of his entering the Officers' Training School at Fort Benjamin Harrison near Indianapolis. Here he secured a commission as first lieutenant. A short time after receiving his commission he was sent over-seas and attached to the 355th Infantry, A. E. F. While in charge of a munition train he was struck by a fragment of an aerial bomb dropped from a Boche plane, and instantly killed.

Lieutenant Edgar B. Ritchie

Lieutenant Ritchie was also a Mason and Masonic services were conducted at the grave in Highland Cemetery. A military salute was fired by a squad of soldiers from Fort Thomas, Ky.

He was 27 years of age and is survived by his widowed mother, Mrs. Glenna J. Ritchie, two brothers and a sister. One of the brothers, Casper M. Ritchie, is at present cashier in the General Passenger Office at Cincinnati.

Cincinnati Terminals

Correspondent, JOSEPH BEEL, *Chief Clerk to Superintendent of Terminals*

Do you know Wm. Hampton, "General Wade Hampton," the swamp angel of North Carolina—in service since 1892 as inspector and truck man. Wade has been a faithful and conscientious worker. We are trying to have him become a member of our Veterans' Association.

Yard Conductors "Pat" Mahoney and "Jerry" Halpin, who run the 1st and 2nd trick crew at Gest Street, have become expert car accountants from the nice work they are doing in handling the spotting record. You can't tell them anything about the switching now. They will tell you, "Good work, boys, it keeps us all."

The accompanying picture of East Norwood Station was taken during the month of August, 1884, when the double-track of the old Cincinnati, Washington & Baltimore Railroad ended there. The other tracks are of what was known as the Cincinnati Northern, a narrow gauge railroad and now the C. L. & N. The names of the men in the picture, from left to right, are—P. J. Heerny, agent at Vinton, Ohio, now dead; C. H. Kelly, agent and operator, at present working at East Norwood as operator, and George Hammit, then section foreman of the Cincinnati Northern. At the time this picture was taken, there were only three houses in East Norwood and two under construction. During the flood of 1884 this was used as the Union Station for all trains.

You have forgotten me, I'm sure,
You barely recognize me now.
To you I'm just like other men,
You are so distant and so cool,
And yet there was a time, dear Ruth,
When I let you chew my gum in school.

You don't recall when we were beaux,
And swore we'd never, never part,
You said forever you'd be true,
And so did I; I crossed my heart.
But Jack has come into your life,
To you I'm a presumptuous fool,
And yet there was a time, dear Ruth,
When I let you chew my gum in school.

Joe O'Donnell's favorite melody is,
"You're the flower of my heart, sweet dandelion."

A wise old owl lived in an oak,
The more he saw, the less he spoke,
The less he spoke, the more he heard,
Why can't Alfretha Bromley be like that bird?

Guess who says:
"Gee, whackey!"
"Gosh, Hemlock!"
"I think that's silly."
"That's the spirit."
"Oh, well, if I checked if you know it's all right." (Cliff Backer gets one guess.)

East Norwood Station as it appeared in August, 1884

New Castle Division

Correspondent, J. A. JACKSON

Our sincere sympathy is extended to A. F. Alexander, relief agent, in the death of his father, which occurred in Akron recently.

Superintendent D. F. Stevens has returned from a two weeks vacation spent at his summer cottage, Crooked Lake, Ind.

J. L. Shriver, road foreman of engines, has returned from a two weeks vacation spent along the Allegheny River. We have not heard of any extraordinarily large catches yet, but as the leisure hours develop it may be that we will hear some real fish stories, as "Jack" is a terror with the rod and reel.

R. P. Canty, baggagemaster, Youngstown, Ohio, died very suddenly at his old home in Cumberland, Md., on June 20, his death being attributed to heart trouble. Mr. Canty came to Youngstown from Pittsburgh, Pa., in September, 1918, and gained the respect and esteem of his fellow employees, as well as the travelling public with whom he came in contact. He was reliable and trustworthy and rendered valuable service to the Company. His presence will be greatly missed by his many old time friends in the Youngstown District. The funeral was held from the Catholic Church in Oakland, Md., on June 23, with interment in the cemetery adjoining. A host of sorrowing friends extend their sympathy to the members of his family.

A distressing accident occurred in the New Castle Junction yards on Wednesday, August 3, when Yard Brakeman Elmer Gohn was caught between the engine and a cut of cars which he was engaged in switching, and so terribly crushed that death ensued shortly afterwards. Brakeman Gohn was one of the old time employees of the New Castle Division, a promoted conductor. Owing to the reduction in forces, however, he was acting as brakeman at the time of his death. Funeral services were conducted from his late residence on Friday, August 5, and were largely attended. The sympathy of his fellow employees is extended to the widow and family in their great loss.

The picture shown here is of Miss Pheobe Johnson, ten year old daughter of Captain of Police T. L. Johnson, who is now located at Youngstown, Ohio. Miss Johnson is conceded one of the best toe dancers in the state. During the war she entertained the soldiers at Camp Meade and

Miss Pheobe Johnson

also at entertainments given for the benefit of disabled veterans. Possessed of a pleasing personality and with a charm that has endeared her to her host of friends among the employees of the Railroad, she is ever willing to assist in any entertainment given for our employees and their families.

We Wonder What Would Happen If—

Sam Rosen would get bald.
Duffy would forget to swear.
Vogan was without a chew.
Beatrice was on the outs with Jim.
Peebles would get slim like Pool.
Fred Ellis would go to a dance.
Carl Hanna would get married.
Blanche would get a fellow.
Ed. Merriman would get fat.
Eilbeck would buy a diamond ring.
Pool would forget to run to Mahoningtown.
"Charlie" would get a haircut.
Balentine would say something.
Minnick would forget where Beckford Street was.
Gladys would stop saying "Oh James!"
"Pete" would shave off his mustache.
McCarthy would stop playing Rum.
Ritty would buy a pack of Mail Pouch.
Hazel would ever weight two hundred.
Thatcher would go back to Florida.
Margaret would make up with "Doc."

The late Daniel Lester Host, Newark Division

J. E. Morrissey, tonnage clerk, New Castle Junction, is surely in possession of a lucky rabbit's foot, having just recently drawn the winning number for a "Henry" touring car, given away by the local council of the Knights of Columbus. "Johnny" was not content with the prize he won, so he turned "Henry" in for a Buick. We're not a bit jealous of John's good luck, but would like awfully well to see him a little more sociable, and at least give the poor tired girls a ride once in a while.

One of the very popular pastimes indulged in during he lunch hour at New Castle Junction is the horse shoe pitching contests. McGaughey, Morrissey, Thomas and McWilliams comprise the "BIG LEAGUE" with Ellis, Rosen, McCarthy and Poole holding up their end in the "MINORS." Some real stars are being developed, and we're in hopes of having a world's series right in our own back yard this fall. (Let's hear from "Duke.")

Signal Supervisor and Mrs. J. C. Hoffman were sadly bereaved on Sunday, July 31, in the death of their three year old son, J. Charles. The funeral was held at Barberton, Ohio on Tuesday, August 2. The sympathy of the New Castle Division employees is extended to the parents in their great loss.

Mr. and Mrs. L. W. Strayer, of the Hamilton Apartments, were sorely bereaved in

The late Richard H. Beall, Newark Division

the death of their infant son, William Good, aged four days, on Monday, August 1. Mr. Strayer was formerly division engineer on the New Castle Division, having but recently accepted the position of assistant chief engineer of the Johnson Limestone Co. The sympathy of their many old friends of the Baltimore and Ohio is extended to them.

Newark Division

Correspondents

W. E. LAIRD, *Chief Clerk*, Newark, Ohio
A. D. LIST, Newark (Ohio) Shops

Engineer Edward Ryan is on the job getting business for the Baltimore and Ohio. While on an outing at Woodstock, Ohio, recently, he learned that two parties with whom he had become acquainted, were making a trip to Washington, D. C., and that it was their intention to travel via the line of one of our competitors. Mr. Ryan, in his very convincing way, outlined the advantages of our service and told of the beautiful scenery on the Baltimore and Ohio, mentioning that he was himself a Baltimore and Ohio employee. The result was that they purchased two tickets, Columbus to Washington and return, via our line, using sleeper both ways.

Richard H. Beall

The recent death of Richard H. Beall marks the passing of another Baltimore and Ohio Veteran.

He began his railroad career in 1860 as a water boy, later entered Piedmont Shops, in 1866 was transferred to fireman, was later promoted to engineer and continued in that capacity until 1909, when failing health compelled him to retire. His father before him was contractor on the work of building the Third Division.

His death occurred at Barnesville, Ohio, after an extended illness. He gave the Baltimore and Ohio 46 years of loyal and efficient service, and during that time made a host of friends who grieve that he has been taken from them.

Columbus, Ohio
Daniel Lester Host

Born at West Carlyle, Ohio, on January 2, 1860, his spirit breaking the bonds of this earthly prison June 5, 1921, and returning to Him who gave it, Daniel Lester Host has gone to rest in the peace and happiness of an eternal home.

Mr. Host was educated in the common schools of Frazersburg, Ohio, choosing telegraphy as his profession. This he learned on the Pennsylvania Railroad in 1881, being employed by this company until entering the service of the Baltimore and Ohio on July 25, 1882 as telegraph operator. He resigned in September, 1882, to enter the service of the N. Y. N. H. & H.; was re-employed by the Baltimore and Ohio as copy operator, Columbus, Ohio, on January 18, 1885; promoted to dispatcher, Columbus and Newark Division on July 20, 1885. He served in this capacity until January 11, 1904, when he was promoted to trainmaster and chief train dispatcher filling this position until about the middle of 1918, when his health failed so that he was unable to attend to duty. He was retired March 1, 1919.

Though his cheerful salutations are silenced, he is not forgotten by the hundreds who knew him in life. He always had a good word for all and an ill word or feeling for none, regardless of their rank in life. Even when his body was racked with the pangs of illness his associates knew it not unless they were able to read it from his countenance; he never complained more than to sometimes say "I feel a little knocked out." To charity and those individuals needing help or even asking for it he was a most liberal giver, never considering whether it would be returned or not, and loaning sums that he knew would never be returned, always remarking, "Well if it will do them any good, they are welcome to it." He was ever ready to do all he could towards the furtherance of anything that would tend toward the advancement of his fellow man.

In the performance of his duties as an official and representative of the Company, he was a most lenient judge—always holding that a personal association with those under his jurisdiction would accomplish greater results than to administer punishment, causing the innocent to suffer more than the guilty. In this manner he drew all around him in readiness to obey his every command or slightest wish.

Mr. Host is survived by his widow. All who knew him join in extending to her their deepest sympathy.

Ohio Division

Correspondent, A. E. ERICH, *Secretary to Superintendent*

Although a little late in giving this, we wish to inform the readers that the long prophetic event came to pass. Harry Jones of the Division Accountant's Office, had the name of Miss Wilda Graves, of the Freight Agent's Office, changed to correspond with his own. They quietly went to Cincinnati, then to Newport, Ky., where the ceremony was performed, and the first knowledge their friends had of the happy affair was when a telegram announced it. On his return to work on the following Monday, he found his desk draped with a wreath, also a clothes line, on which were suspended several articles of wearing apparel for the younger generation, and some "kewpies." Our heartiest congratulations are extended to the happy pair, and we wish them a long, long, happy life together.

Harry A. Acton, stenographer, Division Freight Agent's office, has resigned to accept a position as secretary and manager of a private estate in Chillicothe. We wish him good luck and success in his new position. Charles Dunlap of the freight office, succeeds Mr. Acton.

Our sympathies are extended to Conductor and Mrs. Thomas Murphy, in the death of their only son, Carl, at his home in Cincinnati, on May 6, after a long illness, which was caused by being wounded and gassed while in the service in France. He had been at several different hospitals for treatment and was seemingly on the road to recovery until several weeks previous to his death.

Trainmaster Banks is grandfather for the third time, a little girl having been born to his daughter, Mrs. Walter Metzgar. Although a little disappointed, as all his grandchildren are girls, nevertheless he is smiling over the title thrice conferred upon him.

MAIL COUPON TODAY

Russell Washington Townsend

at one of the leading clothing stores at Chillicothe, Ohio, spoke to the proprietor, Mr. Bergman, relative to having goods shipped via Baltimore and Ohio. It so happened at this particular time that a salesman was in the store with whom an order was placed for goods. Mr. Bergman instructed that this order be routed Baltimore and Ohio instead of a competing road. Another instance where a word at the right time helped to get business.

BOOST OUR Railroad, and try to get all the business for it you can.

Brakeman F. Brandun was recently "treated" to a calf wagon ride, in honor of his marriage. We wish him much happiness in his new life.

We extend to Charles O. Wilson, roundhouse clerk, and Mrs. Wilson our sincerest sympathy in the loss of their only daughter, Verna May.

Glenn P. Mallow, Stores Department, Chillicothe, has deserted the bachelors' circle. The bride was Miss Beatrice Mae Cruse, daughter of Switchman and Mrs. Harry Cruse. Both are well known, and their host of friends wish them a happy married life. (One of Mr. Mallow's friends has asked us to warn him against "race horses.")

The accompanying picture is of W. L. ("Bill") Allison, Southwest District safety agent, while "posing" on his property as a "landed" proprietor, he being the fortunate possessor of three lots on Carlisle Place, Chillicothe, Ohio.

Nobody can pose like "Bill" Allison

Russell Washington Townsend is the bright two and one-half months old son of Mr. and Mrs. G. W. Townsend of Fayetteville, N. C., and also has the special honor of being the nephew of Operators Annie and Margaret Townsend.

In the Stores Department, Cupid has claimed another victim, George Flagg, who just recently came in our midst as chief clerk to storekeeper. We wish him success and happiness in his two new positions, and welcome him and his bride among us.

Mr. Flagg succeeded Homer Baum as chief clerk, Mr. Baum having been appointed assistant storekeeper. From all indications, it looks as if "Baumie" is to follow Mr. Flagg in taking the other all important position for life. Look out, "Baumie," while Cupid is shooting his darts around it generally means he "Mrs." it.

We take this means of extending our sympathy to Engineer George G. Wilson and family in the death of the daughter Margaret.

T. J. Schachtele, assistant erecting shop foreman, is strutting around these days with a smile that won't come off. Our old friend, the stork, paid a visit to his home recently and left a fine baby boy. Congratulations.

We wish to express our deep, sincere sympathy to Division Engineer J. L. Maher in the loss of his wife.

Midland City Ball Team

The accompanying picture is of the Midland Baseball team, Midland City, Ohio, of which several members are Baltimore and Ohio employees. This team has only been defeated twice during the season.

What are you doing to **SAVE FUEL**? Let each fireman on the Ohio Division have the motto "**SAVE A SHOVELFUL A TRIP.**"

Indiana Division

Correspondent, H. S. ADAMS, Chief Clerk to Superintendent

A pretty wedding took place at 2.00 o'clock on the afternoon of August 16 at the home of Mr. and Mrs. A. J. Elmore, of Kurtz, when their daughter, Elma, became the bride of Lawrence Willman, utility clerk at Seymour.

The impressive ring ceremony was read by the Rev. B. H. Buchanan, pastor of the Kurtz Christian church, in the presence of the relatives and a few close friends.

The bride wore a becomingly fashioned dress of white organdie over satin and carried a shower bouquet of Ophelia roses.

After the ceremony a luncheon was served and Mr. and Mrs. Willman left for a short wedding trip through the east.

Toledo Division

Correspondent, EDWARD M. MANNIX

East Dayton

Toledo, Ohio, we congratulate you on winning the Safety banner in the special

Ask Your Dealer. If he hasn't them, send direct, giving dealer's name. Insist on Nu-Way or Excello. Look for Guarantee Label attached to buckle.

Nu-Way Stretch Suspender Co., Mfrs., Adrian, Mich.

Safety drive just concluded, but, remember this is continuous. Hold fast to what you have; it is one of the greatest honors that could be bestowed upon you.

Have you read carefully the Better Operation suggestions and our superintendent's bulletin for a "Better Operation Drive?" Toledo Division has always carried off the honors in these special campaigns. Let us by strict adherence "Save a Dollar a Day," and at the end of the campaign, be the winner as usual.

"Among Ourselves" is a section much sought for in our MAGAZINE. After reading the notes of our correspondents, it makes us feel that we are all one, and our interests the same. It shows the fraternal spirit among us, especially when we see the wide diversity of interests covered, the Children's Page, Women's Department, the letters of our executive officers, etc.

A new organization has been formed at the East Dayton Roundhouse, known as the "Gloom Chasers." All are fully enrolled, and there is a Ladies Auxiliary. The password is "Smile."

Eugene Farley, Car Repair Department, will soon be led to the altar by one of Dayton's fairest. Our congratulations follow Mr. and Mrs. Farley on their journey through wedded life.

Michael Dugan, boilermaker, Indiana Division, paid us a brief visit while on his vacation. "Mike" is well and favorably known to our boys, who were all pleased to see him.

Cartoon by E. B. Pierce, Valuation Department

Toledo

Assistant Correspondent, FRANK J. McMANUS

During the month of June, 1921, a total of 534,209 tons of lake coal were dumped at the Toledo coal machine into lake vessels. The tonnage from opening of navigation to June 30, totaled 953,539 tons, and represents the heaviest dumping that the Toledo machine has handled in any similar period since the erection of the machine.

H. N. Schoenberger, agent, thinks that he has qualified as a competent chauffeur for one of those things that they make in Detroit, Michigan. Recently when an inquiry was sent him as to whether he wanted a refund in cash, or to take the refund amount in repair work, because of the reduction in price of "those things," he elected to take the cash.

William Kind, clerk, coal machine, was a visitor at the recent Dempsey-Carpentier socking contest. "Mose" reports that nothing unusual happened on the trip, except that the first night in the Pullman the conductor found him walking in his sleep; the night after the fight he lost considerable time in buying souvenirs for his girl; on the third night, after getting into the Polo grounds but not seeing the game, he frightened everyone in the Belmont Hotel when he started yelling in his sleep. Outside of that and a few (?) other things, nothing unusual happened.

B. W. Jeffords, yardmaster, spent his vacation in Yellowstone National Park. One day when the temperature was 100 in the shade in Toledo, and no one was in the shade, General Yardmaster Farling received a card from "Jeff" stating that they had had a snowstorm and were sleeping under blankets at night.

F. J. Schultz, assistant agent, has purchased a lot in Toledo's new suburb, Reno Beach. There are lots of sky, water and mosquitoes in this development.

Division Accountant's Office, Dayton, Ohio

Assistant Correspondent, G. M. McBRIDE

WANTED: Someone to furnish a bat for our ball players. Referee is also needed.

BORN: To Mr. and Mrs. Howard C. White on July 29, a 10 pound boy, Bobby L. White. Mr. White wears an air of authority now, which can only be subdued by a few trips across the floor in the wee hours of the morning. If the baby cries for milk, don't give him a milk ticket, for that will cut no ice.

The employees of the Division Accountant's Office were agreeably surprised when Eddy Velten appeared on the scene with cigars and candy and announced that on March 11 at 6.15 a. m., his marriage to Rosen Beck was solemnized. Congratulations! We hope he will imitate that popular song and always sing "Oh what a Rose was Rosie."

Walter A. Booram announces his engagement to Miss Mary Cecil Hancock, formerly of Kentucky, the marriage to take place in the near future. He can then sing that beautiful song entitled "Oh, what a pal was Mary."

We regret to announce that our chief clerk, J. E. Fortman, is on the sick list. Our best wishes follow him for a speedy recovery.

Oh! here you are! Misses Jessie Munch and Mary Blanford have just returned from their vacations, having visited Havana, Cuba, Miami, Fla., Jacksonville, Fla., and Chattanooga, Tenn. From all reports Mary got seasick, chased the largest spider she ever saw around the room and finally murdered it with a coat hanger and a wet towel. We imagine Jessie was on the job too. Say, girls, better stay away from Cuba.

Good morning, Mr. Hockett, you're the boy we all like to size up on the 15th and 30th of each month. Always there with your little sack of Red Horse and our pay checks. Some old scout, I say!

Lima

Assistant Correspondent, RAY GARRIGUS

W. E. Baker, car foreman, spent his vacation in northern Michigan. "Bill" reports that the fishing was great.

R. E. Thomas, boilermaker helper, has signed a life contract by taking unto himself a wife. "Dick" is stepping around like a two year old. Much obliged for the cigars, Dick.

Wreckmaster Brewer has purchased a new Dodge touring car. 'Tis rumored that "Ike" was out on a country road, fifty miles from nowhere, when a hot box developed. "Ike" reports that a new brass and a little pin grease came in mighty handy.

William Kramer, car repairman, is back on the job again. "Bill" worked cars in France while serving with the A. E. F. He is very enthusiastic about working thirteen hours a day for a dollar ten per.

After 48 years of continuous service, William Holloran, boilermaker, is taking a short vacation. This a record to be proud of and we hope "Will" has the time of his life.

Idle Thoughts.

Relief train idle. Hasn't been called for a month. Shop forces increased. Many old faces back again. Looks like old times. Lively interest is displayed in the "Save-a-dollar-a-day" campaign. Vacation time. New fish stories. Time to order the winter coal. What did I do with my summer wages?

Wesley McCachren, freight painter, has just returned from a trip to Cumberland. Wesley reports that the Baltimore and Ohio is right up to its slogan, "Best and Only."

Callboys "Joe" and Lawrence Helwig had a narrow escape from serious injury when their automobile turned over after hitting a bridge railing. Both are back to work again.

Baltimore *and* Ohio Magazine

October, 1921

*Carrollton Viaduct
Baltimore and Ohio Railroad
Built in 1829*

The Cover Picture-The Carrollton Viaduct

Built for the Baltimore and Ohio Railroad in 1829

Photograph by B. Hyanes, through the courtesy of
D. A. Williams, Assistant to Purchasing Agent

The *Citizens' and Farmers' Almanac* of 1831, published in Hagerstown, Md., introduces one of its stories in this wise:

"—with a belief that the progress of the Baltimore and Ohio Railroad is an object of curiosity and interest to very many of our readers, we now proceed to lay before them a description of the same as contained in a letter from De Witt Clinton, Esq., Civil Engineer, of New York, who visited it shortly after the commencement of travel thereon from Baltimore to Ellicotts, and an Engraved View and description of the most prominent Structure occurring on it, viz.: THE CARROLLTON VIADUCT over Gwynn's Falls in the vicinity of Baltimore."

The letter is dated in Baltimore, June 2d, 1830, and we quote from it interesting excerpts concerning the Carrollton Viaduct, viz.:

"The Carrollton and Patapsco viaducts do much credit to their projectors, and will rank with any masonry in this country, or in Europe." * * * *

"Moving onward, the traveller finds himself on the level summit of the ground which overlooks and forms the eastern bank of Gwynn's Falls. The Road approaches the stream at right angles, and is carried over it by an immense structure of dressed in granite, designed by CASPER W. WEAVER, Esq., and executed by JAMES LLOYD, Esq., one of the most enterprising and skillful bridge architects of the country, called in honor of the illustrious individual who laid the First Stone,

THE CARROLLTON VIADUCT,

a work for which the extent, solidity, beauty, and even grandeur, has not, we believe, its equal in this country."

Wood cut of Carrollton Viaduct appearing in the *Citizens' and Farmers' Almanac* of 1831.
Note the "horse cars" on the track

Lack of space prevents reprinting of more of this interesting letter, so we conclude with the following information concerning the viaduct furnished to the *Railway Age Gazette* in 1917 by S. C. Tanner, now superintendent of shops at Martinsburg:

Repairs recently made on the old stone Arch Bridge disclose some interesting construction details that indicated the skill and ingenuity of the bridge masons of nearly a century ago. The structure is 297 feet long, with a central arch with an 80 foot span, and with the base of the rails 65 feet, 6 inches above the bed of the stream. Large pilasters were placed on the side walls and extend to about 4 feet above the original elevation of the railroad tracks, to form parapets. The spandrel spaces over the arches are not filled, but the track load is supported on a system of longitudinal and transverse 12 inch brick walls, resting in the arch rings. These walls are spaced 3 feet center to center, transversely, and 5 feet longitudinally, and are covered with 12 inch granite slabs, which, in turn, hold the ballast under the tracks.

It was originally constructed for double track, and although the equipment it was designed to carry, undoubtedly weighed less than the present day automobile truck, it has remained in perfect condition under the continually increasing loads, until it is now carrying as heavy loads and traffic as any bridge in the country. No repairs would have been necessary in the recent past had not the common practice of raising the track at intervals, when applying new ballast, brought the rails up to the level of the top of the parapet walls, and placed a heavy lateral thrust upon them, which they were not designed to carry. This caused the spandrel walls to move to such an extent that it became necessary to take them down to the elevation of the top of the arch, and in some places, still lower, and to reset them, backing them up with concrete under the track a sufficient distance to take the thrust from the parapet walls. In handling this work, special care was taken to replace the stones in their former position, in order to preserve the originality of the old bridge as far as possible.

The structure was in serious danger of destruction during the Civil War, but by careful guarding it came through unharmed, and judging from its present condition, it will continue to serve indefinitely.

\$1 Brings Hartman's Richly Upholstered 7 Piece Suite

Quarter-Sawed and Solid Oak

Send only \$1 for this complete suite of library, parlor, or living room furniture—seven splendid, massive pieces. Use it 30 days, on free trial, then if you don't say that it is even more than you expected, ship it back and we return your \$1 and pay transportation charges both ways.

Use Your Head

A Woodpecker pecks
Out a great many specks,
Of sawdust
When building a Hut;
He works like a nigger
To make the hole bigger—
He's sore if
His cutter won't cut.
He don't bother with plans
Of cheap artisans,
But there's one thing
Can rightly be said:
The whole excavation
Has this explanation—
He builds it
By
Using
His
Head.

Oh These Men!

A bright little girl, aged four, and her brother, aged six, were spending the night with their aunt. When bed-time came, the aunt asked them how they said their prayers. The little girl answered, "Sometimes I say them to muddie's knees and sometimes to the side of the bed,"
"And how about you, little boy?" asked the aunt.
"Oh, I don't need to pray; I sleep with daddy."—*Carpenter Steel News.*

The sweet young thing was being shown through the locomotive works.

"What is that thing?" she asked, pointing with a dainty parasol.

"That," answered the guide, "is an engine boiler."

She was an up-to-date young lady and at once became interested. "And why do they boil engines?" she inquired again.

"To make the engine tender," politely replied the resourceful guide.—*Exchange.*

31-PIECE DINNER SET FREE

Every piece in this big 31-piece dinner set is decorated with this beautiful Colonial Design in two colors. A flawless pure white with a dainty blue filigree design blending with a neat gold band. N. DAVIS, 201 Friend Bldg., Kansas City, Mo.

Who's Who?

Back in the those days, wet days that have ended, two gentlemen, both far overtaken in alcoholic stimulant, were seen under a lamp-post on a street corner clinging to each other for support.

As a spectator passed them he overheard the following dialogue carried on in somewhat fuzzy accents:

Said Souse Number One to Souse Number Two: "Do you know Bill Talbott?"

Said Souse Number Two, after a moment of reflection: "No; whuzziz his name?"

Said Souse Number One: "Who?"

—Exchange.

Let Her Down Easy

Young Husband—"Did you make those biscuits, my dear?"

His Wife—"Yes, darling."

Her Husband—"Well, I'd rather you would not make any more, sweetheart."

His Wife—"Why not, my love?"

Her Husband—"Because, angel mine, you are too light for such heavy work."

Published monthly at Baltimore, Maryland, by the Baltimore and Ohio Railroad to improve its service to the public and to promote a greater community of interest among its employees. Contributions are welcomed. Manuscripts and photographs will be returned upon request.

THE READER AND ADVERTISING

Circulation of the Baltimore and Ohio Magazine is over 36,000 copies per issue, our aim being to place it in the hands and in the homes of practically all English speaking employees of the Railroad. An examination of our advertising will show that it conforms to the highest standards. We do not guarantee it, but we believe that it means exactly what it says, and for that reason feel free to urge our readers to patronize our advertisers whenever they consistently can.

Osculatory

The gob was on shore-leave and happy because he had found a girl as affectionate as he. His joy was dimmed, however, for a bluecoat had forbidden spooning in the park, and his girl had tabooed it in the streets. But life took a new turn when he saw a man kiss his wife farewell in front of the Pennsylvania Station, New York. He rushed his girl toward a crowd hurrying toward the Philadelphia express, and bade her a fond farewell. When the crowd thinned, they joined a throng for Washington, and repeated the act. They repeated it again before the Chicago train.

This was too much for a colored porter who had been watching. He stepped up to the gob. "Boss," he said, "why don't you go downstairs and try the Long Island Station? Dem local trains am a-leaving mos' all de time!"—*Everybody's*.

Mrs.—"Let me have a little shopping money this morning, Martin!"

Martin—"Certainly. Would you rather have an old five or a new one?"

Mrs.—"A new one, of course!"

Martin—"Here's the one—and I'm four to the good."—*Exchange*.

A village girl eloped in her father's clothes. The next day the local paper came out with an account of the elopement, headed, "Flees in Father's Pants."

THE DISARMAMENT CONFERENCE

On November 11, next, the third anniversary of the ending of the Great War, representatives of the principal allied and some of the other nations of the world will assemble at the call of President Harding in Washington, D. C., to begin the Disarmament Conference. One looks forward to this conference with mingled feelings. We long for the amelioration of the armament burden in our own country—yet in the same breath we say that America, the Champion of Liberty and the Protector of Weak Peoples, must be strong.

At noon on Armistice Day our people will pause for two minutes from their accustomed occupations in honor of our unknown dead. Let us use this time not alone to recall tenderly the sacrifices of those who were lost in the War, but also to breathe the prayer that Divine guidance and wisdom may attend the deliberations of the Conference to the end that War and its suffering shall be no more.

ARMISTICE DAY, NOVEMBER 11, 1921, WASHINGTON, D. C.

Loving hearts and hands in all the civilized countries of the world pay fitting tribute on appropriate occasion to the memory of their sons who have been lost in battle. And nowhere is the tribute more sincere than at the graves of the American boys who died and are buried on foreign soil. The affectionate care given to their last resting places by the people of France, England, Belgium and Italy, is illustrious proof of the friendship which now exists, and which we hope will always exist, between these countries and our own.

There are among these, and among those whose graves are on this side of the sea, many whose identities are known. But there is another army, the army of the unknown dead, whose individualities were blotted out in the terrible circumstance of the Great War. And it is as a tribute to these that America, following the example of England and France, will turn on November 11, Armistice Day.

The casket containing the body of the unknown hero will be carried by night to the vast rotunda of the Capitol in Washington, where, in the chamber hallowed by the memory of all of his illustrious forefathers, it will lie in state with full military guard of honor through the night of November 10, and until the morning of Armistice Day. Then it will be placed at the head of an impressive civilian and military cortege, and in its wake will follow the President of the United States (on foot for the first time on such an occasion in the history of the country), and the most illustrious assemblage of dignitaries of our own and foreign countries which ever honored a similar memorial. The two living ex-Presidents of the United States will be there, the Premiers of England and France, and such world famous men as Foch, Beatty, Diaz, Jacques—all marching behind the casket of the unknown soldier to his last resting place in our beautiful National Cemetery at Arlington.

The honors included in the ceremonial there will be such as have never been paid to any other American. England will place upon his casket (the first time this medal has been bestowed upon other than an Englishman) its mark of highest honor, the Victorian Cross. America will bestow the Congressional Medal of Honor, and the other nations represented will pay the tribute of their most distinguished decorations.

* * * * *

To Baltimore and Ohio employes, everything of this nature, reflecting the patriotism and the idealism of our country, should appeal with a peculiar power. For has not the Baltimore and Ohio been to a greater degree than any other railroad, part and parcel of the history of the United States?

Beginning with that beautiful Fourth of July in 1828, when Charles Carroll, then the only surviving signer of the Declaration of Independence, laid the cornerstone of the Railroad at Mt. Clare, and continuing on down to the days of the Great War, when we were in the forefront of those carriers rushing war supplies to the seaboard, ours had been a singular privilege of service to the country.

It is significant also that for years the Baltimore and Ohio has had as the emblem of its passenger service the familiar dome of the Nation's Capitol, with the words, "All Trains via Washington," imprinted across it.

The close connection of the Railroad with Washington therefore, and the part it has played in the history of the country, make it but natural that we, as railroaders and Americans, should take an unusual interest and pride in the events which occur in the Capital City and upon which the eyes of the world are often focused; and further that we should be glad that through our connection with the Baltimore and Ohio we are able to direct our friends and acquaintances over our own line to the principal shrine of the Nation and its altars of sacred patriotism.

* * * * *

The Unknown Dead—greatest symbol of duty and love of country that has ever thrilled the hearts and dimmed the eyes of our people—may the Baltimore and Ohio, in keeping with its historic privilege and destiny, be the means of bringing to this most sacred shrine, throngs and companies of devoted pilgrims, and thus help burn brighter the fire of our common and holy patriotism.

The Reconstruction of Bridge 467, Butler Branch, Pittsburgh Division, Crossing the Allegheny River, Foxburg, Pennsylvania

By P. H. Lang, Jr., Engineer of Bridges

THE reconstruction of the river spans in Bridge 467, Butler Branch, Pittsburgh Division, crossing the Allegheny River at Foxburg, Pa., recently completed, has been in progress since July of this year.

The new river structure, designed for modern loading, consists of three spans of riveted trusses, carrying the railroad traffic on the top chord and the highway traffic on the bottom chord. Contract for the fabrication and erection of these spans was placed with the Bethlehem Steel Bridge Corporation, in April, 1921, and the work was prosecuted continuously. The new spans were assembled and erected on falsework upstream from the existing bridge, the old spans rolled out of position and the new spans into position on rails and rollers. Such movements occurred on three separate occasions, namely August 21, September 18 and October 16, on each of which dates one of the spans involved was placed in final position. The total amount of steelwork included is about 900 tons. This improvement entailed very little work

on the masonry substructure, which remains practically unaltered.

The original structure carrying the tracks of the Pittsburgh and Western Railroad, now a part of the Baltimore and Ohio System, across the Allegheny River at this point, consisted of three spans double track timber Howe trusses, built in 1872, and so designed as to support the railroad tracks on the top chord and the highway on the bottom chord. The bridge was reconstructed in 1908 as a series of timber Howe truss spans, and, in 1912, when the standard-gauging of the line from Foxburg to Mount Jewett was performed, the timber-bottom chord was replaced in steel for the purpose of providing increased carrying capacity.

The original structure at this point was owned by the Foxburg Bridge Company, in whose possession it remained from 1872 to 1904, and its use for the movement of railroad equipment was subject to the payment of toll. On January 2, 1904, in consequence of insolvency of the Bridge Company, its effects were sold

at public auction in Pittsburgh, and, during the succeeding month, the purchasers incorporated as the Bridge Company of Foxburg, with whom, on April 1, 1904, the Railroad Company concluded a new agreement, providing for the use of the bridge. Operation under this agreement was continued until the final purchase by the Railroad Company, in 1920, of the effects of the Bridge Company, including the structure under consideration.

The condition of the three river spans at this point was such that, immediately upon the acquisition of the structure by the Railroad Company, it was deemed necessary to take prompt steps toward their renewal. These spans were each 172 feet in length, and it is believed were the longest Howe trusses carrying railroad traffic in the eastern part of the United States, if not in the entire country.

This reconstruction was in the general charge of H. A. Lane, chief engineer, and under the immediate supervision of the writer. The field work was in charge of A. C. Clarke, district engineer.

The Local Agent—the Important Position He Occupies in the Railroad Organization

Watch How He is Lining up Business on the Cleveland Division

THE real railroad agent, whether he is a handler of tickets, baggage, or freight, or a combination of all three, is a live wire. He is to the railroad what the man in the first line trenches is to the army; he is the point of contact between his company and the shipping and traveling public.

As the manufacturer is judged by the kind of salesman that he sends out, so is the railroad judged by the man who represents it, the agent. A part of a salesman's "stock in trade" is his geniality, his ability to make friends of his prospective customers. Some of the biggest business deals that have ever been "put over" have been made not by some stroke of genius, nor by any streak of luck, but through the winning personality of a good natured salesman. In the same manner, the local agent may find himself to be one of the most important cogs in the wheels of the railroad's progress. He is in a better position to either make or break his company than perhaps any other person. He can make friends or enemies; he can get business or lose it; he can add to or subtract from the railroad's revenue.

"John Jones" to the Rescue

Recently it happened, as it does happen about three times a minute, that the telephone bell in a certain ticket office was doing double duty. The assistant agent, a new man, picked up the receiver.

"Hello," he said (for that is the only way to express what he did), languidly.

"Is this the Blank Ticket Office?" asked a woman's voice, as she gave the name of a ticket office of a competitive railroad.

"No!" This time the new agent was awake. He was angry, or he was provoked, or people interrupted his work, or something was the matter; whatever it was that had happened to him, he forgot the big part that he played in the railroad game.

"Oh," came back the voice, "I thought this was Blank's office. Can you tell me their number? I could'nt find the telephone book and the operator gave me the wrong . . ."

"W-a-i-t a m-o—m-ent," the new assistant agent was plainly bored. At this moment Jones came in to relieve him. "Here, Jones, this lady wants to know Blank's number. Do you know what it is without looking

it up in the book?" Jones picked up the receiver quickly.

"I can tell you their number," he said pleasantly to the woman, "but perhaps we can even save you the trouble of making another call. This is Mr. Jones, of the Baltimore and Ohio. If it's a matter of transportation, I can guarantee you a safe and pleasant trip over our Road. Can't we be of service to you?"

Do you wonder that John Jones got the "customer?" Do you wonder that two hours later found the little lady at the window of the ticket office, asking for Mr. Jones? And is there any doubt where the "trade" might have gone if there had been no John Jones?

We Need More "John Joneses"

Our Traffic Department now has a campaign afoot whereby it hopes to establish the fact that there are John Joneses in the persons of all of our local agents. It is a sort of brotherly Get-Together-With-The-Agents campaign, that is destined to touch every agent on the System. Its purpose is to set before him the importance of his position. It is impossible for superintendents and other officers to get in touch with prospective patrons as they would like to do, but this is something which can be done by the agent, and it is a feature of this campaign to show him the importance of his getting out and making friends for the Railroad, of getting the cooperation of the public by advertising the features of our good service; of look-

Foxburg Bridge—General view of structure from east end, after conclusion of rolling operation, August 21, showing old span in rolled-out position on falsework, and new span in place

ing after the needs of the shippers, such as their empty car requirements, etc.

Along with this movement of training the agents as to their possibilities in getting business for the Railroad in a pleasant manner, comes the suggestion that those agents who show ability in this direction will be in line for promotions to positions in the traffic and operating departments.

Setting a Standard

To further the campaign, and in addition to personal talks with the agents, various meetings are being held throughout the System. A recent report of such a meeting on the Cleveland Division shows what can be done and is being done. But the Clevelanders have gone a step further: *they have set for themselves a mark, a standard allotment for each station*

in the work that it is expected to accomplish. An excerpt from the report of Assistant General Freight Agent Kimes says:

"Bulletins will be issued explaining the method of conducting the campaign, and setting the revenue which we hope and expect each station to produce."

This is the spirit that begets business. Set a standard for a man.

Office of General Manager,
BALTIMORE, MD., September 23, 1921.

whether he be agent or office boy, engineer or clerk, trackman or superintendent, and if he is made of the right material he will succeed.

Cleveland Division, accept our congratulations!

R. W. Brown Made Superintendent, Connellsville Division.

Following the resignation of W. J. Brady as superintendent of the Con-

nellsville Division of the Baltimore and Ohio, Revelle W. Brown, formerly superintendent of the Ohio Division, with headquarters at Chillicothe, Ohio, has been named to succeed him.

Mr. Brown was born August 5, 1883, entering the employ of the Baltimore and Ohio July 19, 1901, as a laborer on the Illinois Division. In 1902 he became a fireman and advanced to locomotive engineer in

November 1905. Later he was appointed assistant road foreman of engines and in October 1912, road foreman of engines with headquarters at Indianapolis, soon thereafter being promoted to supervisor of locomotives. On June 1, 1915, he was made trainmaster at Delphos, Ohio, being advanced to assistant superintendent of the Ohio Division October 1, 1917, becoming superintendent of that division September 1, 1919.

We Saved at the Rate of over a Million and a Quarter Dollars a Year in the "No-Accident" Drive, Eastern Lines

To All Operating Department Officers and Employees:

The "No Accident Campaign" inaugurated on the Eastern Lines of the Baltimore and Ohio for the thirty day period, August 15, to September 15, 1921, for the purpose of reducing loss and damage to lading, equipment and roadway by reason of accidents in yards and on line of road, has resulted in showing the large amount of money that employes can save the railroad by diligent attention in the performance of their duties.

Tabulated statement on the opposite page shows the results, from which it will be noted that the Monongah Division stands at the head of the list, and the others follow in the order of their standing.

During the six months, February to July, 1921, inclusive, the average loss per month by reason of damage to locomotives, cars, tracks, and structures, and cost of clearing wrecks, was \$86,773 as compared with \$25,643 for the period of this campaign, a decrease of \$61,130 or 70.4 per cent.

Translating these figures into 1000 gross ton miles, the loss to the Baltimore and Ohio incurred by reason of damage to locomotives, cars, tracks and structures and cost of clearing wrecks for the Eastern Lines was 6.48 cents per 1000 gross ton miles for the six months period ended July 31, while during the period covered by the "No-Accident Campaign" the cost was but 1.81 cents per 1000 gross ton miles, a decrease of 4.67 cents per 1000 gross ton miles, or 72.1 per cent. This reduction is very significant. A saving of \$61,130 per month on the Eastern Lines is equivalent to \$733,560 per annum.

Applying the decrease of 4.67 cents per 1000 gross ton miles to the business handled on the Baltimore and Ohio System during the same six months period, a saving of \$114,252 per month, or \$1,371,024 per annum, would have been made.

If this saving had been realized during the past twelve months, the items for the clearing of wrecks, loss and damage of freight, damage to equipment and roadway would have been reduced to a minimum, and the sum of \$1,371,024 would have been available for needed repairs to equipment and roadway. At \$3.00 per ton the estimated saving would purchase 457,008 tons or 9,140 cars of coal for locomotive fuel.

It is hoped that every employee of the Company working directly in transportation service, or indirectly, will study these figures and apply the lesson they teach in helping to reduce accidents of all kinds which result not only in personal injury, but loss and damage to freight and great damage to equipment and roadway.

C. H. Galloway

Vice-President Operation and Maintenance

There Are "Blanks" Galore in this Letter but They Mean Real Money to the Baltimore and Ohio

Veteran George Metcalf has done yeoman work in the business-getting campaign of the Baltimore and Ohio

WE HAVE seen few letters resulting from our business-getting campaign that mean more to the Railroad than the one reprinted later on in this article. It was sent to the editor of the MAGAZINE by Boiler Maker Helper George Metcalf, of Garrett, Ind., and with it was the following laconic note from him:

316 High Street.

GARRETT, Ind., Sept. 28, 1921.

Dear Sir—I asked a friend of mine if he would help the Baltimore and Ohio by shipping freight over the line, and enclosed is the letter he sent to me, so you see I tried to do my bit.

Yours truly,

(Signed) GEORGE METCALF.

And the letter that Mr. Metcalf enclosed was such an inspiring one and showed so forcibly the splendid results to the Company from the good will and the good work of just one man, that it made us sit up and take notice. For business reasons it is impracticable for us to reproduce the letter in full but if you will read into the blanks in the following reprint, the name of one of the largest manufacturing concerns in the country, the names of several of the factories which supply them with their raw materials, and the names of a number of the competitors of the Baltimore and Ohio, you can see as attractive a picture as we saw when we first read the original copy.

It was dated September 8, and was addressed to Mr. Metcalf at his home in Garrett, Ind.

Dear Sir—In compliance with our conversation of September 4, wish to say:

That the writer has instructed the — Co., of —, Ohio, to divert all future carload shipments of pig iron from the — R. R. to the Baltimore and Ohio. These shipments amount to approximately three or four cars per week. Have directed the — Co., of —, Fla., whose shipments consist of approximately three cars per week, and which route at the present time has been divided 50-50 with the — R. R's and the — R. R's to route all future shipments over the — Baltimore and Ohio routing.

Also have this day sent a man to ride car of turpentine, originating at —, Ala., original routing of which was — R.R's and have directed him to divert this car at Cincinnati over the Baltimore and Ohio.

Have done nothing in reference to carloads originating in the — district as we maintain a representative there and the writer expects to make a trip there the early part of next week, at which time will take up directly with our representative and instruct him to use Baltimore and Ohio routing wherever consistent. Will also stop at Warren and have — reroute via Baltimore and Ohio instead of —.

Hoping this is satisfactory and all that you expect, beg to remain,

Yours very truly,

— Company,

(Signed) —

— Manager.

After the reports in this letter had been verified by our Commercial Development Department we wrote to Mr. Metcalf to find out how he had turned the trick. And this is his reply:

GARRETT, IND., October 14, 1921.
Editor MAGAZINE,
Baltimore, Md.,

Dear Sir—Your letter at hand, and will try to answer your questions.

The writer of the letter promising business to the Baltimore and Ohio, is my son-in-law, and was at one time a brakeman on the Chicago Division. He was visiting me and I asked him what he could do for the Company in the way of shipping freight. He said he would see what he could do and you have the letter I received from him.

I began work for the Baltimore and Ohio on March 7, 1883 as a fireman, was promoted to engineer, June 16, 1886, and ran an engine for seven years. I lost my right eye from a hot cinder while running an engine.

I have a common school education and was born in Linn County, Iowa. I have always worked for the interests of the Company I work for. As requested, am enclosing a picture of myself.

Hoping that this proves satisfactory, I remain,

Yours respectfully,

(Signed) GEORGE METCALF.

It is at all times in good taste for our employes to ask their relatives and friends to patronize the Company which gives them their living. If you were a grocer, or automobile dealer, or an insurance agent, you would naturally expect your relatives and friends to give you their trade. It is

By W. L. Robinson

Superintendent, Fuel and Locomotive Performance

FOR a number of years on the Baltimore and Ohio a monthly statement of the performance of individual engineers and engines has been compiled and issued. The purpose of comparing the current fuel performance with previous performance is the stimulation of interest upon the part of those whose names appear on the statements and the direction of the attention of the supervising officers to those who may need assistance in order to improve their performance.

Other railroads and associations of railroad officers have for some time past been giving particular attention to the feature of the individual performance record as an essential element of fuel economy work and it appears to be probable that several roads will establish such records in the near future.

The advantage obtained from such records and the good they may do in the direction of improving the fuel performance and reducing the fuel expense of the railroad is dependent to a great extent upon the interest taken in them by the employees and their supervising officers.

It is now generally recognized that exact charges of coal against the engines, such as would result from accurate weighing or measuring of each disbursement of fuel, is not absolutely necessary in order to obtain reasonably accurate records which may serve as the basis of the performance statements. It is desirable that each disbursement may be charged with the greatest practicable accuracy, which can be accomplished in most cases by constant supervision of the employees who place coal on the engines and estimate the disbursements. This is the method in effect on the Baltimore and Ohio.

A good example of the interest that such records may stimulate among those whose performance they show, as well as of the accuracy of the records for practical purposes, was recently reported from the Newark Division.

Fireman Milton Temple, in passenger service, running between Newark and Parkersburg with engine 884 during the month of April, 1921, kept a daily record of his estimates of the disbursements of coal to his engine for 22 days. On thirteen days his

estimates agreed with the estimate of the tippelman, on five days his estimate was from one-half to one ton less and on four days from one-half to one ton more than the tippelman's estimate, with the final result of only one ton variation in a total disbursement of 124 tons.

Firemen on every division of the System are keeping record of their coal consumption in an endeavor to beat the records of others on similar runs and this spirit of competition is undoubtedly helpful to fuel economy.

In the photograph with Fireman Temple, we find Engineer D. R. Parker, another enthusiast on the subject of handling fuel. A few more men who, like these two, have earned the title of "Coal Savers", and the fuel situation will cease to be a problem.

"Thanks!" Says Pittsburgh Motorist, for Timely Warning that His Car Was Carelessly Driven

FOR months the Baltimore and Ohio has been carrying on through the Safety Department a most practical and resultful campaign to reduce motor car accidents at our railroad crossings. It is taken right to the car owner himself in a direct and forceful—yet friendly—way, and the response which the Railroad is getting is well illustrated in the following letter to Vice-President Galloway:

AUGUST LOCH,

JEWELER AND OPTICIAN,

415 Federal Street. North Side.

PITTSBURGH, PA., September 26, 1921.

MR. C. W. GALLOWAY,
Baltimore, Md.

Dear Sir—I want to thank you for the postal card you sent to me stating that my car Pennsylvania No. 340,100 crossed your

track at Stoyestown without observing the danger signal. I was not in the car on that day, but the parties who were in the car told me it would never happen again. You cured them. Thank you!

(Signed) AUGUST LOCH.

Mr. Loch's car is one of the thousands which are constantly going over the crossings of the Baltimore and Ohio and other railroads. And it is to keep those driven carelessly, and their occupants, free from harm that our Company is making its check of the drivers.

Just as often as possible division officers arrange to have competent employees do this checking work. Sometimes they do it themselves. When the observer, standing at the crossing, sees a driver approach or

Safety Section

Vice-President Galloway Addresses National Safety Congress

OLD Boston, the background of all sorts of historical happenings, honored as the home or headquarters of many of those who have made the United States what it is today, loved for its quaintness and for the beauty of its surrounding country, and famous as a seat of learning, added one more link to its chain of historic meetings when it was chosen as the rendezvous of the National Safety Congress during the week beginning September 26.

At this tenth annual convention, held at the historic State House, were gathered men who represented perhaps a hundred industries and professions. What cause could be more worthy of the recognition from every walk of life than that which works forward the safeguarding of life and limb—nationwide SAFETY?

Not only within the limits of the city of Boston, but throughout the whole state of Massachusetts during this week, a safety campaign was in progress. At South Station, where the ebb and flow of humanity reminds the onlooker more than ever that the great machine of progress needs an occasional warning lest it slip its cogs and become clogged through the work of the demon Carelessness, there hung posters of varied designs, announcing that this was Safety Week, that Massachusetts expected citizen and visitor to do their duty. "WELCOME SAFETY CONGRESS" was a banner which hung from one side of the station to the other. Such signs were spread about the city; and the schools were filled with posters well calculated to drive home the meaning of Safety.

Inside the State House the 19 sections of the National Safety Council held their meetings. These were divided as follows: Automobile, Chemical, Construction, Drop Forge, Education, Electric Railway, Engineering, Health Service, Metals, Mining, Packers and Tanners, Paper and Pulp, Public Safety, Public Utilities, Rubber, Steam Railroad, Textile, Women in Industry, Woodworking.

The Steam Railroad section was naturally the one in which the Safety men of the Baltimore and Ohio were

interested; John T. Broderick, superintendent of Safety, together with the following men represented the Baltimore and Ohio; E. R. Scoville, W. D. Lenderking, W. F. Braden, W. L. Allison, and W. J. Head, Safety agents.

Safety Sayings

Gleaned at the National Safety Congress in Boston

"The great need of Safety is due to the inherent tendency of man to take a chance on his own life and the lives of his fellow employees."

—General Superintendent Meredith, Central Railroad of New Jersey.

"Man's greatest jeopardy is at crossings; this is where the big Mogul and the 'tin Lizzie' meet. Everybody rides trains; trainmen are safe men, but the public is criminally careless."

—Rev. Walt Holcomb, evangelist, Cartersville, Georgia.

"Educate the automobile driver by demanding that he receive a greater amount of training before he is allowed to drive a car."

—Vice-President Galloway, Baltimore and Ohio Railroad.

"Money cannot replace the loss of eyesight or limbs."

—Harry A. Adams, assistant to general manager, Union Pacific Railroad.

"A man who enters the service of the railroad at the age of 20 years may reasonably expect 42 years of service; if he does himself an injury that might have been prevented, he robs himself—he robs his family—his fellow employee—his community—his company—and the God who gave him life."

—John F. Moore, associate general secretary, International Committee, Y. M. C. A., New York.

"Is it not singular, that everything that is worth doing well has a moral and ethical background?"

—T. H. Carrow, supervisor of Safety, Pennsylvania System.

"As the airplane is above the ox-cart, so will the results of Safety be above what they were when we first started with it."

—E. L. Bair, vice-president, Benefit Association of Railway Employees, Chicago.

On Tuesday morning, September 27, this section, whose members came from practically every large railroad in the United States, enjoyed an address by Charles W. Galloway, vice-president, Operation and Maintenance, of the Baltimore and Ohio.

The meeting was opened at ten o'clock by Chairman T. H. Carrow, superintendent of Safety, Pennsylvania System. The program was as follows: Reports of chairman, secretary and committees, followed by four addresses, the first by John F. Moore, associate general secretary, International Committee, Railroad Y. M. C. A., New York City.

Mr. Moore's subject was "Safety First—From a Moral Viewpoint." He took his "text" from the book of Deuteronomy, explaining that Safety First began in Old Testament days. Mr. Moore outlined the causes of accidents, giving some of the moral defects which lead to man failure, and offering methods for correction.

Following Mr. Moore, there was an address by the Rev. Walt Holcomb, evangelist, Cartersville, Ga., on "The Safety of Man." Mr. Holcomb gave a clear, interesting talk, impressing upon his hearers the great responsibility that rests upon each person in the battle for Safety.

Chairman Carrow then introduced Mr. Galloway.

Mr. Galloway spoke of Safety on the Baltimore and Ohio, of the accident tests, of the increase of man hours per casualty, emphasizing the importance of eliminating grade crossing accidents. He gave figures which showed what has been accomplished by the Baltimore and Ohio, and the possibilities, if handled systematically, of what may yet be accomplished. He spoke from his personal experience with drivers of motor vehicles.

Mr. Galloway said that in the year 1915 there were on the Baltimore and Ohio 9659 casualties; that in 1920 there were 6941; but—in 1915 there were but 32,000,000,000 gross ton miles, as against 41,000,000,000 in 1920, an increase in gross ton miles of 26 per cent., and a 13 per cent. increase in train mileage; it follows then that there has been a 28 per cent. decrease in the number of casualties. The accident test in April and May, in which the Philadelphia and Toledo Divisions were the winners, showed an increase of 81 per cent. of man hours per casualty.

"Parallel to Safety work," said Mr. Galloway, "is the prevention of accidents at grade crossings." He then told of the experience which is required of engineers before they are

allowed to take charge of trains, comparing it with the limited amount of experience which the law requires of those who operate automobiles. In connection with this feature, Mr. Galloway went into detail, telling of the causes of accidents at grade crossings, and emphasizing that the education of the operators of auto vehicles will go a long way toward the elimination of such accidents. He cited instances where collisions had taken place at grade crossings even after the drivers of motor vehicles had been warned of approaching trains.

As to the future of the Safety Council, Mr. Galloway urged that its integrity be preserved.

"Thanks," Says Motorist

(Continued from page 11)

cross in a careless manner, he makes a note of the car number. This is forwarded to the office of the division superintendent, where record is made of it. Then it goes to the office of Vice-President Galloway. Here another record is made and a duplicate record sent in post card form to the Commissioner of Motor Vehicles of the state which licensed the car. He, in turn, addresses the card to the address of the licensee, who is thus apprised of the careless handling of his car at the crossing.

Often the owner has not been in the car when the disregard of proper precaution by the driver was shown. Perhaps the chauffeur or another member of the family was driving. The friendly warning therefore comes to most car owners as most helpful and considerate advice—advice which might very easily avert the loss of his car or the even worse calamity of accident or death to his loved ones.

An investment in the bank of SAFETY always pays one-hundred per cent. dividend. Remember that when you are injured, while nature does the healing, the doctor "cops" the fee.

Practice SAFETY FIRST ALWAYS.

Friends are something like clothes—they last a long time if you save 'em for Sunday, but if you use 'em every day you wear 'em out. Tell your friends to travel BALTIMORE AND OHIO, and there will be no danger of wearing 'em out.

By A. E. Erich,
Correspondent, Ohio Division

Old Lady (who has been lunching with her son).—Here, William, you left this quarter on the table by mistake. It's lucky I saw it, because the waiter had his eye on it.—*Exchange.*

The Conductor Did Not Realize that His Discourtesy Would Call for an Apology from the Management

Mr. Daniel Willard, President,
The Baltimore and Ohio Railroad,
Baltimore, Md.

Washington, D. C., September 7, 1921.

Dear Mr. Willard:

I have been a patron of your railroad at very frequent intervals for the past fourteen years, and have always received my due amount of courtesy from the employes, until on a very recent trip from Cumberland to Washington. Arriving just before train time, I found a passenger train on the crossing where there was no subway. Seeing a conductor, I appealed to him, asking if it was safe to cross by passing over the platform of the standing coaches, in order to purchase my ticket; his none too gracious answer was: "Why don't you go around." The "around" to which he referred, was to the rear of the train and back—a distance of at least a square. While I was attempting to explain to him that I wished to board that train, and by so doing I should miss it, he walked away leaving me talking. I consider that conductor, first, very rude to a lady, secondly, very inconsiderate of passengers, especially when traveling alone; and thirdly, very much disinterested in his employer's business interests, or he would have informed me that it was permissible for me to board the train at that place, and pay my fare. Then as I attempted to walk around the train, a long freight approached and cut me off completely; when the freight had passed, my train had departed. I learned that blocking the crossings happens frequently in that town. Was compelled to wait for the night train, with no available berths. Doomed to spend the greater part of the night in a day coach was bad enough, but being annoyed by a fellow passenger who persisted in pressing his attention upon me was worse; arriving in Washington at 2.30 in the morning, was mighty embarrassing, all due to a stupid conductor and bad management.

As I am a wage earner, and have my employer's interest really at heart, I feel that on account of loss of rest I gave him a very poor day's service the day following, besides feeling miserable myself.

I may feel different before my next trip is due, but my present attitude is, when in quest of courtesy, consideration, and comfort, stay away from the Baltimore and Ohio.

I am not a "knocker," but realize that no enterprise is successful unless its managers know its defects.

Very respectfully,

(Signed) (Miss) _____

THE BALTIMORE AND OHIO RAILROAD COMPANY
OFFICE OF THE PRESIDENT
BALTIMORE, MD:

DANIEL WILLARD,
PRESIDENT

At New York, September 13, 1921.

Miss _____
Washington, D. C.
My dear Miss _____:

Your letter of September 7 has just reached me, and I have read with chagrin what you say therein with reference to your experience in connection with Baltimore and Ohio trains at Cumberland and also on your way from that place to Washington.

I suppose the one thing to which the officers of the Baltimore and Ohio Company are urged to give constant and alert attention, above all others, is the question of Safety, but second only to Safety, all connected with the Company have been urged repeatedly to be courteous and considerate in their dealings with the public. We believe that courtesy pays, and that belief in my own case is confirmed by what is said in your letter. You clearly indicate that because you were treated discourteously on a certain date by some employe of the Baltimore and Ohio Company, that hereafter you will be disposed to ride on some road other than the Baltimore and Ohio, when possible, which, of course, would mean a loss of revenue to that Company.

I regret very much that a Baltimore and Ohio conductor should have replied to you as you say he did at Cumberland. No matter who he was, or what his connection with the Company, he ought to have replied courteously and helpfully to your question, if for no other reason, simply because you are a woman and he is a man. Unfortunately, you did not state definitely in your letter when the incident occurred, and it is therefore impossible for me to locate the man at fault. I have decided, however, to print your letter in full in the Baltimore and Ohio Magazine, if you have no objection, and also a copy of my reply, in order that all employes in the service may appreciate the direct effect which their attitude has upon the reputation and business of the Company.

I note also what you say concerning the annoyance to which you were subjected by a fellow passenger on your way to Washington. Passenger conductors are expected to look after the safety of their trains and also the comfort and convenience of their passengers. The conductor of a passenger train, in a general sense, occupies the same relation to the passengers upon his train, that the captain occupies with reference to the passengers on his ship. Both are supposed to maintain good order. If you ever have the misfortune to be annoyed again in a similar way when traveling on a Baltimore and Ohio train, I hope you will bring the matter to the attention of the train conductor, who I feel certain will take the necessary steps to correct the matter complained of.

I repeat that I am very much chagrined because of the manner in which you were treated by one of the Baltimore and Ohio employes, and apologize for his rudeness. However, I find some satisfaction in your statement that you have traveled over the Baltimore and Ohio Railroad at intervals for fourteen years and have always received your "due amount of courtesy," until the incident referred to. If you should have occasion to use our trains in the future, I hope you will have no further cause to complain of discourteous treatment on the part of Baltimore and Ohio employes.

Very truly yours,

Daniel Willard

P. S. Of course, we will not publish your name unless you are quite willing we should do so.

The young lady who wrote the letter declined to let us use her name—Ed.

Hygiene of the Mind

By Dr. A. J. Bossyns

Medical Examiner, Baltimore, Md.

IT IS safe to say that if man were forced to depend solely on instinct, the whole human race would perish in a few years. Of all living creatures, man would be the least able to procure food and defend himself from the attacks of beasts. His mastery over the animal kingdom was won by intellect and reason. It is through the mind that he invented means of protection and methods of growing food, and learned the arts and sciences. Since the mind has performed such wonders, it is not strange that it should have a wonderful influence over the body. As a matter of fact, the mind has superseded instinct, governs the body, and to a great extent controls action, health and life itself.

Mind Controls Body

Mind and body are so intimately connected that the conduct of one affects the other, and both thrive or suffer together. When the mind is burdened with sorrow or worry, the functions of the body become deranged, as manifested by disturbance of digestion, secretion and assimilation. Sudden fright or startling news causes violent heart action and faintness, which are followed by loss of appetite, sleeplessness and other physical disorders. Extreme anger and occasionally excessive joy will produce the same symptoms. The cumulative effects of homesickness, unrequited love, despondency or despair will be exhibited in depression of spirits, impaired digestion, disturbed sleep, and loss of weight and vitality. These symptoms may be produced by imaginary as well as by real conditions, and those who become victims of their own imagination really believe that they are afflicted with some serious disease, and suffer accordingly. They constitute the cases that are cured by mental suggestion, or by the widely advertised "cure-alls."

The Tonic of Good Cheer

The good effects of mind over body are equally evident. Good news, success in laudable undertakings, the pleasure of duties well done, and the fun of innocent play, all stimulate and benefit the body. A patient always shows improvement after the visit of a friend or relative who enters the sick room with a friendly smile, and expresses a few words of encouragement and confidence in speedy recovery. Just as sick cases sometimes terminate fatally upon receipt of calamitous news, others are saved from impending death by reassuring news, good fortune or the appearance of a long absent friend or relative. The mind not only influences the body, but also influences other minds. An individual will appear in an angry mood, growl over trifles, find fault with everybody, and thus cause depression among his fellows, and discouragement in their work. Another will arrive smiling, have a cheerful word for each of his comrades, and spread sunshine and optimism over all. It is clear that the mind must be healthy to show good effects, and it must be strong to withstand the unwholesome animal nature or instincts of the body. Vice, perversity and crime are the fruits of weak minds, while adherence to right, courage in adversity, and determination to overcome obstacles are the attributes of the strong.

Cultivate Will Power—a Mark of Mastery

We are not all equally blessed with strong minds and bodies, but we can strengthen both by using will power along proper channels. Will power can be cultivated and developed to a surprising degree by everyone. It can be tested by swallowing a bitter or sour food or medicine without the twitch of a muscle, by suffering pain without flinching, or by abstaining from the little faults that are indulged in for self-gratification. It should be

practiced by exhibiting patience in petty annoyances, composure during displeasure, and cheerfulness under adverse conditions. Inability to do these things is a confession of weakness, their accomplishment a mark of mastery.

The cumulative force of the cultivation of will power is always apparent, but is best demonstrated in the sick room. Instead of moaning with pain, and keeping the household in an uproar with unreasonable demands, he who has mastered his will, suffers in silence and retains his complacency. Instead of yielding to pessimism and making recovery difficult by unnecessary worry, he remains smilingly cheerful, confident in a speedy return to health, and thus assists nature in the cure of the malady. Hygiene of the mind means keeping in harmony with nature, avoiding the discords of physical and mental excesses, and the regulation of one's action by will.

Will power grows by what it feeds on, and, with constant exercise, will in time become so strong that one may overcome suffering and adversity, restrain all harmful desires, and bear life's burdens with patience and fortitude. As the mind gains in power, the selfish animal instincts are correspondingly repressed, and the proper conduct of mind and body becomes a fixed habit.

Will power rules and governs all actions, and if trained along suitable channels, will result in cleanliness of mind and body, cheerfulness in the home and workshop, and the thorough enjoyment of life. Life is what we make it, and the *will* to live properly has for its reward, good health, happiness and longevity.

Finds a Way to Beat the Landlord.

BELINGTON, W. VA., August 3, 1921.

Mr. W. J. DUDLEY,
Superintendent Relief Department,
Baltimore, Md.

Dear Sir—I am enclosing a photograph of our home which was purchased through the Baltimore and Ohio Relief Department, and of which we are proud.

I know of no better or easier plan by which an employe can secure a home of his own and thus save the landlord from making his monthly rent collections. I wish to thank the Relief Department for the many favors shown me while a borrower.

You may have the photograph of our home for the BALTIMORE AND OHIO MAGAZINE, if you wish.

Yours truly,

The Weak Rung In One Man's Ladder

Recently I ran into a group of men doing an important construction job for the Railroad. I began to ask questions and the foreman got so interested in explaining the work to me that it was an hour before I was able to break away from him. In many respects he is a superior man, having a number of the qualities that go to make leaders in the railroad world.

The particular equipment of which he has charge has never failed in its important job of moving trains. He supervised its construction and had to invent a good deal of it to suit the peculiar conditions. He has never had a man killed under his supervision (and there is an unusual hazard connected with the work), and only one man injured, and he not seriously.

His intelligence reaches beyond the confines of his everyday work and he talks convincingly on the general railroad situation.

His enthusiasm is suggested by the interest he took in explaining his work to me. He is faithful, loyal, painstaking and interested in the prosperity of the Company.

Yet he himself maintains that, as compared with a number of other men who started railroading with him, he is a failure.

He was telling me how he had been faced with this emergency and that, and how through his own ingenuity he had met them and kept the trains moving. Then he stopped suddenly and, his expression changing to one of deep disappointment, he said:

"And just look at me. After all these years of service, handling and supervising this important cog in the Railroad's machine, I am nothing but a foreman—holding down the same job I had 15 years ago.

"Men who started with and after me in the same department have left me in the lurch and are now holding down big desk jobs with fine salaries."

The man's sincerity made a deep impression on me and I felt a lump rising in my throat as I realized how keenly he felt that he had been a failure. And I fear that my effort to cheer him up a bit was not altogether successful.

Several days later, with the recollection of this experience still hanging heavily over me, I met another Baltimore and Ohio man, one who has known intimately for years the subject of the story. He is now out of the service and while working for the Railroad was perhaps as successful, but not more successful than the foreman. So I put the case up to him.

"Yes," he said, "he is just that good a man in his job. Everything that he told you is true, the long years of service, his knowledge of his work, his ingenuity, faithfulness, loyalty. In fact I don't know how his job could have been handled better than it has been by him."

"Why then," I asked, "hasn't he gone further up the ladder? With all those years of service, with all his splendid qualities, his career seems to be what he seems to think it is, a tragedy."

"Yes, it does seem so," replied my informant. "And yet he has brought it all on himself. He has always had a one-track mind and has never been able to take the suggestions and orders of his superior officers graciously."

"Confident of his own ability to handle his job, he became mentally stubborn early in his career. Many of the men who started with him but have passed him will tell you how often he has said in effect: 'Well, if I can't do it this way, I won't do it at all. If you don't like the way I run this job, you can get someone else to do it.'"

I then recalled a remark made by the foreman in his conversation with me—the remark that he had never taken a vacation. This, it seems to me, confirms in a measure the diagnosis of his so-called failure. He has always felt so absolutely right in what he was doing that he considered himself indispensable to the job. And in that way he developed a self-sufficiency and a stubbornness which explains the disappointment of his railroad career.

There has never been a man so big, so perfect, so indispensable to his task, that he could afford to ignore the advice of those placed around him to help him. No man is so important that some other man could not fill his place.

A Practical Vocational Plan

The city of York, Pa., has made quite a name for itself because of the advanced and interesting methods in use by its school authorities in the training of school pupils in the trades. They call it the "Cooperative Vocational Plan" and it works briefly as follows:

Two boys, who wish to learn the same trade, are paired. One goes to school for a two weeks' period and the other spends the same length of time in a shop at practical work in the trade he has selected. At the end of the two weeks' period their positions are reversed.

The advantages of the plan are apparent. It gives the students the requisite theoretical knowledge and training and enables them to supplement this by the lessons of their practical work. It gives to the employer the continuous labor of one person. And, as the boys are paid for their work, it enables them to be self-supporting to a great extent while learning the trade.

During the year 1920-1921 there were 169 sophomores, juniors and seniors doing this type of work, the total amount of their wages being \$50,272.97, or an average of almost \$300 per man.

It will be noted that first year men are unemployed and hence not earning any wages.

The most interesting feature in connection with this situation in York, however, is the fact that of the 169 pupils, only 6 of them were unemployed. This seems to be pretty good proof that the plan is a sound one and that the boys are doing efficient work.

The kinds of trade followed and the number of pupils engaged in each were: machinists, 122; pattern makers, 24; electricians, 14; cabinet makers, 2; layer outs, 1; paper makers, 2; ornamental iron fitters, 1; sheetmetal workers, 2; auto mechanics, 1.

At this time of the year there are probably hundreds of men on the Baltimore and Ohio who, having seen some of their companions and many of their younger brothers and sisters go back to school, are asking themselves if they have had a sufficient amount of training. And they may well do this because the signs of the times certainly indicate impressively that it is the trained man who wins.

If there is any kind of practical insurance against want and unemployment, it is the insurance which is being earned by the young fellow who, even at a great sacrifice, makes sure that he is getting good training in the line of work which he has chosen for himself.

In the large cities all over the Baltimore and Ohio there are ample opportunities for our young men employees to study in well managed night schools and universities. The joys at smaller points will probably have to look to the correspondence schools.

In this connection we should add that the Baltimore and Ohio is now making a drive through poster advertising and in other ways, to get the young men of Baltimore and Ohio families interested in the apprentice courses which the Railroad offers. The detailed information can be had from any officers of the Motive Power Department. The wages paid during training and the admirable and comprehensive courses offered, make an ideal combination for the boy who needs to learn a trade. And the young man going into one of these apprentice groups, with the determination to go through the courses creditably, can also have the moral assurance that because of his superior preparation, attained through the combination of theoretical study and practical work, he will have a better insurance against unemployment than the man who has failed to combine the theoretical study with the actual work.

The Puissant Bath

Nothing so stiffens a man's backbone and multiplies his abilities as a consciousness of superiority. Let him feel that he is a worldbeater and he will set the woods afire. He will accomplish the impossible. He will rejoice as a strong man to run a race. Persuade him that he is a weakling, and he is licked before the fight begins.

Whatever his work may be, whether he leads armies or writes poems or lays brick, he will perform the better for the possession of the quality men call conceit, for conceit is no more than self-respect, and without self-respect one has no more chance in the world than a one-legged man at a kicking match.

If a man is conscious of being a little more righteous than his fellows, knowledge of his superiority will tickle his vanity and enlarge his ego. And in this respect at least, cleanliness is next to godliness, for the clean man feels superior to the unclean man, and consciousness of superiority gives him an advantage whenever the two shall meet.

Find a man who now respects himself and holds his head high; require him to go unshaven and unwashed for a fortnight; dress him in wrinkled garments and unshined shoes; and behold, he will cringe and keep in the shadows.

Or find one who thinks himself whipped of fate; shave and shear him; scrub his hide and dress him in fine clothes, and he will look the world in the eye and walk with kings.

The man who denies himself a daily bath and a daily change of socks and shirt deliberately assumes a handicap. Pride may be absorbed from a bathtub of water. In the lather of soap is a charm that will increase his horsepower 50 per cent. Man crushed to earth will rise again from the depths of a bathtub. You can't keep a clean man down.

—Baltimore Evening Sun.

Statistics compiled by the National Association of Ice Cream Manufacturers shows that the consumption of ice cream in the United States has increased approximately 100,000,000 gallons since prohibition went into effect.

Transportation Past and Future

An officer of the United States Air Service recently addressed the monthly meeting of the Baltimore Traffic Club. The appalling catastrophe to the ZR-2, the dirigible airship built by Great Britain for the United States, which collapsed and fell into the River Humber in England, had occurred only a few days previously. The wreck, with the large loss of life which accompanied it, was fresh in the minds of the audience, and the certainty with which the speaker predicted that this accident, terrible and discouraging though it was, would not hold up appreciably the development of the dirigible airship, amazed some of his hearers.

Among other things he said that practical aeronautical engineers are even now making the forecast that although the ZR-2 was by far the largest airship that had ever been constructed, they believe that the not far distant future will produce airships with a gas, and hence a carrying capacity, of one hundred times that of the ZR-2.

In the mind of the layman, the tragic end of the ZR-2 and most of its crew, would seem almost to prohibit for a long time further experimenting with such risky vehicles of the air, were it not for the discoveries and improvements constantly being made. For instance a new gas, helium, is now being made in small quantities. It has all the buoyancy of hydrogen gas and, in marked contrast to hydrogen, is non-inflammable. And whether we are willing to look into the future with the optimism of the aeronautical engineers and see in our mind's eye, airships literally thousands of feet long and proportionately big in their other measurements, we must admit that the discovery of this new unflammable gas should go a long way toward solving the problem of the lighter-than-air ship of the sky.

In this connection it is interesting to note the following article, which has been printed in our MAGAZINE before, but which illustrates so well the amazing development in transportation during the last century. What would the members of the school board who were responsible for this damning, even of the idea, of the railroad, think of the aircraft of 1921, when they could not conceive of the practicability of a railroad train in their day?

"In the little town of Lancaster, Pa., just 90 years ago, the literary society asked the use of the school-house for debating the question: 'Are Railroads Practical?' And here is the answer the school board made in their wisdom:

"If the society wants the use of the school-house to debate some decent moral question, we should cheerfully give the use of it, but such a thing as a railroad is wicked as well as absurd. If God had wanted human beings to travel at the fearful rate of seven miles an hour, He would have clearly foretold it by His prophets, but since nothing is said about it in His Holy Writ, it is plainly an investigation of the devil to lead immortal souls to hell. Hence we refuse the use of the school-house."

Edison's Questionnaire to Telegraphers a "Cinch" for Our Own "Charlie" Selden

THE annual meeting of the Telegraph and Telephone Division, American Railway Association, was held at Cleveland, Ohio, September 21, 22 and 23. Mr. H. Hulatt, manager of Telegraph, Grand Trunk Railway System, presided as chairman. Charles A. Plumly, superintendent Telegraph, was the senior representative of the Baltimore and Ohio Railroad Company; E. W. Day and E. T. Ambach, assistant superintendents Telegraph, and B. F. Thompson, Telephone engineer, were representatives; Charles Selden, general inspector of Transportation and former superintendent Telegraph, was also present.

One of the delightful features was the "Get Together" meeting in the Hotel Cleveland on the night of the 20th. There was good music and dancing, and everybody got acquainted with everybody else. There were songs, and here is one of the best, it being sung as a tribute to Mr. Plumly on account of him having recently recovered from a long illness, but Mr. Plumly says its popularity was due the "catchy" air.

Well, maybe it was, but we like the words, too:

"No More Doctors"

(To the tune of "Yip I Addy")

Yip-I-Addy-I-Ay, I-Ay,
Yip-I-Addy-I-Ay.
Plumly's here and we're full of cheer,
May he grow fatter and fatter each year,
Yip-I-Addy-I-Ay, I-Ay,
May doctors and drugs be no more (Hurrah).
Never more we'll be glum,
Good old Plum, Good old Plum,
Yip-I-Addy-I-Ay, I-Ay.

Another feature of the evening was a kiddie car race. Two old timers were appointed judges and stationed at one end of the hall, the center of the hall having been cleared in the meantime. Then Charles Selden and two other veterans were called to the far end of the hall and each presented with a variegated colored skull cap, after which kiddie cars were produced and the race was on. Mr. Selden made a vigorous start and slipped from the car to the floor; however, he was game enough to quickly remount, and by a great burst of speed won the race.

It Pays To Be Polite

(A True Story)

I boarded a trolley car
This morning at eight,
And pushed up front
To find a seat.
There was none to be had,
But on the front seat
Sat a woman and a baby.
The baby was scarcely
Three years old,
And I knew that
The mother
Had paid no fare for it.
And yet—
She let it occupy the space
That rightly belonged to me—
Or to some other one of the twelve
Passengers who were hanging
On the straps.
You understand
Just how I felt—
Like speaking out my mind
And telling her to take that brat
Upon her lap.
And yet—
Some good angel hovered near
And told me to keep quiet.
After awhile, a man
Arose and gave me
His seat. I thanked him
And sat down.
Presently the baby looked at me
And smiled.
I smiled, too—
I couldn't help it.
Then I saw the mother
Had a suitcase.

I wondered where they could be
Travelling.
Again the baby smiled
And touched me with his fingers.
"Going bye-bye?" I asked him,
"Yes, to Philadelphia," said his
Mother.
"From Mt. Royal?" I inquired,
"No, I don't think so;
"My husband told me I'd better go
"Via (and she mentioned
another road)."
"We have a train
"At 8.45," I told her,
"And if you would like
"To go from there
"I'll help you with your luggage
"And the baby, for I work
"At Mt. Royal."
"That's kind of you,
She said, "And if you're sure
"About that train, I'll go
"That way."
She did!
And the last I saw of her
And the baby
And the suitcase,
They were getting aboard
Our Number Four.
Another passenger
To Our Road!
But just suppose
That I'd been mean
About that seat!
It always pays
To be polite.

On the evening of September 22 a banquet was tendered by the Railway Telegraph and Telephone Appliance Association at Hotel Cleveland. One of the principal events of the evening was a Morse communication between Thomas A. Edison, the great inventor, and Charles Selden, arrangements having been made for a direct wire between Mr. Edison's home at East Orange, N. J., and the Hotel Cleveland, by the Western Union Telegraph Company. A wire was stretched to all the chandeliers in the banquet room and a telegraph sounder placed in each chandelier so that all telegraphers could hear everything passing on the wire. In addition, for the benefit of non-telegraphers, large easels were placed carrying poster sheets of white paper and a telegrapher with carbon point copied the matter so that all could see what was being done. The instrument started clicking at 9.05 p. m. as follows:

"ORANGE, N. J., September 22.

"To the Telegraph and Telephone Section, American Railway Association, in convention assembled, Cleveland, Ohio.

It is with great pleasure and some pride that I am still able to send readable Morse, that I extend my kindest felicitations and congratulate you upon the able manner in which you are carrying on the work begun by the Railway Telegraph Superintendents in 1882. This occasion brings back to me pleasant recollections of the days of 1865 when I was a regular and probably a better operator. I hope some of my comrades are there tonight. To all I extend my "73."

"Edison" 9.05 p. m.

Mr. Selden made immediate reply as follows:

"Convention Hall, CLEVELAND, OHIO.
September 22, 1921.

"TO THOMAS A. EDISON,
ORANGE, N. J.

We appreciate the honor of receiving your telegraphic greeting sent by use of the old reliable Morse. Your sending is still excellent. Many of your old telegraph operator comrades, of whom I am proud to be one, are here and join with all in good wishes with the hope that you will continue for many years to contribute achievements like the many of yours by which civilization has benefitted so richly. Some of our younger members are greatly relieved now that your message is in; they were afraid you might send your latest questionnaire. Do you care to ask us something easy? "73."

CHARLES SELDEN, Telegraph and Telephone Section, American Railway Association.

Mr. Edison then submitted eight questions, which are listed below:

1. On what road was the telegraph first used for train dispatching, and when?
 2. Name the operator who could receive the car numbers of fifteen cars in one message and could then sit down and write them out. He did about 8 years ago.
 3. Name four presidents of railways who started as telegraph operators.
 4. Why do Erie Railway telegraph operators use eight dots for the letter "P"?
 5. What is the difference between a night operator and a drowned man?
 6. What telegraph superintendent can tell the most funny stories?
 7. Name the telegraph superintendent who came to New York and after a heavy dinner told the taxi chauffeur to drive over the "Wheatstone bridge?"
 8. Who is "Charley" Selden?
- Mr. Selden was game, and immediately answered each question:

1. The Erie road, date unknown by me. It was before I was born.

2. David McCargo.

3. A. H. Smith, New York Central; John J. Burnett, Nickel Plate; A. J. Earling, Chicago and North Western; George Stevens, Chesapeake & Ohio; James Tausig, Wabash; Carl Gray, Union Pacific; and many others.

4. Because Erie Railroad is all dots.

5. Can't raise either.

6. Edward Chenery; George Cellar; Frank Williams; J. B. Foley, D. L. & W.; Keenan, N. Y. C.; and a lot of other chestnut venders.

7. Superintendent Hall, of M. K. & T.

8. Party is unknown. Send better address.

At this point Mr. Edison inquired as to the number present, and when informed by Mr. Selden that there were present approximately 175, representing railroads, and over 100 ladies, he replied, "Holy Gee! I did not

think you had grown so big," and after some further conversation "good nights" were said and the wire disconnected.

The Telegraph and Telephone Division anticipates a spring meeting to be held in March of next year at Richmond, Va., and the annual meeting at Colorado Springs in September.

For the ensuing year C. A. Plumly, superintendent Telegraph, will continue as member of Committee No. 1, Sub-Committee "B"—Wire Crossings; and was also appointed chairman of Sub-Committee "C"—Underground Construction. E. T. Ambach, assistant superintendent Telegraph, is a member of Committee No. 1 and Sub-Committee "A," Construction and Maintenance of Pole Lines. B. F. Thompson, Telephone engineer, is a member of Committee No. 11, Telephone Transmission.

In order to exploit the movement and its purposes thoroughly, the local railroad-express committees will be provided with posters and other literature, together with newspaper articles to be submitted to local publications. A special two color announcement, of "Perfect Package Month" will be distributed for tacking up in railroad depots, warehouses and on cars, while the express wagons and motor trucks of the country will carry an illustrated "Perfect Package" poster. "Make Your City's Record 100 Per Cent.," will be the message to shippers on these posters.

The assurances that this movement will be a great success is given in the enlistment of the entire working forces of the railroads and the express companies, totalling at least 2,000,000 men, in this campaign. How the movement is to be carried out will be fully explained to the agents of the carriers and they will be asked to use their best efforts and their own ideas in accomplishing the results desired.

November Named "Perfect Package Month"

Nation-wide movement to be conducted by the railroads and the express companies of the country, to stimulate further interest in good packing

THE railroads, steamship lines and express companies of the United States and Canada, through the American Railway Association and the American Railway Express Company, will inaugurate a nation-wide movement in November, for "Perfect Packages." November has, therefore, been named "Perfect Package Month."

The employees of the railroads and express carriers are requested to take the initiative in making "Perfect Package Month" a great success, and in every city and town will be asked to get together and form local campaign committees. Cooperation of shippers and of civic organizations will be sought during the movement.

During November, railroad and express employes will be asked to examine carefully all shipments and to note any shipping errors. Where such are found, notations will be made upon especially prepared "Exception reports," which will be sent to the shippers of the packages. A record of the number of "exceptions" found will be kept by the local railroad-express committee, so that a summary may be sent to the shippers' organization cooperating, at stated periods.

The purpose of the movement is to stimulate further public interest in good packing of shipments, and all trades and industries which use rail transportation in any form, will be invited to cooperate in "Perfect Package Month." At the conclusion of the drive, the shipping records of the various cities and towns will be compiled and sent to the joint campaign committee of the railroads and express companies, so that the highest percentages may be ascertained and published.

The carriers do not propose to throw a heavy burden on the shippers' organizations they ask to participate. The number of "exceptions" discovered during the month, together with a notation of the principal shipping errors, will be reported to

these organizations, and at the conclusion of the drive the carriers will tell just what was the business passing out of these localities, so that a percentage record may be obtained.

B. C. Forbes Says:

"Diamonds are Chunks of Coal that stuck to their job."

The Best And Only

(By Ray Garrigus)

Clerk, Car Department, Lima, Ohio

I've traveled the length of the Sunset Route through the West Coast's golden clime,

I know every stop on The Way to Go, every man on the Fruit Belt Line,
I've covered the south on the Cotton Belt and ridden the Rio Grande,
I've searched far and wide but now I'm at home on the best line in the land.

There's the Deep Water Route and the Orient and the grand old West Point Line,

The Q. and C. with its Dixie Flyer that's always in on time;
I've sped through the land of Robert Lee on the Rail That Serves the South,
But the happiest miles were those I rode on the Eastern Scenic Route.

There's the N. Y. C. with its flying trains and stops that are far and few,
Now speed is an asset, we must agree—other things considered, too;
But who prefers speed to comfort when out for pleasure bound?
I've traveled the road that combines the two—and it runs o'er historic ground.

I've crossed the Divide on the Salt Lake Route, and the Rockies' highest peaks
On the winding line of the C. P. R. through the Northland cold and bleak;
I've tried the Vicksburg Line and know the romance of the Santa Fe,
But the Best and Only's the road for me in this grand old U. S. A.

Where service cannot be excelled and safety is first—always—
And speed is enough to get you there with a minimum of delays:
With SAFETY and SERVICE and SPEED combined, the results obtained are the best,
I've tried them all and the Best and Only will prove itself in the test.

Thirtieth Annual Meeting of the Baltimore and Ohio Association of Railway Surgeons—Baltimore, Md., September 8, 9 and 10

THE thirtieth annual meeting of the Baltimore and Ohio Association of Railway Surgeons convened at 9.30 A. M. on Thursday, September 8 at the Hotel Emerson in Baltimore. One hundred and sixty-one members from the territory covered by the Railroad were in attendance at the various sessions; including their families, the registration totaled 317 persons. After the opening session the convention adjourned to Osler Hall, on Cathedral Street, where the remaining sessions were held.

Dr. C. Hampson Jones, health commissioner of Baltimore City, welcomed the visitors in the name of Mayor William F. Broening, and Dr. E. B. Pittro, of Salem, W. Va., president of the association, responded.

George Dobbin Penniman, counsel for the Relief Department, delivered an address on "Medical Expert Testimony," and showed how such testimony could be presented in court in the clearest and most intelligible way.

An address of welcome on behalf of the Company was delivered by George M. Shriver, senior vice-president, at the morning session on September 9.

The entertainment features provided by the railway management for the delegates and the visiting ladies included two sight-seeing trips through the beautiful Green Spring Valley, Druid Hill Park, Towson, Pikesville and other suburban show spots. Some of the delegates, surprised at the size of Druid Lake, mistook it for a branch of the Chesapeake Bay. Stops were made at the Emerson estate, Brooklandwood, where the delegates had an opportunity to taste the rich newly-churned buttermilk.

Moving picture entertainment was provided in the afternoons at the Century Theatre. On Thursday evening the Convention sent many of its delegates to the Coliseum at Carlin's Park. Seats on the front row were not securable after an early hour, and those who went to study the use of the compressed air apparatus seemed glued to the benches. The diving mermaids also received a large share of attention from surgeons and medical examiners alike.

The success of the Vaudeville Entertainment at Lehman's Hall on the night of September 9 was due to the efforts of Joseph W. Swikert of the Relief Department, who acted as organizer and stage manager. John Bopp, steward in the Baltimore and Ohio Building restaurant, served refreshments after the entertainment and through the dances which followed. Miss Helen Bourne, the social secretary, had an opportunity to renew the pleasant friendships of the session of 1920, and made many

friends by her tactful and gracious manner.

On September 10 the following officers were elected for the coming year:

Dr. J. G. Shirer, Newark, Ohio, President.

Dr. V. D. Lespinass, Chicago, Ill., First Vice-President.

Dr. W. R. Griess, Cincinnati, Ohio, Second Vice-President.

Mr. C. E. Johnson, Baltimore, Md., Secretary-Treasurer.

The convention wound up on September 10 with a trip on the Steamer "Annapolis" on the Chesapeake Bay and the Sassafras River. Some of the visitors who for the first time saw the twinkling lights along the shore, returned to their homes with the feeling that there were no more attractive places for sunlight and moonlight sails than the Patapsco River and Chesapeake Bay. John Bopp served an appetizing buffet supper for the excursionists.

By midnight of Saturday a large proportion of the delegates were on their way back home with praises for their Baltimore hosts.

The professional side of the convention was covered by the following program in addresses and discussion:

Hospitalization for Minor Injuries. Dr. E. C. Brush, Zanesville, Ohio. (In the absence of Dr. Brush his paper was read by Dr. B. S. Rankin, of Tunnelton, W. Va.) Discussion opened by Dr. C. R. Ogden, Clarksburg, W. Va.

A Plea for Standardizing the Treatment of Railroad Injuries. Dr. John R. Littlefield, Cumberland, Md. Discussion opened by Dr. Page Edmunds, consulting and general surgeon, Baltimore, Md.

Pulse Rate and Blood Pressure Observations as Aids in the Treatment of Acute Head Traumas. Dr. Paul R. Sieber, consulting surgeon, Pittsburgh, Pa. Discussion opened by Dr. R. W. Locher, Baltimore, Md.

United Fractures. Dr. Thomas B. Johnson, Frederick, Md. Discussion opened by Dr. H. A. Becker, Cleveland, Ohio.

Plastic Surgery of the Face and hands—Stereoptican Demonstration. Dr. Lawrence Ryan, Chicago, Ill. Discussion opened by Dr. Frank Lynn, Baltimore, Md.

Symposium on Injuries to the Back.

Disablement due to condition of the Back. Dr. Walter R. Griess, consulting surgeon, Cincinnati, Ohio.

Method of Examination of Disabled Backs. Dr. G. Carroll Lockard, medical consultant, Baltimore, Md.

The Neurological Aspect of Back Disablement. Dr. Irving J. Spear, Neurologist, Baltimore, Md. Discussion opened by Dr. Page Edmunds, consulting and general surgeon, Baltimore, Md.

Sudden Post-Operative Death. Dr. John W. Thomson, Garrett, Ind. Discussion opened by Dr. W. W. Golden, Elkins, W. Va.

The Diagnosis of Malignancy in the Mammary Gland. Dr. A. C. Harrison, consulting surgeon, Baltimore, Md.

Functional Recovery. Dr. Henry A. Becker, consulting surgeon, Cleveland, Ohio. Discussion opened by Dr. J. W. Thomson Garrett, Ind.

Reductions of Hip Joint Dislocations. Dr. C. S. Hoffman, Keyser, W. Va. Discussion opened by Dr. M. F. Hussey, Sidney, Ohio.

Results of Negligence in the Care of Wounds. Dr. C. E. Ward, Cleveland, Ohio. Discussion opened by Dr. J. O. Howell, Bridgeport, Ohio.

Only a Lead Pencil—but it Means Better Operations

Freight Agent F. G. Hadley, Mount Vernon, Ohio, is not overlooking the tiniest bet to make the efficiency of his force measure up to the high standard being striven for in the Better Operations drive on the Western Lines. The accompanying cut tells the story of how he and his force get every bit of lead possible used out of the pencils issued them. When a pencil becomes too small to be used it is saved, and when another gets of the same size the two unsharpened ends are placed together and a binding of stiff paper is wrapped around them and glued fast. The result is a double-pointed short pencil which has a whole lot of use left in it.

The saving of one pencil out of ten may not be much in itself, but when we reckon it on a percentage basis, it stands at at least 10 per cent. Imagine what a saving of 10 per cent. in all our operations would mean!

These were the committees which organized the convention and put it through:

EXECUTIVE COMMITTEE.

DR. H. S. HEDGES, Chairman, Brunswick, Md.

DR. H. B. ANDERSON, Newark, Ohio.

DR. J. N. SPROWLS, Claysville, Pa.

DR. C. U. HANNA, Zanesville, Ohio.

DR. E. S. MONTGOMERY, Pittsburgh, Pa.

DR. J. S. HULL, Hicksville, Ohio.

RESOLUTIONS.

DR. C. R. OGDEN, Chairman, Clarksburg, W. Va.

DR. N. R. EASTMAN, Mt. Vernon, Ohio.

DR. H. B. ANDERSON, Newark, Ohio.

TRANSPORTATION.

C. E. JOHNSON, Chairman, Baltimore, Md.

DR. FULLER NANCE, Baltimore, Md.

DR. W. F. MORRISON, Philadelphia, Pa.

NECROLOGY.

DR. J. L. COCHRAN, Chairman, Connellsville, Pa.

DR. JOHN PALMER, JR., Wilmington, Del.

DR. B. S. RANKIN, Tunnelton, W. Va.

ARRANGEMENTS.

DR. R. D. SYKES, Chairman, Baltimore, Md.

DR. PAGE EDMUNDS, Baltimore, Md.

DR. R. W. LOCHER, Baltimore, Md.

DR. C. W. PENCE, Philadelphia, Pa.

Look Out for the Surgeons! They Do an Awful Lot of "Cutting Up"

Being Aunt Mary's Story of the Fun and Frolic Chapters of the Baltimore and Ohio Surgeons' Convention in Baltimore

IF I wuz a germ," sez Ezra to me the otherday, "I'd pester them surgeons to death."

"Why so?" sez I.

"Just so's I could go along with 'em," sez Ezra

"Right you be," sez I, thinkin' at the same time that if Ezra wasn't sich a homely critter with sich a red nose an' a terrible big Adam's apple, I'd want him to be one o' them Comp'ny surgeons. But them folks is so good lookin' that 'mongst them, Ezra would look jist like a moss-covered hippopotamus in a swan lake.

Now I'm goin' to tell you about two parties what that Baltimore and Ohio Association of Railway Surgeons had while they wuz holdin' their annual meetin' in Baltimore.

When they sez to me, "Aunt Mary, here's a ticket to our parties," I reckon you know I didn't need no second invite. On Friday night, Ezra come home sayin' he felt like as if he wuz goin' to get awful sick, an' didn't I have some whisk—I mean *medicine* in the house what wou'd fix him up. I had. I made him a good hot toddy, tucked him into bed, an' then got myself all dolled up to go to the entertainment in Lehmann Hall.

I walked in about half-past eight. There wuz the surgeons an' their wives an' families, an' them what didn't have their wives brought somebody else's, an' they wuz all laughin' an' talkin' an' havin' the time o' their young lives. Soon the music started. The orkistry wuz led by William Gable, a Relief Department boy, who plays the violin with pep. Mrs. Doris Stevens played the pianny; Joseph Frisby, Auditor Passenger Receipts Office, beat the heads out of the drums, an' George B. Charles played the saxophone.

The whole place has a sort o' medical atmosphere, as it were. Them doctors wasn't allowed to fergit shop fer a minnit. The little play what the Vagabond players

gave wuz called "Yellow." I didn't see nothin' yellow; the curtains wuz pink an' green, an' there wuz a big "B and O," arranged like a staff o' music right in the background, "Al" Rupert sung lots o' songs right up an' down the aisle. Robert Test wuz a wonderful magician man; he stirred up three rings in a saucepan with a storage egg, cooked it, an' lo an' behold, there wuz a lot o' bouquets o' flowers; he also buried some beathenish Mohanmedans an' changed their sarcophaguses. Then Miss Elizabeth Helfrich, secretary to the tax clerk, sung some pretty songs what every-

body enjoyed: "Spring Has Come Again," an' "Wenn die Rosen Blume."

Suddenly, all the lights went out an' the place wuz dark as night. Cold chills run up an' down ny spine. There wuz hollerin' an' shootin' in the streets. Then, bless my soul, the lights come on the stage an' there wuz three men in prison. Presently the door opened, an the warden throwed another man in. They all wuz as follers:

Gangsters—

Lefty—Joseph Swikert, Relief Department.

Rabbit—Theodore Buck, Bacteriological Department.

Kid—Frank Holbein, Real Estate Department.

Bull—J. M. McGrath, of Gilpin-Langdon Drug Company.

Tarpey, a jailor—Theodore Marburger of Reinle Salmon Co.

They wuz some tough fellows in New York who had been on a hunt fer loot. One of 'em had shot a man. When they got in jail they decided that it wuzn't no use fer four men to die fer one, so they tossed up a coin to see who would say that he did the killing'. But one of 'em, Lefty, wouldn't abide by what he had swore to. The rest got mad at him. They let him toss the coin again, but when he lost out again, he set down an' cried. Finally they told him if he didn't say he'd do what he swore to do, they'd kill him. An' kill him they did. I heard him choke an' hit the floor. Sez I, sorrowful an' mournful like, "Good-by, Mr. Swikert." Then I got mad 'cause with all them doctors there, nary one run up on

"The Baltimore and Ohio Railroad is to be Congratulated on its Employes"

THE PIQUA CHAMBER OF COMMERCE

Piqua, Ohio, September 16, 1921.

Mr. Daniel Willard, Pres.,
The Baltimore & Ohio Railroad,
Baltimore, Md.

Dear Mr. Willard:—

Yourself and the Baltimore & Ohio are to be congratulated on the type of employes whom you have. I can truthfully say that dealing with them, both through writing and telephone communication, is a pleasure and that I have found them all, without exception, willing to do anything in their power to please the public.

Recently one of our manufacturers had a shipment of material coming which was badly needed. The same was delivered to your line at St. Louis on the 14th and reached Piqua this morning. This fast time was due to the efforts of Mr. P. D. Freer, general freight agent at Cincinnati and Mr. Edw. Hart, Jr., general freight agent at St. Louis.

This kind of co-operation on the part of your employes is the rule and not the exception; at least, that is our experience in dealing with any of them and we wish that we could personally thank them for this co-operation.

Very truly yours,

THE PIQUA CHAMBER OF COMMERCE,

(SIGNED) S. D. HUTCHINS,

Traffic Manager.

the stage to try to bring him to life. An' jist as I wuz 'bout to run up there myself to throw some water on him, here he come down in the audience, all spik an' span in his white trousers, as if nothin' hadn't happened. Glory be! He must have nine lives like a cat.

That there "Miss" Herma then come out an' danced in a purple dress with a million spangles. Then she went back an' changed it fer a black an' old rose one, an' danced again. When she went back again, Miss Helfrich sung again. Later when I got home I told Ezra that if I had a voice like that girl, I'd sing all day in the office, but he sez that I wouldn't, so I reckon I wouldn't.

In a few minutes Herma wuz back, all dolled up in another frock. She had them doctors goin', all right; they wuz makin' eyes at her, when all of a sudden, Herma took off her—I mean his wig, for Herma is a man, whose first name is Herman. I'll declare to goodness, I don't know what's comin' next.

Billy J. Kavanaugh, the "Black Epidemic," was the last man on the program. He started off things by sayin' that his name wuz Joshua, not the one what made the sun stand still, but the one what made the moonshine still. Then follered a lot o' jokes an' songs an' dancin', after which they opened that cellar door down underneath the stage, threw in the seats, an' everybody started dancin'. Mister Johnny Bopp served refreshments. There wuz fruit punch, candies, ice cream, cakes, an' cigars, an' everybody had a good time. Among the prominent folks what I saw there wuz Mr. Shriver, senior vice president; W. J. Dudley, superintendent, Relief Department; Dr. Griess, consulting surgeon, Cincinnati, Ohio; Dr. Seiber, consulting surgeon, Pittsburgh, Pa.; Dr. Hughes, of Chicago., Dr. Morrison, Company surgeon, Philadelphia, and ex-president of the Association; Dr. Fitrow, retirin' president of the Association; Dr. Sinsel, medical examiner, Grafton, and president of the West Virginia Senate.

The fat man's race was 'most the funniest thing of all. Dr. Morrison fell down, others slipped and slid around 'till they got dizzy, and the hardest part of it was, after they had exerted themselves like that, they went an' awarded the prize to the skinniest man there, Dr. Samuel A. Pratt, of Kingwood, W. Va., who hadn't even run in the race.

They all had a gay time dancin'. I had to leave early, fer I wuz skeered Ezra might 'wake up from his jag an' miss me. When I got home, he called out to me:

"Wuz there any germs there?"

"Dunno," sez I, "but there aint no flies can light on them surgeons."

* * * *

Next day, bein' Saturday afternoon, we all went down the Chesapeake Bay an' up the Sassafras River. When we handed the man our tickets to get on the boat, he

politely gave each lady a box of candy, an' cigars to the men. Up on the deck they wuz all havin' a lively time. Mr. an' Mrs. H. Irving Martin wuz eatin' lunch. They had chocolate cake, an' caramels, an' I don't know what all. That started it, an' from that time on, life wuz one grand feast after another. Me an' Elsie went down in the cellar of the boat to see what wuz goin' on. Whatever it wuz, it wuz goin'. There wuz the orkistry of the night before, splittin' their sides a-playin' "Turkey in the Straw," while "Doc" Sykes, "Joe" Swikert, "Doc" Hughes an' "Doc" Shirer, were all shakin' their feet off. Oh, no, they wuzn't dancin' with any ladies, but it didn't make no difference to them.

Presently they had a real quadrille, in which the ladies joined. My, but you ought to have seen Mister Charles Johnson! He was in his glory fer shore.

"Swing your partners," called Dr. Mills, of Toledo. An' Dr. Hussey tried to swing her, but his feet wouldn't go right. But nobody could blame him, 'cause gettin' a new daughter-in-law is enough to make anybody forget his steps. He took off his coat, an' then he did a little better, but I'll guarantee that if he'd had a bit o' Sloans' liniment, he'd slid along faster. I counted three red hats bobbin' around, an' mebbly that's what dazzled his eyes.

Dr. Thompson, Dayton, Ohio, an' his wife, daughter, an' niece, wuz among the onlookers. Dr. Thompson was on the C. H. & D. for 20 years before that road was taken over by the Baltimore and Ohio.

"I wonder if my husband has fallen overboard?" asked one lady, rather anxiously.

"I don't know," replied another, "but it would be rather interesting to fish him out, wouldn't it?"

"Love's In My Heart," sang Miss Helen Bourne, who acted as registrar during the convention. Great applause greeted her singin', an' she rewarded her listeners with another little song, "Butterflies."

Jist then I heard something which I think I'll pass on as a good pointer for Mr. Jiggs. Please don't tell Mrs. Hughes, but the doctor wuz fannin' Miss Helfrich, when he sez, sorter slow an' easy, "My wife is up on deck, I think."

"What would she do if she saw you now? Do you think she'd pull my hair?"

"Oh, no," sez the doctor, assuringly, "I keep her nails trimmed close."

Meanwhile, up on deck sets the Missus an' Dr. Mather.

"Havin' a good time?" I asks her.

"Yes," sez she, "Dr. Mather has told me all he knows, an' it didn't take him more than ten minutes.

Here an' there wuz one or two o' them

LOYALTY

Chet. Jones 'd shout as 'round he'd roam, "There ain't no place like Home, Sweet Home;" a one-hoss town it proved t' be, but Chet. was long on loyalty. There wa'n't nuthin' said ner done, from doin's big t' jest plain fun, but Chet. would start t' talk it down with stuff about his one-hoss town.

Y'd say Ed. Smith was doin' well, t' hear him 'bout th' city tell; but Chet. said jobs in Thompson's store gave fellers just as much an' more. Chet. liked t' hear an' liked t' read 'bout big Base-ball with stars an' speed, but vowed it didn't hit th' spot like Squashville games in Jones's lot.

He heard about a city girl a-pictured like a peach er pearl, but said: "She's mebbe fair t' you, but nuthin' much 'side my gal Sue." Like you an' me an' all th' rest, big music soothed Chet. Jones's breast; he said it sounded great an' grand, but pick fer him th' Squashville Band.

He said "no pie is good as Ma's, no chickens ever grew like Pa's; the garden truck they riz and pick, jest make the city grub look sick." Durn fine fer Chet. t' say were best his town an' things that he possessed, but rooted in his heart y' see he had a hunk of loyalty.

—Robert Stewart Suttcliffe in Telephone Review

"put an' take" games in progress. Over on one side wuz "Jerry" Lawler, "Willie" Funk, "Doc." Milholland, "Governor" Sinsel an' "Bill" Kennedy. "Doc." Nance looked on.

"Why aren't you playin'?" asks one.

"My wif's got all my money," sez he, mournfully.

Just then Dr. Shirer, president-elect of the Association, comes along.

"I disapprove of this," he sez. "This society is a decent society, an' it has no business to play craps. By the way, how much does it cost to join?"

"No use joinin'," sez another, Mrs. Bossyns has all the money."

"Doc" Mather wouldn't join the party. "No, ma'am," sez he, "I never gamble with ladies." "Doc." Shirer wanted us to note that he had a fat pocketbook when he finished. Somebody asked if Mr. Martin joined in the game. Dr. Frank Dorsey, New Castle, sez the reason he played is that he wanted to get enough money to defray his hotel expenses. Dr. Fittro just looked on. While the games wuz goin' on, I steps around to see what the other folks wuz doin'.

"Come here, Aunt Mary," sez Dr. Hartman, of Tippecanoe City, Ohio, "I'd like to sing you one of my songs." "Then he added, "But wait a minute 'till I get my teeth fastened in so's they won't drop out. I waited, and presently he started. There was "Old Man Dreams," "The Last Rose of Summer," and several others; poems that he had remembered from his childhood days, an' I'll say it wuz a pleasure to listen to him. An' his teeth stayed in fine.

Then came "Doc." Sykes with some of his original poems, one of which I'll quote at the end of this story.

At five o'clock, Mr. Johnny Bopp sent his men to scatter broadcast a delicious feast o' chicken salad, croquettes, green peas, rolls, sandwiches, coffee an' ice cream. Mebby it wuzn't good, an' mebby them doctors didn't all eat jist like they wuz human. As fer me, I set down an' rested, fer I couldn't eat no more. Then Mister Ball, of the Relief Department, started on one o' them ghost yarns o' his'n, assisted by Mister Swikert an' "Doc." Sykes. Pretty soon Dr. Hurley of Connellsville, an' Dr. Selby, of Cumberland, joined in the party. The story would go something like this:

Mr. Ball: I grabbed my trusty gun, and—

Mr. Swikert: You mean your *rusty* gun?

Mr. Ball: No, I grabbed my *trusty* gun an' started fer the window—

Dr. Sykes: When you reached there you threw your chest out.

Mr. Swikert: It fell to the ground with a sickening thud.

Mr. Ball: Oh, the dickens! Let me tell my story!

And tell it he did, but it took him no less than two hours.

Downstairs there wuz more fun an' more dancin' an' all that worried me wuz that I

couldn't be in two or three places at the same time. I think that's what worried lots of others, too.

We got back home shortly after eight o'clock. As we wuz goin' off the boat there wuz another box of candy fer us. My, but that wuz one grand an' glorious lot o' fun! Now, to put the finishin' touches to the story, I'll let you read one of "Doc." Sykes' poems, jist as he told it to me. He told me lots o' other things, too, but I ain't tellin' you what they be.

Here's to the doctor, with his pills and his knife,

He's our constant companion from birth throughout life,

Up and down through the land with his knife and his pills,

He spends his life curing humanity's ills.
Without thought of his own sweet comfort or wealth,
As long as he brings to his patients good health.
In all kinds of weather, at all times of the clock,
On his mission of mercy goes our faithful old doc,
'Tends the new, squalling infant, to the old he gives aid,
He touches life's pathway at all points on the grade.
So here's to the doctor, may God bless his skill,
And help his patients to pay when he renders his bill.

Conductor Shipley's Courtesy Brought Him Quick Returns

CONDUCTOR Charles H. Shipley, Baltimore Division, has long been known as one of the most representative of our conductors. His middle name doesn't begin with "C," but it means courtesy, jist the same. If he worried about what kind of a return he was going to get for his thoughtful attention to passengers, it might not come as quickly as it sometimes has to him. But this doesn't worry him in the least, as may be seen from the letters, subjoined:

WICHITA NORTHWESTERN RAILWAY COMPANY

OFFICE OF THE PRESIDENT
Hutchinson, Kansas

September 10, 1921.

O. P. BYERS,
President.

Dear Mr. Shipley:

The enclosed is in remembrance of your kind and courteous treatment to us while passengers on your train from Washington to Cumberland last June.

How much more pleasant life would be if we could all greet each other as you did us.

Sincerely yours,
(Signed) O. P. BYERS

Mr. C. H. Shipley,
Condr. Baltimore and Ohio Ry.,
Baltimore, Md.

1319 West Saratoga Street,
BALTIMORE, MD.

October 4, 1921.

Mr. O. P. BYERS, President,
Wichita Northwestern Railway Co.,
Hutchinson, Kansas.

Dear Mr. Byers—It was a great and pleasant surprise for me to receive your letter of September 10 and particularly to find therein the enclosure of an annual pass for the current year over your railroad.

It is no trouble to me to show to all our passengers the same courtesy which you are kind enough to acknowledge. It makes things so much more pleasant for everybody if all of us try to be kind and considerate, as suggested in your letter.

I read on page 26 of the August issue of our MAGAZINE, a copy of which I am enclosing herewith, the unusually high opinion

which you expressed in your letter to Mr. Galloway of the service provided on our train No. 1, when you had occasion to use it recently. This is but another illustration of the interest which, it seems to me, Baltimore and Ohio train service employees are taking in making passengers comfortable on the trains of our railroad.

You will probably also be interested in seeing the enclosed copy of the February, 1916, issue of our MAGAZINE, and particularly in noting on page 30 the little story which was written about me.

Again let me thank you for your kind remembrance of our little visit together.

Yours very truly,
(Signed) C. H. SHIPLEY.

In travelling on the road the writer has frequent occasion to note the courtesy of our train employes, and especially of our long service conductors. Pity is that the limits of space in the MAGAZINE do not permit of our giving deserved commendation of all of them.

Here's to you, "Captain" Shipley, and to the many others wearing the stripes of honorable service such as yours! The way that you and they handle their important jobs for the Railroad is helping make the world a lot brighter.

Overheard in a Pullman

CINCINNATI, OHIO, October 9, 1921.
Editor, Baltimore and Ohio Magazine,
Baltimore, Maryland.

Dear Sir—Here is a conversation overheard between passengers on our Train No. 4, Pullman No. 24:

First Passenger: Do you know why I always patronize the Baltimore and Ohio?

Second Passenger: No, I do not.

First Passenger: Because, through their trainmen, they are always giving something away that does not cost them anything.

Second Passenger: What is that?

First Passenger: Why, Courtesy, by the train employes.

Yours very truly,
T. A. BROWN,
Conductor

The payments to pensioned employees constitute a special roll contributed by the Company.

During the calendar year 1920, \$342,993.35 was paid out through the Pension Feature to those who have been honorably retired.

The total payments since the inauguration of the Pension Feature, October 1, 1884, to July 31, 1921, amount to \$4,470,808.00.

The following pensioned employees, after serving the Company faithfully for a number of years, have died:

Pensioners' Roll of Honor

*Oh, blest retirement! friend of life's decline—
 Retreat from care that ever must be thine;
 How blest is he who crowns, in shades like these,
 A youth of labor with an age of ease.*

GOLDSMITH—"The Deserted village"

George W. Wolfe

From a real Baltimore and Ohio family comes George W. Wolfe, who was pensioned on June 15, this year.

Mr. Wolfe was born on May 1, 1856, at Ijamsville, Md. His father, William Wolfe, was a section foreman at Bartholows, Md., for 40 years. He had one brother, Jewguthrie, who also worked at Bartholows as trackman for 40 years, and another brother, Eli, who held the same position at the same place for 50 years. These three members of the family are now dead, but there are two brothers who are living and are still in the service. William has a record of 52 years of service at Bartholows, and John has already spent 40 years in service at Riverside.

Thomas Murray

Another farmer boy was Thomas Murray, brakeman, Illinois Division, who was pensioned on June 10, this year.

Mr. Murray was born on January 1, 1851, near Mitchell, Ind. His parents were Alexander and Sarah (Guthrie) Murray. He attended public school in Mitchell until he was 17 years of age, when he went to work on a farm, where he remained until 1875, when he sought employment on the Ohio and Mississippi Railroad as trackman. In 1881 he was transferred to brakeman.

In 1887 Mr. Murray was married to Sarah A. Barrett. Three of his children are living: Mrs. Mary Daggy and Frank Murray, both of Mitchell, Ind., and Mrs. Pauline Young, of Washington, Ind.

James A. Gross

Gratefulness for the kindness of the Relief Department is the keynote of a letter from James A. Gross, pensioned brakeman, Cumberland Division.

Mr. Gross was born on April 17, 1857 at No. 12, Morgan B., W. Va., now known as Magnolia. He entered the services of the Company as track hand at Doc Gully Tunnel, under Track Foreman L. Hansrote, in March, 1872. He was transferred to yard brakeman, Cumberland Yard, in February, 1890, and promoted to yard conductor in April, 1896. He worked in this position until October, 1907, when he was disabled. He was pensioned on July 21, this year.

John F. Mitchell

Another 50-year record is that of John F. Mitchell, pensioned engineer, Chicago Division.

Mr. Mitchell was born on March 10, 1852. We are told that he attended public school, when he was not playing hooky, at Sandusky, Ohio. He began his career with the Baltimore and Ohio in 1869 as newsboy on the Newark division. His duties then required him to keep the fires going in the passenger coaches, and to carry water to the passengers.

On June 21, 1871 he took service as a fireman on the Lake Erie Division of the Baltimore and Ohio, and in 1873 was transferred to the Chicago Division, which was then in the course of construction. He brought an engine over the Lake Shore to Auburn Junction and laid the iron both ways. In the latter part of 1874 the laying of the rails to South Chicago was completed. It was then that Mr. Mitchell was promoted and given charge of an engine. He pulled the first stock train, consisting of 11 cars, with camel engine No. 16, over the Chicago Division. In 1877 he was made passenger engineer, and has been continuously in service until October 1, this year, when he was pensioned. He drove an engine for 50 years, one month, and one day—all with a clean record. Now, "Johnnie," as he is familiarly known, feels that he is entitled to a little rest.

Richard F. Mercer

Lacking one year of a half-century of service on the Baltimore and Ohio, Richard F. Mercer, carpenter, Mt. Clare shops, has been recently pensioned.

Mr. Mercer was born on January 1, 1851. He entered the service of the Company as carpenter in the Maintenance of Way Department on April 16, 1872. He worked under John L. Wilson, master of roads. This position he held for 23 years. His territory extended from the Ohio River to Baltimore, and his work consisted of general house building and bridge work. In 1891 he was listed as cabinet maker, Mt. Clare; in 1906 as shop carpenter. This position he held until the time of his retirement on May 18, this year.

Conrad C. McMullin

Conrad C. McMullin, pensioned engineer, began railroading with the Cincinnati Southern Railroad as brakeman. In 1877 he left here and came east, where he held several positions until 1890, when he heeded Horace Greeley's advice to "Go West, young man," and came West to find a position with the P. & W. Railway. Here he worked until he was pensioned, April 1, this year.

He tells us that he is now trying to content himself on his farm on East Division Street, Springfield, Mo.

"Above the rattle of mower or reaper," says Mr. McMullin, "I love to hear the sound of an engine with a good, square valve motion; moreover, I want to say in conclusion, that if any of the boys from the old P. and W., or Baltimore and Ohio ever come this way, the latchstring is always on the outside, and (Sh-h-h-h!) there is a still in the cellar—filled with milk and buttermilk."

Oscar Hodson

Born on July 10, 1855, six miles north of Hillsboro, Ohio, Oscar Hodson moved with his family to Russell at the age of 7. Here he lived until he went firing with the C. W. & V., on July 14, 1883. He had engine No. 49 on the Hillsboro and Cincinnati accommodation, with Elwood Rother, with whom he worked for over 20 years. Later they were assigned to Engine No. 52, which took a tumble at Gest Street, Cincinnati, down into Mill Creek. Fortunately, no one was hurt. The engine was rebuilt and again turned over to Mr. Hodson and Mr. Rother. Bad luck seemed to be running apace with old No. 52, however, for she blew up near Blanchester, Ohio, in 1888. Mr. Hodson was then promoted to engineer. He ran for more than a year, then went back with Mr. Rother, in order to be home at night with his wife, who was then in ill health.

Three years later, Mr. Hodson lost his limb. After this he went to work at Loveland, until his health failed. He is now living with his daughter in Logan. He says:

"I have some fine Ancona chickens to put in my time with, for I cannot sit still and loaf.

"If any of the boys want some of the best layers in the world, I have them.

"I thank the Baltimore and Ohio for what it is doing for me."

Mr. Hodson lives at 554 E. Second Street, Logan, Ohio. He was pensioned on May 5, this year.

Conrad Deabner

Conrad Deabner, pensioned machinist, was first employed as machinist apprentice, Fort Wayne Shops, Allegheny, Pa., from 1870 to 1883. He entered the service of the Baltimore and Ohio at Glenwood, as coppersmith, on August 2, 1884. From this time until August 20, this year, he has remained in continuous service.

THESE HAD A HAND IN MAKING THE BALTIMORE AND OHIO — MORE OF OUR PENSIONERS

1. Oscar Hodson. 2. Richard F. Mercer. 3. C. C. McMullin. 4. R. M. Davis. 5. James A. Gross. 6. Lorenzo Herring. 7. James A. Shuck. 8. Albert Wilford. 9. William Jacobs. 10. Thomas B. Athey. 11. George E. Renmel. 12. John F. Mitchell. 13. The late John T. Fowler. 14. Richard Moulde

George E. Remmel

In reading over the records of our Pensioners, it is surprising to discover that the majority of our oldtimers were farmer boys. George E. Remmel once belonged to this group. He was born on January 25, 1883 in Madison, Jefferson County, Indiana. His parents were George and Hanna (Everhart) Remmel. At the age of three years, the boy came with his parents to live on a farm seven miles north of Washington, Indiana. He attended school in Daviess County until he was 16 years old, then went to work on a farm, where he remained until 1902, when he entered the service of the Baltimore and Ohio as laborer. His further record is as follows: 1906, bolt cutter; 1911, machine shop hand; 1915, machine operator; 1916, machine hand and operator, Indiana Division.

Mr. Remmel was pensioned on June 16, this year.

Lorenzo D. Herring

The number of different positions which he held in the service of the Railroad gives to Lorenzo D. Herring anything but a monotonous record.

Born in Oakland Md., on May 8, 1856, in 1869 he went to work for the old M. C. & C. Railroad as water boy on work train. In 1871 he went to work in the Chillicothe Machine Shops, where he learned the brass moulding trade. In 1877, he went to work in the Water Station Department; in 1880 he went on the road as fireman, but because of brass poisoning, went South for his health in 1882. A year later he returned to work in the House Carpentering Department. In 1888 he went back to firing; in 1896 he was promoted to engineer. He ran successively between Parkersburg and Cincinnati, on the Marietta Branch, and between Parkersburg and Zanesville. He had to give up this work, however, because of losing the use of his right arm. In October, 1919, he went to work in the Parkersburg Shops. Here he worked for six months, but because of his arm was obliged to give up this work also. He was retired on August 5, this year.

Richard Moulden

It is not only the man in the higher position who means much to the railroad; the crossing watchman who practices the Golden Rule can accomplish as much in his own way as the man upon whose shoulders rests greater responsibility.

Richard Moulden tells us that he has always treated his fellow man as he himself wished to be treated by others.

Mr. Moulden was born on a farm in Maysville, Ky., on July 22, 1851. Here he worked during the early days of his life, afterwards serving twelve years as a shoemaker's apprentice.

From this position he went to work as foreman for a sewer contractor, laying sewers in Park Street Yards, Cincinnati, in 1896. Three years later he took the posi-

tion of trackman, Maintenance of Way Department, Ohio, and then as watchman at Mill Street crossing. From here he was transferred to Eighth Street crossing, thence back to the tower crossing. This position he held until his retirement, on May 5, this year.

Albert Wilford

*"And a mother she was and is to me,
For I was born on the open sea."*

This and the rest of Barry Cornwall's beautiful poem, "The Sea," might aptly be quoted by Albert Wilford, pensioned foreman, Locust Point Elevators, whose birth and education on the sea is a part of his unique record.

Mr. Wilford was born on the good ship "Daniel Draper," off the coast of Newfoundland, on October 12, 1851. He received his education on board various ships plying between all ports of the world, and followed the water until the age of 22.

During this period he rose from cabin boy to the position of chief officer. This latter position he held on the barge "Templar," under the firm of Vritugich; of the barque "Genorgian," and on the ship "The Grey Eagle."

At the age of 22 he went to work for the Baltimore and Ohio as assistant rigger, under Mr. Davis, then of the Locust Point Terminals. He was soon promoted, and when the Baltimore and Ohio built the new extension in Philadelphia, Mr. Wilford was given charge of the bridgework; then he was given charge of the laying of all the deep water cable from Fort Mifflin, Jersey City, under the Susquehanna and Gunpowder Rivers. Before this work was completed, he was sent to Johnstown to take charge of some reconstruction work in connection with the famous Johnstown Flood. From thence he came back to the Philadelphia Division to complete the work which he had begun. Later he was transferred to the elevators, where he spent many years. He was promoted from time to time until he was named master mechanic, which position he held for 16 years. Mr. Wilford was married in Baltimore in 1879. He has two sons and a daughter. He was pensioned on June 10th, this year.

John T. Fowler

The late John T. Fowler was born on March 2, 1830. He entered the service of the Baltimore and Ohio as fireman on the Baltimore Division in 1851. In 1853 he was made engine wiper at Mt. Clare. In 1861, engine wiper and hostler; 1871, transferred to Riverside, same position; in 1892, watchman, Riverside; in 1896, engine wiper. Mr. Fowler was pensioned on October 1, 1902. His death occurred at his home, Raspe and Rose Avenues, Baltimore, on October 2 of this year.

James A. Schuck

A veteran of 44 years of service, James A. Schuck, carpenter, Pittsburgh Division, was placed on the Pensioners' List this year.

Born on October 10, 1848, Mr. Schuck came to work with the Baltimore and Ohio at Connellsville, Pa., on December 28, 1872. He left the service in August, 1873, entering it again at Cumberland in March, 1878. On January 8, 1886, he was transferred to Glenwood as shop carpenter, Motive Power Department.

Mr. Schuck has been a fire marshal for 17 years; a member of the Safety Committee for 5 years, and on the First Aid and Sanitation Committee for three years. He helped to organize the Veterans' Association at Pittsburgh in May, 1917. He is now vice-president of this chapter.

Mr. Schuck was retired from service on July 23, this year.

William Jacobs

A car foreman who took great pride in the appearance of his equipment, was William Jacobs, pensioned mill foreman, Cleveland Division. Mr. Jacobs entered the service of the C. L. & W. on May 4, 1880, as car repairman. In June, 1882, he was made car foreman, and in January, 1893, he was made mill foreman, which position he held until the time of his recent retirement. Mr. Jacobs says:

"In these 41 years of service with the Baltimore and Ohio, I have seen many changes among the officials and in the freight and passenger equipment. In my early days, all of the iron ore and coal was handled by wheelbarrow to and from the boats; this is quite a contrast with the modern ore loading and unloading machines now at Lorain port. Methods of repairing cars were also different. Most of our work was done by hand, without the aid of milling machines and pneumatic tools."

Mr. Jacobs tells us also of the evolution of the present car shop, the roundhouse, of the locomotives, and of the ore boats. He says of the locomotives that they were of small type, but that the firemen kept them polished and were proud to see them always clean and neat.

Resin M. Davis

With a service record of 41 years, Resin M. Davis, patternmaker, was retired on July 16, this year.

Mr. Davis entered the service of the Company on May 24, 1880, as carpenter, Motive Power Department, Mt. Clare. On April 18, 1881, he was transferred to the Maintenance of Way Department, Baltimore Division, in the same capacity. Later he was promoted to the position of carpenter foreman. On August 15, 1904, he was transferred to the Pattern Shop, Mt. Clare.

Thomas B. Athey

Born in Greenland Gap, W. Va., on May 17, 1856, Thomas B. Athey lived here with his parents until the war broke out in 1861, when his parents moved to Moorefield, W. Va. Here the boy worked on his father's farm until he was 15 years old, when the family moved to Patterson's Creek.

(Continued on page 64)

SOME OF THOSE WHO HELPED TO EAT THE FRIED CHICKEN

1. A group of "Aunt Mary's" nephews and nieces. 2. Engineer M. S. Deevers, 21 years of service, and his family. 3. L. M. Van Horn, retired yard conductor, 45 years of service; Engineer E. G. Barling, 36 years of service, Baltimore Division; E. T. Parlett, pensioned Blue Line engineer, 49 years of service. 4. Superintendent C. M. Shriver standing beside the engine which took the Veterans to Martinsburg; the picture on the engine is that of General Manager E. W. Scheer. 5. Another Railroad family, Machinist and Mrs. C. E. Knadler and their children Doris Lee and Bernardine. 6. The Cumberland Shop Band, Leader Frank de Luca in center of back row. 7. "Hurry and take the picture; we can't wait much longer"

The Tale of the Lunch Basket

or

The Celebration of the Veterans' Picnic at Martinsburg, on September 24

WHAT would you do if you were a plain, everyday sort of a market basket, and somebody filled you full of good things to eat and took you on a picnic to Martinsburg?

Well, that's just what happened to me.

I'm just an ordinary sort of a basket, no fandangles or anything in the way of decoration, but let me say to you, when it comes to holding good things to eat, I'm right there. I wouldn't tell you the name of my master and mistress—the former a good Veteran, the latter a staunch member of the Ladies' Auxiliary—but if you had looked up in the rack on the left hand side of the third coach that carried the Baltimore Veterans to Martinsburg, you would have seen me. Ah, dear brothers and sisters, but I was loaded to overflowing, and now . . . and now . . . I'm as empty as the old beer keg that Mr. Holmes sawed down to make into a washtub!

About six o'clock on the morning of September 24, I was packed full of goodies until my sides bulged out like a Christmas stocking. Then I was taken down to Camden Station where the Special was waiting. Here my master set me on the platform right up near the first coach, and from this vantage point I was able to see many things. On the front of the engine, for instance, there was a picture of Mr. Scheer. Just as I was busy admiring it, along comes Mr. Scheer himself, together with Superintendent C. M. Shriver and "Gineral" Bowers. "See!" said the "gineral," pointing to the picture, "we've got you all right!" And Mr. Scheer looked, but the only way I can tell you of the expression on his face would be to say as the old woman said of her husband when he sat down to an especially good dinner, "he wuz all took back."

Soon at the gate I saw a big, tall man in a gray suit. Yes, bless my soul, but there was Mr. Curren, general superintendent of Transportation. This was his first time to visit a Veterans' picnic.

"Where be ye goin', Mister Curren?" an old lady asked.

"Up to Martinsburg, to get some of Aunt Mary's pies," he replied (I heard somebody say, 'though you needn't mention it, that Mr. Curren had gone without breakfast that morning in order to conserve his appetite).

Soon Vice-President Galloway and General Superintendent White joined the group of officers, and just at this minute, somebody picked me up, carried me into the coach and swung me into the rack.

Goodness me, what a jolly crowd there was! Laughing, talking, joking, singing, and . . . yes, some were even snoring. Down in the last seat on the right sat Engineer Ephraim Provance, "The Man Who Saved Annapolis," telling Grand President Sturmer and Conductor Pledge all about the old times.

When the train stopped near Boyds Station to wait for another train to go by, the fragrant odor of honeysuckle came floating through the windows. In another moment all of the younger "boys" were out there on the bank, picking honeysuckle for their and other Veterans' wives. When the train started off again, I surely thought that I'd have to burst, for apples, chicken sandwiches, cakes, candies, pickles, bananas and deviled eggs nearly pushed my sides out. And goodness only knows what might have happened if I had come tumbling down on the top of Mr. Sturmer's head. Just imagine him covered with lemon pie!

In a surprisingly short time, it seemed, we reached Martinsburg. I was set on the platform again. Then I saw the folks alight from the train. Superintendent Van Horn was there to meet them, and a host of railroaders from Martinsburg and Cumberland, including Superintendent Tanner, Martinsburg Shops, who was a hungry man. Here we were serenaded by Comrey's Concert Band, then taken to the picnic grounds, Rosemont Park, in automobiles and Fords, busses and trucks, and you may rest assured

I was glad to get there and to be relieved of my burden.

When the folks sat down to eat, they hung me in the branches of a tree that stood directly in front of the pavilion. Here I could see and hear everything. The Fifth Ward Fire Company's Drum Corps, which was made up of boys of Martinsburg, came along in their handsome red and black uniforms with little Fez caps, and looking for all the world like a crowd of young Shriners. They didn't get many opportunities to show their skill in handling their instruments, but they made a splendid appearance. The Cumberland Shop Band, led by Frank De Luca, did the honors for the day and furnished music for a dance later in the evening. The Ladies' Auxiliary of Martinsburg served the officers with a dinner such as they only can prepare. Among these hosts were: Mrs. J. E. Oliver, wife of scale foreman; Mrs. Edward Linthicum, wife of conductor; Mrs. J. H. Copenhaver, wife of riveter; Mrs. W. J. Keplinger, wife of engineer; Mrs. Daisy Duckwell, of Berkeley Springs; Mrs. G. T. Foreman, wife of engineer; Mrs. C. E. Knadler, wife of machinist; Mrs. H. W. Fawver, wife of engineer; Mrs. C. R. Burkhart, wife of car repairer; Mrs. C. H. Lowrey, widow of shopman, and a number of others who appear in the accompanying pictures. Shortly after dinner the Veterans and their families gathered around the entrance to the pavilion, Mr. Sturmer asked the officers to the platform, and the afternoon's program began.

Dr. Wagner, of the Lutheran Church, Martinsburg, opened the meeting with a prayer for patience, for understanding, particularly between employer and employee. Mr. Sturmer then presented Brother P. J. Harrigan, president of the Connellsville Veterans, with a 50-year service emblem. Mr. Harrigan made quite an appropriate reply to the presentation, saying that a mistake had been made, for his service record with the Baltimore and Ohio had begun at the age of three years, when his father and mother brought him from Ireland to America. On his way to his new home, little "P. J." fell between the cars. "The brakeman in picking him up remarked, 'Oh, yes, he'll come, too,' meaning that the boy would some day come to the Baltimore and Ohio. "The growth of the Baltimore and Ohio," said Mr. Harrigan, "is only a testimonial of what the Veterans have always found in the official family—that its members are good guardians. I hope that the day will come when the Baltimore and Ohio will span the continent from coast to coast. I thank you all."

"Through the efforts of the officials and employes," supplemented Mr. Sturmer, "the Baltimore and Ohio will soon be the greatest trunk line in the United States." Mr. Sturmer then introduced Vice-President Charles W. Galloway.

Mr. Galloway said that he subscribed to two things that had already been mentioned; one, that the people had not come there for

AT THE MARTINSBURG PICNIC

1. A group of Officers and Veterans. Here we find Superintendent Van Horn, District Master Mechanic A. K. Galloway, Assistant to the President G. H. Campbell, General Manager Scheer, General Superintendent of Transportation W. G. Curren, Vice President Galloway, Superintendent White; G. W. Sturmer, grand president of Veterans, John Doyle, president Newark chapter of Veterans, G. A. Bowers, president Baltimore chapter of Veterans. 2. Walter, son of Fireman A. R. Sanders. 3. The Banner of Welcome. 4. William L. Childs, oldest boilermaker in years of service at Mt. Clare; he entered service in 1879. 5. And the kiddies were there too. 6. The Fifth Ward Fire Company's Drum Corps. 7. A group of Veteran Officers and their friends

the purpose of listening to a long talk; the other, that the Baltimore and Ohio is going to be a great railroad. He presented to the Veterans a number of facts with reference to the various disturbances among railroad men; outlined to them our plan of building new equipment as the contribution of the Baltimore and Ohio toward keeping things going, and cautioned everybody to keep his feet on the ground and his head out of the air. Mr. Galloway complimented the Baltimore and Ohio employees when he said: "Our people have *snap, punch, and get-up-and-go*." He also spoke of the courtesy of the employees, saying that it was as good, if not better on the Baltimore and Ohio, than on any other railroad that he knew. He told them that the present disturbances are the result of the readjustment period, and that what has happened on the Baltimore and Ohio is only an indication of what has happened in all other businesses, and gave a number of concrete facts to explain the conditions on the Railroad. He said that the Railroad owes a lot of money, but that its debts are honest ones, and outlined what it will be possible to accomplish when the Government settlement is made. As an instance of how far the Railroad has already gone toward keeping some of its men, Mr. Galloway said that we had obtained permission from the Interstate Commerce Commission to repair and white-lead a number of engines and not to charge them out until these were actually put to work.

Mr. Galloway furthermore cautioned the men not to listen to those who would keep them forever stirred up.

"The railroad man," he said, "needs advice, good advice. We want people who do constructive, not destructive, work. Don't be excited or influenced by words when you don't know what they mean."

In conclusion he spoke of the growth of the Veterans' Association and of the Ladies-Auxiliary, asking for their continued cooperation and expressing the wish for the happiness of the Baltimore and Ohio family.

Next on the program came General Manager E. W. Scheer. Mr. Scheer spoke of the expenses of the Railroad; of the "Think and Act" drive, the object of which was to reduce expenses, particularly through preventing damage to freight.

"The figures for August," said Mr. Scheer, "do not show any improvement. The loss and damage is greater than it has been for many months, and if we keep on as we are going now, the loss and damage will be greater than in any year of the history of the Baltimore and Ohio * * * * * A reduction of expenses means work for more days in a week; it means that you can help. I want each employee to promise himself that he is going to do a little better." He then told of an accident report which showed that a conductor had received injuries from being burned by cleaning the cushions of his caboose with gasoline. A later report showed that the whole caboose had been burned, the combustion being caused by

another train passing at the time he was using the gasoline.

Mr. Scheer then made an appeal to each employee to do his best in the reduction of loss and damage.

"I am glad to be with you," said Mr. Scheer in conclusion, "I hope to come back again next year, and I sincerely hope *that the chicken will hold out*." (Meanwhile, I thought that if I am still able to carry the lunch next year, I hope that they'll go easy on the chicken, for that was what nearly caused me to burst on the way up.)

Michael Smith, the topical song man, kept the Veterans entertained for a long time, for nobody knew who would be the next victim of his verses. In his song about Mr. Galloway, Mr. Smith said:

"Take Mr. Galloway's words and root 'em in your crown,
For that's the only way you're going to
'keep your feet on the ground.'"

Mr. Sturmer then introduced Mr. R. B. White, general superintendent, Maryland District. Mr. White expressed his appreciation of his invitation to be with the Veterans on this occasion, and of the good dinner. Then he went on to say that some enviable records have been made on the Baltimore and Ohio by maintaining its good service, its On Time passenger and Q. D. trains, but that during the month of September, thus far, we were slipping; that more business secured means more trains, and more trains mean more work.

"Let's get busy," suggested Mr. White, "you can do it; you did it before, and you can do it again."

Next on the program were selections by the Cumberland Shop Band, then a series of dances. As soon as the old-fashioned tunes were struck up, rheumatism and lumbago were forgotten, and one Veteran after another joined in the old quadrille.

About the middle of the afternoon, Brother G. A. Bowers, president of the Baltimore Veterans, gave one of his characteristic speeches, full of good advice, with a bit of spicy wit to wash it down. Following him were Brother Charles Pennell, also a former Martinsburg man, and Brother Allison, president of the Cumberland chapter of Veterans, who recited one of his famous poems, which are always well received. This was the first occasion on which some of the officers had the opportunity of hearing Brother Allison, and they appeared to enjoy the entertainment. Mrs. Charles Shipley, president of the Ladies' Auxiliary, added to the pleasure of the afternoon with one of her cheery little talks, which are always calculated to cure the most obstinate cases of grouch. H. W. Fauver, president of the Martinsburg chapter of Veterans, gave an inspirational talk. H. L. Whartman, Mt. Clare, gave several solos, and Michael C. Smith came on for a second of his series of topical songs.

The visitors from Baltimore and Cumberland left the grounds at about six o'clock, *and they forgot all about me*. The folks who

were left began to eat supper, others came from the country around to attend the dance, given by the Cumberland Shop Band. I had just begun to think that I'd be left hanging up on the tree for the birds to build their next year's nests in, when somebody shouted, "Look, Daddy, there's an old market basket! Let's take it home!" It was little Billy Stephens. So then, he and his pa, who is assistant foreman in Martinsburg Shops, his ma, and his sister Matilda, all fished me down from the tree and the next day they sent me home on No. 6, in care of Conductor N. E. Reese.

Conductor Reese looked at me, then said: "Pon my soul, but you do look as though there were some good things to eat at that picnic yesterday."

"You bet!" said I.

John Ketzner, Cumberland Veteran, Presented with Fifty-year Service Button

ON October 4, John Ketzner, a Baltimore and Ohio Veteran of 53 years of service, was honored by being presented with a 50-year service button.

Mr. Ketzner came to work with the Company at Harpers Ferry, on October 20, 1868. He is still in active service as carpenter in the Cumberland Shops. He is a well-known and popular employee and one of the oldest, if not the oldest of the Veterans on that division. As one of his many friends remarks, "I doubt if he has an enemy in the world."

The presentation took place at the monthly meeting of the Veterans at Odd Fellows Hall. The speech was made by Harry Allison, president of the Cumberland chapter of Veterans, and was aptly responded to by Mr. Ketzner. The "Boys" are gratified to have Mr. Ketzner honored by this token of esteem and wish him many more years of active service.

Mr. Ketzner has two sons who are Baltimore and Ohio men.

William "Starch" Airhart, Cumberland Veteran

POPULAR among the Veterans of Martinsburg is our old friend, William (alias "Starch") Airhart, pensioned conductor, aged 79 years. He it is who has seniority over all of his companions who collect daily at Joseph Pfarr's cobblingshop. He, however, says that he is the youngest looking man in the bunch, and that these young railroad men who sit around talking about interlocking as being among the latest inventions are sadly mistaken, for when he was a young fellow and lived around Williamsport, he drove on the canal and used interlocking even then.

Women's Department

Edited by MARGARET TALBOTT STEVENS

Tribute to the Engineer

By Mrs. S. A. Irwin,

Wife of Terminal General Foreman, Pittsburgh, Pa.

*The good engineer is the man whom we hail,
With his hand on the throttle, his eye on the rail,
He ever is ready his duty to do,
Whether called for the yard or a train going through.*

*We see him at first, a youth in good health,
Beginning his calling and seeking his wealth,
With eyes shining brightly, with overalls blue,
With hands in great gauntlets, with dinner pail, too.*

*He climbs on his engine, takes shovel in hand,
And learns that the game requires plenty of sand,
The hot fire is even, the smoke he keeps down,
He rings the bell always when nearing a town.*

*The next time we see him, he's on the right side,
Hitting the "high spots," his throttle thrown wide,
Obedient to orders, and to all signals, too,
He's a jolly good fellow with all of his crew.*

*Soon he becomes a crack road engineer,
With regular runs throughout all of the year.
The next thing for him, as you all will agree,
Is to sign up a card for the B. of L. E.*

*And then, to make sure of a long, happy life,
He builds him a cottage, then gets him a wife,
One who can cook, who can keep house and mend
(And help him on pay day his money to spend).*

*He prepares twice a month 'gainst a long, rainy day
By putting a part of his wages away,
For safe in his home, it is my firm belief,
You will find a pass book in the Railroad Relief.*

*When this engineer grows to be an old man,
Go get him to make you a speech, if you can,
Let him tell you the tale of how he started in,
And he'll tell you that loyalty always helps win.*

*The good engineer is the man whom we hail,
His hand on the throttle, his eye on the rail,
With the headlight a-shining and signals all clear—
This is my tribute to the good engineer.*

The Legend of La Repentie

By Mlle. P. Lafontaine,

La Rochelle, France

NOT far from the town of La Pallice, at about half a mile from the large harbor, we find a very small port, which is known as "La Repentie." Here, some 20 or 30 years before the large harbor was dug, small craft came and dropped anchor.

So small that it seems but a toy beside the larger harbor, La Repentie has nothing about it so interesting as the legend connected with its history.

Centuries ago a few fishermen and their wives lived along the rocky coast, which is

built up of stones, terrace upon terrace. At that time there were no lighthouses nor buoys here to warn the sailors of the dangers, and quite often, on stormy nights, fishing boats and other vessels coming down from the north of France, were wrecked on the shore. In every such misfortune there was a profit for the fishermen who lived along the coast. On the day after each wreck the fishwives might have been seen on the beach in search of spoils.

Realizing the value of such spoils, there came a woman to the seaside who daily lived in the hope of getting rich in this manner. To gain her ends, she would walk along the seashore on the darkest of nights, waving a lantern or lighting torches along the shore in order that the sailors, on seeing the lights, might guide their ships toward them. Then she would go back to her home. In the morning she would be the first one on the beach to search for the booty. In time she became quite wealthy.

One day came when she was punished for her crime. After a stormy night on which she had set her lights, hoping to wreck some vessel, she went forth in the morning to see what the sea had brought. Ah, but this time there were more than planks, and boxes, and casks; there was a corpse. But whose? None but that of her son, who had left home years before and whom the woman had thought long lost or dead. Now, indeed, he was dead, and she had worked the wrecking of his ship with her own hands.

Great heavens! And had she wrought this calamity upon herself! At once she realized her sin. She wrung her hands and tore her hair, but nothing could make amends, for the deed was done. Her very heart was torn with pain, and from thenceforth life became a torment.

At last her remorse threw her to her knees. Finally, in order to repent of her sin, she gave all of the money which she possessed for the digging of a harbor at the very place which had been the theater of her evil doings. As for herself, she ended her life among the nuns, behind the grating of a cloister. Since this time, the harbor and the land surrounding it were called "La Repentie"—the repenting woman.

Mrs. W. L. Alderton, wife of pensioned carpenter, Keyser, W. Va.

Western Maryland Man Pays Tribute to Women and Their Work

ON the morning of the picnic of the Baltimore chapter of Veterans, John J. Doyle, agent, Western Maryland, Walbrook, stood on the platform looking after the passengers. Two of our women were talking to him about the fine cooperation of the Western Maryland in handling our trains on that day. The conversation turned to office work, then to women and their place on the Railroad, and women's work in general.

"I certainly admire the ability of some of our women," said Mr. Doyle. "Women are now using their brains in occupations which were heretofore unheard of, and I'm glad to see it.

"For centuries, it seems, women have been restricted to certain kinds of work; they were only supposed to be able to do certain things; until recently they have had no chance to really develop their minds and to exercise any originality which they might possess.

"Times are different now, and I don't know but that it's a mighty good thing. Women are making good, and they deserve credit for it. Think of the field of writing that has opened itself up to women. Our leading newspapers could not get along without them. Experience, however, is what will make a good writer. Only yesterday I was reading an article written by Mrs. Harrison, the Baltimore reporter who was imprisoned for over a year by the Bolsheviks in a Russian prison and only recently released. I was indeed surprised at her talent. It was wonderful; her writings portray the inner thoughts of one who has experienced a great deal, and this, after all, is what teaches. All of the training in the world will not make a person a great writer unless he, or she, has something to write about. Mrs. Harrison will, without a doubt, bring something new into the world of thought. And she is but one; there are many others. Good luck to them."

When You A-Nutting Go

WHETHER you go on a hunt for chestnuts, walnuts, hickorynuts, bechnuts, chinquapins, hazelnuts, or any kind of outdoor party in the Autumn, you have chosen an entertainment that all of your guests will surely enjoy. Here are the invitations, written on leaves cut from red or brown cardboard:

The chestnut trees are loaded down
With golden treasures, rich and brown.
On Saturday, at Johnson's gate,
You'll find us waiting. Don't be late.
We start at 2 in the afternoon,
We come back home by the light of the moon.
An unbreakable cup, and old salt sack,
And you're ready to bring the treasure back.

(The word "chestnut" may be changed to the name of any other nut, and the name of any suitable place substituted for Johnson's gate.)

Straw rides are lots of fun, and if you must go for a long distance, have a straw ride, by all means; however, if the trip is no more than two miles, a good hike will put everybody in good spirits.

The "eats" are divided into as many sections as there are guests, and tied into as many packages. Fasten each package to the end of a stout stick, so that it can be carried across the shoulder. Each guest must bear a burden. Be sure to take plenty of apples and uncooked white or sweet potatoes, salt, sugar, slices of bacon, a package of instantaneous coffee, a can of condensed milk, slices of bread spread with butter, a kettle or pail (which can be utilized as a container for some of the other supplies), and lots and lots of homemade cookies. By the time you have reached the end of the journey you will be ready to eat the cookies.

While the last of the nuts are being gathered, have some of the boys build a campfire. Set the potatoes to roast in the ashes. When these are nearly ready, set on a kettle of water and call your guests to the feast. Give to each one his share of bacon, with a stick on which to cook it before the fire.

Distribute the slices of bread and butter to be made into sandwiches with the bacon. The bread may be toasted by those who desire it. Into each cup put a teaspoonful of instantaneous coffee. Fill the cup with boiling water; add sugar and milk. Your potatoes are now ready. Bring out your apples, which may be roasted, if preferred. Now you have a feast that will tempt the palate of any chestnut hunter under the sun. Boiled or roasted chestnuts complete the menu. Songs around the campfire and a tramp home will insure a happy ending to a happy afternoon.

Recipes

Quality Ketchup

Cut and boil tomatoes. Strain through a sieve. To every three pints of juice add the following:

- 1 onion, chopped fine.
- 1 teaspoon cloves.
- 1 teaspoon cinnamon (put cloves and cinnamon into a little bag).
- 1 teaspoon salt.
- 1 cup sugar.
- 1 cup vinegar.

Season to taste with red pepper and boil until of proper consistency. Seal tightly in bottles and keep in a cool place.

Salad Dressing

One-half tablespoon mustard, $\frac{1}{2}$ tablespoon salt (scant), 2 tablespoons sugar, 1 teaspoon cornstarch, 1 egg, $\frac{1}{4}$ cup milk or cream, $\frac{1}{4}$ cup vinegar, 1 teaspoon butter.

Dear Women Readers:

As I write this letter, there are three contributions lying on my desk. One is a Christmas poem, on which there is nothing to indicate who the writer may be; one is a war poem, signed "N. G."; and the third a little poem about the sunset, signed "M. B. R."

All three of these poems are worth while publishing in our Department, and certainly all three are worthy of the signature of the writer, but since it is the policy of the Magazine not to publish anonymous communications, we cannot use them.

We do not publish the names of contributors when we are asked to withhold them; you may use a "nom de plume" instead, if you so desire, but just as an evidence of good faith, won't you please send in your name with your contribution? And if those who sent us the above mentioned poems will let me have their names, we shall be glad to publish the poems. Thank you.

There are many subjects that may suggest themselves to our women who would like to help the Women's Department, but one of the quickest ways to find the subject on which you will be able to write about better than any other is to ask yourself this question: "What can I do better than anything else, how do I do it, and why do I like to do it?" Then send me your answer.

Please do not think that your article for the Magazine must be elaborately written; all mistakes of English, rhetoric, spelling, etc., are taken care of at the Magazine office before the article is sent to the printer. If you have something worth telling, send it in, and, as old Mrs. Ruggles said, "I'm thankin' ye kindly."

Yours sincerely,

Margaret Talbot Stevens

Associate Editor

Lace, Braid and Embroidery Generously Used on Dressy Costumes—Autumn Fashions

By Maude Hall

EASILY the most distinguishing feature of Autumn fashions is their variety.

Preference for the slender silhouette has inspired most of the daylight frocks for Fall. Models for evening use are allowed wider latitude but the insouciant grace and daring of the costumes of old Spain seem to find fascinating counterparts in formal Autumn attire.

Lace, braid and embroidery are generously used in all the schemes of embellishments. Even sports apparel has not escaped the touch of the embroiderer, but the ornamentation on sports blouses has reached new heights of restrained elegance. Colors, however, are bright. But they are wearable and generally becoming.

In an afternoon model in kingfisher blue, the blouse is of all-over lace, dyed in the same shade, while the sleeveless overdress contents itself with a simple embroidery design at the base of the deep square neck and two wide tucks on the skirt. Very large armholes disclose the underblouse in beguiling fashion and the fulness at the waist is held in with a sash of satin serge.

Another model in the same material has an underblouse of satin handsomely braided with narrow silk soutache. The neck is V-shaped and the armholes of medium size, so that any of the new full sleeves could be fitted into them, if desired. The hem and a deep tuck which trim the skirt are hemstitched. The tuck may be omitted, if the design be reproduced in less expensive materials for more practical wear, and inserted pockets substituted.

The various forms of apron drapery continue to be featured prominently and they are all attractive. Nothing is prettier on a simple frock of crepe de chine or of satin than an apron tunic, pointed at the lower edge and laid in accordion plaits. A model in soft gray has pockets added to the tunic, despite its plaits and the pockets like the round collar and flaring sleeves, are outlined

with a simple embroidery stitch. The belt is of self-material, arranged in sash fashion with a large bow at the back.

Suitable for serge, cashmere, broadcloth or any of the fabrics to be worn during the Fall and Winter, is a straight-line frock trimmed with soutache braid. A deep border is formed of the braid at the bottom of the skirt, while braid buttons with tiny loops trim the pockets and front of the waist. The dress is of the slip-over type and is designed to be worn with separate blouses, so that one can change the appearance of the design as frequently as a different blouse is worn. The back extends over the shoulders, forming a yoke effect in front.

Sports apparel cling loyally to the three-piece idea, each costume consisting of a

skirt, blouse, or sweater, and shirtwaist. In some of the latest models knickers have been added. The sleeveless overblouse is the favored model and invariably this is made upon the simplest possible lines.

The plaids and stripes in vogue for the moment are excellent for sports skirts and blouses and there are well-founded rumors to the effect that they will be in good style until next Spring. There has been very little change in the style of sports skirts, the plaited models holding over for another season.

Cashmere in an attractive shade of French brown is used for a smart and simple outfit. The lower edge of the skirt blouse and large armholes and round neck are outlined with several rows of darning stitch embroidery in bright shades of green and yellow. The underblouse is of natural color crepe de chine, finished with a round collar and box plait at the front. Turn-back cuffs trim the long sleeves. A narrow string belt holds in the fulness at the waist.

A sports frock in striped serge is also made with a hip-length overblouse which is bound with plain silk braid. The fronts are laid in plaits, the back extending over the shoulders and joined to them to form a yoke. The skirt has a medium-sized hem over which a single row of braid is stitched.

For Party and Playtime

After one attains the dignity of four years and over, crepe de chine is quite the most fashionable silk to select for a party frock. And quite the correct way to make it is after the first model pictured. The closing is at the back, the round neck having a narrow piping of self-material. Embroidery trims the front of the long-waisted blouse, while straight gathered flounces do the honors on the skirt. Medium sizes require 3 yards 36-inch material.

One can indulge in simple games and be well dressed, also. The second model is in check gingham, the waist having an open front with inset vestee of self-material. The collar extends down the front forming tabs, while waist and skirt meet under a bias belt of self-material. Medium size requires 2 yards 36-inch gingham.

First model: *Pictorial Review* GIRLS' DRESS No. 9454. Sizes, 4 to 10 years. Price, 30 cents. Embroidery No. 12377. Transfer, blue or yellow, 35 cents.

Second Model: DRESS No. 9450. Sizes, 2 to 6 years. Price, 30 cents.

LADIES' HOUSE-DRESS No. 9407. Four sizes, 36, 40, 44 and 48 bust. Width at lower edge about 2 yards. Size 36 requires $4\frac{1}{4}$ yards 32-inch material, $\frac{3}{4}$ -yard 32-inch contrasting material. The back of dress and sleeves are cut in one. Front of waist and front gore are gathered and joined to a straight band. Price 20 cents.

DRESS No. 9671. Sizes, 34 to 46 inches bust and 18 to 20 years.

DRESS No. 9661. Sizes, 34 to 44 inches bust.

DRESS No. 9640. Sizes, 34 to 48 inches bust.

DRESS No. 9642. Sizes, 34 to 44 inches bust.

DRESS No. 9649. Sizes, 34 to 46 inches bust.

DRESS No. 9676. Sizes, 34 to 44 inches bust and 16 to 20 years.

Youthfully Stylish is this Slip-on-Dress with Round Collar and Inserted Pockets

THE straight-line frock is always seasonable and becoming. This model, which lends itself to development in every material that lays claim to fashionable distinction, is of the slip-over type. The front is slashed at the center and finished for closing. A round collar trims the neck, while inserted pockets are featured on the skirt. Medium size requires $4\frac{1}{2}$ yards 36-inch material.

The cause of a quick finish is ably served by the back and front of the frock, as neither has seams. The tissue for these sections is placed on the material with triple "TTT" perforations resting along the lengthwise fold. The remaining sections of the tissue are so arranged that the large "O" perforations rest on a lengthwise thread. The piecing for the sash must be cut from an open width of the goods, as shown in the cutting guide.

There is an underbody, which is made first for a perfect foundation. The under-arm and shoulder seams are first closed, after which the fronts are hemmed. Plait the lower edges and tack.

For the dress itself, first slash the front section in from under-arm edge between the small "o" perforations. Bind the upper slashed edge. Gather lower slashed extension between "T" perforations and draw gathers in to fit the upper slashed edge. Stitch stay underneath. Slash front of dress through the fold at center-front, from upper edge to the lower single small "o" perforation. Turn away $\frac{3}{8}$ -inch at upper edges of slash and graduate into nothing at lower edge. Gather front of shoulder and close under-arm and shoulder seams as notched. Sew collar to neck edge with center-backs and large "O" perforations even. The shield may be of self-material, or of embroidery.

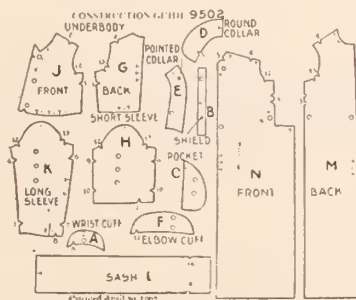

Arrange outside on underbody with center-fronts, center-backs and corresponding edges even. Tack neck edges at back together and baste around the armhole edges.

Next, form plait in sleeve and stitch. Leave slashed edges free and finish for closing. Gather, then close seam as notched. Sew wrist cuff to sleeve as notched and bring small "o" perforations in cuff to seam of sleeve. Sew sleeve in armhole with notches and small "o" perforations even, and bring seam of sleeve to under-arm seam. Ease in any fulness between the notches. Hold sleeve toward you when basting it in the armhole.

For the pockets, slash fronts of dress between the two small "o" perforations and bind slashed edges for pocket opening. Join two pocket sections with edges even, leaving an opening between the two small "o" perforations to slip the hand through. Sew pocket to pocket opening in front of dress.

Fold the sash through the center and arrange to suit the individual taste.

DRESS No. 9502. Sizes, 16 to 20 years and 34 to 42 inches bust. Price, 35 cents.

Poor Mother Pumpkin!

*I walked down through the meadow on a bright Autumn day,
Where heaps of golden pumpkins in the frosted grasses lay,
And all of them were smiling, save the largest one of all,
Who sat there sadly weeping, just beside a cornstalk tall.*

*I listened to her sobbing, then I heard the cornstalk say:
"Oh, dear, good Mother Pumpkin, tell me why you weep today,
For your children are so happy, oh, do come and lift your head,"
But she went on with her weeping, and this is what she said:*

*"I have nineteen sons and daughters, you can see them with your eyes,
And I've raised them for the purpose of making pumpkin pies,
But the farm boy said this morning—'tho' he called me 'Meadow Queen,'
He wants twenty jack-o'-lanterns—and tonight is Hallowe'en!"*

The Wampum Belt

LONG ago, before the first white settlers came to the shores of America, there lived among a tribe of the Delawares a little Indian boy.

This little fellow had no name, for, as some of you know, Indian babies are not given names while they are very young. They must grow old enough to do some brave deed, or to suffer some hardship, and they were named accordingly. This is why we read of such peculiar names as Sitting Bull, Shows-a-Fish, Rain-in-the-Face, etc.

Although this Indian boy of whom I am telling you had no name, yet there were other boys of his own age who had earned names for themselves by killing wild beasts, for they had been allowed to go hunting with their fathers. But this boy had not seen his father for many, many moons. Six seasons ago his mother (called Wish-to-Grow, because she was not very tall) and he had been lost from their people, and they had wandered about the forest for several weeks before they had been found by the Delawares, who took them to live in their own wigwams. It was a long time before the squaw had learned to speak the language of the Delawares, and, strange to say, she had never told them the name of the boy's father. She had even cautioned her little boy not to say anything about him. She believed that the father had been lost, and it would not do to tell a strange tribe of the loss of a brave of another tribe. So they had kept silent.

Wish-to-Grow had never let the boy go hunting with the others, for she was afraid that something might happen to him, and he was all she had. The other boys made all kinds of fun of him. They tortured him,

they beat him with their bows, they burned him with coals of fire, but he never showed a sign of fear.

"He will make a good brave," they would say to Wish-to-Grow, "why do you not let him go with us?" But Wish-to-Grow only shook her head.

"He will grow up without a name," the young braves declared angrily.

"But he can dig potatoes and hoe corn," she replied.

"Women's work!" they scoffed. "Squaw Boy! That's what we shall call him soon."

It was only old Bear's Paw, the medicine man, who ever spoke otherwise.

"The son of 'Wish-to-Grow is also the

son of a chieftain," he told them, "I know the marks of blood when I see them."

"You are old and foolish; you are a medicine man, Bear's Paw, and dream of foolish things," the young braves said.

And the boy grew very sad, but he said nothing, for he was an Indian and dared not betray his feelings, even to his mother. And Wish-to-Grow never knew how her boy longed for a great adventure.

It was in the early autumn of that year, when the boy was nearly ten years old, that a terrible thing happened. Chief Wake-All-Night had lost his wampum belt, the beautiful belt with a turtle, the symbol of the Delawares, and a peace pipe, made of black, white and purple beads, that had been given him by the chief of another tribe with whom he had made a treaty. This was the handsomest belt along the whole Atlantic coast. It must be found at once.

A searching party was sent to examine all the wigwams. They hunted all day and all night, for this was a large tribe. Finally they came to the wigwam of Wish-to-Grow. The boy was fast asleep on a bear skin, for it was very early in the morning. The searchers looked all through the pots of clay, and the provisions that Wish-to-Grow had placed in the corner of her wigwam. Then they came to the bear skin where the boy lay.

"Do not waken him," she begged them "he could not have it; he is but a baby, let him sleep."

"We must look everywhere," Big Walt shouted, pushing the squaw away and poking into the bearskin on which the boy lay. The gruff voice of the big Indian awakened the boy, who sat upright, looked around wildly, then suddenly he grasped the little coonskin bag that had laid under his head. The tall Indian grabbed it from his hands and the boy, forgetting his teachings, gave a loud whoop of terror that brought the other Indians in haste to the wigwam. Then he sprang upon the brave and tried to

Wigwam sewing card (see page 38)

Drawn by Eleanor Hills, Fort Richmond, S. I

tear the coonskin bag from his hands. Two of the others seized the boy and held him, while Big Wolf opened the bag.

There lay a wampum belt, with its black turtle and its purple peace pipe.

They looked at the boy, expecting him to hang his head in shame. Instead he looked at them defiantly.

"It is mine!" he shouted.

"Yours! Pooh! Squaw Boy, who steals! Big Chief of Algonquins give Big Chief of Delawares wampum belt. Squaw Boy steal. Indian steal from own tribe, Indian die!"

That night Chief Wake-All-Night and his counselors held a big pow-wow, to see what should be the punishment.

"Burn him at the stake," urged several braves.

"No," said Chief Wake-All-Night, "I cannot do this. He is not in truth, of our own tribe. He shall suffer for the rest of his life. Call together all of the people. Build the fires. Dance the snake dance, stretch the boy out on the ground and hold him there while Big Wolf shall cut his hair. Clip it close to his head, and do this again four times a moon, so that his hair shall never grow long!"

In vain did Wish-to-Grow plead for her son that he should be spared this shameful punishment, for an Indian would rather burn at the stake than lose his hair.

"Did you steal the wampum belt, my son?" she asked her boy, when his hands had been tied behind him.

"No steal," declared the little fellow. "My belt!"

"Silence!" shouted his guard.

Soon great logs were brought and the fires were lighted. The dancers took their

places, tom-toms sounded and the forest re-echoed with the shouts of the savages as they went through the wild gestures of this strange dance. Poor Wish-to-Grow stood looking on. In another moment they had seized the boy, thrown him on the grass, and Big Wolf was cutting off the long, black locks, a more beautiful suit of hair than any boy of the Delawares possessed.

Then the boy's hands were untied and he stood before them. He did not even go to his own wigwam, but looked at them defiantly. They did not understand it.

Just then old Bear's Paw came rushing into the circle.

"Big Chief of Algonquins come!" he announced.

All noise ceased, and Chief Wake-All-Night went to meet the chief of a branch of one of the Algonquin tribes, the same with whom they had made a treaty seven summers before.

"Welcome Chief Many Otters," said Wake-All-Night, while a brave ran for the peace pipe.

Together the chiefs smoked. Then Many Otters spoke.

"Have you ever seen a squaw called Wish-to-Grow?"

They all began to wonder. What could this great chief, of whom they were all afraid, want to know about the squaw whose boy's hair had just been cut? Wake-All-Night pointed his finger at Wish-to-Grow. Many Otters commanded her to come to him.

"My squaw," he announced. Then, turning to her he asked, "where is the boy?"

Then the Indians became frightened. What would happen when the great chief found out what they had done? Surely he would make war on the whole Delaware tribe. Some began to call upon the Great Spirit. Others sounded the tom-toms. The medicine man began his incantations. "Did I not say the boy was the son of a great chief?" he asked.

"Silence!" demanded Wake-All-Night. Then he began at the beginning and told Many Otters how they had found Wish-to-Grow and the boy wandering about in the forest, six seasons ago; how that the Delawares had taken them into their tribe, and how that Wish-to-Grow had never allowed the boy to go hunting with the braves; how they had missed the great wampum belt and had found it in the coonskin bag under the

Drawn by Ella L. Beckman, Baltimore, Md.

boy's head, and how at last they had to punish him by cutting off his hair.

The chief of the Algonquins was angry. He called the boy to him, lifted him up and set him upon his shoulder. The Delawares waited in fear for his words.

"Seven summers ago, Big Chief Many Otters make treaty with Big Chief Wake-All-Night. Many Otters had two wampum belts made. One he gave to Wake-All-Night; one he sew up in coonskin bag for present to his son. Squaw never see belt. He tell squaw save coonskin bag for boy when he go hunting with braves. Boy is right. Wampum belt in coonskin bag belongs to him. Bring me belt."

He took it and gave it to the boy.

"Do you know anything about other wampum belt?" he asked.

"Big Wolf have him," answered the boy, his eyes flashing.

All eyes were turned upon Big Wolf. The brave stalked to his wigwam, brought forth the chief's belt of wampum and threw it into the midst of the circle. Then, before the astonished Indians could realize what he meant to do, he ran from the camp as hard as he could. And as he was the fastest runner of the tribe, nobody attempted to catch him.

Then it was that Chief Wake-All-Night called Many Otters into his wigwam, where they talked until late in the night, while the others waited anxiously outside. At last the two came out. Wake-All-Night then gave orders for a grand feast. Nuts and fruits were brought out, dogs were roasted, and all made ready for the dance of the peace pipe, for Many Otters had made peace with Wake-All-Night for the second time. What feasting! What rejoicing that there was still to be peace between the two tribes.

After the festivities were over, the Indians sat around the fire while Chief Many Otters told the story of how he had become lost from his tribe, how when he had at last found his way to them, he learned that his wife and little boy were gone, and of his search for them.

Then, taking the little fellow and setting him upon his shoulder, he bade the medicine man to place the boy's wampum belt across the boy's shoulder, for as yet it was too large to be worn around his waist. Chief Wake-All-Night stepped forth.

"From this day on, Oh, Delawares, this boy shall be known by the name of Tells-the-Truth; he is very brave. He is the son of a mighty chief. I command you to do him honor."

Then the Indians brought him all kinds of presents; beads and bearskins, tomahawks and stone hatchets. The medicine man beat the tom-tom and said words which he believed would drive away the evil spirits.

"But what shall be done about his short hair?" asked Wish-to-Grow.

"He shall have my own head-dress of eagle feathers," replied Chief Wake-All-Night, "he shall wear it until his hair grow long, and thereafter, if he wishes. There is one thing more. We shall grant to Tells-the-Truth one wish, the greatest that he can think of. Let him think wisely before he decides."

But little Tells-the-Truth did not have to think.

"I wish to go hunting with the braves," he said.

"You shall go tomorrow," answered his father.

And on that night, Wish-to-Grow was happy because her chief had returned. Many Otters was happy because he had found his squaw and his brave little boy, but neither of them was as happy as little Tells-the-Truth, as he lay down upon his bearskin bed with the coonskin bag under his head, for inside the coonskin bag was his own wampum belt

Indians

By Ida Smith
Dorsey, Md.

Indians live in wigwams, made of the skins of deer and bears, and sometimes of birchbark. Their canoes are also made of birchbark. The men fish, hunt and fight most of the time; only a little of their time is given to cultivating the ground. The women, who are called squaws, do most of this. They plant corn, potatoes, pumpkins and beans. The women also build the wigwams, and when the Indians move their camps, the women have to do this work. The Indian children do not go to school, and never learn to read or write as we do. And yet, some of them are well educated, for they know all about the plants, the trees and the animals in the forests. An Indian boy can live in the woods where a white boy could not, for we do not know as much about the wild life as they.

My Visit to the Indians

By Eleanor Hills

Port Richmond, N. Y.

(Note: Eleanor is eleven years old and is in the sixth grade. She takes violin lessons, sings and dances. Her father is a Baltimore and Ohio conductor. She sends her love to her railroad cousins.)

I WILL tell you of a visit to an Indian camp at Saranac Lake. One hot day in July, I visited this Indian camp. There were real Indians, with their campfires and wigwams, and they danced Indian dances. There was one Indian lady who told fortunes. Next day, when we came home, we played at fortune telling, and the cost was one penny a fortune.

Wigwam Sewing Card

Cut out the picture on page 36 and paste it on a bit of cardboard. Place it under a heavy book until tomorrow. Then, with a hatpin, stick little holes wherever the dots are. With a large needle and some colored wool or twine, follow the outline of the big wigwam, going into one hole and out of the next, until you have gone around it. Then come back over the same lines, this time letting your stitches fill in the spaces between

your first set of stitches. This will make a solid line. Next, take the other wigwam, then the trec, the grass, and the sky line. The grass is done in straight stitches; you will not have to go over it for the second time. Brown, red, green, and yellow are good colors to use. Make the skyline and the sun's rays red, the tree trunk brown, the leaves yellow, the wigwams yellow, with brown openings; the grass green and brown, showing that Jack Frost is just coming around.

Dear Girls and Boys:

How do you like our Indian Page?

Now, if you want to have quite as nice a page for December, let me have your letters right away. Don't wait, for if you send them in after November 10, it will be too late. Everything for the Christmas number will be about Christmas: pictures, poems, stories, drawings and letters. When you write, let me know if you like the sewing card; if you do, we'll have some others. I hope that you will all have a jolly time on Hallowe'en.

With love,

Aunt Mary

Once upon a time, there lived a family of people named Wigwag. There was Papa Wigwag, Mamma Wigwag, Katy Wigwag, Tommy Wigwag and Baby Wigwag. And they all lived together in a Wigwag house that had a Wigwag chimney.

One day, Tommy and Katy took the Wigwag dog and went for a walk, 'way up the Wigwag Lane. Then they sat down to rest under the Wigwag tree.

The sky grew very dark, and Mamma Wigwag began to wonder where the children were, for they had not come home to supper.

"What shall we do?" she asked.

"Put Baby to bed and we'll go and look for them," said Papa.

So they put Baby to bed and left the Wigwag cat to watch the house, and they went to look for the Wigwag runaways.

Soon they found Tommy, Katy, and the Wigwag dog, all fast asleep under the Wigwag tree.

Then they all went home, where they found the Wigwag cat sitting on the Wigwag doorstep, washing her Wigwag face.

Safety Roll of Honor

Baltimore Division

On August 11, Carpenter Foreman J. J. Young noticed engine 4521 with train to Potomac Yard, on the Alexandria Branch, with brake rigging dragging under car about 11 cars from the caboose. Mr. Young jumped on the caboose and notified the conductor who had the train stopped and necessary repairs made.

On August 17, Signal Maintainer C. G. Hunter, while inspecting bond wires in Mt. Airy Tunnel, discovered two broken rails on the eastbound track. Mr. Hunter immediately got in touch with the operator at "WX" Tower and had him hold eastbound trains; then he called trackmen to make repairs.

On the night of July 10, Foreman J. M. Dale, East Lexington, discovered that Chesapeake & Ohio trestle just south of the Wye switch at East Lexington, Va., was on fire. He immediately extinguished it. Superintendent J. F. Briant of the Chesapeake and Ohio Railway Company at Clifton Forge, Virginia, has written a letter expressing his appreciation of Foreman Dale's action.

Company's Patrolman Maurice F. Wilhere, Philadelphia, flagged No. 525, which was approaching, when an auto truck stalled on the crossing at Cherry Street.

Connellsville Division

CONNELLSVILLE, PA., September 19, 1921.
MR. WALTER COTTOM,
Bridge Inspector.

Dear Sir—I have your letter of the 17th, advising me of your actions when you found some broken parts of a car and immediately notified the nearest operator. Train 97 was examined and a defective car set out.

Your actions in this matter are appreciated, as they undoubtedly saved a wreck.

Yours very truly,
(Signed) H. R. GIBSON,
Division Engineer.

Pittsburgh Division

On September 20, the Pittsburgh Division was visited by a very heavy rain storm, which caused interference to train service at several points.

The track at Herrons Road Crossing, just west of Allison Park, was badly washed out. This fact was discovered by R. H. Dierker, employed as cashier, Pittsburgh Freight Station, who lives at Allison Park. Mr. Dierker immediately flagged passenger and freight trains in that vicinity and, no doubt, saved the Baltimore and Ohio from considerable expense, as well as possible loss of life.

Charleston Division

Gay McCune, lamp man, Gassaway, W. Va., noted a broken bridge rod on switch, and, in addition, track out of gauge at another point in Gassaway yard. Had repairs made, averting a possible accident.

Brakeman D. Harman noted and reported car with weak draft timbers in his train. He had car placed next to caboose, and probably averted an accident. Brakeman Harman has also been commended for noting and reporting a missing crossing sign near McClellan.

On August 20, a severe storm put all wires out of commission near Bower. Agent E. F. Hutson secured assistance and promptly restored temporary communication.

The Superintendent has written an appropriate letter of appreciation to Foreman J. Williamson and his gang, C. & P. Telephone Co., for assistance rendered in restoring wire communication during the same storm.

Conductor B. E. Jeffries noted truck bolster broken near Centralia.

Agent J. P. Ryan has been active in claim prevention work.

Boilermaker K. L. Hicks, while walking through Gassaway yard, noted on a train made up ready to go out, a defective condition of drop bottom on a gondola. He had car set off and repairs made.

Brakeman Samples while on a siding, noted a cross tie fall from car, stopped train and had it removed from rail of main track.

Agent Rollyson, Frametown, noted and reported a passing car leaking coal.

The following engineers have been commended for making over 100 per cent. fuel, performance in August, 1921: D. Wilmoth, G. F. Purkey, G. C. Smith, W. T. Spencer, L. B. Shomo, J. B. Poling, S. L. Rodabaugh, A. B. Nicholas, L. R. Shomo, W. J. Johnson, E. R. Berry, R. E. Smith, Thomas Farry, E. W. Hall, W. E. Paisley, A. F. Tierney, M. T. Hall, J. C. Jordan, C. U. Skiles, W. P. Paxton, A. W. Pickens, A. Kibbe, A. J. Lunsford and W. P. Amos.

Wheeling Division

At 5.30 a. m., on June 30, while train 100, engine 2358, in charge of Conductor J. P. Hill, was pulling into Brooklyn Junction Yard from the Short Line, Yard Master P. S. Rushford noticed broken flange on Baltimore and Ohio car 259849. Train was stopped at once and car set out of train. It was found that twenty-four inches of the flange was missing.

New Castle Division

On September 18, Engineer R. E. Armstrong, in charge of engine 4093 west, on the steel special, at the westbound passing siding at Newton Falls, reported to the operator that No. 13 had a brake beam down. The train was stopped at "FS" Tower, and it was found that brake beam was down on the fourth car from the engine.

Mr. Armstrong has been commended by Superintendent Stevens.

On August 24 as extra east 4098 was pulling into New Castle Junction yard, Flagman D. W. Ayers observed door on side of

car P. F. E. 6799 swinging out towards No. 2 track. He immediately handed message to operator at "OA" Tower, and also reported the matter to the Trainmaster's Office. Train was stopped and door adjusted to its proper place, thus eliminating the possibility of an accident.

On August 18, as extra east was passing Ravenna, Section Foreman W. Brust observed brake beam dragging on car. He immediately notified train crew, who had train stopped and repairs made.

While extra east 4123 was going east from DeForest Junction on August 16, Section Foreman F. W. Pressler noticed truss rod broken in two on one of cars. The rod was doubled up and dragging under rear truck, thus creating a very serious condition. Mr. Pressler notified train crew, who had train stopped and the unsafe condition corrected.

While returning home from work on the night of August 5, Track Foreman U. G. Alberts, discovered three pieces of broken flange along the track. He immediately notified the Superintendent's Office so that trains en-route could be inspected. It was found that a car in train arriving at Ohio Junction had broken flange.

Newark Division

Section Foreman R. W. Monroe, Eagleport, Ohio, after a hard rain on the night of September 20, along the Muskingum Valley, started out at 4.00 a. m. to walk his section, anticipating washout trouble. Just west of Malta he discovered that the road bed had been badly washed for a distance of about 25 feet, 10 feet deep. He flagged train 61, thus averting a possible accident.

Cleveland Division

MR. E. G. FISHER,
Section Foreman,
Beach City, Ohio.

Dear Sir—Your report of September 7 has been received. It is noted that on this date while you were working just west of Beach City, you noticed hopper bottom rod dragging on rail on extra 4288, and that you immediately notified conductor, who stopped train and had it repaired.

I want to commend you for this service, as I believe that had this defect not been discovered by you, there probably would have been an accident.

Very truly yours,
(Signed) H. B. GREEN,
Superintendent.

Chicago Division

WILLARD, OHIO, Sept. 19, 1921.

EDITOR, Magazine:

We all know that there is considerable damage to cars which do switching over humps in our terminals and there is always more or less comment on this, but we hear very little of the splendid work often done to prevent damage to cars.

In this connection I wish to mention a case which occurred on the West Bound Hump at Willard on Sept. 14, when 16 loaded cars broke off and but for the good work done by Brakemen J. D. Rogers, E. F. Pope, J. H. Snyder, C. B. Frye and E. E. Skinner, there would, without a doubt have been considerable damage. These men have been commended for the prompt action which was taken in this case.

(Signed) J. B. HERSH,
Terminal Train Master

Ohio Division

Engineer Iuler with No. 4, discovered west switch at station track, Leesburg open. He succeeded in bringing train to a stop before accident occurred.

Engineer O. O. Walsh, on train 41, observed a lady hanging on hand hold on day coach and being dragged along platform. He immediately stopped train, and thereby prevented possible serious injury to the lady. For his watchfulness and prompt action he has been commended.

On August 3, Engineer Welsh discovered culvert in bad condition at Gepharts, caused by heavy rains. He left fireman Starkey to flag passenger train No. 52, which was following train of which he was in charge.

Indiana Division

On September 9, when extra 2920, east, was passing Moore's Hill, Agent W. J. Gorman noticed brake beam down on Baltimore and Ohio 195333. He communicated this information to the dispatcher, who stopped the train at Dillsboro and had brake beam removed.

On September 17, while on his way to work, Traek Foreman Graham Young, North Vernon, found some obstructions on the rail on the high side of the curve at Riley's Cut, about a mile east of North Vernon. The obstruction consisted of spikes, nuts, rail braces and pieces of angle bar. Mr. Young immediately removed these, then endeavored to locate the persons responsible. A little further east he came upon two men on the railroad. He called them, but they left the right of way and refused to return or to answer him.

Suspecting these to be the guilty parties, Mr. Young got in touch with the chief of police at North Vernon, and a patrolman of the Baltimore and Ohio, whom he assisted in locating four young men. These were arrested and placed in North Vernon jail; two days later these men were ordered to be held for the grand jury. The quick action of Mr. Young averted a derailment of the local freight train out of North Vernon at 7.30 a. m.

Illinois Division

On August 25, Traek Foreman O. Navolt, Mill Shoals, discovered brake beam dragging on oil tank in No. 81's train. He called this to the attention of the trainmen, who stopped the train and removed it.

Toledo Division

DAYTON, OHIO, September 8, 1921.
MR. H. C. SOUTH,
Section Foreman,
Cridersville, Ohio.

Dear Sir—Your note of the 30 ult., to Supervisor Ledger relative to discovering a bad order ear in the switch run, has been referred to me.

I take this opportunity to commend you for your action in this respect, which is an indication of having the Company's interests at heart, as well as being a close observer of conditions. In this particular instance your action resulted in the car being set off; otherwise a considerable quantity of the contents might have been lost and wasted in transit, resulting in a claim for loss of consignee.

I also expect to see that a notation of this is made in our next MAGAZINE in order that this may be brought to the attention of your fellow employees.

(Signed) R. E. CHAMBERLAIN,
Division Engineer

On September 24, as extra 4193, north, Conductor Kohli, was pulling into South Hamilton yard, Yard Clerk Lane and Car Inspector Letsche observed on the 4th car from engine, Baltimore and Ohio 223992, tie strap dropped down, allowing boxes to turn over. These two men flagged and stopped this train before ear was derailed, thus averting a bad accident.

On August 21, while train 94 was passing Miami City Junction Tower, Towerman George Weston saw fire falling from cars and assumed that a brake beam was dragging. He immediately notified the switch tender at the East end of River Bridge to stop this train. This was done and inspection made; the arch bar of Frisco 123825, loaded with zinc ore, was found to be down and rubbing along the rail. The car was switched out by yard engine into Perry St. yard.

In For Keeps

It was in Paris. The talkative guide was exhibiting to the interested American tourist the tomb of Napoleon with all the customary flourishes of both language and hands.

"This immense sarcophagus," declaimed the guide, "weighs forty tons. Inside of that, sir, is a steel receptacle weighing twelve tons. Inside of that is a leaden casket, hermetically sealed, weighing over two tons. Inside of that rests a mahogany coffin, containing the remains of a very great man."

For a moment the American was silent, as if in deep meditation. Then he said:

"It seems to me that you've got him all right. If he ever gets out, cable me at my expense!"—London Tit-Bits.

Among Ourselves

Baltimore and Ohio and Baltimore and Ohio Annex Buildings

Law Department

Correspondent, GEORGE W. HAULENBEEK

G. Ray Craig, counsel at Norwalk, Ohio, while transacting some legal business at Toledo, learned that some of his friends contemplated a trip to Washington and New York. He suggested that good time could be made by taking a Baltimore and Ohio train to Deshler and catching our No. 8 at that point. Afterwards, Mr. Craig, while on another business trip to Toledo, found that his friends had made the trip as suggested; they were delighted and had taken another trip, going by the same route. Law Department counsel, please step to the front.

When James Gordon Bennett, the elder, was living, and in full control of the New York *Herald*, he was always ascribing the success of any movement advocated by his paper to the mysterious influence of the *Herald*; so, I shall have to give due credit to the mysterious influence of the BALTIMORE AND OHIO MAGAZINE, for in a recent number of that publication George C. Zink, a Law Department employee, was very properly extolled. The result was that another department in the building, having faith in the accuracy of the MAGAZINE correspondent, made application for his services, and Mr. Zink was accordingly transferred and is now duly installed and doing well in the Freight Traffic Department.

Stephen Cadden succeeded George Zink, taking up his duties in the Law Department on August 26. He, as well as his predecessor, came from the Telegraph Department. And I shall begin to think that young gentlemen in that atmosphere receive pretty good training. Stephen is fully meeting the requirements of this department and in a manner that is freighted with satisfaction. His reticence is a good characteristic. He pays no attention to the clicking of the clock, and the location of the hands on the dial do not concern him.

In the Good Old Summer Time

All summer long, the Law Department has revelled in open windows and doors, with an occasional electric fan thrown in. It has indulged in aquatic trips on the Dreamland and the Emma Giles now and then. Now that autumn is well advanced, all this is changed. Every one of us, the ladies as well, vote aye for a continuance of the good old summer time. We don't like slippery pavements, snow ploughs, delayed traffic and all that sort of thing.

Radiating Optimism

We are quite willing, however, to accept the situation and to do our best. We are in full accord with the various activities advocated by the BALTIMORE AND OHIO MAGAZINE, to wit: Safety movement; work of the Welfare Department; No-Accident campaigns; saving of fuel; courtesy and politeness to everyone; get business when we can, and radiate optimism in every direction at all times.

George H. Stein

George H. Stein, Baltimore and Ohio counsel, assistant to H. B. Gill, division counsel, Philadelphia, died suddenly on September 19. He had been in the service of the Law Department for a number of years and was efficient and capable in every way.

Car Service Department

Correspondents,

J. T. LEAN and H. V. OBERENDER

Miss Edith Robinson and Miss Evelyn Benson have of late been heard singing "I Don't Want to Grow Older" but we understand that Miss Robinson celebrated one of her birthdays on September 17, and Miss Benson one on September 23.

We regret very much the loss of one of our fellow-clerks and friends, K. L. Metzger, who left the railroad to go into business in New York City.

It is gratifying for us to announce that Carl L. Hornfeek is again with us and enjoying the best of health.

On Saturday, September 10, our baseball team played the Philadelphia and Reading Nine at Homewood. Our boys put up a hard fight but were defeated by the score of 6 to 5. Bryan did exceptionally well on the firing line and would have won the game had not several miscues turned the odds against us.

On Saturday, September 24, our boys, with about eighty rooters, journeyed to Philadelphia to give the "Reading Nine" a return game. Hahn did the twirling and Peters the catching. The game was practically ours up until the eighth inning, when the score was 3-1, in our favor, but the odds were against us, for the Reading team in their half of the eighth scored four runs, putting them in the lead, 5-3. Thus the game ended.

Although losing the game we all had a great time, going up and coming home on our "private car." The double quartet, Boteler, Paynter, Strauch, Kirby, Oberender, Doenges, Lean and Buettner, furnished the crowd with some fine singing.

Little Charlie Bayn was there with his megaphone. Roy Brown did a little dance accompanied by the "Tambourine Four" who furnished the necessary noises. Oberender and Kerby sang a duet "I'm sorry I made you cry." Shorty Reider was there with his funny laugh.

The girls furnished candy and fruit for the crowd and everybody had a good time.

Freight Tariff Bureau

Correspondents,

F. W. RUPPERT, C. A. WAGNER

Again we appear on these pages. This time it is through a cloud of strangling smoke derived from the hod of R. P. M., who, chuck full of "Datura Stramonium," better known as "Jimson Weed," was standing on the corner of Gillingham Alley, puffing the weeds to a frazzle, while the rest of us innocent folk, who have been cured of catarrh for seven years, through other means, stood choking from the aroma (or fumes, we might say with better satisfaction). We don't wish you any hard luck, Mr. Martin, but we wouldn't care if you would pick a leaf of skunk cabbage by mistake some fine night and light up while outside of Baltimore. And the farther out the better.

Our busiest time is the last half hour before five p. m. Then you may see Clara W., chasing after "Cabby," "Gus," "Jap," "Lew," etc., for Interstate copies. "The printers line is busy." "Boy's on his way." "Can't print today." "Must have copies, short date." These are the answers poor Clara gets and most times she has to stay after five to file them. Does she worry? NO, L. S. E. does that.

Well folks, "Bozy" and "Vi" are still having their troubles with mailing lists. "Bozy" makes 'em and "Vi" says they are wrong, and that supplies are short because too many were ordered.

AT LAST. Michael R., who always fell for each new face, has decided "One was enough for him," and has traveled upon the great sea of matrimony. Mr. and Mrs. Robinson spent their honeymoon at Niagara Falls and Toronto. We all wish you and yours the best of luck, "Mike."

"Shorty" Lynch, our hairbreadth horse race man, also anticipates asserting himself in the face of the world, for according to Rumor, Miss Mildred Thomas is to become Mrs. E. J. Lynch on October 20. Well, "Ed," we congratulate you on your nerve anyhow.

Our veteran, Walter Webb, has his hands full these days chasing back and forth to Washington to keep the Interstate Commerce Commission posted on how to run a railroad.

The two "Joes"—Ramming and Wich, Engineering Department

Babies of the Freight Traffic Department
1. Little "Billie" Curran. 2. Jane V. Martin. 3. "Betty"

As some of our work is sent out of town, there came a call for a man to go to St. Louis, and our old hero "Lew" said he was fully acquainted with the city, but he would not go unless transportation was issued for two. What's the idea, "Lew," can't you live without her?

George B. Hoyt, our grand old gentleman, has just returned to the office after a two weeks stay at Rageley Tavern and Kennebunk, Maine. We all received a card from him.

Have you ever noticed that distinguished gent who gets off the car every morning (bar Sunday) at Redwood and Liberty Sts.; so that he can a few puffs on his "stump" before entering the building? I suppose you all know him. The same stump is again put into action at noon and finally conquered at night. Eh, Lindsey?

Our fashion model, better known as "Woody," spent a pleasant vacation at his country home at St. Helena, Md.

A great change was noticed about the file and correspondence room during the week of September 12 when it was operated by the great Horacio Leatherberry and Oswald Heisey, both members of this club. It wouldn't be fair to say whether the change was for the better or worse, so we won't.

We shall have Quail for Supper

"Cas" W. and Frank R., made one grand attempt to put the Northwestern hunters and trappers out of work. Early on one September morn, they boarded the Southern for the wilds of Burke, Va., where they intended to make a special graveyard for fowl, but up to this time there has been no great deficiency of birds at that point.

They were heard to say, before taking a little target practice, "We will match the best sharpshooter on earth," and afterwards "after a few more years practice."

Next month we hope to complete our list of Cupid's victims and if we don't it won't be our fault for they are going so fast in this office that it is a hard problem to keep up with them.

With sincere regret we report the death of Miss Christopher, one of our stenographers, on October 10. We all extend our deepest sympathy to her family.

Freight Traffic Department

Correspondent, DOROTHY RUBENSTEIN

In our picture gallery we have Jane V. Martin, the charming little daughter of J.

A. Martin, rate clerk; "Billy," the son of C. J. Curran, rate clerk; and an adorable bit of femininity, "Betty," the little niece of Miss Lillian E. Burman, stenographer.

A personality of charm, mellowed and fine, is F. B. Upsher, of our department. Words can hardly express the contagious infection of his hearty laugh, which once heard, cannot be forgotten, and the memory of the man back of the laugh lingers with one ever after. Always with a pleasant word, ready at all times to help his fellows in their various endeavors, a character such as his is a blessing to this world, spreading sunshine and cheer wherever he is, and it is befitting to quote his oft repeated expression: "A thing of beauty is a joy forever." If we had many more like him, how much more pleasant life would be for us all! We consider him a fine model from which to mould a sweeter disposition.

It is noted, with pleasure, that trade conditions are improving; slowly, it is true, but yet surely. This tends to increase the spirit of optimism in the business world and effects are far reaching indeed. We cannot help but feel, with a blessed sense of relief, that the days of hectic spending are past, and that with the return to normalcy, the people as a whole are turning to higher standards of living and morality. Of course, we all realize it will be a long time before conditions are as they were before the world plunged into the chaos of war, but taking everything into consideration, the outlook for the future is brightening, and already the slender golden rays of tomorrow's sun, rising above the horizon, are full of promise for a new day of peace and prosperity. In order to bring about the fulfillment of our hopes, we must all turn our faces to the light, co-operating to the fullest extent with each other, and, above all, have faith in the eternal power of God.

Testimonials

"The birds that warble in the trees
All give us keen delight;
But we don't give a tarnal sneeze
For frogs that yelp at night.

"The birds give us a feeling that's
Replete with joy intense,
But we'd not give a hoot for cats
That yowl upon the fence.

"The birds deserve what's said of them,
We love their sharps and flats,
But cocks that crow at 3 A. M.
Are worse than frogs and cats."

A hearty welcome by this office is extended to the newcomers, Messrs. G. M. Campbell, Geo. C. Zink and Wilbur Smith.

We are glad to report the return to the office of C. L. Cole, Jr., who has entirely recovered from his recent illness.

Fuel Agent's Office

Correspondent, P. L. EBAUGH

J. R. Scotten, who has been going to Delta, Pa., every Saturday, for the past six months, recently took along with him a solitaire that compared with an engine headlight for size. Mr. Scotten has not as yet named the happy day, but we have our suspicions that it will be in December.

H. G. Miller who has been spending his week ends at Cambridge, Md., also made a purchase of a solitaire, and we congratulate him. Mr. Miller wishes to deny the report that he is taking a correspondence course in cooking.

Miss Freida L. Ader, who recently returned from a two weeks' trip on one of the lake steamers, has since her return been receiving several letters each week. Can it be possible that she has succumbed to the wiles of a dashing officer? (She has been seen several evenings promenading along the deck with a young Apollo.)

Relief Department

Correspondent H. IRVING MARTIN

Miss Elizabeth Brune joined the "Hospital Club" on September 22 and took her first degree in the Appendicitis Division. She likes vacations, but this one doesn't suit her, so we can expect her back soon to turn out some more "eb's."

J. Norris Desverreaux and Mrs. J. N. spent their vacation at Ocean City, Md., supervising the old salts who were seine-hauling, and tempering the summer's heat by a cool dip in the Atlantic or a stroll along the waters of the inlet. Too soon came the call, "Back, back to Baltimore," to join the "Dingbat," "Fritzie" and "Our John" in the Savings Feature.

Ferdinand Franz goes off to New Jersey with the rector of the Church of Saint John the Baptist and other friends bound for the Saint Francis Health Resort at Danville. He doesn't report any casualties from mosquitoes, but says that he got a good rest and also a chance to spend some hours in Newark and a few days in the shadow of the Woolworth Building.

Shades of Frederick W. Taylor, just look at this! Scientific Management gets a new recruit, and at the bottom of the ladder.

JAMES GARFIELD RUSSELL, IN A CLASS BY HIMSELF

A reminder of the valuation department outing

W. Clifford, son of W. C. Donnelly, supervisor of Time Service

Br'er Ball and his other seven-eighths headed for Gulf of Mexico. Tropical storm follows. If cyclone meets tourist, expect seasickness. Bulletins anxiously awaited.

The following principles of business success were evolved by our office messenger, F. B. Vane, Jr., for the guidance of his substitute (in F. B. V's. absence from his desk). Note the kernels of truth, the definite plans and ideals; also that he adds one, for luck, to Mr. Emerson's "Twelve Principles."

1. Telegrams and Building Mail from the other offices to go to Chief Clerk.
2. Count your U. S. Letters and do not order an excess supply of postage stamps.
3. Be sure to keep the inkwells filled.
4. Enter up Baltimore and Ohio Registry as soon as received and you will not have to do it at five p. m.
5. Take special care to keep all out-going mail around the office moving swiftly.
6. Work steadily and do not allow yourself to get frustrated.
7. Do not forget to close up the office at the close of business each day.
8. Always keep your sponges wet.
9. Answer all buzzes promptly.
10. Don't forget to pull the string every time somebody rings.
11. Do not let moss grow on applications wanted.
12. Do not eat peanuts during working hours.
13. And last but not least, *Keep Smiling.*

Once more Cupid Makes a hit and captures one of our bright-faced girls, Miss Jean A. Bennett, who was married at noon on August 8 at North Avenue M. E. Church, Baltimore, to Walter C. Alvey, a surveyor in the Valuation Department. After a trip to Florida they settled down like old married folks at 3308 Harford Ave., Baltimore. We wish them all the good luck possible, and will give them a oat of-arms, fashioned from four leaf clovers, horseshoes and wish-bones.

Mr. and Mrs. Parkin Scott betook themselves to Atlantic City, where Mrs. Scott showed her ability to acquire knowledge by learning to swim. After their return in safety to Relay, Mrs. Scott diverts six passengers from other railroads to the Baltimore and Ohio and starts for Cleveland to attend the convention of the Service Star Legion. The party stopped at the Hotel Statler and now praise that hostelry and the service and meals of the Baltimore and Ohio dining cars. Mrs. Scott knows how to get results, whether it be in capturing passenger traffic or in presiding over and managing a public meeting. A good sample of the "new woman," yet always feminine.

Miss Mary F. Wigglesworth and Walter W. Lanahan, both of the Savings Feature, were married on August 19. They immediately left for New York to spend their honeymoon. Deservedly popular and well liked, we extend to them our fullest wishes for a happy future.

James William Wilson, Savings Feature, resigned on September 17 to enter Randolph Macon College. He will enter the legal profession upon his graduation from college. He is not the first disciple of Blackstone who got his start in business life in the Relief Department. Some of his predecessors are now successful attorneys.

Telegraph Department

Correspondent DELLA M. HAIN

Here's the little "Colonel," Master Clifford Donnelly, doing his bit in the garden. We can't see what is in the basket, but we guess he's planting clocks and watches, for if he takes after his father as much as he looks like him, it couldn't be anything else. Note: How about thyme? —Ed.

Transportation Department

Correspondent, L. K. BURNS

Here's a notice we posted on our bulletin board, and sent copies of it to our traveling men. Just a tip for somebody else who might want to use a similar notice.

"BOOST BUSINESS"

A good many of us are living up to this motto of the Baltimore and Ohio and a good many of us would like to but don't know how. Now if the ones who have had an opportunity to disclose the merits of the Baltimore and Ohio would tell about it for the benefit of those who fail to see such opportunities, we would have a 100 per cent. "boosting" department; therefore—

A memorandum written to the MAGAZINE correspondent concerning any business secured by an individual, any conversations overheard that are in the nature of a "boost," a simpler method of handling or doing a certain kind of work whereby our Road might be benefited, will be appreciated by all.

Personal items of interest are always welcomed by the correspondent.

Let us get together and build up a live column in the "Among Ourselves" Department of the MAGAZINE. Your cooperation will enable the correspondent to do this, but he cannot progress alone.

We're mighty glad to have old "Bill" Marley back again. "Bill" had an attack of typhoid recently.

"Do to others, etc." While boosting our own business, how about putting in a good word here and there for the business of our customers?

We were beginning to think that King Hymen had forsaken his altar, when along comes W. S. Guerke to assure us that he has not. Indeed, to prove the veracity of his statement, he presents Mrs. W. S. Guerke who, according to hearsay, is a "sweet, lovable little girl." Perhaps we can be mollified to the extent of forgiving G.'s secrecy if he will introduce us. Congratulations, Mr. and Mrs. Guerke! Here's hoping you will "live happily ever after."

When Mr. Sherry's jovial countenance was even more jovial than usual, we became curious and inquisitive and thusly learned that little Miss Ruth MacKay Sherry arrived at the home of Mr. and Mrs. H. B. Sherry on August 7. "Daddy" claims she's a regular vamp and already has a host of admirers.

We welcome in our midst Alexander P. Wilson, new clerk, Mine Rating Bureau.

We wonder what the attraction is at Brunswick for three certain young ladies of the Embargo Bureau on nearly every week end. Perhaps we can account for the frequent visits of one of them, but as for the other two—we have our suspicions. Let's ask "Jinnie;" she knows everything.

The fact that John B. Egerton has left the service of the Baltimore and Ohio Railroad, to return to the training of the minds of the coming generation, comes as quite a surprise to his friends and acquaintances.

Mr. Egerton entered the service of the Baltimore and Ohio with the engineer of tests, in 1911, in connection with the Timber Preservation Plant at Granite City, Illinois. He then went to the Timber Treating Plant at Green Spring, W. Va., which was at that time, in the course of construction. At its completion he joined the force of the Scales and Weighing Department, and continued in this line of work until the time of resignation on September 7.

For ten years Mr. Egerton has given in his services to the Baltimore and Ohio, the best of a highly trained mind, and conscientious labor in all his duties. Those who have come in contact with him have felt the strength of his character and have realized the thoroughness with which he has gone into all matters for the best interests of his Company.

Mr. Egerton received his primary education in the Baltimore schools; his high school and college courses at Rock Hill College, Ellicott City, Maryland. After he completed his studies as a student, he continued at the College as a professor, teaching successively the languages, physics, chemistry, and allied scientific subjects, keeping abreast with progress by attending special courses at the Johns Hopkins University and through other educational sources. The general scientific courses, under his able direction were highly developed and became recognized by leading universities of the country, and it was largely through Mr. Egerton's personal efforts that this recognition was extended to the point where a diploma from Rock Hill College admitted students to the Johns Hopkins and other universities, without the necessity of an entrance examination.
