Mr. Fraser is survived by his wife, two brothers in Australia, three sons, one daughter, four grandchildren and two great grandchildren. Burial was in Oakwoods cemetery, Chicago.

Mr. Fraser was born in Venice, Scotland, September 6, 1839. That he inherited the traditional sturdiness of the Scotch people is proved by the fact that he succeeded in avoiding retirement at 70 and was active in his work when more than 80 years old. One of his prized possessions was a letter written to him in 1911 by C. F. Parker, vice-president in charge of the purchasing and supply department, announcing that his retirement order has been modified.

### Too Active for Pension at 70

"In consideration of this case, which, by the way, is the first one on record that I know of, we were prompted by what seemed to us common justice toward you," wrote Mr. Parker. "Ordinarily, when one reaches 70 years of age, he has not the good sound mental and physical condition with which you are blessed. In your case the retirement on the pension rule at this time would have worked a hardship.

"A clear statement of the conditions brought a modification by the Executive Committee of our Board in New York, where it is necessary for this to go, and they were, no doubt, largely governed by the good record of service that you have

G. F. Fraser

with this company. It was very gratifying to me, I assure you, to learn that they recognized the justice of making an exception in your case.

"I hope and trust that you may continue to enjoy your vigorous good health for many years to come."

### With British Army

At the age of 17 Mr. Fraser left Scotland for London to study music. Later he served for several years as a band sergeant in the British army, seeing service in various parts of

the world, winning numerous medals, and distinguishing himself as a survivor of the massacre in India. His experience in this band work made him so proficient that it was said he could play practically any instrument except the piano.

In 1869 Mr. Fraser came to America to make his home. His first location was in Quebec, Canada. In 1870 he went to Roanoke, Va., to take up clerical work with the Norfolk & Western Railroad. While there he organized and directed his first railway band, composed of employes in the machine shops at Roanoke.

His second railway employment was with the Grand Trunk Railroad at Montreal, Canada. There he organized the Grand Trunk band.

In 1892 he entered the employ of the Illinois Central at the Twenty-seventh Street Shops, Chicago. When Burnside Shops were opened, Mr. Fraser was one of the

first employes transferred there. In 1896 came the organization of the present Illinois Central band, which he directed for twenty-five years.

#### Led a Successful Band

The band was his greatest hobby. Its first engagement was heading the railway men at Canton, Ohio, during the first campaign of President McKinley. Since then it has had a prominent part in most of the public celebrations in and around Chicago. The band was selected to head the railway division of 7,000 men in the preparedness parade of June 3, 1916, said to have been one of the biggest parades ever held in Chicago. For the last five years it has played at the Illinois State Fair, at automobile and horse shows, and at entertainments during the war when troops arrived in or left Chicago.

Mr. Fraser spent more than fifty years in railway work, including almost thirty years

with the Illinois Central. He was a high degree Mason, and had served as president of the American International Musical and Theatrical Union of New York City and vice-president of the American Federation of Musicians.

Among the prized possessions of Mr. Fraser's long and honored career, he numbered seven medals of gold, silver and bronze. A gold medal was presented to him September 24, 1912, by members of the band for long and faithful service. One silver medal was for the defense of Lucknow, in India, in 1857-58; another was presented by Queen Victoria for "distinguished conduct in the field"; a third was from the Naval Brigade, Newcastle, N. S. W.; a fourth was from the V. A. Band, Newcastle, N. S. W.; a fifth was from New Zealand. The bronze medal was given by the Illinois Central for faithful service, a souvenir commemorating the company's fiftieth anniversary in 1901.

## A BAND THAT HAS LOST ITS LEADER

The Illinois Central Band in 1916. Director Fraser is in the center, with the white uniform. Seated at the left, not in uniform, is H. C. Eich, former master mechanic, now superintendent of motive power for the Chicago Great Western at Oelwein, Iowa; next to him is W. A. Summerhays, now purchasing agent, at that time general storekeeper; at the extreme right is the late W. H. Quirk, at that time chief smoke inspector.

# Office Men Set 'em Up, Knock 'em Down

## General Office and 63d Street Bowling Leagues Wreak Havoc Among Pins in Chicago Alleys

THE Illinois Central General Office Bowling League, which was rounded into an organization September 30 and is to continue for a season of twenty-two weeks, is being led by the team from the office of the engineer, maintenance of way. This is according to the standing of the teams taken October 21. The highest individual average at that time was held by L. Bernbach.

The purpose of this organization is to encourage and foster among its members the spirit of good fellowship, thereby maintaining and increasing interest in the bowling game, and to create and establish a better understanding and closer relationship among the employes of the company.

The officers of the league are: President, Dr. G. G. Dowdall; secretary, O. M. Ziebell; and treasurer, W. E. DuBois.

The twelve teams and their captains are as follows: (1) Officers, J. J. Bennett; (2) Vice-President and General Manager, J. Ullrich; (3) Vice-President, Accounting, E. J. O'Connor; (4) Vice-President, Purchasing, W. E. Kline; (5) Engineer, Maintenance of Way, W. S. Camp; (6) Auditor, Miscellaneous Accounts, R. E. Krubeck; (7) Auditor, Disbursement, A. T. Krupka; (8) General Freight, W. C. Kaylor; (9) Engineer, Bridges and Buildings, L. A. Stone; (10) General Superintendent, Transportation, C. M. Knodell; (11) Chicago Terminal Improvement, M. Block; (12) Land and Tax Department, W. P. Enright.

The rules of the league are in part as follows:

Each team is limited to ten members, who must be employed in the general offices of the Illinois Central at Twelfth street or city office, and must be employed in the office represented by the team. The officers' team is excepted. Application for teams to secure bowlers outside of their departments must be filed with the secretary of the league two weeks before scheduled game in which such bowler or bowlers intend to participate, and written permission must be secured from the executive committee before such bowler or bowlers will be permitted to bowl. This rule will be strictly enforced and any team violating same will be penalized by having such member's score thrown out and a score of 135 substituted therefor.

The names of the members of each team are filed with the secretary for official record.

Teams are not allowed to have over two absentees. Substitutes for absentees may be used, and the team will be allowed not to exceed a score of 135 for the regular member whose place is filled by a substitute.

In case of a tie game, one frame will be bowled, each member of the two teams to complete their frame before the following frame is bowled, the team having the highest score for this frame will be the winner of the tie game.

No postponed games will be allowed or recognized unless agreed to by the captains of the teams interested, and such recognized postponed games must be rolled within one month from date of postponement. The final game cannot be postponed.

The entry fee will be \$10 per team. This amount is credited to the prize fund. The captains must deliver into the hands of the treasurer the entry fees for their teams one week before starting the season.

A charge of 75 cents per man per series is made. Of this 55 cents is paid for the use of the alleys, and 20 cents is credited to the prize fund.

Captains see that a complete record of contesting games is submitted to the secretary immediately after each contest. It is optional with the team to fill out detail score book. However, total of each individual game and grand total of all games must be shown.

A bowler must have rolled forty-four of the scheduled games, and the last series to be eligible to individual prize money.

A team that fails to finish is disqualified as a team for any prize money.

The standing of the teams and the leading individual averages on October 21 were:

Team.	Won.	Lost.	Pct.	Aver. Pins Per Game.	High Game.	High Series.

## Has Remarkably Fine "on Time" Record

Two letters are given here which are self-explanatory. W. Atwill, superintendent of the St. Louis division, wrote to G. E. Patterson, acting general superintendent of the Northern Lines, on October 3, as follows:

"I am advised that Engineer H. H. Banks, in making his trip on Train No. 24, September 28, completed the month for him on that run, and that he has made every trip into Centralia on that run on time since the twenty-second of last January, or nine straight months on time, not even one minute late. Some of the arrivals have, of course, been close.

"Also, there are four connections to make on that run, two at Carbondale and two at Du Quoin, and none of these connections was ever missed; neither did he have an engine failure.

"I have written Engineer Banks, expressing my appreciation for such a record."

A. E. Clift, general manager, wrote to Mr. Patterson on October 10 as follows:

"Referring to Superintendent Atwill's letter dated October 3, received with your notation October 5, relative to St. Louis division Engineer H. H. Banks' 'on-time' record with Train No. 24 between Cairo and Centralia from January 22 to September 28.

"Please express to Engineer Banks, through Superintendent Atwill, my personal appreciation of this splendid performance, which is another demonstration of the loyal spirit of co-operation and individual interest in maintaining the Illinois Central standard of service so characteristic of our employes, and of which the management is thoroughly appreciative."

# No Hunting!

By HORACE

Short Story  
Complete  
in This Issue

AMERICANS are great outdoor sports—I mean, as regards the universally popular open-air pastimes of hunting and fishing. Almost the entire male population and a considerable portion of the gentler sisterhood fire up into instant enthusiasm at the bare mention of the subject. Hunting—or fishing, as the case may be—is a topic that warrants anybody, at any time or place, to approach a perfect stranger and engage him in intimate and confidential conversation. You may be assured that whatever advances you make will not be received with cold suspicion or reserve. Indeed, you may be prepared for the contrary. Americans readily respond to the most casual comments or questions concerning their hunting and fishing experiences with effusive and often highly colored recitals of adventures. Their efforts in this regard are occasionally so remarkable as to test the listener's credulity. But the tone and mien of the *raconteur* is never that of one who jests. He seems very much in earnest. He waxes eloquent—

I've a number of friends who like to talk about hunting and fishing. Dick Diebold,

who works in our office, is one of these, and Old Man Billings, who lives cat-a-cornered across the street from my boarding-house, is another. Dick Diebold is a self-confessed specialist as a slayer of wild waterfowl. Wild geese, brant, swans, cranes, gulls, snipe, ducks—especially ducks. Mallard, teal, canvasback, redhead, greenhead, butterball, spoonbill, graybill, pintail, fantail—he rattles off their names with a glibness that takes your breath away.

It would stimulate and inspire you to hear him describe the large bags of game he brings in. He tells it in a way to make one's pulses leap. Tales of bleak and stormy wind-swept moors and sedgey marshes gray under a leaden November sky where, amid a driving mist or the swirl of snowflakes, one squats in blind or duck-boat banging away as fast as he can jiggle the jiggers on his pump-gun—only pausing at intervals to reload—while around him like falling leaves rain the toothsome trophies of his prowess.

I saw Diebold getting off the train one day coming back from one of his hunting expeditions. He was dressed in a flapped

Banging away as fast as he can jiggle the jiggers on his pump-gun—only pausing at intervals to reload—while around him like falling leaves rain the toothsome trophies of his prowess.

shooting-cap, yellow shooting-coat and trousers, and he carried wading boots and a gun-case. All the game I saw consisted of a dank-looking, dark-plumaged bird with a white bill which I later described to Old Man Billings, who called it a "coot" or "mudhen." He said epicures of the more discriminating type generally repudiated mudhens entirely. Diebold hinted that it had been an off day on the moors and marshes—and ran to catch his trolley car.

But next day I heard him expanding to somebody about what a day he'd had; he said the whole sky was obscured with the flight of mallards, and he'd been forced to stop several times to allow his gun to cool. Old Man Billings is more of an all-around hunter; he doesn't specialize on any particular kind of game; squirrels, rabbits, quail, pheasant, plover—he told me in a burst of confidence one day that he enjoyed the rare experience of killing a rabbit—no, it was a squirrel—and a quail simultaneously with one shot from his rifle. He deemed that pretty nifty shooting, and I agreed. In the old days, when the forests were alive with deer, elk, bear, bison, turkey, and a species of bird or beast he calls a "painter," he says he used to—but I'll not go into that. He also professes to be a fisherman, too.

So I decided that I would become a mighty nimrod.

After due deliberation, I settled on a rifle as my weapon. A rifle holds out a certain romantic appeal to me that is lacking in revolvers, shotguns and other types of firearms. I had my heart set on a rifle, a repeating rifle of not-too-big caliber, not one of those that shoot today and kill tomorrow, as the saying goes. I told the affable young man in the sporting-goods store something of my cherished desires, and he submitted several rifles which he recommended as suited to my needs.

The one I bought was of modest bore and velocity. He told me it would be adequate to dispatch any game I succeeded in hitting in that immediate section of the country. I have no reason to think he misrepresented the facts.

Bearing my new rifle, I returned to the office after luncheon. My fellow-workers inspected it, some gingerly, all admiringly; that is, all except Dick Diebold; he affected a semi-supercilious, professional air.

"Why didn't you buy an air-gun?" he said, "Or a nigger-shooter—." His tone was offensive. "It's a waste of time and bother to go hunting with a little pop-gun like that. You can't hit anything in the first place, and in the second place, after you've got one shot and missed, the game has either flew or run away."

Imagine bandying words with a person who says "has flew."

"When I go hunting," he continued, "I make it a point to fetch back something to cook in a pot."

"Oh," I retorted airily. "Well, I'm different. I'm a sportsman. There's a difference between a sportsman and a pot-hunter."

He guffawed in much the same tone as a jackass brays.

Having arranged for a day off, procured my hunting license, one hundred rounds of ammunition, shooting-cap and coat, I went home filled with anticipations. I thought of asking Old Man Billings to accompany me hunting, only to learn that he'd gone with his wife to visit a married daughter. But he had previously given me explicit directions as to the location and area of what he called the best "squirrel timber" in the vicinity of the city. It lay to the eastward in the valley of a small stream, some five or six miles distant. I decided to walk all the way for the exercise.

I started early next morning. Walking briskly, I soon traversed the outlying suburbs, crossed the frontier of the city limits and boldly plunged into the wilds of the open country by way of a public highway which led eastward. The breath of huge fields fragrant with ripening grain and orchards full of red-cheeked apples came to my nostrils. My pulses thrilled—for a little while. After a couple of miles of trudging I found myself laboring at the exhaust, somewhat like a locomotive puffing up a long grade. I was climbing a long slant at the time. The top was farther on, which, once reached, I fancied would give me a view of all that part of the state. But no. It only gave me an outlook upon a higher hill just beyond. The road continued to dip and ascend up and down hill after hill until—ultimately I came in sight of Old Man Billings' famous squirrel timber. I knew it at once.

So I abandoned the traveled road and,

climbing a barbed-wire fence, struck off across a cornfield. A full-statured cornfield is no place for a short fat man. The growth of stalks, grasses, weeds, and what not hampers marching. One gets entangled until—well, I regretted ever having entered that cornfield. But after an hour or so's frightful struggle I issued once more into the open air and thrust and tore my way over and through another barbed-wire fence.

I was well-blown and horribly thirsty. I decided that a drink, or five or six drinks, of clear, cold water would greatly appeal to me. But there wasn't any well or human habitation in sight. Then I remembered the river—not a large river, it's true, but no doubt it would have some kind of moisture in it—and it would be somewhere nearby. It was farther away than I expected, and many barbed-wire barriers intervened. There are far and away too many of these rude barriers stretched across our pleasant countryside. They're an offense to the eye and a menace to life and limb, to say nothing of apparel. A tall, lissome, long-legged man might be able to negotiate these barriers better. But a short, chubby man hasn't a chance; he can't squeeze through, straddle over, or crawl under.

Arrived at the river, I reclined and drank long and deep. The water was warm and had what a scientist would call a "brackish" taste. Something with a dash of decayed rubber, sour garbage and commercial fertilizer, I'd say. Also an odor. This I presently found to be due probably to the presence of a somewhat decomposed dead carcass of a horse or cow which reposed a little distance above where I'd quenched my thirst. Quenched my thirst was right! I was no longer thirsty.

I now began to hunt. There were trees all about. Tall, thick-foliaged trees where squirrels probably lurked. I moved forward alertly, rifle in readiness. It was fine sport. I felt like a great hunter threading the pristine solitudes. At this time I had an idea that when I'd shot twenty squirrels I'd knock off shooting for that day. I managed to pass another barbed-wire fence.

And then I reached the next succeeding barbed-wire handicap without having seen hair or hide of a squirrel. I now entered a sort of thicketed field or woods pasture where, suddenly, I came face to face with

two cows. They were mild-appearing, reddish-colored, female, domesticated cows, and both stopped browsing to stare at me with true feminine curiosity. They seemed quite innocent and harmless, except that one of them lifted her head and gave a short "moo" for no apparent reason. Her reason was very soon plain. She was answered almost instantly by a hoarse bellow from a little farther on in the bushes. Whereupon she looked at me as much as to say: "Now, my friend, you stick around here a minute and see what happens to you."

I heard it coming. It came rumbling and muttering with a great thrashing and crashing of bushes, and it seemed to be coming hurriedly. I am a stranger to the emotion known as craven fear, but I thought it best to go on about my business of hunting without further delay. I had no inclination to stop there and gossip with a couple of strange cows, let alone the rude, uncouth, hoarse-voiced friend of theirs I could hear approaching.

So I departed as promptly as was consistent with the topography of that particular locality. The beast behind me crashed uproariously in pursuit. Thereupon, I quickened my stride, hoping to reach and negotiate one of the numerous *chevaux-de-frise* or *frises* and end any chance of bootless discussion. But a few steps onward I issued out into a vast, treeless, level expanse of grassland with the nearest fence or other barrier several miles distant. My ribald pursuer now appeared in sight. He was a well-grown bull, judging from his low brow, thick, beefy neck and general ruffianly aspect, and he was disconcertingly near. He paused momentarily to paw a bit of turf and rumble a challenge, and then he raced merrily toward me. Meanwhile I gave a very creditable imitation of a heavier-than-air object getting under way for a sustained flight. I said the bull "raced" for me. Really he was as light on his feet as a thistle down. He simply spurned the earth with a careless hoof, and it scurried backward from beneath him as the track slips from under an express train.

Then I found myself neatly pocketed.

In front, to right, and to left—was a lake or pond of open water. I could not escape around the rim. The bull would merely

need to tack to port or starboard as might be to intercept me at the point B or C of the isosceles triangle ABC. And he doubtless grasped his geometrical advantage, for he came on with a roar of deep joy.

There was no choice. I must take to the water. I didn't hesitate, either. I sprinted right out on the level surface of the pond. After a few steps I broke through the upper crust of green scum and began to submerge, as it were. The pond wasn't deep as regarded actual water. There was a foot or so of water, underlaid, however, with about four more feet of viscous mud.

The bull paused on the bank and watched me flounder out to the middle of the morass. He cocked his ears forward and observed me with evident interest and appreciation. His two female friends joined him, and the three stood regarding me with great enjoyment. But when I moved to wade out to the farther shore, the bull instantly emitted a loud bellow and sped around the shore to intercept me.

Half an hour passed. My position was intolerable. I shouted to the bull to "begone!" but he shook his head in a negative. I made a few rapid calculations. Say the animal was valued at \$100 actually; if I killed him, he would instantly become worth \$200 automatically. But there was my likelihood of contracting pneumonia, or blackwater fever, or something. Nurse, a month, at \$40 a week, two doctors, fifty visits at \$3 each, drugs, loss of time at my work, and so on—I would make a clean gain of \$92 by shoot-

ing the bull without another minute's delay. With the determined air of a man who has made his decision and intends to abide by it, I waded directly toward the shore where my enemy stood. The three of them eyed me with manifest astonishment. I suppose they thought I'd gone mad from terror and exposure.

The bull glared at me, turned and muttered something to his companions in a low tone of voice. It seemed that they had no suggestions to offer. So he gave me a final contemptuous glance, kicked up his heels derisively and galloped off snorting toward the thickets. He was only a blusterer, after all. I splashed on out and stalked haughtily across the pasture unmolested, lacerated my way through a barbed-wire fence and resumed my hunt.

I now reduced my quota of squirrels to fifteen. When I had bagged fifteen, I'd go home. But I failed to see any. I began to feel somewhat empty and weak. Barbed-wire barricades sap one's youthful vigor and vim after so long a time. I decided I would knock off when I'd killed ten squirrels. A moment came when I further reduced this number to five. And later I narrowed it down to three, two and—soon afterward I told myself solemnly that when I had slain one squirrel I'd call it a day.

My feet were rapidly becoming too heavy to lift off the ground. Even my two hands had grown noticeably burdensome, and my trusty rifle had assumed the 200-pound dead weight of a field cannon. And at last I

*With the determined air of a man who has made his decision and intends to abide by it, I waded directly toward the shore where my enemy stood. The three of them eyed me with manifest astonishment.*

came to the dusty, drab line of a public highway traversing the expanse of primitive forest. A final barbed-wire barrier separated me from the thoroughfare. When I saw that wagon road I sort of felt somehow that my day's hunt was over. I did not argue the matter. Failing in a second attempt to toss a 150-pound leg over the low top wire, I subsided to the ground like a stricken baby elephant and proceeded to roll and waddle under the fence. Then, after several trials, I regained my feet and pointed my nose toward the faint blue haze that hung over home—miles and miles away.

I stood for a moment plunged in tired musings. My hunt had been intelligently planned and conscientiously carried out. Reckoned from the viewpoint of game bagged, it might have been a more brilliant success, but then I reflected that I wasn't a pot-hunter. I was a sportsman. Sport for sport's sake, and all that sort of thing, you know—

Something seemed to prompt me to look behind me. I did so. I saw a signboard on a tree at the edge of the woods out of which I had come. I read the rudely painted words thereon, and a great light of understanding burst upon me. I saw it all very clearly. Somebody had placed that sign there as a guidepost to fond and foolish sportsmen like me. The information it furnished was unsolicited and gratuitous, but it was faithful and true. If I'd only seen that sign when I first started out I'd have saved myself a lot of steps. The sign read:

Whoever put up that sign was right. There wasn't any hunting on those premises. I'd proved it. I sighed and began to push my heavy, mud-crust-ed feet one ahead of the other toward the west. Many, many, weary hours afterward I reached the place where I abide. I doffed my shooting-coat and put aside my beloved rifle. And then I made a startling discovery. The hundred rounds of ammunition reposed where I had left it, or them, on my dresser. The boxes hadn't been opened; they were quite intact. Excitedly I worked the do-dinkus of my rifle. It was not loaded. I had accomplished my day's hunt without a cartridge in the magazine.

Sport for sport's sake!

Dick Diebold asked me later if I'd had any luck ranging the game trails.

"How'd you come out with the pea-shooter?" were his exact words.

"Oh, pretty fair," I replied carelessly. "I only bagged about twenty squirrels, a dozen rabbits, and, oh, yes, ten quail—"

He clapped me heartily on the back.

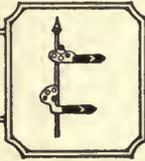

"You're some hunter, Old Top," he enthused. "I'll take you with me one of these days and we'll make a clean-up—"

### A LESSON UNLEARNED

This week a man and his family, driving from Casper, Wyo., to a point in Illinois, to visit relatives after many years' separation, tried to beat a train over a crossing at Grand Junction, Iowa. The car was wrecked, the wife killed and a daughter seriously injured. The man escaped. Can one imagine the mental state of that man the rest of his life? All the time in the world, yet to avoid stopping ten seconds to permit the train to pass, he took the chance. Wouldn't you think such a story as this would cause drivers to "stop, look and listen"? Naturally you would, but it will not. People who read this will go right out and buck the first locomotive that tries to use a crossing first.—Waterloo (Iowa) *Evening Courier and Reporter*, September 10.

**Save Lives in December!**

## ACCIDENT AND

## INJURY PREVENTION

## Pat Smith Makes a Crossing Safe

**W**HY is it that you have never had an accident at this crossing?" was asked Pat Smith, a crossing flagman on the main line at 38th street, Chicago.

"Because," replied Smith, "I'm on the job all the time; if I'm not on the job, somebody is likely to get hurt, and then I won't have any job."

Smith has been at 38th street over four years, and nobody has ever been injured while he was on duty. His hours are between 7 a. m. and 6 p. m. During the bath-

ing season, he has to watch out for the safety of about eight hundred persons, many of them women and children, every day; during the other seasons, one hundred persons cross the tracks daily; likewise, about one hundred teams and trucks need his attention every day of the year. Smith does not have two tracks to watch—he has eight, all main line, over which pass, during his hours of duty, some 237 suburban trains, 31 through passenger trains, several freights and many transfer trains, nearly all of which are moving at high speed. Smith never allows any visitors. He works hard and talks little, and it was hard to get him to tell why he was such a successful crossing flagman.

Smith says: "There is one rule that I have always followed—I never let pedestrians or teams enter the crossing until the tracks are clear all the way over. Many people want to cross part way, if a train is on one of the farther tracks, and then wait until the train has passed. When a train is coming on any track, I hold up my

Pat Smith and the 38th Street Crossing

sign and keep everybody off the tracks entirely until the train has gone; then I let them start across, and I make them keep going until they *are* across. I never let anybody loiter, and I never let children play on the tracks. At first, I had trouble keeping people back, and also trouble with small boys who wanted to play on the track, but now they mind pretty well."

Incidentally, Smith's stature and his determined look are what make them mind,

for he is perfectly capable of taking care of any person who might want to disobey his signals.

Asked what was the hardest part of his work, Smith said: "The hardest part is to get teams safely across in the early mornings of the fall months, when there is frequently a fog so heavy that I can't see more than a few feet. Then I have to time my trains as best I can and go across with each team."

---

## How Customs Changed in Twenty Years

By V. R. BYRD,  
Conductor, Memphis Division

Twenty years ago the writer entered the service of the Illinois Central at McComb, Miss. O. M. Dunn was division superintendent; J. J. Flynn, trainmaster; James Moss, day yardmaster, and D. A. Kinney, night yardmaster.

I have worked for a great many different men since, but never have I worked for better men. The hours were long, the pay was short, the work was thirty-one nights a month and twelve hours a night, and I drew down sixty bucks. At the rate we are working under now, time and a half after eight hours, I would have run John D. Rockefeller a close race in pursuit of the elusive dollar. If No. 1 was late, the night crew, of which I was an "honorary" member, had to remain on duty and cut the diner in. This we did free of charge, as we received no overtime; we did this to be good fellows and hold our jobs.

After assuring myself I had taught the officials on the Louisiana division all that it was necessary for them to know, and as Mr. Dunn and Mr. Flynn had left, I decided to "move." In other words, I had too much money accumulated to tarry long in one place.

Accordingly, I got a transfer from Trainmaster B. F. Galvani, who succeeded Mr. Flynn, and followed the latter to Memphis. I had heard from my boyhood days about the Bluff City.

I made my first trip as conductor from Memphis to Gwin, via Clarksdale and Tutwiler, 161 miles; I was on duty twenty-

four hours and had every kind of accident barring a head-end collision on this trip. In those days the requisites for a job were a strong back and a weak mind. The 400-class engines hauled 1,400 tons; today a 900-class engine hauls 2,600 to 4,200 tons and makes the trip in nine to eleven hours.

W. S. King was general superintendent of the Y. & M. V.; J. J. Flynn, division superintendent; W. A. Allison, trainmaster, and F. D. Munson, chief dispatcher. There never was a better set of officials on any railroad. Today Mr. Munson is the only one left of this crowd. He is still dispatcher, and a better one never handled a key.

Today we have fourteen passenger trains a day hauled by super-heated engines—the best money can buy—and all-steel coaches and equipment, 90-pound steel rail, a No. 1 roadbed, sixty-four miles of automatic block signals, and the largest manifest and freight business of any road out of Memphis. One hundred per cent of all manifest and passenger trains make a record of which we all may well feel proud.

Without any disrespect to any other division, I believe we have the best officials and bunch of men that can be found on any man's railroad. To see a property rise from almost a 10 per cent proposition to a 100 per cent performance shows the good old Memphis division to be a top-liner. We have one of the largest and most up-to-date gravity yards in the whole country, and the Grand Central Station, where all our passenger trains arrive and depart, is a credit not only to the city but also to the great system by which we are employed.

# CLAIMS DEPARTMENT

## A Surprising Relapse

Attempted repudiation of a claims settlement was recently a dismal failure for Foreman Arthur Ellsworth of Mattoon, Ill., who sought to have himself declared mentally defunct and of gullible proclivity on the day he made a substantial adjustment for injuries he had received. He continued in the service as an able and competent foreman for nearly two years after the injury, when, just before the expiration of the limitation statute, he resigned, invoked the blessing of able counsel, and brought suit for \$20,000.

It was back in March, 1919, when he received his voucher for a large sum of money, and on down through succeeding days his name was on the payroll as a hale, hearty and desirable employe. Some time during those intervening months his mind was awakened by a vision, the vampire of more money.

The case attracted unusual attention among employes, and the uppermost question was: Can a man make a settlement with the company and then renounce it at will, bring suit and "get by" with it?

Ellsworth claimed that at the time of the settlement and when he received his money he did not know what he was doing, was mentally unsound, and incapable of transacting the usual affairs of ordinary life. To accomplish this purpose of breaking his agreement and renouncing the settlement, he was willing to say to the world that at a period in his life his mentality had relapsed, and that he roamed about under a cloud of uncertainty, an irresponsible derelict, remiss and delinquent—a most remarkable confession of faith.

W. J. Burns, the great detective, now at the head of the secret service of the United States, once said in reply to an inquiry as to how he was able to apprehend those he sought: "Because, somewhere along the line, they fail to cover up their tracks."

And here is where Ellsworth, too, broke his molasses jug. On or about the time he received his voucher he went to the bank and told the cashier and assistant cashier that he had made a settlement with the company. They read it over to him. He said that he understood it, signed it, took some of the money and deposited the rest of it. In a few days thereafter he purchased a home, made diligent inquiry as to the taxes and paving assessments, executed a mortgage, signed a contract for the purchase of the property, bought stock in a building and loan association, paid rent checks up until he moved, issued checks in the regular course of business to divers and sundry persons, traded at his accustomed places and in the usual manner, and gave many evidences he was Arthur Ellsworth, section foreman, of sound mind and memory.

But there were others of less cheerful observation: a group who thought they could note slight inaccuracies in the speech of this man; a clique who said he never slept, said little, was cross, said unkind things to his wife, ate little, took headache pills, told them to put the hand car on and then take the hand car off. A sister-in-law laughed at him; women throughout the neighborhood said he was "queer" and was not "right" at times. A lonely mother-in-law said he remained at her home long after the injury, where she saw him daily, and that he "didn't know nothin'." When she was presented a check he had drawn payable to her order during that interval and was asked to identify it, she immediately recognized this as a rational performance. Even a brother endeavored to relate misdeeds and misdoings of his confused elder brother during his visit to the home of the latter. He, too, was presented a check payable to his order, which he immediately proceeded to acknowledge.

After a week of tedious and monotonous

contention the matter at last was dumped into the laps of the twelve men who had so patiently listened to the dreary details. And they promptly dealt this thing a terrible blow, one that should be a landmark and an everlasting admonition to those who come to the halls of justice with such cases.—C. D. C.

### Needless Expense

A negro named Victor Oliyev, a trespasser, crossing the tracks to "flip" a freight train, was struck and injured by a suburban passenger train at Chicago, May 3, 1919. Development of the facts connected with the injury necessitated considerable work and expense. Under the facts it was thought there was no liability, and a claim was declined. A suit was brought, which was later dismissed for want of prosecution, but subsequently reinstated. The suit was tried October 3, 4, 5, and 6, 1921, resulting in a directed verdict for the defendant after the plaintiff rested.

The negro told an improbable story, but to meet his statement required the presence of fifteen witnesses to prove plats, photographs, movements of trains, records, etc., involving an expense of more than \$600 to the company. The loss of time of all of these men aggregated about sixty days, to which should be added the time of the judge, jurors and court attaches, so that the expense to the people was no doubt a like amount.

This is but one of the many unmeritorious suits brought against corporations, railroads especially. They contribute in no small degree to the cost of operation of railroads, as well as increasing taxation.

All at stake on the part of the negro and his lawyer was the loss of a few days, opposed to which was an actual expense of approximately \$1,200, including the loss of time of twelve jurors, a judge, court attaches, a lawyer and fifteen witnesses.—M. B. R.

### Grade-Crossing Accidents

The rapid increase in the number of automobiles throughout the country and the corresponding increase in grade-crossing accidents make it imperative that we continue our efforts to reduce the number of such accidents to a minimum. States and

municipalities have enacted laws and ordinances, and "Safety First" experts have tried to educate the public to use more care at railway crossings, and still the fatalities are on the increase.

I recently heard a paper read showing the good effect the bumpers had at the speedways in Memphis, where thousands of automobiles pass every day without a single accident reported in several years. There is no doubt in my mind that bumpers installed at these various railway crossings have prevented many accidents.

W. E. Douglass, general claim agent of the Southern Pacific, recently declared that 90 per cent of grade-crossing accidents on that road occurred where the automobile approached from the fireman's side of the engine, and that his road had recently equipped its engines with a cord, so that the fireman could sound the alarm whistle from his side of the engine, and firemen have been instructed to be the look-out in going over grade crossings. Probably 75 per cent of such accidents I have investigated occurred on the fireman's side, and in several cases the fireman was putting in a fire or otherwise engaged, and did not see the automobile. Some of these accidents, it is safe to assume, could have been avoided had the fireman been on the look-out and the engine equipped so that he could sound the whistle himself.

The engine crews are not always to blame. Engineers tell me of the nerve-racking experiences they have with automobile drivers racing over the crossings a few feet in front of the engine and others driving up and stopping suddenly only three or four feet from the track.

The automobile industry seems to be a permanent organization, and the separation of all grades is a financial impossibility. Therefore, while we may not be able to eliminate the grade-crossing accident, we can lessen the number by having the engineer make free use of the whistle when approaching all crossings and by having the fireman on the look-out and ready to give warning in case of danger.—J. R. S.

### Why Do They Do It?

The readers of the daily papers no doubt noticed a short paragraph the other day announcing that three people were killed

at a crossing near Perry. They probably read it and said to themselves, "Another fool driver gone to his reward." That is one side of the case.

The other side is told by the engineer of the train which killed these people. We had the privilege—we will not say pleasure, for there was no pleasure in it—of visiting the man who drove the engine that caused the death of these three people. He is a man probably 60 years of age, has been an engineer for many years, and this was his first fatal accident.

In describing this accident he said that the train was going along about 40 miles an hour and that the crossing ahead was as clear as a virgin prairie, not a bush or tree to obstruct the view for a mile in either direction, when suddenly this auto appeared approaching the crossing. He never had a thought but what it would stop before reaching the fatal spot, but on it came and had just reached the center of the track when the engine struck it broadside on. One of the occupants was picked up nearly 150 feet from the collision; the others were closer, but all three either were dead or died within a few minutes after being picked up.

The auto was thrown high in the air and came down a complete wreck. Three lives snuffed out in an instant, all because of the mad haste of the driver, who would not stop to let a train pass by!

Frank Owens could not have felt worse had he been personally to blame for the death of these people. It has unnerved him so that he cannot speak of it without a shudder, and it has done more to age him than ten years of hard work. Although absolutely blameless, the terror of that scene is so indelibly stamped upon his memory that he cannot erase it.

The person who willfully subjects another to such a trial as Frank Owens has passed through may not deserve the death penalty, but he certainly deserves some sort of punishment, and we believe if it were possible to punish auto drivers for attempting to cross close in front of a moving train there would be grim justice in sending them to jail.—Manson (Iowa) *Journal and Democrat*, September 22.

### Railway Crossings

"Railway crossings are places where automobile drivers turn around and visit with the people on the back seat. They frequently become good mixers by this process. Sometimes it is hard to distinguish one from another after the train has gone by. The driver is always easy to pick out. He is the one with his face turned away from the railway track.

"Many people are of the opinion that the highway crosses the railway tracks. This is not so. The railway track always crosses the highway. Some railway tracks run four abreast. Their percentage of hits is higher than the single-track variety. It gets them three ways—going, coming and standing still.

"A person becomes full of derisive glee when he has successfully dodged a train, only to find too late that he is standing in the path of another. Then his friends and relatives order flowers, and the undertaker does his best to make the late lamented appear presentable."—Baldwinsville (N. Y.) *Gazette & Farmers' Journal*.

### Fools Will Always Try

"Perhaps if it were more generally known that a locomotive smashes up a motor car beyond repair as well as kills the family, there'd be fewer attempts to beat the train over the crossing."—Kansas City (Mo.) *Star*.

S. M. Copp and C. D. Cary herewith present No. 6 in their series of epitaphs:

# Shows Value of Railway Law Department

## *District Attorney Notes Varieties of Work; The Standing of Lawyers in 1645 and Now*

By H. D. MINOR,

District Attorney, Memphis, Tenn.

**T**HE law department is different from its allies. It builds no railway lines or cars and obtains no traffic. It produces no revenue; on the contrary, it is somewhat expensive and is often regarded as being in the way. Occasionally it is an obstacle to ambitious schemes. It is sometimes obliged to place a veto on elaborate plans of the operating and traffic departments—not because it doubts the wisdom or policy of their plans but because some inexorable statute or law of the state must be respected.

None the less, the law department serves a most useful purpose and is indispensable to the operation of a great railway system like ours. It is the counselor and adviser of every other department and of every official of the company. It stands as a bulwark of protection against the unjust demands of litigants and others. It is the company's protector and guardian against excessive demands for taxes, against unconstitutional legislation, against persons making unjust demands for personal injuries or freight claims, and it is usually the company's diplomatic representative in negotiations with city, county and state officers. In short, the company could not get along without a law department. It is a necessary adjunct to every great business.

### A Wide Variety of Work

The average railway man does not often come in contact with the law department. He is more concerned with the operation of trains, the construction of roadbeds and bridges, the handling of traffic in freight yards, with machines and repair shops and things of that kind.

The average layman probably thinks that most of the work of the law department is in the defense of damage suits. That is largely true of the local attorneys' offices, but not at all true of the general offices. Damage suits are really a more serious problem with the claims department than with

ours, as the law in such cases is usually well settled, and the great problem is to have the facts of the case properly brought before the court and jury. If one should spend a few days in the office of a general solicitor, he would be surprised at the variety of matters which come up for attention.

For example: What are the company's rights with respect to a bridge over a navigable stream? What can be done to prevent another railroad from crossing our main line at grade? What are our rights and obligations with respect to a track which, under a special law, several companies are entitled to use with us? What sort of title do we have to our right-of-way over sixteenth section lands? What are we to do when a viaduct belonging to the city becomes a menace to our trains passing under it? Is the company bound to pave a street which crosses its right-of-way? What can the company do to remove houses which have been built on our right-of-way and been there for years? How can we prevent the enforcement of unreasonable rates on particular commodities put into effect by a state railway commission? What shall be done about a drainage district whose plans call for crossing our line with a dredge boat and the substitution, at a great expense, of a long span bridge for an existing trestle? How can we prevent an excessive assessment of the company's property for taxation? How defend successfully a suit for damages for the death of a man killed at a crossing? These and many other like questions are constantly arising, and all take time, study and thought for their solution. We cannot just open a book and find the answer, as some may suppose.

### Rates and Contracts Difficult

The office of the general counsel at Chicago has, daily, problems even more varied and difficult. They force Judge Horton and the members of his staff to earn their bread—maybe not by the sweat of their brows, but certainly by a process equally as trying.

There are handled, in addition to the ordinary work of the Illinois Central, practically all of our rate litigation, involving expert work outside of the experience of the average lawyer, and also most of our contracts, of which there is a great number.

Like every other department, we cannot get along without aid. Probably our principal associate is the claims department, for in all personal injury litigation we would be rather helpless without it. It finds out the facts, locates the witnesses, arranges for their attendance at court, and in other similar ways proves itself indispensable. Under efficient management, the Illinois Central claims department has become one of the best in the country.

The help of the traffic department is not so often needed but is entirely indispensable when needed. No lawyer in the service, however capable he may be, would undertake to handle traffic litigation without the experts of the traffic department at his elbow. In the same way, none of us would want to handle a tax assessment before a railway commission or a tax litigation before a court without calling on the land and tax commissioner. And, in a general way, no one has proved himself more helpful to the law department than has our president himself. His exceptional judgment, his sound common sense, his knowledge of men and his unfailing courage have often been of the greatest help in handling problems falling to our department.

#### All Employes Co-operate

But it is not merely to the heads of the departments and our officials that we must look for assistance. On the contrary, the maxim of "all for each and each for all" is as applicable to the law department as to any other. Good sense, loyalty, thoughtfulness and discretion on the part of employes are at last the most important thing to a railway company. One or two illustrations will indicate how true this is as to the company's legal affairs and may furnish an inspiration to other employes.

A boy 6 years old was put on a train, his father claiming that the conductor promised to see that he was safely put off at his destination, where he was to be met by relatives who would take him several miles into the country. The conductor overlooked him and carried him beyond his station, but left

him in charge of a station agent, promising to have the conductor of the returning train pick him up. The second conductor did this and, realizing the situation, was thoughtful enough to go through the train asking if anyone was getting off at the boy's destination. He found such a man, who not only took care of the boy but carried him to his relatives in the country. Suit was brought, and the jury rendered a verdict for \$1,500, but the supreme court reduced this to a nominal sum. Had it not been for the good sense of the second conductor, R. H. Kerr of the Memphis division, the \$1,500 verdict would have been affirmed. Our

#### Courtesy An Asset

Next to brains and health, courtesy, or that attitude which makes one able to gain the good will and esteem of people met in daily contact, is a person's greatest asset. Its value manifests itself by obtaining for the one who possesses it much of the material pleasures of life, and by returns which rise above material conception.

The material pleasures that reward the courteous person may easily be measured in dollars and cents. Courtesy in service marks one for advancement. It gives him a decided advantage over the person who is competing with him but who lacks courtesy.

But the person whose mental capacity does not limit him to the consideration of money as the sole standard for measuring the rewards of life's efforts is the one who can really appreciate the value of this great asset. Courtesy is the prime factor in developing a pleasant personality. It makes one's fellows look up to and respect him. It smooths the road he has to travel. A smile and a pleasant word are reflected, like the image from the looking glass.

Those who cannot acquire the high estimation of the multitude by becoming famous through the usual avenues of popularity can acquire the same results—on a smaller scale, but readily measurable—by making a favorable impression upon the many people met in the course of the day's work through a courteous demeanor, a ready smile and a cheery word.—MILTON LIEBERMAN, *General Manager's Office, Chicago.*

lawyers handled the case well, but, after all, it was Mr. Kerr who saved the day.

### How Unpopular Lawyers Were

It may be of interest to note here that, while lawyers of character now occupy a high place in our civilization and are respected by those who know them, this was not always the case. The early legislation in Virginia, for example, furnishes a number of instances indicating that lawyers were not in favor with the legislature in those days, but were largely regarded as a nuisance. A statute of 1645 contains this provision:

Whereas many troublesome suits are multiplied by the unskillfulness and covetousness of attorneys, who have more intended their own profit, and their inordinate lucre, than the good of their clients; Be it, therefore, enacted, that all mercenary attorneys be wholly expelled from such office except as to suits pending.

This term "mercenary" seems to have been intended to embrace all lawyers who charged fees for their services.

In November, 1647, the legislature went farther and provided:

It is thought *fit* that unto the act forbidding mercenary attorneys, *bee* added that they shall not take any *recompence*, either directly or indirectly. And that it be further enacted, That in case either plaintiff or defendant, by his *weakness*, shall be likely to *loose* his cause, that they themselves may either open the cause in such case of weakness, or shall appoint some *fit* man out of the people to plead the cause, and allow him satisfaction requisite, and not to allow any other attorneys in private causes, *betwixt* man and man, in the country.

In 1658 the legislature went "the limit" and passed this statute:

Whereas, There doth much charge and trouble arise by the admittance of attorneys and lawyers, through pleading of causes, thereby to maintaine *suites* in lawe to the great prejudice and charge of the inhabitants of this *colony*; for prevention thereof, be it enacted by the authority of this present grand assembly, that *noe* person or persons whatsoever, within this *colony*, either lawyers or any other, shall pleade in any *courte* of judicature within this *colony*, or give *councill* in any cause, or controvercie whatsoever, for any kind of *reward* or *proffit* whatsoever, either directly or indirectly, upon the penalty of five thousand pounds of tobacco upon every breach thereof.

### Good Lawyers Are Respected

In spite of this hostile legislation, the profession seemed to thrive, and in 1682 the legislature took a different tack and undertook to regulate fees, fixing, for example, the fee for a case in the general court at "50 shillings or 500 pounds of tobacco" and in the county court at "15 shillings or 100 pounds of tobacco."

The good sense of the people ultimately asserted itself, and statutory regulations of this sort have long ceased to exist, so that, while lawyers who fail to appreciate the responsibilities of their profession are uniformly ill regarded, lawyers of character oc-

cupy now, in the public estimation, an enviable position. Indeed, as all of us know, lawyers have been the leaders in all governmental affairs for the past two centuries. Of the three departments of government—the legislative, the executive and the judicial—lawyers have been in exclusive control of the last and have been the determinative influence in the two others.

A rather widespread fallacy about lawyers in general is that they are experts at ways that are dark and tricks that are vain. No greater fallacy ever existed. The men who become lawyers are, at the outset of their careers, probably of an average with other men in the matter of integrity and honesty. In all law schools, however, the importance of these characteristics in the life of a lawyer is impressed on the students constantly. After a lawyer begins practice, he is always under the spot-light. If he is trying a case in court, there is beside him a keen adversary, watching his every act, and an impartial judge on the bench.

### It Pays to Be Honest

If he is handling a matter in his office, he may feel reasonably sure that somewhere and at some time what he is doing will come under scrutiny. Even if he were inclined to be dishonest, he could not afford to be so. Aside from all this, every lawyer is taught and also learns from observation that he can have no more valuable asset than the confidence of the courts and of the people of his vicinage. Self interest, therefore, demands that he be straightforward. In other words, there are more influences in a lawyer's life conducive toward uprightness and integrity than in any other calling.

Another fallacy which is somewhat widespread is that a railway company employs "smart" lawyers who can "put things over," whether right or wrong. This is a fallacy indeed. Our company does try to obtain the best lawyers, but the integrity and standing of a lawyer is always a first consideration where his employment by the company is in contemplation. The writer of this article has had an experience of eleven years as an officer of the law department, and during all of that period not only has no "short cut" or device of doubtful propriety been attempted but it has never even been suggested by a member either of our department or of any other department.

## *Economizing on Material Consumption*

By K. E. BEAL,

Ass't. Division Storekeeper, Waterloo, Ia.

**A**T school, in the early grades, we were taught elementary astronomy by comparisons intended to impress more indelibly on our minds the vastness of astronomical distances. Thus we learned that the moon was distant from the earth 283,000 miles, and the sun 93,000,000 miles. But we could not appreciate this distance expressed in miles, whereas, when told that an express train traveling at a speed of sixty miles an hour, day and night without stopping, would require nearly 200 days to traverse the space intervening between the moon and the earth and nearly 177 years to negotiate the distance between the sun and the earth, we could more readily realize how vast these intervening spaces were.

There is a certain fascination about statistics and comparative figures. Almost everyone knows that waste is used on a railroad, but few people, including the average railway man, could hazard a close guess as to how much colored cotton and wool waste is used annually on a railroad the size of the Illinois Central.

Take the two divisions served by the Waterloo storehouse, the Iowa and Minnesota divisions. The waste used for all purposes on these two divisions during 1920 would fill a train of sixteen cars. If the total amount of waste used during that year were put in one bale, it would weigh nearly 270,000 pounds. Piled one ordinary bale on top of the other, you could stand on the top bale and look down on a building as high as the Woolworth Building in New York, about 750 feet below your feet.

If all the cloth signal flags purchased for use during 1920 for the same two divisions were sewed together, we would have a huge flag approximately 9,000 feet square. The

candles used on the same divisions in 1920, if molded into one big candle, would furnish light for more than two months; the signal fuses, if made into one big fusee, could be lighted one day and would still be burning nearly seven years later.

Now there are twelve storehouses on the Illinois Central System, some of them furnishing more or less waste, cloth flags, candles, and fusees than the Waterloo storehouse, but I think we can safely multiply the foregoing figures by twelve to arrive at an estimate of the totals of the quantities used on the system. The size of these totals is readily apparent.

How can these totals be reduced? It is

### *Growth*

A saucy little toadstool  
That sprang up in the night  
Said to an acorn lying near:  
"Pray tell me, is this right,  
That oak trees sprout from acorns,  
And it takes them years to grow?  
I've heard about it often,  
And I've wondered if 'twere so."

"Why, yes," the acorn answered,  
"What you heard is very true.  
An oak grows from an acorn,  
And it takes a long while, too.  
But when a great oak tree is grown  
It stands throughout all time,  
Defying wind and rain and storm—  
A monument sublime."

"Oh!" said the toadstool, dolefully,  
"Now isn't it too bad  
They could not spring up quick  
like me?  
I think it very sad."  
But the acorn only answered,  
With a knowing little smile:  
"Things done so quickly, as a rule,  
Are not the things worth while."

difficult to devise any general or concrete plan for economizing on material, except, perhaps, to suggest that all employes whose duties require them to use material do their part by using less this year than they did last year, without impairing their work or the service, and by protecting the company in every way possible against the loss of material.

I have roughly estimated that if all employes on the system whose duties require the use of waste would each use but two pounds a month less than was used last year, they would effect a saving of one full carload for the company. I am sure that a conscientious effort by all employes to economize on material would result in a wonderful saving for the company. All the avenues of leakage should be closed as far as possible. It is a matter for each employe to watch and watch closely.

#### Things We Should or Should Not Do

Keep your station as clean as you expect your house to be.

Why not put your motor car under shelter when not in use?

Yes, I helped to conserve fuel. Did you?

Look for it. What? Business for the Illinois Central.

Help clean up for the winter.

Keep your switches oiled. They will work better.

Do you waste oil? If so, why?

Unload that car today, not tomorrow!

Keep the brakes in good order, and you will not have so many bad order cars.

Are your oil founts, globes and lenses clean? If they are, you will get results.

Do not leave your truck far out on the station platform at night. Put it up next to the wall.

Keep up fuel saving.

Save your old oil barrels for fire protection.

Help educate all in your community to keep right-of-way farm gates closed.

I help the *Illinois Central Magazine*. Do you?

## COMMUNICATIONS

### Family Pride

DEAR EDITOR: My sister has a fine voice and sings in public frequently. When I hear anyone praise her performance, I throw out my chest and say "That's *my* sister." You would think that I deserved the credit for her achievement. But it happens in the best regulated families.

The other day a business man picked up a copy of the *Illinois Central Magazine*, and if I should tell you all the complimentary remarks which he made about it, your new fall hat wouldn't fit. Anyway, he concluded by saying that it was the finest book of its kind that he had ever seen. I surely felt proud, and I said chestily, "That's *our* magazine."

So it ought to be with all employes of the Illinois Central family. When we hear the equipment or the service praised, our chests should expand, and we should say with just pride, "That's *our* road." It is well to know that our road has a splendid reputation; that during one month of this year 99.2 per cent of the passenger trains maintained schedule time; that more than 5,000,000,000 passengers have been carried one mile since a passenger riding in a proper position was injured fatally, and many other achievements of like character, and that we are obligated to do all we can to convince the public that the Illinois Central can back up its reputation by performance.

I suppose you wonder what my sister's voice has to do with the Illinois Central, but it is a sample of family pride in both cases.  
—TILLIE THE TYPIST.

### A Word for Prohibition

TO THE EDITOR: I have been asked, as a laboring man, to give my views on prohibition. In my humble opinion prohibition has in no way been a failure. While it hasn't prohibited it entirely, it certainly has reduced the consumption of whisky. Surely, we can all see a wonderful improvement in general conditions now and during whisky days.

I think I have had an opportunity to see the evil in the curse of it all my life. I have heard it argued from every standpoint by

**Strike No Stock  
in November!**

some very brilliant men, but I have never heard one good thing that it ever did, and we can all look back and see the evil of it. I have seen many a good, noble, Christian woman have to take in sewing, and not only have to do her own washing but wash for others that she might earn some money to buy food and clothing for the children—due to the fact that the breadwinner spent all he made for whisky—something that shortened his life, poisoned his brain and made him hate himself.

I do not argue that you can legislate religion into people, but some of the evil can be, and has been, removed by that process. If every man were big and strong and had the moral courage to walk up and rub a lion in the face, it would be quite different, but such is not the case. Many of them are weak and easily tempted, and such people must be looked after by our law-making bodies. In time to come I think the Eighteenth Amendment will be considered one of the greatest pieces of legislation that was ever put on the statute book. There is nothing in the world that has caused more misery, more heartaches and more want than whisky. Surely we can see that it has been a curse to our nation. And as for light wines and beer, as I heard former Governor Hooper say, "There is no such animal." Anything that will fire a person's brain should not be allowed to be made.

I attended a church entertainment about a year ago. It was in the part of the city where they were all working people, and there were many children present. I never before saw such bright-eyed, rosy-cheeked, neatly dressed, well-nourished children as they were. I know five years previous such would not have been the case, for where there was a saloon, there is now a grocery store or a restaurant, and the children are now receiving more care and attention than they ever did.

What is more disgusting or heart-rending than to see a bright young boy, just coming into manhood, with his brain fired with alcohol? Keep whisky, beer and wine down, and the coming generation will be bigger, brighter and better people. In just a few years a man drinking whisky will be looked on as we look on a "dope" fiend now.

If you call a doctor, he must be sober. If

you consult a lawyer, he must have a clear head. Just stop and think whom you want around you when they are drinking. No one. And no one wants you around when you are drinking. This being true, stay sober, do business and be wanted. A man who has anything to do should be sober, and the man who hasn't needs everything but whisky.

And I am sure, since the good women have a right to vote, they will certainly protect the coming generation from the evil of the past, for many of them know as no one but a mother can know what whisky has done to our American homes.—C. J. BARNETT, *Engineer, Memphis, Tenn.*

## *The Right Spirit*

I got a passenger yesterday morning for our No. 3 who would have gone to another road had I sat back and not mentioned the fact that our road would appreciate the business, and I believe all of our employes, if they put a word in now and then, could assist greatly in getting both passenger and freight business.

You may think it strange I should interest myself in this case, but I would like to see every railway employe interested enough in the railroad where he is employed to work for the best interests of that road, and, in so doing, he would continually make conditions better for himself, for the public and for the railroad.

I believe a railway employe should be just as interested in the welfare of the railroad as a clerk in the clothing store should be for his employer. You or I go into a clothing store to buy a shirt, and the clerk will also want to sell us a necktie. This proves that he is working for his employer. The same applies to railway men. The railroads are in the transportation business, and if the employes will only say a word now and then to people they come in contact with, these people will realize we have transportation for sale and also realize that, since the employes themselves are actually interested, they are bound to get good service and good treatment.—*Letter From a Yardmaster to a Superintendent.*

## Our Professional Host—The Steward

### What a Number of Things the Dining Car Man Has to Do in His Work, and Do Well!

By T. S. ROBINSON,  
Chief Clerk, Dining Service Dept.

THE dictionary defines a "steward" as one who superintends the culinary affairs of a club, hotel or ship. However, this definition conveys to the reader only a superficial idea of the duties of this, the most important post in an eating establishment, whether it be a small cafe in a village or a metropolitan hostelry on Broadway. The pendulum-swing of profit and loss is as clearly defined on the daily sheets of a steward's report as on the ticker of a stock report, and upon him and his services depends the success or failure of the business.

Years ago, when railroads first began experimenting with dining cars (to save time and add comfort for passengers), all they thought of employing were a cook and a waiter and somebody to take in the cash and make change for the passengers eating in the dining car. However, as time wore on, business grew, passengers became more exacting, and the receipts and expenses of the diner fluctuated up and down, regardless of the amount of business transacted, it was deemed necessary to systematize this new department, showing clearly the distribution of all supplies and the results therefrom.

#### Needs a Capable Man

Thus it became necessary to have the services of one who could order the proper supplies in season, make out a menu—*table d'hote* or *a la carte*—for any meal, be a judge of legitimate portions, render the proper service, handle the traveling public courteously and in a business-like manner, at the same time being a bureau of information to anyone who might chance to question him regarding train schedules, connections, hotels and anything else the public is desirous of knowing, and make reports in detail of his trip, financially as well as gastronomically.

In employing dining car stewards the department had to obtain the services of men

with experience in clubs and hotels as waiters, head waiters and stewards: men who had pleasing personalities, who could cater to the most fastidious connoisseurs, who could serve an epicure an *entremets* without hesitancy or embarrassment and at the same time attend to the wants of others, while computing checks, making change, answering questions—all this with propriety and precision, at the same time wearing the smile that never comes off, although subjected to drastic hardships of fatigue, heat, long hours and the mental tortures of the hard-to-please, as well as suffering the mistakes of his cooks and waiters, who often commit blunders unknown to him. There is little doubt that a dining car steward is subjected to more trials and tribulations in handling the traveling public than any employe in the company's service.

#### Handling the Company's Guests

Always neatly dressed and cleanly shaven, he greets the passengers with a smile as they enter the diner, seats them in the most appropriate place—depending on the number in the party—and places a menu and meal-check at their disposal, suggesting some choice viand of the season for their meal. He sees that their order is promptly taken and, when delivered to them by the waiter, has been properly cooked and served. Before the repast is finished he inquires if the food and service are to their liking; should a change be desired, he is on the alert to comply at all times. When the meal is finished, he extends the prices of the articles ordered and computes the total, handing the check to the waiter for collection.

He makes change with lightning-like rapidity, always making it a point to return new currency for change whenever it is possible; the steward usually obtains a hundred dollars of change before starting out on his run. Being a clever dispenser of food, he never permits a passenger to leave the car dissatisfied, but exhausts every

resource to please at all times, being often rewarded by a handsome gratuity.

### No More Work Like This

Before prohibition tossed its dry mantle over the land, rare wines, liquors and champagnes were served on all dining cars, and on many long transcontinental runs the "joy water" was carried in quart bottles. It was the duty of the steward to prepare all mixed drinks as quickly and thoroughly as if ordered over the mahogany railing. Whether martini cocktail or gin rickey, he had it ready for the occasion.

Is it any wonder that many stewards become epicures and spendthrifts, when

they cater to the most fastidious and must eat, drink and dress as becomes their position in life? The pay of a dining car steward has just recently become commensurate with the service rendered, now averaging about \$175 a month, all expenses being furnished free while on the road. It seems to be the rule that a dining car steward nearly always remains in the work, as the calling has its allurements in travel and the fascination of meeting all kinds of people. Then there is always the chance of promotion to inspector, assistant superintendent and superintendent which naturally falls to the most competent man.

## Save Money by Sealing Cars Properly

By C. G. RICHMOND,

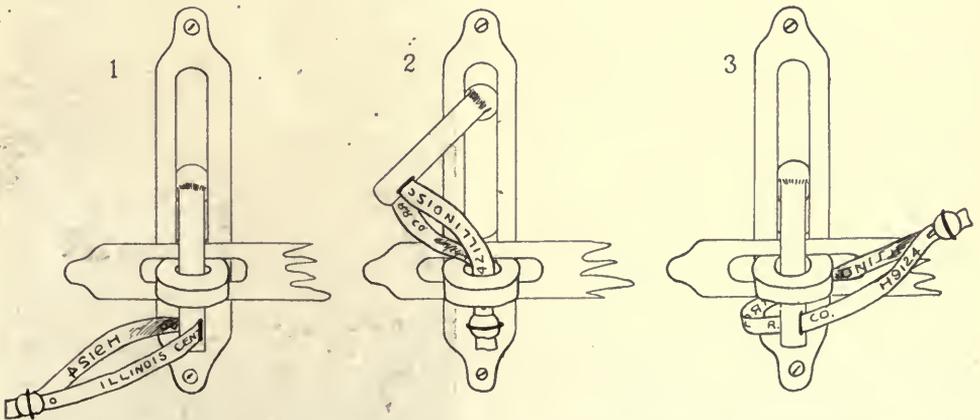

Superintendents, Stations and Transfers

We are indebted to Yard Clerk Phil Reitz of Evansville, Ind., for the accompanying sketch of improper and proper sealing of cars. This sketch is most timely, as at present a great many cars are moving over the Illinois Central System with imperfect seal protection, caused by improper application of seals at the originating stations and the failure to detect the fault at intermediate terminals.

A seal does not in itself protect freight; it protects the record and shows the point where freight cars may have been tampered with. We must first have a properly sealed car and then a proper seal record. The record is valueless unless it is based on a tested seal.

### Cars Opened—Seals Unbroken

During one period of thirty days 103 Tyden seals were removed from as many cars without breaking the seal. *These seals had not been locked.* The seal clerk failed to shove

1. They sealed me this way in a hurry after loading my car with first-class freight and merchandise—

2. We took a journey toward our destination, and at our first stop for water—while no one was looking—a roughly dressed person slipped me through the staple like this, took what he wanted, pulled me back as I was before, and never broke my record.

3. If you want to stop a little leak, seal me like this; for I am one of the many fasteners on box cars that are improperly sealed.—*Words and music by PHIL REITZ, yard clerk at Evansville, Ind.*

the tin end completely into the bell of the seal, which must be done to lock it.

Seal clerks can prevent this failure to lock by testing after sealing. In other words, apply the seal, then give it a quick jerk, which requires but a second's time. This jerk will open the seal in the event it failed to lock. A seal is worthless unless it is locked.

Seal records are an important factor in the settlement of freight claims. Rule 55 of the American Railway Association Freight Claim Division reads as follows:

Carriers shall take record of all seals placed on side and end doors of cars at the time seals are so placed and of all seals removed from cars, taken at the time seals are removed. If seals are placed or removed by shippers, consignees, custom officials, state or authorized or recognized grain inspectors, the carrier shall take seal record as nearly as practicable to the time of placing or removing of seals. Carriers shall also take record of all seals on side and end doors of cars delivered to or received from other carriers at junction points, such records to be taken at the time when cars are placed on interchange tracks.

#### Company Liable for Loss

Rule 56 defines an "imperfect seal record" as follows:

- (a) absence of record of seals on side or end doors;
- (b) absence of record of marks or impressions on the seal;
- (c) when record of seals applied by carriers shows merely the name or initials of the carrier, omitting to show the number or other distinguishing marks appearing on the seal;
- (d) when junction record is not taken as provided in Rule 55 above.

Rule 58 provides that carriers shall be held liable for loss on account of any imperfect seal record.

The following instructions, in effect since December 30, 1920, should be carried out literally by all employees concerned:

Seals must be applied to all closed cars, including stock cars, containing freight of any nature, except cars which may be exempted by special arrangements.

All side-door openings must be sealed; all end doors must be securely fastened inside or sealed.

#### Seals Should Go on Early

Seals should be applied as soon as practicable after the freight has been loaded into the cars and the proper forwarding directions delivered to this company.

Permanent record must be maintained of seals applied to cars loaded at originating sta-

tions and also to loaded cars received from connecting lines.

Seals must be replaced at stations intermediate to the initial and terminal stations where they may have been removed in connection with the loading or discharge of freight or for other proper purposes, or at points where imperfect sealing is detected.

Proper seal record must be maintained on all cars placed on team tracks for delivery, and cars remaining over night on team or house tracks must be sealed and a record made.

Proper sealing and recording of seals, in addition to being of benefit to the freight claim agent, are of value to the chief special agent's department in finding where robberies took place and in seeking the guilty persons.

Proper sealing and incident records are among the most important features of railway operation. The co-operation of all employees is heartily solicited by the management to the end that the Illinois Central System may overcome these delinquencies on its lines.

## TWO DARKIES

Here we have the "Gold Dust Twins," who attracted much attention at the recent style show at Champaign, Ill. The little girl on the right is Affre Wedding, daughter of Operator H. A. Wedding of Champaign. On the left is Margaret Walkington, her friend and playmate.

## *Coffee Business Is Worth Going After*

By EDWARD V. VERLANDER  
City Freight Agent, New Orleans, La.

WITH the coming of the Eighteenth Amendment, so much has been said and written about the use of coffee as a substitute for alcoholic liquors that a word or two concerning its origin, growth and transportation to the point where it is ultimately roasted and made ready for use seems appropriate.

Coffee derives its name from the Arabic *K'Lawah* and sometimes from *Kaffa*, a province of Abyssinia. It was first heard of in Abyssinia in the fifteenth century, the Arabs using it for many purposes, one being to enable them to keep awake during long religious services and ceremonies. Subsequently it grew in favor until it became the national Arabic drink. During the seventeenth century it was introduced into Europe, and in the early part of the eighteenth century its cultivation was extended to Jamaica and other tropical regions of the New World.

### From Central and South America

Almost all coffee consumed in the United States comes from Central and South America, where the plant grows to a height of about eighteen or twenty feet. It blossoms in dense clusters which are very fragrant and evanescent. There are two, three and sometimes more "flushes" of blossoms in one year, and flowers and fruit in all stages may thus be seen on one plant. The fruit, which is a fleshy berry, ripens a dark red, like a cherry, seven months after flowering. The cherry generally contains two seeds, face to face, flat on the facing sides and convex on the others. In the Americas the coffee plants abound at altitudes between 2,000 and 3,500 feet, where the temperature runs from 40 to 80 degrees, averaging 60 to 70 degrees.

After being harvested and cured, coffee is packed generally in standard size burlap bags, averaging 132 pounds to the bag, and then transported by steamship to New York, New Orleans or San Francisco, the two former being the principal ports of importation, although lately importations through San Francisco have increased.

### How Coffee Is Unloaded

At New Orleans, the port of entry in which the Illinois Central is vitally interested and from which it enjoys an inland haul, coffee is unloaded on the wharf to which the vessel is assigned, and from there usually drayed either directly to depots of the inland carrier for immediate forwarding or to warehouses for storage and subsequent forwarding or for local consumption. At the port of debarkation, the first packages unloaded are samples, which are examined by customs inspectors. These samples represent the marks and grades of coffee aboard the vessels. After this examination the samples are turned over to forwarding agents, representing the owners, who in turn express them to the consignees.

During normal times the average cargo of coffee is 70,000 bags, which is discharged at the rate of about 10,000 bags a day.

For the fiscal year ending June 30, 1921, 2,637,211 bags of Brazilian coffee, or approximately 8,000 carloads, allowing 333 bags to the car, were imported through New Orleans. From this, the importance of the traffic to the inland carriers is obvious. As coffee is used at all points reached by the rails of the Illinois Central and its connections, it will be apparent that coffee is a commodity which it behooves all employees to bear in mind when soliciting in the interest of the Illinois Central, as in addition to its volume it comes from a port served by our rails and may be considered 100 per cent business.

## Coal and the Classics Meet in Indiana

*Being Excerpts Here and There from Monthly Bulletins of the Conservation Committee*

COAL and the classics would seem to have no relation, but that is because you have not been reading the monthly bulletins of the Indiana Division Fuel Conservation Committee. The Thomas Jefferson of that group (seven men sign the document each month) has been sprinkling statistics with suitable quotations, and the effect has been to make the argument "go over" in great style. In fact, results have been plainly evident.

"Now that we are pinched off center, let's get under way with some momentum and pass those divisions which are next ahead of us," is the appeal in Bulletin No. 7. "It takes more power to start a thing than to keep it going. Observe the heavy train leaving a station: the engine exerts every ounce of energy to gain momentum; a few lengths away, and it is investing all its resources in speed."

### Faith Is to Be Admired

The officers have had faith in the men, the bulletin points out, and then quotes Turgot: "What I admire in Columbus is not his having discovered a world, but his having gone to search for it on the faith of an opinion."

Efficient young men are needed today, the writer says: "Our ranks are being combed for men with ambition, for men who really want to get ahead, gain momentum in the railroad world, and are willing to prove it by training themselves to do some one thing well. Build up momentum, and keep your momentum as the plus element of power that puts you in the lead and lands you in the terminal of achievement.

"Save one scoop of coal, 14 pounds, 3 cents, between each two mile posts on each trip during April. Watch the results."

### A Word From Roosevelt

Besides analyzing the statistics on coal consumption each month and pointing out the various ways coal can be saved, the bulletin shows in what ways employes besides firemen can help, and then adds: "You boast of your experience, but have you ever tried to use the experience of other men? Talk about this proposition. Roosevelt once said,

'I wish to preach, not the doctrine of ignoble ease, but the doctrine of toil and effort, of labor and strife—the doctrine of the strenuous life.'"

A great man once said, according to the bulletin, that "skepticism has never founded empires, established principles, or changed the world's heart. The great doers of history have always been men of faith."

### A Reference to Prometheus

One bulletin was marked by a discourse on the value of fire. "It is a precious thing, this fire we are endeavoring to keep going, without burning more fuel than is actually required. Five hundred years B. C. the great master of Greek tragedy, Æschylus, wrote the drama 'Prometheus Bound.' Prometheus, a Greek god, considered the champion of man against the oppression of the supreme deity, Zeus, was bound by Zeus to the rocks to be battered by the elements for having given us mortals fire.

"What say I? All too clearly I foresee

The things that come, and nought of pain shall be

By me unlooked for; but I needs must bear My destiny as best I may, knowing well The might resistless of Necessity.

And neither may I speak of this my fate, Nor hold my peace. For I, poor I, through giving

Great gifts to mortal men, am prisoner made

In these fast fetters; yea in fennel stalk I snatched the hidden spring of stolen fire, Which is to men a teacher of all arts, Their chief resource. And now this penalty

Of that offence I pay, fast riveted In chains beneath the open firmament.'

"Don't waste it. Twenty-five hundred years ago it was recognized as man's chief resource. Preserve it."

And the next month, after an explanation of how coal was formed, comes this recital of history:

### An Index of Industrial Progress

"The age of the steam engine is also the age in which the use of coal has become

widespread, and the output of coal is a faithful index of industrial progress. Although the Greek writer Theophrastus (300 B. C.) mentions the use of coal as a fuel, and its use was also known to the ancient Britons and the Chinese, it was virtually unknown throughout the Middle Ages. The first record of coal mining in England is of the year 1180 A. D., and in America in 1750. From that date to 1821 there were mined 15,000 tons. Today the annual output is close to 700 millions of tons, of which approximately 150 millions are consumed in American locomotives alone. Consider that: Better than one of every five tons mined is burned

for one purpose, i. e., draw-bar pull. This one expense on the Illinois Central for 1920 was:

Freight Service.....	\$10,404,074.12
Passenger Service .....	3,361,878.36
Yard Service .....	2,461,583.92

\$16,227,536.40

"The supply will some day be exhausted. Save it."

The signers of the bulletin each month were the members of the committee: G. H. Danver, Thomas Wilson, C. J. Walker, T. J. Cronin, C. A. Keene, E. N. Vane and G. M. O'Rourke, chairman.

## Government Ownership? It's Not So Good

*The following article by J. G. B. Morse of Cambridge, Mass., appeared in The Railroad Employee magazine. It is the result of personal experience in recent travel in Italy.*

"Government ownership, that's the only solution of the problem," writes my railway friend from America.

Well, perhaps he is right. I'm not sure. But would he, I wonder, be so certain if he could see the way government ownership of railroads actually functions today abroad? The following is a fair sample of what the traveler at present will meet on the railroads of Italy, roads that have from the first been under the control of the government.

Since the war the railroads of every country have suffered, but their general condition in Italy seems just a little worse than in most places. The equipment is for the most part of the poorest, dating almost entirely from before the war, and of inferior construction even for that period. Today the roadbeds are actually dangerous, the carriages themselves are not only old and worn, but are usually dirty and in a state which is an invitation to disease germs of all kinds. The passenger trains are divided into three classes: first, second and third, and even the former, which correspond to our Pullman cars, are not cleaned and attended to as they should be.

### Not Exactly Comfortable Traveling

In addition, all three classes of carriages seem to be suffering from flat wheels, and a long journey in one of them is not a thing to

be desired. The interiors, besides being dirty, are never heated, and often one finds broken windows, torn curtains, or carriages without electric light bulbs, a fact which does not render a trip through the numerous tunnels in the northern part of the country more pleasant. Lucky is the traveler who can make himself comfortable in an Italian railway carriage today.

But as if the actual condition of the trains is not bad enough, the journey is made still more unbearable by the fact that unless one arrives at a station an hour ahead of the time of the train's departure, one is not sure of a seat. There is no way of reserving seats, and, as accommodations in all classes are insufficient, to be sure of being able to spend the journey off your feet you must get to the station one hour before the train departs. There is no other way, and the writer remembers an all-night journey from Rome to Turin in which the corridors were filled with people who were forced to remain standing over eight hours. Every train in Italy at present has a crowd of unfortunates who reached the station too late and are forced to stand whether their journey be a short or a long one.

### Train Is Due When It Arrives

This is bad enough, but what is worse is the fact that there are no schedules in Italy. Do not presume that there are no timetables. There are. But no train attempts to follow a timetable. It leaves the station of departure anywhere from ten minutes to half an hour

behind the time stated, and it arrives at its destination anywhere from one to three hours late, depending on the length of the journey. In fact, as one man remarked, in Italy a train is due when it arrives!

And as for speed—well—in this country they don't know what speed is. From Ventimelia, on the French frontier, to Genoa, a distance of ninety-four miles, takes six hours. From Milan to Genoa, a distance of some ninety-odd miles, takes four hours, and from Florence to Venice, a distance of one hundred and eighty-five miles, takes twelve hours. These are fair examples. Some trains make better time, others make worse.

### Strikes Prove Bothersome, Too

And then there is the strike habit. In Italy, when the trainmen feel like a day off, they strike. The strike may be purely local, covering a given city, or a province, or it may include the whole country. Recently the city of Rome was without train service for three days. On one train that departed just before the strike, the crew left the train at midnight, and the journey was continued by a volun-

teer crew at a pace that was described as something slower than a walk. The writer was in Venice recently when no trains left the city for several days, and the scene on the first one that did pull out can better be imagined than described.

In the States just now the people are kicking about the high fares, but they should pay what an Italian is obliged to and they would stop complaining. For instance, an Italian, to travel a distance of two hundred and thirty miles, about as far as from Boston to New York, pays something over \$40. This is first class, second is about \$8 less, and if he cares to sit for ten hours on the board seats in the third class, it comes to only about \$29. Everything is proportionate, and yet the travelers in the States can't see why they have to pay the railroads such a lot of money to get from New York to Philadelphia.

Yes, government ownership of railroads is a great thing, all right. For someone. But that someone isn't the government, it isn't the travelers, and it's a safe bet it isn't the railroad.

## 70,000 MILES OF STEADY SERVICE

Engine 1797, which is assigned to Engineer W. M. Flack on the Birmingham district, Tennessee division, came out of the shop in May, 1919, after receiving general repairs. This engine has made 70,000 miles since that time, and has never failed to take its turn in freight service.

"This is rather a remarkable performance, and we attribute it largely to the interest displayed in the engine by Mr. Flack, and the care of it," writes C. R. Young, superintendent of the Tennessee division.

# *It's Milking Time in Attala County, Miss.*

## *How Our Development Bureau and the Dairy Cow Put King Cotton Down for the Count*

By H. J. SCHWIETERT,  
General Development Agent

THE development bureau of the Illinois Central System has recently completed the third in a series of three dairy promotion campaigns in Attala County, Mississippi. Lectures, charts and motion pictures were used to impress the people of the county with the possibilities of dairying in a country such as theirs, where farming can be stabilized only by the process of returning to the soil the fertility which has been taken from it by years of soil robbing. The campaign was a great success.

Attala County, of which Kosciusko is the county seat, is traversed by the Aberdeen branch of the Illinois Central Railroad. The county is in northern Mississippi, in what is known as the hill country, where the fertility of the soil has become sorely depleted by continuous soil robbing for the past half century or more. Crop production long ago reached the point of diminishing returns to the farmer, and a sincere effort is being made by the citizens to redeem their lands by putting into practice methods that will return to the soil each year more fertility than is taken out of it.

### **Development Bureau Active**

The development bureau took the initiative in this work by putting on a dairy campaign a little more than a year ago, and since that time we have been requested by business men and others to return and follow up with two other special campaigns to sell to the farmers the idea of dairy farming.

The third and last of these campaigns was held the week of October 3 to 8. It was one of the best we have ever held from the point of interest manifested. Thousands turned out to hear the lectures, study the charts and see the motion pictures, to learn what must be done to place their farming operations on a more secure basis. The people were anxious to learn. They came to the meetings to absorb all the information possible, and, after the meetings had lasted until nearly 11 o'clock

at night, many lingered to ask questions on feeding the dairy cow to obtain more economical results, what feeds to grow, and how to grow them. In some instances it was necessary to extinguish the lights in order to get them to leave.

### **Asked Speakers to Return**

In practically every instance the farmers asked us to return in the late fall or winter to tell them a continued story of the marvelous transformation that has taken place in various communities where the farmers awoke to the realization that it was "time to milk," as has been the case in several communities in Attala County. Many white-haired fathers and mothers told us, with tears in their eyes, how glad they were that we had shown them how to make their farms profitable, and how to provide themselves with the funds to make rural life more attractive and to educate their children.

In the communities where dairying was started two years ago, the farmers who forsook "Old King Cotton" and went to milking said it was the best move they ever made. They declared they could not understand why they had not started sooner.

One farmer told me how, through the influence of his wife, they had gone into dairy farming when the Illinois Central helped to establish the co-operative creamery at West, Miss. They found it so much more profitable than growing cotton with their depleted soils and the ravages of the boll weevil that they have not grown a stalk of cotton for three years. He has vowed never to grow another stalk. He has found dairying and poultry raising a safer and surer system of farming.

"Since we commenced dairy farming," his wife told me, "we have sent our oldest daughter to college, and this year two more of our daughters are enjoying the same privilege."

### **How to Tell the Dairy Farmer**

In every instance where we held meetings it was an easy matter to distinguish between the dairy and cotton farmer without asking any questions. The man who is milking a few

good dairy cows has about him an air of certainty and positiveness that distinguishes him from the cotton farmer. The dairy farms are well kept, and as a rule we found the homes on these farms nicely painted and the barns and other buildings in a good state of repair.

Dairy farming has advanced so rapidly in Attala County that Clyde Hester, whose widowed mother was enabled to send her boy to college through the aid of the dairy cow, organized the Kosciusko Creamery about two years ago. Dairy development was then on in earnest. Not only were the farmers interested, but the bankers, merchants and other business men began talking the subject.

In less than two years the Kosciusko Creamery is manufacturing as high as 50,000 pounds of butter a month. This rapid development would do credit to any territory in the corn belt. The bulk of the cream for the creamery is supplied by farmers of Attala County and is delivered by motor truck or wagon.

Many of the farmers make their own deliveries. The creamery now has approximately 200 patrons. Banker Jackson of Kosciusko is of the opinion that at least 75 per cent of the farmers will be milking cows and selling cream in 1922.

The forces of the development bureau were joined by two of the agricultural agents of the Central of Georgia Railway Company for two days. They had been sent over by J. F. Jackson, agricultural agent for that system, to observe how the Illinois Central carries on its development work, with the view of putting some of our methods into practice on the Central of Georgia. They expressed themselves highly pleased with our campaign.

Almost daily new recruits are joining the dairy farmer ranks in Attala County, as evidenced by the number of cream separators that are being sold by local dealers. Attala County farmers are heeding the call of "It's time to milk."

## NEWS of the DIVISIONS

### AROUND CHICAGO Suburban Service

Mrs. Sarah Fennell, who has been ill at the hospital, has resumed work as ticket agent at Cheltenham.

Ticket Agent Jessie Shoemaker has resumed work after spending a vacation in Ohio.

The extension to the viaduct at the Randolph Street suburban station is rapidly nearing completion and will be ready for use shortly. This will go a long way toward relieving the present congested condition in handling the morning and evening crowds at this point.

Miss Elizabeth Lilly is on a vacation with her sister, Mrs. Nellie Reeves, who has been in the hospital.

Charlie Brossow, whose wife recently underwent a serious operation, reports she is regaining her health rapidly.

Ticket Agent Eileen Sullivan is now out of the hospital and gaining.

Ticket Agents Amelia Eberle and Mary Boettcher are off on vacations.

Suburban Flagman Harry L. Holmes is off on account of an injury sustained while assisting a woman passenger who attempted to board his train while in motion.

A. Bernard, superintendent of the suburban passenger service, has addressed the following

letter to Engineer W. J. Stokes: "I note engine 1409, your engine, consumed only 58 pounds of coal per engine mile during September. This placed you at the top of the list of all suburban passenger engines in the small amount of fuel consumed. This is indeed very gratifying, and you are to be congratulated on your excellent showing."

### Magazine Department

Miss Lena J. Tolone, stenographer in the office of the Illinois Central Magazine, was married Sunday afternoon, October 16, to Mario J. Bovaro at St. Anthony's Church, Kensington and Prairie avenues, Chicago. Mr. and Mrs. Bovaro left on a wedding trip to New York and Pittsburgh. After November 1 they will be at home at 10816 Wabash avenue, Chicago.

### Office of Auditor of Freight Receipts

Arthur Piper, chief clerk of interline freight accounts, fifth floor, has been in the Illinois Central Hospital more than a month, and he may not be able to return to work for some time.

Edward Stark has resigned to enter the accounting game in the loop.

Miss Ethel Sherwood, daughter of F. B. Sherwood, auditor of freight overcharge claims, was

married Saturday afternoon, October 22, to Homer Park of St. Louis, Mo. Mr. Park is a traveling auditor with headquarters at Carbondale, Ill.

Miss Margaret Magnusen, comptometer operator, was married September 5 to Guy M. Vincent of Parsons, Kan. Before she left for her new home in the Sunflower State, the girls of the office presented her with a hammered silver tray and basket.

Miss Mildred Winegar has become the bride of G. B. Lindstrom. Their honeymoon was a trip East.

Miss Erna Heublein has been married to E. Seeder. The wedding was a quiet one, due to the illness of the bride's mother.

Miss Ida Johnson surprised everybody by announcing her wedding on the first anniversary of her employment. Miss Johnson and R. C. Smith were married secretly. They took a motor trip through Wisconsin and western Illinois.

Miss Alice Spink, who has been on a three months' leave of absence, has returned much improved in health.

Miss Anna Des Camps and Miss Aletha Hastings have returned from a two weeks' tour through the East. While in Washington they had the honor of shaking hands with President Harding.

Miss Mary McDonald enjoyed a two weeks' vacation in Colorado.

F. E. Trude will return the first of the month. The home of Mrs. L. Swanson (once Florence McDonald) rejoices in the arrival October 18 of a baby boy.

Tuesday evening, October 18, a number of young women gave a surprise party for Miss Blanche Lyon.

When Miss Margaret Maroney left the service September 30, the girls gave a farewell banquet in her honor. Fifty-four of her friends "sat in" to say farewell. The table was beautifully decorated with American Beauty roses and gladiolas.

We were all deeply grieved to learn of the sudden death of Miss Irene Holmgren's father.

The "Sugar Cane Twins," Charlie Zonker and Walter Allaire, have gone South.

Miss May Combs and Miss Susan Lang have announced their annual sorority dance to be held in the ballroom of the Cooper-Carlton Hotel, November 12.

Miss Mabel Skinner will be married October 29.

A. L. Paugh is spending a week's vacation in the South with our old friend, Efficiency Expert William Mills.

Chief Clerk Ed Reha is an expert fisherman. He can prove he is also a great hunter by showing a crane he brought home from his vacation trip and had mounted.

Mrs. Renetta Sterns of Zanesville, Ohio, formerly Miss Renetta Trnosky, and Mrs. J. J. Thompson of Port Dover, Ont., formerly Miss Inez Johnson, send greetings to their Illinois Central friends.

F. E. Bell is to be complimented on the manner in which he supervised the work of the ninth floor during the absence of Chief Clerk Reha on his vacation.

Miss Minnie Puff has rented her home in Elmhurst and will reside in Chicago.

#### Office, Terminal Freight Agent, Fordham

Chief Clerk Howard C. Willemín and Mrs. Willemín are spending their vacation with friends at Pittsburgh, Pa.

Terminal Freight Agent A. Frantz recently enjoyed a fishing trip at Hamlin Lake, Ludington, Mich.

A presentation of a dozen silver teaspoons by the girls of Fordham Office to Mrs. Joe Dawson, formerly Miss Charlotte Bradley, stenographer in the office of the superintendent of freight service, took place at a luncheon given by Mrs. Dawson September 27. Those present were Misses Rose Benjamin, Lucile Curley, Minnie Harris, Violet Crozier, Anna Gibbons, Margaret Wallace, Ethel Lindberg and Sidney Meziere.

#### Baggage and Mail Traffic Dept.

Leonard Mayer, our tracing clerk, and Miss Frieda Haderer have been absent this month on account of sickness.

Mrs. Courtright, while on her way to the train at Parkside, October 17, fell, breaking both arms.

Miss Vesta Shoesmith recently visited Mr. and Mrs. Carlson at Fredonia, N. Y.

Fred Laenhardt has sufficiently recovered his health to return to work, and for the time being will be in the 63rd street mail room.

#### ILLINOIS DIVISION

##### Superintendent's Office, Champaign

Miss Billie Friend, file clerk, has returned from a two weeks' vacation spent with her parents, Mr. and Mrs. T. J. Friend, Flora, Ill.

"Safe Handling of Explosives and Inflammable Articles in Transit" was the subject of an illustrated lecture by Col. James M. Taylor of the Bureau of Explosives at Washington, given before employes of the Illinois Central, Monday night, October 17, at Trainmen's hall. This lecture is the first move in a campaign for more careful transportation of merchandise and other goods on railroads.

##### Kankakee Freight

On September 27, R. S. Stith, warehouse man, had his right leg broken. He was loading a heavy piece of machinery on a truck which slipped, causing the accident.

Train No. 55 was wrecked in Kankakee yard October 4, caused by a broken truck. Seventeen cars of perishable freight were wrecked, three completely demolished and eleven partly wrecked, making it necessary to transfer the contents.

C. E. Cartler, clerk, after four years' service, resigned October 5 to accept a position with the Standard Oil Company.

As an extra precaution to prevent crossing accidents, Claim Agent C. D. Cary has presented each of the crossing flagmen with a police whistle, instructing them to "toot" it vigorously when trains are approaching.

##### Champaign Freight

Harry Mitchell, cashier, left Monday, October 17, on a two weeks' vacation.

Miss Helen Sullivan, who formerly held the position of expense clerk, is now working in the accounting department of the superintendent's office. Miss Amelia Feldhake of Effingham, Ill., is filling the position vacated by Miss Sullivan.

Julius Bialeschkl, warehouse foreman, was called to Shelbyville, October 14, on account of the death of his grandfather.

##### Effingham Freight

Barney J. Utz, cashier in the freight office,

left with his brother October 16 for Tucson, Ariz., his brother going there for his health.

Miss Amelia Feldhake, who was laid off in the reduction in the force at the agent's office, has accepted a position at the freight office at Champagn.

**Kankakee Yard and Roundhouse**

Engineer O. A. Johnson has motored to Minnesota to look over his farm.

Carl Norden, car foreman, has purchased a new automobile.

Engineer C. C. Strauss and Mrs. N. Dick were married October 8, 1921, and spent their honeymoon in Chicago.

Mrs. L. W. Cummings, wife of machinist at Kankakee, underwent a surgical operation at the emergency hospital, and is getting along nicely.

Chief Yard Clerk E. J. Brosseau has purchased a new automobile.

Miss Ursula Grutus of Terre Haute visited a week with her sister, Mrs. E. Damon, wife of Yardmaster Damon.

W. F. Hardgrove, switchman, was off the week of the 15th, attending Masonic meetings in Chicago and Omaha.

Kankakee had a large fire in the business district, October 15. The D. M. Norris & Son hardware store burned to the ground. J. R. Brayton, night yardmaster, who lived in the adjoining building, was driven out by the fire.

**Champaign Yard and Roundhouse**

W. H. Donley, general foreman, returned to his apartment Saturday evening, October 15, and found that burglars had entered his home and taken about \$700 worth of jewelry, etc.

William J. Cochrane, boiler inspector, was seriously injured October 7 when he was struck in the right eye with a piece of metal just as he was entering a fire-box door. The piece of metal was from a tool used by Boilermaker John Coady, who was working inside the fire-box. Mr. Cochrane was rushed to Doctor Kirby, who made arrangements with the Illinois Central Hospital at Chicago and accompanied Mr. Cochrane to Chicago on train No. 24. Mr. Cochrane is reported as improving daily. However, it is still doubtful whether he will lose the sight of his eye.

Firemen L. C. Hagler and H. C. Griffith resigned from the service on the Champaign district October 1 to engage in other business.

The W. J. Zitterel Contracting Company of Webster City, Iowa, has been working at the Champaign roundhouse for the past few weeks, installing a new turntable which is to be 100 feet 8 inches long, taking the place of the 85-foot table. The assignment of some of the 2900 class engines to the Illinois division brought about the installation of the larger turntable, the smaller table not being large enough to turn this type of engine.

M. R. Marmion, day roundhouse clerk, resumed his duties on Monday, October 17, after several days' illness.

V. U. Powell, master mechanic at Burnside, was a visitor at the Champaign roundhouse Monday, October 17.

Mrs. Arthur Beam, wife of Pipe Fitter A. Beam, left Champaign Saturday, October 15, for McComb, Miss., where she will spend the balance of the month visiting relatives.

**WISCONSIN DIVISION**

James Kiley, section foreman at Dodgeville, Wis., was born in Carmarthon, South Wales, December 1, 1858, and died at Dodgeville, Tuesday, October 4, 1921. The cause of death was cancer, says the Dodgeville Chronicle of October 13.

Mr. Kiley lost his mother when three years of age, and two years later came to America, locating in Boston. Two years later he came to Mazomanie, where he grew to manhood. Here, too, he was married January 24, 1883, to Miss Anna Deneen. To this union were born five sons, all of whom are living.

Mr. Kiley is survived by his wife Mrs. Anna Kiley of Dodgeville, and his five sons—Michael of Chicago, William of Montfort, Clarence of Dodgeville, Walter of Cortez, Colo., and Frank of Blue Earth, Minn.

When the Illinois Central was building to Dodgeville, Mr. Kiley came to that city as one of the foremen of construction, and when the road was completed he was given the foremanship of the Dodgeville section, and moved his family there. He had been a valued employe of the Illinois Central for thirty-three years. The respect and appreciation in which officials of the company held Mr. Kiley is shown by a telegram from the general manager of the system and a letter from the roadmaster of the Wisconsin division to Mrs. Kiley after the death of her husband.

For thirty years Mr. Kiley was chief of the fire department of Dodgeville, and saw the equipment grow from a "bucket brigade" to a

James Kiley

modern fire fighting outfit, including a chemical motor truck and pump. Many towns of many times the size of Dodgeville could not boast of a fire chief with the initiative and the executive ability of "Jim." He also served the city for a time as alderman.

Railway officials, ex-officials, and out-of-town employes who attended the services Saturday, October 8, were: L. W. Wallom, supervisor of the Madison and Dodgeville district; John Sullivan, ex-supervisor; John Reardon and Charles Shafer, conductors; Charles Vial (engineer) and Mrs. Vial; N. H. McCaffery (engineer) and daughter Florence; Gordon Reigard, engineer; W. Hummer, bridge constructor, all of Freeport, and R. H. Carter, agent at Jonesdale.

#### Bloomington, Ill.

Miss E. E. Moore has returned from a month's vacation in Spokane, Wash. She reports an enjoyable trip, and in addition secured routing on a car of lumber moving from Spokane to a point on the Erie Railroad, the car to be given the Illinois Central at Council Bluffs.

Agent C. E. Slonaker was a member of a party of agents given a trip over the Illinois Central Southern lines and the Yazoo & Mississippi Valley in recognition of the showing made during the "No Exception" campaign. Bloomington was one of two stations on the Wisconsin division to make the greatest reduction in exceptions during that period.

Here's one for prompt handling of cars for unloading: Car RPX 517 arrived here at 10:40 a. m. today, was placed for unloading at 10:50 a. m., released at 12:40 p. m. and lined up for movement to Roxana, Ill., at 12:50 p. m. Time consumed, 2 hours and 10 minutes.

#### Minonk, Ill.

The many friends of S. A. Roberts will be pleased to learn that he has been promoted to the position of district foreman, with headquarters at Freeport. E. R. Price of Chicago succeeded Foreman Roberts.

Miss Jessie Roberts, 31 years old, daughter of Foreman S. A. Roberts, died in Chicago, September 6, and was buried at Omaha.

The yards are now in the finest shape ever known, due to the work of Foreman Roathe and his men. The "hump" in the south end is fast disappearing since it was made known the dirt could be had for the hauling. When this is entirely removed and the old ponds of the coal company at the north end are filled Minonk will make them all sit up and take notice when it comes to neat station grounds.

The Minonk mine is again in full operation, after having installed considerable new equipment consisting, in part, of a new steel tower, tippie and shaker screens and automatic dumping and weighing machinery.

The potato season is now at its height. Our drive is never without one or more cars of potatoes. They are selling at from \$2, at the start, to as low as \$1.25 a bushel.

#### MINNESOTA DIVISION

Superintendent L. E. McCabe has returned from Memphis, Tenn., where he was called on business.

Trainmaster L. E. Strouse has returned from a two weeks' vacation spent in Minneapolis and St. Paul.

Frank Hardy, trainmaster's clerk at Waterloo, and Miss Nell O'Herrin of Dubuque were married October 4 in the Cathedral at Dubuque.

## A FOOT-LOOSE AND CARE-FREE PAIR

Here we have, on the hood of the car, ThirdTrick Operator C. W. Atkinson of Minonk, Ill., Wisconsin division. The other man is his friend, Paul Cunningham, with whom he is touring California. The two left Minonk, Monday, September 12, driving this car, which has a body they made themselves. They carry a grip on each side, and everything else, including a "pup" tent and complete cooking outfit, goes under a waterproof covering in the rear. They report rains and mud, but a good time.

After spending their honeymoon in New Orleans and Wichita Falls, Texas, they will reside in Waterloo.

Misses Genevieve Sims and Hilda Blichman recently spent the week-end in Chicago.

Our sympathy is extended to Conductor L. L. Cooling, in the loss of his little daughter, Aerial, aged 9, who passed away October 6 at their home, Needham Place, Dubuque, Iowa.

J. R. Morphew and C. W. Lentz of the bridge and building department, Chicago, were in Dubuque recently.

J. B. Cornelius, conductor on Nos. 31 and 32 for the past several years, was retired on a pension September 1, on account of failing health. He has been succeeded by T. Flynn.

A baby daughter arrived at the home of Roadmaster H. Rhoads, October 5.

Our sympathy is extended to Frank Meyer, messenger in the superintendent's office, in the loss of his father, George J. Meyer, who died at his home in Dubuque, September 28.

Mike Oster, assistant chief clerk to the superintendent, recently purchased an automobile.

D. W. Loban, who became agent at Osage, Iowa, in the fall of 1887, and who has been in practically continuous service of the company since, has now retired from that work and is placed on the list of pensioners by the company. When Mr. Loban took charge at Osage, he relieved Frank Munger as agent. With the exception of five years in Waterloo and four years in Galena, Ill., he has been in charge of the Osage station since. In all these years of service, he has not missed more than six months from his labors. Mr. Loban is now connected with the Monarch Film Co.

#### INDIANA DIVISION Mattoon Shops

T. J. McGinnis, clerk in the special accountant's office at the Mattoon shops, has returned to work following an operation for appendicitis.

Miss Freida Byerly has become stenographer in the office of the division storekeeper at Mattoon.

Ralph Rhue has been transferred as stock-keeper at Palestine. He is the father of a daughter.

C. H. Love, machine foreman, and Mrs. Love have returned from a vacation in Oklahoma City.

J. A. Bell, master mechanic, and Mrs. Bell have returned from Gainesville, Ga., where they accompanied their daughter, Mildred, who entered Breneau College.

A representative of the Mattoon (Ill.) Journal-Gazette, in conversation with Agent M. Dorsey, was "called" for having a lighted cigar with him. Mr. Dorsey stated that the rule of "No Smoking" had been followed by him in all the forty years that he had been dealing with the care of railway property in freight houses, during all of which time, he said, "I have not had a single fire loss," and he reached over to a wooden pillar of the freight platform roof and "knocked on wood," showing that the Lord Chesterfield of the Indiana division has also the common human emotion of prudence.

W. C. Scott, third trick telegrapher at Newton, Ill., who is relieving Elmer Moore, now on a vacation, was held up at the Illinois Central station, at 2 o'clock the morning of October 6, overpowered, bound and locked in the cold storage room across the tracks to the east. The robbers knocked the combination off the office safe with a hammer and took about \$50. Three men are reported to have been engaged in the

hold-up and safe looting. Discovery of the robbery was made by the Mattoon dispatcher's calling Newton. Receiving no answer he switched to Olney and told of his belief that something was wrong. The Olney telegraph operator telephoned to the residence of R. E. Bayles, Newton agent, who at once went to the Newton station and found out what had occurred.

#### SPRINGFIELD DIVISION

The bridge and building department of the Illinois Central performed rather a unique job September 25, when it picked up a depot at Jenkins Switch, three miles west of Clinton, Ill., and moved it a distance of forty miles to Teheran, near Havana. The structure was a fair sized building, 16x40 feet. The agency at Jenkins was discontinued over two years ago. The building was loaded on flat cars. While passing the coal chutes at Lincoln it was necessary to roll the building to one side of the flat car in order to clear, and in passing two other places it was rolled to the opposite side and later readjusted. The transfer was made in one-half day.

#### ST. LOUIS DIVISION

E. H. Smith, freight train performance clerk, attended the state convention of the American Legion at Decatur, Ill., October 9 to 11.

Trainmaster W. R. Givens, Mounds, is off duty on account of illness.

D. W. Saunders, general foreman, Mounds, has been appointed general foreman, Twenty-seventh street, Chicago, Ill. H. C. Elsner, round-house foreman, Mounds, has been promoted to general foreman at that point. T. H. Cary, from Burnside, has assumed the duties of round-house foreman, Mounds.

Ice Inspector George E. Titus, Mounds, has been in the hospital at Chicago for special treatment for some time.

Walter Trammel, check clerk, Carbondale, who has been off duty for some time on account of illness, is able to be back to his post of duty.

General Car Foreman W. J. Biggerstaff, Mounds, resumed his duties October 10 after a few days' leave of absence.

William Ashley, son of Conductor C. H. Ashley and formerly employed in the division office, Carbondale, has been in Holden Hospital, Carbondale, for a number of weeks, having successfully undergone two operations.

Conductor Harry Adams, Centralia, is aiding in the fuel conservation drive by his skill in drawing, furnishing sketches to make more impressive the idea of saving fuel.

Marcus Vitt, 8-year-old son of Switchman A. A. Vitt, Carbondale, died October 15.

Mrs. Mary O'Connell, mother-in-law of Chief Clerk H. C. Culley, Carbondale, died Sunday, October 16, and was buried at Grand Tower, Ill., October 18.

#### Centralia, Ill.

Clerk Glen Stonecipher and Mrs. Stonecipher are the parents of a boy.

Clerke Everett Beebe and Mrs. Beebe are also the parents of a boy.

John Sproat of Clinton, Ill., has become secretary to Trainmaster F. T. Gibbs.

General Yardmaster R. E. Adams, Assistant Yardmaster J. F. Smithers and Hump Clerk J. E. Combs are able to be on duty again after recovering from an automobile accident August 31. The car in which these men were going to work, owned by Mr. Adams, skidded at a

sharp turn in the road and turned over three times.

J. R. McFarland, conductor on the St. Louis division, has been appointed assistant general yardmaster at Centralia.

Gottlieb Reichman, clerk at the south scales, and Miss Ethel Bateman of Irvington, Ill., were married a short time ago.

Switchman F. M. Miller is off duty for a few days because of a mashed thumb. While making a coupling his thumb was caught in the pin.

Business has increased on the St. Louis division to such an extent that it was necessary to resume work on the second shift of the hump at Centralia.

Michael J. Moffett, agent for the Illinois Central at Pinckneyville, Ill., St. Louis division, died at his home Thursday, October 13, at the age of 61 years. Death

was due to heart trouble and other complications. For several years he had been in failing health, but he kept steadily on most of the time in the performance of his duty as agent, until six weeks ago, after beginning his day's labor at his desk, he became very ill and returned to his home.

Funeral services were held Saturday, October 15, at St. Bruno's Catholic Church, of which he was a devout member. Following the regular church service by the pastor, Father Strumpf, assisted by Father Schauerte of Murphysboro, Father Eschmann of Du Quoin spoke beautifully of the life and work of Mr. Moffett.

Mr. Moffett was born at Edinburg, Ind., April 8, 1860. Being thrown upon his own resources at a very tender age, he began his railway career when he was 13 years old, working as a section hand. Later he learned telegraphy and other office work. In 1889 he went to Pinckneyville as ticket agent and later, by strict attention to his work, faithfulness, co-operation with his fellow men and the company, he was made agent.

He was esteemed by all the officers and employees. The railway men had confidence in his judgment, and he was highly respected by them and the public. Many a ticket Mr. Moffett bought with funds from his own pocket for some unfortunate traveler at the Illinois Central station. More than once he sent some small boy to his home, telephoning his good wife to give the little waif something to eat and some clothing.

Mr. Moffett was married to Miss Frances Bischof March 2, 1897. She died October 23, 1903, leaving two little girls, Marcella and Mary Agnes. January 17, 1906, he was married to Miss Hannah M. Bischof. To this union was born one son, Owen.

Among railway men who attended the funeral were W. Atwill, superintendent of the St. Louis division; Trainmaster Frank Hatch and Joseph Youngblood of Carbondale, Robert Moeser of Belleville, David Brownlee of St. Louis, S. T.

Turlay and Morris Mulconery of East St. Louis. —Contributed by Miss Marie Eaton, deputy county clerk.

In a spectacular early morning fire October 12, the Illinois Central station at Marissa, Ill., was totally destroyed, entailing not only the loss of the building, but the destruction of several thousand dollars' worth of freight.

The fire was discovered at about 4 a. m. by Harvey Church, night telegraph operator. He barely had time to send the call in the station and flee.

Two thousand pounds of carbide was stored in the freight-room. As soon as the water hit this, there was an explosion, but no one was injured. Many fruit cans exploded, the cans being hurled high into the air.

The station's supply of tickets was destroyed.

#### KENTUCKY DIVISION

J. William Ferguson, 21, station agent for the Illinois Central at Rockport, Ky., died September 29 in the Illinois Central Hospital at Paducah as a result of a fracture of the skull and internal injuries. Ferguson was found lying between the rails near the Rockport station, but too late to keep a fast passenger train from striking him, according to the report. How Ferguson happened to be between the tracks has not been learned. It is possible that he was assaulted and then thrown on the tracks to cover the crime. Ferguson had been in the employ of the Illinois Central since a lad. Until a few weeks ago he was employed at the station at Sturgis, Ky. He was a member of the Masonic and Odd Fellows lodges.

Christopher Klinger, commercial agent of the Illinois Central, who died at Louisville, Ky., on July 2, was possessed of more than the ordinary sense of foresight. He seemed to have a premonition of his death. Sunday, June 5, he slipped into his office and saw to it that his desk was in its usual good order. He then went home, made all arrangements necessary in the event of his death, and, going to bed, seemed to sense that his death would only be a question of days.

With the closing of that desk, there was ended the career of one of the Illinois Central's most widely known representatives.

Mr. Klinger was born March 13, 1857, in Louisville, in which city his entire life was spent. There it was he received his education in the public schools, high school, and finally business college. There it was he learned the trade of lithographer and engraver. And there it was his railway career began and ended.

His first railway position was with the old Jeffersonville, Madison & Indianapolis Railroad, now a part of the Pennsylvania System, where he served as a yard clerk for a year. During the eighteen months following he was a checker on the Monon platform.

In 1883 Mr. Klinger entered the service of the Chesapeake & Ohio Southwestern as assistant agent at Fourteenth and Kentucky streets, a position which he held until 1903, during which time the C. & O. S. W. became a part of the Illinois Central.

July 1, 1903, Mr. Klinger was made contracting freight agent at the Louisville commercial office, and by a singular coincidence it was exactly seven years later, July 1, 1910, that he was appointed commercial agent at Louisville, succeeding T. B. McCabe, deceased.

Conservative, frank, sincere, he was a man of singular characteristics. His business judgment was sound. He was thrifty, and more—he was not ashamed of it. Of a retiring disposition, he detested publicity—so much so, in fact, that you

Michael J. Moffett

will not find a photograph of him, save an occasional group picture taken while on an official errand. But the outstanding point in his life was his large circle of friends. President, clerk or laborer, he knew them all. Many are they, including a host of employes of the Illinois Central System, who will miss "Chris" and his genial, wholesome manner.

**TENNESSEE DIVISION  
Jackson, Tenn.**

C. E. Sieber, traveling engineer on the Mississippi division, is back at his post, looking much improved, after several days in the hospital at Chicago.

W. Wilcox, roundhouse foreman at Jackson shops, is enjoying a well earned vacation.

B. D. Little, erecting foreman, has moved into the new home which he just completed on Fairground street.

Mr. and Mrs. James O'Conner are receiving congratulations upon the arrival of a son, who has been named James O'Conner, Jr.

**Dyersburg, Tenn.**

Agent W. N. Waggoner attended a meeting of officials and agent in Memphis, October 4, in regard to the method of handling cotton at compress points.

Miss Jemmie Pritchard, demurrage clerk, spent a few days in Hickman last week.

**Fulton, Ky.**

Superintendent C. R. Young and Trainmasters H. W. Williams and J. J. Hill spent several days last week in Memphis, working on the new timetable.

W. H. Cox, track supervisor, and Mrs. Cox are enjoying their vacation in Hot Springs, Ark.

B. E. Albert, general car foreman, attended the Tri-State Fair in Memphis last week, as also did General Foreman Huddleston.

A. N. Matheny, storekeeper, surprised his many friends, Saturday, September 24, when he and Miss Ruby Norris of Fulton were married.

Dr. Joseph Read Luten of Fulton, local surgeon for the Illinois Central forty-four years, died Sunday evening, September 11, at his home in Fulton. He had been critically ill for five weeks. Doctor Luten was born in Moscow, Hickman County, Kentucky, March 6, 1843. At the breaking out of the Civil War he enlisted in Capt. H. A. Tyler's Company of Forrest's cavalry, in which he served faithfully until he received his honorable discharge. In 1864 he completed his education in medical universities in Philadelphia and New Orleans, and in 1875 he located in Fulton. He was appointed local surgeon for the C. O. & S. W., later the Illinois Central, in 1876, and was in active service until his death. In 1881 he was elected to the legislature from Fulton and Hickman counties.

**LOUISIANA DIVISION OFFICE FORCE**

Left to right, standing—Carl McGowen, messenger; O. E. Bell, auditor; J. E. Cope, Sr., car distributor; F. M. Cross, timekeeper; C. M. Streibich, accountant; R. F. Bundy, instrumentman accountant; Earl McGowen, F. R. Kermeen, accountants; F. A. Tyner, timekeeper; I. F. Tullis, assistant chief accountant; J. A. Parnell, J. A. Anderson, accountants; George Edwards, rodman; C. H. Douglass, accountant; L. W. King, instrumentman; Herbert Douglass, accountant; H. E. Prescott, assistant file clerk; F. E. Brasfield, accountant; J. W. Beacham, supervisor's clerk; A. C. Turax, chief accountant, store department; George Little, accountant; G. F. Odhen, assistant division storekeeper; W. P. Alvarez, clerk store department.

Next row, sitting—E. H. Lewis, assistant engineer; W. D. Dodds, private secretary; E. A. McGuinness, assistant chief clerk to the superintendent; W. T. McGuire, chief clerk to the superintendent; C. B. Sauls, division storekeeper; T. J. Quigley, superintendent; J. E. Schneider, chief dispatcher; C. L. Carroll, W. P. Bonds, dispatchers; H. A. Wilmot, chief accountant.

Women, except the four in front—Katie Browne, trainmaster's clerk; Frances Othen, stenographer; Marie Wardlaw, clerk to the roadmaster; Una Holmes, comptometer operator; Bessie Lane, performance clerk; Altha Day, tonnage clerk; Beulah Clendenning, efficiency clerk; Gladys Browder, chief performance clerk; Beulah Youngblood, accountant; Roberta Darville, stenographer, road department; Lois Williams, stenographer, superintendent's office; Vivian Johnson, clerk; Louise Bridges, chief file clerk; Hettie McKnight, invoice clerk, store department; Mary Browne, performance clerk; Mattie Thornhill, clerk.

Front row—Claire Pimm, supervising agent's clerk; May D. McMichael, clerk to the chief dispatcher; Della May Dougall, statistician; Maude Walker, stenographer to the chief accountant.

# Hamilton Watch

"The Railroad Timekeeper of America"

## The Watch of the Greatest Mileage

This is a country far excelling all others in railroad mileage. The pre-war railroad mileage of the United States was 249,852 miles—more than twice the totals of Canada, the United Kingdom, France, and Germany added together.

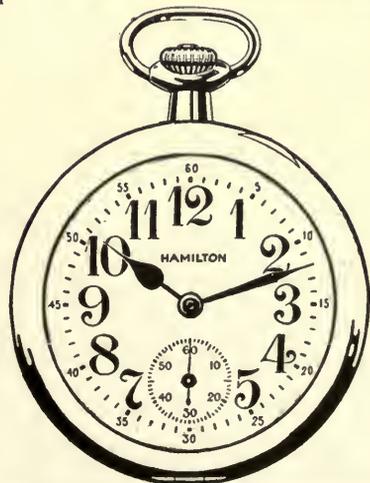

That the Hamilton Watch should be the most popular timekeeper over the world's greatest railroad mileage is a fact worth thinking about when you buy a watch.

Patrick J. Landy, the efficient conductor shown here, runs out of Chicago on the Fast Mail—No. 9 on the C. & N. W. He brings back the Iowa-Dakota Express. His service with the C. & N. W. began in 1879. He bought his Hamilton Watch "in the nineties." He is still running trains by it.

When you buy, inspect the Hamilton models that railroad men favor, particularly 992 (16 size, 21 jewels). Hamilton Watches range in price from \$40 to \$200; movements alone, \$22 (in Canada, \$25) and up.

Send for "The Timekeeper," an interesting booklet about the manufacture and care of fine watches. The different Hamiltons are illustrated, and prices given.

HAMILTON WATCH COMPANY  
Lancaster, Pa.

Funeral services were held from the family residence Tuesday afternoon, September 13.

Superintendent C. R. Young addressed a letter of commendation to Conductor J. J. Powers, Jackson, Tenn., October 5, with reference to interest manifested by him while in charge of Train 51, Engine 1734, at Corinth, Miss., September 30. Engine 1734 broke reversing gear and could not be used in backward motion. Conductor Powers used Switch Engine 659 at Corinth to set off Corinth cars, and obtained clamps, bolts and parts removed from cars on hand at Corinth and made repairs to the engine so that the train could be handled to its destination. The train was delayed only thirty-five minutes at Corinth for making repairs and arrived at Haleyville ahead of schedule. Superintendent Young wrote: "The interest and good judgment manifested in this case are appreciated by myself and other division officers and substantiate the statement that I have repeatedly made that the men on the Tennessee division are equal to any emergency that may arise. The interest and action taken by you in this instance are the sort of things that go a long way toward making a first-class railroad."

Engineer J. E. Green has written from Mounds, Ill., to Master Mechanic L. Grimes at Jackson, Tenn., as follows:

"This is to advise you that my fireman and I are in and have been in, the fuel campaign since it has been on.

"First, I wish to say, for an engine crew to accomplish success in such a campaign, they must be equipped with the best material with which to work—they must co-operate with each other.

"I feel very proud of my position as locomotive engineer in the employment of the most splendid railroad in the world, and I am very proud of the shop force at Jackson, Tenn., with whom I am associated, and their excellent service in co-operating with the engineers in assisting us in the up-keep of our engines. I can, however, speak only of the condition of my own engine in this case, for it is the only one which I have run. I am truly glad to advise you that this engine is in excellent condition, due to the splendid service of your shop force. According to my belief, Engine 1735 has been out of the shop a little more than thirteen months, and I will say that the machinery and draft rigging are beyond question.

"As evidence of my statement above, I will give the accomplishments of my engine on my last trip:

"We were listed out of Jackson on Train No. 52, September 8, called for 4:15 p. m. on engine and 4:30 p. m. on train. Left Frogmoor 4:50 p. m. with 1,858 tons; met No. 5 at Oakfield, on time; came to Martin, delayed 1 hour 45 minutes doing work and letting trains No. 24 and No. 10 pass; filled to 2,300 tons at Martin; ran coal chute at Fulton, and arrived at Mounds at 1 a. m., September 9; made a coal ticket for six tons of coal there, which would amply fill space in tank.

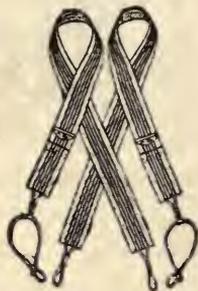

"The safety valves were open only once, and that was due to my having to shut engine off unexpectedly and reduce speed of my train."

MEMPHIS, TENN.

Miss Corynne Jackson was married October 15, at Memphis, to Edwin H. Bock. The ceremony took place at the Autumn Avenue Presbyterian Church, the Rev. J. B. Carpenter officiating. Mr. Bock is chief clerk to R. J. Car-

**MEMPHIS TERMINAL DIVISION**  
Mechanical Department

L. T. Fox, machinist, erecting shop, was injured recently by a piece of steel striking him in the eye. He has resumed work.

P. Lauders, machinist's apprentice, was injured by being caught between the table and frame of a boring mill. He has resumed work.

C. F. Newman, machinist, erecting shop, has returned home from San Antonio, Tex., where he was called by the illness of relatives.

L. R. Watson, machinist, erecting shop, who had the misfortune to lose both of his children the first part of the month, desires to thank his shopmates for their sympathy and assistance in his bereavement.

O. F. Heckinger, machinist, fitting shop, has returned to work after an illness of ten days.

Mark Hansen, machinist apprentice, fitting room, who has been on the injured list with a mashed finger, caused by striking it with a hammer, has returned to work after an absence of a few days.

William Kelley, machinist, erecting shop, has resumed work after being on the sick list for a few days.

G. A. Gaden, roundhouse foreman, has resumed his duties after a two weeks' vacation.

William A. Frost and Mrs. Frost have returned from Chicago, where they were called by the illness of a relative.

E. M. Lyle, machinist, roundhouse, who has been on the sick list for the last ten days, has so far recovered as to resume work.

R. Burdell, machinist's apprentice, who had the misfortune to lose the end of his finger which was caught between the tool holder and dog of a lathe, has resumed work.

The Memphis Illinois Central indoor baseball team would like to arrange a series of games with Memphis teams or any clubs from outside the city. Address George Marrero, manager, Illinois Central Shops. In the series of baseball games between the Memphis and Nonconnah shops at Gaston Park much interest is being taken by employes. The features of the games to date have been the catching of Waycoster and the pitching of Carpenter. Much credit must also be given Daddy Wilkes, the Babe Ruth of the team, who distinguished himself by timely hits and daring base running for the Nonconnah shops, and the pitching and catching of the Arnold brothers. The games to date have been as follows: First game, Memphis, 15; Nonconnah, 8; second game, Memphis, 9; Nonconnah, 15; third game, Memphis, 7; Nonconnah, 5.

F. Reedy, blacksmith shop, has returned to work after an illness of several days.

Instrumentman S. P. Critz is on a short vacation.

Mrs. Cross, wife of Rodman Cross, was seriously injured in an automobile accident last week.

Mrs. Bill Wolf, accounting department, superintendent's office, is on her vacation.

James Doherty, file clerk, has resigned his position with the road.

Joe Gulo, car distributor, has left Central Station for the tower of Lake Cormorant.

The following is the motto of the accounting department in the superintendent's office at Memphis:

When you get down of mornings  
 O ut with your work,  
 R oll up your sleeves, boy,  
 K ick in and don't shirk.

L et the little jobs wait,  
 I f they must, for a while,  
 K ill all the tough nuts—  
 E ach one—with a smile.

H ave no fear of their bigness,  
 E ach is simple, you'll find,  
 L ag not, and at night  
 L eave a clear deck behind.

MISSISSIPPI DIVISION

Hugh Jennings, foreman of a construction gang in the employ of the Illinois Central, was killed by a local freight train September 29. Mr. Jennings, whose crew was working near Pickens, was superintending the men operating a concrete mixer, which was preparing material to put in some forms that were placed under a culvert. The mixer was making a good deal of noise, and he did not notice the approaching train until too near him to get out of the way. The engine struck him, killing him instantly. Mr. Jennings was a middle aged man, having been married several years. His home was in Grenada.

LOUISIANA DIVISION

Supervising Agent W. E. McCloy and Mrs. McCloy are spending their vacation in Missouri.

Everybody on the Louisiana division is preparing for Perfect Package month.

tember 30. This was her first vote and it happened that it was cast on her birthday.

**Mechanical Department**

A campaign has been begun by Master Mechanic Roddie and General Foreman Royal to make McComb the cleanest shop on the system. Two flags have been made, one white and the other black. The white flag has "Cleanest Shop," while the black flag has "Dirtiest Shop" painted across the face. An inspection committee has been appointed by Mr. Royal, composed of Blacksmith Foreman W. J. Shea as chairman and Foremen Abbott and Hunt as committeemen. Inspections will be made each second and fourth Monday. Any recommendations made by the committee will be written up to each man concerned, and any irregularities handled for correction. One inspection has been made, and it was not necessary to place the dirty flag. The shops were found in good condition. The committee reported that the foundry was in better condition than it had been in forty years.

Erecting Foremen Lyons and Haley have returned from a vacation. Foreman Lyons visited Buffalo, Chicago and points in the East. Foreman Haley recuperated at Brown's Wells, Miss. Foreman Shea also visited in Mobile and along the Gulf coast.

Government Inspector Bennett paid us a visit this week. Mr. Bennett says, "It's like taking a vacation to come to McComb."

General Foreman Royal is receiving congratulations on the arrival of a son September 3, George Clinton.

Engine Carpenter H. D. Boussoun has returned to work after being off several days on account of injury. Mr. Boussoun was sent to the Illinois Central Hospital in New Orleans, and is enthusiastic over the good treatment he received while there.

The sympathy of all is extended to General Foreman Miller, Asylum, formerly employed at McComb, and Machinist O. L. Miller, of McComb shops, in the death of their wife and mother, which occurred September 15.

**VICKSBURG DIVISION**

L. R. Swisher, chief dispatcher, reports business at local shipping points in excellent progress, with a car supply sufficient to protect all demands.

Conductors Hoke and Witherspoon and Dispatcher R. L. Page are keeping quiet about developments around El Dorado, but recent news of several good oil wells brought in on their holdings has been sufficient to keep up the usual smiles.

Herbert Cadenhead, younger brother of Charles Cadenhead, has recently been employed as assistant night ticket clerk at Greenville.

News that the fuel campaign was to continue through October was received with the usual determination by all officers and employes to make the second's better than the first month's results.

**NEW ORLEANS DIVISION**

Mayor Grouchy of Baton Rouge, La., has received information that Baton Rouge has been designated as a main station along the chartered airway between the Lakes and the Gulf. This designation, according to Major Clagett, becomes final only upon the location in or near the city of a safe landing field for airplanes. The main stations already selected for the Lakes to the Gulf airway include Chicago, Rantoul,

Engineer J. R. Tusson has been commended for quick action in slowing down his train (No. 12) and saving from destruction an automobile which had stalled on the track in front of him on a sharp curve.

S. H. Mullins, section foreman from Myles to St. Elmo on the "Little J," was seriously injured in a railway motor car accident at Insmore, Miss., August 26. Mr. Mullins was seated on the right side of the motor car, and under him was a crowbar, point forward. While the car was going up the hill at the crossing of Willwood Farm, near Insmore, the crowbar slipped forward, striking between the rail and cross-tie, at the same time throwing Mr. Mullins off the seat to the ground, paralleling his body with the right side of the track. The two wheels of the car passed over his right forearm and arm, breaking them in three places. The locomotive of the 11 o'clock passenger train at Carlisle was detained, with baggage car and caboose of the local freight. This special train carried Mr. Mullins to Jackson, where hospital surgeons amputated his arm near the shoulder.

The new and commodious yard office at Baton Rouge, La., was ready for occupancy October 11, and on that date the office force moved in. The large volume of business done by the company at this point can now be handled more expeditiously and satisfactorily, and the office force is correspondingly delighted.

The handsome residence of Road Supervisor H. D. Cunningham, at Wilson, La., was recently destroyed by fire. At the same time the home of Engineer W. A. Falconer was burned.

Miss Jimmie Clark, operator, of Ethel, La., was recently married to W. R. Hertzler of the dispatcher's forces at Baton Rouge.

L. F. Cato, agent at Stampley, Miss., is receiving congratulations on his marriage.

Supervising Agent A. S. Hurt has just returned from a visit to his old home at Milan, Tenn., where he attended the wedding of his niece, Miss Mildred Pearce, to Ransom Burford, a merchant of Leland, Miss. This event will be of special interest to old timers, as Mrs. Burford is the daughter of the late Allen Q. Pearce, at one time city ticket agent at Vicksburg, Miss., and later traveling passenger agent, well known in railroad and business circles.

The announcement of the marriage of D. E. Hopper, chief accountant in Master Mechanic Christy's office, to Miss Marian Glass came as a surprise to their many friends.

John L. Sullivan, of the freight department, is receiving congratulations on the arrival of a boy in his home.

Miss Louise Bankston and Mrs. Leona Ingram, of the superintendent's office, were recent visitors to Jackson, Miss.

Will DeJong, who has been quite ill, is back

**SLINGERLAND SCHOOL OF MUSIC, Inc.**  
1815 Orchard Street Dept. 109 Chicago, Illinois

at his desk in Master Mechanic Christy's office.

The New Orleans division, which has been lagging somewhat in contributing to the division news of the magazine, has organized a plan in which every employe is a reporter. A clearing house for news has been established in the superintendent's office at Vicksburg, with one of the accountants in charge. All contributions of general interest are solicited for consideration. Neal McLean, of the Natchez freight department, will co-operate for his district.

**Natchez, Miss.**

Warehouse Foreman Will K. Carney is away for a few days, having taken his wife and young child, Beverly, to the Illinois Central Hospital at New Orleans, the child to undergo treatment.

Engine Foreman Frank Moore has a vacation for a few days to visit his old Masonic Lodge at Wilson, La., where several of his friends are taking the Royal Arch degree in Masonry.

The Natchez freight office is congratulating itself upon handling a large tonnage of pecans to Northern markets this year, and accords great credit to Check Clerk Case, who was largely instrumental in securing this absolutely new business.

Accountants Ernest D. Goza and Robert K. Holman and Cashier Victor A. Jehlen have become the nimrods of the Natchez freight office. They are no mean bird hunters, either, as their last year's kill will bear witness. The bird season opens November 1, and the Natchez country is famous for its fine hunting grounds of open sedge fields. We all invite our less favored comrades to come down and join us in the bird chase. Ticket Agent Walter Lowry has also developed into a bird hunting enthusiast.

Major and Mrs. Robert L. Montgomery have returned from a delightful trip to California, where the major was a delegate to the Grand Lodge of Elks, held in Los Angeles. The major enjoyed his visit to his old war time haunts around Fort Sam Houston and other points where he served during the Mexican border trouble.

Night Clerk Russell Godard is off on a vacation, being the last of the freight office force to get his leave. From agent to messenger boy, every one in the Natchez freight office has been put on his mettle to keep business moving the past two weeks, a heavier volume of business having passed through the Natchez terminal than ever before during the same length of time.

Mandeville Phipps is relieving Engine Foreman Moore for a few days.

Engineer Herman Steele, of the Natchez yard, made a fine showing in fuel conservation the past two weeks, and to his own and the rest of the switching crew's credit they have so far handled the largest business passing through the terminal without one dollar's worth of damage to equipment.

Conductor Robert P. Phipps is off on a short leave and Conductor Fred Roberts is relieving him.

Jackson, Miss., with its magnificent State Fair, is now the mecca of travelers from all over the state. A number of our employes are interested in farms and cattle and are taking this opportunity to see the fine exhibits of agricultural products and cattle which are being shown at the Fair. There have been several carload shipments of fine cattle made from Natchez for exhibition purposes.

*Henry Burke Hull*

The appointment of Mr. Hull as assistant to the president was announced November 1 by President Charles H. Markham. Mr. Hull entered the service November 1, 1898, as claim agent of the Louisiana division with headquarters at McComb, Miss. His first railway service was with the C. B. & Q. at St. Louis. After three years at McComb, he was transferred to Springfield, Ill., as claim agent, and in 1904 he was promoted to district claim agent, with headquarters at Memphis. In 1909 he was made assistant chief claim agent of the Yazoo & Mississippi Valley and the Southern Lines of the Illinois Central. July 1, 1911, he was transferred to Chicago as assistant chief claim agent, Northern Lines. March 15, 1913, he was made chief claim agent, succeeding Charner T. Scaife, deceased. The title later was changed to general claim agent. Mr. Hull was born March 11, 1870, at Chamois, Osage County, Missouri. Prior to entering railway service he was employed in newspaper work at Hannibal, Mo.

# ILLINOIS CENTRAL MAGAZINE

DECEMBER

NINETEEN TWENTY-ONE

Published monthly by the Illinois Central System in the interest of the system, its officers and employes, and the territory served by its lines.

Address all communications to: The Editor, Illinois Central Magazine, Room 817, Central Station, Chicago. The return of manuscripts, photographs, etc., except upon request, is not guaranteed.

Advertising rates upon application. Subscription rates: 15 cents a copy, \$1.50 a year.

## Accident Prevention Is Part of Our Duty

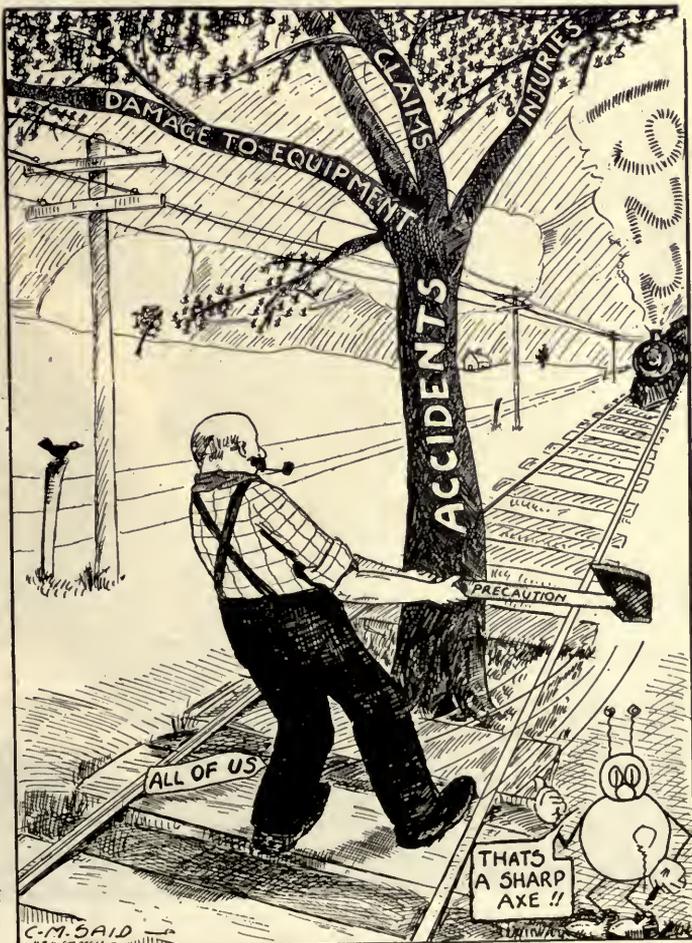

### General Manager A. E. Clift Points Out Great Necessity for This Month's Safety Campaign

By A. E. CLIFT,  
General Manager

THE December drive for the prevention of personal injuries, train accidents and damage to equipment can be made a success if every officer and employe will do his duty. Vice-President L. W. Baldwin, in an article in the November number of the magazine, says that he expects no one to do more than his duty. This is as much as should be expected of an employe. There are two phases of duty. The compliance with rules and regulations to prevent injuries and accidents is one phase. The other phase is something beyond the written regulations—it is fulfilling the obligation the employe owes to the company in uninterrupted service, and the obligation to himself and his family is preventing injury to himself.

#### Falling From Cars

For illustration: During the first nine months of 1921 119 conductors, 178 engineers, 460 brakemen, and

Let's Get This Tree Off Our Right-of-Way

375 switchmen sustained personal injuries. One of the chief causes was falling from the tops, sides and ends of cars. Another frequent cause was careless boarding and alighting from cars or trains. Injuries while coupling or uncoupling cars and coupling or uncoupling air hose also were among the chief classes of

injury. A misstep, failure to look, misjudgment of speed, going in between moving cars to uncouple, adjusting drawbars with the feet, or lining up drawbars by hand caused these injuries. In doing an act of this kind and incurring risk, an employe is not doing his duty to himself, his family or the company.

*A. E. Clift, General Manager*

During the same period 294 firemen sustained injuries; the chief cause was falling from engine tanks when taking water or coal. Firemen should be more careful in doing this work; they should see that their footing is secure and not attempt to pull down the spout or coal conveyor when the engine is moving.

Nine hundred and forty-two track laborers were injured during the 9-month period ending September 30. Careless handling of rails and ties is the outstanding cause of injuries to this class of employes. Only by unceasing vigilance and close supervision on the part of foremen can this cause be removed.

#### Equipment Workers Head List

Injuries to maintenance of equipment employes top the list during the first nine months of this year, more than 3,000 employes of this department having sustained injuries. This is at the rate of more than ten employes injured a day. Eye injuries, caused by flying particles, stand at the top as the chief cause. The use

of goggles, when practical, will materially reduce such injuries.

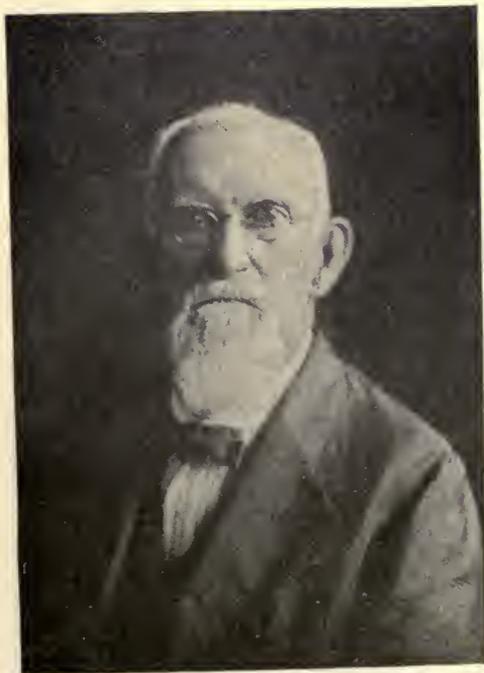

The total record of injuries to employes for the 9-month period is 6,742. Even though there is an inherent danger in railway work, this is not a record to be proud of; but by the co-operation of all officers and employes—especially the older ones, who by reason of their experience can more readily foresee a hazard, in giving a timely warning to their junior associates—the record can be materially improved. An analysis of the injuries indicates too frequently that a great many accidents could have been avoided had the individual given more consideration to the possibility of personal injury and performed his duties in a workmanlike manner and along lines prescribed for his safety.

We earnestly request our employes to keep in mind the chief causes of injuries to themselves, as indicated. By so doing they not only will make a success of the December drive, but will perform their full duty to themselves, their families, and the company.

## Foreman Painter Retired After 40½ Years

James Craig Martin, foreman painter at the Illinois Central Shops, Paducah, Ky., who recently was retired after forty years and six months of service, began learning the painter's trade October 19, 1861, under A. P. LeGras in the L. & N. shops at Louisville. He next went to sign and house painting on his own account. On November 11, 1880, he entered the employ of the Paducah & Elizabethtown Railroad as foreman of the paint department at Elizabethtown, Ky., and in September, 1884, went to Paducah, Ky., to take charge of the paint department of the Newport News & Mississippi Valley Railroad, which was absorbed by the Illinois Central Railroad July 1, 1896. Mr. Martin's crew often numbered from twenty-eight to thirty men, all first-class coach and engine painters.

Mr. Martin was born in Louisville on November 7, 1847. He is a self-educated, self-made man, and highly respected by all who know him. He was married to Miss Mary E. Sheppard on May 8, 1873, and has two children—W. F. Martin, manager of the Central Glass Company, Louisville, and R. S. Martin, head bookkeeper and credit man of a large

James C. Martin

wholesale grocery house at Paducah. The family resides on Harrison street, Paducah.

# How Y. & M. V. Tackled Livestock Problem

*Pictures and "Pep" Utilized in November Effort, Explains  
General Superintendent A. H. Egan*

By COLONEL A. H. EGAN,  
General Superintendent, Memphis, Tenn.

**T**HE killing of stock by trains is a subject that has caused the management of railroads much concern for many years. The territory traversed by the railroad and the amount of stock raised thereon are the principal factors that bear materially on the question.

The Yazoo & Mississippi Valley Railroad traverses territory in which the watering facilities, as well as the character of the soil, are such as to yield grass in ample quantities for feeding thousands of head of stock. These features, coupled with a climate sufficiently mild not to necessitate housing to any great extent, make this section admirable for stock raising from every viewpoint.

Consequently, having more roaming stock, we naturally or unfortunately strike more than are struck in a territory having different conditions. We have concluded that progress in reducing the number struck can be made only by specialization. This conclusion has been emphasized by the gratifying results of the various campaigns of recent months.

## Plans Laid Well in Advance

Information of the present campaign was given our officers and employes considerably in advance of its opening, which permitted formulation of plans to follow closely from day to day, and this has accomplished much. However, total elimination of stock killing in

-NEW ORLEANS DIVISION.

Keep the gates closed. Drive them off. Repair the fences. Enlist aid of owners. Talk about it until everyone knows about it. About what?

OUR SYSTEM KILL NO STOCK CAMPAIGN  
REMEMBER--NOVEMBER.

*One Card Widely Used*

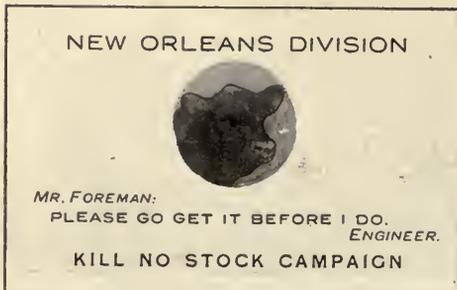

territory only partly fenced, and not wholly protected by effective legislation, is something that cannot possibly be accomplished in a limited time.

During October and November we have, as stated, specialized on this feature in several ways: by enlisting the co-operation of stock owners through various county and parish periodicals, the editors of which have rendered us invaluable assistance; by personal letters to prominent business men and planters in adjacent territory, as well as by conferences with stock men by division officers. In the reports I have received to date, not a single person owning stock bordering our waylands has declined or failed to meet our appeal in a wholehearted manner.

## Had Bulletins Illustrated

Considering the volume of instructions and circular matter that must necessarily be issued to our employes, we felt that, in order to obtain and hold their attention, as well as to instill enthusiasm adequate to bring the campaign to a successful conclusion, a marked deviation must be made from the routine matter used daily during the year. We therefore conceived the idea of illustrating our daily bulletins with cartoons or sketches, alternating between serious and humorous subjects, without detracting from the importance of the subject in hand, and still sufficiently attractive to warrant attention. This work is being done by mimeograph on the different divisions, inexpensively but effectively.

The cabs of our locomotives have been

*For the Engineers*

equipped with a small receptacle for cards appropriately worded. The engineer throws one of these cards to the first maintenance of way crew reached after having seen stock up on the right-of-way. The foreman in charge of the gang then has the cattle driven off, gates closed, fences repaired, etc.

The section foremen are required to telegraph the roadmaster, supervisor and traveling engineer a report on each head of stock struck. A joint investigation by the traveling engineer and supervisor follows, to the end that the necessary corrective measures may be applied.

**Hearty Response by Employees**

Comparative statements showing briefly our progress are issued regularly to all employees. These statements serve to inspire the men to better performance, and the friendly rivalry that exists among the divisions becomes keener as each day of the campaign draws to a close. With the figures at hand at this time [the middle of November] I would estimate that the final result of the drive will show a reduction approximating 50 per cent from the figures of November last year.

In my years of experience I have never seen all classes and departments of employes strive daily for any common purpose or goal with a more zealous enthusiasm than is manifested in the present campaign. This asser-

tion, however, does not minimize the hearty response of our employes to our efforts in former system campaigns.

The whole subject simmers down to the necessity of acquainting our entire citizenship with the conditions as they actually exist, showing how they can be improved, supporting such statements with the undeniable facts,

NEW ORLEANS DIVISION.

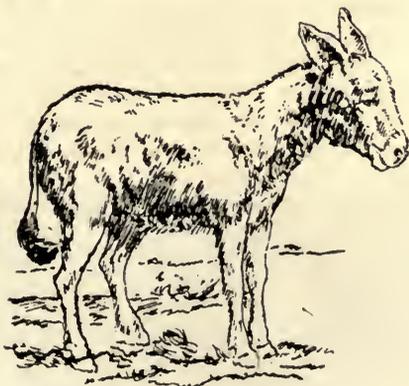

GOODNESS GRACIOUS ALIVE! Somebody "Spilled the beans" Killed two perfectly nice cows, and one little shoat, thereby ruining a ONE HUNDRED PERCENT SHOWING.

RESULT: The Boss is all "peeved" up as will be seen from the "snap shot" above.

I'll tell you how to square it up- Last November we killed 143. Cut that hundred off this year, and we can get him to smile again.

which are easily obtained. Interest the individual employe. Make the object in view clear beyond doubt. Then, and only then, can we be assured of ultimate success, which

means putting a stop to the killing of stock by trains, thus eliminating a burdensome expense to the railroads and a serious loss to the country.

## Illinois Central Is a Factor in State Fair

By H. J. SCHWIETERT,  
General Development Agent

The Mississippi State Fair, held in October, is history. It has become another milestone in the progress and development of that great commonwealth. The quality of all exhibits, excepting hogs, was the best we have ever seen at this state fair.

The boys' corn club display was the best in its history. Every year has shown marked improvement in breeding. This year there were 350 entries in this exhibit, and the standard was much higher than usual.

Warren County, of which Vicksburg is the county seat, demonstrated that Mississippi has land that can produce as fine forage crops as can be grown anywhere. The county agent had on display alfalfa, vetch, red clover, blue grass, crimson clover, peas, soy beans, burr clover and lespedeza and other grasses that would convince the most skeptical that Mississippi is a livestock country. Warren County was awarded second prize on county display.

The outstanding exhibit was that of dairy cattle, and especially of the Jersey breed. The aged cow class would have done credit to the National Dairy Show. Professor Humphrey, in charge of animal husbandry at the University of Wisconsin, who acted as judge of dairy cattle, said: "These cows would be a

credit to any great dairy show." The competition was keen, and the judge had a hard time placing the blue ribbon.

In 1920 the dairy exhibit at this fair consisted of just five head of rather inferior cattle, and this year there were approximately 150 head of outstanding individuals from Mississippi and a few from other states. The crowds were at the dairy barns and the show ring, where the judging took place. Never has the interest been so keen in the dairy industry in Mississippi as this year.

It is an industry that represents \$3,000,000,000 annually in the United States. It is an industry that has saved many a community in Mississippi during the past six years, and it is the one industry that is going to rescue other communities in Mississippi, if they are to be saved from utter ruin during these times of reconstruction.

### Illinois Central Held Short Course

The development bureau of the Illinois Central conducted a dairy short course at the fair, attended by twenty-three girls from various parts of Mississippi, twelve of whom were from counties traversed by the Illinois Central System. These girls, having carried on dairy work throughout the year, were those who had made the best records in their respective counties. For these twelve girls, the Illinois Central System furnished free transportation to the state fair and return, and also transported their cows free.

The club girl whose cow made the best record was Miss Elizabeth Walker of Oxford, Miss. She sold from her cow \$504 worth of milk during the lactation period. The cost of feed was \$50 for the year, which includes neither cost of pasture nor cost of delivering milk to town.

Each girl was required to make her own milk stool, and this stunt brought out some novel ideas as to design. The best milk stool was made by Miss Hallie Patterson of Oakland.

In connection with the girls' work there was

Miss Elizabeth Walker and Her Cow

*Girls Lined Up for Milking Contest*

a milking contest, in which Miss Stella Brown of Sardis was the winner.

#### **Of Interest to Growers and Shippers**

Another feature of the Illinois Central display was an exhibit of sweet potato and vegetable growing and the proper packing for shipment to market. This exhibit was in a booth in the agricultural building and was in charge of E. G. Wade, agricultural agent of the development bureau. Features of the exhibit were a model hot bed and a model cold frame, showing the proper method of construction. The hot bed was set with growing plants. Farmers interested in truck growing kept Mr. Wade busy answering questions. All indications point to an increased acreage in vegetables for shipment to northern markets for 1922.

Another feature of the display that attracted considerable attention was that showing the proper and improper packing of sweet potatoes. Hampers and crates of sweet potatoes were shown just as received from the shipper, along with packages properly packed. Each

hamper was marked with a sign showing right and wrong methods. This exhibition brought forth much favorable comment.

This exhibit supplemented the refrigerator car exhibit on display at the Illinois Central station, which we believe served a splendid purpose by giving valuable information to the truck growers and shippers of perishable products.

Of general interest to all visitors at Jackson was the Illinois Central exhibit of old and new engines, which has been touring the system, as explained in recent issues of this magazine.

#### **TREZIEME CLUB BALL**

The Trezieme Club, composed of men who were formerly members of the 13th Engineers, has announced a ball to be held in the Masonic Temple drill hall, Chicago, December 9, to which members of the 13th Engineers and other railway employes are invited. A considerable number of Illinois Central System employes who served with the 13th Engineers are members of the club.

*Milking Stools Made by the Girls Themselves*

## C. M. Schwab Gives Disarmament His Vote

### Noted Steel Man Voices Approval of Conference at Dinner in Honor of Marshal Foch

*Speaking in New York the evening of November 18, at the dinner given in honor of Marshal Foch by the American Iron and Steel Institute, Charles M. Schwab, chairman of the Bethlehem Steel Corporation, said in substance:*

**F**OR many years it has been my pleasure and my privilege to address you, my associates and co-workers in iron and steel. This year the atmosphere is one of deep and serious appreciation of a great occasion. We have had in the past many eminent guests, but, however significant our meetings have been, no one of them has made us realize as I think we do tonight, the feeling, even deeper than reverence, that is inspired by the presence amongst us of this the greatest commander in the world's history.

I like to feel, and in the presence of this gathering the feeling is most intense, that there is something peculiarly fine and honorable and strong in our profession of workers in iron and steel.

#### The Language of Iron and Steel

The painters of word pictures have never been able to describe a great and strong character better than as a "man of iron." The soldiers who bared their breasts to enemy shot and bayonet were described as men with iron nerves and will of steel.

In our own day, when we seek a comparison for what is enduring, for what is steadfast in character, we can find no better symbol than "steel."

And so, my dear marshal, may I tell you in the language of the greatest of poets that you have been grappled to our souls with hoops of steel. . . .

Great as he was in all the responsibilities of war leadership, Marshal Foch will stand as the supreme representative in all history of unity of action and command. Have you, my friends, ever thought how frequently this profound principle of action applies in life and industry? Individuals and individual interests can accomplish but little; united effort and co-operation under single leadership can accomplish anything. So it is, in industry, our industry, all

Charles M. Schwab

industry; unity of action, unity of command is the most effective means to great results.

#### Great Commander Always Needed

When a battle is to be fought, when a game is to be won, when a struggle of any kind is to be undertaken, we need first of all the great commander, the man with a vision to see what should be done, the man with courage to undertake it, the man with power of leadership to induce other men to follow him.

We of the great steel industry have much to learn from this principle. The greatness of industrial America has been realized through the application of it, and America will continue to rise to still greater heights of achievement as she allows this principle to have freedom of action.

We in this country are in the midst of a great business depression, a depression which is affecting the steel industry quite as acutely as any other industry in the country. To escape from this slough of despond the various

December, 1921

factors of the steel business must consider the interests of the whole rather than merely seek to promote their selfish aims.

In Judge Gary, the president of our Iron and Steel Institute, we have a really great leader. Let us follow him in his optimism and his determination to surmount the many pitfalls. Let us share in his great vision, let us stand together in good-will and co-operation for the hastening of that great era of prosperity which is surely before us. . . .

### Offered Early Aid to French

It is more than a pleasure for me to be able to pay my tribute of respect and admiration for the brilliant marshal who is our guest to-night. I salute him, not alone because he is so great a commander, but I salute him with added enthusiasm because he comes from France, the France which sent us Lafayette in our own struggle for independence, the same France with whom the United States have not only never had a serious dispute, but with whom our relations have been from the beginnings of our history upon terms of such intimacy and sympathy.

When the war in Europe broke out and the safety of France was threatened, my sympathy and interest went out to France with all the ardor I possessed. And I may be permitted to relate a bit of history. The war had been in progress only a short time when I wrote a letter to one of the leading statesmen of France telling him that, if it would help, we would gladly place the ordnance and armament manufacturing facilities of the Bethlehem Steel Company at the disposal of the French government, believing, as we did, that we were the only large ordnance plant in the world sufficiently free and independent to be in a position at that time to render such a service. . . .

### Steel in the World War

All classes of men are prone to over-estimate the service they rendered to you, my dear marshal, in the winning of the war. I hope I shall not exceed the bounds of modesty if I refer briefly to what our American iron and steel industry did in that direction.

From the beginning to the end of the war, our industry furnished for war purposes nearly fifty million tons of steel. The mere figure does not picture to the mind what that means. And yet fifty million tons of steel would build a modern railway ten times around the earth.

During the war we talked of a "bridge of

ships" across the Atlantic. Fifty million tons of steel put into the hulls of ships would actually build a bridge of ships from the United States to France.

It was truly a war of material and machines as well as of men, and we of the American iron and steel industry like to think, not that we won the war, but that we accomplished in full the part that was assigned to us. The demands then made upon our industry not only produced steel; they produced men who were at any time prepared to outdo in personal effort and sacrifice even the former great achievements of their industry. . . .

### The Coming of Peace

After war comes peace. Our own great General Grant, after our Civil War, said: "Let us have peace." The nation is prouder of that prayer than of any warlike utterance he ever made, and that sentence surrounds his tomb in our city.

"Let us have peace." That sublime phrase of General Grant's might well be the motto of the world conference now assembled at Washington.

And I would like to take advantage of this occasion to say something which has long been upon my heart, and which at this significant moment it is clearly my duty to say. It was stated at some of the sessions of the recent League of Nations meetings in Geneva, it has often been carelessly suggested in the press, that the flame of war is in great measure kept alive by those interested in the private building of naval ships and the manufacture of munitions of war.

### Welcomes Armament Reduction

I can, of course, speak only for myself, but I believe I know and express the sentiments of others placed in similar positions to mine when I say this:

I am at the head of the largest war materials manufacturing works in the world. The shipyards of my company build more naval ships than are built in any other yards under one management in the United States. But I have been thrilled beyond expression, as has every good American, by the brilliant and statesman-like scheme laid before the conference at Washington by Secretary Hughes. The carrying out of that plan may involve great monetary loss in some quarters, but such a thing as financial loss can be of no consideration when compared to the inestimable boon to

mankind which would be involved in the realization of that magnificent plan. What red-blooded American would not, indeed, make any sacrifice if the burden of armament could be lifted from the shoulders of humanity. May God speed the day when this noble conception can be realized!

If the armed protection of our country is necessary, the establishment of which I am the head will devote itself with all its energy to providing means for protection of this country's homes and families. But I say to you from the bottom of my heart that if the statesmen now assembled in Washington under the far-sighted leadership of our President and Secretary Hughes should find it possible to bring about disarmament and permanent peace, gladly would I see the war-making machinery of the Bethlehem Steel Corporation sunk to the bottom of the ocean.

#### Willing to Take a Loss

Nothing could contribute more to the ulti-

mate and permanent prosperity and happiness of the world than the conclusion of agreements among the great nations of the world which would eliminate war and the causes of war. And so let us say to the men gathered in Washington, let it go out from this gathering of men of the steel and iron industry, that we are solidly behind every effort they can make which will hasten the coming of the time when war shall be no more.

If disarmament inflicts a money loss upon us, the American iron and steel industry will accept it willingly and gladly. We will do so not in a spirit of mere idealism and self-sacrifice, but in a belief that the greatest permanent, material prosperity would be brought about by the concentration of the energies of mankind upon constructive activities, upon means for well-being, and not for the destruction of civilization.

## Still in Railway Law Work at Age of 86

A patriarch of railway law departments is Judge Joel Branham, division counsel for the Central of Georgia Railroad at Rome, Ga.,

who has passed his eighty-sixth birthday and is still able to attend to work. Judge Branham has devoted sixty-four years of his life to his profession, his admission to the bar dating from 1857. Since 1892 he has been identified with railway practice, and since 1901 has served continuously as division counsel for the Central of Georgia. He is a native of Eatonton, Ga. He is a genuine philosopher, according to *The Right Way Magazine* of the Central of Georgia, to which we are indebted for the engraving and this information. Sunday, August 28, 1921, which was his eighty-sixth birthday, he sent out the following remembrance to his friends:

"This is my eighty-sixth birthday—I am thankful:

"For the goodness of God and for all the blessings that have fallen on me from His bountiful hand; for a sound mind; for strength to attend to business; for courage to bear the ills of life, the discomforts, infirmities and solitude of age; for the winged messages of love from my children, and for the warm hand-grasp and kind words of my kin-

Judge Joel Branham

dred and friends; that I am free from intolerance and bigotry; that I believe in the immutable laws of Nature—God is God; He changeth not; in Him is no variableness or shadow of turning; that I have faith in the fundamental principles of the religion of Christ—adoration of God and love to man; that I am free from hatred, envy and evil thoughts; and that I love my kindred and friends, and that they love me; in daylight hours they comfort me, and when night draws her dark curtain across the sun I take refuge in my books and commune with God and my own thoughts; and so I grow calm and serene and await, unafraid, the hour when the soul, released from its prison house, shall flee to the bosom of its God.

"To all, all who may read these lines, I send a greeting of love.

"My heart leaps up when I behold  
A rainbow in the sky;  
So was it when my life began;  
So is it now I am a man;  
So be it when I shall grow old,  
Or let me die."

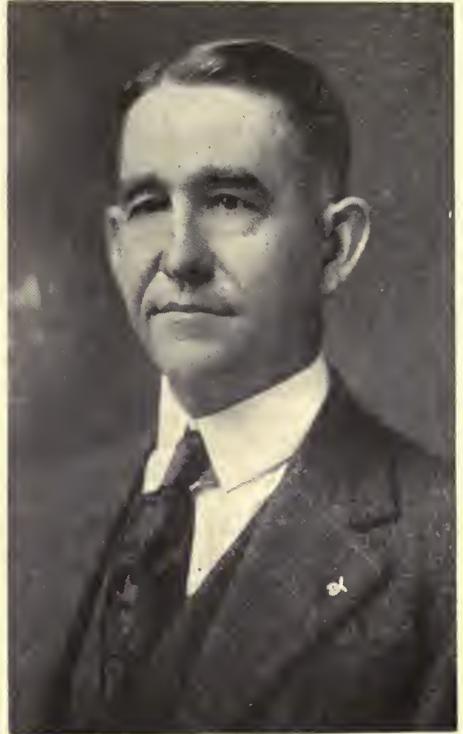

#### CAMP GRANT TO STAY?

The preservation of Camp Grant, at Rockford, Ill., as a military nucleus for either state or federal troops is a probability, according to the opinion of W. J. McDonald, who has just completed an audit of the ordnance and supply records of the entire camp. Mr. McDonald, who is employed in the government field service, maintains, according to his own observation and the fact that disposition of the camp property and supplies has been halted, that the camp will remain as a military post for either the regular army or the national guard.—Rockford (Ill.) *Gazette*, November 2.

#### EXHIBIT AT NATCHEZ

Owing to the fact that the new 2-10-2 type of locomotive could not be handled to Natchez, Miss., the Cotton and Diversification Celebration at that place November 17, 18 and 19 had to be content with the exhibit of the old "Mississippi" engine, but the same interest was observable there as at the other places our engine exhibit has recently held forth.

## IN COAL TRAFFIC

*W. T. Wright*

W. T. Wright, recently appointed supervisor of coal traffic, with headquarters at Carbondale, Ill., was born in Scheller, Ill., February 9, 1874. He was educated in the Jefferson County public schools, and his railway service has been entirely on the St. Louis division of the Illinois Central.

His record is as follows: 1893, station helper and student of telegraphy, Tamaroa; 1894 to 1921, agent at various stations on St. Louis division; November 1, 1921, promoted to supervisor of coal traffic.

In his new position he will have general supervision, under direction of the coal traffic manager, of the coal traffic on the Illinois Central System. He will be the field man of the coal traffic department, enabling that department to maintain closer supervision of this traffic at its source, the coalfields of southern Illinois, central Illinois, Indiana, western Kentucky and Alabama.

*December—A Time  
to End Accidents*

# Machine Takes Note of Freight-Car Bumps

## Impact Register Makes Record That Shows When and Where Rough Handling Took Place

BY J. J. HOEKSEMA  
Traveling Car Agent, Chicago

**T**HE rough handling of cars on the Illinois Central System is doomed. The solution of the rough handling problem lies in the education and supervision of all employes concerned in the handling of cars, both in switching and train movement. The management has attacked the problem from both angles, and already noteworthy results have been obtained.

The Illinois Central System on September 1, adopted the use of an impact register for making tests as to the handling of train equipment. The impact register is a machine capable of recording the exact time and force of the shock sustained in each case of rough handling. A number of these machines have been used continuously since September 1 in making records of equipment handling between principal terminal points, especially between Chicago and New Orleans, Chicago and Memphis, Louisville and Memphis, Chicago and East St. Louis, Memphis and New Orleans (via Y. & M. V.) and Chicago and Waterloo.

### Considerable Decrease Noted

During the period ending September 24 the machines recorded 3.88 cases of rough handling per 1,000 miles of movement. During the period ending October 14 they recorded 2.52 cases per 1,000 miles, a substantial decrease. During the first period of observation 25 per cent of the cars on which tests were made were handled from origin to destination with no rough handling, and during the second period 36 per cent were free from any rough usage. During the first period of observation 28.03 per cent of the territory under observation, measured in mileage, had a perfect record, and during the second period this was increased to 42 per cent.

To appreciate the improvement which already has been made, it should be noted that the second observation period reported herewith closed about six weeks after the tests were begun. The results therefore represent

J. J. Hoeksema

the accomplishment of a little more than thirty days of supervisory work.

The impact register is so designed that the records of vibration in each case of rough handling are registered on a chart propelled by a spring motor-driven 8-day clock. The chart is graduated into time periods of fifteen minutes each and is provided with zone lines which indicate the violence of the shock sustained. The apparatus is mounted on a cast iron base with an aluminum top and is placed in an oak box designed so that a standard car seal can be applied to it when it is loaded into a car.

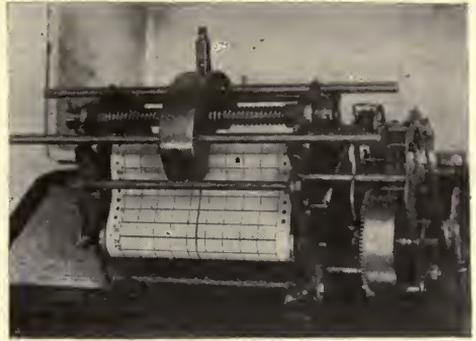

### How the Machine Is Managed

The plan is to place the register in a car, cleated to the floor, set the chart properly, start the clock and lock the box and seal it, taking a record of the seal number. The machine is not inspected again until it reaches the destination of the car. Officers and employes handling trains do not

know where the tests are being made. The authorized representative enters the car at its destination, removes the machine and withdraws the chart. If the chart shows that the car in which the machine was riding sustained such a jolt as to cause a violent vibration of the impact register at a certain time, the records of the transportation department will disclose exactly where the car was at that time, and appropriate action can be taken.

The tests have been made under the direction of J. F. Porterfield, general superintendent of transportation. Each case of rough handling detected by the machines has been reported through the operating department until it reaches the superintendent of the division upon which the complained-of rough handling took place. The superintendents are under instructions to investigate each case reported and take the necessary steps to correct rough handling practices.

The foregoing is a summary of how the management has been attacking the rough handling problem from the standpoint of supervision. As regards the education of employees, yard employees in most of the larger terminals have been shown in actual tests the rate of speed at which couplings should be made. The rules of the operating department are drafted to insure the careful handling of

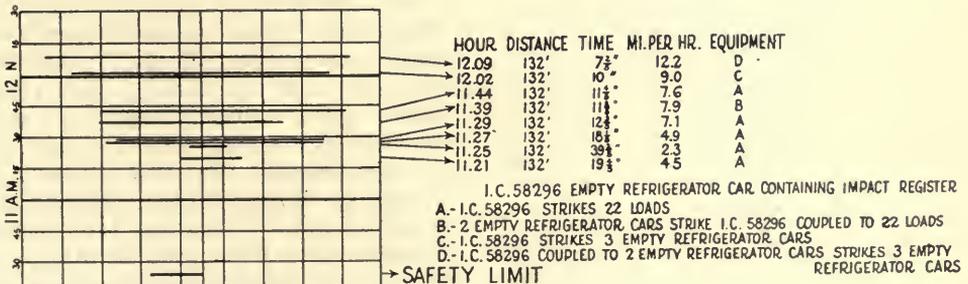

The Impact Register

equipment, for the protection of both the equipment and the goods it contains. Further than that, the management relies upon the good common sense and the loyalty of officers and employes concerned. The reason for bringing pressure to bear upon the violators of the rules of practice is to assure that employes will be constantly on the alert and carry out such practices as will assure the safety of operation.

**A Saving in Dollars and Cents**

Although the figures presented in connection with this review show the immediate results of the management's effort as developed un-

The illustration above is of a chart which came from the impact register used in making tests in Harahan Yard, New Orleans, to determine at what rate of speed cars can be coupled under various conditions without rough handling. The columns to the right of the chart are translated as follows: (1) the time at which the impacts were registered, the test taking place between 11:21 a. m. and 12:09 p. m.; (2) in each case a car, or cars, was shunted a distance of 132 feet in making the coupling; (3) the time consumed, in seconds, in traversing the 132 feet, from which has been figured (4) the rate of speed, in miles per hour; (5) the letters refer to the legend describing how equipment was used in the test. A line drawn at the point on the chart corresponding approximately to 10:25 a. m. shows the approximate impact constituting the safety limit. Each coupling causing a greater vibration of the instrument is rough handling, or worse. From this record, it is claimed, absolute responsibility can be traced, through train records, for any rough handling.

der the tests made with the impact register, the real attainments in the elimination of rough handling are represented in dollars and cents eliminated from freight damage claim payments and repair bills for equipment. During the four months of September 1 to December 31, 1920, the railroads of the country paid more than \$12,000,000 for damage to freight caused by rough handling.

Efforts will be made toward noting such decreases in claims and repair bills as may be incident to the operation of the impact register.

With freight claims there is obviously the difficulty encountered in the delays made necessary by the investigation of the claim. It is therefore difficult to state exactly what one month's payments represent as regards the time that the actual damage occurred. However, there should be a general decrease noted in claims attributed to rough handling after several months have elapsed. Some estimate as to the decrease in question might, for the present, be had from the O. S. & D. reports.

As to the investigation into the repair bills, the mechanical department can aid materially

by keeping a complete list of all cars placed on the repair tracks as an obvious result of rough handling. The number of such cars disabled can be compared with the number in previous months, and the decrease in repair bills can be computed in terms of the average cost of replacing each car so disabled.

After substantial decreases in claims have been noted, such information should be brought to the attention of shippers in our territory. Their interest in the safe delivery of their goods at the destination is no small one, and if we can show that our percentage of payments on rough handling claims per gross revenue dollar is lower than the average railroad, we should be able to draw a greater volume of business to our lines by virtue of a higher standard of service offered.

This, then, should be the ultimate goal of our efforts in reducing rough handling. With the application of the constant efforts of all concerned, the rapid improvement which has characterized the early days of this campaign will continue and will realize ultimately all the purposes for which the campaign itself is being conducted.

## Courtesy Is Needed Among Ourselves, Too

By A. C. FREIGO,

Chief Dispatcher, Indiana Division

Much has been written about courteous treatment of the public in general by employes. I think courtesy is of the utmost importance among the employes themselves. "Honesty is the best policy," we've all heard, but it seems to me courtesy is a close second.

To be honest is to be fair, just and honorable. According to Webster, to be courteous is to be courtly, civil and respectful, so it seems that the two are almost analogous. Courtesy is a state of mind as well as of principle and can be practiced until it becomes a habit and a pleasure. When the harmonious feeling exists in any business, its effect will be noticeable to the public in general and will be as much an asset as wealth, for without it a man or corporation can accomplish little.

It is essential for one in authority to have the respect of his subordinates. The day of the slave driver is past, and more and more business heads realize the value and necessity of friendly relations among their employes.

This condition can be maintained with no loss of dignity to either.

We know "a civil answer turneth away wrath," and that to stop and think before speaking in haste always brings better results. Neither the employer nor the employe is at his best when confused, and confusion is sure to follow an outbreak of temper. To be angry is surely not showing courtesy. A corporation demands much of its employes (as it should) in courtesy toward the public, and why should not this same attitude exist among all employes regardless of rank?

A request couched in commanding, arrogant terms is complied with by the inferior, but how is it accomplished? With more or less of a grudge. Had it been given in a firm but civil manner, it would in all probability have been accomplished cheerfully, and there would have been a feeling of gratitude and respect on both sides. The inferior should have enough respect and obedience to do exactly as requested.

Courtesy demands self-respect, as well as respect from others; so, without a doubt, to be honest with ourselves we must be courteous.

## Girl Employee Proves a Business Getter

*Don't Start Too Early in Day, Advises Miss Vivian Brand,  
Assistant to Agent, Dubuque, Iowa*

**N**EWSPAPER work lost a promising recruit when Miss Vivian Brand forsook the society desk of the Dubuque (Ia.) *Telegraph Herald* three years ago for a railway career, as represented by an office job in the Illinois Central station at Dubuque. The beginning of the plan for employe solicitation of traffic about a year ago gave her her big opportunity, and she seized it with such vim and determination that she is now one of the leading business getters on the system. Miss Brand can sell things, as anyone must realize who has felt his reluctance melt under the influence of her smile, and what the Illinois Central System wants just now is the employe who can do just that sort of thing.

### Traffic Solicitors Needed

On many parts of the system a revival of interest in this work is needed. Largely through the efforts of the Illinois Central Employes' Business Association, written up in this magazine last May, the divisions west of Chicago are far ahead of the field in business getting by employes.

Miss Brand, who is a native of Dubuque, started her business career a few years ago as a shoe saleslady at \$6 a week. That she has developed her knack of selling is proved by a recent 2-day visit to Waterloo that netted about 260 routing orders, a 1-day inspection of Cedar Rapids that got about 90, and a 4-day canvass of Albert Lea, Minn., with Agent J. E. Allison of Dubuque, that yielded almost 200 carloads of traffic and several hundred LCL.

Miss Brand will talk volumes about the Illinois Central, which she declares is the finest system in the country, but she won't tell much about her own achievements. The argument that her experience might help other employes, however, overcame her reserve, and here is her story, exactly as she typed it herself on the editor's own typewriter. If it doesn't prove that newspaper work lost a lot when the Illinois Central gained a traffic solicitor, then the writer of this introduction lacks judgment.

*Miss Brand at Work*

By **MISS VIVIAN BRAND,**  
Assistant to the Agent, Dubuque, Iowa

Somehow or other, I have always liked to sell things—so whenever there was to be a tag day for any worthy cause, I was always there on some corner with my little tin box. One Saturday noon in November, 1918, during a drive to provide comforts for the Dubuque soldiers overseas, I had taken my stand where the crowd was thickest, and

was busy pinning tags on the passers-by and dropping the nickels and dimes in the box. Of course, there were some who passed with not even a glance in my direction, and one of these was a tall white-haired gentleman, hurrying to catch his car. I knew that he was J. E. Allison, Illinois Central freight agent, and that he could well afford to buy a tag; so I determined to land him when he should return from lunch.

When he passed me again he hesitated a moment, but said that he was in a hurry and went on. Was I disappointed? No. I was just that much more determined. I watched for him all afternoon, and at last saw him crossing the street toward me. When I spoke to him the third time, he stopped and asked me the purpose for which the money was to be used, but said that he did not believe the soldiers would ever get it. Of course, this started an argument. It was hard for me to convince him because all the time I talked to him I was obliged to continue selling tags to the other people passing by.

#### Won Job by Persistence

Finally he laughed and said that such persistence should be rewarded, handing me a dollar for a tag. That was more than I had received all afternoon, but I did not tell him so. Instead I informed him that he owed me two additional dollars for the two times he had passed me by earlier in the day. Well, he gave me that \$3, and then he asked me where I worked. I told him that I was society editor on the *Telegraph Herald* newspaper staff, and had been working there more than a year. He then informed me that there was a vacancy in his office and asked me if I would care to work for him. I fairly gasped at the salary he named, and when he told me that I must be able to operate a typewriter, I promised to spend every moment of my spare time practicing on the machine. This I did, and in about a week I became a member of the Illinois Central family.

Of course, I could not help but wonder just how such extraordinary good luck had happened to fall to me, and just how long I would be able to keep a position which I had acquired in such a strange manner. In the course of time I served as messenger, expense clerk and assistant cashier.

At the end of two years a solicitation

campaign was instituted, every employe being asked to secure at least a carload of freight for their railroad. Once again I was to be right at home, even as in the drives for the soldiers, selling something for a cause I loved.

#### Got Results on First Trial

After work, on the first day of the campaign, I started out with my pockets full of blank routing orders. When I returned to the office the next morning they were not blank, and Mr. Allison was immensely pleased. He then informed me that whenever I could be spared at the office I was to spend my time soliciting freight business, and this I continued to do for several months.

In February, while the president's special was passing through Dubuque, Mr. Markham and Mr. Baldwin made a personal call upon me, inquiring as to whether I liked my work and informing me that they were pleased with the results obtained. As a result of this visit a new position was created, so that I was able to devote my entire time to solicitation. I can safely say that the day on which the news was brought to me that I was to be promoted, with a better salary—but better still that I was to be allowed to solicit freight business in the entire city—was the happiest day of my life. I do not think that I can ever experience greater joy or gratitude toward anyone than I felt then for the management of the Illinois Central.

#### Finds Work a Pleasure

The solicitation of freight business has been my work for almost a year now, but it has been pure pleasure for me, rather than work. Of course, a position which brings a person in direct contact with the public, as mine does, is bound to have a great deal of grief connected with it, but I believe that the compensations in this line of activity are greater than in any other. Although a few disagreeable persons are found here and there, the great majority of the business people with whom I have come in contact are pleasant, and the work certainly lacks monotony.

The first thing that Mr. Allison told me when I started out was that I was to have the sole responsibility of my position. We have always talked over together the matters concerning solicitation, but he has

never yet told me where to go, whom to interview, or how to go about it. He believes, as I do, that the solicitor alone knows the proper time to call upon each concern and the different ways in which each individual must be handled, as these things can be learned only by experience.

At first I made the mistake of calling at offices too early in the morning. I found that the man I wanted to see was very often busy with his mail when I arrived, and I was frequently obliged to return later. I also found that it does not pay to call upon some people too often, as it bothers them. Still others request you to call more frequently, and feel rather offended if you stay away too long. These things and many others, the solicitor alone can decide, and it takes a great deal of patience to work it all out.

#### Must Bear Discouragements

Among other things, a solicitor must be absolutely discouragement-proof. I could recite numerous cases where I have called upon a man five or six times, on each occasion approaching him with a hopeful smile and on each occasion being turned down, and then during perhaps the seventh visit have had him suddenly hand me more business than I had dared dream of getting from him. The big question is not how do you treat him when he routes a lot of business over your line, but how you treat him when he refuses to do so. A smile on your face, when at heart you are sorely disappointed, will go a long way with that man, and if you can keep smiling long enough, you will eventually get what you want.

Then again, business men are often unreasonable. They berate the Illinois Central for things for which it could not possibly be responsible and take out upon the solicitor grievances concerning any department which they are able to recall. The person in this position is expected to see that claims are paid more promptly, that better speed is made with freight, that new rates are put into effect—in short, that the entire railroad is run in better fashion. While of course these things are impossible for the solicitor to attend to, much can be accomplished through the proper co-operation among the different departments.

#### How Clerks Can Hold Business

Every employe in the freight office, but most particularly the car clerk, or the rate

clerk, can do his part in holding business after it has been obtained by the solicitor. When a shipper telephones the car clerk and asks if he has a certain kind of car to load out, and the clerk merely says, "No," he has lost some business for the road. What he should do is inform the patron that he will do all he can to get one for him at once, and then get busy on the telephone. The chances are that he can get the car if he tries hard enough, and in that way he will be doing his part to increase business.

The rate clerk, when a shipper rings the office for a rate, can inform the solicitor of the fact, and he in turn can influence the man to use our road. The rate clerk can also do a great deal of harm by being slow to get information for a shipper, or by being discourteous.

In this connection, let me say that the telephone is one of the most important factors in obtaining business. When a man calls the office seeking information which may perhaps sound stupid, the employe who answers the telephone is inclined to be rather impatient, perhaps. However, he should consider that there may be a large amount of business hanging on the answer he gives, and he should be made to realize the good or ill that he can do.

The Dubuque station's report of traffic solicitation by employes, which is largely Miss Brand's report, was as follows for the first ten days of November:

(See next page)

#### Led Chicago District

The following letter to C. M. Kittle, senior vice-president, is from Fred Zimmerman, vice-president of the Chicago, Indianapolis & Louisville Railroad (the Monon), who served as chairman of the railway group in the recent Home Service appeal of the Salvation Army:

"It is more than good of you and your associates to accomplish such splendid results for the Home Service appeal of the Salvation Army. I thank you most heartily for your favor of the 15th and the subscription of \$3,056.19.

"This is the largest contribution by any railroad in the Chicago district, and I congratulate you upon the results of your efforts."

# Ironing Out the Stiff Grades in Kentucky

## Conquering the Natural Difficulties There Proves a Rocky Problem in More Ways Than One

By T. H. ROBERTSON,  
Assistant Engineer

ON account of increased coal traffic on the Kentucky division, it was decided to reduce grades between Dawson Springs and Princeton, Ky. This was the second step in the grade reduction program between Central City and Paducah, grades having been reduced between Princeton and Paducah during 1914-1915. Although the completion of the Scottsburg-Dawson work leaves thirty-six miles of the engine district still unimproved, the object of the grade reduction is largely accomplished, as the last work undertaken brings the completed section of the improvement to the source of the traffic—coal mines between Central City and Dawson.

The original line had a maximum grade of 1.25 per cent, with 6 degrees uncompensated

curves, while the new work has a maximum grade of .5 per cent southbound, and .75 per cent northbound, with a maximum curve of 2 degrees.

The preponderance of the traffic is southbound, so that northbound trains are easily handled over the .75 per cent grades.

The grade improvement effects a material saving in train operation. Mikado locomotives, which handled only 1,300 tons over the old grades, handled 3,300 tons over the new .5 per cent southbound grade. Santa Fe locomotives are now handling 4,400 tons over this grade.

### Work Handled in Two Sections

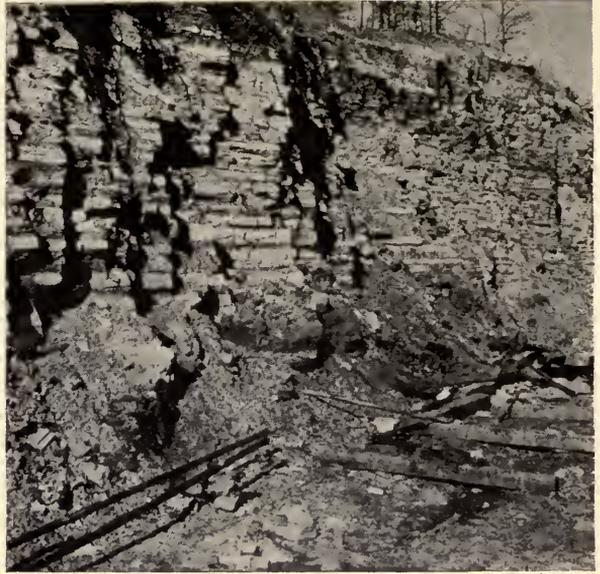

From a construction standpoint, the work was divided into two sections, separated by one-half mile of track that was not disturbed.

The Scottsburg section has a length of 8.43 miles and effects a saving of 1,320 feet in

Bridge on New Line Over Montgomery Creek—Note Old Line Following Valley Below

length as compared with the old line. At the east end of this work, the new line follows the old location closely along the valley of Montgomery Creek, crossing the old line overhead three times within the first three miles, obtaining a straighter alignment by cutting through the hills in the sides of the valley. At Claxton, about five miles west, the old line turns to the south, while the new location continues on a tangent two miles farther, the maximum separation being about 3,500 feet. The lines join again south of Scottsburg.

*Character of Rock Encountered in Cut Between Princeton and Central City*

The grade line from the east rises at rates varying from .4 per cent to .5 per cent to a point half way up the ascent, where there is a level grade for 3,200 feet. West of this, the grade rises on a .5 per cent compensated for nearly four miles, and then continues on a .4 per cent to the summit. The descent to the junction with the old line is on a .6 per cent grade.

The country traversed by the new line presented erratic rock formations, which caused serious delay to the work on account of slides, as well as causing the cost to be greatly increased. The original cross-section quantities showed 672,000 cubic yards to be moved. On account of slides in both cuts and fills, it was necessary to move 1,200,000 cubic yards.

### **A Problem in Geology**

The most remarkable feature presented by the project arises from the geological formation of the country traversed by this portion of the line. From two miles east of Princeton to a point some distance beyond Nortonville, a great many faults in the rocks are encountered which produce sudden changes in the stratification, while the so-called Claxton fault, crossing the west end of the Scottsburg section of the work, has effected a sudden transition from the rocks of the Pennsylvanian age, which prevail east of that point, to those of the Mississippian period, which are exposed west of the fault. A further phenomenon of this region is the prevalence of distorted or inclined stratification. Thus, near Claxton, along the existing line of the railroad the upturned ends of 800 vertical feet of Mississippian rock have been exposed.

Under such circumstances, it was impossible to predict the nature of the material to be en-

countered in opening the cuts and to determine the character of cut section that would safely stand in excavation. As many as six or seven different rock formations were encountered in some of the cuts, while in a few the material was uniform throughout—a pure solid sandstone. However, the latter was the exception, and by far the larger proportion of the yardage consisted of the complicated, diversified materials, which in some cases proved so unstable upon excavating that the cuts had to be removed to much flatter slopes than originally proposed.

### **One Cut Is Seventy-four Feet Deep**

On the Scottsburg line, the first heavy cut at the east end of the work extends from Stations 395 to 404. This cut is seventy-four feet deep, and the rock extended almost to the natural surface of the ground. This cut was staked on a quarter to one slope in rock, then allowing a three-foot bench and the overlying earth staked on a one to one slope. About eight feet above grade line, a stratum of shale was encountered, which caused rock to slide on both sides of the cut. It was deemed necessary to shoot the top off the cut, leaving a bench about thirty feet wide and thirty feet deep. After this was done we experienced no further trouble. The ground at the end of this cut is steep, rising 100 feet in a hori-

zontal distance of 270. With great difficulty the contractor placed his equipment in position for the first cut, it being necessary to have switchbacks in order to get his cars placed for loading.

Between Stations 434 and 440 there is a side-hill cut that differs from nearly all of the other work, in that the material is a solid, almost unseamed sandstone. A large part of this material was moved by a "coyote" shot, which was accomplished by driving a tunnel for 100 feet along the center line. The tunnel was cross-cut and loaded with 537 kegs of black powder. This blast moved about 5,000 cubic yards of rock.

#### New Line Thirty Feet Above Old

Between Ruth and Claxton, a distance of one and one-half miles, the new line and the old are close together, although the new line is from thirty to forty feet above the old. The two large embankments in this stretch of new line were built by the general contractor from material in the summit cuts nearly four miles away. Construction track was detoured for 9,000 feet around a heavy section of work that was being done by a sub-contractor, S. M. Boorhem. Serious difficulty was encountered in these two fills on account of large slides; in some places the slides extended from 90 to 100 feet beyond the original slope line. After the new track had been laid and ballasted over these fills, slides again occurred, caused by three days of steady rain. This made it necessary to have the contractor put a steam shovel outfit back to work, and it required

five months of additional time to fill the slides.

West of Claxton, the rock in the cuts assumed a much more erratic character. A short cut at Station 500 contained 17,750 yards of material in a length of 700 feet. This was largely conglomerate, solid in place but requiring slopes of one to one to obtain the necessary stability in the cut. From Stations 532 to 542, a cut of sixty-five feet in depth contained a strata of shale, conglomerate, sandstone, limestone and boulders.

#### An Odd Combination of Rock

A still more remarkable combination of material was disclosed in a cut 1,400 feet long and 60 feet deep, beginning at Station 552. At the top was earth containing floating boulders to a depth of fifteen feet. Below this was a 20-foot stratum of material having the appearance of natural masonry and consisting of courses of rectangular limestone blocks, with clay in the horizontal and vertical joints. Underneath this were two 4-foot courses of soft black shale and hard shale respectively, with a hard limestone formation for the remaining depth.

The earth was taken out on a slope of one to one and the remaining material at one-quarter to one. It was found the material would not stand on this steep slope, and the cut was widened on both sides from the natural surface to the hard limestone formation near the bottom of the cut, leaving a bench on top of this limestone about twenty-five feet wide.

The cut between Stations 573 and 630 contained about 200,000 cubic yards of material,

Slides—One in a Cut and One on a Fill—in Kentucky Division Grade Reduction

*Tunnel on the Dawson Cut-Off, Looking South—Note Method of Construction at Left*

50 per cent of which was rock. More than 175,000 cubic yards of additional excavation were required in this cut because of the slides on the south side. The material consists of sandstone carried on limestone, with a stratum of shale between, the limestone being on a transverse dip of 30 degrees from the horizontal, descending from south to north. As soon as the material was excavated to grade, the sandstone slipped into the cut for a length of 700 feet, the rock breaking away on the surface as far as ninety feet beyond the established edge of the slope.

#### **Moved Line at Dawson Springs**

The Dawson Springs cut-off extends from about one and three-quarters miles west of the town to a point about two and one-half miles east of it. As the old line makes a general detour to the north, the location of the new line south of the old one a maximum distance of 4,600 feet and a total length of 20,673 feet made possible a saving of 3,554 feet in distance and 179 degrees of curvature.

The new line traverses high ground between two loops or detours in the Tradewater River in the southern portion of the town of Dawson Springs. This involves a cut sixty feet deep containing nearly 200,000 cubic yards of excavation, the cut being excavated for a main line and two passing tracks. The material was mainly sandstone, with a thin stratum of coal overlying fire-clay about halfway up the slope. The material from this cut was used in fills both east and west.

The west mile of this section of the work is virtually an independent cut-off through a

projecting shoulder of rock separating the Tradewater River from Montgomery Creek. It involved the driving of a tunnel 506 feet long, which the old line avoided by crossing the Tradewater River below its junction with Montgomery Creek.

#### **Tunnel Went Through Sandstone**

The first 11,000 feet at the east end of this work are almost entirely on fill, which entailed a change in the channel of the Tradewater River to avoid the construction of two crossings. The first 10,000 feet at the east end of the work are on level grade. The difference in elevation of the two ends is only about ten feet, and the maximum elevation at any point in the line is only fifteen feet above the lowest, the high points being reached by about 1,200 feet of .5 per cent grade from the east and 1,800 feet of .75 per cent grade from the west.

The material encountered in the tunnel was unlike almost anything else on the work. It was hard white sandstone of nearly uniform texture through the entire length of the bore. The excavation was conducted by driving a full-width bottom heading ten feet high, into which the rock from the rest of the section was trapped. Jack-hammers were used for drilling all the work, and the material was mucked by hand and small cars on a two-foot gauge track. Double shifts were used at each heading, and one-half the tunnel was taken out in a single month. The work was done by Peter McVeigh, of Butte, Mont. It was not necessary to line this tunnel on account of the character of rock encountered,

This project involved but a limited amount of bridge work. The only structure of importance is a bridge over the Tradewater River consisting of four deck-plate girder spans, one 79 feet 6 inches and three 51 feet 1½ inches long. The substructure is of concrete on pile foundation, with the exception of one pier, where rock was encountered on a slope so great that there was a difference of 14 feet in the elevation of the surface in the width of the cofferdam. The practical certainty of sliding with a pile foundation under such circumstances led to the conclusion to carry the pier to the rock.

#### Ready for a Double Track

This necessitated a new cofferdam built around the old one to provide a puddle wall. With the aid of this, the rock surface was unwatered and stepped off to afford a stable seat for the pier. These measures necessitated a maximum depth of the pier of 58 feet below the base of the rail. All of the piers in this structure are stepped out on the north side to provide for future second track.

At Station 395 there is a bridge over Montgomery Creek consisting of a 75-foot girder span. One end of this is supported on an abutment built into the rock ledge of the hillside

at the end of a cut, while the other end of the girder is supported on a pier 50 feet high. The connection between this end of the girder and the head of the adjoining embankment is made by means of a 50-foot approach span having its outer end supported on a bank block carried by creosoted piles driven into the embankment.

Contract for this grade reduction work was let in July, 1917, to the Walsh Construction Company of Davenport, Iowa, some of the work to be done by sub-contractors and some by the forces of the general contractor. Conditions arising as a result of the war introduced such large increases in the cost of doing the work that it was necessary to relieve the contractors by changing the stipulation of the contract from a price per yard basis to a "cost plus percentage" form of contract. The work was completed in the spring of 1920.

Since this line has been put in operation, no trouble has been experienced from slides either in cuts or in fills.

*December—A Time  
to End Accidents*

### *Things to Talk About*

Railway executives meeting in New York November 16 adopted a resolution granting, for an experimental period of six months, a reduction of 10 per cent in car-load rates on wheat, corn, oats, other grain, flour and meal, hay, straw and alfalfa, unmanufactured tobacco, cotton, cottonseed and products except cottonseed oil and cotton meal, citrus fruits, other fresh fruits, potatoes, other fresh vegetables, dried fruits and vegetables, horses and mules, cattle and calves, sheep and goats, hogs, poultry, eggs, butter and cheese, and wool. Application will be made to the Interstate Commerce Commission immediately for authority to put these reductions into effect.

This action has been taken by the railroads notwithstanding the fact that their net operating income for the first year of operation under the present general level of freight and passenger rates was only 2.9 per cent on the valuation of their properties as fixed by the Interstate Commerce Commission for rate-making purposes—an amount which was just about enough to pay interest on outstanding railway bonds. The action was taken in response to an insistent demand that the railroads do something for the improvement of agricultural conditions.

The railroads are not in a financial position to make this sacrifice. Unless there should be some revival in business, which is purely conjectural, the entire immediate loss involved in this proposed reduction in rates would be taken from the net earnings of the railroads. In making this reduction the railroads are relying upon the public for co-operation in bringing about the necessary reduction in transportation costs, and they are hoping for the co-operation of labor itself.

# Oil—A Recent Development in Louisiana

## Rail and River Advantages Cause Crop of Refineries to Spring Up Along the Y. & M. V.

**L**OUISIANA is the paradise of the oil tank car. The stranger who travels over the ninety miles of the New Orleans division of the Yazoo & Mississippi Valley between Baton Rouge and New Orleans is likely to get the idea that all the tank cars in the country have been called together for a convention. In fact, tank cars and fields of sugar cane furnish about all the scenery there is on that part of the Y. & M. V.

One of the wonders of recent years has been the development of southern Louisiana as a center of the oil refining industry. Geographical advantages along the lower Mississippi, consisting of proximity to the chief oil fields of both the United States and Mexico, good rail transportation and river frontage on deep water navigation, have combined to make this part of the state the most important new field of oil operations in the United States.

The location of these refineries along this stretch of the river has added greatly to the manufacturing wealth of Louisiana, and the traffic developed by them has meant a great deal to the prosperity of the Illinois Central System.

### A Growth of Recent Years

This great new business has sprung up almost over night. It has been only about a dozen years since the Standard Oil Company of Louisiana laid the foundation for its great refinery at Standard Oil, or North Baton Rouge (on the first bluff land that touches the river, looking upstream), and since then there

have been added the works of the Carson Petroleum Company at the Crespo plantation, sixteen miles above New Orleans, the Island Refining Company at Sarpy, on the Prospect plantation, the Mexican Petroleum Corporation at Destrehan, and the New Orleans Refining Company, owned by the Royal Dutch Shell interests, at Good Hope.

The greatest of these refineries is undoubtedly that of the Standard Oil Company of Louisiana. It has meant more business for the Y. & M. V. than any of the others, although some of the newer plants have shown a greater percentage of increase in recent years. Crude oil for the Standard Oil refinery is piped from the southwestern oil fields of the United States, while that for the others is mainly supplied by tank steamers from the Mexican fields. In the source of supply lies the main difference between the Standard Oil refinery and the others; most of the other differences are merely in magnitude of facilities and operation.

### Meant Million and a Half to Us

The Standard Oil plant covers the major portion of the 783 acres which the company owns at North Baton Rouge. It has a frontage on our right-of-way of 6,612 feet. In normal times it affords employment to about 4,000 persons, with an annual payroll at the refinery alone of about \$7,000,000 a year, or about \$12,000,000 a year for the entire company. The plant has a wharf 1,500 feet long and 7 4/10 miles of track in and around the

Refinery of Standard Oil Company of Louisiana at Baton Rouge

plant, on which the company operates its own switch engines. The refinery receives annually about 12,000 carload shipments and forwards about 24,000. Last year this traffic yielded the Illinois Central System about \$1,500,000 in freight charges. The refinery's daily capacity is 45,000 barrels of crude oil.

The Standard Oil Company has recently purchased 738 acres of land five miles north of its Baton Rouge refinery, near Maryland, La., for storage purposes. This tract of land has a frontage of 5,650 feet on our right-of-way, and we have installed 1,350 feet of additional track at that point.

The Carson Petroleum Company, in buying the Crespo plantation, planned an initial investment of more than a million dollars in its plant. The ground is a plot of 500 acres and has a river frontage of 3,000 feet. Docking facilities alone will cost almost \$200,000. The company's plans in addition to a large tank farm, include an extensive casing and coopeage plant—a canning factory with a capacity of 20,000 5-gallon cans daily, a casing factory to produce 5,000 cases a day, and the production of barrels on a scale as large as the demand justifies.

#### Uses Mexican Crude Oils

The Island Refining Company, a subsidiary of the Island Oil & Transport Corporation, has a refinery under construction at Sarpy (Prospect plantation). The company owns 150 acres, with a frontage of 2,200 feet on the river and a wharf 450 feet long. The refinery capacity will be 10,000 barrels daily, using only Mexican crude oils, and the completed plant is expected to produce all the usual refinery products.

The Mexican Petroleum Corporation's refinery at Destrehan is eighteen miles above

New Orleans by rail or twenty-five miles by river. The plant occupies 400 of the 1,012 acres owned by the company. The river frontage is 5,100 feet, 1,000 feet of which is protected by piling. The loading wharf occupies a frontage of 600 feet. The plant's tank storage capacity for crude oil is 300,000 barrels; for fuel oil, 220,000 barrels. The refinery uses 20,000 barrels of Mexican crude oil a day and produces gasoline, kerosene, road oil, gas oil, asphalts, flux and diesel engine oils. The company has a capacity for loading bunker oil of 3,000 barrels an hour at the docks, and there are also facilities for barging to shipside.

#### Handle Fifty Cars at Once

The New Orleans Refining Company's plant at Good Hope, or Sellars, is twenty-five miles above New Orleans. The total acreage of 366 acres gives a frontage of 1,466 feet on the river. The refinery capacity will be 10,000 barrels daily of Mexican crude oil from the La Carona Petroleum Corporation, a subsidiary in Mexico. The storage capacity for refinery use is 160,000 barrels. The plant is composed of two units—the refinery and a storage and export station. The latter handles finished domestic products from the Roxana Petroleum Corporation, a subsidiary operating in Louisiana, Texas, Oklahoma and Kansas. The storage capacity for this unit is 440,000 barrels. Its loading racks will accommodate fifty tank cars at one time.

How does an oil-producing and refining company operate? The Standard Oil Company of Louisiana is organized in four distinct departments, each having a definite part in the prosperity of the company. First there is the producing department, which gets the oil out of the ground. Then there is the pipe-line department, which transports the oil to the re-

Looking From Office Building Across Tracks of Y. & M. V.

*Plant of the New Orleans Refining Company*

finery. Then there is the manufacturing department, the refinery, which turns the crude oil into marketable products. Finally there is the sales department, which attends to the distribution.

#### **Strictly a Louisiana Concern**

This company is incorporated under the laws of Louisiana, and all of its officers and directors are residents of the state. The officers are: President, D. R. Weller; first vice-president, C. K. Clarke; second vice-president, C. O. Scholder; secretary and treasurer, A. K. Gordon. The foregoing, with J. E. Todd, F. Ray McGrew, C. I. Fiero, T. H. Taylor and J. A. Bechtold, are the board of directors.

The company's history dates from April 13, 1909, when it was incorporated. Construction of the refinery at Baton Rouge began the same year, and it has been improved and added to ever since.

The growth of the plant has kept pace with the development of the oil-producing fields of Louisiana and Arkansas, to which it is linked by pipe-line. In 1909 the Caddo field was the only one from which the company obtained crude oil. Additional fields now tapped are the DeSoto, Crichton, Red River, Bull Bayou, Homer, Haynesville and Eldorado fields. These fields supply oils of varying qualities sufficient to keep the pipe-lines working close to their daily capacity of 50,000 barrels of 42 gallons each.

#### **A Great System of Pipe-Lines**

These pipe-lines which carry the oil to the refinery constitute a big part of the company's investment and require the constant attention of a considerable body of workers. The company's pipe-line system is 268 miles long. It consists of gathering lines in the producing fields, which bring the oil into central tanks, and three trunk lines which take the oil to Baton Rouge. Two of these trunk lines are

of 8-inch pipe; the other is 12-inch pipe. Seven pumping stations are spaced out along the line, approximately forty miles apart. These pumping stations are connected by a private telegraph service to the Baton Rouge refinery, so that instant notice can be given of damage to the pipe-lines and orders can be transmitted to change the kind of oil being pumped. This change is accomplished by having each pumping station take up in its storage tanks the oil in the pipe and then start pumping the new variety called for. The kind of oil pumped naturally depends upon the demand at Baton Rouge.

The trunk lines are set from eighteen inches to two feet in the ground and generally follow railway right-of-way. They cross both the Atchafalaya and Mississippi rivers, being allowed to sink in the silt in the river bed in whatever zig-zag curves they happen to assume. Special "river clamps" safeguard the joints in the rivers. Line walkers go over every foot of the pipe-lines every day looking for leaks. They carry telegraph instruments which they can attach to the company's private wire in order to report to the pumping stations.

#### **Where Manufacture Takes Place**

The refinery at Baton Rouge constitutes the manufacturing department of the company. It has a daily capacity of 45,000 barrels of crude oil, equal to what 225 tank cars can carry. This crude oil is distilled and manufactured into various petroleum products, the chief of which are naphtha, gasoline, refined oil, gas oil, fuel oil, lubricating oil, paraffine wax and grease. The refinery also makes road oils and asphalts from certain Mexican crude oils which are received by steamer. This Mexican oil is only a small percentage of that received, however; the big business is on the oil piped in.

*Which Is a Development at Good Hope, La.*

The refinery is operated twenty-four hours a day. At present it employs about 3,500 persons, which is about 500 short of normal times. There are three 8-hour shifts. All the employes work on an 8-hour day or shift basis, and never more than six days a week. Each has one day off in every seven, although that is not necessarily Sunday.

#### **And They Yet Have Stills**

The Baton Rouge refinery is up-to-date and complete, one of the largest oil refineries in the country. It takes an average of 100 tank cars a day to handle its outbound products, in addition to those that travel by box car and by steamer or barge. It is a vast chemical works, where distillation is practiced on a huge scale. The crude oil is evaporated and condensed to varying degrees of refinement, until the ultimate residuum is petroleum coke, which is used in the manufacture of electric light carbons and as fuel for other processes in the refinery. The stills have a capacity of 1,000 barrels, and an average of thirty-six hours is required for a complete distillation. The oils then pass through other stages of manufacture and are treated with various chemicals so as to meet the specifications for the various grades.

Nothing is lost. It used to be said of the packing houses that they lost nothing of the pig but its squeal. The refinery wouldn't even lose that. For example, a gas that was formerly lost in the process of manufacture has now been stored to operate certain huge gas engines, as large as the largest stationary steam engines, which provide the electricity needed in the plant. A special separation plant has been installed to save the oil that has been escaping to the river with the surface water from the refinery grounds. New processes are constantly being brought out to make more efficient the process of refining.

#### **Acres of Tanks for Storage**

To the casual passer-by the most noticeable features of the refinery are the vast storage tanks which cover most of the 783 acres at North Baton Rouge and which cover most of the 738 acres recently acquired at Maryland. These tanks are used for storage of both crude oil and manufactured products. Dikes are built around them for safety in case of fire, and the pipes permit of drawing off at the bottom the oil in a tank while a fire is burning at the top of it. Needless to say, smoking is one of the most unpopular pastimes around the refinery.

The refinery has its own machine shop, power plant, employment bureau, police force, welfare department and medical service. A modern and well-equipped office building is just across the Y. & M. V. tracks from the main part of the refinery.

As previously mentioned, the refinery is on the bank of the Mississippi, on the first highlands above the mouth of the river. At the lowest stage the river has about thirty-five feet of water, which will take care of the largest tank steamer afloat. The refinery dock, which is just back of the office building, will accommodate three ships at once. It is a notable piece of engineering—practically a 2-story dock of 120-foot spliced piling. This construction is necessary to allow for the variation of more than forty feet in the stages of the river.

#### **Baton Rouge a Great Port**

Much of the refinery's output is handled by steamer. The largest tank steamers will carry 5,000,000 gallons, and the refinery receives and dispatches an average of 250 cargoes a year. The company exports products to Great Britain, France, Spain, Italy, Holland, Germany, Denmark, Norway and Sweden directly from Baton Rouge. A large coastwise trade is

handled, too. This business has made Baton Rouge one of the leading ports of the United States. For the fiscal year ending June 30, 1921, this Mississippi River port, with exports and imports of 1,553,901 tons, ranked fourth in the Gulf of Mexico and ninth in the United States.

The sales department of the company has its headquarters in New Orleans. The products are sold under the trademarked name "Stanocola"—"Stan" for Standard, "o" for oil, "co" for company and "la" for Louisiana. This sales department has charge of merchandising in Louisiana, Tennessee and Arkansas, where it operates more than 200 tank stations. Distribution is carried on in part by the company's marine department, which operates tow-boats and barges on the Mississippi River and its tributaries to distribute fuel oil, refined oil and gasoline as far as Memphis, Tenn., and Arkansas City, Ark., where it is reshipped, if necessary, in tank cars or smaller containers.

Fuel oil is also carried to various sugar plantations along the Mississippi and its bayous, and bunker fuel oil is delivered to vessels in New Orleans harbor by barges and pump-boats which go alongside the vessels in midstream. The number of oil-burning steamers is increasing every day.

#### Organization With a Heart

It is pleasing to note that such a large and efficient organization as this can show keen sympathy. To promote the welfare of its employes is one of the chief policies of the company. The Baton Rouge refinery has a system of industrial representation that gives

*Stanocola Red Cross Unit*

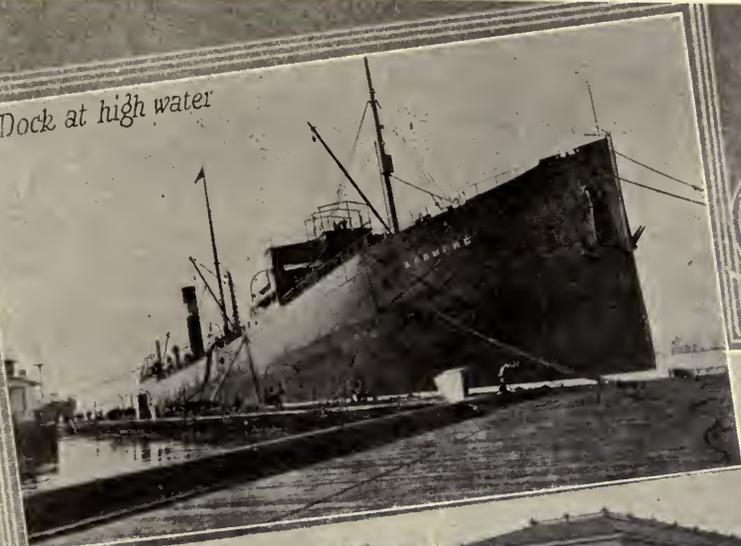

the employes considerable power in the management of their own relations with the company. The plant is divided into eleven divisions, each division consisting of one or more departments. For example, one division is composed of the machinists, blacksmiths, truck drivers and electricians. Each division has at least two representatives, on the basis of one to each 100 employes. Under the present allotment, there are twenty-seven white representatives and fifteen negro representatives, as the races are organized separately. These representatives meet, according to color, in separate conferences with a like number of representatives of the management. The conferences are empowered to handle all matters of joint interest—hours, wages, working conditions and adjustment of grievances. Their final decision is subject to review by the board of directors.

The choosing of representatives, which is

*Mexican Petroleum Corporation's Plant at Destrehan, La.*

Band

carried on in an election with ballot boxes and great secrecy, is an occasion for much friendly electioneering. This system of industrial representation actually functions, to the satisfaction of both management and employes.

#### For Welfare of Employes

The company's welfare work includes the operation of a first-aid hospital in charge of two physicians and two graduate nurses. Medical examination is required for all new employes, and at regular times for all employes to determine their qualifications for the work to which they are assigned. A sickness disability plan provides half pay during the period of disability for all employes with service of a year or more. A visiting nurse makes house-to-house calls. In accident disability the company furnishes medical attention and pays compensation in accordance with the workmen's compensation act. There is also a life insurance plan, whereby employes with service of one year or more receive without cost to them insurance policies ranging from \$500 to \$2,000.

Then, too, there is a pension system. Employes 65 years old having twenty years of services are retired on a pension, which is figured as 2 per cent for each year of active service computed upon average salary or

wages received during the last five years of employment.

#### Y. & M. V. Has Suburban Service

The company maintains a dining room for the convenience of office foremen and the office force for the noon-day meal. The refinery has a band of thirty musicians, which gives weekly concerts in Baton Rouge during the summer. Each department also has a baseball team in the summer, and games are played frequently in Baton Rouge.

Most of the employes live in Baton Rouge, which is three miles down the Y. & M. V. tracks from the refinery. For their convenience a suburban service has been installed. It is believed to be the only one on the Illinois Central System outside of Chicago that serves patrons who are not employes of the company. Trips are timed so as to get the forces to the refinery and back as the various shifts change. Transportation from Baton Rouge to the refinery began in 1909 with omnibusses; then tow boats and barges on the river were used; then the railroads got into the game, first with open gondola cars, then with old fruit cars with benches in them, and now with regular passenger coaches.

And so it can be seen that the Stanocola refinery means passenger as well as freight business to the Y. & M. V. at Baton Rouge.

### ENGINE AND CREW WITH ON-TIME RECORD

Here is Engine 1135, which Engineer H. H. Banks of the St. Louis division recently handled to a record of nine straight months of on-time service, with four connections on each run and not an engine failure, as noted on page 91 of our November issue. The men in the picture, right to left, are: Fireman Clarence Carter, Engineer Banks, Traveling Engineer J. H. McGuire and Trainmaster F. T. Gibbs.

## Fourteen Times Around Earth—On Time!

### Engineer C. J. Barnett Completes His Remarkable 5-Year Record With the Panama Limited

WHEN Illinois Central Train No. 8, better known as the Panama Limited, arrived at Memphis, Tenn., at 10:05 p. m., November 16, 1921, Engineer Charles J. Barnett, with Engine 1100, had just completed five continuous years in this service, making daily trips between Memphis, Tenn., and Canton, Miss., a distance of 188 miles. This is a total of 1,825 trips, and Mr. Barnett has always maintained the schedule of that train, which is a wonderful performance in view of the fact that the district between Memphis and Canton is single-tracked and has the heaviest grades between Chicago and New Orleans.

In this length of time Mr. Barnett has made 343,100 miles, or the equivalent of fourteen times around the earth.

Mr. Barnett has been running Engine 1100 ever since it was built in 1913. This engine is of the Pacific type. When the Panama Limited train service was begun in 1916, he and his engine were assigned to this service and pulled the first train south from Memphis to Canton.

Mr. Barnett has been in locomotive service on the Mississippi division since 1892.

When Mr. Barnett took this engine, November 16, 1916, the engine had in 26,005 miles. We have spent for thorough and general repairs on this engine since that date \$12,254.75.

C. J. Barnett

In other words, this engine made 343,100 miles during the 5-year period with the foregoing amount expended for thorough and general repairs.

## Old Time Table Gives Basis for a Story

An observing newspaper man at Manchester, Iowa, is H. L. Rann, whose Manchester Press picked out of the November issue of the Illinois Central Magazine information for an old-time railway story of interest to all the readers in his vicinity. Under the heading, "Can You Recall the Days of '57? Reprinting of Ancient Time Table of Pioneer Railway May Jog Dormant Memories of Old-Timers; Fast Time Was Frowned Upon; Three Hours Were Required to Make the Run From Dubuque to Dyersville; Some Weird Rules for Guidance

of Employes," the Press recently carried the following interpretation of the 1857 time-table of the Dubuque & Pacific Railroad, which was reproduced on page 66 of our November issue:

We wonder how many readers of *The Press* today can recall the time when the Illinois Central tracks stuck their noses into the vast and illimitable west only as far as the village of Dyersville? Not many, we'll venture. The Illinois Central was then known as the Dubuque & Pacific Railroad, and in 1857 the division superintendent was D. H. Dotterer. On May 11 of

that year Mr. Dotterer issued a time table and instructions to employes, which are now veritable curiosities, as indicating the primitive stage of railway transportation at a time when Delaware County had no outlet to the world at large save by lumber wagon.

In 1857 the Dubuque & Pacific ran only two trains to the terminal, Dyersville. One was a mail train and the other an accommodation train. The mail left Dubuque at 7 a. m. and arrived at Dyersville at 10 a. m. The accommodation left Dubuque at 3 p. m. and reached the terminal at 6 p. m. This was a nice, leisurely trip of three hours, now covered in thirty minutes, but no doubt it was a revelation to the first passenger, especially in wet weather, when the roads were morasses. The stations on the line were Dubuque, Julien, Caledonia (now Peosta?), Epworth, Farley and Dyersville. The engines, of course, were filled up with cord wood instead of coal.

Among the rules laid down for observance by the employes of the road was one which is particularly interesting. It specified that in case of damage to engines, tenders or trains, due to neglect or carelessness, the cost of repairs were to be paid by the employe at fault. What would the Five Brotherhoods say if such a ruling were put in force today? Rather, what wouldn't they say? Here are Mr. Dotterer's instructions, which, you will admit, read queerly:

"Any damage the engine, tender or train may sustain by neglect of instructions or carelessness of the engineer, the net cost of repairs of the same will be charged to him and the amount deducted from his wages. The same will hold good against the conductor for any damage the train, engine or tender may sustain by his carelessness or neglect of duty.

"The whistle must not be used except in extreme cases of danger, in giving the necessary signals and in approaching the stations.

"Great care must be observed in approaching public crossings to reduce speed and commence ringing the bell at least 80 rods from the crossings.

"Each train will wait on the other at regular passing places 30 minutes after the regular arrival time.

"Being that the road is not fenced and no cow-catchers, engineers must keep a sharp lookout for cattle and in no case run so as to risk the safety of the train, the making of

time being only a secondary object. Let your motto be, 'Safe first and fast afterward.'

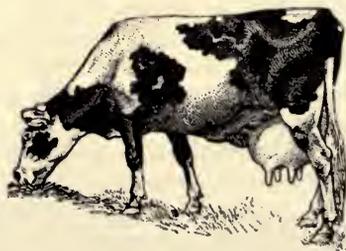

"Conductors will be very particular to see that the bell or whistle cord is always properly attached before leaving a station. Engineers will be responsible for any damage that may accrue from obstructions that may interfere with the free working of the cord in passing over the tender, etc."

The first passenger train from Dubuque to Dyersville, May 11, 1857, was drawn by a locomotive bearing the name of "J. P. Farley." Thomas W. Place was engineer; James S. Northup, conductor. This was when the Dubuque & Pacific Railroad was first opened for business.

St. Louis Division,  
I. C. R. R.

# O K Set on Double-Tracking Cairo Bridge

## Government Permission Is at Last Obtained for Improving Our Gateway to the South

By C. I. ANDERSON,  
Assistant Engineer

THE Illinois Central Railroad Company was granted a charter February 10, 1851, authorizing the location, construction and operation of a railroad and two branches, the main line to extend from La Salle, Ill., to a point near Cairo on the Ohio River, with one branch to Chicago and another to a point on the Mississippi River opposite Dubuque, Iowa. While the original plan contemplated confining the initial construction to lines within Illinois, the incorporators had in mind an extension southward from Cairo across Kentucky, Tennessee, Mississippi and Louisiana to New Orleans, then commonly spoken of as the "Queen City of the South." James C. Clarke, then master of transportation of the Illinois Central Railroad Company, thus expressed the sentiment: "The value of a great through traffic north and south is yet unknown, but it is reasonable to suppose that passengers and the more costly freights will seek the most available and the most direct route to the exclusion of the river, which is circuitous and uncertain."

### Completed North and South Line

Financial depression during and after the Civil War postponed the immediate realization of Mr. Clarke's dream, but the subsequent success in building up the business of the railroad after it had been extended to New Orleans more than fulfilled his prediction as set forth by him at that early date.

With the gradual return of public confidence

in railroads after the Civil War, the officials of the Illinois Central Railroad Company resumed their original policy of progression. In 1872 William H. Osborn, one of the directors of the Illinois Central Railroad Company, effected negotiations with Colonel Henry S. McCombs, then president of the Southern Railroad Association, which was operating the New Orleans, Jackson & Great Northern and the Mississippi Central railroads, resulting in the extension of the Mississippi Central Railroad from Jackson, Tenn., to Fillmore, Ballard County, Ky., nearly opposite Cairo, and the establishment of a transfer ferry.

Unable to await the fair return on their investments, the New Orleans, Jackson & Great Northern and Mississippi Central railroads became bankrupt and were sold under foreclosure in 1877 to a consolidation of corporations under the title of the Chicago, St. Louis & New Orleans Railroad Company.

Ferrying, costly, tedious at all times and hazardous during high-water stages, was not at all satisfactory, and plans for bridging the Ohio River were considered. They took definite shape in 1879, when, at the instance of President Ackerman of this company, soundings, surveys and estimates were made. From time to time the condition of the river was watched carefully, and frequent joint committee board meetings of this company and the Chicago, St. Louis & New Orleans Railroad Company were held, with a view to considering the bridge construction.

As an aid to this movement Kentucky approved "An act to authorize the Chicago, St.

The Cairo Bridge and a Freight Train Crossing It

Louis & New Orleans Railroad Company and the Illinois Central Railroad Company, or either of them separately, to build and maintain a railroad bridge across the Ohio River," March 29, 1886, and this was formally accepted by the Chicago, St. Louis & New Orleans Railroad Company April 1, 1886. Work on the approach to the proposed bridge was begun shortly thereafter by the Chicago, St. Louis & New Orleans Railroad Company. Detail plans for the entire bridge were prepared by Engineers George S. Morrison and E. L. Corthell, in conjunction with E. T. Jeffery.

At a board meeting of the Chicago, St. Louis & New Orleans Railroad Company, held March 26, 1887, it was decided to petition the Secretary of War for a permit to construct the bridge in accordance with acts of Congress passed December 17, 1872, and February 14, 1883, authorizing the construction of bridges across the Ohio River.

The application for the construction of the Cairo bridge on its present location was approved in April, 1887, and actual construction on the bridge proper was begun July 1, 1887, by the Union Bridge Company, which was awarded the contract for the greater portion of the bridge work. The bridge, a single-track structure, was completed ready for traffic October 29, 1889, and turned over to the operating department of the railroad March 1, 1890.

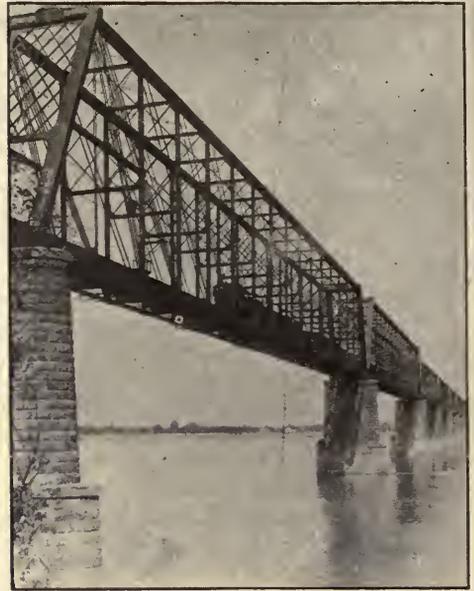

The total length of the opening was 20,460 feet, or  $3\frac{7}{8}$  miles. At that time it was the longest metallic bridge in the world, excepting the Tay Bridge. Of the above-mentioned length 7,850 feet represented the Kentucky approach, 4,646 feet were over the channel proper and 7,963 feet of approach were on the Illinois bank.

#### Bridge Now $1\frac{1}{2}$ Miles Long

The steel was erected by means of falsework driven directly in line with the present alignment. Nine thousand nine hundred feet of this bridge consisted of timber trestle, which was later replaced by earth filling. In 1901-1902 the length of the bridge was further reduced when the steel viaduct approach on the Illinois side of the river was replaced by an earth fill, reducing the bridge to its present length of 7,957 feet, or one and one-half miles.

The time of construction was two and one-half years, and the work was carried out without any great loss of material or equipment.

On account of the heavy alluvial deposits it

*Another View of the Bridge, With a Train Just Crossing*

was both impracticable and impossible to go to bedrock, even by the use of the pneumatic process, and the channel piers rest on caissons, the lowest being seventy-five feet below lowest water. The total height of the structure, from the bottom of the deepest foundation to the top of the highest part of the iron work, is 249 feet.

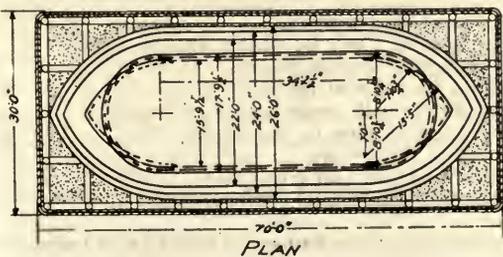

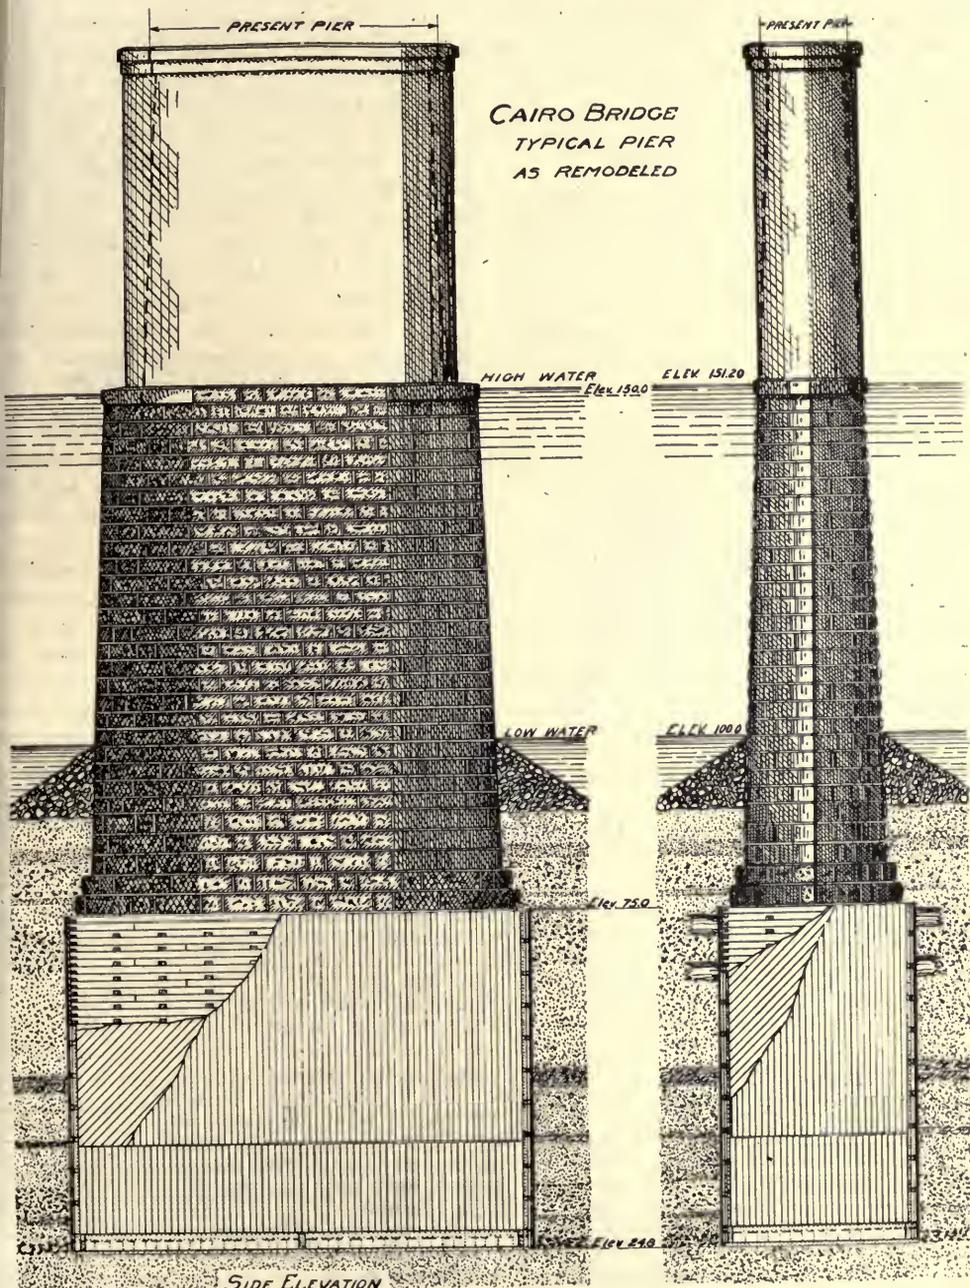

Traffic over this bridge increased immensely during the first ten years of its use, and that, in conjunction with the increased weight of equipment, occasioned the consideration of plans for feasible methods of double-tracking as early as 1902.

Tentative plans and estimates were prepared and considered from time to time, but it was not until 1914 that formal application was made to put falsework in the river preparatory to double-tracking. However, at a hearing held by a board of government engineers June 16, 1914, at Cincinnati, Ohio, this company was denied the right to build the double track on the grounds that navigation interests objected to the length of the present 523½-foot channel span openings, and insisted that these spans should be increased to 800 or 1,000 feet in length.

#### Double Track Badly Needed

This company was not justified in doing so and set about finding means of strengthening

CAIRO BRIDGE  
TYPICAL PIER  
AS REMODELED

Datum is 100 feet below Low Water  
" " 169.58' above mean tide of Biloxi Miss.

the bridge members to meet the requirements of increased loading due to heavier engines and cars, and thus make it possible to increase the tonnage of trains across the bridge. This work, which was done without the use of falsework, was completed in 1915.

During the European War, and since its close, the need of a double-track structure has been most urgent. In the latter part of 1920, on account of the gradual reduction of river traffic on the Ohio River, it was believed it might be possible to convince the government that the company could replace the present single-track bridge with a double-track structure without affecting adversely the navigation conditions, and therefore plans for reopening the case with the Secretary of War were started.

The present bridge consists of two 523½-foot, seven 405-foot through spans, three 250-foot deck truss spans and one 50-foot deck plate girder, on masonry piers. The Kentucky approach consists of twenty-one 150-foot deck truss spans and one 106-foot deck plate girder span on steel cylinder piers, filled with concrete.

The present river piers have an offset at a point about at the high-water mark, very nearly coinciding with the starling, and it is proposed to jacket with concrete or remove and rebuild, as necessity may demand, the portions of the piers above the starling, and thereby increase the dimensions of the tops of the piers sufficiently to accommodate the metal supports for the proposed double-track spans. The proposed new double-track superstructure will be designed for a loading equivalent to or greater than Cooper's E-60 class loading, and the gradient on the Kentucky approach reduced to .5 per cent, or 26.4 feet per mile.

#### Permission Obtained November 10

Plans were also developed to show possible further aid to navigation, either by fixed or floating protection, should present or future conditions so demand.

May 12, 1921, formal application for double-tracking the Cairo bridge, describing the proposed changes in detail, was filed with the Secretary of War. September 6, 1921, notice of a public hearing to be held at Cairo, Ill., September 28, 1921, was received, and preparations were made to present the proper argument

### On Short Time

She was loose, lame and leaking, and the coal was full of slag  
As she staggered up that mountain grade with all that she could drag.  
The "hogger" watched the pointer, while the brawny "tallow pot"  
With all his Herculean effort tried to keep that scrap heap hot.  
Ten miles away the summit loomed, and there, the "hogger" knew,  
Number Four, the fast express, at ten fifteen was due.  
The "eagle eye" pulled out his watch; nine forty-five it read.  
"Thirty minutes more to make the next ten miles," he said.

Then turning to the swearing, sweltering, grimy "smoke,"  
With a word of wrathful meaning these stormy words he spoke:  
"I want more steam," the "hogger" roared. "I want the engine hot.  
Do you think were coasting down the hill or standing on the spot?"  
The fire boy grabbed the clinker hook and wrestled it with rage;  
With hook and scoop he fiercely worked, until upon the gauge  
The hesitating pointer slowly, surely came around  
Until the boiler pressure registered almost two hundred pounds.  
The "eagle eye" put on his "gun," again he pulled his watch,  
Then with a peaceful smile he cut her down a notch.

The "con" back in the cupola was raving wild with rage.  
"What's the matter with that 'hog head'? Can't he read a printed page?  
Can't he see that Number Four is among the carded trains?  
I never saw a 'hog head' yet that had an ounce of brains!"  
Just then the old mill gathered speed; the mile posts lagged no more,  
And they pulled into summit siding just in time to "clear" for Four.  
And there at summit siding they had to lie in wait,  
For Number Four, that fast express, was just two hours late!

—Sent in by JOSEPH W. GASEY, McComb (Miss.) Shops.

before the board of engineers appointed by the chief of engineers. The hearing, held in the Federal Building at Cairo, Ill., on the date previously set, was well attended. The interests against the granting of this permit were championed by a representative of the Greater Kanawha River Improvement Association. Argument was presented by both sides, and able assistance was given the company by prominent citizens of Cairo.

November 10 a letter was received from Brigadier-General H. Taylor, assistant secretary of war, announcing that the application for double-tracking was approved.

The proposed new double-track superstructure of the bridge proper will appear in elevation similar to that of the present one. The permit provides for no change in the relative condition between the bottom of the spans and the surface of the river.

## An Engineering Essay in Near-English

*The following material presents a problem in editorial policy. It has almost equal right to go in an engineering department (if this magazine had one) or in the "I See" column recently established. Ex-service men and others who have had occasion to struggle with the French language will appreciate the French writer's attempt to unravel our English tongue. This is an article on the rack railroad at Langres, France. It appeared as chapter 13 of a Guide to Langres, published for the benefit of American visitors during the war. The magazine is indebted to S. M. Sherman, assistant engineer, Chicago Terminal Improvement, for access to the publication.*

One of the principal curiosities of the city of Langres, it is certainly the rack-railway established in 1887 and destined to climb up the mountain on which the town is sit down. Formerly travellers were obliged, to go from station to the city, to do on foot the journey about forty minutes along to way up on top of which they arrived tired and quite out of breath. We ought to the travellers arriving by the valley a scalling so hard?

Problem, already resolved at Righi (Switzerland), has received a new application at Langres. The engineers had installed there a rack-railway, that begins in the station yard of Langres-Marne and that end to inside of the city, after to have gone over a length of 1,475 meters and purchase a nivel difference of 132 metres. We conceived easily the impossibility that would have there for an engine, circulating on an ordinary way, to scalling acclivity as rapid as this one of road wich we speak. The simple adherence of the wheels from locomotive to the rails should enough sufficient for alike acclivity.

Here is from the "Illustration" summary

The Rack-railway

descriptions of that rack-railway, the first that has been established in France.

"In reality, the rack is an iron ladder, laid down against the rails along up the acclivity. It is this ladder that the question is to do scalling to railway composed with an engine and two carriages. Far that the engine is provided with one toothed wheel, wich put in gear with the steps. The upright of the ladder, that is placed in the middle of the line, have the form of an inversion U, uprights are interspace of 10 centimetres from axle in axle. The rack existe just in two parts in main point of acclivity; other parts in level run are crossed by a simple adherence and admit nivel crossings.

"The entrance in rack, when it leaves level runs, present the following dispositions: the stationary part of rack is prolonged by movable piece presenting, of force of one jaw army of teeth and articulate on the stationary ladder. This jaw lean on the line by two springs armed with lateral guides destined to prevent movable-rack deviations. With this both springs, it relent slowly under impulsion of the teeth wheel, as soon as this one present itself, and feeding with grain do reg-

ulary, without jolt, before it arrive at stationary rack.

"Locomotive differ sensibly from usual locomotive. It posses a teeth wheel placed at its lower part, of wich wheel, feed with grain on the rack in line of the gradients.

"Moreover, this engine lean on wheels so as to occupe an horizontal position in the acclivities; on the contrary, on flat land it is lightly inclined. It is provided with four help breaks: compressed air break counter steam break and two help breaks. For the carriages, they are provided ahead of frame, of one platform on wich rest agent charged to manoeuvre an energetic break wich operated on teeth wheel. Engine is always on side of

the valley; it push the train to the acclivity and hold back it to the declivity. The speed of walk is 10 kilom. at hour, all course do it about 8 to 10 minutes.

"The security is complete the rack rending running off the rails impossible, and the one whatever of three breaks from engine begetting instantaneous stop of the train as soon as squeeze it thoroughly.

"Out coming from Langres station the line cross the avenue of this station, turn abruptly at left, cleared fortifications and arrives to the foot even of rampart of the cliff on what the city is built, it a viaduct the hight of the steep wich seprate it from the city."

### A MATTER OF COMMON AGREEMENT

The cartoon presented herewith is by Miss Edna E. Aldrich of Teheran, Ill., daughter of C. L. Aldrich, for almost thirty years a station agent with the Illinois Central. The Aldrich family is an Illinois Central institution. One son, Arthur L. Aldrich, entered the service as a telegrapher at the age of 16, seven years ago, and is now agent at Pawnee Junction, Ill. His younger brother, W. J. Aldrich, also entered the service at the age of 16, be-

came a telegrapher at 17 and has now been with the company three years. The Aldriches believe the Illinois Central System to be, as Arthur writes, "the greatest railway system in the world."

*December—A Time to End Accidents*

# Here's a Tale of an Agent's Long-Tailed Pets

**F**EW persons could bring themselves to the point of fondling an alligator. And the general opinion is that few alligators could be fondled. But there is proof at Belzoni, Miss., on the Yazoo & Mississippi Valley Railroad, that there are at least two alligators in the world that can be petted. In fact, they have been humored so much and often that they have become spoiled. These two alligators demand kind treatment and insist on being petted.

All travelers on that part of the Illinois Central System can, and many of them do, see these alligators at Belzoni. They are in the park at the station. A small pen has been built for their home. On one side of this pen there is a small wooden structure about a foot high, two feet wide and six feet long, and on the other a pool of water of about the same dimensions in the ground and lined with concrete. The wooden structure is a retreat for the alligators, and the pool supplies the element which their nature demands. The pen has been constructed to resemble, as nearly as possible, a natural home for them.

## Six Months Awake, Six Asleep

During the warm months of the year, from May to October, these two alligators can be seen basking in the sun. They loll about with little concern for the rest of the world, unless food is offered. Persons who make a special effort to see them when the trains stop at Belzoni hang on the strong fence of

the small pen and gaze in wonderment at the rough, shiny, iron-like coated reptiles.

When the air and the earth begin to chill, the alligators lose their interest in the outside world, and their desire is to eat, crawl lazily into their retreat, bury themselves in the mud and go to sleep. But they are not left unmolested. Eager sightseers rouse them from their slumber by poking sticks through the cracks of the boards that shelter them. In answer to the jab of the sticks, a piercing hiss like the steam exhaust of an engine comes from the interior of the small wooden structure. The alligators come out, but they are furious. The hiss is continued with increasing volume, and their huge mouths stand open in defiance to anyone who might come near. They refuse the choicest parcels of food. If left alone, they would remain dormant during the entire six months of cool weather.

## Property of Agent L. S. Bradley

L. S. Bradley is the agent at Belzoni. The alligators belong to him, and he shows affection for them just as one shows affection for a dog or other animals. He has given each a name, and has taught them to come to him when their names are called. He fondles them, rubs their ferocious-looking rough heads, pats their sleek sides and talks to them in endearing terms. One can almost imagine the reptiles purring under his gentle handling.

Mr. Bradley has always had a great love

for pets. He has had dogs, cats, squirrels, rabbits and other animals. His kind-heartedness won the confidence of his pets, and they all displayed sincere affection for him. It has been little trouble for him to teach an animal tricks. They seem to understand what he wants and do their utmost to please him.

In 1907 Jake Boone, conductor on the Y. & M. V., got off of his train at Belzoni, and asked Mr. Bradley if he would like to have an alligator for a pet. Not taking the matter seriously, Mr. Bradley answered in the affirmative. He had never considered an alligator as a possible pet, and the matter soon slipped his mind. In a few days, Conductor Boone walked into the station at Belzoni with an 18-inch alligator in his hands, and handed it to Mr. Bradley with the declaration that it was a "bird." It was a cunning little thing, Mr. Bradley says, and his liking went out to it immediately.

**Snakes Added to Collection**

Mr. Bradley solicited the service of E. F. Grable, then carpenter foreman, to build a suitable pen in the station park.

The news of Mr. Bradley's pet alligator quickly spread over the division, and his fondness for animals was the topic of much of the conversation among employes.

One day H. H. Alexander caught a 6-foot rattlesnake, and brought it to Mr. Bradley

to keep. Mr. Bradley made a cage for it and gave the snake tender care—at a distance. This news also traveled rapidly, and it was not long before other persons brought him two more of the dangerous reptiles.

For food, Mr. Bradley gave the snakes live rats. He selected the largest ones he could find because he enjoyed watching the rattlers battle for their food. The snakes would not crawl to the rats and devour them, he says. Instead, the reptiles laid in wait, when they were hungry, until a rat came within reach. When a rat came near, the coiling process began, and in a flash a snake had buried its deadly fangs either in the forehead or side of the rat. Not longer than two minutes later, and often in much less time, the rat was dead. Then the snake ate it, his own poison and all.

**Some New Natural History**

But the snakes were not to have their way always. There came a cold day, and it is a snake's nature to become dormant in such weather. On this day there were several rats in the cage with the rattlers. They, like many previous ones, had been placed there as snake food. It may have been a coincidence, but on the day the snakes became sleepy the rats grew very hungry. The rats proceeded to feed upon the snakes. It may have been an act of revenge. Mr. Bradley says it has always

Joe and Pat at Belzoni, Miss.

*Agent L. S. Bradley*

been a mystery to him, and he seldom tells the story for fear that no one will believe it.

In the meantime, Mr. Bradley had named his alligator "Jake Boone" in honor of the donor. Jake grew slowly but surely. He was peevish at sunset if he had not been fondled during the day. He had become spoiled, and expected Mr. Bradley to rub his head each day. Jake soon learned his name. He would raise his head and start toward the person calling his name. Mr. Bradley often took him into the station. He would place Jake on the floor, rub his head and sides and then tell the assistant, Mr. Bradley's son, to call the alligator. When he did, Jake went to him immediately. The two men amused themselves by having the alligator cross the room from one to the other.

In 1907 Kit Lockett, negro, was employed as station cleaner at Belzoni. Love for alligators must have been contagious at that time, for Kit learned to think as much of Jake as Mr. Bradley did. Kit would climb into the den, call Jake, take him on his lap and pet him for hours.

#### Got Two More Alligators

The next year there were two additions to the alligator family. Joe Craken, super-

visor, and Pat Lister, conductor, each brought a young alligator. The reptiles were named Joe and Pat respectively, and became as fond of their captors as was Jake. Kit took pride in all three of them, and saw that their every need was attended to.

In 1919 Jake had grown into such a splendid specimen he was sent for exhibition to the city zoo at Jackson, Miss. Mr. Bradley made a trip to Jackson about a year later. He wanted to see how Jake was being treated, he said, and to see if the alligator still remembered him. When Mr. Bradley arrived at Jake's new home in the zoo, he called Jake, and was surprised to see the alligator raise his head and start toward him.

A few months ago, Mr. Bradley says, he heard that Jake had been killed at Jackson. He was shot in the back of the

*Kit Lockett, the 'Gators' Nurse*

head, the only spot where alligators are easily killed.

Joe and Pat are happy at Belzoni. The city marshal saves all the stray dogs he kills, and feeds them to the alligators. Their favorite dish is raw meat, but fish, they find, are also delicious. When they are fed live rats, they show their close relation to the snake family by lying in wait. When they strike, it is both with the mouth and tail. The tail serves to throw the object into the mouth. They do not chew their food, but hold it with their teeth, then gulp it down. They will jump like a dog after small pieces of raw meat.

#### Sixteen Years at Belzoni

From October to May, Joe and Pat eat nothing and sleep most of the time. When May arrives, Mr. Bradley says, the two alligators are as fat and sleek as they were when they stopped eating.

The spring of the year is mating season for alligators. In that season, Mr. Bradley says, Joe and Pat pierce the early morning

air with deep notes that resemble the bellow of a bull. They raise their heads, their necks swell and the sound that emerges vibrates through the surrounding country.

Mr. Bradley has had many animals offered to him for his little zoo, but he says too many would be expensive. He has refused many alligators. He is keeping Joe and Pat because he has become attached to them and because they have aroused much curiosity.

Mr. Bradley has been in the service of the Illinois Central System at Belzoni for sixteen years. His first railway work was as agent for the L. N. O. & T. at Shelby, Miss., in 1892. He remained there when the road was purchased by the Y. & M. V., but left the service in 1897 to accept a position in Tennessee with the N. C. & St. L. In 1899 he went to Hollywood, Miss., as agent for the Y. & M. V. and stayed there three years. He was then transferred to Minter City, Miss., where he was agent until he was sent to Belzoni as agent in 1905.

## Urges More Work to Avoid Railway Fires

The Railway Fire Protection Association, which held its annual meeting in Chicago, October 18-20, is a vigorous organization representing seventy-seven railroads, the U. S. Steel Corporation, the Bethlehem Steel Corporation, the Bureau of Explosives, two electric railways and various insurance companies, corporations, firms and manufacturing industries. The constant aim of its members is to make railway employes (and officers) 100 per cent efficient in the prevention of fires.

The association statistical committee, reporting for seventy-five railroads comprising a mileage of 194,166, disclosed fire losses for 1920 aggregating \$10,563,915. This loss was larger than that suffered in 1919, but a gratifying feature is that the number of fires decreased 1,219.

The committee on resolutions recommended:

That executives make manifest and proclaim their interest in fire prevention and protection, give active support and direction to enforcement and acceptance of individual responsibility as a matter of daily duty and encourage the inauguration of a system of education to develop comprehensive interest in fire prevention.

That all fire prevention activities on each railroad be co-ordinated through a central administrative officer for the promulgation of rules and regulations for the protection of properties and guidance of officers and employes, and to secure the best co-operation in elimination of fire hazards.

That, in all building plans, consideration be given to fire hazards and that these hazards be eliminated or minimized before construction, as at that time correction may be made most easily and economically. The encouragement of fire resistive building construction and the more extended use of fire walls to reduce large areas subject to fire are of great importance.

That care and cleanliness be recognized as the greatest safeguards against fire and be given first attention. Railroads have many frame structures. A clean frame building with careful, interested occupants, is a better fire risk than a brick structure in a dirty, congested condition with indifferent tenants.

That the enforcement of rules and regulations for the safe transportation, storage and use of explosives and other dangerous articles as prescribed by the Bureau of Explosives, American Railway Association, should be strictly carried out.

That rigid investigation of all fires be made to determine the cause and fix the individual responsibility for damage or destruction of property.

That intelligent and comprehensive inspection and adequate watchman service are both vitally important.

That maintenance and standardization of fire fighting facilities of both organization and equipment are necessary, and, where property values justify, installation of automatic sprinklers as a means of extinguishing fires in their incipency, is recommended.

That it should be fully realized insurance only partly compensates for fire waste, and invariably a fire produces an operating loss, regardless of insurance collected.

That this association believes that a campaign or interest endorsing the recommendations above will produce beneficial results and it earnestly appeals to railway executives and officials for their personal influence in their enforcement.

# How We Make Water Fit for a Boiler

## Three Methods of Treatment Are in Use on Illinois Central System, and They Pay Their Way

By C. R. KNOWLES,  
Superintendent, Water Service

THE process of treatment or purification of railway water supplies for locomotives, while of the first importance, does not involve any deep chemical principles, as there are only half a dozen or so chemicals used in all the known processes of treatment, with the exception of the compounds used in interior treatment, which are generally purchased already prepared for use or manufactured under the supervision of a chemist and applied as directed.

Most of the water treating plants on railroads use only two reagents in the treatment of water—lime and soda ash. In addition to these, sulphate of alumina and iron sulphate are sometimes used as coagulating mediums to assist in the precipitation of matter in suspension. Three general methods of water treatment are in use on the Illinois Central System:

1. Interior treatment by means of specially prepared compounds and soda ash.
2. Exterior treatment in treating plants using lime and soda ash.
3. Filtration through sand filters using sulphate of alumina (alum) for the removal of mud and suspended matter.

The first method of treatment consists chiefly of the use of compounds prepared in the

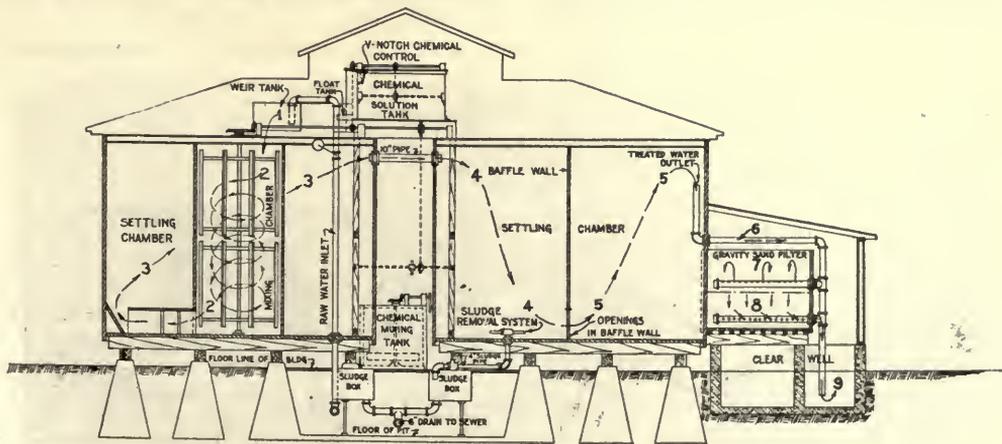

form of bricks for use in locomotives and in a paste form for use in stationary boilers. The bricks are placed in the tender of the locomotive each time water is taken, and, as the bricks dissolve, the compound is carried into the boiler with the water. This form of treatment is used extensively on the Northern and Western lines and from Mounds to Birmingham on the Southern Lines, as well as at all principal power plants. Anti-foaming compound is also used to prevent foaming of boilers using water treated with lime and soda ash.

### Now Using More Compound

The anti-foaming compound, which comes in a paste form, is dissolved in warm water and applied to the water in the engine tender or directly to the boiler through the injector when necessary.

During 1920 we purchased 120,000 pounds of boiler compound. We shall use during the present year more than 200,000 pounds.

The treatment of water by means of boiler compounds is not identical with the treatment of water in a water-softening plant, as the chemical reaction between the ingredients in the compound and the objectionable elements carried in the water takes place within the boiler, and, instead of being removed, the scale-forming materials are kept in a soft state and are carried to the bottom of the boiler, where

CONTINUOUS WATER SOFTENER  
AT WATERLOO, IA.

they are blown off through the blow-off cock.

The advantage of treating with boiler compound is that it is relatively inexpensive as compared with the cost of constructing and maintaining treating plants and it may be used where such plants do not exist or where the cost of construction cannot be justified.

### Two Types of Softeners

Water softeners for railway water service are built in two general types, the "intermittent" and the "continuous" types. In the intermittent treating plant two or more tanks are always required, as after treatment it is necessary for the water to stand until reaction and precipitation have taken place, while in the continuous plant the process of reaction and precipitation takes place as the water is passing through the softener, and the water is ready for use as it passes out of the discharge end of the plant. An illustration of the passage of the water through a continuous softener is shown in the plan of the Waterloo, Iowa, plant, reproduced herewith.

The untreated water is discharged into the weir tank (1), where the chemicals used in treatment are added; the water then passes into the mixing chamber, or downtake (2), where the water and chemicals are thoroughly mixed by means of revolving paddles. The water then passes out of the bottom of the mixing chamber, enters the first settling chamber (3), and slowly rises to the top as additional water is admitted; it then passes through a 10-inch pipe into the second settling chamber (4) and down under the baffle wall into the third settling chamber (5), in which it rises and passes out through the treated water outlet (6), and into a gravity sand filter (7). It then passes through a sand bed

*Plant at Baton Rouge, La.*

30 inches thick (8), and into the clear well (9), from which it is pumped to the storage tank and is ready for use. The greater part of the impurities are deposited in the settling chambers (3), (4) and (5), and are removed by the sludge removal system to the sewer. The filter removes any matter in suspension that remains in the water after it has passed through the system. The present Waterloo plant has been in continuous operation since 1916 and is removing annually more than 700,000 pounds of solids from the water used at that point.

### Where Our Plants Are

Continuous treating plants with filters are in service at Freeport, Ill., Independence, Dubuque, Waterloo, Charles City, Osage, Mona, Cherokee and Merrill, Iowa, and Carbondale, Ill., while intermittent treating plants without filters are in service in Lena, Scales Mound and Galena, Ill., Peosta, Dyersville and Manchester, Iowa, Haldane, Mendota and Decatur, Ill.

Lime and soda ash are used exclusively in

*Big Muddy Pumping and Water Softening Plant, St. Louis Division*

both the continuous and the intermittent plants. The scale-forming materials which are removed from the water through treatment are compounds of lime, magnesia, iron, alumina, etc. The great majority of these materials are carbonates of lime and magnesia, which are designated as temporary hardness, due to the fact that they precipitate out of the water at a temperature equivalent to about 50 pounds boiler pressure. Sulphates of lime and magnesia are termed permanent hardness, because they are not affected by temperature.

The action of the reagents, lime and soda ash, in removing the impurities and softening the water may be illustrated by giving as an example their action on carbonate and sulphate of lime.

Carbonate of lime, the chemical term for limestone, marble and chalk, is soluble only in water containing carbonic acid gas and is thrown into suspension when the carbonic acid gas is thrown out of solution. This may be done by means of certain chemicals, the cheapest of which is quick lime. In the process of water softening the quick lime is mixed with water, forming hydrate of lime, commonly called slaked lime. When this slaked lime is added to the water in proper quantities, it unites with the carbonic acid gas which holds the carbonate of lime in solution, forming carbonate of lime, and precipitates out, together with the original carbonate of lime. As it is not soluble in water alone, the carbonate of magnesia is also precipitated at the same time.

#### Getting Gypsum Out of Water

Sulphate of lime, commonly known as gypsum or plaster of paris, may be removed from water by the application of carbonate of soda (soda ash). A reaction takes place when the soda ash is added to water containing sulphate of lime in solution, resulting in the formation of carbonate of lime and sulphate of soda. The carbonate of lime settles down, and the sulphate of soda remains in solution.

Some waters contain free sulphuric acid, particularly surface waters subjected to pollution from mine drainage. Sulphuric acid is extremely corrosive. It is removed at the same time the carbonates and sulphates are removed by the application of lime to neutralize the acid.

Thorough mixing of the chemicals and water is necessary for correct treatment, after which sufficient time must be allowed to permit the

chemicals applied to react with the impurities to be removed. This is usually fixed at four hours, depending upon the character of the impurities and the temperature of the water.

Frequent analyses and tests of the water are necessary to determine the definite amount of chemicals in proper proportion that must be added to the water to obtain the desired results. Well waters change but little in character, as a general thing, especially from the deeper wells, but water from surface supplies must be carefully checked at frequent intervals in order to detect changes in the water affecting the treatment, particularly immediately after rains or when the flood waters from rains are running out.

#### Two Kinds of Filters

While filters are used as a finishing step in the treatment of water with lime and soda ash, they are also used to remove mud, suspended matter, and bacteria from water. Filters may be of either the pressure or the gravity type. In the pressure type the water is passed through the filter under pressure and is delivered directly to the storage tank without being rehandled. With the gravity type of filter the water flows through the filter by gravity and is repumped to the storage tank.

Sand is usually employed as a filtering medi-

*Interior, Baton Rouge Plant*

um in either type of filter, although excelsior, charcoal, culm and other materials have been successfully used for the purpose. The sand beds vary in thickness and are supported on beds of gravel. In both the pressure and gravity type used on the Illinois Central, the water enters at the top, is distributed uniformly over the sand bed and passes downward through the sand and supporting layer of gravel beneath. The filters are washed by reversing the flow of water and passing it upward through the sand, washing off the mud that has collected.

#### Treatment Pays for Itself

Much of the mud and suspended matter carried by the water is so fine that it will pass through the sand bed unless a coagulant is used. Sulphate of alumina, which is used as a coagulant, has the property of bringing the finely divided particles in suspension together

in flocks in such a manner that they are retained by the sand.

The material carried by some waters is much easier to filter out than that carried by others.

For example, the mud carried by the Mississippi River at Baton Rouge is readily removed by the filter at that point, except when the flood waters from the Red River enter the Mississippi in large quantities, when it is impossible to remove all of the mud except by prolonged settling and coagulation. As the present settling time is limited, plans have been prepared for providing additional settling time, to permit of handling the Red River water, which at times carries as high as 3,500 parts per million of suspended matter.

While the proper treatment of water for use in locomotives is sometimes a troublesome and expensive operation, the trouble and expense is repaid many times over in improved operation of locomotives.

## *He Served the Illinois Central 50½ Years*

John Pendergast, recently retired section foreman at Colfax, Ill., was born in Chicago, Ill., June 12, 1856. At the age of 15 years, April 5, 1871, he entered the service of the Illinois Central Railroad Company.

He worked as section laborer April 5, 1871, to April, 1876, at Farina, Ill. From there he went to Dongola, Ill., to take charge of an extra gang laying steel and taking up old iron rail. Then, going back to Farina, he resumed work as section laborer until January 24, 1878, when he was sent to Mason, Ill., as a section foreman. March 1, 1880, he was transferred to Colfax, where he served as section foreman until September 30, 1921, when he was pensioned on account of failing health after serving the company for fifty years and six months.

During this entire length of service Mr. Pendergast's name was never omitted from a payroll; neither was there ever an accident on his section due to any negligence on his part. He has always been a conscientious and faithful employe, with the company's interest at heart.

His son, Walter, who is agent for the Illinois Central at Roberts, Ill., has been in the employ of the company since 1904.

*John Pendergast*

Frank Pemberton of Kempton has been transferred to Colfax to succeed Mr. Pendergast as section foreman.

## A Vision Among the Magnolias - The Louisiana State University

**P**ASSENGERS on the Yazoo & Mississippi Valley just south of Baton Rouge, La., next spring are advised to turn their attention from the levee just west of them to the first magnolia-crested bluff just east of them and behold rising there something unique in American educational annals—a group of state university buildings of one plan and architecture, a university that is a unit because it is built to order.

Crowning the magnolia bluff in the next year or two will be the new and complete Louisiana State University and Agricultural and Mechanical College—to give it its full official name. As a matter of fact, when you hear the project discussed in Baton Rouge you will hear it referred to, nine times out of ten, as “the new agricultural college,” but that is not the proper statement, since the whole University will be moved there from its present sit on the northern side of the city.

### Governor Parker a Farmer

The biggest reason for stressing the agricultural side of the University is perhaps Governor John M. Parker himself. The governor is a real farmer as well as Louisiana's outstanding figure of national prominence. His present visit to Washington, D. C., where he is lending his judgment to the armament conference as a member of the advisory committee for the American delegates, probably has not prevented him from being in spirit in Louisiana, where his pedigreed stock, by winning blue ribbons in the various fairs, are leading his people on to better farming and where he keeps a desk drawer in his private

office well filled with photographs of his prize-winners to exhibit to agriculturally minded visitors who obtain audience with him.

The governor is a militarily erect gray-mustached Southern gentleman, and he is busy and curt if need be, but he is never too busy to talk about his stock farm and how it is arranged so that each animal has just so much space, and how visitors make Sunday pilgrimages to look it over.

The governor was brought up in northern Louisiana, in the parish (which means county) just opposite Vicksburg, Miss., where his people had been planters for several generations. His present stock farm of several thousand acres is at Bayou Sarah, or St. Francisville, about forty miles above Baton Rouge on the east side of the Mississippi. Here he has Hereford and Holstein cattle, Duroc-Jersey hogs, Angora and milking goats, and sheep, housed inexpensively, the hogs in pens along a middle lane, with half an acre assigned to each sow. This time of year it is uncommon to pick up a Louisiana newspaper that has not something about the governor's stock on their way to one of the many fairs Louisiana has, telling how they travel in special cars with their own attendants and how they won prizes at the previous fairs.

### Took Legislature to Farm

The governor is a big man in farming circles in his native state. Last year the Louisiana Swine Breeders' Association held its annual meeting at his farm, and last year the governor also took the whole legislature up there from Baton Rouge for a visit.

Which naturally brings us back to the new

agricultural college, which leads on to the new University.

The governor is a staunch friend of education. When he was elected one of his planks pledged an improvement in the state agricultural college to keep pace with Louisiana's growth as an agricultural state. The development of the state's natural resources, particularly in oil, laid the foundation of the plan—to have the soil itself pay for the new college. When natural resources are taken from the soil, something has been subtracted from the wealth of the state, and so it is no more than fair that the state should tax this severance of its resources. Hence we find in operation the Severance License Bill, passed by the legislature in 1920, which provides a tax of 2 per cent on the value of all gas, oil, sulphur, salt, lumber and other natural products. This tax is collected at the time the products are severed from the soil. It goes into what is known as the Severance License Fund.

#### Money Goes to University

And this fund is to build the new University. An exception of \$800,000 is set aside for the charity hospitals at New Orleans and Shreveport, the insane asylums at Alexandria and Jackson, the negro university at Scotland and the boys' reform school, but what is left goes to the agricultural college account. At present there is in this fund about \$1,700,000 for agricultural college purposes.

A new bill up at the present session of the legislature raises the tax to 2½ per cent, to run to January, 1925, and specifies that not more than \$6,500,000 of the fund shall go to University purposes. In addition the constitution of 1920 provides a one-half mill property tax for the support of the University, limiting the annual share to \$1,000,000, unless the legislature makes an additional appropriation.

This is more money than the University has been accustomed to seeing—at least \$6,000,000 for building and \$1,000,000 a year for support. And so great plans are being made. Massachusetts architects have been engaged to prepare the preliminary drawings, and detailed plans for this made-to-order and built-to-specifications University are developing every day. The dedication of the grounds and laying of a cornerstone will make up a big event for next spring, about the fifteenth of March. President Harding has given his conditional acceptance to an invitation to attend. Herbert

Hoover, secretary of commerce, also has accepted conditionally. Charles M. Schwab has likewise been invited, but has not yet accepted.

#### Site Includes Almost 2,000 Acres

The new University grounds total 1,916 acres, just south of Baton Rouge, bordering on the river and crossed by the right-of-way of the Y. & M. V. The first plot of more than a thousand acres was bought three years ago, when the first plans for the new development were laid.

On the north edge of this acreage, and within good view and easy walking distance of the Y. & M. V. tracks, on a bluff that extends out toward the river, commanding the lowlands and covered with magnolias, the new University buildings will rise. They will be modern and fireproof, of a standard but simple and satisfactory design. The first structures to be erected will be the livestock barns, which will occupy the ridge running just south of the main mound.

The main campus of the new University, to which a new boulevard is planned to lead from the city, will occupy the site of the headquarters buildings of the old Magnolia Mound plantation, which occupied this land and was in its glory "befo' de wah." Picturesque decorations of the campus will be two conical Indian mounds, which will be retained in the landscape gardening plans. A natural hollow will be utilized for an open-air swimming pool, near which the gymnasium will stand. On the ridge to the south, in all probability, will be laid out the University athletic fields. But no man-made decoration can equal the profusion of the magnolias with

*One of Oldest Buildings on Present Campus, Said to Date From Spanish Occupation. Now Used by University Band.*

their Spanish moss, and the buildings will be laid out so as to harm as few of them as possible.

#### Good Farm Lands Included

A spur of the Y. & M. V. has already been built to the University site, and it is certain that the construction of this educational institution will mean considerable revenue for the Illinois Central System.

The lowlands comprised in the new University farm are among the richest in Louisiana, and it is hard to see how the College of Agriculture and the Agricultural Experiment

Station could have fared much better by any other move. Prof. W. R. Dodson, dean of the college and director of the station, an 1890 graduate of the University of Missouri, who recently resumed his work in Louisiana in order to participate in the new development, is enthusiastic in describing the possibilities of the new grounds to the visitor. The combination of high and low ground will make possible the raising of all of Louisiana's crops side by side, the most prominent among them being rice, sugar cane, corn and cotton. Water to irrigate the rice can be

*Where the New University Will be Built. Upper Picture Shows the Two Indian Mounds. Lower Picture Is View From Mound Toward Y. & M. V. Track and River.*

siphoned over the levee from the Mississippi River. The present experiment stations are at Crowley for rice, at Audubon Park for sugar, at Calhoun for hill-land crops and beef cattle, and at Baton Rouge for general instructional purposes.

An efficient system of extension education has been built up, and there is much agricultural rivalry among the parishes, most of which finds its expression in the unusually fine series of big and little fairs that Louisiana holds. For much of this development the state is indebted to Professor Dodson, who has been an agricultural leader in Louisiana for almost three decades.

### Present University Noteworthy

The present University equipment, which will probably be sold to provide additional funds for the new construction, yields to no other institution in the country in wealth of historical associations and natural beauty of campus.

The University owes its origin to certain grants of land made to Louisiana in 1806, 1811 and 1827 by the United States government "for the use of a seminary of learning." The state constitution of 1845 provided for the establishment of such an institution from the proceeds of the sale of these lands, but it was several years before the legislature succeeded in giving effect to this constitutional mandate. A plan of organization was adopted in 1848, and in 1853 a site about three miles from Alexandria, on the east bank of the Red River, was chosen for the new institution, which was officially designated as the Louisiana State Seminary of Learning.

During the next six years various changes and improvements in the plan of organization were adopted by the legislature. Among these was a law providing for military instruction in the seminary. In 1859 William Tecumseh Sherman, a former army officer, was chosen superintendent, and by the end of the year a faculty had been selected and preparations for academic work had been completed.

### School Started in 1860

The first session began January 2, 1860. In spite of the Civil War, which led to the resignation of most of its teaching force and student body, the seminary continued in operation until April, 1863, when an invasion of

the Red River Valley by Union forces caused it to suspend its exercises.

Academic work was resumed on October 2, 1865, under the presidency of David French Boyd, who remained at the head of the institution for nearly twenty years. October 15, 1869, the seminary building was destroyed by fire; but the disaster interrupted its work for only a fortnight, as accommodations were at once secured in Baton Rouge in the building of the School for the Deaf, which remained the domicile of the institution until 1886. In that year new quarters were found in the buildings of the United States Army post in the northern part of the city, from which the regular troops had been withdrawn some years before. A loan of these buildings and grounds was generously made by the United States government, and by an Act of Congress, approved April 28, 1902, this loan was converted into a gift, full title to the property being vested in the University.

### Two Institutions Combined

In the meantime important changes were taking place in the organization of the institution. In 1870, after the removal of the seminary to Baton Rouge, its name was changed by the legislature to the Louisiana State University. January 2, 1877, the University was merged with the Louisiana Agricultural and Mechanical College, which had been chartered April 7, 1873, and had been opened in New Orleans June 1, 1874. The two state institutions, "united and constituted into one and the same institution of learning," assumed the legal title of the Louisiana State University and Agricultural and Mechanical College, and the first session under the new arrangement began October 5, 1877.

In 1880 William Preston Johnson became president and served for three years, being succeeded in 1883 by James W. Nicholson. In 1884 David F. Boyd returned to the presidency for two years. In 1887 James W. Nicholson again became president, and upon his resignation in 1896 he was succeeded by Thomas D. Boyd, the present executive.

The University enclosure, comprising more than fifty acres, is an ideal situation for an institution of learning. The campus lies upon a high bluff overlooking the Mississippi River, and is well laid off in walks and avenues shaded by elms and live oaks. At the northern end of the grounds is the University lake,

which adds to the attractiveness of the surroundings and affords facilities for recreation in swimming and boating.

### Much History Around University

The University occupies an historic spot. Within the confines of the present campus have been quartered in past years the soldiers of France, England, Spain, the United States, and the Confederate States in the order named. There in 1779 occurred the only battle fought in Louisiana during the Revolutionary War, when a British garrison was attacked and captured by the Spanish governor, Bernardo de Galvez. Spanish soldiers remained there until 1810, when their feeble garrison was expelled by a band of American adventurers led by Philemon Thomas, and that portion of West Florida was wrested from the Spaniards.

From the beginning of the American occupation until 1877 the present University site served as a garrison for United States troops, with the exception of 1861-1862, when it was held by the Confederates. Within those grounds and in their immediate vicinity many stirring events of the Civil War, on both land and water, were enacted. There, too, in the ante-bellum days stood the home of General Zachary Taylor, the hero of Buena Vista and President of the United States. A memorial tablet, marking the site of President Taylor's residence, was erected in 1899 by the local camp of the United Confederate Veterans, and forms one of the interesting objects of the campus.

September 22, 1917, the Historical Society of East and West Baton Rouge dedicated a marble tablet as a memorial marking the site of the Spanish fort captured by General Philemon Thomas September 23, 1810.

### Campus Has Forty-nine Buildings

The grounds of the University lie at the northern boundary of Baton Rouge. Upon the campus are forty-nine buildings, the most important of which are: Alumni Hall, a memorial to the late President David F. Boyd, containing the various administrative offices; the Hill Memorial Library, donated by the late John Hill of the Parish of West Baton Rouge as a memorial to his son, John Hill, Jr.; Garig Hall, used for public assemblies, the gift of William Garig of Baton Rouge; Irion Hall, containing the chemical laboratories and the lecture rooms of the Law School; Heard Hall, occupied by the departments of physics, electrical engineering, civil engineering, and

mathematics; Robertson Hall, equipped for work in mechanic arts and drawing; the engineering laboratory, and the power plant, for practical instruction in electrical and mechanical engineering; Peabody Hall, a gift of the Peabody Education Fund, occupied by the departments of education, psychology, home economics, music, and Peabody High School and several academic departments; Foster Hall, containing the students' dining room and dormitory; Agricultural Hall; the Agronomy Building; the experiment station offices; the offices of the department of agricultural extension; the Pavilion, now used as a gymnasium for girls; the gymnasium, built in 1918 as barracks for the S. A. T. C.; the four Pentagon dormitories; the hospital; a steam laundry; five fraternity halls; and four residences.

The University is organized into the following schools and colleges: The College of Arts and Sciences, the College of Agriculture, the College of Engineering, the Audubon Sugar School, the Law School, the Teachers College, the Graduate Department and the Summer Session.

The enrollment last year was about 1,100.

### Baton Rouge Is Prosperous

Baton Rouge, besides being the seat of the State University, is the capital of Louisiana. Although far up the Mississippi River, and a small city, as cities go, it is, strange to say, one of the biggest ports in the United States, and it is one of the best stations on the Illinois Central System, usually ranking better than tenth. In November, 1920, by doing a business only slightly less than a million dollars, it rose to fifth place on the system. George Wildes is the Y. & M. V. agent at Baton Rouge, and the Y. & M. V. is undoubtedly Baton Rouge's most popular railroad. Mr. Wildes, who was a major in the World War, is commander of the American Legion post at Baton Rouge, and his personal popularity has much to do with the esteem in which the Y. & M. V. is held.

Baton Rouge, its residents say, has never felt the business depression. It is a fact that building is going on there at a rate approximating that of the most prosperous cities before the war. According to J. Halliday Dupuy, secretary-treasurer of the Mortgage Loan & Realty Company, a value of \$1,000 a front foot is not unusual in the business district, and new residence districts cannot be opened up fast enough for the demand.

# Saw Early Days of New Orleans Division

*Veterans Served That Line Before Its Initials Were Changed From L., N. O. & T. to Y. & M. V.*

**T**HE New Orleans division of the Yazoo & Mississippi Valley Railroad has five veterans in service whose experiences on that line date back to the days of the Louisville, New Orleans & Texas, the Y. & M. V.'s predecessor in that part of the country. Their service records with the past and present owners of that line range from forty-seven to thirty-six years. N. J. Day, clerk in the freight house at Vicksburg, Miss., heads the list with forty-seven years of service. Next come J. H. Evans, engineer, and J. A. Winder, foreman of passenger car repairs, each with a record of thirty-eight years. They are followed by George S. Rodenbaugh, night round-house foreman at Vicksburg, who started work thirty-seven years ago, and O. Duhon, agent at Convent, La., who, with thirty-six years to his credit, is probably the oldest station master on the Y. & M. V.

## He Is a Native of England

N. J. Day, clerk in the freight house at Vicksburg, has been in the service of the Y. & M. V. since its origin. His railway experience dates back to before 1874, when he was a clerk for the Port Gibson & Grand Gulf Railroad.

Mr. Day was born August 23, 1852, at Bedford, England. When he was 18 years old he came to this country and went directly to Port Gibson, Miss., where a brother was employed. He stayed there two or three years and obtained a position with the P. G. & G. G. as freight clerk. Cotton made up the bulk of the freight in those days, he says, and he has handled thousands of bales of it.

In his first years of service, the railroads carried the freight to the river, where it was transferred to boats and taken to New Orleans. This was before the construction of a railroad parallel to the Mississippi River.

When the L., N. O. & T. Railroad purchased the P. G. & G. G., Mr. Day retained his position. He remained there for only a few months, when he was transferred to Vicksburg as a freight clerk.

In 1883 Mr. Day was the baggageman on the first train that ran from Vicksburg to Port

Gibson, he says. His last run as baggageman was from Harriston to Leland, Miss.

## Train Went Through a Bridge

Mr. Day was baggageman on a P. G. & G. G. train when what he terms the most serious accident of the history of the road occurred. Engineer Sim Coates, Mr. Day says, was making his first trip on the road when a bridge gave way. It was a mixed train, with several freight cars in front of the passenger coaches. The bridge was completely demolished, and the engine and some freight cars fell into the stream below. The water was extremely high, which was probably the cause for the weakening of the bridge, and the part of the train which fell through the bridge was swallowed by the stream. The body of Engineer Coates was never found after the accident. He was the only one who lost his life. After a lapse of six months, the old engine, No. 10, was taken from the water. In the firebox was found a watch. It belonged to the fireman, Bill Bird, and was cleaned and presented to him by the company. Several of the freight cars floated down the stream as far as Natchez, Miss.

Mr. Day has been more pleased with the freight checking work than with any other railway work he has been in. He has been giving faithful service, reports for duty on the minute, or a little before, and does not leave until the day's work is completed. He has been in service forty-seven years and intends to continue for many more.

## Handled First Run Over L., N. O. & T.

J. H. Evans, who was the engineer on the first scheduled passenger train on the Louisville, New Orleans & Texas Railroad between New Orleans, La., and Vicksburg, Miss., August 10, 1884, is at present an engineer on the same division. Since that time however, the L., N. O. & T. has become the Yazoo & Mississippi Valley.

Mr. Evans was born February 7, 1854, at Jackson, Miss., and was educated there. When he was 17 years old he was successful in his application for employment as apprentice in

the machine shops of the Vicksburg & Meridian Railroad at Vicksburg.

He went to Vicksburg with the understanding that he was to remain as an apprentice in the shops for four years. His salary the first year was to be 75 cents a day, and this was to be increased 25 cents each additional year. He remained three years and three months and then asked to be transferred to the transportation department.

### Took First Train to Memphis

He took a position as fireman on a switch engine at Vicksburg. In a short time he was placed on a regular freight run between Vicksburg and Meridian. January 28, 1878, he was promoted to engineer on the same run.

When the L., N. O. & T. began construction north and south from Vicksburg in 1883, Mr. Evans accepted a position as engineer on a work engine. The line was completed south to New Orleans first, and Mr. Evans was given the first passenger train. October 12, 1884, he was engineer on the first scheduled passenger train from Vicksburg to Memphis, and remained on that run until January, 1891, when he asked to be transferred to the New Orleans division. For nineteen years he was engineer on a train between New Orleans and Vicksburg. Then, at his own request, he was transferred to the Hammond and Eastern district. Since January, 1910, he has had the run between Baton Rouge and Covington, and has made his home in the latter city.

Mr. Evans says that in all his forty-nine years of railway work only three men have met death beneath the wheels of his engines. The first of these was a suicide; the second, a drunken negro; the third, an old negro who was caught on a bridge. None of these deaths, he believes, was caused by neglect on his part.

### Off the Track and On Again

Mr. Evans relates the stories of two accidents, either of which might have resulted in the death of many persons. Luckily, however, no one was injured.

About thirty-five years ago he was the engineer on No. 15 between Vicksburg and Memphis. One dark night when about two miles out of Vicksburg, near the National Cemetery, his engine gave a lurch. It tossed dangerously from side to side, and there was an accompanying noise that sounded as if the entire train were being smashed. Just two

rail lengths ahead was a bridge, and the waters of the river were running furiously high that night.

Mr. Evans jammed on the brakes and brought the train to a stop. Investigation proved that every wheel of the train was on the rails. He and the fireman were puzzled at the cause of the terrible noise until they saw that the track over which the train had just passed was completely torn up. They reasoned then that the engine and coaches had been derailed, but had miraculously bounded over the ties a short distance and got back on the rails.

They looked for the cause of the derailment and found that the angle bars had been removed from a joint, the spikes had been drawn and the rails had been pulled out three or four feet.

The dimness of the oil-lamp headlights of those days prevented him from seeing that the track had been tampered with, he says.

### Another Case of Great Luck

The only explanation he has why the train was not thrown into the ditch is that, after bounding over the ties, the wheels of the engine squarely struck the end of the good rail, and the other wheels of the train followed.

Mr. Evans says J. M. Edwards, general manager at that time, was in his office car at the end of the train that night. There was a delay of only ten minutes.

Again, about twenty years ago, when Mr. Evans was on No. 21, the engine, No. 69, split a switch at Cane Spur on a curve just north of Convent, La. The engine was thrown from the track, and all connections between it and the tender were broken. The track was completely demolished, but the entire train passed over, minus the engine, and kept in an upright position. None of the other couplings had parted.

Mr. Evans says that he and the fireman, Fred Summers, crawled out of the overturned engine after they had got their bearings. Neither was injured, and they learned that the passengers did not know what had happened.

### Wrecked by Striking Stock

In 1880 the most serious accident of his career occurred. His engine was light—70-inch wheels and 16-inch cylinders. He was driving at a fast rate when he sighted a yearling on the right-of-way just ahead; in the hope that it would move to a safe distance

George S. Rodenbaugh

O. Duhon.

J. A. Winder.

N. J. Day.

J. H. Evans.

from the track, he slowed down. But instead of moving away, the animal walked deliberately in front of the train and was struck. The engine was too light to stand even that small shock, and before two rail lengths had been run the entire train was derailed. The engine turned over, and Mr. Evans was severely cut on the side of the head. He was unconscious when found by the conductor. The trainmen reported that Mr. Evans had been killed.

Mr. Evans did not regain consciousness until the next morning. He went directly to his home in Vicksburg. On his arrival there, he found the house full of mourners, and complete funeral arrangements had been made.

Right now, Mr. Evans says, he is having more trouble in not striking stock than he ever had. However, it is seldom that a train is thrown off the track now when stock is struck—the weight of the modern engine prevents that.

You would not believe how difficult it is to keep from striking stock on the right-of-way, he says, unless you see how foolish the animals get at the approach of a train.

#### How Cows Act on Right-of-Way

"Many times," he said, "I have seen two cows, one on each side of the track. When the train approaches, both animals invariably cross the track. They do not seem to make up their minds to move until the engine is right at them, and then it is often too late.

"I have often seen a cow grazing on the edge of the right-of-way, far from the track, look up at the on-rushing train and walk directly to the track in front of it.

"If engineers had a schedule of just 10 miles an hour, it would be possible to keep from killing stock," he said. "But at a schedule of 40 miles an hour, danger lurks for the animals which get on the right-of-way."

Mr. Evans says that his son, at the age of 4, told him he intended to become an engineer just like his father. The boy grew into manhood, studied mechanics and did become an engineer. January 15, 1917, he was killed in a collision at Shelby, Miss.

Mr. Evans is apparently in perfect health. He is sturdy, full of life and a pleasant man to meet. His service for the company has always been the best, and, from all indications, he will continue at it for several years to come.

#### In Our Service Since 1883

J. A. Winder, foreman of passenger car repairs for the Y. & M. V. at Vicksburg, Miss., has been in the service of roads now part of the Illinois Central System continuously since September 7, 1883. His entire railway career extends over forty years.

Mr. Winder was born May 11, 1858, at Kingston, Ontario, Canada. At the age of 19, he obtained a position with the Weber Piano Company at Kingston, and remained in that employ as an apprentice for four years. He then served two years as a cabinet maker for the Chicago & North Western Railroad.

He resigned his position with this railroad to become a passenger car builder for the Illinois Central. He was placed at McComb, Miss., under George Baxter, then master car builder. Mr. Winder remained in that work for seven years.

#### Saw Some Speedy Justice

While he was working at his bench one day, Mr. Winder says, several men on horseback dashed into the shop with long ropes dangling at their sides. Before the shopmen realized what was going on, one of their number was seized and carried away. He was taken to the outskirts of McComb and hanged. The reason for the act was, Mr. Winder says, that this man had been stealing cattle. It all came about so suddenly, Mr. Winder says, he did not know whether he wanted to stay in McComb or not. But he did stay, and says that he made many warm friends in that city.

In 1890 Mr. Winder accepted a position as cabinet maker with the L., N. O. & T. R. R., now the Y. & M. V., at Vicksburg. On account of the excellent quality of his work, he was soon placed in charge of all the passenger repairs at Vicksburg. Later he was transferred to New Orleans as foreman of passenger and freight car repairs. He served there two years, and was transferred to Memphis, Tenn., in the same capacity. He remained in the latter city about two years.

When the Y. & M. V. bought the L., N. O. & T., Mr. Winder returned to Vicksburg, and again took up his duties as foreman of coach repairs. He had been there one year when he was called to New Orleans to take a position as joint car inspector for all roads running into that city.

#### Became a Traveling Inspector

He remained in that position two years, and returned to Vicksburg to become traveling car

inspector and lumber inspector for the Illinois Central System between Memphis and New Orleans. His territory also included all the branch lines.

In 1911, Mr. Winder was sent to Greenville as foreman. He remained there two years, and then was transferred to Vicksburg as foreman of freight car repairs. For the last three or four years, Mr. Winder has been foreman of passenger car repairs in the shops at Vicksburg.

There has been a great improvement in mechanic's tools and mill machinery since his early days of railroading, Mr. Winder says. The first planers for dressing the car sills required much work. Formerly the sill had to be run through four times, but the planers of today are operated by electricity and dress four sides of the piece at one time.

When he first went to McComb, he says, the run from Chicago there required thirty-six hours for the fastest train on the Illinois Central. And in those days, he says, some of the engines were still being fired with wood.

#### Has Gold Medal for Heroism

Another of the old-timers on the New Orleans division is George S. Rodenbaugh, night roundhouse foreman at Vicksburg. Mr. Rodenbaugh joined the Louisville, New Orleans & Texas, now the Yazoo & Mississippi Valley, September 6, 1884, and has worked for the same road ever since, with the exception of two intermissions when he was out of the service. He began his railway service in 1873 with the old Memphis & Charleston Railroad, now the Southern.

Mr. Rodenbaugh cherishes as one of the finest souvenirs of his railway service a gold medal presented to him for heroic devotion to duty during the Memphis yellow fever epidemic in 1878. On one side is inscribed "Engineer" and "From Howard Association" (a relief organization), and on the other side is Mr. Rodenbaugh's name and the explanation, "For Services During Epidemic, 1878." In this epidemic, Mr. Rodenbaugh recalls, it was not uncommon for more than two hundred persons in and around the city to die in a day, and he was constantly employed, as an engineer, in pulling loads of supplies and coffins into the city. His own conductor and brakeman and the engineer opposite him lost their lives in the epidemic, but he says he never suffered from the disease and has always enjoyed good health.

One thing that kept a person in the city, Mr. Rodenbaugh recalls, was the panic that prevailed outside; anyone was in danger of violence who attempted to escape from the city while the epidemic was raging.

#### Started Railway Work in 1873

Mr. Rodenbaugh is a native of Marion County, Tennessee, where he was born in 1852. That makes him almost 70 years old, and right on the edge of a pension—although it is going to be hard to pry him loose from railway work. He started braking for the Memphis & Charleston out of Huntsville, Ala., in 1873, almost fifty years ago, became a fireman in 1876 and was made an engineer in 1878, the year of the epidemic. In 1884 he entered the employ of the Y. & M. V.'s predecessor, working out of New Orleans, and for six years handled construction, freight and passenger trains in that vicinity.

Much construction was made necessary by the fact that levees were few and far between, and it was no uncommon occurrence for the Mississippi to tear up the roadbed between Memphis and New Orleans. In 1884 there were only two passenger trains between Vicksburg and New Orleans, according to Mr. Rodenbaugh.

In 1890 Mr. Rodenbaugh left the company's service, but returned in 1895 to spend three years as night roundhouse foreman at Vicksburg. After two years more of absence, he again returned to the Y. & M. V., September 1, 1900, to occupy the same position, which he has now held almost twenty-two years without a break.

#### Recalls When Wood Fired Engines

Mr. Rodenbaugh is well supplied with reminiscences of the old days when wood was used for engine fuel—and occasionally to splice rails—and when, as brakeman, he had to help dig the wood out of the snow to pile on the engine. He remembers how the fireman would rack a full supply of wood in the firebox and then sit back and ride eight or ten miles without having to set to work again. He recalls the superior sort of clear, well-cut pine engine wood found near Hammond, La., and how much it was preferred to the rough green wood that frequently had to be used in some parts of Alabama.

In connection with Memphis, he recalls when only four railroads entered that city and when the Mississippi & Tennessee company's shops were well outside the city, but just about on

the spot where our Grand Central Station now stands. As an example of rapid telegraphy, an accomplishment much thought of at that time, he tells of Patsy Ayres and how, in reporting the Memphis epidemic, he sent the story as the reporter was writing it, but without telling the reporter. When the completed message was turned over to him, he informed the astonished newspaper man that the story had already gone. In profound appreciation, the writer of the message did something not likely to be repeated today—he pulled out of his pockets two pint bottles of whisky and insisted that it was his treat.

When Mr. Rodenbaugh started work, brakemen got \$1.60 a day. In 1875 that was cut to \$1.40, and in 1876 to \$1.30. Firemen's wages had been cut at the same time from \$1.80 to \$1.60 and then to \$1.50. That difference of 20 cents a day caused him to desert the caboose for the engine.

#### A Good Word for the Old Pilots

In connection with the "Strike No Stock" campaign, Mr. Rodenbaugh has a good word to say for the old engines he started work with. With the long couplings then in use, a long pilot could be carried that would knock stock off the track. With the short couplings and the short pilots now in use, an animal that is struck is likely to be thrown under the wheels rather than off the track.

It would take volumes to give a detailed account of Mr. Rodenbaugh's experiences as an engineer. He has been in seven serious wrecks, but on each occasion escaped with no bones broken. On four occasions he jumped; once he was thrown off, and other times he couldn't get off the locomotive. He was ditched twice by striking stock.

Mr. Rodenbaugh recalls how the evening trains of the Illinois Central and the L., N. O. & T. used to race out of New Orleans on their parallel tracks to Kenner, La., where they parted company. That was back in the middle eighties, and Mr. Rodenbaugh's road had the Illinois Central bested an inch in piston capacity, so that his train usually managed to swing itself across in front of the other. Bart Baldwin, who was handling the Illinois Central train, used to have his fireman fix up the fire-box with a layer of coal, then a layer of pine knots, then a layer of coal and so on, but even that strategy was seldom successful.

On one occasion, when J. McGuire, another

of the Y. & M. V. old-timers, had charge of the L., N. O. & T. train, Mr. Rodenbaugh was delegated to ride out on the Illinois Central train and set the brakes, so that there would be no doubt about the result of the race. The regular brakeman discovered him, however, and put him off; so he contented himself by acting as flagman at a crossing in order to prevent delay to the L., N. O. & T. train. This sort of fooling continued, he says, until the crews were "called down" by J. M. Edwards, the well-beloved general manager at that time.

#### Booster for the National Park

Mr. Rodenbaugh is a great booster for the National Park at Vicksburg. With Mrs. Rodenbaugh, he has his comfortable little home on the edge of the park, just back of the Iowa monument. A horse and buggy get him to work and back every day. Although well provided with railway transportation, he says that his travel with the horse and buggy is about all that he has taken in many years.

In conversing about the park, he recalls two of the park commissioners—Captain W. T. Rigby, Federal, still living in Vicksburg, and the late General Stephen G. Lee, Confederate, father of Blewett Lee, New York counsel of the company—and how they used to discuss the siege of Vicksburg, and in particular one charge that was ordered almost on the site of the Iowa monument. A memorial to General Lee has been erected in the park, largely as a result of the efforts of Captain Rigby, his former foe.

Mr. Rodenbaugh has been holding up well at the night work he has handled so long. The only injury he ever suffered in railroading was a smash-up of the little finger on his left hand, suffered while making couplings when he was braking. He believes that he is getting his second sight, as he has been able to discard the glasses he formerly was forced to wear.

#### Learned the Work Right at Home

O. Duhon, agent at Convent, La., has probably been in the service of the Y. & M. V. longer than any other station master. He was born May 31, 1863, at Convent, was educated there and learned to operate telegraph instruments under J. V. Voorheis, the first agent at Convent.

The station at Convent was constructed in 1884, and was the first station on the L., N. O. & T. Railroad, Mr. Duhon says. Later, about

1893, the L., N. O. & T. was bought by the Y. & M. V.

Mr. Duhon's home was adjoining the right-of-way, and when the station was built, he says, he naturally found it a convenient place for his idle hours. At the age of 19, he became interested in the telegraph instruments. He sat in wonderment when Agent Voorheis sent and received messages over the wires. Mr. Duhon was eager to learn, asked Mr. Voorheis to teach him and soon learned to be a dependable operator.

His first position in the railway business was as agent for the L., N. O. & T. at St. Gabriel, La., in 1885. He gave the company good service there for two and one-half years. Then there was a vacancy at the Convent, La., station. Mr. Duhon asked to be transferred there, and was given the position in 1887.

#### Decorates Station and Grounds

His ambition was attained when he took charge of the station at Convent, Mr. Duhon says. When it was first built, he often pictured himself as the agent, and determined to put forth his best efforts to fit himself for the position. To be an agent at a railway sta-

tion was indeed an honor, one of the greatest to be had, as this young man pictured it.

Consequently, when he became the agent at Convent, he took great pride in the building and the station grounds. It was next to his home in his heart, he says, and he wished to make it as beautiful as possible.

With the aid of Richard Walsh, section foreman at Convent, many beautiful flowers were planted about the grounds. Mr. Duhon brought the plants from his home. This was before the day of a complete landscape gardening organization of the company, and Mr. Duhon employed his own initiative in planning the flower beds and selecting the variety of flowers. At present, rose bushes, geraniums and many other pretty plants lend grace and beauty to the station grounds and building.

Mr. Duhon has decorated the interior of his office in the station as one would a home. There are pictures on the walls, and lace curtains at the windows.

In 1917, the station at Convent was remodeled, and made nearly twice its original size.

## Signal Employes Profit by Organization

By W. J. PEASE,

Clerk, Signal Office, Champaign, Ill.

It may be interesting to others, especially to all signal department employes of the system, to know something of the activities of the signal department of the Illinois division. In reading our magazine, I have seen little about automatic block signals, although we have one of the most nearly complete block systems of any of the large railroads.

We, the signal employes of the Illinois division, have started a series of educational meetings and also a circulating library, using our own time for attending the meetings and studying the books from the library. Through these meetings and this library we are building up one of the best and strongest organizations of signalmen on the entire system, and we are really proud of the progress we have made in this way.

We have found that our work is growing easier for us, and also that it is becoming more fascinating each day. Where we used to work, you might say, just for the com-

ensation we received, we are now working because we are thoroughly interested in our work.

I cannot remember any other time when conditions on the Illinois division have been so pleasant for signal employes as at present. This is largely due to getting together at our meetings, finding out the trouble the other man has, profiting by his experience, and also forgetting to "pass the buck." This "pass the buck" game, I suppose, used to be more common on railroads than in any other business, but we are proud to say that the Illinois division signal employes have got above this cowardly way of doing business and are now doing business "straight from the shoulder."

If we have a failure which is "on" us, we admit it, straighten it out, and go on, but you can just bet that this same failure does not occur again on the same man's territory, for when it does happen he fixes it for all time, and then tells his brother about it, so that he may not have the same failure. If we have a failure that we are unable to lo-

cate, we call for help and get it straightened out, profiting by the help we receive.

Our most recent meeting was held at Gibson City, Sunday, October 23. Considering the fact that Gibson City is an out-of-the-way place, we had a splendid attendance, with thirty-eight present. This meeting was given up entirely to committee work. We had reports from committees on the following subjects: Grounds, compensation and motion, motor cars and safety, bonding and track circuits, semaphore lamps.

Each committee is working and getting results. For example, from information gained by the committee on grounds, we are now operating all of our interlocking plants clear of grounds, and all automatic signals are working clear of grounds, with the exception of a few on the north end, which we will clear when we cut or overlap common. In relieving these grounds we feel that we are giving the company a safety factor which it has been paying for but has not been receiving.

We are full of enthusiasm about the Illinois division and want others to know about it. Life is just what you make it, and the same applies to work. If you are working under a load of buck-passing and I-told-you-so stuff, work will not be a pleasure but a task. Life will be unpleasant; your home life will not be what it should, and eventually you will have no job, for we are getting to a time when we have to produce and deliver the goods.

We are being paid well for our services. We are working for the best railroad on the map. If we are deserving, we will get all the support we need. We have been given motor cars, good tools, and what we need to work with. So why shouldn't we be expected to produce?

We believe that we are doing what is right to ourselves, to our company and to our families by fitting ourselves for what is reasonably expected to be our life occupation. Just take the doctor, the teacher or any other professional man, and find out what time he has spent preparing himself for his life work. Then think of us, and figure out how much time we have spent in fitting ourselves for our work. Isn't it a fact that a signaling is just as technical as any other occupation, and when you consider it from the "safety" factor much more important than many?

Our company has spent thousands and

thousands of dollars to install a block system for safety. This system consists of expensive and accurate mechanisms, which require delicate and scientific adjustment. The company has intrusted them to our care, and we must fit ourselves so that this trust will not be misplaced. How many surgeons or mechanics would allow someone to use their tools and instruments who had never been taught how to use them? When we consider our responsibility we can be classed only with professional men, and we should do all possible to defend our company, ourselves and our profession.

## TRIP A SUCCESS

*Illinois Central delegation to the Bridge and Building Convention photographed at Nicholson, Pa., at the Tunkhannock Viaduct of the D. L. & W. Left to right: Mrs. M. A. Smith; J. K. Melton, photographer, Chicago; M. A. Smith, supervisor, bridges, buildings and water works, New Orleans; Maro Johnson, assistant engineer, Chicago; F. H. Soothill, chief estimator, Chicago; C. R. Knowles, superintendent, water service, Chicago.*

The thirty-first annual convention of the American Railway Bridge & Building Association, which was held at the McAlpin Hotel, New York City, October 18, 19 and 20, honored the Illinois Central by electing C. R. Knowles, superintendent, water service, as president of the association, and Maro Johnson, assistant engineer, as a member of the board of direction. The meeting was the most largely attended in the history of the association. More than 275 members registered, in addition to more than 100 guests. Those from Chicago and points west, numbering more than 170, went to the convention in a special train of ten cars provided by the Michigan Central and Delaware, Lackawanna & Western. The party stopped briefly en route at Niagara Falls, New York, and at the Tunkhannock Viaduct.

## THE ARMAMENT CONFERENCE

We are living in an age of wonders. We have passed through the greatest war in history; we are now to witness the greatest effort that has ever been made to insure peace, and to lighten the load which the fear of war has placed upon the groaning peoples of the earth.

The present conference, wherein there have assembled the representatives of the most powerful nations of the world, will rank in importance with the assembly of the Greek chieftains before the siege of Troy, the solemn conclaves of the Roman senate to decree the fate of Carthage, the great councils of the church in medieval times, the meeting of the English barons at Runnymede, the French states-general at Versailles, or the American Continental Congress in 1776, all convocations that flame as beacon lights upon a mountain to light the course of history.

It should be remembered that this is not a conference to bring about disarmament. President Harding has made this very clear. It is a conference to attempt to limit armaments, in an effort not only to preserve peace but as well to lighten the burdens of taxation by avoiding futile and useless expenditure. It is obvious that the nations of the world cannot wholly disarm. The necessity for preserving domestic peace, as well as the need for some defensive and protective measures against a possible foreign foe, makes it certain that every country must maintain an armed force, both on land and sea. But it is the theory of our American statesmen that our military and naval preparations should not go beyond these needs.

It was evident to every thoughtful person that the naval programs of the great powers were conceived and were being carried out not in contemplation of peace but in contemplation of war. These countries were building ships not for purely domestic and defensive purposes but for aggressive and offensive purposes. In other words, the statesmanship of the world was grounded on fear, on distrust, on selfishness, on the rule of force rather than

the rule of reason and justice. The great powers were building ships against each other. For years Great Britain has held to the view that her place in the world demanded that her naval strength should be equal to that of any two other nations. In this country, many people were urging the view that we must not be behind Great Britain in naval strength. Japan, unquestionably one of the great powers of the earth, did not want to fall far behind. France, while not aspiring to naval supremacy, looks with apprehension upon her neighbor, so lately her armed enemy, Germany, and insists upon the need of a powerful army. And other nations have emulated these examples.

Far-seeing statesmen of the present time know that these policies mean the ruin of the world. Aside from the moral aspects of the problem, there is the economic one. We are in great trouble. We are reaping the whirlwind which the winds of war have sown. Europe is on the verge of bankruptcy. Her obligations have not been met. There is doubt if they ever can be. Production is at the lowest ebb in years, taxes are enormous, unemployment is general, credit has fallen, the exchange situation is bad, famine looms in the near future. Shall these unhappy peoples be further burdened with the expense of building and maintaining larger and larger armaments for the sole purpose of engaging in other wars, the folly and ruin of which have so lately been demonstrated?

Something had to be done—particularly so, in the light of the well understood fact that as long as the question resolved itself into a competitive race, the enormous sums spent for armaments would accomplish nothing toward establishing the supremacy of any one nation. The evil was manifest. The only question was: What is the remedy and how and by whom shall it be applied?

There were many reasons why the proposal for a limitation of armaments should come from America. In the first place, a proposal from such a source would have the merit of magnanimity. For if this business

of rivalry in armament were to go on, no one doubted that the United States, by far the most solvent of present-day nations, would outlast all others. Again, we were outside the League of Nations and not involved in the politics of that organization. If the initial move had come from a member of the league, intense opposition would have been excited among many of our citizens who look with disfavor upon the league and all its works. Moreover, in the popular mind, the greatest menace to the peace of the world was the relation between the United States and Japan—a relation depending upon that intricate maze of diplomatic subtleties known as the Far Eastern question.

It was therefore highly appropriate that America should take the lead. It is indeed fortunate that at such a time a man of great heart, candor and common sense occupied the White House, and a man of superb intellect, courage and integrity was at the head of the State Department. Whether this is a Hughes conference, as the President modestly insists, or a Harding conference, as some special writers assert, is of small consequence. The fact remains that it was called by our country, that the suggestion was enthusiastically received by the leading nations, that the ablest statesmen of the world have assembled at Washington, and that it has most auspiciously entered upon its great task. The bold but carefully-thought-out plan voiced by Secretary Hughes was received on the opening day with such enthusiasm that some success at least seems certain.

There can be no doubt that the most delicate task of the conference grows out of the problems that cluster around the Pacific. Here are questions that will tax the skill, knowledge and ability of even so able a man as Mr. Hughes. The key to the situation is China. After all, what Japan longs for is a chance at China. It is a storehouse of raw material; if prosperous, it would furnish the greatest consuming markets in the world. Some day China will be free, civilized and orderly. Who shall get its business? Japan has the advantage of proximity; England, the advantage of being first in the field; America, thanks to Mr. Hay, whatever advantage comes from gratitude for generous treatment and for insistence upon the doctrine of the open door.

If the question of China can be settled on lines which are consistent with its welfare and dignity, there remains, among others, the question of a renewal of the alliance about to expire between England and Japan. Whether it shall be renewed rests with England. If these vexing Eastern questions can be otherwise amicably adjusted there will be no occasion for the renewal of a compact which now seems unnecessary in view of the disarmament of Germany and the collapse of Russia.

If we are to have alliances, it is difficult to resist the conclusion that the most useful and natural entente is one to which the parties are Great Britain, France and the United States. An understanding among these nations, if based on a sincere desire to prevent wars, would be indeed a strong league to enforce peace. But these alliances and understandings among a few nations provoke countries not parties to them to make counter-arrangements, thereby arraying the nations in hostile camps. It is far better either that all should join or that there should be none. The simpler, and therefore the more satisfactory program, is one that does not look to alliances, but rather, as in the present conference, to understandings limiting the means of war.

The present conference will probably not fulfill the hopes of its sponsors. Such meetings rarely do. But already much has been accomplished. If no more is done than to bring together these—the ablest men of the world—for discussion of these vexing and delicate questions, the end would be considerable. But at the outset we have Great Britain, Japan, France and Italy yielding ready acquiescence to the principles of Secretary Hughes' plan for limiting naval armament and naval expenditure. It is unlikely that public opinion in these nations will permit the delegates, even if disposed to do so, to reject the plan.

The question of limitation upon land armaments does not present insuperable difficulties. Doubtless something here must be conceded to France, in view of her proximity to Germany, unless the nations are prepared to guarantee her immunity from attack. Such a guaranty public opinion in this country will not indorse. But it is believed that if the conference reaches no conclusion whatever on this subject—one that many thoughtful persons think is one of purely in-

ternal and domestic concern—it will abundantly justify itself if it settles wisely the Far Eastern question, and puts a limitation upon the growth of navies—the only engines of war that snatch away the protection of surrounding seas.

This conference marks an epoch in our history. The close of the war left us the unchallenged primacy in the domain of finance and industry. This conference will, we believe, give us the leadership in the field of moral action. No other nation, sitting serenely in the seat of power, has ever thus voluntarily offered to put itself in shackles for the sake of humanity. Never before has war been made to appear so despicable, peace so desirable. Never before has the world been shown such a display of strength, joined with a benevolence so all-embracing. Never has a great nation been better led toward the exalted heights where dwell all the powers and forces that make for the greatest good to all classes of mankind. Never have Americans had better cause to be proud of their heritage and the quality of their leadership. Never has it been more evident that, running like a golden thread through all the varied texture of events, is the will of the Infinite, using all men, their strength and their weaknesses, to further His mighty purposes. We can but have high hopes that to men of good will on this sad earth of ours will come the blessed heritage of *Peace*.

### SEEKING THE PUBLIC'S SUPPORT

A story of how the management of the Illinois Central System has sought to establish the mutuality of understanding with its patrons which is so necessary to the success of a public service institution is told in a booklet which has been published by the management in the past month. A definite program of seeking the public's support of the railway system was undertaken September 1, 1920, the day the roads came back upon their own financial responsibility following federal control, and it has been pursued with what the management terms a great success.

The general outline of the program is built about a series of monthly statements made to the public through the newspapers published on the lines of the Illinois Central System, about 475 in all. Their object, according to the booklet, is to create discussions of railway affairs, based upon fact, and to lead patrons

to offer constructive criticism and suggestions. Many persons have been led into a correspondence with Mr. Markham on the various subjects discussed, and the correspondence has served to clear up for them points which they did not fully understand—and to give the management a close understanding of the patrons' wants.

The management of the Illinois Central System takes the position that a public fully informed about railway affairs will be sympathetic to measures which will resolve into a better, stronger system of transportation. The management wants to encourage that attitude. If there are faults in the management and operation of the system, it wants to clear them up.

It takes a lot of faith in the organization for the management of a great railway system to come out in the open once every month with a broadside invitation for constructive criticism and suggestion. The average reader of the booklet will doubtless be staggered by the bold faith which Mr. Markham had in the men and women associated with him when he voluntarily put them under the microscope and challenged the public to take a look at the service they render. Not every institution could withstand that sort of scrutiny. But that the Illinois Central System has withstood it and has continued its invitation is eloquent testimony of the soundness of the system.

The *Illinois Central Magazine* congratulates the management upon its policy of cultivating public relations. Essaying to speak on behalf of the great body of employes, we want to tell the management that its faith in us is not unfounded; that we appreciate the trust imposed in us and that we intend to measure up.

The Illinois Central System has been likened to one big family. The analogy is good. We are a family. Our aim is one: To serve the public with transportation. That service cannot be rendered unless the public appreciates what we oftentimes are up against. The management has undertaken to keep the public advised of our problems from time to time, and in doing so the management is lightening our work, creating the atmosphere which is needed for our best labors. We are grateful.

### COURTESY

"It's easy enough to be pleasant," a poet has written, "when life flows along like a

song; but the man worth while is the one who can smile when everything goes dead wrong."

It occurs to us that the simple little verse preaches a whole sermon on courtesy. A person deserves no special credit for reflecting the smiles and the cheery words and the grateful acts of kindness which are passed to him; it is only when he returns a smile for a frown or a cheery word for a grouchy one, or when he is obliging in the face of a surly request or question, that he can be said to have the spirit of courtesy in him.

And if that be courtesy, two things are demanded of the candidate for courtesy honors. One is an abiding sense of humor, and the other is an infinite patience. He needs a sense of humor to be able to rise, in his own spirit, above the temptation to be discourteous, and only an infinite patience will save that sense of humor for him.

Courtesy is indeed a priceless possession. It is not something that can be bought; it takes years of patient cultivation. But it is worth the effort.

Courtesy is an investment free from taxes and other charges which yields unlimited returns in dividends. It's worth all it costs.

### HONESTY

"Honesty is the best policy" is a clever statement of one of the most fundamental principles of right conduct. Miguel De Cervantes, Spanish poet and novelist, first pronounced it more than three centuries ago, when he wrote *Don Quixote*. Many who read these lines will remember having fashioned the words, laboriously and studiously, with many blots perchance, in the copybooks of another generation. Several doubtless will recall having been "kept in after school" to copy them across many feet of blackboard as punishment for some offense. Pronounce the first two words to 100 persons and ask them to supply the missing words to complete the epigram, and you will get 100 correct answers. The twentieth century knows "Honesty is the best policy" as a household expression.

Accepting that virtually every person knows that "the best policy" completes the expression which begins "Honesty is—," how many accept the principle of the statement as a standard of every-day conduct? On the railroad we do a lot of preaching among ourselves. We tell each other that

we must be honest in all our dealings one with another, and with the company which is our employer—that we must treat the company's business as we would our own, that we must be efficient, and practice safety, and be courteous. After all, the principle of honesty is the fundamental thing. It comes down to that. "First to thine own self be true," Shakespeare had his *Polonius* say, "and it must follow, as the night the day, thou canst not be false to any man."

The acceptance of honesty in all its phases as a fundamental principle of guidance is the foundation stone of right living.

These remarks are called forth by a letter from Superintendent C. R. Young of the Tennessee division, who writes to tell us of an incident which he describes as follows:

"On train No. 3, October 6, Conductor J. S. Wesson took up a pass issued to the wife of an employe. He questioned the holder of the pass and discovered that she was not the wife of the employe on whose account it had been issued, but one of his relatives. The pass was sent to the department head who requested the transportation, and the employe on whose account it was procured was required to pay \$33.79, which represented the fare our company would have been deprived of had not the conductor detected the improper use of the transportation."

### WHAT "REST" IS

A biographer of the late Sir William Van Horne, who built the Canadian Pacific, writes that "he enjoyed games and attacked them with a boyish zest which was never quenched." According to his Boswell, he developed his periods of recreation as an artist develops his talent. He was a painter of ability. He collected Japanese pottery and paintings. He was a gifted paleontologist. He studied men. He made friends. In all these phases of his remarkably productive life he applied himself as wholeheartedly as he did to the knotty problems of building and operating a railroad. His life is an inspiration. He is one of the most outstanding figures in the transportation history of North America.

The reader of Van Horne's biography is caused to wonder whether the zest which the great railway builder had for recreation is not one of the contributing factors to his

long period of useful activity. Certain it is that playtime has a definite place in the life of the well-balanced man.

Play is the complement of work. Recreation is that activity which allows a person to build himself up for renewed vigor in his work. One cannot be thoroughly undertaken without the other. Some men make the mistake of regarding their lives as days spent in a workshop in which there is never a breathing spell. They are so engrossed that they fail to take the time to cultivate their instincts for play. Others go to the opposite extreme; life, for them, is an immense playground, and they never know the supreme joy of a task performed in travail.

Either extreme is dangerous. The middle course is the safe one. Play and work both have their places and their times. Some men may be so strong that they can tackle life as a workshop in which the day begins in youth and ends at the grave. Some may be so gifted that they can give the world an appearance of having accomplished without the expenditure of honest effort.

The well-rounded man is typified in Sir William Van Horne—a man who built a great transcontinental railway system and brought it through its early days, and yet one who “loved games, and attacked them with a boyish zest which was never quenched.”

### ACCEPTING RESPONSIBILITY

Some persons are unfitted for responsibility because they have trained themselves to find excuses for every blunder they make. They are artists at manufacturing alibis. Catch one of them in a mistake and attempt to call his attention to it, and before the words have left your mouth he will interrupt you with a most plausible explanation of what caused him to err.

It wouldn't be so bad if he used his facility for excusing blunders for alibi purposes only, but unfortunately the alibi artist gets to the point where he believes his own alibis, and at that point disintegration begins. When a person is able to believe his own work faultless, when he can find a ready excuse for every blunder he makes and believe it himself, he is headed for the discard. A rude awakening is his only hope.

One of the first principles in accepting re-

sponsibility is to admit one's error and to admit the principle that blunders are never excusable, and therefore that each particular error is inexcusable. The boss doesn't call attention to the mistake you make in order to discover your ability to produce gullible explanations; he calls attention to it in order to keep you from making other mistakes just like it—and you will never be able to do that so long as you believe there was some good and sufficient cause for your blunder.

Some persons are good character analysts—when the other fellow's faults and frailties are under the microscope, but they cannot judge themselves. Getting ahead depends largely on one's ability to analyze the personality of the other fellow, but it depends even more largely upon one's ability to analyze himself. Know your own limitations, and strive to overcome them. Acknowledge your mistakes, and strive to prevent their recurrence. Admit the imperfections in your own character, and strive for perfection.

### SERVICE TO CUBA

Announcement is made of the establishment of package car service to accommodate less-than-carload shipments, effective November 2, from Chicago to Havana, Cuba. This service contemplates the consolidation of less-than-carload shipments moving from points where rates apply via Chicago for loading in a through car to be operated from Chicago to Havana without transfer in connection with the Illinois Central to Martin, Tenn.; the Nashville, Chattanooga & St. Louis to Atlanta; the Central of Georgia Railway to Albany, Ga.; the Atlantic Coast Line to Jacksonville, Fla.; the Florida East Coast Railway to Key West, and the Florida East Coast Car Ferry Company to Havana. The schedule from Chicago to Havana will be approximately seven days, and through cars will be forwarded Wednesday of each week until the tonnage justifies the operation of a semi-weekly or daily car.

to End Accidents*

# PUBLIC OPINION

What the

World thinks

## JUSTICE TO THE RAILROADS

Railroads pay taxes, just as individuals and other businesses pay taxes. They paid their share in the construction of the Panama Canal. They paid their share in the building of the emergency fleet during the war. They are doing their share in the building of the hard roads.

It is proposed to give coastwise shipping free passage through the canal, which will make it impossible for the railroads to compete with water-borne commerce. The emergency fleet is being operated at a loss, which the taxpayers are meeting out of their pockets.

Given free tolls and a national treasury to meet its losses, the shipping board's boats will cripple the railroads seriously, declares an exchange.

We are building hard roads. They divert from the railroads their freight and passenger traffic. Almost all local business is being carried on the public highway.

These are developments in our economic life which must be considered in a study of the transportation question. The railroads must continue to operate. The public demands lower rates, and lower rates must be granted. Who is the prophet who can predict how?—Clinton (Ill.) *Morning Journal*, November 9.

## RAILROADING ABOVE BOARD

"Public Relations" is the title of a book recently issued by the Illinois Central System. If more attention were paid to this sort of thing on the part of railroads there would be less criticism on the part of the public.

Public relations in its prominent practice has a two-fold merit. It keeps the public informed and intelligently trusting, while it keeps the management painstaking and the employes faithful.

The Illinois Central has a creditable tradition. It was the boast of President Fish a score years ago that the Illinois Central had

never been used for speculative purposes. That high minded attitude is continued in the splendid energies of the present president.

Indeed a modern Harriman is this gentleman, C. H. Markham, for he has the constructive promptings of the old organizer, shorn of that which passed as destructive.

Railroading of today is not what it was when railway lines were jockeying in and out with railway systems for reasons of stock inflation and over-night money. The problem of today is to take things as they are and make the best of them. Mr. Markham fits admirably into the new era.

President Markham goes about it in a workman-like way. He has banded together shopmen, trainmen, and officials alike into an engine that pulls solely for the public. He has taken the men into his purposes, and he has taken the people into his confidence. The publicity carried by the newspapers under the mast-head of the "Illinois Central System" is one of the best impressions of constructive post-war literature.

President Markham's analysis of present day railway objects has done worlds to dissolve the mist of misunderstanding that has come to hover over all transportation. His value to the Illinois Central is a value to the railway world.—Bloomington (Ill.) *Daily Bulletin*, November 16.

## MR. FORD'S RAILROAD

Citing statistics filed with the Interstate Commerce Commission by Henry Ford's railroad, the Detroit, Toledo & Ironton, the *Railway Age* shows in an article in its current issue that the monthly net return earned by the railroad declined over 70 per cent between June and August, the last month for which complete figures are available.

The reduction of 20 per cent in local rates and the advance in wages granted by Mr. Ford were put into effect on July 1. It was widely reported that in spite of the reduc-

tion in rates and advance in wages Mr. Ford had converted the D., T. & I. from a bankrupt into a prosperous railroad. The statistics published in the *Railway Age* show that in June, before these changes were made, the total earnings of the railroad were \$713,527 and that they increased in July to \$744,498 and in August to \$763,840. They also show that in June, before the rates and wages were changed, the expenses incurred by the railroad for each dollar earned were 52.7 cents, while in July they had increased to 59.7 and in August to 71.8 cents. The result of this large increase in operating expenses was that the net operating income declined from \$261,259 in June to \$187,395 in July, and to only \$70,643 in August.

"The recent reports of the road to the Interstate Commerce Commission," says the *Railway Age*, "fail to maintain the marked improvement in earnings which earlier in the year filled the newspapers with accounts of Ford's 'railway miracle.' Mr. Ford installed his own management on the road in March, in which month the net operating income was \$77,985. In April the effects of the Ford traffic or the Ford genius were made apparent in a net operating income of \$276,452, which resulted from an increase in earnings of \$258,439, while the expense increased only \$42,846. The report for April became available about July 1, or about the time Mr. Ford announced his increase in wages and proposed reductions in rates, and led to the whole publicity given to statements that Ford had shown an increase in net while increasing wages and reducing rates. For May there was a further increase in earnings but the expenses also went up and the net was lower than in April and in each month since, the net has been lower than it was the month before until in August it was only \$70,643, or less than it was in March, although the earnings were greater than in any preceding month and \$324,600 greater than in March.

"Comparing Mr. Ford's railroad with all the Class I railroads of the United States is like comparing a mouse with a hippopotamus. Since, however, the propaganda regarding the 'miracle' worked on the D., T. & I. has invited the comparison, the following facts are presented for what they are worth: Between June and August when Mr. Ford made his famous changes in rates and wages the total earnings of the D., T. & I. increased 7 per cent, while those of all the Class 1 railroads

increased 9.3 per cent. Meantime the operating expenses of the D., T. & I. increased 46 per cent, while those of the Class 1 railroads increased less than 1 per cent. In consequence the net operating income of the D., T. & I. declined over 70 per cent, while that of the Class 1 railroads increased from \$51,640,000 to \$90,241,000, or almost 75 per cent. The increase in net operating income of the Class 1 roads was mainly due to the reduction of wages on July 1."—*Railway Age* (Chicago), November 19.

### THE NORTH AND SOUTH ROAD

Probably the most original and strongest mind among American economists was that of Henry C. Carey, whose works spoke to the world in eight European and one Asiatic languages. He is often spoken of simply as a Protectionist, but he was a Free Trader in the first half of his life, and very much more than a Protectionist at any time. Among his disciples were Free Traders like Bastiat, Schulze-Delitsch, Edward Atkinson, and others who did not know the sources of the ideas they adopted.

Carey's central idea was the value and importance of "local centers of trade and industry." He did not like to see great cities gathering into themselves the population of the country. He was opposed to centralization in every form. He believed, as did Adam Smith, in that trade between town and country in which there is the most rapid overturn of capital, and the least opportunity for the middleman to levy profits, and the smallest outlay on transportation.

In his view the railroad had a great work to do in unifying the country, both politically and industrially. During the Civil War he had some business with the government which required him to call on the President. He took with him a railway map of the United States, which he spread before Mr. Lincoln, and called his attention to the fact that the great lines at that time ran only east and west, carrying goods from the interior to the seaboard. "Suppose they had run north and south as much as they do east and west, Mr. Lincoln, what would have been the difference?"

"We certainly would have found it easier," said Mr. Lincoln, "to get our soldiers and their supplies to the scene of conflict in the South."

"No, Mr. President," replied Mr. Carey,

"you would not have had to send soldiers into the South, for through continued intercourse and exchange the people of the two sections would have known each other too well to quarrel and go to war. But a railway system which is all warp and no woof let the country become two sections, which did not know each other."—PROF. ROBERT ELLIS THOMPSON, LL.D., New York City (N. Y.)—*Daily Financial America*, October 6.

### PASSIVE OBSERVATION

For twenty years two chess players met daily at Brown's Chop House, took their places silently, silently played their game and silently departed. For twenty years a third party sat by and silently looked on.

Then one of the two players failed to show up—for the first time in twenty years. After waiting a few minutes, his partner said to the onlooker: "I guess he isn't coming today. Will you play his men?"

"Sorry," was the answer, "but I don't know the game."

He had followed every move for twenty years, but he didn't know the game. He had watched the drama of king and castle for two decades without sensing a single undercurrent of strategy, speculating on a single motive, or anticipating a single coup.

He had displayed infinite patience in looking at the game, but he couldn't be bothered looking into it. He showed every symptom of life except its first symptom—curiosity.

He belonged to that listless army of passive observers who clutter up the side lines of business—men who look without seeing, listen without hearing, do without understanding.

Placed in an office—at a bench—he would remain twenty years ignorant of his neighbor's job, his superior's problems, his own significance. When the opportunity for advancement came, he would have to say, "Sorry, but I don't know the game."—*The Right Way*, Central of Georgia Magazine.

### DAIRY MEETINGS

The Illinois Central Railroad is interested in the welfare of the farmers along its lines, for the railroad can prosper only as the farmers prosper.

Under the direction of H. J. Schwieter, general development agent for the railroad, a dairy campaign is now being held at Marissa and nearby communities. It has been found

that dairy communities on the average are the most prosperous communities. This section of the country is well adapted to dairying; so Mr. Schwieter is endeavoring to get more farmers to milk cows.

In order to get in touch with the farmers, a motion picture machine is used to show dairy subjects. Mr. Schwieter's men go right out in the country schoolhouses and, by means of a novel generating device attached to any make of automobile, are able to furnish the current for their picture machine.

A short lecture on the advantages of the dairy type of farming is given, followed by the pictures.

The first meeting, held at Pleasant Hill schoolhouse Tuesday night, was well attended, and everyone enjoyed the program.

Other meetings are scheduled for Wednesday night at East Dozaw school, Thursday afternoon at Marissa public school and Thursday night at West Dozaw schoolhouse. On Friday it is planned to use the motion picture theater at Marissa to hold an afternoon meeting for the merchants and townspeople, and Friday night the last meeting will be held at White Oak schoolhouse.

We are grateful to the Illinois Central for these meetings and hope they will be well attended. The program is free to all, and the subject is of vital interest to this whole community—Marissa (Ill.) *Messenger*, November 17.

### Flowers

The following is from a letter written by Pitt P. Hand, publicity manager of the New York Central Lines, to the editor of the *Illinois Central Magazine* under date of November 11:

"I cannot refrain from sending my hearty congratulations on your November issue, which certainly reaches a high standard. It is crammed with information valuable to all railway workers, presented in a most attractive style. The magazine apparently is determined, in its field, to keep abreast of the splendid service rendered the railway situation by President Markham."

As many of our readers know, the *New York Central Lines Magazine* is itself one of the leaders in the field of railway publications.

### Work

**I** PITY no man because he has to work. If he is worth his salt, he will work. I envy the man who has a work worth doing and does it well. There never has been devised, and there never will be devised, any law which will enable a man to succeed save by the exercise of those qualities which have always been the prerequisites of success, the qualities of hard work, of keen intelligence, of unflinching will.—THEODORE ROOSEVELT, quoted by C. K. D. of the passenger department.

Tillie the Typist says she is glad, of course, that the war is over, but that no man looks the part of a hero when wearing rubbers and carrying an umbrella.

### Theory and Practice

"Lips were made for kisses,"

The maiden said to me;  
And with the sweet suggestion  
I could not but agree.

But when I sought to prove it—

To make the matter clear—  
She flouted me, retorting,

"Don't credit all you hear."

—LOCHINVAR II.

### Something Just as Good

The traveling man from Milwaukee was in search of a news stand at Galena, Ill. He accosted a native: "Can you tell me, please, where I can get a Milwaukee Sentinel?" "You can't. The only thing you can get now is the Illinois Central."—F. W. D. in Chicago (Ill.) *Tribune* "Line o' Type or Two."

### Our Favorite Home Brew Recipe

J. L. B. vouches for the efficacy of this one: Chase bull frog 3 miles and gather up the

hops; to these hops add 10 gallons hemlock tan bark, about 2 quarts turpentine, 1 pint of shellac and 2 bars laundry soap. Simmer gently for 36 hours; then strain through an I. W. W.'s sock to keep it from working. Pour into brown bottles. Drop a live grasshopper into each bottle to furnish the kick. Cork tightly and put in cool place. *Select pall-bearers.*

### Melancholy Days

First it rains,  
Then it snows,  
What comes next  
No one knows.

\* \* \*

One day hot,  
Next day cold,  
Fall is here  
I've been told.

\* \* \*

One day a coat,  
Next day no vest,  
It's hard to tell,  
Just-what is best.

\* \* \*

Oh woe is me,  
My cup is full.  
Too soon I'll don  
That scratchy wool.

—W. L. M.

### Here Is \$5 Worth

The Chicago *Evening American* has been conducting a "Screenydill" contest with movie titles. One of its recent awards was announced as follows:

"Nowhere else than Council Hill, Ill.!

"Bill J. Welch, who, we gather from the stationery, helps conduct the affairs of the Illinois Central Railroad, wrote the following:

"Sentimental Tommy," "Just Out of College," "White and Unmarried," "To Please One Woman" "Out of the Chorus," made her "His Social Secretary," and found her "Such a Little Queen" that he soon made her "A Blushing Bride."

"Ain't that sweet?

"Go ahead and spend the \$5, Bill; it's as good as in your pocket right now."

### This Is Deep and Rocky Stuff

Information was recently received by one of our departments that a car of agricultural limestone which was being transported South for demonstration purposes had been delivered

at Duck Hill, Miss., and there appropriated for the construction of a station platform. It is suggested that this more than meets expectations for the limestone, and that Duck Hill must be a *bird* of a town to raise a station platform by means of its use.—L. B. R.

### Hit or Miss

If it were not for the alarm clock, some men would never reach work—providing that the alarm clock is far enough away when it rings.

Before most of them go to bed they set it so as to wake them up in time, and then they have to set it again in order to start for work.

Most persons get to work on time, and some don't because they try to catch the last train a minute after it leaves.

After some men get to work they forget all about it until it's time to go home, and that's about half an hour before quitting time, and they wonder why their pay check is short at the end of the period.

One foreman started to look for a man in the morning and found him at night when he checked out.

The only time most men are around is when the pay-master calls with their hard-earned money.

Some men are like mules; the only time they work is when the boss is around. If he stays around too long they suddenly find that something is wrong with one of their tools and go for a walk to the grindstone.

When they do come back it is unnecessary to start because the boss has departed, and it's nearly time to dress and go home.

A man is supposed to check in right on the "dot" and change his clothes after the gong has sounded, which usually takes most of them three-quarters of an hour.

Pretty soon all a company will have to do is to carry a man on the payroll, send him a check and let the work finish itself.

—ANDY GUMP.

### Bill's Bull-etin

Thanksgiving has gone, but not indigestion.

Regret that I have but one day to give to my turkey.

Christmas next—easier on digestion, but tough on pocket-book.

Boys are preparing by shaking off sweet-hearts like apples off tree.

Ma gives Pa electric percolator—Pa gives Ma silent treatment and gives bankbook final squeeze.

Sister gives beau near-silver cigarette case—will last as long as mesh bag he gives her—both will last as long as their affection.

Christmas jewelry, like foliage, turns green in spring.

Join S. P. U. G.'s—lose friends; don't join—lose bank balance.

Spirit of Christmas, like that of war-motte, is "Give till it hurts."

Christmas toys made by Humpty-Dumpty—played with once and are broken like New Year's resolution.

There is no Santa Claus—it's your father, if he's working.

Girls hang up stockings—don't roll them—add galoshes for good measure.

Open season for galoshes—girls look like sisters of "Puss-in-Boots."

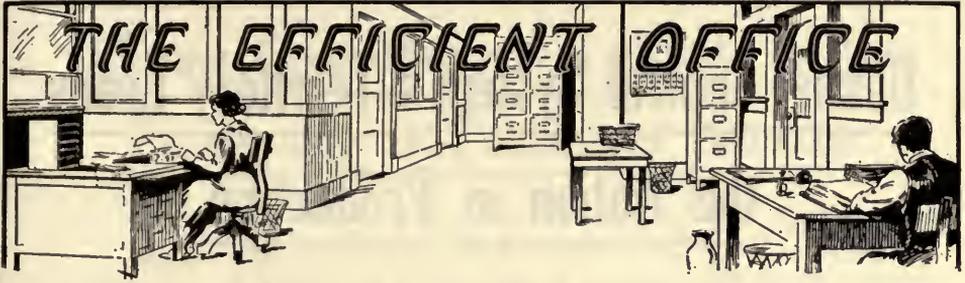

Open buckles jingle like sleigh bells. Don't buckle top—would make 'em sensible.

Give her a pair for Christmas—her feet will appreciate them.

Christmas sometimes spelled Xmas—X stands for expensive.

Years for an X-less Christmas and a thirsty New Year.

—W. L. M., General Freight Department.

### An Ice-Box for the Hectograph

Inquiry was made in the November issue as to how hectograph forms could be run off in the summer time without having the lines become "wavy."

This same difficulty was experienced in our office and was overcome by the use of an "ice-box," as we called it, constructed of metal, with brackets riveted on each side to support the pans. Enough space was allowed at the bottom for an ample supply of ice, which kept the pans ready for use at all times. Another effective remedy is to keep the pans in a cool place and to sponge them down with ice water before running off the forms.

Co-operation is also essential in an efficient office. If you have on your desk certain information needed by another clerk and not directly concerning yourself, don't side-track it, but hand it to him. This will save considerable time and correspondence.—A. DYKSTRA, *Engine Clerk, Burnside Shops, Chicago.*

### Finds Binders Handy

At Baton Rouge we have for some time past been using the McBee thread binders in filing our interchange reports, train sheets, yard check and various other reports which Mr. Porterfield instructs to be bound in very serviceable and nice manner. These binders are secured through the stationer, come already equipped with screws and nuts and are very easily handled.—B. GALVANI, *Chief Yard Clerk, Baton Rouge, La.*

### Pass on the Good Ideas

I suggest that the chief clerk in each department appoint a competent person to make a careful study of the methods used in making reports, filing and handling correspondence and of original ideas for the better handling of office work. Equipped with this knowledge, the investigator could compare notes, in the magazine, with representatives of

other departments. Not only would the exchange of views be profitable but the plan would foster the get-together spirit as well.—FRED ABRAHAMSON, *Office of the General Superintendent of Transportation, Chicago.*

### About Pencil Sharpeners

Pencil sharpeners are often the cause of much worry as well as the loss of time. The usual shavings receptacles often wear loose, and refuse to stay in their proper place. The result is that the shavings are scattered over the floor. Then, too, in a busy office the receptacle has to be emptied frequently.

The office boy in the general claims office recently solved the problem by fastening a discarded pasteboard box around the sharpener so that it would catch the shavings. The box he employed was one in which rubber bands are received. A hole was punched through each side of it; then it was fastened to the main section by a rubber band, and it has not failed to function to date. It will hold many more shavings than the old container.

### Handling Time Books

There was a time when we could hardly get the time books in at the expiration of the semi-monthly periods on account of numerous corrections. Some time ago sheets from the hourly and monthly calculator were mimeographed and sent to each foreman, covering rates of his men and himself. We asked their co-operation in the handling of the books and met with a hearty response. Now there are very few corrections to make. This not only expedites the handling of the books but makes it much easier for the foremen and supervisor's clerks as well.—F. T. KINNISON, *Clerk to Supervisor, Harriston, Miss.*

# Illinois Central System's Territory Leads the Nation in Production

The Illinois Central System, extending from the Great Lakes and the upper Missouri River valley along the Mississippi River to the Gulf of Mexico, serves the most productive district in the world. This wonderfully fertile territory, drained by the nation's three greatest water systems—the Mississippi, Missouri and Ohio rivers—furnishes the raw material to feed, clothe, shelter and warm many millions of the world's population.

The fourteen states which are directly served by the Illinois Central System's 6,233 miles of railway lines are:

<b>Alabama</b>	<b>Kentucky</b>	<b>Nebraska</b>
<b>Arkansas</b>	<b>Louisiana</b>	<b>South Dakota</b>
<b>Illinois</b>	<b>Minnesota</b>	<b>Tennessee</b>
<b>Indiana</b>	<b>Mississippi</b>	<b>Wisconsin</b>
<b>Iowa</b>	<b>Missouri</b>	

These fourteen states are less than 30 per cent of the number in the Union. Their territory of 797,793 square miles is only 26.3 per cent of the total area of the United States. But how much greater are the percentages which show their leadership in the substantial things of the world!

Forty-five per cent of all the farms in the United States are located in these fourteen states, and in 1920 they produced crops valued at 39.2 per cent of the total valuation of all the farm crops of the country. The farms in these fourteen states are equipped with farm buildings valued at 46 per cent of the valuation of all the farm buildings of the country, and with farm machinery valued at 46.3 per cent of the nation's total.

In practically every farm crop these fourteen states as a whole take a pre-eminent leadership, despite the great variety of climate and soils encountered between South Dakota and Louisiana. In 1920 they produced 65.9 per cent of all the corn, 30.7 per cent of all the wheat, 62.4 per cent of all the oats, 45.3 per cent of all the barley, 49.1 per cent of all the rye, 30.9 per cent of all the white potatoes, 45.6 per cent of all the sweet potatoes, 39.8 per cent of all the tame hay, 61.3 per cent of all the wild hay, 27 per cent of all the cotton, 63.7 per cent of all the rice and 42.5 per cent of all the tobacco produced in the United States.

The Illinois Central System's territory also is a leader in livestock production. The fourteen states on January 1, 1921, contained 46.8 per cent of all the horses, 49 per cent of all the mules, 43.1 per cent of all the cattle, 19.3 per cent of all the sheep and 62.2 per cent of all the swine on the farms of the United States. The aggregate value of the livestock in the fourteen states was 41.4 per cent of the aggregate value of the livestock on all the farms in the country.

In addition to farm leadership, the fourteen states served by the Illinois Central System produced 37.5 per cent of all the lumber and 34.5 per cent of all the bituminous coal produced in the country during 1920.

The Illinois Central System is proud of the magnificent territory which it directly serves with transportation. Transportation is the factor which gives real value to the excellent production of these states. We are constantly endeavoring to contribute our part toward making this territory of even greater productive value, especially by rendering a service of satisfaction to our patrons. We are eager to be of service because that is the end for which the Illinois Central System exists.

Constructive criticism and suggestions are invited.

**C. H. MARKHAM,**  
President, Illinois Central System.

# Illinois Central System Points to Its Leadership in Passenger Service

The existence of a railway system is justified by its ability to serve the public with transportation. The measure of its service is the measure of its worth. As one example of its high standing, the Illinois Central System invites the attention of the public to those things which are indicative of its capacity for efficient passenger transportation service.

Much depends upon personnel. As an organization the Illinois Central System is composed of a body of 60,000 faithful and efficient workers. Its officers have advanced through the ranks of the service, thus acquiring the practical experience for intelligent supervision. The efforts of the organization are concentrated on making the Illinois Central System, in point of service, the outstanding railway system in the United States; and that means in the world, for American railroads have long held, and continue to hold, the leadership of the world in efficient transportation service.

Much depends upon equipment. Up-to-date and well-maintained equipment is the first essential to passenger service of the high type, which the Illinois Central System strives to give at all times. For years, the Illinois Central System has been a leader among the railway systems in adding to its equipment, keeping its equipment well maintained and developing its roadway facilities.

The Illinois Central System is a leader in the amount of steel passenger equipment in use. Sixty per cent of the passenger cars on the Illinois Central System are of all-steel or steel-underframe construction. Steel cars are expensive, but they are a generally recognized factor for the safety and comfort of passengers.

The latest figures available show the percentage of all-steel and steel-underframe passenger cars in service on the railroads of the country as a whole to be less than 39 per cent.

The passenger on the Illinois Central System is assured of a safe, comfortable trip in a car of good construction and modern convenience, over a smooth-riding track of a heavy rail and ties, fully ballasted and well maintained, hauled by a locomotive of sufficient power and in such a condition of maintenance as to give every reasonable assurance of scheduled movement.

For the most part, each locomotive is regularly assigned to the same engineer, who takes a personal pride in its condition. This is believed to be one of the reasons for the small number of engine failures on the Illinois Central System, a record which is outstanding among the railroads of the country.

The regularity with which Illinois Central System passenger trains maintain their schedules indicates the high order of our passenger service. The percentage of passenger trains maintaining schedule, by months, for 1920 and the current year to November 1 follows:

	1920	1921
January .....	93.4	97.8
February .....	96.4	98.5
March .....	94.0	98.3
April .....	93.4	98.5
May .....	94.2	99.2
June .....	96.4	99.1
July .....	96.9	99.1
August .....	96.8	99.1
September .....	96.7	98.6
October .....	97.3	98.1
November .....	97.0	.....
December .....	93.8	.....
Average.....	95.5	98.6

The patrons of the Illinois Central System find courteous and sympathetic attention in every department. Employees take great pride in our reputation for courtesy.

Service is now the only basis of competition among the railroads. Since rates are standardized, the Illinois Central System cannot offer rate bargains to command patronage, but it can offer—and it is constantly developing—the organization, equipment and facilities for unusual service.

Constructive criticism and suggestions are invited.

C. H. MARKHAM,  
President, Illinois Central System.

# Won the Gratitude of Vaudeville People

## How a Little Service Brought Notice to F. T. Wood, Third-Trick Operator at Rockford, Ill.

**F** T. WOOD, third-trick operator at Rockford, Ill., has been commended for an act of kindness to vaudeville actors who recently were in danger of not being able to leave Rockford in time to make their first appearance in Chicago the following day. The courtesy shown was appreciated by the theatrical people. The November 11 issue of the *Vaudeville News* contained a detailed account of the affair, and Mr. Wood received a letter from E. F. Albee, president of the B. F. Keith circuit of theaters, New York City, thanking him for his co-operative spirit.

While on duty at the station in Rockford about 5 a. m., October 24, Mr. Wood received a message that a car had been derailed at Evarts, Ill., and that it would probably be several hours before the track was cleared. No. 12, a Chicago-bound train, was due at that point about 5:30 o'clock, and word was sent out that this train would probably be detoured over the Chicago Great Western Railroad at South Freeport.

Mr. Wood remembered that there was theatrical baggage at the station in Rockford, and that it was scheduled to go to Chicago on No. 12. Vaudeville actors made that trip every Monday morning, and Mr. Wood had become so acquainted with their schedule that he knew it was important for them to arrive in Chicago on time. No. 12 was the only train on the Illinois Central that would get them there for rehearsals and their first performance.

### Got Them on Another Train

Mr. Wood telephoned to the Mayer Hotel, where the vaudeville people usually stayed, and told the manager to inform them of the accident and that it would be best for them to take the 7 o'clock Northwestern train to Chicago.

When the actors arrived at the Illinois Central station to redeem their transportation, their baggage was already on its way to the Northwestern station. Their money was refunded, and they arrived in Chicago over the Northwestern in time for their first performance.

F. T. Wood

It happened that the track was cleared sooner than was expected, and No. 12 was not detoured over the Great Western. No. 12 was delayed one and one-half hours, but arrived in Chicago in time for the actors to attend rehearsals if they had gone on it. However, Mr. Wood knew that the vaudeville actors' trip was so important to them that they could not afford to take the chance of waiting for No. 12.

That afternoon Sig Mayer, proprietor of the Mayer Hotel, wrote a letter to Mr. Albee commenting upon the incident. Mr. Albee replied to the letter, and then wrote his appreciation to President C. H. Markham and Mr. Wood.

### What Mr. Wood Has to Say

"I had no idea that the little stunt was going to cause so much comment," Mr. Wood said. "I knew the acts had to get to Chicago that morning, and realized that they would not

if I did not act quickly. I forgot all about the affair a few minutes after it was over, until I received a letter from Mr. Albee. It seems to me that they are making a mountain out of a mole hill; but if it is as important as they say it is, I hope the incident will serve as a suggestion to other employes when like cases come up. If it clinches more business for the Illinois Central, I'm glad."

Mr. Wood has been in the service of the company for five years. He studied telegraphy at the Bowling Green Business College, Bowling Green, Ky., for seven months, then attended the Illinois Central Station Training School in Chicago for three weeks. After his course was completed, he was given a position as station clerk at Orangeville, Ill. He was in that position a year, and then passed the examination to be a telegraph operator. He was made a relief operator on the Wisconsin division, and in 1918 was given a permanent position at Rockford. He has been in that city since.

### Hotel Man Tells Incident

The letter Mr. Mayer wrote to Mr. Albee read as follows:

"Much has been said of the waning service and 'public-be-damned' spirit of railway employes, but following is an instance of one night station agent, whose thoughtfulness saved four vaudeville acts, closing here at the Palace theater yesterday, considerable inconvenience as well as dollars and cents.

"Some time in the night there was a wreck on the Illinois Central Railroad out of here, which necessitated the rerouting of Chicago-bound trains so that they did not go through Rockford. The baggage belonging to these performers was already on hand at the depot, having been taken the night before. The agent, realizing that most of the performers stopped with us, called us, advising that the early morning train would not run, and that, if they wished to get into Chicago early, it would be best to take some other road. The transfer man was called and the baggage taken to another depot, so that these people got out on a 7 o'clock train, only mildly inconvenienced.

"It was the wish of these people that you be advised of this incident, together with the name of the agent, whom we have found to be F. T. Woods."

### Thanks From Vaudeville People

Mr. Albee then wrote to President Markham as follows:

"It is most gratifying to receive knowledge of the kindly consideration and splendid co-operation given by the railroads throughout the country to the vaudeville profession. It means so much to the artists and the managers of the different theatres to have them appear with their trunks on Monday morning in the different cities where they are to play. Failing to arrive on time on Monday puts the managers to a great disadvantage and disappoints the patrons of the theaters.

"Your road has given splendid service, and it reflects great credit on yourself, the executive staff, those in the baggage department and other branches of the service, who are carrying out your instructions to the letter. The thoughtful action of F. T. Woods in the interests of the artists is most commendable.

"In behalf of twelve thousand vaudeville artists and eight hundred vaudeville managers throughout the country, I want sincerely to thank you for your great interest."

## IN THE CAMPAIGN

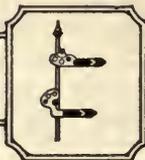

My ole brindle cow got out on the track,  
Thought I'd go an' bring her back.  
An' jes' ez I come round the hill  
There she wuz - a standin' still.  
Lookin' at engine right in the face,  
An' from it jes' a little space.  
But they didn't strike her - tell yer what,  
These engineers are a keeful lot.  
They've got wud at they call a comp'ny o' some kin'  
They're 'f strikin' stock on the I.C. line.

CHGO NOV 27

DEAR BILL

WE TRIED TO CHEER UP YOUR WIFE AND KIDS AT THE  
THANKSGIVIN FEED DURING YOUR ABSENCE BUT IT WAS A PRETTY GLOOMY AFFAIR  
WITH YOU IN THE COMPANY HOSPITAL. SAY BILL I TOLD YOU THAT THE  
CHGO SWITCHMEN HAD RENTED ALL THE BEDS AND THEN YOU GO AHEAD AND FALL  
FROM THE TOP OF A CAR WHEN ON YOUR TRIP HOME. AND YOU AINT THE ONLY  
BRAKEMAN WHO RECENTLY PULLED OFF THIS STUNT. THEY TELL ME THAT SIX  
OF THEM EITHER STEPPED OR FELL OFF CARS RECENTLY. ALSO ONE CONDUCTOR  
DID THE SAME THING AND LOST HIS ARM. CLIMBING DOWN FROM TOP OF  
A CAR IS THE SAFEST WAY WHEN YOU GO TO PULLING PINS AGAIN REMEMBER  
BILL THAT TAKING CHANCES IS ALL RIGHT FOR CIRCUS PERFORMERS BUT BRAKEMEN  
AINT PAID TO DO SO. NOW THIS AINT A SERMON BUT A SUGGESTION FROM  
A FRIEND WHO DONT WANT NO MORE THANKSGIVIN FEEDS SPOILED. WILL DROP UP  
TO THE HOSPITAL AND SEE YOU THURSDAY.

JOE

## Keeps Crossing Accident-Proof 7 Years

Here we have John Terry, crossing flagman at Main street, Warren, Ill., Minnesota division, who has guarded this one crossing seven years without an accident.

Mr. Terry started working for the company in 1885 as a section laborer. After working for twelve years, he made a visit to his home in Ireland, and then returned to America, where he again took up with the Old Reliable, working on the section. In 1914 he was placed at Main street, Warren, as flagman, and he has been there since. He has never had an accident at this crossing, although it is an exceptionally busy one. He says he makes it a point to be out on the crossing with his "stop" sign in plenty of time. He has a great many small school chil-

dren using the crossing during school days, and he makes it a point always to watch them and, if necessary, help them across. In addition he voluntarily got himself a police whistle. He says that the whistle comes in mighty handy in attracting attention, especially in the winter, when the days are short and it gets dark early.

Besides being a splendid flagman, Mr. Terry believes in cleanliness about the crossing. His shanty and surroundings are the picture of neatness. He also has a garden spot, and it is a good one, as can be seen from the picture. Mr. Terry's efficient service has been a source of pride to Claim Agent H. D. Smith of Waterloo, Iowa, who gives us his picture and record.

*John Terry and the Way He Keeps His Place*

## Teach New Employe the Ways of Safety

By J. A. BELL,  
Master Mechanic, Mattoon, Ill.

The decrease in injuries to railway employes during the past twenty years or more has been due to improvement in tools with which they have to work—improvement in roadway and equipment—and elimination of hazardous conditions, coupled with a continuous effort on

the part of the management to educate each employe always to think before acting and then to act in a way that will injure neither his fellow employe nor himself.

A further decrease in personal injuries can be brought about by exercising greater care in the selection of men entering the service. Applicants should be questioned regarding their

education, physical condition and habits before being allowed to fill out application papers, and no man should be permitted to start actual work without first having been cautioned and instructed by the employing officer and the supervisor of the work on which he is to be engaged. By starting off in this manner, you will find a lasting impression is made, and a little talk at reasonable intervals will invariably add to the service another valuable employe and assist in the prevention of injuries.

If an injury does occur, prompt investigation of it should be made and the responsibility determined. The manner in which the injury occurred should be demonstrated to as many employes as possible, and, as suggestions are received of means whereby such an injury

can be prevented, immediate action should be taken with that end in view.

Those in authority must not only correct the unsafe things but also build up a fine safety morale among the employes by their personal efforts and personal contact. Teach each employe to act with safety, that is his duty to assist his fellow workmen to work with safety, and, if an employe is found who is carelessly inclined, reason with him until he is fully convinced you are in earnest and interested in his personal welfare.

Renewed efforts by all concerned, with a determination to beat all previous records, will result in a showing for December, 1921, that each employe on the Illinois Central should be proud of.

## Buy Seals and Help Fight Tuberculosis

At least 1,000,000 persons in the United States have active tuberculosis and another 1,000,000 have the disease in a relatively quiescent form, most of them arrested cases, according to a study of the situation made by the National Tuberculosis Association. Of the 1,000,000 active cases of tuberculosis, according to the records of the United States Bureau of the Census, 132,000 have died during the past year.

Stating the situation in another way, 120 deaths for every 100,000 of population, according to the best available statistics, have been caused by tuberculosis during the last year. Fifteen years ago there were 200 tuberculosis deaths a year for every 100,000 of population. It has been estimated, by comparing the present death rate with that of no longer than twenty years ago, that a saving of approximately 75,000 lives annually has been effected.

Dr. Louis I. Dublin, in a report to the United States Department of Labor entitled "Causes of Death by Occupations," says that tuberculosis of the lungs is the most prevalent cause of death for all occupations combined, being responsible for 20.5 per cent of all deaths at all ages. Between the ages of 15 and 24 it shows a proportionate mortality of 33.8 per cent and increases to its maximum of 40.9 per cent in the age period of 25 to 34. The years when it takes the greatest number of lives are the most productive years for both men and women. Doctor Dublin, who is an insurance statistician, also has found that

among the policy holders in the company which he represents there has been a decline of 42 per cent in the death rate from tuberculosis of the lungs among white persons during the period of 1911 to 1919.

In commenting upon this decline Doctor Dublin says the achievement, he believes, has resulted in large part from the public health and educational work of communities generally during the past thirty years.

In order to estimate the influence of tuberculosis upon the length of human life in this country, the National Tuberculosis Association has prepared life tables with tuberculosis included and with tuberculosis excluded. On the basis of these results, it is estimated that, if tuberculosis could be eliminated as a cause

*The Christmas Seal*

of death in the United States, two and one-half years would be added to the life of every individual in the country. Capitalizing each individual life at \$100 a year, the net saving to the country would be at least \$25,000,000,000.

To provide the necessary health machinery to control tuberculosis would cost, according to experience gathered by the National Tuberculosis Association, approximately \$2 a year for each person in any average American community. This expenditure would undoubtedly have to be extended over a period of probably ten years at least. Applying these figures to

the entire population, for an expenditure of approximately \$2,000,000,000 the saving of \$25,000,000,000 could be secured, a net saving of \$23,000,000,000.

The National Tuberculosis Association and its allied agencies are carrying on a winning fight against tuberculosis. Their extension into every community of the United States will mean an increased saving of life and money.

The tuberculosis Christmas seal sale to be held in December provides the "sinews of war" with which the national, state and local associations can carry on their fight.

## Some Chicago Facts in a Letter to Estelle

There's nothing like going to headquarters for facts.

Addressing the Illinois Central in general and signing herself "yours respectful," Miss Estelle Andrews of 33 Washington avenue, Collingswood, N. J., who is a student of geography, recently wrote the following letter:

"One of the things we are required to do in our geography class in school this year is to write a composition on one of the largest cities in United States. I have chosen the respective city of Chicago and know it is a noted railway center, if you would kindly send me information regarding this it would help me a great deal in my work. Thanking you in advance."

The postoffice department found the Illinois Central all right, and this great railway system wrestled with itself and brought forth the following, which ought to help Miss Estelle's class standing considerably:

"Chicago is the greatest railway terminal in the world. No train passes through Chicago; it is the terminus of every road that enters it. Thirty-nine railroads, including twenty-two of the greatest railway systems in the world, end in Chicago. Those thirty-nine roads include almost half of the entire railway mileage of the United States. One thousand four hundred trains enter and leave Chicago every day in the year—more than enter and leave any other city in the world. They bring in and take out of the city daily nearly two hundred thousand persons. Fourteen hundred miles of belt lines encircle Chicago, and that

is one-third of the total belt line mileage of the country.

"Because of its location in the heart of the Middle West, being the terminus of the great railway systems which stretch into every far corner of the country, Chicago is the greatest shipping center in the world. The South Water Street station of the Illinois Central System, in the heart of the business district of the city, is the largest freight depot in the world. Its receipts in October, 1921, were nearly three and a half million dollars.

"The Illinois Central System has maintained an important relationship to Chicago since it was first built, in 1851-6. Our entrance to the city is along the Lake Michigan front, giving us what probably is the most favorable site for a railway terminal in the world. We maintain a suburban service to the South Side of the city, operating 350 week-day suburban trains and carrying 70,000 passengers a day. Our suburban service has been the means of developing the famous South Side residential district of Chicago. Other railroads maintain suburban services to the North Shore and the West Side.

"The most interesting thing about Chicago has been its magnificent growth, in a lifetime, from a frontier trading post to a city of two and a half million people. The railroads made that growth possible—just as they have made possible the development of the entire United States from the scattered colonies on the Atlantic seaboard to a compact unit of forty-eight states with a hundred and ten million inhabitants."

# Engine Exhibit Makes Hit at Hammond, La.

## Illinois Central Display Is Feature of the Successful Annual Florida Parishes Fair

The development of the Florida Parishes of Louisiana—Tangipahoa, Livingston and St. Helena—owes much to the Illinois Central System. The relation between the railway system and its patrons in that section has always been most cordial. It was something of more than usual interest to the system, therefore, when the development in which the system has aided was portrayed so fittingly recently at the Florida Parishes Fair in Hammond. Major George B. Campbell, editor and publisher of the Hammond Vindicator, contributes the following story to the magazine.

By MAJOR G. B. CAMPBELL,

Editor, The Hammond (La.) Vindicator

**G**OVERNOR JOHN M. PARKER dedicated the magnificent new buildings and grounds of the Florida Parishes Fair Association at Hammond Monday, October 24, the opening day of the greatest agricultural attraction ever held in this section. The fair lasted six days. The governor's dedicatory speech was delivered before a crowd of 12,000 persons, and it teemed with the optimism so characteristic of Louisiana's governor.

The new home of the fair association cost a little less than \$100,000. All buildings are constructed with an eye to permanency and expansion, for it is conceded now that within five years, judging from the fine response of the people of the three parishes comprising the association, the enterprise will have expanded to a point where it will rank second to none in Louisiana.

Major G. B. Campbell

Governor Parker, himself a close student of the soil and vitally interested in agriculture, as evidenced by his operation of one of the largest cattle-raising and stock farms in Louisiana, touched the keynote in his speech when he declared that the future of this great commonwealth depends solely upon the efforts of the agriculturists. He was particularly gratified to observe such close co-operation on the part of the farmers of Livingston, St.

Our Engine Exhibit at Hammond, La.

Helena and Tangipahoa parishes, and he spoke in glowing terms of the great strides made by the tillers of the soil during the past few years.

**Harry D. Wilson Speaks**

Commissioner of Agriculture Harry D. Wilson accompanied the governor to Hammond and delivered a speech filled with sparkling thoughts along agricultural lines, complimenting the fair association on getting together the greatest agricultural display that he had ever observed in his home section of Louisiana. Mr. Wilson is working with the association now to include two more parishes—Washington and St. Tammany—in the group comprising the Florida Parishes Fair Association. Aside from this he is working to get two Mississippi counties bordering the Louisiana line to affiliate and make the fair enterprise somewhat of an inter-state event. His idea appears to meet with approval.

**Wonderful Exhibits**

Never before in the history of this section were so many fine agricultural exhibits assembled. Practically the entire resources of the three parishes were exemplified by the dis-

play. Visitors from all sections declared that the exhibition was a complete revelation. Manager Mort L. Bixler worked hard to get the various communities to send the best exhibits possible, and the result of his efforts proved a surprise even to the fair promoters.

The live stock exhibit was not so good as last year, owing to the fact that many of the prize herds were at fairs in the North and could not reach here, but still the showing made was highly praised. Houltton Brothers exhibited a number of their best head of registered stock, and many others did likewise.

**Illinois Central Exhibit Praised**

The fair association, as well as the people of Tangipahoa Parish, feels under lasting obligations to the Illinois Central System for the excellent exhibit sent here—the contrasting engines, the old "Mississippi" and one of the latest models recently purchased. This action on the part of the Illinois Central was liberally commended by the thousands who viewed the engines as they stood in the yards here in charge of Clarence L. Strader, a most popular engineer, who took great pride in explaining to all the wonderful evolution of railroading

*Exhibits at the Florida Parishes Fair*

as depicted by the two types of engines separated by nearly 100 years of civilization.

#### Grandfather Used "Mississippi"

An interesting feature of the visit of the old "Mississippi" to Hammond, and one which caused a revival of memories of more than a half century ago, was when Dr. Lucius D. McGehee viewed the exhibit. He had read of the early history of the old engine and recalled that his grandfather used it to get his household goods to Woodville, Miss., in the years around 1836-37.

"My grandfather," Doctor McGehee said, "often told us about his perilous trips on this same engine, and in fact helped to operate it."

#### Fair in Infancy

The Florida Parishes Fair Association is in the infant class and will grow from year to year. Located as it is on the greatest railroad in the South, and with highways running in either direction, over which the people

*The Agricultural Building*

auto races and horse races helped to entertain the large crowds and caused all to forget business cares for the week.

The Illinois Central, as usual, handled the crowds in an efficient manner. Special trains

*A Field of Motor Cars and the Race Track*

find easy access, nothing can mar the gradual expansion of the enterprise. Men of capital are behind the association and through their influence the stockholders have become so numerous that practically all of the business men of the three parishes own some share in it.

The photographs herewith give an idea of the enterprise. Handsome buildings, a half-mile race track and a grandstand with a seating capacity of 2,500 all contribute to the magnitude of the association.

The attendance this year was almost double that of last year, fine weather prevailing throughout fair week, with the exception of one afternoon when a slight storm interrupted activities for a while.

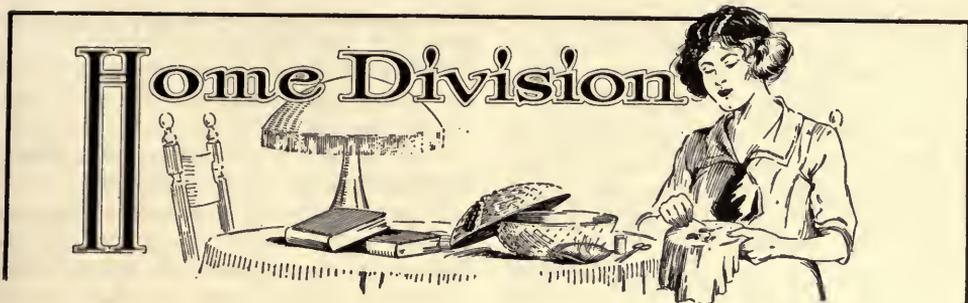

Plenty of amusements were furnished. A carnival, a dog and monkey show, auto polo,

from Baton Rouge and McComb were operated to accommodate visitors, and the regular trains carried extra coaches.

Withal, the fair will be remembered as the most elaborate attraction of its kind ever held here, and its success will spur the people to greater activities next year. It will be hard, however, to eclipse the 1921 fair, but those behind the enterprise declare that such a thing can be accomplished.

#### ITS YEARLY JOB

Every year the Mississippi River carries down to the Gulf of Mexico as much earth as was dug out to make the Panama Canal. If these thousands of pounds of dirt were carried down to the Gulf in trainloads instead of in the river water, it would take about 1,700 trains a day to keep it moving.

### The Things We Talk About

The short girl in the blue prunella coat sighed wearily.

"What's on your mind?" asked the tall girl, fitting a hanger into her brown dolman.

"I rode down on the train with Miss Brewster," the short girl groaned.

The tall girl giggled. "Is she still enjoying poor health?"

"Oh, yes. I tried to dodge behind a post, but she saw me first. We exchanged 'Good morning,' and then she baited me with a 'How are you?' 'Fine,' said I. 'And you?' 'Not very well.' Her faced assumed a mournful expression, and, with head inclined on one side, she regaled me, Rogers Park to the Loop, with her complaints. Great grief! I feel as if I had been to a funeral."

"How tiresome!" sympathized the tall girl.

"I have come to the conclusion," continued the short girl, "that women are divided conversationally into three classes: Those who discuss their ailments, those who use a masculine pronoun with every other breath, and those who brag or criticize. I wish I were a man! I would fortify myself behind a newspaper and read in peace."

"In pieces, you mean," corrected the tall girl. "Just when you felt secure behind your paper barricade, along would come Bill Jones or Dick Flynn. Some men are just as boresome as the women you malign. How would you like to listen to eight miles of golf or fish story, or the clever sayings of some fellow's young grandson?"

"Well, I am cross about it. I have the worst luck, anyway. Now, yesterday I had a nice book, but couldn't even open it. I rode down with the Browne girls. One would have thought they were French modistes the way they picked out the weak

points of the costumes of the other passengers. And I couldn't understand half their slang expressions. By the way, Dora, what does 'giving one the air' mean?"

The tall girl retreated. "It is what I am going to give you until you get over that awful grouch." And the door slammed behind her.

### Tested Recipes

**HONEY BARS.** Grind 2 cups raisins and 1 cup nut meats in food chopper, and mix with  $\frac{1}{4}$  cup honey. Pack under a weight for at least 24 hours. Cut in bars.

**SCALLOPED EGGS WITH POTATO.** Three eggs, 2 cups cooked potato cut into dice, 2 tablespoons butter, 1 tablespoon chopped onion, 2 tablespoons flour, 1 cup milk,  $\frac{1}{4}$  teaspoon salt. Boil eggs hard and cut in slices. Arrange in a baking dish with diced potatoes. Pour over the eggs and potatoes a white sauce made as follows: Melt 2 tablespoons butter and cook the onion in this until light brown, add the flour and salt, stir and add the milk. Cook until thick, stirring constantly. Melt one tablespoon of butter and toss  $\frac{1}{2}$  cup cracker crumbs in the butter until coated, season with salt and pepper, and cover the scallop. Brown in hot oven.

**CODFISH FRITTERS.** 3 eggs, 1 cup codfish (freshened and flaked),  $\frac{1}{2}$  cup sifted flour,  $\frac{1}{2}$  teaspoon baking powder, pepper. Beat eggs, add pepper to taste, and fish; then add flour sifted with baking powder. Beat all together, and drop by spoonfuls into a frying pan half full of very hot fat.

**MRS. BARKER'S SPICE DROPS.** (A good way to use stale cake.) 4 cups of cake crumbs, 3 cups of flour, 3 teaspoons baking powder, 1 teaspoon each of cloves, ginger, and ground cinnamon,  $\frac{1}{2}$  teaspoon salt, 2 cups of brown sugar, 2 tablespoons

lard and 1 tablespoon butter or butter substitute,  $\frac{1}{2}$  pound seeded raisins, 2 eggs, 1 teaspoon baking soda, 1 pint sour milk. Mix all dry ingredients (except soda) together in a bowl with sugar and shortening, and add raisins. Beat the eggs, dissolve the soda in a little warm water, put it into the sour milk, then beat the eggs and milk together, and combine with the dry ingredients. Drop by spoonfuls on a greased pan and bake in quick oven about 15 minutes. (All measures must be level.)

**FRUIT CAKE.** 1 pound brown sugar, 1 pound salt pork (little or no lean), 6 eggs, 1 teaspoon each of cinnamon and cloves,  $\frac{1}{2}$  pound each of currants, raisins, and nut meats,  $\frac{1}{2}$  pound lemon, orange and citron peel (mixed), 2 cups flour, 2 teaspoons baking powder, 1 cup sour milk,  $\frac{1}{4}$  teaspoon soda. Chop the pork and fruit and nuts. Put sugar into mixing bowl, add pork, spices, fruit and nuts, eggs (well beaten), then the flour and baking powder (sifted together), last the sour milk in which the soda has been dissolved. Bake in a loaf pan lined with greased paper.

#### Every Woman's Duty

A woman with the loveliest hands gives us her secret: Equal parts of glycerine and lemon juice (the latter strained carefully), applied at night. A few drops of one's favorite perfume may be added. This treatment prevents redness and chapping.

Rubbing with pumice stone will reduce calloused spots on the soles of the feet.

#### Household Hints for Home Makers

The juice of one or two lemons put into the wash boiler when boiling clothes will whiten them.

Mud stains should be allowed to dry, then be brushed carefully. If the stains persist, lay the stained material, wrong side up, on a pad of cloth, and sponge with water.

Cheese cloth is excellent for dusters.

To keep the refrigerator sweet it should be cleaned once a week. Remove ice and food. Wash the inside of the refrigerator and racks with hot water containing soap or soda, rinse carefully, and wipe dry. Clean and scald the drain pipe and pan.

To store a small quantity of apples for winter use, wrap them in paper to prevent

bruise or spread of rot, pack in a box, and keep in a cool place.

Camphor, which absorbs moisture, is useful in the silver drawer. Dryness helps prevent tarnishing.

Rubbing with fine steel wool will remove discolorations from aluminum ware.

A round or flat whisk broom can be used to sprinkle the clothes evenly and quickly. Keep a broom especially for this purpose.

Paint or varnish spots on glass can be removed with turpentine.

Brooms, brushes, and mops should be hung up, so that the weight will not rest on the cleaning part.

In darning large holes, sew a piece of net over the hole, and darn through the net.

#### Gift Suggestions

Thanksgiving Day has slipped by, and we begin to think about holiday shopping. Most of us have been converted, by bitter experience, to the plan of shopping early. We have found that the stores are less crowded, the salespeople less fagged, and the stock of holiday merchandise in larger variety and fresher than it will be after much handling. It is a good plan to make a list and to classify the articles as far as possible, thus saving time and energy in going from one department or store to another. Make your gifts conform to the standard, "beautiful but useful." The following list may be found helpful in planning one's gifts:

*For the man of the house:* Umbrella, bathrobe, belt, muffler, scarf, motor gloves, pocket flashlight, book, cuff links, traveling case, fountain pen, golf balls or clubs, sweater, subscription to home-town paper or magazine, silk shirt, handkerchiefs, collar box, cigarette holder, book ends, smoking stand, watch chain, smoking jacket, soft leather bedroom slippers, walking stick, military brushes.

*For the home or business woman:* Picture, telephone doll, narcissus bowl and bulbs embroidered guest towel, box of stationery, bottle of favorite perfume, book (fiction or poems), fountain pen, metal pencil, subscription to magazine, umbrella, purse, gloves, opera glasses, handkerchiefs, boudoir slippers, vanity case, overnight bag, silk sweater, kodak picture (enlarged and framed), lace collar and cuffs, slipper trees, sewing basket, dainty apron, bar pin, string of novelty beads.

## CHILD'S SWEATER

(For a 2-year-old)

**MATERIAL**—5 balls knitting yarn, 1 pair knitting needles No. 5.

**DIRECTIONS**—*Back*: Cast on 83 stitches; knit 9 ribs; then start block pattern as follows:

First row, knit; second row, knit 3 and purl 1.

Third row, knit; fourth row, knit 3 and purl 1.

Fifth row, knit; sixth row, knit 3 and purl 1.

Seventh row, knit; eighth row, purl every stitch.

Repeat from first to eighth row inclusive for pattern of block throughout sweater. Knit 11 blocks, then cast on 32 stitches on

*The Sweater*

each end of needle for sleeves. Knit on the 147 stitches until there are 4 blocks from where stitches were cast on for sleeves. Knit 65 stitches, bind off 17 stitches for neck, taking off remaining 65 stitches on an extra needle, until one front is completed.

*Front*: Take in a stitch at neck for 2 ribs; on the 63 stitches that remain knit 4 ribs; then add 2 stitches at neck each rib for 5 ribs. When 7 blocks are completed at the hand, bind off 8 stitches at end of needle each rib for 4 ribs; knit 4 ribs; add 1 stitch at underarm for 4 ribs; then knit without widening until front is same length as back. Make other front to correspond; join underarm seams.

Plain knitting, instead of block pattern, may be used on 9 stitches down front edges, making buttonholes in every 12th rib by

knitting 3, binding off 3, knitting 3; on next row coming back knit 3, cast on 3, knit 3.

*Cuff*: Cast on 20 stitches; knit plain for 40 ribs; join and sew on sleeve.

*Collar*: Cast on 20 stitches; knit plain for 60 ribs; sew on neck.

For more explicit directions or any assistance address Miss Lucy E. Sinclair, 605 Central Station, Chicago.

## Not His Job.

I'm not supposed to do that, he said,  
When an extra task he chanced to see.

That's not my job and it's not my care,  
So I'll pass it by and leave it there;  
And the boss who gave him his weekly pay

Lost more than his wages on him that day.

I'm not supposed to do that, he said,  
That duty belongs to Jim or Fred.  
So a little task that was in his way  
That he could have handled without delay

Was left unfilled, and the way was paved  
For a heavy loss that he could have saved.

And the time went on and he kept his place,  
But he never altered his easy pace,  
And folks remarked on how well he knew

The line of work he was hired to do,  
For never once was he known to turn  
His hand to things not for his concern.

But there in his foolish rut he stayed,  
And for all he did he was fairly paid,  
But he never was worth a dollar more

Than he got for his toil when his week was o'er,  
For he knew too well when his work was through

And he'd done all he was hired to do.

If you want to grow in this world,  
young man,

You must do every day all the work  
you can.

If you find a task, though it's not  
your bit,

And it should be done, take care of  
it;

You will never conquer a raise if you  
Do only the things you're supposed to  
do.—SELECTED.

# Economy Scores Knock-Out in 31st Round

## How Waste Went Down in Thrilling Combat in New Orleans Terminal Division Arena

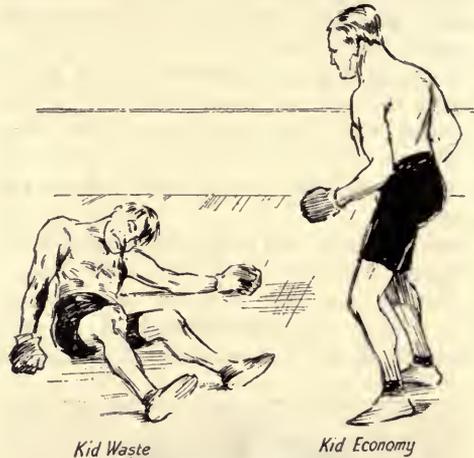

**T**HE most memorable pugilistic encounter of the year wasn't the one staged five months ago at Boyle's Thirty Acres when Jack Dempsey smashed his way into an American victory over the sturdy little French challenger. The New Jersey fight was a street brawl as compared with the grueling thirty-one round bout which Kid Economy and Kid Waste fought during October in the arena of the New Orleans Terminal Division. The bout began at one minute after midnight on the 1st of October and came to an end at midnight of the 31st.

The first twenty-one rounds were indecisive. The fortunes of battle veered first to the challenger and then to the defender. But after the twenty-first Kid Waste visibly weakened and Economy waded into the fight with lightning blows that sent the defender of the title to his knees time and again while the loyal supporters of Kid Economy fairly raised the roof with their shouted acclaims of their protege. The knockout blow came in the closing seconds of the fight. When Kid Waste was counted out by Trainmaster Charlie Beven, the referee, the division went wild with joy.

### What the Fighters Weighed

It was a part of the October coal-saving drive. The New Orleans Terminal was just one of the seventeen operating divisions which participated in the campaign for a conservation of coal during October, but it devised what is probably the most unusual method of getting publicity on the big event. On the New Orleans Terminal Division the campaign became the big fight for the title between Kid Economy and Kid Waste. Economy was the challenger for the title. The challenger weighed in at 110, which was the goal set to be reached in the average pounds of coal consumed per switch engine mile, and the defender, Kid Waste, weighed in at 122, which was one pound less than the September average.

The New Orleans Terminal Division not only has coal savers but has sport writers, as well. The big fight was covered by daily ringside bulletins on the progress of the fight, written in an unusually interesting style.

*The Knock-Out*

Every few days the bulletins were illustrated with sketches of the fight made from the ringside.

The first bulletin appeared September 30. "The gladiators, after a month of strenuous preparation, are fit for their return fight," the bulletin read.

"Kid Economy, the challenger, is of slight build but as lithe as physical training can possibly make a fighter. In a statement to the press late today he makes it known that he will strive from the outset of this battle to make it a victory.

"Kid Waste, a fighter of the rugged type, is just as confident that he will retain the championship. In his statement to the press he merely states that he rules supreme and will continue to do so."

### Betting Swayed by Sentiment

"The betting," the bulletin declared, "is being controlled more or less by sentiment. Kid Economy is being backed by the entire populace of the New Orleans Terminal Division, who have drawn up a resolution which will be handed to their pride just after he enters the ring in which they express their eagerness for him to emerge from the fray as victor and their champion."

Here are parts of the first ringside bulletin:

"New Orleans, October 1, 12:01 a. m.—Among the ringside devotees were fans who have attended such celebrated contests as the victory of Kid Safety over Kid Accident, Be Careful over Kid Exception and the memorable battle in which Kid Waste emerged victor over Kid Economy after a grueling fight of thirty rounds (the September coal-saving drive), the victor not being determined until the last minutes of the fight.

"Kid Economy was the first to enter the ring, accompanied by his manager and chief second, Jimmie Chapman. The plaudits as he jumped over the ropes were deafening. It was plainly seen that he was the popular favorite.

"Kid Waste, as he has in the past, entered the ring in that boastful and arrogant way which only he can assume, scorning the aid of anyone.

#### Some Messages of Encouragement

"Shortly afterward Announcer 'Monk' Mora introduced the third man in the ring, Charlie Beven, who immediately called both fighters to the center of the ring and gave them their final instructions, cautioning both fighters that nothing but clean fighting would be tolerated.

"Messages of encouragement from Albert Clift, John Porterfield and John Egan were received by Kid Economy just before he entered the ring in which they expressed their eagerness to see him emerge from the fray as victor."

And then followed some predictions on the fight by the followers of the sport. Here are samples:

"Jeff Harrell, peer of all trainers, who has trained Kid Economy for this fight:

"No doubt as to the outcome. I have left nothing undone to fit the challenger for a winning battle. Kid Economy is in the pink, and if condition counts for anything the battle is already won."

"Bill Lange, Kid Economy's lifelong friend, who has seconded him in all his battles:

"The Kid is primed for a winning fight. The only question in my mind is how long Kid Waste will last."

"Johnny Marshall, one of Kid Economy's most ardent supporters:

"If pulling for Kid Economy will make him victor he has already won."

#### Support From the "Tallow Pots"

"Frank Tornabene, who supported Kid

Economy loyally during his September fight for the championship:

"Nothing to it but Kid Economy. The "tallow pots" are backing him to a man."

Then followed some opinions from Kid Waste's camp. Joe Gloom and Johnny Pessimist were quoted, Gloom declaring that "Kid Economy can't win; Waste is too strong," and Pessimist that "Kid Economy chewed off more than he can swallow."

Then came the daily ringside flashes. The opening round went to Kid Economy and likewise the second. But the third was even, and Waste won the fourth, fifth, sixth, seventh and eighth. And thus the battle raged. At the end of the report of each round appeared the figures showing the number of pounds of coal consumed per switch engine mile to date, the variation in the figure being the signal for the decision of the sport writers. Just as an indication of how the battle waged—and how it was reported—the following are some of the ringside daily flashes which came from division headquarters:

#### First Goes to Economy

FIRST ROUND—The bell clanged, and the fight was on. Following the advice of his chief adviser, Bob Lacey, Kid Economy, the challenger, danced around the champion, left-jabbing him at will. The skill of the challenger stood him in good stead as the champion lunged with all his weight to get into close quarters, swinging an overhand right that meant doom if it landed. They clinched. Referee cautioned both fighters about the use of the kidney blow. In breaking from the clinch the great little man caught the champion with a terrific right flush to the chin. Kid Waste looked to be badly shaken up as the bell clanged. Economy's round, 122.

SECOND ROUND—As they came out of their corners for the second round, Kid Economy landed a hard right to the champion's jaw. Waste, evidently not yet over the effects of the beating he received in the opening round, sagged to his knees. Jimmie Chapman, Kid Economy's manager and chief second, immediately assumed the "smile that won't come off," and the supporters of the champion looked gloomy. Kid Waste, however, went into a clinch, and his wonderful recuperative powers enabled him to weather the storm. Waste blocked two left jabs and landed a hard right in return. Kid Economy danced around the ring, closely followed by Waste. They were mixing it in a neutral corner when the bell rang. Economy's round, 116.

Note—It was reported that Charlie Havers, acting as commissioner for Kid Economy's backers from Harahan, placed a bet of \$1,000 at odds of 8 to 5 that the championship would change hands.

#### Third Round an Even One

THIRD ROUND—The round started tamely. Kid Economy, showing the results of superior training and handling, cleverly out-boxed Kid Waste. Waste, urged on by his supporters, rushed the challenger to the ropes and sent several hard rights to the body. Kid Economy sent two lefts to the head in rapid succession, and took a right hook to the jaw. Waste took many blows in an effort to land the finishing punch, but Economy was too clever. As the bell rang, they were fighting hard with Waste having a little the better of it. Even round, 118.

Note—Box A, front row, was occupied by

"Marcel-Wave" Wright, "Sisal-Haired" Nodier, "Boo-Boo" Phillips, "Schultz" Schneider, "El Capitan" Sheehan and "Gob" Johnson, all loyal supporters of Kid Economy. Their cheering and encouragement aided Kid Economy in evening the round.

**FOURTH ROUND**—Sprnging from his corner at the clang of the bell, with the grim determination of ending the fight, Waste showered Kid Economy with a volley of lefts and rights. Economy, taken by surprise, tried to fight back, but the suddenness of the attack drove him to the ropes. Waste landed a hard left to the stomach, and, as Economy dropped his guard, crossed his right to the jaw. Ringside spectators hissed Waste for what they believed was a low blow. Economy fell into a clinch to save himself from further punishment. Waste, taking advantage of his superior strength, roughed Economy around the ring. Referee Beven had just stepped in to separate the fighters when the bell rang, ending the round. Waste's round, 122.

Note—It required the combined efforts of Captain Royan, and Boxing Commissioners John Rogan, Pete Mumford and Henry Moore to quiet a disturbance in Box C, occupied by "Flounder-Foot" Tallon, "Pee-Wee" Stengel, "Big-Six" Ernst, "Smiling Gus" Schilling, "Stand-Pat" Steitz and "Flat-Wheel" Ernst, all supporters of Kid Economy, who were loud in their criticism of the foul tactics used by Kid Waste.

#### Waste Takes Sixth Round

**SIXTH ROUND**—Slouching from his corner, Waste waited in the center of the ring for Economy to lead. Economy led, landing a light left to the stomach, and crossing his right to the jaw. Waste seemed to awaken to the fact that he was fighting a losing battle, and rushed Economy to the ropes, beating a tattoo on his body. Economy landed two left jabs, but seemed to feel the effect of the heavy body punishment he was receiving, and his blows lacked steam. Waste took everything Economy could give and continued his attack on the challenger's body. They clinched. In breaking from the clinch, Waste caught Economy with a hard right, flush on the jaw, which easily entitled him to the round. Waste's round, 127.

Note—Between the fifth and sixth rounds, a procession, led by "Big Boy" McDonald, "Brother" Hoyt, "Lead" Connelly, "O. K." Powers, "Tubby" Marshall, "Gentleman Leon" Duke, "Happy" Holligna, "Peller Club" Jonveaux, "Jitney" Joyner, "Chuck" Gouteriez, "Rocks" Oeschger, "Will You" Hoffstetter, "Slim" Beckman and "Sweetheart" Wulffe, paraded about the arena led by the jazziest jazz band ever heard, proclaiming in loud tones that they were with Economy and were willing to bet their money that he would be crowned champion.

**TWENTIETH ROUND**—What a round! Waste would not permit his man to remain idle for a moment, rushing and slam-basting his way. He was met, however, by a boxer as determined as he, and his rushes were brought to a sudden halt by well-directed blows. In breaking from a clinch Waste heeled his man—splitting Economy's lip. As though infuriated at Waste's foul tactics, Economy threw caution to the winds and set sail for his man, landing blow after blow with telling effect. Only a fighting machine like Waste could withstand the blows that landed during this set-to. Waste was severely punishing Economy's stomach as the bell rang. Even round, 126.

#### Economy Scores a Knock-Out

**THIRTY-FIRST ROUND**—The bell rang for the 31st. Economy jumped eagerly from his corner. Waste's handlers had been working valiantly on their man during the one minute rest, massaging his legs and stopping the flow of blood from his several cuts. He seemed greatly refreshed—in fact looks to be in better shape than at any time since the 20th round. They shook hands in the center of the ring. In spite of the beating Waste had received in the previous rounds, he still looked confident and even the most ardent supporters of Economy could not but admire his spirit. He immediately set sail for Economy in typical Waste

fashion—head down, both arms flying, regardless of blows landed by Economy, hoping only to land a haymaker. With a less experienced or poorly trained fighter, Waste's final rally might have been successful, but he was up against what was probably the best conditioned and smartest fighting machine that ever entered the ring. Instead of losing his head, as victory appeared his, and swapping punches with the still dangerous Waste, Economy avoided the rush of his opponent, and landed a stinging right just in front of the ear, which brought Waste up short. Taking full advantage of his chance, Economy leaped in, fast as lightning, and landed a terrific punch to the chin. Waste went down like a log. At the count of five, he attempted to draw his legs up under his body in a vain effort to regain his feet, but the effort was too much for his fast waning strength and he rolled over on his back, remaining in that position until the fatal ten had been counted by Referee Beven and a new champion crowned.

Despite the efforts of Captain Royan and the police, Economy's supporters rushed into the ring, breaking down the posts and destroying the ropes in their eagerness to get to the champion. Quickly they hoisted Economy to their shoulders, and, wildly cheering, carried him to his dressing room.

Only a few spectators remained in the vast arena to watch Waste. Tired and badly beaten, he leaned back on his stool as his handlers removed his sodden gloves. Wearily he rose to his feet and walked slowly across the ring. He was helped through the ropes and dragged himself wearily to his quarters, not even deigning to cast a look back on the ring he had entered a few hours before a champion, the admired of all, proud of his title and confident he would retain it; and was now leaving—a beaten man—with none to admire and few to pity.—115.

## REAL ECONOMY

D. Crutchfield

Here is a picture of D. Crutchfield, oiler at the passenger station, Fulton, Ky., who has a wonderful record for taking care of his tools, which he holds to be of much importance to the company. He has been in the service of the company since September, 1911, and still has the same lantern issued him when he began working. He has had only two globes,

the first of which was broken by another employe to whom he lent his lantern. The oil can which he holds in his hand has been in the service for the past eight years, and he says both will last him a long while yet, and might possibly survive him.

# Freight's Faithful Chaperon—The Waybill

## Document Is Sorely Needed to Guide Shipments Through Intricacies of the Terminals

By C. G. RICHMOND,  
Superintendent, Stations and Transfers

THE accompanying cartoon, drawn by Mr. Wolfard of the Baltimore & Ohio Railroad and reproduced here by permission of that line, illustrates in an effective manner the importance of keeping the waybills with the freight.

This applies to carload as well as "Elsie L" freight for the reason that a car cannot travel far without a waybill, and, if it does, delivery cannot be arranged without billing. The delay and annoyance to consignee, due to this neglect alone, are not inconsiderable.

The waybill is the only document which can satisfactorily guide a car or a package through the intricacies of our large freight terminals; it is the only means which assures the proper movement of a car or shipment via route and junctions designated by the shipper.

### Waybill Has Importance

The waybill is of great importance to the accounting department, as the collection of revenue and the apportionment of it between carriers is based entirely on the waybill and the information thereon.

The loss of a waybill, in addition to causing delay to and probable loss of a shipment, also causes considerable inconvenience to the accounting department. In such cases, a copy of the lost waybill must be secured and handled through the account at the destination station. The negligent handling of waybills, therefore, results in delay, needless work and dissatisfied patrons.

An LCL shipment checking over without billing is commonly known as "astray" freight, and we learn from sad and costly experience that many shipments forwarded on "over" or "astray" billing never reach their destinations.

### Good Practices Recommended

The following practices are recommended to all employes having to do with the handling of waybills to insure having bills with cars and freight at all times.

1. Receiving clerks should see that all freight received is shown on the bill of lading;

that it is directed to the proper car, and that shipping tickets, showing the cars into which shipments have been loaded, are promptly sent to the billing department.

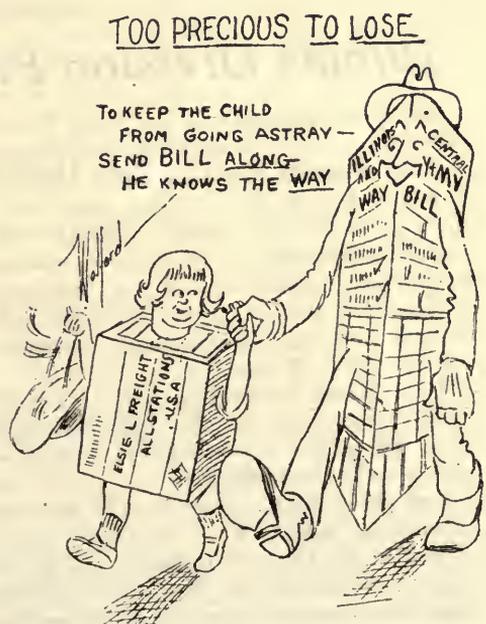

2. Warehouse foremen should see that freight is loaded into the proper car; that shipping tickets, covering any freight remaining on the floor of the house at the close of the day, are held until the freight has been loaded.

3. Bill clerks should see that shipments are billed in the car into which they have been loaded; that all items appearing on shipping tickets are transcribed to waybills, and that consignee and description of articles are correctly and fully shown.

### How Conductors Can Help

4. Agents and chief clerks should see that waybills for each car are correctly pouched, making frequent tests so determine if pouching is being properly handled.

5. Local freight train conductors handling way cars should see that waybills do not be-

Good Company

come lost or misplaced while in their possession.

6. Local freight train conductors should see that freight loaded at non-agency stations is billed at the first agency station and that waybills are received to cover freight loaded at agency stations.

7. Conductors should telegraph the chief dispatcher and the trainmaster immediately after discovery of any cars in their trains for which waybills have not been furnished.

8. Trainmasters, yardmasters and chief yard clerks should inspect bill racks and make a frequent check of bills with daily yard checks, to determine if any cars are in the yard without waybills and if any waybills are in the racks for which cars are not in the yard.

9. Yard clerks in outbound train yards should see that conductors are furnished waybills for all cars in their trains.

#### How Company Will Benefit

A strict compliance with the requirements above will result in benefits to the Illinois Central in the following manner:

1. Prevention of causes for freight claims and the expense incident thereto.

2. Saving effected in freight car equipment through the utilization of car days otherwise lost while "no bill" cars remain on hold tracks.

3. Saving in yard operating expense involved in the switching of "no bill" cars to and from hold tracks.

4. Elimination of causes for considerable annoyance to shippers and consignees and the retaining of traffic which might otherwise be routed via other lines.

#### Great Improvement Noted

During October, 1921, on the entire system, 70 cars were delayed 143 days on account of mishandling of waybills and waybill errors, compared with 213 cars delayed 970 days during October, 1920, a decrease of 143 cars, or 67.1 per cent, and a decrease of 827 car days, or 85.2 per cent. The average days of detention also decreased from 4.52 days in October, 1920, to 2.04 days in October, 1921, or 2.48 days.

On the entire system, during October, 1921, there were 1,011 LCL shipments arriving at destinations without billing, compared with 2,828 in October, 1920, a decrease of 1,817, or 64.2 per cent.

This showing is gratifying and reflects much credit on all employes concerned. It is hoped that the knowledge of what has already been accomplished will stimulate employes to put forth a special effort to make the Illinois Central System 100 per cent in this particular.

## Illinois Division Passes Own Inspection

During the first week of November Superintendent J. W. Hevron of the Illinois division, together with his entire division staff and several agents, track supervisors and section foremen, using a special train, visited each station on the division, making a thorough inspection of all buildings, agencies and tracks. It was the opinion of all that it was one of the most successful and profitable of trips.

The various committees had been previously organized, so that upon reaching each station the inspection was completed within a very few minutes.

Committee No. 1, consisting of H. Kabbes, supervising agent, J. T. Stanford, trainmaster, C. W. Davis, trainmaster, and W. G. Tiley, chief dispatcher, reported on general appearance and cleanliness of office, waiting room and wareroom.

Committee No. 2, consisting of H. B. Finnegan, agent, Gibson City, W. H. Bash, agent, Effingham, J. H. Sage, route agent, American Express, Kankakee, and J. G. Hill, traveling agent, American Express, Mattoon, reported on tariffs, station accounts and express accounts.

Committee No. 3, consisting of C. W. McKnight, agent, Paxton, and R. G. Miller, chief clerk to superintendent, Champaign, reported on condition of station supplies, station records and flagging equipment.

Committee No. 4, consisting of J. M. Purtil, agent, Kankakee, and A. P. Gorman, agent, Champaign, reported on loss and damage to both freight and express.

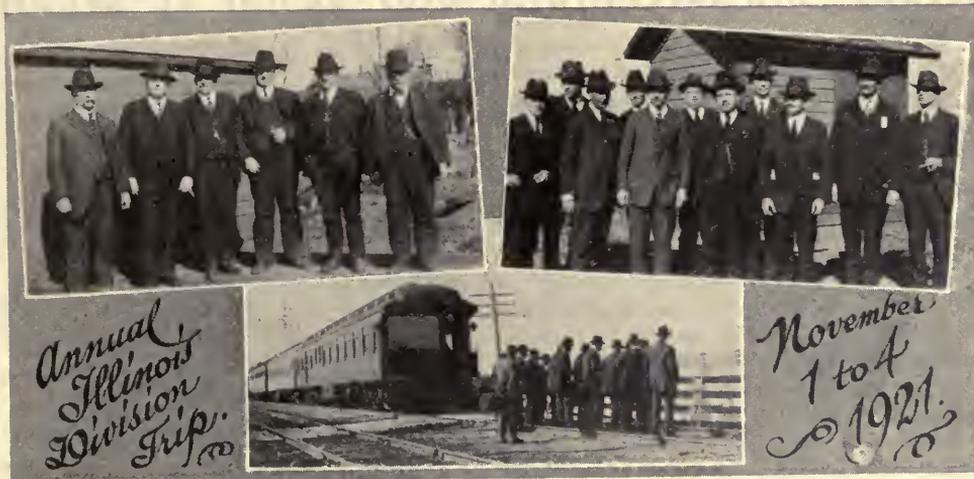

Committee No. 5, consisting of C. R. Walters, car distributor, Champaign, G. W. Stafford, traveling freight agent, Kankakee,

and W. G. Tiley, chief dispatcher, Champaign, reported on inspection of station records and the handling of car service car reports and interchange.

Similar committees under the direction of Roadmaster J. L. Downs were assigned individual items for inspection, such as line and surface, spiking and spacing of ties, buildings and policing, ditches, banking and ballast, switches and sidings, etc.

Each agent and section foreman was graded by the committee, and so far as the station agencies are concerned, a general division average of 99.1 per cent was obtained, indicating an extremely healthy condition of affairs at every station on the division.

Herewith appear photographs taken by the "official photographer," S. C. Hofmann, supervisor of signals.

The Illinois division annual inspection trip. In the smaller group to the left, reading from left to right, are: T. Carey, road supervisor, Effingham; T. Connerton, road supervisor, Cabery; G. W. Shrider, road supervisor, Champaign; E. R. Fitzgerald, road supervisor, Gilman; T. Brosnahan, road supervisor, Mattoon; J. Gallagher, road supervisor, Kankakee.

In the group at the right, reading from left to right, are: R. G. Miller, chief clerk to superintendent, Champaign; A. P. Gorman, agent, Champaign; W. H. Bash, agent, Effingham; W. G. Tiley, chief dispatcher, Champaign; C. R. Walters, car distributor, Champaign; H. H. Weatherford, dispatcher, Champaign; H. Kabbes, supervising agent, Champaign; C. W. McKnight, agent, Paxton; H. B. Finnegan, agent, Gibson City; J. M. Purtill, agent, Kankakee; J. H. Sage, route agent, American Express, Kankakee.

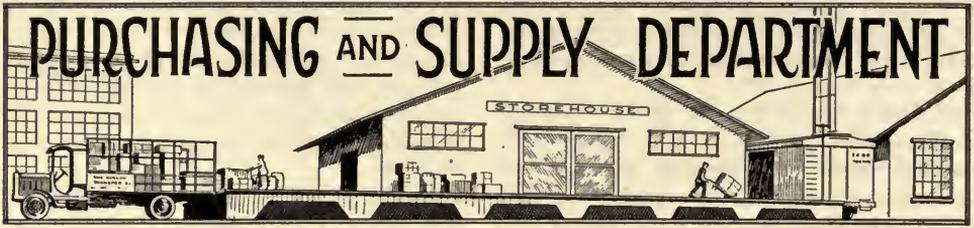

## Our Monthly Roll of Honor

Below is a list of employes retired at the meeting of the Board of Pensions, October 28:

Name	Occupation	Years of Service	Date of Retirement
Henry Coppedge (Col.)	Blacksmith, Covington, Tenn.	21	5/31/21
Martin J. McCarthy	Watchman, Chief Special Agent's Dept.	17	6/30/21
Fred T. Saberton	Clerk, Auditor of Passenger Receipts Dept.	26	6/30/21
Samuel McNeil	Section Laborer, Clinton, Ill.	35	7/31/21
Louis Blum	Engineman, Chicago Terminal	36	8/31/21
Albert W. Burbank	Train Baggage man, St. Louis Division	38	9/30/21
Frederick Findlay	Engineman, St. Louis Division	15	9/30/21

The following deaths of pensioners were reported at the same meeting:

Name	Last Employment	Date of Death	Term as Pensioner
George F. Fraser	Clerk, Burnside Storehouse	9/28/21	2 months
Martin Naylor	Section Laborer, Wisconsin Division	10/13/21	16 years
Hans C. Jorgensen	Mason, Chicago Terminal	10/12/21	8 years
William Hennegan	Section Foreman, Minnesota Division	10/13/21	18 years
John Kief	Tinsmith, Burnside Shops	10/20/21	12 years

## Good Stock-Keeping and What It Means

By J. R. STOKES,

Stockkeeper, Memphis, Tenn.

**T**HE average user of material apparently gives little thought to the amount of care and supervision devoted to maintaining a stock flexible enough to meet the requirements of the various departments at the time needed. When one stops to consider that about 35 per cent of the gross earnings of the railroads is used to purchase materials and supplies, it can readily be understood that systematic ordering is necessary to meet the other expenses and insure a reasonable return on the investment.

It has been estimated that the number of various items carried in stock ranges from 35,000 to 50,000. These items are composed of materials for locomotives, cars, tracks, buildings, bridges, water works, electrical work, signals, telephones, telegraphs and other departments of railway activity.

For illustration, a locomotive is composed of approximately 5,200 parts and a freight car of about 500. As progress carries the railroads forward to meet the demands of the public, motive power and other standards are likewise improved, increasing the units of material to be carried on hand. From this it can be seen that a permanent record is the only way to keep the supply work organized.

### Items Are Stored in Order

First of all, the material must be uniformly and neatly stored according to its peculiar nature and with regard to the effect that weather conditions will have upon it. Each item is stored separately, according to stock section and in the order in which it appears in the stockbooks. Expensive items and other items of delicate construction are housed, while larger units, such as rough lumber, castings, wheels, axles and tires, are usually stored on platforms or proper bearings.

Small items are placed in bins constructed to conform with the size and quantity carried. The material in these bins is stacked from left to right in rows, giving the storehouse a uniform appearance.

Lumber, for example, is placed on ramps, high enough from the ground to prevent deterioration, and stacked as wide and high as practicable, stripping it uniformly according to size and giving it the proper ventilation and slope for drainage.

This attention to detail insures accuracy and greater speed in taking monthly inventories.

### Checks Are Made Regularly

A consistent check is made possible by the stockbook adopted by the American Railway Association (Division 6, Purchases and Stores) commonly used on railroads. This book covers one year and is so arranged as to show the amount on hand, due from previous requisitions, transfers to other stores, ordered, requisition number and receipts each month, separately.

The stockkeeper makes a check every thirty days at a set time. With the foregoing information, he is in a position to know the average consumption for thirty days or, for that matter, for any period. The material on line of road for renewals, additions and betterments and ordinary repairs to roadway maintenance is checked by a "line stock checker" according to districts and divisions, using a book similar to the stock record. This is done periodically or as often as necessary. Such stocks are not excessive, being governed entirely by the amount of work in progress, with the exception of emergency stocks representing material shipped out for current use.

### When Extra Supplies Are Needed

In the event special work is anticipated, officers of the various departments are in a position to know the requirements far enough in

advance to allow a reasonable length of time for delivery of the material to carry on the work, thus avoiding delays and unnecessary expense. With this information and familiarity with average requirements of staples and with prompt deliveries of various commodities from the manufacturers, the problem of having the material on hand at the time needed can be satisfactorily arranged.

The definition of good stockkeeping is to carry on hand at all times a stock of material and supplies to meet adequately the demands of a railroad, preventing waste and deterioration and at the same time avoiding over-stocking. This surplus is equivalent to money invested which is not bringing a return on the investment.

By following the practices previously mentioned and conducting your relations with the various departments or consumers in a manner that will bring about the closest co-operation, you should find no difficulty in keeping the stock carried at a minimum.

### Things We Should Or Should Not Do

Let everyone help to keep cars moving.

Why load a grain car when a rough freight car will do just as well?

Keep your premises clean; this will help.

Why use electric lights when they are not needed?

Do not stop saving fuel.

Get your articles in early for publication in the *Illinois Central Magazine*. They are needed and appreciated.

Do not run motor cars over road crossings to see how fast they can go. You might hit something.

Why run for a train and take a chance?

Keep refrigerator doors closed; when switching or moving cars, it is dangerous to leave doors open.

Don't throw matches in waste baskets. They may not be entirely extinguished.

Why try to beat a moving train across road crossings? You may slip and fall.

Have you examined your stoves and pipe to know they are O. K.?

Why not pile up material? It looks better and lasts longer.

If you want to smoke, go into the smoker; don't try to smoke on platforms and in cars not assigned for this purpose.

Read the *Illinois Central Magazine*. It will do you no harm but a lot of good.

## COMMUNICATIONS

This magazine is not responsible for opinions printed under this heading. Initials or pen names will be permitted only when correct name and address of the writer are known to the editor.

### The Humanitarian

TO THE EDITOR: The article which appeared in the November *Illinois Central Magazine* written by Judge Robert S. Lovett, in reference to the amounts due the United States by our European allies, was a masterful exposition of a code of ethics beyond the measure of universal conception. In his appeal Judge Lovett openly convicts as opposed to the tradition of "American generosity and big-heartedness" anything short of making the debt a trust fund to be applied in behalf of humanity.

His expression on the subject clearly defines the duty of the Congress, and charges that body with the obligation of searching deeply for the moral quality which shall identify to Europe for all time the legislative heart of America. He expresses no distrust in the ability of the present administration to act wisely under its present responsibilities, but with sober warning he suggests the results which would follow present errors.

Judge Lovett has done a great service. The brief but strong appeal for the quality of mercy should permeate traditional Americanism and its effect should be an awakening toward the obligation this rich and powerful nation owes to the remnant of economic and political Europe.—JOSEPH S. TERRY, *Greenville, Miss.*

### Back to the Bible

TO THE EDITOR: Actuated by a sincere desire to help solve our recurrent labor crises and to minimize the friction growing out of the adoption of a bonus system—for I hold its ultimate adoption certain—I venture to offer the following as a possible solution of this exceedingly difficult question. I believe the adoption of this program would increase labor efficiency, eliminate discontent, create a feeling of greater loyalty, and promote morality, which, in its reflex action, will again stimulate and revivify the ranks of industry.

I do not offer a new theory of industrial management nor, to any degree whatever, a radical departure from established custom.

Radicalism is ever contrary to the law of evolution and is a departure from common sense. I do offer, however, a scientific combination of age-old facts, based upon pure reason and clear logic.

Economic conditions are pressing insistently for a solution. Might, as a principle of industrial stimulation, has been weighed and found wanting. Might secures only temporary results; the reaction is always dangerous. It is a worn-out theory about ready to explode, and, truly, I fear the explosion. Industrial labor management needs today a principle of constructive effort based upon the permanent underlying facts governing human activity.

Men who have thought deeply upon the matter tell us that our workaday world is but a replica of the great spiritual universe and that the few simple laws of the spiritual universe are equally operative in our sphere. These laws are the great underlying principles of human endeavor. They are simple in operation and easily applied. Their very simplicity is misleading. In our vanity we frown with disdain upon the miracle of simplicity and look for complex relations, forgetting that complexity adds confusion only. Energy, applied in obedience to fundamental laws, brings permanent results. All leaders of great movements have declared that their success was due to moving with the current of some fundamental law. One of the few simple facts motivating human endeavor since the beginning of creation is the intuitive sense of religious service. This sense finds concrete expression in rules of right conduct. This right conduct, or relation of human beings the one to the other, can be given no other name than service. Service is the keynote of Christianity. It is this keynote that I propose to use as the basis of a theory of industrial management.

I would not commercialize religion, but I would elevate service to the dignity of the true religion. I would give service a new setting, a different perspective, by giving it a moral turn. At the same time I would utilize the innate faculty of religious sense in a practical manner. If this faculty is a deep underlying fact, the motive of a large part of human activity, why not study it scientifically, and use it in every-day life? What is the sense of permitting such a vast store of energy to go unheeded? Religious service should be made to mean industrial service. "Thou shalt love

thy neighbor" was meant to be a rule of action in every-day conduct.

The average employe has learned to reverence the Bible as the highest expression of religious ideals. Even were the religious sense not innate, he could easily be reached in this direction. However, early religious training will aid in the development of a force of almost infinite capacity, once it is put into practical operation. By giving a practical interpretation to Scriptural texts I propose to reach the motor centers through lines of least resistance. By means of lectures, posters, stickers and other avenues which a resourceful man could devise, well-known passages can be turned to practical account.

A system of management operating in harmony with inbred religious beliefs will meet with little or no opposition from the workers.

The following are only a few examples. The number can be increased to an almost unlimited extent:

#### Service

"No man can serve two masters" (Matt. 6:24).

Interpretation—No man ought to belong to an organization that divides his allegiance.

#### Remuneration

"The laborer is worthy of his hire" (Luke 10:7).

Interpretation—Each man will be paid according to what he is worth. The bonus system affords the fairest means of remuneration.

"Whatsoever a man soweth that shall he also reap" (Gal. 6:7).

Interpretation—Good work and loyal service will be paid for in proportion to effort.

#### Promotion

"To him that overcometh I will give power" (Rev. 2:26).

Interpretation—Promotion comes to efficient individual effort.

"Work out your own salvation" (Phil. 2:12).

Interpretation—Individual effort plainly stated. "He that overcometh shall eat of the tree of life" (Rev. 2:27).

Interpretation—Individual effort, not collective bargaining, will be rewarded.

"Not every one that sayeth Lord, Lord, shall enter" (Matt. 7:21).

Interpretation—Only those that serve shall receive a full pay envelope.

Such a plan will necessitate the formation of a new department, that of industrial relations. This department may be made to assume original shape, but the plan adopted by the Pennsylvania System has many good points, and, since we are offering somewhat of an innovation, had, perhaps, better be adopted; too many new ideas may be looked upon with disfavor. I would especially recommend the Pennsylvania's plan, or a form of it modified to include the idea of service as above outlined, because it contains the idea of representation so essential to our main purpose of individual development. It should at least be

elastic enough to meet the exigencies of the situation.

Apropos the matter of individual development, the following drama recently came under my observation:

A young man employed by a large industrial concern was promoted to a subordinate position of which he was very proud. He set about thoroughly to acquaint himself with his new position and, if possible, to make his services more valuable to his employer. It was not long until he found his movements blocked. Being gifted with an acute mind, he was able to detect a subtle, yet powerful, opposition. He was being suppressed by blind and unreasoning envy. Finding his path so effectively blocked, he eased up on his efforts, in order to avert an open break, and, to prevent stagnation, he took up the art of painting in his spare hours. He soon gave promise of superior talent and decided to devote all his energy to his new work. Eventually his organization will lose a man who, but for the policy

of suppression practiced, might have become a master of industry. A merit system applicable to officials would have prevented this diversion of energy.

I admit these suggestions may appear visionary, but a great man, the leader of a nation, once said: "Without a vision the people perish." I am supplying that vision. I am supplying the true incentive to sustained effort and at the same time providing the means of individual development. Tracing individual efforts to the pay envelope will provide elementary lessons in reasoning. When a man begins to think, his true worth begins; no longer does he need a taskmaster; he is now looking for an opportunity for greater service. With science aiding industry, we shall move, barring incidental disturbances, to the goal of true success. The principles advanced will, if adopted, prove to be revivifying; if rejected, our future labor policies will be bound up in subdued opposition and smoldering hatred.—E. H. PETERS, *Paducah, Ky.*

## New Plan Is Used in Filing Embargoes

After careful study of the various methods of compiling embargoes for the guidance of those receiving freight from shippers and connections, J. F. Porterfield, general superintendent of transportation, decided to improve our system by issuing a separate page for each railroad, filed alphabetically in a durable loose-leaf binder. During the first week in November there was forwarded to each superintendent, each agent and each other person concerned one of these binders containing a complete set of embargoes then in effect. Each set consisted of one hundred and forty pages.

Each carrier has been assigned a number. Whenever a change is made in any embargo, a revised page is issued, and it is the duty of all concerned to place that page in proper order in the binder and remove the canceled or superseded page.

While it involved considerable expense to start this plan and will mean a great amount of work for the freight transportation department to issue separate pages for each carrier, the change will eliminate the necessity of cutting up sheets and pasting the effective embargo over the canceled or superseded embargo by agents, yard forces and others.

Frequently in the past, when restrictions

were in effect, shipments were unknowingly accepted from shippers and connecting lines in violation of embargoes, resulting in delayed freight and unnecessary car hire expense.

It is the hope of the management that, with this system in effect, the acceptance of freight in violation of embargoes will be eliminated, thereby avoiding extra switching, per diem expense, etc., and, most of all, dissatisfaction to patrons on account of delayed freight.

From the favorable comments received from many of our agents, it is evident that the new plan is an improvement.

### ABOUT WATCHES

The rim of the balance wheel in your watch travels about ten miles a day, and some 2,400 operations were required to make it. Also your watch has about 175 separate pieces, and some of the screws are so small that you wouldn't know they were there until the repair man charged you for putting one in. An ordinary thimble will hold about 50,000 of these screws, and the hair springs are so fine that they sell them at a rate of \$84,000 a pound.

# Average of 187 Leads One Bowling League

## First Round of 63rd Street Organization Ends—Notes of the General Offices' Competition

The 63rd Street General Office Bowling League at Chicago completed its first round November 16 with the Seminole Limited (Heimsath) and New Orleans Special (Hengels) tied for first place, each having won sixteen and lost five games.

This league was organized in 1920 with six teams. The previous season ended April 15, 1921. The pennant was won by the team of the Auditor of Passenger Receipts in the last two weeks of the season.

This year the response to the call for bowlers was so great that the league could have organized twelve teams, but because of limited alley space only eight teams could be accommodated. The following officers were selected: President, Frank Pierce; secretary, Lee Calloway; treasurer, Lou Heimsath. Rules were

adopted, and the league started on its way October 5, 1921.

The Seminole Limited, New Orleans Special, Diamond Special and Panama Limited, led by Lou Heimsath, Tom Hengels, Tom McKenna and Lee Calloway, respectively, began to assert their class, and at present only two games separate the first and fourth place teams.

The Daylight Special, led by Goodell, is coming along strongly, and by the time the next round is completed may be up with the leaders. In the last two weeks they have taken the odd games from both the Diamond Special and the Panama Limited.

The New Orleans Limited and the Freeport Peddler are tied for sixth place, with the Gilman Local trailing. The standing of the teams November 16, with a list of the twenty high bowlers, is given below:

	<i>Won</i>	<i>Lost</i>	<i>Pct.</i>	<i>Average</i>	<i>High Game</i>	<i>High Series</i>
Seminole Ltd. ....	16	5	761	858	966	2,610
New Orleans Special.....	16	5	761	855	936	2,673
Diamond Special .....	14	7	667	825	947	2,721
Panama Ltd. ....	14	7	667	806	926	2,640
Daylight Special .....	11	10	524	810	955	2,508
New Orleans Ltd. ....	6	15	285	745	837	2,379
Freeport Peddler .....	6	15	285	736	826	2,311
Gilman Local .....	1	20	047	660	763	2,187

	<i>Games</i>	<i>Total Pins</i>	<i>Average</i>	<i>High Game</i>	<i>High Series</i>
1. Hengels .....	15	2,818	187	224	607
2. Beusse .....	18	3,321	184	245	608
3. Pierce .....	21	3,867	184	237	594

20. Goodell .....	21	3,465	165	224	578

## WITH THE BOWLERS

By WALTER E. DuBOIS

Bernback, with an average of 190, is keeping the Engineer, Maintenance of Way, team in first place in the 12th Street General Office Bowling League at Chicago. Rolff, with an average of 168, is the only other bowler on that team above 160. Bernback's 269 is high game for the league so far, and his 631 is also high for high series. The boys complain that alleys 1 and 2 are hard to play on, but Bernback got eight straight strikes on those two alleys.

The Land and Tax Department has the best balanced team in the league, four of the players being over the 160 mark, led by Captain Enright, with an average of 179. Riley is right behind him, with an average of 173. Tittle's 161 is good for one more pin than Brown has. If that team does not finish in first place, the team that does will know it has been in a real battle.

The Auditor of Miscellaneous Accounts' team has no stars like those of the two leaders, but Krubeck and Carney, with 163 and 161, are closely followed by the rest of the team, and that keeps the team in third place.

Cote, of Mr. Blauvelt's office, is always able to average around 170, with Collier ten pins below. They are keeping their teams on a par with the Auditor of Miscellaneous Accounts' team, and the great rivalry between the two teams keeps the interest at fever heat.

Captain Knodell of the General Superintendent of Transportation's team is the class of that team, with an average of 177, and if he could corner another bowler who could average 160, his team would be higher in the race than it is. It takes more than one man to keep a team at the top.

The Auditor of Disbursements' team, in sixth place, is led by Hurlbut, with an average of 165. That office has ten would-be bowlers, and next year the team will be in the thick of the battle. It takes more than one season to develop a 160 bowler.

The Chicago Terminal Improvement team, led by Captain Block, with an average of 173, is only one game behind the team from the Auditor of Disbursements.

The General Freight team has been slipping for some time and will have to brace up. The team has good bowlers in Rozene and

Koch, with averages of 169 and 166, but the regular team does not always show up, and that results in loss of games.

Captain Stone, with an average of 168, is doing his best to make a winner out of the B. & B. team. If he can dig up another good bowler, look out for that team.

Ullrich and Ryan are doing the best work for the General Manager's team. Ryan has been about 160 since the season opened, but slipped badly the night they met the Officers. Captain Ullrich, one of the best liked bowlers, has a smile in spite of the fact his team usually gets trimmed.

The Purchasing Department team lost twelve straight games before tasting the sweets of victory. Larsen, with an average of 171, does the heavy work for that office. Grace, of the Chief Special Agent's office, is now playing with the Purchasing Department, and as a result there has been a big improvement in the team's bowling.

We now come to the team in last place, the Officers. We all like a winner; as Manager McComb has had anything but a winner, he has a hard job each week scraping a team together. There are some good bowlers among the officials, but they are out of town a great deal, and the work falls on the genial McComb. His team lost eighteen straight games, then had a little pep shot into it in the form of rooting and trimmed the General Manager's team two out of three. Now Mac goes around with the "smile that won't come off."

We bowl Friday nights at 6320 Dorchester avenue. Come out and root for your team. Reserved seats for the women.

*State Capitol, Baton Rouge, La.*

# Our Bouquets Outnumber the Brickbats

## How Employes Gave Constructive Criticisms and Suggestions for the Illinois Central Magazine

**I**N an effort to determine in what respect the *Illinois Central Magazine* is appealing to its readers we have recently sent a questionnaire to representative employes of the Illinois Central System—a selected group on each operating division—asking their opinions and suggestions on the contents, distribution, size and make-up of the magazine. The returns have been coming in for several weeks, and the magazine staff now feels it has a good idea of the opinions of its average reader.

The diversity of the views expressed on some of the questions warns us that our decisions will not be received alike by those who have been so kind as to lend us their counsel. For example, several of those who have replied thus far to the questionnaire have urged us to go in more for fiction, and about the same number have told us that fiction is the least desirable feature we have in the magazine! If we open the windows for one group it is plain we shall have to ignore, seemingly, the request for closed windows from the other.

### What the Questions Were

Here is the set of questions we have asked:

1. Do you read the Illinois Central Magazine regularly? Why?
2. What do you consider the best feature of the magazine—the one which you would like most to have us continue?
3. What do you consider the weakest feature of the magazine—the one which you would rather have us discontinue?
4. Is the magazine being distributed effectively among employes in your vicinity? Have you any suggestions?
5. Does your magazine go into your home? Do the womenfolks read it?
6. We have tried to have a page of humor occasionally. Do you like the idea? What would you think of a "column" of humor, like some daily newspapers have? Would you contribute to it?
7. We believe stories of human interest about employes are good. Do you like them? Can you give us "tips" on such stories, or on stories along some other lines?
8. What national advertiser would you like to see using the magazine? Why? Do you read the advertisements?
9. Do you like the present size of the magazine? Have you any suggestions?
10. Please give us any other criticism or suggestions about how you think the magazine could be made more appealing to employes.

In considering the replies we have received it must be borne in mind that the questionnaire was sent to a truly representa-

tive list of employes—section laborers, shop workers, clerks, stenographers, operators, agents, switchmen, foremen, enginemen, trainmen, and the like.

### Nearly All Read Magazine

Nearly all have written us that they read the magazine every month, and the few who do not read it regularly declared that has been due to their failure to receive it regularly. The readers welcome it, they said, because it deals directly with the work in which they are employed, because it represents the Illinois Central System, because they find it instructive, or entertaining, or inspiring, or because it promotes the family spirit which binds them to the officers and employes in other locations.

The greatest diversity of views was expressed in reply to the second and third questions. The most popular feature of the magazine, it appears, has been the stories of practical interest, those from officers and employes in which everyday problems are discussed. The greatest number voted outright for practical stories. Next in favor came the stories of early day railroading and the division news. Of those voting for the reminiscences, some mentioned the stories of division veterans, and of those voting for division news some made it a general statement, applying to the news of various localities generally, and not necessarily the section devoted to division notes. Among the other features mentioned favorably in the replies at hand are: Editorial, accident and injury prevention, public opinion, biographies of our officers, stage and screen, good photographs, human interest stories, general railway stories, stories of modern appliances, and claims department.

### Some Things Not So Popular

The foregoing paragraph mentions the stage and screen department, recently discontinued. The reason we discontinued it is that a considerable percentage of those who replied to the questionnaire expressed disapproval of it. We thought best to leave it out for a while and see whether any complaints were registered. None have been.

Next in line in the features disapproved of is the use of "too personal" items in the division news. We are urging our division reporters to discontinue reports of week-end visits and trivial items, and the editorial blue-pencil has been sharpened. We have mentioned already that fiction received some unfavorable votes. Stories playing up various towns received unfavorable mention. An employe on a certain division described the news of his division as the weakest feature of the magazine; we have sent him the name of the correspondent for that division.

Nearly all declared the magazine is being distributed effectively in their territories; some wrote that it is not. We are having our distribution lists thoroughly revised, in the hope of securing effective distribution. Complaints on that source should be taken up through the organization—in division organization through the superintendent and in departmental organization through the department head. We want the magazine to reach those employes who will read and appreciate it.

### Something for the Women

All those who receive the magazine wrote that it goes into their homes and, with a single exception, they declared that the womenfolk read it. Many were kind enough to say that the women find it extremely interesting, and some especially mentioned the home division, a recently acquired feature of the magazine. The home division is original stuff, and the editorial staff is extremely proud of the way it is being handled by a most capable young woman who belongs to the Illinois Central System family. If any of the women have suggestions about the home division, its director would like to hear from them. Address her as follows: Home Division, care of The Editor, Illinois Central Magazine, Room 817, Central Station, Chicago. It is interesting to know that correspondents declared that the magazine is not only read in their own homes but is passed on to the neighbors, who are interested in it.

The page of humor received the votes of all but a few, and we accordingly instituted it, beginning in the October number. We call it "I See." A number have pledged to contribute to it. Contributions are solicited from all officers and employes.

The human interest stories received a very small negative vote. Some of our correspondents gave us actual tips, and most of the others promised to do so later. It is hoped the promises are not forgotten. We mean by human interest a story that is built not so much upon its news or educational value as upon the human interest that it carries.

### A Real Human Interest Story

As one of the best recent examples of human interest stories, we cite that of Isaiah Smith, a negro pumper on the Memphis division, who wrote his daily reports to Joe Concklin' at Memphis on a typewriter. It was published last month. We thought it was a corking good story; it not only carried human interest; but it illustrated effectively the point of how far-reaching our coal conservation-campaign really was.

Most liked the present size of the magazine, but a few voted for a larger type page.

A wealth of good suggestions were made in reply to the tenth question. We appreciate them all. Some counseled going in for more fiction, and especially continued stories. Others urged us to bend our efforts to working up division news. Still others wanted us to establish departments of particular interest to the sort of work in which they are engaged, mechanical subjects for mechanics, operating subjects for employes of the operating department, and the like. Others suggested that we urge every employe to give his magazine to some one else when he has finished reading it. A few voted for more contributions from employes.

### Some Suggestions Offered

The following suggestions are some of those which received votes: A department giving information and suggestions on investments, more pictures, more cartoons, the commendation of meritorious service, a department for sports and athletics, all decisions of the Railroad Labor Board in full, thrift stories, more biographies, human interest stories, a department for amateur verse, and the printing of page numbers on the cover when we refer to various articles.

It would be impossible to give space to all the suggestions made. As typical of the many constructive ones received, the following reply from our tenth question from a point in Mississippi is quoted:

Make the magazine interesting to office men and women. Keep silly twaddle of no interest

to anyone except the person who writes it out of division news.

Don't let any miserable doggerel creep into the division news or any other department.

Credit to those to whom credit is due, but fulsome praise, never.

Set a high standard, and maintain it, and then the magazine, like the railroad, will compare favorably with any.

It may be of interest to know that we have succeeded in signing up that correspondent as the principal division reporter

for the division on which he is employed. The notes which he submitted for the November magazine indicate that we are going to get good stuff from him.

This offers an opportunity for us to invite the fullest co-operation from all officers and employes and members of their families, especially in giving suggestions and submitting photographs and material.

## One Mail Truck in Use a Few Years Back

*Three Guesses at the Steed's Identity*

Here we have Charley Dupuy, one of the fixtures at the Baton Rouge, La., station, and the type of mail cart with which for twenty-one long years he hauled the United States mail between the postoffice and the station. In all those years he missed connections less than half a dozen times.

Charley, who is something of an authority among the other negroes who work around the station, is 62 years old and has spent thirty-five years in service connected with the L., N. O. & T. and Y. & M. V. He says he never laid off in twenty-seven years.

He began service as a freight handler January 22, 1886, two years after the L., N. O. & T. started operations. In 1897 he began handling the mail. He says he first got from a brickyard a dray just like the one in the picture, and when he climbed on it

and talked to his mule he felt monarch of all he surveyed. He antedated the idea of present-day motorists by carrying spare parts—an extra wheel and extra shafts. As the cart fell to pieces under its long usage, he says, he patched it up, until at the time he quit carrying the mail, about three years ago, it was an entirely new vehicle.

At present he is janitor at the station. He is full of reminiscences of the early days of the Y. & M. V. at Baton Rouge, when the tracks ran back of the present freight house and there were only two men required in the office—an agent and a bill collector—as the population of Baton Rouge was less than half what it is now and the freight business was only a small percentage of its present proportions.

# Traffic Department

## *New Coaling Facilities at New Orleans*

By B. J. ROWE,  
Coal Traffic Manager

LACK of adequate facilities at New Orleans for the expeditious and economical handling of coal from cars directly to the holds of ocean-going vessels has long been felt. It is recognized as one of the reasons why a greater export coal business has not been handled through that port.

### Could Not Handle Cargo Coal

Although cargo coal has been neglected, ample facilities exist for the handling of bunker coal from cars to barges, from which it is transferred to ships' bunkers while the vessels are lying alongside the wharf, taking on or discharging cargo.

These facilities consist of coal tipples, installed and operated mainly by the railroads engaged in hauling the coal from the mines, although there are some privately owned facilities. However, the location of these tipples is such that they are not adapted to the handling of cargo coal, except in a very limited way.

To meet this need and to build up New Orleans as a port of export for coal to foreign countries as well as for the coastwise trade in coal by water, Louisiana, through its Board of Commissioners, Port of New Orleans (Dock Board), has built a complete up-to-date public coal handling plant.

This plant, which is at the up-stream end of the river frontage, was completed and put in operation about two months ago. Some idea of its magnitude may be got from the fact that it cost well over a million dollars to install and equip.

### Five Purposes of New Plant

The purpose of this plant is fivefold:

First, the unloading of coal and coke from railway cars into storage piles;

Second, the unloading of coal and coke from railway cars and loading into vessels;

Third, the reclaiming of coal and coke from storage piles and loading into vessels;

Fourth, the unloading of coal and coke from barges and delivery into steamers, other vessels or storage piles;

Fifth, the loading of coal and coke from storage piles into railway cars.

The plant has a storage capacity of 25,000 tons, with provision for keeping separate each kind of coal as well as coals of different ownership. Here coal may be held awaiting the accumulation of a cargo or arrival of a vessel and may then be quickly picked up and transferred to the ship's hold.

The 750 feet of wharf at the plant can take care of three ships at a time, with a maximum loading capacity of about 800 tons an hour.

### Equipment Now Put in Use

The plant is equipped with a hopper house, three loading towers and one unloading tower. Two of the three loading towers travel along a track so they can discharge directly into the hatches. The unloading tower is a steam-operated traveling hoist with a projecting boom carrying a trolley and grab bucket. Seven thousand one hundred and twenty lineal feet of 36-inch belting are required to operate the thirteen distinct conveyors included in the layout.

The plant is served by the Illinois Central Railroad and the New Orleans Public Belt Railroad.

In furtherance of the plans for handling export and bunker coal through the port of New Orleans, the railroads have published, effective December 16, separate rates to apply on that traffic and will, effective at the same time, discontinue the absorption of the tipple charge, thus separating the terminal charges from the transportation charge.

### New Rates Are Announced

The new rates to New Orleans from the three major coal fields are as follows: Alabama, \$2.25 per ton of 2,000 pounds; Kentucky, \$2.57; Illinois, \$2.75.

These rates will apply on coal for export

or for bunkering purposes or movement by vessel to points in Texas and Florida accessible by water.

The exports of coal through all ports for the first nine months of 1921 were 17,473,625 tons. Although this figure is a decrease of 6,000,000 tons as compared with the export

during the corresponding period last year, it is nevertheless 4,000,000 tons above the bituminous export for the same period of 1913.

These new facilities, second to none on the Gulf, should make possible the handling of a greater portion of this export tonnage through New Orleans.

## Passenger Department Loses H. J. Phelps

H. J. Phelps, general passenger agent for the Northern and Western lines of the Illinois Central, died at 1:35 p. m., Sunday, November 20, at the Illinois Central Hospital in Chicago. Meningitis was the cause of his death.

Mr. Phelps had been ill only four weeks. He was forced to leave his office in Central Station on account of the development of a carbuncle. After two weeks in his home, his condition became so critical that he was taken to the hospital.

Mr. Phelps had given faithful and untiring service to the Illinois Central System for more than thirty-nine years. September 3 was

his sixtieth birthday. He was born at Elmira, N. Y., and was educated there in the public schools and the Elmira Academy. He began his railway career as a telegraph operator for the Illinois Central in 1882. He received his first promotion in 1887, when he was made station agent at Onawa, Iowa.

Efficient work won for him the successive promotions to ticket agent at Sioux Falls, S. D., and freight and passenger agent at Baton Rouge, La. In November, 1894, he was promoted to city passenger agent at Chicago, and was later made the city passenger and ticket agent. His next promotion was in August, 1905, when he was made division passenger agent at Dubuque, Iowa. He continued in this position until he was made general passenger agent in March, 1911.

Mr. Phelps was a member of the Chicago Athletic Club and the Modern Woodmen of America. His wife and three sons, Robert, Guy and Harry, survive. A sister, Miss Corra Phelps of Buffalo, N. Y., is the only other near relative surviving.

The funeral service was conducted at 2 p. m., Tuesday, November 22, at the chapel in Oakwoods cemetery. The casket was placed in a vault.

### WHERE MAN EXCELS

Of all the animals that roam the earth, man is the only one who has no natural weapons. He has no great teeth or claws for defense. His strength is slight. He has no way of discovering food or of avoiding danger by his sense of smell. He cannot climb quickly, nor has he any protective coloring. Had it not been for his superior mind he would have perished from the earth long ages past, and you would not be here today. It was man's intellect that led him to make artificial weapons, and his social instinct made him form tribes to give and receive protection from wild beasts.

H. J. Phelps

# Heavier Loading a Car-Shortage Solution

*It Is Service to the Public as Well as a Means of Reducing Transportation Expense for Us*

By R. B. GOE,

Supervisor, Weighing and Inspection

**T**RAFFIC is increasing with the upward trend of business, and the importance of our campaign for the heavier loading of freight is being driven home as the number of surplus freight cars shrinks steadily. Heavier loading of freight is advisable at all times, for it cuts down the number of gross ton miles which must be produced in the freight service to carry each ton of revenue-producing freight, and consequently cuts down transportation expense, but when the danger of a car shortage looms the situation has a double aspect. In addition to the obligation which we have for the economical production of transportation service, an increased public demand for cars forces upon us the duty of doing the utmost within our power to meet that demand. There is every indication that we will be facing that duty in the near future. We must prepare for it.

As an indication of what can be accomplished by the man on the ground in this effort for heavier loading of freight, attention is directed to the following letter written by Agent T. A. Landrum of Hollandale, Miss., to Superintendent T. L. Dubbs:

"I wrote you a few days ago about seven cars of cottonseed meal moving from Hollandale to Jacksonville, Fla., 15 tons to the car. I went to see the Hollandale Cotton Oil Mill people and asked them about wiring to the people that they sold these products to, to see if we could get them to allow us to load heavier cars, and they readily told me to wire them anything that I wanted. I sent them the following:

"A. W. Treadwell & Co. Owing to car shortage can't you instruct loading 30 tons to car to Jacksonville instead of 15 tons as originally ordered. (Signed) Hollandale Cotton Oil Mill."

"This morning I got this reply:

"Hollandale Cotton Oil Mill, Hollandale, Miss. Your wire. Load one car 30 tons to

R. B. Goe

Jacksonville. Will advise later on balance. (Signed) A. P. Treadwell & Co.'

"Now if I do not gain any more than this, I feel that the effort put forth has been well rewarded, for, instead of handling this car to Jacksonville for \$90, we are handling it with a revenue of \$180.

"This one car went forward today with the 60,000 pounds, and I hope to be able to get the other handled the same way."

This agent's action practically doubled the tonnage and earnings of one car.

Failure to load 26,859 cars in September as heavily as the division-commodity averages of August resulted in an increased transportation expense of approximately \$11,600. During September, however, 5,073 cars were loaded more heavily than the division-commodity averages of August, resulting in a decreased transportation expense on those commodities and divisions of approximately \$8,200.

Estimates of the results in gross ton miles

and transportation expense of heavier or lighter loading of cars are made regularly in our office from figures on the actual weights of cars loaded, by commodities and divisions. Close attention should be given these figures by division officers, and every effort should be made to increase average car-loadings.

The table which follows shows the estimated increase in transportation expense produced by a falling off in the average carload of certain commodities loaded by divisions in September compared with August, and the estimated decrease in transportation expense produced by a gain in the average carload of certain commodities, by divisions. The computation is compiled from the agent's reports of car capacity utilized, form No. 30, and is based upon the average load of certain cars of each commodity loaded, by divisions, in September and August. The column headed "number of cars" shows the number of cars of the commodity loaded in September whose weights are used in computing the estimates.

### Things to Talk About

During the twelve months ending August 31, 1921, the railroads of the country earned less than one-half the net income which the Transportation Act of 1920 established as a fair and reasonable return on their valuation. The net railway operating income for the year was \$530,655,927, or 2.9 per cent. It lacked \$571,342,073 of constituting the 6 per cent return contemplated by the Transportation Act. The year ending August 31 is significant because it was the first full year following governmental control during which the railroads were operated on their own financial responsibilities. It also was the first full year of operation under the present general level of freight and passenger rates, established in August, 1920.

Despite a much greater wage bill, caused by burdensome working rules and by increased rates of pay, the railroads succeeded in reducing operating expenses \$218,876,981 as compared with the year ending August 31, 1920. Expenditures for maintenance of way and structures were reduced 12.3 per cent and for maintenance of equipment 7.1 per cent. As a greater wage scale was in effect, the amount of maintenance work which had to be postponed because of a lack of money is even greater than indicated in the figures of decreased expenditures. This deferred work will have to be performed in addition to the normal maintenance requirements of the coming months.

## Good Roads in Washington County, Miss.

By JOSEPH S. TERRY,  
Train Dispatcher, Greenville, Miss.

No factor entered more largely into the economic, political and military success of the Roman Empire than good roads. With amazing swiftness the Cæsars dispatched their legions from coast to coast and maneuvered with such superior strategy within the empire that the enemy wore itself out in repeated attempts at conquest. Not until time and decay had yielded up the glory of this great people to the quest of a milder science of government and Christian philosophy had broken the cordon of tyranny did the political life and military machine of Rome collapse.

America must have good roads. Many communities are now completing road-building programs. The economic demands of the people are being answered. Progress is too rapid for any community to be segregated commercially by a lack of adequate inland transportation facilities. The interests of progressive communities demand expansion; this expansion bids commercial relationship with the nation, and national economic welfare cannot be attained to its fullest degree without the firm support of community organization everywhere.

Since June 1, 1916, eighty-eight miles of concrete public roads have been constructed in Washington County, Mississippi, of which Greenville is the county seat. Fifty additional miles are now being constructed with the aid of federal funds. When the entire contract has been executed approximately 160 miles of concrete public roads will have been constructed, making Washington County one

Joseph S. Terry

of the best developed communities in the South with respect to its public highways.

The highways already completed extend from Lamont to Glen Allen, about fifty miles, adjacent to the Yazoo & Mississippi Valley main track; Greenville to Leland, along the track, fourteen miles; Winterville to Nominee, about six miles, into the interior; Leland to Trail Lake, along the track,

fifteen miles; and Arcola to Trail, three miles, into the interior. The fifty miles now under way will extend from Choctaw to Percy, along the main track, and will be completed within another year. The work is being performed by contract labor at a cost of \$2.50 a square yard. The road from Choctaw to Percy will be eighteen feet in width. The others are ten feet wide.

The prime object of the railroads is to serve the public. Farmers, timber interests and all other producers of commodities must be afforded good public highways in order that rail transportation lines may not suffer loss of revenue from unnecessary delays to the equipment which is placed to serve their interests. Our good roads are

eliminating this phase of loss to the railroads. On the other hand, good roads are relieving the railroads to some extent of excessive haulage at insufficient revenue. This feature is acceptable, because no business can obtain the full discharge of its obligations if it is hampered by congestion.

Neighboring counties comprising the Delta section of Mississippi are doing as much toward constructing good roads. With these physical improvements at the command of public interests, and the Yazoo & Mississippi Valley Railroad furnishing ample steam transportation to move the products of the entire section, the potential growth of Washington County and the Delta is assured.

## Ends 48 Years of Service With Company

*Fred Altenbern*

Pensioned after forty-eight years of almost continuous service with the Illinois Central Railroad Company, Fred Altenbern, 225 West Clark street, has retired from active railway work to enjoy the fruits of his labor, said the Freeport (Ill.) *Journal Standard* recently.

Railroading fifty years ago wasn't what it is today, by any means, and the young man who took up that work had to be fortified with exceptional physical strength and great courage. The day of the air brake had not yet arrived, and brakemen were obliged to run along the tops of the cars, setting the brakes by hand, most of them using a small hickory stick to assist them in turning the wheel.

It was this work that Mr. Altenbern, a young physical giant, undertook forty-eight years ago. He was then a resident of Lena, having moved to that town when a boy from Freeport, his birthplace.

Mr. Altenbern was promoted eventually to conductor, and he had charge of the first train on the Dodgeville line of the Illinois Central. Later he took charge of a train on the main line, between Chicago and Dubuque. For the past twenty years, however, Mr. Altenbern has been in the yard service in Freeport.

In every department of the service Mr. Altenbern proved himself a man of exceptional worth, and his retirement on pension comes as a reward of work well done. Mr. Altenbern and his wife will continue to make their home in Freeport.

to End Accidents**

# An Adventure in Realism

By HORACE

Short Story—Complete in This Issue

MY friend Spink takes a great interest in my struggling endeavors to set the world afire as a writer of realistic fiction. He is a confirmed reader of books, periodicals, pamphlets, magazines, newspapers. He will read anything once, I suspect. It is an actual fact that he has been known to read the speeches of congressmen which occasionally come to him through the mails in printed form, and anyone who does that is—. But what I meant to say was that my friend Spink deems himself rather well read. And he advises me about how to write. Caustically, at times.

"You alleged writers of so-called literature," he says, "ought to get your feet on the ground for a change. You go blatting off on the trail of the weird, the fantastic, the ridiculous, the impossible—or, at most, the risqué—instead of writing simply and logically of real life. You'd do well to follow newspaper methods in your fiction writing. Tell of the every-day doings of every-day people. Get your plots from life as it eddies and swirls in its ever-changing tide around you. Write of real flesh and blood folks instead of your erratic, preposterous, impossible puppets. Such characters aren't real. What you want to do is—"

"All right," I told him. "I'll follow your advice."

So I retired—that is, I ascended—to my Attic Workshop and, after having gone into the silence, chewed off the ends of sundry stub pencils and invoked the gods who look after the problems of creative composition, I chiseled this story out of the living ivory. And having done it—neatly on one side of the paper, folded flat, never rolled—I hastened to my friend and slammed it down before him. "There, now," I snarled at him. "Read that!"

He did so. Then he rose and shook my limp hand.

"Great!" he boomed. "You've pulled it off at last. This tale is drawn with swift, bold strokes of true artistry. You have delineated the very beating heart of Life itself. Of

every-day Life, which, after all's said and done, is the only really realistic realism—"

I did not wait to hear more. Clutching the manuscript in my trembling hands I thrust it into a large envelope—together with a stamped, self-addressed, return envelope, if found unsuited to the editor's present needs, but no lack of merit implied—and ran excitedly to the nearest mail-box. . . . .

And now comes Austin Aloysius Highfill, a married man and a keeper of books for the Moving Van and Storage Company.

The Highfills lived rather a monochromatic existence. After ten years or so, Austin A. had habited himself to a set, daily routine. He rose at 7, lighted the gas burner under the coffee pot, and fed the cat while his wife dressed. They breakfasted. He then walked five blocks to his work, arriving there at 8. During the succeeding nine hours he busied himself at his high desk, except the hour between 12 o'clock, noon, and 1, post meridian,

*Austin A., fed, phlegmatic, sat in his favorite chair . . . and proceeded to peruse the evening paper. Mrs. Highfill, in loose wrapper and rocking chair, was—well, darning hose . . . . Mrs. Highfill was a fluent and willing conversationalist.*

when he lunched at the family flat. At 5 o'clock he put away his ledgers, big and little, locked the fireproof vault, and walked home. Two nights a month, after the first, he labored a few hours overtime on statements and trial balance.

On Sundays he lingered at home. Two bulky newspapers filled the morning. In the afternoon, in summer, the couple went for a trolley ride to the park. In winter they occasionally attended services at the nearest church. Mrs. Highfill read books obtained from the free public library and kept the flat in indifferent order. One afternoon a week she went to a card club. Two separate, red-letter days she brought home a hand-painted pie plate as a trophy of her prowess with the pasteboards. The Highfills possessed neither children nor dogs. These weren't allowed in the flat-building.

Austin A. was an unimaginative man, stolid and slow of wit. He was a failure at even desultory conversation. He did not smoke. He had only one dissipation—he chewed gum. And of all the—but let's don't moralize.

On an evening in late spring the Highfills sat in their diminutive sitting room. Austin A., fed, phlegmatic, sat in his favorite chair, polished his pince-nez, perched it on his nose, and proceeded to peruse the evening paper. Mrs. Highfill, in loose wrapper and rocking chair, was—well, darned hose, if it's essential. Mrs. Highfill was a fluent and willing conversationalist. Household tasks, the indifference of her spouse to opinions expressed or questions asked—nothing of that sort deterred her. She conversed for the pure joy of conversing. *L'art pour l'art.*

Austin A. glanced at the first-page headlines. He read the captions: "A Guileless Farmer," "Lions Roar for Human Flesh," "Smugglers' Identity Revealed" and "Pool-rooms Hard Hit," with mechanical precision, one after the other—.

"Oh, by the way, I saw the ex-Mrs. Ramsdell today," burred his wife, "as I was coming out of the public library. She was all painted up like an actress and looked terribly satisfied with herself. I never thought Jack Ramsdell was altogether to blame—."

Austin A. neither affirmed nor denied this interesting hypothesis. He was reading the local weather hazard for the next twenty-four hours: "Cooler," it stated confidently, "with probably rain and brisk to high winds."

"The price of steak went up a cent a pound today," Mrs. Highfill continued recitatively. "I guess we'll be glad to get even horse meat, pretty soon. Old Martin Jenkins and his oldest boy have quit work; they're on a strike at the freight house; they'll be getting hungry before very long, I'll warrant—."

Her spouse rattled his paper as he turned the page. He read: "Suitcase Thieves at Work" and "Lowlands Under Water." The headline, "Fight in a Cafe," with a sub-head, "Man Narrowly Escapes Lynching," claimed his attention momentarily. It was not nearly so exciting as at first appeared, however. He wasted a passing glance at a real estate advertisement with an immense clock-face covering half a page and the declaration: "It Is Striking Your Opportunity at Seabreeze Heights"—then he proceeded to "New York Has Girl Sleuth," "Footpads Rob Citizen" and "Society Belle Elopes."

"The grocery boy told me this morning that somebody fired a bullet through their front window at the store last night. A man who acted queerly was seen in the neighborhood. They think he might have been an escaped lunatic—."

Her husband seemingly missed the startling possibilities of that incident, being engrossed in a 10-line review of *The Lonely Inn*, a new novel from the facile pen of I. Bessemer Sellers, the world's most popular author for that month (Highbinders Co., \$2 net). He skipped the editorial page—all except a next-to-reading-matter paragraph extolling the efficacy of Painogone for toothache.

At the top of the next page was the headline: "Cop Run Down by Joy-Riders" and a clipped (credited) descriptive item about automatic pistols.

"I was talking to Mrs. Jones, across the alley back of us, today," intoned Mrs. Highfill, "and she told me what she does for her indigestion. She had it frightfully bad, but she's a lot better; she's gained three pounds. She drinks boiling hot water before and after her meals—."

But Austin A. paid no heed. He was digesting the account of the home team's latest hair-raising victory as chronicled in detail on the sports page.

"... the tally stood 1 to a soap bubble in favor of the visitors when our huskies came to the shillalah in the final stanza of the ninth. Dawson whoofed. Bunny was

safe on a fumble at second, but they nailed him when he sought to purloin the keystone. Then Dusty zoomed the pill for two bags and grabbed third by the skin of his front teeth. Two down and the count two and three on Watty. The breathing in the stands became labored. Then Cole made a grievous mistake; he let one trickle down the groove. O happy day! O glorious swat! Biff! Bang! Over the fence—two runs—and twenty thousand howling fans went nuts—.”

Austin A. folded the paper reverently and placed it on the dining table. He removed his spectacles in a preoccupied way. His vacant gaze wandered to his wife's placid face, thence to the cat asleep on the imitation leather couch, thence to the clock ticking away busily on the mantel shelf.

“You haven't heard a word I've been saying,” his wife said, in a mildly pessimistic tone. “Now, have you?”

“Eh?” he yawned. “Ho, hum—um! I'm kind of tired tonight. Had a pretty busy day today. I—I guess I'll go to bed, m'dear—.”

Mrs. Highfill sighed.

Austin A. shuffled into the bedroom and proceeded to doff his diurnal apparel and don the robes of night; he reclined on the bed, pulled the light cover over his relaxed form, and in a few minutes was dozing gently like a tired, somewhat wizened child.

Some time later—vaguely, but rather insistently—there came to his slumbering consciousness a disturbing sound. It was a sound of groaning. Austin A. roused himself with an effort, stirred, and sat up in a semi-sentient state of maudlin inquiry. The sounds emanated from his connubial partner, who occupied the other half of the bed.

“Wass matter, m'dear?” he asked gummily.

“I've got a perfectly horrible toothache,” his wife wailed, “and there isn't a thing in the house to put on it—ugh-h-h!—.”

“Tha's too bad—.” Heavy-eyed, but awake, the other swung his bare feet to the cool floor. “I'll run down to the drug store, 'n' get you some med'cine,” he said. His wife attempted a feeble protest. “Saw the very thing in tonight's paper,” he gumbled as he groped for his trousers. “Painogone for toothache, that's it. I'll hurry right back.”

When he had dressed, he switched on the sitting (and dining) room light so that he could find his hat, short top-coat and gloves. Having made sure he had his night-latch key,

he put out the light, let himself out the front door, and descended the steps to the sidewalk. The cool, damp caress of the night air fanned his face. It was very dark, with the faintest suggestion of mist in the air. He hadn't noticed what time it was, but it evidently was late; there were no wayfarers on the street. The drug store was two squares distant.

At the street intersection which intervened, a shadowy figure of a man materialized out of the shadows, and a voice spoke to him. The man was shabbily attired in drab-colored clothes and wore a wide-brimmed white felt hat. He had the unmistakable look of a country person.

“I say, I've been held up,” he confided in some excitement. “Only jest a minute or two ago. Right down the street here a little ways. Two robbers, mister. They took my gunmetal watch and upwards of a dollar and six bits in money. Where'll I be most likely to find one of these here police detectives?”

“Ha!” said Austin A. “You've been robbed, you say? Ahem! Did you get a good look at the—er—men who robbed you?”

“You bet your boots I did. I talked to 'em quite a bit before they stuck a gun under my nose. One was an old-like man, and the other one looked young enough to be his son. They both had on overalls. The old 'un had a sandy mustache and a scar on his left cheek, and he was shy the first finger of his right hand. The other one was slim-built and cross-eyed, and he had a wart on his nose. He wore a speckled cap, and his ears was big and stuck out from his head—.”

Austin A. gave a slight nervous start. “Why—er—,” he cried, “that sounds like some frien—er—that is, ahem! I have a notion I've seen the men you describe. Old man Jenk—I beg pardon, if you care to you can come with me to a telephone where we can call up the police—.”

“This town's quite a place,” the other prattled as they walked along. “I'm from Smithersville, up-state. I just got here today. My dinner cost me 90 cents, and the waiter got mad because I didn't give him a dime besides. Huh! I reckon I ain't as big a fool as I look—.”

“The—ah—city is—er—quite a place, as you say,” assented Austin A. “It has a great many pitfalls for the—ahem!—I wonder who this can be, now?”

A big, black, closed automobile, moving at

*A big, black, closed automobile, moving at a swift pace, was in the act of stopping abreast of the two pedestrians. A woman's face . . . showed at the window. She beckoned hurriedly. Austin A. recognized the lady.*

a swift pace, had suddenly slowed and swerved in toward the curb and was in the act of stopping abreast of the two pedestrians. A woman's face, white against the background of gloom inside the car, showed at the window. She beckoned hurriedly with an arm, rounded, snowy, whereon a jeweled bracelet sparkled. Her voice, thrilling, contralto, tremulously feminine, discreetly modulated, spoke.

"Come here, please! I have need of—gracious! How oddly fortunate. It is Mr. Austin Highfill, of all the persons in the world!"

Austin A. bared his head. His hair was slightly thinning on top. He recognized the lady with a thrill—let us say nicely-pleased-without-being-too-cordial interest.

"How do you do, Mrs. Ramsdell," he murmured. "I shall be delighted to be able to serve you, I'm sure." The glib gallantry of his words sounded surprising in his own ears.

"How perfectly sweet of you. Get in, Mr. Highfill, quickly. We have no time to lose. Your friend may come, too. I can explain en route—"

"My friend—." Austin A. hesitated. "Why, this—um—person isn't—"

"Sure thing, I'm your huckleberry, ma'am," said the gentleman from Smithersville, horticulturally. "Whatever you say goes a long ways with me." He came forward with a sprightly air. He even led the way into the big car. Mr. Highfill followed hesitantly.

"To the ferry," the lady directed her driver briefly. "Lose no time."

The car sped on its way. In the darkness, Austin A. felt the warm, yielding, perfumed presence of Mrs. Ramsdell sway softly against him. He breathed the languishing, heavy-sweet odor of violets. His head spun dizzily when he abruptly discovered a white hand resting like a snowflake on his coat-sleeve.

"Listen, please," she cooed liquidly. "Three men muffled in long raincoats boarded a cross-town car at the Statue, ten minutes ago. They will leave or attempt to leave the city at the earliest possible moment. One of them carried a black, alligator bag. That bag contains \$75,000 and some small change, in cash. These men tapped the wires and fleeced the United Poolrooms, Limited, of the sum I have mentioned, today. I have been employed to trail them—to the ends of the earth, if necessary. I employ my own peculiar methods—induction, a woman's intuition, cleverness—what does it matter if I obtain results? I am the—"

"I know," muttered Austin A., awesomely. "You are the Girl Sleuth."

"How odd that you would guess it," she said admiringly. She leaned forward with a kind of velvety, sinuous grace. "Faster!" she commanded through the tube.

The car shot forward like a projectile. To Austin A.'s near-sighted eyes the lights along the street appeared to be an elongated streak of brightness. There came the low, drumming patter of something on the roof above his head.

"She's raining cats and dogs," the country man announced, with zoological terseness.

"Rain was predicted," observed Mrs. Ramsdell indifferently.

The machine skidded with a sickening lurch as it rounded a corner in a flying parabola whose vertex narrowly missed impinging upon the curbstone parapet. Indeed there was a slight jolt, but the driver, after a quick glance over his shoulder, continued onward at increased speed.

"We struck something—what was it?" asked Mrs. Ramsdell with true feminine curiosity. "Answer me, Francois!" Her tone was imperious.

"Oi'm thinkin' 'twas only a cop, mum," the chauffeur shouted back with a foreign accent. "But th' big booby wasn't kilt. He got up again, mum."

"Ah, the ferry, at last," hissed the lady.

"Mr. Highfill, here is my purse. Go and purchase tickets. Three, one way, to Seabreeze Heights. This—this gentleman and I will meet you at the train—but first I must disguise myself. I shall take the role of a country bride on her wedding trip to the big city. You, sir," addressing the yokel, "will be my husband—temporarily. What is your name, please?"

"Call me Lew, fer short," that person replied pleasantly. "My full name is Llewellyn Barrington Smith. I'd just as lief be your husband as not," he supplemented, with bucolic naivete, "if anything liefer."

"Thank you," she effused, dimpling. "Now, you must look out of the window with both eyes until I have finished changing my shirt-waist."

The rain came down with a rush as Austin A. rejoined his companions at the turnstile. Mrs. Ramsdell, in a home-tailored traveling dress and hat with limp feathers, clung bashfully to the arm of her rural swain. At that moment three men, bundled to the ears in long ulsters, thrust them aside and ran to board the waiting train. One of them carried a black, alligator bag.

"Our quarry," whispered the bride. "Quick, follow them!"

"Why—er—ahem!" began Austin A. "Per-

haps I ought to excuse myself. My—ah—my wife is—"

"Is doubtless at home asleep and dreaming pleasant dreams," interposed the soft contralto tones of the Girl Sleuth, "and I—I am here, practically alone and unprotected, and I need you. You will not desert me; you are too brave and chivalrous—"

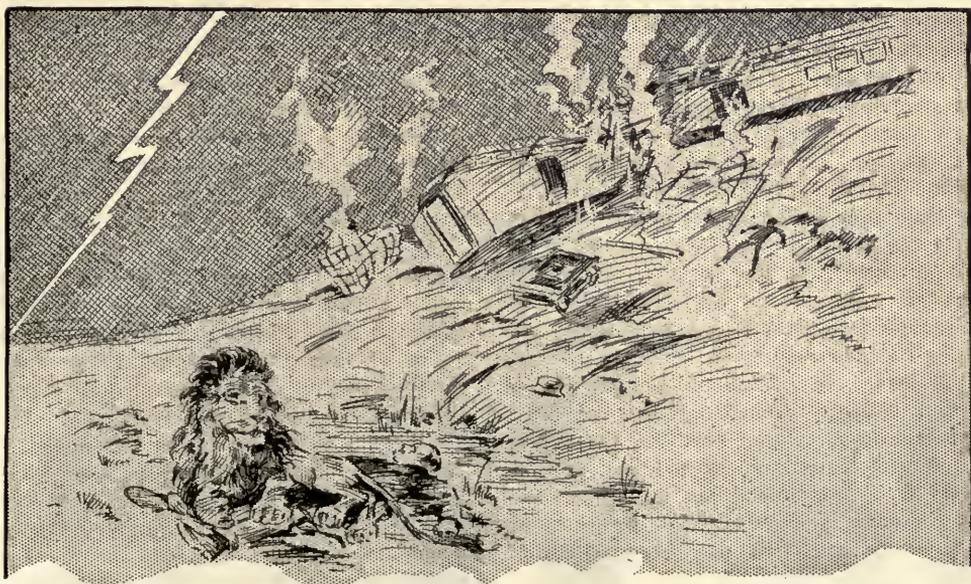

Austin A. felt his reluctance melt under the warmth of her glance. "All right," he said ardently; "all right, I'll come."

They ran and clambered upon the train. Pursued and pursuers entered a coach and found seats. The lady sank back against the cane-upholstered cushions. Austin A. turned down his coat collar. The fever of adventure quickened his drooping pulses.

"We have to deal with desperate and dangerous men," Mrs. Ramsdell murmured. "Ah, the train is starting. Take this," she commanded, and Austin A. felt the handle of a sinister-looking automatic pistol pressed into his grasp. "But do not fire until it is absolutely necessary," she whispered impressively. "I shall depend upon your coolness and good judgment, remember."

"Right," he nodded. "You can rely on me."

The ferry entered its slip, and the train presently scurried off. They were soon out in the open country. The wind had increased to

*A lightning flash gave him a glimpse of the thing that held him fast. It was a full-grown lion.*

the proportions of a wild gale. It raved and howled. Passengers stirred in their seats in some alarm. Yet fiercer became the roaring tumult outside. The train, actually stalled in its progress, shivered and staggered. Then—with a demoniac shrieking, the tempest swept them before it!

The coaches were hurled bodily from the track and tumbled down an embankment. Austin A., bruised, buffeted and shaken, found himself falling through space. He heard the rending of wood and metal, the screams of women and children, the hoarse grunting of men. Propelled by some awful impetus, he was projected through a window and fell, half dazed, in a morass of mud and water, clear of the wreck.

He sought, after a moment, to rise, only to find that he was pinned down by some bulky object which lay across his legs. He put out his hand and touched a shaggy coat, thick-napped, *alive*. A lightning flash gave him a glimpse of the thing that held him fast. He saw a length of tawny body, a yellow-maned head with gleaming eyes and mouth agape. *It was a full-grown lion!*

In an ecstasy of terror, he squealed shrilly. Then his ears throbbled from the deep, harsh, guttural, basso-profundo roar of the king of beasts. The roar came from a second lion just behind him. Another flash of lightning revealed the broken and twisted cage nearby, from which a third lion, a female, was in the act of emerging. The animals had been passengers on the wrecked train. Suddenly the beast that held him captive rose to its feet. He was free. He scrambled to his hands and knees. The lion shrank back, snarling savagely. Austin A. leaped to his feet and ran.

He ran, not warily or with any idea of direction, but frantically, blindly, heedless of barriers or pitfalls. He collided with trees, fell down declivities, scrambled up steep slopes, suffering no permanent hurts and only momentary delays. He crashed through or hurdled fences, splashed through brooks, penetrated dense thickets. Once, when he thought he heard a lion roaring off to the right, he swerved to the left and ran through a small lake or pond neck deep. That dampened his ardor somewhat. His pace gradually slackened.

He came out, after a time, upon what looked like a highroad. Meanwhile the wind had died down. He followed the road. Minutes or

hours later, he descried a light in the black darkness ahead. Then he came up to an isolated house in the woods. There was a swinging signboard on a post. On it he read "The Inn." He advanced to the door and knocked loudly.

The door opened, and a swarthy youth in a gray sweater, knee-length breeches and a short-visored cap, bade him enter. Some twenty or more gray-sweatered young men were standing or sitting around a great room. Three young women were grouped near the fire-place, where a tiny blaze languished. Austin A. noticed a monogrammed device on the sleeves of all the men.

"Baseball players," he said aloud. "What team is this?"

"Oh, hully gee!" roared a voice. "Here's a mud-lark wanting to know what team this is. Gather round, gents, and take a look at it!"

One of the young women crowded closer. "Let me present our company," she said. "Kind sir, permit me to introduce to you the Gladiators, the greatest ball team in the world!"

"I know," cried Austin A. "I read it in the paper: 'Watty swatted it over the fence, and twenty thousand fans went nuts.' I never saw a ball game in my life," he said lamely, "but I intend to, some day—."

A clamor at the door diverted the attention of the crowd. "Here comes that hearse-driver of a preacher," someone shouted.

"Preacher?" echoed Austin A. "Are you about to hold religious services?"

"You bet. Special incantations and ceremonies. See that red-headed guy over there? That's the 'Rabbit.' He's to be married to the goddess in the brown suit and sailor hat."

"How romantic!" murmured Austin A. "She—er—has all the attributes of a—ah—what is commonly called a peach. Might I ask her name?"

"She is Miss Elsimore Roxcumber, daughter of old Beelzebub Roxcumber, the multi-pluto-millionaire. This is a runaway match," his informant confided.

Wild cries of disappointment resounded. Instead of the minister, three men muffled in long raincoats entered. The last one carried a black, alligator handbag. Austin A. looked expectantly for Mrs. Ramsdell and her erstwhile bridegroom from up-state, but they didn't appear. He fingered his automatic pistol. One of the ball-players spoke in raucous tones.

"Hooray!" he shouted. "Look who's here!"

Arrived from the wilds, on foot and hungry, the famous singing trio from the big Broadway success, 'The Smugglers.' Give 'em a horse meat sandwich apiece, landlord, and then let's have some cheering music—"

Austin A. elbowed himself forward and drew his sinister-looking weapon.

"Those men are crooks," he shrilled. "That valise contains stolen loot. I-I arrest all three of you in the name of-of the Amalgamated Poolplayers' Association of—"

Someone gave him a sudden push; he fell against someone else, who bandied him in a different direction. Thus shoved, thrust, pinched, pummeled, and pushed, he was battle-dored to the door and kicked ruthlessly into the darkness outside. He fell into a large puddle of mud and water which happened to be conveniently near.

He rose, muttering vague threats. Shadows passed the lighted windows of the Inn. He raised his pistol in a shaking hand and pressed the trigger. A deafening sound and a crash of broken glass smote his ear-drums.

"Lynch the crazy bughouse! A rope! Somebody get a rope!" The door opened, and out buzzed gray figures like a swarm of angry hornets. Austin A. threw down his weapon and sped with terror-winged feet into the night. For the second time that fearful night, his fleetness bore him safely away from a dire fate. The shouts of his pursuers grew fainter and died away in the distance.

The moon's cheery face pecked at him from underneath a cloud. In the mellow light he saw not far away the shadowy outlines of a

small building. It proved to be a wayside waiting station, built beside a railway track for the convenience of commuters.

He went inside. There was no living occupant of the small room, but in one corner stood a suitcase, left there deliberately or inadvertently by some traveler. Weary and bedraggled, Austin A. stooped and fumbled at the fastenings. The suitcase wasn't locked. He opened it. It contained a suit of clothes the color and texture of his own and practically the size he wore. He threw off his own tattered and mud-caked habiliments and changed into the clothes so fortunately placed in his possession. A train whistled, he stepped out on the small platform; the train paused, he boarded it.

In the dim dawn Austin Aloysius Highfill silently let himself in at his own front door. The tinkle of the alarm clock, chattering on the mantel, resounded as he tiptoed into the dining sitting room. He peeped into the bedroom. His wife stirred, yawned, opened her eyes. She looked like a grotesque caricature of herself in curl-papers.

"How is the tooth, m'dear?" Austin A. grinned abashedly.

"It stopped before you came back, I guess," she said. "It was thoughtful of you not to waken me, Austin, love. You look ill yourself this morning. Why don't you ask for a week off? You could take a trip to the country. It would do you so much good—"

"Um-er—," he said. "Why, I guess it's only a little spell of indigestion. I've a notion to try drinking boiling water at meal times like you said Mrs. What's-her-name did—"

# NEWS of the DIVISIONS

## AROUND CHICAGO

### Office, Auditor of Freight Receipts

"Do You Remember When" conversation among H. A. Manley, who began service January, 1889; C. H. Suffield, June, 1891; L. Leatherman, May, 1907, and C. B. West, August, 1906:

"Say, boys, do you remember when the Accounting Department occupied one small floor at 78 Michigan avenue? When our present local treasurer and three others comprised the Interline Division? When Arthur Trine, H. A. Manley and C. N. Bear ran the Earnings Division?"

"When our assistant auditor of freight receipts was bookkeeper, assistant treasurer and audited half the stations—yes, and stood at the desk and checked local abstracts with the rest of the boys?"

"When E. H. Harriman, 'the railway wizard,' was vice-president of the Illinois Central, with offices on the second floor of 78 Michigan avenue?"

"When we had one telephone in the general office? When we did our calculating by hand and not by machines? When we talked to a pretty stenographer and not into a dictaphone? When the office was an Eveless Eden and we used the same roller towel and drank from the old tin cup and went over to the little brick saloon for a full free lunch with a glass of glorious 'good and gone'?"

"Do you remember when the Hyde Park 'Dummy' ran to 57th street, took on a load of wood and returned to the city?"

"When the funeral train ran to Oakwoods Cemetery in the country? When Bill Helion helped Charles Murphy run the Cubs ball team during the winter by advising him whom to fire or sign up?"

"When the boys received their December pay just before Christmas so they could have a good time, and when you could touch the 'Boss' any old time for a little advance pay?"

"Yes, boys, those were the days."

E. H. Runden went hunting Sunday, November 13th, bringing home twenty-five rabbits.

Some people naturally smile; some smile of necessity; but when a girl is paid for smiling we all smile with her. Miss Emma Borst caused us all to smile when she smilingly received \$5 in the Herald and Examiner smile contest.

L. F. Hale has been confined to his bed for the last week by sickness.

tests inaugurated and fostered by the Railroad Branch Y. M. C. A. Secretaries Hennessee and Davison succeeded in creating considerable enthusiasm among the employes, and the several events, which were participated in by 239 contestants, were witnessed by large gatherings during the half-hour lunch period. Considering the fact that the contestants wore their shop clothes and heavy shoes, good marks were recorded in the events, which included a 50-yard dash, 12-pound shot-put, chinning the bar, and standing and running broad jump. After the close of the athletic events Burnside employes were informed they had captured fourth place among the twenty-eight competing industrial plants.

Burnside Y. M. C. A. secretaries have now formulated a bowling league and are open for challenges from teams on the Illinois Central System.

E. E. Hennessee, local Y. M. C. A. secretary at Burnside shops, has resigned. His successor, John Glenn, formerly executive secretary of the Grand Trunk Y. M. C. A. of Chicago, will take charge of the work December 1. Mr. Hennessee has been the Burnside secretary for more than two years, and during his incumbency has made many friends among officials and employes, who will be sorry to see him sever his connection with the Y. M. C. A.

E. E. Hennessee

### Burnside Shops

The employes of Burnside Shops took an active interest in the industrial athletic con-

activities, at Burnside. Mr. Davison will retain the post of assistant secretary.

**Dining Service Department**

Saturday, October 29, 1921, will go down in railway history as "Investment Bankers' Day." On that date the Central States group of that association journeyed out of Central Station, Chicago, enroute to New Orleans on one of the longest, heaviest, fastest and most palatial special trains ever run on any railroad—a solid Pullman train of twelve luxurious compartment and drawing-room cars, besides two 36-seat all-steel diners in the middle of the train ready to serve sumptuous table d'hote meals. The special departed from the Illinois Central Station at 12:35 p. m., running as the second section of the famous Panama Limited and scheduled to make only two stops between Chicago and New Orleans. The bankers arrived at their destination in as happy, clean and comfortable a condition as the minute they stepped aboard the train, one thousand miles away, the day before. V. K. Simmons was steward of the forward diner, and Ike Greenberg was in charge of the rear car. Two inspectors accompanied this famous party, to see that nothing was lacking in the service or other appointments necessary to the travelers' pleasure or welfare. C. A. Castle and S. F. Myron (the dining car inspectors) were the recipients of many compliments from the passengers, who without solicitation made the announcement that the Illinois Central would be the "only route" for them in the future.

Saturday, November 12, was banner day for the dining service department. Eleven dining cars and five buffet cars—stocked, equipped and manned by 130 men—all reported for duty on time—all competent and physically fit, ready to serve the biggest movement of special and regular trains ever attempted by the Illinois Central. The occasion was the homecoming of the University of Illinois alumni and the football game between Chicago and Illinois at Champaign. Five trainloads of passengers rolled out of Central Station in fifty minutes, all bound for Champaign, all eager to greet their relatives attending the university, all excited regarding the outcome of the great football game. The dining service department was equal to the occasion. All extra preparations were at attention and ready to serve the 3,323 passengers who had purchased tickets for this event. Breakfast and luncheon were served to all who desired dining car service southbound. The dining cars were parked in a convenient place near the station at Champaign, ready for early service to those who wanted to dine immediately on their return from the game, in that way giving more room for those coming later, thus accommodating the hundreds who patronized the diners enroute to Chicago. The Maroons won the game, and needless to say, almost every Chicago passenger was in a joyful mood.

The dining service department herewith presents "Our A, B, C's" by Al Nankivell:

- A stands for Affable, which we try to be,
- Treating our patrons with rare courtesy.
- B stands for Best, and it's our fond ambition  
To make this word talk under every condition.
- C stands for Can, and if 'tis within reason,  
We'll work the thing out if it takes a whole season.
- D stands for Dugan and Diner as well,

- Interchangeable words in this department, I'll tell.
- E stands for Eat, and if folks didn't do it,  
There would be no need for hams, chicken or suet.
- F stands for Fragile, and we all should try  
To keep the broken dish bill from rising too high.
- G stands for Good, a cheerful old word,  
And we want it to speak, from a fish to a bird.
- H stands for Honesty, noble and grand;  
"Preferable to riches," was Solomon's stand.
- I is for the State that gave us our name;  
The others be thanked for increasing our fame.
- J stands for Johnnie, who (quite city bred)  
Wants the office boy's name on each letter head.
- K is as in Kake, Kream, Krackers and Krumbs;  
I'm not going to quit 'till my thinker numbs.
- L stands for Louisiana, the end of the road  
Until trains float on water, when we'll circle the globe.
- M stands for Milk, which I have on the brain,  
For I drink it at morn, and at noon do the same.
- N stands for 'Nuffsaid, and when a rule's given,  
It had better be lived up to if we'd here make a liv'n.
- O stands for Orders, which good men observe,  
Thus avoiding trouble when rounding a curve.
- P stands for Pie, which our chefs can make,  
For when it comes to pastry, they take the cake.
- Q stands for Quick, a snappy little word,  
And when put into action few complaints are heard.
- R stands for Roast, a savory noun,  
But when applied to a scolding, 'tis a verb with a frown.
- S stands for Service, which we aim to give,  
And up to this standard we want to live.
- T stands for Tea, Toast, Turkey and Tongue;  
The last two named, when alive, like to run.
- U stands for Utopia; to that height let us rise,  
'Till men everywhere laud us to the skies.
- V stands for Victuals, an old-fashioned word,  
But it makes my mouth water whene'er seen or heard.
- W stands for Waste—let's not do it, my friends;  
Be fair with the road on whom our living depends.
- X stands for 'Xtra, a pleasant word to our ear,  
For it means more business, of which we like to hear.
- Y stands for Yesterday, but let's live for today,  
Sawing our wood and making the hay.
- Z stands for Zenith, the top o' the hill;  
Let us stay there and bask in the public's good will.

& the end is not yet.

**ILLINOIS DIVISION  
Superintendent's Office**

Robert Valade of Kankakee has accepted a position as stenographer in the superintendent's office.

Mr. and Mrs. R. G. Miller are the proud parents of a son, born November 9. Mr. Miller is chief clerk to the Superintendent.

Up to and including November 19 the Illinois division ranks first in the "Kill No Stock" campaign. The Illinois division is the only division with a clear record for the first half

of the month. With this good start we should be able to maintain this good record throughout the balance of the month.

**Kankakee Yard and Roundhouse**

Mrs. L. W. Cummings, wife of a machinist at Kankakee, who underwent an operation at the Emergency Hospital, has been taken home and is getting along nicely.

R. Weaver, supplyman, has been quarantined at home, on account of diphtheria in the family.

Fireman Charles Kirkpatrick has been called to Kempton by the sickness of his father.

**Champaign Yard and Roundhouse**

John Coleman, aged pensioned engine cleaner, gained considerable comment in the recent Mercy Hospital Drive, which was conducted in Champaign and Urbana to raise sufficient money to erect and equip a hospital. Mr. Coleman, whose monthly pension allowance amounts to \$25, which is his only income, went to the chairman of the committee in charge of this drive, unsolicited, and donated \$25. The chairman, who was an acquaintance of Mr. Coleman, knowing his financial circumstances, refused to accept his donation; however, Mr. Coleman, by insisting, prevailed upon him to accept the \$25, remarking that he was sorry that he did not have more to offer.

A. C. McVicker, superintendent of the W. J. Zitterell Company of Webster City, Iowa, for the past few months in charge of the work of installing a turntable at Champaign roundhouse, departed Thursday, November 10, for his home in Vancouver, British Columbia, where he will spend the winter. Mr. McVicker lives on a farm near Vancouver and devotes his time during the winter months to hunting deer, elk and other large game and to raising pedigreed rabbits, dogs, etc. While at Champaign he related some remarkable and interesting stories about his experiences in the northern country.

**Maintenance of Way Department**

The water department reports that on November 3 it put in operation the new, 100,000-gallon water tank, displacing the old tank of 50,000 capacity, at Kinmundy, Ill.

The bridge and building department has just completed renewing two more open-deck wooden bridges with concrete pile trestles. We are fast getting rid of the wooden deck bridges, and before long the Illinois division main line will have only concrete or steel structures.

We have just completed the installation of a new 100-foot turntable at the Champaign shops. This table, which is replacing the old 85-foot table, was necessary in order to accommodate the new 2-10-2 type engines, of which the Illinois division has recently received five.

The Illinois division signal employes educational meeting for December will be held at Gilman. We expect to have an oil man with us at this meeting to tell us something about our oil-burning lamps, used on our automatic block signals. The meeting will be held on Sunday, either the 11th or 18th.

Signal forces will start work within the next two months on the installation of a wig-wag crossing at 11th and Church streets, Gibson City, Ill.

**SPRINGFIELD DIVISION  
Clinton Shops**

The first section of the city indoor baseball season has just been finished. There were four teams represented in this section: the Business Men, Seniors, Rotary Club and the Illinois Central Shops. The Shops' team finished in second place. The Seniors defeated the Shops, 17-13, and tied for first place in the league. It was then necessary to play off the tie, and the game was won by the Seniors, 18-9. Much credit is due the battery for the team's success. Machinist Angerer pitched the four games, while Machinist Howard and Electrician Sheridan split the honors of the catching position.

Paul Holsinger, 2-year-old son of General Foreman and Mrs. Fred J. Holsinger, died October 5, after a two weeks' illness of pneumonia at the family home in the Black Apartments. The body was taken to Freeport and laid to rest in the family lot there. The family wishes to extend thanks to all those who assisted them in any way, and those who donated the beautiful floral pieces. They also wish to thank the officials of the company, who ar-

# Hamilton Watch

"The Railroad Timekeeper of America"

## Railroads may change their equipment, but the Hamilton Watch will still time the trains

No railroad man who has purchased a Hamilton Watch need ever fear that railroad improvements will force him to buy another watch.

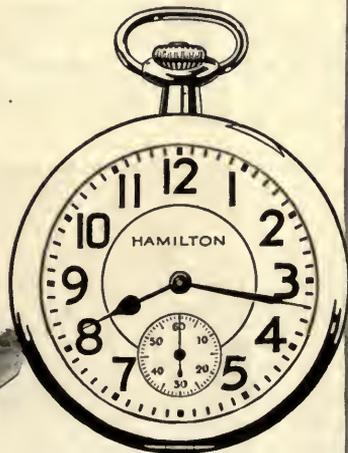

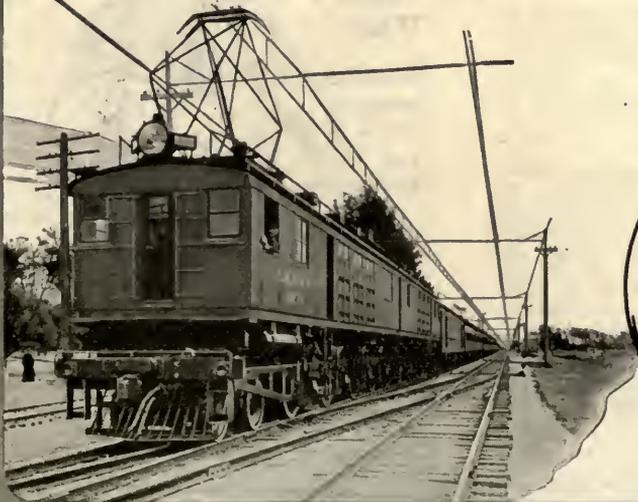

Hamiltons are made to keep accurate time—railroad time—under any conditions. No railroad changes can affect the Hamilton's timekeeping qualities. Engineers picked to run the highest-powered electric locomotives tell us that their Hamiltons keep accurate time.

Your jeweler will be glad to show you a Hamilton Watch, because he knows it is a watch that will give you entire satisfaction.

For time inspection service, Hamilton No. 992 (16 size—21 jewels) is the most popular watch on American railroads and will pass any official inspection. And, moreover, it will keep on passing inspection for years and years.

Write today for the Hamilton Watch Book, "The Timekeeper." It pictures and describes all Hamilton models, and states prices. Hamiltons start at \$22.00 (\$25.00 in Canada) for a movement alone. From this they run, by easy stages, to \$200.00 for the Hamilton Masterpiece in an extra-heavy 18k gold case.

HAMILTON WATCH COMPANY, *Lancaster, Pa.*

ranged for the private service from Clinton to Freeport.

The marriage of Miss Stella F. Rousey and Peuben Henry Young took place November 1 in the bridal parlors of Judge Bedinger. Mrs. Young is from Wapella. Mr. Young is a painter at the shops, having been in the service of the Illinois Central for the past ten years, with the exception of one and a half years with the 37th Infantry in France. Mr. Young is a member of the Crang-Bennett Legion Post of this city. The couple is now at home at 1027 East Main street.

**Springfield Station**

Miss Anna Herzog, stenographer at the Springfield freight office, returned from her trip in Texas, November 1. While there she visited the sick soldiers at Camp Logan, near Houston.

Otto F. Franz, veteran warehouse foreman at the Springfield freight house, severed his connection with the Illinois Central November 15, organizing the O. F. Franz Transfer Company. Mr. Franz entered the service as trucker fifteen years ago, later being promoted to check clerk and then to warehouse foreman.

Mrs. Anna Janssen, wife of William Janssen, chief clerk at the Springfield freight office, died October 11 at St. John's Sanitarium, near Riverton, after a lingering illness of two years with tuberculosis. Funeral services were held at the family residence November 14, the Rev. Paul Schulz, pastor of Trinity Lutheran Church, officiating. Interment was in Oak Ridge Cemetery.

**Decatur, Ill.**

The Second Annual Railway Banquet, given at Decatur October 20 by the Decatur Transportation Club, was well attended by Illinois Central employes. Out-of-town guests were William Smith, Jr., A. G. F. A., St. Louis, Mo., J. J. Stephens, C. A., Peoria, Ill., and officials from the Springfield division office at Clinton.

Monday, November 14, the Highland Hereford Breeders' Association of Marfa, Texas, held a cattle sale on the farm of J. G. Imboden, at Suffern, Ill. About twenty cars of cattle were brought from Marfa, Texas, for this sale and were sold to farmers in central Illinois.

The "Perfect Package Campaign," which is being held this month, is so far a success. The business firms in Decatur are doing their utmost to ship out perfect packages.

Russell E. Fulk, cashier at Decatur, has returned from a two weeks' vacation spent in northern Wisconsin.

Arthur Sperry, 1314 East Washington street, died in John Warner Hospital November 16 after a short illness with typhoid-pneumonia. He was a son of Elijah and Serena Sperry, and was born in Champaign County November 24, 1874. He came to Clinton at the age of 24. He was married to Mary Myers, March 11, 1896, and one child, Miss Faye, was born. Mr. Sperry had been in the employ of the Illinois Central about twenty-three years, and in 1898 became one of the trusted and faithful engineers of the system. Besides the wife and daughter, he is survived by his mother, who resides at St. Joseph, Ill.—Clinton (Ill.) Register, November 18.

The village of Chestnut owes its existence today to the big whistle on the Illinois Central Railroad's Diamond Special passenger train. The engineer saw that the town was on the

the morning of October 15 as the train approached, and he opened up the big siren. It awoke the inhabitants, and the flames were extinguished after one business block had been destroyed. According to information available, the fire was discovered in the garage and restaurant. The origin of the fire, or in which building it first started, is not definitely known. Five business houses were burned. The garage owner sustained the heaviest loss. Tires valued at \$500 and tools valued at \$500 were destroyed. Three automobiles, all practically new, were burned.—Maroa (Ill.) New Times, October 20.

**ST. LOUIS DIVISION**

Frank Crouse, who has been working as accountant in the office of Division Accountant L. F. Foley, resigned recently to accept a position with a coal mine at Zeigler, Ill. Orville

2312 Mott Bldg. Adrian, Mich.

Ahl was appointed to fill the vacancy made by Mr. Crouse's resignation.

The plans and specifications have been drawn up for the construction of freight houses at Zeigler and West Frankfort, Ill. Work will start in the near future.

In the Madri Gras parade this year, the local car men had a float on which there was a miniature box car complete in every detail, which showed evidences of good workmanship. The Madri Gras parade is an annual affair put on by Carbondale on Hallowe'en night. It is becoming popular over the entire southern part of the state.

Since W. T. Wright, former agent at Benton, Ill., has been appointed supervisor of coal traffic, with headquarters at Carbondale, Ill., S. B. Morris, agent at Simpson, Ill., has been appointed to succeed him at Benton.

John R. Sproat, from Trainmaster Gibbs' office at Centralia, has been appointed statistician in Superintendent W. Atwill's office at Carbondale.

The daily freight train performance for the St. Louis division shows a total of 2,791 trains run for October, 1921, with 332,795,000 gross ton miles.

Miss Lena Hampton, stenographer in Superintendent W. Atwill's office, resigned recently, and the vacancy has been filled by Miss Norma VanBuskirk, who has been working as stenographer in Roadmaster J. W. Kern's office. Miss Lanora Barber is filling the vacancy in the roadmaster's office.

C. A. Fallon, for many years cashier, has been appointed agent at Pinckneyville, Ill., to fill the vacancy caused by the death of M. J. Moffett.

Superintendent W. Atwill, Claim Agent W. R. Clemons and Roadmaster's Chief Clerk L. L. Hellig made a trip to Horse Shoe Lake, November 10, and spent an enjoyable day among the ducks and quails. It is reported they brought home the bacon, too.

W. S. Williams, general superintendent of the Western Lines, and Mrs. Williams visited friends in Carbondale November 13 and 14. Mr. Williams was superintendent of the St. Louis division before being promoted to general superintendent.

Miss Julia Stearns, accountant, is back at work after a leave of absence on account of the sickness and death of her mother.

Charles Gardner, clerk in Roadmaster Kern's office, is back after being in Holden Hospital, Carbondale, a few days.

Work was begun November 18 on the new station building at Marissa, Ill. The old one was destroyed by fire October 13, 1921.

October 18 a high record was made on the St. Louis division in the number of cars of coal billed, there being 1,778.

Dr. Charles James Boswell, for twenty-five years local and district surgeon for the Illinois Central Railroad at Mounds, Ill., died October 23, 1921. Doctor Boswell was born October 10, 1876, at Mount Pleasant, Ill., was graduated from the Barnes Med-

Dr. C. J. Boswell

ical College at St. Louis in 1894, was a member of the Illinois State Board of Health for six years, had an active practice in Mounds for twenty-seven years, was mayor of Mounds for two terms and was the president of the First National Bank of Mounds since its organization. Dr. O. T. Hudson, who has been local surgeon at Mounds, has been appointed district surgeon to succeed Doctor Boswell.

### East St. Louis Freight Office

The Illinois Central Indoor baseball team is making a splendid showing in the Railroad Turkey League, composed of teams from the different railroads in this terminal, the standing of the team, as of November 15, being as follows:

	Won	Lost
Illinois Central .....	3	0
Pennsylvania .....	3	0
Southern .....	1	1
Missouri Pacific .....	1	2
Wabash .....	0	2
Big Four .....	0	3

One more game remains to be played, that being with the Pennsylvania team, and a hard-fought contest is looked for, but all indications point to a victory and the championship for our boys. The line-up is as follows: Quirk, 2b, Bradley 1b, Pensoneau 1ss, Tice 3b, Dickerson lf, Dettenbach, rss, Buschman rf, Marty c, DuHadway p. Inquiries as to open dates with a view of booking games should be addressed to the manager, Lawrence Sullivan.

After the close of the Indoor Baseball season, the local office will enter a team in the Basketball League, composed of various teams from the different railroads in the terminal. The

basketball team looks good and should have a successful season. For information as to booking games, address the manager, J. W. Tice.

The East St. Louis Local Freight Office would like to suggest that an Employees' Athletic Association, similar to that of the Pennsylvania Railroad, be organized, and that through it annual field events be held at given points; also that elimination baseball contests, indoor baseball contests, basketball contests and bowling contests be held annually, the system to be divided into four divisions, as follows: Northern Lines, Western Lines, Southern Lines, Y. & M. V., and to be handled on a plan something on the order of the following: Baseball teams to be organized on each of the four grand divisions, and to play a certain number of games on their respective divisions—Chicago to play about six games with teams on the Northern Lines, Omaha to play the same number of games with teams on Western Lines, etc.; then the leading teams of the Northern and Western lines to play for the northern championship, and the leading teams of the Southern Lines and Y. & M. V. to play for the southern championship, and then the northern and southern winners to play for the system championship. The indoor baseball, basketball, bowling and any other contests to be handled on a similar basis, a regular set of officers to be elected or appointed to arrange schedules, rules, etc.

During a severe storm November 20 lightning struck an Illinois Central passenger engine near Pinckneyville and made Engineer McLaughlin unconscious. The engineer, stunned, fell from his seat and in doing so threw the throttle wide open. The fireman took his place and brought the train under control.

Robbers entered the Illinois Central station at Tamaroa, Ill., October 22, took a pouch of first-class mail and a tie sack containing newspapers and parcel post matter. The tie sack was rifled near the station. The mail had been brought to Tamaroa by train No. 23 and, as this train arrives after the postoffice closes, the mail is left at the depot until the following morning. The station at Du Bols was broken into; a store at Radom and one at Richview robbed the same night.

**INDIANA DIVISION**

**Superintendent's Office**

Born to Mr. and Mrs. Eugene Watts, September 18, a daughter, Mary June. Mr. Watts is in the accounting department, Mattoon.

Born to Mr. and Mrs. Morris Kemper, September 26, a boy, John William. Mr. Kemper is an accountant, Mattoon.

October 11, Marling Crane of the accounting department, Mattoon, was married to Miss Grace Clark at the Christian Church in Urbana, Ill.

W. O. Chamberlain has been appointed supervisor, Mattoon to Evansville, temporarily, as a result of the illness of H. H. Cordier.

**Evansville Freight Office**

We regret exceedingly to learn of the death of W. W. Alsop, Evansville, Ind., October 19. Mr. Alsop served the Illinois Central faithfully for sixteen years, having entered the service as carpenter with the B. & B. department in 1905. In 1916 Mr. Alsop was placed at Poseyville, Ind., as station pumper. Due to ill health he was transferred to Evansville August

6, 1921, where he served as crossing flagman at Central avenue and Devon street. Mr. Alsop is survived by his wife and two children.

The condition of Arthur W. Walling, chief rate clerk at Evansville, is considered very serious. Mr. Walling has been confined to Walker Hospital for the past eight weeks, suffering a relapse after an attack of typhoid.

G. P. Spiegel, assistant rate clerk at Evansville, has returned to his desk after a two weeks' illness.

Julius J. Meyer, cashier at Evansville, who for the past two months has been off duty on account of temporary loss of eyesight, is not expected to return to his desk for at least another month.

Mr. and Mrs. Phil. A. Reitz announce the birth of a son, Phil. A., Jr. Mr. Reitz is chief yard clerk.

The marriage of Miss Pansy Doughty, clerk in the Evansville freight office, and U. R. Ogle, yard clerk at Harwood, took place Saturday, October 29. After the ceremony, a reception for fifty guests was held at the couple's new home on Second avenue, Evansville.

Chicago, will mail Book of  
the Eye Free upon request.

**Chief Dispatcher's Office**

October 28, Kenneth Tralnor, agent at Rose Hill, Ill., and Miss Bernice Scott, daughter of Section Foreman Bert Scott, Dalton City, Ill., were quietly married at Sullivan, Ill.

Owing to increased business between Centra-lla and Peoria, there have been four through runs daily established, moving considerable tonnage. Owing to all crews' being unacquainted with the road off their own division, the time made was not so good as expected, but since making a few trips, they are showing up much better. Conductor R. C. Musgrove and J. F. Epperson are handling the Indiana division crews.

November 10, Conductor C. E. Thompson, Brakeman W. M. Thatcher, Roadmaster's Chief Clerk H. G. Seibert and Carl Slover of the master mechanic's office were initiated into the Order of Elks.

**Mattoon Shops**

George Lidster has been transferred from Palestine Shops to Mattoon Shops as stock-keeper in the store department.

John, little son of Boiler Maker Helper John Myler, passed away at his home November 14 of diphtheria.

Mary, little daughter of Car Helper Ed Severns, passed away November 11 of diphtheria.

**MINNESOTA DIVISION**

Alfred Larson, a farmer who lives along the right-of-way of the Illinois Central at Delaware, Iowa, discovered a broken rail at a crossing and reported it to P. Mortenson, the section foreman. Mr. Larson was driving his cattle through a private crossing when he found the broken rail. He immediately telephoned the section foreman, who repaired the track.

**KENTUCKY DIVISION**

George M. Glayne, H. M. McKeown and Roy L. Krouse composed a committee which recently sent the following resolutions to the Illinois Central Magazine on the death of A. L. Turner, night yardmaster in the south yards at Paducah, Ky., who was run over by a yard engine August 28.

"Whereas, the Almighty God in His infinite wisdom has seen fit to take from our midst our friend and co-worker,

"Be it resolved, That we bow our heads in humble submission to His immutable will, conceding it is ever beneficently directed toward us in good.

"Be it further resolved, That we extend to the bereaved loved ones our sincerest sympathy in the affliction they have just sustained."

**TENNESSEE DIVISION**

Fulton, Ky.

**SLINGERLAND SCHOOL OF MUSIC, Inc.**  
1815 Orchard Street Dept. 109 Chicago, Illinois

office at New Orleans, where he will be engaged in special work.

T. J. Murchison, former agent at Fowlkes, Tenn., who has been on a leave of absence for several months on account of ill health, has been appointed agent at Troy, Tenn.

C. W. Bridges, former agent at Troy, Tenn., has bid in the agency at Clinton, Ky., Agent C. R. Collins having been transferred to Halls, Tenn.

Miss Mabel Green, agent at Hickory, Ky., left November 11 for an extensive trip through the West, to San Francisco and various other points of interest.

J. W. Ticker, caller, who has been off for several days on account of important business, has returned to work again.

T. J. Wilds, slab yard foreman at Fulton, Ky., took three rolls of roofing paper from a car moving through that city on November 3 when he discovered that they were billed to a different destination. He turned the paper over to the agent, who forwarded it to its destination, De Soto, Ill.

**Birmingham, Ala.**

Writing in praise of Agent Ben Herring and the employes of the Birmingham station, an employe points out how the Birmingham station has come to the front since Mr. Herring was appointed agent, January 15, 1921.

First:—

Illinois Central uncollected, Jan. 1, 1921 .....	\$9,125.83
Illinois Central uncollected, Oct. 1, 1921 .....	3,066.62
A decrease of .....	6,059.21

As this is a joint agency and comes under jurisdiction of Mr. Herring, the writer also reports the Central of Georgia account:

Second:—

Central of Georgia uncollected, Jan. 1, 1921 .....	\$4,969.90
Central of Georgia uncollected, Oct. 1, 1921 .....	962.32
A decrease of .....	4,007.58

Third:—

Cost per ton of handling freight, Jan. 1, 1921 .....	\$0.81-9
Cost per ton of handling freight, Oct. 1, 1921 .....	.62-7
A decrease of .....	.19-2

Fourth:—

Cost per expense and waybill, Jan. 1, 1921 .....	\$0.61
Cost per expense and waybill, Oct. 1, 1921 .....	.38-5
A decrease of .....	.22-5

When Mr. Herring took over this station there was no employe who did not have more work than could possibly have been done in eight hours, the writer points out. Mr. Herring saw this at once and began to systematize the work. It was no time before he had lightened the work of each employe, and reduced forces in the meantime, and today there is more work being produced in eight hours than has ever been known in the history of the Birmingham station.

**MEMPHIS TERMINAL DIVISION  
Telegraph Department**

H. J. Locke, 60 years old, lineman on the Cairo district for the past thirty-three years, died at Fulton, Ky., November 2 after an illness of about eight months.

Lineman J.C. Campbell has been assigned

# Cured His RUPTURE

I was badly ruptured while lifting a trunk several years ago. Doctors said my only hope of cure was an operation. Trusses did me no good. Finally I got hold of something that quickly and completely cured me. Years have passed and the rupture has never returned, although I am doing hard work as a carpenter. There was no operation, no lost time, no trouble. I have nothing to sell, but will give full information about how you may find a complete cure without operation, if you write to me, Eugene M. Pullen, Carpenter, 214 Marcellus Avenue, Manassquan, N. J. Better cut out this notice and show it to any others who are ruptured—you may save a life or at least stop the misery of rupture and the worry and danger of an operation.

Memphis terminals, fell from a pole in Nonconnah Yard November 15, but was not seriously injured.

#### Mechanical Department

William Wilson, erecting shop foreman, is taking an enforced vacation caused by a carbuncle on his left hand.

C. Harwood, machinist erecting shop, has been visiting friends in New Orleans recently.

The last baseball game of the season between the Memphis and Nonconnah shopmen at Gaston Park was won by the Memphis team, score 6 to 4.

Dan Bodamer, who was connected with the Illinois Central System at Memphis from 1913 to 1915, was accidentally killed November 7 while performing his duties in connection with train work of the Missouri, Kansas & Texas Railroad at Muskogee, Okla. Mr. Bodamer was a brother of E. Bodamer, superintendent of the Illinois Central terminals at Memphis. He left yesterday for Dennison, Texas, where the body of his brother will be taken for burial today. Mr. Bodamer is survived by his widow, whose home was in Dennison. He had been with the M., K. & T. Railroad since leaving Memphis in 1915. During the world war Mr. Bodamer served more than two years in the United States navy, being attached to the steamship Beaver. He was 36 years old.—Memphis (Tenn.) Commercial Appeal, November 8.

#### MEMPHIS DIVISION

W. B. Tucker, who has been promoted to locomotive engineer, but on account of slack business is running as fireman, on October 23 was firing engine No. 950, with Engineer H. L. Gear, when, just north of the Lambert, Miss., station, he noticed fire under the roof of a cotton seed house. He had the engineer stop the train, got out and awoke some people, and they put the fire out. The damage, therefore, was slight. Had this crew not taken this action, the fire probably would have consumed the cotton seed house and the gin adjacent, with the cotton. Mr. Tucker also, last spring, while off duty in North Memphis, noticed a fire at an oil mill there, called up the general yardmaster over the telephone, and had several freight cars moved before they burned.

#### VICKSBURG DIVISION

I. G. Cockerhan, employe of the Y. & M. V. Railroad, was fatally injured October 8, in the south yards at Cleveland, Miss. Mr. Cockerhan was coupling two cars when the engineer obeyed what he thought was a back signal. Mr. Cockerhan was caught between the two cars and every bone in his hips crushed. His crew secured a special train and rushed him to Greenville to the King's Daughters' Hospital. Medical attention was given promptly, but he died that evening. His mother, sister and brother, Doctor Cockerhan of Gunnison, were at his bedside. The body was sent to Liberty for interment.—Cleveland (Miss.) Enterprise, October 13.

#### NEW ORLEANS DIVISION

Mrs. F. W. Ross, agent at Clinton, La., who has been seriously ill at the Illinois Central Hospital, New Orleans, is now rapidly improving.

Conductor R. F. Roberts, incapacitated by ill-

ness for the past month, is able to be about again.

The entire New Orleans division extends its sympathy to Conductor J. A. Mitchell, whose wife recently died.

The following promotions to the rank of conductor were authorized by Trainmasters F. H. Anderson and E. J. Redon: Flagman J. L. Gillis, T. B. Riggin, W. J. Thurman, F. E. James, D. J. McCubbin.

H. Darensborg, flagman, died in the Illinois Central Hospital, New Orleans, November 13, as the result of injuries received in an accident in the freight yards at Reserve La. His body was taken to Alford, La., for interment.

Night Yardmaster Lee Pierce of Baton Rouge, after a long and severe illness, has returned to work.

Miss Marie Daunoy, stenographer to General Yardmaster R. E. Prewett of Baton Rouge, La., was recently married to J. C. Burt, flagman. After their return from a short honeymoon, Mrs. Burt's associate workers presented her with a chest of silver.

A son was born recently to Mr. and Mrs. G. O. David. Mr. David is connected with the yard office forces at Baton Rouge, La.

Engineer Martin Rand was detached from road duty during the Cotton Carnival at Natchez, Miss., November 17, 18 and 19, to act as official lecturer in connection with the exhibition of the engine "Mississippi."

Major R. L. Montgomery, agent at Natchez, Miss., Clerks J. L. Schuchs, Fred Parham and Walter Alexander and Switchman Mandeville Phipps participated in the Armistice Day Celebration as members of the American Legion, also attending the sumptuous banquet which followed. Major Montgomery delivered an address at that brilliant function.

The Natchez Warehouse is now the proud possessor of a mascot in the form of a pigeon, which solemnly walked out of a Fayette car several days ago when the door was opened. The bird evidently likes its new quarters, for it has shown no disposition to leave and evidently figures on remaining as a permanent guest. Foreman Carney was in doubt at first whether to make an over report against Fayette on the pigeon, but he finally decided in the negative, as he thought possibly it might be disposed of elsewhere and the boys in the warehouse thereby lose their pet.

THE BEST THING WE HAVE COMES LAST

Cheer-makers in the homes of employes of the auditor of freight receipts, Chicago: (1) Bruce E., 4, son of F. E. Bell; (2) Mildred, 2, daughter of Henry W. Nelson; (3) Ruth E., 7, and Hazel H., 2, daughters of H. H. Vale; (4) Bob, 2, and Jack, 4, sons of L. G. West, grandsons of C. B. West; (5) Elizabeth, 11, and Edna, 7, daughters of L. F. Hale; (6) Lenore, 9, and Dorris, 2, daughters of William Levin. Dorris is the one who swallowed the nickel.

The Big Boss

Say, folks, did you hear what people all say,  
Dad works for the old I. C.?  
'Taint so, I know—no, 'taint that way—  
My Daddy, he's working for me.  
'Taint bosses and pay checks and 'ficiency stuff  
Keeps Dad working hard without miss.

'Taint so, I know—say, 'taint pay enough—  
He works for my hug and my kiss.  
When I laughs and hollers and huddles and  
tickles  
Dad works like it was all fun,  
But when I gets sick or swallows a nickel  
He drops all and comes home on a run.  
—CLERK, Auditor of Freight Receipts.

# ILLINOIS CENTRAL MAGAZINE

*January, 1922*

To All Officers and Employees of the Illinois Central System:

*I send Christmas greetings and best wishes for the happiest holiday season you have ever had. I also wish to express my grateful appreciation for the faithful and efficient manner in which you have performed your duties throughout the year. You have not only maintained the high standard for which the Illinois Central System has become noted, but you have kept our railroad fully abreast with the best among American railroads in the quality of service rendered to the public.*

*I welcome this opportunity to pledge, with you, renewed loyalty, strength and patience in facing, for our railway system, and our country, the task that 1922 has set for us. May the ties which bind us closely together be strengthened in this season of good cheer.*

GEORGE M. CROWSON, *Editor.*

CHARLES E. KANE, *Assistant Editor.*

## *President Appeals to Honor of Employes Urges That Accusations Against Railroads Be Supported or Repudiated as to Our System*

*The following letter, addressed to the employes of the Illinois Central System by President C. H. Markham, was sent out December 20:*

FOR a long time men who claim to represent you and your sentiments have been engaged in a campaign of abuse and vilification to discredit the managements of the railroads, including the Illinois Central System, in the eyes of the public. Your financial assistance, in the form of the dues and assessments of your organizations, has made it possible for these men to conduct their campaign of putting obstacles in the way of railway development. I cannot bring myself to believe, however, that the men of the Illinois Central System approve of this use of their money.

You surely will agree with me that the accusations made by these men whose activities your money makes possible are wholly inconsistent with the facts. As an example, take the case of Mr. Frank J. Warne, claiming to represent the train and engine service employes, who recently testified at great length before the Committee on Interstate Commerce of the United States Senate, making accusation after accusation without any evidence in support. He charged, among other things, that railway managements are profiting through contracts made at excessive prices with supply companies in which railway officers are financially interested; that railway managements are violating the law which prohibits the granting of rebates, concessions and discriminations;

that railway managements are granting to favored shippers the use of free transportation in violation of law, and that false claims for loss and damage to freight are being paid to favored shippers. Not a shred of evidence was given in support of these accusations.

### **Offenders Are Numerous**

Mr. Warne is not the only offender. Similarly unfounded charges have been made by Mr. W. Jett Lauck, who claims to represent the railway employes' department of the American Federation of Labor, in testimony before the United States Railroad Labor Board, and by Mr. Glenn E. Plumb, who calls himself general counsel of the Organized Railway Employes of America, in public speeches and articles in the paper called "Labor," supported by the contributions of or dues levied on railway employes, including yourselves. Some labor representatives for years have fought every effort on the part of the railroads for increases in rates—despite the fact that increases were needed to stabilize railway earnings so that employes might be assured of continued employment at good pay and under good working conditions—and have opposed policies designed to increase the efficiency of railway service.

I cannot believe that these men, calling themselves your spokesmen, reflect the true sentiment of the men of the Illinois Central System, who have worked with the management so faithfully and whole-heartedly in building up a railway system which we pride ourselves in believing is one of the greatest

railway systems in the world. But, frankly, I have been disappointed that these men have been permitted to continue to pour out unchecked torrents of false accusations without even a word of public protest from the men whom they claim to represent and whose money makes their activities possible.

I earnestly suggest that you consider seriously their charges. You are in a position to develop the truth or falsity of their statements as far as our railroad is concerned. If you find that their charges are true, I suggest that it is your duty to bring the evidence to my attention and to the attention of the public. If you find that the charges are false, I insist that it is your duty as honest men to make public disavowal of the men who thus misrepresent you.

#### **Must Keep Our Record Clean**

In no case did Mr. Warne exempt the Illinois Central System from his broad and general accusations, and it is to be assumed therefore that he included us. Many of you are in a particularly favorable position to learn whether excessive prices are being paid on our railroad for materials and supplies, whether we indulge in the unlawful practices of giving rebates, concessions and discriminations (which Mr. Warne says are "not confined to any group of railroads or any particular section of the country") or of granting free transportation in violation of the law, or whether false claims are being paid as concessions to shippers. I believe there are no such cases on the Illinois Central System. If there are any, I earnestly beg you to bring them to my attention. I want to include in this invitation an earnest request that you bring to my attention any practice on the part of any representative of the Illinois Central System which is in violation of the code of ethics which should guide every honorable business man.

< Our organization on the Illinois Central System is not perfect. I know of no human agency which is perfect. But I do have unbounded confidence in the honesty and integrity of the employes of our railroad. If there are any among us who by their acts are bringing us to discredit in the eyes of the public, it is our duty to get rid of them. We must stand before the public with clean hands.

#### **All Officers Are Employes**

One thing to be regretted about the irresponsible accusations of these men who claim

to represent you is their attempt to create a breach between railway managements and employes. The term "railway officer" is a misnomer. All railway officers are employes. The officers of the Illinois Central System are men who have been selected from the ranks of employes to hold positions of greater responsibility and trust, but they remain employes. Loyalty is a common duty we all owe to the company that furnishes us with employment. We of the Illinois Central System have but one end to serve, to make this railway system of greatest service to the public. That should keep us bound closely together.

Unless the Illinois Central System prospers, its employes cannot prosper. We must do everything within our power to build up our railway system, and thus faithfully discharge the obligation we are under to serve the public with transportation. In doing that we shall build up that which will give us permanent employment and make our own future secure. If we fail to discharge this obligation, we are only bringing down our house upon our own heads.

I make this personal appeal to you because I believe, as I have said many times, that there are no more loyal and earnest men in the world than the men of the Illinois Central System. I am in sympathy with your ambitions for better conditions in life. Labor organization conceived upon a platform which will bring improvement in those conditions in the right manner has my whole-hearted approval. Organization which is founded upon any other platform is not worth while.

### **Supported Red Cross**

The following letter from Vice-President L. W. Baldwin to Marquis Eaton, Chairman, Chicago Chapter, American Red Cross, 400 North Michigan avenue, Chicago, Ill., is self-explanatory:

"Enclose Illinois Central Railroad Company voucher No. 5627, in amount two thousand fifty-five and 31/100 dollars (\$2,055.31), covering subscriptions made by employes of the Illinois Central Railroad in Chicago and Cook County to the Fifth Red Cross Roll Call."

Receipt was most gratefully acknowledged by Mr. Eaton, and to this Mrs. Frederick B. Countiss, chairman for the Loop, added her personal thanks.

## They Go After Business at Jackson, Miss.

### Live Organization Has Systematized Employee Solicitation of Traffic at That Point

WE are all familiar with the old wheeze about the small boy who took a pig in a sack to town to sell and who returned at night to the farm with the pig still in his possession. Being asked by his father why he had not made a sale, he replied: "Nobody asked me what I had in the sack." He had failed to advertise his wares at the market place; he had sat dumbly idle without an effort to offer his produce at the doors of possible purchasers.

In this respect he does not differ from others who have goods or service to sell, and who fail to call to the attention of the public those facilities or special features which make their wares attractive. In a traffic sense this becomes even more important when it is remembered that there are at junction points several railway lines, all of which can and do offer prompt,

courteous and efficient service, all of which are openly desirous of securing both the inbound and outbound business of the entire community, as well the consumer as the producer. The Illinois Central System is well advertised; its service is wonderful, and the general public knows that fact; yet it is surprising how little effort the average shipper or receiver of freight will make to direct or divert his traffic to our line as against another, unless the matter is brought home to him by direct solicitation.

#### The Good Old Days Are Gone

Solicitation of competitive freight traffic as conducted today is almost an exact science. The old days have passed in which the solicitor could promise a preferential rate, a rebate under cover or unlimited passes; and John Barleycorn, as an induce-

Our traffic experts at Jackson, Miss. Standing, left to right: J. L. Morgan, agent; R. W. Hardin, general yardmaster. Sitting, left to right, the solicitation committee: C. H. Williams, Sr., claim clerk, chairman; E. E. Hardy, chief yard clerk; A. E. Wacaster, warehouse foreman; Homer Hill, cashier.

ment to the signing of routing orders, has been relegated to the rear. Today service, effectively presented and explained by the solicitor (and rigidly carried out by the railway organization), plus equal rates and, in a certain degree, plus the personality of the solicitor, forms the basis of all competitive solicitation of traffic, either freight or passenger.

No solicitor should promise more than his organization can perform; wild promises are dangerous, and one such broken promise is a boomerang; two boomerangs in the same place will effectually kill the business. Failure to reciprocate route orders by giving immediate and thoughtful personal attention and consideration to requests of the patron for tracing, for rate advices, for any reasonable information will eventually make the solicitor *persona non grata* to that receiver or shipper.

Ordinarily at the larger competitive points the traffic department has special representatives to look after solicitation and matters pertaining to movement of traffic. Since this is not the case at Jackson, Miss., traffic has to be looked after by the local agent and his organization. Out of this dilemma arose the theory and the subsequent practice of group solicitation by the employes of the agency.

#### Organized in March, 1921

This idea took concrete form in March, 1921. A meeting in the agent's office was attended by representatives of each department and division of the agency. It was realized at the outset that haphazard solicitation would be worse than useless, that shippers and receivers would soon tire of being solicited by half a dozen persons for the same shipment, that route orders must be carefully checked and promptly and properly placed to be effective. It was decided to form a committee to take the matter in charge, and out of this meeting grew the present Freight Traffic Solicitation Committee, consisting of Homer Hill, cashier; E. E. Hardy, chief yard clerk, and A. E. Wacaster, warehouse foreman. The committee chose C. H. Williams, Sr., as chairman.

All route orders and matters pertaining to this particular line of work are referred to the chairman, who carefully edits them,

culling out duplicates, re-arranging routing directions to avoid impossible or impracticable routes or short haul junctions and routes where the rate is not applicable. After this is done, each order is forwarded to the proper traffic official in the territory in which the shipment originates, this transmittal being made on a specially prepared form of letter, a copy of which is retained for the traffic file.

#### Weekly Report Is Made

At the end of each week a report in the form of an itemized statement is made to Joseph Hattendorf, general freight agent, Memphis, Tenn., with a copy for T. J. Quigley, superintendent, McComb, Miss. This report shows in detail the name of the employe obtaining the routing, the name of the person or firm signing it, the address of the firm or corporation to which the order is directed and its location, the number of carloads included in the order and the class or commodity represented, a statement as to where the order was sent for placement and the date on which it was forwarded.

#### Preparedness

I have been thinking a great deal about preparedness, and have come to the conclusion that none of us is prepared for things as they sometimes come to us. In the late war, had we been prepared, no doubt the struggle would not have lasted so long as it did. This subject brings to my mind a story on preparedness.

An old negro came into a certain Kentucky town with a load of tobacco. After having it weighed and unloaded, he went to the office, where he was informed that, after the tobacco was weighed and stowed away, it was found the expense had overrun the worth of his tobacco some 59 cents. The bookkeeper said: "Well, Rastus, the next time you come to town just bring me a hen, and that will settle your bill."

The old negro left. In two or three days he was back. He went to the bookkeeper with a hen under each arm. The bookkeeper informed Rastus that he did not tell him to bring two hens, to which Rastus replied: "I know you-all didn't, Boss, but I has another load of tobacco."—B. RUNNALS, *Agent, Carbondale, Ill.*

In addition to this report, there is compiled weekly a statement showing the relative standing of each solicitor, who is in effect a competitor with every other employe. This report gives the number of orders obtained with the total number of cars involved, and is prepared separately as to carloads and less-than-carload orders. This "efficiency report" is placed on the bulletin boards of the freight office and the yard office. It acts as an incentive to each solicitor and in fact is an honor roll. A copy of that report for the work up to December 15, 1921, is presented herewith:

#### Carload Shipments

\*Now out of service.

The system works well. It must be effective, or the Jackson employes could not have obtained 531 carload orders cover-

ing 3,002 cars, and 261 less-than-carload orders since March, 1921.

#### Patrons Demand Service

The public has come to expect weekly visits from certain employes. The patrons even telephone in their orders with subsequent confirmation; they are receptive to any and all innovations as to route and service and seem to be well satisfied with the plan. This community solicitation, like every other system, is not all beer and skittles, however. You never receive "something for nothing." You cannot continually request routing orders without giving office service, as well as transportation service, in return. The Jackson employes find themselves called on for information and for special attention to little wants and difficulties more frequently than before, and they give that service pleasantly, promptly and willingly. A satisfied patron is the best advertisement, they feel. They prefer that a man should tell his troubles rather than nurse a grouch. As time goes on they find these wants become fewer and much more reasonable, and that an *esprit de corps* has been established between the patrons and the company's agency force which is strong and valuable.

The postal card system is not used at the Jackson agency. Solicitation is direct, personal and verbal. The employes go to the shipper or receiver as regularly as possible and make every effort to obtain something, no matter how little, at each visit. They also try to give some little service or assistance, no matter how small, with each visit. The results, as shown in the "efficiency report," seem to justify the efforts.

#### Some Examples of Success

Special attention might be directed to Thomas Shannon, a messenger. When delivering notices he always has a route order blank and will ask consignees if they will have another movement of the kind. In this way he has obtained eighty-eight route orders covering less-than-carload shipments and four carloads.

C. H. Williams, Jr., who left the service in September to enter the A. & M. College, worked on the expense bill desk. He frequently kept notes of shipments coming to the various consignees and would call on

## A New Year's Message From President Harding

**H**ERE on my desk I am keeping a photograph of a group of my old friends, taken on my front porch one day the past autumn. It has been a reminder and an inspiration to me many times, a reminder of the unlimited possibilities of American life, and an inspiration to all effort that those possibilities may be preserved and broadened. Let me point out some of them.

Here is a man who started life as a water boy on a railroad construction gang, became a telegrapher, and is now a captain of industry—head of a great industry which he conceived, built and controls.

Next to him is another with a like beginning; a poor boy who had little education and no chance but what he made for himself out of this country's opportunities. He is one of the most important railroad executives in Ohio today.

Here is one of the men who have made Marion; he was a farm boy in this county, didn't know what it would mean to have a dollar to spend freely. Now he is a dominating figure in one of the largest manufacturing industries in the state—an industry whose products go literally all over the world. Down in the bottom row is a young man who came up by the same route. He had nothing, and imagined himself well started toward success when he became a country telegraph operator and station agent while yet a mere boy. He has risen step by step to be, today, general manager of one of the country's great railroads.

So on through the list. No man in that group of nine, apparently, had an even start for success. They all knew the hard ways, the real privations. Their story tells us what America means and why we must make it continue to mean opportunities and inspiration and the reward of merit. Every work to that end is to be commended and encouraged.

## Via New Orleans—What It Means to Us

### Our Storage Space at Stuyvesant Docks Will Accommodate 4,670 Carloads of Freight at Once

*Think of one station that can store 4,670 cars of freight!—62 trainloads of 75 cars each!—or one trainload that would be 40 miles long! That is our storage capacity at Stuyvesant Docks, New Orleans. The port of New Orleans, the second port in the United States, is served with rail transportation very largely by the Illinois Central System. New Orleans is our port, our chief touch with the outer world whose commodities we carry. The way we handle this import and export business, our actual contact with the ships at Stuyvesant Docks, is outlined in the article presented herewith.*

By **FRED DE LONG,**

Station Accountant, Stuyvesant Docks

**S**TUYVESANT Docks at New Orleans, opened in September, 1895, cover a space 4,730 feet long and 150 feet wide, reaching from Louisiana avenue to Napoleon avenue, a distance of thirteen city blocks. The dock is built of steel, concrete and brick, all under one roof, and is fire-proof. The wharf is divided into eleven sections, sections 1 to 8 inclusive being divided by brick walls two feet thick. If the freight in one section should catch on fire, the fire could not spread to the rest of the warehouse on account of these brick walls.

#### Can Handle Largest Steamers

The dock is built out over the Mississippi River for a distance of twenty feet, and at low water the depth along the dock is from twenty-five to fifty feet, allowing the largest steamer entering this port to dock any time during the year.

The warehouse, or dock, is equipped with eleven electric derricks and one large steam locomotive crane. It is also equipped with electric trucks and conveyors, as well as special equipment for handling large machinery, logs and marble across the wharf in any berth. The wharf will accommodate eleven of the largest vessels at one time, and if the wharf were loaded to capacity it would hold 1,050 cars of freight.

About two hundred feet back from the dock are two grain elevators. Elevator D, with a capacity of one million bushels of grain, and Elevator E, with a capacity of one and a half million bushels of grain, can, under normal conditions, unload two hundred cars of grain in ten hours. There are belts, or conveyors, running from Elevator E over the top of the docks through which four vessels can load grain at the same time at the rate of 80,000 bushels an hour. From Elevator D three vessels can load at the same time at the rate of 60,000 bushels an hour. In all, seven vessels can load grain at the same time at the rate of 140,000 bushels an hour.

These elevators are connected by a steel gallery and reversible belt which can handle 25,000 bushels of grain an hour, thereby avoiding the moving of vessels from one elevator to the other when their cargo con-

Agent A. E. Scaife

sists of grain from both elevators. These elevators are equipped with driers, circular cleaners, clippers, etc., for reconditioning grain. When running to capacity, they can handle from cars to vessel ten million bushels of grain a month. If the elevators were loaded to capacity, they would hold 2,500 cars of grain at one time.

### Add Three Large Warehouses

Next to, and parallel with, the docks are two steel and concrete warehouses known as Warehouse No. 30, which is 1,200 feet long and 100 feet wide, and Warehouse No. 31, which is 1,000 feet long and 100 feet wide. Warehouse No. 30 is divided into ten sections, each section 100 feet by 120 feet, separated by fire-proof walls. This warehouse will hold 18,000 bales of cotton, stored for access to any specific lot at any time; or it will hold 10,000 hogsheads of tobacco, tiered three hogsheads high; or it will hold 240 cars of miscellaneous cargo in carload lots.

In Warehouse No. 31, 140 feet at the east end is used as an office. This warehouse will hold 12,000 bales of cotton, stored for access to any specific lot at any time; or it will hold 7,000 hogsheads of tobacco, tiered three hogsheads high; or it will hold 180 cars of miscellaneous freight in carload lots.

Along Tchoupitoulas street, from Louisiana avenue to General Taylor street, a distance of seven city blocks, is Warehouse No. 32, which is 2,290 feet in length and varying from 88 feet wide at Louisiana avenue to 180 feet wide at General Taylor street. This warehouse is divided into nine sections, all sections separated by fire-proof walls. The largest section has a floor space of 50,000 square feet.

### Storage for 40 Miles of Freight

This warehouse is used principally to handle cotton shipped to New Orleans for local delivery. It will hold 35,000 bales of cotton, stored for access to any specific lot at any time. During the dull cotton season this warehouse is used to store nitrate of soda, sisal and tobacco. This warehouse, when loaded to capacity, will hold 700 cars of freight.

If the docks, warehouses and elevators were loaded to capacity at the same time, they would hold 4,670 cars of freight, or 62 trainloads of 75 cars each. If these cars were all placed in one train at the same time, the train would be about 40 miles long. The

docks are so situated that a steamer can take on round cargo and bulk grain and coal up at the same time.

Some sizable steamers load and unload freight at the docks. One steamer, the latter part of October, took on 175 carloads of wheat, equivalent to two trainloads of 87 cars each. From the largest banana boat entering the port 145 cars of bananas are unloaded, equivalent to two trainloads of more than 70 cars each.

Since the station opened as a regular agency, August 10, up to the close of October, 23,959 cars of freight were handled, amounting to 314,628 tons.

### A Big Job for One Man

The employes at this station lay claim to the fact that these are the largest dock and warehouse facilities under the supervision of any one man in the United States.

The man in charge is the agent, Arthur E. Scaife. Mr. Scaife, who was born March 7, 1867, at Hernando, Miss., started his railway career with the old Mississippi & Tennessee Railroad (now the Illinois Central) in 1885 at Memphis, Tenn., as collector. Afterward he served as receiving and cotton clerk until November, 1892, when he was transferred to New Orleans as cotton clerk. He was transferred from his work as cotton clerk to be in charge of the Southport Yards of the Illinois Central and Y. & M. V. until 1895. He was placed in charge of Stuyvesant Docks as wharfinger that year, the day they opened. In 1911 Stuyvesant Docks were made a limited agency, and Mr. Scaife was appointed as agent. He is now joint export and import agent.

August 10, 1921, Stuyvesant Docks were opened as a regular station, or agency, for the handling of export and import freight only, in carload lots. This work was formerly handled by the New Orleans local freight office. Since the separation and transfer on August 10, I am reliably informed, New Orleans is the only city on the Illinois Central where two large, separate and distinct stations, or agencies, are maintained, and also that the warehouse at this point is the largest on the Illinois Central.

### A Wonderful New Office.

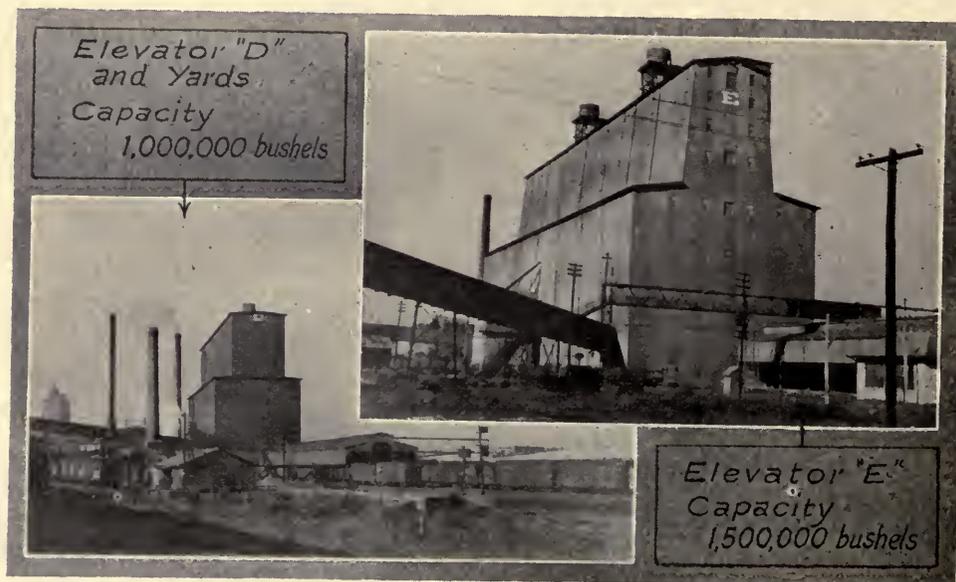

A large new office was built at this station in the south end of Warehouse No. 31. The office is all on the ground floor and has

a floor space of 12,000 square feet. It is very light, as the east and west walls are composed of nothing but windows. The window frames and sashes are made of steel, and the office is fireproof throughout. There is no doubt that this is one of the finest and best-equipped railroad offices in the country.

There is a mahogany finished counter 5 feet wide and 55 feet long, over which the public transacts business. The office is well supplied with electric fans, and there is running ice water all the time—city water, which never comes in contact with the ice that cools it, as the water runs through coils packed in ice under the ground. Each clerk

has a steel locker for his own use. The windows are screened with copper wire screening, and likewise the doors, for protection from the galinippers which are so plentiful and such a pest in this part of the country.

Mr. Scaife, as explained, has been here for many years, ever since the opening of Stuyvesant Docks. The chief clerk, W. H. Powers, likewise has been here a number of years. When this station was opened August 10 to handle accounts, F. De Long was transferred from the Chicago, Ill., local freight office as accountant, and E. M. Blanchard was transferred from the New Orleans local office as cashier.

*The Elevators at Stuyvesant Docks*

## Some Self-Education in Salesmanship

By H. O. DAHL,  
General Yardmaster, Waterloo, Iowa

Some time ago a request was made by our president, Mr. Markham, that each employe obtain one carload of freight. I am sure Mr. Markham, in making this request, did not have in mind only the purpose of finance from the railway standpoint, but also the education of the average employe.

If you have not obtained a car of freight, do so and learn the tact of meeting a commercial man and the act of approach. Let him educate you in the fine points of sales-

manship. We are all salesmen, selling all that we, as a railroad, have for sale—transportation and service.

In soliciting freight, you should first get as much detail as possible covering the concern you are about to call on, the amount of business it is doing and the proportion your railroad is obtaining. You should have with you data, as far as possible, as to the patronage the concern is receiving from our employes, etc.

In a larger terminal you should get the number of employes enrolled or living in

that city, the amount of the monthly payroll and the money the railroad has invested in the town, in order to give you an idea what the railway company is leaving in the community in the way of salaries paid out. A good way to assemble this is through a special committee, when possible—or better still, an active organization of solicitors formed for this purpose, with officers elected to handle all detail in a practical manner.

The writer is sure that any employe taking an active part in solicitation will find the experience pleasing and educational. You will find the average person solicited very much interested and pleased to learn that you are taking a personal interest in

his business as well as that of the railroad, and this will develop a pleasant relationship among the employe, the patron and the employer.

Strive not to let any freight go out of your own town unless it moves on your own railroad and also strive not to let any freight come into your town on other than your own line. If it does, in a very diplomatic way endeavor to find the cause therefor. In this way, you may be able to rectify imaginary grievances, which will result in our obtaining the business.

Take an interest in your railroad. Obtain business and see the result. You owe it to the company, as the company's business means your bread and butter.

## Great Economy Lies in Heavy Loading

It cost the Illinois Central System \$89,726.60 more in transportation expense to handle its carload freight traffic in November, 1921, than it would have cost if the average loading of cars had been the same as in November, 1920, according to an estimate prepared by R. B. Goe, supervisor of weighing and inspection.

Mr. Goe's report is a summary of his reports on the loading of cars by commodities on each division, as obtained from the agents' reports of car capacity utilized. He estimates that as a result of the heavier loading of some commodities by divisions the system was relieved of performing 7,283,920 gross ton

miles of service, with a saving in transportation expense of \$36,419.60. Offsetting this, however, is the information that the failure to load some commodities as heavily made it necessary for the system to perform 25,229,240 additional gross ton miles of freight service, at an increased transportation expense of \$126,146.20.

The following report by divisions shows the increased transportation expense caused by the falling off in the carload of some commodities, the decreased transportation expense occasioned by the heavier loading of other commodities, and the net increase or decrease in transportation expense charged to each division:

Division	Increased Transportation Expense	Decreased Transportation Expense	Net Increase
Chicago Terminal .....	\$ 34,389.60	\$ 1,584.80	\$32,804.80
Illinois .....	2,060.80	865.20	1,195.60
St. Louis .....	798.00	6,921.60	*6,123.60
Springfield .....	2,895.80	6,386.80	*3,491.00
Indiana .....	5,426.40	1,870.40	3,556.00
Wisconsin .....	5,079.20	971.60	4,107.60
Minnesota .....	3,315.20	798.00	2,517.20
Iowa .....	2,704.80	2,279.20	425.60
Kentucky .....	8,806.00	277.20	8,528.80
Tennessee .....	3,418.80	1,607.20	1,811.60
Mississippi .....	5,339.60	1,024.80	4,314.80
Louisiana .....	1,943.20	1,624.00	319.20
New Orleans Terminal .....	5,614.00	963.20	4,650.80
Memphis Terminal .....	23,508.80	918.40	22,590.40
Memphis .....	7,414.40	2,884.00	4,530.40
Vicksburg .....	1,433.60	4,743.20	*3,309.60
New Orleans .....	11,998.00	700.00	11,298.00
<b>Total.....</b>	<b>\$126,146.20</b>	<b>\$36,419.60</b>	<b>\$89,726.60</b>

\*Indicates net decrease in transportation expense.

# Illinois Central System Ready for the Tasks of 1922

The beginning of a new year is a time when we pause to review what has transpired in the year just ended, seeking to gain from our reflection something which will be of value in deciding our future course.

The eventful year through which we have just passed has been particularly marked by restrictive economic demands upon the railroads. We entered the year full of hope that the business depression which had set in would soon spend its force and that business would again go along normally, but that hope failed to materialize. As a result of the falling off in business, the railroads as a whole during the first nine months of the year earned a net return equivalent to approximately 2.9 per cent upon their valuation—a return barely sufficient to pay interest on outstanding bonds, with no allowance for compensation to the owners. The improvement in net earnings during the latter part of the year has been slow, and in many instances it has been brought about only at the sacrifice of badly needed maintenance expenditures. A demand for reduced railway rates, in the face of the failure of the railroads, as a whole, to earn a net return sufficient to their needs, also was restrictive in the uncertainty it created.

In spite of these influences, however, the railroads have given adequate service at all times. We should not be discouraged by the present situation, unfavorable as some of its aspects may be.

We should like to give you in this review a statement of how the Illinois Central System has accounted for itself during 1921, but at this time we have complete information covering only the ten months to November 1.

During the first ten months of the year, the Illinois Central System performed a freight service equivalent to carrying 10,286,296,822 tons of freight one mile, as compared with 13,200,197,416 net ton miles in the first ten months of 1920. During the first ten months of 1921 we performed a passenger service equivalent to carrying 642,365,624 pas-

sengers one mile, as compared with 859,526,161 passenger miles in the first ten months of 1920. This decrease in business is reflected in the gross earnings. For the first ten months of 1921 we had a gross income of \$135,926,186, which was \$6,615,074 less than the gross income of the corresponding period of 1920.

Through drastic reductions in our expenditures, we ended the first ten months of 1921 with a net income of \$7,772,154. Approximately \$6,375,600 was required to pay dividends on stock for the ten months period, leaving a balance of \$1,396,554 for improvements in our properties. However, during the ten months of this year covered in this report we spent a total of \$16,284,809 for new equipment, over and above amounts spent in the repair and maintenance of equipment, and a total of \$6,614,782 for permanent improvements to roadway, over and above expenditures for maintenance. This total new investment of \$22,899,591 exceeded the amount we had left over after paying expenses and a return on investment by \$21,503,047, which had to be borrowed.

We entered the year with 57,081 employes, but the drastic reductions in force made necessary by the great decline in business cut the number to 48,649 in February. Since that time there has been a steady gain in the number of employes. When it became known that a reduced scale of wages would become effective July 1 through the ruling of the Railroad Labor Board, we immediately laid plans for large increases in our forces, with the result that by October we had a total of 60,388 employes in all departments.

In spite of the depression, the Illinois Central has made a creditable showing. One reason for this has been that our employes have striven at all times to perform their service to the public in that efficient and courteous manner which marks our organization. To them belongs much of the credit for what we have accomplished.

We take the position that we are but the trustees of a great investment which has been made in this agency of transportation, and that we are responsible to the public for our stewardship. We call the public's attention to the events of the year, and give our pledge that we shall strive to our utmost to make of 1922 a year of still greater successes. To that end we seek your confidence and good will.

Constructive criticism and suggestions are invited.

**C. H. MARKHAM,**  
President, Illinois Central System.

# The Benefits of Treating Boiler Waters

*On One Job, Five Engines Now Do the Work That Six Did,  
and Coal Saving Is 25 Per Cent*

By C. R. KNOWLES,  
Superintendent, Water Service

**W**ATER is treated by the lime and soda process at twenty water stations on the Illinois Central, and mud and suspended matter are removed from the water by filtration at three stations. In addition to this, water from approximately seventy stations is treated by the interior method, which consists of applying chemicals direct to the water in the engine tenders or boilers.

The total investment in lime and soda treating plants is \$247,801; in filter plants, \$52,438.

A total of 1,150,000,000 gallons of water is softened annually with lime and soda ash, and 481,000,000 gallons are filtered. The annual cost for operation and maintenance of softening plants is \$90,000, while the cost for the operation of filter plants is \$9,500. These figures including interest and depreciation charges. A total of 200,000 pounds of chemicals is used annually in interior treatment at a cost of \$20,000, which makes the total cost of water treatment for locomotives \$119,500 a year.

It is obvious that material results must be

*Good water helps us maintain our on-time record.*

*Good water makes possible the movement of high-class perishable freight without delay.*

obtained from the use of treated water in locomotives to justify this expense. Capitalized at 6 per cent, it is equivalent to an investment of nearly \$2,000,000.

### Saving at 15 Cents a Pound

While the benefits from water treatment are generally admitted, they are chiefly of an intangible nature and difficult to convert into direct financial returns. As a result of the difficulty of placing a direct value upon

the numerous benefits derived from treating water, the saving is usually arrived at by placing a certain value upon the removal of impurities by treatment in water softening plants. Fifteen cents is generally accepted as representing the aggregate saving effected for each pound of scale-forming material removed from the water. This figure is used in arriving at the net saving in the following table showing the operating results from water softening plants on the Illinois Central during 1920:

Plant	Source of Supply	Number Gallons Pumped	Lbs. of Solids Removed Per Year	Saving at 15c Per Lb. Solids Removed	Cost of Treatment	Net Saving Per Year
Freeport .....	River	255,021,000	433,535	\$ 65,030.25	\$ 12,952.70	\$ 52,077.55

\*Cost of treatment in excess of saving.

### What Mud Removal Means

The saving effected by the removal of mud is dependent to some extent upon the prevention of scale formed either by the mud alone or in combination with scale-forming solids in solution in the water, but the chief saving through mud removal is in the increased time a locomotive may be operated between wash-outs, the prevention of foaming through accumulation of mud, the impossibility of mud burns and the decreased cost of boiler washing.

Mud is a fruitful source of trouble in locomotive boilers and is always a menace to the proper operation on account of the foaming and the danger of burning the boiler if the mud is allowed to accumulate on the sheets. In order to safeguard against these troubles, it is necessary to wash the boiler every one to three round trips where ex-

tremely muddy water is used, while by removing the mud from the water before it enters the boiler the wash-out period may be extended to six or eight round trips or longer, depending upon the service in which the locomotive is used, the quantity of matter in solution in the water, and the amount of blowing-off done.

The rivers of the South and Middle West often carry 5 or 6 pounds of suspended matter per thousand gallons during the periods of high water, which means that a locomotive may take into its boiler 100 to 120 pounds of mud on one trip.

### Paid for Itself in Two Months

The treating plant constructed at Homewood, Ill., for treating the water used by the Walsh Construction Company in grading the new Markham Yard is an example

*The Homewood treating plant made it possible for five of these engines to do the work of six engines using bad water.*

showing concrete results of water treatment.

The equipment used by the contractor consisted of two steam shovels, six locomotives and two hoisting engines. The saving effected by the treatment in less than two months was equal to the entire cost of the water-softening plant and presents an unusual demonstration of the value of water treatment. This demonstration is especially conclusive because the isolation of the equipment limited its supply of water to a single source and because the record of per-

formance gives a check not only on the total quantity of fuel but also on the relative amount of fuel used per unit of equipment performance.

The contractor found the water upon which he was dependent for his water supply so unfit for use that it caused serious difficulty in the operation of equipment. As a result, a water-softening plant was installed which treated all the water used in the boiler's after October 27, 1918. Records of the fuel used before and after the installation of the softener constitute the basis for the conclu-

*Good water increased the efficiency of this shovel 33 per cent.*

# The Motor Truck, Aid to Transportation

*President C. H. Markham, However, Names Some of Its Drawbacks in a Speech to Peoria, Ill., Club*

THE proper development of the motor truck as a common carrier on the public highways, in line with the nation's whole transportation problem, is desirable, President C. H. Markham of the Illinois Central System declared in an address December 8 before the Transportation Club of Peoria, Ill. It is one phase of providing the public with adequate, efficient and economical transportation service, he said.

Mr. Markham devoted his address to a discussion of the problems of transportation in their three phases, with respect to the rail, water and motor truck carriers. Speaking of the use of motor trucks in common carrier service, he said, in part:

## The Motor Truck's Place

"The use of the motor truck was given considerable impetus during the war, when the demands of traffic were greater than the railroads were able to handle. Since the war there has been a decided falling off in the use of trucks, especially in the Middle West, as rail transportation has been found cheaper, more efficient, and, on the whole, more feasible. I believe the future of the motor truck will be found in taking from the railroads the burden of excessive short hauls and thus also lessening switching and terminal movement. I do not foresee the development of the motor truck as a real competitor of either the railroads or the waterways in long hauls.

"The greatest use of the truck as a common carrier has been developed in the large cities and their environs, in some sections of the East and in some places on the Pacific coast. Plans were under way in October and November, 1918, to extend the use of trucks in the Chicago district considerably, should the war continue many months longer with its burden upon the lines of railway communication. Those plans were abandoned following the armistice, because the motor truck had not yet proved its ability to handle quantities of traffic more cheaply than they can be handled by rail.

"With this premise, therefore—that the

motor truck has a definite place in the transportation field, that of supplementing the service of the rail and water carriers—allow me to raise for your consideration a few points which have an important bearing on the subject of its relation to the problem of transportation.

## For Equality in Restrictions

"I have made the point that, in justice to the railroads and the users of their service, the waterway transportation agencies must be made to bear the cost of operation and a fair proportion of the cost of providing the facilities. The same thing is true of the use of motor trucks as a common carrier industry. Unfortunately, there have been few experiments which give us definite information on the actual costs of truck service. Where trucking companies have made rates which take business from the railroads, and they have seemingly prospered for a short time, many of them have ultimately failed. The trucking companies have this advantage, of course: They are not surrounded with the restrictions and limitations which are placed upon the railroads; they are not required by rigid laws and the binding regulations of constituted agencies to maintain certain services. They have no Eight-Hour Law, no national rules and working conditions for their employes, fixed without their consent by the leaders of highly unionized forces and a paternalistic government. It is not beyond the range of human imagination that they will be bound down by such restrictions, if they continue to operate as common carriers. When they are, will they then be able to make rates which will compete with the rail carriers?

"And if they are allowed to become a definite part of the general plan of providing transportation service, should they not be operated on a parity with the other agencies of transportation? Is it fair to tell the railroads that eight hours shall be the basic day, with cumbersome and costly restrictions upon operation in the sixteen other hours of the twenty-four, and not tell the

trucking companies the same thing? Is it fair to tell the railroads what service they must give, what rates they must charge, what wages they must pay their employes and what conditions their employes shall work under, and not place the same restrictions upon their competitors?

#### All in the Same Boat

"I do not plead for a subjection of the trucking companies to the same drastic restrictions the railroads are now subjected to. I have seen the economic loss which such a system produces, and I would plead, rather, that all the agencies of transportation be relieved of it. But I do present for your earnest consideration that the railroads, the waterway carriers and the trucking companies—all engaged in transportation—should be treated as nearly alike as possible. It is not fair to surround the railroads with cumbersome restrictions and place no restrictions whatever upon the other agencies of transportation.

"Another phase of the situation with respect to the use of motor trucks as common carriers, is this: The railroads are required to build and maintain their roadways, assessing against the cost of service a return upon investment and the cost of maintenance and replacement. The trucks, on the other hand, are furnished without charge other than small license fees the use of the public highways, built with public funds.

#### Wear and Tear on Roads

"It might be said that the highways are there, that they are built primarily for the service of the people as a whole, that they will be maintained regardless of their use in truck traffic, and therefore any effort to make the trucking companies bear an adequate portion of the cost would be unfair.

"While hard-surfaced roads are built primarily for the use of the people as a whole, every road constructed is planned with the view of bearing the traffic which is expected to pass over it. A road of sufficient strength to bear the wear and tear of freight-carrying motor truck traffic costs considerably more than a road of the strength to withstand otherwise normal usage. Mr. L. S. Sadler, Commissioner of Roads of the State of Pennsylvania, testifying before the Committee on Roads of the national House of Representatives, December 15, 1920, de-

clared that roads in Pennsylvania of sufficient strength to withstand the wear and tear of heavily loaded motor trucks cost the state \$60,000 a mile during 1920, and he estimated that the cost of such roads in 1921, with reduced labor and material cost, would be between \$50,000 and \$55,000 a mile. Further than that, he testified that the annual cost of maintenance of such roads under the wear and tear of truck traffic averaged \$5,000 a mile.

#### Comparison of Capitalization

"I ask you to compare this initial cost with the cost of building and equipping the railroads of the United States. The capitalization per mile of American railroads is lower than the capitalization per mile of the railroads of any other principal country in the world.

"The following are the latest figures available on the capitalization of railroads per mile:

Belgium .....	\$216,143
France .....	150,439
Japan .....	99,184
Germany .....	120,049
United Kingdom .....	275,590
United States .....	72,106

"While the hard-surfaced roads built in Pennsylvania in 1920 to withstand the wear and tear of heavy truck traffic were constructed at an initial cost of \$60,000 per mile, the railroads of the United States, including their equipment, roadway and all investments, cost less than \$73,000 a mile. And the \$60,000 is shown to be only the initial cost, with yearly expenditures for maintenance running at the rate of \$5,000 per mile and the need for entire replacement within a few years.

#### Hard Roads in New England

"I want to quote on this subject the following from an article by Mr. Philip Cabot, a Boston business man, which appeared recently in the *Atlantic Monthly*:

"Every abuse carries its penalty. The penalty for this abuse of our roads will be a heavy one, which the tax-payers must pay. The Commonwealth of Massachusetts has spent more than \$25,000,000 of the tax-payers' money in road construction, much of which has already been ground to powder under the wheels of the five-ton truck; and the damage must today be repaired at perhaps double the former cost. Our state tax has mounted, in recent years, by leaps

and bounds; the contribution of the truck-owner to the cost of road construction is so trivial, that most of the burden will fall upon the tax-payer, on whose now over-loaded back a huge additional levy is apparently about to fall at the very moment when he is expecting relief. And make no mistake as to who must bear the burden. The old notion that a tax could be pinned upon one class has vanished into thin air. We now realize that it is not the capitalist who pays the tax, or the manufacturer. It is the man in the street who pays the tax, in the increased cost of everything he buys. He pays the bill for every waste of public money.'

### Roads Not Built for Trucks

"Mr. Cabot then goes into operating costs and arrives at the conclusion that the people of Massachusetts, by the expenditure of more than \$10,000,000 annually on building and maintaining highways, can build up a system of transportation whose operating costs will be prohibitive:

"This conclusion does not imply that the policy of the Commonwealth regarding the construction of state roads has been unwise. On the contrary, such construction, properly planned and administered on the basis of payment by the automobile of its share of cost and maintenance, through a system of registration fees, is sound and popular. But these roads were designed for relatively light traffic; their foundations and bridges are wholly inadequate to withstand the blows of a five-ton truck, and their use for freight service of this character is wantonly wasteful. The \$25,000,000 investment of the tax-payers' money is being destroyed by a use that was never intended. Your pocket knife makes a poor claw-hammer, to say nothing of the effect on the knife.'

"As further testimony on the wear and tear of trucks on the roads permit me to quote the following from an article by Mr. H. S. Fairbank, Senior Highway Engineer of the Bureau of Public Roads, in the Year-book of the Department of Agriculture, 1920:

### Measuring Force of the Blow

"The blows a motor truck delivers to a road, like the shells a big gun hurls into a fortress, can be withstood only if the force of the impact is accurately known in advance and provided for. The first move in solving the problem of road building for motor truck

traffic was to find out how much force the truck puts into a blow . . . . It has been found that a five-ton truck equipped with solid rubber tires and traveling at a speed of 15 miles per hour, striking a surface depression only one-quarter inch in depth, delivers a blow to the road equivalent to four times its actual weight.'

### Would Adopt the Waterways

"I do not bring up this phase of the question to cite an argument against the proper development of the motor truck as a common carrier. As I said, I believe it has its proper field, in the short hauls which it can perform with a door-to-door delivery. But I ask you to consider whether the industry should not be made to carry itself and to pay its proportionate cost of building and maintaining the facilities offered it by the public."

Mr. Markham urged that experiments to determine the feasibility of inland waterways be given a fair trial. If they prove that particular waterways should be made a part of the transportation plans for the country, the railroads should not be barred from operating boat lines as co-ordinate parts of their services.

Rail and water carrier services are not fundamentally competitive, Mr. Markham said. A recognition of that fact allows railway men to take a broader view of the question of developing waterways.

A resume was given of railway affairs as they exist now with respect to the failure of the roads to earn the net return which the Transportation Act contemplates they should earn.

In speaking of the need for further reductions in the cost of operation, he said, in part:

### Skimming Has Been Necessary

"During the nine months ending September 30 the enormous slump in traffic naturally brought a decrease in transportation expenses, but we find that while transportation expenditures fell off 18.9 per cent, as compared with the first nine months of 1920, expenditures for maintenance of way and structures fell off 27.1 per cent, and expenditures for maintenance of equipment fell off 19.6 per cent. This reduction of maintenance expense must be considered in the light of the fact that maintenance requirements this year were the greatest ever

known. Practically all of this maintenance work will have to be performed during the coming months, in addition to normal maintenance requirements. Holding maintenance expenditures down, therefore, is not a saving; it means merely awaiting the availability of ready cash. So it will be seen that even the small net return which the railroads earned during the nine months ending September 30—a return barely sufficient to pay the interest on their outstanding bonds, with no allowance made for dividends—was realized only at the expense of putting off expenditures which are going to have to be made as funds become available.

"It must be borne in mind, in any consideration of the railway problem, that the railroads did not profit, as many industries did, during the war period. Many industries were enabled to lay by profits during the war period which permit them now to take their losses in readjustment without endangering their soundness as business institutions. The railroads, however, were operated by the government under a provision which guaranteed to them the average earnings of three pre-war years, a rate of slightly more than 5 per cent on property valuation. It is worthy of note that these obligations remain, in a large part, still unpaid, but the point I wanted to make is that the railroads were not permitted to lay by in surplus funds an amount sufficient to tide them over such a period of readjustment as we have been passing through. As a result, railway credit is seriously impaired.

#### Earnings Not Guaranteed Now

"The government recognized this disadvantage at which the railroads were placed in facing readjustments when it created the six months' guaranty period, extending from March 1 to August 31, 1920. But since August 31, 1920, no guaranties of any kind have been in effect and the railroads have been earning, as before pointed out, less than one-half the return which the law prescribes as fair and reasonable.

"The need for further reductions in the railway payroll is readily apparent upon an examination of information on increases in the payroll. In 1916 the railroads paid a wage bill of \$1,468,576,394, and in 1920 it had increased to \$3,698,216,351. During the first six months of 1921, with the great reduc-

tion in the number of railway employes, the payroll was at the annual rate of \$2,914,020,302. Since the middle of the year there have been reductions in railway wages, but the increased number of workers this has allowed the railroads to employ may offset any benefits which might accrue to the railroads in increased earning power as a result of the reduction in wages. It is probable therefore, that the 1921 payroll will be an increase of nearly 100 per cent over 1916.

#### Rail Workers Worth Good Money

"I take this occasion to repeat something I have said many times during the last several months, and that is that I believe railway workers are entitled to the highest pay justified by economic conditions. They perform one of the nation's most important services. Certain groups of railway workers have many millions of dollars' worth of equipment and goods in their hands every day, and the character of service demanded of them is of the most painstaking. In times past railway workers were underpaid. I am decidedly not in favor of putting railway wages back on the pre-war scale. I even wish it were possible to continue the present scale of wages. The ambitions which railway workers have for bettering their working conditions and for earning enough to make life pleasant have my fullest sympathy. I have come through the mill, and I speak, I believe, with a full understanding of the problems of working people.

"However, to pay railway workers more than the limit justified by economic conditions would not only be inimical to the public welfare but would be inimical to the welfare of the workers themselves.

"You must remember that these figures on the great increases in the total payroll of the railroads are not representative of the increases which have come to certain groups of the workers. During federal control the Railroad Administration followed a policy of giving the greatest increases in pay to the groups of workers which received the lowest pay. Unskilled labor, in almost all cases, was given much greater increases than skilled labor.

#### Readjustments of Pay Needed

"It is entirely inequitable that further cuts in the pay of skilled laborers, whose preparation requires long periods of train-

ing, should be at the same rate as cuts in the pay of workers whose compensation has increased many times as much. Rather than a general blanket reduction in pay, we need readjustments. There are some workers who are performing a high grade of trained service and working solely in the interest of their employers who are earning every dollar they receive. I favor paying them what they earn. The wages of others must be adjusted along graduated scales.

"Such a reduction in rates as would further impair railway credit and possibly throw a great many roads into bankruptcy would not be in the interest of the public welfare. When we strive to protect railway credit,

we are working not alone in the interest of simple justice to the investors whose resources have made the railroads possible, but we are working in the greater interest of stabilizing the railroads—of making it possible for the railroads to continue to be operated and maintained and enlarged under the American principle of control by their owners. Unless we want to throw the railroads under the control of the state—and I am sure all of us want to prevent that—we must see that their development and growth are assured under the present plan of operation. That means that their earnings must be sufficient to attract new capital resources."

## Stock-Killing in a 21 Per Cent Reduction

A decrease of 21 per cent in the number of stock killed on the Illinois Central System in November, 1921, as compared with November, 1920, sums up the success of the recent "Strike No Stock" campaign. November, 1920, saw 484 head of stock killed on Illinois Central System waylands, while the number for the November just past was 384, a reduction of exactly 100.

Compared with October, 1921, however, the November, 1921, figure is an increase of 140 head.

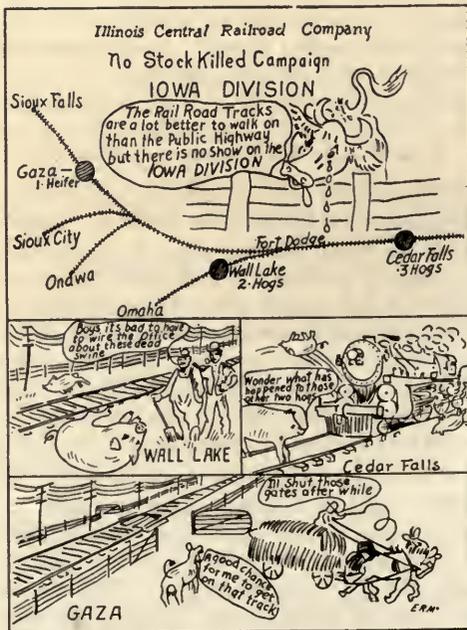

Nine divisions showed decreases in November, 1921, compared with November, 1920; six showed increases and two (the Chicago and Memphis terminals) remained unchanged, with no stock killed either month.

Considerable public interest was enlisted, as well as the interest of employes, and it is more than likely that these factors will tend to reduce the number of stock killed in the future. As an example, of civic cooperation in the effort, Trainmaster W. H. Petty of the Mississippi division cites the assistance rendered Section Foreman W. B. Horn at Coldwater, Miss.

Mayor T. H. Cooper of Coldwater issued a warning to stock owners that their stock should not be permitted to run at large in violation of the city ordinances. Then he procured the services of four young men to keep a constant look-out for stock running at large. Animals that are taken up are

placed in the pound, and the usual fee, together with the necessary expense for feed, is collected when they are released. Half of the money collected in this way goes to the young men who take up the stock, and the other half goes to the city park fund. Willful violators are cited to appear before the mayor, and fines as high as \$10 have been assessed.

Needless to say, the safety of stock at

How They Did It in Iowa

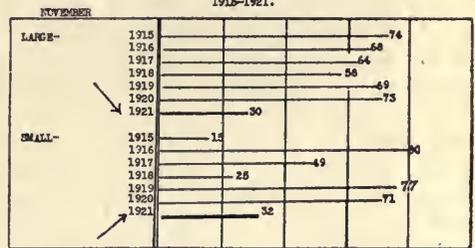

Coldwater has been improved. "If we could interest the city and county authorities along our line to this extent," writes Superintendent A. D. Caulfield, "the number of stock struck on our waylands would be reduced to the minimum."

The final figures on striking stock in November, 1921, are as follows:

Division	No of Stock Killed	
	Large	Small
Chicago Terminal .....	0	0
Illinois .....	2	0
St. Louis .....	3	2
Springfield .....	3	0
Indiana .....	1	5
Wisconsin .....	2	9
Iowa .....	2	5

The New Orleans Division Report

AGENT MAKES HOBBY OF SPECIAL TRAINS

If Agent J. S. Berry of Sturgis, Ky., has a hobby, it is the promotion of special trains from Sturgis to various places on the Illinois Central. The photograph shown herewith is of his third special train of the year, which went to Marion, Ky., and return November 24 to carry Sturgis residents attending the Central Interscholastic Association contest held that day at Marion. In the foreground are shown, left to right, Conductor L. E.

Greer, Prof. A. L. Morgan of the Sturgis High School, and Mr. Berry himself. Mr. Berry's first special train of 1921 was to Morganfield, Ky., and return February 22. It earned for the company \$385.15. His second, to Providence, Ky., April 22, earned almost \$400, while the one to Marion took in about \$300. Mr. Berry has been with the Illinois Central twenty-eight years, ever since the Illinois Central got the Ohio Valley Railroad.

# Developing Importance of the Telephone

## Something About F. T. Wilbur and the Establishment He Supervises to Handle Our Messages

THESE are many important jobs in railroading, but few are more important in our present-day railway organization than that of keeping up communications for the rapid transfer of orders and information. The invention of the telegraph came at a most opportune moment in the railway development of the country, and now the telephone is being utilized to a great extent to supplement and take the place of the telegraph.

The Illinois Central is one of the country's pioneers in adapting the telephone to railway uses. Prior to 1902 railroads in general had practically no long distance telephone service, according to F. T. Wilbur, superintendent of telegraph, Northern and Western lines. Since that time, however, construction of telephone lines and the conversion of telegraph wires to this service have been progressing until now the Illinois Central north of the Ohio river (Mr. Wilbur's territory) has approximately 8,000 miles of long-distance telephone wire in use for train dispatching and messages. Trains on more than half the mileage in Mr. Wilbur's territory, including all the main line and heavy traffic branch line trains, are dispatched by telephone. Only the branch lines with light traffic still rely on the telegraph for train dispatching.

### Telephone Service

#### IN MAKING A CALL—

1. Hunt up the number and use that number, even in local calls.
2. Speak directly into the mouth-piece.
3. Stay on the line until you get your party.
4. Conduct your conversation courteously—that's good business.
5. Move the receiver hook slowly up and down if you need to recall the operator's attention.
6. Say "Good-by" and hang up the receiver when you are done.

#### Started Dispatching in 1908

The first circuit for train dispatching on the Northern and Western lines was placed in service in December, 1908, and now the circuits for this purpose total about 2,000 miles, requiring 4,000 miles of wire, as the telephone circuit is a 2-wire affair. It has been recognized that the telephone is preferable to the telegraph for this use on account of its flexibility and the fact that information can be passed over it much more rapidly than over the telegraph. The telephone is a time-saver, and for that reason it is a factor in efficiency.

The telephone operators at Central Station, Chicago. Reading left to right, top row: Miss Cecilia Stevens, Miss Mae Luby, supervisor, Mrs. Fay Ruckman, extra, Mrs. Rose Bell, Miss Jennie Novak, Miss Marguerite Bogardus, Mrs. C. M. Knodell, Mrs. Jewell O'Leary, Miss Harriett Bergen and Mrs. Anna Barr. Bottom row: Miss Katherine Walsh, Miss Hazel Bailey, Miss Catherine Clader, Mrs. Alyce Lilley, Miss Laura Holland and Miss Nellie Higgins, extra.

*Central Station's 8-Position Switchboard in Complete Operation.*

In addition to the approximately 2,000 miles of train dispatching circuits we have north of the Ohio river, the same territory is served by about 2,000 miles of circuits for messages and other conversational purposes.

It must be remembered also that Mr. Wilbur's territory is only a part of the Illinois Central System. Stationed at Memphis is B. Weeks, superintendent of telegraph for the Southern Lines of the Illinois Central and the Yazoo & Mississippi Valley, whose territory keeps pace with the rest of the system in developing the telephone.

Mr. Wilbur, in addition to his other work, has found time to install and experiment with a wireless receiving outfit. His idea is to determine to what extent the wireless is likely to come into use in railway work. He has heard messages by wireless telegraph from government stations on both coasts—Arlington and San Diego—as well as some messages from foreign stations. Within a smaller radius he has experimented in receiving wireless telephony.

#### **A Small City's Business**

In addition to a considerable long-distance telephone business, Mr. Wilbur, at the offices, shops and yards around Chicago, has supervision of a local telephone service that

is considerably bigger than that required for the average city of several thousand inhabitants. The amount of talk required to carry on the business of the system headquarters and the Chicago terminal is so considerable that the Illinois Central has to pay the Illinois Bell Telephone Company, for Chicago alone, an average of \$4,500 a month for the rental of service, in addition to the sums which the railroad has to pay for maintain-

### **Telephone Service**

#### **IN TAKING A CALL—**

1. Answer the bell promptly.
2. Don't say "Hello." Give your name or the name of your department.
3. Have a pad and pencil at hand to make notes.
4. If someone else is desired, take the message for him if he cannot be immediately summoned or if the call cannot be transferred to his telephone.
5. Keep all your attention on the telephone, so that you will not need to have the message repeated.
6. Remember, a rough answer turneth away business.
7. Say "Good-by" and hang up the receiver when you are done.

ing its own service. A total of more than \$50,000 a year is paid for calls that go out through the city exchanges alone, not to consider the innumerable local calls that are merely within the office buildings or between buildings.

Incidentally, figuring one personal call to every nine business messages, Mr. Wilbur estimates that the company has to pay out about \$5,000 a year for this sort of conversation.

Our rental of service from the Illinois Bell Telephone Company in Chicago is at the rate of so much a call after a certain fixed amount has been paid. That makes each outgoing call cost at least  $3\frac{1}{2}$  cents.

The telephone switchboard originally occupied an extremely limited space on the second floor of Central Station. In 1909 it was replaced by a larger switchboard on the ninth floor in more commodious quarters. The telegraph office and headquarters of the department also were moved from the second to the ninth floor.

The Central Station switchboard at present is what is known as an 8-position board—that is, for full and complete service, it requires eight operators working simultaneously. In the busy hours of the day—during the office hours at the station—these eight positions will be found occupied all the time.

### Sixteen Operators at Central Station

This board serves 400 busy local telephones in and around the building, in addition to the trunk lines to the city exchanges and the trunk lines to the 63d Street Office Building, which itself has a 2-position switchboard. In order efficiently to handle the calls at Central Station, the services of sixteen operators are required, including one chief, or supervising, operator, twelve regular switchboard operators, two extra operators and one telephone message operator, who has a booth to herself.

Since the switchboard has only eight positions, naturally the twelve operators are not all at work at once. It must be remembered, however, that the service must continue twenty-four hours a day and seven days a week. The twelve regular operators make possible an arrangement of the work so that at least one operator is on the job all the time. Between 6 p. m. and 7 a. m. only one operator

is needed to handle all the eight positions. A schedule is arranged, and the hours are dovetailed so that each operator does eight hours of work a day, exclusive of the meal period.

A rest room is provided near the switchboard room, to which the operators may retire for relaxation between periods of work and in which they eat the lunches they bring or prepare light lunches for themselves. It is meant to be, in a sense, a clubroom for the operators.

### Hard to Remember Names

As probably 2,000 individuals are called for by name over the telephones served by the Central Station switchboard, it will be seen that the operators have to do a great deal of memory work in order to give rapid service. The local telephones have numbers, and Mr. Wilbur urges that these numbers be used whenever known, although he admits that it is difficult to keep up a reliable directory with the frequent changes found necessary.

As mentioned, Central Station and the 63rd Street Office Building are linked by trunk lines, so that calls between them need not go through the city exchanges. Burnside Shops are served by the Central Station switchboard.

In order to lighten the switchboard work to some extent, the telephone department has installed an automatic switchboard of

*The message operator has a booth to herself. She gives the telegraph service a lift by transmitting messages by telephone to stations between Chicago and Freeport and between Chicago and Champaign and to outlying places on the Chicago terminal. Miss Katherine Walsh.*

*A corner of Mr. Wilbur's office, showing his facilities for accessibility to long distance telephone lines and telegraph circuits. The "glass jar" is a condenser which is used in wireless experiments.*

100 lines at Central Station and one of 200 lines at Burnside, which also serves 63rd street. These are connected by trunk lines, so that by a slight change in the signaling (prefixing the number 2 to the number called for), Central Station users of the automatic

can avail themselves of the Burnside service, and vice versa.

The automatic telephone, as many persons know and as more will know in a few years, has a dial full of numbers on each instrument, by which the subscriber picks out the particular combination of numbers he desires to call. No operators are needed. The automatic telephones at present used by the Illinois Central at Chicago, besides serving some general offices at Central Station, Burnside and 63rd street, also link up with practically all of the towers, yard offices, etc., from South Water street to Wildwood, inclusive.

In using the automatic, Mr. Wilbur points out, the subscriber has to use a number and not a name, which would be a good practice in any use of the telephone.

In order that the telephone facilities may serve their users efficiently, Mr. Wilbur believes that a few words of caution are timely:

Confine calls to those which are reasonably important, especially city calls in Chicago, as each time a call is completed to the correct number a minimum charge of 3½ cents is made, whether the person asked for is reached or not.

Long distance telephone lines are idle to a considerable extent for the following reasons:

A long distance call is placed, but when connections are completed the person who placed the call is not to be found, because he has left his desk, and there is delay in finding him.

An individual is called for, when one of several persons may be able to handle the conversation in the event the individual sought is otherwise engaged.

The line is "held" while car records and other information are being looked up.

## Coal Full of Heat Units Mined on Line

By L. J. JOFFRAY,  
General Fuel Inspector

In 1920 the mines on the Illinois Central produced approximately 25,500,000 tons of bituminous coal, ranging in calorific value from 10,600 to 13,800 heat units per pound, as determined by analysis of the product. It is not

at all difficult to find on the market several of these grades, suitable for any purpose that involves heat and power.

We often hear doubt expressed as to the value of domestic coals produced on the Illinois Central. The writer hereby asserts that no coal other than that produced on this railroad has been used in his household

in the past twenty-seven years, with most satisfactory and economical results. I can conscientiously recommend its use for all our readers and their friends who may become interested through the traffic solicitation of all our employes. We should realize that every added ton of coal moved on our railroad will accrue to the benefit of all.

**How Heat Value Is Measured**

The heat value of coal is usually expressed in calories or in British thermal units. The calorie, the unit determined by the metric system, represents the heat necessary to raise the temperature of one kilogram of pure water from 15 degrees to 16 degrees Centigrade, while the British thermal unit—expressed "B. T. U." and in use in all our fuel analyses—is representative of the amount of heat necessary to raise the temperature of one pound of pure water from 62 degrees to 63 degrees Fahrenheit.

Following is a tabulated comparison of the two units.

- 1 Calorie = 3.968 B. T. U.
- 1 B. T. U. = 0.252 Calories.

<i>Unit</i>	<i>Water</i>	<i>Temperature Rise</i>
1 B. T. U.	1 Pound	1° Fahrenheit
1 Calorie	1 Kilogram	1° Centigrade

Heat energy has a certain definite relation to work. This relation as determined is a demonstration of the first law of thermodynamics, namely: that heat and mechanical energy are mutually convertible in the ratio of 778 foot pounds for one B. T. U. The heat derived in burning coal is brought about by the oxidization of its combustible elements—carbon, hydrogen and the unoxidized forms of sulphur and iron. Hence, combustion of coal involves the rapid chemical union of oxygen with the combustible elements contained therein, accompanied by a diffusion of heat and light.

**What Perfect Combustion Is**

Perfect combustion occurs when the combustible unites with the greatest amount of oxygen possible without excess. Imperfect combustion occurs when the union between the combustible and oxygen is incomplete or when an excess of oxygen is present. The theoretical amount of air required to burn one pound of bituminous coal such as that produced along our railroad is 11.6 pounds.

However, in practice, due to the impurities and the difficulty of getting air into contact with all the particles, it is impossible to obtain perfect combustion with the theoretical amount of air, and an excess is required sometimes equal to double the theoretical amount.

Air in a furnace in excess of that absolutely required is a source of waste. By dilution it lowers the temperature of combustion. It retards the heat absorption by decreasing the difference of temperature between gases and boiler contents, and it increases the volume of the products of combustion so that the smoke stack gases carry off an undue amount of heat units.

The mine-run coal used on our locomotives will average, according to the proximate analysis made at our laboratory at Burnside and substantiated by records from the University of Illinois and the United States Bureau of Mines, as follows:

Moisture .....	11.64 per cent
Volatile Matter.....	36.16 per cent
Fixed Carbon .....	40.31 per cent
Ash .....	11.89 per cent
Sulphur .....	3.86 per cent
B. T. U.....	12,003 per pound

**A New Application of Units**

A ton of this coal contains 24,006,000 heat units. Should we, for instance, review our September fuel performance on a heat unit basis instead of from a ton and pound point of view, the figures would look like this:

- 1,716,429 heat units per 1,000 gross ton miles;
- 19,084,770 heat units per 100 passenger car miles;
- 1,392,348 heat units per switch engine mile.

The adoption of this method of computing locomotive performance would be impractical, as a rule, inasmuch as it involves too many figures, but we do glean from a study of the table an idea of how small and apparently insignificant heat units are. They are as easily lost as the proverbial needle in a haystack, unless those who are directly responsible for their ultimate delivery to their proper uses adopt a careful policy of saving these heat units and letting their aggregate in money value accrue to the betterment of our railroad.

# The Nation Must Stand By Its Railroads

*They Must Be Allowed to Keep Pace With Our Industrial Development, Declares S. O. Dunn*

THE country is facing the prospect of huge economic losses unless more is done to improve the railway situation, declared Samuel O. Dunn, editor of the *Railway Age*, in an address before the Lions' Club and the Chamber of Commerce at Dallas, Texas, December 16. When business revives again and the country's industries attempt to operate at capacity, we shall be confronted with a situation unlike anything which has ever existed in this country, Mr. Dunn said.

"On the one hand, we shall have a system of railroads the capacity of which within the last ten years, and especially within the last five years, has been increased relatively less than since the first rail was laid. On the other hand, we shall have productive industries whose capacity probably has increased relatively more within recent years than ever before in history. Unless I draw an entirely erroneous conclusion, when that time comes the traffic offered the railroads will far exceed what they can handle.

"The amount of production and commerce that can be carried depends on the amount of farm products, fuel, raw materials and finished products that can be transported; and for transportation we are chiefly dependent on the railroads. Therefore, instead of being able to operate and produce to their capacity, the industries of the country will have to limit their production to the basis of the amount of traffic the railroads can handle. The increased investment which has been made in the productive industries has been made on the assumption that they will be able to produce to capacity. If they are not able to do so, they will not be able to earn a return upon the great investment which has been made in them. Prolonged inability of our productive industries to utilize a large part of their productive capacity would cause disaster to them and to many of our commercial and financial institutions.

## Must Earn an Adequate Return

"Is it not plain that there is real danger in this situation for all of us? If there is real

danger in it, what should be done to avoid it?

"It would seem the only effective thing that can be done is to give the development of the railroads a chance to catch up with the development of our other industries. That, in turn, can be done only by allowing them in future to earn a net return sufficient to cause investment in them of a large amount of additional capital. You know as well as I that no large new investments are being made in them now. In the interest of the public welfare they ought to be strenuously engaged in increasing their facilities. They are doing nothing of the kind because thus far this year the percentage of net return they have earned has been the smallest in more than thirty years, and they have had to retrench in every possible way to earn even that."

Discussing why the development of the railroads has fallen behind that of other industries, Mr. Dunn pointed out that, as compared with 1900 to 1910, the average wholesale price of all commodities had up to 1917 increased 70 per cent, while no advance in railway rates throughout the country had been made. In 1920, when the total advances in the average railway rate reached 70 per cent, the increase in the average wholesale price of commodities had reached 175 per cent. The result was that the net income of other industries, after paying interest and taxes, increased out of all proportion to the net income of the railroads.

"In the three years ending with 1911 the net income of the railroads, after paying interest and taxes, averaged \$430,000,000 a year. In the three years ending with 1914 the net income of the railroads declined, while that of other industries showed substantial increases. In the five years ending 1919, including the government guaranties, the net income of the railroads averaged about \$558,000,000, or 30 per cent more than in the three years ending with 1911. On the other hand, in the five years ending with 1919, the net income, after paying interest and taxes, of all the corporations of the

United States averaged \$7,000,000,000 a year, an increase of 120 per cent, or \$4,000,000,000, a year over the average for the three years ending with 1911. This increase in the net income for all the corporations for that five years aggregated an amount equal to the total valuation placed by the Interstate Commerce Commission upon all the railroads of the United States!

### How Other Industries Fared.

"After this long period of years, when the railroads were restricted to net returns which were positively beggarly compared with those made in other lines of business, and when in consequence the development of the railroads fell far behind that of other industries, we might not unnaturally expect to find the farmers and business men of the country a unit now in demanding a government policy in dealing with the railroads which would insure rapid and adequate increases in their capacity. And what do we find? We find ourselves in the midst of a great agitation for general reductions of freight rates, which is supported by the argument that the present rates are so high that they are insupportably burdensome to business.

"A stranger to the facts would infer from what is being widely said and published that the present rates of the railroads are relatively much higher than the present prices of most commodities. What are the facts? In July, 1921, the latest month for which we have complete statistics, the average freight rate per ton per mile in the entire United States was 65½ per cent higher than the average rate from 1900 to 1910, while the average wholesale price of commodities was 66.7 per cent higher than the average wholesale price of commodities in the ten years from 1900 to 1910. Since the traffic of the railroads increased 80 per cent, when from 1900 to 1910 the relation between the average rates and the average price of commodities was almost exactly the same as it is now, how can it be rationally contended that the present relationship between rates and prices is so burdensome that it is preventing a revival of business?

"But from the standpoint of the farmer, the manufacturer, the merchant, the banker, the working man and every other class of our people the most important question re-

garding the railroads at present is not whether, by how much, or when, their rates should be reduced. Our most important problem affecting the railroads is that of devising and carrying out a policy which at the earliest possible time will cause a renewal on a large scale of increases in their capacity. An immediate general reduction of rates might confer temporary benefits by temporarily stimulating general business, but it would inevitably make the net operating income of the railways less than it otherwise would be. That would postpone the time when the railroads could begin rehabilitating and enlarging their facilities.

### Transportation Shortage a Burden

"Because the capacity of the railroads was inadequate in 1920, many farmers could not get their grain to market when grain prices were high. The coal operators complained they could not operate their mines to capacity because they could not get enough cars. Construction concerns complained bitterly because the giving of priority in the use of open top cars to the coal operators made it impossible to do all the construction work they wanted to do. The manufacturers had to send hundreds of thousands of automobiles over the country under their own power because the railroads could not haul them. The railroads already are increasing their purchases of equipment, and rates which will enable them to maintain and increase their net returns will enable them to increase their capacity so that when a revival of business comes they will at least be less unequal to the demands upon them than they would be if premature reductions of rates were made.

"On the other hand, if there are premature general reductions of rates, they will be unable even to make a start toward reducing the already great disparity between their capacity and the productive capacity of the country's other industries. Therefore, premature general reductions of rates seem as certain, by preventing any increases in the capacity of the railroads, to prepare the way for a very serious crisis in the relations between our transportation system and our industrial, commercial and financial systems when general business revives as anything that possibly could be done. What will it profit the farmers and business interests to secure comparatively small reductions in

their rates and comparatively small increases in the business done by them now, if these transient benefits are secured at the cost later on of far greater losses extending over much longer periods?

"While premature general reductions of rates would be immediately disastrous to many of the railroads and probably in the long run would prove disastrous to business

of all kinds, it cannot be questioned that in the future the general tendency of rates should be downward, although this is equally true of the prices of many commodities. But these reductions of rates in the interest not only of the railroads, but of the entire nation, should be preceded, or at least accompanied, by corresponding reductions in railway operating costs."

---

## Coal-Saving Has Meaning for All of Us

By J. W. DODGE,

General Fuel Conservation Committee

During this period of readjustment in the business life of our nation, economy, coupled with honest labor, mental and physical, is recognized by all thinkers as the lever that will most quickly lift us out of the bog and restore both business and living conditions to the favorable position held prior to the World War.

It is a recognized fact that in this country, where nature has blessed us so abundantly, there has not been the necessity for practicing economy to the degree other nations have practiced it, but present conditions point clearly to the need of higher efficiency and the curtailment of useless waste if we are to progress and maintain our present standard of living.

Our former position of proud isolation has passed. As a single member of the great family of nations in a world that is becoming theoretically smaller each day by reason of quicker transportation facilities, it is apparent that we must (like Mohammed) go to the Mountain—and adjust ourselves to meet the changed condition, living not less for ourselves but to a larger degree for all mankind, respecting the rights of others as we would have our own respected, giving and demanding only justice and a square deal.

Among the many ways in which economies can be obtained through co-operation and concerted effort there is no greater opportunity in our business of railroading than in the conservation of coal, the cost of which has increased 158 per cent in the past five years.

When it is remembered that the coal bill of this system in 1920 was nearly \$18,000,000, taking out of the treasury from which comes

the support of ourselves and families one-fourth of each net dollar earned, good horse sense tells us to protect our income by avoiding loss through the varied avenues of waste that have been described in preceding articles and the instruction conveyed to all of us.

The problem is one that concerns each officer and employe. Maximum results can best be obtained by united, thoughtful and persistent effort. It is a self-evident fact that unless the railroad prospers financially, we, the employes, cannot enjoy the full measure of comfort and prosperity. Therefore the objective is one demanding our fullest co-operation.

For several years past the management has given fuel conservation due consideration, endeavoring through education and constructive measures to reduce the expense per unit of service. The results obtained have been gratifying, reflecting credit for loyal and intelligent effort. Yet a proper consideration of the problem, viewed from the standpoint of a saving of approximately 35,000 tons in September last, after the reductions made during the past nine years, but illustrates and emphasizes the opportunity for greater economy and efficiency.

Coal is the stored energy that propels the wheels of transportation and the foundation upon which our manufacturing interests rest. Without it commerce and civilization will perish. Coal does not grow. When consumed it is gone forever. A little more than a hundred years ago our nation produced a few hundred tons annually. Now our consumption is nearly 700,000,000 tons a year.

How rapidly are we exhausting the heritage with which nature has blessed us and to what extent through waste are we depriving ourselves and coming generations of the most essential element in man's economical progress!

# Dependability? That's His Middle Name

*Engineer Adam R. Bigleben Is Retired Now, but He Still Has His Locomotive Whistle*

**N**O visit to Greenville, Miss., headquarters of the Vicksburg division of the Y. & M. V., is complete without at least a talk with the patriarch of that part of the Illinois Central System—Adam R. Bigleben, retired locomotive engineer. For many things he is noted, one of them believed to be unique: Popular usage has named his old train after him, until even today you hear the natives talking about catching "Bigleben" for a ride somewhere down the line. It is a fact that clocks in many homes along the line were set by the time that Mr. Bigleben kept on his run.

Mr. Bigleben is a fine old man, 73 years old, but he acts much younger than he looks, as anyone realizes who has ridden with him as he handled one of his two motor cars through the slippery mire of a Greenville side street. He has a fine home on the main street of Greenville, only a block from the division offices, and he maintains his interest in the affairs of the company by visits with the officials who stop off at his town.

## Started Braking in 1869

Mr. Bigleben, who is a native of Indiana, began his railway career in 1869 as brakeman on the Louisville & Nashville at Bowling Green, Ky. In 1873 he became a fireman. Three years later he pulled up stakes and went to Denver, Colo., and later to Los Angeles, Cal., where he worked as a fireman for the Southern Pacific on construction work. In 1879 he returned to Kentucky as an engineer on the L. & N., and in August, 1883, he entered the employ of the Louisville, New Orleans & Texas, now the Y. & M. V., as an engineer on construction work. The road was opened in 1884 from Memphis to Vicksburg, and he handled freight and extra passenger runs there for several years. The Greenville-Vicksburg run was put on in the fall of 1894, and with it he began the twenty-two years of service on one run that was to occupy him until his retirement.

Part of his record includes 993 days of

*Mr. and Mrs. Adam R. Bigleben*

service without an absence—truly a record that householders could set their clocks by! That dependability is perhaps Mr. Bigleben's most characteristic trait. He has always been a faithful employe, and that is one of the reasons he has prospered.

## Always Kept Same Whistle

As an engineer Mr. Bigleben was painstaking and exact. He always wanted his engine to be well-kept, and woe to the fireman who did not co-operate in keeping it spick and span! He doesn't admit it himself, but it is said of him that his heart was broken once when he came down in the morning and found that an emergency had called his engine out the night before without him.

Another pet idea of his was to keep the same whistle with him on whatever new engine he happened to draw. That whistle, which he says he has carefully hidden away at home at present, is a chime whistle of unusually fine tone that was given to him thirty years ago at Memphis, Tenn., by Master Mechanic Buckley of the Memphis

& Charleston Railroad, now the Southern.

Mr. Bingleben is well-to-do—the fact that he maintains two motor cars ought to prove that. Part of his prosperity is the result of good dealing in real estate. He bought 400 acres of land from the railway company in 1898, paying \$4 an acre for it. Four years ago he sold this land at \$66.50 an acre, and in the meantime he had cut from it \$1,900 worth of timber, which was \$300 more than the whole land cost him.

### To Visit Chicago This Year

His pension from the company nets him \$77.60 a month, and he gets \$20.50 a month from the B. of L. E. He was retired, under the age limit, June 1, 1916.

Mr. Bingleben's most cherished possessions

are letters of commendation he has received from present and past officials of the company; on his list, among others, are the names of Markham, Baldwin, Foley, Park, Egan, Mays, Dubbs, Christy, Fletcher and Cronin. He says that he has never been refused a pass since he left the service, but he has not done much traveling, except on the Y. & M. V. After refusing many invitations, he and Mrs. Bingleben are planning now to visit Chicago next summer.

Mr. and Mrs. Bingleben have been married forty-one years. They have ten children, six sons and four daughters. Mr. Bingleben is a good citizen of Greenville, in which he has lived almost thirty years, and he never tires of showing its beauties to visitors.

## Do Try to Be Friends With the Captain!

*The following editorial on "Loyalty Is Success" is from the pen of the late Elbert Hubbard. It was reprinted recently on the cover of The Right Way, the magazine published by the Central of Georgia Railway Company. It appealed so greatly to Superintendent C. R. Young of the Tennessee division that he had 500 copies printed and distributed to the officers and employes of the division.*

A big business is a steamship bound for a port called Success. It takes a large force of men to operate this boat. Eternal vigilance is not only the price of liberty, but is the price of every other good thing, including steamboating.

To keep this steamship moving, the captain requires the assistance of hundreds of people who have a singleness of aim—one purpose—a desire to do the right thing and the best thing in order that the ship shall move steadily, surely and safely on her course.

Curiously enough, there are men falling overboard. These folks who fall overboard are always cautioned to keep away from dangerous places; still, there are those who delight in taking risks. These individuals who fall off, and cling to floating spars, or are picked up by passing craft, usually declare that they were "discharged." They say the Captain or the Mate or their comrades had it in for them.

I am inclined to think that no man was ever "discharged" from a successful concern—he discharged himself.

When a man quits his work—say, oiling the engine or scrubbing the deck—and leans over the side calling to outsiders, explaining what a bum boat he is aboard of, how bad the food is and what a fool there is for a Captain, he gradually loosens his hold until he falls into the yeasty deep. There is no one to blame but himself, yet you will have hard work to make him understand this little point.

When a man is told to do a certain thing, and there leaps to his lips, or even to his heart, the formula, "I wasn't hired to do that," he is standing upon a greased plank that inclines toward the sea. When the plank is tilted to a proper angle, he goes to Dayy Jones' locker, and nobody tilts the fatal plank but the man himself.

And the way the plank is tilted is this: The man takes more interest in passing craft and what is going on on land, than in doing his work on board ship.

So I repeat: No man employed by a successful concern was ever discharged. Those who fall overboard get on the greased plank and then give it a tilt to the starboard.

If you are on a greased plank, you had better get off from it, and quickly, too.

Loyalty is the thing!

# Romance Found in Many Station Names

## Illinois Pioneers Are Commemorated, as Are the Indians and the Company's Early Officials

If you would have your name remembered, bestow it upon some town. Then, long after you are dead, your name will be invoked on every car of every passenger train that stops at the station you christened. Pioneers of Illinois have thus been fittingly commemorated along the lines of the Illinois Central in the state whose name it bears. Some station names, of course, are merely descriptive of the locality, and some are duplications of other station names back East or in the old countries, while others have been manufactured for the occasion; but for the most part those that Illinois Central employes are familiar with are the names of pioneers or of explorers or of the native Indian inhabitants who held the ground before explorer or pioneer arrived.

By R. B. GRAY,  
Advertising Agent

**F**EBRUARY 20, 1883, William K. Ackerman, then president of the Illinois Central Railroad, read before the Chicago Historical Society a paper on early Illinois railroads. The following year his address was published, together with a series of notes by John Wentworth on the origin of the names of many Illinois Central stations in Illinois. From this publication the following accounts were gleaned:

**KENWOOD** was named in 1856 by Dr. J. A. Kennicott, who first built a small frame house near the present station site. He called it Kenwood after the family homestead of his ancestors in the suburb of Edinburgh. The Illinois Central station was established in 1859 by General George B. McClellan, then vice-president of the company.

**HYDE PARK** was laid out in 1856 by Paul Cornell and named after a village on the Hudson, near New York City.

**BURNSIDE** station was established in 1862 and named after General A. E. Burnside, at one time cashier of the Illinois Central land department, and afterward treasurer of the company.

**MATTESON** was settled in 1855 and named after Joel A. Matteson, governor of Illinois, 1853-57.

**RICHTON** was named by Joseph Batchelder, who settled there in 1836 or 1837, after Richton, Vt., his former place of residence.

**MONEE** was named after a Pottawatamie Indian woman, the wife of Joseph Baily, a French-Canadian trader of considerable note and influence in the early days.

**PEOTONE** is a Pottawatamie Indian word meaning "bring" or "come here."

**MANTENO** is probably a corruption of "Manitou," the Algonquin Indian word for "spirit."

**TUCKER** until 1873 was called La Prairie and from then until 1876 Martin; in the latter year the name was changed to Tucker, after J. F. Tucker, then general superintendent of the Illinois Central.

**KANKAKEE** is supposed to be a French corruption of an Indian name corrupted further by the early settlers. When La Salle in 1680 was exploring in the vicinity of the Kankakee River, that stream was called by the Indians Thiakiki or Haukiki, a name which, according to Charlevoix, was afterward changed by the French to Kiakiki, "raven," whence probably came its present form.

**CHEBANSE** was named after a Pottawatamie Indian chief, "Little Duck," in English.

**CLIFTON** was named by W. A. Veech in 1857 after the old Clifton House in Chicago.

**ASHKUM**, said to mean "more and more," derives its name from that of an Iroquois Indian chief.

**DANFORTH** was named after George W. Danforth, who made large purchases of Illinois Central land near that point.

**GILMAN** took its name from Samuel Gilman of New York, a railway builder.

**ONARGA** is probably an Iroquois Indian name meaning "a place of rocky hills."

**LODA** was named after one of the Gallic gods in Ossian's epic poem *Cath-Loda*.

**PAXTON**, called Prospect City prior to 1858, was named in honor of Sir Joseph Paxton, who was then deeply interested in bringing settlers to Illinois.

LUDLOW was named after Thomas W. Ludlow of New York, one of the incorporators of the Illinois Central Railroad Company.

RANTOUL was named at the request of W. P. Burrall, a former president of the Illinois Central, after Robert Rantoul, Jr., a United States senator, one of the incorporators of the company.

THOMASBORO was named after John Thomas, an English gentleman and one of the oldest settlers of the community.

CHAMPAIGN was named by settlers from Urbana, Champaign County, Ohio, after their former home.

SAVOY derives its name from Princess Clotilde of Savoy, who, with her husband, Prince Napoleon, visited Illinois in 1861.

TOLONO was named by placing the vowel "o" thus, "o-o-o," and filling in the consonants, "t," "l," "n." J. B. Calhoun, who, with J. Condit Smith, purchased a large tract of land and laid out the town, gave the place its name.

PESOTUM was named after the Indian Pe-so-tum, who killed Captain William Wells of Fort Wayne at the Chicago massacre, August 15, 1812.

HAYES was named in 1877 after Samuel Jarvis Hayes, superintendent of machinery, Illinois Central, 1856-82.

TUSCOLA is an Appalachian Indian word meaning "flat plain."

GALTON was named after Captain Douglas Galton, who visited Illinois in 1856 to examine the affairs of the Illinois Central on behalf of British shareholders.

ARCOLA was named by Postmaster Kearney of the town in 1871 after Arcole, a village in Italy famous for a victory gained there by Napoleon over the Austrians in 1796.

HUMBOLT was named in honor of Baron Alexander von Humboldt, the eminent German naturalist and traveler.

MATTOON was named after J. Mattoon, member of a firm of railway contractors and one of the original proprietors of the town.

AETNA was named after Mount Aetna, a famous volcano in Sicily.

NEOGA is an Iroquois Indian word from "neo," meaning "deity," and "oga," meaning "place"—"place of the deity." The town was laid out in 1856.

SIGEL was named after Franz Sigel, a German soldier who served as colonel in the Union army during the Civil War and afterward became a major-general.

EFFINGHAM was named after General E. Effingham, an Englishman by birth, who surveyed the county.

WATSON was named after George Watson, division superintendent of the Illinois Central in 1856.

MASON was named after Colonel Roswell B. Mason, chief engineer of the Illinois Central in 1851 and later its first superintendent of transportation. He was afterward mayor of Chicago.

EDGEWOOD derived its name from its situation, at the edge of the woods.

LACLEDE was named after Pierre Laclede, leader of a company of French merchants trading with the Indians between 1762 and 1768.

FARINA is Latin for "flour." The town, which was organized in 1867, probably received its name from its situation in the winter wheat region.

KINMUNDY was named after the birthplace in Scotland of William Ferguson, who visited Illinois in 1856 and subsequently wrote a book on his American travels. Ferguson was a member of the firm of Robert Benson & Company, agents for the Illinois Central in England.

ALMA was named by John B. Calhoun after the Alma River in the Crimea, where a battle was fought September 20, 1854. Alma station was established about that time.

TONTI was named after the Chevalier Henri de Tonty, an Italian officer in the service of La Salle.

ODIN was named after the god of that name in Scandinavian mythology; the surrounding country was settled by Scandinavians.

CENTRALIA was laid out by the Illinois Central, which erected machine shops there in 1856. No explanation is given of the origin of the name.

IRVINGTON was named after Washington Irving.

RICHVIEW, laid out in 1839 by W. B. Lindsay, was originally called Richmond. In 1852 the name was changed to Richview because of the elevated site of the old town (1½ miles from the station), which afforded a fine view of the surrounding region.

ASHLEY was named after Colonel L. W.

Ashley, a division engineer of the Illinois Central.

RADOM was named after a political subdivision of Russian Poland by General J. B. Turchin in 1873, when he induced Poles to settle in the locality.

BOIS was called Coloma prior to 1868. It was changed to DuBois in honor of Jesse K. DuBois, auditor of public accounts, 1857-64. The name has since been shortened to Bois.

TAMAROA was named by Nelson Holt, agent at that point from 1855 on. The Tamaroa Indians were one of the five tribes composing the Illinois Confederacy; the other members of the confederacy were the Mitchiganias, Kaskaskias, Peorias and Kahokias.

ST. JOHNS was named by the A. F. & A. Masons in 1856, when they held a celebration on the site June 24, St. John's day.

DU QUOIN. At the time the Illinois Central tracks reached this point there was already a small village, about five miles distant, named Du Quoin, and the station received a similar designation. "Quoin" is an old English word synonymous with "coign," modern French "coin," meaning an external angle or corner. Since Du Quoin is in the southeastern corner of Perry County, this may explain its name. Another explanation is that it was named after Du Quoin, a chief of the Kaskaskias and Peorias and a savage of considerable ability.

ELKVILLE derives its name from the fact that, in the early days of the settlement, elk, attracted by the salt licks, frequently came to the adjacent prairie.

DE SOTO was named in honor of Fernando de Soto, the famous Spanish explorer.

CARBONDALE. Illinois Central tracks were laid through Jackson County in 1852, and the town was founded in the same year. Situated in a coal producing region, it was named Carbondale.

BOSKY BELL was established in 1877 and named by the Rev. J. L. Hawkins of Carbondale.

MAKANDA was named after the chief of the last tribe of Indians that inhabited the vicinity.

COBDEN, formerly called South Pass, was named in 1859 after Richard Cobden, an English statesman and member of Parliament, who was a large shareholder in the Illinois Central and who traveled over the line in 1858.

ANNA was named after Mrs. Anna Davis, wife of Winstead Davis of Jonesboro, Ill., probate judge and founder of the town.

DONGOLA was named after Dongola, in Africa.

WETAUG was named by George Watson, a division superintendent, who formerly lived in a small town of that name in Massachusetts. In the Ojibway Indian dialect the word means "gambler."

ULLIN was named after Ullin, Fingal's bard in the poems of Ossian.

PULASKI was named in honor of Count Casimir Pulaski, a Polish soldier who fought in the Revolutionary War and became a brigadier-general in the American army.

VILLA RIDGE was named by a daughter of Doctor Arter, after their farm, upon which they settled in 1837.

MOUNDS derives its name from the Indian mounds in the vicinity.

CAIRO. In 1818, John Comegys, Shadrack Bond and others entered upon 1,800 acres of land near the mouth of the Ohio and obtained a charter from the territorial legislature under the name "City and Bank of Cairo." In one of his novels, *Martin Chuzzlewit*, Dickens refers to Cairo as "Eden."

MENOMINEE was named after the Menominee Indian tribe, a member of the Algonquin family; they were rice eaters, and the name "Menominee" means "wild rice."

GALENA derives its name from the sulphide of lead that abounds in the vicinity. The town was laid out in 1827 and incorporated in 1839.

COUNCIL HILL. There is a tradition that the Indians held councils there. Near the station is a large rock from which Black Hawk is said to have addressed his braves for the last time.

SCALES MOUND derived its name from a large mound owned by Samuel Scales half a mile from the station.

APPLE RIVER. La Pomme, or Apple River, was so named because of the number of crab-apple trees on its banks, according to one account. Another says that a German named Appel was killed there during the Blackhawk War and that the river and station took their name from that incident.

WARREN was called Courtland until 1854, when it was changed to Warren in honor of Warren Burnett, son of Captain Alexander Burnett. Warren Burnett was the first male child born in the town.

NORA was named by Roswell B. Mason, chief engineer of the Illinois Central, at the request of J. M. Douglas, who remarked that it was a small place and required a small name.

WADHAMS GROVE was named after Henry Wadhams, who came from New York and settled there about 1828.

LENA was named after "the plain of Lena," in Ossian's poem *Pingal*. The town was laid out in 1853 by Samuel J. Dodds.

ELEROY. Hiram Jones, a settler from Utica, N. Y., in 1846, named the town after his son, Leroy.

FREEPORT was formerly known as Winnishiek, after an Indian chief. The town was renamed Freeport in 1837 by Mrs. William Baker, whose husband's hospitality was so generous that she selected the name ironically. Freeport was incorporated as a village in 1850; as a city, in 1855.

BAILEYVILLE was named after O. Bailey, a settler from Vermont in 1848.

FORRESTON was laid out in 1854 by D. A. Neal of Beverly, Mass., when there were several forests in the vicinity.

HALDANE was named after Alexander Haldane, station agent and neighboring land owner. The station was established in 1858.

POLO was named after Marco Polo, the famous Venetian traveler, by Zenas Appleton, the proprietor of the land. The town was incorporated in 1856.

WOOSUNG was named after a town in China by Captain Anderson, station agent, who formerly sailed between New York and China.

DIXON was named after Father John Dixon, the first white settler in Lee County, who, beginning in 1830, maintained a ferry across Rock River.

ELDENA was named after Mrs. Eldena Van Epp, wife of a former owner of the adjacent lands.

AMBOY was named after Amboy, N. J. It is said to be a Delaware Indian word meaning "bowl."

SUBLETTE was formerly called Homo. It was named Sublette by Illinois Central officials because of the frequent subletting of the contract for grading between that point and Mendota.

MENDOTA was named in 1853 by T. B. Blackstone, then division engineer of the Illinois Central and afterward president of the Chicago & Alton. The name is of Indian origin and means "junction of two trails."

DIMICK was named in 1875 after one of the first settlers.

LA SALLE was named in honor of Rene Robert; Sieur de la Salle, the famous French explorer.

OGLESBY was named after R. J. Oglesby, governor of Illinois, 1865-1869.

TONICA was named after the Tonicas or Tunicas, a tribe of Indians located, in 1713, about 225 miles by river north of New Orleans. In the Ojibway dialect the word signifies "a place inhabited."

LOSTANT was named after the Countess of Lostant, wife of Baron Mercier, a French minister to the United States, who, in company with Prince Napoleon, visited Illinois in 1861.

WENONA was named after Hiawatha's mother, the daughter of Nokomis.

RUTLAND was named by early settlers after Rutland, Vt.

MINONK. The name appears upon an old French map ascribed to Marquette. In the Ojibway dialect the word means "good place."

WOODFORD was named by Peter Rockwell after the county.

PANOLA was named by J. B. Calhoun, who formed the word by placing the vowels "a," "o," "a," and filling in the consonants, "p," "n," "l."

EL PASO was named by George L. Gibson, one of the original landowners, after El Paso, Texas.

KAPPA. The Kappas were a tribe of Indians first mentioned by Garcilasso, the historian of De Soto, between 1539 and 1542.

HUDSON was named by the members of the Illinois Land Association, many of whom were from Hudson, N. Y.

NORMAL was named after the State Normal University, located there.

BLOOMINGTON was formerly called Keg's Grove. The name was changed to Blooming Grove by Mrs. William Orendorff in 1824. James Allen in 1829 altered it to Bloomington.

HENDRIX was named after John Hendrix, the first settler in McLean County (1822).

RANDOLPH was named after Gardner Randolph, an early settler.

HEYWORTH was named in honor of Lawrence Heyworth, member of the English Parliament, who visited Illinois in 1856 and became a large holder of Illinois Central stock.

WAPPELLA was named after Wapello, chief of the Foxes. According to one authority the word means "the little prince." In Sauk dia-

lect, waup or waub means "he that is painted white."

CLINTON was named in honor of De Witt Clinton, an American statesman, 1769-1828.

MAROA derives its name from the Maroas, a sub-tribe of the Indian Confederacy known as the Illini.

EMERY was named after Charles F. Emery, a neighboring landowner who settled in 1856.

FORSYTH was named after Robert Forsyth, general freight agent of the Illinois Central, 1856-1865.

DECATUR was named after Commodore Stephen Decatur.

ELWIN was named in 1880 after Elwood and Martin, the two founders of the town.

MACON was named after Nathaniel Macon of North Carolina, a noted statesman in his day, 1757-1837.

WALKER was named in 1882 after J. W. Walker.

MOWEAQUA was named from a small stream  $1\frac{1}{2}$  miles south of the station, called by the Indians Moweaqua, a Pottawatamie word meaning "she that weeps."

RADFORD was named after George Radford, a neighboring landowner. The station was established in 1874.

ASSUMPTION was called Tacusah until 1859, when it was changed to Assumption at the request of E. E. Malhiot of Assumption, Canada, who purchased a large tract of land in the vicinity.

DUNKEL was named after Elias Dunkel, Illinois Central agent in 1879 and owner of neighboring land.

PANA. In Douay's narrative of La Salle's attempt to ascend the Mississippi in 1687 mention is made of an Indian tribe called Pani, which was known to the Spaniards as the Towiachos.

OCONEE was named after Oconee, daughter of an Indian chief. In Shawnee the word means "bone."

RAMSEY was named after Alexander Ramsey, member of Congress, 1843-1847, governor of Minnesota Territory, 1849-1853, Secretary of War under President Garfield.

VERA was called Bear Creek prior to 1874. Vera, both in Spanish and Latin, means "true."

VANDALIA. For about twenty years, beginning in 1820, Vandalia was the capital of Illinois, succeeding Kaskaskia. The town was

laid out in 1819 and is said to have been named after Vandalia McCullom, the first child of one of the founders.

SHOBONIER was named after an Indian chief. The word is derived from the French "chevalier."

VERNON was established in 1872 and named after William Vernon, auditor of the Illinois Central up to 1875.

PATOKA was named after Patokah, an Indian chief who, with his tribe, lived at Mineral Springs, a few miles west of the town.

SANDOVAL was named after an old Mexican or Spanish chief.

## Discourtesy

A young mother with a fretful baby recently boarded an Illinois Central train for an all-night ride after she had traveled a long distance on another railroad.

When the conductor of the Illinois Central train collected the woman's ticket she asked several questions as to the time of arrival, what station the train entered, etc., which were answered in the usual way by the conductor, who also told her that anything the porter or he could do to help her would be gladly done.

The conductor noticed the tired look vanish for a moment from the young mother's face, and she said:

"It is different here from on the \_\_\_\_\_ road. There the train auditor swore at me and otherwise talked very discourteously to me because I dropped my ticket when I went to hand it to him. It made me nervous and upset all the way. I called the conductor, who promised he would report it."

During the night the young woman told the conductor she was going to \_\_\_\_\_ to visit a sister and then was going to \_\_\_\_\_, a 2,000 mile journey, to join her husband, an aviator in the army.

The conductor asked her to allow him to send a passenger agent to call on her and help arrange for her trip to \_\_\_\_\_, to which request the woman gladly assented, and gave her name and her sister's address. These were turned over to the proper passenger agent, who ticketed her from \_\_\_\_\_ to \_\_\_\_\_, 1,300 miles of which is covered by the Illinois Central.—C. H. DRAPER, *Conductor, Chicago.*

# Here's a Man Who Strengthens Service

*Conductor W. H. Sharkey, Thirty-Seven Years Employed,  
Finds It Natural to Be Courteous*

**E**MPLOYES such as W. H. Sharkey, passenger conductor on the line between Freeport and Centralia, Ill., are the ones who have established for the Illinois Central System the reputation that it has more courteous employes than any other railway system in the country.

Mr. Sharkey, who has been in the service of the Illinois Central thirty-seven years, does not feel it is an effort to be courteous. He does naturally and easily hundreds of little acts of kindness for the patrons of his train. To be able to be of service makes him happy.

When Mr. Sharkey collects the tickets on his train, he makes a practice of saying a few words to each passenger. His remarks are not lengthy—merely a few words, accompanied by a smile that tells the patron he or she is welcome on the train. The smile is not a meaningless one, one that can be wiped off as easily as put on; for each passenger there is a new brightness and sparkle in it that gives assurance of sincerity. The ticket is received with a courteous "thank you," and Mr. Sharkey passes pleasantly on to the next person.

## Tells Each the Time of Arrival

When a passenger is in doubt as to connections that are to be made, Mr. Sharkey either has the information in his mind or looks it up. When he looks at the destination indicated on each ticket he takes up, Mr. Sharkey tells the passenger the time the train is supposed to arrive at that place. If the train is slightly late, he tells the patron so, but assures him or her that it will more than likely arrive on scheduled time.

One train Mr. Sharkey is on leaves Freeport in the afternoon. Shortly before 6 o'clock, Mr. Sharkey announces in each coach that the train will stop ten minutes for lunch at Mendota. Then he goes to the lunch counter with the passengers to eat. On one occasion, nearly every passenger on the train got off at Mendota. When the 10-minute wait was about up, all but one man had finished. This man picked up his sandwich, gulped half of his coffee and started for the door.

Mr. Sharkey saw him making the desperate

*W. H. Sharkey*

effort to get back on the train before the ten minutes was up. "Don't rush," he said. "Take your time. We'll wait for you."

## Won Friend for Illinois Central

The patron looked puzzled, but returned to the counter and finished eating. There was a smile on his face that told that he was going to remember Mr. Sharkey and the Illinois Central. He was pleased, and that kind of impression cannot easily be erased.

Several passengers heard Mr. Sharkey's remark and smiled. He returned the smile, and, seemingly in answer to what they had in mind,

explained: "There are not too many people living on this line now, and we want to treat all of the remaining ones right, so that they won't leave us."

Mr. Sharkey was born September 16, 1866, at Amboy, Ill. He was educated in that city. January 9, 1884, he obtained a position with the Illinois Central as passenger car cleaner. His salary was \$34 a month, he says, and he worked from 5:30 a. m. to 6 p. m. every day except Sunday, when he had half a day off. He had ten fires to build in the shop stoves every morning, and by 7 o'clock he was busy cleaning coaches. Soft soap and pumice stone were used in preparing the outside of the coaches for the painters. All coaches were painted yellow then, he says.

He remained in that position for three years, and was then made a passenger brakeman on the Wisconsin division. In 1892 he was transferred to the Amboy district as a freight brakeman, and he remained there for three years.

#### Little Decoration in Those Days

In those days, he says, the right-of-way and station grounds were never kept very clean. No decorative shrubbery was planted, and the buck-brush grew right up to the side of the train. From Pana to Centralia there was only mud ballast.

When he was a passenger brakeman, his salary was \$45 a month. There were no restrictions on the employes' smoking then, and they were allowed to wear long, black linen dusters as a protection to their clothes. It took as long then to run from Amboy to Centralia as it takes now to run from Freeport to Centralia. There were wood stoves in each coach, and it was the brakeman's duty to keep the wood boxes filled.

Those were the days when every town had a saloon. Mr. Sharkey says that on nearly every run there would be fights. Intoxicated men would get on the train, start an argument among themselves and end in a fight. The train crew would lock the doors of the coaches and wait for the war to end. At night the oil lamps were smashed one by one by flying bottles until the coaches were in total darkness. When the trouble subsided, the crew would replace the broken lamps with new ones.

#### Couldn't Tell Agents Apart

When he first went to the Amboy district, he says he had difficulty in telling the agents apart. They all looked alike. old men with

gray beards, wearing uniforms similar to those now worn by conductors. At each new station on his first run, he says, he was sure the agent who came out of the station was the same man who was at the station just left.

In 1895 Mr. Sharkey was made a freight conductor on the Amboy district. He remained in that position until 1913, when he was promoted to passenger conductor on the same district. March 1, 1918, he was made a local freight conductor on account of taking off some passenger trains. His run was between Clinton and Minonk until November 20, 1920, when he was returned to the passenger run. He continues in that position at present.

Mr. Sharkey says that the Amboy district has a record of having only one passenger killed. This case was that of a woman who was struck on the head by something at the side of the track.

### Friendship

It is only human to make an extraordinary effort to perform our duty well when we know that our friends are counting on us and when good service on our part means so much to them. Perhaps there is no other class of workers so utterly dependent upon one another in order to make a good showing as are railway men.

When one looks into the faces of those who are to accompany him on the trip, a feeling of confidence comes over him, if they happen to be his friends, and he knows they will cooperate in every way to make the trip a success.

It is unpleasant to be associated with people who show ill-feeling toward one another, for good results cannot be had, and a lack of interest shown by one member of a crew can offset the efforts of those who really try to do that which is expected of them. It is easy for friends to work well together to accomplish good results.

Many times, through anger, claims arise for loss and damage to freight, and equipment is also damaged through rough handling while switching. This each year takes a heavy toll out of the company's treasury. The voice of conscience within every human being should dictate that which is duty and should be an inspiration to us to perform our tasks well and try to be worthy of our hire.

—T. J. RILEY, *Engineer, McComb, Miss.*

# A Good Word on Henry Ford's Experiment

## Walker D. Hines Points Out What Railway Men May Hope to Learn From the D., T. & I.

Under the heading, "Ford is Right—and Wrong; he has done things with the D., T. & I. that could not be done with any independent line, but nevertheless there should be no objection to his conducting a laboratory in elementary railroading," the following article by Walker D. Hines, former Director General of Railroads and former Chairman of the Board, Santa Fe Railroad, was published in the December issue of *The Nation's Business*.

**H**ENRY FORD'S attitude on railway problems, as set forth in the November *Nation's Business*, appeals strongly to the American people. His face is turned toward the future, and he confidently proposes reforms which are in the public interest. He has the courage of his convictions, and he does things instead of merely talking about them.

But the beguiling charm of his genius makes it all the more important to weigh with care his criticisms and proposals. It is particularly important to appraise at their true value his achievements on the D., T. & I. Railroad, because it is those achievements which have given him, in the popular estimation, a certain authority to speak on railway matters.

### What Ford Ownership Meant

At present we have the results of only six months of Mr. Ford's management of the D., T. & I., the months of March to August of the present year. It is impossible to formulate with certainty conclusions of controlling value from the six months' operation of any railroad, but as to Mr. Ford's railroad, the one thing about which we can be certain is that his small railroad has become an adjunct to his big motor plants, and that this has completely changed the railroad's earning capacity and has put it in a class entirely apart from railroads in general in this country.

A favorable earning capacity for a railroad depends, of course, on its costs, but even before that it depends on an adequate volume of business that pays a satisfactory revenue and admits of being handled under

### Hines on Ford

"He has brought every competing railroad system in the country to the door of his factory. . . ."

"... can offer the tempting bait of high-class traffic in trainload lots at regular intervals."

"... the quick terminal service which his autocratic position as combined shipper and carrier enables him to demand."

"It is to be confidently expected that Mr. Ford will make numerous improvement in operation which can be followed to advantage on the railroads generally."

"It is seriously questionable whether this movement [against nonproductive stockholders] ought to be carried to the extent of promoting the control of common carriers by large industrial enterprises."

"It is contrary to the public interest for a large shipper like Mr. Ford to own and operate a railroad by means of which he has a powerful leverage for obtaining special consideration from the common carriers."

"We can congratulate ourselves that the present combination [Ford and the D., T. & I.] is in the hands of a genius who is willing to turn his railroad into a laboratory for the making of experiments."

favorable operating conditions. It is in these respects that Mr. Ford has wrought the one certain metamorphosis in the character of the D., T. & I., and he has done it simply because he has turned over to it the great and steady traffic to and from his factories. In addition to a large inbound movement, his plants give the D., T. & I. probably more than 5,000 cars of high-class outbound traffic per month—a traffic that earns an unusually good revenue and that has the rare advantage of being received, handled and delivered in solid trainload lots, so as to minimize the heavy costs of terminal handling and so as to get the maximum service out of the train—and all this over the northern part of the

railroad, which is understood to have the best operating conditions.

#### Greater Revenue—Smaller Tonnage

Mr. Ford denies that this change is important, because he says the railroad had an even greater tonnage in the past. But he strangely overlooks the fact that the tonnage in the past earned a much smaller rate and could not be handled from origin to destination on the D., T. & I. in solid trainload lots.

The following comparison of the months from March to July, 1920 and 1921 (August, 1921, not yet being available as to all these factors), will serve to illustrate the much greater revenue derived from the smaller tonnage which the railroad has been obtaining this year:

	Revenue	Ton-Miles
	1920	1921
March .....	38,916,414	22,571,995
April .....	42,216,433	31,640,541
May .....	45,075,879	42,090,654
June .....	42,702,109	38,589,439
July .....	53,600,300	38,217,145

In the past the traffic of the D., T. & I. has appeared to be peculiarly lacking in all good points, but over-night it finds itself blessed with a large additional traffic of extraordinary desirability, which more than offsets the diminution in tonnage which the D., T. & I., in common with all other railroads, has suffered during the present long and serious slump in business.

#### Brings Railroads to Him

By purchasing this railroad Mr. Ford has done what was the equivalent of bringing practically every competing railway system in the country to the door of his factory, and that is an advantage which no competing manufacturing plant enjoys. What he can do through this means in getting for his railroad increased divisions of through rates remains yet to be ascertained, because it is not at present known, but the impression prevails that he has secured increased divisions. A shipper who does not own a railroad must pay the published tariff rate, which is known to his competitors, and he cannot lawfully get any concession from the carriers. But when he owns his own railroad he can get in the shape of an increase in the division received by his railroad out of the through rate a concession which is not published in the tariffs or reported, unless in exceptional cases, to the Interstate Com-

merce Commission. Certainly there is a tremendous inducement for especially large divisions when the shipper can offer to a large number of competing railroads the tempting bait of high-class traffic in trainload lots at regular intervals.

There are probably other advantages for his railroad growing out of his position as a shipper. For example, it would be strange if Mr. Ford could not force his connections to take his desirable traffic at such hours in the day or night as to save his railroad (and as to put on the connecting railroad) the succeeding day's rental or *per diem* of the \$1 per day per freight car. Likewise, he is apparently able to force his connections to supply

Freight Revenue	Revenue per Ton-Mile
1920	1921
\$372,561	\$413,736
257,128	674,692
366,349	721,562
367,276	686,355
383,781	723,634

Revenue	Revenue per Ton-Mile
1920	1921
\$,00950	\$.01830
.00600	.02131
.00810	.01710
.00860	.01778
.00716	.01893

him special service by accepting his traffic from his railroad within a few minutes after they receive it.

#### Prosperity Proves Nothing

The fact that under such circumstances the railroad has turned long-standing adversity into a certain measure of prosperity is the most natural thing in the world, and in itself proves nothing whatever for the Ford railway policies, which are too new to admit of measuring their economic value—and indeed some of the most important and interesting of these policies did not become effective until the very end of the six-month period, which is all we have to examine, and even now some of them are still entirely in the realm of discussion.

Mr. Ford states that he has speeded up the movement of traffic on his railroad, and that other railroads should do likewise. This brings into interesting relief the fundamental difference between the railroads in general and the D., T. & I. in its new role of Ford plant facility.

The great element in the slow movement of freight traffic is the time consumed in the terminals. It is highly important to reduce terminal work and to cut out delay in the terminals. The United States Railroad Administration gave special attention to this

subject and found the most cordial attitude on the part of railway officers generally to its efforts in this direction. It inaugurated in September, 1919, special local terminal committees, with representation of the shippers as well as of the railroads, and sought to put into effect all practical suggestions looking to the elimination of factors leading to delay or unnecessary work. Similar efforts have been continued since the resumption of private control.

### Better Ideas Welcome

Every additional impetus of improvement is to be welcomed, whether through consolidation of terminals or terminal handling, movement of trains without breaking them up at intermediate terminals, increased promptness in effecting deliveries between connecting railroads, elimination of delays, as, for example, delays in loading or unloading, or on account of billing or because of slowness in repairing cars developing defects in transit. Any new thoughts which Mr. Ford can originate and justify will be gladly seized upon by the railway fraternity, in my opinion. But apparently the principal way in which he copes with the terminal problem is to put the terminal burdens on his connections by requiring them to take the traffic off his tracks within twenty minutes. What happens after that is not his problem, but theirs. They are no doubt willing to do this as a special service in his particular case in order to get his traffic (and to maintain, if necessary, special terminal crews for this purpose), but it does not follow that they can do the same thing in all cases. Indeed it may be a question whether sometimes they do not run the risk of prejudicing other traffic in order to give Mr. Ford the quick terminal service which his autocratic position as combined shipper and carrier enables him to demand.

Mr. Ford also says that he has been able to speed up the delivery of the traffic from his factories by from seven to fourteen days. He says this enables him to reduce his working capital by about \$30,000,000.

### Makes Other Roads Speed Up

It is clear he does not mean that he has reduced the time of movement over his own railroad by from seven to fourteen days. In fact, this traffic does not move on his own railroad except for a short distance in most cases—say from 70 to 100 miles. What he must mean is that he demands of his con-

nections as the price of giving them his traffic that they speed up the delivery to final destination by from seven to fourteen days. Here again his connections may be willing to do this in order to get his traffic, but it does not follow that they can do the same thing for all of Mr. Ford's competitors or for the general public, and the question again arises whether the railroads may not at times be forced to delay other traffic in order to give Mr. Ford the special fast movement which he demands, and which his special position enables him to obtain. It is clear that Mr. Ford's railroad does not supply the ideal field for experiment as to fast train movement, because the haul on his railroad is too short and his traffic is too special in character to present the problems which exist on the railroads generally.

If we were to judge by the average car miles per day, we would have some question as to whether he has made sustained progress in speeding up the handling of the traffic over his own line. These averages for the last six months, March to August, of this year and last year, were as follows:

	1920	1921
March .....	20.5	27.8
April .....	9.6	26.3
May .....	10.7	27.3
June .....	10.9	25.1
July .....	18.5	21.6
August .....	20.9	20.7

### All Cars Are Figured In

It is fair to say, however, that this average of car miles per car per day is by no means conclusive of the speed obtained in the movement of cars actually handling traffic, because the average is based on all the cars which happen to be on the railroad at the time, including surplus cars. Thus in the time of a slump in business such an average goes down, and in time of heavy business the average goes up, regardless of the actual speed of the cars containing loads.

However, despite the unique situation of the D., T. & I. at the present time, it is to be confidently expected that Mr. Ford will make numerous improvements in operation which can be followed to advantage on the railroads generally. The promotion of contentment, and consequently of increased efficiency on the part of the employes, the elimination of unnecessary employes (including lawyers), the resort to more direct action and the cutting out of lost motion in the settlement of claims, the getting rid of obsolete

or needless reports and statistics, the development of the standing and authority of the local station agents, are all things which are pre-eminently desirable, and it is to be earnestly hoped that Mr. Ford can throw new light on how to accomplish them.

It is also much to be desired that, even for the sake of a small additional reduction in cost, he will not put into effect the policy which the newspapers attribute to him of discontinuing certain labor statistics which will be necessary for adequate comparison with other roads.

**Too Early to See Results**

It must be again emphasized that it is yet too early to know what economies Mr. Ford can achieve even with all those advantages which put his railroad in a class entirely apart from the railroads in general. The results of operation for the six months, March to August, 1921, do not indicate a steady upward trend in his net. The figures are as follows:

	Operating Revenue	Operating Expenses	Operating Income
March .....	\$439,052	\$352,970	\$ 76,252
April .....	697,491	395,816	291,905
May .....	744,406	422,328	311,302
June .....	713,527	376,383	327,003
July .....	744,498	444,794	285,329
August .....	763,840	548,246	197,234

These figures, in connection with those above given for the months of March to July, emphasize anew that the principal factor in the net is the greatly increased gross, notwithstanding a smaller tonnage.

The country will certainly be the gainer if Mr. Ford can design lighter locomotives which will do the same work as the existing heavy locomotives, and if he can design lighter freight cars which will do the same work as the existing freight cars, and which will be strong enough to be hauled and switched (as they would have to be) in the same trains and cuts of cars with the existing heavy equipment throughout the country, on all sorts of grades and curves and under all sorts of conditions.

**Problem of the Stockholder**

It is not clear what Mr. Ford means by eliminating the unproductive stockholder. I cannot imagine he means that existing stock should be confiscated. If he means that for the future stock should not be issued except for appropriate value which has been or is to be put into the property, that seems to be

assured by the Transportation Act. If he means that it is desirable to encourage the ownership of stock by employes and by people who live in the communities through which the railroads run, that certainly is an ideal which I believe the public and railway people would like to see realized. The closer we can get to a condition where the people who use and work on the railroads themselves own the railroads and help to finance them, the better it will be for the country. If Mr. Ford can develop some new methods of accomplishing this result, he will certainly render an important service by doing so. It is seriously questionable, however, whether this movement ought to be carried to the extent of promoting the control of common carriers by large industrial enterprises.

While speaking of the promotion of the ownership of railway stock and the financing of railway necessities by the railway employes and the people living in the communities along the railroads, I would like to suggest that in order to accomplish such an object it is most important that the government avoid making frequent and hasty changes in its railway policy.

**Contrary to Public Interest?**

For example, it would be a detrimental move if the government in this difficult and transitional period should repeal the authority the Interstate Commerce Commission possesses for the protection of the interstate situation over intrastate rates, or should repeal the duty of the commission to fix rates sufficient, within practicable limits, to pay a fair return on railway property. Through such repeals the chance of securing more widespread popular ownership of railway securities and greater participation by the general public in railway financing would be rendered much more remote, and the necessity for resorting at high cost to highly specialized financial experts for assistance in railway financing would become greater than ever.

In conclusion, I wish to express my personal opinion that it is contrary to the public interest for a large shipper like Mr. Ford to own and operate a railroad, by means of which he has a powerful leverage for obtaining special consideration from the common carriers of the country. But as long as this is permitted by law, we can at least congratulate ourselves that the present combination

is in the hands of a genius who is willing to turn his railroad into a laboratory for the making of the experiments which his resourcefulness suggests, and I shall be surprised if some of the experiments do not turn out to be valuable from the standpoint of railway companies in general.

Surely, with his remarkable record in economical production and with his extraordi-

nary personality, he can impress his spirit and his methods upon 450 miles of railroad, with about 2,000 employes, so as to obtain substantial economies. Some of them should be practical examples for the 250,000 miles of railroad with their 2,000,000 employes, but their problems are by no means as simple, and they cannot enjoy the unique advantages which the Ford railroad enjoys.

## He Now Sees Value of Pension System

G. E. McAfee, pensioned agent, residing in Salem, Ore., recently wrote to Superintendent T. H. Sullivan of the Iowa division as follows:

"In returning herewith application for annual pass for 1922, I desire again to express my gratitude to the grand old Illinois Central Company not only for the pass which is to be furnished me, but for many other things, among which is the monthly pension, which never fails.

"As I look back over the thirty years which I so happily spent in the service, I am deeply sensible of the fact that neither myself nor the associates with whom I had an intimate acquaintance placed anything approaching a true value upon the pension plan which was provided us by the management. Had we done so, we would have been more painstaking in our work and have had a deeper interest in all things having to do with the welfare of the company of which we were a part, and would have placed a very high value upon the positions we were so fortunate as to hold.

"As a matter of fact, we did realize that at some time in the dim future we might be given this pension, but in somewhat the same way as we felt that at some time we might become President of the United States.

"I sincerely hope that the present generation of employes is placing more nearly the true estimate upon the value of the pension system, and I am sure that every one of the present pensioners would deem it a privilege to have an opportunity to impress the matter upon the minds of those who have taken up the work where we so regretfully laid it down.

"I sometimes regret that my lines have fallen in places so distant that I cannot often meet even one of the great Illinois Central

family, and I must own to an occasional attack of homesickness, but I certainly appreciate the monthly pension, the *Illinois Central Magazine* and the annual pass.

"You may wonder that I prize the latter, when I am hundreds of miles from the nearest mile of the Illinois Central track and cannot show it to an Illinois Central conductor, but I do, and each one I receive is carefully placed with the others I have accumulated, and I now have a collection of which I am right proud.

"Besides, one of these days, when the Illinois Central has acquired the Southern Pacific, my wife and I will take many a pleasant little journey in Oregon, where every mile is a delight to the eye."

## DECEMBER

THE month of holidays. People are traveling more than usual. Our facilities may be taxed and people will be less careful of their personal safety than at other times.

Solicitors are appealing to the public to patronize our line. We should make an extra effort to provide for their safety and comfort at all times.

With this in view we show them that we are always practicing safety and will continue our efforts.

# Natural Rock Asphalt a Traffic Source

## Kentucky Industry Is Spurred On by the Many Highway Developments That Are Impending

By W. G. CRAWFORD,  
Agent, Greenville, Ky.

**A**RRANGEMENTS are being made for the construction work on the new rock asphalt mill near Rock Port, Ky., on the Muhlenberg side of Green River. Bids are being received by the Natural Rock Asphalt Corporation for the grading of 2,500 feet of siding from the main line of the Illinois Central to the mill site. It is expected to have this plant in operation by spring, with an initial capacity of 1,000 tons of the finished product a day.

The locating of this plant on the Illinois Central will result in a great deal of new business for this company. Many states traversed by our lines have already voted bonds for highways, and the construction of these highways will begin in the early spring of this year. Our agents and representatives at points where these highways are contemplated will be doing their communities a good turn by calling their attention to this wonderful road material. By doing this, they will also increase the earnings of this company in transportation charges.

### A Fine Road Material

Building and maintaining good roads are now recognized public necessities. The

federal government, the states and the counties are co-operating in connecting all important towns by highways over which traffic can pass with economy and comfort. One of the most important features of such roads is construction that will be durable and waterproof and will sustain the traffic without breaking down and deteriorating so as to make them expensive to maintain.

It is estimated that the cost per mile per year to keep up the surface of even the best type of macadamized roads is from \$500 to \$1,000.

### Equal to European Product

Natural rock asphalt has been the highest type of pavement in Europe for more than one hundred years. About seventy years ago natural rock asphalt was imported from Europe and used in New York City and elsewhere along the Atlantic Coast. Rock asphalt streets laid in St. Augustine, Fla., in 1885 are still in service. The cost of ocean transportation, however, was so high as to make the extensive use of the imported rock prohibitive. American genius then devised a substitute for natural rock asphalt by mixing hot asphalt and sand by machinery, which constitutes the common type of sheet asphalt in use today.

The natural rock asphalt deposits of Ed-

Left: Flushing Soil From Top of Asphalt by Hydraulic Pressure. Right: Open Quarry, Showing Face of Ledge and Asphalt in the Rough.

monson County, Kentucky, equal in every respect the European product. When they first became known, however, their inaccessible location made them unavailable for use until the improvement of Bear Creek, Green and Nolin rivers provided water transportation to railway points.

Extensive beds of this rock asphalt have recently been surveyed along these rivers in Edmonson County. Blasting into the face of the cliffs has revealed rich black rock, or asphalt, in a bed eighteen feet thick. It is estimated there are several hundred million tons along the banks of these rivers.

Comparatively few persons know about these vast deposits of a material which, in its natural state, without adding anything to it or taking anything from it, makes the best known surface for roads and streets.

While this asphalt has been quarried and shipped for many years in a limited way to various parts of the United States, it is only within the last five years that its use has become generally known. Only one company has thus far produced this material extensively and put it on the market.

Natural rock asphalt, as found in its purest and most valuable state in Edmonson County, was formed by the infusion of petroleum, ages ago, into a bed of sandstone, or silica (quartz) sand. Once deep under the earth or under the sea, it was later raised, by some upheaval, above the sea level. The volatile oils leaked out or evaporated when the erosion of the surface into the valleys cut through the deposit. The heavier asphaltum base of the petroleum remaining, thoroughly impregnating the original oil sand, finished the product now known as "black rock," or rock asphalt.

### Mining the Kentucky Asphalt

The mining or quarrying of this product is not a complex problem. When it is found under but a few feet of cover, the overburden is stripped by hydraulic methods. When the cover is thicker and heavier, steam shovels are used. The rock is taken from the quarries in large blocks, just as other stone is quarried, loaded in tram cars, carried to the barges and transported down Green River to Rock Port, where the new mill will be located.

At the mill it is crushed into smaller pieces and run through a great pulverizer

which reduces it to the fineness of the sand which it contains. This sand is sticky because the original rock was saturated with the asphalt that was left in it when the volatile oils evaporated or leaked out.

Every grain of this fine, sharp, linty sand is perfectly coated with asphalt by the age-long process of nature. This pulverized rock asphalt is spread on the road to a thickness of about two inches on top of a foundation of cracked rock such as would be used on the ordinary macadam road. It is then rolled cold, just as it comes from the mill. This makes the construction of roads simpler, quicker, easier and cheaper than can possibly be done by any other process or with any other material. The completed road presents a smooth, resilient, gritty surface that will not "bleed" or buckle in hot weather, will not crack in cold weather, and is not slippery when wet.

### Comparison of Chemical Analyses

It has been found necessary in the artificial, or hot mixed, types of asphalt paving to use approximately 10 per cent of bitumen in order to cover the grains of sand and bind the mixture. This large proportion of bitumen causes a pavement to creep, roll, buckle, have a wash-board effect in the road surface and "bleed." It also becomes soft in hot weather and cracks in cold weather.

Standard road specifications for natural rock asphalt call for a bitumen content of from 7 to 9½ per cent. Chemical analysis of the deposits of natural rock asphalt of Edmonson County show bitumen 7.75 to 9.65 per cent, which, when ground together, averages approximately 8 per cent bitumen and 92 per cent silica quartz, a reduction of 20 per cent in bitumen content under that of the hot mixed types of asphalt pavement.

Many of the natural deposits of asphalt rock in the United States have a limestone base, which does not render them suitable for the best type of road surface. Kentucky natural rock asphalt, however, is composed of a mixture of pure silica sand and bitumen, and is the ideal material for the highest type of road pavement. Kentucky natural rock asphalt pavement subjected to heavy traffic for years shows no appreciable wear. It never loses its life. Tests show that ma-

*Left: Warren County, Kentucky, Road in Course of Construction, Showing Three Stages of the Work—Limestone Base and Asphalt Surface Before and After Rolling. Right: The Completed Asphalt Road.*

material which has been down as long as fifteen years is practically as alive today as it was when laid.

#### Repair Work Advantages

Repair work simply consists of preparing the spot for repair in the usual way and of rolling in a little additional cold pulverized rock. It is laid without heating in ordinary temperature by common labor, and no particular machinery is used in making these repairs. Ordinary asphalt requires mixing with sand and other materials in specially constructed machines, with a certain amount of heating and it must be hot while being transferred. The required sub-surface with ordinary asphalt is also costly. Added to this, the work of repairing must always be carried out along lines parallel to the original expensive construction. The Kentucky rock asphalt eliminates all of these enumerated drawbacks associated with construction and repair by ordinary asphalt.

It is known that five hundred tons of the rock asphalt are required to pave a road sixteen feet wide for one mile. At this time the asphalt is being sold around \$9.50 a ton. This means that the asphalt material for a mile will cost \$4,750, which makes it by far the cheapest high-grade paving material known.

#### Tests Prove Its Worth

Natural rock asphalt from Kentucky now surfaces some of the best and most durable roads and streets in the country.

On Nelson avenue, Columbus, Ohio, a test road was built by the state highway commission in 1909. Seventeen sections of

different types of road were laid. The section surfaced with natural rock asphalt is still in perfect condition, without having been repaired. Nearly all the sixteen other types of road have been extensively repaired or reconstructed.

The section of the Dixie Highway in Jefferson County, Kentucky—built partly before the war, partly during the war, and now being extended—sustained a traffic of four thousand vehicles a day during the war, including all the heavy military traffic between Camp Knox and Camp Taylor. No better road can be seen anywhere today.

Muhlenberg and Warren counties, Kentucky, are using this material extensively. Several miles have been completed in Warren County. In Muhlenberg County the citizens recently subscribed \$220,000 to assist in building seven miles of federal and state-aid highway, known as the Central Highway, extending from Owensboro, Ky., where it connects with the Ohio River road, through Greenville, Central City, Madisonville, Dawson Springs, Princeton and on to Paducah. The surface of these seven miles will be Kentucky rock asphalt.

#### COL. W. G. ARN HONORED

W. G. Arn, assistant engineer, maintenance of way, of the Illinois Central, is now serving as president of the Chicago section of the Society of American Military Engineers. The election of officers was held November 16. Colonel Arn served in France as an officer of the Thirteenth Engineers, in which many of our men enlisted.

# Behind the Scenes in a Standard Diner

## Four Cooks and Six Waiters Work in Limited Space, and Each Has His Own Share to Do

By T. S. ROBINSON,

Chief Clerk, Dining Service Department

**I**N the November issue of this magazine appeared an article on the dining car steward and his duties. But what of the dining car employes other than the steward?

The crew of a standard dining car (containing thirty-six seats) on a heavy run usually comprises one steward, four cooks and six waiters, a total of eleven men. However, the dining car must not be confused with a cafe car, or club car, which seats twenty-four passengers at the most and consequently needs fewer employes. This type of car is usually found on the lighter runs. Standard diners are used on long, heavy trains; should the traffic justify it, two dining cars are used on one train to serve the passengers, this being the custom when the passenger list exceeds eighty first-class fares.

### Four Ranks of Cooks

Dining car cooks are selected for their competency and physical fitness. This applies to all classes. Cooks are graded according to their ability and their knowledge of the culinary art, as follows: first, or chef-cook; second cook; third cook, and fourth cook. The grades and the salaries go hand-in-hand and are commensurate with the services rendered.

The chef (French for chief) has complete supervision of the kitchen. He has three assistants, all more or less with separate and distinct duties to perform during each meal. The chef is responsible for the preparation of the food—the tasty and palatable portions delivered to the patrons of our dining cars. He is constantly attending the preparation, be it boiling, broiling, frying, stewing, sauteing, blanching, braising, basting, roasting, baking, or what not, until the food has passed from the raw material through the various stages of the culinary art to choice appetizing dishes properly garnished, ready for the waiters' service.

It has always been the policy of the Illinois Central dining service department to purchase the best provisions on the market,

as in most commercial matters the cheapest is the dearest in the end. In the matter of stock, it is necessary to have, above all, a sufficient quantity of the finest materials at one's disposal. It is absurd to expect excellent cooking from a chef (be his merits or talents what they may) whom one provides with defective or scanty goods.

### How the Chef Works

Besides general supervision, the chef's personal attention is directed toward making soups, salads, sauces; carving meats (both raw and cooked), making pastry and bakery goods, and often running the broiler in the preparation of fish, steaks, chops, and poultry. He is always ready to help the second cook when the latter has more work than he can do. Teamwork is the greatest asset of a dining car crew. Without it, no crew could render efficient service and get proper results.

The chef uses many French technical terms on the menu, words for which there is no English equivalent, as it would strain the meaning of certain English words in order to fit them to a slightly unusual application. In so doing, he follows a precedent which has been established for many decades all over the world. The example for such verbal adoptions was set long ago in France, where sporting and other terms for which no suitable native words could be found were borrowed wholesale from the English language and Gallicised. It is therefore not unreasonable to apply the principle to terms in cookery, which, though plentiful and varied in France, are scarce in this country.

The pay of an experienced chef-cook ranges from \$118 to \$178 a month, including seniority and overtime.

### Where Second Cook Comes In

The second cook is the chef's assistant—that is, if he has the ambition to be promoted to a better position with more pay, he is always striving to do more and better work and is eager to learn the chef's duties. Otherwise he is merely the one who takes care of

the short orders, as cooking cakes, sausage, ham or bacon and eggs, omelettes, entrees and stews, and vegetables. If he is efficient and anxious to improve, he will do the pastry and bakery work, besides looking after the broiler orders. He keeps the range and broiler clean and helps the third cook when that cook has more work than he can do.

Many of our chef cooks have developed from second cooks, and they are preferred for the service, on account of their intimate knowledge of doing things the Illinois Central way. The second cook always helps check out the supplies at the commissary, loads the stores on the car and puts them away properly. The monthly pay of a second cook ranges from \$91 to \$150, including seniority and overtime.

The third cook is an embryonic second cook. Many third cooks on the Illinois Central have demonstrated their fitness and ability by sheer stick-to-it-iveness of several years' hard work and have become our best second cooks. The third cook is usually the first man to open the diner-kitchen of a morning. He starts the fire, prepares the cereal, makes the coffee, bakes the apples, browns the toast, dishes up the vegetables and looks after the bread orders. He prepares the vegetables and often cooks short orders when he shows an inclination to follow the cooking profession and to develop into a second cook. He lends a hand in helping out the fourth cook (whom he treats as a subordinate) when the occasion requires it in rush hours. The monthly pay of a third cook ranges from \$76 to \$115, including overtime.

#### Fourth Cook Is "Pearl-Diver"

The fourth cook is last, but not least, for his services are indispensable, and I have known several to develop into fine chef-cooks by their untiring and loyal efforts in trying to better themselves in the cooking line. A fourth cook, sometimes dubbed a "pearl-diver," is usually busy washing dishes, pots, pans and other kitchen utensils used in the preparation of a meal. He keeps the kitchen floor and vestibule clean and often takes care of the fire, ashes and garbage—all necessary in keeping the service neat, clean and sanitary. The pay of a fourth cook ranges from \$61.50 to \$82 a month, with overtime.

All cooks are required to pass a surgeon's

examination before entering the service and once every six months thereafter as long as they remain in the service. They are furnished with clean caps, coats, and aprons from the Illinois Central laundry for every meal. Clean, wholesome quarters await them at the distant terminals when out on their runs.

A standard dining car kitchen is about 18 feet long and 4 feet wide. This gives little room for the movements of four cooks in the performance of their duties, when we consider the cooking and serving of an average of one hundred meals in about two and one-half hours, under the unfavorable conditions of sudden stops and starts and the instability due to a 60-mile speed around sharp curves.

#### Chief Waiter Nearest Kitchen

Of the six waiters on a dining car, the first waiter, or pantry-man, seems to hold the most important post. He is responsible for the care and storing away of the milk, cream, ice cream, butter, bread, cheese and fruits and vegetables which are used as relishes, besides such dry stores as are used immediately by the waiters, such as sugar, salt, pepper and all other condiments. On account of his many duties and the necessity of his being in the pantry much of the time showing the other waiters many attentions, he always has been given the first station, or the one next to the pantry.

It might be proper to note here that each waiter is given a separate station and a distinct side work. In a 36-seat car, containing six large tables and six small ones, it can readily be seen that each waiter has an equal share of the work to do, and in that way seldom has more than he can properly attend to if he is a competent waiter.

The second waiter's side duties have to do with cleaning the large silver, keeping the buffet dressed and clean, mopping the marble-matting and attending to all car orders and supplies. He waits on the second section of tables.

#### This One Keeps the Linen

The third waiter looks after the linen—the table cloths, table tops, napkins—counts and sacks the soiled linen, and tags and ships it to the laundry in Chicago. He also cares for the drapery and curtains, and in cases of necessity keeps up the Baker heat-

er. He has charge of the third section of tables.

The fourth waiter cares for the small silver and steel knives and looks after the dusting and general cleaning. He serves the fourth section of tables.

The fifth waiter looks after the cleaning and filling of all vinegar and oil cruets, salt and pepper shakers and all sugar bowls. He has charge of the fifth section of tables.

The sixth waiter looks after all glassware and trays, keeps the chill-box clean, sweeps

and cares for the aisle strip. He looks after the sixth, or last, section of tables.

All waiters and cooks take orders from the steward and must use team-work to help one another along. The monthly pay of a waiter ranges from \$59 to \$88, including overtime. However, to this amount must be added the dozen small gratuities received every day while rendering that ever-faithful service, kindly and attentive, which wins the thanks of the Illinois Central and its passengers.

## Now Out of the Harness After 49 Years

*Jerry O'Connor, veteran section foreman of the Springfield division, was retired recently after forty-nine years of faithful service. Following is an excerpt from the Illinois State Register at Springfield, wherein mention is made of his faithful service.*

Forty-nine years of honorable service with the Illinois Central Railroad, retirement with a small pension, a comfortable home, and five children all well located in business and in professions, is the happy situation of Jerry O'Connor, 1128 East Adams street, who, with his wife, is about the most contented person in the city of Springfield.

*Jerry O'Connor*

Jerry O'Connor came from a family of railway men. His father was employed as a section foreman as far back as Jerry can remember, and it was with his father as a track laborer that Jerry began his service with the Illinois Central on the track between Anna and Cobden. Since that time he has held the position of section foreman, supervisor of division, section foreman again, flagman and laborer, but always with the same railroad. He was holding the place of flagman at the Eighth street crossing in Springfield in July this year when he was stricken with apoplexy and was declared physically unqualified longer to serve the railroad. Two years were still lacking in the length of service to give him a retirement with a pension, but

the committee at its meeting in August granted the retirement anyway, and with it the part pay, and a pass over any of the company's lines for the remainder of his life.

Mr. O'Connor, in his forty-nine years with the railroad, has seen many changes in the construction of roadbeds, and his coming in contact with the railway public has given him an insight into the habits of the people. He says there are more accidents on the roads now than forty years ago, but he attributes them to the fact that there is more travel.

"People are not more careless than they were forty years ago; there are just more people," was his explanation of the increase in number of railway casualties. "People do not walk the tracks now as they did years ago," continued Mr. O'Connor in speaking of persons being killed by trains. "Forty years ago the streets and roads were bad, and people living in the outskirts of the city or in the adjacent country always used the railway tracks in walking into the city."

One of the greatest inventions in road building in his experience, he said, was the "angle bar" connecting the rails on the road, which permits them to contract and expand with the change of temperature without becoming disconnected. The block system of controlling trains on the track is another invention of much value, thinks O'Connor, and also the larger rails being used now. Forty years ago trains were drawn by the 10-ton engine, and seventeen cars was a heavy drag. Now the rails are much larger and permit the use of 100-ton engines and the drawing of trains of 100 cars.

# Our Veterans of the Blue-Grass Country

## *Kentucky Division Old-Timers Include a Civil War Soldier and an Expert Cushion Maker*

**T**HE Kentucky division of the Illinois Central System has five men in service who have watched the history of that part of the system in the making. The record of each dates back to the roads that were predecessors of the Illinois Central System in that region.

E. D. Gourieux, car foreman at Paducah, who boasts of being one month and three days older than the Illinois Central, has been in the service for forty-three years. He is now in his seventies, and has never had to wear glasses. J. J. Connors, conductor between Louisville and Paducah, has been in the service for forty-one years. His railway career started when he was a husky lad of 15. Louis Rapp, upholsterer in the shops at Paducah, is keeping the engine crews of the Kentucky division in a happy frame of mind with his excellent cushions. He has been in the service for forty-one years. J. M. Milstead, car carpenter at Princeton, is one of a very few men who were in the army during the Civil War and are still in the service of the Illinois Central. He was a lad of only 14 when the war began, but he enlisted, and was in several battles. His record of railway service is forty years. J. W. Whedon, conductor between Louisville and Paducah, was one of the men responsible for the establishment of the hospital at Paducah back in 1884. His service extends over a period of 37 years.

### Older Than Illinois Central

E. D. Gourieux, car foreman at Paducah, Ky., proudly boasts of being one month and three days older than the Illinois Central System, and he is apparently in just as healthy a physical condition as the railroad. He was born January 7, 1851, at Pont-a-Mousson, France. His service record with the Illinois Central is forty-four years.

When Mr. Gourieux was but a small child, his parents went to St. Thomas, West Indies, then to Panama, and later to New York. After living in New York four years, Mrs. Gourieux took her 7-year-old son back to France. The father remained in America. Soon after her arrival in France, Mrs. Gour-

ieux died. The boy lived with his grandparents until he was 14 years old. He returned to America then, and went to Paducah, Ky., where his father was a house contractor.

Mr. Gourieux served four years as a carpenter apprentice under the direction of his father at Paducah. He says that every piece was made by hand in those days. It was not possible to order machine-made pieces from the mill, as is done now. Lumber was all the mills furnished.

### One Job After Another

October 1, 1868, Mr. Gourieux began his railway-career as a laborer on a new railroad that was being constructed from Huntington, Tenn., to Jackson, Tenn. The contractor for whom he was working had a contract for the construction of the first ten miles of the roadbed. Mr. Gourieux says after the grading was completed, the gang of workmen was transferred to another job, and he does not know yet whether that railroad was completed or not.

Just previous to the outbreak of the yellow fever in 1878, Mr. Gourieux was gang foreman on a tie train of the Texas & Pacific. He left Texas at that time and returned to Paducah, where he entered the service of the Paducah & Memphis Railroad as a section foreman.

Shortly afterward he was made a watchman on a construction train. His duties were to keep the boiler from freezing at night, waken the cook in the morning and take a ticket or notice from the passing trains. The latter was necessary as a verification of their passage, he says.

### Back Twisted and Straightened

Later he became a fireman on one of the early wood-burners, and at the same time worked extra in the shops at Paducah. Mr. Gourieux was a versatile workman. When anyone was off duty, no matter what his job was, Mr. Gourieux was called to take his place. He says that there were no division

J. J. Connors

J. W. Whedon

Louis Rapp

E. D. Gourieux

J. M. Milstead

or classification of workmen in those days. If a man could do two different kinds of work well, he was placed at both of them.

Mr. Gourieux was next made a foreman and conductor on a pile-driver. He says that in those days the train crew worked on the pile-driver as well as run the train.

In his early days of railroading (he does not remember the exact date) Mr. Gourieux's back was injured in a wreck. When the injury had healed, his back remained twisted. But on March 23, 1884, while he was standing at the side of a passing freight train, a line broke and struck him a terrific blow. He was knocked down, a leg and an arm were broken, and his back was injured again. When he had recovered, his back was again straight. Often, he says, trainmen who know him threatened to present him with a bill for the straightening of his back.

#### A Real Christmas Reunion

He was off duty after the accident until October of the same year. He was not able then to handle a laboring position, but he was given custody of the water pumps in the shops at Paducah. He continued there until the city put in a waterworks.

In 1885 he became a carpenter in the shops. He had not been there but three months when he was placed in charge of a gang, and he gradually worked up until he was made car foreman.

Mr. Gourieux has never had to wear glasses, although he is in the seventies.

His wife was a Paducah girl, daughter of French parents. They have nine children, four boys and five girls. All the children are married, except the two youngest ones.

Christmas Day the entire family came together at the old home in Paducah. Mrs. Gourieux was at the height of her happiness, he says, when all her boys and girls and their children were about her. The huge pot went on the fire, as in the days of old, and the feast was the best that her experienced hands could prepare. The reunion numbered about twenty, Mr. Gourieux says, counting children, sons-in-laws, daughters-in-laws and grandchildren.

Mr. Gourieux expects to be placed on the pension list this year, but he says it is going to be hard for him to keep away from the shops at Paducah.

#### Helped Found Paducah Hospital

J. W. Whedon, now a conductor on the Kentucky division, was one of the men responsible for the establishment of the present Illinois Central hospital at Paducah, Ky. In the middle eighties, when health conditions around Paducah were bad, Mr. Whedon was an employe of the Chesapeake, Ohio & Southwestern, now the Illinois Central. Plans worked out at that time for the hospital at Paducah, established in 1884, included assessments on the following basis, which would look peculiar on present wages: Those receiving \$40 a month or less were to be taxed 40 cents; those receiving between \$40 and \$75, 50 cents; those receiving between \$75 and \$90, 75 cents; those receiving \$90 or more, \$1. Mr. Whedon was elected one of the eleven members of the first board of directors of the hospital.

Mr. Whedon for thirty-seven years has been an employe of the Illinois Central Railroad and lines that later became part of the system. However, his whole railway experience extends over a period of fifty-nine years.

He was born January 20, 1851, at Madison, Ind. In 1863, when 12 years old, he obtained a position as water boy on a passenger train between Madison and Indianapolis, on a line which later became part of the Pennsylvania System. In those days, there were no water coolers on the coaches. A barrel of ice water was carried in the baggage car, and the water boy carried a pail and cups through the coaches for the convenience of the passengers.

Many soldiers were traveling in those days, Mr. Whedon says, and he was allowed to sell lemonade. This brought him an income of from \$4 to \$5 each day.

One of Mr. Whedon's Experiences With High Water on the Kentucky Division.

### From Water Boy to Brakeman

After serving as a water boy five or six years, he obtained a position as brakeman on that same railroad. In 1870, he accepted a position as brakeman on the L. & N. The same year he was promoted to conductor and sent to the Memphis division. He remained there until 1875.

Mr. Whedon has seen the Kentucky division of the Illinois Central make its history from the very beginning. He started to work on the Elizabethtown & Paducah Railroad as a conductor in 1875. Later the line was extended to Louisville, and the name became Louisville, Elizabethtown & Paducah Railroad. The line was purchased by the C. O. & S. W. R. R., and in 1886 the Newport News & Mississippi Valley Railroad took it over. Then, in 1897, it was bought by the Illinois Central.

Mr. Whedon first worked in 1876 for what later became the Illinois Central Railroad, but he left the service in 1877 and did not return until 1884. In that year, he accepted a position as freight conductor running out of Louisville. In 1886 he was made trainmaster at Memphis, but was there only two years when he accepted a position as passenger conductor out of Louisville. He has continued in that position since.

### Had to Run Through Water

There was a serious flood on his run in April, 1913. Between Kosmosdale and West Point, Ky., the rising water covered the right-of-way and came just to the floor of the coaches. The fire-box of the engine escaped the water by only four inches. All trains out of Louisville made their scheduled runs every day except one. On that day, a heavy wind arose, Mr. Whedon says, and the bounding waves lapped up through the doors of the coaches, and the trains had to be detoured over the L. & N. tracks. When the water retreated, the Illinois Central track was in just as good condition as before. Mr. Whedon says the reason was that the roadbed was underlaid with four feet of rock.

Engineer L. L. Cofer has been on the same run with Mr. Whedon for nineteen years.

The Illinois Central had all-steel trains running into Louisville five years before any other road, Mr. Whedon says. When one of

*Engineer L. L. Cofer and Conductor Whedon, Who Have Been on the Same Run Nineteen Years.*

the competing roads did purchase one or two steel coaches, he says, they made so much "fuss" about it one would think that those were the only steel coaches in existence.

Mr. Whedon was discharged from the Illinois Central Hospital in Chicago the first part of last month. He was there six weeks on account of an attack of bronchitis.

### Served in Confederate Army

J. M. Milstead, car carpenter at Princeton, Ky., is one of the very few men still in the service of the Illinois Central who were in the army during the Civil War. He was only 14 years old at the time the war began, but he enlisted in the Confederate army.

Mr. Milstead was born on a farm in Warren County, Tennessee, August, 29, 1849. He lived on the farm until September, 1863, when he joined Captain Kalaher's Boy Regiment. There were 700 boys in the regiment. They were equipped and drilled a short time at Humbolt, Tenn., and then were sent to Athens, Ala., where they engaged in a fight with negroes. They captured 1,500 and took Athens. After this, the boys were sent to various places

in Tennessee and Mississippi, and later took part in the battle at Brice's Cross Road.

About eight thousand Confederate soldiers were in this battle, which lasted one day, Mr. Milstead says. The Union soldiers were defeated, and thousands were killed and captured. The Confederates lost five officers and seven hundred men, he says.

#### Surrendered in Alabama

Mr. Milstead was in several other battles after that, and escaped each time without serious wounds. His regiment surrendered in 1865 to General Sturges at Montgomery, Ala., he says.

After he was released from the army, Mr. Milstead returned to farm life in Kentucky. This was in December, 1865, and he remained there until 1879, when he went to work on coal barges on the Ohio River.

October 1, 1881, Mr. Milstead accepted a position as carpenter on a bridge gang of the Chesapeake, Ohio & Southwestern. He says he worked ten hours a day, received \$1.80 and thought it big pay. There were only three bridges on the railroad that were not constructed entirely of wood in those days, he says. The bridges at Eureka, Ky., West Point, Ky., and Gilbertsville, Ky., were partly built of iron. The tops were all wood, but the girders were metal.

Mr. Milstead was seriously injured November 2, 1882. He was knocked off of the Cuttawba, Ky., bridge with a long board in his hands, and fell thirty-seven feet into a pile of timber. From this he slid into the creek. When he was rescued, it was found that all his ribs on the left side were broken, as well as his collar-bone and breast-bone, and his hip was badly crushed. He was taken to the hospital at Paducah, and was unconscious for several days. His condition was such that the attending physician thought he would not live, Mr. Milstead says. He was in the hospital until March, 1883.

#### Founded a Tennessee Station

After his recovery, Mr. Milstead was given a position as watchman at the bridge at Big Hatchet river. He established a small station there, and named it Rialto, Tenn.

Later, he became the agent at his little station, and the company derived considerable revenue from lumber shipments at that point. But after four years, Mr. Milstead's health became so bad that he had to give up his posi-

tion. He returned to a farm in Kentucky, where he stayed three years.

In 1890 he was again able to work, and accepted a position on a steam shovel at Gravel Switch, Ky. He was a fireman at first, then a craneman, and after five years was made an engineer. He remained two years longer, and then asked to be transferred to the shops at Paducah.

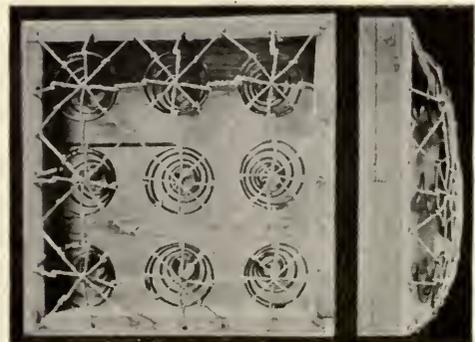

His request was granted, and he was made foreman of a lumber gang. After a year, he was made a car repairer, and in 1904 he was transferred to Princeton as car inspector. He had been in this position three years when he was made car foreman. When the shops were completed there in 1916, the work became too heavy for Mr. Milstead. He was then made a car carpenter, and remains in that position today.

#### An Expert Maker of Cushions

Louis Rapp is a man who can make an engine crew happier than almost anyone else. He is the upholsterer at the shops at Paducah, Ky., and he has invented a seat cushion which pleases all the enginemen who use it. He has received many letters to the effect, and he is constantly receiving requests for more cushions. When cushions are ordered from him, he builds them according to the person who is to use them. He always asks whether the man is of medium, light or heavy build, and constructs the cushion accordingly.

Mr. Rapp is a Kentuckian. He was born July 16, 1853, at Louisville. His father was a cabinet maker. Mr. Rapp says he does not remember when he first started upholstery work, but is sure that he was tinkering along when he was no more than ten or twelve years old.

His first railway work was with the Cincin-

Top and Side Views of the Frame of One of Mr. Rapp's Famous Cushions.

nati Short Line in 1872, when he was 19 years old. At that time, he was an accomplished upholsterer. His work gained recognition for him, and soon afterward he was offered a better position with the Louisville, New Albany & Chicago Railroad, now the Monon. In 1880 he accepted a position with the Chesapeake, Ohio & Southwestern Railroad at Elizabethtown, Ky., but he only remained there nine months. He then accepted a position in the Ohio Falls car shops at Louisville, and remained there until 1885.

### Has to Have a Helper Now

The short time he was employed by the Chesapeake, Ohio & Southwestern at Elizabethtown had made an impression on that company. The value of his work was recognized, and in 1885 he was again offered a position as the C., O. & S. W. upholsterer. At that time there was not enough upholstery to be done on the railroad to keep one man busy, he says. The position was offered him with the condition that he would be willing to work in the paint shop when there was no upholstery to be done. He accepted, and was sent to Paducah, Ky.

Mr. Rapp has continued in that position in Paducah since 1885, but now his upholstery duties require his whole time. In fact, three months ago he became so crowded with work that he had to employ a helper.

In his early days with the C., O. & S. W. there was never a thought of doing upholstery work on an engine, he says. But now the attention each new engine gets keeps him busy a day and a half. For instance, a new engine gets a roof of canvas, two side curtains, one backing board curtain, one slide curtain, two awnings, two back rests, two cushions, two arm rests and three bumper cushions. Each piece of work takes a lot of time and care, especially the cushions, which Mr. Rapp takes great pride in making perfect.

### Comforts for the Engineer

Mr. Rapp says the reason so much attention is given to upholstering the engines nowadays is that good upholstery has been found to be of great comfort to the engine crews. In former days, many of the engineers and firemen suffered with shattered bones in their arms on account of not having arm rests. Many of them lost the use of the affected arms, and could not raise them over their heads. Now, at a cost of approximately 25

cents, the trouble is eliminated entirely, he says.

During November, he says, more than 300 yards of material were used on engines alone. He and the helper did all the work.

Mr. Rapp had the pleasure of shaking the hand of Abraham Lincoln in 1864, and he considers that as one of the great incidents of his life.

It was while he was employed as a waiter in a restaurant in Louisville that Lincoln, Sheridan, Sherman and Thomas were domiciled at the National Hotel in that city for one day. Breakfast for the four was ordered from the restaurant where Mr. Rapp was employed. They were to have quail on toast, he says. After the meal was prepared by the chef, Mr. Rapp was intrusted with the tray for delivery to the hotel. When he stepped out upon the street he was surprised to find himself surrounded by soldiers. There were two in front with fixed bayonets and two in the rear. It was then that he discovered that they were to act as his bodyguard to the hotel. A king could feel no haughtier, he says, than he did in the center of that bodyguard. When he arrived at the hotel, he found the four principals seated at a table. He placed their breakfast before them, then shook hands with each, and had a few moments' chat before he left.

### Forty-One Years an Employee

J. J. Connors, conductor on the Kentucky division, has spent forty-one years in the service of the Illinois Central and roads now part of the system. His father was a railway man who helped build the Elizabethtown & Paducah Railroad, which has now become part of the Illinois Central System.

Conductor Connors was born May 22, 1865, at Lebanon, Ky. At the age of fifteen he was a stout, muscular lad. He wanted to get into the railway game, he says, but his age was against him. However, his eagerness and his physique finally won for him a place on a section of the Elizabethtown & Paducah Railroad. He waded into the work like a veteran, and soon made many friends among the passing train crews.

One day a friend of his who had been in the service of the company for several years and who was well acquainted with the higher officials obtained for him a position as brakeman. He says his friend had a hard time convincing the officers that a lad of 15

could be a brakeman, but they decided to give him a trial.

Mr. Connors worked hard as a brakeman for two years, and was then promoted to yardmaster at Elizabethtown, Ky. In connection with his duties in this position, he was given a branch conductor run from Cecilia to Elizabethtown.

#### Almost Cut Off a Train

It was while he was employed in the yards at Elizabethtown that the company decided to change the gauge of the track. An order was issued to all trains to be in the yards at 4 o'clock one morning so that the work could be started and completed as soon as possible. At Caneyville, Mr. Hickey, the section foreman, started his crew to work too soon. He rushed work on a mile of his section, and had completed the change when a train came upon him. That mile had to be changed back in order that the train could pass.

There was no ballast to the roadbed in those days, Mr. Connors says, and the trains and rails were light. Twenty-five miles an hour was fast speed then.

In 1886, the first heavy engines appeared on the road, with steam brakes. But they did not prove to be successful, he says. When the brakes were thrown on the engine, there was danger of the coaches buckling and jumping the track. Brakes still had to be set by hand.

When he was on the Elizabethtown run in 1884, there was a serious flood which endangered the bridge at West Point. Train service was stopped on that line, and efforts to save the wooden structure were put forward. Loaded coal cars were placed on each end of the bridge to hold it down. Mr. Connors was in service hauling rails, ties and coal cars to the flooded district.

#### Had the Boss in a Wreck

When the Elizabethtown branch was extended to Hodgenville, eleven miles, that part was added to Mr. Connors' run. He was there one year, and then was placed on the run between Louisville and Leitchfield. Then that line was extended to Central City, and Mr. Connors had a longer run.

A few months later, his good service won for him a regular run from Louisville to Paducah, and he has continued there since.

The most serious wreck his train has been in occurred when Superintendent T. E. Hill's car was on the rear. At Illsely, the track

buckled, and the train was derailed. It was on a curve at the time, and looked to be a serious accident, Mr. Connors says. When Mr. Hill's car was examined, the superintendent was found in a corner with every chair piled upon him.

The secret of Mr. Connors' popularity as a conductor can well be attributed to his kind-heartedness and courteous nature. The newsboys on his train think a great deal of him. One declared that Mr. Connors was by far the best conductor he had worked with, and that he was always ready and willing to be of assistance.

### RIGHT AT HOME

"Have you a little fairy in your roundhouse?" inquires Photographer John K. Melton, who snapped this one. Well, Champaign, Ill., has, and here she is. Wouldn't she stop the train? Margaret Cain (for it is she) has been a stenographer for several years at the Champaign roundhouse, where her father is a car helper. They say that what she doesn't know about locomotives isn't worth knowing.

# Stood By Western Railroading in 1863

## Early Issue of Chicago Tribune Mentioned Illinois Central and Gave Civil War Sidelights

**T**HROUGH the courtesy of T. W. Place, pensioned master mechanic at Waterloo, Iowa, the *Illinois Central Magazine* has had access to a copy of the *Chicago Tribune* of June 15, 1863. That the West was not accustomed to yield to the East, even in those days, nearly sixty years ago, is proved by an article the newspaper carried under the heading of "Railway Enterprise in Chicago—Superiority of Western Manufactures—Six Month's Work in the Railway Shops." Pointing to the general spirit of progress, the *Tribune* said:

"At no period in the history of this country has the increase of railways compared with that of the past ten years, nor has the increase been as great anywhere else as in the Northwestern states. At the outset, most of the Western railroad companies were compelled to buy their rolling stock wherever they could get it. The result was that engines and cars of different sizes and patterns accumulated, to such an extent that one road had fourteen different sizes of locomotives in use—each requiring an entire set of patterns, in order to make the parts necessary to keep them in repair. The same was true of cars.

### Scorn From the East.

"Because these purchases were made in the East (rather from the urgent demand and want of time to manufacture than from any absence of the requisite talent and materials), the statement was made in an Eastern railroad publication that 'the general character of work done upon locomotives and cars in the West was cheap and temporary.' This is wide of the truth. There are no better engines or cars built in the United States than those constructed by our home mechanics for Western railroads. We have as skillful men and as good materials of every kind as exist anywhere. The rolling stock built by some manufacturers East is thrown together for sale. That made in Western shops is built for service and is far superior to any that can be purchased or manufactured by contract. This is particularly applicable to cars.

"Another important reform that is being worked in Western shops is the uniformity of patterns, so that those portions of either engines or cars that are more liable to get out of order in case of accident can be replaced without delay at any repair point on the road. For instance, if the wheels and axles are of uniform size, the defective can be replaced by a new one with very little delay or expense. The same rule applies to engines. So far as consistent, the companies are using the same patterns for a number of locomotives—the advantages of which are transparent to anyone.

### Improvement in the West.

"Several of our Western companies now construct all their own engines and cars, while some have manufactured cars for other roads and for the government upon contract. From reliable data, it has been found that both engines and cars can be manufactured here fully as cheap as they can be purchased and that they are far better than can be bought ready made anywhere."

Taking up the shops in the city in turn, the *Tribune* had the following to say about the Illinois Central:

"The Illinois Central car shops are on the lake shore, in the southern part of the city, and are the most extensive of any within the corporate limits. For several months past, three house cars per day have been built, besides keeping up the necessary repairs, which is no trifling affair. Since November four hundred and thirty freight cars have been built for the company, besides overhauling and altering about one hundred cars for the government.

"The company ordered materials for 500 substantial freight cars, and the remaining seventy will be constructed as soon as the materials can be got together, there being a scarcity of some kinds of timber. They are using the iron track and Winslow's patent iron roof.

### Two Sleeping Cars Being Built.

"Besides the above immense number of freight cars (sufficient to fully stock most

ordinary roads), two first-class passenger cars and two superb sleeping cars are in course of construction at these works.

"In the machinery department, Engine No. 4 has been rebuilt to take the place of one sold. Cylinders 16 by 24; drivers 5 feet. Two others of the same size—Nos. 110 and 111—are in course of construction. They are also getting plans and patterns ready for four others—cylinders 15 by 22, 5-foot drivers.

"Of the 45 engines on the road between Chicago and Centralia, nearly all have been altered to coal-burners. There are now but six burning wood. There is now but one obstacle to overcome, and Mr. Hays thinks he will be able to accomplish this, which is to consume the smoke, when coal-burners will be adopted for passenger engines also.

"About 200 hands are employed at the machine shops. S. J. Hays is superintendent of machinery for the Chicago division; W. T. Morrow, master machinist. At the car works 400 hands are employed. C. F. Scoville is superintendent; W. B. Snow, foreman."

### A Mirror of Civil War Times

The newspaper was then what newspapers are now—a mirror to reflect the trend of the times. This particular issue of the *Tribune* was of only four pages, but each page was considerably larger than we are accustomed to seeing at present. The Civil War was then at its highest stage, with the siege of Vicksburg in progress and General Lee starting a march up the Rappahannock which one dispatch shrewdly summarized as follows: "There is no doubt he intends to risk everything in a determined effort to cross the Rappahannock and assume the offensive." That offensive led, two weeks later, to Gettysburg, at the same time that Vicksburg surrendered.

There was a dispatch from Leavenworth, Kan., headed "Kansas and the Border," one from St. Paul, Minn., on fighting the Indians and a report from Utah Territory on the same subject. Most of the first page was devoted to the Civil War. Then, too, there was a threatening aspect of affairs in Japan, where foreigners were in danger, and the British and French fleets were on the point of beginning hostilities unless the

Japanese paid an indemnity and surrendered the murderers of an Englishman.

### East to West by Steamer

Considerable space was devoted to an editorial on horse railroads for the south side of the city, with a reference to the 30,000 inhabitants of the suburbs south of Twelfth street. More than three and a half of the paper's thirty-six columns were taken up by a list of letters uncalled for at the postoffice.

San Francisco, in a dispatch dated two days before, reported "liquors dull" on the market and the sailings of steamers for New York, with rates ranging from \$240 first class to \$50 in the steerage. An advertisement on the same page, strangely enough, called for 4,000 tons of railway iron for the track of the first section of the Union Pacific Railway, eastern division, with delivery at either Leavenworth or Kansas City.

The Polish Committee of Chicago was advertising a meeting to further the cause of long-suffering Poland. Shipping was one of Chicago's biggest interests, and a doctor advertised to mend compasses, barometers and other nautical instruments.

### How to Escape the Draft

Out-of-town boarding for the hot season was offered by a private family in Rockford, Ill. The draft was in effect to get recruits for the army, and on an inside page was an advertisement announcing that "on the receipt of fifty cents information will be given to any person how to avoid the draft."

Life in the army, however, must have had its recompenses, as witness the following want-ad, which sounds much like those occasionally used in the recent world war by soldiers: "Wanted — correspondence. A young private soldier, in Uncle Sam's army, desires to correspond with some pretty young lady, with a view to fun, love, adventure, or whatever may turn up. Address Charlie Stanton, 42d Regiment Illinois Volunteers, Murfreesboro, Tenn."

The Illinois Central time table, as printed with that of other roads in this issue, called for one day passenger train, one night passenger, one Kankakee accommodation, and four Hyde Park trains—these four undoubtedly the predecessors of our present Chicago suburban service.

# Editorial

## INTO THE RAIL QUESTION

An inquiry to determine the reasonableness and adequacy of present railway rates began December 14 before the Interstate Commerce Commission in Washington. Following a statement of the railroads' position, the commission expects to adjourn until January 9, when shippers' representatives are to be heard.

Howard Elliott, chairman of the board of directors of the Northern Pacific, made the opening statement on behalf of the railroads. He declared that, while the railroads are eager to co-operate in every reasonable way with the other interests of the country to bring about better economic conditions, they must be allowed to live and grow in the interest of the country as a whole. While reductions in rates may have a favorable reaction upon business, reductions below the limit of adequacy may do the country more harm than good.

"There was little complaint about the Transportation Act a year ago or about the rates under it," Mr. Elliott said. "In fact, then the complaint was for more cars, more tracks, more engines, etc., and a demand that the railroads move the grain, the coal, the fruit, etc. The rate was a secondary matter.

"That same complaint will come again unless the carriers are self-supporting through rates, and, further, unless the public wishes to revise the opinion deliberately arrived at after its experience with government control and after the long debate in Congress, and decides to support the carriers by public taxation or to take them over and have them operated by the government.

"There must be an effective and adequate transportation machine for the future growth of the country. It is trite to say this, but it is just as important to the farmer and to the manufacturer, who feel now that rates must be reduced, as it is to anyone else.

"The carriers had no large profits in the period of inflation, and, as they are quasi-public servants controlled in their earnings and

expenditures by government agencies, great care should be taken now not to take away from them and give to others to such an extent that the carriers cannot obtain money with which to maintain and operate their properties properly, pay the interest on their bonds, which are scattered so widely, pay some return to their owners, large in number, and obtain new money for extension for the business that is bound to come again, perhaps in 1922, perhaps not until 1923."

George M. Shriver, senior vice-president of the Baltimore & Ohio, presented a detailed statement and chart covering a period of more than thirty years which indicates, even without taking into consideration the decreases recently made and arranged for, that freight rates are not relatively higher than average commodity prices.

"While currently railway operating costs are on a basis which affords an inadequate rate," Mr. Shriver said, "the basic elements of cost are declining and will no doubt continue to decline, so that in the not-too-distant future rail transportation can again be brought to the relative position it heretofore occupied of being the lowest priced commodity in the country, and continue—as it now is—lower than in any other country."

The railroads presented statements showing that for the twelve months ending September 30, 1921, their net railway operating income was \$542,409,582, or 2.75 per cent on the investment in their properties. Because of decreased operating income and increased charges and taxes, the net corporate income has been so diminished that some railroads have been compelled to suspend, and others to reduce, the customary dividends, while some have maintained customary dividends only by drawing upon surplus earned in previous years, with the result that their margin of credit has been reduced, Mr. Shriver said.

## A HOME MAGAZINE

We have been trying to make the *Illinois Central Magazine* a welcome visitor in the

homes, around the firesides, of employes. The Illinois Central, in most cases, makes these homes possible, and we believe it is fitting that the magazine should, in the finest sense, go home to every employe.

One of our correspondents took it upon himself to note how the December magazine was received in his office. Sixty-eight copies were distributed, he reports, and sixty-seven of those were promptly taken home.

That is a fine percentage. How is it where you work?

### WHAT HIT THE FARMER?

A production greater than can be absorbed by the world's post-war buying power, and not increased freight rates, is the explanation of the tremendous slump in the prices of farm products.

President Markham illustrates the point in a letter to the Birmingham (Ala.) *Post*, which published an editorial November 28, of which the following is an excerpt:

"There must be some answer for the low price of the farmer's corn aside from the financial condition of Europe. There are reasons to believe that it is to be found in the excessively high freight rates now in force from the corn country to the seaboard. Corn is being burned in Nebraska because the railroads want so much to haul it to the consumer that the corn is used as fuel and the mouth has to go hungry or find corn nearer at home."

Mr. Markham gives his illustration in the following language, quoting from his letter to *The Post* under date of December 12:

"The facts are that railway rates are not responsible for the tremendous slump in the prices of farm products. Increased freight charges do not constitute the difference between 40-cent corn and \$2 corn, nor the difference between \$1 wheat and \$3 wheat. Since your editorial makes reference to the situation in the Northwest, take Omaha conditions as an example. On May 8, 1920, wheat sold for \$3.07 a bushel on the Omaha Board of Trade, and on November 4, 1921, it sold for 98 cents a bushel, a difference of \$2.09. Between May, 1920, and November, 1921, the freight rate on wheat for export from Omaha to New York had increased only 2 2/5 cents a bushel, and from Omaha to New Orleans only 2 7/10 cents a bushel. On May 15, 1920, corn sold for \$2 a bushel on the Omaha Board of Trade, and

on October 14, 1921, it reached a low mark of 35 1/2 cents, a difference of \$1.64 1/2 a bushel. Between May, 1920, and October, 1921, the export freight rate on corn, Omaha to New York, increased only 2 1/5 cents a bushel, and from Omaha to New Orleans the export rate increased only 2 3/5 cents a bushel."

### TOO MUCH OPTIMISM

Many over-enthusiastic friends of water transportation have sought to make capital of reports that the government's experiment in barge line operation on the lower Mississippi has been producing profits of late. The line was organized three years ago last September and for two years and a half its revenues did not pay the actual expenses of operation, selling traffic, maintenance, etc. During the summer of 1921 the barge line has been making a profit, according to the showing of the government's agents.

A signed article in the St. Louis (Mo.) *Post-Dispatch* of November 13, calling attention to this showing and hailing the barge line as one business venture in which the government has made money, drew a letter from President Markham.

The line is not a business venture, Mr. Markham said in a letter under date of December 16 to the St. Louis paper, but an experiment to determine what part inland waterways shall play in the future transportation plans of the country. Up to the short period this year when a profit is reported, Mr. Markham pointed out, the line has sustained operating deficits which are large in comparison to the business handled, and which the taxpayers have had to make good. The reported profit takes no consideration of the great investment which has been poured from the public treasury into keeping the waters traversed navigable, takes no consideration of the investment in facilities and equipment provided by the taxpayers, and takes no consideration of taxes, depreciation and insurance—all items which would have to be charged against a commercial venture and which, by reason of not having been charged against this experiment, must be met by the taxpayers of the country.

The following are excerpts from Mr. Markham's letter:

"The national experiment which we are making with inland waterways to determine what part they shall play in the national transportation plans of the future must be fair—

fair to the waterways themselves, to the other agencies of transportation (operating on a commercial basis), and to the people at large. It is not fair to exaggerate beyond their relative importance alleged results which appear more favorable than they are. I regret to see this effort . . . to make the present experiment profit at the expense of other transportation agencies, especially the railroads. It reveals a lack of vision on their part, a lack of vision which is the more deplorable because of the assistance and co-operation which have been given the experiment by railway men.

"The public welfare demands a well-correlated and efficient national system of transportation. To secure such a system, we must make use of those instrumentalities which prove themselves most efficient and most economical. The three most popular methods of transportation—by railroad, by waterway and by motor truck—must be considered in the light of our national problem, and their use must be directed along lines which will work for the efficiency and economy of transportation as a whole. The motor truck probably will take a definite place in this plan as an agency for the transportation of freight, and especially high grade freight, in short distances in congested areas, and in supplementing the railroads and the waterways by penetrating regions which they cannot reach. There are places where the waterways have proved their ability to handle freight more economically than the railroads, and in those regions the railroads have discontinued competing services. There are other sections where the waterways are, but where the railroads, by reason of various considerations, have been able to handle traffic more cheaply and efficiently, and the waterways have gone out of business. There are still other sections where waterways cannot be provided, and there the field is the railroads'.

"If the water carrier service is in fact more feasible than rail service in any particular territory, the railroads should be permitted to own and operate barge lines to supplement and co-ordinate their services by rail. By making the railroads and the waterways co-ordinate parts of the whole plan of transportation, mistakes of the past can be eliminated. There would be no disposition to ruinous competition, but the most feasible route would be utilized in each line of traffic. Neither rail nor water facilities would be developed to such an extent

as to make for large economic waste, but each would be developed in line with the business problems to be met. Each could supplement the other. A constructive national transportation policy should contemplate permitting the railroads to operate water carrier service, from which they are now barred by legislative restrictions.

"In the reports of the federal barge lines which I have seen only the actual expenses of operation, selling traffic, maintenance of equipment, etc., are taken into consideration. In addition to similar expenses, the railroads are required to build their own lines and facilities and buy and replace their own equipment; the railroads pay more than a quarter of a billion dollars annually in taxes; and they must earn a capital return sufficient to compensate the investors whose invested savings have made their enterprise possible. Instead of the direct users of the waterways service doing this in the case of the government's experiment, the taxpayers of the country as a whole pay these items—they provide the funds to make the rivers navigable, they have purchased for the barge lines the equipment and facilities used in operation, they pay the taxes from which the barge lines are exempted, and they will be called upon, if the government continues in the experiment, to replace the facilities and equipment as they are worn out or become out of date.

"I do not bring up this phase of the subject in protest against the methods pursued by the government in the operation of its barge lines; I bring it up to show how utterly unfair it is to exaggerate the importance of alleged operating results produced by these experimental water carriers. It is unfair to the waterways themselves, it is unfair to the railroads, and it is wholly unfair to the public, in whose interest the experiment is being made. Representing to the public that the barge lines are saving the shippers money is, in the face of facts thus far produced and given circulation, entirely misleading. If the taxpayers met the costs of providing the railroads with facilities and equipment and renewing them from time to time, if they agreed to absorb the quarter of a billion dollars in taxes now paid by the railroads each year—in short, if the railroads were treated on a parity with the barge lines now operated as an experiment by the government—would the barge lines then be able to render a service as economical and as altogether feasible as that produced by the

railroads? Or, if the water carriers had to meet these costs from which they are now freed—as they should have to meet them when the experiment is ended and their operation becomes a commercial venture—would they then be able to charge rates which would produce savings for the shippers? These are the questions to be considered in viewing the federal barge lines experiment.

"If we do not view the situation in that light we are not playing fair to the taxpayers of the country as a whole. If the inland waterways are to be an extensive part of our future transportation plans as a nation, and the people as a whole are to be called upon to provide the funds for making the rivers navigable, their benefits must be national. If they are not to be a national benefit, but are to be used solely or largely for the benefit of the communities located directly upon the waterways, their costs should be borne by those who receive the benefits."

### MISREPRESENTATION

An example of how the railroads are misrepresented by those who endeavor to put obstacles in the way of railway progress is contained in a statement from James E. Ferguson, former governor of Texas, which was published in a recent number of the *Boilermaker and Iron Ship Builders' Journal*. Mr. Ferguson discovered an instance where the freight charge for hauling a car of fuel oil a distance of thirty miles amounted to \$75, and by rapid calculation he came to the conclusion that "for the use of one freight train the railroad was getting \$6,000 an hour." He figured out that the wages of the train crew amounted to \$7, and therefore the railroad made a net profit of \$5,993 for running the train!

It may be of interest in considering the former governor's statement to know that he bears the distinction of being the only governor whom the people of Texas have ever impeached and removed from office. But how do his figures stack up with the truth?

During the first seven months of 1921, according to the Interstate Commerce Commission reports, the railroads received an average of 1.275 cents for each ton of freight they hauled one mile—in railway terms, for each ton mile of freight service performed. This means that the roads charge only 5 cents for hauling nearly four tons of freight each mile.

To put it in another way, they haul a pound of freight 7,845 miles, or more than eight times the distance between Chicago and New Orleans, for a nickel!

Another mistake which Mr. Ferguson makes is in considering only the cost of operation as represented in the pay of the men actually engaged in the operation of his hypothetical train. During the war we became acquainted with the statement that it took a number of men back of the lines to keep the man in the trenches supplied with fuel, clothing and supplies. The same thing is true of the railway service. Every man engaged in the actual operation of a train must have back of him ten workers engaged in all the other activities of the railroad—keeping up the track, the rolling stock, the signals, and all other facilities and equipment, and making accurate accounting of the manifold financial transactions. If the miners mining the coal, the woodsmen getting out the lumber, the steel workers manufacturing the steel that the railroads consume were included, the number of workers behind each trainman would be much greater than ten to one. The Ferguson statement considers only a fraction of the cost of operating a railroad. It would be just as fair to look at a squad of men fighting in a trench and declare that their wages constitute the whole cost of manning an army.

The railroads are not defending the present scale of rates. Rates are high. In comparison with the reduced prices of some products, especially agricultural, they seem out of proportion. But what shall we accept as the basis of rate-making?

The Transportation Act of 1920 provides that rates shall be fixed at such a level as to earn, under honest, efficient and economical management, a fair return upon the investment in the properties devoted to the transportation service. That provision is eminently fair. It is not alone a matter of simple justice to the millions of persons who, directly and indirectly, have invested their savings in railway securities and have thus made the railroads possible; it is a matter upon which the whole future of our transportation system rests. If the railroads are not permitted to earn a return that is fair and reasonable, they cannot induce investors to put new capital into railway investments. If the railroads cannot secure new capital from time to time for the making of extensions to and improvements in

their plants, they cannot keep pace with the growth of the country's business. If they are prevented from keeping pace with the growth of business, the commercial structure of the country will collapse, for the railroads are the arteries of business; commercial activity is founded upon the ready interchange of ma-

terials, which only the railroads have proved able to supply. There is only one other alternative to permitting the railroads a fair and reasonable return—namely, that the government shall subsidize the railroads from the public treasury, whose funds come from the taxpayers—and we surely want to prevent that.

## Here Is an Agent's New Year Greeting

It is customary yearly in this land of the blest,

To extend friendly greeting the first of the year.

So do not be worried; 'tis only a jest

That I offer you now in the way of good cheer.

The Station Agent is the gist of my song,

The man who's responsible if anything's wrong,

The man who is burdened with multiplied bosses,

The man who is charged with all of the losses.

The Auditor kicks if reports are delayed,

The Superintendent thinks they are all overpaid,

The Freight Claim Agent, with fiendish glee,

Says, "Charge him the loss on the O. S. & D."

The G. P. A., when travel declines,

Dictates a letter containing these lines:

"Explain the discrepancy; I must say I fear  
You're not so energetic as you were last year."

The Agent answers: "Cotton is but 4 cents a pound;

Weather so dry wheat won't sprout in the ground."

And then, with a candor most beautiful to hear,

Says: "Not so many traveling as there were last year."

This kick disposed of, about the next day

Comes a long-winded letter from the G. F. A.,

Which says: "I notice for the seventh time  
Dusenbury is shipping by the other line.

"If you can't get business, please say why;

I'm of the impression that you don't half try.

You must be energetic, you *must* get freight,  
But be very careful that you don't cut the rate."

The Agent gets up early and works till very late,

All the time scheming how to get more freight.

He lies upon his downy couch, and dreams  
that he's been praised,

And as a recognition that his salary has  
been raised.

He wakes and finds the adage true

(In fact, it never varies)

That dreams, except a very few,

Go always by contraries.

When death o'ertakes, and beyond he wakes

And knocks upon the door,

And Old Peter looks upon his books

To figure up his score,

He tremblingly asks about the tasks,

In this beautiful land of gold:

"Is there no escape from hustling freight?

Must I do this as of old?"

"Have you Superintendents and General  
Freight Agents,

Claim Agents and Auditors here?

If this is so, I will go below;

I must keep my conscience clear."

Old Peter the while looks down with a smile

And takes him by the hand,

Saying: "Never fear; there's none of them  
here—

Come in and join the band."

# PUBLIC OPINION

What the

World thinks

## APPRECIATES THE Y. & M. V.

The following letter from a reader of the New Orleans (La.) *Item* was printed in the *Item* December 9:

"The Editor of the *Item*:—It is not often that I am as much pleased with an editorial contribution as I was by one in your paper some ten days ago to which fortunately my attention was called.

"I refer to that one in which you so acceptably discussed the spirit of friendliness manifested by some railroads in the South, especially those entering New Orleans, and contrasting that manifestation of a willingness to live and let live with the opposite practice which too much characterizes the practices of many. You point out the Illinois Central Railroad as a corporation which enters your popular life, in the true spirit of neighborliness, illustrating in its acts the truth that all corporations are not vampires and enemies to the community.

"I cannot speak from personal knowledge of the Illinois Central immediately—but being a resident on one of its subsidiary lines—under (largely) identical executive direction—the Yazoo & Mississippi Valley Railroad, I can heartily endorse what you have said, not in praise, but in justice to a great neighbor. We have questions stubborn enough, in all reason, existing in our politico-economic life, without injecting therein imaginary wrong supposedly existing contrary to our interest, and pouring thus the fuel of imaginary grievance upon the fires of prejudice and passion.

"The world is torn and bloody enough now, scarcely able to breathe freely since the armistice, three years ago. The smoke of contention yet hovers on the horizon, and it becomes us to pause and heed any note of concord which rises to the ear and applaud the spirit of him who sounds it.

"The stamp of emphatic disapproval

should mark our reception of any note of discord, whose tones or terms will tend to encourage or promote inharmony or array men into classes, suspicious one of another. More with us than with any other people, perhaps, is this reprehensible. Bound together by a veritable plexus of steel and wire, by steam and electricity, joined in an indissoluble union of interest, we, of democratic America, are one mighty family, nearer in time and distance to each other than were our fathers in the days of the Revolution who resided 100 miles apart.

"It is a pleasure, for him who pens these lines, looking back over a mental trail of thirty-seven years and more, having seen the first spike driven and the last in the construction of the Y. & M. V., living during all that time adjoining their property, to record the fact that this railroad has been a factor in the upbuilding of Mississippi, increasing and sincere. So of the parent line. Be it a grade crossing too low, or an obstructing embankment, hindering to view progress or travel, a courteous call of attention thereto has, without exception, in my memory, brought response more than half-way upon its part, in cost and effort, the needed thing to do.

"Sometimes, it may be, our expectations exceed the just line of exaction and by our gauge it falls short—then is not the time to forget the good that has been done—but is the time when the cadence sheet of debit and credit should be cast and the things that are Cæsar's should be rendered unto Cæsar.

"In the case of my own little town of Centreville, Miss., the partnership between it and 'The Company' has progressed through 'all these years' with such smoothness, fairness and friendship that we can say thereof—'you, by co-operative work and fairness, have made us the best town (in its

class) on your line, and we in turn are your best patrons, as a result.'

"CIV,  
"Centreville, Miss."

### GOVERNMENT OWNERSHIP

Before the railway strike was called off President Stone of the Brotherhood of Locomotive Engineers issued a statement indicating that one of the objectives of the strike was to compel a resumption of government ownership and operation.

On the other hand, far-seeing publicists like Mr. Hapgood, who writes daily for the *States*, have been suggesting that the owners themselves have had something like this in mind, provided they can get their price for the roads.

But even if the employes and the capitalists would like to see the government again take over the country's transportation, it is certain that the masses of the people would not.

There was a time before the war when many people felt that government ownership would be in the public interest, sentiment in the South being against it only from a fear that such control would cause racial clashes and disorder.

But most of those who were for government ownership some years ago were cured by their experience during the war when the federal power did assume control. Instead of better service and cheaper rates for passenger and freight traffic, they had to put up with worse service and higher costs, aside from a tremendous debt which in the end they must pay, and they are still suffering from the experiment.

A time may come when the government will be able to operate the railroads more efficiently and cheaply than private owners, but that time is far in the future, and popular sentiment for a long time will be against a renewal of the experiment of a few years ago.—New Orleans (La.) *States*.

### A RAILROADING CAREER

Ralph Peters, president of the Long Island Railroad Company, was asked recently to give his opinion on the question of "A Railway Career for the American Boy." In his reply to the inquiring magazine editor, Mr. Peters said in part:

"Since January 1, 1918, I suppose most

railway men have many times wondered whether railroading could be recommended to anyone as a life career, but I believe the railroads must soon 'come back' and offer the same inducements for young men as existed when so many of the present generation of railway executives entered upon the lowly occupations that led to their advancement and finally to the highest positions in their organizations.

"The railway profession is an honorable

### Co-operation

The spirit of co-operation reflected in all our recent campaigns must be gratifying not only to the officers but to all employes. It illustrates conclusively what can be accomplished by getting together and working with singleness of purpose.

I recall a statement by a prominent attorney who, while in conversation with a guard at the insane asylum watching over the inmates at work, inquired if the guard was not afraid that they would get together and attack him when he was not looking. To this the guard made answer: "If they were capable of getting together, they would not be here." This seems to illustrate in a way the sanity of co-operation.

The success of individual effort depends largely on the spirit of co-operation. While it is doubtless true that the streams that turn the mill-wheels of the world rise in solitary places, the power behind Niagara represents the confluence of many rivers. The spirit of co-operation that moved the Spanish queen to pawn her jewels made it possible for Columbus to discover America. In the recent war America's co-operation turned the tide of conflict.

Co-operation by employes in response to requests of the management has already been productive of great results.

The Old Reliable has attained an enviable reputation for keeping its passenger trains on time. Our patrons have come to realize that, when they travel on the Illinois Central, nothing short of an act of Providence will prevent their reaching their destination on time. The care with which our engineers start and stop trains and the courtesy shown passengers by trainmen oftentimes cause travelers to feel that their journey ends all too soon.—S. KERR, *Agent, Cedar Rapids, Iowa.*

one, and full of the keenest interest to the young man who is interested in it. To such a man the sight of a moving train, a busy freight yard, a mammoth station belonging to his railroad, is the cause of the greatest pride, and the thought that he is a part of the organization that makes such things possible is a spur to greater ambition and advancement.

"Never were the railroads in greater need of brains and talent. They must be operated at a high point of efficiency and to attract the proper material inducements for advancement will be held out to those who can 'deliver the goods.'

"While the man with the higher education may have the advantage, the man with an ordinary education may successfully compete with him provided he can 'railroad' and constantly tries to improve himself. But both must have an inherent love for the work and must be practical. He who would succeed must not only do his own work well, but must watch the other man and learn his work. He must be so interested in the business that he will get genuine pleasure in spending his 'time off' to visit those parts of the railroad that do not enter into his daily work, so that he may know at first hand what they look like and how the operation is handled there. For such a man or boy I say the railroad offers the greatest opportunities for a successful career."

---

### ONE OF OUR PROBLEMS

Chicago newspapers profess to be heartily in favor of a system of subways. Certainly, if there is any city that badly needs a system of subways, it is Chicago, but unfortunately some of our newspapers—those that are making the loudest demands for a system of subways—are themselves perhaps the obstructions most likely to keep Chicago from obtaining that greatly needed improvement. We refer to those newspapers that are strenuously advocating a 5-cent fare for our surface lines, a fare which, if put into effect, would undoubtedly throw the surface lines into bankruptcy.

Is there any assurance that these newspapers will not pursue the same policy toward investors in a system of subways that they are now pursuing toward investors in the securities of the surface lines?

"Oh," these newspapers will say, "but we

want the city itself to own and operate the system of subways."

If the Chicago newspapers that are advocating a 5-cent fare for the surface lines should succeed in forcing their will upon those lines, and if a subway were built and placed in operation, would not the subway have to compete with the surface lines by also granting a 5-cent fare?

Would that not mean that the already overburdened tax-payers of Chicago would have to bear the brunt of the difference between the income and the outgo of the system of subways? Would it not mean that the citizen using the suburban line of one of the railroads would have to dig down in his pockets to help pay the fare of the citizen who used the subway?

The perspective of some of those who write editorials for our newspapers—editorials which are read by the public generally and which tend to mold public opinion—is a most peculiar one.

What is said of the destructive policy of some of our newspapers may also be said of the politician who wants to have himself elected to office and who finds himself in a situation where he must win a temporary popularity at any cost. He raises a straw man to fight, and usually that straw man is a public service corporation of some sort. He wins the election by catering to the ignorance and prejudices of his constituents. When he gets into office, he puts his reforms into effect, and after a while they begin to rebound upon the tax-payers.

Look at the situation of our railroads. The public is demanding lower rates and blaming the railway managements for the rates that now obtain. The public does not stop to think that it, and not the railway managements, is to blame for the higher rates. It is paying the penalty for being influenced in years past by the unconstructive leadership of the demagogic newspaper and the demagogic politician.

Some newspaper writers pour out their destructive propaganda because they believe it will make their newspapers read by an increasingly large number of persons. They are willing to make their newspapers popular at any cost to the city, the state and the country. This tendency is one of our problems. It is a tendency that threatens to drive a wedge into our system of government.—Chicago (Ill.) *Journal of Commerce*, December 8.

## SOME OFF-LINE COMMENT ABOUT US

*Favorable comment regarding the Illinois Central System and its policies is not confined to newspapers and citizens along our lines. That our reputation is nation-wide is shown by the many favorable notices given in off-line newspapers. The editorials below represent only a fraction of those appearing here and there over the country.*

### "PUBLIC RELATIONS"

The Savannah Press has received from Mr. C. H. Markham, president of the Illinois Central Railroad Company in Chicago, the copy of a little booklet which the railroad has recently published, entitled "Public Relations."

It gives a summary of what the Illinois Central has been doing the past fifteen months to promote a better understanding and a closer relationship between the management of the system and its patrons.

So far as we can see, this work marks a distinctive departure in the policy of railway management. The railroad has gone frankly to its patrons with its problems, hiding nothing from them, and has sought their constructive support. Judging from recent returns, the public has given its support.

Mr. Markham is well known in Savannah. Since the Illinois Central purchased the Central of Georgia Railway, he has been a frequent visitor to this city, and what he says about the Illinois Central is much of it applicable to the conduct of the Central of Georgia.—Savannah (Ga.) Press, November 22.

### A RAILROAD'S PUBLIC RELATIONS

Soon after the railroads were returned to private management, the Illinois Central began an extensive campaign to better the general relations between the railroads and the public. There was less need of this on the Illinois Central than on many other roads, for already President Markham had to a considerable degree gained the good will of the regions served by his company. But Mr. Markham took the view that, under the new railroad policy, the public's co-operation would be essential to the well-being of the railroads in the long run.

To secure this co-operation, the Illinois Central conducted a widespread advertising campaign in the newspapers; it encouraged its

officers to make addresses on subjects in which the railroad was concerned; it gave newspaper men the opportunity to obtain any information that they desired; it asked patrons to take up with the management complaints concerning service. Every one of its advertisements ended with these words: "Constructive criticism and suggestions are invited." The entire work was done with ability; but it is not probable that President Markham himself wrote all the statements issued, though they bore his signature.

A cynic might perhaps say that the large amount of favorable comment published in the press regarding the Illinois Central's experiment was not unrelated to the generous amount of advertising space which the company was purchasing. In some places this may conceivably have been a factor. But there was no reason to doubt the sincerity of the railroad's intention of dealing with the public frankly and co-operatively. At the time the campaign was begun, railroad facilities in general were overtaxed, but the extent of the Illinois Central's pronouncements shows that the company was not merely trying to allay irritation arising in a single condition. These pronouncements are now reprinted, along with much of the newspaper comment that they evoked, in a booklet on "Public Relations." Any railroad management animated by similar good intentions could not do better than adopt the spirit and method here disclosed in addressing the public.

The Illinois Central contends that railroads have suffered very much in the past through the reticence of their officials. It is probable that the public believes that in the past officials were reticent because they had reason to be reticent. But Mr. Markham, one of the most diplomatic as well as ablest and most progressive executives, holds that the public and the railroads are now on trial together. He desires that his company shall enjoy the co-operation of the public no less than of its employes.—Springfield (Mass.) Republican, November 27.

### RAILROADS AND THE PUBLIC

When the Illinois Central System was returned to its owners in 1920, Charles H. Mark-

ham, the president, had prepared a general plan for the cultivation of better relations between the road and the public. Mr. Markham had given much of his time to a study of this particular problem and he proceeded to put the plan in operation.

In his first letter to the patrons of the road, Mr. Markham announced the new policy and concluded with the slogan: "Constructive criticism and suggestions are invited."

It has been the post-war policy of the Illinois Central to issue a public statement at the end of every month for the benefit of the patrons of the road, and in each statement that slogan has been repeated.

The result has been that the correspondence with the chief executive of the system has increased by leaps and bounds and now, after fourteen months, Mr. Markham has succeeded in getting into touch with practically every large shipper, every public official and every prominent citizen in the territory that the system serves.

Mr. Markham has succeeded in doing what he set out to do. He has obtained first-hand information on the state of the public mind, as it effects the properties he has charge of. He has found the point of contact, and he has developed it.

There are 475 daily and weekly English language newspapers on the Illinois Central lines. Each month a signed statement from President Markham is published in these newspapers in the form of an advertisement. The public is told of the accomplishments and the aims of the road. It also learns of the difficulties that the road is confronted with. A feeling of better understanding prevails. Mr. Markham has discovered that the public is ready to accord fair treatment to the railroads that accord them fair treatment in return.

Newspaper reporters who hitherto had found channels of information closed to them now find the doors of local officials wide open. By order of Mr. Markham, local railroad officers were directed to appear before chambers of commerce and other civic bodies and to take an active interest in all civic movements. In order that they might keep up with what was going on at the headquarters of the system, a monthly bulletin was published and sent to every agent of the road, in which manner he was kept advised of policies and innovations.

In a word, every employe of the system has been made a promoter of the service and all

restrictions have been removed. Mr. Markham believes that the agent of the railroad on the ground is the man best qualified to handle local problems and he has encouraged the practice.

He has made it plain that a man may work for the railroad and still be an important cog in the community.

The public has come to know that the Illinois Central management welcomes every opportunity to meet its patrons and to discuss with them in public or in private all phases of railroad organization. To Mr. Markham must be given the credit for the success of the public relations movement. It was his idea, and he has carried it out, attending in person to many of the details and replying in person to the voluminous correspondence which has resulted.

Charles H. Markham is a native of Tennessee. He was born in Clarksville May 22, 1861. He began his railway career as a section hand on the Santa Fe, in New Mexico. He handled a pick and he handled a sledge, but he kept his mind working, too, and in a few years he was freight and passenger agent at Fresno, Cal. He went to the Southern Pacific with headquarters at San Francisco in 1901, and later he moved to Texas to become vice-president and general manager of the Houston & Texas Central. He was back with the Southern Pacific in 1904, and then, for seven years, he was the chief executive of the Guffey Petroleum Company and the Gulf Refining Company. In 1912 he was elected president of the Illinois Central and also served as president of the Central of Georgia. During federal control, he served as regional director in the South, with headquarters at Atlanta, and then as regional director of the Allegheny region, with his office at Philadelphia. He returned to his post as head of the Illinois Central when the federal government relinquished control.

The movement that Mr. Markham inaugurated has taken hold. Other railroads are following his example. Out of it will come an era of understanding which will benefit the railroads and the public.—Nashville (Tenn.) *Tennessean*, December 9.

#### ON TIME

At a time when a section of Massachusetts has been getting with difficulty any train service at all, and people have not been disposed

to complain because trains were losing two hours in running between Boston and Springfield, it may seem churlish to call attention to the remarkable on-time record just announced by the Illinois Central. But it is taking no unfair advantage of our lines to comment on the statement, since they do not approximate the record even under the most favorable conditions. Operating and traffic problems and the topography of New England are so different that we cannot expect our roads to show the same standard of performance as a road operating on the level floor of the Mississippi Valley, many of whose trains run distances of 500, 700 and 900 miles, with the best of opportunities for making up lost time. New England railroads probably do not do so well as the public has a right to expect; but it is by the measure of New England possibilities that they must be judged.

In its statement published the 1st, the Illinois Central announces that for the first nine months of the year, 98.6 per cent of its trains maintained their schedules. While, technically, maintaining schedules is not the same thing as running on time, it is inferred that the Illinois Central's statement refers to on-time service as the public understands it. The Illinois Central operates about 220 passenger trains a day, over a system of about 6,000 miles, extending into 14 states. Last year, in spite of generally congested conditions, this rail-

road recorded 95.5 per cent of its trains as on time, and in four favorable months of 1919, when the United States railroad administration was making a test of passenger operation, the Illinois Central's records showed 95.8 per cent of its trains on time, compared with an average of 83.3 for all the railroads of the country.

While a system of the size of the Illinois Central could not make a showing of this kind without real determination on the part of officials and employes, the management attributes the record particularly to the condition of its locomotives. It insists on high standards of maintenance, and as far as possible it assigns each locomotive regularly to the same engineer, who takes a personal pride in its condition.

But both topography and traffic demands favor the locomotives on such a road as the Illinois Central. Adding one car to a train on a level railroad may impose very little additional burden on the engine while on the New England grades, unless a helping engine is provided, it may mean the difference between being on time and running behind schedule. Moreover, as strains increase, the liability to engine failure probably increases.

Running passenger trains on time is an effective agency for attracting good will to a railroad, though alone it will not suffice. Where competition exists, it builds up business.—Springfield (Mass.) *Republican*, December 4.

---

## *How Madison County Won Its Leadership*

In the course of four years Madison County, Tennessee, of which Jackson is the county seat, has been an exhibitor, a strong competitor and finally the highest winner at the Tri-State Fair in Memphis, Tenn. The Tri-State Fair offers prizes for county exhibits, basing the awards on quality of products, variety and educational value. When it is remembered that the first prize is \$250, that the winner of the first prize has a greater chance to win individual prizes, and that the distinction of winning is worth more than all prizes, one may well appreciate the competition to be encountered from various counties in Tennessee, Arkansas and Mississippi. Madison County, which is bisected by the Illinois Central, won this first prize in

1921, thus establishing its relative standing with the other productive counties of the Memphis trade territory.

Madison County exhibitors won three firsts and three seconds on the leading varieties of apples, first on Irish potatoes, first and third on sweet potatoes and three corn prizes. Representatives of the county pig clubs won first on a pen of three fat pigs, first and second on individuals and grand champion fat pig.

The livestock judging team from Madison County won first prize over six other teams from West Tennessee. Bethel Thomas of Jackson won a place on the livestock judging team to represent Tennessee in an interstate contest at Atlanta, Ga.

R. E. Hopper of Madison County won

Madison County Exhibit at Tri-State Fair

three champion prizes on Poland-China hogs, and two grand champion herd prizes.

The Madison County exhibit was under the direction of County Agent Judd Brooks of Jackson, whose untiring leadership dur-

ing the last four years has had a big influence in materially improving livestock raising and general farming methods in the county, as well as cementing friendship between farmer and railway man.

## Lost Package Payments Keep Dwindling

Claim payments for lost packages continue to show a remarkable reduction as compared with last year. The accompanying statement shows a reduction of 788 claims paid for lost packages during November, 1921, as compared with November, 1920.

The total LCL tonnage handled in November, 1921, as compared with November, 1920, shows a decrease of only 1,619 tons, or .6 per cent, while the lost package claims decreased 788, or 75.2 per cent. The total amount paid for lost packages in November, 1921, was only \$13,015, while in November, 1920, the total paid was \$38,044. This shows a reduction of \$25,029, or 65.7 per cent.

This remarkable reduction in the number of claims and amounts paid for lost packages is the result of the interest being taken in accepting, trucking, stowing, and delivering LCL shipments by all forces concerned.

The cartoon in the December issue of this magazine illustrating the need to "Keep Bill Along, He Knows the Way" gives the solution of the lost package problem. If we can insure that each shipment of LCL freight will be accompanied to its destination by a waybill, that proper delivery will be made,

and a receipt taken, the claims for "loss of a package" will be practically eliminated.

The number of claim payments for lost packages ran as follows:

1922—A New Page  
in Our History

### The Habit of Gladness

**I**S there anything more delightful than a sunny soul, one who radiates sunshine, joy, gladness from every pore; who is always optimistic and hopeful, always expecting good things to come to him, who gives us the impression that he is glad to be alive, that he was born in just the right place, at the right time and under the most favorable circumstances? Just to be glad! If we could only form the habit of being glad, what a wonderful thing it would be for everybody who touches our lives to bathe in the warmth and power of our mental sunshine! What a paradise this would be if we all made up our minds to be glad!—SELECTED.

### "Good Night, Ladies!"

You sing a little song or two;  
 You have a little chat;  
 You make a little candy fudge,  
 And then you get your hat;  
 You take her hand and say good-by  
 As sweetly as you can—  
 Ain't that a heck of an evening  
 For a great big healthy man?

### Where There's Life

The original optimist isn't dead after all, as was alleged. He has merely been in retirement. He emerged long enough yesterday to board an Illinois Central suburban train with the news: "Well, thank God, I'm getting married tomorrow. My troubles are over."—LINE O' TYPE OR TWO, Chicago *Tribune*.

### Lest We Forget

1. Longfellow could take a sheet of paper worth one-tenth of a cent, write a poem on it and make it worth \$5,000.—THAT'S GENIUS.
2. Rockefeller could take a similar sheet

of paper, write a few words on it and make it worth \$10,000,000—THAT'S CAPITAL.

3. The U. S. Government can take an ounce and a small fraction of gold, stamp the eagle on it and make it worth \$20—THAT'S MONEY.

4. A skilled workman can take 30 cents worth of steel, make it into watch springs and make it worth \$8,000—THAT'S SKILL.

5. A merchant can take an article that cost him 90 cents and sell it for \$1—THAT'S BUSINESS.

6. A woman can buy a good fall hat for \$10, but prefers one that costs \$100—THAT'S FOOLISHNESS.

7. A miner can dig a ton of coal for less than we would wish to—THAT'S LABOR.

8. The man that wrote this article can write a check for \$1,000,000, but it wouldn't be worth 30 cents—THAT'S TOUGH.

9. There are some folks who will tell you that you can get as much out of life in other ways as you can by attending to your work—THAT'S WRONG.

10. The only way to get anything or anywhere in this world, folks, is to work hard and to the best of your ability. Don't forget that your work, whether *good, bad or indifferent*, will be recognized—THAT'S RIGHT.—RAYMOND R. ABILDGAARD, in *Loft's Candy Kettle*.

### Something Turned Up

With trembling hand and fluttering heart,  
 By mail he did propose,  
 And waited for what might turn up—  
 Alas! It was her nose.

### A Night of Wrecks

Winter came down, whirling and twisting—every shelf of its store-room contributing. Whether rain, sleet, snow, or mixtures, our coat showed them all.

Chicago's defense of this first advance was eloquent. (We've read of spiked guns—in battles of men—where they were deserted and useless, twisted and broken.) In the scrimmage with this god of the North, umbrellas were aids to defense, protecting the folks outside, to a limit.

Yes, we were foolish. Didn't need be in the storm; and our feet were wet and our trousers soggy—but there is a time when it's

a taste of adventure just to buck a wind, smile at rain and sleet "pinging" our face; see other folks dread and run from it, protecting their silks and tailor's creases.

We crossed a street to get a rest from the eddying rain and wind (and dry our neck) to find just as many gusts! Around a corner—howdy, but Lake Michigan was on a tear! The wind just whizzed, and here began the downfall of the umbrellas. They were brave and elastic, but cloth and wire couldn't hold. Some went inside out—some broke ribs—some went in two at the shaft. The street corners were marked and the sidewalk dotted with forsaken and "busted" sticks.

Hands pocketed and head tucked to meet the rain, digging along to nowhere—some-how we happened to look up—directly into the point of an undefeated champion. Gasping and dodging to the side, barely missing the spokes of another, we skidded out of the way! Ah, more wrecks, sprawling and crumpled, scattered like octopi, and our soggy hat felt cheerful, for it could stand adventures. Those poor hats that can't stand adversity are in for a time, yet we can't sympathize with those deadly, dangerous, treacherous rainsticks. We laugh at their impunity.

A roar drowns the wind as an L train goes by, a ghostly shape in the rain-dimmed light. Only spots of brightness where the theaters stand forth, and the rest of the street shows the vagueness of show-window and hurrying shapeless people.

Water stands out in drops on our coat. Feet, wet for some time, are feeling the cold. Face wet and nose chilly—winter has come to Chicago.

#### Irreparable Loss

"Anybody hurt in the wreck?"

"One gentleman, I believe."

"Bones broken?"

"I think it was his heart. He sat down by a leaking suitcase and shed tears."—Sent in by C. D. C.

#### Essay on "Pants"

Pants are made for men and not for women. Women are made for men and not for pants. When a man pants for a woman and a woman pants for a man, that makes a pair of pants. Pants are like molasses; they are thinner in hot weather and thicker in cold weather. There has been much discussion as to whether pants

is singular or plural. Seems to us that when men wear pants it is plural, and when they don't wear them it is singular. If you want to make the pants last, make the coat first.

#### Try This in Court

"And why did you obtain a divorce, Maud. Was it because of cruelty or incompatibility?"

"Oh, dear, no—just inconveniency."—L. B. R.

#### Bill's Bull-etin

New Year's Eve—another name for an anti-prohibition demonstration.

Make resolutions—break them like hearts at a summer resort.

Sons and daughters of Bacchus disport themselves in manner of Russian Ballet.

Start off New Year with head like a sieve and taste in mouth like inside of motorman's glove.

Buy quart of "real stuff"—one sniff and you're gone, like the fifteen you paid for it.

Makes two keyholes grow where but one grew before.

Made of embalming fluid—saves time for undertaker.

Doctor doesn't participate—wrist too tired from writing prescriptions—can't lift glass.

Hip-pockets filled to full capacity—so are owners.

Toast of evening—at start, Hip! Hip! Hooray; later, Hic! Hic! Hooray.

Brings out all latent talents—train caller finds he is a Caruso—flat-footed girl a Pavlowa—at the Gardens the entertainers are not only ones with a skate on.

Sign in garage window: "Alcohol and skid chains for sale"—A New Year's suggestion?

A New Year's Day breakfast—Ice Water.

Happy New Year.

—W. L. M., *General Freight Department.*

# Coal Tests Justify the Reduction Theory

## Experiments on Fifty-Three Cars Show Necessity for This Protection Against Shortage Claims

FOR several years there has been considerable controversy over the method of adjusting claims made upon the railroads for the alleged loss of coal in transit. Shippers have presented claims on a basis of the alleged loss as disclosed by weights at points of origin and destination; the railroads have contended that such a basis is unfair because certain factors tend to produce an apparent loss in weight where there has actually been no loss whatever. A great number of tests have been made by the railroads, by coal operators and by coal merchants, and they support the railroads' contention.

The practice followed by the Illinois Central System is one which has been arrived at in the light of many years' experience in the handling of coal. Each claim is investigated upon presentation. If the investigation develops evidence that there has been a leakage from the cars, or that the car has been pilfered while in the road's custody, the claim is paid upon the basis of origin and destination weights. If the investigation develops no evidence that coal has actually been lost from the car, the railroad deducts from the claim 2 per cent of the net mine weight of the load and allows the balance. Our contention is that the 2 per cent deduction practice works approximate justice, by reason of those factors which make for a variation in weights regardless of actual loss.

### Three Factors in Variation

The factors which tend to produce a variation in scale weights where there has been no actual gain or loss in the load are these:

Scale variance, which is recognized by the United States Bureau of Standards. Scales are never in perfect alignment, and the government bureau recognizes an alignment when the variation under test does not exceed one pound in a thousand.

The human element in measuring the force of gravity.

The inherent vice of the commodity. Coal is vegetable matter and is subject to the action of light, heat and air, giving off its water content under such conditions.

This practice of making a percentage de-

duction from coal claims in cases where there is no evidence of leakage or pilferage was attacked in the May number of *The Retail Coalman* by Ralph Merriam, a Chicago lawyer. His argument was founded upon a series of abstract cases. Vice-President M. P. Blauvelt of the Illinois Central System, under whose jurisdiction freight claims are adjusted on this road, made a reply to Mr. Merriam, and his reply was published in the July number of *The Retail Coalman*. The text of his letter also was published in the *Illinois Central Magazine* for July (pp. 52-55).

### Committee Made Public Test

Thereupon followed an exchange of letters through the medium of *The Retail Coalman*, with the result that the Illinois Central System prepared to make a public test to determine the equity of its position. The test was held October 17 to 25 under the jurisdiction of the Chicago Claim Conference, an organization representing all the roads entering Chicago. Representatives of the claim and weighing departments of the following named roads had direct supervision of the test:

- Pennsylvania System.
- Chicago, Burlington & Quincy.
- Illinois Central System.
- Chicago & Northwestern.
- Chicago & Eastern Illinois.
- Chicago, Milwaukee & St. Paul.
- Chicago, Rock Island & Pacific.
- Baltimore & Ohio.

Representatives of the Chicago Coal Merchants' Association and the Consumers' Company of Chicago were present when the test began. Mr. Merriam was invited to attend in person, but he pleaded other business engagements and was not present.

Immediately upon completion of the loading and weighing of each car, it was placed under the direct supervision of the persons in charge of the test, and until it arrived at its destination for the final taking of its weight it was under constant surveillance. During the process of transportation, all

cars which developed leaks or mechanical defects necessitating repairs were removed from the test. Fifty-three cars arrived in perfect condition.

### How the Figures Ran

The following is the result of the test:

Mine Weight Pounds	Destination Weight Pounds	Loss Pounds	Gain Pounds
100,000	100,000	-----	-----
102,300	101,900	----- 400	-----
111,200	113,400	-----	----- 2,200
93,500	104,500	-----	----- 11,000
94,300	103,000	-----	----- 9,700
95,600	95,400	----- 200	-----
69,700	69,300	----- 400	-----
93,300	93,800	-----	----- 500
73,600	73,000	----- 600	-----
88,600	86,500	----- 2,100	-----
106,900	105,700	----- 1,200	-----
69,900	68,900	----- 1,000	-----
72,600	71,260	----- 1,340	-----
98,700	102,260	-----	----- 3,560
92,100	91,500	----- 600	-----
92,700	92,060	----- 640	-----
93,400	92,960	----- 440	-----
95,700	95,381	----- 320	-----
88,700	91,200	-----	----- 2,500
109,600	108,100	----- 1,500	-----
102,600	101,100	----- 1,500	-----
111,400	110,790	----- 610	-----
103,700	103,080	----- 620	-----
101,800	99,060	----- 2,740	-----
102,900	100,320	----- 2,580	-----
102,600	100,880	----- 1,720	-----
102,800	102,320	----- 480	-----
96,400	96,160	----- 240	-----
75,000	74,520	----- 480	-----
100,800	100,000	----- 800	-----
90,600	90,760	-----	----- 160
100,600	100,300	----- 300	-----
69,000	68,900	----- 100	-----
89,700	90,000	-----	----- 300
82,900	80,740	----- 2,160	-----
108,000	105,780	----- 2,220	-----
98,500	101,740	-----	----- 3,240
96,900	102,580	-----	----- 5,680
97,900	97,060	----- 840	-----
64,600	64,340	----- 260	-----
73,600	73,460	----- 140	-----
103,600	103,280	----- 320	-----
70,000	68,960	----- 1,040	-----
94,900	96,060	-----	----- 1,160
101,000	101,000	-----	-----
70,700	68,960	----- 1,740	-----

94,200	91,780	----- 2,420	-----
68,200	67,860	----- 340	-----
114,500	114,140	----- 360	-----
115,800	115,340	----- 460	-----
111,800	111,580	----- 220	-----
70,400	68,800	----- 1,600	-----
Totals	-----	35,430	40,680

him what appears to be more coal than was shipped from the mines.

### Prevents an Injustice

Taking the 2 per cent deduction from the net mine weight on contested cases, the railroad would still have claims for 2,634 pounds of coal. Under the practice followed by the Illinois Central System, those claims would be paid. The Illinois Central System does not contend that the percentage deduction practice works exact justice, but it does contend that it works to prevent injustice to the railroad, and to the average shipper, whose payments to the railroad for service must be taken to pay coal claims.

It is obvious that there would be no need for the percentage deduction practice if the shipper offered to pay the railroad for the over-weight of coal delivered, as well as asking the railroad to pay him for the loss in weight.

The Illinois Central System takes the position that the test reported herewith constitutes another link in the chain of evidence supporting its contention that the percentage deduction practice, while not working actual justice in every particular case, does work approximate justice and does tend to prevent actual injustice in cases where there is no evidence that there has been a loss of coal in transit, other than that shown by the difference in scale weights.

### He Wasn't Promoted

- He grumbled.
- He was willing, but unfitted.
- He wasn't ready for the next step.
- He did not put his heart in his work.
- He ruined his ability by half doing things.
- He tried to make "bluff" take the place of hard work.
- He didn't learn that the best of his salary was not in his pay check.
- He was always behind-hand.
- He didn't believe in himself.
- His stock excuse was "I forgot."
- He learned nothing from his mistakes.
- He felt that he was above his position.
- He did not think it worth while to learn how.

Without the deduction practice, claims would be presented for an aggregate loss in weight of 35,430 pounds of coal, although the conditions of the test were such as to produce conclusive evidence that no coal had been lost in transit. The twelve cases in which the scales showed a gain in weight would, of course, not be reported to the carrier. The shipper would not ask the privilege of paying freight on the basis of increased weight, and he certainly would not offer to pay the railroad for delivering to

### Good Resolutions

Wordsworth put it thus:

"A creature not too bright or good  
For human nature's daily food."

And a charming but mischievous woman once said: "No man shall sit beside me because he thinks I am perfectly safe."

Strange but true, no woman wants to be thought too good for this earth, though in reality she may be pure gold. This characteristic of woman, "uncertain, coy, and hard to please," affords an excuse for suggesting a thorough review of our omissions and commissions and a list of New Year's resolutions to start 1922 on its way rejoicing.

#### *Resolved:*

That I shall not delegate entirely to another the mental and moral training of my children—the future citizens of my country.

That I shall make the most of my talents, physical and mental.

That I shall dress as well as my income will permit, that my appearance may be a credit to my family, to the community in which I live, and to the country of which I am a representative citizen.

That I shall vote, and vote intelligently, that my influence may be felt in civic affairs.

That I shall strive for the best in all things pertaining to my daily life, realizing that, however others may contend, unconsciously I am my brother's keeper, and that my example may influence him.

That I shall guard my speech, because by my vocal expressions of thought am I known.

That I shall dignify my job, menial though it may be, by the excellent manner in which I perform it.

That in disposing of my income I shall maintain a middle course, knowing that ex-

travagance rots character and that penuriosity dwarfs the soul.

That I shall cast the dark shadows of bitterness and hate from my heart, that it may become light with sweetness and love.

That I shall make my home a real sanctum, decrying the present-day tendency to regard the home merely as a place to eat and sleep.

That I shall strive for self-mastery, looking always toward the ideal of womanhood I want to reach, and my standard shall bear the legend, "No steps backward."

### Every Woman's Duty

Before retiring, remove from the face all traces of dust accumulated during the day, using a good cleansing cream, then scrub with a complexion brush, warm water and a good soap, rinse in water of the same temperature, and finish by applying cold water or a bit of ice wrapped in a soft cloth. This treatment tones up the skin.

When reading or sewing, especially by artificial light, be sure that the light falls over the left shoulder. This prevents eye-strain, one of the causes of wrinkles.

Wearing short sleeves directs attention to the arm and elbow. If you are blessed with well-shaped arms and pretty hands, do not mar the effect by neglecting your elbows. Scrub them with soap and water, using a soft brush, and rub in as much skin cream as will be absorbed. Dust lightly with powder.

To reduce the hips, lie flat on the back on the floor, and roll from side to side.

### Household Hints for Home Makers

To remove stains from inside the coffee pot, rub with salt. Vinegar and salt will remove tea stains from china.

Left-over olives should never be returned

to the liquid in which they were packed. Cover them with clear cold water, to which one teaspoonful of salt has been added, and they will keep indefinitely.

To thread a needle readily, hold it against a white background.

A tablespoonful of sugar added to the water in which turnips are cooked will overcome the bitter flavor.

To remove milk or cream stains from fabrics which cannot be laundered, sponge carefully with water, allow to dry, and then sponge with chloroform.

Before heating milk, rinse out the pan with hot water. This will prevent the milk sticking to the pan.

Soak mildew stains in sour milk and then place in the sun without rinsing. Repeat the treatment several times, if necessary.

"I am knitting my daughter a pair of white mittens," she said. I looked mystified, for I knew that her daughter was a grown-up woman with kiddies of her own. So the dear lady explained that the mittens were useful to protect the hands while hanging out the clothes in cold weather, and, being white, would not soil the linen.

We have the men interested, too. Our "Andy Gump" contributes a hint to umbrella users: Touch with oil the center ends of the ribs of your umbrella. This prevents rusting and ruining of the material; however, little oil is to be used.

### Tested Recipes

**DEVIL'S FOOD CAKE.** 1 cup milk,  $\frac{1}{2}$  cup sugar, 2 generous squares chocolate. Boil in double boiler until thick as salad dressing.

Mix 2 eggs with 1 cup sugar and butter size of an egg (melted), add  $\frac{1}{2}$  cup milk in which has been dissolved 1 teaspoon baking soda, add 2 cups flour and 2 teaspoons vanilla. Combine with the first mixture and bake in layers. Put together and frost with marshmallow frosting.—Mrs. E. F. DUNN, *Lake Geneva, Wis.*

**MARSHMALLOW FROSTING.** Beat 2 egg whites stiff. Boil a cupful of granulated sugar and  $\frac{1}{4}$  cupful boiling water to "soft ball" stage. Pour gradually on the egg whites, beating constantly. Add  $\frac{1}{2}$  teaspoonful vanilla and 20 marshmallows cut in quarters. Beat until smooth and spread on cake.

**CRANBERRY GELATIN.** Soak  $2\frac{1}{2}$  tablespoonfuls of gelatin in 3 tablespoonfuls of cold water. When soft, add  $\frac{1}{2}$  cupful of boiling water,  $1\frac{1}{2}$  cupfuls of cranberry juice,  $\frac{1}{2}$  cupful of sugar,  $\frac{1}{2}$  cupful corn syrup, and 1 tablespoonful lemon juice. Strain and turn into a mold and chill. Serve with whipped cream. Whipped cream may be beaten into the jelly as it begins to set.

**STUFFED DATES.** Pour boiling water over a pound of choice dates, stir with a fork, drain and place on an agate plate and dry off in a hot oven. Two or three minutes should be sufficient. The dates must be hot and dry. Cut each date on one side, remove the seed, place half a shelled pecan in the pocket, draw the date over the nut meat, and roll in granulated sugar.

**STUFFED POTATOES.** Select good-sized potatoes and bake. When done, cut off a lengthwise slice; scoop out potato and mash; add 1 tablespoon butter, salt and pepper to taste,  $\frac{1}{2}$  cup milk, and 2 eggs, whites beaten stiff. Refill the skins with this mixture, cover with grated cheese or paprika, and bake until potatoes are puffed and brown.

*Have you contributed a recipe for the Home Division? Do it now!*

## HAT BOXES

Every girl loves dainty things, and dear to the feminine heart is a tastefully furnished room. Perhaps you have been delighted with the room of a girl friend and then have had the whole effect spoiled by a peep into the clothes closet, the gloomy recesses of which fairly made you shudder.

"A thing of beauty is a joy forever," said the poet. And when a homely hat box can be transformed into a beautiful receptacle, none the less useful for its gay decoration, we have taken a step in the direction of making our clothes closets more presentable and our rooms more charming. The illustration shows three beautiful hat boxes. They are covered with wall paper. Perhaps you have within fingers' reach some samples of wall paper. If not, charming designs may be purchased at a small cost in the store in your town. These boxes are easy to make. The directions are as follows:

A hat box of any kind will answer the

purpose. Measure the surface. Select paper of a good stock. Wet it thoroughly. This may be done by holding it in the kitchen sink and allowing the water to run over the surface. Then blot with newspapers, being careful not to tear the paper. After it has been blotted, remove it to some dry newspapers, and spread the back of the wall paper with a good quality of paste (wall paper or library paste will do). Smooth it

over with the hand, fit the paper to the box, and rub it smooth with the hand or a brush. Take a sharp knife and trim the edges. Set the box away until thoroughly dry. You will find that the box is much stronger than it originally was. Patterns may be selected to suit the individual taste. Borders of wall paper make pretty boxes, as shown in the illustration.—MRS. JOHN K. MELTON, Chicago.

Here Are the Hat Boxes Described Above

## Our Monthly Roll of Honor

Below is a list of employees retired at the meeting of the Board of Pensions, November 29 :

Name	Occupation	Years of Service	Date of Retirement
John Fashauer .....	Freight Handler, Louisville, Ky.....	20	4/30/21
John Fuchs .....	Boilermaker Helper, Burnside .....	24	7/31/21
William O. Read.....	Engineman, Kentucky division.....	27	8/31/21
Robert Stone .....	Laborer, South Water St., Chicago.....	29	9/30/21
William Deto .....	Engineman, Illinois division.....	30	9/30/21
Chris Siefman .....	Conductor, Illinois division.....	21	9/30/21
William R. Hays.....	Engineman, St. Louis division.....	30	9/30/21
Mrs. Mary E. Williamson.....	Mail Clerk, South Water St., Chicago.....	18	10/31/21
William McCubbin .....	Chief Clerk to Supt., McComb, Miss.....	24	10/31/21
Reuben O. Pease .....	Watchman, Waterloo, Iowa.....	56½	11/30/21
John Graney .....	Engineman, Illinois division.....	50¾	11/30/21
William B. Nusz.....	Telegraph Lineman, Cecilia, Ky.....	16	12/31/20
George Anderson .....	Clerk, New Orleans, La.....	29	6/30/21

The following deaths of pensioners were reported at the same meeting:

Name	Last Employment	Date of Death	Term as Pensioner
Theodore Shelton .....	Engineman, Kentucky division.....	11/ 9/21	5 years
Hilliard Sandford (Col.).....	Laborer, Kentucky division.....	10/24/21	4 years
George Jordan (Col.).....	Machinist Helper, Tennessee division.....	10/19/21	1 year

# Where the Ten-Pins Are Falling Heavily

## Bowling Notes From Here and There Prove That Illinois Central System Has Some Experts

By WALTER E. DUBOIS

**T**HE Engineer, Maintenance of Way, team is still leading the Twelfth Street General Office Bowling League at Chicago and has only lost one game in the last month. The Purchasing Department had the honor of taking that game.

The Land and Tax Department, which is second, has lost only two games in the last month, the General Freight Office taking the two.

The Auditor of Miscellaneous Accounts' team is still keeping ahead of the team from Mr. Blauvelt's office, and doing it in spite of losing two out of three to that team.

There has been an improvement in the team average of the General Superintendent of Transportation Office, which has retained its standing in the league.

When the Chicago Terminal Improvement and General Freight Office met on December 16, they were tied for sixth place. The Terminal Improvement team took two out of three and shoved the General Freight team into seventh place.

The General Freight team, however, has shown an improvement in its bowling.

The Auditor of Disbursements' team has dropped from sixth to eighth place. The team average shows a loss of five pins a game in the last month. The Land and Tax team shows a loss of two pins, while all other teams have improved.

The Engineer, Bridges and Buildings, team is still in ninth place. As the Purchasing Department has moved up close behind, there may be a change in the standing if the Bridges and Buildings team slips.

The Officers have captured one more game and are now one game behind the Vice-President and General Manager's Office.

The bowlers greatly appreciate the fact that the women are visiting the alleys each week to root for their teams.

The standing, as of December 16, follows:

Teams	W.	L.	Pct.	Average Pins Per Game	High Game	Series
1. Engineer, Maintenance of Way.....	29	4	.879	807	940	2,546
2. Land and Tax.....	27	6	.818	807	909	2,588

### A Full Life

There are so many who maintain that feverish ambition is Satan's subtlest weapon, and so numerous are those who rant about the world's mad pursuit of pleasure, that it is thrice refreshing to meet one who holds that a full life is composed of equal parts of aspiration and recreation.

Ambition, in its original sense, is a selfish trait, implying a desire for self-aggrandizement; aspiration is a noble virtue, impelling its possessor to do great things, even without material reward. Caesar was ambitious; George Washington aspired. And those who aspire realize that wholesome recreation is a necessity, if the body and brain cells worn away during the working day are to be recreated or replaced for use the next day.

Cling to the happy medium! Be a slave neither to work nor to play. Learn to forget each when occupied in the other; yet never completely lose sight of either. Good work is impossible without clear thinking induced by clean recreation, which, in turn, must be accompanied by the feeling of satisfaction born of work well done.—E. P. O'DONNELL, *Stenographer, New Orleans.*

The 63d Street Office League team took the honors at the important bowling match held at Chicago December 3 with the team representing the Twelfth Street Office League, the scores being 2,719 and 2,602. The teams were composed of the supposedly ablest bowlers in the two leagues. Below is the detailed report:

#### Twelfth Street

	(1)	(2)	(3)	Total
M. Block .....	158	187	184	529

	851	916	835	2602
	929	880	910	2719

Our Minnesota division correspondent headed this "When 'Cracker' Meets 'Noodle,'" which makes it sound like an eating contest.

When the Minnesota division ran its semi-annual inspection train recently, the general

superintendent of transportation was represented by C. M. Knodell. During the trip it was brought out that Knodell was a high-class bowler. It was a foregone conclusion that H. D. Smith, claim agent on the Minnesota division, also was in a class by himself.

When these facts were generally made known, there could be but one result, and a match was arranged between Knodell and Smith, to be rolled at Waterloo. There was considerable speculation as to the winner.

The final outcome, however, was pleasing

to the Minnesota division bunch. The score was as follows:

	Smith Knodell
First game .....	217 165
Second game .....	150 166
Third game .....	211 183

This gave the honors to H. D. ("Cracker") Smith, with an average of 193 pins for the three games, while C. M. ("Noodles") Knodell got an average of 171.

Here is the standing of the Burnside Shops Bowling Clubs for November, 1921:

"The above-listed scores were made possible on account of having pins with round bottoms. However, new pins have been furnished, and it appears that the scores will show a marked decrease, as most of the players are either losing control of the ball or finding there is lead in the pins, as no 'slushy' strikes are made," explains "Andy Gump," our correspondent.

**OPPORTUNITY FOUND HIM**

The death in Chicago last week of Harry G. Phelps, general passenger agent for the Illinois Central Railroad Company, recalls to mind the fact that it was at Ackley that he began his career on the railroad as a telegraph operator. A blizzard that tied up traffic on the Illinois Central figured in Mr. Phelps' advancement with the company. General Passenger Agent A. H. Hanson was held up for several days at Ackley because of the storm. Phelps was then working as operator there. Mr. Hanson took a liking to the young man and was instrumental in his advancement. The father of Mr. Phelps was formerly landlord of the old Commercial Hotel, opposite the Illinois Central station at Ackley. A few years ago the son parked his office car between the hotel and the station where he began his railway career.—Iowa Falls (Iowa) *Sentinel*, November 29.

# CLAIMS DEPARTMENT

## Nebraska Falls in Line

How Nebraska knocked out ambulance chasing by a law similar to that so successful in Iowa is shown in a copy of Chapter 171 of the laws of Nebraska, 1921, recently received in the claims office at Chicago. The heading reads:

"An act to prohibit the so-called practice of ambulance chasing for the purpose of inducing residents of this state to bring suits outside of this state on personal injury or death claims arising within this state, and to prohibit the solicitation of such claims and the prosecution of such suits thereon in foreign jurisdiction; to provide a penalty for the violation of this act, and to repeal all acts or parts of acts inconsistent with or in conflict with this act."

The law is worded as follows.

"It shall be unlawful for any person, with the intent or for the purpose of instituting a suit thereon outside of this state, to seek or solicit the business of collecting any claim for damages for personal injury sustained within this state, or for death resulting therefrom, or in any way to promote the prosecution of a suit brought outside of this state for such damages, or do any act or thing in furtherance thereof, in cases where such right of action rests in a resident of this state, or his legal representative, and is against a person, co-partnership or corporation subject to personal service within this state."

The punishment provides that "any person violating any provisions of this act shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be fined in any sum not less than \$25 nor more than \$500, or shall be imprisoned in the county jail not less than ten days nor more than six months, or shall be both fined and imprisoned at the discretion of the court."

## How Advertising Killed a Cow

Some folks still doubt the power of advertising. If you are among them, listen to this:

A few months ago arrangements were made

to spray the right-of-way on the Western Lines with a weed-killer of a poisonous nature. In preparation for this work, signs were posted along the railroad, warning the public of the possible effect of the poison on livestock, which sometimes chooses railway property as grazing ground.

On account of a change in plans, however, the weed-killer train was not run west of Waterloo.

The scene now shifts to the city of New Hartford, which, it might well be stated, is west of Waterloo. There, a short time after the aforementioned signs had been posted, a certain family cow came to her earthly end under suspicious circumstances. The owner and a veterinarian diagnosed the case as one of poisoning. The animal had been pastured adjacent to our right-of-way. The owner had read the signs and, reading, had believed. The result was a claim for the value of the cow. The claim has been declined.

While in this particular case it was misdirected, the power of advertising is clearly shown.—W. J. H.

## Three Grade-Crossing Victories

The three cases given below are recent victories for the company on suits filed as a result of grade-crossing accidents. Although all of these suits caused a loss of time and money which is regrettable, the trend of the results is such as to discourage indiscriminate litigation.

## Not Guilty of Negligence

A Hamilton County, Iowa, jury recently decided, in a suit for damages brought by C. H. Swiney, former circuit court clerk, that the Illinois Central was not guilty of negligence. This suit grew out of a grade-crossing accident, in which an automobile driven by Mr. Swiney's 14-year-old daughter collided with train No. 1/52 at Duncombe, Iowa, August 10, 1920.

The usual charges were made that the view

was obstructed and that the engineer failed to give proper signals, as well as that he violated the speed ordinance. Notwithstanding these charges, the jury evidently thought that the driver was guilty of negligence in failing to look out for the approaching train.

The Webster City (Iowa) *Freeman Journal*, in its issue of October 28, reported the trial of the case as follows:

"A sealed verdict in favor of the Illinois Central Railroad Company was returned in the district court shortly after 12 o'clock last night by the jury in the case brought by C. H. Swiney, in which he asked \$2,200 damages from the road as the result of an automobile accident in Duncombe in August, 1920. The case went to the jury about 5 o'clock in the afternoon.

"Another case in which C. H. Swiney, as next friend of Helen Swiney, asks \$20,000 damages grows out of the same accident, and will probably be tried during the next term of court. The petition states that Miss Swiney's use of her left leg is permanently impaired as a result of the accident."

#### Refused a Settlement

In a recent suit tried at Dubuque, Iowa, to recover damages to an express truck belonging to the Dubuque Motor Express Company, the court instructed the jury to find that the railroad was not guilty of negligence. The suit grew out of a collision between a motor truck of the Dubuque Motor Express Company and Illinois Central passenger train No. 27 at the Jones street crossing, October 11, 1919. It was claimed that the crossing flagman, who was on the crossing, signaled the occupants of the truck to proceed, but witnesses who saw the accident testified that this was not a fact.

Claim for damage to the truck and contents was presented shortly after the accident. In order to avoid the expense and trouble of defending a suit, the railroad offered to pay in compromise \$663, which represented one-half of the damage.

The result of the trial indicates that the Dubuque Motor Express Company would have been better off financially had it accepted the offer.

#### Another Settlement Refused

As George C. Heberling, a prominent manufacturer of Bloomington, Ill., was attempting

to cross the Illinois Central tracks at the Empire street crossing November 6, 1920, he collided with Illinois Central passenger train No. 120.

Mr. Heberling claimed that he approached the track at a speed of about 12 miles an hour; that when he reached a point where he could see up the track he observed the train approaching at about 35 miles an hour, but heard no signals of any kind; that as the crossing was on a descending grade he realized he could not stop and therefore increased the speed of the automobile to avoid accident.

Witnesses declared, however, that the automobile was driven at a speed greater than that at which the train was being run.

Shortly after the accident a claim was presented for damage to the automobile. While investigation developed that the claim was without merit, the company, being desirous of discouraging litigation, offered the claimant a reasonable settlement, which he declined to accept. Suit was filed for \$3,000 in the circuit court of McLean County. The case came up for trial at Bloomington, September 26. The jury decided that the railroad was in no way to blame for the accident and returned a verdict in its favor.

#### Helped War Veteran Get Pension

The Kankakee (Ill.) *Republican* recently carried the following little human interest story regarding C. D. Cary, claim agent at Kankakee:

"In 1907 Bennie Holman, a transient, had a leg cut off while attempting to board a freight train at Buckingham. He was brought to Kankakee, where he received medical attention.

"When his injury had healed he applied to C. D. Cary, claim agent of the Illinois Central, for help to get to Freeport, Ill. Cary gave him a pass to Freeport and \$25 in money.

"Cary bade Holman good-by, and that was the last he ever saw of him. He learned that Holman was a veteran of the Spanish-American War.

"Early in 1921 Cary heard from Holman. The man stated that he was in the National Soldiers' Home at Dayton, Ohio. He asked Cary to intercede for him in procuring a pension.

"Yesterday Cary received a letter from Holman stating that through his efforts he has procured the pension. Here is his letter to the claim agent:

"I write to let you know that I have been granted a pension of \$30 per month. I want to thank you sincerely for your help. If it had not been for your fairness and kindness to me I would probably not have received this grand relief. I will never forget you. Please tell me if you smoke and I will send you a

box of choice cigars. I want to show you that I am really sincere in what I say.

"I will have 15 months' back pay so I will have \$450 and I want to do something for your kindness. Please answer at once. I hope you will always enjoy good health. I will always remain your friend."

## A Little Fable Good for New Year's Day

By T. W. CROW,  
Out-Freight Department, Chicago

A long freight train rolled slowly into the siding and stopped with a grinding of brakes and a rattling of couplers. The crew cut off the engine and started to work switching out cars from a near-by track.

"Oh, dear me!" sighed a new box car, "what a hum-drum life is this that I have to live. Nothing for me but work, work all the time. Never a moment of rest for me except when I am stopped at some jerk-water town while the engine takes water, or I am set out in some smoky, dirty yard to be jerked and bumped around to suit the whims of some rough switching crew.

"And I am always obliged to carry a heavy load; it is a wonder that the traffic manager would not let his cars run empty once in a while. Only last week the G. Y. M. wanted to send me home empty, and I was much pleased when I heard of his plans; but the division superintendent put out an order to send all cars home under load; so here I am, loaded to the brim with wheat for some fat elevator in Chicago. I wish that some one would poke a hole in my floor and let the old wheat run out all over the ground."

### The Passenger Car's Free Life

At this point a passenger train roared past, while the disconsolate car gazed after it with a self-pitying expression.

"Now, that is what I call living," said the box car. "To go rushing around the country, behind a swift passenger engine; to have the right of way over all the poky old freight trains; to carry all the happy young children and the newlyweds; to have a man sweep my floor and clean me up all spick and span every day—yes, that is the life, all right. Why could not I have been

a passenger car instead of an ugly old box car? I would much rather be a dirty old switch engine, or even a caboose, than what I am. I shall never know anything but rough treatment. No romance, no tragedy, no adventure shall ever fall to my lot."

"Tut, tut, my dear sister. Why are you so distressed with your lot?" The voice came from a battered old box car on the next track.

The new car replied: "Oh, it is all right for you to talk that way; you are only an old worn-out car, almost ready for the junk pile, while I am young and have a whole life of drudgery ahead of me."

### Old, and Experienced, as Well

"Yes, I am old, I must admit," said the old car, "but I have lived a wonderful life. I have seen many things, I have traveled many thousands of miles, and I still have a few thousand miles left to travel, and several years of useful work before I am sent to the junk-pile. If you do not mind, I would like to tell you a few things."

"Go ahead," said the other, "I may as well listen to your tale as to stand here and listen to the banging and bumping of that miserable old freight engine."

"It was in 1898," said the old car, "that I came out of the shops a bright, new car. I felt very proud when the inspector placed his O'K on me, and I was made ready for my first trip. At first, everything was lovely, but after a while I began to feel much as you feel now.

"As I grew older, however, I came to realize that I could not hope ever to be anything but a box car; so I just made up my mind to be the very best kind of box car that it was possible for me to be and to make just as much profit for my employers as I could. I had rather a hard time at first in keeping my resolution, but the more I practiced it, the more I was convinced

that I had found the secret of real usefulness and happiness.

### A Wide Range of Travel

"You complained of the lack of romance, tragedy and adventure in the life of a box car. What, may I ask, could be more romantic than the life I have lived the past twenty years or more? I have traveled from the frozen shores of Hudson Bay to the sun-kissed shores of the Mexican Gulf; I have seen the beautiful wooded hills of New England and the burning, barren sands of the Great Southwest. I have journeyed from the cornlands of Iowa to the cotton-fields of Alabama, from the coal region of Pennsylvania to the copper region of Montana. I have traveled the far-flung prairies of Kansas and Nebraska, across the snow-capped Rockies, and down their western slope into the paradise of Southern California, where the flowers bloom the year around, and whence the birds never have occasion to migrate. I have seen the beauty of the great forests of Oregon and Washington, as well as the quiet, peaceful countryside of the great Mississippi Valley.

"And if these things are not sufficient, think of the wonderful work that I have done in my lifetime. I have benefited countless thousands of human beings with the articles of commerce that I have carried. I have carried wheat and corn from the farms to the mills, and then taken the flour and meal to the cities, from where it was sent broadcast over the world to provide food for many people. I have even carried coal to keep the great mills and factories running and to keep people warm during the cold winters. I have carried many other things, among them iron, cotton and wool to be made into useful articles of commerce that would make the world better.

### Some Tragedy and Adventure, Too

"Really, I think there is sufficient romance in my life to fill a book. And as for tragedy—well, I have seen tragedy a-plenty. I have seen many poor fellows badly mused up, and a few who were killed. I have carried many a poor hobo whose very life itself was a tragedy. Many times I have listened to tales of lives that had been broken and twisted and warped, some by unnatural circumstances, others by the actions of unscrupulous persons, and yet others by the foolishness of the poor victims themselves; but

whatever the cause, their lives were tragedies, just the same.

"As for adventure, I must say that I have had my share, with derailments, storms, snowslides, and such other accidents as fall to the lot of a box car.

"And so, my dear sister, this is a fairly accurate account of my life, and the wonder of it all is that I have lived as long as I have. But, as I said before, the secret of usefulness and happiness in life lies in doing the very best that you can."

### A Lesson to Be Practiced

"Really, I cannot tell you how much good your story has done me," said the new car, "and I must say that I certainly am going to practice your philosophy. I hope that I may be as successful in applying it as you have been.

"Well, my crew is coupling up the train, and we shall be leaving presently; so I must bid you good-by."

"Good-by," said the other, "and good luck."

## Helped Salvation Army

In connection with the recent Home Service appeal of the Salvation Army, C. M. Kittle, senior vice-president, received the following letter from Commissioner William Pearl of Chicago:

"Permit me to express to you my sincere gratitude and that of the Salvation Army for the excellent support you have given us in connection with our recent Home Service appeal in Chicago:

"I understand that the employes of your company have subscribed a little better than \$3,000 to the appeal, which is a very fine record indeed, and we feel that these splendid results are in no small measure due to your co-operation and influence. We, of the Salvation Army, will not soon forget the part you have played in making these results possible.

"On behalf of thousands of Chicago's poor and needy, who will so largely benefit by the services you have rendered, and many of whom, but for the very fine work which you have done, would have to face the on-coming winter without the assurance of even the barest necessities of life, I thank you."

# Care With Empty Cars Can Save Money

## *Proper Routing Is an Important Factor in Maintaining the Efficiency of the Railway Plant*

By H. K. BUCK,  
Chief Yard Clerk, Gwin, Miss.

HAVING given considerable study to the subject in the five years I have been with the Illinois Central, I venture the opinion that one of the greatest fields for improvement in our operating methods lies in our handling of empty equipment.

No business has the hearty co-operation and good will of its personnel to a greater extent than the railroads, and I believe the Illinois Central System ranks first in that. The mishandling of empty equipment is seldom due to a willful violation of instructions. It is usually due to a failure on the part of the person concerned to understand instructions, especially the first three of the car service rules, which apply generally to conditions we have in the terminals and locally on the road. Occasionally, mishandling is due to a failure to keep up with special instructions.

Paragraph D of Rule No. 3 reads as follows: "Deliver empty to the roads from which originally received, *if impracticable to dispose of them under other paragraphs of Rule No. 3.*" Judging from the mishandling of equipment now being experienced by the company, I would say that many of us do not read the other paragraphs of the rule, and at times it seems that some of us have lost the book entirely.

### A Form to Save Trouble

The use of Form 151 empty slip waybill, attached at junction to the regular waybill (practically the same as the old "home route card"), is one of the best systems ever put into effect. However, because we do not give the car service rules sufficient study and do not keep up with special instructions, we are mishandling equipment even under this plan. We are causing back haul, which we are trying to eliminate, and causing extra *per diem*, the latter an expense which a great many of us do not seem to consider as we should.

Here is an example: An agency on the Illinois division recently made empty a Southern Pacific automobile car which we had received from the New Orleans & Great North-

ern at Jackson under load. The car was forwarded from the point in Illinois on the Jackson returnable Bill Form 151, which was made at Jackson when the car was received, notwithstanding that special instructions at that time on this type of equipment were to "load to, or in the direction of, Chicago; if no loading, bill empty to Wildwood, Ill." The car in question moved back south as far as Gwin, and was then billed to Chicago. The failure of the Illinois division agent to observe the special instructions caused an unnecessary empty haul of more than 1,000 miles, and also an extra *per diem* expense of about ten days, for the car moved in tonnage trains.

### Use Care as With Loaded Cars

I have talked with and corresponded with agents on this subject, and many of them appear not to be posted on the car service rules as they should be. It would be fine if as much interest were manifested in billing empties and handling empties as in billing and handling loaded cars. Everyone should realize that the proper handling of cars means dollars saved, and dollars saved are equivalent to dollars earned. I watch the movement of empty equipment, first, because it is my duty and, second, because of my own interest. I enjoy it. I like to see how many cars I can "get going right."

I believe we have the best line-up of yard clerks at Gwin that is to be found on the system, and that is what eliminates "no bills" and "over bills." Get old cars moving. Detect cars which are moving against instructions. Bill correctly. Study the car service rules. We are endeavoring to do these things at Gwin, and each clerk is taught the great importance of carrying out special instructions and the car service rules.

Most of the time lost by clerks in handling waybills for in- and out-bound trains, I believe, is caused by the improper billing of empty equipment. Trains are delayed waiting for waybills because clerks are looking to see whether cars are empty or loaded without billing. We have overcome most of this at Gwin by giving the empty billing a special study.

When every car moving is accompanied by its proper billing, there is no danger of moving loaded cars on empty waybills.

### A Rule That Saves Money

An understanding and use of Rule No. 4 will save the company many dollars. That is, when we have a surplus of empty equipment on hand, send the surplus home by the shortest route on revenue billing at a reciprocal rate of 5 cents a mile, with a minimum of 100 miles for each road handling the cars. This is more economical than hauling the cars a great distance around to get them home direct. If everyone, before billing an empty car, would take enough interest to figure out the movement of that car, just as though he had to pay \$1 for each twenty-four hours' delay in getting the car home or to the proper junction, the gross mishandling of empty equipment would be done away with.

I want to tell you something of the system we have on the Louisiana division for keeping up with the current instructions governing the handling of empties. We are, of course, familiar with the book, General Order No. 10, issued February 21, 1919. It has 18 pages, 8x11 inches, forming a loose-leaf book, giving the disposition of privately owned empty freight car equipment. The chief train dispatchers at McComb and Memphis issue car bulletins, numbering them consecutively, and reissuing them as often as necessary to keep instructions correct. They list each class of equipment separately, so there is no possible chance for error. The bulletins are printed on sheets the same as General Order No. 10. We have been furnished with two backs for this special book, and, with General Order No. 10, current car bulletins and wire instructions, we are able to form a loose-leaf book. As new instructions are received, the canceled ones are removed.

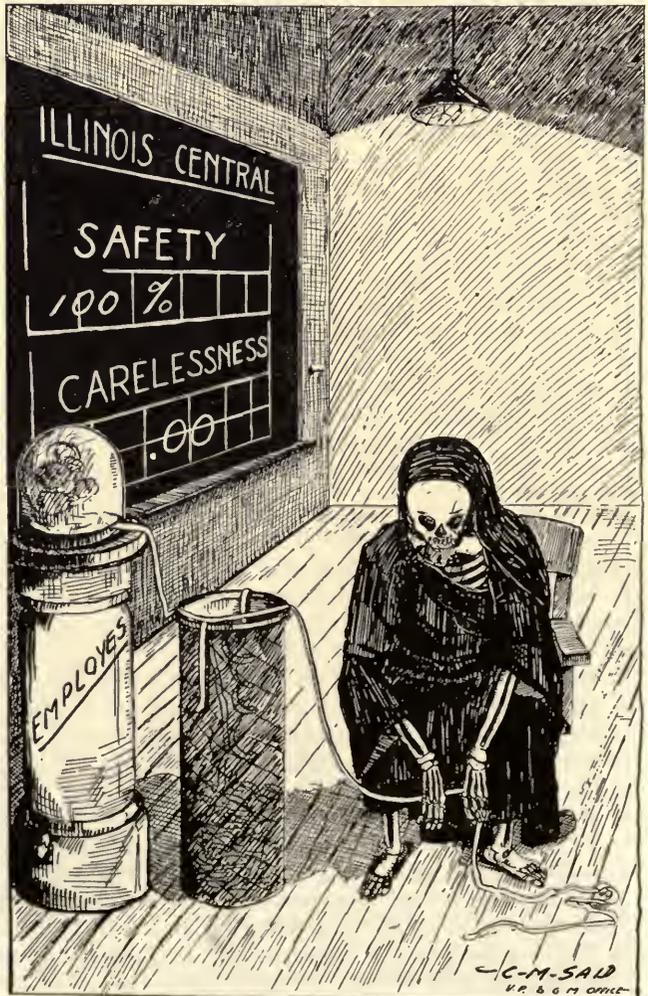

## COMMUNICATIONS

### For Private Ownership

*Engineer C. J. Barnett of Memphis is a world's champion when it comes to maintaining schedule on the Panama Limited, as he recently completed five perfect years of such service. His feat was noted in the December issue of this magazine. Mr. Barnett has ideas on subjects other than schedule maintenance, however, and his record for service and citizenship entitles him to a hearing.*

To THE EDITOR: I have heard much about the government ownership of railroads, but

## WIPED OUT!—A PROPHECY

it is my humble opinion that we, as a whole, do not want government ownership. Private ownership, with government regulation, is what I consider best for this great country. Private ownership of railroads is one of the things that has made America what it is today. Was there ever a country that developed and prospered as this one has?

When the older countries, as I call them, were at a crisis, they had to call on America to come to their assistance, and we did. I am glad to say we made victory possible much sooner than we hoped for.

The development of this country—with the great railroads running everywhere, their main arteries touching every kind of raw material and putting the finished product at every point for distribution through the world—was all under private ownership, and I venture to say that, had the government owned the railroads for the last thirty years, this would not have been possible, for there would not have been so many railroads in America as there are.

Competition is the life of trade. When the government owns anything, competition ceases, and efficiency decreases to a certain extent. What we need in this country is competition. Everybody must get busy. We must put more people to work for private concerns and reduce the number of people who are working for the government. We must increase efficiency and production. There are too many people working for the government who are not producers.

I have heard something about the profit-sharing system, and it is my humble opinion that there isn't anything to such a system. There isn't anything to sharing profits with one who has nothing invested. This will not increase efficiency. Giving people something for nothing is a move in the wrong direction. It decreases production.

Private ownership, with efficiency and production, has made this country, and that is what we need now. Doing well is hard to beat, and why change?—C. J. BARNETT, *Engineer, Memphis, Tenn.*

---

### The Salesman and the Pig

TO THE EDITOR: When I took the fat china pig from my desk that morning, he was so glutted with silver that he scarcely jingled.

He was a big brown porker, with a slot in his broad back, and a label on his side. How the family had laughed over that label! "When is a pig not a pig?" they teased. "When he is labeled 'Oriental rug.'" You see, the pig was my bank, and quarters and halves had been his sole diet for more than a year. I felt rather ashamed of the petty economies which had been practiced at times to feed the pig, but now he was stuffed to capacity, and I was going to buy myself an Oriental rug for a Christmas present.

In high spirits I hurried from the office, on Saturday afternoon, to a store which boasts the Christmas spirit, and in the rug department a clerk was assigned to give me attention. I didn't like that clerk from the first glance. He had a bored air as he grandly drew up a chair for me. Now, what I do not know about Oriental rugs would fill a large volume. I know that the Turkish ones are mostly red, but I have not the names glibly at the end of my tongue. So I told the clerk timidly that my knowledge was limited. And then I spent a most uncomfortable half hour. No, he wasn't discourteous—far from it. He had about as much interest in selling me the Masonic Temple as he had in trying to learn the particular kind of rug which would please me. There was something in his stony air of hauteur which made my face burn. And when he was called away for a minute I did a most cowardly thing: I fled!

I couldn't help thinking that that clerk was a poor representative of the management of the store. I wanted a rug, and I wanted it badly enough to have saved carefully for it, but he couldn't have sold me a rug if my life depended on it!

I doubt whether those who meet the public realize the responsibility resting upon them. They represent the management of the store or business, and it is within their power to make a very good impression or an exceedingly bad one. It isn't any favor to the public to be courteous. To put yourself in the place of the fellow on the other side of the counter may seem like asking a great deal, but are we not forever quoting the Golden Rule? Display a bit of interest in the thing that you are selling, Mr. Salesman, whether it is tacks or transportation, and make the buyer feel that you know just what he wants, and that you are delighted to serve him.—TILLIE THE TYPIST.

# MEN OF THE ROAD

By Charles Hanson Towne

*Dedicated to all railway veterans of the United States by the author, who wrote it for the Pennsylvania System Veteran Employees' Association.*

## I

Sometimes when I think of those rails that  
run like arteries through our land,  
A vision comes of the endless roads that  
master minds have planned;  
Roads that lead to the Golden West, and  
North where the snow lies white;  
Roads that plunge through chasm and gorge  
and sing through the lonely night;  
Then down to the sunlit seas of the South,  
and East to the ocean wide—  
Roads that are swift, and sure, and clean,  
the country's hope and pride.

But what is a road without manly men to  
urge the engines on,  
To keep the furnace hot with life, from  
thrilling dawn to dawn;  
To make the silver tracks express the glory  
and will of the wise,  
And knit the cities in one vast plan of beauty  
and enterprise?  
For men must stand at throttle and brake,  
and in every aisle and door,  
Like sentinels who kept their tryst, though  
loud the thunder roar.

The men who dreamed this iron dream were  
men of iron worth,  
And when you and I have journeyed far,  
their dream shall circle the earth.  
They toiled in the dark, when lo! a spark, a  
flash from the heavenly fire,  
Made them see aright in the aching night;  
and they built of their great desire.

They built these roads that speed us all to  
distant towns and rivers;  
They built new cities on wide waste-lands—  
they were the gospel-givers;  
They were the dreamers who pondered long,  
who would not falter nor fail—  
The men who dreamed a noble dream of  
long bright miles of rail.

## II

They battled long—how long!  
Their hopes went down in dust.  
The weak became the strong,  
And whispered, "Lo! we must!"  
They saw the forests fade  
In pathways for their dream;  
They heard the prairies sing  
With the loud roar of steam.  
They pushed their engines on  
Through swamps and deserts wide;  
They tore asunder the great hills—  
They would not be denied!  
They made vast halls of steel,  
Where through, with lightning speed,  
The first wild engine raced  
Like some gigantic steed.  
Their headlights pierced the dark,  
Their signals flashed and gleamed;  
And through dim tunnels of the earth  
Exultantly they steamed.  
From coast to distant coast  
They sped; they could not fail!  
And now, behold long miles  
Of shining silver rail!

## III

It a little thing to follow those  
 Who wrought so well out of their passion-  
 ate fears?  
 Is it a little thing to keep alive  
 The solid tasks of these great pioneers?  
 Is it a little thing to say tonight,  
 "We shall not falter in the coming years!"

Is it a little thing to be of those  
 Who kept alive the lamp of great desire?  
 Some spark of their exultant flame shall  
 flash,  
 As watchmen flash a little word of fire.  
 Torch-bearers of the years, their light still  
 burns—  
 High, high indeed! . . . And yours shall  
 burn still higher!

## IV

Honor to them!—the men who served  
 In youth, and still serve on today!  
 Honor to them! They never swerved,  
 And none their busy hands could stay.  
 What though the track lay straight, or  
 curved?—  
 Their iron horses found the way!

Honor for those long, tireless years,  
 Wherein they gave their manly best!  
 They had no time for foolish fears  
 When the great storms roared East and  
 West;  
 "We follow them—those pioneers!—  
 We, too, are ready for the test!"

Remembered by their confreres still,  
 The Veterans who served so well  
 Are like great cedars on a hill,  
 The story of whose growth men tell.  
 Their boughs fall not—and never will  
 Till God Himself shall ring the bell!

And they who wrought out of their might,  
 And served the roads they loved always,  
 They sit by glowing fires tonight,  
 With memories of distant days;  
 And though their heads are silver-white,  
 They still are young enough for praise.

And they who follow them shall know  
 Such seasons white with honest joy.  
 How wonderful like this to grow  
 To manhood in the Road's employ,  
 And say, "I did my best! and though  
 I'm old in years, I'm still—a boy!"

Honor to them! All honor still  
 To those who served, and served so well!  
 They are like cedars on a hill,  
 The story of whose growth men tell.  
 Their boughs fall not—and never will  
 Till God Himself shall ring the bell!

## V

Men of the Rail, men of the Road,  
 When May came out, and her orchards  
 glowed,  
 You whirled from tired cities, through lanes  
 Of beauty, on your thundering trains.  
 When Summer sang beneath opulent skies,  
 And the world was a book for our weary  
 eyes—  
 A great, green gospel of joy—you sped  
 Where the hills were mute, where the rose  
 was red.  
 And when Autumn came with beautiful  
 dreams  
 And draped the mountains and kissed the  
 streams,  
 You saw her pages of purple and glory,  
 And read in a flash her wonderful story.  
 When the ice-bound rivers were hushed in  
 sleep  
 In northern wastes, and the snow lay deep  
 In valley and gorge, you saw the white  
 Perfection in a world of light:  
 The trees like nuns in hoods of snow,  
 Silent and beautiful, row on row.  
 And when Spring came out with silver feet,  
 Her lovely legend to repeat,  
 You saw her through the forests run  
 Beside your speeding train! The sun  
 Was tangled in her golden hair—  
 You saw the glints and gleamings there.

Men of the Rail, men of the Road,  
 The whole world is your bright abode!  
 But though far you fare on the silver track,  
 The same rails bring you singing back!  
 It's a gypsy life, and a gypsy trail,  
 Men of the Road, men of the Rail!

## HE STARTED WITH US

H. R. Stafford was recently elected a vice-president of the Chicago, Burlington & Quincy Railroad. Mr. Stafford began his railway career with the Illinois Central, serving in various capacities for fifteen years. Later he was chief engineer of the Grand Trunk Railroad, assistant regional director of the United States Railroad Administration, and then assistant to President Hale Holden of the Burlington.

## ACCIDENT AND

## INJURY PREVENTION

## They Swear By This Man's Safety Work

**F**RANK Calkins, engineer on the Wisconsin division, established such a reputation for carefulness and safety, not only among the officers and employes with whom he worked, but with the citizens of the towns through which he ran, that the city council of Polo, Ill., in considering the question of gates at railway crossings, decided that none was necessary when Engineer Calkins was at the throttle, and only asked that all engineers use the same great care.

It might be said that Mr. Calkins has been running a train for thirty years, the last ten years of which have been on a local freight, switching box-cars at every station between Freeport and Amboy and passing over hundreds of public crossings daily, yet he has never run into a pedestrian or a vehicle. Doubtless, too, the drivers of automobiles in these towns have been sometimes as careless as they are anywhere, for a time or two they succeeded in running bang into the train before they would allow themselves to be stopped. Perhaps still others committed suicide by drinking hair tonic, but that, of course, is no part of our story.

### An Expert in Switching

It would be a good guess that Mr. Calkins follows the rules of safety zealously, anticipating whatever act might result in an accident and thus avoiding it. For three years, while state hospital buildings were being constructed near Dixon, he switched cars containing everything from stone steps to art glass windows on tracks with  $4\frac{1}{2}$  per cent grades and 38-degree curves with never a mishap. He never had to report an injury to a member of his crew and, in fact, has never been called in to an investigation of any kind in the last sixteen years. Brakemen who worked with him preferred to work nowhere else, and only with reluctance would accept promotion as conductors on other trains.

Mr. Calkins admits that the habit of

safety has grown on him until it is uppermost in his mind in everything he does. He modestly insists that what he does is nothing more than the duty of every engineer in charge of a locomotive, but has consented to give a few of the outstanding principles which have made his record possible:

### There's a Reason for Each Rule

"We must not be satisfied with a mere

Frank Calkins

perfunctory compliance with rules, but must look to the reason for each rule—to what it was meant to safeguard—and see that our performance fully satisfies the purpose for which the rule was intended. After we have read our train orders and turned them over to the fireman and head brakeman, we must call out the meeting points and see that all understand the orders alike—three heads are three times better than one. Before departure we must inspect every working part of our locomotive just as if we expected to find something wrong—the oiling, brakes, air, bellringer—and bring the whistle lever into easy reach, and then later be sure to make good use of it.

“The fireman, as well as the engineer, must keep a close watch-out at every public crossing; the approaching automobile might contain his own wife and baby instead of his mother-in-law.

“Each of the four blasts of the crossing whistle must be separate, long and distinct, so that they will not fail to be heard, with an additional alarm at busy crossings or where the view is obstructed, leaving nothing to chance. We must try to do the fast running between stations, so that we won't need so much speed through the towns; but don't pass through the heart of a town without letting them know a train is approaching—use the whistle everywhere that it is not positively prohibited, and keep the bell ringing.

“The accidents in switching are all eliminated by stopping or slowing down enough before backing over a crossing to give the brakeman a chance to go ahead of the cars, especially if your view is not clear.

### Remember Men in the Caboose!

“Climbing on or around the locomotive is dangerous; let's not get so used to it that we neglect holding on firmly, because a slip may be fatal. On freight trains, when you can expect the trainmen to be getting on or off, slow up to make it safe for them. We must always remember there are men in the caboose, and give thought to them in starting or stopping—use of straight air may cause injury.

“The fireman is getting his training from the engineer; don't merely set him a good example in safety, but be his big brother. Don't let him climb back to take water right when he may be struck by a bridge overhead, nor let him be killed by a structure at the side of the track when you could have told him it was there. Watch how he stands to take water and how he pulls down the coal chute; maybe he hasn't learned the safe way.

“Slow down or stop for the switch; if we make the brakeman run for it, there are many things over which he may stumble. In one word, let's eliminate every possible risk and danger, and let no one take a chance.”

CHGO DEC.15

DEAR BILL

AM GLAD YOU ARE BACK PULLING PINS AGAIN AFTER YOUR REST

IN THE HOSPITAL. TOO BAD THERE WASNT A NO ACCIDENT DRIVE IN NOVEMBER

SO THAT YOU WOULDNT HAVE BEEN HURT. BY THE WAY, BILL, THE NO ACCIDENT

DRIVE THIS MONTH MEANS NOTHIN TO BUCK SMITHERS YOUNG HEART. I SAW HIM

YESTERDAY TRYING HIS DURNEST TO PUT HIS RIGHT DOG BETWEEN 2 COUPLERS

TO ADJUST A DRAW BAR. IVE SEEN FELLOWS AT CIRCUSES PUT THEIR HEADS

IN A LIONS MOUTH FOR PAY, AND SEEN BALLET DANCERS USE THEIR FEET TO MAKE

A LIVING BUT WHY ANYONE WILL STICK THEIR FOOT AGAINST A DRAW BAR IS A

HARD ONE. IF BUCK KEEPS THIS UP HE WILL HAVE MORE WOOD IN HIS LEG

THAN IN HIS HEAD. HERES HOPING, BILL, YOU WONT TRY THIS STUNT AND

SPOIL OUR FISHING TRIP NEXT SUMMER.

JOE

# The College That Lies in Your Mail Box

## Smith and Brown Decide to Delve Into the Correspondence Education Offered by the States

**T**WO railway men at a small town in the West had had several heart-to-heart talks with each other about the greater attractions of life in a large city. Both had been born and brought up in the country within a few miles of where they were working. One of them, John Smith, was rather discouraged and wanted to seek a position in the nearest metropolis. He was always urging his friend, Tom Brown, to join him, but the latter was never quite convinced of the wisdom of such a step. Furthermore, Tom had a deep love for the country and was unwilling to go away from it. Their conversations at various times had left the matter unsettled.

Finally Tom drops in on John again, one fine day, and starts the ball rolling a new way.

### Happiness Lies Within

"John," says he, "I've been thinking of our talks about the advantages of the city compared with those of the country, and I have just about come to the conclusion that the old philosophers were right when they said that happiness was within us, and that we cannot get out of ourselves what isn't first put in.

"Do you remember my old friend, Dick Jones, who stopped off at this station about a year ago? Well, I saw him again a few days since and asked him how everything was going. He says, 'Fine,' and then he opens up and tells me about a new experience of his.

"It seems that, like yourself, he had had the notion of transferring his affections from the country to the city, where he thought he would find less monotony and more opportunity to broaden his experience. Now just before he packs up to make the move, he meets a chap who tells him all about some kind of extension education work—that's what they call it—carried on by the state universities. ways did have a hankering for studying out things, but had never been able to do much Dick says he listened carefully because he systematically.

### Picked Out His Own Subject

"The upshot of it all was that Dick wrote to the director of extension education of the

state university in his home state, and to those in some near-by states, to find out just what courses were given by correspondence and on what subjects. He got replies and picked out a subject that suited his inclinations—I don't remember just what it was—and he has been making good progress in the work ever since.

"He says the expense is very small, probably much less than the cost, because the university is supported by state funds and is able to offer good courses of study by correspondence on various subjects. This seems to be done as a matter of public welfare.

"Dick is much interested in his studies, and he looked mighty cheerful to me; he said he was soon going to start another course more advanced and that, in some way, he had got into touch with some other serious students interested in the same subject, with whom he was corresponding.

### Wants to Let Others Know

"It struck me that Dick was creating for himself a little world of his own in which he would find increasing happiness. I said as much to him, but he told me that, while he did enjoy the work and it took very little of his time, yet the thing which gave him the most pleasure was to let as many others as possible know about the excellent opportunities available and to induce them to take advantage of them.

"He said that the state university in his home state did not happen to give any courses in the particular subject in which he is interested, but that he got just what he wanted from a similar institution in an adjoining state. He gave me a complete list of all the directors of university extension education in the United States, and here it is":

**WISCONSIN**

Dean L. E. Reber, University of Wisconsin, Madison, Wis.

**WYOMING**

F. M. Foster, University of Wyoming, Laramie, Wyo.

**Willing to Take a Chance**

"But, Tom," says John, "what's all that mean to you or me? I'll bet that the stuff your friend Dick is studying wouldn't be of any earthly interest to you or me."

"Well," rejoins Tom, "that's probably so, but I'm pretty sure that there are lots of other subjects, and I'm going to send for some circulars telling all about them. I'll wager there's something for me in it yet. Anyhow, the missus says she would like to see if there's anything to appeal to her side of the house."

"I'm not much interested," says John, "but you can ask for two copies of those circulars if you want to and give me a set when you get them. I'll know better then if I want to do anything about it."

**Study to Appreciate Life**

"Glad to do it, John," says Tom, "and after I decide exactly what course to take myself, I'm going to try to find out how to get into direct correspondence with some other serious students who are interested in that same subject. Anyway, I intend to try out this plan before I ever turn my back on country life. A poet once said: 'God made the country; man made the town.' What say you?"

"Well, I don't know yet," replied John, "but I'll wait a while and see what you turn up. If you survive the performance, I may be tempted to follow your example. There are several things I've always been curious to learn about, and maybe you're showing me a way to do so. I'll admit that the man who has got the goods in his head has a better chance to get the most out of life, in the long run."

"My own notion," says Tom, "is that perhaps both of us and thousands more like us in the small towns throughout this great country may be able to bring the world to our own doors, or at least as much of it as we really need."

# How the Louisiana Division Saved Its Coal

## Superintendent T. J. Quigley Outlines Plan Which Proved the Most Successful on the System

*We all like a winner, and we wonder how he did it. The Louisiana division proved the best coal-saving division in September and October, according to the judgment of the general fuel conservation committee, and here we have Superintendent T. J. Quigley's account of how the teamwork was put in effect to obtain the necessary results.*

By **T. J. QUIGLEY,**  
Superintendent, Louisiana Division

**A**S superintendent of the Louisiana division, I have been requested to write on fuel conservation. The general fuel conservation committee has advised me that the request was made on account of the excellent results obtained on this division in fuel conservation during September and October.

I feel that this request might, with the same end in view, have been made of the head of any department—in fact, of any man—on the Louisiana division. The showing which we made was so outstandingly due to the interest and co-operation of all on the division that every man on the division should have a hand in writing any article pertaining to the results obtained.

The methods of getting this individual interest and co-operation may be briefly outlined as follows:

### How All Were Enlisted

In the mechanical department, meetings were held with all general foremen, and at each shop point with all foremen. Each foreman in turn made it his duty to talk to each employe, explaining the various ways in which he, as an individual and in connection with his duties, could conserve coal. Also, at the time of the talk, each employe received a card showing briefly the ways in which he could assist in conserving fuel.

In the road department, meetings were held with the supervisors, and they, in turn, personally talked to each foreman, who then outlined to the men in each gang the methods that could be adopted to save coal.

In the transportation department, meetings were held at terminals with the road men.

and also with all yard crews. In addition, a meeting was held with the train dispatchers, and their interest was solicited in moving trains promptly. It was fully realized that the coal burned by an engine while the train is not moving produces no useful work, and that the dispatchers, therefore, could play an important part in the fuel conservation campaign by avoiding all unnecessary delays to trains.

The trainmasters and traveling engineers also personally talked to each man on their seniority lists.

### Made Changes on the Engines

Prior to the beginning of the campaign, enginemen were requested to go over their engines carefully and advise the superintendent personally of any defects in their engines or any conditions that would tend to increase the amount of coal consumed. In accordance with their reports, some changes were made in the engines which apparently served to reduce coal consumption.

Suggestions were solicited and obtained in a great many instances from all employes on the division, regardless of the character of their work or the department in which employed, and each suggestion received the fullest consideration to determine whether or not it could be put into effect.

Passenger enginemen agreed to double the road in each case on one tank of coal, and freight men agreed to run certain coaling stations without taking coal. Tests were conducted throughout the month in coal consumption, and the results of these tests were posted at all bulletin points. Cartoons were shown daily at McComb on a blackboard near the engineers' washroom. This served to create interest among all the men, and these cartoons were watched for daily. The supervising agent made a trip over the division, holding a meeting at each station with the entire station force, impressing upon them the ways in which the agent and his force could assist in saving coal.

By the time the campaign had begun, the men had made up their minds that they could beat any other division on the system.

## Economy, Not Penury

By L. L. KING,

Special Assistant, Purchasing Department

**W**EBSTER defines "Economy" as "A regulation of household affairs; frugality in expenditure; management which expends money to advantage and incurs no waste."

The management of this great railway system, which in reality is nothing more than a large household, employing numerous people and using an abundance of material, has never for a single moment lost sight of this all-important word. This fact is evidenced clearly by the recent drives it has conducted—the "No Exception," "Fuel Saving," "No Stock Killed" and "No Accident" campaigns, as well as several other drives completed some time ago. These campaigns, of course, have but one objective, that of saving or economizing.

During the present period of reconstruction, when everything is unsettled, factories and shops in some cases working less than 50 per cent of their capacity, high prices prevailing for materials, as well as labor, the practice of economy, if applied by all, will do more toward stabilizing conditions and to assist in bringing about the desired results than any other one thing imaginable.

Some may ask: "How can I, in my seemingly unimportant place, save or help to economize?" Regardless of your position there is always something you can offer.

The pumper at way stations may save a few pints of oil in lubricating his pump or a few shovels of coal each month.

Section men may refrain from taking from the track a tie that will give service another year or so and use a few second-hand spikes or bolts, instead of insisting on new ones.

Mechanics and others machining or fitting expensive pieces of materials for application to equipment, etc., can make a substantial

saving by exercising extreme care in handling to avoid loss by incorrect measurements, which is often the case in passing articles over their machines.

Car repairers could make a wonderful showing if, in nailing a piece of lumber in its strategic position on a car, they will avoid using a surplus nail per board. A recent instance was called to the attention of car men after a car had passed through the shop; surplus nails were used, or more than were covered by specification, amounting to nineteen pounds. Such practices should certainly be corrected. With the present price of nails, this item alone will mount well over hundreds of dollars quickly.

Station agents and their helpers can accomplish as much as others if they will follow up closely the checking of freight received, to know that it is properly packed for shipment and to see that it is loaded correctly in cars to withstand shocks to which it might be subjected while in transit. This would avoid loss and damage claims, meaning a real saving.

Clerks and stenographers can do their part by conserving in the use of stationery, using old, obsolete forms for scratch pads. Envelopes can often be used the second or third time. Carbon sheets should always be used until the ink is entirely worn off. Pencils may be used completely, by the aid of holders furnished. There is really no limit in this big field for saving in all lines.

Conserving the use of materials in this manner may seem rather trifling to the individual, but when a concerted effort is made by all employes on a system the size of the Illinois Central, with a view of saving everything regardless of its value, the effect will be tremendously large when consolidated.

Economy, of course, is not only applicable to those using materials, but can be extended easily to saving in labor. Conditions can be improved a great deal by increasing ef-

iciency in daily routine. Seek short-cuts in your work and get the most done in the least possible time. Get out of the old beaten path made by some of your predecessors. Try to put into practice new ideas or methods in keeping with the present time. Lend a helping hand occasionally to those near you. This will get you into the limelight, where your superior will notice you and due recognition will follow.

It may be well to mention or differentiate between "economy" and "parsimony." It is not the intention of the management, I am sure, to encourage economy to the extent of employing the latter word, which implies an "improper saving of expenses." All should know when something they are saving is of advantage.

In purchasing materials—which, by the way, is largely the duty of the writer—every requisition received is closely scrutinized before inquiries are sent out for bids from manufacturers or others engaged in jobbing materials, to know that items are correctly

described. When bids are returned they are tabulated and closely examined by buyers before orders are placed, to know that material quoted on is in accordance with specifications, etc. This determined, the order is placed with the lowest bidder, consideration, of course, being given as to quality, source of supply, time of delivery and F. O. B. point. It is needless to mention that thousands of dollars are saved monthly by those handling such orders. Of necessity they must be on the alert in placing business at the proper time and with the most consistent shippers.

It is probable that a large number of employees who handle and use materials on the line have no conception of the amounts purchased and consumed during a 30-day period. It may be of interest to learn that for the present year the purchases of miscellaneous materials per month have averaged approximately \$3,500,000, which means, of course, that a like amount of these items is used during the same period.

## LEADERS IN NATION'S RAILWAY LIFE

Copyright by Underwood & Underwood, New York

*Executives of the nation's leading railroads assembled for a recent meeting with President Harding at the White House. Left to right, front row: S. M. Felton, President, Chicago Great Western; Howard Elliott, Chairman, Northern Pacific; Thomas Dewitt Cuyler, Chairman, Association of Railway Executives; Alfred P. Thom, General Counsel, Association of Railway Executives; C. H. Markham, President, Illinois Central; Samuel Rea, President, Pennsylvania; Judge Robert S. Lovett, Chairman, Union Pacific. Back row, left to right: Julius Kruttschnitt, Chairman, Southern Pacific; Ivy L. Lee; A. H. Smith, President, New York Central; Hale Holden, President, Chicago, Burlington & Quincy; W. B. Storey, President, Atchison, Topeka & Santa Fe; James J. Davis, Secretary of Labor; General W. W. Atterbury, Vice-President, Pennsylvania.*

# Patrons Have Good Word for Our Service

## Letters to Management Commend Fine Manner in Which Employes Represent the Company

**T**WENTY members of a Chicago City Council committee, returning from a tour of the Pacific Coast not long ago, used Panama Limited train No. 8 from New Orleans to Chicago. Those in charge made a statement upon arrival in Chicago to the effect that the service received en route from New Orleans to Chicago could not be excelled by that received on any of the other lines used in connection with the entire trip from Chicago to the Pacific Coast and return.

That statement is typical of many of those made by our pleased patrons. The management is continually receiving letters of commendation. A selection wide enough to show the range of comment is presented below. All of these letters were received in the last few months.

### From a Railway Official

The following letter to C. M. Kittle, senior vice-president, is from C. B. Hayes of Mobile, Ala., vice-president of the Mobile & Ohio Railroad Company:

"The writer was a passenger of your train No. 4 out of New Orleans, Monday, September 26, en route to Greenwood, Miss

"Our party unfortunately had missed your train the night before; consequently we were about twelve hours behind our schedule for arriving in Greenwood and could not have reached our destination until about 8:30 o'clock Monday night, except for the efficient and accommodating services rendered by your conductor, R. E. McInturff.

"On inquiry of Mr. McInturff to know if there was any way in which we could reach our destination more promptly, he told me that he did not know but that as soon as he finished making his ticket collection he would find out. Without saying anything further to me in the matter, he found that we could save three or four hours by going through Winona, Miss., provided the Columbus & Greenville would hold their train for us some fifteen or twenty minutes. He took the matter in hand with some officer or agent of your company, and in a very little

while received information that the Columbus & Greenville train would be held for us.

"It is quite refreshing in these times to come in contact with a man like Mr. McInturff, who not only handles a situation intelligently but leaves one under the impression that it is a pleasure for him to be able to serve a patron of your line."

### Rapid Work on Freight

The following letter was received by M. Dorsey, agent at Mattoon, Ill., from George X. Chuse, sales manager of the Chuse Engine and Manufacturing Company of Mattoon:

"Referring to the matter of a shipment which we have just made to Martin, Tenn., and which we were so very anxious to get through in just as short time as possible, I beg to advise that this car left here on the morning of the 27th at 5:30 and arrived at Martin, Tenn., on the morning of the 28th at 8, thus making about 26½ hours en route from Mattoon to Martin.

"This is what we call real service, and we wish to thank you for the promptness with which your railroad handled this shipment.

"You might be interested to note that we shall have another carload for Martin to go forward about the latter part of next month."

### Where Telephone Service Counts

The following letter to President C. H. Markham is from R. M. Broaddus, traffic manager of the Marsh & Truman Lumber Company, 601 McCormick Building, 332 South Michigan avenue, Chicago, Ill.:

"So unusual has been the service rendered us in connection with the movement of cars by your Mr. Tenney, on local telephone 281 in C. C. Cameron's office, that we can't let the matter pass without favorable mention.

"We have a lot of emergency cases when it is necessary for us to know the exact location of the car and also to have a quick movement, and it was our good fortune some time ago to get in touch with Mr.

Tenney in connection with just such a case. And, of course, we have been in touch with him ever since.

"When a man connected with a railroad makes you feel that he is just as much interested in your shipments as you are, and takes the same interest in the movement of your cars as you do, then 'delivers the goods,' he is an exception.

"That is the way Tenney takes care of us. He 'delivers the goods.' So naturally, when we know the kind of service we can depend on, we route via the Illinois Central when possible."

#### Loyalty Won a Customer

The following letter to President C. H. Markham is from B. E. Buckman, president of B. E. Buckman & Company, investment securities, 325-328 Washington Building, Madison, Wis.:

"You doubtless hear many complaints about help, etc., but you will probably be glad to hear a few words said about one of your employes. His name is H. W. Bibb, conductor on train No. 305 out of St. Louis to Paducah. The writer had occasion to use this train recently and was complaining in a joking way to the conductor that there ought to be parlor cars. He took particular pains to show me the good qualities of the Illinois Central, its right-of-way, roadbed, etc., in such a convincing manner that he made a good customer out of me. Services like this and loyalty to the company should be called to the attention of the proper official, and I take great pleasure in doing so."

#### Pleasant Recollections

The following letter to E. H. Baker, supervisor of passenger service, is from S. Valentine Saxby, secretary of the Commercial Club of Hibbing, Minn.:

"I wish to convey to you my sincere thanks for the deep interest which you personally and your company took in the trip made by the secretaries to New Orleans. You can rest assured that every secretary took home only the pleasantest recollections of the service rendered by your employes. At any time in the future should I contemplate traveling in your vicinity, I shall not fail to advise you."

#### Says It With Verse

E. Andris of 207 West Union street, Marion, Ill., "The Drummer Poet," gives his opinion of the Illinois Central System in verse. Mr. Andris has traveled about 250,-

000 miles in the last thirty years, and about 75 or 80 per cent of that travel has been over the Illinois Central System. In all that time, he says, he has been on only two Illinois Central trains that got a wheel off the track, and in neither case was anyone injured or any material damage done. Mr. Andris' verses, as sent to Superintendent W. Atwill of the St. Louis division, follow:

I have used the I. C. R. R.

From the Gulf up to the Lakes;

I have seen the sweet magnolia bloom

Out through the swamps and brakes.

When you're out just for a frolic

Or for sights, and you wish to roam,

Take a trip along the I. C. Road

And leave your cares at home.

For safety and convenience

And comforts large or small,

There's none can beat the old I. C.

In winter, spring, or fall.

When winter's blasts are raging

You can southward wind your way,

Or when the sun gets blazing hot

To lakeward you can stray.

You can cross the Mississippi

And Big Muddy as you go,

You can see the Cache and Okaw,

Illinois and Ohio,

The Saline and old Crab Orchard,

Middle Fork and Drury Creek,

And the names of other rivers

We might spell but could not speak.

As the rivers, so the cities,

I could name them by the score;

But my thoughts, they now are waning,

And I can write no more.

But this is my conclusion,

Which experience will show:

The old I. C., where e'er you be,

Is the safest way to go.

#### Service to Injured Man

The following letter referring to Flagman E. C. Brennan of the suburban service at Chicago is from Harry H. Frazer, a patron:

"August 24, 1921, I was hurt at 62nd and Dorchester and took the 5:09 p. m. train out of the city to Harvey. I got on the train at 63rd street. Were it not for the flagman, I don't know how I ever would have reached Harvey. He offered to get a doctor at Kensington, but I said 'No'; then when we got to Harvey he pretty nearly carried me off,

and from there Mr. Beck took me home in the ambulance. From what the fellows say I think the flagman's name is Brennan. But if all trainmen were as thoughtful of the passengers as Mr. Brennan, you surely would have a wonderful service, and he, above all, as I can see from his actions, is a perfect gentleman."

### Out of Bed to Serve Patron

The following letter was addressed to Vice-President L. W. Baldwin by F. C. Dougherty, Hotel Henry Watterson, Louisville, Ky., who signs himself "always your patron":

"While riding on one of your trains the other day between Carbondale and Paducah, I happened upon one of your *Illinois Central Magazines*, and in reading it over I noticed several write-ups given to employes holding various positions on your system for their excellent service given to the public. I will have to acknowledge that in all my travel I have never received any better treatment than I have on the Illinois Central.

"There is one place I have in mind at present that will be hard to beat anywhere for good, quick and courteous treatment, and a place where you can always look for a smile and a 'thank you,' at least this is how I found it, and that is your ticket office at Princeton, Ky.

"While in Paducah I asked the ticket agent the name of the young man selling tickets at Princeton in the daytime. He informed me that it was young Mr. Blades. To be sure of this before writing, I dropped off your fast train No. 102 on my way to Louisville to see if the same young man was in the office who was there when I previously passed through and to see if the name was correct. I found that it was.

"Here is the experience I had with this office at Princeton, and I think that the Illinois Central should be proud of the fact that it has such a confident young man to hold this position. Without a doubt he is one of the best I have seen anywhere on giving off-hand information in regard to rates, train connections and service.

"Some few weeks ago I received a telephone message that my sister in New York was very low, wishing me to come on the first train. I was at Hopkinsville when I received this message, and I left on the first train, arriving at Princeton at 9:15 p. m. Going

to the ticket office, I found it closed. After talking to the porter I found out that the night ticket man did not come on duty until 1 a. m.

"Being tired and worried over my sister's condition, I wished to buy my ticket and check my baggage, so that I would not have to bother with it at train time, also allowing me more sleep; so I asked over at the hotel who the ticket agent was and where I could find him. I was told by the clerk to call young Mr. Blades, that probably he would come down and sell me my ticket.

"I called him at 10:15 p. m. and found that he had retired for the night. After finding this out, I insisted that he need not come and put himself to so much trouble, but he informed me that it was all right and that he would be glad to accommodate me. In about fifteen minutes he was on the job with a smile, and not more than ten minutes later I had my ticket through to New York. He also checked my baggage, as the baggage man had not come on duty, and in turn called Paducah to get me a reservation to Louisville and then got me one from Louisville to New York, getting both for me in record time.

"I think that if some of the other employes would look at this young man's interest in his work and example of service and accommodation, the Illinois Central could never be beaten in service and efficiency. As for me, I shall always remain a patron and booster for the Illinois Central Railroad.

"I think that this young man should be commended for this excellent service. I expect to tell him in person when I get back down that way just how much of a burden he lifted off my shoulders that night."

### Had an Enjoyable Trip

The following letter to President C. H. Markham is from H. M. Van Auken, secretary of the Chamber of Commerce, Mason City, Iowa:

"I want to express to you my deep appreciation of the many courtesies and kindnesses extended by the Illinois Central Railroad to me, as well as the other secretaries who made the trip to New Orleans and return over your road.

"E. H. Baker, your representative, was surely solicitous of our comfort and welfare while on the trip. We enjoyed his company very much, I assure you.

"The service was good, the accommoda-

tions were good, the equipment and its handling were good, and so altogether we had a most enjoyable trip."

### Proper Re-Routing Appreciated

Agent F. B. Wilkinson, Jackson, Tenn., recently wrote as follows to Superintendent C. R. Young at Fulton, Ky.:

"The following letter from the H. W. Johns-Manville Company refers to a shipment which their St. Louis branch, through error, marked and shipped to Jackson, Tenn., when it should have gone to Jackson, Miss. We understood through their local representative, Mr. Herndon, that they had a force of men at Jackson, Miss., waiting for the material; so we loaded it, together with some other Jackson, Miss., and beyond freight, in a banana refrigerator and moved it on a through train to Jackson, Miss., and wrote them on October 12 what we had done. We were glad to favor them, and it seems they appreciated the courtesy."

Their letter follows:

"We wish to thank you for the very first-class and efficient service you rendered in re-routing the material shipped from St. Louis to Jackson, Tenn., in error. We sincerely appreciate this courtesy, and assure you that it will be a pleasure to divert our business in your territory over your lines, whenever possible."

### Bankers Appreciate Our Work

The following letter to President C. H. Markham is from Barrett Wendell, Jr., chairman of the Central States group of the Investment Bankers' Association of America, 111 West Monroe street, Chicago:

"As chairman of the Central States Group of the Investment Bankers' Association, I wish to express to you on behalf of the group our sincere appreciation and thanks for the unusual service given to us in providing for our special train both going to and returning from the annual Investment Bankers' Association of America's recent convention in New Orleans last week.

"From the standpoint of equipment, service and courtesy, the Illinois Central Railroad and its employes achieved a most unusual success, which will long be remembered by those of us who made this trip. Unusual efforts were put forth by your company in giving us special schedules and in changing hours of departure, etc., to meet

unexpected conditions which arose. We thoroughly appreciate that such acts, affecting as they did the operation of a great railway system, were the strongest possible evidence, not only of your ability to cope with situations as they arose, but also as to the willingness of your entire organization to serve the public.

"The entire handling of this situation, in our unanimous opinion, was so unusual that we feel it merits our especial thanks through you to those who performed this service for us. We wish especially to comment on the untiring attention and resourcefulness shown by Mr. McEvilly, of your city passenger department, in meeting our requirements prior to and on the entire trip."

### Enjoyed Bankers' Trip

J. Herndon Smith, of Smith, Moore & Company, 509 Olive street, St. Louis, adds his personal thanks to those of the investment bankers' officials in the following letter to President C. H. Markham:

"I have just returned this morning from a trip to New Orleans, attending the Investment Bankers' Association's meetings, and want to compliment you on the excellent service given us on your road, both going and coming, and on the splendid condition of the property. I want particularly to commend your dining car service, and especially the service given us on the Panama Limited leaving New Orleans on November 2.

"I was much interested in your article on the bill of fare in regard to opportunities for young men in railway service, and I think you are to be congratulated on showing this to the young men, so many of whom are now inclined to go into every other industry except railroads."

### WILLIAM BEVEN DIES

William Beven, father of J. L. Beven, assistant to the senior vice-president, and Trainmaster C. T. Beven of the New Orleans Terminal Division, died in New Orleans, December 16, at the age of 72. Burial was in New Orleans. The senior Mr. Beven was a pensioned locomotive engineer. He was retired from service December 31, 1918, with a pension record of 48 years and 6 months of total and last continuous service. Mr. Beven began railway work in 1866 at the age of 17.

## How to Avoid Colds

**T**HIS is the dangerous season of the year for sickness. Which would you rather do—exercise a reasonable amount of care in protecting the good health which you have, or unthinkingly let down the barriers and let in one of those insidious "colds," thus laying the foundation for subsequent sickness and ill-health?

Statisticians tell us that sickness has steadily been increasing during the last forty or fifty years throughout this particular season, simply because we are too careless to use the brains given us and to dress properly.

### *Change the outer clothing to suit the weather!*

Ride one of our trains and observe the passengers—the majority sit in the coach with their out-of-door clothing on, instead of removing it upon entering. Result: they take "cold" and calmly blame the "overheated" coaches, which are standardized to 70 degrees.

Authorities agree that the best degree of health is maintained in a temperature of 70 degrees. That is why humanity tries to adapt itself to the changing temperatures by changing climates or, if financially unable to go South, by changing the outer garments.

### *Change the outer clothing to suit the weather!*

A person catches "cold" more quickly in a poorly ventilated and overheated room than in an enclosure which is well ventilated and heated to seventy degrees Fahrenheit. The skin should be given the chance to breath freely and without danger to itself or to the heat-regulating apparatus in the body. This means keep out of overheated rooms and those which are poorly ventilated, both at home and in public places, if you would do justice to the finely adjusted machinery with which the body is equipped.

The reason that "colds" are dangerous is that the body resistance is lowered and the start of some more serious trouble is fostered. Consumption, pneumonia, rheumatism and pleurisy may gain a start in this way. Is it not therefore better to guard against "catching cold" than to fight a serious disease which results from lack of such precaution?

### *Change the outer clothing to suit the weather!*

Increase the resistance of the skin itself by keeping it clean by frequent bathing, always following a warm bath by the application of cold water to the skin surface and then by friction with a rough towel. Each morning apply cold water to the chest and neck—followed by vigorous friction with a rough towel.

Now for the underwear: Heavies for the out-of-door worker and full-length mediums for the inside worker, these to be taken off at night and a suitable change worn during the sleeping hours, which should be passed in a room which is well ventilated by opening the windows.

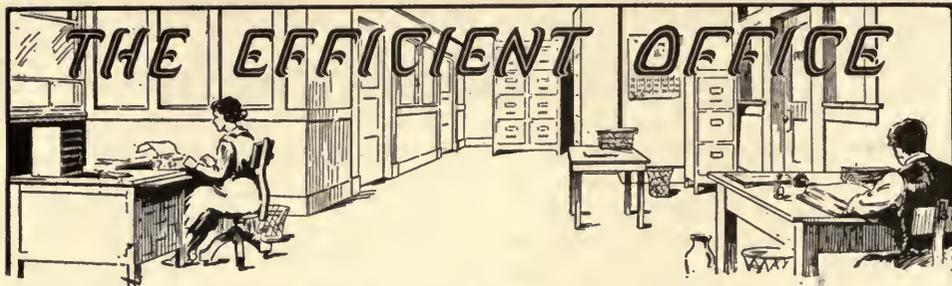

Dress in the morning in a warm room, for it is of vital importance that the skin does not become chilled.

Outer clothing: Whether summer or winter weight clothing is worn is not essential. The really important point is to avoid changing temperatures by putting on outer garments when going out-of-doors and by removing them when coming indoors.

### *Change the outer clothing to suit the weather!*

## DECORATED BY FRENCH

Information has been received that Miss Byrd W. Hamblen, in our general eastern agent's office, New York, has been decorated by the French government, through its consul general at New York, with the *Médaille de la Reconnaissance Francaise*. This high honor has been conferred upon Miss Hamblen in recognition of her splendid work as secretary and treasurer of *Le Paquet du Soldat*, an organization for the relief and care of French soldiers during the war, and as president of *Le Paquet De L'Orphelin*, which has aided in the relief of French mothers and orphans since the war. Miss Cora E. Fish, in the general freight department, Chicago, was the western secretary of the first-named society during the war, and through her many of our Chicago young women employes had an opportunity to help French soldiers by writing letters of cheer and sending articles for their comfort.

### Carbons on Irregular Forms

Forms for reports, etc., when run off on the hectograph, duplicator, mimeograph, multigraph or other duplicating machines are usually irregular on the sheets, and this handicaps the stenographer in putting in carbons and getting the figures in the right place on his carbon copies. By taking a pin, and selecting a certain point on one side of a page (such as the center of an "O" or other letter) on each copy he desires to make, and doing the same with some other letter on the opposite side of the page, the stenographer will be able to get the proper alignment on all his copies. Of course, the top edge (which slips in the typewriter) may be very irregular, but by placing a large envelope over the end of the sheets the stenographer will find it easy to slip them through the machine, and have all his copies filled in in the proper place.—*Superintendent's Office, Fulton, Ky.*

### Removing Carbons After Use

In making several copies of reports and letters, especially when the form is bound at the top, stenographers sometimes find it difficult to remove the carbon, after the copy has been made, without tearing all the sheets apart. By cutting a small corner off of the carbon paper, you can easily grip your form at this point and remove all the carbons without disturbing the copies.—*Superintendent's Office, Fulton, Ky.*

### Handling the Files

As stated before, filing will help correspondence considerably, if it is properly done. However, many clerks who handle correspondence will retain a certain file in their drawers for further reference, causing considerable delay to the file clerk in locating it when it is wanted by another person. If more information is desired, and has been requested, why not hand the material back

and have the file clerk put it in the "suspense," or open file, where it can be referred to without trouble?—*A DYKSTRA, Chief Clerk, Locomotive Department, Burnside.*

### Stationery Book

Take one of our standard, Form 642, linen-back books; cut six sheets to the width of one and one-half inches; leave the seventh sheet full width; repeat this operation until sufficient sheets are allowed for the listing of every form used by the department installing the book. List in numerical order form number and description on the full-width sheets, divide the 1½-inch sheets into two ¾-inch columns, heading one "On Hand"; the other, "Wanted." Then run through your stock of stationery, filling in the column headed "On Hand." With this information the column "Wanted" can be readily filled in. Requisition Form 370 is then compiled from the book.

Six of the narrow leaves, with a requisition each sixty days, affords the space necessary for twelve months' use. Our experience thus far is that the book saves time, prevents ordering excessive supplies, and insures ordering enough for sixty days' requirements. If you have a better scheme, tell us about it; if not, give it a trial—*S. F. LYNCH, Chief Clerk, Vicksburg, Miss.*

### Statements

We receive from time to time a large number of printed, hectographed and mimeographed circulars containing system statistical data of great value. In order to provide the best use, they must necessarily be readily accessible. We assign a number to each and have them indexed. When they are wanted, we turn to the index, obtain the number, and then get them from the large metal file boxes in which they are filed in numerical order.—*W. F. McDUFF, File Clerk, Vicksburg, Miss.*

# Law Department

## The End of a Blindfolded Mule

The supreme court of Mississippi has just reversed and remanded the case of *Payne, Director General vs. Hamblen*, appealed by the Director General from the circuit court of Madison County. There was a recovery in the lower court for \$175, which was the jury's estimate of the value of a mule killed in the night time by a passenger train of the company running 45 miles an hour through the open country. The engineer testified that he had an electric headlight, which was shining brightly, but that he could see an object no larger than a mule only within 250 feet, and that he could not stop a train running 45 miles an hour within that distance.

The court held that in the open country it was not necessary for a train to run so slowly that it could be stopped after an object appeared on the track within the range of the engineer's vision. The case is an important one, since it makes clear that certain observations of the Mississippi court in previous cases apply only where trains are running through a municipality or along a piece of track where pedestrians may reasonably be expected.

The case is of note further because the court finds that, under the testimony, the mule appeared upon the track with a sack over its head. This sack was found on the pilot of the engine. Two holes had been cut in the sack for the mule's ears, but whoever put the sack on the mule failed to cut any holes for the eyes. Judge Holden used this language in the opinion:

While it is not material to a decision of this case, we have not overlooked the undisputed testimony of the engineer and firemen with reference to the sack that was on the mule's head at the time he was struck. It does not appear who it was that cut the earholes in the sack and fitted it over the mule's head, but it was done evidently for the purpose of blinding the mule for an unworthy motive. It endangers the lives of the persons on the train to strike a large animal on the track, as it sometimes results in derailment of the train. If the animal in this case had been able to see the train he probably would have got off the track uninjured. To say the least of it, the remarkable fact of the mule's appearing blindfolded upon the track is enough to excite reasonable suspicion in the premises.

The judgment of the lower court is reversed, and judgment entered here for appellant.

It is obvious from this decision that a mule

that blindfolds itself with a sack and wanders on a railway track in Mississippi will hereafter be considered as guilty of contributory negligence as a matter of law.

## When the Law Set Lawyers' Fees

One of the delicate and difficult questions which the general officers of the law department, as well as the district attorneys, are called upon to decide is: What fees shall be paid to our local attorneys in those cases where they are compensated on a fee basis?

E. H. Ratcliff of Natchez, a prominent citizen of Mississippi and our local attorney for several counties in his part of the state, sends us a reference to an act of the Mississippi Legislature, passed in 1822, fixing attorneys' fees according to a schedule, which reads:

For prosecuting or defending a suit in the supreme court .....	\$16
For like services in a circuit court .....	10
For prosecuting or defending a suit in chancery .....	16
For like services in a county court .....	5
For prosecuting or defending a real or mixed action, in supreme or circuit courts .....	20
On each appeal from the decision of a justice of the peace to the county court .....	5

However, the next session of the legislature, conceiving that these fees were out of all reason, excessive, extortionate and oppressive, amended the law so as to provide fees according to the following schedule:

For prosecuting or defending a suit in the supreme court .....	\$8.00
Like service in a circuit court .....	5.50
Prosecuting or defending a suit in chancery .....	8.00
Like service in a county court .....	3.00
For prosecuting or defending a real or mixed action in supreme or circuit court .....	10.00
On each appeal from the decision of a justice of the peace to the county court .....	3.00
Prosecuting or defending an appeal from a justice of the peace to the circuit court .....	3.00

While this law was repealed long ago, yet it furnishes a very good idea as to the estimate which the members of the legislature put upon the services of attorneys in the early days of Mississippi. We are not insisting, however, that in all cases this schedule shall be applied to the services of our attorneys.

## Traffic Cop Needed at Crossings

A novel contention was put forward by the plaintiff in a recent case against a railroad other than the Illinois Central, reported by

R. M. Barnes of Lacon, one of our local attorneys for Marshall County, Illinois.

It appears that the plaintiff was the driver of an automobile which ran into the side of a moving train at a street crossing in broad daylight, where the view was unobstructed, enabling the driver to see for as much as a quarter of a mile up the track. The plaintiff, being otherwise hard pressed for a theory, invoked the provisions of Section 33 of the Motor Vehicle Law of Illinois, approved June 30, 1919, which provides:

All vehicles traveling upon public highways shall give the right of way to other vehicles approaching along intersecting highways from the right, and shall have the right of way over those approaching from the left.

The plaintiff insisted that he was approaching the railroad from the right, and, since the railroad was in a sense a public highway, it was the duty of the engineer to yield him the right of way, stop the train and permit his motor car to pass.

Undoubtedly this contention has the merit of originality, if not ingenuity. The trial judge, however, declined to adopt this view and eliminated this ground of recovery from the consideration of the jury.

#### Danger in Lending a Motor Car

Henderson, Fribourg & Hatfield, our local attorneys at Sioux City, Iowa, are struggling with a rather novel question arising under the law of Iowa. They represent the owner of a car who lent it to his brother, a young man who had attained his majority. This brother used the car, a sedan, in entertaining some of his women friends. While thus joyously occupied, the trusty car struck and seriously injured a pedestrian. Suit was brought against the owner of the car, under a statute which provides:

Sec. 12. Motor vehicle operation under 15 years of age—responsibility for damage. No person under 15 years of age shall operate or drive a motor vehicle by permission from the owner of the car unless such person be accompanied by a person of mature years and in all cases where damage is done by any car driven by any person under 15 years of age and in all cases where damage is done by the car, driven by consent of the owner, by reason of the negligence of the driver, the owner of the car shall be liable for such damage.

The district judge interpreted this statute to apply to all cases where the owner of a car lends it, even though the lendeer is more than 15 years of age. He sent the case to the jury under instructions so declaring. The jury promptly rendered a verdict for the plaintiff, and the case has now gone to the supreme court of Iowa. If the decision of the lower court

is affirmed, it certainly will be a risky business for a citizen of Iowa to lend a car to a friend. The outcome of the case will be awaited with interest.

#### Under the Carmack Amendment

F. M. West, our active and efficient assistant local attorney at Jackson, Miss., who has charge of all freight claim litigation for the company in Hinds and Copiah counties, calls attention to the case of the *Yazoo & Mississippi Valley Railroad Company vs. Norman*, 125 Miss. 636, which Mr. West thinks will be of interest to such of our local attorneys as are called upon to defend cases under the Carmack Amendment.

Mr. West states the matter as follows:

The plaintiff consigned to his own order two cars of tomatoes from Utica, Miss., to Effingham, Ill., via the Y. & M. V. as initial carrier. The shipment was delivered to the Illinois Central at Jackson, Miss. The shipper applied to the agent of the latter company at Hazlehurst, Miss., and requested diversion to Pitcairn, Pa. New bills of lading were accordingly issued by the Illinois Central in lieu of those originally issued at Utica.

After the cars were delivered to the carrier between Effingham and Pitcairn, the shipper applied to the soliciting freight agent of a connecting line, stationed at Hazlehurst, for diversion of the cars from Pitcairn to Pittsburgh. Bills of lading were accordingly issued by the connecting line upon request of the soliciting freight agent. Damage to the shipment occurred upon the connecting line. Suit was brought against the Y. & M. V., under the Carmack Amendment, as initial carrier.

The plaintiff recovered judgment in the trial court, but upon appeal the Supreme Court held that the initial carrier was not liable, since the plaintiff had made new contracts with the connecting line, to which contracts the defendant was not a party, holding that the initial carrier had complied with its contract when it delivered the shipment at Effingham.

#### IN OLD POSITION

Effective December 1, W. E. Hoyt resumed his position as division storekeeper at Water Valley, Miss., vice J. W. Cockrill, assigned to other duties.

THERE'S no getting away from the fact that our modern world needs fixing in a lot of ways. Everybody who gives the matter a thought is ready and willing to admit it. From the tall-domed scientific savants to the long-whiskered know-it-all who foregather around the stove in Hicks' Store of winter nights to cuss the present administration, they'll concede you the contention that everything's gone to the bally bow-wows. It is time therefore that some cool-headed and far-sighted person took charge of this bootless wrangle and offered a solution to satisfy each one of the hundred and ten million disputants.

So I've decided to emerge from my hole long enough to dispense the right dope to all hands. It cuts no ice with me what group or faction you happen to be hobnobbing with today. Capital or labor, wet or dry, optimist or pessimist, pro or con, hit or miss, man or mouse, you're faded. My remedy gets right at the heart of this proposition, gentlemen—and you, too, ladies. It begins at the beginning. To reform and rehabilitate the shattered wreck of civilization as we now see it we've got to reconstruct the human race. And the way to do that is to start with 'em the minute they're hatched. Ancestry is nine parts assumption and one part bunk. Heredity is mostly fallacy. Environment and training are all important.

The ancient Greeks sought to breed a perfect race of men and women. If the accounts that have been handed down to us can be relied on, they made a good showing for a while, but where are they now? Just lately, comparatively speaking, the Germans evolved a race of super-men, if you swallowed their merits as advertised. But when the goods were delivered they somehow failed to come up to specifications. There was a screw loose or a part missing or something. They apparently left out some trifling detail that was most essential.

It's up to us in this country to correct all minor errors in our manufacture. It's an impossible task to undertake to work over

our present stock of completed product. The men and women we have on hand now we'll have to use as temporary makeshifts. We must devote all our energies to the proper up-bringing of the small fry. It has been said the best authority on the care and training of children is a childless spinster. That's just another mistaken idea of an ivory-turreted school of thinkers, similar to the notion that playing with toads causes warts and that a rooster's crowing on the front porch is a sign company's coming. Nothing to it, in fact. An unmarried woman may have all the enthusiasm and conceit and confidence in her own judgment in the world as regards raising prize-winning babies, but at best her knowledge is wholly theoretical. And when it comes to theoretical matters you want the best brand on the market, and here it is, gathered at great expenditure of time and effort, boiled down to a sweet syrup and presented in plain print.

Your present informant doesn't intend to wax scientific in this paper for all of his ability to do so if he felt in the humor. He who pens these trenchant sentences has dabbled a lot in the heavier-than-air branches of human knowledge and could, if he felt so disposed, discourse glibly of biology, ethnology, pathology, eugenics, psycho-therapy, astrology, normalcy, astronomy, Deuteronomy—and a long list of isms. But that would necessitate digging into different books and stewing around to beat the band. If you want that sort of thing, go dig it out yourself.

This will be a plain, practical, common-sense discussion of a live subject. We'll take the ordinary, average baby—not the isolated and exceptional child born in some royal palace, nor yet the nameless foundling spawned in some squalid hovel—merely the every-day, lusty, sound-lunged, sturdy, American babe born in the land of the free and the home of the brave with the heritage of all the ages his for the asking, right or wrong our country still, and three cheers for the grand old flag! We'll take this

aforsaid youngster, I say, at the moment of his advent into our disorganized and slightly disfigured social and political economy and map out a properly balanced and sensible course of care, discipline, feeding, and all that sort of thing. We need some kind of uniform system in this process of propagating a new generation of world-beaters.

First let us take it for granted that press notices have been sent to the local newspaper announcing the arrival in your home of the unparalleled little stranger. Of course, if the little paragon chances to be the fifth, tenth, or some such number in the immediate sequence of arrivals of this kind, his press notices won't be very elaborately extensive—indeed, they may be wholly taken for granted. But well, anyhow, let's say that ducky little Dolbertus or Amethystine, as the case

may be, has made his or her appearance. The blessed tiny is clothed and in its right mind, to all intents and purposes. Mamma and Papa are both convalescent, or at least resigned to the inevitable. The babe is born and must needs be accepted and provided for henceforth, regardless of how many others in the household are constrained to readjust their daily way of doing, or find themselves—ah—inclined to step lively.

A baby doesn't concern himself about your affairs; he has problems of his own.

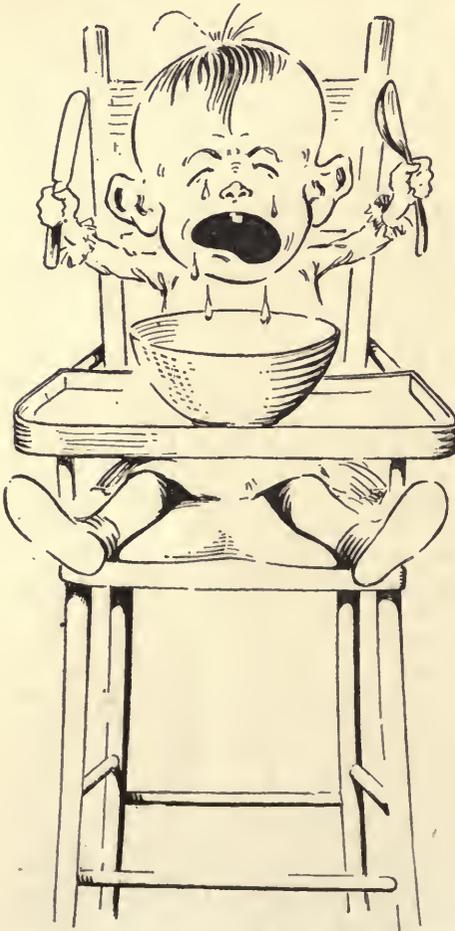

During the first three months or so of life on the earth plane, a human infant requires three main physical considerations, namely: food, clothing, sleep. If the youngling is of the male sex he goes on requiring food in an ever-increasing quantity, quality and variety until he finally expires of enlargement of the liver or fatty degeneration of the head, or something, at the age of three score and odd. If the little one is a girl, she demands clothes, and more clothes, and so on. If it happens to be born in Philadelphia, sleep, etc., etc.

Let us touch upon each of these essentials in turn. Beginning with—

### Sleep

A new-born child will actually sleep pretty much all of the time it isn't feeding, crying, crowing, hic-coughing, or merely meditating upon the cursed combination of diabolical circumstances that has placed it in such a humiliating position, as it were. Babies have a way of meditating aloud; so don't be alarmed if yours thinks in accents that make the windows rattle. A baby's motto is "I'll tell the world!" and he lives up to it. But of course the darlings will sleep occasionally, even if the message to the public at large is momentarily deferred. Regularity as regards the sleep question is important in a way, but by no means a vital matter. Let baby use his own happy judgment to a certain extent. Any time he elects to drop off for a cut-nap—even if the hygienic books, and the school board's director of hygiene, and the district superintendent of infant welfare, and what not, all say it's an off hour—let him snooze. Gracious goodness, yes!

A normal baby will generally wake up fairly early in the morning of its own accord. No use tying up money in an alarm clock to rouse him. The time of awakening isn't necessarily the same in all cases. It

*A baby's motto is "I'll tell the world!" and he lives up to it.*

will vary appreciably, you'll find. One baby will awaken shortly after midnight, and another shortly before, and so on, any old time between curfew and the following noon. If your particular specimen should happen to be asleep at feeding time, you can do either of two things: Arouse the little fellow or shoo everybody out of that part of the house, treading on tip-toe and breathing breathless "hists!" to those who dare move a wheel in their heads. If you elect to arouse the infant, the responsibility is yours. I can only suggest that you'll do well to go about it gently. Don't start anything you might not be able to stop.

When a tot is two or three months old it will frequently sleep a little while in the forenoon and maybe in the afternoon as well, if it chooses to do so. If, after a couple or three hours of singing lullabies and walking the floor and rocking and "trot-trotting to Boston," your baby seems wakeful, you are safe in suspecting that it isn't sleepy. Here is one hard and fast admonition.

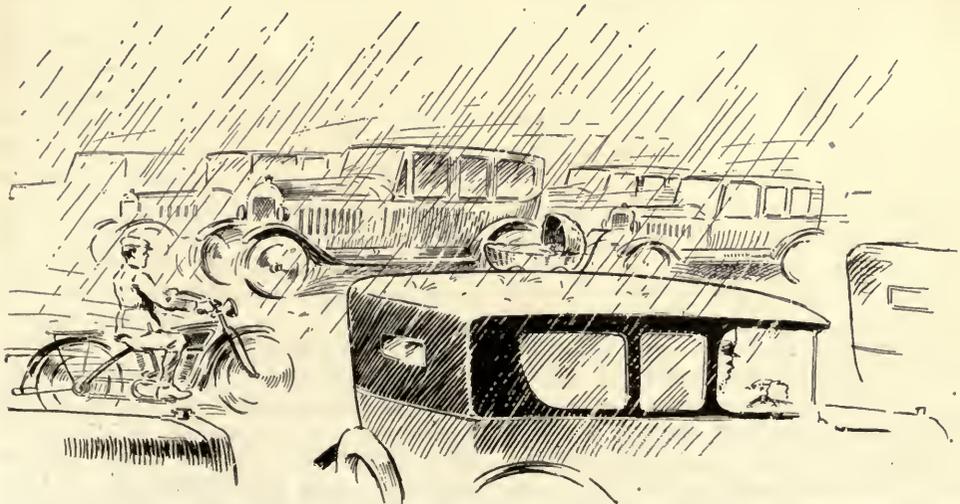

Never let a young baby sleep in a perambulator parked in the middle of a street where automobile traffic is congested. Especially when it is raining or snowing hard. The little dear might catch cold.

Ordinarily the baby should be made ready for bed along about 5 o'clock in the afternoon, or 6 o'clock, if you prefer round numbers. Spend a pleasant hour getting him soothed and quieted, avoiding all uproarious hullabloo and disconcerting noises or move-

ments. Baby's eyes and ears are keen and alert. And never lose sight of the fact that a baby loves the sound of its own voice. Some of them never lose that fond emotion in after life. Washington, D. C., is full of 'em. Getting back to the theme—somewhere about 10:30 or 11:45 o'clock that same night, if you have good luck, your infant should be sleeping like a saintly cherub—unless he should develop symptoms of the colic. Colic—but that's something else again. Colic comes under another scientific classification—aerodynamics—and is apart from this paper. I could a tale unfold whose lightest word—but let be.

Baby may awaken two—or two times two—or more times during the hours when all honest, daytime-toiling folks are supposed to be sound asleep. Don't be alarmed if he yells lustily every time. He has no way of knowing you don't care for his voice. He thinks it sounds great. Besides, would you want him to be a mute? A young child may be trained to lie on his side or back, or even his tummy, while asleep if the trainer uses care and patience. Don't get rough. If you change a baby's position while he is asleep and he rears up with his face all flapped open and a series of ear-splitting sounds spraying forth which can be heard downstairs six blocks away, don't blame me. Blame Bill.

To summarize in a general way as pertains to baby's sleep, do the best you can under all circumstances. It is a good all-around rule to let sleeping babies lie. And keep calm

*Never let a young baby sleep in a perambulator parked in the middle of a street, where automobile traffic is congested. Especially when it is raining or snowing hard. The little dear might catch cold.*

whatever happens. If your baby insists upon sitting up in bed from 12 midnight until 5:45 a. m. practicing the words "da-da," "mum-mum," and "oofty," with occasional accompaniments of Indian war-whoops and college yells, don't lose your sedate equanimity. Bill's folks and your folks, too, probably went through the same delightful experience. Unruffled and calm's the idea.

Serenity sidesteps wrinkles. The next important essential is—

### Clothing

A baby fed on proper food (see farther on) will be found to require certain conventional articles of apparel. It should be borne in mind, however, that clothing is, to a great extent, pretty much a concession to the conventions, after all. It depends largely upon where you are and when you're there as to what you're supposed to wear. In the vicinity of the equator, clothes are a minor problem consisting of a nose-ring and a carefree disposition, as a rule. In our more inclement climate, we have adopted a general plan or scheme of dress which fluctuates considerably with the changes of seasons, styles, state of exchequer, age, sex, vocation, and such like. It is still the custom to wear clothes in the ordinary walks of life in this latitude. Beaches and ballrooms permit more or fewer modifications, but there are a few old-established, set regulations that hold good. For example, the tail of a man's shirt is supposed to be kept tucked inside his pants. There's no special reason for it that I know of, except that it's the custom. Try going downtown some beautiful June morning with your shirt-tail flowing free like the skirts of a coat, and see what a sensation you'll create. I'll bet you the bevo you haven't the nerve to do it.

A baby's clothing, no matter how expensive each tiny garment may be, should be fashioned along simple lines. No use cluttering up an infant's little body with feathers and furbelows and jewelry and millinery, or haberdashery, as the case may be. That sort of thing is rank nonsense. Dress the baby in silks or flour-sacks as you see fit, but let the garments be fashioned on a simple design. Certain items of apparel are requisite, such as bands, diapers, shirts, petticoats, dresses, and *robes de nuit*. The last is a little dash of elegance on my part in speaking of a nightgown. The number of

garments, quality and cut of material, and such matters will no doubt depend upon its parents' Bradstreet rating, social aspirations, charge account, or what the neighbors bring in, as the case may be.

A good general rule to go by is: Dress the baby in whatever Providence, its father, its mother's parents, or the welfare board has provided. Here is one "don't" to remember: Don't fasten its clothes on with needles, with common sharp-pointed, stickery pins, or with shingle nails. A baby has a right to choose his own time about getting stuck up—judgment!—and remember a small baby's mouth is the only place he knows of to put things into that he finds floating around loose. His mouth is his treasure chest, and all is grist that comes to his mill.

A little discretion should be exercised about dressing a baby warmly in winter and coolly in summer and so on. The writer is willing to grant all the latitude you like, and longitude, too, in regard to style and texture of your child's raiment. Go as far as you like. Employ a nurse, six nurses, if you can afford it. But look to it every now and then to make sure that your baby is getting something to eat.

A baby needs food in order to grow into the splendor of marvelous manhood or womanhood we're aiming for at this particular time. Which brings us to the item of—

### Food

In the good old haphazard days of whilom and erstwhile, young babies were pretty generally reared on mother's milk. An idea prevailed that no other form of sustenance was needed during the preliminary stages of the youngster's career. This notion yet exists in various parts of the country where old-fashioned customs survive in spite of all cults, boards, committees, and societies to promote the expert up-bringing of children notwithstanding. I, myself, personally, do not snort around and get red in the face about this particular detail of baby-propagation. Some of my distinguished brother scientists insist that mother's milk is not the baby's proper dietary element. A few go so far as to denounce mother's milk as an insidious toxin, a slow poison, almost if not quite so harmful as broken doses of cockroach paste, but I am more liberal. During my long and checkered experience as an investigator of the phenomena of child-growth I've run across several husky specimens that

had apparently thrived on the aforesaid slow poison.

So if you, ma'am, feel like assuming all responsibility in the premises, you have my hearty endorsement. If you're willing to take the risk of carbohydrates and vitamins and ptomaines and calories, to say nothing of starch, grape-sugar, curds, and potassium salts, why I should worry. However, I shall append a bit of timely advice to those who subscribe to artificial and scientifically proved methods of feeding infants. In my morning mail recently, along with the latest quotations on storage batteries, tires, oil stocks, player-piano music, etc., I received an illuminating booklet from a kind of society or something which maintains a scientific laboratory somewhere in the East and conducts extensive researches and experimentation along the lines of baby foods. I read the pamphlet through with a great deal of interest.

It seems that these investigators have stumbled on something which they freely admit is the ideal baby food. And they've taken the pains to describe their discovery so plausibly and beautifully that it impressed even a dour old philosopher like me. Although scientists from the word go, with their eyes on the high goal of a bigger, broader and better humanity, these devoted men have gone to the trouble of manufacturing their product and placing it on the market within the reach of all at a small cost per helping. I take pleasure in quoting from the treatise sent me:

"What is the perfect food for Precious Sweetie? Ah, staid old science has solved that perplexing question for us, and the answer is ready. Nibble's Food for Infants is the one thing that fulfills every requirement for the nursing baby.

"The first year of a child's life is most important. Health, strength, vigor of body and mind are being founded and nourished for the future. Bones, teeth and hair, necessary adjuncts to the individual in after years, are formed and developed. Nibble's Food is chemically compounded for this emergency. Dissolve it, add certain other

*Twenty Years Old: Nibble's Food with—ice water to cigarettes. In short, the child is now dietetically launched.*

elements according to directions, and introduce the result into the delicate stomach. Everything has been worked out for the average, or common garden variety of, parent. No need to bother about diastase, maltose, dextrin, protein, saliva—all those things are eliminated or provided for beforehand.

"Nibble's Food is supplied ready to serve. The most wool-gathering blunderer will have hard scrambling to go wrong. Merely follow the plainly printed chart of instructions. Nibble's Food is advertised by its gratified friends. Never lift a growing child by the hair or ear. If your baby is taken dangerously ill, call a physician. Nibble's Food is supplied in two sizes, large and small.

"Schedule of daily diet recommended for children at various ages:

#### One Week Old

Nibble's Food and milk.

#### One Year Old

Nibble's Food and milk.

Nibble's Food, milk and egg.

Nibble's Food, milk, egg and bread.

To Nibble's Food may be added any of the following: bread, stale bread, pumpernickel, but not pretzels, crackers, biscuit, porridge, the ninety and nine kinds of breakfast cereals, beef, chicken or mutton broth, but not Irish stew, macaroni, spaghetti, prunes, but not hash.

#### Five Years Old

Nibble's Food with bread, butter, preserves, jellies, jams, cake, pie, candy, ice cream cones, bacon rinds, raw vegetables, pot liquor, most meats, fruits, cereal, and ditto above.

#### Eight Years Old

Nibble's Food with hard-boiled eggs, puddings, pastries, sweets, gravy, molasses, omelet, cookies, baked ham, baked squash, and ditto above.

#### Ten Years Old

Nibble's Food with string beans, boiled cabbage, corned beef, licorice drops, all-day suckers, dried herring, stewed turnips, green apples,

turkey and dressing, cranberry sauce, and ditto above.

**Sixteen Years Old**

Nibble's Food with hot cornbread, sauerkraut and wieners, corn on the cob, canned tomatoes, salt horse, horseradish, mulligan stew, mulligatawny soup, fried oysters, oysters au naturel, and ditto foregoing.

**Twenty Years Old**

Nibble's Food with—ice water to cigarettes. In short, the child is now dietetically launched. He or she is safely equipped for any reasonable test of his or her alimentary functions. There remains only the little necessary preliminary of obtaining sufficient comestibles for intelligent experimentation.

Could anything be fairer than that?

And now, to pick up once more the trailing thread of my theme, I reiterate and repeat with grim emphasis that our future as a great and powerful nation rests upon the puny shoulders of the babes of today—the babes of today, and tomorrow night, and Tuesday of next week, and so on and on indefinitely. The prize-fighters and home-run hitters of tomorrow, aye, and the lissome lassies of future Follies and Midnight Revues, and not only those but the artists and artisans, the merchants and mechanics, the builders and sowers and reapers, the men

of brain and brawn—and the women, too, writers and teachers, doctors and lawyers, wives and mothers—all of 'em are being nurtured in our midst at this moment.

It behooves us to be up and doing. With a little careful calculation and patience and zeal we have it in our power to rear a race of zaza-pazazas, mighty men and women who will be pippins from the ground up. We need 'em. Take a look around the next time you get in a crowd or rubber from a car window at any station where your train stops. Size up the general run of the populace now at large, and you'll get my meaning. Some of 'em look like human beings, but most of 'em resemble what happens in the foundry when the mold slips. Amateur work. Tinker jobs. Cobbling. That's what they are. The results of carelessness.

What we want to do is put some zip and skill into this baby-growing business. Baby-raising is big league stuff. Let's not leave it all to the amateurs.

**WELL DECORATED, BOTH INSIDE AND OUT**

First prize was given to the motor car decorated by members of the superintendent's office, Louisiana division, which took part in the Trades' Day parade at McComb, Miss., November 5. Occupants, front seat: Miss Gladys Browder, chief performance clerk, at the wheel; Miss Della Mae Dougall, statistician, on her right. Back seat, left to right: Miss May D. McMichael, stenographer to the chief dispatcher, Miss Lois Williams, stenographer, superintendent's office; Miss Claire Pimm, clerk to supervising agent.

# Traffic Department

## *Success Reviewed at Traffic Meeting*

**N**EARLY one hundred representatives of the traffic department from all parts of the system and our off-line agencies gathered in Chicago December 13 and 14 for a discussion of traffic affairs. The meeting was opened by Vice-President Bowes, at which time President Markham and Vice-President Bowes addressed the representatives. Following the joint session, conferences were held by the passenger men with General Passenger Agent W. H. Brill of New Orleans as chairman and by the freight men with General Freight Agent William Haywood of Chicago and General Freight Agent Joseph Hattendorf of Memphis in charge.

President Markham said, in part:

"As you know, we have been within the last year very successful in developing a plan for adding to the efforts of those who are directly responsible for the solicitation of traffic by bringing about a condition as a result of which a great number of employes are engaged in doing whatever they can in the way of direct assistance to you.

### **Good Effects Both Ways**

"Without desiring to claim any credit for the idea, perhaps I ought to tell you that a little more than a year ago something occurred that suggested to me the idea that there was an opportunity, if the interest of the men could be developed along proper lines, to accomplish two things. If we could get only a very small percentage of the 60,000 employes of this company interested as individuals in it they could, and would, increase the business of the company in the way of solicitation of passengers and freight; that it would not only result in increase in our business in the way of increasing tonnage and increasing passenger travel, business that we would not otherwise get, but the effect on the individual himself would perhaps be of very much greater importance to the company than would the amount of business that he would be able to secure as a result of his efforts.

"It is in human nature that if a man does something for you he incurs an obligation at that time. As soon as he has succeeded in doing the thing he has started out to do he incurs an obligation to do something else for you. If in the handling of the business of the company we can succeed in getting a goodly number of employes to do something for the company, it makes better men of them in their increased interest in the particular jobs in which they are engaged.

"Those who are located at points where we have a large number of employes already realize the important influence of this work on the solicitation of traffic. It is a work, however, which you have got to get behind. I am doing everything I can, in making trips over the road, scrutinizing and looking over reports in connection with solicitation of traffic, developing new thoughts and new ways of keeping up interest.

### **How Business Was Won**

"There are all kinds of illustrations of benefits that have accrued in this work. One for example comes to my mind:

"A contractor in Tennessee figuring on a road contract had a young man in his employ whose father was one of our engineers. The boy at home one evening mentioned to his father the fact that his employer had secured the contract. The father questioned the boy and learned that the contractor expected to get his gravel from a pit on another line. He got as much information as he could from his son and went to work. He found that the contractor could get this gravel on our line and that we had a lower rate. He gave this information to his son, with the result that there was a movement of gravel from our gravel pit. This was business we would not have secured had not this employe taken interest enough to see what he could do to get this business.

"This attitude reflects in the attitude of the men toward the people they come in contact with. It would surprise you to know how many letters come to my desk with respect to

the publicity work we are doing, complimenting us for the difference in Illinois Central treatment and the treatment received on other railroads. I am not criticising other railroads, but I believe in a great many of these matters we have developed practices which others have not.

### Success of the Illinois Central

"It ought to be a source of great satisfaction to you today, at a time when industrial conditions are bad, at a time when most railroads in the country have not been able to earn much above their operating expenses without deferring maintenance work and effecting economies that may be very harmful to the property, to know that under all these conditions the Illinois Central stands out in bold relief as compared with any other large system in the United States as a money producer. I want to give you briefly my understanding of some of the reasons for this situation.

"In the first place, the Illinois Central is perhaps one of the most favorably located railroads in the United States. It serves a territory which, taken by and large, is equaled by no similar amount of territory served by a similar amount of mileage. In the early days the Illinois Central was free from a great many things that were done by other railroads, resulting perhaps from bad management or unwise attention. The Illinois Central has always been well financed. There has never been a dollar's worth of watered stock.

"I want to disclaim any intention to boast when I say that it is a pretty well managed property; but no amount of management or of sound financing or of location will suffice to make a good railroad unless that railroad is provided with good tools to work with— with equipment. My candid opinion is that the Illinois Central has the best transportation machine in the United States, and I make that statement out of some little experience that I have had with other railroads.

### Aim Is to Give Information

"I want to call your attention to what we are doing along publicity lines. One of the plans we are developing is that of getting up periodically a statement dealing with matters of current interest and sent out to the officers under the head of 'Things to Talk About.' It may interest you to know that the idea of that originated in my experience years ago when I was agent at Fresno, Cal. I began to grope

around, trying to find something that would teach me more about railroading, but I could not find anything. There is no subject in the world that offers as much important and interesting information as the railway subject, and the purpose of 'Things to Talk About' was to enable our officers to have first hand information that they could use wherever they may be, at meetings, at commercial clubs, meeting people on trains.

"You are all generally familiar with what we are doing in the publicity line. I want to call the attention of those who are not directly located on the line to the importance of their keeping up with this."

Vice-President Bowes gave a report on the reorganization of the freight traffic department and called upon the men to keep going forward in their work.

"What can you do yourselves to establish something, create something new in that line?" Mr. Bowes said, referring to the experiences which Mr. Markham had related. "I think we ought to get away from the idea that all we have to do is to get a passenger and a carload of freight. A solicitor has more than that to do."

---

### Changes in Freight Department

In line with a policy of segregating the activities of the general freight department of the Northern and Western lines, a number of changes have been made.

Effective December 1, C. C. Cameron, general freight agent at Chicago, was continued in charge of rate adjustments, rate quotations, tariffs, divisions, and subjects related thereto, except coal and coke traffic, which comes under the supervision of B. J. Rowe, coal traffic manager.

Effective the same date, William Haywood was appointed general freight agent at Chicago in charge of solicitation and matters related thereto.

Mr. Haywood was born May 30, 1884. He entered the service of the Illinois Central in October, 1901, as messenger to the traffic manager, and subsequently was secretary to various traffic officials, including the traffic vice-president. From September 21, 1909, to July 1, 1912, he was secretary to the president. From the latter date to April 1, 1917, he was chief clerk to the traffic vice-president; April 1, 1917, was appointed assistant general freight agent, Northern and Western lines, Chicago;

and March 1, 1920, was made assistant to the traffic manager.

Mr. Haywood's department is a new one. J. F. McMahon, who has been with the Illinois Central nineteen years, has been made chief clerk in charge of Mr. Haywood's office. His nineteen years with the company have been spent with the traffic department, with the exception of two years as secretary to Federal Manager C. M. Kittle during government control. He has recently been assistant commercial agent at Chicago.

Effective December 15, C. E. Stailey, commercial agent at Kansas City, was transferred to Memphis as assistant general freight agent in charge of solicitation. He was succeeded at Kansas City by Hugh Hardin, who has been traveling freight agent out of Kansas City. Both Mr. Stailey and Mr. Hardin have been with the traffic department a number of years.

#### Changes in Passenger Department

Changes brought about in the passenger traffic department by the recent death of H. J. Phelps, general passenger agent of the Northern and Western lines, have included the promotion of J. V. Lanigan, assistant general passenger agent, Northern and Western lines, to Mr. Phelps' old position; that of J. W. Stevenson, chief clerk of the traffic department, to Mr. Lanigan's old position, and that of G. G. Truesdale, formerly commercial agent at New York City, to assistant general passenger agent in charge of solicitation.

Mr. Lanigan, who is a native of St. Louis, Mo., entered railway service as a clerk in the passenger department of the Chicago, Burlington & Quincy. After holding several clerical positions, he went to the Missouri, Kansas & Texas in 1904 as rate clerk in the passenger department. In 1906 he took the same position with the Illinois Central, and in 1908 he became chief rate clerk of the department. April 15, 1911, he was promoted to assistant general passenger agent, with headquarters at Chicago.

Mr. Stevenson was born in Chicago September 17, 1888. July 1, 1903, he entered railway service as a clerk in the office of the Western Passenger Association in Chicago. From 1909 to 1912, he was a rate clerk in the passenger department of the Chicago Great Western. Then he took up the same work with the Illinois Central. March 16, 1914,

he was made assistant chief clerk of the passenger department, and on May 13 he became chief clerk. March 1, 1920, he became district passenger agent, with headquarters at Chicago, and a month later was promoted to chief clerk of the traffic department.

Mr. Truesdale entered the service of the Illinois Central in July, 1901, as an office messenger in the transportation department. In 1902 he became a file clerk, in the passenger department. Then he served as secretary to the assistant general passenger agent. In May, 1906, he was appointed traveling passenger agent, with headquarters at Cincinnati. January 1, 1908, he was transferred to Chicago as city passenger agent; in October, 1911, to Pittsburgh, Pa., as district passenger agent; and in July, 1917, to New York City as commercial agent.

#### H. N. Mudge Retires

H. N. Mudge, who has just retired as general advertising agent of the Illinois Central,

"The Railroad Timekeeper of America"

## This Engineer Believes In Good Companions For His Three Boys

Engineer William E. Loco, who runs a Chicago and Northwestern train out of Chicago, has been railroading for forty-five years.

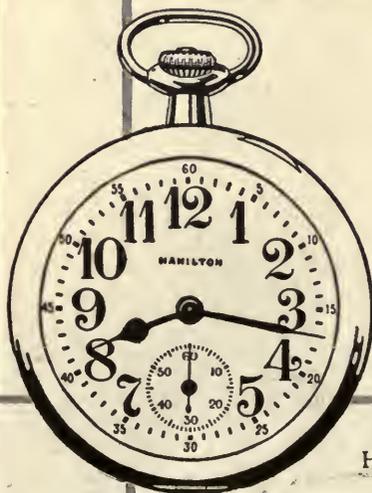

For twenty-one years he has carried the same Hamilton Watch, and it has always served him faithfully.

In fact, so accurate and dependable has he found it that he has made it a pleasant duty to present each of his three sons with a Hamilton as they came of age.

There is nothing uncanny about the phenomenal timekeeping qualities of any specific Hamilton Watch. The fact that Hamilton Watches are built around the requirements of the Railroad man makes them uniformly accurate.

The factory's guarantee of satisfaction is backed up by the jeweler from whom you buy your Hamilton. A Hamilton Watch is never an orphan. It is born with a pedigree—and it will live up to its reputation for enduring, accurate service.

That is the kind of watch you need.

When you buy, inspect the Hamilton models that Railroad men favor, particularly No. 992 (16-size, 21 jewels). Hamilton Watches range in price from \$40 to \$200; movements alone \$22 (in Canada \$25) and up. Send for "The Timekeeper", an interesting booklet about the manufacture and care of fine watches. The different Hamiltons are illustrated and prices given.

HAMILTON WATCH COMPANY,

Lancaster, Penna., U. S. A.

has been in that position continuously for 30 years and 8 months.

Mr. Mudge was born in Massachusetts in 1853. He was educated in the public schools of that state and the Massachusetts Institute of Technology at Boston, where he later served as an instructor for several years.

He was advertising agent of the Burlington for seven years before he came to the Illinois Central.

Among various activities for the Illinois Central, Mr. Mudge was the author of the "Rambler" stories which were published each month for six years, in the *Illinois Central Magazine*. He is an ardent amateur photographer and often illustrated his stories with pictures taken by himself.

The accompanying picture was taken last summer on the Indiana sand dunes, where Mr. Mudge frequently takes outings. Mr. Mudge confesses enthusiasm for the outdoor life.

R. B. Gray, who succeeds Mr. Mudge as advertising agent, served the Illinois Central from 1905 to 1910 as assistant city ticket agent at Chicago. After eleven years with the Union Pacific System, he returned to us October 1 last as assistant advertising agent.

**J. M. LYON & CO.**  
1 Maiden Lane, New York N.Y.

**AROUND CHICAGO  
Suburban Passenger Service**

During the recent Christmas shopping season, our suburban traffic attained unprecedented figures. We handled an average of more than 80,000 passengers a day, which is a considerable increase over any previous year. On Saturday, December 17, we reached a figure of 87,635, operating a total of 394 suburban trains.

The suburban staff committee recently organized by Trainmaster E. O. Guyton, which meets every Monday at Randolph Street, is proving beneficial to the suburban service and to the suburban operating organization. The open discussion of topics of interest and suggestions for improvement at these meetings has created an interest on the part of all concerned toward making our suburban service 100 per cent in every respect. The members of this committee consist of the supervisory force of the suburban passenger service and of representatives from the trainmen, enginemen and ticket punchers.

The degree team of Division 327 of the Order of Railway Conductors, consisting principally of Illinois Central suburban conductors, is still kept busy conferring degrees for their neighboring divisions. So far this team has conferred degrees on fifteen classes in the past twenty-one months. They not only are in demand on our own system but have been called as far west at Denver, Colo., where they handled a class of 111 candidates. They contemplate making trips to St. Louis, Superior, Wis., and Roodhouse, Ill., in the near future.

The new headhouse at Randolph Street is completed and in operation, facilitating greatly the handling of the thousands of suburban passengers using the station. Many favorable comments indicate our patrons' appreciation of this added comfort provided for them.

For a while it was a novelty to see U. S. Marines, with their "shooting irons" very much in evidence, riding on our suburban trains which carry U. S. mail.

"Andy," our handy man at Randolph Street,

who, among his various other duties, tends the suburban gate at the 12th Street station, has been furnished with a shelter, known as a "bungalow," which protects him from the lake breezes as well as from the alluring smiles of the many beautiful young women who work in our 12th Street offices and pass daily through this gate.

Maintainer Keller was called to Matteson at 1:30 a. m. December 19 to take care of signal trouble. While performing this duty, he detected a broken rail on track 1, about one mile north of Matteson, the rail being broken in the center clear through. Section men were called immediately and the necessary repairs were made.

**Central Station Telephone Force**

The Jonquills, members of a club composed of Central Station telephone operators at Chicago, have announced plans for a dancing party to be given February 4, 1922, at the Masonic Temple Drill Hall, Chicago. The party will begin at 8:30 p. m., and there will be music by Harvey's orchestra.

**WISCONSIN DIVISION**

**Dixon, Ill.**

Work on dismantling the old Rock River bridge at Dixon has been discontinued for the time being, owing to the fact that the crew was needed at another point.

The Dixon yard passing track has been extended on the south end about 400 feet, and other tracks are being replaced with heavier steel.

Warehouse Foreman H. L. Curran was married in Chicago on November 28 to Miss Mary Swank of Sterling.

Receiving Clerk P. H. Phalen is the proud father of two baby girls.

Agent C. G. Shepherd and Mrs. Shepherd spent Sunday, December 4, in Chicago visiting their son, George Shepherd. Young Shepherd is a member of the staff of the Rock Island Magazine, having the duty of making the cover design each month.

J. E. McIntyre, who has been off on account of sickness, is back on the yard engine. During his time off, his place was filled by D. S. McIntyre.

J. M. Reynolds, O. S. & D. clerk, was in Chicago recently to call on his brother-in-law, George E. Downey, who is confined in the Illinois Central Hospital with a broken arm. Mr. Downey is reported as improving.

**Minok, Ill.**

Warehouseman Defries has resumed work after several days in the company hospital at Chicago, where he was undergoing treatment for an injured arm.

The far-famed Fans basketball team has opened the season successfully by annexing six straight victories. We have great pride in this team, due to fact that four of the regular players are Illinois Central employees.

B. M. Stoddard lays claim to being the oldest continuous shipper on the system. He started in the mercantile business in Minok in 1865, stayed in it until 1876, when he entered the grain business, and he has been in that continuously ever since. Who disputes the claim?

Wisconsin division conductors have been on the alert to obtain passenger business for the company. Conductor W. H. Sharkey recently

Martin Naylon

convinced two travelers they could use our line best, and the company took in more than \$15 on their tickets. Conductor B. Lichtenberger won a Sioux City passenger at a gain of more than \$17.

Martin Naylon, for many years a section laborer in the employ of the Illinois Central at Polo, Ill., died at his home in Polo on October 13. Mr. Naylon was born in Ireland in 1839 and came to the United States in 1867. He settled in Chicago, where he was married to Miss Mary Callahan in 1873. The same year he entered the employ of the Illinois Central at Polo. With the exception of a short time he spent with the Burlington, practically all the rest of his life was spent in the service of the Illinois Central. He was retired a few years ago.

**MINNESOTA DIVISION**

Master Vern Massingham, who lost his foot in an accident at the Illinois Central station some time ago, has gone to Omaha to have an artificial limb fitted. This is made possible through the generosity of the railway company, which provided a goodly fund not only for this purpose but for his education, in part, also. We sometimes speak of corporations as being heart-

less but this case seems to be an exception.—  
Independence (Iowa) Conservative, November 16.

**IOWA DIVISION**

R. L. Cain, assistant chief clerk to the superintendent, left recently on an extended trip to Southern California. Mansfield Sullivan is now assistant chief clerk to the superintendent since the departure of Mr. Cain for California. Mansfield's place on the tonnage has been filled by Oscar Martin, formerly of the accountant's office, while Miss McDermitt is located in the accountant's office.

V. E. Allen, O. S. & D. clerk at Fort Dodge, is in Chicago taking treatments at the hospital.

Charles Nelson, turntable operator, has been granted a 90-day leave of absence to go to California.

C. Akerman, boilermaker, Fort Dodge, recently went to Chicago for medical treatment.

R. Kingsbury, locomotive crane operator, was recently called to Rochester, Minn., on account of the serious illness of his sister there.

Fern Hill has resumed her duties in the accounting department office at Fort Dodge, after a 90-day leave of absence in California.

Mr. and Mrs. J. W. Seip are the proud parents of a boy, Peter Vaugh, born November 30. Mr. Seip is first trick dispatcher at Fort Dodge.

John Wesley, yard checker, is the proud possessor of a fine baby girl.

J. J. O'Leary of Cherokee is now first trick dispatcher at the division offices, Fort Dodge. The position was made vacant by the death of Walter Beresford.

August Weise, boiler foreman, is a hustler in the freight solicitation business. He has made good with three automobile firms who heretofore have been routing their business over other railroads.

Fay Godwin, laborer in the car department, has been passing around wedding cigars. The event took place December 3.

M. G. Plumley, car man, was taken to the Chicago hospital Saturday, December 10, on account of an infection in one of his eyes.

Daniel Kennedy, switchman at Fort Dodge, who has a reputation as a good light heavy-weight boxer, recently won an important contest with G. Fugitt of Lehigh. The decision was awarded to Kennedy in the seventh round of a scheduled 10-round bout when Fugitt persisted in violating a rule agreed to regarding clean breaks from the clinches. The match, held on December 8 by the American Legion Boxing Club, drew a thousand spectators, including eighty Illinois Central supporters of Kennedy in ringside seats.

**ILLINOIS DIVISION**

**Kankakee Freight Office**

In order to handle the "Perfect Package" campaign during November, as outlined by the American Railway Association and the American Railway Express, a joint committee was formed by the agents of the Illinois Central, Big Four, New York Central, and the American Railway Express. Grant Clapperton, agent of the New York Central, was chosen chairman of the joint committee. At the close of November, he submitted the following report:

Total number of shipments forwarded by freight .....	4,414
Total number of exceptions .....	9
Total number of shipments forwarded by express .....	2,587
Total number of exceptions .....	5
Total shipments .....	7,001
Total exceptions .....	14
Exceptions divided as follows:	

Splendid for every sort of external ache and pain, rheumatism, neuralgia, sciatica, lumbago, stiff joints and sore muscles, sprains and strains, and the after effects of weather exposure.

The office force was glad to receive a visit from Roscoe Stith, warehouseman, who has been off about three months with a broken leg. He is able to get around with the aid of a cane and crutch, and no doubt will soon be back on duty.

The signal employes' educational meeting for December was held at Champaign, Sunday, December 11. The subject was maintenance and operation of motor cars, with an address by H. W. Cutshall, manager of Mudge & Company. The meeting was under the direction of the committee on motor cars, of which F. G. Alexander is chairman. Thirty-five persons attended. The signal employes have accumulated a circulating library of forty-one volumes.

**INDIANA DIVISION**

**Superintendent's Office**

Supervisor H. H. Cordier was in the offices recently, having just returned from the Illinois Central Hospital. While Mr. Cordier will not be able, for several months, to resume work, he is on the road to recovery.

Claim Agent M. E. Young is still in Webster Brothers' Sanitarium at Olney, having taken ill about three months ago, when he was in that city. However, word from there is to the effect that he is now getting along nicely.

A Christmas party was given at the home of Miss Catherine Stephenson of the superintendent's office the evening of December 15. The

## "Safety-Valve Steve" Says:

Tim, my fireman, can't wear his jumper when he's firing—but when the run's over he slips on a slick jumper—and gives the crowds the once over.

Yes—Tim is careful that all Overalls and Jumpers he buys are made out of Stifel's Indigo Cloth. I switched him in right—twelve years ago when I says—"Tim—always look for this boot-shaped trade mark in your Work Clothes."

All the big Overall and Work Clothes manufacturers use Stifel's Indigo Cloth because it wears best. Well—we're pulling out now. See you later.

Christmas idea was carried out in decorations, the old fashioned "grab bag" being a feature of the evening. Those present were: Mrs. Lou Morris, Mrs. Zella Rose, Misses Norienne Quinn, Florence McShane, Essie Reams, Marguerite Smith, Naomi Bailey, Victoria Gustafson and Helen Hennessy.

A physical culture class has recently been organized in Mattoon, and several of the young women of the railway offices have enrolled.

**ST. LOUIS DIVISION**

Mrs. Pearl Thompson, timekeeper in the division office at Carbondale, found her automobile was stolen from in front of her residence recently, but the car was located in Johnston City, Ill., within a few days and returned to Mrs. Thompson.

The famous Italian, General Diaz, was through Carbondale, December 3, on his way to St. Louis. His car was handled into Carbondale on No. 2, and a special train was run from Carbondale to St. Louis. Engine 1033 pulled the train, with Engineer Dave McConachie in charge. The trip was made in one hour and forty-seven minutes.

Big Muddy Mine No. 9 at Murphysboro, Ill., was recently abandoned because water from the Big Muddy River ran into it during the recent heavy rains. The four men within the mine at the time escaped without injury.

Traveling Engineer J. H. McGuire of Centralia, Ill., was recently elected to membership on the board of directors of the Centralia Trust & Savings Bank. Mr. McGuire has for some time been a member of the board of directors of the Centralia National Bank.

W. R. Givens, trainmaster, Mounds, who has been in a hospital, has returned to his duties.

The Knight Templars of Carbondale had a parade on December 7 in which there were knights from various other towns in Southern Illinois. A commandery has been established at Carbondale. Trainmaster F. E. Hatch is commander of Carbondale lodge.

V. O. Vineyard has been appointed Agent at Simpson, Ill.; W. B. Grissom, at Grantsburg; S. W. Breeze, at Buckner.

**TENNESSEE DIVISION**

Clerk C. C. Gamble had the misfortune to lose his baby November 26. Burial was at Newbern, Tenn., November 28.

Switchtender J. F. Shelby has been commended for his action on December 7, when he observed I. C. 124961, in Train 182, off center, and immediately notified all concerned.

Kelly Grady, flagman on the Birmingham district, while on Train 52, November 23, found a bundle of flat iron in I. C. 17705, which was moving as an empty, avoiding probable suit and a shortage.

On the rear of Train 5, Friday, December 9, Supervisor's Clerk Elvis R. Campbell and Miss Lula Johnson departed for Jackson, Tenn., where they were married. They spent their

honeymoon in Bowling Green, Ky., the groom's home.

Unusual presence of mind was displayed by Conductor C. O. Marr, while in charge of Extra 1130, South, November 30, when Extra 1795 North pulled by him and he observed M. P. 17186 with a broken journal, and also observed that the engineer did not observe the stop signals being given by yard men. Realizing the immediate danger and the necessity of making an immediate stop, he ran and stuck his knife into one of the air hose, thereby stopping the train and probably averting a serious accident.

SLINGERLAND SCHOOL OF MUSIC, Inc.  
 1815 Orchard Street Dept. 109 Chicago, Illinois

MEMPHIS DIVISION

Our former boss, V. V. Boatner, who is now president of the Peoria & Pekin Union Railroad at Peoria, Ill., honored us with his presence at a staff meeting Saturday, November 26.

F. T. Theobald, chief clerk in the superintendent's office, had a pleasant hunting trip recently in the wilds of Mississippi with a party of hunters. It is reported they killed twelve deer, two of which are to the credit of Mr. Theobald. He found an abundant supply of squirrels, ducks, fish, opossum and wild turkeys.

Sympathy has been extended to C. M. Coburn, accountant in the superintendent's office, on the death of his father, J. W. Coburn, who died at his home in Memphis. Mr. Coburn was struck by an automobile December 10 and died December 13.

While out flagging at Glendora, Miss., November 4, on Train 96, Flagman C. H. Tennyson noticed a cotton gin on fire. He also noticed two cars on the spur track in front of the gin, one loaded with cotton and one with cotton seed. The train was at the station, half a mile away, and the engineer had called in the flagman, but, instead of coming in, Mr. Tennyson signaled to the conductor, calling attention to the fire. The conductor and crew, acting quickly, backed up with the engine, removed several bales of cotton from the track where they had been thrown by gin employes, and moved the two cars from the spur before they were damaged. This action on the part of Flagman Tennyson, Conductor A. T. Stevenson, Brake-man Alf Powell, Brakeman Jack Bradley, Engineer W. E. Philipps and Fireman Will Austin saved two cars and several thousand dollars' worth of cotton and cotton seed.

A pile-driver and train crew were working on Bridge K 22-6 near Howard, Miss., November 26. We had two cars of bridge material to unload at this bridge, and we were also driving piling. While the pile-driver was at work, Conductor C. D. Jones, Fireman W. C. Lovell, Brakeman C. L. Rosson and Brakeman C. C. Wallace unloaded the two cars of bridge material. This saved the company about \$15, as it would have required the bridge gang about one hour and thirty minutes to unload the material.

The Greenwood Compress at Greenwood, Miss., burned on the night of December 4, destroying between six and seven thousand bales of cotton. Engineer D. T. Knight, Fireman W. Bowman, Yardmaster M. Gann, Switchman R. McKinney, Switchman Ike Jackson, Flagman H. G. Brewer and Yard Clerk B. Clark gathered at the roundhouse, raised steam in the yard engine, went on the compress track and pulled out eight cars belonging to our company. By the time they had coupled to the cars, two of them had already caught fire. These two cars were pushed up the main track to a water spout, where the fire was extinguished with slight damage to the cars and none to the contents. This action saved the company several thousand dollars.

TELEGRAPH DEPARTMENT

Southern Lines

William B. Nusz, lineman at Cecilia, Ky., received his Christmas present in the shape of a pension effective January 1, 1922. Mr. Nusz was born in Shepherdsville, Ky., January 24, 1846, and has been in continuous service since September, 1883, on what is now known as the Kentucky division of the Illinois Central.

Gus Graham, lineman at Vicksburg, Miss., died November 29, 1921, at the age of 49. Mr. Graham first started work in the telegraph construction gang in March, 1892, and was stationed

KERITE

Time is the great test. The most efficient and permanent insulation known is

**KERITE**

**KERITE** INSULATED WIRE & CABLE COMPANY  
NEW YORK CHICAGO

at Vicksburg for the last seventeen years. He was a past master of Franklin Lodge, A. F. & A. M., and the impressive Masonic burial service was performed by officers and members of that lodge.

Members of the telegraph department staff are making every effort to promote efficiency in telegraph and telephone service by encouraging operators at important stations to test out and locate wire trouble. Outside of our general offices, the Louisiana division stands first in this respect. Chief Operator Wilson of the McComb, Miss., office is taking a course in electrical engineering and has made several close measurements of trouble at distant points.

**MEMPHIS TERMINAL**

**Mechanical Department, Memphis, Tenn.**

J. E. Elliott, machine shop foreman, who has been on the sick list for two weeks with a severe attack of tonsillitis, has resumed his duties once more.

Ralph Moore, machinist, erecting shop, is taking an enforced vacation, caused by a carbuncle on his left hand.

G. Jones, airman, filling shop, took a week's vacation hunting quail and other members of the feathered tribe in Missouri.

C. Hammond, machinist, erecting shop, who injured his hand last month, is so far recovered as to resume work.

J. Jones, blacksmith foreman, who has been on the sick list for a few days, has resumed work.

R. McKenzie, machinist, erecting shop, has returned from Chicago, Ill., where he underwent an operation at the Illinois Central Hospital.

Mark Hansen, machinist apprentice, has returned from New Orleans, La., where he has been the guest of friends.

J. R. Rollins, fitting shop, is on the injured list with a mashed finger caused by a door's closing on it.

E. Bernstoph, machinist, filling shop, has resumed work after being on the sick list.

George Coolidge, blacksmith, has returned from Decatur, Ala., where he was called by the death of a relative.

W. L. Teasley, machine shop foreman, has resumed work after being on the sick list.

The Lauderdale Improvement Club, a new South Memphis organization composed mostly of Illinois Central employes, met recently in the auditorium of the Lauderdale school. Following a short business session, fifty-two new members were received. The school children staged an entertainment, and Doctor Shaw, pastor of the proposed South Side church, made a short address.

William Leach, machinist, machine shop, has married.

**LOUISIANA DIVISION  
Canton, Miss.**

Mrs. Roy Wardlow, wife of Machinist Roy Wardlow, has resigned as record clerk in the freight office to accept a position in the Canton High School.

A movement is on foot to floor the Y. M. C. A. swimming pool, so that it can be used during the winter as a skating rink. This recreation would mean much to our railway men.

Canton is to receive a new water tank. Foreman Scott and his force promise the tank complete by Christmas.

The many friends of Section Foreman W. M. Henry were sorry to learn of the serious illness of his daughter Louise, but were pleased to learn the operation was a success.

Conductor J. C. Turner had recently as his visitor B. B. Jones, Oklahoma oil magnate, formerly trainmaster of the Louisiana division.

**VICKSBURG DIVISION**

B. H. Alexander, formerly employed as dispatcher by the C. & G. R. R. at Columbus, Miss., is relieving Operator J. K. Kenney on the third trick at Cleveland. Mr. Kenney was recently granted a six months' leave of absence.

L. R. Swisher, chief dispatcher, left Greenville December 15 to spend fifteen days at points in the North. W. P. Lawton, first trick dispatcher, acted as chief during this time.

**NEW ORLEANS DIVISION.**

A. G. Todd, clerk in the freight office, Baton Rouge, La., and Miss Bessie Anderson, stenographer to Chief Dispatcher J. B. Yellowley, were married recently. Both Mr. and Mrs. Todd returned to their desks after a short wedding trip.

Delmar Smith, clerk, Vicksburg yard office, and Miss Rachel Washburn of Jackson, Miss., were united in marriage on December 9.

William Rockwood, chief clerk, Vicksburg yard office, after a severe illness, has returned to work.

Engineers R. E. Montgomery, Perry Johnson, W. H. Pettit and a number of other railway men organized a hunting party and invaded the Louisiana swamps near Baton Rouge recently, making a big killing—eight deer, besides large quantities of smaller game were bagged.

Nonnie T. Piazza, clerk in the freight house, Vicksburg, Miss., and Miss Elizabeth Yosee, also of Vicksburg, were married on December 18.

## 110-Piece Dinner Set **Superb Bluebird Monogram Design**

**\$1.00**  
Down

An amazing value. A dinner set in the exquisite Bluebird design, combined with your own monogram; all blending perfectly with pink, green and lavender floral pattern. Lovely blue border on each piece. Popular Colonial shape. **Each piece is fired in the glaze and guaranteed not to check or craze.** That splendid Old English finish is applied to the clay before firing and gives that indestructible, snow-white finish.

**Your Initial on Every Piece FREE**

Yes, your choice of any initial in the distinctive shaded Puritan letter on every one of the 110 pieces—and no extra charge! This wonderful dinner set is yours for only \$1.00 down and \$2.70 a month; \$29.90 in all.

### 30 Days' Trial—Easy Payments

Try this set in your home 30 days. Our guarantee protects you. If not satisfied, return it at our expense and we'll refund your \$1.00 plus any freight or express you paid. If satisfied, pay balance in small monthly payments. We trust honest people anywhere in U.S. No discount for cash; nothing extra for credit. No C. O. D. Open an account with us.

**STRAUS & SCHRAM, Reg. 4062 W. 35th St., Chicago**  
Enclosed find \$1.00. Ship special advertised 110-Piece Bluebird Monogram Dinner Set, No. 66702A. I am to have 30 days' free trial. If I keep the set I will pay \$2.70 monthly, \$29.90 in all. If not satisfied, I am to return the set within 30 days and you're to refund my money and any express charges I paid.

#### Complete Service for 12 People

This splendid set consists of:  
12 dinner plates, 9 inches  
12 breakfast plates, 7 inches  
12 coupe soups, 7 1/2 in.  
12 fruit saucers, 5 1/4 in.  
12 oatmeal dishes, 8 inches  
1 oval open vegetable dish, 8 1/2 inches  
1 round vegetable dish, 8 3/4 inches  
1 sugar bowl and cover (2 pieces)  
1 butter dish, 7 1/2 inches  
12 cups  
12 saucers  
12 bread and butter plates, 6 in.  
1 platter, 13 1/2 in.  
1 platter, 13 1/4 in.  
1 covered vegetable dish (2 pieces)  
1 gravy boat  
1 gravy boat stand  
1 bowl, 1 pint  
1 cream pitcher  
1 pickle dish

This set is one that will add tone and beauty to any dining room. With ordinary care it will last a lifetime. Weight packed, about 100 pounds.

Order by No. 66702A. Send \$1.00 with order—\$2.70 monthly. Price of 110 pieces \$29.90.

No C. O. D. No discount for cash. Shows thousands of bargains in furniture, jewelry, carpets, rugs, curtains, silverware, stoves, talking machines, porch and lawn furniture, women's, men's and children's clothing.

Register 4062  
W. 35th St., Chicago

### Cut Price

Rock-bottom prices now. Lowest since before the war. So send the coupon at once with only \$1.00 and we will ship you this 110-Piece Bluebird Monogram Dinner Set on thirty days' trial. Money refunded if not satisfied.

*Floyd R. Mays*

Mr. Mays, superintendent of the New Orleans division of the Y. & M. V., with headquarters at Vicksburg, Miss., was born at Crockett, Va., August 28, 1879, was educated in the public schools of Bristol and Roanoke, Va., and was subsequently graduated in mechanical engineering. He began his railway career as a machinist apprentice for the Norfolk & Western Railroad, Roanoke, Va., August 1, 1895. He entered the service of the Southern Railroad as a machinist at Salisbury, N. C., and later was transferred by that company to Selma, Ala., as machinist. Mr. Mays entered the service of the Yazoo & Mississippi Valley Railroad at Vicksburg, Miss., July 4, 1901, as a machinist. He was promoted to locomotive engineer, Vicksburg division, November 2, 1903. His successive promotions were as follows: Appointed instructor on transportation rules, May 15, 1911; promoted to traveling engineer, Vicksburg division, September 29, 1911; appointed assistant trainmaster, Memphis division, October 3, 1912; appointed trainmaster, Vicksburg division, December 8, 1913; transferred to New Orleans division as trainmaster July 15, 1916; promoted to superintendent, New Orleans division, August 15, 1917.

## A. Lincoln, Once Illinois Central Attorney

*Used His Influence for Charter and Later Won Big Tax Suit for the Company and Collected a Fee*

By JOHN G. DRENNAN,  
District Attorney, Chicago

THE name of Abraham Lincoln, whose birthday the nation will celebrate this month, appears often in historical sketches of the early life of the Illinois Central Railroad. He appeared before the committee of the Legislature of Illinois at the time it reported favorably the charter creating the Illinois Central Railroad Company, which charter as reported by the committee was passed by the legislature February 11, 1851. In 1852 he was employed by James F. Joy, then general counsel, to represent the company in litigation at Springfield, the state capital, and generally in central Illinois. He continued to serve the Illinois Central as one of its lawyers until his election to the presidency. Records still in existence disclose that he was consulted frequently and that his opinions were highly respected. He appeared before the Supreme Court of Illinois as the legal representative of the Illinois Central in many cases.

### Helped Company Get Charter

Mr. Lincoln was admitted to the bar of Illinois in 1837. At that time he became associated with Major John T. Stuart, and this partnership extended over a period of four years. In 1841 he entered into a law partnership with Stephen T. Logan, and the firm of Logan & Lincoln was in existence another four years. Then he associated with himself William H. Herndon. The firm name of Lincoln & Herndon continued until the president's death. His association with

the Illinois Central, however, seems to have been independent of his law partnership.

In 1904 we were able to establish Mr. Lincoln's connection with the granting of the charter of the Illinois Central through a statement obtained from Judge Anthony Thornton, who at that time was the only living member of the Legislature of Illinois which granted the charter. His statement declared that he had a distinct recollection that Mr. Lincoln was associated with Robert Rantoul, Jr., one of the members of the first board of directors of the Illinois Central Railroad Company, to obtain the company's charter. Severe opposition was encountered, for there were many legislators who looked with distinct disfavor upon chartering a concern of such debatable value as a railway company. But Mr. Lincoln's eloquence prevailed.

### Won Important Tax Suit

Mr. Lincoln's most valuable legal service for the Illinois Central probably was in the case of the *Illinois Central Railroad Company v. McLean County, Illinois*, in which was involved an interpretation of the charter of the company. The charter provides that the company, in lieu of all other taxes, shall pay into the state treasury annually an amount equal, at least, to 7 per cent of the gross revenue derived from its charter lines in Illinois. McLean County took the position that the exemption from all other taxes applied only to state taxes, and sought to levy county taxes against the property of the company in McLean County. Mr. Lincoln was employed by the company to assist in

the litigation to establish judicially the interpretation of the charter. Associated with him were General Counsel Joy and Mason Brayman, then local attorney for the Illinois Central at Chicago and vicinity. Mr. Brayman afterward became a brigadier-general in the Union Army. Mr. Joy was later president of the Michigan Central and the Wabash railway companies. His political prominence culminated in his speech nominating James G. Blaine for the Republican presidential nomination at the Chicago convention in 1884.

The importance of the McLean County suit can be realized when it is reflected that, if the company had lost, every county, city and school district in Illinois through which the road ran or which contained property of the company would have had the right to assess and collect local taxes, adding to the considerable burden imposed upon the revenues of the company by the 7 per cent contract. The suit was argued in the Supreme Court of Illinois by Mr. Lincoln and finally decided at the December term, 1855, in favor of the company.

#### A Much-Misunderstood Incident

Out of this suit there grew an incident which has, at times, been misunderstood. Mr. Lincoln presented a bill for his services in the amount of \$5,000. It is believed that this is the largest bill he ever presented to any client. Mr. Joy, the general counsel, recognized the merit of the bill, but the amount was so large that he was afraid the payment of so large a fee without protest might embarrass his department with the board of directors at New York. Mr. Lincoln was advised to bring a suit to collect it. This he did, in McLean County. The case was tried June 18, 1857, and the jury awarded a verdict for \$4,800, Mr. Lincoln already having received a payment of \$200. Judgment was entered upon the verdict and paid without objection on the part of the company.

It has been stated by historians that Mr. Lincoln presented the company with a bill for his services of \$2,000 and that this amount was disallowed as excessive, and that he then brought suit for \$6,000 and received an award of \$4,800. It has been definitely established that this is a mistake and that the suit was a friendly one.

The history of the trial of this case is well given by Charles L. Capen, a prominent attorney at Bloomington, Ill., afterward

president of the Illinois State Bar Association. He says:

"When the case was reached for trial no one appeared for the defendant, and judgment went by default for \$5,000. That afternoon John M. Douglas, one of the solicitors of the company at Chicago, came to attend the trial. He told Mr. Lincoln that default placed him in an embarrassing position, that he (Lincoln) ought to have the money, and asked him to permit the default to be set aside, and the case tried. To this Mr. Lincoln consented. On the trial Mr. Douglas called Mr. Lincoln's attention to the fact that \$200 had been paid on account of this fee, which Mr. Lincoln said he had forgotten.

#### How the Suit Was Tried

"Mr. Lincoln had taken the depositions of some of the leading lawyers of the state as to what was a reasonable fee. Among these was O. H. Browning of Quincy.

"Mr. Lincoln tried his own case, and as he got up to speak to the jury a button on his pantaloons gave way. Saying, 'Wait a minute 'til I fix my galluses,' he took out a knife, whittled a stick and used that in place of the button.

"David Davis was the presiding judge. The jury returned a verdict for Mr. Lincoln for the full amount of \$4,800, which was promptly paid by the company."

Following Mr. Lincoln's death, his body was returned to Illinois in a special train carrying the family and public officials. As the train moved from Chicago to Springfield over the road which he had helped to make possible and with which he had been identified as an attorney, hundreds of thousands of persons turned out to pay him tribute.

#### TELL YOUR FRIENDS

It is believed that additional convenience has been added to the service of the Diamond Special between Chicago and St. Louis by changing its time of departure at both ends from 9:45 p. m. to 10:30 p. m., shortening the time of the run, and this fact has been and is being advertised by the passenger traffic department.

#### CHANGE IN OFFICERS

Effective January 1, a reorganization of the purchasing department was announced by Vice-President A. C. Mann, by which Joseph J. Bennett, assistant purchasing agent, was named purchasing agent and William A. Summerhays, purchasing agent, was named lumber and tie agent.

## Realized an Agent's Greatest Opportunity

*E. W. Brown Took Road Into Rockford, Ill., Assured Its Prosperity and Is Still on the Job*

IT has been pointed out in these pages before that the agent is the railway company as far as his town is concerned, and that an inefficient agent can break a railroad's reputation in his vicinity a good deal more rapidly than any other factor in the company's relations with the public. On the other hand, it has been said, an agent who recognizes his responsibility as the company's representative can build firm and deep the standing of his line, so that the good impression he made will linger long after he has passed on his way.

An excellent example of this second type of agent on the Illinois Central System is Edward W. Brown of Rockford, Ill., Wisconsin division. Mr. Brown's case is unusual and exceptional, rather than typical of even the best agents, for his opportunities have been greater than most and his wealth and previously won standing in the community have made less difficult the tasks he has attempted. His achievements have been so remarkable that it is doubtful whether any exact parallel exists among agents anywhere in the country.

### One Man's Achievement

Mr. Brown helped to drag the Illinois Central into Rockford, after preliminary plans had routed it another way; he bought its right-of-way; he has been its first and only agent; he has found it possible to advance the interests of the company and of Rockford, and his own personal fortunes at the same time; and he has made the prosperity of the Illinois Central in Rockford so enduring a nature that it will continue long after he has been gathered to his fathers.

In a nutshell, Mr. Brown's plan of killing three birds with one stone has been to encourage the location of factories on the company's land and on his own, to link these factories to our line by side-tracks and then to let the Illinois Central's superior service hold the business he had made for it. As a result of the strategic location of factories which he has arranged, the Illinois Central is assured of the bulk of their business as long as they keep running—and the diversity of the factories makes it sure that at least a large proportion of them will keep running all the time.

*E. W. Brown*

Rockford, with a population of 70,000 persons, more than half of whom are of Scandanavian descent, is a thrifty manufacturing city with an unusually large number of factories for its size. It has in the neighborhood of 350 factories—about one factory for every 200 inhabitants.

### High Standing of Illinois Central

At the present time, largely due to Mr. Brown's untiring efforts, the Illinois Central—which was the fourth road to build into Rockford—serves more industries in Rockford than any two other roads entering the city. In the past, it has not been unusual for the Illinois Central's business out of Rockford to surpass the business of all the other roads combined. The Illinois Central has thirty miles of side-tracks serving industries in Rockford. In ordinary times it operates three switch engines

with full crews. It has 600 feet of frontage on South Main street, which is the main thoroughfare for railroads, the hotels being located just north of the stations; the other lines have not more than 200 feet of frontage each. The Illinois Central has yards for switching in West Rockford three-quarters of a mile long without a street crossing. In the five miles of Illinois Central belt line, there is only one small tract unoccupied by factories. The belt line is covered with industries from one end to the other, as well as the side-tracks which lead from it.

It was not just an accident that these factories clustered along the Illinois Central. Mr. Brown is not the sort of man who believes in sitting down and waiting for something to happen. He is eternally busy—even today, at the age of 64—but he handles himself like a man of 40, and he manages to get a great deal done.

#### Puts Factories Along Our Line

In all his transactions—and they have been extensive, as he seems to have some interest in, or to have sold land to, at least half the industries in Rockford—Mr. Brown has always purchased manufacturing sites lying along the Illinois Central belt line or side-tracks, thereby giving the Illinois Central the benefit of these industries. With his brother, Frank R. Brown—reputed to be even better off than E. W. himself—he bought 350 acres of land in the southeastern part of Rockford, running west from Rock River for two miles and a half. This land was beautifully located for manufacturing industries—level as a floor and easily served by railroad—and today there are seventy-five large manufacturing institutions located on this one tract of ground, which is served, of course, by the Illinois Central belt line.

Mr. Brown has since bought several other tracts, paying as high as \$1,750 an acre, and has made terms which have drawn manufacturing institutions to them. It is said to be a fact that he has bought and sold more factory sites in Rockford than all the real estate agents and other dealers combined.

It might be remarked here, incidentally, that Rockford has assured its own prosperity by having a diversity of factories and by having most of them controlled by local capital. Only a small percentage of the industries in Rockford came from the outside or are controlled by outside capital. Rockford's pre-eminence in furniture manufacturing, for example, is large-

ly because its expert Scandinavian wood-workers are in the business for themselves.

#### Some Assets of Rockford

Rockford has five large knitting mills, which turn out 20,000 dozen pairs of stockings daily. Twenty-five hundred workers are employed. Mr. Brown is interested in three of the mills. Rockford has thirty-two furniture factories and twenty large machine shops. It has the largest gas stove plant in the United States, and that plant is on ground owned by the Illinois Central. Rockford has a \$20,000,000 implement concern. And so on. The list could take up considerable space.

In addition to encouraging home industries, Mr. Brown has been instrumental in bringing several large industries from other cities—a machine and tool company, employing 300 hands, from Beloit, Wis., a company employing 600 hands, from Chicago, and others equally as important.

It is not on record that the Illinois Central has ever regretted entering Rockford, but it is a fact that it came near to missing Rockford and that the efforts of Mr. Brown and his father were largely instrumental in influencing the change in plan.

When the Burlington condemned the right-of-way of the Illinois Central, in 1885 or 1886, from Portage to East Dubuque, the trial took place at Galena, Ill., and Mr. Brown's father, Judge William Brown, twenty-one years a circuit judge, presided at the trial. There the judge became acquainted with Stuyvesant Fish, president of the Illinois Central, and with E. T. Jeffries, then general manager.

#### How Survey Was Changed

When the Illinois Central decided to build the line from Chicago to Freeport to serve the Western Lines, the survey left out Rockford, just as Elgin is left out at present. The survey made at that time passed below what is now Camp Grant, south of South Bend, crossing the Rock River at Hoisington Rocks. When it became known that the Illinois Central was going to build, a committee of business men and manufacturers of Rockford waited upon Mr. Jeffries and tried to persuade him to have the Illinois Central run through Rockford, but without avail. A second committee waited upon Mr. Jeffries, but with the same result.

When Judge Brown heard of this, he called in his son, E. W., who was an alderman of Rockford at the time, and gave him a letter to present to Mr. Jeffries. This letter was an invitation to Mr. Jeffries to visit Rockford as

the guest of Judge Brown and to meet some of the manufacturers and business men at his home. E. W. Brown presented this letter to Mr. Jeffries, and the latter, after demurring, finally decided to make the trip. He brought Isham Randolph, chief engineer of the C., M. & N. Railroad, with him. Several manufacturers and business men of Rockford met Mr. Jeffries at Judge Brown's home that night for dinner, and before Mr. Jeffries departed the location for the right-of-way was picked out through Rockford.

### Bought Most of Right-of-Way

At once E. W. Brown and others began buying right-of-way, but at the end of thirty days Mr. Brown was the only one left at the work. In all he bought right-of-way for about thirty-five miles of main line, as well as the right-of-way through Rockford. The average price paid farmers was \$5,000 a mile, as the survey ran diagonally through the farms.

Three lines preceded the Illinois Central into Rockford, the first in 1857, when Judge Brown was mayor. The first Illinois Central train reached Rockford from Freeport in 1888. The first two carloads of freight moving in were a carload of yarn from Macon, Ga., and a carload of watermelons from Texas—and the Illinois Central has had this yarn and melon business into Rockford ever since. Mr. Brown was appointed agent at that time, and he has served the company at Rockford in the same capacity since—a record of about thirty-five years.

It does not need to be pointed out that Mr. Brown's activities have made him a civic benefactor of Rockford as well as an influence for the Illinois Central's prosperity. In addition to encouraging the building of factories for his native city and building factories and warehouses on his own account, he has served the city seven years as alderman and three terms as mayor, and now is serving as president of the park board.

### Cooked Own Picnic Dinner

Mr. Brown is a great mixer. He seems to know everybody in town, and when he drives along the street he is kept busy waving to his friends. One of his greatest pleasures in years past was to give, with his brother, Frank, a yearly picnic for the shippers, the business men and manufacturers, of Rockford, in addition to which he invited Illinois Central representatives. This annual picnic was held at the bung-

alow on Mr. Brown's farm, not far from town, and the brothers always insisted on doing the cooking themselves. June 15, 1911, for example, they fed 275 persons at the first table and about 40 afterward. They served 28 gallons of clam chowder, 2 bushels of new potatoes in cream, 1 bushel of sifted early June peas, 117 pounds of filet of beef with mushrooms, 110 pounds of baked ham, and coffee, cigars and ice cream in proportion.

The cooking took almost two hours and required forty-five feet of running charcoal fire. Ninety automobiles were required to get the crowd to and from the picnic.

Mr. Brown, although he has discontinued the picnics, still gives occasional little dinners to his friends at which he does the cooking himself.

### A Real Representative

Loyalty to the company has been a large factor in Mr. Brown's success. His relations with the various officers have always been pleasant. Perhaps his closet friend was the late President J. T. Harahan. Occasionally his plans for expansion at Rockford have failed to meet satisfactory support in Chicago, but he has generally managed to get the tracks or the money needed because he has always been in a position to carry on the project on his own

### Gentle? Oh My!

Conductor R. L. Scott, Flagman W. R. McNally, Brakeman E. P. Woolard, Engineer O. C. Walker and Fireman James Spann of the Tennessee division recently demonstrated their gentleness in the handling of freight trains. The test was not with an impact register, but with a dozen loose eggs.

Furniture belonging to W. E. Cummins of Sharon, Tenn., moving in I. C. 48430 from Wickliffe, Ky., to Sharon, Tenn., contained one kitchen cabinet, in one drawer of which one dozen loose eggs were unintentionally left. The eggs were forgotten until the shipment arrived at its destination, when, to the shipper's surprise as he opened the drawer, all the eggs were found in perfect shape.

The members of the crew have been commended for their good record in this instance, which seems to indicate that they have no need whatever for the impact register, recently described in this magazine.

account if the company failed to indorse it. Such independence, however, has never led him astray; on the contrary, it has netted for the company well-paying team tracks at the station and profitable industrial tracks in the factory district; in one case, at least, it meant taking away business from under the nose of a competitor which was a little slow about putting in a side-track for a factory right along its own line.

Mr. Brown has great confidence in Illinois Central stock as an investment, and he has shown his confidence by becoming a stockholder.

#### Station Is Efficient

The Rockford station employs a force of about sixty persons. H. R. Aufdenspring, assistant agent, attends to much of the routine

work and the operation. R. A. Wheelless is ticket agent. Elmer Rightor, chief rate clerk, has been in the work about thirty years. J. E. Connors has been yardmaster for about fifteen years. The freight office is neat, well lighted and heated, and efficient. The workers on the loading platforms *have* to be efficient in order to dispose of the steady run of business. In short, Rockford is a station worth studying as an example in organization.

The organization is a reflection of Mr. Brown's own personality. He is a builder. There is a difference between merely *starting* a business and *establishing* a business; an established business is one which has taken root. Thanks very largely to the inspiration and the activity of Agent Brown, the Illinois Central has become *established* in Rockford.

---

## Saving \$9,000,000 a Year for Our Patrons

*The following quotation is from Things to Talk About, our monthly bulletin of information.*

Although the railroads as a whole failed to realize the statutory net return during any month of the past year and the total net income of the year was insufficient to meet fixed charges, with no allowance for dividends and property investments, the roads have taken an important step in the lowering of rates. In addition to putting into effect the reduction in hay and grain rates ordered by the Interstate Commerce Commission, they have reduced rates on agricultural products generally. Both reductions were made effective January 1.

A further saving in the nation's transportation bill comes about through the removal of the government's war tax, also effective January 1. While this is an effective way of reducing rates to railway patrons, the railroads do not suffer thereby, for in the collection of the tax they have acted as agents of the government and the tax has not been taken into income accounts.

It is estimated that these reductions in transportation costs to railway patrons will mean a benefit to Illinois Central System patrons of about \$9,000,000 in 1922.

Shippers of farm products on the Illinois Central System will benefit by more than \$4,000,000, according to preliminary estimates. The estimate, based on the business of 1921, is \$4,129,551—roughly speaking, a

general saving of 10 cents on the dollar. Of this estimated saving to our shippers, \$1,250,000 is accounted for by the reductions in rates on hay, grain and grain products in the territory designated by the Interstate Commerce Commission in its decision. The remainder, \$2,879,551, is the estimated saving to our shippers in the balance of our territory resulting from the 10 per cent reduction in rates on farm products.

The removal of the war taxes—3 per cent on freight charges and 8 per cent on passenger fares—will reduce transportation costs to Illinois Central System patrons about \$5,000,000 in 1922, it is estimated. During 1921 the Illinois Central System collected for the government \$2,960,000—in round numbers, with the December sum closely approximated—as a war tax on the freight handled by the system. The war tax on passenger fares on the Illinois Central System amounted to approximately \$1,940,000 in 1921, making a total of both freight and passenger war tax collections of \$4,900,000. The total war taxes collected by this system for the government in 1920 were \$5,338,329.41, or \$3,084,072.54 for freight and \$2,254,256.87 for passenger business.

The railroads of the country in 1920 collected \$232,809,963.16 as war taxes on their business and turned it over to the government.

## *Lincoln Shrine Stands at Hodgenville, Ky.*

*Illinois Central Alone Serves Town Where He Was Born  
and Where He Spent His Boyhood Days*

**T**HE Illinois Central is the only railroad serving Hodgenville, Ky., where is preserved the old log cabin in which Abraham Lincoln was born. Tourists from all parts of the world make the trip there to see the birthplace of the former president of the United States.

The old log cabin is in its original position, on a hill that dominates the surrounding ground which was formerly the Lincoln farm. It is protected from the elements by a memorial building.

The old Lincoln farm is now the Lincoln National Park. It was deeded to the government by the Lincoln Farm Association upon consideration that the land and buildings thereon be forever conserved. The Lincoln Farm Association had purchased the property after raising a public subscription of \$385,000. All of this amount, except \$48,000, was spent for ground and improvements. The latter sum was left as an endowment to care for the park.

There is nothing in the park that rivals in interest the old log cabin in which Lincoln

was born. Its history is as romantic as the life of the child who left the cabin destined to become the president of the United States.

### **Many Changes in the Old Cabin**

A family by the name of Harrison lived in it after the Lincolns moved to Indiana. It was then vacant for several years. In the early sixties, shortly after Lincoln was chosen president, George Rodman, an admirer of Lincoln, bought the old cabin from Richard Creal, and moved it to his property, about one and one-half miles from the Lincoln farm. It was first used as a shelter for negroes, and later as a tenant house. Two terms of school were taught in the cabin in 1872 and 1873. John Davenport married the school teacher in 1875, and they kept house in the cabin until 1894. That year it was purchased by A. W. Dennett and moved back to the original site on the Lincoln farm.

The cabin rested on the old foundation only a short time. In the same year it was

*Lincoln Memorial Hall,  
Hodgenville, Ky.*

taken down, and the 143 pieces were marked and shipped to the Nashville Centennial. It was moved to Central Park, New York, and again exhibited at the Buffalo Exposition in 1901. It was then purchased by David Creer and stored in the Poffenhausen mansion on Long Island. In 1906 the Lincoln Farm Association came in possession of the cabin, and shipped it to Louisville, Ky., where it was one of the features of the Homecoming Celebration. It was stored in Louisville until the laying of the cornerstone of the memorial building which was to shelter it, when it was returned to the Lincoln farm at Hodgenville. It was taken back to the original site for the ceremony and immediately returned to storage until the building which houses it was dedicated in 1911.

#### Cabin Now in Memorial Building

The memorial building was designed by John Russell Pope. The material used is Stony Creek Connecticut granite.

Within the memorial building now stands the humble 1-room cabin in which Abraham Lincoln was born. With the exception of inscriptions on the walls of the memorial building, a card index cabinet in one corner and a chain around the cabin, there is nothing to detract the attention of the visitor from the chief object of the memorial building.

The original dirt floor has been covered with concrete, so that it will remain permanent. A post has been set vertically in the center of the floor to mark the exact spot for replacing the cabin when it is moved for exhibition purposes.

The government has placed a keeper in charge to look after the property, to give a brief history of the cabin to the visitors and to keep vandals from taking souvenirs.

A stroll about the Lincoln National Park is indeed interesting. All of the natural elements that contributed to the early environment of Lincoln have been retained.

There is the old rail fence which borders that portion of the Jackson Highway passing through the park. Lincoln was too young to take part in the splitting of the

rails that made this fence, but doubtless he watched his father wielding his crude ax.

#### Cabin Was Built Close to Spring

The spring that furnished the Lincoln family with water is still to be found. It is yet highly praised by the neighbors on account of its excellent qualities. The cabin was built close to this spring.

There is the "path of the barefoot boy," the old mill, Knob Creek, from which Lincoln was saved from drowning when a lad, and the old millstone on which was ground the meal for the daily bread of the Lincoln family.

From the time that the memorial project was launched to the date of the acceptance of the park by the United States government, three presidents visited the birthplace of Lincoln and took part in the exercises appropriate to the occasions. President Theodore Roosevelt presided over the ceremonies at the laying of the cornerstone, February 12, 1909. President William H. Taft attended the dedicatory services November 9, 1911, and the formal acceptance of the Lincoln farm as a national park was by President Woodrow Wilson, September 4, 1916.

#### A Case of 'Vaporation

The keeper tells of a tourist from Chicago who came to view the birthplace of Lincoln.

A fine automobile stopped in front of the memorial building, and the Chicagoan walked up the steps with his negro chauffeur.

*The Old Lincoln Mill  
and Swimming Hole*

*The Path of the  
Barefoot Boy*

*The Lincoln Spring*

feur. They entered the building, and stood admiring the log cabin.

"Tom," the man from Chicago said to the negro, "what do you think would have happened if we had come up here in our car when the Lincoln family was living here?"

"Don't you think," he continued, "that

Mr. Lincoln would have poked a squirrel rifle through that lone window, and filled us full of lead? Or would he have hit out for the woods back behind here?"

The negro scratched his head and seemed to be in deep thought for a short time. Then he said: "No sah, Misto Lincoln would have just 'vaporated, dat's all.

## *Ditcher Is a Help in Maintenance Work*

By L. H. BOND,

District Engineer, Chicago

The problem of proper drainage is as old as the railroads; without adequate ditches the track cannot be maintained at a high standard.

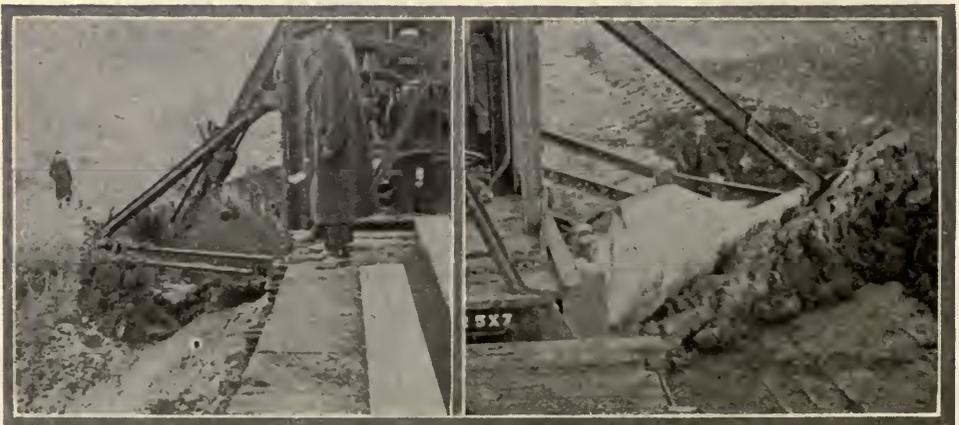

The original ditcher, a shovel in the hands of a more or less efficient laborer, has seen its day and is being rapidly replaced by modern machines. The team and scraper did good work through this same period and can still be depended upon under certain conditions, but this method is slow and expensive.

The modern machine, operated on the rails, consists of two major types, the dipper, or loading, type and the wing, or drag type. Either of these types can be operated throughout the year provided the frost is not too deep. The American ditchers, working in pairs, have materially changed for the better the ditching conditions on this railroad. This machine is well known.

Now comes the Jordan spreader with ditcher attachment. The spreader itself is

not new, but the ditcher wing is, at least on the Illinois Central. An exhaustive trial was made early in January on the St. Louis division, between Texas Junction and Sand Ridge. This location was selected on account of having about the worst conditions that could be encountered from a ditching standpoint and affording a good opportunity because of lack of interference with regular train service.

The machine pictured herewith is a special type flat car, with cylinders, guides and wings arranged so that one man can handle the entire operation in a most satisfactory manner. A work train consisting of an 800-class engine or larger, together with caboosé and crew, is all that is needed in addition to the spreader and operator. The power is all furnished by the locomotive. Air from the air pump operates the wings, and the ditching motion comes from the tractive effort. The ditcher wing and folding parallel retainer are lowered in the ditch at a point some two or three hundred feet from the

*Ditcher at Work on the St. Louis Division*

outlet end. The train is moved in the outlet direction, and the load is discharged outside the cut. This is repeated until the ditch is satisfactory.

The average load discharged from the wing is about eight cubic yards, and it can be deposited on the fill in the form of banking to the true cross-section. By this method a true ditch is formed, the wing cutting on true lines to the railroad's standard design. The possibilities in short cuts and those involving not more than 1,200 feet of haul are more promising than by any other known method.

The trial demonstrated that in excess of

100 cubic yards can be moved per hour on an average haul of 1,000 feet at a cost of about 10 cents a yard; under more favorable conditions, more yardage at smaller cost is possible.

The saving in maintenance through proper drainage is direct, and the advent of economical machines that involve practically no labor is of such value to railroads that a program of ditching can be laid out the same as for the placing of rail, ties, ballast, etc. We hope to obtain results in ditching this season in excess of former years.

## Showing the Glory of the Commonplace

About Forty Years Ago  
Two Perfectly Normal Young People  
Started Out Living.  
The Boy Was Not a Genius.  
The Girl Was Not a Ravishing Beauty.  
They Were, Both of Them,  
Just Healthy, Wide-Awake, Up-and-Doing  
Kids.  
Of Course, They Got Married.  
There Wasn't Anything Unusual  
About Their Married Life.  
The Girl Did Just What Any Other Ameri-  
can Girl  
Might—or Has to—Do:  
She Washed Dishes, Swept Floors, Dusted  
Furniture,  
Fought the Grocer, Gossiped Now and  
Then  
\* \* \* \* And Had Babies. \* \* \* \*  
If She Was in Any Way Remarkable  
It Was in Saving a Little Money Every  
Month.  
The Boy Was Just as Commonplace  
In His Way. \* \* \* \*  
He Kept Plugging at a Plugger's Job.  
He Kicked About the Dinner Now and  
Then,  
Bought a Car Before He Could Afford One  
And Sold It Two Months Later.  
Called His Boss a Slave-Driver Before His  
Wife,  
And Then Made Her Ask the Boss to  
Dinner.  
\* \* \* \* The Only Thing About Him That  
Was Odd—  
And, at That, It Wasn't So Very Odd—

Was a Hobby He Cultivated of Studying  
the Bond Market  
And Buying One or Two Bonds of the Sen-  
sible Kind  
Every Now and Then. \* \* \* \* \*  
Evenings, Nowadays, They Spend a Good  
Deal of Time  
Looking Back. And Mostly at the Time  
When They Had to Do Without  
To Insure What They Wanted Later  
On. \* \* \* \*  
They've Still Got That First Bankbook.  
The Receipt for the First Bond They Ever  
Bought  
Is in a Gilt Frame, and Hangs on the Wall  
In a Room Upstairs. \* \* \* \* \*  
\* \* \* The Grown-Up Boy Likes His  
Work Too Much  
To Retire; and the Grown-Up Girl,  
Although She's Sometimes Just a Little  
Lonely  
What With Her Children Gone, Likes  
"Him" Too Much  
To Ask Him to Retire. \* \* \* \* \*  
They Haven't Got a Million Dollars, but  
They've Got  
Enough.  
And They Attribute Their Income to That  
First Bankbook  
And That First Bond.  
And I Don't Know Why I Tell This Story  
Unless It's Out of a Sort of Veneration for  
The Glory of the Commonplace.

\* \* \* \* \*

I Thank You.

—The Magazine of Wall Street, December  
10, 1921, with apologies to K. C. B.

# Hitting the High Spots in Seeing Europe

*Miss Marion Waggener of Princeton, Ky., Illinois Central Girl, Gives a Summary of Her Trip*

By MISS MARION WAGGENER,  
Clerk to Supervisor B. & B., Princeton, Ky.

I THOUGHT I knew what it was to feel "good-by" when I said "good-by" to my friends the afternoon of June 10, 1921—I thought it was "good-by" when I said "good-by" to the family, and Princeton, the early morning of June 11—it was another "good-by" when I left our Illinois Central at Louisville, and later left Kentucky for West Virginia—but it was not until the afternoon of June 18 that I, for the first time, knew what "good-by" really was.

It was then I stood on the deck of the Rochambeau, and with her sailed out of New York harbor, past the Statue of Liberty, bound for strange lands.

We had sailed about 4 in the afternoon, and it was just at a glorious sunset that the last sight of the Statue of Liberty might be caught—and, as her uplifted torch fell behind the water curtain, it was at that minute that I knew what "good-by" was, and *that* was the only minute of the whole summer that I would have turned back.

I cannot go through the entire trip, nor can I pick out all of the most interesting things; so we will just bundle up our imagination, and hit Europe in the high spots.

Ten days and three thousand miles were covered, and we stepped ashore at Le Havre, "foreigners" for the first time in our lives. At first we were bewildered.

## Memories of Joan of Arc

Le Havre is the second port in France, about six hours from Paris by rail. Midway between Le Havre and Paris we passed through Rouen—Joan of Arc's Rouen—and it seemed to me that day that this was the most peaceful and beautifully picturesque country in the world.

Then Paris—Paris of the Louvre, the Invalides, the Madeleine, the Opera, the Pantheon and the Luxemburg, of Napoleon, and of Worth and Paquin—all so wonderful!

I must laugh now when I think of all the illusions that were shattered for me last summer. I cannot say I was disappointed—more truly, I was surprised. Nothing was found as

I had pictured—in all fairness, I had expected too much—and I found just ordinary people, not Cinderellas, and Queens, and Kings, and the sort; and I found villages, very like our own, and the cities! Really good "imitations" of our own New York and Chicago.

*Miss Marion Waggener*

I believe one may see more stunningly gowned women on Fourth street in Kentucky's Louisville than on the streets and boulevards of Paris; and the evening at the Opera could not be compared in brilliance with one at our Metropolitan. (I think, however, these are generally conceded, but I went over with my old "fairy tale" vision.)

## The Palace at Fontainebleau

Some 19 kilometers from Paris stands the majestic and beautiful forest of Fontainebleau and the fortified chateau built by Louis VII in 1162. It was Francis I, however, who in the 15th century converted the medieval fortress into a palace of almost unparalleled extent and magnificence. The exterior is less imposing than that of some other edifices of the same period, but the interior, which was decorated by French and Italian artists, is deservedly much admired.

In the early part of 1920 the French government extended the use of this palace to 250

music students from America, who might reside there to be under the tuition of the faculty of the Conservatory of Paris (to which only French are admitted). These scholarships were awarded through the governors of the states, and a Princeton girl, Miss Mary Eliza Dudley, was a fortunate recipient. I visited her in her "palace" home, and it was from the window of her room in the left wing, added by Henry IV, that I took the picture of the front of the palace.

\* \* \* \* \*

Leaving Paris early in the morning of July 1, we started on what I cannot call a 2-day trip, but rather a pilgrimage—a visit to the battlefields of Northern France, Flanders' Field—the Gethsemane of our civilization, where again, by the crucifixion of Right and Truth, embodied in those thousand souls in khaki and blue, another triumph was won.

**Battlefields Not Commercialized**

When I think of ourselves at home, and then of the days spent in the war zone, I almost shudder. Never in all my life do I remember having been affected as I was then. It was all so different from what I had expected, and never had I realized just what it was and what it meant to be an American until I spent a night in the Argonne Forest.

I thought that very night of you at home, and then wondered if these poor French natives would ever be able to enjoy anything of

life again! They seemed contented—yes, but such placid and absolutely resigned contentment struck me as being the most pathetic thing I had ever noticed.

The battlefields have not been commercialized, as I had expected, nor did we find there a throng of tourists. It will sound rather strange, I am sure, but we did not pass more than five or six cars on our whole trip through the war zone.

I had expected to see throngs of Americans pouring forth their American dollars (a favorite phrase of some journalists) and expected to find stations on every hand where souvenirs and trinkets of the battlefields would be sold at prohibitive prices—but it was not so.

Instead, everyone was at work clearing the debris. When I would look and see nothing but the shattered walls left of an entire village, and see the people wave at us and smile over the ashes and dust of what was once their home, I wondered if they were not the most wonderful people in the world. Surely there's many an unhonored hero among them.

**A Night in the Argonne Forest**

I have a picture of one old man taken in front of the doorway of his house which was used by the German crown prince as his observatory at Montfaucon. Of course the house had been rearranged for the crown prince's convenience—three additional cellars dug, etc.—and on this day the old man was there

*Repairing Trinite Church, Paris, wrecked by 70 mile "Big Bertha"*

clearing up the debris, getting ready to rebuild just as it was—his home—before the war.

The night spent in the Argonne was at the home of General Poi, formerly of the French Army. During the war this house had been used as headquarters of the "Lost Battalion."

Since it was not a large house it was necessary for some of our party to "pallet" for the night (just now I don't remember how we drew lots), and it was my fortune to take to the floor. But necessity, always the mother of invention, inspired a suggestion from a kindly member of the party that a table be used, and a table it was, with four feather beds laid crosswise, and one to cover with. No danger falling off even a higher "bed," for we had driven some hundred miles in an automobile that day.

This table was a wonderfully carved piece. It had been used in Major Alexander's office, and over its top, no doubt, had been planned and studied the route of the last journey of many a German son!

### An Independent Little Nation

Switzerland is like the pretty maid whose face is her fortune—not only because its beauties year by year attract visitors who spend in it enormous amounts of money, but chiefly because its protecting, invigorating mountains, its fertile valleys and useful lakes, have enabled the Swiss themselves, through the centuries, to develop into a sturdy, free and industrious nation.

There are today about three and one-half million Swiss—much less than the population of New York—but they have lived independently in the midst of powerful neighbors who have tried to annex their country in times past.

Three-fourths of the whole country is covered by mountains. The Alps are in the south; the Jura, on the French border; the Swiss Plateau, in between. Both the Rhone and the Rhine rivers have their sources here and, together with the Aar, drain the greater part of the land.

While each of these rivers is invaluable in its contribution to the country's marvelous scenery, unfortunately not one of them is navigable. The climate varies in many stages from the perpetual winter of the snowclad Alpine heights to the summer atmosphere of the vine-producing valleys of the south.

### Not So Many Swiss Farmers

The Swiss were once almost exclusively a pastoral nation, but today only 29 per cent of the Swiss are engaged in agricultural occupations, so that they produce only sufficient foodstuffs to support themselves for about six months in each year.

It is a remarkable and interesting feature of the country's farming activities to know that there are nearly 300,000 peasant proprietors distributed throughout the various cantons today.

An unkind Nature has denied the country coal; the small quantities discovered in the

last few years are so limited as to be almost negligible. Undismayed by this lack, however, the ingenious inhabitants have yoked the energies of the mountain torrents, and many a roaring rivulet contributes to the 380,000,000 horsepower of energy now available from water.

Lacking navigable rivers or sea coast, the Swiss have laid down one of the most admirable systems of railroads to be found anywhere, and this in the face of considerable natural obstacles, too, for bridges, erected in spite of difficulties, span gorges sheltering raging torrents, while even the mighty Alps have found their majesties undermined by a series of wonderful engineering feats, the best known being the St. Gothard tunnel.

### Longest Tunnel in the World

This tunnel was constructed in 1872-80 at a cost of some 57,000,000 francs (\$11,350,000). It is 28 feet broad, 21 feet high, and  $9\frac{1}{4}$  miles long, which is  $1\frac{2}{3}$  miles longer than any other tunnel in the world. It is lined throughout with masonry, double tracked and lighted throughout by lanterns, placed feather fashion, at intervals of some hundred feet. The central point is, I believe, said to be some 3,800 feet above sea level, from which it descends on both sides about 6 feet in each thousand, and it is about 6,000 feet below the top of the mountain to the base of the rail.

The air in the interior is fresh and free from smoke, as only electric trains are used, and the temperature remains about 70 degrees Fahrenheit.

We entered the tunnel at 1:12 p. m. and came out at 1:26 p. m. How thankful I was the Alps were not over the Kentucky division!

### Saw the Lion of Lucerne

The "Lion" is inseparable from the history of Lucerne, and it was the one thing of the trip that was more nearly as I had expected. One may recall the history—that during the Revolution in 1792 the French King, who had learned to rely on the Swiss, had formed a guard of honor of trusty yeomen from Lucerne; when the mob stormed the Tuileries Palace, August 10, 1792, these Swiss guards stood firm at their posts, defending with their lives King Louis XVI; one after the other, they were massacred, and the guard was almost wiped out. This dying lion (twenty feet long) reclining in a grotto, transfixed by a broken lance and shielding the Bourbon lily with its paw, is hewn out of the natural sandstone after a model of the Dane, Thorwaldsen. A

spring at the top of the rock flows down and forms a pool at the base. I have never seen agony so wonderfully and truly depicted in stone as is portrayed by the features of this dying lion.

### On Getting Identified

One of the most pleasant experiences of the summer came to me at Lucerne. It was after dinner. I was in the salon when I heard a pleasant voice inquire of some members of my party for the "young lady from Kentucky." I was, of course, interested and approached her with greeting. Through the excitement, I remember the conversation something like this:

"Are you from Kentucky?"

"Yes."

"From what part?"

Now in the beginning of the trip I soon learned these to be the usual questions, and had decided that "In the western part, near the Purchase" would be definite enough to be satisfactory, for I dared not presume that "Princeton, Kentucky" would be recognized. So in this case, my usual answer was given.

"Oh, near Paducah?" she asked.

And, even with that, I didn't, for some reason, mention Princeton. I explained, "Yes, just forty-five miles north, on the Illinois Central."

"Near Princeton?"

"Oh! I *am* from Princeton!"

"Do you know a Mrs. Waggener?"

"My mother!"

(Only one who knows me can know how nearly I dropped.)

"Then, are you the little deaf girl?"

She was Mrs. Carl Frost of Jackson, Miss., and had known of the wonderful accomplishment of my mother in teaching my sister, who has been deaf since infancy. It was truly a wonderful coincidence that we should have met as we did in Lucerne.

Dreadfully hackneyed, but none the less true, is the saying that after all the world is not so large.

\* \* \* \* \*

"Beyond the Alps lies Italy!" Our first sight of the country came as we emerged from the Alps, and the impression is that an enchanted garden lies before, for the verdure, the many lakes and the lovely rolling Lombard country seem like a sudden mirage after the rugged scenery we had just left behind.

Lombardy has been justly celebrated for its lakes, and the beauty of Como, Maggiore and Lugano has been extolled for centuries.

Venice - Plaza of St. Mark's and its pigeons. In center distance, Palace of the Doges.

Venice - St. Mark's Cathedral

Pisa - The Cathedral and its leaning bell tower, which is 130 ft. high, and 13 ft. 5 ins. out of plumb.

Rome - St. Peter's Cathedral. A Glimpse of the Vatican to the right.....

Rome - Roman Forum, Showing three columns of Temple of Castor & Pollux

Milan - The Cathedral

### From Sunny Italy.

Genoa - Statue of Columbus

Rome - Interior of Colosseum

Florence - Ponte Vecchio and Lung'Arno (The Old Bridge and Along the Arno)

The chief city in the Lombard plain is Milan, and its principal ornament, the cathedral, which draws thousands of pilgrims with its forests of spires, its lacelike facade and its impressive interior, is worthy of its fame. This lovely, huge, white marble pile looks as if the fairies had spun it in a million nights!

\* \* \* \* \*

Venice is a by-word to travelers. The praises of its canals and lagoons have been written and sung since early troubadour days. I was disappointed—but then Niagara disappoints some! It is picturesque, but Venice *has been*, and this fact everywhere impresses us.

Somehow, I had always imagined that a ride on the Grand Canal in the moonlight would be the most marvelously romantic experience in the world, but—the moonlight was there, and so were the lapping of the waves, the train of gondolas gliding along, the gentle music of the guitars—but something was lacking! "Something" that was *not* in Italy!

\* \* \* \* \*

Turning southward, a new vista of even richer beauty is discovered, and the "garden" of Italy—Tuscany—reveals one of the loveliest spots on earth.

In Florence, the ancient capital of Tuscany,

Rouen, France

Car in which Armistice was signed, now stationed in the court of the Invalides, Paris.

Pisa, Italy

Venice, Italy

Entrance to St. Gotthard Tunnel, Göschenen

Railway Stations, etc. Train shed, Berne, Switzerland

Genoa, Italy

Railway Stations, etc.

Here and There in Europe

Fontainebleau, France

Bersagliere (guards) at Viareggio Station, Italy

are united the beauties of a superb natural location and the most historic associations of the Renaissance.

In art it claims distinction as one of the greatest cities in the world, not only by virtue of its history but also as the present home of many of the great masterpieces of Italian painting.

In walking through the streets of Florence the visitor is ever conscious of the past greatness of the city. We see the house of Dante, the Ponte Vecchio where Cellini kept his little shop and worked his miracles in gold, the church—or rather the many churches—where Fra Lippo Lippi, Botticelli and Della Robbia worked at the great masterpieces which today draw throngs of reverent students of art to see them. We see the great piazza, bordered by magnificent buildings, where Savonarola met his death; we visit the convent at Fiesole where the great reformer lived and where also the gentle genius of Fra Angelico left its mark. On nearly every street one sees a ragged Tuscan palace, the most notable being that of the Medici; the peerless "lily" tower of Giotto, the vast cathedral, the innumerable gardens and the world famous art gallery make Florence one of the treasure cities of the world.

\* \* \* \* \*

All roads lead to Rome!

Rome is, in truth, the Eternal City. We may say of it that its past, its present and its future are one. Time rolls back in Rome as in a book. We walk on the very dust of Caesar, and every step we take is on historic ground.

Rome brings Caesar as near to us as Napoleon; we walk across the place where Julius Caesar lived; we stand on the spot where he was stabbed by Brutus; we can walk down from the Capitol into the Great Forum and read Mark Antony's speech in the place where Antony spoke.

I shall not try to picture the Forum—I suppose there is no site on earth in which is concentrated so much history of the world.

But as the history of Rome was submerged by the coming up of other nations, so the very monuments of Rome were buried in the dust of centuries. I was amazed as I stood amid those ruins and tried to picture what the place was once upon a time. Imagination almost reels to think of the splendor of the place when Rome was Rome.

And while Rome lived in pomp, with her

emperors on thrones of gold, her conquerors were hiding under ground. Down in the tombs were the persecuted Christians, driven to worship and perhaps to live among the dead. Forty groups of catacombs have been found outside the gates of Rome, cut out, sometimes five deep, in the ground, so that we may walk about in them today at the depth of forty feet below the surface and walk so far in them that we would travel 500 miles.

#### Sic Transit Gloria Mundi

Down in these tombs were the persecuted followers of the Carpenter of Nazareth, whose apostles had been led outside of the gates to be crucified. The Romans would have laughed if someone had said that these poor men, hiding underground, were founding an empire greater than their own. But think of these two empires: At one time there were in Rome, on the same day, two men, Nero and Paul; Nero lived in a golden house; Paul was in prison, in chains; yet Nero's empire has gone, Paul's empire has come. Peter and Paul fill Rome today.

It was a wonder I cannot express, that here was a great civilization before Christianity; that Christianity came into the very heart of it and was crucified; that the civilization ceased to be, the greatest power on earth broke down, and the persecuted Christianity inherited its greatness, establishing its empire throughout the earth, for all ages to come, so that today, when the Caesars are dead and men store coal in their palaces and drink liquor in their tombs, the great glory of Rome is the tomb of a fisherman whom Nero crucified—St. Peter's Cathedral—the church of the Vatican.

\* \* \* \* \*

From Rome to Pisa; from Pisa to Viareggio to Genoa; then out of Italy into France again at Aix-les-Bains, and on to London.

Here is where my memory fails—the going from Calais across the Channel to Dover, England! I *think* we went in a channel steamer; I *think* they said we were supposed to cross in a couple of hours; I *know* it took six hours, by clock, and ages by the imagination; and I *think* I heard someone say it was the roughest crossing in twenty-one months! At any rate—first a shiver—then a hot sweat—then a chill—then everything! At first I was afraid I was going to die, and then (and in a very few minutes, too) I was afraid I was *not* going to die! I forgot my sins!

Well, there's no use taking any more space trying to describe sea-sickness; it can't be

London - Piccadilly Circus

London - Leicester Square

London - Trafalgar Square

Seeing London by Motor Bus

With  
a  
Kodak  
in  
England

Warwick - Warwick Castle

Stratford-on-Avon  
Ann Hathaway's  
Cottage

done. It has been said that there is nothing new under the sun, but I beg to differ. To one who has never been sea-sick, it is new!

**Nothing Quite Like Home**

So, to London at last! And in those few days were crowded many pleasures. I was away from my party then, with only a friend of my mother, and together we "did" London.

I can't decide whether it was because we were again among people with whom we could converse without signs and note-books and phrase-books, or whether it was because we had known what suffering was, and survived (I can't forget the Channel crossing)—at least something made London welcome.

From London to Shakespeare's country, Stratford-on-Avon; then to Warwick and Kenilworth; to learned Oxford, and then to Liverpool to board the Victorian for HOME!

Henry Van Dyke knew his business when he wrote:

" 'Tis fine to see the Old World, and travel up and down

Among the famous palaces and cities of renown,  
To admire the crumbly castles and the statues of the kings—

But now I think I've had enough of antiquated things.

"Oh, London is a man's town, there's power in the air;

And Paris is a woman's town, with flowers in her hair;  
And it's sweet to dream in Venice, and it's great to study Rome;

But when it comes to living, there is no place like home.

"I know that Europe's wonderful, yet something seems to lack;

The Past is too much with her, and the people looking back.

But the glory of the Present is to make the Future free—

We love our land for what she is and what she is to be.

"Oh, it's home again, and home again, America for me!

I want a ship that's westward bound to plough the rolling sea,

To the blessed Land of Room Enough beyond the ocean bars,

Where the air is full of sunlight and the flag is full of stars."

## ONE RUN 50 YEARS!

John A. Graney was born in Bristol, Conn., January 1, 1853. Seventeen years later he was employed as a fireman on the Illinois Central run between Champaign and Centralia. He had fifty years' continuous service on this same run before being retired December 1.

Previous to his employment as a fireman he had worked in the Illinois Central shops in Centralia and for the Indianapolis & St. Louis Railroad, which is now a part of the Big Four Railroad.

Six years after he had started firing on the Illinois Central he was promoted to engineer. In 1893 he was transferred to the passenger service, driving Nos. 2 and 5 between Champaign and Centralia. He has driven these same trains ever since.

Several months ago Mr. Graney was presented with an honorary membership badge by the Brotherhood of Locomotive Engineers after forty-three years of continuous membership in the organization.

## Returns to His Old Love — Railroading

The following is from the Burlington (Iowa) *Hawk-Eye* of December 27:

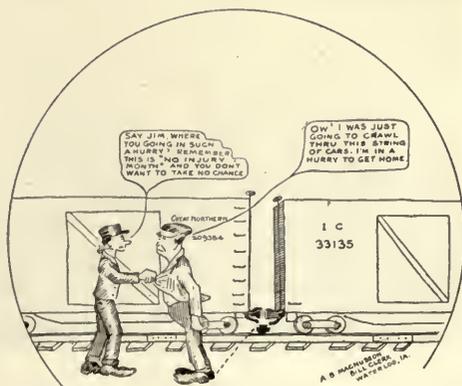

Paul E. Odell is returning to his old love — railroading.

He leaves Burlington today for Chicago to take up his new duties with the Illinois Central. Mrs. Odell will remain in Burlington, at their home, 724 South Garfield avenue, through the winter, joining Mr. Odell in Chicago in the spring.

Paul Odell came to Burlington about two years ago as resident manager of the Shower Brothers Company during the construction of the great plant north of town. After the plant was constructed, Mr. Odell remained in charge of operations there until a few months ago. Before going with the Showers people, in 1919, Mr. Odell had been railroading for many years, and for seven years with the Illinois Central. He returns to that road, entering upon special duties in the office of the general superintendent of transportation.

During their residence in Burlington, both Mr. and Mrs. Odell have been prominent

socially and have made many friends. Mr. Odell was active in fraternal and club work as well as in business; he is a natural "mixer" and leaves a large circle of acquaintances. For more than a year "P. E. O.," as he signed himself, has been a regular contributor to *The Hawk-Eye's* Sunday "colyum," "Breakfast Food."

An Echo From December

## Springfield—a Lincoln City in Illinois

*State Capital, on Our Lines, Has Many Reminders of Its Famous Former Citizen and President of U. S.*

THE names of Abraham Lincoln and Springfield, Ill., are inseparably linked together. It was there that he lived and practiced law. His political ambitions were born there. It was from there that he went as chief magistrate of the nation. And his final resting place is there.

Springfield is rich with memorials of the martyred president. The most striking of them is the monumental tomb in Oak Ridge Cemetery. It was constructed with funds collected by the National Lincoln Monument Association, formed May 11, 1865. Sunday schools, lodges, army organizations, individuals and states made voluntary contributions. Construction was begun in November, 1899, and the structure was completed June 1, 1901.

The monument, built of Quincy granite, consists of a square base 72½ feet on each side and 15 feet 10 inches high. At the north side of the base is a semi-circular projection, the interior of which is the vestibule of the catacomb, and gives access to view the crypts in which are placed the bodies of Mrs. Lin-

coln, the sons and the grandson, Abraham Lincoln, son of Robert T. Lincoln. On the south side of the base is a similar projection. The interior of this is elliptical; it is called Memorial Hall. The entire base, including these two projections, measures 119½ feet from north to south, and 72½ feet from east to west.

### Steps Lead Up to Terrace

In the angles formed by the addition of these two projections are handsome flights of stone steps. There are two on each end. These steps are projected by granite balustrades which extend completely around the top of the base, forming a terrace.

From the plane of this terrace rises the obelisk, or die, which is 28 feet 4 inches high from the ground and tapers to 11 feet square at the top. At the angles of this obelisk are four pedestals of 11 feet diameter which rise 12½ feet above the plane of the terrace.

Upon the four pedestals stand the four bronze groups which represent the four arms of the service: infantry, cavalry, artillery and

*The Lincoln Home at Springfield*

navy. A shaft rises from the obelisk, tapering to a square of 8 feet at the summit. A band, or chain, of shields passes around the obelisk and pedestals. Each shield bears the name of a state.

At the south end of the obelisk is a square pedestal, 7 feet high, which supports the statue of Lincoln. This pedestal is ornamented with the coat of arms of the United States and is intended to typify the constitution of the United States. Mr. Lincoln's statue above it makes the whole an illustration of the position he took at the outbreak of the Civil War.

The body of Abraham Lincoln is in a cement vault beneath the floor of the catacomb.

Lincoln's old home at Eighth and Jackson streets is kept intact in Springfield. It is open to visitors.

Places made historic by events in Lincoln's life while he resided in Springfield are marked by bronze tablets.

There are thirteen of them, and each one bears his name, the event which took place at that location and the date.

A statue which represents Abraham Lin-

# Illinois Central System Calls State Control of Rates Backward Step

There has been much discussion lately of bills introduced into Congress to take away from the Interstate Commerce Commission all authority over state rates. The proposed legislation, we believe, is unprogressive, impracticable and illogical.

Our Federal Constitution grew out of a generally accepted feeling on the part of the people that commerce among the states should be free. Our forefathers were convinced that nothing but ruin and chaos would result from a system which allowed one state to put restrictions upon the commerce of another state. The Federal Government was founded upon the theory that commerce and trade were national subjects and should not be subjected to local conditions. To that end the Constitution confers the exclusive power upon Congress to regulate commerce among the states. By a long line of Supreme Court decisions it is now thoroughly settled that a state must not be permitted to make any rate or regulation which will interfere with interstate commerce. The power of the Interstate Commerce Commission to condemn such rates which do discriminate against interstate commerce has been repeatedly upheld.

As a practical matter, everyone knows that a railway system traversing a number of states is operated as a unit. All its property is used in both interstate and intrastate commerce. Its revenues from both are commingled; its expenses as between the two classes of commerce cannot be accurately separated. It ought not to maintain upon its line as many separate and distinct systems of rates as there are states which it traverses. In the case of the Illinois Central System, passing through and touching fourteen different states, it is obvious at a glance that it ought not to have fifteen systems of rates, one applicable to interstate commerce, and fourteen others applicable to the commerce of the different states which it serves. If such a theory is sound, so far as the practical effect is concerned, it would be equally sound to say that each county traversed by the railroad should have the right to make a separate system of rates. Of course, there is a political difference as between the relation of counties to states and states to nation, but, as a practical matter, the two situations are analogous.

No one has ever been able to give any good reason why a passenger making an intrastate journey should pay a rate lower than or different from that of the passenger making an interstate journey, both occupying the same seat and receiving precisely the same accommodations. Rail-

roads in the United States have for a long time struggled against this divided authority. They have been subjected to a number of conflicting regulations, and have been greatly embarrassed and inconvenienced by the necessity of obeying the mandates of various state commissions on the subject of rates, many of which conflict with one another. In some instances state commissions have frankly announced their purpose to give to the people of their own state an advantage over the people of another state by making a discriminatory rate adjustment. In one western state, a state commission put out an order requiring the railroads to put up placards in their stations explaining how an interstate passenger could defeat the interstate rate by buying a ticket to a border line point, getting off the train, and re-buying across the border. All these considerations induced Congress, in the Transportation Act, to provide more convenient machinery than had theretofore existed whereby discriminations against interstate commerce could be removed, and whereby the states would be required to contribute their fair share toward the expense of maintaining the transportation machine.

While present legislation does not go so far, yet it is recognized by all thoughtful students of the problem that there should be but one body with power to regulate rates, and that the national body. There would still be left to the state commissions many important duties in connection with their police power. Their jurisdiction would be unimpaired as to service matters, such as operation of intrastate trains, character of station facilities, crossings, etc.

It is a great mistake to suppose that the control of rates by the Interstate Commerce Commission would make it more troublesome and expensive for patrons of the railroad to obtain relief. The Interstate Commerce Commission has more than a thousand expert employes, drawn from every section of the country, thoroughly familiar with local problems and competent to assist in the solution of rate questions. A petition to the Interstate Commerce Commission will in nearly every case bring one of these examiners almost to the door of the petitioner, where the complaint can be heard. The proceeding is informal, the expense is less, generally speaking, than is involved in going to the state capital to present a matter to the state commission, and no reason exists why the public generally should not look with favor upon a system which will insure fair, consistent and harmonious treatment of the rate structure of the country.

The removal of the war tax January 1 has had the effect of making a substantial reduction in both freight and passenger rates, and the railroads have placed in effect reductions in freight rates on agricultural products. They will continue to make reductions as often as they are able to do so without impairing their ability to serve the public.

Constructive criticism and suggestions are invited.

C. H. MARKHAM,  
President, Illinois Central System.

# The Railroad Labor Board, by a Member

## Ben W. Hooper, Vice-Chairman, Explains Working of That Much-Discussed and Important Organization

There is a great deal of public interest in the workings of the United States Railroad Labor Board, particularly since this board received much of the credit for averting the railway strike threatened last fall. Here we have a summary of the board's organization and policies—the board's reason for existence—as outlined by Ben W. Hooper, former governor of Tennessee, member of the public group of the Railroad Labor Board, and vice-chairman in its organization. This speech by Mr. Hooper was delivered before the New York Railroad Club December 15 last.

**I**T is not my purpose tonight to bear in mind your connection with the great transportation business of this country. I prefer to think of you, on this occasion, merely as American citizens, far more deeply concerned about the welfare of your country than you are about the advancement of any private interest.

It is my belief that some of the mighty men who figured as pioneers in railway construction on this continent were inspired by ideals far more lofty than those of financial aggrandizement. They felt the thrill of conquering genius as they advanced across river and plain and cut their way through wilderness and mountain. In their wake, there followed such a tremendous flood of humanity as history has not recorded since the teeming millions of Northern Europe swept downward to the Mediterranean. But this westward movement of men did not have for its objective vandalism or war. It was an army of peaceful construction and development. On every side it brought blossoms and verdure to the land, and by the magic of strong wills and courageous souls there sprang up, in the wild places, cities and villages where the hum of industry and traffic mingled with the laughter and song of women and children.

### Age of Pioneer Is Gone

But that splendid period, when those men of prophetic vision and Napoleonic action laid the foundations of an industrial empire and tied the oceans together with rails of steel, has passed away.

While railway construction is not by any means at an end, the problems of transporta-

Ben W. Hooper

tion in this day and time are widely different from what they were in the period just referred to. They demand, however, no less degree of courage, power and genius.

The people and their government gave aid and succor, financial and otherwise, to the railroad-building projects of earlier days. They also conferred upon the carrier great corporate powers for the successful operation of an enormous business that is, and must ever be, a monopoly. Not only is railway transportation essentially a monopoly, but it is a monopoly of a thing upon which depends the very life of our nation and of the individuals who compose it. Upon this fundamental fact is based all the regulative and restrictive legislation touching railroads that has ever been enacted.

### A New Era in Railroading

In my judgment, it is a blind waste of energy for men to strive to bring about a return to the conditions surrounding railway operation a generation ago. We can no more restore to those conditions than we can restore the other facts and features that went to make up

a somewhat crude and undeveloped country. There is no note either of elation or of regret in this statement. It is a simple recognition of the changes that time has wrought in the railway business, as it has in all things else American.

When every man's water supply was dipped with a gourd from a spring or lifted from a well in the old oaken bucket, there was no need of elaborate laws and ordinances regulating water systems. When the tallow candle was the sole dependence for illumination, our legislatures and city boards were not worried by the management or regulation of lighting systems.

When our country had only a few feeble steam railroads, running through sparsely populated and undeveloped domains, the need of restrictive legislation was not felt. But today, in a country of more than 100,000,000 persons, with railway lines stretching thousands of miles and criss-crossed like a gigantic spider web, with agricultural and industrial interests totaling in their output multiplied billions of dollars annually, there have arisen social and economic conditions that make the railway problem a challenge to the best minds of this age. So there need be no Alexandrian laments among railway men that there are no other worlds to conquer. It is true that these new and unconquered worlds present problems different from the old, and they must be attacked by railway men of a new type, armed and equipped in a modern way.

#### **What Today's Executive Must Be**

The railway executive of today not only must have the brains and the energy to conduct a vast business of intricate complexity, but he must continually deal with governmental agencies, state and national, and must handle sociological and economic questions of constantly increasing difficulty and importance. In fact, the railway executive of today must be a statesman and a diplomat as well as a business man of superlative ability. He must also be a philosopher, reconciling himself to the task of dealing with things as they are and not as he thinks they should be. He will look squarely in the face the fact that an overwhelming and unalterable preponderance of public opinion has decreed that, as a matter of self-preservation, the carriers must be closely regulated, and that the people will never subject themselves to the risk of having the gov-

ernment dominated either by the carriers or by their employes.

He will likewise realize that public opinion is not hostile to the carriers, but is interested in their prosperity and anxious to see them make money for their stockholders.

He will discern that there is no large percentage of the people in this country who, at this time, favor public ownership of the railroads or who even want them restricted by law one whit more than is clearly essential to the public welfare.

#### **What the Railway Problem Is**

Out of all these angles and corners of this situation comes the railway problem of today—with only such governmental regulation as is necessary to protect the rights and interests of the people, can the railroads be successfully operated? Or will governmental limitations upon managerial judgment and discretion drive the roads into bankruptcy and ultimately into government ownership?

That is a blunt statement, but nothing is to be gained by upholstering this rugged question with the velvet of verbiage.

Mark you, I am not asking whether or not it is possible to carry the matter of public regulation of the carriers so far as to render their successful operation an impossibility. That question carries with it an inevitable affirmative answer. I am merely asking whether or not the degree of public regulation absolutely essential to insure efficient public service and to protect the people against oppression makes private operation of the roads impracticable.

It is obvious that the man who answers this question must first answer another, and that is, how much and what sort of public regulation is essential to the welfare of the public?

Upon this last question, there would be a promiscuous and multitudinous diversity of opinion.

#### **Birth of Railroad Labor Board**

For the purposes of this occasion, I am going to assume that the regulative legislation enacted by Congress prior to 1920 is not in excess of what it ought to be. I am going to take it for granted that the Interstate Commerce Commission, created away back in 1887, has justified its right to existence and to the exercise of the powers conferred upon it by Congress. But I am not going to ask you to assume that this new-fangled tribunal, the Railroad Labor Board, is essential to the public weal. It is such a recent experiment that

no arbitrary or conclusive presumptions stand in its favor. But, with your indulgence, I am going to present a few facts upon which you may base an opinion as to whether the Railroad Labor Board is entitled to your approval and that of the public in general. I shall not be such a dare-devil, however, as to invite any expression of that opinion at this time.

The labor section of the Transportation Act of 1920 was enacted by a Republican congress and signed by a Democratic president, because they had a full realization of the dangers of the post-war conditions that surrounded the railroads and involved the public. Railway working rules and wages had been greatly influenced by the war and federal control of the roads. The carriers contended that the labor conditions that existed at the termination of federal control were artificial, unreasonable, uneconomic and burdensome, and that the roads could not live under them.

#### How a Rail Crisis Was Met

The employes insisted that their wages were among the last to be increased, that this increase was insufficient, and that the working rules established during federal control had given them little or nothing to which they were not entitled. Add to this sharp dispute the disturbed and uncertain industrial conditions that existed throughout the country, and you have enough explosives and combustibles to render a conflagration almost a certainty.

It was at this juncture that Congress said, through the Transportation Act: "Let us see if a way cannot be found to settle these railway labor disputes by the establishment of an impartial tribunal before which they can be tried, as any other law suit." This step was not taken by Congress because the people desired to intermeddle with the affairs either of the carriers or of their employes. It was taken because the people knew that they would otherwise be ground to pieces between the upper and the nether millstones.

Thus the Railroad Labor Board began to function at a most critical period, and there was immediately dumped upon the work bench in front of it more work than ever confronted any other governmental agency. Almost before it could perfect its organization, the wages of every railway employe of every class in the Union were brought into dispute, and the rules and working conditions of these two million men were likewise submitted to the board. In

addition to these two great controversies, involving, in fact, several hundred disputes, scores of questions of secondary importance and hundreds of grievances have poured in upon the board in a steady stream.

#### Adjustment Boards Were Lacking

The adjustment boards which the Transportation Act contemplated should be set up, by the mutual agreement of the carriers and employes, to act as inferior courts for the trial of these grievance cases, were not established. Only recently the first few adjustment boards began to function. The lack of them made the prompt and satisfactory action of our board impossible.

Under the strain of this crushing load, the board has been compelled to double back on the 8-hour law, working eight hours before lunch and eight hours afterward. For all this, we have received no punitive overtime, but many punitive maledictions for sins of omission and commission.

In these twenty-one months, the board has disposed of two general readjustments of wages, has revised the rules of the six shop crafts and of the maintenance of way employes, has stopped one general strike, and has decided 950 miscellaneous disputes. And, despite all this, a newspaper punster has referred to us as a "Board of Meditation."

At any rate, we are not liable to the charge of having restricted the output.

There is one thing, however, that has given the board a soothing feeling of self-satisfaction, and that is the fine team work manifested by the carriers and their employes in "cussin'" the board. This has been accepted as conclusive evidence of the board's fairness and impartiality.

#### Board Blamed by Both Sides

If only one side had criticised our decisions, we might have been suspicious of ourselves. This enflaming fire of criticism has been peculiarly beneficial to the public members of the board in that it has removed all danger, if any existed, of our entertaining any feelings of partiality for either side. Of course, I mean that it has caused us to love both sides with equal fervor.

Returning to a serious discussion of the board's work, it has been truly remarkable to see with what unanimity and alacrity both the carriers and the employes have brought their differences to the board for adjustment in accordance with the law. It is worthy of fur-

ther emphatic notation that both parties in a vast majority of instances have respected and obeyed the decisions of the board. On account of the fact that the holiday season of peace and good will is so near, I will not mention anybody who has violated the board's decisions.

It is not good taste to hang lemons on the Christmas tree.

The law creating the Railroad Labor Board is a unique piece of legislation in this country, but it has numerous counterparts in other lands, including Canada, Australia and several European countries. It is an odd combination of voluntary and compulsory arbitration.

### Compulsory Points in the Law

Public attention has not been directed to the fact that there is anything compulsory in the law, but there is. There are three mandatory provisions in the statute, binding alike upon the carrier and the employe. The law says that:

*First*, the carrier and the employe, in case of a dispute, *shall* endeavor to settle the matter by conference and negotiation;

*Second*, if they fail to reach an agreement by direct conference and negotiation, they *shall* submit the dispute to the Railroad Labor Board;

*Third*, the Railroad Labor Board *shall* decide the dispute.

If, upon investigation, the board finds that this final decision is violated by either party, the board "may make public its decision in such manner as it may determine."

In other words, there is no penalty attached to a violation of the board's decision, except that the board may point the finger of scorn at the violator. The Transportation Act, as it passed the United States Senate, contained a mild anti-strike provision, as well as penalties for the railway officials violating the law. This provision was eliminated by the House, and the board was left dependent on public sentiment for the enforcement of its decisions. By the way, it is an item of curious interest that the State of Texas, in its suit against the board, takes the position that this power to direct public attention to a violation of the board's decision conflicts with the provision of the United States Constitution which forbids "cruel and unusual punishments."

### Dodged a Pitfall in the Law

The train and engine brotherhoods, in their

recent strike ballots, seemed to draw a sharp distinction between those provisions of the Transportation Act which they considered imperative and those which they did not consider imperative. The public, at the time, did not appear to grasp this idea. The brotherhoods were really protesting against a further wage reduction and the change in rules which the carriers sought, but I could not get them to say so at the strike hearing. They shrewdly confined themselves to the July wage reduction, already accomplished—on the theory, I take it, that the law did not forbid their striking against the board's final decision, but that it did command them to go through all the preliminary steps leading up to a decision before they struck, and that they would therefore be violating the law if they struck against a possible future decision of the board toward which the mandatory preliminary steps had not yet been taken.

This must be noted as an interesting and important development in connection with the practical application of this new law.

It is proper to say just here, not in a controversial way, but as a mere matter of abstract interest to all students of the Transportation Act, that it is the contention of the board that the Pennsylvania System, in its dealings with the shop crafts, fell into this pitfall which the brotherhoods had side-stepped. The Pennsylvania, however, has very able counsel who do not accept this dictum of mine, and it remains to be seen whether or not the courts will accept it.

Personally, I am glad that this honest difference of opinion as to the meaning of the law is to be judicially settled.

### How the Groups Work Out

The Labor Board is not sensitive about law suits brought against it. The only thing which really grates upon the delicate nerves of the board is a resolution adopted by ill-advised persons favoring the abolition of the board. It is now generally conceded that such resolutions are contrary to the public policy and against the peace and dignity of the commonwealth, and they have grown gratifyingly few and far between.

There is another feature of the Transportation Act that aroused debate at the time of its enactment, and that is the group make-up of the board. Recently there has been a revival of the unfriendly criticism of this provision, which gives to the carriers three representa-

tives, to the employes three, and to the public three.

As a member of the public group, I have watched at close range the actual test of this provision, and I am convinced of its wisdom.

The usual objection to it is that it is an incongruous thing to place upon a quasi-judicial tribunal advocates of the litigants.

It is frequently stated that these two expert groups uniformly line up with the respective interests from which they came. This is not true. While such would be the obviously natural tendency of these men under ordinary circumstances, it must be remembered that they are under the obligation of an official oath.

#### Votes of Members Change

A day rarely passes in the proceedings of the board when members of these two expert groups do not cross over the line and vote with the opposing interest. It cannot possibly happen that either the carrier or the employe is invariably in the right, and these expert groups are experimentally aware of this fact. Moreover, the board, by reason of the presence of these gentlemen among its membership, constantly has at its command a wealth of information relative to all phases of the railway labor question.

The work of the board during the past year has been performed amid very perplexing conditions. When the July wage-cut was made, it was capable of demonstration that the cost of living had diminished, and yet the decrease had been very irregular. The cost of some of the necessities of life had descended far more rapidly than others, and occasionally a descending item of living cost showed a tendency to rise again.

The economic laws governing this thing have never been reduced to an exact science. No man could have accurately predicted a year ago the course of the markets. The truth is that the prices of commodities are not governed by natural laws so exclusively as they once were. Nature will finally have her own way, but her progress will be resisted at every step by humanity. Practically every line of business in the United States, except farming, was organized to resist deflation on its own part and to demand it loudly on the part of all other businesses.

When the proclamation of war was issued, it was a bugle call to a large percentage of our population to go forth and gouge their neighbors, and some of them have never yet heard the recall.

#### About Averting the Strike

At the end of October, 1921, the strike threat of the train and engine service brotherhoods came to a focus. The public thereupon suddenly awoke to the fact that there was a Transportation Act and a Labor Board. Without stopping to inquire whether or not the Labor Board had teeth, it was enthusiastically admonished from all sides that somebody must be bitten.

The board officially, and some of its members personally, took steps that averted the strike. As soon as this was accomplished, the board was treated to a shower of verbal brickbats because it had, forsooth, violated the quasi-proprietries of a quasi-judicial tribunal.

When we saw the public, like a fair maiden, suffocating in the smoke and lapped by the flames on the twentieth floor of a burning building, and when we unceremoniously grabbed her and carried her to a place of safety, there were certain fastidious souls who complained because we had indelicately mussed up her garments and disarranged her marcel wave.

There was one thing that a few sophisticated and hard-boiled individuals never could believe, and that was that I did not promise the brotherhood officers, when addressing them, to take something away from the carriers and give it to them; and yet, that I did not was literally true.

#### How the Crisis Was Passed

The memorandum which was adopted by the board and which was finally the means of averting the strike merely called attention to the fact that it was premature to start a row about another reduction in wages, because the board did not propose to readjust the wages of any class of labor until the rules and working conditions of that particular class had been passed upon.

I maintain that this was a sensible, just and proper course for the board to pursue, and it will finally receive the approval of both the carriers and the employes.

Wages cannot be intelligently fixed without having a known and established schedule of working rules to which to apply them. But many people were misled by erroneous statements in the press to the effect that I had definitely promised for the board that the wages of the brotherhoods should not be touched for a year or until July next. No such statement was made, and none was necessary. No state-

ment was made that amounted to a prejudgment of any question that might thereafter come before the board.

### Board Has Justified Action

But it was said further that the board's memorandum, in effect, closed the door in the face of the carriers and the employes who might want to ask for a readjustment of wages, because there would be an interminable delay in completing rules. On this point the board has been thoroughly vindicated, because it has already issued its decision on shop craft rules, effective December 1, and its decision on maintenance of way rules, effective December 16, and it will be weeks and possibly months before any petition for a wage revision is filed with the board. So the carriers and the employes are not waiting on the board in this matter, but the board is waiting on them.

Some of the carriers may not be altogether pleased with the rules handed down by the board; neither are the employes entirely pleased. Doubtless the board has made a few scattering mistakes, but it has tried very hard to protect the rights of the employes and at the same time interfere as little as possible with the discretion and judgment of the management in the operation of the roads.

I am sure all of you would be surprised if you could examine the submissions on rules made by the various carriers and see what a very wide diversity of plan, purpose and opinion is reflected in them. There is an entire absence of anything resembling co-ordination. That which one carrier strenuously opposed another as cordially approved, and that, too, when it was a question of general application, unaffected by local conditions. While this situation served to add to the labor of the board, it was considered creditable to the carriers in one respect, for it showed that they had not prearranged a hard and fast set of irreducible demands.

### The Evil Effects of a Strike

Reverting to the strike episode, there was a section of public opinion, outside of railway circles, that wanted a strike. At least, these persons thought they wanted it. Their argument was that, if the railway employes wanted to strike, they should not be hindered, that it was a good time for a strike, and that the railway organizations could be crushed and union labor, in general, given a set-back.

There were several weak spots in this argument. In the first place, there is no such thing as a good time for a railway strike.

In this connection I am reminded of a moonshiner whom I once represented in a Tennessee court. He was convicted at the spring term of court and pleaded with the judge for a suspension of his jail sentence till the fall term, because he had an ailing wife, and his seven children were too small to plant a crop.

Upon this plea of the imminent starvation of his family, the judge suspended sentence till fall. When the fall term came, the moonshiner returned, according to the terms of his bond. When his case was called, he unwound his tall form from the chair and importuned the court to suspend his sentence a few weeks longer, in order that he might get in enough firewood to last his helpless family till spring.

The judge, growing somewhat impatient, exclaimed: "Dorsey, you didn't want to go to jail last spring, and now you don't want to go this fall; you are hard to please."

The moonshiner replied: "Judge, when you come to think about it, they hain't no handy time to go to jail."

While last fall might have been an opportune time to fight labor unions, the price of the fight would have staggered the nation. This country has never experienced a general railway strike, and but few men have any adequate conception of the ruin and misery it would bring to the people, not only the poor, but also the well-to-do.

### A Bad Time for Questions

For the last few months, tens of thousands of men have been straining their credit and husbanding their resources in an effort to pass through this period of post-war depression without bankruptcy. They have stood on the brink of a precipice and looked ruin in the face. A general railway strike would have pushed them over the edge and plunged them into the abyss. They were not able to stand anything more.

An old Tennessee mountaineer was carrying on his shoulder a heavy back-log for the fire, when one of the children said something to him. He made no reply till he could shuffle up to the hearth and roll off his burden, when he turned angrily to the child and said: "Now, don't you never speak to me again when I am in a strain."

Thousands of men during the last few months have been in such a financial strain that one more word would have been too much, especially if that word had come from a banker along about renewal time.

Then another thought occurs to me: Would

it have been wise to have crushed the railway unions, even if it could have been done? What would have taken their place? Is any man so blind to all the aspects of modern industry as to believe that the time will ever return when railway labor is not organized?

If the brotherhoods had been crushed, rest assured that organizations of some character would have sprung up in their stead, and their successors, in all probability, would not have been animated by motives half so conservative and patriotic as those which control the brotherhoods.

### Labor Has Right to Organize

The right of labor to organize is based on sound principles, recognized by Congress and sanctioned by the courts of the land. The problem in this country today is not how to stamp out and destroy organized labor, but how to deal with its just demands fairly and humanely, and how to curb its unjust demands and control such of its activities as threaten the public welfare.

In my judgment, the survival of this republic depends upon the wisdom with which this question is handled.

Friendly as I am to the theory and principle of organized labor, I am profoundly awed when I contemplate its possibilities for evil. If organized labor is to be permitted to throttle individuality, destroy initiative, exalt inefficiency, dominate management, limit production, ignore the rights of the public, and set up a class government, then indeed is this country headed toward bolshevism and death.

All of these things are the possible, but not the unavoidable, results of organized labor. They are merely the abuses of a thing inherently good. On the other hand, if organized labor confines its efforts to the legitimate advancement of the cause of the working man, by the procurement of a just and reasonable wage and wholesome working conditions, the maintenance of an increasingly good standard of living, and the preservation of the political and civil rights of labor, then organized labor not only will serve its own interests, but will constitute one of the bulwarks of the American republic.

### Railway Labor Is Set Apart

In the regulation of railway labor there are certain principles involved which do not apply to labor in general. The people of the United States must have efficient and uninterrupted railway traffic. The employes must share with

the carriers the execution of this public trust. When a man enters the employ of a railroad, and every day that he is so engaged, he should understand that whatever rights men may have to strike and tie up a strictly private business, they have no such right, morally at least, to tie up the railroads and destroy the property, business, health, comfort and lives of innocent men, women and children.

This does not mean involuntary servitude. It would not mean that the railway employe would be compelled to work for a railroad. It would simply mean that he would have no right to conspire with his fellow employes to destroy, by concerted action, the transportation of the country for the purpose of enforcing his demands against the carrier. If this is not a law, it ought to be, and it will be.

In consideration of such a legal regulation, it would be the duty of the public to make sure that an absolutely impartial tribunal was provided for the adjudication of all matters of dispute between the carriers and employes, and this tribunal should place an exalted estimate upon the supreme importance of an honorable and patriotic discharge of this official duty.

### Where the Public Comes In

The millions of dollars wasted by both sides in industrial warfare would be saved to enlarge the income of the carriers and the wages of employes or to diminish the rates paid by the people.

The public should then realize that a living wage means something more to an American citizen than a bare existence, and that the highly skilled men into whose care the lives of millions of people are constantly entrusted are entitled to a wage commensurate with their skill, hazard and responsibility.

The employes should be expected to recognize the fact that there is a limit to the ability of a carrier to pay wages, and that there is no mysterious and miraculous fountain of inexhaustible gold flowing into the coffers of a railroad. Every cent of its revenues must come from the pockets of the people. It is not to the interest of either the employe or the public that wages be made so high as to overburden the carrier. It is obvious, however, that the ability of the carrier to pay cannot be treated as a controlling consideration in fixing wages, for this might result, in some instances, in requiring the employe to work for little or nothing.

We stand now upon the threshold of a new

year—the fourth since our country emerged from the war. While the process of deflation is not complete, it has proceeded so far without any industrial catastrophe or political upheaval. The railway industry has been particularly fortunate in avoiding any great disaster, though it has been undeniably pulling a heavy grade for the last year.

I believe that we can all now discern the first gray streaks of dawn upon the eastern sky. Nothing else can so hasten the coming of the perfect day as the rehabilitation of the great transportation systems of this country. To this end, it is indispensable that a magnified spirit of co-operation shall exist between the carriers and their employes. For the consummation of this essential thing, the Railroad Labor Board pledges its earnest efforts.

#### Opportunity in Railway Work

The most inspiring scene I have ever witnessed—more filled with human interest and dramatic power than any artificial spectacle of the stage—is the meeting of the executives and leaders of the railroads of the United States and of their two million employes for the peaceful submission of their industrial contro-

versies to the arbitrament of a government tribunal. What a tribute to the majesty of the law! Upon the carriers' side of the table, I have seen men who, a few years ago, would have been sitting upon the side of labor. They exemplify the possibilities in this land of opportunity, where the laboring man of today may be the captain of industry tomorrow.

Since I came into this hall I have been told upon good authority that 90 per cent of the railway executives of this country came up from the ranks of labor. This is the genius of our free institutions, and it was upon this rock that our fathers founded our republic.

Whenever reverence for the law and respect for constituted authority have fled from the hearts of the people, then will fall across our land the shadow of the approaching time when the lizards will sun themselves upon the crumbling walls of New York and the archaeologists of some alien race will dig in the ruins for the vestiges of a dead nation.

But if we are guided in our enactment, administration and observance of the laws by Christian consideration of the relative rights of men, our republic will still shine resplendent in its leadership of the nations at the second coming of the Prince of Peace.

### WHERE THE SEMINOLE LIMITED ENDS ITS RUN

# The Hobo, a Real Problem on the Railroad

*Although Distinctly an American Type, He Is Frequently a Criminal and a Menace to Society*

By T. T. KELIHER,  
Chief Special Agent

THE modern tramp, or "hobo," is distinctly an American type. The species is not found in any other civilized country in the world. He is the product of our own civilization:

The first appearance of the tramp, or "hobo," as he is known today, followed closely after the political and industrial crisis resulting from the great Civil War. Before that time, occasionally, a journeyman mechanic would travel on foot from place to place, seeking honest employment, as had been the custom among mechanics and artisans from time immemorial. The opening up of the vast empire of the Middle West and the West, the era of railway building that connected the Atlantic with the Pacific, the Great Lakes with the Gulf, and the Canadian border with the Mexican border, offered a means and an opportunity, undreamed of before, for those so inclined to gratify their wanderlust and spirit of adventure.

## First Hoboes Met Favor

At first these migrations of idle men from place to place were viewed with toleration and encouraged by the aid of food and shelter, on account of the many in their ranks who had lately gallantly served their country in its hour of trial and need, and in the popular belief that they were honest working men, seeking an opportunity to better their condition and gain a competency from the vast storehouse of natural wealth in the fast-developing West. Gradually, however, there grew up among these migratory bodies of men—among whom was found, occasionally, a harmless, happy-go-lucky vagabond—a class of unscrupulous mendicants, who perceived an opportunity of leading an easy, indolent and nomadic life by imposing upon the good nature and generosity of a sympathetic and indulgent public. These Argonauts of hobo-dom were wise enough to condescend occasionally to perform light tasks of labor for short intervals—the shorter the better—and thereby to do their bit toward maintaining

the myth of "an unfortunate working man, seeking employment."

The ease with which these pioneers of "See America First" obtained a livelihood from the gullible public, and the ease with which they succeeded in traveling over the railroads of the country, soon attracted to their ranks a vast army of men of like inclinations and tastes, who, as the public gradually became aware of their true character and hypocrisy, found their path not the rosy one of former years. As a result of the idle and useless lives they had lived, they preferred to become criminal vagabonds, rather than to seek an honest livelihood by honest labor.

## Criminals Among Them Today

Consequently, today, a vast majority of the tramps and hoboes who infest our highways and railroads are criminals (and not *bona-fide* working men, as some "sob sisters" would have one believe), who are either going to some designated rendezvous to commit a robbery or other felony or who are fleeing from the scene of their latest crime.

Their number has been augmented in recent years by the addition of the "I. W. W.'s" and the Bolsheviki, who are largely criminal in their inclinations, thoughts and habits, and those that are not genuinely criminal are suffering from insanity in one form or another. Their hands are ever raised against their fellow men, against law and order and organized society, and they are a constant and an ever-increasing menace to the security of life and property of all organized society and orderly government.

Today this vast, floating, social miasma is poisoning the youths of the land and all those who come in contact with it or near it. Its poison has penetrated into the confines of every village and hamlet throughout the land, spreading and inculcating in the minds of our youths and the unthinking the damnable doctrine that the state and society owe to the individual, without any effort on his part, a living; that, if the living is not handed out on a silver platter, one is justified in taking or stealing the property and goods of another who has, by

his toil and industry, accumulated a competency to guard against the vicissitudes of old age; that one owes no duty or loyalty to organized society or government, and that those things which one cannot take or steal for his own use, should be destroyed by a systematic sabotage that will deprive the owner thereof of the result of his honest endeavor.

### The Jail as a Rest Club

This most undesirable condition has not attained its present menacing state without the aid of those outside the ranks of hobo-döm. There have been constructed, at convenient intervals about the country, clubs and rest sanitariums for the use of the hobo fraternities. These clubs are sometimes erroneously called jails or houses of correction, by the uninformed.

These clubs, or rest sanitariums, are usually furnished with all modern and up-to-date conveniences, and some of them are almost palatial in their appointment. Semi-annually, or at least annually, a committee called the grand jury makes a personal inspection of these

clubs and rest sanitariums that are within its jurisdiction, and woe to the sheriff or jailer who unfortunately failed in the slightest degree in maintaining the high standards of excellency! Should the grand jury fail in its duty in this respect, there is always a self-constituted committee to look after the welfare and comfort of all the hoboes and criminals, even though a hundred decent, God-fearing, law-respecting citizens and their children, through misfortune and sickness, may be living and suffering in hovels and without the bare necessities of life.

That this most deplorable and regrettable condition prevails is known to all those who have given the matter the slightest consideration.

The railroads of the country are the chief sufferers from this cancerous social growth. There is no property right or other rights of the railroad that the modern hobo feels called upon to consider or respect. Millions of dollars worth of railway property and merchandise in transit are destroyed and stolen annually by this class. The actual value of mer-

*Some First Offenders—Box Car Robbers*

*Some Old-Timers, Long at the Game*

chandise stolen is only a small part of the loss of merchandise in transit.

**Destroys More Than He Steals**

The average hobo realizes that he is not provided with means for carrying away a large amount of bulky goods. Consequently, when hoboes enter a merchandise car, they break open a great many cases and dump or throw out the contents on the floor in searching for small, compact, valuable goods that they can carry off concealed about their persons. It oftens happens that they will not take more than \$50 value in goods, such as silk shirts, silk underwear, silk stockings, other small, compact, valuable articles, etc., but they will destroy and damage \$500 worth of goods by destroying the original containers and soiling the contents by tramping on them on the dirty floor of the car and otherwise damaging them.

Hoboes are the constant causes of fires that destroy buildings, empty box cars and other equipment. To build camp fires they abstract the packing waste from the journal boxes, causing journals to run hot and burn off, and thereby causing wrecks that cost the railroads the loss of many thousands of dollars and, in many cases, loss of life and limb. They are a constant menace to the safety of thousands of passengers, in that they often, in revenge for some real or fancied inconvenience caused them by some employe of the railroad in the performance of his duty, will tamper with switches and electric signals and commit other acts of sabotage, thereby causing derailments and wrecks that result in loss of property and life and limb.

The criminal hobo will shoot to kill, without warning, the watchman or other employe who happens to come upon him in the act of committing a robbery. The morning reports are full of accounts of watchmen who have been killed, while in the performance of their duties, by hobo trespassers.

**Trespassing Results in Death**

The loss of life and limb on account of hoboes, riding trains and trespassing upon the right-of-way and the consequent financial and economic loss to the country and the railroad are appalling. The reports for all railroads during 1919 show:

Trespassers killed .....	2,553
Trespassers injured .....	2,658
<hr/>	
Total .....	5,211

and during 1920:

Trespassers killed .....	2,166
Trespassers injured .....	2,362
<hr/>	
Total .....	4,528

During 1921, on the Illinois Central and Yazoo & Mississippi Valley railroads, 98 trespassers were killed and 221 injured.

These figures give some idea of the magnitude of the problem that confronts the railroads and the public today. The best minds of the country have given the subject their attention, and, as yet, no practical solution of the problem has been offered. "What is the best thing to do that will decrease the number of, and finally eliminate, tramps and hoboes?" is the perplexing question. It is admitted by all cognizant of the facts that those countries that have stringent anti-trespass laws and severe labor penalties that are vigorously enforced suffer little from the hobo nuisance.

That stringent laws were found necessary to cope with idleness and vagrancy in remote times is vouched for by the enactment of a law by the English Parliament in 1530, a severe law, which read, in part, as follows: "Any person being whole and mighty in body and able to labor" found begging or being a vagrant might be arrested and "tied to the end of a cart naked and beaten with whips throughout the town."

**Death Penalty for Vagrancy**

Five years later, the punishment for "rufflers, sturdy vagabonds and valiant beggars" who persisted in not working, after a whipping, was increased to have the "upper part of the gristle of his right ear clean cut off" and, if still persistent, he was to be "tried and executed as a felon." It is needless to say there were not many cases needing the "upper part of the gristle of his right ear clean cut off" or "execution as a felon" in England for vagrancy, while this statute existed.

It is a fact that the American hobo hates work with an enduring hatred and suffers great mental anguish while performing the slightest task of manual labor.

A uniform law against vagrancy and trespass, with actual labor on public roads or stone piles from thirty to ninety days as a penalty, will, to my mind, go a long way toward a solution of the problem. I fully realize, however, that a small, though well-organized, minority of misguided and mistaken idealists makes the passage of such a law,

through the many different state legislatures, well-nigh impossible. Until all the people awoken to a realization of the vital impor-

tance of the matter, not only to the railroad but to themselves and their sons, I see little hope for improvement.

## Engineer Has Had One Oil Can 25 Years

*A Good Engine and a Good Engineer*

Here is Engineer Joe F. Randall of the Tennessee division. Behind him is his engine. In his hand is an oil can he has been using for twenty-five years.

"I have run this engine eleven months without the renewal of either cylinder or valve packing rings, for any cause, and there is no blow in either," says Mr. Randall. "I ran my preceding engine twenty-five months without the renewal of either cylinder or valve rings, without a blow. When this first engine, No. 1096, went in the shop four months later, they found no carbon in her valve rings; both valves and cylinders were perfectly smooth.

"This was a saving of both labor and material, as it takes five hours for a machinist and his helper to renew a set of cylinder packing."

In addition to using the one oil can twenty-five years, Mr. Randall still has the same tools

that were issued to him when he began work for the company as an engineer, January 1, 1883, almost forty years ago.

"I have been able to keep them by seeing personally after them at all terminals and also when changing engines," he says. "I feel it a duty I owe to the company. When supplies are given into an employe's care, he should see that they are kept in good repair and not lost or wasted, just the same as if they were his personal property; and if anything is lost, he should be able to account for it.

"This is the kind of saving that will keep up the rate of pay and care for the dividends of the railroad, as well as our own individual accumulations. One who becomes willfully wasteful generally comes to woful want. Therefore it behooves all to form the habit of saving and caring for the things given into their care as if they were personal property."

# Pro and Con of "Labor Leaders" Taken Up

## President C. H. Markham Replies to Charges Dragged Into Discussion by William H. Johnston of Machinists

*A letter from William H. Johnston, president of the International Association of Machinists, to President Markham of the Illinois Central System and Mr. Markham's reply are reproduced herewith. Editorial reference to this exchange of letters, which is an outgrowth of the letter of December 20 from President Markham to the employes of the Illinois Central System, will be found in the editorial department.*

*The letter from Mr. Johnston, under date of January 2, follows:*

**Y**OU have just made public a letter addressed to the employes of your road, calling on them "to repudiate Frank J. Warne, W. Jett Lauck and Glenn E. Plumb, as men who have been engaged in a campaign of abuse and vilification to discredit the managements of the railroads in the eyes of the public." You say: "You will surely agree with me that the accusations made by these men are wholly inconsistent with the facts."

You, sir, in your letter to your employes have not pointed any of the specific statements or accusations so made by any of these gentlemen, which you so charge are wholly inconsistent with the facts.

### Miles of Line vs. Miles of Track

Your letter is dated December 20th. On December 14th Mr. Plumb appeared before the Committee of the House of Representatives on Interstate and Foreign Commerce, and presented testimony disclosing the findings of the Interstate Commerce Commission as to the final valuation of twenty-four Class I railroads on which the work of valuation had been completed. In presenting this testimony Mr. Plumb used only the official figures disclosed by the Interstate Commerce Commission's valuations. The twenty-four railroads so valued had a total mileage of 29,055 miles. They had issued \$930,000,000 of bonds, had outstanding current liabilities estimated at \$57,000,000, and stock issued of a par value of \$463,000,000, disclosing total capital obligations of \$1,448,000,000. The total final valuation of all these properties as established by the Commission was only \$950,000,000; \$37,000,000 less than the

total indebtedness, and \$499,000,000 less than the total capital obligations. The values so far established show an average valuation per mile of track of \$32,717. This average includes all values—terminals, equipment, motive power, everything used in railway operation. If this be a reliable index of the average value of all the tracks and railway properties in America, amounting to 265,000 miles, then the total valuation of all the railways in the country would not exceed \$8,610,000,000.

### Difference Looks Large

When the roads were returned to private control, the valuation established by the Commission for rate-making purposes was \$18,900,000,000 and rates were fixed which it was estimated would return a net profit of 6 per cent upon this amount. The values so far established by the Commission indicate that this amount is \$10,290,000,000 in excess of the actual value of the properties. If this be true, then railway management today is exacting from the public rates intended to produce \$612,000,000 more than what is declared by law to be a fair rate of return upon the actual value. The railroads admit that for the past year they have earned profits which would pay more than 6 per cent on \$8,610,000,000, but are still insisting on their right to exact the additional \$600,000,000. Do you, Mr. Markham, insist that the figures so given by Mr. Plumb to this Committee are "accusations wholly inconsistent with the facts?" Or perhaps you admit that the statements so made are correct, and your attacks on Mr. Plumb are not based on the presentations he has made to the Committee and to the members of Congress. You certainly are in a position "to develop the truth or falsity of these statements so far as your own railroad is concerned," and, doubtless, so far as all of the railroads in America are concerned. If you find these statements are true as being the findings of the Interstate Commerce Commission, do you, then, suggest to the people of the United States that they shall repudiate that Commission and all its works?

### The "Representatives" of Labor

On the other hand, if you find that the valu-

ations so disclosed are true, is not their very truthfulness the fact which discredits the managements of the railroads in the eyes of the public, rather than the circumstance that these facts had been made public through the representatives of organized labor whom you are personally attacking?

You, Mr. Markham, together with the other railway officials, while still insisting on your right to receive from the service you render to the public this additional \$600,000,000, admit that the rates intended to produce this profit are really stifling business, and have failed to produce the profits you demand by some \$360,000,000 a year. You, together with the other railway officials, are now insisting that the wages of your employes, and all employes, shall be reduced enough to make up this deficit. Whom should the employes repudiate, Mr. Markham, those highly paid railway officials now charged with the responsibility

of administering these public highways who insist on collecting an unwarranted deficit from a faithful body of employes, and from a long suffering, overcharged public, or the modestly salaried representatives of organized labor, who have earnestly and faithfully disclosed to the members of organized labor, and to the public, the actual facts, based on official findings, regarding your administration of these great utilities?

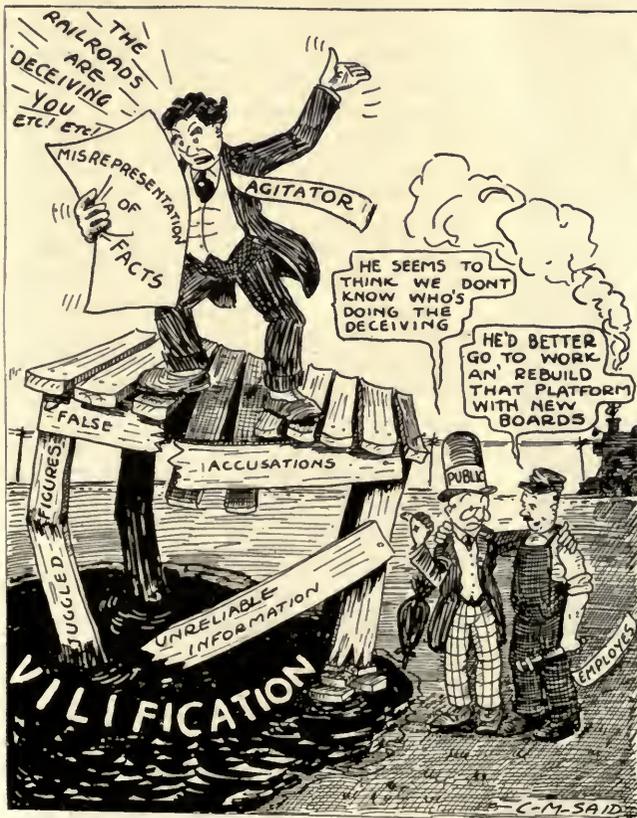

**President Markham's Reply**

*The following is Mr. Markham's reply, dated January 3:*

I ADDRESSED a letter on December 20 to the employes of the Illinois Central System calling attention to the campaign of misrepresentation and abuse which is being carried on by spokesmen of certain labor unions to discredit the managements of the railroads in the eyes of the public. You have written to me an open letter regarding my letter to our employes in which you make statements that afford a most glaring example of the kind of misrepresentation of the railroads to which I called attention.

You seize upon statistics of the tentative valuation placed by the Interstate Commerce Commission upon twenty-four railroads, practically all of which are small and unimportant, and use them in a way that is adapted entirely to mislead railway employes and the public concerning the facts as to the valuation of the railroads made by the Interstate Commerce Commission. The statistics to which you refer were given by Glenn E. Plumb, author of the Plumb plan, to a committee of the House of Representatives on December 14. You say these figures show an average valuation per *mile of track* for these twenty-four railroads of \$32,717. Then, applying this figure to the 265,000 miles of line of all the railroads of the United States, you arrive at an estimated value for all the railroads of \$8,610,000,000, which is \$10,290,000,000 less than the tentative

**TOO MUCH OF THIS**

*The Radical—a Breeder of Trouble*

valuation of \$18,900,000,000 fixed by the Interstate Commerce Commission in 1920 for rate-making purposes.

### How Terms Are Juggled

The merest amateur in railway matters can see at a glance that your method of using your own figures is entirely erroneous. Since you use the *miles of track* in arriving at your estimated value per mile, of these twenty-four railroads, of course you should also have used *miles of track*, instead of *miles of line*, in making your estimate of the value of all the railroads. The two things are not the same. A railroad may have two, or three, or four, or even more tracks for each mile of line. The railroads of the United States have approximately 405,000 miles of track and only 265,000 miles of line. If you had used this figure of trackage, as you should have, since your estimate of the average valuation per mile was based on trackage, then your estimate of the total valuation of all the railroads of the United States would have been \$4,640,000,000 more than the estimate you actually made, or over 50 per cent more. Could any better evidence of the campaign of misrepresentation being carried on by certain labor leaders be afforded than your own use of these figures?

But your misrepresentation of the facts is even worse than the figures I have given would indicate. The railroads whose tentative valuations you and Mr. Plumb cite have only about 7 per cent of the total trackage in the country, and only two of them have more than 1,000 miles of line. Only one-half of the number own as many as 500 miles of line. These are not representative roads, and therefore the statistics regarding their valuations are not representative of the valuations of all the railroads. The valuation of all the railroads cannot be fairly or intelligently estimated upon any such unrepresentative basis.

### Better Trust the Commission

Having in this remarkable manner arrived at a valuation of your own of all the railroads, you ask me in your letter: "If you find these statements are true as being the findings of the Interstate Commerce Commission, do you then suggest to the people of the United States that they shall repudiate that Commission and all its works?" Considering what you yourself have done, this is an extraordinary question for you to ask of me. As I have shown, your estimate of the value of all the railroads is erroneously based upon the findings of the

Commission regarding the value of only 7 per cent of the railway trackage of the United States, this trackage not being in the last representative of the railroads as a whole. But the Interstate Commerce Commission itself, on the basis of information gathered by it regarding the value of all the railroads, placed upon them in 1920 in the rate advance case a tentative valuation of almost \$11,000,000,000 more than your estimate. Naturally, I am more disposed to accept the Commission's own valuation of all the railroads, which was based on information gathered by it regarding all of them, than your estimate of their value of them which is based on information gathered by the Commission regarding only 7 per cent of their trackage. It seems pertinent, in this connection, to ask you and Mr. Plumb how you can consistently accept without question the findings of the Commission regarding 7 per cent of the country's railway trackage, and at the same time entirely repudiate its estimate of the value of all the railway property in the country?

### A Sample of Misrepresentation

Your reference in your letter to "representatives of organized labor who have earnestly and faithfully disclosed to members of organized labor and to the public the actual facts, based upon official findings" becomes nothing less than farcical in view of the complete misrepresentation of the whole subject of railway valuation which is made in your letter to me.

Moreover, you have yourself further justified my statement that the campaign of misrepresentation which men claiming to represent the railway employes of the country are conducting is unsupported by any evidence. Your letter gives the stamp of approval to Mr. Plumb's misrepresentations from a man who stands at the head of an organization supported by the railway employes of the country, who should be fully as concerned as anyone in seeing that the public knows the facts about the business in which they are engaged.

### GONDOLA CARS ORDERED

In order to provide for a better handling of its large and growing coal traffic, the Illinois Central System has just placed orders for the construction of 2,000 gondola cars of the latest designs. The news is received as another indication of the awakening of business. The order will mean employment for many hundred men.

## *They Nursed the Illinois Central Into Life*

*J. E. Lufkin and J. W. Fuller, 92 and 90, Both of Anna, Ill., Helped Build Line in 1852 Near Cairo*

AT Anna, Ill., reside John E. Lufkin and James W. Fuller, who were among the first employes of the Illinois Central Railroad. Both worked on the construction of the right-of-way at the southern end of the charter lines near Cairo, as early as 1852. Both are still active at present, although one is in the nineties and the other almost as old.

Mr. Lufkin was born March 23, 1830, on a farm near New Gloucester, Me. When he was 18 years old, many railroads were being constructed in this country. He worked on several in the East at 50 cents a day and board, and even at that age was foreman of a gang of graders. Gradually he worked his way westward because the possibilities loomed greater to him.

In 1852 he learned that the Illinois Central was in need of men for the construction of its line between Centralia and Cairo. The romance of the frontier had gripped his heart. He decided to make the long journey to the new field which looked most promising to him.

There was much wilderness between him and his goal, and there were few cut paths to follow. Travel in those days was indeed a hardship, and it required days to make what we would now call a short journey. The rivers offered the least resistance to travelers, and when a long trip was to be made, they were the usual means of getting there.

### **Helped Build the Roadbed**

Mr. Lufkin traveled down the Ohio River until he reached Cairo, then up the Mississippi to a place called Willard's Landing. Ware station is in that locality now. He brought his river journey to an end there, and traveled overland to Jonesboro. On his arrival there, he was placed in charge of a gang of men, and sent north of Cobden to construct the roadbed of the Illinois Central. Anna, his present home, was not then in existence. He was foreman of that gang with their wheelbarrows for two years. At the end of that time, the rails were put in place, and train service started.

Mr. Lufkin was given a position as con-

ductor on a train between Cairo and Centralia. Sam George was the only other conductor, he says. But business was not good soon after that, and the life of a conductor became much too tame for Mr. Lufkin. He had lived the greater part of his life in the outdoors and could not bring himself to liking the quiet life.

At his request, the superintendent, George

*John E. Lufkin*

Watson, took him off as conductor and made him roadmaster. He served in this capacity between Cairo and Pana for ten years. His salary was increased from \$60 to \$80 a month when he was made roadmaster. During the time he was in this position, Marvin Hughitt was the assistant superintendent, and Colonel R. B. Mason was the chief engineer. The latter was succeeded by General George B. McClellan, who was later called to the army during the Civil War.

#### Resigned After Eighteen Years

Mr. Lufkin was in the service of the Illinois Central Railroad for eighteen years. When he informed the officials that he intended to resign, they told him that he was in line for a promotion to trainmaster. But Mr. Lufkin was eager to get into business for himself. He wanted to settle down in one place where he could remain with his family. The result was that he entered business in Anna.

But business life eventually proved to be too tame. He craved the open, even though he had now reached the age of 80. He felt that all of his muscles were not being brought into play, and that he was gradually wasting away. So he bought a 40-acre farm near Anna. He planted fruit trees on his land. Although the farm is about three miles from Anna, he often walks that distance to keep himself in trim. He accustomed himself to long walks when he was roadmaster by plodding over the ties for miles each day.

Mr. Lufkin will be 92 years old in March, and he insists that he is good for the century mark and more. He always has a good word for the company. He believes in it to the extent that he advised a son to enter the service. This son, John Lufkin, is supervisor of signals at Grenada, Miss.

#### Traveled in an Ox-Cart

Mr. Fuller, the other Illinois Central builder at Anna, was born in February, 1832, at Skaneateles, N. Y. When he was 10 years old, his parents moved to Chicago, where they remained for one summer. They then moved to Mount Vernon, Ill. In 1852, the Fuller family moved to Union County and settled near the present site of Anna. The family made the trip in a wagon drawn by an ox team.

Mr. Fuller obtained a position as foreman of a construction gang which was working on the Illinois Central right-of-way between

*James W. Fuller*

Cairo and the Big Muddy River. When this work was completed, and train service started, Mr. Fuller made a contract with the company to fence the right-of-way between Cairo and Centralia. He used wooden fence rails and boards. All the cattle guards and gates were constructed by him. At each private crossing, he installed a gate; the total number between Centralia and Cairo was 1,500.

In 1854 he assisted in laying the rail from the Lower Cache into Cairo. He was then made foreman of the wood-sawing crew, operating between Centralia and Cairo. Their engine ran on the railway track from station to station. It was placed at one side when there was sawing to be done, and after the work was finished, the men placed it back on the track to move on to the next stop. When a train replenished its supply of wood, he says, the entire crew was employed, and it required fifteen or twenty minutes at each station.

#### Coal Burners Took His Job

This work was brought to an abrupt end in 1855, Mr. Fuller says, when the Illinois Central Railroad began installing coal burners. He was then made a section foreman between Anna and Cobden. While in this

position, he placed the first ballast in the road. Rocks were broken with sledge hammers, he says.

In 1867 Mr. Fuller was made track supervisor between Anna and Duquoin, and he continued in that position until he resigned in 1869.

In that year he became a farmer near Anna, and he has made a great success of it. In 1884 he organized a shipping association, and was chosen its first president. Each year since he has been re-elected to that position. Although he really likes farming, Mr. Fuller says that he had to keep away

from his former associates every time he went to town for fear that the desire to return to railroading would overpower him. He is still a great friend of the Illinois Central.

Mr. Fuller also expects to climb over the 100 mark in years. In February he will be 90 years old. From all appearances he knows what he is talking about, too, for he gets around to work on schedule every day and seems just as lively as in his younger days, which is remarkable for a man who attended the famous Lincoln-Douglas debate at Jonesboro, Ill., when Lincoln was a candidate for president.

## *His Reputation Is the Company's Asset*

It has been estimated that Benjamin B. Ford, one of the veteran conductors of the Mississippi division, has handled approximately 120,000,000 persons one mile since he has been running a passenger train. That number of persons would be larger than the present population of the United States. And in all that time there has never been a passenger injured on his train.

Mr. Ford was born near Waterford, Marshall County, Miss., August 16, 1858. February 1, 1887, he began his railway career as a flagman on the Mississippi division between Jackson, Tenn., and Canton, Miss. For almost thirty-five years he has worked in the one locality.

September 29, 1887, he was promoted to conductor. March 1, 1901, he was assigned to the regular passenger run between Memphis and Canton on Trains No. 1 and No. 4. At the death of Major W. M. Wood a few years ago, he was assigned to handle No. 2 and No. 3.

April 22, 1891, Mr. Ford was married to Miss Katie D. Cowan, daughter of E. D. Cowan of Canton, Miss., who served as ticket agent at that point for thirty-three years, from 1866 to 1899. Mr. and Mrs. Ford have one daughter, Elizabeth.

Mr. Ford is regarded as one of the best passenger conductors the Mississippi division ever had, as his efficiency record shows that he has been assessed only five demerits on two occasions for minor infractions of the rules. As a witness in suits against the railroad, he has always been a distinct asset to the company, as his reputation for courtesy

*Benjamin B. Ford*

and reliability has frequently had considerable weight in influencing the decisions.

A former circuit judge of Mississippi, living off the line of the Illinois Central, recently inquired about Conductor Ford's health and related how the conductor's straightforward testimony had caused him to instruct the jury to find for the company in a suit against the company by a patron who alleged that the conductor had used abusive language.

## Directs Attention to the Hot-Box Problem

*G. E. Patterson, Acting General Superintendent, Suggests Ways to Eliminate This Cause of Delay*

By G. E. PATTERSON,

Acting General Superintendent, Chicago

**A**MONG the greatest causes of delay to freight trains between terminals and to carload traffic both at and between terminals are overheated journals.

The direct expense incident to cut journals, worn and broken brasses, and extra wages and fuel on account of delay is not the only loss. We must consider also the patron who waits for the late arrival of cars that are, in some instances, delayed in transit for days on account of hot journals. Such patrons may become dissatisfied with our service and may route their freight over some other road, where they expect to get prompt movement.

Although such expense and such loss of revenue are so great as to cause operating officials serious concern, yet more important and more serious is the great hazard of accident due to journals' burning off and causing derailments, damage to equipment, personal injuries and the possible loss of life.

While we have reason to believe that the hot-box evil is not so bad on our line as on many other railroads, we must admit that it is greater than we can justify, although at present time we are setting out probably 40 per cent fewer cars from this cause than were set out two years ago.

### Must Teach the Proper Methods

For many years it appeared that only division officials and trainmen fully realized the extent of the hot-box evil. However, for the past two years, the Illinois Central management has been active in a campaign to eliminate the trouble. Wonderful improvement has been made in that time, but satisfactory results will not be obtained until we have 100 per cent co-operation and more intensive supervision over inspectors and oilers in yards and terminals.

There is good reason to fear that car foremen instruct new men when they are employed and then fail to follow up their work and correct their errors, that fore-

*G. E. Patterson*

men do not supervise the work of the men who oil and repack journal boxes so closely as they do the work of men who inspect the car body and running gear or make repairs. The work of the employe who packs and oils journal boxes should be supervised by foremen just as closely as the work of a man who looks after penalty defects. When foremen do this the number of hot journals will show a marked decrease.

Failure to care properly for packing and lubrication at terminals cannot be charged to a general lack of knowledge by our men, but rather to neglect; and the neglect is, in most cases, due to lack of efficient supervision on the part of foremen.

### Watch the Empty Cars, Too

Before we can reduce the number of hot journals to the minimum, there are many things for us to do—so many they cannot be enumerated here. For the present we

need not learn more about the causes, but we must first remove the causes we know now exist. We know the empty car receives little attention; it is allowed to move to the territory in which it is to be loaded, and not until it is under load are we seriously concerned about the packing and lubrication. Then, too, we must not lose sight of the foreign cars, of which many thousands are handled on this railroad, which must receive the same consideration in regard to inspection, attention and lubrication as our own cars.

Well-defined methods of inspection and lubrication of empty cars must be arranged at heavy interchange points, at initial terminals and at certain intermediate oiling stations. Until each superintendent is impressed with the importance of this and actually provides for the inspection and lubrication at the necessary points on his division, the best results cannot be obtained.

#### Placing the Responsibility

No single yard can look after the packing and lubrication of empties en route to coal or grain fields. The responsibility must be placed where it belongs, at heavy interchange points and at designated yards according to the initial starting point and destination of empty cars. When the empty car is properly prepared for the load and when car foremen in terminals and intermediate yards supervise the work of employes charged with the duty of inspecting and lubricating journals, great advancement will have been made in the elimination of hot journals.

The greatest results in the elimination of the hot-box evil will not be realized until superintendents know by actual record the number of cars that run hot out of each terminal per thousand cars moved, and not then until each superintendent understands that he is the head of his division and that the responsibility rests on his shoulders. It is the superintendent who must bear the transportation expense incident to the wages of oilers and the transportation expense caused by delay; in his hands the remedy has been placed in the way of supervision.

#### Some Definite Suggestions

While, as I have already said, I cannot undertake to enumerate the many things that cause hot journals and the many things we must do to eliminate them, yet there are a few definite suggestions I want to sum-

marize which must receive our consideration:

We must give more attention to journal boxes on empty cars, especially coal and grain cars en route to the coal and grain fields.

Local conditions must be considered, and then some well-defined plan worked out for taking care of journal boxes at each terminal, intermediate yard and heavy interchange point.

The oilers or other men whose duty it is to examine packing and apply oil must be required to carry packing and oil with them, instead of returning a great distance for such supplies after a box has been found that requires either packing or lubrication.

The foreman must see that inspectors and oilers provide themselves with standard hooks and packing irons and that such standard tools are used in the performance of the work.

### HANDLES THE WIRES

*F. T. Wilbur, superintendent of telegraph, Northern and Western lines, who has received many compliments upon the telephone story which appeared in the January issue of this magazine.*

# Conductor Nabs Three Negro Desperadoes

*D. S. Brownlee Proves Himself Efficient, Too, in Capturing the Occasional Dissatisfied Patron*

**I**N these days of prohibition it is not often that a conductor on a passenger train must turn policeman. But D. S. Brownlee, conductor on the line between St. Louis and Paducah, Ky., had that unusual experience not long ago.

On the morning of December 24, when his train, No. 205, southbound from St. Louis, arrived at Pinkneyville, Ill., he was notified by the sheriff at that place of a hold-up which had occurred a few stations down the line. He was told that three negroes had bound, gagged, robbed and painfully wounded a man on No. 252, a fast northbound freight train, and had then jumped off near Matthews, Ill.

Mr. Brownlee promised to deliver the three men to the proper authorities if they boarded his train.

When No. 205 stopped at Grubbs, three negroes went into the smoker. Mr. Brownlee recognized them from the description given him by the sheriff, and went directly to them.

## Captured the Three Negroes

First, he asked for their fares. One of the men displayed a roll of bills, and paid for the three passengers. Mr. Brownlee asked the aid of another passenger to help him search the negroes for weapons. When it was found that they had none, they were forced to sit in a double seat at the end of the coach. The assisting passenger kept watch over them while Mr. Brownlee collected the remaining tickets on the train.

At the next station, Vergennes, Mr. Brownlee notified the sheriff at Murphysboro of the arrest. The negroes gave no trouble, and were delivered to the sheriff at Murphysboro. They have confessed to the crime.

The victim of the three negroes, a man 70 years ago, was given treatment at Pinckneyville, and was able to continue his journey, it was learned. He was in charge of an immigrant car, bound from Bolivar, Miss., to Climax, Kan.

Mr. Brownlee is a popular conductor on the St. Louis division, and his many friends

*D. S. Brownlee*

have been congratulating him on his quick work in capturing the bandits.

He is not what we would call a veteran employe, but he has been in the service of the Illinois Central for a long time. He first started to work for the company in 1896 as a helper in the roundhouse at Pinckneyville, but worked only three months.

## Started as Brakeman in 1889

In 1898 he accepted a position as a brakeman on the line between East St. Louis and Pinckneyville. He gave good, conscientious service, and after two years and a half was

promoted to freight conductor on the St. Louis district.

Mr. Brownlee was made passenger conductor in 1915 on what is known as the "Billy Bryan" run from Carbondale to Johnston City. The run was not named after the well-known national character, but after a conductor who was just as well known on that run as the other Mr. Bryan is known nationally.

Later, Mr. Brownlee was transferred to a run between St. Louis and Marion, Ill., and then to the position he now has, between Paducah and St. Louis.

### Won a Friend Who Was Lost

There is a reason for Mr. Brownlee's popularity on the St. Louis division. He is courteous, kind-hearted and has the interest of the company foremost in his mind. With those qualities combined, a man cannot keep from making friends and retaining them.

A little incident in his life illustrates clearly just what caliber of man he is.

A woman boarded his train one day with half a frown on her face. He asked her where she was going just as she was about to enter the coach, and received a very short and snappy reply.

That sort of thing would never get by Mr. Brownlee unnoticed. He sensed discourteous treatment to that woman on the part of some other employe of the company, and he determined to have the thing righted and her good-will established if it were possible for him to do so.

"Thank you," he said when she handed him her ticket after the train had left the station.

He read the destination, and then said: "We are due in Carbondale at 11:10. Your train does not leave there until thirty minutes later. You will have plenty of time for a light lunch, if you wish it."

### Nursed a Smile Back to Life

Just that, and her scowl began to fade. She turned her face from the window toward him, and there was a slight smile.

"I believe you will find the other side of the coach a little more comfortable farther down the track," he added. "The sun will be shining directly in these windows. Shall I help you move your baggage?"

The last remark clinched it. She moved, and the smile had grown considerably. When she was comfortably seated again, she looked up at him and said, "There is one good conductor on the road."

That is just one of many similar incidents he could relate if he were persuaded to go into the matter.

Soliciting business for the company is his favorite hobby. Frequently he persuades passengers to go on the Illinois Central after they had planned to go some other route.

### Active in Traffic Solicitation

Although a passenger conductor, he does not stop with soliciting passenger business. Through his suggestion, a grocery company of Marion, Ill., a firm which seldom routed goods over the Illinois Central, now uses our line often. It was a simple matter for Mr. Brownlee.

He was acquainted with a member of that firm, and sent him a card asking for some of his freight business for the Illinois Central. The first response came in the form of a carload of potatoes, with the information to the freight agent that the shipment was made over the Illinois Central as a compliment to Mr. Brownlee, out of respect for his friendship and seeming interest in the welfare of the Illinois Central.

This grocery company learned that the service given by the Illinois Central was good, and the shipments have steadily grown.

Mr. Brownlee says he feels that the welfare of the Illinois Central is his welfare, and that if he is able to promote its prosperity he is promoting his own prosperity.

### Beware!

If you find you have a grouch on,  
Don't carry it too far;  
Smile on every one you meet,  
And your stock will jump to par.

Your friends will gather 'round  
you,  
And your enemies will run;  
That gives you more protection  
Than would a bull-dog or a gun.

A grouch is so unnatural —  
How they come no one will tell —  
That, they say, if you die with a  
grouch on,  
You will surely go to — well —

And, at a meeting held at our headquarters,  
It was the unanimous decision  
That there is no room for grouches  
On the Minnesota division.

—T. M. JOYCE, *Conductor,*  
*Minnesota Division.*

# Five Veterans From Our Iowa Division

## Two Station Agents, Section Foreman, Conductor and Train Baggage Man Make Up the List

THE Iowa division of the Illinois Central System has five men in service whose total record of years employed is 222. The average years of service of these five men is 44.4. The oldest in service on the Iowa division, W. L. Beattie, has a record of 50 years piled up behind him, and the last of the five, James McCue, has spent 40 years with the company.

Mr. Beattie, agent at Omaha, Neb., has worked for the Illinois Central practically all of his life. He started to work as a clerk when he was 14 years old, and too small to handle a large ledger comfortably. W. M. Frantz, agent at Cherokee, Iowa, has been in the service for 47 years. The first two years were with no salary. Robert Peterson has helped to keep up a portion of the track of the Iowa division for 43 years. His entire railway experience centers about Cedar Falls, Iowa. H. C. Sprague, conductor between Omaha and Fort Dodge, had railway ambitions early in his youth, got a position with the Illinois Central and has remained in the service 42 years. Mr. McCue, train baggage man, has been an employe of the Illinois Central Railroad for 40 years, and has never visited Chicago.

### Started When 14 Years Old

W. L. Beattie, agent at Omaha, Neb., is a true and loyal son of the Illinois Central. He has worked for no other company. The beginning of his fifty years of service dates back to when he was a boy 14 years old. His father died when he was only about 6 years old, and he was confronted with the problem of obtaining an education as well as helping provide for his home.

In the spring of 1872, he obtained a position as a freight clerk for the Illinois Central at Dunleith, Ill. That city has now been named East Dubuque. Young Beattie was but a lad, and too small to sit in a chair to make entries in a ledger on the table, but he was accurate and dependable. Comfort was provided for him by a large book placed on a high stool so that he would be able to reach the top of the table.

In those days, there was heavy freight traffic on the Mississippi River. Freight was received at Dunleith from the East and South. There it was unloaded from the trains, stored in the large freight house and then loaded on the steamboats. The boats were so large, and so much freight had to be handled, Mr. Beattie says, that often the reloading required as long as twenty-four hours. The loaded boats would then move to river points north of Dunleith. After their cargoes were discharged, these boats towed barges loaded with grain, a large percentage of which was grown in Minnesota, back to Dunleith. The Illinois Central had a large grain elevator there where the products of the North were stored until they were loaded on trains to be shipped to Chicago, the principal market.

### Went to School in the Winter

It was in this kind of work that Mr. Beattie received his initiation into the service of the Illinois Central. But his employment lasted only through the summer months, when the river was navigable. Large forces were laid off when the river froze.

However, luck was with Mr. Beattie, although he did not fully realize it. With such an arrangement, he was able to go to school during the winter. If a steady position could have been obtained, he says, he would have gladly taken it, but now he is glad that he was able to attend school.

Continuous movement freight trains did not run into Iowa from Chicago then. Dunleith was the stopping point. If there were cars in a train which were for points West, they were transferred across the river by an engine which was held at Dunleith especially for that purpose. They were taken to Dubuque, and then handled by the western trains.

For three summers Mr. Beattie labored at the freight house in Dunleith. He was a hard-working lad, and the older employes took a keen interest in him. Telegraph operators cultivated his confidence and taught him their trade. He was a long time learning, since it was different from anything he had ever done

W. L. Beattie

James McCue

Robert Peterson

H. C. Sprague

W. M. Frantz

before, but he finally mastered it just as thoroughly as his clerical work.

#### Made Agent at Age of 19

When the summer of 1875 was drawing to a close, he was more eager than ever to retain a position through the winter. By this time he had become an accomplished operator. After repeated requests, he was assigned a position as operator in the passenger station at Dubuque.

That he was a conscientious worker is shown in the fact that the following spring he was made the relief agent at Dubuque. He continued in this position one year and then was made agent at Dunleith. That was a responsible position for a lad of 19, but he handled it well. He remained there until February, 1890, when he was transferred to Madison, Wis., as agent.

After he had been in Madison eight years, he was given the position as agent at Dubuque. He was there only four years when he was made the commercial agent at Council Bluffs, Iowa. Mr. Beattie was transferred to Omaha as agent in 1908, and he continues in that position today.

#### Started With No Salary

W. M. Frantz, agent at Cherokee, Iowa, has been in the service of the Illinois Central for forty-seven years. He started as a station helper in April, 1875, at Charles City, Iowa, with no salary. He wanted to learn to be a telegraph operator, and he worked as helper at the station in order to obtain the instruction.

Learning telegraphy was just as difficult for Mr. Frantz as it has been for many others, and it was two years before his services as an operator were of value to the company. At the end of that time, however, a salary of \$20 a month was allowed him. He was given more important work, and in a few months was sent to Epworth, Iowa, as a relief agent.

He was in Epworth but one month when he was transferred to Cherokee, Iowa, as operator and clerk. His experience proved of value to him, and his ability won for him the same year the promotion to agent at Pomeroy, Iowa. It was a small station, but it was an advancement, and he worked hard to fit himself for further promotion.

#### Grasshoppers and Bad Winters

Mr. Frantz remembers the attack the grasshoppers made on the crops of the West

back in those days. Millions of them swept over the land, he says, and destroyed all crops.

Another impression he has from his early days of railroading is of the severe cold winters. From 1878 to 1888, he says, the weather was much worse than that of the present days. He recalls the winter of 1880, which started October 16. The snow drifted and piled in such heaps that train service on the Cherokee district was impossible for a week. From that date to the following March, not more than a dozen trains operated through to Sioux City. One blizzard followed another during that time, and there was no help or facilities for fighting the snow.

In 1882, Mr. Frantz was made agent at Cedar Falls, Iowa. He remained there two years, and was then made joint ticket agent at Le Mars. He had served there seven years when he was made train dispatcher at Fort Dodge and Cherokee. Train dispatchers were ordered to work on 12-hour shifts in 1894, Mr. Frantz says, as a move toward economy. An agency looked better to him then, he says, and he asked to be transferred. He was made freight agent at Le Mars.

#### Busy Time as Chief Dispatcher

In 1896 he became the chief train dispatcher at Cherokee. At the same time he did all the operating, both local and relay, and took the car reports. In all, he says, he was on duty from eighteen to twenty hours every day. The superintendent promised more help, but Mr. Frantz asked to be transferred. He took the agency at Fort Dodge in 1896, and remained until 1902. In that year he was made the traveling freight agent.

On April 19, 1918, he accepted the position as agent at Cherokee, and he has been there since.

There is a vast difference between the freight trains of today and those of earlier railroading, Mr. Frantz says. A load of ten tons was considered extremely heavy at first, but now a carload is often as heavy as sixty tons. And the first cars were only twenty-six or twenty-eight feet long. He has seen land increase in value from \$3 to \$500 an acre all along the line, he says, and the direct cause was the railroad.

Mr. Frantz is a firm believer in the Illinois

Central System, and insists that it is the best railroad in the West.

### Forty-Three Years at One Place

For 43 years Robert Peterson, 67-year-old veteran employe, has helped to keep up a portion of track on what is now the Iowa division of the Illinois Central System. He began as a laborer in the maintenance of way department at Cedar Falls, Iowa, in 1879. Five years later he was made a foreman, and he has held that rank for 38 years. His entire railway experience has centered about Cedar Falls. His first work was on the branch line extending toward Albert Lea, Minn., but shortly after his promotion to foremanship he was given jurisdiction over the 6-mile section extending eastward from Cedar Falls on the main line, and that has been his assignment ever since. He has never been in an accident. He has never suffered an injury of any kind. There never has been a derailment on his section—with the exception of cars leaving the track in the yards.

Mr. Peterson has requested retirement under the pension benefits offered by the company to its faithful employes. His health is not so good as it used to be. In fact, the reporter for the *Illinois Central Magazine* obtained Mr. Peterson's story piecemeal—first in the magazine office, to which Mr. Peterson paid a visit while on his way to the hospital in Chicago, and later sitting at Mr. Peterson's bedside in the hospital, which he entered January 17 for treatment.

### A Native of Denmark

Mr. Peterson was born in Denmark. When he was 14 years old the family came to the United States, and since then his life has been spent either in or around Cedar Falls. His father was a carpenter, but he died shortly after coming to his new home, and Robert, as a boy, went to work early. He tried a number of occupations before entering railway service, at 24, as a maintenance of way workman.

Those were the days of 60-pound iron rail and dirt ballast. It was a task to keep the dirt filled in about the ties. The weeds had to be cut with shovels, and it was tiring work. Signaling hadn't been brought to a high stage of perfection then, and the foremen would station two of the laborers to keep a lookout for trains while the work went on. A coming train meant redoubling speed to put the track in temporary condition for passage. But traffic was lighter

then, too. The locomotives had the queer-looking bell-shaped smoke-stacks one now sees only in the pictures of early days or occasionally in an industrial plant which uses equipment scrapped by the railroads. The box cars were 26 or 28 feet long. A gondola car with a capacity of 20 tons was a monster.

Handling snow has not been so difficult of late years in Mr. Peterson's territory, but in the old days on the Albert Lea line, he remembers, the men had a job on hands in keeping the line open during the winter months. Frequently they spent their 10-hour days building walls of snow and scooping out the drifts as rapidly as they formed.

### Right-of-Way Was Unfenced

In those early days, too, the waylands were unfenced and stock grazed on the right-of-way. Stock killing was frequent then.

Mr. Peterson believes the period of the youthful marauder is passing. Possibly mischievous boys are finding something more profitable to do than going over the tracks, putting spikes and bits of stone and iron on the rails, "to see what would happen." Three or four years ago, however, Mr. Peterson came the nearest to an accident that he ever experienced. Pranksters had covered the rails with small stones, and the stones almost wrecked the motor car on which Mr. Peterson was riding.

When Mr. Peterson began work a section laborer was paid \$1.10 a day—11 cents an hour for ten hours' work. When he was promoted to foreman a foreman's pay was \$40 a month, or slightly more than one-third what it is now.

Mr. Peterson and his wife are the parents of two children, both of whom are married. The son, Winnie, is an engineer for the Great Western at Clarion, Iowa.

### Looked Forward to Railroading

H. C. Sprague, conductor on the line between Omaha, Neb., and Fort Dodge, Iowa, had railway ambitions early in his youth, he says. He was born on a farm near the now famous little city of Marion, Ohio, and lived there until he was about 18 years old.

All through his boyhood days, he says, his imagination turned the farm wagon, on which he would ride daily, into a passenger train. He was the whole crew, from engineer to flagman. He was a busy boy shoveling imaginary coal and collecting tickets on his crowded "train." But when brakes were to be applied to avoid an impending collision, that was real.

He would shove down the old bar with a masterful thrust.

Mr. Sprague cannot remember that he had any particular railway position in mind when he was young. He does recall, however, that he was determined to go into the business at the earliest possible opportunity.

When he was 18 years old, his parents moved to a farm in Wayne County, Illinois. Two years later, he married.

### From Farm to Coal Mine

In 1880 Mr. Sprague decided to break away from farm life and obtained a position in the coal mines at Centralia, Ill. He wanted to enter the railway business then, but there was no position open. He placed his application with F. A. Rugg, who was then trainmaster for the Illinois Central, and worked in the mines to await developments. He lived at a house where the railway men stayed, and talked railway matters with them.

As he looks back on it, he says, he must have been a terrible bother to the trainmaster. He hounded him continually for a position, but was refused. Other young men obtained positions as brakemen from the trainmaster, and Mr. Sprague says that he could not understand why he was refused when his application was in long before. But now he believes that the trainmaster had more interest in him than he thought at that time. Braking was a dangerous occupation then. The old link-and-pin coupling was in use, and it necessitated going in between the cars, steering the links with the hands and guiding the pin to its proper place. And Mr. Sprague was a young married man.

### Finally Got Job as Brakeman

But after three months, Mr. Sprague's determined efforts obtained for him a position as a brakeman. He was placed on a run between Centralia and Cairo. Trains did not hold together so well in those days as they do now, he says. Many times the pins and links would break, and often a train going down hill would be in three or four pieces.

Mr. Sprague's interest in the railway business made a good brakeman out of him. He says that he never thought of promotion or a larger salary. He was enthusiastic about his work, and did it to the best of his ability. That was his satisfaction. After one year had passed, he was promoted to a position as freight conductor on the same run.

In the fall of 1887, when construction on the

lines to Sioux Falls, S. D., and Onawa, Iowa, was begun, Mr. Sprague was transferred to that territory as conductor on a construction train. When the work was completed in the fall of 1888, he was given a regular freight run there.

### Back to Construction Work

After he had been on this run for four or five years, he was made a conductor on the line between Sioux City and Cherokee. It was a local freight run. He remained in that position until construction on the line between Council Bluffs and Tara was started. Then he was again transferred to a construction train.

At the completion of this line in 1900, Mr. Sprague was promoted to passenger conductor. His run was between Omaha and Fort Dodge. This was a higher position than his ambition had pictured him in the railway business, he says. Mr. Sprague has continued on the run between Omaha and Fort Dodge since. His trains are Nos. 11, 12, 13 and 14.

Mrs. Sprague died last October. Mr. Sprague and his daughter live in Council Bluffs.

Mr. Sprague is a fine man to know. The word "gentleman," often misused, fits him perfectly. He is kind, courteous and is continually on the lookout for the comfort of the passengers of his train. He has an army of friends.

### Hasn't Visited Chicago Yet

James McCue, train baggageman on the Iowa division, forty years an employe of the Illinois Central System, is a great traveler—on business. But probably the most peculiar thing about Mr. McCue is the fact that he confines his traveling strictly to his business duties. Although he was born at Amboy, Ill., within seventy miles of Chicago, and has made railroading his life work within easy traveling distance of the big city, he has never visited Chicago.

In fact, he says, he has never asked for a pass off the Illinois Central, and the only traveling of any consequence he has done on the Illinois Central, outside of his work, was one trip from Waterloo, Iowa, his present home, to Amboy.

Like Conductor W. H. Sharkey, recently described in this magazine, Mr. McCue got his start in railway work by cleaning coaches for the Illinois Central at its Amboy shops. Bob Richards at that time was foreman of the car shop. That was in 1870, when Mr. McCue was about 14 years old, and the

Amboy shops were just about the most important shops on the Illinois Central. The shops were dismantled some years later, however, after Mr. McCue had left Amboy, and so his pass above mentioned, from Waterloo to Amboy, after forty years' absence, took him into unfamiliar scenes.

#### Got \$1 a Day at Age of 14

Comparing his own coach-cleaning work with Conductor Sharkey's, Mr. McCue points out that he escaped the care of the stoves which Mr. Sharkey had a few years later, and consequently that his hours of work were not much different from those in vogue today. He worked only six days a week and was paid at the rate of \$1 a day—a fine wage for a 14-year-old boy in those days.

After about two years in the shops, Mr. McCue gave up railroading and took up farming for several years, but he got back into the game in 1881 as a brakeman, serving between Waterloo and Sioux City, Iowa. He alternated as brakeman and extra conductor until 1895, when he was seriously injured in a train accident. When he recovered, in 1896, he started running baggage, and he has been in that line of work ever since. For several years he ran between Lyle, Minn., and Dubuque, Iowa; that was before the line was extended to Albert Lea, Minn.; but now his run is from Dubuque to

Fort Dodge, and he has matters so arranged that he can lie over in Waterloo, where he has made his home in the same house for twenty-six years. He lives at 514 East Second street.

#### Reported Dead After Accident

Mr. McCue's serious injury happened March 9, 1895, when he fell between the cars at Duncombe, Iowa, and two trucks passed over him. His injuries were so serious that some of the papers reported his death, but he managed to recover, in spite of his crushed shoulders and dislocated hips, after seventeen months off duty. His left ankle is still "dead" as a result of this accident, and this hampers him somewhat in climbing in and out of cars.

Outside of the injury, however, he has always enjoyed satisfactory health, and he says he expects to outlive many of those who at one time thought him dead.

Mr. McCue was born October 5, 1857, and therefore is 64 years old at present, but he handles his work like a younger man. After twenty-five years' experience with baggage, he says that the system of work is simpler now than when he started and that there seems to be less baggage to handle, although the amount of company mail has naturally grown with the growth of the company.

---

## Pensioner Hears Illinois Central Praised

The following letter to Vice-President L. W. Baldwin is from John Sullivan, pensioned supervisor, 1030 South Galena avenue, Freeport, Ill. Mr. Sullivan writes after a trip to New Orleans:

"My object in writing this letter is to let you know of the fine service we had on your trains and how glad I felt for the great improvements that have been made since I worked on the Louisiana division. The change is wonderful.

"I have heard some very nice things said in the smoking rooms of the sleepers about the Illinois Central that would make the management feel proud. In coming north from Canton, I made some remark about the clay soil. One of the men, whose father-in-law owns a great many acres of land near Canton, said this clay land yielded good crops when fertilizer was used. I said the Illinois Central went through all kinds of soil and climate. Another big man

of big business, a native of Illinois but in business in Texas with steamboats and railroads, said: 'The Illinois Central is a great railroad. I think it is intellectually great and physically strong.'

"We left New Orleans at 8:30 Sunday morning and arrived in Chicago at 10:45 a. m. the next day, right on the dot. How much different from the early methods of moving trains! At a roadmasters' convention in Chicago some time ago, the president of the association in his address said that, in the early days of railroading, if the trains running in opposite directions did not meet at designated stations, a man on horseback was sent to the next station to hold the train that failed to make its meeting point.

"You surely have reason to feel proud of your present system. I beg pardon for bothering you with this letter, but I like to honor those to whom honor is due."

# Electric Lights Serve Engineer's Chickens

*E. E. White of Waterloo, Iowa, Gives Them Summer in the Winter and Gets Fine Return in Eggs*

## Poor Man's Cake

Take 1 cup of sugar, 1 tablespoonful of butter and 1 egg; beat together with 1 cup of milk, 2 cups of flour, 2 teaspoonfuls of baking powder and 1 teaspoonful of vanilla. Bake as two layers in 8-inch pans about 35 minutes. For the filling between the layers, chop half a pound of figs in a meat grinder and mix with 1 cup of brown sugar and 1 cup of cold water; boil until it spins a thread. For the icing, mix 2 cups of powdered sugar,  $\frac{2}{3}$  cup of butter,  $\frac{1}{2}$  teaspoonful of vanilla and a little cold coffee.—Recipe of E. E. WHITE, Engineer, Minnesota Division, Waterloo, Iowa.

ANY poultry man who can average close to an egg a day for every two hens during the winter is likely to consider himself more than lucky, but an achievement such as that is nothing unusual for E. E. White of 911 Lincoln street, Waterloo, Iowa, for twenty-four years an employe of the Illinois Central. In his backyard poultry house at Waterloo, Mr. White maintains about 110 single comb White Leghorn hens, and from those hens in December he received 1,588 eggs—an average of almost 51 a day. And what is more to the point, he was selling those eggs at an average price of 60 cents a dozen; his expenses for the month were \$17.50, and his receipts were \$79.20. This is a profit of better than \$60 in one month, made in spare time and in a space no larger than the average small-town backyard.

For the first sixteen days of January the egg record of these hens varied from 39 to 62 a day; prices varied from

40 cents to 50 cents; daily sales fluctuated between 3 and 6 dozen eggs, and the daily receipts ranged from \$1.20 to \$3 a day. January 17 the hens had laid 49 eggs up to 1 p. m. While Mr. White is out on his run as a freight engineer between Waterloo and Freeport, those hens are piling up for him an extra profit of close to \$2 a day that is more than welcome. That ought to be enough encouragement to keep anybody cheerful and well-fed, and those who know him say that Engineer White is one of the biggest and best-spirited employes on the Minnesota division.

## Has Summer All Winter

Mr. White's success with his poultry is not the result of blind luck and haphazard methods in the care of his flock. Far from that. The figures previously cited show that he keeps exact records of production, and the unusual winter production—the real test of successful poultry raising—is the result of thoughtful planning and scientific care. That does not mean that Mr. White spends a great deal of money on his flock; it means merely that he knows what is needed, and he is not

Mr. and Mrs. E. E. White and Their Boys

afraid to devote his spare time to doing those things.

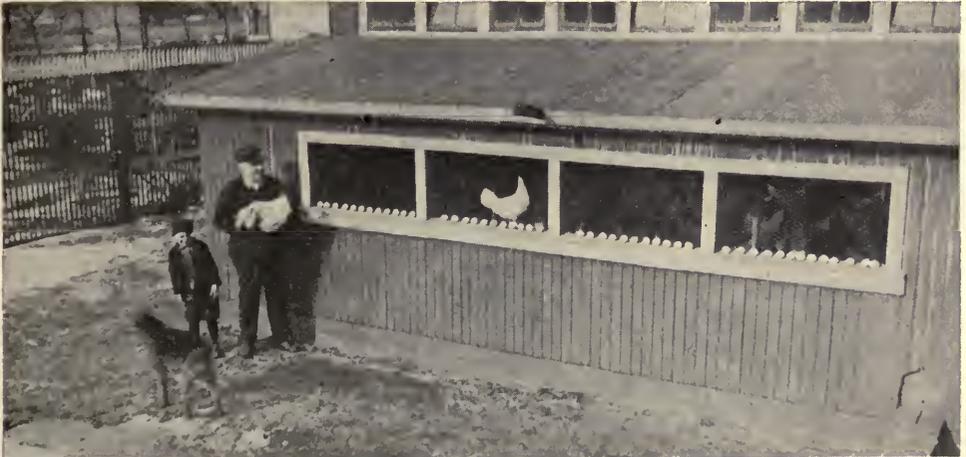

Mr. White's 20-by-24-foot half-monitor chicken house is well-ventilated, cleanly kept and electrically lighted. Those electric lights are perhaps the biggest secret of the forced production of winter eggs. Instead of allowing his hens to loaf by going to roost at the early winter twilight and remaining there until the late winter dawn, as most folks do, Mr. White turns on his lights and imitates summer conditions for his hens all winter long. He gets them up at 6 o'clock in the morning and keeps them at work until almost 8 o'clock at night—a 14-hour day, as compared with the 9- or 10-hour day that most hens enjoy.

Then, too, he simulates summer conditions

in the food he gives them. Their big event of the day is the noon feeding with a pan of sprouted oats. The way those hens scramble for the oat sprouts and the curly white oat roots indicates their keen enjoyment of the food.

#### A Busy Day for the Hens

The hens' daily schedule runs something like this: 6 a. m., lights go on, up for the day; shortly thereafter, feed (one quart of grain to every fifteen hens) and luke-warm water, work done by one of the sons of the house (Mr. White has five boys, from 7 to 17, great hands for chores); all morning, scratch around on the straw-covered floor, drink from the automatic water fountains, eat occasionally from the suspended pails full of laying mash, lay eggs; noon, a treat of

*Above, Mr. White, his youngest son, the family dog and the prize-winning rooster, which Mr. White is holding. A morning's yield of eggs is laid out on the window-sill of the chicken house. Below, the chicken house and, at the right, the boys' pigeon cage.*

sprouted oats; afternoon, same as morning; lights go on at dusk; eat (one quart of scratch grain to every ten hens); work some more; lights dimmed at 7:30, out at 8; climb on medicated roosts for the night.

These roosts are of wood; they have troughs containing oil, which seeps out through the cracks and keeps the roosts sanitary by killing mites.

Mr. White simulates summer conditions in everything except heat for his hens. This, he says, is not necessary; it is better to have good ventilation. Consequently several of the windows on one side of chicken house are kept open almost all the time; only in the severest weather are all the windows closed. The walls are double boarded, with tarred felt in between, so that there is no draft. The house is cleaned every day, and a depth of 6 to 8 inches of clean straw is kept on the floor all the time. The place is frequently disinfected for lice.

#### Makes His Own Equipment

The nests are of the Iowa farm design, built in tiers along the wall, with narrow openings for entrance, and no steps for the hens to climb up along. Mr. White is now planning to supplant these with new and improved galvanized iron nests which he is making himself.

Mr. White also made his own sprouting machine which prepares the pans of sprouted oats for the noon-time meal. This machine, which he keeps in the cellar, near the furnace, is practically a tall galvanized iron incubator, with double walls, with an oil lamp at the bottom and moist heat passing over and around the eight pans of dampened oats which are kept developing day by day. This

*Mr. and Mrs. White, showing empty pan and pan of sprouted oats.*

gives one pan a day for the week and one for emergencies, and it takes about a week for a pan of oats to sprout sufficiently for feeding. The pans are of galvanized iron, 14 by 18 inches and 1 inch deep; the bottom is perforated. Mr. White also has two incubators.

The start of the White family in the chicken business dates back about two years. They started with six chickens and kept picking up more and reading more about the matter, until now they keep more than 100 all the time. Their neighbors kept asking for the eggs, and now they have a nice little private business worked up, with the boys to do the chores and the delivery work and Mrs. White to make the choice when culling is to be done and chicken meat is needed for the table. Mrs. White never kills a laying hen, Mr. White declares.

#### He Is Now Selling Settings

Mr. White's chickens are of the Ferris strain of single comb White Leghorns. His initial settings were obtained from the Iowa Demonstration Farm, near Cedar Falls. Now he is selling settings on his own account. The end of January saw his chicken house divided into three breeding pens by wire netting. In one pen, selected by the county agent, were the choice hens of the flock, and Mr. White is selling their eggs for setting at the rate of \$3 for 15 eggs; the

*The White home at Waterloo*

second and third pens produce settings that sell around \$2. In addition, he also sells a few baby chicks.

Mr. White has not gone in extensively for prizes at poultry shows. Last year saw his first exhibiting, and one rooster and four hens of his won the prize for the third best pen at the Waterloo show.

Overhead expenses have not bothered Mr. White much in his poultry venture. The investment required even for his chicken house was small, as most of the material came from old box cars and car doors he obtained from the company, and D. M. Delancy, his fireman, helped him put the house together. Not a carpenter has laid hands on it.

Mr. White is a subscriber to a poultry journal, and he always reads all he can about the subject. He declares that the use of electric light increases the production of winter eggs more than half, and in proof he cites the fact that his production in December, 1920, a bad winter, was only a few dozen less than the production for December, 1921, a comparatively good winter. In December, 1920, however, he received 80 cents a dozen, compared with 60 cents a dozen in the December just past.

#### An Excellent Baker of Cakes

Mr. White, in addition to making a success of the poultry business as a sideline, is noted as one of the best cake-bakers in his part of the country. In proof of this, two of his favorite recipes are presented in connection with this article. To show that the hand that controls one of our 2900-type freight engines can handle as well the mixing bowl and the cake pan, he will go into the kitchen and turn out one of the best cakes you ever set your teeth into. The writer has sampled Mr. White's product and can vouch for its excellence.

Mr. White also is an expert with the rifle and the shotgun, and his reputation for marksmanship is widespread. One of his tricks is to eject an empty shell from a repeating rifle, draw in another shell and hit the first shell before it strikes the ground. He has proved himself a prize-winner in breaking blue-rocks with a shotgun. He frequently goes on hunting trips, and he always keeps a collection of guns in the house.

#### Twenty-Four Years With Company

His service with the Illinois Central started March 2, 1898, when he began work

### Fruit Cake

Take 2 large cups of sugar, 1 quart of water, 1 pound of raisins, 1 pound of currants, some cinnamon and allspice; mix and let boil half an hour. As you take it off the stove, add two tablespoonfuls of lard. Allow to cool. Work in salt, 1 tablespoonful of soda, 4 cups of flour and 1 cup of nuts. Bake about an hour.—Recipe of E. E. WHITE, Engineer, Minnesota Division, Waterloo, Iowa.

as a helper in the roundhouse at Freeport, Ill. He was a native of Nevada, Ill., but was picked off the farm by his uncle, M. L. Hanley, now traveling freight agent at Freeport. August 11, 1898, he started firing between Freeport and Chicago. His service on the Minnesota division dates from 1901. He was examined in 1902 and did his first work as an engineer on a work train. For eight years now he has been an engineer on the same freight run between Freeport and Waterloo. His present engine is No. 2968.

Mr. White was married in 1903. The Whites now have five boys, previously mentioned: Bob, 17; Ed, 15; Hanley, 12; Dick, 10, and Joe, 7. These boys are a great help with the chickens, although it is believed that they prefer tinkering with their wireless apparatus, which has an aerial overhanging the whole backyard.

#### A GOOD IDEA

"After reading my November and December numbers of the *Illinois Central Magazine*, I handed them to the librarian of the Toledo Library, established by the schools and some outside aid," writes Flavius Tossey of Toledo, Ill., attorney for the Illinois Central in Cumberland County. "The librarian was glad to get these numbers, and they will be read alike by old and young patrons. I am confident the reading of these magazines by library patrons will have a tendency to promote, in some degree, a good feeling toward the company in the minds of a good class of people. I write this as a suggestion that members of the Illinois Central family at any places on the company's lines, especially in moderately populated communities where there are libraries, who receive the magazine, might do as I did—read it, and then place it in the nearest public library."

# Our Wire Service South of the Ohio River

## B. Weeks Heads Extensive Telegraph and Telephone Organization That Has Its Own Problems

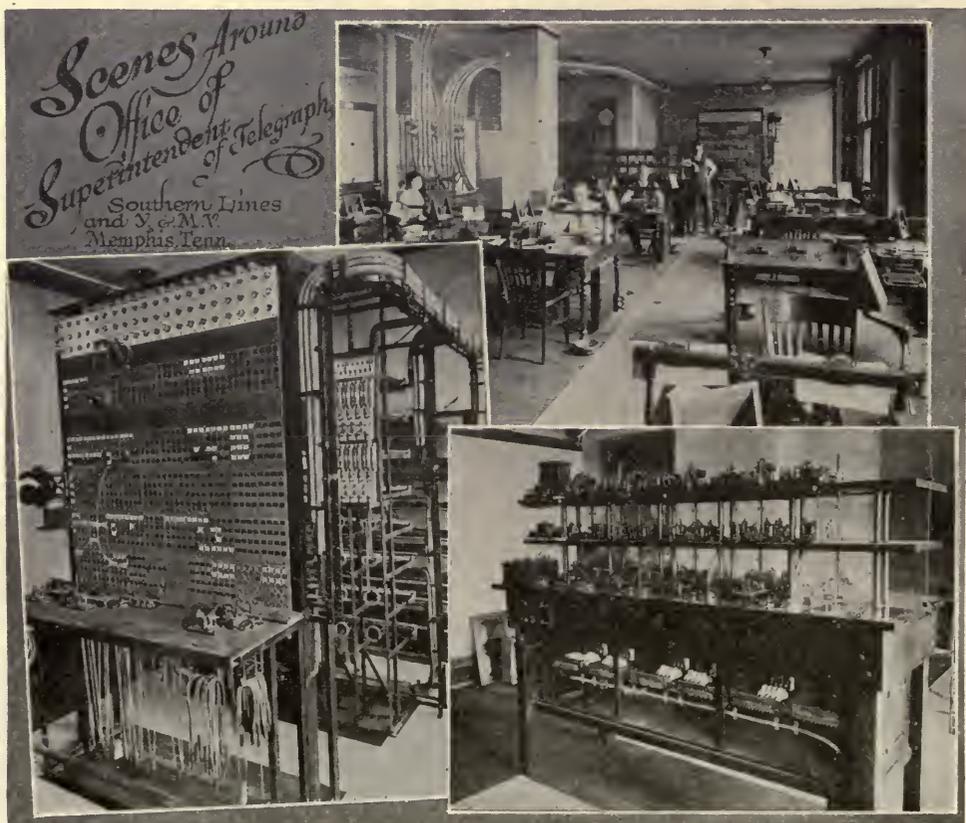

THE Illinois Central Southern Lines, made up of the lines south of the Ohio River, and the Yazoo & Mississippi Valley Railroad, known as the "Valley Road," have their telegraph and telephone department in charge of B. Weeks, superintendent of telegraph, Memphis, Tenn., who entered railway service as agent-operator at Kenner, La., in November, 1883, during the construction of the Valley Road.

At that time a pole line was constructed from New Orleans to Baton Rouge, with one wire to which telephones located at various construction camps were connected; this was

about the first use of telephone in railway construction. When a regular passenger train was put on, telephones were removed, and the wire turned into telegraph service and extended to Vicksburg and Memphis for the use of dispatchers, after which a second wire was strung from Memphis to New Orleans for other business.

### Relayed Messages Through Cairo

The Illinois Central at that time operated two wires from New Orleans to Cairo, one wire being used jointly for dispatching trains and for local messages, and the second wire being connected to terminal and junction

points; the Chicago business was relayed through Cairo.

The total wire mileage of the Southern Lines at that time was about 1,200 miles, and the Valley Road had about 900 miles of wire.

The Illinois Central later on acquired control of the C. O. & S. W. Railroad from Memphis to Louisville, the Mississippi & Tennessee from Memphis to Grenada, and the Valley Road from Memphis to New Orleans.

The telephone and telegraph forces at Memphis: Upper picture, back row, reading from left to right—D. C. Walker, Bertha Bridges, J. Reed Wells, C. S. Priddy, Glen Roach, J. I. Evans; front row, left to right—A. L. Stahl, L. L. Blakley, Christine Beckham, J. E. Drewry, J. B. Hughes, B. Weeks, H. Johnson.

The telephone operators, middle picture, upper row, left to right—Anna Lowe, Hannah Regan, Julia Price; lower, left to right—Vernie Garrett, Bertie Wilson, Lucile Brazelton.

At the switchboard, lower picture, left to right—Operators Brazelton, Lowe, Wilson, Price, Garrett, Regan.

The first installation of equipment for telephone train dispatching was on the Louisiana division in April, 1909, and the telephone is now being used for this purpose on all of the main line divisions of the Illinois Central Southern Lines and the most important districts of the Y. & M. V. This has been followed by the installation of second, or local, telephone lines on these districts, in addition to which the department is operating a long distance telephone circuit, leased from the telephone company, from Louisville to Memphis and over the Y. & M. V. to New Orleans.

*Sleet—a Frequent Cause of Wire Trouble*

### Nearly 9,000 Miles of Wire

The total circuit miles for train dispatching by telephone are now 1,826; local message lines total 1,681 miles; leased lines, 863—a total of 4,370 circuit miles, representing some 8,740 miles of wire. The telegraph service, requiring about 8,000 miles of wire, operates a duplex telegraph between Chicago and New Orleans and from Chicago to Memphis. The Memphis telegraph office sends to Chicago daily, between 8 a. m. and 6 p. m., about 300 messages and reports, the average time of these messages on hand being 30 minutes; during the same hours about 250 messages daily are sent to other offices.

The Memphis telephone exchange is presided over by Miss Vernie Garrett, and the New Orleans telephone service is in charge of Miss Angie O'Rourke. A recent check of calls handled by the Memphis telephone board shows a total of 464 in and out and through connections on toll or long distance lines between 8 a. m. and 5 p. m.; local calls totaled 4,052. The value of the long distance calls handled through the Memphis exchange, based on the lowest commercial day rate, would be more than \$300 a day.

### Studying Wireless Telephony

Experiments are being made in wireless telephony. Equipment has been received which enables the department to pick up telegraph sending; under favorable conditions, it has received telephone conversations, music, and singing sent broadcast at night from Pitts-

burgh and Denver. This work will be continued and receiving stations established at other important points. With the development in the work, transmitting stations will probably be installed for wireless telephone communication between important points on the Southern Lines and the Y. & M. V.

During 1921 repairs were made to telegraph lines which involved the setting of 3,159 new poles, resetting 1,885 which had become defective at the ground line, and installing 825 anchors for protecting the line.

### T. J. HUDSON DIES

T. J. Hudson, former general traffic manager of the Illinois Central, died January 21 at St. Petersburg, Fla., after an illness of more than a year. He was 75 years old. Mr. Hudson was in the service of the Illinois Central System for thirty-one years. He obtained his first railway experience with the Chicago & Alton Railroad, and came to the Illinois Central in 1877 as superintendent of the Springfield division. In 1881, he was made superintendent of the Chicago division. Five years later he was promoted to superintendent of the Illinois and Iowa lines, with offices in Chicago. He had held this position one year and seven months when he was promoted to traffic manager. He was traffic manager from 1887 to 1905, when he was promoted to general traffic manager. March 12, 1908, he retired from active service on a pension.

# Editorial

## ABRAHAM LINCOLN

We feel that we need offer no apology in making the February number of the *Illinois Central Magazine* a tribute to the memory of Abraham Lincoln. That his birthplace at Hodgenville, Ky., is a shrine to which many pilgrims travel each year over the lines of the Illinois Central; that his years of preparation for the leadership of the Nation were spent at Springfield, Ill., on the Illinois Central; that the railroad traverses a territory which Lincoln loved devotedly, and in which he lived until called to Washington—these would be reasons enough. Further than that, however, the immortal statesman was once our co-worker. He served the Illinois Central as an attorney for nine years, and the record of his service is our proud heritage.

We have essayed therefore to present a story of Lincoln from the three phases in which he came into most intimate contact with the railroad. Judge Drennan has contributed an article on Lincoln's service to the Illinois Central as an attorney, and illustrated articles deal with his birthplace and the Springfield memorials. We have passed over those details of his life which are more intimately known from an historical standpoint, and we also have attempted to supplement the work of the late Colonel H. L. Anderson, former editor of the magazine, who contributed an interesting and valuable sketch of Lincoln's life in the early months of 1913, through these pages.

Our effort has been directed upon a presentation of a human interest story of the renowned statesman, in a manner that employes of the Illinois Central System will feel touches their lives directly. We have not tried to draw a sermon from his life—we believe the simple record of his life in itself is ennobling. We could say little to add to his glory.

## OUR COURTESY RECORD

From time to time we have published in the magazine excerpts of letters from patrons com-

plimenting the Illinois Central System upon the prompt, efficient, courteous service exhibited by employes in the various departments. The other day an officer of another railroad, who has occasion to travel frequently over our lines, told the editor that in his opinion there are no more courteous train service employes than ours. He was asked to put his compliment in the form of a letter which could be used in the magazine. Here's what he wrote:

"On the frequent trips which I am forced to make over the Illinois Central System I have been very much impressed with the courtesy and attention paid to passengers by the train crews, including dining-car stewards and Pullman employes. There seems to be a good fellowship prevailing, and the passengers are made to feel that they are guests of the company rather than so much livestock being transported, as seems to be the feeling which exists upon some other lines that I might mention. I am led to make this comment because there is nothing which makes a man feel so good as to know that his efforts are appreciated, not only by his employer but by the public in general.

"You will appreciate that it naturally follows when people are well satisfied with the treatment they receive in traveling they become boosters for the line according their proper consideration—and that naturally attracts other people to travel over that line, as well as to ship their freight that way."

## RAIL FACTS VS. FANCIES

A letter from President Markham to the employes of the Illinois Central System calling attention to a campaign of misrepresentation carried on by men claiming to represent the sentiments of the railway employes of the country was published in the *Illinois Central Magazine* for January (pp. 7-8).

Mr. Markham gave a summary of four specific accusations made against the railway managements of the country, without excepting the Illinois Central, by Frank J. Warne, who was employed by the train and engine service brotherhoods, before the Senate Com-

mittee on Interstate Commerce during December. He urged that employes examine the accusations with respect to this system and asked them to report to him any evidence they might find that the unlawful practices charged by Mr. Warne were indulged in on the Illinois Central System. He suggested that employes finding the charges to be false owe it to their honor to repudiate the leadership of men engaged in such misrepresentation.

Following the letter to employes, Mr. Markham and the other officers have received a great number of letters from employes in which they declare their resentment against such misrepresentation. The letters have come from every part of the Illinois Central System, from representatives of every class of employment. Many have been from men who have represented their organizations in dealings with the management with respect to wage scales and working conditions, and they declare that they have found the management willing at all times to meet the employes' representatives on a fair basis.

The family spirit of the organization of the Illinois Central System has been exemplified by the letter and the results it has produced. Mr. Markham gave evidence of his confidence in the men of the road when he addressed his letter of December 20 to them. Many of them gave evidence of their confidence in the management when they came back promptly with the response that they do not approve of abuse and misrepresentation. Both Mr. Markham and the men exhibited their confidence in the railroad by repudiating entirely the accusations made by Mr. Warne.

There is no quarrel between the management and the men of the Illinois Central System. The family spirit in which the organization carries on has been strengthened by the mutual exchange of confidences.

In further proof, however, of the truth of Mr. Markham's charge that men claiming to represent the railway employes have been misrepresenting facts in their abuse of railway managements has come a letter from William H. Johnston, president of the International Association of Machinists. Readers will find it published elsewhere in this issue. Mr. Johnston, overlooking the specific charges upon which Mr. Markham's letter was based, quoted testimony given by Glenn E. Plumb before a committee of the House of Repre-

sentatives, December 14, purporting to show that the railroads of the country are valued by the Interstate Commerce Commission for rate-making purposes at a figure more than ten billion dollars in excess of their "actual valuation." Mr. Markham's reply also is reprinted in this number.

Mr. Plumb and Mr. Johnston use an unique method in determining the "actual valuation" of the railroads. The Interstate Commerce Commission has been engaged for a number of years in the work of determining the value of the railway properties of the country. Thus far they have served tentative valuations upon twenty-four Class I railway systems out of a total of about 200, but the twenty-four roads have a mileage of only about 7 per cent of the total. With the exception of the Rock Island Lines and the Central of Georgia, the roads thus far tentatively valued have been small roads. A number of them were in receivership or in the process of reorganization at the date on which their tentative valuations are based. Some of them have since been reorganized. They are thoroughly unrepresentative, as a group, of the railroads of the country. No intelligent person will say that the valuation per mile of one of the branch lines of the Illinois Central System, for example, can be taken as a basis for arriving at the valuation of all our lines. And yet that is what Mr. Plumb and Mr. Johnston did, in taking the valuation per mile of 7 per cent of the railway trackage of the country and attempting to compute thereon the value of all railway properties, mile for mile. Not only have they erred in that, however, but Mr. Markham points out graphically that by a misuse of figures on *miles of track* and *miles of line* they have thrown their calculations off more than 50 per cent and rendered them entirely worthless. For the twenty-four small roads tentatively valued they have taken the average value per *mile of track* (including all track) and multiplied it by the number of *miles of line* of all roads (first track only).

Mr. Plumb claims to speak for the railway employes of the country. He calls himself general counsel of the Organized Railway Employes of America. So far as the records indicate, he represents the organized employes of all the railroads in the United States. Mr. Johnston is the chief executive officer of one of the crafts organizations. Their exposure by President Markham is complete, and this

after-effect of our president's December 20 letter is further testimony of the need for a statement such as Mr. Markham made. It

has set our men to thinking. They have said they resent the unfair tactics employed by their self-styled leaders.

## Some of Our 1921 "No Exception" Records

O. D. Weitzel, agent at Cedars, Miss., reports as follows:

"Below I quote the number of carloads of freight handled at this station, inbound and outbound, for the year, January 1 to December 31, inclusive, 1921: Outbound, 222 cars; inbound, 391 cars; total 613 cars.

"Also the number of pieces of LCL freight and pounds handled inbound and outbound: 1,145 pieces, or 59,961 pounds (30 tons) LCL freight, outbound; 1,485 pieces, or 71,400 pounds (35½ tons), LCL freight, inbound.

"During 1921 not a single bad order report was issued against the foregoing freight handled here, and not a single short report was issued against this freight.

"I hope that I shall be able to write you another letter of this nature at the close of the year 1922."

Pressed for an explanation of how he did it, Mr. Weitzel wrote:

"First, I check the LCL freight from locals to the warehouse carefully; next I check it from the warehouse to each person receiving it. In delivering part shipments I check and make notation on the back of the delivery receipt, showing that he received that load; then I take his signature for it.

"When I am not delivering freight to or from my warehouse, I keep the warehouse doors closed and locked.

"As an agent performing my duty, I have picked up oats, corn, and flour, putting them back in the torn sacks and sewing the sacks up. I have picked up soap, cookies, sugar and all sorts of various canned goods, placed them back in boxes, then securely nailed the boxes, therefore preventing exceptions.

"When I receive at my station shipments of glassware or crockery and the container shows signs of rough handling, I have the consignee open it before removing from the warehouse, and I check by invoice, also examining carefully to see if the shipment is cracked or not. Many and many a shipment of glassware or crockery is not broken by the railway company but broken by the one who handled from warehouse to store.

"When I check a piece of freight short, I put a tracer after it the same day it checks short; nine times out of ten you will locate it by prompt handling of the tracer.

"I never accept household goods, merchandise or LCL freight of any kind unless it is properly packed.

"If all agents will live up to the existing instructions in regard to handling LCL freight, I am inclined to believe that the percentage of claims filed can show a 50 per cent decrease annually."

G. W. Spicer, agent at Alburnett, Iowa writes as follows:

"My claim report for December, 1921, is blank, as was the whole year. I had five bad order reports in 1921 and one short report.

"We can all keep exceptions down if we will only watch and make a special effort, as one has to do if we win out in anything.

"I have interested myself enough to run through my business report for 1921, and I see that my freight forwarded for twelve months was \$9,615.55; freight received was \$21,667.50, and the total was \$31,283.05. No claims, one short, five bad orders."

S. F. Quinn, agent at Logan, Ill., writes:

"I finished the year, 1921, without a short and very few bad orders. I think it is very good for 1921, station running from 300 to 500 Pro's per month. I aim for the same in 1922."

### TRAINLOAD OF CORN

Considerable comment has been evoked by a trainload of twenty-five cars of corn which recently moved out of Onawa, Iowa, over the Illinois Central, three cars being consigned to Sioux City, Iowa, and twenty-two to Chicago. The total weight of the shipment was 2,444,000 pounds, or 1,222 tons. By shipping the corn on January 1 the shipper took advantage of the reduced rates placed in effect on that date. This was one of the biggest shipments of corn recently made. It was declared at Onawa to be a sign of returning prosperity, as all of the corn was bought in that territory on the east bank of the Missouri River.

# PUBLIC OPINION

What the

World thinks

## GET TOGETHER

No matter the wind,  
No matter the weather,  
No matter the why,  
No matter the whether—  
Master and man  
Must get together.

From an Ohio daily I glean the following editorial bit:

"An Indianapolis paper tells how the Central Labor Union of that city has planned to invite employers of labor to address that body during the winter months. The meetings, it is explained, are not to be occasions in which there are to be wranglings and contentions and discussion as to the relative merits of each cause, but they are to be held for the purpose of getting a better understanding through calm and dispassionate statement. The president of the labor organization says that one of the greatest needs is to have each side get the other's viewpoint; and the series of talks starts out with strong encouragement that this will in a considerable measure be accomplished."

Get together!

If nations, with all their selfish and conflicting interests, can get together on a major problem like limitation of armaments, capital and labor in America should be able to get together.

I trust the effort in Indianapolis is sincere; and I trust it may succeed.

The first business man who talked at the initial meeting of the proposed series said:

"The time has come for employers and employes to realize that they cannot get along without each other. That one class cannot prosper unless the other does. That it is as much to the employer's interest that his workers be prosperous and contented, as it is that his business be healthful and active."

Likewise, it is just as important to the workers that the business of their employers be prosperous—for without that prosperity he cannot give employment.

Get together!

If capital cannot give some reasonable return for its investment, the people who furnish capital will cease to do so.

They will decide to withhold it—and take no risks—and undergo no anxiety.

When capital is active—working people are benefited.

When capital is inactive—laborers are hurt.

Slack business means a small payroll; dead business means a closed plant.

Get together!

The careless, lazy worker is an enemy to all his loyal and industrious fellows.

Workers in hard luck hesitate at hard work.

The employer who doesn't pay as good wages and furnish as good working conditions as he can afford is an enemy to his fellow employees.

Get together!—Chicago (Ill.) *Journal of Commerce*, January 7.

## ASKS FOR CRITICISM

Among transportation lines in the South the Central of Georgia Railway stands out conspicuous for its endeavors to establish a better understanding between its organization and the public. President William A. Winburn has, by means of advertisements, asked the public for constructive criticism concerning his road, so that any causes for dissatisfaction existing may be revealed and removed if possible, the idea being to do away with any difficulty before the public has been aroused to complain about it. In his publications he takes the people into his confidence by openly considering and discussing the problems of the railroads, and already he has developed a spirit of public co-operation with an absence of antagonism that is very gratifying.

The wisdom of this course upon the part of a leading railroad is apparent to any one, and it is bound to react favorably not only upon its officers and employes, but to the advantage of other railway organiza-

tions, which cannot fail to be influenced by the spirit of friendly relationship that will be created between the line and its patrons. The plan while partly new is not altogether so, for the Illinois Central Railroad Company, which controls the Central of Georgia Railway, started it some time ago, President C. H. Markham surprising the traveling and shipping public along the lines of the system by requesting them to point out things to which they objected and to suggest remedies. The results were gratifying—then, as they are now in the case of the Central of Georgia road.

It will be observed that "constructive criticism" is requested. It is well that it is so. There is too much of the "knocking" style of criticism, which creates hostility and anger, but does not, as the saying goes, "get anywhere." If any one finds cause for complaint about a railroad it is almost certain that thinking of the complaint will suggest a remedy, and the idea of that remedy is what the railway men want. An outside point of view is often exceedingly helpful in the case of any enterprise, and in none more so than railroads, which are constantly in business relationships with large numbers of people. In sundry private enterprises the idea that "the customer is always right" was developed years ago, and to the lasting profit of these several large enterprises, which left nothing undone to make their customers contented and satisfied, even submitting to injustices rather than permit ill will to grow. Although a public service corporation like a railroad should not be expected to deal more liberally with one patron than another, it ought to treat all courteously, considerately and with full concern for their welfare and the character of the service rendered.

President Winburn has taken a forward step in his relationship with the public and it is to be hoped that the full fruition of his anticipations will be realized.—*Manufacturers' Record*, Baltimore, Md., January 12.

#### CANADA'S RAILWAY DEFICIT

A deficit of \$100,000,000 in the government operation of Canadian railroads last year resulted in the overwhelming defeat at the recent election of the Conservative party,

which had fostered the Canadian National Railways plan. It defeated Prime Minister Meighan in some of the provinces that were presumably Conservative strongholds and lost for him his home constituency in Manitoba.

Six other cabinet members were discarded by the electors. Canada turned Liberal with a vengeance, because Canadians sickened of the government's venture in business.

What would have been the Canadian reaction had the railway deficit been six times larger than that against which voters recently rebelled? The deficit of the American experiment in government operation of railroads affords that comparison, for, in twenty-six months, the actual loss to the taxpayers of the United States from government operation of railroads was \$1,375,000,000.

Government ownership and operation of railroads was not an actual issue in the Canadian campaign, for the reason that both parties were afraid of it. Both agree, however, that the great reaction from Conservative politics was largely due to public dissatisfaction with the railway situation.

It might be said that the comparison is unfair because of the wide difference in the total mileage of the railroads of the two countries. However, the comparative difference is not great. The mileage of the railroads in this country is less than ten times that of Canada and our annual loss during government operation was more than six times that of Canada. If account be taken of the difference in traffic density, the figures compare rather closely.

The Canadian experience should be a lesson and a warning to American politicians. The candidate or the party that espouses any plan other than paying our losses incident to government's experiment in business and forgetting the matter is doomed to defeat. Municipal, state or government ownership of utilities or industries is a beautiful theory which has thrilled the electorate from time to time throughout modern history, but it has never failed to exact its toll of operating deficits and tax burdens, and is almost invariably repudiated, together with those who have sponsored it.—Chicago (Ill.) *Journal of Commerce*, December 15.

# Spends His Noon Hour Soliciting Traffic

*Here Is the Diary of an Illinois Central Employee Showing How He Attacks the Problem*

"I buy from you; why don't you patronize the Illinois Central?" is getting to be a more popular motto on this railway system every day. The renewed interest in traffic solicitation by employes brings questions from those who want to do all they can but who do not know just how to go about it. Here is how one employe broke into the game. Fred Abrahamson, employed in the office of the general superintendent of transportation at Chicago, became imbued with the idea through articles appearing in the Illinois Central Magazine. This is his own diary of the results.

**H**M. METZ, commercial agent, and J. W. Rhodes, foreign freight agent, were consulted. Both supplied me with valuable information relative to the work.

Equipped thus, I decided on the following course of action:

The Time—Noon Hour.

The Place—Chicago Loop District.

The Goal—Illinois Central Business.

I chose the noon-hour because it was the only time available; the loop district on account of its adaptability to my purpose, and the goal—Illinois Central business—because it is the medium which sustains our great railway system.

I first went to a wholesale house where I had formerly been employed. Prospects the first noon looked good for a batch of routing orders. I called next day and was informed that solicitors from the commercial agent's office made regular calls there and were getting all the business.

## Got His First Routing Order

I went next to the hardware store where I trade and

was rewarded with my first routing order, reading as follows:

— Manufacturing Company,  
Rockford, Ill.

Gentlemen:

We note in making freight shipments, it would be more convenient for us if you will kindly route shipments from Rockford by way of the Illinois Central.

Third day to the — Piano Company. My wife's mother, her three sisters and myself had each purchased a piano from this concern. Naturally, I was well taken care of and was assured every possible shipment would be routed via our line.

The noon day following, I went to a large department store where I had been a steady customer for years. On divulging this information, I was treated with the greatest consideration. The traffic man informed me

*Fred Abrahamson Soliciting Traffic—Photograph by Ernest E. Schart, Chicago.*

that his firm was a good friend of the Illinois Central and was giving the Illinois Central a large percentage of its business. During my interview he gave me the information that some of the officials of his concern contemplated taking a trip to Waycross, Ga. A mental note of this was taken and the information given the passenger department on my return to the office.

#### Promised to Use the Blanks

The fifth day's noon-hour solicitation found me at another department store where I had recently done some trading. The traffic man, on hearing of my patronage of the firm, welcomed me in. Learning I was after business for the Illinois Central, he suggested that I give him a pad of routing blanks. He filled them out "Route via IC" and said he would give them to his buyers when they start out on the road in sixty days.

A friend intended leaving for St. Louis. I asked how he was going. "On the \_\_\_\_\_ Railroad," he said.

"How about the Illinois Central?" I asked.

I called him up a short time thereafter with data. He went via the Diamond Special.

While on a suburban train, I became ac-

quainted with a gentleman who, I found, directs routing for a loop concern. I urged him to ship via our line. A few weeks later I chanced upon him again, and he volunteered the information that he had routed three LCL shipments the past ten days from Chicago to New Orleans via the Illinois Central. He said he would like to get some data on passenger fares between Chicago and New Orleans. This information I supplied, and the following day he assured me he had decided to take this trip in April via the Illinois Central.

#### Deals With Those He Knows

It will be noticed all my solicitation has been done with people whom I know or have had business dealings with. This method I have found very satisfactory; it brings results. Commenting on this method, Mr. Metz, commercial agent, said: "Your approach to the subject is unusual; while our men have to go after business from the standpoint of solicitors, you approach the prospects as a guest."

If each of our 60,000 employes could obtain but one hundred pounds of LCL business or could induce a friend to use our passenger service once a week, the total would soon amount to a very large figure.

## Landmarks End Rough Starts and Stops

By J. H. McGUIRE,

Traveling Engineer, Centralia, Ill.

We are all proud of our passenger trains, their reputation for service, equipment and handling, and the large percentage of trains that run on time. We receive many letters from passengers that are complimentary to the service, and it is seldom that a complaint is filed.

Just recently one of our officials made the remark that if the rough stops and starts at water spouts could be avoided, more than 90 per cent of the few rough stops and starts could be eliminated. I think no one except an engineer can appreciate the benefit a landmark is in making a stop for water spouts, milk platforms, etc. This is especially true with an extra engineer.

At Carbondale we have landmarks for all stops made to take water. We make these landmarks by painting with white paint a mark about six or eight inches wide and two or more feet long that will be directly under the

step at the gangway when the manhole is directly opposite the water spout, and a stop within two feet either way from this landmark will spot the engine right to get water. At points where it is impracticable to use paint, this mark could be made of concrete about the same size, permanently placed and with the top slightly above the surface of the ground.

Our train No. 1, for instance, picks up a mail car before taking water, and for its benefit we have the mark just one car length back, so that the engine will stand in position to get water after the work is done.

At Ashley this same train loads a lot of milk. This milk is loaded on a truck or push car that runs on a track, and the train must stop at a certain point with the baggage car door just right in order to do this work. We have the landmarks at this point. Without these marks the engineer is making the stops according to signals given by the fireman or baggageman, as the case may be, and of course he is working by their judgment and not his own.

### Valentines

The fourteenth day of February derives its name from St. Valentine, a bishop and martyr, who was put to death on that day in the year 270, at Rome. The custom of choosing valentines on this day is an ancient one, and the fact that the practice has come down through the centuries indicates its appeal to the human heart. There does not appear to have been any incident in the life of Valentine to which the origin of the custom can be traced. There was an old belief that birds chose their mates on this day.

In olden days, on the eve of St. Valentine's Day, the young people of a community went to meet, and each drew by lot from a number of names of the opposite sex which were put into a receptacle. Each gentleman drew the name of a lady for his valentine and became bound to her service for a year. If the Fates were kind, the gentleman drew the name of the one he loved best, and in that case we may be sure that his service was tireless and the year all too short.

Valentine Day at the present time is observed by sending a love token not only to the object of one's choice but also to a dear friend or relative. And everyone knows how eagerly children watch for the postman on this day. A valentine need not necessarily enfold its tender sentiment in lace paper and celluloid, gay with painted crimson hearts. A box of flowers (and who isn't thrilled when the tissue wrappings disclose the fragrant violet?), a basket of fruit, a heart-shaped box of candy, a book, a handkerchief, or even a glass of home-made jelly or a beautifully frosted cake are among the offerings which will delight our loved ones and show our adherence to the ancient custom of choosing a valentine.

### Care of the Hair

If you don't believe that women devote more time and thought to artistic hair arrangement

nowadays than ever before, look about you the next time you attend the opera, concert, or theater, and be convinced.

The other evening I sat behind a row of beautiful heads, and made a mental note of the neatness and becomingness of each coiffure. On the end at the right was an exquisite head of iron-gray hair, softly waved and coiled in shining loops. The next woman in the row had hair of lustrous blue-black, gracefully twisted into a knot after the Grecian fashion. Then there was a head of rich golden-brown hair, arranged in smooth, wide waves, with fascinating reddish tendrils escaping about the ears. And then there was a bobbed head, the hair so thick that it stood out bushily all around, lending a saucy air to the charming profile. I looked about me with critical eye. There wasn't a single neglected head in sight. Gone was the careless, get-it-up-in-any-style twist, with wisps of hair hanging about the ears and stringing down at the nape of the neck like corn silk. What a blessing the side-puff arrangement is, I thought, since very few women have really pretty ears.

Truly, a woman's crown of glory is her hair, and every minute spent on its care will be well repaid. How often should the hair be shampooed? Some women say every two weeks, but there is considerable difference of opinion on this point. Those of us who work where cinders and soot are to be contended with know that to have a clean and comfortable head it must be tubbed every week. Weekly shampoos at the hairdresser's make alarming inroads upon the purse. I know three girls who "clubbed" together and bought an electric hair dryer, and they have found it worth its weight in gold. Think of the convenience of a shampoo early in the morning or late at night! For the hair dryer knows no business hours. The bath spray is used for rinsing purposes, and the final touch is a lemon rinse. Just squeeze a lemon, strain

the juice carefully, add to it a pint of water, and you have a rinse that will bring out all the hidden glints in your hair.

Rubbing hot oil into the scalp nourishes the roots of the hair. Brushing helps to keep it in condition, besides removing any dandruff. Another excellent treatment is to massage the scalp with the tips of the fingers, describing small circles, until the head feels warm.

Hairpins to match the color of the hair can be found in the shops. And would you have believed that brilliantine to match the color of the hair is now to be had? There is the trick, also, of wearing two hair nets when a particularly trim coiffure is desired, pinning the second net in place over the first one. Finally, a deft pat or two to make sure that the pins are fastened firmly in the hair and one goes blithely in to dinner, secure in the knowledge that she will not face the tragedy of having a loose hairpin fall into the soup.

---

### Today

O Father, guide these faltering steps today,  
Lest I should fall!

Tomorrow? Ah, tomorrow's far away—

Today is all.

If I but keep my feet till evening time,  
Night will bring rest;

Then, stronger grown, tomorrow I shall climb  
With newer zest.

Oh, may I stoop to no unworthiness,

In pain or sorrow,

Nor bear from yesterday one bitterness

On to tomorrow!

Then, Father, help these searching eyes today  
The path to see;

Be patient with my feebleness—the way  
Is steep to Thee!

—SELECTED.

---

### Tested Recipes

**APPLE SAUCE CAKE.**—Cream together 1 cup of sugar and  $\frac{1}{2}$  cup of butter, add  $1\frac{1}{2}$  cups of apple sauce, 2 small teaspoons baking soda (dissolved in the sauce), 1 cup seeded raisins, 1 teaspoon cinnamon,  $\frac{1}{4}$  teaspoon each of cloves and nutmeg, and 2 cups sifted flour. Bake in slow oven.

**SOUR MILK GEMS.**— $1\frac{1}{4}$  cupfuls sour milk, 1 cupful sirup, 2 tablespoonfuls of shortening, 1 teaspoonful baking soda, 1 teaspoonful salt. Mix until well blended, and then add 1

cupful white flour and  $1\frac{1}{2}$  cupfuls graham flour. Beat until thoroughly mixed, and bake for 18 minutes in well-greased muffin tins.

**MACARONI AND ROUND STEAK.**—Boil  $\frac{1}{2}$  package macaroni (broken into inch lengths) in salted boiling water for 20 minutes, then drain. Put through food chopper 1 pound round steak and 2 onions. Grease a baking dish, add the macaroni, then the meat and onions, and salt and pepper to taste; then add  $\frac{1}{2}$  can tomatoes,  $\frac{1}{2}$  cupful bread crumbs, a little grated cheese, and dot the dish with small pieces of butter (2 tablespoonfuls will be sufficient). Bake in moderate oven one hour.

**CREAM COOKIES.**— $1\frac{1}{2}$  cups of sugar, 1 cup butter, 3 eggs,  $\frac{1}{2}$  pint sour cream, 1 teaspoon baking soda, 2 cups flour, almond flavor. Cut into star or heart shapes and decorate with nuts or colored sugar.—M. ANDERSON, *Chicago*.

---

### Household Hints for Home Makers

To remove the black coating which collects inside coffee and tea pots, throw a handful of baking soda into the pot, fill it with boiling water, let it stand on the stove for five or six hours, then wash thoroughly and rinse in boiling water. Be careful to clean out the spout. This process will make the inside of an old coffee pot bright and clean.—ANDY GUMP.

To wash chamois, soak it for about ten minutes in two quarts of moderately warm water to which two heaping teaspoons of borax have been added; then wash. Then take two quarts of water of the same temperature, add one teaspoon of borax, and wash the chamois again. Rinse well, pull out smooth, and when partly dry rub with the hands.—ANDY GUMP.

When reheating rolls, have the oven hot before the rolls are put into it; otherwise, the rolls will have a hard crust.

To make celery crisp, soak it in cold water for twenty minutes before serving.

A piece of art gum on one's writing desk is indispensable. Finger marks disappear like magic under its touch.

The carpenter put a brace on the Home Division desk the other day. We observed that when the screws would not go into the wood readily, he rubbed a little soap on the point and presto! the screws were in place.

To clean a rusty or dirty flatiron, scour with sand soap or other rough material, wash the iron and wipe it dry, heat and wax it, rubbing off the surplus wax on a clean cloth. Electric and gas irons can also be cleaned in

this way, but care must be taken not to wet the insulated wires of an electric iron. New irons should be waxed before they are used.

### Every Woman's Duty

Six to eight glasses of water should be drunk during the day to flush the system properly. Drinking water at mealtime is not harmful, provided it is not used to wash the food down without chewing.

Keep a pair of tweezers on your dressing table and use them to remove those unsightly little bristles which will crop out occasionally on one's cheek or chin.

If you would have rosy cheeks and sparkling eyes, eat an apple each night before bedtime. Apples cleanse the teeth, also.

## COMMUNICATIONS

This magazine is not responsible for opinions printed under this heading. Initials or pen names will be permitted only when correct name and address of the writer are known to the editor.

### Rates and Wages

TO THE EDITOR: Are freight and passenger rates too high? Nine out of ten will, without thinking, at once say they are, for that idea is drilled into us every time we pick up a newspaper or magazine. But are they too high?

The rates are not high enough if they take care only of the interest as it falls due on the outstanding bonds and dividends due on stock. They must be high enough to enable the railroads to buy engines, cars, supplies of all kinds, enlarge their shops to take care of new and heavier equipment, reduce grades, build heavier bridges, extend second tracks, etc., but above all, from the employes' standpoint, they must be high enough to enable the railroads to pay us as high a wage as any other industry.

There are some union leaders, claiming to represent railway employes, who think of themselves only. In an effort to gain public favor, they will not hesitate to condemn and defame the railroads with false statements and insinuations, and President Markham certainly did the right thing when he called some of the worst offenders. But on the other hand, there are also some railway officials in the same class, who think of themselves and

the stockholders only and who seek to gain public favor by demanding a reduction in the pay of all employes.

There is a middle course that should be taken by the railroads and their employes. Instead of fighting each other, they should work together. That statement may sound radical, but it is practical. No railroad wants to see the rates reduced, and no employe wants to see his pay cut. If the employes will fight against a reduction in rates, and win, the talk of reducing wages would quickly subside, for the railroads on their present rates would soon be on their feet after business picks up; but if we allow every Tom, Dick and Harry to tell the Interstate Commerce Commission what the rail rates shall be, then the rates will come down, and so will our pay. Those who are demanding a reduction in rates are not demanding it for the dear public; they are demanding it for their own special benefit, and we should fight against them for that reason. It would indeed seem strange to read about the brotherhoods fighting to retain the present transportation rates, with the object of retaining our present rates of pay, but they should do so and get the idea out of their heads that a railway pocket-book has no bottom.

Perhaps those reading this article who are not members of a union wonder how they can help stop the cry for reduced rates. The question is easily answered, for the cry for reduced rates comes mostly through the newspapers. It is doubtful if there are any editors of newspapers located on the lines of the Illinois Central who are unknown to at least some of us. If you see anything in your paper about reducing rates, drop the editor a note and ask him what his object is in fighting the railroads. Better still, call on him and question him on the subject; it may surprise you as to how little he really knows on the subject, for it is a case of the blind leading the blind. Many newspapers write up the subject merely because they believe the public wants to read it, and they feel secure in the belief that the railroads have no friends, anyway.

If the newspapers find that they are going to hear from their readers when they attack the railroads, they will soon investigate the matter more deeply. In the past the newspapers have accused the railroads of everything from arson to murder, and they have got away with it, and it is time the employes should en-

deavor to stop it. They can stop it, and it will result in a more cordial feeling between the newspapers and the railroads. As the public will naturally follow the lead of the newspapers, we will all reap the benefit.—WALTER E. DUBOIS, *voucher clerk, Chicago.*

### Waste Here and There

TO THE EDITOR: Railway shops, like our own homes, have a certain amount of cash allotted them each month on which to operate, and this is often overdrawn, causing a reduction either in force or in working hours. This condition could be greatly improved if more care were exercised by employes in the use and distribution of material and company-owned tools.

The proper application of repair parts to rolling stock will also assist in reducing expenses. Improper measurements taken at the time of placing an order for repair parts will result in waste. When received the piece is either thrown aside to rust, losing its value, or is given a smashing blow with a hammer and chucked in the scrap pile, causing a loss of approximately 85 per cent or more of its value. Haphazard work by an employe is another setback. Too many employes work because they have to, not that they feel an interest in it, and consequently try to loaf as much as the safety of their jobs allows, although 70 per cent of them would be hard set if they were discharged.

If you ever happen to stand on the rear platform of a train, watch the right-of-way as you move smoothly along and you will notice a tie here, a spike and clamp there, a hammer or a pick head which could have been refitted with a new handle—but no, the user had to have a new one; second-hand stuff wouldn't go; he wasn't paying for it; the railroad had enough money. All this wouldn't happen if the man working on the job were paying for the material and tools being used. Did you ever notice a mechanic in the shops wipe his tools and put them properly in his tool chest? If you did, nine chances out of ten those were his own.

Transportation department employes, especially the engineers and switchmen, are in a position to help reduce unnecessary expenses by handling loaded and empty cars carefully. You have perhaps noticed at one time or another how an engineer will, upon a given signal from a switchman, shove a car down a side track with terrific

speed. Naturally, when this car hits the other cars or the bumping posts, it will often cause a damage to the draft rigging or to merchandise if the car is loaded. This causes unnecessary repairs, delay and damage to merchandise, and raises the operating expenses without a return.

There are numerous other small items that could be avoided if proper precaution had been exercised from the start. Therefore, in doing our work, let us have an aim to boost production by concentrating our thoughts.—ANDY GUMP, *Chicago, Ill.*

### Economy at McComb Shops

TO THE EDITOR: I have waited in vain to see an article from the reclaim department on the Illinois Central System. I will tell you a few little stunts we play in McComb shops. We have a reclaim department at McComb called the "scrap dock," and every employe knows where the scrap dock is. It is about 50 feet by 500 feet, more or less, where scrap and good material (I mean second-hand) are shipped from different points to be inspected, sorted out and placed in different bins according to grade.

A. H. Haley takes charge of the scrap iron, and I have the reclaim. We don't let anything get away that is worth anything. We save all good parts of monkey wrenches, Stilson wrenches, all kinds of S wrenches. We save all good parts of wheel-barrow. I have built ten within three years. We even save the good parts of pliers and put them together. We have one tack hammer that was broken open, but we reclaimed it. We pick up all good waste nails, screws, nuts and washers, cotter keys and everything else of any value. All good bolts are re-threaded; nuts are rattled to get the dirt off and re-tapped.—H. E. YOUNG, *McComb, Miss.*

### IN COAL TRAFFIC WORK

Effective January 10, R. P. DeCamp was appointed assistant coal traffic manager. Mr. DeCamp was promoted from chief clerk of the traffic department.

### OFFICE DISCONTINUED

With the retirement of John R. Webster upon pension, the office of general agent at Omaha has been discontinued, effective December 15.

# Some Deadheads the Conductor Didn't See

## How the Fairies Rode One of Our Trains Last Christmas Eve With a 6-Year-Old Pay Passenger

*Do you believe in fairies? Maybe not, if you are a common-sense grown-up railroader, but fairies do travel our trains with almost every little boy and girl we carry. There were some near Memphis on the Christmas Eve just past. J. T. W., flagman, vouches for it, and here is his report of the affair, made upon arrival in Memphis after riding 172 miles with a 6-year-old boy and the boy's imagination.*

ONCE upon a time—it's today; I won't try to fool you—there was a little boy—it's me; I won't try to fool you about that, either—who was riding upon a train—this train; you see, I really don't want to fool you about anything, for I fool myself more than I fool you, when I fool you—going to see a fairy—the Fairy Jo; for, above all things, I would not fool about the one I love most; would you? Would you pretend you didn't like the one in the whole world you loved the most of all? He was going to see the fairy in the land where the fairy was born and cared for and where she was loved and taught many things by folks very strange to me; yet I love them, for they all built a fairy home, filled with lovely things, and friendships which made her happy, and I love them because she loves and loved them.

### Seeing With Your Eyes Shut

Well, the little boy riding on the train going to see the fairy that had called him—and you know it's the thing to do, when fairies call, to go—was sitting in the car, looking out of the window and listening with his eyes closed. What do you suppose he saw? Trees and buildings, you think. No, it was night-time; didn't I tell you that? Ah, yes; lights running by; and the snow on the tracks that our light shines on; yes, a Christmas tree in a window and a green wreath tied with red ribbon—how well you see with your mind's eye!

He looked out and saw a man sitting on a seat just like his seat. How was that? That's easy, you say? Just a reflection. . . . Well, after he had seen everything, he kept on looking, for he had heard that if you will look even after you seem to see everything, some-

times you can see other things. . . . You know how, if you are thinking of something, and one idea comes to you, another often comes forward when you wait and wait and expect it to come. . . . He looked and looked and looked, sometimes with his eyes closed, sometimes half-closed—how else?—that's right; sometimes with one open and the other closed, and sometimes just the opposite, the left one open and the right one closed.

### Why Is Everything Changed?

Did you ever look that way? And did you ever half go to sleep looking at something with your eyes closed? You see such wonderful things. You sometimes see soft mists, and sometimes a kind of gray darkness through which things don't have their usual shapes and colors and sizes and everything. They seem changed. Do you know why? Neither do I, but just when he was wondering why, he saw some moving, flying things out in the darkness. What do you suppose it all looked like? You're right. It was really and truly Fairyland, everywhere, everywhere outdoors. They seemed like angel workers painting houses beautifully, coaxing flowers up into the gardens, dancing with children on playgrounds, dipping their toes in the red of rainbows and dancing on the cheeks of pale people, and everywhere playing in the future—and oh! putting such spirit in folks!

He held his breath for fear of losing the lovely picture. He wondered what it all meant. And he wondered so hard the Fairy Jo came to him—something like, you remember, the genii came when Aladdin rubbed his lamp very hard? She came, and his eyes were so shut he could see her very plainly. Are yours shut enough? He whispered to her, he was so afraid of shooing the Fairy company away, when he had motioned her close to him: "Who are those people making everything out there new, and so much more lovely than it usually seems?"

### Visitors From the Future

And the Fairy came close to him and said—what do you think she said? Night Fairies? No. Dream Fairies? No. Anybody else

guess? Well, she said: "They are the Fairy Visitors from the Future."

And he smiled, as we do sometimes, even though we don't know exactly what folks mean. But he thought: I'll wait; some time I'll find out what this all means.

And his silence was understood by the Fairy, for she said: "Pictures of things as we would like them all the time hover over the looks of things as we see them. You know how we play horse with a stick of wood and a string? And sometimes we play house with a carpet and a shawl and a box? Just like that we play Future with the present; we play folks are just what we want them to be—only we really play it, not just pretend to play it."

You know, that little boy really was playing Future, and the Fairy Jo was teaching him the game. And he went on playing and watching and smiling and wondering—and almost went to sleep holding the dear Fairy's hand in his, when. . . .

"Shall I make up your berth now?"

#### A Message Through the Ground

He opened his eyes, and there stood over him the nice friendly man who takes care of folks on the trains. So he got up and moved to the seat on the other side of the car, saw the steam rushing by near the window, white

like tiny clouds blowing faster than wind blows, and noticed how his paper was moving, for he was playing on a tiny typewriter. And that took his dreamy mind—you know how our minds get easy-like and quick to think of things sometimes, 'specially if we've been thinking of something for a long time and aren't excited at all? What do you think he thought of next? The wheels? The noise? The rails? The ties? The engine? Yes, all of them. And he wondered if the earth could hear the noise. And if the train weighed much, and pressed the ground down much. And if the ground carried the sounds as far away as the air does. And would it carry words as far as the Fairy Jo was away?

He tried. . . . And he saw a troop of messengers, singing the songs the train was singing as it hurried along, catch up his words, drop down through the floor, jump from the wheels to the rail, dive into the ground with a cheer—for the ground isn't ground to fairies, it's just the air of fairyland, and ideas and loving thoughts can run through it as fish swim in water or birds fly in the sky. And the boy saw the messengers go far to the South, to the home of the Fairy, and say to her—but I couldn't hear exactly what they said to her—but they smiled, and she smiled, and he smiled as he watched them.

## A Christmas Gift Where Sorely Needed

At Como, Miss., about half way between Memphis and Grenada, on the Grenada district of the Mississippi division, lives Mrs. Lee, a widow, mother of Miss Audrey Lee and two sons, Ira and Clarence. These sons, now about 25 years of age, have been invalids since birth. The family, since the death of the husband and father about six years ago, has been wholly dependent upon the salary obtained by Miss Audrey Lee for services as operator for the Cumberland Telephone Company of that little city.

The employes of the Grenada district, having become accustomed to the friendly greetings waded by these two boys and realizing the meager Christmas in store for them, at the suggestion of Trainmaster W. H. Petty on December 18 started a Christmas fund for their benefit, from which was realized \$121.50. This amount was fittingly presented by the Rev. A. C. McCorkle, pastor of the Methodist

Church of Como, on Christmas Eve, together with a letter from the railway employes addressed to Mrs. Lee, Miss Audrey, Ira and Clarence, reading as follows:

"We, the undersigned employes of the Illinois Central Railroad Company, take this way of wishing you a Merry Christmas and Happy New Year."

The names of those contributing were given, and Miss Audrey replied as follows:

"To you and your fellow employes, who gave so freely of their help to us Christmas, we wish to tender our heartfelt thanks. We know that each and every one of you sympathizes with us in our affliction, but did not expect what was received, and want to assure you that it will be put to the very best advantage. May God bless and reward every one of you with what He promised to those who are as good as you."

# Hospital Department

## Buttermilk Proves Genuine Health Drink

EVERYONE knows what buttermilk is, but too few persons drink it. Many of those drinking it do not know how much benefit is being done in the way of improving health conditions in the body. There was a time in the early days when many persons lived in the country. All were more or less familiar with buttermilk, and its use was then very much neglected. In fact, the common practice was to feed it to the hogs.

Many persons do not like the taste of buttermilk and will not encourage themselves to drink it, because they do not know of the benefit it is to general health. Buttermilk *does* promote health. It is a much more healthful drink than many of the sweetened concoctions sold at soda fountains; many of the latter, instead of being helpful, are harmful, due to the carbonic acid gas that they contain. Good buttermilk is a much safer and better drink than either tea or coffee. The practice of hastily eating a piece of pie or a doughnut should be discarded in favor of taking one or two glasses of buttermilk, which can be easily and pleasantly taken with no great demand on the digestive apparatus and in a minimum time.

### Great Increase in Recent Years

A recent bulletin from the dairy department of the United States Department of Agriculture declares that the use of milk has increased as much in the last 10 years as in the preceding 280 years. The reason for this is that people are beginning to realize the food value of milk. The great advantage of buttermilk as a food is its chemical action in keeping the intestinal tract, especially the lower bowel, clean and free from harmful disease-producing bacteria. Drink plenty of it—it is useful in the promotion of good health.

A famous scientist named Metchnikoff, who was not blessed with superabundant health, studied the virtues of buttermilk and became one of its most earnest advocates. As a result of drinking it regularly for many

years, this man attained the age of 80. He attributed his good health in his late years to the fact that he had overcome many serious infections by drinking buttermilk and thus keeping the digestive tract free from bacteria and resultant infection. Buttermilk protects by preventing infection.

### Other Points in Its Favor

Lime, so necessary for the growth of bones, is supplied by buttermilk, which also contains those essential vitamins, the absence of which permits the invasion of the system by rickets and scurvy. An analysis shows the presence of 3 per cent proteins, 5 per cent sugar of milk and  $\frac{1}{2}$  per cent each of minerals and fats. One quart contains one ounce of protein, which is one of the chief body builders.

How much better it is, therefore, to drink a glass of buttermilk, which has high food value as well as anti-bacterial action, rather than to indulge in some of the more commonly used beverages which have little or no food value, and which have in many cases a detrimental rather than a beneficial effect on the stomach. A record has been kept in a large industrial organization where two or three thousand quarts of milk are consumed daily by employes, and it has become noticeable that the amount of buttermilk being consumed is increasing, while the use of sweet milk is proportionately decreasing. Sweet milk has the food value, but it does not have the virtue of destroying bacteria. Consequently, the publicity which has been furnished its employes by this industrial organization is producing a decided result in the increased consumption of buttermilk by the employes of this plant.

### Artificial Product Is Good

As to the value of artificially prepared, or "made," buttermilk, compared with the buttermilk produced from the churning, experts are quoted as saying that the artificial product is often better than the natural butter-

milk, because of being less liable to contamination. Where especially sanitary precautions are taken in the dairy to prevent any possible contamination, the natural buttermilk is just as good and has perhaps a slightly more acceptable taste. However, the chemical properties of these two preparations are practically identical. Therefore, you need not be afraid to drink the "made" buttermilk purchased in the city, for it is wholesomely clean, just as nourishing and will protect good health just as much as the natural variety.

For health's sake, make this your rule: "Drink buttermilk in order to produce good health, and in order to produce better health drink more buttermilk." It is good for young or old, for the man who works with his muscle and the man who works with his brain. It is recommended alike to those possessing good health and those in search of it. It is a healthful, nourishing, protecting and upbuilding beverage and food.

#### Realizes Need More Than Ever

The following letter to Dr. G. G. Dowdall is from Dr. R. J. Nestor, district surgeon at Waterloo, Iowa:

"I was sorry not to have seen you again before leaving Chicago, but after visiting friends for two days I left direct for the train. On September 5 I found that I had sufficiently recovered so that I was able to resume work, and I have found that I am sustaining my work satisfactorily and notice an improvement in my condition every day.

"I wish to express my appreciation of the kindly interest taken by you in my case during my recent illness and serious operation. I also wish to let you know how fully I appreciate the kindness and courtesies shown me by the different members of the hospital department staff, both surgeons and nurses. I certainly feel very grateful to them. I can truly say that I now realize more fully than ever what the Illinois Central Hospital at Chicago means to the employes."

#### As Good as Any in the Country

The following letter to Dr. G. G. Dowdall is from S. F. Lynch, chief clerk to the superintendent, Vicksburg, Miss.:

"You doubtless have received numerous letters of this nature, but I feel that should I refrain from writing this letter I would be very ungrateful indeed.

"I have just about entirely recovered from my recent operation and wish to say that, while I was sure that I would receive good treatment while under the care of the hospital department, yet I could not help but be amazed at the excellent service rendered and the efficiency of the entire organization connected with the Illinois Central Hospital at Chicago.

"It would be needless for me to begin to make any special mention for the reason that, should I do so, it would be necessary in all fairness to mention the names of each and every person with whom I came in contact. I merely wish you to know that I am extremely grateful for the most excellent service rendered me, and I feel that my early recovery can be wholly attributed to the treatment, which is, in my opinion, as good as could be received in any hospital in the United States."

#### Off Duty Just a Month

The following letter to Dr. G. G. Dowdall is from Paul O. Christy, machinist, Illinois Central roundhouse, Jackson, Miss.:

"I hope that you will not compare my appreciation of the treatment which I received while in the Illinois Central Hospital at Chicago with the length of time that it has taken me to acknowledge it.

"I want to thank you and all concerned for the excellent attention and many favors shown me while I was in the Chicago hospital. I entered the hospital August 5, was operated on for appendicitis August 8, was out of bed August 16, was discharged August 20, and returned to my duty September 6, once more a well man. I cannot see how this record could be beaten, and I must say that all the credit is due to the skillful and careful attention that I received while under the care of the hospital department.

"I wish you to know that I shall always have a tender spot for the Illinois Central Hospital at Chicago and the members of its staff, and I hope that some day I shall have the pleasure of seeing each and every one of them again."

#### IN CHARGE OF MATERIAL

Effective January 1, I. S. Fairchild was appointed division storekeeper at New Orleans, in charge of all material on the New Orleans Terminal division.

# Saw Dark Future for the United States

## Luckily, However, Most of Lord Macaulay's Predictions in Letter of 1857 Still Remain Unfulfilled

*Fortunately, most of our troubles never happen. That is why it is interesting to look back at what the prophets of disaster had to say a few generations ago, compare their prophecies with what really has happened—and then knock wood in the hope that our good fortune will continue. Lord Thomas Macaulay, English author and statesman, wrote a letter to H. S. Randall of New York, May 23, 1857—sixty-five years ago. This is what Lord Macaulay had to say at that time about Jeffersonian democracy and the future of the United States:*

**Y**OU are surprised to learn that I have not a high opinion of Mr. Jefferson, and I am surprised at your surprise. I am certain that I never wrote a line, and that I never in parliament, in conversation, or even on the hustings,—a place where it is the fashion to court the populace,—uttered a word indicating the opinion that the supreme authority in a state ought to be intrusted to the majority of citizens told by the head; in other words, to the poorest and most ignorant part of society. I have long been convinced that institutions purely democratic must, sooner or later, destroy liberty or civilization, or both.

In Europe, where the population is dense, the effect of such institutions would be almost instantaneous. What happened lately in France is an example. In 1848 a pure democracy was established there. During a short time there was a strong reason to expect a general spoliation, a national bankruptcy, a new partition of the soil, a maximum of prices, a ruinous load of taxation laid on the rich for the purpose of supporting the poor in idleness. Such a system would, in twenty years, have made France as poor and as barbarous as the France of the Carolingians.

Happily the danger was averted; and now there is a despotism, a silent tribune, an enslaved press, liberty is gone, but civilization has been saved. I have not the smallest doubt that if we had a purely democratic government here the effect would be the same. Either the poor would plunder the rich, and civilization would perish, or order and property

would be saved by a strong military government, and liberty would perish.

You may think that your country enjoys an exemption from these evils. I will frankly own to you that I am of a very different opinion. Your fate I believe to be certain though it is deferred by a physical cause. As long as you have a boundless extent of fertile and unoccupied land, your laboring population will be far more at ease than the laboring population of the old world; and while that is the case the Jeffersonian policy may continue to exist without causing any fatal calamity. But the time will come when New England will be as thickly peopled as Old England.

Wages will be as low, and will fluctuate as much, with you as with us. You will have your Manchesters and Birminghams. Hundreds and thousands of artisans will assuredly be sometimes out of work. Then your institutions will be fairly brought to the test. Distress everywhere makes the laborer mutinous and discontented, and inclines him to listen with eagerness to agitators, who will tell him that it is a monstrous iniquity that one man should have millions while another cannot get a full meal.

In bad years there is plenty of grumbling here, and sometimes a little rioting. But it matters little, for here the sufferers are not the rulers. The supreme power is in the hands of a class, numerous indeed, but select, of an educated class, of a class which is, and knows itself to be, deeply interested in the security of property and the maintenance of order. Accordingly, the malcontents are firmly yet gently restrained. The bad time is got over without robbing the wealthy to relieve the indigent. The springs of national prosperity soon begin to flow again; work is plentiful; wages rise, and all is tranquility and cheerfulness.

I have seen England three or four times pass through such critical seasons as I have described. Through such seasons the United States will have to pass, in the course of the next century, if not of this. How will you

pass through them? I heartily wish you a good deliverance. But my reason and my wishes are at war, and I cannot help foreboding the worst.

It is quite plain that your government will never be able to restrain a distressed and discontented majority. For with you the majority is the government, and has the rich, who are always a minority, absolutely at its mercy. The day will come when, in the State of New York, a multitude of people, none of whom has had more than half a breakfast, or expects to have more than half a dinner, will choose the legislature. Is it possible to doubt what sort of a legislature will be chosen? On one side is a statesman preaching patience. On the other is a dangerous demagogue ranting about the tyranny of capitalists and usurers, and asking why anybody should be permitted to drink champagne and to ride in a carriage while thousands of honest people are in want of necessities? Which of the two candidates is likely to be chosen by the working man who hears his children cry for bread?

I seriously apprehend that you will, in some such season of adversity as I have described,

do things which will prevent prosperity from returning; that you will act like people in a year of scarcity, devour all of the seed corn and thus make the next year a year, not of scarcity, but of absolute failure. There will be, I fear, spoliation. The spoliation will increase distress. The distress will produce fresh spoliation.

There is nothing to stay you. Your Constitution is all sail and no anchor.

As I said before, when society has entered on this downward progress either civilization or liberty must perish. Either some Caesar or Napoleon will seize the reins of government with a strong hand, or your Republic will be as fearfully plundered and laid waste by barbarians in the twentieth century as the Roman Empire was in the fifth; with this difference, that the Huns and Vandals who ravaged the Roman Empire came from without, and that your Huns and Vandals will have been engendered within your country by your institutions.

Thinking this, of course, I cannot reckon Jefferson among the benefactors of mankind.

---

## *Illinois Central Helps in Limestone Tests*

By **H. J. SCHWIETERT,**  
General Development Agent

A few years ago the late Dr. Cyril G. Hopkins, who was perhaps the greatest soil expert of his time, made a survey of the soils of various Southern states, including Mississippi, which indicated that all the hill soils were deficient in lime, and that to secure the best results in crop production from an economical and profitable standpoint there should be a liberal application of agricultural limestone.

Investigations have been carried on by the development bureau, and our conclusions are the same as those of Doctor Hopkins. We have diagnosed the case of our patient, the soil, and have found that it is in a sadly overworked, weakened condition, and that, unless something is done to correct this condition, the farmers will soon have to abandon these worn-out farms.

Believing we have discovered the real problem confronting the Mississippi farmer, especially in the "hill country," the development bureau is carrying on experiments in the use

of limestone at various points, in co-operation with progressive dairy farmers. The object in making these experiments on dairy farms is to demonstrate to this particular type of farmer the importance of growing an abundance of forage crops for his livestock and that his Mississippi farm can produce and provide for all his needs if he will supply the limiting factor to his soil, which in our judgment is limestone. This is especially true where one attempts to grow clover, alfalfa, or other legumes, which are so essential in building up soils that are low in organic matter or decayed vegetation.

Experiments are being carried on with the following farmers: Canton, Lindsey Reese; Coldwater, Jesse Callicutt; Courtland, Fred Lamb; Fayette, F. C. McIntosh; Jackson, A. L. Hughes and J. J. Childre; Kosciusko, R. L. Bailey; Sardis, J. O. West; Vaiden, J. C. Allen; Water Valley, D. H. Thornton; Weir, W. H. Lavender; Wesson, W. L. Little; Winona, C. N. Jones.

The plan as outlined calls for approximately twenty-five tons of limestone for each experi-

ment, the farmers furnishing all labor in connection therewith, while the Illinois Central furnishes the limestone free.

The limestone was applied to the land last fall, and winter cover crops, such as rye, oats, vetch or crimson clover, were sown. After these winter cover crops have been harvested in the spring, the various plots will be planted to such legumes as lespedeza, alfalfa, red clover, cowpeas, soybeans and velvet beans. In some cases corn may be planted with the beans and peas. All of these crops will not be grown on every field, but they will be included at various places, so that the information pertaining to each of these crops in connection with the use of limestone will be available.

The experiments in growing the crops will be carried on under field conditions and on a scale large enough so the results can be easily noticed. The size of the experimental plots ranges from six to twelve acres. In every instance there will be a check plot, where the same crops will be grown without the use of limestone, and from this we will arrive at the real value of limestone in increased production. All crops will be either weighed or measured, so that the information disseminated from this bureau will be as nearly correct as it is possible to make it. Different amounts of limestone will be applied to different parts of the field, and in each experiment part of the field will be left without lime. In this manner we shall not only determine the effect of the lime, but we shall also determine the smallest amount necessary to sweeten the soil, and also the relative value of heavy and light applications.

At each place the experiment field is located as near town and the railroad as conditions

permit. The fields selected are practically level, and the soil is of uniform fertility, so that the differences in yield cannot be attributed to differences in the natural productivity of the soil, but will be directly due to the action of the limestone in sweetening the soil and furnishing the necessary plant food. The various experiment fields have been selected with a view to having them located on the main public highways, in order that the growing crops may be observed by as many farmers and others as possible.

The main object in carrying on these experiments at various points is to serve as many people as possible and bring the real object lesson to their attention. Then, too, soil and climatic conditions will have their effect on the experiment, and results will not be all alike. Thus each community will be given results obtained under the prevailing conditions in that section of the country and on the farm of one of the neighbors.

Meetings will be held when the crops are large enough to show the effects of the limestone, and all farmers and others in the community will be invited to attend. At that time the experiment will be explained and additional information on liming and proper cultivation will be given.

One of the outstanding problems of the average dairyman is the production of the proper kind and amount of forage crops, and these experiment plots are particularly opportune for the dairyman. We believe this work of the Illinois Central offers the farmer one of the easiest and cheapest means of producing more and better feed for his livestock, as well as the most economical method of building up his soil fertility.

---

## *Here Are Some Facts on the Income Tax*

In making out his income tax return for 1921, the average taxpayer will find a considerable saving<sup>23</sup> in comparison with the amount of tax paid on the same income for 1920.

The exemptions provided by the revenue act of 1921 are \$1,000 for single persons (the term including widows, widowers, divorcees, and persons separated from husband and wife by mutual agreement), \$2,500 for married persons whose net income was \$5,000 or less, and \$2,000 for married persons whose

net income was \$5,000 or more. Under the revenue act of 1918 the personal exemption allowed a married person was \$2,000, regardless of the amount of net income. The personal exemption allowed a married person applies also to the head of a family, man or woman who supports in one household one or more relatives by blood, marriage, or adoption.

The exemptions for a dependent—a person who receives his chief support from the taxpayer and who is under 18 years of age or

incapable of self-support because mentally or physically defective—is increased from \$200 to \$400.

The act requires that a return be filed by every single person whose net income for 1921 was \$1,000 or more, every married person whose net income was \$2,000 or more, and by every person—single or married—whose gross income was \$5,000 or more.

The requirement to file a return of gross income of \$5,000 or more regardless of net income is a new provision. Net income is gross income less certain specified deductions for business expenses, losses, bad debts, etc., which are fully explained on the forms.

Returns must be filed by married couples whose combined net income for 1921, including that of dependent minor children, equaled or exceeded \$2,000, or if the combined gross income equaled or exceeded \$5,000.

The period for filing returns is from January 1 to March 15, 1922. Heavy penalties are provided for failure or "willful refusal" to file a return on time.

Forms 1040A for incomes of \$5,000 and less and 1040 for incomes in excess of \$5,000 may be obtained from the offices of col-

## The Income Tax

**WHO?** Single persons who had net income of \$1,000 or more, or gross income of \$5,000 or more.

Married couples who had net income of \$2,000 or more, or gross income of \$5,000 or more.

**WHEN?** March 15, 1922, is final date for filing returns and making first payments.

**WHERE?** Collector of internal revenue for the district in which the person lives, or has his principal place of business.

**HOW?** Full directions on Form 1040A and Form 1040; also the law and regulations.

**WHAT?** Four per cent normal tax on taxable income up to \$4,000 in excess of exemption. Eight per cent normal tax on balance of taxable income. Surtax from 1 per cent to 65 per cent on net incomes over \$5,000 for 1921.

lectors of internal revenue and branch offices. The tax may be paid in full at the time of filing the return, or in four equal installments, due on or before March 15, June 15, September 15, and December 15.

## Study of "Man-Failures" Can Save Fuel

Interest in fuel conservation has not died down on the Illinois Central System. New means of attacking the problem are continually being devised. One of the best is shown below. It is a system of fuel conservation bulletins, in effect on the Illinois division, and was originated by Trainmaster J. T. Stanford.

Bulletin No. 1 read as follows:

"Local train at Clifton failed to get into clear in time to avoid stopping heavy drag at block, thereby causing considerably more time to be consumed by the drag pulling by than if they had not stopped, which in turn delayed the local more than if they had got into the clear before the drag reached the block.

"A brakeman, in assisting a fireman, was putting coal in the fire-box and continued to do so after the engine was shut off, until cautioned by the fireman that it was unnecessary.

"If all firemen would manifest the same

interest as in this case, it would result in considerable saving of fuel."

Bulletin No. 2 read as follows:

"A northbound tonnage train was stopped at an interlocker. The crossing was observed to be clear, and after waiting seven minutes the towerman gave this train the crossing.

"This unnecessary stop, together with a high northwest wind with which this train had to contend, resulted in the consumption of approximately 3,000 pounds of coal to complete the run to the next terminal. The coal uselessly consumed in this instance would have hauled 1,000 gross tons a distance of 20 miles.

"The towerman claims that his signal bell was not working, and he did not see the approaching train until after it had stopped.

"Eliminate waste and save coal!"

These bulletins are posted on all bulletin boards on the Illinois division. At the sug-

gestion of the General Fuel Conservation Committee, they are being furnished to all other divisions for their information.

It is important that all divisions publish similar bulletins for the information of employees, as it is the specific reference to these "man-failures" that emphasizes the importance of this waste, and causes the individual employe to give fuel conservation more serious attention.

Reports of fuel performances from the Illinois division for December, 1921, compared with those for December, 1920, indicate that this division has made a decrease in pounds of coal consumed per 100 passenger car miles of 564, or 29.4 per cent, and shows only a

slight increase in the other services, 5 per cent per 1,000 gross ton miles and 7.9 per cent per switch engine mile.

The Springfield division shows increases of less than 1 per cent in passenger and switching service, while making a decrease of 6.7 per cent in freight consumption per 1,000 gross ton miles.

The Tennessee division has shown the best average performance, all services, with 8.2 per cent decrease per 100 passenger car miles, 2.8 per cent decrease per 1,000 gross ton miles and 47.9 per cent decrease per switching mile as compared with December, 1920. This division has also reduced its fuel consumption 7,681 tons, or 18.7 per cent, as compared with 1920.

## Gave His Men a Report on Year's Work

The following extracts are from an open letter addressed, early in January, by Trainmaster G. S. Rought of the Freeport, Madison and Dodgeville districts, Wisconsin division, to the trainmen, enginemen and yardmen under his jurisdiction.

You men of the Freeport, Madison and Dodgeville districts have established the yardstick by which your capacity and ability are gauged; you have done well; you have demonstrated what can be done, and in order that you may have some intelligent idea of the task you have set for yourselves to better—or at least equal—in 1922, I quote some facts of interest to you:

The Western Lines handled 15,065 cars of fruit, 25,197 cars of stock, 10,449 cars of meat.

The Freeport derrick was out once in 1921 to relief of crews on my territory; that on August 24—broken truck between East Junction and Evarts. Three of the numbered accidents were for cars damaged in yards; four were for engines derailed; two were for broken trucks, and one was for a

broken wheel. Three of the numbered accidents did not entail any expense.

On Freeport district your record of couplers pulled out and cars damaged in yards is as follows:

	Couplers Pulled Out	Amount of Damage	Damage to Equipment in Yards
January .....	5	\$142.00	\$262.00
February .....	4	100.30	230.00
March .....	4	118.00	407.60
April .....	3	146.00	474.00
May .....	1	112.65	238.12
June .....	2	36.20	46.00
July .....	3	116.50	77.49
August .....	2	88.00	50.00
September .....	7	185.50	156.00
October .....	6	283.00	594.85
November .....	6	261.20	265.75
December .....	7	153.65	80.00

Freeport district had 12 numbered accidents in 1921; 11, in 1920. Madison district had 3 numbered accidents in 1921; 1, in 1920. Damage, \$7,903.60 in 1921; \$8,580.49, in 1920.

Trains operated out of Freeport terminal, road overtime, yard engine overtime and car miles were as follows:

	Trains Run	Road Overtime	Yard Engine Overtime	Average Car Miles
January .....	903	\$5,970.00	65' 45"	62.26
February .....	640	4,681.57	12' 50"	43.15
March .....	690	3,872.54	15' 05"	47.38
April .....	632	3,716.61	24' 05"	43.02
May .....	678	3,221.61	31' 55"	42.28
June .....	679	3,601.58	44' 25"	43.99
July .....	676	3,295.51	51' 30"	41.80
August .....	829	4,258.41	94' 15"	48.34
September .....	897	3,269.99	94' 50"	49.96
October .....	1,009	4,471.92	152' 55"	57.60
November .....	830	4,960.38	79' 40"	56.64
December .....	768	3,510.61	37' 35"	44.13

### A Judge Within You

IT is not necessary for someone to tell us whether we are right or wrong. A little judge within us passes on our every act. The trend of the times is to measure you by your record before this judge. People are coming to know that the progress of the race depends upon the progress of *honesty*. The justice and truth of your own motives determine the verdict which you will eventually pass on your every act and thought. You bear within you your own reward—or condemnation.—SELECTED.

### Suggestions Accepted

Little Johnnie was testing his lungs out vigorously, when the minister paused and, putting his fatherly hand under Johnnie's chin, lifted his face up to his and said: "Why, Johnnie, I wouldn't cry like that."

But he let go, when Johnny replied: "Well, how would you cry, then? I don't know any other way."

### The Power of Example

"Aren't you going to wash your face, Tommy?"

"Aw, mama, let me just put powder over it, like you do."

### Automobile Department

In behalf of a friend, we just asked the automobile editor the best route to New Orleans in February and without a moment's hesitation Brother Jenkins replied, "Illinois Central."—IN THE WAKE OF THE NEWS, *Chicago Tribune*.

### When a Lawyer's Advice Paid

A member of the law department of the Illinois Central was kept busy several years ago entertaining citizens' committees that had complaints. A certain business man was

one of the most frequent complainants. He was continually telling the lawyer how the Illinois Central ought to run its business affairs. Finally he exhausted the attorney's patience.

"Sir," replied the attorney to his advice one day, "if you paid as much attention to your own business as you do to telling us how to run ours, you'd be a rich man."

A few years later the business man met another representative of the railroad.

"Do you know," he said, "X— has made me a rich man. Two or three years ago he told me I could make myself rich by paying as much attention to my own business as I do to yours. I went home and thought it over, and I came to the conclusion he was right. I've been paying attention to my own business, and I'm getting rich at it."

### Doing His Best

A Sunday school teacher, as she was about to close the lesson for the day, said to her little pupils:

"From now until next Sunday I want each of you to play 'train.' Every boy or girl you bring to Sunday school next Sunday we will call a 'coach,' and the one who brings the most 'coaches,' or in other words the longest 'train,' will receive a pleasant surprise."

The following Sunday each pupil, with the exception of one, brought several "coaches." This one was tardy; however, he came in before the class was taken up, and he brought with him one lone little colored lad. Going up to the teacher he solemnly said: "I couldn't find a single 'coach,' teacher; so I brought a 'coal car.'"—M. E. B.

### Hire and Fire

The judge was evidently getting a bit fed up with the jury, and at last he announced:

"I discharge this jury!"

A tall, lean member of the twelve then rose.

"Say, judge, you can't discharge me."

"Can't discharge you? Why not?" thundered the other.

"Waal," replied the juryman, pointing to the counsel for the defense, "I was hired by that guy over there!"

### Getting Acquainted

A new foreman took charge of the shop this particular morning, and many of the men had

not as yet met him. About the middle of the forenoon he was making a tour of the buildings to familiarize himself with the layout, when, on passing a small inclosure, he saw two workmen inside who were sitting down smoking. Before he had the opportunity to speak, one of the men said: "Hello, what are you doing, stranger?"

"I'm Dodgen, the new foreman," was the reply.

"So are we; come in and have a smoke."

**A Boss' Advice**

Don't lie. It wastes your time and mine. I am sure to catch you in the end, and that is the wrong end.

Watch your work, not the clock. A long day's work makes a long day short, and a short day's work makes my face long.

Give me more than I expect, and I will pay you more than you expect. I can afford to increase your pay if you increase my profits.

You owe so much to yourself that you can't owe anybody else. Keep out of debt or keep out of my shop.

Dishonesty is never an accident. Good men, like good women, can't see temptation when they meet it.

Mind your own business, and in time you will have a business of your own to mind.

Don't do anything here that hurts your self-respect. The employe who is willing to steal for me is capable of stealing from me.

It is none of my business what you do at night, but if dissipation affects what you do the next day and you do half as much as I demand you'll last half as long as you hoped.

Don't tell me what I like to hear, but what I ought to hear. I don't want a valet to my vanity, but I need lots of them for my dollars.

Don't kick if I kick. If you are worth while correcting you are worth while keeping. I don't waste time cutting specks out of rotten apples.—SELECTED.

**Awful in Any Language**

P—: "I see Illinois Central stock has reached par."

B—(A Southerner): "Correct. Pretty soon it will be 'gran-pah' instead of just 'pah.'"

**Ancient History**

He was the only one of all the wedding guests who did not appear in a happy frame

of mind. He only adorned the wall, and looked lugubrious.

"What's the matter?" cried out an exuberant young man. "Haven't you kissed the bride yet?"

"Not lately," he said with a gulp.

**Review of the Year**

- Homicide, larceny, graft,
- Marriages, births and divorces,
- Poets and bankers gone daft,
- Quack cures and memory courses,
- Congress in stormy debates,
- Labor and capital clinching,
- Jazzing in forty-eight states,
- Bootlegging, boozing and lynching,
- Business deals, losses and gains,
- Cries of "You robber!" and "Faker!"
- Bobbed-haired and short-skirted janes,
- Bills from the butcher and baker;
- Mixture of sadness and cheer,
- Loving and laughing and sinning,
- What of the coming New Year?
- Repeat this from end to beginning.

**39TH ST. EXPRESS**

# CLAIMS DEPARTMENT

## \$5,000—\$10,000—Nothing

As illustrative of one of the many ways in which a recovery is sought against a railway company in a suit for damages, the case of Elizabeth Evans, brought at St. Louis against the Illinois Central, is an example. The suit was filed by her as the widow of Harry Evans, to recover damages on account of his death, April 19, 1916, while he was attempting to cross the track in a motor car at Brooklyn street, St. Louis.

The evidence developed that the accident was due to the negligence of Mr. Evans in failing to look before attempting to cross the track. As the lawyer representing Mrs. Evans realized that her husband was guilty of contributory negligence, he finally evolved a novel theory that the railway company had run its train so fast that it was guilty of conduct properly described as wanton and willful.

The case was first tried September 14, 1916. The jury awarded the widow \$5,000. A new trial was granted. The case was again tried February 18, 1918. The jury returned a verdict against the company for \$10,000. The case was then appealed by the company to the supreme court. July 22, 1921, the judgment was reversed, and the widow was denied recovery. It was more than five years from the date of the accident to the final disposition of the case.

The company was represented throughout the entire litigation by our local attorney, William R. Gentry of St. Louis. Mr. Gentry is entitled to much credit for the final outcome. Commenting on the case, he says:

"If the plaintiff had succeeded in establishing her theory, it would have completely revolutionized the law pertaining to crossing accidents in Missouri. There never was anything in the plaintiff's theory, and yet at one time or another two judges of the circuit court and two judges of the supreme court voted to adopt her theory. The judge who originally dissented in the

plaintiff's favor, in Division No. 2, had left the bench before the case was argued in the court *en banc*, and the dissenting vote there was by a different judge. If the plaintiff could have succeeded in establishing her theory, then contributory negligence would never have been a defense in a crossing case, for all the plaintiff would have to do in any case would be to change the name from 'negligence' to 'wantonness' or 'willfulness,' and thus preclude any possibility of a defense based on contributory negligence."—S. M. C.

## Taxi! Taxi! Taxi!

Ho hum, what's new? Nothing except that Local Attorney Vernon Foster won another law suit at Chicago. Sure, he always does, but what was the case about? Oh, a fellow named McConnell got off the Panama at Central Station and went out to get a taxi. He tried to take one away from an usher whose passenger was already in the cab. He lost out, and then got angry and "cussed" the usher and also added a kick or two and nearly got arrested. Then he turned around and sued the government, because, he said, the usher knocked him down. It took the members of the jury nearly fifteen minutes to write their names on a piece of paper, saying it was their opinion that Mr. McConnell was out of luck.—A. L. W.

## Safety in California

The following order has recently been issued by the State Railroad Commission of California, effective December 15, 1921:

"It is hereby ordered that all transportation companies, as defined by Section 1, paragraph C of Chapter 213, Statutes of 1917, and amendments thereto, be and they are hereby required to stop each and every stage engaged in the transportation of passengers before crossing the tracks of any steam or electric interurban railroad, such stop to be made not less than fifty (50)

feet nor more than seventy-five (75) feet from the nearest rail of the railroad over which the highway crosses. After making the stop hereby required the driver or operator of the stage shall carefully look in each direction for approaching cars or trains and shall not start his stage until it has been ascertained that there are no cars or trains approaching the crossing in either direction.

"The foregoing rule shall not apply in connection with the operation of passenger stages within municipalities as regards operation over the tracks of electric or other street railroads."

### Saw All but the Engine

The services of about forty witnesses were required in the case of Earl Rigdon against the Illinois Central, tried in the latest term of the Perry County Circuit Court at Pinckneyville, Ill. The trial resulted in a verdict for the defendant.

The plaintiff, driving his father's automobile, was struck by a local freight train, No. 292, on a highway about two miles north of Tilden, Ill., the morning of January 20, 1921. He was injured and the automobile destroyed. He demanded \$5,000.

It was charged that the train was running at a high and dangerous rate of speed, that no signals were given, that the crossing was a much-frequented one, and that the view was obstructed. The plaintiff, on cross-examination, testified as to the surroundings, that he saw trees at the edge of the right-of-way, the cattle guard, wing fences—in fact, everything but the engine, which happened to be the biggest thing around there.

The jury evidently became convinced that he was not on the look-out for his own safety. The fact is, too many autoists pass over railway crossings while utterly oblivious to the danger which they might reasonably anticipate. They pay no heed whatever to the crossing warning signs, which ought to be sufficient to put them on their guard and should be the means of avoiding accidents of this character.—P. M. G.

### A Warning Unheeded

In a seven months' period in Iowa ending with October, 254 persons were killed on the highways and 3,177 were injured.

The automobile is responsible for most of the total. In the month of July 51 persons were killed on the Iowa highways—almost two a day. The figures stagger everybody but the fool at the wheel. He is still indifferent.—Sioux Falls (S. D.) *Argus-Leader*, December 20.

### "Safety First" in Verse

Flagman Art Teets of the Iowa division submits the following:

Art Teets

Deacon Jones, one  
Sunday morn,  
Was on his way to  
church,  
And walking on the  
railway track,  
Not heeding safety  
first.

He did not hear the  
whistle blow,  
Nor the engine bell  
give warning;  
His thoughts were on  
his task ahead  
That cold and frosty  
morning.

The engine struck him from behind  
And sent him high and higher;  
The fireman did not see him go,  
While putting in a fire.

The engineer, he brought his train  
Abruptly to a stop;  
He saw the man had landed  
In a tree up near the top.

The passengers, they all got out  
To see what they could see;  
They heard the deacon singing  
"Nearer, My God, to Thee."

They got a ladder and brought him down;  
His clothes were slightly soiled;  
And, by the smile upon his face,  
They saw the undertaker he had foiled.

Then on his way rejoicing  
He went his way to church;  
And ever since that Sunday morn  
He preaches "Safety First."

### No Satisfaction for Sam

The company won another suit recently, the case of Sam Kennedy, a gentleman of

color, residing in Memphis, against the Y. & M. V., for \$5,000 damages on account of alleged abuse by Conductor Ira White and having to ride in a what was alleged to be a cold car while a passenger on the "Peavine" train out of Clarksdale, Miss. This occurred December 25, 1920, and the train in controversy was No. 25, which leaves Clarksdale at 5 a. m.

Sam was going to see his wife's family at Benoit, Miss., and incidentally to spend the holidays there. However, due to the alleged cold car and alleged abuse at the conductor's hands, Sam was ill and did not enjoy the Christmas feeling as much as he evidently desired; so he decided that he would seek retribution from the Y. & M. V. Hence this suit and the following article from the Memphis (Tenn.) *Commercial Appeal* of December 21:

"Judge Pittman declined to let the reputation of the 'Peavine' train of the Y. & M. V. get into the record in this court yesterday morning; hence each man who travels on it from Clarksdale to Greenville still is entitled to his personal opinion of the service.

"Sam Kennedy was suing the road on the claim that the train was so cold that he caught the pleurisy last Christmas Day and that the conductor cursed him when he complained. Charles Banks, one of the leaders of the negro colony at Mound Bayou, Miss., and one of the leaders of his race in the South, was on the train and a witness for the company to the effect that the train was comfortable and the conductor did not abuse Sam. H. D. Hawkins, a member of the jury, wanted to know of Banks what was the reputation of the 'Peavine' train, but Judge Pittman, inasmuch as Thomas A. Evans, counsel for the company, could not well object to a question by a juror, made the objection himself and then sustained it. Sam lost his suit."

This case required the attendance of an entire train crew, a disinterested witness, the claim agent and the local attorney, besides taking up the time of the judge and jury when they might have tried some meritorious case. There was not the least doubt from the beginning of the testimony that the Y. & M. V. would receive a verdict. If Sam should now have to foot the entire bill of this litigation and that fact should be advertised properly, this class of litigation would soon fall into the discard. If

Sam had received a verdict, it is useless to explain that there would have been other suits, as the star witness for the plaintiff was reported to be contemplating one in the event this was successful.—V. S. A.

### A Fair Deal on Claims

The following expression of sympathy toward the railway viewpoint on claims in general is from the Rev. Fred R. Harper, a Methodist minister of Fowlkes, Tenn.

"Some time ago I noticed in the *Illinois Central Magazine* an article telling of the unmanly ways in which some unscrupulous persons took advantage of the company in regard to injury claims. Many willingly falsified in order to obtain large damages for injuries that never occurred. I know the railroads are very often cheated in this respect, and the community should take a pride in showing up any person of the community found guilty of defrauding the railroads.

"There is another way in which the railroads are defrauded out of large sums. The damages collected by the class to which I refer may not be so large as the damages collected by the supposedly injured man, but the cases, I dare say, are more numerous.

"I refer to the men who have stock killed on the road or property burned by the train. I know that there are cases in which the damages collected are not what they ought to be, but these cases are very scattering. It is usually the case that beef comes mighty high to the railroad, and pork is nearly out of sight.

"I have a case in mind in which a little cow was killed. The man wasn't very sorry that the loss occurred when he found that he could collect damages. The cow was really worth \$35 to \$40. At least not over that, but the man wanted \$60 for the cow. Two of three men decided the cow was worth \$60, while the third man, a man who stood for justice to all, decided that the right value was \$40. The man obtained the \$40 which was his real damage, but he really thinks hard of the other man because he didn't assist in cheating the company out of \$20.

"In a great many cases the three men will agree with the owner in the price, and the claim consequently is larger than it should be. Of course, \$20 isn't very much, but many such losses of \$20 would finally amount to a great deal.

"Nor is the stock claim the only one that is ever higher than it should be. Claims for

property that the railroad has destroyed in one way or another are oftentimes larger than they should be.

"The only way I know of stopping such

things is to create a sentiment against it. Expose the man, and cause him to be found out. Show him up as not really honest, and the claims will come in right."

## Service Bureau Open for Car Information

In line with its customary effort to be of the greatest possible service to its patrons, the Illinois Central System has put into effect, dating from January 1, a service bureau at Chicago to furnish to the shipping public information on carload shipments coming on and going off our lines, and the passing record at important terminals on our system.

The service bureau will furnish both on- and off-line traffic representatives daily recapitulation reports showing records of carload shipments coming on and going off the line via all junctions. This will enable traffic representatives to furnish car records directly to the shipping public in their respective territories, either upon request or where the representative desires to advance the information.

These junction passing reports will place in the hands of the traffic representatives car records sufficient to meet the ordinary demands of the shippers for information pertaining to the movement of interline carload freight.

In addition, to meet the requirements of shippers tracing carload freight of an emergency character, or which may have met

with delay, the service bureau will have available upon request, either by telegram or letter, passing records at all our important district terminals. Requests for such information should be addressed to W. Haywood, general freight agent, Chicago.

The Illinois Central System, in arranging to provide the shipping public with this service, has added a new bureau to its organization with the view of providing quick information pertaining to the record of carload freight on its system.

It should be understood by all officers and employes having to do with the compilation of the report that the success of the service bureau and its ability to furnish prompt and accurate information depend upon close observance of the instructions covering the furnishing of all information required by the forms.

The service bureau will be an important adjunct to our solicitation department. It is expected that everyone using the information made available by this bureau will diligently apply it to the best interest of the shipping public and the Illinois Central System.

## Our Monthly Roll of Honor

Below is a list of employes retired at the meeting of the Board of Pensions, December 30:

Name	Occupation	Years of Service	Date of Retirement
James P. Bradley.....	Agent and Operator, Thompsonville, Ill.....	20	8/31/21
Francis M. Fry.....	Switchman, Waterloo, Iowa.....	41	9/30/21
John F. Bowman.....	Section Laborer, Oconee, Ill.....	24	11/30/21
Henry N. Mudge.....	General Advertising Agent, Chicago.....	31	12/31/21
James T. Whalon.....	Switch Tender, Chicago.....	29	12/31/21
John Whealon.....	Machinist, Champaign, Ill.....	35	12/31/21
Charles B. Duke.....	Agent and Operator, Scobey, Miss.....	21	12/31/21
Charles E. Combs.....	Engine Inspector, Centralia, Ill.....	26	9/30/21
George Lyons.....	Blacksmith, Burnside Shops.....	32	12/31/21

The following deaths of pensioners were reported at the same meeting:

Name	Last Employment	Date of Death	Term as Pensioner
John Fashauer.....	Freight Handler, Kentucky Division	11/ 5/21	7 months
Henry Heimel.....	Laborer, New Orleans Terminal....	12/ 9/21	11 years
Thomas F. Murphy.....	Conductor, Springfield Division.....	12/18/21	6 years
Thomas F. Cummisford.....	Brakeman, Minnesota Division.....	12/13/21	13 years
Morgan C. Wooley.....	Scale Inspector, Engineering Dept.	12/25/21	8 years

# Workers Now Demand Adult Education

*United States Is Showing Interest in This Movement, First Organized in 1903 in Great Britain*

A COMPREHENSIVE and interesting survey of the many problems involved in adult education is contained in the final report of the Adult Education Committee of the Ministry of Reconstruction, Great Britain, published in 1919. The report consists of 409 pages and covers every phase of the subject in an attractive manner. It is, indeed, difficult to find in it a single page of dry reading.

The Adult Education Committee, in summarizing its conclusions, makes many pertinent observations.

"The history of adult education since the beginning of the 19th century has conclusively shown the reality of the demand among men and women for non-vocational education. The demand has persisted in the face of the gravest difficulties and the most adverse circumstances. The large volume of educational activity which we have analyzed . . . probably surpasses in volume the educational work among adults carried on in any other country. We have shown its extraordinary variety and its wide-spread character. We are certain that this large volume of work is an indication of the depth and persistence of the demand for adult education."

## A New Type of Education

Elsewhere in the report are many valuable suggestions on the place of adult education in the work of the universities.

"For ultimately it is as the addition of a new type of higher education to those already in existence that the experiments which are the subject of our earlier chapters must be judged. Though hitherto we have spoken only of what the universities can do for adult students, it is not less important to emphasize the contribution which adult students can make to the universities. The characteristic of the movements described in this report is the attempt to bring education of a humanistic character within reach of all classes and individuals who desire it, irrespective of their occupations, their incomes, or their social position. They thus make a contribution to the educational thought and activities of the country, which,

if not entirely novel, is new upon its present scale. . . ."

## First Organization in 1903

The report mentions the activities of many different organizations, including those of the Workers' Educational Association of Great Britain, which was established by a small group in 1903. The University of Oxford entered this movement in 1907, and since then nearly every university and university college in Great Britain has taken like action. The registry of the association in 1919 showed nearly 15,000 members, 209 branches, and more than 2,700 affiliated societies. There were then about 120 classes with a full 3-year course and a student membership of more than 3,000. The other members of the association, then, were in 1-year classes and study circles requiring less of the worker's time. Australia, New Zealand, Canada and South Africa are also interested in this work.

The affairs of the Workers' Educational Association are administered by joint committees composed of an equal number of working people and of university representatives. The choice of subjects of study is left to the students. The courses favor a liberal as against a merely bread-and-butter education, and therefore are non-vocational. The subjects selected by the students are economics, history, literature, natural sciences, modern languages, music, drama, and art. The desire for adult education must come from the workers themselves, but this desire can be stimulated by vigorous appeals and by successful samples of the results accomplished.

## No Parallel Among Leisure Classes

The Workers' Educational Association gives a picture of intellectual energy and enthusiasm which, according to unanimous testimony, finds no parallel among the leisure classes of Great Britain. During the war it was discovered that much more serious reading was done in the camps and in the trenches by the members of this organization than by any other type of enlisted men. And the output attains a high standard. Oxford University examiners were astonished to see that many

of the essays by such students were fully equal to the productions of "honors men" in the final schools.

Some interesting articles relating to the Workers' Educational Association were published in *The Nation* (New York) for May 10, 1919, and in *The Survey* (New York) for November 13, 1920.

### Now About 1,500 Adult Schools

Another interesting movement in Britain is that of the adult schools, which are federated into the National Adult School Union. There are now (1922) about 1,500 schools with a membership of more than 50,000 men and women. The largest schools have 200 to 300 members, and the smallest about ten. The age of entry is 18, and there are in existence a number of junior schools for younger members. Membership is open to all who are in sympathy with the aims of the movement and who wish to join.

Adult schools are democratic in their constitution, and each school is free to manage its own affairs and arrange its own program. Financial responsibilities are undertaken by the schools themselves, though certain assistance, in the provision of lecturers, etc., is undertaken by the National Council. The schools do not receive any financial aid from the state, though certain special classes are able to secure grants from the government education department and from local authorities. Since 1917 a system of group correspondence classes also has been evolved whereby men and women, meeting, it may be, in remote villages, are encouraged to thresh out problems of economics, history, literature, etc., and are kept in constant touch, by mail, with competent instructors.

One of the most recent developments of the National Adult School Union is the establishment of an International Correspondence Bureau whereby, within a few months, 1,500 men and women in different countries of Continental Europe have been brought into constant contact with the interested students in Great Britain by the exchange of letters. Groups of a similar character to adult schools already have been formed in France, Spain and Austria.

### World Association Organized

In 1920 was organized the World Association for Adult Education, with headquarters in London, acting as a general clearing house for all the agencies in that field of work.

Affiliated with it is the new British Institute for Adult Education. Councils also have been formed in other countries, including Holland and Czecho-Slovakia.

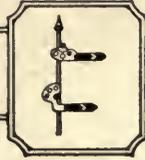

In the United States, adult education has taken many different forms, which no doubt in time will become inter-related through the medium of an American Association for Adult Education to be affiliated with the World Association for Adult Education and thus, indirectly, with similar organizations in other countries. A preliminary survey of adult education in America is being made by Edwin Pahlow, 83 Prospect Street, Reading, Mass., who is a member of the advisory committee of the World Association. Among the newer organizations in the United States is the Workers' Educational Bureau of America, 465 West 23rd Street, New York City, which is the outgrowth of the first general conference on workers' education ever convened in the United States, held in New York City in April, 1921. The sponsors of this bureau have so far been cautious and not unmindful of difficulties, and in the discussion of controversial questions, where previously abstract and unreal propositions had sufficed, have insisted upon a scientific presentation of realities. A conservative but effective program, carefully followed, would seem to possess potentialities which are immeasurable.

There is, indeed, ample room for a lot of constructive work in the United States in those directions which would be of the greatest national benefit, and particularly is this true as to the widespread need of a better and more general understanding of the fundamental principles of sound economics which are inevitable and cannot be escaped by any fine-spun theories.

### SPOKE ON RAIL SITUATION

James P. Helm, Jr., of the law firm of Trabue, Doolan, Helm & Helm, Louisville, district attorneys for the Illinois Central in Kentucky, recently read a paper on "The Railroad Situation" before the Pierian Club of Louisville that was of such timely interest that the Louisville *Times* published it in full, in three installments, January 10, 11 and 12. The paper reflects a great deal of research on the part of Mr. Helm, and is a careful and thorough review of the rail transportation situation.

## ACCIDENT AND

## INJURY PREVENTION

## How East St. Louis Reduced Shop Injuries

A SYSTEM of departmental rivalry worked out so well in the East St. Louis shops in preventing accidents in December that its adoption all over the system has been officially urged. In order to make a fair comparison, a record of accidents per man-hour was kept, and it is likely that this method of figuring will be generally adopted.

The idea was originated by E. G. Bishop, chief clerk, and had the hearty support of Master Mechanic L. A. Kuhns. A test was made in November, and the real effort was put forth in December.

There was a reduction of personal injuries from eighteen in December, 1920, and thirteen in November, 1921, to but four in December, 1921. Attention is further invited to the increase in "average man-hours per injury" from 9,980 in December, 1920, and

13,821 in November, 1921, to 46,201 in December, 1921.

### Daily Statement Posted

To secure departmental rivalry at all points under the jurisdiction of the East St. Louis shops, a daily statement was posted in each department, showing for that department the man-hours worked each day, the number of injuries each day, accumulative man-hours and personal injuries to date and the average hours worked per personal injury. The daily performance of the present month was compared with the performance of the same period of the preceding year, thus giving the employes the opportunity to know what their efforts were accomplishing in the elimination of personal injuries.

In addition to the statements showing the accomplishments of the departments, there

JIM

was posted in each department a daily statement showing the accomplishments to date in all departments for the entire jurisdiction of the East St. Louis shops.

No supervisor, safety committee or group of enthusiastic employes could, regardless of their activities, have avoided any one of the four injuries that were sustained in December, 1921. Below is a brief description of each case, from which it will be noted that one occurred while an employe was performing an act entirely foreign to his course of employment. Another, which occurred in a purely accidental manner, was so trivial that the employe did not lose an hour from his work, or even report to the company surgeon for treatment. The two other cases were purely accidental, very slight and disability in each case not longer than one day.

#### The Four December Accidents

The four cases were:

December 3. A flue borer at East St. Louis was cleaning the crown sheet of a locomotive when a piece of scale entered his eye. He wore goggles, but they did not fit snugly at the top.

December 5. A machinist at East St. Louis was driving a driving box shoe off a frame of a locomotive when a particle of steel entered his eye. Purely accidental and could not have been avoided by the highest degree of carefulness. It is not practical to require men to wear goggles while engaged in this work.

December 6. An engine watchman at Carbondale was shoveling coal on a locomotive when a lump of coal fell from the tank and hit him on the head. Very slight bruise, no time lost and did not even find it necessary to report to company surgeon.

December 8. A coal shoveler at Herrin was handling a pistol, accidentally discharged it and shot his finger. Altogether foreign to his course of employment.

Absence of employes from their regular course of employment slackens production. Output is planned and each employe assigned his part to perform to enable the production schedule to be maintained. Absence of even one employe in a well-planned organization slackens production. By reducing the personal injuries the East St. Louis shops have reduced the loss of productive hours, as will be noted from the following figures, showing loss of productive hours due to personal injuries in December, 1921, compared with December, 1920, and November, 1921. Particular attention is invited to the small number of productive hours lost in December. Had it not been for the one injury to the coal shoveler at Herrin, which occurred in a way entirely

foreign to the course of his employment, the loss of productive hours in December, 1921, would not have been more than 16. The figures follow:

December, 1920 .....	1,381
November, 1921 .....	951
December, 1921 .....	98

#### Kept Campaign Before Men

"I think we did excellently," writes Mas-

### To Win Good Will

In intercourse with the shipping public, we in the local freight office find, that to a certain degree there exists in the minds of some of the shippers the thought that the interests of the railroad are inimical to their interests and that it is their duty not only to seek unfair advantage but to antagonize us, regardless of whether there is cause for such a policy or not.

This erroneous impression, of course, is not general. That it does exist, even in a minor degree, is due, I believe, principally to the fact that in our relations with them we have not acquired their confidence and good will, even though merited.

The policy of our management, as reflected in the service rendered our patrons, has been a real power in proving the fallacy of this antagonism, yet there is much still to be done to obliterate this thought, and that very vital task can be accomplished only by us, the employes.

I believe we can, by application, judgment and diplomacy, convince the shippers that we consider that, the very moment we accept their freight for transportation, we have by that action entered their employ, have become, as it were, another department in their organization. With reference to this transaction, we are as amenable to their wishes, insofar as they do not conflict with the rules and regulations prescribed by the proper authorities governing transportation, as any employe in their service. Also, they have a right to demand and expect from us the same degree of efficiency that they demand of their other employes.

Our service will not always be absolutely perfect, but, having established ourselves in the close relationship of employe to employer, it is but logical to believe we shall acquire their confidence and good will.—T. N. SUBLETT, *Assistant Agent, Chicago, Ill.*

ter Mechanic Kuhns. "I believe this excellent accomplishment was made possible by the departmental rivalry and interest that we created by keeping the information before the men as we did. The idea had my hearty support from the beginning and was

assisted in every way possible by personal interviews that I had with various employes and by several mass meetings that I held among the employes under my jurisdiction."

Below is the tabulated report showing how the plan worked out:

Department	December, 1920			November, 1921			December, 1921

# Detective Work Traces Lost Packages

## Care in Checking and Comparison of Records Wipe Most of These Exceptions Off the Slate

By C. G. RICHMOND,

Superintendent, Stations and Transfers

**L**OSS of a package is one of the classifications of claim causes used by freight claim agents to distinguish such claims from those caused by pilferage, delays, defective equipment and many other things responsible for freight claims.

Causes for the majority of freight claims of this class can be overcome without any additional expense. At the same time this will result in a reduction in correspondence and the elimination of annoyance to shippers and consignees.

The mystery surrounding the lost package makes this subject an interesting study. As a rule the most puzzling cases are found to be due to failure of agents to comply with the rules governing the acceptance and delivery of LCL shipments as follows:

1. To see that shipments are properly marked before accepting for forwarding;
2. To see that shipments are loaded in proper car and accompanied by waybills;
3. To see that shipments are properly checked from car at destination;
4. To see that shipments are checked and proper receipt taken at time of delivery to consignee;
5. To see that receipts are properly filed;
6. To see that astray or over shipments are delivered only upon presentation of documentary proof of ownership;
7. To see that proper investigation is made of all shortages with connecting line agents and consignees;
8. To see that overages and shortages are properly matched with connecting line records at common points.

### The Waybill a Protection

If every shipment were accompanied by a waybill, claims for loss of a package would be practically eliminated with the exception of those caused by theft and erroneous deliveries, which would be a very small percentage compared with the percentage of

present claim payments for loss of a package.

The failure of originating and transfer platform stations to forward a waybill with each and every shipment is an important factor contributing to the losses chargeable under the heading, "Loss of a Package." The waybill is the only document which can safely guide a shipment via the proper route to its destination and insure prompt delivery to the correct consignee.

Therefore agents should see that receiving clerks are impressed with the importance of knowing the entire shipment is received and properly marked before receipting for it; also, that the shipment is correctly loaded, and, last, but not least, that the waybill accompanies the shipment.

There seems to be, in many instances, a laxity on the part of agents in affording proper protection against a claim in the delivery of over shipments which are caused by excess of billing or failure to receive a waybill.

Agents are frequently careless in matching overages and shortages with connecting line agents, and they do not consult consignee with a view of closing out shortages.

### Get Proof of Ownership

There are numerous methods employed by agents in matching overs and shorts. However, there is only one right way to deliver over freight, and that is to "secure proof of ownership" before delivery of shipment, after which a reference to the revenue waybill should be secured from the originating agent, proper record made on short report, short freight accounted for coupon rendered, and record entered in alphabetical over-and-short book furnished all agents.

If at a common point, proper advice should be furnished the agents of connecting lines, giving full information as to the delivery of the shipment.

The local agents naturally desire to get early disposition of overages, and in order to clear the freight house and eliminate arguments with consignees they frequently deliver excess and over shipments without

presentation of documentary proof of ownership.

When this violation of the rules is later discovered, the agent invariably offers the excuse that the consignee is reliable and willing to furnish a bond equaling the value of the package.

The fact is apparently overlooked that the shipment or package may not belong to the consignee whose name appears thereon, due to improper marking by shipper; that it may be short at another station on this railroad or a connecting line, and, further, that a claim may be presented by the shipper, while the consignee receiving the shipment may never be apprised of the filing of the claim.

The claimant, in most instances, is honest in filing his claim, and has no intention to defraud. The claim is filed as a result of our own defective and erroneous records.

However, regardless of the honesty and good reputation of the consignee receiving the overage, the agent should in all cases require presentation of proper proof of ownership, secure receipt and close out short records; otherwise a claim for a short package may result.

#### How Three Claims Developed

As an illustration of the importance of requiring proof of ownership on over shipments and also maintaining proper station records, the following are a few specific cases of claims filed for alleged shortages in which investigation developed shipment had been delivered to the consignee.

1. Claim filed for \$1,075.84, covering loss of five rolls of leather. This shipment was received from a connecting line, destined to one of our larger stations, against which an embargo was in effect. The shipment was then returned to the delivering line. However, the way-bill was forwarded in the regular manner, indicating to the destination agent that the shipment had been accepted and forwarded. The shipment checked short at destination, agent issuing short report and short notation to consignee, who filed claim for shortage. Investigation with connecting line and consignee developed the shipment had reached destination via another railroad and had been delivered without proof of ownership.

2. Claim filed for \$1,187.50, covering loss of one Firefoam Engine on wheels, originating on and destined to a point on connecting line, this line being intermediate. Agent at the final junction point on this line checked the engine short and made an over report for "one tank on

wheels"—no marks. However, a careful examination several months later developed that the shipment was marked, but in an indistinct manner. The agent held the billing and should have matched the over with the shortage.

3. Claim filed for \$601.58, covering loss of four liquid carbonaters moving between two of the larger stations. On the date this shipment was forwarded, the shipper delivered several other consignments of the same commodity for branch houses at various destinations. These four carbonaters were incorrectly marked, checked over at the wrong destination, and short at the correct destination. The overage was delivered as marked without requiring proof of ownership, and a claim was filed for shortage by consignee at the correct destination.

#### How Records Are Cleared

A similar investigation of many other claims filed for shortage during the past year has resulted in locating the alleged shortage.

The remarkable reduction in claims paid for loss of an entire package on the Illinois Central and Y. & M. V. in the past year proves conclusively that a large part of these losses were due not so much to the loss of a package as to the failure to maintain proper records and to investigate each shortage with connecting lines and consignees.

As an illustration of what can be accomplished by the proper investigation of overs and shorts, during 1921 the Memphis station issued 1,173 short reports on shipments destined to Memphis proper. Through the proper investigation with consignees and connecting lines, 1,098 of these shortages were closed, there remaining only 75 open shortages at the close of the year, a number of which are of recent date and will be closed by further investigation.

During this same period, Memphis station issued 2,078 over reports covering shipments reaching Memphis without waybill, and of this total 2,063 have been delivered, there remaining on hand at the close of the year only 15 over shipments, two of which are more than 30 days old.

The interest taken to reduce causes for exceptions in the "No Exception" campaign during April, May and June and the continued interest and co-operation of all officers and employes during the subsequent months of 1921 resulted in a remarkable reduction in the over and short exceptions as compared with 1920.

#### Great Decrease in Exceptions

The following is a statement showing the

outbound LCL tonnage, total exceptions and tons handled per exception for July, 1920, March, 1921, and October, 1921, and also the total outbound LCL tonnage, total exceptions and percentage of decrease October, 1921, from July, 1920, compared:

Months	
July, 1920 .....	227,931
March, 1921 .....	214,295
October, 1921 .....	201,588
Total Outbound LCL Tonnage .....	227,931
October, 1921 .....	201,588
Total Exceptions .....	4,723

first eleven months of 1920, compared with 4,334 for the corresponding period this year, a decrease of 6,565, or 60.2 per cent.

These figures reflect credit on all em-

Total Outbound LCL Tonnage	Total Exceptions	Tons Handled per Exception
July, 1920	19,703	11.5
July, 1921	9,184	23.3
July, 1920	4,723	42.6
Tons Decrease	Pct. Decrease	
19,703	26,343	11.5
19,703	14,980	76.0

The result of this increased efficiency in the handling of LCL freight is reflected in the decrease in claims paid for lost packages, which shows a total of 10,899 for the

ployees having to do with the handling of LCL freight. It is hoped that every effort will be made to maintain this excellent standard of efficiency during 1922.

## REX SEMMES AT WORK AND AT BASEBALL

Here we have Rex Semmes, property of Agent W. S. Semmes of Sardis, Miss. Rex was born at Meridian, Miss., December 7, 1917, and entered the employ of the Illinois Central at the age of 2 months. He is an expert ball player, but he knows how to work, too. He calls for the yard book at 3:30 p. m. each day, except Sundays, carries the book to North Yard and is on hand at South Yard to get it when the yard checker is through. He never asks for the book on Sundays. He carries mail or small packages to and from

the station and will never lay them down unless he meets a dog, which he promptly whips, and then he picks up his package again. He can count. He was taught to run guinea fowls from the chickens, but when an old guinea came up with little ones he was taught not to run them. Now they are grown, and while he can't tell one from another, he counts four and runs the others away. Early in life he began to put out cigarettes carelessly thrown around, matches or anything that was burning.

## Promotion Comes to the Man Who Knows

By J. G. WARNECKE,

Division Storekeeper, Centralia, Ill.

THE remark that "There is no chance for promotion," made carelessly by so many employes, is as far from the truth now as ever. There is room, and plenty of it, near the top on the rounds of the ladder of Success. These heights can be reached only by him who is willing to put forth the efforts to crowd out and climb over those who are holding to the easy rounds called "Course of Least Resistance," "Carelessness," "Saturday," "Pay-Day," "Let George Do It," "Tomorrow, Not Today," and the numerous others which can be likened to the bottom rounds of the ladder to Success.

The crowd is legion that is hanging around hoping to get the benefit of being a top-rounder without putting forth any special effort to surpass the many who are trying the same route.

In the store department, a man entering the service should above all learn to think. To succeed he must grow in solitude, work, develop by studying his work, books and thoughts. He should study and learn to master the work assigned to him. After this is done, he should expand in his knowledge by learning the details of the business of those he comes in contact with. In getting a knowledge of this he will be able to converse intelligently not only about his own business, but also about things in general. He should especially watch those above him to whose position he aspires. In this he should especially note how the man does things in ways different from most others. Without doubt in this will be seen the cause of the promotion.

### Successful Man a Student

Close observation will show that the successful man spends much of his time by him-

self, working, planning for others or reading books, all of which gives him individual growth, development, etc. The clerk or stock man who is spending every moment possible in studying or in company and conversation with those who know more than he does and have made a success in life is sure to develop himself so as to merit and get advancement. On the other hand, one who thinks only when trying to tell a smutty story or something about the movies, etc., and whose associates know only as much as or less than he does has little chance of advancement.

The promoted man must be an educated man. By this I do not mean he must be a graduate of some college or university. Many of the different department heads are not college men. Education obtained in schools is fine, but it is only a foundation which enables one more readily to enlarge and expand the mental faculties so as to work more efficiently. Most men quit studying just as soon as they leave school. These are the ones who are crowding the bottom rounds of the ladder of Success.

### About Delivering the Goods

The successful man, in this department and every other department, will tell you that his hardest studying periods have been since he left school. The man in this department who "thinks" and who realizes that the education he receives while performing his daily duties is one of his most valuable assets will succeed.

Intensive personal interest in the work, an interest in the welfare of the company, and a sense of satisfaction over things well done are some of the attributes of success.

Only a small percentage of all men are putting forth real, honest-to-goodness effort toward promotion; so why not be one of the few "who deliver the goods?" As Walt Mason says:

"One man is afraid that he'll labor too hard—the world isn't yearning for such; and one man is ever alert, on his guard, lest he put in a minute too much; and one has a grouch or a temper that's bad, and one is a creature of moods; so it's hey for the joyous and rollicking lad—for the one who delivers the goods."

### Charles Vernon Neely Dies

The many friends of C. V. Neely will be surprised to hear of his death at the Illinois Central Hospital on January 2. He was taken to the hospital on December 23, suffering with pneumonia. Funeral services were held January 6, burial being at Walthalla Cemetery, St. Louis, Mo.

Mr. Neely was born in Columbia, Tenn., December 10, 1899, and entered the service

C. V. Neely

Louis, who survives him.

of the Illinois Central October 10, 1917, working in various capacities. He was best known over the system as supply car clerk in charge of Line No. 1, a position he held for a considerable time.

At the time of his death he was filling the position of stock-keeper at 27th Street, Chicago. He was married January 15, 1920, to Miss Louise Bergman of St.

## 1921 Was No Criterion of Railway Success

*The following quotation is from Things to Talk About, our monthly bulletin of information.*

Efforts doubtless will be made to judge the Transportation Act by the income and operating results of American railroads for 1921, the first year of operation under the terms of the act. The 1921 results are not a fair test of the act. The past year has been abnormal in nearly every respect. The framers of the Transportation Act expected that post-war railway readjustments would take place in the six months of March 1 to September 1, 1920, and for that period the net earnings of the railroads were guaranteed at the rate in effect during federal control. But the guaranty period came to a close September 1, 1920, and since that time the railroads have been upon their own financial resources—and the end of the readjustment period is not yet. The framers of the Transportation Act could not possibly have anticipated 1921 conditions. For a fair test of the Transportation Act we must judge the operations of the railroads under normal conditions.

Freight traffic fell off nearly one-fourth and passenger traffic nearly one-fifth in 1921, as compared with 1920. Operating revenues were \$300,000,000 less than in 1920, while if the 1920 volume of business had obtained during 1921 operating revenues would have been \$700,000,000 greater than in 1920, or \$1,300,000,000 greater than they

actually were. The railroads succeeded in reducing their operating costs \$1,176,000,000 in 1921, as compared with 1920, but even with this 20 per cent reduction they were able to realize as net operating income for the payment of fixed charges, dividends and expenditures for new investments only \$616,000,000, according to preliminary estimates by the Bureau of Railway Economics. Their fixed charges alone (interest on debt, rentals, etc.) amounted to \$640,000,000, so it will be seen that net income was hardly sufficient to pay fixed charges, leaving nothing whatever, considering the railroads as a whole, for the payment of dividends to the stockholders and for making new capital investments in the properties.

The net income of the railroads for 1921 was equivalent to about 3.3 per cent upon valuation. Considering the guaranty of earnings existing during federal control and for the six months' period ending September 1, 1920, the 1921 net operating income was the smallest in thirteen years, or since 1908.

***The honorable conduct of a business not only wins the commendation of the Public, but establishes a bond of trust between those served and the ones who faithfully perform their duties.***

# One Night a Hero—the Next Night a Dub

## Bowling Experts Rise and Fall; Notes of the Illinois Central Leagues Running at Chicago

By **WALTER E. DuBOIS**,  
Voucher Clerk, Chicago.

**T**HE Chicago Terminal Improvement team in the 12th Street General Office Bowling League gave the bowling fans something to talk about when it took two out of three from the Engineer Maintenance of Way team, and then took three straight from the team representing the Accounting Vice-President's office, just when Captain O'Connor had his team going well. Captain Block has his team doing great work among the maples. The Land and Tax team also caused excitement when it upset 2,657 pins for an average of 177, a mark for the whole system to shoot at.

Comparing the averages of October 21 with today, we find some interesting changes, mostly for the better. At that time Bernbach was upsetting them for an average of 188, but has dropped back to 185. Enright has also dropped two pins, from 182 to 180. Block shoved his average up from 163 to 178, a 15-pin advance, and has been a tower of strength to his team. "Noodles" Knodell moved up to 178, an increase of 4 pins, and would like to meet

"Cracker" Smith on the Woodlawn alleys and make a cheese sandwich out of him.

Cote remains at 171, but should get that left arm of his oiled up, for there is no reason why he cannot shove his average up to at least 175. Larson was upsetting them for 161; now they are dropping into the pits for him for an average of 169. Roff is helping Bernbach keep their team in first place and has advanced three pins for an average of 168. Collier has moved up five pins and is now rated at 165, while Stone is 1 pin behind him, having increased his average 2 pins. Grace has an average of 163 and has kept above 160 since he started bowling last November. Breitzke has dropped from 163 to 160.

Krubeck has lost the groove and has dropped from 165 to 159. He will have to brace up, for his team is suffering as a result. Brown has moved up to 158, a 2-pin increase. Coble, Camp and Carney now appear among the select first twenty bowlers and will be watched from now on. Ullrich, like his team, is slipping, having dropped 1 pin.

It's a great game—one night a hero and the next night a dub!

Here is the standing, as of January 13, 1922:

Teams	W.	L.	Per-centage	Aver. Pins Per Game	High Game	High Series
1. Engineer Maintenance of Way.....	35	7	.833	809	940	2,554
2. Land and Tax.....	34	8	.810	815	909	2,657

The 63d Street General Office Bowling League has now completed its 16th week of competition, with the Seminole Limited in first place with 37 games won and only 11 lost, closely followed by the New Orleans Special with 36 won and 12 lost. This standing is due to the fact that during the last month the Seminoles took three games from the New Orleans Specials.

The standings of the teams and of the first twenty bowlers are listed below:

Team	Won	Lost	Total Pins	Average	High Games	High Series
1. Seminole Ltd.....	37	11	40,956	853	966	2,631
2. New Orleans Spcl.....	36	12	40,692	847	936	2,673
3. Panama Ltd.....	32	16	39,410	821	953	2,671
4. Diamond Spcl.....	26	22	39,293	819	985	2,721

"The struggle for first place is now being fought between the machine shop and the car-

penyer shop," writes our correspondent, Andy Gump.

"Credit is due the carpenter shop players. They applied for admission at the beginning of the series, but there was room for only eight departments, and they were refused. However, after the first game was played, the store department withdrew, and the carpenter shop was admitted with the understanding that the three games lost by the store department were to be placed against the carpenter shop's record. This arrangement was accepted, and the carpenter shop bowlers are not letting a little matter of three games stand in their way toward reaching first place."

Those who did not take advantage of the opportunity to witness the return bowling match between the 63d and 12th Street bowling teams Saturday night, January 14, at the Woodlawn Bowling Alleys, Chicago, may never again have the opportunity to witness such an exciting match as was won by 63d Street by the small margin of seven pins on a 3-game total. Two 5-man teams of the greatest bowling stars in the country could not produce any greater thrills than the fans experienced in the third game of

this match, when it was up to the last man on each team to decide the winner.

The boys from 12th Street could not get started and appeared to be suffering from stage fright in the first game, which was won by 63d Street by the large total of 129 pins. Notwithstanding these huge odds against them right at the start, consistent bowling managed to reduce the lead of their opponents to 18 pins. In the third game, the match was not decided until the last man on each team had finished bowling.

## Southern "Turkey Day" in Mid-December

Loading Turkeys at Starkville, Miss.

Turkey Day—not Thanksgiving, but Friday, December 17, 1921—was a notable day in the annals of Starkville and Oktibbeha County, Mississippi, in that it clearly demonstrated the value of co-operative effort intelligently and systematically planned; it also

offered suggestions along the line of diversification of farm products, which may go a long way toward solving the agricultural problems that confront the Southern farmer.

Turkey Day had been extensively advertised by C. P. Barret, county agent, and the Stark-

ville Chamber of Commerce. A price of 34 cents a pound had been guaranteed the producer, the cash to be paid immediately on delivery of the fowls at the car for shipment. The price was considerably above the local market, and the mode of settlement, especially in view of the approach of the holidays and the insistent need for ready funds to satisfy Christmas wants, was an additional incentive to the poultryman to take advantage of this opportunity.

Accordingly, the early morning risers of Starkville witnessed the vanguard of the turkey-army trooping in on the splendid rock highways leading into Oktibbeha's capital city, and the late breakfasters, gazing out on the steady procession of varied conveyances, from the antiquated surrey and creaky wagon to the modern high-powered automobile, wondered what circus had come this way.

The picture gives a correct view of the scene of activity at the platform where the cars were loaded, but it must be remembered that the camera could not encompass the streets in the vicinity of the station, which were blocked by turkey-laden trucks and wagons.

Two cars, containing more than 25,000 pounds of turkeys, were weighed, loaded and settled for before the closing hour of the banks, 3 o'clock, and payments totaling \$10,000 were put into the hands of the farmers of Oktibbeha County. The overflow—the two cars could not accommodate the entire offering—was shipped by express the next day.

The Bronze variety predominated. One of the pure-bred male birds was selected from Saturday's receipts and placed on the scales to be weighed. It had been ascertained that he came into this world in May, 1921—a splendid type of turkey-hood he was, with blood-red wattles, jet-black silken beard and a coat of such sheen that it rivaled a debutante's party gown, stately of tread and with head erect, viewing the proceedings with interest. The weigher announced that the beam balanced on the number 23, and that it would be the same number for the bird the minute an epicure in a distant city spied this candidate for honors of a sumptuous Christmas dinner.

Oktibbeha County, known far and wide as "The Jersey County of the South," is well on its way to another title—"The Turkey County of the South."

## PRACTICES ECONOMY

*William Peterson*

Here we have a picture of Engineer William Peterson, one of the older heads on the Memphis Terminal. Mr. Peterson knows and practices economy. He has recently been doing a great deal of work train service, and he has always taken great interest in picking up valuable material and bringing it to the shop, according to E. Bodamer, terminal superintendent.

Mr. Peterson began work as locomotive engineer in 1879 on the Mississippi & Tennessee Railroad, which was later taken over by the Illinois Central. He has been an engineer on the Memphis Terminal since August 10, 1890, and is the oldest man on the seniority list of Memphis Terminal. He is the father of seven children, five girls and two boys, and resides at 399 LaCledé avenue. He has complimentary letters from each superintendent he has worked under.

# Giving Dining Service on Special Trains

## How Our Organization Functions to Make Every Such Trip a Thing Long to Be Remembered

By T. S. ROBINSON,

Chief Clerk, Dining Service Department

THE dining service department co-operates with other departments to insure the transportation of passengers on special trains with safety, speed, comfort and dining-car service unsurpassed. Special trains, whether operated with a view to speed or exclusiveness, are luxuries indulged in by the up-to-date captains of industry, on pleasure bent or on business emergencies; by organizations that desire to travel to conventions *en famille*, thus furnishing domestic and social attractions in addition to speed and comfort; and by government officials and forces on various occasions.

When the dining service department receives a transportation notice from the general passenger agent, saying: "Please arrange following movement"—detailing explicitly the name of the party, number of passengers, kind of equipment, date and train schedule, number of dining cars required, number of meals and kind of service desired, *a la carte* or *table d'hôte*—then things begin to move in an energetic manner about the commissary department and continue until preparations are complete, which means up to the time the train departs from the station.

After receipting the duplicate transportation notice (which is done to insure delivery), the dining service department begins to set the wheels in motion, preparatory for the movement, commensurate with the data outlined in the notice.

### Menu Cards as Souvenirs

Sufficient time is given the dining service department in advance of the movement to enable it to make out and prepare the printing of the menus, select a competent crew of cooks, waiters and steward, order supplies and stock the car with provisions and equipment for the trip. After the menus are decided on, they are forwarded to the printers, where a proof of the menu card is struck off and returned for approval. The menu cards are appropriately designed as to name, tour and date of the trip and location of the convention, a

sufficient number being printed to afford a complimentary menu card to each passenger as a souvenir, should it be desired. Copies of the menu card are furnished the steward in advance of the trip, giving him sufficient time to make out a requisition for all the supplies necessary to fill the requirements of each menu for as many passengers as are scheduled on the train.

The steward assigned to duty on a special train is usually an experienced one, having had a considerable service, one who is familiar with every detail of the steward's profession,

### A Good Citizen

Chauncey M. Depew, chairman of the board of directors and one of the oldest charter members of the New York Central Veterans' Association, recently addressed a letter to his fellow veterans in which he made some striking comments on loyalty and service. He wrote in part:

"On the first day of January, 1922, I completed fifty-six years of service in the company. That I am in about as good shape in this January, 1922, as I was in January, 1866, is a tribute to the health and happiness and longevity which comes from service in the New York Central.

"Every organization is divided into boosters and knockers. A knocker is one who is dissatisfied with everybody above him, everybody around him and especially with the organization with which he is working. A railway man should leave criticisms and complaints against his job to the commuter, the shipper, the politician and the fellow who cannot get on the pay-roll. The booster is always healthy, always happy and always cheerful. He helps others and in that way helps himself. He has pride in his organization, pride in his train, pride in his locomotive, pride in what he believes can be done by his company better than by any other in the world. A knocker is a poor citizen; a booster is a good one."

one who can read a menu and tell at a glance how many portions and pounds of any article listed on it are required to make the trip for a given number of passengers. This estimate is given off-hand to cover the requirements of any menu, *table d'hote* or *a la carte*. The latter is a 65 per cent reduction from the former.

*A la carte* menus are full-sized portions, with fewer courses, and each article served is personally selected by the guest from a large *a la carte* menu, each item having a separate price. *Table d'hote* menus range from five to ten courses, and each portion is minimized accordingly. *Table d'hote* meals have a fixed price, and all guests are served from the special selection which is already prepared and ready for service when they enter the dining car.

### How Much Is a Portion?

One frequently notes two prices opposite articles on *a la carte* bills in restaurants and cafes, showing the values of half and full portions. This proves the discretion of the management in catering to the appetites of the various patrons by affording a greater variety with less expense.

The following list of portions, which are standard on dining cars, will give an idea as to size and amount served passengers with *a la carte* meals:

- Olives or radishes, 6 or 8 per portion.
- Clams or oysters, 6 or 7 per portion.
- Fresh fish, 1 (gross) pound.
- Stews and entrees, 8 ounces each.
- Roast veal or lamb, 8 ounces each.
- Roast chicken, duck, goose, 1 pound gross.
- Roast beef, 1 pound gross.
- Chops, 1 rib each, (optional with passenger).
- Small steak, 8 ounces, trimmed.
- Small sirloin, 12 ounces trimmed.
- Extra sirloin, 16 ounces trimmed.
- Bacon, 6 strips.
- Ham, 1 horse-shoe cut.
- Vegetables, usually 1 large baker full.
- Tomato salad, 1 large one sliced.
- Head lettuce, 1 head to the order.
- Bread, 3 slices.
- Rolls, 3 to the order.
- Pies,  $\frac{1}{4}$  to the order.

Preserves are served in individual portions.

Cereals are served from individual portions.

Butter is cut into 32 chips per pound.

Each steward is supplied with a portion, price and service list (prepared in the superintendent's office) and is not allowed to deviate therefrom.

### Food Is Always Fresh

After the steward has made out his requisition for supplies, he turns it over to the commissary storekeeper, who orders all supplies accordingly. Supplies are purchased on the open market and are of the best quality obtainable. Morning orders are delivered the same day purchased, thus guaranteeing to dining-car patrons fresh wholesome oysters, fish, meats, fruits, vegetables and dairy products daily.

Crews report for duty three hours before the trains depart, thus giving ample time for checking off supplies, transferring them by wagon to coach yards for storing on dining cars and preparing for the meals. Consequently, when the train is switched into the station ready for the embarkation of passengers, every article is in its place, window screens are adjusted, the meal is ready, and all cooks and waiters are at their proper stations, ready to serve the Illinois Central's guests promptly and courteously.

In addition to the gastronomical features, the diner is stocked with a generous amount of non-alcoholic beverages, mineral and charged waters and imported and domestic cigars and cigarettes, which travelers enjoy while "killing time on the road." Assortments of playing cards, kept in stock, are always in demand by the traveling public.

## INKID SAYS—

(Copyright Applied For)

## What Patrons Say of Our Service

### To California via New Orleans

The following letter to J. V. Lanigan, general passenger agent, is from Mrs. C. S. Biernatzki of 250 North Lake street, Aurora, Ill.:

"My husband and I take this rather inadequate means of indicating our very deep appreciation of the manner in which you have arranged transportation for us to California by way of New Orleans. This is the sort of service which does a great deal to remove the more or less popular prejudice against the impersonal manner in which great railroads sometimes handle their patrons.

"Our comment here in the family has already induced one member to say that his next trip to the coast would be via New Orleans, and perhaps other friends will appreciate knowing that this route is not alone interesting, but takes very little more time than the more direct routes.

"Permit us again to acknowledge our thanks for your considerate service."

### Service Pleased This Patron

Alonzo C. Tenney, M. D., 25 East Washington street, Chicago, recently wrote as follows to President C. H. Markham:

"On a recent trip to Champaign I was so pleased with the dining car service that I inquired the name of the gentleman who was in charge of the dining car.

"It gives me pleasure to advise you that Mr. R. R. Mather, on Train No. 3, D. C. 3990, has established with one patron, at least, a reputation for efficiency and courteous service that surpasses any service encountered on any other line, any place in the United States."

### A Change in Thirty Years

The following letter to President C. H. Markham is from W. E. Schofield of W. E. Schofield & Company, hotel brokers, Suite 614, Tacoma Building, Madison and La Salle streets, Chicago:

"Thirty years ago I made my first trip to New Orleans.

"Yesterday I made my last trip from New

Orleans and could not help but note the wonderful progress in your road during that time. Instead of wrecks being strewn along the line south of Cairo, trains invariably late and indifferent employes, we now find a finely ballasted road, trains nearly always on time, uniform courtesy from employes and a railroad second to none in America.

"Such transcendent management is surely to be complimented."

### Helped Look for Lost Case

The following letter to A. M. Umshler, Chicago Terminal superintendent, is from Donald L. Evans, attorney, 1516 East 65th place, Chicago:

"While using the suburban service of the Illinois Central Railroad, I lost a brief case containing valuable papers.

"I called your Mr. Outerbridge, in charge of your suburban lost and found department, and in his effort to help me he put me in touch with Mr. Roth, who, I understand, is a brakeman or flagman, to help me locate the case.

"Mr. Roth was exceptionally courteous in the matter, and Mr. Outerbridge went out of his way trying to help me in locating the brief case.

"I want you to know that I appreciate very much the courtesies extended me by these two employes and also that they left nothing undone to assist me. Without a doubt they have the interest of the public in mind, and I consider them exceptional men in handling the public."

### A Bit of Christmas Cheer

The following letter was addressed to President C. H. Markham in December by E. S. Hoche, vice-president, the Automatic Recording Safe Company, 159 North State street, Chicago:

"I am a patron of your suburban service—live at the South Shore Country Club. One day last summer I left my spectacles in the car that had brought me to Randolph street—dropped to the bench or floor when I thought they had gone into my vest pocket, I assume—and I did not discover

my loss until I had reached my office. Upon returning to the Randolph street station that evening, I looked up your 'Lost and Found' department, and was agreeably surprised to find that the spectacles had been found and turned in by a flagman, E. Mattocks. I had the attendant write the flagman's name down on a slip of paper for me, with the intention of sending a reward to that honest and dutiful worker, feeling that I was morally bound to encourage him, by proving to him that honesty is really the best policy. While the glasses were of no particular value, as such, to anyone but myself, he could have realized several dollars out of the gold of the frames, making sure of this cash, instead of turning his find in to headquarters and depending on the fairness of the owner to reward him.

"I put the slip of paper with the flagman's name in my pocket, and brought it to my office the next day, with the purpose of drawing a check and writing a note of thanks to Mattocks; but other matters pressed in upon me, with the result that the memo bearing his name was placed in my personal file for later attention. By mistake of a file clerk, it reached the wrong file, coming to the surface again just the other day—a guilty reminder of a duty unfulfilled:

"Because of this long delay, I am taking the liberty of sending the little check of recognition that I had originally intended for your good flagman to him through you, thus drawing your attention to his act. In doing this I am actuated partly by the conviction that a workman who will return a lost article found by him shows by such action that he has not been poisoned by the vicious propaganda that has been spread by the socially and morally degenerate union labor agents who have so long been doing their best to make workmen despise their work, short serve their employers, and hate their fellow men who may happen to be a little better off than they are.

"Commending you for the fine intelligence and broad spirit of fairness shown by you in your dealings with your employes and the public, and hoping that the really great railroad over which you preside will continue to prosper, increasingly, under your wise direction, I am, with the compliments of the season, very truly yours."

### Courtesy, Politeness, Good Nature

The following letter to President C. H. Markham was recently written by Leon H. Prentice, president of the L. H. Prentice Company, steamfitters, 328-330 South Sherman street, Chicago. Mr. Prentice wrote from 30 Cedar street, Daytona, Fla.:

"In your Tribune ad of December 1 you ask for criticisms and suggestions for your road. I have neither, but I received such uniform courtesy, politeness and good nature the last trip I made here, I want to tell you about it.

"Beginning at the ticket office in the Insurance Exchange, the agents were exceedingly polite and accommodating when I bought my tickets and when I was obliged to change them for a later date. The baggageman at the station was not only polite and pleasant but actually jolly and good natured—something I have never before experienced in my dealings with railway employes during fifty years. The gateman, the conductors and dining car manager were all nice and good natured, and I thank them all for a pleasant trip, which I hope I may repeat for many years to come, although I am 74 years old."

### Leaving a Pleasant Taste

The following letter is from E. O. Hanson, president, the Derma-Viva Company, 608 South Dearborn street, Chicago:

"Every time the writer has felt that he has not been properly treated by an employe of your railroad he has called your attention to the matter, and I feel that, in case I call your attention to lack of service, then I should also call your attention to any kindness or courtesy extended by an employe of your road.

"I have a very bad habit of being caught without any money. Saturday, when I went to your Van Buren street station and reached in my pocket for my ticket, I found that I had used it up, and upon further searching I found that all I had with me was 90 cents. I dislike very much to pay 24 cents for a ticket one way to 60th street, when I can buy a 10-ride ticket for \$1.10. I went up to the ticket agent, told her the circumstances and asked her if she would be willing to take my check. In the kindest manner possible she said surely she would take my check. I then told her I had

90 cents and that I would give her the 90 cents and a check for 20 cents. She said that it was unnecessary that I give her a check, that I could pay her the 20 cents later.

"I went out on the platform and thought the matter over. I really believed you would be glad to hear of this girl; so I went back to the ticket puncher and asked him her name. He told me her name was Mrs. Gilleta. I told him what she had done, and he very courteously said to me: 'If this is a fact and you are going to write to the Illinois Central in regard to it, we would be glad if you did, because we really do try to be courteous and thoughtful. As some people complain of us, sometimes, we would like very much to have those commend us who feel they should.'

"I therefore am writing you this letter, which I think I should do, because these two people certainly were splendid to me Saturday, and such actions leave such a pleasant taste with the customer."

#### Appreciated the Interest Shown

The following letter to G. A. Lavery, ticket agent, Decatur, Ill., was written by Francis J. Cunniff, Niantic, Ill.:

"I have your letter of December 9 in reply to my request for information regarding my trip to Carrier Mills, Ill., and since the information is very satisfactory I cannot say that your letter ended our relation, for I wish to thank you for the consideration and interest shown.

"It is far from my intention to indulge in flattery to you. As you know, there is a wide difference between flattery and praise, and, while I do not wish to employ the former, I do sincerely give you the latter in unstinted measure.

"I am under the impression that it was your duty; yet there's a difference in performing duty—at least, it has been my experience. You have no doubt been giving this same consideration to both the Illinois Central and the public that you have given me. While perhaps there have been few who appreciated it, I desire for you to know that I greatly appreciated the information and interest shown."

#### Best in All Ways

The following letter to Vice-President C. M.

Kittle is from E. C. Finkbine, Blening Building, Des Moines, Iowa:

"I returned this morning from a very pleasant trip in Mississippi. I wish to congratulate you upon your Panama Limited train. It is, I think, the best train I ever rode on, all things considered. Your service is excellent, your equipment is good, and it goes over a perfect track. No one could have had a better ride than we enjoyed."

#### Pleased With Fruit Service

The following letter to President C. H. Markham is from M. Lapidus & Sons, dealers in fruits and produce, 81-83 West South Water street, Chicago:

"The Secretary of the International Apple Shippers' Association has advised us that the Illinois Central Railroad has already built one thousand new refrigerator cars, and has just placed an order for one thousand more, delivery to commence February 1 and to be completed by October 10, 1922.

"The action that your railroad has taken to secure suitable equipment for the movement of perishable fruit and vegetables is certainly very commendable.

"We feel that, if the other carriers serving our industry would show an equal interest therein, the fruit and vegetable industry would have no cause for complaint.

"We have always been quite satisfied with the service that the Illinois Central has given us, and, although we are not large factors in this business, we always try, at all times, to favor them with as much business as possible."

#### His Smoothest Ride

The following appreciation is from Alderman Sheldon W. Govier of the Ninth Ward, Chicago, to President C. H. Markham:

"I have recently returned from a tour throughout this country and Canada, and it was my good fortune to return home on the Panama Limited from New Orleans to Chicago. As I have just completed a journey of ten thousand miles I was so pleased with the fine, smooth ride, after being jostled and bumped about on various other passenger trains, that I could not help but sit down and dictate this letter to the president of the Illinois Central Railroad to show how I appreciated the smoothest ride that I have ever had on a railroad train, and assure you that,

whenever I have occasion to travel in the direction that the Illinois Central runs, I will take that line in preference to all others."

### Good Football Service

The following letter was addressed to President C. H. Markham by W. M. Barrow, assistant attorney-general of Louisiana:

"As an observer of excellent service, I wish to express my highest appreciation of the magnificent train and service which was furnished by your company last Saturday to carry the people of Baton Rouge and the

L. S. U. students to the L. S. U.-Tulane football game, which was played in New Orleans on November 19, 1921.

"This train was all that could be demanded of any carrier, and was operated in a manner to elicit the highest praise of all of the passengers. I feel that the management of your company should know that efficient service is praised, although, perhaps, you usually hear only the knocks.

"I know, in writing this letter, I am expressing the views of hundreds who used this service last Saturday."

## Gives Outline of Louisiana Dairy Traffic

By S. M. CARPENTER,  
Agent, Arcola, La.

There are approximately two hundred and forty dairies on the McComb district of the Louisiana division. Their total production will average five hundred cans of milk shipped daily into New Orleans. These shipments will total five thousand gallons of whole milk every twenty-four hours.

Most of these dairies are small ones operated by farmers and their families. They will average thirty-five cows to the dairy, which will allow twenty or twenty-five cows to the barn milking, while the balance are dry. Of course this is a general average, as there are some large dairies in this territory, but the majority will average from fifteen to thirty gallons of milk a day.

Cows are milked twice a day in clean, sanitary barns which have passed the state inspection. The milk is then run through a milk cooler to remove the animal heat from the milk. It is then placed in shipping cans for transportation to market.

There are three sizes of shipping cans: five, eight and ten gallons. They are thoroughly scalded before receiving the milk. The milk is then hauled to the nearest railway station for shipment to New Orleans.

All charges must be prepaid before forwarding. We use for this purpose a prepaid milk ticket of three parts. The first stub is pulled by the forwarding agent. By this he balances his billing. The second stub is pulled by the baggage agent at New Orleans. The third stub of the ticket is left on the can and is the stub that returns the

empty can to the shipping station free of charge.

Each milk can also has attached to it a shipping tag showing the shipper's name and address, consignee's name and address, date of shipment and train number. The covers on the cans are fitted with paper gaskets, which make the cans water-tight. The lids are sealed with a wire and lead seal. Cans which are prepared in this way are air-tight, and it is almost impossible for the contents to waste out.

The Louisiana dairyman has the advantage of the Mississippi dairyman, owing to the fact that he has the benefit of the state rate of 2½ cents per gallon for eighty miles or less, and 3 cents per gallon for more than eighty miles. This includes the return of the empty cans to the shipper.

While there are several creameries on this district, the bulk of this traffic is shipped into New Orleans. I would estimate that fully 95 per cent is shipped as whole milk to New Orleans. The remaining 5 per cent goes to the creameries on the district.

The milk traffic differs from the vegetable and fruit traffic, inasmuch as the milk traffic is every day in the year, while the vegetable and fruit traffic lasts for only ninety or a hundred days. Although the revenue derived from milk is not so large as from other traffic, it is large enough, taking into consideration the revenue derived indirectly from this traffic, such as feeds and other commodities used by the dairies. It behooves us to encourage this traffic and to see that it receives the attention it deserves.

By HORACE

Short Story—Complete in This Issue

I  
**B**ARNEY DUPUY first saw Beatrice Farnham as she bowled aristocratically past him in an opulent town car while he stood gaping from a safety-islet. He had a vague impression that there was somebody with her—a person feminine and middle-aged—but he hadn't particularly noticed this party of the second part owing to the fact that his two eyes were rather busy just then with their task of drinking in the wondrous contours and color-tones which made up a composite image of The Girl. If he had possessed a hundred or thousand eyes like a spider, he—but his eyes were only two.

A clearer, more comprehensive inspection of *both* occupants of the car might have caused subsequent events to take a different turn. Upon that pivotal point this story precariously teeters. Just a hasty paragraph or so of unexciting preliminary, and then comes the action, plot, dialogue, and emotional stuff.

Barney Dupuy's college chum, Sam Willard, was a spoiled son of wealthy parents. The Willards, rich and retired, owned a summer home called Sandhurst-on-the-Lake. And just beyond a box hedge or so lived the Mannerings, likewise idly rich. Almost by accident, as it were, Barney learned of a Certain Person's presence for a month's stay at the Mannerings'. It was within a stone's throw of a spot where his own welcome was assured. It was easy for him to become a guest of Sam Willard, requiring only the most amateur diplomatic maneuvering. He maneuvered it. He met Bee Farnham. They saw each other early, late and often. They became engaged to wed. Excellent.

But calm's the word! Many's the slip that results from a hop and a skip.

Our luck Barney, of course, must needs pull the inevitable blunder. In Sam's roadster, at dulcet eventide, dallying in a poetic, sylvan lane in the twilight—dim twilight, mind you; don't neglect either the twilight or its decided dimness—Barney allowed

himself to be seen by a Certain Person while he was in the company of a divinity beside him—a dainty figure in 'sky-blue, with plumed hat to match, whose presence, to all outward appearance, was not at all hateful or fatiguing to him. At least, that was the impression Beatrice Farnham received when she saw them.

Right-O! Here we are all set for dialogue and emotional stuff.

## II

"You will understand, if you please, that airy badinage and presumably flippant evasions are ill-timed and very unconvincing, just at this time. I am giving you an opportunity, Mr. Dupuy, to explain a certain incident. An explanation is quite necessary—from my point of view. I only hope you will be able to explain—"

These crisp, not to say curt, words came

"I am giving you an opportunity, Mr. Dupuy, to explain a certain incident. An explanation is quite necessary—from my point of view. I only hope you will be able to explain—"

very clearly and incisively over the telephone, to impinge upon the tympanum of Barney Dupuy's burning left ear. Heavens, and Holy Gee! So Beatrice had seen him with—or, at least she'd seen him, anyhow—and he had been too much occupied even to notice the woman who was avowedly his heart's adored. Confound it, she *was* his heart's adored. But—

His heart skipped a couple of beats and tried to climb out of its stuffy prison by way of his parched and constricted throat. His mental mechanism seemed to have run out of juice, back-fired once or twice, and gone dead.

"I am waiting," her voice came, measured and pitiless. "But I must inform you that I shan't continue to sit here waiting for hours until you have concocted—"

Concocted! A harsh word. He steadied his voice with a supreme effort.

"Hallo! Oh, hallo—is that you, Bee, dear? I thought Central had cut—what was it you asked me, little one? Who was that in Sam's car with me, yesterday evening? Why, Bee, I—well, if you really are crazy to know, I—of course I shall be glad to tell you the horrid truth. Dearie, it was—it was my own mother."

There was a momentary pause—a hushed instant of silence. Barney waited—hopeful, but at the same time anxious. A still, small voice came to his ear—and he smiled.

"Oh, Barney, I—I'm sorry. I didn't know your mother was—I'm honestly grieved to think I—please forgive me, dear. You should have told me right at first—"

"Don't let it cloud your beloved brow for a second," he returned graciously, master of both voice and vocabulary once more. "You're wholly justified in your—er—you've a perfect right to ask me anything, any time—surely! Aren't you my own ootsums-toot—"

"Hu—sh-h!" she admonished him. "You forgot that you're speaking over the phone. Central probably is listening, silly. Can't you run across lawns and see me, just for a few minutes, Barney boy? Do, please. Give me five minutes to pin up my hair—"

"Sure. Be right over in five minutes."

"No, twenty, say. Good-by."

The young man wiped the dew from his flushed face. He had twenty minutes' respite in which to strengthen, rivet and polish

his story. To a man of imagination and assurance so short an interval may be made to serve; and he flattered himself that in some degree he possessed both creative genius and aplomb.

Smiling and bland of mien therefore, he entered her presence presently. Attired in dainty, beribboned, informal near-negligee, she seemed never more alluring, he thought, and her penitent, dark eyes met his ardent gray ones with a shy glance of humility and apology. For a look like that a man would be justified in adding burglary and larceny to the crime of willful perjury.

"It's so fine and manly and generous of you not to be angry with poor me," she murmured. "One couldn't blame you, you know, if you should demand an apology on my bended knees for all the dreadful things I said a little while ago. I—I'm—"

Then ensued soft rustling sounds, mingled with certain sibilant and hurriedly aspirated, audible, atmospheric disturbances of a mildly explosive character, succeeded by an unmistakable giggle. Then, tenderly:

"How could anyone be angry with the most booful woman in the world?"—and more of the same, *ad absurdum*. Two—three minutes of it.

"By the way, dear, I have already planned to make amends. You know, without my saying so, that I am very anxious to meet your darling mother; and she, too, no doubt will be expected to display some little curiosity to see me, under the existing circum—"

"Of course, Honey Bee," he assented fondly. "Mother's crazy wild to meet you. She commanded me particularly to tell you—"

"How charming of her! I know I shall just love her to death. But listen. I have already arranged the preliminaries for a little affair for her. I've invited a few of my dearest friends to a little luncheon in the Japanese tearoom of the Country Club at noon today, and you're to bring your mother, who will be the guest of honor."

The young man's mouth worked soundlessly, and his eyes rolled in his head.

"Why—why—," he managed to mutter helplessly. "Why, she—"

"You know you'll not be expected to attend—only to bring the guest of honor and surrender her to me. Gracious!"—consult-

ing a tiny bracelet watch—"It's 9 o'clock now, and I've a lot of things to do. Run along, please, and attend to your part like a dutiful son and sweetheart; there's a good boy. No, don't argue! There!—one, two, three—and no more, sir. Shoo!"

In a species of daze the helpless victim found himself thrust gently but summarily out of the house, or rather out of the hot griddle into the inclined chute leading directly to the fire.

It was a chastened and subdued, but at the same time glassy-eyed and incoherent, apparition of his friend and guest that burst in upon Sam Willard, to find that soulful sluggard poring over an array of old letters which he surreptitiously but unsuccessfully tried to conceal from view.

"Hullo," he growled. "What ho? Had a stroke or something?"

"Sam! Good old Sam! Man, I'm in a soup-kettle full of boiling fish, and not a sail in sight. I'm torpedoed without warning, scuttled, harpooned, gaffed in the gills. Tell me what to do quick, Sam, old man, before I run yelping and take a high dive off the nearest boat-pier!"

"Um," said Sam reflectively. "Keep calm and grab a chicken coop. Now tell your Uncle James where the shell hit you and what all, while Congress is convening."

"It was fate, I reckon," gloomed the other. "Listen, and I will tell you all.

"Last night about dusk, when I was coming along the road over here toward the west a ways in your roadster, I saw a girl. She was a stunning, pretty girl: sky-blue clothes of this clingy stuff, classy from hat to boots, you know. She bobbed up rather suddenly and acted as if she was about to hail me when she saw the car. I slowed down, of course. She smiled and said, 'Good evening,' as I stopped. I yanked off your cap and goggles I was wearing and returned her salutation in my niftiest manner. She clouded up instantly and stepped back.

"'Oh,' she says, 'I beg your pardon. I—I thought you were someone I knew. I'm very sorry. Please forgive me.'

"I didn't get it that she was stalling at all; you could see she really was embarrassed.

"'The misfortune is mine,' I said. 'Consider yourself forgiven ninety-nine times and don't mention it.' She smiled another pretty smile for me. Well, we passed a

few more words between us, and, learning that she was going my way, I finally prevailed upon her to accept the small favor of the vacant seat at my right. She did so. She wouldn't tell me her name or who she took me for, but she got out at that big buff-brick house down by the bay where the stone dogs are on the gatepost. She went in there—"

"Wha-at!" The apathy of Sam Willard was suddenly replaced by violent excitement. "What did she say? Did she mention my name? What were her exact words? Go on, you big mumbling slowpoke!"

"I don't remember what she said. 'Twasn't anything in particular. The thing that's worrying me is that Beatrice Farnham saw us together, and she isn't one to mince matters in a case of that kind. She called me on the carpet this morning right away and gave me a bad ten minutes. Caught me unprepared, confound it, and I made a boob play. On the spur of the moment I told her it was my mother who was with me, and she—"

"Are you sure she didn't send me any message? Not a word? Think hard—"

"Who? Beatrice? No, she didn't—"

"No, no, not Beatrice, you dumbhead! Carol—Carol Hillis, I'm talking about. It was she you picked up. She and I quarreled, and she said—no matter what she said. From the way you say she acted, she's relenting and wants to see me. I got to go see her. You'll excuse me now, old scout. Make yourself comfor—"

"But I tell you Beatrice has arranged to give a luncheon at the club today noon in my mother's honor—!" His voice rose to a shout. "And my mother isn't here. She hasn't been here! What am I to do?"

But Sam, the erstwhile sluggard, had wriggled half into his coat, snatched a cap of some kind, and was at the door.

"Don't ask me what to do," he called over his shoulder. "I'm in a blooming big hurry. I'll take the roadster. Dad's gone off somewhere in the big car, so if you wanta go out for anything, you can use the mater's electric. She won't mind—"

With which thoughtful farewell he went clattering down the stairs.

### III

When a man is about to sink in a sea of difficulties the instinct of self-preservation spurs him to keep on struggling, no matter

how futile his initial efforts may seem. Neither does he scorn the sorry refuge of a raft to stay him up because there chances to be no swift motor-launch handy.

So Barney Dupuy went out in Mrs. Willard's electric coupé:

He had desperately contrived, in the short space of time yet available to him, a fantastic plan of action. He purposed to drive to a boat-wharf he knew of, and from there telephone Beatrice that his mother had embarked for New Haven or Providence or some other seaport in obedience to a telegram calling her to the bedside of a dying relative. A sister, for example, or perhaps a favorite cousin would do as well.

Once on the way and snailing along snugly, his downcast spirits began to mount again. There are more ways of eradicating a cat than feeding it red-hot fishhooks smothered in mushrooms, he told himself. And if his luck held, all would be propitious.

The boat landing was eight or ten miles distant. It was not an important traffic point. The regular boats stopped there only to put off an occasional passenger or to take on one, at a prearranged signal. A man kept a lonely vigil in a sort of wooden pavilion which was subdivided into waiting room, ticket office, and a stall where cigars, popcorn, chromatic postcards and the like were offered for sale. There was also a drop-coin-here telephone in a booth.

Our painstaking fabricator of plausible artifices rolled silently up to within the sheltered lee of the small building, stopped, descended, and approached the somnolent official in charge. Yes, there was a telephone there in its booth, but it wasn't working; it had been out of order for a couple-a days. No, there wasn't another 'phone nearer than two or three miles. Did the gentleman wish to take the next boat? It would be along about 4 p. m.

With a frown of annoyance, Barney turned to leave by way of the small waiting room. It was then that he observed a trim, female figure standing by a window which commanded a view seaward. She was attired in a dress of some soft material, sky-blue in color, with hat to match. Her back was toward him, but the young man was struck with something oddly familiar in her appearance and pose. He paused irresolute. At the same time the lady faced about and caught him staring. A little con-

fused, he saw that she was a stranger to him, and a much older woman than he had thought her. If she was not entirely past middle age, at any rate she was no longer young. She regarded him calmly, with a questioning look.

"I—I beg your pardon," he stammered, "I—I thought you were someone I knew."

"The offense, if any, is not apparent," she said in friendly, well-modulated, musical tones. "You are absolved, young sir. You came to meet someone, perhaps?"

"No," he returned, "I came to—to use the telephone."

"Ah, then as a fellow-victim of the telephone service, or rather absence of service, here, I can but hold you blameless for anything you should do or say. Do you swear fluently under sufficient provocation, young man?"

He laughed. "My capabilities in that respect do not rise above mean levels," he confessed.

"A great deal depends upon the emphasis, after all. The commoner forms of expletive may be made very expressive if launched with proper fervor. I am sure that if you were to step outside and direct a few well-chosen remarks toward the system of communication they favor their patrons with in this vicinity both of us would feel greatly relieved."

Pretending to do what she suggested, he stamped out on the wooden platform, to

*He was in urgent need of a maternal relative to save both his own face and the fairer face of Beatrice. "Listen!" he said in a tense voice, "I am in terrible trouble, and I need you—"*

rage and bluster in pantomime up and down for several seconds. She watched him with manifest approval from the open doorway.

"There, I feel ever so much more comfortable," she said when he re-entered. "These soulless corporations deserve to be sharply rebuked occasionally. Thanks to your timely help I shall make out nicely until the boat comes at 4, or 8, or midnight, or whenever it does come in reality."

"Oh, you are waiting for the next boat—," he said foolishly.

"Yes, I shall depart as I arrived, unheralded, unwept, unhonored, and unsung. Also un nourished. The man here informs me that popcorn and peanuts comprise the extent of his resources of an edible nature. He hasn't even an orange."

"If I can be of any assistance—," volunteered Barney. "I could take you—that is, you could come with me to—please don't think me inquisitive, but how does it happen you are marooned here?"

"I wondered how long you would suffer in silence before asking," she smiled. "And I'm sure I don't mind telling you. I am on my way to Bridgeport. I happened to recall that a friend of mine lives somewhere in this vicinity. She often has urged me to pay her a visit; so I had them to put me down at this place, being the victim of an hallucination to the effect that I would find it easy to communicate with my friend and have her send for me. Her name, by the way, is Mrs. James Grassfield."

"Ah," said Barney, "I know the Grassfields very well by sight. They live a considerable distance from here along the coast. You shouldn't have got off here. If you had gone on to Saltmarsh, twenty miles farther on, you would have been within a short distance of the Grassfields' summer cottage."

"Isn't that too annoying? So near and yet so far. It is all my own fault, though. I should have looked before I leaped. I am old enough to have learned discretion."

"If I only had Sam's car now," the other reflected, "instead of this slow tortoise of an electric coupe, I could whisk you to—I beg your pardon. I'm Barney Dupuy, you know. I'm visiting at the Willardses, near here—"

He paused, uncertain just what to expect, in view of the expression on her face.

"You don't think I'm presuming on short acquaintance, do you?" he asked.

"Nonsense," she laughed, her brow clearing. "I am old enough to be your mother, Barney Dupuy. I was thinking of something entirely different—"

A part of her words stuck in his mind. "Old enough to be his mother!" Suddenly a daring thought set the slowly revolving wheels of his mental mechanism to whirling like a racing motor. His mother! Did he not need a mother just at that moment? He did. He was in urgent need of a maternal relative to save both his own face and the fairer face of Beatrice, whose forgiveness he might never hope to obtain if she were left honor-guestless at her luncheon without a very good and sufficient excuse.

"Listen!" he said in a tense voice. "I am in terrible trouble, and I need you—"

With that voluble absence of reserve that bespeaks the childlike mind, he recited in detail the story of his woeful plight. Eloquence descended upon his head as he progressed, and he spoke with the tongue of an angel, or a serpent, according to one's point of view in the matter. He elaborated—but we need not follow the thread in its entirety. Much of it would be a twice-told tale, anyhow.

One point was raised in passing.

"But if I were to undertake what you ask," she deliberated, "if I consent to act the part of your mother for a few hours today, would not that be deliberately deceiving you—the woman you say you love and hope to make your wife? And ultimately isn't it inevitable that she must find out the truth? You are only deferring the final reckoning, young sir."

"I've thought of that," he prevaricated with a glib tongue, "but, everything considered, I am convinced that the paramount thing is to save Beatrice from humiliation now at any cost. I accept the chances of explaining it satisfactorily to her later."

"Very well," she said quietly. "I will undertake to do it."

#### IV

At the proper time then, Barney the bland, smiling, debonair, unembarrassed, in Mrs. Willard's stylish electric coupe, swept grandly up the gravel driveway to the east pergola of the Country Club, where he stopped and, with an air of pride and filial

devotion, assisted his companion, a calm, kindly, distinguished-looking lady of mature years, to alight and enter the building.

Beatrice Farnham was not in sight, but in the big sun parlor a party of half a dozen ladies sat in reed lounging chairs. Among them was Sam Willard's mother.

The latter came forward at once to greet the new arrivals. To Barney, her nod was perfunctory; his charge, however, she welcomed with a graciousness that bordered on the effusive.

"How dear of you to come," she cooed. "We were expecting you. Beatrice will be here directly, and in the meantime you must meet several of our best people—"

The young man, conscious of being somewhat outpaced in the general scurry of amenities, turned toward a near-by window. He caught the familiar throb of Sam Willard's Tiger Cub motor, and obtained a glimpse of Sam Willard and Beatrice Farnham descending from the car and chatting gaily as they came up the veranda steps together.

He met the pair as they entered the room. "We were almost late," said Beatrice.

"Where is everybody? Introduce me to your mother at once, please."

Pridefully and with unruffled assurance, he led her toward the animated group.

"Mother, dear," he called, "this is Beatrice—"

The two women met in an embrace and exchanged osculatory pledges of esteem. Thereupon ensued the usual burst of concerted, conversational drum-fire.

The young men presently strolled toward the smoking room.

"As a smooth, suave, successful instance of a star liar," said Sam, when they were established on a settee, "my friend, you are it. I can't quite fathom how you put it over. Is it sheer nerve or just luck?"

"It is art, my son," laughed the other. "By the way did you see the charming Miss Hillis? Rattling pretty girl. Permit me to congratulate you—"

Mrs. Willard found them yawning in each other's faces a little while afterward.

"You boys may be excused until 3 o'clock," she told them. "Please leave my coupe where it is, if you'll be so kind. I

"Mother, dear," he called, "this is Beatrice—"

may have occasion to use it, and the roadster should serve your erratic needs."

In cinematographic science it is the practice frequently to sacrifice continuity for the sake of swiftness. Scenes are deleted in order to accelerate the action. It is good art in literary practice, too.

Some hours afterward two dejected young men sat isolated and out of humor in their stranded car, a goodly number of miles from nowhere in particular. Their untoward predicament was due to an empty fuel tank.

"Confound it! I'm supposed to be on hand at 3 to take charge of my ostensible relative," complained Barney. "Don't you understand? The lady expects to catch her boat at 4. What will she think of me? My reputation for truth and veracity will suffer if I don't keep out of this blooming car of yours."

"Oh, no, you're safe enough," retorted his friend. "True art is only goaded to higher flights by a few reverses."

Having walked miles in search of gasoline and yet more miles returning to the car when they'd found a supply, it was long after darkness had descended on Sandhurst-on-the-Sound when the stragglers reached home.

The plot thickens here for a moment's space and then feathers away to a mere shadow of a fleecy cloud flitting across the lea. A small packet and a letter had arrived by messenger for Mr. Bernard Dupuy in his absence. He opened both in the secrecy of his room. The packet contained a ring such as is worn on the third finger of a young woman's left hand. The letter was written in the familiar hand of Beatrice Farnham.

"I would hesitate to marry a man who appears to be a stranger to the most ordinary usages of truth and veracity," she wrote. "Whenever there is a choice between fact and fiction, you never are at a loss to make your selection. Prevarication with some people is a matter of expediency, but in your case it looks like a settled habit. Carol Hillis told me herself you picked her up that night in Sam's car. And as for your mother — have you forgotten that your mother is in Colorado? The papers chronicled her going. The gracious lady you so freely introduced to me as your dear mother was — quite another person, I fancy. I have been enlightened by knowing you, but the

time has come to say farewell. A long farewell. 'Fare thee well, and if forever, still forever fare thee well'—"

## V

Shall we conclude with a bit of gossip as a sort of fillip?

Mrs. Willard, in confidence to a friend, over afternoon teacups:

"Sam's young friend, Barney Dupuy, my dear—why, he has returned to the city, you know. He spent nearly seven weeks with us. Such an irresponsible boy. Clever after a fashion, but utterly untrustworthy in his statements. He seemed to plunge himself deeper in deceit and subterfuge every day. He was desperately in love with Bee Farnham for more than a month. Did you hear what he did when Bee took him to task for going motoring with Carol Hillis? My dear, it was simply too absurd.

"He solemnly assured Bee that he had been driving with his own mother. So she laid a plan to catch him by inviting his mother to a luncheon. And what did he do but scour the country for someone to serve in the emergency. He actually found someone, too, and brought her boldly to be introduced. It was too droll!

"For, of all the people in world, whom do you suppose he found and brought to the luncheon? Actually introduced to Beatrice as his mother, too! No other than Mrs. James L. Farnham, who, it happened, he had never met before. Bee's own mother! It was irresistible. When he found out what he'd done, what do you suppose he said? He said: 'Well, she came very nearly being my mother, didn't she? It's not my fault that she isn't—'"

## A BEAUTY HINT

The efficient stenographer always answers her bell promptly. Haven't you been called while you were in the very act of putting a hectograph ribbon on the machine, and had to appear in the presence of the boss with your fingers stained a royal purple and with perhaps a violet smudge across one cheek? Avoid this embarrassing situation by keeping in your desk a pair of old silk gloves; slip them on when handling the hectograph ribbon, or even cleaning the machine, and keep your hands free from stains.—TILLIE THE TYPIST, *Chicago, Ill.*

## NEWS of the DIVISIONS

### AROUND CHICAGO

#### Suburban Passenger Service

Mrs. Laura Goodman, who fell on the platform at the South Shore station November 13, fracturing her right hip and injuring both feet, and was taken to the Illinois Central Hospital for treatment, is getting along nicely at present. Her only sister died December 27 in a hospital at Los Angeles, Cal., after an operation.

Miss Mary Corcoran, agent at 31st street, is in the Illinois Central Hospital with a nervous breakdown.

#### Vice-President, Accounting.

Mrs. E. Clettenberg (formerly Miss Gertrude Hoffman), once comptometer operator in Mr. Blauvelt's office, entertained several former co-workers at her home on the North Side, Chicago, January 4. The dinner, prepared by the hostess, "all by herself," was appreciated. The men washed the dishes. Games were played. Those present were Misses Heuer and Marshall, Mr. Menzel and Mr. Hoffman. The newlyweds extended their remembrances to all their friends of the office.

### ILLINOIS DIVISION Superintendent's Office

The wedding of Miss Gladys Thornton to George Selmer, which had been kept a secret by them, was announced Saturday, January 7. The ceremony took place on the afternoon of October 29, 1921, in Covington, Ind. They left on a wedding trip to Chicago, returning to Champaign, where they went to live at 310 South Randolph street. The bride is the daughter of Mrs. George Wascafer of Covington, Ind., and is a registered nurse, having been graduated from the Burnham Hospital in 1920. She has been practicing in Champaign since her graduation. Mr. Selmer is a telegraph operator in the yard office at Champaign.

Miss Iva Phipps of Champaign has accepted a position as stenographer in the superintendent's office.

G. J. Martin, train baggageman on No. 326, died December 22, 1921, while performing his duties. Mr. Martin was employed June 1, 1894, as brakeman and was promoted April 18, 1895, to train baggageman. He was injured May 23, 1905, right hand being mashed, which necessitated amputation. Mr. Martin's brother, C. H. Martin, wishes to express his sincere thanks to all employees who sent flowers and their sympathy at the time of the death and burial of his brother.

While on No. 502 out of Clinton, December 15, a passenger, J. L. Hartwell of Dixon, Ill., lost his pocket-book. The pocket-book was found by Conductor William Scott about the middle of coach 2173, was turned into the ticket agent at

Clinton, Ill., and was sent to Mr. Hartwell. Below is a copy of a letter received from Mr. Hartwell, under date of December 23, 1921: "I am much pleased to acknowledge the kind service of the conductor of the train from Clinton north, on which I was a passenger December 15. My purse was left on the Chicago train a few miles west of Clinton. I mentioned the fact to the conductor going north. He informed me in less than two hours that it was found, and it was handed me by our local agent, Charles Albright, the next day; the purse contained \$44.68. I was a passenger on this line forty-six years ago, and the contrast between the train courtesy and service at that time and at present is remarkable."

Illinois Division employees are sorry to hear of the death of Mrs. W. E. Ellwood, wife of Traveling Engineer W. E. Elwood. Mrs. Elwood died Friday, January 13, 1922, after a brief illness, leaving surviving her husband and one son, Earl.

### Kankakee, Ill.

General Manager A. E. Clift, General Superintendent G. E. Patterson, Superintendent J. W. Hevron, General Freight Agent W. Haywood and Assistant Engineer A. L. Davis made Kankakee a visit January 14. While here they made a trip by auto to the Lehigh Stone Company's quarries and also inspected the Lehigh & Southern Railroad from Lehigh to Irwin. This line is now completed and connected up with the Bloomington district at Irwin, but is not yet in operation.

Patrick Toohey, about 65 years old, died suddenly on January 3. He was employed as crossing flagman at Station street crossing for more than ten years, having been placed in that position after serving about twenty years as section laborer at various points on the Illinois Central. On the night of January 2 he came to work as usual in apparently good health, and was found in his shanty about 5 o'clock in the morning, unconscious, by Yard Foreman John Hartman. He was taken to his home, where he died that afternoon. During Mr. Toohey's service as crossing flagman he never had an accident, was always on the job, and was well liked by everybody.

George P. Evans, accountant in the agent's office, received a telegram that his brother, Harry, died in Enid, Okla., January 16. The body was brought to Kankakee for interment.

The following letter was written to Pat Hearty, crossing flagman, by Superintendent J. W. Hevron:

"I understand that on the morning of December 28, while a team was being driven across our tracks at Jeffrey street crossing, one of the horses caught his foot in the flangeway between the rail and the crossing plant. You promptly flagged No. 8 until the horse's foot could be re-

leased and prevented an accident on the crossing. I want to compliment you for your prompt action in this matter."

The January signal employes' educational meeting was held at Champaign Sunday, the 15th, with an attendance of forty-five. Oil-burning lamps were discussed. The February meeting will be directed by the committee on grounds.

**ST. LOUIS DIVISION**

The new mine tracks serving the Lake Creek and Royalton mines were recently put into service. The first trip was made to Royalton December 2, arriving there at 6:30 a. m. with Engine 814, Engineer L. M. Quigley and Conductor F. H. Nash. An agency will be established at Royalton in the near future.

V. E. Huff has been appointed agent for Grantsburg, Ill.; K. A. Horn, for Wolf Lake; F. C. Terry, for Winkle.

Up to January 20, there have been six oil trains run from Centralia to Baton Rouge, this oil coming to the Illinois Central at Centralia from Casper, Wyo. We handle it south in trains averaging sixty cars to the train.

Miss Ruby Robinson, daughter of Train Dispatcher George Robinson, Carbondale, was recently married to Melvin Bastian. They reside in Chicago.

Midway Mine, a privately owned mine at Ward, Ill., on the Illinois Central, St. Louis division, caught fire the night of January 18. Pumper O.

Tucker, who was the only person in the mine at the time, lost his life by suffocation. He was a brother-in-law of B. A. Winchester, who is employed by the Illinois Central in the freight house, Carbondale.

The Daily Independent of Murphysboro, Ill., had a scare-head story in December on the hold-up of Agent-Operator W. L. Morris of Texas Junction by a burly negro, in which Mr. Morris lost \$11, his lodge pins and his passes. A widespread search was at once started for the negro. Mr. Morris has been with the Illinois Central about ten years. He started on the Tennessee division, but has worked about eight years in the St. Louis division, including seven years at Texas Junction.

**MINNESOTA DIVISION**

C. T. Coffey, second trick operator, K. B. office, Dubuque, who has been confined to Olmstead Hospital at Rochester, Minn., for the past two months, has returned home and is convalescent.

J. H. Wells, third trick operator at East Cabin, has taken a three months' leave of absence on account of failing health. Mr. Wells is being relieved by Operator S. T. Mayne.

J. W. Benda, agent at Council Hill, has again

resumed work after having been confined to Finley Hospital, Dubuque, with typhoid fever.

Engineer N. W. Frisbie has again resumed his duties on 16-15.

Roadmaster H. Rhoads is spending his vacation in Miami, Fla.

H. E. Shelton, D. V. rodman, has again returned to work. He had his tonsils removed.

W. A. Titus, engineer, broke his leg while attending a dance recently.

Miss Margaret Walsh was recently appointed assistant to the agent at Waterloo.

T. J. Roemer, former claim clerk, Waterloo, is now a student at the Iowa State Teachers' College, Cedar Falls.

Brakeman J. A. McDonnell, who was injured at Osage recently, is around again.

Conductor William Beatty has been granted a six months' leave of absence and has taken Mrs. Beatty to Hot Springs, Ark., in search of health.

Wednesday evening, December 28, the members of the B. of R. T. at Dubuque entertained at a dance at the Eagles' Hall. Through the courtesy of the management and the active interest taken by the members and officers of M. Gilles Lodge of Waterloo, a B. of R. T. special train was run from Waterloo to Dubuque in order to accommodate the members and their wives living at Waterloo. The train was manned by Engineer P. H. Townsend, Fireman G. H. Zunker, Conductor A. R. Scheel and Brakeman R. Bradford, who volunteered their service.

T. J. Winniger, machine shop foreman, Waterloo, is the proud father of a baby boy, born December 21.

Mr. Klempay has been acting general foreman at Dubuque, relieving Mr. Christofferson, who was away on his vacation.

Members of the freight house office force at Dubuque received Christmas greetings from a former accountant, T. J. Ahern, who is now a public accountant in Wichita Falls, Texas.

Miss Ethel Lassance has been promoted to the position of assistant to the agent at Dubuque in charge of solicitation of freight.

M. S. Bachmann, chief clerk of the revising bureau, returned to his duties after a month's leave of absence spent with his mother in California.

Fred D. Smith, formerly instrument man on the Minnesota division, was in Dubuque recently, visiting old friends. Mr. Smith left the Illinois Central in April, 1920, to take charge of location and construction of a railroad out of Tampico, Mexico, for the International Petroleum Company. He is now in New York, studying refining methods, preparatory to returning to Tampico for this work.

H. W. Probus has been appointed section foreman at Apple River, Ill.

B. W. Harris has again returned to Eleroy as section foreman to take the place of Foreman C. W. Dorsey, who has returned to the South.

Extra gangs have been taken off for this season, and the extra gang foremen, W. L. Alfred and L. E. Case, have returned to the South.

Yardmaster H. A. Clancy of Dubuque has been named commander of the Dubuque post of the American Legion, No. 6, for 1922.

Ed Sheehan, former dispatcher, was in Dubuque calling on old friends recently. Mr. Sheehan is now dispatching trains for the C., R. F. & P. at Denver, Colo.

T. Harrington, detective, Chicago, passed away at his home on December 25. Mr. Harrington was a brother of J. Harrington, conductor between Chicago and Dubuque.

C. A. Crowley has again resumed work, after

W. L. Morris

# Hamilton Watch

"The Railroad Timekeeper of America"

*Is there a better judge of a Watch than a Railroad Man?*

LONG years of experience on a job where accurate time is vital, makes the Railroad man an authority on watches.

And when he has timed trains accurately with his Hamilton through years of service, its dependability is conclusively proved

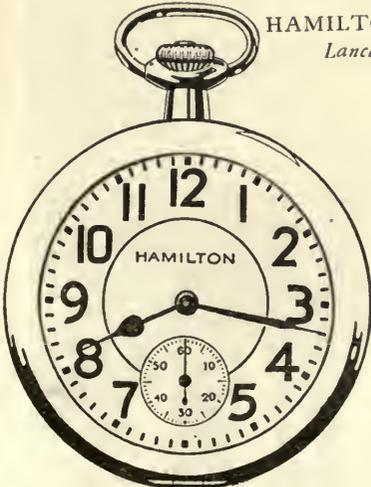

Charles Hamilton, the efficient engineer shown here, runs the Bangor Flyer—one of the longest hauls on the B. & M. He has been with the Boston & Maine 49 years. He runs the Bangor Flyer by a Hamilton Watch.

The Hamilton is built to stand the hard jolts of a Railroad job. When you buy a Hamilton you buy satisfaction. The Railroad man who bought a Hamilton so long ago that he isn't sure whether it was fifteen or twenty years ago, is satisfied. The man who bought a Hamilton recently—a few months or a few years ago, is satisfied; and when you decide to buy a Hamilton, you can bank on the same satisfaction.

Your jeweler sells Hamiltons, and will be glad to show you a No. 992—the 16-size Railroad Timekeeper of America—or any other grade made. And he'll look after it for you, and be a service station for its continuous, accurate performance.

*Hamilton Watches range in price from \$40 to \$200; movements alone \$22 (in Canada \$25) and up. Send for "The Timekeeper", an interesting booklet about the manufacture and care of fine watches. The different Hamiltons are illustrated and prices given.*

HAMILTON WATCH COMPANY  
Lancaster, Penna., U. S. A.

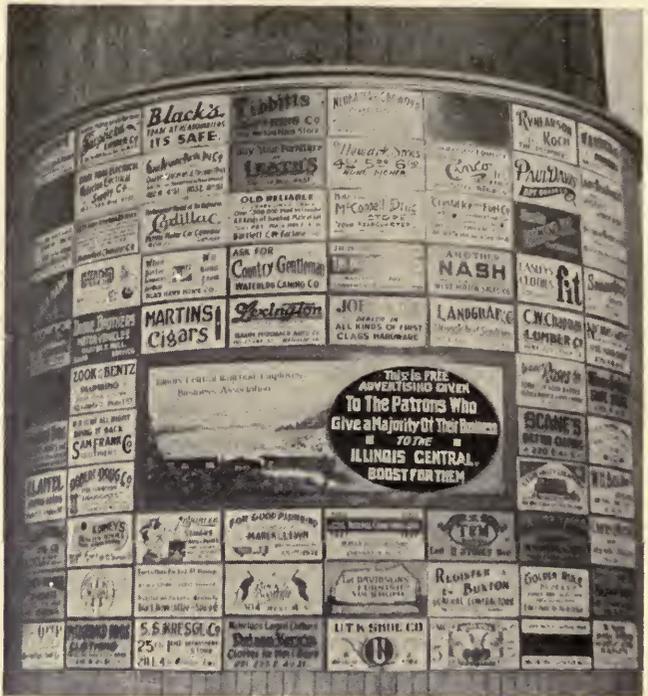

an absence of a week on account of the serious illness of his wife. Mrs. Crowley is now on the road to recovery.

Conductor J. F. James has again resumed work after an absence of about two months caused by an accident at Warren, Ill.

Conductor H. G. Searles was seriously injured at his home December 15. Mr. Searles was in the act of cranking his car when in some way he slipped and broke his right leg. He has been removed to the Illinois Central Hospital at Chicago.

Tuesday, December 9, the members of the division office forces complimented Miss Margaret Walsh, who was recently appointed assistant to the agent at Waterloo, by a dinner dance at the Cafe Moderne. Dinner was served at 7 p. m. L. E. McCabe, superintendent, was toastmaster, and short speeches were given during the evening by Messrs. Heller, Bowden, Guensler, Strouse and Donahue and Misses Walsh, Phillips and McDonald. A quartet consisting of Messrs. Guensler, Russell, Strouse and Heller sang "Margie." Miss Walsh was presented with a corsage of Ophelia roses as a token of appreciation for her services.

Operator N. E. Malmgren of

Base of smoke-stack at Waterloo, Iowa, shops, showing idea worked out by Employees' Business Association.

# Stifel's Indigo Cloth

Standard for over 75 years

## "Safety-Valve Steve" Says:

"I've been railroading for forty years—or thereabouts—and want to tell you fellows right now that the right Work Clothes are made out of Stifel's Indigo Cloth.

All the big Overall and Jumper makers are wise to it—and make their clothes out of it.—If you want a real "go-ahead signal" when buying Work Clothes—just turn up the cuff of the pants.

There it is—big as a semaphore—but shaped like a boot—see:

Look for that trade mark—it'll pay you—well, good luck."

Garments sold by dealers everywhere — We are makers of the cloth only.

J. L. STIFEL & SONS  
Indigo Dyers and Printers

New York

Wheeling, W. Va.

Baltimore

Manchester, Iowa, recently made friends for the Illinois Central by handling a Western Union telegram after the Western Union office was closed. The person receiving the telegram was much pleased with the service, and Mr. Malmgren received letters of appreciation from Acting Chief Operator Brown of the Western Union at Cedar Rapids, as well as from Chief Dispatcher E. C. Russell of the Minnesota division at Dubuque.

**KENTUCKY DIVISION**

The little beauty spot in front of the local Illinois Central station, which has been the recipient of so many compliments during the past summer, has been named Crenshaw Park by the Illinois Central roadmaster. The plot was named for its venerable colored guardian, Cal Crenshaw, who spends his time keeping things looking right around the station. Many flowers have recently been planted in Crenshaw Park, and will bloom out next spring in a burst of beauty.—Dawson Springs (Ky.) Progress.

**TENNESSEE DIVISION**

For quick action, note the movement of I. C. 54095, January 16, 1922: This car was set out of Train No. 191 on January 16 at Newbern, Tenn., at 11:30 a. m., loaded with merchandise. Train 192, the same date, picked up this car loaded with eggs for Cairo, Ill., at 1:30 p. m. Exactly two hours were consumed in unloading and loading.

Supervisor's Clerk M. L. Ragsdale of Dyersburg, Tenn., has returned from the hospital at Chicago, having undergone a slight operation.

Bondurant, Ky., is much elated over the fact that the oil prospects are favorable around that fair little city.

Section Foreman C. L. Crocker of Dyersburg is reported ill with an attack of appendicitis.

Mr. and Mrs. A. N. Robinson visited in Fulton and Jackson during the holidays. Mr. Robinson was formerly supervising agent on this division.

Floyd Irby is reported ill with the "flu," but is said to be getting along nicely.

J. Faulkner Williams is now working as yard clerk at Dyersburg, Tenn., third trick.

E. E. Mount has returned to work after an extended leave of absence on account of illness.

Gideon J. Willingham and Miss Monette Thetford of Fulton, Ky., were married December 18 at the bride's home. The couple left immediately after the ceremony for Chicago and other points.

The alertness of Conductor D. Cunningham in "tipping off" our freight traffic solicitors has resulted in our obtaining two cars of meat each week, East St. Louis to Memphis, that had been moving over a competing line.

Superintendent C. R. Young recently wrote the following letter to W. T. Clark and Elvis Clark of Water Valley, Ky.: "My attention has been called to your flagging our passenger train No. 102, a very high-class mail train, December 22, one-half mile north of Water Valley, notifying the engineer that there was a broken rail on the outside of a curve a little farther north. No doubt your action in this matter prevented a derailment of a passenger train and probable injury or loss of life to passengers, and I wish to convey to you the thanks of the management, as well as of the division officers, for the interest displayed by you."

**MISSISSIPPI DIVISION**

More than one hundred Masons were present at the Masonic Temple in Water Valley, Miss.,

**WATERLOO, IOWA**

Saturday evening, December 17, when A. D. Caulfield, superintendent of the Illinois Central, with headquarters at Water Valley, was raised to the degree of a Master Mason. Brethren from Canton, Goodman, Durant, Winona, Grenada and other points were guests of Valley City Lodge No. 402. T. Q. Ellis, chief train dispatcher of the Illinois Central, with offices at Water Valley, who is worshipful master at Valley City Lodge, conferred the degree. A large majority of those present were employes of the system.

Mildred and Sue, daughters of Mr. and Mrs. W. H. Petty, of Durant, Miss., are rejoiced over the arrival of a baby sister, Mary Esther, who was a November baby. Mr. Petty is train-master on the Aberdeen and Grenada districts.

A. M. Fisher, section foreman, died suddenly at his home at Batesville, Miss, on Tuesday morning, December 27. Mr. Fisher had just arisen to make a fire in the grate when he complained of feeling ill. His wife suggested that she call a physician; to this he objected, saying that he would be all right in a little while, but he breathed his last in a few minutes. Mr. Fisher has been section foreman on the Mississippi division eighteen years. He was an efficient and valuable employe.

A. E. Hood, for eleven years employed as flagman and conductor on the Grenada district, died at his residence in Memphis on Tuesday morning, December 27, after an illness of some time with pneumonia. Mr. Hood was a loyal and faithful employe. His body was brought to Grenada, his former home, for interment. He leaves a wife and other relatives to mourn his loss.

We regret to report that Clerk J. J. Ford has been in the hospital at New Orleans on account of rheumatism, and will have to make weekly trips there for treatment for some time.

#### LOUISIANA DIVISION

We had as our visitor January 14 and 15 J. L. Small, former claim agent, Louisiana division, who is now stationed at Princeton, Ky. Mr. Small was accompanied by his wife and daughter.

Excitement prevailed in the store department at noontime recently when a message came to Division Storekeeper Sauls that his house was on fire; however, the firemen succeeded in extinguishing the flames with a minimum loss to the building.

W. H. Washington, pensioned engineer, now residing at Duluth, Minn., came to see us the other day. He said he was glad to leave the snows and come to the Sunny South again.

Another visitor was E. F. Lambrecht, 300,000-mile walker from Fort Worth, Texas. He is walking in the interest of the Interstate Medical Association, starting from London, England, and is en route to Alaska via San Francisco.

I. F. Tullis, accountant, and Mrs. Tullis chaperoned a camping party to Quinn's Bridge, seven miles out from McComb, January 14. Those enjoying the supper by camp fire were J. E. Cope, Jr., chief clerk to roadmaster; Mrs. Maud Lee, stenographer, accounting department; Misses Una Holmes and Altha Day, tonnage clerks, and Roberta Darville, stenographer, road department; J. E. Smith, stock-keeper, store department; E. H. Lewis, assistant engineer; G. T. Edwards, rodman; J. A. Anderson and H. E. Prescott, accountants; C. J. Weppler, masonry inspector; Gale Taylor, engineer; H. A. Schmitt, clerk, general superintendent's office, New Orleans, and several girls not connected with the company.

Miss Louise Bridges entertained members of

the superintendent's force at five hundred Friday evening, January 13.

#### Jackson, Miss.

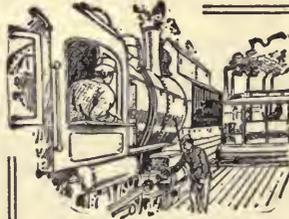

The Kiwanis dining room at the Edwards House was the scene of a large and jolly dinner party Saturday evening, December 31, as the Old Year was passing out. Mr. and Mrs. J. L. Morgan were host and hostess to the Illinois Central local agency forces, with Dr. and Mrs. W. W. Smithson and Mr. and Mrs. R. W. Hardin as special guests. Speeches touching on the happy personal and official relations existing among all present, the gift of a magnificent bouquet of Jacqueminot roses to Mrs. Morgan, and a visit to the Majestic Theater served to fill an evening which will long be remembered by those present because of its enjoyable nature.

The marriage is announced of Miss Annie McNair, formerly of this office, to Corneilus Swope. They have been at home in Chicago, Ill., since January 15.

The new freight solicitation committee for 1922 which has been selected consists of J. B. Terry, Homer Hill, Mrs. Lillie McDaniel, W. G. Shotwell, James Elliott, J. G. More, T. N. Swoford, Lawrence Pridden and C. H. Williams, with George H. Terry as secretary. The new committee has taken hold of the work with vim, and the reports to date show that the 1921 records will certainly be equaled and probably be surpassed. Passenger solicitation will be made one of the strong features this year.

#### Gwin, Miss.

Yard Foreman E. V. Sheppard left January 10 for the Chicago hospital. Mrs. Mamie Chiles,

*"More miles to the pint;  
Better service to the mile!"*

*"When Galena Oils go in  
Lubrication troubles go out."*

## The Test of Railway Lubricants

There is nothing to compare with the test of actual service in determining the quality and durability of railroad lubricants.

The very nature of the work—its widely varying degrees of weight, speed and temperature—demands strength and stamina far beyond the capacity of the average "good lubricants."

Oils that may satisfactorily fill the requirements of ordinary machine lubrication will invariably break down under the strains of railroad work, unless endowed with essentials of strength and endurance peculiar to basic quality.

Galena lubricants, above all, are quality products. The stocks from which they are manufactured are built to Galena specifications from the finest crudes that nature produces. The exclusively Galena Compounding processes—developed by this company through its more than half century of specialization—adds the further physical properties necessary to the high type of lubricating efficiency always identified with the use of Galena Oils.

The superior quality of Galena lubricants and the exceptionally valuable lubrication service that accompanies them, make possible the unequalled performance records on hundreds of American railroads—records that prove by both mileage and fuel saving their ultimate economy.

**Galena-Signal Oil Company**

record clerk at Gwin, went there December 4. Every one will be glad to know they are getting along well and expect to return home soon.

Night Chief Clerk H. W. Anderson is the proud father of a 12-pound junior.

Gwin is growing all the time. Since the last writing C. H. Johnson has erected a home about two blocks from the yard office. At present a new store and another new residence are being erected.

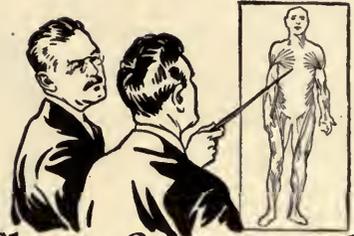

**NEW ORLEANS TERMINAL**

The following letter was addressed to Engineer E. J. Powers and Fireman J. V. Maloney by Trainmaster C. T. Beven December 23: "I wish to commend you for your consideration and co-operative spirit displayed on the afternoon of December 14, at which time you voluntarily commenced work thirty minutes before regularly assigned time and proceeded to the Standard Oil Company's plant, Jackson avenue and South Claiborne street, which was on fire, and pulled several tanks of oil from that switch, thereby saving cars as well as contents. I extend to you my appreciation for this voluntary service, as it displayed beyond doubt your loyalty as true and worthy employes, and a notation covering it has been inserted in your efficiency record."

**A PROMISING BABY**

Here we have a picture of Stanley M. Lazarus, grandson of A. E. Scaife, agent at Stuyvesant Docks, New Orleans, and nephew of the late Charner T. Scaife, formerly general claim agent. Stanley is a big, blond fellow, and he started walking and talking at the age of 1 year.

W. K. McKay have received letters from Conductor V. R. Byrd, who is receiving treatment in the Illinois Central Hospital at Chicago. The many friends of Mr. Byrd hope that he will soon recover.

Section Foreman J. W. Pittman at Rising Sun, Miss., found a piece of broken flange sixteen inches long on January 11. He telephoned Dispatcher A. T. King to stop Extra 973, which had just passed, explaining that the flange indicated a fresh break. Dispatcher King stopped Extra 973 at Cruger, and it was found the flange was broken from I. C. 128573, company coal, lead wheel, forward truck, seventeenth car from engine. Car was set out at 9:40 a. m. Yardmaster Wicker at Gwin and Car Foreman Buoyou were notified to send a pair of new wheels to Cruger, with men to make repairs. Wheels were loaded and forwarded on the local within one hour, without delay to the local. Wheels were placed on this car, and it moved into Gwin within four hours after it was set out, and was forwarded from Gwin in the same train it would have gone forward in had it not been set out.

Conductor L. C. Gaerig observed a car of lumber in train No. 72, January 7, with lumber hanging over the side. He flagged No. 72 and passenger train No. 33 to prevent a possible side-swipe of No. 33's coaches. Conductor Gaerig, with the aid of two section men, adjusted the loading on this car.

**VICKSBURG DIVISION**

Regardless of the fact that 1921 was a year of comparative inactivity with lumber manufacturers, the Vicksburg division billed and handled, approximately 4,700 cars of lumber, including bolts and shingles, during this period. Seven large hardwood lumber mills are operated on the Vicksburg division, each averaging a 10,000,000-foot cutting capacity a year.

Effective January 14, one local freight train operates tri-weekly between Greenville and Coahoma. With the other service displaced by this arrangement, this train is making the run and doing all necessary work each day with practically no overtime.

The Alhambra Oil & Gas Company of Greenville recently drilled into a strong gas pocket in their well No. 2 near Glen Allen. The manager reports a favorable indication of strong gas pressure, and very likely oil at a greater depth. The well at present is only 1,974 feet deep. Several shares of stock in this company are owned by local employes.

**NEW ORLEANS DIVISION**

W. B. McConnico, traveling freight agent, Baton Rouge, La., was recently transferred to the general freight office, New Orleans. He has been at Baton Rouge for twelve years. His successor is O. F. Redd of Jackson, Tenn.

C. N. Campbell has been appointed assistant chief dispatcher, with headquarters at Baton Rouge, La.

A successful sugar cane season has just come

to an end. An uninterrupted and eminently satisfactory movement of this product was sustained throughout the period, reflecting great credit on both shippers and carriers. A highly commendable spirit of co-operation was manifested.

A boy was born to Mr. and Mrs. Thomas Bloodworth. Mr. Bloodworth is rate clerk at Natchez, Miss.

Homer Green of the Natchez freight office is slowly recovering from a serious illness.

Walter Alexander of the freight office forces, Natchez, Miss., has been appointed scoutmaster of the Natchez branch of the Boy Scouts.

Accountant E. D. Goza of the Natchez freight office holds the record for duck hunting this season—twenty-six mallards in half a day.

Plans are under way at Natchez for the erection of a beautiful and substantial memorial hall to perpetuate the memory of the men of Mississippi who served in the world war, and Major R. L. Montgomery, our agent, has been elected as a member of the memorial hall commission for a term of five years.

Miss Edna Mahin, after a long illness, has now fully recovered and has returned to her desk in the superintendent's office at Vicksburg.

Cecil Kiernan of the superintendent's office, Vicksburg, has been transferred to the office of the general manager.

*William Haywood*

Mr. Haywood, general freight agent at Chicago, was born May 30, 1884. He entered the service of the Illinois Central in October, 1901, as a messenger to the traffic manager. Later years found him as secretary to various traffic officials, including the traffic vice-president. From September 21, 1909, to July 1, 1912, he was secretary to the president. From the latter date to April 1, 1917, he was chief clerk to the traffic vice-president. He was then appointed assistant general freight agent of the Northern and Western lines, and remained in that position until March 1, 1920, when he was made assistant to the traffic manager. December 1, 1921, Mr. Haywood was appointed general freight agent in charge of solicitation and matters related thereto.

# ILLINOIS CENTRAL MAGAZINE

MARCH

NINETEEN TWENTY-TWO

Published monthly by the Illinois Central System in the interest of the system, its officers and employes, and the territory served by its lines.

Address all communications to: The Editor, Illinois Central Magazine, Room 318, Central Station, Chicago. Manuscripts, photographs, etc., will not be returned, except upon request. All contributions should be typewritten—double-spaced—and signed.

Advertising rates upon application.

GEORGE M. CROWSON, *Editor.*

CHARLES E. KANE, *Assistant Editor.*

## Our 70 Years on the Chicago Lake Front

### Terminal Improvement Plans Contemplate Changes More Wonderful Than Those Made in the Past

The following article concerning the extensive project under way for the improvement of the Illinois Central's terminal facilities at Chicago is contributed by the Chicago Terminal Improvement Department:

THE development of the Chicago Terminal has been continuous and rapid since the entrance of the Illinois Central Railroad into the city in 1852. The present contemplated improvement, upon the initial stages of which the company is now entering, is the natural result of seventy years of growth. A knowledge of what has taken place is neces-

sary to the full appreciation of the magnitude and significance of the present project.

The Illinois Central was the first important railroad in Illinois, and for twenty years its construction had been the ambition of the state and its citizens. The first land grant ever given by the Congress to assist in the construction of a railroad was given to the State of Illinois to promote building the Illinois Central Railroad. It has been stated by historians that the construction of the Illinois Central might be regarded as the most important industrial undertaking ever commenced in Illinois. The promised extension of the railroad into Chi-

Michigan Avenue north from Park Row in 1864, showing the Illinois Central tracks on trestle and the passenger station at Randolph Street in the distance. Picture by courtesy of the Chicago Historical Society.

*The first Illinois Central Railroad passenger station in Chicago in 1868. Picture reproduced from Andreas' "History of Chicago."*

cago was largely responsible for securing the assistance from the federal government.

#### **A "Branch" Line to Chicago**

One of the principal exponents of the Land Grant Act in the Congress was Senator Stephen A. Douglas, who resided in Chicago adjacent to the present right-of-way near 35th Street, and from whom a portion of the right-of-way in the city was later purchased. The bills originally submitted in the Congress had been opposed by the Eastern senators on the ground that the Western states would alone be benefited. The road had been described as extending from Galena to Cairo following the great natural waterway of the Mississippi, the route which Western commerce had taken up to that time. Mr. Douglas was instrumental in having the bill revised to include a "branch" from Centralia to Chicago and, by so doing, won the support of the Eastern interests, as they felt that the proposed branch to Chicago would connect with the Eastern roads then building toward that city and would tend to deflect the commerce of the Mississippi Valley toward the Eastern market. This move on the part of Mr. Douglas was of almost inestimable value to the railway company, as it not only secured the necessary aid from the federal government but also made Chicago, which was destined to become the world's greatest railway center, the principal terminal of the Illinois Central System.

It seems eminently fitting that the monument dedicated to the memory of this statesman should stand as it does on the site of his

former residence near 35th Street, overlooking the tracks of the Illinois Central.

Prior to the granting of the Illinois Central charter, two roads, the Southern Michigan (now the New York Central) and the Michigan Central had been rivals in Michigan and northern Indiana. During 1850 they extended their tracks to within a few miles of Chicago. Each endeavored to secure an independent entrance into the city and to prevent its competitor from obtaining a similar right. The result was a bitter fight in the legislatures of Illinois, Michigan and Indiana, in the common council of Chicago and even between groups of workmen along the tracks. The companies were of equal strength, and neither could secure a charter from the state or a franchise from the city. Despite their efforts, the two railroads in 1851 were halted at the Illinois state line. The charter for the Illinois Central was before the legislature at this time, and the Michigan Central allied itself with the promoters of the road, hoping thereby to secure the coveted entrance into Chicago. The charter was eventually granted.

#### **Coming Into the City**

On July 12, 1851, representatives of the Illinois Central and Michigan Central railroads presented a petition to the common council of Chicago asking permission to lay tracks within the city limits. The strife over the Southern Michigan and Michigan Central entrance into the city had been so bitter that the proposed alliance between the Illinois Central and Michigan Central brought suspicion upon the

former and even opposition on the part of the city government.

The location of the line in Chicago, which at that time was a rapidly growing city of about 30,000, was a matter of considerable importance. President Schuyler of the Illinois Central Railroad Company had suggested a line along the west bank of the Chicago River, running to Kinzie Street to connect with the Galena & Chicago Union (now part of the Chicago & Northwestern System). A location for the Illinois Central terminal on the east side of the river also had been considered.

### The Lake Caused Trouble

In 1850 Michigan Avenue, which separated the city from Lake Michigan, was the aristocratic residence street of Chicago. For many years the lake storms had been making serious inroads on the shore immediately east of the avenue and on the street itself. Considerable expense had been incurred by the city and by the property owners on Michigan Avenue in the construction of a shore protection which had proven entirely inadequate.

In 1849 a special assessment was made for this work and in 1851 more than \$12,000 was spent on it under the direction of the superintendent of public works. In the fall of that year a great storm seriously damaged the work, and the water encroached upon the street proper. The storm did so much damage in the vicinity of Madison and Monroe streets that Mayor Gurnee, who lived on the corner of Michigan Avenue and Monroe Street, had the fire bells rung and the citizens turned out

### A New Deadline!

It is planned, beginning with the April 1 issue, to get the *Illinois Central Magazine* distributed all over the system by the first of each month, instead of merely having it in process of distribution, as at present.

To do this, we must change our deadline for material from the 20th of the preceding month to the 15th.

This means that all material for the April issue should be in the magazine office—not merely in the mail—by March 15. Co-operation of all contributors is sought in this change. Division correspondents, in particular, should arrange to assemble their notes considerably earlier in the month.

It is needless to say that a good story received in the magazine office the first of the month, when work is light, is more likely to make its way into the magazine than a good story received with a great many other good stories at the last minute. Get your contribution in as early as you can, but in any case—

**GET IT IN BY THE 15TH!**

in force to fill up the wash in the street made by the waves.

### Protecting the Lake Front

The encroachment upon Michigan Avenue was a serious matter, and some of the property owners were desirous of having the railroad located in front of the street and protected by a breakwater that would also effectually protect the shore and relieve them of

Viaduct Across 60th Street, Showing Jackson Park in the Background.

a constant source of expense. Certain of the property owners along the avenue, however, objected strenuously to the proposition of running a steam railroad in front of their homes, as they feared that it might impair the value of their investment. The north and west wards of the city argued that the city was poor and the assumption by the railroads of the expense of maintaining the shore protection would more than compensate for any depression in the value of residence property in the neighborhood.

The lake front entrance was at last agreed upon between the citizens and the railway company, and on June 14, 1852, an ordinance was

passed by the common council of the city granting the Illinois Central Railroad Company the right "to lay down, construct and maintain within the limits of the city of Chicago, and along the margin of the lake within and adjacent to the same, a railroad, with one or more tracks, and to operate the same with locomotive engines and cars, under rules and regulations \* \* \* not inconsistent with the public safety." This change in its plan for building on the west bank of the river was objected to by the Illinois Central, but was finally accepted.

It is interesting to note that the passage of the first ordinance, which was the fifth draft

considered by the interested parties, represented six months of effort and, while constituting a very important step in the history of both the railway company and the city of Chicago, covered less than six pages of printed pamphlet.

The desire of the city to have the lake shore protected was reflected in the ordinance by a demand that the railway company construct a suitable breakwater to protect the lake front of the city against the action of the waters of Lake Michigan between the north line of Randolph Street and the southern boundary of the city (then 22nd Street).

**Building Restrictions Imposed**

Another provision of the original ordinance

which afterward developed into tremendous importance was the one providing that the company should erect no building between the north line of Randolph Street and the south line of Lake Park Avenue (now 11th<sup>o</sup> Place), nor place any obstruction to the view of the lake from the shore within this boundary.

The rural character of the Chicago which existed at the time of the entrance of the railway company is reflected by the clause in the ordinance which required the railway company to construct "fences or other sufficient works as will prevent animals from straying upon or obstructing its tracks."

During the negotiations with the common

...rict of Chicago in 1874.

*Randolph Street Suburban Station in 1895.*

council, the railway companies had not been idle but had advanced their tracks to the southern limits of the city, where temporary freight and passenger stations had been established. Much of the ground, especially near Lake Calumet and Woodlawn (63rd Street), was low and marshy, and this made it necessary to place the tracks on trestle at considerable additional expense.

The Michigan Central Railroad made use of the tracks of the Illinois Central Railroad north from Calumet (now Kensington, 115th Street) to the Chicago River, and this piece of roadbed became the final link by which the former company established a through line from Chicago to the East.

The tracks from the city limits south were not completed without several sharp fights with the Southern Michigan. That company opposed the construction of the road and endeavored to prevent the Illinois Central from crossing its tracks. It demanded that the latter company put in an overhead crossing at Grand Crossing (75th Street), which was refused. The difficulty could not be settled for some time. Finally the Illinois Central, becoming impatient, built the crossing under cover of night. At the site of this crossing, sixty years later, developed one of the greatest grade separations of railroads in Chicago, which work cost the interested railroads in excess of \$4,000,000.

#### **The First Chicago Terminal**

With subsequent purchases of land between Park Row (now 11th Place) and the Chicago River, partly from private owners and partly from the federal government, which had subdivided the grounds on which the historic Fort Dearborn had stood, the Illinois Central secured probably the finest terminal property

possessed by any single railroad in the world. Its stations and shops were situated in the heart of the city, and its right-of-way between Grand Crossing and the river was not crossed by a railroad, and, for most of the distance, not even by a highway.

Once the legal difficulties were removed, the work of construction proceeded rapidly. Rails, ties and piles were already on hand and within a few weeks after the passage of the franchise admitting the railroad to the city the track was extended to 12th Street. Temporary freight and passenger stations were built and used until permanent structures were constructed. Much of the right-of-way was under water, and heavy expenditures were necessary to put the tracks in safe condition. The rails were laid on temporary trestles nearly the entire distance from Hyde Park (now 53rd Street) to the Chicago River, and east of the railroad a temporary breakwater of piling was constructed to comply with the provisions of the ordinance. The breakwater and trestle were to be filled in at a later time when the company's finances would justify the expense. The company spent something like \$250,000 in purchasing urban property, in addition to one-half million more expended on lake shore protection. The foresight of the early citizens in requiring the railway company to maintain the shore protection can be more fully appreciated when it is realized that this protection has cost the company more than \$2,500,000.

At the foot of Randolph Street, on the land purchased from the federal government, the company, in 1853, commenced the erection of its first Chicago passenger station, the total cost of which was \$180,000. At that time it was the most expensive railway station in the country. Facilities for handling passengers were

excellent and there was an abundance of room. The station was used jointly by the Illinois Central, Michigan Central, Burlington and Galena & Chicago Union railroads. The top floor of the station was used as a general office.

**Had Largest Freight House, Too**

North of the passenger station the company erected a large freight house, which also was the largest of its kind in the country. It was likewise the largest brick or stone building in the city. At 14th Street, near the present passenger station, were placed temporary shops, roundhouses and cleaning yards.

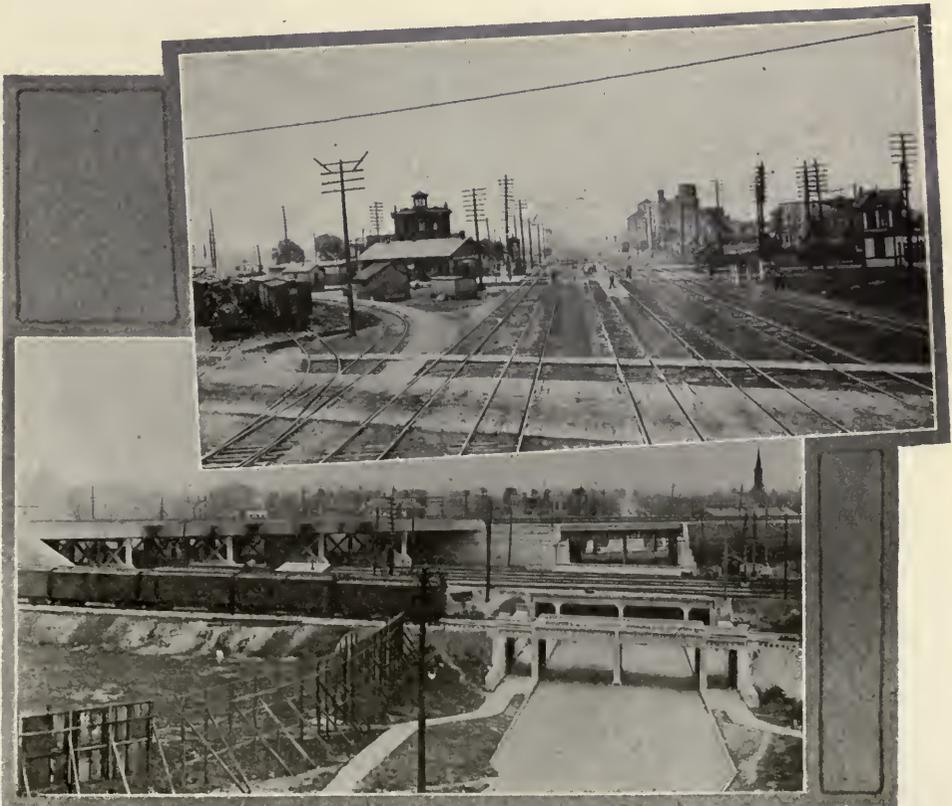

On June 23, 1852, the company secured an amendment to its charter permitting it to build a railroad from 12th Street (now Roosevelt Road) to the south branch of the Chicago River. This railroad was known as the St. Charles Air Line and served as an inner belt road for all railroads entering Chicago at that

time. It was built by the Illinois Central and completed in 1856 at a cost of \$50,000. Subsequently the Illinois Central sold three-fourths of its interest in the St. Charles Air Line to the Michigan Central, Burlington and North-western.

Thus were laid the foundations for a continuous development of the Illinois Central Chicago Terminal.

Gradually the lake shore was filled in between the Illinois Central outer breakwater and Michigan Avenue, and in the space between the railway tracks and the avenue was created Lake Park, which became the initial development of Grant Park, later to play a very important part in the lake front development.

In 1871 occurred the great Chicago fire, which had a tremendous influence on the history of the city. Out of this fire the passenger station previously described emerged with noth-

*Upper, Grand Crossing in 1902, before grades were separated; lower, Grand Crossing after grades were separated.*

ing but bare walls. The station was owned jointly by the Illinois Central and Michigan Central railroads and there was some question as to what policy should be pursued as to its reconstruction. As a result of this indecision, the station was not fully repaired and was used in a more or less make-shift manner until the negotiations between the two roads finally resulted in definite plans approximately twenty years later for the construction of the present station by the Illinois Central and the use of it by the Michigan Central as a tenant.

### Pullman's Idea Born in Our Shops

An extensive fleet of marine equipment, such as floating pile drivers, derrick barges, tender boats, etc., was required for the maintenance of the breakwater along the lake front, the harbor for which was located in a crib-protected basin just off the shore line somewhat south of the present Central Station. This place was known as Weldon Slip, and around it gradually grew what was at that time the railroad's principal mechanical terminal, consisting of roundhouse and shop buildings. These facilities early became overcrowded and were extended to Randolph Street on the north and 27th Street on the south, where, at the latter place, was located a car repair plant. It was in this plant that the vision of George M. Pullman, then working as a car repairman, conceived and brought about the construction of the first sleeping car, now known the world over as the "Pullman Sleeping Car," thus initiating the business of the Pullman Company.

Weldon Shops functioned with considerable prominence until it became necessary that they be removed to make room for the present passenger terminal. In 1892, they were moved to 95th Street and formed the nucleus of the present Burnside Shops.

Next to the Chicago fire perhaps the greatest event in the city's history was the pretentious and eminently successful world's Columbian Exposition held in 1893 in what is now known as Jackson Park. The progressiveness of the Illinois Central was here again exemplified by the manner in which it met the tremendously increased demand for transportation to and from the Exposition grounds.

Previous mention had been made of the decision on the part of the Illinois Central to abandon the passenger terminal at Randolph Street and construct the present Central Station near East Roosevelt Road. The construction of this terminal illustrated the progress-

siveness of the railroad. Representing a cost to the railway company of \$1,940,000, it was started in June, 1892, and opened to the public on April 17, 1893. It was then considered a monument among railway passenger stations. The large waiting-room with its beautifully decorated arch ceiling and stained windows was considered a masterpiece, and the steel train shed was then the largest of its kind in the world. Incidentally, the station building was one of the first steel skeleton fire-proof buildings in Chicago.

### Beginning of Track Elevation

In further preparation for the anticipated tremendously increased traffic to the Exposition, the Illinois Central undertook what was the pioneer track elevation work in Chicago, elevating its tracks between 53rd and 67th streets.

Previous to this period the suburban service of the Illinois Central was of rather modest proportions, keeping pace, however, with the growth of the city.

In 1882 a suburban line was built to the thriving manufacturing town of South Chicago, and ten years later service was established to Blue Island. Early records (1890) indicate the suburban service was entirely local in character and was handled by 21 locomotives and 89 coaches. Two additional tracks were built for the purpose of handling the Exposition crowds between Van Buren Street and "The Midway" (60th Street). These two tracks were used exclusively for express service to the Exposition. Forty-one locomotives and 300 coaches were added to the service, which carried, between May 1 and October 31, 8,780,000 passengers to and from the grounds. For the same period the regular local suburban service handled 578,000 passengers. The fare charged for the service was double that of its competitors, which demonstrated that the public was prepared to pay for adequate service when performed with promptness, safety and comfort.

The success of the suburban service during the fair demonstrated its possibilities and probably lent greatly to the recognition on the part of the city of the possibilities in suburban service. So successful has been the development of this service that today the regular schedule provides for 342 suburban trains in twenty-four hours and handles 23,000,000 passengers a year.

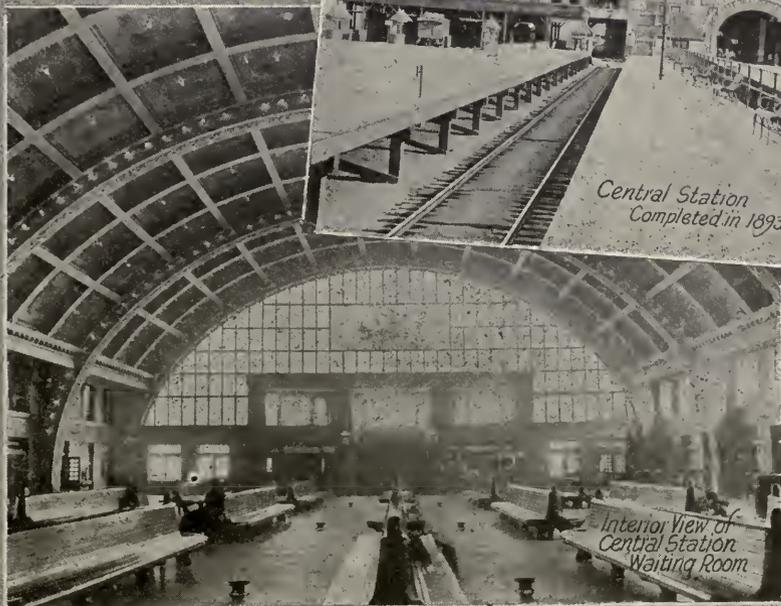

The successful accomplishment of the Ex-

*Central Station  
Completed in 1893*

*Interior View of  
Central Station  
Waiting Room*

position proved conclusively to the people of Chicago what could be accomplished by the "I Will" spirit. The late Daniel H. Burnham was the architect who conceived the plan of the Exposition grounds and buildings. Its success gave Chicago its first touch of civic pride and also unlimited confidence in the ability of Mr. Burnham.

#### City Planning in 1908

Largely out of inspiration which he gained by the successful accomplishment of his plans, and ably supported by the Chicago Commercial Club, he was able in 1908 to lay before the citizens of Chicago for their future guidance his "City Beautiful Plan," an adequate conception of an attractive city as well as a conveniently laid out city. Out of this beginning grew the present Chicago Plan Commission, which today acts under the authority of the city government and is entrusted with the development of an orderly city plan.

The railway company, by filling in submerged lands, had extended its property in places eastward into the lake. There developed a desire on the part of the city to restrict the company to a definite right of way in front of Lake Park (Randolph Street to 11th Place) in order to develop what is now the easterly portion of Grant Park. To accomplish this, it desired the railway company

to depress its tracks in front of Lake Park, construct suitable retaining walls and permit the construction of bridges across the tracks to connect the portions of the park on either side of the right-of-way. This was accomplished by the passage of an ordinance on March 21, 1895, which is one of the important agreements between the railway company and the city of Chicago relative to the Chicago Terminal. The execution of the provisions of this ordinance gave to the city a park area which now covers 155 acres between Randolph Street and Roosevelt Road. Consent has recently been obtained from the Secretary of War to add an additional area of forty-five acres, which will place the shore line of the park approximately 1,700 feet east of the company's right-of-way.

In compliance with the provisions of the 1895 ordinance, the railway company constructed two retaining walls, one on each side of the right-of-way, with the tops of the walls carried to an elevation 22 feet above the lake level, which is approximately 8 feet above the surface of Michigan Avenue. A masonry balustrade was constructed on top of the west wall to protect the right of way.

#### "The Watch Dog" of the Lake Front

Montgomery Ward, who had made a phenomenal success as a pioneer in the mail or-

*Aerial View of Lake Front From Chicago River South, 1921.*

der business, had constructed on Michigan Avenue the tallest building in the West. The top of the bronze figure, which surmounted the tower of the building, stood 390 feet above the surface of Michigan Avenue, and it is only natural that Mr. Ward should have developed great pride in the enviable position which he occupied on the lake front. He, with two other gentlemen, took exception to the masonry balustrade which had been constructed upon the retaining wall and brought suit against the railway company to have it removed. The court ruled that the Illinois Central should not be permitted to build any structures which would obstruct the view above the top of the retaining wall (22 feet above the lake level) and required the replacement of the masonry balustrade by the present iron picket fence. Thus an unobstructed view of the lake and park from Michigan Avenue between Randolph Street and Park Row has become an accomplished fact and must forever remain so.

Because of Montgomery Ward's activities in demanding the unobstructed view of the lake, he has been referred to as the "Watch Dog of the Lake Front."

In 1898 the St. Charles Air Line was elevated from its easterly terminus west to Clark Street, which made possible the separation of a very objectionable grade crossing with other railroads near Clark and 16th streets.

One of the important outgrowths of the World's Columbian Exposition was the Field Museum of Natural History, established as a permanent memorial of the fair. With the subscriptions of numerous public spirited citizens, including \$1,000,000 from Marshall Field, the project was launched, and in 1894 a large number of exhibits from the fair were housed in temporary quarters in the Fine Arts Building of the Exposition in Jackson Park and formulation of plans for a permanent museum was begun. Mr. Field, at the time of his death in 1906, left \$4,000,000 as a building fund and an additional \$4,000,000 as an endowment fund for maintenance, on condition that within a period of six years a site should be furnished free of charge in the down-town portion of the

city. Such a building required great space, and, although considered a very desirable site, its construction in Grant Park between Randolph Street and Roosevelt Road was not a possibility on account of the building restriction.

#### Why Museum Is on the Lake Front

One of the basic principles of the City Beautiful Plan was the creation of an outer lake front park system connecting Lincoln, Grant and Jackson parks. The South Park commissioners held jurisdiction over Grant and Jackson parks and were responsible for the execution of the plan as far as the connection of these two parks was concerned.

The accomplishment of the plan required the transfer of the riparian rights of the railway company to the South Park Commissioners in order that land for park purposes could be obtained by filling in the lake shore east of the railway company's right-of-way. The importance of the proper solution of this problem was great and the matter had been under negotiation for a long period.

In 1912 two important agreements were concluded between the Illinois Central and the South Park commissioners which settled these matters and made possible the construction of the park. A controversy arose with the city of Chicago as to the execution of these agreements.

A plan had been formed to locate the Field Museum on Illinois Central property partly on the site of the old Weldon Yard. The time limit for the fulfillment of Mr. Field's gift had almost expired. It became necessary either to secure a permit from the Illinois Central to locate the museum on property which had not at that time been transferred to the South Park Commissioners, or to reconstruct it

*Field Museum of Natural History, built on land formerly owned by the Illinois Central Railroad.*

*Randolph Street Subway built by railway company in compliance with terms of the Lake Front Ordinance.*

in Jackson Park, far removed from the center of the city. At this point President C. H. Markham, who had conducted the negotiations with the South Park Commissioners for a settlement of the lake front controversy, waived the final adjustment among the railway company, the South Park commissioners and the city of Chicago and voluntarily agreed that the museum should be located on its present site.

In 1913 the Chicago Union Station Company requested the city of Chicago for the right to construct a new terminal in the downtown district immediately west of the south branch of the Chicago River. This request immediately aroused considerable opposition, and the terminal problem of Chicago as a result received very careful study by various committees and numerous public spirited citizens. The Chicago Union Station matter was settled in 1914, but the interest that developed in its consideration resulted that year in the creation of the Railway Terminal Commission, which had for its purpose a careful study of the entire terminal problem of Chicago.

#### **Chicago's Terminal Problem**

This commission immediately began to function in an active manner and had a direct influence on the terminal problem of the Illinois Central and the attitude of the city toward the so-called Lake Front Ordinance. This ordinance, which grew out of the 1912 agreements with the South Park Commissioners, was before the city for consideration at that time. A review of some of the main features of Chicago's terminal problem will, therefore, be of interest.

Chicago, largely because of its topography and geographical location, has become the world's greatest railway center. Naturally, the railroads of the West and Northwest converge to the southern end of Lake Michigan as the most convenient point for the interchange of traffic with the lines of the East. Partly as a result of its excellent transportation facilities, Chicago has enjoyed in its relatively short municipal life one of the greatest growths of any city in the world. Since the Illinois Central began operation within its corporate limits the city has increased thirteen fold in area and one hundred fold in population.

The surrounding territory, because of its extreme flatness, has offered no physical obstacles to the entrance of railroads, and, as a result, they have followed no defined channel, but have striven to reach the heart of the city through the lines of least financial resistance. This multiplicity of railway entrances, which has tended to divide the city into many different districts, obviously has had a great effect on its physical development. This effect naturally increases as the lines converge to the heart of the city, where they confine and endanger its growth and development.

#### **Railroads in Heart of City**

In the central business district of Chicago, which is bounded by the Chicago River, Michigan Avenue, Roosevelt Road and the south branch of the river, is concentrated the greater part of the business activities of the city. It not only is surrounded on all sides by railway property, but is penetrated from the south for about half its length by the approach tracks to the passenger terminals lo-

*Filling behind bulkhead immediately east of Central Station in 1896*

cated east of the south branch of the Chicago River.

The United States Government was naturally interested in protecting the interests of lake navigation, and the approval of the Secretary of War was therefore required before the lake front improvement could be accomplished.

Thus it is seen that the development of the Lake Front Ordinance involved many interests, the most important of which were the railway companies (Illinois Central and Michigan Central), the South Park Commissioners, the Railway Terminal Commission, the Chicago Plan Commission, the city of Chicago and the United States Government.

After many months of negotiation an ordinance was prepared which was acceptable to all parties. This ordinance was passed by the city council on July 21, 1919, and is probably one of the most important documents of its kind ever prepared to cover an improvement of this character. It is interesting to note that it is approximately thirty times the size of the original ordinance by which the railway company received the right to operate within the city limits.

One of the main points of contention settled by the ordinance was the electrification within the city limits of the railway company's motive power. Attention has been called to the extremely heavy suburban service. The locomotives operating north of Roosevelt Road were a continual source of criticism on the part of the city on the claim that the smoke and noise were objectionable in such close proximity to the main business district.

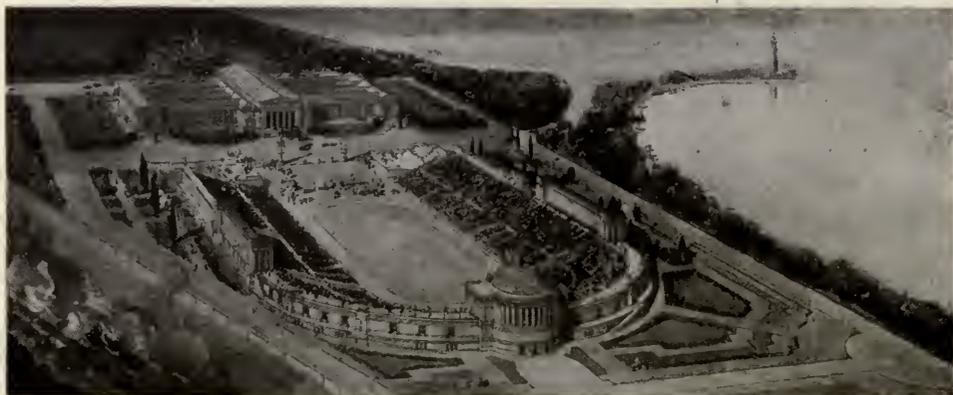

As a result of action taken by the Chicago

Association of Commerce in 1909, a committee of prominent citizens and engineers was appointed to investigate the question of smoke abatement and electrification of railway terminals in Chicago. This committee, commonly referred to as "The Smoke Abatement Committee," after making a very exhaustive study, reported that from a financial standpoint it was not feasible at that time to electrify all the railroads in Chicago. Notwithstanding the report of this committee, the city insisted that the Illinois Central take the first step in an electrification program.

### The Electrification Program

The ordinance provides that the electrification of the railroad be accomplished by progressive steps. The suburban service is to be electrified by 1927 and the freight service north of Roosevelt Road by 1930. This will then eliminate practically all of the locomotive smoke from Grant Park. The suburban service will be operated by multiple unit trains—that is, from either end, regardless of how many cars may be in a train—such as are used by the subways in New York and the elevated railroads in Chicago. By 1935 the remainder of the freight service is to be electrified to the city limits, and in another 5-year period, under certain conditions, the through passenger service in the city is to be electrified.

In connection with the electrification of its freight service north of Roosevelt Road, the railway company proposes to rebuild entirely its freight facilities north of Randolph Street. These will consist of new modern freight houses with warehouses, team tracks, etc. Authority has been issued by all of the controlling

Stadium designed by Holabird & Roche to be built by South Park Commissioners south of Field Museum of Natural History.

*South Park Boulevard Viaduct, designed by the Condron Company, to be built by the South Park Commissioners in compliance with terms of the Lake Front Ordinance.*

government agencies to fill the five slips connecting the railway company's property with the Chicago River and Lake Michigan. These slips at South Water Street will be filled and the land thus made used in the freight development scheme.

The interests of lake commerce have been safeguarded by the creation of Harbor District No. 3 east of the new park area between 16th and 31st streets extended east. In order that this might be accessible, railway connections will be provided between the Harbor District and the Illinois Central tracks. Provision also is made for the use of these connections by foreign railroads. Two viaducts and one subway across the property of the railway company will furnish ample means of approach to the Harbor District for vehicular traffic.

Previous mention has been made of the creation of the Lake Front Park which will connect Grant and Jackson parks and consist of approximately 1,240 acres of reclaimed land. It will provide space for four beaches accommodating 120,000 bathers and an inclosed water course 600 feet wide and five miles long for boat races and other aquatic sports.

Wide boulevards will extend the entire length of the park area and will probably become the principal thoroughfares for rapid vehicular traffic between the north and south sides of the city and to the central business district.

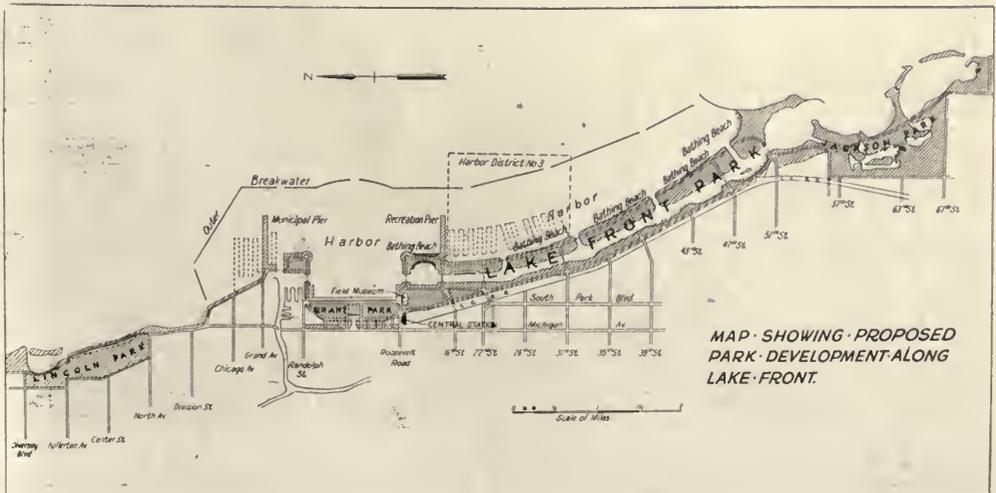

**Finest Parks in the World**

In the space immediately south of the Field Museum a large stadium, with a seating capacity of 100,000, has been planned and will probably be constructed in the near future. These improvements will give to Chicago a park system along the lake front unsurpassed by any city in the world.

To make the park readily accessible to the citizens, provision has been made for the construction of numerous subways and viaducts across the right-of-way of the Illinois Central.

The new passenger station will be located south of Roosevelt Road and east of Indiana Avenue, which is to be widened to 100 feet.

It is essential that a passenger station have adequate means of approach, and in this respect the location chosen for the station is particularly favored. Roosevelt Road, which nearly bisects the population of the city of Chicago, is to be carried over the tracks of

the railway company as a viaduct 118 feet wide. When this is accomplished, it will be the main east and west artery of traffic in Chicago. Michigan Avenue, less than one block west of the proposed station, is the most used automobile drive in the world, and at present is the principal north and south thoroughfare of the city.

Lying to the east of the station will be the outer boulevard, which, because of the attractions of the natural and artificial beauty of its surroundings and absence of cross streets to interfere with the rapid movement of its traffic, will probably become the principal avenue of travel for automobiles coming to the central business district from the South Side and will serve as another very useful approach to the station.

The Roosevelt Road street car line connecting with all surface lines in the city will have a direct connection with the station and will enter Grant Park by a subway under the railway company's tracks. This connection, together with the Illinois Central suburban service, the elevated railroad two blocks distant and the boulevards previously mentioned, will make the local transportation facilities of the proposed station almost ideal.

#### Impressing the Visitor

It is essential to the prestige of a city such as Chicago that its passenger terminals be of such character and so located as to add to the dignity of the city. It is also important that the environment of the station create a favorable impression upon the traveling public. It would be difficult to imagine a setting

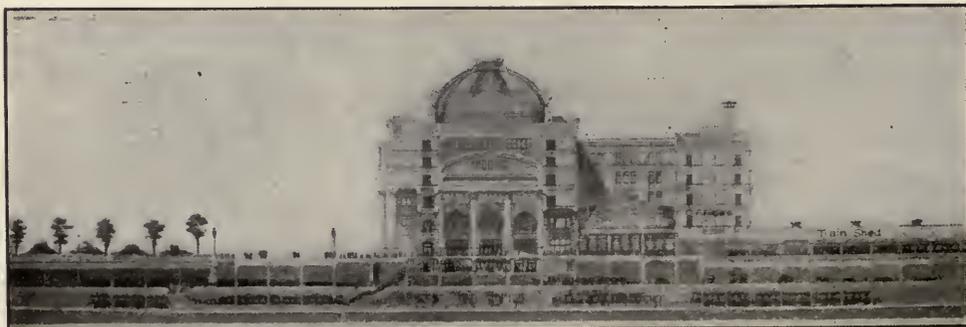

more esthetic and a location more advantageous than the one proposed for this station.

The panoramic view obtained from this location will be of a character that will impress the visitor with Chicago's greatness. The station itself will occupy an imposing site at the south end of Grant Park and will be visible from Michigan Avenue for a distance of nearly two miles.

The difference in elevation between Indiana Avenue and Roosevelt Road makes possible a most convenient development of a station on two levels. The higher, or Roosevelt Road, will form an ideal approach to a terminal with stub tracks built on that elevation. This street, being elevated, will make possible, if such a development becomes desirable, the future construction of a through station on the lower level with tracks extending under the viaduct.

It is fortunate that in the proposed location it is possible to segregate entirely the through and suburban services. In this way, it will be possible to use the suburban service as a means of approach to the station, and at the same time the growth of that service will not interfere with the facilities for the through service. It is proposed to operate the electrified suburban trains through a tunnel under the station. The suburban station and waiting room will be connected to the main waiting room by elevators and stairs. Provision will also be made for the interchange of passengers with the surface lines and the city subway system when built.

The station building will be of ample size

*North and south section through station building and train shed, looking east from Indiana Avenue. This view shows the three main levels proposed in the new station. The through passenger tracks are located on the same level as Roosevelt Road Viaduct, which makes it possible for patrons to pass through the lobby, concourse and on to the train platforms without using stairs or crossing tracks. The middle level will be used for baggage, mail and express facilities and will be served from Indiana Avenue. The lower track level is occupied by suburban tracks and platforms and can also be used for a future through passenger track level.*

*Aerial view of the proposed Central Station, Field Museum of Natural History and proposed Stadium. Picture reproduced by courtesy of the Chicago Plan Commission.*

and will contain all the modern station conveniences necessary for the comfort of the traveling public. It will be of a dignified style of architecture, in keeping with its surroundings and in harmony with the Field Museum.

#### A Hotel in the Plans

It is planned to construct a modern hotel on Roosevelt Road between Michigan and Indiana avenues. Provision will be made for a connection between the hotel and the station building by means of an inclosed passage-way over Indiana Avenue.

The Illinois Central now owns a right-of-way 200 feet in width from the city limits northward to 51st Street, 300 feet in width from 51st Street to 41st Street and 250 feet in width from 41st Street to 31st Street. From 31st Street to Roosevelt Road, a distance in excess of two miles, the right-of-way has an average width of 635 feet.

It is proposed ultimately to construct upon the 200-foot right-of-way, thirteen main operating tracks, which should be ample for all future requirements.

The coach yard, mechanical terminal, baggage, mail, express and station facilities will occupy the wide section of the right-of-way between Roosevelt Road and 31st Street. This space is ample for the combined requirements of all the roads coming into the city of Chicago.

The South Park Commissioners have already

made a substantial beginning toward the construction of the Lake Front Park.

A bulkhead from Roosevelt Road to 24th Street has been constructed, and the filling of the lake between this bulkhead and the present shore line has progressed as far south as 16th Street.

Plans for the South Park Boulevard Viaduct, which will extend across the right-of-way of the railway company near 23rd Street, are practically completed, and in all probability actual construction of the viaduct will begin in a few months.

The work of constructing the stadium previously mentioned will begin as soon as building conditions are favorable.

The Field Museum of Natural History, previously discussed, said to be the largest marble building in the world, was completed in 1921 at a cost of \$7,000,000.

For many years the Illinois Central has been preparing for the work it is now facing on the Chicago Terminal. The extensive Hyde Park and Kensington track elevation projects and the Grand Crossing grade separation were executed with due regard for the requirements of electrification.

#### Markham Yard Project

An important step undertaken in preparation for electrification is the construction of Markham Yard near Homewood. This project, when completed, will give to the Illinois Central one of the largest trunk line hump

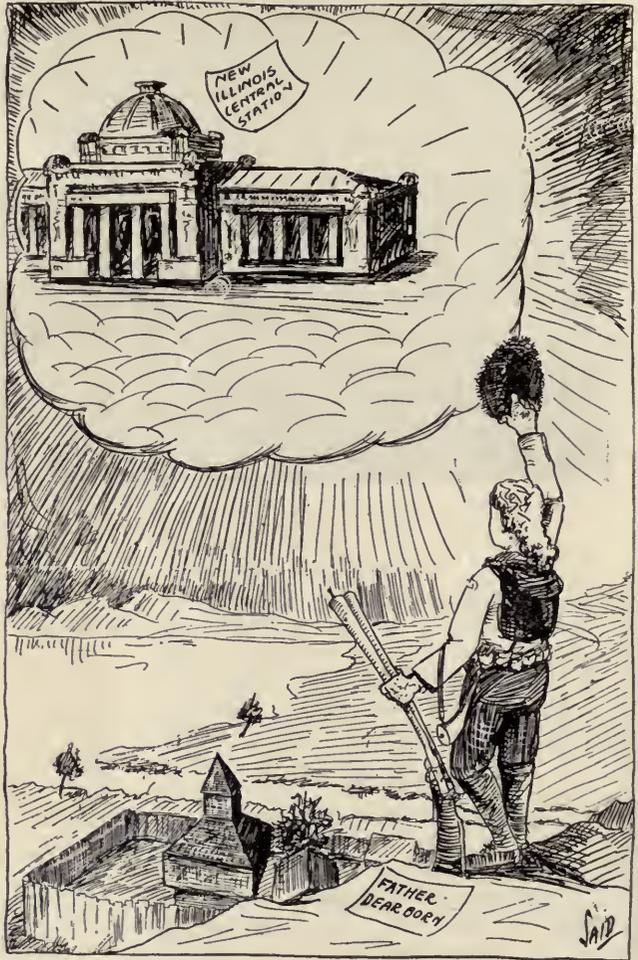

classification yards in the world and will be used to classify all Illinois Central freight, inbound and outbound, except western line business. Interchange between steam and electric motive power for the freight service will be made at this yard.

The Randolph Street subway numbered in the May, 1921, number of the *Illinois Central Magazine* was constructed in compliance with the terms of the Lake Front Ordinance.

The railway company in 1921 placed in service twenty new steel suburban coaches. These were designed and so constructed that they can later on be equipped for electric operation. As soon as the suburban service is electrified they will be fitted with motors and operated as multiple unit equipment.

In the past twenty years great progress has been made in the science of railway electrification, and a number of important terminals have already been successfully electrified. In no terminal, however, is the problem so complex as the one facing the Illinois Central. In order that this highly complicated problem might be handled successfully, an electrification commission, including three of the most eminent electrical engineers in the United States, has been appointed and is now investigating all matters pertaining to this problem. The report of the commission will be completed shortly, and many matters temporarily held in abeyance can then be settled.

From the date of entrance of the Illinois Central into Chicago in 1852 down to the present time, the policy of the railroad has been one of improved service and progress. No better example of this policy can be found than the development of the Chicago Terminal, which in seventy years has not only kept pace with the industrial development of the country, but has risen to a point where it is destined soon to become one of the world's greatest terminals. The successful consummation of this great work will be of inestimable value to the citizens of Chicago, a trib-

ute to the efforts of its many sponsors, and a monument to the energy and progressive spirit of the Illinois Central Railroad.

#### PASSENGER APPOINTMENTS

Effective January 15, J. V. Lanigan, General Passenger Agent, announced the following appointments: W. G. Ferstel, District Passenger Agent, 607 Merchants Loan & Trust Building, Chicago, Ill.; P. J. Mottz, Special Passenger Agent, office 53rd Street (Hyde Park) Station, Chicago, Ill.; W. W. Wilson, Traveling Passenger Agent, 309 Marshall Building, Cleveland, Ohio; H. H. Hays, Traveling Passenger Agent, 412 Free Press Building, Detroit, Mich.; E. J. Meade, Traveling Passenger Agent, 1411 Majestic Building, Milwaukee, Wis.; W. P. Wheelan, Traveling Passenger Agent, 502 Central Station, Chicago, Ill.; G. R. Kimbel, Traveling Passenger Agent, Illinois Central Station, Dubuque, Iowa.

# Herbert Hoover Surveys Railway Problem

## Secretary of Commerce Suggests That Nation's Best Investment Right Now Would Be in Transportation

The following statement was made by Herbert Hoover, Secretary of Commerce, before the Interstate Commerce Commission at its general rate inquiry at Washington, D. C., February 3:

**I**N responding to the invitation to discuss some of the problems present in your general railway investigation, I shall devote myself to three of the railway topics which especially arise from the present economic situation.

I do not need to review at length that we are recovering from the destruction and inflation of the greatest war in history, that we are suffering from the waste, the extravagance and over-expansion of the post-war boom, and that the war has brought about great shifts in the movement and price levels of commodities between nations.

### Better Perspective Needed

I would, however, suggest that it might be profitable for our people to get a somewhat clearer perspective of our own, and the world's, troubles and problems. Even a superficial survey must bring us out of an atmosphere of gloomy introspection into an assuring realization that, great as our dislocations may seem to be, we relatively are in an enviable position. Our nation is unshaken, and as a people we are getting our bearings in a world of perplexing economic adjustments. While there is unemployment and lack of profit-taking, we are free of panic. We are comparatively more restless than injured. For instance, as heavy as our tax burden is, it is still less than one-half as great in proportion to our national productivity as that of the other states in the war.

The violence of our readjustment, however, is without parallel, and we sometimes tend to color our measures for the future by the depression we are in. The fact is that we must predicate all plans for the future on the ultimate return of the American people to a normal economic activity, with our annual progress in the expansion of our production, of our plant and equipment of our skill and our efficiency. There can be no question that this re-

Herbert Hoover

turn will take place, and no responsible body will approach our problems on any other basis. Not one of us would submit to the charge that we were not prepared to bet against any odds upon the future of the United States. Our problem is to expedite this recovery—to speed up employment of our workers, and thereby find markets for our farmers.

### Two Factors Needed Now

If we look at the national economic situation as a whole, the greatest impulse that can be given to recovery from any source whatever is a reduction of rates on primary commodities, combined with the immediate resumption of railway construction and equipment. The first depends upon reduction of operating costs; the second, upon restoration of credit for our railroads.

One thing is absolute. Our transportation facilities are below the needs of our country, and, unless we have a quick resumption of construction, the whole community—agricul-

tural, commercial and industrial—will be gasping from a strangulation caused by insufficient transportation the moment that our business activities resume. For the past five years we have had no consequential expansion to our railway transportation machine. With but one interval of nine months in 1918 and 1919, we had a car shortage throughout the whole of the years 1916-17-18-19 and 20. This shortage rose to as high as 160,000 cars, with a corresponding shortage of motive power. We paid tremendous sums in commercial losses and unemployment in consequence. We laid it on the war. We should lay it on our lack of foresight and our antagonism to railroads.

#### Annual Expansion Demanded

Few persons seem to realize the amount of expansion in our transportation machine necessary to keep pace with the growth of the country. And an equal few seem to have any notion of the price we pay for not having it. Our country is more dependent upon railway transport than any other. All others have comparatively greater coast lines and internal waterways. The experience of the twenty years before the war has shown that we must build an extension of lines, including terminal facilities, additional sidings, etc., every year equal to the construction of a new railroad from New York to San Francisco. We must add at least 120,000 cars and 2,500 locomotives annually to our equipment. Since we entered the war in 1917 we have constructed at least 10,000 miles of railroads less than our increasing population and economic development called for, and we are behind in rolling stock by about 4,000 locomotives and 200,000 cars.

I wish to emphasize that, unless we can have an immediate resumption of construction and equipment, our commercial community will pay treble the cost of the whole of them in the losses of a single season. The very moment that we reach anything like normal business we shall see a repetition of car shortages, followed by an increase in the cost of coal to the consumer from \$1 to \$3 a ton; we shall again see premiums of 20 cents a bushel for the use of cars for moving grain; we shall in fact see a shortage of commodities to the consumer; and we shall see gluts upon the hands of the producers. We shall see factories filled with orders again closed for lack of cars; we shall see large intermittency in employment; and we shall see the usual profiteering in commodities due to a stricture between the producer and consumer.

#### What Such Shortages Cost

There would be no difficulty whatever, by basing such losses on the experiences we have already had, to calculate a loss to the American people of a billion dollars for each one of these periodic transportation shortages.

Furthermore, there is nothing that is so recoverable a loss to the nation as idle shops and idle men. Today we have both. There is nothing that will so quickly start the springs of business and employment as an immediate resumption of construction and equipment of the railroads. When business does resume, we shall need all of our capacity for the production of consumable goods. We shall not only find it strangled for lack of transportation, but we shall find ourselves plunging into the manufacture of this very railway equipment and construction in competition with consumable goods for materials and labor. Herein lies the basic cause of destructive price inflation and booms, with all their waste and over-expansion. In times of depression, we should prepare for the future, and by doing so we can cure the depression itself.

#### How Confidence Was Lost

If we examine the fundamental reasons for failure to resume equipment, we will find them in the loss of confidence in railroads as an investment and the competition of tax-free securities. We have passed the period of credit strain in this depression. Surplus capital is pouring by hundreds of millions monthly into tax-free securities and foreign loans, and yet our railroads are unable to finance the most moderate of construction programs. The confidence of the public in railway investments was at so low an ebb before the war that finance by the issue of common and preferred stocks had become impossible, and railway expansion was living on bond issues. The confidence of an assurance and continuity in earning power to cover this burden of bonds has been even lowered since the war began because of the uncertainties of both rising and falling prices, of rising and falling wages, of rising and falling rates, preventing all regularity of earnings upon which an investor could be convinced, even if no other difficult factors entered into the problem.

I see no occasion to go into the labyrinth of past railway finance, its propriety or lack of propriety, its foolishness or its skill. That generation is gone by. This commission approaches the financial problems of the railroads

upon the actual value, not upon their issues of securities and I take it we are living for the future, not the past. We want transportation, and we want it with the values of private initiative and clean public service.

### Roads Will Make Money

If we look to the immediate future, with its complete necessity of paring the railway earnings down to little more than bond interest, until we give relief to the shipper (and thus the primary foundation to business recovery), I can see little likelihood of convincing the investor as to his margins of safety. There is an atmosphere that our railroads will never again earn profits, and that they are not as an industry worthy of investment, and that, because private investors will not come to their assistance, nobody can do anything.

Far from its being impossible for our railroads again to return to a profitable footing, I believe it is possible to demonstrate that on an average they will become very profitable. If we assume that the reduction of prices and wage levels will settle at a plane no lower than 50 per cent over pre-war, and if we assume that the present rates are to maintain, and if we assume restored traffic, then the earnings of our railroads would exceed 15 per cent on the whole of the commission's tentative valuation. Surely there is room here for safety to investment, as well as relief to the shipper.

But the circumstances being as they are, confidence being at a low ebb, we do not have the equipment necessary for our business. We are driving headlong for a setback to our whole commerce the very moment that we begin to get on our feet.

### Courageous Program Needed

In these circumstances, it seems to me vital that the railroads, as our greatest industry, should propose a courageous program of broad-vised betterments, and, if necessary, the government should consider giving the use of its superior credit. It would not cost the taxpayer a cent to give the government guaranty to equipment trusts upon the primary responsibility of the railroads, the proceeds devoted entirely to improvement and equipment. This is no proposal to take money from the taxpayer. It is a proposal to save him from paying treble the amount of his guaranty in profiteering and losses. It will render a reduction of rates earlier, for unless something is done the improvements will have to be paid over years out of increased rates. Nor would we

lose a cent upon the guaranty, for if American railroads cannot earn interest upon their borrowings let us throw up our hands and prepare for a second Russia.

A real program of construction would, in its various ramifications, give relief to five or six hundred thousand of our unemployed. It would enable even added numbers to increase the standard of living, and thus give increased market to the produce of our farmers. Our farmers who look to foreign markets for their surplus should stop to consider that our home consumption of meat decreased nearly 7 pounds per capita in 1921, mostly owing to unemployment, and that if this decrease could be overcome it would be worth more than a 35-per cent increase in exports.

### Money Needed More at Home

We talk glibly of giving billions of credits to foreign countries to increase our farm exports. I wish to say, with all responsibility for the statement, that a billion dollars spent upon American railroads will give more employment to our people, more advance to our industry, more assistance to our farmers, than twice that sum expended outside the frontiers of the United States—and there will be greater security for the investor.

Finally, I want to refer to the veritable witches' cauldron which is being fed constantly with hates distilled from the misdeeds of railway promoters in the past, from the conflicts between the railroads and the farmers, between the railroads and their workmen. From all the confusion that arises from it we destroy our railroads and destroy ourselves. With this commission, on one hand, assuring

### *It's Up to You*

I'm strong for the fellow who tackles  
his part  
With courage and vigor and resolute  
heart;  
Who is proud of the work he is given

grace;  
Who refuses to quibble or straddle or  
duck  
Any shade of his duty by "passing the  
buck."—SELECTED.

honesty in finance, justice to the shipper and the railway investor; with the Railroad Labor Board assuring justice to workers, and, above all, with a greater spirit of public service in our generation of railway managers, it is time to call off the witches and take some vision of our national situation if we are to pull ourselves out of this depression.

Before entering upon the question of readjustment of rates, I wish to set out some factors in the present economic situation that bear upon the entire question.

**A Comparison With 1913**

The following table shows a few commodities and service groups, compared to 1913 as 100:

Farm crops (at the farm).....	98
All animals (at the farm).....	92
Retail foodstuffs .....	150
Cotton (at the farm).....	136
Wool (at the farm).....	101
Retail clothing .....	213
Steel billets (Pittsburgh).....	113
Copper .....	86
Zinc .....	90
Pig iron (Pittsburgh).....	128
Bituminous coal (at the mine, estimated 4 districts) .....	160
Bituminous coal (retail, various localities) .....	198-220
Yellow pine lumber (at the mill).....	189
Douglas fir lumber (at the mill).....	125
Lumber (retail, partly estimated).....	200
Cost of living, variously estimated from .....	162 to 180
Wage scales (approximate)	
Farm labor .....	135
Textile industries .....	210
Steel industries .....	150
Railroads .....	200
Metal trades .....	218
Building trades .....	190
Coal mining .....	173

This table at once demonstrates:

- (1) The inequality in prices and wages between different groups of commodities;
- (2) The great increase in spread between "producer's" and "consumer's" goods;
- (3) The lag in wage scales.

**Some Producers Hard Hit**

As the population engaged in the "deflated" producer's goods—agriculture, and metals, wood, etc.—comprises one-half the total in number of the nation, its power to buy the same ratio of consumer's goods has been reduced to less than 70 per cent of pre-war, and is the consequent cause of a large part of the industrial and commercial unemployment and stagnation in our cities and our transportation.

I wish especially to call your attention to the indicated enormous increase in "spread" between

primary producer's and ultimate consumer's goods. In considering it, we must bear in mind that when we use 100 for both consumer's and producer's goods of 1913, we have already included the spread between producer and consumer at that period. I therefore believe that the index numbers indicate an increase of 100 per cent in the actual spread. It is right here where the most of our economic difficulties lie today. Our increased cost of manufacture and distribution bears two relations to the rate question: first, the increase of rates of from 30 per cent to 100 per cent in different commodities is part of it, and is in turn partly caused by it; and, second, the increased rates bear very unequally on different groups in the community.

**Taxes Help Cause "Spread"**

If we search for the cause of this increase of spread we shall find therein a vast complex of increased taxation, increased wages, rents, and a dozen items, all reacting upon one another, and also expressing themselves in increased cost of operating the railroads. For instance, the total increase in national, state and municipal taxes since 1913 is approximately \$5,640,000,000. At the present purchasing power of the dollar, our total national productivity is probably somewhere around 50 billions of dollars, of which more than 10 per cent must now be devoted to increased taxes. This sum of money must be obtained from either the producer or the consumer, and in any event a considerable part of the taxes contributes to widen the spread. Because the increase in spread due to taxes necessitates a spiral of increased wages, rents, etc., before its force expends itself, my own opinion is that possibly 20 points in the distorted index number flow from increased taxes.

The increase of railway rates since 1913 in Class I railroads of 1921 is about \$2,600,000,000, of which about \$1,400,000,000 is due to wage increases and about \$160,000,000 to tax increases. If our traffics were normal, the total increase of rates would be more like \$3,500,000,000. These sums enter into this increase in the spread and carry with them a further trail of increased living costs and again a spiral of higher wages, rents, etc., in all other branches of manufacture and distribution.

**False Hope for the Farmer**

There are other causes of the increased

# Illinois Central System Says Service Is Keynote in Handling Freight

The freight service of the Illinois Central System is founded upon prompt and regular movement of freight and the considerate treatment of patrons' wants by an organization which strives to render a service of satisfaction. We hold those to be the requisite elements of freight service.

The Illinois Central System is among the leading railroads of the country in handling perishable freight. Fruits from the tropics arriving by steamships are moved north from the port of New Orleans in solid trainloads for distribution to marketing centers throughout the country. Domestic fruits and vegetables produced in Louisiana, Mississippi and Tennessee are loaded at stations on our lines and shipped to principal points throughout the United States and Canada, moving largely in solid trainloads. Vegetables from the Rio Grande valley of Texas move in substantial volume through the Baton Rouge gateway and are handled by the Illinois Central System from Baton Rouge to principal points in the North and East. Solid trainloads of meat and packinghouse products are handled between Omaha, Sioux City and Chicago. Through trains from Council Bluffs to Chicago carry California vegetables and fruits.

Transportation of quality and quantity is an essential for the well-being and development of trade in commodities commonly classed as perishable freight. Without rapid and dependable transportation service consuming centers would have to depend on supplies from relatively nearby points of production, and trade generally would be contracted. The accurate maintenance of schedules is important in handling perishable freight. As an example of the kind of service rendered by the Illinois Central System, it is worthy to note that during the past six months our fast freight trains handling perishable and other high-class freight long distances have made scheduled early morning deliveries 99 per cent on time. A bureau in the office of our car accountant at Chicago receives telegraphic advices of the movement of cars loaded with perishable freight and is able at any time to furnish shippers of such cars or consignees the exact location and probable time of arrival or delivery to connecting line.

Fast merchandise trains are operated out of all the principal cities on the Illinois Central System on schedules which enable specialization in forwarding the freight the same day received.

The Illinois Central System also ranks among the leaders of the railroads in originating coal and lumber traffic. This class of traffic does not require such rapid movement as perishable freight and merchandise, but does require regular and dependable service, which we are enabled to give through a well-equipped transportation plant and special attention to the freight movement. To a large extent these commodities are classified into solid trains and handled long distances intact, thus minimizing detention at terminals.

Not all cars are handled without delay. Delays occur from causes beyond our control—others from causes under our control. The delays, however, are extremely small, taking into consideration the thousands of cars handled daily. A loaded car found delayed is immediately placed in a preferred class, through special carding and notation on waybill, and handled in fast freight trains to avoid further delay and, if possible, to overcome that already sustained.

We are continually adding to our equipment in the effort to keep abreast of traffic demands. We own 1,700 locomotives and 69,127 freight cars. Since the return from federal control we have purchased and received 150 locomotives, 1,000 refrigerator cars, 300 stock cars, and 200 flat cars. We have recently placed orders for 2,000 additional gondola cars and 1,000 additional refrigerators.

We are striving constantly to perfect all departments of our service. We realize that our worth to the public is measured by the service we give, and we invite the public to call upon us for any service, small or large.

Constructive criticism and suggestions are invited.

**C. H. MARKHAM,**  
President, Illinois Central System.

## Centralia, Ill., Employes Owners of Homes

*Fully Half of the 1,700 in City Illinois Central Founded Are Safely Out of the Renter Class*

A COMFORTABLE home is one thing that makes a railway man appreciate life. It is a place where he can plant a garden, have flowers, practice any hobby he may have; it is a place where he can rest after his run or after his day's toil.

The employes of the Illinois Central at Centralia, Ill., realize the value of homes. There are about 850 employes' homes in that city, and about 1,700 names appear on

the company payrolls. That is 50 per cent, and a mighty good showing. This percentage is increasing steadily. At present, there are thirty new homes for Illinois Central employes under construction in Centralia.

The majority of the employes' homes in Centralia were not erected originally for them. When one found himself financially able to invest in real estate, he usually pur-

chased a home that he could move into immediately.

### Back Pay Used to Buy Homes

Back pay was probably one of the biggest factors in enabling the employes at Centralia to own their homes. Many of them used that money as a first and substantial payment. The back pay, in some cases, ran into hundreds of dollars, and with an initial payment like that, it was possible to arrange convenient monthly payments.

The real estate dealers of Centralia took advantage of the opportunity, and encouraged all the employes who could to invest in a home. The dealers profited, the employes profited, Centralia profited and the Illinois Central Railroad will profit in the long run. There is no better citizen and employe than the one who is contented, and a home goes further toward creating content in a man than anything else.

Those employes who bought homes in Centralia at the time of the receipt of the back pay find now that they are experiencing no hardships in keeping up the monthly payments. The average payment is near \$40, about the amount that rent would cost. In several years they will have their homes as receipts for their money instead of many pieces of paper with the inscription, "Rent Paid."

### Employes' Homes Are Well Kept

The railway men in Centralia take great pride in their homes. These homes are among the best-kept pieces of property in the city. The lawns are beautiful, and in many cases indicate that the company's chief gardener, H. S. Moulder, has been consulted in regard to effective decorations. He is liberal in his advice, although his time is too limited to help in the actual work. He has expressed a willingness to be of any service possible to the employes in beautifying their homes when such service does not interfere with his duties to the company.

When looking at the lawns about the homes in Centralia, one can imagine many an employe down on his knees, over a flower bed, pulling weeds or pushing a lawn mower. The grounds are just that well-kept.

Credit for the neat and clean appearance of the houses must also go to the wives of the employes. In most cases, everything is spotless, and the arrangement of the

furniture in the rooms lends a complete appearance of comfort. The windows sparkle in the sunlight, giving the impression that they are made of diamonds instead of glass, and the dainty, snow-white curtains peeping from each edge make a beautiful setting.

In taking the accompanying pictures of employes' homes in Centralia, no attempt was made to select merely the finest or the most beautiful. Just a few in various parts of the city were caught by the staff photographer to typify the general class of dwellings of the Illinois Central employes in that city.

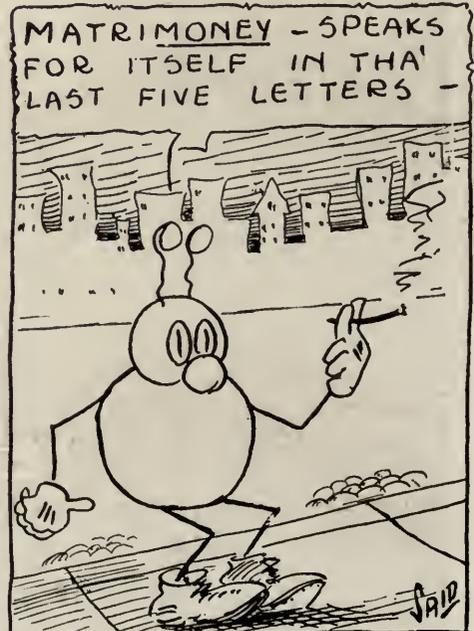

### Centralia a Prosperous City

The life and prosperity of Centralia parallel the life and prosperity of the Illinois Central Railroad. The growth of the railroad has mirrored itself in the growth of the city.

Centralia was planned and founded by the Illinois Central in 1852. That point was to be one of the terminals of the railroad, and a city there was necessary for the convenience of the employes.

Old and new pictures of the facilities of the company at Centralia illustrate the great

strides progress has made. The first round-house and shops there would certainly prove inadequate to take care of the business handled now at that terminal.

And Centralia, with a present population of 17,000, is growing to such an extent that the business buildings there are proving too few to take care of the increasing demand for space. Many new buildings are

under construction in the business district.

When the old Illinois Central shops were torn down, a large space of land was opened in the heart of the business district. At present four buildings have been completed or are under construction on this land. One of them, a warehouse, is owned by F. T. Gibbs, trainmaster of the Illinois Central at Centralia.

## *L. A. Downs Delegate to Meeting in Italy*

"A signal honor has been conferred upon L. A. Downs, vice-president and general manager of this company," says the January issue of the *Right Way Magazine* of the Central of Georgia. "He has received notice of his appointment as one of the eight American delegates selected by the American Railway Association to attend the International Railway Congress, which will meet in Rome, Italy, next April. This Congress meets every five years, but owing to the war there has been no meeting since 1910.

"At the Congress there will be representatives from all nations. From the United States there will be only eight delegates, and as there are a large number of railroads in this country, it is obvious that most of them will not be represented at the Congress by one of their officers, and the appointment of Mr. Downs as a delegate is very complimentary to the Central of Georgia Railway."

Mr. Downs is an Illinois Central product. Born at Greencastle, Ind., May 9, 1872, he was graduated from Purdue University in 1894 and entered the employ of the Illinois Central in 1896, serving in the engineering department. He served successively as assistant engineer, roadmaster, assistant chief engineer maintenance of way, and superintendent of the Iowa, Minnesota and Kentucky divisions. In 1915 he was made general superintendent of the

made general superintendent of the Northern and Western lines, and in 1919 he was made assistant general manager, a position he left to go to the Central of Georgia March 1, 1920.

# General Pershing's Recent Visit to Illinois

*Delivers Addresses at Springfield and Champaign; Compliments R. O. T. C. at the State University*

ONE of the notable things about the general of our army, John J. Pershing, is that he often gets away from his headquarters in Washington and travels about the country, rubbing elbows with his fellow countrymen. The best part of it is that he seems to enjoy it greatly, and that the men, women and children with whom he comes in contact on these trips also enjoy it, for he, in his position at the head of our army, personifies the power and patriotism of our country.

General Pershing made one of these trips to Illinois in February, spending February 11, 12 and 13 in the state, to the great enjoyment of all those who had the opportunity of seeing and hearing him.

Pershing is the possessor of many distinctions. One is that of being the only American general who ever held that rank on the field of battle, or while in active command of an army in the field. Peyton C. March and Tasker H. Bliss, both generals of the late war, did not hold the rank in active service overseas, and Pershing was the only one whose rank was confirmed by the Congress after the war. Another notable distinction which General Pershing has is that no military act of his, from the time he entered West Point to the present, was ever criticised by an expert writer on military subjects. Considering the few men who have had, in the entire history of the world, the wide military experience that General Pershing has had, the lack of criticism of him constitutes one of the remarkable things about the record of this very remarkable man.

The American generals preceding Pershing were commis-

sioned at that rank on the following dates: Grant, July 25, 1866; Sherman, March 4, 1869; Sheridan, June 1, 1888, while he was on his death-bed. Washington's title as general was from the Continental Congress, and he does not rank as a general according to the present definition. In the United States Army a general is the commander of all the military forces under the President, who is by the constitution the titular commander-in-chief of both army and navy. The office of general exists only when created by special laws, and has been held only by General Grant, Sherman, Sheridan and Pershing, who was made a maj-

*General John J. Pershing*

or-general September 25, 1916, and a general October 6, 1917, during the war. Pershing was confirmed by the Senate as "general of the armies of the United States" September 4, 1919.

Pershing is 62 years old and was born in Missouri. He is one of the most widely known men in the world. His face and figure have been made familiar to the average person by the number of pictures of him that have appeared in every newspaper and periodical. However, to one who never saw him in person there is in store a surprise, for General Pershing is much taller than his pictures make him appear to be. Tall, erect and without a pound of extra flesh on his body, his appearance is pleasing to the eye of every American because he looks the great part which he has played, and is playing, in the affairs of our national life. Wherever he goes his great popularity is most apparent. Mingling with all classes of people, never sparing himself, and talking, as he does, the necessity of instilling in all citizens respect for constituted authority, respect for the law, and unalloyed patriotism, he is a great asset to the nation.

#### Had Busy Visit to Illinois

General Pershing was a busy man during his visit to Illinois. On February 11 he witnessed the matinee performance of "A Buck on Leave" at the Auditorium Theater, Chicago, and greeted his friend and double, John J. Kelly, who takes the part of General Pershing in the play. He also congratulated the star of the play, Sergeant Pat Barnes, and told him that the play was better than when he saw it in France at the close of the war. He jocularly admonished Mr. Kelley to be very careful "because," he said, "you look so much like me that you could ruin my reputation."

At Springfield February 12 General Pershing delivered an address on Abraham Lin-

*General Pershing and President David Kinley of the University of Illinois. Picture taken in front of President Kinley's home February 13.*

coln. Among other things, he said of the life of Lincoln:

"In considering his life and his many-sided genius, little has been said of his grasp of military affairs except by way of criticism. As commander-in-chief of the armies of the North, his was the burden of the war. It was vital to the nation to direct aright the energies of a people unprepared for war in the struggle for the preservation of the union.

"Without military training or equipment, but with a fund of common sense and an exceptional capacity for concentrated thought upon any subject that came up for determination, he was called upon to consider grave

questions of strategy in the conduct of the war. Considering his own experience in the contests of life, he clearly saw and understood the important moral factors upon which victory ultimately depends, and became a master of the fundamental principles of war."

General Pershing read extracts from President Lincoln's correspondence with generals in command of the Union armies to show the military responsibilities that fell upon the shoulders of the "commander-in-chief."

"The letters that I have read," said General Pershing, "show the impress of Lincoln's thorough study of the conduct of war. They sound like the words of a trained strategist. It is astonishing that such mature wisdom should be found in a man who up to a few years before had given no thought to the art of war."

#### Lincoln as a Military Strategist

"But, after all, military sagacity is but the application of common sense, through the exercise of which all principles of strategy have been evolved, and Lincoln's fund of common sense seemed inexhaustible. Time and again he gave counsel to his successive commanders, on the Rappahannock, at Gettysburg, which demonstrate the clarity of his judgment and his accurate grasp of situations."

On the morning of February 13 General Pershing made a speech before the Illinois convention of the Pike's Peak Ocean-to-Ocean Highway Association at Springfield. On this occasion he said that the A. E. F. had left the roads in France within their sector in better condition than they had received them.

"We spent millions of dollars in keeping up the roads," he said. "A transcontinental road for military purposes is the present lack of this country. Should an enemy blow up our mountain passes in the west, destroying the railway tracks, what means would we have for moving troops, unless we have a military highway?"

"If Grant had had good roads there would not have been such great difficulty in bringing the Civil War to a successful end.

"On behalf of good roads, I would also invoke the spirit of Abraham Lincoln. He would favor good roads. His experience at Old Salem, which we visited yesterday, would surely secure him for every good road move.

"There are some folks here from Hannibal,

Mo., I'm from Missouri, too. I lived on a farm there, and it was all we could do to haul our farm wagon sometimes. It sometimes took three hours to get the hind wheels out of a mudhole as we waited till someone came along to whom we could 'hook on.'

#### A Highway Named for Him

"I am thankful for the honor you have done me in using my name for your association, and I hope it may never be handicapped for that reason."

The general was introduced by J. D. Clarkson of St. Joseph, Mo., general manager of the highway. He told the state convention that General Pershing had permitted the highway to call its road "The Pershing Transport Route" three years ago, but it remained for this day to witness the "baptismal ceremony." The highway passes through General Pershing's home town of Laclede, Mo.

General Pershing arrived at Champaign on the afternoon of February 13, accompanied by his aide, Colonel John McCauley Palmer of Washington, Colonel Earl Thornton of Chicago, and Senator William McKinley. He and his party were met at Champaign by a party of Illinois Central officials, composed of Charles M. Kittle, senior vice-president; H. B. Hull, assistant to the president; John G. Drennan, district attorney, and J. W. Hevron, superintendent, who accompanied him and his party to Chicago on Illinois Central train No. 2 that evening. Robert F. Carr, president of the Dearborn Chemical Company, was also in the party from Chicago. Colonel Palmer is a son of John M. Palmer, who was at one time corporation counsel of the city of Chicago and who died in Chicago, and a grandson of Governor John M. Palmer of Springfield.

In the afternoon General Pershing was the guest of the citizens of the twin cities of Champaign and Urbana and the University of Illinois. He was driven to the armory, where he saw for the first time the largest Reserve Officers Training Corps unit in the world—the university brigade—which is composed of all first and second year men in the university. He was introduced by Senator McKinley of Illinois and delivered an address. In the course of his remarks, he paid a great compliment to the Reserve Officers Training Corps of the University of Illinois. He said he could not say it was the

best in the country, but from what he saw he believed it soon would be.

His address at the armory, in part, follows:

#### Insurance Against War

"We are attempting, in the United States Army, to build up a system which will not again find us unprepared in case of an imperative call to war such as we had in 1917. The divisions which fought so valiantly through the world war are being maintained, thanks to a good law passed by Congress, and we are going to keep them fit by earnest work and loyalty among the citizens of America. But those ranks will thin out as years pass and it is to the well trained and efficient men of these great university R. O. T. C. camps that we are looking for the future.

"I have been told by President Kinley that the discipline and obedience to duty which military training brings to every man has an excellent reaction among the student body here. I believe that it is one of the best influences you can have here because military training brings two things which are necessary to success, discipline and confidence in one's own ability. Without those two attributes no one can be successful and with them one may conquer."

The general spoke of his work while training cadets at the University of Nebraska, mentioning a rifle team he trained there which won the national championship. He also told, in speaking of the huge armory, of an airdome in Germany which the American army of occupation used while there.

"I reviewed the Thirty-third division in that airdome," he said, "and that division of 30,000 men hardly made an impression in the vast floor space of the place. I would like to say that the work of the Thirty-third division was such that every man who served under its banner should feel proud. Its record will go down in history as one of great merit and distinction."

At the conclusion of his address he presented medals to the men who had won honors at the summer training camps last summer. He

was driven through the cities of Champaign and Urbana, visiting all of the schools. The school children were out in the street expecting him. At each school he left his automobile and walked among the children. He also visited the livestock exhibition of the agricultural department of the university. In the display of livestock was the champion Jersey milk cow of the world. He inspected the buildings of the university and expressed himself as being greatly impressed by them, particularly the engineering department. Following this inspection he was entertained at tea at the home of President and Mrs. Kinley of the university. All in all, it was a great afternoon for General Pershing; also for the people of Champaign and Urbana.

#### Illinois Central Men at the Rotary Club

The Lincoln celebration by the Rotary Club at Champaign was held February 13, which was "Pershing Day" at Champaign. The Champaign Rotary Club is a thoroughly representative organization of 100 business men. The railroads are represented in the club by Superintendent J. W. Hevron of the Illinois Central, and to him fell the honor of being the chairman in charge of the meeting on "Pershing Day." There were quite a number of distinguished guests present from a distance. The speakers were Senior Vice-President Charles M. Kittle of the Illinois Central System and Professor D. K. Dodge of the University of Illinois.

Mr. Kittle spoke of the earnest desire of

*An attraction at the University of Illinois—Raleigh's Sybil, born March 29, 1915, now world's champion Jersey, with a record of 18,847 pounds of milk and 863.33 pounds of butter-fat in 365 days. This yearly production of milk would fill 222 10-gallon cans. At the age of 3½ years she won the silver medal for a year's production from the American Jersey Cattle Club. Her record at that time was 13,443 pounds of milk and 610 pounds of fat. She was developed and is owned by the University.*

the officers of the Illinois Central System to know the transportation wants of the patrons of the road. He said: "We want to know your troubles and assist you as far as we can in adjusting them, and we also want you to know our troubles, and we request your assistance in adjusting them." He explained that the railroads are in the hands of the public, and he made an appeal for the co-operation of the public and a "pull together" movement for the common welfare of all.

Mr. Kittle assured the members of the Rotary Club that the management of the Illinois Central appreciates the friendship and support of the people of Champaign County greatly and is anxious to help in every way that it can in the upbuilding of the city and the territory served by it.

#### Superintendent Hevron's Speech

In introducing Professor Dodge, Chairman Hevron made a very good speech on Lincoln. In part he said:

"In looking around for a program for today, the thought occurred to me that we could well afford, for one day, to lay aside our usual discussions of the present-day problems and do honor to the great American and citizen of the world, Abraham Lincoln, who was born 113 years ago yesterday, and the anniversary of his birth is being observed today, not only in practically every state in the Union, but in foreign countries as well.

"I presume every boy is a hero worshipper to a certain extent. The name of Lincoln was indelibly impressed upon my memory from early boyhood, possibly from the fact that I was born and reared in the same neighborhood in Spencer County, Indiana, where Lincoln, as a youth, spent thirteen years of his life before emigrating to Illinois. Spencer County is also the last resting place of his mother, Nancy Hanks, and his only sister, Sarah Lincoln.

"Anecdotes of Lincoln's early life were numerous in Spencer County. I well remember visiting my uncle, Joseph C. Richardson, whose father was a neighbor of the Lincoln family and who attended the backwoods school with Lincoln, but not for a very long period. Mr. Lincoln said himself that during the thirteen years he lived in Spencer County the total time he spent in school would not have aggregated more than four

*J. W. Hevron*

months. Among the most cherished possessions of my uncle was an old Webster's speller, and written by Lincoln upon the fly leaf of this book were these words:

Abraham Lincoln, his tongue and pen,  
They will be great, but God knows when.

"Abraham Lincoln was a Rotarian. While our organization proper has only been in existence the comparatively short period of seventeen years, the principle of Rotary is over 2,000 years old. Lincoln was a Rotarian in principle, exemplifying by his every thought, word and deed the ideal of our organization—service above self—so much so that he sacrificed his own life on the altar of freedom and an undivided country, but left to us Americans and the world at large a heritage that will never perish. It is therefore fitting that we, in our humble way, today partly acknowledge the debt of gratitude we owe him."

Professor Dodge delivered a most instructive address upon the interest which Lincoln took in agriculture and the surprising knowledge that he had of agriculture. Among other things he said that Lincoln did not have a quick mind—that he was slow to make up his mind, but when once he made it up he rarely if ever changed it.

# A Soldier's View on Loyalty of Employes

*Major Robert L. Montgomery, Our Agent at Natchez, Miss., Comments on President's Letter of December 20*

Robert L. Montgomery agent at Natchez, Miss., has been a good soldier for his country; for thirty-three years he has been a good soldier for the Yazoo & Mississippi Valley Railroad Company and for the Illinois Central System as a whole. Major Montgomery, who served in the infantry during the World War and who includes in his record an assignment as commanding officer of Fort McPherson, Ga., has written for the Illinois Central Magazine his reaction to Mr. Markham's letter of December 20 addressed to the employes of the system. Major Montgomery's letter follows:

**M**R. MARKHAM'S letter of December 20, 1921, addressed to the employes of the Illinois Central System, published in the *Illinois Central Magazine* for January, calling attention to the campaign of abuse and vilification to discredit the managements of the railroads, including the Illinois Central System, that has been waged by certain men claiming to be leaders of organized labor, has aroused serious interest within me, as I am sure it has in others who have that staunch feeling of fidelity toward the interests of their employers which has been engendered by many years of harmonious service in which honesty and fair dealing have been the rule mutually practiced by employer and employe.

## A Call for Testimony

Mr. Markham's very frank and kindly letter has been uppermost in my mind since I first perused it, and I have felt that, probably because of my many years' service in the transportation department, I was in a position to refute, at least as far as the Illinois Central is concerned, some of the charges; but my natural inclination has always been to refrain from thrusting myself into undue prominence, unless and until some real good might follow and my sense of right and justice rebelled at silence.

A feeling of loyalty, deep set and of long standing, which should never have been suppressed, has overcome my timidity since reading the last issue of the *Illinois Central Magazine*, and I want to express my public disapproval of any campaign by any man or any set of men to discredit the management of the

*Major Robert L. Montgomery*

Illinois Central System in the eyes of the public, and I do not care whether these men are members or leaders of organized labor or not.

With the exception of the three years I served in the army of the United States, 1916 to 1919, during the Mexican border trouble and the World War, I have been continually in the service of the Illinois Central System for thirty-three years, and I am therefore in a position, from long experience and intimate knowledge of things concerning it, to speak advisedly.

## Does Not Believe Charges

I do not believe that the charge of Mr. Warne that the management of the Illinois Central is profiting through contracts with supply companies made at excessive prices can be supported by creditable evidence. I say "against the Illinois Central System," because it is not excepted by Mr. Warne. Neither have I the least suspicion that our management is violating the law which prohibits the granting of rebates and concessions and the practice of

discrimination. Insofar as granting to favored shippers free transportation in violation of law and the payment of false claims to favored patrons is concerned, I am in a position to state that I do not believe that a scintilla of evidence can be produced to bolster up such an accusation. On the other hand, since the present management has been in charge of the affairs of the Illinois Central System, I have had a personal and intimate knowledge that the law in reference to the granting of free transportation has been observed religiously and that the payment of claims for loss and damage to freight has been so jealously guarded by those in charge of such payments as to preclude a suggestion of suspicion.

I have no hesitancy in saying that there is not a doubt in my mind that our people have had suggestions of material advantage that might accrue to us through the granting of free transportation and the payment of false claims; they have, in my many years of service, been made to me, but that they have been invariably, firmly and absolutely rejected seems to me beyond a question of doubt.

#### Would Not Serve Otherwise

I believe firmly in the integrity of the management of the Illinois Central System; I am proud to be able to say this honestly and without reservation. If I put credence in the wild, unsustainable accusations of men who call themselves "leaders," if I believed that their vilification, spread in an irresponsible way broadcast over the country, was deserved, I would consider it a shameful thing to work for such employers, because I would be continually reminded of the old and homely but true adage: "If you lie with hogs, you will get fleas on you."

There is no question that we have, for the most part, the most earnest and loyal organization of employes on the Illinois Central System, that most of them are firmly imbued with the conviction that they are working for one of the best railroads, if not the best railroad, in the world, and that it and its management are worthy of true allegiance. This, then, being the situation, I believe it is our bounden duty to deprecate any tactics by any one designed to throw obstacles in the way of railway development and to prevent the increase in efficiency of railway service so essential to the maintenance of the greatest possible number of men at steady employment, at good pay and

under good working conditions. Nay, more, I would repudiate men who make irresponsible accusations against our employers with the deliberate attempt to bring about disloyalty. There is no good that can possibly come to us from such attempts. I have no sympathy with the motive that prompts such attempts, nor part or parcel with such scurrilous methods.

#### Why Loyalty Is Necessary

I believe that Mr. Markham is absolutely sincere when he says that he is in sympathy with our ambitions for better conditions in life. I believe that he is sincere when he says that labor organization conceived upon a platform which will bring improvement in those conditions in the right manner has his whole-hearted approval. His point is well taken when he says that organization which is founded upon any other platform is not worth while.

I had the privilege and the pleasure of making a short address to a meeting of New Orleans division railway men held at Natchez in April of last year. In discussing loyalty to our employers I took occasion to say: "I cannot see how any man can allow disloyalty to creep into his make-up for any one for whom, by all the laws of right and justice, he should preserve an unswerving loyalty. As for me, I have that same feeling of fealty for the Illinois Central System, in a way, that I have for my country or my family. Why shouldn't I? Has it not furnished me with raiment, sustenance and shelter, in fact a livelihood, practically all my life? There is not any good thing that I could do for the Illinois Central System that I would leave undone. There is, there should be, no feeling of antagonism between us, and I want to say to you—and I say it as one of you, who has been one of you and with you for the past thirty-three years—that the man who would inculcate in your minds a feeling of antagonism toward your employer or a feeling that your interests are antagonistic to his is guilty of dishonest effort."

Macaulay, I believe, has said that "loyalty is the sublimest of virtues." It expands the heart and vivifies the whole being, so that a man must be loyal to his country, his family, his home, his employer, to something, in order to be anything. Disloyalty shrivels the heart and makes mere pygmies of men who, if the sunshine of loyalty and truth had flooded their souls, might have been giants in the arena of human usefulness.

# Kansas Editor Sees Gold Bricks in Blocs

Charles F. Scott, Former Congressman, Points Out Dangers in Government by Cliques of Any Sort

The following article is reprinted, by permission, from *The Nation's Business* for February.

By CHARLES F. SCOTT

**T**HE AGRICULTURAL Bloc in Congress is now trying to shape legislation in such a way as to relieve the farmers of taxation and heap the burdens of government upon capitalists or manufacturers. The Labor Bloc is fighting for anything that will help organized labor regardless of its effect upon the rest of the people. Every bloc, whether consciously or not, is disregarding the slogan, "Equal rights for all," and is seeking special privileges for a few.

Fundamentally the farmers of America are conservative, fair-minded and patriotic. They do not intentionally injure any other class of the people and they do not consciously seek special privileges for themselves. The reason they are so often put in the attitude of doing both of those things is that they are not political economists, with a wide horizon and a clear comprehension of the inter-relationship of all lines of industrial, commercial and financial activities, and therefore are easily made the victims of false or shallow-minded leadership—leadership which is either consciously demagogical or ignorantly wrongheaded.

## An Eye Out for Votes

These men *know!* They know, for example, that surtaxes ought to be reduced. They oppose such reduction out of sheer demagoguery, because they think they can go back to their farmer constituents and get votes by telling them how they piled the taxes "where they belong, on the backs of the rich." They *know* that this bi-partisan, group, class method of controlling legislation is all wrong, subversive of stable government, and they pursue it for purely personal, selfish, political reasons. They deserve to be crucified, first for misleading the farmers, second for demagoguery, and third for menacing the Republic!

For generations the farmers have suffered, and they are suffering now, from such leadership. Again and again in the course of our history men have come to the front (every period of "hard times" produces a new brood)

## From the Corn Belt

Charles F. Scott knows the farmer. He edits the Iola (Kan.) *Daily Register* for a farming audience. During ten years in Congress he served four years as a member of the Committee on Agriculture. The Kansas Agricultural College conferred an LL.D. on him. He is a former regent of the University of Kansas and was for a time acting president of the College of Emporia. He has written several books and is a well-equipped student of public affairs; but first and foremost he knows the farmers' problems, and he knows the corn belt.

In a letter accompanying this manuscript Mr. Scott said:

"The farmers have played in awfully hard luck this past year and really deserve sympathy. Right here in Allen County there are many tenant farmers who after a whole year of hard work are actually in debt, the crop they raised not selling for enough to pay their rent. And yet they are brave and patient. Many of them come into my office and make no complaint except 'hard luck.'

"Two or three mass meetings of farmers have been held in Iola within the last two weeks, and the only resolutions they have adopted have been by way of an appeal for economy in public expenditure, asking that an expensive road program be suspended until times are better, and the like. *No class bitterness or vindictiveness expressed at all.*

"But the Farm Bloc deserves all the castigation that can be given it."

—THE EDITOR, *The Nation's Business.*

who have told the farmer that there is abroad in the land a fell conspiracy to deprive him of his just deserts, to restrict him to a niggardly dole for his labor, to deliver him into the clutches of the "money kings"; and then have offered themselves and their panaceas as a way out of all these woes. It is no wonder that the farmer now and then has come to the point where he suffered from delusions of persecution, and it is no wonder that again and again he has been brought to support measures that promised easy and quick relief but which in performance proved to be only

quack nostrums, leaving the last condition of the patient worse than the first.

The latest manifestation of this false or shallow-minded leadership is the bi-partisan group of senators and representatives who, in the name and in the assumed interest of the farmer, have brought forward and to some extent already have forced upon the statute books a list of measures that not only betray the grossest favoritism toward the farmer but are equally and indiscriminately hostile to all other American interests.

#### A Program Generally Harmful

If these measures tended in reality to help the farmer, lift him out of the depression in which he is common with most other American interests is now suffering and place him on the highway of satisfied and contented prosperity, then they might escape criticism; for any measure which would uplift the country's basic industry would necessarily promote the public welfare. But it requires only the most cursory consideration of the program proposed by this Agricultural Bloc to show that the measures included in that program are either futile or harmful, that they will either be wholly ineffective or actually and actively detrimental, not only to the business interests of the country generally, but to the agricultural interests as well.

It is interesting to note in this connection Senator Moses' statement that there are but two "dirt farmers" in the Upper House, and that neither of them has been asked to share in the councils or the plans of the Agricultural Bloc. The bloc, it appears, is not unlike a group of spinsters giving kindly advice on how to dose the baby's colic, ignoring meanwhile the experience of those blessed with babies of their own.

Political leaders are extremely anxious about this situation. Business leaders in every community have reason to feel even greater disquiet.

#### Party Lines Broken Down

The Agricultural Bloc has broken down party lines. Despite the personal appeal of President Harding that surtaxes be reduced at least to a maximum of 32 per cent, a step the Republican party had sworn itself to take and a step recognized on every hand as vital to the restoration of normal business processes, the farmer group defeated the proposal. That brake remained clamped on business. This was but one of the Bloc's achievements at the special session. It is not surprising,

therefore, to find President Harding, in his opening message to this session, saying that there is "vastly greater security, immensely more of the national viewpoint, much larger and prompter accomplishment, where our divisions are along party lines, in the broader and loftier sense, than to divide geographically, or according to pursuit or personal following."

This mild rebuke was supplemented by Secretary Weeks, probably speaking on behalf of the administration, when he publicly attacked the group. Senator King of Utah, in the November number of *The Nation's Business*, revealed the fundamental menace to American institutions of class legislation, such as the farmers' Bloc seeks. Those straws show which way the political wind blows. But if those who believe in the preservation of the great parties and in the orderly process of organized self-control are unaffectedly alarmed, how much more cause has the business man for concern!

At the special session the Agricultural Bloc prevented legislation for the relief of the railroads. This stroke of blind malice hurt the farmer as much as it hurt other business men, for our commercial life depends upon a sound transportation system. The Bloc put through the bills for control of the packing industry and of the grain exchanges. The Bloc forced through the emergency

Charles F. Scott

tariff, which admittedly brought the farmer no relief but was calculated to make the American consumer pay more for the necessities of life. The Bloc enacted legislation to put half a billion dollars of Treasury funds at the disposal of the farmer, that he might hold his crops for higher prices. This also tended to increase the cost of living; and it was the kind of legislation which, had it been enacted to enable manufacturers to hold stocks bought at high prices instead of liquidating them at enormous loss, would have brought an uproar of protest from the farming public.

### He Made Enormous Profits

The truth of the matter is that the farmer reaped enormous profits during the war and the period of inflation afterward. Now that hard times and liquidation have come, he must forego part of his profits. The Agricultural Bloc is his public whimperer, like a hired mourner.

The Bloc has put through a law to increase the interest rate on farm loan bonds to  $5\frac{1}{2}$  per cent, while the rate of interest to the farmer-borrower remained unchanged. The bonds are tax-exempt. What would the farmer say if money were thus handed over to New England woolen mills at the expense of the public treasury and, in most instances, at a rate economically unsound?

The farmer has always been led to hope for political panaceas when hard times overtook him, because he was first hit and often hardest hit under the operation of that inescapable economic law whereby the prices of raw materials are first to fall. As a rule escape held out to him has been cheap money. The farmer was behind Bryan and the 50-cent dollar in 1896, and it was in the rural communities that the shibboleth of sixteen to one was chanted most ardently. He has been a misguided advocate of greenbackism and populism and fiat currency.

Apparently the Agricultural Bloc realizes that forthright attempts to create inflation or a fiat currency will not be tolerated in this country now—not while we look on at the desperate depreciation of European currencies from that cause. But it still regards the Federal Reserve System (which by common consent had a large share in winning the World War and in averting the suspension of specie payment as an aftermath) as its sworn enemy. And so it is demanding that one of the five members of the Federal Reserve Board be a farmer.

### Not a Farmer's Place

The governors of this, the greatest (and, I believe, the best) banking system in the world, should be men trained to a task requiring special knowledge and judgment. To ask a farmer to sit there is like asking a farmer to treat typhoid fever or to translate Sanskrit. But the Farmer Bloc insists that the Federal Reserve System as constituted is his enemy, and that his only recourse is in representation on the board.

"Agriculture has died under the withering touch of this Federal Reserve System," cries Senator Heflin from the floor, in debating the bill. "It ordered credit refused to farmers who were holding their crops for better prices on the ground that this is gambling. It murdered the cotton industry in the South."

Senators Kenyon, Capper, and Ladd of North Dakota share these views. So do other members of the Bloc. But mature opinion opposes the kind of banking system which was set up, for instance, in North Dakota. It objects to class legislation, such as is proposed in the present measure.

"The Federal Reserve Board," said Senator Edge, "should not be composed of men representing any special group or interest, but men who would represent the entire country." And Senator McLean said that two branches of the Government above all others should be kept free from politics—the Supreme Court and the Federal Reserve.

### Specimens of Class Legislation

The Agricultural Bloc, not content with tampering with the country's financial system, plans to put through a bill restricting the use of shoddy and substitutes for wool, even to those who wish to buy the cheaper materials; another of its bills would regulate the length of time commodities may be kept in cold storage, although it is worth noting that the War Finance Corporation does not regulate the length of time the farmer may keep his grain in storage, by means of Federal funds advanced through the corporation; another bill would extend Federal aid to highway construction along lines said to be favored by farmers and opposed by automobilists generally. All these are specimens of class legislation. They represent, not the will of the majority, but the desire of a special class.

For the leaders of the farmer persist in regarding him as a member of a special group.

As a matter of fact his prosperity is inseparably intertwined with the prosperity of the whole country, and the country's prosperity depends upon his. We had a remarkable reminder of this recently when W. H. Woodlin, president of the American Car and Foundry Company (which, being a railway equipment industry, we would naturally suppose to be more nearly independent of farming than others), said: "Like other lines of business, the equipment industry depends to a big extent on the American farmer"; and he explained that the slump in his business, except in repair work, was due to the slump in the price of farm products.

**Keeping Back the Truth**

The farmer's political champions will not let him believe this because they will not look in the face the fact that prices on manufactured articles are logically slow to fall. They think that the manufacturer has worked some kind of legerdmain. The only legerdmain is economic law. And if they did but know it, decreased purchasing power on the farmer's part hurts the manufacturer about as much as it hurts him. Figures compiled by the Bureau of Labor show that the average value of the farmer's products for 1921 was about 20 per cent higher than in the last pre-war year, 1913. The wholesale price of manufactured articles averaged about 70 per cent above 1913, but owing to the decreased purchasing power of farmers (who constitute the largest consuming group outside factory employes) many factories were closed down, and others were only operating part time. Thus the output of manufactured articles was cut down. The volume of production decreased. The selling price for farm products last year was about twelve billions. The value added by manufacture to the country's commodities that year is estimated at about twelve billions.

Prof. David Friday has made a comparison which shows that the value of farm products and the value added by manufacture were the same not only last year but in other years. It was not a mere coincidence in 1921. The Department of Agriculture compiles one set of figures, and the Census of Manufactures compiles the other independently; and Mr. Friday has prepared a table, representing all the years when both sets of figures are available, which discloses this astonishing result:

Year	Value of all farm products	Value added by manufacture
1899 .....	\$ 4,717,000	\$ 4,831,000
1904 .....	6,122,000	6,293,000
1909 .....	8,558,000	8,529,000
1914 .....	9,895,000	9,878,000
1919 .....	24,982,000	25,500,000

**We Depend Upon One Another**

Which of these sets of figures is cause and which effect, or whether both are resultants in part of other factors not shown in the table, need not concern us here. The interesting fact is the relation they show between the farm and the factory. They demonstrate beyond peradventure the interdependence of agricultural well-being with manufacturing well-being. No one will deny that banking and wholesaling and retailing prosperity depend upon manufacturing and farming prosperity. No one will deny that the welfare of one industry affects the welfare of all others. That is to say, no one will deny this except perhaps those spokesmen for the farmer, who insist on legislation intended to benefit him alone, at the cost of the rest of the public.

This situation is not peculiar to the United States. In Canada the United Farmers of Alberta, running candidates on a platform of "government by systematically organized groups" (which is also the goal of Guild Socialism), have won the provincial general election by a large majority. In Quebec an entirely new farmers' organization, called the "National Progressive Party," threatens to take the saddle. The labor element has formed, it should be said, its own party, so that Canada has in prospect four political parties and strictly class legislation, depending on which controls the balance of power. Reports from the Dominion indicate that the agricultural politicians are hopeful of obtaining such control there as they have procured in this country. Evidently they are as muddled and as selfish in their economic and political ideas as are the farmers' leaders in the United States.

Probably the farmers who rail against capitalism are themselves unaware that they, as owners of the means of production, are the largest capitalist class in the United States. Probably they are unaware that in forcing through spiteful laws aimed to cripple other industries they are hurting their own industry. They may even be unaware that farm prices cannot recover in this country until they recover in Europe—since the American farmers' product must compete on the

international market with the European product. Ignorance such as this cannot be dispated over night. Other means must be

found to curb the activities of the Agricultural Bloc. It is for the American business community to find them.

WHEN EAST DUBUQUE WAS DUNLEITH

LIVE STOCK.

EXTRACT FROM FREIGHT TARIFF.

Non-Enumerated Live Stock of all kinds not shipped under Contract will be charged First Class rates.

Enumerated Live Stock, in less quantities than car loads, will be charged First Class, at the following estimated weights:

ONE HORSE, (Except Stallions),	OR HORNED ANIMAL,	- - -	2,000 lbs.
TWO HORSES, OR HORNED ANIMALS,	- - -	- - -	3,500 "
THREE HORSES, OR HORNED ANIMALS,	- - -	- - -	5,000 "
EACH ADDITIONAL ANIMAL,	- - -	- - -	1,000 "

Stallions will be reckoned at 3,000 lbs. and taken at first class rates.

HOGS, CALVES AND SHEEP, over five in number, will be reckoned at 150 lbs. each, first class rates, but will be charged not less than 25 cents each, however short the distance. Five or less, at not less than 50 cents each, however short the distance.

At these rates, in car loads, or less, the owner is to load, unload, feed, water and take care of his Stock at his own expense and risk, and is to assume all risk of injury and damage that animals may do to themselves or to each other, or which may arise from delay of Train, or otherwise.

From one to three Cars of Stock will entitle the owner, or one driver, to a "Free Pass" on the Train with the Stock, to take care of it. From 4 to 9 cars will entitle two men, and nine cars and upwards, three men in charge to pass on Stock Train, which is the maximum number that will be passed on any train, from one consignor or party, at their own risk of personal injury from any cause whatever.

Return Passes will be granted only to persons owning or in charge of at least three Cars of Stock, and only on presentation of the Contract at the Office of the General Freight Agent within six days from date.

Slaughtered Hogs carried only at the risk of the owner as to the weather and delay of train, at second class rates.

No Agent is authorized to make an agreement for the shipment of Live Stock, Fresh Provisions or Slaughtered Hogs, at any particular time. Due diligence will be observed in sending them forward.

Freight Office Illinois Central Railroad Company.

Received of *Mr Wm Posters at Dunleith* <sup>Dec 14<sup>th</sup> 1885</sup>  
*three boxes of lot of W W Woods*  
to be delivered at *Chicago* Station, at special rates,  
being *36* Dollars per car. In consideration of which, and  
for other valuable considerations, it is hereby mutually agreed that said Company shall not be  
liable for loss by jumping from the cars, delay of trains, or any damage said property may  
sustain except such as may result from a collision of the train, or when cars are thrown from  
the track in course of transportation.

To be fed and taken care of by owner.

*Wm Posters* Agent.

An Illinois Central document more than sixty-three years old. This freight receipt was called to the attention of the Illinois Central Magazine by B. A. Beck, assistant secretary of the company.

# Why Our First Right-of-Way Was Wide

## Early Illinois Legislators Insisted Upon 200 Feet to Save Prairies From the Wood-Burners' Sparks

By JOHN G. DRENNAN,  
District Attorney, Chicago

SOME years ago I became interested in the subject of how the Illinois Central Railroad Company obtained a right-of-way 200 feet wide through the state of Illinois for its charter lines. At that time there were but two men living, so far as I was able to ascertain, who were members of the Legislature that had to do with the granting of the charter of the Illinois Central Railroad Company (Act of Feb. 10, 1851, Private Laws of Illinois 1851, p. 61, etc.). These men were Hon. Anthony Thornton of Shelbyville, Ill., and Hon. James C. Allen of Olney, Ill., who were members of the House. I had several talks with each of them about it and obtained written statements of the salient points.

W. K. Ackerman, in his history of the Illinois Central Railroad Company, states, in substance, that the representative for the proponents of this great enterprise—the Illinois Central Railroad Company—before the legislative committees was Robert Rantoul, Jr., an American statesman, born in Beverly, Mass., 1805, graduated at Harvard in 1826 and admitted to the bar in 1827. He was a member of the Massachusetts Board of Education in 1837, was appointed collector of the Port of Boston by President Tyler in 1845. He was also United States district attorney for Massachusetts. It is said that Hiram Ketchum, a distinguished lawyer of New York, and a personal friend of Daniel Webster, suggested Rantoul's name to the men back of the enterprise as a fit person to draft the charter and give attention to the handling of it before the Legislature. He was afterward a member of the United States Senate from Massachusetts, was succeeded by Charles Sumner, and was immediately thereafter elected to Congress from Massachusetts, but died before his term expired.

Judge Thornton and Judge Allen, in their talks with me, and in their signed statements, now in the possession of the historical department of the Illinois Central Railroad Company, said, in substance, that when Mr. Rantoul first presented the draft of the charter

to the Legislature, he requested a right-of-way only one hundred feet wide. In the Legislature, however, were a number of men of wealth who had, or whose friends had, large herds of cattle which grazed in season on the prairies in central Illinois. These men, of whom Samuel A. Buckmaster was the leader, insisted that the right-of-way should be two hundred feet wide. Other members of the Legislature thought this wholly unnecessary, but Buckmaster and his followers insisted that as the railway engines were being fired by wood, sparks ejected from the smoke stacks of the engines would, if the right-of-way through these extensive prairies was only one hundred feet wide, pass beyond the right-of-way line, ignite the prairie grass and destroy the range, so valuable to cattle raisers; that if the right-of-way was two hundred feet wide, the common law duties of the railway company would require it to keep its right-of-way free of combustible material and thereby insure safety and, to a large extent, protect the prairies against fire. Upon the assurance of Mr. Rantoul that throughout the prairie area the company would take the two hundred feet and properly care for it as requested by Buckmaster and his followers, the language in regard to the width of the right-of-way, which was incorporated in Section 3 of the charter, is:

"The said corporation shall have right-of-way upon, and may appropriate to its sole use and control, for the purpose contemplated herein, land not exceeding two hundred feet in width through its entire length."

The company lived up to the promise of Mr. Rantoul and did appropriate a right-of-way two hundred feet wide and thereafter maintained it as required by law at great expense—except that one of the superintendents, who had charge of the fencing of the right-of-way in McLean County, fenced only one hundred feet. Some thirty years ago the officials of the Illinois Central Railroad Company, noting this fact, sought to obtain title to this remaining one hundred feet—which it had lawfully selected—but the Supreme Court held that the

occupancy of more than twenty years by the adjacent land owners gave them the title.

The maintenance of this extensive right-of-way and complying with the law which was passed many years ago requiring all railroads to keep their rights-of-way free of combustible material entailed great expense upon the Illinois Central Railroad Company. However, the railway company has at last grown up to the necessities of its rights and the charter in that respect, and this extra one hundred feet in width is now and will be, in the future development of this great railway system, an asset of great value.

The personnel of the General Assembly of the state, 1850-1852, probably contains the names of more men who were prominent in the history of the state for more than a quarter of a century thereafter than any previous or subsequent Legislature.

In the Senate was John M. Palmer of Macoupin County, then a young but prominent lawyer at Carlinville. He had been a member of the constitutional convention of 1847; was elected to the state Senate in 1850 and re-elected in 1854, serving eight years; major-general in the Civil War; military governor of Kentucky the latter part of the war; elected governor of the state of Illinois in 1869, serving four years; elected United States Senator in 1891, serving six years; ran for President on the Gold Democratic ticket with General S. B. Buckner of Kentucky as a running mate in 1892. Many years before his death he was made one of the trustees of the construction mortgage given by the company in 1851, and he held that position until the mortgage was lifted in 1892. The release of that mortgage was executed by William K. Ackerman, former president of the company; Robert T. Lincoln, son of the martyred President, and John M. Palmer, as trustees. Governor Palmer was a lawyer of unquestioned ability, retained all his faculties to the last and died at the advanced age of about 84 at his home in Springfield.

Among others in the Senate were:

Joel A. Matteson, a distinguished lawyer of Will County, Illinois, who was elected governor of the state in 1853, serving four years.

John T. Stewart, an eminent lawyer at Springfield, the law partner of Abraham Lincoln from 1837 to 1841, and thereafter for many years one of the leading lawyers of Springfield, Ill., where he lived and enjoyed a lucrative practice and died at a good old age.

J. L. D. Morrison, from St. Clair County, a cousin of "Horizontal Bill" Morrison, a distinguished soldier of the Mexican War, and prominent in the affairs of the state of Illinois for many years. Mr. Ackerman, in his history of the Illinois Central Railroad Company, gives him the credit of having, on February 5, 1851, offered the substitute charter-bill which after various amendments passed the Senate February 6, by a vote of twenty-three to two. Four days later, February 10, 1851, it was passed by the House of Representatives by a vote of seventy-two to two.

Joseph Gillespie of Madison County, a distinguished lawyer, and a well known public spirited citizen of the state for many years, who was also an officer in the Black Hawk War.

Hiram Roundtree of Montgomery County, who had been a member of the constitutional convention of 1847.

Of the House, Sidney Breese was speaker. He served as a lieutenant-colonel in the Black Hawk War; had been judge on the Supreme Court of the state from 1841 to 1843. He resigned upon being elected to the United States Senate in 1843, and served six years. He was re-elected to the Supreme Court in 1857 and re-elected again and again, and was a member of the court when he died in 1878. Judge Breese and his friends claimed for him the lion's share of the honor of originating the scheme of this great railway system. Mr. Ackerman, in his history of the company, at page 6, speaking in regard to this question, says:

"What Judge Breese did claim was undoubtedly true: viz., that he had 'said and written' more in favor of the plan than anyone else, and for this he was entitled to great credit."

William J. Allen was enrolling and engrossing clerk. He was a member of the constitutional conventions of 1862 and 1870. He was appointed judge of the United States District Court at Springfield, Ill., and served with distinction for many years and until his death.

Among others in the House were:

Zadoc Casey of Jefferson County, who was elected lieutenant-governor in 1830. He enlisted in the Black Hawk War as a private, and was in the thickest of the fighting. Mr. Stephens, in his history of that war, mentions the fact that at the battle of Kellogg's Place Governor Casey's horse was shot "and his escape was made only after a terrific fight

with the enemy." He also was for many years a member of the Congress of the United States and a distinguished lawyer of the state.

James C. Allen of Crawford County, distinguished not only as a lawyer but probably one of the ablest public speakers in the state. He was a candidate for Congress at large in 1864. He continued his home at Olney, in Crawford County, Illinois, and died respected by all at the advanced age of over 80 years.

U. F. Linder, Coles County, who was elected attorney general of the state as early as 1837, enjoyed a splendid practice and was for years one of the distinguished legal lights of the state.

Phillip Fouke, afterward a member of Congress, a colonel in the Civil War, and who fought with Grant in his first battle at Belmont, Mo.

Ninian W. Edwards of Sangamon County, a brother-in-law of Abraham Lincoln, and a distinguished lawyer at Springfield, Ill., for many years.

Oliver L. Davis of Vermillion County, an able lawyer, and one of the first judges of the Appellate Court of the Third District.

Anthony Thornton, of whom we have spoken, of Shelby County. He had been a member of the constitutional convention of 1847 and was also a member of the constitutional con-

vention of 1862. He was a congressman from the state of Illinois, a judge of the Supreme Court from 1870 to 1873, and died at Shelbyville, Ill., at the advanced age of 89. He was one of the ablest lawyers of the state, loved his profession and was active in the practice until the last year of his life.

Samuel A. Buckmaster of Madison County, He had been an officer in the Black Hawk War, was a distinguished lawyer and public spirited citizen. He was a member of the constitutional convention of 1862. As a member of the Legislature he probably, from what Judge Thornton and Judge Allen said, had more to do with insisting upon the right-of-way being two hundred feet wide than any other member of either house.

James W. Singleton of Brown County, a member of the constitutional convention of 1847, a distinguished officer of the Civil War, and for many years a representative in Congress from the Quincy district.

James C. Conklin of Sangamon County. He had been circuit attorney of the Springfield circuit, was a friend and co-worker of Lincoln, and enjoyed a lucrative practice at Springfield, Ill., until his death.

John Hise of LaSalle, and many other men who afterward obtained distinction as lawyers and judges.

---

## *How Shippers Can Save a Lot of Trouble*

Legible shipping documents and the correct marking and packing of shipments are subjects to which the Railway and Steamboat Warehouse committee has given much consideration recently. The Local Freight Agents' Association of Chicago has co-operated with the committee, and following a recent joint meeting the freight agents compiled a list of suggestions to shippers which if observed will do much to eliminate troubles of the past. Chairman J. A. Brough, of the Railway and Steamship Warehouse Committee, suggests that each reader "tear out these suggestions and send them to his shipping department with instruction to comply carefully with the suggestions."

The list of suggestions as prepared by the Local Freight Agents' Association is as follows:

Transportation companies throughout the country are experiencing a great deal of

difficulty in handling LCL freight due to illegible and incomplete shipping orders, and disregard of rules governing marking of packages. The Local Freight Agents' Association of Chicago has given this matter considerable study and presents a few suggestions, that if followed will lessen if not eliminate the difficulties experienced.

(1) Make the shipping order first, or original writing. The carbon copies are frequently illegible. Many shippers are shipping orders with practically all articles shipped printed thereon. Only a few articles printed are actually shipped to a single consignee. The parts of bills of lading are not perfectly matched, and carbon copies are therefore incorrect both as to the number and character of articles shipped. We, therefore, recommend that this form of preparing bills of lading be abolished. Rate clerks and billing clerks do not see the freight, and the shipping order should be very plain both as to commodities and number of packages shipped, and consignee and destination; otherwise errors in rating and billing are made, causing overcharges and undercharges and improper description of freight, making identification of

shipment at destination difficult and frequently impossible.

(2) Use classification terms in describing shipments. This will insure correct rating and checking of freight. Every shipping department should be in possession of classification covering the territory served.

(3) Do not use trade names in describing shipments. This is an improper practice and is confusing to rate and billing clerks.

(4) Use typewriter if possible in preparing shipping instructions. If this is impractical, write plainly and use good carbon paper.

(5) Be sure that the number of article is plainly stated. Careless or illegible handwriting on shipping orders makes possible many errors, causing delays and dissatisfaction. A little time expended here will save much time later on.

(6) Show street address of consignee if in your possession. This will insure prompt notice being sent at destination and correct delivery.

(7) Where there are two places of same name in a state, the county should be shown on shipping bill and on package.

(8) When consignee is located at an inland town, always show on both bill of lading and packages the railway station at which delivery is to be effected.

(9) Do not abbreviate commodities. B. Powder may be baking powder or black powder. E. Ware may be enamelware or earthenware, etc.

(10) See that your shipping orders are properly signed. Signatures on typewriter or initials of firm's representative are not sufficient.

(11) When consigned "To Order," shipment must be so marked, and further marked with an identifying symbol or number, which must be shown on shipping order and bill of lading. This is a classification requirement.

(12) In marking packages it is desirable that the shipper's name be shown with the word "From" in front of it.

"Correct shipping practices at the initial point are of the utmost importance," said Mr. Brough, "in that they have a direct influence in getting the goods started to the customer under proper conditions. Our sales force can go out and get orders, but unless we deliver the goods to the customer in good condition and without unnecessary delay, we are losing a part of the benefits secured by our sales force."

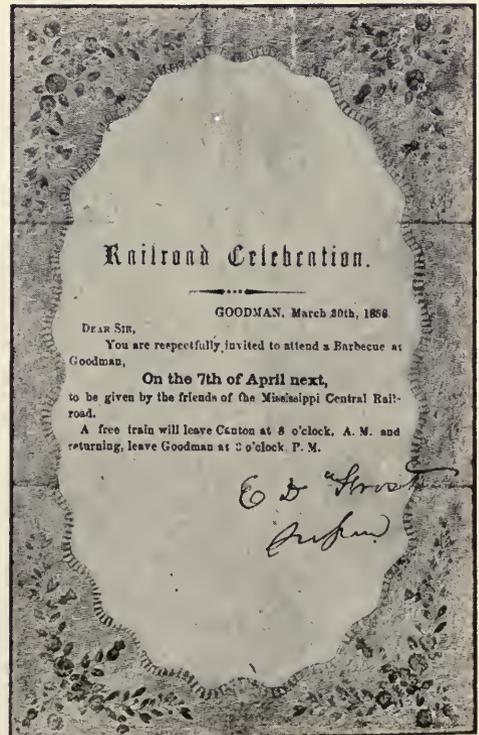

## A Reminder of Early Mississippi Central

The following self-explanatory letter is from W. D. Kennedy, 1801 Dennison street, Little Rock, Ark., a conductor on the Rock Island, to J. M. Walsh, superintendent of the Memphis division of the Y. & M. V.:

This printed invitation, or railway pass, dated March 30, 1858, issued at Goodman, Miss., by Superintendent Frost to the friends of the Mississippi Central Railroad to attend a picnic and barbecue given by the road and its employes, was given to my wife's grandfather, F. W. Grothe (now deceased), by Mr. Frost, who was superintendent of the road, with headquarters at Goodman, Miss.

Later on the road was extended south, and the headquarters of the officials were changed to Canton, Miss. Mr. Grothe was a merchant and planter in Canton, Miss., in his younger days. In 1860 he moved to New Orleans, La., where he opened a wholesale grocery business. He was in this business up until 1867, when he passed away. During Mr. Grothe's lifetime he often spoke of this invitation, or pass, and how he prized it because it was given to him by his good friend Mr. Frost, superintendent of the road.

Goodman's loss was Canton's gain, as it is a division point now, and the old Mississippi Central Railroad has been extended until it reaches from the Gulf to the Great Lakes and is now known the world over as the Illinois Central Railroad. Goodman station is still there and on the map, but it is not a flag stop

for the limited.

It affords me great pleasure to hand this invitation back to an official of this great railroad for his keepsake after it had been in the hands of one family for sixty-three years.

## On the Trail With Bob Gant's Bloodhounds

*Crystal Springs, Miss., on Louisiana Division, Is Home of Man-Hunters Who Are in the Movies*

**A**NIMAL stories are nearly always good reading. This one is about bloodhounds, murderers in Mississippi, and little children lost in the swamps.

*First we shall publish a little free advertising.*

A 5-reel photoplay, "The Man-Hunters," featuring Bob Gant, noted man-hunter of Mississippi, and his famous bloodhounds, will more than likely be in Chicago for some time, beginning about March 5. The picture was taken at Crystal Springs, Miss., on the main line of the Illinois Central. Mr. Gant and two of his hounds will appear in person at every performance.

*And now we shall have a short story to give an idea of how the hounds operate.*

M— C— from Ohio came to Crystal Springs in 19—. Being an expert saw-filer he obtained a good position in one of the numerous saw-mills. For a year or more M— worked diligently, but as his wages advanced his ideas of living assumed a new phase. With a pay check of \$60 a week he began to look around for more companionable company.

One night M— was found with Mrs. J. W—, wife of C— W—, a brother worker in the same mill.

### Seemed a Mysterious Murder

When M— left the house, W— and his unfaithful wife had both been stabbed to death. The next morning a ghastly sight met the gaze of a friendly neighbor. There had been no evidence left behind—no unusual noise of the night before could be recalled—no one had been seen to enter or leave the house—only the mute evidence of a crime presented to the officers a mystery.

M— C— joined the throng of curious. With a nervous tread, he stopped for a second to look upon the results of his night's work. He went back to the mill. As he filed away, the reflection of his victims flashed back and forth on the shining surface of the great saw. Every step of the preceding night he had covered from man's detection—only his

*One of Bob's Gant's Hounds*

conscience reflected his terrible deed, so he thought.

In the town lived Bob Gant, with a nationwide reputation as a man-hunter, who owned several of the finest bloodhounds in the world. In his kennels were three especially fine hounds, Red Terror, Lady Bess and Red Eagle. Bob and his hounds had gained the ill-will of certain officials in whose hands rested the unraveling of this double murder. In consequence, nearly forty-eight hours had elapsed since the W— murder and no tangible evidence was in sight. Many of the citizens expressed regret that Bob had not been called, and the rumor began to spread that the hounds were going to be worked out.

### Poisoning Roused Bob Gant

As a result of this rumor, Red Terror and several of Gant's younger dogs were found dead from drinking poisoned water. This was more than Bob could stand. With a determination to find the guilty party, Lady Bess and Red Eagle were brought into action by their master.

Acting on his own initiative and followed by a throng of men, women and children, Bob entered the W— home, led by his two faithful hounds, who seemed to realize the responsibility of the undertaking—straining at the leash, scenting here and scenting

there, baying as if in answer to their master's words, in one room and into another, straining every muscle, smelling the now cold blood on the floor dried by the lapse of time.

Excitement was at fever heat as the two hounds, with heads thrown high in the air, sprang through an open window. Around the house, down an alley way they went, frantically pulling their master on. Through a negro settlement, into the cemetery, the sacred home of the dead, Lady Bess and Red Eagle went frantically on. Bounding into a negro church with renewed inspiration, they seemed to instill a new hope in the hundreds of followers. Out of the church they went, down through a pine thicket, where, under a bunch of freshly disturbed pine straw, the dagger of death was found.

#### Murderer Thwarted Justice

Down at a little creek they lapped a few swallows of water from the same pool from which the murderer had quenched his own thirst and washed his bloody hands. As the whistles for the noon hour were blowing Lady Bess and Red Eagle were madly leading their master to the saw-filer's stand. Baying an expression of satisfied determination, they bounded down the gravel walk, out of the mill yard and over the Illinois Central tracks, through a vacant lot twelve minutes behind M— C—.

M— worked fast in those few minutes. With one last mad rush Lady Bess and Red Eagle jumped on the porch of the house in which M— lived. With drawn revolver Bob opened the door. Down the hall Lady Bess and Red Eagle reared upon the last door. On the bed lay M— C—, his body still warm, the blood gurgling from a freshly slashed throat.

the Louisiana division of the Illinois Central, is a quiet looking place. Its annual spring activity in the shipping of vegetables (in which, it is claimed, it leads the United States for towns of its size) would seem to be the only excitement of wide importance that it has. This impression, however, should not be accepted. Crystal Springs is noted for more than the shipping of vegetables.

Crystal Springs, for example, is the home of some of the best known man-hunting bloodhounds in that part of the United States, and they and their master, R. L. ("Bob") Gant, have got into the movies, and now there is no telling how far the fame of Crystal Springs will spread. It might be worth noting, too, that Mr. Gant is being backed in his movie venture by Mississippi's

Bob Gant (at left) closing deal with H. W. Mason (at right) for Fourth of July exhibition. Lady Bess and Red Eagle on the floor.

And now for the rest of the story.

Crystal Springs, Miss., on

first real Republican candidate for governor "in fifty years," as the announcements read. This man is Hastings W. Mason, and he, too, is a resident of Crystal Springs.

#### Not So Wicked as Once Painted

Bloodhounds have always had a fascination for those interested in criminology and for lots of people who do not pretend to know what criminology is. The very name of such dogs calls up thoughts of thrilling chases through town and country after some law-breaker and desperate fights when the person sought is finally run to ground. Bloodhounds picture themselves to us as the ferocious dogs that pursued Eliza in "Uncle Tom's Cabin" until she had to make her immortal dash across the cakes of ice in the Ohio River to the freedom that was to be found on the other side. They have always been cast as the villains in our American folk-lore, and their use, even in the most praiseworthy cases, has frequently been looked upon as something not quite fair to the person being trailed.

As a matter of fact, those who know them best declare that the real bloodhounds are far from being the ferocious beasts they have been so long regarded. Trailing a man is a game to them, and when they finally locate him they do not attack him, but merely stand around and regard the game as at an

end. For this reason, they are nearly always kept in leash when trailing dangerous criminals, so that the officers will be at hand when the criminal is found in order to protect the hounds from being killed.

#### Bloodhounds Often Benefactors

Most of the so-called "bloodhounds" whose reputations suffered from their work during slavery days were not pure bloodhounds. They were largely Great Danes or mastiffs, with perhaps a touch of bloodhound in their ancestry. Even the thrilling name "bloodhound," which calls to mind the ideas of battle and gore, has been figured out to be a corruption of the term "blooded hound," indicating that such hounds were the pure-breds of their family. In Europe they do not suffer from any reputation such as they have so wrongly received in this country.

Furthermore, bloodhounds, through their highly developed sense of smell, have been in many instances real benefactors to citizens other than the officers of the law. They have frequently been used to trail persons lost in wild country. Bob Gant's hounds, for example, have been used to find children lost in the swamps of the lower Mississippi Valley, and the motion picture in which Gant and his hounds are now starring is based upon such an incident.

#### Lady Bess and Red Eagle Best Known

Gant's hounds, which had won fame for

their feats all over Mississippi before they got into the movies, have had their training from Bob Gant himself at his home in Crystal Springs. Gant has been in the hound business close to twenty years. He usually keeps in the neighborhood of a dozen hounds, the best known of his present stock being Lady Bess and Red Eagle, who are starred in the motion picture and who are now with their master on the road. Red Eagle is 14 years old. Lady Bess is 10. Bloodhounds often live to be 25 years old. They do their best work after they have reached the age of 10. They are frail puppies, but hardy when grown.

Gant's dogs are descended from European ancestry. Those he started in business with

he obtained from a Mississippi lumber company. Since going into the business, he has had as many as several calls a day for the services of the dogs. In addition to the money he makes by tracking criminals for the sheriffs of Mississippi, he also finds a profit in breeding the hounds. He recently sold a pair of puppies for \$500, and a pair of grown and trained dogs he sold to the state farm at Parchman netted him in the neighborhood of \$1,000.

**Starts Training Them Early**

Gant starts training his puppies at an early age. First he goes off maybe a thousand yards and guides the puppies to him by means of a string. Then they are taught to rely upon scent. A young dog is sent out

Scenes from "The Man-Hunters." At top, a group, showing Joseph Echebal and Eileen Richter of New Orleans, the only professionals in the picture, with Helen Hargravess and a group of the Crystal Springs children. At left, Helen Hargravess, daughter of Doctor Hargravess of Crystal Springs. At right, Mrs. Mary Block of Crystal Springs, one of the leading characters.

with an old dog on a trail, and learns by imitation. Contrary to general belief, the dogs on the trail do not run with their noses on the ground. Instead they usually carry their noses well in the air, and get down to the ground only when the trail becomes extremely hard to follow.

A broken trail means little to the Gant hounds if they are allowed an opportunity to pick it up again. For example, when a fugitive has been tracked to a place where he took a train, his trail can be picked up again by the hounds if they are set off the train at approximately the place it was left by the man they are trailing. The same plan is followed when the fugitive takes to the water or crosses a river. A search usually reveals to the dogs the place he came out of the water, and they can take up the trail right where they left off.

#### How the Photoplay Originated

Gant's dogs have figured in solving some of the most important crimes in Mississippi. Mr. Mason has a box full of clippings about their work. In one case, at least, they caught a man twice—once after he committed the crime and again after he had escaped from jail. They have sent several criminals to the gallows. But, as noted before, they have also on occasion brought joy to the parents of children who had become lost. A child was lost on Sicily Island, La., across from Natchez, Miss. A man had been arrested, charged with the abduction. Gant's dogs were put on the trail eighty-two hours after the child had disappeared. A night-gown the child had worn was used to give the scent, and the dogs did their duty by finding the child, more dead than alive, in the swamps.

From this incident a photoplay was made last July at Crystal Springs. Outsiders wrote the play and directed it, and there were two professional actors in it—but from there on it was a Crystal Springs production. When a train was needed in the picture, it was an Illinois Central train that was used. Most of the scenes were laid on the 10,000-acre Mount Arista ranch of W. D. Ross, near Crystal Springs. Mr. Ross took a part in the picture. Mr. Gant and his hounds starred. Residents of Crystal Springs, including Mr. Mason himself, took the other parts, and when the 5-reel picture was completed and released, it was called, fitly enough, "The Man-Hunters."

*Ready for the Trail*

#### Bloodhounds Save the Day

In the picture the dogs are called to the rescue after the hero has been threatened with lynching because he is suspected of having kidnaped the child who is lost. Of course the dogs find the child (the daughter of a Crystal Springs physician), the hero's life is saved, and the hero and the heroine live happily ever after. The plot gives a chance for some good action pictures of Lady Bess and Red Eagle on the trail, and it is said that these opportunities are utilized to the full, so that those seeing the picture need not lack for thrills.

It is this picture which Mr. Mason is backing and which Mr. Gant and his two leading hounds have recently been presenting in Tennessee. For the last days of February, the show was in Cairo, Ill., and it is expected to be in Chicago about the fifth of March.

Let the announcement explain:

#### What You See in the Picture

"In 'The Man-Hunters' you see Lady Bess and Red Eagle master the murderous convict.

"You witness the separation of two lovers by the stern hand of the law on circumstantial evidence gathered by Bidly Spicer, the walking newspaper of the town.

"You see the hangman's noose removed from the lover's neck by the leader of an

enraged mob, who reluctantly places the neck of the lover in the prowess of two bloodhounds.

"You see Lady Bess and Red Eagle on a trail eight-two hours old after taking the scent from little Phoebe's night dress worn on the morning of her disappearance. Straining at the leash as if realizing their great responsibility, they pull their master on, through the bogs, into the swamps, into the dark of night, stimulated in the search by a hundred horseback riders. Guided only by their sense of smell, these two dumb animals go on and on.

"You see little Phoebe Lee, 8 years old, lost in the almost impenetrable swamps, from which strong men have never returned.

"Through bogs, through marshes, Lady Bess and Red Eagle bound on with renewed energy as the scent grows hotter, their baying giving courage to Bob and the searching party.

"At last you see two 'man-hunting' bloodhounds make one last plunge into the hiding nest of the alligator where no human feet were meant to tread.

"You see Lady Bess and Red Eagle, with their master, like the others of the searching party, rejoice at the finding of little Phoebe and the vindication of an unjust accusation.

"You see the reconciliation, the happiness of two lovers and realize a great mistake has been averted and two lives saved by two dogs, 'man's best friend.'"

And all this at Crystal Springs, Miss.!

#### Republican Candidate for Governor

Mr. Mason, backer of Gant, his dogs and the motion picture, is something of an unusual character himself. In the first place, he is a Republican in Mississippi. He has been in the vegetable brokerage business. He is an announced candidate for governor. He is to have charge of the advertising end of a Republican magazine being founded in Mississippi with the support of the national Republican organization. He backed Gant in a public man-hunt as part of the Fourth of July celebration at Crystal Springs last year and took occasion to advertise the special train service as being on "the Illinois Central main line, the best in the world." And, last but not least, he celebrated Thanksgiving by sending President Harding a turkey and got all kinds of publicity back East in an endeavor to get some life insurance on the fowl.

## AN OLD CROSS-TIE

Here is the grand-daddy of all the cross-ties on the Illinois Central System. This veteran from Ponchatoula, La., Louisiana division, propped up between Section Foreman William Fannally of Ponchatoula (at the left) and Track Supervisor O. E. Smith of Hammond, La., (at the right), has a known record of forty-two years in the service, and perhaps more years than that.

Mr. Smith describes the tie as a Louisiana long-leaf yellow pine heart tie. Its age has been checked by Mr. Fannally by observation during his own forty-two years of service on that section. The tie weighs 300 pounds. It is  $7\frac{1}{2}$  inches thick by  $18\frac{1}{2}$  inches wide by  $9\frac{1}{2}$  feet long. The tie was made from the first cut of a yellow pine. It was hewn out with a common chopping ax and smoothed on two sides.

A record of rail weights kept by Mr. Fannally shows that the tie has been in service under 56-pound, 60-pound, 70-pound, 85-pound and 90-pound metal. The tie has put in its many years of service on Section No. 41 at Ponchatoula on the northward main track, one-

half mile north of Ponchatoula station, 864 miles from Chicago and 45 miles from New Orleans.

The average life of the present-day creosoted pine tie, according to Mr. Smith, is about ten years.

Mr. Fannaly was born April 12, 1861, and went to work for the company January 1, 1880, as a section laborer. He served one year as a laborer and one year as a track apprentice.

January 5, 1882, Mr. Fannaly was promoted to be foreman, and he has held the same position on the same section ever since.

The old tie has seen many railroaders come and go. "It is noteworthy to think of the many and various locomotives, cars and other equipment that have passed over this tie and that have been and are now reposing in the various scrap bins along the line," writes Mr. Smith.

## C. D. Cary Helps Make State Constitution

Charles D. Cary, claim agent of the Illinois division, who makes his headquarters at Kankakee, was elected January 23 to represent the 20th senatorial district of Illinois in the state constitutional convention. Mr. Cary ran on the Republican ticket and carried his district by a majority of 2,208.

"If I could but feel the worthiness of the honor this district has conferred upon me," says Mr. Cary, "I would indeed feel a better concern relative to the duties thereby imposed.

"Politics never before assumed what might be termed a fascination for me. I have always been active in supporting the election of the man I preferred, but I never desired to become a candidate or to hold any political office whatever. I believed that politics was a misfortune sooner or later to any man who made it his stock in trade. I am still of that opinion."

When Len Small of Kankakee was a candidate for governor of Illinois, Mr. Cary took an active part in his campaign, for he was exceedingly anxious to see Mr. Small elected. In 1919 Senator E. C. Curtis of the 20th senatorial district, comprising

the counties of Kankakee, Iroquois and Grundy, was elected as a delegate to the constitutional convention to meet in January, 1920. Senator Curtis died in March, 1920. Governor Small called a special pri-

Charles D. Cary

mary December 23, 1921, to nominate a candidate to fill this vacancy, the election to take place January 23, 1922.

Early in November, 1921, Governor Small asked Mr. Cary to become a candidate to succeed Senator Curtis for this honor. Mr. Cary felt great reluctance in giving his consent, but the governor urged that he overlook these objections and file petitions for the nomination as the candidate of the Republican party. Mr. Cary did so and was made the nominee.

The Democratic party placed in nomination James H. Mallaney, a young farmer living near Kankakee. Mr. Cary's opponent had three newspapers of the district for him, and Mr. Cary had seven. The candidates traveled over the district for thirty days exhibiting themselves and declaring their views concerning matters before the convention. At the election Mr. Cary carried all three counties in the district. He carried the city of Kankakee by 1,124 majority, and the county by 1,083 majority. He carried Iroquois County by a 2-to-1 majority, and Grundy County he carried in places by as high as 9 to 1.

Mr. Cary was sworn into office in the capitol at Springfield by Judge E. S. Smith of that city January 31 and took his seat immediately. When he assumed his place, the sergeant-at-arms placed upon his desk a bouquet of roses, the gift of Governor Small and Colonel C. R. Miller.

Mr. Cary was born on a farm in Marshall County, Illinois, February 22, 1874. He later moved to Rantoul, Ill., and was graduated from the public school there, after which he taught a country school. He was graduated from the University of Michigan in 1893 with the degree of Bachelor of Letters, and in 1895 with the degree of Bachelor of Laws. While at college he was the editor of the *U. of M. Daily* for one year and the accredited correspondent of the *Chicago Times-Herald*.

Soon after leaving college he became acquainted with L. L. Losey, then the chief claim agent of the Illinois Central, who requested that he come into the claims department of the Illinois Central. He consented to do so if he could be located at Kankakee. There was no vacancy at that place at that time; so it was not until a year or so later that a vacancy occurred and Mr. Cary was asked to take charge of the claims work of the Illinois division, with headquarters at Kankakee. He assumed his duties as claim agent November 1, 1905.

### J. W. BRANTON DIES

J. W. Branton, master mechanic of the Illinois Central at Centralia, Ill., died in Chicago Wednesday, February 15. He is survived by his wife and a daughter about 16 years old.

He had been ill for a long time, but did not permit his illness to interfere with his railway duties. He had been complaining of stomach trouble for some time, but went to the hospital only a week before his death.

Mr. Branton began his railway career about twenty years ago, entering the service of the Illinois Central at Sioux City, Iowa, where he served as a mechanic. Later he was promoted to general foreman and served in that capacity at Mounds, East St. Louis and Carbondale. He was promoted to master mechanic August 1, 1912, at Centralia.

According to his friends, his ten years in Centralia were well spent, not only in railway but in civic interests. He had the interests of the men at the shops, in the yards and on the road at heart, and was a man of influence in railway and civic circles. He was ardently interested in the Y. M. C. A. and other movements for the good of the city and pledged his support to anything that was beneficial to the community.

### PRAISES S. C. SULLIVAN

Said the Vicksburg (Miss.) *Post* of February 15: Mayor Hayes, just back from a business trip to Chicago, says that one of the greatest pleasures of his stay in the Windy City was his meeting with an old official friend, S. C. Sullivan, special agent of the Illinois Central Railroad whom the mayor has known for many years. Mr. Sullivan, who is now close to 60 years of age, is not yet ready by any means for the retired list and is just as active and alert as the younger men in the railway detective service. The mayor says that while he was in Chicago, Detective Sullivan made a very important capture of an international crook whom the authorities all over this country have been after for a long time. The man's method was to impersonate an officer at railway stations and ask travelers to show their money, as he was on the track of counterfeiters. He would select what he wanted from the roll and, saying that they were counterfeits, would walk off before the astonished victim could ask any questions. He is said to have fleeced easy marks out of thousands of dollars.

# Springfield Division Veterans Give Banquet

## Second Social Meeting of Association Cements Ties Among Members and Promises Good to the System

CLINTON, Ill., was the scene of the second social meeting of the Veteran Employes' Association of the Springfield division. About three hundred persons, including the "old-timers," their wives, children and friends, attended a banquet, entertainment and dance there February 9.

The first meeting of the organization was a picnic at Weldon Springs, near Clinton, August 14. The success of the organization was assured at that gathering. It was something new on the Illinois Central System, and the employes of the Springfield division thoroughly enjoyed the experience. Many friends who had not seen one another for several years were brought together on that occasion. Some of those who met shook hands heartily, carried on a conversation for a few moments, parted, and then had to ask a neighbor who the other was. "I remember that face; I have worked with him many a time, but I can't recall his name," was said many times.

This was repeated at the banquet February 9, but not so much so as at the picnic. One could see the real purpose of the organization taking effect; the members are becoming bound together in true friendship.

They are becoming acquainted with one another's experiences and are getting a thorough view of the Illinois Central in its earlier days.

### Visitors Arrived Early

Many of the members arrived in Clinton early the day of the banquet. They expressed themselves as desirous of making a complete day of it, since they had enjoyed the previous meeting so much. And the entertainment committee of the organization was "Johnny-on-the-spot" in making arrangements for an enjoyable day.

The new yards have recently been completed at Clinton. They are masterpieces in yard-building and, as such, are intensely interesting to railway men. The entertainment committee realized this when it made arrangements for a coach and engine to take the early arrivals over the yards on a tour of inspection.

There were wives and children among the early arrivals, but when it was announced that the first place to be visited on the tour would be the engine shops, the women, reminded of their silks, satins and lace, decided that social calls would be more proper.

So the men walked to the shops alone.

*Some of Those Who Came With the Veterans*

My, how the stories did fly on the trip to the shops! Some of them were stories that had not been heard—recently. "I remember way back when" was repeated more than once, and each time there was a punch behind it.

### Made Inspection of Shops

On the arrival at the shops, a mechanic was assigned to take the visitors through. Each machine was demonstrated and explained. The many engines which were being worked on created much interest. Our two most recent types of engines, the 2900 and the 3500, were represented. It was an excellent opportunity to view the innermost parts of the monster 2900-type engine which caused so much comment at the exhibits last fall. The 3500-type switching engine received its share of praise and admiration, too.

Why were the two new engines in the shops? It was not a mechanical fault. An engine must have its rest and have its vital parts looked after and attended to just as certainly as a sturdy man needs his sleep and an occasional medical overhauling.

The trip through the shops was educational. In passing through the storeroom, it was remarked how everything was in perfect order, even the tiniest little nuts. Everything was catalogued so that any piece might be readily found.

After the tour of the shops, the men walked back to the station, where they joined their families for the trip to the new yards. The special train which carried the visitors to the new yards was manned by L. H. Watson, engineer, E. J. Doty, fireman, E. E. Kennedy and John Moreland, switchmen, and James Hyde, engine foreman.

### Looked Over the New Yard

The first stop was made at the new yard office. Everyone left the train and went through the new building. The members of the office force took great pride in showing their new home.

Then the special train carried the visitors slowly along the newly laid tracks. Each yard has a feed line to which are joined the numerous tandem switches. Even the women of the party expressed wonderment at the neatness of the yards. Stops were made at the newly installed scales which automatically weigh the cars that pass over

*The New Yard Office at Clinton*

them, and a man was there to explain their operation. Each yard has scales.

It was nearly 6 o'clock when the trip was completed, and the banquet was scheduled to start at 6:30. There was no need for a whistle or bell when the appointed hour arrived. All were there eager to partake of what they knew to be a sumptuously prepared dinner. The Ladies Aid Society of the Clinton Methodist Church undertook the task of pleasing the palates of this hungry throng. Friends of members and pensioned employes were the guests of honor.

After the last course had been served, C. W. Shaw, superintendent of the Springfield division and president of the association, reviewed the primary object of the organization as being to promote social intercourse and foster a fraternal feeling among its members.

### Value of the Organization

"Friendship causes contentment," he said, "and contented employes make the best workers. Not only is this organization going to help each individual member, but it is going to be of benefit to the company. The effects of the organization will manifest themselves in better service."

A quartet sang after Mr. Shaw's short welcome to the visitors. Then the Rev. F. B. Madden made a short talk on the value of friendship.

The honors of the evening went to D. S. Bailey, who was formerly superintendent of the Springfield division. Mr. Bailey is on the pension list now after serving the Illinois Central Railroad continuously for 52 years. He retired in 1916.

Mr. Bailey made a talk concerning his experiences while in the service of the company from the time, as he pictured it, when the Illinois Central was just "two lines of rust" to the date of his retirement. In conclusion, he raised his water glass to the following toast: "I sincerely hope that the

Illinois Central Railroad progresses as much in the next fifty years as it has in the last fifty."

Mr. Bailey says that, as long as he is able, he intends to attend every meeting of the Veteran Employees' Association.

Enjoys Meeting Old Friends

"One can't imagine the great pleasure derived from mingling with the men worked for and with in the days gone by," he says. "Going over the old experiences is just as interesting as the best book I ever read."

And Mr. Bailey shows his great pleasure when he is talking to his old friends. Seldom is anything recalled that he does not distinctly remember.

One man who was formerly employed under Mr. Bailey said that it was hard to realize that the former superintendent was

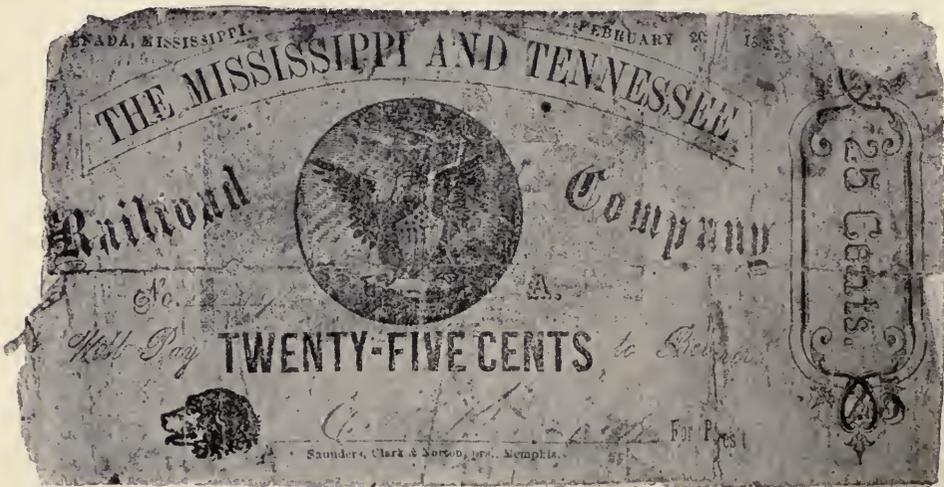

growing old. A man as young and active as Mr. Bailey was in his days of employment would be expected to live forever, he mused. But Mr. Bailey is far from being an inactive man now. His movements are brisk.

The banquet was brought to a close with the singing of "America," and everyone adjourned to the Knights of Pythias Hall.

Miss Anna Gail Wilson and Miss Unaita Brewer entertained the veterans and their families with violin and piano solos. Tom Gilliland, first trick operator at Maroa, Ill., kept the throng amused with jokes, and then dancing was announced.

Mr. Shaw announced the dancing from the stage. Dancing was enjoyed until about 11:30 o'clock, when special trains carried the visitors back to their homes.

DOCUMENTS RELATING TO OUR HISTORY

This Was Good Money at Grenada, Miss., in 1862

Time Table, No. 3. Chicago Branch, Illinois Central Railroad. First Division.

CENTRALIA and URBANA.

TO TAKE EFFECT ON AND AFTER WEDNESDAY, DECEMBER 21, 1856, AT 10 O'CLOCK, MIDNIGHT.

Table with columns for 'TRAINS GOING SOUTH', 'STATIONS', and 'TRAINS GOING NORTH'. It lists train numbers, departure times, and arrival times for various stations including Urbana, Toluca, Peoria, Ottumwa, Keokuk, Farina, Keosauqua, Toulon, Galva, and Centralia. The table is dense with numerical data and station names.

For Rules and Regulations see back of this Table. The Table is subject to change without notice. Passengers and Freight must comply with the following rules: 1. Passengers must be ready to board the train at least 15 minutes before departure. 2. Freight must be loaded and unloaded at least 24 hours before departure. 3. Passengers must not drink or use intoxicating liquors on the train. 4. Passengers must not smoke on the train. 5. Passengers must not use profane language. 6. Passengers must not use obscene or indecent language. 7. Passengers must not use obscene or indecent gestures. 8. Passengers must not use obscene or indecent signs. 9. Passengers must not use obscene or indecent clothing. 10. Passengers must not use obscene or indecent behavior. 11. Passengers must not use obscene or indecent words. 12. Passengers must not use obscene or indecent actions. 13. Passengers must not use obscene or indecent expressions. 14. Passengers must not use obscene or indecent sounds. 15. Passengers must not use obscene or indecent smells. 16. Passengers must not use obscene or indecent tastes. 17. Passengers must not use obscene or indecent feelings. 18. Passengers must not use obscene or indecent thoughts. 19. Passengers must not use obscene or indecent intentions. 20. Passengers must not use obscene or indecent desires. 21. Passengers must not use obscene or indecent passions. 22. Passengers must not use obscene or indecent emotions. 23. Passengers must not use obscene or indecent affections. 24. Passengers must not use obscene or indecent attachments. 25. Passengers must not use obscene or indecent connections. 26. Passengers must not use obscene or indecent relations. 27. Passengers must not use obscene or indecent associations. 28. Passengers must not use obscene or indecent correspondences. 29. Passengers must not use obscene or indecent communications. 30. Passengers must not use obscene or indecent messages. 31. Passengers must not use obscene or indecent news. 32. Passengers must not use obscene or indecent information. 33. Passengers must not use obscene or indecent intelligence. 34. Passengers must not use obscene or indecent knowledge. 35. Passengers must not use obscene or indecent wisdom. 36. Passengers must not use obscene or indecent understanding. 37. Passengers must not use obscene or indecent reason. 38. Passengers must not use obscene or indecent judgment. 39. Passengers must not use obscene or indecent discretion. 40. Passengers must not use obscene or indecent prudence. 41. Passengers must not use obscene or indecent caution. 42. Passengers must not use obscene or indecent vigilance. 43. Passengers must not use obscene or indecent alertness. 44. Passengers must not use obscene or indecent watchfulness. 45. Passengers must not use obscene or indecent circumspection. 46. Passengers must not use obscene or indecent care. 47. Passengers must not use obscene or indecent diligence. 48. Passengers must not use obscene or indecent industry. 49. Passengers must not use obscene or indecent assiduity. 50. Passengers must not use obscene or indecent application. 51. Passengers must not use obscene or indecent perseverance. 52. Passengers must not use obscene or indecent persistence. 53. Passengers must not use obscene or indecent tenacity. 54. Passengers must not use obscene or indecent pertinacity. 55. Passengers must not use obscene or indecent obstinacy. 56. Passengers must not use obscene or indecent perversity. 57. A Schedule on the Chicago "Branch" in 1856

## To Take Stump With His Gospel of Service

*J. T. Thomas, Grenada, Miss., Bank President, Learns New Trick at 62 for the Benefit of His People*

**J.** T. ("Tal") Thomas, president of the Grenada Bank and a string of twelve branch banks in northern Mississippi, was born May 9, 1860. That makes him very close to 62 years old—a good age to stay at home and sit before the fireplace.

Mr. Thomas, however, isn't doing anything like that—just yet. On the contrary, beginning March 15, he will take eight weeks off from his banking duties to stump his territory, making speeches at the rate of two a day. Less than two months ago he made his first real stump speech, after sixty-one years of abstinence. Since then he has taught himself

the knack of the thing, and two weeks ago he stood up and reeled off a 45-minute speech that his friends pronounced a "hammer."

Why has this 62-year-old bank president taught himself this new trick so late in the game and laid out for himself such a strenuous speaking tour, a tour that would threaten to wear down a much younger man?

### A Prophet Among His People

Mr. Thomas is fond of quoting the Bible to illustrate his points, and it may be necessary to go back to the Old Testament to explain Mr. Thomas himself and his delayed interest in speech-making—back to the days of the patriarchs and the prophets who were leaders among their people and whose counsel was in demand when all other counselors had failed.

For Mr. Thomas, in his way, is a prophet—a prophet of better things and better times for the hill people of northern Mississippi—and his speeches will be pleas to his people to hold on a little longer, to make the best of what they have and not to pull up stakes and leave for the Delta and across the river, in the trail of so many of their neighbors. In other words, Mr. Thomas will throw himself into the breach that the efforts of others have failed to hold. He will present in person the latest service campaign of the Grenada banking system, the latest and most comprehensive of several efforts made by his banks for the betterment of their territory.

To do this Mr. Thomas will travel all over northern Mississippi—in the spring—and deliver about a hundred speeches in two months—at the age of 62!

That is real service. It is community patriotism. It is the inspiration of a prophet who has won honor in his own country. And it is also good business.

"We must stop this exodus,"

*J. T. Thomas*

Mr. Thomas says. "It is draining our territory of its longest-established families. It is breaking home ties for some of our oldest residents. And a steady increase in forfeitures will turn the Grenada banking system into a farming institution."

Mr. Thomas' gospel on his speaking campaign is set forth on the poster advertising the proposed contests. "Farmers, stop going to the Delta," it says. "This county is good enough if you will but take advantage of the opportunity offered by its soil. Catch the vision. Making the best of what you have is the first rule for getting ahead."

The latest campaign of his thirteen banks, which Mr. Thomas will explain to the farmers, includes the counties of Choctaw, Webster, Yalabousha, Tallahatchie, Attala, Oktibeha, Chickasaw, Winston and Calhoun. A series of contests in each county will last until November, 1922, and the total expense to the banks is expected to be in the neighborhood of \$10,000. Not many of our city banking institutions give away their money at that rate.

#### Prize Even for Church Attendance

Under the direction of the county agents of the nine counties above named, the Grenada banking system will give away prizes as follows for various farm enterprises: Hogs, prizes of \$10, \$5 and \$2.50 for the best pure-bred sow and litter; cotton, prizes of \$15, \$10 and \$5 for the greatest net profit per acre, not more than six acres to the mule; corn, prizes of \$15, \$10 and \$5 for the greatest net profit per acre; oats and lespedeza, prizes of \$15, \$10 and \$5 for the best four acres; poultry, prizes of \$10, \$7.50 and \$5 for the best net profit per hen; dairy, prizes of \$15, \$10 and \$5 for the best net profit per cow; bees, prizes of \$7.50, \$5 and \$2.50 for the maximum comb honey production per stand.

Aside from these more or less usual prizes to be awarded in each of the nine counties, the Grenada banking system is going into the community organization problem by offering a \$40 kitchen cabinet for the best kept home, the contest to be confined to the farm wives; a prize of \$100 for the largest attendance at a rural church, not less than two meetings a month for twelve months, to be located not less than two miles from a railway station; \$100 to the county of the nine competing (Grenada County excepted) winning the largest number of prizes at the 1922

Grenada Fair; \$50 for the most net profit derived from any one of fifteen farms competing; a free trip to the State Fair at Jackson for the best boys' community club leader; a 16-by-16 army tent and equipment, consisting of cots and kitchen utensils for ten or twelve boys, for the boys' community club doing the best all-around work in 1922.

#### The Soul of His Organization

This \$10,000 campaign is just one of several efforts that the Grenada banking system has attempted—but in talking of the Grenada banking system we must not get too far away from Mr. Thomas, for he is the heart and soul of the organization.

The thing that puts Mr. Thomas closest in sympathy with the hopes of the northern Mississippi people is the fact that he is one of them, a native of Grenada County, where he has lived all his life. He is largely a self-made man, as he was born in moderate circumstances on a farm eight miles west of Grenada and has never had more than eighteen months in school. Despite these handicaps, he is a polished gentleman in the best sense of the term and he has a happy faculty of self-expression that makes his writings of literary value as well as practical. What his speeches will be, of course, remains to be discovered.

Mr. Thomas' father served in the Confederate army in the Civil War and was wounded in battle. After the war he went into the mercantile business. J. T. (the T stands for Talbert, but the J is a mystery) got his first touch of finance at the age of 10 when he received a few cents for knocking cotton stalks on the farm of an uncle, and he was 14 and full of farm experience when the family moved into Grenada.

In 1881 he succeeded his father as circuit and chancery clerk of Grenada County, and in 1890 he was made cashier of the newly organized Grenada Bank. He succeeded to the presidency after the death of the first president in 1906, and he has held the office ever since.

#### Twelve Branch Banks Developed

Meanwhile the Grenada Bank has sprouted new banks all over that part of Mississippi. Branch banks have been established as follows: Bank of Eupora, 1898; Bank of Ackerman, 1899; Bank of Louisville, 1903; Bank of Belzoni, 1904; Bank of Moorhead, 1904; Bank of McCool, 1905; Calhoun County Bank

at Calhoun City, Miss., Bank of Woodland, Bank of Noxapater, Bank of Oakland, Bank of Vardaman at Timberville, Miss., and Bank of Charleston, all established in 1906.

Mr. Thomas has succeeded in working up a real family spirit among the branch managers and other employes of his banks. An annual social and business meeting of the officers is held. Usually the place selected is one well worth visiting—Mammoth Cave, Ky., for example, and French Lick, Ind., have been used. Every program includes a series of papers by those in attendance, through which ideas of interest to all are spread and the operation of all the banks is further unified. A souvenir booklet is issued after each meeting, detailing the proceedings and reproducing the talks that were made.

#### Had Two Sons in Recent War

Mr. Thomas has seen the capital of the Grenada Bank increased from \$50,000 in 1890 to \$250,000 in 1907. In 1891 Mr. Thomas married Miss Ruth A. Jones, and they have three sons and a daughter. Two of the sons served their country in the navy during the World War, a fact of which Mr. Thomas is proud. In 1903 Mr. Thomas was elected president of the Mississippi Bankers' Association. In 1917 he was elected president of the Cot-

ton States Merchants' Association. He is a Knight Templar and a thirty-second degree Mason. In addition, he is one of the best-beloved residents of his part of the state. Many wider opportunities in banking have been offered to him, but he has preferred to stay among his own people, and perhaps that is why they respect him so highly.

Mr. Thomas has not allowed himself to become discouraged by failures or only nominal results in previous campaigns his banks have sponsored. The campaign of service was instituted many years ago when the banks issued a farm magazine, edited by a man especially employed for the purpose. The magazine was adapted to local conditions and was mailed free of charge to every adult citizen of the counties in which the banks were located. After the fifth monthly issue, a check at the various postoffices showed that many of the recipients refused to take the magazine and others took it and threw it away as soon as they saw what it was. So the magazine was discontinued.

#### No Results From Seed Campaign

Mr. Thomas then conceived the idea of distributing free of cost to the farmers seed of improved varieties of cotton, corn, crimson and burr clover, wheat, oats and rye. The one

*The Grenada Bank*

condition imposed was that the recipients should keep a record of the results they gained by the use of the seed. Considerable money was invested in this campaign of education, but the banks have still to receive their first report from a farmer, although they wrote to the persons using the seed, offering the services of a secretary and the use of the banking rooms to figure up the results.

Next the Grenada banking system turned its attention to the younger generation, with somewhat better success. The attempt was to encourage diversification, to induce the boys and girls to raise more and better chickens and hogs. To this end the banks bought and sold several thousand pigs and chickens of the best breeds to the boys and girls, accepting their notes without interest and without security in payment. After a year's experience the banks went still deeper financially into the problem by engaging one man at \$250 a month and expenses to give general supervision to the work, one man at \$100 a month to give direct supervision, and several persons at smaller salaries to give local supervision from time to time.

#### Success With Boys and Girls

This effort proved successful. Many of the boys realized from their hogs \$150 to \$500 a year, and the girls made money from their chickens at the rate of from \$50 to \$175 a year. After the second year of this effort, there were shipped out of these counties, which never before had shipped hogs in carload lots, as many as thirteen carloads a year. The shipments of poultry and eggs from Eupora increased from \$49,000 to \$400,000 within three years, and almost as marked improvements were made at other towns covered.

This work has now been taken over by the staff of the Mississippi Agricultural and Mechanical College.

The most recent project has been a traveling motion picture show which the banks have sent over their territory in connection with capable lecturers. This work was begun in August, 1920. The program of education and general uplift has been carried on by means of pictures and lectures on good roads, rural sanitation, diversified farming, poultry raising, dairying, boys' and girls' club work, comedies, travel views, war reviews, etc. In eighteen months of work the banks and the State Board of Health (which asked permission to join the

campaign) have spent in the neighborhood of \$15,000 on this one project. The banks' lecturer draws about \$300 a month, and the initial cost of the first-class motion picture outfit represents a considerable outlay.

#### Good Crowds at Banks' Movies

There has never been a penny charged for admission to these entertainments, and the banks' territory has been thoroughly covered. The State Board of Health has noted results in its part of the campaign in a reduction of disease and in an increased willingness among the people to co-operate in the work, but the banks, of course, have still to see any concrete results from their contribution.

Good crowds have always attended the exhibition. For example, a thousand persons attended the show in the public square of the county seat town of Pontotoc, while the show was given four nights in succession in the public park at Water Valley to a thousand persons each night. In some cases, in the districts most distant from the railroads, the pictures shown by the banks' representatives are the first motion pictures that some of the people have seen.

"In our conception of the work, we have thought to make better and perhaps happier and more contented people of the citizens of our territory," says Mr. Thomas, speaking of the motion picture enterprise. That is the motto by which he and his banks work. They extend their efforts among the negroes as well as among the white population.

#### Good Words for the Illinois Central

Mr. Thomas, by virtue of being a director of the Chicago, St. Louis & New Orleans Railroad Company, is a member of the Illinois Central System family. He prizes highly his relationship with the officers and employes of the system, and he declares he has yet to ride on a railroad where better service is to be found. His travels have been wide enough to make him a competent judge.

In his effort to serve his patrons, Mr. Thomas' policy is very much in line with that of the Illinois Central System. He expresses high regard for the work of the Illinois Central development bureau, and he takes every opportunity to co-operate with its campaigns.

"Our banks have had the vision all the time to serve the people," Mr. Thomas says, "and we naturally hope some day to be benefited in return. In the final analysis, we are merely building a fire to warm ourselves by."

# Editorial

## STEPS TOWARD PEACE

A hope has been expanded into a reality by the achievements of the recent conference at Washington, D. C., in the reduction of naval armaments and the elimination or subordination of problems likely to cause war among powers represented on the Pacific Ocean.

The record of the conference includes:

A 15-year naval holiday and consequent savings estimated at \$15,000,000,000; an agreement insuring peace in the Pacific, where, notoriously, complications and friction were developing at an alarming rate; termination of the Anglo-Japanese alliance, which was feared and disliked by Americans; close and friendly co-operation between the United States and the British empire in safeguarding peace and equal opportunity; solution of the Shantung problem; voluntary withdrawal by Japan of some demands inconsonant with the principles of Chinese sovereignty and the open door; a definite promise by Japan to evacuate Russian territory and respect the integrity and independence of the Far Eastern Republic; important territorial, commercial and other concessions to China in pursuance of a pledge to treat that vast but long-oppressed empire as an equal of the great powers; publication of all secret treaties or agreements between China and other powers; establishment of a board of reference to decide disputes involving the open-door policy; agreements to prohibit the use of chemical warfare and to outlaw piracy by submarines; resolutions for special conferences to carry such agreements into effect and recommend suitable amendments to the code of international law.

This conference, of course, did not eliminate war or the possibility of it, but the probability of war is greatly reduced. The danger has been made remote. The treaties can be broken, as treaties have been broken in the past, but it is likely that the remembrance of our recent war will keep them inviolate for a good many years.

The conference accomplished more than was expected of it. Any step toward peace, however small and uncertain, would have made

worth while the deliberations of those in attendance. The really definite achievements of the meeting are worthy of great praise, and the full meed of praise has been, and is being, given.

## A PHILOSOPHY OF LIFE

A philosophy of life which carries with it a wealth of inspiration is given by the late Samuel Butler in his *The Way of All Flesh*. The following colloquy between father and son appears in Chapter II:

My father's face would always brighten when old Pontifex's name was mentioned. "I tell you, Edward," he would say to me, "old Pontifex was not only an able man, but he was one of the very ablest men that ever I knew."

This was more than I as a young man was prepared to stand. "My dear father," I answered, "what did he do? He could draw a little, but could he to save his life have got a picture into the Royal Academy exhibition? He built two organs and could play the Minuet in *Samson* on one and the March in *Scipio* on the other; he was a good carpenter and a bit of a wag; he was a good old fellow enough, but why make him out so much abler than he was?"

"My boy," returned my father, "you must not judge by the work, but by the work in connection with the surroundings. Could Giotto or Filippo Lippi, think you, have got a picture into the Exhibition? Would a single one of those frescoes we went to see when we were at Padua have the remotest chance of being hung, if it were sent in for exhibition now? Why, the Academy people would be so outraged that they would not even write to poor Giotto to tell him to come and take his fresco away. Phew!" continued he, waxing warm, "if old Pontifex had had Cromwell's chances he would have done all that Cromwell did, and have done it better; if he had had Giotto's chances he would have done all that Giotto did, and done it no worse; as it was, he was a village carpenter, and I will undertake to say

he never scamped a job in the whole course of his life."

"But," said I, "we cannot judge people with so many 'ifs.' If old Pontifex had lived in Giotto's time he might have been another Giotto, but he did not live in Giotto's time."

"I tell you, Edward," said my father with some severity, "we must judge men not so much by what they do, as by what they make us feel that they have it in them to do. If a man has done enough, either in painting, music or the affairs of life, to make me feel that I might trust him in an emergency he has done enough. It is not by what a man has actually put upon his canvas, nor yet by the acts which he has set down, so to speak, upon the canvas of his life that I will judge him, but by what he makes me feel that he felt and aimed at. If he has made me feel that he felt those things to be lovable which I hold lovable myself I ask no more; his grammar may have been imperfect, but still I have understood him; he and I are *en rapport*; and I say again, Edward, that old Pontifex was not only an able man, but one of the very ablest men I ever knew."

### A MAN'S JOB

There is reason to believe that the "boomer" is disappearing. This is a good time to have and to hold a job. A man should think twice—more than that, a dozen times—before throwing up his employment and adventuring out to seek something he might like better. This is, of course, doubly and triply true of the married man, who has established his own fireside and who has, as the saying goes, "given hostages to fortune."

A job is a big thing in England, where they have been driven to the extremity of doling out governmental charity to the unemployed. "Well, I am one of the millions of unemployed," writes a correspondent from England, "and can see no future of obtaining work here. I expect it is the same in America. They are making a 2-penny levy in this country to help the unemployed."

Arthur Capper, United States senator from Kansas, expressed the idea well when he said:

"A man's job is his best friend. It clothes and feeds his wife and children, pays the rent and supplies them with the wherewithal to develop and become cultivated. The least a man

can do in return is to love his job. A man's job is grateful. It is like a little garden that thrives on love. It will one day flower into fruit worth while, for him and his to enjoy. If you ask any successful man the reason for his making good, he will tell you that first and foremost it is because he likes his work; indeed, he loves it. His whole heart and soul are wrapped up in it. His whole physical and mental energies are focused on it. He walks his work, he talks his work; he is entirely inseparable from his work, and that is the way every man worth his salt ought to be if he wants to make of his work what it should be, and make of himself what he wants to be."

### The Greatest Word

Edward W. Bok, formerly editor of the *Ladies' Home Journal*, writes in the *Mentor* on "the greatest word in the English language."

"It is not Love; it is not Brotherhood; it is not Friendship. It is the word that embodies the spirit of all these words," he writes.

"The word is 'Service,' not the service that serves only self, but the service that labors for the interest of others and thus becomes the finest and best service to ourselves."

A true conception of service would in the finest sense revolutionize our modern transportation system. When the management is contented with its present business and equipment and employes do not strive to do their fullest capacity the duties assigned them, then a railroad does not, to my mind, accept its responsibility.

When I see what the management of the Illinois Central is trying to do so splendidly—purchasing new and up-to-date equipment, enlarging terminals, co-operating with employes in order that they may become a happy and contented lot, I believe our management has accomplished all that "service" implies.

It is a pleasure to represent such a company as ours under the present management. When a man sings at his work his heart pulses in harmony with the eternally vibrant purpose of life—service. Then does the mind shape thoughts and the hand shape things unmarred by discord.

If it be an industry that goes singing to its task, then does its commodity embody the joy and beauty of worth and performance. Illinois Central transportation is a song of absolute sincerity materialized.—H. N. WENTZ, *Agent, Morgantown, Ind.*

# PUBLIC OPINION

What the

World thinks

## PUBLIC RELATIONS

The Illinois Central System started on an unusual program the day its property was returned from governmental control to the control of its owners. This railroad decided to tell the people who lived along the Illinois Central lines what the system was trying to do, what its handicaps were, how it was trying to co-operate with its patrons, and what ambitions it had in the way of service. To carry on this program the Illinois Central resolved to use well directed publicity, admitting any shortcomings that the system might have and mentioning any virtues which it had.

This program of the Illinois Central has been in continuous operation since September 1, 1920, and not only has the system been benefited, but the people generally have been given valuable information regarding railroads, and every railroad in the country which is trying to co-operate in the general scheme for better times has received certain positive benefits.

Railroads are essentials. They connect producers with consumers, manufacturers with buyers, and one section with another. They are not made up of saints, as a few deluded railway presidents tried to have the people believe a few decades ago. They make some mistakes because they are directed by humans. They are not in business for their health's sake, but want to make the equivalent of good interest on investments. They do not operate purely for altruistic purposes, but have a selfish interest to serve while they are serving the people. As a rule they are directed by men of business experience, railway knowledge, and by men who have a broad outlook on business and life.

*The Journal* has not agreed with everything President Markham of the Illinois Central System has said in the many announcements which his road has caused to be printed, although in the main the statements have car-

ried the evidences of truth and common sense. But *The Journal* realizes that perhaps no other effort by railroads or similar organizations in recent years has done more to clarify public opinion on subjects of big business than the articles prepared under the direction of President Markham or written by him. It may have been observed that there has been very little criticism of railroads in recent months. Part of this is surely due to the fact that the people know the roads have been handicapped because of inadequate working capital and income. But it is equally true that the campaign of the Illinois Central and a few other roads has contributed much toward this new feeling.

This is an era in which the people demand information. President Markham realizes this, and in helping his system he is also helping the people and the general railroad-ing business.—Peoria (Ill.) *Journal*, January 28.

## GETTING FACTS STRAIGHT

If all the general officers of the railroads of the United States (some 1,800 companies) had worked for nothing in 1920, what might the effect have been, first, on railway rates; second, on railway wages?

The total revenue of the railroads for 1920 was \$6,178,388,046.

Assume, for easy calculation, that \$6,000,000,000 represented the income from rates and fares in 1920; also assume that the salaries of general officers for 1920 amounted to \$50,000,000 (the actual sum was \$47,119,465).

The fifty million dollars is 1/120th of six billion dollars. Therefore each dollar of rates or fares could have been reduced 1/120th, or 83 one-hundredths of one cent.

In other words, if all the general officers had worked for nothing, railway rates and

fares could not have been reduced as much as 1 per cent.

Suppose the salaries of all general officers were *cut in half* (to an average of a little over \$2,600 a year, or less than the average pay of conductors or engineers).

The possible saving to a shipper whose freight bills have been \$1,000 a year would have been \$4.16 a year, or about 35 cents a month.

If the salaries of all general officers in 1920 (\$47,119,465) had been cut in half and then added to the railway payroll it would have made a possible increase to the men of 65/100 of 1 per cent.—*American Railroads*, January 31.

### MORE "CONVERSATION"

The editor of the *Gazette* was invited to participate in the conference called at Washington this week to consider existing agricultural conditions. He is duly appreciative of the compliment, but could not see his way clear to attend. He trusts that something good will come of it. No one appreciates more thoroughly the unfortunate situation prevailing; none can be more sympathetic or more sincerely anxious to serve; but we are going to be perfectly frank about this matter.

We believe that hard work, thrift and economy offer the only way out—the one absolutely sure way out—and with all due deference to the President, who lent the dignity of his great office to the opening session, we wish to say that the cattle and hogs on feed today in the corn belt are doing more for the restoration of prosperity every twenty-four hours than all "talkfests" can accomplish in a year. It has cost a lot of good money to hold all the conferences and committee meetings that have been held during the last twelve months, many of which have been little else than post-mortems on the moot question of who it was that really "killed cock robin"—the kaiser, the federal reserve board, the board of trade, the packers, the railroads, the middlemen, the profiteers, or some other Satanic agency.

There is not an intelligent man, woman, or child in America but knows that we are suffering not from some incurable or dangerous internal disease, but from the wounds of war—gunshot wounds, if you

please; and these are to be healed by time and honest co-operation, not by patent medicines.

These gatherings afford a fine opportunity for "conversation" for farm consumption, but does that sort of thing get anywhere? That is the question. Believing that all should practice what they preach, and believing that the man who attends to his own business closely these days is the one who is doing most for his country, we have saved the price of a Washington ticket and hotel bill and a week's time.—*The Breeders' Gazette*

### FOLLOW FAST AND FASTER

Sometimes when we read the news dispatches, we wonder how the railway managers have been able to get the roads into so much better condition since their return to private management. There is such a continuous round of hearings and investigations, at which a large number of the leading railway managers are required to attend, that it is amazing that they find any time left to conduct the business of the roads. Still, there is no doubt that the roads are better off with private managers spending a lot of time answering questions than they were when under the control of a man who gave a lot of his time to politics.—Havana (Ill.) *Republican*, February 3

### CRITICS ARE CHALLENGED

Railway executives and managers have been criticised, abused, maligned, probably libeled, during recent years by faultfinders and self-appointed critics, many of them wholly unlearned in the mechanics of the transportation business. On the shoulders of executives and managers have been heaped charges of reckless waste and wanton disregard of public interests. They have been pronounced guilty of financial juggling to the detriment of employes and the public, have been held up to scorn as men guilty of shameful fraud. The strange part of the situation is the fact that the railway men have remained so nearly silent under these charges. In most cases they have gone unanswered, and little effort has been made to put the truth before the public. Doubtless the records of the railroads would disprove much that has been charged. The charges are renewed and amplified each time a man-

ager or executive adopts a course that is not approved by the critics. Quite naturally there are many kinds of railway executives and managers, as may be found in other fields, but that all of them, or a majority, would be found inefficient or false to their trusts has not been established by proof, probably could not be.

President Markham of the Illinois Central has grown tired of these attacks. He has invited his employes to investigate, select men for that work from every line of employment, so there would be familiarity with the records, then come in and learn what facts are shown in the records. It would be helpful to an important situation affecting the entire country if the invitation were accepted. It would be refreshing to have employes make their report. The invitation, as a direct challenge of the truthfulness of the charges, could scarcely be expected if the records show any basis for the charges.

Employes have an interest in the well-being and right management of the companies they serve. Conditions under which railway men labor make for courage and fair dealing, for just consideration that others be not unjustly accused. There would be a public value in upsetting misrepresentation and establishing the facts plainly before the public. In railway management there is room for a difference of opinion, but that difference does not prove falsity of what has been done or proposed. It might put railroads in closer and more friendly touch with the public if that investigation were made, and that would be of untold value to the railroads.—Columbus (Ohio) *Ohio State Journal*, January 3.

### CRAFTY MISREPRESENTATION

The unfairness of the advocates of government ownership of railroads is illustrated by some figures recently compiled and published by one of the advocates of the Plumb plan, which would require the government to buy the railroads and turn them over to the employes to manage and operate. This proponent of government ownership took the valuation of a few of the short lines, which have the least expensive properties, divided that valuation by the miles of "track" and then multiplied the quotient by the total mileage of "line" of all the roads, and ac-

cepted this product as the value of all the roads. There were two vitally important errors in this method of computation. In the first place, the short lines, with their relatively poorer construction and equipment, smaller terminals and shops, are not representative of the roads as a whole. Then, again, the value of miles of "track" is not comparable with value of miles of "line," for many of the larger roads have several tracks on each mile of "line." The method of computation adopted by the Plumb planner is about as fair as for a railway manager to compute farm values by taking the value of unimproved pasture lands as a basis and multiplying by the total area of all farms. Still, one can scarcely blame the government ownership advocates for resorting to such methods. They would have no argument at all if they had to be fair.—Belleville (Ill.) *Daily Advocate*, January 31.

### FIFTY YEARS AHEAD

If in fifty years we shall have a population of 250,000,000, with the necessary 25 billion dollars investment in additional transportation on the rails, and all the prodigious increases in production and in industrial and mercantile establishments of all kinds to provide for the wants and needs of a population  $2\frac{1}{2}$  times larger than we now have, as the chairman of the Northern Pacific Railroad tells us, we shall have to take a better attitude toward our railroads than now prevails.

We cannot cramp, pinch, starve and devil with perpetual investigations, governmental restrictions and public hostility our transportation facilities, and at the same time expect them to meet the future in a state of preparedness. We must think and act for the future as well as for the present, and encourage instead of defaming the prime necessity of progress.—Chicago (Ill.) *Journal of Commerce*, January 31.

### THE MOTOR TRUCK

When you ride your motor car to San Francisco to San Jose just make a mental note of the number of heavy motor trucks, heavily freighted, that pass you and that you pass, and the number of passenger motors, and you will then learn perhaps for the first time how rapidly difficulties are mounting for the railroads. You hear a roar behind you, and you quickly swerve

out of the way. The giant, loaded with from twenty to thirty passengers, passes by, challenging the right of all others to the highway. You have scarcely got under way again when another dreadnought warns you that it is coming; in the meantime a half-dozen loaded trucks have passed you going the other way.

You of course know that your beautiful electric suburban service in Santa Clara County is running far behind expenses, that even your city lines are scarcely keeping even with overhead. You know, too, that the steam roads are constantly coming to the rescue of the electric roads, else the latter would soon disappear from the highways and be no more.

The anomalous angle of the difficulty lies in the fact that the very roads over which the motor busses and freight trucks run are maintained very largely by the railroads themselves, for no corporations in the state pay anything like the same ratio of taxes.—San Jose (Cal.) *Mercury*.

#### STAR AND UNDERSTUDY

For ever star there is an understudy. No matter how high on the ladder one may be, just below him is another, ready and waiting to take his place. Both are stimulated to effort by the knowledge that one is above, the other below. The star must exert himself to retain his hold upon his place, knowing that if he shall slip he is lost. The understudy must be ready to step into the star's place at a moment's notice. It is a case of the survival of the fittest. Life is filled with stars and understudies. A star is no sooner set than another rises to take its place. Always some one is in preparation for the high places in life, however exalted they may be. No man is so indispensable that another equally capable cannot be found to fill his place when he drops out of the play. Thus does the world revolve in its orbit, pursuing its ordered way, undisturbed by the constant ebb and flow of human life.—Sioux City (Iowa) *Journal*.

#### NO GOVERNMENT MAGIC

Some people look on government as a sort of magic. It has only to wave its wand, and presto! the genie is summoned from the bottle and things begin to happen. The ordinary person has to work and save to get ahead. The government is free from all these crude limitations. All it needs to

do is to say: "Let there be money," and there is money.

These ideas seem to be in Mr. Ford's mind when he talks about the government being able to issue money against a great development project and so to finance it without paying interest. If you or I should undertake to build a power plant and were without the necessary funds, we should have to borrow and pay somebody for the use of the money. But Mr. Ford thinks the government, somehow, is different.

How is it different? The government is made up of you and me and the rest of us, associated in various activities. Its only resources are the funds it gets when it writes us to please remit. In Russia and central Europe when people didn't remit, it tried to trade on this widespread impression of government magic, and printed money, bales of it, millions, and billions and trillions of dollars' worth. Pretty soon people saw the magic was a fraud and now the money isn't worth anything.

No, the only way you or I can get money for development work is by borrowing from somebody who has saved it, and paying him for the use of it. The only way you and I and Smith and Jones, associated in a common enterprise called the United States government, can get money for the Muscle Shoals plant, is to borrow it and pay for its use.—Kansas City (Mo.) *Times*.

#### DECLINE IN RAILWAY BUILDING

For two-thirds of a century the United States witnessed the expansion of railroad facilities, the construction of new mileage having reached its crest in 1887 when 12,878 miles were built. Since then there has been a gradual decline in construction until in 1921, there was a net loss of 1,200 miles of track, 1,675 miles having been abandoned while only 475 miles of new track were built, according to figures presented by the *Railway Age*.

The same authority states further that during the last five years 5,700 miles of unprofitable trackage have been abandoned and only 3,200 miles constructed, leaving a net loss of 2,500 miles since the government assumed control of the roads.

Many factors enter into the situation, not all of them of recent origin. The great boom in railroad building which was at its height thirty years ago resulted in the building of many

lines into new and undeveloped territory, and a slump in building while this territory was catching up was natural. Extensions and short lines have been built since, but the country was pretty well served with railroads until fifteen years ago.

In more recent times the mismanagement resulting from government control has had a devastating effect on the roads. The government burdened them with enormous wage increases without increasing rates. The roads carried the enormous extra business occasioned by the war without material extra compensation, notwithstanding business generally was making greater profits than ever before. When the roads were returned they were granted higher rates, but the slump in traffic and the deflation in profits of general business prevented the roads from retrieving their losses in the war and getting on a firm basis again. In-

stead they were saddled with higher wages and high rates, which tended to restrict traffic and their own profit still further. Railroad securities logically became weak under such conditions, borrowing capacity became limited and extensions and improvements became unthought of at a time when the roads could not make ends meet.

The introduction of the automobile and the truck has brought strong new competition for the railroads. Their local traffic in particular has suffered. No doubt, most of the short lines that have been abandoned have succumbed to motor competition. This factor will have to be considered in whatever plans the railroads develop for future expansion.

The abandonment of 2,500 miles of trackage within the last five years by no means indicates that the saturation point has been reached in railroads in this country. There are many sections where new lines are actually needed and others where the building of lines would encourage material development and aid in distributing the population more evenly.

The lines that were abandoned may have been badly located under the new conditions, but they were needed somewhere, and many other lines, besides. The transportation problem is one of the most vital and most serious the country faces. Railroad interests and financiers must have the aid of sound statesmanship in rehabilitating and revitalizing the railroad system.—Houston (Tex.) *Post*, February 3.

### Concerning "Courtesy"

It has been my good fortune to read every article published in the magazine from the first publication to date. It appears that each contributor has done his part toward defining the term "courtesy."

I have made a study of the term and have reached the conclusion that the most logical definition is the one given by Confucius. When asked "What is love?" he said: "Love is to conquer self and turn to courtesy. Could we conquer self and turn to courtesy for but one day, all mankind would turn to love."

The sign of courtesy: To be ever courteous of eye and courteous of ear; to be ever courteous in words, and ever courteous in deeds.

The law: Not to do unto others what we would not have them do unto us; to breed no wrong in home and to breed no wrong in state.

This saying has no doubt been the foundation of our present Golden Rule.

Confucius lived about 500 B. C. He did not regard himself as an innovator, but as the conservator of ancient truth and ceremonial propriety. He dealt with neither theology nor metaphysics, but with moral and political conduct.

His would appear to me to be more logical than some of our present day theological interpretations, for we have such a diversity of views. With his view we can make our acts square with the facts.—S. CUMMINGS, *Agent, New Lebanon, Ind.*

### FORD'S RAILWAY ADVENTURE

Henry Ford's experiment in operating the Detroit, Toledo & Ironton Railroad is being closely watched by the railway men, who are careful to keep us informed as to developments. Mr. Ford has been increasing wages and reducing rates on his railroad, and he has been telling the world how he would run the railroads of the country if they were his. His ideas about running railroads are in more or less violent conflict with those of the railway managers, and it is hardly possible for them to discuss him, his ideas or his railroad with patience. It is not *The Journal's* purpose, however, to comment on Mr. Ford's notions about railway management or on what his critics say about them. It wishes merely to present some figures showing what Mr. Ford is doing with the Detroit, Toledo & Ironton.

The net operating income of the road in

March, 1921, when the Ford management took charge, was \$77,985. For the month of April it was \$276,452, a sudden gain of nearly \$200,000. Since April the net operating income has shown a decline each month, according to the statistics of earnings and expenses filed with the Interstate Commerce Commission, although its total earnings have steadily increased. For the month of August the net operating income was \$70,643; for September, \$46,749; for October, \$15,191. The gross earnings for October were \$213,000 greater than for March.

What is the explanation of the steady shrinkage in the net operating income, while at the same time the gross earnings have as steadily increased? Railway men would answer, doubtless, that the figures prove that Mr. Ford is not the wizard in railway management that he assumes to be. It is a fact well established that the sudden large increase in the net operating income in April, the first month under the Ford management, was due to the diversion by Mr. Ford of all his business to his own railroad. It is clear

how this business could be greater in volume at the outset than in the succeeding months. It is to be kept in mind, also, that on July 1 Mr. Ford instituted both advances in wages and reductions in local rates. This would account for a part, at least, of the shrinkage in the net operating income.

*The Journal* is not presenting any defense of the Ford management of the Detroit, Toledo & Ironton. It is presenting only such facts as are available at this distance. Mr. Ford's theories of railway management will be tested by the monthly balance sheet that he submits to the Interstate Commerce Commission. If he has the right ideas, that will be revealed in the figures on earnings, expenditures and income. If his theories are impractical, that will be shown in red ink. *The Journal* is not so prejudiced against Mr. Ford that it would be unwilling to utilize his plan of railway management, if it could be proved by experience that it is a better plan than that now in practice. It is up to Mr. Ford to make good.—Sioux City (Iowa) *Journal*, December 24.

**SOME CO-OPERATION IN THE SAVING OF COAL**

Good firing on the New Orleans division. Engine 1080, on trains No. 30 and No. 31, running between Vicksburg and New Orleans, was photographed twice without warning by W. W. Allaire of Chicago. J. D. Riggs, engineer of No. 1080, appears in the middle in the lower picture, with Engineer J. H. Evans on his right and Fireman C. Damiano, who handles his coal so well, on his left. This engine is shown in a photoplay by Harris Dickson of Vicksburg entitled "Custard Nine."

## *Five of Our Mississippi Division Veterans*

*All of Them Live at Water Valley, and Four Work in the Shops There; Records Vary From 54 to 45 Years*

**W**ATER VALLEY, MISS., headquarters of the Mississippi division, is the home of five employes who have been in the service of the Illinois Central and its predecessors at that place for the greater part of their lives. Three of them entered the service in the shops at Water Valley, and have remained in the same departments. The total service of these five men is 242 years, or an average of 48.4 years of service each.

W. H. Myers heads the list with fifty-four years of service. He has two sons who have been employed by the company for about twenty years. John McDermott has spent fifty years of almost continuous service with the Illinois Central, during the last twenty-eight of which he has been active in the politics of Water Valley. W. J. King has served at Water Valley for forty-seven years. He now holds the position his father held for thirty-two years. C. F. Johnson started to work in the shops at Water Valley forty-six years ago, and is there today. A. P. Berglund has spent forty-five years in the shops at Water Valley.

### **Entered Service at Centralia, Ill.**

W. H. Myers is a lamp tender in the yards at Water Valley. He was born on a farm in Allen County, Kentucky, in 1852, and lived in the country until he was 11 years old, when his father died on a farm near Centralia, Ill., where the family had moved. The family moved to town after the death of Mr. Myers, and the boy did odd jobs to help support his mother.

When he was 16 years old, W. H. Myers obtained a position as coach cleaner for the Illinois Central Railroad at Centralia. His salary was \$39 a month, and he cleaned every coach left standing in the yards there. After four years he was made car inspector. For eight years he inspected all the trains that came in the Centralia yards.

In 1880 Mr. Myers took a position as helper to the night hostler at the roundhouse in Centralia. After a short time the hostler was discharged, and Mr. Myers was appointed in his place. He continued in that position for

six or seven years, and then resigned. After about six months away from railroading, he returned to the shops at Centralia as a blacksmith's helper.

### **Fired Wood-Burning Engines**

It was while he was employed in the blacksmith shop that he first fired one of the old wood-burning engines, he says. Enginemen were scarce, and often he was taken out of the shop to fire an engine. He continued in that position for about three years.

Mr. Myers married in 1881. His wife was Miss Delphine Friderich, daughter of August Friderich, a machinist in the shops at Centralia.

In 1888 Mr. Myers received a letter from a brother in Water Valley, Miss., informing him that the railroad needed men there. Mr. Myers went to Water Valley and began work as a fireman on a regular freight run between Water Valley and Canton, Miss.

When the fever scare came the following year, Mr. Myers saw a chance of rapid advancement and remained in service. Many employes were leaving for the North at that time. Mr. Myers' hope was realized when he was made an engineer on a switch engine in the yards at Water Valley.

At that time, he was the only white man employed in the yards there. His fireman was a negro, the switchmen were negroes and the yardmaster was a negro.

### **Switching Was Hardest Work**

After serving as engineer on a switch engine for fourteen years, Mr. Myers was transferred to be boss wiper in the roundhouse on account of his failing health. He was in that position about two years when he was made lamp tender in the yards, and he has held that position since.

The crew of a switch engine had the hardest of all railway positions in those days, Mr. Myers says. The men worked at least twelve hours every day, and often more.

There were no air brakes then, and the link-and-pin coupling served to hold the cars together. Often, when a car was to be moved, neither links nor pins could be found. That

meant a long walk before the switching could be done.

The young railroader of today cannot complain of hard work, Mr. Myers says.

#### Wins Success in Local Politics

John McDermott, boilermaker foreman in the shops at Water Valley, is a politician as well as a railroader. He is vice-mayor, street commissioner and alderman of Water Valley. He has served in the government of the city since 1894. But his political activities have not been confined to Water Valley alone. He was on the county executive committee for setting the dates for primary election for four or five years, and he has been a delegate to state Democratic conventions.

Mr. McDermott entered the service of the Illinois Central Railroad in 1872 as an apprentice in the boiler shops at Waterloo, Iowa. T. W. Place was the master mechanic there then. Mr. Place has been on the pension list of the company for several years.

The salary of apprentice boilermakers then was 75 cents a day for the first year, with an increase each year until it reached \$1 the fourth year. After the term of apprenticeship was completed, Mr. McDermott was made a journeyman boilermaker at a salary of \$2.25 a day. That was an admirable salary in those days, he says.

#### Steel in His Eye 25 Years

A piece of steel lodged in Mr. McDermott's left eye when he was employed in the shops at Waterloo. It gave him considerable trouble, but he lost no time at the shops, he says. The wound soon healed, and he thought little more of the injured eye. About twenty-five years later, a physician removed the piece of metal at Water Valley. His eye is weaker, Mr. McDermott says, but the sight is not greatly impaired.

Soon after his apprenticeship term was finished at Waterloo, the business of the company became slack, and many men had to be suspended. Mr. McDermott, being the newest man in the shop, was one of the first to go out. He went to Memphis, Tenn., where he obtained a position with the Mississippi & Tennessee Railroad as a boilermaker. During the fever scare of 1878, the shops at Memphis were closed, but Mr. McDermott stayed in the city until work was resumed in 1879. That same year, the shops were closed again for the same reason, and Mr. McDermott decided that the best thing to do was to go north.

He considered himself lucky by escaping the first year, and did not want to run the chance a second time.

#### From Dubuque to Memphis

He went to Dubuque, Iowa, and there worked for the Chicago, Dubuque & Minneapolis Railroad. He was not satisfied with his employment in that company, and welcomed a call back to Memphis when the shops were reopened. He was well liked by the officials of the C., D. & M. at Dubuque, and they tried to persuade him to remain. A man came to take his place, however, and he returned to Memphis as a boilermaker for the Mississippi & Tennessee. This road later became part of the Illinois Central System.

Mr. McDermott remained in Memphis until 1882, when he was transferred to the shops at Water Valley as a boilermaker. Business had greatly increased then, he says, and there was much work being done at Water Valley. Many cars were being built from the ground up, and more men were needed every day.

He was made boilermaker foreman in 1898, when J. T. Goodwin resigned, and he has kept that position since.

Mr. McDermott says that there is a vast difference between boilermaking of today and the early days. There were few tools for the convenience of the workman in his first days, he says. Everything was made by hand, and the worker had to have more skill then. But the finished piece of work today is better than that of yesterday, he says.

#### Follows in Father's Footsteps

W. J. King, blacksmith foreman in the shops at Water Valley, is following directly in the footsteps of his father. The elder Mr. King, who died in 1901, was blacksmith foreman at Water Valley for thirty-two years. But that does not mean that the present foreman expects to die after he has served the company in that position for that length of time. W. J. King is said to be the youngest old man in the shops at Water Valley, and he looks the part. His physical make-up is truly that of the blacksmith type—robust, sturdy and tough as the metal on which his muscles were built.

Mr. King was born in 1861 at Mobile, Ala. His father was a blacksmith for the Mobile & Ohio Railroad at that time.

When the Civil War was ended, the King family moved to Vicksburg, Miss. The trip, which was made in a wagon drawn by an ox team, required many days of hardships. That

John M. Dermott

C. F. Johnson

W. J. King

W. H. Myers.

A. P. Berglund

trip, Mr. King says, is the first event of his life he distinctly remembers. The second is the pair of pants which took the place of his skirts on the arrival at Vicksburg. He was a real boy then, and his father's occupation began to loom as the grandest thing in the world.

After several changes, the elder Mr. King accepted a position as blacksmith foreman in the shops at Water Valley in 1868.

### Made Good as Blacksmith

When the boy had reached the age of 14, his father got a position for him in the boiler shop. He entered the service as a boilermaker helper, and did not sign the apprenticeship papers. He was determined to become a blacksmith, he says, and did not want to spend four years as an apprentice in the boiler shop. He accepted the position because it was the only thing open at that time. At the end of eight months, he persuaded his father to make out apprenticeship papers for him in the blacksmith shop.

After his name had been placed on the dotted line, Mr. King says, his ambition was to prove himself the best apprentice in the shop. His salary at the beginning was \$1.25 a day. This was to be increased gradually during the four years of apprenticeship, and at the time he became a full-fledged blacksmith he was to receive \$3.35 a day. J. F. White, master mechanic at Water Valley at that time, believed in encouraging apprentices. When one showed that he was interested in his work, and did his best no matter how minute the task was, Mr. White kept that spark of ambition alive by encouraging boosts in salary.

Young King did his work with a thoroughness that soon drew the attention of the master mechanic, and the apprentice's salary began to increase in proportion to the service rendered the company. The result was that Mr. King was receiving \$3.35 a day, the salary of a blacksmith, the last year of his apprenticeship. He was doing the work of a blacksmith. He made rocker arms, tumbling shafts, rods and many other parts for new engines. Everything he turned out was a good piece of work.

### Succeeded Father as Foreman

After the 4-year term of apprenticeship was completed, his work was not changed, and neither was his salary. He plugged along

with increasing interest trying to accomplish all that he could.

In 1897 the elder Mr. King's health began to break. That year his son was appointed assistant foreman of the shop, and he continued in that position until the death of his father in 1901. W. J. King was then made the blacksmith foreman.

Mr. King claims credit for making the 3½-by-5½ Crupp tire which made the record of running eleven months and eleven days without having to be taken off. The tire was turned over to him after having been split in the original fitting, he says, and he was told to see what could be done with it. A perfect job of welding made it as good as new, and the surprising run of eleven months and eleven days resulted. The tire was finally taken off on account of a split, he says.

Mr. King remained at the Water Valley shops during the fever scares of 1878 and 1879, and did not have the fever.

The railway employes at Water Valley have a picnic every year, and Mr. King plans and arranges the program.

### Was a Native of Sweden

C. F. Johnson, carpenter in the shops at Water Valley, proudly boasts of being one of the oldest men in service at that place. He first started to work in 1876 as a carpenter in the shops at Water Valley, and he has continued in that place since.

Mr. Johnson was born in April, 1852, in Sweden, and lived in that country until he was 25 years old. His father was a carpenter and wagon maker, but Mr. Johnson did no carpenter work while he lived at his home in Sweden. His father died when he was 16 years old, and he left the little farm to learn the shoemaker's trade in Norway. He was there a little more than a year when he decided to give it up and return to his farm home.

It was not long after his return from Norway that Mr. Johnson received a letter from a brother who was a carpenter in America. The brother pictured the possibilities of this country so attractively that Mr. Johnson decided to venture across the ocean. On his arrival he found that his first impression was that he did not like the new country, he says, and he gave his brother a good talking to for persuading him to leave the farm at home.

Mr. Johnson went straight to Water Valley, when he arrived in this country, but he was

unable to obtain a position alongside his brother in the shops for two weeks.

### Rapid Work Building Cars

His first work was repairing damaged box cars and building new ones. New cars were built complete in five hours by six carpenters, he says. It took about the same time to build coal cars, but flat cars were built at the rate of three in ten hours.

About a year later, Mr. Johnson was put to work on passenger car building and repairing. He remembers one particularly neat mail car which he helped build. It was the pride of all six carpenters who worked on it. They eagerly watched it, as it was taken out for the first trip. That same day, word was received that a wreck had occurred, and the new car was demolished.

Mr. Johnson says that his salary at the beginning was only 12½ cents an hour. After six weeks he was raised to 15 cents an hour, and three years later he received 20 cents an hour. At one time in the last few years his salary was 85 cents an hour, but now it has been reduced to 77 cents.

He does little car repairing now except on special occasions. His duties chiefly consist of cabinet making, pattern making, making cabs for engines and furniture for the shop offices.

### Put In Shops' First Air Brake

A. P. Berglund, also a carpenter in the shops at Water Valley, installed the first air brake on a car that was built in the shops at Water Valley. He has been in service for forty-five years, all of the time in the Water Valley shops.

Mr. Berglund was born January 1, 1851, in Sweden. His father was a bookkeeper. There was a little farm about the home in Sweden, and the young son worked it until he was about 17 years old. Three older brothers felt the call of America and made the trip across. A lumber mill was established at Water Valley, and the three boys worked diligently to make it a success. The youngest of the three returned to Sweden after he had been in America a short time, but found that the new country offered more opportunities than the land of his birth. He persuaded his younger brother, A. P. Berglund, to leave the old home place and accompany him to America.

On arrival at Water Valley, the youngest boy was given a position in the mill carrying lumber away from the planer. He did not

like the new work, he says, and frequently complained to his brother for persuading him to come to America, but he made the best of his circumstances.

### Entered Railway Work in 1877

A short while afterward, the two younger brothers became carpenters, and built houses along the right-of-way of the Mississippi Central Railroad. They were successful in their undertaking and thus worked up a large market for some of the lumber turned out by their brothers' mill.

But it was not to last long. The mill was sold in 1877, and the boys were left without a position. A. P. Berglund lost no time in finding work. He had become an accomplished carpenter by this time, and he applied for work at the railway shops at Water Valley. He was given a position as carpenter, and was put to work building new cars and repairing old ones. Later he was given the work of making doors and benches.

### Coming of the Air Brake

Mr. Berglund had continued in this work for several years when the news came to Water Valley that all cars were to have air brakes. This was considered a great step in the railway business at that time, he says. It meant a decrease in the number of wrecks and an increase in the length of the freight trains. Up to that time, each car had to have the brakes set by hand. Twenty cars made a huge train, even though the cars of those days were "match-boxes" by the side of the present cars.

A car with newly installed air brakes was sent to Water Valley from Vicksburg, Miss. It was to be a model by which brakes were to be placed on the cars at the Water Valley shops.

Mr. Berglund says that he installed the air brakes on the new mail car Mr. Johnson referred to as being smashed in a wreck on its first trip.

His duties consist now of making ladders, ice boxes, coal boxes, caboose material and repairs for the yards. He has never been laid off, and he has never been injured in service. His record is one of good conscientious service from the beginning.

for Our Magazine*  
(See Page 7)

### A Prayer

WHAT the newly converted railroader said upon being asked to lead in prayer: "O Lord, now that I have flagged Thee, lift up my feet from the rough road of life and place them safely on the deck of the train of salvation. May the safety lamp be known as prudence and all couplings of the train as a strong link of love, and let my hand lamp be the Bible. And, Heavenly Father, keep all switches closed that lead off on the sidings, especially those with a blind end. O Lord, if it be thy will to have semaphore block signals along the line, show the white light of hope that I may make the run of life without stopping. And, Lord, give us the ten commandments as a schedule, and when we have finished our run on schedule time and pulled into the great dark station of death, may the Superintendent of the Universe say, 'Well done, thou good and faithful servant; come and sign the payroll and receive your check for eternal happiness.' Amen."—SELECTED.

### On a Slow Train

Every time the conductor of the mixed train passed through the coach the melancholy man inquired nervously: "Are we almost there, conductor?"

"I've told you repeatedly that we'll get there on time," snapped the conductor.

"Remember, my wife is dying," returned the melancholy man dolefully.

Half an hour later the conductor passed through again.

"I guess she's dead now," said the melancholy man, seizing him by the coat tail, "but I'd be willing to pay extra fare if you would speed up a bit and catch up with the funeral. If they embalmed her I might be in time."

The conductor silenced him with a stony stare.

The man remained quiet for a spell, calmly

chewing a cut of tobacco and spitting at a cuspidor. Then the conductor passed through again.

"Conductor," said he, "there seems to be a stiff wind dead ahead. If you would get up a little more steam I would be glad to pay for the extra coal. I'd like to see my wife's grave before the tombstone crumbles with age."

"If you don't sit down and keep quiet, I'll make more work for the damage suit lawyers," returned the conductor.

The man sighed mournfully, and the conductor passed on.

The next time the conductor passed through the train the man said excitedly: "Conductor, I just now remember I have a note due in the bank in thirty days, and my credit will be ruined if you don't get me there in time to meet it."

"There'll be an inquest over your remains if you don't watch out," the conductor threatened.

Sadly the melancholy individual fell back in his seat.

There was a lot of switching done at the next station, and when the conductor entered the coach again he endeavored to keep his temper under perfect control. He was surprised to see the melancholy man laughing and talking with a passenger who a few minutes before had entered the coach. A flask containing a suspicious-looking colorless liquid, which a Volstead chemist would have undoubtedly pronounced contraband, was in plain evidence.

"You don't feel so bad about your wife's death just now," said the conductor.

"Time heals all wounds," said the disconsolate one.

"And you're not so darned particular about the note?"

"Not now. I should worry. I've been figuring the thing out, and I find that the note has been outlawed by the statute of limitations since I saw you last."

The conductor collapsed, and the train dragged on.—T. T.

### Earlier Chicago

In 1863, there were only two railroad tracks on the lake front, both laid over the piling. The Illinois Central had its roundhouse at Fifteenth street and the Michigan Central ran over the same tracks.

There were two locomotives in the roundhouse which went to the railroad yards

and to the passenger depot. They were used for both freight and passenger trains.

As customary in those days, these locomotives were named—Lucifer and Pluto. Their wide-brimmed smokestacks were a bright red.—J. C. in *THE WAKE OF THE NEWS*, *Chicago Tribune*.

**Revenge Is Sweet**

"You got even with that motorist who ran over you," said the sympathetic bystander.

"What do you mean?" asked the pedestrian, who was brushing the dust from his clothes.

"The remarks you made about the vintage of his car brought a blush of shame to his cheek."

**A New Angle on This One**

When the ambitious young man entered the superintendent's office the office boy was seated in the swivel chair with his feet on top of the desk.

"Is the superintendent in?" inquired the young man.

"Nope; you'll have to wait. Whadda yer want?" said the kid.

"Do you suppose there is an opening here for a college graduate?"

"Nope; not now, but there will be if they don't raise my wages."

That same kid was fired shortly after.

"Well," said the chief clerk to the superintendent, "we've seen the last of him."

"Don't be too sure," replied the superintendent. "He's liable to turn up here again as an efficiency expert."

**Those Switch Engines!**

The following story is credited to the late John Kendrick Bangs:

A train made up of day coaches and Pullman sleepers broke through a wooden trestle and landed in a frightful mass of twisted wreckage on the bottom of a ravine some eighty feet below. The wrecking crew worked nobly, and after several hours of heroic effort came to a crushed and splintered sleeper at the base of the ruin. There amid the debris, sleeping peacefully, with a beam across his chest, lay the porter, wholly unhurt and dreaming. He was even snoring. The foreman of the wrecking crew, with suitable language expressing his amazement at the miracle, finally succeeded in getting Sambo half awake.

"Wh-whut's de mattah?" stammered Sambo,

sitting up and gazing dazedly at the ruin on every side.

"Matter?" echoed the foreman. "Why, jumping jehoshaphat, man! Don't you know that this whole dod-gasted train has fallen through the trestle? It's a wonder you weren't killed. Didn't you feel anything?"

"Why, yas, boss," said Sambo. "I did feel sumpin' kind o' jolty; but I t'ought dey was a-puttin' on de dinah at Jackson."

**Speaking of Heat**

"Last night was the hottest night in the year."

"Not for me; the hottest night for me was when my wife discovered that my pay had been raised and I hadn't told her of it."

**More Married Life**

"Well, well," exclaimed the Mrs., looking up from the evening paper, "boots and shoes should be getting much cheaper now. Here's an item that says they are being made from all sorts of skins, even rat skins." Then, in an effort at witticism, she added: "I wonder what they do with banana and orange skins?"

"Why, my dear," replied the Mr., "they make slippers."

## Woman Tells of Her Forty Years in Service

*Miss Annie B. Perce, Employed in Office of Agent at Cairo, Ill., Comes From an Illinois Central Family*

*While we are talking about veteran employes of the Illinois Central System, it might be well to pause and take note that not all of our veteran employes are men. Here is a veteran woman employe with an experience of forty years in the office of the agent at Cairo.*

By MISS ANNIE B. PERCE,  
Office of Agent, Cairo, Ill.

I MAY be said to belong to an Illinois Central family. There has been very little time since the road was begun that members of my family have not been in the service. My grandfather, William L. Perce, was senior member of the firm of Perce, Keith & Snell, which built the line north from Clinton, Ill. Three sisters and two brothers of mine have been in service, and one brother is still in the office here. My father, Samuel Y. Perce, worked for my grandfather as a civil engineer until the completion of the line. He was then made agent at Polo, Ill., and was afterward agent at Dixon, and later at Wapella, from 1865 until 1878. In the fall of 1878 we came to Cairo, where my father was employed in the office until his retirement.

I, however, had no thought of engaging in railway service. I planned to be a teacher. After my graduation from the Cairo High School in 1879, I taught in the country for three years. In the summer of 1882 my father

was called away for a few days, and I helped with his work during his absence. Shortly afterward a vacancy occurred on the abstract desk, and the chief clerk, George Chellet, offered me the position. I accepted it, and so all my plans were changed.

Pay Was Good "for a Girl"

At that time very few women were employed in offices of any kind, and I believe I was one of the first in local railway office work. My first salary was \$45 a month, which was considered very good pay "for a girl." It was the opinion of most employers in the early days that the chief recommendation for a woman was that her services could be had for less money than those of a man.

After three years as abstract clerk I was promoted to assistant cashier, and three years later was appointed cashier. The cashier-ship at that time included the duties of station accountant. Cairo and Mounds were then under one agency; so the accounts of Mounds, except the local accounts, were included in Cairo accounts. The position was one of considerable responsibility and hard work.

In 1901 I asked to be relieved and given a desk in the other office. When the traveling auditor, C. C. Whitney, checked me out, he recommended that a station accountant be appointed, and I was given that position, which

Miss Annie B. Perce at Her Desk

I held until July, 1921. Since then I have been handling Uncollected.

From the time of my appointment to the cashiership, in September, 1889, until July, 1921, there was only one month that I did not make up the Statement of Account. That was in May, 1908, when I was absent on thirty days' vacation.

### Time-Saving Methods Now Used

Railway office work, like every other kind of work, has changed very much in forty years. We have in the office here an old Freight Received Book dated 1865. This book, made of fine quality stationery, with entries in beautiful and painstaking penmanship, carefully spaced and ruled in red ink, appears as a relic of a more dignified and leisurely age, when contrasted with the modern carbon process, lead pencil records. When my work began the same styles of records were required. Waybills were then abstracted in books and copied on sheets to be sent to the auditor's office. Freight bills were made with pen and ink, each part written, while for use in checking freight a book copy was made, and, in addition to these, notices were made to consignees. It is a far cry from that laborious method to the present manifold system whereby freight bill, cashier's memorandum, notice, delivery sheet, and freight received record are made at one time with a typewriter.

Many records which we considered necessary have been done away with. Although some of them were relinquished with many misgivings, we find that everything goes on and the results are about as satisfactory as before.

I remember one traveling auditor who insisted that connecting line settlements should be entered in detail on the cash book, instead of only weekly totals, and the question was fought out whenever he checked the station. Now the tendency is to cut out all duplications.

### Worked More Than Eight Hours

Looking back to the early days in the crowded, inconvenient old stone depot, with none of the modern labor-saving devices such as carbon paper, typewriters, adding machines and telephones, I wonder sometimes how we accomplished all that we did. Perhaps it was because we had more time.

We were not limited to eight hours a day. For many years office hours were from 7 a. m. until 12, 1 p. m. until 6, "and as long thereafter as the work may require."

Working conditions in respect to hours of labor, as well as in many other respects, have greatly improved, and railway clerical work is in many ways more desirable than it was even a few years ago.

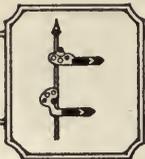

During my service Cairo station has had only three agents and four cashiers, but the clerks who have come and gone, if they could be assembled, would make a fair-sized army. Many of them would think it a dream come true if they were to see our present beautiful, large, well-lighted, well-ventilated and modernly-equipped office.

## IN NEW QUARTERS

W. H. Brill, general passenger agent at New Orleans, has just distributed 10,000 postcards like this, showing the location of his new offices in the new Hibernia Bank Building at New Orleans. The building, which was completed and occupied October 1, 1921, is twenty-three stories high and has a lantern at the top of the tower 355 feet above the street. The tower is chartered as an official lighthouse by the United States government. The building covers approximately half an acre.

## ACCIDENT AND

## INJURY PREVENTION

## Wiping Out Personal Injuries at McComb

By R. E. REVERE, Machinist,  
Member Safety Committee, McComb Shops

**P**ERSONAL injuries at McComb shops are handled as follows:

We have a committee composed of one committeeman from each department. It is the committee's duty to inspect all places about the shop that are likely to cause an accident, and report its findings to the foreman in charge, who gives the matter his prompt attention and often prevents a personal injury.

The safety committee is at all times on the alert for defective tools and machines that may cause an injury. Improper conditions are always reported, when found, to the tool foreman, who has the tool or machine repaired so as to prevent any one from being injured.

Emery wheels get special attention at all times. They are kept dressed and the guards are always kept clean, so that the man grinding on the wheel will not have to raise the guard to see what he is doing, thereby preventing eye injuries due to flying emery.

When an employe is injured he is given medical attention as soon as possible. It is the duty of the foreman under whom he is working to accompany him to the doctor to determine just how severe the injury is, so that he will be in a position to state whether or not it will be necessary for the injured person to lose any time or about how many days he will lose.

The foreman in charge makes out a preliminary report as soon as he gets back to the shop. The injured person makes out the usual personal injury report, Form 475. If he does not lose any time he also signs a non-disability slip and returns to his regular line of work or such work as he can do.

By a plan of following up closely each injury and insisting on having the injured person return to work as soon as possible, the number of reportable accidents can be reduced considerably.

We have another reason for watching the

### TELEGRAM

Form 500

Illinois Central Railroad Company

OMIT EVERY UNNECESSARY WORD

DEAR BILL

IF YOU WANT TO BE A FRIEND OF MINE DONT EVER LET ME CATCH YOU  
SHOWING ANY CARS OVER A PUBLIC CROSSING WITHOUT PROTECTING THE CROSSING.  
SOME BIRD PULLED OFF THIS STUNT WHEN I WAS DRIVING MY ASH CAN OVER A  
CROSSING LAST WEEK AND I CAME PRETTY NEAR JOINING THE ANGELS. THERE  
WAS A COAL CAR ON THE SIDING AND AFTER PASSING IT AND WHEN HENRY'S

SUMMER.

JIM.

injuries closely. You will find a number of men about the shops who carry accident insurance, and they will stay off work longer than they really should in order to get their insurance and to have a claim for time from the railway company.

After the injured person returns to work there is an investigating committee to find out just how the accident occurred and whether or not it was carelessness on his part.

The committee also makes suggestions on how the accident could have been prevented. This report is put on our safety bulletin boards (which are located in desirable places in each department), and all employes are able to read just how the employe was injured and how it could have been prevented.

The safety committee meets with the master

mechanic once each month to go over the different means by which a personal injury might have been prevented, as about 70 per cent of our personal injuries are caused by carelessness.

The best way in the world to prevent personal injuries is for every man to be careful in what he is doing so as not to get hurt or to do something that might cause someone else to be injured.

If a member of the safety committee sees employes doing something that looks dangerous, he goes to them and tells them that they are likely to be injured. Sometimes an employe will laugh at you when you tell him about the dangerous move he is making, but the majority of the men will listen to good advice.

## NEW COMMUNITY DISPLAY AT HAMMOND, LA.

Another good piece of work accomplished by the Chamber of Commerce of Hammond, La., is the installation of the agricultural display case at the Illinois Central passenger station, according to the January 20 issue of the Hammond *Vindicator*.

Samples of practically all of the agricultural products of Tangipahoa parish may be seen on display in the case, making a beautiful and pleasing effect, which will no doubt attract the eyes of hundreds of people as they pass through Hammond. In the case may be seen fine specimens of corn, sweet potatoes, strawberries, oranges, preserves, pecans, cotton, cotton seed, and in fact the many crops cultivated in Tangi-

pahoa parish. Handsome photographs of scenes at the fair grounds are tastefully arranged so as to give the best result.

Fair Manager Mort Bixler and A. A. Ormsby of the Louisiana Agricultural Extension Department arranged the display for the Chamber of Commerce, and will, from time to time, make an inspection and see that the case is kept attractive.

"It is certainly a fine advertisement for this section, and the money expended in assembling the display was judiciously spent. We only wish that the parish had one of the displays in every large northern city. The result would be surprising," declares the *Vindicator*.

# Promptness a Big Factor in Handling Mail

## Our Chicago Platforms Take Care of an Average of 35 Inbound and 41 Outbound Cars, or 250 Tons, Daily

By J. W. DODGE, JR.,

General Foreman, Mail Platforms, Central Station, Chicago

“**P**ROTECT the mails if it takes every marine in the service” are the orders of the Postmaster General. It has not been necessary for the management of the Illinois Central System to issue such drastic orders, but it is generally understood that the United States mails must move without unnecessary delay.

In order that a clear understanding may be had, it should be borne in mind that the proper handling of United States mail covers a wide field and demands accuracy, promptness and close co-operation of the various departments.

At Central Station, Chicago, the mail is classed in two units—inbound and outbound.

All carloads inbound are switched to the incoming platform, unloaded and classified for twenty-two different points and dispatched to the various stations by automobile, on schedule. Ten minutes is allowed for the placing of these cars. Mail handlers must do this unloading and classifying under scrutiny of government transfer clerks. Less-than-carload mail is trucked to the incoming platform and disposed of in the same manner. The incoming platform will accommodate five cars. It is 300 feet long and varies in width from 8 to 25 feet. An average of 35 cars, or 10,000 pieces of mail, per day is handled over this platform.

The outbound platform is 12 feet wide and 200 feet long. Mail is delivered on this platform and separated on trucks for the various cars and trains. All of the outbound mail is trucked to the cars after separation and is then again separated and piled according to diagrams furnished by the government for each car. An average of 41 cars, or 13,000 pieces of mail, per day is loaded outbound.

At this station mail also is handled for two other railroads—the Big Four and the Michigan Central.

The mechanical department figures largely in the handling of mail. Postal cars must be in a sanitary condition, supplied with fresh water and ice. The lights must be in such condition that they will function properly, and the heating facilities must not fail in cold weather. Postal clerks must be comfortable, or they cannot accomplish the work assigned them. Loading is delayed if steam is not turned on, because the postal clerks are not required to enter cars until they are heated to a comfortable temperature.

The switching of postal as well as storage mail cars is one of the most important items in handling mail properly. A delay in placing incoming cars for unloading results in the scheduled automobile having to leave the station without mail in order to perform its other work on time. This necessitates calling an emergency automobile, and in most of such cases, if connection mail is involved, the connection is missed and an irregularity results.

Failure to place cars for loading on schedule time prevents the clerks getting into them, and mail cannot be loaded until clerks have reported. The bulk of the mail in these cars is to be worked, and consequently a delay means extra effort and sometimes a failure to deliver at destination or transfer point. All avoidable irregularities are chargeable to the railroad and subject to fine in each case. Fines

The Mail Platform in 1905. Foremen H. Hunt (2) and R. Grabham (4) and Platform Men T. Malley (1) and C. Campbell (3) are still in service.

*The Mail Platforms Today*

can always be collected for they can be deducted from the railroad's compensation, and, when once assessed, they are seldom remitted. Government transfer clerks are assigned to the platform at all times, and it is their duty to report all irregularities.

Mail handled over this platform is of five classes, as follows: Registers, pouches, daily papers, paper mail and parcel post. Each outgoing pouch, sack or parcel must be loaded in a certain car of a certain train, and mail handlers must know what mail must be loaded into each particular car. If it is to be loaded in postal cars, it must be taken to the proper door; otherwise it is thrown out by the clerks. This necessitates re-handling, as clerks have no time to direct mail other than their own, even though they may know in which car or portion of car it is to be placed. If loaded in storage cars, it is the duty of mail handlers to separate and pile it properly, for, if wrongly separated, it is carried by destination or transfer point and an irregularity is reported. Except when separating or piling mail inside of cars, the entire work of mail handlers is out of doors.

Before the inauguration of the parcel post mail, Central Station had a platform six feet wide and twenty feet long. An average of 5,000 pieces of mail per day passed over this platform, requiring the services of fifteen men. The present platform, 500 feet long and 12 feet wide, extends from Roosevelt Road (12th Street) to 13th Street along Indiana Avenue,

and an average of 250 tons of mail per day is handled over it, requiring the services of fifty men.

This article would not be complete without referring to the personal side of the mail handlers at Central Station. The majority of the men have been in the service several years. Many of them are married and own their own homes; they are a conscientious and loyal group of employees.

#### TELEPHONE SAVED TROUBLE

An advantage of the telephone over the telegraph is shown in the following letter from A. A. Freiberger, chief train dispatcher at Memphis, Tenn., to B. Weeks, superintendent of telegraph:

"At 9:15 a. m., January 11, the section foreman at Rising Sun, Miss., came in on the dispatcher's telephone at the conductor's booth at that point and reported finding a piece of broken flange from a car, which had evidently broken out of a car in a train southbound that had just passed there a short time before.

"We caught this train at Cruger and found eighteen inches of flange on the lead wheel on the forward truck of a heavy coal car in his train broken out. It would, no doubt, have caused a derailment before the train arrived at Gwin had it not been found at Cruger.

"Had there been no booth telephone at Rising Sun, no doubt an accident would have occurred before the section foreman could have reached a telegraph office to report."

### Speech! Speech!

Our best friend argues that it is unnecessary nowadays to cultivate good speech. "How wonderful," "I'll tell the world," and "You know it," she claims, will carry one through any conversation. And she cites the modern fiction marvel, whose heroine wends her way through the chapters, stopping here and there to breathe a soft "Damn!" We agree with our best friend that "damns" should be soft, unless one happens to catch her fingers in a door.

Some individuals have an ear for music. They may be unable to play or sing a note, but their musical ear detects the slightest discordant sound. Unfortunately, we have not an ear for music, but we have what affects us in much the same way—an ear for English. The "ain't got nos" and "don't want nones" chill us disagreeably.

We must tell you about Jim, our one-time office boy. His nose turned upward at the tip, and his hair was too much on the carrot shade to make an artist rave. But he had a charming smile, and we liked him so much that one day we reminded him that he should not say "ain't." He frowned belligerently upon us and retorted, "Mr. Blank says ain't." Mr. Blank was the head of the department and the sun in Jim's small universe. So our efforts with Jim ended there. Mr. Blank was a graduate of a famous Eastern university—and one may say what one pleases, it seems, if he knows better!

By your conversation are you known. Time and again we have heard a lament like this: "Mrs. Brown is a stunning woman, but when she opens her mouth"—and there words fail the speaker. What are some of these little "give-aways"? We shall point out a few of them.

On the suburban train one day we overheard a smartly gowned woman prefacing her remarks in this way: "Between you and I." We

wanted to whisper in her ear, "Never between you and *I*, dear madam; always between you and *me*." Don't you remember 'way back in seventh grade, when we wore curls or pigtail, and wrestled with prepositions and cases? We learned that prepositions must be followed by the "me, her, and him" pronouns, and not the "I, she, and he" forms. Prepositions are words like between, into, upon, over, among, behind.

Another common error: "Laura invited Mae and *I* to go." Or, "She asked *we* girls to come for luncheon." In the former case, whom did Laura invite? Mae and *me*; objective case after the verb. In the latter case we are confused by the word "girls," for doesn't the sentence really mean, "She asked *us* to come for luncheon"? We would not say, "She asked *we* to come."

Thanks to an excellent English teacher, who advised us to "Murder your relatives, but don't split your infinitives," we learned to avoid such expressions as "to quickly go," or "to at any time come." So we should say "to go quickly," or "to come at any time."

Some teachers declare for "He don't" and "It is me," instead of "He doesn't" and "It is I," but we are just old-fashioned enough to adhere to the latter form. "It is she," and "It is he,"—not "It is her," and "It is him."

Woman has come to play such an important role in civic affairs, and she is called upon so frequently nowadays to take the "stump" in behalf of some measure or other, that it behooves her to look well to her speech-making equipment. She needs every bit of poise that she can command, and if there must be a mental tussle with a word or an expression of which she is doubtful, her momentary hesitation will interfere with her continuity of thought, and she is in danger of losing her grip upon her audience.

Some women converse easily and correctly, but if one feels the least uncertainty about grammatical forms, she should consult one or

more of the numerous books on the subject which line the shelves of our public libraries and which are accessible at almost any time. In addition to this, there are several magazines published at the present time which devote their contents exclusively to correct English. In the daily newspapers we frequently find mispronunciations played up. Haven't you seen the word "column" distorted into "colyum"?

We do not agree that conversation has degenerated into a few slang expressions. We cannot all be brilliant conversationalists, but we can improve the quality of our conversation. Careless expressions indicate careless thinking. There are so many beautiful things in the world about us, in music, art, literature, and the wonders of nature, that, since it is said that women *must* talk, it seems too bad to waste our energy in wielding that weapon which may even destroy our neighbor's good name. Don't you remember the story about the woman who opened a bag of feathers and scattered them to the four winds? That is about what happens when we circulate gossip. We can no more pick up the escaped fragments than she could recover her feathers.

#### Household Hints for Home Makers

To remove indelible (copying) pencil marks, soak fabric in grain or wood alcohol until stains are dissolved, then wash with soap and water.

If cauliflower is cooked in equal parts of milk and water, it will not become discolored.

Oil of pennyroyal will drive away ants. Sprinkle a few drops on bits of cotton and distribute them near the cracks or openings where the pests enter.

Use an earthenware bowl and a slitted wooden spoon to cream butter and sugar. Metal utensils discolor the sugar and shortening.

To clean enamel paint, rub first with a woolen or cotton flannel cloth wrung out of hot water, and then with a clean, dry cloth.

Burn your tongue? A bit of butter will relieve the smart.

A small package of raisins in the school lunch will please the children.

Hang your blouses upon clothes hangers and they will not wrinkle.

A mop wringer fastened to the cleaning pail saves much stooping and wrings the mop more thoroughly than can be done with the hands.

#### Tennessee Division Recipes

**CHOCOLATE FUDGE.**—Cook together 3 cups granulated sugar, 3 tablespoons cocoa, 2

tablespoons white corn syrup, 1 tablespoon butter or cooking oil,  $\frac{1}{4}$  teaspoon salt, and  $\frac{3}{4}$  cup milk until the mixture forms a soft ball when dropped in cold water. Set aside to cool. Then add 1 teaspoon vanilla, and beat until it creams. Pour into greased pan and cut in squares.

**SALTED ALMONDS.**—Blanch almonds by pouring boiling water over them. Let stand a few minutes, remove skins, and dry in oven. Fry in deep, hot fat. Remove from kettle and sprinkle with salt. Place in oven a few minutes to dry.

**WELSH RABBIT.**—Heat 1 cup sweet milk, add 2 cups grated cheese, and cook until cheese melts; beat in yolks of 2 eggs, salt and pepper to taste. This covers four slices toast.

**FRUIT SALAD DRESSING.**—Heat to boiling point  $\frac{1}{4}$  cup pineapple juice,  $\frac{1}{4}$  cup orange juice,  $\frac{1}{4}$  cup lemon juice, and 3 tablespoons water. Sift together 1 tablespoon cornstarch and  $\frac{1}{2}$  cup sugar. Stir hot liquid into dry ingredients, and cook in double boiler 15 minutes. Slightly beat 2 eggs, then add the cooked mixture, a little at a time, until all has been used, beating constantly. Put back on stove for one minute. Thin with whipped cream.

**CHEESE-NUT LUNCHEON SANDWICHES.**—2 cups finely chopped nuts, 1 cup grated cheese, 1 teaspoon sugar, 1 teaspoon salt, 1 cup salad dressing. Slice bread in shape and size wanted. Cover the bottom slice of bread with nuts, spread salad dressing over the nuts, then cover with cheese, salting and sugaring it the least bit, add more salad dressing, then a

### *Railway Business Ethics*

To provide courteous and efficient service.

To be able to assure the public of clean, sanitary and safe transportation.

To avoid the "public be damned" attitude and collaborate with civic communities in betterments for both public and railroad.

To instill loyalty in our employes toward railroad, community and country.

To solicit business on a fair and square basis of dealing and sell to the public as much transportation as we can, as that is all we have to sell.

To be open and above-board in our dealings and be fair, and to demand the same in return.—H. J. ROSE, Superintendent, Indiana Division, at meeting of Mattoon, Ill., Rotary Club.

lettuce leaf, and top it with the other slice of bread. This quantity makes five sandwiches.

### Every Woman's Duty

Grandmother used to shake her head and say, "March, many weather." So get out your veils, dear ladies, for there will be harsh winds—depend on it. To prevent a rough and blowy skin, apply a substantial foundation of cream and a generous coating of powder, before venturing forth in the weather.

Drink plenty of buttermilk. It is a complexion beautifier.

To stop a choking spasm, raise the left arm above the head.

Among one's toilet preparations should be included a vial of glycerine and rose water (equal parts), for chapped hands and lips.

### Listen!

We had cherished the notion that as soon as a diamond blossomed on her ring finger, the happy creature hustled about and learned to cook. But no, there sat one of the species, viewing her "shower" of miscellaneous gifts, carelessly asking whether beans could be cooked in the pretty casserole. (And the wedding only eight days away!)

"We can have toast and coffee, anyway," she remarked, examining the electric toaster.

"You will learn to cook very soon," someone reassured her. "It will come naturally to you."

We could not help hoping that her first efforts as a cook would also "come naturally" to the happy bridegroom.

The play was an adaptation of a popular novel by a Spanish writer, and the hero had met a tragic death. As I stood in the lobby, two pretty young things passed me, "goulashes" flapping.

"Did you like it?" floated in my direction.

"All but the ending. Wasn't it just too sad?"

Youth insists upon a happy ending, thought I. But a moment later two silver-haired ladies (I know they were adorable grandmothers) paused long enough to voice their regret that the hero could not have lived "happily ever after" with his Rosa.

Bless their feminine hearts! Young or old, isn't it just like them to look for a happy ending in affairs of love, whether portrayed upon the stage or screen, or lived in the human experiences of those around them?

## COMMUNICATIONS

This magazine is not responsible for opinions printed under this heading. Initials or pen names will be permitted only when correct name and address of the writer are known to the editor.

### The Fuel Conservation Campaign

TO THE EDITOR: Reading in the January issue of our magazine how the Louisiana division saved the most coal and came out winner in the fuel conservation campaign ahead of the Memphis and Tennessee divisions, which were about tied for second place, I decided that the most important feature was left out.

If this fuel campaign had been held prior to September, the Louisiana division would not have won the record for the most fuel saved per 1,000 gross ton miles in freight service.

We all know that the largest portion of coal consumed on a railroad is that burned on through freight trains handling heavy tonnage. On most of the divisions of the Illinois Central System, we have superheated locomotives to handle this tonnage, and we all know they are very economical in the use of fuel.

I was in Gwin, Miss., one day while the traveling engineer was weighing some of the locomotive tanks to ascertain the amount of coal they had consumed in the trip. He showed where he had weighed an 800 class (saturated) engine and one of the 1500 class (superheated) and each had taken the same amount of coal, but the superheated engine had brought in 900 tons more freight than the saturated engine, indicating the great saving that may be effected where superheated power is used.

During August and the early part of September the Louisiana division received about seventeen locomotives of the 1500 class. These are superheated engines. They were the first superheated locomotives that the Louisiana division had received, and they were placed in service as soon as they arrived.

The Louisiana division has about 175 miles of double track, as compared with 27 miles on the Memphis division.

During September and October there were seventeen superheated locomotives, with a tractive effort of 51,630 pounds each, operat-

ing between McComb and Gwin. All the locomotives operating on the Memphis division in freight service were of the 941 (saturated) class, with a tractive effort of 39,180 pounds. So we can all see what the Memphis division had to compete with, and we can have a better conception as to why the Louisiana division came out winner over the Memphis division.

The meetings held, the talks made, the cartoonist, etc., alone did not win this drive, for this propaganda was carried on by all the other divisions, but it was the superheated locomotive vs. the saturated locomotive that put the Louisiana division ahead of the Memphis division in the fuel campaign.

Now I know a great many will take exception to the foregoing, especially the ones on the winning division. But just a question to those who do: Suppose the management had sent these seventeen superheated locomotives to the Memphis division instead of to the Louisiana, and had let the latter operate with the saturated power; which would have won, then, in the amount of fuel saved?

I suppose some time we shall have superheated locomotives in freight service on the Memphis division, and, if we ever do, the other divisions will have to go some to get ahead of the Memphis division in the least amount of fuel consumed per 1,000 gross ton miles in freight service.

The Memphis division, being nearly all single track, requires the use of more fuel when trains meet, as one or the other has to be stopped, and sometimes both. One thing that speaks well for our dispatchers is that they keep us moving most of the time.

Now, taking this all in all and summing it up, with the Louisiana division mostly double-track and the Memphis division nearly all single-track, the Louisiana division having superheated locomotives with an advantage of more than 11,000 pounds in tractive effort over our saturated type—both of which were factors in effecting a better saving—I think the Memphis division, in view of the facilities at hand, made a better saving than the Louisiana division in freight service during the fuel conservation campaign.—J. O. HARLEY, *Engineer, Memphis Division.*

---

### Wrecking Crews

TO THE EDITOR: I am really astonished

at the wasteful methods of some wrecking crews. I think the crew ought really to be a "salvaging" crew. Some crews live up to their names and make worse wrecks than they find.

Very often many things are stolen from the wreck because it is improperly guarded. I have known of some instances where very much valuable freight was stolen or was allowed to go to waste through carelessness.

Very often the wrecking crew will come out in a great hurry, set fire to some cars that could be made usable at a very reasonable cost, and hike back home.

Now I can't see very much economy in that. Every car that can be made usable at a reasonable cost for repairs should be saved. Cars are not very plentiful at the best, and the cost of new ones should be figured.

Suppose we change the name of our wrecking crews and a lot of the work.—  
F. R. HARPER, *Fowlkes, Tenn.*

---

### FROM A PENSIONER

G. W. Hall, pensioned engineer, writes as follows from Route 3, Box 37, Springdale, Ark., to Superintendent J. F. Dignan at Freeport, Ill.: "Annual pass, No. 25649, for myself and wife received. Also pension for January. Thanks for both. Memory often brings other days back. Forty-two years on railroads gave much experience, both of pleasure and hard work, many trials and temptations, all of which were not resisted as they should have been, but now on the last stages of our long journey we are blessed with many kindnesses by our old Illinois Central Railroad. Passes, pension and magazine are all appreciated, and the magazine is passed along to ex-employees who live near us."

---

### A TALKING POINT

The passenger department has called attention to one of our recently named trains, the "Hawkeye Limited" (Trains 11 and 12), operating between Chicago, Omaha, Sioux City, and Sioux Falls. The "Hawkeye" is an all-steel train operating on fast schedule. Its equipment consists of coaches, chair cars, "Hawkeye Limited" (Trains 11 and 12), operation sleeper, the latter being operated between Chicago and Sioux City. Dining car service for all meals is provided.

# Fighting the Snow on Our Western Lines

## *Program Includes Careful Preparation for Winter Service and Prompt Use of Adequate Equipment*

By M. M. BACKUS,

District Engineer, Waterloo, Iowa

ONE of the large problems in getting traffic over the Western Lines in winter is handling snow, and our success in serving the public is measured by the extent to which we eliminate or overcome interference from this source.

To cope with this proposition, means are taken in advance of the actual troublesome season to prepare against delays. Prior to the winter months, meetings are held on each division, the final meeting being held in the general superintendent's office, to go over in detail ways and means of combating the heavy snows which may be expected at some time or other but which usually come with little advance notice. An organization is perfected so that, when snow does become a menace to traffic, every interlocking plant, every switching lead, every engine lead, every turntable, every passenger platform, and, in fact, every switch, is protected. Each outlying switch is equipped early in the fall with a snow broom and shovel. At points where vehicular passage over our tracks is not frequent in winter months, the crossing planks are removed; at other points, flanger signs are maintained so that when flanger is run for cleaning snow away from rail the operator will know where these crossings are located.

### Protection Against Snow

Means are taken to keep snow away from points where it will cause trouble. Turntable pits in this territory are constructed with considerable space between the bottom of turntable and the floor of pit so as to delay interference on account of snow and ice accumulating.

The snow fence, which is of two types, permanent and portable, is a large factor in avoiding trouble, these fences being constructed along the top of cuts on lines parallel with the track. The permanent fence is made of 1x6-inch boards fastened to wooden fence posts which vary in height according to estimated needs. This fence is built on the wayland line and takes the place of standard wire fence in its service of turning stock. The portable fence

is piled up and protected against fire in summer months. In the winter months it is usually placed outside of the waylands on the farmers' fields. The most serious interference to traffic by snow is due to drifting in the cuts. To prevent this, snow fences are used. They retard the wind and air currents so that much, if not all, of the snow which is being carried along is stopped by the plank in the fence, or deposited back of the fence instead of in the cuts. The portable fence, after depositing one drift its full height, can be moved back and in some cases where the snow is heavy can be placed on top of drift and be again as effective as when first placed.

### Snow Fighting Equipment

Weather bureau reports are now obtainable so that fighting snow, except in rare cases, can be accomplished efficiently by means of the organization perfected in the fall. Assigned men, with snow brooms, shovels, scoops, homemade wooden snow plows operated by hand, and melting torches in case of sleet, keep interlocking plants and turntables in operation, and do such work around station platforms as will insure their being clear of snow on arrival and departure of trains. Other men keep open the working leads in freight yards and the engine leads in mechanical terminals.

There are assigned and ready for immediate use at Freeport four wedge plows, two box car flangers, and one Russel snow plow; at Dubuque, Glenville, and Cedar Rapids, one wedge plow at each place; at Waterloo, one Jull plow, one Russel plow, one box car flanger, and two wedge plows; at Fort Dodge, Cherokee, Sioux City, Sioux Falls, and Council Bluffs, one wedge plow each; and at Fort Dodge and Cherokee, one Russel plow each.

Wedge plows are prepared for service by fastening them on to the end of Roger ballast cars which are weighted down with coal. In the spring these cars are dismantled and put in ballast service. The coal primarily used for weighting down the ballast car often furnishes auxiliary supply for heating or for firing a boiler.

The Russel plow is considered our most efficient snow fighting device, the usual practice

being to put it ahead of one or more engines to be literally shoved through the drifts. This plow is equipped with flangers, but otherwise has no machine or engine. It is usually followed by another engine which is used as pull-out engine if the plow gets stuck in the drift, and with it is a gang of laborers with shovels to be used whenever their services are needed.

#### How a Rotary Plow Works

The Jull, or rotary plow, has also proved effective. It is equipped with an auger-like arrangement which bores into the drift as the plow is pushed by the locomotive and deposits snow to one side and behind the plow. This machine is operated at the rate of only four to five miles per hour, so as to permit of disposing of all the material which enters the auger. It is equipped with the standard locomotive boiler. Early in the fall experienced engineers are assigned from each division,

three for each of the Russel plows and two for the Jull plow, to handle air on the plows, communicate with engineers on locomotives and operate flangers.

After an opening has been made through the heavy drifts for the safe operation of trains, and after the storm has abated, it is often found advisable to widen the opening, this being done by means of an American ditcher or Jordan spreader. In terminals, the Jordan spreaders can be used to advantage in cleaning off yard tracks, and the American ditchers in loading snow around station platforms, and engine and working leads.

High winds with a fall of snow may cause delayed passenger trains and retard the movement of freight trains, but the practice now in effect is to take trains, especially of dead freight, to the terminal and hold them there until the storm is over. An efficient organization is handling our snow fighting equipment.

Some Pictures NOT Taken at New Orleans

## A Challenge to Illinois Central Bowlers

### *Railway Men Should Be Well Represented in National Tournament in Chicago Beginning Late in April*

By WALTER E. DuBOIS,  
Voucher Clerk, Chicago

**R**AILWAY men from all over the country have often wished they could take part in a bowling tournament for transportation employes only. Their wish will be gratified this year, for a tournament of railway, steamship, American Express and Pullman employes, or a combination of the foregoing employes, will be held in Chicago this year, starting on April 29 at Bensinger's Randolph street alleys. Five-men contests, doubles and singles will be rolled, and the entry fee for each event will be \$1. It will also cost 25 cents a game for the use of the alleys. All fees will be collected when the players appear on the alleys.

It is expected that at least fifty teams from the Pennsylvania Railroad will take part, with other roads in the same proportion, and it is the wish of the Illinois Central System bowlers of Chicago that at least thirty teams from points on the Illinois Central System will take part. Free transportation is one of the blessings we enjoy, and bowlers are urged to take advantage of that fact, take part in the tournament, and at the same time have a chance to look Chicago over.

The committees handling the tournament wish to take care of the out-of-town bowlers first and have reserved Saturdays and Sundays for them, so as to avoid loss of time from duty. Those desiring to enter are urged promptly to notify W. P. Enright, Room 305, Central Station, Illinois Central Railroad, Chicago, as to what time they can reach Chicago and the time their last train leaves, so that they will be properly taken care of.

Practically all entry fee money will be used as prize money, for the only expense will be for printing and postage, which will leave plenty of money to be distributed among those lucky enough to hit that head pin right. No one is sure of winning, which makes bowling the greatest of indoor winter

sports, and another point that should not be overlooked is the experience entrants will gain, which will be of advantage in our next tournament.

A good room may be had cheaply at various hotels, while meals may be had at numerous cafeterias ranging from 25 cents up. Those desiring something more pretentious may also have their wishes gratified.

All entries must be in the hands of the committee on or before April 12.

The team from the Land and Tax Department in the 12th Street General Office Bowling League at Chicago has stepped into first place, and the members declare they will finish in that position. When Bernbach was injured, it was the beginning of the end of the hopes of the Engineer Maintenance of Way team to finish in first place.

The General Superintendent of Transportation's team, after various ups and downs, once more is in third place, while the General Freight team has surprised all by landing in fourth place. Teams representing the Vice President Accounting and Chicago Terminal Improvement are tied for fifth place, but the chances seem slightly in favor of Captain O'Connor and his team. The Auditor of Miscellaneous Accounts' team has slipped badly, but has plenty of room between itself and the team from the Auditor of Disbursements' office.

The Vice-President Purchasing is coming with a rush and may pass the Auditor of Disbursements before the end of the season. For Larson has his team working well. The Engineer Bridges and Buildings has held the same position for some time, and will probably remain there to the end of the season.

Kindly note that the Officers have moved out of the cellar, and now Mr. McComb is as happy as a kitten with two tails. Captain Ullrich has been unable to get his team started, and it is now resting easily in last place. Next month we shall have the final results, for the season ends March 10.

Here are the standings as of February 10:

Teams	W.	L.	%	Av. Pins Per Game	High Game	High Series
1. Land & Tax.....	44	10	815	813	909	2,657

in rare form recently, totaling 642 for his three games.

The Gilman Local has fired up and is now in trim for a race with the New Orleans Limited.

Powers ("the St. Louis kid") was back in the line-up recently, having finished his course of "warmin' the bench," and rolled 567 for his three games. His score of 567 is high series on his team, the New Orleans Limited, and he also had a 219 game, which is high game for his team.

The race in individual average leaders is tightening up. Callaway slipped, and now Hengels leads, with Pierce third. There is a difference of twenty pins between first and third places.

The Daylight Special trimmed the Panama three straight recently.

The New Orleans Special rolled high series for the season recently, a total of

P. W. Smith of the Seminole Limited was

2,881 pins for three games. The following week the Seminole rolled 2,822, which is second high.

Here are the Burnside Shops' Bowling Club standings for the week ending February 11:

Teams	W.	L.	Pct.	High Game	Team Average
Machine Shop	35	7	.833	900	776
Carpenter Shop	27	15	.692	865	769
Tin Shop	21	21	.500	836	756
Freight Shop	19	23	.452	816	695
S. S. Office	18	24	.428	889	708
Foreman	16	26	.380	840	655

**First Ten Individual Standings**

Names	No. Games	High Game	Average
Rolff	31	243	177
Brassa	42	226	175
Adams	36	235	172
Piske	33	202	167
Ritthaler	33	223	164
Herzog	39	213	160
E. Johnson	39	219	159
Rubbert	39	213	159
Ehrlicher	36	213	158
Bradley	39	196	157

"A comparison of the line-up of January 7 with the one above will show that two teams have been dropped—the Roundhouse and the M. M. Office. This is due to the fact that some of the members of these two teams were unable to attend the games," explains "Andy Gump," our correspondent.

"The Carpenter Shop has somehow or other lost its 'pep' and has dropped from 7 to 15 games lost out of 42 played, while the Machine Shop has succeeded in keeping 'on the alley' by dropping only from 5 to 7 games lost out of the total 42 played. The Tin Shop is showing a marked improvement.

"A committee has been formed, consisting of a man from each club and headed by Chief Clerk Lynch, to settle all altercations which may arise. The attention of the players also is called to the fact that it has been noticed that mistakes in the addition of scores are common; in cases of close games it is likely to make a large difference."

**A BUSY FORCE OF ACCOUNTANTS AT MEMPHIS**

Part of the local accounting force at Memphis, Tenn. This is said to be the first interior view of the depot taken since its destruction by fire in February, 1920. On the left are M. G. Guerard, accountant; Miss L. F. Spain, stenographer; C. A. Anderson, assistant accountant inbound accounts; R. E. Leggett, W. J. Baskin, T. P. Dahogne, J. E. Moray, V. A. Greer, Mrs. M. P. Scholmke and Miss Willie M. Summers, of the inbound accounts. On the right may be seen R. C. Hudson, assistant switching accountant; S. H. Johnson and Z. D. Hurt of switching accounts; W. F. Seat, assistant accountant outbound and miscellaneous accounts; J. L. Katzenmeyer, J. A. Steele, T. M. Baird, W. M. Steigler, W. J. Caruthers, A. M. Bailey and Miss Elva Nokes. J. W. Gish, cashier, and Henry Meyer, assistant cashier, are also seen.

# New Station Rises at West Frankfort, Ill.

## Coal-Mining City Gets the Freight and Passenger Facilities to Keep Pace With Our Increasing Business

BY O. T. DUNN,

Assistant Engineer, Buildings Dept.

**T**O meet increased business, both passenger and freight, at West Frankfort, Ill., as the town and coal-fields have developed, the Illinois Central has under construction station facilities which will be a worthy addition to this growing community and a credit to the company. The location is close to the business section, as well as to the residence section, of West Frankfort. There will be a frame passenger station, facing Monroe street at the northeast corner of its junction with Elm street, and a brick freight-house will stand at the southeast corner of Main and Monroe streets, with necessary platforms, tracks and paved driveways, with a storm water sewer system.

The station grounds, covering two acres, have a frontage of 1,195 lineal feet on four streets, allowing a continuous movement of vehicles from one street along the driveways to another street. There will be three freight-house tracks, three team-tracks and one track serving the passenger station, a total of 4,000 lineal feet of track. Two thousand square yards of concrete and a thousand square yards of brick driveways, with concrete curb, built upon railway property, will connect the adjoining streets and will provide access to the building and team-tracks, so that freight can be delivered to and received from the freight-house or cars directly.

The passenger station will be a frame building 24 by 60 feet, containing a waiting room, a ticket office, a baggage room and toilets,

with the platform and track on the east side and streets on the three other sides of the lot. This makes the station easily accessible from every direction.

### Freight-House to Be of Brick

The freight-house will be a 1-story brick building 32 feet 8 inches by 200 feet 2 inches, on a concrete foundation. It will contain offices for the agent and his clerks, toilets, a perishable material room, and a general freight room 144 feet long containing two standard depot scales, a clerks' office, and a fire hydrant. Along the east side of the building will be a wooden platform adjoining the three house-tracks, and on the west side will be a brick driveway, providing ample space for vehicles using this building.

Both buildings will be lighted by electricity. Modern plumbing fixtures will be installed to connect to the city sewer. The passenger station will be heated by coal stoves, but the freight-house will have a modern 2-pipe steam-heating system, with a water tube steam boiler in a separate room under the office portion of the building.

The Illinois Central has become an important feature in the development of West Frankfort and the coal-fields of Franklin County. This region is one of the largest bituminous coal producing territories in the world.

### Territory Frequently Divided

This section of Illinois was originally part of the vast territory ceded to England by France in 1763, and in turn surrendered to the United States in 1796. The present Franklin

The New Freight Depot at West Frankfort, Ill.

County was then a portion of St. Clair County, and Kaskaskia, the county seat, was established in 1680, deriving its name from a powerful tribe of Indians then inhabiting the territory between the Big Muddy and Mississippi rivers.

In 1809, when Illinois was organized into a territory proper, further sub-divisions were made, and this portion of the territory became included in Gallatin County. This division continued until 1818, when Illinois was admitted to the Union, and Franklin County was formed from the west part of Gallatin. The present town of Franklin Heights marks the approximate location of what was at that time the county seat of Franklin County. The early judges held court in a log house on the site where the large brick school now stands.

By an act of the legislature in 1839, Franklin County was again divided, the southern portion being named Williamson County. This established the boundaries of these counties as we know them today.

#### First Mine Opened at Zeigler

The first mine opened in Franklin County, near the old Kaskaskia trail, was named after its owner, Levi Zeigler Leiter. As the mine was developed, the town of Zeigler was formed. The Illinois Central track to this mine from Christopher was built in 1903. As first constructed, it was 11.88 miles long. The discovery of such excellent and abundant quantities of coal led to the opening of the old No. 11 mine in West Frankfort in the same year. The third mine opened, called "Old Mine," was at Benton. There are now seven mines operating and one being developed within the city, and twenty-six producing mines are found in Franklin County. In 1900 there was no coal mined in the county, and Williamson ranked ninth among the producing counties of the state. In 1917 Franklin County produced more coal than any other county in Illinois, and it is today probably the largest coal-producing county in the world. For the fiscal year of 1920, 11,299,280 tons of coal were produced from these mines. This phenomenal growth is due largely to the advancement of methods of mining and transportation, and the Illinois Central has had its share in the latter.

The Illinois Central built a line from Benton to West Frankfort in 1914-15, and at that time the station at West Frankfort consisted of a car body. In 1916 a combination passenger station and freight depot was erected. This was a frame building 24 by 60 feet on a

*The Old West Frankfort Station*

timber post foundation. West Frankfort was the end of the line, and the terminal facilities consisted of this frame building, freight and passenger platforms and about 2,900 lineal feet of house and team tracks.

#### Community Has 20,000 Population

The development of West Frankfort, which has been recent, has followed the wonderful strides made by the coal industries in Franklin County. In the early nineties, another railroad built through the county, and the present city was built on its tracks one and one-fourth miles west of the older town of Frankfort Heights. The population in 1906 was some 1,200, while today West Frankfort and Frankfort Heights, which are really one community, have a combined population of 20,000.

A community high school, with auditorium seating 1,200, is the latest addition. The Union Hospital, caring for sixty patients in an emergency, is another matter of pride for the city. The various religious denominations are represented by five churches. Thriving business houses, comfortable residences and fifteen miles of paved streets are other indications of the civic progress being made. The payrolls at the mines for West Frankfort alone amount to \$750,000 a month, and four banks are needed to look after the financial interests of the community. In addition to the Illinois Central, two other railroads have tracks in the city.

for Our Magazine***

(See Page 7)

# CLAIMS DEPARTMENT

## Thought He Owed the Railroad

*The following reminiscences are contributed by William Bosley, pensioned engineer, Indiana division.*

Looking backward over fifty years of railway life brings to one's memory many peculiar incidents. Some are pleasant, and some are not so pleasant. It has always been my endeavor to forget the unpleasant ones, insofar as I can, and at the same time remember a few of the more pleasant ones.

In looking over the *Illinois Central Magazine* for February, I see on page 91 an account of a cow-killing case, in which the owner received \$40 for a cow which he valued at \$60. Nothing unusual about this—probably it was a fair settlement—but it brings to my mind a case which I think goes "one better" in the railroad's favor, for in this particular case the writer was interested, being the engineer at fault, if fault there was. The peculiar part of this case was that the farmer owning the cow considered himself indebted to the railroad instead of the road's being indebted to him!

The railroad passed through the farmer's land, and, as is usually the case, the company had provided him with a private crossing equipped with proper gates, and he, like many others, was not very careful about keeping those gates closed. In this way the cow got on the company's wayland but, fortunately for all concerned, was not very badly injured. All the necessary reports were made out and sent in to the officials.

In due time the claim agent called on the owner of the cow to adjust the matter. After he had introduced himself and stated the nature of his business, he was much surprised when the owner of the cow replied that the company's train did bump his old red cow and knocked her down the embankment, but it had not hurt her very much; in fact, it had been more of a benefit than an injury to her, as she had always been a notorious kicker and often kicked

over the milk pail, spilling all of the milk. Since being bumped by the train, she had been so crippled up in her hind quarters she could not kick at all, and for that reason he was getting twice the amount of milk that he had been getting before the accident, and he felt himself indebted to the company for the improved condition of his cow, inasmuch as the cow got on the railway track due to his own carelessness in leaving the gate open!

This very unusual case was such a surprise to the claim agent that for a while he was at a loss for a proper reply. Finally he told the cow owner that the railroad was not in the business of reforming kicking cows and so had no fixed rates for such service, but that, if he would sign a release and promise to be more careful in the future about keeping this gate closed, there wouldn't be any charge for this case. In the future, however, any such accident arising from like causes would call for a minimum charge of \$10 per bump.

If such an arrangement could be put in effect at this time, perhaps it would help to reduce the number of claims for stock killed and injured on the company's waylands.

## Grade-Crossing Accidents Continue

The record for grade-crossing accidents on the Illinois Central System for the year ending December 31, 1921, shows there were 406 grade-crossing accidents, resulting in the death of 41 persons and injury to 168 others. This is an increase of 14 per cent in the number of persons killed as compared with the corresponding period of 1920. This total of casualties shows that more than three persons a month were killed and fourteen persons a month were injured in grade-crossing accidents.

Notwithstanding the expenditure of large sums of money by the railway company in cutting down embankments, installing crossing protection and employing crossing flag-

men, grade-crossing accidents continue on the increase.

In Iowa alone there were ninety-six persons killed in grade-crossing accidents during 1921 on all railroads.

The following editorial from the Marthasville (Mo.) Record of February 3 sets out very clearly the only remedy that will prevent such accidents:

“Which should stop—the train or the automobile?”

“The automobile grade-crossing peril as it is today continues to grow, both with the increasing number of automobiles and the more speedy and rapid driving which is multiplying along with the increased mileage of better roads, so says Secretary Jewell Mayes in the 1921 Year Book of the Missouri State Board of Agriculture.

“We appeal to every farmer owning an

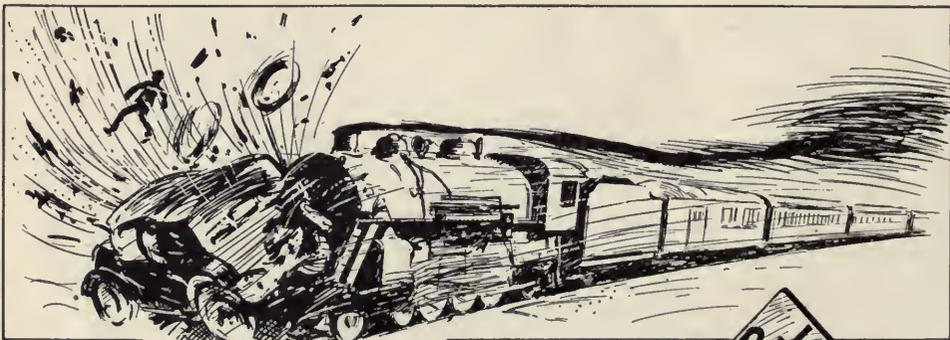

automobile, urging that each railway crossing be considered more seriously, because nearly every crossing is today a death-trap, except as it is approached thoughtfully and with extreme care. Not unlike the ‘unloaded gun,’ it is the ‘perfectly safe’ railway crossing at which individuals and sometimes whole families are killed.

“Frankly speaking, not one accident in a hundred is truly ‘unavoidable.’ In an overwhelmingly large number of cases, the driver of the automobile is entirely to blame for the tragedy that results.

“It is not a popular thing to say, and by no means is it a popular thing to hear, that too many automobiles are driven too much of the time too fast.

“There is too much automobile speeding.

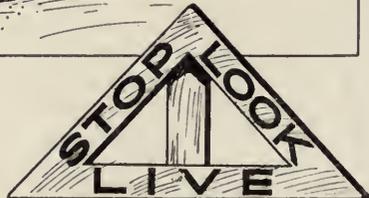

“The fellow who has the least to do, and

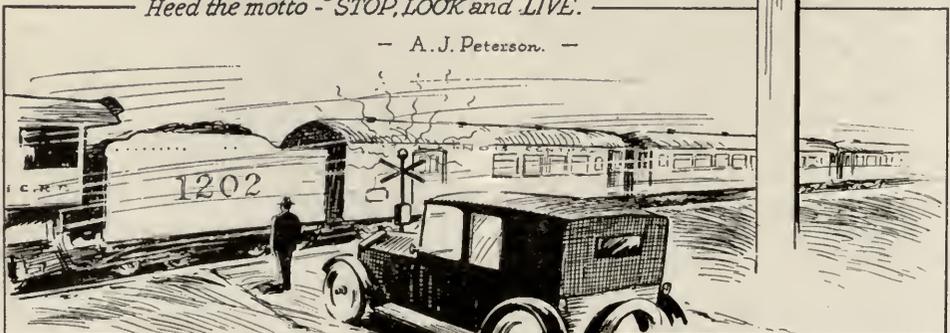

*Under the sod and under the dew,  
Lie many persons who, like you,  
Failed to heed the crossing warning  
To their families' regret and mourning*

*Had they listened for whistle and bell,  
They would now be here to tell  
Of numberless persons who failed to heed  
And had none to blame for their careless deed.*

*Approaching tracks in your automobile,  
Put on the brakes until they squeal;  
And to your safety attention give.  
Heed the motto - STOP, LOOK and LIVE.*

— A. J. Peterson. —

the most spare time, is most likely to be the swiftest driver.

"The only wonder today is that there are no more pedestrians killed at street crossings and along our public highways.

"It is small wonder that there are so many people killed as the chronicles of the daily newspapers record from week to week, since the automobile is now in its 'horse-racing stage' of its existence.

"The man who dares to drive a horse or team one-half or one-third as fast as the average speeding car would be arrested on the spot—and yet the racing horse or team can by no stretch of the imagination be considered one-fourth as dangerous as the flying car.

"This neighborly warning may meet many unwelcome eyes, but it is none the less the truth. Using rapidly moving automobiles to try to butt railway trains off the track is reckless business. Railway management somehow or other has gained a reputation for contrariness—and possibly this tendency may have something or other to do with the disposition of passenger and freight trains to insist on maintaining the right of the rail, to the destruction of automobiles and their speed-infected occupants!

"The railway train at each crossing may not (in your opinion) be entitled to the exclusive right-of-way, but we pray you to avoid an argument by being liberal in all cases with the flying monsters on tracks of steel—because it is evidently better to stop and lose a little time in preference to losing one's life!"

---

### How Some Avoid Accidents

*B. H. Heuring, claim agent at Freeport, Ill., contributes the following:*

Most of the personal injuries are to employes. Analysis of how these injuries occur shows that the great majority of them are easily avoidable. Usually they could have been avoided by the person injured—he simply failed to take thought of his safety.

Twenty men may be switchmen in one yard, or working in the same shop or on the same bridge or section of track; some of their names will appear a number of times on the record of avoidable injuries, while the names of the others will never appear, even though they continue in the same service for twenty years. They all do the

same work, but they don't all think or act in the same manner; safety holds first place in the minds of some, but not the others.

There is usually a safe way to do each thing, and there are always many other ways which may do just as well if the foot or hand doesn't slip, perhaps taking less effort or saving a second of time. Some men rigidly adhere to the safe method in all things, while others will compromise their safety to save a few steps or perhaps a few seconds; still others never consider their safety at all.

The way we work follows the way we think. The manner we do each act shows the manner in which we are thinking, and bespeaks what purposes and considerations hold first place in our mind. So it is that our safety from avoidable injuries depends entirely on the way we think. In whatever you may be doing, just ask yourself what purpose or consideration is uppermost in your mind. Your answer to this question will indicate just how likely you will be to injure yourself before you finish.

If we are not thinking of our safety at all, then almost anything will happen to us in the way of an injury. If safety means something to us, but is not so important to our mind as the desire to get there the quickest or do the thing the easiest, then we are compromising our safety by putting other considerations ahead of it, and just any little slip will be likely to result in our injury.

But with the safe man safety always holds first place. He knows that the first rule of logic is to put first things first, and it is simply not sound sense to give first consideration to anything else, because *safety* is *first*. To carry this thought with us may save you or me from being the next man hurt. As soon as it becomes our habit of thinking, then the thousands of avoidable injuries will remain as only the memory of a nightmare and we will awaken to a worth-while realization of the folly of tearing and bruising our bodies. Never could we do ourselves a greater service, for what is the gain of a few minutes of time or even of wealth or position, as compared with the hazard of life or limb?

---

### Railroad Wins Damages

The respective rights of railroads and motor vehicles at grade crossings figured conspicu-

ously in a recent decision by the Municipal Court of Cleveland in which the New York Central Railroad was awarded judgment in the sum of \$331.26 for damage done to a locomotive in a collision with a heavy motor truck.

The evidence showed that on November 13, 1921, Harold L. Wilcox drove a 4-ton motor truck onto a grade crossing at Wickliffe, Ohio, with the result that it was hit by a fast passenger train, doing considerable damage to the locomotive.

The crossing where the accident occurred is twenty-four feet wide, planked, stone filled, and was in good condition. Regular crossing signs were located on each side of the tracks.

Wilcox said he had the windshield and the curtains closed on the cab of his truck, but saw the headlight of a train coming from the east; however, it looked to be about a mile away, so he continued ahead at a speed of about four miles an hour. The front wheels of his truck crossed the track on which the train was coming, and then the motor stalled, leaving the big truck standing squarely across the track. There was no time to signal the train to stop, the driver jumping from his seat just in time to escape injury and probably death.

The railway company brought suit for damages to its locomotive, alleging that the

accident was due wholly to the negligence of the driver, and the court awarded the company judgment in the full amount of its claim.

The court's decision in this case makes clear that the rights of passengers on trains to protection at grade crossings are paramount to those of persons riding in motor vehicles. On this point the United States Circuit Court of Appeals, a few years ago, held:

"Because of the fact that a collision between a railway train and an automobile endangers not only those in the auto, but also those on board the train, and also because the car is more readily controlled than a horse vehicle and can be left by the driver, if necessary, the law exacts from him a strict performance of the duty to stop, look and listen before driving upon a railway crossing where the view is obstructed, and to do so at a time and place where stopping and looking and listening will be effective."

Fast passenger and mail trains, operated on regular schedules, are essential to the public weal, and, therefore, cannot be interfered with unnecessarily at grade crossings without putting the blame for accidents, if any occur, upon those who carelessly obstruct the right-of-way.

## Compares Boiler-Washer and Physician

BY WILLIAM HUDGINS,

2809 Commercial Avenue, Cairo, Ill.

I saw a recent article in the *Illinois Central Magazine* on preparing engines for a trip, and the first item mentioned was a clean boiler. That touches on my line of work and makes me think that the boiler-washer is an extremely important person—and I know he is.

Every man should do his best, and a man should like his job before he can do it well. I like mine, not just because I make a living out of it, but also because I like to give satisfaction.

A boiler-washer is to the locomotive what a physician is to the human body. If a man has a clean stomach he will be healthy, and if a boiler is clear of mud and scales there will not be many leaks.

When I began to work with this company I first learned to take care of myself; then I learned to take care of a boiler in the same way. I want to say to all boiler-washers not to slight an engine just because it is sometimes washed in St. Louis, again in Cairo and again in Centralia—which we know in some cases is true—but do as well as if you had to wash it all the time.

Another thing: Do not do your work in a crude manner just because your employer is not around, but do as well always as when he is around. I never want my employer to watch me, because I have my part to play and I must do my work. My foreman has assured me that I have been doing my work well ever since I began this work in 1895.

## *He Rode With Lincoln and Douglas in 1859*

*B. F. Smith, Illinois Central Brakeman Before Civil War,  
Writes to President Markham of His Experiences,*

PRESIDENT MARKHAM has received a letter from B. F. Smith, retired horticulturist, Lawrence, Kan., in which Mr. Smith relates some of his experiences when he was an employe of the Illinois Central during the Civil War. Mr. Smith writes that he has lived in Kansas forty-two years. He was moved to write to Mr. Markham after reading the story of the latter's life which was published in the October number of the *American Magazine*. His letter, in part, follows:

"I was an employe of the Illinois Central for eight years, beginning in April, 1858. I went to work as a freight brakeman on the South division, and in 1859 I was transferred to the Chicago division, running between Centralia and Chicago. In November of that year I was transferred back to the South division and was promoted to baggage master, and I continued to serve the Illinois Central until March 1, 1866, when I resigned to go into the business of fruit growing. I was in the fruit growing business more than fifty years, but am now retired, having passed my 85th birthday.

### **The First Strawberries**

In 1860, about the 5th of May, I carried the first package of strawberries handled on the Illinois Central. The berries were packed in an old fashioned candy box holding about two gallons, and the box was marked to H. W. Newhall, Chicago. They were grown by the station agent at Ullin, twenty miles north of Cairo. Cobden later became the big strawberry center in southern Illinois. In 1862, 1863 and 1864 the Cobden berry growers received \$1 a quart during the first two weeks of berry picking. There were other stations along the line of the railroad in southern Illinois in 1865, and a man at Centralia planted ten acres. Anna and Dongola also began to plant small patches; so the Cobden berry men then had only about four to six days advantage at the price of \$1 a quart. It was several years before anyone began shipping berries from Tennessee and Arkansas.

The first peach orchard in southern Illinois of which I remember was one of ten acres planted on a high elevation a half mile east of Cobden. During the peach ripening season

of 1858 a very poor class of seedling peaches was shipped to the Chicago market in common board boxes before the orchards of fine budded fruit came into bearing for commercial purposes, which was between 1862 and 1864.

The Illinois Central made southern Illinois a good place to live and make money; in fact, the Illinois Central did more for settlement in Illinois than any other railroad in the state.

### **Heard Lincoln and Douglas**

In the fall of 1858 Stephen A. Douglas and Abraham Lincoln were canvassing the state in joint debate for election to the United States Senate. I was the brakeman on the special train sent to Jonesboro, where these two distinguished men were to speak. There were only three Republicans in the town to hear Mr. Lincoln, but thousands of Democrats to hear Mr. Douglas. When we arrived at the station four or five young men came into the car and carried Mr. Douglas to a hack, not allowing his feet to touch the platform. Mr. Lincoln's three Republican friends were not

### *Feelin' Fine*

They ain't no use in kickin', friend,  
If things don't come your way;  
It does no good to holler 'round,  
An' grumble night and day;  
The thing to do's to curb your grief,  
Cut out your little whine,  
An' when they ask you how you are,  
Jest say, "I'm feelin' fine."

They ain't no man alive but what  
Is booked to get his slap;  
They ain't no man that walks but what  
From trouble gets his rap;  
Go mingle with the bunch, old boy,  
Where all the bright lights shine,  
And when they ask you how you are,  
Jest say, "I'm feelin' fine."

Your heart may be a-bustin' with  
Some real or fancied wo;  
But if you smile, the other folks  
Ain't very apt to know;  
The old world laughs at heartaches,  
friend,  
Be they your own or mine;  
So when they ask you how you are,  
Jest say, "I'm feelin' fine."

there to receive him. Though only a boy then, it seemed to me that Mr. Lincoln made the best argument on slavery. His face was covered with smiles from the beginning to the last words of his speech.

In the spring and summer of 1859, when I was a brakeman on the Chicago division, Mr. Douglas came aboard at Odin, going to Chicago. He asked me if he could sit in my seat, as he wanted to step out and shake hands with his friends. I told him he must sit next to the window, that I must sit near the door to attend the brake at the station. He offered me a cigar, which I refused, saying I never smoked.

He shouted, "What! a railroad man who does not smoke?"

"Yes, sir."

After we had lunch at Champaign Mr. Douglas went into the second class car and rode until we arrived in Chicago, where I went forward to look after my train chest. Mr. Douglas had a bottle in his grip that had a little whisky in it.

He said, "Here, brakeman, is some mighty good whisky."

I refused to drink it, saying that I did not like it. Friends carried him out and put him in a cab and sent him to a hotel.

### A Ride With Lincoln

The same year, in October, that Mr. Douglas sat with me on a 120-mile ride, Mr. Lincoln sat in my seat for a ride of twelve miles. He had been sleeping all night, having got on the train at Chicago. He got up at Champaign and sat with me until he arrived at Tolono, where he changed cars for Springfield. He saw the sun rising over the beautiful prairies. Mr. Lincoln, like Mr. Douglas, seemed to want to get acquainted with the boy brakeman and to see the beautiful sun rising.

When Mr. Lincoln stepped off the train at Tolono I never saw his face again, but if he could have seen my face on the 15th of April, 1865, after the assassination in the theater, he would have seen tears trickling down my face all day.

When I began work on the Illinois Central I was newsboy and attended to carrying water to passengers, etc. Beginning in April I worked as a freight train brakeman. The superintendent on the main line from Centralia to Dunleith, opposite Dubuque, was John C. Jacobs. Phineas Pease was train dispatcher on the line between Centralia and Cairo. When

the Chicago branch was opened for business W. R. Arthur was superintendent from Cairo to Chicago, and Robert Forsyth was the general freight agent. W. P. Johnson was the general passenger agent. David Oxley was head of the shops at Centralia. When I resigned, in 1866, J. D. Herkins was superintendent of the Chicago division, and Marvin Hughitt (now chairman of the board of the Chicago & Northwestern) was train dispatcher. The officials often sat in the baggage car with me in those days. I remember Mr. Hughitt quite well. He was first a telegraph office employe. He came to Centralia near the close of the war.

### G. L. WEATHERHEAD DIES

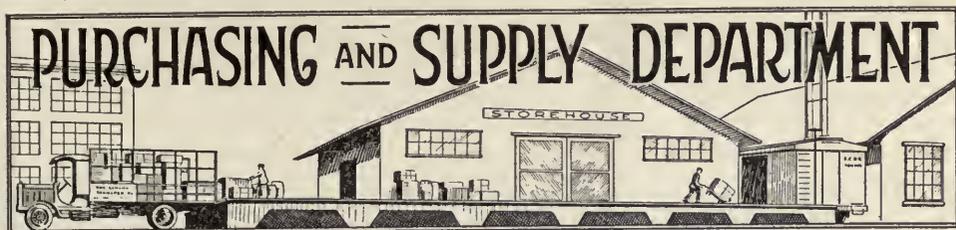

George L. Weatherhead, for more than forty years an employe of the Illinois Central System, died at his home in Chicago February 1, at the age of 79. Mr. Weatherhead was one of the earliest locomotive engineers the company had. He retired more than twenty years ago, just before the company's pension department began to function.

G. L. Weatherhead

Mr. Weatherhead is survived by his wife, three sons and two sisters. Two of the sons, William G. and Ray F., are in the employ of the Illinois Central, the former as a passenger engineer on runs south from Chicago and the latter as a fireman in the Chicago suburban passenger service. Burial was in Champaign, Ill., where Mr. Weatherhead began his work for the Illinois Central in the car shops at the age of 13.

At the age of 17 Mr. Weatherhead was running a stationary engine at Champaign, and at 19 he began his life-work in the cab of a locomotive. Early in his youth an accident crippled his hand, and later, in the shops, he sustained an injury which left him lame. When the call to the colors came in 1860 he was not physically fit to respond, but he did his share by hauling supplies to General Grant and by hauling Confederate prisoners.

## *Declares Fidelity Brings Its Own Reward*

By AMOS EASTRIDGE,  
Waterloo, Iowa, Storehouse

**F**IDELITY to any cause brings its own reward regardless of what pursuit one may follow. Constant application coupled with earnest effort will invariably accomplish the desired results in life.

This, being true as regards individuals, is equally true as applied to a group of employes working collectively toward a given end. Therefore whole-souled faithfulness, earnest application and a real heart interest become the first elements of success of a corporation. This group spirit of employes is a power that can make or mar the success of a company.

More especially is this true as regards employes of railroads who work under various conditions and over a vast territory.

The section laborer working along the track through winter's cold and summer's heat may feel that his humble position in the railroad's personnel does not warrant any egotistical outbreak on his part or any special effort other than that required to "get by," yet on him and his fellow workers of the maintenance of way department depend largely the effectiveness of the road's operation and its ability to get and hold its share of revenue traffic.

The agent caring for the company business at his station may feel at times that he is an unimportant factor in the road's operation, yet he is practically the "whole affair" insofar as the shipping public is concerned. It is through his attentiveness to business, his courtesy to patrons and his earnestness in going after additional business that results will come, and the degree of his success will be governed by the amount of attentiveness, courtesy and energy he puts into his work.

The train crews performing the actual work of transporting revenue business may at times underestimate the importance of their particu-

lar branch of the service, yet it is most essential to their company's welfare, as well as their own, to exercise proper care in the handling of both freight and passenger traffic so as to insure safety to shippers and passengers.

And in all others of the various departments making up the railroad's organization individual fidelity goes hand in hand with and is essential to the success of the company.

The question might arise, why should you, as an employe, go out of your way to contribute to the success of the road merely because you are working for it? We should be prompted by selfish reasons, if for no other, for each employe, regardless of the kind of work he is performing, is an integral part of the road's organization and from the revenue received from the road's operation our salaries are paid.

Therefore, it may be clearly seen, each employe working under a corporate head is in reality working for himself, and his individual success will be gauged by his individual efforts. He is, in a certain sense, a favored stockholder, as he receives his dividends in the form of pay checks from the gross earnings of the road before one cent can be set aside to pay dividends to those who furnished the capital to build and equip the road. In addition, the company issues free transportation to its employes, and, as transportation is the only thing a railroad has to sell, it is giving to him and his dependents of its only stock in trade.

And after a certain number of years of continuous service most roads grant their employes a pension upon attaining a given age or if they are incapacitated for service through sickness or accident, thus adding to their comfort when they have arrived at that point where they can no longer take their place in the ranks of the active workers.

As an employe of the Illinois Central System, I take personal pride in its achievements and have an abiding faith in its future. To

me it does not alone represent the source of my job, but instead an organization of officials and employes, working together toward that most coveted of goals—Success.

So let each of us lay aside any prejudice or

doubts we may have and go forward with full confidence in the men who govern the destiny of our road, ever ready to give them undivided support in their efforts to make the Illinois Central System "second to none."

## AN EARLY-DAY PRIDE OF DUBUQUE, IOWA

This verse was written by John Buckley (deceased), station master at Dubuque in 1865. John Buckley was the father of W. L. Buckley, at present time city passenger and ticket agent at Waterloo, and of M. H. Buckley, one of our conductors.

We have spoken so oft of Dubuque's famous depot,

Where the Central did business for many a year,

Where at all hours and seasons it pleased us to meet you,

To mention it now would cause you to jeer. Though the old shed has gone—no more we will view it—

The scenes there enacted we cannot forget; Or the men of all nations we have seen pass through it,

And the many old friends whom we miss with regret.

Oft have we sat there from night until morn, Waiting for trains delayed by the snow, And prayed our friend Gabriel would not blow his horn,

Till we had better quarters while yet here below.

Eureka! My friend, the horn has not tooted— We have a new building, the verdict calls fine;

Where people of all classes now can be suited, While waiting to take the old famous White Line.

There is a room for the women, grand beyond measure;

One for the men, you will always find clean; And those that are hungry can now take their leisure,

While they eat from a place that is sandwiched between.

You can see an old friend if you gaze through the wicket

Though his smile may be broader than in days of yore,

Or you may think him "tony" when stamping your ticket,

But he'll treat you so kindly you cannot feel sore.

Checks for your baggage, no matter what station;

Present us your ticket, you need do no more; You can purchase them here for all points in the nation,

But none that would land you on the Styx' fabled shore.

On the reliable White Line you'll never meet danger;

Our motto is safety wherever you go, Which fact to our patrons is really no stranger,

Though 'tis said the reliable has been somewhat slow.

The scene is so changed, we wonder what ails us,

As we stand in our new room and roll up our eye.

We miss the old web, where the spider regaled us,

As he jumped on the neck of the innocent fly.

What has become of the lively cockroaches, The rats that danced "alamand left" on the floor,

While waiting for lunch to be brought from the coaches,

To share with the sleek little mice by the score?

# Traffic Department

## *Praises Our New Passing Report Highly*

By C. J. RYAN,

Commercial Agent, Pittsburgh, Pa.

**A**MONG the many improvements in and additions to Illinois Central System service since governmental control, one of the most important, to my mind, is the new passing report which was inaugurated January 1 of this year. This report fills a long felt want, and will be welcomed, not only by all of our traffic representatives and others who come in touch with the shipping public, but also by thousands of shippers and receivers of carload freight who are patrons of our railroad. It will also, I am sure, bring us many new patrons.

I have taken occasion to examine the passing reports of a number of the larger and more important lines having representation in the Pittsburgh district, and believe I may say without fear of contradiction that the Illinois Central passing report is superior to many and second to none in the country. As usual, our people have done things in a big, broad, Illinois Central way, and have given us a "regular" report, and one of which we may justly feel proud. To use the expression of one of our higher officers, they have given us "a new tool to work with," and if it is properly handled and utilized to the fullest extent, there is no question that it will prove to be a most powerful solicitation asset, resulting in a substantial increase in our tonnage and revenues, a great saving in labor, time and money, and be worth its weight in gold.

A few of the benefits to be derived from a report of this kind which occur to me at this time are:

It will enable our outside representatives to give our patrons prompt and accurate information as to the movement of their carload shipments. This means better service, and, after all, as stated by one of our officers in a recent article in this magazine, service is the very best of solicitation. To illustrate this point:

On a recent visit to the traffic manager of one of the largest concerns in the Pittsburgh district, I was told:

"There has been a remarkable improvement in the service I have been getting from your office since the first of the year, and I am going to see that you receive a larger share of our traffic."

The improvement referred to was due entirely to the new passing report, as we are now in position to give this firm a daily report of the passing of all their cars within a very few hours after they reach our line. During the month of January this industry favored us with a haul on 116 cars of highly competitive traffic as against 11 cars for December. This traffic manager controls a tremendous amount of traffic and is in position to favor us with a great many more than 116 cars, and if it is humanly possible we are going to see that he does it.

On carload shipments of lumber, fruit, vegetables and other traffic which is to a great extent diverted or reconsigned in transit, the passing report enables us to place reconsigning instructions promptly and with the minimum expenditure of money, time and labor. Frequently in the past we have placed instructions covering reconsignments with a number of agents along the line after cars had actually left our rails, resulting in delay and a waste of time, labor and money, without obtaining results.

A passing report such as we now have gives us a daily check on the business we are handling, and enables us to determine whether we are securing our long haul and maximum revenue on such traffic. It frequently gives information as to the traffic regarding which we have no advice, and upon following up such cases it will often be found that we are securing only a fractional part of such business, when we should be securing it all, or at least a greater proportion.

It also will give us a line on business which,

while controlled in a certain territory, neither originates at nor is destined to points in such territory. This information is especially valuable for the reason that many of the larger and more important concerns, as for example the steel and oil interests, have plants in various parts of the country, and the business is controlled at some central point in a territory which never sees the traffic.

A salesman's value to the company he represents and the compensation he receives are gauged by the results he obtains, or, in other words, the sales he makes. His sales are controlled by a number of things, foremost among which are his activity, his ability and the quality of goods or the line he is handling. An outside traffic representative is in every sense of the word a salesman, and the new passing report is our daily sales report. Traffic representatives of the Illinois Central System have a wonderful line to handle, for we are selling transportation over the finest railroad in this country, which means the world. It is practically impossible to cross this wonderful country without coming in contact with the Illinois

Central System somewhere. Make the shipping and traveling public see it, make them use it and make them like it. This refers to passenger as well as freight business, as the two are closely allied.

Keep your eye on that daily sales report, capitalize on it to the fullest extent with the shipping public, analyze it carefully and follow up promptly the valuable leads it gives you, for our superior officers are going to watch it closely and by it you will be judged. It is going to tell the whole story and show whether you are hitting in the .300 class and belong in the big league, or whether it is "back to the bushes" for you.

In conclusion, I want to go on record as saying that our officers and employes who are in charge of this important report deserve much credit for the prompt, accurate and efficient manner in which this information is being compiled and transmitted to our outside agencies. No doubt the report will be improved upon from time to time, but in its present shape it's better than many and as good as any.

## Inspection More Than Pays Its Own Way

By R. B. GOE,

### Supervisor of Weighing and Inspection

Reports reaching this office from the various inspection bureaus of which we are members, from our own inspectors and from other sources indicate beyond question there is considerable yet to be accomplished in classification inspection of freight, both CL and LCL.

The following report, covering the result of such inspection at five of our largest stations where local inspectors are employed, for December compared with November, 1921, shows that increased revenue alone resulting from such inspection amounted to approximately five times the expense of the men employed for such service. The revenue increase is but a small factor in the real benefits derived from strict compliance with classification requirements, and is used here only to illustrate the fact that there is a large number of classification violations. We do not believe there are a great number of shippers who will willfully violate such requirements, but rather there is a lack of understanding, on the part of both shippers and railway employes, as to the classification provisions.

Station	Number of Inspectors Employed	Increased Revenue From Inspection	Revenue From Reweighing	Total
<b>Mounds</b>				
December ....	1	\$1,153.45	\$ 99.98	\$1,253.43
November ....	1	502.61	103.82	606.43
<b>New Orleans</b>				
December ....	3	727.16	489.13	1,216.29
November ....	3	858.34	548.35	1,406.69
<b>Memphis</b>				
December ....	2	799.68	106.14	905.82
November ....	2	1,228.08	77.50	1,305.58
<b>Louisville</b>				
December ....	2	472.21	295.25	767.46
November ....	2	474.68	252.63	727.31
<b>Evansville</b>				
December ....	1	514.87	250.17	765.04
November ....	1	381.94	257.19	639.13
<b>TOTAL</b>				
December ....	9	3,667.37	1,240.67	4,908.04
November ....	9	3,445.65	1,239.49	4,685.14

Articles not properly described as to kind, how packed, set up, nested, boxed, crated or loose, etc., cannot be correctly rated at point of origin or can billing be revised at the destination.

Failure to show the correct description on the shipping order or waybills so that proper tariff rating can be applied or failure properly to mark, pack or describe shipments may result in an overcharge, causing criticism, if not

an overcharge claim, loss in freight revenue and additional liability to loss and damage.

Certain penalties are prescribed in the classification for failure to mark, pack and describe shipments offered for transportation, which are in some instances 20 per cent increased freight rate, in others one or more class rates higher.

If receiving clerks are not educated so as to be able properly to receive freight as to the classification requirements, and will accept articles not properly described and packed, and some inspector or other employe finds such an article after it has been receipted for and assesses the penalty, the carriers' revenue has been protected, but the chances are you have made a shipper or consignee dissatisfied and with a desire to "get even." It is, therefore, highly important that these things be known and started out properly, but the fact that a mistake is made at the receiving door does not relieve the carrier of the responsibility for the correct application of classification and tariff requirements.

To overcome errors of description of commodities, where the shipping ticket does not show a full description or where there is more than one rating for an article, the rate clerk at the billing point should have the shipment inspected by an inspector, if there be one at that point; if not, he should have the warehouse man examine it, or in many cases he can do so himself.

On arrival at destination, the revising clerk should follow the same procedure where the waybill does not show sufficient information correctly to revise the billing.

As an example of what can be accomplished by this method of inspection, the rate clerk at Greenwood, Miss., makes an inspection of all shipments that are not properly described, and records show that, in addition to picking up undercharges of from \$50 to \$60 in revenue, a great many overcharge claims are prevented and, no doubt, loss and damage claims prevented as well.

## Report Shows a Reduction in Exceptions

The results of the constant effort which has been made on the Illinois Central System during the past year for reducing the causes of freight claims are shown in a report announced by C. G. Richmond, superintendent of stations and transfers. The less-than-carload tonnage handled by the Illinois Central System

in 1921 was a decrease of 21.1 per cent from 1920, while the number of exceptions charged against the handling of LCL freight was reduced 73.7 per cent. There was an increase in the number of tons handled per error of 36.8 per cent over 1920.

The statement, by operating divisions and grand operating divisions, follows:

Divisions—	LCL Tonnage		Per Cent Decrease	Exceptions		Per Cent Decrease
	1921	1920		1921	1920	
Wisconsin .....	102,383	141,075	27.4	1,523	9,654	85.2

## What Patrons Say of Our Service

### Service in a Time of Sorrow

The following letter was addressed to President C. H. Markham by J. M. Hinkley of Bois, Ill., under date of February 13:

"I was looking over a railway magazine a short time ago, or rather one day last week, and saw some of the written testimony of the patrons of your road for its good service; so I thought I would tell a little of my experience on your road and of the help which I received through it.

"On the night of December 28 last, my wife became very sick, and I tried to get a doctor from Ashley over the telephone, but I could not get the operator at Ashley.

"I then went to the agent here at Bois, whose name is H. W. Ashenfelder, and asked him to see if he could get the doctor for me over the railway phone, as I was needing him badly.

"My wife was expecting to be confined in about a month, but all the indications pointed to her being sick that night. It was then about 1 a. m. or a little before. When Ashenfelder had got the doctor for me, he went a little further, as he knew that in the condition of the wagon roads the doctor could not get here for about two hours. As there was a fast train due in Ashley in a few minutes, he called up the dispatcher at Carbondale and told him the circumstances, and he had the fast train stop and let the doctor off, so that I had him here in about forty minutes where it would otherwise have been two hours anyway, at the best.

"And again on the second of this month I received help which was appreciated. When our little baby was buried the roads were almost impassable with a horse; so Ashenfelder again got a fast train to stop, so that we could take the body to Ashley and not have to make that awful trip that day in buggies.

"So I think the thanks are certainly due to the agent here, H. W. Ashenfelder, to the agent who is at Ashley on duty at 1 a. m., to the two dispatchers at Carbondale, and to you for the high service which you maintain on the Illinois Central Railroad.

"Service of this kind is appreciated by all concerned, and due thanks I think should be given to all who help in sickness and sorrow, as well as at other times."

### Praise for Our Dining Service

When J. Herndon Smith of Smith, Moore & Company, 509 Olive Street, St. Louis, partook of a meal on the Seminole Limited February 1, he was so pleased that he wrote across his business card, "The dining-car service on the Seminole today was fine," and sent it to C. B. Dugan, superintendent, dining service.

Mr. Dugan recently received the following letter from Ernest Heg, proprietor of Magner, Winslow & Company, provision dealers, 440-502 South Clark Street, Chicago: "Recently we made a trip to and from Jacksonville and wish to say we had most excellent service and very courteous treatment. Your inspector, Mr. Castle, was most affable and sure helped to make our trip pleasant. We all get some 'kicks' and thought you would like to know that all in your dining cars seemed most pleased."

Another letter which Mr. Dugan recently received was from Ira C. Humphrey, secretary and treasurer of the Florida Groves Association, 30 North Michigan Avenue, Chicago. Mr. Humphrey said: "We desire to express our appreciation for the courtesy of your Mr. Castle, who accompanied one of our recent excursion parties to Florida. Every possible courtesy to our party was extended by Mr. Castle and his staff, and we were well pleased with the service."

The following letter was received by Mr. Dugan from Walter H. Saunders, a member of the firm of Leahy & Saunders, attorneys at law, Suite 1105, National Bank of Commerce Building, St. Louis: "I beg to advise that on Friday, December 30, the directors of the Fairview Fluorspar & Lead Company, including myself, boarded your Louisville train at Princeton, Ky., bound for Paducah, about 5:20 p. m. The dinner served us in the dining car was, I think, the best meal that I have eaten on a dining car in many years. Both the food and the service were perfect. At the time, I expressed my pleasure to the conductor in charge of this car, and I wish to go on record as commending your splendid dining-car service. I have traveled a number of times on your Panama Limited, and I do not believe there is a finer train in the United States. Hoping that you may

continue to maintain your splendid passenger and dining-car service, I am."

#### Service Makes a Convert

The following letter regarding the prompt adjustment of a ticket refund claim was addressed to J. V. Lanigan, general passenger agent at Chicago, by Robert E. Benton of 828 Waveland avenue, Chicago:

"Your letter of January 30 came as a very pleasant surprise. This was the first claim I have made against a railway company. All talk I have ever heard about claims has been tinged with deep shades of blue, it being said that miles of red tape and unlimited patience were used, and necessary, to get results. Your action in this matter was indeed snappy, and I am waiting for the next blue hound to set up a wail; then I'll sit on the hound.

"Your prompt attention to my claim and very satisfactory settlement, as well as your information on how to get the refund of war tax, are much appreciated, and I thank you for the courteous, pleasing manner in which you have served me. I am for you."

#### Held a Train for a Party

Morris Hecker of Stipes & Hecker, 47 Chester Street, Champaign, Ill., recently wrote the following letter to Superintendent J. W. Hevron of the Illinois division, and Mr. Hevron sent a copy to Superintendent J. F. Dignan of the Wisconsin division:

"On Thursday morning, February 16, I started for La Salle, Ill., with a party of local contractors, leaving here on the Big Four at 4:23 a. m., expecting to take the Illinois Central at Bloomington due to leave there at 6:10 a. m.

"When my party and I arrived at the local Big Four station we were advised by the agent that the Big Four train was 20 minutes late and that it would be impossible for us to catch the Illinois Central train at Bloomington, and furthermore that the Big Four would be probably 30 minutes late out of here.

"I was in a fix, for there I was with eight of my good customers that I had persuaded to get up at 3:30 a. m. to take this trip and another party expecting us at La Salle. There seemed no possible chance to get to La Salle that morning by some other route, either, and it would have been ridiculous to have to send them back home.

"So I called up your dispatcher and told

him my troubles, and he got busy. He called me a little later and advised that the Illinois Central would hold the train at Bloomington for us ten minutes. We made it all right, and I wanted to tell you so that you could tell your dispatcher and the rest of your organization that so willingly helped, along with the conductor on the train for Bloomington to La Salle, that this was a case of real honest-to-goodness service and that it was appreciated by the entire party.

"I hope that some time I may be able to reciprocate."

#### Praises All the Employes

B. G. Beckman of the Beckman-Dawson Roofing Company, 19 South La Salle street, Chicago, recently wrote as follows to President C. H. Markham:

"I just want to drop you a line to express the satisfaction and pleasure Mrs. Beckman and myself had in traveling over the Illinois Central and Y. & M. V. in the past month. We made a trip to Havana, stopping en route at most of the principal cities between here and New Orleans, and I want to say that all of your employes are apparently on their toes in an endeavor to satisfy all travelers. Your station agents do not seem to have the 'know it all' attitude, and your dining car service certainly was excellent.

"I think there is no doubt that the campaign you are instituting of co-operating with the public is being expressed throughout the rank and file of the employes and bringing about the results you as head of the system desire."

#### Appreciated Conductor's Announcement

The following letter, signed merely "A Patron of the Company," was received recently by C. W. Shaw, superintendent of the Springfield division:

"I happened to be a passenger on your train No. 534 en route to Springfield, Ill., on the night of December 30, 1921. The train had a fairly comfortable load of passengers. About the time your train was in the vicinity of Springfield, the conductor took a prominent place in the center of the coach, removed his cap and repeated the following in a tone of voice that could be heard over the entire coach: 'Ladies, gentlemen and children, in behalf of myself and the management of this company that I am serving, I want to thank

you for your patronage of the last year and hope it may continue in the future. At any time I can be of assistance in making your trip more pleasant over the Illinois Central Railroad, my service is yours for the asking; and I wish each and all of you to enjoy a happy and prosperous New Year.'

"I had never before taken the opportunity to learn this conductor's name, but I had used his train a number of times and always had received the most courteous treatment. This action prompted me to ascertain his name. I found he was M. Kennedy. I want to emphasize the fact that the little statement, which cost him so little, made a great friend of everyone in the coach not only for the conductor, but for the company as well. I thought it would be of interest to you to know that the method your conductor employed was deserving of my writing you this letter."

In notifying Conductor Kennedy of this letter, Mr. Shaw said:

"This is certainly commendable action on your part, and I want to express my full appreciation, as well as the appreciation of the management, for the interest you are taking in handling your affairs in a genuinely satisfactory manner.

"If we could get all the other employes of Illinois Central interested in the same manner, we certainly could enjoy a passenger and freight service that would require the utmost effort on the part of each and every one of us to perform. The act of a conductor in making friends with the public is an easy one and follows out what I have said a number of times, that courtesy and efficient service are among the cheapest and most profitable efforts on our part."

#### Got Plenty of Information

The following letter to President C. H. Markham is from F. L. Shidler of the Shidler Construction Material Company, Rosewood avenue and Birch street, Kankakee, Ill.:

"Having just experienced the pleasure of meeting one of your officials who presides evenings at the gate of your 63rd Street station, Chicago, and remembering the treatment that I received from this man, I wish to express my appreciation.

"I believe that courteous treatment should be brought to your attention as well as discourteous treatment.

"I rushed into the station two minutes be-

fore the Big Four train was due, and he told me that I could not board that train. He also, *without my asking*, explained why I could not board this train for Kankakee. He then explained just when I could leave, told me that I could remain in the station, asked me if I wished lunch and directed me where I could obtain food.

"He also called my attention to a theater nearby, where I might amuse myself until my train time. He even mentioned the name and quality of the show for the evening.

"While the public has no claim to general or particular information other than that pertaining to trains, this man's effort to make me feel that a railroad can be human made a deep impression. I even tried out the two colored porters and found them inoculated with the same microbe that the gateman has."

#### Good Service Got a Berth

Dr. Will Mason of the William Mason Memorial Hospital, Murray, Ky., recently wrote as follows to Robert Padgitt, agent at Paducah, Ky.:

"I want to thank you for the courteous treatment you rendered Mrs. Mason in securing her a lower berth to Louisville Wednesday night. That was very kind and thoughtful indeed of you. She certainly appreciated it so much and has written me how nice you were to her. I have always recognized your great worth, but wished to express my feelings. Any time I can be of any assistance to you, just let me know."

Mr. Padgitt's service consisted of making a special telephone call to Cairo to obtain a lower berth after all had been sold that were available at Paducah.

#### Fixed Up a Station's Light

The following letter to J. V. Lanigan, general passenger agent, is from the Rev. Royal Seynwolt, pastor of the McConnell M. E. Church, Winslow, Ill.:

"On December 22, 1921, I forwarded to you a letter enclosing a petition asking for better lighting facilities at your McConnell passenger station.

"Within ten days I was personally visited at my home, six or seven miles from McConnell, by your supervising agent, J. F. Riordon of Freeport, Ill., who, coming in a driving storm, assured me that arrangements had been made

to furnish lights at McConnell and that service would begin that night.

"This thing has been done, and on behalf of the petitioners I want to express our appreciation for the efficient way that you have cared for the matter.

"I also want to commend Mr. Riordon for his courtesies in helping to adjust the matter."

**The Best Possible Service**

The following New Year letter to Trainmaster J. D. White of East St. Louis, Ill., is from the Alfocorn Milling Company, Railway Exchange Building, St. Louis, Mo., by J. A. Hanson, traffic manager:

"We certainly appreciate the remarks in your postal of the 24th, and we want to say that you and your office force have shown by your efficient service during the year now passing that you actually have taken an interest in our business.

"Your statement that the Illinois Central can furnish good transportation is no exaggeration, but on the other hand we believe that you are somewhat modest, as we feel that your company is entitled to say that it can furnish the best transportation to be obtained. For our part we can say that shippers in this territory will never know what real transportation service is until they

begin to route their business via the Illinois Central Railroad.

"The many courtesies accorded us during the past year are deeply appreciated, and, wherever possible, our business will move Illinois Central, as we know that we can expect the very best possible service from your entire organization."

**From a Commercial Traveler**

The following letter to President C. H. Markham is from H. E. Johnston of 2101 North New Jersey street, Indianapolis, Ind.:

"Thinking you may be interested in learning, from a commercial traveler of more than thirty years' experience, as to the loyalty of your employes whom I have recently encountered, I wish to state that the intensity of the loyalty of the Illinois Central operatives lately coming under my notice is such as to prompt me to volunteer to you the information that, in my opinion, no greater allegiance and spirit of willing co-operation could be found, even in a much smaller organization than is under your direction.

"I could mention several concrete cases going to prove the foregoing statement, but perhaps that is unnecessary, since you already know how unusually devoted to you are your employes."

**Our Monthly Roll of Honor**

Below is a list of employes retired at the meeting of the Board of Pensions January 30, 1922:

Name	Occupation	Years of Service	Date of Retirement
John R. McLean.....	Carpenter, Mattoon, Ill.....	35	7/31/21
James W. Nall.....	Clerk, Birmingham, Ala.....	41	7/31/21
Emile Rummell.....	Hostler, New Orleans, La.....	17	8/31/21
Charles Bentley (Col.).....	Car Repairer, Jackson, Tenn.....	26	8/31/21
Christopher H. Schmillen.....	Engineman, Chicago Terminal.....	31	10/31/21
John R. Webster.....	General Agent, Omaha, Neb.....	31	12/15/21
Martin Dwyer.....	Section Foreman, Cedar Falls, Iowa.....	37	12/31/21
William H. Cramer.....	Foreman (B. & B.), Wisconsin Div.....	29	12/31/21
John E. Greenwood.....	Engineman, Kankakee, Ill.....	32	12/31/21
Charles L. Conley.....	Section Laborer, McConnell, Tenn.....	24	1/31/22
Peter McKenna.....	Foreman (B. & B.), Minnesota Div.....	29	1/31/22
Robert Radzon.....	Car Repairer, Kankakee, Ill.....	32	1/31/22
John J. Boyce.....	Boilermaker, Burnside Shops.....	26	1/31/22
John Duncan (Deceased).....	Blacksmith, Burnside Shops.....	24	6/30/21

The following deaths of pensioners were reported:

Name	Last Employment	Date of Death	Term as Pensioner
William Beven.....	Engineman, Louisiana Div.....	12/16/21	3 yrs.
Allen Miller (Col.).....	Blacksmith Helper, Mississippi Div.....	12/31/21	11 yrs.
Phillip Drennon.....	Engineman, Kentucky Div.....	12/31/21	8 mos.

Thomas J. Hudson.....	General Traffic Manager, System.....	1/21/22	14 yrs.
John Convent.....	Laborer, Chicago Terminal.....	12/10/21	7 mos.
James McKeon.....	Section Laborer, Iowa Division.....	1/20/22	7 yrs.

# THE ETERNAL GUESS

By HORACE

Short Story—Complete in This Issue

MILDRED PRESTON and Della May Robinson were tried and true chums. They had been born and had grown up to young womanhood in the same small town, in the same block, facing the same street. They had made mud pies, played "house," dressed dolls, and read the same story books together through twenty happy and harmonious years. Their loyalty to each other had survived every test except that of falling in love with the same young man.

Homer Mowbray lived in the next block. Homer was 23. He could remember seeing both girls in their perambulators—only in Brookfield they were called "go-carts" instead of perambulators. As a boy he had been freckled and wide-mouthed and possessed ears which were noticeably large and outstanding. He had grown into an undersized young man with a deep, rumbling, *basso profundo* voice that sounded like a bumblebee buzzing inside a jug.

Homer was intermittently employed as an automobile salesman in one of the town garages during the summer months. In the winter months he made a pretense of studying law in his father's law office. Generous, genial, known as a good fellow, with hundreds of friends and no enemies, he was the jolly, whole-souled sort of young man every girl likes, but at the same time would never think of loving.

Homer had sort of settled down to keeping company with Della May. Not infrequently Mildred Preston accompanied them on long drives, of a Sunday afternoon, when Homer succeeded in obtaining a demonstrator car from the garage for a few hours. Mildred treated Homer much as a wise and tolerant older sister would have done.

Bruce Pollard was a different kind of young man. Tall, striking-looking, of athletic build, he appealed to the eye. His hair was dark and curling, and he had sympathetic dark eyes. His features would

have been called clear-cut by our best drawing-room school of novelists.

He was of wealthy affiliations. He was luckily born with a whole complement of silverware in his mouth, hall-marked sterling, colonial pattern. Pollard, Senior, was a country Croesus, and Bruce was the only child. When the latter was 23, just out of college, where he had won honors in football, hammer throwing, and whatever else it was he studied, his admiring parent conceived the idea of launching the young paragon on a career. So he bought up the controlling interest in the Agricultural National Bank of Brookfield and sent Bruce over—the Pollards resided in an adjoining county—to be the bank's cashier.

Mildred and Della May met Homer on the sidewalk in front of the postoffice a day or two after Bruce Pollard's advent in Brookfield. Homer's habitual grin had a meaning slant to it. The two girls had come from the direction of the Agricultural National Bank, which stood a few doors distant up the street.

"Are you members of the committee, too?" he growled. "Don't go looking blank and pretending not to understand, now. You can't fool old Hawkeye, my dearies."

"What *are* you talking about, smarty?" said Della May. "What kind of a committee?"

"The Bruce Pollard Admiration Committee," Homer snickered. Della May tossed her head. Mildred grew an almost imperceptible shade of deeper pink. "I'll give you a tip," Homer said with mock seriousness. "You can't make any impression on Bruce by merely admiring him. He's used to that. I knew him down at the state university. Girls all fall in love with him at sight, and follow him around in droves."

"Oh, Homer, do you know him?" Della May clutched Homer's arm. "Milly's dying to meet him. Is he as fascinating to talk

*"Oh, Homer, do you know him?" Della May clutched Homer's arm. "Milly's dying to meet him. . . . Will you introduce him to us, Homer?"*

to as he is handsome? Will you introduce him to us, Homer?"

"Sure, I know him like a book. He and I belonged to the same frat. Why, yes, I'll arrange it so you can meet him before some other Brookfield girl gets her brand on him, if that's what you want. Are you both smitten?"

"Oh, be still!" said Della May. "Milly's favorably impressed. For my part, I'm not caring—"

"Now, Dell," objected Mildred, "you know you're the main one."

"The more the merrier," quoth Homer. "I'll tell you what I'll do. I'll bring him up to the tennis court one of these evenings soon. Don't thank me. The pleasure is all yours," he waved away their protestations of gratitude.

He kept his promise. He appeared at the tennis court late in the afternoon with Bruce Pollard in tow. Mildred and Della May were there—by chance, of course—knocking the balls around in a half-hearted way. They struck poses at once.

Bruce was duly introduced. He had a soft, sugary voice, and he said tennis was one of his best beloved pastimes. His playing was the polished perfection of elegance, a moving pageant of artistic attitudes and exquisite graces. His tennis was Delsartean, but not especially brilliant, when considered

from the dispassionate angle of a score card. With Mildred Preston for his partner, Bruce won one set. Mildred's technique resembled an excited small boy fighting hornets, but she occasionally triumphed, as Homer said, by sheer ability to whack in the wrong place at the right time. Mildred freely conceded all the credit for victory to her wonderful partner.

Della May exhibited signs of emotional complications. Her moods were like an April sky; now merry, now lowering, now storm clouded. The day ended, as regards Della May, with prospects of unsettled weather and cooler.

"I've had a lovely afternoon, really," Mr. Pollard twittered at the moment of parting. "I adore tennis. So glad to've met you ladies, honestly. Let's arrange to play again, right soon—." He departed, accompanied by Homer the Homely. The splendid figure of Bruce Pollard was enough to upset the peace of mind of any girl, as he swung down the street.

"Isn't he just grand?" whispered Mildred rapturously. "Don't you think he's awfully charming, Dell?"

Miss Robinson frowned darkly. "He's easy to look at," she assented. "But he talks like his mouth was full of soothing syrup. I tried to imagine myself sitting across the table from him the rest of my life, listening to that cooing dove's voice, and it got on my nerves just to think of it. Ugh! He looks like a he-man, but his talk sounds like when you blow in a perfume bottle. You can have him for all of me. He's so nice he's insipid. I wish Homer had his money."

Miss Preston was inattentive. "Do you think I've a chance, Dell?"

"It looks promising," Miss Robinson admitted.

Bruce escorted Mildred to Friday evening Christian Endeavor Society meeting; played tennis with her; sat out dances on occasion—straws which indicate the prevailing direction of the wind. The two couples—Bruce and Mildred and Homer and Della May—went picnicking together and on moonlight drives in Homer's demonstrator, and, if propinquity afforded the opportunity for developing and maturing Love's dream, all was over but the rice throwing.

Mildred and Della May occupied the hot afternoons doing fancy-work together on the

Preston's vine-shaded porch. On these occasions they discussed many things.

"Just what do you think of him, Dell?" Mildred studied the outlines of a capital "P" she was embroidering.

"He's a self-centered ninny," said Della May, heatedly. "Look how he lets little old good-natured Homer fetch and carry for him. When there's a flat tire, he sits like a grand duke while Homer does the dirty work. When there's a fire to be built at a picnic, does he bring wood? Not so you can notice it. He's afraid of soiling his lily-white hands. Who rowed the boat all day when we went fishing at Freeman's Lake last week? Why, good old dependable Homer. Homer's too easy-going to allow himself to be made a goat. I'm going to tell him so."

"You're prejudiced, Dell, dear," argued Mildred. "Bruce doesn't shirk the hard part. I'd be the first one to defend Homer if I thought he was getting the worst of it. Homer changes the tires because he wants to; he's responsible for the car. And Bruce isn't the least bit self-centered. He's awfully generous and thoughtful."

Della May made a sound very near to "oof!" "Oh yes, he's thoughtful," she said with fine irony—"of himself. I do wish he wasn't just a beautiful picture of a man. I like to see a man—a real man—get all sweaty, with his hands dirty, once in a while. If your wonderful Bruce would get up enough steam to wilt down his collar, I'd have hopes for him."

"I wanted your opinion, because I've about decided to marry him."

"Oh! Then I'd better be careful what I say," was Della May's calm rejoinder.

## II

For some time Homer had had a neat scheme. He confided it to Della May, and she—in strictest confidence, of course—confided it to Mildred. It was, in effect, that he would represent to his firm that Bruce Pollard was a live prospect who merely needed a bit of clever persuading to become a purchaser of an automobile. So it was ostensibly for the purpose of business that Homer arranged to transport the party to the Allendale Chautauqua toward the close of summer. Their destination was only twenty miles distant, and the roads were fine. It was a merry party.

Six miles or so out, the left rear tire picked up a nail and went flat. Homer carried a spare tire already inflated. He made a quick change. Bruce did not offer to help. Mildred seemed preoccupied while her *beau idéal* discoursed dulcetly of certain stirring adventures he'd experienced while climbing Bright Angel Trail on muleback.

Homer got in, grinning genially, and they reached the chautauqua grounds without other incident. The gatekeeper collected \$3—from Homer—50 cents each for the passengers and a dollar for the car.

"Drive up close to the grandstand," directed Bruce, "so we can hear the music." Mildred giggled and regained her usual blitheness of spirit.

"And don't fail to stop in the shade," added Bruce wittily. "I sunburn so easily."

Della May scowled at her reflection in the windshield.

It seemed destined to be one of those days when many little things go wrong. The incidents mounted in a sort of increasing progression of petty irritations. Bruce was chief offender. He allowed Homer to purchase all the peanuts, popcorn and lemonade; he did have the grace to pay for his own and Mildred's lunches, but his choice of sandwiches was unfortunate, and he spilled coffee on Della May's new sport skirt. His efforts to be light-hearted and gay were depressing. Mildred's eyes, temporarily freed from Love's glamor, saw flaws in the marble, and she almost began to suspect that her god's feet were made of clay.

The program of entertainments provided at the chautauqua was, to use Homer's elegant phraseology, "marvelously punk." In fact, the day was out of tune. Babies cried, and were spanked by impatient parents; dust got in people's eyes, ears, noses and throats; the ice water was iceless, and the merry-go-round broke down and wouldn't run.

Bruce seemed more insipid in his talk and more annoyingly selfish in small things than ever before. Homer, ordinarily optimistic, succumbed to boredom at last. "Let's hit the trail," he proposed at 3 o'clock. "This undertaker's convention makes me sick! Gee! I'd hate to be buried here!"

There was difficulty encountered about getting the car out of the tangled maze of vehicles senselessly massed in no semblance

of order, and Homer was considerably hotter, dustier and more disgruntled than ever when he finally accomplished a clearance. Bruce was quite unruffled and tranquil.

They made at least five miles on the homeward road before anything else of a disturbing character happened. Then the motor missed fire, spat disgustedly, and ceased functioning. Homer descended, and hunted here and there in places where black grime lurked in waiting for him. "The confounded gas tank's empty," he announced specifically.

"How silly!" burred Bruce. "You should've thought to make sure there was plenty before we started, Homer, old fello'."

"There was plenty," snapped Homer. "The cut-off valve in the carburetor must've got something under it, and the gas leaked out. That's one drawback to a car that feeds by gravity. You don't have that trouble with a vacuum system," he explained in his best selling manner. "This year's cars are all equipped with the latest—"

"Homer Mowbray," said Della May. "Don't stand there making a speech with your nose covered in smudge! How are we going to get home with no gasoline?"

"Don't get excited," admonished Homer. "I'll walk back to a farmhouse we passed, and more than likely get enough to take us in on. If they haven't got an automobile they've got a flivver."

He strode off, back along the dusty road over which they had come. The car had stopped on the sunny side of a high, osage hedge, where no breeze could reach its occupants. Bruce sat on the shady side and seemed quite comfortable, while the two girls sweltered. He prattled away pleasantly.

"Funny how some can take their ease while others do all the sweating," remarked Della May acidly. She was staring across fields at some men loading hay on a wagon as she spoke.

Bruce followed her unseeing gaze. "Yes, isn't it?" he purred. "But that's because some have brawn and others have brains, don't you think so, Miss Della May?"

"Milly, say something," begged Della

"Say, you lazy loafer!" he exploded. "Are you glued to your seat or what? Why didn't you get your blood to circulating by getting out and changing that tire while I was gone?"

May, grimly. "If you don't create a diversion, I'll begin biting and scratching."

"You ought to stand it if I can," said Mildred peevishly.

"Let me fan you with my straw hat," offered Bruce.

Homer hove in sight, burdened with a tin bucket. He approached in a sort of halo of dancing heat waves. Perspiration dripped from his parboiled face.

"Got a couple of gallons," he growled cheerily. "Lucky I—hullo!" He broke off to peer at one of the front wheels. "Good Lord! There's another flat in front—"

Bruce laughed merrily. His levity was inopportune. Homer glared at him like an angry fox squirrel about to attack a cinnamon bear.

"Say, you lazy loafer!" he exploded. "Are you glued to your seat, or what? Why didn't you get your blood to circulating by getting out and changing that tire while I was gone? You could've at least jacked it up off the rim. Hop down and act like a human being once instead of a stuffed—" Homer was so angry he spluttered. It was the first time the two girls had ever seen him thoroughly enraged. He looked different—like a fierce bantam cock offering battle to a turkey gobbler in the rumbling accents of a bullfrog. Both girls trembled with alarm.

Bruce's emotion was one of unalloyed amusement. He stared at Homer and then burst into laughter. "Homer, don't glare at me like that," he begged. "You're too funny for anything! Go on and fix that tire. I won't fight you while you're mad;

you look dangerous. Keep back! Don't come near me!"

Homer, growling in his throat, poured the gasoline into the tank; he got out tools from under the front seat, while Bruce continued to chuckle at intervals and make bantering comments. Della May stepped from the car.

"I'll help you, Homer," she said, her lips tightly compressed. "It would be too bad to disturb Mr. Pollard's comfort."

Bruce's amusement abruptly vanished. He made haste to descend. "Oh, I say, Miss Della May," he said seriously, "I was only joking—come, don't be angry. I'll help Homer—"

Miss Robinson ignored him. He gently touched her arm. "Please get back in; I insist upon it."

Della May regarded him with blazing eyes. Bruce gave her look for look, but his eyes did not blaze; they were bright, unwavering, compelling. Her gaze fell, and for no visible reason she began to cry. She made a fruitless effort to shake off his hand.

"Let me alone!" she burst out. "I—I hate you! You're a selfish beast!" Then, with incomprehensible feminine inconsistency, she suffered him to lead her and all but tenderly lift her into the rear seat beside Mildred. Homer and Mildred stared in a bewildered fashion as she retired behind her handkerchief. Bruce took off his coat preparatory to lending assistance.

"Don't cry, dear," whispered Mildred. "He's a brute!"

Della May raised a tearful countenance. "Do you really think so?"

"I'm certain of it," returned Mildred with decision.

Homer removed and dissected the tire, repaired and replaced the inner tube; Bruce pumped it up to sixty pounds' pressure with the hand pump. It was collar wilting work; it opened his pores in a way that should have gratified even Della May.

All four were sparing of speech on the way home. The girls got out at their homes, and Homer and Bruce solemnly drove away. It had been a consummately disappointing trip.

Homer Mowbray came into view in the bright moonlight late that evening, as Mildred Preston sat glooming alone on the

Preston's front veranda. He was in high humor. "Hurrah for everything!" he cried. "What you reckon's happened? I'll give you two guesses."

Mildred sighed. "I can't guess, Homer." "A regular streak of luck. Guess quick and then congratulate me."

Mildred studied his smiling face soberly. "You've asked Dell to marry you," she said softly, "and she's consented."

Homer gave a little start. "No," he laughed, "you're 'way off. No, what's happened: I've sold two cars. Two—count 'em—since supper. Commission's three hundred dollars each. Doc Smith bought a coupe—had him nibbling for a month. I knew I'd land him sooner or later. But the other was a complete surprise. Who do you reckon bought that new 4-passenger, wire-wheeled speedster we just got in? Paid down the cash! Nobody but your handsome banker friend, Bruce Pollard!"

"Bruce Pollard!" echoed Mildred. "Well—I suppose he can afford to buy a car if he wants one—"

"Yes, I rather think so," said Homer. "It only set him back a mere trifle of three thou. But you haven't congratulated me yet."

Mildred shook hands gravely. "I'm glad for you, Homer."

He pumped her hand up and down in a foolishly boyish manner. Then abruptly he relinquished it and turned to go. "Good night," he said. "I'm glad—well—you'll like that speedster—"

"Good night, Homer," Mildred said hastily.

### III

Homer busied himself the next few days teaching Bruce to drive. He was a conscientious instructor who believed in thoroughness. Bruce was fairly apt, however. Having mastered the essential fundamentals of driving, so that he could function with both hands and feet independently of both eyes, he began to wonder if Homer hadn't exaggerated the responsibilities of motoring a wee mite. Which was the very thing Homer had been anxious to warn him against.

It was a marvelously bright moonlight evening when, by happy prearrangement, the

four young persons went for the first ride in Bruce Pollard's new car. Della May had re-established quasi-friendly relations with Bruce; if she still hated him, she didn't scream out at the sight of him. One can't cherish rancor forever without cause against a handsome young man who takes one out riding in a new speedster—

The party bowled along a pleasant country lane not far from town. Bruce, with Mildred demurely beside him on the front seat, was proud of his expertness as a driver. Homer and Della May sat behind. All were in a giggling mood. Homer's droll humor was irresistible. Whatever he said sounded funny.

And around the next corner waited—Fate, grimly smiling.

Bruce let the car coast down a long slant. It was delightful—the very poetry of swift motion. At the bottom of the slant was a turn. Distances are deceptive in the moonlight. Homer would unconsciously have avoided what happened had he been at the wheel. But Bruce was due for his quiz—and there were several other matters to be adjusted.

The car was going too fast to make the turn. It made too large a curve. There was a deep ravine which the road skirted, and the outer wheels of the car struck the soft earth beyond the roadway; the car plunged over the bank, turning as it fell.

The thing had been lightning quick. Not one of the four had time even to realize what was happening. Bruce Pollard and Mildred Preston were thrown, or jumped, clear of the machine as it overturned. Neither was hurt in the least. But in a moment there came the hissing flash of flame and billows of inky black smoke; the wrecked car had become a death-trap of fire. And—

Homer and Della May were pinned beneath the wreckage!

The vicious crackling of red, lapping tongues—at such a time souls cast off all trappings of pretense. Mildred's heart was in her piercing scream of "Homer! Oh, save Homer!"

It was now Bruce Pollard, the athlete, not helplessly incompetent nor uncertain, but quick, resourceful, capable, mind and muscles co-ordinating. It was no weakling's job—to lift, or at least to shift, a ton

or more of inert weight so that those beneath could crawl out to safety. The fact that the car lay on a slant was all that made the feat possible. Bruce lifted and tilted the mass, unheeding the flames that darted and laved his hands and seemed to play around his head. And he held it until Homer dragged Della May clear.

Then he let fall his burden and, stooping, gathered up another burden, the limp form of Della May Robinson, which he held tenderly in his hungry arms. Her face was white and still. A trickle of red ran down her oval cheek.

Moonlight and black smoke may easily give the atmosphere of tragedy to such a setting. The truth was that Della May was practically unharmed. She had only fainted, and the blood on her face came from the very tiniest of scratches. Meanwhile Mildred was sobbing convulsively on Homer's gentle breast, her arms wound in a decided and unmistakable fashion around his unre-sisting neck.

#### IV

And that is pretty nearly all.

The two pairs of united lovers clambered out of the ravine and walked back to Brookfield. They didn't even wait to see the car finish burning up. However, as the Brookfield *Argus* declared in its exciting account of the accident, "the loss was covered by insurance."

"Dell, dear," Mildred said one day while admiring a certain new diamond solitaire which adorned her chum's most important finger, "when did you fall in love with Bruce Pollard, really? You always acted like you utterly despised him—"

"Oh, fiddlesticks, Mil, I was crazy about him the minute I saw him. I tried to conceal it from you all because I thought you wanted him yourself."

"My goodness! And it was Homer I wanted," Mildred murmured, gazing lovingly at her own engagement ring. "I've loved Homer since we were kids—"

**for Our Magazine**

(See Page 7)

## Hoover on Railroads

(Continued From Page 28)

spread, some of which will be mitigated with time.

No one can say what particular table-land of prices and wages we may settle upon, but it is a certainty that the exchange value of producer's goods will not again line up with consumer's goods unless we can decrease the costs and eliminate the wastes of our whole manufacturing and distribution trades. And unless we can secure their nearer proximity, we shall retard a return of employment and prosperity.

I wish to digress for just a moment from railway to agricultural subjects, to point out that the recent projects for fixing farm prices by law are apparently founded on the notion that by raising agricultural prices up to the levels of consumer's goods we can remedy the extreme hardship of our farmers. Even if it be possible to raise the prices, much less advantage would accrue to the farmer than anticipated. Unless the "spread" is decreased by actual savings, the costs of manufacture and distribution would be at least partly increased by higher prices of producer's goods. The spread is fundamentally due to increased cost of manufacture and distribution, not to the fall in producer's goods. The real remedy is an attack upon the causes of the spread and thereby to bring consumer's goods down to the producer's buying power.

### Must Reduce Railway Costs

It is a certainty that, in order to decrease the spread, railway rates must come down, and, for rates to come down, costs of railway operation in wages and prices of supplies must be reduced. Until this adjustment is secured, the economic machine will continue to move slowly. We cannot and should not expect wages to come back to pre-war levels. Many of our wage scales were too low in pre-war times. They can follow down step by step with the cost of living, but there are permanent charges in this spread, such as the taxes, which will hold the cost of living above pre-war levels. We must gain our other reductions in the spread by increased national efficiency.

The involved complex of transportation rates was obviously originally based on some relationship to the value of commodities, mitigated

by competition. In other words, the old slogan of "what the traffic will bear" had some economic background. But this entire conception of rate-making was destroyed by horizontal raises. We have rates clearly beyond what the traffic can bear.

### How Industry Is Affected

The increases in railway rates during the past five years have fallen with extraordinary inequality on different commodities and different groups of people in the community. The country grew up; its industries were distributed under ratios of cost between different commodities, ratios between raw materials and finished goods, ratios between the farm and the city. These have all been distorted by the horizontal rises. The increases in rates since 1914, for instance, have added probably less than 1 per cent to the price of cotton goods on the average haul, but they have added probably 60 per cent to the price of coal. The increased rates since 1914 have added nearly 100 per cent to the cost of assembling the materials for pig iron.

All this is artificially forcing our industries to move toward their raw materials. This does not alone represent the starting of a new factory; it is a movement of the whole mechanism of the community, labor, homes, schools, railroads and what-not—an enormous duplication of plant and loss of capital. We shall ultimately have the rates readjusted, and then we shall destroy the new industries created under them.

### Rate Burden Hits Two Ways

Of equal importance, there is a new economic light on this distortion of rates evident under the stress of the last few years: That is the better realization that some increases of rates come mostly off the producer, while others are paid by the consumer. Increases in spread between producer and consumer do not fall equally upon each of them. In primary commodities where the price is fixed by international competition, the increase or decrease in rates is a deduction from the producer. Take wheat, for instance, the point of competition with foreign produce lines at Liverpool. The net to the producer is Liverpool, less transportation and other handling charges. Therefore increases of rates are a deduction from the farmers' price.

The same thing applies to the producer in certain cases of domestic competition. Also where there is rapid turnover, as in manufac-

ture, and consequent ability to reduce supply, the consumer pays the freight, as processes of productivity will not continue below the profit point. In most manufactured commodities the consumer pays the freight, for production quickly shrinks when prices at the factory become unprofitable, and the price to the buyer is the factory price plus the freight. For instance, in hides, the farmer gets the international price less freight. On boots he pays the manufacturer's cost, profit and freight.

### A Case Needing Judgment

It appears to me that, with the paralysis induced by the increased spread, we have to take a broader vision of what part of the community is suffering most and direct such concessions through the railway rates as can be given to that group—if we would better equalize the whole economic load.

During the past eight months, the railroads have made many thousand readjustments of local rates in endeavoring to heal local distortions, but I am convinced that the whole railway rate structure needs a most systematic overhaul in the light of these new economic forces that have been brought into play. We obviously must maintain the average rate that will support our transportation systems adequately, and such an overhauling of rates might well mean the advancement of rates in certain commodities in order that compensation can be given to others where there is undue duress.

### Might Raise Some Rates

If I were to discuss the rates charged today, I should say at once that a decrease in passenger rates is not nearly so vital to the community as one in freight rates, for passenger rates do not enter in the "spread" in proportion to the relative volume of earnings. If I were examining the freight rates, I should at once say that coal, metals, wood, and agricultural and other producers' goods should be reduced to the bottom before LCL and class rates are touched.

I would be willing to go even further and say that I am convinced that, even if the commission cannot at the present moment justifiably reduce railway incomes a single dollar, it is warranted in investigating the possibility of some relief to the more distressed commodities by a revision of some rates upward. There is perhaps no great field for changes in this direction, but it is worth inquiry. As mentioned above, an economic analysis of our industry will show that LCL and class rates are

far too low compared with the rates on primary commodities.

With the gradual return of the traffic to normal, with decreased operating costs, relief in rates will be available, and it would be an economic crime to apply such relief by horizontal reductions to all rates, thus giving relief to higher priced goods and travel, when the vital mainsprings of our economic life, our agriculture and fuel and metals, are choked.

### The Present Rate Situation

Determination of anything in the nature of a permanent rate basis is in my own view impossible at the present time because:

The last five years of changing administration, irregular traffic and wildly fluctuating wages and prices of materials give us but little reliable historical criteria upon which to base an estimate of the future. We are in the midst of violent economic readjustments, of a profound industrial depression. No one can determine to what plane the reduction in operating costs will settle. No one can estimate the volume of traffics that are probable for any particular period ahead. It appears to me, therefore, that the commission will need to temporize with the situation for some time, and that its conclusion may well fall into three periods:

- 1—The immediate present;
- 2—During the early period of decreasing costs and increasing efficiency and slowly recovering traffics;
- 3—Normal operations.

### Need to Increase Earnings

If we survey the results of the past year in the application of present costs and rates, we find many railroads failing to earn interest upon their borrowed capital. We find some others, more fortunately situated, who have earned dividends on their share capital. One or two exceptions of low bonded indebtedness have done extraordinarily well on their share capital. If we survey the situation by districts, in order that single instances do not mislead us, we find that the whole of the Class I southern roads barely covered bond interest, while the most fortunate group, the western roads, show an earning of only 4 per cent in 1921 upon their tentative valuation. Moreover, it is obvious that maintenance has been held to a low level and new equipment and extensions practically to nothing.

The present earnings, in their perilous closeness to bond obligations, seem to me to dispose

of the question of immediate important rate relief, if we do not wish widespread receivership and shocks to our whole commercial fabric.

I believe there are cases where earnings could be increased by lower rates. I know that it is contended that such opportunities do not exist, but no one can review the testimony given here during the past few weeks without concluding that the rates in special instances are stifling business. These directions are perhaps not important in the whole problem of rates, but I am convinced that lower rates would recover lost traffic, such as export coal, substitutions in building materials, gains in water competition, etc.

### How Improvement Will Come

We must assume that those railway wages and supplies which are out of line will at least in part follow down to the levels of decreased cost of living; we must assume that the efficiency that is slowly emerging after the government management will still further increase; we must assume that the volume of traffics will increase toward normal.

I have the feeling that the railroads, being our greatest business, will agree that all these savings should be instantly devoted to relief in the rates on primary commodities in order that we should expedite the recovery that can only come through decreased spread between producer's and consumer's goods.

I recognize that the uncertainty and slow reduction of rates in this fashion will itself delay business recovery because of the uncertainty of business as to its future costs. If our railroads were in a position to stand the temporary shock, it would be infinitely better to drop the rates on primary commodities tomorrow—our business recovery would come faster. But we cannot ask the impossible.

### A Look Into the Future

If we look further to normal times, we could make a rough calculation that present wages and costs at say 50 per cent above pre-war would show that the railroads can earn somewhere around \$1,500,000,000 in excess of the 6 per cent minimum upon tentative valuation. As I have stated, relief is first more critically needed in the rates on primary commodities.

Some estimates given to me indicate that approximately 35 or 40 per cent of revenues are involved in the groups more urgently needing relief. I think it will also bear calculation that, in the income assumed above, primary commodities can eventually be reduced to pre-

war rates, and still place earnings upon a basis that will inspire such confidence in investors as will secure the free flow of investment capital into construction. It is not to be expected that capital for these purposes will be available at the rate that does not exceed the tax-free securities at least 2 per cent to 3 per cent.

A great deal has been said about the inefficiency of our railway system. I do not sympathize with these statements. Comparison with foreign railroads on the fundamental criteria of per-ton-mile costs, train loading and so forth, in the light of our cost of living, will demonstrate that our railroads are of higher standards, are better in methods than others and are growing in efficiency.

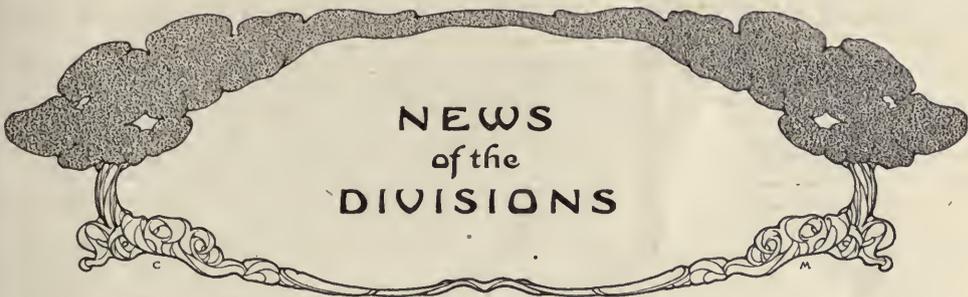

The consolidation of our railroads into larger systems has been contemplated in our legislatures of some years past as a gain in efficiency. Its value can be overestimated—it is not a panacea for all trouble. It does give hope, however, of economies in further efficiency from more complete utilization of rolling stocks and terminals, some small degree of saving in overhead, saving in current inventories, but probably its greatest saving would be decreased cost of proper finance, increased financial stability and fuller independence from the supply companies.

### Opposes Government Ownership

It is probably unnecessary to refer to the question of government ownership. No one with a week's observation of government railroads abroad or with government operation of industry in the United States will contend that our railroads could ever be operated as intelligently or as efficiently by the government as through the initiative of private individuals. Moreover, the welfare of its multitude of workers would be far worse under government operation.

We are struggling with the great problem of maintaining public control of monopoly, at the same time maintaining the initiative of private enterprise. I believe that we are steadily progressing to solution.

Great social and economic problems find their solution slowly and by a process of trial and error. We have tried unregulated monopoly, and have tried government operation, and found the error in them. We still have much to solve if we are to maintain our transportation. Much of this solution depends upon the successful initiative of the railroads themselves and much of the shaping of these matters lies fortunately in your able hands.

## NEWS of the DIVISIONS

### WISCONSIN DIVISION Minonk, Ill.

Miss Rachel B. Christians of East Grove street, Bloomington, Ill., and Harma Hinrichs of Minonk, Ill., were married Saturday, February 4, at the parsonage of the First Presbyterian Church of Bloomington. Mrs. Hinrichs lived in Minonk until two years ago, when she moved with her mother to Bloomington. Mr. Hinrichs has spent all of his life here. He is employed as first trick operator by the Illinois Central.

Walter Rotowski has resumed work at the coal chutes after being off some six weeks nursing a broken wrist, the result of falling into the elevator shaft at the coal chutes.

Operator Collins relieved Operator Hinrichs while the latter was off joining the benedictines. Operator Atkinson is enjoying an extended visit with relatives in Iowa, during which Operator Hopkins is doing the relief work.

With a rise in the grain markets there was a rush of grain shipments in the earlier part of the month and up to about the 20th, when the weather broke up. Bad roads have materially reduced the output.

Agent Kelly was housebound several days, being again threatened with pneumonia. The latest word is that he is much improved and is again on the job.

Our basketball team is still knocking 'em off. The Armour American Legion team of Chicago is the only team able to get away winner so far this season. Our team has a return game with the fast Armour team, and the boys are confident of winning, in which event there will be a third game to decide "who's who." Just one man other than the coach is not an Illinois Central employe. Therefore we claim the Illinois Central championship and stand ready to defend the claim. Challengers should address George Halfman, care Illinois Central Railroad, Minonk, Ill.

### Dixon, Ill.

Work on dismantling the Rock River bridge at Dixon has again been discontinued. There remain three spans to be taken down.

The Black Diamond extra gang, Foreman Keller, has been reduced to five men, and the laying of 90-pound rail in Dixon Yard is being held up for the present.

The first natural ice for the past two years was handled out of Dixon during February. There were loaded out twenty-nine cars of 14-inch ice.

During 1921, the Borden Condensed Milk Company, Dixon branch, shipped 80,000,000 empty tin cans, distributed between Modesta, Cal., Fort Scott, Kan., Logan, Utah, and Monroe, Wis.

The freight house platform at this station is being improved by the renewal of portions

of the platform. In the very near future further improvements will be made in the way of drainage and resurfacing driveways to the freight station.

The last car damaged in Dixon Yard by a switch engine was on January 25, 1921. Engine No. 652 figured in the damage, which was caused by bad rail. This is a record for C. H. Ruggles.

Joseph Lantrum, pensioned sand dryer, died at his home in Minonk Saturday, February 11, at the age of 80. He was born in Rutherford, Tenn., February 3, 1842. In December, 1921, Mr. and Mrs. Lantrum celebrated their 56th wedding anniversary. She and two children survive him. Mr. Lantrum was a faithful employe of the Illinois Central for more than thirty-four years. He was retired on a pension in 1911. "Joe," as he was best known, was always kind-hearted and pleasant. He took great delight in relating his old-time railway experiences. Funeral services were held at the home Monday, February 13, conducted by the Rev. H. McFall of the Methodist Church. Burial took place in the Minonk Cemetery. Mr. Lantrum was a member of the Minonk Methodist Church.

### ILLINOIS DIVISION

#### Superintendent's Office

Miss Zoe and Miss Billie Friend, accountant and file clerk respectively, left Champaign February 17 on No. 3 for Palm Beach, Fla., to visit their parents, Mr. and Mrs. T. J. Friend of Flora, Ill., who are spending the winter in the South. From Palm Beach the party will motor to Jacksonville. Miss Zoe and Miss Billie will return to Champaign in about ten days.

The marriage of L. M. Sands, accountant and son of Mr. and Mrs. F. G. Sands of Tolono, Ill., to Miss Edna Gerschwiller, daughter of Mrs. Elizabeth Gerschwiller of Champaign, was a surprise to their many friends. The ceremony was performed the afternoon of February 17 at the home of Mr. and Mrs. R. B. Burley, 6939 Harper avenue, Chicago. Mr. and Mrs. Burley and E. F. Kremer, chief accountant at Champaign, were the only ones who attended.

Illinois division employes extend their sympathy to Noble Richmond, chief clerk to Trainmaster J. T. Stanford at Champaign, because of the death of his two grandmothers, Mrs. Noble of Champaign, Ill., who died the afternoon of February 16, and Mrs. Richmond of Neoga, Ill., who died the morning of February 17. While arrangements were being made for the funeral of Mrs. Noble, "Nick" received word of the death of his other grandmother, Mrs. Richmond.

Miss Lona and Miss Blanche Lawson, tonnage clerk and accountant, left for Birmingham, Ala.,

on No. 3, February 13, to meet their parents, Engineer L. ("Pokey") Burns and Mrs. Burns, who have been visiting relatives in Cupey Oriente, Cuba. Before returning to Champaign they expect to make a short visit to Chattanooga, Tenn. Mr. and Mrs. Burns will visit Biloxi, Miss., and New Orleans, La., before returning to their home in Chicago.

#### INDIANA DIVISION

M. S. Hacker, operator at Cass, Ind., and Miss Tillie Butler, also of Cass, were quietly married February 11, at Linton, Ind.

After a thorough check, February 14, of the Mattoon yard offices and yards, Mr. Pinkerton and Mr. Green report that Mattoon is being handled nearer to 100 per cent than any yard checked to date.

Chief Dispatcher Freigo is back on the job after a several days' absence due to a very severe cold. Dispatcher J. W. Bledsoe relieved him.

Due to the completion of the "101 report" in the accounting department, L. H. Petri, who was on that work, has been transferred to the chief clerk's office, relieving Carlton Schlicher.

Other changes in the offices are as follows: Miss Victoria Gustafson, who has been in the trainmaster's office for several years, is now in the office of Chief Dispatcher Freigo; Miss Essie Reams relieved Miss Gustafson, and Miss Cora Burch fills the stenographic position made vacant by the departure of Miss Reams.

Mrs. Lou Morris, who did substitute work for several months in the offices, has left, and has been visiting in Chicago.

#### ST. LOUIS DIVISION

Charles Clayton, who was employed as a stenographer in Superintendent Atwill's office, has gone to Tampico, Mexico, where he is employed in a similar capacity with an oil firm.

James T. Champly has been appointed agent at Royalton, Ill.

The oil prospects at Centralia, Ill., are becoming brighter every day. It is reported that one well has been brought in producing approximately 300 barrels, and that six new outfits have started drilling recently.

The new depot at Marissa was recently completed. It is now one of the nicest stations on the St. Louis district.

On January 29 there were 4,493 cars handled through the terminal at Mounds, Ill. This is the best record for the last two or three years at that point.

H. J. Corzine, section foreman at Carbon-dale, recently saw a brake beam dragging on I. C. 11435, and took the necessary action to have it removed, preventing, no doubt, a serious accident.

The first detachment of the St. Louis Cardinals passed through Carbon-dale, February 18, en route to Orange, Tex., via New Orleans. The party included Acting Manager Shotten, Pitchers, Haines, Pfeffer, North and Barns, and Coaches Sugden and Thomas. Mrs. Shotten and two children were along.

A dinner party and dance in honor of Mrs. Emory Mason, who was recently married, was given by thirty employes of the Illinois Central in the freight house at Benton, February 14. A 3-course dinner was served, after which a dance was given. The bride was presented with a set of silver.

Rolly Fox, Elkhaville, Ill., flagged train No. 74,

near Elkhaville, January 19, when he found a broken rail.

The Centralia quartet entertained the night force at the Carbon-dale division office January 21. The quartet was on its way to St. Louis to entertain conductors at the initiation of a large number into a lodge there. The quartet is composed of the following Illinois Central employes: McFarland, Adams, Maxfield and Armstrong. General Chairman Moales also visited the office, and enjoyed the entertainment.

Brakeman J. B. Blackman, on Extra 1755 north, January 25, saw a brake beam lying across one of the rails in the vicinity of Ogles, got off his train and flagged train No. 224.

Miss Augusta Gurley, sister of Dispatcher Gurley, was recently employed as a stenographer in Superintendent Atwill's office. She fills the vacancy made by the resignation of Charles Clayton.

#### TENNESSEE DIVISION

February 10, Roy E. Pickering, accountant, better known as "Little Pick," became the proud father of twin girls, Elizabeth and Margaret.

Sympathy has been extended to Miss Hortense Johnson on the death of her mother, Mrs. Bell Johnson, on January 30, 1922.

P. H. Croft, former instrument man at Fulton, who has been connected with the engineering department at Chicago, has been made supervisor of the C. M. & G. Railroad, with headquarters at Dyersburg, Tenn. He succeeds S. H. Parks, who has been transferred to the St. Louis division, with headquarters in East St. Louis.

Gideon J. Willingham has returned to work after several days' illness.

C. L. Crocker, section foreman at Fowlkes, Tenn., returned home January 27, after undergoing an operation for appendicitis at the Paducah Hospital.

Section Foreman H. F. Underwood has been transferred to Wickliffe, Ky., on account of his position at Dyersburg, Tenn., being abolished.

Conductor D. A. Kenney has been commended for the interest manifested by him on January 13 when he notified the dispatcher that a car in Extra 1720 had a flat wheel.

Miss Blanche Trevathan of Arlington, Ky., notified our operator at Bardwell, Ky., of an accident to our train, Extra 1739, January 15 at Arlington. Our derrick started to the point of accident earlier than it would have been possible otherwise, and division officers, as well as the management, are very grateful for this voluntary assistance.

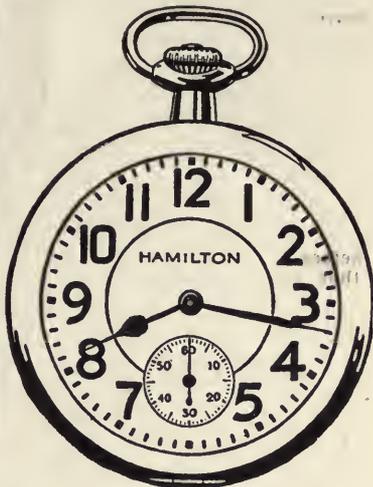

For prompt handling of loaded cars, attention is called to I. C. 173122 and N. C. & St. L. 13874, placed for loading at the Bemis Bag Company, Jackson, Tenn., at 7 a. m., February 2, loaded with bagging for Minneapolis, and Wabash 66946 loaded by the Veneering Lumber Company, at 9 a. m., same date. The three cars moved out on Train No. 52 the same date they were loaded. This is one of many such cases.

I. C. 21038 and 38618 of Train No. 191 were set out at 12:50 p. m., January 23, at Newbern, unloaded, placed in train No. 192 at 2:40 p. m., the same date and billed to Centralia for grain loading. This is the kind of movement which makes the Illinois Central service so attractive to its many patrons, and maintains the standard of the Tennessee division.

Solicitation is one thing, and service is another; but they are so intimate that they are

Conductor Dan Mandaville has been in Erie Service 46 years. His run is between Jersey City and Binghamton—out on No. 5, back on No. 6. He has been carrying for 15 years that Hamilton he has in his hand.

## TRUE TIME ALL THE TIME

is what you can expect from your Hamilton Watch.

For thirty years we have been building Railroad Watches—

—Watches which have more than met the exacting requirements of Railroad Watch Inspection.

—Watches that have been doing their full share in keeping "On Time" the fast Limited Trains on America's finest Railroads.

—Watches that have been serving Engineers, Firemen, Conductors, Trainmen, Dispatchers, Telegraphers, Yardmasters, Switchmen—in fact all classes of Railroad men whose jobs require an accurate and dependable watch.

The number of satisfied Hamilton owners on America's railroads is now legion. We don't manufacture all the Railroad watches; but all the Railroad watches which we manufacture are watches of dependable, enduring accuracy. There is a comforting assurance in belonging to the majority.

For time inspection service, the most popular watch on American railroads is the Hamilton No. 992 (16 size—21 jewels).

Write today for the Hamilton Watch Book—"The Timekeeper." It pictures and describes the various Hamilton models, with their prices, beginning at \$22 (\$25 in Canada) for a movement alone, up to \$200 for the Hamilton masterpiece. Also other interesting watch information that makes it especially valuable to railroad men.

HAMILTON WATCH COMPANY

"The Railroad Timekeeper of America"

each entirely dependent upon the other. The former gets the business, and it is up to the latter to keep it; whereas the latter might never have the business if it were not for the former, and it is impossible to give service without someone to serve.

It is more than probable that solicitation induced the shipper to choose the Illinois Central when he loaded R. I. 500384, mules for Albany, Ga., handled in Train Extra No. 1737, Tennessee division, January 31, in charge of Conductor R. H. Briggs—and then service visited her part. Conductor Briggs wired the agent at Birmingham as follows:

"Extra 1737 Sth has RI-500384 mules for Albany, Ga., CGA loaded 5:30 p. m., January 30, owner in charge and very anxious feed water get on 38 tonight. Please arrange to handle promptly as it means several cars to us with prompt movement. Should reach Birmingham 3:15 p. m."

The mules were fed, watered and rested, and moved on train No. 38. The shipper was greatly pleased, and indicated that he would have twenty-five or thirty additional cars to move.

For a number of weeks the little city of Riceville, on the outskirts of Fulton, has been bothered by petty robberies, such as stealing of clothes, meat, groceries and other small things. No one seemed to be lucky, or fortunate enough, to be able to get a shot at the robbers until about 5 a. m., February 6. Green Templeton, a fireman at Fulton, was awakened by a noise at his window. Slipping out of bed, he crawled close to the window, and shot twice at two men he saw trying to get in. They ran before he could get another shot at them. Later that morning, an examination revealed blood stains just outside of the window. Dogs were sent for, to trail the men, but they did no good. By this time the news had spread, and men were on the lookout for the robbers. About 9 o'clock word was received that the robbers were believed to be about a half mile beyond the coal chute. Several men went to see if they were the ones. It happened that Foster Edwards, night engine inspector, and Carl Parton, carman, were near the coal chute about the time this news reached there and they went in search of the men. A short distance ahead, three men ran from a fire as the pursuers approached. One man was caught, and it was learned that he had been shot. He was turned over to the officers, and the search was continued for the others.

**MISSISSIPPI DIVISION**

On the morning of December 27, A. M. Fisher, one of the Mississippi division's best track foremen, fell in the harness at his post of duty.

Mr. Fisher entered the service of the Illinois Central as a common laborer in July, 1903; was promoted as foreman at West, Miss., July, 1904; was moved to Durant, December, 1905; to Grenada, December, 1906; to Horn Lake, January, 1907; to Sardis, October, 1908; to Batesville, October, 1909. He was given charge

of an extra gang in August, 1911, and was returned to the Batesville section in May, 1914, where he remained until his death.

He was considered by all who knew him one

of the best track men on the division. He was also considered one of the hardest workers. The record will show that his job was maintained in first-class condition at all times with less money than that of any other foreman on the district where he worked.

He was known by all concerned for his promptness to duty under all conditions. No night was too dark, it did not rain too hard and the storm was never too heavy for him to get out and look after the condition of his track. He was always the first man on his district to call in on the telephone and give the train dispatcher and his supervisor the condition of his track. He was always prompt in carrying out instructions and was loyal to his superiors. His practice was when a job was started to fight it to the finish. He never was satisfied with unfinished or untidy work. While other men have possibly climbed to higher rank in the same time, it can truthfully be said that no man in his department stuck closer to his duty, carried out instructions more promptly, or worked harder to make progress on his job than A. M. Fisher.—Contributed by A. R. Wilkinson of Sardis, Miss., his supervisor.

Allen Miller, pensioned negro employe of the Water Valley, (Miss.), shops, died at his home in Water Valley, December 31, 1921.

"Uncle Allen," as he was familiarly known to both his white and negro friends, was born near the present city of Greenwood, Miss., March 10, 1840, and began service with the old Chicago, St. Louis & New Orleans Railroad Company, now the Illinois Central Railroad, in the machinery department at Water Valley as a blacksmith helper under former Master Mechanic Jack F. White. He worked in that capacity for these companies continuously up to August, 1910, when he was retired on pension because of having reached the age limit.

"Uncle Allen" worked under every master mechanic at Water Valley from the time of Mr. White up to the time of William H. Watkins and was always considered a reliable and efficient employe, faithful in the discharge of his duties and loyal to his friends and his church. He was a consecrated member of the Eversdale Baptist Church for nearly half of his life.

**MEMPHIS TERMINAL DIVISION**

On July 21 J. A. Bottoms, clerk in the freight office at Memphis, will reach his twenty-first birthday, and will become sole heir to the money and property left him by Mrs. Margaret Moncure, an aunt, who died at New York, January 25.

The estate is now in the hands of the Guaranty Trust Co. of New York, appointed administrator and guardian.

Bottoms admits that the estate is large, but refuses to reveal the exact amount. He would not deny the report that it is close to \$100,000, mostly in real estate.

"The only time I ever saw my aunt was when I saw her in her coffin, in January," Bottoms said.

She was a sister of Bottoms' father, who died several years ago. Bottoms lives with his mother.

Mechanical Department, Memphis, Tenn.

transferred to the Illinois Central Hospital in Chicago.

James Moore, machinist apprentice, has resumed work after being on the sick list for ten days.

W. H. Smith, night hostler, who has been confined at St. Joseph's Hospital with appendicitis, has recovered enough to be removed to his home.

Machinist William Herbert has returned from Chicago, where he has been under treatment at the Illinois Central Hospital.

Herman Slusmyer, Illinois Central engineer, has let the contract for two dwellings on his plot at Gaston and Patton streets.

Elmer Nottmler, tinsmith, has resumed work after being on the sick list for a week.

Ernest Brown, machinist apprentice, has resumed work after an enforced vacation caused by a wrist sprained while cranking an automobile.

Frank Heckinger, machinist, has resumed work after being on the sick list for a few days.

Edward Shepherdson, machinist, who has been on the sick list for a week, has resumed work.

The entertainment given recently in the Lauderdale School auditorium for the benefit of the Drum and Bugle Corps was largely attended, and the musical program rendered by the orchestra and the Central High School Glee Club was very liberally applauded. The black-face sketch by F. Foley, Norman McBride, Zetta Foley and Noble Craig and the whistling number by Frank Wright received much applause. The receipts, amounting to \$80, will be used to buy uniforms and instruments for the corps. There has been no organization of this kind in South Memphis. The present corps is sponsored by the Lauderdale Improvement Club.

At the last meeting of the South Memphis Lauderdale Improvement Club, the members perfected plans to establish a night school for the benefit of the young men of the district who do not have the opportunity to attend during the day. A thorough course of instruction will be given in various grades, and all those who wish to attend the classes will be welcome. Those wishing to attend or who desire further information should apply to Professor Toryson of the Lauderdale School. The meeting, which was largely attended, was addressed by Mrs. Ellis of the school board, who was a guest of the club. Several club members also spoke. H. Patterson was elected chairman of the membership committee which will make a drive for new members this coming month. The purpose of the club is to improve South Memphis and

make it a better place for the members and their families to live in. The club is affiliated with the A. B. Hill and the South Memphis Business Men's clubs. President W. F. Lauer, general foreman of the Illinois Central shops, presided.

Carleton L. Swofford, 7 years old, son of Lee C. and Ethel E. Swofford, died at the family home, 244 Simpson avenue, Monday evening, February 6, of scarlet fever. Mr. Swofford is chief electrician for the Illinois Central Railroad. Funeral services were held at the residence. The Rev. J. W. Orr officiated. Burial was in Forest Hill Cemetery.

C. R. Farnar, machinist, is on the disabled list with a sprained hip caused by falling in a pit.

**MEMPHIS DIVISION**

R. S. Magee, division agent, was married to Miss Edith White of Memphis, January 28.

Mrs. O. E. Ramsey, clerk in the master mechanic's office, was married February 16 to M. A. Leach, Memphis division engineer.

February 7, Conductor H. B. Robinson observed a bent axle on N. Y. C. 48126, fifteen cars from the caboose in train No. 72. The car was set out at Greenwood, Miss., and the wheels removed.

At a point approximately one and one-half miles south of Grenada a stake pocket on I. C. 69760, a car loaded with logs in train No. 396, broke, and two of the logs fell off. T. C. Conn, conductor, made an inspection when his train stopped to set out some cars at a box factory in Grenada, and discovered broken wires on the car. He went back to where the logs had fallen, and found that one had not cleared the main line. He cut his engine off, went to the box factory, borrowed some cant hooks and moved the logs in clear. Upon his arrival at Grenada, Conductor Conn endeavored to communicate with the operator at Greenwood to place a restricting order over this section of the track. He did not know whether or not the logs had impaired the track when they fell. He was unable to get in communication with the operator at Greenwood and his train was tied up. Being apprehensive about passenger train No. 322, Conductor Conn went to his caboose, got a lantern, walked back to the place where the logs fell off, flagged No. 322 and piloted the train over the place.

I. C. 87183, loaded with a contractor's outfit, moved from Greenville to Winona over the Y. & M. V. and the Illinois Central, a distance of 189 miles, in forty-eight hours. The car was started February 8, moved through five termi-

nals and was handled by five road trains and by switch engines at Cleveland, Clarksdale and Greenwood. No special movement was indicated for this car. This business was got by M. L. Mays, agent at Winona, although the distance over another road was only 83 miles.

The consignee was very much pleased with the prompt handling of this car, and as a result is routing a large shipment of pipe from Birmingham over our line. He expects to give us routing on shipments of gravel, sand and cement which will move in the near future.

Conductor V. R. Byrd, who has been in the Illinois Central Hospital at Chicago for some time, recently returned to Memphis very much improved.

**NEW ORLEANS DIVISION**

Engineer J. J. Mulvihill, in stepping off an engine in New Orleans Yard, severely sprained his ankle, necessitating his laying off for some weeks. He has recovered sufficiently to resume his run.

The sudden death of Engine Foreman C. E. Harris of Vicksburg Yard came as a shock to his fellow workers and to the community. Mr. Harris, while on his way home after his night's work, dropped dead of heart disease. He leaves a widow and child.

Conductor E. O. Stafford fell from the cupola of his caboose, sustaining a dislocation of his shoulder and minor bruises.

Engineer J. D. Riggs is on the sick list.

A son was born recently to Brakeman and Mrs. M. K. Riggn.

Twin boys were born to Engineer and Mrs. J. J. Drehr, recently.

Flagman E. A. Weysham was married in New Orleans in the early part of the month.

At a benefit performance at a Vicksburg theater, given for the benefit of the American Legion, a comedy film by a well-known novelist and scenario writer was presented. The picture attracted wide attention, due partly to the fact that the author is a home product and also to the appearance of several prominent railway men on the screen, including Superintendent F. R. Mays, Engineer J. D. Riggs and Conductor R. E. Cook, who for the first time, perhaps, saw themselves as others see them.

Section Foreman H. D. Schwing of St. Rose, La., section, after a severe illness in the Illinois Central Hospital at New Orleans, has returned to his duties.

Foreman J. D. McDonald has been moved to Arlington Section L-26. Mr. McDonald is one of our oldest foremen.

The Illinois Central System, in promptly keeping pace with the remarkable progress of

Baton Rouge, La., has authorized the building of a freight and passenger depot at that point at an estimated cost of \$600,000. Work on the new structure will begin as soon as possible, and completion at an early date is desired. The building will be in keeping with the usual high standard of the company—up-to-date in every respect. The citizens of Baton Rouge are justly proud of this valuable addition to their city.

A. G. Wellons, traveling auditor, has been appointed auditor of the entire New Orleans division in addition to his duties on the Vicksburg division.

*E. Bodamer*

Mr. Bodamer, superintendent of the Memphis Terminal division, was born June 9, 1870, at Logan, Ohio, and began his railway work in 1886 as a switchman for the Pennsylvania. In 1889 he entered the service of the Terminal Railroad Association as a switchman at St. Louis, and in 1894 he became a switchman for the Wiggins Ferry Railroad at St. Louis. He served as a conductor for the Frisco from 1889 to 1903. Then he took the same position with the Illinois Central, serving the company as a conductor for ten years. In 1913 he was made trainmaster at Memphis. Five years later he was made trainmaster on the Tennessee division, and was then transferred to the Y. & M. V. The same year, 1918, he received a temporary\* appointment as superintendent of the Memphis Terminal, in the absence of J. M. Walsh. Upon Mr. Walsh's return from the war in 1919, Mr. Bodamer reassumed his duties as trainmaster. He was appointed superintendent to succeed Mr. Walsh when the latter went to the Memphis division in June, 1921.

## Let's "Sell" the "Old Reliable"—That's Easy

*Every Employe Is a Salesman in His Way, and Our Product Contains the Necessary Priceless Ingredient*

By N. BELL,  
Master Mechanic, Waterloo, Iowa

WHEN I contemplate "making" the magazine, I confess I feel like little Johnnie, who haltingly was practicing an exercise on the piano and finally, in desperation, called up to his older brother, "I can't play this piece!" His brother promptly yelled down to him, "That's what you got to practice it for, you poor fish!" So bear with me.

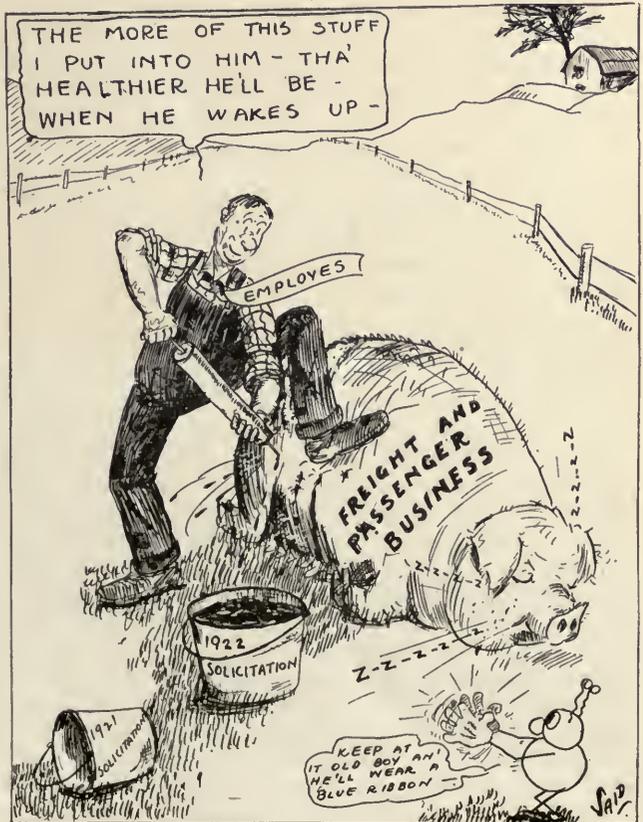

Out here in Iowa, the land of corn, the Illinois Central is called the "Old Reliable," which is a nickname to be proud of. There is no question it is fitting so called.

I recall one stormy day last March at one of our stations. A knight of the grip came rushing down the street to see the tail end of one of our local passenger trains fast disappearing. He rushed up to me and asked if that was the train to Waterloo. On being told it was, he sat down and said, "I'll be darned—a local train right on the dot!"

I found, in conversation with him, that he had just come from an eastern territory and, as he put it, "Down there you

don't have to be on the dot; usually five or ten minutes don't matter."

However, he soon smiled and said: "I'm satisfied with this kind of service, and I'll sure be on time to travel on this line. It's good

enough for me." The Old Reliable had been "sold" to him.

### Every Employe a Salesman

One thing above all else stands out in the Illinois Central family, and that is: Everyone is a good salesman. I saw a flagman on one of our trains recently, upon arriving at a station and after announcing the stop, gather up a dear old lady's bag and suitcase and carefully help her off the train and start her on her way with a smile. He certainly "sold" the Old Reliable big, not only to this old lady but to all the passengers in that car.

I was passing through one of our roundhouses and noticed one of our machinists with a main rod brass down. I stopped to examine the brass and talk to this man, who is truly an artist in his line of work, if it is possible to speak of artistry in a railway roundhouse. I told him we were very anxious to have the train the engine was going on "on time." He said, "So am I, and I'll do my best." He was selling our wares conscientiously and well.

I sat in an observation car on one of our heavy trains, which, as you know, is the place where the jolts at stations and water cranes show big. The train was stopped and started beautifully. An old gentleman opposite me said to the gentleman next to him, "My, this is some train!" If the engineer could have heard the complimentary things said, he would have felt well repaid for his care in handling that train. He surely was "selling" big.

### Team Work and Talking Points

I might tell you story after story of actual cases of good salesmanship. I have been so fortunate in the past, and am now, as to be a small factor in an organization of our employes to "sell" the Old Reliable. This organization truly has the crusaders' fire, enthusiasm and aggressiveness for the cause.

It surely makes one glad to be one of the Illinois Central family, to meet someone who smilingly tells you: "We surely did well last night. We put twenty-two cars of hogs at X—— packing plant." Or to have someone stop you and have him bombard you joyously with the information that: "We got fifty-three cars of coal over the Illinois Central this month we never could haul before, and the freight house receipts are going to show a big increase this month." That sounds mighty good, as it means the Old Reliable is going better all the time. It means work for us all and good for the town we live in—a better town for all of us.

Folks, don't be afraid to sell your road to the merchant, the professional man, your neighbor and all. They like it. They appreciate it. There are many things they like to hear of. Tell them that the Illinois Central has a well-maintained roadbed and matchless equipment; that we have 60 per cent of our passenger equipment of steel construction, which is 21 per cent better than of the country as a whole; that our passenger trains were 98.2 per cent on time over the system in 1921; that our passenger engines are the finest that can be built and are carefully maintained in the best condition; that our freight equipment is very good, and our freight and switching power is second to none, and our organization is matchless.

### Hakeem and the Priceless Ingredient

As I write, I am reminded of the story of Hakeem the Wise One. In the city of Bagdad, many years ago, lived Hakeem the Wise One, and many persons went to him for counsel, which he gave freely to all, asking nothing in return. There came to him a young man who had spent much but got little, and he said: "Tell me, Wise One, what shall I do to receive the most for that which I spend?"

Hakeem answered: "A thing that is bought or sold has no value unless it contains that which cannot be bought or sold. Look for the Priceless Ingredient."

"But what is the Priceless Ingredient?" asked the young man.

Spoke then the Wise One: "My son, the Priceless Ingredient of every product in the market place is the Honor and Integrity of him who makes it. Consider his name before you buy."

Mr. Markham in one of his open letters says: "The patrons of the Illinois Central System find courteous and sympathetic attention in every department. Employes take great pride in our reputation for courtesy. Service is now the only basis of competition among the railroads. Since rates are standardized, the Illinois Central System cannot offer rate bargains to command patronage, but it can offer—and it is constantly developing—the organization, equipment and facilities for unusual service."

This is certainly putting the "Priceless Ingredient" in the Illinois Central. Our president and his organization by progressive policies make "selling" the Old Reliable easy. Let's approach the future with confidence and a stout heart, and "sell" big. Let's go!

# Up in the Air With Uncle Sam's Fast Mail

## Thirty Hours From Coast to Coast Is Goal Sought by Service Now in Its Fourth Year of Operation

*The following are excerpts from an address delivered before the Washington Section, Society of Automotive Engineers, January 6 by Colonel E. H. Shaughnessy, second assistant postmaster general. Colonel Shaughnessy since then has died of injuries received in a theater accident at Washington.*

**T**HE air mail service was started May 15, 1918, the first step being the establishment of a mail route from Washington, D. C., to New York City via Philadelphia, no intermediate stops being made. To begin with, army planes and army personnel were used. The planes were the JN4-H type, equipped with 150-horsepower Hispano-Suiza motors having a carrying capacity of 150 pounds of letter mail, or approximately 6,000 letters.

On August 12, 1918, the postoffice department, having perfected a civilian organization, relieved the army from further duty with the air mail service, thereupon assuming full charge of all activities and at the same time putting in use the standard E-4 type plane, equipped with the same 150-horsepower Hispano-Suiza motor, but having a carrying capacity of 200 pounds, or approximately 8,000 letters.

The Washington-New York route operated steadily and successfully, warranting further expansion, and on May 15, 1919, or one year later, the first leg of the transcontinental route was established from Cleveland to Chicago, via Bryan, Ohio, using the DeHaviland 4 type plane, equipped with a 400-horsepower Liberty motor, having a carrying capacity of 350 pounds, or approximately 14,000 letters.

### Rapid Extension of Service

Further extension followed rapidly. July 1, 1919, service was started from Cleveland to New York City, via Bellefonte, Pa.; May 15, 1920, from Chicago to Omaha, via Iowa City, Iowa; September 6, 1920, from Omaha to San Francisco, via North Platte, Neb., Cheyenne, Wyo., Salt Lake City, Utah, and Reno, Nev. In addition to the transcontinental trunk route, additional lateral routes were put into operation as follows: August 15, 1920, from St. Louis to Chicago, and December 1, 1920, from Chicago to Minneapolis.

That was the situation when the present administration took office; that is to say, there were in operation air mail routes from New York City to San Francisco, St. Louis to Chicago and Minneapolis to Chicago over

*Photo. from Underwood & Underwood, N.Y.*

*This photo shows a Thomas-Morse Hispano transcontinental air mail plane. The machine has a wing span of 45½ feet and an overall length of 26 feet. The motors are two American Hispano-Suiza 300 h. p., both contained in the nacelle, placed between two fuselages.*

which mail planes were flying regularly during the daylight hours.

Great things had been accomplished in the way of extending the air mail service, but the situation as we found it was not altogether satisfactory. Criticism was being directed toward the service by the public and the Congress, principally due to the fact that there had been a series of unfortunate accidents during 1920, which had resulted in considerable loss of life. In addition to this feature, members of Congress, in committee and on the floor, objected to the manner in which the air mail service had been extended and financed.

### Air Mail Service Reorganized

The whole matter was given serious consideration. A careful check-up indicated that most of the operating difficulties came from too-rapid expansion without providing necessary facilities with which to operate efficiently. Then there was the necessity for getting four square with the committees in Congress; so we decided to start a new deal all around: first, to carry out the intent of Congress, which, let me say, is not unfriendly to an air mail service, although very properly unfriendly to what the Congress thinks is maladministration in any service; second, to align ourselves with the expressed desire of the administration for economy; and, third, to put into effect my own thought that we would be helping aviation in a much more beneficial way if we stopped the too-rapid expansion which, through lack of sufficient facilities, seemed to be making the air mail service an extra hazardous occupation, and instead concentrate our efforts on standardizing and perfecting the operation on a more restricted route.

For these reasons we decided to discontinue the laterals. Washington to New York City was abandoned May 31, 1921, and St. Louis-Chicago and Minneapolis-Chicago June 30, 1921, which reduced our expenditures at the rate of \$675,000 per annum. Today we are operating only the New York City to San Francisco route. It may be interesting to know that while we have materially reduced the mileage in taking off these laterals, our mail planes are going to fly, for the fiscal year July 1, 1921, to June 30, 1922, at least 1,800,000 miles as compared with 1,760,000 for the preceding

fiscal year, this showing being due to increased efficiency in flying performance.

### Across the Continent in 30 Hours!

The air mail service as at present operated is used as an auxiliary to the fast mail train service because we do not attempt to fly at night. We hope that within a reasonable length of time the proposed bureau of aeronautics in the department of commerce will come into being and start the work of marking the airways for night flying. When this is done the real value of an air mail service will be at once apparent, for with night flying mail can be put across the continent in less than thirty hours. As a matter of fact, on a test flight on February 22, 1921, the air mail put mail across from San Francisco to New York in 25 hours and 21 minutes actual flying time. This was a notable performance but altogether too hazardous to try again until the way is marked by suitable aids to flying such as lighthouses, beacons, etc.

The transcontinental route is divided into three operating divisions. The eastern division, from New York to Chicago, is 770 miles long, with headquarters at New York; the central division, from Chicago to Rock Springs, Wyo., 1,125 miles, with headquarters at Omaha; and the western division, from Rock Springs, Wyo., to San Francisco, 785 miles, with headquarters at San Francisco. Air mail fields are located at the following points: Hempstead, L. I., Bellefonte, Pa., Cleveland, Bryan, Ohio, Chicago (Checkerboard Field, Maywood, Ill.), Iowa City, Iowa, Omaha, North Platte, Neb., Cheyenne, Wyo., Rawlins, Wyo., Rock Springs, Wyo., Salt Lake City, Elko, Nev., Reno, Nev., and San Francisco. In addition to these fields there is an air mail warehouse at Newark, N. J., and an air mail repair depot at Maywood, Ill.

### Radio at All Fields but One

Radio stations are located at headquarters (Washington, D. C.), and at all fields except Rawlins, Wyo. Navy radio stations are used jointly at Cleveland, Chicago and San Francisco. All the other radio stations are owned and operated by the postoffice department.

During the period from May 15, 1918, to October 31, 1921, 221 planes have been used in the air mail service. The following tabulation shows what has become of them:

Crashed and parts salvaged.....	81
Crashed and burned—no salvage.....	20
Burned on ground—no salvage.....	7
Withdrawn—unsatisfactory type—parts salvaged.....	19
Withdrawn account age—parts salvaged.....	8
Withdrawn and stored—small type.....	9
Transferred to army.....	1
Available October 31—flying condition.....	50
Available October 31—undergoing repair.....	26
	221

Since last June, when the reorganization of the air mail service took place, great strides have been taken in connection with standardizing and improving the flying equipment. From the first a number of different types of planes had been used, principally JN 4-H Standard E-4, JL's twin-motored DH-4 and a single-motored DH-4. We have standardized on the single-motored DH-4 and have eliminated all other types. This does not mean that the DH-4 is the most suitable plane available; it simply means that it is a satisfactory plane for air mail service and it is good business to

standardize on it because the army has a large surplus which is transferred to our service as needed without expense to us. It may be interesting for you to know something in connection with the useful life of the DH-4 based on our experience; we have in the air mail service at the present time 143 planes, 50 in serviceable condition, 38 being overhauled and 55 in storage awaiting overhauling.

**Service Does Own Repair Work**

Another item that may be interesting is that during the fiscal year ending June 30, 1921, the postoffice department paid companies for rebuilding and converting planes the sum of \$276,109, and purchased eight planes for \$200,000, a total of \$476,109, while since July 1 this year no planes have been purchased and all conversion work has been done by our own repair shop at an average cost of \$1,200, and at the same time our situation has materially improved. We have

Giving the air mail service the "once over." Accompanied by officials of the air mail service Will Hays, former Postmaster General, inspected several of the postal planes at Bolling Field, Washington, D. C. This photo shows, left to right: E. H. Shaughnessy, assistant postmaster general (deceased), Postmaster General Hays and Carl F. Egoe, superintendent of the air mail service.

today 14 more planes in serviceable conditions than on July 1 last.

The air service is directed by a general superintendent located in Washington reporting to the second assistant postmaster general. The field service is divided into three operating divisions under the supervision of division superintendents located at Hempstead, L. I., Omaha, and San Francisco. Each superintendent has an assistant superintendent to assist in general supervision and local field managers at each landing. In addition to this there is a supply warehouse at Newark, N. J., and a repair depot at Maywood, Ill., in charge of superintendents, reporting directly to headquarters. The total number of employes is 479, and the present annual payroll \$787,620. Prior to the reorganization July 1 last, the payroll carried 521 employes, salaries \$864,321.

The operating performance of the air mail service in recent months has been truly remarkable. For the first quarter of the current fiscal year, that is, from July 1 to September 30, 1921, 98 per cent of all scheduled trips were completed. By divisions, the record of performance is as follows:

Division	Miles Flown	Letters Carried
New York—Chicago	112,626	3,506,000
Chicago—Rock Springs	168,805	4,310,760
Rock Springs—San Francisco	109,587	2,197,520

In addition to the 391,018 miles flown with mail on regular schedule, our records show 49,662 miles of test flights and ferry trips, making a grand total of 440,680 miles flown in the three months.

#### No Trips Missed in 185 Days

An exceptionally good record was made on that portion of the route between Cleveland and Chicago, air distance 335 miles. No mail trips were defaulted from April 29 to October 31, a period of 185 days. During that period 98,890 miles were flown and 3,271,360 letters carried. Our records show that approximately two-thirds of all mail trips are made in clear weather; the balance, in fog, rain or snow.

During this same quarter, there were eleven crashes, eight of which occurred on air mail fields and three at outside points of forced landings. Two ships were entirely destroyed, but during the quarter there were no fatalities or injuries to employes on

regular mail trips. There was, however, one fatality on a ferry trip. On July 16, 1921, Pilot Howard Smith lost his life in Ship No. 222 on the San Francisco field. He was assigned to ferry his ship to Reno and fell from an altitude of 300 feet when taking off.

During the period of May 15, 1918, to November 30, 1921, there have been thirty fatal accidents in the air mail service—by fiscal years, that is, from July 1 to June 30, as follows:

	Pilots	Mechanics	Other Employes
1917 (1½ months)	....	....	....
1918 (12 months)	2	1	....
1919 (12 months)	6	1	2
1920 (12 months)	13	4	....
1921 ( 5 months)	1	....	....
	22	6	2

During 1920, using round figures, there was one fatality for each 100,000 miles flown. Since July 1 we have had one fatality for each 800,000 miles flown.

#### A Fine Group of Pilots

In my opinion, this improved showing comes principally from putting into effect a sensible, businesslike program, using trustworthy men and material, leaving the experimenting and stunting to those who are not entrusted with the United States mails. I want to emphasize the fact that since July 1 last, during which time this remarkably fine record has been made by our pilots, DH-4 planes have been used exclusively. I cannot say too much at this time in commendation of our air mail pilots, several of whom have flown 100,000 miles carrying mail. Since the beginning of the service, air mail pilots have flown 3,400,000 miles, carrying more than 2,500,000 pounds of mail, or approximately 100,000,000 letters. No finer class of men or pilots can be found anywhere, individually or collectively, than those in the air mail service. It is a pleasure to recognize publicly the work they are doing. They are worthily carrying on the best traditions of postal service.

Statistics have been published regularly showing operation and maintenance cost of the air mail service, which are useful for comparative purposes, but have not been truly representative, in my opinion, because the figures shown have not included such items as general overhead expenses and permanent improvements, surplus supplies on hand were not charged out until used, planes purchased were not charged to capital ac-

count, etc. Using the statistics as they have been published, the purely operating and maintenance cost per mile during the quarter ending September 30, 1920, was 87 cents and for the same quarter of 1921  $71\frac{1}{3}$  cents, a reduction of  $15\frac{1}{2}$  cents per mile. Without much further delay, we intend to revise the cost sheet so as to include every dollar properly chargeable to the air mail service. The new method applied to the periods just given you would result in a cost per mile of \$1.43 for 1920 and \$1.04 for 1921, or a reduction of 39 cents per mile operated.

#### A Steady Reduction in Cost

This material reduction in operating cost is chargeable principally to reduced overhead expense; secondly, to increased efficiency from the personnel (jobs are thought more of nowadays than for several years past), and, thirdly, to economy in purchasing supplies, principally gasoline. We are successfully operating today on domestic aviation gas, whereas formerly the so-called fighting grade was used. Cost per mile means nothing unless translated into ton mile figures. Taking the last figures quoted you, which are truly representative, we find that last year the DH-4 plane carrying 350 pounds of mail was operated at the rate of \$8 per ton mile.

This year the same plane carrying the same load costs at the rate of \$6 per ton mile; however, we have recently put into service an improved DH-4 with the load-carrying capacity increased to 800 pounds, an increase of over 100 per cent in utility with no additional operating cost (in fact, identically the same plane merely re-designed), which will bring the ton mile cost down to \$2.60, a remarkable reduction from the figures of a year ago. No doubt private enterprise can do much better than this because, as you gentlemen well know, Liberty motors are expensive to operate. Our justification for using them is that they are surplus stock in the war department and cost us nothing.

#### Government Operation Temporary

In conclusion, just a word as to the future policy of the postoffice department with reference to air mail service: The department, true to its tradition, wants air transportation of the mail because in that direction lies rapid transit. Whether it be heavier-than-air, or lighter-than-air, types

of carriers is immaterial, if the service given is reliable and speedy. The department, however, does not feel that it should operate an air mail service any more than it should operate a steamboat service or a railway service, but only until such time as the commercial interests of this country are ready to step in and take over the burden.

We are willing and eager to co-operate to the fullest extent in assisting real commercial aviation, not by any possible chance to enter into contracts with companies or individuals in the prospectus, stock-selling stage who want to use the legend "United States Mails" to sell stock, but with those having ships in the air ready to load the mails. How soon that time will come we, of course, do not know, but let us all hope that it will be soon and collectively do everything we can consistently to advance the date, because, after all, there are other important uses for airplanes aside from carrying commerce. This country of ours still needs the sort of protection that airplanes and airships and airmen can give.

#### TICKET SALESMANSHIP

*J. V. Lanigan, general passenger agent at Chicago, recently issued the following circular on salesmanship:*

Every time a ticket is purchased it pleases the management. Every ticket purchased helps make a ticket-selling job, and therefore the seller should also be pleased.

Some ticket agents and sellers practice the pleasing custom of acknowledging their and the management's pleasure by a pleasant "Thank You" in passing a ticket to the purchaser. It makes the buyer and seller happier and improves the relationship between the patron and our railroad. Not only is it a practice that is encouraged but it is the wish and hope that every ticket agent and seller not now following it will do so.

Every telephone inquiry for information concerning fares, train service or sleeping car accommodations is made by a prospective patron, and telephone "prospects" are as valuable as buyers at the counter. The management appreciates the telephone call of the prospect, and, as every telephone prospect helps make jobs for telephone operators and ticket sellers, the latter also should share the management's appreciation, and some do.

# Illinois Central Plans a Hotel on Wheels

*Extensive Preparations Are Being Made for Housing 6,000 Knights Templar at New Orleans Conclave in April*

A MODERN hotel on wheels with a capacity of 6,000 guests will be operated by the Illinois Central System in the heart of downtown New Orleans during the triennial conclave of the Grand Commandery, Knights Templar, April 24 to 27. The hotel on wheels will be 250 Pullman sleeping cars, and our Poydras Yard, located between Poydras and Lafayette streets and extending the five blocks from Magnolia to Saratoga streets, is being enlarged to provide the parking space. Eleven, new tracks are being built, and three of the permanent tracks are being extended.

The sleeping cars will be operated by the Illinois Central System after the pattern of a miniature city. Each car will be a house. Illinois Central dining cars will be parked about the city to furnish meals, and a section of Warehouse No. 3 is being converted into a temporary clubhouse. Warehouse No. 3 adjoins Poydras Yard on the west. The clubhouse will contain toilets, shower baths, a barber shop and a laundry agency. The small city will be thoroughly lighted and supplied with water; sewage disposal from the cars has been arranged for, and walks will be laid. A temporary office building will be erected facing on Saratoga street, and in this building there will be an information bureau. Representatives

*J. W. Cousins*

of the various departments in charge will be on hand to carry out the Illinois Central's program in arranging for this service—which is

*Laying track for the "hotel on wheels." Foreman A. K. Duke with his gang. These negroes sing at their work and move to the cadence of their song.*

*Looking northward over the site of the wheeled city, March 11, with gangs laying temporary tracks. At the left are warehouses; the Illinois Central Hospital appears in the background*

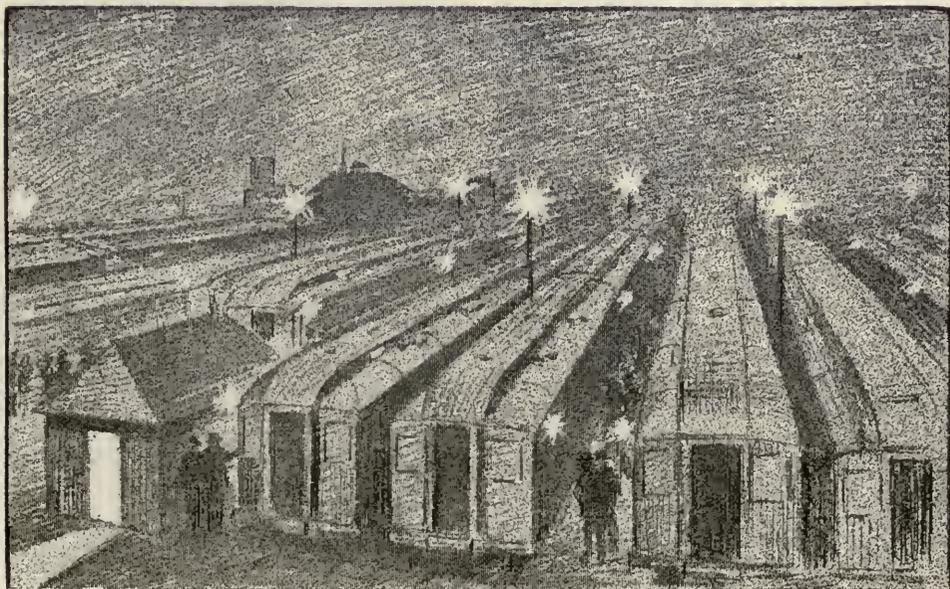

that nothing shall be spared to make it a great success.

#### **Water Supply Is Arranged For**

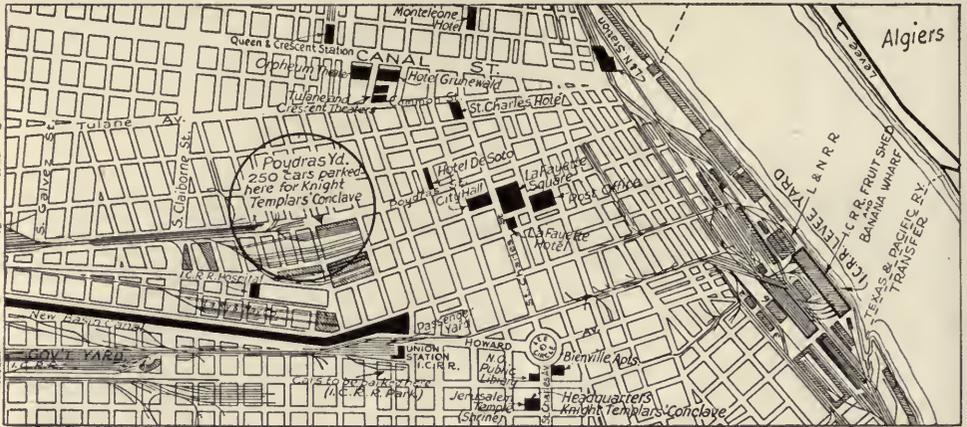

In order to furnish a constant supply of good water to the cars and the clubhouse, the municipal water supply will be tapped, and water mains will extend the full length of the Illinois Central's miniature city, with laterals leading off the mains for connection with each car. The water supply also will be piped into the warehouse. Two locomotives will furnish

the steam for heating the cars and for heating the water, in both the cars and the clubhouse. In the clubhouse there will be a 500-gallon tank supplied with hot water, heated by a locomotive stationed on an adjoining track.

One of the biggest problems involved in the project is that of supplying the electric current for the cars. A Pullman sleeping car generates its own electric current while in motion and charges its battery, which has a

*The artist's conception of the sleeping car city, as it will appear. Drawn by C. B. Medin of the magazine staff.*

*Downtown New Orleans, showing the location of the city on wheels with reference to hotel and theatrical districts.*

capacity that will supply the car, under ordinary conditions, for eight or ten hours after it comes to a standstill. The municipal electric cables are too heavily charged to be of use in restoring the batteries, and hence the Illinois Central must provide transformers and generators.

It has been arranged to purchase twenty-five 10-horsepower 440-volt 3-phase motors, which will be placed on portable skids. Car gener-

ators, similar to those used on the cars when they are in motion, will be supplied by the Pullman Company, and these will be placed on the same skids, each one connected with a motor by a belt operating on pulleys. Each morning, after the occupants have left the cars, electricians will start charging the batteries. Each unit will be hooked up with two cars at once, and will be supplied with current from one of four 25-kilowatt 440-volt 3-phase trans-

H. F. Chalstrom

M. A. Smith

formers tapping 2,200-volt primary lines which will extend the length of the miniature city. Leads will be used to reach adjoining cars, so that, while each unit will be on skids, the entire charging operation can be completed without moving a unit.

**"Streets" Will Be Lighted**

General lighting will be provided for in 250-candlepower lamps topping poles 100 feet apart. In order to give a "front porch light," the vestibule light, which is 15-candlepower, will be carried to the outside of each car platform and attached. Walking down the board walks between each pair of car tracks, one will be able to imagine himself in a well-lighted city.

It is of interest to note in this connection that the commanders are planning to spend a considerable sum of money in providing additional illumination for New Orleans during the conclave.

Warehouse No. 3 will undergo considerable changes between the 1st and 24th of April. Plans have been made for a 3-chair barber shop, which will be operated under concession rights. A laundry will obtain the concession for an agency to be located in the clubhouse, offering as a special service 1-day laundry work. A towel room will provide towels for bathers. Twenty-four shower baths are being installed.

Immediately to the south of the section of the warehouse given over to the clubhouse a section will be turned into a baggage room, with an expert baggage attendant in charge at all hours.

**Plenty of Space Available**

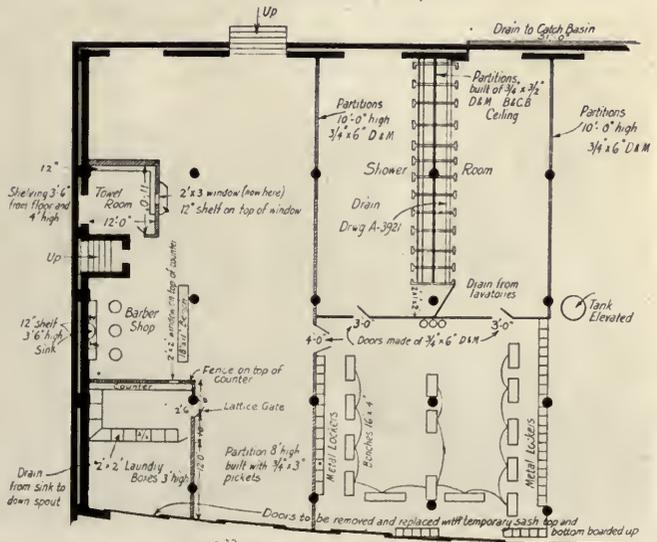

In addition to the facilities in Poydras Yard proper, tracks will be laid in the neutral ground on Poydras Street, immediately east of the yard, and this will be available as parking space for more cars. If these facilities fail to provide sufficient room, there will be parking space for cars to the west of Union Station. Arrangements have been made by the Illinois Central to date for the handling of nearly 200 Pullman cars arriving over its own lines in its miniature city, and about thirty cars coming into New Orleans over the Southern Pacific will be cared

*D. D. Flinn*

for. This number, however, doubtless will be increased. The cars will be sent direct to the parking space as each train arrives.

As an instance of the service which the Illinois Central System will give its 4-day guests, it may be noted that Poydras Yard practically

*Floor plan of the clubhouse to be built in Warehouse No. 3.*

adjoins the Illinois Central's New Orleans Hospital, and medical services will be at the call of the guests at any time.

It is a big project, but something like it was needed to assist New Orleans in the gigantic job of caring for the crowds that are expected. It is believed that the Crescent City will have more than 30,000 visitors, and it cannot possibly stretch its hotel capacity to care for that number. Something had to be done, and the Illinois Central System came forward with its plan for helping out.

#### Considerable Outlay Is Involved

The Illinois Central System will spend about

\$65,600 in building its miniature city. More than half that amount will be reclaimed through the salvage of materials used, but the outlay will give an idea of the size of the project.

It would seem that rates considerably in advance of regular hotel rates would be needed to care for the expense, but that will not be the case. In arranging for the project, the Pullman Company has agreed to furnish its sleeping cars to the visitors at the rate of \$54 a day for each car, from the time it picks up its guests until it sets them down again at home. While the cars are parked in the Illi-

*Exterior (top) and interior (bottom) views of Warehouse No. 3, as it appeared March 11.*

nois Central's little city, the railroad will charge \$12 a car a day. The total cost, prorated among the occupants of the cars, will make a rate of not to exceed an average of \$2 a day.

Superintendent J. W. Cousins is in direct charge of the work of laying out the Illinois Central's modern hotel-city. Roadmaster J. E. Rogan and Assistant Engineer H. E. Chalmers, with the co-operation of the heads of the various departments on the New Orleans terminal division which are involved, have drawn the plans, and to them has fallen the construction feature of the work. M. A. Smith, supervisor of bridges, buildings and water service, arranged for the water supply and sanitation. Master Mechanic E. C. Roddie and District Foreman J. N. Chapman have as their problem supplying heating for the cars and clubhouse, and keeping the tanks in the sleeping cars charged with water pressure. E. W. Jansen, electrical engineer, handled the electrical problem, which is being carried out under the direct supervision of D. D. Flinn, district electrical foreman.

The conclave will be a gala event. Twenty thousand Knights Templar are expected to be in line, in uniform, for the parade. Floats used in the Mardi Gras carnival this year will be called into service.

### A 6-YEAR-OLD BANDIT

*The following dispatch from Pana, Ill., dated March 7, recently appeared in the Illinois State Register of Springfield, Ill.:*

The youngest hold-up woman in the world is at large in Pana today.

She held up the northbound Illinois Central passenger train at the union station here shortly after 5 o'clock Monday afternoon and made her getaway with ease, smiling at the crew and spectators about the station. She is believed to be about 6 years of age.

It was in this wise:

The train had started to pull out, Conductor Will Knowles having signaled his engineer, when the little girl came running down the brick platform in an effort to get aboard. Accommodating, as Illinois Central trainmen always are, the brakeman, seeing the child and reckoning that she wished to board the train, quickly jumped aboard, pulled the signal cord and stopped the train. Stepping lively aboard the

train, the little tot requested that the brakeman "hold the train just a 'minute.'"

Imagine the surprise that the child gave the trainmen, including "Big Hearted Bill" Knowles, when she hastened down the aisle of the coach, kissed a relative good-by and then retraced her steps and alighted from the train.

Once off the train, the cherub smiled, thanked the trainmen and then hurried away, leaving the railway boys in a wave of wonderment on how she had "played them."

Conductor Knowles and his men didn't have time to say a word. Realizing that the child had put it over them, they simply smiled, signaled the engineer to go ahead, climbed aboard and were off for Decatur.

### 42 YEARS OF SAFETY

J. H. Enright

The maintenance of way department of the Springfield division is not alone in having section foremen who have served the company long periods without accident, as noted in the September issue of this magazine. Herewith we have a photograph of Section Foreman J. H. Enright of El Paso, Ill., Amboy district, Wisconsin division, who has never been injured in all the forty-two years he has worked for the Illinois Central.

## Conductor Proves a Developer of Farms

*William Trafton of Canton, Miss., Improves All He Handles,  
and His Sweet Potatoes Win Wide Fame*

**M**OST employes in the train and engine service have their runs so arranged as to give them frequent lay-overs of twenty-four hours or more, usually in the towns where they live. The problem of how that extra day shall be spent is often the deciding factor in a man's life. Shall it be spent in loafing, in playing pool with the boys down at the corner, or shall it be spent in some occupation that makes the man a better citizen?

Conductor William Trafton has found good use for the extra day that he spends in his home town of Canton, Miss., a use that has brought him profit with the passing years and has been a genuine contribution to the community. Conductor Trafton is a practical farmer. He has made farming, and trading in farm lands, pay, and he has left each farm he has owned in better condition than when he took it over. He is a breeder of purebred stock, and the sweet potatoes he raises are famed up and down the lines of the Illinois Central System for their luscious sweetness.

### Began Railroading at Age of 17

Mr. Trafton was born in southern Illinois. His father, Dr. G. W. Trafton, was a lieutenant-colonel of cavalry in the Federal Army

during the Civil War, and at one time his regiment was encamped at Canton, Miss., his son's present home. The son began railroading when he was 17 years old, as a brakeman on the Wabash between Cairo and Carmi, Ill. Later he went to the Cairo Short Line, which is now a part of the St. Louis division of the Illinois Central. For two years he dropped out of railroading and ran a flour mill, but in 1894 he returned to railway service as a brakeman at McComb. For two and a half years he ran as a brakeman on the local freight between McComb and Hammond. In 1897 he was made a freight conductor on that same run, and twelve years ago he was promoted to passenger conductor, at which time he moved to Canton. His present run is on the New Orleans Special and the "Merry Widow," between Canton and New Orleans.

### Tripled Price of First Farm

Farming possibilities led Mr. Trafton to locate in Canton, which is the county seat of Madison County. He had been brought up on a farm in southern Illinois, and he had always wanted to lead a farmer's life. When he went to Mississippi, he had saved up \$1,800 for investment, and by the time he got ready to buy

*William Trafton of Canton, Miss.—at left, as citizen; in center, as farmer; at right, as conductor. The center view also shows Martin, the sweet potato expert, and two Duroc-Jersey pigs.*

*Before and after Conductor Trafton takes a farm. Photographs from a road which bounds the Trafton farm. On the left, portion of original farm retained by former owner. On the right, portion purchased by Mr. Trafton.*

a farm he had added another \$200 to that sum.

The year he went to Canton, which was 1910, Mr. Trafton bought a 360-acre farm six miles southeast of the town for \$4,140. He had only \$2,000 to pay down on it, but he backed his judgment for the balance. He had that farm seven years. From a small start he built up a fine herd of Hereford cattle. He purchased a registered bull calf for \$100 and bought twelve Hereford cows on the market at 6 cents a pound. When he sold out in 1917, he was able to dispose of the bull for \$250, and the rest of his herd as well brought fancy prices. The farm itself he sold for \$14,500, or more than three times the purchase price.

The year he sold his 360-acre farm, Conductor Trafton bought a 120-acre farm adjoining it. He paid \$840. In a few weeks he sold it for \$1,800. Immediately he purchased a 340-acre farm twelve miles northeast of Canton for \$3,400. It went through the course of improvement which Mr. Trafton gives every farm he owns, and the next year he sold it for twice what it cost him.

For two years Mr. Trafton confined his farming activities to his place in town, but in 1920 he bought a 200-acre farm just half a mile from Canton, and it he still owns. He repaired and rebuilt his negro tenant houses, built fences, cleaned out the fence rows, used a little paint, and in a short while he was offered \$4,000 more for the place than he had paid for it. But he doesn't want to sell—just yet, at any rate.

#### **Noted for His Sweet Potatoes**

When Conductor Trafton began farming

his present place he obtained as a tenant an old negro who, he claims, is one of the best authorities in the country on sweet potatoes. Martin, the negro, was born in slavery, and he has grown up with the South. His information on how to grow the big luscious yams that tickle the palate is a combination of folklore and experimenting.

Two years ago Mr. Trafton began to grow yams. He obtained his first seed from Porto Rico, and Martin was given instructions to show what he could do. He did so well that Conductor Trafton disposed of the entire surplus of his first-year crop, about 100 bushels, to the Illinois Central dining car department. Last year the surplus amounted to about 150 bushels. Patrons on our dining cars, eating those yams, have begged the stewards for the name of the producer, and Conductor Trafton has received letters from all over the United States calling for the fine yellow Porto Rican yams that Martin grows. This year Mr. Trafton hopes to produce enough to supply all the needs of the Illinois Central diners,

*Drawing the breaking plow is no task for this trio of Missourians.*

with some left to send to those who call for them.

### How Martin Raises the Yams

There's no use in keeping Martin's plan of growing yams a secret, however. In the first place, you've got to have a dark yellow clay soil, like that in Madison County. The thinnest yellow clay is the most preferable. Cow-peas should be grown the year before, to supply the ground with nitrogen. After the cow-pea crop has been gathered, the land should be plowed under in the fall. In the spring a "middle-buster" is used to open furrows, in which the fertilizer is distributed. The fertilizer is made up of equal parts of cotton seed meal and acid phosphate, and it is used 600 pounds to the acre. When it is distributed, a breaking plow is run between the furrows to build up a ridge, which is then harrowed, and on which the plants, after being daubed with mud, are set out.

Some people believe yams should be taken out of the ground before frost, but that's all wrong, according to Martin. The grower should wait for the first frost, for that puts the sweet flavor in them. But after the frost they should be harvested immediately, before the rain strikes them.

Of course, after the yam is harvested there is a lot in knowing how to prepare it for the table, and that's where Mrs. Trafton comes in to the story. The conductor's wife consented to give the *Illinois Central Magazine* her best sweet potato recipes, and here they are:

### Three Dishes Worth Preparing

*Baked sweet potatoes*—Select medium-sized yams. Wash and dry them with a cloth. Then with a mop grease the potatoes with lard until they are well greased. Bake in a moderate oven one hour, or until they are soft.

*Sweet potato custard pie*—For two custards, use five eggs. Beat the yolks until very light, add one cup of finely grated sweet potato, two cups of hot milk, one cup of sugar and the whites, well-beaten. Flavor with nutmeg and all-spice. Bake in a crisp crust in hot oven until well set. Be careful not to burn.

*Sweet potatoes en casserole*—Take three medium-sized potatoes well baked. Melt together one-third cup of butter and one-third cup of water, and add one-third cup of sugar. Slice the potatoes in the casserole and pour the mixture over them. Add a few whole spice and bake twenty minutes.

Mr. Trafton is planning now to build up a herd of Duroc-Jersey hogs. He now has a

couple of fine registered female pigs, and they will be crossed with a registered boar. His pigs are of the Enochs strain, from Fernwood, Miss., the farm recently purchased by John Borden of Chicago.

### Sees Possibilities of Country

Conductor Trafton has made a success of dealing in farm land, but he has not been a speculator. Each farm has been wonderfully improved by a thorough dressing up, the rotation of crops, and the introduction of other modern farming methods. He declares that if he had backed his judgment on the potential value of farm lands and speculated, with the backing that he could get, he would be a millionaire now.

Mr. Trafton is enthusiastic over the possibilities in farming for energetic young men in Madison County. Even with the increase in land values during the last few years, farm lands in that section are cheap. A person who will care for the land will find the clay soil of North Mississippi unexcelled in productivity, according to Mr. Trafton. Although in the cotton belt, small grains can be grown in abundance. The luxuriant growth of grasses supplies excellent grazing lands and meadows. The weather is not rigorous, and the problem of shelter is comparatively simple.

But it takes energy to win the battle, at that. Mississippi will produce a living for a lazy man, but only a man with energy and enthusiasm will make farming in Mississippi pay. Conductor Trafton has those attributes.

### THE R. I. P. R. R.

A sufferer who lives close to a railway yard in the suburbs wrote the following to the railway company, complaining about the racket:

"Gentlemen: Why is it that your switch engine has to ding and dong and fizz and spit and clang and bang and buzz and hiss and bell and wail and pant and rant and howl and yowl and grate and grind and puff and bump and click and clank and chug and moan and hoot and toot and crash and grunt and gasp and groan and whistle and wheeze and squawk and blow and jar and jerk and rasp and jingle and twang and clack and rumble and jangle and ring and clatter and yelp and howl and hum and snarl and puff and growl and thump and boom and clash and jolt and jostle and shake and screech and snarl and slam and throb and crink and quiver and rumble and roar and rattle and yell and smoke and smell and shriek like hell all night long?"

# The "Little J" and the Railway Problem

*Need for Studying the Situation Is Shown by V. V. Boatner, Former Memphis Division Superintendent*

The following remarks are from an address made by V. V. Boatner, president of the Peoria & Pekin Union Railway Company, before the Optimist Club at Peoria, Ill., February 28. Mr. Boatner, formerly superintendent of the Memphis division of the Illinois Central System, left our service less than a year ago.

DOWN in Mississippi is the city of Natchez, at the end of a short railroad called the "Little J." This line is a branch of the Illinois Central System. The people of Natchez are somewhat pretentious in their inclinations and travel extensively. After their journeys up through this section of the country, they returned from Chicago on the Panama Limited to Jackson, Miss., where they connected with a train on the "Little J" for Natchez. This branch-line train consisted of old style non-vestibule coaches, and sometimes freight cars were added to make the trip more comfortable. Five or six hours were consumed running the hundred miles from Jackson to Natchez.

This method of travel grew so irksome to the good people of Natchez that they delegated one of their principal bankers to call upon the officers of the Illinois Central with a view to securing an all-steel vestibuled train with a parlor car and a shorter schedule for the train on the "Little J" which connected with the Panama Limited at Jackson.

In placing his case before the management of the Illinois Central, the banker from Natchez remarked: "We ride the best train in the world—the Panama Limited—from Chicago to Jackson, where we are forced to get on an antiquated, jerkwater outfit and are immediately precipitated from affluence to poverty."

## Railroads' Darkest Year Was 1921

In this period of transition, many lines of business endeavor have got back on the "Little J." The railroads of the country have fared no better than other enterprises—in fact, they never did get off the "Little J." With the largest gross revenue up to that time, received in 1920, the net earnings from operation were \$62,000,000—and that was after receiving \$64,000,000 from the government for back mail pay which had accrued in previous years.

Nineteen twenty-one was, without exaggeration, the darkest year in the railroads' history. It is estimated that the net revenues were about six hundred million dollars, which is less than 3 per cent return upon the valuation fixed by the Interstate Commerce Commission and is not sufficient to meet fixed charges and rentals, to say nothing of payment of dividends. It is needless to say we were glad to see the tail-lights of 1921, with its long train of struggle and economic tragedy, pass around the curve and into the realm of forgetfulness.

The gross revenues of the railroads in 1921 were about twice as great as in 1916. The public paid that much additional for its transportation. Notwithstanding this fact, the railroads failed to earn their fixed charges. It naturally followed, on account of the adjustments taking place, that the public began to complain of the excessive cost of transportation and to demand reductions in rates.

The railway situation, on account of staggering operating costs, was so critical when the carriers were returned to their owners that the Interstate Commerce Commission found it necessary to increase the rates in August, 1920. Deflation had already begun. This additional burden upon the public was made more and more difficult to carry as the deflation process continued. There was a heavy reduction in traffic which seriously curtailed the revenues of the carriers. At the same time, demands for rate reductions became more insistent.

## Are Freight Rates Too High?

Going back to the 10-year period from 1890 to 1899 inclusive and taking the average freight rate and average wholesale prices for that period as 100, we find that by bringing this comparison down to July, 1921, the advance in freight rates occupied the following ratio to the wholesale price on the following commodities:

Average rate per ton mile.....	149
Average wholesale price of:	
Farm products .....	189
Food .....	184
Clothing .....	222
Fuel .....	261
Metal and implements.....	160
Lumber and material.....	304

Drugs .....	202
House furnishings .....	277
Miscellaneous .....	204
All commodities .....	200

It can be seen from these comparisons that, relatively speaking, the freight rates have not advanced by any means out of proportion to the advance in wholesale prices on most items that go into the cost of living. In fact, the advance in rates has been less than that of any other item of expense.

Not so long ago, a great deal was seen in the papers on the theory of relativity by Doctor Einstein. Possibly many of us have not given enough consideration to Einstein's theory that everything is upon the basis of relativity. It would appear that it is not an unfair basis upon which to pass judgment. Under the pressure of regulation and public sentiment, freight rates decreased in the 17-year period ending in 1917 from the 100 basis of 1900 to 85, whereas the wholesale prices of all other commodities, as well as wages, vastly increased; only since 1917 have rates been advanced to their present relative position.

#### Railway Development Too Slow

During the 17-year period, 1905 to 1922, which embraces the years of drastic railway regulation and unremunerative rates, the price of railway securities has continued to decrease, resulting in a continued curtailment in development and expansion of the carriers' facilities up to 1921, when securities were at their lowest ebb and when more mileage was abandoned than built, 1,500 miles having been discontinued and 405 miles constructed.

In the 5-year period from 1917 to 1921 inclusive, the mileage of railroads abandoned in the United States amounted to 4,989 miles. Secretary of Commerce Hoover, testifying before the Interstate Commerce Commission recently in connection with its inquiry as to proposed reduction in rates, made this statement: "We must add at least 120,000 cars and 2,500 locomotives annually to our equipment. Since we entered the war in 1917, we have constructed at least 10,000 miles of railroad, 4,000 locomotives and 150,000 cars less than should have been constructed to meet our increasing population."

I think that everyone, including railway officers, will concede that rates are too high under present conditions. With farm products back to pre-war prices and prices of many other commodities very much reduced, present freight rates, without question, are an oppressive bur-

den on some commodities and have resulted in moving the farms of Illinois 700 miles farther from the seaports than they were when prices of products of the farm were previously at their present figure.

#### Effect of Rates on Farming

The grain markets of the world are in Europe, and we must compete with other countries in getting our grain to those markets. The farther away we remove our farms by increased costs or otherwise, the more disadvantageously we are located in the competitive field. It cannot be conceded, however, that all of the ills that have befallen the farmer are attributable to the high freight rates. Much has been said about corn being burned in Iowa and other Western states on account of high freight rates. On May 8, 1920, wheat sold for \$3.07 a bushel on the Omaha Board of Trade, and on November 4, 1921, it sold for 98 cents a bushel, a difference of \$2.09. Between May, 1920, and November, 1921, the freight rate on wheat for export from Omaha to New York had increased only 2% cents a bushel, and from Omaha to New Orleans only  $2\frac{1}{10}$  cents a bushel. On May 15, 1920, corn sold for \$2 a bushel on the Omaha Board of Trade, and on October 14, 1921, it reached a low mark of  $35\frac{1}{2}$  cents, a difference of \$1.64 $\frac{1}{2}$  a bushel. Between May, 1920, and October, 1921, the export freight rate on corn, Omaha to New York, increased only  $2\frac{1}{2}$  cents a bushel, and from Omaha to New Orleans the export rate increased only 2% cents a bushel.

A study of the chart of prices of farm products shows that changes in freight rates have a negligible effect upon the upward or downward movement of prices. When rates were increased in June, 1918, under the authority of the Railroad Administration, the increase came at a time when the price line was moving upward, and it continued to move upward. It so happened that the rate increase of August, 1920, came at a time when the price line was pointed downward, but it cannot be said that the rate advance accelerated the downward movement any more than it can be said that the increase of June, 1918, accelerated the upward movement. Obviously, therefore, the reason the farmer is receiving pre-war prices for his product is not on account of increased freight rates.

The American Farm Bureau Federation estimates that on November 1 corn stocks totaled 3,452,000,000 bushels, not counting that stored in country mills and elevators. This is 370-

V. V. Boatner

000,000 bushels more than ever were consumed and exported in any one year. Bringing the situation up to date, we have noticed corn and wheat, have advanced in one day from 3 to 6 cents a bushel, which more than offsets the increased freight rate. Notwithstanding corn and wheat have increased in price since November from 15 to 40 cents a bushel, we have not jumped back into a prosperous condition.

#### Why Are Freight Rates High?

With the railroads earning less than fixed charges, to say nothing of dividends, it can hardly be said that their net earnings are too great, nor can it be said that Section 15A of the Transportation Act, which so many organizations and national representatives have advocated repealing, has wrought injury to industry. This section was a recognition by the Congress that the railroads were entitled to earn a reasonable return upon their investment, considered to be 6 per cent. It did not guarantee these earnings, nor have they been made. It did provide, however, that all in excess of that amount should be divided with or taken over by the government. It is the first time that the Congress has recognized that the railroads are entitled to a specific return. Can it be expected that railway securities will be attractive

to investors unless a reasonable return can be secured? There is no other source from which to obtain funds to improve property, purchase new equipment and make additions and betterments necessitated by an ever-increasing population.

Analyzing the disposition of the gross revenues of the railroads, we find that in 1921 more than 60 per cent was paid out in wages, 27 per cent for materials and 5 per cent for taxes, making a total of 92 cents of every dollar paid out in prices fixed by the government and by market conditions, leaving the small remainder of 8 cents to pay fixed charges and rentals. Nothing is left for dividends.

#### Should Rates Be Reduced?

With the present cost of operation, most of which is regulated by the government, and with less than fixed charges left for a return to carriers, it would appear an unwise policy for the Interstate Commerce Commission to reduce the present scale of rates. In the blanket increase, rates on many basic commodities were thrown out of line. Adjustments should be made and rates reduced on a number of these commodities. Thousands of reductions and adjustments have already been made by the carriers and are still being made as fast as conditions will permit and they can be satisfactorily arranged.

To reduce the whole structure of rates under the circumstances that have been indicated—particularly those prevailing in 1921 and from which we have not advanced very far—would only accentuate our economic troubles. The railroads are our biggest industry. Next to agriculture, they are the largest purchasers of supplies. Lack of adequate purchasing power prevents them from launching into large projects of improvement and making heavy increases in equipment necessary not only to carry on the present commerce of the country but to provide for the increase certain to come with improved conditions. Secretary Hoover, before the Interstate Commerce Commission recently, made this statement: "One thing is absolute—our transportation facilities are below the needs of our country, and unless we have a quick resumption of construction the whole community, agricultural, commercial and industrial, will be gasping from a strangulation caused by insufficient transportation the moment our business activities resume. Few people seem to realize the amount of expansion in our transportation machinery necessary to keep pace with the growth of the country. And an

equal few seem to have any notion of the price we pay for not having it."

### An Antidote for Unemployment

If all the necessary improvements and the required expenditures therefor could be made upon the railroads today, the unemployment situation would soon become a very small factor in this country, if it would not entirely disappear. Hundreds of thousands of men would be put to work, not only in the railway field but in every line of endeavor, which would have such a far-reaching effect that a materially increased market for farm products would result.

There is no loss so irrevocable as idle shops and idle men. Today we have both. There is nothing that will so quickly start the springs of business and employment as an immediate resumption of construction and equipment of railroads. A billion dollars expended at this time on American railroads would have a more beneficial effect upon the business of this country than several billion dollars lent to European nations for reconstruction purposes.

To decrease rates under such conditions would inflict an irreparable injury to the transportation lines, which are the arteries through which our commerce flows. In other words, we would have a case of hardening of the arteries, considered a rather dangerous malady. It resolves itself, therefore, into a matter of reducing operating costs in order not only to improve the present situation but to allow necessary adjustments of rates upon certain commodities.

Since a greater portion of railway operating cost is fixed by the government through its Railroad Labor Board, and rates are fixed by another governmental body, the Interstate Commerce Commission—both public bodies, but independent of each other—it would appear that the logical course would be to place the matter before the cost-fixing body and not the rate-fixing body.

### A Chance for the Public to Help

The entire railway situation is one in which the public is vitally interested, yet one about which the public generally is not sufficiently informed. Since governmental or public bodies are regulating the income and also the expenditures of the railroads, the time has come when the public must take a greater interest in what is taking place, if the public interest is to be properly conserved. In other words, the interest of the public and of the transportation lines is so closely allied and interwoven, and the condition of the railroads has such a marked

bearing on the prosperity of all other enterprises, including agriculture, that the necessity for close co-operation and better understanding is clear.

I am not like the man from Minneapolis, who started off light blue, turned dark blue and closed with jet black. Quite to the contrary. I believe we are standing at the gray dawn of a better day. Business is improving. There have been more cars ordered by the railroads in 1922, so far, than there were in the entire year of 1921. It is reasonable to expect a slow, but continued, improvement in the already improved conditions, but we must not lose sight of the fact that there are many obstacles in front of us, and we must all work together if we expect to attain the end desired.

In a town in New England, on a little farm, two boys were reared. One was of a studious nature; the other, adventurous. The studious lad went to a seminary and became a minister. The adventurous boy went to sea as a sailor and sailed the seven seas. Finally, desiring to visit his brother at the little town in New England where he had settled, the sailor decided to return. As a remembrance of some of his trips, he decided to bring something back to his brother. So he obtained a parrot, as he thought it would be of interest, and started off for his brother's home. After the usual salutations were exchanged, the sailor brother said, "I have brought you a present, one I thought would be of interest to you."

His ministerial brother inquired what it was, and the sailor told him it was a parrot. The minister said, "I have one, given me by one of my parishoners."

The sailor was somewhat disappointed for the moment; however, he said, "Bring out your parrot, and let's see what they say to each other." This was done.

The minister's parrot sidled up to the sailor's parrot and said, "What shall we do to be saved?"

To which the sailor's parrot instantly replied, "Pump like hell, or we'll all go down."

## Good Work

TO OUR CONTRIBUTORS: The response to our appeal for earlier submission of material for the magazine brought nearly everything needed for this issue into the office by March 15. This co-operation is appreciated. Please bear in mind and tell others that the deadline from now on is the 15th of each month.

# How to Put the Hot Box Out of Business

## Detailed Instruction of All Employes Involved Proves Successful on the New Orleans Terminal Division

"As for the New Orleans terminal, the best advertisement for our efficiency in the handling of hot boxes is gauged by what we can do and are doing," writes Mr. Chapman. "The general instructions, as compiled and issued by our superintendent of motive power, are being complied with. During October there were forwarded from the New Orleans terminal approximately 10,200 cars. Of this number, the records show we had eight reportable hot boxes, giving us a percentage of .0007; in other words, only one car ran hot out of every 1,274 cars dispatched from the terminal."

By J. N. CHAPMAN,

District Foreman, New Orleans, La.

**T**HE proper execution of certain kinds of work is effected by some harmoniously and without apparent effort, while others bungle about everything they undertake. The difference lies in the forethought given the proposition and the manner in which it is undertaken.

Practically everything has been done to expedite car movement; yet we are still confronted with our common enemy, the hot box. When we take into consideration all the facilities provided, the supervision given, the tools furnished, proper instructions as to method distributed, the best of material used, etc., and we still experience trouble, we must admit on the face of it that the project is a large one to analyze, if we are to determine the causes and effect the remedy.

### What a Hot Box Is

The hot box has been a common subject for discussion throughout the history of railroading. Various remedies have been advanced, some theoretical, some practical, but the majority of discussion so far has been based on cases that have already happened—"post mortem." In discussing the hot box we should first endeavor to determine its identity and how it is caused.

The identification of a hot box really needs no discussion, and the causes are numerous. Summing up the various causes we find a hot box is due directly to the accumulation of more heat than the journal or journals can

J. N. Chapman
