was born at Portage, Wis., on May 15, 1872. He began railroad work in 1888 in the service of the Chicago, Burlington & Quincy. Later in the same year he was employed by the Kansas City, Springfield & Memphis, at Kansas City, Mo. He entered the service of the Union Pacific at Portland, Ore., in 1890 and he was appointed general agent of the Oregon-Washington Railroad & Navigation, with headquarters at Butte, Mont., in 1897. Later in that year he was appointed general

agent of the Oregon Short Line, with headquarters at Portland, which position he held until 1901, when he was transferred to Salt Lake City, Utah. He was appointed assistant general freight agent of the Oregon-Washington Railroad & Navigation, with headquarters at Portland, in 1902. He later became general freight and passenger agent of the Southern Pacific, with the same headquarters, which position he held until 1910, when he was appointed general freight and passenger agent of the Spokane, Portland & Seattle, with head-

A. B. Chown

A. M. Cleland

W. E. Coman

quarters at Portland, soon after being promoted to traffic manager. From 1913 to 1919 he was vice-president and general manager of the Northwestern Electric, at Portland and from 1919 to the time of his recent appointment, he was connected with the Washington Water Power Company at Spokane, Wash.

James B. Duffy, assistant general passenger agent of the Atchison, Topeka & Santa Fe, Coast Lines, with headquarters at San Francisco, Cal., has been promoted to general

J. B. Duffy

passenger agent, with headquarters at Los Angeles, Cal., effective February 1, succeeding to the duties of J. J. Byrne, assistant passenger traffic manager, deceased. Mr. Duffy was born on January 3, 1875. He entered railroad service in 1890 as an assistant ticket agent on the Atchison, Topeka & Santa Fe at San Francisco. Two years later he was made a rate clerk, and in March, 1895, he was promoted to chief clerk in the general passenger traffic office at Prescott, Ariz. In January, 1896, he was

transferred to Albuquerque, N. M., and was later made passenger agent at San Jose, Cal., which position he held until July, 1900. From that date until the present, he has been successively station ticket agent, city passenger agent, general agent, and assistant general passenger agent at San Francisco, Cal., except for a brief period during federal control, when he was manager of the consolidated ticket office in that city.

E. S. Leavitt has been appointed general agent of the Southern Pacific, with headquarters at Boston, Mass., succeeding **James H. Glynn**, lately deceased.

E. E. Carter, superintendent of terminals of the St. Louis-San Francisco, with headquarters at Tulsa, Okla., has been appointed general agent, with the same headquarters.

W. G. Powell has been appointed freight traffic manager of the Dansville & Mount Morris, with headquarters at Dansville, N. Y., which position he will occupy in addition to that of general manager.

Engineering, Maintenance of Way and Signaling

W. L. Dayton, supervisor of signals of the Detroit division of the Grand Trunk, with headquarters at Durand, Mich., has been transferred to the Chicago division, with headquarters at Battle Creek, Mich., succeeding **H. E. Burns**, transferred. He will be succeeded at Durand by **J. P. Coleman**, formerly assistant supervisor of signals of the Chicago division, with headquarters at Battle Creek.

Henry D. Jouett, terminal engineer, Grand Central Terminal improvements, of the New York Central with headquarters at New York City, has been promoted to chief engineer of the Cleveland Union Terminals with headquarters at Cleveland, Ohio. Mr. Jouett was born at Summerville, Mass., on March 30, 1878, receiving his technical training at the Massachusetts Institute of Technology from which he was graduated in 1900. He entered railway service in June of the same year as a rodman in the division engineer's office at Albany, N. Y. One month later he was promoted to an inspector of erection of bridges, holding this position until in April, 1901, when he was promoted to assistant supervisor of track. In April, 1902, he was promoted to assistant in the division engineer's office at Albany, where he remained until August

when he left the employ of the railroad to go with a building contractor. Mr. Jouett re-entered the employ of the New York Central in February, 1903, in connection with the electrification work in the New York district and since that time has successively served as transitman, assistant engineer on construction, resident engineer, designing engineer on the electric zone improvements and later on the west side improvements in New York City, and terminal engineer, the position which he held at the time of his latest promotion.

W. H. Coverdale, recently appointed consulting engineer of the reorganized Chicago & Eastern Illinois, was born at Kingston, Canada, in 1871. He was graduated from Geneva

W. H. Coverdale

College, Beaver Falls, Pa., in 1891 with the degree of bachelor of arts, and received the degree of doctor of science in 1914. From 1892 to 1900 he was in the service of the Pennsylvania, Lines West, as rodman, instrumentman and assistant engineer, and during the last three years of that period was track elevation engineer in charge of the Pittsburgh, Fort Wayne & Chicago track elevation from 47th street to Park Manor, Chicago. From 1901 to 1903 Mr. Coverdale was employed as civil engineer by a New York

firm of engineers and contractors. Since 1904 he has practised as a consulting engineer, specializing in railroad and industrial management and financing. In addition to his recent election as director and appointment as consulting engineer of Chicago & Eastern Illinois, Mr. Coverdale is chairman of the board of directors of the Pittsburgh & West Virginia, and of the Pittsburgh Terminal Railroad & Coal Company; he is president and director of the West Side Belt, director and consulting engineer of Gulf States Steel Company, and of the Gulf, Mobile & Northern; a director of the Meridian & Memphis; and ancillary receiver of the Connecticut Brass & Manufacturing Corporation.

Purchasing and Stores

E. Gardner Thorpe has been appointed general storekeeper of the Long Island, succeeding **Eugene Wright**, promoted.

G. W. Bichlemer, purchasing agent of the Union Pacific with headquarters at Omaha, Nebr., has been promoted to general purchasing agent with the same headquarters.

Miscellaneous

J. P. Burns has been appointed assistant chief of the department of investigation of the Canadian Pacific with headquarters at Winnipeg, succeeding **Wm. McLeod**, deceased. **A. H. Cadieux** has been appointed assistant to the chief of the investigation department with headquarters at Montreal.

Obituary

T. J. Hudson, formerly general traffic manager of the Illinois Central, died on January 21, at St. Petersburg, Fla. Mr. Hudson retired from active railroad service in 1907.

THE INTERSTATE COMMERCE COMMISSION has issued orders authorizing common directors among the companies comprising the systems of the Philadelphia & Reading and the Boston & Maine

One measure fostered by union labor under the sponsorship of the United States Railroad Administration was the standardization of wages, that is, the same wage for the good, the bad and the indifferent, under all conditions. Under this plan every possible effort was made to decrease the differential

A Much Needed Adjustment

between the wages paid to the inexperienced beginner and that received by the efficient veteran. Considerable progress was made to this end in the clerical organizations; minimum rates of pay were greatly increased and only moderate increments were made in the established rates for the more experienced employees. The plan under which wages were reduced by the Labor Board in Decision 147 has not corrected this condition. As a result, the railroads are now compelled to pay wages to boys and girls with no experience which are greatly out of line with those paid more experienced clerks. So small has been this differential between positions of different grades that it has been difficult in some cases to get clerks to take the more responsible positions. At least one railroad recently has found it possible to overcome this difficulty by arriving at an agreement for a reduction in wages with representatives of its clerical employees. This reduction has been worked out on a sliding scale whereby practically no decrease has been made for the positions requiring the greatest degree of responsibility and experience but with a maximum reduction for the beginners. It is to be hoped that other roads will be successful in the prosecution of similar negotiations with their employees.

The Southern Pacific has announced a plan, effective February 1, whereby employees of the system will be assisted in the

Helping Employees Buy Stock

purchase of Southern Pacific Company stock. This means the addition of another important railway system to the list of roads which have now adopted such plans. This list includes the Lehigh Valley, the New York Central, the Union Pacific and now the Southern Pacific—rather imposing advocates, we should say, for a plan of any kind. The Southern Pacific plan, in its essentials, is the same as those of the other roads. The company proposes to assist its employees by securing the stock for them and having them pay for it by the deduction of monthly installments from the employee's pay. The stock is not treasury stock but is secured in the open market. There is lacking, therefore, any of that feature of paternalism which might otherwise spoil a plan of this kind. In the Southern Pacific plan, as in the plans adopted by the other railway companies and by certain industrial companies, the employee, when he has completed the payments on his stock, is as much a bona fide stockholder as any other stockholder. The *Railway Age*, on a number of occasions has stated its belief that railway employees should be encouraged to secure stock of the company by which they are employed. The railway that numbers many of its employees as stockholders will agree that our opinion is correct. The Lehigh Valley established some time ago a plan such as the Southern Pacific is now adopting and has had marked success with it. It may be cause or effect, but it is a fact that the officers of the Lehigh Valley are most enthusiastic concerning the spirit of loyalty which exists on the Lehigh Valley system. The Pennsylv-

ania numbers a proportion of its employees also as stockholders, although it has not had a plan for assisting its employees to buy stock. Presumably this ownership of stock by employees is only one factor among several, but it is nevertheless true that the morale of the Pennsylvania rank and file is one of the most valuable assets the Pennsylvania System has.

Control of the Shantung Railway is a point on which hinges the settlement of a number of perplexing problems in the Far East. According to the New York Times, Japan has agreed to accept China's offer of 53,000,000 marks for the property, with the stipulation that the traffic manager is to be a Japanese. At this point China balks. There is much to be said for the Chinese stand in this controversy. If China can control her railways, then all nations will have equal opportunities in China. Heretofore the foreign-owned railways have been used entirely too frequently as political instruments of the country of ownership. China needs the help of foreign capital and foreign skill in solving her railroad problem, but the solution of that problem will be indefinitely postponed as long as railways are seen primarily as instruments of economic domination rather than as means of increasing the national wealth. It seems that China is likely to have little confidence in railways operated by foreigners and, that being the case, the taking over of such railways by the government is the only course to follow.

The Shantung Railway

The extent to which obsolete, worn-out machinery limits railroad shop output and increases costs is generally recognized. Additional evidence of this unfortunate condition, however, continually crops out, as indicated in the

Old Shop Machinery Limits Output

discussion of a paper on the correct machining of wheels and axles, read before a recent meeting of the Car Foremen's Association of Chicago. When questioned as to how many rolled steel wheels can be turned on a modern wheel lathe in an eight-hour day, one of the members said, "With our machinery, which is not modern, we can turn out about five pairs in eight hours. At C— (mentioning another point on the system), where the machinery is not quite so old, they can turn eight pairs in eight hours." The fact of the matter is that had a modern, high-power wheel lathe been installed at either of the points mentioned, rolled steel car wheels could have been turned in an average of 30 minutes a pair from floor to floor, making a total of 16 pairs in eight hours. No reflection is intended on the car shop foreman at the point where only five pairs of wheels are being turned in eight hours. He has probably found by sad experience that any attempt to secure more than that production will result in a broken lathe and consequent delay and tie-up of the work while the lathe is being repaired. Neither is there reflection on the railroad management, which probably has many such old machines and would be only too glad to replace them all could the necessary funds be obtained. Whatever may be the reason, the fact remains that car wheel lathes with only

33 to 50 per cent of the efficiency of modern machines are being used by that railroad with the unavoidable conclusion that every pair of car wheels turned is costing almost that proportion more for the operation than should be necessary.

The Automatic Train Control Order

WHILE the order which the Interstate Commerce Commission served on 49 carriers to show cause on or before March 15, 1922, why they should not be required to make installations of automatic train control, was unexpected, it has served to clarify the atmosphere with reference to this important development in train operation. As was to be expected, the order has produced widely differing reactions. Some railway men feel that the art has not yet been developed sufficiently to warrant installations on such an extensive scale. Others seem to think that too much time already has been spent on investigation and discussion. Still others regret because the order was issued before installations which they were planning had been started.

While the order shows evidence of haste in preparation, and the specifications are very general in character the action taken by the commission may well be considered as a start toward determining, under actual service conditions, the value of a number of devices which show evidences of merit, but which have not as yet been tested outside the laboratory, as well as toward further testing of the value of devices which already have shown what they can do under actual service conditions.

Some confusion exists as to the provisions of this order. In brief, it requires that the railroads mentioned shall each make an installation of an automatic train stop or train control device over a full passenger locomotive division which may be selected by the railroad itself with the approval of the commission, between those points on the carrier's main line designated in the order. The device selected must be applied to or operated in connection with all road engines operating on or over the district chosen.

It is to be expected that the order will be modified after the hearings before the commission. It is possible that all of the roads cited in the order may not be required to make installations. It further appears that the roads were selected on the basis of gross earnings, and the list includes a number which have little or no signaling, which fact will undoubtedly be taken into account before any final order is issued. It is also reasonable to expect that the commission will allow the carriers to select other passenger engine divisions than between the points specified.

Another question of paramount interest is the cost of installation. With such data as are at hand, and on the basis of an average passenger engine division of 125 miles with approximately 65 locomotives operating over it, it is estimated that the cost of installation will range between \$100,000 and \$600,000, depending on the device selected.

It is to be hoped that the railroads will not endeavor to contest this order, provided it is modified in such a manner and to such an extent that the installations may be made without undue hardship to any road concerned. The installations should be located in different sections of the country in order that the effects of widely differing climatic and operating conditions may be studied carefully. The kind of device to be installed should be left to the carrier to determine in the light of what it thinks will best meet its needs. In order that no undue hardship shall be placed on any carrier, or carriers, it has been suggested that the expense of the installation and maintenance of the device should be prorated among the members of the American Railway Association.

The air brake, the automatic coupler, and the automatic block signal system have effected savings in addition to providing greater safety in operation. The average operat-

ing officer may well ask wherein automatic train control will aid operation. It is interesting to note in this connection, that the movement of trains by signal indication with the elimination of the written train order and the derail are receiving serious consideration at the present time. No doubt the shortcomings of the train order system and the fact that a derail, when effective, may wreck a train are largely responsible for this. In train operation by signal indication the defects of the train order system are corrected but the fallibility of the human element still remains. It is this that it is hoped automatic train control will practically eliminate without decreasing the employees' sense of responsibility. While many have feared that the installation of additional mechanical safety facilities will tend to make men careless, train movement with train control has been in operation sufficiently to largely remove this fear.

Through the use of automatic train control and the automatic block system, with take-siding signals and the remote control of passing siding, junction, or other switches, derails can be eliminated and trains can be operated much closer to schedule through fogs and storms safely without train orders, and a maximum use of the tracks will result. Also, it should be remembered that the expenditures for certain classes of collisions and derailments will be materially decreased, as well as overtime, while there will be less wear and tear to equipment because of the elimination of unnecessary stops.

Labor Board Should Stick to Facts

IT HARDLY NEEDS to be said that opinions rendered, awards made and statements issued by, or on behalf, of the Railroad Labor Board should be based upon a knowledge of facts and that the facts should be correctly stated. The award made, the opinions rendered and statements issued on behalf of the majority of the board in the case involving the rules and working conditions of clerks, freight handlers, express and station employees do not measure up to these requirements. The award made by the majority of the board, which became effective on February 1, gave all these employees an eight-hour day except where service is intermittent, with pro-rata overtime for the ninth hour, and time and one-half thereafter. Where service is intermittent eight hours actual time on duty within a spread of twelve hours is made to constitute a day's work.

The three railroad members of the board filed an opinion dissenting from the part of the decision of the majority providing for punitive payment for service rendered beyond the ninth hour. In their dissenting opinion the railroad members made certain statements of fact regarding the hours of work of these classes of employees prior to federal control. Three of the members who joined in the majority opinion, Messrs. McMenimen, Hooper and Hanger, then filed an answer to the dissenting opinion, in which they attempted to show that the statements made by the railroad members regarding working hours prior to federal control were incorrect. The result of the publication of this answer to the dissenting opinion was to disclose that a majority of the members of the board who had signed the majority opinion did not themselves state correctly the facts as to the working hours of these classes of employees prior to government control or on what basis they were paid.

The railroad members, in their dissenting opinion, said that prior to federal control clerical forces generally were paid on a monthly rate basis, which covered all service rendered. Messrs. McMenimen, Hooper and Hanger, in their answer, said: "This statement is in error to the extent that a number of carriers were paying overtime to clerical and station employees prior to federal control." It develops, however, that a tabulation made by the Railroad Wage Commission, based upon a study of representative railroads

for the month of December, 1917, showed that on these railroads more than 99 per cent of all clerks were paid a monthly rate which did cover all service rendered by them.

Another statement made by the railroad members in their dissenting opinion was that prior to federal control other classes of employees covered by the clerks' agreement, including freight house laborers and other station employees, generally worked ten hours per day and were paid at pro-rata rates for overtime work. It was added that ordinarily the same hours of service per day are now required to meet business needs throughout the country along the lines of the carriers. This statement also was challenged in the answer to the dissenting opinion as "erroneous to a very large degree." It now develops that the study by the Railroad Wage Commission of the hours and working conditions of these classes of employees mentioned above showed that 89 per cent of them worked ten hours or more. It also showed that 92 per cent of the "freight house laborers and other station employees" mentioned in the dissenting opinion worked ten or more hours in December, 1917.

In support of their contention that the statements made by the railroad members regarding working hours under private operation were erroneous, Messrs. McMenimen, Hooper and Hanger quoted extensive extracts from answers made by the regional directors and individual railroads to a questionnaire sent out by the Railroad Administration in August, 1919. It develops, however, that the answer to the dissenting opinion did not include all the replies received by the Railroad Administration to these questions, although the language in it plainly implied that it did, and in consequence a misleading impression was given regarding the facts shown by the replies to the questionnaire.

For example, one question asked in the questionnaire, was: "Would it be possible to work the employees coming under the provisions of supplement No. 7 on a 44-hour week without punitive overtime in (a) general offices, (b) division offices, (c) warehouses, (d) station ticket offices and other (e) miscellaneous points." With reference to the reply received from the Pocahontas region it was stated: "Reply indicates that all but 5 per cent of the employees in the general offices and warehouses could be given a 44-hour week without the payment of punitive overtime." The reply actually received by the Railroad Administration from the Pocahontas region was quite different, being as follows: "It would not be possible to work employees coming under the provisions of supplement No. 7 on a 44-hour week without punitive overtime, for the reason that numerous such employees now work Saturday afternoons and certain hours on Sundays. The percentage would possibly be (a) general office, 5 per cent; (b) division office, 20 per cent; (c) warehouse office, 5 per cent; (d) station ticket office, 100 per cent; (e) miscellaneous office, 5 per cent." The answers made by some important railroads, including, for example, the Pennsylvania and the Chicago, Milwaukee & St. Paul, were not quoted at all. The records of the Railroad Administration show that these railroads answered that employees of none of the classes mentioned could be given a 44-hour week without the payment of punitive overtime. It is as pernicious and indefensible to misrepresent by refraining from telling all the facts, when all are presumed to be given, as it is to misstate them.

The railroad members, in their dissenting opinion, said: "The work of all classes covered by this agreement is to an extent intermittent and does not require constant application. With a lesser day than ten hours the carrier cannot, with economy and efficiency, meet the demands of the public." Those signing the answer to the dissenting opinion undertook to show that practically all these employees worked continuous time. The report of the Interstate Commerce Commission regarding the time worked and the compensation of the 310,000 employees included in these classes in July, 1921, shows that in that month they received \$2,181,-

404 for time paid for but not worked, and that every single class of them received some of this money.

The misrepresentations of facts contained in the answer made to the dissenting opinion were sufficiently indefensible. But this was not the worst of the matter. A statement headed "From the Railroad Labor Board," regarding the new rules established was given to the press, which said: "These two changes in the rules are expected to save the railroads many millions of dollars, any exact estimate being impossible owing to fluctuations in business and traffic conditions. Railroad critics of the national agreements, in past hearings before the Railroad Labor Board, contended that these two rules cost the roads great sums, even hinting at amounts in excess of \$50,000,000, but experts attached to the board say that \$15,000,000 is a conservative estimate." As a result of this statement being given to the press it was heralded all over the country that the board had made changes in the rules which would save the railroads from \$15,000,000 to \$50,000,000.

Soon afterward Samuel M. Felton issued a statement showing that the board's own statistical department had estimated the savings that would be made at only \$4,823,524.84. Only a short time ago a statement was issued by an employee of the board estimating that changes made in the rules in the shop crafts agreement with the employees would save the railways \$50,000,000 a year and this was also widely published. Subsequently, R. M. Barton, chairman of the board, said: "The statement referred to was not made by nor authorized by the board. We have no means of knowing with accuracy what the saving will amount to."

The Railroad Labor Board is a government body whose members represent railway employees, the railroads and the public. Its usefulness will be determined, in the long run, by the extent to which it deserves the confidence of all these parties. It cannot gain or hold, much less deserve, such confidence unless its members make much greater efforts to learn the facts bearing on the questions they are dealing with, or to stick to the facts after they have learned them, than they did in the instances mentioned.

Why Two Specifications for Steel Railway Bridges?

DURING THE LAST 20 years the specifications for steel railway bridges adopted by the American Railway Engineering Association have come to be accepted as the standard guide for the design and construction of steel bridges on American railways. For this reason, railway engineers concerned with bridge design now find themselves in a rather confused state of mind when they receive copies of a specification prepared by the Special Committee on Specifications for Bridge Design and Construction of the American Society of Civil Engineers. Except for major changes in three or four paragraphs, the new specifications for design are almost identical with the latest draft of the A. R. E. A. specifications adopted in March, 1920. The two specifications are so nearly alike in form and substance that it is exceedingly difficult to understand why it was necessary to issue the later instrument under the sponsorship of another society.

With a record of 20 years of useful work the Committee on Iron and Steel Structures of the American Railway Engineering Association has come to be recognized the world over as the leading authority on steel railway bridges. Not only are its specifications in general use here but even in countries as remote as India its work is given a great deal of consideration in the development of similar rules. Because of this, the similarity in the specifications of the two societies, together with a duplication of words in the names of the two organizations, can but result in an unfortunate confusion.

It is conceded that the A. R. E. A. specifications are not

perfect. Some engineers are far from satisfied with certain features of the rules of design in their present form, chief among which is the column formula. The method of determining the required section of the compression flange of plate girders has also been criticized, and a few bridge engineers have been disappointed because the specifications in their present form do not provide for the proportioning of bridge members for maximum loadings and maximum stresses. It is in reference to these specific features that the American Society's specification differs in substance from the A. R. E. A. instrument. One of these, the column formula, the new specification offers three alternative methods because members of the A. S. C. E. committee could not agree on any one of them. The modifications proposed by the A. S. C. E. specifications with respect to disputed points may comprise distinct improvements over the corresponding requirements in the A. R. E. A. specifications. Nevertheless, we believe that such improvement may be accomplished far better through action by the committee responsible for the original specifications than through the agency of some other organization. That such changes or improvements may be forthcoming is evidenced by the fact that the report of the Committee on Iron and Steel Structures for consideration at the next convention of the American Railway Engineering Association offers a new formula for the design of compression flanges of plate girders which is identical with the one embodied in the new A. S. C. E. specifications.

The present rules for the design of steel railway bridges as drawn up by the Iron and Steel Committee of the A. R. E. A. are the result of a process of evolution. They represent years of work by the committee and many hours of discussion at the annual conventions. Through this process, they have undergone a gradual improvement and will continue to do so through the combined efforts of bridge engineers representing the railroads and other interests vitally concerned in this work. Any benefits to accrue from independent efforts on the part of others will be largely neutralized by unnecessary and confusing duplication.

Face the Problem Squarely

THE TRANSPORTATION ACT requires the Interstate Commerce Commission to determine from time to time what net return the railways as a whole should be allowed to earn. It is required in doing this to consider the country's need for adequate means of transportation. The law makes 5½ to 6 per cent the measure of a reasonable net return only until March 1, 1922. Therefore, the commission must again soon say, if the law is not changed, what return it believes it is reasonable and in the public interest to let the railways have.

It is to be hoped that in passing upon this question, the commission will squarely face the railroad problem as it actually is. Although that problem is being discussed by many persons and dealt with by many government bodies, almost nobody is facing it squarely and discussing or dealing with it on its merits. Continued paltering with it will cause disaster, not only to the railways but to every class of business interests and every class of people in the country. The *Railway Age* can see as clearly and has recognized as frankly as anybody the improvements in the railroad situation which have occurred within recent months. The efficiency of labor has improved, operating costs have been reduced, net return has increased and expenditures for equipment and improvements have been partially renewed.

But these things do not solve the railroad problem, or necessarily bring a real solution of it nearer. The railroad problem will be solved only when the public and the government decide finally to do one of two things and then act accordingly. One solution of it would be the adoption

of government ownership. It would be a bad solution, but it would be a solution. The only other solution possible is the definite and final adoption of a policy of allowing the railways under private ownership to earn an average net return, in good years and in bad, sufficient to enable them to improve and expand their properties so that they can handle all the traffic offered to them with economy.

Whatever might be true under government ownership, it is plain that under private ownership and management there never can be any solution of the railroad problem consistent with the public welfare unless the railways are allowed on the average, year by year, to earn relatively as large net returns as are earned in other businesses. Government regulation may decide that the railways, like other industries, may earn large profits in good years and small profits or none in bad years. It may decide that in good years the railways must be content with smaller profits than those earned in other businesses and in bad years will be allowed to earn larger profits than are earned in other businesses. One or the other of these policies it must adopt, however, if the railroad problem is to be solved under private ownership.

Upon the net return the railways are allowed to earn always must depend the amount of new investment they can make in their properties. Upon the new investment they can make must always depend, in turn, both the economy and adequacy of the service they can render. They cannot in the future effect economies in operation and make reductions of rates as in the past, unless they can make large capital expenditures as in the past. They cannot increase the amount of service rendered by them in the future as in the past, unless they can make large capital expenditures as in the past.

Facts such as these have been theoretically recognized but actually ignored in all past regulation of the railways. They have been regulated as if it was to the public interest to reduce and limit their net returns as much as the courts would not hold confiscatory. The facts regarding railroad development under this policy of regulation are indisputable. The development of the railways has steadily declined. This decline did not begin within recent years. It began more than ten years ago and has continued at an accelerating rate ever since.

Both the fact, and the main cause, of this rapid decline of railroad development were recognized by the public and Congress when the Transportation Act was passed. It was owing to this that the rate-making provisions of the Transportation Act were adopted and that a large advance in rates in 1920 was willingly conceded.

Now, however, a great part of the public and of public men are advocating not merely a return to the policy of regulation which formerly prevailed, but the adoption of a more unfair and dangerous policy. They are insisting upon reductions in rates in entire disregard of the fact that in the past the railways did not earn as large profits as were made in other industries, that the net return they have earned under the Transportation Act has been only one-half as large as that act virtually promised them, and that to make immediate large reductions of rates would completely wipe out the present net returns. They are advocating repeal of all those provisions of the Transportation Act which were intended to assure to the railways a better opportunity to earn reasonable net returns and at the same time favoring the retention of all the provisions of that act which impose upon the railways increased restrictions and burdens. They would repeal the rate-making provisions but leave the railways burdened with the present system of regulation of the wages and working conditions of their employees which, at a time when they are earning an inadequate net return, is forcing them to pay higher wages than are being paid to similar labor in any other industry. Even the Interstate Commerce Commission is yielding to this pressure for unfair

and destructive regulation. It is ordering large reductions of rates in spite of the fact that the railways never have earned and are not earning now the net return that the Transportation Act requires the commission to let them earn.

The demands being made for reductions of rates and for changes in the Transportation Act express a mania regarding the railroad question comparable to past manias in this country regarding fiat paper money or free silver. Formerly, millions of our people, including many regarded as intelligent and wise, advocated legislation to depreciate the country's currency as a sovereign means of alleviating the effects of panics and industrial depression. Now, literally millions, including many regarded as intelligent and wise, advocate wholesale reductions of railway rates and the adoption of unfair railway legislation as the main remedy for present business conditions. They proceed on the remarkable theory that the way to improve business is financially to ruin and prevent revival of the development of the railroad industry. The present prices of most kinds of commodities are relatively higher than the railway rates on them, and yet the very producing and distributing concerns that are charging these prices, and which have made much larger profits than the railways for years, are contending that the restoration of normal business conditions demands, first of all, immediate reductions of railway rates.

Perhaps the Interstate Commerce Commission, in determining what return the railways shall be allowed to earn in the future, will be controlled by the present railway mania. Perhaps, if it is not, Congress will deprive it of the power to determine the net return that they may earn. We hope neither of these things will occur, although history shows that such things are quite possible. The railroads could then appeal to the federal courts and get some protection there, but in the long run appeals to the courts, however successful, will not solve the railroad problem. It will never be solved under private ownership, unless Congress and the Interstate Commerce Commission, as a deliberate public policy, decide that the railways must be allowed to earn adequate net returns and shall then consistently act in accordance with this decision. Government regulation of the railways in the past has been a failure and worse than a failure because it has been consistently predicated upon the false economic theory that the railroads should be restricted to the smallest net return that the courts will not hold confiscatory. The application of this theory has slowed down and finally stopped railroad development. Its continued application will forever prevent an adequate revival of railroad development, and that would be worse than government ownership itself.

New Books

Life of George Westinghouse. By Henry G. Prout, C. E., A. M., LL. D., 375 pages. Portrait frontispiece and eight other illustrations. Size 6 in. x 9 in. Bound in cloth. Charles Scribner's Sons, New York. Price \$2.50.

George Westinghouse was a great man. He was a genius, but a good deal more than that. He developed his own and others' inventions and was a business executive as well as an engineer. Above all this he was a gentleman, associating always with worth-while people, and benevolent to his employees because that was his nature, not merely because it was "good business" to take an interest in their welfare. His pre-eminence as a noble citizen is indicated by the very lines of his portrait, and readers of this book who are unacquainted with his career will be charmed to see how the varied acts of his life, as here narrated, confirm the impressions which they will gain from this picture.

And Colonel Prout has made a great book. Chronological treatment of the subject, as a whole, was out of the question, for Westinghouse left no systematic memoranda and but

few letters; and so the author, in a dozen chapters, has given, separately, a condensed history of each of a dozen careers, almost any one of which would be enough to make a man distinguished. The chapter introducing these, with two other chapters at the close, contain the distinctively "human interest" part of the story, though there is human interest everywhere.

Colonel Prout is not only a scholar, he is one of the most accomplished writers in the field of engineering, and a discriminating observer. Adding to this his own acquaintance with many of the topics dealt with, and his years of association with Westinghouse himself, one may reasonably expect a thoroughly illuminating narrative. This expectation is not disappointed. The reading public is fortunate in having the benefit of such an unusual combination.

Railroad men who shortsightedly have thought that the fame of Westinghouse rested on the air brake alone will find this book an eye-opener. The air brake was, indeed, the great outstanding mechanical feature in the railroad world from 1869 to 1889, and that alone served to put Westinghouse's name alongside of Stephenson's; but Westinghouse had a great career after that. The biographer classes his work in developing alternating electric current for the manufacture of power as at least of equal importance. In three other fields—natural gas, the turbo-generator and electro pneumatic apparatus for signaling—Westinghouse did a prodigious amount of pioneer work.

The candor of the author is always in evidence, and the great things which glorified the name of Westinghouse from a hundred different angles are not allowed to obscure the truth necessary to make an honest narrative. Mistakes and reverses are recognized with almost Scriptural fidelity. Another point calling for frank treatment was the question of recognizing the work of the "large group of able, loyal and devoted assistants which Westinghouse attached to himself," these including brilliant and constructive organizers, administrators, executives and engineers. Of these a few exceptional names are mentioned, but as regards the list as a whole "the committee (mentioned below) and the editor regret that it is not practicable to enter upon the delicate task of telling what these men did."

The American Society of Mechanical Engineers is primarily responsible for this book, Messrs. Scribner working in co-operation with a committee of the society, of which Charles A. Terry was chairman. The author also gives, in the preface, the names of 18 other men who contributed material and advice; in short he has employed all the resources of the experienced editor, with a purpose of making a book of which every paragraph should be faultless.

The main chapters, as above noted, are the first, 17th and 18th. The titles of the others are: the air brake; friction draft gear; a general sketch of electric activities; the induction motor and meter; rotary converter; the Chicago World's Fair; Niagara Falls; electric traction; steam and gas engines; the turbo-generator; signaling and interlocking; natural gas; various interests and activities; European enterprises; financial methods, etc. The lighting of the World's Fair at Chicago, in 1893 and the epoch-making work at Niagara Falls in 1889, and the following years—where now there are hydro-electric plants with an aggregate capacity of 500,000 h.p.—are among the most absorbing stories in the book.

In an appendix devoted to some description of the numerous patents taken out by Westinghouse, eight pages are required for a simple index, one line to each patent. In 11 years, from his 34th year to the end of his 44th, Westinghouse took out 134 patents, an average of more than one each month; and at the same time he was stimulating and directing the work of many other inventors. Another list, filling two pages—a single line to each item—gives the names of the Westinghouse associated companies, chronologically arranged.

Letters to the Editor

The RAILWAY AGE welcomes letters from its readers and especially those containing constructive suggestions for improvements in the railway field. Short letters—about 250 words—are particularly appreciated.

The Automatic Train Stop Problem

NEW YORK

TO THE EDITOR:

What are the railroads to do? The Interstate Commerce Commission tells them that certain sections of their roads must be equipped with automatic train stops; leaves the roads to select apparatus without any practical advice from any government source as to type or kind, and then gives warning that every last detail will be subject to approval by the Bureau of Safety. Isn't that a pretty crude and hasty command? One would think that after reflecting on Section 26 for 21 months, those eleven commissioners could evolve something more sane than this half-baked proposal.

And the public is very lenient in calling for an accounting to cover only 21 months; for this problem has been before the Washington authorities ever since President Roosevelt set the ball rolling in 1906. However, if the infliction of a slight bodily injury on a popular member of the President's cabinet in a rear collision of passenger trains can arouse the commissioners, it behooves us to ask no questions; it will not be the first time that a long period of more or less futile discussion has been ended by a trifling accident.

Perhaps you may think I am only a fault-finder; that, like some railroad presidents, I only wish to throw the whole responsibility on the commission while, I myself, seek to do everything possible to block the wheels of progress. That is not the case. I simply wish to ask the question with which I started; I am disappointed that you, in your editorial of January 21, merely push the whole perplexing mess farther into the future. The commissioners evidently know that this is a troublesome question and they mean, no doubt, to avoid burning their own fingers; and so the question remains, What are the railroads going to do? WALL STREET.

[Holding no brief for the railroads we cannot tell what they will do. They themselves will tell, at Washington, no doubt, within a few weeks. Railroad managers, however, are much like the courts, in having great regard for precedent, and it may be expected that their first move, in seeking to find an automatic train stop which will satisfy the Interstate Commerce Commission, will be to review what has been done already in that line. Our correspondent may be interested in the list, printed last week, of train stops which are already in use, or which have been tried with more or less success.—EDITOR.]

The Most Economical Freight Train Speed

ST. LOUIS, MO.

TO THE EDITOR:

The article on page 1273 of the issue of December 24, 1921, entitled "Economic Speeds of Freight Operation," is very interesting in so far as the data contained therein apply to the various speeds, train loads and production in gross ton miles per train hour; however, the same thorough study that was given the foregoing factors appears to be lacking in that portion dealing with "Costs." The "Average Cost per Gross Ton-Mile" in the table on page 1274, was

computed on the basis of an assumed average cost (\$14.50) per train hour, this same average being used for each speed whether it be 5 or 29 miles per hour. It is inferred that this average cost embraces wages, fuel, train supplies and expenses, locomotive supplies and expenses and probably engine-house expenses. If such is the case, exception is taken with respect to the cost data contained in the article for the following reasons:

The average cost per train hour of a single freight train varies with the speed of the train. As an example, a freight train moving continuously between two terminals 100 miles apart, at an average speed of 12½ miles per hour, will cover the distance in 8 hours. The same train moving continuously at a speed of 25 miles per hour will cover the distance in 4 hours. The wages of the train and engine crew would be exactly the same at each speed. The cost of train supplies and expenses, as well as locomotive supplies and expenses, would also be approximately the same at both speeds. There would be no variation in engine-house expenses. There would be some variation in the cost of fuel, but the amount would probably be slight. Therefore, the average cost per hour of the train moving 25 miles per hour, would be approximately double the average cost per hour of the train moving at the slower speed.

Assuming that it was practically possible to move freight trains continuously at stated speeds and using the Gross Ton-Miles per Train Hour at various speeds, as shown in the table on page 1274, it will be found that greater economy will be obtained at a speed of 12½ miles per hour than at a speed of between 17 and 18 miles, as stated in the article.

As proof of this, it is safe to state that the total cost of a 100-mile run would be almost the same at 12½ miles per hour as at 17 or 18 miles per hour. At the speed of 12½ miles per hour about 98,004 gross ton-miles (see table on page 1274) would be produced per hour for a period of 8 hours, or a total of 760,032 gross ton-miles; at the 17-mile per hour speed about 110,551 gross ton-miles (see table on page 1274) would be produced per hour for a period of 5.9 hours, or a total of 652,251 gross ton-miles. From this it is readily apparent that the slower speed would be the more economical for the reason that 107,781 more gross ton-miles would be produced thereby and at approximately the same cost.

Statistician for Chief Operating Officer, M. K. & T. Lines

American Railway Men in Asia

CHICAGO

TO THE EDITOR:

When Charles R. Crane passed through Chicago recently on his return from China by way of Siberia and Russia he said of the American railway men in Asia: "My journey was facilitated by the kindly offices of the American engineers under John F. Stevens and Col. B. O. Johnson, the railway experts, who still maintain their headquarters in Harbin. Their influence is to be felt the whole length of the Trans-Siberian Railway, where the Russians have the best of feelings toward America because of the conscientious care that has been exercised by these forgotten Americans in desolate Manchuria. The tradition of the good work that the Red Cross and other organizations did there still exists. But these patient railway men have done most of all to keep up the good name of America in Siberia and Russia. They have been most sympathetic towards the Russians, both workers and bosses, and have made themselves most favorably known all the way to Moscow. They helped to make my journey secure and comfortable. Their contribution to the history of the times has been most dramatic and most valuable."

The Russian Railway Service Corps, as the American en-

gineers were officially known, numbered 216 men when it reached Asia in December, 1917. The old corps was sent home in May, 1920, after the triumph of the Bolsheviks. Col. B. O. Johnson, formerly of the Northern Pacific, was instructed to retain a small staff and remain in Harbin with Mr. Stevens. They then continued to function under the terms of the inter-allied agreement, which is expected to retain its life until the last allied (Japanese) soldier leaves Siberia. Col. Johnson retained only three men out of the original engineers, but he then proceeded to organize some American-trained Chinese engineers and presently railway affairs in Manchuria and eastern Siberia were moving along very well.

Then began the most interesting developments of all. The absolute breakdown of Russian authority in the Far East forced the Russians into a relationship with the Americans which has become closer in the last 18 months. The Russians learned to trust the Americans. The Americans pay no attention to Russian politics, knowing all reds and reactionaries alike, only as Russians. The Russians no longer even talk their politics to the Americans, as the latter have insisted that they are not interested.

"I have grown very fond of the poor old Russian," writes one of these Americans now in Harbin. "He has had one — of a time. He is peculiar, and all that sort of thing, but since I have been able to talk to him in his own language and have got under his hide I sure like him. And things are looking up with him. This is Russia's hard winter. You are going to note a very rapid evolution of Bolshevism towards a practical working democracy in the next 12 months. Russia's recovery will be very rapid. Russia's wealth is in her soil. She had only about 45,000 miles of railway and little manufacturing. A few thousand tons of well selected repair parts would make a wonderful change in her transport. Her track is better than that in America, despite her troubles."

The improvement in the Chinese Eastern has been enormous. For the benefit of the foreign colony in north Manchuria a time table in English has been prepared showing arrivals and departures between Vladivostok and Manchuria station, 1,608 versts away. Dining cars and first, second and third-class sleeping cars are now run regularly. Trains are electrically lighted throughout. It is hoped soon to have a regular service between Vladivostok and Irkutsk.

PAUL WRIGHT.

A Difference of Opinion on Water Treatment

CHICAGO

TO THE EDITOR:

I have read with interest the article by C. R. Knowles in the issue of November 12 and the subsequent communications on the subject of "The Interior Treatment of Boiler Waters." As I am an "exterior treatment man" I would not have felt competent to enter into the subject if it had not been for the letter by C. H. Koyl, which appeared in the issue of December 24.

For about 20 years I have been actively engaged in the design, construction and operation of water treating plants. My experience covers more than a thousand plants treating more than half as many waters and ranging in capacity from several hundred gallons to several million gallons per day. As a result of this experience I am firmly convinced that exterior treatment is the best method we have and that unless something as yet unknown is found, much more than the 50 per cent of the boiler waters referred to by Mr. Knowles will ultimately be taken care of that way.

If we take the figure of 6 per cent as being approximately correct for the proportion of water needing treatment that

is now receiving it, or if the proportion is twice as great, it will take many years to install plants to take care of the balance, even if the money were immediately available—which it is not. This being the case, it seems to me not only proper but very desirable that there should be a discussion of other means that can be used under present conditions. From the article published and from other sources I gather that with reasonably proper use, compounds—both anti-scale and anti-foaming—do decrease certain expenses, avoid or reduce certain troubles and in other ways produce results of which the benefit exceeds the cost. The cost per pound or per other unit may be, and I understand is, greater than for exterior treatment, but if they pay their way and leave a balance, what valid argument is there against using them until something better can be done?

So far as they relate to this aspect of the situation, I cannot take at all seriously the committee pronouncements made 50 years ago, and quoted in the article printed in your issue of December 24. There is a proverb that "the good is the enemy of the best," meaning that we are pretty apt to take things somewhat easily as long as we get along pretty well; but it seems to me that to turn this around and make the best the enemy of the good, to argue that we should do nothing at all until we can do the best is rather stretching things. I suspect that if those committees could be re-assembled they would be found to be made up of rather practical fellows who would gladly use any means available and that they would be somewhat surprised at the rigid construction put on their words.

If compounds may be used, and Mr. Koyl himself approves of them to an extent, it is impossible to have too much information about them and a series of articles or a to-the-point discussion in which results and methods of use are brought out is apparently needed, and I hope it will be continued. If he had said that to install adequate treating plants is a step forward, I would have agreed, but certainly to try to do more intelligently something that is useful and that we are already doing is not "a step backward."

Another statement in Mr. Koyl's article that I cannot agree with is that "20 years ago it used to be said that 'an increased tendency to foam is characteristic of all water treated with soda ash.'" This was true 20 years ago and is now so far as relates to using a water treated with soda ash without separation of the precipitate, but apparently the reference is to the use of soda ash in a water softening plant. With possibly an occasional exception so rare as not now to be remembered and very likely due to some other and unusual condition, my experience has been that water after softening is less apt to foam than before, whether soda ash is used in the treatment or not. Likewise this has been the experience of all others so far as I ever heard. It is a common experience for boilers to show an increased tendency to foam for a time after the use of softened water is begun. This, however, is laid to the increased amount of mud present from the softening and disintegration of the old scale and it stops when the boilers are clean.

What is meant by the reference to the sludge being left, not by soda ash but by lime treatment, is not clear since the addition of soda ash in amount equivalent to the permanent hardness will commonly cause no precipitation in water without heating or the addition of lime also, whereas lime without soda ash will quickly cause precipitation. When both are used and the reaction of each one produces calcium carbonate, how can it be told which portion of calcium carbonate is left?

Mr. Koyl has, however, done a real service in directing attention to the part played by suspended matter in causing foaming as against that of dissolved solids. While this has been known for a long time it is frequently overlooked or not given the attention it deserves. We have all seen a boiler that had been steaming quietly, suddenly start to foam vig-

ously on the addition of turbid water. Of course, every boiler in service contains solids both in suspension and in solution and both play some part in every case of foaming, but as Mr. Koyl points out, the amount of dissolved solids may be very greatly increased if the amount of suspended matter is kept down.

It should be noted also that while the effect of dissolved solids in causing foaming is roughly in proportion to the amount present, regardless of what the soluble salts are, this is not the case with suspended matter. With the latter the effect is more nearly proportional to the number of particles present than to the weight; in fact after particles reach a certain maximum size they may have very little effect at all. This is the reason why substances like magnesia and silica which precipitate in very fine form, have an effect all out of proportion to the amount present as compared with the effect of some other substances.

It is a realization of this desirability of eliminating suspended matter as far as possible that has led to the use of sand filters in much present day water softening work. Not only is clear water obtained in this way but an additional grain or so of half-suspended or colloidal matter that will not settle out may also be removed. Something of the same result may be secured by the use of coagulant such as sulphate of alumina or sulphate of iron in connection with the treatment, but it is necessary to use more than with filters which means increased expense and increased solids in the water. There is no essential difference between clarifying a water naturally turbid and one that has been made turbid by treatment; very much the same kind of materials and very much the same conditions of suspension are present in both cases. It would seem advisable therefore to take advantage of the experience in clarification gained in such fields, for instance, as municipal supplies, rather than to go through again the experiments and arguments long passed by. All experienced water works engineers use sand filtration as the most dependable and most economical means of getting a satisfactory supply, sedimentation basins being used to first get rid of the heavier suspended matter. This is exactly what is now being done by most of those manufacturing water softening equipment and since history tends to repeat itself it may be expected to become standard practice.

In one place Mr. Koyl makes the statement that "all experienced men say 'water softening consists of adding lime and soda ash to the water which is then stirred until chemical reaction has taken place.'" This is contrasted with a statement quoted from Mr. Knowles that "water softening consists of adding lime and soda ash to the water which is then allowed to stand until chemical action has taken place." I might stop with the suggestion that water softening does not "consist of" either one or the other but that both refer to methods or steps that are used in one or another water softening plant. Every or nearly every concern making water softeners has made experiments, both laboratory and field, to ascertain what could be expected from agitation for different periods and the results are no secret to those in the business. Perhaps the outcome of these experiments is best shown by the fact that not a single concern manufacturing such apparatus now uses prolonged agitating, nor does any one advocate it so far as I know except Mr. Koyl and those who have been subjected to his influence.

Under some conditions or with some waters the effect of excessive agitation is harmful in that the precipitate formed will be broken up to such an extent that it will scarcely settle at all, so that the hardness of the water increases. Perhaps there is not actual resuspension but the establishment of some of the precipitate in a colloidal form so that it acts as though in solution. This harmful effect of prolonged agitation can be entirely overcome by the use of a coagulant such as sulphate of aluminum or sulphate of iron and this is what Mr. Koyl does. Except for the cost of the larger

amount of coagulant used and the increase in dissolved solids, there is no objection to the process but within my knowledge every result claimed for it has been produced, and I think even better results obtained, without any agitation at all except for perhaps a few minutes to secure mixing.

W. H. GREEN,
Vice-President, International Filter Co.

The Motor Truck and the Railroad

CHATHAM, N. J.

TO THE EDITOR:

The editorial entitled "Unfair Motor Vehicle Competition" which appeared in your issue of December 10 has a double interest for me as I am both a railroad employee and a resident along one of the motor highways now in process of reconstruction in New Jersey. The position of the carrier of heavy freight motor traffic on our highways is indeed enviable when it may charge what rates and pay what wages it chooses, unhampered by Interstate Commerce Commission or Labor Board and under no expense of construction or upkeep of its roadbed or right-of-way.

Recently the foundation of our house became so weakened by the constant jarring of the heavy trucks which speed past our door that we were obliged to have it reconstructed to preserve a structure which has stood since before the Revolution. Unless we attempt to hold up some of these trucks there is small chance of our collecting for the damage they have caused, but our taxes will undoubtedly be higher next year to pay for the new pavement now being put in. When the machine which was engaged in ripping up the old pavement nipped off the branches of some of our shade trees and damaged the remaining foliage by misdirected steam, we registered our annoyance and were comforted with the information that such slight inconvenience should be borne cheerfully, considering the great public improvement under way. In contrast, a few years ago the Lackawanna railroad, which serves this part of New Jersey, embarked upon a program of eliminating its grade crossings through this section. In making the embankments the railroad was obliged to take small portions of the adjoining property which had previously been devoted to the cultivation of burdock weeds, ashes and tin cans. It was remarkable how prosperous the people soon became who had been deprived of their property for the public benefit in this case.

So much for my private grievance as one taxed for the support of a species of transportation in competition with the one which pays my salary. Of course there is no use in setting one's self in the way of progress to be run over by it. It cannot be denied that motor trucks can do things which a railroad train cannot do as effectively. Strikes and the war have opened our eyes to new uses for motor vehicles as well as for aeroplanes. Whether further development of the aeroplane and motor transportation, aided by the Lincoln highway idea, will relegate our much harried and regulated railway transportation to the level of our present canal transportation is a question for those who control the purse strings of the railroads, notably the Interstate Commerce Commission and the investing public. Already railroads are reducing their mileage wherever possible.

I cannot help wondering why transportation is not more often considered broadly as transportation, the means of getting from one place to another by whatever method employed, whether railroad, truck, aeroplane or trolley car. Instead of railroad companies, why should we not have great transportation companies, unrestricted as to method of locomotion, which might convey the public and its freight from Waterford, Maine, to Hoquiam, Wash., by any combination of types of transportation which would do it most expeditiously and economically. Does not the way out for the railroads as well as the public lie in that direction?

G. H.

New Haven Using Motor Cars on Branch Lines

Important Advantages of New Passenger Equipment Are Flexibility and Low Operating Cost

ANYONE who examines the map of the New York, New Haven & Hartford is at once impressed by the numerous short lines and the many junctions. The lines of this company form a network over southern New England, traversing both highly developed industrial sections and rural districts. The area covered by the road is small and therefore outside of the main passenger lines there are few through passenger routes. Most of the territory through which the New Haven runs is rather densely populated so there is considerable passenger traffic available, but the short lines make a satisfactory arrangement of passenger train

have now been received. Two are in service between New Haven, Conn., and Derby, and Tremont, Mass., and Fairhaven. The third will soon be assigned.

The cars combine many of the characteristics of automotive and railroad equipment as will be noted by reference to the illustrations. The motive power is furnished by the Mack truck engine, made by the International Motor Company, New York. This motor has four cylinders, each of 5 in. diameter and 6 in. stroke. The power rating according to N. A. C. rules is 40 hp., but the motor actually develops a maximum of about 60 hp. The motor is located under a

Mack Rail Car, Used in Local Passenger Service on the New Haven

service and locomotive runs almost impossible. To make conditions still more difficult private automobiles and motor buses maintain keen competition for the business and therefore the branch line passenger traffic is often a source of expense instead of a revenue earner. Under these circumstances the railroad has found it advisable to restrict passenger train service on many lines to two trains a day.

The officers of the New Haven made a careful analysis of this situation to determine the most economical method of handling branch line passenger service with the primary object of reducing the cost of operation. It was felt that it might be possible to reduce operating costs on some of the lines where there is only light traffic by running small unit cars. The study of the problem led to the conclusion that the usual three-car train was unsuited for the existing conditions and that the service demanded equipment which was more economical and also more flexible. This decision led to the design of gasoline-driven passenger cars of which three

hood placed ahead of the car body and power is transmitted by a gear drive to the rear axle which is of the bevel gear type, the gear ratio being 4.29 to 1. The axle has no differential, and drives two 40 in. wheels with cast steel centers and rolled steel tires. The transmission, of the selective type, gives four speeds forward and four in reverse with direct drive in high speed.

The leading truck is of the four-wheel type with 20 in. diameter wheels. The axles, like those of the driving wheels, run in Timken roller bearings. The truck has a swing bolster supporting leaf springs which in turn carry the underframe. At the rear the frame is also supported on leaf springs which are slung under the rear axle. In order to reduce vibration and deaden sound, rubber blocks are interposed between the ends of the springs and the car underframe.

The cars are braked by the Westinghouse Air Brake Company's motor vehicle brake. The pressure for this device

is taken from the compression in two of the engine cylinders and is stored in two small chambers on either side of the car. A brake valve mounted in front of the driver's seat controls the application directly and the release through a quick release valve installed close to the brake chamber. The braking force is obtained through two dished plates between which is placed a heavy rubber diaphragm. The diaphragm is connected to a push rod which transmits the pressure through the brake shoes to the wheels. In addition an emergency hand brake is provided which acts on the rear wheels only and is operated by means of a wheel on the steering column.

The body of the car has seating capacity for 35 passengers and baggage capacity of 1,000 lb. The body is 27 ft. 10 in. long and 9 ft. wide inside the window sills, with a height of 6 ft. 6 in. from floor to ceiling. The maximum width at the steps is 9 ft. 8 in.; the width at the eaves, 9 ft. 7 in., and the maximum height above the rail, 10 ft. 5 in. The car weighs 23,400 lb. fully equipped, or about 30,000 lb. when filled to capacity.

The body of the car was built by the Osgood-Bradley Company, Worcester, Mass. The frame is of wood and steel covered with No. 18 openhearth steel plates. The flooring in the passenger compartment is 13 16 in. yellow pine, with maple floor mat strips extending down the aisle and to the front entrance steps on both sides. In the baggage compartment the floor is 1 1/8 in. thick. Under the flooring is a layer of hair felt insulation which is held in place by corrugated steel plates, No. 24 gage. The sides of the car also have a layer of hair felt which is covered with agasote. The roof is of tongued and grooved sheathing covered with canvas.

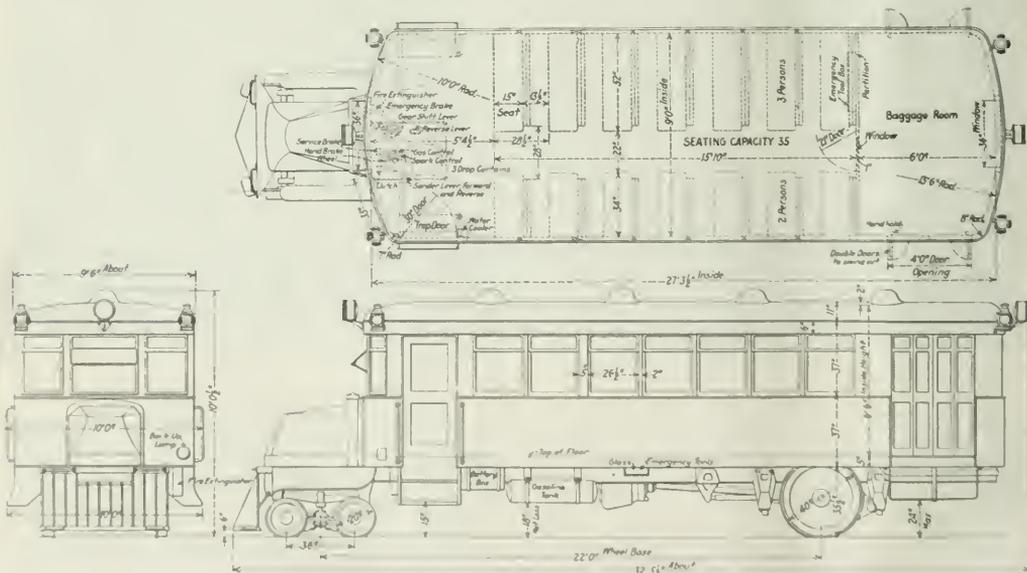

The inside width of the body is sufficient to provide space

plates and pedestals and fabrikoid upholstery. The car body is heated by the exhaust from the engine which is connected to a special exhaust heating control valve on the muffler pipe. There are no heating pipes in the baggage compartment. The interior lighting is controlled by a New-

Interior View, Looking Toward the Rear

bold 12-volt miniature train-lighting system, 12 lights of 15 candle-power each furnishing illumination for the body. The exterior light consists of golden glow 9 in. headlights of 32 candlepower at front and rear with classification and

Plan and Elevations of New Haven Motor Car

for five passengers across the car. For this reason two-capacity seats have been placed on the left side and three-capacity seats on the right side of the aisle. This reduces the length of the body, which is very desirable because it reduces the overhang beyond the rear wheels and cuts down the dead weight. The seats, which are made by Heywood-Wakefield Company, Wakefield, Mass., have pressed steel wall

marker lamps of 4 candlepower. Klaxon and Strombose horns are provided for warning devices, the Strombose horn being used for railroad crossing signals in order that the autoists will not confuse the sound with that of other road vehicles.

In service the car maintains a speed of about 35 miles an hour on level track and has made 40 miles an hour. It

does not fall below 20 miles an hour on $\frac{3}{4}$ mile grades of 2 per cent.

One of the items of greatest interest in connection with the gasoline rail car is the cost of operation, but the limited experience with these cars does not make it possible to give a close estimate of costs. However, it seems certain that this type of vehicle will effect remarkable economies in wages, fuel, maintenance and fixed charges. The crew required to operate the New Haven car consists of two men, an engineer and a conductor. The gasoline consumption averages about $\frac{1}{2}$ gal. per mile. The cost of maintenance is yet to be determined. Similar engines in motor truck service show very low repair costs and equally good results are anticipated in rail service.

The conditions on rail cars should be less severe than on

Front End of Body, Showing Driver's Seat and Controls

heavy trucks. While the weight of the car is greater the grades are not as steep and the shocks due to uneven road surfaces are minimized. For these reasons it is anticipated that maintenance charges will be less than for trucks with the same motor. It is of interest to note that the railroad will not carry repair parts in its storehouse as the International Motor Company has a branch at New Haven.

The popularity of road motor buses augurs well for the success of the rail motor car, which operates far more smoothly and can safely maintain higher speeds. There is every indication that the service will be popular with passengers. From the railroad standpoint the advantages are many. Operating costs are reduced; the necessity for extensive terminal facilities are eliminated; in short, the car provides a flexible, economical unit that is just what the railroads need for handling branch line traffic.

WHY OLD RAILROAD TIES ARE BURNED.—Samuel Porcher, general purchasing agent of the Pennsylvania, answering critics who think that railroad companies should allow people to take old ties for fuel, says that not all of those taken out are burned. A considerable number are sold to persons living on or near the right of way, who buy them at ten or fifteen cents apiece; but this is practicable only where the ties can be delivered at a public crossing, or other point where they can be obtained safely by the users. The company cannot sanction the public going promiscuously over tracks and through yards to gather up old ties. Dealers in fire-wood do not want old ties. The ties are often dirty; or contain grit which might injure the saws used in cutting them. Their fibre is more or less crushed, so that they burn out too quickly. Efforts have been made to sell ties for wood pulp, for burning and sale of the ashes for fertilizer, and for manufacture into charcoal, but without success.

Correction

IN THE REPORT of the decision of the Interstate Commerce Commission in the hardwood lumber case, published in last week's issue, page 283, it was stated that the commissioners who presumably favored the majority report were Commissioner Aitchison, Cox, Esch, Hall, Lewis and Meyer, because the others signed minority reports. Our attention has been called, however, to the fact that on the date of the decision in that case, January 16, Mr. Aitchison and Mr. Hall were not members of the commission and not eligible to vote in the decision, as their appointments were confirmed by the Senate late in the afternoon and they were not sworn in until the following day. The report was made public on January 20.

Agricultural Conference Asks Rate Reduction

WASHINGTON, D. C.

IN ADDITION to a heterogeneous assortment of other measures designed to relieve the condition imposed upon the agricultural industry by a more rapid decline in the prices of farm products than in the prices of many commodities which the farmer buys, the agricultural conference held at Washington last week adopted recommendations for immediate reductions in freight rates, a repeal of the so-called "guaranty" clause of the transportation act and a restoration of the powers of the state railroad commissions to reduce rates without too much interference from a federal commission in case their orders happen to cause discrimination against interstate commerce.

These recommendations of the sub-committee on railroad transportation were adopted without much argument but suggestions that reduced freight rates might be made more possible of attainment by a reduction in the wages of railroad employees and coal miners and a repeal of the Adamson law encountered the denunciation of Samuel Gompers, who was a delegate to the conference and he succeeded in defeating those proposals in connection with a report of the committee on marketing. The fight was renewed, however, in connection with the report of the railroad committee and the report was adopted by the conference containing a recommendation insisting that "railroad corporations and railroad labor should share in the deflation in charges now affecting all industries," as "essential to the restoration of normal conditions in agriculture" and "to the welfare of the entire community," and appealing "to those in authority to take such action as may be necessary in order to accomplish that result." This was adopted over Mr. Gompers' vigorous protest and his motion to strike it from the report, after one of the farmer delegates had raised the question whether this was a conference of farmers or of the American Federation of Labor. Mr. Gompers insisted that labor had already been "deflated" as indicated by the large number of unemployed, but some of the farmer delegates made some pointed contrasts between the wages of railroad employees and the earnings of the farmer. The report as adopted is as follows:

"On the basis of present agricultural prices existing levels of freight rates on basic agricultural commodities constitute an excessive burden upon the agriculture of the country, and if long continued will result in re-locating much of our agricultural production with consequent modification of railroad revenues and revenue-producing centers.

"Wherefore it is recommended as follows:

"I. That the freight rates on farm products, live stock and the products of allied industries be reduced to the rates in effect August 25, 1920, and that the Interstate Commerce Commission put the above reductions into effect at once, and

further reductions as rapidly as reductions in operating expenses will justify.

"That the carriers be directed to readjust freight rates on other commodities as quickly as possible upon the basis of what the various classes of traffic will reasonably bear. That those rate relationships between producing districts and markets which existed prior to the application of general percentage or horizontal rate increases, which destroyed said relationships, unfairly increasing the advantages held by certain sections over others should be corrected, and the relationships should be restored as they existed prior to the war so far as conditions will permit.

"II. We believe that Section 15-a of the Interstate Commerce Act, containing the provisions as to the fixed amount of return that must be provided for if possible on the aggregate value of railroad properties, regardless of the economic conditions, is fundamentally unsound, and we recommend its immediate repeal in its entirety.

"III. The full powers of the state railroad commissions as they existed immediately prior to the federal control of railroads (except as to control and distribution of cars in interstate commerce) should be restored by act of Congress at the earliest possible date.

"IV. The railroads are seeking to fix a valuation upon their properties which will include the so-called land multiple, on the theory that if they had to re-purchase such lands today the cost of condemnation proceedings and damage to adjoining property would compel the payment of more than twice the present value of their lands. This theoretical basis would increase the present transportation burden of a return upon several hundreds of millions of dollars. We urge upon Congress the prompt passage of a law which will effectually prevent such a method of valuation.

"V. We are opposed to the many abuses that have grown up through violations of the principle of the long and short haul clause which requires that rates to intermediate points shall not exceed the rates between the most distant points. For many years the intermountain states were discriminated against by the charging of more for the short hauls than for the long hauls. This situation has been corrected, but today there is an effort to change this, and we earnestly recommend to the Interstate Commerce Commission that no change shall be made in the present adjustment.

"VI. This committee recognizes the urgent need of extensive and prompt additions to the refrigerator car equipment of the carriers, and the repairing or rebuilding of much of the present equipment to adequately and safely handle the perishable crops of the country. The committee, therefore, strongly recommends that the carriers give this question prompt attention; that as rapidly as conditions permit a sufficient number of new refrigerator cars be built and such part of the present equipment as is inefficient be brought to a state of efficiency by repair or rebuilding; that in determining the type of car to build, cars of less efficiency than the standard refrigerator cars as adopted by the United States Department of Agriculture and the United States Railroad Administration should not be built. That the same principle govern so far as possible in rebuilding.

That the refrigerator cars be standardized as to essential construction to permit prompt and economical repairs and replacement of parts.

"VII. That we commend the Interstate Commerce Commission and the railway companies for their recognition of agriculture as the basic industry of the country and for their action in effecting certain general reductions in the freight rates on agricultural products.

In conclusion we insist that the railroad corporations and railroad labor should share in the deflation in charges now afflicting all industries. This is essential to the restoration of normal conditions in agriculture and it is essential to the well-being of the entire community. We earnestly appeal to

those in authority to take such action as may be necessary in order to accomplish that result."

The conference also adopted a committee report recommending an investigation by the Interstate Commerce Commission to determine the advisability of extending preferential export freight rates to agricultural commodities not now affected.

Hooper and Plumb Discuss Settlement of Labor Problems

BEN W. HOOPER, of the Labor Board, and Glenn E. Plumb addressed the opening session of the annual meeting of the National Civic Federation at New York on January 30. Mr. Plumb appeared only as the representative of B. M. Jewell, president of the Railway Employees' department of the American Federation of Labor, and not to express his personal views.

The subject assigned to both speakers was the discussion of the Railroad Labor Board, whether it should be abolished, combined with the Interstate Commerce Commission, replaced by a general industrial court like that in Kansas or given power to enforce its decisions.

Mr. Hooper's opinions on this subject are rather generally known and were outlined in detail in his address before the New York Railroad Club on December 15, which was published in part in the *Railway Age* of December 17, page 1197. In brief, his contention was for making the decisions of the board mandatory by fixing penalties for violation of its decrees. This would make strikes illegal. Mr. Hooper contended, however, that such a provision would not penalize the unions unduly since with one exception they have obeyed all the board's decisions anyway, whereas the violations by the carriers have been, according to Mr. Hooper, "too numerous to mention." In his opinion the board has already justified its existence by the work it has accomplished. Furthermore, he objected to the proposal that wages and rates should be fixed by the same body on the ground that ability to pay cannot be treated as a primary consideration in fixing wages.

Mr. Jewell's paper, read by Glenn E. Plumb, outlined his objections to any form of compulsion in the settlement of disputes arising between labor and management. His belief was that the board is "unscientific in principle, uneconomic in theory and impracticable in operation." He said in part:

Those who have acquired skill and knowledge in the industry fully realize that labor costs are not determined alone by the hourly or daily wage but are actually determined by the wage rate divided by the volume of output, so that it is quite possible to have a decreasing scale of cost accompanied by an increasing scale of wages. On the other hand, it is also quite possible to have an increasing scale of costs accompanied by a decreasing scale of wages. At some point, to be determined only by those who have the required intimate knowledge of the industry, is found a rate of pay which induces the highest degree of efficiency. Beyond this rate of pay, wages ordinarily should not rise unless accompanied by a corresponding increase in efficiency. Below this point, wages should not fall. The exact point on the scale can be determined only by the judgment of those most experienced and most skilled in the supervision of labor and the performance by labor of the duties which this service requires. Considering this to be the ideal to be attained, see how impossible it becomes to accomplish this ideal through a body organized after the manner of the Railroad Labor Board.

The underlying idea of the paper was apparently that the only solution for the labor problem was the admission of labor into the management of the carriers.

Mr. Hooper addressed the Boston Chamber of Commerce on January 27. His theme was the function of governmental supervision of the railways, particularly insofar as the Labor Board is concerned, and the success of such activity. He expressed himself as viewing with optimism the business outlook and predicted a reduction in rates.

General Testimony Before I. C. C. in Rate Case

Shippers Express Conflicting Opinions as to How Reductions, if Any, Should Be Made

WASHINGTON.

AFTER HEARING since January 19 the testimony of shippers of specific so-called basic commodities, most of whom urged reductions in freight rates approximating the amount of the increases made by the commission in 1920 in Ex Parte 74, the Interstate Commerce Commission on January 30 began hearing testimony on behalf of the public and shippers as to the general aspects of the case. Following the testimony reported in last week's issue, statements were made by witnesses on sand and gravel, brick, lime, cement, gypsum and asphalt, lumber and forest products and fertilizer and materials. While most of these asked for reductions in their rates, some of them only went so far as to say that if the commission determined that any reductions are warranted, their commodities should be given consideration and many said they were as much if not more interested in reductions in rates on coal and other raw materials as in the rates on their own products. The public or general testimony was to continue until February 4, after which there will be other commodity testimony and two days have been scheduled for railroad labor organizations.

N. I. T. League Favors Horizontal Decrease, if Any

The first general witness on January 30 was W. H. Chandler, president of the National Industrial Traffic League, representing also the Boston Chamber of Commerce and the New England Traffic League. The position of the league had been determined at the annual meeting in November, which Mr. Chandler said had a larger attendance than any previous league meeting, and at a special meeting in Washington on January 27, attended by some 200 of the 1,000 members of the league, at which resolutions were adopted "that if and when, in the opinion of the commission, freight rates and charges may properly be reduced, the reduction should be made in the same manner in which the advances were made in Ex Parte 74." The resolutions also expressed the opinion of the league that "the findings of the commission should be definite with respect to the question of general reductions so that all uncertainty with respect to this question be removed and that business men may make their commitments with some degree of certainty and stability." It was further declared that "the league is fully cognizant of the necessity for the carriers' revenues being adequate in every respect to insure proper transportation facilities and service in times of business prosperity and to support their credit; and also recognizes the imperative necessity as an aid to the restoration of normal business conditions, that the present high level of rates be reduced as soon as possible."

The league does not say, Mr. Chandler said, that there shall be reductions, but that if there are to be reductions, they should be general rather than placed on a few specific commodities, and in order to make rate reductions possible, he said, the commission should give the carriers moral support in their efforts to reduce wages. Mr. Chandler said he did not assume that the resolutions adopted represented the position of every individual member of the league. Many of the members had expressed their opinion in the testimony as to specific commodities, but there is a very heavy tonnage of commodities not represented by those who have spoken and a heavy tonnage moving on class rates. The position of the league had been expressed at the annual meeting and in addition a circular had been sent to the members asking which shippers wanted the league to represent them at the

hearings and whether they shared in the views of the league. He presented some 200 letters which had been received, all except eight or ten of which endorsed the position taken in the resolutions and represented mainly the views of members who were not present at the meeting.

Mr. Chandler said he had frequently heard it stated that it would be most unfair if the commission should show preferential treatment to any class of business, that when the emergency in 1920 necessitated a radical increase in railroad revenues all shippers were required to bear their equal share of the burden and just as soon as it is possible to relieve the country of that burden in whole or in part, all classes of shippers should get equal relief. He had heard railroad officials say that the class rate structure should remain where it is because class rates have not borne their proper relation to commodity schedules. If this be true, he said, it is a sad commentary on the railroad experts who for many years have been building up the rate structure. If the relation is wrong, it should be handled before the commission in an entirely separate proceeding.

Reduction in Passenger Fares Not Asked

Commissioner Hall asked if the equality of treatment proposed should be extended to passenger fares. Mr. Chandler said that the league had voted only to ask the commission to adjust freight rates. Commissioner Hall remarked that if the position is sound that rates should be reduced by a reversal of the order in which they were increased, the passenger fares might be entitled to consideration because they were advanced in order to provide an additional increase in revenues after the wage order had been issued. Mr. Chandler replied that the general position seems to be that freight rates have more to do with business than passenger fares and many of his people, he said, are not dissatisfied with the passenger fares. Commissioner Aitchison asked if the witness was not asking preferential treatment for his people over others who may not ship freight but have to travel, to which Mr. Chandler replied that the league had not made any objection to any reduction in passenger fares. Commissioner Lewis raised the question of mileage books. Mr. Chandler said he had not heard of any chamber of commerce asking for mileage books. Certain organizations of commercial travelers, he said, have been very active in this demand, but he had heard of no other commercial organization that had expressed any interest in mileage books.

The Matter of Adequate Service

Asked as to how the reduction should be made so as to restore the relationship of rates, Mr. Chandler said he would instruct the carriers to go back to the base rates in effect at the time the 1920 advances were made and apply to those base rates a percentage increase which was less than the increase authorized at the time the emergency existed. Very material reductions, he said, have taken place in the price of many commodities which the carriers use, but cost of labor, one of the largest items, has not been adequately deflated. It is apparent that the carriers generally are paying more than is being paid for similar work in other lines of industry and it is obvious that the carriers are not being operated economically because they are paying more than the market price for labor. There is a general impression, Mr. Chandler said, that high rates are causing buyers'

strikes and that business would be very greatly improved if freight rates were reduced. Whether or not this be true, it is the very general impression that the uncertainty in the rate situation is a permanent factor in the present business situation. Mr. Chandler said that the statement made by railroad executives that the measure of the rate is of less importance than the character of the service, is far from accurate. Very frequently it is the freight rate that determines whether goods will be bought in one market or another and the executives apparently do not distinguish between conditions which existed during the war and those that prevailed before. While shippers are vitally interested in having adequate service, it is not correct to say they are more interested in freight service than in the general level of rates. He said he knew that the railroads are losing revenue because of their present high level of rates and that they do not appreciate it. He had been told by shippers that they were moving even low class freight by motor truck at a considerable saving and one big manufacturer, a member of his transportation committee, said he had not used the railroad on which he is located for a year.

Commissioner Aitchison asked the witness if there are any complaints now of railroad service. Mr. Chandler said: "They are not complaining; they are not shipping because the service is not good and the rates are high." He said that motor truck transportation has its disadvantages and if the railroads would give good service at reasonable rates the shippers would be glad to go back to the railroads. In reply to questions, however, he said that the criticisms of the service apply more particularly to short distance service under 50 miles. It seems to be a general theory on the part of railroad operating officers, he said, that l.c.l. freight cannot be handled at a profit. It was his belief that they formed this opinion during the war when they did not want to be bothered with it, but he pointed out that they must maintain an organization for handling long distance l.c.l. traffic and he thought it should be possible to handle additional units at reasonable rates.

Railroad Labor a Preferred Class

Returning to the subject of high wages, Mr. Chandler said that in his opinion one of the most beneficial things the commission could do, if it finds from the testimony that railroad labor has been made a preferred class, would be to come out flatfootedly and tell the people of the United States that from the evidence which has been submitted railroad workers are paid more than the prevailing rate of wages in the open market and that in its opinion the carriers should make further effort to reduce these labor costs. "I think it would be entirely proper," he said, "for this commission to say to the public that by reason of the failure of the Labor Board to deflate wages, the cost of conducting transportation is many million dollars more than it should be and that the railroads are not being operated economically so long as this situation exists."

Commissioner Esch asked if that would not be asking the commission to give advice to another body of equal dignity and authority within its own sphere as to what its position should be. He asked whether the league intends to file another petition with the Labor Board for a hearing on behalf of the shippers. Mr. Chandler replied that so far as he knew it does not intend to do so, but he declined to agree with the statement that the other board is of equal dignity and authority with the commission.

"I do not think any one thinks this," he said. "Something has got to be done. We have got to get wages down or the railroads have got to keep rates up. No one seems to have the moral courage to do it. The Labor Board has got to have a jolt. We thought it had one at the time that the strike was threatened, but one of its members began to organize and pulled things up."

No Progress in Twenty Years

As to other economies which the railroads might effect, Mr. Chandler said there is room for much greater supervision to prevent loss and damage claims and that the railroads are selling freight which has gone astray for almost nothing. He said the carriers have made no progress in 20 years in that direction and as to the simplification of tariffs, if they have advanced at all they have advanced backward. Commissioner Aitchison apparently took this as a criticism of the commission and asked whether he desired to propose amendments to its tariff circular. Mr. Chandler said it could not be done by amendments of the circular, but the basis of stating rates should be changed.

Mr. Chandler said that if the commission should show a receptive attitude he thought something could be done, but he thought the railroads or perhaps the commission rather than the league should take the initiative. Mr. Chandler also criticized the propaganda of the railroads for the purpose of trying to bring about heavier carloading, saying that the establishment of excessive carload minima has the effect of putting the small merchant out of business and he also said the carriers are not getting sufficient revenue under their contract with the express companies. Regarding statements by railroad officers as to the need for more equipment, Mr. Chandler said that the terminal and intermediate yards are congested "because cars are permitted to loaf" and that the available car supply would be materially increased if cars were kept moving steadily, not necessarily fast. In conclusion, Mr. Chandler said:

"We, therefore, respectfully urge upon the commission the vital importance of an early and authoritative announcement concerning the railroad situation. The public wants to be informed of the standing of the carriers and of their ability to bear substantial reductions and whether the commission will order reductions; in other words, what it can expect, so that business can be resumed. How much of a reduction, if any, shall be made is for the commission to determine. We do desire, however, to emphasize our belief that transportation costs must be reduced. We do not believe that the public will be content to continue to pay exorbitant freight rates in order that railroad labor shall be treated as a preferred class. In reply to a question as to what would happen if the commission should decide there should be no reduction, Mr. Chandler said: "Well, I guess we'd all go home and go to work."

F. H. Wood, of the Southern Pacific, asked Mr. Chandler if it was wrong for the railroads to make reductions during the last year on particular commodities to meet the economic conditions without at the same time reducing all rates. Mr. Chandler said he would not oppose any particular reductions which seemed necessary in the judgment of the traffic officials and if the carriers found any rates out of line, they should reduce them, but if the commission finds that reductions are warranted they should be general rather than confined to specific commodities. Asked whether he would rather have a horizontal reduction of one per cent than a substantial reduction on some commodity, Mr. Chandler said he did not think the commission would order any such reduction. Commissioner Esch referred to a statement by Mr. Willard that a reduction of less than 10 per cent would have little effect and asked the witness whether if a 10 per cent reduction were to be made, amounting to approximately \$450,000,000, it should be distributed among all commodities and diluted or whether it should be concentrated on six, eight or ten basic commodities.

"I do not see how the Interstate Commerce Commission could play favorites," Mr. Chandler replied. "I do not see how any one can say that any reduction from the peak would not help. The big shippers who are interested in particular commodities can usually take care of themselves."

Representatives of Commercial Organizations Favor General Reduction

A number of representatives of commercial associations followed Mr. Chandler, most of whom specifically endorsed the position taken by the National Industrial Traffic League, or at least expressed the general opinion that any reduction in the rates should be a horizontal percentage reduction. These included H. Mueller, of the St. Paul Association of Public and Business Affairs; Frank H. Baer, Cleveland Chamber of Commerce; J. H. Tedrow, Chamber of Commerce of Kansas City; C. E. Childe, Omaha Chamber of Commerce; R. M. Field, Illinois District Traffic League; P. W. Hanson, East Side Manufacturers' Association; P. W. Coyle, St. Louis Chamber of Commerce; George P. Wilson, Philadelphia Chamber of Commerce; C. S. Bather, Rockford Manufacturers and Shippers' Association; W. C. Lindsay, National Confectioners' Association, and C. G. Hylander, National Association of Chewing Gum Manufacturers. Many of these witnesses laid emphasis on the importance of some definite statement by the commission at an early date to relieve the uncertainty as to whether rates are to be reduced. Some of them were questioned by members of the commission as to the importance of passenger fares. Mr. Childe said there is an economic demand for reduced passenger fares. Mr. Field said that his association had taken no position on passenger fares because of the opinion that freight rate reductions are of greater importance. A number of the witnesses said that the present level of rates is restricting the markets of manufacturers by tending to reduce long haul shipments. When Mr. Lindsay said that candy manufacturers now can only reach the nearby territory, Commissioner Hall asked if there is any special reason why candy should move for long distances and whether it is not an advantage to the manufacturer to have other competition kept out of his territory. Mr. Lindsay said that it works both ways, but that a reduction in rates would be a great help to the industry. Commissioner Lewis asked whether 10 or 15 per cent reduction in freight rates would increase the sale of candy. The witness said he thought it would. Every little item helps in this industry, he said, and reduction ought to help the consumer. Mr. Hylander said that the production of chewing gum in this country was last year approximately 100,000,000 pounds. During 1919 it was 110,000,000 pounds. The price has not been advanced and he did not attempt to say that a reduction in freight rates would increase the sale, but urged the importance of a reduction of the cost of transportation as one of the costs of doing business in order to restore business to normal conditions.

Construction Industries Want Reduction in Building Materials

William B. King, representing the National Federation of Construction Industries and the National Association of Builders Exchanges, opposed a horizontal or general reduction in rates as unscientific and said that reductions should first be made on the heavier and more basic commodities. He urged a rate reduction on the ground that it would tend to promote construction and relief of the housing shortage but admitted that the freight rate is only one of many elements which enter into the situation. If he had to choose, he said, he would probably prefer to have a larger reduction in wages than has been made.

Mr. Hines Advises Against General Rate Reduction at This Time

Walker D. Hines, former director general of railroads, testified on January 31 at the request of the commission and expressed the opinion that there ought not to be a general reduction in rates at this time and that great caution should

be exercised in making any specific reductions, for the reason that reductions which would reduce the income of the carriers would be detrimental to the public service and that it is wholly problematical whether reductions would have a sufficient effect in stimulating traffic to increase net earnings. He said he thought the commission would be justified in taking as starting points for its consideration the fact that the railroads are not now earning more than a fair return and that no reduction in rates could be called for on the ground that the earnings are too high (although, he said, we must all admit that the rates are high), and that the slump in business is due to fundamental conditions of worldwide character and not to the rates in this country. The depression, he said, is due to the inability of the entire world to readjust itself after the war. Mr. Hines said that the commission has the authority and duty to consider the reasonableness of rates on specific classes of traffic, but he was not in a position to offer observations as to the reasonableness of specific rates. However, from the standpoint of the public interest in adequate transportation, the attitude which should probably be adopted toward specific complaints is that the entire condition at present is essentially abnormal and temporary.

He also pointed out that any revenue which the railways may be able to save would go to build up a reserve which he thought of the largest public interest. They have not been in a position to build up a satisfactory reserve and their surplus has in recent years been depleted. When Commissioner Campbell asked whether Mr. Hines thought the roads should start to build up a reserve in abnormal times, Mr. Hines said he had not meant that, but that in a doubtful case the need of the railroads for a reserve is a factor to be borne in mind. It is to be expected, he said, that the railroads will not earn a fair return in times of depression. The only thing to hope for is a surplus in good years. A reduction in rates now, Mr. Hines said, would deplete the revenues of the railways unless it should result in a considerable stimulation of traffic and to reduce the revenue would reduce the purchasing power of the railways. There would also be a serious doubt in many cases as to whether a reduction in rates would go to the benefit of that part of the community that ought to have it. The benefit is often appropriated by some class of society that is highly organized.

In reply to a question by Commissioner Lewis as to what would be the effect on the business of the country of a general 10 per cent reduction in rates, Mr. Hines said his impression is that a reduction of that sort would translate itself into such an exceedingly small change in prices that it would not have an important effect. It would probably be absorbed by the highly organized class of society and not get very far. An increase in demand is required to bring about an increase in business and he did not think a reduction of that amount would be sufficient to increase the demand in general. It is well to recall, Mr. Hines said, that the railroad enterprise is so big and so obvious that it is likely to be a target toward which every one directs his shafts when there is discontent, although the transportation service is not the real cause of the trouble. In his opinion, one of the greatest burdens on production in this country is the system of distribution, but it is much easier to direct an attack against the transportation than it is against the system of distribution in general. Therefore, we have a situation where the complaints of the public take the direction of the demand for action whose certain effect would be the hampering of the public service.

Mr. Hines said he had no other idea than that there will be a continued expectation of rate reductions and the commission should supervise the situation so that reductions may be made from time to time in such a way as not to be hurtful to the public interest. He believed the most useful

method of getting a satisfactory idea of the situation would be to take all the information available and create a statement of railroad operations for a constructive year, assuming a normal traffic and a normal level of expenses. Much confusion is caused by stressing matters out of proportion to their effect on costs as a whole. For example, he said, the discussion of the national agreements has created an impression that they cost hundreds of millions of dollars, but he had seen no estimate on the part of the executives of great savings to be effected by the modifications made in them by the Labor Board.

Mr. Hines also expressed the opinion that the railroads have not devoted as much attention to terminal and maintenance expenses as they have to road haul expenses. One of the difficulties is that we have not developed satisfactory measures of results in those fields.

Reduction in Rate of Return Not Advisable

In reply to a question by Commissioner Esch as to what should be a fair rate of return after March 1, Mr. Hines said that under present conditions a reduction in the rate of return would not be advisable, but he questioned whether the commission is under duty to fix a rate on or before March 1. He thought it would be entirely proper for the commission to hold that matter under consideration as long as there is no hope of the railways earning an excessive return and fix the percentage when the time comes to make use of it. At any rate, it would not be expedient to reduce it below the present rate. Commissioner Esch pointed out that the law merely states that the percentage shall be determined from time to time as often as may be necessary. Commissioner Esch referred to the criticism of the valuation tentatively fixed by the commission for the purpose of the rate case, on the ground that it included property paid for out of surplus earnings and asked if that sort of property should be legitimately included. Mr. Hines replied that the property as it stands belongs to the railroad companies and its value is the value as it stands. The fact that it was created in part out of surplus earnings does not impair the ownership. Mr. Hines said that he did not believe that the reasonableness of rates at the present time should be decided by any assumption of what business will be for the future, but that there should be a continuing study of the situation.

"We know," he said, "that the returns in the immediate past have been decidedly low, and it is reasonable to believe that any substantial reduction in revenues would be injurious to the public interest. Extreme caution should be used in reaching a decision that any rate is too high."

Tie Production Greatly Curtailed

THE PRESENT limited demand for cross ties on the part of the railways is naturally leading to a marked curtailment in production in practically all parts of the country. Indicative as this is of the retrenchment in expenditures which the roads have been forced to effect, it is also a result of an extensive over-production in 1920. However, this situation forecasts a shortage when the roads begin to buy, for a considerable interval necessarily elapses between the beginning of tie making operations and the delivery of ties to the roads. The present lack of activity in the principal tie producing areas of the United States was outlined in reports prepared by operators in those regions and presented at the fourth annual meeting of the National Association of Railroad Tie Producers, which was held at the Hotel Sherman, Chicago, on January 26 and 27.

In Virginia, West Virginia and Ohio a number of roads withdrew from the market late in 1921, while others curtailed their purchases. This has led to a decline in production until the output is only 20 to 25 per cent of normal in Virginia and 35 to 40 per cent in West Virginia.

In the southeastern states including Kentucky, Tennessee, northern Alabama and Mississippi, a few scattering lots of ties of 1920 manufacture remain. Relatively few ties have been produced in 1921. Recently some of the roads have bought ties under contract or have started buying along their right-of-ways, but the demand is still so limited that the tie contractors and buyers are only going after those ties which can be obtained most cheaply and with the least effort practically stopping production in the more inaccessible areas.

In the South Central states, including the Ozark region, production is now somewhat below normal, but in the cotton producing sections where the crop is almost a failure it could easily be stimulated to double what it is now. The prices now being paid are approximately 50 per cent of those of a year ago. The demand from the railroads has been below normal until recently, but the indications are now that it will increase to practically normal during the spring and summer.

Operations in the northern woods are now smaller than at any time in the last 20 years. In this territory the ties are produced during the winter on contracts let in the fall. Last fall the roads did not enter the market to any extent and those ties purchased were at prices about half of those of a year ago. Under these conditions the only ties which are now coming out are those produced by farmers who are compelled to cut some timber in order to eke out a living.

In the Rocky Mountain territory most of the ties are hewn far back in the woods and are transported to market by driving in spring flood waters, also necessitating fall contracts. The railways have secured marked concessions in prices and have put into effect more drastic specifications. Aided by an ample supply of labor at reduced wages some of the operators are going ahead. The production as a whole, however, has been curtailed greatly in this area.

In the Pacific Northwest the production is now limited principally to the immediate local requirements of the roads. A considerable portion of this demand is being supplied by the small producer, principally the ranchers who have small tracts of suitable timber which they can convert into ties. The percentage of hewn ties in this area is now much greater than for many years.

A Polish Container Car for Coal Service; One Section of Body Removed to Show Construction of Underframe

A BILL HAS BEEN introduced in the State Senate of Kentucky, to give to the Board of Public Works the power to order and to contract for the elimination of grade crossings, charging the railroad companies with 65 per cent of the cost and the city or town with 35 per cent.

Revised Station Plans Embody New Features

The Chicago Project Embraces Headhouse of Office Building Type
and a Large Railway Mail Terminal

DEVELOPMENT OF PLANS for the Chicago Union Station during the progress of construction has led to some interesting modifications of the original layout, chief among which is a decision to adopt an office building type of structure for the headhouse instead of one providing only for the waiting room and auxiliary facilities. Another departure from the original plan is provision for an enormous railway mail terminal now in process of construction. A further innovation embraces separate baggage platforms with ramps connecting to the basement baggage room so that eleva-

sequent resumption of the construction the desirability of certain departures from the original plans have presented themselves from time to time and these changes have been incorporated in the final plans.

One of the important changes agreed upon provides for the necessary changes in the headhouse to permit of an office building in place of the monumental type of construction originally contemplated for exclusive use as a station structure. This modification was undertaken as a means of securing more efficient utilization of the full block of valuable

Architect's Drawing of the Completed Station, with a Suggested Plan for a New Post Office at the Right

tors and trucking tunnels below the level of the tracks have been largely eliminated.

The general conception of the station as described in the *Railway Age Gazette* for November 3, 1916, page 803, remains unchanged. As there described, the project provides for a headhouse occupying the entire block bounded by Canal, Adams and Clinton streets and Jackson boulevard, with a passenger concourse under and east of Canal street and two separate grids of station tracks to the north of Adams street and to the south of Jackson boulevard respectively. The station proper and tracks will be on a level below the city streets with a baggage room occupying a sub-basement, having communication with the street by means of two long inclined driveways that open onto the street at the northwest and southwest corners of the headhouse.

Work on this project was curtailed with the advent of the war and the period of government control, but upon the sub-

real estate to be occupied by the headhouse and will be accomplished without any appreciable alteration of the architectural treatment of the great waiting room which will be 250 ft. long by over 100 ft. wide. Access to the offices will be afforded by entrances on the Adams street and Jackson boulevard sides of the building, which will have no connection with the waiting room floor except minor stairways for the accommodation of persons employed in the offices in going to and from trains. The large waiting room will have entrances from the centers of the Canal street and Clinton street sides with stairways leading to the waiting room level which is 16½ ft. below Canal street and 10 ft. below Clinton street. The main entrance on Canal street will be in duplicate, the two doorways and stairways being separated a distance of 112 ft. This space between the two stairways will be utilized to provide a single broad corridor leading from the waiting room to the passenger concourse, and with one passageway instead

of two, as originally planned, it will be possible to place the ticket offices on one side and the baggage counter on the other side. The result will be a most logical separation of the functions of the passenger concourse and the waiting room. Thus, the concourse will provide, in close proximity, all of the facilities needed by the passenger for the business of taking or leaving a train, namely, the ticket office, baggage counter, parcel check, cab stand and convenient access to the street by means of ramps from entrances on Jackson boulevard and Adams street close to the two river bridges. These will be of special convenience to the suburban passengers since they afford entrance to the station at those points on the station property nearest to the business center of the city. The waiting room is designed to provide for those passengers who are compelled to spend some time in the station. Along the west wall of this great room will be found a lunch room and restaurant, while at the northwest and southwest corners will be the women's waiting room and smoking room, respectively, together with toilets, rest rooms, etc.

Unique Baggage Platform Arrangement

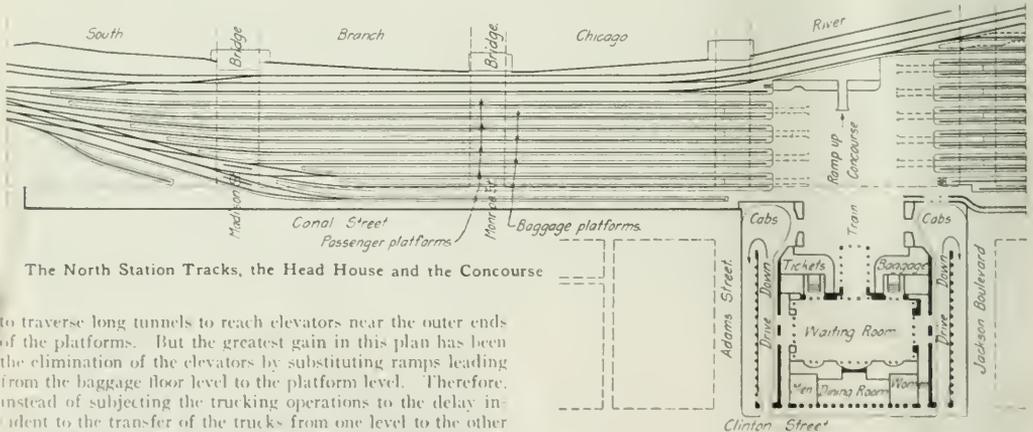

By far the most interesting feature of the new plan is the arrangement of the baggage platform which was brought about as a means of obviating the costly construction of trucking tunnels and elevator pits below the water level of the nearby Chicago river, but aside from considerations of economy, a number of operating advantages will accrue from the arrangements agreed upon. The primary result will be the segregation of passengers and trucks on independent platforms. This in turn obviates the objection to the movement of trucks on the platforms to and from the baggage and express cars at the outer ends of the platform, thereby permitting all trucks to pass from the baggage room direct to the platform instead of requiring all trucks for outbound trains

the use of high station platforms, but owing to the through car traffic movement involving the use of cars from various connecting roads in the west, it was found that the high platforms would entail extended changes in equipment by roads that do not enter the station. Consequently, it has been decided to adopt the low passenger platform but with a type of construction that will readily permit of a change to high platforms whenever this is found desirable. The construction of low passenger platforms will require a slight incline downward from the concourse floor level to the platform level. In event of subsequent construction of high passenger platforms, a slight ramp upward from the concourse to the platforms will be required.

Large Structure for Railway Mail Service

Another important change in the station plans has been brought about through an arrangement with the United States Postoffice Department whereby the City of Chicago will secure the advantage of a considerable increase in its postoffice facilities without the need of obtaining an appropriation from Congress. Under a contract consummated between the station company and the Postoffice Department, the former is now erecting a seven story building, 796 ft. long by 75 ft. 6 in. wide, extending along the east side of the station property for the full distance between Van Buren street and Harrison street. This feature of the project alone will entail an expenditure of approximately \$4,000,000. The Postoffice Department has agreed to lease this building for a period of 20 years, and the building will be adequate to take care of the railway mail service of the railroads entering the Union station and will also afford a large measure of relief to the greatly overcrowded general postoffice of the city.

The building is an enormous structure providing over 11 acres of floor area and 8 1/2 million cu. ft. of cubical contents.

The North Station Tracks, the Head House and the Concourse

to traverse long tunnels to reach elevators near the outer ends of the platforms. But the greatest gain in this plan has been the elimination of the elevators by substituting ramps leading from the baggage floor level to the platform level. Therefore, instead of subjecting the trucking operations to the delay incident to the transfer of the trucks from one level to the other by means of elevators, the operation can go continuously as the ramps will be wide enough to permit the passage of two trucks abreast. The plan will be better understood by reference to the drawing. The design provides for placing the head of the ramps at about the normal position for the end of the tender of an incoming locomotive so that the baggage platform will be at the normal level opposite the nearest door of the leading baggage car.

The baggage platforms will be 10 ft. 9 in. and the passenger platforms 13 ft. 1 in. in width and by a rearrangement of the tracks it has been possible to provide approximately the same amount of track space in the station as was originally planned with the tracks spaced 27 ft. center to center across the platforms. The original plan was committed to

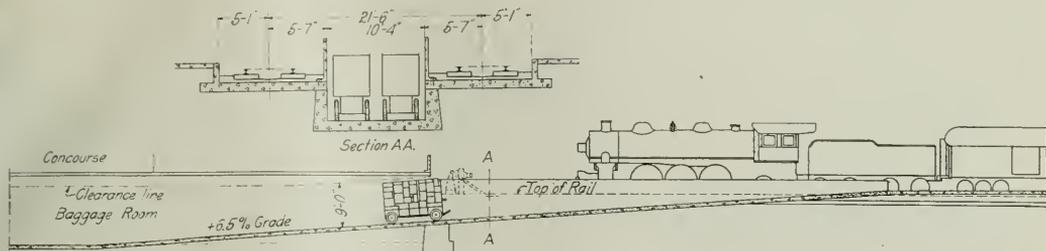

The use of this building for the handling of mail to and from trains will be limited to the basement, the track level floor and a portion of the street level floor, the remaining portion of that floor and all those above being reserved by the postal department for the sorting and distribution of papers, parcel post and similar mail matter. Mail is delivered and received on both the track and the basement level. On the track level, platforms are provided adjacent to two longitudinal tracks and four stub tracks with adequate space for 61 cars. In the basement communication is provided by means of two tunnels for the handling of mail on platform trucks to and from mail cars standing on tracks elsewhere in the sta-

tion. One of these tunnels passes transversely under the south end of the south station tracks and gives access to these tracks by means of elevators. The other tunnel connects the mail building with the station baggage room where the ramps, previously referred to in this article, afford direct access to the baggage platforms adjacent to any of the tracks.

The building is to be equipped with the most modern appliances for the mechanical handling of the mail. Fifteen

end of the building, or to upper floors of the building for reclassification.

The building is also of considerable interest from the standpoint of design and construction. It has a structural steel frame containing 7,000 tons of structural steel and is supported on concrete caissons extending about 50 ft. below the city datum. The most notable feature is a steel truss in the west wall 149 ft. 4½ in. long, center to center of sup-

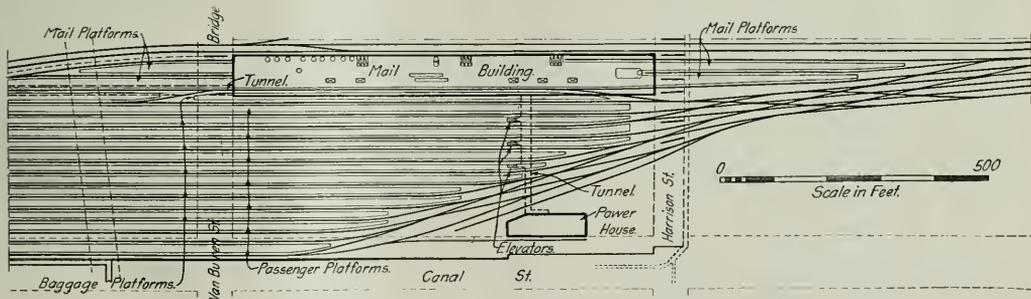

Two Sectional Views, Illustrating the Arrangement of Ramps from Baggage Platforms Into the Baggage Room

elevators will be provided for the handling of the mail trucks. Nine of these elevators will extend from the basement to the sixth floor.

Five of them will operate between the driveway level and the basement and one will serve between the basement and the track level. In addition to the elevators provision has been made for the transportation of mail from place to place in the building and also for classification

porting columns, which carries a load of 4,050 tons and is the heaviest truss which has ever been used in building construction.

The building of this truss is occasioned by the requirements of the trackage serving the mail terminal. One of the railway tracks for the building is located inside the columns supporting the west wall of the building and to connect this track with an outer track parallel to it, it was necessary to

The South Station Tracks, Showing Also the Mail Terminal

through the agency of belt conveyors. Spiral chutes will also form an important feature of the layout.

Building of Unusual Character

The street level floor of the building will be devoted to the handling of mail to and from street vehicles. The building has but a very limited frontage on the two streets, but ample truck space will be provided by a driveway which is being constructed along the east side of the building for the entire distance between Van Buren street and Harrison street. Outgoing railway mail will be received at the north end of the building and passed into 18 chutes by which the mail will descend either to the track level or the basement. The arrangement of elevators is such that ample facilities are provided for the delivery to the lower floors of any mail that is unsuited to handling in the chutes. Inbound railway mail will be received directly from cars and spotted at the house platforms or on platform trucks coming in through the trucking tunnels. This mail will be elevated to the street floor for delivery to street trucks in the driveway at the south

provide a crossover with No. 7 frogs requiring a length of 220 ft. between switch points. As a consequence of this it was necessary to omit four of the wall columns in the track level story of the building and support these columns in the floors above by a truss in the street level story or at a sufficient elevation so that the bottom chord would give a clearance of 17 ft. above top of rail. The weight of this truss is 365 tons and it contains 11 tons of field rivets, largely of 1 1/16 in. diameter.

The building is not enclosed with walls on the track level, but will have brick curtain walls for all stories above the street grade.

The delivery platforms on the street level are provided with steel rolling doors. The floors are of reinforced concrete construction, covered with crosoted blocks for all areas used for trucking or handling mail.

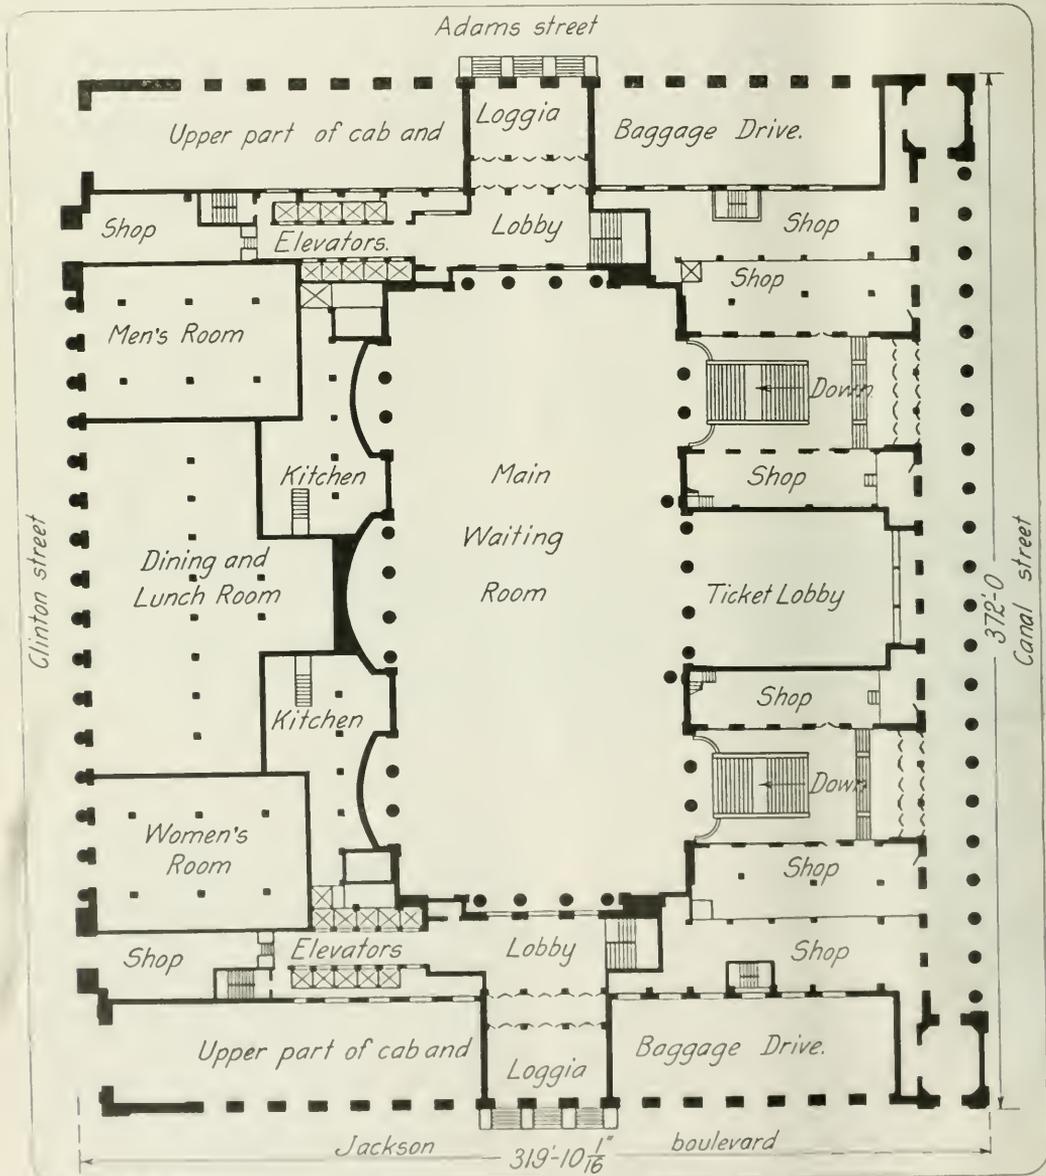

A street entrance and public lobby are provided at the Van Buren street end of the building with access to three passenger elevators communicating with the various floors. A portion of the sixth floor is arranged to provide space for

postal offices, stock room, repair shops, cafeteria, study room and incinerator, a room for charging batteries for electric tractor trucks and auxiliary uses.

Work on the station project is progressing under the direction of J. D'Esposito, chief engineer, and A. J. Hammond, assistant chief engineer, Chicago Union Station Company. Graham, Anderson, Probst & White, Chicago, are the architects. Arrangement for the use of the railway mail terminal by the United States Railway Mail Service is under the direc-

tion of Colonel E. H. Shaughnessy, second assistant postmaster general, Washington, D. C.

PASSENGERS CHECKING BAGGAGE on the Chicago, Burlington & Quincy, commencing March 1, will be allowed to declare the actual value of their property. The new rule will replace that limiting the value to \$100 for each adult ticket. Receipts for the excess valuation, are to be indicated by stamps affixed to the baggage.

The Head House—a Section at the Street Level

W. G. McAdoo Defends His Administration

Former Director General Replies to Criticisms with Charges Against Railway Executives

WASHINGTON, D. C.

A DETAILED REPLY to numerous criticisms of the federal administration of the railroads during 1918 and 1919 was made by W. G. McAdoo, director general of railroads during 1918, in a prepared statement presented before the Senate committee on interstate commerce on February 1 and 2. The statement comprised 140 typewritten pages, a large part of which was made up of quotations from statements made by railroad executives in testimony before the Interstate Commerce Commission and Congressional committees, and by the commission in reports and in testimony before the committees regarding the condition of the railroads prior to federal control, from various reports and memoranda contrasting operations during federal control and those under private management and from correspondence of the Railroad Administration, which Mr. McAdoo uses to support his contentions. Much of the material used has previously been published in reports of the Railroad Administration. A condensed abstract of the prepared statement, omitting most of the quotations, is as follows:

McAdoo's Testimony

Charges of inefficiency in the management of the railroads during federal control have, from time to time, been made and published with a recklessness for which ignorance, design or selfish purpose alone can account. So far as 1918 is concerned, the unpublished testimony of seven of the ablest railroad men in the United States, given in a report to my successor as director general of railroads, Walker D. Hines, January 17, 1919, is conclusive answer:

"The measures taken during the year 1918 called for no apologies. They were caused by war conditions and the efficient operation of the railroads in support of the government during the war justifies every act of the administration during that period. It was impossible to avoid the increases in wages which were granted, and those which are pending are inherently a result of the same causes. War industries surrounding the railroads on all sides were paying war prices for labor and depleting the railroad supply of labor, particularly the supply of skilled labor. These conditions necessarily forced increases in wages of railroad labor and will persist not only during the present year (1919) as a necessary part of the war experience of the country, but for sometime in the future."

This report was signed by: A. H. Smith, C. H. Markham, R. H. Aishton, Hale Holden, B. F. Bush, N. D. Maher and B. L. Winchell.

There has been a general disposition to compare railroad operations in 1918 when, out of imperious necessity, they had to be devoted, first, to war purposes; and, second, to the general needs of the country, with the operation of the railroads under peace conditions and in normal times. A moment's reflection will convince any unbiased mind that such a comparison is wholly unfair and prejudiced. Even on this basis it is clear that railroad operations in the year 1918 were conducted with great efficiency, skill and ability.

In 1918, after paying a rental of \$906,000,000 there was a deficit in railroad operations of \$216,000,000. Unthinking people urge this as conclusive evidence of the failure of the Railroad Administration. It is, of course, a superficial and unfair judgment, because it is a part of the war cost and, like all war cost, it is an expenditure for which there is no compensation but victory. When we consider the imminent peril which faced the country because of the breakdown of the railroads under private control, in 1916 as well as in 1917, and reflect that the assertion of federal control alone overcame that peril and transformed the railroad systems of the country into a tremendous and effective war machine, and that the total cost of transportation for the war purpose in the year 1918 was only \$216,000,000, and for the entire 26 months of federal control only \$714,000,000 on Class I roads, it is infinitesimal as compared with the total expenditures made by the American people to win the war.

When the government took over the railroads there was, of course, no opportunity to make an inspection of tracks and structures and to determine with certainty their condition; nor to make similar investigations of the condition of motive power and equipment; nor to check inventories. The government had

to rely upon railroad officials and railroad men, all of whom were retained in the service of the government and upon whose loyalty and integrity the government had a right to depend, at a time when our sons were shedding their blood and giving their lives upon the fields of battle. Railroad men ran the railroads of the United States while I was director general, and if they were inefficient or disloyal to their government in that time, they must answer to their own consciences. But I have said before that I believed them to be both loyal and efficient, and that the remarkable results achieved in 1918 conclusively prove that they were.

Pre-War Condition of Railroads Called a Menace

In the fall of 1917 the inefficiency of the American railroads made them unintentionally but nevertheless actually the strongest ally of the German Kaiser. The collapse under the burden of war traffic had almost cut the line of communication between the American army at the front and its base of supplies. The condition of traffic, particularly in the east, and the embargoes on freight in all important centers, had reached such an acute state of almost complete congestion that the Interstate Commerce Commission December 1, 1917, felt impelled to submit to Congress a special report sharply calling attention to the critical situation which faced the country.

Upon our declaration of war the railroads in response to the resolution of the Council of National Defense, organized on April 11, 1917, a special Committee on National Defense, usually called the Railroad War Board, to secure co-operation between the various railroad systems. Despite the activities of this committee and its various efforts at co-operation, the condition of the railroads grew steadily worse until there had become an almost complete paralysis of transportation. This Railroad War Board, on December 22, 1917, only five days prior to the President's proclamation to take over the roads and in response to a questionnaire by the chairman of the committee on interstate commerce of the Senate, submitted replies outlining what it had accomplished during the more than eight months of its existence, emphasizing the things deemed necessary for successful operation of the railroads and the difficulties with which they were faced.

[Then follows a series of quotations from the report of the Railroad War Board and other expressions as to the condition at that time.]

This breakdown of the American railroads did not occur overnight. It resulted not alone from lack of unification, but from the impaired physical condition of the roads extending over a period of years, and from long-deferred maintenance and improvements.

It is now asserted by railroad representatives or executives that when the roads were taken over by the government January 1, 1918, they were a well-equipped machine and in splendid physical and operating condition. The falsity of this assertion is shown by the report made by the Railroad War Board in which it is recited that the railroads needed "approximately 2,000 locomotives and 150,000 cars in addition to those now on order to meet the requirements" of the year 1918 and that "the cost of this equipment is approximately \$500,000,000 and that "the railroads generally cannot * * * (in the year 1918) provide through their usual channels for the capital requirements for the acquisition of equipment and other possible additions to plant." They invoked, therefore, the co-operation and aid of the government to secure for them on their own individual credit the new capital found by the government to be necessary not only for enlarging plant but for renewing maturing obligations.

At the time this statement was made the railroads had on order 1,902 locomotives and 42,857 freight cars.

By their own confession the railroads needed 3,902 locomotives and 192,857 freight cars. During federal control 4,226 locomotives and 159,056 freight cars were supplied to the railroads. Notwithstanding this great addition to the equipment of the companies the railroad executives are now claiming that the railroads were returned to them a less well-equipped machine than at the time the government took control of them, January 1, 1918.

If the railroads had been a "well-equipped machine" and in splendid physical and operating condition January 1, 1918, why was it that, in the fall of 1916, there was a congestion and breakdown of railroad transportation in the United States of a similar character and with like hurtful consequences, to the breakdown and congestion which occurred in the fall of 1917 just prior to federal control?

Further startling differences between the present attempt to

show that the railroads were in splendid condition and the effort of the railroad executives to obtain various increases in rates are disclosed by the records of the Interstate Commerce Commission. In view of the pathetic picture of the condition of the roads as drawn by these executives before the Interstate Commerce Commission from 1910 to 1917, the least cynical might be justified in questioning the good faith of these who in order to bolster up a "reticent case against the operation of these roads under federal control, now assert that they were maintained under private control "to the highest point of efficiency."

As long ago as 1910, in testimony given before the Interstate Commerce Commission, the railway officials acknowledged that their roads were not being maintained and improved in accordance with public expectation and the traffic needs of the country.

If evidence, other than the statement of the Railroad War Board and the testimony of the railroad executives is needed to demonstrate that lack of sufficient motive power continued to the beginning of federal control, it will be found in the letters to me (quoted) in January, 1918, from various executives of the Eastern lines answering my complaint of their inefficient operation of the roads. For instance, Samuel Rea confessed that the Pennsylvania Railroad had "practically the same plant as in 1915"; President Dice of the Philadelphia & Reading itemized his difficulties of operation as—1st, shortage of locomotives, and 2nd, shortage of men; Mr. Besler, president and general manager of the Central Railroad of New Jersey said, "We lack sufficient locomotives, of which we have been in urgent need for months past." Mr. Besler also requested that 1 "immediately direct 25 freight locomotives *** be transferred to the Central Railroad of New Jersey."

It is a significant commentary upon the pre-war efficiency of railroad equipment that from 1914 to 1916 the number of locomotives in the service decreased from 67,012 to 65,595; and on December 31, 1917, there were only 66,070 locomotives in service. In other words, when the railroads were taken over there were 942 less locomotives in the service than in June 30, 1914, three and a half years previous, while the average tractive power of locomotives had increased only from 31,006 to 33,932 pounds.

Similarly the number of freight cars increased from 2,349,734 on June 30, 1914, to 2,329,475 on December 31, 1916, but increased December 31, 1917, to 2,379,472, or practically 50,000 cars increase in three and a half years, while their average tonnage capacity increased from 39.1 to 40.9 tons per car, or only 1.8 tons per car.

Bad Order Cars

The following tables, compiled from the records of the Railroad Administration on the basis of the number of locomotives and revenue cars on line, and not on the basis of units of equipment owned, show the condition of locomotives and freight cars at the beginning and end of federal control, and utterly refute the present extravagant claims of the railroads.

	Beginning of Federal Control*	End of Federal Control
Number of locomotives on line	58,319	65,100
Number of locomotives out of service for repairs requiring over 24 hours	9,105	11,587
Percentage of locomotives out of service for repairs requiring over 24 hours	15.6	17.8

* Figures include only roads owning 100 or more locomotives.

BAD ORDER CARS AS OF JANUARY 4, 1918, AND FEBRUARY 28, 1920

	Bad order cars	Revenue cars on line	Per cent of bad order cars to revenue cars
January 4, 1918	126,650	2,374,566	5.3
February 28, 1920	141,906	2,486,507	5.7

There were a total of 4,375 cars held under Circular No. 20 awaiting disposition or authority to retire.

* These figures are based upon reports of the railroads made upon order of the Director General of Railroads.

The tables show that there was little difference in the reported number of bad order cars and locomotives at the beginning and the end of federal control. The percentage of bad order locomotives presented a more unfavorable showing to the railroad Administration than actually existed, for the reason that prior to federal control locomotives were only reported as out of service for repairs when they were in need of class repairs, while the Bad Order Administration required such a report for all locomotives held for repair which would require more than 24 hours to perform. On this basis the number shown out of service (in repairs at the beginning of federal control) would be increased to about 20 per cent.

The fact that the bad order equipment at the beginning of federal control was all king the terminals and shops and roundhouses, and that during federal control a higher standard of maintenance and repair was maintained, so that at the end of federal control the railroads were in condition to meet the heaviest traffic demands of their history.

Remedies Applied

The Railroad Administration adopted the only two possible methods for improving the general condition of equipment; namely, first, immediately using more efficiently the available facilities and forces, and later increasing the shop facilities and forces, since immediate increase of these facilities and forces under war conditions was impossible. The Railroad Administration called on the representatives of the organized railroad employees to agree to certain modifications in their contracts with the railroad companies relative to hours of labor and to agree also to modifications of the rules governing the promotion to mechanics of apprentices and helpers.

Under these modifications the railroad employees patriotically gave up privileges and concessions which their organizations had obtained through many years of negotiations and controversy, in which they agreed to an extension of the hours of service to 70 per week and to the promotion of all competent helpers and apprentices to mechanics wherever a shortage of mechanics existed. The concessions granted to the government by the labor organizations at this time could not have been obtained by the railroad managements under any conditions. The employees had previously refused to make similar concessions to the railroad corporations because of their belief that once they gave up these privileges, they would never be restored under private control. The average increase in locomotive-shop hours for the entire country amounted to about 16 per cent, and the effect became immediately apparent by the increased number of locomotives repaired per week.

There were 1930 locomotives of various types built by locomotive works on administration orders during the full period of federal control and 100,000 freight cars were, on like order, built by car manufacturers. This equipment was standardized. As a matter of fact the Railroad Administration purchased 4226 new locomotives and 159,076 freight cars. Counting the equipment built in railroad shops we turned back to the carriers 2006 more locomotives, 26,815 more freight cars and 1051 more passenger cars than we received.

Standard practices were also established for mechanical work and many other economies effected. From the beginning, the mechanical department of the Division of Operation endeavored diligently to maintain the equipment, without any idea that economies should or could be realized by reducing maintenance which the equipment ought to receive, but with the thought that the fullest possible measure of maintenance should be given, trying through greater vigilance to get more maintenance per dollar of money expended than would be expected if such vigilance were lacking. With this thought in mind, immediately after the roads were placed under federal control, we began to check locomotive shop output and roundhouse shop costs, so that all unnecessary expenditures might be eliminated and greater efficiency in shop and roundhouse operation obtained. Where improper practices were found to exist, action was taken through the regional directors to secure more efficient and economical methods.

Federal managers were required to prepare and submit information regarding maintenance of equipment during the test period, during the seven years prior to the test period, as well as during the calendar year 1918.

Deficit of 1918 Charged to Railway Executives

The railway net operating income for the year 1918 as defined by the federal control act was \$690,418,778. The rental charge was \$906,524,492, leaving an operating deficit for 1918 of \$216,105,714.

A striking illustration of the result of the running of the railroads of the country by the corporations for the account of the government may be obtained by comparing the results of the first five months of 1918 with the first five months of 1917.

As shown by the Interstate Commerce Commission, the net operating income for the first five months of 1917 was \$346,439,522. The net operating income for the first five months of 1918 was \$215,278,841. This means that the corporations when running the railroads for the account of their government, with all the aid and assistance the government could give, earned \$131,160,681 less operating income than in the same period of 1917. This decrease occurred in spite of the advantage of a 15 per cent increase in official classification territory in class rates, directed by the Interstate Commerce Commission in June, 1917, and a general advance of 15 per cent in commodity rates in the same territory March 12, 1918, and without taking into account the retroactive wage increase (made upon the recommendation of the Railroad Wage Commission), properly chargeable against the first five months of 1918. The entire wage increase was charged to operating expenses for the last seven months of 1918, thus mak-

ing the showing for the first five months of 1918 more favorable to the corporations than the facts justify.

The rental charge for the first five months (5/12 of \$906,524,-492) was \$377,718,535, while the operating income was \$215,-278,841. The result is that the corporations, without charging them up with retroactive wage increase, did not earn the rental for the roads for the first five months of 1918 by \$162,439,694. If we charge to the first five months of 1918 their proportion of wage increases made subsequent to May, 1918, but retroactive to the first of January, 1918, it would add to the operating expenses \$198,780,724. This would reduce the net operating income of \$215,278,841, reported for the period, to \$16,498,117, a decrease of \$329,941,405 as compared with the net income for the first five months of 1917.

The proportionate amount of rental due the carriers for these five months was \$377,718,538. Deducting the net income of \$16,498,117, we have a loss for the five months of \$361,220,421, or more than the total deficit for the year 1918, viz.: \$216,105,714. On this basis there was a surplus for the last seven months of 1918 of \$145,114,707 as compared with a loss of \$361,220,421 for the first five months of 1918.

If, to offset the above charge due to wage increases against the operations of the carriers by corporations for the first five months of 1918, they should be credited with five-sixths of the \$494,-000,000 which Director General Hines says would have been received if the rate increase put in effect in June, 1918, had been in effect from January 1, 1918, the result would be to add \$412,000,000 to the net operating income for the first five months and convert the loss of \$361,000,000 to a surplus of \$51,000,000. On the other hand, allocating one-sixth of the \$494,000,000 to the last seven months of the year would increase the surplus of \$145,000,000 shown above to a surplus of \$227,000,000 or five times the surplus of the first five months of the year.

If, in these circumstances, there had been no deficit, what becomes of the charge of extravagance and wasteful inefficiency now preferred against federal control? Do not these figures show that the waste, inefficiency and incompetence, if any, was shown by the railroad executives when they were operating the railroad for account of the government during the first five months of 1918?

Private Control Declared a Failure During the War

The issue is inescapable that if there was in 1918 extravagance and inefficiency, these railroad executives were guilty of it, and if they were not guilty then, they are now, for their own purposes, guilty of an attempt to besmirch the record. I have defended their loyalty to the government, and have believed that they were honestly attempting to co-operate with the government in the efficient operation of the roads, but what excuse can they offer for their reckless and indiscriminate criticism of the operation of the railroads under federal control when figured on any basis, by far the greater part of the deficit for the year 1918 occurred when they were operating the carriers for the account of their government? What pretense can they make that they could have produced better results than the government when they signally failed to function efficiently not only during the first five months of 1918 but also in 1916 and 1917 as shown by the scathing criticism of the railroad corporations by the Interstate Commerce Commission in its decision of January 18, 1917, to which I have already referred?

Having failed so signally to raise capital to provide the necessary capital expenditures and the wage increase necessary to retain sufficient skilled labor to efficiently operate the roads, by what right do they now criticize the Railroad Administration which established a credit of a billion of dollars and more for capital expenditures, brought order out of chaos, not the transportation system of the country functioning, opened up the line of communication between the soldiers at the front and their base of supplies, and made possible the early ending of the gruesome and awful war?

Could private control have bettered the weather conditions of which the railroad executives complain, or overcome the ravages of influenza, or more capably cope with the competition for skilled labor which the high wages of the shipyards, munitions plants, and the cost-plus contracts generally, had abnormally excited? The inescapable truth is that private control was powerless to meet the demands upon the railroads.

It is unfair and stupid if not worse, to challenge the efficient operation of the railroads during 1918 under the stress of war conditions, because after paying more than \$900,000,000 to the owners in rentals there was a deficit of about \$216,000,000, all of which, on a fair comparison and adjustment was incurred by the railroad executives in the first five months of 1918 as I have already shown.

Corporations Relieved of Operating Carriers

On March 21, 1918, Congress passed the federal control act which created practically the relation of lessor and lessee between

the railroad corporations and the government, and by the first of May, I had become convinced that the management of the railroads by the railroad corporations under the direction of the director general could no longer be continued. Not only was I dissatisfied with the results of the corporate operation of the roads, but I realized that under the federal control act there would inevitably be conflicts between the duty of the railroad executives to their corporations and their duty to the government. Moreover, I became convinced that much economy could not be effected without rerouting of traffic by the shortest and most efficient lines which meant the elimination of competition, the abandonment of unnecessary passenger and freight mileage, the elimination of many employees who were required under competitive control and were not needed under unified operation of the railroads.

Experience of almost five months with corporate managements convinced me that their officers were so habituated to competitive practices that it was impossible even under government control to prevent them from competing with each other for business. Tradition and habit were too strong. Thorough co-ordination and the most efficient use of the properties for the war purposes required the abandonment of competition.

The unanswerable fact is that the performance of the railroads in 1920 would not have been possible if the railroad properties had not been returned to them by the government in exceptionally good condition. The railroads could not have performed "the greatest transportation task in their history" if they had been broken down or injured by the government. On the contrary, this "greatest task in their history" was performed because, during the period of federal control, \$1,219,840,291 was expended in improvements, additions, betterments and equipment which made of the railroad properties an infinitely better transportation machine than it was on January 1, 1918, when the government took possession. This is shown in part by the condition of locomotive tractive power and freight car tonnage capacity.

Complaint of Poor Distribution of Cars

One of the frequent complaints by the railway executives has been that when the carriers were returned to private control, the freight cars of the individual carriers were poorly distributed among them all, and due to the unification methods of federal control, this resulted in each railroad having only a small percentage of its own cars at home. And yet the Interstate Commerce Commission points out in its 1920 report, after the return to private control, "cars have been distributed primarily without regard to ownership" because "the movement of traffic was the first consideration." And within two and a half months, upon the petition of the railroads, the commission ordered the relocation of thousands of cars without regard to ownership. More than this, this report shows that the same Car Service Commission of the American Railroad Association, existing before federal control and which was used as the agency of the director general in distributing cars during federal control, was continued by the railroads after federal control and distributed hundreds of thousands of cars without regard to ownership. This complaint therefore, is baseless.

Bad Order Condition of Equipment

It is interesting to compare the bad-order condition of freight cars and locomotives at the end of federal control with such condition on July 1, 1921, with such a let up in traffic movement in the past year as to afford private management a splendid opportunity to bring the condition of the equipment up to that high standard of maintenance which they would have us now believe was usual in the "outstanding success" of the management.

It will be recalled that the bad order freight cars on February 20, 1920, numbered 141,906, or a percentage of 5.7; locomotives out of service for repairs over 24 hours were 11,587, or 17.8 per cent. On October 1, 1921, there were 364,372 bad order freight train cars, which is an increase since the close of federal control of 222,466. This, however, bad as it may seem, does not tell the story with respect to the alarming condition of freight train cars. Of the 141,906 bad order freight cars at the close of federal control, 62,936 required light repairs, and 78,970 required heavy repairs. Of the 364,372 bad order cars as of October 1, 1921, 78,040 required light repairs, while 286,332 required heavy repairs. It will thus be seen that while the number of bad order cars requiring light repairs has increased, 15,104, the number requiring heavy repairs has increased 207,362.

Using an estimated cost of repairs based on studies of the results during federal control, it would have cost at the end of federal control but \$9,508,865 to repair all bad order cars. It would have cost on October 1, 1921, \$33,365,204 to repair all of the bad order cars, but owing to the fact that many of these cars are of all steel construction and have been standing exposed to the weather for from one to two years, the cost to repair them at present would, without doubt, greatly exceed the above estimate. [Mr. McAdoo here included a detailed analysis of the Railroad

Administration labor policy—This portion of his testimony will be given in next week's issue of the *Railway Age*.]

Comparative Cost of Public and Private Operation

There are so many different factors to be taken into account, that no completely satisfactory comparison can be made of the operating and financial performance of the transportation system under the war administration as against the period since the termination of federal control. Moreover, as I have stated, the period covered by the Railroad Administration was unique and unprecedented. The railroads were managed with but one primary object in view—to assist in the winning of the war. When it became necessary, costs were disregarded. Even under these conditions, however, a very favorable comparison can be drawn with the results of private operation.

The railroads as public utilities cost the people of the country whatever amounts are paid for the transportation of freight and passengers plus whatever direct appropriations or grants are made from the public funds by the Congress after deducting assets remaining in the hands of the government. During the 26 months of federal control, the gross revenues paid to the railroads directly by the public amounted to \$11,036,572,509. Director-General Davis recently estimated that the ultimate cost arising from appropriations by Congress would be \$1,496,281,961. Adding this to the direct cost in revenues, we have a total cost to the public amounting to \$12,532,854,470, covering the entire 26 months of federal control.

Since the termination of federal control, statistics are available for 20 months of private control or until November 1, 1921. These show a total operating revenue paid by the public to the railroads of \$9,972,305,818. To this must be added the amounts which must be paid by the public under the 6 months guarantee period. The Interstate Commerce Commission estimates this will be \$525,412,135. This sum added to operating revenues makes a total cost to the public of 20 months of private control amounting to \$10,508,242,716. Reducing the cost of each period to a comparable monthly basis, gives the following result:

Cost to the Public Per Month

Railroad Administration	\$470,637,404
Private Control	525,412,135

Expressed in terms of dollars and cents, therefore, the cost of operating the railroads under private management has been \$54,774,731 per month more than it was during federal control or \$657,296,772 per annum. If the costs of operation are considered on the basis of units of transportation actually handled, or equated ton-miles, it is even more favorable to the Railroad Administration. It is as follows:

Cost to the Public Per 1,000 Equated Ton Miles

Under Railroad Administration	\$10.94
Under Private Control	12.81

Every advantage is given to this comparison to the period of private operation. The annual guaranteed rental of \$906,000,000 is fully included in the period of federal control while in the period of private control the return or net profit, contemplated under the transportation act, is practically omitted. If the expectations of the transportation act had been completely realized as the returns provided for the railroads (6 per cent on \$18,900,000,000) the cost to the public of private operation would have been greatly increased. The return provided for in the transportation act, if realized, would amount to \$1,134,000,000 annually. In 1920, however, the net income of the railroads was only \$62,264,000 and in 1921, according to estimates, the net income will not exceed \$600,000,000. Conservatively stated, therefore, the amount which it would have cost the public if the guarantee provision of the transportation act had been realized during the period of private management would have been at least one billion dollars more than the amount already stated. This is equivalent to \$50,000,000 for each month of the period. If added to the surplus of cost to the public per month, as before stated, of a private over governmental control, it would amount to \$93,379,275 a month or in other words, would show that private operation had cost the people \$1,120,551,300 more per annum than the Railroad Administration.

Annual Costs of Operation

As to actual operating costs and efficiency, a comparison may be made by eliminating all elements of profit and reducing the items to direct operating expense. This is done in the following table:

	Jan. 1, 1919, to February 29, 1921	March 1, 1920, to October 31, 1921
Total operating expense	\$9,966,900,373	\$8,876,733,707
Less: Tax	451,193,914	481,501,012
Eliminable revenue	1,717,574	2,008,975
Eliminable costs	2,900,771	24,552,116
Net facility cost	1,695,666	10,258,968
Total	\$6,167,666	\$6,165,144,796

By reference to this table it will be seen that the actual operating monthly costs under governmental control were only \$375,988,813 as against \$473,257,239 under private management; or in other words, private control cost \$97,268,386 more per month or \$1,167,220,632 per annum.

Expressed in terms of work done or units of traffic handled the cost per 1,000 equated ton miles under government control was only \$8.74 as compared with \$11.54 under private management. In other words the cost of private operation since federal control has been 32 per cent higher than under the Railroad Administration.

Clerks' Brotherhood Officials Protest Discharge of Freight Inspectors

H. J. Chapman, general chairman of the Brotherhood of Railway Clerks for Trunk Line territory, and J. J. Forrester, national legislative representative of the brotherhoods, testified before the Senate committee on January 27. Mr. Chapman said that last March the railroads abolished the Trunk Line Freight Inspection Bureau after the freight inspectors had refused a proposition to work six days a week for five days' pay and had thereby thrown out of employment 900 freight inspectors, who, he said, had saved the eastern railroads \$12,000,000 a year in revenue by detecting cases of freight which had been improperly classified by the shippers.

He said that at one point alone three inspectors who had received during the year \$3,900 in wages had saved the railroads \$100,000 in revenue. Mr. Chapman said that the railroads had taken this step on the ground of economy and had suggested that the work could be handled by the regular station forces, but, he said, that it was his personal opinion that the bureau was abolished because the employees had organized and that as a matter of fact the work had not been done by the other employees. In November the bureau was re-established with about 75 inspectors, most of whom were new men. A proposal that the inspectors work without salary but on a percentage basis was not accepted by the roads. Mr. Chapman said.

Senator La Follette, who took a great interest in this testimony, asked whether the railroads had abolished the freight inspectors so as to make it easy to extend favors to shippers. Mr. Forrester said he would not charge that that was the purpose, but that this would be the result. Senator Cummins remarked that the suspension of the inspection service would leave it just as open to the shippers the railroads did not want to favor, but Mr. Forrester said that it would be easier for a railroad to instruct one of its own employees to allow a mis-billed shipment to go through than it would be if the inspectors were employees of a bureau. He preferred to criticize the action of the railroads as mismanagement, but said that if it were not mismanagement there is some other motive on the part of the railroads. Senator Fernald who has himself had a great deal of experience as a shipper, said that in Maine he knew that every car of freight is inspected by the local agents. Mr. Forrester said this is not true in the larger terminals. Mr. Forrester said that the records of the bureau will show that even with the inspection there is a large amount of mis-billing and mis-classification of freight on the part of the shippers and that the abolishment of the inspection simply increased the waste of railroad revenues.

Mr. Chapman said that only five days before he was dismissed he had been approached by a shipper who proposed to put through 1,000 cases of whiskey billed as medicine and had offered him \$1 a case to let it go through. He had reported this to his superior who had notified the internal revenue officers, but he said apparently the railroads did not appreciate his action. Senator Cummins said that the charge appeared to be that the eastern railroads have thrown away \$12,000,000 a year without apparent reason and that he would take the liberty of calling the matter up and the attention of the railroads to see what explanation they may have.

Report of the Bureau of Locomotive Inspection

Smaller Percentage of Defects—Fewer Accidents—Welding Firebox Crown Sheets Dangerous

THE REPORT of the chief inspector of locomotive boilers to the Interstate Commerce Commission for the fiscal year ending June 30, 1921, shows a decrease in the percentage of locomotive defects and a falling off in the number of accidents. The number of locomotives inspected, moreover, was larger than in any previous year since the bureau has been in operation. A summary of the report is given below.

Statistics of Defects and Accidents

The tabulations have been arranged so as to permit comparison with previous years, and show the number of locomotives inspected; the number and percentage of those inspected

Low Water Caused Crown Sheet Failure and Boiler Explosion

found defective; and the number for which special notice for repairs was issued, withholding the locomotive from service because of having defects constituting violations of the law; together with the number of defects found; also the number of accidents caused by failure from any cause of the locomotive or tender and all parts and appurtenances thereof, together with the number of persons killed and injured as a result of such failure.

NUMBER OF LOCOMOTIVES INSPECTED, NUMBER FOUND DEFECTIVE, PERCENTAGE INSPECTED FOUND DEFECTIVE, NUMBER ORDERED OUT OF SERVICE, AND TOTAL DEFECTS FOUND BY YEARS

	1921	1920	1919	1918	1917
Number of locomotives inspected..	60,812	49,471	59,772	41,611	47,542
Number found defective.....	30,207	25,529	34,557	22,196	25,909
Percentage found defective.....	50	52	58	53	54.5
Number ordered out of service....	3,914	3,774	4,433	2,125	3,294
Total defects found.....	104,848	95,066	135,300	78,277	84,883

NUMBER OF ACCIDENTS, NUMBER KILLED AND NUMBER INJURED AS A RESULT OF FAILURE OF PARTS AND APPURTENANCES OF THE ENTIRE LOCOMOTIVE AND TENDER, BY YEARS

	1921	1920	1919	1918	1917
Number of accidents.....	735	843	565	641	616
Decrease from previous year (per cent)...	12.8	*49.2	11.8	4.1	...
Number killed.....	64	66	57	46	62
Decrease from previous year (per cent)...	3	*15.8	*23.9	25.8	...
Number injured.....	800	916	647	756	721
Decrease from previous year (per cent)...	12.6	*41.6	14.4	4.8	...

*Increase.

NUMBER OF ACCIDENTS, NUMBER KILLED AND NUMBER INJURED AS A RESULT OF THE FAILURE OF SOME PART OR APPURTENANCE OF THE BOILER ONLY, FOR THE FISCAL YEAR ENDED JUNE 30, 1912, 1915, 1920 AND 1921

	1921	1920	1915	1912
Number of accidents.....	342	439	424	856
Number killed.....	51	48	13	91
Number injured.....	379	503	467	1,005

DERAILMENTS DUE TO DEFECTS IN OR FAILURE OF SOME PART OF THE LOCOMOTIVE OR TENDER, AND THE NUMBER OF PERSONS KILLED AND INJURED AS A RESULT OF SUCH DERAILMENTS FOR THE FISCAL YEARS ENDED JUNE 30, 1917-1921, INCLUSIVE.

	1921	1920	1919	1918	1917
Number of derailments*.....	8	7	7	2	4
Number killed.....	7	6	6	...	1
Number injured.....	30	12	7	2	21

*Only derailments reported by carriers as being caused by defect in or failure of parts of the locomotive or tender were investigated or counted in this tabulation.

A summary of accidents and casualties occurring during the fiscal year ended June 30, 1921, as compared with the year ended June 30, 1920, covering the entire locomotive and tender and their appurtenances, shows a reduction of 12.8 per cent in the number of accidents, 3 per cent in the number killed, and 12.6 per cent in the number injured.

During the first six months of the fiscal year 1921 accidents and casualties occurred at an alarming rate and exceeded those of any like period during the five preceding years. However, during the last six months a marked reduction is recorded. The number of accidents and casualties during the year was considerably in excess of those occurring during the year 1919, a large number of accidents resulting in serious injury being caused by the failure of what are frequently termed unimportant parts. For instance, during the year 85 accidents were caused by the failure of some part of the grate-shaking apparatus, 82 by squirt hose, and 65 by some part of the reversing gear, all of which could have been avoided by reasonable care.

There were no authentic records from which comparisons

Crown Sheet Failure Caused by Low Water; Seam Had Been Autogenously Welded

could be made of accidents prior to the enactment of the boiler inspection law. A comparison, however, of the fiscal year ended June 30, 1912, the first year of the law, with the fiscal year 1915, the year in which the law was amended, and 1921, the present year, is of importance, and shows the far-reaching effect of proper inspection and repair, as required by the law and the rules and regulations established thereunder.

Comparing 1912, covering parts and appurtenances of the boiler only, with the year 1915, the fourth year of the law, there is shown to be a reduction of 50 per cent in the number of accidents, 85.7 per cent in the number killed, and 53.5 per cent in the number injured.

Comparing 1912 with the year 1921 covering parts and appurtenances of the boiler only, there is shown to be a reduction of 60 per cent in the number of accidents, 44 per cent in

the number killed and 62 per cent in the number injured.

Comparing 1915, the fourth year of the existence of the law, with the year 1921, there is shown a decrease of 19 per cent in the number of accidents, an increase of 292 per cent in the number killed, and a decrease of 17 per cent in the number injured, due to the failure of some part or appurtenance of the boiler only. Barrel explosions have been entirely eliminated, and while the so-called crown-sheet failures have materially decreased, the great increase in fatalities indicates that the severity of these failures has increased tremendously.

Welded Firebox Sheets

During the year there were a number of accidents investigated in which firebox seams formed by the autogenous welding process were involved, where, through the failure of these seams, it is believed the result of the accident was much more serious than would otherwise have been. Autogenous welding can be used on many parts of the locomotive and tender and on parts of the stayed surfaces of the boiler with safety and economy, but inasmuch as the bureau's accident investigations show that approximately 80 per cent of the autogenously welded seams fail, where they are involved in the accidents, it is believed that such methods should be avoided in firebox crown-sheet seams where overheating and failure are liable to occur, or on any part of the boiler where the strain to which the structure is subjected is not carried by other construction which fully meets with the requirements of the rules, at least until some means has been developed through which the quality and tenacity of the weld may be established in advance of its failure. This should apply on all parts of the locomotive and tender where, through failure, an accident and an injury might result.

Boiler Explosions

The next portion of the report is devoted to a discussion of the theory of boiler explosions and to what takes place in such occurrences.

The force of a boiler explosion is in proportion to the size and suddenness of the initial rupture and the temperature and volume of the water in the boiler at the time of the rupture. The average modern boiler has a capacity of approximately 500 cu. ft. of water below the crown-sheet and has a steam space of about 150 cu. ft. If such a boiler with 200 lb. pressure ruptures from any cause, so as to suddenly reduce the pressure to that of the atmosphere, the released energy will amount to approximately 700,000,000 ft.-lb. and if the explosion took place in two seconds approximately 690,000 h.p. would be developed.

This gives some idea of the force which accompanies many boiler failures, with their serious and fatal results, and supplies the reason for the violence which in many cases is sufficient to hurl the entire boiler several hundred feet or tear it into fragments, scattering them in every direction.

Explosions result because some part of the vessel is too weak to withstand the pressure to which it is subjected. This weakness may be caused by: 1. Abnormal steam pressure. 2. Weakness in design or construction. 3. Improper workmanship. 4. Corrosion or wasting away of material. 5. Broken or defective stays. 6. Overheated crown or firebox sheets.

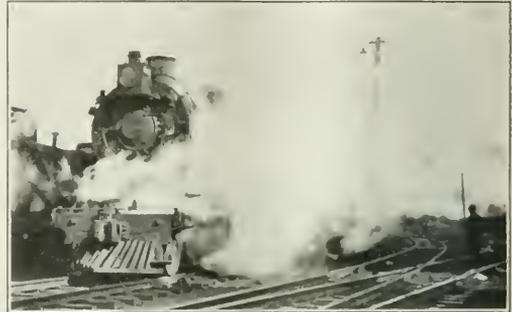

A remedy for the first three causes is provided for in the law and rules by requiring that the working pressure be fixed, after consideration of each individual boiler by competent authorities, and by fixing a substantial factor of safety to provide against any hidden defects of material and construction.

To protect against failure due to corrosion or other defects caused by wear and usage, the law requires that regular inspections, both interior and exterior, be made and that all boilers be subjected to a hydrostatic test at regular intervals

and a sworn report filed showing the conditions found and repairs made.

Failure of crown or firebox sheets, due to overheating, may be the result of scale or grease on the firebox sheets or from low water. The firebox sheets and tubes are in contact with the fire, and would become heated to that temperature if it were not for the presence of water in the boiler. As previously explained, the temperature of the water depends on the boiler pressure, but rarely reaches more than 400 deg. F.; therefore while the plates are in contact with the water on one side they cannot greatly exceed this temperature, although the temperature in the firebox may exceed 2,500 deg., which is about the fusing point of firebox steel.

The heat in the firebox is conducted through the plate to the water in the boiler, where it is absorbed, the sheet thus

Leaking Badly But Reported Ready for Service: Cylinder Cocks Closed

being prevented from heating to the temperature of the fire and burning gases. If, however, the transmission of the heat to the water is obstructed by scale or grease, or if the water fails to absorb the heat, due to being foamy, the plates will retain the heat, and may become red hot; or if the sheets are unprotected by water from any cause they become overheated. Metal loses strength when heated, and if heated to a high temperature has comparatively little strength to resist the pressure within the boiler, when as a result the sheets are forced off the stays and failure occurs. It is a well recognized fact that scale or grease may be the direct cause of an explosion. Scale may indirectly cause an explosion by restricting or closing the openings in the water-indicating appliances, thereby causing a false level of water to be registered, deceiving the enginemen.

Water Gages and Glasses

One of the most perplexing problems which has presented itself while operating the modern locomotive is that of securing a correct indication of the height of water over the crown-sheet under all conditions of service.

In the last annual report was included the results of tests made to determine the action of water in the boiler on the water-indicating appliances with respect to their correct registration. These tests established that gage cocks screwed directly in the boiler do not correctly indicate the general water level while steam is rapidly escaping from the boiler, and in order to secure a proper appliance it was recommended that a water column to which three gage cocks and one water glass were attached be applied.

As far as the bureau has been able to determine, practically all new locomotives constructed since that report was rendered have had water columns applied. On old locomotives the application has not progressed rapidly, probably due to the difficulty in obtaining necessary appropriations. The

necessity for such appliances, however, is practically unquestioned, and some roads are proceeding with the application in a very satisfactory way. It is hoped that in the near future this important appliance will be applied on all locomotives, so that enginemen may have accurate knowledge of the general water level in the boiler under all conditions of service.

Flue Removals

During the year 209 applications were filed for extension of time for the removal of flues, as provided in rule 10. Investigation showed that in 25 of these cases the condition of the locomotives was such that no extension could properly be granted; 22 were in such condition that the full extension requested could not be granted, but an extension for a shorter period within the limits of safety was allowed; 25 extensions were granted after defects disclosed by investigation had been repaired; 38 applications were withdrawn for various reasons; and the remaining 99 were granted for the full period requested.

Headlights

On July 1, 1920, the rules became effective requiring each locomotive used in road service between sunset and sunrise to be equipped with a headlight which will enable the enginemen to see in a clear atmosphere a dark object as large as a man 800 ft. ahead of the locomotive and that yard locomotives have one light on the front and one on the rear that will enable the enginemen to see 300 ft. ahead of the locomotive. These requirements have been given close attention and have been fully complied with. The lighting equipment with which locomotives are now equipped seems to be meeting with the universal approval of officers and employees required to operate and maintain them.

The fact that not a single formal appeal has been taken from the decision of any inspector during the fiscal year demonstrates that wisdom and good judgment have been exercised by the inspectors in the performance of their duties.

Recommendations

On closing the report the following recommendations are made:

That the act of February 17, 1911, be amended so as to provide for additional inspectors to be appointed by the commission as the needs of the service develop, and that adequate salaries may be paid that will obtain and retain in the service a full corps of well-trained, efficient inspectors, and that the amounts directly appropriated be increased to meet the requirements.

That all locomotives not using oil for fuel have a mechanically operated fire door so constructed that it may be operated by pressure of the foot on a pedal or other suitable device located on the floor of the cab or tender at a proper distance from the fire door, so that it may be conveniently operated by the person firing the locomotive.

The old swing-type door, which is largely used at present, is almost invariably blown open in case of firebox accidents and permits the discharging steam and boiling water, with the contents of the firebox, to be blown into the cab of the locomotive, seriously and most frequently scalding and burning the persons therein. Such accidents frequently occur while coal is being put into the firebox, and with the fire door necessarily open, under such circumstances it is impossible for it to be closed. The automatic fire door would remain closed if closed when the accidents occur. If open, it would automatically close the moment the operator's foot was removed from the operating device, thus preventing the direct discharge of the scalding water and fire into the cab of the locomotive with such serious results.

The automatic fire door is not a new and untried device, as there are thousands of them in service, and they are required by law in some states. The automatic fire door is

also of great value in prevention of serious cracks and leaks in firebox sheets by limiting the time the fire doors are open when placing coal on the fire, thus reducing the amount of cold air admitted, which causes loss of temperature and consequent expansion and contraction and the setting up of great strains.

That all locomotives be provided with a bell so arranged and maintained that it may be operated from the engineer's cab by hand and by power.

That cabs of all locomotives not equipped with front door or windows of such size as to permit of easy exit have a suitable stirrup or other step and a horizontal handhold on each side approximately the full length of the cab, which will enable the enginemen to go from the cab to the running board in front of it; handholds and steps or stirrups to be securely fastened with bolts or rivets; the distance between the step and handhold to be not less than 60 in. nor more than 72 in.

That all locomotives where there is a difference between the readings of the gage cocks and water glass of two or more inches under any condition of service be equipped with a suitable water column, to which shall be attached three gage cocks and one water glass, with not less than 6 in., preferably 8 in., clear reading, and one water glass with not less than 6 in., preferably 8 in., clear reading on the left side or back head of the boiler. Investigations have clearly established that gage cocks when screwed directly into the boiler do not correctly register the proper water level over the crown sheet. It is very important that at least two appliances attached separately be employed for this purpose so as to form a double check and so as to have one appliance in case of failure of the other while on the road and away from points where repairs can be made.

Felton Attacks Estimate of "Savings" Under New Working Rules

A PUBLICITY statement emanating from the Railroad Labor Board and containing an estimate of the enormous "savings" which are to ensue from the application of the new working rules for clerks, freight handlers and station employees, was impeached by Samuel M. Felton, president of the Chicago Great Western and chairman of the Western Committee on Public Relations of the Association of Railway Executives, in a statement issued on January 30.

"The press and public recently have been misled by misinformation emanating from the office of the Railroad Labor Board in a matter of such importance that the incident should not be allowed to pass unnoticed," Mr. Felton said.

"On January 28 a statement headed 'From United States Railroad Labor Board' was given to the press regarding an order the Labor Board had issued changing certain rules in the national agreements made by the Railroad Administration under federal control with the Brotherhood of Railroad and Steamship Clerks, Freight Handlers, Express and Station Employees. Referring to the changes in two rules which were made, the statement emanating from the Railroad Labor Board said, 'These two changes in the rules are expected to save the railroads many millions of dollars—any exact estimate being impossible owing to fluctuating business and traffic conditions. Railroad critics of the national agreements in past hearings before the Railroad Labor Board contended that these two rules cost the roads great sums, even hinting at amounts in excess of \$50,000,000, but experts attached to the board say that \$15,000,000 is a conservative estimate.'

"This whole statement regarding estimated savings, although emanating from the Labor Board, was a fabrication.

"First, no witness for the railways in hearings before the Railroad Labor Board ever estimated that the two rules in

question cost the railways \$50,000,000 a year, and therefore no witness for the railways ever intimated that by changing these two rules this amount could be saved.

"Second, the statistical department of the Labor Board itself estimated—not at \$15,000,000—but at \$4,823,524.84 the total saving that could be made by changes in these rules.

"The result was to give a large part of the public the impression that the saving made by these changes in rules was ten times as great as was estimated by the board's own statistical department. Furthermore, some railways which have carefully checked their figures are unable to find that the changes in rules in question will enable them to make any savings that are more than negligible.

"The press and the public are entitled to know the facts about this matter, because it is wholly unjust to give the public a grossly exaggerated idea of the reductions in railway labor costs which the Labor Board is making by its revision of the working rules."

No comment has been made at the Labor Board. Several members are not in Chicago and it is understood that no further action will be taken until the full board can assemble.

Rules for Recovery of Excess Income

THE INTERSTATE COMMERCE COMMISSION on January 28 made public an order dated January 16 prescribing regulations for the ascertainment and collection of the amounts due the government under the so-called "recapture" provisions of the Transportation Act in the case of roads earning a net railway operating income in excess of 6 per cent. The commission has decided that the first computation to be made of the excess earnings shall be made for that part of the year 1920 during which the roads were operated without guaranty from the government and that thereafter the computation shall be made on the basis of calendar years. For that part of 1920 the roads are required to report by February 1. There had been some speculation as to whether the commission would use for this purpose the first twelve months after the expiration of the guaranty, which would be the year beginning September 30, 1920, for most of the roads. The selection of the period makes some difference because during the last four months of 1920 the increased rates were in effect and the volume of traffic was heavy until December. For September the Class I roads earned at the annual rate of 4.52 per cent, for October 4.84 per cent, for November 3.39 per cent, and for December 0.29 per cent, whereas for the year ending August 30, 1921, the net operating income represented a return of only about 2.9 per cent. The difference, however, is comparatively slight for the roads as a whole, although wide variations may exist as to different roads, but by segregating the odd months of 1920 it is made possible to proceed hereafter on the basis of the calendar year, which is also the railroad fiscal year.

The order provides in part as follows:

It is ordered:

1. That the years or parts of years for which net railway operating income and the return represented by such income upon the aggregate value of railway property held for and used in the service of transportation are to be computed shall be the years or parts of years ending on December 31, respectively. In the case of any carrier which accepted the provisions of section 209 of the Transportation Act, 1920, the first period for which such computations are to be made shall be September 1, 1920, to December 31, 1920, both inclusive. In the case of carriers which did not accept the provisions of said section 209 of the Transportation Act, 1920, the first period for which such computations are to be made shall be March 1, 1920, to December 31, 1920, both inclusive.

2. That the excess income for the portions of a year ended December 31, 1920, shall be preliminarily fixed as the income in excess of such proportions of 6 per cent on the value of the railway property held for and used in the service of transportation as the net railway operating income for the months of September to

December, both inclusive, or for the months of March to December, both inclusive, as the case may be, in the three years ended June 30, 1917, bears to the total net railway operating income for the same three years.

3. The aggregate value of the railway property of the reporting carrier or carriers shall be based preliminarily, in the case of carriers which made such returns directly or indirectly, upon the amount reported or used by such carrier or carriers as the aggregate value of railway property held for and used by them in the service of transportation in the proceeding entitled "in the matter of the applications of carriers in official, southern, and western classification territories for authority to increase rates," Docket No. Ex Parte 74, with adjustments for—

- (a) New lines, extensions and additions, and betterments;
- (b) Retirements;

(c) Amounts of property for which permission to retain earnings under paragraph (18) of section 15a of the Interstate Commerce Act has been granted; and

- (d) Other increases or decreases,

properly affecting the aggregate value of the railway property of such carriers held for and used in the service of transportation, claimed or reported by the carrier and supported by detailed explanations. The value of such railway property, as reported, will be corrected and the actual value will be determined in the manner provided in paragraph (4) of section 15a of the Interstate Commerce Act, and corresponding adjustments in amounts recoverable by and payable to the commission will be effected. In the case of those carriers which did not directly or indirectly make returns in connection with Ex Parte 74, the investment in road and equipment as of December 31, 1919, with proper adjustments as hereinabove indicated will be used for preliminary computations, and these preliminary computations will be similarly corrected after the determination of actual values in accordance with paragraph (4) of section 15a of the Interstate Commerce Act.

4. The establishment of preliminary bases for prorating the return of 6 per cent, or ascertaining property values to which the rate is applicable, does not preclude any carrier from using such other bases as it considers more equitable and in accord with the facts; such other bases, however, must be fully and properly supported.

It is further ordered, That pursuant to the foregoing rules and regulations for the determination and recovery of the excess income payable under section 15a of the Interstate Commerce Act each and every carrier by railroad, or partly by railroad and partly by water, within the continental United States, subject to the provisions of the Interstate Commerce Act, excluding—

- (a) Sleeping-car companies and express companies;
- (b) Street or suburban electric railways unless operated as a part of a general steam railroad system of transportation;

(c) Interurban electric railways unless operated as a part of a general steam railroad system of transportation or engaged in the general transportation of freight; and

(d) Any belt-line railroad, terminal switching railroad, or other terminal facility, owned exclusively and maintained, operated, and controlled by any state or political subdivision thereof, shall on or before February 1, 1922, report to the secretary of the Interstate Commerce Commission, Washington, D. C., the following matters:

1. The amount by which its net railway operating income for the period ended December 31, 1920, was in excess of that percentage of the value of railway property held for and used by it in the service of transportation, established by the foregoing rules, with explanation and details of the manner in which such excess income was computed, or, in the event there was no such excess railway operating income, that fact, with corresponding calculations and details in support of the return.

2. In cases where excess net railway operating income is reported, a statement of the title of the fund account in which one-half of such excess was placed, when such reserve fund was established, the amount placed in that fund, and how the assets in that fund are represented or held.

3. The amount of the remaining one-half of the excess income as preliminarily computed paid to the Interstate Commerce Commission and when and how such amount was paid. If unpaid the amount should be paid by remittance to or draft in favor of the Interstate Commerce Commission, transmitted to George B. McGinty, secretary of the Interstate Commerce Commission, Washington, D. C.

4. The value of the railway property of the reporting carrier or carriers with a statement in detail of the manner in which such value is arrived at and a full explanation as to the method in which the values of properties of a group of carriers have been aggregated in cases where property values and income are computed for a system pursuant to the provisions of paragraph (6) of section 15a of the Interstate Commerce Act. In such cases a full explanation should be given of the reasons why the group of carriers used are treated as under common control, management and operation.

Electric Traction for Steam Railroads

Tendencies of Practice in the United States—Limitations and Advantages of Equipment Used

A REPORT on heavy electric traction, which deals particularly with results obtained in the United States and Canada, has been prepared for the ninth International Congress of the International Railway Association by George Gibbs, chief engineer of traction, Long Island. The report deals with the subject from the standpoint of a railway man who has been in contact with the technical details, but who is writing for those not specially versed in them. Mr. Gibbs has dealt with the subject in an unusually thorough fashion and has made a number of pertinent statements well worth the attention of anyone interested in heavy electric traction. The outstanding parts of the report follow:

In 1910 electric traction was in service in the United States and Canada on 11 different railroads, including a total of 873 miles of track. At the end of the year 1920 the number of roads had increased to 19 and the miles of track to 3370.

This indicates considerable growth in the use of electric traction during a ten-year period, but the greater part is due to projects determined upon prior to the war. It may be said that for the past six years electric traction has been in the condition of arrested development—a situation which unfortunately, applies in some measure to its technical as well as to its physical aspect.

Advantages Secured

The reasons for which electric operation has been adopted have been so often stated that it is unnecessary to enlarge upon them at length, but it will be useful to note that the trend of development of electric traction in America has primarily been to secure better operating conditions, thus:

(1) For terminals, in large cities where tunnel approaches are generally involved (or in long tunnels elsewhere) and usually where steam locomotives are objectionable. Also, because switching and idle power movements can be reduced by using motor-car trains instead of locomotives for haulage. These advantages may greatly increase the capacity of a terminal or a tunnel.

(2) On heavy gradients (sometimes in connection with hazardous steam operated tunnels) where the running speeds with steam traction are low; to increase the capacity of the line and effect substantial operating savings.

(3) For short-haul (suburban) passenger services, to increase track capacity because of quicker schedules in services having many stops, and incidentally, to foster business, due to the attractiveness of electric operation from the standpoint of the traveller.

(4) In certain cases for long-haul services; for the main purpose of securing operating economy in districts where coal is expensive and where cheap hydro-electric power can be obtained.

In other words, the great majority of the installations have been undertaken to facilitate operation over some particularly difficult or congested portion of a railway. In all cases the direct operating savings plus the indirect advantages are sufficient to justify the adoption of electric haulage.

Locomotives

No approximation, even, to a standard electric locomotive design has been arrived at. The problems still ahead for solution are both electrical and mechanical; the former await the selection of a system and the development and perfection of apparatus, the latter relate to the working out of methods

of transmitting power from the motors to the driving wheels and securing the best type of locomotive structure for perfect tracking properties. It may be said, however, that the serious problems awaiting solution at present are mechanical, rather than electrical; motors and control of both the D. C. and the A. C. types work well; of the mechanical features we know little of a conclusive nature—experience has been too limited with electric locomotives.

Motors direct-g geared to axles are suitable only for low-speed locomotives, such as those for switching or freight services. For the heaviest requirements of freight haulage, however, it is doubtful if this type is the best, because it is difficult to apply the drive to produce a stable wheel-grouping; also, because the heavy motor masses have a very low center of gravity and the un-spring-borne weights are very considerable. Large motors, furthermore, produce severe side shocks in curving and with track in poor surface, and hub-liner wear is apt to be great.

Locomotives equipped with quill driven geared motors, should produce better results in the above respects, but only in degree. A quill drive has not been entirely satisfactory for very heavy service, because mechanically it is difficult to find space for conservatively designed springs, and if the quill is not maintained normally concentric with the axle severe bending stresses are set up in the springs at each revolution of the wheels, whereas a helical spring should be subjected to torsional stresses only. Therefore, quill drive appears to have a distinct limitation in successful application to electric locomotives.

The type of locomotive which has the motor armature mounted rigidly on the axle, requires many axles for heavy traction, and a locomotive wheel arrangement which is somewhat complicated and unfavorable for tracking. It has been used for high speed work, however, in cases where track construction is of the heaviest character and its maintenance is of the highest order; its field is limited to high speed service because of low output of the motors at low speeds.

Gearless motors flexibly suspended around the axles, may be used for high speed passenger locomotives with either D. C. or A. C. traction, but it is not an economical type as regards first cost of motors and it has a low center of gravity of the running gear. It is furthermore subject to the difficulty mentioned above in securing durable spring-driving mechanism.

Locomotives having gearless motors and rod drive are suitable for high-speed passenger work with both D. C. and A. C. motors, and this type of drive allows the most desirable wheel arrangement and weight distribution for perfect tracking qualities of the locomotive. The motors, however, are very large and costly because of their low speed and their limited capacity; the type is not suitable for low-speed service.

The type of locomotive having geared motors and a rod drive, offers the most flexible and promising solution for passenger and freight locomotive construction, because of the allowable variation in wheel arrangement and in motor mounting and capacity; it permits most perfect tracking qualities for a great variety of designs and running speeds. It is suitable both for D. C. and A. C. traction systems.

Side rods connecting the various driving wheels are desirable in all types to prevent slipping of independent axles and to thus obtain maximum traction, especially with D. C. motors having series-multiple control.

A combination of driving and carrying axles is desirable, also an unsymmetrical wheel distribution, to assist in proper tracking. This point was clearly brought out by the experiments made by the Pennsylvania Railroad in 1909 when it took up the design of its electric locomotives for use in the New York Terminal (*Railway Age*, November 19 and November 26, 1921).

Motor Cars

American practice tends to a motor car which will have the largest passenger capacity consistent with the economical limits to the application of sufficient motive power to the car. Best economy in equipment and maintenance cost is obtained by using two motors only and mounting them on one truck. A modern car of steel construction and of about 70 feet length over-all will satisfy these conditions. It will weigh, without electric equipment, but including full seated passenger load, about 50 tons (100,000 lb.). Two motors will give a capacity of about 500 hp. total for the car, and with this capacity the most exacting local service schedules can be performed, if all cars in the train are equipped with motors.

Existing electrifications for such service are now conducted by the 650-volt D. C. system, by the high tension single-phase A. C. system, and by the 1,500-volt D. C. system with two motors per car; the high tension (3,000 volts) direct current system, requires four motors per car, because of the necessity of limiting the voltage in each motor to 1,500, and to obtain series-parallel control of the motors. Motor-car equipments for the 3,000-volt system have not yet been under practical trial on any electrified steam railway in America.

Current Collection

Third rail conductors have sufficient current-carrying capacity for all traction conditions even with low voltages, but it is believed that the third rail working conductor systems have become obsolete for general railway electrification in America.

The overhead working conductor systems will become standard in the future for general electrification, and the two important electric systems, namely, the alternating current and the high tension direct current must be adapted for all requirements with this form of conductor.

At the present state of the art, the 11,000-volt alternating current system has been demonstrated to be well adapted for current collection from an overhead conductor under all conditions met with on American railways; it is reliable and economical in upkeep.

The success of the 3,000-volt direct-current system, as regards current collection, seems less certain and remains to be demonstrated for some of the difficult conditions that must be met; difficult current collection is undeniably a handicap to the success of this particular electric system and will weigh heavily against its adoption as a standard unless some overwhelming advantages of another nature are possible in the way of future perfection of direct current apparatus which will outweigh the present and probable future advantages of the alternating current system.

Substations

The alternating current system substations contain transformers which alter the voltage of the current only, and the switching and safety apparatus to control it. Substations of this kind are relatively simple, as they contain no moving apparatus and require only occasional inspection and attention. Direct current systems require transformers, switching apparatus for the high tension current and rotary converting apparatus to change it into direct current, also, low-tension switching and safety appliances. This combination of apparatus is relatively costly and complicated and requires attendants at all times. It has been proposed to do away

with constant attendance by installing automatic means, controlled by the load conditions, to cut the apparatus in and out of circuit. A description is entirely too technical for insertion in a report of this kind but it may be said that automatic substations have been employed for interurban traction work and are in process of development. It is too early yet to pass upon the results obtained or to assign a definite field for their use. The control mechanism is necessarily complicated, delicate and expensive and probably has serious limitations as regards its use for important traction installations on steam railways. It is possible they may be used in these cases, but as an adjunct only, to assist and simplify the work of the regular attendants in emergencies.

Standardization and Power Supply

Until recently, in America, there has been no concerted action looking to the standardization of the important features of any system, much less fixing upon any one system as a standard for all work. But at the present time this question has been brought very much to the fore.

There exists no sufficient and comparable operating data covering all kinds of traffic from which to conclude as to the relative advantages and disadvantages of the two systems most generally advocated today, i. e., the "alternating" and the "direct" current.

It is too early in the state of the art to determine and fix the features of any one system to the extent required for purpose of useful standardization without restricting the future and desirable development of the system selected. For instance, if the high-tension direct current system should be decided upon as standard, no practical advantage would result unless the voltage should be fixed; no one knows however at present, what voltage should be adopted as a finality for this system and a change in a voltage once established is a serious matter in a direct current system, as it would make obsolete practically all features of an installation in use.

Neither system, as now developed and applied to a typical general case, differs greatly in first and operating costs.

There is danger in endeavoring now to arrive at one standard system of being unduly influenced in favor of one which is at the time enjoying the greatest use, and which may have been the only one available at the time of installation. An example of a system which operates well, but which is conceded to be already out of date for certain kinds of railway usage in America, is the 600-volt direct current third rail system. Main line railroads here are no longer seriously considering the third rail in any form for important main line electrification work. This system is, however, the one most perfectly developed as all features and details have been thoroughly tried out and weak points eliminated. But it is the realization of its limitations which has caused inventors to work to higher voltages and by so doing to get away from the third rail and back to an overhead working conductor system. Assuming that the above statements are well founded, and the writer believes from his experience that they are true, it would appear that the development of electric systems is proceeding along normal and logical lines at present and that there is no reason to force a conclusion at this time by hasty action in any direction. However, there is some reason to feel that this orderly consideration of the subject will not continue because of the views which are being generally expressed by those who are not engaged in operating the railways but are connected with other industries. To be explicit, because this is necessary clearly to explain the situation of the two great electrical manufacturing companies in America, one is committed at present to the advocacy of the direct current system, and does not offer train equipment for the alternating current system; the other company has been responsible for the development of the alternating current system and advocates its use, but will furnish direct current apparatus if the customer prefers.

The telegraph and the telephone companies are unfriendly to alternating current traction because they believe this system may cause them expense or difficulty to prevent inductive effects from the traction current. The commercial central power companies appear to consider it to their interest to advocate the use of direct current traction as the easiest system for them to supply power to, and they are now beginning to plan for the future railway power business. In explanation of this attitude these power companies find it advantageous for their commercial lighting and power loads to use 60-cycle current; this frequency is suitable for direct current traction, but cannot be used for alternating current traction in the present state of the art, without changing the frequency locally, which means added expense, hence they are opposed to the latter system.

While the above interests have decided views and are expressing them, the railways who must use the apparatus have not considered it necessary actively to advocate any particular electric system; they are trying out what they have got and are awaiting further information. Electrical engi-

neers, competent to pass upon the operating as well as the technical aspects of the question, are not very numerous nor very influential, as compared with the powerful interests which are taking a decided stand upon the subject, and engineers are, furthermore, divided in their views upon the question.

The writer wishes it to be understood that he does not wish to advocate any one system to the exclusion of another, and favors a further trial of both the alternating and the high tension direct current systems. However, it will be apparent from what he has said in this report that he considers high tension alternating current to have at present the greater number of demonstrated advantages for general railway use and to hold out the most promise for the future. Therefore, if it is thought necessary to standardize now, it would seem to him illogical to select the high voltage direct current system which has not yet been applied to all railway operating conditions, and which appears difficult of application to some, and to discard a system which has been so applied and is operating economically and well in all cases.

How Federal Valuation of the Roads May be Used*

A Résumé of the Applications Suggested by the Transportation Act and Other Regulatory Activities

By T. P. Artaud

Executive Assistant, Bureau of Valuation, Interstate Commerce Commission

THE USES of railway valuation and the purpose to which it may be put may be treated largely under the heads of:

(1) Those uses which are written into the Transportation act of 1920, and (2) general purposes for which valuation is available but which have not been made obligatory under the law.

Under section 15-A of the *Transportation act of 1920*, the Interstate Commerce Commission is required to prescribe just and reasonable rates under which the carriers as a whole, or as a whole in each rate group or territory, as the commission may designate, may earn an aggregate net railway operating income equal to a fair return upon the aggregate value of the railway property used within that rate group in the service of transportation. It is not to be argued that the valuation work now being conducted and approaching completion under the Interstate Commerce Commission should be the sole and only measure of value as the term is used in the preceding paragraph. But it is not to be disputed that this valuation is one of the most important, if not the most important single factor in determining that value. It is perhaps the only tangible, definite, and unmistakable fact which is available to anybody who is charged with determining the "fair value" of railway properties, but, as has been repeatedly pointed out by the courts, the physical value of the properties must be modified by other factors and considered in connection with them in fixing the sum of "fair value."

(a) Under the transportation act, the Interstate Commerce Commission is required to designate the limits of rate groups and to determine the aggregate value of railway properties within such groups. Having determined that value as a whole, it shall prescribe rates which will yield as nearly as may be a reasonable return on the value of the properties. If the rate structure is too low, there will immediately arise the question of the confiscation of the property devoted to public service. Therefore, it follows that the value must be established definitely and on legal grounds. The value of each rate group having been determined, it becomes possible to test the rate level as between the different groups and to modify or adjust such rate levels in accordance with the needs of the country as a whole. The val-

uation work shows the property devoted to common carrier service separately for each state and for the railroad system as a whole, so that it becomes possible to apportion the properties used in interstate, as distinguished from intrastate service, and to fix rates for these two different classes of traffic.

(b) Under the same section (15-A) the commission is required to determine the value of each individual railroad property and to ascertain the net railway operating income under the rates prescribed in the preceding paragraph. If this return is in excess of the figure set by the commission as reasonable, one-half of such excess is impounded by the carrier in a reserve fund, the uses of which are described in the act; the remaining one-half is to be recaptured by the commission and added to the contingent fund, from which loans shall be made to railroads in accordance with the provisions of this act. It is therefore evident that the valuation work conducted under section 19-A of the act is essential to the fulfillment of this provision.

(c) Under section 5, paragraph 4, the commission is required to prepare and adopt a plan for the consolidation of the railway properties in the United States into a limited number of systems, the par value of the bonds, together with the capital stock outstanding, of which is not to exceed the value of the consolidated properties as determined by the commission under section 19-A, the so-called valuation act. In this paragraph it is expressly provided that the commission shall proceed immediately to the ascertainment of such value of the properties involved in any proposed consolidation. The valuation so fixed shall also form the basis for the rental of property by one carrier to another and the basis of payment for joint use of facilities.

(d) Exclusive of the consolidation just referred to, the total value of securities issued by a corporation shall not exceed the value of the properties as determined by the commission, and no carrier may put out a security issue without the approval of the commission having been first obtained; thus security issues, both existing and proposed, rest directly upon the value as determined under section 19-A of the act.

(e) Carriers are authorized to set up, with the approval of the commission, reserve and depreciation funds, and the additions which may be made in any year are based upon percentages of the value as found by the Interstate Commerce Commission in accordance with section 19-A, the valuation act. Both the

*From a statement presented to the House Committee on Appropriations on December 21, 1921.

amount and the uses to which such reserve and depreciation funds may be devoted are expressly set forth in the transportation act.

(f) The commission is empowered under the act to make loans to carriers out of the revolving or contingent fund set up as heretofore mentioned and to lease to carriers equipment purchased out of that fund. It is implied in the act that the adequacy of the security for such loans shall be tested by the value of the properties together with other considerations relating to the carrier applying for the loan.

Other Uses

The foregoing are some of the essential uses in the transportation act to which the valuation authorized in section 19-A is required to be put. In addition to these, there are certain uses to which it may be put, not at present written into law.

(a) For 25 years or more prior to the passage of the valuation act, the Interstate Commerce Commission consistently called to the attention of Congress the necessity for a valuation of railroad properties in order that a check of the balance sheets of carriers might be made and the system of accounting for all roads might be standardized.

(b) Scarcely less important than the regulatory power of the commission itself is the effect on the investing public of comprehensive knowledge of the financial condition of the railroads. Railroad credit for many years has been impaired to such an extent that it is impossible for carriers to finance their operations on an adequate scale or at reasonable interest charges. Everything which will tend to restore confidence is essential, and a complete inventory and exposition of the assets, financial condition, and operating revenues and expenses is best calculated to produce this result. The impression is broadcast that many railroad security issues are to a greater or less extent "watered," and whether or not this impression be well founded, it is necessary to determine the fact.

(c) Under the Clayton Act, the commission is required to approve in advance of the letting of the contract expenditures amounting to over \$50,000 per annum. There has been gathered by the Bureau of Valuation information relating to every conceivable form of construction or purchase, and this should be of incalculable benefit in checking the reasonableness of prices and the character of work to be done under such contracts which the commission is required to approve or deny. It should form the basis for estimates or at least a criterion for checking every new contract or proposed extension.

(d) Any discussion of the possibilities of Government acquisition, either outright or in any modified form, can not be intelligently carried forward, nor can any proposed plan be considered, without knowledge of the value of the properties.

(e) The valuation work now being performed by the commission should, and doubtless will, when completed, be largely used in connection with the taxation of railroad properties. Closely connected with the question of reasonable railway rates

stands the question of reasonable railway taxation. Some few states tax railways on the basis of earnings, but there is no tendency for this practice to become general. The result is that railway taxation fails to show that degree of uniformity which one might reasonably expect in view of the general uniformity of method. Since railway taxes amount to between 4 and 5 per cent of the aggregate of the operating expenses, and since on this account a reasonable charge on interstate traffic may be affected by the manner in which the states administer their taxing laws, it may well be claimed that the valuation of railway properties becomes a matter of Federal concern. As the valuation of each carrier is determined by the commission this figure is served upon the states in which the carrier is located, together with the underlying data showing the apportionment of the property between the several states. There thus becomes available to each state not only the appraisal of the properties within its limits, but also the figures of value for the property as a whole. Each state therefore has at its hand full information upon which it may proceed to fix the taxes of such of the property as lies within its borders. Whether it makes use of this information or not, it is a matter of the highest concern to the Nation as a whole that the methods adopted within the several states be uniform.

(f) One of the major features in the accounting report underlying the valuation published by the commission is a financial and corporate history of the carrier. This consists of a full and accurate statement of facts and without any inference being drawn therefrom. Its utility is at once apparent. If much or any of the unsound financing, against which so much popular criticism has been directed, has been practiced, that fact will appear; if not, the record will show for itself. If the former, an exposition of the pertinent facts will do much toward correcting the situation, both by throwing the light of publicity on the subject and by pointing the way toward corrective and preventive legislation. If the latter, a clearing away of suspicion will greatly benefit the railroads themselves, the investing public, and the credit structure of the entire country.

There is just one thing further I should like to say. There are a great many extravagant statements made about over-capitalization and other irregularities. I am firmly convinced that this valuation will throw more true light upon and do more to restore the financial stability of the railroads than anything I know, and I think that the public will have a much clearer conception of the railroad problem, and expenditures will be more clearly explained and scrutinized than has heretofore been possible. Congress will have available all necessary facts on which to base further legislation. I know from long experience that if this valuation had been started years ago, it would have prevented such disastrous events as those on the New Haven and Frisco.

Two Types of Container Cars On the Left the New York Central Car; on the Right, Design Developed by the River and Rail Transportation Company

Freight Car Loading

WASHINGTON, D. C.

THE NUMBER of cars loaded with revenue freight during the week ended January 21 was 738,275, according to the weekly report of the Car Service Division of the American Railway Association. This not only represents an increase over the week before but an increase of nearly 30,000

products, merchandise, and miscellaneous freight, the largest increase being shown by the l.c.l. merchandise, while there were decreases in livestock, coal, coke and ore.

Summaries for the weeks of January 14 and 21 are given in accompanying tables. The freight car surplus for the period January 15 to 22 was 396,192, a reduction of 43,000 as compared with the week before. Of the total, 159,109 were box cars, and 183,999 were coal cars.

of locomotives. This, in part, explains the varied character of the itineraries. The shippers' letter says:

"We have thus far made no shipments to the Pacific Coast through Canada except one trainload of 30 freight cars (150 Durant touring cars) which went over the Grand Trunk from Buffalo through Toronto, Ont., and thence to Sarnia, Ont. This was the shipment of December 14. The three shipments were routed as outlined on following page.

"December 5, solid trainload of 150 Durant touring cars in 30 freight cars, for Oakland, California; sent via Pennsylvania to Toledo; Michigan Central to Chicago; Chicago & Northwestern to Council Bluffs; Union Pacific to Ogden, and Southern Pacific to Oakland.

"December 14, second shipment, 160 Durant cars in 32 freight cars, via Pennsylvania to Buffalo; Grand Trunk to Chicago by way of Toronto, Port Huron and Lansing; Chicago, Milwaukee & St. Paul to Kansas City and thence over

along with the train to the Coast, the transfer from the Pennsylvania Lines to the St. Paul road was made at the Union Passenger station. Here the seals of the cars were broken and the shipment inspected.

"These trains were made up at the Greenville yards, south of Jersey City, and this last one was entered in the train

One Hundred Cars of Automobiles Starting a Transcontinental Trip on the Pennsylvania

the Chicago, Rock Island & Pacific, the El Paso & Southwestern, and the Southern Pacific to Oakland.

"December 30, the largest single shipment of any one commodity ever carried across the continent; 500 Durant touring cars carried in 100 uniform steel freight cars of the Pennsylvania. It was routed via Pennsylvania to Chicago and thence over the Chicago, Milwaukee & St. Paul, Union Pacific and Southern Pacific to San Francisco. This train was hauled by two large locomotives. To make the grades through Pennsylvania additional engines were used and the train was divided. At Chicago where officers' cars were attached to carry representatives of the three western railroads

On the Union Pacific

orders entirely across the continent as 'The Durant Prosperity Special.' W. J. Bailey, traffic manager for Durant Motor Company of New York, accompanied the train from New York to Omaha."

At Omaha it was decided to placard the train more effectively and a marker was displayed on the front of the locomotive, as shown in the illustration. It is assumed that after seeing the 100 cars behind the engine no one was left in doubt as to the appropriateness of the name.

Division Accounting—An Operating Viewpoint

The Centralized and Decentralized Plans Contrasted—Methods Worked Out on the New Haven

By J. E. Slater

Special Assistant to General Manager, N. Y., N. H. & H.

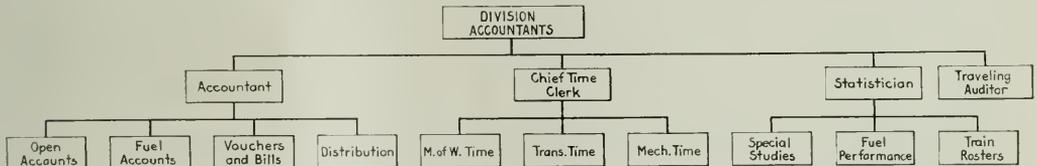

PART I

THE ACCOUNTING of expenses by operating divisions was instituted on the New Haven about five years ago, several years after it had been developed successfully on a number of other railroads. Since that time the original plan has been dropped and another installed. The experiences with the two plans and the reasons for the failure of one and the success of the other, may throw some light on this problem as it exists today.

In the first place it should be stated that this article is written *entirely from the viewpoint of the operating department*. It does not take into consideration the value of division accounting to the accounting department or the merits of any plan of division accounting as seen through the eyes

necessary for the compilation of the various reports are in the one office, and all of the work, with a possible exception of making out the payrolls, is done in this central accounting bureau.

The second plan may be called the decentralized plan. Under this organization, all of the work of compiling the expenses for a designated division is done by a bureau stationed at division headquarters. Any charges properly made against that division must pass through the division accountant's office and no charges from any other source are permitted in the account for that division. The organization is sometimes under the jurisdiction of the local operating officers and sometimes under the accounting department,

Accountant, Chief Time Clerk and Statistician represent actual positions in each office. The chart also indicates the division of the work in the three bureaus.

Organization of Local Division Accounting Office

of accounting officers. The operating officer is interested in accounts as indices of operating efficiency. He demands a scheme of accounting which provides currently accurate statistics of performance and cost, subdivided in such a manner that individual subordinates can be judged on their individual performances. To the extent that division accounting meets these requirements better than other plans, it is of value.

In 1916, the New Haven had relatively few divisional statistics of performance and cost. The cost data available related solely to payrolls. To obtain a complete statement of the expenditures made on any one division it was necessary to obtain information from five or six sources, some of these being on the divisions, others at the general accounting offices. In order to correct this situation and provide detailed indices of divisional performance and cost, divisional accounting was established.

Before deciding upon the plan and method, a study was made of the various systems already in effect. This study developed that there were two general plans radically different with respect to organization.

The Centralized Plan and Decentralized Plans

The first of these may be designated as the centralized plan. Under this plan, the entire division accounting organization is concentrated in one office, usually at headquarters in the office of the auditor of disbursements. The allocations to divisions are made by analysis of payrolls, open accounts, vouchers, bills, etc., and such other supplementary data as may be requested from time clerks, material clerks and others located at division headquarters. All of the data

but in either case the essential element of the scheme, namely, a local organization on each division, is retained.

The centralized plan was adopted by the New Haven in 1916. The reasons at that time were:

- (1) The complicated structure of divisional lines which rendered extremely difficult allocation of expenses to the actual operation on each division.
- (2) The greater facility of supervising compilation of the large amount of necessary data.
- (3) The greater ease of standardizing methods.
- (4) The fact that fewer changes in accounting methods would be necessary at the source.
- (5) The lower cost.

New Haven Divisions Not Well

Defined Operating Units

It will be noted that only the first of these reasons directly concerns the operating department. The others have to do solely with accounting department organization and administration. The first reason is, however, a very important one. The New Haven differs from most lines on which division accounting has been established in that its divisions are not well defined operating units. Each division is of necessity made up of a network of main line and branches. The result is a short mileage along any one route. Engines and crews are not confined to the division to which assigned. For example, passenger train crew runs from New York to Boston cover portions of five divisions and engine crew runs from New Haven to Boston cover portions of four divisions. The train service payrolls of one division, therefore, cover service on several others and fuel loaded on tenders at one division enginehouse is consumed on parts

of other divisions. The allocation of these expenses, therefore, to the division on which the expense is actually incurred is obviously more easy in a central bureau where all the data covering the runs are available.

Division accounting under the centralized plan was continued until the early part of 1918 when it was discontinued as a war economy. The experience of these eighteen months, however, demonstrated that, from the operating viewpoint, this method was not satisfactory. The reasons were:

- (1) The figures failed to reflect accurately the operating results on each division.
- (2) The plan did not provide figures promptly after the close of the period.
- (3) No supplementary data were given to the division forces in addition to regular statements.

Limitations of Centralized Plan

The failure of the statistics to reflect actual operating conditions was due to the attempt to allocate all expense to particular divisions. This resulted in superintendents being charged with items over which they had no control. Moreover, other factors were included, such as journal entries carrying adjustments, which often changed radically the results shown. When these facts became apparent to the division officers, their confidence in the statement was naturally lessened. This lack of confidence was accentuated by the fact that they possessed no detail of the items which brought forth criticism.

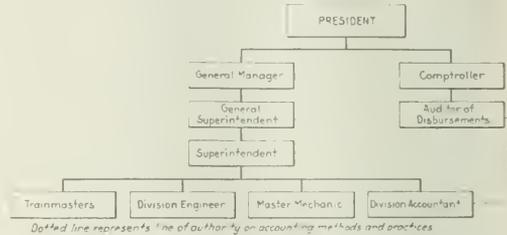

The failure of this system to produce the statistics promptly was also a serious hindrance to the satisfactory results under the centralized plan. It is axiomatic that statistics must be up-to-date to be of value. Under the centralized plan, the allocation of expense followed the closing of the books in the general offices. The statements containing the divisional information were issued about three weeks later, or six weeks following the period covered. Statistics issued so long after the close of period cannot be of material assistance to operating officers.

The failure of the centralized plan to provide supplementary data in addition to regular statements was due to the

In 1920, as a part of the general plan to standardize and improve accounts and statistics, consideration was given to the re-establishment of division accounting. For the reasons already enumerated, the centralized plan was discarded and a detailed study made of the problems to be met under the decentralized plan.

Reasons for Adopting New Methods

Chief of these questions was the line of authority and responsibility. On most railroads where the decentralized plan is in effect, the division accountant reports to the superintendent, receiving instructions as to accounting methods and practices from the accounting department. Under the alternative plan, the division accountant reports to the accounting

Line of Responsibility of Division Accounting Organization Under the Operating Department Plan

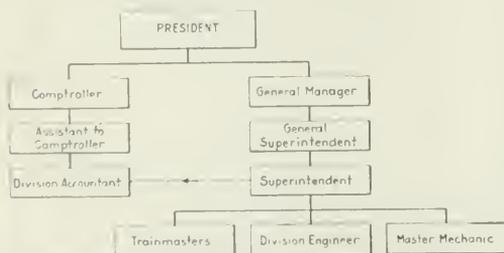

department, but co-operates with the operating organization and gives division officers the information which they require. After a careful study of the advantages of the two plans, the latter was adopted.

The reasons governing the New Haven officers in making this choice were:

- (1) The policy in recent years of concentrating all accounting and compilation of statistics in the accounting department.
- (2) The difficulty in former years in obtaining accurate and uniform statistics from operating offices.
- (3) The necessity under the operating department plan of utilizing a considerable force of traveling accountants, to check the work on the divisions and to maintain standardized methods and practices.

The first of these reasons being a matter of policy requires no comment. The second reason is based on a practical situation of great importance. Superintendents, for the most part, are not interested in the methods by which certain statistical results are obtained. If these results accurately reflect operating performance, the statistics themselves are of interest. The methods are likely to be waved aside as mere book-keeping. It is admitted that any superintendent is materially assisted by accounting knowledge. This fact is undoubtedly the controlling element in the admirable practice on the Great Northern of requiring certain accounting training of its superintendents. Nevertheless, on most railroads the majority of the superintendents do not have this knowledge, and view accounting problems as of relative insignificance.

With this practical situation as an initial problem, one must realize the great importance of proper supervision of methods employed. It is admitted that the results are more important, but to produce the results, the methods must be adequately supervised. If the superintendent is not interested or has not the necessary knowledge to provide this supervision, a corps of traveling accountants must be maintained. This method, however, cannot produce as favorable results as when the division accountants report to the accounting department and are held strictly responsible for the use of proper methods.

Dotted line represents line of procedure covering requirements of statements and information

Line of Responsibility of Division Accounting Organization Under the Accounting Department Plan

fact that the figures were not compiled locally. In the central bureau, certain information was collected, separated and allocated to divisions, but the peculiar and differing requirements of individual officers could not be met. The net result of the system from the view point of the division officer was a large and complicated statement which reached him about six weeks after the close of the month, and which contained no detailed and specific data compiled in accordance with his views and requirements.

It will be noted that the net result of the centralized plan, from the operating view point, was three fundamental disadvantages, largely inherent in the plan itself, as opposed to one advantage

Division Accountant as a Member of the Superintendent's Staff

Nevertheless, it must be admitted that there are important advantages in making the division accountant a member of the superintendent's staff. Just as in the alternative plan, the division accountant is in closer touch with the accounting practices and problems, so, if in the operating department, he is in closer touch with operating problems. The operating officer is interested in results, both as a measure of his own performance and as a guide to check the performance of his subordinates. If the division accountant is in the operating department, he, too, is interested in the results and consequently is more likely to check and analyze them and to furnish the answer to his superintendent. In other words, the point of view of the division accountant is largely influenced by that of his superior, and it is as important that he be interested in results as in the technique which determines how these results should be compiled.

A second important advantage of the plan making the division accountant an operating representative, is the view point of the superintendent himself. It is human nature that a man has more confidence in results he has himself obtained than in those worked out by others. Likewise, a superintendent is likely to be more interested and to have more confidence in results obtained by his own subordinates than in those presented to him by an officer in another department.

Co-operation Between Departments Necessary

Regardless of the relative merits of either plan of organization, both require complete co-operation between accounting and operating departments. Both groups of officers are vitally interested in the questions of the accounting organiza-

tion and personnel. Both are especially interested in the selection of the proper men for division accountants. The ideal man should have a thorough knowledge of accounts, and equally important, an understanding of operating conditions, problems and requirements. He should be as watchful for weaknesses in operating performance as for accounting errors. He should keep the division staff posted on the many details of performance and cost which the latter cannot follow personally from day to day. His aim should be to furnish not only all data which may be called for, but to furnish information which is not requested. In the latter rests the greatest possibilities for division accountants.

The efforts made by the New Haven to insure the proper amount of co-operation is reflected in the organization and personnel in the division accounting offices. Of nine division accountants, five had their principal experience in the operating department, and some of these had previously had no accounting department training. Moreover, the division accountant has three principal assistants, an accountant, a chief time clerk and a statistician. Of these, the first is naturally an accounting man with all or most of his experience in the local or general accounting offices. The second must, of necessity, have had long training in time keeping, and most of the chief time clerks formerly held that position under the superintendent. The third bureau head in almost every case was taken from the operating department, and is expected to know the operating details and problems of the division to which he is assigned. From this it will be readily seen that from an organization point of view every attempt has been made to reach the proper balance between the two departments and to establish that close co-operation which is so essential.

Interesting Suggestions at R. B. A. Dinner

Included in Addresses by Eugene Meyer, Jr., and Frederick P.

Fish—Annual Meeting Takes Important Action

ABOUT 1,600 railway executives and railway supply men were in attendance at the thirteenth annual dinner of the Railway Business Association held at the Waldorf-Astoria Hotel, New York, on February 1. Addresses were delivered by Eugene Meyer, Jr., managing director of the War Finance Corporation, and Frederick P. Fish, chairman of the National Industrial Conference Board. President Alba B. Johnson gave an analysis of the present situation, made especially interesting by the inclusion of a number of humorous definitions of an optimist. Charles M. Schwab, who was present, was also called up to make some remarks.

Eugene Meyer's Address

Mr. Meyer spoke of the work which has been done by the War Finance Corporation with reference to the sale of the equipment trust certificates and with reference also to the assistance given to assist in stabilizing conditions in industry.

"The program for marketing railroad equipment trust certificates from the Government is substantially completed," he said, "and the needs of the administration are amply supplied out of the funds already raised. It is merely a question now if anybody wants some more."

Continuing he said in part:

"If anyone thing has made difficulty for the railroad industry and for the industries that depend upon the railroads more than any other, it has been the decline in the gross volume of business. With large fixed charges, inelastic

charges that cannot be controlled for the most part, your industries must run at or near the capacity of the transportation plant to be prosperous. You cannot control your fixed charges, your taxes or a large part of your overhead; and more perhaps than any manufacturing industry you must have a volume of business approaching the capacity of your plant in order to be even fairly prosperous.

"It was an unfortunate fact that when the railroads were returned from the Government to private control there existed a freight blockade and a congestion in traffic without precedent, I think, in the history of this country in time of peace. The financial credit strain existing at that time and subsequently was accompanied by collapsing markets and collapsing prices, and when the raise in the freight rate schedules was made effective in the fall, that collapse in prices and markets was well under way. It was unfortunate, perhaps, that when the freight rates were raised the collapse in the markets and prices was becoming acute, because it led to an altogether false and exaggerated idea of the relationship of the freight rate increases and the diminished volume of business and diminished volume of tonnage for the railroads. It is always difficult to trace cause and effect in such complex situations as we have been living through in the past year and a half, but with the strain and worry in every department of our economic activity it was not unnatural that every department of industry sought to find in some other activity the cause of its troubles.

"The railroads today find themselves between the pro-

ducers and the consumers of the country; the producers who do not get an adequate return for their labor, their risk and their capital involved; I mean the agricultural producers; and the consumers that pay, they think, too much for their necessities. This position between these two elements is one that you have to face in this industry. There is in every drama a villain, and you are in danger of being cast for the role unless you can analyze the facts, present them, and make clear to the country the causes and proper remedies for the difficulties.

"The problem of the adjustments of the railroads and allied industries to the new conditions that confront you, have to be met. These adjustments have to be made, I feel, with somewhat of a radical turning of the railroad minds from old conditions. I do not see an immediate prospect of the wholesale repeal of legislation as an immediate relief in the near future. Others have pointed out that the difficulties of the railroads are enchaned by the Panama Canal, good roads built at public expense and financed by tax-free securities, and the gasoline engine without a franchise and without great taxation competing with railroads in parts of this country. But these things have come to stay. We must face the future and try to deal with the problem in the light of the facts as they are.

Seasonal Fluctuations

"One important and revolutionary factor in the last generation which seems to me perhaps to be very much neglected in the consideration of the railroad situation, is the development of a system of national marketing. Coming as I do in contact with the various activities in various parts of the country, this fact has struck home as one of the important fundamental features to which perhaps too little importance is paid.

"You know that in the past hundreds of thousands of freight cars have been fully employed in October and unemployed in March. But as the wheat from the northwest and the cotton from the south and all the commodities were rushed to market in the fall months freight congestion, car shortage, developed and interfered with economic operation, and then in the spring, when it was all rushed to market by methods confused and disorderly and undeveloped, and unworthy, I think, of a civilized nation, we sat down in the spring with no business for the railroads and lots of idle cars.

Your membership has been co-operating, railroad men and men of the railroad industries in every way that I have ever been able to think of asking them to co-operate. During the war, and when the appropriation failed in March, 1919, and again during the past few months, the railroad industry have accorded the War Finance Corporation every possible help. It has been our good fortune in recent months to have the power and ample resources to go into this western country where the great bulk of our producers live who are suffering and have been, and do something to help them. Corn today in Iowa is selling for 35 cents on the farm, without any particularly important increase in the contract market, as against 15 to 18 cents when I was there in September.

Sheep are selling at a fair price. Cattle have ceased to be sacrificed to breeding herds in immature stock. The feeding operations in the Corn Belt have been restored to a great extent and in all of this work we have had your co-operation, and I hope we will continue to have it. We have had to ask in the Western country that the bankers and business men and the stock growers, the cattle men, who have been in great distress, by creating banking institutions to help us make our land effective, I mean companies known as cattle loan companies. And your railroads and business men in these communities have come forward and lacked these enterprises, these companies, with new capital in those

distressed states, so that today we have more capital invested, I mean private capital, in the live stock financing companies, in the new companies, than existed on October 1st in all the companies that had grown up previously to that time, and these new companies are enabling us to lend on a safe basis by millions in the great states where the cattle industry is so fundamentally a part of all of our industry, and the railroad men who are interested in that territory and who have followed our work with close interest, have been most helpful in stimulating the public sentiment to form these new companies that mean salvation to those people.

F. P. Fish's Address

Mr. Fish, in his address, discussed principally railroad labor matters. He began his address with an analysis of the present labor situation. He then suggested that one of the difficulties at present was the fact that matters of rates are handled by one body and matters of wages by another, and he proposed also that a study of the entire railway situation should be made by an impartial public board composed of such men as Elihu Root, Charles Evan Hughes, etc. He also made a plea for the incorporation of labor unions and showed wherein that would help the situation measurably.

With reference to the Interstate Commerce Commission and the Railroad Labor Board, he said: "It is not enough that these two Boards will act in the utmost good faith, but they will co-operate, they will consult together; it is logically and from a business point of view utterly absurd that the two functions should be separated. I am not going to make any suggestions as to how it should be done. There are many ways that obviously occur to any of you. It may well be that the whole thing should be put in the power of one board or one commission, and whatever is done that commission should be large enough and should be so well organized that it could not only deal with all these questions and take the whole responsibility of correlating the expenses which they control with the rates which they control so as to get the results that the Esch-Cummins Act was intended to make, but it should be so organized that that thing and all other questions coming before that board should be decided promptly. As I look back over what I have seen of the action of the Interstate Commerce Commission during all these years, the one great criticism that I make upon it is that their action has never been prompt. There have been delays after delays in the settlement of questions that should be settled immediately one way or the other, and I firmly believe that one of the great things that must be produced and developed in the near future is such an organization as will act comprehensively and will act promptly.

Mr. Fish's most interesting proposal was that of an intensive study with a view primarily to formulating principles by a body of impartial leaders of public thought. On this subject he said:

"It is one of the difficulties which we find with reference to all these innumerable boards that have been established during the last thirty or forty years, national and state, that they are turned loose and without any established principles to guide them, thereby being utterly different in character from the courts, which have developed logically from the earliest traditions of mankind. They have principles, and it is the function of the courts to develop and apply those principles as new cases arise. But these commissions have had largely to make their own principles, and they have drifted along from day to day, building up certain traditions. Sometimes they have recognized that they have made mistakes, and have corrected them, but generally it has been a growth without any solid fundamental principles which are to be developed and applied.

"One thing that I would most respectfully and humbly suggest is that today there is nothing that could be done that would be more important among those things that can be

done under the present legal situation than all these boards, particularly the Interstate Commerce Commission and the Labor Board, which has had but a short experience and has acted with the utmost good faith apparently, in the face of tremendous difficulties, should sit down today recognizing that the conditions of today are utterly unlike those not merely of thirty years ago but of five years ago or six years ago, and see if they cannot work out for themselves a more definite and settled series of principles than any that they have, and principles that are not based merely upon tradition or upon the situation as it existed five or thirty years ago, but that are brought up to date, that fit the conditions of this time, so that in their rules, in their regulations, in their laws which they establish and in their methods, they shall deal not with an academic problem, which may be dealt with in any old way—for an academic problem has little relation to realities—but with the exigencies of today, which is the period and the time with which we are tremendously interested.

"I go even farther with a suggestion that very likely will not receive approval from any source, and that is this: The changes in the situation from thirty years and seven years and six years to the present time, when you stop to consider them, are enormous. There is hardly any relation between the two, and yet we have these schemes of regulation, these boards for regulation, that were created when the situation was utterly different from what it is today, and which have practically drifted from that time to this. Would it not be a most excellent thing for the railroads, a most excellent thing for this country and for every individual in this country, if there could be an intensive study made of the entire situation which would determine what, in view of the present conditions, is required by way of regulation, how far it should go, what is essential, what is unessential, what should be the nature and character of the regulation, what methods should be employed, and how the whole matter should be correlated in such a way as to fit present conditions. Now, such an intensive study as that, which I suggest, can never be made by Congress. Congress has too much to do. Its affairs are so complicated that it cannot deal with such problems with intelligence, and the result is sure to be a want of clearness, a want of certainty, want of sanity, such as I think you can see in the Esch-Cummins Bill, which to me, as I have already stated, is evidently the result of an effort on the part of Congress in the utmost good faith to help in this situation. The board that I would suggest is one that is made up of the best men in this country, not necessarily railroad men, not necessarily laboring men, not the favorite tripod organization of laboring men, railroad men and the public, but men who are selected because they are intelligent, because they are strong, because they are used to dealing with great questions, and because they have the ability and the power and the intelligence to get help from everybody, and after they have got the facts, have the power and capacity to study those facts and the imagination to devise ways and means for putting the matter in the best possible shape. The type of men I have in mind for such a board would be illustrated by Elihu Root and by Mr. Hughes, eminent public citizens. They were put into positions for which they had no experience, political, international, and they have made good, and they would have made good anywhere else. There are a good many such men in this country, and if there was a real effort made to find them, the responsibilities of such a job, the fact that it is a matter of such great public importance, would attract them. I respectfully submit, for your consideration, the desirability of an immediate complete survey of this whole situation by outside men, who will study it thoroughly and intelligently, and report, and, by their report, the public could be well informed. On their report, Congress could act safely, accepting or rejecting whatever their specific recommendations were, but in every

case finding recommendations that were the result of careful thought and so put that their validity could be measured.

Annual Business Meeting

The feature of the annual business meeting of the Association held on Wednesday morning was the passage of a resolution opposing the creation of a commissioner-general of transportation as proposed by the railroad committee of the Chamber of Commerce of the United States. (*Railway Age* of January 28, 1922, page 273.) The resolution which was adopted only after some discussion, concluded with the words: "An officer designated as the President's representative to discuss railway problems with committees of Congress and federal agencies, including the Interstate Commerce Commission, would be a wholly new feature in our government, for which we see no occasion and in which we fear the possibility of pressure tending to impair the independence of those charged with railway regulation or legislation."

The meeting received and acted on the report of the executive committee, the report of the committee on equipment policies, etc., and elected officers for the ensuing year.

The report of the committee on equipment policies dealt chiefly with the matter of automatic train control. With reference to the Interstate Commerce Commission's recent order, the report contained the statement, "Concerning . . . whether or not the time is suitable from the financial point of view for these installations, most, and we have no doubt all, of the carriers view with grave anxiety the confirmation of any such order at this time."

Resolutions

The resolutions which were adopted follow:

I. RAILWAY CREDIT

We welcome the growing recognition that the pervasive benefits to flow from resumption of large-scale railway buying can be brought within reach only through financial rehabilitation of the roads. An indispensable requisite is new capital and hence investors' confidence. Of such confidence the essential condition is that compared with other enterprises railroads shall yield an attractive income and that stability in this respect shall be forecast by the public and governmental attitude. Such attitude will take concrete form in the degree of steadfastness with which volunteers organize and labor to preserve in the Transportation Act and its administration the policy of rate-regulation designed to yield adequate railway income. Occupational groups are coming to a better understanding. This will bring fuller comprehension of the stake which each group has in enabling the railways to resume large buying and will promote harmonious action to accomplish the necessary reassurance of investors.

II. THE WAY TO BUSINESS RECOVERY

Return of general prosperity can in no way be so effectively promoted as through resumption of large railway purchases. Industrial, mercantile and agricultural shippers have a greater concern in adequate railway income than in lower rates. Factory and farm alike are suffering from curtailment of markets through impairment of buying power. The war abnormally enlarged mines and mills, which in many cases are letting demand approach existing capacity before creating new. The railroads on the contrary, due to restrictions affecting credit, came to the war period with serious arrearages of provision, which have been aggravated during and since federal control. A relatively small gain in traffic would overtax facilities again as in the fall of 1920. The underdevelopment and undermaintenance of the railroads warrant replacements, improvements and extensions vast enough to use all the capital which would be available under the best conditions. Large railway purchasing, in itself prudent and far sighted, would start up industry and trade. It would readjust prices by re-establishing a balanced relation between farm products and the manufactured goods for which they are exchanged. By reviving the pay-rolls in every community it would bring back the buying power throughout the United States which always and especially now is the farmer's chief reliance, and enable him to purchase miscellaneous commodities in normal volume.

III. TRANSPORTATION ACT

We favor a reasonable experience of the Transportation Act of 1920 without modification of the rule of rate-making. Since

the railways were relinquished to their owners conditions have been extremely abnormal and are unlikely to recur. The Commission has said "The rate adjustment cannot with advantage be made dependent upon fluctuations in traffic * * * The duty cast upon us by Section 15a is a continuing duty and looks to the future * * * What is contemplated by the law is that in this exercise of our rate-making power the result shall reflect our best judgment as to the basis which may reasonably be expected for the future to yield the prescribed return." Judgment requires experience. Experience should have time to develop before we subject the Commission, the users of transportation, the country and the railway managers to another legislative upheaval. Amendments can be intelligently considered only after a period of average tonnage and average gross earnings under moderate rates and under labor cost adjusted to levels prevailing in other employment.

IV. UNIFIED CONTROL

Proposals for repeal of the federal control established in some sections of the Transportation Act of 1920 show that certain misunderstandings are not yet obsolete. Congress has been urged to restore State control of car service and of rates. It is argued that State commissions give shippers more satisfactory response. The fact that the car supply is national, the seasonal mobilization at points of demand necessarily centralized and the State authorities helpless to conscript cars as the Interstate Commerce Commission can and does, for movement across State lines. What provides the national car supply is the financial strength of the individual road, whose revenue comes from its total traffic—about 15 per cent state hauls and the rest interstate hauls taking rates based upon the sum of the locals. Neither as to car service nor as to rates has the federal commission interfered with the state authorities except in major emergencies and then only after consulting them. We favor preservation of federal control where state regulation conflicts with federal.

V. RESPONSIBLE RATE REVISION

Many shippers and some leading traffic associations refrain, in our judgment wisely, from attempts at political pressure in rate revisions. They proceed instead in an orderly manner by negotiation with the carriers or on appeal from them by presenting testimony and argument before the Interstate Commerce Commission as before a court. Statements and proposals affecting rates which federal executive officials or members of Congress may present are apt to be ex parte and obstructive rather than helpful in the quest for wise action. In discouraging rate revision by influence and clamor nobody has a greater stake than the shippers. If the Commission succeeds in its task of establishing a rate structure stable as well as satisfactory in other respects the shippers will enjoy efficiency of transportation, regularity of railway purchases as an offset against business fluctuations and fixity of competitive rate relations made possible when general rate revisions are infrequent. The Commission can perform its function only if it has public support for an administration of the statutory policy based upon its long and wide experience and its continuous current survey of the situation as a whole.

VI. COMMISSIONER GENERAL OF TRANSPORTATION

Having considered the summary of recommendations reported by the railroad committee of the Chamber of Commerce of the United States to the board of directors for consideration at the meeting of the National Council to be held in Washington, D. C., February 8 and 9, 1922, at which time that body will be asked to advise the board of directors on the questions involved, the Railway Business Association opposes the creation of a Commissioner General of Transportation for the purposes set forth in that report. An officer designated as the president's representative to discuss railway problems with committees of Congress and federal agencies, including the Interstate Commerce Commission, would be a wholly new feature in our government, for which we see no occasion and in which we fear the possibility of pressure tending to impair the independence of those charged with railway regulation or legislation.

VII. THE LABOR BOARD AND THE COMMISSION

The Interstate Commerce Commission has said: "While the law makes no provision for co-ordination between the Labor Board and the Commission, the desirability of contact between the two bodies is appreciated. Since the creation of the Labor Board informal conferences have been held from time to time, and will without doubt be continued in the future. We have been particularly solicitous to procure and have at hand such statistical information as may aid the Labor Board in its work." We urge initiation and maintenance of such contact between the Labor Board and the Commission as will assure a relation of labor cost to net railway income fair alike to the employees, the railways, the shippers and the public.

VIII. SHIPPERS AND THE LABOR BOARD

In the adjustment of railway labor disputes shippers and other citizens are parties in interest. The public has a permanent stake in continuity of service. Its concern is supreme in the restriction of operating cost to a level which under rates that move the traffic will yield net income sufficient to support railway credit and so provide adequate facilities without resort to government ownership and deficits taken from the tax levy. Employers of labor in the field, forest, mine and mill are entitled to protection against government action which raises the cost of railway labor, for which they compete, above levels which other industries can pay and then pyramids their burden by assessing upon them in freight rates the increased cost of the railway labor. Cases before the Labor Board involve interpretation of the law and determination of administrative policy. The Labor Board should give shippers the fullest opportunity to be heard. Besides according shippers their clear right this course will give dignity and stability to the Board itself by bringing shippers' advocates off the hustings into a proceeding which will and should acquire a quasi-judicial atmosphere. We hope that the Board will hereafter permit shippers to intervene as parties.

IX. STABILITY OF RAILWAY PURCHASES

We reaffirm our conviction that railway purchases prearranged for periods when general business is dull would tend to stabilize prosperity in every field and promote economy in railway management. We note with encouragement the attention that the Department of Commerce, committees of Congress and business associations have been giving this subject, broadened to embrace public works and public utilities. Stable purchases by large buyers would minimize unemployment of labor in every occupation. It would cut down idleness of plant and of organization, permitting a smaller investment and overhead to do the total work of each decade. This would tend to reduce interest rates and to liberate capital for development of the country in other directions. It would enable the units which resorted to it to buy when cost of labor and materials is lowest. Public works would bear more lightly on the tax-payers, while railroads and public utilities could operate satisfactorily on lower rates. Facilities would be maintained and enlarged adequately for each recurring peak of load. By tending to keep normal the industrial and commercial payroll and hence general consumption of farm products it would help stabilize the farmer's output in volume of demand and in price. For realization of such a policy it is requisite that its desirability be generally recognized by those who have responsibility for construction programs and that advance financial provision be made possible by effecting in ways consistent with the public interest an accumulation and reservation of funds and credit in prosperous years to be drawn on for vigorous maintenance and improvements in dull years.

X. INCOME SURTAX RATES

It is of great public consequence that a clearer understanding should prevail concerning the taxation of large incomes. Many have an impression that income taxes in some way take money from the rich and spread it among the poor. Advocates of high surtax rates persuaded the Senate to raise the maximum from the House rate, 32 per cent, to 50 per cent, and the House to concur. As a class the supposed beneficiaries of this provision are its victims. The 50 per cent surtax little if any affects the incomes of the rich, who can invest their surplus in tax-exempt securities; but it takes away the whole income of the poor man who loses his job when the rich man's income is diverted from enterprises which otherwise would give the poor man work. What railroads pay for capital is increased and the supply diminished. Hence the public pays higher rates and yet suffers from famine in a prime necessity—transportation facilities. Directly affected is the farmer, whose dependence on transportation is special and the demand and price for whose goods are largely contingent upon the prosperity of the very industrial enterprises whose payrolls, with their buying power, are restricted through the surtax. At the earliest moment Congress should reduce the income surtax rates.

Election of Officers

Officers were elected as follows:

By the general executive committee, Alba B. Johnson as national councillor in the Chamber of Commerce of the United States.

The association in annual meeting re-elected the following: Alba B. Johnson, president, and W. W. Salmon, W. W. Willits, Knox Taylor, W. H. Woodin, S. G. Allen, Stephen C. Mason and Charles J. Symington, vice-presidents. P. Harvey Middleton was elected treasurer and will also serve as assistant secretary.

General News Department

The Central of Georgia reports that for the 12 months of the last calendar year 98.7 per cent of its passenger trains maintained schedule time.

The New York, New Haven & Hartford reports the total number of passenger trains run in 1921 as 505,853, of which 91.1 per cent, were on time.

The Great Northern ore dock No. 2 at Allouez, a suburb of Superior, Wis., was practically destroyed by fire on January 30, with a loss which may reach \$2,000,000.

The American Society for Steel Treating will hold a sectional meeting Friday, March 3, at the Engineering Societies' building, New York City.

The Western Maryland has let to W. K. Hosier the contract for the operation of its repair shops at Elkins, Va. About 100 men have been employed at these shops.

The American Wood Preservers' Association in the closing session of its annual convention which was held in Chicago on January 24, 25 and 26, voted to hold the next meeting in New Orleans, La., on January 23, 1923.

The engineman and fireman of an eastbound passenger train on the Baltimore & Ohio were killed and several passengers injured in a head-on collision with a westbound freight train near Noble, Illinois, on February 1.

A fire at Willis avenue and 132d street, New York City, on January 28, destroyed the brick office building of the New York, New Haven & Hartford Railroad at that point. This building was four stories in height and 200 feet long.

The presidents of the Eastern railroads, at a conference in New York City, on January 31, decided to appoint a committee of general managers to canvass the 52 principal roads east of the Mississippi river and north of the Ohio to determine the sentiments of the roads in regard to complying with the suggestion of the Secretary of Commerce for regional conferences with the leaders of the employing brotherhoods.

Inspectors of Locomotives are wanted by the Interstate Commerce Commission, salary \$3,000 a year. The United States Civil Service Commission announces that applicants will be examined on March 8 and 9 at the usual places throughout the country. Inspectors of safety appliances and inspectors of hours of service are also wanted, at the same salary, and examinations may be taken on March 22 and 23.

The Pennsylvania Railroad, looking for revenue from all practicable sources, offers to sell advertising space in some of its passenger cars and ferry boats; the coaches operated in electric service out of Broad Street Station and between Camden and Atlantic City, and the ferry-boats operated between Philadelphia and Camden and Jersey City and New York. Of the cars involved, 111 run between Philadelphia and Paoli, Germantown and Chestnut Hill, and 94 between Camden and Atlantic City. There are ten ferry-boats running between Philadelphia and Camden, and eight between New York and Jersey City.

Erie Contracts for Handling Freight

The Erie has contracted with the Consolidated Freight Handling Company, Youngstown, Ohio, to handle the road's less-than-carload freight through its freight houses at Cleveland, Akron, Youngstown, Warren, Barberton, Ashland and Mansfield in Ohio, Corry, Sharon and Meadville, in Pennsylvania, and Jamestown, N. Y. Under the terms of the contract, the freight handling company becomes the lessee of the freight houses and adjacent property required for such work.

Automatic Substations on Electric Line

The Oregon Electric Railway has placed a large order for automatic railway substation equipment with the General Electric Company. Manual operation will be changed to automatic in seven substations and with the exception of one station in the City of Portland, automatic substations will supply all of the power required for the 180 miles of track on this road. Power is supplied to the overhead wire at 1,200 volts.

More Common Officers and Directors Authorized

The Interstate Commerce Commission has issued an order authorizing common officers and directors among companies comprising the Erie system. L. F. Loree has been authorized to retain his offices and directorates in the Delaware & Hudson and subsidiaries, the Kansas City Southern, Seaboard Air Line, Wheeling & Lake Erie, and other companies, and to remain either as director and member of the executive committee of the Baltimore & Ohio or the Erie or the Pere Marquette.

Directors Moore and Stotesbury

The Interstate Commerce Commission has denied the application of William H. Moore for authority to retain the positions of director of the Lehigh Valley and of the Delaware, Lackawanna & Western. E. T. Stotesbury has been authorized by the commission to hold until further order the position of director of the Lehigh & Hudson River and either the position of director of the Lehigh Valley and certain named subsidiaries or positions with carriers of the Reading System including chairman of board of directors of the Philadelphia & Reading, and director of various subsidiaries. He is given 30 days in which to make his election as to which positions he will hold.

Southern Pacific Erecting Large Commissary Building

The Southern Pacific has under construction at West Oakland, Cal., what is probably the largest commissary department plant in existence. This establishment will include laundry facilities for the handling of one million pieces of linen a month, a butcher shop with cooling and chill room and a bake shop. About 250,000 meals are served each month by the different branches of the service under the Southern Pacific Commissary Department's jurisdiction. Waiters are schooled at the plant in their duties, examinations are held once a month and the successful applicants are given graduate waiters certificates. Monthly examinations are also held for chefs applying for certificates of a similar character as well as for cooks seeking promotions to the position of chef.

Progress in Engineering Standardization

Beginning with 1922, the Engineering Division of the American Railway Association became a member body of the American Engineering Standards Committee. E. A. Frink, of the Seaboard Air Line, who is chairman of the standardization committee of the division, represents the division upon the American Engineering Standards Committee.

Arrangements have just been completed by this organization whereby co-operation with the standardizing bodies in other countries will be made more effective. In order that all standards will be available to the industries of the various countries, each national body will sell the approved standards of the other bodies. The American Engineering Standards Committee, 29 West Thirty-ninth street, New York City, has available the publications of the standardizing bodies in Austria, Belgium, Canada, France, Germany, Great Britain, Holland, Sweden and Switzerland. Copies of the standards may be obtained at a nominal cost, or the copies on file may be consulted at the offices of the committee.

Tie Producers Meet in Chicago

The National Association of Railroad Tie Producers held its fourth annual meeting at the Hotel Sherman, Chicago, on January 26 and 27. Tie producers were present from all parts of the country. Consideration was given to the present purchasing policy of the railways and to other problems affecting the production of cross ties. The following officers were elected for the ensuing year. President, J. H. Johnson, B. Johnson & Son, Richmond, Ind.; first vice-president, Timmons Harmount, Harmount Tie & Lumber Company, Chillicothe, Ohio; second vice-president, H. M. Cochran, Union Lumber Company, San Francisco, Cal.; secretary, Warren Nixon, Western Tie & Timber Company, St. Louis, Mo., and treasurer, R. E. McKee, Long Bell Lumber Company, Kansas City, Mo.

Southern Pacific Stock for Employees

Employees of the Southern Pacific System, beginning on February 1, will be given the opportunity to buy shares of the capital stock of the company, at the market rate, without payment of commissions. The plan provides that, on application by the employee, the company will buy the stock in the open market, deducting the purchase cost from his monthly pay, at the rate of \$5 a month for each share. An employee may buy from 1 to 15 shares of stock, according to his ability to pay for it. It is also provided that, having completed a specified purchase, the employee may buy additional shares but at no time is he to be paying for more than 15 shares at one time. Failure to pay three successive installments will terminate the employee's rights to complete the purchase. The company will charge the employee 6 per cent interest on the cost of the stock bought for his account and will credit him with dividends paid on the stock held for him. With the stock selling at 81½ and dividends at six per cent, the employee makes a profit on the money advanced to him.

Expenditures for Valuations—\$75,000,000

In a bulletin issued by the Presidents' Conference Committee on Federal Valuation under date of January 20, the statement is made that a total of \$11,480,923 was expended for valuation work by Class I carriers reporting to the Presidents' Conference Committee, during the year ending June 30, 1921, making the total reported expended by these carriers for the eight years ending June 30, 1921 (with a few omissions) \$54,120,957. The expenditures of the Government's Bureau of Valuation for the year ending June 30, 1921, were \$2,728,656, while the total expenditures by the Bureau from the beginning of the valuation work to June 30, 1921, as reported in the annual reports of the Interstate Commerce Commission to Congress have been \$21,462,809. In this same statement there is quoted testimony, presented before a sub-committee of the House Committee on Appropriations by T. P. Artaud, executive assistant of the Bureau of Valuation, to the effect that the number of employees in the Division of Valuation has been reduced from 1,016 in December, 1920, to 553 in December, 1921.

Live Stock Claim Prevention

At a live stock loss and damage reduction conference held recently in Chicago, the freight claim division of the American Railway Association presented facts and figures showing what the railroads are doing to prevent loss and damage to live stock shipments. For the eight months ending August 31, 1921, the railroads expended \$2,567,309 for loss and damage of this character. Of this amount \$1,021,172 was the direct result of delay; \$3,037,718 was entered as damage; \$19,147 as unlocated loss; \$101,410 as resulting from train wrecks; \$91,425 loss due to errors of employees; \$54,030 from defective or unfit equipment; \$42,562 misrouted or handling and unloading; \$12,076 robbery and \$3,337 for loss.

The report of live stock loss and damage expenditures during recent years shows that the situation has been improved materially and this is reflected both from the records of the various stock yards and of carriers handling different phases of live stock shipment matter. The Hartford Live Stock In-

surance Company finds its present claims the lowest in the history of the company. Reporting for 11 western markets, the Western Weighing & Inspection Bureau has prepared statistics showing that for the month of October, 1921, there was but one dead animal to each 4,734 stock shipped, as compared to one in 3,600 recorded for the same month in 1920.

Director General Proposes Modification of Equipment Trust Agreement

The director general has addressed a letter to all railroads of which the United States Treasury still holds issues of equipment trust obligations, no part of which has yet been sold, requesting modifications of the subordination terms of the trust agreement. Under the original terms the director general was authorized to subordinate only the last five maturities; namely, 1931 to 1935, inclusive, or any one or more of these maturities. Under the proposed amendment, the director general may subordinate such portion of the maturities of any year as he may determine.

The amended clause will read as follows:

"Eleventh: Upon request of the holder, or holders, of all the notes which by their terms shall be due and payable in any year, and upon presentation of such notes for that purpose the trustee shall stamp thereon, or upon such part thereof as said holder, or holders, may designate and request the following words:

"For value received and as an inducement to purchases of unstamped notes, the holder of this note has caused the same to be stamped pursuant to Article Eleventh of the Equipment Trust Agreement mentioned in the note and, as provided in said Article Eleventh, the unstamped notes shall be payable in preference and priority to the stamped notes out of any moneys received or collected by the trustee under said Equipment Trust Agreement upon enforcement of its rights or remedies in case of a default of the carrier."

For the present, it is the purpose of the director general, upon the execution of the supplemental agreements making the amended clause operative, to make sale of railroad equipment trust obligations under an arrangement to subordinate, on the part of the government, approximately 33½ per cent of the principal amount of each maturity; and the director general will be prepared to sell 66½ per cent of issues of equipment trust obligations, unsubordinated, at par and accrued interest to date of delivery. The Railroad Administration thus will retain the one-third subordinated part of all serial maturities.

Meetings and Conventions

The following list gives names of secretaries dates of next or regular meetings and places of meetings:

- AIR BRAKE ASSOCIATION—F. M. Nellis, 165 Broadway, New York City.
 AMERICAN MEETING, May 9-12, 1922, Hotel Washington, Washington, D. C.
 Exhibit by Air Brake Appliance Association.
 AIR BRAKE APPLIANCE ASSOCIATION—J. F. Geitstus, The Ashton Valve Company, 318 W. Washington St., Chicago. Meeting with Air Brake Association.
 AMERICAN ASSOCIATION OF DEMURRAGE OFFICERS—F. A. Pontious, Supervisor of Demurrage and Storage, C. & N. W. Ry., Chicago.
 AMERICAN ASSOCIATION OF DIVING CAR SUPERINTENDENTS—L. A. Stone, C. & E. L. Ry., Chicago.
 AMERICAN ASSOCIATION OF ENGINEERS—C. E. Drayer, 63 E. Adams St., Chicago.
 AMERICAN ASSOCIATION OF GENERAL BAGGAGE AGENTS—F. L. Duncan, 333 So. Michigan Ave., Chicago. Next meeting, June 28 and 29, Minneapolis, Minn.
 AMERICAN ASSOCIATION OF PASSENGER TRAVEL OFFICERS—W. C. Hope, C. R. R. of N. J., 143 Liberty St., New York.
 AMERICAN ASSOCIATION OF RAILROAD SUPERINTENDENTS—J. Rothschild, Room 400, Union Station, St. Louis, Mo. Next convention, August 23-25, 1922, Kansas City, Mo.
 AMERICAN ELECTRIC RAILWAY ASSOCIATION—J. W. Welsh, 8 W. 40th St., New York.
 AMERICAN RAILROAD MASTER TIMMERS', COPPLERS AND PIPE FITTERS' ASSOCIATION—C. Horchardt, 202 North Hamilton Ave., Chicago, Ill.
 AMERICAN RAILWAY ASSOCIATION—J. E. Fairbanks, General Secretary, 75 Church St., New York, N. Y. Annual meeting, November, 1922.
 Division I—Operating Freight Station Section (including former activities of American Association of Freight Agents), R. O. Wells, Freight Agent, Illinois Central Railroad, Chicago, Ill.
 Medical and Surgical Section—J. C. Cawwin, 75 Church St., New York.
 Protective Section (including former activities of the American

- Railway Chief Special Agents and Chiefs of Police Association). J. C. Caviston, 75 Church St., New York, N. Y.
- Telegraph and Telephone Section (including former activities of the Association of Railway Telegraph Superintendents). W. A. Fairbanks, 75 Church St., New York, N. Y. Next meeting, March 21-23, Richmond, Va. Annual meeting, September 20-22, 1922, Colorado Springs, Colo.
- Safety Section. J. C. Caviston, 75 Church St., New York.
- Division II—Transportation (including former activities of the Association of Transportation and Car Accounting Officers). G. W. Covert, 431 South Dearborn St., Chicago, Ill.
- Division III—Traffic. J. Gottschalk, 143 Liberty St., New York.
- Division IV—Engineering. E. H. Fritch, 431 South Dearborn St., Chicago, Ill. Next convention, March 14-16, Chicago. Exhibit of National Railway Appliances Association, March 13-16.
- Construction and Maintenance Section. E. H. Fritch.
- Electrical Section. E. H. Fritch.
- Signal Section (including former activities of the Railway Signal Association). H. J. Baller, 74 Church St., New York, N. Y. Next meeting, March 13 and 14, Drake Hotel, Chicago. Annual meeting, June 14-16, 1922, Monmouth Hotel, Spring Lake, N. J.
- Division V—Mechanical (including former activities of the Master Car Builders' Association and the American Railway Master Mechanics' Association). V. R. Hawthorne, 431 South Dearborn St., Chicago, Ill. Annual convention, June 14-21, 1922, Atlantic City, N. J. Exhibit by Railway Supply Manufacturers' Association.
- Equipment Painting Section (including former activities of the Master Car and Locomotive Painter Association). V. R. Hawthorne, 431 South Dearborn St., Chicago, Ill.
- Division VI—Purchases and Stores (including former activities of the Railway Storekeepers' Association). P. Murphy, General Store Keeper, New York Central, Collingwood, N. Y.
- Division VII—Freight Claims (including former activities of the Freight Claim Association). Lewis Pilcher, 431 South Dearborn St., Chicago, Ill.
- AMERICAN RAILWAY BRIDGE AND BUILDING ASSOCIATION.—C. A. Lichty, C. & N. W. Ry., 319 N. Waller Ave., Cincinnati, Ohio. Next convention, October 17-19, 1922, Cincinnati, Ohio. Exhibit by Bridge and Building Supply Men's Association.
- AMERICAN RAILWAY DEVELOPMENT ASSOCIATION.—J. F. Jackson, Central of Georgia, Savannah, Ga. Annual meeting, May 10-12, 1922, Denver, Colo.
- AMERICAN RAILWAY ENGINEERING ASSOCIATION.—(Works in co-operation with the American Railway Association, Division IV.) E. H. Fritch, 431 South Dearborn St., Chicago. Next convention, March 14-16, Chicago. Exhibit by National Railway Appliances Association, March 13-16.
- AMERICAN RAILWAY MASTER MECHANICS' ASSOCIATION.—(See American Railway Association, Division 5.)
- AMERICAN RAILWAY TOOL FOREMEN'S ASSOCIATION.—R. D. Fletcher, 1145 East Marquette Road, Chicago. Exhibit by Supply Association of the American Railway Tool Foremen's Association.
- AMERICAN SHORT LINE RAILROAD ASSOCIATION.—T. F. Whittlesey, Union Trust Bldg., Washington, D. C.
- AMERICAN SOCIETY FOR STEEL TREATING.—W. H. Eisenman, 4600 Prospect Ave., Cleveland, Ohio. Annual convention, September 25-30, 1922, Detroit, Mich.
- AMERICAN SOCIETY FOR TESTING MATERIALS.—C. L. Warwick, University of Pennsylvania, Philadelphia, Pa. Annual meeting, June 26, 1922, Chalfonte Hotel, Atlantic City, N. J.
- AMERICAN SOCIETY OF CIVIL ENGINEERS.—E. M. Chender (acting secretary), 33 W. 39th St., New York. Regular meetings 1st and 3d Wednesdays in month, except July and August, 33 W. 39th St., New York.
- AMERICAN SOCIETY OF MECHANICAL ENGINEERS.—Calvin W. Rice, 29 W. 39th St., New York.
- Railroad Division. A. F. Stuebing, Managing Editor, Railway Mechanical Engineer, Woolworth Bldg., New York. Next meeting, May 16, 1922, 29 W. 39th St., New York.
- AMERICAN TRAIN DISPATCHERS' ASSOCIATION.—C. L. Darling, Northern Pacific Ry., Spokane, Wash.
- AMERICAN WOOD PRESERVERS' ASSOCIATION.—George M. Hunt, Chemist, Forest Products Laboratory, Madison, Wis.
- ASSOCIATION OF RAILWAY CLAIM AGENTS.—H. D. Morris, Northern Pacific R. R., St. Paul, Minn. Next meeting, May 17-19, 1922, Montreal.
- ASSOCIATION OF RAILWAY ELECTRICAL ENGINEERS.—Jos. A. Andreuccetti, C. & N. W., Room 411, C. & N. W. Sta., Chicago. Exhibit by Railway Electrical Supply Manufacturers' Association.
- ASSOCIATION OF RAILWAY EXECUTIVES.—Thomas De Witt Cuyler (chairman), 61 Broadway, New York, N. Y.
- ASSOCIATION OF RAILWAY SUPPLY MEN.—A. W. Clokey, 1658 McCormick Bldg., Chicago. Meeting with International Railway General Foremen's Association.
- ASSOCIATION OF RAILWAY TELEGRAPH SUPERINTENDENTS.—(See American Railway Association, Division 1.)
- ASSOCIATION OF TRANSPORTATION AND CAR ACCOUNTING OFFICERS.—(See American Railway Association, Division II.)
- BRIDGE AND BUILDING SUPPLY MEN'S ASSOCIATION.—D. J. Higgins, American Valve & Meter Company, 332 S. Michigan Ave., Chicago. Meeting with convention of American Railway Bridge and Building Association.
- CANADIAN RAILWAY CLUB.—W. A. Booth, 53 Rushbrooke St., Montreal, Que. CAR FOREMEN'S ASSOCIATION OF CHICAGO.—Aron Kline, 626 North Pine Ave., Chicago, Ill. Regular meetings, 2d Monday in month, except June, July and August, New Morrison Hotel, Chicago.
- CAR FOREMEN'S ASSOCIATION OF ST. LOUIS, MO.—Thomas B. Koenek, 604 Federal Reserve Bank Bldg., St. Louis, Mo. Meetings, first Tuesday in month at the American Hotel Annex, St. Louis.
- CENTRAL RAILWAY AND TELEPHONE CLUB.—Harry D. Vought, 26 Cortlandt St., New York. Regular meetings, 2d Thursday in January, March, May, September and November, Hotel Iroquois, Buffalo, N. Y.
- CHIEF INTERCHANGE CAR INSPECTORS' AND CAR FOREMEN'S ASSOCIATION.—W. P. Elliott, Terminal Railroad Association of St. Louis, East St. Louis, Ill.
- CHIEF INTERCHANGE CAR INSPECTORS' AND CAR FOREMEN'S SUPPLY MEN'S ASSOCIATION.—D. B. Wright, 34th St. and Artesan Ave., Chicago, Ill. Meeting with Chief Interchange Car Inspectors' and Car Foremen's Association.
- CINCINNATI RAILROAD CLUB.—W. C. Cooder, Union Central Bldg., Cincinnati, Ohio. Meetings, 2d Tuesday in February, May, September and November.
- EASTERN RAILROAD ASSOCIATION.—E. N. Bessling, 614 F St., N. W., Washington, D. C. Annual meeting May 11, 1922, Railroad Club of New York.
- FREIGHT CLAIM ASSOCIATION.—(See American Railway Association, Division II.)
- GENERAL SUPERINTENDENTS' ASSOCIATION OF CHICAGO.—C. H. Treichel, Grand Central Station, Chicago. Regular meetings, Wednesday preceding 3d Friday in month, Room 1414, Manhattan Bldg., Chicago.
- INTERNATIONAL RAILROAD MASTER BLACKSMITHS' ASSOCIATION.—W. J. Mayer, Michigan Central R. R., Detroit, Mich. Exhibit by International Railroad Master Blacksmiths' Supply Men's Association.
- INTERNATIONAL RAILROAD MASTER BLACKSMITHS' SUPPLY MEN'S ASSOCIATION.—George T. White, 74 Railway Exchange, Chicago. Meeting with International Railroad Master Blacksmiths' Association.
- INTERNATIONAL RAILWAY FUEL ASSOCIATION.—J. G. Crawford, 702 E. 51st St., Chicago. Next annual meeting, May 22-25, 1922, Auditorium Hotel, Chicago. Exhibit by International Railway Supply Men's Association.
- INTERNATIONAL RAILWAY GENERAL FOREMEN'S ASSOCIATION.—Wm. Hall, 1061 W. Mahalia Ave., Winona, Minn.
- INTERNATIONAL RAILWAY SUPPLY MEN'S ASSOCIATION.—C. W. Sullivan, Garlock Packing Co., 326 W. Madison St., Chicago. Meeting with International Railway Fuel Association.
- MAINTENANCE OF WAY MASTER PAINTERS' ASSOCIATION.—E. E. Martin, Union Pacific R. R., Room No. 19, Union Pacific Bldg., Kansas City, Mo. Annual convention, 1922, Buffalo, N. Y.
- MASTER BOILER MAKERS' ASSOCIATION.—Harry D. Vought, 26 Cortlandt St., New York. Next convention, May 23-26, 1922, Hotel Sherman, Chicago.
- MASTER CAR AND LOCOMOTIVE PAINTERS' ASSOCIATION.—(See A. R. A., Division V.)
- MASTER CAR BUILDERS' ASSOCIATION.—(See A. R. A., Division V.)
- NATIONAL ASSOCIATION OF RAILWAY TIE PRODUCERS.—Warren C. Nixon, Sisco & Timber Co., 905 Syndicate Trust Bldg., St. Louis, Mo.
- NATIONAL ASSOCIATION OF RAILWAY AND UTILITIES COMMISSIONERS.—James B. Walker, 499 Lafayette St., New York. Next convention, September 26, 1922, Detroit, Mich.
- NATIONAL FOREIGN TRADE COUNCIL.—O. K. Davis, 1 Hanover Square, New York. Next convention, May 10-12, Philadelphia, Pa.
- NATIONAL RAILWAY APPLIANCE ASSOCIATION.—C. W. Kelly, People's Gas Bldg., Chicago. Annual exhibition, March 13-16, Coliseum, Chicago, at convention of American Railway Engineering Association.
- NEW ENGLAND RAILROAD CLUB.—W. E. Cade, Jr., 683 Atlantic Ave., Boston, Mass. Regular meetings, 2d Tuesday in month, excepting June, July, August and September.
- NEW YORK RAILROAD CLUB.—Harry D. Vought, 26 Cortlandt St., New York. Regular meetings, 3d Friday in month, except June, July and August, at 29 W. 39th St., New York.
- PACIFIC RAILWAY CLUB.—W. S. Wollner, 64 Pine St., San Francisco, Cal. Regular meetings, 2d Thursday in month, alternately in San Francisco and Oakland.
- RAILWAY ACCOUNTING OFFICERS' ASSOCIATION.—E. R. Woodson, 1116 Woodward Building, Washington, D. C. Annual meeting, June 14, 1922, Cleveland, Ohio.
- RAILWAY BUSINESS ASSOCIATION.—Frank W. Noxon, 600 Liberty Bldg., Broad and Chestnut Sts., Philadelphia, Pa. Annual dinner, February 1, Waldorf-Astoria, New York.
- RAILWAY CLUB OF PITTSBURGH.—J. D. Corway, 515 Grandview Ave., Pittsburgh, Pa. Regular meetings, 4th Thursday in month, except June, July and August, Fort Pitt Hotel, Pittsburgh, Pa.
- RAILWAY DEVELOPMENT ASSOCIATION.—(See Am. Ry. Development Assn.)
- RAILWAY ELECTRICAL SUPPLY MANUFACTURERS' ASSOCIATION.—J. Scribner, General Electric Co., Chicago. Annual meeting with Association of Railway Electrical Engineers.
- RAILWAY EQUIPMENT MANUFACTURERS' ASSOCIATION.—R. J. Himmelright, 17 East 42nd St., New York. Meeting with Traveling Engineers' Association.
- RAILWAY FIRE PROTECTION ASSOCIATION.—R. R. Hackett, Baltimore & Ohio R. R., Baltimore, Md.
- RAILWAY REAL ESTATE ASSOCIATION.—R. H. Mortenson, C. & O. Ry., Richmond, Va. Next meeting, October 10-13, 1922, Pittsburgh, Pa.
- RAILWAY SIGNAL ASSOCIATION.—(See A. R. A., Division IV., Signal Section.)
- RAILWAY STOREKEEPERS' ASSOCIATION.—(See A. R. A., Division VI.)
- RAILWAY SUPPLY MANUFACTURERS' ASSOCIATION.—J. D. Corway, 1841 Oliver Bldg., Pittsburgh, Pa. Meeting with A. R. A., Division V.
- RAILWAY TELEGRAPH AND TELEPHONE APPLIANCE ASSOCIATION.—G. A. Nelson, 30 Church St., New York.
- RAILWAY TREASURY OFFICERS ASSOCIATION.—L. W. Cox, Commercial Trust Bldg., Philadelphia, Pa.
- ROADMASTERS' AND MAINTENANCE OF WAY ASSOCIATION.—P. J. McAndrews, C. & N. W. Ry., Regular Ill. Annual convention, September 12-14, 1922, Cleveland, Ohio. Exhibit by Track Supply Association.
- ST. LOUIS RAILWAY CLUB.—B. W. Fraenthal, Union Station, St. Louis, Mo. Regular meetings, 2d Friday in month, except June, July and August.
- SIGNAL APPLIANCE ASSOCIATION.—F. W. Edmunds, Sunbeam Electric Manufacturing Company, New York City. Meeting with American Railway Association, Signal Section.
- SOUTHERN AND SOUTHWESTERN RAILWAY CLUB.—A. J. Merrill, P. O. Box 1205, Atlanta, Ga. Regular meetings, 3d Thursday in January, March, May, July, September and November, Piedmont Hotel, Atlanta.
- SOUTHERN ASSOCIATION OF CAR SERVICE OFFICERS.—E. W. Sandwich, Western Ry. of Ala., Atlanta, Ga.
- SUPPLY ASSOCIATION OF AMERICAN RAILWAY TOOL FOREMEN'S ASSOCIATION.—H. S. Wier, 9 N. Jefferson St., Chicago.
- TRACK SUPPLY ASSOCIATION.—W. C. Kidd, Ramapo Iron Works, Hillburn, N. Y. Meets with Roadmasters' and Maintenance of Way Association.
- TRAVELING ENGINEERS' ASSOCIATION.—W. O. Thompson, Marine Trust Building, Buffalo, N. Y. Exhibit by Railway Equipment Manufacturers' Association.
- WESTERN RAILWAY CLUB.—Bruce V. Crandall, 14 E. Jackson Boulevard, Chicago, Ill. Regular meetings, 3d Monday each month except June, July and August.

Traffic News

No passports are now required at Laredo, Tex., for United States citizens entering Mexico.

Canadian Pacific passenger traffic officers, to the number of 60, held their annual conference in New York City this week.

Production of soft coal increased 6.4 per cent during the week ended January 21, according to the weekly bulletin of the Geological Survey. The total output is estimated at 8,838,000 net tons. The bulletin says that at the present rate production probably exceeds consumption.

The fourth annual convention of the American Fruit & Vegetable Shippers' Association was held at the Hotel Sherman, Chicago, from January 25 to 28, inclusive. More than 2,000 delegates representing shippers, brokers, jobbers and receivers were in attendance.

The Passenger Ticket & Freight Agents' Association of Texas, at its annual convention at Corpus Christi, on January 22 and 23, elected the following officers: President, E. Paul Junkin, Dallas; vice-president, Elbert Blair, Fort Worth, and secretary-treasurer, L. B. Sheppard, Dallas.

Reductions ranging as high as 33 1/3 per cent on many commodities moving from New York to California terminals and intermediate points, via the Southern Pacific Steamship Lines to Galveston, Tex., and thence west via the Southern Pacific, have been announced by the company and will shortly take effect. Items affected in this reduction, on a carload lot basis, are: canned goods, beverages, preserves, linoleum, green coffee, paint, dry or in oil, lead, twine, cordage and rope, bullets, loaded cartridges, etc.

The opening session of an investigation of the "Pittsburgh Plus" trade practice, which fixes the prices of steel products on the basis of a Pittsburgh (Pa.) price, plus freight to destination, no matter where the steel may be made or shipped from, began before John W. Bennett, examiner for the Federal Trade Commission at Milwaukee, Wis., on January 30. On the opening day, H. E. White, Minneapolis, Minn., rate expert for the Western Association of Rolled Steel Consumers, submitted figures showing the advantage the Pittsburgh manufacturer has over his competitors in the west. Further testimony showing the disadvantage under which the western manufacturer labors was given by H. W. Ladish, of Cudahy, Wis., president of the Ladish Drop Forge Company. The hearing is to continue at Milwaukee for several days and then will be continued at other centers of the steel industry.

N. I. T. L. for Repeal of Section 15-a

The National Industrial Traffic League, at a special meeting at Washington on January 27 adopted resolutions recommending the repeal of Section 15-a of the transportation act, which contains the percentage rule of rate making, but favoring a clear declaration of principle in the law that the railways are entitled to fair compensation. The league also went on record as opposed to the Capper and Nicholson bills, which would also repeal or modify Section 15-a particularly for the purpose of restoring the powers of the state commissions.

Portraits on Family Tickets

Portraits on family tickets (which are good for 50 rides within one year), are now required by the New York Central, a notice to that effect having been issued at New York City last week, applying to the New York suburban district. This action follows the use of portraits on individual monthly tickets which was put into effect a few months ago. With the fifty-ride tickets, which are good for the purchaser and his family and servants, only the purchaser's portrait will be required, but he must give the names of all the members of his family who will be entitled to use the ticket, and each of these other members, when he or she rides, will be obliged upon to write his or her name.

Labor Board Decisions

Seniority of Demoted Supervisory Officer

An assistant roadmaster on the Michigan Central was demoted to section foreman, displacing a foreman. The employees organization entered a complaint maintaining that, as an assistant roadmaster is outside the scope of the agreement, a man in that position has no seniority rights under the agreement. The decision of the board is that he is entitled to a position as section foreman by displacing the junior section foreman in point of service. *Decision No. 594.*

Employees Who Fail to Report for Work Not Entitled to Pay

Two bridge and building mechanics on the Nashville, Chattanooga & St. Louis were temporarily out of service and notices sent to them concerning a newly organized paint gang were not received. When they did hear of these positions, they applied for them but were denied employment because the quota was full. The railroad recognized their seniority and stated that they would have been accepted if they had applied for the positions in time. The board denied the claim of the two men for pay during the time that this gang was in service. *Decision No. 603.*

Train Dispatcher Can Displace an Agent-Telegrapher

A train dispatcher on the Wabash was permitted to displace an agent-telegrapher because of a reduction in train dispatching forces. An agreement between the employees and the carrier provides that employees assigned to official positions with the company shall retain their seniority so long as they remain in such official positions. The employees contended that these rules do not permit such officers who return to telegraph service to displace regularly assigned employees in that service. The carrier contended that its action was proper and in accordance with the agreement. The Labor Board sustained the position of the carrier.—*Decision No. 620.*

A similar dispute between the Order of Railroad Telegraphers and the New York Central regarding train dispatchers displacing employees in telegraph service when the positions of train dispatchers were abolished, was decided in favor of the carrier by the Labor Board.—*Decision No. 619.*

Carriers Sustained in Applying 10 Cents an Hour Decrease in Baggage Department

On April 1, 1920, the various classes of employees in the baggage room of the Union Station at St. Louis, Mo., received a uniform increase in pay of 17 cents an hour. Article 2 of Decision No. 2 of the Board provided for smaller increases for various classes of work, to be added to the rates established by or under the authority of the United States Railroad Administration, but the carrier allowed the 17 cent increase to stand, in consideration of the agreement made at the time when that increase became effective. After the passage of Section 4 of Addendum No. 1 of Decision No. 147, which authorized graduated decreases, the employees contended that this Addendum should be applied exactly as it read; that is 10 cents an hour for baggage and parcel room employees, 6 cents for foremen and sub-foremen, 6 cents for clerks with two or more years' experience, and 13 cents for clerks with experience of 1 year in railroad clerical work. The carrier contended that, as the employees were treated as one class in increasing their wages, to segregate them into different classes and apply the decrease authorized by Decision No. 147, would create differentials which had not heretofore existed; that they should be considered as one class in applying the decrease and that the 10 cents per hour was the proper decrease to be applied, which position was sustained by the Board.—*Decision No. 621.*

Foreign Railway News

Rail Strike in Germany

In spite of a presidential decree forbidding under heavy penalties any such action, a strike was declared on the railways of Germany beginning at midnight, February 1. Enginemen, trainmen and station masters are the employees affected, although other workers may join them. It is expected that the government will fight the strike with all its resources.

Financial Details of L. & N. W.—

L. & Y. Amalgamation

The following details of the merger of the Lancashire & Yorkshire with the London & North Western, previously mentioned in these columns, will convey in general the financial arrangements agreed to.

1. Holders of L. & Y. 3 per cent debenture stock will receive in exchange a like amount of London & North Western 3 per cent debenture stock.

2. Holders of L. & Y. 6 per cent minimum preference stock will for each £100 of such stock receive £150 L. & N. W. 4 per cent guaranteed stock (which, of course, will yield the same income). Since in the L. & Y. these stockholders were entitled to share pro rata with common stockholders all dividends over 6 per cent, a further £6 5s is added, allowing the holders of L. & Y. 6 per cent minimum preference stock a total of £156 5s of L. & N. W. 4 per cent guaranteed stock for each £100 of the former holding.

3. Holders of L. & Y. 4½ per cent minimum preference stock will receive £125 of L. & N. W. 4 per cent guaranteed stock for each £100 of the former, i. e., a yield of 5 per cent (the £25 in compensation for lower rate of dividend and relinquishing of rights to share with common stockholders all dividends over 4½ per cent).

4. Holders of L. & Y. 4 per cent guaranteed stock will receive a like amount of the same L. & N. W. stock.

5. Holders of L. & Y. 3 per cent preference stock will receive for each £100 thereof £75 of similar 4 per cent stock of the L. & N. W. (same dividend yield).

6. Holders of 5 per cent redeemable preference stock (redeemable June 30, 1926) of the L. & Y. will receive similar stock of the L. & N. W.

7. Holders of each £100 of L. & Y. ordinary shares will receive £73 of L. & N. W. ordinary stock.

8. Heretofore L. & N. W. preference shareholders had the voting power only in cases affecting their interests, while L. & Y. preference shareholders had full voting powers. Hereafter all preference shareholders will vote on all questions the same as the holders of ordinary shares.

The chairman of the London & North Western at the meeting of the L. & N. W. stockholders where the plan was announced, said in part:

"We took the earning capacity of the separate undertakings as the fair and only reasonable basis for amalgamation, and this basis has been adopted in the recent Railways Act as a direction to the Amalgamation Tribunal in assessing the value of the respective undertakings. We took the year 1913, which was the last complete year under normal conditions, when the North Western paid 7 per cent on its ordinary stock and the Lancashire & Yorkshire paid 4½ per cent and assessed the earning value of the two companies on that basis. We, however, as the company making the offer, added a small advantage to the holders of Lancashire & Yorkshire ordinary stock, which both companies considered only fair and reasonable. To sum up the position it is this: The boards of the two companies are mutually satisfied that the proposed amalgamation will be to the advantage of their respective stockholders. The London & North Western, as the larger of the companies, is practically absorbing the other, and as we were the wooing party, we have thought it well to deal perhaps somewhat generously on an income basis with the other party concerned."

Equipment and Supplies

Locomotives

WINSTON & Co., Kingston, N. Y., has ordered 1 Prairie type locomotive from the American Locomotive Company. This locomotive will have 16 by 24 in. cylinders and a total weight in working order of 107,000 lb.

THE STEWART JONES COMPANY, Rock Hill, S. C., has ordered 1 four-wheel type tank locomotive from the American Locomotive Company. This locomotive will have 14 by 28 in. cylinders and a total weight in working order of 79,000 lb.

THE UNIVERSAL PORTLAND CEMENT COMPANY, Chicago, has ordered 1 six-wheel switching locomotive from the American Locomotive Company. This locomotive will have 20 by 26 in. cylinders and a total weight in working order of 142,000 lb.

TEXAS GULF SULPHUR COMPANY, 47 East Forty-second street, New York City, has ordered 1 Consolidation type locomotive from the American Locomotive Company. This locomotive will have 21 by 28 in. cylinders, a total weight in working order of 163,000 lb. and will be equipped with a superheater.

NEW YORK, ONTARIO & WESTERN, reported in the *Railway Age* of December 3, as inquiring for from 3 to 6 locomotives, has ordered 4 Mountain type locomotives from the American Locomotive Company. These locomotives will have 27 by 28 in. cylinders, a total-weight in working order of 317,000 lb. and will be equipped with superheaters.

Freight Cars

THE NORFOLK & WESTERN is inquiring for prices on a number of freight cars including 1000 gondola cars and 1000 hopper cars of 120 tons capacity.

THE CHICAGO, BURLINGTON & QUINCY is expected to place contracts the latter part of the week for a part of the 7,300 freight cars it has on inquiry.

THE EASTMAN CHEMICAL CORPORATION, New York City, has ordered from the General American Tank Car Corporation 1 tank car with a capacity of 6,000 gal.

Iron and Steel

THE MINNEAPOLIS & ST. LOUIS has ordered 3,000 tons of rail from the Illinois Steel Company.

THE CHICAGO UNION STATION COMPANY, which was noted in the *Railway Age* of January 21 as inquiring for structural steel, has placed an order for 17,000 tons with the American Bridge Company.

THE ILLINOIS CENTRAL has ordered 30,000 tons of 90 lb. rail, distributed as follows: 14,000 tons from the Tennessee Coal & Iron Company, 11,000 tons from the Illinois Steel Company, and 5,000 tons from the Inland Steel Company.

Machinery and Tools

THE VIRGINIA RAILWAY is inquiring for prices on 1 American ditching machine.

THE NEW YORK CENTRAL has ordered 1 40-ton gantry crane from the Niles-Bement-Pond Company, New York City.

THE DELAWARE, LACKAWANNA & WESTERN has ordered 1 42-in. frog switch planer from the Niles-Bement-Pond Company and has also bought recently some tools including engine lathes, radial drills, a boring turning mill, wheel press, horizontal borer and a slotter.

Supply Trade News

Griffen S. Ackley, formerly from 1903 to 1909, president of the National Brake Company, Buffalo, N. Y., died in Brooklyn, N. Y., on January 23. Mr. Ackley sold his interests in the above company in 1909 and formed the Ackley Brake & Supply Corporation, with headquarters in New York City.

A. R. Hance has been appointed northwestern sales manager of the **Bucyrus Company**, South Milwaukee, Wis., with headquarters at 608 Pittock Block, Portland, Ore., succeeding **L. T. Russell**, who has resigned. Mr. Hance has been connected with the sales department of the company in the Central and Eastern territories for the past six years.

C. R. Naylor, of the western sales office of the **T. H. Symington Company**, at Chicago, has been appointed manager of sales of the **Forged Steel Yoke Corporation**, with headquarters in the Peoples Gas building, Chicago, effective February 1. The output of the Forged Steel Yoke Corporation will be sold and distributed by The T. H. Symington Company, which still retains Mr. Naylor's services.

A. W. Brown has been appointed assistant to the vice-president of the western district of the **T. H. Symington Company**, New York City, effective February 1. Mr. Brown will make his headquarters in the Peoples Gas building, Chicago. He was born on February 6, 1881, in New York City, and was educated at Trinity College of New York and Andover Academy, of Mass. Mr. Brown was connected with the Griffin Wheel Company from 1913 to 1919 and was then appointed manager of railway sales of the Air Reduction Sales Company, New York City, which position he now leaves to take up his new duties with the T. H. Symington Company.

A. W. Brown

The **Electric Storage Battery Co.**, Philadelphia, Pa., announces the consolidation of its various offices in New York City. That part of the sales force formerly located at the Exide factory branch, Sixty-fourth street and West End avenue, has been moved to the New York branch office at 23-31 West Forty-third street, which will hereafter be the headquarters also of the export sales department. Under the new arrangement, **F. L. Kellogg**, manager of the North Atlantic district embracing the New York, Boston and Rochester branch territories, **F. F. Sampson**, New York branch manager and **J. E. Kelly, Jr.**, export sales manager will be located at West Forty-third street offices. The change was effective February 1.

The **Doullter & Williams, Inc.**, the **Southern Lighterage & Wracking Company, Inc.**, and the **Shell Beach Land & Improvement Company, Inc.**, have been consolidated under the name of the **Doullter & Williams Company, Inc.**, New Orleans, La. The new company has a capital of \$1,000,000 and it will continue to carry on the different operations previously handled by the above-named companies. In addition to specializing in the design and construction of docks, wharves and industrial plants its operations include the undertaking and handling of various kinds of construction work in a department for each class of work, under the manage-

ment of a competent engineer of practical experience in the class of work handled by his department.

The **Northern Refrigerator Car Company** has been organized at Milwaukee, Wis., to operate 500, 40 ft. steel underframe refrigerator cars that are now being constructed by the **Haskell & Barker Car Company**, in addition to all of the cars heretofore operated by the **Cudahy-Milwaukee Refrigerator Line**, and the **Peacock Refrigerator Line**. The incorporators of the company are **Michael F. Cudahy**, **C. P. J. Kroeck** and **Charles O'Hara**, the latter serving as president of the company.

Ogle Construction Company

Carl F. Bledsoe, secretary of the **Ogle Construction Company**, Chicago, has been elected president succeeding **Robert A. Ogle**, deceased. **M. W. Powell**, vice-president, has been elected vice-president and secretary, and **J. G. Forster**, vice-president, has been elected vice-president and treasurer.

Carl F. Bledsoe was born in Texas in 1881, and after completing a collegiate course, enrolled as a student of the International Correspondence School, completing the course in civil engineering. He entered business with the **Gurley Engineering Company** at St. Louis, Mo., in 1904, as a draftsman and structural engineer. From 1906 to 1911, he was with the **Otto Gas Engine Works**, at Chicago, as a structural engineer in their railway construction department. During the latter year, he assisted in the organization of the **Ogle Construction Company** from which time he has served the company as secretary, in addition to supervising the engineering and construction policies of the company.

M. W. Powell, who has been elected vice-president and secretary, succeeding Mr. Bledsoe, as secretary, was born in Georgia, and is a graduate of the mechanical engineering department of the **Kentucky State University**, class of 1905. He entered business in the engineering department of the **Chicago & Alton**, in 1905, and during the next two years was employed by that company. During the latter year, he became office engineer with the **Chicago, Indiana & Southern**. From 1909 to 1913, he was designing engineer of locomotive fuel and water stations, for the **Otto Gas Engine Works** and the **T. W. Snow Construction Company**. In 1913, he became vice-president of the **Ogle Construction Company** in charge of engineering, which office he will continue to occupy in addition to his duties as secretary.

J. G. Forster, vice-president in charge of sales, who in addition has now taken over the duties of treasurer, was born in Baltimore, Md., in 1893. After graduating from the **Baltimore Polytechnic Institute**, he superintended the construction of the bulk sales distributing stations for an oil jobbing company at Baltimore, until 1917. During the war he served as officer in charge of fuel and forage, under the depot quartermaster at Atlanta, Ga. Upon his discharge in 1919, he became associated with the **Ogle Construction Company**.

Obituary

C. M. Woodruff, formerly railroad sales manager of the **B. F. Goodrich Rubber Company**, Akron, Ohio, was struck by an automobile truck on January 25, and died shortly afterward in the **Akron City Hospital**. At the time of his death Mr. Woodruff was 45 years of age and was business manager of the **Akron Board of Education**. Mr. Woodruff was a native of **Ashtabula county, Ohio**. He worked his way through **Oberlin College**, graduating in 1901, and then went to Akron and started as a trucker in the plant of the **B. F. Goodrich Company** in order to learn the business from the bottom up, from which position he was promoted to night foreman of the air brake hose department. From there he was taken into the railroad sales department as traveling representative. For a period of seven years he covered all the railroads in the South and Middle West, later being made railroad sales manager. He was elected a member of the **Akron school board** in 1917, and a year and a half later, after a service of 18 years with the **Goodrich Company** he accepted an appointment as business manager of the school board.

Railway Construction

CHICAGO, BURLINGTON & QUINCY.—This company, which was noted in the *Railway Age* of December 17 (page 1252), as contemplating the construction of a new passenger station at Aurora, Ill., has applied to the Illinois Commerce Commission for authority to proceed with this work.

CHICAGO GREAT WESTERN.—This company is accepting bids for the repair of its grain elevators at Omaha, Neb.

CHICAGO, ROCK ISLAND & PACIFIC.—This company has awarded a contract to the Miller Heating Company, Chicago, for the installation of a boiler washing system in its roundhouse at Chickasha, Okla., estimated to cost approximately \$30,000. A water treating plant will also soon be installed in connection with the above.

CHICAGO, ROCK ISLAND & PACIFIC.—This company has awarded a contract to the Railroad Water & Coal Handling Company, Chicago, for the construction of a frame coaling station at Booneville, Ark., the cost of which is estimated at \$20,000.

CHICAGO UNION STATION.—This company will soon receive bids for the wrecking of the old baggage building on Canal street between Jackson and Adams streets. Following the wrecking of this building the concourse of the new union station will be constructed at that point.

GULF, COLORADO & SANTA FE.—This company, which was noted in the *Railway Age* of December 31 (page 1332), as contemplating the construction of a two-story freight station at Brenham, Tex., is now receiving bids for the building of this station. The work involved will include a two-story office building, 32 ft. by 36 ft., a warehouse, 32 ft. by 74 ft.; and a concrete platform 32 ft. by 128 ft. The building will be of brick construction, with concrete floors and a tar and gravel roof. The entire cost has been estimated at \$33,890.

ILLINOIS CENTRAL.—This company will construct a third track from Matteson, Ill., to North Junction, a distance of about 10 miles, and from Tucker to Kankakee, a distance of approximately 5 miles.

LOS ANGELES & SALT LAKE.—This company has awarded a contract to the Lynch-Cannon Company, Salt Lake City, Utah, for the construction of a two-story office building, 80 ft. by 200 ft., and a one-story freight station, 50 ft. by 600 ft. at Los Angeles, Cal. The structures will be of reinforced concrete and brick construction, the entire cost of which is estimated at \$210,050.

LOUISVILLE & NASHVILLE.—This company closed bids on January 30, for the construction of a Y. M. C. A. building at Hazard, Ky. The same company contemplates the construction of a packing and shipping shed at Biloxi, Miss.

MINNEAPOLIS, ST. PAUL & SAULT STE. MARIE.—This company, in conjunction with the Chicago & Northwestern and the city of Ironwood, Mich., will receive bids until March 1 for the construction of a reinforced concrete viaduct, 1,500 ft. in length, over 23 tracks at Mansfield street, Ironwood, to cost \$220,000.

MISSOURI, KANSAS & TEXAS.—This company will construct a brick and stucco passenger station at Highland Park (Dallas), Tex., estimated to cost \$17,000.

MISSOURI PACIFIC. This company, which was noted in the *Railway Age* of January 21 as accepting bids for a reinforced concrete and stucco passenger station at Earle, Ark., has awarded the contract for this work to H. O. Hirsch & Company, St. Louis, Mo.

NATIONAL RAILWAYS OF MEXICO.—This company has awarded a contract to Dudley & Orr, El Paso, Tex., for the grading and the placing of corrugated iron culverts for 47 miles of railroad, extending from Lucero, Mex., to the property of the Erupcion Mining Company.

Railway Financial News

ATLANTA, BIRMINGHAM & ATLANTIC.—*Asks Government Loan.*—This company has applied to the Interstate Commerce Commission for a loan of \$615,592 for 15 years to pay back taxes due for 1921 in Alabama and Georgia and a short term loan.

BALTIMORE & OHIO.—*Authorized to Abandon Branches.*—The Interstate Commerce Commission has issued certificates authorizing the abandonment of the Pigeon Run Branch in Starks County, Ohio, 5.62 miles, and 2.76 miles of its Magnolia branch.

BOSTON & MAINE.—*Asks Government Loan.*—An application has been filed with the Interstate Commerce Commission for a loan of \$5,000,000 for 13 years for the purpose of refunding a loan to the company made last year from the revolving fund.

BUFFALO, ROCHESTER & PITTSBURGH.—*Six Months Guaranty Determined.*—The Interstate Commerce Commission has issued a certificate stating that it has finally determined the amount of the guaranty to this company for the six months period of 1920, amounting to \$1,693,771, of which \$161,271 is still due.

CENTRAL OF NEW JERSEY.—*Directors Resign.*—George F. Baker and Robert W. de Forest have resigned from the board of directors. The offices of chairman of the board, vice-president and general counsel and assistant to the president have been discontinued.

CHICAGO & ALTON.—*New Directors.*—Charles Hayden, chairman of the Chicago, Rock Island & Pacific, and Marcus L. Bell, vice-president and general counsel, have been elected to the board and executive committee of the Chicago & Alton. They succeed J. S. Mackie, who resigned because of ill health, and Roberts Walker, who withdrew because his duties in the bondholders' committee had ended.

CHICAGO & WESTERN INDIANA.—*Authorized to Issue Bonds.*—The Interstate Commerce Commission has authorized an issue of \$223,000 of consolidated mortgage gold bonds to be delivered to the applicants' tenants in repayment of sinking fund advances.

CHICAGO, BURLINGTON & QUINCY.—*Band Issue.*—J. P. Morgan & Co., the First National Bank and the National City Company are offering the new issue of \$30,000,000 first and refunding mortgage 5 per cent bonds, due 1971, at 97, at which price the bonds yield approximately 5.17 per cent. The Interstate Commerce Commission amended its original order of January 17 fixing the price of these bonds at not less than 89½ per cent to provide that they should be sold at not less than 92½ per cent of par and accrued interest so that the total cost to the applicant would not exceed 5½ per cent. The bonds are issued under a new mortgage and cover by direct or collateral lien about 9,000 miles of road.

According to preliminary figures furnished the bankers by Hale Holden, president of the Chicago, Burlington & Quincy, the net income of the road for 1921, after deducting rentals and miscellaneous charges, was slightly over \$31,000,000, against interest charges on the company's funded debt of \$6,800,000. For the past ten years the Burlington has reported net income, after deducting rentals and miscellaneous charges, which has averaged more than four times the company's annual interest charges on the funded debt. With the exception of equipment trust certificates taken by the Railroad Administration, the Burlington has sold no bonds during the past seven years, and its funded debt today is nearly \$9,500,000 less than in 1909, with the result that its current interest charges are materially lower than those of ten years ago. Since 1901 the Burlington's surplus income and miscellaneous profits after charges have amounted to approximately \$466,000,000, of which \$223,000,000 has been paid out in cash dividends and about \$178,000,000 has been added to surplus. The bonds now being offered are not redeemable for twenty years, after which date the company has the option of retiring the issue as a whole at prices ranging from 107½ in 1942 to 103 for the last ten-year period prior to maturity.

CHICAGO, INDIANAPOLIS & LOUISVILLE.—*Loan to War Finance Corporation Repaid.*—The War Finance Corporation has announced that its advance of \$1,400,000 to this company made on March 14, 1919, has been repaid in full. The railroad company has been authorized by the commission to procure the authentication and delivery to its treasurer of \$955,000 of first and general

mortgage 6 per cent gold bonds to be pledged from time to time as security for short term notes.

CHICAGO, ROCK ISLAND & PACIFIC.—Authorized to Issue Bonds.—The Interstate Commerce Commission has authorized an issue of \$1,000,000 of general mortgage gold bonds to be used as collateral security from time to time for short term notes.

CHICAGO, ROCK ISLAND & PACIFIC.—Director Resigns.—John G. Shedd has resigned as a director in compliance with the Interstate Commerce Commission's ruling on interlocking directorates, and Carl Nyquist, vice-president, secretary and treasurer of the company, has been elected to succeed him.

Retirement of Notes.—The \$4,500,000 6 per cent collateral trust notes due February 1, 1922, were met by cash payment from the company's treasury.

COLORADO, WYOMING & EASTERN.—Receiver.—President F. B. Miller has been appointed receiver with headquarters at Laramie, Wyo. See *Railway Age*, November 19, 1921, page 1016.

DENVER & RIO GRANDE.—Reorganization Plan.—The reorganization plan, dated January 27, 1922, provides for the cancellation of the present first and refunding mortgage, the creation of two new mortgages, an exchange of the present first and refunding mortgage bonds for 50 per cent of the junior issue of the two new mortgage bond issues and 50 per cent in new cumulative preferred stock, and the provision of \$10,000,000 cash by the Western Pacific Corporation in exchange for new common stock of no par value.

An outline of the plan, as approved and adopted by the committee representing the holders of first and refunding mortgage five per cent bonds, follows:

During the last year at a judgment sale, the Western Pacific Railroad purchased the property of the Denver & Rio Grande Railroad Company through a new company, under the name of Denver & Rio Grande Western and with the approval of the Interstate Commerce Commission became the owner of the entire capital stock of the new company. This amounted to 300,000 shares of no par value. The new company acquired the property subject to the bonds of the old company, but did not assume their payment.

The Western Pacific is now making an offer to the holders of the Denver & Rio Grande refunding 5% under which the refunding bond holders are to receive in exchange for their bonds 50 per cent in a new sinking fund mortgage 5 per cent bond due 1955 and 50 per cent in a 7 per cent cumulative preferred stock of the reorganized company, an average return of 6 per cent. According to the plan the Western Pacific agrees to put \$10,000,000 in cash or property into the reorganized company, for which it will receive only common stock, "thereby increasing the amount of the equity behind the new securities." Future financing is provided for by a new senior unifying mortgage bond for the purpose of refunding of the underlying bonds for future additions and betterments. None of these bonds, however, are to be issued at present.

One of the important features of the plan is the reduction in bonded debt from \$125,956,000 to \$101,669,000, a decrease of \$23,387,000 and a reduction in the fixed charges from \$5,896,940 to \$4,613,160, a decrease of \$1,283,780.

It is provided that the plan shall not become operative unless the Western Pacific Corporation and the committee shall otherwise agree, unless the holders of at least 50 per cent of the outstanding refunding bonds, not including bonds on deposit under the adjustment mortgage, nor bonds held in the sinking fund under the refunding mortgage, nor bonds held in the treasury of the new company, shall become bound by the plan on or before May 28, 1922, or a later date fixed by agreement between the committee and the Western Pacific Corporation; and if the holders of more than 50 per cent and less than 80 per cent of the refunding bonds, as above specified, shall become bound by the plan prior to that date (or a later date fixed by agreement as aforesaid), the plan may be declared operative by the Western Pacific Corporation, by written notice to that effect given to the committee, and in the same event, upon the giving of such notice, the plan shall thereupon become operative; but if the holders of 80 per cent of the refunding bonds, as above specified, shall become bound by the plan prior to that date (or a later date fixed by agreement, as aforesaid), the plan may be declared operative by either the Western Pacific Corporation or the committee, by written notice to that effect given to the other party and in the same event, upon the giving of such notice to either party the plan shall thereupon become operative.

J. H. Young, the president of the new company, estimates that it will be necessary to expend upon road structures and equipment in the next five years, including a small expenditure for extensions, not less than \$20,670,237. For the eleven months ended November 30, 1921, the company showed net revenues of \$4,405,677, which, added to other income, made a total income of \$5,111,851. After allowing for various charges, however, the road showed a deficit amounting to \$3,328,105.

The 5 per cent refunding bondholders' protective committee consists of the following: J. E. Young, president of Brown Brothers & Co., chairman; Burton Carter, John D. Rockefeller, Charles Hasden of Hasden, Stone & Co., Andrew I. Miller of Boussevain & Co., Frederick Strauss of J. and W. Seligman & Co., Melvin A. Traylor, president, First Trust & Savings Bank, Chicago. The committee represents a very large amount of the refunding bonds and it recommends bondholders deposit under the plan.

New Committee Opposes Plan.—An independent committee representing the Denver & Rio Grande first and refunding

mortgage 5 per cent bonds and the adjustment mortgage 7 per cent bonds has been formed with James H. Perkins, president of the Farmers Loan & Trust Company, chairman.

The other members of the committee are R. Walter Leigh, of Maitland, Coppel & Co.; John G. Lonsdale, president of the National Bank of Commerce, St. Louis, and John H. McClement and Willis D. Wood, of Ladd & Wood.

The committee, headed by Richard Sutro, also representing the 7 per cent cumulative adjustment mortgage Denver & Rio Grande bonds, announced the receipt of a letter from Samuel Untermyer, counsel for the committee, advising against consenting to the proposal made by the Western Pacific. The committee also announced that it has arranged with the Farmers' Loan and Trust Company to advance the amount of the February 1 interest coupon on the 5 per cent bonds to depositing bondholders.

DETROIT, TOLEDO & IRONTON.—Asks Authority to Issue Bonds.—This company has applied to the Interstate Commerce Commission for authority to issue \$451,000 of 5 per cent gold bonds maturing March 1, 1964, to reimburse the treasury for expenditures made between July 1, 1920, and July 1, 1921, for improvements, betterments and additions to permanent facilities.

GREAT NORTHERN.—Authorized to Issue Bonds.—The Interstate Commerce Commission has authorized an issue of \$30,000,000 of general mortgage gold bonds to be sold at not less than 93 1/8 per cent of par and accrued interest. Of the proceeds \$15,000,000 is to be used to pay the note to the United States maturing March 1, \$2,800,000 for the retirement of bonds of the Minneapolis Union, \$4,170,000 for the purchase of equipment, and \$7,215,000 for additions and betterments.

ILLINOIS CENTRAL.—Asks Authority for Equipment Agreement.—This company has filed with the Interstate Commerce Commission an application for authority to execute an agreement with the Pullman Company under the terms of which the purchase price of 650 refrigerator cars being built by the Pullman Company, \$1,748,500, is to be paid in semi-annual installments at the rate of \$650 a day on a lease basis.

INTERNATIONAL & GREAT NORTHERN.—Protective Committee Asks Reorganization Plan.—Frederick Strauss, chairman of the protective committee of the three-year notes, after a meeting of the committee on Tuesday, announced that De Witt Millhauser of Speyer & Co., had been elected a member of the committee. J. & W. Seligman & Co. and Speyer & Co. were urged by the protective committee to submit a plan of reorganization of the International & Great Northern properties.

JACKSONVILLE TERMINAL.—Asks Authority to Issue Bonds.—This company has applied to the Interstate Commerce Commission for authority to issue \$4,000,000 of refunding and extension mortgage bonds to be guaranteed by the Atlantic Coast Line, Florida East Coast, Seaboard Air Line and Southern. Part of the issue is to refund outstanding obligations and \$1,100,000 is to be sold bearing interest at 6 per cent at not less than 95 per cent of par.

KANSAS CITY & PACIFIC.—Bond Interest.—The New York Stock Exchange has received notice that the interest matured August 1, 1921, on the 4 per cent 100-year bonds, due 1990, will be paid on presentation of coupons on and after January 31, 1922. The committee on securities ruled that the bonds be quoted ex-interest on January 31, the August 1, 1921, coupon, and that thereafter the bonds will be dealt in "flat" and until further notice must carry February 1, 1922, and subsequent coupons to be a delivery.

MISSOURI KANSAS & TEXAS.—Reorganization. J. & W. Seligman & Co. and Hallgarten & Co., reorganization managers, have called the attention of bondholders to the fact that the extended period for the deposit of securities will expire on Saturday, February 4.

A few holders of certificates of deposit for the M., K. & T. second mortgage 4s, the first extension 5s, the first mortgage 5s and the M., K. & T. first 5s are still under the misapprehension that they need take no affirmative step in order to participate in the reorganization plan, but it is necessary for them to present their certificates of deposit to be stamped as assenting to the plan.

WISCONSIN CENTRAL.—Minority Holders Begin Inquiry.—W. J. Wollman and associates, representing the minority common stockholders, are planning an investigation of the road's financial condition to determine if its resources have been handled in any manner detrimental to their interests.

The road constitutes the Chicago entrance for the Canadian Pacific, being controlled through the Minneapolis, St. Paul & Sault Ste. Marie which owns 51 per cent of the Wisconsin Central common shares. The common stock has never paid a dividend, and the question has been raised whether the Wisconsin Central has not been made to bear too great a portion of certain charges thereby benefiting the Soo Line, and also the Canadian Pacific. The Wisconsin Central minority interest which proposes investigation represents 25,000 shares of common stock.

Tentative Valuations

The Interstate Commerce Commission has announced the tentative valuation of the property of the New York, Ontario & Western, including its leased lines, in which the final value as of June 30, 1916, is stated as \$34,495,193 for the property wholly owned and used, and \$10,556,177 for property leased, making a total of \$45,051,370 for the property used. The capitalization outstanding as of the valuation date was \$88,245,982.

The commission has also issued tentative valuations of the property of the Butler County Railroad as of 1916, in which the final value is stated as \$910,396 for the property used and \$907,490 for the property owned. The final value of the property owned by the Central Union Depot & Railway Company of Cincinnati as of 1915 is given as \$970,808 and the property used as \$1,095,678. For the Artesian Belt the final value of the property owned and used as of 1917 is given as \$443,281. The final value of the New Mexico Central as of 1916 is placed at \$1,365,024, and of the Southern Railway in Mississippi as of 1915 at \$4,678,545 for the property used and \$4,470,534 for the property owned.

Additional Equipment Trust Sales

The director general of railroads has announced additional sales, at par plus accrued interest, of railroad equipment trust certificates held by the government as follows:

To Lee, Higginson & Co., New York:	
Kansas City Terminal, 1923-27, inclusive.....	\$62,500
Terminal Railroad Association of St. Louis, 1923-1927, inclusive.....	114,000
Indiana Harbor Belt, 1923-1927, inclusive.....	196,500
Monongahela Railway, 1923-1927, inclusive.....	164,500
	\$337,500

To Guaranty Trust Company of New York and associates:	
Pere Marquette Railway Company, 1923-1935, inclusive.....	\$5,834,400
To Harris, Forbes & Co., New York:	
Maine Central Railroad Company, 1923-1935, inclusive.....	695,500

The total amount of equipment trust certificates sold by the government to date, at par plus accrued interest, is \$218,132,100.

Railroad Administration Settlements

The United States Railroad Administration reports the following final settlements, and has paid out to the several roads the following amounts:

Colorado Midland	\$319,000
Carolina & Northwestern.....	95,000
Blue Ridge	5,500
Tallahatchee	3,000
Pacific Coast.....	25,000
Memphis Union Station.....	10,000

Dividends Declared

Cleveland & Pittsburgh.—Guaranteed, 1 1/4 per cent, quarterly; special guaranteed, 1 per cent, quarterly; both payable March 1 to holders of record February 10.

Railway Officers

Executive

George F. Baker has resigned as chairman of the board of directors and as a director of the Central of New Jersey and the office of chairman has been abolished.

George A. Shwab was elected vice-president of the Tennessee Central, with headquarters at Nashville, Tenn., at a meeting held by the board of directors on January 26.

Financial, Legal and Accounting

Robert W. DeForest, vice-president and general counsel of the Central of New Jersey, has been appointed general counsel, the position of vice-president and general counsel having been abolished, effective February 1.

L. M. Hannaford has been appointed assistant real estate and tax agent of the Central of New Jersey with headquarters at New York, succeeding **Albert A. Hesser**, promoted to manager of the marine department, effective February 1.

Walter Stokes, general attorney of the Tennessee Central, was elected general counsel at a meeting held by the board of directors in Nashville, Tenn., on January 26. **P. D. Houston** was elected treasurer, **W. T. Hale**, secretary and **W. M. Mooney**, comptroller. **H. E. Norton** was appointed assistant treasurer and **A. R. Baker** assistant secretary. All of the above officers will have their headquarters in Nashville.

Operating

Charles H. Stein has been appointed general manager of the Central of New Jersey, with headquarters at New York, effective February 1. Mr. Stein will have charge not only of the operating department but of the engineering, mechanical and marine departments as well. Mr. Stein was born at Baltimore, Md., in 1871 and was educated in the Baltimore City College. He began his railroad career on December 7, 1889, as a rodman on the Western Maryland, and from that time until 1893 was transitman and assistant engineer on preliminary surveys and construction. From 1893 until May, 1903, he was assistant roadmaster on the same road and from then until June, 1905, was assistant supervisor for the Philadelphia & Reading at Reading, Pa. In 1905 he was promoted to supervisor. Two years later he entered the service of the Central of New Jersey as engineer, maintenance of way, and held that position until appointed superintendent in February, 1914. In 1918 he became assistant general manager of that road and of the Philadelphia & Reading. On March 1, 1920, he became assistant to the president of the Central of New Jersey, which position he was holding at the time of his recent appointment as general manager. The position of assistant to the president has been abolished.

C. H. Stein

F. J. Gavin, general superintendent of the Lake district of the Great Northern, with headquarters at Superior, Wis., has had his jurisdiction extended over the Dakota division.

J. L. Close, superintendent of the Breckenridge division, with headquarters at Breckenridge, Minn., has had his jurisdiction extended over the line from Wahpeton Junction, N. D., to Moorhead Junction, Minn., while J. E. O'Brien, superintendent of the Dakota division, with headquarters at Grand Forks, N. D., has had his authority extended over the Northern division. The jurisdiction of J. A. Frogner, superintendent of the Willmar division, with headquarters at Willmar, Minn., has been extended over the Sioux City division.

Albert A. Hesser, assistant real estate and tax agent of the Central of New Jersey, has been appointed manager of the marine department, effective February 1. Mr. Hesser was born at Mahanoy Plane, Pa., on July 8, 1886. He was graduated from Pottsville (Pa.) High School and from Lehigh University—from the latter institution in 1911 with a degree in civil engineering. In 1915 he received the degree of bachelor of laws from the Brooklyn (N. Y.) Law School and was admitted to the New York bar in 1917. Mr. Hesser entered the service of the engineering department of the Central of New Jersey in 1912, was transferred to the freight department in 1916 and later in the same year became an industrial engineer in the real estate and tax department. Mr. Hesser enlisted in the army in September, 1917, and was discharged in August, 1919, with the grade of captain of engineers. He returned immediately to the service of the Central of New Jersey and was appointed assistant real estate and tax agent on March 1, 1920, which position, as noted above, he was holding at the time of his recent appointment.

Traffic

J. F. Moses, division passenger agent of the Atchison, Topeka & Santa Fe, with headquarters at San Francisco, Cal., has been promoted to assistant general passenger agent, with the same headquarters.

William H. Millard, city freight agent of the Northern Pacific, with headquarters at Chicago, has been promoted to general agent, with headquarters at Cleveland, Ohio, succeeding R. J. Tozer, who has been transferred to Pittsburgh, Pa.

F. V. Martin, formerly agent in charge of the consolidated ticket office at Indianapolis, Ind., has been appointed general agent of the Chicago, Indianapolis & Louisville, with the same headquarters, the consolidated ticket office having been discontinued.

W. S. Ferstel has been appointed district passenger agent of the Illinois Central, with headquarters at Chicago. P. S. Mottz, traveling passenger agent, with headquarters at Chicago, has been promoted to special passenger agent, with the same headquarters.

Arthur B. Smith, whose appointment as passenger traffic manager of the Northern Pacific, with headquarters at St. Paul, Minn., was announced in the *Railway Age* of January 21 (page 256), was born at Boston, Mass., on September 15, 1861. He entered railroad service in 1880, as a clerk in the chief engineer's office of the Burlington & Missouri River (Chicago, Burlington & Quincy) at Omaha, Neb., and was successively division engineer, chief clerk to the chief engineer, chief clerk to the general superintendent, chief clerk to the general passenger agent, and assistant general passenger agent, until November 1, 1901, when he left to become auditor of the Yellowstone Park Company. He re-entered railroad service on May 1, 1904, as assistant general passenger agent of the Northern Pacific, with headquarters at St. Paul, Minn., which position he held until December, 1906, when he left to become general traffic manager of the Consolidated Railway at New Haven, Conn. In March, 1908, he was appointed general passenger agent of the New York, New Haven & Hartford, with headquarters at New Haven, Conn., which position he was holding at the time of his recent appointment.

Mechanical

Frederick A. Isaacson has been appointed assistant mechanical engineer of the Atchison, Topeka & Santa Fe, with headquarters at Topeka, Kan.

D. J. Durrell, master mechanic of the Pennsylvania, Southwestern Region, with headquarters at Cincinnati, Ohio, has been transferred to Lancaster, Ohio, succeeding R. J. Sponseller, who has been acting master mechanic.

W. C. Smith, assistant mechanical superintendent of the Missouri Pacific with headquarters at St. Louis, Mo., has been promoted to mechanical superintendent with the same headquarters succeeding J. E. O'Brien, resigned. Mr. Smith will be succeeded by Charles Harter who will also continue to perform his duties as mechanical engineer.

With the leasing of the Erie car shops at Youngstown, Ohio, to the Youngstown Equipment Company, W. W. Warner has resigned from the position of shop superintendent of the Erie to become manager of the Youngstown Equipment Company. Webster E. Harmison, master mechanic at Kent, Ohio, will have jurisdiction over all car department matters formerly handled by Mr. Warner.

Purchasing and Stores

E. R. Brinton has been appointed general storekeeper of the Chesapeake & Ohio of Indiana, and of the Cincinnati division of the Chesapeake & Ohio, with headquarters at Covington, Ky. J. P. Kavanaugh has been appointed general storekeeper of the Eastern division of the Chesapeake & Ohio, with headquarters at Clifton Forge, Va. The position of inspector of stores has been abolished.

G. W. Bichlmeir, whose appointment as general purchasing agent of the Union Pacific, with headquarters at Omaha, Neb., was announced in the *Railway Age* of January 28 (page 306),

C. W. Bichlmeir

was born at Cincinnati, Ohio, on September 10, 1886. He entered railroad service in 1906 as a clerk in the office of the purchasing agent of the Cincinnati, Hamilton & Dayton (Baltimore & Ohio). In 1909 he left to become a clerk in the supply department of the Missouri Pacific at St. Louis, Mo., and the following year he was promoted to chief clerk to the division storekeeper at Osawatimie, Kan., which position he held until January, 1911, when he left to become chief clerk to the general storekeeper of the Kansas City Southern at

Kansas City, Mo. Mr. Bichlmeir left railroad service in 1917 to engage in other business. He re-entered the employ of the Kansas City Southern in April, 1918, as chief clerk to the purchasing agent and, in August of the same year, he was promoted to assistant to the purchasing agent. He was promoted to purchasing agent with headquarters at Kansas City, Mo., in March, 1920, and in November of that year he left to become purchasing assistant of the Union Pacific, with headquarters at Omaha, Neb., which position he was holding at the time of his recent promotion.

Special

H. B. McCoy, director of the government-owned Manila Railroad, has been elected general manager of that road, succeeding E. J. Westerhouse.

Obituary

Herbert D. Howe, vice president and general counsel of the New York, Chicago & St. Louis, with headquarters at Cleveland, Ohio, died at his home in that city on January 29.

Charles Hayden, chairman of the board of the Chicago, Rock Island & Pacific, recently sent a letter to the stockholders of

Stockholders Must Be Educated

that system which is well worth a wider circulation among those who are interested in the railway problem; it is reproduced on another page of this issue. Railroad credit must be improved and the roads must be placed in shape for the peak load that will surely come upon them sooner or later. The credit can only be restored when the public understands fully the facts of the railroad situation and the prime necessity, purely in its own interests, of strengthening and improving them. Mr. Hayden has shown excellent judgment in talking so frankly to the stockholders of his road. Secretary Hoover, representing the public and testifying before the Interstate Commerce Commission last week, was equally frank, as indicated by the rather complete draft of his statement which appears elsewhere in this number. If railroad credit is not restored and the transportation machine fails when business revives, then it is quite possible for industry to lose tremendous sums of money because of lack of transportation, as is so clearly indicated by Mr. Hoover. After all, the public, as well as the stockholders, are partners in the railroad game, and it is greatly to be regretted that so many interests are at work in distorting the facts about railroad operation and finance and misrepresenting the railroads to the public. More power to men like Mr. Hayden and Secretary Hoover who frankly and fearlessly state the real facts.

The main points in our editorial of January 14, on the lesson of the Woodmont (Pa.) collision, might be repeated this week

The Lesson of the Last Collision

in connection with a collision at Camps, Texas, reported in another column of this issue. We notice this report, at this time, as a reminder that our observations in the former editorial are neither untimely nor overdrawn. The emphasis placed by the federal and state inspectors on other lessons of the Woodmont disaster should not be allowed to obscure the immediate lesson; the lesson that the block system is needed everywhere, on thin lines, as well as on busier ones, and that the manual block system, *properly managed*, is the only satisfactory scheme where automatic signals have not been installed. The venerated American train-dispatching system has long since written its own epitaph. The qualifying clause which we have italicized is the main point of the present lesson, for the block system was ostensibly in force both at Woodmont and at Camps, but under such very inadequate rules that the system was little better than a farce. This has been the main feature in a great many other government reports of this kind. It is a feature in which a sweeping reform is needed. The annual government report represents a large mileage of railroad as operated by the block system, in name, but which is not thus operated in fact. At Camps the dispatcher changed meeting points at the last minute; one of those typical cases where, to the casual observer, trainloads of passengers seem to be moved with as much freedom and with as narrow margins of protection against collision, as though they were nothing but checkers on a checker-board.

On Monday of this week W. B. Storey, president of the Atchison, Topeka & Santa Fe, authorized the statement that

The Outlook Continues to Grow Brighter

that road will spend \$43,150,000 for improvements and additions to its property this year. Of this amount \$11,750,000 has been set aside for the completion of work held up during the depression, \$22,000,000 for new work and \$8,000,000 for equipment. Particularly significant is the appropriation of over \$6,600,000 for additional main lines and \$1,400,000 for the construction of a 55-mile extension in southwestern Kansas, which is understood to be the forerunner of other lines in contemplation later in the season. On the following day the Chicago, Burlington & Quincy placed orders for 7,300 cars, involving an expenditure of nearly \$15,000,000. Coming as these developments do after other large equipment orders of recent weeks and after the awarding of an increasing number of contracts for improvements to roadway and structures, they indicate that many of the roads are not only seeing indications of better earnings which are warranting them in making these expenditures, but that they also see a revival of business which will require these added facilities.

The proposed order of the Interstate Commerce Commission on train control calls for immediate intensive study

Train Control Demands Careful Study

of this subject by the roads affected and also by those which may be required to make installations later. Heretofore this subject has been given more or less desultory attention, even since the passage of the Transportation Act which empowers the Commission to issue an order such as has recently been prepared. The time is now here when certain railroads must consider train control carefully and in their choice of a device it is necessary that the costs of installation, operation and maintenance receive serious consideration. These points will no doubt exert a marked influence in the selection finally made. However, deliberation also should be given as to the manner in which train control may be applied for bettering the present train operating methods in the future through the medium of the proposed installations. The roads which attempt to meet an immediate need only by preparing plans with the idea of "getting by" will find this expensive when a re-arrangement is required to meet the advanced operating practices which are being advocated. The responsible executive officers will do well to see that proper consideration is given to this question now.

The cupola on a caboose is such an institution in this country that a suggestion that it be abandoned would be a bold one.

Why the Cupola?

Nevertheless on at least one important road the cupolas have for the most been boarded up. The contention is that the train crew can detect hot boxes and dragging brake rigging much better from the lower windows than they can from the top. Such a conclusion seems logical but, on the other hand, it might be said that conditions in the cupola are such that constant

watchfulness on the part of the crew can be obtained with a minimum of discomfort, whereas peering from one of the small side windows necessitates an unnatural, cramped position. This condition might be remedied by providing adequate facilities for observation from the side windows. Cross seats could be built and a larger window, perhaps slightly extended with a narrow pane to permit a view forward without opening the side window, could be installed on each side of the car. Cupolas are expensive to maintain and make the heating of the cars difficult in winter. Perhaps they should be done away with on some roads. The provision of equally adequate facilities for constant watchfulness at the side windows, however, would strengthen the argument of those who take this view.

The principles of adjusted tonnage rating are familiar to most railroad operating men and practically all roads use this method in making up trains. Like many other things which have become familiar through long use it is taken as a matter of course and usually receives little attention. There is reason to question whether tonnage rating as ordinarily applied gives the best results that could reasonably be expected. There is more to this method than mere trial runs will disclose. Both the resistance of the cars and the tractive effort developed should be carefully checked to insure that the full capacity of the locomotive is being developed. Such an analysis will bring out some surprising facts. On one road a new device was put in service. The railroad complained that it was not giving the economy that was anticipated. Investigations showed that the locomotive was hauling too light a train and was not being worked to capacity and therefore the device was not functioning properly. The same thing might happen on any road. The only certain way to fix a rating that will get full capacity out of the locomotives and insure economical operation is to check the performance with a dynamometer car. Where it is not used the rating of locomotives cannot be more than a guess. Surely every large railroad would find many uses for a dynamometer car. Yet the number of roads that own and operate such equipment could be counted on the fingers of one hand.

Present Cost of Living, Wages and Rates

A DEMAND FOR GENERAL reductions of railway rates, both passenger and freight, has been voiced in the recent hearings before the Interstate Commerce Commission. The spokesmen of the railways have indicated a willingness to make general reductions of rates, but they have claimed that to make general reductions of rates unaccompanied by reductions of wages would be injurious to the country; that it would wipe out the net operating income of the railways and render them unable to make needed increases in their facilities.

The most recent official statistics throw new light upon the important questions of the present relationships, first, between the cost of living and railway wages, and, secondly, between railway wages and railway rates. The statistics of the United States Bureau of Labor were used by the representatives of labor as the highest authority on the cost of living, when they were seeking advances in wages on the ground that the cost of living made them necessary. The Department of Labor has this week made public statistics showing that in December, 1911, the average cost of living in the United States was 47 per cent higher than in December

1910. This is the lowest figure for cost of living that the Bureau of Labor has reported since before the war in Europe began.

How does the relationship between the present wages of railway labor and the cost of living compare with the relationship that existed between railway wages and the cost of living in 1910? The latest available statistics regarding railway wages are those of the Interstate Commerce Commission for September, 1921, which have just recently been made public, and there has been no change in wages since then. These statistics show that in September the average hourly earnings of railway employees were 61.3 cents as compared with 27.8 cents in the year 1910, or 121 per cent more. The railways in recent months have been handling slightly less traffic than in 1910. They have reduced the number of employees and the amount of their purchases as much as is consistent with the maintenance of their properties in a safe condition—in some cases, perhaps, more than this. In September they had 440,550 less employees than in the same month of 1920, a reduction of 26 per cent. Even after this drastic reduction of employees, however, they had on the pay roll in September, 1921, 1,718,330 men, or 4.3 per cent more than the average number employed in 1916. In spite of all the retrenchments made and the maintenance deferred, the eight-hour day and other rules and working conditions make it necessary to employ more men to handle the business than in 1910.

The use of the average increase of 121 per cent in hourly wages to indicate how much higher wages are than they were in 1910 has been criticized on the ground that it gives a false impression because the wages of some employees are not anywhere near this much higher than they were in 1910. There is justice in this criticism. The average hourly earnings of enginemen and trainmen in road service are only from 20 per cent for passenger engineers to 52 per cent for passenger baggagemen higher than they were in 1910. The facts indicate that, measured by the cost of living, there would be little or no justification for reducing the wages of some classes of employees.

But when it is shown that the increases of some employees have been comparatively small and at the same time that the average increase is still 121 per cent, it necessarily follows that the increases of some employees are much greater than the average. Bearing in mind that the cost of living is now only 47 per cent higher than in 1910, attention should be forcibly called to the relatively very large advances in wages that some employees are still enjoying and which are greatly inflating the cost of railway operation.

In September, 1921, car inspectors earned an average of 74.2 cents an hour, which is 201 per cent more than they received in 1910. Switch tenders are getting 55.4 cents an hour, which represents an increase in their pay of 181 per cent. Air-brake men are receiving 76.2 cents an hour, which is 166 per cent more than they received in 1910. Car repairers are getting 75 cents an hour, an increase of 157 per cent. Yard firemen are getting 65 cents an hour, an increase of 138 per cent. Section laborers are receiving over 37 cents an hour, an increase of 126 per cent. Boilermakers are receiving 79 cents an hour, an increase of 93 per cent; and owing mainly to changes in rules and classifications, there are 55 per cent more of them employed than five years ago. Machinists are getting 78.3 cents an hour, or 91 per cent more than in 1910, and there are 48 per cent more of them on the pay roll. Yard conductors are getting 80.4 cents an hour, or 109 per cent more than five years ago, and there are 17 per cent more of them on the pay roll. Blacksmiths are receiving 78.6 cents an hour, or 100 per cent more than in 1910, and there are 14 per cent more of them on the pay roll.

Here are ten classes of employees, including about 500,000

ten, each class of which are receiving average hourly wages representing advances since 1916 at least twice as great as the increase in the cost of living, and some of them enjoying increases over four times as great as the increase in the cost of living.

Compare these advances in wages with the advances in rates which have been made. Average railway rates in 1916 were the lowest in the history of the United States. The average rate per ton per mile in September, 1921, was 80 per cent more than in the year 1916; the average rate per passenger per mile, 53 per cent more. Because the advances in rates have been so much less than the advances in wages, and because the wages of labor constitute the bulk of railway expenses, substantial reductions of rates are incompatible with the earning of adequate net returns by the railways unless reductions of wages are to accompany the reductions of rates.

Does the public prefer to have the railways continue to pay the present wages or to reduce both the wages and the rates? That is the practical question presented. The public might conceivably decide that maintenance of the present wage scales is desirable. In that case, it could not consistently object to paying the present rates. On the other hand, if it decides that the present rates must be reduced, then it must recognize the fact that this decision necessarily carries with it a decision that the present wages must be reduced. The rates and the wages must stand or fall together.

Fiction and Facts About "Weak" and "Strong" Railroads

ONE ceases to wonder that many of the people of the United States in general, and of the state of Iowa in particular, misunderstand the railroad situation and favor unfair and ruinous regulation when one reflects on the amount of incorrect information that constantly is given them. The Des Moines Register in an editorial in its issue of January 26, entitled "What Railroads Overlook", affords some striking examples of the kind of railroad "information" often given to the public.

Some time ago the Register published a statement based on computations by Clifford Thorne as to the market value of railway stocks and bonds in July, 1920, indicating that the value of the railways did not exceed \$13,000,000,000. The *Railway Age* criticised this. The Register now says: "The *Railway Age* did not dispute Mr. Thorne's figures. It merely contended that the selling value of the property at a time like this could not be made on the basis on which to fix earnings." This statement is highly misleading. What the *Railway Age* did was to show that a similar computation based on the prices of stocks and bonds on June 30, 1916, indicated that at that time the market value of all railway stocks and bonds was \$17,830,000,000, and that since then the investment made in railroad properties has been \$2,800,000,000. If the Register does not desire to mislead its readers regarding the valuation the railways are entitled to, why does it not give them the facts regarding what railway securities were worth before as well as after two years of government control had largely destroyed the earning capacity and credit of the railways.

The Register continues: "But leaving that and coming to the last six months' earnings of the railroads as the *Age* gives them, the point the Register makes against the railroads and against the *Age*, as the spokesman of the railroads, is that they do not meet their own problem, for it could be shown that the operating expenses of several of the strongest roads have not in the last six months run much above 55 per cent of their earnings, while the operating expenses of others have run into 90 per cent of their earn-

ings. Of what importance is the general average in the face of the fact that rates on the Union Pacific and Santa Fe are high enough to enable those roads to operate on nearly half of their earnings?"

There is not a correct statement in this quotation, except that the expenses of some roads have run into 90 per cent of their earnings. It is not true that the operating expenses of "several of the strongest lines" in the last six months of 1921 did not much exceed 55 per cent of their total earnings; there is not a single important railway system in the United States of which this is true. The Register specifically mentions the Santa Fe and the Union Pacific. Its examples are skillfully chosen. These two roads had among the lowest operating ratios in the months mentioned of any leading railways in the country. But in these six months the operating expenses of the Santa Fe System were 69.2 per cent of its expenses, and those of the Union Pacific System were 69.04 per cent of its expenses. The difference between 55 per cent and 69 per cent is important. If the operating ratio of the Santa Fe System, for example, had been 55 per cent instead of 69 per cent, its net earnings in these six months would have been \$16,000,000 larger than they were.

How about other so-called "strong" roads? The operating ratios of practically all of them were the lowest and their net earnings the largest in October that they were in any month of the year. Even in October, however, the operating ratios of nine of the strongest railways in the country were as follows: Delaware, Lackawanna & Western, 74; New York Central, 75; Pennsylvania, 83; Atlantic Coast Line, 85; Louisville and Nashville, 78; Illinois Central, 72; Santa Fe, 63; Union Pacific (not including system subsidiaries), 59; Burlington, 73.

Furthermore, the ratio of earnings to expenses does not correctly indicate how much a railway has remaining out of its earnings with which to pay interest and dividends and make improvements. To arrive at this, its taxes must first be deducted. The Santa Fe is one of the most prosperous railways in the country, yet in the last six months of 1921 its operating expenses and taxes took 77 per cent of its earnings, while in the entire year, 1921 they took 82 per cent of its earnings. The Register especially singles out the Santa Fe as a railway whose earnings are "twice what the service ought to cost." This road each year publishes in its annual report a statement showing the percentage of net return that it has earned annually on its investment in property since it was re-organized in 1896. This statement shows that never in any year has the Santa Fe system earned more than 6.85 per cent on its property investment and that its average return in 26 years has been only slightly over 5 per cent. In 1921 it was just about 5 per cent.

Having predicted that the *Railway Age* would not be drawn into a discussion of the relations between the weak and strong railways the Des Moines Register added: "Yet that is the very thing that has got to be met by the railroads themselves, for if they do not they are going to be judged by the earnings of the strong roads. . . . The people will not consent to rates to keep the Great Western on the profitable list. By doing so they enable the Santa Fe to take twice what the service ought to cost. . . . It would have been better for them (the railways) in the long run if they had permitted some sort of consolidation after the war. . . . They should be able to see clearly that in some way the unusual advantage of such roads as the Union Pacific has got to be used to maintain service on such roads as the Great Western."

The *Railway Age* has been discussing the relations between the "weak" and "strong" roads for years, and has no reason for hesitating to discuss them now. For many years railway financiers and managers voluntarily effected consolidations of weak and strong roads. Why are there still "weak" and "strong" roads in every part of the country?

Largely because the government of the United States, under the Sherman Anti-Trust Law, for almost 30 years, more and more strongly opposed all consolidations of railways which had even a remote tendency to reduce competition. The *Railway Age* criticised this policy for years because it prevented reasonable and desirable consolidation. Was not the Des Moines Register at that time opposing all consolidations that would reduce competition? Spokesmen of the railways, including the Railway Executives' Advisory Committee and the Association of Railway Executives, repeatedly presented to committees of Congress plans for changes in our system of regulation, and every one of these included modifications of the government's policy which would have authorized all consolidations of railways that the Interstate Commerce Commission might hold would not be prejudicial to the public interest. Nevertheless, the Sherman Anti-Trust Law, as it applied to the railways under private operation, was kept in full effect until March 1, 1920. How can the railways, in the face of this record, be justly criticised for not having "permitted some sort of consolidation after the war"?

On March 1, 1920, the Transportation Act went into effect with provisions requiring the Interstate Commerce Commission to formulate a general plan for consolidation of all the railways into a limited number of continental systems. Since then the railways have had no power to effect any consolidations not in accordance with the Commission's general plan, and the Commission has not yet adopted any general plan.

But, it may be said, at least the railways are opposed to any general scheme for consolidating all weak roads with strong ones. But "the railways" as a whole have never taken any stand either for or against such a policy. Railway financiers and executives are virtually unanimous in believing that to both the railways and the public it would be beneficial for weak roads and strong roads in many cases to be consolidated. They differ, however, as to just what consolidations should be made and on what terms. There is not a class of students of the railroad problem in the United States,—public men, economists or shippers,—whose members do not disagree among themselves on this same subject. Should railway financiers and executives be denounced for disagreeing among themselves on a subject on which every other well-informed class of persons disagree?

There is one point regarding this matter of the weak and strong roads which is very pertinent but which the Des Moines Register ignores. Its statements imply that a "strong" road may keep all the net return it may earn. But the Transportation Act provides not only that the Interstate Commerce Commission shall fix rates which will yield the railways of each territorial group a fair return on their aggregate valuation, but also that if any railway earns more than 6 per cent upon its own valuation it shall pay one-half of the excess to the government. If, for example, a strong road should earn 10 per cent it would be allowed to retain only 8 per cent and required to give 2 per cent to the government. While the so-called 5½ per cent "guarantee" provision expires on March 1, this provision for the recapture of one half of earnings over 6 per cent will remain in effect unless and until repealed.

When the Des Moines Register talks about some railways earning large returns why does it ignore the fact that regardless of whether the average return earned by any group of railways is 6 per cent or 3 per cent, if a single railway in the group earns more than 6 per cent, the government gets one-half of the excess?

Railways have no right to complain of criticisms of them that are based upon facts fully and correctly stated. But criticisms of them which are based upon the incorrect statement of some facts and the ignoring of others which are closely related and highly pertinent are unjust both to the

railways and the public. They tend to create a public sentiment which will prevent a solution of the railroad problem based on knowledge and reason. There is more misinformation, prejudice and fanaticism on the subject of railroads, per square mile of area, in the state of Iowa than in any other state in the Union. Editorials such as the one in the Des Moines Register from which we have quoted help to explain why this is the case.

Co-operation

A SHIPPING CLERK in a local freight office of an eastern road recently addressed a letter to his management in which he said, in part, "I have been watching with particular interest the efforts of the roads to reduce the loss of freight revenue resulting from freight loss and damage claims. I have read the ideas and suggestions of our loyal workers and have in my own way tried to find some solution to this trying situation.

"There never has been a time when the better elements necessary to make the *real man* are needed more than now. The keynote of the whole matter is, What can I do?"

What can *he* do? Here is an interesting example of an employee of lesser rank who, not satisfied with the usual method of handling freight on his line and believing the freight claim problem to be capable of solution, has taken steps on his own initiative to help eliminate this waste and to prevent a continuance of this loss to his company. How many workers are striving towards the same goal of betterment and success, and on the other hand, what are the railroads doing to encourage such worthy aims from the rank and file of their employees? The answer is "few," in both cases.

His letter continued, "I believe that co-operation is a good thing, but how many of us fully realize what it takes to make it? Without individual effort and interest, co-operation will accomplish very little. However, if every man who participates in the handling of a freight shipment would feel his responsibility, and make it a point to do his part so well and carefully that no trouble would result while the shipment was in his custody, there would be little likelihood of any negligence mistakes or errors causing loss or damage to the freight while in transit."

There is no doubt as to the correctness of this employee's statement. Co-operation is the cure of the freight claim ill and many other ills connected with the operation of railroads. However, the matter of most concern is, how to get this co-operation? One sure way is to encourage such worthy motives as described above. Monthly conferences, advertising, employee magazines, the suggestion box, new idea contests, just remuneration and promotion, and many other like means, are all possible ways of bringing together those who, in the past, have been somewhat unnoticed, for it is the shipping clerk and the freight handler who come in contact with the actual handling of the freight, not the office superintendent or other supervisors. It might be well in some instances to establish schools where the ambitious employee could become more proficient in railroad service and have the opportunity of greater advancement which otherwise might not come; other large industries have tried this method with success. At any odds, get the men in the frame of mind of this shipping clerk, and human nature indicates that they will endeavor to improve their service and thus better themselves; rather this perhaps, than abide by the slogan of their labor union chiefs—as little work and the highest wages possible. The transition will be slow but co-operation can only be brought about by effective counter-propaganda to the present labor doctrines, showing the way to success and self-betterment.

The Future of the

Automatic Hose Connector

JUST HOW LONG before public interest in the automatic hose connector as a safety device will manifest itself in some form of compulsory regulation no one can say with assurance, but it may safely be assumed that such a manifestation will eventually take place. That the railroads are not entirely unaware of this is evident from the growing interest in the connector which has been shown during the past seven or eight years. Since 1915 no less than seven such devices have been on trial in actual service and it is safe to say that no device with any reasonable probability of operating successfully has been deprived of its opportunity for a demonstration. At least two connectors seem to have passed the experimental stage so far as their essential features are concerned and their service indicates that, like all of the important safety devices so far developed, they can more than pay their way.

If then the railroads are aware of the value of the connector as a safety device the use of which the public eventually may demand and there are practical connectors in the field that have proved to be real economy devices, what ought the railroads to do? The answer would be obvious if it were not for one important consideration. Several types of connector heads have been developed; only one of them can ever be placed on freight cars in interchange if the connector is to prove a blessing and not a curse.

There will be no extensive application of connectors to freight equipment until through some agency all but one type of gasket face and one type of gathering device has been eliminated. But who ought to do the eliminating? The railroads, or the companies who have toiled and struggled, each in a different way, to solve a difficult problem for the benefit of themselves, the railroads and humanity? If no other method is developed undoubtedly the railroads, acting through the American Railway Association, eventually will settle the matter. But the task will not be altogether a pleasant one and there is little likelihood of any effective action until it is forced by compulsory public regulation.

The suggestion that the companies that have developed successful connector devices take up the task may appear unreasonable on casual inspection. But it will stand a closer examination. It is evident that before the connector can obtain commercial success all but one type of head must be eliminated. This may be accomplished by the arbitrary adoption of a standard by the American Railway Association or through a pooling or interchange of patents under pressure from that organization. The history of the development of the automatic coupler suggests the probability of the second solution. In that case no special advantage will be obtained by any organization unless it is perhaps by those with the least to offer. In the meantime, while waiting for the force of public opinion to bring the matter to an issue, the advantages of the connector are denied to the railways and there may be many lean years for those who have made it a practical device before its ultimate status is established. Since those most interested in the development of the connector must ultimately get together, is it not reasonable to suggest that they do so voluntarily, thereby greatly hastening commercial success for themselves, added safety for railway employees and the opportunity for the enjoyment of the economic advantages of a well developed connector for the railroads?

THE CHICAGO & ALTON SHOPS at Bloomington, Ill., which have been on a 3 day a week working schedule since December 28, 1921, were placed on a 5 day schedule, on February 1. Officers of the road state the change bids fair to be permanent.

New Books

Electric Arc Welding. By E. Wanamaker and H. R. Pennington. 254 pages. 167 illustrations. Size 5 in. by 9 in. Bound in cloth. Published by Simmons-Boardman Publishing Company, Woolworth Building, New York.

The average user of electric arc welding apparatus will find this book suited to his needs, for it treats the subject thoroughly in language that is easy to understand. The authors hold positions as electrical engineer and supervisor of electrical equipment and welding, respectively, on the Chicago, Rock Island & Pacific. They are leaders in making new and successful applications of the electric arc welding process and have an everyday working knowledge of conditions encountered in actual practice.

The subject matter in the book is confined to autogenous electric arc welding and no attempt has been made to cover electric welding in its broadest sense. The book covers descriptions of welding systems and their installations, phenomena of the metallic and carbon welding arc, training of operators, methods for applying metal to various types of joints and building-up operations, electrode materials used, weldability of various metals, weld composition, thermal disturbances of parts affected by the welding process, physical properties of completed welds, efficiency of welding equipments, welding cost, etc.

This information is that which is most in demand for practical purposes and the book is one of the unusual books that cover a scientific subject without the aid of mathematics. It should be found useful both as an instruction book for teaching the layman the principles of welding and as a reference book for the welding operator.

Principles of Railroad Transportation by Emory R. Johnson and Thurman W. Van Metre. 617 pages. 5½ in. by 8½ in. Bound in Cloth. D. Appleton & Co., New York.

Neither of the authors of this book needs any introduction to students of transportation. Dean Johnson's work, "American Railway Transportation," is a classic of railway literature and both collaborators are well known for their successful academic work in railway subjects. Indeed, the present work is an outgrowth of Dean Johnson's efforts to bring his "American Railway Transportation" up to date. In doing so he found that it was advisable to rewrite the entire work and "Principles of Railroad Transportation" is the result.

We know of but one other general treatise on transportation which follows railroad development through the passage of the Transportation Act. Of the two this book will be found in most respects the superior. It is with assurance, then, that the work is commended to the attention of every careful student of railway problems and to every railroad man who would have a broad view of the railway business as a whole.

The so-called "intelligence" test has become such a fad of recent years that many have doubtless ceased to see in it any real worth. Nevertheless, there is nothing which can so effectively bring home one's ignorance along some line in which he supposes himself to be well versed than a series of questions, admittedly fair, put to him by a recognized master. Therefore, aside from the timeliness of "Principles of Railroad Transportation" and its thoroughness, the list of questions on each chapter which appears in the appendix to the book is its most noteworthy feature. Schoolroom practice? Yes. But a method of helping the uninformed man of affairs to master the subject as well as to guide the college student who is seeking the same goal.

"What is meant by 'a service of a public nature'? Why did the federal government stop constructing and later stop aiding road building? What two mechanical features made Stephenson's 'Rocket' a success? What was the origin of the

Reading: Discuss the relative value of highways, waterways and steam railroads as means of transportation. How does the capital invested in railroads compare with that of other industries? What is meant by 'community of interest' and what is its effect? Would it be a wise policy to permit complete territorial consolidation of railroads? Discuss the various views as to the proper basis for railroad capitalization. Why do a third of American railway stocks yield no dividends? Discuss the origin and development of freight classifications. From what sources are the accounts regarding traffic, receipts and expenditures compiled? Is the railroad business a complete monopoly? What are the main provisions of the Interstate Commerce Act as amended to date?"—These are fair examples of the hundreds of questions appearing in the appendix.

At no time has an acquaintance with facts about our railroads been so important as the present. Every friend of the railroads knows that on every hand he hears charges which he is sure are false against the status quo. Armed with facts easily obtainable in a work of this character no one need let such misstatements go unchallenged.

Principles and Design of Foundation Brake Rigging.—121 pages, 74 illustrations. Published by the Air Brake Association, F. M. Nellis, Secretary, 165 Broadway, New York.

This book is unique in that it is the only comprehensive treatise that has ever been issued covering the fundamental underlying principles and their application to the design of foundation brake rigging. The first chapter is devoted to the theory of friction, the factors which effect its amount, the meaning of coefficient of friction and the friction between the brake shoe and the wheel and between the wheel and the rail. Following this is an explanation of what actually stops a railroad train and the sequence of events which then takes place.

The subject next taken up is that of leverage, first simple levers and then levers combined into various systems. The meaning of leverage ratio is explained and rules are given for calculating leverage with examples of their application to various types of foundation brake rigging. The effect of angularity of levers is also shown. Braking power and braking ratios are defined and reasons are given for the commonly accepted braking ratios for passenger and freight cars. The underlying principles having been explained, the subject of foundation brake rigging is next treated in detail. Some of the points covered are four and six wheel truck brakes, single shoe and clasp brakes, empty and load brakes, hand brakes, locomotive driver brakes, piston travel, efficiency of brake rigging and design of rigging members.

A chapter on retardation, calculation of train stops and retarding force necessary to control a train on a grade is followed by clear and concise definitions of the terms commonly used in discussions of braking and brake rigging. This completes a book which will be found to be an invaluable reference work to those who are interested in the vital subject of the application and use of air brakes on all types of rolling stock.

FRIDAY THE THIRTEENTH OF FEBRUARY, a passenger was in a *single late* in reaching North Elizabeth Station and attempted to board a moving train. Unfortunately he came in contact with the fence at the end of the station platform, was dragged some distance and sustained injuries from which he died a few days later. This is the substance of a message, on a small slip of paper, which, by direction of P. I. Grove, superintendent, was handed recently to all passengers on suburban trains of the Pennsylvania Railroad between Elizabeth, N. J., and New York City. Other notes, concerning car-low conduct by passengers, are being distributed at the same way.

Letters to the Editor

[The RAILWAY AGE welcomes letters from its readers and especially those containing constructive suggestions for improvements in the railway field. Short letters—about 250 words—are particularly appreciated.]

Lights at Highway Crossings

BOSTON, Mass.

TO THE EDITOR:

Every reader must sympathize with you in your effort (January 14, page 166) to get the automobile crowd to use fewer red lights; but what grounds have you for hoping for any success? None at all. People everywhere are so greatly in love with red that the use of red lights is likely to increase rather than diminish. Moreover, if you could induce autoists to try yellow they would make a bad job of it. They would come out, within less than a year, with a dozen different tints, from a common kerosene flame to glass as dark as a total eclipse of the moon.

The true remedy for your trouble is to have a light set from six to ten feet above the ground; one on each side of every crossing. Mr. Morrison of the New Haven road, and Mr. Rudd of the Pennsylvania, have started the right practice, as illustrated in your paper of September 3 and October 29, 1921.

When roads with such numerous and complicated problems as those which the New Haven and the Pennsylvania encounter, have decided on a style of construction or plan of procedure for general use, it is safe to say that their examples merit careful attention and study. These large roads cannot deal with such questions in a superficial way, and the rest of us should avail ourselves of the results of their investigations and experience.

P. S. C.

Col. Shaughnessy's Military Career

NEW YORK.

TO THE EDITOR:

Among the many communications which you will no doubt receive with regard to the sad death of Colonel Edward H. Shaughnessy, Second Assistant Postmaster General, I wish to record a few words. I was closely associated with him as a fellow officer of the 13th Engineers from May, 1917, until he returned to the States in September, 1919. In fact the Colonel, Major Thos. M. Horton and myself were the first three reserve officers to be attached to the 13th Engineers in the Monadnock building and on the Municipal Pier in Chicago, and received the first reservists.

The Colonel's rise from a lieutenant in the 13th Engineers to the position held at his death marks a course of consistent study, hard work and absolute fair dealing with his fellow men.

In the Monadnock building in May, 1917, reservists and reservist aspirants were coming in in droves, and the Colonel was assigned to the job of "hand picking" the kind of railway men which the service demanded for the future success of the 13th Engineers. As the regiment filled up, he was assigned to the acting command of Company E—the North Western Company—and proceeded to organize and drill this company to a point where it never had any superiors; moreover, it probably furnished more future officers to the regiment than any other company.

While the regiment at that time only consisted of two

battalions of about 550 men and officers, it was split up into three provisional battalions for the purpose of movement to France. The first battalion was sent out of Chicago July 19, 1917, and the second and third two days later, all three passing New York in the same order of separation. The first arrived in Liverpool, thence to Borden Camp, August 1, and the 2nd and 3rd battalions on slower passages nearly two weeks later. Our final consolidation at Borden, a parade in London, with the 12th, 14th, and 17th Engineers, also with the 11th Engineers at Borden Camp is a matter of history.

We finally landed in La Havre, August 17. Colonel Shaughnessy, Capt. Holmes, Major Walter Johnson and myself, with a selected detail of about a hundred amateur stevedores, were left behind to unload our engineering equipment from the boat and forward it to Chalons sur Marne. This consisted of about 60 wagon loads (wagons in the European sense). Colonel Shaughnessy called it the carnival company, and it looked more like it than anything else. The balance of the regiment went on ahead of us, we following in about 36 hours.

At Chalons the Colonel commenced immediately his hard work of organizing the regiment in a railway scheme of things, blended of course with the necessary military aspect. Three weeks later, when we finally arrived at our permanent stand with Fluery sur Aire as G. H. Q., nearly every man was ready to fit into the right place. The Colonel, I consider, was more to be credited in getting things going in an orderly railway sense than any other officer. And he did this with such diplomatic tact, that I do not think you could ever find an officer of higher or equal rank, in whom he inspired any jealousy. If there ever was such, the cold facts of the matter are just these—that any others who could have done the same thing were at the time thoroughly willing to “let Ed. do it,” while those who knew nothing about the job were equally well pleased to see things going so nicely.

Following this, Colonel Shaughnessy immediately addressed himself to the task of getting up a simple English condensed translation, in one consolidated pocket edition, of four important French Railway rule books. This was later used by the Railway Transportation Corps throughout France.

Always studying, he made wonderful progress with the French language, which early in 1918 won him a place with the French Regulating Station at St. Dizier, where he immediately availed himself of the opportunity of mastering the fundamentals of “supply regulation.” This schooling made him the man of the hour to be sent to Chateau-Thierry in July, 1918, where he did much good work in straightening out the confusion which was the natural consequence of that operation.

In September, 1918, he arrived at Is sur Tille, as General Superintendent of lines entering the advance section, and during the following six months took the same untiring interest in the success of the railway lines of communication in the advance section as had marked his past year's work. Here he utilized his extensive experience as chief train dispatcher and trainmaster, coupled with the nerve to put through any reforms or system that the circumstances required. And always with that same political tact, which aroused no one's envy. Many a man with possibly equal ability would and did fall down from lack of diplomacy.

In March, 1919, Colonel Shaughnessy was made Deputy Director General of Transportation for the Advance Section at Chaumont, having charge of the railway transportation for the evacuation of over a million men, which was successfully accomplished in April and May, 1919.

In June, 1919, he was made Director General of Transportation at Tours, and during June, July and August the complete evacuation from the SOS, and the surplus from

the Army of Occupation was accomplished to within a few casual detachments.

He returned in September, 1919, to his former occupation on the Chicago & North Western, leaving there some six months later to become Assistant Director of Transportation of the Petroleum Institute. The end of about a year's service with the Institute was marked by his selection for the post held at the time of his death.

As a transportation expert, Colonel Shaughnessy had as broad a vision as any man I ever knew. That was not all, for in most cases his nerve would successfully accomplish what his convictions indicated was necessary. But the best, and perhaps the most important of all, was his ability to do these things without exciting envy or friction.

F. A. PARKER,
Major, Eng. Res. Corps.

[Major Parker was at one time a train dispatcher on the Chicago & North Western, and later chief train dispatcher on the Missouri and Iowa divisions of the Chicago, Rock Island & Pacific. He was closely associated with Colonel Shaughnessy from May, 1917 to November, 1917; as lieutenant of the 13th Engineers; again as a trainmaster in the advance section from September, 1918, to March, 1919, and then as his first assistant, as Asst. Supt. Transportation, Advance Section, March to June, 1919; and finally as General Supt. Transportation at Tours, June to September, 1919.—Editor.]

Sleeping Cars Drastically Criticized

NEW YORK

TO THE EDITOR:

Your recent editorial “Are Upper Berths Too High?” and your description of new sleepers for the Canadian Pacific brings up again a question which occurs in the minds of many laymen—Why has there been so little real advance in sleeping car architecture?

It is true we have advanced considerably from the pioneer sleepers with their rows of shelves upon which human beings reclined.

We have designed the compartment and the drawing room, admirable in their way, but extravagant in their use of space, cost to the passenger, and operating cost to their owner. In the ordinary straight berth sleeper we have shown very little progress. This car is essentially what its forerunners were, saving numerous refinements of detail.

It is the detestation of travelers and a violation of all the nicer senses of modesty and comfort. A bed-chamber for both sexes in which the occupants are separated by flapping, ill-fastened curtains and in which these travelers are obliged to wriggle out of and into their clothing in a series of acrobatic movements, half of them climbing to their roosts by step ladders, is an institution which is hardly up to our twentieth century ideas of modesty or comfort.

It would seem that inventive genius which has evolved the “folding apartment” in our cities might overcome these crude and offensive conditions in our sleepers.

A series of extremely narrow staterooms with transverse berths and just sufficient floor space in which to stand on one's feet while dressing or undressing is one theory which it would seem might be put into practice by inventive genius. It would seem possible that such an arrangement might be worked out for single or double berth combinations and without a serious sacrifice of passenger carrying capacity. Solid partitions would of course replace the miserable makeshift of present curtains, and decency and comfort make a night journey a pleasure rather than the dreaded experience it is now.

Let there be some real progress in sleeping car interior layout.

TRAVELER.

The Improvement of Boiler Waters

OMAHA, Neb.

TO THE EDITOR:

Having read the article entitled "The Interior Treatment of Boiler Waters," by C. R. Knowles in the *Railway Age* of November 12, 1921, the writer has been interested in the various comments and criticisms that have appeared in subsequent issues. While being quite generally in harmony with the observations of W. H. Hobbs in the issue of December 10 and C. H. Koyl in the issue of December 24, there are certain phases of the subject as presented by Mr. Knowles that, for the sake of clarity, should be mentioned.

It is unfortunate that the discussions of anti-foaming treatment and anti-scale treatment were so interwoven in the original article as to result in possible misinterpretation.

The "hit-and-miss" treatment to which the author refers may be laid aside in this discussion as this is not boiler water treatment at all. Only the correct application of any method should be used in making comparisons, otherwise we might as well discuss the "hit-and-miss" method of train dispatching or train operation. The use of anti-foaming compounds is so different from the use of water softening plants and anti-scale compounds that this should be made clear. Anti-foaming compounds may be used as an auxiliary to either method of anti-scale treatment or it may be required on waters that receive no other treatment.

The following statement appears in the original article:

"An increased tendency to cause foaming is characteristic of all water treated with soda ash, and nearly every railroad using the lime and soda treatment finds it also necessary to apply interior treatment to the softened water to prevent foaming. It follows therefore that certain waters cannot be used successfully after exterior treatment without interior treatment to prevent foaming."

In this connection, certain facts concerning water treatment now under the direction of the writer, will be of interest. Seventy-five per cent of all the anti-foaming compound used on 9,500 miles of road is applied on a district 137 miles long where no water softeners operate and no anti-scale compound is used. The foaming is purely the result of natural water conditions. On one division having eight water softeners on the main line, the master mechanic in a report made on December 23 said: "It is not necessary to use anti-foam compound on this division. It is not very often that we have foamy boilers, and it is very easy for an engineer to give the boiler a blowing out." When two or three more water softeners have been installed on this division, in order to complete the treatment, the tendency to foam will be even less than at present, owing to the consequent reduction of concentration in the boilers.

It is true that "certain waters cannot be successfully used after exterior treatment without interior treatment to prevent foaming"; however, if anti-scale compound were applied to the same waters in the boiler, the foaming would be more severe. Anything that increases the concentration in the boiler and produces a sludge, increases foaming.

Mr. Koyl referred to boilers containing 1,000 grains of sodium salts per gallon without foaming. There are few boilers that do not have enough suspended matter to induce foaming in a water of this concentration.

The one fact that is paramount in Mr. Knowles' article is that anti-foaming compounds are a valuable adjunct to motive operation in bad water districts. This should not be confused with anti-scale treatment.

The railway water problem is too intricate and varies too widely on different roads for anyone to lay down rules for handling these problems with the expectation that they will be applicable in any number of cases. The problem is of such magnitude that it deserves careful study in every case by trained men who will attack all phases of the water problem with the view to effecting the greatest economies for the

road employing them. Other methods give but partial results and the old adage is as applicable here as elsewhere: "Anything that is worth doing at all is worth doing well."

WM. M. BARR,

Consulting Chemist, Union Pacific System.

Control of West Side Belt

PITTSBURGH, Pa.

TO THE EDITOR:

My attention has just been called to an article appearing in your issue of December 24, 1921, page 1263, entitled "Railroads May Not Evade Consolidation Provisions of Law," dealing with the recent decision of the Interstate Commerce Commission in Finance Docket 1108, an application by The Pittsburgh & West Virginia Railway Company for authority under Section 20-a of the act to issue certain additional capital stock to carry out a contract between it and the West Side Belt Railroad Company (controlled by it) for the purchase of the property of the Belt Company by The Pittsburgh & West Virginia Railway Company.

There was no attempt whatever on the part of this company to evade the consolidation or any other provisions of the Transportation Act. On the contrary, as a reading of the article in question will show, application was made under paragraph 18 of section 1 for authority to consummate the purchase, and that application was filed coincident with the application under Section 20-a to issue the stock.

The Interstate Commerce Commission held, upon the application under paragraph 18 of section 1, in Finance Docket 1107, that that section of the act was not applicable in the case of carriers already in operation. The commission might well have held—as it did in Finance Docket 1288, an application of the Soo Line to purchase the property of the Wisconsin & Northern, substantially similar in character, which was also made under paragraph 18 of section 1—that, while under its construction thereof that section was not applicable, the application would be considered and disposed of under paragraph 2 of section 5 of the act. This company is now making application under that section of the act and renewing the application in Finance Docket 1108.

The decision in Docket 1108 does not, as you seem to conclude, hold that a purchase of the character in question may not be consummated until the commission shall have formulated its general plan of consolidation contemplated by other paragraphs of Section 5. That question was not determined by the decision in Finance Docket 1108; but, unless the commission does find authority under paragraph 2 of section 5 to authorize purchases similar to that here contemplated (which it did find by its decision in the above-mentioned Soo application, Finance Docket 1288), none could be made until after the general plan is formulated.

There is substantial doubt whether authority could be obtained under the laws of Pennsylvania to merge the two companies, inasmuch as The Pittsburgh & West Virginia Railway Company is a consolidated corporation of the states of Pennsylvania and West Virginia, and it is doubtful whether a domestic corporation may merge with a consolidated corporation. A consolidation of the two companies would entail reissue and relisting of the capital stock of the consolidated company, involving, with other incidents an expense in the neighborhood of upwards of \$200,000. For these reasons, apart from several other important ones, the plan of purchasing the property of the Belt, for which there is clear statutory authority, was decided upon, rather than merging or consolidating the companies; and this conclusion was reached before the transportation act was passed, and obviously without regard thereto, and so, necessarily, without any attempt to "evade" the provisions of that act.

H. E. FARRELL,

President Pittsburgh & West Virginia Railway and West Side Belt Railroad

Increasing the Scope of Locomotive Cranes

Experiences of the Lehigh Valley Demonstrate that a Wide Range of Work Can Be Handled Advantageously

THE USE of mechanical equipment for all classes of railway work has been given a great impetus in the last three or four years, chiefly as the result of a distinct need brought about by the shortage of labor. This need has, in a way, abated and has been replaced by a more important one, that of doing the work at the lowest possible cost. This has resulted in the discovery of an increasing number of purposes for which different classes of equipment are adapted and has emphasized the fact that many forms of work heretofore thought to be solely in the realm of hand labor can be performed cheaper, better and quicker with machinery. The locomotive crane has been one

Unloading Rail with a Fleet of Locomotive Cranes

Swinging in New 136-lb. Rail with a Locomotive Crane

of these pieces of equipment which study has shown to be readily usable for a wide variety of purposes. On the Lehigh Valley, for instance, it has been profitable to use a larger number of cranes and no better evidence can be presented of the scope of such machines than the fact that this road has 47 locomotive cranes in service on 1,449 miles of line. This is probably more locomotive cranes per mile of road than any other road in the country.

Cranes Are Constantly in Demand

Where mechanical equipment is in use, the big factor to be considered, if strict economy is to be had, is the question of possible idle time. Each crane, for instance, represents an investment, the interest charge on which must be apportioned and carried as a part of the cost of the work which the crane performs. Other items also, such as depreciation, for example, must be taken into consideration and where the idle time is large they may possibly eat up any savings effected in doing a particular class of work which would otherwise accrue to the benefit of the road. This is a possibility which has acted as a deterring influence and has prevented many roads from securing enough equipment to carry out efficiently and economically certain phases of railway work which are more or less seasonal. The experience of

the Lehigh Valley has been, however, that there are so many tasks for which a locomotive crane can be utilized to advantage that the question concerned with their use has become one not of possible idle time but of enough cranes. In spite of the large number of cranes which that road employs, there is nearly always a waiting list of work. Thus the overhead on a crane is re-

duced to the minimum so far as any individual task is concerned, with a resultant economy in the performance of that task.

The cranes are used by the engineering, maintenance-of-way, mechanical, operating, traffic and other departments to advantage. In general they are assigned regularly in varying numbers to each of the divisions by the engineer maintenance-of-way who is responsible directly and indirectly for the care and operation of all cranes on the system. When assigned to the divisions they become a special charge of the division engineer whose duty it is to see that they are kept employed constantly and that an equitable distribution is made to the departments in need of them. This officer makes a weekly report to the engineer maintenance-of-way showing the number of cranes on the division, the assignment and location of each one and the class or classes of work on which they have been employed during that period. This information from each division office is then compiled in the office of the engineer maintenance-of-way into a system report. When calls are made for additional cranes

Locomotive Crane Handling Bridge Ties

on a division it is possible for the engineer maintenance-of-way to make the most economical and satisfactory assignment through the aid of the information which is thus placed in his hands every week.

The feature of particular interest in this article is the list of uses for locomotive cranes. Each item is, in the majority of instances, representative of a general purpose, which may, and often does, contain a number of specific uses which differ somewhat but may still be included under the one head. Practically no work is undertaken that is not preceded by a study to determine how much of it can be performed effec-

tively with cranes. The experience of the road indicates that the more the employees use the cranes, the more uses they find for them, and that this experience is not confined to any one department. In general the items listed are self-explanatory and may well serve as a guide to any road which has found it difficult to keep its cranes working steadily. A few of the items are so interesting that they deserve a little more complete treatment. For that reason additional details are given here.

The question of laying rail by locomotive cranes is fairly well known, the method having been described in detail in the December 10, 1920, issue of the *Railway Age*. A more recent development is the utilization of cranes equipped with clam shell buckets for cleaning ballast. With this method a gondola with a large screen mounted on it, is placed next to the crane. The ballast is forked out from between and down to the bottom of the ties. This foul ballast is piled in the track center, where it is picked up by the bucket and dropped on the screen. The dirt falls through and the cleaned ballast runs down the screen and, by means of chutes, is returned either to the track center or between the tracks. The ballast between the tracks is cleaned down to a depth of from 12 in. to 14 in. below the bottom of the tie.

Handling Bulk Freight to Release Cars

The Lehigh Valley has utilized locomotive cranes in varying numbers for the loading and unloading of bulk freight from open top cars. Generally this has been in place of or where gantry cranes are not already installed, but it has also been found advantageous to use them even where there are other facilities. The greatest use of cranes for freight handling purposes has been on the New Jersey waterfront at Black Tom—Pier 7—where lighterage freight is usually handled. During the period of heavier traffic it was not uncommon to have three or four cranes working regularly. The material handled covered all classes, from pig iron, billets, and rails to boxed automobiles and even loose sulphur.

As a measure of relieving congestion the cranes were employed extensively for unloading material from cars to open storage plots until, for instance, the necessary ships for loading were available. This allowed a quick release of the cars for other purposes. When ships were ready the cranes were run in again and the material reloaded into cars, brought to pier side and often placed directly on the lighter or whatever was there to receive it. Ordinarily the cranes unload the freight near the string piece where the floating hoists can reach it easily. In performing this and other work it is quite common for a crane to switch one or two cars by its own power. Commodities such as sulphur are loaded into box cars through the medium of a hopper and spout, the crane dumping the product into the hopper. Practically the only labor required outside of the crane operators is that of the men who stow it away in the car.

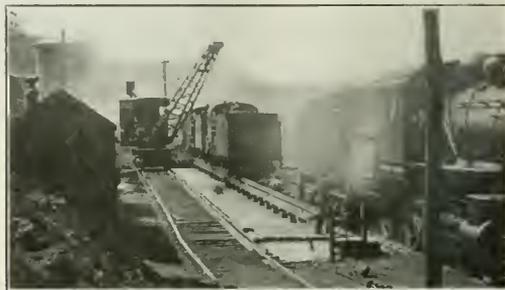

Crane Takes Place of Work Train

There is usually a variety of work around yards, shops, storehouses, and even out on the line, that ordinarily requires the service of a work train. Because of the self-propelling feature of the locomotive crane, it has been found possible to substitute it for a work train in a large number of instances. At the Lehigh Valley's shops and engine terminal at Sayre, Pa., for example, it is used extensively in this way, handling two or three cars at a time, even on grades. Loaded cars are spotted and often unloaded by cranes while the reverse is also carried out with equal satisfaction. One common way in which the crane is utilized for two purposes is in the cleaning up of refuse, scrap and other debris in yards and terminals. In this work the crane pulls or pushes the open top car or cars along by its own power, loading the refuse into them by means of a clamshell bucket and then moving along to the next pile to be loaded. Work train ser-

vice is thus eliminated entirely while an added advantage is gained by the fact that the crane is more flexible and faster than hand labor.

Work train service has been greatly reduced in connection with the renewals of bridge decking through use of the locomotive crane. In this work cranes are used to pick up the old ties, loading them on a flat behind the crane and, in turn, picking up a bundle of new ties from the same car and depositing them in the proper position for insertion. Rail, old and new, is likewise handled by the cranes with the result that this work is speeded up materially.

While this method is in a way a form of material handling, the list shows several more specific instances, one of the most interesting of which is the one referring to the load-

Crane Serving an Ash Pit

ing of track materials, such as splice bars, tie-plates, bolts and spikes. In common with many roads, the Lehigh Valley assembles its materials in designated store yards from which it is distributed along the line when needed. In piling splices, tie-plates, etc., in the yards, care is taken that each pile is kept within certain limits of size. Thus when it is necessary to load splices, for instance, a clamshell bucket handled by a crane is dropped over the pile and the splices picked up almost 100 per cent clean. The few that are missed are loaded into the bucket by hand after which it is unloaded into a car as usual. Kegs of spikes are handled in the same manner, the crane easily picking up one keg at a time, without damage, with the aid of a bucket. As may be surmised, the time saved in loading a car is large.

Numerous other items contained in the list which follows are equally and perhaps even more interesting, depending upon the viewpoint and the department under consideration, as for instance, the one dealing with the handling of signal bridges. It is, however, practically impossible to go into detail on all of the items and it is not necessary for the greater part of them are self-explanatory.

We are indebted to G. L. Moore, engineer maintenance of way of the Lehigh Valley, his staff at headquarters, and to all the division engineers for the information contained in this article.

Uses of Locomotive Cranes on the Lehigh Valley

Maintenance of Way

- (1) Laying rail
- (2) Cleaning ballast by means of large screens mounted in cars and by bucket
- (3) Loading, unloading and placing tie tamper air compressor outfits.
- (4) Loading ties for local or other delivery by means of slings
- (5) Handling all sorts of scrap, refuse, sweepings and cleanings, etc., in terminals and yards.
- (6) Driving piles, being equipped with steam hammers
- (7) Handling frogs and switches at frog shops.
- (8) Removing old and laying new frogs and switches in yard and other tracks
- (9) Handling treated timber at the company treating plant at Manville, N. J.
- (10) Loading, unloading and placing snow fencing panels in final position.
- (11) Loading tie plates, splices, bolts and kegs of spikes. Used in connection with a bucket

- (12) Rocking turntables when necessary to replace or change centers.
 - (13) Wasting dirt in case of slides.
 - (14) Ditching along right-of-way, or in other places as desired.
 - (15) Cleaning or picking the right-of-way.
 - (16) Handling steel for bridge renewals and erection.
 - (17) Distributing stone ballast where it is uneconomical to distribute it by opening hoppers.
 - (18) Cleaning snow out of cuts.
 - (19) Setting up highway crossing alarms.
 - (20) Cleaning off tunnel portals—men shoveling into bucket.
 - (21) Dredging around pontoons and float bridges.
 - (22) Raising tracks, sidings, etc., either for a permanent raise or in sticking coals, etc.
 - (23) Shifting track or turnouts, etc., to new locations.
 - (24) Picking up, loading or shifting small buildings.
 - (25) Tearing down and distributing timbers in obsolete coal trestles.
 - (26) Raising small bridges where it is necessary to secure greater clearance. Used in place of jacks.
 - (27) Handling bridge timbers such as decking, ties, etc. Used to remove old and place new timbers in position.
 - (28) Erection of highway crossing bridges in connection with an extension of the boom.
 - (29) Lining tunnels. Steel sections carried in on top of boom and placed in position.
 - (30) Setting up stand pipes, water tanks, and pipe lines, etc., in water service work.
 - (31) Unloading and placing various classes of pumps. If unable to move the material into the building and place it in position it is moved as near to final position as possible.
 - (32) Cleaning out suction wells for fire protection pumps.
 - (33) Excavating trenches in water service and sewer work.
- Construction—**
- (1) Use in construction where bents and materials are framed in advance, moved in and placed in position by cranes.
 - (2) Laying new track on branch lines and sidings. Ties handled in bundles. Rails laid and cranes moved ahead.
 - (3) Placing pre-cast concrete slabs in bridge and other work.
 - (4) Setting up steel stacks of all dimensions and sizes up to the capacity of machine in tons, etc.
 - (5) Loading, distributing and installing reinforced concrete and other types of culverts.
 - (6) Erecting buildings and sheds, handling material, placing timbers or steel trusses, etc.
- (7) Picking up and loading gravel and sand at company pits.
 - (8) Distributing material and charging mixers in concrete work.
 - (9) Excavating for bridge piers and abutments.
 - (10) Digging for and placing cribbing and filling same.
 - (11) Grading for industrial tracks and other sidings.
 - (12) Grading approaches for overhead highway crossing bridges.
 - (13) Hooking up gears and frames at transfer bridges.
 - (14) Loading, unloading and placing steam boilers, etc., and drawbridges and power houses.
 - (15) Picking up, distributing and placing rip rap in the construction of retaining walls.
- Operation—**
- (1) Rerailing cars in yards, or other work.
 - (2) Handling freight at waterfront terminals.
 - (3) Handling sand at terminals, filling bins, etc.
 - (4) Wrecking work such as picking up and throwing aside or loading refuse, freight, coal, burnt timbers, car parts, etc., up to the capacity of the machines.
 - (5) Handling ashes at engine terminals in connection with various types of pits.
 - (6) Stocking coal.
 - (7) Coaling engines.
 - (8) Spotting cars around company shops and yards.
- Mechanical—**
- (1) Handling heavy material at locomotive shops with or without magnets.
 - (2) Handling wheels and axles, mounted or unmounted, in varying amounts at car shops and other locations.
 - (3) Dismantling and removing old condemned cars from trucks.
- Signal and Electrical—**
- (1) Loading and placing concrete telephone booths, battery wells, etc.
 - (2) Pulling up and loading or unloading telephone, telegraph poles, etc.
 - (3) Setting up telephone and telegraph poles, signal brackets and bridge warning signs.
 - (4) Erecting or moving signal bridges. New foundations made ready and bridges picked up as a unit where possible or in sections otherwise and moved to new location.
- Miscellaneous—**
- (1) At the general storehouse for handling timber in the lumber yards.
 - (2) Handling pig iron and scrap by magnets at outlying points where regular electric gantry cranes are not installed.
 - (3) Unloading coal at stations and other company buildings.

Plain Facts for Rock Island Stockholders

Chairman of Board Hayden Tells Them About Valuation and Other Public Relation Problems

CHAIRMAN Charles Hayden of the board of directors of the Chicago, Rock Island & Pacific recently sent a letter to the stockholders of that system in which he discussed with them frankly some of the more important problems confronting the railroad, and particularly those associated with federal regulation. Extracts from his letter follow:

"The paramount importance of the transportation problem makes it proper again to call to your attention certain phases of that problem directly affecting your interest as stockholders of this company, and as citizens of the United States.

The Federal Valuation

"After six years' work the tentative valuation of your company's properties was announced by the Interstate Commerce Commission in September at approximately \$335,500,000, as of June 30, 1915. This is for carrier property only.

"In order to make a comparison of the value announced by the commission with the company's present capitalization, it is necessary to exclude the value of certain leased lines whose capital stock is not entirely owned by this company and to bring the figures down to date by adding additions and betterments since the date of valuation. So stated, the comparison is as follows (see table in next column):

"This valuation, officially determined by the United States government, refutes for all time and for all purposes the suggestion sometimes made by the uninformed, that this company is overcapitalized. We regard the valuation established by the commission as being much less than the actual value of the property, and have filed the protest contemplated

by law in the hope that, upon a hearing, the commission will substantially increase its valuation; but, even on the commission's minimum basis, this valuation must be taken

PHYSICAL PROPERTY AS OF JUNE 30, 1915, AS ANNOUNCED BY COMMISSION	
(a) Carrier property (C. R. I. & P., C. R. I. & G., and Morris Terminal)	\$335,539,013
(b) Non-carrier property	5,745,895
Total	\$341,284,908
From the foregoing should be excluded the values of the following leased lines, which are not controlled through the ownership of entire capital stock:	
Keokuk & Des Moines	\$3,464,958
Peoria & Bureau Valley	1,650,000
White & Black River	700,000
	5,814,958
Balance, excluding these lines	\$335,469,950
There should also be deducted cash and materials on hand June 30, 1915, as found by the commission	9,022,288
Remainder, representing physical property owned directly or through stock ownership, as of June 30, 1915, as found by commission	326,447,662
Add: Additions and betterments July 1, 1915, to June 30, 1921	36,374,458
Cash and materials, June 30, 1921	25,455,222
Total, June 30, 1921	\$388,277,342
LIABILITIES JUNE 30, 1921, ACCORDING TO COMPANY'S BOOKS	
Long term debt	\$234,505,515
Loans and bills payable	14,930,000
Preferred stock	54,557,989
Total capital liabilities ahead of common stock	\$303,993,504
Common stock outstanding	74,482,523
Total capital liabilities	\$378,476,027
Amount by which minimum value as found by commission exceeds total capital liabilities as of June 30, 1921	9,801,315
Amount of equity represented by common stock (difference between property values of \$388,277,342 and total of senior obligations)	84,283,838
Same per share of \$74,482,523 of common stock	\$113.10

as establishing a property value behind our stocks and bonds, much in excess of their par value.

Rate of Return Under Transportation Act

"On account of the general business depression which has existed in the country during the last year, the rates fixed by the commission have failed by a very substantial sum to produce the return contemplated by the Transportation Act. For instance, the earnings of your property for the year ending September 30, 1921, were \$8,890,000 short of being six per cent upon its property investment, and your property's earnings were better than the average in the group in which it was placed. Notwithstanding this fact, many substantial reductions in rates have been made by the carriers in the country, partly under order of the commission, and partly voluntarily, with the idea that a reduction in rates would in some degree promote the movement of traffic. Unless the effect of these rate reductions is counterbalanced by an increase in traffic, it is reasonable to anticipate a substantial reduction in the company's net revenues in the coming year, because the reductions ordered by the commission in one case alone (the hay, grain and grain products case, I. C. C. docket No. 12929) will amount in the case of the Rock Island to \$3,500,000 a year, all of which comes out of net revenue. Consequently, it is of the utmost importance to you, as stockholders of this company, as well as to the public at large, that the commission shall not reduce the rate of return below the existing standard. In view of the fact that the government itself is now charging us six per cent upon money loaned to us for additions and betterments, it would seem that the commission will have little ground for reducing this rate, but nevertheless it is being urged to reduce it. A decision is expected about March 1.

"Of equal importance is the danger that Congress may repeal that section of the Transportation Act which imposes this duty upon the commission. While the responsibility of fixing rates to provide a fair return was on the commission even under the old law, there was no specific mandate to this effect, and it is very important that the positive direction contained in the Transportation Act should not be disturbed.

Labor Conditions

"The great obstacle to a further reduction of rates is the cost of labor. The Labor Board has made substantial reductions in the last few months, which were anticipated, however, in the reductions of rates mentioned above. The carriers now are proceeding to ask for additional reductions, which will have to be made if the labor cost of transportation is to be reduced to a basis comparable to that in other industries. For instance, unskilled labor is now costing the railroads approximately 40 cents an hour, which is a uniform rate for all portions of our system; whereas at many points on our road the current rate for unskilled labor in industrial occupations is 22 cents to 30 cents an hour. The Labor Board also has eliminated some of the burdensome rules left in force by the Railroad Administration, though not to the extent hoped for by the carriers. Many classes of work are still performed by unskilled labor, classified as mechanics or in other classifications taking higher pay.

"We must not be understood as objecting to fair pay for our employees, but the country is in a process of post war liquidation. Railroad investors, as a class, received probably less of an increase in their return as a result of high war prices than any other element in the community, whereas railroad labor was very handsomely treated by the government acting through the Railroad Administration. The stockholders are now doing their full part in the process of deflation by accepting substantial reductions in income, and it is only equitable that labor, which profited so largely, also should contribute to the process.

"There has been much discussion in the public press of

the Labor Board and its usefulness. Your directors are firmly of the opinion that the Labor Board is an excellent institution, because it places labor costs under the control of a public body. Sooner or later the public will come to realize that its decrees have the force of law, and public sentiment will not support an attempt to settle any labor controversy otherwise than through its processes. In addition, the government itself cannot in fixing rates ignore the wage costs determined by a tribunal of its own making. The whole Transportation Act is new, and it can hardly be said to have had a thorough trial; and particularly is this the case with these provisions relating to the Labor Board.

State-Made Rates

"A bill is pending in the United States Senate (Senate Bill 1150), introduced by Senator Capper of Kansas, which, if passed, will undo a large part of the good accomplished by the Transportation Act, and constitute a long step backward in railway regulation. Its purpose is not only to repeal the section of the Interstate Commerce Act requiring the commission to fix rates at a prescribed level, but to deprive the Interstate Commerce Commission of all jurisdiction over rates within a state, no matter how seriously such rates may discriminate against the interstate rates. The effect would be to give every state commission practically exclusive jurisdiction over rates within the state, with no remedy whatever to the carriers to protect the revenues provided by the Transportation Act, and a result which may be forecast by reference to the long series of adverse state regulations beginning in 1907, and ending in the cataclysm of federal control.

Partners Rather Than Creditors

"We call these things to your attention, because it is to your interest as a stockholder, as well as to the interest of the public, that railroad credit shall be maintained. It is essential that the public shall have such confidence in the railroad managements and in the way in which the railroad problem is being handled by the government, that it will be willing to provide on favorable terms the new capital, which is necessary not only to protect the existing investments but to finance the expansion of our transportation system.

"The Rock Island should be financed by increasing the number of its partners rather than by increasing the number of its creditors, that is, with stock rather than with bonds. This means that we must be allowed a more liberal basis of earnings than a maximum which merely yields the cost of operation plus the going rate for borrowed capital and leaves the risk with the investor. It is obvious that such a limited return will not allow any railway company to attract necessary capital in competition either with tax-free public securities or with industrial stocks which offer equal security with a much larger opportunity for profit, no greater risk and a freedom from the depression of constant regulation. This problem is of vital and immediate consequence to every stockholder, for so long as the Rock Island must finance its improvements and extensions through a constant increase of its debt, carrying a fixed charge, both the market value of your holdings and the return, which you can hope to realize thereon, are bound to diminish.

"These elementary propositions are so simple that they are often forgotten by those who are charged with public duties concerning the railroads, and yet the public will suffer most if they are ignored. With every phase of a railroad's operations and financing regulated to the point of suffocation and with the public interest overguarded at every turn, it ought to be clear to those in charge of our national policies that there can be no danger in treating a railroad like any other business enterprise and allowing it a return which will attract new capital; and that the failure to do this means the failure of private ownership and the breakdown of our transportation system."

Creosoted Piling at the Somerville Plant of the Santa Fe

The Story of Creosoted Trestles on the Santa Fe*

This Road Now Has 370,515 Track Feet of Wooden and Steel
Bridges with Ballasted Decks

By A. F. Robinson

Bridge Engineer, Atchison, Topeka & Santa Fe System, Chicago

THE FIRST creosoted piles were used in 1875 in an open deck pile bridge built across Galveston Bay. The first creosoted ballasted deck pile bridges were put into service on the Santa Fe late in 1899. The same season creosoted timber flooring was used on a ballast deck steel bridge at Los Angeles. When the joint track elevation bridges were built in Chicago, creosoted timber flooring was used for supporting the ballast. Following 1900 the use of creosote increased very rapidly and by 1908 almost all the timber used in bridges was creosoted.

From 10 to 12 lb. of creosote per cu. ft. of timber was first used for structures on land or in fresh water. For structures in salt water a much heavier treatment was required. At present piles for marine service receive a light steaming and then from 20 to 25 lb. of creosote per cu. ft. of timber is forced in, or all the creosote the timber will take. For about 10 years, southern pine has been treated by the full cell process, some 14 to 16 lb. of creosote per cu. ft. of timber being used. At all of the Santa Fe treating plants southern pine for land structures is air seasoned and then creosoted without steaming. When we commenced using creosoted material the treating was done at commercial plants and the timber was steamed.

Our bridge list as of January 1, 1921, shows the following single track lengths of bridges with arches, boxes and pipes omitted but T-rail bridges included:

498,757 lin. ft. open deck timber bridges
222,520 lin. ft. ballast deck timber bridges
120,307 lin. ft. open deck steel bridges
147,995 lin. ft. ballast deck steel bridges
2,411 lin. ft. reinforced concrete bridges

991,990 lin. ft. all bridges—equals about 188 miles.

Almost all of the ballast deck steel bridges have creosoted timber floors.

The creosoted ballast deck timber bridges from 16 to 20 years old seem to be in perfect condition and give promise of being good for from 15 to 20 years more. These may, therefore, be considered as permanent structures. Some 38 per cent of all our bridges are ballast deck and almost 50 per cent can be termed permanent structures. For main lines alone, the percentage of ballast deck bridges is now 68 per cent. No open deck bridges of any kind have been built on the main lines during the past 10 years, except after wash-outs or burnouts.

Early Difficulties

Creosoted timber bridges had not been in service very long before we found there were many things to be learned about cutting, handling and curing before treatment; and also about handling the treated material and building the bridges. During 1909 and 1910 there were many complaints about rotten piling on the Beaumont division, which extends from Somerville, Tex., to Longview, Oakdale, Beaumont and Port Bolivar. In this territory the timber seems to be affected more readily by decay than in any other part of the country traversed by the system lines.

A few miles east of Cleveland, Tex., we have what is known as an experimental section, where all kinds of treatment on ties, fence posts, etc., are tried out. This section was taken because the soil and climate seemed to be adapted especially to produce rot in both treated and untreated timber. On this section I found at least 2,000 piles that were rotting very badly. The piling and timber used had been treated in commercial plants between 1900 and about 1907. Up to that time no rules had been made covering the time the material might be left in the woods after cutting or the time

*Abstracted from a paper presented before a joint meeting of the Western Society of Engineers and the American Wood Preservers' Association, at Chicago, on January 25, 1927.

it was to be cured before treating and I think many piles had been left in the woods several months and the material had actually commenced to decay before it was taken to the treating plant.

Piles after being driven in the bents, are sawed off for capping and our plans call for these freshly cut surfaces to receive a heavy treatment of hot creosote before the caps are applied. Notwithstanding this we found a large per cent of the piles were beginning to fail at the caps. There would be an outer layer or ring of creosoted sap wood which was good, but inside this there would be a ring of untreated sap wood which was rotting very rapidly. In many cases a great deal of load was being carried by the outer creosoted ring of sap wood and but very little by the heartwood. We found a good many cases of rot starting at or near the ground surface.

Another source of trouble was the driving of the piles. I found a good many cases where the heartwood had been broken loose from the sap. The ordinary steam hammer has the lower end about 12 in. in diameter projecting through the driving block and striking the pile. A circle 12 in. in diameter has a little more than one-half the area of a 16-in. circle and only about two-fifths the area of one 18 in. in diameter. From this you will note the blow from the hammer was being delivered into the pile over an area of less than one-half its surface. The skin friction on the outer surface of the pile would hold it up and the hammer would drive the heartwood loose. This was overcome by providing a driving head 18 in. in diameter which rested squarely on the head of the pile and so arranged that the blow from the hammer must be distributed over the entire surface of the pile.

Irregular Penetration

When these piles were cut out, the cross sections were examined very carefully and it was found that the creosote had penetrated very irregularly. On one side the treatment would be almost as thin as a sheet of paper and on the other side it might be two inches thick, the thickness of treatment varying all around the surface of the piling. We figured that this was due to moisture in the piling, which resulted from the steaming and the improper seasoning. At our own treating plant at Somerville all material except that used in marine work is carefully air-cured and receives no steaming of any kind. As the result of this handling, we have been able to get a very uniform penetration of the creosote. On the other parts of the Santa Fe system we have had very few piles failing at the caps.

Examination of the stringers in ballast deck bridges where steaming was done in treatment showed a similar condition to the piling, but it was not so extensive. In a very few cases outer stringers were decayed on the upper surface, as a result of the irregular penetration of the creosote.

Close attention is necessary in the air-seasoning of timber piling. If the sap has commenced to turn or sour, the treating will not be effective. It is probable that different curing rules will be required in different sections of the country where the moisture conditions vary.

As the result of our trouble from the rotting of piles at the caps we made an extended test on a field treatment of piles when cut for caps. With the first apparatus we were able to get about 3/8 in. end penetration of the creosote. Several first class creosoted piles were cut into lengths of about three feet and also a similar number of untreated piles which were reasonably well seasoned. A part of these short creosoted specimens received the end treatment with our pressure apparatus. The other samples were painted with various kinds of preserving material and also several kinds of "R I W" paint. After the coatings had properly dried, these short pieces of piling were set up in a trench in the ground on the right-of-way two miles east of Cleveland, Tex. These pile butts were set in an exact line and at the same elevation.

A cap 12 in. wide and 4 in. thick was placed on top of the row of pile butts so that the test would be relatively the same as in the bent of a pile bridge.

These pile heads have been examined annually for eight years past. At present the samples of creosoted pile having pressure treatment on the ends and several of those receiving brush coatings on the ends are still in good condition. These investigations lead me to feel that a brush coating of hot heavy creosote, of Reeves' Wood Preserver and Toch's "R I W" paint will protect the freshly cut head of a creosoted pile for a long time. I am not as yet certain whether it will be necessary to use the pressure treatment for the ends of piles, since the brush coating seems to be giving extremely good results thus far and the application of this brush coating will cost considerably less than the pressure treatment.

Investigations made seem to show that the following rules must be adhered to absolutely in handling treated timbers:

1. Treated timber must not be cut, bruised or handled in a rough manner. Grab hooks or dogs should not be used in handling the material, unless the holes made by the hooks are carefully plugged with creosoted pins.
2. The driving of piles must be done with a hammer which will not split them or break the sap loose from the heartwood.
3. Any cut surfaces or bored holes must be carefully treated with hot creosote and holes plugged.
4. Where solid stringers are used in ballast deck bridges without any cross planking it is necessary to make end cuts on some of the sticks on account of the variation in panel lengths of bridges due to driving of piles. These freshly cut ends must be thoroughly coated with creosote before the stringer deck is placed.

Treating Plants

The Santa Fe has built four treating plants. In 1885 a plant was opened at Las Vegas, N. M., but it burned down in 1908. In 1898 a plant was opened at Bellemont, Ariz., and this burned down in July, 1906. Both of these plants were designed for the zinc chloride treatment although some creosoting was done. The buildings for these two plants were temporary wooden structures of great fire hazard.

The present plant at Somerville, Tex., was opened in 1907 and the Albuquerque plant in 1908 or 1909. The buildings for these two plants are reinforced concrete, thus reducing the fire hazard to a low figure. Both of these plants were designed exclusively for creosoting. During the late war period and for nearly two years thereafter ties were treated by the zinc chloride process, but all the bridge timbers and the piles were creosoted. The total output from the four treating plants above noted is as follows:

	Ties	Timber, board feet	Piling, linear feet
Las Vegas	6,231,598	22,575,400	790,729
Bellemont	2,123,519	9,607,215	224,521
Albuquerque	7,346,245	20,667,932	512,580
Somerville	43,423,230	213,411,285	8,172,169
Total	59,114,597	265,661,932	9,609,999

Some 380,300 linear feet of the above piling was treated by the Rueping process at the Somerville plant in 1906 and 1907.

A great deal of creosoted Oregon fir timber and piling has been used on our coast lines. This material was treated in commercial plants in Oregon and Washington and delivered to the railroad via water at National City, Cal., and San Francisco.

A good deal of timber has been used for the floors in ballast deck bridges. When we figure interest on the excess cost of the ballast deck over the open deck structure and also the cost of maintenance we can show a very interesting saving from the use of the ballast deck bridges. A feature of the ballast deck bridge is the very low maintenance cost. When the track has been thoroughly bedded and properly lined and surfaced, almost no further expenditure is required during the life of the track tie. We have bridges above 100 feet in length which we have run from three to seven years without receiving any attention other than the lifting of a few joints at very rare intervals.

W. G. McAdoo Defends Railroad Administration

Concluding Testimony, the Major Portion of Which Was Abstracted
in Last Week's Railway Age

IN THE *Railway Age* of February 4, page 327, was published in abstract the testimony of W. G. McAdoo, formerly director general of railroads, defending his administration before the Senate committee on Interstate Commerce. Because of the length of Mr. McAdoo's statement it was impossible to include in last week's issue all the matters of importance covered by him. Essential parts of the testimony omitted last week are, therefore, given herewith.

Mr. Kruttschnitt's Charges

Mr. Kruttschnitt, in an article published in the *Atlantic Monthly* for January, 1922, is even more specific than in his testimony before this committee in declaring that the government's promises to maintain "the roads in as good repair and as complete equipment as when taken over, were completely ignored" and says that "renewal of rails, ties and ballast was skimmed to the danger point, and the equipment, scattered all over the United States, had been given scant attention and was in the worst condition ever known."

The charge that the ties were "skimmed to the danger point" is flatly contradicted by the facts, especially so far as the Southern Pacific is concerned. The tie renewals of the Southern Pacific for 1917 were 3,186,447, while for 1918 they were 3,981,107. In other words, during 1918 the government laid 794,660 more ties on the Southern Pacific than Mr. Kruttschnitt laid in 1917, an increase of 25 per cent.

Statements have been made, I believe, before this committee to the effect, or at least it seems to have been assumed, that the government was under obligation to put back into the track each year as many new ties as represented the average tie replacements made by the railroads during the three years preceding federal control. There is nothing in the contract to justify this assumption or assertion. The government's obligation was to expend "such sums" * * * "as may be requisite in order that such property may be returned to the companies at the end of federal control in substantially as good repair and in substantially as complete equipment as it was on January 1, 1918,"—the cost of labor and materials being equated. It would have been foolish to assume an obligation to replace as many ties and rails in a piece of track as represented the average for a three-year test period, because it might have been unnecessary to do so whereas expenditures in other directions necessary to maintain the properties in substantially as good condition as when received, might have been desirable and as to these the director general was given discretion.

Assuming, however, for purposes of illustration, that it was the duty of the Railroad Administration to put in as many cross ties and new rails as were represented by the average of the so-called three-year test period, let us judge from the facts how well the Railroad Administration complied even with this fictitious requirement.

For the whole country, from the annual reports of the Interstate Commerce Commission for Class I railroads, there were laid during 1918 only 2,930,891 or 2.3 per cent less cross ties on previously constructed tracks than in 1917, while there was an increase in the number of switch and bridge ties laid in previously constructed tracks of 14,401,163 feet, or 6.9 per cent. In the light of these facts, what becomes of Mr. Kruttschnitt's charge that ties were "skimmed to the danger point" during federal control?

Mr. Kruttschnitt's charge that ballast was skimmed on the railroads is also contradicted by the facts because, in 1918, the Railroad Administration applied on Class I Railroads, 18,863,344 cubic yards of ballast while in 1917 the corporations applied, on Class I railroads, only 18,262,503 cubic yards of ballast. Thus the government applied 600,841 cubic yards more ballast in 1918 than the corporations applied in 1917.

The annual report of the Interstate Commerce Commission for Class I railroads shows that there were only 163,182 tons less rail laid in replacement and betterment in 1918 than in 1917, or a decrease of only 8 per cent. So far from "skimming" the Southern Pacific System for rails, the government (despite the demands of General Pershing for rails in France) in 1918 laid 436 more tons of new rails on the Southern Pacific System than Mr. Kruttschnitt laid in 1917.

There is filed herewith an exhibit, a table taken from a statement prepared by the Division of Operation of the United States Railroad Administration dated May 15, 1919, showing the number of cross ties used in maintenance for the annual average of the test period and that of the calendar year 1917 and 1918 on typical systems.

For the 18 typical roads shown the Railroad Administration in 1918 laid 2.9 per cent more ties than the 18 corporations laid in 1917, and fell short of the test period only 15.2 per cent, while in 1917 these corporations fell short of the average for the test period 17 per cent.

Early Days of the Railroad Administration

For nearly five months the full power of the government was put behind these corporations. These executives were backed to the limit in what they, and the Railroad War Board, had declared necessary to operate the railroads successfully.

The conditions on the Pennsylvania, the B. & O., the Reading, and the Central Railroad of New Jersey were so unsatisfactory because of the congestion on these lines and their failure to produce the requisite amount of transportation, in effect paralyzing transportation all over the Eastern territory, that I became convinced that the managements were not efficient. On the 17th of January, 1918, I addressed letters to the presidents of each of these railroads in which I stated to them frankly that, as we were in the midst of a great war, the public interest and the life of the Nation demanded that these railroads should be operated efficiently and that excuses were worth nothing; that only results would tell; that unless there was a decided improvement a change in the management of these properties would become inevitable.

[Mr. McAdoo here presented copies of his letters of which the following is a sample, together with their replies:]

"I make due allowance for storms and the elements and for other things that I know complicate the railroad situation. Nevertheless, we are in a great war, and excuses are not worth anything. The only thing that tells now is results. The public demands them and the life of the Nation demands them.

"I would not be candid if I did not tell you that I am not fully satisfied with the efficiency of the management of the ——— Railroad. I believe that great improvement can be made, and I look to you and the officers of that system to bring that improvement about at the earliest possible moment.

"My personal regard for you is an assurance that I would not consciously criticize unfairly, and that same personal regard makes me anxious for your success. But I would not be frank if I did not tell you that unless there is a decided improvement in the efficiency of the ——— Railroad system, a change in the management will become inevitable. This I should deeply regret."

In these replies from Messrs. Rea, Willard, Dice and Besler, we find the same complaint of (1) lack of locomotives, (2) shortage of labor, (3) reduced efficiency due to lack of skilled labor, (4) unprecedentedly severe weather, and lastly, a pledge of loyal co-operation and support.

It is reasonable to assume that, in view of the assurances of co-operation and support given by railroad officials throughout the country to make government operation successful for the purposes of the war, and in view of the exercise of all the powers of the government to help the railroad corporations operate the railroads at the highest point of efficiency, the executives did their best to manage these properties efficiently and successfully, and yet during the first five months of 1918, when they operated the railroads as agents of the director general, results were most disappointing.

On May 18, 1918, the railroad presidents were released and federal managers substituted for them. These federal managers were chosen from the railroad officials according to their ability and their knowledge of the properties. In each instance the federal manager was a former president or general manager or some high official of a railroad company. At the same time the country was divided into seven regional districts and a regional director was appointed in each and had control of the general operations of all the railroads in his territory. Under him were the federal managers. The seven regional directors appointed, were recognized as being among the ablest men in the railroad profession.

Each of these regional directors was required to resign from the presidency of his company. Smith gave up a salary of \$87,000 per year and accepted \$50,000 per year as regional director.

Aishton and Holden and Markham gave up \$60,000 or more per year to accept \$50,000. Winchell and Maher each received \$40,000 as regional directors, the same or less than they were receiving as officials of their respective companies. These seven men I wish now to say served their country with patriotism, fidelity and ability. Every criticism against the Railroad Administration is in effect a criticism against them because if the railroads were not efficiently operated the responsibility was largely theirs. I have denied heretofore, and I deny now that they ran the railroads inefficiently. The best vindication of their ability as railroad men is the record of railroad operation from the 21st day of May, 1918, when the corporations were relieved of control.

These seven eminent railroad men can not be accused of being faithless to the railroad interests of the country when they pointed with pride to the *efficient operation* of the railroads during 1918. Criticism of the Railroad Administration is an attack upon the ability, capacity, and patriotism of these men, and upon all the subordinate railroad officers and men who were retained to operate the railroads under federal control.

It is pertinent at this point to examine the various annual reports of these regional directors made to the director general touching the operation of the roads under their control. These reports disclose with definite clearness that the unification of the railroads under federal control resulted in the saving of millions of dollars which would not have been possible under operation by their owners. (Here follows a number of extracts from the reports of the regional directors.)

It may be said in criticism of these comparisons that the higher wages of labor, as well as higher freight and passenger rates since 1920 were an inheritance of private management from the Railroad Administration. To this the obvious answer is that it does not necessarily follow that such advances would have been made under a continuance of federal operations, but even so, the Railroad Administration in 1918, as I have pointed out, inherited the necessity of equally as large wage increases from private management before the war and had to make corresponding increases in freight and passenger charges.

Increase in Rolling Stock Under Federal Control

In three and one-half years from June 30, 1914, to December 31, 1917, the total increase of tractive power for all locomotives amounted to 193,320,820 pounds. This represents an average annual increase of 55,234,520 pounds for the three and one-half years in question. During the period of federal control there was an increase of 254,495,000 pounds tractive effort. This represents an average annual increase of 117,460,000 pounds as compared with the average annual increase of 55,234,520 pounds for three and one-half years prior to federal control.

From June 30, 1914, to December 31, 1917, the total increase in the tonnage capacity of freight train cars amounted to 4,283,050 tons, or an annual average increase of 1,223,728 tons. During the period of federal control there was an increase of 7,801,106 tons capacity. This represents an average annual increase of 3,649,664 tons capacity as compared with the annual average increase of 1,223,728 tons capacity for the three and one-half years prior to federal control.

The Proposed 5-Years Test Period

It will be remembered that in December, 1918, I had announced my conviction that the roads should be returned as promptly as possible unless the Congress authorized their retention for a sufficient length of time to test under normal conditions the value of unified control and direction. I suggested a five-year test period for this purpose.

Congress refused to approve my suggestion and following the insistent demands of the railroads, provided that they should be retained until March 1, 1920, and in addition guaranteed to them for the first 6 months after their return, an income equal to one-half of the yearly income during federal control.

I do not wish to be understood as renewing the suggestion for a five year test period, because the time for it has gone by—continuity of operation having been broken, but, speaking on the general results and efforts of restored private control and the return to the old so-called competitive system of railroad operation with its great wastes and inefficiencies, with the tremendous burden imposed on the public of increased freight and passenger rates, the evil consequences of which are reflected in the prostration of agriculture, labor and industry, and of the colossal claims made by the railroad corporations against the government for alleged under maintenance, inefficiency of labor, etc., I am convinced that it would have cost the American people far less money to have controlled the railroads for said test period than has resulted from their return to private control. Whatever of under-maintenance may have existed, the government could have overcome at reasonable cost during the five-year test period and whatever conditions have arisen on this score, out of their earlier return

would have been eliminated at the end of the five years because there would have been ample time to equalize over-maintenance, of which there was a great deal on some lines, with the under-maintenance on others and to bring the properties up to a high standard of construction and efficiency.

I am also convinced that the present level of freight and passenger rates would have been unnecessary because there is no question in my mind that a well-directed and unified operation of the railroads would enormously reduce the cost of operation and greatly increase efficiency. Again, the cost of credit for capital expenditures and refunding of maturing obligations would have been less than under private control. During such a test period the existing investments in the railroads would have been protected, labor problems would, in my judgment, have yielded to more reasonable treatment, and the common use of terminal facilities, not possible under diversified competitive control, would have constantly tended toward a lowering of the cost of transportation since the terminal costs constitute such a large percentage of the total.

Railroad Administration's Labor Policy

Upon my assumption of the duties of director general, January 1, 1918, I was confronted with the tremendous problem of relieving the unprecedented congestion of traffic and restoring efficient operation of the railroads. An absolute essential to the achievement of these imperative needs was to satisfactorily dispose of the labor problem, which was then acute and menacing. Railroad employees throughout the country were thoroughly discontented and strikes were impending everywhere. The railroad executives had testified before the Interstate Commerce Commission and elsewhere that railroad wages were below the scale paid in competitive industries and had been seeking increases in rates in order that they might increase wages, and without which increases of rates they said that it was impossible to do so. My railroad advisers urged that I give immediate attention to the labor question. Railroad labor was grossly underpaid and there were many grave abuses in the matter of working conditions on the railroads which needed correction.

Among other things, the U. S. 16-hour law was being constantly disregarded. Railroad executives claimed that this was necessitated by the shortage of labor and other abnormal conditions. It was clear that railroad employees could not be expected to work for the railroads at lower rates of pay than they could command in competitive industries throughout the country. The high cost of living had made it impossible for many of them to live on the wages they were receiving, and it was clearly in the interest of justice and right, to say nothing of the wisdom and reason of the policy, to bring their wages to a level which would enable the railroads to command the requisite amount of service and to prevent the continued depletion of their forces with the constant labor turn-over which railroad managers themselves had insisted was one of the reasons why they were unable to make the railroads function efficiently.

The labor problem had to be settled from three angles, first, from the standpoint of railroad management, and second, from the standpoint of labor, and third, from the standpoint of the public. In order to meet the management phase of the problem I selected as the director of the Division of Operation (the most important division in the Railroad Administration) Carl R. Gray, whose long experience as a railroad executive and practical railroad man pre-eminently fitted him for this responsible task. Second, from the standpoint of labor, I appointed, as director of the Division of Labor, W. S. Carter, at that time president of the Brotherhood of Locomotive Firemen and Enginemen. No orders affecting wages or conditions of railroad labor were ever made by me except after full discussion with them and, while it was not always possible to reconcile differing views, I may say that no order was ever made by me concerning wages or working conditions except upon the recommendation of these men or with their approval. I wish, however, to say that I accept full and complete responsibility, notwithstanding, for every order that was made by me as director general of railroads, whether upon the approval of any members of my staff or not. I always took the best advice I could get and then, as the responsibility for making the decision was mine, I did not hesitate to make the decision. Third, from the standpoint of the public. The director general was supposed to represent the public interest as well as all interests, and I created a Division of Public Service and Accounting and put at the head of it Charles A. Prouty (now deceased) for many years a member of the Interstate Commerce Commission.

Railroad Wage Commission

There was only one way to compose the disturbed labor situation on the railroads and that was to appoint immediately a railroad wage commission to investigate the subject, as I was unwilling to act solely upon my own judgment about so important

a matter, and to have it report after a careful investigation as to wages and working conditions with recommendation as a basis for action. As some months would be required to make these investigations, it was necessary to give railroad employees the assurance immediately that the delay would not operate to their disadvantage and that, if increases of wages were recommended by the commission and were put into effect by the director general, they would be retroactive to the 1st of January, 1918. This course was adopted after consultation particularly with A. H. Smith.

This commission upon exhaustive investigation found that railroad labor had been deplorably underpaid and recommended an increase ranging from 43 per cent for the lowest paid to nothing for the highest paid. In this connection, the findings of this commission utterly refute the charges that railroad employees took advantage of the war emergency to wring undeserved and unreasonable concessions in wages from the government.

The Wage Commission made its report on April 30, 1918, and upon its consideration and in accordance with its recommendation 1 promulgated, May 25, 1918, General Order No. 27 granting the suggested graduated increase of 43 per cent for the lowest paid to increase for employees receiving \$250 per month and over. This increase was below the wages of corresponding groups of other industrial workers.

Until recently no question was ever raised as to the justice and propriety of the increases in wages so made. In fact, the wisdom and necessity of these increases was generally conceded at the time. The increases granted by the United States Railroad Labor Board in 1920 are reflected in the payrolls of seven months only of the year 1920, but if the estimates submitted by the Association of Railway Executives are correct, as to what the full effect of this increase would have been if distributed over the whole year 1920, the added labor outlay would have been approximately \$1,147,000,000, as compared with only \$866,000,000 for the entire year 1918, or \$281,000,000, more than the total increases in the payroll in the year 1918. There was not the slightest complaint from any railroad executive that the wage increases promulgated in General Order No. 27 and in the supplements thereto were too high; and never at any time during that year were railroad wages too high. The fact is that railroad employees worked for less pay during the war than any other class of industrial workers doing similar work. The further fact is that no fair complaint can be made of the part the railroad employees performed during the war.

Railroad Executives Urged Wage Increases

Not only did no railroad executive complain that the scheduled wages in General Order No. 27 was too high, but the contrary was true. Time and again railroad executives appealed to the Railroad Administration at Washington to increase wages in order that the munitions factories, shipbuilding plants and other industries should not draw from the roads their skilled labor. The correspondence between Regional Director A. H. Smith, and Director of the Division of Transportation, C. R. Gray, with the accompanying letter from President Rea of the Pennsylvania Railroad, conclusively show that the Pennsylvania officials were not satisfied with the award of the Railroad Wage Commission because the increase was not sufficient. President Rea, particularly complained of the basis upon which the Railroad Wage Commission made its award, to wit: that railroad labor was entitled to a living wage, saying in effect, that while this was a deciding factor, another factor should very largely govern and that was the wages paid in other industries, pointing out that by virtue of the higher rate paid by other industries his road had lost a large number of its employees.

Immediately upon the issuance of General Order No. 27, the Board of Railroad Wages and Working Conditions was directed to give consideration to the rates of pay and working conditions of shop crafts so that a supplement might be issued promptly establishing a rate more nearly equal to the rates paid by private industries, shipyards and other government departments. It was necessary for the board to define the work of the various crafts so that each might receive the proper rate; otherwise the purpose of the order might be entirely defeated if on any railroad the men were given improper classification. On the other hand, it would be possible for the officials to classify mechanics as handy-men or helpers and thereby decrease their rates below those which were intended to be paid them. Therefore, for the protection of the administration against excessive charges, as well as for the protection of the employees against discrimination, it was necessary for the board to define the work of each craft. On July 8, 1918, the three railroad members of the Board of Railroad Wages and Working Conditions submitted to me one recommendation and the three labor members of this board another.

At the hearings held by this board the representatives of the federated mechanical crafts had demanded the allowance of a universal minimum rate of 75 cents per hour for the seven federated

metal workers, electricians, molders and carmen; an eight-hour day, time and one-half for overtime, a minimum guarantee of \$6 per day of eight hours, a minimum rate of 56¼ cents per hour for all helpers of the indicated seven crafts, and that no rate for the above crafts should carry an increase of less than 25 cents per hour. The railroad men and the labor men on the board could not agree on a report and submitted separate reports. They differed both as to the classification of the employees and as to the rate of compensation. After full consideration of these reports with Director of Operations, Carl R. Gray, and Director of Labor, W. S. Carter, and Assistant Director of Operations McManamy, and upon their advice, Supplement No. 4 to General Order No. 27 was promulgated July 25, 1918. This supplement was based almost entirely upon the recommendations made by the railroad members of the board as will be disclosed by the comparison between this supplement and the two recommendations aforesaid.

Recommendations of Railroad Members of Wage Board Followed

There was no general reclassification of railroad employees under Supplement No. 4, but the regular classification of railroad employees in the mechanical crafts that was in general use on all railroads was uniformly applied to individual employees who were performing the work of the various crafts. Further than this, Supplement No. 4 adopted the classification recommended in the report of the railroad members of the Board of Railroad Wages and Working Conditions and approved by Director of Operations Gray, his assistant, McManamy, and Director of Labor Carter.

Manifestly, the wage scales could not be applied unless the same classification of railroad employees existed everywhere, and since all the railroads were under federal control and the government was a common employer, it was impossible to pay shopmen on the Erie Railroad, for instance, working alongside shopmen on the Pennsylvania Railroad, a different rate and to give them a different classification.

However, after the promulgation of Supplement No. 4, it was soon found that on a number of railroads men who were doing mechanical work were classified as helpers and men doing helpers' work were classified as mechanics; therefore, Interpretation No. 1 to Supplement No. 4 was issued, the purpose of which was to pay each employee in accordance with the work he was doing. This was to protect the administration as much as to protect the employee, and many cases exist where employees' classification was reduced, thereby resulting in enormous savings. As a matter of fact, the classification of some 2,254 men on the Pennsylvania Lines West was reduced at one time, thus effecting a saving to the administration of \$3,426 per day, \$1,041,504 per annum, which was being wrongfully paid out by the officials in charge of that road.

In a similar case Regional Director Hardin, who succeeded A. H. Smith, at New York, protested against decisions made by the Railroad Administration because they would force him to reduce the classification of some 2,000 men on the New York Central Railroad who were being overpaid, and appealed to the director general to set aside such decision. However, the decision was sustained and the men's classification was made to correspond with the work they were actually doing, thereby effecting a large saving to the administration.

John G. Walber, secretary of the Bureau of Information of the Eastern Railroads, was one of the last witnesses called before this committee by the railroads in the hearings of last June. He was a member of the Board of Adjustment No. 1 during 1918 and handled during the last three months of federal control labor matters for the Eastern Region as labor assistant in the Division of Operation. He discussed at length the increases made in wages by supplement No. 4 to General Order No. 27. He says that this order was the beginning of reclassification of employees in the mechanical department. He failed, however, to inform this committee, although discussing very fully the results of the so-called reclassification of employees in the mechanical crafts, that I adopted the identical classifications recommended by Messrs. Gaines, formerly of the Georgia Central, Morse of the Chicago & Northwestern and Denver & Salt Lake, and Lindsey of the New York Central, as railroad members of the board, and upon the advice of Carl R. Gray, W. S. Carter, and Frank McManamy. As a matter of fact, 142 railroads had signed agreements with their shop employees prior to federal control, in which there were substantially the same classifications.

Again Mr. Walber calls to the attention of the committee the fact that before the promulgation of Supplement No. 4 certain railroads did not pay punitive overtime, for which this order provided. The clear inference from this testimony is that the payment of punitive overtime was forced upon the Pennsylvania and Philadelphia and Reading against their wishes. Mr. Walber, however, failed to tell the committee that time and a half for

overtime on the Pennsylvania was granted by Regional Director Smith, without authority from the Railroad Administration, at the request of President Rea and upon the recommendation of Mr. Walber himself.

The scale of wages put into effect by Supplement No. 4 was unsatisfactory to the shop crafts generally and their representatives and the heads of their organizations on August 2, 1918, filed a protest against it. This was not unnatural in view of the recommendation of a higher scale by the labor members of the Board of Railroad Wages & Working Conditions, and in view of the further fact that the scale of wages being paid in shipyards and war industries was higher than the scale established in Supplement No. 4. I felt that there was genuine merit in the contentions of the men, but upon a full consideration of the matter and in view of all the conditions prevailing, I felt obliged to refuse their request for a reconsideration of the case and decided that the scale established in Supplement No. 4 must stand. I outlined my position and my decision in a letter I addressed to them under date of August 28, 1918.

The shop crafts accepted this decision and throughout the entire period of the war their members stood by their jobs and worked for less pay than was offered to them in competitive industries. No stronger refutation of the charge that railroad men were inefficient or indifferent to the interests of the Railroad Administration and of their country in its great emergency could be adduced than this incident. What I have said about the shop crafts applies to all the other employees of the railroads who, with like patriotism and zeal, served their country in that great time.

Other Wages Higher Than Paid

by Railroad Administration

The charge that the wages of railroad labor were unnecessarily raised and that wages were thereby elevated throughout the country is false. The schedules of wages promulgated by the Railroad Administration during 1918 were generally below those in other basic industries and well below the rates fixed by the navy yards, by the National War Labor Board and by the Shipbuilding Labor Adjustment Board.

The extraordinary orders for munitions and supplies of all kinds placed in this country by allied governments during the calendar years 1915-1916 led to an unprecedented demand for labor, which in turn, was followed by remarkable increases in rates of pay for all classes. With our advent into the war these conditions were intensified. To secure workmen for the shipbuilding plants, rates of pay were further increased and standardized for the entire country by the Shipbuilding Labor Adjustment Board during the autumn of 1917 and the winter of 1918. During the early spring of 1918, the Taft Walsh Board sanctioned large wage increases in all branches of industry and through its support of the principle of a living wage gave an unusual impetus to the rising rates of pay of unskilled workers.

These conditions necessarily caused advances in the rates of pay of railway workers. The Railroad Administration itself was a conservative instead of an imitating influence in the general advances in wage payments. The award of the impartial Railroad Wage Commission in March, 1918, according to the experience and insistence of the railway executives themselves, did not go far enough in meeting competitive conditions in increasing rates and classifying certain classes of workers. Subsequently, almost without exception, the recommendations of the railroad representatives of the Board of Wages and Working Conditions were accepted as a basis for further wage adjustments. The Railroad Administration's general actual lagged behind the rates of pay established by the Shipbuilding Labor Adjustment Board and the National War Labor Board.

Piece Work

The railway executives have laid great stress on the abolition of piece work, claiming that maintenance costs were largely increased thereby, piece work was abolished only after an extensive investigation covering a period of months in which a comparison of the results obtained in a region working day with a region working piece work had shown:

1. There was no advantage from efficiency standpoint in piece work over day work in locomotive repair shops.
2. That locomotive maintenance costs per 1,000 pounds of motive power mile were greater in the region working piece work than they were in the region working day work.
3. That it was not possible under piece work system to avoid large payments to workmen for work which was not performed. In fact on the Pennsylvania Railroad it was found that the officials had voluntarily overpaid piece workers to the extent of more than two and one-half millions of dollars.
4. No substantial difference in the general condition

of equipment was found in the piece work region as compared with the day work region on roads where work was properly supervised and a high standard of maintenance required.

Less than 10 per cent of all the employees in the maintenance of equipment department were at any time, during federal control, working on the piece work plan; therefore, authorizing it to be discontinued could not have seriously affected maintenance costs either during or since federal control. For the information of the committee the reports of the investigations and the recommendations upon which I authorized piece work be abolished are herewith attached.

Report on Head-on

Collision at Camps, Texas

THE inspectors of the Interstate Commerce Commission have made a report on a collision on the Texas & Pacific, in Texas, on November 10, where six or more persons were found chargeable with negligence or misconduct.

The collision occurred near Camps, Gregg County, about 50 miles west of Marshall, and the trains were westbound passenger No. 3 and eastbound freight No. 66, first section. The fireman of the freight train was killed and 43 passengers and four employees were injured. The collision occurred at about 5:11 a. m., one mile west of Camps, which station No. 3 had passed because of disregard of a train order. At Longview Junction, eight miles east of Camps, the conductor of No. 3 had received a number of train orders, one of which, No. 8, would have allowed train No. 3 to go beyond Camps; but another, No. 14, received later, required it to wait at Camps until 5:15.

Order No. 14 was on Form 19, but the other was on Form 31. With No. 14, the operator was instructed to issue a caution card, Camps being, apparently, in the middle of a manual block signal section. The engineman declared that he did not receive order No. 14 and that it was not listed on the clearance card he received. This clearance card appears to have been lost.

Summarizing a long statement of irregularities, the report of the inspector says that Conductor Turner of No. 3 knew that he should wait at Camps until 5:15, yet allowed his train to pass at 5:10.

He said that he did not know the train had passed the station. Also there is no evidence, except Turner's word, that order No. 14 was given to the engineman or to the fireman. Conductor Turner and the engineman made no effort to compare their orders.

The conductor and the engineman of the freight are also at fault for starting for Camps with insufficient time from the last preceding station. The operator at Longview Junction is at fault for issuing a clearance card saying that the block was clear when it should have stated that the block was occupied; also for failing to issue a caution card after being so instructed by the dispatcher. Conductor Turner should have refused to accept the clearance card improperly filled out.

The dispatcher is criticized for encouraging the freight to run at excessive speed to reach the meeting point and for issuing order No. 14 on Form 19, which form is not allowed to be used to restrict the superiority of a train at a station where there is no telegrapher.

The engineman of the freight claims that he did not need to clear the superior train by five minutes, which ignorance or misunderstanding of rules is a reflection upon the officers, says the report. Five persons, altogether, are censured in connection with order No. 14, and the conductor of the freight for sending orders to the engineman by the flagman instead of delivering them personally. All of the employees involved were experienced men.

Recent Changes in American Hose Connectors

Passenger Heads Interlocked Under Pressure—Permanently Attached Freight Interchange Adapter

THE AMERICAN automatic hose connector is one of the few connector devices placed on trial during the past seven years, the practicability and reliability of which has been indicated by an extensive period of service. It is now in service on the equipment of eight steam railroads and two industrial roads in the United States and installations are now under way on several other steam railroads.

The American connector is manufactured by the American

ment the lugs may readily be welded on, while new couplers may be secured with the lugs cast on. The standard arrangement of hose connections remains undisturbed.

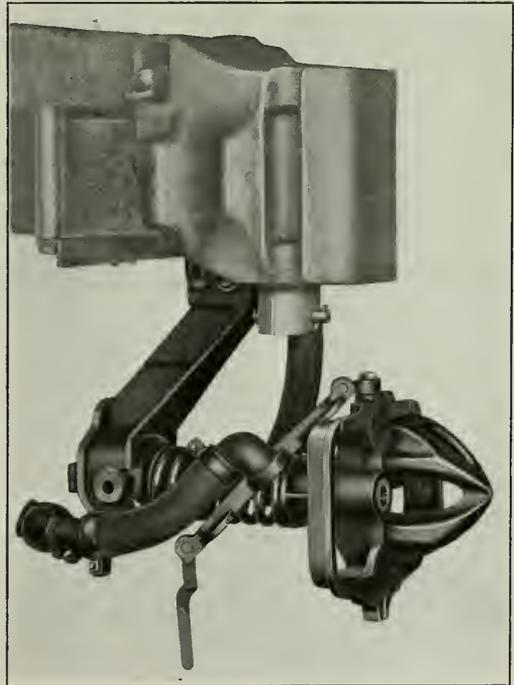

The first extensive installation of American connectors,* comprising 100 freight cars, 18 locomotives and 24 passenger cars, was made on the Copper Range Railroad at Houghton, Michigan, early in 1919. These connectors have been thoroughly tested under severe conditions as to climate and curvature and are still in service.

Since that installation a number of improvements, either in the head itself or its attachments, have been made to insure positive maintenance of vertical alignment, the automatic locking of the heads under high steam pressure in passenger service and to provide a convenient freight interchange adapter.

The application of the chain suspension to both passenger

Face of Passenger Connector Head; Brake Pipe and Signal Adapter Is Attached Direct to the Head, Steam Heat Adapter to the Hose

American Freight Connector with Permanent Interchange Adapter

Automatic Connector Company, Cleveland, Ohio. It is of the butting joint type with a so-called pin and funnel type gathering and registering device, and the head is designed to provide a gathering range of $7\frac{1}{2}$ in. vertically by 7 in. horizontally, a range materially greater than that of the standard coupler. Each connector complete consists of six parts and weighs 50 lb. As shown in the illustrations, the brake pipe is in the center of the bearing face of the connector head; on passenger heads the center of the signal port is located $3\frac{1}{2}$ in. above and the center of the steam heat port 4 in. below the center of the brake pipe port. The ports normally lie in the same vertical plane as the center line of the drawbar, with the pyramidal or projecting guide at the right and the receiving guide at the left when facing the end of the car.

When two connectors are joined the gaskets are slightly compressed and the contact between the heads is made at four points. These points are 11 in. apart horizontally and 15 in. apart vertically, a spread of bearing that assures freedom from leakage in going around sharp curves or over rough track with frozen hose.

The connector is suspended from a malleable iron bracket which is either bolted to a lug on the coupler head or directly to the coupler shank. For installations on existing equip-

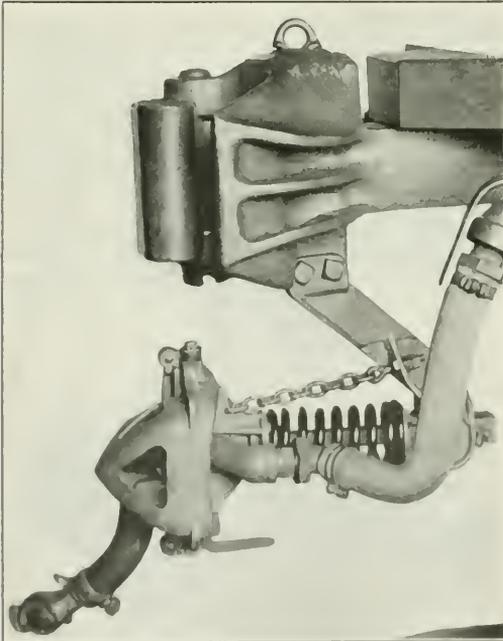

and freight connector heads, by which accurate vertical alignment of the head is assured while in its free position, is shown in the drawing and in one of the photographs. By referring to the drawing it will be seen that the length of the chain is so adjusted that when the head is free the center line of the connector is raised at an angle such that the nose of the projecting guide is held $\frac{7}{8}$ in. above the horizontal line through the pivot center. In this position the bearing

*The connectors applied to this equipment were briefly described in the *Daily Railway Age*, June 18, 1919, page 1477.

face of the connector head projects $1\frac{1}{2}$ in. beyond the inside face of the coupler knuckle. The angle of the chain is such that when connector equipped cars are coupled the slack produced by the $1\frac{1}{2}$ in. compression gives the heads complete freedom of angular movement within the full range of movement of the car couplers, both angular and vertical.

In passenger service the use of high steam pressure on the steam heat line, particularly between the locomotive and a baggage car equipped with head end lighting equipment, produces a severe reaction tending to separate the heads unless springs of higher capacity than those used in freight service are included in the equipment. As the steam heat connection is at the lower port in the face of the connector, the tendency is to open up the connectors at the bottom around the top bearing surfaces as a pivot. This tendency has been utilized to produce a positive lock which holds the connectors tightly engaged, irrespective of spring tension, so long as the heads are under pressure.

By referring to the drawing it will be seen that the lower gathering surface of the projecting guide has been extended to form a slight shoulder or permanent latch. On the corresponding surface of the receiving guide is a similar shoulder, the two being in such relation to each other that when ad-

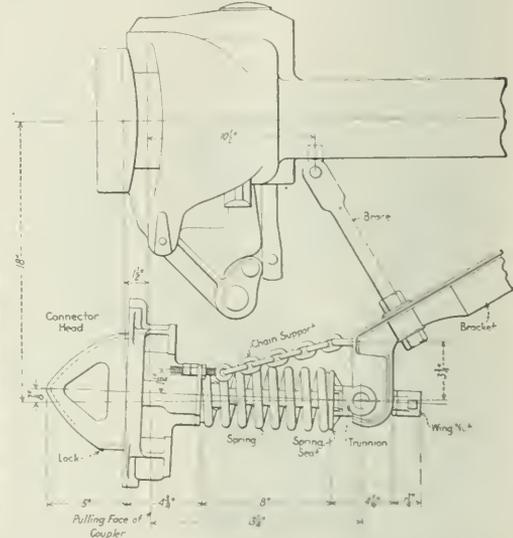

Application of Freight Connector with Chain Suspension; Interchange Adapter in Service Position

joining heads are brought together they interlock. Any tendency of the heads to open at the bottom therefore automatically brings together the faces of these two projections and effectively prevents further opening. When the cars are uncoupled, however, the first separation of the connectors is at the top; this is insured by the slight elevation of the connector heads effected by the chain adjustment. This angularity of the heads disengages the interlocked lugs so that they cause no interference with the normal operation of the connectors.

One of the problems of connector service is the convenient

adaptation of connector cars to operate with cars equipped with standard hose connections. An interchange adapter for freight connectors has been developed by the American Automatic Connector Company, which is permanently attached to the connector head and can be placed in or removed from the interchange position in a few seconds without tools. In one of the illustrations the adapter is shown clamped in operation position and in another it is swung back out of the way. The adapter is locked in service position by means of a lever at the bottom which is engaged in a slot between two lugs at the bottom of the connector head. Laterally projecting shoulders on the lever engage the rear surfaces of the

Application of Passenger Connector with Chain Support and Automatic Pressure Lock

lugs. In closing the lever these projections, in passing the corners of the lugs, compress the gaskets in the face of the connector, the pressure being slightly relieved when the lever has been fully raised. The lever is thus held in the locking position without the use of mechanical fastenings which materially simplifies the operation of applying or removing the adapter.

The American connector has been thoroughly tested on the Copper Range Railroad under particularly severe climatic conditions, in both freight and passenger service. While the connector may be considered primarily a safety device, the results of these tests indicate that its application was fully justified as an economy measure. Air hose renewals on the 100 Copper Range freight cars equipped with the connectors were reduced from \$80.50 in 1918 to \$1.15 in 1919 and gasket renewals were reduced from \$4.80 in 1918 to \$3.32 in 1919. On 20 passenger cars no air hose renewals were made in 1919, while in 1918 they cost \$16.10. Steam hose renewals were similarly reduced from \$154.00 to \$6.60. On the average it is conservatively estimated that the connectors may be expected to effect a reduction of 60 per cent in hose and gasket renewals. The total cost of maintaining connector service on 100 freight cars and 20 passenger cars for a period of 8 months was \$40.63. This included hose and gasket renewals as well as damage to connector heads caused by striking bumpers at mills, and other obstructions, before proper clearances were established for the connectors.

The connectors greatly reduce brake pipe leakage. This improves the operation of the brakes, saves fuel and air pump maintenance and materially decreases the damage to equipment from undesired slack action. Air pumps maintenance was reduced 50 per cent on engines regularly handling connector equipped cars.

On the Copper Range, ore cars move between the mines and mills and are uncoupled twice each day, once at the mine and once at the mill. Some of these cuts require coupling on curves as sharp as 19 deg. and the gathering range of the connectors has been found to exceed that of the car couplers. In this service the connectors effect a saving in crew time of one-half hour a day for each 40 car train.

During the tests conducted in 1919 on the Copper Range by the Bureau of Safety of the Interstate Commerce Commission, the ability of the American connector head to withstand abusive treatment was clearly demonstrated. In a number of coupling tests with connector equipped cars on sharp curves and with abnormal conditions of vertical alignment artificially created to place the connectors beyond their gathering range, the only damage suffered by the connectors was the bending of the shafts. Following each of these tests the heads were allowed to return to their normal position and the cars again coupled. In all cases the connectors then performed their intended functions of gathering, registering and maintaining tight brake pipe joints. The gasket faces are completely protected from injury by an adjoining head under conditions which prevent the heads from gathering and registering, and the form of the projection guide is such that it is not susceptible to injury unless from a cause serious enough to destroy the entire connector and its attachments.

Since the first trial installation of American connectors on the New York Central at Chicago late in 1918, trial installations have been placed in service on the Copper Range Railroad; the Erie; Baltimore & Ohio; Detroit, Toledo & Ironton; Nashville, Chattanooga & St. Louis; the Chicago Great Western and the Monon. A number of industrial cars of the American Steel and Wire and the Carnegie Steel Companies have also been equipped. All of these installations are still in service, except that the original installation on the New York Central was removed and substituted by improved connectors which are now in service on the Lansing division.

Wage Reduction Disputes Now Before the Labor Board

THE CONTROVERSY between the railroads and practically all classes of their employes over proposals made some time ago for further reductions in wages will soon be in the hands of the Railroad Labor Board, according to present indications. Approximately 50 disputes between individual carriers and various groups of employes have already been certified to the Board.

Among the carriers which have submitted their cases to the Board are the Atchison, Topeka & Santa Fe and subsidiaries; Baltimore & Ohio; Chesapeake & Ohio; Gulf, Colorado & Santa Fe; Gulf Coast Lines; Illinois Central; Lake Erie & Western; Lehigh Valley; New York Central; St. Louis-San Francisco; Wabash; Yazoo & Mississippi; Buffalo & Susquehanna; Grand Trunk; Northern Pacific; Minneapolis & St. Louis; Chicago, Burlington & Quincy; Cincinnati, Indianapolis & Western; Kansas, Oklahoma & Gulf; Los Angeles & Salt Lake; Oregon-Washington Railroad & Navigation Company; Baltimore & Ohio Chicago Terminal; Chicago, St. Paul, Minneapolis & Omaha; Duluth, South Shore & Atlantic; Oregon Short Line; Texas & Pacific; Chicago Great Western; Western Pacific; Missouri Pacific;

Southern Pacific; Minneapolis, St. Paul & Sault Ste. Marie; Chicago, Indianapolis & Louisville; Union Pacific and subsidiaries; Missouri, Kansas & Texas; Buffalo, Rochester & Pittsburgh; Louisiana & Arkansas; Colorado & Southern; Peoria & Pekin Union; Kanawha & Michigan; Kanawha & West Virginia; Kansas City, Mexico & Orient and subsidiaries; International & Great Northern; Minnesota Transfer; St. Paul Bridge & Terminal Company; Ann Arbor; Chicago, Peoria & St. Louis; Fort Worth & Denver City; Wichita Valley; Mineral Range; Union Stock Yards of Omaha; Ogden Union Railway & Depot Company; Gulf & Ship Island; Keokuk Union Depot, and the Toledo, Peoria & Western.

An analysis of the submissions which have already been made to the Board shows that more carriers have requested reductions in wages of those employees represented by the United Brotherhood of Maintenance of Way Employees and Railroad Shop Laborers and the Order of Railroad Telegraphers than of any other classes, 43 carriers submitting requests for reductions in wages for these employees. Submissions involving requests for reductions in the wages of employees represented by the Brotherhood of Railway & Steamship Clerks, Freight Handlers, Express and Station Employees and the Federated Shop Crafts have been made to the Board by 42 and 41 carriers respectively. The following analysis of the submissions made so far shows the number of carriers requesting reductions in the wages of the employees represented by the organizations indicated:

Organization	No. of carriers filing submissions
Brotherhood of Locomotive Engineers.....	19
Brotherhood of Locomotive Firemen and Enginem.....	36
Order of Railway Conductors.....	35
Brotherhood of Railroad Trainmen.....	37
Switchmen's Union of North America.....	7
Order of Railroad Telegraphers.....	43
Federated Shop Crafts.....	41
Brotherhood of Maintenance of Way Employees, etc.....	43
Brotherhood of Railway & Steamship Clerks, etc.....	42
Brotherhood of Railroad Signalmen of America.....	26
International Brotherhood of Firemen and Oilers.....	21
American Train Dispatchers Association.....	14
National Brotherhood of Dining Car Employees.....	2
Brotherhood of Dining Car Conductors.....	2
Dining & Sleeping Car Employees Union.....	2
American Association of Engineers.....	1
Railroad Yardmasters of America.....	1
International Association of Supervisors & Mechanics.....	1
Unorganized Police Employees.....	1
Unorganized Red Caps.....	1
Marine Culinary Workers Association of California.....	1
International Union of Steam Operating Engineers.....	1
Stewarts, Porters, Cooks and Waiters.....	1
Special Agents, Special Watchmen and Officers.....	1
Switch Tenders.....	1
American Federation of Railway Workers.....	1
Unorganized Storekeepers.....	1
Marine Employees.....	1

Labor Organizations Bring Requests for Wage Increases Before Board

As a result of the announced intention of several labor organizations to meet the requests of the carriers for wage reductions with demands for wage increases, several of the labor organizations have also submitted disputes to the Board. Submissions have been filed by the American Train Dispatchers' Association covering disputes of this character with the Oregon Short Line; Chicago, Indianapolis & Louisville; Duluth, South Shore & Atlantic; Mineral Range, and Texas Pacific. The Federated Shop Crafts have filed submissions involving disputes with the Lehigh Valley; International & Great Northern; Trinity & Brazos Valley, and Chicago Junction. The Order of Railroad Telegraphers similarly has filed submissions regarding disputes with the Wabash; Gulf Coast Lines; Minneapolis, St. Paul & Sault Ste. Marie; Trinity & Brazos Valley; Chicago, St. Paul, Minneapolis & Omaha; Fort Worth & Denver City; Wichita Valley, and Oregon Short Line. The Brotherhood of Railway & Steamship Clerks, Freight Handlers, Express and Station Employees has also filed submissions covering disputes with the Baltimore & Ohio Chicago Terminal; Minne-

apolis, St. Paul & Sault Ste Marie; Fort Worth & Denver City; Wichita Valley; Gulf, Colorado & Santa Fe; Beaumont Wharf & Terminal Company; Minnesota Transfer; Southern Pacific Lines in Texas and Louisiana, and Union Pacific.

No action has been taken by the Board as to docketing or consolidating these cases, but it appears from the number and character of the submissions already made and from the progress of the negotiations on individual carriers that have not as yet filed their submissions, that the entire controversy will be in the hands of the Board before the end of February.

Work has practically been completed on the new rules to cover the working conditions of signal department employees and these are to be announced in the near future, leaving only the disputes involving smaller groups of employees to be disposed of.

Freight Car Loading

WASHINGTON, D. C.

DUE PRINCIPALLY to increased shipments of coal, loading of revenue freight totaled 743,728 cars during the week which ended on January 28 compared with 738,275 cars during the previous week or an increase of 5,453 cars, according to the report of the Car Service Division of the American Railway Association. This was also an increase of 42,123 cars compared with the corresponding week in 1921, but a decrease of 59,604 cars compared with the corresponding week in 1920.

Coal shipments during the week of January 28 totaled 180,966 cars, which was an increase of 16,875 cars over the week before, and 17,536 cars in excess of the corresponding week in 1921. It was, however, 7,949 cars below the number shipped during the same week in 1920. Coke shipments also increased 235 cars over the week before which brought the total to 7,502.

There were 32,590 cars loaded with live stock, an increase of 629 cars over the week before and 213 cars more than were loaded during the corresponding week last year. Shipments of grain and grain products amounted to 50,880 cars, 1,301 cars less than were shipped the week before. This was 10,916 cars more than were loaded during the same week in 1921 and 14,376 cars more than during the same week in 1920.

Forest products also showed a reduction of 2,955 cars under the week before, the total being 47,373 cars which was

5,000 less than the corresponding week last year. Merchandise and miscellaneous freight, which includes manufactured products, totaled 420,410 cars, a reduction of 7,768 under the previous week. This was 24,703 cars above the total for the corresponding week in 1921, but 43,804 under the corresponding week in 1920.

Compared by districts, increases in the loading of all commodities over the week before were reported in all except the Eastern and Southern districts, while the Southwestern district was the only one to show a reduction compared with the corresponding week in 1921.

Accounting for Settlements With Railroad Administration

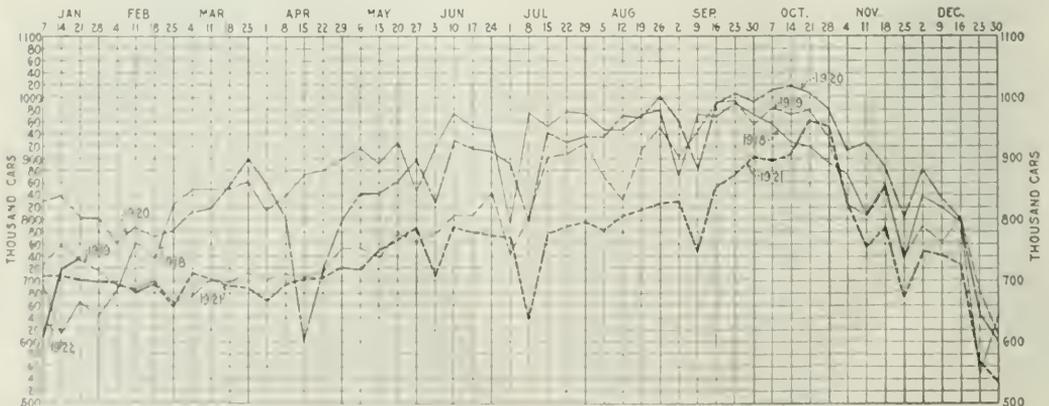

THE Interstate Commerce Commission, having under consideration the procedure to be observed by carriers whose systems of transportation were under federal control, in accounting for the amounts receivable from or payable to the director general of railroads in final settlement for the use and operation of their property during federal control has ordered that the following accounting procedure be observed by such carriers:

(1) All ledger accounts with the United States Railroad Administration covering items adjusted in such final settlement shall be considered as liquidated and shall be closed.

(2) Items on which the amount of settlement may be mutually agreed upon between the director general and the carrier whether or not previously recorded in the accounts, shall be recorded in the accounts in accordance with the effective accounting regulations on basis of settlement agreed upon.

(3) Any difference between amounts adjusted in accordance with the foregoing and the amount collected or paid by the carrier in such final settlement shall be cleared to profit and loss account 607, "Miscellaneous credits," or 621, "Miscellaneous debits," as may be appropriate, provided that the use of profit and loss in clearing balances shall not operate to relieve carriers of the observance of classification rules applying to additions to and retirement of physical property and the maintenance of adequate depreciation reserves for equipment.

EIGHTY-FIVE PER CENT of the 160 married employees of the Chicago, Rock Island & Pacific at Pratt, Kan., who have been in the company's service one year or longer are home owners.

Revenue Freight Car Loadings to January 21, 1922

Real Program of Railroad Construction Needed

Tremendous Losses Suffered Because of Lack of Foresight and Antagonism to Railroads

By Herbert Hoover, Secretary of Commerce*

IN RESPONDING to the invitation to discuss some of the problems present in your general railroad investigation, I shall devote myself to three of the railway topics which especially arise from the present economic situation.

I do not need to review at length that we are recovering from the destruction and inflation of the greatest war in history; that we are suffering from the waste, the extravagance, and over-expansion of the post-war boom, and that the war has brought about great shifts in the movement and price levels of commodities between nations.

I would, however, suggest that it might be profitable for our people to get a somewhat clearer perspective of our own, and the world's, troubles and problems. Even a superficial survey must bring us out of an atmosphere of gloomy introspection into an assuring realization that, great as our dislocations may seem to be, we relatively are in an enviable position. Our nation is unshaken and as a people we are getting our bearings in a world of perplexing economic adjustments. While there is unemployment and lack of profit taking, we are free of panic. We are comparatively more restless than injured. For instance as heavy as our tax burden is it is still less than one-half as great in proportion to our national productivity as the other states in the war.

The violence of our readjustment, however, is without parallel and we sometimes tend to color our measures for the future by the depression we are in. The fact is that we must predicate all plans for the future on the ultimate return of the American people to a normal economic activity, with our annual progress in the expansion of our production, of our plant and equipment, of our skill and our efficiency. There can be no question that this return will take place, and no responsible body will approach our problems on any other basis. Not one of us would submit to the charge that we were not prepared to bet against any odds upon the future of the United States. Our problem is to expedite this recovery—to speed up employment of our workers, and thereby find market for our farmers.

If we look at the national economic situation as a whole, the greatest impulse that can be given to recovery from any source whatever is a reduction of rates on primary commodities combined with the immediate resumption of railway construction and equipment. The first depends upon reduction of operating costs, the second upon restoration of credit for our railways.

One thing is absolute. Our transportation facilities are below the needs of our country, and unless we have a quick resumption of construction, the whole community—agricultural, commercial, and industrial—will be gasping from a strangulation caused by insufficient transportation the moment that our business activities resume. For the past five years we have had no consequential expansion to our railway transportation machine. With but one interval of nine months in 1918 and 1919 we had a car shortage throughout the whole of the years 1916-17-18-19 and '20. This shortage rose to as high as 160,000 cars with a corresponding shortage of motive power. We paid tremendous sums in commercial losses and unemployment in consequence. We laid it onto the war. We should lay it onto our lack of foresight and antagonism to railroads.

Railways Need 4,000 Locomotives and 200,000 Cars

Few people seem to realize the amount of expansion in our transportation machine necessary to keep pace with the growth of the country. And an equal few seem to have any notion of the price we pay for not having it. Our country is more dependent upon railway transport than any other. All others have comparatively greater coast lines and internal waterways. The experience of the 20 years before the war has shown that we must build an extension of lines, including terminal facilities, additional sidings, etc., every year equal to the construction of a new railway from New York to San Francisco. We must add at least 120,000 cars and 2,500 locomotives annually to our equipment. Since we entered the war in 1917 we have constructed at least 10,000 miles of railways less than our increasing population and economic development called for and we are behind in rolling stock by about 4,000 locomotives and 200,000 cars.

I wish to emphasize that unless we can have an immediate resumption of construction and equipment, our commercial community will pay treble the cost of the whole of them in their losses of a single season. The very moment that we reach anything like normal business we shall see a repetition of car shortages, followed by an increase in the cost of coal to the consumer from one to three dollars a ton; we shall again see premiums of 20 cents a bushel for the use of cars for moving grain; we shall in fact see a shortage of commodities to the consumer; and we shall see gluts upon the hands of the producers. We shall see factories filled with orders again closed for lack of cars; we shall see large intermitency in employment; and we shall see the usual profiteering in commodities due to a stricture between the producer and consumer.

There would be no difficulty whatever, by basing such losses on the experiences we have already had, to calculate a loss to the American people of a billion dollars for each one of these periodic transportation shortages.

Furthermore, there is nothing that is so irrecoverable a loss to the nation as idle shops and idle men. To-day we have both. There is nothing that will so quickly start the springs of business and employment as an immediate resumption of construction and equipment of the railways. When business does resume, we shall need all of our capacity for the production of consumable goods. We shall not only find it strangled for lack of transportation, but we shall find ourselves plunging into the manufacture of this very railway equipment and construction in competition with consumable goods for materials and labor. Herein lies the basic cause of destructive price inflation and booms, with all their waste and over-expansion. In times of depression, we should prepare for the future and by doing so we can cure the depression itself.

If we examine the fundamental reasons for failure to resume equipment, we will find them in the loss of confidence in railways as an investment and the competition of tax free securities. We have passed the period of credit strain in this depression. Surplus capital is pouring by hundreds of millions monthly into tax free securities and foreign loans, and yet our railways are unable to finance the most moderate of construction programs. The confidence of the public in railway investments was at so low an ebb before the war that finance by the issue of common and preferred stocks had

*Statement before the Interstate Commerce Commission on February 3, 1922.

become impossible and railway expansion was living on bond issues. The confidence of an assurance and continuity in earning power to cover this burden of bonds has been even lowered since the war began, because of the uncertainties of both rising and falling prices, of rising and falling wages, of rising and falling rates preventing all regularity of earnings upon which an investor could be convinced, even if no other difficult factors entered into the problem. I see no occasion to go into the labyrinth of past railway finance, its propriety, or lack of propriety, its foolishness or its skill. This commission approaches the financial problems of the railways upon the actual value, not upon their issues of securities and I take it we are living for the future, not the past. We want transportation, and we want it with the values of private initiative and clean public service.

If we look to the immediate future with its complete necessity of paring the railway earnings down to little more than bond interest, until we give relief to the shipper (and thus the primary foundation to business recovery) I can see little likelihood of convincing the investor as to his margins of safety. There is an atmosphere that our railways will never again earn profits, and that they are not as an industry worthy of investment, and that because private investors will not come to their assistance nobody can do anything.

Driving Headlong for a Setback

Far from it being impossible for our railways again to return to a profitable footing, I believe it is possible to demonstrate that on an average they will become very profitable. If we assume that the reduction of prices and wage levels will settle at a plane no lower than 50 per cent over pre-war, and if we assume that the present rates are to maintain, and if we assume restored traffic, then the earnings of our railways would exceed 15 per cent on the whole of the commission's tentative valuation. Surely there is room here for safety to investment, as well as relief to the shipper.

But the circumstances being as they are, confidence being at a low ebb, we do not have the equipment necessary for our business. We are driving headlong for a setback to our whole commerce the very moment that we begin to get on our feet.

In these circumstances it seems to me vital that the railways as our greatest industry should propose a courageous program of broad visioned betterments and if necessary the government should consider giving the use of its superior credit. It would not cost the taxpayer a cent to give the government guarantee to equipment trusts upon the primary responsibility of the railways, the proceeds devoted entirely to improvement and equipment. This is no proposal to take money from the taxpayer. It is a proposal to save him from paying treble the amount of his guarantee in profiteering and losses. It will render a reduction of rates earlier, or unless something is done the improvement will have to be paid over years out of increased rates. Nor would we lose a cent upon the guarantee, for if American railways can not earn interest upon their borrowings let us throw up our hands and prepare for a second Russia.

A real program of construction would in its various ramifications give relief to five or six hundred thousand of our unemployed. It would enable even added numbers to increase their standard of living, and thus give increased market to the produce of our farmers. Our farmers who look to foreign markets for their surplus should stop to consider that our home consumption of meat decreased nearly seven pounds per capita in 1921, mostly owing to unemployment and that if this decrease could be overcome it would be worth more than a 35 per cent increase in exports.

We talk glibly of giving billions of credits to foreign countries, to increase our farm exports. I wish to say with all responsibility for the statement that a billion dollars spent upon American railways will give more employment to

our people, more advance to our industry, more assistance to our farmers, than twice that sum expended outside the frontiers of the United States—and there will be greater security for the investor.

Time to Call Off the Witches

Finally, I want to refer to the veritable witches cauldron being fed constantly with hates distilled from the misdeeds of railway promoters in the past, from the conflicts between the railways and the farmers, between the railways and their workmen. From all the confusion that arises from it we destroy our railways and destroy ourselves. With this commission on one hand assuring honesty in finance, justice to the shipper and the railway investor, with the Railway Labor Board assuring justice to workers and, above all, with a great spirit of public service in our generation of railway managers, it is time to call off the witches and take some vision of our national situation if we are to pull ourselves out of this depression.

Railway Rates

Before entering upon the question of readjustment of rates, I wish to set out some factors in the present economic situation that bear upon the entire question.

The following table shows a few commodities and service groups, compared to 1913 as 100:

Farm crops, at the farm.....	98
All animals, at the farm.....	92
Retail food stuffs.....	150
Cotton, at the farm.....	136
Wool, at the farm.....	101
Retail clothing.....	213
Steel billets, Pittsburgh.....	113
Copper.....	86
Zinc.....	90
Pig iron, Pittsburgh.....	128
Bituminous coal, at the mine (estimated 4 districts).....	160
Bituminous coal (retail various localities).....	198-220
Yellow Pine Lumber (at the mill).....	189
Douglas Fir Lumber (at the mill).....	125
Lumber (retail) partly estimated.....	200
Cost of Living variously estimated from Wage Scales (approximate).....	162-180
Farm labor.....	135
Textile industries.....	210
Steel industries.....	150
Railways.....	200
Metals trades.....	218
Building trades.....	176
Coal mining scales.....	173

This table at once demonstrates

- (1) The inequality in prices and wages between different groups of commodities.
- (2) The great increase in spread between "producer's" and "consumer's" goods.
- (3) The lag in wage scales.

As the population engaged in the "deflated" producer's goods—agriculture, and metals, wool, etc.,—comprises one-half the total in number of the nation, their power to buy the same ratio of consumer's goods has been reduced to less than 70 per cent of pre-war, and is the consequent cause of a large part of the industrial and commercial unemployment and stagnation in our cities and our transportation.

Spread in Prices

I wish to especially call your attention to the indicated enormous increase in spread between primary producer's and ultimate consumer's goods. In considering it, we must bear in mind that when we use 100 for both consumer's and producer's goods of 1913, we have already included the spread between producer and consumer at that period. I therefore believe that the index numbers indicate an increase of 100 per cent in the actual spread. It is right here where the most of our economic difficulties lie today. Our increased cost of manufacture and distribution bears two relations to the rate question—first, that the increase of rates of from 30 per cent to 100 per cent in different commodities are part of it, and are in turn part caused by it; and second, the increased rates bear very unequally on different groups in the community.

If we search for the cause of this increase of spread we shall find therein a vast complex of increased taxation, increased wages, rents, and a dozen items, all reacting upon each other, and also expressing themselves in increased cost of operating the railways. For instance, the total increase in national, state and municipal taxes since 1913 is approximately \$5,640,000,000. At the present purchasing power of the dollar, our total national productivity is probably somewhere around 50 billions of dollars, of which over 10 per cent must now be devoted to increased taxes. This sum of money must be obtained either from the producer or the consumer and in any event a considerable part of the taxes contributes to widen the spread. Because the increase in spread due to taxes necessitates a spiral of increased wages, rents, etc., and before its force expends itself my own opinion is that possibly 20 points in the distorted index number flows from increased taxes.

The increase of railway rates since 1913 in Class I railways to 1921, is about \$2,600,000,000, of which about \$1,400,000,000 are due to wage increases and about \$160,000,000 to tax increases. If our traffics were normal the total increase of rates would be more like \$3,500,000,000. These sums enter into this increase in the spread and carry with them a further trail of increased living costs and again a spiral of higher wages, rents, etc., in all other branches of manufacture and distribution.

There are other causes of the increased spread, some of which will be mitigated with time.

No one can say to what particular table-land of prices and wages we may settle upon, but it is a certainty that the exchange value of producer's goods will not again line up with consumer's goods unless we can decrease the costs and eliminate the wastes of our whole manufacturing and distribution trades. And unless we can secure their nearer proximity we will retard a return of employment and prosperity.

I wish to digress for just a moment from railway to agricultural subjects, to point out that the recent project for fixing farm prices by law are apparently founded on the notion that by raising agricultural prices up to the levels of consumer's goods we can remedy the extreme hardship of our farmers. Even if it be possible to raise the prices, much less advantage would accrue to the farmer than anticipated. Unless the "spread" is decreased by actual savings, the costs of manufacture and distribution would be at least partially increased by higher prices of producer's goods. The spread is fundamentally due to increased cost of manufacture and distribution, not to the fall in producer's goods. The real remedy is an attack upon the causes of the spread and thereby to bring consumer's goods down to the producer's buying power.

It is a certainty that in order to decrease the spread, railway rates must come down and for rates to come down costs of railway operation in wages and prices of supplies must be reduced. Until this adjustment is secured the economic machine will continue to move slowly. We cannot and should not expect wages to come back to pre-war levels. Many of our wage scales were too low in pre-war times. They can follow down step by step with the cost of living, but there are permanent charges in this spread, such as taxes, which will hold the cost of living above pre-war levels. We must gain our other reductions in the spread by increased national efficiency.

The Method of Readjusting Rates

The involved complex of transportation rates was obviously originally based on some relationship to the value of commodities, mitigated by competition. In other words, the old slogan of "what the traffic will bear" had some economic background. But this entire conception of ratemaking was destroyed by horizontal raises. We have rates clearly beyond what the traffic can bear.

The increases in railway rates during the past five years have fallen with extraordinary inequality on different commodities and different groups of people in the community. The country grew up, its industries were distributed under ratios of costs between different commodities, ratios between raw materials and finished goods, ratios between the farm and city. These have all been distorted by the horizontal rises. The increases in rates since 1914, for instance, have added probably less than 1 per cent to the price of cotton goods on the average haul but it has added probably 60 per cent to the price of coal. The increased rates since 1914 have added nearly 100 per cent to the cost of assembling the materials for pig iron.

All this is artificially forcing our industry to move toward their raw materials. This does not alone represent the starting of a new factory; it is a movement of the whole mechanism of the community, labor, homes, schools, railways and whatnot—an enormous duplication of plant and loss of capital. We will ultimately have the rates readjusted and then we will destroy the new industries created under it.

Of equal importance there is a new economic light on this distortion of rates evident under the stress of the last few years. That is, the better realization that some increases of rates come mostly off the producer while others are paid by the consumer. Increases in spread between producer and consumer do not fall equally upon each of them. In primary commodities where the price is fixed by international competition, the increase or decrease in rates is a deduction from the producer. Take wheat, for instance, the point of competition with foreign produce lies at Liverpool. The net to the producer is Liverpool less transportation and other handling charges. Therefore increases of rates are a deduction from the farmers' price. The same thing applies to the producer in certain cases of domestic competition. Also where there is rapid turnover, as in manufacture, and consequent ability to reduce supply, the consumer pays the freight, as processes of productivity will not continue below profit point. In most manufactured commodities the consumer pays the freight, for production quickly shrinks when prices at the factory become unprofitable and the price to the buyer is the factory price plus the freight. For instance, in hides, the farmer gets the international price less freight. On boots he pays the manufacturer's cost, profit and freight.

It appears to me that with the paralysis induced by the increased spread, we have to take a broader vision of what part of the community is suffering most and direct such concessions through the railway rates as can be given to that group—if we would better equalize the whole economic load.

During the past eight months the railways have made many thousand readjustments of local rates in endeavoring to heal local distortions, but I am convinced that the whole railway rate structure needs a most systematic overhaul in the light of these new economic forces that have been brought into play.

We obviously must maintain the average rate that will support our transportation systems adequately and such an overhauling of rates might quite well mean the advancement of rates in certain commodities in order that compensation can be given to others where there is undue duress.

If I were to discuss the rates charged today I should say at once that a decrease in passenger rates is not nearly so vital to the community as freight rates, for passenger rates do not enter into the "spread" in proportion to the relative volume of earnings. If I were examining the freight rates I should at once say that coal, metals, wood, and agricultural and other producers' goods should be reduced to the bottom before l. c. 1. and class rates are touched.

I would be willing to go even farther and say that I am convinced that even if the commission cannot at the present moment justifiably reduce railway incomes a single dollar, it is warranted in investigating the possibility of some relief

to the more distressed commodities by a revision of some rates upward. There is perhaps no great field for changes in this direction but it is worth inquiry. As mentioned above, an economic analysis of our industry will show that l.c.l. and class rates are far too low compared to the rates on primary commodities.

With the gradual return of the traffic to normal, with decreased operating costs, relief in rates will be available, and it would be an economic crime to apply such relief by horizontal reductions to all rates thus giving relief to higher priced goods and travel, when the vital mainspring of our economic life, our agriculture and fuel and metals are choked.

The Present Rate Situation

Determination of anything in the nature of permanent rate basis is in my own view impossible at the present time because:

The last five years of changing administration, irregular traffic and wildly fluctuating wages and prices of materials give us but little reliable historical criteria upon which to base the future. We are in the midst of violent economic readjustments, of a profound industrial depression. No one can determine to what plane the reduction in operating costs will settle. No one can estimate the volume of traffics that are probable for any particular period ahead. It appears to me, therefore, that the commission will need to temporize with the situation for some time, and that its conclusions may well fall into three periods:

First—The immediate present.

Second—During the early period of decreasing costs and increasing efficiency and slowly recovering traffics.

Third—Normal operations.

THE IMMEDIATE PRESENT

If we survey the results of the past year in the application of present costs and rates, we find many railways failing to earn interest upon their borrowed capital; we find some others more fortunately situated who have earned dividends on their share capital.

One or two exceptions of low bonded indebtedness have done extraordinarily well on their share capital. If we survey the situation by districts, in order that single instances do not mislead us, we will find that the whole of the Class I southern roads barely covered bond interest, while the most fortunate group, the western roads, show an earning of only four per cent in 1921 upon their tentative valuation. Moreover, it is obvious that maintenance has been held to a low level and new equipment and extensions practically nil.

The present earnings in their perilous closeness to bond obligations seem to me to dispose of the question of immediate important rate relief, if we do not wish widespread receivership and shocks to our whole commercial fabric.

I believe there are cases where earnings could be increased by lower rates. I know that it is contended that such opportunities do not exist, but no one can review the testimony given here during the past few weeks without concluding that the rates in special instances are stifling business. These directions are perhaps not important in the whole problem of rates, but I am convinced that lower rates would recover lost traffic, such as export coal, substitutions in building materials, gains in water competition, etc.

THE SECOND PERIOD—DURING 1922

We must assume that those railway wages and supplies which are out of line will at least in part follow down to the levels of decreased cost of living; we must assume that the efficiency that is slowly emerging after the government management will still further increase; we must assume that the volume of traffics will increase toward normal.

I have the feeling that the railways being our greatest

business, will agree that all these savings should be instantly devoted to relief in the rates on primary commodities in order that we should expedite the recovery that can only come through decreased spread between producer's and consumer's goods.

I recognize that the uncertainty and slow reduction of rates in this fashion will itself delay business recovery because of the uncertainty of business as to its future costs. If our railways were in position to stand the temporary shock it would be infinitely better to drop the rates on primary commodities tomorrow—our business recovery would come faster. But we cannot ask the impossible.

THIRD

If we look further to normal times, we could make a rough calculation that present wages and costs at say 50 per cent above pre-war would show that the railways can earn somewhere around \$1,500,000,000 in excess of the six per cent minimum upon tentative valuation. As I have stated, relief is first more critically needed in the rates on primary commodities.

Some estimates given to me indicate that approximately 35 or 40 per cent of revenues are involved in the groups more urgently needing relief. I think it will also bear calculation that in the income assumed above primary commodities can eventually be reduced to pre-war rates, and still place earnings upon a basis that will inspire such confidence in investors as will secure the free flow of investment capital into construction. It is not to be expected that capital for these purposes will be available at the rate that does not exceed the taxfree securities at least two per cent to three per cent.

Efficiency of Railways

A great deal has been said about the inefficiency of our railway system. I do not sympathize with these statements. Comparison with foreign railways of the fundamental criteria of per ton-mile costs, train loading and so forth, in the light of our cost of living, will demonstrate that our railways are of higher standards, better in methods than others and are growing in efficiency.

The consolidation of our railways into larger systems has been contemplated in our legislatures for some years past as a gain in efficiency. Its value can be overestimated—it is not a panacea for all trouble. It does give hope, however, of economies in further efficiency from more complete utilization of rolling stocks and terminals, some small degree of saving in overhead, saving in current inventories; but its probable great saving would be decreased cost of proper finance, increased financial stability and fuller independence from the supply companies.

It is probably unnecessary to refer to the question of government ownership. No one with a week's observation of government railways abroad, or with government operation of industry in the United States, will contend that our railways could ever be operated as intelligently or as efficiently by the government as through the initiative of private individuals. Moreover, the welfare of its multitude of workers will be far worse under government operation.

We are struggling with the great problem of maintaining public control of monopoly, at the same time maintaining the initiative of private enterprise. I believe that we are steadily progressing to solution.

Great social and economic problems find their solution slowly and by a process of trial and error. We have tried unregulated monopoly, and have tried government operation, and found the error in them. We still have much to solve if we are to maintain our transportation. Much of this solution depends upon the successful initiative of the railways themselves and much of the shaping of these matters lies fortunately in your able hands.

The I. C. C. General Rate Investigation

Commission Concludes Hearing on General Aspects of Case— Testimony of Secretary Hoover, Pullman Company, Etc.

WASHINGTON, D. C.

THE INTERSTATE COMMERCE COMMISSION on February 4 concluded that part of its hearings on the general aspects of the rate case from the point of view of representatives of the public and shippers interested in rates generally rather than those on particular commodities. An adjournment was taken until February 8 to allow two days for the conferences which the commission holds at the beginning of each month.

The feature of the hearing during the past week was the statement made by Secretary Hoover of the Department of Commerce, who appeared at the invitation of the commission on the suggestion of the Chamber of Commerce of the United States, to give his views as to the railroad and rate problems. Mr. Hoover's statement is printed in full elsewhere in this issue. He did not attempt to give direct advice as to how rates should be adjusted, although he said that rates on primary basic commodities should be reduced as soon as possible and if they cannot be reduced without reducing the income of the railroads the commission would be warranted in investigating the possibility of some relief to the more distressed commodities by a revision of some rates upward.

Before discussing rates, Mr. Hoover emphasized strongly the necessity for an adequate return for the roads to encourage the development of adequate railroad facilities so that they may be able to handle the normal volume of business which is to be expected. He pointed out the enormous losses to the public which result from the periodic shortages of transportation and declared that such shortages in the past should be attributed not to the war but to "our lack of foresight and antagonism to railroads." Obviously, therefore, he said, we must maintain the average rate that will support the transportation systems adequately. He believed that there are cases where earnings could be increased by lower rates but said that complete relief must await a further period of gradual readjustment and it would be "an economic crime" to apply a horizontal reduction.

Mr. Hoover's appearance attracted a large audience to the commission's hearing room and the expressions heard afterward indicated that nearly all the various elements in it found something in his statement to approve. Paul A. Walker, representing the state commission group, arose and said Mr. Hoover's statement was "the best thing he had ever listened to" and asked if it might not be printed for wide distribution.

Hoover Cross-Examined by Thorne

Clifford Thorne cross-examined Mr. Hoover, but the secretary declined to admit that he did not know what he was talking about because he had not brought with him all the figures on which his conclusions were based. He offered to send them to Mr. Thorne if he desired them. Thorne began by asking the witness if he had the idea that the proportion of bonds to stock was greater than it was 10 or 15 years ago. Mr. Hoover said no, but he believed it is too high and a high proportion of bonds gives less flexibility to the whole economic situation than is desirable. The higher the proportion of share capital, he said, the better.

Mr. Thorne asked if he did not know that most of the railroads were financed by giving stock bonuses with the bonds.

"Oh, yes, I have been hearing about that ever since I was a boy," replied Mr. Hoover, "but we have got to live for the future and not rehash the past. I believe the present amount of stocks and bonds is less than the tentative value fixed by the commission. We are faced with a practical question and

the commission is dealing with value, not the mass of paper in the markets."

Mr. Thorne then asked his favorite question as to whether the railroads are not earning as good a return and are not able to raise capital on as favorable terms as industrial and public utilities.

"I don't consider the comparison between the returns of the railways and other industries a fair comparison," said Mr. Hoover, "but the practical fact is that the railways have been unable to secure capital in competition with other industries and tax free securities." He added by way of illustration that the director-general of railroads has a large parcel of very good 6 per cent railroad securities which he would like to sell and he has been able to "peddle out" some of them during the past six months, but not enough to finance the requirements for new equipment for one month. The question is not whether railway securities can now be sold as easily as industrial securities, he said, and public utilities are in much the same condition as the railways.

Mr. Thorne, who numbers among his clients the National Wholesale Grocers' Association, asked if Mr. Hoover was aware that large advances had been made in l.c.l. rates on food articles since the war. He replied that only a very small percentage of food products moves l.c.l. When Mr. Thorne asked if he had made any analysis of the canned goods and other food products that moved l.c.l. as compared with the carload movements, Mr. Hoover said he had made enough of an analysis to know that it would be better for the farmer to have a reduction in his primary rates than in l.c.l. rates.

Pullman Company Objects to Surcharge

L. S. Taylor, vice-president and comptroller of the Pullman Company, presented a statement on February 3 to show that the application of the commission's order in Ex Parte 74 providing for a surcharge to accrue to the railroads amounting to 50 per cent of the charge for space in sleeping and parlor cars had caused an immediate marked reduction in passenger traffic in Pullman cars, and a consequent serious decrease in revenue, not only to the Pullman Company but also, as the company believes, to the railroads, and which has continued since that time.

He presented a statement of gross revenue by months from May 1, 1920, to October 31, 1921, showing a reduction in revenue in September, 1920, as compared with August, 1920, amounting to \$1,418,057.54, and a further decline in October and succeeding months. This decrease between the two months named amounted to 15.43 per cent, whereas over a series of years from 1917 to 1921, inclusive, there was a variation between those two months of less than 1 per cent, except in 1920, when the decrease amounted to 15.43 per cent in September, the first month after the surcharge took effect. In 1917, 1918 and 1919 there was a variation of only \$23,000 to \$33,000 in revenue between August and September; in 1920 the decrease in September under August was \$1,418,000, while in 1921 the variation was again normal, amounting to less than \$25,000.

"It necessarily follows," Mr. Taylor said, "that some change of importance seriously affecting travel caused the immediate marked drop of \$1,418,000 in September, 1920, as compared with August, 1920, and no other explanation can be offered than the application of the surcharge at that time. A new lower level of revenue then resulted which still further declined in succeeding months, and while the general business depression throughout the country had its influence on

the further decline, the fact remains that the sudden decrease of more than 15 per cent at that time, not noticeable in any other year, was coincident with the application of the surcharge.

"As further illustrating the change taking place at that time in traffic conditions, a statement of passengers in Pullman cars from August, 1920, to November, 1921, inclusive, has been compiled. There was a reduction of 17.05 per cent in number of passengers in September, 1920, as compared with August, with increased percentages of reduction in succeeding months. Such reduction was not reflected in car miles, the decrease in car miles being much less than the decrease in number of passengers. This shows that the number of cars operated has not decreased in proportion to the decrease in number of passengers and in revenue. At the same time, the expenses per car have remained fully as great, and operating expenses have not decreased with the decrease in operating revenue.

The 1918 Surcharge

"The commission's report in Ex Parte 74 states that The Pullman Company opposed the re-establishment of the surcharge on the ground that it would reduce travel in Pullman cars, and referred to the showing made by the company with reference to the surcharge imposed by the director general in 1918. A further study of the effect of the surcharge at that time shows that the marked falling off in travel in Pullman cars in June, 1918, was followed by a perceptible increase in December when that surcharge was taken off. Attention is invited to the statement submitted showing comparisons of revenue of the month of June with the revenue of May for a series of years. Normally there is always some increase in June on account of summer tourist travel. The exhibit shows increases in June over May for the years 1915 to 1921 varying from 10 to 20 per cent, with the exception of 1918 when the surcharge was in effect from and after June 10, and in that month there was a decrease of 6.24 per cent. That is, instead of a normal increase of at least 10 per cent there was a decrease of more than 6 per cent, or a total decrease of more than 16 per cent as compared with 1917, and of 20 to 25 per cent as compared with other years shown on the statement. The actual decrease in revenue for the one month in 1918 was at least three-quarters of a million dollars. And this decrease continued throughout the time the surcharge was in effect.

"The 1918 surcharge was taken off November 30 of that year. A comparative statement of revenue of December with that of November, for the years 1915 to 1921, is also submitted. This shows that normally there is some increase in December over November due in part to increased travel on account of the Christmas holidays. The increase varies from less than 1 per cent to 16 per cent, except in 1918, when in December, the first month after the removal of the surcharge, the increase was 39.67 per cent, more than double that of any other year. The increase in gross revenue was between \$800,000 and \$900,000 over the normal increase of the month of December as compared with November, and more than a million dollars greater than the normal increase in that month in any other year.

"Plainly, these figures cannot fail to show that the imposition of the surcharge caused a very noticeable decrease in travel in Pullman cars, and we believe in passenger travel generally, during the time the surcharge of 1918 was in effect, with a repetition of the same decrease in travel at the time the surcharge of 1920 was imposed, which has continued to the present time. The consequent loss of revenue to The Pullman Company since August, 1920, without possibility of corresponding reduction in expenses has resulted in a net operating loss.

Sleeping and Parlor Car Business Shows a Loss

"The net results from operation of The Pullman Company's sleeping and parlor car business for the year ended October 31, 1921, shows a loss of \$2,856,702.80, against a capital investment in that portion of its business much in excess of \$100,000,000. This does not mean a decrease in revenue of that amount, but an actual loss, an excess of expenses over income. The operating ratio for that year was 99.65 per cent without taxes; including taxes, the ratio was 104.15 per cent.

"The company has not found it possible to reduce operating expenses to meet the constantly decreasing revenue. One of the principal reasons is that the decrease in the number of cars operated has not been proportionate to the decrease in gross revenue

and passengers carried. The expenses per car have not decreased; in fact, during the last months of 1921 the expenses per car increased, notwithstanding reductions in wages, on account of additional heavy repairs after the close of the summer season.

"The decision of the United States Railroad Labor Board authorizing a reduction in wages of employees effective July 1, 1921, has resulted in the saving of only a small proportion of the very large increase in the company's payroll expenses of the past three or four years.

For the year ended December 31, 1917, The Pullman Company's operating department payrolls (this includes only the sleeping and parlor car business) aggregated.....	\$16,977,543.04
For the calendar year ended December 31, 1920, they were.....	32,986,260.12
For the calendar year ended December 31, 1921, they were.....	30,676,821.76

"To show the situation with respect to reductions in wages more in detail a statement of decreases in operating expenses due to reduction in force or reduction in wages is attached. This gives the increase in wages in June, 1921, over June, 1920, as showing the effect of the increase of July 1, 1920. It also shows the decrease due to reduction in force and reduction in wages during the last five months of 1921 as compared with the corresponding months of 1920. The average of these five months in reduction due to reduction in wages amounts to \$153,000 a month or approximately \$1,800,000 a year. That is, during the last five months of 1921 the decrease on this account was at the annual rate of about \$1,800,000 a year. The reduction in force, varying from 2,400 to 4,100 employees in different months, was largely due to the decrease in business.

Pullman Revenue Reduced \$1,000,000 a Month

"The decrease in passenger traffic in Pullman cars since the application of the surcharge in 1920 has resulted in a reduction of revenue to The Pullman Company of about \$1,000,000 a month. The average reduction in number of revenue passengers has been over 600,000 passengers a month. The average distance traveled by passengers in Pullman cars is over 360 miles, year by year, or nearly 10 times the average distance traveled by all passengers on all railroads, according to well known statistics. It is obvious that a decrease of this extent must have had a material effect on rail transportation, partially offset, of course, by the amount of revenue derived from the surcharge accruing to the railroads."

Commissioner Aitchison asked Mr. Taylor if he had any opinion of the comparative merits of the plan of selling a separate ticket for the surcharge at half a cent a mile that was used by the Railroad Administration and the present plan of adding the surcharge to the price of the Pullman ticket. Mr. Taylor said the present plan creates antagonism because the public thinks the Pullman Company gets the money, but when Mr. Aitchison suggested that this be weighed against the fact that the public found the former plan an "infernal nuisance" he said the convenience of the public must be given first consideration. Commissioner Esch asked whether any of the railroads desired to have the surcharge taken off. Mr. Taylor said he thought a number of roads feel it should come off.

Discussing the operating expenses of the Pullman Company, Mr. Taylor said that maintenance expenses were very heavy last year, partly because the company had had to rebuild a large number of steel cars that were less than 10 years old. The principal cause, he said, was corrosion. Some of the trouble was probably due to the fact that when the first steel cars were built the necessity of protection against climatic changes was not well understood. "Some of our people thought the steel cars would last 50 years," Mr. Taylor said, "but our experience indicates that a steel car has not the life of a wood car."

Mr. Taylor said his company thought that about half of the falling off of Pullman travel was due to the surcharge and the other half to business depression. He was convinced that the railroads are losing twice as much money as a result of the surcharge as they are making by it.

E. A. McElroy, representing the National Retail Drygoods Association, comprising 2,200 stores, presented a petition to the commission urging a general horizontal reduction in rates, saying it was believed that this would benefit the railroads. He presented the results of a questionnaire addressed

to the members, saying 99 per cent of the replies were in favor of a reduction in rates and 86 per cent in favor of a general reduction.

F. H. Wood, representing the roads, asked whether retail prices had been reduced as much as wholesale prices. The witness replied that retail prices had come down more than wholesale prices and proved it by saying that silk stockings have come down from \$2.50 to \$1.00.

State Commission Wants Fares Reduced

A number of representatives of the state commissions who testified on February 2 and 3 seemed to be more interested in a reduction in passenger fares than in freight rates, although they also urged freight rate reductions. In addition to trying to show that passenger rates are too high, they had a large amount of statistical testimony to show that the railways are more prosperous than they are willing to admit, and they were especially optimistic in building up constructive years to show that on the present basis of rates and wages the railroads will soon be earning more than 6 per cent. One set of exhibits showed that during the year ending October 31, 1921, after adjusting for present rates and costs, the southern roads would earn 6.75 per cent, the eastern roads 8.06 per cent, and the western roads 6.34 per cent. Exhibits were also made up to show that the railroads have not curtailed their maintenance unduly.

Constructing a Valuation on Reports of

10 Per Cent of the Mileage

Fred Pettijohn, vice-president of the Roberts-Pettijohn-Wood firm of accountants, testified on February 3 and 4 as a witness for Clifford Thorne and presented exhibits to show the returns earned by the railroads on a valuation made by applying to the property investment accounts of 1921 the percentage of the railroad property investment accounts shown by the final values as reported by the commission in the tentative valuations of 182 roads. On this basis he arrived at a valuation for all the roads of \$16,000,000,000 as compared with the figure of \$18,900,000,000 used tentatively by the commission for the purposes of the 1920 rate case.

Fred H. Wood, of the Southern Pacific, said that if the purpose was to attack the commission's valuation, he would feel compelled to lodge an objection, as the issue was not pertinent to this case, the commission having already denied motions to reopen Ex Parte 74.

Mr. Thorne denied that he intended to "attack" the valuation, saying he wished only to submit "additional cumulative evidence" on the subject, as the commission has served many tentative valuations since 1920. After some discussion Commissioner Hall ruled that the witness might answer the questions and present his figures. These showed a ratio of final value to property investment of 73.3 per cent.

Commissioner Aitchison, however, pointed out that the valuations were as of various dates back as far as 1914 and that no adjustment had been made for additions and betterments since. "If there was inflation in the property investment account as of the valuation date," he said, "you have assumed a similar inflation in the money spent since, instead of allowing the full amount of the additions and betterments."

The witness replied that this was so but that his figures represented a fair approximation. Mr. Aitchison pointed out that the New York, Ontario & Western property account as shown in the tentative valuation was \$92,000,000 as against a final value of only \$44,000,000, and that, therefore, if the road had spent \$10,000,000 since it would have been allowed only about half of it. Mr. Thorne said that the purpose was to get an approximation and that if it were desired the figures would be adjusted.

On cross-examination Mr. Wood brought out from the witness that the 182 tentative valuations represent only about

10 per cent of the total mileage and asked if he thought these figures represent a reliable guide to the total. With certain corrections suggested by Mr. Aitchison, Mr. Pettijohn said he thought they were. Mr. Wood then pointed out that the New York, Ontario & Western report was served only about a week ago and asked what the percentage for the eastern district would have been without that report. The witness replied that the inclusion of that road had reduced the eastern percentage from about 80 to 72. Similarly, it was shown that the exclusion of the Rock Island report in the western district would have reduced the percentage from 71.2 to 54.7.

"Would your study have been equally reliable and valuable if it had been made a week ago without the New York, Ontario & Western?" asked Mr. Wood. The witness replied that it would have been fair in including all the reports available, but as to whether 10 per cent of the mileage is representative or not "only time will tell."

"I think we can agree that only time will tell," said Mr. Wood. "Then do you still think that the conclusions you have reached from 10 per cent of the mileage have any great value as against the commission's tentative valuation for all the roads?"

"They are the best available figures I know of," replied Mr. Pettijohn. He said he had not read the statements made by Commissioners Hall and Clark in testimony before committees of the Senate regarding the methods used by the commission in reaching the \$18,900,000,000 figure.

Mr. Pettijohn also had exhibits regarding the maintenance expenditures of the roads, to show that they had not been unduly curtailed as compared with previous years. He also had exhibits comparing the efficiency of labor on the basis of ton-miles per man-hour.

H. W. Bikle asked if the increase in ton-miles did not rather reflect the results of the increased traffic, the heavy loading campaign and the efficiency of management rather than the efficiency of the employees. Mr. Pettijohn replied that management undoubtedly entered into it.

Reed Speaks for the Kansas Commission

Clyde M. Reed of the Kansas Public Utilities Commission, took the stand with a number of exhibits prepared jointly for the state commissions and Mr. Thorne to show the comparative yields on railroad, industrial, public utility, and government securities, together with other similar information intended to show the comparatively good credit of the railroads. Another exhibit showed a reduction in the mileage of railroads in receiver's hands from 37,353 in 1916 to 14,502 in 1921. Other exhibits showed large increases in the failures and liabilities in business in 1921 and the net losses of a number of prominent industries.

Mr. Reed said that farm prices had been deflated to an amount estimated by him as aggregating seven billion dollars, and that farm operations were now and had been conducted at a loss. He pointed out that the business failures in 1921 aggregated 19,982, a larger number than has occurred in any year in the history of the country. The total liabilities involved in the failures of 1921 amounted to \$750,300,000. This sum has doubled the liabilities of any previous year, with one exception. In the face of the most disastrous year in American business, Reed pointed out that the railroad mileage in the hands of receivers at the close of 1921 was the smallest of any year since 1912, and less than half of the receivership mileage in 1915, 1916 and 1917.

Some of the strong railroads made their full return in 1921, he said, and the railroads as a whole made some return in that year, as contrasted with the general losses sustained by farmers and business men, and enormous losses shown in the operations of such industrial concerns as Armour & Co., Swift & Co., Sears, Roebuck & Co., Cuba Cane Sugar Corporation, Consolidated Gas Company of New

York, Fisk Rubber Company, Firestone Tire & Rubber Company, and others.

Quoting such financial authorities as Bradstreet, the Commercial and Financial Chronicle of New York, the Harvard Review of Economics Statistics, Mr. Reed claimed the railroads were able to borrow money and float refunding and new securities at a lesser rate of interest than public utilities or industrial concerns. The 1921 capital flotations of long-time securities for railroads carried 5.30 per cent, as against 6.66 per cent for public utilities, and 7.10 per cent for industrials.

"As a matter of fact," Reed stated, "the decline in the value of railroad securities as related to the net rate of return was not materially greater than government bonds, with particular reference to the Third and Fourth Liberty Loan issues. At the close of 1921 railroad securities were in as good a relative position as the government securities named." He pointed out that in 1921 the railroads, for new capital purposes and to meet maturing obligations, issued \$655,289,500 in securities, which were absorbed by the market. This was more than one-fourth of all the capital flotations in 1921, and these securities were floated at a lower rate of interest than securities of industrial, public utilities and other concerns. Reed claimed that railroad credit had not been impaired.

Pointing out that the tractive power of locomotives now on American railroads had increased 60 per cent since 1910, and that the carrying capacity of freight cars had increased 20 per cent, Reed claimed that the railroads were not candid with the country in constantly conveying the impression that railroad facilities were inadequate. "Car shortages have occurred and will occur again," he said, "but the fact is that the peak loads of the traffic in 1918 and 1920 were higher than the normal tonnage is likely to be up to 1929. Therefore, altogether too much emphasis is being laid by the railroads upon their new capital needs. Their refunding needs for the years 1922, 1923 and 1924 aggregate only \$207,000,000, as against \$302,000,000 in the year of 1921 alone. There has been much misunderstanding in the country on the railroad financial standing, much of which has been fostered by the railroads for the purpose of creating a public sentiment that will sustain the high rates now being charged for the transportation of passengers and property."

One point upon which Reed laid emphasis was the comparison of American and English railroad rates. President Willard, of the Baltimore & Ohio, had referred to the lower rates charged for the transportation of freight in the United States as compared with England. "There is no proper basis of comparison and the impression that American rates are lower is wrong," Mr. Reed said, "for two reasons: First, the average haul per ton in England is less than 60 miles; in the United States it is 325 miles. Therefore, the average rate charged per ton-mile on distances so widely apart has no significance.

Secondly, it is not true that American freight rates for the same length of haul are lower than English rates. On the contrary, they are substantially the same, the American rates being a trifle higher."

Mr. Reed did not state definitely what percentage he thought the commission ought to allow as a fair return after March 1. Commissioner Aitchison asked if he had ever heard of any court or commission fixing less than 6 per cent as a fair return. He said he had not but that the roads had never got above 6 per cent before the war, yet they had built up the greatest railroad system in the world, but he said the fact that much of the outstanding capital of the roads carries only about 4 per cent should be considered and it is not necessary to fix the rate on the basis of the cost of new money.

A point of view considerably different from that presented by most of the shippers was given by R. C. Fulbright, representing the Southwestern Traffic League.

"We do not believe this commission should undertake to compel the carriers to reduce rates generally, or on any given commodity, merely because shippers generally or the shippers of such commodity are not prospering," said the witness. "However great may be the economic demand for the reduction of rates, we believe this commission should see that any reduction is a logical one from a transportation standpoint in order that the rates may be reasonable, just and non-discriminatory.

"There is a distinction between the considerations of economic questions which bear upon traffic and those which affect the public welfare more generally. For example: The commission has always permitted a showing of an economic situation in so far as the same bears upon the question as to whether or not traffic will move under a given set of rates, or upon the question of whether or not the adjustment of the rates as such, unduly restricts the movement of traffic. It has also given consideration to production, consumption, and distribution for the purpose of ascertaining the character and volume of traffic at a given time or that which may be expected for a future period."

Mr. Fulbright said he believed it was fallacious to plead for reductions in rates on certain commodities because of the prostrate condition of the industry producing such commodities. He continued:

"When once the commission orders a rate reduction on the ground that the shippers interested in such rates are losing money and need help, the door will be at once open to the plea of all who feel that they are in any way oppressed. When once the public concludes that this commission will order freight rate reduction to relieve economic distress, the door will be open to every kind of public pressure which may be invoked by various classes of the shipping and consuming public. We will rapidly pass into an era where political issues will be framed upon agitation for reduced freight rates.

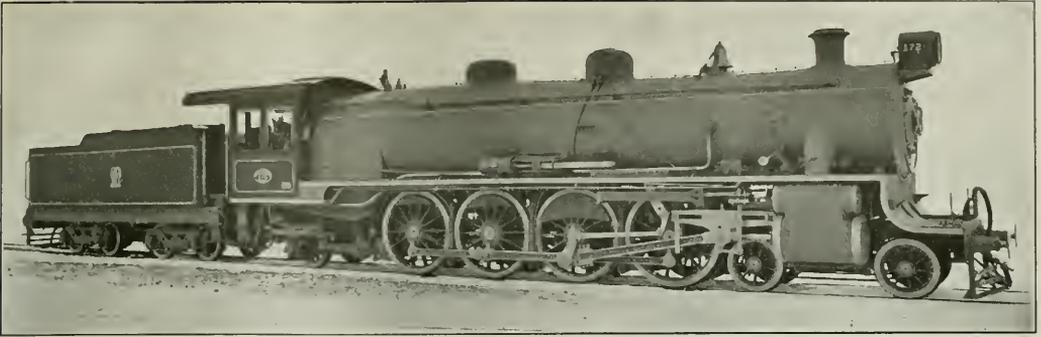

I am surprised that representatives of the carriers have indicated that this proceeding is primarily an economic case. Such would be a most dangerous precedent and undoubtedly would lead to political interference, to the great detriment of the transportation system.

I have made this statement to the end that there should be no misunderstanding of our position in introducing certain economic testimony in this case. Let it be understood at the outset that our position is that freight rates should be reduced only so far as there is a reasonable outlook for a resumption of normal traffic and a reduction of operating expenses. I will go further and say that if we could not normally expect a greater traffic than that handled in 1921 or a reduction of operating costs below the level for that year, most assuredly no general reduction of rates should be undertaken.

We believe that there can be a general reduction of rates in western territory without impairing the carriers' revenues in the future. There are many fallacies in the case which has been presented by the railroads, but most of these should be pointed out in argument rather than brought to your attention during the taking of testimony.

I cannot refrain from calling your attention to the fact that the carriers have predicated this case upon a constructive year which represents the lowest ebb of traffic for a period of several years, and at a time when general deflation has resulted in paralyzed industry. It also is shown by their own testimony that by reason of their method of charging in materials when they are applied to maintenance or operation at the average price of all such materials then in stock, the operations for the constructive year have been virtually upon peak prices. This is well illustrated in their exhibits as to coal prices, coupled with their testimony that coal may now be obtained at practically one-half the average price shown for the constructive year. The same is true as to labor costs for two-thirds of the constructive year. Great saving has already been effected in these costs and large additional savings should be effected when the present applications of the carriers for further reduction of labor scales are acted upon.

The interests represented by me believe that a general reduction, if not more than 10 per cent, would of itself greatly stimulate development of traffic in the southwestern territory. This is not necessarily true as to every commodity, but it is true as to numerous commodities and class traffic generally. The very fact that railroad rates are virtually at their peak, while other costs have been greatly reduced, creates the conviction on the part of the shipping and buying public that it is only a matter of a short time until reductions will be made, and there is a disposition to buy only as absolute necessity requires.

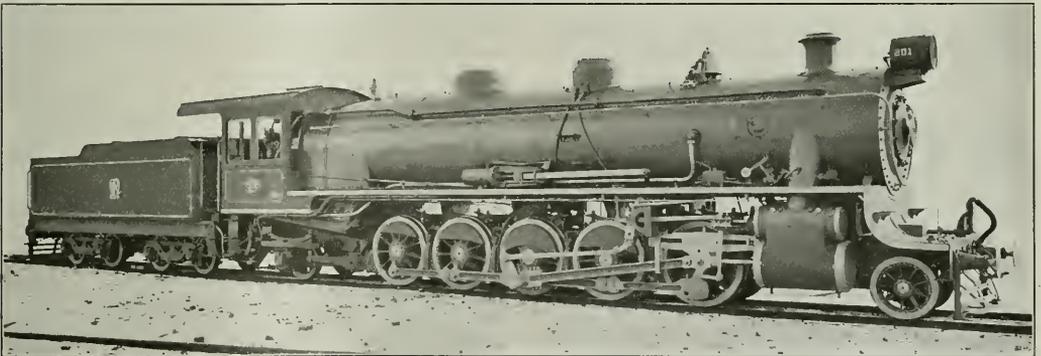

Mountain Type Passenger Locomotive

American Locomotives for the Manila Railroad

Mountain and Santa Fe Types Have an Unusual Number of Interchangeable Parts to Facilitate Maintenance

RAILROAD DEVELOPMENT in the Philippine Islands has been quite meagre. The largest island, Luzon, is served by the Manila Railroad with headquarters at Manila. This road is 665 miles long and has a north and a south line with branches. The rolling stock, including the new locomotives now being received, consists of 145 locomotives, 240 passenger cars and 1,675 freight cars. The only other railroad in the Philippines is the Philippine Railroad on the islands of Panay and Cebu, with 295 miles of line authorized

The Manila Railroad distributes a large part of the imports, a considerable proportion of which are from the United States. On the north line there is inter-island passenger traffic, while the freight tonnage consists largely of sugar and tobacco. On the south line the traffic handled includes coconut, copra, coconut oil, hemp and lumber. There is also the passenger traffic to and from the south and the southern islands, connection being made by boat at Hondagua. There are no large cities along the line of the road, but there

Santa Fe Type Freight Locomotive

and 133 open. This is an American enterprise and at present has 15 locomotives, 50 passenger cars and 198 freight cars in service.

The Philippines have a population of 10,350,000 and a total area of 115,026 square miles, of which 41,000 square miles comprise the island of Luzon. Practically all of the imports and exports, to the annual amount of \$137,461,766 for imports and \$142,190,563 for exports, pass through the port of Manila. The principal imports are wheat flour, cotton goods, chemicals, automobiles, fish, paper, silk, iron and steel, while the exports consist largely of copra, coconut oil, hemp, maguay, embroideries, sugar centrifugal, raw sugar, tobacco leaf and cigars.

are many small native towns. The large majority of the passengers are natives who travel third class, but excellent first-class coaches are provided also, although they are rarely filled.

The track gage of both Philippine roads is 42 in., which is the standard gage in Japan and is also frequently used in many other eastern countries.

Much of the equipment on the Manila Railroad is quite antiquated but the lack of necessary capital made it impossible to replace the present facilities by anything like the amount of new equipment needed. The situation, however, is being greatly improved by the addition of 10 new Mountain (4-8-2 type) locomotives for passenger service and 10

Santa Fe (2-10-2 type) locomotives for freight service, built at the Brooks works of the American Locomotive Company. In addition, the road received 10 locomotives last year from the H. K. Porter Company and is now receiving an additional lot of 10 more.

These are not the first locomotives on this road from the United States, as the American Locomotive Company delivered 10 to the road in 1913. The old locomotives have made 140,000 miles between shoppings, which is an excellent record and in excess of that ordinarily obtained by American roads, 80,000 miles being considered a good general average.

In designing the new locomotives the American Locomo-

lb. on the front truck and 24,000 lb. on the trailing truck. The engine wheel-base is 34 ft. 41 in., driving wheel-base 18 ft. 4 in. and rigid wheel-base 13 ft. 6 in.

The 4-8-2 type locomotives, which are capable of exerting a tractive force of 28,600 lb., have 60 in. drivers and weigh 183,000 lb., 119,000 lb. being on the drivers, 34,000 lb. on the front truck and 30,000 lb. on the trailing truck. The engine wheel-base is 34 ft. 7 in. and driving wheel-base, 15 ft. 9 in. The tenders have a capacity of six tons of coal and 5,000 gal. of water.

The road on which this equipment is to operate includes $1\frac{1}{2}$ per cent grades and curves of 150 meters (492 ft.) radius.

The locomotives are provided with screw type couplings having the hook, screw, clevis, links and screw crosshead made of chrome-vanadium steel. The bumper and sills on the front end of the locomotive and rear end of the tender

Station at Hondagua

otive Company arranged to have as many as possible of the detail parts of the two types the same to facilitate maintenance and reduce the number of extra parts which would have to be carried by a road situated so far from the point of manufacture. That the designers succeeded to a high degree is evidenced by the fact that the interchangeable parts include the boiler complete with fittings; cylinders complete, except height; valve motion parts with exception of eccentric cranks; trailing truck; cab; tender; cocks; valves; fittings and brake cylinders. The following parts also are interchangeable except for the modifications required because of the use of lateral motion driving boxes on the forward axle of the 2-10-2 type locomotive: Rods, crank pins, driving axles, driving boxes, driving box saddles, shoes and wedges, equalizing arrangement details and spring hangers.

Both types of locomotives have 20 in. by 28 in. cylinders,

Engine House at Hondagua

11 in. piston valves with $5\frac{1}{2}$ in. travel and an extended wagon top boiler carrying 180 lb. steam pressure. The inside diameter of the first ring of the boiler is 63 in.; the firebox is 84 $\frac{3}{16}$ in. long by 60 $\frac{1}{4}$ in. wide with 1.50, 2-in. tubes and 22, 5 $\frac{1}{8}$ -in. flues, 15 ft. 6 in. long. The heating surface is 176 sq. ft. for the firebox, combustion chamber and arch tubes and 1,823 sq. ft. for the tubes and flues; the superheater surface is 493 sq. ft. and the grate area 35.2 sq. ft.

The 2-10-2 type locomotives, which are capable of exerting a tractive force of 35,700 lb., have 48 in. drivers and weigh 188,000 lb., 148,500 lb. of which are on the drivers, 15,500

Construction Work on Southern Extension to Guinayangan

have been designed, however, to allow for a future application of M.C.B. couplers. The brake equipment was furnished by the Vacuum Brake Company of England and in addition to the ejector and apparatus for controlling the train brakes, the locomotives are equipped with steam driver brakes while independent hand brakes are used on the tender.

The equipment throughout is strictly modern and includes Locomotive Superheater Company's superheaters, pyrometers, Security brick arches, Worthington feedwater pumps and heaters, Alco 7 in. type E-3 steam power reverse gear, Pyle-National electric headlights and Barco flexible connections in the vacuum brake piping between the engine and tender.

Chamber of Commerce Discusses Railroad Problem

Railroad Committee Proposal for Commissioner General of Transportation Is Vigorously Opposed

WASHINGTON, D. C.

THE RAILROAD question was the chief subject considered at a two-day session of the conference of the national council of the Chamber of Commerce of the United States held at Washington on February 8 and 9. The discussion centered around a report of the railroad committee proposing the creation of a commissioner general of transportation, to be appointed by the President, whose duty would be to present the public interest before government bodies responsible for the formulation of policies having to do with transportation. This proposal was vigorously opposed by Howard Elliott, chairman of the Northern Pacific; Alba B. Johnson, president of the Railway Business Association, and others.

Report of the Railroad Committee

The report was presented by George A. Post, president of the Hudson River Bridge & Terminal Association, chairman of the railroad committee. The report said in part:

Your committee is much impressed by the fact that at the hearings before the various governmental bodies that are constantly dealing with matters affecting interstate commerce no witness ever appears who is authorized and equipped to present the matters under consideration from the standpoint of the public as a whole. There are usually able representatives of the various special interests, but there is no official representative of the public—no one who is charged by the government with responsibility for making an independent study of the transportation needs of the American people, and then making at the discretion of the President of the United States the results of that study, available to the rate making and wage fixing powers to neutralize the influence of those whose attitude and contentions are liable to have their bases in their desire to promote their own interests without due regard for the interests of the public as a whole.

In its review of the transportation situation the committee says:

Nearly two years have elapsed since Congress passed the Transportation Act returning the railroads to private operation. At no time during that period have conditions been normal either in the United States or in the world at large. As a result of the great war there has been a world-wide depression in business and a great decrease in the volume of railroad traffic and in the net earnings of the roads. The gross revenues of the roads have considerably increased under the new rate schedule established in 1920, but the cost of operation has remained so high that the net operating income of the railways of the country as a whole has remained very inadequate. In 1921, for example, the net railway operating income was only 2.9 per cent of the tentative value of the property as determined by the Interstate Commerce Commission—less than one-half of the 6 per cent authorized in the act, and an amount quite insufficient to furnish an adequate basis for the re-establishment of railroad credit.

Many of the conditions which limit the earnings of the railroads are entirely beyond the direct control of Congress or of the Interstate Commerce Commission or the Railroad Labor Board or the railroads themselves. Nevertheless, each of these agencies is now engaged in making a comprehensive and nation-wide effort to bring together information and develop constructive proposals in the hope of restoring normal conditions in the transportation industry.

The Senate Committee on Interstate Commerce has just completed a series of hearings on "Modifications of the Transportation Act," at which proposals to repeal the statutory rule of rate-making and to repeal the authority of the Interstate Commerce Commission to regulate interstate rates when they discriminate against interstate commerce were carefully considered. The committee has not yet submitted its report, but the official record of the hearings contains a large amount of testimony which tends to show that these two provisions of the act are in the public interest and that they have been administered by the Interstate Commerce Commission in accordance with the intent of Congress when it included them in the act.

The Senate Committee on Interstate Commerce is also conduct-

ing a series of hearings on railroad revenues and expenses with a view to determine what are the facts in regard to the financial operations of the railroads since March 1, 1920, and what would be the best means of bringing about a condition that will warrant the Interstate Commerce Commission in reducing freight and passenger rates. The testimony of railroad executives and the testimony of railroad security owners at these hearings have been carefully reported to members of the Chamber of Commerce of the United States in special publications issued by the Department of Transportation and Communication, and the testimony of railroad employees, railroad shippers, and other witnesses at the hearings will be reported as soon as possible after it is completed.

Almost every interest affected by railroad transportation has already submitted voluminous testimony to the Senate committee during these hearings, and has brought to its attention a great variety of plans for improving the situation by amending or repealing certain provisions of the act. In December, 1921, a representative of the Chamber of Commerce of the United States appeared before the committee, but not for the purpose of criticizing the act. On the contrary, he declared in his testimony that the business men of the country regard the act as a strong piece of constructive legislation and on their behalf urged Congress not to amend any of the provisions of the act until they have been tested under normal peace conditions.

The Joint Commission of Agricultural Inquiry appointed by Congress in July, 1921, is also holding a series of hearings that have an important bearing on transportation. This commission is investigating the causes of the present condition of agriculture, giving special attention to the marketing and transportation facilities of the country with a view to recommending legislation which will in the opinion of this Congressional body tend to remedy existing conditions. As yet it has submitted only a preliminary report, but it has announced that in its final report it will include the results of a nation-wide study of transportation conditions as they affect agriculture.

The Railroad Labor Board is sitting in almost continuous session in its effort to fix wages and working conditions that will be just and reasonable, not only to railroad employees, but to the railroads themselves, to users of railroad transportation, and to the general public. The board has already made substantial reductions in the scale of wages paid to large classes of railroad employees, and it is now considering the possibility of further reductions. It has set aside many of the rules included in the national agreements governing working conditions that were in effect during the war, and has formulated new rules to take their place. The board is proceeding in an orderly way to discharge the responsibilities placed upon it by the Transportation Act, and it seems reasonable to expect that if given an opportunity to continue its work with full public support it will be able to bring about a reduction in railroad labor cost that can and will be translated into a reduction in freight rates.

Further Investigations

The Interstate Commerce Commission commenced on December 14, 1921, a general investigation to determine whether and to what extent, if any, further reductions in rates *** can lawfully be required by order of the commission *** upon any commodities or descriptions of traffic and also to determine what will constitute a fair return from and after March 1, 1922, under section 15a of the Interstate Commerce Act. The railroad executives have already completed their testimony at these hearings. They maintain that the revenues of the railroads in each important traffic section of the country are at the present time wholly inadequate, and that if these revenues are further reduced by a reduction in rates it would inevitably result in financial disaster for many of the railroads without bringing any corresponding advantage to the industries. They assert that a general reduction of rates at this time would prevent the railroads from making adequate preparation for the expected revival of business, and would tend to make it impossible for the industries to obtain necessary transportation service when normal traffic is restored.

Representatives of the shippers are now testifying before the commission. In almost every instance they urge large and immediate reductions in freight rates, expressing the belief that such reductions would result in an increase in traffic and presumably in an increase in the revenues of the roads. The railroad executives do not share this belief.

Your committee has given careful consideration to the proceed-

mings of these various investigations as far as they have gone. We do not presume to offer a solution of the difficult questions now confronting the official agencies that have been established to regulate interstate commerce. In due time these questions will be settled by these agencies according to their best lights. Your committee is much impressed, however, by the fact that at the hearings before the various governmental bodies that are constantly dealing with matters affecting interstate commerce no witness ever appears who is authorized and equipped to present the matters under consideration from the standpoint of the public as a whole. There are usually able representatives of the various special interests, but there is no official representative of the public—no one who is charged by the government with responsibility for making an independent study of the transportation needs of the American people and then making, at the discretion of the President of the United States, the results of that study available to the rate making and wage fixing powers to neutralize the influence of those whose attitude and contentions are liable to have their bases in their desire to promote their own interests without due regard for the interests of the public as a whole.

The specific recommendations of the committee were published in the *Railway Age* of January 28, page 273.

Railway Business Association Opposes Report

Mr. Johnson said the Railway Business Association unanimously adopted in annual meeting on February 1 a resolution opposing the creation of a commissioner general of transportation for the purposes set forth in the report of the railroad committee, and specified the following reason: An officer designated as the President's representative to discuss railway problems with committees of Congress and federal agencies, including the Interstate Commerce Commission, would be a wholly new feature in our government, for which the association sees no occasion and in which it fears the possibility of pressure tending to impair the independence of those charged with railway regulation or legislation.

The general executive committee, which on January 31 unanimously recommended such action, requested him to appear at this meeting, support that resolution and advance an alternative proposal for a channel through which organized business can impress its views respecting railways upon federal officers and agencies.

Mr. Johnson said in part:

Congress or its divisions from time to time receive communications from the President in his official capacity. Hitherto such advice has come either directly from the President or through executive officials exercising power over the subject and owing responsibility therefor directly or indirectly to the President. Members of Congress on the other hand, are sometimes informed of the President's views through channels other than these. When that course is pursued it is in his capacity not as President but as party leader or as a citizen. In that case, the emissary, whatever may happen to be his official status, if any, is acting for the moment unofficially and without government responsibility.

What is now proposed is that an individual shall express the President's views to committees of Congress on a subject in relation to which the emissary has no official power of responsibility. Yet he is not an employee of the President's party or of the President personally but an employee of the government. He has authority to require information from all departments. He has the explicit duty of reporting recommendations to the President.

The Interstate Commerce Commission has statutory power and duty. It is responsible for the results of its course. Its administration of the law is theoretically based upon its independent judgment. In adjudicating the rights of those who complain of discriminations it is in effect a court. Whether exercising business judgment as to wise rate level or judicial authority in the correction of discriminations, the commission has enjoyed until recently a large degree of immunity from executive suggestion. The fact when a President transmitted views upon rate cases has been to anger but great pains to emphasize by secrecy the unofficial character of the message. Knowledge of it reached the public only by whispered rumor. During federal control the director general made the rate, but this was under a war emergency measure which placed the commission not to subordinate but to supervise.

Re-appointment of the roads to their owners restored the previous legal status. Unfortunately the previous practice was not fully restored. Executive suggestion, both Presidential and cabinet, has been frequent and open. A week ago today it was made formal by the secretary of commerce making oral recommendations to the commission regarding its rate policy. It is this tendency

which is sought to be made official, formal and permanent through the creation of a commissioner general of transportation. As applied to the commission it is a departure in our process of government.

So long as we keep our legislative and executive separate, Congress has an independence for us to maintain. Executive pressure tends to break down that independence. Administrative boards like the Interstate Commerce Commission by the terms of their establishment are still further protected. Such boards are quasi-judicial and quasi-expert. They adjudicate right and wrong and they also exercise business discretion. Either function involves judgment. The commissioners concentrate upon their subject. They have a cumulative experience. They have a broad basis of comparison and familiarity with precedents. They carry a responsibility for the aggregate results of their work. Their judgments are those of an authority. Not even the Supreme Court reviews those judgments except as to the single aspect of jurisdiction. Either the statute bestows a given power or it does not. If it does, the board has the last word.

Orderly procedure is of the essence. Independence is vital. Clamor is the petulance of those seeking privileges. Pressure is scandalous. To Congress the President or his subordinates may suggest policies, but contrary to the common habit of thought the Interstate Commerce Commission is an arm not of Congress but of the government as a whole, created by joint action of Congress and the President, and its limits defined by the Supreme Court. If the proposed commissioner did not exert influence he would be useless. If he did, he would be mischievous. The basic idea is meddlesomeness. If the executive department has jurisdiction it can carry out its views without appeal to any other branch of the government. If the executive department lacks a jurisdiction which it ought to have the remedy is to confer the jurisdiction with power, not to set up advisory functions. If a branch of the government other than the executive has jurisdiction and this is a mistake the jurisdiction should be placed elsewhere or the function abolished. If it is where it belongs the tribunal carrying the responsibility should be respected and kept free from executive encroachment.

Co-ordination is a ghastly nightmare. As we learned in the war, attempts at it brought us to the brink of disaster. The only workable course when two authorities conflict is to place one above the other with power not to advise but to decide. The most conspicuous field of conflict actual or apprehended is between the commission and the labor board. We doubt that public opinion is sufficiently crystallized to formulate a remedy but whatever the remedy the co-ordination should unify power and not amplify advice.

Outcome Government Ownership

If we fail in the present experiment with regulation, the outcome will be government ownership. I do not know of any competent observer who doubts it. If we cannot regulate railroads we cannot regulate banking or business or agriculture or labor. If the government cannot regulate, it must own and operate all these activities. When that time comes the map-makers may continue to label a certain North American area the United States, but it will not be the kind of United States you and I think worth living in or preserving. The background of this railway problem is our whole political and economic life. The railroads are the first trench. We must hold it.

Whether we hold that trench or not will depend upon our railway policy and its administration. Adequacy of income as a statutory aim of regulation is fighting for its existence against the forces of repeal. The chamber stands solidly against such repeal.

Adequacy of income in its practical application by the Interstate Commerce Commission is fighting for its life against the forces of special interest and irresponsible pressure. Upon this aspect the chamber has not spoken. There is need for it to speak.

Organized business should provide and maintain means of its own for presenting business opinion upon railroad questions to those charged with regulation or legislation. In that direction the chamber has done much. It could do much more. It would be a great piece of good fortune if the discussion of the railroad committee report should lead to the development of a more comprehensive plan. Such a result of this debate would be logical, since we all know that the object in the minds of the railroad committee was and is an improvement in the means for attaining and preserving the vigor of our transportation system.

Alexander W. Smith Favors Report

Alexander W. Smith, of Atlanta, Ga., spoke on behalf of the committee in advocating the report. The right solution of the railroad question, he said, involves ultimately the existence of the government of the United States. The greatest defect in our system of railway regulation has been that the

regulating body has had presented to it a mere contest between selfish interests and the general good has had no counsel in court to represent its interests. That process of continual contest before regulating bodies has been the greatest enemy the carriers have had to confront. He said the plan was not original with the committee and quoted statements by Alfred P. Thom advocating the creation of a commissioner of transportation, a bureau of transportation or some agency to present the public interest to the rate-making power. Mr. Smith said there is absolutely no co-ordination and co-operation between the innumerable agencies that are dealing with various phases of transportation. He had ascertained that there are 42 separate federal agencies that have some functions to perform with reference to transportation, besides the regulating bodies of 48 states. Yet, he said, the great problem that stands behind it all goes by default and decisions are rendered without its ever being heard. How can there be a readjustment of rates and costs, he asked, with one body determining 60 per cent of the costs and another fixing the rates? "We have a beautiful machine, but no driver at the wheel, and we are getting nowhere. The great problem facing the country is the problem of public control coincident with private initiative and enterprise. In self-preservation we will have to have government ownership unless that problem can be solved. The idea of the committee is to put upon the President the responsibility of selecting some one who can act for him in studying how to bring to a common purpose the work of the various agencies."

In reply to the suggestion that the plan would inject politics into the situation, Mr. Smith said there has been a good deal of politics in the transportation question for several years. He argued that the recommendation does not provide for a political officer and said that for that reason it was not proposed that the commissioner be subject to confirmation by the Senate.

It must be assumed that the President will have ordinary intelligence enough to select a man who will be a credit to himself, because what he does would be the direct act of the President. He referred to the fact that when President Harding came to appoint a new director general of railroads the proclamation was filled out and signed before he ever saw the man. The appointment was made because of his previous familiarity with the problems connected with the liquidation of the Railroad Administration and without any question of political consideration.

Redfield Says Department of Commerce

Now Has Authority

W. C. Redfield, former Secretary of Commerce, said that he violated no confidence in stating that the committee had consulted Secretary Hoover on the subject and that he thought the functions proposed might well be reposed in the Department of Commerce. However, Mr. Redfield said, both the committee and the secretary seem to have overlooked the fact that the organic act creating that department makes it its duty to foster, promote and develop various things including "the transportation facilities of the United States." He recalled the fact that while he was secretary the department had intervened in the rate case of the Solvay Process Company against the Delaware, Lackawanna & Western and the director general on the ground that the increase in the rate against which the company was complaining was a matter that interested the entire public. Mr. Redfield said the department also has authority to make from time to time investigations and reports concerning commerce and transportation and its powers in this respect are very broad and comprehensive, being stated in language very similar to that of the committee's recommendations.

Elliott Opposes Reopening of Congressional Debate

Howard Elliott, chairman of the Northern Pacific and chairman of the Chamber's committee on transportation and

communication, earnestly opposed the adoption of the report at this time without full and careful consideration in connection with the work of other organizations which are studying the same question. Without discussing in detail the merits of the proposal itself, he opposed reopening the discussion in Congress on the transportation act because of the danger, if the door is once opened, of demolishing the entire act before there has been an opportunity to fully try it out. The act is not perfect, he said, but it is the result of five or six years of nationwide debate and now represents a guidepost. To tell Congress now that it should be changed would be to reopen the entire question. "Once open Pandora's box," he said, "and you do not know what you will get out of it." The Association of Railway Executives is now at work studying what changes in the transportation act may be worth considering in the future, and organizations of bankers and farmers are studying the same question and there is consultation among them.

In conclusion Mr. Elliott said: "The railroads are common carriers of people and property, but they are not common carriers of all the economic troubles of this country. Let us have a holiday for two years in the discussion of the railway problem and let us go ahead and tend to business."

Emil P. Allrecht, president of the Philadelphia Bourse, opposed the plan on the ground that it would merely increase the number of regulating bodies instead of helping in the solution of the problem. His organization for four years has voted in favor of discontinuing some of the regulatory bodies and "letting business take more care of itself." The proposed commissioner, he said, would not have any authority except to meddle with other legally constituted authorities.

W. H. Chandler, president of the National Industrial Traffic League, also opposed the report, saying he agreed with Mr. Elliott.

Following the conference the board of directors is to decide, after having ascertained the reaction of the council, which was plainly unfavorable, whether the recommendations of the committee shall be submitted to a referendum vote of the chamber.

At the evening session on Wednesday, Herbert Hoover, Secretary of Commerce, discussed the subject of "Consolidated Transportation," and Senator A. B. Cummins, chairman of the Senate committee on interstate commerce, spoke on "The Transportation Question from Different Points of View."

At the session on Thursday, T. C. Powell, vice-president of the Erie, was to speak on the transportation question from the point of view of the railroads, and W. S. Dickey, president of the W. S. Dickey Clay Products Company, was to discuss it from the point of view of the shipper.

A Signal Box on the Midland Railway, England

Hearings Before Committee on Interstate Commerce

McAdoo Makes Supplementary Statement—Manufacturers Urge Consolidation of Labor Board and I. C. C.

WASHINGTON, D. C.

W. G. McADOO, former director general of railroads, completed his statement before the Senate committee on interstate commerce on February 2. He made an addition to the statement which was abstracted partly in last week's issue and partly elsewhere in this week's issue, but he was questioned very little by members of the committee. At the conclusion of the statement Senator Cummins said that Mr. McAdoo had been devoting much of his statement to the more extreme criticisms that had been made of federal control, but that criticism of inefficiency of the Railroad Administration was not the prominent note taken by the railway executives in their testimony before the committee. Their testimony was directed to showing that the large increase in expenditures in 1920 could not have been avoided by the railroads because of conditions created by the Railroad Administration and they were attempting to justify their own expenses.

Senator Cummins also referred to Mr. McAdoo's statement of the cost of railroad service under federal control in which he had used the figure of \$714,000,000 as representing the deficit of the Class I roads. He pointed out that this did not measure the entire cost of federal control, as indicated by the larger figures since used by Director General Davis. Mr. McAdoo replied that the \$714,000,000 was, of course, merely the deficit from the operation of the Class I roads and that Mr. Hines' report had shown a deficit of some \$900,000,000 when the losses from water lines, the Pullman Company and the express company were taken into consideration. He understood Director General Davis had added some \$300,000,000 in his estimate of the cost of liquidation and that this included payments to short lines, a large item on account of the Minnesota fires, the adjustment of materials and supplies, etc., as well as undermaintenance, etc. Senator Cummins said he still thought that when the accounts were finally settled the government would still be behind at least \$1,300,000,000.

Increased Costs Not Exceptional

Mr. McAdoo in the concluding part of his statement also gave some comparisons of the increased cost of production in numerous large industries, to show that increased cost of operation of the railroads under federal control was not exceptional. He said that in his opinion the two outstanding reasons for the increased cost in 1920, aside from the additional wage increases, were the loss of economies resulting from unified operation and the fact that the railroads greatly increased their maintenance expenditures during the six months' guaranty period. He said the figures showed an increase of \$402,000,000 in maintenance expenditures during that period as compared with 1919. In this connection he read from a letter written by W. G. Besler, president of the Central Railroad of New Jersey, to his superintendent of motive power urging him to hurry up the repair of locomotives that had been sent to outside shops in order that the bills might surely be in by September 1, when the guaranty period would expire. He said this letter was brought out at a hearing before the Interstate Commerce Commission in its investigation of repairs in outside shops. Mr. McAdoo also said that the program of restoration of the railroads ceased with the guaranty period and since that time the maintenance expenses have been greatly reduced.

In his conclusion Mr. McAdoo said that the taking over of the railroads had stabilized labor conditions, given adequate service to the public, satisfied the needs of the military

arm of the government, protected the stock and bondholders and had saved the railroads instead of ruining them as asserted. He said that one of the most serious defects about the railroad situation at the present time is that the railroad transportation machine is in large part obsolete.

Senator Cummins has indicated that an opportunity will be given the railroads to introduce rebuttal testimony in reply to that of Mr. Hines, Mr. McAdoo and the labor representatives.

Manufacturers Urge Consolidation

of Labor Board and I. C. C.

The consolidation of the functions of the Railroad Labor Board with those of the Interstate Commerce Commission, so that a single tribunal composed exclusively of representatives of the public and regulating railroad expense as well as income through a single body, was advocated on February 3 before the committee, on behalf of 50,000 manufacturers throughout the United States, by a committee of the National Industrial Council. The committee, headed by C. S. Walker, director of the Iowa Manufacturers' Association, said in part:

Uninterrupted and efficient transportation at reasonable cost is as essential to the vitality of our industrial and commercial life as the unimpeded circulation of the blood to the health of the human body. The technical problem must be met by railway management, but there are certain principles in which every citizen should be interested because they affect the integrity of his social life. These the industrial associations of the United States have endeavored to assemble and state in simple terms that we may have a common starting point from which to approach this great question.

These conclusions are not hastily expressed but were carefully formulated after study by a conference committee and were submitted to each state organization, subjected to analysis and discussion, and are approved and presented on behalf of industrial associations authorized to speak for substantially 50,000 American manufacturers.

They are not submitted as representing merely a manufacturer's viewpoint but that of citizens whose active business life has led them to realize the necessity for securing effective recognition of certain essentials in American transportation. By that form of communication we live and move and have our being. The quicker our people recognize the necessity for preserving its integrity of operation, the protection which must be given our carriers and the recognition of social obligation which must be exacted from management and men in that service, the more quickly we will stabilize the conditions under which this great social instrumentality operates and relieve ourselves of the overshadowing dread of its financial breakdown or the arbitrary interruption of its service.

To produce this result the committee urged that the following affirmative principles be recognized:

(1) The deliberate interruption of railroad service being socially destructive, disputes between the carriers and their employees should be ultimately determinable by a public tribunal, without stoppage of service.

(2) The members of such tribunal should possess the highest personal qualifications and represent the public exclusively.

(3) That such tribunal should be affiliated with, or function as a part of the rate-making authority.

(4) That each carrier should be regarded as the primary unit of joint interest and co-operation in the establishment and maintenance of employment relations between the employees and the management of such carrier.

(5) That arbitrary discrimination between organized employees and unorganized employees or between those who desire to bargain collectively and those who desire to bargain individually is intolerable in the regulation of the railroads.

(6) That while the carriers and their employees should be afforded the widest opportunity to fix the terms of their employment relations, no form is desirable or permissible that does not assure to management the opportunity to fulfill its primary public

obligation to give uninterrupted and efficient service at reasonable rates.

(7) That the right of intervention by representatives of the public, for good cause shown, before federal administrative tribunals, including the Railroad Labor Board, ought to be affirmatively recognized by appropriate amendment to existing legislation.

(8) That National transportation ought to be regulated by Congress exclusively, and any recession of authority in such field, to state tribunals, is retrogressive and injurious to industrial development, as well as to orderly expansion of transportation facilities.

(9) That all National or State legislation imposing artificial economic burdens upon the cost of transportation, of which the Adamson Act and "full crew" laws are typical National and local examples, ought to be repealed.

Objects to Classification of Officers

Charles G. Poirier, vice-president of the Grand Order of Supervisors, an organization of some 5,000 supervisory officials, testified before the Committee on February 8 and urged the elimination of the classification of "subordinate officers" in the transportation act on the ground that the effect of this classification has been to give the shop crafts and the American Federation of Labor an opportunity to assert jurisdiction over the supervisory officials, such as foremen, destroying the status which many of them had claimed as officials, and that this is the cause of inefficiency in railroad operation because it tends to deprive the foremen of any control over the employees. Senators Cummins, Poindexter and Fernald expressed great interest in this testimony, saying that if this has been the effect it is exactly opposite to that intended by the classification of subordinate officers, which was put into the act at the instance of organizations of train dispatchers and yardmasters on the ground that it would tend to differentiate an intermediate class of men who were between the recognized official class and the employees.

Mr. Poirier said that the supervisory officers lost control of their men to a considerable extent during federal control, because it was impossible for them to retain the respect of the organized employees when the latter, if dismissed for cause, were able through their organizations to get themselves reinstated with pay for the time lost. He estimated the efficiency of the employees under these conditions at 70 per cent, and said that after the signing of the national agreements it dropped to 60 or 65 per cent. "Labor felt supreme," he said, "and their power and influence were felt on all sides. The American Federation of Labor gave notice that all employees and all foremen, unless they became members of the crafts, would lose their jobs. Then the Interstate Commerce Commission, acting under the law, placed the supervisory fore-

men on a plane with the labor organizations under the guise of "subordinate officials," which classification had been placed in the law at the instance of the labor organizations and certain organizations of disloyal supervisory officials whose motto was that they couldn't get any thing for their members unless they were so classified. A large part of the increase in operating expenses into which this committee is inquiring results directly from this separation of the supervisory officers from the official family to which they rightfully belong.

Purpose of Organization

"Our organization was formed in 1918 for self-protection by the conservative and progressive class of supervisory officials who objected to being separated from the official family and forced into the ranks of the crafts of the men we supervise. We objected strenuously to the Spencer amendment which placed the classification of subordinate officials in the act but the yardmasters, train dispatchers, storekeepers and some others formed their own organizations, and if the committee will allow me to express my own opinion or perhaps my imagination, I may say that the purpose is to hand those organizations over to the federation later just as the shop crafts were first organized separately and then taken over.

"Unless we can correct this situation we must go into the crafts, too. The recognition of subordinate officials as a separate class has given the federation an opportunity to dominate the supervisory officials whom it has placed on the same plane with the employees. It is legislating for them, it calls them 'scabs' in case of a strike, which it could not do if they were considered as officers, and we can do nothing to help ourselves. We are losing members daily."

When Senator Cummins said that the separate classification had been adopted for the purpose of making nominations to and giving representation before the Labor Board, Mr. Poirier said his organization does not want to go before the Labor Board. Its members consider themselves as officers, although certain organizations, such as the train dispatchers, prefer to use labor union tactics and go before the board. He insisted that the term subordinate officials is a misnomer, that all officers are subordinate to some one, from the vice-president down to the section boss.

"As it stands today the federation can say that we are no different from the crafts, and we can't hold our jobs much longer unless we affiliate with the crafts. We have tried to assert our status as officers but the pressure is getting too hot. This committee must help us out if the railroads are to be saved," Mr. Poirier said.

Krupps, Essen, Germany, at Work

General News Department

Employees in the offices of the Chicago & North Western at Chicago, have been notified that they will have to work Saturday afternoons. It is reported that vacations will also be curtailed.

The Maintenance of Way Club of Chicago will hold its next meeting at the Auditorium Hotel, Chicago, at 6 p. m., on February 15, at which time E. D. Swift, engineer maintenance of way of the Belt Railway, Chicago, will present a paper on the maintenance of railroad crossings.

The Repeal of the Full-crew Law, of New York, which has been in force since 1913, is proposed in bills introduced in the Legislature last week by Senator Wiswall and Assemblyman Mastick. These bills provide that the Public Service Commission shall be authorized to determine the number of men to be required in a train crew.

J. G. Sullivan, consulting engineer, Winnipeg, Man., formerly chief engineer of the Canadian Pacific Railway, Lines West, was elected president of the Engineering Institute of Canada at its annual meeting in Montreal, Que., on January 24 and 25. Mr. Sullivan was president of the American Railway Engineering Association during 1917-18.

A New Thawing Shed has just been put in service at the Pennsylvania Railroad coal terminal, at South Amboy, N. J., where coal for New York City and the Atlantic Seaboard is delivered to boats. This shed accommodates 20 cars at one time and cost about \$100,000. It is 448 feet long and contains two tracks. The cars being placed inside the shed, the doors are locked, and air is forced by powerful blowers over steam radiators and heated to between 200 and 250 degrees. It is forced through long concrete ducts which have outlets underneath the cars, located at intervals of about six feet. The thawing takes from one to twelve hours, the average time being about three hours.

John N. Hasson, of Tyrone, Pa., locomotive engineman of the Pennsylvania Railroad, who was retired on February 1, after an active service of 41 years on the Tyrone Division, 32 years of which he was a passenger runner, says that he has worked 41 Christmas days and 40 New Years, having missed New Years of this year owing to illness. Of all the other holidays in this time, he worked all but three. He was never disciplined for an infraction of the rules of the company, and has been in only one accident of any account. That was when he was a passenger engineman on the Moshannon Branch. While running at regular speed the engine suddenly turned over and rammed her stack in the ground. Mr. Hasson suffered injuries about the hand, but was off duty only two days.

Additional Directors of A. R. A.

Additional directors of the American Railway Association, to enlarge the board, have been elected as follows: for the term expiring November, 1924, Julius Kruttschnitt, Southern Pacific, for the term expiring November, 1923, E. E. Loomis, Lehigh Valley, for the term expiring November, 1922, Howard Elliott, Northern Pacific.

Erie Shops Leased

The car shops of the Erie Railroad at Buffalo, N. Y., have been leased to the Seminole Construction Company, and the new management began operations on Monday, February 6. The shops of this road at Jersey City, N. J., have been leased to the Wagner Construction Company, the new arrangement taking effect on February 12. This contract includes also the shops at North Paterson, N. J.

Reports on Excess Earnings Due April 1

The Inter-state Commerce Commission has extended the date on or before which railroad returns showing any excess earnings above 6 per cent on the value for the period ending December 31, 1920, shall be filed, from February 1 to April 1. Representations were made to the commission that the time fixed in the order of January 16 for the filing of returns was not sufficient.

Tentative Valuations

The Interstate Commerce Commission has issued tentative valuations in which it reports the final values as follows: Franklin & Pittsylvania, 1916, property used, \$404,308; property owned, \$328,308; Fort Worth Union Passenger Station, 1916, property owned, \$210,230; Greenwich & Johnsonville, 1916, property owned, \$901,912; Gainesville & Northwestern 1916, property owned, \$517,248.

Railway Revenues for December

A preliminary compilation of railway revenues and expenses for December for 163 roads gives a net operating income of \$39,555,000 as compared with \$3,930,000 for December, 1920. For these roads the revenues decreased 23 per cent but the expenses show a decrease of 31.2 per cent. The December returns have been difficult to estimate. A smaller number of roads showed a greater net operating income than is shown for 163 companies but many of the reports received later showed deficits.

Employees Fined for Theft

Eleven employees of the New York Central, arrested last September on charges of theft of goods from freight cars, were last week fined in the Supreme Court at White Plains, N. Y., in amounts from \$100 to \$300 each, with the alternative of serving jail sentences if the fines were not paid. Most of the men have families and they were allowed to plead guilty to the charge of receiving stolen goods. Some of them said it was necessary to join the company of thieves in order to hold their jobs; and it was stated that one of them had resigned his place in order to escape the "system." Two of the culprits were passenger conductors and one was a yardmaster.

Proceedings of the American Welding Society

The first monthly issue of the proceedings of the American Welding Society, dated January, 1922, has recently been published. The proceedings are 6 in. by 9 in. in size and the first number contains 44 pages. Copies of each issue will be mailed to each paid-up member.

A regular program has been laid out for the proceedings and each issue will contain editorials, news of the various local sections, activities of the American Bureau of Welding, a list of new members, an employment service bulletin, important technical papers presented to the society, a question and answer column, technical items of interest to the society and the industry, and a bibliography of current welding literature.

Requiring Omnibuses to Stop at Crossings

J. C. Caviston, 30 Vesey street, New York City, secretary of the Operating Division of the American Railway Association, has sent to all members of the association a copy of the order recently issued by the State Railroad Commission of California, requiring that stages and omnibuses be stopped before passing over railroad crossings; and with this a message from the committee on grade crossing protection, C. L. Bardol, chairman, suggest-

ing that railroads bring this matter to the attention of state commissions to see if action in this direction cannot be obtained in all of the states. A similar order has been issued by the Public Service Commission of Nevada; and it applies the rule not only to automobile stages (passenger-carrying vehicles) but also to trucks engaged in the transportation of explosives or inflammable liquids.

Pennsylvania-Labor Board Case Delayed

The controversy between the Pennsylvania and the Railroad Labor Board has been again postponed; hearings will be had before Judge K. M. Landis, of the United States District Court at Chicago on February 17. The developments in this controversy, including the temporary injunction obtained from Judge Landis by the Railroad to restrain the Board from issuing an order which that carrier believed to be unfair and unjust, have been described in previous issues of the *Railway Age*. Later, attorneys for the Labor Board filed a plea to dissolve this temporary injunction. Judge R. M. Barton, chairman of the Board, informed Judge Landis, when the last postponement was made, that the Board was anxious to have the case settled.

Automatic Train Stops in New York

The number of automatic train stops in use in and around New York City, mainly in subways, aggregates about 3,700, divided as follows:

Brooklyn Rapid Transit Company (including New York Municipal Railways) 1,077, divided as follows: General Railway Signal Company, electric motor apparatus, 950; Federal Signal Company, electric motor 19 and electro-pneumatic 68; Union Switch & Signal Company, electro-pneumatic 40.

Hudson & Manhattan, electro pneumatic, 244.

Interborough Rapid Transit Company, electro-pneumatic, 2,355.

To these must be added a small number, about 20, Hill automatic stops, in use on the Pennsylvania at its tunnels under the East and North rivers and at the drawbridge between New York and Manhattan Transfer.

Santa Fe Announces Budget

The Atchison, Topeka & Santa Fe has appropriated \$43,150,000 for equipment, improvements and betterments for 1922. Of this amount \$11,750,000 will be for the completion of work in hand; \$22,000,000 for new work including 75 miles of new second track from Yampai, Ariz., to Griffith; \$8,000,000 for new equipment; and \$1,400,000 for a new line from Satanta, Kan., west 55 miles. Following are some of the larger items in the budget:

Additional main line.....	\$6,662,298
Satanta branch line.....	1,400,000
Bridges, trestles and culverts.....	1,512,893
Rails and other track material.....	1,101,868
Stations and office buildings.....	1,056,639
Shop buildings.....	1,041,350
Additional yard tracks and sidings.....	946,148
Shop machines and tools.....	724,281
Assessments for public improvements.....	533,633
Widening cuts, fills, etc.....	459,701
Signals and interlockers.....	446,289

Eastern Managers Meet

Managers of 55 railroads in the Eastern conference territory, in a meeting at New York on February 8 decided that the conference committee should begin next week negotiations with the Big Four brotherhoods on adjustment of rules and wages, as proposed at Chicago some weeks ago. The conductors and trainmen were notified that they would be met on February 16, and the enginemen and firemen were asked to appear on February 20. The conference committee of officers consists of P. E. Crowley, N. Y. C., chairman; Elisha Lee, Penna.; C. W. Galloway, B. & O.; Charles H. Ewing, P. & R.; C. L. Bardo, N. Y., N. H. & H.; M. S. Connors, I. V., and John G. Walber, chairman of the bureau of information. The roads joining the negotiations will be those on which are employed from 80 to 90 per cent of the brother-

hood memberships. The roads that are not expected to participate are the Bangor & Aroostook; the Pere Marquette; the Cincinnati, Indianapolis & Western; the Toledo, St. Louis & Western, and the Bessemer & Lake Erie.

All Exhibit Space Reserved

One index of the general feeling in the railway appliances' field is to be noted in the present status of plans for the fourteenth annual exhibit of the National Railway Appliances' Association at Chicago, March 13-16. The regular meeting for the allotment of space, held last November, closed with 22 spaces still unreserved and there was at that time some feeling of uncertainty on the part of the members of the association as to the success of the coming exhibit. However, all question of doubt has been eliminated by the fact that all available space has since been taken up and C. W. Kelly, secretary of the association, is being embarrassed by requests from a great many companies for space which he is unable to provide. The association is in a position to take on additional non-exhibiting members who are always given the preference in the allotment of space in case any vacancies occur.

Safety on the New Haven

The New York, New Haven & Hartford reports that in January for the third time the 38,000 employees of the system passed through an entire month without a fatal injury. The two previous months when this record of safety was achieved were May, 1920 and August, 1921.

The New Haven's Bureau of Safety was established in April, 1914, with a central committee and fourteen subordinate committees and there are now altogether 34, with a total membership of 557. Representatives of the safety department keep in constant touch with employees by personal interviews, and by means of 250 bulletin boards. A friendly rivalry is maintained between divisions and shops. Through the courtesy of school authorities in the cities and towns, children have been taught the danger of playing on railroad property, stealing rides, etc., and manufacturers have co-operated with the Safety Bureau in warning their employees of the danger of trespassing on the tracks.

A cause of continued grave concern is the careless operation of automobiles at grade crossings. During 1921, 27 automobilists were killed and 90 injured at crossings on the New Haven road and 177 automobiles were driven through gates and into the sides of passing trains, resulting in 10 deaths and 25 injuries.

Since 1913 the number of persons killed on the road (all classes) has decreased 57 per cent, while the number of employees killed has decreased 62 per cent.

Illinois Central Discusses State Rate Control

Proposed legislation in Congress to take away from the Interstate Commerce Commission authority over state rates is characterized as unprogressive, impracticable and illogical in the latest advertisement of the Illinois Central in its publicity campaign. The article states that the federal constitution grew out of a generally accepted feeling on the part of the people that commerce among the states should be free. "The federal government," the article continues, "was founded upon the theory that commerce and trade were national subjects and should not be subjected to local conditions. To that end the constitution confers exclusive power on Congress to regulate commerce among the states. By a long life of supreme court decisions it is now thoroughly settled that a state must not be permitted to make any rates or regulations which will interfere with Interstate Commerce. The power of the Commission to condemn rates which discriminate against interstate commerce, has been repeatedly upheld. In the case of the Illinois Central System, passing through and touching 14 different states, it is obvious at a glance that it ought not to have 15 systems of rates, one applicable to interstate commerce, and 14 others applicable to the commerce of the different states which it serves.

"Railroads in the United States have for a long time struggled against a divided authority of intrastate and interstate traffic and they have been subjected to a number of conflicting regula-

tions and have been greatly embarrassed and inconvenienced by the necessity of obeying the mandates of various state commissions on the subject of rates many of which conflict with one another. In some instances, state commissions have frankly announced the purpose to give to the people of their own state an advantage over the people of another state by making a discriminatory rate adjustment. While present legislation does not go so far as to make it necessary for all states to contribute their fair share toward the expense of maintaining the transportation machine, yet it is recognized by all thoughtful students of the problem that there should be but one body with power to regulate rates and that the national body. There would still be left to the state commissions many important duties in connection with their police power. Their jurisdiction would be unimpaired as to service matters such as operation of intrastate trains, character of station facilities, crossings, etc. It is a great mistake to suppose that the control of rates by the Interstate Commerce Commission would make it more troublesome and expensive for patrons of the railroads to give relief."

Illinois Manufacturers' Association Considers Capper Bill and Railway Wages

The Illinois Manufacturers' Association passed a resolution on January 6, protesting against that part of the Capper Bill restoring the jurisdiction of the state commissions and repealing the rate-making section of the Transportation Act of 1920, and a second resolution calling upon the Labor Board to render a clear cut decision that will bring about a readjustment in railroad wages. The first resolution states that the passage of the bill, by seriously impairing the financial stability of the roads, would place them in a more acute condition than they have been at any time in the past, and that such complicated authority over the roads would react seriously upon the manufacturers and all other interests. The second resolution calls attention to the fact that manufacturers are particularly concerned with the application by the railroads for the readjustment of wages of their employees, including shop and common labor, both of which, under the schedules of the United States Railroad Labor Board, are far in excess of wages paid in industrial lines and seriously affect manufacturing enterprise; that excessive war-time wages as well as uneconomic working rules have so raised the cost of railroad operation that freight and passenger rates cannot be reduced to the level needed to stimulate manufacturing, commerce and agriculture; that therefore, the Labor Board should bring about a readjustment in railway wages, to a basis of that paid labor in the vicinity for similar work, and also abrogate uneconomic working conditions.

Successful Santa Fe Land Development

The Atchison, Topeka & Santa Fe, believing that there were great possibilities in the agricultural development of the southwestern counties in Kansas, purchased some 340,000 acres of land in this territory in 1909 from a holding company, and placed it on the market at a little above cost. A nation-wide advertising campaign was inaugurated to sell the land to young men who would be willing to buy it and farm it according to a scientific system which was established by the company's agricultural department—a system which had been demonstrated successfully by the Kansas Agricultural College. The land sold for \$1,200 to \$3,500 per quarter section and the settlers were permitted to pay down one-eighth of the purchase price and the remainder in annual installments for not to exceed nine years, until the entire indebtedness had been removed, at which time the deed was transferred to the owner. Some completed their payments within two or three years, while the majority made their final payments before the expiration of the time specified in the contract. It was necessary for the company to grant extensions of time in only a very few instances and there has not been a single foreclosure suit.

In connection with this venture the railroad built a new line extending from Dodge City, Kan., to Elkhart, a distance of 125 miles, to provide the needed transportation facilities for the newly opened territory. The project is considered to have been a complete success, not only through the financial return on the land investment, but also from the new and steadily growing business of a rapidly developing country.

Traffic News

The Interstate Commerce Commission has changed the effective date of its order prescribing the terms of an export bill of lading from February 15 to March 15.

Senator Robinson of Arkansas has introduced in the Senate a bill to require the discontinuance of the surcharge on fares of passengers riding in sleeping and parlor cars.

Rice and rice products are to be included in the 10 per cent. reduction in transcontinental freight rates on farm products, granted the first of the year by the carriers.

The Public Service Commission of Alabama began this week public hearings in connection with its proposal that the railroads should make a general readjustment of the freight rates in that state. The carriers are called upon to give detailed information concerning each one of about forty prominent commodities.

The Southeastern Express Company, operating over the lines of the Southern Railway Company, announces that its service has been extended over the Tennessee Central, between Harriman, Tenn., and Hopkinsville, Ky. This extension took effect on February 1, the day on which the Tennessee Central was delivered by the Receiver to the new owners.

Freight carried through the Panama Canal in 1921 amounted to approximately 10,708,338 long tons. The decrease in the number of ships as compared with 1920 was 1.1 per cent and in cargo 4.7 per cent. The net tonnage of vessels in the year 1921, however, exceeded that of 1920, as there was 11,435,811 tons, Panama Canal measurement, for 1921, and 10,378,365 for the previous year. Tolls aggregated \$10,325,718 in 1921, as compared with \$10,295,362 in 1920.

The new officers of the Traffic Club of Minneapolis, Minn., are as follows: president, Charles L. Kennedy, assistant general freight agent, Chicago, Milwaukee & St. Paul; vice-presidents, W. H. Perry, general traffic manager, Pillsbury Flour Mills Company; George A. Upton, general agent, Baltimore & Ohio; secretary, W. W. Gibson; treasurer, L. H. Caswell; directors, W. H. Perry, Paul Scheunemann, S. A. Eddy and George V. Thomson.

Officers of the Traffic Club of Kansas City, Mo., for 1922, are president, John D. Yates, assistant general freight agent, Missouri Pacific; vice-presidents, Charles D. Dooley, traffic manager, Peet Brothers Manufacturing Company; R. F. Atwood, division freight agent, Chicago, Rock Island & Pacific; secretary-treasurer, Peter J. Rose, general agent, Cincinnati, Indianapolis & Western; directors, George H. Hamilton, general freight agent, Missouri Pacific; Charles W. Miller, traffic manager, Swift & Co.; Oscar H. Poehler, traffic manager, Dierks Lumber & Coal Company; W. D. Wells, traffic manager, W. S. Dickey Clay Manufacturing Company; L. E. Ayer, general agent, Canadian National System; Fred B. Blair, traffic manager, Hoyalnd Flour Mills Company; M. A. Gray, traffic manager, H. E. Lee Mercantile Company; E. G. Woodward, general agent, passenger department, Chicago, Milwaukee & St. Paul.

Commercial Stocks of Anthracite

and Bituminous Coal

At the beginning of the new year American consumers had on hand approximately 47,000,000 tons of soft coal, according to a report of a survey made by the Bureau of the Census and the Geological Survey. This was a million tons less than the revised figure of stocks on November 1. While much above the low mark of June, 1920, it was still 16,000,000 tons, or 25 per cent, below the maximum of 63,000,000 tons reached on the day of the Armistice.

In terms of days' supply the present stock appears larger than it would in times of normal business. At the rate of consumption prevailing during December, the reserve was sufficient to last 41 days, if evenly divided. Were business active, the present stocks would last not more than 32 days, if evenly divided. But the stocks are never evenly divided. In every community there

are consumers who store virtually no coal. Therefore, as experience has shown, symptoms of a shortage develop in a very few days, if the delivery of coal is interrupted. Such interruptions have occurred in the past through mine strikes, traffic congestion on the railroads, or severe winter weather. Today the trend of production is upward and coal is being added to storage. In the last week of January 9,626,000 net tons were produced, and not more than 9,000,000 tons consumed and exported.

Retail coal dealers' stocks of anthracite on January 1 were smaller than on November 1 last, but larger than at any time in 1919 or 1920. It is the opinion of the trade that the quantity in the possession of householders is below normal. Incomplete reports on the quantity held in storage by producers indicate little change since November 1. Nearly a million tons of by-product coke is on hand at coke plants, much of which can be used for domestic fuel.

According to reports received from the American Railway Association, the carriers had about 35 days' supply on hand at the beginning of the year, allowing for the present reduced rate of consumption. The roads already heard from show a total in storage of over 13,000,000 tons, and it is possible that complete returns will indicate a total stock above even the maximum of 13,644,000 tons on January 1, 1919. A large amount of this railroad-fuel coal is held in cars.

Coal Production

A further increase marked the production of soft coal during the week ended January 28, according to the weekly bulletin of the Geological Survey. The total production is estimated at 9,626,000 net tons or 9½ per cent over the week preceding. For the first time since mid-November the output was large enough to meet current consumption and add materially to the reserve of coal in storage.

Shipping Board Seeks Cancellation of Contracts With Japanese Steamship Lines

The preferential traffic contracts between the Chicago, Milwaukee & St. Paul and the Great Northern railways and Japanese steamship lines, covering export and import traffic to and from the Orient, which the Shipping Board is insisting that the railroads abrogate in order to give Shipping Board vessels a chance for a share in the business, were the subject of an informal conference at the Shipping Board offices on February 2, attended by Chairman Lasker and Commissioners Thompson and Lissner of the Shipping Board, Chairman McChord and Commissioners Campbell and Potter of the Interstate Commerce Commission, Ralph Budd, president of the Great Northern, H. E. Byram, president, and R. M. Calkins, vice-president of the Chicago, Milwaukee & St. Paul, and representatives of the Seattle Chamber of Commerce.

The Shipping Board reaffirmed its position that all preferential contracts between railroads and foreign steamship companies must be abrogated and stated that it could not enter into a contract with the rail lines to take the place of the foreign contracts. The railroad officers expressed their desire to aid the American merchant marine, but reaffirmed their previous position that the abrogation of the contracts would only deprive them of revenue with no assurance that the business would go to the American boats, because of the control of a large part of the traffic by the Japanese soliciting agencies and the probability that the contracts would be transferred to Canadian lines. It is understood that Mr. Budd proposed as a compromise that the contract be abrogated and that the road agree to turn over to the Shipping Board vessels one-half of the unrouted traffic, giving the other half to Japanese lines in return for the business which they can give to the road. Commissioner Potter is said to have taken the position that the railroad officers would not be warranted in voluntarily giving up the contracts and thereby sacrificing their revenues. Members of the board claim that they have legal authority to compel the cancellation of the contracts but have preferred to try to persuade the roads to cancel them. The railroad representatives will meet again with members of the board on March 1 with a view to giving their final answer at that time.

Commission and Court News

Interstate Commerce Commission

The commission has suspended from February 5 until June 5, the operation of certain schedules published in tariffs issued by agents E. B. Boyd, W. P. Emerson, W. J. Kelly and F. A. Leland, which propose increases and reductions in rates on green coffee from New Orleans, Galveston, and other Gulf ports to various destinations in Oklahoma, Kansas, Texas, Arkansas, Missouri and other states.

The commission has suspended from February 6 until June 5, the operation of schedules which propose proportional class rates from Seattle and Tacoma, Wash. to Portland, Ore., applicable on shipments destined to points on the Oregon Electric Railway, south of Portland, to and including Eugene, and points on the Southern Pacific south of Portland, to and including Roseburg, and the same proportional rates from Portland to Seattle, which rates are published to expire May 31, 1922.

United States Supreme Court

Interstate Commerce Commission's North Dakota Order Held Enforceable

The rate case of the State of North Dakota, briefly reported in a previous issue was in the shape of a bill in equity brought by the State in the United States Supreme Court against certain named railroad companies to prevent their obeying an order of the Interstate Commerce Commission until the Supreme Court can review the decision upon which that order was made. The order increased intrastate freight rates in North Dakota upon a finding that the present rates were an unjust discrimination against interstate commerce within the meaning of paragraph 4 of section 13 of the Act to regulate commerce as amended by the Transportation Act of February 28, 1920, c. 91, Title IV, § 416, 41 Stat. 456, 484, North Dakota Rates, Fares and Charges, 61 I. C. C. 504. Increased Rates, 1920, 58 I. C. C. 220.

The Supreme Court dismissed the bill, holding that the State should be remitted to the remedy offered by the statutes—a suit in the District Court in which the United States is made a party. The court said, by Mr. Justice Holmes: "Complete justice requires that the railroads should not be subjected to the risk of two irreconcilable commands—that of the Interstate Commerce Commission enforced by a decree on the one side and that of this court on the other. The decision in this case, although an authority, would not be *res judicata*, and the Commission would not be concluded from rearguing the whole matter. As to public policy, Congress has indicated the policy of the United States. For although it is argued that the requirement that the United States should be made a party is a mere matter of procedure for the purpose of giving the Department of Justice control, we cannot limit the significance of the Judicial Code, section 211, by such a speculation. The language of the section shows that public interests were before the mind of Congress, and that in its opinion an order made in the public interest should not be hindered from going into effect until the representative of the public had been heard. It appears to us that this view is so reasonable that it should be accepted by this Court even if not bound.

"There is no doubt that a State can sue in the District Court when the United States is a party and has consented to be sued there and has not expressed its consent to be sued elsewhere. *United States v. Louisiana*, 123 U. S. 32; *Ames v. Kansas*, 111 U. S. 449. For the reasons that we have indicated it is equitable that a decree should not be entered except in such form as to bind the Interstate Commerce Commission and the United States and therefore this bill must be dismissed. The right of the State is sufficiently protected by the right to appeal from the decision of the District Court."—*North Dakota v. Chicago & North Western*. Decided January 23, 1922.

Labor Board Decisions

Seniority Rights Not Allowed Express

Messenger Living Outside Terminal Point

An express messenger of the American Railway Express Company, owning his home at Fulton, Ky., and residing there, was refused the right to exercise his seniority rights by the Board on runs from Cairo, Ill., to New Orleans, La., after he refused to move to Cairo. The contention of the carrier that it was necessary to call upon train employees for extra service and that they should reside at the home terminal where they would be available when desired on important runs, was upheld.—*Decision No. 661.*

Differential Rates of Pay for

Express Messengers Upheld

Express messengers on trains of the Chesapeake & Ohio, operating between Cincinnati, Ohio, and Chicago, Ill., requested the same rates of pay as express messengers on trains on the Cleveland, Cincinnati, Chicago & St. Louis, operating between the same points. The carrier, admitting the disparity, contended that such differentials had always existed and were warranted by differences in working conditions and the greater importance of the higher paid runs. The Board upheld this contention. *Decision No. 638.* Like rulings were made in *Decisions 653, 654, 655, 656 and 659*, in which employees on other roads sought equalization of wages on the same basis.

Board's Authority to Decide Claims for Overtime

for Period from March 1, 1920, to December 1, 1920

Although the claim of clerks in the Chicago, Indianapolis & Louisville, in the local freight office at Chicago, for payment for overtime work in excess of 8 hours a day in connection with the establishment of a 45-hour week, was denied by the Board, the contention of the carriers, that the Board had no jurisdiction in the case, was denied. The carrier contended that inasmuch as the claim was for wages alleged to be due, the Board had no authority to make any decision either denying or sustaining it; that it was a matter for the courts to determine under the working agreement in effect during the period for which the claim was made; and that the board had no authority to decide the claim for the period of federal control, January 1, 1920, to March 1, 1920. The Board over-ruled this contention. *Decision No. 607.*

Boilermaker Not Responsible for Violation of

Federal Boiler Inspection Rules

A boilermaker in the employ of the Fort Smith & Western, was dismissed on February 27, 1921, for alleged violation of rule 25 of the federal locomotive inspection laws. The employees contended that his dismissal should have been on the grounds of incompetency and not on the charge that he violated this rule. In its decision the Board stated that the evidence shows conclusively that the conditions on which the dismissal was based were entirely within the control of the carrier; that the employee in question was not the responsible party, and his reinstatement with seniority rights, unimpaired and pay for time lost was ordered.

A dissenting opinion was filed by Horace Baker, in which he said: "In my judgment the responsibility for proper boiler inspection is a very important one that devolves upon the carrier, which must rely on its supervising forces to see that proper inspection is made. To absolve from blame a man who failed by reason of incompetency, neglect, or otherwise, to properly inspect boilers and report those which need attention, places a responsibility upon the Labor Board not contemplated by the Transportation Act, 1920. Action taken in this case is not only an injustice to the carrier, but may result in a serious menace to the public and employees of the carrier, to say nothing of damage to property."—*Decision No. 598.*

Foreign Railway News

Swedish Electric Locomotives for France

The Allmänna Svenska Elektriska Aktiebolaget—the well known "A. S. E. A."—has recently secured a contract from the French State Railways for construction of 30 electric locomotives at the company's works at Vasteras, according to information from Consul D. I. Murphy, at Stockholm.

India to Order Railway Equipment Once a Year

LONDON.

The Government of India, it is reported, beginning with the year 1923, will invite bids annually for all the railway locomotives and stocks required during the ensuing twelve months. The average annual requirements will be 160 locomotives and 160 additional boilers during 1923 and 1924, and thereafter 400 locomotives and 400 additional boilers.

Avalanche Buries Japanese Train

The burial of a railroad train in an avalanche, reported in a press dispatch from Tokio, Japan, on February 4, is said to have resulted in the killing of 110 persons and the injury of numbers of others. The accident occurred at Itoigawa. The statement is not clear whether or not the train was a passenger train, the victims being, it is said, mostly farmers, workmen and men engaged in clearing snow from the track.

Britain Lands South African Electrification Contract

Cable advices from Commercial Attaché Walter S. Tower, of London, announce that the contract for electrification of 170 miles of single track of the South African Railway between Pietermaritzburg and Glencair has been given to the Metropolitan Vickers Electric Company of Manchester. The cost of this work will be about 750,000 pounds sterling, being based on a revision of the British bids as of January 1. No new bids were asked for, since the old ones were reduced in amount on account of wage cuts in the electrical industry and other reductions in cost items.

New Short Line Railroad in Mexico

Contracts have been awarded to a firm in El Paso, Tex., for the construction of a new railroad, 47 miles in length, called the Ferrocarril de Chihuahua y Oriente, to run from Sierra Los Lamentos and Erupcion mine to the Mexican Central, at Candelaria, 65 miles south of Juarez, according to Vice-Consul Oscar Cole Harper, Ciudad Juarez. The contract calls for the completion of the roadbed and bridges within 150 days, it being understood that the railroad company will lay the steel. It is planned to have the road in operation by August, 1922, or sooner.

The line will be of standard gauge and will carry passengers and freight. The main traffic, however, will consist of lead and silver ores from the Erupcion mines, which in magnitude of ore deposits are likened to the famous ore deposits of the Santa Fulalia district near Chihuahua, Mexico.

Condition of Polish Railways Improves

LONDON.

In March, 1919, the total mileage of the Polish railways in operation amounted to approximately 3,225 miles, whereas in March, 1921, there were approximately 9,750 miles in operation. In July, 1919, they had 2,127 locomotives, 4,859 passenger cars and 41,953 freight cars. In July, 1921, these had increased to 3,696 locomotives, 8,489 passenger cars and 87,901 freight cars and Germany has recently delivered to Poland under the reparations treaty 300 locomotives.

In 1919, 49 per cent of the locomotives and 32 per cent of the passenger cars were under repair, while at the present time only 37 per cent of the locomotives and 20 per cent of the passenger cars are under repair. Eleven per cent of the freight cars were under repair in 1915, while today there are only 8 per cent.

German Railway Strike Ended

The strike on the railways of Germany has ended, according to press dispatches from Berlin. The workers return on the sole condition that there will be no wholesale discharges from the service. For a week transportation was virtually paralyzed and there seemed to be a grave danger of a general strike. The government fought the strike with every means available and the outcome would seem on its face to be a government victory.

Wage Reductions in Scotland

The National Wages Board, sitting in London, has announced certain modifications in wage scales and working conditions on the Scottish railways as follows:

1. Wages shall be decreased 2 shillings per week for every drop of 5 points in the cost of living index number (instead of one shilling as at present), provided that the present "B" or "stop" rate (beyond which wages may drop) will be maintained.
2. Adult rates shall be paid to employees when they attain 20 years of age, instead of 18 as at present.
3. Where economy will accrue, men may be worked regularly 9 hours a day, but with regular overtime pay.
4. Employees may be required to work their 8 hours in a spread of 10 or 12 hours under certain conditions.

While the new rulings take some favorable conditions away from the employees, they do not in any way meet the demands of the Scottish railway companies, which were:

1. An out-an-out reduction in wage rates to bring them back to the scale prevailing before the June, 1920, award—an average reduction of 5s. weekly.
2. The discontinuance of extra payment for night duty.
3. The payment of adult wages at the age of 21.
4. Increasing the hours of service over 8 hours in some cases and allowing split tricks over a 12-hour period.

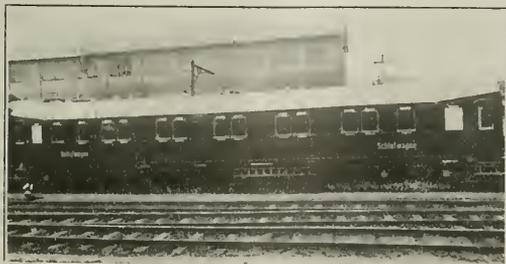

Cheap Sleeping Accommodations on German Railways

The German State Railway has recently experimented with a new type of third-class compartment on the sleeping cars on the Berlin-Jena line, according to the Engineer (London).

The Three Berths

The new compartments do not contain beds, but have three sloping shelves placed one above the other, the lowest of which during the day is converted into an ordinary seat, the middle one into a back, while the upper one is used as a rack for parcels. The occupant of the upper shelf climbs into position by means of a folding ladder. The administration intends to place these sleeping compartments on three lines, between Berlin and Cologne, Berlin and Munich, and Berlin and Königsberg. In view of the low price of the sleeping ticket, 40 marks per person, a great demand for the accommodation thus provided is expected.

The New Third-Class Sleeping Car

Equipment and Supplies

Freight Cars

THE NORTHERN PACIFIC is inquiring for 500 refrigerator cars, of 70 ton capacity.

THE CHICAGO, MILWAUKEE & ST. PAUL is inquiring for 1,000 or more 40-ton box cars.

THE WESTMORELAND COAL COMPANY, Philadelphia, Pa., is inquiring for 100 cars of 55-ton capacity.

THE CANTON HANKOW is asking for prices through export houses in New York City on 10 open freight cars.

THE WARNER SUGAR COMPANY, 99 Wall street, New York City, has ordered 10 logging cars from the Magor Car Company.

THE CHICAGO, BURLINGTON & QUINCY is inquiring for 500 automobile cars, which inquiry has been substituted for 500 40-ton box cars inquired for previously.

THE ARGENTINE STATE RAILWAYS are asking for bids until March 1, at Buenos Aires, for 750 narrow gage cars to include flat cars, gondolas, box, tank and passenger cars.

THE DELAWARE, LACKAWANNA & WESTERN has placed orders for the repair of 700, 30-ton box cars with the Magor Car Company and for 500 with the American Car & Foundry Company.

THE SEABOARD AIR LINE, reported in the *Railway Age* of January 7 as having placed orders with the Chickasaw Shipbuilding Company, Birmingham, Ala., for new freight cars, has ordered 1,750 new steel underframe freight cars from this company and will have repairs made to 3,000 freight cars.

THE CHICAGO, BURLINGTON & QUINCY has ordered 6,800 freight cars of the 7,300 on inquiry, distributed as follows: 1,000, 40-ton, steel frame box cars from the Mt. Vernon Car Manufacturing Company, 500 of this type from the Pullman Company and 500 from the General American Car Company; 500, 30-ton refrigerator cars with 40-ton trucks from the American Car & Foundry Company, 400 from the General American Car Company and 400 from the Pullman Company; 500 stock cars from the American Car & Foundry Company; 1,000, 50-ton composite gondolas from the Western Steel Car & Foundry Company, 500 from the Pullman Company, and 500 from the American Car & Foundry Company; and 1,000, 16 door, steel gondola cars from the Bettendorf Company.

Passenger Cars

THE PENNSYLVANIA RAILROAD reported in the *Railway Age* of January 14 as inquiring for 20 all steel dining cars will build these cars at its Altoona, Pa., shops.

THE CENTRAL OF NEW JERSEY is asking for prices on about 50 cars for passenger service, to include 25, 63-ft. steel passenger cars, 10, 63-ft. combination passenger and baggage cars and 10 baggage cars.

THE UNION PACIFIC, reported in the *Railway Age* of December 24, as inquiring for 25 baggage cars, 20 coaches and 18 steel observation cars, has ordered 25 steel baggage cars from the American Car & Foundry Company, and 20 coaches from the Pullman Company.

Machinery and Tools

THE DELAWARE, LACKAWANNA & WESTERN recently ordered a Ryerson-Conradson engine lathe, for its Dover, N. J., shops.

THE SHIBAURA ENGINEERING WORKS, Tokyo, Japan, is inquiring through Mitsui & Co., New York City, for 48 machine tools.

Iron and Steel

THE JAPANESE GOVERNMENT RAILWAYS will receive bids up to February 13, at Tokyo, Japan, for 10,000 tons of 60-lb. rail, together with 500 tons of splice bars.

Track Specialties

THE LOUISVILLE & NASHVILLE has ordered 2,700 tons of splice bars from the Inland Steel Company; 7,500 kegs of spikes from the Jones & Laughlin Steel Company; and 3,500 kegs of bolts from the Illinois Steel Company.

Miscellaneous

THE GREAT NORTHERN is asking for prices on 450,000 tie plates.

THE GREAT NORTHERN is inquiring for two motor buses, each with seating capacity for not less than 40 persons, with 10 ft. space for haggage and express.

Signaling

NEW YORK CITY export houses are asking for prices on 200 complete sets of color light signals; also on another lot of 52 complete sets, for export to Japan.

THE WESTERN PACIFIC has ordered from the General Railway Signal Company a mechanical interlocking plant, 24 levers, to be installed by the signal company, at San Jose, Cal.

THE UNION PACIFIC has ordered materials from the Union Switch & Signal Company for the installation of a d. c. 110-volt Type "F" electric interlocking at Council Bluffs, Iowa; 8 switches, 8 signals and 4 traffic control levers. Installation by railroad forces.

THE WABASH has awarded a contract to the Union Switch & Signal Company for the complete installation of an electric interlocking at Rouge river drawbridge near Detroit, Mich. The interlocking includes 22 functions which will be controlled by 10 working levers in a 15 lever frame.

THE MISSOURI PACIFIC has ordered from the General Railway Signal Company the material for a mechanical interlocking, Saxby & Farmer, 28 levers, to be installed at Hiawatha, Kan.; and has given a similar order for Dudley, Mo., 24 levers, the apparatus in both cases to be installed by the railroad company's forces.

THE PHILADELPHIA & READING has ordered from the Union Switch & Signal Company, a complete style "P 5" electro-mechanical interlocking for a drawbridge at Darby Creek, Pa. The layout consists of a double track with one turnout, necessitating 5 smash board signals. The signal company is to construct the entire installation

\$4,800,000 of Silk En Route from Japan to New York on the C. M. & St. P.

Supply Trade News

M. C. Davidson, works manager of the Ryan Car Company, has been elected a director and second vice-president of the company.

The Rathbun Jones Engineering Company, Toledo, Ohio, has appointed the Ingersoll-Rand Company, New York city, general sales agent for Rathbun gas engines.

The Hauck Manufacturing Company, Brooklyn, N. Y., manufacturer of portable oil burners, furnaces, torches, etc., has moved its Philadelphia, Pa., office to 1726 Sansom street. Herbert Vogelsang, who has been connected with the company for six years, is in charge of this office.

John Harvey Bryan, representative of the Apollo Steel Company, Apollo, Pa., manufacturer of steel sheets, has been appointed also representative of the Gulf States Steel Company, Birmingham, Ala., manufacturer of wire products and bars. Mr. Bryan's headquarters is at 50 Church street, New York city.

Frank M. Morley joined the service department field staff of the Franklin Railway Supply Company, New York City, on January 1. He was born at Smithboro, N. Y., on January 31, 1884, and was educated in the public schools of Auburn, N. Y. and Sayre, Pa. After completing an apprenticeship in the Sayre, Pa. shop of the Lehigh Valley Railroad, he joined the Ingersoll-Rand Company. Mr. Morley has also been connected with the Seaboard Air Line, the United States Navy Yard at Norfolk, Virginia, the Washington Navy Yard and was at one time a field engineer for the Standard Stoker Company.

The Pittsburgh Testing Laboratory, Pittsburgh, Pa., inspecting engineers and chemists, announces the retirement of its president, George H. Clapp, and his reappointment as a member of the board of directors of the company, and the election of Col. James Milliken to the presidency of the company. This corporation devotes special attention to the inspection of railroad locomotives, cars, steel rails, track appliances, bridges, etc. Expert inspection is now given in a large way in the building of all kinds of good roads. Its chemical department specializes in the analysis of metals, coals, cement, etc., and gives particular attention to the analysis of imported food products. Col. Milliken was born on February 19, 1865, at Newton, Bucks County, Pa. He was educated in the Philadelphia schools and also took a course at the University of Pennsylvania and holds an honorary degree of mechanical engineer. In September, 1885, he entered the service of the Pennsylvania Railroad. In January, 1903, he was appointed superintendent of motive power of the Philadelphia, Baltimore & Washington. In May, 1917, he was relieved of his duties as superintendent of motive power on the Pennsylvania to assist Col. Deakne, commanding officer of the 19th Engineers in recruiting a regiment of locomotive repairmen for service in France. The following July he was appointed mechanical aid to S. M. Felton, director general military railways at Washington, D. C. and was given charge of the design, purchase, production and shipment of locomotives, cars, shop and engine house equipment. In June, 1918, he was placed in charge of the engineering and purchasing work of the railway equipment and track materials. On October 18, 1918, he was commissioned a colonel in the Corps of Engineers, with the same duties as previously and in addition assisted in selecting the officers in mechanical regiments that were sent overseas. Colonel Milliken was honorably discharged from the service in April, 1919. On July 14, 1919, he was made an officer in the Loyal Legion d'Honneur. Since 1919 he served as president of the Industrial Car Manufacturers' Institute.

Obituary

Harry Frankel, president of the Frankel Connector Co., Inc., died at his home in New York City, on February 3, at the age of 55.

Don H. Amsbary, Pittsburgh district manager of the Dearborn Chemical Company, Chicago, died on January 25, at his home in Pittsburgh, Pa. Mr. Amsbary was born on March 3,

1869, at Pekin, Illinois, and was educated at the Cathedral Grammar School of his native town. He began work with the American Water Works and Guaranty Company of New Castle, Pennsylvania, at the age of 21 and was in that company's service until 1907. He then entered the employ of the Dearborn Chemical Company, in the Pittsburgh district, and for the past seven years was district manager of that company. Mr. Amsbary was identified with many business and social organizations including the

D. H. Amsbary

Railway Club of Pittsburgh, Pennsylvania.

Trade Publications

GUNITE.—The Cement Gun Construction Company, Chicago, has issued a 32-page bulletin containing photographs showing methods and results secured in the application of gunite or cement mortar applied with a cement gun. The work illustrated covers a wide variety of structures including the encasing of structural steel bridges, the coating of masonry arches and tunnel linings and the construction of small concrete units such as telephone booths.

MOTOR CARS.—In a 20-page booklet recently issued by the Fairmont Gas Engine and Railway Motor Car Company, Fairmont, Minn., an interesting account is given of the Fairmont motor designed for application to section gang cars. The illustrations in this pamphlet show views of these motor cars in use by track and bridge and building gangs for hauling both men and materials and also show various mechanical parts of the equipment. The text consists primarily of the exposition of the mechanical and operating advantages of this form of equipment.

CONCRETE PLACING EQUIPMENT.—The Lakewood Engineering Company, Cleveland, Ohio, has issued a 64-page descriptive booklet on the various types of concrete chuting plants which it carries along with other equipment for use in concrete construction work. Detailed specifications are given for all types and sizes of the Lakewood chute sections, steel towers, sliding frames, elevator buckets, tower and floor hoppers, concrete carts, etc. The booklet is well illustrated with photographs of construction projects showing the various ways in which the chuting plants are used. The dimension sketches of the plants are reproduced in blueprint form, showing complete details. The booklet also includes tables of practical help in laying out such plants on various kinds of work.

UNLESS THE AMERICAN PUBLIC led by American financiers, becomes interested in investing money in foreign securities, American exporters are bound to be handicapped. Many European countries habitually buy large amounts of such securities each year and the money thus raised is naturally spent in the country of its origin. We have made great strides in this direction as the numerous foreign loans floated here testify, but there is still ample room for constructive educational work on the part of bankers along these lines.—E. D. Kilburn, *Westinghouse Electric International Company.*

Railway Construction

ATCHISON, TOPEKA & SANTA FE.—This company contemplates the construction of 75 miles of second track between Yampai, Ariz., and Griffith, including the reduction of grades.

ATCHISON, TOPEKA & SANTA FE.—This company closed bids on February 9, for the construction of three stations, several section houses, and other necessary buildings on its new branch line which will extend westward from Satanta, Kan.

ATCHISON, TOPEKA & SANTA FE.—This company closed bids on February 9, for the construction of a branch line to extend from Satanta, Kan., to a point 55 miles westward, the cost of which is estimated at \$1,400,000.

ATCHISON, TOPEKA & SANTA FE.—This company is constructing an additional jetty in Red Deer Creek, in order to protect its roundhouse and other terminal property at Canadian, Tex., from floods.

CANADIAN PACIFIC.—This company will construct a large pier on the Burrard Inlet waterfront at Burrard, B. C., the dredging and filling for which was done in 1921. It is expected that it will be about 18 months before the pier is completed.

CANADIAN PACIFIC.—This company will construct an additional ice storage building at Okanagan Landing, B. C.

CHICAGO, BURLINGTON & QUINCY.—This company which was noted in the *Railway Age* of January 21 as receiving bids for the construction of a 45-room hotel and alterations to its eating house at Cody, Wyoming, estimated to cost \$25,000, has awarded the contract for this work to F. Jacoby, Billings, Montana.

CLEVELAND, CINCINNATI, CHICAGO & ST. LOUIS.—This company has prepared plans for the construction of a Y. M. C. A. building at Bellefontaine, Ohio, estimated to cost \$100,000.

DARCO CORPORATION.—This corporation contemplates the construction of a line of railroad to extend from Marshall Texas, to the Darco lignite territory, which is a distance of about ten miles.

DENVER & RIO GRANDE WESTERN.—This company contemplates changing its lines in New Mexico, from narrow gage to standard gage with the possibility of also extending them. No definite decision has yet been reached as to when this work will be undertaken.

DODGE CITY & CIMARRON.—This company has applied to the Interstate Commerce Commission for authority to construct an extension to its lines from Satanta, Kan., through Haskell, Grant and Stanton counties, a distance of approximately 55 miles.

ERIE.—This company has awarded a contract to Foley Brothers, St. Paul, Minn., for the construction of a freight pier 100 ft. by 842 ft. at Weehawken, N. J. The pier dock, retaining walls and platform will be of concrete construction with a superstructure of wood sheathed with zinc.

GREAT NORTHERN.—This company, which was noted in the *Railway Age* of December 24 (page 1286), as contemplating the construction of a second main track between Lamona, Wash., and Blustem, a distance of 22 miles, has awarded the contract for this work to Grant Smith & Co., Seattle, Wash. This same company contemplates the construction of a second main track between Welliston, N. D., and Spring Brook, a distance of about eight miles.

GREAT NORTHERN.—This company, in conjunction with the Northern Pacific, contemplates the construction of a viaduct over the tracks at its Bay Front yard, Superior, Wis., although this work has not as yet been authorized. The same company is making extensive repairs to its Interstate Bridge in that city, including the rebuilding of Superior approach, which is used for street railway and highway traffic.

Railway Financial News

INDIANAPOLIS & CINCINNATI TRACTION.—This company will construct an extension to its lines from a point in Indiana to Cincinnati, Ohio. The rapid transit commission of Cincinnati will undertake the construction of a 17-mile approach to the city from the point of intersection with the Indianapolis & Cincinnati Traction. A 2½-mile tunnel through which the interurban will gain entrance into the city has been completed.

JACKSON & EASTERN.—This company has awarded a contract to J. N. McLeod, Jackson, Miss., for the construction of a railroad from Currans Crossing, Miss., to Pelahatchie Creek, a distance of 11 miles. This is part of a 61-mile extension program which was recently authorized by the Interstate Commerce Commission, and which will be completed during the present year. It is expected that contracts will be awarded in the near future for the construction of the remainder of the extension.

MINNEAPOLIS & ST. LOUIS.—This company, in conjunction with the Great Northern, has prepared plans for the construction of a steel bridge approximately 520 ft. in length over the tracks of both railroads at Fifth street, North Minneapolis. This work is estimated to cost about \$200,000.

MISSOURI PACIFIC.—This company closed bids on February 10 for the construction of a service building at Little Rock, Ark., estimated to cost about \$12,000.

PACIFIC FRUIT EXPRESS.—This company contemplates the construction of an ice plant at a location which has not as yet been announced.

OKLAHOMA RAILWAY.—This company contemplates the construction of an extension to its lines, from Guthrie, Okla., to Stillwater, a distance of about 30 miles, the cost of which is estimated at \$1,200,000.

OREGON SHORT LINE.—This company has been petitioned by the farmers in southwestern Idaho, to extend its Homedale branch line from Homedale, Idaho, to Butte, a distance of about 7 miles.

SALT LAKE & UTAH.—This company, in conjunction with the Bamberger Electric, contemplates the construction of a two-story reinforced concrete and steel terminal building, 170 ft. by 184 ft., including stores, offices and train sheds, at Salt Lake City, Utah, the entire cost of which is estimated at \$250,000.

SOUTHERN PACIFIC.—This company, in conjunction with the city of Houston, Tex., is receiving bids for the construction of a subway to replace the old North Main street tunnel in that city. The subway will be under 19 tracks and will provide two passageways, 21 ft. in width, for highway traffic, and one 8 ft. in width, for pedestrians. The work is estimated to cost approximately \$200,000 of which the city will bear one-half.

ST. LOUIS-SAN FRANCISCO. This company contemplates the extension of its lines from Vinita, Okla., northwest into the coal fields of the Central Coal & Coke Company, of Kansas City, Mo., a distance of about 20 miles. Surveys for this extension are now being made.

ST. LOUIS-SAN FRANCISCO.—This company will receive bids until February 20 for the construction of a 4-story brick hospital at Springfield, Mo., estimated to cost \$700,000.

UNION PACIFIC.—This company closed bids on February 10 for the construction of a new station and rooming house at Yermo, Cal.

WENATCHEE SOUTHERN. This company has applied to the Interstate Commerce Commission for a certificate authorizing the construction of a line from Wenatchee to Beverly Junction, a distance of 53 miles (partly over the tracks of the Chicago, Milwaukee & St. Paul from Beverly Junction to Hanford, Wash., 46 miles), the construction of a new line from Hanford to a point on the Oregon-Washington Railroad & Navigation Company's 29-mile line, and use of the latter's tracks to Kennewick, Wash.

WACUPA & NORTH WESTERN. The Interstate Commerce Commission has received an application of this company for a certificate authorizing the construction of an extension of 14 miles from a point near Nevada to La Grange, Kans. The commission says it is unable to find that present or future convenience and necessity require the construction of the extension.

ATCHISON, TOPEKA & SANTA FE.—*Budget for 1922.*—This company will spend \$43,150,000 for improvements and betterments in 1922 according to President W. B. Storey who is quoted as follows:

Probably \$60,000,000 a year for the next three years ought to be spent. Of the 1922 expenditures \$11,750,000 will be for the completion of work in hand, \$22,000,000 for new work including 75 miles of new second track in Arizona from Yampai to Griffiths; \$8,000,000 for new equipment, and \$1,400,000 for a new branch line from Satanta, Kan., 55 miles west. Additional maintenance will require \$6,662,236; bridges, trestles and culverts, \$1,318,893; rails and other track material, \$1,101,868; stations and office buildings, \$1,056,639; shop buildings, \$1,041,350; additional yard tracks and sidings, \$946,148; shop machines and tools, \$724,281; assessments for public improvements, \$533,633; widening cuts, fills, etc., \$459,701; signals and interlockers, \$446,288.

CHICAGO & INDIANA COAL RAILWAY.—*The Sale of Brazil Branch.*—The line known as the Brazil Branch, which was formerly owned by the Chicago & Indiana Coal Railway, was sold at foreclosure on January 16, 1922, for \$15,000 to attorneys for the Metropolitan Trust Company of New York. When the Chicago & Eastern Illinois was re-organized recently the new company did not acquire this former Chicago & Indiana Coal Railway Company property.

DENVER & RIO GRANDE.—*Hammond Committee Defends Reorganization Plan.*—The committee of Denver & Rio Grande refunding 5 per cent. bondholders, of which John H. Hammond is chairman, has issued a reply to the committee headed by James H. Perkins, which latter committee, in inviting deposits of the bonds with it, expressed the opinion that the plan of reorganization agreed upon by the Hammond committee with the Western Pacific was unsatisfactory and said that the Perkins committee purposed to obtain better terms by arrangement with one or more connecting lines. Mr. Hammond says his committee has recommended a definite and constructive plan which includes the provision that the Western Pacific furnish \$10,000,000 for the improvement of the Denver & Rio Grande property and the turning over to the re-organized company of all unencumbered assets of the old company in exchange for common stock after new securities are offered for the bonds.

The Hammond committee says further that the Perkins committee's reference to connecting lines is unquestionably to the Missouri Pacific and adds:

Interests connected with that line have been aware for more than two years that this committee has been endeavoring to arrange a plan. They have been given every opportunity to submit a proposal to this committee and have failed to do so.

If these interests have any intention of submitting a proposal they have had ample time to formulate it and can submit it promptly. Consequently at the announcement of the Perkins Committee is not followed up promptly by a definite plan, it will be apparent that the purpose of its announcement is only to prevent the deposit of bonds under the plan within the time limit therefor (March 1 next) and thus cause the plan to fail.

If the plan of this committee should fail the Perkins may have a less favorable plan to offer or it may have no plan at all. In the latter case the refunding bondholders would be forced to an independent reorganization of the property which would necessitate their raising themselves at least the \$10,000,000 which the Western Pacific now offers. Such independent reorganization would involve either an assessment on the bondholders or probably at least 25 per cent. or the acceptance of new securities much less desirable than those now offered under the plan of this committee.

The Perkins Committee has arranged to lend bondholders \$25 per bond (the equivalent of the February coupon) in the security of their bonds. Under the offer of the Western Pacific, the February coupon is purchased by it, and whether the plan fails or succeeds, the bondholder has no liability for repayment. The like offer is made in respect of the August next coupon if the plan is then operative. Coupons so purchased are subordinated to the principal and future interest of the refunding bonds. Finally, the Perkins Committee offers a thing but a possibility. We offer a concrete, definite and constructive plan. If not accepted by the assent of the requisite number of bonds in the short time limited, prior to March 1 next the offer may have to be withdrawn. In such case the bondholders may be left at the mercy of such offer as "one or more connecting lines" may then be willing to make, or perhaps to be driven to the necessity of an independent reorganization.

James H. Perkins, chairman of the so-called Perkins committee for the Denver & Rio Grande refunding 5s and adjustment 7s, said:

I have read the statement of the Hammond committee. The committee to which I belong is not a Missouri Pacific committee. It is a committee representing bondholders of the Denver road. It was not formed until the Western Pacific plan was published, and was formed because

The Western Pacific plan did not seem fair to the Denver bondholders. Our committee believes the Denver is a very valuable property, and that the Denver bondholders have a right to a plan which will properly reflect that value. Our committee will, therefore, oppose any effort to jam through before March 1st a plan which it regards as unfair and unjust in the interests of the Western Pacific. Deposit with the Hammond Committee now means that the bondholder irrevocably consents to the Western Pacific plan before he knows whether he has got the best terms available.

The Western Pacific Railroad Corporation is offering to holders of Denver & Rio Grande adjustment mortgage 7 per cent bonds of 1932, both on account of principal and unpaid interest, 50 per cent of new sinking fund 5 per cent bonds and 50 per cent of new 7 per cent cumulative preferred stock of Denver & Rio Grande Western or of a new company to be organized in its stead. The offer is made contingent on the effectiveness of the proposed plan of reorganization, which hinges on the deposit of 80 per cent of Denver & Rio Grande first and refunding 5s. This is virtually the same offer made to the holders of 5 per cent bonds, except that they receive their interest in cash, while the interest on the adjustment 7s is payable in new securities.

The Western Pacific owns \$5,175,000 adjustment 7s out of a total issue of \$10,000,000, and has issued its ten-year 4 per cent notes against them. These noteholders are offered the privilege of exchanging their notes for the new securities of Denver & Rio Grande Western or its successor on the same terms with respect to principal accorded holders of adjustment 7s.

ERIE.—Asks Government Loan.—This company has applied to the Interstate Commerce Commission for a loan of \$5,000,000 from the revolving fund to assist it in meeting the maturity of \$15,000,000 of three-year notes which come due on April 1.

Earnings in 1921.—This company showed a net railway operating income for the year 1921 amounting to \$2,133,697, after charging in for 1921 approximately \$3,000,000 on account of transactions applicable to the guaranty period. Excluding such charges, the net railway operating income for the year would have been \$5,062,541. As compared with the company's report to the Interstate Commerce Commission in 1920, showing a net railway operating deficit of \$16,994,118, the Erie's 1921 record represents an increase of \$19,127,815.

In 1920 surplus over charges, based on federal compensation for eight months, was \$4,438,585, equal to \$1.67 a share on the \$112,481,900 common stock after preferred dividends. Its earnings last year were equivalent to 4 per cent dividends on both classes of preferred stock, with a balance of \$138,265.

GREAT NORTHERN.—Bond Sale.—A syndicate headed by J. P. Morgan & Co., has sold \$30,000,000 5½ per cent, 30-year general mortgage series B bonds, maturing January 1, 1952, at 96½ and interest, to yield 5.75 per cent.

GULF, MOBILE & NORTHERN.—Asks Government Loan.—This company has applied to the Interstate Commerce Commission for a loan of \$1,088,188 for 15 years from the revolving fund.

ILLINOIS CENTRAL.—Asks Authority to Issue Equipment Trust Certificates.—Application has been filed with the Interstate Commerce Commission for authority to issue \$3,255,000 of equipment trust certificates at 5½ per cent, which it is proposed to sell to Kuhn, Loeb & Co., at 97½, for the purchase of 350 refrigerator cars from the General American Car Company, 2,000 gondola cars, including 500 from the American Car & Foundry Company, 700 from the Pullman Company, 400 from the Western Steel Car & Foundry Company and 400 from the Standard Steel Car Company.

KANSAS CITY NORTHWESTERN.—Asks Government Loan.—This company has applied to the Interstate Commerce Commission for a loan of \$1,300,000 for 15 years.

MANISTIQUE & LAKE SUPERIOR.—Asks Authority to Abandon Line.—This company has applied to the Interstate Commerce Commission for a certificate authorizing abandonment of its McNeil branch in Schoolcraft County, Mich., 7½ miles.

MISSOURI & NORTH ARKANSAS.—Sale Ordered.—Sale of this road, which suspended operation last July, was ordered in a decree issued by United States District Judge Jacob Trieber at Little Rock, Ark., February 7. The decree provides that 30 days may be given for the settlement of as many claims as possible, and that 30 days more for advertising the sale must ensue before the sale takes place. The minimum bid which may be accepted

for the road under the order is \$3,000,000. The sale will be held at Harrison, Ark., its headquarters.

The Missouri & North Arkansas extends from Joplin, Mo., to Helena, Ark., 368 miles. The road has been in the hands of a receiver since April 1, 1912 and was forced to cease operations when its officers failed to raise money needed to run it. Various plans have been attempted to bring about the resumption of operation, including the request of a loan of \$3,500,000 from the government, most of which would be used to pay indebtedness.

MISSOURI, KANSAS & TEXAS.—Suit Filed.—The Central Trust Company of New York filed a suit in the United States District Court at Topeka, Kans., on February 4, to foreclose the first extension mortgage bonds and seven subsequent issues of this company, which has recently been reorganized. The face value of the outstanding extension bonds is given as \$3,253,000. Permission to file the suit was obtained from Judge Walter H. Sanborn at St. Louis January 23. The petition alleges the railroad company executed a mortgage on certain of its branches, franchises and other property on November 1, 1894, on which interest has been unpaid since 1915.

NORFOLK & WESTERN.—Asks Authority to Issue Bonds.—This company has applied to the Interstate Commerce Commission for authority to issue and sell \$666,000 of first consolidated mortgage 4 per cent bonds now held in its treasury for the purpose of reimbursing the treasury for expenditures. The bonds are to be sold at not less than 90.

NORTHERN PACIFIC.—Earnings in 1921.—The preliminary earnings statement for the year ended December 31, 1921, shows net income after taxes and charges of \$22,065,399, equivalent to \$8.89 a share earned on the outstanding \$248,000,000 capital stock against \$7.69 a share in 1920 with the assistance of federal compensation and guaranty. Without federal credits earnings in 1920 were equal to \$1.14 a share.

The preliminary income account compares as follows:

	1921	1920	Changes
Gross	\$94,538,059	\$113,084,407	Dec. \$18,546,348
Expenses, taxes, etc.	86,662,883	111,111,029	Dec. 24,448,146
Operating increase.....	\$7,875,176	\$1,973,378	Inc. \$5,901,798
Equipment, rents, etc.	2,968,650	5,976,680	Dec. 3,007,430
Net operating increase. .	\$10,843,826	\$7,949,458	Inc. \$2,894,368
Other income.....	26,552,682	7,549,833	Inc. 19,002,849
Total income.....	\$37,396,508	\$15,499,291	Inc. \$21,897,217
Interest, rentals, etc.	15,331,109	12,668,240	Inc. 2,662,869
Net income.....	\$22,065,399	\$2,831,051	Inc. \$19,234,348
Dividends	17,360,000
Surplus	\$4,705,399
Inv. in road and equipment.	3,525,048

*Includes \$12,451,530 for additional dividend received from Burlington in December, 1921. This payment was made out of savings accumulated since purchase of an interest in the Burlington in 1901.

During the year the company has paid obligations as follows: Five-year 6 per cent note to government, not due until November 23, 1925, \$6,000,000; St. Paul-Duluth Division 4 per cent bonds, \$2,403,000; 7 per cent equipment trust certificates, \$450,000; prior lien bonds, \$276,000; and St. Paul & Northern Pacific bonds \$36,000, making a total of \$9,165,000.

OREGON-WASHINGTON RAILROAD & NAVIGATION COMPANY.—Bond Offering.—A syndicate headed by Harris, Forbes & Co. and including the Guaranty Company, Kissel, Kinnicut & Co., White, Weld & Co., the National City Company, and Clark, Dodge & Co. are offering \$8,800,000 first and refunding 4s, due 1961, at 78½, to yield over 5.30 per cent.

SEABOARD AIR LINE.—Condition of Equipment After Federal Control.—Seaboard-Bay Line Company Organized.—This company has taken steps of importance to its security owners in making provision to relieve the condition in which its rolling stock was returned from federal control. In a statement issued February 3, President Warfield points out that over 5,000 cars, or 30 per cent of the Seaboard's freight car ownership, were returned unfit for use, with little progress thus far made with the United States Railroad Administration in recognition of this condition.

A corporation known as the Seaboard-Bay Line Company is being organized by Seaboard interests to provide the means for purchasing, rebuilding or otherwise acquiring or providing for the reconstruction of cars and equipment for the Seaboard Air Line

and equipment for the Baltimore Steam Packet Company (Old Bay Line), the stock of which is owned by the Seaboard. The new company will have a capital of \$1,500,000 paid in from the resources of the two companies by which the stock will be owned.

S. Davies Warfield, who is also president of the Seaboard-Bay Line, explained the purposes of the new company as follows:

Five thousand freight cars—over 30 per cent of the total freight car equipment of the Seaboard Air Line—were returned from federal control unfit for service. This railroad has thus been compelled to pay per diem charges of over a million and a half dollars per annum for the use of foreign cars, because of the condition of its own cars returned. This has been reflected in operations and has resulted in heavy market depreciation of the securities of the company.

In addition, the Railroad Administration during federal control diverted more locomotives from this railroad to other roads than from all railroads of the South combined. By this diversion—which included 26 new locomotives then being delivered—those remaining were not given classified repairs. During federal control over one hundred million tractive ton miles were run out of the railroad's locomotives without substantial repairs, in excess of the mileage run up when taken over. No adequate adjustment has yet been offered by the Railroad Administration for either their use or repairs. Half a million dollars had to be spent to quickly repair locomotives in outside shops to enable the railroad up its return to begin to perform its duty to the public. These conditions have otherwise had to be relieved.

Arrangements have been completed to reduce or wipe out per diem charges, also to provide Baltimore Steam Packet Company (Old Bay Line), owned by the Seaboard, with two steamers, one additional steamer to be added to the fleet, the other to replace the one destroyed by fire during federal control through what Circuit Court Judge Rose termed gross negligence. The Steam Packet Company was returned with two steamers only, no relief steamer, and the property otherwise set back under federal control.

The new company—the Seaboard-Bay Line Company—will issue, and has arranged to place \$4,600,000 6 per cent 15-year equipment trust certificates at par. The proceeds, together with the other resources of the new company, will be immediately reconstructed by the Chickasaw Car & Shipbuilding Company, located on Seaboard rails at Birmingham, Ala.; also 1,750 new steel under-frame freight cars; 25 Mikado locomotives nearing completion by the American Locomotive Company, and two twin-screw, steel, combination passenger and freight steamers ordered from Pusey & Jones Company, Wilmington, Del., for the Baltimore Steam Packet Company far use between Baltimore and Norfolk, Va.—these steamers will be the last word in marine construction, and will be delivered in the fall.

Delivery of the 3,000 reconstructed cars will begin in 60 days and completed in six months. To reconstruct these cars and complete necessary work on others would require two and a half years in the Seaboard's own shops, which compares favorably in capacity with shops of similarly situated railroads. Per diem charges against operation will thus cease two years earlier, and the work done at much less cost than if performed in Seaboard shops.

When the increased locomotive power and the reconstructed and additional new equipment is in operation, a substantial change may be looked for in the net operating results of this railroad in the saving of per diem alone.

The letting of this work on competitive bids to car builders at much lower cost and much earlier delivery than is possible in Seaboard shops is no reflection on any class of Seaboard employees. This railroad's men are earlier, and the work done at much less cost than if performed in Seaboard shops.

SEABOARD-BAY LINE.—*New Company.*—See Seaboard Air Line.

WESTERN PACIFIC.—*Reorganization of D. & R. G.* See Denver & Rio Grande.

WICHITA FALLS & SOUTHERN.—*Asks Authority to Issue Securities.*—This company has applied to the Interstate Commerce Commission for authority to issue \$144,000 of capital stock and \$1,556,000 of first and second mortgage 6 per cent. gold bonds.

Additional Sales of Equipment Trusts

The director-general of railroads has confirmed an additional sale of railroad equipment trust certificates to the Girard Trust Company of Philadelphia; Chicago & Eastern Illinois, 1923 to 1935, inclusive, \$429,000; Missouri, Kansas & Texas, 1923 to 1935, inclusive, \$728,000. Total amount of these sales \$1,157,000. The total amount of equipment trust certificates sold by the government to date, at par plus accrued interest, is \$219,289,100.

Dividends Declared

B. & O., Rochester & Pittsburgh—Common, \$2, semi-annually, preferred \$1, semi-annually, both payable February 15 to holders of record February 1.

Crocker-Corbin Central—Preferred, 1 per cent, quarterly, payable March 1 to holders of record February 1.

Trend of Railway Stock and Bond Prices

	Feb. 1	Last week	Last year
Average price of 100 preferred railway stocks	79.8	86.15	87.42
Average price of 100 preferred railway bonds	81.00	81.50	78.74

Railway Officers

Executive

Hugh Wright Stanley, whose election as president of the Tennessee Central, with headquarters at Nashville, Tenn., was announced in the *Railway Age* of January 28 (page 304),

H. W. Stanley

was born on February 13, 1874, at Petersburg, Va. He entered railroad service in May, 1890, as a telegraph operator on the Norfolk & Western, and was successively telegraph operator, stenographer, and chief clerk until 1895, when he left to become chief clerk to the superintendent of the Southern at Knoxville, Tenn. In May, 1897, he became secretary to the general superintendent of the Seaboard Air Line at Hamlet, N. C. He served successively as chief clerk to the general superintendent from 1900 to 1903; trainmaster from 1903 to May, 1906; division superintendent from May, 1906 to February, 1907; superintendent of transportation, with headquarters at Norfolk, Va., from February, 1907 to March 1, 1910; general superintendent of transportation from March 1, 1910, to October 1, 1911; assistant general manager from October 1, 1911, to May 1, 1912; general manager from May 1, 1912, to October 1, 1914, and assistant to the president from October 1, 1914, to June, 1916. He was then engaged in special work for the National Conference Committee of the Railways and the A. R. A. and was later made assistant to the chairman of the commission on car service, at Washington, D. C. In July, 1917, he was made receiver of the Tennessee Central, which position he held up to the time of his recent election.

Financial, Legal and Accounting

Eugene Wright, whose appointment as secretary of the Long Island was announced in the *Railway Age* of January 28, page 304, was born at Flushing, L. I., on May 8, 1871.

E. Wright

He attended the public and high schools there and in January, 1889, entered the employ of the Long Island as messenger boy in the accounting department. Until February, 1893, he served in various clerical capacities and from that time until June, 1897, was clerk and bookkeeper to the cashier. From the latter date until April, 1906, he was bookkeeper and chief accountant in the accounting department. In April, 1906, he was appointed paymaster, which position he held until February 1, 1919, when he was promoted to general storekeeper. He was serving in this position at the time of his recent appointment.

E. J. Lawler, has been appointed freight claim agent of the Columbus & Greenville, with headquarters at Mobile, Ala., succeeding **J. H. Patterson**, resigned.

A. M. Warren, chief claim agent of the Louisville & Nashville, with headquarters at Louisville, Ky., has been appointed assistant district attorney of that road for Kentucky and Virginia, with the same headquarters. **H. T. Lively**, freight claim agent, with headquarters at Louisville, has been promoted to general claim agent with the same headquarters. He will have jurisdiction over claims for loss and damage to freight, personal injuries, damage to property, including live stock killed or injured on the right of way, and the prevention of causes for loss and damage freight claims. The positions of chief claim agent and freight claim agent are abolished.

Operating

G. W. Bradley has been appointed trainmaster of the Fort Wayne division of the Pennsylvania, with headquarters at Fort Wayne, Ind.

David E. Nichols, trainmaster of the Northern Pacific, with headquarters at Duluth, Minn., has been transferred to the Pasco division, with headquarters at Spokane, Wash.

W. E. Rominc has been appointed trainmaster of the Missouri Pacific with jurisdiction over the Wagoner, Greenwood and Fort Smith districts and the Central division, with headquarters at Van Buren, Ark.

M. F. Weeks has been appointed assistant superintendent of the McGehee district of the Missouri Pacific, including the McGehee yard, the Hamburg district and the Louisiana division, with headquarters at McGehee, Ark.

J. M. Sommers, chief dispatcher of the Grand Trunk, with headquarters at Battle Creek, Mich., has been promoted to trainmaster, with headquarters at Elsdon (Chicago) Ill. He will be succeeded by **B. L. Tyler**, at Battle Creek.

C. A. Veale has been appointed trainmaster of the Southern Pacific, with headquarters at Oakland Pier, Cal., succeeding **W. G. Crocker**, who has been assigned to other duties. The position of assistant trainmaster of the East Bay Electric division has been abolished.

C. A. Cotterell, assistant general superintendent of the Canadian Pacific, with headquarters at Vancouver, B. C., has been appointed acting general superintendent with the same headquarters, succeeding to the duties of **F. W. Peters**, who has been granted a leave of absence.

H. H. Brown, assistant general manager of the St. Louis-San Francisco, with headquarters at Springfield, Mo., has been granted a leave of absence until March 1, after which date the position of assistant general manager will be abolished and Mr. Brown will be assigned to other duties.

J. Leppla, superintendent of the Galena Division of the Chicago & Northwestern with headquarters at Chicago, has been transferred to the Ashland Division with headquarters at Antigo, Wis., succeeding **G. J. Quigley** deceased. He will be succeeded at Chicago by **P. G. Campbell**, assistant superintendent of the Galena Division, who will be succeeded by **F. R. Loyd**, assistant superintendent of the Iowa Division, with headquarters at Clinton, Iowa. **A. R. Pelnar** will succeed Mr. Loyd.

H. E. McGee, general manager of the Missouri, Kansas & Texas of Texas, with headquarters at Dallas, Tex., has been appointed general manager of the Missouri, Kansas & Texas, with headquarters at Parsons, Kan., succeeding **A. S. Johnson**, who has been appointed superintendent of the consolidated Smithville and Texas Central districts (South Texas district) of the Missouri, Kansas & Texas of Texas, with headquarters at Waco, Tex. The position of general manager of the Texas lines has been abolished. **J. W. Evens**, has been appointed trainmaster of the new South Texas district, with headquarters at Waco, and **O. W. Cambell** trainmaster, with headquarters at Smithville, Tex.

Traffic

O. C. Walker has been appointed chief supervisor of perishable traffic and weighing of the Canadian Pacific, with headquarters at Montreal.

Joseph Rankin has been appointed general agent of the Gulf Coast Lines and **J. R. Yore**, commercial agent, both with headquarters at St. Louis, Mo.

W. H. Deacon, traveling passenger agent of the Canadian Pacific coast steamship service, with headquarters at Vancouver, B. C., has been promoted to general agent, with headquarters at Portland, Ore., succeeding **E. E. Penn**, deceased.

R. D. Williams has been appointed traffic manager of the Sacramento Northern, with headquarters at Sacramento, Cal., succeeding **Z. T. George**, who has resigned to enter other business. **J. J. Harris** has been appointed general passenger agent with the same headquarters.

William C. Bowles, whose appointment as assistant freight traffic manager of the Canadian Pacific was announced in the *Railway Age* of January 14, page 210, was born in Montreal on June 3, 1875.

W. C. Bowles

He entered railway service with the Canadian Pacific as a clerk in the general freight office at Montreal. In 1896 he was in Chicago as chief clerk to the general agent, freight department, and in 1897 he was in Montreal in the office of the general freight agent. From the latter date until 1903 he was chief clerk to the trainmaster and general freight agent at Winnipeg, when he was promoted to assistant general freight agent at Calgary, Alta., being transferred later in a similar capacity to Vancouver.

In 1907 he was appointed general freight agent at Winnipeg and served in that capacity until the time of his recent promotion.

Clarence E. Jefferson, whose appointment as general freight agent of the Canadian Pacific, with headquarters at Winnipeg, Man., was announced in the *Railway Age* of December 24 (page 1291), was born at Boston, Mass., on September 6, 1889. He entered railroad service on September 10, 1906, as an office boy in the traffic department of the Canadian Pacific Dispatch at Boston, and he was successively office boy, billing clerk, tracing clerk, and tariff and percentage clerk until November, 1911, when he left to become tariff clerk in the freight traffic office of the Boston & Maine at Boston. He later consecutively held the same position in the service of the Maine Central and the New York, New Haven & Hartford at Boston. In March, 1913, he was made percentage clerk in the freight traffic office of the Canadian Pacific at Montreal, Que., which position he held until December, 1915, when he was promoted to assistant general freight agent, with headquarters at Montreal. From June, 1921, to December of the same year, he was acting general freight agent, Eastern lines, with the same headquarters, which position he was holding at the time of his recent promotion.

Mechanical

A. B. Shanks, master mechanic of the Missouri, Kansas & Texas of Texas, with headquarters at Smithville, Tex., has been appointed master mechanic in charge of the newly created South Texas district, with headquarters at Waco, Tex.

T. F. Howley, special agent for the Erie, has been appointed superintendent of locomotive operation, with headquarters at New York.

H. K. York, car foreman of the Canadian Pacific, with headquarters at Alyth, Alta., has been promoted to general car foreman, with headquarters at Moose Jaw, Sask.

G. Moth, division master mechanic of the Canadian Pacific, with headquarters at Edmonton, Alta., has been appointed to the advisory position of district master mechanic of the Edmonton, Dunvegan and British Columbia, with the same headquarters.

William C. Smith, whose appointment as mechanical superintendent of the Missouri Pacific, with headquarters at St. Louis, Mo., was announced in the *Railway Age* of February 4 (page 356), was born at Detroit, Mich., on September 25, 1869. He entered railroad service in December, 1887, as a machinist's apprentice on the Missouri Pacific. He left in April, 1895, to enter the service of the Atchison, Topeka & Santa Fe as a machinist. In December of that year he returned to the Missouri Pacific as a gang foreman and, in January, two years later he was made a machinist. He was promoted to shop foreman in September, 1897, and to division foreman in January, 1902, which latter position he held until January, 1905, when he was promoted to master mechanic. In July, 1912, he was promoted to general master mechanic and in September, 1915, to assistant mechanical superintendent, with headquarters at St. Louis, which position he was holding at the time of his recent promotion.

W. C. Smith

Engineering, Maintenance of Way and Signaling

F. J. Nevins has been appointed valuation engineer of the Chicago, Rock Island & Pacific, with headquarters at Chicago.

D. C. Fenstermaker has been appointed principal assistant engineer of the Chicago, Milwaukee & St. Paul, with headquarters at Chicago, and with such duties as may be assigned to him by the chief engineer, effective February 1. Mr. Fenstermaker was formerly district engineer of the Southern district of this road but has been on leave of absence since April 16, since which time he has been engaged in the construction of a railway for the United Fruit Company in Cuba.

E. L. Martin, engineer maintenance of way of the Missouri, Kansas & Texas of Texas, with headquarters at Dallas, Tex., has been appointed engineer maintenance of way of the Missouri, Kansas & Texas, with headquarters at Parsons, Kan., succeeding H. H. Jolnitz, who has been assigned to other duties. **W. W. Marshall**, district engineer, Texas lines, with headquarters at Waco, Tex., has been appointed district engineer in charge of the newly created South Texas district, with the same headquarters.

Obituary

C. J. Quigley, division superintendent of the Chicago & North Western, with headquarters at Antigo, Wis., died of pneumonia at Lyons, Wis., on September 15, 1861. He entered railroad service in February, 1881, as a station helper on the Chicago & North Western, since which time he has been successively telegraph operator, agent, general yard-

master at the Chicago terminal, assistant division superintendent with headquarters at Chicago, and division superintendent, which latter position he was holding at the time of his death.

William F. Merrill, formerly a vice-president of the Erie and of the New York, New Haven & Hartford, died at his home in Plainfield, N. J., on February 3. Mr. Merrill was born on July 14, 1842, at Montague, Mass., and was educated at Amherst and Harvard Universities. In 1866 he entered railway service in the engineering department of the Chicago, Burlington & Quincy. From 1873 to 1875 he was resident engineer of the Erie at Buffalo, N. Y. Then for five years he was with the Toledo, Peoria & Warsaw (now Toledo, Peoria & Western), consecutively as assistant engineer, assistant to the receiver and superintendent. From 1880 to 1882 he was general superintendent of the Wabash. The following year he was general superintendent of the Chicago & Alton. From 1883 to 1887 he was superintendent of the Iowa lines of the Chicago, Burlington & Quincy. He then became general manager of the Hannibal & St. Joseph and the Kansas City, St. Joseph & Council Bluffs (both now a part of the Chicago, Burlington & Quincy). In 1890, he went to the Chicago, Burlington & Quincy in a similar capacity and remained in that position until 1896 when he was elected second vice-president of the Erie. In 1900 he became first vice-president of the New York, New Haven & Hartford and in 1903 retired from railroad service.

E. H. Shaughnessy, second assistant postmaster general in charge of the railway mail service, died at a hospital in Washington, D. C., on February 2, from the effects of injuries sustained in the Knickerbocker theatre catastrophe in that city on January 28. Mr. Shaughnessy was born in Chicago on October 26, 1882. He entered railroad service in July, 1899, as a telegraph operator on the Chicago & North Western and during the following 18 years he served continuously in various capacities on this road, both in Chicago and at other points on the line. On May 28, 1917, while trainmaster at Chicago, he was granted a leave of absence to enter military service. He rose from the rank of first lieutenant to lieutenant-colonel, and was assigned in France to the transportation corps, successively serving as general superintendent, assistant general manager, general manager and acting deputy general of transportation of the advance section. While "over there" he collaborated with the French military and civilian railway men in the preparation of a French-English book of rules for railway operation. He was commended for conspicuous service at Chateau Thierry, awarded the distinguished service medal and decorated with the Legion of Honor by the president of France. Upon his return from overseas, in September, 1920, Colonel Shaughnessy resumed his duties with the Chicago & North Western, as trainmaster on the Galena division, with headquarters at Sterling, Ill. He soon left railroad service to accept an appointment as assistant director, division of transportation, American Petroleum Institute, with headquarters at New York. He was appointed second assistant postmaster general in April 1921, which position he was holding at the time of his death.

E. H. Shaughnessy

THE RATE OF EXCHANGE on freight shipments between points in Canada and the United States will be 4 1/2 per cent and the surcharge 3 per cent from February 1 to February 14, inclusive. The rate of surcharge on inter-sectional passenger business will be based on a 4 per cent exchange.

As will be noted on another page of this issue, a bascule bridge of an entirely new type was recently placed in service on the Wabash at Detroit. This structure is of interest as marking the first important innovation in bascule bridge design for a number of years. About 1900 new developments in bridges of this class were rather common but for the last 10 or 15 years the structures built have been limited almost entirely to two or three types. These have not competed with new bascule designs but with vertical lift spans, a class of movable bridge in which the development during the last 10 years has been much more active. The fact that a new design of heel trunnion span has been evolved serves to indicate that the last word has not yet been said in the development of the bascule bridge.

A New Type of Bascule Bridge

The effectiveness of an army is largely dependent on the quality of its subalterns; that of a railroad depends largely on its foremen. Given a corps of intelligent, thoroughly-trying foremen, whose energies are being directed by a loyal enthusiasm for the company which employs them, and efficiency of work is assured. Times like these are exceedingly trying for the spirit of these foremen. "I was put back to painter early last year," writes one of them, "but was reinstated as foreman in July. The first of this year I was set back to assistant foreman with only three men, but I hope it will not last long." This is not from an employee of limited service, but from one who has given at least 25 years of his life to the railroad. Surely these vicissitudes must sorely try his loyalty, must make him feel that he is but a pawn on a great chessboard. Retrenchments are necessary and will continue so as long as our economic life is marked by waves of expansion and depression. But would it not be possible to carry out the drastic reductions in force with a greater manifestation of sympathy for those who suffer hardships in consequence? Explanations to these loyal foremen of the conditions that make it necessary to lay them off, together with assurances of restored positions as soon as conditions change for the better, would bring a return in sustained good will far exceeding any outlay involved.

The Human Side of Railroading

The general character of the motive power operating problem on the small road is not essentially different from that on a large system. The number of locomotives may be comparatively small but the changes that have taken place in economic conditions, the increased size of bills for fuel and maintenance, coupled with inadequate revenues, have rendered it just as essential that every step possible be taken to reduce the cost of locomotive operation. The small road may not be called upon to haul long and heavy trains, and relatively light locomotives may furnish adequate power, but the locomotives on such roads are usually notably inefficient and frequently quite old. It may not, and generally will not be feasible at

Locomotives for Small Roads

the present time to order new and modern locomotives. However, some small roads have made remarkable reductions in fuel consumption and in maintenance costs by replacing their worn-out locomotives by rebuilt locomotives purchased from larger roads. There are thousands of locomotives which no longer are capable of economically handling main line traffic, but which, if rebuilt and equipped with superheaters and other fuel economizers, are capable of efficiently meeting all the requirements of the average small road.

This phrase is used in England to describe the constant increase in the number of conditions under which reduced passenger fares are applied. The railways have not made any reductions in basic rates, yet they announce at frequent intervals additions to the imposing list of conditions under which reduced rates apply. There would be few to contradict the statement that in this country reductions in freight rates are of greater economic importance than reduced passenger fares. Any changes that may be made in passenger rates, then, should not be concessions to the traveling public resulting in reduced earnings for the carriers—if such sacrifices are made they should be in freight rates. The only justification for alterations in our passenger tariffs should be to increase—not reduce—railway revenues. In other words, what our railways need is to fill the vacant seats in trains now running—by the extension of the sale of excursion and tourist tickets at reduced rates, if necessary, and without permitting ordinary traffic to move under the lower rates. Our roads have taken some steps in this direction, but the British railways have gone farther and are making a thorough experiment with these rates which can well be followed with interest. If "reductions by installments" can be made to increase net earnings and at the same time to build good-will for the railways in the minds of the public, then the practice should be given wider application in this country.

"Reductions by Installments"

The railroad problem in the United States would be fairly easy to solve were it not for the labor situation. The roads will never succeed if they do not have the hearty co-operation of their employees. Do the labor leaders want to destroy the roads? Are they doing anything to help to bring about the right sort of co-operation? Fairness and frankness must characterize all negotiations and intercourse between the managements and the men—any other course followed by either the managements or the men is suicidal. The labor union leaders for some years, for reasons best known to themselves, have apparently believed that it was good policy to throw mud at the railroad managements; sometimes referring to misdeeds of the past, sometimes through misrepresentation by skillful juggling with figures in the hands of the so-called expert labor economists. Secretary Hoover, when cross-examined in the Interstate Commerce Commission general rate investigation, neatly called the turn on

Time to Play Fair

The general character of the motive power operating problem on the small road is not essentially different from that on a large system. The number of locomotives may be comparatively small but the changes that have taken place in economic conditions, the increased size of bills for fuel and maintenance, coupled with inadequate revenues, have rendered it just as essential that every step possible be taken to reduce the cost of locomotive operation. The small road may not be called upon to haul long and heavy trains, and relatively light locomotives may furnish adequate power, but the locomotives on such roads are usually notably inefficient and frequently quite old. It may not, and generally will not be feasible at

Clifford Thorne, who represented certain shippers, when he referred to past financial transactions. "Oh yes," Mr. Hoover said, "I have been hearing about that ever since I was a boy, but we have got to live for the future and not rehash the past." One of the nastiest critics of railroad managements is the Plumb Plan publication known as "Labor." It is not only poisoning the minds of railroad employees but, through the influence of the labor unions, is being widely quoted in the daily newspapers and is carrying on a most unfair propaganda against the railroads. Possibly it is not out of place in this connection to take another quotation from Mr. Hoover's testimony: "Finally, I want to refer to the veritable witches' cauldron being fed constantly with hates distilled from the misdeeds of railway promoters in the past, from the conflicts between the railways and the farmers, between the railways and their workmen. From all the confusion that arises from it we destroy our railways and destroy ourselves. With this commission on one hand assuring honesty in finance, justice to the shipper and the railway investor; with the Railway Labor Board assuring justice to workers and, above all, with a great spirit of public service in our generation of railway managers, it is time to call off the witches and take some vision of our national situation if we are to pull ourselves out of this depression." Is it not fair time that the reactionaries among the railroad executives and the radicals in the ranks of railroad labor awakened to the disaster that surely lies ahead unless they get together on a common basis and stop trying to cut each other's throats?

In considering the proposed order for train control prepared by the Interstate Commerce Commission, the railroads must necessarily be guided largely by the specifications contained in it. However, it would appear that these specifications were prepared with the idea that many changes will be found necessary after more extensive service installations have been made. Inasmuch as they appear to represent what are considered as the theoretically ideal requisites it would seem that the Commission must allow the carriers considerable latitude in the selection and installation of devices which they think will best meet their respective operating conditions. One road may desire a device having speed control and a positive stop; another may desire one without the speed feature and with a permissive stop, while still other carriers may desire different combinations. If progress is to be made in this development and experimental work it will be for the railroads to be allowed a certain degree of freedom and it is to be hoped that the officers studying this problem will be encouraged to interpret the specifications liberally in order that the maximum information may be secured.

A picture was recently received in this country from Japan showing two Japanese laborers shaping a long bridge timber with a cross-cut saw. The timber was supported above the ground and one bare-footed sawyer stood on it, the other working from underneath. While this method of sawing lumber may be economical and satisfactory in countries where laborers can live on a few ounces of rice a day, the standard of living in America is higher, labor receives relatively greater pay, and economical operation in most industries can be secured only by utilizing labor-saving machinery wherever possible. Owing to the greatly increased use of steel in bridge, car and building construction and repair work during the past few years, many people forget how much wood is still used for

these purposes. Consequently they fail to appreciate the need of modern woodworking machinery in car shops. Mill room equipment receives far less attention than formerly and less, in fact, than it deserves. A single large eastern railroad, for example, uses approximately 100,000,000 board feet of lumber annually for bridge timbers, car sills, framing, flooring, roofing, siding, lining, etc., exclusive of ties. When it is remembered that there are about 200 Class I roads in the United States some of which use less but others probably more lumber than the road quoted, some conception is reached of the enormous total consumption. The need of modern efficient woodworking machinery for finishing this lumber is self-evident.

The electrical illumination of passenger car equipment has been established for years. However, far too many roads accept the charges for this service as necessary without ascertaining the actual cost of lighting a car each month. On a certain large western road an officer inquired recently regarding the car lighting costs only to learn that no one had checked such charges lately. A hurry-up call was then sent out to assemble all charges for battery renewal parts, jars, generators, belts, and other equipment. Time-books of various electricians and car repairs were checked, etc. The result of the accounting showed that while the average cost of car lighting was well within reason certain excessive expenditures were very evident. Having inaugurated an accounting system for various car lighting equipment and parts, this road is now in a position to introduce numerous economies. Another road discovered that the charges for repair parts and labor for the maintenance of the batteries on a certain car were three times what they should have been. This road also is now delving into the detailed charges of its car lighting service. One expert claims that over \$10,000,000 is spent annually for car lighting equipment and repairs; every road should know where its share is going. Some roads prefer to have all car lighting equipment furnished and maintained by a supply company on contract at a certain price per car per month; the Pullman Company also has a fixed rate for lighting cars furnished to the railroads. A comparison of these figures with the actual charges on many roads should show that extensive economies in car lighting service are possible.

**Car
Lighting
Costs**

The discussion of the question whether train orders may safely be intrusted to station operators, to be delivered without requiring conductors to sign them,

**The Argument for
Train-Order
Form 19**

which was continued through a half dozen issues of the *Railway Age* last autumn, was unavoidably suspended in December, while yet unfinished; but it is resumed this week, and the article from F. W. Weston, of the Northern Pacific, now presented, may well serve as a concluding chapter. (The articles referred to appeared in the issues of September 10, pages 474 and 479; September 24, pages 557 and 562; October 8, page 662; October 15, page 703; November 12, page 933; December 3, page 1107 and December 10, page 1129.) It seems to us that the advocates of Form 19 have won their case. Mr. Weston clinches his argument with a statement, quite conservative, of money saved, but he has a strong case aside from that. On a busy single-track line simplicity and celerity are important elements in train operation, even if they were costly. The punctuality and regularity of passenger trains, promoted by improving the movement of all trains, is a valuable asset, even though it cannot be financially measured. The experiences of the Great Northern and the Hocking Valley confirm

**Don't Neglect
Mill Room
Equipment**

the Northern Pacific's report. It should be noted in particular that neither Mr. Forman nor Mr. Weston rests his argument on having the train order system reinforced by the block system. The block system should be used everywhere; and those roads which have discontinued Form 31 only where they have automatic block signals cannot claim to have done any great thing. We say that our friends have made out their case; but this does not mean that there can be mathematical proof. These experienced observers are, indeed, perfectly satisfied that fewer failures have occurred with Form 19 than with Form 31, and that in the nature of the case the conditions in the future must be like those of the past; but, as everybody knows, a disastrous collision always gives a black eye to all those features connected with its cause which are not ideally perfect, whatever may be the main cause; and therefore it is proper to bear in mind that those dispatchers who argue for Form 19 make no claim of infallibility. The best thing for the doubter to do is to read the arguments over again, and do the whole job at one sitting.

Efficiency of Government and Private Operation

THE most striking fact in the railroad history of the year 1921, except the decline of traffic, was the large reduction of operating expenses. The most striking feature of the reduction of expenses was the very large part of it which was effected by reducing the number of employees.

Two former director generals under government operation, W. G. McAdoo and Walker D. Hines, recently have been testifying before a Senate committee in an effort to show that the railways were operated with the greatest efficiency practicable under government control. They made special efforts to vindicate the Railroad Administration's labor policy. Meantime, the railways under private operation have been effecting increases in efficiency and economy which afford the best answer to the statistics and arguments of Messrs. McAdoo and Hines.

The defenders of government operation have made much use of comparisons of the operating expenses under government control in 1918 and 1919 and under private operation in 1920 to support their claim of relatively great efficiency under government control. But, as has repeatedly been pointed out, when the railways were returned to their owners their operating expenses had been increased under government control until they were on the highest level ever reached up to that time. The companies had to operate them with working conditions for employees which had been established by the Railroad Administration. They had to pay until May 1, 1920, the highest scale of wages that was paid at any time under government control, and the rest of the year the still higher wages fixed by the Railroad Labor Board. They had to charge into their accounts materials and supplies at prices which had been paid by the Railroad Administration, and to pay prices for coal which also had been largely established by the government. They had to fight the outlaw switchmen's strikes and to deal with the demoralized transportation conditions which they caused. They had to handle the largest traffic ever moved in a single year.

For these reasons, to compare the operating expenses of 1920 with those under government control is likely to lead to unreasonable and unjust conclusions. The private managements did not have a fair chance in 1920 to make improvements in operating methods which would show the relative economy of private as compared with government operation.

The railways were operated by the government 26 months, during 16 months of which the country was at peace. It is now almost 24 months since they were returned to private

operation. The government had ample opportunity between the signing of the armistice and the return to private operation to show what it could do in operating the railways under conditions of peace. The companies have now had almost two years in which to show whether they can operate the properties more efficiently and economically than the government. The operating results of the closing months of government control and of recent months under private management, therefore, afford material for an instructive comparison of the relative efficiency of government and private operation.

The most outstanding fact about government operation is that under it the operating expenses of the railways were always increasing whether the traffic handled was increasing or not. The traffic handled in 1919 was less than in 1918, but this decrease in the traffic handled was accompanied by an increase in operating expenses. On the other hand, while under private operation in 1920 an increase in traffic was accompanied by a large increase in expenses, as soon as the traffic began to decline the operating expenses began to be reduced, and in the first eleven months of 1921 the total operating expenses were \$1,070,000,000 less than in the same months of 1920.

Furthermore, this reduction of operating expenses has grown relatively greater month by month. Every business man knows that it is extremely difficult in a period of declining business to reduce expenses, and especially labor costs, in proportion to the decline of business. This is especially true in the railroad business. A manufacturer can close his plant and stop most of his expenses. A railway must continue to operate regardless of how much its business declines, and, therefore, most of its expenses must go on. The railways, under private operation, have, however, reduced their expenses almost in proportion to the decline in their business in spite of the fact that the decline in business has been the greatest that ever occurred. They have been rendering more passenger train service than in 1919. They have been handling only about 12 per cent less freight. Wages are the largest item of railway expenses, and the cost of fuel is one of the largest items. They are paying higher scales of wages and higher prices for coal than in 1919. Nevertheless, in the last three months for which complete statistics are available, September, October and November, their total operating expenses were less than in 1919. Their total operating expenses in these months of 1919 were \$1,196,000,000, and in 1921, \$1,142,000,000.

The principal cause of the large and practically uninterrupted increase of operating expenses under government control was the Railroad Administration's labor policy. Mr. McAdoo has attempted to show that if the railways were not operated with the highest efficiency under government control it was largely the fault of railway officers trained under private operation, since they constituted most of his staff. But these railway officers were not responsible for, and most of them were not in accord with, his labor policy, and it was the increase in the number of employees as well as in their wages that caused most of the increase in operating expenses. In December, 1917, when the government took over the railways, they had 1,703,748 employees. In January, 1920, a month before they were returned to private operation, they had 1,953,571 employees, an increase of 249,823. The average number of employees in 1919 was 1,913,422. As already indicated, the railways in 1921 rendered more passenger service than in 1919, and in the first ten months of the year 1921 rendered only 12 per cent less freight service than in 1919. The average number of employees in these months, however, was only 1,656,615, or 13½ per cent less than the average number in the year 1919. The reduction in the number of employees was actually greater than the reduction of freight business handled.

The latest month for which we have complete statistics of railway operation is October, 1921. The railways rendered 371,000 more train miles of passenger service in that month

than in October, 1919. They handled only ten per cent less freight. In October, 1919, however, the number of employees was 1,977,616, while in October, 1921, it was only 1,754,136, a reduction of 223,480, or over 11 per cent. The scale of wages paid was higher than in 1919; and yet the reduction in the number of employees was so great that whereas in October, 1919, the total wages paid were over \$253,000,000, in October, 1921, they were only \$257,600,000.

While the freight business handled in 1921 was less than in 1919, the amount of freight business handled per employee was greater. The number of ton-miles per employee in the first ten months of 1919 was 171,309, while in the first ten months of 1921 it was 174,670. The railways have not only within the last year greatly reduced the number of employees, but they have increased the average miles run by freight trains and adopted numerous other methods which have resulted in greatly reducing the amount of overtime for which they have had to pay. This elimination of overtime paid for at punitive rates helps to account for the reduction in the total wages paid.

It may be said that a large part of the reduction in operating expenses, and especially in the number of men employed, has been due to the reduction and deferring of maintenance work. This is true, but the Railroad Administration was not in the latter part of 1919 using for maintenance relatively any more of the money spent for operation than the railway companies have been recently. In both October, 1919, and October, 1921, the expenditures for maintenance were 46 per cent of the total expenses of operation. The fact is that under private operation the railways have made almost as large reductions in transportation expenses, which represent a real economy, as in maintenance expenses which do not always represent a real economy.

The Interstate Commerce Commission publishes monthly the unit costs per train mile for locomotive repairs, wages of engineers and trainmen, fuel, engine house expenses and other locomotive and train supplies. These "selected accounts" are partly maintenance but chiefly transportation expenses. It is a notable fact that the totals of these "selected accounts" per freight train mile increased from \$1.674 in March, 1919, to \$1.923 in February, 1920, the last month of government control. They were never so high again until after the wage advance granted in July, 1920. They reached their maximum in August, 1920, when they were \$2.40, and after that they were reduced until in June, 1921, although the high wages fixed by the Railroad Labor Board were still in effect, they were \$1.753. In October they were only \$1.639. They had been reduced to almost the same amount as in October, 1919, when they were \$1.617, in spite of the fact that both the wages of engineers and trainmen, and the price of coal were higher in October, 1921, than in October, 1919.

The railways have benefited by the large economies in operation which have been effected under private management. The fact that within recent months they have been earning larger net returns than a year ago is mainly due to the economies that have been made. The public also is benefiting by them. It is an actual fact that although railway labor is being paid a higher scale of wages, the coal operators are being paid more for coal and the public is being charged higher freight and passenger rates than two years ago under government control, the public is really paying practically no more for its freight and passenger transportation than it was two years ago. The last month for which statistics of railway earnings and expenses are available, is November. The total cost of railway transportation to the public in November, 1919, including earnings derived from their rates, with the deficit incurred by the Railroad Administration added and the taxes paid by the railways subtracted, amounted to \$481,000,000. The total cost to the public of railway transportation in November,

1921—that is the total earnings derived from the rates charged, with the taxes paid by the railways subtracted—was \$440,000,000, or 8½ per cent less than in 1919. The number of tons of freight carried one mile was only 10.4 per cent less than in November, 1919. In other words, the railways paid a higher scale of wages to their employees and higher prices for fuel, and yet earned a larger net return and rendered service at a smaller net cost to the public than in November, 1919.

The outstanding things shown by the facts which have been stated are that under government operation, even after the war was over, the general tendency was for the number of men employed and the expenses incurred to increase faster relatively than the traffic increased, while under private operation, both before and since government control, the general tendency always has been for operating expenses and the number of men employed to increase less in proportion than the traffic when the traffic is increasing, and to decline sharply when the traffic declines. The year 1921 was an extremely hard one for the railway companies, but the increases in efficiency and economy secured in that year are the best possible answer to the claims of the defenders of government operation as to its superior efficiency.

On "Selling" the Railroads

THE railways of the United States make as good transportation as any railways in the world. They sell it cheaper than any other railways in the world. They are selling their commodity relatively more cheaply to-day than most other commodities are being sold in this country.

In spite of these facts the management of the railways and their rates are the objects of general and even bitter attack. They are constantly misrepresented, and many people believe the misrepresentations.

What is the reason for this condition of affairs? There can be only one answer. The railways have not been and are not being properly "sold" to the public.

What is wrong with the way they have been and are being sold? The answer to this question might be found in a study of the selling methods of many other classes of concerns which do not make relatively as essential or as good commodities as the railways do, which charge relatively much higher prices for them, make many times as large profits and yet escape all the attacks, all the trials and tribulations from which the railways suffer.

For example, look through the advertising columns of any large magazine or newspaper. Note the large amounts of space which are occupied by the advertisements of automobile companies, chewing gum companies, oil companies, telephone companies and concerns of almost every other kind. Note also that this is "institutional" advertising as well as commercial advertising—advertising intended to "sell" the concern itself as well as its product.

Then look for the railroad advertising. Having found it, if you can find any, compare—or contrast—it with the advertising of other classes of concerns. What you will find of it is good. But you won't find much.

We mention advertising only as an example.

The railways are not "selling" themselves to the public. The trouble is that most of them are not even trying to. If the railways would make relatively as great efforts and spend relatively as much of their earnings in selling themselves to the public as most other classes of concerns do, the railroad problem would speedily be advanced a long way toward solution. If the railways were as efficient in selling themselves to the public as they are in serving the public they would soon be the most popular and among the most prosperous concerns in the United States.

Letters to the Editor

[The RAILWAY AGE welcomes letters from its readers and especially those containing constructive suggestions for improvements in the railway field. Short letters—about 250 words—are particularly appreciated.]

Ammunition for Lauck and Plumb

PHILADELPHIA, Pa.

TO THE EDITOR:

Your columns abound with eulogies for the railroad officials and with condemnation for government ownership and labor unions; therefore, I would like to have you ask this question of railway executives through your columns:

"Why is it, if net returns do not cover operating expenses, that they are continually making capital expenditures for improvements and charging the material and labor to operating expenses? This is in strict violation of I. C. C. Rules and the law governing. Is this done to increase the cost of operation so that they can advertise the facts before the public and better fortify their contention for another wage reduction and hold on to their high rates?"

This practice is being carried out on nearly all railroads and the employees are gathering all the information they can for Jett Lauck and Mr. Plumb's paper "Labor".

I should like to see this answered through your columns by some railway executive. "AN OBSERVER."

College Training Does Not Make the Man

BOSTON, MASS.

TO THE EDITOR:

"One Who Has Seen" (*Railway Age*, December, 10, 1921), still has the Missouri delegation to convince. The Romans gathered "not to bury Caesar but to praise him"; had "One Who Has Seen" been at the gathering, his interest would have doubtless centered on the interment. Having satisfactorily sung the obsequies for the railroad and semi-other-business demise of 61 of his railroad service co-starters; thrown the spotlight on six and the dimmed spotlight on one of the remaining co-starters whom he can recall; lilted his paean of hate for colleges, college education and college men in general; and having placed the other "granger" starter who began his railroading in the president's office at the behest of an influential, interceding friend in a strategic position to finally accept modest praise at the call of "Gunga Din," our college man's friend states—"After all is said and done, the qualities which help men to succeed in life are *born in them* and not taught them," and then naming "two qualities most necessary to success in railroad work," we find that "the 'Call Boy' has these *driven into him* from his start at 16 years of age."

What is this? A case of "Ye must be born again! 'Call Boy,' Ye must be born again!"

No! Our friend "Who Has Seen" and "A. R. A. Clerk" who appeared in *Railway Age* of October 8, are not temperamentally qualified—the former to give an unbiased opinion of the present day representative college and college man, or the latter to give an unsoured estimate of the real non-college railroad man.

A man is a man be he college or self-educated, or be he without education at all; nor can criticism from an embittered viewpoint harm him. "SHOW ME."

Speeding Up Car Movements at Terminals

NORTHWEST REGION.

TO THE EDITOR:

What Mr. Ford is reported to have accomplished on the D., T & I. in the way of speeding up the movement of cars and in getting a full day's work for a day's pay is no more than can be accomplished on other roads and what has been accomplished on some of them. As proof of this I will cite my own experiences in revising the methods of operation of a large terminal.

I came to this railroad about two years ago and had some trouble in getting established, as I was a rank outsider. I used all the diplomacy that I knew, and had to go a little slow for 60 days until I had my bearings and learned the operation of the division. Then I commenced to make changes in the method of operating the terminals. Trains, both inbound and outbound, were being handled from several different yards, cars were being cross hauled and thus delayed, yard power was being worked practically without system and engines were loafing on the job everywhere.

My first move was to line up a system of handling transfer crews connecting with time freight trains, getting them running on a tight schedule so that they had no time to loaf and insisting that time freight trains should run on time every night. The result was that some transfer crews were taken off and our time freight trains moved on time and ahead of time every night. Then I gave the work each engine was doing some study and found out that in some yards power was being milled around, several engines being sent into the same territory to do work that one crew could have done if it had been properly lined up at the start. This resulted in taking off more power, as I was getting more work out of every engine. At the same time I was checking up loaded cars left off time freight trains, cars not placed on repair tracks promptly, and empty cars not moved up and classified, and found that cars were being delayed badly because we had no follow-up system in effect so that we would know just what was being left over after each fast freight train and why.

We started a system under which the agent and yardmaster in each yard kept a check of every car in his territory that would be ready by 5:30 p. m. for the night time freight trains, and also made arrangements with connections so that we knew what loads they were going to deliver us for the night trains. Each yardmaster was held responsible for seeing that every train load in his territory was switched out, weighed and brought to the classification yard in time to connect with the night trains. This was no small job as every time a car was passed up there were any number of excuses as to why the car was not gotten out. By checking each car and demanding an explanation on it, it was not long until every one understood that no excuses would be taken for delayed cars and, like the reduction of power, it now comes easy.

The moving of loaded cars to and from repair tracks was handled in the same way, and a recent check of all of our time freight trains for a period of one week showed that out of all the cars handled on these trains there were but four that did not move on the first train after they were loaded, billed and ready to move, two of these having been held for daylight inspection of contents.

As to getting a full day's work for a day's pay, our record of cost per car as reflected by reports furnished by the auditor for the month of July as compared with previous years shows a decrease in the cost of handling cars of 22 per cent as compared with July, 1918, while since that time men in yard service have received about 58 per cent increase in wages. This has been brought about not only by demanding but getting a full day's work for a day's pay and at the

same time so changing the method of operation and cutting corners in every direction, as not only to speed up the movement of cars, but at the same time to speed up the movement of freight trains over this division; the reduction in the cost of handling cars is thus only a small proportion of the total amount of money saved.

ASSISTANT SUPERINTENDENT.

An Advocate of Soda Ash

INDIANAPOLIS, IND.

TO THE EDITOR:

There is no question about the value of water treatment, for water treating plants have been used by railroads for more than 20 years. Figures compiled by the writer from shop records for switch engines using untreated water showed, in pre-war times, a boiler repair cost of 0.0153 cents per locomotive mile, while switch engines using water of the same chemical character treated in a treating plant showed a boiler repair cost of only 0.0055 cents per locomotive mile. These figures include only shop work and exclude the cost of calking flues between shoppings on the locomotives using raw water, the loss of locomotive time for such work, or the loss in fuel due to scaled heating surfaces. In another instance, a switch engine using a 40 gr. water showed a boiler repair cost 18 times greater than an engine using a 30 gr. water treated in a treating plant. The cost of treated water at the present time, including interest and depreciation on the plant, cost of chemicals, operator's wages, averages about 3½ cents per 1,000 gallons.

It is found that water from deep wells at Streator, Urbana, Sidney, Arthur, Lovington and many other points in Illinois and other states contain some natural bicarbonate of soda in addition to the usual 15 to 25 grains of bicarbonate of lime and magnesia. Inspection of the stationary boilers at any of these points shows them to be free from scale, pitting, corrosion or other evils noticed in boilers using water containing the same ingredients in the absence of bicarbonate of soda. It is natural that, upon finding these conditions and their effects, soda ash should be introduced to other waters not containing it to prevent the formation of scale and its evils. The most notable example of such application of which I know is on the Wabash, where soda ash is added in the tub to all waters not containing it naturally in quantity slightly in excess of enough to remove the sulphate hardness. Beginning in 1914, this road was able to show a reduction of 96 per cent in flue failures and a decrease of 88 per cent in firebox renewals. The writer's own experience with a limited use of soda ash on two divisions, each of which had treated water at one terminal, where formerly considerable trouble had been experienced with leaky flues and fireboxes, showed a reduction of 70 per cent in failures on the road with no increase in washouts and no noticeable increase in priming tendencies of the boilers, and the boilers are reasonably free from scale. This was accomplished at a cost of about \$1 per 1,000 freight train miles.

Boiler compounds are numerous and of many kinds. For the purpose of this discussion they will be understood as meaning only those of reliable make and of national reputation, used for the prevention of scale. Such compounds consist of soda ash with small amounts of weak organic acids or other substances to hold the surface tension of the water. They have been in use more or less since the advent of boilers, and if applied in the proper quantity and used commonly as directed they will keep boilers reasonably free from scale. In doing this, they largely prevent leaky flues and leaky fireboxes since these conditions are usually caused by scale. On a division which came under the writer's observation, where a boiler compound was used in accordance with the manufacturer's instructions there was a reduc-

tion of 60 per cent in boiler failures, a decrease in the terminal boilermaker forces, and engines were turned and dispatched with less loss of time. The cost was \$3 per 1,000 freight train miles. Boiler compounds are expensive and roads employing chemists cannot afford to purchase such materials when soda ash can be used at about one-fourth the expense with greater efficiency and good results. Those roads that do not employ a chemist or have no one in charge of water treatment and directly responsible for the work, can often use boiler compounds purchased from reliable manufacturers to advantage. The reliable manufacturers have experts who follow the use of the compound and obtain results. This service is, of course, added to the cost of the compound and is one of the reasons for its being so much more expensive than chemicals purchased in the open market.

Water treating plants are expensive to install and to operate. They have the advantage over other methods because they remove 80 per cent of the scale-forming solids from the water. This reduces the amount of blowing down necessary on the road and the priming tendencies of the boiler. The water consumed at terminals is a large part of the total, and the water at those points should have first attention. Where the water there needs treatment, it is important to treat it by the most efficient methods. Usually this can best be done by installing a treating plant. Since a treating plant represents a considerable outlay of money, its design is a matter that must be given careful attention so that it will deliver a water uniformly treated and properly clarified of the resultant precipitate for delivery to the locomotives.

At stations between terminals where the incrusting solids are not high and comparatively small quantities are taken, the water can often be treated with soda ash more economically than by other methods, the soda ash being fed to the storage tank by a small auxiliary pump, the character of the pump depending on the methods of pumping the water. The soda ash costs less than 2½ cents a pound and no additional expense is incurred in labor applying it. The cost of apparatus to feed soda ash usually does not exceed \$150 per station. A distinct advantage is gained by feeding the soda ash into wayside tanks as compared with its use in the tender, since it usually gives the time necessary for chemical reaction before entering the boiler. The responsibility for application is placed upon the pumper where it is more easily supervised.

It should not be many years before even on roads of very light traffic it is universally understood that hard scale in a locomotive boiler is an extravagance not to be tolerated. More important than the costs ordinarily figured as due to bad water is the consequent uncertain road performance.

R. W. CHORLEY,
Mechanical Inspector, Pennsylvania System Southwestern Region

Will Religion and Railroading Mix?

CONCORDIA, KANSAS.

TO THE EDITOR:

Will religion and railroading mix?

Carlyle has said: "It seems to me a great truth, that human things cannot stand on selfishness, mechanical utilities, economics, and law of courts; that if there be not a religious element in the relations of men, such relations are miserable, and doomed to ruin."

Does our present situation in the railroad world demonstrate Carlyle's seeming great truth?

I have taken the privilege on several occasions during the past year, at our class and safety first meetings, of trying to inject this idea; some claim it would be a fine thing if—others say it will not work. To my mind there are no ifs or will nots in it; it has been a demonstrated fact in other industries, why not railroading?

I would like to know just what per cent of railroad men are proud of their calling and take into it the spirit of the brotherhood of man, instead of the brotherhood of crafts; it seems to me that our railroads are brotherhooded to death, except the right kind of brotherhood. Is not the lack of this spirit, as taught by the Man of Galilee, the reason that railroad men as a class are looked upon by the general public as a lot of roughnecks?

At our class meeting I read the communication from "An Old Railroader" in the December 3 issue of the *Railway Age*, and made this statement: "If we could Christianize this division of this railroad system it would be but a little while until the eyes of all other divisions would be turned this way to see what was happening."

The Christian religion is the biggest business in the world today, and I believe railroading is the next; the two combined would make a force so great that the kingdom would come before some of us were ready for it, for every man in the employ of the company from the president down to the track walker would be an evangelist to the community, and a booster for the railroad.

This may all seem visionary, but who ever did anything without a vision. When one looks at the bigness of it, he is tempted to exclaim, "Oh Lord, how long!"

TRAIN DISPATCHER.

Cut Out the Knocking

GREENVILLE, TEXAS.

TO THE EDITOR:

As an introduction to what I wish to say, I quote the following from Elbert Hubbard:

"If you work for a man, in Heaven's name work for him. If he pays you wages that supply you bread and butter, speak well of him—stand by him and by the institution he represents. If put to a pinch, an ounce of loyalty is worth a pound of cleverness. If you must vilify, condemn and eternally disparage, why, resign your position, and when you are on the outside, damn to your heart's content. But while you are a part of the institution do not condemn it; if you do, you are loosing the tendrils that hold you to the institution and the first high wind that comes along you will be uprooted and blown away and probably you will never know why."

The habit of knocking seems to be second nature with most railroad men. I have been in the business a long time and have worked in a good many division points for various railroads; but it is the same wherever you go. When not finding fault with a brother workman in our own line, such as trainmen and enginemen, we have serious complaints to make about the "boneheaded" dispatcher, the chief dispatcher and nearly all the minor officials. We also take a fall out of the management, and wind up by telling how the railroad should be run.

I often wonder why so many of us have gone so far through life, and have not been picked up to manage some large railway system. The directors are certainly letting some high class talent get away from them. Many of us are wise enough to tell them how to run the railways for profit, even in these dull times, and never cut the forces.

There are men that we work with that are as different in their line of work as white is from black; some men are strictly first-class in their line of work; some about the average, while others just get by and yet are equally paid for the line of service they perform. Railway managers are not alike either, but each one has to make a creditable showing or he won't last. Many of them have been connected with their company for years; others four or five years, and I have known of cases where they wound up their career in less than a year.

When one of them fails to be a financial success or is unwilling to play the game fair, he is asked to resign. (A privilege given to distinguish them from an ordinary workman.)

As for our minor officials, they too have to make a show-

ing. If they are not as efficient as their predecessors, or cannot show some improvement over them, they do not last long. So why should we always be condemning them for doing their duty? We might as well find fault with an officer of the law for doing his sworn duty. In nearly every case these same officials were one day in our ranks and we should gladly help them make good. If the men that do not suit us were removed at our request, we would be forever working for a new boss, and if there is any one thing that will disrupt the service, or injure the organization, it is the continual changing of officials. For these reasons I do not think we should be always fault finding.

If we are to make our best records, it will be with the co-operation of our officials and not by antagonizing them—neither will it be under new men whom we do not understand and whose ideas of good railroading are unfamiliar to us. The good officials of any large concern are like good teachers; they are judges of human nature, they know how to handle men so as to bring out the best that is in them. Such officials rarely have trouble with their men.

Railway employees are not disloyal—they are generous to a fault and the better side of their natures is easily reached, but the old worn out customs have got most of them. They will knock; when they meet in bunches they air out their troubles, and in doing so they often say more than they really mean.

They oftentimes speak disrespectfully of the officials of the company they work for; there are always outsiders who prove to be good listeners and go away with the impression that we railroad men are terribly mistreated and in many cases they think we are working for a lot of slave drivers. Since this impression is false it not only hurts railway business, but also the individual. Let us get out of this habit of knocking—get on the other side of the fence—let us try boosting awhile. It will not only help business and make us feel better, but also the men we work for will not appear as heartless as we thought.

Everything is changing so why not change this bad habit for a good one? If we cannot do this, but feel that we must knock, I would suggest we memorize the following:

"We would have less worldly clamor
And more roofs to shield our 'domes'
If the fellow with the hammer
Used it in constructing homes."

P. CAIN,

Dispatcher, M. K. & T.

A Correction

IN THE editorial, entitled "Present Cost of Living, Wages and Rates," in the *Railway Age* of February 11, it was shown that according to a recent report of the Bureau of Labor the average cost of living in the United States in December, 1921, was 47 per cent higher than in December, 1916. The following comment was made upon this figure:

"This is the lowest figure for cost of living that the Bureau of Labor has reported since before the war in Europe began."

This statement is erroneous. The cost of living, as shown by the Bureau of Labor's report, was about 70 per cent higher in December, 1921, than in December, 1914. The statement should have been that this was the lowest figure for cost of living at the end of any year since 1917.

THE ALABAMA, TENNESSEE & NORTHERN, operating 186 miles of road and running (on the average) a freight each way six times a week and a passenger train each way seven times a week, reports, for the year 1921, that every train crew completed every trip within 16 hours, leaving nothing to report to the government under the Hours of Service Law.

View of the Bridge Just After It Was Opened for Traffic

A New Development in Bascule Bridge Design

Old Wabash Swing Span Over River Rouge Was Replaced by a
New Structure on January 26

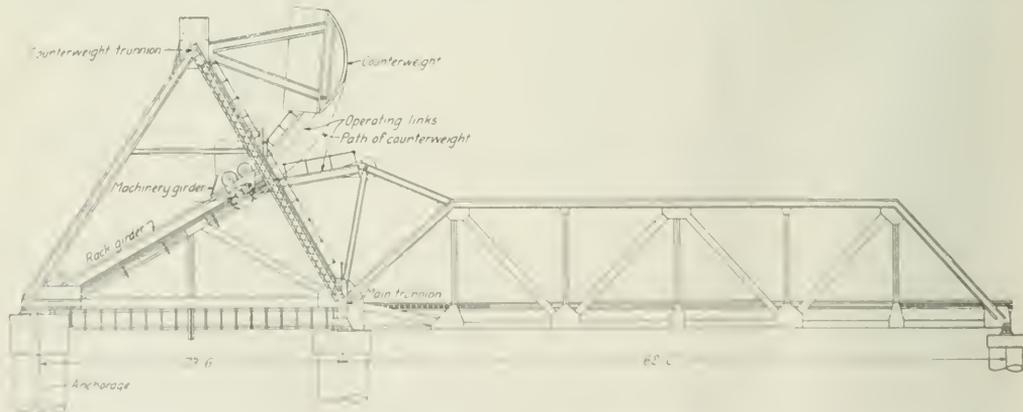

ON JANUARY 26 a bascule bridge of an entirely new design was placed in service at the Wabash crossing of the River Rouge at Detroit, Mich. The bridge comprises a single leaf span of 162 ft., a tower span of 73 ft. 6 in. and a deck girder approach span of 53 ft. 2 in. It replaces a double-track swing span which would not fulfill the requirements of a statute passed by Congress in 1917 providing for the improvement of the River Rouge to afford a waterway 200 ft. wide with 125 ft. clear openings at

(1) A plan prepared by the engineers of the Wabash of a bascule bridge with a counterweight attached to the bridge.

(2) A bascule bridge invented by C. G. E. Larsson, assistant chief engineer of the American Bridge Company of New York, which required no counterweight and which was operated by combined pneumatic and hydraulic machinery.

(3) A Strauss bascule bridge.

(4) The Cummings type, patented over 20 years ago and since expired, was proposed by the American Bridge Company, but Mr. Cunningham would not accept this unless so designed

General Elevation of the River Rouge Bridge

bridges. This same project was responsible for a similar replacement of the Michigan Central bridge over this waterway, completed some time ago.

The selection of the type of structure was made after a consideration of four designs of bascule bridges and a vertical lift span. The designs considered and the conclusion reached by A. O. Cunningham, chief engineer of the Wabash, under whose direction the design and construction of the bridge were carried out, were as follows:

that the counterweight was attached to the moving leaf by links. After making a thorough study, the American Bridge Company finally submitted a design, which met these requirements and which is now known as the "Abt type." The design so submitted being acceptable, the contract for the superstructure was awarded to the American Bridge Company.

In this type of bascule bridge the counterweight is suspended from a trunnion located at the apex of a triangular-shaped counterweight tower. The linkage mechanism by

which this counterweight is connected to the bridge span is a novel part of the design, giving to the contra-rotating counterweight the same angular velocity as the span. Expressed in other words, this means that the angle between the horizontal (or vertical) and the line connecting the pivot with the center of gravity of the counterweight is always identical with the angle between the horizontal and a line connecting the main trunnion with the center of gravity of the leaf. One of the links acts as a strut supporting the counterweight while its fellow is a tension member connecting it to the movable leaf.

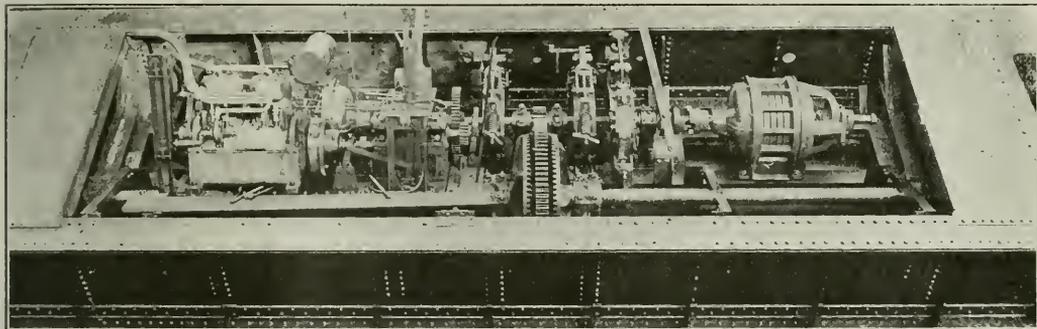

The counterweight consists of a basket of structural steel filled with concrete and suspended from the counterweight trunnion by stiff hangers. This basket is enclosed on all sides, except on the side toward the pivot. This form of construction has the advantage, therefore, that it may be erected in the hanging position by a locomotive crane without

entirely independent of the brakes to the motor shaft. All the brakes have been designed to set slowly and to release quickly.

The air for the brakes is supplied by a compressor rated at 25 cu. ft. of free air per minute, with a governor to insure uniform pressure. The bridge is operated by remote control from an operating house located south of the bridge, which also contains the interlocking machine.

The masonry supporting the A-frame and main trunnion consists of four cylinders 12 ft. in diameter sunk to rock by the pneumatic process and connected crosswise of the bridge by a pier and abutment resting on the cylinders. The rest pier is of concrete extending below the bed of the river and supported on piles driven to rock.

The new structure was erected in the open position so as to clear the old swing span. When the new structure was ready for service, operation of trains across the bridge was

The Operating Machinery Assembled in the Machinery Girder

the use of any falsework. Also the necessary concrete may be poured inside the structural steel basket without the aid of any forms.

The bridge is operated by machinery mounted on a cross girder of structural steel which travels up and down two inclined members equipped with racks. This cross girder is joined to the compression and tension links at their common pivot.

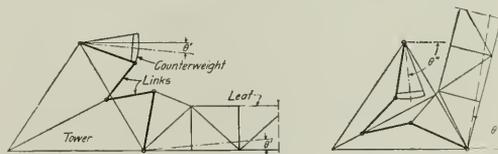

The machinery required for operation was assembled complete inside the girder at the shop and subjected to tests before shipping it to the site of the bridge. This arrangement greatly reduced the amount of assembly work necessary at the bridge site.

The main power equipment of this bridge comprises two 100-hp. electric motors operating on three-phase, 60-cycle, 440-volt alternating current. Either of these motors is capable of operating the bridge alone and is connected to the operating shaft by separate clutches, the object being to use these motors alternately, thereby giving greater assurance that one motor will always be in working order. To allow for failure of electrical power, a 58-hp. gasoline engine is provided as an auxiliary unit. The power equipment has been geared so that either of the motors will open or close the bridge in less than 1½ minutes and the gas engine in about eight minutes.

Each electric motor has a solenoid brake for full torque, one of these brakes having an attachment to transform it to a hand brake if the gasoline engine is to be used. On the motor shaft an air brake has been installed for full torque of the two motors; also two emergency brakes entirely independent of the machinery, arranged to grip I-beams attached to the inclined girder. These brakes can develop 175,000 lb. holding power and are supplied with air from a line

abandoned for a period of about eight hours during which the old span was shifted sidewise on falsework, the new approach span was erected for one track and the rest pier put in condition to receive the new span which was then placed in the open position. During the time that the bridge was out of service, one or two through passenger trains were detoured over other lines, while service for local passenger trains was maintained by hauling passengers between Detroit and the site of the bridge in motor buses.

The bridge was fabricated at the Gary plant of the American Bridge Company with Albert Reichmann, western division engineer, in charge. The erection was under the direc-

Relation of Parts in the Open and Closed Positions of the "Abt Patent" Bascule

tion of James L. deVou, Pittsburgh division erecting manager of the American Bridge Company. The electrical, air and gas engine equipment was furnished and installed by the Norwood-Noonan Company of Chicago. The substructure including all foundation work was done by the J. W. McMurry Contracting Company, Kansas City, Mo., this contractor also removing the old masonry. A new electric interlocking plant is being installed by the Union Switch & Signal Company.

Should the Cost of Treating Ties Be Charged to Maintenance?*

By Earl Stimson

Chief Engineer Maintenance, Baltimore & Ohio

A RAILWAY'S FUNDS can be obtained either from moneys earned or from moneys borrowed. The relative durability of these ways from the railroad standpoint depends upon the degree of prosperity of the road or the state of its credit. If the earnings are large, it is desirable to put a portion back into the property and in what better way can it be returned than to invest in treatment for prolonging the life of ties. If the earnings are low, resort to capitalizing of the excess cost of the ties due to the treatment would be a means of meeting the expense, as the road of low earning power would likely have poor credit and consequently difficulty in securing the necessary funds.

The manner of providing for this expense, however, has been prescribed by the Inter-state Commerce Commission. Under Account No. 8—Ties, of the Classification of Investment in Road and Equipment, Issue of 1914—we find in this connection, mention made only of including "the excess cost of metal ties used in repairs of track over the cost to replace in kind wooden ties removed." Under Account No. 212, Ties—Classification of Operating Revenue and Operating Expenses of Steam Roads, Issue of 1914, we find—"This account shall include the cost of cross, switch, bridge and other track ties used in the repairs of tracks." Note B under this account states that, "the excess cost of metal ties applied in the place of wooden ties over the cost at current prices of replacing in kind the wooden ties removed shall be charged to road and equipment account No. 8, Ties."

While no specific mention is made of treated ties, it is plainly evident that the commission does not consider the treatment of ties a "betterment" in the sense in which that word is defined by the commission. Such definition is given as: "Betterments are improvements of existing facilities through the substitution of superior parts for inferior parts retired, such as the substitution of steel-tired wheels for cast wheels under equipment, the application of heavier rail in tracks, and the strengthening of bridges by the substitution of heavier members. The cost chargeable to the accounts of this classification is the excess cost of new parts over the cost at current prices of new parts of the kind retired."

The argument may be put forth that if the substitution of a metal tie for a wooden tie is a betterment, why is not the substitution of a wooden tie which has had the length of its serviceability increased by chemical treatment also a betterment? This may be answered by stating that there is no reason why the treatment should not be classed as a betterment, as the treatment undoubtedly makes the treated tie superior to the untreated tie, as far, at least, as its life as measured by its resistance to decay is concerned. On the other hand, it may be answered that there is sufficient reason why the treatment should not be classed as a betterment. In the case of the metal tie substituted for a wooden tie, there is unquestionably a substitution of a superior part for an inferior part, as the tie is made of a radically different and structurally superior material.

The commission evidently considers a wooden tie as a wooden tie, whether of soft or hard wood—whether untreated or treated. A wooden tie structurally is no better after treatment. It will carry no greater load and will not hold the spikes better. Under severe usage it will resist rail and spike cutting, and other forms of mechanical wear, no better unless specially protected with tie plates and screw spikes at considerable additional expense. Under very severe usage the treated tie is destroyed as quickly as the untreated tie. The

increase in the length of life of the treated tie is the only point upon which its superiority can be based. The same point can be raised in favor of the white oak or long leaf yellow pine tie, substituted for a red oak or short leaf pine tie.

There are many kinds of treatment, varying widely in cost and effectiveness, the effectiveness not always being in direct ratio to the costs. The effectiveness of treatments varies also with the kinds of wood. It is difficult after a few years to identify a tie being removed from the track as a treated or untreated tie, and if the former, the process of treatment used, unless a very elaborate record and method of marking for identification is initiated concurrent with the authority to charge the cost of treating to investment in road, that is to capital account. Otherwise it would be impossible to separate the charges accurately.

The rapid rise in the price of timber has increased the price of the tie in much greater proportion than the cost of treatment has increased. Less expensive treatments that have been found adequate, are being used more and more in place of the more expensive treatments formerly considered necessary. The result has been that the ratio of the cost of treatment to the price of the tie has decreased greatly, making the use of treatment not only show greater economies but also reducing the proportion that the excess cost of treatment bears to the total cost of the treated tie. This should in itself stimulate the use of treated ties and not make necessary resorting to the doubtful expedient of capitalizing.

The steady increase of the use of treated ties, until now a large percentage of the ties used are treated, rather nullifies the idea that the present method of charging out the cost of treatment to maintenance is preventing a more liberal use of treated ties. Nor does it appear that charging to investment in road—that is capitalizing—the excess cost of the metal tie has brought about the extensive use of that tie, or made it even a competitor of the treated tie. Millions of treated ties are used to thousands of metal ties.

The writer has treated this subject not from the standpoint of the accountant or the financier, but rather from that of the maintenance engineer. He has cheerfully taken into his maintenance costs the expense of treating some 12,000,000 ties to date. He is even now reaping to no inconsiderable extent the full benefits of the price paid. He is not and will not be compelled throughout all time to give up some portion of those benefits in the payment of interest charges, or in other words, to pay tribute to capitalizing. The writer favors the present practice of charging the cost of treating ties to maintenance.

Further Testimony on Merits of Form 19 Order

The Conscientious Dispatcher—Views of a Dozen Competent,
Experienced Observers—Money Saved

By Edgar W. Weston

Inspector of Train Dispatching, Northern Pacific Railway

WHEN I WROTE the article which was published on December 3 about Form 19, I had not seen Mr. Forman's letter in the *Railway Age* of October 8, or Mr. Nichols' in the issue of October 15. I cannot bring myself to agree that dispatchers should be allowed to instruct operators to clear the order signal so that trains for which there are no orders may pass. Decidedly, it would be a violation of the rules and should not be countenanced.

Now, allow me to put myself in the position of what Mr. Nichols calls the "over-zealous train dispatcher." He will say, no doubt, that when I conceded two occasions where signatures should be required I was trying to hedge. I am inclined to take the position that in even those two cases a plan can be devised which will insure delivery of a 19 form, and the train dispatcher be assured of the fact, without taking signatures. For the present, however, let it go, with the understanding that when delivered at a non-telegraph office restricting orders must be signed; also when the train has already passed the train order signal.

The train dispatcher is never immune from responsibility for the delivery of a train order. Where Form 19 with a clearance is used the dispatcher must know that all orders for the train are included when the operator gives him the order numbers and he approves them. If he does not use the same care in this that he does in recording and checking the signatures given him for 31 orders, he is not a reliable dispatcher. The unreliable train dispatcher, when he has a 31 order out for a train that he is anxious to keep moving, will say to the operator: "Conductor Jones is on No. 51. Sign up and keep them going." Thus he encourages and expects the operator to violate rules by signing the conductor's name, securing "complete" and handing it up to the passing train as if it were Form 19.

As to the work extra between B and D, which the dispatcher wants to have protect itself against an extra after a specified time, he surely will not put out either a 31 or a 19 restricting order for the work extra if the train is so situated that delivery of the order is uncertain. When the work extra comes to a point where an order can be delivered and the delivery is accomplished why is not Form 19 just as safe? Until then the extra will not, of course, be permitted to enter the work extra's limits, no matter which form of order is used. The same is true when it is desired to annul the work order of the work extra.

There is no argument for Form 31 in the two paragraphs where Mr. Nichols calls attention to reducing a time order and giving an extra right over all trains. As the train dispatcher must know that the restricting order is delivered, be it Form 31 or Form 19, before allowing the inferior train to enter the restricted territory, why insist upon Form 31 when the dispatcher is more certain of delivery by using Form 19 and a clearance?

If a restricting order, Form 19, is out for delivery, at the point of restriction, the rules require that the train order signal be displayed at "stop." If the engine man should pass this signal without stopping, or the operator hand up the restricting order before the train is stopped both violate a rule, and give evidence of a lack of proper supervision. Thus far, have I hedged, or clouded the issue?

Surely, Mr. Nichols will not accuse superintendents of being over-zealous when they advocate the exclusive use of Form 19 or say that it is because they wish to lessen their own responsibility. I believe he will admit that it is because they want to improve operating conditions. Let me quote expressions from a number of superintendents as to what they think after nine years' experience. Not all of these superintendents are ex-train dispatchers.

Views of Northern Pacific Superintendents

A—"The use of Form 19 for restricting the rights of trains has been in use about 10 years, and I cannot recall an instance of where hazard could be charged to such use. This use is a great help in keeping trains moving, especially in extremely cold weather. When Form 31 was used for restricting rights, it was nothing unusual during the winter months to have trains freeze up before getting started again."

B—"To use Form 31 on this division would mean more expensive operation in loss of time, more fuel consumed, and in cold weather many tie-ups, because of the 16-hour law. As a safety proposition, I believe the 19 order is fully as safe as the 31."

C—"I do not know of any case where hazard has been created that could be chargeable to the use of the 19 order. The greater hazard is with the 31 order. There have been more cases of trains leaving stations without their orders where the 31 is used. The delay incident to the use of Form 31 is not tolerable; it means stopping trains and waiting for conductor to sign the order, dispatcher to complete it after signature is transmitted, then clearing the train."

D—"I do not recall any instance where hazards could be charged to the 19 order. By using this form we do away with the stopping of trains, thereby eliminating the chances of breaking in two, and expedite movement by not requiring them to stop."

E—"The strongest argument in favor of the use of Form 19 is the saving of time and expense caused by stopping trains to sign restricting orders. I believe that we could not handle the same volume of business using Form 31. I do not remember a hazard chargeable to Form 19 being used in this manner."

F—"I do not recall any hazard chargeable to the 19 order. After a good many years' experience with Forms 31 and 19, I wish to go on record as saying for all purposes Form 19 has proved its worth as a time and fuel saver. Its abuse has only been caused by excessive speed and failure on the part of certain employees to confine themselves to rules in connection with the operation of train order signals at the caution position."

G—"There has been no instance in my recollection where a hazard of accident has been created, because we use the Form 19 in place of the 31. There would be a very considerable increase in the time of men on duty if we used the 31 form, because it means the stopping of long freight trains for the conductor to sign the order and then take it to the engineer for delivery."

H—"I cannot recall any case where a hazard or near hazard could be attributed to the use of Form 19. It is not good practice to stop a 99-car train and expect the conductor to walk from the rear to the station and sign a 31 train order, when the same result can be obtained by the use of a Form 19 with equal safety."

I—"I have never felt that a train order signal is any more effective when displayed for a 31 order than when displayed for a 19 order. To go back to the 31 order would mean expensive long delays to our freight trains. I do not know of any hazard that has occurred from the use of Form 19 as we are now using it."

J—"It seems to me the best argument for the 19 order is the fact that we have safely operated for a good many years with it. I do not know of any hazards under the 19 order, except those which are due to conductors and engine men overlooking or forgetting their orders. It seems to me that they will forget a 31 as quickly as a 19."

K—"Since we began using Form 19 orders, I know of no hazards that can be charged to this form. It is certainly a great time saver in getting trains over the road, particularly our long freight trains. We are handling many freight trains of from 90 to 99 cars, and if these trains were required to stop with the engine at the train order signal and the conductor required to walk 99 car lengths from the caboose to the office to sign a 31 train order, it would cause a delay of from 15 to 30 minutes to such trains, and would cause congestion on a busy piece of single track."

If the train dispatcher is obliged to use Form 31, he will endeavor to avoid extra stops by placing the order where the train stops for coal or water or makes regular station stops. If, in doing this, he has the order delivered too long a time before it is to be executed the chance of a hazard

is increased, because the conductor or the engineman is more likely to overlook an important part of the order than if it were placed close to the point of execution. Of course neither form of order should be condemned because someone forgets or disobeys the rule, but the form that will reduce the chance for hazard should be used.

Where Form 31 was used two hazards occurred which anyone must admit would probably have been avoided had Form 19 been used. A schedule order on Form 31 is addressed to No 20 at G——. The conductor comes to the telegraph office, signs the order, then goes outside, intending to return for the order when it is completed. For some reason he forgets it, gives the engineman the signal to go and the train leaves, both conductor and engineman overlooking the train order signal at "stop."

In another case a meet order is put out on Form 31 to No. 870 at B——. The train passes the order signal at "stop" to do some station switching. As soon as the switching is finished, No. 870 pulls out without the conductor's having returned to the telegraph office to sign and receive the completed Form 31 meet order. In both cases had the restricting orders been on Form 19 instead of Form 31 the operator would have been out on the platform and would have delivered the orders when the train passed the telegraph office.

The Superintendents' Experiences

As giving a little more reality to the quotations which I have made from the statements of our superintendents I may be permitted to comment briefly on the locations and circumstances which constitute the background of their utterances. The paragraphs are lettered to correspond with the quotations.

A—When this superintendent was a dispatcher it was considered that Form 31 was the only safe order to use in restricting rights. His division has 204 miles of main line and 117 miles of branches, with a traffic movement characteristic of a trunk line leading out of a large city.

B—This superintendent was a train dispatcher when only Form 31 was used for restricting purposes. His division has 360 miles of main line and 112 miles of branches. There are two dispatching districts, and during portions of the year the main line traffic is very dense. Through the winter months there is plenty of snow and severe cold water to contend with.

C—This division has 100 miles of main line, parts of it double track because of dense traffic, and 271 miles of branches. Train movement on both main line and branches is particularly heavy during the months when grain is moving. The superintendent is neither an ex-train dispatcher nor a conductor.

D—This is another division with its mileage in the northwest wheat region which provides very heavy traffic, while the wheat is moving, in addition to the usual through traffic. There are 106 miles of main line and 671 miles of branches. The superintendent is a former train dispatcher of more than ordinary ability.

E—This is from a former train dispatcher, now superintendent of a heavy mountain division where only the very best and safest methods of operation should be used. It has 346 miles of main line and 327 miles of branches.

F—This comes from the superintendent of another heavy division in the Rocky Mountains, 331 miles of main line and 223 miles of branches. He has never been a train dispatcher or conductor, but his experience makes him competent to say what is safe operation for any division.

G—This is a division of 293 miles of main line and 384 miles of branches, with heavy traffic on all of it. The superintendent has had experience as a train dispatcher and as conductor.

H—This division has 303 miles of main line and 373 miles of branches, and in addition to taking care of a heavy through traffic is in the heaviest fruit and wheat region of the west. The superintendent is a former conductor of many years' experience.

I—The division is 317 miles of main line and 140 miles of branches leading two ways out of a large city to and over the Cascade Mountains. The superintendent has had wide experience as a train dispatcher and in other capacities on both main line and branch lines.

J—The division has 44 miles of main line and 80 miles of branches through a portion of the Northwest where the seasonal and varied weather makes the train order system operation difficult. This man has never been a train dispatcher.

K—This is a heavy division with 40 miles of branches and 103 miles of main line, double track and dense traffic. The superintendent is a former train dispatcher and is well up on the committee that formulated our present book of rules.

Value of Time Savings With Freight Trains

I think I have proved the safety of using Form 19 for restricting the rights of trains. What more does it mean

to a busy division? I recall a division 140 miles in length where westward freight trains are unavoidably delayed from two to four hours from the time the crew is on duty until departure from the terminal. As a result in the winter months the margin for reaching the farther terminal inside the 16-hour limit is very small. If the average daily number of these trains were 15 (and frequently it is many more), and we had to use Form 31 instead of Form 19, a train making a trip over the division would ordinarily be stopped not less than five times on purpose to sign an order. Each stop would result in a delay of 30 minutes or more—a total delay of two hours and thirty minutes to each train. Because of this at least eight of the fifteen trains would have to be tied up before reaching the terminal to avoid violating the 16-hour law.

The reader can figure for himself what this means in additional expense to the eight trains, as well as the cost of overtime imposed on the other seven trains that were able to scratch into the terminal within the 16-hour limit. On other divisions the average number of tie-ups is not likely to be so great, but on 12 divisions I believe there would average for three months of the year two tie-ups or their equivalents, sending out relief crews, the daily unnecessary expense of 24 trains delayed and tied up because of using Form 31.

A careful check made for three days on four divisions gives the information that, had they been using Form 31, 20 trains on each division every 24 hours would have made otherwise unnecessary stops. Five such unnecessary stops for each train would be a fair average over the division. Thus, the use of the 31 order on these divisions would result in 100 unnecessary stops per day on each division. A train so stopped consumes, in getting under way again, from 800 lb. to 1,500 lb. of additional coal. If we say the average per train for each stop is 900 lb., we should have a total of 45 tons for each division; or for 12 divisions 540 tons of additional coal consumed daily.

If the average cost of the coal is \$4.66 a ton placed on the dock it means the tidy sum of \$2,516 spent daily without an adequate return.

MEDICINE HAT, ALBERTA, makes flour, and its mills report that they have shipped 1,760 tons of flour to Europe, which is moving via Vancouver and the Panama Canal. They have yet to ship by that route 2,498 tons. The mills have also shipped 80 tons of flour to China and expect to send 300 tons more. Medicine Hat is 818 miles east of Vancouver.

Southern Railway Block Signal Station, Copper, Virginia

The I. C. C. General Rate Investigation

Frank J. Warne Testifies for Railroad Labor Organizations— Additional Testimony on Behalf of Shippers

WASHINGTON, D. C.

FRANK J. WARNE testified before the Interstate Commerce Commission at the rate hearing on February 10 and 11 as an economist representing the railroad labor organizations. He was introduced by Glenn E. Plumb, who acted as his counsel, and read a list of 17 organizations on whose behalf he said he appeared, without calling attention to the fact that the Brotherhood of Railroad Trainmen was not included. The commission had set aside two days for testimony on behalf of the labor organizations, and as Mr. Warne was the only witness he received the full time.

Mr. Warne stated that the employees did not appear to advocate either a reduction or an increase in transportation rates. With rates as rates the employees are not concerned, he said. "They do not believe their wages should be affected whatever the decision of this commission. They believe there is no economic law that establishes any relation whatsoever between rates as such for transportation and rates of wages for services performed."

Mr. Warne submitted as exhibits numerous charts and statistical tables such as he had used in his more protracted testimony recently before the Senate committee, but he found the commissioners somewhat more critical of his peculiar methods of handling statistics than were most of the senators. The questions asked and the expressions on the faces of the commissioners indicated amazement and at times amusement at some of the claims made by the witness. Frequently he replied to demands for explanations by promising to come to that point "later." His statistics and charts proved, he said, that in 1920 operating revenues increased by a much greater amount each month from May to September than did compensation to employees, notwithstanding there was no change in the transportation rate although the rates of wages were increased. From October to the close of the year, he claimed, operating revenues decreased notwithstanding a large increase in the rates, while total compensation to employees decreased due to a less number being employed. He also showed how operating revenues decrease in one period compared with another, although the transportation rate remains the same.

The railway employees' participation in the present rate case, Warne said, was due to the claim of railway executives, "in alliance with large corporation shippers," that a wage reduction must precede a rate reduction. He quoted from Senator La Follette's speech in the Senate last December regarding the alleged agreement between certain representatives of the railroads on the one side, and steel, coal, lumber and other producing and manufacturing interests and farm organizations on the other. This understanding between these interests, the speech said, provided for a reduction in the wages of railway employees. It was to oppose and to prevent, if possible, "such an uneconomic solution of the railroad situation" that the employees appeared before the commission, the witness said.

Commission Wants Facts

If the agreement resulted in a reduction in the wages of railway employees, Warne claimed, the economics of railway operation were such that there could very easily result, and under conditions of early future increases in volume of traffic there would likely result such an increase in total operating revenues as to cause the reduced rate to produce an even larger total operating revenue than resulted from the higher rate. So that at the same time they claimed credit for the

reduction in the transportation rate, the railroad corporations would actually be receiving larger revenues, while the employees were receiving the lower wages.

When Mr. Warne read from a newspaper story quoted by La Follette, saying that the railroads and the shippers at the meeting on December 9 had agreed to "bury the hatchet;" Commissioner Aitchison asked if he thought the present proceedings bear out that statement, and Commissioner Hall interrupted to say that so far as the commission is concerned the witness might dispense with newspaper articles and Senate speeches. "We want facts," he said, "and you may confine yourself to what you know of your own knowledge."

Mr. Warne said he was trying to establish the fact that the railroads and shippers have agreed to try to reduce wages. "Is this commission not interested in agreements made outside affecting rates and wages?" he said. "If you were present or have authentic copies of the agreements or the minutes you can present them," said Mr. Hall, "but this commission will not be swayed by speeches and newspaper articles." Mr. Warne then omitted further reference to Senator La Follette's speech.

Mr. Warne attempted to explain the increased proportion of the wage bill to total operating expenses by saying that the greater part of the cost of utilizing a greater percentage of the capacity of the railroad plant is naturally labor cost. He presented a chart which showed a sharp increase in the operating expenses other than compensation about August, 1920, which he explained by saying it was due to the fact that August was the last month in which the railroads could get in their estimates of expenditures before the close of the guaranty period.

Commissioner Aitchison asked if the cost of moving trains of empty cars under the commission's emergency car service orders of 1920 did not have something to do with it, and whether the railroad plant was not so overloaded at that time the law of decreasing returns was in operation. He also cited the large increase in the cost of railroad fuel at that time, particularly in the case of railroads which had to purchase coal outside of their contracts during a runaway market. Mr. Warne preferred to believe that the railroads were crowding all possible expenses into the guaranty period, although he said he was not "questioning the motives" of the railroad managers.

Commissioner Esch asked the witness if he thought the railroads had put in an overestimate of their expense in the face of the provision of the law that required the commission to police the accounts and to readjust them if necessary in order to safeguard the treasury against the possibility of just what Mr. Warne had expressed. Mr. Warne replied that the reports were made by the roads in self-protection; they probably knew the amounts would be cut down, but they knew they would not be increased above their figures.

Discussing the proportion of each dollar of operating revenue that goes to labor Warne said that an increase in this is entirely consistent with an increase in the amount going to investment. For illustration he stated that "in 1915 labor received 41.5 cents out of every dollar of revenue, and in 1913 it received 43.1 cents out of each dollar. But in the latter year, with labor receiving 1.6 cents more out of every dollar than in 1915, there went to investment 104,515,602 more dollars in 1913 than in 1915.

"Widely published figures of railway executives give the proportions going to investment in 1920 as 1 cent out of each

dollar. The inclusion of the amount of the standard return increases this more than elevenfold—to 11.4 cents. For 1919 investment received 16.2 cents out of every dollar, instead of 8.8 cents, and in 1918 the amount going to investment out of each dollar was 17.6 and not 13.1 cents.

"The 11.4 cents out of every dollar that in 1920 went to investment, a relatively low return compared with 1919 and 1918 because of much greater maintenance expenditures in 1920 out of revenue, is equal to 105,528,216 more dollars than the 23.8 cents out of every dollar in 1915; it is \$127,-614,902 more than the 21.8 cents going to investment in 1914; it is even greater in total amount by \$80,148,666 than the 25.2 cents received by investment in 1912.

"The 16.2 cents in 1919 and the 17.6 in 1918 received by investment out of every dollar are \$223,419,659 more than the 23.8 cents in 1915. They are \$245,506,345 more than the 21.8 cents in 1914; \$188,040,109 more than the 25.2 cents in 1912. They are only \$78,348,467 less than the 29.1 cents in 1916, this latter standing for the largest proportion out of each dollar received by investment in any one of these years from 1912 to 1920.

"With labor receiving 53.6 cents out of every dollar in 1920, the largest proportion in any one of these nine years, there went to investment a much larger sum, not taking into consideration the large income to capital through excessive maintenance, than in either 1915, when labor received only 41.5 cents, or in 1914, when it was paid 44.1 cents, or in 1912, when the proportion of each dollar was 43.1 cents."

Criticising the statistical testimony presented by railway witnesses as to the rate of return on capital, Warne charged that the figures of their property investment account were very greatly inflated—that the amount of capital invested was considerably less than that upon which the roads claimed they should receive a return in interest and dividends. He also charged that the net operating income statistics of the railway witnesses were "highly deflated," particularly during the years of federal control.

Warne "Proves" the Rates Have

Increased More Than Wages

Mr. Warne produced a complicated series of statistics, estimates and assumptions on which he based the assertion that the average increase in freight rates from 1913 to 1921 was 113 per cent. "If this increase be applied to the total freight operating revenues for Class I carriers for 1913, the increase in freight revenue due to the 113 per cent increase would be \$2,420,434,318. The same percentage increase applied to the tons moved one mile for the calendar year 1920 shows freight revenue on Class I roads to have been increased \$3,341,205,503, assuming the same earnings per ton-mile as those of 1913." He did not say what the actual increase in earnings was, but after another calculation to show that the rate reductions made since 1920 amount to a very small percentage, he proceeded to contrast the freight rate increase with the increase in employees' wages.

First he quoted from a statement of the Railroad Labor Board to the effect that "from August, 1914, to December, 1917, the wage of railroad employees remained substantially unaltered." Then he referred to the increases made during federal control and by the Railroad Labor Board in 1920, and the reduction in 1921, but, he declared: "When an attempt is made to ascertain the per cent increase in the rate of wages of railroad employees from 1914 to 1921 almost insurmountable obstacles are encountered, partly owing to the innumerable classes of employees, changes in rules and conditions of employment which resulted in increases in pay, and also in large part to the absence of basic statistical data in the reports to the commission by the railroads of compensation and number of employees and so on."

In reply to questions by Commissioner Hall, Mr. Warne said no one could estimate how much the wage increase

made by General Order No. 27 of the Railroad Administration would amount to and he would not attempt to estimate it within a hundred million dollars. However, he said, the "highest estimate of the total percentage increase in wages from 1916 to 1920 for the entire country" that he had seen was stated as being 84.6 per cent in the testimony of J. G. Walber before the Senate committee. This estimate, he said, was for the engine and train service class of employees and was based upon "the inadequate statistics reported by the carriers to the Interstate Commerce Commission and also upon the inaccurate average annual compensation per employee."

Accepting for comparative purposes "even this exaggerated estimate," Mr. Warne found it to be the fact that the percentage increase in the rate of wages has been less than the 113 per cent increase in the freight rate, and "as the same percentage increase in wages is equal in amount of dollars to only one-half that of freight rates, it is clear that freight rates advances have been very much greater than wage increases over the same period. Freight rates alone have increased in amounts of dollars since 1914 from two to three times the increases in wages of employees."

"How do you get that?" asked Commissioner Hall. "You said you couldn't estimate the wage increase within a hundred million dollars; now are you going to give it?" Mr. Warne explained all over again that it was impossible to give the wage increase, but that he had used Mr. Walber's percentage for train and enginemmen to measure it, and that a given percentage of increase in wages is only about half as much in dollars as the same percentage applied to the payroll. "Do you see my point?" he asked.

"Yes, I see your point," replied Mr. Hall, "but it isn't so."

"Most assuredly these comparative percentage increases, and the increases in dollars since 1914, of freight rates on the one hand and wages on the other, justify the statement, as representative of the facts, that there can now be a considerable reduction in transportation rates without any decrease in the wages of railway employees." Mr. Warne continued: "Notwithstanding the long-deferred and quite moderate increases in wages granted the railway employees during and following federal control, part of which increases was taken away again in the July, 1921, wage award of the Railroad Labor Board, the great majority of employees on the railroads today are not receiving a wage sufficient to support themselves and their families in decency and comfort to the extent demanded of them by our democratic form of society with its republican institutions. Not only is this true in the face of intermittent employment and in many cases of complete unemployment, their present wage does not meet even their absolutely necessary fixed charges for food, clothing and shelter."

Increases in Payroll Due to

Other Factors Than Wage Rates

Mr. Warne then proceeded to demonstrate that the railroads have overstated the increase in wages by \$1,250,000,000. He enumerated 11 different items, among which were the inclusion of officers' salaries and employees whose compensation is chargeable to capital account, the increased number of employees on account of increases in business, overtime payments, etc., which he said do not represent increases in wages. He replied in the affirmative, however, when Commissioner Hall asked if the money was not all paid by the railroads and paid to the wage earners. Upon further questioning Mr. Warne gave figures for the amount of most of the 11 items, which, however, footed up some \$300,000,000 short of the billion and a quarter he had given as the total. He said some of the remaining items had been estimated and promised to file the working sheets later.

Mr. Warne was cross-examined briefly by F. H. Wood.

commerce counsel of the Southern Pacific, who said he would rather curtail the cross-examination than the witness' statement if he had anything more to say. Referring to Mr. Warne's attack upon the property investment accounts of the railroads on the ground that they were largely swollen by investments in affiliated companies, Mr. Wood asked M. O. Lorenz, director of the commission's Bureau of Statistics, to give the numbers of the accounts which are included in the commission's report of property investment. He then had Mr. Warne read the description of these accounts from the commission's report form to show that the investments in affiliated companies are not included.

Mr. Warne had also testified that the railroads had overestimated their back wage payments in 1920 and had charged \$146,000,000 to their monthly expenses on this account, whereas the commission's quarterly report of compensation showed only \$102,000,000 of back pay. Mr. Wood showed after numerous questions that the \$102,000,000 applied only to the second quarter of 1920 and that the remaining \$44,000,000 was not shown in the third quarterly report as back pay because it was paid during August and September for service during July and August and was, therefore, not back pay with reference to that quarter.

Mr. Wood asked Mr. Warne if he would agree with the statement he had quoted from the Labor Board that wages were substantially unaltered from August, 1914, to December, 1917. Mr. Warne said it was true so far as "any flat out and out increases" were concerned, although there were some increases "for competitive reasons." Mr. Wood then asked the witness to read from a statement showing the average compensation per employee in 1914, 1915, 1916 and 1917. Mr. Warne declined to do this without giving an explanation of the "absolute inaccuracy" of the average annual compensation and said he had not sufficient time to make the explanation. He did say, however, that the commission's statistics are "worthless" on that point because the total compensation for a year includes payments to many men who were not in service at the time the count of employees was made. For this reason, he said, it is impossible to get any reliable comparison of the earnings in various years. Mr. Wood asked if other classes of employees had not received much larger increases than the percentage quoted from Mr. Walber which he had used. Mr. Warne said he was not able to answer.

Mr. Wood also referred to an exhibit headed "Increase in Mileage Constructed," which the witness had used in reply to statements by railroad officers that new construction has fallen off. This showed an increase of 27,000 miles of line from 1908 to 1919. Mr. Warne said this had been taken from a table in the commission's annual report, but on being handed a copy of the table, he said it had been taken from the figures of operated mileage, which includes trackage rights, instead of from the column of "miles owned," which showed an increase of only 49,000 miles, most of which was in the early part of the period. When Mr. Wood asked why he had not used the miles owned, Mr. Warne said his clerk had probably made the mistake.

Hay Shippers Ask Rate Reduction

Testimony of shippers of hay, grain and seeds was heard on February 9. W. I. Bates, president of the National Hay Association, expressed appreciation of the recent 10 per cent reduction and said it had tended to stimulate the traffic to some extent, but not enough to make it worth while for the farmers to continue to produce hay. It is practically impossible to get the commodity to market, he said, if the grower is to receive a fair price, and the high rates have localized the market so that shipments were reduced from 8,000,000 tons in 1920 to 5,000,000 in 1921. He asked the removal of the entire increase made in Ex Parte 74.

When Commissioner Aitchison asked if the real compe-

tititor of the hay producer is not the Ford company, Mr. Bates replied that the animal population of the country has increased. The commissioners, however, questioned the witness closely as to just how a reduction in rates would benefit the hay producer and as to how much farther hay might be shipped to market. He had no figures on this point. He said that the benefit of the 10 per cent reduction had been given to the consumer and had probably increased the demand for hay 50 per cent, but he was somewhat hazy as to whether a further reduction in rates would go to the farmer, the distributor or the consumer.

Commissioner Hall pointed out that the animals have not stopped eating hay and asked if the effect of the increase had not been to increase the local market for hay while reducing the long haul shipments. Mr. Bates said that the animals have not been so well fed and that the members of his association had indicated their belief that a reduction in rates would help them. On cross-examination it was brought out that as only 35 per cent of the members are producers the vote may have been carried by the jobbers and distributors.

The hearing was resumed on February 15 with shippers of canned goods and wholesale groceries as the principal witnesses. James Moore, president of the National Canners' Association, said the canning industry is in a desperate condition and needs any reduction in rates that can fairly be allowed. He said the relief extended to agricultural products should be extended to canned goods.

Non-Union Mines Could Produce

6,000,000 Tons of Coal a Week

J. D. A. Morrow, vice-president of the National Coal Association, filed a number of supplemental exhibits giving information that had been asked at the time of his testimony, relating mainly to the costs of coal production and wages. One of his exhibits was a table comparing the production capacity of the union and non-union coal districts, which is of especial interest in view of the threats of a coal strike. This showed a capacity for the non-union fields of 5,676,000 tons a week, or 38 per cent of the total capacity. Mr. Morrow estimated that the total capacity of the bituminous coal mines in the United States is 776,000,000 tons, or 14,930,000 a week, of which 481,000,000 tons were assigned to the union fields and 295,000,000 to the non-union fields. According to these figures, in the event of a strike it would be possible to produce about two-thirds as much coal per week as the present average. Discussing the possibilities in the case of a strike, Mr. Morrow said:

"This estimate of capacity is based upon actual productive performance in each district in the United States in 1918, according to the reports to the United States Fuel Administration and the United States Geological Survey. After the first three months of 1918 the bituminous coal mines had a fairly full car supply. In the event of a strike April 1, current business conditions would permit the railroads to give the non-union mines a full car supply, thereby permitting maximum shipments of coal, if railroad operation is not disorganized. The capacity of the bituminous mines of the United States has increased somewhat since 1918. Therefore, the estimate of capacity shown here, based upon 1918 performance, is considered conservative and well within what the bituminous coal mines can do, given full car supply and no interference with production and shipments.

"With a full car supply and no interference with production by the non-union mines in the event of a strike on April 1, the output of the non-union mines will materially increase as additions are made to their working forces and the demand for coal stimulates production.

"From the figures shown above it appears that the present capacity of the non-union bituminous coal mines is nearly 6,000,000 tons per week. Current consumption of bituminous

coal in the United States is apparently somewhat in excess of 7,500,000 tons per week. With a material decrease in the consumption of bituminous coal as domestic fuel and decreased consumption by other users as warm weather approaches, if there is no increase in industrial activity which would necessitate a greater use of bituminous coal, the necessary current consumption after April 1 will approximate 7,000,000 tons a week against the present productive capacity of 6,000,000 tons of the non-union mines. According to the report of the United States Geological Survey, the total stocks of bituminous coal in the hands of consumers January 1, 1922, approximated 47,000,000 tons, an average of 41 days' supply. At the anthracite mines about 2,500,000 tons of steam sizes are in stock awaiting shipment. It appears probable that many important users of bituminous coal are increasing their stocks in anticipation of the suspension of mining in many fields on April 1.

"If consumers further increase their stocks by April 1, and if the potential production of about 6,000,000 tons per week can be obtained from the non-union mines without interference, such shipments, supplementing the stocks referred to, would maintain the United States for several months without serious inconvenience to consumers, even if strikes-stopped production in all union bituminous fields, and if the weekly output of a million tons of steam sizes of anthracite was cut off."

One of the exhibits was a table showing the distribution of the cost of production of bituminous coal of \$2.91 a ton. Of this, \$1.97, or 67 per cent, was assigned to labor.

J. B. Newman testified on behalf of the National Wholesale Grocers' Association to urge a reduction in the rates on the commodities which members of his association handle. He said that if a reduction of rates should reduce the net income of the railroads below a point necessary to pay interest they should pay it out of their surplus which has been accumulated for the purpose of providing for lean years. Commissioner Hall said that the witness spoke as if this surplus were in funds that could be used for that purpose. He replied that he understood the roads had a billion dollars and a half in funds out of a total of three billion.

Senator La Follette on Railway Wages

WASHINGTON, D. C.

SENATOR LA FOLLETTE began in the Senate on February 10 the first instalment of a speech he has been promising for some time on "The Truth About the Wages of Railway Employees." He said he would prove that the nominal increase in wages has been uniformly less than the increase in the cost of living each year during the war and since the war that, therefore, has followed and not preceded the increase in the cost of living. After some general comparisons of union wage rates and cost of living statistics he declared that railway labor "is receiving substantially no more real wages in terms of commodity values for services rendered than it received 20 years ago."

On the same day the Interstate Commerce Commission had declined to receive as evidence in its rate hearings quotations from a previous speech by Senator La Follette offered by Frank J. Warne, a witness for the railroad labor organizations, but Senator La Follette quoted extensively from Mr. Warne's statements before the Senate committee. Whereas Mr. Warne in testifying before the commission had insisted that it is impossible to compare the wages of railroad employees from year to year on the basis of the Interstate Commerce Commission statistics, which he called "worthless," Senator La Follette said he would use the figures as reported by the roads to the commission because, although they are "very unreliable," the advantage is all on the side of the railroads.

"Faulty as they are," he had compiled from these reports tables comparing the average annual earnings of railway employees as a whole and by classes with the cost of living index from 1900 to 1921. He admitted that there were no figures available on living cost prior to 1913 but he had used an index figure for food prices for the years prior to that. His tables showed an increase in the average earnings of railroad employees from \$567 in 1900 to \$1,790 in 1921 based on the average earnings of the first half of the year multiplied by two, and \$1,575 based on the earnings for the last half of the year after the reduction by the Labor Board on July 1, multiplied by two.

His cost of living figure showed an increase from 100 in 1900 to 270 for the first half of 1921 and 264 for the last half, while the index figure for wages of all employees rose to 516 in the first half and 278 in the last half. In the case of the engineers, 246 for the first half and 227 for the last half, and the conductors, 263 and 239, the increase was less than the increase in the cost of living index but for the other classes of employees given the increase was considerably greater than the increase in the cost of living. For firemen, trainmen machinists, trackmen and telegraphers the figures for the first half of 1921 were 318, 336, 315, 345 and 311, respectively, as against 270 for the cost of living. For the second half of 1921 they were 286, 299, 286, 289 and 270 as against 264 for the cost of living.

The Senator made most of his point from these tables by dwelling on the "underpayment" represented by the \$567 average for 1900. Keeping this in mind, he said, the second table "shows us that the railroad workers as a whole, have barely kept pace with the increased cost of living and that the most favored occupations have at the most only made up a small part of the amount by which they were underpaid in pre-war days. The earnings of the engineers and conductors have fallen far behind the increase in the cost of living and they are actually worse off than they were at the beginning of the century."

Senator La Follette then presented another table comparing the buying power of the average earnings per year, using 37 cents as the purchasing power of the dollar during the first half of 1921 and 38 cents during the second half of the year, as compared with 1900. On this basis he gave the purchasing power of all employees as \$662 in the first half of 1921 and \$599 in the second half, as compared with \$567 in 1900. For the engineers and conductors the adjusted figures for 1921 were below those for 1900, but the figures for all other classes showed considerable increases. For the engineers the buying power was \$1,057 in the first half of 1921 and \$999 in the second half, as compared with \$1,161 in 1900. For the firemen it was \$778 and \$719 as compared with \$662. For the conductors it was \$972 and \$909 as compared with \$1,004. For the trainmen it was \$751 and \$687 as compared with \$694. For the machinists it was \$815 and \$758 as compared with \$698. For the trackmen it was \$397 and \$342 as compared with \$311 and for the telegrapher it was \$736 and \$681 as compared with \$644. For all classes except the engineers and conductors the figures for the last half of 1921 also exceeded those for 1913.

This table, the Senator said, presents the actual situation of the railway employees accurately and impressively. "No honest mind can examine these figures without being convinced that the wages of the workers on the railroads cannot be cut, under present conditions, without inflicting a grave injustice upon this splendid body of men."

In another table the buying power of the annual earnings was reduced to percentages. For all employees in the first half of 1921 it was 117 per cent for that 1900 and for the second half it was 105 per cent. For the second half the percentages were: 80 for engineers, 108 for firemen, 90 for conductors, 115 for trainmen, 108 for machinists, 110 for trackmen and 105 for telegraphers.

Operating Results Show Savings by Rebuilt Power

Complete Replacement of Locomotives Furnishes Unusual Opportunity for Comparison of Costs

By H. F. Grewe

Master Mechanic, Akron, Canton & Youngstown

THE OPERATING figures of the Akron, Canton & Youngstown for the period of May to September, inclusive, of 1921, when compared with the corresponding five months of the previous year, give some interesting data in connection with locomotive operating costs. A 100 per cent change in road service motive power presents an unusual opportunity to compare the locomotive operating figures of

comparison of one class of locomotive with the other, operating data for the period from October, 1920, to April, 1921, have been eliminated from the discussion as during that period charges were made against both classes for repairs and fuel.

Before going into the savings effected, a brief description of the two classes of locomotive is pertinent. The Class E locomotive has a tractive effort of 18,553 lb. and a total weight of 108,000 lb. These locomotives, built in 1896, have

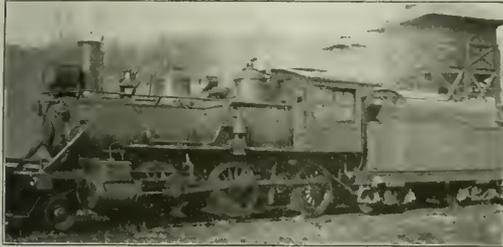

Fig. 1—Old Style Class E Locomotive Used in 1920

an older type locomotive with those of a rebuilt type equipped with superheaters and brick arches.

From March, 1920, until December, 1920, all road tonnage of this carrier was handled with 10 light Mogul locomotives which will hereafter be referred to as the Class E. In December, 1920, a long delayed delivery was made on a

no modern improvements which have to do with fuel economy; that is, they do not have superheaters, brick arches, or other appliances. As will be noted from the illustration, the firebox is of narrow type. Due to the small amount of heating surface and the shape of the firebox it was difficult to maintain the maximum steam pressure at all times.

The Class P locomotives are of a slightly heavier type having a tractive effort of 21,040 lb. and a total weight of 150,000 lb. They were built in 1920 they were rebuilt and fitted with superheaters, brick arches, extra air compressor, Econ-

Percentage.....	86.2	116.2	117.3	99.5	52.4	52.4

advantages in tractive effort and heating surface. The main differences between the two, outside of design, are the superheater and arch applied to the Class P. The leading dimensions and weights are given in Table 1.

Turning now to the savings effected by the change in locomotives, attention is called to Table 2 in which are shown the mileage figures, coal consumption and other data for five months in 1920 when all road traffic was handled by Class E locomotives and for the corresponding period in 1921 when the traffic was handled by Class P locomotives. The figures for the intervening period are omitted, because, as already stated, both types of locomotive were in service at that time. The value of the coal consumed by the locomotives was calculated at a uniform average price of \$3.50 per ton for the

TABLE 3—COMPARISON OF 1926 AND 1921 PERIODS

	1920	1921	Percentage increase or decrease
Cars per train.....	11.47	12.44	+ 8.5
Net revenue tons per train.....	202.60	186.60	- 7.9

Pounds of coal per locomotive mile.....	177.70	108.00	- 39.2
Pounds of coal per train mile.....	336.50	163.20	- 51.5
Pounds of coal per car mile.....	29.35	13.11	- 55.3
Pounds of coal per 1,000 net revenue ton miles.....	1,661.00	876.00	- 47.3
Cost of coal per locomotive mile, cents.	31.10	18.90	- 39.2

better comparison of the fuel costs. In Table 3 additional comparative figures are given which have been calculated from the data given in the preceding table.

Unfortunately, the figures covering gross ton-miles have not been kept until recently on the Akron, Canton & Youngstown and are not available for a comparison of the work done by the two types of locomotives in the periods selected for comparison. The net revenue ton-miles was practically the same for the two periods. The average number of cars in a train was somewhat higher in 1921 but the loading was not so satisfactory. The actual total saving in coal for the five-months period of 1921 as compared with 1920 was 9,344 tons, which at the price of \$3.50 per ton amounted to \$32,704, or at the rate of \$78,490 per year.

If a comparison is made on the basis of locomotive miles, which would appear to be the best available basis of comparison, it will be noted that the rate of coal consumption was 177.7 lb. per mile in 1920 against 108 lb. in 1921. At the assumed cost this would amount to 31.1 cents in 1920 and 18.9 cents in 1921, a saving of 39 per cent in the locomotive fuel bills.

The data presented deals only with the savings effected in fuel. No attempt has been made to estimate other savings effected. There is no doubt that an appreciable saving was made in locomotive and train crew time, for the Class P locomotives get the tonnage over the road on schedule whereas the Class E engines did not. The ratio of the engine failures of the Class P engines to the Class E engines were about one to six for the period, and as every engine failure means a tangible money loss to the carrier this also would swell the savings. It is entirely possible that the savings accruing in the transportation department would be no small percentage of the savings of the mechanical department.

THE AMERICAN PEOPLE in framing their tariff policies and navigation laws should always remember that Canada buys more from them than any other country. In other words, Canada is the best customer of the United States. On the other hand, Canada's best customer is Great Britain and the inevitable result of high tariffs and extreme navigation regulations, together with the demands for high premiums in money exchange, will lead to the reduction of Canada's buying in this country. There is no suggestion of ill feeling in this statement; it is merely an ordinary business proposition.—D. C. Coleman, Vice President, Canadian Pacific, in the *New York World*

Plan for Commissioner General of Transportation Not Approved

WASHINGTON, D. C.

ON THE ground that the time is inopportune for the establishment of a new governmental agency in charge of a commissioner general of transportation to represent the public interest in railroad questions, a recommendation by the National chamber's railroad committee that such a proposal be submitted to a referendum of the chamber's membership was disapproved by a resolution which was adopted by the national council of the chamber on February 9.

The council, however, gave its endorsement to the recent action of Secretary of Commerce Hoover in appearing before the Interstate Commerce Commission as the representative of the public, and expressed the hope that the secretary would continue to exercise this authority when circumstances make it appropriate.

The national council also took the position that the time is not propitious to take a referendum on the question of compulsory adoption of the metric system in the United States.

The resolutions adopted were as follows:

"No committee of the chamber has a more distinguished record for service and accomplishment than the railroad committee. From the board of directors the national council has at this meeting received a report in which the railroad committee presented its views respecting subjects of great importance. After opportunity to understand the committee's views, and as a consequence of further considerations brought out in debate, the national council suggests that the board should ask the railroad committee to continue its vigorous examination of the national problems in railroad transportation, and especially the manner in which the Transportation Act of 1920 meets the high purposes for which it was framed, and believes that the committee's suggestion for a new governmental agency in the transportation field is not timely for submission to a referendum vote."

"The secretary of commerce has performed a distinct public service by appearing before the Interstate Commerce Commission and presenting questions which arise from the economic and business situation. As the government's official representative of industry and commerce the secretary of commerce speaks with an authority that commands attention. Believing that the public interest requires such an authoritative presentation when matters of national importance in transportation are under consideration, the national council is gratified to learn that the statutes creating the department of commerce authorize the secretary to perform such a service and that the secretary is disposed to use this authority when circumstances make it appropriate."

Resolutions received by the resolutions committee, with respect to which the declarations recommended by the resolutions committee do not constitute an affirmative report, the committee recommended should be referred to the board of directors for its consideration and such action as it may deem appropriate.

The resolutions as to which this recommendation is made include:

Appointment of a subcommittee in the chamber's transportation department to study problems of highway development.

Opposition to any amendment of the Transportation Act of 1920 before a full test after return of normal traffic conditions.

Relation of freight rates to business operation.

THE CHICAGO UNION MAR TERMINAL has ordered 370 tons of conveyor and structural steel supports from the Pittsburgh Bridge & Iron Company

I. C. C. Orders Increase in New England Divisions

Roads East of Hudson to Receive 15 Per Cent More of Revenue from Joint Class Rates

WASHINGTON, D. C.

THE Interstate Commerce Commission on February 14 made public a modified order in the New England rate division case, dated January 30, following the reargument in November, in which it orders that the divisions accruing to the New England lines of the joint class rates and of the joint commodity rates which divide on a class rate basis other than those in which the Bangor & Aroostook participates, be increased 15 per cent, except in cases where the present divisions of the New England lines are greater than the division accruing to the lines west of the Hudson, in which cases they are to be increased by 15 per cent of the divisions now accruing to the lines outside of New England. It is estimated that this will increase the revenues of the New England lines by approximately \$7,500,000. The order is effective on March 1.

In its former report the commission found that the record afforded no foundation upon which might rest a valid prescription by it of divisions, but it recommended that the roads appoint committees to work out a readjustment themselves. Subsequently, no readjustment having been accomplished, the New England lines filed a petition for reargument, which was held on November 29, and in the light of the commission's further consideration of the law and the evidence it has issued the new decision to give some relief to the New England roads. The report said in part:

Abstract of Commission's Report

It is impossible to avoid the conclusion that Congress intended the relative financial needs of carriers, so far as these needs are legitimate and incident to the transportation service, to be given consideration in fixing divisions; and it is just and right that this should be so. The cost of the service includes not only expenses of operation but taxes and the proper capital charges incident to the continued functioning of the property. The share of overhead costs fairly attributable to interchange traffic may likewise be greater, relatively, where this density is low. Moreover, the group plan of increasing rates which we followed in 1920 under the provisions of the new law necessarily results in inequality of return to the various carriers. Certain of them gain a larger reward than they would receive if it were practicable to fix rates for individual companies, while others have less. Yet all are parts of the national transportation system and must be adequately maintained if they are not to be abandoned. Due regard for the public interest demands that we give these fortuitous inequalities consideration in the fixing of divisions.

Summing up this phase of the matter, we are of the opinion that our power over divisions is founded upon the public interest; that the carriers are mutually dependent parts of the transportation system; that the public interest requires that all essential parts be maintained, so far as possible, in effective working condition; that the relative amount and cost under economical and efficient management of the service rendered is a prime factor in determining the fair and equitable share of joint revenue which each carrier shall receive; and that included in such cost is a due proportion of the burden of maintaining the financial integrity and credit of the carrier.

Complainants perform their part of the interchange service under less favorable conditions than their connections west of the Hudson River. They are terminal lines; their hauls are short; their traffic splits at frequent junction points and is diffused over many secondary and branch lines; their trainloads are necessarily relatively light; the density of their freight traffic is relatively low; and while their investment per mile of road is low, their investment per revenue ton-mile is relatively high. Moreover, no coal mines are located on their rails, and fuel and many other of their supplies must be brought from considerable distance.

These unfavorable conditions are not new; they have long existed. They have been the cause, however, of a disproportionate increase in the burden upon the New England lines during the past three years. This has come about from the extraordinary

increases in wages and rates which have taken place within that period. It is inevitable that when freight rates are increased the carrier that brings its fuel and other supplies from a distance will suffer disproportionately. On coal alone and by the 40 per cent increase in freight rates alone complainants' costs were increased over \$3,400,000 annually. It is also inevitable that when wages are increased the carrier that produces less ton-miles per unit of labor will suffer disproportionately. In this connection the following statistics for the year 1919 are of particular significance. They show percentages for the New England lines as compared with their connections in trunk line and central territories:

Car-miles per car-day	73.5 per cent
Net ton-miles per car-day	60.8 per cent
Net ton-miles per train-mile	57.4 per cent
Net ton-miles per locomotive-day	55.9 per cent
Cost of yard expenses per 1,000 net ton-miles	155.5 per cent
Freight-train costs per 1,000 net ton-miles (wages)	184.1 per cent
Freight-train costs per 1,000 net ton-miles (total)	176.7 per cent

While labor is apparently not so large a factor, relatively, in the operations of the smaller northern New England lines as it is in the operations of the more complex and congested lines of southern New England, the northern lines have likewise suffered a disproportionate burden by reason of the increases in wages during the past three years to a standardized level, since the wages which they paid theretofore were below the average prevailing in the eastern group.

The divisional arrangements exhibited of record are built upon block bases, and in some cases constructive mileage is used or arbitraries are added. As pointed out in our former report, the blocking is often irregular, inconsistent, and illogical. Nevertheless, this system of dividing the joint rates of the New England lines and their western connections has existed for a great many years, and, so far as the record shows, without complaint until the extraordinary changes of the past three years. It is a reasonable assumption that until then it produced on the whole results which were fair.

The divisional arrangements shown apply to class rates, and generally to the commodity rates on articles which are classified. There is no evidence with respect to the divisions on coal and coke, fluid milk and its edible products, high explosives, or certain low-grade commodities moving short distances. Nor were divisions of the Bangor & Aroostook shown. Findings can not be made with respect to any of these divisions, and complainants do not now ask for such findings. On the other hand, defendants made no offer to prove that divisions in such cases are so favorable to complainants as to make up for deficiencies elsewhere, and the absence of evidence in regard to the divisions of certain rates constitutes no reason for failure to act upon the divisions as to which there is evidence.

Before the extraordinary changes of the past three years the New England lines, because of the relatively unfavorable conditions which have already been mentioned, were clearly entitled to divisions materially larger than would be received under a mileage prorate. The evidence shows:

1. That in not a few cases the present New England divisions are less than would be received on a strict mileage basis; that they are generally larger; but that in many cases the excess is slight.
2. That in many cases the New England divisions are larger than would result from a 50-mile block plan, allowing an extra block of 50 miles to both the originating and the terminal carrier, although frequently they are smaller.
3. That in many cases the New England divisions are a smaller percentage of the corresponding local rates than are the divisions west of the Hudson, although by no means in all cases.
4. That in the instances where the New England lines are allowed arbitraries before the division of the rates, these arbitraries have not been increased, notwithstanding the large percentage increases which have been made in the joint rates in recent years.

Having in mind that the 50-mile block plan is designed merely to afford some additional compensation to the originating and terminal carriers and makes no allowance whatever for operating disadvantages of the New England roads, apart from terminal service, there is nothing in this evidence which tends to overthrow the presumption that the divisional arrangements, prior to the recent extraordinary changes, produced fair results or that they were unduly favorable on the whole to the New England carriers. But if this presumption be accepted as a fair and reasonable conclusion from the facts of record, the further evidence with regard to the effect of the recent extraordinary changes leads

inevitably to the conclusion that the scales which formerly hung approximately level as between the participating carriers are now tipped against the New England roads and in favor of their western connections, because of the disproportionate results of these changes.

Financial Needs

These conclusions are further supported by the evidence in regard to financial needs. In 1917 the railway operating income of the complainants amounted to 5.68 per cent upon their recorded railroad property investment, as compared with 5.63 per cent for the carriers in the remainder of the eastern group. In 1919 this had changed to 1.02 per cent for the New England lines and 1.84 per cent for the other carriers. For the first 10 months of 1920 the railway operating deficit of the New England roads amounted to 3.10 per cent upon investment, while the similar deficit of the other eastern carriers was but 0.92 per cent. Finally, in the 12 months ended September 30, 1921, it appears that the deficit of the New England roads was 0.87 per cent upon investment, while the income of the other carriers amounted to 2.85 per cent. Thus the relative situation of the New England carriers has grown progressively worse, and it is a fact generally conceded that as a group they are in greater financial need than any similar group of important carriers in the country.

Nor does the evidence indicate that the financial needs of the New England lines are ascribable to the low level of their local freight rates or passenger fares. Both the class and commodity rates within New England were revised and increased in 1914.

The class rates were again sharply increased following our decision in *Proposed Increases in New England*, and upon this special increase were superimposed the subsequent 25 per cent and 40 per cent increases. The evidence also shows that passenger traffic in New England is generally more profitable than freight traffic.

If this were a case involving a proposed general increase or reduction in rates, evidence of the character which has thus been summarized, indicating a general need for relief, would be deemed persuasive and as justifying a horizontal increase or reduction. It has been our practice in such cases to disregard the immediate effect upon particular rates and to afford relief without delay, leaving a door open for any necessary subsequent readjustments.

In all such general rate cases we have realized and have held that if we were required to consider the justness and reasonableness of each individual rate, the law would in effect be nullified and the commission reduced to a state of administrative paralysis.

Is there good reason why a similar policy should not be pursued when parts of rates, i. e., divisions, are in issue? Manifestly there is need, in the case now before us, for a thorough revision of divisional arrangements upon a more logical and systematic basis. Manifestly, also, if a horizontal increase is made before this revision takes place, the result may be to leave certain divisions too high and others too low. But in this respect the results flowing from the general increases or reductions in rates which we have frequently authorized have been parallel. Moreover, any comprehensive revision upon a logical and systematic basis can be consummated only after many months of labor and, very probably, only after further prolonged recourse to us. In the meantime the New England lines will be denied even a portion of the relief to which the record indicates that they are entitled and which the public interest clearly requires.

Upon further consideration we are of the opinion that in a case involving divisions we may, when the public interest so requires, grant immediate relief subject to later readjustments, as we have done in cases involving general increases or reductions in rates. Otherwise, we shall fail to do substantial justice. The act requires a practical administration, and prompt action where that is necessary in the public interest. In our former report we recognized the need for a revision of the divisions. The course of action suggested in that report having failed to produce prompt relief, we must adopt another, justified by the record, which will accomplish what Congress intended should be accomplished.

Complainants Entitled to Immediate Relief

We are of the opinion, therefore, that some immediate relief may properly be granted to complainants, pending revisions of the existing divisions upon a more logical and systematic basis; but that relief should be held within conservative limits. The New England lines are in part responsible for the difficulties which the case presents because of their failure until recently to give the attention and study to their divisional arrangements of which there have plainly been in need. It remains to determine what form this immediate relief should take.

As already stated, evidence is lacking in regard to the divisional arrangements of certain specified classes of traffic. Our action will be restricted to the divisions of class rates and of the commodity rates which divide on the class-rate basis.

In one of their exhibits complainants showed, for a constructive year October 31, 1919, the revenues accruing to them on so-

called merchandise traffic interchanged with connecting lines and the revenue accruing to the other carriers participating in the same traffic. This covers traffic other than coal and coke. Eliminating interchange with Canadian lines, the total revenue on this merchandise traffic was \$117,118,424, and of this amount \$37,974,231, approximately one-third, accrued to complainants, and the remainder, \$79,144,193, approximately two-thirds, to connections. In the presentation of their case in *Increased Rates, 1920, supra*, the carriers showed that prior to the increase of wages in 1920 the New England lines required an increase of about 47.5 per cent in their freight revenues to meet their needs, while the other carriers in the eastern group required but 28 per cent. It was testified that the increases which we subsequently authorized averaged about 37 per cent throughout the eastern group. If it had been possible to provide at that time that one-half instead of one-third, of this increase on the merchandise interchange traffic should accrue to the New England lines because of their greater needs, they would have benefited to the extent of about \$7,500,000 additional per year, and no one, we think, would have regarded such a distribution of the increase as unfair under the circumstances. This amount, moreover, falls well below any estimate of the disproportionate burden which the New England lines have suffered in the past three years by reason of the extraordinary changes in rates and wages.

An increase of this amount in the divisions received by complainants would manifestly be of benefit to them far greater than the detriment to their western connections. To illustrate this: If the railway operating income of complainants had been increased by \$7,500,000 in the 12 months ended September 30, 1921, their deficit of 0.87 per cent on investment would have been converted to an income of 0.04 per cent; while if the railway operating income of the other lines in the eastern group had been decreased by a like amount, the result would have been only a reduction in the amount earned on investment from 2.85 per cent to 2.76 per cent. It further develops that if the divisions now received by complainants on this merchandise traffic were increased by 15 per cent, subject to the limitation set forth, the result, as nearly as can be estimated, would be an increase in revenue of not exceeding \$7,500,000.

We find, therefore, that the divisions of the joint class rates here under consideration and of the similar joint commodity rates which divide on the class-rate basis, other than those in which complainant, the Bangor & Aroostook Railroad Company, participates, will for the future be unjust, unreasonable, and inequitable to the extent that complainants' divisions thereof shall be less than 115 per cent of their present divisions, except in cases where their present divisions are greater than the divisions accruing to defendants, in which cases the aforesaid divisions will for the future be unjust, unreasonable, and inequitable to the extent that complainants' divisions shall be less than their present divisions plus 15 per cent of the divisions now accruing to defendants. We further find that the just, reasonable, and equitable divisions to be received by the several other carriers participating in the aforesaid joint rates will for the future be the amounts remaining of the joint rates over and above the divisions so to be received by complainants, to be divided among them as they may agree, or, failing such agreement, as may be determined by us upon application therefor.

We enjoin upon complainants and defendants the necessity for proceeding as expeditiously as possible with the revision of divisions upon a logical and systematic basis which we recommended in our former report; and in order that delay in this process may be reduced to a minimum, we make the following additional recommendation:

Instead of attempting to cover the entire field at once, certain important traffic of comparatively simple characteristics should be selected and attention concentrated in the first instance upon the divisions of the rates upon such traffic in order that a suitable guide for the revision of other divisions may as soon as possible be provided. In making a study of such specific rates, every effort should be made to ascertain with such approximate accuracy as may prove possible the respective costs of the service performed by the various participating carriers, including in such costs a fair share of the charges attributable to taxes and a reasonable return upon the property. The other elements mentioned in the statute, in addition to mileage, should likewise be considered. In case of inability to agree upon the divisions of such rates, the question may be presented to us in advance of the consideration of other specific divisions.

Commissioner Potter wrote a concurring opinion while Commissioners Daniels and Hall wrote dissenting opinions. Commissioner Esch also dissented.

Dissenting Opinion

Commissioner Hall said in part:

"In administering and enforcing the interstate commerce act we can change what the carriers do or have done only as

we find violation of that act, and in doing so must mete out an evenhanded justice to all parties before us, whatever their weakness or strength. It has not been committed to us to equalize the fortunes of carriers, of localities, or of men.

"In the present proceeding we find some, not all, of the rail carriers in New England arrayed against practically all other rail carriers in the United States. Joint rates, class and commodity, from and to the South and the West, clear to the Gulf and the Pacific, are maintained by these New England carriers in connection with the defendants there, as well as with their nearer neighbors just across the Hudson. The Potomac, the Ohio, and the Mississippi are crossed as well as the Hudson. The defendants are in varying stages of prosperity and adversity. Some are in the hands of receivers. Some, like those in the South, have suffered far greater enhancement of their labor costs by federal wage increases than have the complainants. Yet all of these defendants, without exception, are here required to yield up to some New England roads shares greater by 15 per cent than those which they have agreed upon among themselves. No attempt is made to ascertain the effect upon defendants of this requirement, or to ascertain whether the shares remaining to them of the joint earnings will be just, reasonable, and equitable. There is not even a perfunctory compliance with the mandates of the statute in that regard. The record affords no basis for it. The one outstanding fact in the report is that in the opinion of the majority the complainants need the money. Perhaps the defendants need the money as much, and have a better right to it. On that we get little light and no facts on which to exercise a judgment. What are the rates to be divided, what is the important tonnage which moves at those rates and on which the important earnings are made, what are the respective services performed by the participants in effecting the movement, what are the cost and value of those services, and what the present divisions here condemned? The report gives no answer.

"These divisions were determined by the parties themselves many years ago. Complainants make no attempt to show that they were cozened or coerced into agreeing upon them. On the contrary, they urge that until recent years their divisions, as a whole, were reasonable. They now claim that because conditions which have developed during the last few years have affected them seriously, their divisions, as a whole, are no longer reasonable. They show how these conditions have affected them but do not attempt to show how defendants have been affected by like or other conditions, or will be affected by decreased divisions. The burden is upon complainants. There is thus a failure of proof in essentials necessary to entitle complainants to such reformation of their contracts as is here required.

"I can give no adherence to the view that we may increase or decrease divisions of joint rates simply to meet the varying financial needs of particular carriers or groups of carriers without regard to the amount, cost, or value of the services performed by the participating carriers, or the share of joint earnings which will remain to each after the change is made."

CANADIAN RAILWAY PROBLEM.—The Montreal Herald, demanding that the Government "Stop Some of the Railway Waste," says that at the Union Station, in Quebec "a strange thing is to be seen every night. On one track there is a C. P. R. train loaded with passengers for Montreal. On the next track is another splendid train, also bound for Montreal, with not a soul in it—a train belonging to the Canadian National. For months past the National Railways have been running a train each way every day between Montreal and Quebec. It may be that traffic somewhere along the line justifies this, but the impression is that here is where some of that heavy railway deficit is incurred. It is said that these daily National trains between Montreal and Quebec cause a loss of from \$700 to \$800 a day.

Progress of Railroad

Administration Liquidation

WASHINGTON, D. C.

DIRECTOR GENERAL Davis of the Railroad Administration has submitted a report to the President covering the 22 months from the termination of federal control of the railroads on March 1, 1920, to December 31, 1921, which has been transmitted to Congress. Mr. Davis estimates that by the end of this year at least 80 or 90 per cent of the claims of the railroads against the government should be adjusted and that the balance of the carriers' claims and all other demands of third persons should be so nearly disposed of during 1923 that at the end of that time consideration should be given to the abandonment of the existing Railroad Administration and transferring the limited amount of undisposed of matters remaining to some permanent organization of the government.

If future adjustments with the carriers are concluded upon the same general lines as those which have been consummated in the past, Director General Davis says, the administration, with its available assets, including cash on hand, assets in field, and the sale and collection of obligations of the carriers now owned by the government and taken from the carriers, in matters connected with and growing out of federal control, should be able to wind up all matters, questions and disputes arising out of or incident to federal control without any further direct appropriation by Congress.

The director general reviews the contention of the Railroad Administration and the carriers in regard to the interpretation of the standard contract which was executed by roads operating 206,401 miles of road, while roads operating 34,793 miles refused or failed to enter into a contract. The serious differences of opinion, he said, grow out of controversies in the matter of maintenance, repairs, renewal, retirement and depreciation, and in addition, with non-contract companies, the question of reasonable compensation for the use of the property. Another fruitful source of controversy arises over the question of the liability for materials and supplies taken over by the government, the book value of which on December 31, 1917, was \$532,528,864.

Although the differences in the construction of the maintenance provisions of the contract were estimated to amount to \$600,000,000 to \$700,000,000, all settlements that have been made to date have been based on the construction of the contract claimed by the government. Up to December 31, claims in final settlement had been filed aggregating \$931,721,488, representing a total main line mileage of 208,731 miles. On this basis it is estimated that the total amount of claims will aggregate about \$1,100,000. Up to the end of the year claims amounting to \$447,518,009 had been adjusted for \$133,694,353. The claims settled represented 116,099 miles or 48.135 per cent of all the main line mileage under federal control. These adjustments were completed with practically no litigation. The short line railroads have filed claims aggregating \$1,732,272.

Discussing the claims of third persons against the Railroad Administration, the director general says that upon the termination of federal control the then acting director general issued an order providing for the opening by each carrier whose property was taken of what is designed as a trustee account, in order that the general assets of the Railroad Administration arising out of federal control might be collected and the general operating liabilities paid through these accounts. For the 22 months covered by the report, the roads collected assets due the Railroad Administration in the field aggregating approximately \$530,000,000 and there was paid out on federal liabilities through these accounts approximately \$970,000,000.

The various regional organizations created by the Railroad Administration to supervise this work authorized payment of \$32,118,139 in settlement of 37,260 claims for loss and damage, personal injury and fire, aggregating \$74,906,763. The amount recommended by the carriers in settlement of these claims was \$36,862,024 so the authorizations made by the regional organizations represented a saving to the government of \$4,743,884. In addition, claims aggregating \$7,686,345 were declined, although the representatives of the carriers had recommended payment of \$1,771,998 in settlement of these declining claims. The greater portion of the claims of this character having been disposed of, all of the regional offices, except that at New York, have been abandoned and the expense connected with them terminated. The central office in Washington maintains an organization which has supervision over the disposition of the remaining claims.

On reparation claims the administration has paid out on formal awards \$522,789 and on informal claims \$543,996, a total of \$1,066,786. In addition, there will be from 50,000 to 75,000 overcharge claims that will require adjustment. Payments of reparation claims are made out of the \$300,000,000 revolving fund under the control of the Interstate Commerce Commission. The Railroad Administration has paid out on account of liabilities resulting from unfinished contracts with inland waterways \$4,636,028. There is still a small amount of these liabilities which the Railroad Administration must finally pay, but its relations with the inland waterways are practically concluded.

In discussing the additions and betterments made during the period of federal control the director general says there is a controversy of some magnitude arising out of the question as to whether certain claims for additions and betterments should be borne by the carriers or by the administration. These disputes arise largely in the matter of improved facilities which the railroads claim were made for war purposes. Up to December 31, 23,797 of these claims, aggregating \$91,318,381, had been presented; 14,704 of these claims have been disposed of; claims amounting to \$6,313,408 have not been allowed, while claims amounting to \$13,993,511 were declined and claims amounting to \$3,610,895 were withdrawn.

The aggregate receipts of the Railroad Administration from March 1, 1920, to December 31, 1921, were \$1,093,757,504 and the disbursements were \$912,496,869, leaving a balance available for the general purposes of liquidation of \$181,260,634. The estimated amount due the carriers with which final settlements have not been made is \$241,062,934.

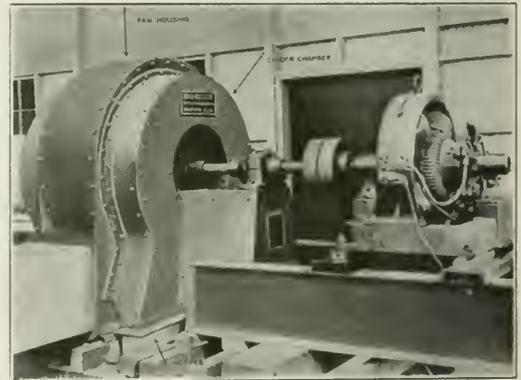

The estimate is based on the administration collecting practically the full amount and that future adjustments will be made along the same general lines as those already collected. On these estimates the Railroad Administration will require some \$59,000,000 in addition to present available funds to complete the final adjustments with the carriers, but it has some other sources from which it may receive some cash and it is, therefore, the judgment of the administration that no additional appropriation will be required. On December 31 the Railroad Administration held \$130,054,053 of definitive obligations of carriers in addition to \$183,255,400 of equipment trust notes. The report says there would seem to be no good reason why the government should not realize and collect a substantial proportion of these obligations. The Railroad Administration had sold \$140,197,700 of the equipment notes and the proceeds were transferred to its account with the Treasury.

During 1921 an average of 1,250 people were in the employ of the Railroad Administration and their total compensation aggregated \$3,084,020. This overhead for the central office in Washington, the report says, is much less than half in number and amount as compared with similar expenses during the period of federal control.

Cinder-Separating Induced Draft Fan

WITH THE IDEA of separating cinders and dust from exhaust gases and thus greatly reducing the smoke nuisance, the B. F. Sturtevant Company, Boston, Mass., has developed a cinder-separating, induced draft fan, shown in the illustration.

The fan housing is indicated by an arrow, also the cinder chamber and the hopper in which dust and cinders collect by gravity. Buckets are provided at the inlet edges of the blades of the paddle wheel. These buckets catch and separate the dust and cinders which are conducted by means of inclined channels leading out into the special dust chambers in the fan. Several small guiding vanes serve to direct the air and cinders into the inclined channels. Since it is impossible to blow dust with air as this would involve again a separation problem, arrangement is made for the dust to settle and fall by gravity into the dust chambers. These dust chambers lead to the closed hopper at the bottom in which the dust accumulates and from which it can be removed periodically or continuously by means of screw or other conveyors. The cinder-separating induced draft fan requires no more attention than an ordinary induced draft fan. It is said to be unusually efficient as a fan and to remove 75 per cent of the solid matter in the gases. The

Sturtevant Fan Designed to Separate Dust and Cinders from Flue Gases

fan removes a still larger proportion of the heavy coarse material which drops over the city in the neighborhood of power plants causing complaints from the residents. Two of these fans have been installed in a large power plant in New York City and are reported to operate successfully. They are used in connection with six 500-hp. boilers and when these boilers are operating at 200 per cent rating, it is found that each fan removes 250 lb. of cinders per hour. At higher ratings this would be much greater. The material resembles a fine coke breeze and on an analysis shows about 9,700 B.t.u. per pound.

The cinder-separating induced draft fan is particularly desirable for use with underfeed stokers. These do not cause a serious smoke nuisance when boilers are operating at normal ratings. They do, however, when the boilers are being forced above normal ratings. Extremely fine particles in the smoke are not particularly objectionable because they are carried away by the air currents and not deposited over the surrounding neighborhood, but the dust and cinders in the gases are fairly heavy and fall within a comparatively short distance of the stack, hence the need of an efficient cinder-separating fan.

Improved Hanna Locomotive Stoker, Type H-2

Changes in Design Increase Simplicity and Durability—Performance
on Norfolk & Western

THE HANNA STOKER, made by the Hanna Locomotive Stoker Company, Cincinnati, Ohio, belongs to the class in which the fuel is delivered in front of a jet of steam by which it is blown into the firebox and distributed over the surface of the grate.

In general, the stoker consists of a steam cylinder which, by means of a rack and pinion rotates a screw conveyor by which the coal is brought from the tender to the locomotive. The coal is then delivered to two screw elevators enclosed in a housing embracing the firing door and elevating on each side of it. These elevators deliver to two oscillating chutes from which the coal drops upon a distributor plate over which it is blown into the firebox and by means of

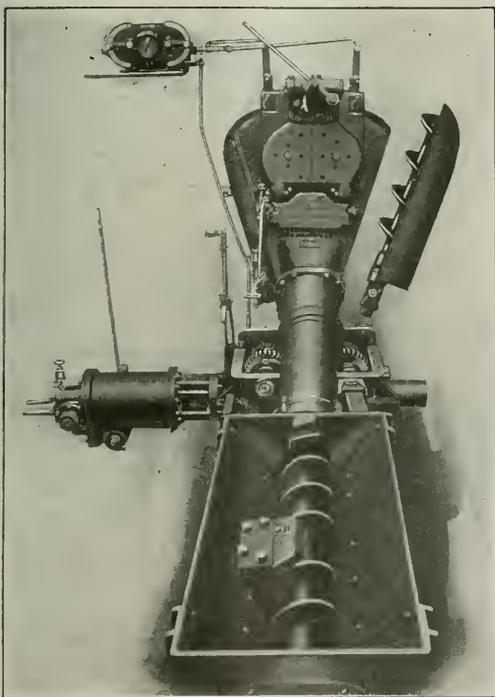

11 in. air brake compressors. Should the conveyor become jammed either by large lumps of coal or by foreign substances such as bolts or stone, it may be necessary to reverse the motion of the piston before it has completed its full stroke. To accomplish this there has been introduced a reversing valve of the piston type operated by a lever in the cab through a system of bell-cranks and rods. The two steam passages from the main slide valve, instead of leading directly to the opposite ends of the cylinder, are carried to the reversing valve chamber, the arrangement of ports being such that by the movement of the reversing valve the steam is caused to flow to the opposite end of the cylinder from that to which it flows when the valve is in the other position.

The end of the extended piston rod is coupled to the rack by means of a key. In addition to the usual stuffing box on the cylinder head, the piston rod passes through a second stuffing box on the rack housing, which is an oil tight case. The rack housing is bored out to take the rack guide which is fitted with two side keys. A bearing and wearing strip is inserted between the rack and the rack guide to take the downward thrust of the rack as it works back and forth to drive the gears. The outer end of the housing is closed by a cap, the removal of which furnishes access to the rack.

Mounted on top of the rack housing is the gear box in which is located the nest of gears which drive the screw conveyor and the two elevators. There are two pinions in mesh with the rack which are so connected by gears and clutches to the conveyors that one of the pinions acts as a driver on the out stroke of the piston while the other pinion becomes the driver on the opposite stroke, thus imparting a continuous motion in one direction to the conveying mechanism.

A telescoping transmission shaft of square section and equipped with universal joints is located on the right hand side and transmits the driving power from the gear case on the locomotive to the gears at the back end of the main conveyor shaft on the tender. This arrangement provides the necessary compensation for the motion between the locomotive and the tender.

The casing of the conveyor on the tender terminates in a ball joint at the front end where it is joined to an inclined circular section which connects the tender to the locomotive. The short conveyor screw in the connecting section is attached to and is driven by the conveyor screw on the tender, a universal joint being used for the connection of the two portions. The elevating screws are independent of the conveyor and are driven direct from the gear case by two universal connections located on the front portion of the gear case.

General View of Hanna Locomotive Stoker

which it is given the proper distribution. The details of the mechanism have been in process of development for a number of years. The speed of the conveyor screws can be varied at will to deliver any desired quantity of fuel; or, in case of clogging or jamming, the conveyor screws can be reversed. Coal may be scattered evenly over the surface of the grate or the delivery concentrated in one place.

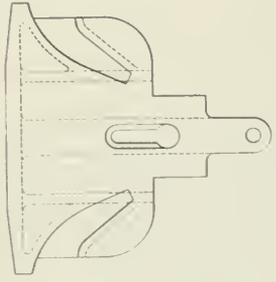

Engine and Conveyor of Simple Construction

The motive power is derived from a single cylinder steam engine having a diameter of 11 in. and a stroke of 16 in. The valve mechanism is similar to that used in 9½ in. and

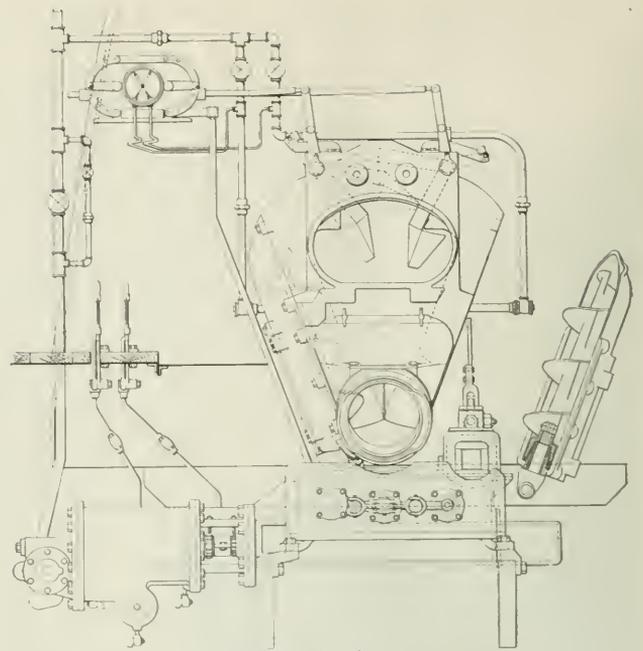

Coal Distributing Mechanism

The pinions driven by the rack are provided with clutches which can be reversed by means of a lever at the left of the fire door. Should it be desired to run the conveyor screws backward, the pressure on the rack is first relieved by reversing the engine as previously explained, and the gear clutches then shifted to bring an extra gear into action which reverses the motion. In addition to these devices a coupling has been provided at the top of the gear case whereby the transmission shaft may be cut off and the conveyor stopped without shutting down the engine. This clutch is operated by a lever on the deck at the right of the fire door.

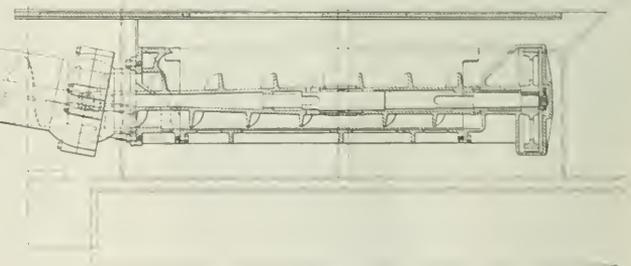

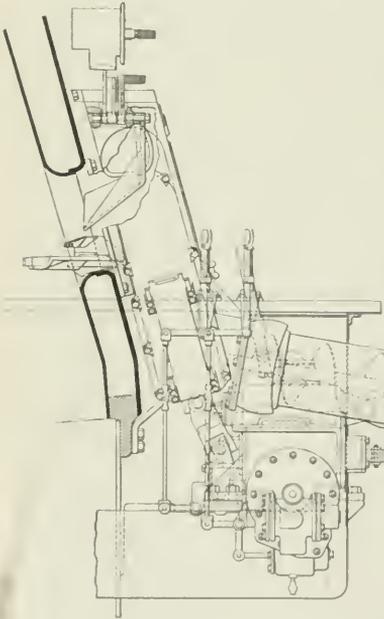

The coal after being conveyed from the tender to the loco-

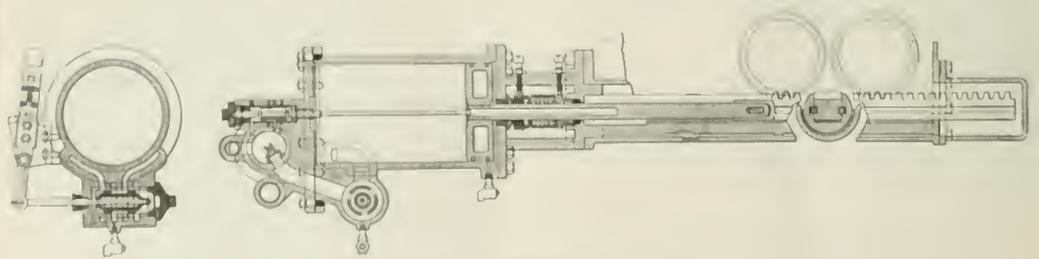

Distributor Plate

Rear Elevation

Longitudinal Section

Section of Engine and Rack Housing

motive and raised by the elevators falls upon two oscillating chutes which swing to and fro as they drop the coal onto the distributor plate. This plate, which is an important element in the operation of the stoker is of cast iron and sets in a casting at the bottom of the fire door from which it can be easily removed even while the fire is burning brightly. As will be noted from the illustration it consists of a broad flat plate with two curved diverging channels cut into the upper surface. These channels catch a portion of the coal as it is blown over the top of the plate and divert it into the back corners of the firebox along the back sheet.

The cast steel blast chamber is located above and slightly back of the distributor plate. It is provided with two trunnions tapped out for $\frac{3}{4}$ in. steam pipes, a different pressure

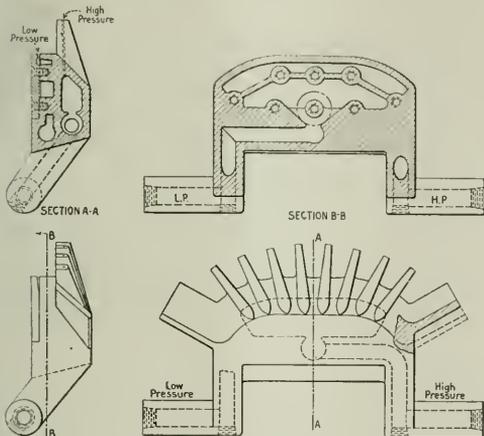

high and low pressure connections of the blast chamber.

By referring to the illustration showing the general rear elevation of the stoker it will be noticed that the main steam pipe leading to the engine is provided with a globe valve and with a $\frac{1}{2}$ -in. by-pass pipe having a second globe valve. In ordinary practice the main valve is kept closed, the by-pass pipe furnishing all the steam necessary to operate the engine at the speed required.

Performance on Norfolk & Western

As an example of the performance of the improved Hanna stoker, some notes relative to a recent run on the Norfolk & Western of a locomotive equipped with a stoker of this type will be of interest. The locomotive was of the Mountain type with 29 in. by 28 in. cylinders, 70 in. drivers, 80.3 sq. ft. grate area and a rated tractive effort of 57,200 lb. The run was from Roanoke, Va., to Bristol, a distance of 151 miles and return. On going west from Roanoke the start is over generally rising undulating grades ranging from 0.73 to 0.9 per cent extending for 20 miles to the eastern slope of the Allegheny mountains. Then there is a direct unbroken rise for about 10 miles on a 1.32 per cent grade to the summit, followed by a drop for about $6\frac{1}{2}$ miles on a 1.0 per cent grade to the valley of the New River. Then there are four sharp rises on grades running from 1.19 to 1.31 per cent with intermediate drops until the summit is reached at 94 miles from Roanoke, the elevation being 2,591 ft. above sea level. On the western slope there is at first a 10 mile descending grade of 1.125 per cent followed by a series of up and down grades of over one per cent into Bristol, the elevation of which is 1,675 ft., making a net rise of 775 ft. from Roanoke, and a total rise on up grades of 3,540 ft.

On the westbound run, known as the "Memphis Special," the train consisted of a mail car, a combination car, two coaches, three Pullman cars and a dining car, the total weight including the locomotive and the eight cars being about 834 tons. There are no regular station stops but two stops are necessary for water and one for coal. On this particular run there were ten stops including those at flag stations together with those for coal and water; in addition there was one slow-down for track work. The actual elapsed time for the run was 4 hr. 50 min., from which 16.5 min. is to be deducted for stops, leaving an actual running time

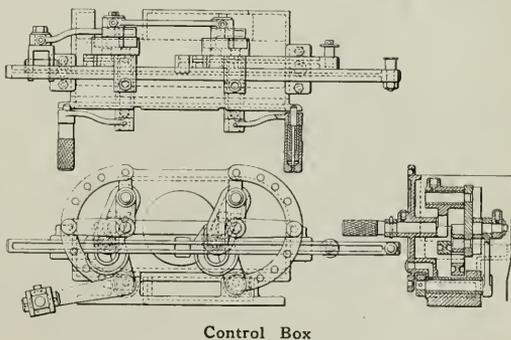

High and Low Pressure Blast Chambers

being supplied to the two connections. High pressure steam at from 25 lb. to 50 lb. pressure enters through the right hand trunnion, passes to the upper passage of the chamber from which it is discharged to the firebox through the eight diverging nozzles which are drilled with $\frac{5}{32}$ in. holes peened down to $\frac{1}{8}$ in. at the orifice. Low pressure steam at from 10 lb. to 25 lb. pressure enters through the left hand trunnion, passes to the lower part of the chamber and is discharged through three nozzles in the plate attached to the bottom of the blast chamber. The combination of the nozzles serves to distribute the coal evenly over the surface of the grates.

The oscillating chutes which deliver the coal to the distributor plate receive their motion from two connecting rods leading to the control box which contains a series of bell-cranks and links. This mechanism receives its reciprocating motion from a crank driven by a worm gear in the main gear case, a rod with universal joints being employed for the connection. On the front of the control box are two levers and handles which are used to adjust the link mechanism and thus regulate the swing of the oscillating chutes. The adjustments for the two chutes are entirely independent and thus provide the maximum flexibility in coal distribution. Should the stoker become inoperative from any cause, the chutes can be disconnected, turned up out of the way and latched; hand firing can then be started immediately. In such a case the coal is simply scattered by shovel on the distributor plate, the stoker blast being used to take the coal from this point and properly distribute it over the surface of the grate.

A duplex gage is also mounted on the front of the control box, the hands showing the steam pressure of the

Control Box

of 4 hr. 33.5 min., giving an average running speed of 33.1 m.p.h.

On leaving Roanoke there was a brightly burning fire, evenly distributed over the grates, with a depth of about four inches, and a steam pressure of 170 lb. Four minutes after leaving the pressure had risen to 190 lb. and from that time on it swung up and down between 175 lb. and 200 lb. Throughout the run the stoker was controlled by the fireman without having to leave his seat. The rate of feed was gov-

erned according to the steam gage and the appearance of the stack. Only immediately after starting was there any appearance of smoke. The fire door was opened by an observer a number of times when the steam was shut off and in every instance the bed of fire was thin and level.

Occasional adjustments of the steam pressure at the blast nozzles was required but these were slight. Pressures varied from 15 lb. to 20 lb. throughout the run with occasional rises to 25 lb. for the high pressure blast. The oscillating chutes for distributing the coal were untouched except for one adjustment to the right wing. The stoker was stopped 17 times, the total time when it was not in operation being 96.5 min. or about a third of the time. The hook was not taken from its supports, the grates were not shaken and not a shovel full of coal was put into the firebox by hand.

The return run was a local. There were six cars in the train at the start and one picked up later, the train then being 94 tons lighter than on the trip west. The elapsed time was 5 hr. 43 min., of which 1 hr. 10 min. were occupied at station stops, of which there were 33. The actual running time was 4 hr. 33 min., requiring an average running speed of 33.1 m.p.h.

Owing to the frequent stops the stoker required more attention than on the westbound trip. It was stopped 32 times and was idle for a total of 2 hr. 19.5 min., or 41 per cent of the elapsed time. The distributing chutes were adjusted nine times. The pressure at the high pressure nozzles varied from 15 lb. to 30 lb. and at the low pressure from 10 lb. to 30 lb. The steam pressure was maintained between 175 lb. and 200 lb., the average being 192 lb. and the safety valves did not open.

On leaving Bristol the fire bed was rough and lumpy as

left from burning down over night after being banked, but within 10 min. after the start it was in a smooth, even condition. The fire hook was not used, no coal was fired by hand and the grates were not shaken. On arrival at Roanoke the fire was thin, level and burning evenly.

The coal used was prepared for stoker operation in accordance with the practice on the Norfolk & Western and was of the usual grade which contains about six per cent ash and 36 per cent volatile matter. The run was not unusual as the records of the locomotive show that for 28 consecutive runs no coal had been fired by hand, the hook had not been used and the grates had not been shaken.

I. C. C. Has Served Valuations on 184 Railroads

TENTATIVE VALUATIONS have been served by the Interstate Commerce Commission on a total of 184 properties up to December 31, 1921. Owing to the fact that most of them are small roads, few being over 1,000 miles long, the total mileage involved is only 26,191—less than 10 per cent of the total miles of railroad in the United States. The appended table shows the figures for final value in comparison with investment in road and equipment and capitalization as taken from statements published by the President's Conference Committee, dated September 21, 1921, and January 20, 1922. This table contains the figures for the valuations which have been served between July 20 and December 31, 1921, those served prior to July 20 having been abstracted in a previous table in the *Railway Age* of August 31, 1921, page 288.

*Road lies partly in Canada. Only property in U. S. inventoried.
 †Figures for entire property both in Canada and United States.

NOTE 1.—Unit prices used in estimating cost of reproduction new and cost of reproduction depreciation are those termed normal prices as of June 30, 1914.
 NOTE 2.—Items in "Capitalization" column should not be totaled, as some duplications are present.
 NOTE 3.—Where a number of carriers are included in one valuation docket the details of the property "Used but not Owned" are not in all cases set up in the name of the owner, but the total amount is included in the totals for this classification.

Freight Car Loading

WASHINGTON, D. C.

REVENUE freight car loading continues to increase, according to the weekly report of the Car Service Division of the American Railway Association. For the week ended February 4 the number of cars loaded with revenue freight was 753,886, an increase of 10,158 as compared with the preceding week and of 54,168 as compared with the corresponding week of 1921.

This was 8,974 less than for the corresponding week of 1920. Coal and merchandise loading showed the large increases.

There was a marked decrease in the car surplus for the week ending January 31, 1922, the total standing at 330,681 cars, or 65,511 cars less than the figure of the previous week.

Of this surplus, 132,174 are box cars, a decrease of 26,925 cars, and 104,386 gondolas, a decrease of 79,613 cars, from the week ending January 23.

Loading of merchandise and miscellaneous freight amounted to 429,705 cars, an increase of 9,295 over the preceding week and 26,944 more than were loaded during the same week last year. It was, however, 9,212 less than were loaded during the corresponding week in 1920.

Coal shipments totaled 185,151 cars, a gain of 4,185 over the week before. This was 27,597 more than were loaded

during the corresponding week in 1921 and 8,640 more than the corresponding week in 1920.

Forest products also showed a gain over the week before of a total of 2,831 cars, the total for the week being 50,204 cars. It was, however, approximately 2,500 under the same week last year and about 10,000 below the corresponding week in the year 1920.

Coke shipments totaled 7,844 cars, an increase of 342 cars over the week before, but 1,678 below one year ago. Ore, with a total of 4,015, was eight in excess of the previous week. During the same week last year, the total was 8,480 cars.

Shipments of grain and grain products amounted to 48,969 cars, a decrease of 1,911 compared with the previous week, but an increase of 11,948 over the same week last year, and 14,376 greater than the same week in 1920. Live stock shipments also decreased 4,592 cars compared with the week before, bringing the total to 27,998, which was 3,608 below the same week in 1921, and 2,263 below the same week in 1920.

Compared by districts, all showed increases over the week before in the loading of all commodities except the North Western, Central Western and South Eastern Districts, while the North Western and South Western were the only ones to show reductions compared with the corresponding week in 1921.

Division Accounting—An Operating Viewpoint

The Centralized and Decentralized Plans Contrasted—Methods Worked Out on the New Haven

By J. E. Slater

Special Assistant to General Manager, N. Y., N. H. & H.

PART II

THE VALUE of any plan depends upon the results which it produces. What then are the results of the plan chosen by the New Haven—the decentralized plan under the jurisdiction of the accounting department? Does it fulfill the requirements which have been previously mentioned? Does it provide accurate, current data on division costs, does it provide detailed information on the various phases of division performance, does it give information not called for as well as regular statements required? A brief summary of the statements issued by division accountants will answer most of these questions.

The Statements Issued

On the New Haven most of the employees are paid weekly, only the officers and subordinate officials being paid semi-

Analysis of Transportation Man Hours

The analysis of transportation man hours is a statement of man hours in transportation service on each division, subdivided into the various classes as prescribed by the Interstate Commerce Commission. This statement is issued six or seven days after the end of the payroll week. It has proven of great value during the last year in the reduction of expenses. During the last week in each month, the general manager, general superintendents and superintendents meet to discuss ways and means of effecting economies and improving performance. With the transportation man hour statement for the first two or three weeks of the month as a basis, a standard of man hours for the succeeding month is established. This standard is then compared with the actual performance each week in the succeeding month. The

Statement of Train Load, Speed and Costs for Slow Freight Service

monthly. On that account, most of the statements are issued weekly. The following are the most important:

- (1) Analysis of payrolls and performance.
- (2) Analysis of transportation man hours.
- (3) Analysis of non-productive time and constructive allowances.
- (4) Analysis of train tonnage, speed and cost of through freight service by districts.

The weekly payroll analysis is a brief summary of payrolls and performance on the division. It contains no innovations, but is designed to give operating officers, (1) a summary of labor expenses, subdivided between departments and classes of service; (2) a comparison of the station, yard and train performances with the costs of these services as a whole; (3) a brief explanation of increases and decreases in payrolls as compared with previous periods. This analysis is issued from seven to ten days after the end of the payroll week

necessity for this close check has resulted in the discovery of means to effect further reductions. The same plan followed by the general manager with reference to transportation service is also followed in the maintenance and mechanical departments. This budget system in both maintenance and transportation departments has been used successfully on other railroads, the important difference on the New Haven being the use of man hours instead of expense.

Non-Productive Time and Constructive Allowances

The statement of non-productive time and constructive allowances is issued within ten days after the end of the payroll week. It is divided into two parts. The first section covers items which are primarily matters of schedule and policy and not subject to the control of local operating officers. Among the important items are payments for vacations and holidays, safety meetings, bonus hour paid to me-

chanical forces in shops, engine and train crews learning road, and relief days for supervisory forces. This part of the statement is valuable chiefly in showing the actual cost of certain schedule rules which provide payment where there is no work.

The second section covers items which are partly or wholly under the control of supervisory officials. Among the important classes are payments for arbitrary allowances for switching by road crews, deadheading, terminal delay, hosting by road crews and guarantee paid passenger crews. These items are closely watched from week to week by division and general officers and material reductions have been made as a result of practices which the statement disclosed.

Analysis of Through Freight Service

By Districts or Runs

The three statements mentioned above are based on division payrolls and the charges made against each division are those carried on that division's payroll. It will be recalled that the division payroll, as far as train and engine service is concerned, may extend beyond the confines of that

Gross ton miles per train hour,
Cost of wages per train mile,
Cost of wages per 1,000 gross ton miles.

This statement is also of particular value in that it furnishes an index of the relative effect of trainload and speed on cost. The importance of properly balancing tonnage and speed is especially great on the New Haven, where the frequency of passenger service makes necessary adequate speed in freight service.

In addition to this analysis of through freight service, the division accountants furnish superintendents with statements of local freight service, by runs. An important consideration in connection with local freight service is overtime and the statement provides an analysis of this factor.

The weekly statements are limited to analysis of labor charges. The question will be asked as to how charges for the important elements of material and fuel are analyzed. These appear in the monthly statement, though fuel is analyzed in greater detail by a method later described.

Monthly Statement in Three Sections

The monthly statement is divided into three sections: (1) maintenance of way expenses; (2) maintenance of equip-

Statement of Non-Productive Time and Constructive Allowances of Transportation Department

division. This situation was the only important operating factor arguing for the centralized plan of division accounting. In order to avoid this difficulty and to provide accurate data for checking the performance of specific trains, a statement is issued weekly, analyzing the performance and cost of through freight train service by districts or runs. This statement ignores division lines, but covers well defined districts within which engine and train crews operate. Each division accountant issues a statement covering designated runs and his statement is forwarded to each superintendent interested in those runs. Where it is desired, the information is further subdivided as between the divisions over which the run is made. The eventual plan will provide for complete separation in this manner in order that train wages on a division may be applied to the ton miles and train miles of that division. For the present, however, this statement furnishes adequate information to interested officers.

The statement shows for each run, separately by direct

- (1) Number of trips,
- (2) Train miles,
- (3) Gross ton miles,
- (4) Average trainloads,
- (5) Average speed,

ment expenses; (3) transportation expenses. The first section shows for the division the total charges to each primary account, subdivided into labor, material and other charges. This permits a close check against the maintenance of way budget, both as to labor and material. The statement also shows a summary of total labor charges, subdivided into roadway forces, bridge and building forces, signal and other forces. Data are also given as to work performed, including ties and rail laid, signals maintained, etc.

The mechanical group of expenses covers charges to primary accounts and, in addition, includes information as to locomotives repaired, running and classified, freight and passenger cars repaired, etc. In addition to this data, division accountants subdivide charges among types of engines and as between running and classified repairs. This information, however, cannot be available on this statement since charges must be consolidated and a system statement issued comparing all the repairs to each type of engine with the mileage made.

The section of the statement covering transportation expenses shows by services, rather than by accounts, the charges made. Station, yard and train services are each divided between passenger and freight service. The miscellaneous items such as charges to signal and interlocker

operation, crossing protection, etc., are shown separately. In addition to the detail of expenses, there is shown general data as to performance. This includes the gross ton miles, train miles (passenger and freight) made on the divisions, the number of tons of L. C. L. freight handled at the larger stations, the tons per man hour and the cost per ton at the same points, the cars handled per engine hour and the cost per car in the more important yards; the ton miles per train hour in freight train service; the cost per 1,000 gross ton miles for freight train expense and for all freight transportation expenses.

Monthly Statement a General Summary

This monthly statement is designed to provide a general summary of the performance for the month. The detailed analyses each week have furnished proper bases for the checking of performance and cost. The monthly statement pretends to do nothing more than show the net result of the efforts made during the month. It is issued on the fifteenth of the following month and is thus reasonably close to the

the division accountant sends daily a report of poor performances to interested officers who check the engine in order to determine the cause of the bad record.

This completes the current information regularly reported to operating offices. This in no way includes all statistical data compiled, but includes only the regular statements issued by division accountants. Moreover, most of the data has been developed with division accounting.

As stated before, however, the greatest value should come from information not specifically called for. In discussing this aspect of the situation, it is difficult to be specific. The amount of information furnished depends largely upon the point of view and experience of the division accountant. Consequently, the extent of the detail furnished varies with division accountants. Cases have been discovered of excessive amounts of overtime paid, and excessive amounts paid for various allowances provided by the schedule. A detailed analysis of the non-productive time statement, showing the specific moves which necessitated the payments, has resulted in corrective measures being taken. Much has been

Statement of Non-Productive Time and Constructive Allowances of Maintenance of Way and Mechanical Departments

period covered. It includes all charges properly made against each division's performance, and subject to the authority of the division staff. It does not include overhead items in which the local organization has no concern. It is a monthly summary of the division's activities and cost of its performance.

Check on Fuel Performance of Individual Locomotives

Mention has been made above of the specific question of fuel. In order to provide a close check of fuel performance, arrangements were made by which each division accountant keeps a check on the performance of individual engines. The car accountant reports to each division accountant the train miles, gross ton miles, time on road and terminal delays of individual freight trains terminating on his division. The division accountant shows against this performance the fuel consumed on the run, this being measured by the fuel necessary to fill the tender at the end of the run. When fuel is taken enroute, report is made to the division accountant of the amount taken. In the office of each division accountant, is a record card for each engine, showing by days the services performed, the fuel consumed and the pounds consumed per 1,000 gross ton miles. These cards are used by road foremen of engines, fuel supervisors and others checking the performance of individual locomotives. The information on the card is available from three to five days after the run is made. In addition to the card record,

done in this direction, but on all railroads this field, almost unexplored, awaits the skill and initiative of division accountants.

Special Studies and Investigation

There is still another field in which the local division accountants can be of the greatest value. This is in the field of special studies and investigation. Experience has repeatedly shown that studies of this kind are much more reliable and satisfactory as to results when they are made under the direction of local representatives who are familiar with the various details of operation in their respective territories, than when conducted by representatives sent out from the central office. Moreover, it has also been shown that these studies are more satisfactory when they are conducted by those whose principal business it is to perform work of this kind than to have it done by various local operating men who are not accustomed to this character of work.

As an example of this sort of work, the New Haven had investigations made of the cost of cleaning fires at some of the more important engine houses. This study was made covering a period of four weeks, involving a time study of the work of all fire cleaning gangs. It required no additional expense, and produced results which quickly justified the trouble in making the study. The work was done through co-operation of the mechanical department and

division accountants and was very satisfactorily worked out.

This field of special studies and analyses is a very broad one and can be more satisfactorily developed by division accountants working on the decentralized plan than by any other method known to the writer.

The net result of the New Haven experiences with the decentralized plan under accounting department jurisdiction has been a success. Much remains to be done to perfect the methods. A large amount of information remains to be

compiled along new lines. Nevertheless, the results have shown that with close co-operation between operating and accounting departments, much can be done otherwise impossible of accomplishment. Moreover, these results can be obtained with relatively slight additional expense. Division accounting opens a great field of study, not only to accountants, but to operating officers. The railroads will do well to push as far and rapidly as possible the further analysis and checking of expenses and costs which division accounting provides.

Labor Board Issues New Rules for Signalmen

Overtime Provisions Materially Changed—Large Part of National Agreement Perpetuated

PUNITIVE OVERTIME for signal department employees will, after February 16, be paid after the tenth hour of consecutive service instead of after the eighth hour, as is now the practice under the existing signalmen's national agreement, according to a new code of rules handed down by the Railroad Labor Board on February 13. The changes which have been made in the rules governing the working conditions of these employees are very similar to those recently made in the working conditions of maintenance-of-way employees and contain relief not so much from the national agreements against which the carriers have directed their fight but from a few of the more restricted rules which necessitate the payment of large sums of money for which no service is received.

The national agreement with the signalmen, formed during the closing days of federal control, contained 78 sections or rules. Of these, 43 are perpetuated in the new code announced by the Labor Board, 16 are remanded to the individual carriers and their own signal employees for settlement, one is eliminated, six are automatically changed by the revision of other rules or by new conditions which did not exist at the time the national agreement was made, and only 12, mostly rules covering the payment of punitive over-time, are changed.

The punitive overtime clause of the signalmen's national agreement stated that "overtime hours, continuous with regular working hours, shall be computed on the actual minute basis and paid for at the overtime rate." The new ruling approved by the Labor Board reads briefly, "overtime will be paid on the actual minute basis at pro-rata rate for the ninth and tenth hours of continuous service, exclusive of meal periods, and thereafter at rate of time and one-half."

Pro Rata Rates for Sunday and Holiday Work

Signal department employees regularly assigned to work on Sundays and holidays, will be compensated on the same basis as on week days, according to another clause of the new code. The signalmen's national agreement provided that "time and one-half time will be paid for all overtime including Sundays and the following holidays: New Year's Day, Washington's Birthday, Decoration Day, Fourth of July, Labor Day, Thanksgiving, and Christmas." The new rule provides that "work performed on Sundays and the following legal holidays—namely, New Year's Day, Washington's Birthday, Decoration Day, Fourth of July, Labor Day, Thanksgiving, and Christmas (provided when any of the above holidays fall on Sunday, the day observed by the state, nation or by proclamation, shall be considered the holiday), shall be paid at the rate of time and one-half, except that employees who are regularly assigned to work

on Sundays and holidays, or employees who work in place of those so regularly assigned, will be compensated on the same basis as on week-days when the entire number of hours constituting the regular week-day assignment of work, or when released on their own request before the completion of such hours." The following clauses are also appended to this new rule:

"If released by the carrier before the expiration of the regular week-day assignment, time and one-half will be allowed for the actual time worked. Sunday and holiday work will be required only when absolutely essential to the continuous operation of the railroad."

A slight change which may or may not, according to the Board's later interpretations, be important, was made in the provisions pertaining to part time work on Sundays and specified holidays. Part of the rule covering this point in the national agreement states that: "regular assignment of more than four and less than eight hours on these days (Sundays and specified holidays) may be established if agreeable to the employees concerned, the hours worked to be paid for at the overtime rate." The comparable clause in the new code reads "regular assignments of more than four hours and less than eight hours on these days may be established if agreeable to the employees concerned, the hours to be paid for at the pro-rata rates."

As in the case of maintenance-of-way employees, the rule covering the payment of employees performing service which requires them to leave and return to their home station daily, has been revised to eliminate the necessity in some cases of paying overtime rates for the time spent in traveling or waiting. The national agreement provision provided that employees performing such service should be paid continuous time from the time they are required to report to the time they return, *whether working, waiting or traveling*. The new rule substitutes for this underlined phrase the following: "straight time for all straight-time work, over time for all overtime work; straight time for all time traveling or waiting."

Another clause of the signalmen's national agreement provided for the payment of half time to employees traveling in boarding cars between 10 p. m. and 6 a. m. This clause has been eliminated in the new code and after February 16, these employees will receive no time for traveling in boarding cars after the regular working period hours.

The rules of the signalmen's national agreement fixing a starting time for shifts and the time and lengths of meal periods have been changed in the new code so that these points may be "arranged by mutual understanding between the local offices and the employees' committee based on actual service requirements."

When employees work through the regular lunch period, they were paid overtime rates for their regular lunch period and 20 minutes in addition to procure their lunch under another rule of the national agreement. Under the new rule covering this point employees required to work through their lunch period will be paid straight time and will be allowed the necessary time to procure their lunch later (not to exceed 30 minutes), without loss of time.

The definition of a helper in the signalmen's national agreement has been expanded and made more specific in the new code. The national agreement characterized a helper as "a man assigned to perform work generally recognized as helpers' work and to assist signalmen, assistant signalmen, signal maintainers, assistant signal maintainers." The new rule characterizes a helper as: "A man assigned to assist other employees specified herein."

Pay for Employees Assigned to Road Work

Section 4 of Article 5 of the signalmen's national agreement relating to the payment on a monthly basis of employees assigned to the maintenance of a section, and who do not return to their home station daily, and employees regularly assigned to perform road-work, is materially changed in the new code. The old and the new rules covering these points are set out side by side below:

National Agreement

An employee assigned to the maintenance of a section who does not return to home station daily and employees regularly assigned to perform road work may be paid on a monthly basis. Such employees shall be paid not less than the minimum hourly rate established for the corresponding class of employees coming under the provisions of this agreement, on the basis of 365 eight-hour days per calendar year, with pay at the rate of time and one-half time for Sundays and holidays designated herein; otherwise, overtime will not be paid. Where meals and lodging are not furnished by the railroad or where the service requirements make the purchase of meals and lodging necessary while away from home point, employees will be paid actual expenses. This service is distinct and separate from that performed by any other class of employees coming under the provisions of this agreement and is not to be confused therewith; the employees assigned to it shall not be assigned to or used to perform work assigned to the other employees under the provisions of this agreement.

NOTE—The following is an example to be followed in arriving at the monthly rate:

	12 hours
365 days multiplied by 8	2920
59 Sundays and holidays at one-half time will be 59	236
multiplied by 4, equaling	236
Total hours to be paid for	3156

The monthly salary is arrived at by dividing the total earnings of 3156 hours by 12; no overtime is allowed for time worked in excess of 8 hours per day; on the other hand, no time is to be deducted unless the employee lays off by his own accord.

New Rule

An employee assigned to the maintenance of a section who does not return to home station daily and employees regularly assigned to perform road work may be paid on a monthly basis. Such employees shall be paid not less than the minimum hourly rate established for the corresponding class of employees coming under the provisions of this schedule on the basis of 365 eight-hour days per calendar year. The monthly salary is arrived at by dividing the total earnings 2920 hours by 12; no overtime is allowed for time worked in excess of 8 hours per day; on the other hand, no time is to be deducted unless the employee lays off of his own accord.

The regularly assigned road men under the provisions of this rule may be used, when at home point, to perform shop work in connection with the work of their regular assignments.

Where meals and lodging are not furnished by the carrier or when the service requirements make the purchase of meals and lodging necessary while away from home point, employees will be paid necessary expenses.

If it is found that this rule does not produce adequate compensation for certain of these positions by reason of the occupants thereof being required to work excessive hours, the salary for these positions may be taken up for adjustment.

The new rule, in addition, adds the following:

"A signal helper, when working alone, or two or more signal helpers working together, may perform such work as filling and cleaning lamps, cleaning and oiling interlocking plants, bonding track, renewing primary batteries, excavating, and handling material, but shall not be permitted to do work recognized as distinctively maintainers' or signalmen's work."

Changes in the Discipline Rules

Two sections of the national agreement relating to investigations into the dismissal of employees and appeals thereon provide for the holding of hearings within seven days of the date when charged with the offense, and for the rendering of a decision within seven days after the completion of the investigation, have been revised in the new agreement to provide for a time limit in these cases of ten days instead of seven days.

Another rule of the signalmen's national agreement, which has been slightly revised in the new set of working rules, is that relating to the reinstatement of employees after charges against them have been unsustainable. The rule covering this point in the national agreement said in part:

"If by reason of such unsustainable charge the employee has been removed from position held, reinstatement will be made and payment allowed for the assigned working hours actually lost, while out of service of the railroad, at not less than the rate of pay of position formerly held or for the difference of rate of pay earned, if in service."

The new rule says:

"If by reason of such unsustainable charge the employee has been removed from position held, reinstatement will be made and payment allowed for the assigned working hours actually lost, while out of the service of the carrier, at not less than the rate of pay of position formerly held, or for the difference in rate of pay earned in or out of the service."

Because a very large majority of the carriers and their employees have agreed upon the major part of Article III, comprising the seniority rules, this article is omitted in its entirety. In further negotiations attention is again directed to principle 11, Exhibit "B" of Decision No. 119, which provides that: "The principle of seniority long applied to the railroad service is sound and should be adhered to. It should be so applied as not to cause undue impairment of the service."

The Labor Board believes that certain other subject matters now regulated by the rules of the national agreement may not be covered in all localities by rules of general application, and require further consideration by the parties directly concerned.

The omission of the rules governing the above matters is indicated herein by not including the number of the article or the section thereof, as the case may be, as used in the national agreement, and all such rules which involve a dispute between a particular carrier and its employees are hereby remanded to said carrier and its employees for the purpose of adjustment under the provisions of Section 301 of the Transportation Act.

With the exception noted above, the clauses of the signalmen's national agreement have either been continued by the Labor Board in this new code or remanded to the individual carriers and their own employees for settlement. It will be noted in this connection that the classification rules of the old national agreement remain unchanged with the exception of that one pertaining to helpers and that all of the provisions relating to promotions have been perpetuated *in toto* as have the provisions of the national agreement grouped in Article 7 and termed "miscellaneous."

The new rules are to apply to each of the carriers party to the dispute except in such cases as any particular carrier may have agreed with its employees upon any one or more of the rules in which cases the rule or rules agreed upon by the carrier and its employees are to apply.

Seniority Rules Remanded for Settlement

Regarding the rules which were part of the old national agreement, and which are not specifically mentioned in the new code, the Labor Board's decision says:

As in the case with the previous announcements of this character made by the Board, the interpretations made by the United States Railroad Administration, by adjustment boards or other agencies acting under the Railroad Administration of those rules which are similar to rules in the national agreement do not apply.

Labor Leaders of Railroad and Coal

Miners' Unions to Confer

A joint meeting of representatives of the United Mine Workers of America, and the "sixteen standard" railroad labor organizations, is to be held in Chicago on February 21, to consider the formation of an alliance of the members of these organizations "in resistance to proposed attacks on the wage scale." The call to the meeting was sent out by John L. Lewis, president of the mine workers' organization, who is obviously trying to enlist the aid of railway employees in the threatened strike of coal miners on April 1. Reports emanating from Indianapolis, where the coal miners' organization has its headquarters indicate that every effort will be made to induce members of the railroad organization to either refuse to handle coal produced by non-union workers in the event of a strike in the mines or walk out in a sympathetic strike.

When leaders of the railroad organizations accepted Mr. Lewis' invitation, he said that "it indicates that the organized railroad workers and mine workers have a profound appreciation of the necessity for closer co-operation and it reflects a determination to utilize every proper means of protecting the interest of the men employed in these basic industries."

More Carriers Apply to Labor Board

for Wage Reductions

The list of carriers, parties to the dispute over the proposed wage reductions, hearings in which will begin on March 6, include, in addition to those enumerated in the *Railway Age* of February 11 (page 777), the Alabama & Vicksburg, the Vicksburg, Shreveport & Pacific, the Charleston & Western Carolina, the Chicago & Eastern Illinois, the Louisville, Henderson & St. Louis, the Nashville, Chattanooga & St. Louis, the Chicago, Rock Island & Pacific, the Chicago, Rock Island & Gulf, the Central New England, the Northwestern railroad, the Atlantic Coast Lines, the Boston & Albany, the Boston & Maine, the Buffalo, Rochester & Pittsburgh, the Cleveland, Cincinnati, Chicago & St. Louis, the Cincinnati Northern, the Louisville & Jeffersonville Bridge, the Muncie Belt, the Denver Union Terminal, the Evansville, Indianapolis & Terre Haute, the Hocking Valley, the Long Island, the Manistique & Lake Superior, the New York, Ontario & Western, and the Pittsburgh & Lake Erie. In addition submissions have been received by the Board on several disputes between certain labor organizations and carriers as a result of the employees' request for wage increases. The disputes of this character submitted to the Board during the past week include cases involving the Brotherhood of Railway & Steamship Clerks, Freight Handlers, Express and Station Employees, and the Cleveland, Cincinnati, Chicago & St. Louis, the Oregon-Washington Railway & Navigation Company, and the Los Angeles & Salt Lake, the Federated Shop Crafts and the Virginian and the Bessemer & Lake Erie; and the Order of Railroad Telegraphers and the Southern Pacific and the Lake Erie & Western.

M & N. A. Seeks Wage Reduction

The Missouri & North Arkansas came before the Labor Board on February 15 and through J. C. Murray, receiver, asked the Board for permission to cut wages 25 per cent in order that the operation of the carrier, suspended since July 31, 1921, could be resumed. Mr. Murray outlined the proposition which was submitted to the employees of the railroad on

October 10. This proposal involves the cutting of wages 25 per cent and the division of any surplus earned by the carriers, after paying operating expenses and interest on government loans, among the men to an extent to bring their wage scale up to the wages paid on other carriers. The owners of the property would receive nothing under the receiver's proposal until after the government loan has been paid off and wages have been restored to the standard scale period.

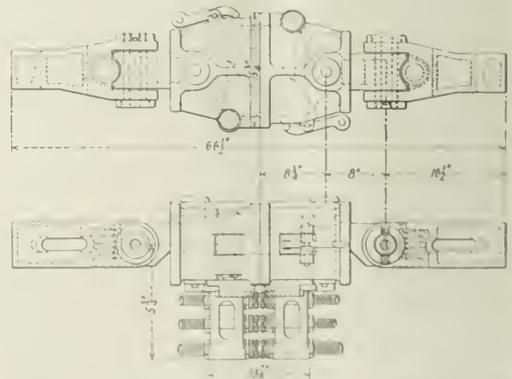

In testifying before the Board Mr. Murray stated that the resumption of operation of the property is dependent upon three propositions: First, the outcome of an application to the Interstate Commerce Commission for a loan of \$3,000,000; second, the outcome of an application to the commission for an increased division of 25 per cent on traffic interchanged with connections; and, third, the outcome of the present application to the Labor Board for a 25 per cent decrease in wages. He also testified that the carrier has been operated at a loss since the receivership began in 1912; that no dividends have been paid since that time, and that the accumulative loss totaled \$17,000,000.

F. J. Wade, president of the Mercantile Trust Company, St. Louis, Mo., representing the holders of all of the stocks, bonds, receiver's certificates, etc., of the carrier, also testified as to the financial history of the property and of his efforts to bring about a resumption of operation.

Representatives of the employees involved based their arguments largely upon the question of jurisdiction and procedure under the terms of the Transportation Act.

The Universal Car and Hose Coupler

A COMBINED CAR COUPLER and automatic steam and air hose connector in the design of which a complete departure has been made from the operating principle of the present standard vertical plane coupler, has recently been placed in service on a number of steam railway passenger cars. The device, which has been developed by the Universal Car and Hose Coupler Company, St. Louis, Mo.,

General Arrangement of the Universal Car and Hose Coupler

provides for no vertical adjustment between the coupler heads and the hose connector blocks are directly connected to the car coupler head.

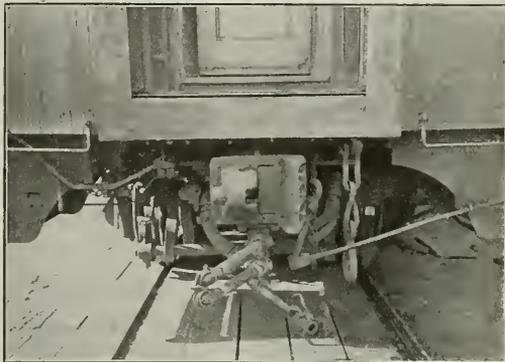

The operating principle of the coupler is clearly shown in the illustrations. From the drawing, which shows two of the devices coupled together, it will be seen that vertical and lateral adjustments are provided for by an intermediate section of the draw bar, hinged to the main draw bar by a large horizontal pin. To the end of this the coupler head in turn

is attached by a vertical pin connection. When uncoupled the coupler head is supported approximately in a horizontal position by means of a vertical coil spring acting on an extension from the lower side of the intermediate draw bar.

The coupler head presents a rectangular bearing face measuring approximately 11 in. vertically by 16 in. wide over all, the width of the bearing surface being about 13½ in. From the left half of the rectangle enclosed by this bearing projects a tongue which is tapered both horizontally and vertically to provide for automatically bringing the coupler heads into alinement as they approach each other. Within the right half of this rectangle is a pocket to receive the tongue of the opposing coupler. The inside vertical face of this tongue is recessed to form a standard M. C. B. knuckle contour for use in interchange with standard equipment. A horizontal opening through the tongue is also provided for the so-called locking lug or latch which is attached to the coupler head by a 1⅝-in. knuckle pin. A cylindrical pocket 8 in. long by 1⅞ in. in diameter is drilled into the locking lug and in this recess is placed a 1-in. coil spring 5½ ins. long acting on a 1-in. pin projecting beyond the back side of the lug. This pin acting against an interior surface of the coupler head automatically maintains the lug in its locking position in which the locking or latch portion of the lug projects outward through the side wall of the adjoining coupler head when the two heads are locked. In coupling, as the bearing faces of the adjoining couplers are gathered into alinement, each automatically opens the latch of the adjoining head against the spring compression until the bearing faces come in contact. Each latch then closes into an opening through the side wall of the adjoining coupler head, thus locking the two heads together. In uncoupling, lateral pressure is brought against the face of one of the latches where it projects through the wall of the adjoining coupler head, by means of a suitable lever arrangement, thus pushing it back

tances below its horizontal center line. These connections project beyond the face of the coupler, in which position they are maintained by coil springs housed within a connector bracket which is attached to the lower face of the coupler head.

When coupled, the compression on these springs maintains a tight joint between the adjoining gaskets. To the rear ends of the connector, pipes are secured short hose connections lacing from the various train line pipes. The gasket ends of the connector pipes are arranged to receive adapter couplings, by which adapter hose can be readily attached for use in interchange with standard equipment.

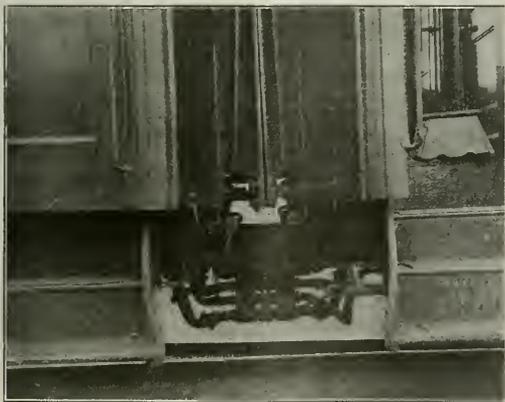

Universal Coupler with Guard Arm Applied for Interchange with the Standard Car and Hose Couplers

To provide for interchange with standard vertical plane couplers a casting, corresponding in contour with the guard arm of the standard coupler, has been designed to fit into the receiving pocket of the Universal coupler, to which it is secured by a lug on its lower face. This lug fits in a corresponding opening through the bottom of the coupler head. One of the illustrations shows this casting in place.

The principle purposes in the design of this coupler are to eliminate the necessity for going between cars to line up coupler heads or to couple air and steam; to interlock the two coupler heads in such a way that the draft stresses will be uniformly distributed over the head; to eliminate slack between the coupler heads and to keep them in correct alinement on curves as well as on straight track.

• • • • •

Universal Couplers in Passenger Service

to clear the locking face of the coupler head with which it is engaged. The interior surface of the latch end of the locking lug engages a tail projection on the adjoining lug in such a manner that the one operation moves both lugs to the release position.

Owing to the fact that the adjoining coupler heads are permitted no freedom of movement relative to each other when coupled the opposed connector blocks are attached directly to the coupler heads, which, thus perform the function of alinement for the hose connections. All that is required, therefore in the hose connector feature are end gasket connections located on the vertical center line of the coupler at fixed dis-

A Narrow Gauge Line in Venezuela

General News Department

The American Association of Engineers will hold its fourth annual railroad conference in Chicago on Monday, March 13, the day preceding the opening of the annual convention of the American Railway Engineering Association.

Hearings before Judge K. M. Landis in the controversy between the Pennsylvania and the Railroad Labor Board, briefly described in previous issues of the *Railway Age*, has again been postponed from February 17 to February 20.

Charges of manslaughter against the engineman and fireman of the Michigan Central train which collided with a New York Central train at the crossing at Porter, Ind., last February, causing the death of 37 passengers, were dismissed in the Circuit Court at Valparaiso, Ind., on February 13.

The Railway Club of Pittsburgh will hold its next meeting at Fort Pitt Hotel, Pittsburgh, on Thursday evening, February 23. Col. H. C. Nutt, president and general manager of the Monongahela Railway will present a paper on "Railway Transportation in the A. E. F." There will be a luncheon following the meeting.

The American Railway Express Company has bought 104 electric trucks for street use, and now has in service more than twelve hundred electric wagons. The new equipment is for service in New York, Philadelphia and Buffalo. It is planned to run the New York trucks on a 24-hour basis, using interchangeable batteries. It is estimated that the exchange of batteries will require less time than to fill the tanks of five-ton gasoline trucks.

The Associated Railroads of New Jersey, comprising nine of the larger systems, represented by A. D. Oliphant and acting with the co-operation of business men and farmers' organizations, have appealed to the Legislature of New Jersey to pass Senator Allen's bill repealing the full crew law of that State. The railroad brotherhoods appeared in force, at the hearing before the Judiciary Committee, to oppose the bill.

Mr. Oliphant showed that since 1913 the added cost of railroad operation due to the full crew law aggregated \$5,000,000 in New Jersey, while last year it amounted to \$627,000. Pennsylvania repealed the full crew law last year, and it is hoped that New York will do the same this year. Mr. Oliphant emphasized the anomalous situation resulting from different laws in the neighboring States. The Allen bill proposes to empower the Public Utility Commission to order larger crews where trains are shown to be undermanned.

Siberian Veterans to Meet

The Siberian Veterans, an organization of those who saw service with the railway expedition to Siberia, will hold its second "Bolshoi Praznik" at the Hotel Commodore, New York, on Saturday, February 25.

Western Railway Club Meeting

The February meeting of the Western Railway Club will be held in the Great Northern hotel, Chicago, on Monday evening, February 20. A paper on "Some Factors in the Business of Owning Locomotives" will be presented by C. B. Peck, mechanical editor of the *Railway Age*.

American Society for Steel Treating

The sectional meeting of the American Society for Steel Treating, scheduled for March 5, will be held at the Hotel McAlpin, New York City, instead of at the Engineering Society's building as previously announced.

C., M. & St. P.'s Appeal Dismissed

The appeal of the Chicago, Milwaukee & St. Paul from the ruling fining H. E. Byram, president of the road, and three other officers \$100 on each of 25 charges for withholding a Chicago employee's wages for time spent in voting on election day was dismissed on February 8 by the State Supreme Court at Springfield, Ill. The court ruled that as the prosecution was under the criminal code, an appeal as in a civil case was not in order.

A. S. T. M. Annual Meeting

The American Society for Testing Materials will hold its twenty-fifth annual meeting at Chalfonte-Haddon Hall, Atlantic City, N. J., during the week beginning June 26, 1922. The first day will be devoted to committee meetings and the convention will open on Tuesday morning, June 27, closing on Friday evening, June 30, or Saturday morning, July 1.

Wage Statistics For October

The Interstate Commerce Commission's summary of wage statistics for October indicates an increase of 35,806 in the number of employees as of the middle of the month compared with September. The total compensation increased \$12,630,137, making a total of \$237,02,959 for a total of 1,754,736 employees. The report for the Detroit, Toledo & Ironton is not included.

I.C.C. Reports on Accident to P.R.R. Locomotive

A report has recently been issued by the chief inspector of the Bureau of Locomotive Inspection, Interstate Commerce Commission, giving the results of an investigation of an accident to Pennsylvania Railroad locomotive 2599, which occurred at Gould Mine, Pa., December 6, 1921. The report states that the accident, which resulted in the death of the locomotive engineer, was caused by grooving of the outer firebox sheet directly above the mud ring in conjunction with fractures of the staybolts in the adjacent area.

Demonstration of Regan Train Control

An operating demonstration of the Regan Automatic Train Control system of the intermittent electrical contact type as installed on the main line of the Chicago, Rock Island & Pacific between Blue Island and Joliet was made on February 13 for the benefit of railroad officers representing all departments which will be affected by train control installations. Speed control was demonstrated in connection with caution signal indications and the train was stopped automatically at locations where the signals indicated stop. On the return trip another locomotive equipped with the indication type of apparatus demonstrated the action of this type at four locations between Blue Island and Chicago.

Committee to Study Train Control

Representatives of all but three or four of the 49 railroads cited in the Interstate Commerce Commission's proposed train control order met in Chicago on Tuesday, February 14, to consider the action to be taken in response to the Commission's order. At this time it was decided to create a committee of nine members to represent the roads with the understanding that any carrier may supplement such presentation in any manner and to such an extent as it considers necessary. This committee includes C. E. Denney, vice-president and general manager of the New York, Chicago & St. Louis, chairman; T. H. Beacom, vice-president and general manager, Chicago, Rock Island & Pacific; W. M. Jeffers, general manager, Union Pacific; A. M. Burt, assistant to operating vice-president, Northern Pacific; E. B. Katte,

chief engineer electric traction, New York Central; C. H. Morrison, signal engineer, New York, New Haven & Hartford; W. J. Eck, signal and electrical superintendent, Southern Railway; R. W. Bell, general superintendent motive power, Illinois Central, and C. F. Giles, superintendent machinery, Louisville & Nashville.

It was also concluded that those roads which desire to show cause why this train control order should not be entered will appear individually before the Commission on or before March 15 and that R. H. Aishton, president of the American Railway Association, should request the Commission to name a date on which this newly created committee may present its testimony in connection with the provisions of the order which affect all carriers.

No Particular Type of Train Control

Endorsed by I.C.C.

The Interstate Commerce Commission has issued a memorandum to the press, referring to its automatic train control order, saying: "It has come to the commission's notice that parties interested in particular devices, by advertisements and other representations in stock-selling activities, are giving the impression to the public that the commission approved, and ordered carriers to install, their particular devices.

"The commission desires it to be understood that its order does not prescribe, prefer, or indorse any particular device or type to be used by any carrier.

"The only requirement is that installation shall pass certain technical specifications and requirements which have been found to be necessary for the successful operation of devices of this character. These are so broad as to afford the desired freest field of opportunity for inventors and for trying out all automatic train control and train stop devices."

Tentative Valuations

The Interstate Commerce Commission has issued its tentative valuation of the property of the Chicago & Eastern Illinois as of June 30, 1915, which gives a final value for the carrier property owned of \$66,082,109 and for the property used of \$69,206,753. This is less than the outstanding capitalization on the valuation date, \$87,181,902, but since that time additions and betterments have been made and the company has been reorganized. The difference between the property owned and that used is mainly represented by the leased property, including \$4,000,000 for that leased from the Chicago & Western Indiana. The total mileage owned was 1,012. The cost of reproduction new of the carrier property owned, exclusive of land, was given as \$72,331,913 and the cost less depreciation as \$54,771,471.

The commission has also announced other tentative valuations as follows:

	Used	Owned
Newburgh & South Shore	1917 \$3,754,546	\$3,272,897
Lake Superior & Ishpeming	1916 4,903,378	4,902,156
Minneapolis Western	1916 794,088	712,592
Salt Lake & Los Angeles	1916 353,903	315,391

Both the Senate Committee on interstate commerce and the House Committee on interstate and foreign commerce have voted to report favorably the bills striking out of the valuation act the provision which requires the Interstate Commerce Commission to ascertain and report the so-called "excess cost of acquisition" of land.

The Government's Use of Jersey Central Locomotives

W. G. McAdoe, former director general of railroads, when making his recent statement before the Senate Committee at Washington (*Railway Age*, February 11, page 371) quoted, with inferences unfavorable to the road, from a letter written by President W. G. Besler of the Central of New Jersey to the superintendent of motive power, directing the latter to have certain locomotives repaired as quickly as possible, so that a bill for the repairs could be presented to the government. Writing to the Newark Morning Ledger Mr. Besler replies to Mr. McAdoe in part, as follows:

"One side of the story is good until the other is told. Mr.

McAdoe glibly states that the railroads, on return to private operation, endeavored to put through bills and charge them to the government, and he cites the Jersey Central as a particularly horrible example.

"Of course the railroads did so, for the reason that, under the contract, the government was obligated to return the properties in as good condition as when taken over, and when, as in the case of the Jersey Central, there were upwards of 100 engines disabled, worn out, and out of service, which should have been repaired by the director general, but which had been set aside and were not so repaired, why should not the railroads send such engines to engine builders for rebuilding, and to be placed in working condition? They had been worn out in 26 months of government operation, and had not been repaired. Is there anything improper in the thought that the government should repair them, or at least pay for the bills on account of such repairs? These bills have not yet been paid! It is one of the claims against the government for failure in the matter of maintenance and upkeep which we hope and intend, if possible, to make the government pay, as required by its obligation in the contract."

Hoover, Daugherty and Trade Associations

Secretary of Commerce Hoover in a memorandum to the attorney general has expressed his views on trade associations and has asked the attorney general for an informal expression of his opinion regarding the legality of certain activities of such associations.

Secretary Hoover's view in the main seems to be that the trade association has a legitimate field but that care is needed to prevent abuses. He emphasizes particularly that information regarding production, capacity, wages, consumption and the like should be given for publication to the daily and business press before it is given to members and that any information obtained be made public and not kept for the exclusive information of members of the association. Some of the points upon which the attorney general was asked to express an opinion are, in brief:

1. May a trade association provide for its members a uniform system of cost accounting, provided that costs so arrived at are not furnished to the members of the association?
2. May a trade association work for uniformity in the use of trade phrases and trade names?
3. May it arrange for uniform grading of product, standard contracts, standard processes and co-operate with its members in eliminating wasteful processes?
4. May it collect credit information about customers, provided a blacklist is not established?
5. May it handle insurance for its members?
6. May it, with its members, engage in co-operative advertising?
7. May it engage in welfare work among the employees of its members?
8. May it handle legislative matters in behalf of its members?
9. May it undertake to bring about closer co-operation between its members and federal and state government?
10. May the association collect statistics from members about volume of production, capacity to produce, wages, consumption of product at home and abroad, distribution of product? May a summary by districts be prepared from these statistics and given to the secretary of commerce?
11. May price statistics be compiled and given only to the secretary of commerce?

Attorney General Daugherty has replied that cost accounting uniformity would be objectionable only if uniform costs were assumed by the members of the association for factors entering into the selling price. Certain phases of Mr. Hoover's proposal about co-operative advertising, too, the attorney general said, would well be modified slightly. Regarding the other proposals he could see no objection provided there was no tendency to curtail production, enhance price or suppress competition. He emphasized, however, that this view was tentative.

Hearing on Authority to Permit Acquisition of Control

The Interstate Commerce Commission has ordered a hearing at Washington on February 28 at which interested parties may express their views on the question that has arisen in the Pittsburgh & West Virginia case as to the authority of the commission to grant the application for permission to acquire the control of the West Side Belt under paragraph 2 section 5 of the interstate commerce act. The questions to be considered at the hearing are:

- (1) May one carrier engaged in the transportation of passengers or property subject to the act acquire control of another such carrier or carriers by any of the methods specified in paragraph 2, section 5 of said act without obtaining the approval of the commission, as provided in said paragraph?

Operating Statistics of Large Steam Roads—Selected Items for the Month of November, 1921.

Freight service

Table with columns: Region, road and year; Average miles of road operated; Trains-miles; Locomotive-miles (Principal and helper, Light); Car-miles (Loaded, Per cent loaded); Ton-miles (thousands) (Excluding locomotives and tender, Revenue and non-revenue); Average number of locomotives on line daily (Service, Unserviceable, Percent un-serviceable, Stored).

1 Includes Chicago, Terre Haute & Southern from July 1, 1921, only. 2 Includes Gaston, Harrisburg & San Antonio, Houston & Shreveport, (C) Data not available.

Compared with November, 1921, for Roads with Annual Operating Revenues above \$25,000,000.

Region, road and year	Average number of freight cars on line daily			Per cent unserviceable	Stored	Gross tons per train, excluding locomotives and tender	Net tons per train loaded	Net tons per car-day	Cars per car-day	Net tons per mile of road per day	Pounds of coal per 1,000 gross ton-miles, including locomotive and tender	Passenger service

(2) Do said paragraph authorize the acquisition by one such carrier of title to the physical property of another such carrier either by deed or by lease in perpetuity, the transaction amounting to "consolidation into a single system for ownership and operation," but not involving the creation of a new corporation or change in the corporate identity of either?

(3) May one such carrier controlling 51 per cent. of the voting power in another such carrier acquire additional voting power by the purchase of an additional percentage of such other carrier's securities without securing the approval of the Commission under said paragraph?

(4) May one such carrier purchase less than a controlling interest in the securities of another such carrier where such purchase will not in and of itself give the purchaser control without securing such approval under said paragraph?

(5) May the Commission in connection with an application for authority to acquire control by lease prescribe as a condition of its approval of said lease that the applicant shall not during the life of said lease part with its control over the lessor previously acquired by the acquisition of capital stock?

(6) May the Commission in authorizing acquisition of control in one manner prescribe conditions with respect to the exercise of control in another manner?

(7) What conditions, generally, may the Commission impose under paragraph 2, section 5, in authorizing the acquisition of control in the manner therein prescribed?

Employees Invited to Think

Charles G. O'Neal, receiver of the Fort Smith & Western, a 200-mile railroad in Oklahoma, has issued a circular announcing to employees that cash prizes are to be offered to employees for ideas and suggestions which can be used to enhance the efficiency of the operation of the road. The circular says, in part:

... Your automobile can run for a while without gasoline, going down hill, but to go up-grade you must step on the gas. Any old-fashioned plant can continue to make money when business is flourishing, but in these times, the most expensive, modern equipment will not save any enterprise which ignores the importance of the human element, and the elimination of unnecessary costs.

To encourage every member of the railroad's organization, to suggest, think and work and become a full member of the organization from which he derives a livelihood, the Management is going to offer cash prizes and other suitable recognition to employees suggesting methods that will produce savings to the railroad. . . . Let us remember that one man is only better than another when he behaves himself better.

Let us give every well-behaved man and woman their equality of opportunity. Live and let live is not enough—we must live and help live, in America.

Your employer must be able to make ends meet in order to pay your wages and meet other obligations. Conditions make it necessary that *economy be practiced in its utmost detail*. Therefore, we want to conduct a "business prayer meeting" if you please, where all members of the team, from the highest official down to the office boy, may be encouraged to relate for the common good whatever useful ideas he may have, "either inspiring or chastening." . . . A lot of men are crammed full of knowledge but can't or don't put it in the proper channels for use. Skill is, of course, essential, but it must be wide awake skill that knows the "why" as well as the "how" of a thing.

True worth of any individual can only come through the possession of his full powers and knowledge of the truth. The management is not afraid of the truth. Here are some things that contribute most to men's success: First, ability to get along with other people, second, ability to think, and to go straight when you think. Look about you, study your work, observe the other fellow, can he assist you? or can you assist him in any mutual way that will produce more economy or eliminate waste? You are not limited to any department in your observations. Make memorandums of your observations and be ready to enter this campaign, full of ideas of which will be out in a short time. Are you going to coast? Let's step on the gas.

Traffic News

C. L. Strunk has been appointed traffic manager for the Benjamin Electric Manufacturing Company, Chicago, succeeding F. H. Thyer, who is now in the sales department of the company.

Robert I. Pierce, formerly with the Firestone Tire & Rubber Company, Akron, Ohio, has been appointed manager of the Traffic Bureau of the Terre Haute (Ind.) Chamber of Commerce.

Reductions in round-trip summer tourist rates to the Pacific coast approximating a cut of \$20 were announced by Western roads at Chicago on February 15. Roads east of Chicago have also agreed on new reduced summer tourist fares, which will soon be announced.

The Ohio State Public Utilities Commission has set February 18, as the date for beginning an investigation of coal freight rates within the state. The action follows a request of Governor Davis, who asked for the hearing to ascertain whether the rates are excessive and are contributing to the inactivity of the Ohio coal mines.

Western roads have announced reduced summer tourist rates to mid-western points for 1922 which are approximately the same as those in effect before the increase of 1920. The rates from Chicago will be on the basis of one and one-tenth of the present one-way fares, and of one and one-fourth for the round trip from Missouri river points.

The Transportation Club of Detroit, Mich., has elected the following officers for 1922: President, O. S. Dustin, general traffic manager, Ashley & Dustin Line; vice-presidents, W. S. Rodgers (Detroit United Line); George R. Dawson (Mulkey Salt Company); secretary, T. R. Cochrane, (Wabash); treasurer, J. A. Ferguson (G. P.). Members of executive committee, R. O. Bromley (M. C.); W. S. Crowl (Michigan Alkali Company).

The Transportation Club of St. Paul, Minn., on February 7, elected the following officers: President, P. R. Flanagan, assistant general freight agent, Chicago Great Western; vice-president, Foster Hannaford (Noyes Brothers & Cutler); secretary, Charles A. Liggett (St. Paul Association); treasurer, F. H. Parker, (G. N.); directors, C. S. Beach (Finch, Van Slyck & McConville); H. G. Costello (Young-Gray Lumber Company); M. P. Graven (C. M. & St. P.); H. Lufkin (St. Paul Foundry Company); H. Mueller (St. Paul Association).

The Chicago Great Western has served notice on competing lines that it will place in effect between Chicago and St. Paul, and between Chicago and Omaha, passenger fares \$1.50 less than those over other lines. The C. G. W. sought a year ago to place such a differential in effect but its application to the Western passenger association has been opposed by its competitors. The present notice follows hearings before the association during the past year. The C. G. W. operates fewer trains to these points than its competitors and does not run through and beyond as do the Chicago & North Western and the Chicago, Milwaukee & St. Paul. This disadvantage is recognized by its competitors but they do not admit that it is sufficient to warrant a differential; they would agree, however, to certain excursion and immigrant privileges. Whether the present action is to cause further passenger fare cuts in the west is problematical.

Valuation of Baggage Compulsory

Passengers on the Southern Pacific, beginning on March 1, will be required to place a valuation on all baggage and a charge of 10 cents will be made for each \$100 of value or fraction thereof, over the established limit of \$100. The change is, in effect, the same as that inaugurated some time since by the Chicago, Burlington & Quincy, and the practice of using adhesive stamps for the excess value charge will be followed. The new plan is not compulsory with intrastate movements in the states of California and Arizona.

Atlantic City as a Winter Resort

The Pennsylvania Railroad reports that travel from New York to Atlantic City on Lincoln's Birthday this year assumed huge proportions. On Friday, February 10, the Atlantic City Limited, an all-Pullman extra-fare train, was run in eight sections, carrying a total of 2,065 passengers, and on Saturday, February 11, the same train was run as an extra in eight sections and carried 2,043 passengers, a total of 4,108 for the two days.

Returning on Monday, the 13th, the New York Limited, an extra-fare all-Pullman train, was run in seven sections, carrying 1,564 passengers. Other regular trains on the 13th carried 2,173 additional passengers from Atlantic City to New York.

Anthracite Shipments in January

Cold waves during January, left their impress in the shape of increased shipments of anthracite during that month, there being a gain of 212,131 tons over December, 1921, although the total January shipments were 892,485 tons less than in the corresponding month last year, due in part to the continued industrial depression. The January record of the Anthracite Bureau of Information shows 4,848,053 gross tons is a decrease from the 1921 average of about 14 per cent.

Shipments by originating carriers were as follows:

	January 1922	January 1921	December 1921
P. & R.	1,052,872	1,172,873	985,262
L. V.	766,602	1,058,127	801,796
C. of N. J.	342,558	470,704	532,597
D. L. & W.	748,768	910,260	626,377
D. & H.	619,762	814,491	654,989
Penna.	331,871	451,879	307,520
Erie	466,495	606,602	450,465
N. Y. O. & W.	101,779	156,364	107,107
L. & N. E.	221,346	99,038	169,811
	4,848,053	5,740,538	4,635,922

Coal Production

Production of coal continues to increase, according to the weekly bulletin of the Geological Survey. The total output during the week ended February 4 is estimated at 9,708,000 net tons, an increase of 88,000 tons as compared with the preceding week. In comparison with the corresponding period a year ago, the increase was 1,576,000 tons.

Central of Georgia Calls on the Public to Confer

The general superintendent and other officers of the Central of Georgia have been traveling over the road holding conferences with patrons concerning train service and other problems of mutual interest. Civic organizations, city councils and the public generally were invited to meet them; and W. A. Winburn, president of the road, issued a brief statement showing the imperative necessity of drastic reduction in expenditures. The road failed by a million dollars to be self-sustaining last year and the officers have gone as far as they possibly can in practicable economies. "We have reduced forces, deferred maintenance and postponed repairs so far as is safely possible. Our employes have done their part by saving \$400,000 in the fuel bill, by reducing the claims for loss and damage to freight and by decreasing the personal injuries."

Continuing, Mr. Winburn says: "It appears, therefore, that the only road open to us is the revision of train schedules so as to free us from the burden of paying overtime; and perhaps in certain instances the temporary removal of certain passenger trains that do not appear to be necessary for the business welfare of the communities that we serve. . . . The very fact that the trains are running nearly empty shows that the service is not essential. But we are anxious to avoid injury to the commercial interests of any community and we ask their help in solving this problem."

The party travels by motor car, and Dover, Dublin, Millen, Statesboro, Milledgeville, Covington, Carrolton and Bremen were among the first places visited.

Federal Traffic Bureau Seeks Economies

Plans for the standardization of shipping and travel regulations for all government departments, which are expected to save the government thousands of dollars annually, are being formu-

lated by the advisory committee of the Federal Traffic Board, under the direction of Budget Officer Charles G. Dawes. As a part of his program to secure "more business in government" General Dawes called a meeting of the advisory committee on February 9 and spoke on the various phases of traffic problems faced by the government at this time.

The committee is composed of some of the most prominent railroad traffic executives, consisting of Ralph C. Caples, chairman; Lewis J. Spence, director of traffic, Southern Pacific; George H. Ingalls, vice-president, New York Central lines; Lincoln Green, vice-president, Southern; H. M. Adams, vice-president, Union Pacific, and Archibald Fries, vice-president of the Baltimore & Ohio. At the meeting there was discussed a plan for simplification in rate-making and the subsequent rendition of accounts and their payment. Six committees have been appointed to take up the traffic problems of the government.

Bills of Lading

The Interstate Commerce Commission has issued an announcement regarding its orders in the bill of lading cases which says:

On October 21, 1921, the commission made two reports in this investigation. In the first of these, *Export Bill of Lading*, 64 I. C. C., 347, it prescribed the form of through export bill of lading to be issued for the transportation of property in connection with vessels registered under the laws of the United States. In the second, *Domestic Bill of Lading and Live Stock Contract*, 64 I. C. C., 357, it prescribed the forms of the domestic bill of lading and of the live stock contract, which later were, on petition, modified in two minor particulars.

The export bill was ordered to be made effective on or before February 15, 1922. Upon representations by the roads that they desired to make the export bill, the domestic bill and the live stock contract effective at the same time, the effective date of the order was changed to March 15, 1922. No order was made in connection with the domestic bill of lading and the live stock contract.

These bill-of-lading rules affect "the value of the service rendered to the shipper, or consignee" and must be filed with the commission in accordance with the provisions of section 6 of the law. The commission has no jurisdiction over loss or damage claims, and the interpretation of the applicable provisions of bills of lading is a matter of law, to be determined by the courts. . . .

It is customary for carriers to furnish bills of lading, but large shippers frequently provide their own. With regard to the transportation covered by paragraph 11 of section 20 of the law, it is specifically provided that any carrier receiving property for such transportation "shall issue a receipt or bill of lading therefor; and . . . it would seem that a carrier could refuse to use a bill of lading tendered by a shipper which was of an unusual size or style. While this is a question to be determined by the courts, it would appear that the terms and conditions of the appropriate bill lawfully published and filed would govern shipments subject to the interstate commerce act, regardless of what bill was actually issued, or of a possible failure to issue a bill. . . . A number of requests have been received for permission to use old bills of lading, or forms with no conditions printed thereon, but the utmost the commission could do would be to indicate that it approved or did not approve of such a practice. The need for it has greatly diminished now that there will be uniform bills of lading for use throughout the country, and there is still an appreciable time during which current forms can be used; and . . . the commission is unwilling to lend its approval to the practice.

In due course an order will be promulgated by the commission designating points at which information relative to the handling of export shipments shall be maintained, and at which through ocean bills of lading shall be issued. . . .

PASSENGER TRAINS moved over the Pacific system of the Southern Pacific during 1921, averaged 93.4 per cent. on time at destination. This is an increase of 3.4 per cent. over 1920.

AN ATTEMPT TO WRECK the southbound Shore Line limited of the Southern Pacific at Glendale, Cal., on the night of January 27, failed when a man was shot in the act of nailing down an obstruction which might have thrown the train off the track. The culprit, a former switchman of the road, died later from the effect of the wound. It was reported that the train carried from \$70,000 to \$150,000 in money but the actual amount is stated to have been about \$8,000.

Commission and Court News

Interstate Commerce Commission

The commission has suspended from February 15, until June 15, the operation of schedules published by the Carolina, Clinchfield & Ohio which propose to increase the rates from 356½ cents to 388 cents per net ton on coal from mines on the Carolina, Clinchfield & Ohio, the Interstate, the Norfolk & Western and the Norton & Northern in Virginia to destination stations, Stokes to Ehrhardts, S. C., on the Atlantic Coast Line Railroad and Lemon Spur to Ehrhardts, S. C., on the Bamberg, Ehrhardts & Waterboro.

The Commission has issued a decision in the case of the American Wholesale Lumber Association versus the director general and the railroads, in which it holds that the charge of \$10 a day on cars of lumber held for reconsignment beyond 48 hours after 7 a. m. of the day following the notice of arrival, which was established by the director general in 1919, was not unreasonable or otherwise unlawful. However, under present conditions, with the great number of idle freight cars and entire absence of congestion throughout the country, the commission finds that the charge is and while present conditions continue, will be, unreasonable. It is, therefore, ordered that the railroads cease from collecting this charge after March 13 until further orders of the commission.

Personnel of Commissions

E. I. Lewis, a member of the Interstate Commerce Commission, has been designated by the commission to assume administrative charge of the work of the Bureau of Valuation, in place of Commissioner Aitchison, who is to devote more of his time to specialization on car service work. Mr. Lewis has been a member of Division I of the commission, which has general supervision over valuation matters. Charles F. Staples is acting director of the bureau.

Court News

Snowsheds and Boarding Car Cooking Utensils Not Assessable by Counties

The Montana Supreme Court holds that snowsheds are part of the roadbed and therefore assessable by the State Board of Equalization and not by the county assessor; and that boarding car cooking utensils are a part of the rolling stock and subject to no assessment save that by the State Board.—*Great Northern v. Flathead County* (Mont.), 202 Pac. 198.

Gondola Car With End Unfastened

The Circuit Court of Appeals, First Circuit, holds that a railroad company was negligent in placing a gondola car in a train with its drop end standing up, but unfastened, and that this was not one of the risks of employment assumed by a trainman who, in attempting to pass from that car to a box car next to it, stepped upon the unfastened upright end of the car, which gave way, and he fell through a bridge to the street below.—*Boston & Maine v. Sullivan*, 275 Fed. 890.

Couplers Required Under Federal Law

The Circuit Court of Appeals, Seventh Circuit, holds that, under section 2 of the Federal Safety Appliance Act, couplers must be such that the act of coupling, as well as of uncoupling, can be accomplished "without the necessity of men going between the ends of the cars." (*Johnson v. So. Pac.*, 196 U. S. 1, 25 Sup. Ct. 158), and that the act did not permit the use of a coupler which must require a brakeman to get on the track at the end of the cars to open the knuckles, though the other train was some distance away. Other evidence that it is impracticable to build couplers

whose knuckles can always be opened by the lever extending to the side of the car, that no such couplers have yet been made, and that the defendant uses a generally approved type, was held irrelevant, the offer not professing to show that compliance with the statute is a mechanical impossibility. The court said: "If the statute is harsh and is difficult to comply with, relief must come from the law-making, not the judicial, branch of the government."—*Payne v. Colvin*, 276 Fed. 15.

Strike No Defense to Action for Demurrage Charges

The Circuit Court of Appeals, Eighth Circuit, holds that under the Interstate Commerce Acts demurrage charges for detention of cars by a shipper or consignee must be enforced, and it is no defense to an action to collect them that the detention was caused by a strike, or was by orders of a sheriff, prohibiting the moving of the cars to prevent inciting mob violence. Neither the Interstate Commerce Commission nor the courts can release parties from such charges because of a strike. Congress alone has the power to write such an exception into the statute.—*Sinclair Refining Co. v. Schaff*, 275 Fed. 769.

Propriety of Extra Charge for Refrigerator

Car is for I. C. C., Not for Courts

The published freight tariff for potatoes from Page, N. D., to Chicago was \$181.69. Another published tariff authorized an extra charge of \$5 when the shipper uses a refrigerator or other insulated car. The Minnesota Supreme Court holds that the question of the propriety of this extra charge is for the Interstate Commerce Commission to pass upon and the state courts cannot, in an action by the shipper to recover the charge, interfere with the rates fixed.—*J. C. Famechon Co. v. Hines* (Minn.) 185 N. W. 941.

Storage Rule for Explosives Does Not Apply to C. L.

The Circuit Court of Appeals, Third Circuit, holds, affirming judgments for the defendant in actions by thirteen plaintiffs against the Lehigh Valley arising out of the Black Tom Terminal fire, that section 1643 of the regulations of the Interstate Commerce Commission, providing that: "Suitable provision must be made, outside the station when practicable, for the safe storage of explosives, and every effort possible must be made to reduce the time of the storage," does not extend to explosives in carload lots which have arrived at their destination and are awaiting unloading for trans-shipment.—*Fidelity & Deposit Co. v. Lehigh Valley*, 275 Fed. 922.

Derailment—Condition of Cars After Accident

In an action for injuries to a passenger in a derailment the Circuit Court of Appeals, Seventh Circuit, held it error to refuse permission to the railroad company to show what was disclosed by an inspection of the cars of the train. The plaintiff having charged, among other acts, defects in the cars, and having relied upon the rule of *res ipsa loquitur*, so far as the rule may apply, it was incumbent on the company to meet and disprove each of the alleged acts of negligence which would give application to the rule. The lapse of time between the accident and a part of the inspection affected the weight, but not the admissibility of this evidence.—*Payne v. Cohlmeier*, 275 Fed. 803.

Physical Connection of Rival Roads Held Unnecessary

In an action to require the Northern Pacific to make a physical connection at Centralia, Wash., between its tracks and those of the Puget Sound & Willapa Harbor, owned and operated by the Chicago, Milwaukee & St. Paul, the Supreme Court of the State of Washington holds that the rival road should not be required to make the physical connection in order that a lumber company might purchase timber and ship it over the Milwaukee road. Evidence did not show with sufficient definiteness the volume of business to be affected, and the saving of time and expense to the shipper as against the cost and loss to the carrier. Judgment reversing an order of the state Public Service Commission was therefore affirmed.—*Northern Pacific v. Commission* (Wash.), 202 Pac. 4.

Labor Board Decisions

Labor Board Declines to Restore

Previous Differentials

A request for an increase in the rates of pay for men in signal towers—train directors and levermen—to restore differentials previously existing between those positions and the positions of dispatchers and signal maintainers, respectively, was raised by the Order of Railroad Telegraphers in a protest against the Terminal Railroad Association of St. Louis. Previous to Federal control, train directors received a higher rate than train dispatchers. The application of the various orders issued by the United States Railroad Administration affecting the classes of employees involved in this dispute has resulted in train dispatchers now receiving a higher rate of pay than the train directors, while levermen, who previously received a higher rate than signal maintainers, are now receiving less. The Labor Board denied the request of the employees.—*Decision No. 611.*

Overtime for Sunday Work by Section Foreman

The question of overtime payment to the foremen for the supervising of maintenance of way gangs was submitted to the Labor Board which cited the following clause from the National Agreement as applying:

"(h) Employees whose responsibilities and or supervisory duties require service in excess of the working hours or days assigned for the general force will be compensated on a monthly rate to cover all services rendered, except that when such employees are required to perform work which is not a part of their responsibilities or supervisory duties, on Sundays or in excess of the established working hours, such work will be paid for on the basis provided in these rules in addition to the monthly rate. For such employees, now paid on an hourly rate, apply the monthly rate, determined by multiplying the hourly rate by 208. Section foremen required to walk or patrol track on Sundays shall be paid therefor, on the bases provided in these rules, in addition to the monthly rate."

The decision of the board is as follows: In the event that no agreement has been reached, effective December 16, 1921, section (h) of Article V of Decision No. 501 shall apply in the manner provided therein. For all service considered as overtime, for which extra compensation is provided, the hourly rate of pay for such service shall be predicated upon 204 hours per month, in accordance with section (e), Article V of Decision No. 501, regardless of the hours or days that may be considered as the regular assignment of monthly-rated supervisory forces.—*Decision No. 593.*

Method of Paying Roustabout Carpenters

A roustabout carpenter on the Louisville & Nashville, with headquarters at Knoxville, Tenn., was engaged in miscellaneous repair work over a portion of the line. He was assigned to a certain carpenter gang but worked entirely without supervision except that he made material and work reports to the gang foreman at the end of each week. The railroad paid him on the basis of 10 hours a day at pro rata rates in accordance with Section i of Article V of the National Agreement. The employees contended that Section m of the same article was the one which applied in his case. Sections i and m are quoted below:

(i) Employees temporarily or permanently assigned to duties requiring variable hours, working on or traveling over an assigned territory and away from and out of reach of their regular boarding and lodging places or outfit cars, will provide board and lodging at their own expense and will be allowed time at the rate of 10 hours per day at pro rata rates and in addition pay for actual time worked in excess of 8 hours on the basis provided, in these rules, excluding time traveling or waiting. When working at points accessible to regular boarding and lodging places or outfit cars, the provisions of this rule will not apply.

(m) Employees not in outfit cars will be allowed straight time for actual time traveling by train, by direction of the management, during or outside of regular work period or during overtime hours either on or off assigned territory, except as otherwise provided for in these rules. Employees will not be allowed time while traveling, in the exercise of seniority rights or between their homes and designated assembling points or for other personal reasons.

The Labor Board sustained the position of the carrier.—*Decision No. 649.*

Foreign Railway News

Extending the Benguela Railway

LONDON.

An extensive program of construction and improvement of railways and port works is proposed for Angola, Portuguese West Africa. The most important project is the extension of the Benguela railway to the Belgian Congo frontier, which will involve the construction of about 466 miles of new line. Track material and rolling stock have already been imported.

French Railway Rates to Be Reduced

LONDON.

The French railways are considering the question of lowering their rates, especially in the case of heavy raw materials. M. Le Trocquer, the minister of public works, has provisionally approved a list of rates for metals, providing a fairly large reduction of those actually obtaining. Rates for consignments of metallurgical products to French seaports are reduced by 25 to 40 per cent, and in the case of ores for export, rates are reduced from 10 to 15 per cent.

French Training for English Students

LONDON.

The Société des Ingenieurs Civils de France states that French engineering firms manufacturing rolling stock and other railway material in the Lorrain district have offered to accept for periods of two or three months a few British engineering students through their summer holidays. The students will not receive any salary and are to make their own arrangements for the journey, board and lodging and will be expected to submit to the same discipline and working hours as their French colleagues on the works' staff.

Brighton Railway Electrification

LONDON.

The London, Brighton & South Coast railway, England, has deposited a bill in Parliament to raise additional money for the purpose of electrifying certain portions of its line. It is estimated that the work will require an expenditure of upwards of £1,000,000 (or about \$4,866,000 at the normal rate of exchange). The bill proposes to empower the company to borrow £500,000 (\$2,433,000) authorized in the year 1911, and also further powers to borrow £1,000,000 (\$4,866,000) which "may be raised without reference to the issue of any additional capital."

Electrification of Italian Railways

LONDON.

The Italian ministry of public works has approved the electrification of the Bologna-Venice-Montefalcone line and the work is to be given to private industry. The Italian State Railway Administration is at present considering the question of using thermo-electric centers instead of hydro-electric centers, since the latter presents the difficulty of high cost of labor and materials and owing to the shortage of water supply with which Italy is at present confronted. It is reported that the electrification of the Chiasso-Bellinzona and Arth-Goldan-Luconca lines will be completed by the end of January, 1922.

"Luggage-in-Advance" Rates Reduced in England

LONDON.

The railway companies of Great Britain have announced reduction in the charge for the conveyance of passengers' "luggage-in-advance" from 3 shillings (approximately 73 cents at the normal rate of exchange) to 2 shillings 6 pence (60 cents) per package. Before the war the charge was 1 shilling (25 cents) per package. During the war the

"luggage-in-advance" system was suspended but was one of the first pre-war services to be restored. Its popularity is very great and in addition to its proving a source of income it assists the railway companies to avoid delays which the handling of large quantities of luggage on passenger trains involves.

Strange Railway Accident in England

LONDON.

An accident occurred on January 27, on the London & North Western between Roade and Blisworth, Northampton, England, as the result of which one person was killed and 18 injured.

The accident occurred between two express trains, one travelling from London to Birmingham and the other from Glasgow, Scotland to London. As the trains were passing each other they were struck by a flying piece of metal. What actually happened is still to a very great extent a matter of conjecture, but it is thought that the accident occurred through the steel foot-step of one of the engines becoming detached. The tender foot-step was apparently broken off the train travelling to Birmingham, which fell on the permanent way, and it is thought that when it hit the ground it rebounded and struck the first coach of its own train. The Glasgow to London express happened to be passing at the moment in the opposite direction, and the foot-step appears to have been caught between the two trains smashing in the glass and some panels in the first coach of each train. The roadway was not damaged.

Irish Railway Strike

LONDON.

The general strike ordered to begin on the Irish railways at midnight on January 14, owing to a dispute over an arbitration award lengthening the standard day, has been postponed. This is the outcome of a conference arranged between the railway managers, the men's representatives and Joseph McGrath, the minister of labor in the new Irish cabinet. The following notice was published by the ministry of publicity on Saturday:

The provisional government, mindful of its obligations to protect the economic life of the country and do all in its power to avert the calamitous consequence of a stoppage of railway services, hereby orders that the terms of the Carrigan award, dated December 17, 1921, dealing with wages and salaries, be put into operation as from January 15, 1922, but that, with a view to affording the provisional government time and opportunity to institute investigations, and to endeavor to bring about a settlement, the operation of the award, dated November 19, 1921, dealing with the hours and conditions of service be suspended for one month from January 14, 1922. The provisional government will recompense the companies for any proved loss incurred by them in consequence of the non-application of the award dated November 19, 1921.

The railwaymen's representatives undertook that work on the railways should continue for one month from January 14, 1922, without prejudice to further action.

British-Canadian Concession in Peru

Details of an important concession to British and Canadian interests by the government of Peru are given in the Pan-American Magazine. Some of these are:

1. The construction of about 1,300 miles of railway by the concessionaire.

2. The grant of 50 million acres of agricultural and mining lands to the corporation for development by it. The surface rights are granted in perpetuity and the sub-surface rights for 33 years. Freedom from "import and export taxes, as well as all other imposts, such as income tax, internal revenue dues, stamp and registration fees, is also granted for the period during which the mineral (i. e., sub-surface) rights exist."

3. The concessionaire receives for 33 years a monopoly of the tobacco industry in the country, subject to government supervision.

4. The concessionaire takes over 62 miles of government railways now in operation and 106 miles under construction and pays £1,325,000 to the government, undertaking at the same time to complete the construction of the lines.

5. The government guarantees that for 33 years no railway will be built to parallel those of the concessionaire.

6. The railway construction program is to be completed within 12 years.

7. The concessionaire has deposited £10,000,000 with the government as a guarantee of good faith.

Standardization of Railway Gage in Australia

LONDON.

It is reported that the conference of state premiers with the federal minister has dropped for the time being the standardization of the railway gages. The first installment would involve an outlay of £21,000,000 (approximately \$102,186,000 at the normal rate of exchange). Mr. Hughes, the commonwealth prime minister is not favorable to the acceptance of any outside offer to undertake the transformation on a percentage basis, as he states the government can obtain all the money it needs for the purpose. The question of the standardization of the railway gage is therefore to stand postponed until May next, when a further conference will be held.

Australian State Railways' Deficits

LONDON.

The Australian railways like all other railways in various parts of the world have been unable to do much to reduce the deficits on the last year's working, owing principally to the high cost of labor and materials. From the annual reports published by the treasurer for the year ended June 30, 1921, the Queensland Railways, it is noted, have had the heaviest loss. The deficit in this railway's operations amounted to £1,581,000 (approximately \$7,693,146 at the normal rate of exchange) for the year ended June 30, 1921.

The deficit on the Victoria Railways amounted to £651,635 (or \$2,170,856) for the year ended June 30, 1921, while the deficit for the previous fiscal year amounted to £212,893 (\$1,035,937).

The New South Wales Government Railways had a deficit amounting to £577,032 (\$2,707,838) or a total deficit for railways and tramways of £470,360 (\$2,283,772). From this it will be seen that the tramways really made a profit on the year's operation. The deficit for the previous fiscal year amounted to £137,574 (\$669,435).

The Western Australia Government Railways' deficit amounted to £418,370 (\$2,045,808).

The New Zealand Railways had a deficit of £115,570 (\$562,363) after operating expenses and interest charges had been paid, although the previous years' working had resulted in a surplus.

Favors Leasing of French State Railway

LONDON.

A report of the sub-commission appointed to inquire into the question of leasing the French State Railway, proposes the creation of a company to operate the line. The scheme would always give a majority of votes to private persons owning capital shares, but would also admit to the board of directors and to the general meetings representatives of the state. The new company would have a capital of 210,000,000 francs (approximately \$40,518,000 at the normal rate of exchange). One-third of the shares would be subscribed by the departments and communes served by the State Railway, as well as by the respective chambers of commerce, administrations of free ports and industrial and agricultural groups. Two-thirds of the shares would be subscribed for by the public. A further 60,000 shares, termed labor shares, would be owned by the employees.

The company would be managed by a council of 27 members, three being representatives of the state and three representing holders of labor shares. The 21 other members would represent capital shares and would be elected at a shareholders' meeting, but seven of these are to be chosen from those representing public communities. This would mean that the subscribing public investing two-thirds of the company's capital would always have a majority of 14 directors out of 27.

British Report on Light Signals

The Ministry of Transport of the British Government has issued a report, dated October 28, in which a committee, appointed in July, reports on its investigation of light signals (for use both day and night) for signaling on British railroads.

The committee consisted of Major C. H. W. Edmonds, of the Ministry of Transport, chairman; J. C. Allen, of the National Union of Railwaymen; Major G. L. Hall, government inspecting

officer; H. J. Oxlade, Associated Society of Locomotive Engineers and Firemen; Captain B. H. Peter, Westinghouse Brake & Saxby Signal Company; W. J. Thorrowgood, telegraph and signal superintendent, London & Southwestern and M. R. Gardner, Ministry of Transport.

The committee examined the color light signals in use on the Liverpool Overhead Railway, where such signals have been in use for a considerable time; and it was found that the signals were distinctly visible at a distance of 1,000 yards, when seen during brilliant sunshine. A position light signal on the London & Southwestern was also examined; and in both cases the lights were found sufficient and satisfactory. The conclusion of the committee is that the color light signal, with separate lenses for each color indication, is superior to all other signals. The committee holds that the use of color light signals will afford most, if not all, of the advantages obtained from power worked semaphores, and at considerably lower cost; particularly in congested districts where power is available; and even for sparsely signaled areas there is little difference in cost as compared with mechanical semaphores.

The committee believes that not more than three types of color light signals would be necessary, namely, for long range, for short range and for shunting. It is believed that artificial backgrounds are not necessary; also that lenses alone are preferable to reflectors or to combinations of reflector and lenses. Extensive hoods are believed undesirable.

English Shippers' Questionnaire

on Effect of Rates on Traffic

LONDON.

In view of the situation created by the refusal of the English railway companies to accede to the request of the shippers' organizations for a general reduction of freight rates, the Federation of British Industries has addressed a letter to its affiliated associations with a request for a reply to certain questions to enable the transport committee to draw up a considered case for reduction.

The letter states that the transport committee unanimously decided to adhere to their demand for a percentage decrease which should be general and include all goods affected by the uniform advances. The questions to which the affiliated associations are asked to reply, are:

1. To what extent have you diverted traffic from railway to road or water transport?
2. What amount of such traffic diverted would you hand back to railways if rates were reduced to, say, 75 per cent above 1913 prices?
3. Can you give any idea of what increased tonnage, if any, would result from a reduction in railway rates to say 75 per cent above 1913 prices, apart from question 2?
4. To what extent are the prices of your commodities today in excess of an average pre-war price.
5. What percentage reduction from the existing rates is necessary to assist your business?
6. To what extent have the increased rates caused a limitation of distribution so far as your firm is concerned. Have you had to cease sending long distances. If so, please give a few instances.

A Stop for Fuel and Water, in Mexico

Equipment and Supplies

Locomotives

THE DETROIT & MACKINAC is inquiring for one or more locomotives.

THE SAVANNAH & ATLANTA is asking for prices on 5 Mikado type locomotives.

THE DENVER & RIO GRANDE is asking for prices on 20 Pacific type locomotives.

THE BUFFALO, ROCHESTER & PITTSBURGH is asking for prices on 20 locomotives.

THE LOUISVILLE, HENDERSON & ST. LOUIS is asking for prices on 6 Consolidation type locomotives.

THE ARGENTINE STATE RAILWAYS are asking for bids for 50 narrow-gauge locomotives, the gauge being 750 mm. (30.3 in.). Communications regarding these locomotives should be addressed to the Direction General, Ferrocarriles del Estado, Buenos Ayres, Argentina.

Freight Cars

THE BOSTON & MAINE is having 1,000 box cars repaired at the shops of the Laconia Car Company.

THE NORFOLK & WESTERN is having 400 coal cars repaired at the shops of the Ralston Steel Car Company.

THE DELAWARE, LACKAWANNA & WESTERN is asking for prices on the repair of about 900 steel hopper cars, of 40 tons capacity.

THE PHILLIPS PETROLEUM COMPANY, Bartlesville, Okla., has ordered 60 insulated tank cars of 8,000 gal. capacity from the Standard Tank Car Company.

THE PHILADELPHIA & READING, reported in the *Railway Age* of December 31 as inquiring for from 500 to 2,000, 70-ton hopper cars, has divided an order for 2,000 cars equally between the American Car & Foundry, the Cambria Steel Company, the Pressed Steel Car Company and the Standard Steel Car Company.

Passenger Cars

THE PHILADELPHIA & READING has ordered 50 suburban coaches from the Bethlehem Shipbuilding Corporation, Harlan Plant.

Machinery and Tools

THE ERIE RAILROAD has recently purchased from Metch & Merryweather, Cleveland, Ohio, a considerable number of machine tools, including engine lathes, axle lathes, vertical turret lathes, shapers, a cylinder boring machine, four power hack saws, three hydraulic presses, two motor driven grinders, two pipe turning machines and a cutter grinder.

Iron and Steel

THE SOUTHERN RAILWAY has ordered 9,000 tons of rail from the Tennessee Coal, Iron & Railroad Co.

Miscellaneous

THE BUFFALO, ROCHESTER & PITTSBURGH will receive bids until 12 o'clock noon, February 24, at Rochester, N. Y., for 5,000 tons open-hearth steel rail, 100-lb. sections; 11,500 pairs 100-lb. angle bars 28-in.; 500 kegs track bolts; 1,000 kegs Goldie track spikes and 231,000 Goldie tie plates.

Supply Trade News

George W. Bender, formerly associated with Mudge & Co., has been appointed vice-president of the **Argyle Railway Supply Company**, Chicago. This company has opened offices in the Webster building, 327 S. LaSalle street, Chicago.

Stewart J. Dewey, assistant signal engineer of the Cleveland, Cincinnati, Chicago & St. Louis, has resigned to enter the service of the **Electric Storage Battery Company**, Philadelphia, Pa., in the railway signal department of its Chicago branch, effective March 1.

J. T. McGarry, vice-president of the American Valve and Meter Company, Cincinnati, Ohio, has been elected president and general manager, succeeding **Wallace H. Gray**, who has been elected chairman of the board of directors. **C. F. Bastian** has been elected secretary and treasurer of the same company, succeeding **Dwight Marfield** resigned.

Baldwin Locomotive Works

The annual report of the Baldwin Locomotive Works for the year ended December 31, 1921, shows a net profit of \$5,044,096, after federal taxes and other charges, equivalent, after preferred dividends, to \$18.22 a share on the \$20,000,000 common stock, against a net profit of \$4,428,518, or \$15.14 a share on the same amount of stock in 1920. The gross sales for the year were \$49,945,506 as compared with \$73,542,666 in 1920.

President S. M. Vauclain in his remarks to the stockholders says:

"The period of readjustment to which the president referred in his last annual report still continues and uncertain business conditions prevail. Your property has been maintained in a high degree of efficiency and is fully prepared to meet the renewal of activities which the president hopes will shortly be realized."

The consolidated balance sheet of the Baldwin Locomotive Works and Standard Steel Works Company as of December 31, 1921, follows:

Assets—		
Baldwin Locomotive, 1921, real estate, etc.		\$27,079,542
Std. Stl., real estate, etc.		9,458,571
Investments		387,725
Inventories		7,000,736
Accounts receivable		10,100,486
Bills receivable		10,293,918
Securities		657,484
Bonds, notes, etc.		23,833,715
Cash		2,172,142
Advances, engineers etc.		320,223
Sinking fund		1,678,725
		\$92,983,338
Liabilities—		
Baldwin Locomotive: capital stock		\$40,000,000
B. I. 1st mortgage bonds		10,000,000
Std. Stl. 1st mortgage bonds		2,200,000
Accounts payable		5,590,718
Bills payable		5,000,000
Depositors' saving fund		1,676,993
Advances		1,041,150
Interest		959,741
Reserves		5,854,138
Sinking fund		2,800,000
Surplus		17,860,598
		\$92,983,338

The annual dinner of the **Chicago Railway Equipment Company** was held at the Union League club, Chicago, the evening of February 7 and was attended by a large number of officers of railways and of railway supply companies. One of the principal features of the evening was the showing of moving pictures illustrating the various plants of the company and the detailed process of making its various products. **James A. Emery** of Washington discussed the subject showing the tendency of government regulation to restrict freedom and initiative in the various lines of business, and the importance of business concerns and their interest in the development of the country in the

C. W. Holt, secretary and general manager of the **Curtain Supply Company**, Chicago, has been elected a vice-president in charge of all operations of the company; **Ross F. Hayes**, eastern sales manager, with headquarters at New York City, has been appointed general sales manager, with headquarters at Chicago; **T. P. O'Brien** has been appointed district sales manager, in charge of the eastern office at New York City, and **Ralph Brown** has been appointed district sales manager of the western district with headquarters at Chicago; **G. B. Allison** has been appointed assistant to Mr. O'Brien and **Edward E. Whitmore** assistant to Mr. Brown.

Obituary

William A. Barstow, president of the Union Tank Car Company, New York, died of pneumonia at his home, Hutton Park, West Orange, N. J., on February 10. Mr. Barstow was born on September 27, 1877, at Cleveland, Ohio, and was educated at the Dearborn Morgan School, Orange, N. J., and at Yale University, graduating from the latter in 1899. The same year he entered the employ of the Atlantic Refining Company at Franklin, Pa. He subsequently served in many branches of the oil industry and in October, 1914, resigned as vice-president of the Imperial Oil Company at New York to become assistant to president of the Union Tank Car Company. Later he was promoted to senior vice-president and since 1919 served as president of the same company.

Frank S. Dinsmore

Frank Solyman Dinsmore, for the last 24 years a member of the business department staff of the *Railway Age*, died at the Long Island College Hospital, Brooklyn, N. Y., at 1:30 on the morning of February 14, of chronic interstitial nephritis.

Frank S. Dinsmore

The end came sooner than was expected. On January 4, following advice of his doctor, Mr. Dinsmore sailed for the British West Indies in the hope that the warm climate would help nature, and that his life might thus be prolonged. But it was too late. By the time the steamer reached Barbados Mr. Dinsmore was too weak to disembark; so he came back, was taken to the hospital and there the spark of life gradually dimmed and then went out. With characteristic optimism, he scarcely realized the seriousness of his condition; and he passed away unconscious of the end and without pain.

Funeral services were held in Brooklyn, where he had lived, on the morning of February 16, after which the body was taken to Chicago. A second service will be held at Rosehill Cemetery, Chicago, today (February 18), after which the body will be cremated.

Mr. Dinsmore is survived by a brother, a sister, a half brother and a half sister.

"F. S. D." as he liked to be called and which he frequently applied to himself when reminiscing, was born at Berlin, Wis., May 13, 1859. His father, a pioneer, trekked by wagon from his birthplace in New Hampshire to northern New York, where he married before going West. At the age of 12, Frank, disgusted by his inability to convince his teacher that he was right in an argument when he was sure of the position he had taken, threw aside his books and went to work for his father, a maker of farm implements. In 1881 he made up his mind to study medicine; and for the next 16 years he so applied himself when not selling medical books to get money with which to pay his tuition fees. Thinking that his

ambition to become a surgeon would be advanced thereby, he joined the staff of the Railway Surgeon in 1894, that paper being then published by the owner of the *Railway Age*. Three years later he transferred his affections to the latter publication and came to New York as its eastern representative. From that time to his death he was almost literally wedded to the *Railway Age*; because for it he lived and, in a sense, died—for he might have been spared longer had his devotion to his work not caused him to regard with contempt, until too late, the warnings he heard on every hand and of which he himself must have been convinced.

In trying to visualize another's character, it is not always easy to know just where to start. With Frank Dinsmore, he was, first of all, a philosopher, with characteristic calmness of temper and judgment and practical wisdom; to which should be added a natural love for his fellow man, gentleness, uprightness and loyalty.

Looking back over the last 24 years and applying to him those splendid attributes which were his, it is not hard to understand how, in the early days of the *Railway Age*, Frank Dinsmore, with his philosophical mind, an abiding faith in his mission and tireless devotion to duty, saved the day over and over again when the till was empty and the liabilities far exceeded the assets. At that time he might have advanced further along the road to material prosperity had he so willed; but instead he elected to stay in the niche he himself had selected, that his conscience might not be charged with lack of devotion to the man who had given him his job (the late Hugh M. Wilson) and to whom he had pledged his all.

Mr. Dinsmore's principal work was that of an advertising salesman; and therein lay the tangible measure of his pecuniary worth to this institution. But his employer values most what he did, by living example and fatherly advice, to help and encourage the younger men of the entire staff—business and editorial. When discouraged, he lifted them out of their depths; if he saw their jobs in jeopardy, he diplomatically and unobtrusively tried to awaken the sort of interest and ambition which would overcome the failing; and when they required a guiding hand, it was his that was always outstretched.

And with his tribute to Mr. Dinsmore's immeasurable worth his employer of the last 14 years unstintingly links his own sense of obligation for the unswerving loyalty and devotion that was reflected in so many varied and delightful ways. With employer and co-workers alike, Mr. Dinsmore's death has created a vacancy that is real. Everyone who was intimately acquainted with him will have as his most lasting impression the beautiful example his living afforded.

E. A. S.

Albert C. Ashton, treasurer of the Ashton Valve Company, East Cambridge, Mass., died on January 31, at St. Petersburg, Fla., where he had been for several weeks on account of

ill health. He was born in England, 52 years ago and was a son of the late Henry G. Ashton, founder of the Ashton Valve Company. Albert C. Ashton graduated from Chauncey Hall School, Boston, and the Massachusetts Institute of Technology where he pursued a course in engineering. For over 20 years he had served as treasurer of the Ashton Valve Company and part of this time served also as general manager. Mr. Ashton took a constant and active interest in the local affairs of Somerville,

Railway Construction

ATCHISON, TOPEKA & SANTA FE.—This company will construct an extension to its lines from Owen, Okla., to Pawhuska, a distance of approximately 40 miles.

CHICAGO, BURLINGTON & QUINCY.—This company will soon receive bids for the construction of a new passenger station at Aurora, Ill. A temporary frame station will be constructed at that point by company forces.

CHICAGO GREAT WESTERN.—This company is receiving bids for the construction of a two-story frame office building at St. Paul, Minn.

CHICAGO UNION STATION.—This company has awarded a contract to R. C. Wieboldt, Chicago, for the construction of a temporary frame passenger station at Canal and Jackson streets, in that city, estimated to cost approximately \$12,000. This structure will be used for the suburban service of the Chicago, Burlington & Quincy during the construction of the main passenger building.

CHICAGO UNION STATION.—This company will soon request bids for the construction of a power plant at Harrison and Canal streets, Chicago.

CLEVELAND, CINCINNATI, CHICAGO & ST. LOUIS.—This company will construct a second main track from Farmland, Ind., to a point about two miles east of Muncie, a distance of approximately 12 miles.

GREAT NORTHERN.—This company contemplates the construction of a second main track between Surrey, N. D., and Minot, a distance of 7.3 miles, estimated to cost \$140,000; between Dean, Wash., and Hillyard, a distance of 9 miles, estimated to cost \$180,000; and between Spokane, Wash., and Fort Wright, a distance of 2.7 miles, estimated to cost \$54,000.

ILLINOIS CENTRAL.—This company will construct a freight and passenger depot at Baton Rouge, La. It is expected that bids will be called for within a month.

MINERETS & WESTERN.—This company which was noted in the *Railway Age* of January 14 (page 207), as receiving bids for the construction of a 35.5 miles standard gage railroad extending from Fresno, Cal., into timber lands, has awarded the contract for this work to the Warren Construction Company, San Francisco, Cal. The estimated cost of the construction is \$800,000 exclusive of bridges.

MISSOURI PACIFIC.—This company will receive bids until February 20, for the construction of a one-story building at Winnsboro, La., estimated to cost \$10,000.

MISSOURI PACIFIC.—This company, which was noted in the *Railway Age* of February 11 (page 402), as receiving bids for the construction of a service building at Little Rock, Ark., estimated to cost \$12,000, has awarded the contract for this work to J. D. Fitzgibbon, St. Louis, Mo.

NEW HOLLAND, HIGGINSPORT & MT. VERNON.—The Interstate Commerce Commission has issued a certificate authorizing the construction of a line extending from a connection with the Norfolk Southern and Wenona, to New Holland, N. C., a distance of 35 miles.

NEW YORK CENTRAL.—This company will receive bids until noon, February 24, covering the manufacture and delivery (and, if desired, erection) of the structural steel for the proposed bridge of the Hudson River Connecting Railroad over the Hudson river, south of Castleton, New York.

TENNESSEE EASTMAN CORPORATION.—This corporation contemplates the construction of a line from Kingsport, Tenn., into Hawkins County, a distance of about 20 miles. Surveys have been made but no final decision has been made as to the undertaking of the work.

A. C. Ashton

Mass., where he had resided since his schoolboy days, and he was a member of many social and business organizations.

Railway Financial News

ATLANTA, BIRMINGHAM & ATLANTIC.—Application for Loan Denied.—The Interstate Commerce Commission has denied the application of the receiver for a loan of \$615,592, on the ground that no showing has been made that the loan is necessary to enable the road to meet the transportation needs of the public or that its prospective earning power is sufficient to afford adequate security for the loan.

BALTIMORE & OHIO.—Equipment Trusts Offered.—An issue of \$10,284,300 equipment trust 6 per cent. gold notes is being offered at prices to yield from 5.50 to 5.75 per cent, by a syndicate composed of the Bankers Trust Company, Dominick & Dominick, Hornblower & Weeks, Marshall Field, Gloré, Ward & Co., the Union Trust Company of Pittsburgh, Harrison, Smith & Co. and the Northern Trust Company of Chicago. These notes mature serially, approximately \$791,000 annually, on January 15, 1923 to 1935, inclusive.

CHESAPEAKE & OHIO.—Asks Authority to Abandon Ferry.—This company has applied to the Interstate Commerce Commission for a certificate authorizing the abandonment of its passenger and freight ferry across the Ohio river between Russell, Ky., and Ironton, Ohio.

CHICAGO, MILWAUKEE & ST. PAUL.—Authorized to Acquire Control.—The Interstate Commerce Commission has authorized the acquisition of control by this company of the Chicago, Milwaukee & Gary by purchase of the capital stock. Authority was also granted to assume obligation or liability as guarantor in respect of not exceeding \$3,000,000 of first mortgage, 40-year, 5 per cent bonds of the Chicago, Milwaukee & Gary by endorsing thereon the guarantee of the C. M. & St. P. of the payment of the principal and the interest after January 1, 1924. The bonds when so endorsed are to be redelivered to the St. Louis Union Trust Company. The commission says there appears to be no necessity at this time for the guarantee of the \$2,700,000 of bonds to be retained by the St. Paul and consideration of that part of the application was, therefore, deferred.

DENVER & RIO GRANDE.—Sutro Committee Opposes Reorganization Plan.—The Sutro committee, representing the 7 per cent cumulative adjustment mortgage bonds of the Denver & Rio Grande, has issued a letter to holders of those securities, setting forth its objections to the Western Pacific's proposed reorganization of the old Denver company. The principal points raised are:

First, failure to provide for the acquisition by the reorganized company of the equity in the Utah Fuel Company stock, thus depriving the reorganized company of the control of a part of its fuel supply; secondly, it is pointed out, the plan requires holders of adjustment and refunding bonds to permit an unlimited unifying mortgage to be placed on the property ahead of all other securities to be issued under the plan.

The committee's letter says:

Although the proposed sinking fund bonds, which the holders of adjustment and refunding bonds are asked to take, in respect of the other 50 per cent of their present holdings, are to be subordinated by the proposed plan to this unlimited issue of new unifying bonds, the plan fails to accord any representation whatever in the board of directors of the reorganized company to the holders of these sinking fund bonds or adjustment bonds—thus denying to the holders of these bonds any effective check upon (a) the issue of unifying bonds for purposes not in the interests of the holders of the proposed sinking fund bonds; (b) the diversion of traffic earnings by inequitable divisions of rates, traffic and truck lease contracts, and otherwise; (c) the impairment of the assets of the reorganized company by unwarranted dividend payments in its common stock.

From exhibit 3 attached to the proposed plan it appears that for the year period ending December 31, 1920, the average strike of the railroad union, exclusive of dividends, interest on securities and interest on the balance and excepting only dividends on the stock of the Rio Grande Southern Railway Company applicable to its creation fund debt, averaged over 16,000,000 per year—or almost \$1,000,000 per year in excess of the total interest payments of the adjustment and refunding bonds, and all underlying issues. It is difficult therefore to conceive of the basis for the traffic plan of the reorganization that has been proposed.

FANSAR & OREAH MOUNTAIN.—Asks Authority to Issue Stock.—The company has applied to the Interstate Commerce Commission for authority to issue \$1,000,000 of capital stock to complete the

construction of its new line from Forgan, Okla., to Richfield, Kans.

KNOXVILLE & CAROLINA.—Asks Authority to Issue Securities.—An application has been filed with the Interstate Commerce Commission for authority to issue \$400,000 of capital stock and \$300,000 of first mortgage bonds. The stock and \$82,000 of the bonds is to be delivered at par for the acquisition of the Knoxville, Sevierville & Eastern and \$100,000 of the bonds to be sold to pay for improvements.

MEMPHIS, DALLAS & GULF.—Asks Authority to Abandon Lines.—The receiver has applied to the commission for a certificate authorizing the abandonment of the lines from Glenwood and Hot Springs, Ark., 53.3 miles; Graysonia to Leard, 5.49 miles; Daleville to Clark Mill, 10.64, and Nashville to Shawmut, 33.97 miles.

MISSOURI, KANSAS & TEXAS.—Authorized to Extend Receiver's Certificates.—The Interstate Commerce Commission has authorized a further extension of the maturity of \$3,000,000 of receiver's certificates from February 15 to May 15 by endorsement.

NEW YORK, NEW HAVEN & HARTFORD.—Asks Government Loan.—This company has applied to the Interstate Commerce Commission for a loan of \$31,324,000 from the revolving fund for 10 years, of which it is proposed to use \$26,258,000 to pay debentures of the European loan maturing April 1, \$2,066,000 to meet equipment trust and other maturities, and \$3,000,000 for additions and betterments.

Following a meeting of the directors on Tuesday President E. J. Pearson stated that the application for a loan of \$31,324,000 was submitted for the purpose of presenting the entire situation of the New Haven to the representatives of the government.

TENNESSEE CENTRAL.—Asks Government Loan.—This company has applied to the Interstate Commerce Commission for a loan of \$2,250,000 from the revolving fund for 10 years, of which \$1,250,000 is to be used for additions and betterments and \$1,000,000 to meet short term obligations.

Dividends Declared

Southern Pacific—1½ per cent, quarterly, payable April 1 to holders of record February 28.
 Union Pacific—Common, 2½ per cent, quarterly; preferred, 2 per cent, both payable April 1 to holders of record March 1.
 Cincinnati Northern, 3 per cent, payable March 1 to holders of record February 24.
 Pittsburgh, Youngstown and Ashtabula, Preferred, \$1.75, quarterly, payable March 1 to holders of record February 20.

Unloading Coal from Container-Car to Motor Truck in Poland

Railway Officers

Executive

G. R. Loyall, president of the Norfolk Southern, has been elected president of the Norfolk Terminal, succeeding **C. W. Huntington**, president of the Virginian. **N. D. Maher**, president of the Norfolk & Western, has been elected vice-president of the Norfolk Terminal, succeeding Mr. Loyall.

Claude K. Boettcher, whose election as vice-president of the Tennessee Central, with headquarters at Nashville, Tenn., was announced in the *Railway Age* of January 28 (page 304), was born at Boulder, Colo., on June 10, 1875. Mr. Boettcher is the senior partner of the firm Boettcher, Porter & Co., investment bankers at Denver, Colo. He has been associated with various railroads at different times, largely through financial matters. From 1900 to 1906, he was vice-president of the Great Western, with headquarters at Denver, and from 1913 until 1919, he was chairman of the board of directors of both the Denver City Tramways and the Denver Inter-mountain, which latter positions were his last railroad connections prior to the time of his recent appointment.

Andrew P. Titus, general manager of the Chicago & Alton, with headquarters at Chicago, has been elected vice-president in charge of operation, with the same headquarters. Mr.

Titus was born on a farm near Princeton, N. J., on April 11, 1873, and was educated at Princeton Preparatory School and at Princeton College. He entered railroad service on July 1, 1890, in the car department of the Lake Shore & Michigan Southern (New York Central), at Cleveland, Ohio. From 1893 to 1895 he was employed by a mining company in Mexico, and, in June of the latter year, he re-entered the service of the Lake Shore & Michigan Southern at Cleveland. He left in May, 1900, to become

A. P. Titus

car distributor and chief clerk to the superintendent of the car service department of the Wheeling & Lake Erie. He was promoted to superintendent of car service, with headquarters at Pittsburgh, Pa., in November, 1905, and to assistant superintendent of transportation, with headquarters at Canton, Ohio, in May, 1907, which latter position he held until July 1, 1912, when he was promoted to superintendent of the Toledo division. He left in August, 1912, to become general superintendent of the Chicago & Alton, with headquarters at Chicago. He was promoted to general manager, with the same headquarters, on November 1, 1915, which position he was holding at the time of his recent promotion.

Financial, Legal and Accounting

W. M. Mooney, whose election as comptroller of the Tennessee Central, with headquarters at Nashville, Tenn., was announced in the *Railway Age* of February 4 (page 355), was born at Three Rivers, Que., on March 13, 1867. He entered railroad service on August 15, 1888, as a clerk in the car accountant's office of the St. Joseph & Grand Island at St. Joseph, Mo. From January 1, 1890, to September 15, 1892, he was a car clerk on the Chicago, St. Paul & Kansas City (Chicago Great Western) at St. Joseph. He returned to the

St. Joseph & Grand Island on the latter date and was successively station accountant, revising clerk, interline freight clerk and chief clerk of freight accounts. On November 1, 1902, he was made chief clerk to the auditor which position he held until August 15, 1907, when he was promoted to auditor and cashier of that road, and of the St. Joseph Terminal R. R., with headquarters at St. Joseph. He left on November 15, 1909, to become auditor of the Tennessee Central, with headquarters at Nashville, which position he was holding at the time of his recent promotion.

Operating

J. M. Shea has been appointed superintendent of the Northern division of the Norfolk Southern with headquarters at New Bern, N. C., and **J. S. Cox** has been appointed to a similar position on the Southern division with headquarters at Raleigh, N. C. The territory covered by these divisions was formerly distributed among three divisions. The Northern division, as it now is, includes: the main line from Norfolk to New Bern and Beaufort to Goldsboro; the Currituck, Kempsville, Suffolk, Elizabeth City, Columbia, Belhaven, Pinetown and Oriental branches; and Marsden Yard. The new Western division includes the main line from Marsden to Charlotte and the Fayetteville, Aberdeen & Asheboro, Ellerbe and Jackson Springs branches.

Traffic

H. W. Gillis has been appointed assistant general freight agent of the Canadian Pacific, Eastern Lines.

Clement S. Ucker has been appointed director of development of the Seaboard Air Line with headquarters at Savannah, Ga.

H. G. Sullivan, commercial agent of the Central of Georgia, with headquarters at Athens, Ga., has been transferred to Montgomery, Ala.; he will be succeeded by **J. Y. Bruce**.

A. P. Smirl, assistant general freight agent of the Texas & Pacific, with headquarters at Dallas, Tex., has been promoted to assistant freight traffic manager with headquarters at New Orleans, La., succeeding **J. S. Houston**, resigned.

R. D. Johnsen, city passenger agent of the Atchison, Topeka & Santa Fe, Coast Lines, with headquarters at San Francisco, Cal., has been promoted to division passenger agent, with the same headquarters, succeeding **J. F. Moses**, promoted.

B. S. Merritt, general agent of the Great Northern, with headquarters at Spokane, Wash., has been promoted to assistant general freight agent, with headquarters at Seattle, Wash. He will be succeeded at Spokane by **J. F. Pewters**, general agent with headquarters at Great Falls, Mont. **A. J. Grummett** has also been appointed assistant general freight agent, with headquarters at Seattle.

Mechanical

J. A. Conley, master mechanic of the Atchison, Topeka & Santa Fe, with headquarters at Calwa, Cal., has had his jurisdiction extended over the shops at Richmond, Cal., succeeding **E. H. Harlow**, formerly superintendent of shops, with headquarters at that point, who died on January 26, after which time his position was abolished.

M. W. Boucher, locomotive foreman of the Canadian Pacific, with headquarters at Field, B. C., has been appointed general locomotive foreman of the Edmonton, Dunvegan & British Columbia, with headquarters at McLennan, Alta. He will have direct supervision over both the mechanical and car departments, the positions of master mechanic and locomotive foreman having been abolished.

Engineering, Maintenance of Way and Signaling

Stewart J. Dewey, assistant signal engineer of the Cleveland, Cincinnati, Chicago & St. Louis, has resigned to enter

the service of the Electric Storage Battery Company (see item under Supply Trade News).

De Witt C. Fenstermaker, whose appointment as principal assistant engineer of the Chicago, Milwaukee & St. Paul, with headquarters at Chicago, was announced in the *Railway Age* of February 11 (page 406), was born on December 27, 1873, at Basil, Ohio. He entered railroad service in 1893 as a rodmn on the Toledo & Ohio Central, and was later successively promoted to instrumentman, draftsman, and assistant engineer, which latter position he held until 1898, when he entered the army for service in the Spanish-American war. From 1899 to 1902 he was assistant engineer in the engineering department of the government of Cuba. Upon returning to this country he entered the service of the Lake Erie, Alliance & Wheeling as resident engineer. He left in 1903, to become resident engineer of the Louisiana Railway & Navigation Company and was soon thereafter promoted to division engineer, and later to chief engineer, with headquarters at Shreveport, La. From 1908 until 1910 he was city engineer of Tulsa, Okla., and from the latter date until 1912, he was designing engineer of the Lehigh & New England. He left in 1912 to become assistant engineer of the Chicago, Milwaukee & St. Paul, with headquarters at Chicago. He was promoted to district engineer, with the same headquarters in March, 1919, and, in April, 1921, he was granted a leave of absence in order that he might act as chief engineer for Peterson, Shirley & Gunther, Omaha contractors, in charge of constructing 50 miles of railroad in Eastern Cuba for the Atlantic Fruit Company which work he was engaged in up to the time of his recent appointment.

F. J. Nevins, whose appointment as valuation engineer of the Chicago, Rock Island & Pacific, with headquarters at Chicago, was announced in the *Railway Age* of February 11 (page 406), was born near Baxter Springs, Kan., in 1872. He entered railroad service in 1892, as a clerk in the local freight office of the Missouri, Kansas & Texas at Denison, Tex., leaving that road in 1893, to enter the service of the Missouri Pacific as a freight brakeman at Osawatomie, Kan., where he was successively conductor, yardmaster and chief clerk to the general foreman of bridges and buildings until 1904, when he was promoted to chief maintenance of way accountant for the entire system, with headquarters at St. Louis, Mo. One year later he was made chief clerk to the chief engineer of maintenance of way, which position he held until 1910, when he left railroad service to become sales and traffic manager of the Portland Cement Company, with jurisdiction over the Southwestern states, and with headquarters at Dallas, Tex. He re-entered railroad service in 1911 as assistant to the vice-president and general manager of the St. Louis-San Francisco, with headquarters at St. Louis, Mo., which position he held until 1914, when he entered the service of the Chicago, Rock Island & Pacific as chief clerk to the engineer in charge of track elevation work at Chicago. He was promoted to chief accountant in the valuation department in 1916, with the same headquarters, which position he held up to the time of his recent promotion.

F. J. Nevins

Purchasing and Stores

E. H. Gaines, Jr., has been appointed purchasing agent of the Tennessee Central with headquarters at Nashville, Tenn.

Obituary

W. G. Bayley, superintendent of the Cleveland, Cincinnati, Chicago & St. Louis with headquarters at Springfield, Ohio, died at Urbana, Ohio, on February 13 at the age of 57, after a lingering illness. Mr. Bayley was born at Hollidaysburg, Pa., and entered railroad service with the Pennsylvania in the engineering department. He later was transferred to the Cleveland, Cincinnati, Chicago & St. Louis and was promoted to engineer, maintenance of way and later to superintendent. Mr. Bayley had been superintendent at Springfield since 1897.

Herbert De Forest Howe, vice-president and general counsel of the New York, Chicago & St. Louis, with headquarters at Cleveland, Ohio, whose death was noted in the *Railway Age* of February 4 (page 356), was born on November 24, 1876, at Morris, Ill. He entered railroad service on November 1, 1898, in the law department of New York Central, Lines West, and served in various legal capacities for that road. In 1909, he organized its general land and tax department and was made general land and tax agent for the western lines. He entered the service of the New York, Chicago & St. Louis on May 15, 1917, as general counsel, with headquarters at Cleveland, and in June, 1917, he was promoted to vice-president and general counsel, with the same headquarters which position he was holding at the time of his recent death.

George K. Warner, treasurer and assistant secretary of the St. Louis Southwestern, with headquarters at St. Louis, Mo., died at his home in that city on February 11, after an illness of two weeks. Mr. Warner was born on September 2, 1860, at Mobile, Ala., and entered railroad service in 1883, as a storekeeper on the New Orleans and Mobile divisions of the Louisville & Nashville. He left in the latter part of that year to become chief clerk to the master mechanic of the Texas & St. Louis, at Jonesboro, Ark., and later at Pine Bluff. From July 10, 1884, to December 5, 1888, he was promoted successively to clerk, bookkeeper, and chief clerk in the accounting department, during which period the name of the company was changed by reorganization to St. Louis, Arkansas & Texas. He was appointed acting treasurer of that company on December 5, 1888, and was elected treasurer on January 14, 1889. On January 16, 1891, upon the reorganization of the company again, he was elected treasurer and assistant secretary which position he was holding at the time of his recent death. He was also secretary and treasurer of the Shreveport Bridge & Terminal Company, vice-president and treasurer of the Grays Point Terminal, the Valley Terminal, the Paraxould Southeastern, the Pine Bluff Arkansas River and the Central Arkansas & Eastern; was also assistant secretary and assistant treasurer of the Southwestern of Texas, Stephenville North & South Texas, Dallas Terminal & Union Depot Company, and the Eastern Texas.

One Big Thing That Is the Matter with the Railroads

LET RAILWAY officers consider the following statements of fact and the following questions:

The railways of the United States are at least as efficiently operated as any others in the world. They are as efficiently managed as any other class of business concerns in this country.

Why, then, does the public lend a willing ear to charges that they are inefficiently managed and to canards such as that Henry Ford, by his operation of the Detroit, Toledo & Ironton, has "shown up" the managements of other railways?

The railways of the United States are the most conservatively capitalized railways in the world. They are at least as conservatively capitalized in proportion to investment as any other class of business concerns in this country.

Why, then, do so many of the people of the country believe they are grossly overcapitalized?

Railway rates on most commodities are today lower compared with ten years ago than the prices of most commodities.

Why, then, does the public loudly and almost universally complain about railway rates rather than about the prices of most commodities?

It is more economical, safer and pleasanter in almost every part of this country to make pleasure trips of any considerable length by railroad than by automobile.

Why, then, does almost everybody who thinks of taking pleasure trips, from say 50 to 200 miles in length, think of taking them in automobiles?

The railways always have been, and are now, as honestly managed as any other class of business concerns in this country.

Why, then, do many persons believe that there is more crooked financing and grafting in their management than in the management of most other lines of business?

Railway officers receive incomes relatively smaller in proportion to the importance of their duties and responsibilities than men in almost any other line of business in this country.

Why, then, do a large part of the people believe that the public is being mulcted to pay railway officers excessive salaries?

It is at least as essential to the welfare of this country that the railways should prosper as that any other industry should prosper.

Why, then, do most people rejoice when reports from the

farms and factories show an increase in the prosperity of farmers and manufacturers, and at the same time think the railways are practicing extortion and regard it as a public calamity when their net earnings show that the railways are beginning to prosper?

When men make large fortunes in the manufacture of automobiles, kodaks, chewing gum, iron and steel, and publishing farm papers almost everybody rejoices. Nobody finds fault because Henry Ford has become enormously rich in the automobile business, because Eastman has become rich by making kodaks, because Wm. Wrigley has become rich by making chewing gum, because Charles M. Schwab has become rich in the steel business, because Senator Arthur Capper has become rich by publishing farm papers. Such men are among our national heroes.

Why, then, if any man should now become rich in the railroad business would he be generally denounced as a "malefactor," as most of those who did make fortunes in the railroad business in the past were denounced?

No railway officer would question that the statements of fact above made are correct. They show that in most important respects the railways have been and are well managed. They show that the railways are one of the country's very greatest assets.

Why, then, do so many people act on the assumption that the railways are the country's greatest liability?

The railway business is the business of manufacturing transportation. No manufacturing business can be successful unless its organization is highly efficient not only in production but in salesmanship. If a concern year by year is making a larger and better product, is making it with relatively greater and greater efficiency and economy, and is selling it at less and less profit to itself can there be more than one explanation of what is the matter with it? The true and only explanation must be that it is failing to "sell" itself to its customers adequately, wisely and effectively.

What is wrong with the salesmanship of the railways? We do not pretend to be able completely to diagnose the case, but we can mention some pertinent facts. In a period when concerns of other kinds have spoken extremely well of themselves in loud tones, the railways for the most part have kept modestly silent. In a period when many have exploited the great advantages of passenger and freight transportation

by motor and by water, the railways have hardly exploited the advantages of transportation by rail. In a period when many other industries have directly and indirectly attacked the railways, the railways have made no counter-attacks. They have stayed on the defensive, or turned the other cheek.

In a period and in a country when and where advertising as a means of selling institutions and goods to the public has been used more extensively and in more original and varied ways than in any other time or country in history, the railways have done relatively only a negligible amount of advertising, and have done this almost solely to exploit the least profitable part of their business. Apparently the largest expenditure that the railways ever made for advertising was in 1916 when it was \$7,500,000. This was *two-tenths of one per cent* of their total earnings. The following are the percentages of their gross earnings spent for advertising in normal years before the war by certain concerns in widely varying industries. A large mail order house, 10 per cent; two tobacco manufacturers, 5 per cent and 6 per cent; a maker of phonographs, 5 per cent; a maker of paint, $3\frac{1}{2}$ per cent; a maker of cement, 2 per cent; a maker of kodaks, 3 per cent; a maker of soap, 3 per cent; a manufacturer of men's collars, $3\frac{1}{2}$ per cent; a manufacturer of men's clothes, 2 per cent; four makers of automobiles, three-fourths of one per cent to 2.6 per cent.

These are typical examples. If the railways should spend in advertising a percentage of their total earnings equal to the *smallest* percentage mentioned in this list their expenditures for advertising on the basis of their present earnings would be \$42,000,000 a year. Their actual expenditures for advertising in 1920 were \$4,140,000. Under normal conditions the amount spent for advertising to sell passenger automobiles alone is six times as great as was spent in 1920 to sell all the railroads and all their service to the public, and more than three times as great as the largest amount that the railroads ever spent for advertising in any year.

The railways have many difficult and important problems to solve to which they are giving consideration. The most important problem they must solve if they are ever to be allowed to earn reasonable profits, and if private ownership and management are to be perpetuated, is the problem of selling themselves to the public. The amount of constructive and effective study, effort and expenditure being devoted to the solution of this problem on most railroads by the officers who must solve it, if it is ever to be solved, is so small as to be almost negligible.

The railroads are not being "sold" to the public, unless by their enemies. They never will be "sold" to the public unless there is a great awakening among the managements to a realization of the fact that here is a great problem about which they have been in doing practically nothing at all, and which they really should solve but they do not even know

The master painter of a certain railroad not long ago made a requisition for varnish for passenger cars. He specified a brand that always gave satisfactory service, but when the material was delivered found that a cheap grade made by a less reliable manufacturer had been furnished. A few days later when

the master painter met the purchasing agent he asked why the cheap varnish had been bought and pointed out that the cost of applying it was more than the cost of the varnish itself so that there was little difference in the total expense, although the low grade material would not last nearly as long. The purchasing agent replied, "If a man does not have money enough to buy a straw hat, he has to make his felt hat do, and this railroad is in the same fix; it simply does not have money enough to buy high priced materials and we have to make cheap material do." This seems to be typical of the viewpoint of some purchasing agents who take the position that the road is too poor to buy material that is higher in price but more economical in the long run. Is such a practice justifiable? As an expedient to avoid a receivership it might be justified temporarily, but as a permanent policy, never. The analogy cited by the purchasing agent does not correspond to the actual situation. The railroad that buys the cheap varnish will find it fails to give the necessary protection to the equipment and the road will soon have to spend money that it might have saved by using first-class material. There is one principle in railroad purchasing which in the interest of economy no road can afford to ignore; that is to follow the recommendations of the specialists in the various departments regarding the purchase of materials.

Less than a month has yet to elapse before the railway civil engineers throughout the country will meet in Chicago in

To Go
or
Not to Go

their twenty-third annual convention; to renew old friendships, to establish new ones, to view the developments in equipment of immediate concern and, more important than these, to participate in the deliberations of a three-day session. Taking cognizance of this many engineers who have never entertained other than the thought of attending, have in all probability already done some planning preparatory to their departure to avoid as nearly as possible the development at the last moment of conditions unfavorable to their plans, as well as to insure the proper functioning of their departments while they are gone. On the other hand many others, if cognizant at all of the association's custom and the proximity of the convention, have yet confronting them "To Go or Not To Go" as an undecided question. Comment need not be made concerning those who have definitely laid their plans, but, in the interest of better railroading, it may well be made concerning those who have not. Men who devote their time and thought largely to engineering problems of the many kinds involved in railway construction, operation or management, should by all means know of the association and should attend its convention, whether members or not, going as to an event from which each cannot afford to be absent. For such is the case. The American Railway Engineering Association is an institution with a constituency which for intellectual ability, sobriety of thinking and industry in its deliberations, is a fit object of pride on the part of its members. The reports presented and discussed are the work of groups of men especially qualified in their particular lines, but far more important to the engineers, they treat of subjects which are his stock in trade; not incidental to his status but fundamental. He may very easily avoid the anticipated inconvenience incident to his attendance at the convention and not having attended feel himself no-wiser the better for not having gone, but under ordinary circumstances

in doing this he will have made a mistake. The convention is his opportunity, in realization of which the prudent engineer will go if he can.

To many men in train service on double track lines the standard code is a mysterious thing. On it they are examined at more or less frequent intervals, but most of its provisions have no relation to their daily activities. They work under block signal protection and with few train orders. Instructions

Double Track and the Standard Code

which, under the standard code, must be given by train order in specific language they often receive as messages for which no standard form is provided in the rules. All this is confusing and tends to make these men unfit for service on single track branch lines when, upon occasion, they are needed there. There is, of course, no reason why unwarranted restrictions should be placed upon double track operation, but men in train service should be able to tell why certain standard practices are omitted on double track. When they are examined on the subject of train orders they should be required to tell what additional safeguards provided by double-track and automatic signals sometimes make the rules concerning specific train order forms unnecessary and, conversely, why these rules are necessary on single track. The failure to appreciate that additional safeguards have been provided by the double track and automatic signals tends to give the employee the impression that his company is not insisting upon obedience to rules and this impression may be harmful to discipline. Certainly an employee holding such a view cannot be trusted on single track where strict adherence to rule is absolutely essential.

The railroads have suffered from the business depression less than have the grocers, according to the declaration of a prominent speaker at a convention of

Troubled Railroads versus

wholesale grocers in New York City last week; and therefore a reduction of

Troubled Grocers

freight rates should be the first thing to be done to restore prosperity in that

branch of the mercantile world. Not being very well informed concerning the profits made by the wholesale grocers during the past few years, we will for the moment, and for the sake of argument, admit that they are, really, worse off than the railroads. But, from the standpoint of the public, why should it follow that the railroads ought to carry freight at less than cost? The public needs railroad transportation and it needs wholesale grocery establishments. We will assume that it has difficulty in keeping up both institutions, and may be obliged to impose hardships on one or the other of them. Now, which shall it be? Or, to go a step farther, assume that both have already been neglected; which of the two ought first to be aided to recover? Setting aside all notions concerning what we should like to do, or what is ideally just and equitable, in the premises it would seem clear that the railroads ought to be succored first. Not because the railroads' owners are a better class of people; neither because they deserve the better treatment; but because *that course is forced by the nature of the case*. A railroad, if it serves important communities, must be kept going even if to do so should require an assessment on the inhabitants to furnish fuel for the locomotives and food for the trainmen. Nothing can take its place. In place of the merchant, on the other hand, some halfway makeshift can be made to serve temporarily. The people—the communities—have established the typical railroad in such a monopolistic situation that they cannot allow it to suffer, any more than the city of Chicago could afford to close up its most important bridge across Chicago river. The grocer is not thus treated; he is

not classed as a vital part of the civic machinery. The community makes him take his chances. Whether or not that is fair is not the question; it is the fact. Even if he has failed and shut up shop, the railroad must be kept going.

The upkeep of railway crossings is usually imposed on the junior road, not only for the renewals of the rail structure, the timbers and the ballast but also the maintenance of line and surface. The expense incurred by the maintaining road is affected to no small extent by the degree of co-operation offered by the

A Chance for Reciprocity

maintenance forces of the other road using the crossing. While the senior road should not be expected to relieve the junior company of any of its established responsibilities, it should maintain its own tracks adjacent to the crossing in a condition that will tend to relieve rather than increase the burden of keeping up the crossing. For instance, the life of the crossing will be influenced to no small degree by the condition of the rails immediately adjoining it. Badly worn rails connected to a new crossing will produce such poor joints that the crossing rails themselves will soon become battered. Also the alinement of a crossing is seriously affected by the creeping of the rails of the intersecting tracks. If the non-maintaining road does not provide adequate anchorage to hold its track, it will cause the maintaining road no end of trouble in keeping the crossing in place. So severe has been the burden on the maintaining road from this cause that it has even been proposed to place rail anchors on the rails on the other property with the idea that the money so spent would be more than offset by the decreased cost of work on the crossing itself. However, such a course ought not to be necessary. The railroads ought to practice reciprocity at least to such an extent that crossings will be maintained at the least possible cost, regardless of the apportionment of the expense. It is only by so doing that true economy for all will be obtained.

In a recent issue of Industrial Management, V. M. Palmer, engineer of industrial economy for the Eastman-Kodak Company, says, "Foremen are frequently referred to as the non-commissioned officers of industry, which position they do in fact occupy between the management and the employee. There is no

Able Shop Fore- men Must Be Developed

question that the need for greater shop and individual efficiency could be realized more completely if foremen measured up closer to the requirements of their position." This statement applies with equal force to industrial foremen and those employed in railroad shops. Owing to the importance of foremen and their direct influence for good or bad on the cost of shop operation, it is important (1) that they be paid a sufficient remuneration to attract men of the necessary calibre; (2) that shopmen of ability be trained and wherever possible given actual experience as acting foremen while regular foremen are sick or on leave of absence; (3) that present foremen be helped and encouraged in every possible way in the performance of their duties. This does not mean that discipline should be relaxed and no mention made of mistakes. With few exceptions foremen take constructive criticism in the spirit in which it is given, realizing that unless weaknesses are pointed out they cannot be corrected and personal improvement and ultimate advancement will be correspondingly delayed. Moreover, when weaknesses are not explained, they tend to grow worse rather than better and may in the end entirely disqualify a foreman for his position. He is then reduced to the ranks and, not knowing wherein his failure lies, can hardly be blamed for feeling that somehow he has not had a square deal. If errors should

be pointed out, it is fully as important to bestow praise where due. Unfortunately, many railroad men get the impression that good work is taken for granted while trivial mistakes receive undue censure. No matter how busy the higher mechanical department officers, they miss a fine opportunity to develop foremen if for any reason the word of helpful criticism or of appreciation for a job well done is withheld.

The Ability of the Carrier to Pay

SINCE THERE is but one source from which the money to meet a railroad payroll can come, namely earnings, it follows that where the earnings of a railroad are less than its operating expenses, the ability of the carrier to continue to pay certain wage scales to its employees must become eventually the governing factor in determining what constitutes "just and reasonable" wages. An inexorable economic law applies to compel either the downward revision of all its operating expenses, and particularly the preponderating labor expense, or the abandonment of the property. Here, public interest in, and necessity for, transportation service tips the balance in favor of the readjustment of operating expenses. The problem presented in such cases is cold fact and not theory. The Railroad Labor Board has faced it many times and on three occasions has recognized that the "ability of the carriers to pay" is a relevant and vital factor in fixing wage levels in some cases.

In deciding a dispute between the Electric Short Line Railway Company and the train service brotherhoods last October, the Board ordered a wage cut of 20 per cent, adding that the lower wages were just and reasonable, taking into consideration all the conditions and circumstances as contemplated by the Transportation Act, including the financial condition of this carrier, i. e., its earnings, cost of operation, etc. Again, in deciding a dispute between the New Orleans Great Northern and several classes of its employees, the Board recognized and specifically stated that the "ability of the carrier to pay is entitled to secondary consideration with a certain type of carrier dependent almost entirely on local business or whose principal function in the final analysis is the development and upbuilding of a new or comparatively new country." Now a third instance of the recognition of this principle is contained in the Board's decision in the Missouri & North Arkansas case (described elsewhere in this issue) in which the employees have been ordered to accept wages 25 per cent below those paid on other Class I carriers. In all these cases proof was submitted of the failure of earnings to meet operating expenses. In each case the choice was between reduction of wages, bankruptcy or abandonment. Whatever interpretation the Board might wish to put on the seven "relevant factors" stated in the Transportation Act as controlling considerations in fixing wage scales, the issue in each of these cases was clear cut; either the "ability of the carrier to pay" governed or it did not. If it did, the public's right to continuous operation of the railroad was recognized by a body created to protect that right. If it did not, that unfortunate expression "the public be damned" became a truism. The Board should be commended for its decisions in these cases, not because they represent a "victory" for the railroads involved, but because they represent a "victory" for the public.

But having acted wisely in these cases, will the Board continue to face this issue squarely? It is just as possible for a road of 10,000 miles to face an inability to pay the wages fixed by the board, as it is for a road 100 miles in length. The principles in each case are exactly the same. Would the board then apply the same reasoning as applied in these three cases and permit the larger carriers to present evidence of their inability to pay?

During the hearings on national agreements in January, 1921 the railroads in the country were facing just such a

situation. They tried to present evidence to the board showing their inability to continue to bear excessive labor costs. In that case, however, the board ruled that: "all questions involving the expense of operation or necessities of railroads and the amount of money necessary to secure successful operation thereof, are under the jurisdiction not of this board, but of the Interstate Commerce Commission." The testimony which the carriers desired to present was ruled out of court as irrelevant.

The inconsistency in the board's rulings on this factor would indicate that the interest of the public in the operation of a large carrier or a group of carriers is less than its interest in the operation of a smaller road. Obviously such a theory is untenable. It is hard to believe that, having ruled as it has in the Electric Short Line, the New Orleans Great Northern and the Missouri & North Arkansas cases, this body, created largely to insure continuous operation of the railroads, will hold to its ruling in the national agreements case and prohibit testimony on the "ability to pay" in future cases involving either small or large carriers.

The Increase in Freight Movement

THE INCREASES in the number of carloads of freight shipped have been so substantial and persistent since the opening of the year 1922 as to constitute a very persuasive indication that general business is reviving.

Not only did the number of carloads of freight shipped increase in every week from that ended January 7 to that ended February 11, but in each of these weeks the total shipments were larger than in the corresponding weeks of 1921. The total freight car loadings in the four weeks ended February 4, 1922, were 2,956,766 as compared with 2,812,637 in the same weeks of 1921, an increase of 144,129. While the total number of cars loaded with freight in these weeks was somewhat less than in 1920, it was larger than in 1919 and, in fact, seems to have been larger than in other previous years.

The most significant feature of this increase in shipments was that it was due to an increase in the number of cars loaded with most kinds of commodities. In the four weeks ended February 4 there was an increase, as compared with the same weeks of last year, of 33,810 cars in shipments of grain, 2,460 cars in shipments of livestock, 17,666 in shipments of coal, 129,476 in shipments of merchandise, and 1,062 in shipments of miscellaneous commodities. Shipments of coke showed a decline of 11,000 carloads, shipments of forest products a decline of 4,456 carloads, and shipments of ore a decline of 16,000 carloads.

When carloadings began to show an increase in the second week in January it was thought that this might be due to temporary causes. The taxes on transportation were removed on January 1, and it was believed the decline in freight shipments in December was partly due to the fact that some shippers were holding back commodities to avoid paying the tax and would forward them in January. If, however, the increase in shipments had been due to the release of goods held back to avoid the tax, it would hardly have continued at an accelerated rate clear into February.

It might also be thought that the increase in shipments was due to a larger movement of coal in anticipation of a coal mine strike on April 1, but while there has been an increase in shipments of coal it has been smaller relatively than the increases in shipments of other kinds.

After experience with the fluctuations in the railroad and other lines of business during the last year and a half most people are somewhat slow to acclaim any apparent improvement as permanent, or as the harbinger of still further improvements. Certainly, however, if the recent increases in carloadings indicate anything at all they indicate a distinct tendency toward improvement in general business.

Letters to the Editor

[The RAILWAY AGE welcomes letters from its readers and especially those containing constructive suggestions for improvements in the railway field. Short letters—about 250 words—are particularly appreciated.]

Trainmen and the Eight-Hour Day

SAN ANTONIO, TEX.

TO THE EDITOR:

"All men know the truth, but what of that? It is rare to find one who knows how to speak it."—Emerson.

I was pleased to note in a recent editorial in the *Railway Age* that the railroad executives had decided to meet with the executive officers of the railroad brotherhoods in an effort to readjust differences on the basis of a "square deal." Later I read in one of President W. S. Carter's (Brotherhood of Locomotive Firemen and Enginemen) publicity bulletins that "It has been the success of the railroads in 'educating the public' through unfair propaganda that has made it absolutely necessary for railroad employees to adopt some method of telling the truth to the public."

To get at the truth as essential to establishing the square deal it is necessary to go back to the inception of the Adamson law, which has been the cause of a world of misrepresentations and recriminations. In answer to the claim that the railroads were able to show that "under our present practice (1915) enginemen demand the right to do two men's work in order to earn two men's pay," President W. S. Carter admitted the truth of the charge, bitterly assailing those members who, as shown by the railroad representatives, ignored "the rights of their fellowmen" and through the power of seniority, say to unemployed brothers: "You shall not work at all; I am going to do my work and your work too, so that I can draw my pay and your pay too. Citing individual instances of men making double wages through this system, Mr. Carter said: "At the same time we had evidence that on that same railroad they had cut the fireman's list; there were hundreds and hundreds of men hungry and their families hungry—and yet they call this a brotherhood."

This deplorable condition was made the strongest argument for the limitation of the workday to eight hours; and, in the protection of the public interest, to prevent a strike to secure this limitation of hours, the Adamson bill became law.

To refresh the memory as to the facts in the case, it is recalled that on August 13, 1916, the President sent for the brotherhood representatives and the managers to confer with him at the White House, and suggested arbitration by way of settling the controversy. The labor leaders, conscious of their strength, stating that the question of the shorter work day was not arbitrable, refused to arbitrate. Later the president referred to the situation then existing in the following words:

"I was not able to make the slightest impression upon those men. They feel so strongly the justice of their cause that they are blind to all the consequences of their action in declaring and prosecuting a strike.

"I was shocked to find a peculiar stiffness and hardness about these men. When I pictured to them the distress of our people in case this strike became a reality, they sat unmoved and apparently indifferent to the seriousness of the whole bad business. I am at the end of my tether, and I do not know what further to do."

When the sincerity of the brotherhood chiefs was questioned by the railroad executives, who asserted that a raise in pay was the real object of the move, the four executives,

acting for the brotherhoods, issued a statement, saying in effect: "If you doubt the sincerity of the brotherhoods in asking for relief from the long hours of labor, arrange that the employees will not be able to make one minute's overtime."

Since the adoption of the Adamson law both sides to this controversy have dodged the responsibility for inaugurating a real eight-hour law by alleging the impossibility of enforcement. Since then, however, Mr. Ford has shown how a real eight-hour day may be put into effect on the railroad, with wages acceptable to the employees. The Pullman employees and express messengers have also enjoyed the benefits of a real limitation of hours of labor.

How different, though, has been the course of the brotherhoods. They even in the so-called Chicago agreement, governing only the engineers and firemen, provided a work month of 38 eight-hour days, with no provision for holding their members even to that limit. In fact, it is common knowledge that this limitation is constantly ignored, with the result that the railroad managers are still able to show these "high peaks" in earnings. And this, too, when thousands of the 75,000 members of the brotherhoods who bared their breasts to the enemy in the late war are unable to support themselves and their families. As to the conductors and brakemen, so far as any action of their organizations is concerned the eight-hour day has been a sham and a fraud. In fact, by official action train crews have been taken out of the service while other crews were making far beyond the mileage contemplated by the law.

Representatives of labor organizations generally complain of the provisions of the Transportation Act that the earnings of capital are carefully protected by the instructions given to the I. C. C. to establish rates that will provide standard returns as dividends, while the chief argument being advanced for reduction of earnings of employees is that the high rates necessitated by this provision are paralyzing business and the rates cannot be lowered except through reduced wages. While agreeing that these requirements of the law are not conducive to the "square deal" to labor, I am constrained to call attention to the fact that there appears to be no disposition on the part of the brotherhood executives to conserve the welfare of the thousands of loyal members who have been separated from their means of living through cutting down the working force, by enforcing the limitation of hours on the members protected in the "high peaks" of earnings by seniority rights.

That the power to limit hours of service exists in the brotherhoods is shown by the fact that it is rigidly enforced among the employees in yard service. At least there has been no evidence of demands made on behalf of the yard men that they be permitted to increase their earnings by working overtime at the expense of the out-of-work brother.

While the influence of the organization executives has been invoked to continue passenger conductors in their long hours of service, the effect of this policy is shown in the fact that, notwithstanding the law requires that wages shall be fixed, among other things, on the basis of "the training and skill required," and "the degree of responsibility," executives have accepted for them a lower rate of pay than is accorded firemen and through freight brakemen. In fact, brakemen deadheading on a train not infrequently receive a larger rate of pay than is accorded the man in charge of the train.

May it not be due to this condition, and the difficulty experienced by many passenger conductors to preserve the standard of living required of them on the wages they receive, that many of the most experienced and valuable employees, who have acquired their value to the company through their years of loyal service, have been removed from the service because of irregularities?

Let us have the truth and a square deal. Think it over.

F. J. BAILEY.

What Is Ahead of the Chief Clerk?

BOSTON, MASS.

TO THE EDITOR:

I have followed with much interest the various communications relating to the chief clerk which you have published during recent months. Two or three of these letters took issue directly with the one and only communication (August 6, 1921, page 236) that I ever wrote to any paper. I should particularly, however, like to comment on the reply which was made by Grant Gibson in your issue of October 8. His letter takes up the case from three entirely different angles. He assumes a point of view on my part that is entirely absent; this is evidently due to faulty expression or my desire to condense to the minimum number of words.

I have never had in mind, or seen, any antagonism between an official and his own chief clerk. I have grown up in the operating department, as he assumes, and have held positions from trainmaster to general manager. I have had several chief clerks and but one that was unsatisfactory; in the others I have had the utmost confidence and have received from them the fullest support. My article was intended rather as a criticism of the official than of chief clerk.

To take up the case from its first angle; namely, the future for a man who takes a clerical position and who works up to the position of chief clerk. It may seem hard to say so, but it is very difficult for any man whose experience has been entirely in an office to successfully assume an official position of the rank of superintendent, superintendent of motive power, or higher. Of course, there are exceptions but they are very few. The greater part of a railroad's business is done outside under conditions entirely different from any other form of industry. A certain amount of experience out on the road is, in my opinion, essential to make a successful operating official.

Three of the chief clerks that I have had in the past are at present successful operating officers but I credit this to the fact that upon advice each gave up his position as chief clerk and went on the road, or in the shops, in a minor official capacity, from which, as a result of their early and long inside experience, they were promoted rapidly. There are three or four more just as efficient men, who are still chief clerks, who refused to take this advice and are in the blind alley referred to. I think the above answers the question as to what is ahead of the chief clerk.

Taking the case up from the second angle, the one that I have had mostly in mind, is the modern tendency to overload the chief clerk. This is due to two causes; one the natural tendency of many men to allow their chief clerks to relieve them of much responsibility, having sufficient work coming to them anyhow, due to the over-centralization which has been creeping into our railroads for many years. This tends to take responsibility away from the minor official, starting with the supervisor of track, division engineer, master mechanic, and up, bringing cases into the higher offices where the recommendations of these men and instructions to these men are largely handled by the chief clerk of their superior. Regardless of the ability, loyalty and industry of the chief clerk, if the divisional or district officer is competent, his judgment should be reversed by, and instructions to him on matters other than of the merest routine should only be from his superior officer. Unfortunately, on many railroads this is not so. It does not stop with the division superintendent's office but goes all the way up. It often results in improper, although honestly given, decisions, and restricts the individuality and the responsibility of the lower official and brings about the very condition complained of—overcrowding of the work in the higher offices. That is what I mean by having officers do more work and chief clerks do less.

If, for example, a communication from a superintendent or person of not of sufficient importance to warrant the personal attention of his superior it means either his authority

is not sufficient or he is not big enough for the job.

The most important element in railroading, as in any other business, is the personal one. No man likes to be criticised or likes to receive vital instructions from other than his "boss." For that reason letters of criticism should never be dictated or signed by other than the responsible official. Many of us will oftentimes sign a letter we would not have written ourselves on the theory that perhaps a little criticism will do no harm, at the same time feeling that it is probably too strong. Such cases do incalculable harm to the morale of subordinate officers.

Quite the reverse of Mr. Gibson's assumption, my experience with my own chief clerks has been pleasant and satisfactory. Also I have had very little trouble with other people's chief clerks. I have in mind the good of the business as a whole; and, to be perfectly frank, the railroads cannot be run by chief clerks, although there is a decided tendency in that direction. "OPERATING OFFICIAL."

Yardmasters Disclaim

Connection With C. G. Poirier

CHICAGO.

TO THE EDITOR:

In your issue of February 11, page 393, considerable space is devoted to the testimony and opinions of C. G. Poirier before the Senate committee on Interstate Commerce. If the writer's memory serves him correctly this is the same gentleman who appeared before the Interstate Commerce Commission during the hearings before that body in October, 1920, claiming to represent all classes of supervisory officers, but, when questioned by an officer of one of the subordinate official organizations, acknowledged that he represented between 200 and 300 individuals. The facts will be found in the record of hearings Ex Parte 72.

Mr. Poirier is reported by your Washington correspondent as saying that "in my opinion or perhaps my imagination the purpose is to hand those organizations over to the federations later, etc." We have very little respect for Mr. Poirier's opinion in this matter, but we have the most unbounded admiration for his imagination, for to imagine the train dispatchers, the yardmasters, the agents, or the mechanical foremen handing their organizations over to the "federations" is some mental feat. And we are prone to wonder what has so stimulated Mr. Poirier's imaginings since October, 1920, when, according to the record referred to above, he addressed the Interstate Commerce Commission as follows:

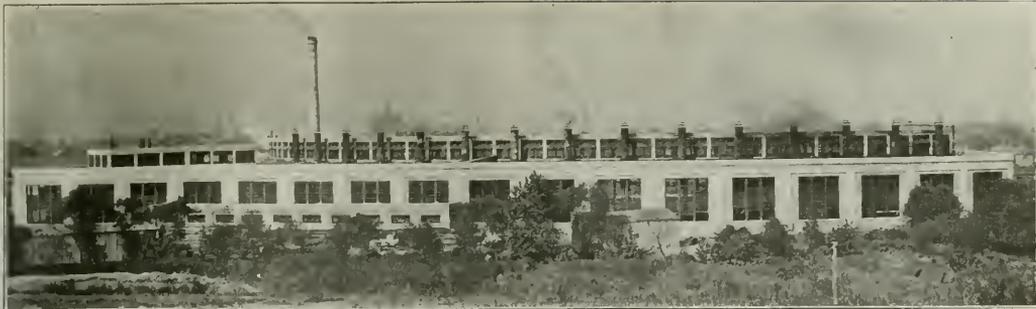

"I just want to say this: It stands to reason that the organizations of subordinate officials were organized for the purpose of withholding themselves from labor organizations. That is true or they would not be here today. They would be affiliated with the American Federation of Labor."

As we have maintained before, the organizations enumerated above came into existence because there was a real need for them in the conditions that existed at the time and that had existed for years past, and one of the impelling motives was to escape the very thing that Mr. Poirier imagines is about to happen.

We have the greatest respect for the fairness and justice of the *Railway Age*, but we cannot help but feel that it has to a certain extent erred in giving so much space to this statement. We do not profess to know what motives have actuated Mr. Poirier in his various appearances in Washington, but we are quite sure that he does not speak for any more men, or any different interests, than he did when he appeared before the Interstate Commerce Commission in October, 1920.

J. L. ELDRIDGE,

First Grand Vice President, Railroad Yardmasters of America

The Simplicity and Harmony of the Design Is Admirably Shown Here

An Engine Terminal for Economical Operation

Central of Georgia Constructs Combined Roundhouse and Shops
of Advanced Design at Columbus, Ga.

By G. W. Tutan

Assistant Engineer, Central of Georgia

THE CENTRAL of Georgia has completed and put into operation at Columbus, Ga., an engine terminal, fully equipped to handle 2-6-6-2 Mallet locomotives and to make heavy as well as running repairs. To secure maximum economies in locomotive terminal operation, the enginehouse has been designed to include a combination of a roundhouse with 15 radial stalls, 120 ft. long, and a power plant and machine, blacksmith and boiler shops. The structure is semi-

the main lines of this division leading from the Birmingham coal and iron fields to points south and east. It is now possible with the new facilities to handle heavy and running repairs quickly and economically on this division.

In considering a location for the proposed engine terminal, two sites were available. One site was three miles east of the city and the other was the existing engine terminal, located in the city limits within a few blocks of the business district.

The Effectiveness of the Lighting and Ventilation Produces a Clear Interior

radial or semi-rectangular in shape, being a combination of the two general types of buildings and is built of reinforced concrete throughout. The roof has a raised section or monitor and is built up from monolithically poured roof slabs, beams and girders. The center bay is served by a 10-ton electric overhead crane which travels the full length of the building, covering both the enginehouse and the machine shop. Stall tracks are served by a 100-ft. turntable driven by a 30 hp. electric tractor. Provision has been made for a future extension of nine stalls.

Columbus, Ga., is the eastern terminus of the Columbus division of the Central of Georgia, and is 100 miles west of the company's main locomotive repair shops. Mallet engines of the 2-6-6-2 type, weighing 308 tons each, are operated over

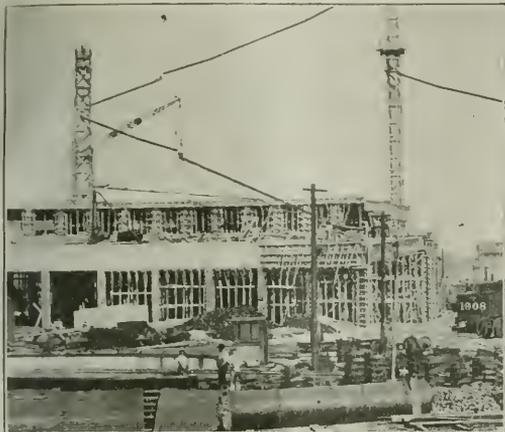

The site of the existing engine terminal within the city was selected because it was more desirable from the point of view of a reliable supply of labor and because a duplication of certain existing facilities would have been necessary at the site east of the city. There were two other important influencing factors, namely, the site east of the city would have added three miles to a district already 57 miles longer than the adjacent eastern one, and the possibility of carrying out the new development without disturbing existing facilities or interrupting operation.

The Design of the Enginehouse Structure

The enginehouse was designed primarily for housing and repairing the 2-6-6-2 Mallet engines and although the three-

proofed with cotton seed gum applied in one coat. The roofs over the power plant, offices and locker rooms are waterproofed with a three-ply built-up felt roofing cemented with cotton seed gum. Sheet steel work has been reduced to a minimum by the use of felt flashing, cast iron and wrought iron rain conductors and copper ventilators.

Ample provision has been made for light and ventilation. Triple sash windows with narrow brick jambs fill the openings between the concrete columns in the outer wall. The

The Concrete Was Chuted From Towers Located at Various Points

sash windows are glazed with clear glass and the top and bottom sash windows are counter-balanced. The upper portions of the hinged doors between the columns on the inner circle are glazed. Pivoted sash windows fill the openings between the columns of the craneway monitor and fixed sash and wood louvres fill alternate openings between columns of the blacksmith monitor. Cast iron smoke jacks with hood openings 4 ft. 7 in. by 12 ft., located over each engine pit and suspended from the roof beams, carry the locomotive

gases from the building. Wrought iron jacks 22 in. in diameter over the forges in the blacksmith shop dispose of these gases.

With regard to artificial lighting provision has been made for outlet plugs for portable lights and power on the columns between all stalls. In conjunction with this a very efficient arrangement of lamps has been obtained and the absence of shadows is particularly noted. All light and power wiring is in metal conduit embedded in the concrete structure and is thus protected from locomotive gases.

There are 15 engine pits of plain concrete with bottoms reinforced with steel rods and old rails. Each pit is 95 ft. 3 in. long on the inside. The bottom is crowned 3 in. and sloped so that the drainage is toward each end into sumps and thence into the sewers. Rail bearing timbers and blocks of creosoted yellow pine are bolted on the walls of each pit for its full length. Cast-iron wheel stops are anchored to the rails at the forward end of each pit. A driving wheel drop pit with air jack lift connects three of the engine pits and, with the traveling crane, permits wheels to be taken from three locomotives at one time. A tender wheel drop pit is built under one of the storage tracks outside of the building.

The floor of the enginehouse and shop is built on a 4-in. concrete base reinforced with wire mesh, a 1/8-in. pitch cushion, and 4-in. creosoted yellow pine blocks. The floors in the offices, locker rooms and power plant are trowel-finished concrete, treated with a metallic floor hardener. The floor between the engine pits has a one-inch crown and drains into the pits. Floor drains connected to sewers take care of the drainage in the power plant and locker rooms.

The turntable is a 100-ft. balanced deck girder steel turntable driven by a 30 hp. electric tractor. The pit walls, bottom and center pedestal are of concrete. Manganese steel heel blocks joining adjacent rails bear on a timber rim on the concrete pit wall. For handling ashes, two double bucket conveyors have been installed and are now in operation.

Shop Equipment Is Complete and Well Laid Out

The shopmen's locker and lavatory rooms in the rear of the blacksmith shop are provided with individual wash basins and shower baths with hot and cold water, sanitary water closets and steel lockers. The engineers' and firemen's locker rooms are similarly equipped with the exception of shower baths, but with the addition of writing tables, benches

The Layout of the Machine Shop Shows Careful Planning

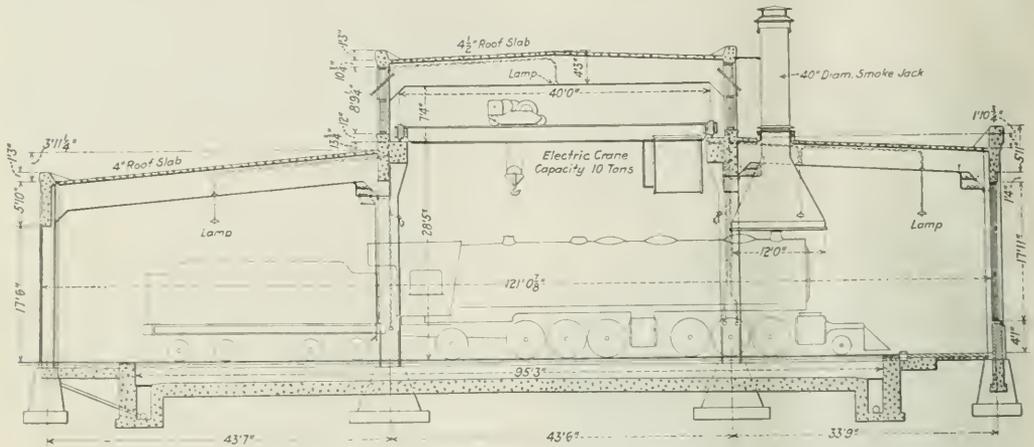

and bulletin boards. Separate rooms are provided for the white and colored employees.

A 10-ton capacity overhead traveling electric crane operates the entire length of the center bay, passing over the 15 engine pits, the drop pit and the machine shop. Jib and bracket cranes are provided in the machine and blacksmith shops. All air, water and steam piping is suspended over-

each group being motor driven and consisting of the following:

GROUP No. 1.

- | | |
|--------------------------------|---------------------------|
| One 26-in. double head shaper. | One twist drill grinder. |
| One 20-in. single head shaper. | One 20-in. emery grinder. |
| Two 36-in. planers. | One 51-in. boring mill. |
| | One 16-in. shaper. |

Section Through Typical Roundhouse Stall

head on wrought iron hangers bolted to the concrete beams and roof slab, where any leakage may be detected and repairs made readily. Drops and valves are provided on columns between all engine pits and in the machine and blacksmith shops.

A heavy duty 90-in. driving wheel lathe and a 42-in. wheel lathe, both motor driven, have been located in positions convenient to the drop pits and wheel tracks. These, with the

GROUP No. 2

- | | |
|--------------------|------------------------------------|
| One 27-in. lathe. | One 2-in. double head bolt cutter. |
| One 24-inch lathe. | One 36-in. vertical turret. |
| Two 18-in. lathes. | One 20-in. double head grinder. |
| One 4-ft. drill. | |

GROUP No. 3

- | | |
|-------------------|---------------------------|
| One 36-in. lathe. | One 4-ft. radial drill. |
| One 24-in. lathe. | One 12-in. brass lathe. |
| One 14-in. lathe. | One 3 by 36 turret lathe. |

The Beginning of the Radial Section—A Business-Like Round House

following tools have been located directly under and are served by the overhead electric crane

- One 100 ton hydraulic press.
- One 6-ft. radial drill—motor driven.
- One 18-in. rapid production slotter—motor driven
- One 25-in. heavy duty lathe—motor driven
- One 24-in. crank plater—motor driven.

The remaining machine tools are arranged in three groups.

- | | |
|--------------------------|----------------------------|
| One 18-in. turret lathe. | One sensitive drill |
| One 3-in. turret lathe. | One horizontal boring mill |

The pipe shop is equipped with a 4 in. motor-driven pipe machine, tilting brass furnace using crude oil for fuel, two coke metal fires and a portable fuel oil burner used for heating and metalizing crosshead shoes, etc. The blacksmith shop is equipped with double forges and also an open or heavy fire served by a two-ton mast crane which also serves a 1,500-lb

steam hammer. A 350-lb. steam hammer takes care of the small work. Other tools and facilities have been installed in quantity and quality necessary to round out the facilities for making economical repairs.

The shop, locker room and office portions of the building are heated by a direct radiation, vacuum return, low pressure steam heating system. Cast-iron wall radiators are attached to the concrete columns and brick walls under the windows. Steam is furnished by the power plant boiler. Climatic conditions make it unnecessary to have radiation in the engine pits.

An efficient boiler washing system, consisting of pumps and washing, filling and sludge tanks, is installed in the

boiler room with pipe lines and drops running to every engine stall. Electric current for light and power is obtained from a local hydro-electric company at 11,000 volts and is stepped down to 440 volts for use in the shop.

Further terminal development in Columbus includes a modern coaling station, an inspection pit and a rearrangement of the freight yard.

The facilities just completed were designed by and erected under the supervision of the engineering department of the Central of Georgia, C. K. Lawrence, chief engineer and W. H. Fetner, superintendent of motive power, with the writer as resident engineer. The general contractor on the work was the George B. Swift Company, Chicago.

Excessive Cost of the National Shop Agreement

Mr. Cuyler Answers Critics Who Doubt Statements Concerning This Inheritance from Government

REPLYING to questions from W. H. Chandler, president of the National Industrial Traffic League, Thomas DeWitt Cuyler, chairman of the Association of Railway Executives, has issued a statement explaining the effect of the "national agreements" with employes, during federal control, on the revenues of the railroads, and disputing some statements made by Walker D. Hines, former director general of railroads. Referring to Mr. Hines's testimony before the Interstate Commerce Commission on January 31, where he said that practically every feature of the shop crafts agreement . . . had been in effect throughout 1919 and had been put in effect in the summer of 1918, Mr. Cuyler says that "some of the most burdensome and injurious interpretations of the provisions of this agreement were never experienced by the director general. These interpretations were largely handed down by Railway Board of Adjustment No. 2, and numerous decisions were rendered in May, June, July, August, and even up to November, 1920."

As to the claim that the classification of labor complained of in the national agreement with the shop crafts had been put in effect in the summer of 1918 and was in effect all during 1919 and could therefore have had no effect upon the operating expenses of 1920, Mr. Cuyler says that one of the most notorious examples of the national agreement, the application of the division of labor to renewing stay-bolts, was not even raised until the case of Engine 1610 of the Baltimore & Ohio on December 6, 1919, less than three months before the termination of Federal control.

The rest of Mr. Cuyler's statement, slightly abridged, is as follows:

Formerly a machinist stripped the locomotive and the boiler makers renewed the stay-bolts. On the occasion in question the shop committee insisted that under the national agreement the following forms of skilled labor must be used:

(1) Pipe fitter and helper to remove injector and other pipes; (2) Machinist and helper to remove injector. (3) Sheet iron worker and helper to remove jacket. (4) Carpenter to remove lagging and running boards. (5) Boiler makers to remove and renew stay-bolts. (6) Engine restored to operating condition by reverse of first four processes.

Yet during 1920 I am informed this became the *standard practice* for the renewal of stay-bolts on all railroads subject to the National Agreement! That the director general did not experience anything like the full force and effect of the rules of the national agreements, will appear from the following decisions of Railway Board of Adjustment No. 2:

Docket 1516, June 18, 1920, prohibiting section men from removing damaged or broken parts of motor cars. Docket 1500,

June 15, 1920, prohibiting machinists taking off electric headlights. Docket 1778, September 2, 1920, requiring that as long as employes are required to perform any work in a carpenter locomotive gang, they must be paid continuously at the highest rate of pay. Docket 1678, August 19, 1920, providing that a freight car repairer who occasionally works on passenger cars must be paid the highest rate of pay continuously. Docket 1477, May 24, 1920, providing that a machinist must be paid overtime when transferring from a night to a day shift, even if to meet his own convenience.

On page 3745 Mr. Hines says, concerning features of the agreement which were established for the first time in 1919, "there were numerous railroads which had practically all those features in their agreement prior to federal control." It is true that under threat of a strike in 1917 a certain group of Southeastern railroads entered into a so-called Southeastern agreement; and this agreement may be considered as the logical predecessor of the national agreement covering the shop crafts. It is equally true that the constructions placed upon those rules by the U. S. R. A. and its boards of adjustment had in large degree never been placed upon them prior to federal control. . . . Even the Southeastern agreement did not abolish piece-work.

When the railroads were returned, on March 1, 1920, they had approximately 261,000 more employes than they had in December, 1917. Of this increase 221,576 is accounted for in shop crafts, clerks, section hands and unskilled laborers. The railroads moved the abnormal traffic of 1920 with no increase in train service employes; but they inherited a 47 per cent increase in the shop crafts, a 29 per cent increase in clerks, and about a 7½ per cent increase in maintenance employes.

It is true that the railroads cannot make an exact computation on each and every railroad of the effect of every rule in each of the national agreements, and of every interpretation; but it is our belief that between excessive increases in employes covered by these rules and decreases in the productivity per man, the estimate of their having added \$300,000,000 to the operating expenses of 1920 is conservative.

It is also undoubtedly true that during 1921, with widespread unemployment and diminished railway forces, the psychological effect made for an increase in productivity and for a curbing of the effort to put further strained constructions upon these rules.

I have no doubt that during 1921 the railroads recovered some considerable portion of the \$300,000,000 excessive burden of 1920, and that the effect of this recovery is included in the approximately \$600,000,000 of net earnings which the roads will probably show for the year 1921.

At the same time I call to your attention that when the Railroad Labor Board announced its revision of the shop crafts agreement, it informally estimated that this revision would probably enable the railroads to save \$300,000,000. . . . We do not believe this to be true, because while the Labor Board made a number of changes which will undoubtedly make for further economy, it left so substantial a portion of the national agreement with the shop crafts that a saving of \$500,000,000 would be impossible unless our original estimate of the cost of the national agreements was far too conservative.

Freight Transportation in New England

AT THE JOINT MEETING of the Boston sections of the American Society of Mechanical Engineers, the American Society of Civil Engineers and the American Institute of Electrical Engineers, held on February 15, the subject of freight transportation in New England and its relation to motor transport was discussed by Gerrit Fort, vice-president in charge of traffic, Boston & Maine, and B. F. Fitch of the Motor Terminals Company. Mr. Fort applied himself to the consideration of existing road motor truck competition, whereas Mr. Fitch spoke on the advantages to be anticipated from the use of unit containers in connection with railways, motor trucks or interurban electric lines, considering all means of transport as a whole.

Motor Trucks and the Railways

Mr. Fort directed attention to the fact that with the exception of the Bangor & Aroostook all railroads in New England showed a deficit for the past year. This was brought about by the high operating expenses, for which the high cost of labor was very largely responsible, coupled with the great decrease in business. With the determination of wages, working conditions, etc., in the hands of the Railway Labor Board and the fixing of rates under the jurisdiction of the Interstate Commerce Commission, it has not been possible for the railways to adjust, of themselves, their revenues and expenses to make ends meet. These restrictions have prevented the railways from adjusting themselves readily to new conditions and have made it impossible for them to meet adequately the motor truck competition. They are not able to "merchandise" their product—transportation—as other industries or merchants do in times of depression and thus increase their revenues. There are no opportunities for bargain sales.

Motor transport by road has its greatest field in the densely populated industrial territories. Thus New England has been a fertile field for the development of this mode of freight transportation and it has hit the railways hard. It received a great impetus during the war when the abnormal demands for transportation were such as to exceed the capacity of the railways for prompt handling.

The motor truck manufacturers were not slow to seize this opportunity. What the actual cost of this mode of transportation amounts to, it has not been possible to determine but it is known that the motor transport companies are charging in the way of rates whatever the traffic will bear and that they are free to adjust their rates either up or down without the interference of any regulatory bodies. In this way they have a great advantage over the railways. In fact there is no regulation between the motor companies themselves.

The question has been asked whether or not it is profitable for the railways to handle L. C. L. freight and if it is not, why not turn it over to the motor trucks. In times of heavy business when a large amount of car load freight is offered, it would undoubtedly be better for the railways to let the motor trucks handle such business, but on the other hand in dull times the railways need the revenue from the L. C. L. shipments

to help meet the overhead expenses. Another distinct advantage enjoyed by the motor truck is that it does not begin to pay for its share of highway maintenance or improvements, while the railway is called upon not only to maintain its own roadway at its own expense but to contribute, by means of taxes, to the maintenance of the highways which the motor trucks use.

Mr. Fort believes that highway motor traffic has come to stay and that for short hauls it has a distinct place in the transportation system of the country, but it should not be allowed to compete unfairly with the railways. The motor truck companies acting as common carriers should be made to pay their fair share of highway maintenance and be subjected to the control of either state commissions or the Interstate Commerce Commission the same as the railways. He believes that the present short haul rail railroad rates should be reduced as soon as business improves or expenses can be reduced. He believes that the motor truck is an economic factor in transportation that should be used to supplement the service of the railways and be developed to co-ordinate with them.

Unit Container Meets New England Conditions

Mr. Fitch explained at some length the service rendered by the unit container for L. C. L. freight at Cincinnati where it has been used with success in linking up the 28 scattered freight houses of all the railways and believed that what had been done there in a small way could be done in a larger way in New England.

He proposed the establishment of transfer stations at the frontiers of the New England territory, such as Albany, Poughkeepsie, Harlem, etc., where all inbound L. C. L. freight should be loaded into containers for individual New England line station destinations or the principal volume consignees. Such containers would then be available for movement by motor truck, interurban car, float or railway car, whichever would offer the most economic operation.

If at such suggested frontier transfers all L. C. L. eastbound shipments destined into New England could be trans-handled to containers and flexibly delivered by any of the existing mediums of transportation throughout this territory, maximum economies could be effected. The cars unloaded at transfers would be immediately available for westbound re-loading, and thus the New England territory, which has been termed a graveyard for box cars, would receive and forward in box cars without transfer only carload shipments, all less than car lots being handled in containers between transfers and industries.

"This program in my estimation," said Mr. Fitch, "will save the per diem charges of foreign cars now paid by New England roads, will decrease labor rehandling costs, increase the ton-mile efficiency of such roads and expedite the movement of freight. As I see the entire New England situation, the problem is first one of co-operation for development of a program permitting maximum use of existing plant of all interests.

Now you all suffer and are paying for the cost of interrupted movements, which causes congestion with its accruing evils and expense, whereas if a co-ordinated system permitting a free and steady flow over existing rails and through existing terminals is developed, your traffic capabilities are unlimited and your cost assessment for additional facilities will be nil."

NEW YORK CENTRAL.—*Stockholders Approve Lease.*—At a special meeting on February 3 the stockholders approved the proposals of the directors to lease the Toledo & Ohio Central and other railroads. The company filed application with the Interstate Commerce Commission last December for authority to make the leases.

Modern Methods of Handling Package Freight*

Remarkable Savings Have Been Made on the New Haven by the
Use of Tractors and Trailers in Freight Houses

By G. Marks

Assistant to General Manager, New York, New Haven & Hartford

MODERN HANDLING of package freight is a real problem. It is a vital factor in prompt dispatch and low transportation cost. Two marked and important innovations have been the deciding factors in securing greater efficiency and economy in the handling of package freight through freight houses:

First: The installation of mechanical equipment through the substitution of electric tractors and trailer trucks for hand-operated two-wheel trucks.

Second: The introduction of cost or performance sheets showing concisely and accurately, the three fundamental features of freight house operation; *total cost* (man-hours and money), *total tonnage*, and *cost per ton*.

Electric Tractors and Trailer Trucks

In order to show the value of the tractor with trailer trucks, it is desirable to call attention first to the so-called "gang system" of handling freight, which is the plan, with but few exceptions, almost universally followed in the East even now, and also the "drop truck system."

The "gang system" involves at least two distinct operations, and often three, as well as much lost motion through the necessity of pushing the freight back to clear the doorways. It increases the possibilities of damage to freight, also splitting of shipments. There is also a decided disadvantage through delay to outward billing, as shipping orders cannot be sent to the billing department until after the final check by the tallyman. Under this system a trucker must make a round trip from the checker to the car and return to the checker. The return movement is unprofitable in that the trucker is not moving any freight, merely pushing an empty truck.

By the introduction of the so-called "drop-truck system," with 4-wheel trucks, manually operated, the first economies were made possible through the elimination of one or two of the three operations previously mentioned. Under this plan, a supply of trucks is placed adjacent to the receiving doorways, enabling teamsters to unload their outbound freight direct to the truck, thus keeping the freight, excepting large and heavy packages, entirely off the freight house floor and almost entirely eliminating the need for the so-called doormen or push-backs. The use of 4-wheel trucks, manually operated, under the "drop-truck" system, effected a partial improvement toward speedier operation as compared with the gang system, but it was still impossible during the peak hours to move the freight as rapidly as offered.

By replacing the 4-wheel trucks, manually operated, with trailer trucks, hauled by electric tractors, it has been definitely shown that rush hours can be protected and the actual loading kept abreast of the receipts, so that at the close of the day, the quantity of freight remaining unloaded is reduced to a minimum. Aside from the loading of practically all freight on the same day offered, it has had the effect of expediting the unloading of freight from the dray and obviating the necessity of the drivers and helpers carrying the freight to any available vacant space on the freight house floor, thereby releasing teams in much less time than was possible under the gang system.

We have operated under the 2-wheel hand truck by gangs; then the 4-wheel truck, manually operated under the "drop-truck" system, and finally under the tractor and trailer system and thus have an intimate knowledge of the results obtainable under all three systems.

Original advocates of tractor operation were firmly of the opinion that a certain hauling distance was essential—I believe 300 ft.—if any decided economy was to be effected, yet this theory has been disproved by practical experience with tractor operation at the New Haven outbound houses in Boston. With designated doorways for the receipt of the freight, practically opposite assigned cars, affording a hauling distance rarely exceeding 150 ft. and averaging but 85 ft., it has been proved that tractors can be most successfully operated regardless of distance.

A most decided advantage in favor of the tractor-trailer is the saving in the number of men, thereby reducing the incidental congestion and confusion with its consequent delay to the hand trucker, also the savings resulting from reduced labor costs. Let me give you some actual figures. At Westchester Transfer, prior to July, 1920 (the date on which it was closed and the new transfer at Cedar Hill opened), the maximum capacity was 25 gangs or approximately 150 men. To exceed this number was unprofitable, as a congestion was created without any resultant increase in performance. Westchester had three platforms, all 1,200 ft. long; two 14 ft. wide, and one, the center, 16 ft. wide. Its peak day averaged between 100 and 125 cars. Yet at Cedar Hill with the same number of platforms, also 1,200 ft. long, two being 20 ft. wide and one 30 ft. wide, using from 12 to 16 tractors with 600 trailing units, and approximately 200 men, three times the number of cars can be worked, as an average of from 300 to 350 cars daily can be handled. With the tractor and trailer, the man movement is restricted to the loading of the trailers at the car being worked and to the unloading of the trailer at its designated block or car by stevedores, the intermediate move being handled by the tractor. Of these 200 men at Cedar Hill, only 32 are required to operate the tractors or ride the trailers, the others being held to a working radius of the car being unloaded or stowed. Due consideration should also be given to the fact that Westchester Transfer operated on a ten-hour basis while Cedar Hill is a straight eight-hour plant.

Our experience is that the trailer equipment should include 15 in. diameter 4-wheel trailers for ordinary compact package freight, with 11 in., or dolly, 4-wheel trailers for hauling machinery, pianos, and similar freight. Fifty 3-wheel trailing trucks, specially adapted to handling heavy package and barrel freight, have just been installed at Cedar Hill, and with these three styles of trailers, the use of the hand truck is practically eliminated, thus giving approximately a 100 per cent tractor-trailer operation.

The tractor crew usually consists of two men—the driver and a helper. The former operates the machine while his helper makes the hitches and lines up the trailers in series according to car location; rides on the rear trailer and upon arrival at the designated cars uncouples the trailers and leaves them for subsequent handling by the stevedores.

The use of tractors requires a charging plant. The neces-

*Abstract of a paper presented before the New England Railroad Club, February 14, 1922.

sary maintenance and minor repairs are handled by an electrician working during the night period who thus gives the trucks daily inspection and attention.

It has been found that the best results from tractor-trailer operation are obtainable only through as close as possible to 100 per cent use of both. The trial of a single unit, when the tonnage handled warrants several such units, does not show up advantageously as the slower work of the hand truck, still retained, interferes with the operation of the tractor.

Whether trailers are hauled directly into cars, pushed in, or left opposite car doors (dependent upon local physical conditions), the actual unloading of the trailer and the stowage of the freight is performed by stevedores assigned to permanent locations who are familiar with the existing loading instructions. In no case is the tractor and its crew detained or held, while trailers are being either loaded or unloaded. The hauling tractor functions usually in both directions, but when no loads are available, empties are moved back to places where they are needed. The distribution of empty trailers is handled by one man who acts in the capacity of car distributor.

Cost or Performance Sheets

To maintain a proper check upon the entire operation of any freight station it is necessary that two distinct divisions of cost be maintained:

First: The freight house force, including all who are actually engaged in the handling of freight through the freight house (watchmen, foremen's clerks, sealers, coopers, sweepers, etc., who, while they may not actually handle freight, yet are essential parts of the freight house organization).

Second: The office force, including those who confine their duties to the freight office and routine work incidental thereto.

Each report should contain a classification of employees by occupations, sub-divided departmentally and the sum total of the expense shown on the two reports should equal the actual payroll total, thus affording an excellent check of performance against the payroll.

The freight house sheet should show the actual hours worked by, and the money paid to each employee, or employees, by classes; the total tonnage handled, subdivided between "forwarded," "received," and "transfer," with but one credit for the same tonnage, regardless of the number of times local conditions require the handling of such tonnage, and without allowance for that tonnage, which, for any reason, is left in the same car and not transferred.

Certain deductions from the payroll total are permissible, as not being chargeable to the actual handling of house freight; such as the use of the house forces for transferring the contents of defect cars; unloading coal for the engine house; or feeding a car of livestock. These deductions should be totaled and shown in a space specially provided with full details of each deduction.

The daily performance record is of first value to the agent, who can thereby gage his forces, day by day, keeping them in proportion with the business offered. Supplementing the daily record, a weekly summary, showing comparative costs for the preceding week, month and year, sent to divisional supervisors, keeps the latter in close touch with each station.

A monthly summary establishes an average daily cost comparison between all stations handling an appreciable amount of tonnage while the grand summary for a division, district or the entire system affords a true basis for comparison and possible improved operation as well as showing the average cost and performance for all stations combined.

The combination of mechanical operation, tractors and trailers, with up-to-date cost and performance sheets, indicating tons handled per man per eight hours, enables an agent to maintain efficient and economical operation, for

by keeping in touch with the cost figures, he can regulate his force as the business increases or decreases day by day.

The results obtainable by present methods versus the old are best shown by a brief statement of the actual experience at the four stations on the New Haven (New York Piers 37 to 42, East River; Cedar Hill Transfer, Providence and Boston), where the tractor-trailer system is now operative.

Pier 39.—In April, 1918, prior to the installation of tractors and trailers, the tonnage handled per man per eight-hour day was 4.4 tons, to be exact 4.408, while in April, 1921, with tractors and trailers, the performance increased to over 9 tons, the exact figures being 9.023, an increase of 4.615 tons or 104 per cent. In other words, the performance doubled itself, creating a saving in handling cost of approximately \$100,000 per year.

Incidentally, during the war period, tractor and trailer operation permitted the New Haven to keep its piers open for outward, and free from embargo on inward, business.

Providence.—The tonnage handled per man per eight-hour day increased from 4.138 in May, 1918, to 7.163 in May, 1921, a net increase of 3.025 tons or 73 per cent. Providence handles both its transfer and outward tonnage with tractors and trailers. The cost per ton was first reduced 10 cents under the "drop truck" system (4-wheel trucks, manually operated) as compared with 2-wheel trucks under the gang system. This saving was equivalent to approximately \$25,000 per year. The cost per ton was further reduced 15 cents through the installation of tractors and trailers, with an additional saving of approximately \$37,500, or a combined saving in excess of \$60,000 per year over the 2-wheel truck operation.

Boston.—At Boston, with its shorter haul to the cars, no transfer freight to be handled, and both "drop-truck" and tractor-trailer operation confined to the handling of outward tonnage only, six cents per ton were saved through the original installation of 4-wheel manually operated trucks, while an additional saving of eight cents per ton has resulted through the installation of the tractor and trailer. Comparing July, 1919, prior to the use of drop-truck, with December, 1921, under tractor and trailer operation, the annual saving attributable to the latter approximates \$75,000.

Considering the cost at these three stations mentioned above prior to the introduction of any form of drop truck, and the present cost with both tractor and trailer, the handling cost has been reduced between 14 and 25 cents per ton. This is due directly to the mechanical equipment. Furthermore, it has been possible to save, within a period of from eight to ten months, an amount equivalent to the entire cost of the installation.

Cedar Hill.—The money saved in the actual handling of the freight is not the only thing to be considered. At the present time business conditions require the purchase of goods in less-than-carload lots. Speedier service from manufacturer to consumer is demanded. Competition with the motor truck must be met; hence, it is imperative that freight move to the greatest practicable extent in "direct-to-destination" cars, thus eliminating all possible delay incident to intermediate and smaller transfer stations. Economical train operation, reduction in per diem, reduction in freight loss and damage costs, require the use of as few cars as possible and all features crystallize in the need of a centralized transfer point, where the greatest number of classifications, or direct cars, can be made.

With this thought in mind, Cedar Hill Transfer on the New Haven was opened in July, 1920. It was initially supplied with 9 tractors and 350 trailers, but this equipment has been increased to 16 tractors and 600 trailers. A record of 2,836 tons has been handled in one day, while 350 cars can be regularly worked and freight transferred into approximately 280 cars in the outbound classifications.

Factors in the Business of Owning Locomotives*

Motive Power and Operating Departments Must Work Together in Design and Operation to Secure Economy

By C. B. Peck

Western Mechanical Editor, *Railway Age*

IN SETTING BEFORE YOU tonight what I conceive to be a few of the important business angles of locomotive policy, my purpose is not that of an exhaustive treatment but merely to suggest something of the relationships which matters within widely different jurisdictions bear to each other in their final effect on the well being of the railroad.

In discussing the ownership and operation of locomotives as a business proposition rather than from the technical viewpoint, it may be pertinent to consider for a moment who owns the locomotives. "The railroad, of course," you say. But the railroad is sharply restricted in its enjoyment of its property by public regulation and if we consider the locomotive as a producer of gross ton miles rather than as an end in itself, a part of the responsibility for expensive service should be placed squarely on the shoulders of the public. Indeed the burden is there now, but there is not a realization of its cause.

Purchasing Policy

The first business relating to the ownership of locomotives is their purchase. The question of what policy should be adopted by railway managements with respect to the acquisition of motive power is an exceedingly difficult one to discuss. Simple as the fundamental principles may appear to be, their application is affected by many variables the relative weight of which must at best be determined on the basis of very meager knowledge. For instance, if a heavy investment in equipment is to be made during a period of heavy traffic in order that the public demand for transportation may be met, just what assurance has the management that the crest of the wave of heavy business may not have passed before the equipment is delivered? If such be the case, what effect is the burden of the added fixed charges likely to have on the financial safety of the corporation until the next period in which the new investment has an opportunity to develop its full earning capacity? Again, with public regulation limiting the maximum return on railway capital to 6 per cent, and then taking care to see that on the average the maximum shall not be reached, what likelihood is there that the credit of the roads will more than meet the need for the additional facilities constantly demanded by the steady industrial and commercial expansion of the country?

With these reservations, then, it may not be out of place to suggest that the ideal purchasing policy is one in which, not locomotives, but locomotive service is the objective. In other words not the lowest price but the least cost per 1,000 gross ton miles or per passenger car mile during the life of the locomotive should be the aim of the management.

The five items of direct cost of freight train operation per 1,000 gross ton miles for the Class I roads during the first 11 months of 1921 averaged \$1,254. Interest on investment and depreciation charges for the same unit of service approximated a total of $7\frac{1}{2}$ cents. The relative importance of locomotive price and operating costs is clearly indicated by these figures. The direct items of unit cost of train operation are given in detail in the table.

Economics and Design

In preparing for the purchase of new motive power the mechanical department has one of the best opportunities that

could possibly be offered to go into the whole vast field of the economics of railway operation. Even the detail mechanical design cannot be settled on the basis of sound judgment until the designer has at his command a thorough knowledge of the limitations of operating and maintenance facilities and a sound appreciation of the relation of the cost of maintaining each group of the details to the total cost of locomotive maintenance. How many roads know the relative cost of maintenance per locomotive mile of locomotives of different

ELEMENTS OF THE UNIT COST OF FREIGHT TRAIN OPERATION

	Cost per 1,000 gross ton-miles
Fuel	\$0.405
Crew wages378
Locomotive repairs512
Train and engine supplies083

classes now in service, and can tell whether the differences are due to the boiler, the rods, cylinder conditions, valve motion, frames or driving boxes? Also whether the differences develop in the back shop or in running repairs? The results of a study of this nature would be tremendously valuable to the designer in his selection of details. One year's saving in maintenance on an order of 50 locomotives, after they had begun to come through for classified repairs would probably defray the entire cost of the study and a sound basis would be established for the rapid elimination from the standards of the road of the undesirable designs. Serious defects of design, tending to cause failures or leading to marked inconvenience in the roundhouse or shop are readily caught. But there are still big possibilities for the exercise of judgment within the range of safe and apparently satisfactory designs. Judgment is nothing but guess work unless founded on fact.

But at the outset the designer has even a broader survey to make—one involving almost every item of direct train operating cost, as well as the investment charges. The limits of weight and tractive effort are generally fixed by conditions outside of the locomotive itself, such as strength of bridges, standards of track maintenance, etc. Within these limits, of course, increasing the capacity of the locomotive decreases the unit cost of crew wages and to a less extent the fuel bill. The cost of maintenance is almost as large as crew wages and increasing the size of the locomotive may materially increase this item of expense if the working loads on the running gear become excessive, or if the size of the locomotive outgrows the facilities for its maintenance. Unit investment charges may also be adversely affected if outgrown shop and terminal facilities lead to a marked reduction in the yearly mileage of the motive power.

The big problem, however, is to determine how much shall be added to the pound price of the bare locomotive for those items of equipment that will increase its capacity without materially increased weight, or will decrease one or more of the important items of unit operating cost.

It is not the purpose of this paper to enter into a detail

*A paper presented before the Western Railway Club, February 20, 1922.

discussion of the possibilities of this growing group of devices; they are known to be large by executives as well as by mechanical department officers. Suffice it is to say that no road need be without reasonably accurate knowledge of the relative importance of each of the factors in its direct train operating costs, and that the final decision as to the selection of such devices should be based on their probable effect on the sum of the cost of fuel, crew wages, locomotive repairs and the investment charges. Of this sum the latter form a very small part, but I fear that they are too frequently the sole factor considered.

Utilization and Maintenance

An analysis of the operating statistics compiled by the Interstate Commerce Commission for the period from 1903 to 1913 inclusive, has developed the fact although there was a marked improvement during that period in the extent to which the potential hauling capacity of freight locomotives was utilized, there was actually a steady decline in the total yearly traffic movement obtained from each unit of hauling capacity. The average train load had increased more than the tractive effort of the average freight locomotive, but the average number of train miles made by each locomotive in a year showed a marked decline. Continuing the comparison, the tremendous increase in traffic which reached its maximum in 1918, led to a big increase in the actual volume of traffic moved by each unit of tractive effort. But this was obtained entirely by increasing the train load, the average train mileage per locomotive per year remaining practically the same as in 1913. In 1920, the record year for volume of traffic, the same conditions continued.

What does this mean? In the first place it shows that the extent of utilization of the capacity of the locomotive when it actually moved, has been greatly increased, with large decreases in the crew time, fuel consumption, cost of train and engine supplies and the enginehouse expense per unit of traffic moved. But the average number of train miles per locomotive has declined from about 22,000 in 1903 to about 18,000 in the high years 1917 and 1920. This decline is equivalent to a loss of two months a year of the kind of service rendered in 1903. To restore the former conditions would mean that $\frac{1}{2}$ of the present investment in locomotives could be released for productive use in providing other much needed facilities.

There are several causes for this marked decline in locomotive mileage, not all of which are under the control of the managements. One of the latter, for instance, is the effect of the locomotive inspection law. But it is pertinent to note that the number of locomotives has increased more than 50 per cent during the 17 years under consideration, and the average hauling capacity has increased between 65 to 70 per cent. In other words, there is at least $2\frac{1}{2}$ times as much locomotive hauling capacity to be maintained as there was in 1903, and some of this capacity probably requires more attention per tractive effort unit than did the average unit of the earlier period. The meager expansion of shop and engine terminal facilities which has taken place during the same period certainly has been far from adequate to care for this great increase in motive power and it seems probable that this is one of the largest, if not the largest single cause of the decrease in train miles per locomotive.

Longer Runs

The distribution of locomotive hours published by the Railroad Administration indicates that the average serviceable locomotive spends not more than 40 per cent of its time on the road, and a little over 50 per cent at the roundhouse. These figures reflect the effect of the short operating district, averaging approximately 100 miles in length, which is so strongly entrenched in American railroad practice.

There are instances where it has long been the practice to

operate passenger locomotives over two freight engine districts, with or without a change of crews, and in several cases increased passenger engine runs have recently been established. On the Missouri, Kansas and Texas, after several months' experience with passenger locomotives operated continuously a distance of 400 miles, the distance was increased on one run to 672 miles, with the result that three locomotives were doing the work which five were formerly required to do. In this case the locomotives are operating in oil burning territory, which, of course, eliminates one of the greatest difficulties in the way of long engine runs, i. e., the maintenance of a good fire without detaching the locomotive and running it over a cinder pit to clean the fire en route. Some experimenting has also been done in increasing the length of freight locomotive runs with very promising results, but this work has not yet reached the point where any general conclusions can safely be drawn from it.

What are the possibilities of long runs? Taking the country as a whole about 10.5 hours are spent on the road and 13.5 hours either in the terminal or at the roundhouse out of each 24 serviceable locomotive hours. Doubling the length of the run would probably have little effect on the average number of terminal hours per trip, but would double the hours on the road. Then instead of 10.5 hours out of each 24 serviceable hours an average of 14.6 hours of actual service would be obtained. This is an increase of about 40 per cent. Putting it differently, for each 10.5 locomotive hours actually required in moving trains there would be 6.75 hours in terminals instead of 13.5 hours, a reduction from a total of 24 to 17.25, or 28 per cent. Eventually, but not immediately, this would mean a 28 per cent reduction in investment charges per unit of service. If the fires do not require cleaning enroute it would reduce the engine house expense per unit of service by 50 per cent. The cost of repairs would not necessarily increase; indeed the closer attention to running repairs required to insure against engine failures would tend to prolong the mileage of the locomotive between classified repairs.

Where locomotives are now operating in assigned service, increasing the length of runs may lead to much less satisfactory maintenance conditions, since it will tend to create pooling conditions with a loss of interest in the upkeep of the locomotives by the crews. This will have to be paid for at the terminals in increased inspection or the plan is likely to prove a failure at the outset.

Wherever a general extension of locomotive runs proves to be practicable an opportunity is offered for the concentration of work at the better equipped terminals. On the development of these terminals future appropriations may be concentrated, with much more effective results than would follow the wider distribution of the same amount of capital over the additional number of intermediate terminals.

Dispatching

The locomotive, like any other machine, has its limitations. Failure to respect these limitations inevitably leads to increased operating costs. Any machine gives the best results when subjected to steady and constant use, following as nearly as possible a fixed routine. In the case of the locomotive this would require dispatching after a fixed minimum period in the hands of the mechanical department with a full tonnage train movement over the division without delay on a regular schedule of running time, followed by the delivery of the train and the return to the mechanical department without terminal delay at the terminal. It is, of course, unnecessary to call attention to the effect of delays, either road or terminal, in increasing crew overtime, and fuel consumption. Nor does it need much argument to convince any mechanical department officer that excessive delays greatly increase the amount of boiler work. Here, the business of locomotive operation comes in vital contact with transportation yard

facilities and passing tracks, on the adequacy or inadequacy of which depends the possibility of obtaining ideal locomotive operating conditions.

But there is another possibility for stabilizing locomotive operation, that does not involve the question of capital expenditure for other facilities. That is the possibility for organizing freight train movement on the basis of regularly scheduled dispatchings, so fixed as to smooth out the load on tracks, yards and engine terminals. The common practice of fleeting trains over the road overloads the passing track facilities on single track lines, thus causing excessive road delays. It chokes terminal yards, which are excessively busy for comparatively short periods followed by longer periods of idleness, and throws a load on the engine terminal that results in long delays to locomotives under steam, short time for repairs, delay in dispatching and engine failures. These overloads increase the unit cost of yard operation, train crew wages, engine house expense and, through neglect of defects in the early stages of their development, inevitably lead to increased maintenance expenditures. Of course certain classes of traffic demand a service that leaves no choice as to how or when the trains shall be moved. But the great bulk of traffic on American railroads can be started on its way at 10, 12 or 2 o'clock as well as at 6 o'clock.

Maintenance

For the first 11 months of 1921 the combined cost of locomotive repairs and engine house expense per 1,000 gross ton miles on the Class I railways slightly exceeded the cost of train and engine crew time, and was only a little less than the cost of fuel. These two accounts, the sum of which is tremendously influenced by the character of shop and engine terminal facilities, are therefore among the three principal items of direct cost of train operation.

Two railroads operating in the same region, through country of much the same nature, handle practically the same character of traffic in about the same average train loads, both passenger and freight. With the exception of enginehouse expense and locomotive maintenance, the unit costs of train operation on the two roads differ but slightly. Over a period of four years' enginehouse expense on Road A averaged 5.5 cents a train mile, and on Road B, 7.3 cents a train mile. Locomotive repairs cost Road A 17 cents a train mile and Road B 26.9 cents a train mile. Road A gets about 40 per cent more train miles a year from each locomotive owned than does Road B. Shop and engine terminal facilities on Road A are considerably above the average; those on Road B, particularly its back shop facilities, are much below the average.

On the business handled during the four years the above difference in the rate of expenditure on these two accounts cost Road B an average of about \$2,300,000 a year. Assuming that half of this difference is brought about by causes which increased and improved facilities could not remove, the saving of the remainder would justify a capital expenditure of over \$9,000,000 on the basis of a 12½ per cent return—certainly liberal enough to be attractive even in these days of high interest rates. The book value of this road is approximately \$400,000,000, and it is doubtful whether the value of all shops, engine terminals and shop facilities for the care of both the cars and the locomotives exceeds \$16,000,000.

Capital Expenditure

But before passing final judgment on the managements of these two roads one other comparison should be made. Road A has a history of extremely conservative financing which places its present management in a position of security; the sheriff has his eye on Road B. Road A is considerably above the average in its ability to accumulate a surplus; Road B's situation is fairly typical of the situation with which the

greater part of the railroads in the United States are confronted today.

With these facts in mind let us try to answer the question, "Where would Road B get \$9,000,000, or half of that amount, to provide additional shop and terminal facilities?" "But," you say, "the prospect of a saving in operating expenses equal to a return of 12½ per cent, possibly even larger, ought to be attractive enough?" Undoubtedly it is attractive enough to the management of Road B, but put yourself in the place of the investor a moment and remember that your bonds will not alone enjoy the security of the high earning capacity of the capital you furnish, but that they will have to share it with most of the securities already outstanding. Furthermore, how confident would you feel that the public would not relieve the railroad of its 3 or 4 per cent of the return, with which it hopes to build up its surplus, long before the maturity of your bonds, leaving you with a depreciated security on your hands? Would you take the risk?

It is not difficult to understand why the credit of the railroads narrowly restricts the amount of new capital they are able to raise. And generally speaking, the managements have little choice as to how they shall spend it. Daniel Willard, president of the Baltimore & Ohio, in his testimony before the Interstate Commerce Committee of the United States Senate during the railroad inquiry last May, clearly defined this problem as follows:

"Is it desirable to spend at this time for new shops \$2,000,000, which sum is available and which sum would enable it to repair its locomotives at a lesser cost, or should the money be used for the purchase of new steel coaches which will mean no economy in operation, but on the contrary mean an increased cost of transportation because of the greater weight of the steel equipment?"

"It was decided," said Mr. Willard, "that the public in this instance would be better served by spending the money available for steel coaches rather than for new shops, inasmuch as it was possible to maintain the motive power in the existing shops."

The demands of the public for increased service require a constant expansion of certain facilities such as industrial tracks, cars and locomotives. Unless funds are still available after these demands have been met how can the management make the much needed investments in facilities such as new shops and enginehouses, which offer opportunities for tremendous economies in operating costs, but which will not take the place of cars and locomotive in actually moving the business?

The public is in control of the railroads' revenues. It controls over half of their expenses. The greatest field for economy beyond the scope of public regulation requires capital expenditure. But the ability of the roads to raise capital depends on their credit, and their credit is largely determined by the relation between their revenues and expenses. Who, then, is responsible for the waste resulting from the use of obsolete and outgrown facilities? The railroads or the public? In my opinion, in the long run the public will pay dearly for its covetous attitude toward its railroads.

The question of back shop expansion is somewhat different from that of engine terminal expansion. In the latter case the necessities of location and service leave little question as to who shall provide the capital. The need for additional back shop space may, however, be met outside of the railroad. While the opportunities for contracting locomotive repairs are not as numerous as in the case of cars the possibilities of utilizing shop space in certain industries during slack times, for locomotive repairs might be developed to very great advantage, thus postponing the time when back shop extensions would become compulsory. If sufficient capacity were available in outside shops, the railroads might be money ahead by depending on them for future growth, thus conserving their credit and at the same time getting the bene-

fit of real business management in the cost of part of their work. Competition of this kind between the railroad and the contract shop might have a wholesome influence in the development of more businesslike methods of control in the management of the railroad shops.

This statement is not a reflection on the ability of railroad shop managements. The methods of accounting for maintenance expenditures leave them little opportunity for the exercise of good business judgment, and any real improvement in this situation will have to originate with, or have the active support of, the chief operating officer or the executive.

Locomotive Rehabilitation

At the present time we are in an era of intensive locomotive development which has progressed so rapidly that the original construction of probably more than half of the locomotives in service is obsolete. Many of these locomotives already have been through one or more rehabilitation processes to restore them to a status of usefulness comparable with that of the new locomotive of modern construction. What should be done with the remainder?

In answering this question, consideration should be given to the question of capital turnover. The maintenance of equipment accounts include a depreciation and a retirement account for each class of equipment, which I am inclined to believe are not taken seriously enough.

There is no doubt but that a locomotive could be maintained forever in a physical condition averaging say about 60 per cent of its condition when received from the builders. But improvements in the efficiency and effectiveness of locomotives, as well as in the other parts of the railroad machine with which it must function have in the past and probably always will in the future, limit its usefulness to a comparatively short period. In considering the advisability of rehabilitating the old locomotive, which has accumulated a large part of the fund necessary to replace its original value, through the depreciation account, this fact should be kept clearly in mind. Furthermore, the cost of the process of rehabilitation cannot all be capitalized but may involve an abnormally heavy charge to the repair account at the time the work is done and the locomotive, being old, and of small capacity will probably continue to run up heavier unit repair charges than would a new locomotive, modern in design and capacity. It becomes a question, then, whether it would not be cheaper to save the heavy charge to repairs, make the necessary retirement charge and raise new capital for the difference between the book value of the old locomotive and a new one, thereby getting at least a year's service with only nominal repair costs, as well as all the advantages of a modern locomotive in reducing the other train operating costs. With these facts in mind it becomes a matter for serious consideration just how large the depreciation rate should be. Too small it tends to perpetuate obsolete and inefficient power. Too large it may increase the average of the sum of all operating costs. Its correct establishment to best fit the probable future development of each road, is not a matter of mere bookkeeping but a question directly affecting future operating costs.

Conclusion

The few business factors which have been here touched on are, I believe, sufficient to establish the fact that a railroad is an entirety which cannot function as a group of walled-in departments, each sufficient unto itself. Probably each one of the points suggested is better understood by some of you than by me, but if in attempting to bring them together some phase of the subject not in his immediate view may have become a little more concrete to any one present, I shall have accomplished my purpose. Let no one forget that railroading is a business and that the yard stick of business principles should be applied to every problem, no matter how technical it apparently may be.

Motor Cars on the New Haven

IN THE discussion of F. M. Whyte's paper on "Australia and Its Railways" at the meeting of the New York Railroad Club, February 17, W. L. Bean (N. Y. N. H. & H.), referred to the use of small self-propelled units in place of steam trains where runs are short and traffic light and unremunerative. He pointed out that there are two fields for these cars; short line runs and branch lines of larger roads. The requirements of these two classes of service are different and care should be taken to make sure the equipment is suitable. It is also necessary for railroad officers to understand definitely the limitations of power available in a gasoline engine, which differs from a steam engine and must not be overloaded. For this reason, grade, speed and weight per horsepower must be carefully considered. At this time it is best to keep on the safe side and not overdo the application of internal combustion engines as this might cause a serious setback in the development.

Mr. Bean discussed the operation of the cars which are now in use on the New Haven. The equipment has only been in service since January 3 and it is impossible to state definitely what the results will be in maintenance, depreciation or reliability, but it is felt that it will be satisfactory in these respects. One of the cars is now making two round trips a day on a 15-mile branch, making a schedule speed of 25 miles an hour with three stops. The car has made 1,437 train miles, carrying from 3 to 38 passengers, the average being 21.2 passengers per trip. The average delay has been 1.3 min. per trip. A second car is making 137 miles a day, the schedule varying from 19 to 23 miles an hour, with five to eight stops. It is carrying from 10 to 66 passengers, the average being 27.2 passengers per trip. The average delay has been 1/5 min. per trip. The third car is making 146 miles a day, the schedule varying from 20 to 26 miles an hour, with three to twelve stops. The car covers six separate trips in a day on lines with grades varying from level to 100 feet per mile. It has carried from 10 to 73 passengers. The average delay has been 1.2 min. per trip.

As a result of the experience up to this time, Mr. Bean is confident that very large economies are available by the use of motor cars. The development will no doubt be rapid and should be directed along sound engineering lines to avoid the building of unsatisfactory equipment. He pointed out that standby losses and the cost of coal and ash handling and attendance at terminals must be considered in comparing steam operation with motor trucks as the gasoline-driven equipment will save large amounts in these items of expense.

German Locomotives for Export Passing Through Kiel Canal on What Was Once a Battleship

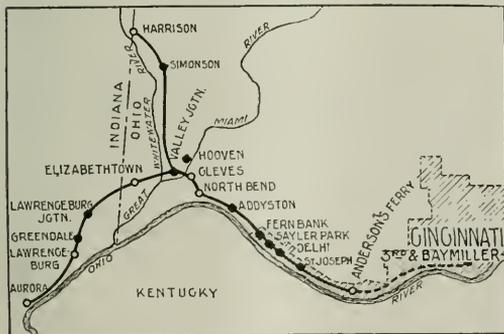

The Three Unit Container Train

Container System Creates Freight Service

Interurban Line Installation at Cincinnati Interesting
Because of Relation to Railroad Practices

IN VIEW of the prominence which the subjects of container cars, motor truck haulage, steam line short-haul, etc., have been receiving of late, the experience of the Cincinnati, Lawrenceburg & Aurora, an electric line, should be of interest. By establishing a small, inexpensive off-track station

outlying point in the city of Cincinnati, known as Anderson's Ferry, to Aurora and Harrison, Ind., a distance of about 30 miles. Anderson's Ferry has been the transfer point for passengers and is now the transfer point for the freight service. The off-track station is located at Third and Baymiller streets in Cincinnati and is equipped for handling demountable containers. Freight is received from and delivered to shippers at this station. The incoming freight is run into containers of 5-ton capacity by hand trucks through end doors and is stowed away in line station order to facilitate quick unloading of individual consignments through the side

Black Characters Denote Prepay Stations

in the downtown part of Cincinnati and inaugurating a demountable body or unit container system in conjunction with motor trucks and flat cars, the road has furnished a freight service that is proving profitable where none at all was furnished previously. The motor truck equipment and service is supplied by the Cincinnati Motors Terminals Company utilizing the same system employed by that company in the interchange of l.c.l steam railroad freight; this system was described on page 219 of the August 6, 1920, issue of the *Railway Age*.

The Cincinnati, Lawrenceburg & Aurora extends from an

Container Ready to Be Removed from Motor Truck Chassis
on to Electric Car

doors at the various destinations. Lading and way bills are made out at the off-track station for each consignment and an abstract of the shipments in each container is made from the way bills. Outbound shipments are made daily, leaving the station at 12:00 noon, and being delivered at the end of the

line at 3:00 p. m. The rates charged are practically the same as steam railroad rates.

Containers Are Handled by Electric Hoists

This off-track station is equipped with a simple steel superstructure carrying an electric hoist for loading and unloading the containers from the wooden horses used to support them at the freight house to the truck chassis. The container when loaded on a truck is moved to the transfer station at Anderson's Ferry on a scheduled run of 40 minutes, partly through city traffic and over a total distance of 6.1 miles. The off-track unit is arranged at present to handle two container units at one setting.

A similar superstructure with hoist has been installed at Anderson's Ferry, extending over the standard gage tracks of the electric line, a driveway for the trucks and storage space with wooden horses. The mobile equipment consists of a 5-ton truck chassis, six container units, an electrically driven flat car and trailer. The containers are the same as those employed in the steam line I. C. I. interchange service except that they have been provided with sliding doors. For this purpose angles were extended back from the doors at the top and bottom of the unit and the door is divided at the center with door stop arrangements similar to those of the ordinary box car. The bodies are 17 ft. 6 in. long, 8 ft. wide and 7 ft. 3½ in. high, inside dimensions.

The electrically driven container flat car has controls and trolley at each end. An old passenger car, that otherwise would have been scrapped, was remodeled at a total cost of about \$500 by removing the body and lengthening the frame about three feet so that two containers could be carried. Steel 3-in. angles anchored to the floor, laterally and longitudinally, hold the units securely. The trailer car consists of a simple steel frame 20 ft. long mounted on two single axle

Motor Truck and Container Ready to Leave

spring trucks and carries one container. This container train is operated by a crew of two men, the motorman and the conductor.

Actual Moving of the Freight

After the containers are loaded on the truck at the off-track station the driver receipts for the load, as represented by the abstract, taking two copies together with the corresponding way bills to the rail transfer. The driver retains one receipted copy of the abstract when his load is received by the train crew. All freight carried in the containers is under the railroad's seal. Before the truck has arrived at the transfer, the two-man crew has already unloaded the container from the flat car and placed it upon the wooden horses.

Upon arrival of the truck, the same crew loads the out-

bound container from truck to flat car or trailer and then loads the return unit from the wooden horse to the truck. Five minutes per unit are allowed for these mechanical interchange movements. The truck then delivers the return container to the downtown off-track station, after which it is released. Space is provided at this point for two bodies so that one is always available for outbound loading by hand truck from shipper's trucks or drays.

The two-man crew unloads the freight from the containers at line destinations; it also makes store door deliveries and collections of light consignments to and from shippers adjacent to the railroad. At Valley Junction the trailer is dropped off for transmission over the branch to Harrison by passenger car, while the self-driven container car proceeds to Aurora. On the return trip the crew loads freight from way station platforms through the side doors without consideration to station order since all shipments are segregated upon receipt at the off-track station.

Since the inauguration of this service both outbound and

Interior View of Off-Track Station Showing Containers Being Loaded

inbound business has increased rapidly, reaching by January 10, 1922, a sustained daily average of 9,000 lb. outbound and a fluctuating inbound agricultural commodity movement of from 1,000 to 12,000 lb. daily. Thus, at times, it has been necessary to use an additional truck chassis providing for simultaneous two-truck movements under a five-minute headway. The outside platform area at the downtown station is 382.5 sq. ft. and the inside, 748.5 sq. ft. This inside area is extended to 1,028.5 sq. ft. by the addition of 280 sq. ft. of floor area provided by the two bodies. It is estimated that this fixed plant is capable of passing 160 tons of freight per 8-hour shift.

FOUR EMPLOYEES of the Denver & Salt Lake were killed when a snow-slide swept a locomotive and six men off the track into a canyon near Loop, Colo., February 19. The four men killed were on the ground shoveling snow to fill the tank, when the slide swept all from the tracks into the canyon. The two men on the tender were saved from death by the protection of the walls of the tank.

THE GULFPORT & MISSISSIPPI COAST TRACTION COMPANY, operating 20 miles of line between Biloxi, Miss., and Pass Christian, making connection with the Gulf & Ship Island at Gulfport, has been adjudged a common carrier of freight in both intrastate and interstate traffic. The officers of the company are, President, W. T. Stewart; general manager, W. A. Sullivan, and traffic manager, T. F. Harris.

The Consolidation of Freight Terminals

This Is Not Desirable for Many Reasons—Railroads
Must Improve Terminal Efficiency

By F. J. Lisman

TO THE PUBLIC the consolidation of terminals means that any shipper will be enabled to deliver his freight at the nearest freight station, no matter what its final destination might be, the same as he would drop a letter into the nearest letter box. Just what this would mean in the handling and rehandling of freight and switching, needs no comment. Even in big cities which have but three railroad systems, like Boston, Philadelphia and Baltimore, this letter box system of freight delivery would not be workable, on account of the cost of rehandling. In the countries of Europe, where the railroads are either owned outright by the government, or are divided into regional groups, freight for any particular point of destination can generally be delivered at only one freight house in each city, except in the case of very large cities where three different freight stations may be available. No doubt if we had similar conditions here, a similar system would prevail and thus the railroads would get more benefit from consolidation and the public would get less service. If unification of terminals would mean less service to the public, the public would not want it.

To those who theorize about possible savings in railroad operation, consolidation of terminals undoubtedly does not mean quite the same thing as it does to the man in the street above referred to. These people no doubt are thinking about consolidation of all terminal facilities owned by all the railroads within certain limits, either within city limits or within limits to the outer yards, etc. Consolidation of this kind would mean that all the companies owning terminals of any kind—tracks, yards, warehouses, freight buildings, team tracks, etc.—would turn them over under a long lease to a new terminal company. The fee naturally could not be turned over to this new terminal company, because terminals in nearly all cases are covered by a variety of long time mortgages. The terminal company would then be expected to act as agent for all the railroads entering a given city, giving each one equal facilities and treatment.

High Cost of Operating Joint Terminals

Presumably each railroad would have a representative on the board of directors of the terminal company, which would select a manager to operate the property for their joint account, each tenant paying according to usage his proportion of operating expenses, rentals, interest charges and taxes. Assuming there are ten railroads interested in such a terminal company, no one of these ten would be particularly interested in its most economical management. It is but human, for instance, to advance the salary of a general manager, even though he may not be entitled to it, just because he is a good fellow, as long as nine-tenths of such an advance is paid by the other man. Likewise, what almost might be called disinterestedness, will permeate the whole management, and such a terminal company would not be operated as economically as at least eight of the ten railroads would operate their own specific properties. Quite true, many switching movements might be eliminated by such joint management or by the joint use of tracks, but it is very doubtful whether the savings at the end of the year through the elimination of unnecessary switching engines will overcome the indifference due to a management which has no keen desire to save and which is not supervised by a real boss who watches every expenditure. Most railroad men express themselves strongly

on the subject of high cost of operating joint properties.

There is an approach to a unification of terminals in the case of the Terminal R. R. Association of St. Louis. The writer does not happen to be familiar with the management of this property, but since its creation quite a number of the lines have established separate freight stations, like the Rock Island, the St. Louis-San Francisco, the Missouri, Kansas & Texas, etc. The extravagant cost of handling passenger business through the big union stations, like Washington, St. Louis, Kansas City, etc., is quite notorious.

Underlying the movement for consolidation of terminals is the idea that expenditures for additional terminals in the future could thereby be saved; but as a matter of fact the development of terminals during the last ten years has been comparatively small and has nowhere been carried on with the idea of anticipating the future, because the railroads have not had the necessary money to do this, nor has there been any encouragement for them to do so. While some railroads may own some undeveloped land available for terminal development, here and there, taking the country as a whole terminal facilities are nowhere excessive. During the period of heavy traffic during the war and up to the fall of 1920, there was a great lack of terminal facilities in the way of yards, sidings, freight houses, etc. Consolidation may in exceptional cases induce the additional use of certain tracks or gauntlets, but probably not of freight houses, docks or even team tracks.

The present Transportation Act may be unconstitutional in so far as it provides for a division of the surplus earnings over 6 per cent with the government. Quite likely the Supreme Court will finally hold that a company is entitled to a fair rate of interest on the capital invested and that a fair rate is 6 per cent, but it is not likely the court will hold that if the companies earn only 3 per cent in one year they will be compelled to divide the surplus above 6 per cent which they may earn the following year. In other words, an average of $4\frac{1}{2}$ per cent would not be a fair return on the money invested and a company therefore should not be compelled to give up any of the surplus earnings unless it has a fair average or cumulative return on the invested capital.

Penalizing the Far-Sighted

Suppose the management of a company has been far-sighted in the acquisition of terminals in a given city and that a large amount of tonnage originates on these terminals. If such terminals were put into a consolidated terminal company on a basis of physical valuation, the company which owns them would lose the benefit accruing therefrom; that is, it might be deprived of a large amount of this traffic and its earnings might fall considerably below the maximum allowed under the present law. Our most successful railroad corporations have generally succeeded because the management over a long period of years has been far-sighted in acquiring ample terminals at all points along their lines on which in course of time all kinds of industries have located. Should these valuable traffic producing facilities now be taken away from them, so that those who have never sown may reap? If a scheme of consolidation of terminals should indemnify these companies for loss of business, the situation might be different.

Theoretically since all railroad companies must switch

from each other, the shipper is supposed to have the choice of routing his freight, but as a matter of fact it is doubtful whether 1 per cent of freight shipped, say, out of the terminals of the Chicago, Burlington & Quincy from Chicago and destined to a local point on the C. B. & Q., is ever routed over any other road. Switching to other railroads, as a rule, is confined to that from manufacturers' sidings to off-line points.

If the terminals in all cities are to be merged, a very large proportion of competition must necessarily be done away with because a large proportion of this competition consists of offering better terminal facilities and prompter handling through the terminals. If a shipper can send his freight to and from a joint terminal over any route between Chicago and Omaha, then the actual competition in service will consist only in more rapid handling of the business over the line or in prompter or more liberal settlement of claims or a more liberal distribution of cigars by the traffic men. Surely competition should not be reduced to these elements only.

While the present system of philosophy is based on the theory of "the greatest good to the greatest number" the carrying out of this philosophy, like that of all socialistic theories is based on the exploitation of those who have been wise and thrifty in the past; but this does not encourage others to build for the future. Under such conditions there will be no further development by forward-looking people. To sum up:

1. It remains to be proved that joint terminals will in the long run be economical of operation.

2. Development of terminal facilities which may be needed by communities in the future will hereafter not be anticipated.

3. As the properties of these joint terminal companies which are to be created will consist mostly of leaseholds, with a variety of mortgages, it will be quite difficult to finance such terminal companies to the best possible advantage unless all the tenant railroads join in a several and joint guaranty of the securities which are to be issued. Should and can the strong corporations be compelled to use their credit for the benefit of their weak competitors?

If the cities themselves, through their officials, become interested in these joint terminal companies, can politics be kept out? Is it not better after all to leave the development of the country and its cities to enlightened self-interest? This has been more successful than any other system devised in the history of the world. Are we not attempting to fly from conditions which can hardly be called evil to evils which we know in part and the extent of which we certainly do not know fully?

Terminal Handling Methods Inefficient

With the readjustment of the cost of living now under way, every effort must be made to reduce expenses in all directions. Railroad companies are expected to do their full share in this and certainly none will claim that the cost of passing the various commodities through the various terminals has reached perfection.

Motor trucks are taking a large amount of the short-haul business. In many cases this seems beneficial to the railroads, but just where the line is to be drawn seems an unknown factor at this time. The railroad companies need all the business out of which they can possibly extract a profit. One of the great advantages of the motor truck is the door to door delivery. There would appear to be every reason to believe that the railroad companies can arrange for deliveries as cheaply, if not cheaper, than motor trucks, because the motor truck mostly assembles and discharges its freight in small amounts while the railroad company brings in or takes out goods by the carload; therefore, a railroad motor truck, at least, either begins or finishes its trip with a full load.

After all the present manner of conducting a freight house

is the outgrowth of primitive conditions. In a country town when the local freight train comes along, it will discharge a few packages, whether they be boxes, sacks or barrels, etc., which are dumped on the platform or hauled into a freight house and then the local agent will call to the country merchant across the way from the station or send a message to him by some passing boy or driver to get his stuff which has just arrived. In the larger communities business is done in not quite as haphazard a way, but nevertheless freight cars are discharged practically by hand and the freight is handled and rehandled. If the L. C. L. freight in a community of say 2,000 were loaded on to a motor truck directly out of the car and delivered within a mile radius, it would probably cost very little more than it does to handle the business into the freight house, send out postal cards and in the meanwhile run the risk of loss and damage. In many cases goods are handled by the old fashioned hand truck by laborers who work as slowly as possible; who are likely to go on strike and who are otherwise not dependable. In many cases it might be possible at a very small cost to provide for increased mechanical handling by endless belts or escalators, etc. If escalators could be standardized so that they could be manufactured on a large scale, their cost would undoubtedly be greatly reduced, probably by over 50 per cent.

Interstate Commerce Commissioner Hall has given this particular phase of terminal work a very large amount of study and is probably more familiar with it than anyone else. He is decidedly of the opinion that this phase of the science of transportation has been grossly neglected.

Suggestions for Improvement

The writer had the pleasure of spending two days in the year 1914 with Henry W. Thornton (who was afterwards made brigadier general and knighted), general manager of the Great Eastern Railway of England. In answer to a question as to the relative merits of American and English railroad management Sir Henry Thornton replied that as far as terminal work was concerned English methods were much more satisfactory than American methods. He went on to explain that conditions were quite different owing to lighter cars which could be switched by horse power, etc. Nevertheless, there appears to be an unnecessary amount of lost motion in terminal work in this country, not only in the handling of freight but also in the handling of cars. Switching engines capable of hauling 30 to 40 loaded cars, are employed a large proportion of the time in switching from 1 to 5 cars. Possibly a light locomotive tractor could be employed to do light switching to very much better advantage. The Pennsylvania Railroad in Jersey City and the Baltimore & Ohio in Baltimore employ fairly heavy tractor locomotives for switching cars on paved streets. The progress made during the war in the development of tractor machines, which could be used over the worst kind of ground, might point the way to considerable savings in many kinds of switching.

Special Charge for Terminal Service

We are now tending in the direction of store-door or direct delivery for which a commensurate additional charge will have to be made; naturally this will mean that we shall drift towards the British system of fixing rates on a basis of a rolling charge and a terminal charge. Nothing is ever settled until it is settled right and the present system of charging rates irrespective of the cost of terminals is unsound and grossly unfair to the smaller communities. In the *Railway Age* of December 13, 1912, an article appeared by the writer, embodying the following:

For nearly a century there has been a tendency on part of the population to drift to the cities. The age of steam which has been followed by the age of electricity, has accentuated this movement, as is evidenced by the census of 1910, in practically all the countries of the world. Manufacturers move to the cities because they are attracted by the labor market; by the fact that the free competition in transportation

facilities, and in many cases the certainty of home markets for their products, etc. In consequence thereof, the railroads in order to meet this condition, have acquired expensive terminals as nearly adjacent as possible to the manufacturing district of these cities. They have in many cases gone to a great expense to build sidings to various factories erected in the centers of these communities.

Unless something is done to check this movement towards the large cities, the railroads will have to increase these heavy expenditures. I do not presume you question the necessity of doubling the terminals every ten to twenty years in the various cities, like not only New York, Chicago, Philadelphia, etc., but also in the smaller size manufacturing towns, like Newark, Paterson, Elizabeth, Trenton, N. J.; Wilmington, Del.; Chester, Pa.; South Bend, Ind.; Kalamazoo, Mich.; Rockford and Joliet, Ill.

What compensation will the railroads get for this increased capital expenditure for the increased cost of switching these cars over the multiplicity of sidings in order to reach their particular destination?

If the establishment of manufacturing plants were encouraged in the smaller communities, the local freight train in many cases could drop off one to five cars at some factory siding, located opposite the freight house or within one or two blocks of it, and the train could move on.

Compare cases of this kind of delivery with the delivery of cars on any of the local freight stations of important lines, or the site of a factory in the manufacturing district of Jersey City or Chicago. The difference in the cost of switching engines, as well as cost of real estate over which trains are run, etc., is, taking everything into consideration, from \$3 per car upwards.

Supposing the little community was to get the benefit of this \$3 per car. It would go a long way towards overcoming the disadvantages of the smaller community compared with the larger one and its broad labor market, which now largely brings the factories to the big communities.

If a difference in rates can be established which is based both on cost of service and value of service, as previously stated, it would go a very long way not only towards avoiding car shortage, the congestion of terminals, but also the congestion of people in the large cities and thus help towards solving one of the biggest problems of our times. The consequences of such a change in the rate making fabric are so broad that space does not permit going into details.

There would be a great deal of opposition from the various chambers of commerce in the various cities, which are interested in building up their towns, the value of real estate and the business of their merchants. On the other hand, the small towns have no such organization. Should not a broad patriotic and philanthropic point of view prevail over a selfish one?

I do not wish to suggest that the rates to the smaller communities should be reduced; on the contrary, the shipper in the larger city should pay a terminal charge above the existing rate in order to compensate the companies for the more expensive service.

Factories in Country Districts

Commissioner, now Chairman, C. C. McChord of the Interstate Commerce Commission, wrote an article entitled "Diffusion of Factories to Country Points," which appeared in the Washington Post of July 28, 1918, and which became part of the record of the Senate Committee on Interstate Commerce.

The following extract is quoted from this article:

The most important matter just now, however, is the part that the railroads should play in the readjustment that must be made in our industrial and economic conditions. As before noted, it has come about that the larger part of our manufacturing is done in our cities. The greatest manufacturing cities of the nation, considering the variety and quantity of production, are Chicago and Philadelphia. Southern New England has developed into a succession of manufacturing cities. Pittsburgh dominates the iron and steel industry and controls prices wherever sales may be made in this country, as Chicago dominates and controls the prices of meats and their products. New York City produces immense quantities of readymade clothing, employing thousands in sweatshops of unsavory surroundings. The result is that workmen and women in largest numbers live under conditions that are not sanitary, wholesome, nor conducive to good morals. This has happened in a country that is less densely populated than any of the great nations of earth and where there is room enough for every citizen and resident to enjoy his full share of pure air and sunlight and to live under conditions conducive to health, morality, and happiness. It would also enable him to secure a home at moderate cost or at reasonable rental, with an area of ground sufficient to permit him to cultivate a garden, where fresh vegetables may be grown for his own use.

Many good people have organized societies and have expended large sums of money in philanthropic efforts to induce immigrants and others to shun the haunts of their fellows in crowded cities and seek homes in the South and West, where conditions are wholesome. In this they meet with a live in a city than in the country. A lower wage payment in the country than in the city would enable the workman to secure more comforts of life, to clothe his family better, and educate them more adequately. If the factory is located near the raw product, there is saving in transportation costs which will be reflected in net earnings.

There are many considerations that dictate a relocation of our manufacturing industries. In the first place, it costs more to do business in a city than in the country. Land values and costs of construction of plants, taxes, etc., constitute charges that must be met from earnings. It costs more to live in a city than in the country. A lower wage payment in the country than in the city would enable the workman to secure more comforts of life, to clothe his family better, and educate them more adequately. If the factory is located near the raw product, there is saving in transportation costs which will be reflected in net earnings.

Municipal Interference Undesirable

Interstate Commerce Commissioner Hall called the writer's attention to the very interesting and most modern development in terminal and port facilities in Astoria, Oregon, constructed by the city authorities at that point. In his opinion much is likely to be done in that direction by other municipal authorities, the same as has been done in some of the large European cities like London, Liverpool, N. Antwerp, Hamburg, Havre, Genoa, etc.

If this should be the tendency in the development of tide-water terminals, we may find that some cities will be willing to handle their terminal work at less than actual cost in order to attract traffic. It is very undesirable that cities should compete with each other in any way but on a sound business basis; if one given city were to handle business over its terminals at less than cost other cities will be compelled to follow the same course, and in the end the deficit will be laid on the taxpayers in general instead of making each class of traffic bear its due proportion. Indirect taxation for any purpose whatsoever is subtle and leads to extravagance.

From the moment municipalities undertake to do business for their own account the game of log rolling, incorrect book-keeping and insufficient depreciation commences and only the sky seems to be the limit. Each administration tries to pass the buck to the next one, etc.

Railroads Must Get Busy

With the increased complexity of our modern civilization, a large part of the public demands (the rest of the public does not object) that municipalities take on new responsibilities and duties under which is included the great problem of reducing the cost of food products to the ultimate consumer. Unless the railroads impress the public with the fact that they are doing their full share in this direction by cutting down every possible expense, many cities are likely to take over a substantial portion of this phase of the transportation business. Railway officials, therefore, must make a thorough study of co-ordination of economic terminals for food products in connection with wholesale and retail food markets.

Fuel and Locomotive Performance on the Central of Georgia

THE statement has been made that whatever tends to conserve locomotive fuel tends also to improve the general operating performance of a railroad. This seems to be borne out by the statistics of the Central of Georgia for the year 1921. During the year the railroad conducted a fuel economy campaign that developed a fine spirit of co-operation among the employees. The results in fuel saving were excellent. As shown in Table 1 the railroad saved more than half a million dollars during the year by improved locomotive fuel performance, this saving resulting in part from direct reductions in the fuel bill and to a lesser degree from incidental economies in operation as shown in the summary.

The spirit developed by the campaign on fuel saving has materially affected the operation in other ways and it is felt that it was an important factor in the excellent passenger train performance. Throughout the 12 months, 98.7 per cent of all passenger trains were on time. The operation of manifest freight trains was also improved, the percentage on time increasing from 76.5 in 1920 to 93.1 in 1921. Engine failures were materially reduced and the average mileage per failure rose to 57,572. Overtime was reduced to a remarkable degree, the overtime for enginemen and trainmen in 1921 being 23 per cent less than 1920. In yard service, overtime was 45 per cent less and in shops, 67 per cent less.

In announcing the results of the fuel saving campaign,

the Central of Georgia Employees' Magazine makes the following comments:

"It is not necessary to state that this amount of money saved in coal has enabled the maintenance of equipment and maintenance of way departments to work more men and to use more material in the past year than would have been possible if this saving had not been effected.

"The credit for this fine performance is due to every one on the railroad who had anything to do directly or indirectly with the consumption of coal. By this time, as a result of the very intensive campaign on fuel economy, all of us are thoroughly familiar with the fact that practically every one on the railroad has something to do directly or indirectly with the question of fuel economy.

"At the various meetings which have been held by division committees on fuel and employees generally on the various divisions, the latter part of December, 1921, and the first part of January, 1922, resolutions have been made to the effect that every effort will be made to make a still greater saving in the year 1922. Fuel economy is a vital element in the operation of our railroad at this time; not only in respect to the direct saving as result of decrease in amount of coal used, but it has a direct influence on the prompt handling of business. The employees of the Central of Georgia are to be congratulated on the fine showing in the year 1921 as reflected by the figures given herewith."

TABLE 1—ANALYSIS OF FUEL SAVING

Actual cost of coal 12 months ending December 31, 1921-1920, as charged to operating expenses

	12 Months 1921	12 Months 1920	Decrease
Tons of coal.....	511,520	637,412	125,892
Cost.....	\$2,092,647	\$2,741,153	\$648,436
Average cost per ton.....	\$4.091	\$4.300	\$0.209
Saved by better performance.....			91,254 tons
At an average of 50 tons per car, the detention of 1,825 cars was saved.			
Figuring an average of 10 days per car, from mine back to mine, there were saved 18,250 car days.			
Figuring an average of 28 cars per train at an average haul of 250 miles, there were saved the operation of 261 trains, also operating 32,625 locomotive miles.			
Saving in car miles and ton miles based on average haul of 250 miles			
Traded cars and 250 miles empty back to the mine.....	912,500		
Car miles.....	912,500		
Ton miles.....	36,503,750		

Summary Saving in Money

91,254 Tons of coal valued at.....	\$350,999.47
18,250 Car days at \$1.00 per day.....	18,250.00
32,625,750 Ton miles at actual transportation cost, or .0034 per ton mile.....	124,112.75
Locomotive repairs 32,625 miles at .30 per mile.....	9,787.50
Freight car repairs 912,500 miles at .02 per mile.....	18,250.00
Total saving.....	\$521,399.72

TABLE 2—PASSENGER TRAIN PERFORMANCE, 1921

Month	Number passenger trains run	Number passenger trains on time	Percentage on time
January.....	2,937	2,867	98
February.....	2,656	2,592	98
March.....	2,941	2,888	98
April.....	2,850	2,816	99

Increase in average miles per engine failure, 1921 over 1920, 33,774 miles, or 58.66 per cent

"After Highways Are Pounded to Pieces—What?"

THE California Electric Railway Association has recently issued a booklet which it has given wide distribution among the chambers of commerce and the traveling and shipping public in general throughout that state. It contains abstracts from the editorials of 78 Californian newspapers, all of which strongly advocate a change from the present day policy of permitting the unrestricted use of boulevards and other paved roadbeds by private parties, companies, and corporations for transacting freight and passenger business by means of heavy and overlaid trucks which, at the same time, establish unfair competition with the railroads.

As the San Luis Obispo Telegram sees it, "there is absolutely no justice in allowing bus and truck lines to operate on roads paid for by the public and, by so doing, cripple or kill the railroad systems which have developed the country and are absolutely essential to the welfare of any community." The Hanford Journal further substantiates this viewpoint by stating "Who is wearing out our highways? Not the business and pleasure cars operated by the people who paid for the roads and are paying for their maintenance. No, they are being hammered to pieces by the heavy passenger busses and the overloaded trucks that are being operated by individuals for profit at the expense of the people. If the business of a railroad is depleted by the competition with trucks and stages, the railroad has a right to apply for higher rates on freight and passenger service, in order that it may yield the return to which it is entitled upon its investment. So, while the people of the country are patronizing trucks and stages, and burdening themselves with the enormous expense of maintaining the highways for the trucks and stages, they are also forcing the railroads to demand and receive greater rates for their service."

"Trucking and passenger motor routes," says the Wheatland Four Corners, "should adequately compensate the state for using the highways, of which much of the building and maintenance costs are derived from the railroads through taxation," and the Tulare Register feels it is unjust that "railroad companies must lay their own rails, maintain their own rights-of-way and general equipment of rails, switches and many other items, while the motor truck is provided by the state with a free right-of-way and a fine roadbed."

Representing one of the richest farming districts in California, the Imperial Valley Press states, "We try to make the railroads pay all the taxes that the traffic can bear, but their competitors on the highways have roads built for them at the public expense, and they get off with a normal license fee. While the San Francisco Chronicle says, "No form of automotive traffic on the highways can of itself develop new territory on any important scale. It cannot create traffic. It can only compete for traffic developed by others."

From every dollar that is collected by the railroads 5½ cents under the old law, and 7 cents under the King bill, goes into the state treasury. "This," says the Indio Palm, "is where the state gets its money with which to build public highways. Every dollar collected from the public by a motor transit company is a dollar taken away from the railroads, 7 cents taken away from the state treasury, and a proportionate amount taken away from the cause of good roads, while every dollar's worth of business that is diverted from the railroads leaves a deficit of one dollar on the company's balance sheet and calls for a corresponding increase in freight and passenger rates somewhere else."

The San Bruno Herald believes that "it is through the railroads alone that we can expect adequate service and that which will develop with our growth and needs. The motor truck can never cover efficiently the field of commercial activities that the railroad does."

The I. C. C. General Rate Investigation

Pooling of Freight Cars Proposed by National Association of Owners of Railroad Securities

WASHINGTON, D. C.

APPROVAL by the Interstate Commerce Commission of a plan for the pooling of freight cars and their purchase, inspection, repair, rebuilding and direction by the National Railway Service Corporation, organized by the National Association of Owners of Railroad Securities, was urged by S. Davies Warfield, president, and other representatives of that association at the rate hearing before the commission on February 15 and 16. Immediate consideration of the plan was asked and it was stated that the association is ready to obtain the introduction in Congress at once of the necessary bills, including one to make the \$300,000,000 loan fund available after March 1. The service corporation under this plan, which was worked out by the association's Board of Economics and Engineering, and described in detail before the commission by W. W. Colpitts, a member of the board, would act in collaboration with the American Railway Association.

The savings to be effected by the plan were estimated by Mr. Colpitts at \$300,000,000 a year, including the following items: Reduction of empty car mileage, \$9,000,000 per annum; reduction in first cost of new equipment, \$33,000,000; saving in financing cost of new equipment, \$23,000,000; reductions in cost of freight car repairs, \$30,000,000; saving through retirement of weak cars, \$96,000,000; saving through improved distribution, \$66,000,000.

"Of all railroad facilities there is none that presents a greater opportunity for joint use or co-ordinated relation than the railroad freight car," said Mr. Warfield. "It is the hybrid of hybrids. It has its birth on the owner railroad and spends 60 per cent of its life on foreign lines; it is responsible to no one and no one is responsible for it. No one seems to care whether its life be long or short, because of its migratory habits and abuse.

"The faults of the system have ranged from inefficiency and carelessness to the extent of conviction for causing bills to be rendered for repairs not made. Such a system cannot produce economical results." He stated that, to secure full results, the present state charter of the service corporation should be superseded by a federal charter. The board of trustees of the service corporation would be evenly divided between executives of the railroads and representatives of investment and business interests, such as compose the present board of the service corporation; the trustees representing the railroads to be selected by each of the four railroad groups now established by the commission.

"The service corporation, through loans made by the commission from the \$300,000,000 revolving fund," he said, "has financed equipment for carriers under the plans of the corporation on more advantageous terms than obtained outside by roads of stronger credit."

Immediate Consideration Urged

Walter L. Fisher, of counsel for the association, urged the immediate consideration of the proposals. "We are in a really serious situation with respect to the transportation system of the United States," Mr. Fisher said. "We have only two sources from which to make effective the necessities—either increase the efficiency and economy of the railroad system or impose an additional burden upon the shippers in order to maintain transportation. I say that not with reference to the return upon the investment but as regards the new funds that are needed.

"We have to find some way in which this railroad system

can be kept functioning. There are two great factors that upon the very first inquiry into the matter reveal themselves as promising relief; they are not small measures of relief, but perfectly enormous. They are the rolling stock and terminals. The report of the board with respect to terminals is not yet available, but the report with reference to the rolling stock has been completed. The reason we came here before you at this time is the exigency of the situation. If you are to utilize this service corporation to which Mr. Warfield has referred, Congressional action must be taken, because the use of the revolving fund expires on March 1. You have to take other action which possibly does not require that authority. You are requiring reports now with respect to the excess over 6 per cent which 15a of the Transportation Act requires. That fund is available.

"If the government should be driven to guaranteeing the equipment certificates, that, as we see it, will necessarily be regarded as an incident for the subsequent guarantee by the government of other things. The equipment certificates are those the railroads can finance better than other securities. You have a concrete demonstration of the ability of the National Railway Service Corporation to finance equipment trust certificates at better rates for the weaker roads than the strongest roads of the United States have been able to finance their certificates.

"Why was it able to place car trust certificates? Representing as it does, constituted as it is of these large investing institutions—they are not bankers, they are not brokers, they are not buying securities to sell them—but they are life insurance companies and savings banks that form the backbone of this association. The savings banks, together with those insurance companies, are ready to buy these certificates direct; they cut out the commissions, the brokerage, and the intermediate profits that would otherwise accrue. If you can stabilize those securities so they can buy them, they are a legitimate form of investment for these institutions.

"This agency is available. As I understand it, it asks no participation except service. There shall be no profit whatever. Here we are representing the rail fundamental securities of these railroads. You have an agency which is sympathetic with the operating end, sympathetic with the public end, and acting under the control and supervision of this commission it can be a tremendous effective agency in bringing about those efficiencies in railroad rolling stock and terminal facilities which are so absolutely essential to any adequate relief of this situation.

"We know the difficulty the commission has in performing the matters of routine work that come before you. We merely wish to offer real opportunities to reduce your labors and present you with material which you can take and put up to be shot at and if it stands analysis you can adopt it. Constructive measures should be the chief work of the commission. In fact, it is almost impossible not to confine yourselves to details and yet the constructive measures are the things that will put the commission in the absolute confidence of the people of the country, make it that great agency for the regulation of our transportation system that it is intended to be, but now must be the time."

Commissioner Hall remarked: "I don't challenge your statement, Mr. Fisher, but it will hardly satisfy 1800 litigants a year filing that number of complaints with the commission if their complaints are pushed to one side while we consider constructive measures. There are 700,000 cars at

the present time in the United States that are not in condition. There has been a certain amount of deferred maintenance, and that has had its effect upon the cars, upon the lessening of expenditure which has brought about the showing the carriers have been able to make for the year 1921. Of course, whoever does it, however it is done, the putting of the bad order cars into good order is going to cost money. This plan you figure on here, does not that involve money, the outlay of money by the carriers?"

"It does," replied Mr. Fisher, "and it proposes, if the chairman please, that this service corporation will undertake to do that work for less money than the carriers will otherwise have to pay to do it."

Proposed Plan of Operation

Mr. Colpitts stated that the pressure for reduced rates is so insistent in the present depressed state of business that means must be sought for meeting this demand, and the board has reached the conclusion that centralized control of interchange freight cars furnishes the most practicable method for effecting an immediate reduction of operating expenses sufficient to aid the carriers in a material degree toward accomplishing this end.

The plan generalized provides for placing all cars normally used in general interchange subject to the control of the central agency with the concurrence of the owners, each railroad retaining its local or special equipment. The ownership of existing equipment would not be disturbed, Mr. Colpitts said. Where unequal ownership of freight cars exists carriers would be required to bring up their quota of cars to meet the country's needs.

Mr. Colpitts summarized the benefits as follows:

"The central agency would immediately arrange for the repair or rebuilding, either in railroad shops or those of car builders of the 300,000 bad order cars, and for the retirement of the much larger number of small capacity weak cars and their replacement with modern cars of larger capacity so as to provide ample equipment against the return of normal traffic. The employment of the men and the purchase of the materials and supplies which this plan involves will aid appreciably in restoring business activity and in putting to work 550,000 idle cars.

"Under unified operation of freight cars, shortages will be less frequent and of shorter duration, and shippers will have greater assurance of receiving cars when and where needed. The program for new construction and replacements will permit of more adequate provision of cars designed and adapted to meet special needs such as the movement of the grain of the West, the citrus fruits and vegetables of California, Florida and the South, and products of the East and Central West.

"Through central control of the equipment, it is quite possible to establish a program of replacements which, within a definite period, say five years, would eliminate all wooden cars from interchange service. In January, 1921, the total number of wooden cars in service approximated 890,000, with a capacity ranging from 30 to 35 tons. It is proposed to replace these 890,000 cars within a period of five years with 540,000 steel underframe cars of 50-ton capacity."

He said that in collaboration with the American Railway Association it is estimated that the service corporation could establish a standard design for cars of different capacities; that the agency could best distribute such surplus cars from a railroad where cars are now owned and only used for that railroad's seasonal requirements, so that such cars could be used many times over to meet the conditions of seasonal requirements of other roads and localities. Cars would be interchanged at interchange points and where repairs or rebuilding is found necessary they would be assigned to either the shops of car manufacturers or railroad shops nearest the point of repair, which however would prove the more econom-

ical. Local group committees could be appointed throughout the country whose function it shall be to know in advance the needs of each section and distribute cars in accordance with local requirements, the chairman of each group committee to be the chief routing officer of the district.

Carriers would no longer bill each other for per diem, repairs, etc. All such items would be charged to and by the agency and cleared by the agency. Each carrier would be concerned only with the balance between interchange cars on its own rails and its contribution of cars to agency control, subject to such exceptions as may be made in case of waiver of per diem. The agency would undertake to supply participating carriers with their normal needs at all times and with their appropriate share of the surplus over normal needs. The cost of operating the agency, not specifically allocated, would be assessed according to car use.

F. H. Wood, commerce counsel of the Southern Pacific, asked whether the probable results of the plan were such that the commission would be justified in making an immediate reduction in rates or whether it would not take considerable time to make the results felt.

"Any savings are required by the railroads to help their credit," replied Mr. Colpitts. "This is not in any sense an argument for reducing rates at this time. Some of these savings would grow from year to year and reach their maximum in five or ten years."

Mr. Wood asked if the fact, as testified by Mr. Aishton, that the average percentage of empty car mileage during federal control was about the same as it had been for 15 years before, would not shake the witness' confidence in his prediction of saving in empty car mileage. Mr. Colpitts said it would not.

Testimony of Shippers

The hearing on February 16 and 17, following the testimony of Mr. Colpitts, was devoted to shippers of fruits and vegetables. In general they asked the removal of the balance of the increases made in Ex Parte 74.

R. G. Phillips, appearing for the International Apple Shippers' Association, the National League of Commission Merchants and the Western Fruit Jobbers' Association, presented numerous voluminous exhibits to show that the freight rates are absorbing a large percentage and in many cases all of the wholesale price. His statement devoted considerable space to answering editorials in the *Railway Age* which had called attention to the wide margin remaining between the retail sales prices of vegetables and the amounts paid to the growers and the railroads, but his statement attempted to defend the wholesaler and the commission merchant against charges of profiteering rather than to explain the prices charged to the public.

Commissioner Hall remarked that the "profiteering" charges were not in evidence before the commission. Mr. Phillips and other witnesses, representing various associations of growers and distributors of fruits and vegetables, who testified, had many statements analyzing the expenses involved in the shipments of thousands of cars to show that the producers and the wholesalers received little or no profit after the freight and other expenses had been paid, but they were generally unable to give satisfactory answers to questions asked by the commissioners to show whether or not the examples given were representative and what became of the balance of the price paid by the consumer. Some of the witnesses asked that the pre-war rates be restored.

Samuel Fraser, a fruit dealer and grower of Rochester, N. Y., objected to an advertisement used by the Louisville & Nashville, which showed that on watermelons shipped from Albany, Ga., to Baltimore, the grower received 7.52 cents, the carrier 12.7 cents and the "middlemen" 80 cents. He had an exhibit covering 1,233 cars of watermelons shipped from the Southern states to Northern cities which showed

the freight rate per melon to be 12.4 cents, but his figures stopped at the wholesale prices.

February 18 was devoted to testimony on behalf of shippers of milk, cream and dairy products, February 20 to beverages and beverage containers and waste material, and February 21 and 22 to livestock and packing house products. The commission's schedule provided also for testimony on petroleum and petroleum products on February 23 and 24 and other commodities on February 25. March 2, 3 and 4 have been set aside by the commission for rebuttal evidence on behalf of the carriers and March 8 to 11 for oral argument. In a notice regarding these dates the commission said that cumulative argument should be avoided and argument should be confined to the outstanding aspects of the case. By co-operation the parties should endeavor to reduce the number of persons to be heard. Brief printed abstracts of the main facts relied upon and of the argument may be presented at the time of oral argument. Voluminous and exhaustive abstracts or arguments are not desired. Parties not participating in the oral argument who have presented evidence may present such abstracts on or before March 8.

W. E. Rosenbaum, traffic manager of the Anheuser-Busch Company of St. Louis, asked for a reduction in the rates on

cereal beverages, saying the present rates are mostly "paper" rates and that a reduction would increase the revenues of the railroads because it would increase the tonnage of cereal beverages which are now in competition with the moonshiner, the bootlegger and the home brewer, whose products do not move extensively by rail. "The cereal beverage industry," he said, "realizes the serious predicament of the carriers, they having been hit almost as hard a blow as our industry, but if we are to survive lower freight rates are absolutely necessary."

The representatives of the livestock shippers who asked further reductions in rates were met by cross-examination which brought out the considerable increases in the prices of livestock since the first of the year. Kenneth F. Burgess, of the Chicago, Burlington & Quincy, asked Henry R. Park, traffic manager of the Chicago Livestock Exchange, how he accounted for the increase in the price of hogs on the Chicago market since January 1 of \$2.20, or five times the amount of the freight rate from the Missouri river to Chicago, 42½ cents, which represents an increase of 19 cents as compared with the rate before federal control. The witness said it was due to increased demand but that it represented only an "unimportant" increase as compared with 1913.

Dispatchers Given New "National Agreement"

Punitive Overtime Clause Included in Labor Board's Rules—Other Developments in Labor Field

A COMPLETE new set of rules to govern the working conditions of train dispatchers was announced by the Railroad Labor Board on February 20, to become effective on March 1. The new rules, constituting what will eventually be another national agreement, are featured by provisions for the payment of punitive overtime after the ninth hour, for one rest day per week, which must be taken by the employees involved, and for the payment of train dispatchers on a monthly basis. The new code contains specific rulings on the scope, hours of service, overtime and expenses, rest days and relief service, rates and application of pay, and miscellaneous conditions usually covered in agreements of this character. Rules on the subjects of seniority, promotions, vacations and sick leave with pay, are not specifically included in the new code, the Board stating that these and "certain other subject matters may not be covered in all localities by rules of general application and require further consideration by the parties directly concerned."

The new rules promulgated by the Board follow:

ARTICLE I—SCOPE

The term "train dispatcher" as herein used shall be understood to include chief, assistant chief, trick, relief, and extra dispatchers, except chief dispatchers vested substantially with the authority of superintendent or assistant superintendent.

ARTICLE II—HOURS OF SERVICE, OVERTIME AND EXPENSES

(a) Eight consecutive hours shall constitute a day's work for train dispatchers.

(b) All time worked in excess of eight hours shall be paid for on the actual minute basis at pro-rata rate for the ninth hour at the rate of time and one-half thereafter. Time consumed in making transfer shall not be counted as overtime.

(c) Each train dispatcher will be assigned to established headquarters in accordance with seniority provisions and when required to leave such headquarters shall be paid necessary actual expenses in addition to regular salary while away. This section does not apply to relief or extra dispatchers.

ARTICLE III—REST DAYS AND RELIEF SERVICE

(a) Each regularly assigned train dispatcher (and extra dispatchers who perform six days' dispatching service in one week)

will be allowed and required to take one day off per week as a relief day, except when unavoidable emergency prevents furnishing relief. If required to work such relief day, extra compensation will be allowed at pro-rata rate.

(b) The carrier shall designate an established rest day for each position in accordance with the foregoing section. Reasonable notice shall be given of change in assignment of rest day.

(c) Where relief requirements regularly necessitate four or more days of relief service per week, relief dispatchers shall be employed and paid the daily rate of each dispatcher relieved, and when not engaged in dispatching service will be assigned to other service and paid therefor a daily rate commensurate with the service rendered.

(d) Relief requirements of less than four days per week will be performed by extra dispatchers who will be paid the daily rate of each train dispatcher relieved.

ARTICLE IV—RATES AND APPLICATION OF PAY

(a) Train dispatchers shall be monthly employees, but the monthly compensation shall be computed on a daily basis.

(b) When necessary to fix a daily rate of pay it shall be determined by multiplying the regular monthly rate by 12 and dividing the result by 313.

(c) Loss of time on account of the hours-of-service law or in changing positions by the direction of proper authority shall be paid for at the rate of the position for which service was performed immediately prior to such change. This does not apply in case of transfers account employees exercising seniority.

(d) Rates of pay for new positions shall be the same as for existing positions of equal scope and responsibility.

ARTICLE V—MISCELLANEOUS

(a) Dispatching offices will be maintained as private as possible.

(b) When assignment by the carrier requires train dispatchers to change their place of residence they will be furnished free transportation for their families and household goods to their new place of residence at time of transfer.

(c) Train dispatchers and their dependents will be granted as liberal transportation privileges as are accorded other subordinate officials and employees.

(d) Reasonable notice will be given of reduction in force or change in hours of assigned positions.

Scope of New Rules Conforms to I. C. C. Regulation

In the general instructions accompanying this decision, the Board, in speaking of the scope of the new rules, cites

the ruling of the Interstate Commerce Commission issued on November 24, 1920, in which it ordered that employees of carriers performing the duties of chief dispatchers, day or night, be classed as officials when vested substantially with the authority of a superintendent or assistant superintendent, and then adds the following explanation:

In its consideration of Article I, defining the scope of the rules for train dispatchers, the Labor Board has recognized the above regulation, which has been in effect incorporated in this article. Under the rule as decided by the Board, each carrier and its employees in disagreement on this article will consider each position involving the work of chief dispatcher in the light of the Interstate Commerce Commission's regulation and of the Board's decision on Article I, and where a chief dispatcher is vested substantially with the authority of a superintendent or assistant superintendent, he will be considered in the official class and will not, therefore, come under the jurisdiction of these rules; where not so vested, he will be considered as coming under the rules.

The new rules will apply to each of the carriers parties to the dispute except in such instances as any particular carrier may have agreed with its employees upon any one or more of such rules in which case the rule or rules agreed upon by the carrier and its employees will apply on the carrier.

Referring to certain other rules which have been proposed by the train dispatchers, the decision says:

The Board has eliminated proposed rules relative to payroll classification, specification of duties, and preference in employment of experienced train dispatchers. These rules shall cease and terminate, except in such instances as any particular carrier may have agreed or may hereafter agree with its employees upon any one or more of such rules, in which case the rule or rules agreed upon by the carrier and its employees shall apply on said road.

In connection with this decision it will be recalled that the American Train Dispatchers' Association first presented its demands for a definite code of rules governing the working conditions of train dispatchers on June 4, 1920. These demands were later changed and during the progress of the hearings on national agreements, in the early part of 1921, an amended proposition was submitted to the Labor Board. Several of the rules requested by the organization in the amended proposition have been sanctioned by the Board in this decision, although the new code is much shorter and less specific than the agreement proposed by the train dispatchers association.

M. & N. A. Employees Ordered to Accept Unique Proposition

The employees of the Missouri & North Arkansas have been ordered by the Labor Board to return to work under the proposition made by Festus J. Wade, and described in last week's issue of *Railway Age*. The Board's decision was handed down on February 18, and after reciting the history of this case—which has been covered in previous issues of the *Railway Age*—described the hearings before the Board on February 15 and includes an opinion and decision in part as follows:

The carrier's request contemplates a reduction in the wages of the employees from the rates established by Decision No. 2 of the Board, an amount equivalent to the decreases authorized by Decision No. 147 for the classes of employees referred to therein in the service of the carriers, parties to said decision, and an additional 25 per cent reduction. There has been submitted to the Board in support of this request considerable data and information in reference to the cost of living, rates paid in outside industries and other relevant conditions referred to in the Transportation Act, 1920.

The representatives of the employees who were present at the hearing held by the Labor Board contended that in view of the conditions hereinbefore set forth the Labor Board had no jurisdiction of this dispute, and, furthermore, contended that there had not been held in compliance with Section 301 of the Transportation Act, the conferences contemplated by said section for the consideration of the justness and reasonableness of the proposed scale of wages.

In its presentation to this Board the carrier has set forth that it has appealed to the Interstate Commerce Commission for assistance to resume operation and has appealed to the executives of carriers in the territory which it serves for a sufficient division of rates to provide adequate income to pay operating expenses, taxes and interest on a proposed loan from the government, if granted. Before the applications with respect to division of rates and government assistance can be finally passed upon a decision from the Labor Board on the question of wages is necessary. The carrier has shown that in order to resume operation of the property a reduction in wages equivalent to an annual saving of \$310,000 must be made, and this would require the application of the decreases authorized by the Board in Decision No. 147, for the classes of employees referred to therein and a further reduction of 25 per cent in the wages established by the application of Decision No. 147.

If this request is not granted the carrier contends that it is inevitable that the road must be scrapped, with the result that thousands of people along the line will be out of employment, with great loss and inconvenience to all those who have made investments in farms, homes, manufacturing establishments, financial institutions, schools, and churches along the line of the railroad on the theory that it was to be an operating railroad. The carrier's proposition further contemplates that the owners of the property shall not receive any return upon their investment until the government loan which is contemplated is paid off and wages of the employees are restored to the standard scale.

The employees request that the Board give consideration at this time only to the question of jurisdiction, and if it is decided that the Board has jurisdiction to set a further hearing for the discussion of the merit of the carrier's proposals as to reduction in wages.

Opinion.—The Labor Board has given consideration to the question of jurisdiction referred to by the employees and is of the opinion that it has jurisdiction in this dispute. It further appears that the contention of the employees that this dispute is not properly before the Board in view of the failure of the carrier to hold conferences as contemplated by Section 301 of the Transportation Act, is not well sustained. The evidence shows that the representative of the receiver circulated among the employees a notice of its desire to resume operation and establish certain wages which would permit of saving an amount required to operate the property. This notice was not only distributed among the employees' representatives on the property to which the carrier had direct access, but the carrier's representative appeared at a conference in Chicago conducted by the organizations whose membership was involved in the controversy and made known to those present at said conferences the details of its proposals and sought their acceptance of the reduced scale of wages. The committee representing the Federated Shop Crafts claim that they were not a party to the conferences conducted by the carrier in either St. Louis or Chicago, but the evidence shows that at the conference in Chicago the president of the Federated Shop Crafts was in attendance and participated therein.

Decision.—That the proposition contained in the submission made by the representatives of the carrier, dated October 10, 1921, shall be accepted by the employees, based upon a continuation of the agreement as to working conditions that were in effect as of January 1, 1921, or, in lieu thereof, the decisions the Labor Board has rendered in connection with rules which superseded the several agreements in effect as of January 1, 1921.

While this matter is not in issue at this time before the Labor Board, it is recommended by the Board that all the former employees party to this dispute be reinstated with the continuity of their seniority unimpaired.

Conferences to be held between the representatives of the employees, parties to this dispute and the representative of the carrier, at the earliest possible date, not later than March 1, 1922, to properly and fairly apply this decision.

Pennsylvania Outlines Its Plan for Settling Disputes

The manner in which controversial questions and matters of mutual interest to the employees and the management of the Pennsylvania are settled under the agreements that carriers has made with several classes of its employees is described in a summary recently issued by that carrier. Steps are provided through which the employees or management may carry a dispute culminating in the reference of the dispute to a last court of appeal, "the United States Railroad Labor Board or other public arbitrator to be decided upon by the reviewing committee." These steps may be summarized as follows:

1. The individual employee first takes up his dispute with his immediate superiors.

2. The local chairman or local committee then takes up the dispute with the division superintendent.

3. The general or regional chairman next takes up the dispute with the general superintendent.

4. The general chairman takes up the dispute with the general manager.

5. The dispute is then referred to a joint reviewing committee composed of equal representation of employees and management with equal voting power, a decision to be arrived at by two-thirds majority, and,

6. The dispute may be referred to the United States Railroad Labor Board or other public arbitrator to be decided upon by the joint reviewing committee.

Labor Leaders Attempt Formation

of Political Coalition

Representatives of a large number of labor organizations and state federations of labor met at Chicago on February 20, in an endeavor to form a coalition to back candidates for public offices who will be favorable to labor legislation and to the demands of organized employees. The call to the meeting was sent out on February 8 and was signed by a committee composed of officers of various railroad labor unions. Included among the signers of the call were W. H. Johnston, International Association of Machinists; Timothy Healy, International Brotherhood of Stationary Firemen and Oilers; L. E. Shepherd, Order of Railway Conductors; Martin F. Ryan, Brotherhood of Railway Carmen; E. J. Manion, Order of Railway Telegraphers; and Warren Stone, Brotherhood of Locomotive Engineers. All except Mr. Stone were present at the meeting on February 20.

Mr. Johnston, who acted as chairman of the meeting, declared in his opening remarks that this movement "will result in retiring from public life the servants of plutocracy and privilege." According to Mr. Johnston, the coalition which has been proposed will "work through existing organizations" to place "more genuine farmers and workers as representatives * * * in our legislative halls."

Among the other railroad labor leaders who attended the meeting were T. C. Cashen, Switchmen's Union of North America; E. F. Fitzgerald, Brotherhood of Railway & Steamship Clerks, Freight Handlers, Express and Station Employees, and E. F. Grable, United Brotherhood of Maintenance of Way Employees and Railroad Shop Laborers.

Pennsylvania Labor Controversy Delayed Again

The suspension of Colonel J. V. Clinnin, assistant United States district attorney at Chicago, who was assigned to the case of the Labor Board in its legal controversy with the Pennsylvania has resulted in the postponement of hearings before the United States District Court at Chicago until March 8. The developments in this case have been fully described in previous issues of the *Railway Age*.

Board Holds Hearings on Telegraphers' Rules

Hearings on proposed rules to govern the working conditions of telegraphers were held before the Board on February 21. Approximately 70 carriers have failed to agree with the telegraphers as to their working rules and all of these disputes were consolidated by the Board into one hearing. The principal points in dispute include "split tricks," overtime, basic days, scope, and punitive payment for calls, Sunday and holiday work and meals. The carriers' testimony at the opening session was largely confined to statements opposing the rules which have been proposed by representatives of the telegraphers on these subjects on the grounds that they will result in uneconomical, unjust and unreasonable conditions. Among those who testified on behalf of the carriers at the opening session were J. W. Higgins, representing 10 western carriers; M. C. McClaury, representing a group of eastern carriers; E. B. Perry, New York, New

Haven & Hartford; T. A. Gregg, Atchison, Topeka & Santa Fe; W. G. Bied, Peoria Terminal Railway; G. H. Synes and R. McIntyre, Union Pacific; H. D. Earl, Texas & Pacific; A. L. Robinson, Wabash; R. S. Henry, Nashville, Chattanooga & St. Louis and a group of southwestern roads; I. C. Clark, Chesapeake & Ohio; J. H. Owen, Florida East Coast; T. B. Turner, Louisville & Nashville; and W. R. Hensley, Louisville, Henderson & St. Louis.

E. J. Manion, president of the Order of Railroad Telegraphers, appeared on behalf of the employees, contending that procedure outlined in the Transportation Act has not been followed in these disputes and urging further conferences on working rules. He dwelt at length on the basic eight hour day, presenting several compilations to show that an eight hour day without provisions for punitive overtime after the eighth hour resulted in the extension of the working day. The subjects of "split tricks" and the scope of the proposed rules were also taken up by Mr. Manion, who argued that the former should not be permitted and that the latter should take in non-telegrapher agents and other similar employees.

Working Conditions for Firemen and Oilers

A new agreement covering the working conditions of firemen and oilers was announced by the Board on February 23 to become effective March 1. This new code extends the scope of the old national agreement, provides for the payment of pro rata rates for the ninth and tenth hours of continuous service and time and one-half thereafter, and for the working of these employees on split tricks, providing their service comes within a spread of 12 hours.

The firemen and oilers' national agreement specifically excluded employees who perform stationary engineers' work, but the new rule on this point extends the application of the new code to stationary engineers, hoisting engineers, grease cup fillers, flue blowers and borers, fire knockers, cinder pit men, fire builders and coal passers. This extension is in keeping with the demands of the firemen and oilers made during the progress of the national agreements case.

The new ruling covering intermittent service and giving the carriers the right to employ men on split tricks without punitive payments is exactly the same as the rule recently given to the clerks and reproduced in the *Railway Age* of January 28, page 277. Several additional changes are included in the new national agreement but these are of minor consequence.

The old national agreement with the firemen and oilers contained 18 rules. Of these five have been reproduced in the new code. One has been automatically changed. Ten rules relating to discipline and grievances have been remanded to the carriers and their employes for further negotiation and two have been materially changed.

Dual Flow Steam-Driven

Air Compressor

THE STEAM END of the Dual Flow steam-driven air compressor recently developed by the Chicago Pneumatic Tool Company, New York City, is said to be entirely new and distinctive, yet based upon principles which have already proven their soundness and superiority in steam engine practice. The foremost feature of this machine, illustrated in Fig. 1, is the steam cylinder which is so designed and constructed that initial condensation is almost entirely eliminated, resulting in a great saving in steam power.

Initial condensation is one of the greatest preventable losses in steam engines of the old counterflow or compound type; it is caused by the cooling of the cylinder walls and head by the comparatively cool exhaust steam as it washes

over them in leaving the cylinder through the same port by which it entered. In the Dual Flow cylinder, the exhaust steam does not wash back over the cylinder walls and head, but leaves through a port in the center of the cylinder. Thus the interior surfaces of the cylinder walls and head remain at very nearly the same temperature as that of the entering steam and initial condensation is reduced to the absolute minimum.

The exhaust port is uncovered by the piston when the latter has traveled about half its stroke. The exhaust is controlled, however, by a patented, steam-tight poppet valve, which opens when the piston is near the end of its stroke and closes again (if the machine is running non-condensing) when the piston covers the port on the return stroke. When running condensing, the valve closes early in the return stroke.

The Dual Flow cylinder was designed to have several advantages over uniflow types. In the first place, a material saving in steam consumption when running non-condensing is claimed. Since the piston of a uniflow engine covers the exhaust port at the start of the return stroke, some provision must be made for preventing excessive compression. This usually takes the form of large clearance spaces. If there is any back pressure, there must be still greater clearance. Compression in the Dual Flow cylinder on the other hand does not begin until the piston has traveled half the return stroke.

A section of the cylinder, showing its construction, is given in Fig. 2. Valve leakage probably causes a greater steam loss than any other single factor. Especially is this true of installations where superheated, high-pressure steam is used; in fact, the faults common in most of the valves now used, such as leakage, excessive clearance, necessity of valve lubrication, etc., have partly offset the advantage to be derived from the use of superheated steam. Too much attention, therefore, cannot be given to the type of valve used.

A solution of the valve problem has been sought in the

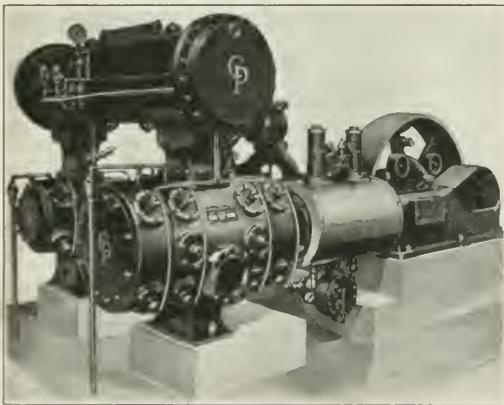

Fig. 1. General View of Dual Flow Air Compressor

case of the Dual Flow steam-driven air compressor by the adoption of the Skinner steam-tight, double-seat poppet valve for both admission and exhaust. This valve is said to remain steam tight indefinitely and seat perfectly, regardless of the pressure or temperature under which the cylinder is operated. It has been known to keep steam tight, with one grinding, with 159 lb. pressure and 150 deg. F. superheat and also with saturated steam at 100 lb. pressure. No lubrication is required.

Inequalities of expansion of the metals forming the valve and seat due to different coefficients of expansion, are com-

pensated for and no side thrust is imposed upon the stem by the lifting mechanism.

The governor is mounted in the flywheel and operated by centrifugal force and inertia. The governor arm is connected to the steam valve eccentric and by changing the throw of the latter it changes the point of the cut-off of the steam entering the cylinder. This method is obviously superior to the old scheme of merely throttling the steam. It is apparent that variations in speed may be made by adding or removing weights.

Unlike the old counterflow engines, which were regulated economically by slowing down during the unloaded periods of the compressor, the Dual Flow is a constant speed machine

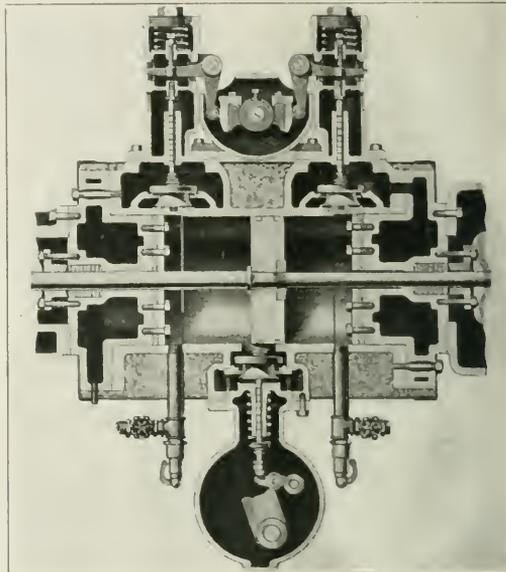

Fig. 2. Cross Section of Dual Flow Steam Cylinder

and shows the best steam economy when operating at its greatest speed. Regulation is therefore effected by two-step capacity control. Two differential unloaders connect with the inlet valves and reduce the capacity of the compressor in two steps. One unloader holds open the inlet valves on the crank end of one cylinder and the head end of the other. The second unloader holds open the inlet valves at the opposite ends. This is one of the simplest, most positive and most efficient methods of regulation known. The air valves are of the Simplate, independent disc type.

DURING THE PERIOD of 24 hours preceding 1 p. m., February 9, 264 passenger trains in-bound and out-bound were handled 100 per cent on time at the Union Station, Chicago. Fifty of these trains were operated in the hour from 7 to 8 a. m.

THE BILL to AMEND the valuation law by omitting the requirement that the Interstate Commerce Commission shall report the cost of acquisition of land, which has been favorably reported by both the House and Senate committees, was debated in the Senate on February 21. It was brought forward on February 17 by Senator Cummins, who asked its immediate consideration. This was opposed by Senator Underwood, who asked for more time to consider it, but Senator Cummins later succeeded in having it made the unfinished business of the Senate.

Present Lubrication Methods Faulty

Positive Mechanical Oil Feed Would Reduce Friction and Wear and Minimize Equipment Delays

By J. J. Hennessy

Delayed by a Hot Box

ONE MEANS of improving net earnings always open to the railroads is to increase the efficiency of train operation, reducing the cost per unit of tonnage moved. Efforts along this line in the past

have been confined largely to increasing the size and hauling capacity of locomotives and cars and the mileage made in a given period by adopting improvements such as superheaters, outside valve gears, mechanical stokers, six-wheel trucks, larger journals, etc. The method of lubricating the journals of railway equipment, especially cars, however, has not been changed, or any serious attempt made to improve it since the first railroad cars were built. It is true that the grease cellar at the time of its adoption for the lubrication of locomotive journals worked a great improvement in the performance of heavy locomotives, but an analysis of the situation at that time showed that while the use of hard grease prevented delays on the road, this was accomplished at the expense of increased wear of equipment, particularly driving journals, boxes and rods.

Oil Versus Hard Grease Lubrication

Grease of the best quality has never been considered by experienced engineers to be nearly as good a lubricant as oil. The best grease that can be manufactured for use on driving journals (this grease must necessarily be quite hard) cannot contain more than 50 per cent of oil, or pure lubricant, the rest being of questionable value except to stiffen the lubricant. Tests made on railroads in Europe and England have proved conclusively that grease is not only a poor lubricant for railway equipment journals of light cars, being injurious to journals and bearings and producing high friction, but that it is impossible to lubricate with grease a journal carrying a load greater than about 80 lb. per sq. in. of projected area where the movement in the journal box due to reversed pressure such as that experienced in a driving box from the piston thrust, is absent. Very few figures reflecting actual costs due to grease lubrication are available, but most mechanical superintendents agree that considerable expense in maintaining driving journals, boxes and rods is incurred because of the poor lubrication afforded by grease.

There is no comparison between the condition of journals and bearings lubricated with grease and those lubricated with oil from the standpoint of wear, and the life of the latter is at least three times as great as the former. In other words, a journal will run without truing three times as long when properly lubricated with oil. In the case of driving journals, greater wear is experienced in the bearings (brass) which wear so rapidly at the front and back as almost to control the length of time a large engine can be kept out of the shop. Other defects of locomotive design, formerly controlling the time an engine could be kept in service, have been overcome to such an extent that at present the excessive wear of driving box brasses with resultant pounding and rod play practically limits the mileage between repairs.

Proof that grease is not as good a lubricant as oil is had from the fact that grease will not lubricate locomotive journals other than driving journals (all of which carry less load) because of the absence of the back and forth movement of the journal in the bearing; also, an engine lubricated with grease will not run cool when not pulling a load, as when being hauled in a train.

In the light of the few experiments in improved methods of lubricating railway equipment that have been made, the increased car-carrying capacity and more economical train operation seem to warrant the most careful attention to proper lubrication. Oil of a nature most suitable for each service should be supplied in such a manner as to provide practically perfect or bath lubrication.

Bath Lubrication More Effective Than Wick Feed

Laboratory tests* made with a standard lubricant testing machine by Beauchamp Tower, and others, have shown that journal friction is reduced materially by increasing the supply of lubricant. Where oil is fed to a journal in sufficient quantity to provide an oil bath, as compared to the amount fed by capillary attraction or wick feed, the coefficient of friction is reduced from .011 to .002 using the same oil under the same laboratory conditions. Bath lubrication would produce a much greater reduction of friction under actual conditions where oil is subject to temperature variations, waste becomes glazed, and both oil and waste are filled with dirt.

In a laboratory, a journal carrying a load equal to that carried by heavy railway journals can be lubricated to produce a coefficient of friction of decidedly less than .003 and the attempt should be made to approach more nearly what can be accomplished under the most favorable conditions.

Railway journals are lubricated by the present method a small portion of the time in a manner that only approximately approaches that of the laboratory with wick feed. This is due to atmospheric conditions and the glazed condition of waste next to the journal which begins as soon after oil is applied, as the journal begins to warm up. About one-half of the period between applications of oil to the waste in the journal box of a normally loaded journal, the journal operates on a scanty supply of lubricant and this condition can be overcome only by bath lubrication or some method giving practically bath lubrication.

Advantages of Better Lubrication

Any reduction of resistance to train movement by better lubrication would have a direct bearing on coal consumption per unit moved, with an indirect bearing on train operation in general and maintenance expense. Delays because of hot boxes, and the labor and material costs involved in bearing and journal renewals, would be correspondingly reduced.

Some tests to determine resistance to car movement have been made by the Pennsylvania Railroad and reported in Bulletin No. 26. Among the resistances considered are rolling resistance of wheel on rail (influenced by type and condition of track), flange pressure on rail, wind resistance due to speed, curve resistance and grade resistance, none of which resistances can be reduced by better lubrication of journals. It is safe to assume that track and equipment conditions,

*Reported in a book entitled "Lubricants and Lubrication," by Archbutt and Dealey.

as well as the condition of packing in boxes were ideal, or in other words that the journals were lubricated in a manner superior to that obtained in ordinary railway practice. Tests with ball bearing journals on railway equipment, the improvement effected being confined entirely to eliminating resistance due to journal friction, have shown such a decrease in effort required to pull cars as to prove that about one-third of the resistance to car movement on good, ballasted level track is due to journal frictional resistance. It would seem from the figures reported in the test that six pounds per ton is required to move what might be considered an average loaded car on level track, or that six pounds per ton would be a fair figure to consider as necessary to pull an average car, considering the number of empties moved and the average loadings of box cars.

The test figures show resistance to movement of light loads and empties to be much greater per ton than with heavily loaded equipment, which further proves that resistance other than journal resistance is of small consequence. Taking two pounds per ton as the resistance due to journal friction as a basis, the coefficient of friction is easily twice as high as under the most unfavorable (wick fed) method in the laboratory. If a method more nearly approximating what should be expected of bath lubrication as shown by laboratory tests is used the journal resistance will be reduced still further. More cars can be hauled and as small a number as three cars added to each freight train of normal size means a considerable increase in revenue per train to say nothing of the decrease in maintenance cost on all cars.

As an additional advantage the carrying capacity of journals would not only be increased by more adequate and reliable lubrication, but where journal load limits with present methods are not so nearly reached, savings due to improvement in their lubrication would be reflected in reduced attention necessary and less hot box trouble when these journals are placed under heavy load. The load limits of journals are increased by proper lubrication and any increase in the carrying capacity of present journals would remove, to a great extent, the need of larger sized journals and six-wheel trucks.

Expense attributable directly to hot boxes on all classes of equipment is enormous and an investigation of the expenditure due to, or resulting from, hot boxes on any of the larger systems would show great possibilities of saving by reducing this trouble alone.

A comparison of the lubrication of railway equipment bearings with the bearings of other heavy machinery is almost impossible due to the crude method of lubricating railway journals and the conditions under which these journals operate. In spite of this fact, when the number of journals that are in service, their loads, operating conditions and the uncertainty of lubrication are considered, the comparatively small amount of trouble experienced is amazing. The success attained with the present methods is made possible by the constant attention of highly trained specialists and the unremitting perseverance of a large number of railway employees. The cost, however, is proportionately large and journals demand a much greater proportion of attention in relation to other matters pertaining to train operation than they should. It would pay to make a serious effort to bring railway journal lubrication up to a status requiring no more attention and expense than the lubrication of ordinary machinery bearings.

Oil of the Right Consistency Needed

Oil of a certain consistency is required by the present method of supplying lubricant to journals by waste feed, to insure its feeding in sufficient quantity under all atmospheric conditions. This requirement limits the lubricants to oils not always most satisfactory from a strictly lubricating standpoint. The constant disturbing of the waste by a large

number of operatives, which is absolutely necessary in severe service, also increases the liability of failure and the application of oil directly to a journal does not seem to reduce this liability. With the best attention possible and the use of all the oil permissible with the present method of application, it is absolutely impossible to avoid a great deal of hot box trouble on the heavier equipment in severe service.

The inadequacy and the unreliable nature of the present method is most noticeable on equipment moving the greater portion of the time under heavy loads. Lubrication failures or hot box troubles develop on this equipment with the greatest frequency, although the inadequacy of the lubrication afforded is proportionately as great on journals carrying less loads a greater portion of the time. The tendency of these journals is to heat when placed under full load, and journal resistance is increased.

An improvement in the method of applying lubricant to such a point that oil of any desired body could be furnished to journals under all conditions, entirely independent of the capillary action of the waste in the box, would reduce the running temperature of journals under heavy load. Little tendency to heat would be noticeable, or if there was heating, it could be detected by a casual inspection and remedied before the box became hot enough to damage the bearing.

A great deal of expense is incurred by giving unnecessary attention to bearings in severe service as a result of the inability of the inspectors to determine exactly which journals are lubricated properly or which are in need of attention. The expense necessary to lubricate railway journals successfully has become accepted as unavoidable, and about the only remedy applied where trouble is experienced seems to be to increase the number of operatives giving journals inspection and attention, without any definite plan of procedure to remedy the trouble. Some positive mechanical means of supplying the lubricant to the journal should be provided and arrangements made for ready inspection. In this way the exact condition of journals can be determined and the efforts of the inspectors will not be nullified because of the impossibility of carefully inspecting all journals.

Locomotive Journal Lubrication

Locomotive driving journals are not more difficult to operate from a lubrication standpoint than the journals of cars, and their construction is such as to lend itself to the development of some more satisfactory method than that used at present. The ease and frequency with which these journals can be inspected and given attention also makes this desired improvement more easily available than in the case of other equipment.

The large diameter of a driving journal and the construction of the waste receptacle or cellar, however, makes the continuous application of sufficient oil to the entire surface of the journal difficult, and the metal of the driving bearing being harder than that of the car bearing makes it necessary that this supply of lubricant to the journal be absolutely continuous, greater damage being done by a failure of the supply of lubricant to journal for a short period.

Modern Heavy Equipment Must Be Well Lubricated

The general adoption of the hard grease method of lubricating locomotive driving journals was largely the result of a determination to eliminate road delays on account of lubrication failures and entirely regardless of the expense incurred by excessive journal wear, frictional resistance and resultant deterioration of other locomotive parts. None of these effects were as noticeable, or of as great consequence, on the locomotives in general use at that time, as with the larger locomotives of the present day. Increases in the size of locomotives, with improvement in their design and construction, permits capacity operation a greater portion of the time and emphasizes the inadequacy of journal lubrication, focusing

attention on repairs directly necessitated by poor lubrication.

Repairs to driving boxes and parts directly affected by the condition of driving boxes are the principal causes of locomotives being kept out of service between general overhauls. While the increase in carrying area of driving journals has about kept pace with the increase in locomotive size, no provision has been made to take care of the greater thrust of piston, and wear at the front and back of driving brasses has become more noticeable. This excessive wear of brasses aids, to a certain extent, the lubrication of the journals provided with grease cellars by permitting a greater movement of the journals back and forth in the boxes, without which satisfactory lubrication with grease is impossible. This movement is much more detrimental to the larger equipment and it becomes more desirable to reduce it to a minimum, which in turn reduces the lubrication afforded by the grease. Moreover, the larger cylinders and heavier wheels bring the centers of the driving boxes further from the centers of the crank pins and closer together, still further adding to the necessity for reducing this movement as well as increasing the need of lubricating the journals properly.

It would seem that a driving box would eventually be developed to provide a greater area to take piston and rod thrust by having the bearing extend down below the center line of the journal. This construction would necessitate oil lubrication with some positive means of application, as restriction of this movement to only that required for proper operation of the journal with oil lubrication would make it impossible to lubricate satisfactorily with grease. Any improvement along this line would show beneficial results, especially on the heavy equipment, and hasten the adoption of some positive mechanical means of supplying oil of any desired consistency to journals of all classes of railway equipment in an absolutely reliable manner.

Freight Car Loading

THE LOADING of revenue freight continued through the week of February 11 the increase which has been shown each week since the first of the year, according to the weekly report of the Car Service Division of the

American Railway Association. The total was 788,412 cars, as compared with 687,867 in the corresponding week of last year and 786,663 in 1920. This is the first week for a long time in which the loading exceeded the corresponding week of 1920. The increase as compared with the previous week was 34,000 cars. Increases as compared with the corresponding week of 1921 were shown in the loading of all classes of commodities except coke, forest products, and ore.

The freight car surplus showed another large drop during the week ending February 8 to 296,659, a decrease of 34,022. There were 121,528 surplus box cars and 123,119 surplus coal cars.

The number of bad order cars on February 1 was 331,050, or 14.5 per cent, an increase of 11,538 as compared with the number on January 15.

General News Department

The Boston & Maine has decided to sell advertising space in passenger cars and in station buildings and has made a contract with George W. Roebling, advertising agent, of New York.

L. M. Parker, secretary to Mr. Hooper of the United States Railroad Labor Board and at one time adjutant of the Soldiers' Home at Hampton, Va., has been appointed secretary of the Board, succeeding C. P. Carrithers. W. M. Hart, assistant statistician of the Board, has been appointed chief statistician, succeeding V. J. Banzer.

Two hold-up men boarded a Denver & Rio Grande train at Alamosa, Colo., on the night of February 18, and after shooting down the messenger in the express car, ransacked that car and then proceeded to go through the passenger coaches, robbing the passengers. The men then stopped the train and made their escape. The express messenger was seriously injured and is not expected to recover.

A. W. Mellon, secretary of the treasury, has issued a statement saying that newspaper reports to the effect that he approves of a plan to give a government guaranty to issues of railroad equipment obligations are without foundation. No such plan has ever been presented to the treasury for consideration. This statement was called forth by the publication of newspaper articles which stated that the Cabinet was considering the suggestion, made by Secretary Hoover in his statement before the Interstate Commerce Commission, that the government might guarantee railroad equipment trust obligations.

Historic Iron Box Car Wrecked in Blast

Box Car No. 90190, of the Nashville, Chattanooga & St. Louis was destroyed by the explosion of a case of dynamite at Hollow Rock Junction, Tenn., last week. This car was the first metal box car ever used in the Southern States. It was commandeered by General Sherman as an ammunition carrier in his advance on Atlanta, in 1864.

The Pere Marquette's Budget for 1922

The proposed new shops of the Pere Marquette at Wyoming (Grand Rapids), Mich., constitute the largest item in the budget of that road for 1922, which amounts to \$4,035,000. For the construction and equipment of the shops the allotment is \$1,400,000. Other improvements include the completion of the Flint Belt line; the installation of a telephone dispatching system between Grand Rapids and Petoskey, and between Holland and Pentwater; \$100,000 for two bridges which will ultimately represent an outlay of \$700,000, and \$1,300,000 for ballasting and rail requirements.

Music at Sacramento Shops

Employees of the Southern Pacific shops at Sacramento, Cal., are having great success with their musical organizations, consisting of a 38-piece band and a glee club of 48 voices. These have been developed at the shops and have attracted favorable attention in many sections of the state during the last few years. Although organized as recently as 1917, during the Liberty Loan drive the organizations have made great strides. In a little over four years these two organizations, which are under the direction of J. L. Weida, foreman of locomotive machine shop No. 1 at Sacramento, have raised over \$14,000 for charitable purposes, have built up a music library valued at over \$3,000, and have equipped themselves with uniforms valued at several thousand dollars.

One of the members of the glee club which has brought the

members much favorable notice is their Christmas carol singing. On Christmas morning at five o'clock the club makes the rounds of all the hospitals, city and county jails, homes of shop employees who have been sick, and to any place where it is felt that music would bring cheer.

Frisco Votes \$7,776,000 Improvements

The St. Louis-San Francisco has authorized an expenditure of \$7,776,000 in 1922, for repairing and modernizing cars and locomotives, purchasing new equipment, and in improving the road and its facilities. The appropriation for new equipment is \$1,260,000, and that for the repair and improvement of existing equipment approximately \$3,072,500. An appropriation of \$1,691,000 has been set aside for laying 186 miles of track, including new second main track out of St. Louis and Kansas City. Other improvements to roadway will take approximately \$1,500,000.

Reading Conductor and Engineman Convicted

Conductor Evans and Engineman Yeakel, the men immediately responsible for the fatal collision on the Philadelphia & Reading at Woodmont, Pa., on December 5, when 27 persons were killed, were tried in court at Norristown, Pa., last week, and were convicted of criminal negligence; the maximum penalty for which is five years' imprisonment or \$5,000 fine, or both. The men were released on bail of \$5,000 each, pending application for a new trial. The verdict of the jury included a recommendation for mercy. According to press reports, the jury, in which were two women, balloted for twenty hours before reaching a decision, 200 ballots being cast.

Ticket Clerks

H. L. Hungerford, superintendent of the Charlotte division of the Southern Railway, in a letter headed as above and circulated among "whom it may concern" gives some condensed advice as follows:

"About nine-tenths of any traveler's opinion of a railroad is made at the ticket window. The reception they get there, the way they are handled, the way they are taken care of, go far towards establishing what travelers will think of that railroad.

"The ticket clerk's job is not an easy one. He has to be a diplomat and a gentleman, he has to have tact and patience and an easy working smile.

"You have to remember that you are never doing a person a favor to sell him a ticket. If people find it difficult or unpleasant to do business at the ticket window that is a sure sign of a poor ticket clerk. Think of the men and women who come to you as being your guests in your house. They are invited to come, and they have every right to expect courteous and cordial interest in their wants.

"If you can't meet and care for people in this spirit; if you can't or won't be courteous, and helpful and gracious and pleasant at every step of your work; and with your fellow employees as well as with the public—*Don't try to be a ticket clerk.*"

Mine and Rail Unions Meet

The joint conference of representatives of the larger railroad labor organizations and the United Mine Workers of America, scheduled for February 21, was held on February 22 and resulted in the adoption of a "toothless" protective agreement for "closer co-operation of forces which will operate to protect more effectively the interests of workers in mining and transportation." While the meeting was held behind closed doors, reliable reports of the developments were circulated. One of these reports quoted Quilliam Green, secretary-treasurer of the miners' or-

ganization, as saying, "It is not what we do in this meeting but what the public believes we can do that is important. If the public believes we can form a working co-operating alliance, the public will force operators to grant our demands."

The substance of the resolution adopted at the conference is contained in the following:

"After mature deliberation and with a full sense of our responsibility we declare that the mutuality of interests of the employees in these basic industries must be recognized and we assert our purpose to apply every honorable method to secure adequate compensation for service rendered and to maintain proper American standards of living. When it becomes apparent that any one or group of the associated organizations is made the victim of unwarranted attacks or its integrity is jeopardized, it will become the duty of the representatives of each of the associated organizations to assemble to consider the situation. Ways and means may then be considered and applied to best meet the emergency. Action taken under this section is subject to approval by each organization represented. This plan shall become operative when ratified by the constitutional authorities of each associated organization."

A. R. E. A. Program

The program for the twenty-third annual convention of the American Railway Engineering Association, which will be held in the Congress Hotel, Chicago, on March 14-16, is as follows:

Tuesday, March 14

President's address.
Reports of secretary and treasurer.
Reports of standing and special committees.
Yards and Terminals.
Electricity.
Ballast.
Iron and Steel Structures.
Standardization.
Signals and Interlocking.
Ties.
Track.

Wednesday, March 15

Shops and Locomotive Terminals.
Roadway.
Economics of Railway Location.
Stresses in Railroad Track.
Records and Accounts.
Signs, Fences and Crossings.
Water Service.
Uniform General Contract Forms.
Annual dinner at 6:30 P. M.

Thursday, March 16.

Masonry
Rail.
Economics of Railway Labor.
Wooden Bridges and Trestles.
Economics of Railway Operation.
Buildings.
Wood Preservation.
Rules and Organization.
Memorial Meeting—John Findley Wallace.
New business.
Election and installation of officers.
Adjournment.

Friday, March 17.

Excursion to Gary Industrial District.

March Meeting of Signal Section

F. B. Wiegant, chairman, and H. S. Balliet, secretary, announce that the ninth meeting of the Signal Section of the American Railway Association will be held at the Drake Hotel, Chicago, on Monday and Tuesday, March 13 and 14. The committee reports to be considered at this meeting are as follows:

Committee I—General provisions for major specifications. Committee II—Specifications for concrete trunking, capping and supports; for universal compensation of pipe line and for mechanical interlocking; also three drawings. Committee III—Specifications for electric wiring for interlocking plants. Committee IV—(Direct current automatic block signaling); requisites

for circuits; approach lighting of signals. Committee V—Rules for signal maintenance and examination papers on signal maintenance. Committee VI—Seven revised standard drawings.

Committee VII—Tables of standard resistances of direct current relays, with their operative characteristics. Committee X—Report on colors for signals. Committee XI—Specifications for storage battery jar and for cement concrete battery box. Committee XII—(Contracts.) Table of interlocking units and values.

Committee XIII—(Electrical Testing.) Instructions for inspecting and testing direct current relays and indicators. Method of testing first range d. c. bottom of mast, upper quadrant, motor signals, push clear type, in service. Method of testing first range, upper quadrant, d. c. motor signals, top mast or bottom of mast type, having pull clear connections. Committee XV—(Valuation.) Table of average service life of the important units of the different types of signal installations. Forms for reporting distribution of signal labor and material charges and credits. Committee XVI—Specification for illuminating Oil No. 5003.

Committee XVIII—Discussion of factors involved in the standards of safety for track circuits. Methods of making d. c. track circuit tests for rail and ballast resistance with forms for recording same. Committee XX—(Highway crossing protection.) Twelve recommendations.

Proposed Legislation to Regulate Aeronautic Industry

The Board of Directors of the Chamber of Commerce of the United States has authorized its Department of Transportation and Communication to interest itself actively in urging broad enabling legislation in commercial aeronautics. The department committee recommends in principle the immediate support of basic national legislation on aeronautics providing for a proper regulatory procedure in the nature of an enabling act providing for the continuation, administration and improvement from time to time of an aeronautical code under proper government authorization, adequate facilities within the Department of Commerce for promoting the regulation and development of commercial air transport operations, intrastate state legislation to conform as nearly as possible to the basic federal legislation, and encouragement of widespread public support of essential aeronautical legislation.

The department's statement says that through lack of legal and economic status aviation is not receiving the practical encouragement it deserves, as a most powerful arm of national defense and as a new transportation agency of great potentiality. The aeronautic industry is the only important case on record of a new industry asking to be regulated from the inception of its operations, whereas the regulation of rail transportation and public utilities have been developed under public pressure.

"During 1920, the Army air service flew 6,250,000 miles; Navy air service, 1,500,000 miles; Air mail, 1,500,000 miles; total, 9,250,000 miles, excluding private and commercial flying. The Manufacturers' Aircraft Association reports 15 commercial companies with over 130 planes in service carrying 86,000 passengers with a gross revenue of over \$800,000. The post office department reports that including the calendar year 1920, the Air mail carried 41,000,000 letters, with an operating cost of \$1,340,000, equal to about \$1 per plane-mile, or slightly exceeding three cents per letter. In the fiscal year 1920-21, the Air mail flew 1,771,000 miles, reducing the cost to 85 cents per plane-mile, carrying an average of 400 pounds per plane. Since the last change in government administration, all air-mail routes have been discontinued, except the New York-Chicago-San Francisco route, due to limited appropriations.

"Yet we find that Europe now has scheduled air service (passenger, mail and freight) between 30 or 40 principal commercial centers. Service runs by time-table, with efficiencies reported on some routes as high as 90 to 98 per cent of scheduled flights run. Europe has largely developed commercial aviation, while America has concentrated on the Air mail. The United States Air mail mileage last year exceeds the commercial mileage of both Britain and France, but our commercial mileage is hardly comparable. * * * Air subsidies in Europe have been important accelerators of commercial air transport. England has granted about \$1,000,000 per year for a three-year period. Government aircraft are operated privately under rental contract. France has given large subsidies. Canada is operating under approximately the International Code and had nearly 500 licenses in force last fall."

REVENUES AND EXPENSES OF RAILWAYS

MONTH OF DECEMBER AND TWELVE MONTHS OF CALENDAR YEAR 1924

Traffic News

The Norfolk & Western has reopened its commercial office in Little Rock, Ark., with F. W. Hampson in charge as commercial agent.

The Akron Traffic Association, Akron, Ohio, has elected the following officers for 1922: president, E. W. Swartz; vice-president, E. L. Morgan; treasurer, C. M. Groninger; secretary, H. L. Sovacool; directors, C. W. Meacham, F. M. Evans, Jr., E. J. Stubbs and H. X. Knox.

Coal Production Increasing

The total output of bituminous coal during the week ended February 11 is estimated by the Geological Survey at 10,326,000 tons, an increase of 620,000 tons over the preceding week. Except for the latter part of October when consumers were stocking up in anticipation of a possible railroad strike, this was the largest output attained in any week in the coal year 1921-22.

Time for Filing Overcharge Claims Extended

The House on February 20 passed the bill to extend the time for filing straight overcharge claims against the Railroad Administration from March 1, 1921, as provided in the transportation act, to September 1, 1922, and to extend the time for filing suits on awards of reparation by the Interstate Commerce Commission until one year from the date of the commission's decision. The bill had been passed by the Senate but an amendment was added in the House to allow a longer time and the Senate on February 21 passed the bill as amended in the House.

Freight Traffic in 1921

Traffic statistics filed with the Interstate Commerce Commission show that during 1921 there was a falling off in the freight traffic of the country of approximately 23.3 per cent compared with the volume the previous year. The decline was the greatest both relatively and absolutely that the railroads of the United States have ever suffered in the course of a single year. The net ton miles, totaled 344,167,000,000 or 104,390,000,000 less than in 1920.

The greatest decrease was in the Eastern district where the net ton miles for the year amounted to 172,394,000,000, a reduction of 55,906,000,000 or 24½ per cent. The Western district showed a reduction of 22½ per cent, or 36,910,000,000 below 1920; and the Southern district 20.6 per cent or 44,729,000,000 in 1921 compared with 56,303,000,000 in 1920.

Reports for December from all but one road, the Detroit, Toledo & Ironton, showed a reduction in traffic on the railroads of the nation of 25.9 per cent compared with the same month the year before total 25,707,000,000, or 8,963,000,000 less than December, 1920.

The compilations are based on reports from carriers representing a total length of road of 233,459 miles.

THE SAFETY REPORT of the Chicago Great Western for 1921 shows that no passenger was killed on the entire system; and not an employee was killed on the Western division. There was no reportable injury of an employee on the Western division in 120 days, and none on the Northern division in 118 days.

APPOINTMENT OF A RECEIVER for the United Brotherhood of Maintenance of Way Employees and Railway Shop Laborers was asked in a petition filed by the Bacon Brothers Company of Toledo, Ohio, in the federal court at that city on February 16, the receiver to take possession of all property of the brotherhood, including funds in the Brotherhood of Locomotive Engineers' Co-operative Bank. This application is supplementary to the original complaint filed several months ago, in which the union was sued for breach of contract to the amount of several hundred thousand dollars in damages.

Commission and Court News

Interstate Commerce Commission

The commission has suspended until June 10, the operation of proposed reductions varying from 1½ to 4 cents per 100 lbs. in the rates on grain from points on the Illinois Central in Illinois to New Orleans, for export to Europe.

A hearing on advances in cotton rates has been scheduled for March 13, before Examiner Cassidy, of the Interstate Commerce Commission, at Memphis, Tenn. It involves increases in cotton rates affecting all points in the Mississippi Valley. The carriers proposed a rate of \$1.37 per 100 lb. from Memphis, to Boston, Mass., and other eastern points, and of 90 cents from Memphis to New Orleans, La. The present rate is \$1.12 from Memphis to Boston and 69 cents from Memphis to New Orleans.

Investigation of Rates on Bunker Coal

The commission on its own motion has instituted an investigation into rates on bunker coal, from all points of origin to all ports of the United States. Many of the carriers serving Atlantic ports make lower rates on coal to such ports for use in bunkering vessels than they make on coal to the same ports for local use. The investigation will deal primarily with the lawfulness and propriety of the practice of discriminating in such rates. A hearing has been scheduled for March 20, at Washington, before Examiner W. P. Bartel.

Investigation of Freight Rates in Southern Territory

At the request of carriers operating within southern territory and of many interested shippers, the commission on its own motion has instituted an investigation of the class rates applicable in interstate commerce to, from and within southern territory.

The rates in question, in many instances, differ materially for substantially similar hauls on like classes of traffic and the relationship to first class of the rates on the lower classes varies greatly in many cases. The investigation is favored by most of the commissions of the southern states. The carriers have been working upon a revision of the rates for many months. Intrastate rates have not been included within the scope of the investigation, but the commission in reaching conclusions with respect to the interstate rates will consult with the state commissions and is confident of their co-operation.

State Commissions

The Minnesota Railroad and Warehouse Commission is preparing to file a petition of intervention with the Interstate Commerce Commission in the case of the Sioux City Live Stock Exchange vs. the Chicago, St. Paul, Minneapolis & Omaha, and the Great Northern. It is claimed that there is discrimination against the state of Iowa resulting from the Minnesota commission's order allowing live stock shippers to be carried back to their homes free. This is not permitted in Iowa and shippers in that state are taking advantage of Minnesota's free fare inducement to take their stock to the South St. Paul market.

Personnel of Commissions

George R. Edwards, member of the state railroad commission of Mississippi, has resigned.

Court News

Provisions for Handholds and Sill Steps

The New York Appellate Division holds that the requirements of the Safety Appliance Act of 1893 as to handholds, and of the act of 1910 as to sill steps, were not suspended by the Interstate Commerce Commission's orders of March 13, 1911, and November 2, 1915—Green v. L. V., 191 N. Y. Supp., 489.

Foreign Railway News

Dutch Secure Chinese Bridge Contracts

LONDON.

The Netherland Syndicate, Ltd., has been authorized by the Chinese government to place orders in Holland for the construction of 150 railway bridges of various spans. These bridges are for the eastern part of the Lunghai Railway which is now under construction.

West Australian to Build Locomotives

LONDON.

The West Australian government will shortly be in the market for the supply of drills, milling machines, plate rolls, grinders and other equipment to the value of £20,000 (or \$97,200 at the normal rate of exchange), to enable the railway workshops to undertake the construction of locomotives.

Electrification in Czecho-Slovakia

LONDON.

A Reuter cable states that plans for railway electrification in Czecho-Slovakia extend over a period of 20 years. A great saving in coal is expected. The first lines to be electrified are those converging on Prague with a radius of 30 miles in order to avoid the transport of coal to the capital.

Deplorable Condition of Russian Railroads

LONDON.

The Russian railways are in a deplorable condition owing to the lack of supplies. On January 1, 1917, the serviceable mileage was approximately 44,000. On January 1, 1921, it was only about 29,000 miles. The number of locomotives in good condition on January 1, 1917, was 17,012, of which 36 were new. On January 1, 1921, the number was 2,921, of which 35 were new. The percentage of unserviceable locomotives on January 1, 1917, was 16.8 per cent. On January 1, 1921, it was 64.2 per cent.

Danish Railway Rate Reduction Proposed

LONDON.

Although the Danish State Railways show a deficit for the half year ending October, 1921, the Danish Traffic Minister has introduced a bill reducing freight rates from between 12½ per cent to 33½ per cent. Passenger rates will be reduced by about 10 to 12 per cent for the third class and the new second class fares will be approximately 80 per cent higher than in 1914. Zone rates will be maintained, but reduced for longer distances. The extra charge for express train tickets will be reduced to less than half of the present charge.

Unbusinesslike Accounting on Belgian State

The Belgian State Railway Administration has decided to change its accounting methods, according to the Wall Street Journal. Heretofore it has been the custom to begin each year with a clean slate. Deficits or surpluses were not carried over. Consequently the State Railway could suffer a loss one year and make a slight profit the next, and when the statement for the second year was given out it would appear that the railways were in good financial shape. Hereafter the railways will be expected to justify themselves over a period of years.

Mexican Government Wants Southern

Pacific to Build Line

Amado Aguirre, secretary of the Department of Communications and Public Works of Mexico, says that the government is anxious to have the Southern Pacific of Mexico complete its branch line between Tepic and La Quemada, as by establishing a junction at Orendain it would connect with the National Railways of Mexico and form a direct line from Mexico City to

Nogales, Sonora. This branch may be extended later via Plan de Barrancas or the Pajarito range, but it is probable that the first point will be chosen. Notwithstanding the fact that the canyons at Plan de Barrancas are deeper, it is probable that this route will be selected as the line will thereby be shortened a number of miles and several curves avoided, it is stated.

It is announced that the Southern Pacific is willing to extend this branch in view of the benefit to be derived from the greater volume of freight and passenger business, which would connect with the National Railways of Mexico, but that this is impossible at present, due to extensive repairs on the line now in operation, made necessary by the deterioration suffered during the revolutionary period.

Mexico Defends Holding of Interoceanic

In response to the recent formal and emphatic demand of the British shareholders of the Interoceanic Railroad that that property be returned to them by the Mexican government, the official explanation is made in Mexico City that under the original concession granted for the construction and operation of this road it was expressly provided that the government could take it over in time of military necessity. This was done during the revolutionary period and it is asserted that the "military necessity" still exists, not only as to the operation by the government of the Interoceanic but of the other former individual properties that now comprise the National Railways of Mexico. The authoritative statement also is made here that "the government is excused from paying damages and indemnity, accrued during the revolutionary period until a final liquidation and return of the railroad is effected."

According to a statement issued by Manuel Padres, chairman of the board of directors of the National Railways of Mexico, the Interoceanic is not operated under lease by that company. He said that the Mexican government owns 55 per cent of the stock of the Interoceanic Railway and that the action of the minority stockholders at their meeting in London is of no legal effect.

New Working Rules in Germany

LONDON.

The new regulations regarding working hours on the German railways have been agreed to, according to Modern Transport (London). In principle they maintain the eight-hour day, but at the same time aim at a more rational and economic use of all the employees. The scheme deals with the actual working hours, the daily rest time and the number of rest days. It points out that the conditions and degrees of employment within the railway service are widely different from those generally prevailing in industry and other fields of employment and it differentiates between hours of actual work and hours when men are required only to be present or available, but are not doing any work. As the nature of the latter class of hours varies materially, rules have been drawn up as to whether and to what extent this time of being in readiness can be counted as part of the 8 working hours.

This should make it possible in some cases to have only two shifts for 24-hours instead of three. In other words the eight-hour day should be transformed into eight working hours. The "service shift," or the aggregate of the actual hours of work including the time the men are to be in readiness, the pauses and the service trips, is not to exceed 15 hours, but the duration is subject to various circumstances and regulations, and the maximum will only come into operation when a minimum of service or work is required from the men. The minimum hours of rest if spent at home are to be eight consecutive hours and 10 hours for the train service men. The number of rest days will not be less than 52 during a year, each of at least 32 consecutive hours. Under circumstances of extra heavy traffic or other emergencies the railways are at liberty to exceed the regular working time of any of their employees.

A BILL has been introduced in the legislature of Kentucky seeking to give to the Railroad Commission of that state the same power over intrastate transportation that the Interstate Commerce Commission has over interstate affairs.

Equipment and Supplies

Equipment Program of the St. Louis-San Francisco

The St. Louis-San Francisco has authorized the expenditure of \$7,766,000 in 1922 for new equipment, the repair and improvement of old equipment and other improvements included in the amount is \$1,260,000 for 8 steel coaches, 6 steel chair cars and a 150-ton steam derrick; \$360,000 for rebuilding 250 steel coal cars; \$300,000 for rebuilding 9 locomotives; \$1,431,000 for bettering existing equipment; \$205,000 for new power plants; \$328,000 for rock blasting; \$280,000 for permanent concrete bridges; \$46,000 for new fences; \$35,000 for new water-treating plants; and \$87,500 for improvement of coaches in branch line service. All mail and mail apartment cars are to be entirely rebuilt; baggage cars are to be improved; 7,000 freight cars rebuilt; 1,150 furniture and vehicle cars to be improved; and electric lights to be installed in coaches on branch lines, and steel underframes to be placed in all wooden coaches.

Locomotives

MITSUI & Co., New York City, are inquiring for 11 tank locomotives, 2-4-2 type; also for 2 internal combustion locomotives adapted for kerosene, of 30 in. gage. All these locomotives are for service in Japan.

THE SOUTHERN RAILWAY is rebuilding 25 consolidation type and 20 Pacific type locomotives in its own shops. These locomotives will be equipped with superheaters and Chambers throttle valves. Outside valve gear will be added to the locomotives not yet equipped with this device.

Passenger Cars

THE DELAWARE & HUDSON is asking for prices on 15 coaches and 2 buffet cars.

THE GREAT NORTHERN, noted in the *Railway Age* of November 26 (page 1068), as inquiring for 35 passenger cars has withdrawn this inquiry.

CENTRAL OF NEW JERSEY.—This company, which was reported in the *Railway Age* of February 11 as inquiring for 25 passenger cars, 10 combination passenger and baggage and 10 baggage cars, has ordered 25 coaches from the American Car & Foundry Company; also 10 cars from the Bethlehem Shipbuilding Corporation, Harlan Plant, and 10 from the Standard Steel Car Company.

Freight Cars

THE ATLANTIC COAST LINE is inquiring for 100 Steel phosphate cars.

THE PEORIA & PERIN UNION is inquiring for from 25 to 35 gondola cars.

THE CENTRAL OF BRAZIL, is inquiring through the car builders for 10 freight cars.

THE ATLANTIC PETROLEUM COMPANY, 233 Broadway, New York City is inquiring for 100 tank cars, of 4,000 gal. capacity, for service in Italy.

THE SOROCABA RAILWAY (Brazil) is inquiring through the car builders for 300 tank cars, of 12 tons capacity and for 200 gondola cars, of 28 tons capacity.

THE CERRO DE PASCO COPPER CORP., 15 Broad Street, New York City, is inquiring for from 20 to 40 steel concrete cars, also for 4 all-metal hopper cars, of 60 tons capacity.

THE PACIFIC FRUIT EXPRESS, reported in the *Railway Age* of January 21, as inquiring for 3,300 refrigerator cars, has ordered 200 of these cars from the Standard Steel Car Company.

THE UNITED SALT COMPANY, New York City, reported in the *Railway Age* of January 28, as inquiring for 50 freight cars, has ordered 50 tank cars, of 20 tons capacity, from the Magor Car

Company. These cars are for use on the Tela Railway, Honduras.

THE GREAT NORTHERN, reported in the *Railway Age* of November 19, 1921, as inquiring for 500 refrigerator cars, has ordered this equipment from the General American Car Company; also 500 all steel gondola cars from the Pressed Steel Car Company, and 500 stock cars from the Pullman Company.

Iron and Steel

THE CHESAPEAKE & OHIO is inquiring for 21,000 tons of rail, including 3,000 tons for the Hocking Valley Railway.

THE CHICAGO UNION MAIL TERMINAL has ordered 370 tons of conveyor and structural steel supports from the Pittsburgh Bridge & Iron Company.

THE BANGOR & AROOSTOOK recently placed an order with the Bethlehem Steel Company for 2,000 tons of 80-lb., open hearth steel rails, with angle bars to fit.

THE NEW YORK CENTRAL will receive bids until 12 o'clock noon, March 3, for 23,000 tons of fabricated steel, for the proposed bridge over the Hudson river at Castleton, N. Y.

Track Specialties

THE HARBOR DEPARTMENT OF LOS ANGELES, CAL., will open bids on March 3, for miscellaneous supplies including 30 frogs, 30 switches, 30 stands and other track material.

THE CINCINNATI NORTHERN is inquiring for 300 kegs of track bolts and 10,000 tie plates, for which bids are to be submitted to W. J. Hiner, Cincinnati, Ohio, on or before 12 o'clock noon of February 27.

THE CLEVELAND, CINCINNATI, CHICAGO & ST. LOUIS is inquiring for 2,975 kegs of track bolts, 81,200 tie plates, 300,000 galvanized tie dating nails, bids for which are to be submitted to W. J. Hiner, Cincinnati, Ohio, on or before 12 o'clock noon February 27.

Machinery and Tools

THE RICHMOND, FREDERICKSBURG & POTOMAC has placed orders for some tools for the repair of elliptical springs.

Miscellaneous

THE NEW YORK CENTRAL will receive bids until 12 o'clock noon, March 6, on its requirements of track bonds; the furnishing, delivery and erection of one 2,000 k.w. synchronous motor generator set, appurtenances, switchboards, wiring and work of such character.

Grand Central Terminal, New York

Supply Trade News

The **Eymon Crossing Company**, Marion, Ohio, has opened an eastern office in Boston, Mass., in charge of **G. T. Wiswell**, formerly with the New York, New Haven & Hartford.

The **Ryan Car Company** has increased its capital stock from \$2,500,000 to \$6,000,000, by the issuance of 35,000 shares of additional common stock with a par value of \$100 per share.

The **Barnes Railway Rail Brace Company** has been organized at Willis, Tex., by **M. E. Barnes** of that city; **Mack Hannah**, of Port Arthur, Tex., and **C. H. Long**, San Antonio, Tex.

T. J. O'Meara, office and construction engineer and formerly assistant signal engineer of the New York Central at Albany, N. Y., has entered the service of the **Hall Switch & Signal Co.**, Garwood, N. J., as electrical engineer, effective February 15.

Pendleton E. Lehde has been appointed a special representative in the state of Louisiana and the southern part of Mississippi of the **Roller-Smith Company**, New York City. Mr. Lehde's headquarters are at 609 Whitney central building, New Orleans, La.

C. L. Dewey, formerly associated with the Dewey Cement-Gun Company, and the Traylor-Dewey Contracting Company, Allentown, Pa., is now with the **Cement-Gun Construction Company**, Chicago, and will devote his time to the development of cement-gun contract work.

General Railway Signal Company

For the year ended December 31, 1921, the General Railway Signal Company reports earnings of \$146,575, as compared with \$748,358 for 1920. The surplus December 31, 1921 was \$554,629, as against \$975,684 at the close of 1920.

Referring to the recent automatic train control order of the Interstate Commerce Commission, the annual report says:

"For more than ten years your company has been engaged in the development of both automatic train stop and automatic train control devices and has made and patented many valuable inventions, and has by purchase and license acquired rights under many other patented inventions in these fields. We are, therefore, in an excellent situation to furnish high grade, dependable devices of the required character as well as the block signaling systems in conjunction with which they should be employed."

Pressed Steel Car Company

The earnings of the Pressed Steel Car Company for the year ended December 31, 1921, after deducting for depreciation, obsolescence, etc., were \$681,906. In 1920 the company reported net profits of \$2,531,805. Dividends on the common stock were reduced from \$1,000,000 in 1920 to \$250,000 in 1921. On the preferred stock \$875,000 was paid in both years, making the total amount paid in dividends \$1,125,000 in 1921, as compared with \$1,875,000 in 1920. The working capital—surplus and undivided profits—on December 31, 1921, was \$14,677,900.

The general balance sheet shows inventory valued at \$2,939,771, against \$11,237,622 at the close of 1920. Cash on hand was \$1,497,192, against \$2,954,137, and notes and accounts receivable \$7,525,167, against \$9,052,208. Accounts and notes payable were reduced from \$14,080,724 to \$3,663,915.

The annual report signed by President F. N. Hoffstot says in part:

Your company's business is so indissolubly linked with the business of the railroads that anything that affects them affects us. Before the war the railroads were about adjusted to new conditions resulting from the supervision of their business by the Interstate Commerce Commission and would have replaced their depleted equipment had it not been necessary to bend their energies first to help meet the extraordinary demands from abroad and then

after the United States entered the war, to support our war program. Then quickly followed government control of the railroads, resulting ultimately, by the granting of increased wages, in the entire overturning of the rules for employment, established as a result of many years of experience. Since the armistice, one by one the pegs supporting this government protection have been removed, but unfortunately this action was not uniform or intelligent.

We are often asked the question, "When will the railroads begin buying?" When they have difficulty in taking care of their overhead charges, let alone setting aside anything for surplus, and must contend with high costs and a reduced volume of traffic, they cannot be expected to incur liabilities for the purchase of rolling stock, particularly at a time when a large part of the equipment they own is not in service, nor will they have a volume of traffic to produce increased revenues unless the manufacturers along their lines are operating successfully.

When car business does revive there will be, in addition to the work we have had in former years, considerable "heavy repairs," as large cars built 20 years ago are only now beginning to need substantial repairs, and few railroads are fitted to do this work as economically as car shops.

Indications point to a large demand for passenger cars, as for years few have been bought, and while this is not an important factor with us, it will help. During the year we took a substantial order for China, which we hope to complete early this year.

Obituary

William C. Sargent for 22 years secretary and also a director of the Chain Belt Company, Milwaukee, Wis., died on February 5. Mr. Sargent was born at Troy, N. Y., on February 2, 1849. In 1871 he went to St. Paul, Minn., and in 1900 became secretary and later a director of the Chain Belt Company, Milwaukee. He was also a director of the Federal Malleable Company, West Allis, Wis.

Joseph E. Schwab, formerly (from 1902 to 1904), president of the American Steel Foundries Company, at New York, died at his home in New York City on February 17, at the age of 57. He was born at Loretto, Pa., and joined the Carnegie Company two years after his brother, Charles M., became identified with it and since that time they were closely associated in various business enterprises. Joseph Schwab served as an engineer in the Carnegie Company until 1894, when he became manager of its Duquesne works. When the United States Steel Corporation was formed, he left the Carnegie Company to become assistant to his brother, the president of the corporation. Two years later he became president of the American Steel Foundries Company and, after a few years, he retired from active participation in industrial properties.

Trade Publications

GASOLINE POWER UNITS.—The Buda Company, Chicago, has issued bulletin No. 388, describing a four-cylinder gasoline power plant, which it has recently developed for use in driving electric generators, arc welding sets, triplex or other types of pumps, hoists, concrete mixers, air compressors and for similar uses in machine shops, etc.

ELECTRIC ENGINE COALERS.—The Robert & Schaefer Company, Chicago, has just issued a four-page folder illustrating locomotive coaling equipment involving the use of an inclined elevator. The descriptions cover plants without elevated storage where the cars and the track hopper afford the storage, the coal being dumped directly from the elevating bucket into the locomotive tender.

GENERATOR COOLING APPARATUS.—The B. F. Sturtevant Company, Boston, Mass., has issued Bulletin No. 246 describing and illustrating in detail its generator cooling apparatus. A psychrometric diagram showing the percentage of relative humidity has also been included in the bulletin which contains 27 neatly arranged pages.

COALING STATION EQUIPMENT.—The Howlett Construction Company, Moline, Ill., has issued a 25-page, loose-leaf booklet, describing the types of coaling stations it erects, together with its line of coaling station equipment. This equipment consists principally of coal gates and aprons, electric hoists, hoisting buckets, car pullers, etc., all of which are illustrated by half-tones and line drawings.

Railway Construction

AMERICAN RAILWAY EXPRESS.—This company is constructing a new brick and concrete station and office building at Sweetwater, Tex.

ATCHISON, TOPEKA & SANTA FE.—This company, which was noted in the *Railway Age* of February 11 (page 401) as having closed bids for the construction of a branch line from Santanta, Kan., to a point 55 miles westward, the cost of which was estimated at \$1,400,000, has awarded the contract for this work to Scott & White, St. Louis, and construction will be started at an early date. The same company will construct four small store department buildings at Topeka, Kan., estimated to cost \$15,000. A new bridge will be constructed over Stranger Creek, a short distance northwest of Potter, Kan. One-story brick section houses will also be constructed at Strong City, Kan., Cherryvale and Ottawa Junction, estimated to cost approximately \$7,500 each.

CHICAGO, ROCK ISLAND & PACIFIC.—This company has awarded a contract to the Railway Water & Coal Handling Company, Chicago, for the construction of a steel coal chute at Bridgeport, Tex., estimated to cost about \$30,000. The same company contemplates the construction of a two-story brick freight house at Omaha, Neb., estimated to cost \$70,000, and a one-story brick passenger station at Graham, Tex., estimated to cost \$25,000.

ELGIN, JOLIET & EASTERN.—This company, in conjunction with Chicago & Joliet Electric, and the state highway department of Illinois contemplates the construction of a viaduct over the tracks at East Cass street, Joliet, Ill.

ILLINOIS CENTRAL.—This company closed bids on February 23, for the installation of a pipe line at Centralia, Ill., to extend from the city water main in that city to the company's yards, a distance of about 3 miles.

ILLINOIS CENTRAL.—This company contemplates the construction of a freight and passenger station at Clarksdale, Miss., estimated to cost \$250,000, of which the city and commercial organizations at that point will bear a proportion of the expense.

INTERNATIONAL & GREAT NORTHERN.—This company has been requested by the state railroad commission of Texas to rebuild its bridge over Greens Bayou, near Aldine, Tex.

KANSAS & OKLAHOMA SOUTHERN.—This company has been authorized by the Interstate Commerce Commission to construct a line from Caney, Kan., to Vinita, Okla., a distance of 61 miles, and a further extension from Vinita, Okla., northwest for a distance of about 10 miles into the coal mining district of that state.

LOS ANGELES & SALT LAKE.—This company will construct a new freight station at Long Beach, Cal., and has applied to the railroad commission of that state for permission to construct standard gage tracks on certain streets in that city for the purpose of serving the proposed station.

LOUISIANA RAILWAY & NAVIGATION.—This company, which was noted in the *Railway Age* of January 28 (page 303) as having preliminary plans prepared for the construction of a passenger station at New Orleans, La., has petitioned the railroad commission of that state and the city council of New Orleans for permission to extend its tracks in that city and to construct the station at Gerod and South Romfort streets. The city has demanded that the cost of the station must not be under \$125,000, and also that the municipal government shall not be held liable for injury to private property in that neighborhood.

MINARET & WESTERN.—This company has awarded a contract to the Meritt Frazer Company,ureka, Cal., for the construction of a bridge over the San Joaquin river at Friant, Cal., the cost of which is estimated at \$60,000. The structure will be 1,300 ft. in length of which 400 ft. will be of steel construction.

MINNEAPOLIS, ST. PAUL & SALT LAKE.—This company contemplates the construction of new terminal facilities at Park Falls, Wis. A four-house repair and machine shops, car sheds

and other necessary buildings will be constructed at that point at an estimated cost of \$500,000.

NEW YORK CENTRAL.—This company is contemplating the construction of a steel highway bridge, 125 ft. in length, near Syracuse, N. Y., to carry the Newark-Lyons highway over its tracks, eliminating a grade crossing.

NEW YORK, NEW HAVEN & HARTFORD.—This company in applying to the Interstate Commerce Commission for a government loan, including \$3,000,000 for additions and betterments, lists the following among other proposed expenditures for the coming year: Rail and other track material, \$700,000; additional main tracks, \$100,000; additional yard tracks and sidings, \$500,000; signals and interlocking, \$300,000; shop buildings, engine houses, etc., \$150,000; electric power plants, etc., \$600,000; improvements to freight cars, \$150,000; and improvements to locomotives, \$100,000.

PERE MARQUETTE.—This company is preparing plans for the construction of new shops at Wyoming (Grand Rapids), Mich., estimated to cost \$1,400,000. This company will also construct a swing bridge over the Saginaw river at Saginaw, Mich., and a bascule bridge over the Black river at Port Huron, Mich., estimated to cost \$700,000. The Flint Belt line which was started last year will be completed at once at a total cost of \$650,000.

PHILADELPHIA & READING.—This company has awarded a contract to the Bader Construction Company, Atlantic City, N. J., for the construction of a third track between Haddon Heights, N. J., and Magnolia, a distance of 2.7 miles. Creosoted ties, stone ballast and 100-lb. rail will be used. At each end of the third track section an interlocking plant will be installed.

RAILWAYS ICE COMPANY.—This company is constructing a one-story brick icing station, 275 ft. by 100 ft., at Clearing, Ill., at an estimated cost of \$350,000. It will be completed by April 15, and operated by the above company for the Belt Railway of Chicago.

SALT LAKE & UTAH.—This company has been authorized by the Public Utilities Commission of Utah to construct an extension to its line from Springville, Utah, into the Uintah basin, the work to be completed within two years.

SAN ANTONIO & ARANSAS PASS.—This company has under consideration improvements and betterments to its property at Waco, Tex., estimated to cost between \$30,000 and \$40,000. No definite decision has been made as to when the work will be undertaken.

ST. LOUIS-SAN FRANCISCO.—This company will spend \$1,691,000 during the current year for track extensions and the replacement of rails. A second main track will be constructed between Spring Hill, Kan., and Paola, a distance of about 13 miles, and between Windsor Springs, Mo., and Valley Park, a distance of approximately 5 miles; \$673,000 will be spent for grade revision work between Crocker, Mo., Garnsey, and St. John; \$280,000 for new power plants; and \$25,000 for water treating plants. This same company will receive bids until March 1, for the remodeling of its Harvey eatinghouse at Sapulpa, Okla., which is estimated to cost approximately \$65,000.

TRINITY & BRAZOS VALLEY.—This company will reconstruct a station at Donie, Tex., and one at Coolidge, both of which were recently destroyed by fire.

APPOINTMENT of a receiver for the United Brotherhood of Maintenance of Way Employees and Railway Shop Laborers was asked in a petition filed by the Bacon Brothers Company of Toledo, Ohio, in the federal court of that city on February 16, the receiver to take possession of all property of the brotherhood, including funds in the Brotherhood of Locomotive Engineers' Co-operative Bank. This application is supplementary to the original complaint filed several months ago, in which the union was sued for breach of contract to the amount of several hundred thousand dollars in damages.

THE BOSTON & MAINE has decided to sell advertising space on passenger cars and in station buildings and has made a contract with George W. Roebing, advertising agent, of New York

Railway Financial News

BIRMINGHAM & NORTHWESTERN.—Asks Authority to Issue Bonds.—This company has applied to the Interstate Commerce Commission for authority to issue \$400,000 of first mortgage 6 per cent refunding bonds to refund an issue due March 1.

CHICAGO, PEORIA & ST. LOUIS.—Asks Authority to Issue Certificates.—The receivers have applied to the Interstate Commerce Commission for authority to issue \$335,000 of one-year certificates of indebtedness at 7 per cent.

DELAWARE, LACKAWANNA & WESTERN.—New Directors.—Samuel Sloan, P. R. Pyne, H. B. Spencer, R. C. Gasser and Frank Rysavy have been elected directors to succeed William Rockefeller, George F. Baker and H. S. Vanderbilt, who resigned recently, in accordance with the Interstate Commerce Commission's ruling on interlocking directorates, and H. A. C. Taylor and M. Taylor Pyne, deceased.

DENVER & RIO GRANDE.—Perkins Committee Criticizes Reorganization Plan.—The committee headed by James H. Perkins, president of the Farmers' Loan and Trust Company, representing the first and refunding 5 per cent bonds, has issued a statement to holders of these securities, setting forth the committee's reasons for opposing the Western Pacific's reorganization plan of the Denver & Rio Grande. The Perkins committee opposes forcing through any plan without proper opportunity for investigating its fairness or for determining whether better terms are available from others than the Western Pacific. The committee has extended to April 1 the time limit for deposit of bonds with the committee.

The statement of the Perkins committee says:

There is a large equity in the Denver & Rio Grande property which the Western Pacific plan does not recognize and it is believed that other proposals for reorganization can be obtained which are decidedly more favorable. For this reason bondholders who have deposited with the so-called Hammond committee should withdraw before February 27 to prevent the Western Pacific plan from going through by default. The Hammond committee has been in existence five years and during that time has been acting with the Western Pacific. On February 1 last the Western Pacific permitted default in the interest on the refunding bonds. They have chosen the moment to make the default (and the time of default is entirely a matter of their own choosing) when the Denver property has not as yet fully recovered from the serious Colorado flood damage of 1921 and when general railroad earnings are at the lowest point, in their endeavor to force the bondholders into accepting this plan by which the bondholders turn one-half of their holdings into preferred stock and permit a new mortgage ahead of the bonds.

ILLINOIS CENTRAL.—\$50,000,000 Preferred Stock Issue Planned.—The stockholders, at the annual meeting on April 19, will be asked to authorize an issue of \$50,000,000 preferred stock, to be sold at various times, for the purpose of electrifying the road's lines in Chicago, reconstructing its Chicago freight and passenger terminals and improving other property in that city. As the work which the issue will finance is expected to spread over a period of 18 years, according to the letter which President C. H. Markham sent to all stockholders describing the plan, the stock will be offered ratably to common stockholders. Those who do not care to subscribe will be given opportunity to dispose of their subscription rights.

President Markham's statement outlining the plans is in part as follows:

New capital will be required by the company principally for electrification of its lines within the City of Chicago, reconstruction of its principal passenger station and freight terminals there and improvement of lands acquired under the contract ordinance with that city passed July 21, 1919. The work is to be done within the next 18 years and is divided into various stages running over that period. The ordinance was accepted after much consideration and it is believed that the improvements contemplated will be productive and remunerative and will permit the use for railroad purposes of much valuable real estate of the company which otherwise would be practically useless.

The board of directors has decided that the financing necessary to carry out these improvements can best be done by issue of preferred stock. Increasing the amount of capital stock relative to bonded indebtedness increases safety, since thereby no addition is made to fixed charges which must be met. The effect should be to improve the credit of the company and enable it to borrow upon more favorable terms in the future if and when necessary for other purposes.

The preferred stock, if authorized by the stockholders, would be a high grade investment security, and should be readily salable as and when funds are needed. The directors do not think it practicable under present market conditions to issue more common stock.

The present amount of stock authorized is \$123,552,000, of which \$109,296,000 is outstanding and the present proposed aggregate increase is \$50,000,000 par value. It is not contemplated to issue this entire amount at this time, but that separate series will be issued over a period of years as the needs of the company shall require. The authority to issue the new

stock will be so framed as to enable the directors to take advantage of market conditions. Approval of the Interstate Commerce Commission is required by law to be given to each issue as it is made. As the preferred stock is issued it will be offered to the common stockholders ratably, and such stockholders as do not care to subscribe will be given the opportunity to sell their subscription rights. In this way the common stockholders will have an opportunity to benefit from whatever advantages may be given the preferred stock.

Principal features of the proposed plan are the following, subject, however, to such changes, additions or subtractions as the stockholders at the meeting may determine:

Far amount of preferred stock at any time shall not exceed one-half of the par amount of common stock at the time outstanding.

Preferred stock shall be preferred both as to dividends and assets; and in case of dissolution of the company preferred stock shall be entitled to receive the redemption price thereof before any distribution shall be made to the common stock.

The preferred stock may be issued from time to time as the board of directors shall determine in one or more series, all series being of equal rank, but differing as to terms in the respects hereinafter stated, as the board of directors shall determine.

The preferred stock shall be entitled to receive from the surplus or net profits of the company, in each fiscal year, dividends at such rate or rates, not exceeding 7 per cent per annum, as shall be determined by the board of directors in connection with issue of the series, respectively, and expressed in the preferred stock certificates, before any dividend shall be paid upon the common stock, but such dividends shall be non-cumulative.

For the election of directors and in all other matters, the holders of the preferred stock shall be entitled to full voting rights as stockholders of the company. The preferred stock or any series thereof may, if the board of directors so determines at the time of the issue thereof, be convertible into common stock within such period and at such rate, taking the preferred stock at par and the common stock at not less than par, as the board of directors shall determine at the time of the issue.

Board of directors may at the time of issuing preferred stock determine that it shall be subject to redemption as a whole at a premium which shall not exceed 15 per cent of par.

Ask Authority to Issue Bonds.—The Illinois Central and the Chicago, St. Louis & New Orleans have filed a joint application with the Interstate Commerce Commission for authority to issue \$1,924,000 of Illinois Central and Chicago, St. Louis & New Orleans joint first refunding mortgage 5 per cent bonds to reimburse the treasury of the Illinois Central for advances made from time to time for additions and betterments for the C., St. L. & N. E. The bonds are to be pledged from time to time, but are not to be sold.

LIVE OAK, PERRY & GULF.—Authorized to Abandon Line.—The Interstate Commerce Commission has issued a certificate authorizing the abandonment of a branch line from Murat Junction to Murat, Fla., 3.74 miles.

NEW ORLEANS, TEXAS & MEXICO.—Asks Authority to Issue Bonds.—This company has applied to the Interstate Commerce Commission for authority to issue \$991,100 of first mortgage 6 per cent gold bonds to reimburse the treasury for expenditures for additions and betterments. The company had already secured authority for \$533,700 of these bonds which have not been issued, and it asks a new order authorizing the issue of \$457,400 additional.

NEW YORK, NEW HAVEN & HARTFORD.—Asks Authority to Extend Loan.—This company has applied to the Interstate Commerce Commission for authority to extend all or part of its outstanding European loan debentures, amounting to \$27,582,691, for three years from April 1, 1922, with interest at 7 per cent instead of 4 per cent as at present. The European loan was floated in 1907, and the amount now to be extended represents part of a total original issue of 145,000,000 francs, or the equivalent then of \$27,985,000. The issue was payable at the option of the holders in francs, pounds sterling or marks. In view of the present depreciated rate of exchange, as an inducement to holders to agree to the extension, it is proposed to extend the franc debentures, of which 69,762,500 are now outstanding, with a guarantee to the holders that at maturity on April 1, 1925, principal and interest will be collectible in dollars in New York at the rate of \$96.50 for each 500 francs face value.

Dividends Declared

Canadian Pacific.—Common, 2½ per cent, quarterly, payable April 1 to holders of record March 1.

Delaware & Bound Brook.—2 per cent, quarterly, payable February 20 to holders of record February 11.

Eric & Pittsburgh.—1½ per cent, quarterly, payable March 10 to holders of record February 28.

Green Bay & Western.—5 per cent, payable February 27 to holders of record February 25.

Trend of Railway Stock and Bond Prices

Railway Officers

Executive

E. H. Cox has been elected president of the recently organized Minarets & Western, with headquarters at San Francisco, Cal.

E. C. Lindley, vice-president and general counsel of the Great Northern, with headquarters at St. Paul, Minn., has resigned.

Financial, Legal and Accounting

Walker D. Hines, formerly director general of railroads, has been appointed eastern general counsel of the Great Northern.

Operating

F. M. Rutter has been appointed superintendent of the London division of the Canadian Pacific and R. McKillop to a similar position on the Bruce division, effective February 15.

Traffic

Charlton Messick has been elected treasurer and assistant secretary of the St. Louis-Southwestern, succeeding G. K. Warner, deceased.

J. W. McClymonds has been appointed manager of perishable freight service of the Western Pacific and Tidewater Southern, effective February 15, with headquarters at San Francisco.

William Haywood, general freight agent of the Illinois Central, with headquarters at Chicago, has had his jurisdiction extended over all matters relating to solicitation, except in Memphis, Tenn., and New Orleans, La.

W. B. Wheeler has been appointed general eastern agent of the Belt Railway of Chicago with headquarters at Pittsburgh, Pa. A. C. Burgess has been appointed commercial agent with headquarters at Minneapolis, Minn.

I. N. Randall has been appointed general agent, refrigerator service of the Union Pacific System, with headquarters at Omaha, Neb., succeeding J. W. McClymonds, who has resigned to accept service with another company.

F. W. Hampson, soliciting freight agent of the Norfolk & Western, with headquarters at Memphis, Tenn., has been promoted to commercial agent, in charge of the newly re-opened freight traffic office at Little Rock, Ark.

A. P. Smirl, whose appointment as assistant traffic manager of the Texas & Pacific, with headquarters at New Orleans, La., was announced in the *Railway Age* of February 18 (page 455), has been in the service of the Texas & Pacific for many years. Prior to Federal control, he was commercial agent, with headquarters at St. Louis, Mo. In 1917, he was promoted to division freight and passenger agent, with headquarters at Shreveport, La., and on March 1, 1920, to assistant general freight agent, with headquarters at Dallas, Tex., which latter position he was holding at the time of his recent promotion.

W. M. Penick, commercial agent of the Illinois Central, with headquarters at Pittsburgh, Pa., has been promoted to assistant general freight agent, with headquarters at Chicago. Mr. Penick was born at Union City, Tenn., on October 27, 1886. He entered railroad service in 1905 as a clerk in the local freight office of the Mobile & Ohio at Union City. He was promoted successively to clerk in the inbound freight

department of the general offices at St. Louis, Mo., bill of lading clerk and chief clerk in the same offices, soliciting freight agent at Chicago, and traveling freight agent at that point, until 1917, when he left to enter the air service of the American army. He was appointed commercial agent of the Illinois Central, with headquarters at Pittsburgh, Pa., on March 1, 1920, which position he was holding at the time of his recent promotion.

Engineering, Maintenance of Way and Signaling

T. O. Russell has been appointed chief engineer of the Minarets & Western, with headquarters at Fresno, Cal.

F. M. Hawthorne, assistant division engineer of the Pennsylvania, with headquarters at Logansport, Ind., has been promoted to division engineer, with headquarters at Terre Haute, Ind., succeeding T. C. Herbert, promoted.

Purchasing and Stores

D. V. Fraser has been appointed assistant to the purchasing agent of the Missouri, Kansas & Texas, with headquarters at St. Louis, Mo., succeeding H. H. Kahrs, resigned to enter other business.

Obituary

W. R. Beauprie, who was vice-president of the Gainesville Midland in 1918 when he retired, died in Atlanta, Ga., on January 13, 1922, as a result of a stroke of paralysis.

A. T. Hardin, vice-president in charge of operation of the New York Central Lines, died on February 21 at New York. Mr. Hardin was born in 1868. He was graduated in engineering from the University of South Carolina in 1894. Previous to that time, 1882, he had entered railway service as a telegraph operator on the Southern. He served that company, except during the period 1890-94, when he attended college, until 1898. He filled the positions of agent and stenographer and, after his graduation from college, was employed in the maintenance of way department. In 1898 he went with the New York Central as supervisor and division engineer.

A. T. Hardin

The following year he was promoted to engineer of track and, in 1903, to engineer maintenance of way. In 1905-06 he was assistant to the general manager and, thereafter, assistant general manager. In 1912 he became assistant vice-president and, in 1913, vice-president. Two years later he was appointed vice-president in charge of operation and, in 1916, he assumed a similar position for all the New York Central Lines. In this position he was serving at the time of his death.

CROSSING A RAILWAY TRACK against the warning of a signal or a watchman has been declared an offense, punishable by fine of not more than \$200, by an ordinance adopted by the Board of Commissioners of Dallas, Tex.

THE NETHERLAND SYNDICATE, LTD., has been authorized by the Chinese government to place orders in Holland for the construction of 150 railway bridges of various spans. These bridges are for the eastern part of the Langhai Railway which is now under construction.

Why Not Sell Necessary Service at a Profit?

THE NECESSITY of the service of railroads and other public utilities constitutes today one of the greatest menaces to their prosperity and development.

To say the fact that people have to buy a service whether they want to or not is a source of great danger to the concerns that render it, may sound like a paradox, but it is not one. First, the public necessity for their service is the real foundation upon which all special regulation of railroads and public utilities is based. Secondly, *the fact that their service is necessary unquestionably is the main reason why adequate and effective means of "selling" these concerns to the public are not adopted by the managements of most of them.* Now, this peculiar form of regulation, and this conspicuous failure of the managements of most railroads and public utilities to "sell" them right, are the main causes of their most serious troubles.

The man who makes kodaks, chewing gum, automobiles, or millinery knows that if his business is to be successful he must give relatively as much attention to salesmanship as to production, because his commodity is not one which the public absolutely must buy. Therefore, he carries on his sales campaigns with the object of so popularizing his product, in spite of the fact that it is a non-essential, as both to create a large demand for it and to enable him to secure prices for it which will yield him a large profit.

Why make similar efforts and expenditures to sell to the public services such as railway transportation, which the public will have to buy anyway? Because, unless these necessary services are sold to the public in the right way they cannot and will not be sold at a satisfactory profit, no matter how much of them may be sold. The public itself, through commissions, fixes the prices that it pays for railroad service. It will never so fix the prices it pays that they will yield a reasonable profit to the railroads as a whole, unless, first, it is "sold" the belief that the service is economically and efficiently rendered, and, secondly, that it is to the public's interest to pay rates that will yield the railroads as a whole reasonable profits.

We have said that the public fixes the prices it will pay. Here is a fact of vital importance which is constantly overlooked by many managements. The railways, collectively and individually, are well organized and equipped to present

their cases to lawmakers, commissions and courts. In other words, they are well organized and equipped to "sell" the lawmakers, commissions and courts. It is a well-known fact, however, that over and over again they convince lawmakers, commissions and courts that certain policies should be adopted, and that in spite of this directly contrary policies are adopted. Why? Because the lawmakers, commissions and courts have been "sold" the policies in question, but the public has not been, and it is public sentiment that finally determines the policies actually adopted.

It is essential to have the case of the railroads fully and ably presented to lawmakers, commissions and courts. But this has been done for many years, and in spite of this railroad net return and railroad development have steadily declined. Why? Because with respect to railroad regulation it is practically useless to convince lawmakers, commissions, and even courts of anything of which the public also is not convinced.

If there is anything regarding the railroad business which should now, after the experience of the last 15 years, be perfectly plain, it is that "selling" the railroads to the public is just as essential a part of successful railroad management as the running of trains, the maintenance of equipment and tracks, the keeping of the books, or the presenting of testimony to commissions and courts. It is equally plain that the public relations work of the railways as a whole and of most individual railways has not been adequately done. If it had been, the railroad history of recent years and the present railroad situation would be very different. It ought to be equally plain that public relations work cannot be successfully done without adequate organizations for that purpose, composed of competent men devoting their thought, time and energies to it, any more than the railroads could be successfully operated and maintained without adequate organizations and competent men devoting themselves exclusively to operation and maintenance. Furthermore, public relations work cannot be successfully done without expenditures proportionate to the purposes sought to be accomplished any more than any other branch of railroad operation can be successfully carried on without expenditures proportionate to the importance of the ends to be attained.

A number of railways have established what are virtually

public relations departments, although not always so called, and by adopting various means to present all the facts about their achievements, their operations, and the necessities of their business to the public have accomplished a great deal in the way of selling to the public not merely their service but the railways themselves as useful and beneficent institutions. Every important railway system of the country ought to be doing the same thing, not merely in its own selfish interest, but in the interest of the public as well. It is as much to the interest of the public as to the railways that the public should be made to see the railroads and their managements as they are instead of as they are painted by their enemies.

The very fact that railroad service is a necessity to the public will always be a liability instead of an asset to the railroads themselves, until the railroads learn to sell their service in such a way as to convince the public that their service is a great benefit to the public for which the public should be glad to pay reasonable rates, instead of letting a large part of the public continue to feel that railroad service is an incubus which they must bear, but for which they should insist upon paying the very least that they can legally force the railways to accept.

Reports from the industries show that business is picking up all along the line and the indications are for a continued improvement, although not in the nature of a spectacular increase. The revenue freight car loadings for the week ending February 18 are again most favorable, as will be noted from the article and diagram on another page. For the weeks ending February 11 and 18 the revenue freight car loadings have surpassed those for the corresponding weeks in previous years. The most significant fact about these increased loadings is that the increases, as compared with the last year, are shown in all districts and in all but a very few classes of materials.

Business Is Reviving

The extended use of long distance telephone circuits for other than train dispatching service is resulting in extensive economies on a number of railroads. The primary function of the telephone is to facilitate the transaction of business between different departments or with the general public. The justification for the extension of this service to long distance telephone communication between general and divisional headquarters depends on the amount of money now spent for toll on commercial lines. An article published elsewhere in this issue describes how one large railroad system is saving over \$52,000 a year by owning and operating its own long distance telephone circuit between New York and Chicago. No doubt many other roads are losing money by delaying similar installations of telephone facilities. It would therefore seem advisable wherever telephone toll payments are at all important for railroad officers to check their expenditures for communication service as compared with the cost of providing their own telephone systems.

Railroad Telephone Economies

During the first two months of this year more freight cars were ordered for domestic use than during the entire year 1921. True, only 23,346 cars were ordered last year, while the number ordered during January and February this year—24,031—is at a rate which might reasonably be expected under normal conditions—a rate, however, which makes no allowance for the shortage of equipment which was so marked when business was at its height. General business is growing slowly but steadily. The public seems to be gaining renewed confidence in the administration of the railways. With the increase in business, this ought to be reflected in greater confidence in railroad securities which will put the roads in a position to order more and more in the way of equipment and facilities. Secretary of Commerce Hoover's statement that the cost to the public of a marked transportation shortage can be calculated in the neighborhood of a billion dollars, should also influence the ordering of equipment wherever possible. It is quite likely, therefore, that the remaining ten months of the year will develop equipment orders in even greater proportion than during the past two months. It is significant also to note that 70 per cent more passenger cars were ordered during January and February than during the entire year 1921, 420 cars being ordered for domestic use for the two months this year as against 246 for the twelve months last year. Welcome as these orders have been, the roads will undoubtedly order at a faster rate if improved business conditions warrant so doing.

A suitable award of cash will be made to any employee offering a suggestion which results in economies or increased efficiency and any saving so effected the company will use in giving employment to more men—this is the gist of the proposal recently made by the management of the Buffalo, Rochester & Pittsburgh to its employees. The fairness of such a plan is manifest. Economies effected at the instance of employees will benefit everyone concerned—the man making the suggestion, the company and the additional men thus given employment. The company has organized a "suggestion bureau" to consider the proposals made by the employees. To make sure that prejudice or discrimination do not enter into this bureau's decisions, all suggestions will be submitted to it by serial number only, with no hint concerning the identity of the author. This move by the Buffalo, Rochester & Pittsburgh sounds promising. Almost every intelligent railroad employee has ideas concerning the operation of his road. The great difficulty has always been to get him to make these ideas known to someone in authority. The offer of a cash prize together with the assurance that savings effected will be used in giving employment to his idle fellow-workmen should provide sufficient incentive to overcome this reticence. If the plan proves a success its adoption will doubtless be widespread. Naturally a report on the results accomplished after the bureau's work is well under way will be of great interest.

A Fair Bid for Employees' Assistance

It is difficult, if not impossible, to say anything new about the need for better organized railway shops and more efficient utilization of shop equipment and manpower. The need is so great, however, that the presentation of new evidence and the restatement of old facts is justified on the ground that eventually a general realization of mechanical department needs will be followed by active steps to improve conditions. Manufacturers throughout the country are examining costs with a critical eye and bending every effort to economize in

Railway Shop Production

labor and material so far as may be consistent with standard, reliable products. Are railroad shops also prepared to turn out cars and locomotives in a minimum time and at the least cost consistent with good quality work? Unfortunately the answer is no. A railroad expert on shop conditions recently said "At the present time I am afraid that the railway shops do not turn out work as quickly as would be done by up-to-date manufacturing concerns." If this statement is true, and it can hardly be denied, two questions immediately arise. What is the reason? What is the remedy? Without going into an involved discussion of the case, shop output per man is dependent upon the attitude of shomen towards their work, the machinery provided for doing that work, and the methods of scheduling and performing detailed operations. These three all-important factors must receive prompt consideration and action by officers in charge if mechanical departments are to play their part in increasing the spread between railway operating revenues and expenses.

One of the old established machine tool manufacturers in New England recently published a list of men who had completed the apprentice training course in the company's shops. The primary object of the course is to develop skilled mechanics, but few of the men are now working at their trades. Their present occupations show that a large proportion have risen to positions of responsibility. Many have become foremen, others are superintendents or general managers, and the list, although short, contains the names of a number of presidents and vice-presidents of important companies. Why have so many of these men made successes in life? There seems but one valid conclusion; the training they received fitted them for managerial positions. Certainly there is a lesson in this for the railroads. There is hardly a road that can find among its employees enough of the right kind of men to fill the vacancies that occur among the officers. Despite this fact, little is done to train the younger employees. Apprentice training that is more than mere time serving has almost disappeared from the railroad shops. How many roads have taken advantage of the new rules that provide for special apprentices? A large railroad system is probably the most complex business institution on earth. It requires many highly skilled leaders to make it operate efficiently. Some good men may develop by chance, but this is not enough. There should be always available in every department men who have a thorough understanding of railroad work that will fit them to assume supervisory positions. The type of man formerly so common, who had a broad knowledge gained by working in various positions is almost unknown at present. The railroads need such men. They can be had only if the railroads will set out deliberately to train them.

Training Men for Promotion

Occupations show that a large proportion have risen to positions of responsibility. Many have become foremen, others are superintendents or general managers, and the list, although short, contains the names of a number of presidents and vice-presidents of important companies. Why have so many of these men made successes in life? There seems but one valid conclusion; the training they received fitted them for managerial positions. Certainly there is a lesson in this for the railroads. There is hardly a road that can find among its employees enough of the right kind of men to fill the vacancies that occur among the officers. Despite this fact, little is done to train the younger employees. Apprentice training that is more than mere time serving has almost disappeared from the railroad shops. How many roads have taken advantage of the new rules that provide for special apprentices? A large railroad system is probably the most complex business institution on earth. It requires many highly skilled leaders to make it operate efficiently. Some good men may develop by chance, but this is not enough. There should be always available in every department men who have a thorough understanding of railroad work that will fit them to assume supervisory positions. The type of man formerly so common, who had a broad knowledge gained by working in various positions is almost unknown at present. The railroads need such men. They can be had only if the railroads will set out deliberately to train them.

Construction to Meet Competition

TO WHAT EXTENT is a railway justified in reducing grades and otherwise improving its facilities to lower its costs of operation in order to compete for and secure traffic from another line already equipped to handle this business with equal or greater economy? This may seem like an academic question, but it is one which is being raised on more than one road today.

Prior to the passage of the Transportation Act of 1920 it was the duty of a railway management to improve and operate its property so as to earn for the stockholders the largest net return consistent with the rendering of adequate service to the public without regard to the effect of this competition on other lines. In general this responsibility is still the same, but the provisions of the Transportation Act rela-

tive to authorizations for new expenditures, grouping the roads into systems, etc., indicate the trend of public regulation toward less active competition and increased unity of operation. Theoretically traffic should be concentrated upon those lines which can handle it most economically and the facilities of these lines should be increased as necessary to enable them to keep pace with the growth of business. Also, the public has an interest in the expenditures which the railways make because of the provision in the Act that the roads shall be permitted to earn a return upon these expenditures. It is therefore interested in the elimination of unnecessary or competitive construction.

On the other hand, the railway system of America has been developed under the stress of active competition, and it has been the hope of increased earnings that has led railway managements to venture large sums for improvement work. Such improvements will be made only if there is a chance to secure the business necessary to earn a return on the investment. Since rates between common points are the same, the roads can compete for traffic only upon the basis of the service which they render and this service reacts to the benefit of the shipper. That the shippers desire competition was demonstrated by their clamor for the return of the railways to private control, following their unified operation by the government.

The expenditure for the enforcement of a competitive line to enable it to handle economically, traffic which it must develop, involves a waste in investment in whole or in part until such time as the traffic taxes the capacity of both lines. However, competition necessarily leads to waste in numerous forms of which this is but one. It is, however, the stimulus to improvements in service and economy in operation which has made the American transportation system the leader of the world. Therefore, while the Transportation Act throws new restrictions around improvement work, it modifies the responsibility of the managements with respect to expenditures for improvements only to the extent that it acts as a curb against reckless investment.

Increase in Total Tractive Power and Car Capacity

IT REPEATEDLY has been shown that the number of locomotives, freight cars and passenger cars acquired by the railways has been declining for some years and that the increase in their number has not kept pace with the growth of traffic. Attempts have been made, however, to show that there has been no ominous decline in the growth of the capacity of the equipment, because, as has been pointed out, year by year there has been an increase in the average tractive power of locomotives and in the average capacity of freight cars. For example, the following statements were made in the weekly news letter of the American Farm Bureau Federation for February 16 in a report of the rate hearings now being conducted by the Interstate Commerce Commission:

Much has been said about the railroads failing to keep up their facilities of recent years. We have been told about the increase in the number of engines and cars not being sufficient. While it is true that in 1920 (the latest year available) there were approximately only 18 per cent more engines in number than in 1908, Clifford Thorne finds that the tractive power had increased 661 per cent. (This figure evidently is a typographical error.) While the total number of (freight) cars in 1920 exceeded those in 1908 by only 13 per cent, the capacity of the cars in 1920 was 37 per cent greater than in 1908. In other words, these statements about increased facilities totally ignore the larger size of the cars and engines.

It is not true that the statements made by witnesses for the railways to the Interstate Commerce Commission have ignored the larger size of the engines and cars. The increases in the average tractive power of locomotives and the average capacity of freight cars have been specifically mentioned, but it has been pointed out that these increases in average power and capacity have been going on steadily for many

years, and that therefore the reduction in recent years in the amount of equipment acquired represents also a reduction of the increase in the total capacity of the equipment.

Shippers should be fully and correctly informed regarding the facts, for they are even more vitally concerned than the railways. What, then, are the facts regarding the increases which have occurred within recent years and in former years in the aggregate tractive power of locomotives and the aggregate capacity of freight cars?

The statistics of the Interstate Commerce Commission make possible comparisons for the years from 1902 to 1920, inclusive. When these years are divided into two periods of nine years each, and the statistics for the two periods are compared, the facts disclosed are striking and even startling. In both these periods there were very large increases in freight and passenger traffic. In both of them there were years when there were acute congestions of traffic and large shortages of cars. Only in the middle of the first period, however, did drastic regulation of the railways become effective, and it was a period when relatively large net returns were earned. On the other hand, in the second period the railways were either subject to extremely effective regulation, or under government operation, and the net returns earned by them were sharply reduced.

The increase in freight business in the first period was 61 per cent and in passenger business 69 per cent. The increase in freight business in the second period was 62 per cent—almost exactly the same relatively as in the earlier period—and the increase in passenger business 41 per cent.

Bearing in mind that the increases in freight business in the two periods were relatively almost exactly the same, what were the comparative increases in the total tractive power of locomotives and the total capacity of freight cars?

In 1902 the total tractive power of locomotives was 770,000,000 pounds. In 1911 it was 1,714,000,000 pounds, an increase of 122 per cent. This seems like a very large increase, but it should be remembered that developments in 1905, 1906 and 1907 showed that the tractive power of the railways was very inadequate, and this large increase in it was made to remedy the inadequacy. In the nine years ending with 1920, the total tractive power increased to 2,337,000,000 pounds, or 36 per cent. In other words, although the increase in freight business was relatively as great in the second period as in the first, the increase in total tractive power was relatively only one-third as great.

In 1902 the total capacity of the freight cars in service was 42,168,000 tons, and in 1911 it was 81,227,000 tons, an increase of 92½ per cent. This large increase in the total capacity of cars was due to the same experience that caused the large increase in the total tractive power of locomotives. In 1920 the total capacity of freight cars was 98,020,000 tons, an increase over 1911 of only 21 per cent. In other words, the increase in it was relatively less than one-fourth as great as in the preceding nine years, although the increase in the freight business handled was relatively as great.

Certainly these figures show a significant decline of the increase in total tractive power and car capacity. It is necessary, however, to present and study the facts in more detail in order to grasp their full significance. The accompanying table gives the statistics regarding the total tractive power of locomotives and the total capacity of freight cars by three-year periods.

It will be noted that the increase in the tractive power of locomotives was the greatest in 1902-1905 and that it steadily declined from that time until the three-year period ended with 1917. It then advanced, but never again became as great as in the three years ending with 1905.

The increase in the total capacity of freight cars was very large in the three years ending with 1905, and even larger in the three years ending with 1908. Since then it

has steadily and rapidly declined. In the three years ending with 1920 the increase in total freight car capacity was less than one-fourth as great as in the three years ending with 1908.

The railways were able to cope with the 62 per cent increase in freight business that occurred between 1911 and 1920 largely because of the great increases in the total tractive power of locomotives and the total capacity of freight

Year	Total tractive power locomotives, pounds	Total capacity freight cars, tons
1902.....	770,000,000	42,168,000
1905.....	1,128,000,000	53,556,000
Increase 3 years.....	358,000,000	11,388,000
1906.....	1,128,000,000	53,556,000
1908.....	1,458,000,000	72,980,000
Increase 3 years.....	330,000,000	19,424,000
1908.....	1,458,000,000	72,980,000
1911.....	1,714,000,000	81,227,000
Increase 3 years.....	256,000,000	8,247,000
1911.....	1,714,000,000	81,227,000
1914.....	1,887,000,000	90,700,000
Increase 3 years.....	173,000,000	9,473,000
1914.....	1,887,000,000	90,700,000
1917.....	2,088,000,000	95,467,000
Increase 3 years.....	201,000,000	4,767,000
1917.....	2,088,000,000	95,467,000
1920.....	2,337,000,000	98,020,000
Increase 3 years.....	249,000,000	2,553,000

cars and other facilities which occurred prior to 1911. Unless the experience of the future is to be entirely different from all our experience in the past they will be offered within a few years a freight business exceeding that of the years 1911 to 1920 as much as the freight business of 1911 to 1920 exceeded that of 1902 to 1911. For over ten years they have been increasing the amount of business handled by them far more relatively than they have been increasing their capacity. The experience of the years 1917, 1918 and 1920 shows that considering the railways as a single system, they had in those years very little surplus capacity left. How, then, is the future increase in the business of the country to be handled unless there is an increase in railway facilities as large in proportion as the increase in traffic? How is this increase in facilities to be made unless the railways are allowed to earn a much larger average net return than they earned in the years during which, as the statistics herewith presented show, their expansion was steadily declining?

The very persons who are now trying to show that there has been no serious decline in the development of the railways will be the first to denounce their managements for inefficiency if, when business revives, the railways are unable to move all the freight offered to them.

The Latest Scheme for Pooling Cars

WHEN AN ORGANIZATION with a standing before the public such as that of the National Association of Owners of Railroad Securities proposes to save the railroads \$500,000,000 a year, the railroads cannot afford to let the proposal pass without subjecting it to critical analysis. If the result of such an analysis indicates that the plan actually offers large possibilities for effecting savings which the railroads cannot themselves effect, certainly they cannot afford to lose the opportunity it offers. If on the other hand the plan possesses inherent weaknesses likely to result in its failure, or if the same difficulties stand in the way of obtaining the economies claimed that prevent the railroads from obtaining these economies themselves, then these facts should be clearly set forth before the public to offset as far as possible the presumption against the railroads always created in the public mind by each reformer with a new million dollar

a day program for saving the railroads from themselves.

Large reductions can no doubt be made in the expenditures of the railroads for car service by improvements in maintenance conditions, by the retirement of obsolete and outworn equipment and by increased car utilization. Some of these savings the railroads have already demonstrated their ability to realize under existing conditions; a high degree of effectiveness in car utilization was attained in 1920. Others could be realized if the necessary capital were available and the financial condition of the roads were such that they could safely undertake the outlay for shop improvements and equipment replacements. Still other savings will be possible when there is a wider appreciation of the fact that 20 empty car miles costs as much as a day's rental.

But these savings would probably fall far short of \$300,000,000 a year. Would the National Railway Service Corporation be able to make good its estimate? Consideration of the various items of the estimate in the report of the Board of Economics and Engineering indicates that some of the conclusions are based on data too general to be conclusive and others are matters of opinion apparently unsupported by tangible evidence.

The saving of \$33,000,000 a year in the first cost of equipment is contingent on complete standardization and uniform buying irrespective of business conditions. The matter of standardization, however, is surrounded by many difficulties and many of the questions to be settled are likely to prove highly controversial. For instance, shall future construction be of the all-steel or composite type; and at just what point shall a compromise be arrived at between the adherents to cars of great strength and those who believe in minimum weight? If the benefit of steady production is to be obtained, what will be the source of the fund from which purchases can be made during periods of business depression when the available surplus of the roads may be too small to stand the strain?

The estimate of the Board indicating a saving of 20 per cent in the cost of heavy repairs, amounting to \$30,000,000 a year, is not entirely consistent. Quantity production methods are to be introduced through a reduction in the number of points at which general repairs are made, but the equipment is to be sent to these plants irrespective of ownership. Many railroads have already availed themselves of the opportunity for saving through the employment of quantity production methods by contracting out their heavy repairs. These benefits have been obtained by aggregating large numbers of cars of a single series in order that each car may be subjected to identical operations, and even though wrong repairs were permitted, much of the benefit of production methods would be lost unless such a segregation were made. Furthermore, the plan contemplates the establishment of shops at large traffic centers, involving considerable capital outlay before it could become effective.

The largest single item in the estimate is the annual saving over a ten-year period of approximately \$96,000,000 a year to be effected by retiring 890,000 small capacity cars of all-wood construction and replacing them within a period of five years with 540,000 steel underframe cars of 50-ton capacity. During the year ending December 31, 1918, there were 524,000 wood box cars and 182,000 coal cars of all wood construction in service on Class I roads. Many of the box cars have undoubtedly already received reinforcement or are suitable for reinforcements which convert them into satisfactory service units. Of the wood coal cars a large number are undoubtedly employed in company service and do not enter into interchange. It is doubtful whether more than half of the 890,000 cars referred to in the report would prove to be subjects for replacement by the corporation. But assuming that the entire number were to be replaced with cars of the increased capacity, would 540,000 of the larger cars be capable of rendering the same service? Dur-

ing 1920 the average carload was 29.4 tons, but considering the fact that open top cars on the average are loaded close to capacity, the average box car load probably did not exceed 22 tons, with an average capacity of approximately 37 tons. Is it probable that an increase in unit capacity is likely to be followed by a proportional increase in the average box car load? The answer to this question has an important bearing on the saving through the retirement of weak cars, since \$65,000,000 per year of the total is claimed for the lesser amount of car mileage in handling an equal volume of traffic in a small number of larger capacity modern cars.

A saving of \$66,000,000 per annum is claimed for the increase in ton-miles per car per day, assuming an increase from 506 obtained in September and October, 1916, to 528. But the railroads, with the assistance of existing agencies, have already demonstrated their ability to exceed this figure for a period of four months in 1920.

Altogether the detailed estimate presented by the Board totals \$257,000,000. Just how the additional \$43,000,000 to make the round sum of \$300,000,000 a year is arrived at the report does not say.

The present accumulation of more than 300,000 bad order cars is the result of one of the most drastic retrenchments in the railroad history. The plan of the National Association of Owners of Railroad Securities proposes that its National Railway Service Corporation immediately arrange for the repair or rebuilding of these cars, a project involving an outlay of at least \$45,000,000 to \$60,000,000. This work will be done for the account of the owners. But if the owners have found themselves unable to undertake it under present business conditions, how will the \$45,000,000 to \$60,000,000 bills be paid?

There are many attractive features in the Association's proposal and the *Railway Age* has no desire to discredit it. To say the least, however, there is a reasonable doubt that the plan, if adopted, will effect a saving approaching \$300,000,000 a year, certainly not immediately. In promising such enormous savings some of which are based on nothing more tangible than opinion evidence, the Association is doing the railroads and their security owners a poor service. In the present state of public opinion if the plan should be dropped, no matter how good the reason, the railroads will stand charged with mismanagement for not adopting it, even though there are good reasons for not adopting it. Should the plan ultimately be adopted, nothing less than \$300,000,000 a year will be accepted by the public. In either case it is not clear just how the inevitable disappointment will serve the best interests of the owners of railway securities. The plan is not one to be placed before the public in terms of glittering generalities but must be subjected to the most careful and detailed analysis by competent railroad officers.

THE SOUTHERN RAILWAY announces round-trip tourist rates to mountain and seashore resorts for the coming summer season at 80 per cent of the double one-way fares. For example, where the one-way fare is \$10, the round-trip rates this summer will be \$16. Last year it would have been \$18 plus \$1.44 war tax.

IN THE NEW ENGLAND FREIGHT-RATE decision the Interstate Commerce Commission holds that our railroads constitute a national transportation system, whose parts must be maintained if they are not to be abandoned. In the undirected, free processes of trade are developed slowly a solidarity and integration that socialize local or temporary advantages which bear disadvantageously on individuals or localities without compensating advantages to society as a whole. As business becomes more of a regular operation in the performance of service and less of a private speculation the integration that goes on reappraises local advantages and disabilities in the interest of the whole process.—*J. Shirley Eaton.*

Letters to the Editor

[The RAILWAY AGE welcomes letters from its readers and especially those containing constructive suggestions for improvements in the railway field. Short letters—about 250 words—are particularly appreciated.]

The Lowest Bidder

SHREVEPORT, LA.

TO THE EDITOR:

I have read, with interest, your editorial of December 10, entitled "Should the Low Bidder Get the Work?" and I agree with you in all that you say.

As an engineer with some years of experience, I have advocated the rejection of "the lowest bid" in cases where it was apparent that the work could not be successfully carried out at the price bid, even though the certified check and surety bond were satisfactory.

I can cite you to more than one case where the "lowest bid" was accepted, and where the final cost to the owner was greater than if the "highest bid" had been taken, to say nothing of poor workmanship that sometimes goes with a job that costs the contractor more than he is receiving, although the efforts of the supervising engineer and his assistants have been all that they could be.

LINTON W. STUBBS.

Give the Facts to the Public

LOUISIANA.

TO THE EDITOR:

I meet many intelligent people whose ideas on most matters are sound, but on account of the camouflage indulged in by the labor agitator and Ford, now believe that all roads are over-capitalized, and all except the D., T. & I. are mis-managed.

It is not uncommon to see in our daily press statements about the roads that are absolutely at variance with the facts. Should not concerted action by our railroad executives be taken to counteract the evil effect already produced by the publicity that has been given to many statements absolutely untrue, and which has greatly affected the attitude of the public toward the railroads? At this time, when the railroad situation is a very live topic, should not every reasonable effort be made to show to the public plainly what the conditions are?

ANOTHER RAILROAD STUDENT.

Religion Required in Railroading

READING, Pa.

TO THE EDITOR:

In your issue of February 18 "Train Dispatcher" asks, "Will religion and railroading mix?"

To my mind, even an expression of doubt on this subject is a sad reflection upon the code of morals of railroad men as a body. In answer I quote from a Pennsylvania Railroad man in The Mutual Magazine of January, 1922,—a publication issued by employees of that road: "The real nature of all the serious problems of the day is spiritual, and their social or material aspects are the result of ignoring divine law in human relationships."

The writer believes religion and railroading will mix—eventually; or there never will be peace and harmony. For, not only the Christian religion, but all others, enjoin strict

justice and fair dealing, and condemn selfishness, greed and so-called sharp practice in all transactions between man and man, either as individuals or in brotherhoods, associations or groups of men.

Only when the rules and conduct of brotherhoods and corporations conform to the precepts of religion will a secure basis be found for a permanent peace on the railroads, or between nations, or in any other human relationship. Make no mistake—not the will of labor, nor the will of capital, nor yet the will of labor boards, commissions or congress, but the will of God must finally and eternally govern the world, including the railroads. Wouldn't it be wise to get on the right side now and begin early to practice the principles that must finally prevail? Every railroader, officer or employee who is doing otherwise is violating the divine book of rules and running without orders. CLERK.

Meetings With Trainmen; Compulsory Attendance

DETROIT, Mich.

TO THE EDITOR:

To the railroader who has been watching things from the inside for 35 years the various letters and other articles concerning safety of train movement which have recently been published call to mind the fact that there are many old lessons which have still to be learned.

The general superintendent ought to get down off his throne, leave his fishing rod or gun to one side, and have a personal meeting with all of the conductors and engineers at least once each month. Every conductor and engineer should be able to show that he has attended such meetings with reasonable regularity. These men sometimes have to attend meetings on two or more divisions so they cannot perhaps be held to the strictest account; but they ought to be required to attend at least four meetings a year.

At these meetings the hand of fellowship should be extended, and the men should be drilled into habits of safety; more than this, into habits of safety and of making time, both at the same time.

At one time we try to inculcate safety; at another time we emphasize the importance of making time; of economizing in the time of men and with the quantity of fuel used, etc. Why not try to teach the men along both of these lines?

J. T. HUFFMANN

Bringing the Best Out of Men

CHICAGO, Ill.

TO THE EDITOR:

Just a few lines to emphasize what has been stated by others, especially the authors of "Big Stick vs. Golden Rule," in the *Railway Age* of November 26, 1921, and "The Golden Rule in Railway Work" in the issue of December 5.

Having taken treatment from several specialists during the last thirty years, I am still of the opinion that the mistake nowadays is in acting toward men very much as if they were animals. Most animals of the domestic type, in fact, receive pretty good treatment if they are in the best skilled. But even a dog tucks his tail between his legs and sneaks away when scolded, or else shows his teeth; a vicious animal, however, will easily respond to kindness. We have but to remember the old saying that soft words turn away wrath, but grievous words stir up anger.

In general, officers above the rank of division superintendent are of the fair sort, but subordinate officers seem to think they must make a big noise and nag and nag and scold, the good with the bad being subjects of their ever-

ready pens and tongues. The whole division is threatened because of the alleged failure of one or two.

If higher officers stand for this (and it rarely comes to the surface except through grievances of the men), then they are applying absent treatment—a thing that will never work to the good of the service. The sooner employers get back to the old way (if they ever knew it), the sooner we will get back to that thing we hear so much of nowadays—normalcy. If men are not trusted they will not respond to the full extent, but the pride most men have will, with proper treatment, call forth the very best.

ANOTHER OLD RAILROADER.

A Word of Suggestion to the Dictator

NEW YORK.

TO THE EDITOR:

The business of writing, like that of railroads, is to get there with the goods.

The writer is the transportation man, the reader is the consignee. It is important to discover the maximum economic load for a train of thought. This varies according to the character of the freight carried, the nature of the region served and the draw-bar pull of the idea that is to move the train of thought.

Too many heavy cars in the train of thought leads to a break-in-two. The best remedy for a break-in-two of this kind is to send out a flagman with a period and to couple up the rest of the train with a new engine.

It is important in passing switches to make sure that the rear end of the train of thought isn't left on a siding. This makes it difficult for the consignee to locate his goods.

It is bad practice to make up a train of thought exclusively of L.C.L.

A critter on the track that has been the cause of many derailments is "and which."

"As" is a very poor coupling and so is "—ing"; they have been the cause of many break-in-twos.

For a heavy train of thought "however" is a poor head engine; cut it in two or couple in three cars back for 100 per cent efficiency.

It is important that the train of thought should be supplied with side-cards indicating destination of its several members.

Transportation men should take care in handling infinitives not to split them. Some consignees object to receiving them in this condition.

F.

Say Good-bye to Old Mr. 31

DALLAS, TEXAS.

TO THE EDITOR:

I have read the several interesting articles in the *Railway Age* on Form 31 train order. I am sure that unless something is done soon to eliminate Form 31 it will eliminate itself. The present rules and attempted practices surrounding Form 31 have become obsolete; everybody knows that these rules and regulations are not in keeping with present day demands.

The saving in operating expense by avoiding unnecessary stopping of long freight trains would in itself amount to a large amount within a twelve-month period. The only reason we do not eliminate Form 31 at once is that we lack the nerve to take the forward step and accept the responsibility. It has ever been thus, with each advance movement in train dispatching.

I cannot believe that with Form 19 there will be more collisions resulting from misinterpretations, mishandling, or overlooked train orders than we are having now. If anything, the odds are in favor of the 19 Form on account of

the manner in which it is handled. It should keep fireman and brakemen better informed concerning orders affecting movements of their train. Wireless telephony, in the near future, will afford means of communication between the train dispatcher and the train crew; then good-bye to old Mr. 31!

When trains are run by signal indications only, no signature is secured for passing either a "stop" or a "proceed" indication. I think any fair minded person will agree that there are more cases of disregarded signal indication (including false indications) than there are of misinterpreted train orders.

How would it do to revise the rules along the following lines?

Leave Rules 201, 202, 203 and 204 as they are;

To Rule 205 add a clause requiring dispatcher to record the time that the order is released for delivery;

Rule 206, no change;

Rule 207, eliminate reference to Form 31;

Rules 208 and 209, no change;

Rule 210, eliminate;

Rule 211, no change.

There will be certain other rules and regulations governing the issuance of clearance cards and their delivery. The train dispatcher should authorize clearances, giving them numbers over his initials and keeping a record in his order book. The operator should repeat and sign his name.

It is my suggestion that this subject be referred to the rules committee of the American Railway Association and let it be given some thought and study. If this is done the only logical outcome will be the abolition of Form 31 and the adoption of a present-day standard method of handling train orders.

W. M. WHITENTON,

Assistant Chief Operating Officer, Missouri, Kansas & Texas.

How a College Training Helps

TEXAS.

TO THE EDITOR:

The various letters and editorials regarding the college man in railroad work which have appeared in the *Railway Age* have been interesting to me because of my being a college man in railroad work. Perhaps some of my experiences, conclusions, and mistakes will be of interest.

I now know that I made two important mistakes during my apprenticeship. First, I was so deeply interested in the new experiences I was meeting that I didn't take time to make friends. Second, I argued technical matters with non-technical men and many times was made to appear ridiculous by having someone pass along my statements badly garbled.

I frankly confess that my advancement has been as rapid as my ability would permit. I wasn't the best student in my class and I am not the best man on the railroad. I have done better than the average man in my class and probably better than I would have done in any other industry, for I was born with the call of the rail in my blood. I have seen some good men fall down because of having advanced too rapidly.

My college training could not possibly have taught me the facts one must know or have given me the experience one must have in order to be a successful mechanical department officer but it has been especially valuable to me in the following ways: It taught me to read with understanding; to think straight and rapidly and to a definite conclusion; to make and appreciate clear and concise reports; to investigate fully before making a decision; to respect the feeling of other men; to know the other fellow's way may be just as good as mine; to take criticism without "blowing up" and to work in harmony with others.

Aside from vicious personal habits nearly every failure of a railroad officer to succeed may be traced to his lack

of training in one or more of the above points. These are the things a man has a chance to learn at college regardless of the studies he pursues and they are the things a man must learn to succeed in any industry. It is granted that they may be learned in the shop or office by experience, but the method is slow and very discouraging.

Prejudice against the college man is not confined to the railroad business. It exists in all branches of industry. However, it appears to be perhaps more pronounced in railroading than in other industries because of the fact that the knowledge which must be acquired by actual experience in the shop or on the road is more essential to success in railroading than is the knowledge acquired at college and this is not the case in most other industries. F. E. M.

Educating Railway Employees

TO THE EDITOR:

I read with a great deal of interest the article of C. G. Juneau, master car builder of the C. M. & St. P., in your issue of January 21, page 223. The thoughts expressed by him are of value to anyone interested in the education of railroad employees. However, he made one statement that I can hardly agree with. The same idea seems to be prevalent in the minds of many railroad men, especially those of the older school.

Mr. Juneau stated: "Unable to turn to educational institutions to provide a trained personnel to grapple with their problems, the railroads' one chance of resurrection seems to lie in their own education of their employees."

It is not quite clear what Mr. Juneau means by "education" in this sense. Obviously he does not refer to general education, but rather to specialized training. But in this sense it must be remembered that practically all of the personnel of the legal and engineering departments of a railroad is college trained. More than one-half of the official personnel of the mechanical department is college trained, while on some roads practically all the mechanical officers are graduates of technical schools.

Perhaps he does not know of the attempt made in the past on the part of the railroads to educate their own employees. There have been some very ambitious beginnings—that of the Harriman lines a few years ago being the most auspicious—but they all failed, except in the work of training apprentices in the mechanical department. The broader the plans, the greater the failure, and they failed for the reason that the function of a railroad company is to produce transportation. It is not to educate. A railroad is primarily a money-making plant and every moment of company time spent by an employee in learning the principles and details of his work represents a loss to the stockholders and a greater charge to the public. The only economic excuse that a railroad company has to engage in educational work is to prevent a greater loss because of the lack of knowledge and inefficiency of its employees. If it can find an outside agency to perform this function, it would be a financial waste for a railroad to attempt it.

Another reason for the failure of educational campaigns undertaken by the railroads themselves is the violation of a fundamental principle of education, i. e., that education must not be forced. There are no exceptions to this rule in the case of grown men and women. The pupils of a railroad educational campaign are men and women and while at first the educational opportunities may be accepted with a great deal of enthusiasm, especially by the ambitious, in the course of time the requiring of knowledge of their duties will be accepted as a part of the job itself. What this means—what effect it will have on the enthusiasm of the students—Mr. Juneau will know.

This does not agree with some authorities who believe that the education of the employee should be required rather than invited. True, such a procedure will produce some results, for it is well known that even a little education is better than none at all, but it will not produce the best results, which can only be obtained through voluntary action on the part of the student.

This has been the course of most railway educational campaigns. They were inaugurated with a burst of enthusiasm that burns itself out within a year or two. The attempt dies so slowly that no one notes its passing. No one seems to miss it. Then when an ambitious official grasps the need of an educational program, it is again resurrected as something original.

Mr. Juneau makes the same mistake that is made by a large number of railroad officers in regard to education. He believes education consists of a course of training in the specialized details of the work. Owing to the complexity and fluctuating character of railroad work, a course of education based on details would be of no value to the student soon after it was completed. If such a course was based on the practices of one road, it would be worse than useless on another road.

Technical education consists in acquiring skill in a certain trade or profession, or specialized work. It does not consist primarily in knowing how to do skillfully certain detailed jobs, but it means the possession of certain fundamental truths or principles which will enable the student to meet practical situations and contingencies as they arise. For instance, if a tariff clerk is familiar with the tariff files, he will understand how to locate the rates without making a study of every tariff file he comes in contact with. If a yardmaster knows the layout of a yard, the purpose of the different tracks and the uses to which they can be put, he can handle any yard after only a slight study of the local layout. If an agent at a small station understands the fundamentals of station work, he will have no difficulty in breaking in at a large station. A civil engineer is not taught how to solve individual engineering problems except as a means of understanding more thoroughly engineering principles. Thus education is fundamentally based on principles, and it is left to the student to apply these principles.

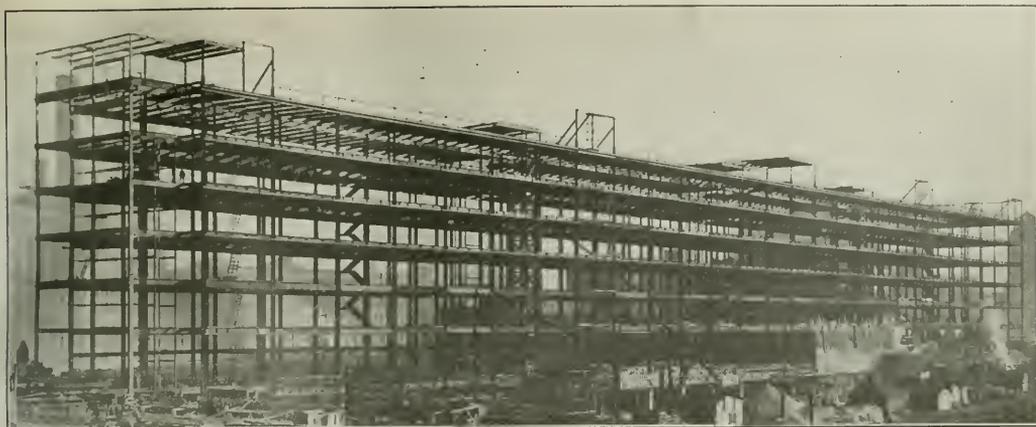

I agree with Mr. Juneau when he states that no educational institution can produce a railroad man. No one who knows anything at all about the business will even suggest that a man can learn the rules or principles of any department of the railroad, and then step out and compete successfully with an employee of a long and varied experience. But it is equally true that a man who learns the rules before the game begins is a much more valuable player than the man who has to be taught as the game proceeds.

CHARLES E. PARKES.

THE DELAWARE & HUDSON reports the number of employees killed (while on duty) in 1921, as 10, as compared with 19 in the preceding year; and of injured 744 as compared with 1,115. The safety department of that road was organized in 1918 and since then the diminution in the number of casualties among employees has shown a marked decrease. The number of employees killed, in all departments, was, for the four years, 40; 18, 19; 10 of injured, 1,615; 920, 1,115, 744. The casualties per million locomotive miles were as follows:

	1918	1919	1920	1921
Killed	2.0	1.3	1.4	0.9
Injured	116.1	78.4	80.9	67.1

In the transportation department the number of killed in 1921, per million locomotive miles, was 0.5 as compared with 2.1 in 1918, and of injured, 30.0 in 1921 as compared with 43.9 in 1918.

The Building Required 7,000 Tons of Structural Steel

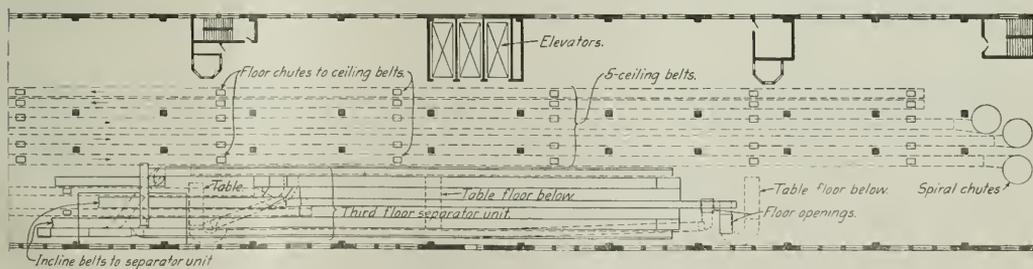

Railway Mail Terminal Will Handle Large Tonnage

Mechanical Transportation an Important Feature of New Union Station Structure at Chicago

THE LARGE railway mail terminal now being erected as a part of the Chicago Union station project* at a cost of \$4,000,000 clearly demonstrates the tendency towards closer co-ordination of the postal service and railway transportation in the handling of mail. For many years, and particularly since the introduction of parcel post, the railway mail service has been operating under adverse conditions in Chicago in the form of facilities that are inadequate

railway mail service and the Union Station Company culminated in an agreement whereby the station company should erect a new mail terminal building and lease the six stories above the track level story to the federal government, the station company retaining the track level story and basement for its own operations.

The new mail terminal will be used for a variety of postal operations, but all of them are closely related to the receipt

A Part Plan of the Third Floor Showing the Separator Unit and the Floor Chutes and Ceiling Belts

for the rapidly increasing volume of business. In 1919 a committee of the railway mail service with William I. Denning, then superintendent of the railway mail service, as chairman, made a thorough study of the operations and the necessary facilities; as a result of its labors a comprehensive scheme of terminal operation was adopted. The fundamental features of this plan were a site conveniently located for both railway mail cars and auto trucks, a building of adequate dimensions and design in which to handle the mails economically and an extensive application of mechanical apparatus. In December, 1920, negotiations between the

and dispatch of mail, either at the Union station or at the other railway stations in Chicago. The operation of this terminal will require the co-ordination of the activities of four independent groups of men; the mail terminal employees, the employees of the postal station, the Union station mail handlers and the employees of the mail street vehicles, but the duties of these several groups and the portion of the building assigned to them will be so clearly defined that little, if any, opportunity will be afforded for any confusion or interference.

An idea of the magnitude of the operations to be carried on in this terminal will be gained from the fact that it will be capable of handling 3,000 tons of mail each 24 hours, and will employ over 1,000 clerks and porters in the railway

*A brief reference to this terminal in connection with its relation to the Chicago Union station was made in an article on the station project published in the *Railway Age* of February 4, page 323.

mail terminal department alone. To meet these needs an enormous building has been provided. It occupies a length of 796 ft. along the east side of the Union station property between Van Buren street and Harrison street. It has a width of 76 ft. and a height of seven stories and basement. Besides the frontage on Van Buren street and on Harrison street which is relatively narrow, a private driveway is being provided along the full length of one side. Like the large freight terminals of the Pennsylvania, the Chicago & Alton and the Chicago, Burlington & Quincy recently completed or under construction in the same vicinity, the mail terminal will be of the two-level type to be served by platform tracks on the lower level and a teamway on the street level, the driveway mentioned above affording 580 ft. of clear tail-board space, or enough for 60 street vehicles at one time. The track level will have platform lengths adequate to serve 61 cars, while the basement will afford communication by means of tunnels with cars at Union station platforms remote from the mail terminal.

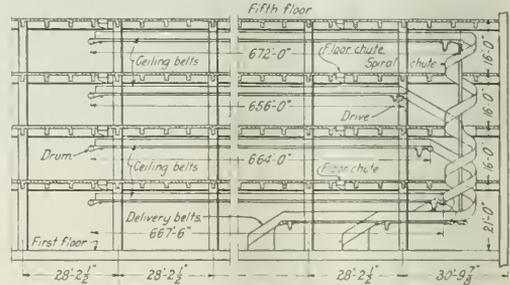

It is to be expected that the expeditious and economical movement of the vast amount of material which must be handled daily in this new terminal in units no larger than the ordinary mail sacks will require the application of suitable material handling equipment to the greatest extent feasible. Accordingly, arrangements have been made for the use of 15 freight elevators, 65 belt conveyors requiring the use of seven miles of belting and nearly 2,000 industrial trucks of various patterns and capacities, together with a sufficient number of tractors to handle them effectively throughout the building.

A Variety of Functions

The terminal will have a variety of functions. From the standpoint of railroad officers, the feature of first interest is the handling of mail received from and delivered to trains at the Union station. This portion of the work will be handled by Union station employees and will consist primarily of the transfer of mail sacks from street vehicles to mail cars and vice versa. However, the great bulk of the operations of the terminal will consist in the receipt, classifying and dispatch of all papers, catalogs and parcel post mail originating in Chicago, as well as mail of these three classes passing through the city. Much of the material will

floor and trucked to the driveway space near the south end of the building for transfer to the street vehicles.

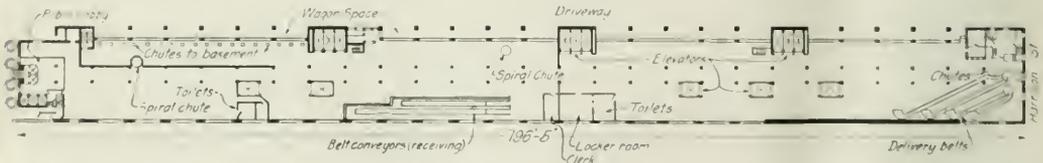

By far the greater portion of the building will be devoted to the railway mail terminal service, the purpose of which is the receipt, classification and dispatch of all mail coming from the street or from the trains which is not received in sacks properly classified for delivery to trains or street vehicles. Such mail will be received from the street along the middle portion of the driveway space and from trains on the basement or track level. From these points of receipt it will be delivered to the upper floors of the building for the necessary work which consists of one or more classifications,

A Part Longitudinal Section of the Terminal. Showing How the Ceiling Belts Deliver Mail to the Spiral Chutes

resulting in the sacking of the mail properly segregated according to the various railway mail routes or street delivery. Another separation introduced is to provide that second-class matter, catalogs and small parcels, are not placed in the same mail bags with large, bulky packages. The first named are classified on the fourth and fifth floors and the other two on the second and third. Separation into these two classifications is to be made on the first floor or, insofar as possible, by persons or companies delivering mail to the terminal.

Second-class, catalogs, and small parcelpost packages delivered in sacks will be placed on 3-ft. by 8-ft. platform

Plan of the Building on the Street Level

be received in the terminal already weighed and with the postage canceled, but on a considerable portion of it these operations will not have been completed. Consequently, it has been necessary to provide for a postoffice in the building for the receipt and handling of so-called postoffice mail.

All classes of mail made up in bags for mail cars on lines served by the Union station will be received on the street level at the north end of the building where 18 chutes will be available for transmitting the mail sacks directly to the track or basement level to be sorted and loaded on platform trucks to be hauled direct to the mail cars of the various trains. Incoming mail on trains entering the Union station will be sorted on the track or basement level, loaded on trucks and delivered to upper floors of the building by elevators. Sacks of mail properly sorted for other railway stations or for Chicago City Delivery will be delivered to the street level

trucks and will be taken to the elevators and delivered to the fourth or fifth floors, according to a general classification. Sacks containing bulky packages, if classified according to states, will be placed on 8 ft. trucks and delivered to the third floor. In general, mail delivered to the upper floors on the 3 ft. by 8 ft. trucks will be transferred according to classification onto smaller trucks of a capacity of about 20 sacks each and delivered on these to the various state sections on the floors for classification.

The classification of bulky parcelpost mail received at the station in unclassified form will be handled through the aid of special classifying equipment, for which purpose the work will be greatly facilitated by having the mailer deliver it to the terminal in tilting box trucks which may be rolled off of the street vehicle with the minimum of effort. These tilting box trucks will be taken to two belt conveyors as indi-

cated in the plan of the street floor where they will be dumped onto the conveyors for delivery up an incline to the third floor. Here the packages will pass through what is known as a separation unit. As shown in the drawing this consists of a series of belts arranged in such a fashion that postal clerks standing on platforms between these belts may pick up packages from the feed belts and throw them onto other belts to separate them for certain general classifications. In addition two belts are to be provided to receive mail for another primary classification. These two belts will deliver this material up an incline to the fourth floor, where the second separation unit will be provided for the separation of the mail into other general classifications. The mail sep-

question are provided with delivery spouts on the street floor, as indicated on the floor plan.

Large Amount of Conveying Equipment Required

The conveyors consist of belting made of four thicknesses of canvas weighing two pounds to the square yard, traveling on rollers consisting of cold drawn seamless steel tubes, 3 1/2 in. to 5 in. in diameter, made of No. 10 gage material. This tubing is spot-welded to pressed steel heads that support turned steel shafts 3/4 in. in diameter. These shafts are to be fitted with renewable steel races and Hyatt roller bearings. The belt conveyors are equipped with either canvas or metal side guards, except where their use in separation units would result in interference. The belts are operated by motor-driven, double-drive pulleys, the main pulley being 30 in. in diameter and provided with an automatic gravity takeup. There will be 65 separate conveyor belts to be driven by 65 motors, all of which are to be of the multi-polar semi-enclosed type designed for 220-volt direct-current service. Provision will be made for a very complete system of control so that any continuous train of the conveying system may be shut off instantly by push buttons located at convenient intervals along its course. This will be provided to insure against the piling up of mail as a consequence of the continued operation of any portion of the train of conveying equipment when a section in advance has been shut off.

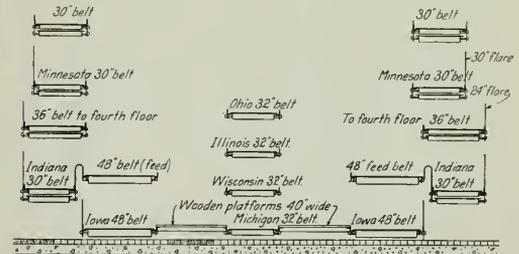

The spiral chutes are to be made of No. 12 gage steel plates with double blades. The mail chutes on the street floor are arranged to close flush with the floor when not in use so as not to interfere with trucking. Mail chutes leading to the ceiling belts are given a quarter turn so that the mail sacks can slide to within three feet of the belts instead of dropping the full vertical distance of 7 ft. from the floor level

Drawing of the Building, Showing the View from Van Buren Street

arated on the classification belts in the separation units on the third and fourth floors will be transmitted through openings in the floors and over other belts to working tables on the second floor and third floors, respectively.

The final separation and classification of all mail handled by the terminal forces is to be made at tables on the second, third, fourth and fifth floors where the mail is placed in sacks and properly marked, ready for delivery to the Union station forces on the track floor or the basement, or to the street vehicles on the street floor for delivery to various parts of the city or to other railway stations. This movement of the mail sacks from the second, third, fourth and fifth floors, to the street floor, the track floor or the basement, is to be accomplished with a minimum of manual labor and without the use of the elevators. Close to the ceilings directly below the second, third, fourth and fifth floors, five longitudinal conveyor belts (20 in all) are being provided, extending practically the entire length of the building and with which communication is afforded by means of 60 openings through each of these floors at approximately uniform intervals; these openings are to be of sufficient size so that mail sacks may be dropped onto the belts readily. Each of these 20 conveyor belts is to be connected with one of five double spiral chutes. One of these is located at the north end of the building, one near the middle and three at the south end. All of these chutes except two extend to the basement and the two in

Typical Section Through One of the Separator Units

to the belt. The elevators are to be equipped with automatic leveling devices to insure that the platforms of the elevators are locked on perfect level with the floor whenever the elevator doors are open.

The new mail terminal building was designed and is being constructed under the direction of J. D'Esposito, chief engineer, and A. J. Hammond, assistant chief engineer of the Chicago Union Station Company, in co-operation with the late Colonel E. H. Shaughnessy, second assistant postmaster general, and W. H. Riddell, general superintendent of the Railway Mail Service. The mail handling equipment is being installed in the building by The Lamson Company, Boston, Mass. Graham, Anderson, Probst & White, Chicago, are the architects.

THE CHICAGO SAFETY COUNCIL, in its co-operation with the railroads to reduce automobile accidents, finds that in the year ending December 31, 1921, out of 210 cases reported by the roads, 63 were instances where crossing gates were damaged by motor vehicles running into them.

House Committee Begins Hearings on Transportation Act

WASHINGTON, D. C.

THE HOUSE COMMITTEE on interstate and foreign commerce on February 23 began a series of hearings, at the request of the state railroad commissioners on proposed amendments to the Transportation Act. Chairman Winslow announced that the hearings would be confined to bills relating to Section 15-a of the act and the provisions relating to intrastate rates and as many bills relating to these subjects have been introduced during the past year the Sweet bill, H. R. 6861, was called up as the basis for the hearing. This proposes to terminate all control by the Interstate Commerce Commission over intrastate rates and to nullify all orders of the Interstate Commerce Commission relating to intrastate rates. It provides for dealing with questions of discrimination against interstate commerce by co-operative proceedings to which both the Interstate Commerce Commission and the state commissions would be parties. It also would repeal Section 15-a.

J. E. Benton, general solicitor of the National Association of Railway and Utilities Commissioners, made an opening statement outlining the history of the Shreveport case, the decision in which, he said, "attributed a meaning to the interstate commerce law which had been undiscovered for 25 years." He told the committee that the Interstate Commerce Commission, in spite of the fact that its "Shreveport powers" had been very clearly defined during the six years preceding the Transportation Act, has construed that act as giving it a power totally new which in effect results in centralizing the power of regulation over all rates.

Reading the resolutions adopted by the state commissioners at their convention in Atlanta as outlining their position as to amendments to the law, Mr. Benton said they do not contend that the so-called Shreveport power of the Interstate Commerce Commission ought to be wholly terminated, but the association asks a definition of the commission's jurisdiction that will hold it to the application of that power as it was exercised before the passage of the Transportation Act.

W. D. B. Ainey, chairman of the Pennsylvania Public Service Commission, said that he desired to approach the subject from a somewhat different angle. The Pennsylvania commission is not confronted with any serious situation arising from the Transportation Act, and its relations with the Interstate Commerce Commission are perfectly harmonious, but it is opposing the centralization of regulating authority in Washington on the ground that it is tending to deprive the carriers of initiative and responsibility. He believed that the correct policy of railway regulation is that represented by the Pennsylvania law, which makes the state commission a purely corrective body that does not substitute its judgment for the initiative of the carriers.

"So far as the Pennsylvania commission is concerned," Mr. Ainey said, "we would be perfectly willing to have all our authority taken away as far as railroads are concerned. We would still have plenty to do, but we are concerned with the overcentralization of authority over our rates in Washington. We believe it is depriving the railroads of responsibility and initiative and we don't believe it will lead to the best development of the railroad system or enable the roads to function properly and render adequate service. We believe the removal of all authority from the states such as has been accomplished will lead to a tendency against which we wish to protest because it will narrow the scope of the authority of the railroad through..."

He said he had recently taken up with a member of the commission a question of vital importance to the city of Philadelphia but was told the commission would not deal with a question of the first in Philadelphia but must consider San Francisco, Seattle, Chicago and St. Louis.

Representative Merritt said he agreed that the railroads ought to be allowed more initiative and asked if the proposed legislation provided for it, but Mr. Ainey said he was not discussing any of the bills and had not examined them.

Chairmen or members of a dozen or more state commissions were present prepared to testify on following days and Mr. Benton indicated that he hoped to have an opportunity to present a comprehensive statement later.

Operating Results with Gasoline Motor Cars

THE LINE of the Pittsburgh & Shawmut passes through the coal mining section of Western Pennsylvania and does not reach any large centers of population. Freight forms by far the most important traffic; in fact the road found that passenger trains were unremunerative but were necessary to keep up the production of the mining towns along the line because a supply of men could not be maintained at these points unless transportation facilities were provided to enable them to reach the larger towns. In order to reduce the cost of maintaining passenger service three Bowen motor cars were purchased and were placed in operation during the month of October, 1921. The results obtained up to this time are of special interest as indicating what may be expected with this type of equipment.

The motor cars have already been described (*Railway Age*, October 29, 1921, page 841) and for that reason further details will not be given here. The cars operate on severe grades and are not designed for high speed, the maximum speed on level track being about 30 miles an hour. The schedule on the Pittsburgh & Shawmut, including stops, averages 22 miles an hour. The cars are operated under the standard form of train rules adopted by the American Railway Association. The crew consists of two men—an engineer and a conductor. One car operates out of Brookville, Pa., making 98 miles daily, the wages, including overtime, amounting to \$7.83 for the engineer and \$9.38 for the conductor. Another car operates out of Kittanning, Pa., on an 83-mile daily run, the wages being \$8.63 for the engineer and \$9.10 for the conductor. The wages of the crew on these runs are respectively 17.5 cents and 22.5 cents per train mile.

The mileage per gallon of gasoline with these cars is about 6.8. The total cost of operation, including wages, material and supplies, fuel, and depreciation at the annual rate of four per cent, amounts to approximately 35 cents per train mile. The cost of operation of steam passenger trains based on the same method of ascertaining costs is approximately 71 cents per mile. Thus the motor cars reduce the cost by about one-half, at the same time giving more frequent service and developing business which could not have been obtained with steam train operation.

The cars handle 45 passengers seated, but have frequently been loaded with as many as 65 passengers leaving the initial terminal. There have been no derailments since the cars were put in operation. Some difficulty has been experienced by reason of sleet and ice making it impossible to operate on schedule time. The transmission gears originally applied gave some trouble and it has been necessary to replace them with heavier gears. As a whole, the railroad officers are well satisfied with the operation of the cars as it is felt that very little difficulty will be experienced since minor mechanical defects have been corrected, and the substitution of motor cars for steam train operation will enable the road to conduct its passenger business on a paying basis. The *Railway Age* is indebted to Dwight C. Morgan, vice-president of the Pittsburg & Shawmut for this information regarding the performance of the cars.

The Federal Signal Company's Audible Signal

Interesting Experiments on the Boston & Albany in
Massachusetts and New York

one at East Brookfield, Massachusetts, and one at Chatham, New York.

This apparatus was first put on the market by the Federal company several years ago, and one of them has been in use at Salmon Bay drawbridge, on the Northern Pacific, in the state of Washington, since 1914; but numerous changes of detail have been made in the design since that year. The cutting-out arrangement (by which an approaching engine-

THE BOSTON & ALBANY has in use two audible roadside signals, installed by the Federal Signal Company, of Albany, N. Y., last September, which have given very satisfactory service, functioning as distant signals; an audible warning (a torpedo) sounded in conjunction with the visual indication given by the three-position automatic semaphore. The torpedo is in position to be exploded by the passage of a train, at all times when the semaphore is in the 45-degree position. When the semaphore goes to the clear (90-degree) position the audible apparatus is cut out. The signals are on the westbound track of the main line,

an interlocked stop signal and has never been exploded by a train. It is tested once a month.)

The Boston & Albany signals have operated without failure since they were installed, six months ago. They have been subjected to severe winter weather, and a heavy train service. The signal may be called a repeater of the caution indication, but it operates independently of the visual signal.

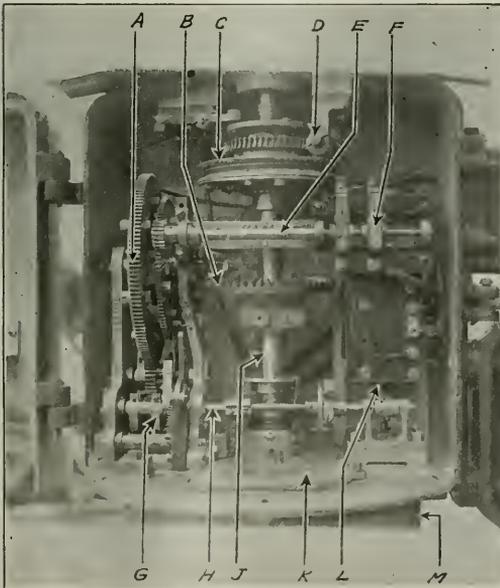

The shell magazine in the audible signal is designed to hold 72 shells, and is so interconnected with the semaphore that when the magazine approaches exhaustion the semaphore blade is set in the horizontal position against approaching trains. On the Boston & Albany reloading once in about two weeks is sufficient, explosions taking place on an average of 25 a week at each signal.

The mechanism is shown in the illustration, the torpedo drum being at the bottom of the case. This drum is rotated by means of a large weight which tends at all times to bring a new cartridge into firing position. This is accomplished by de-energizing a holding winding on the operating solenoid. When a cartridge has been fired, the operating weight indexes a fresh cartridge to the firing position so that the succeeding pick-up of the track relay (when the train has passed out of the block) will again put the mechanism in condition to repeat the firing operation. Check contacts are provided to insure that the audible signal is in a firing position before the signal control circuit is completed, so that the audible signal must be in firing condition before the visual signal can indicate either "proceed" or "proceed with caution."

The mechanism case is mounted on a short post (iron pipe). This is set about 60 ft. in advance of the semaphore so that the explosion, which occurs about one second after the leading wheels of the train pass the signal post (and open the track relay) will sound at the moment when the engineman in the cab is nearest to it.

Within the post is suspended the operating weight, which is attached, by means of a cable, running over a grooved pulley to the main operating sheave C. The weight tends to rotate a main shaft J, at the lower extremity of which is mounted the drum carrying the cartridges (inside of M). Rotation of shaft J drives, through the medium of the bevel gears B, the spur gear A, which in turn cocks the firing hammers as each cartridge is indexed to the firing position. The hammers are held cocked by the triggers G. These triggers are carried on a trigger shaft H connected to the plunger of the solenoid core L. Thus, as the core L drops, the trigger G is disconnected from the firing hammer and one cartridge is exploded. The apparatus can be adjusted to provide for any number of explosions at each operation.

After the explosion, the drum is indexed by the weight to the new firing position. As soon as the solenoid core L is picked up the circuit controller F will close, to permit the semaphore to again clear. The controller contacts are in timed relation to the firing position of the magazine, through the medium of the gears and pinions on the left hand extremity of the shaft E. The shaft D is provided for disconnecting the operating weight when it is necessary to replenish

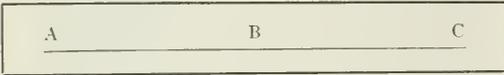

Federal Audible Signal

man, after seeing the visual signal, can prevent the explosion) which has been a feature of the descriptions heretofore published, is not included in the Boston & Albany installation. (On the Northern Pacific the torpedo apparatus is at

and reload the magazine. Access to the firing chambers is provided through a hand hole plate *K*.

The control of the explosion of the cartridge so that it will occur only on the passage of a train, and at the moment that the locomotive passes nearest to it, is accomplished by means of a contact on the track relay. Assuming that the leading train—the train to be protected—is in section *B-C*, The semaphore at *A* is at caution; and as the following train reaches *A* its leading wheels, by opening the track relay at that point, cause the semaphore arm to move to

the stop position and also cause the opening of a circuit to the solenoid which controls the release of the trigger that causes the explosion of the cartridge.

THE SPACE INTERVAL.—It is getting harder to railroad legislation through Congress now that they have installed the bloc system.—*Southern Lumberman*.

Freight Car Loading

WASHINGTON, D. C.

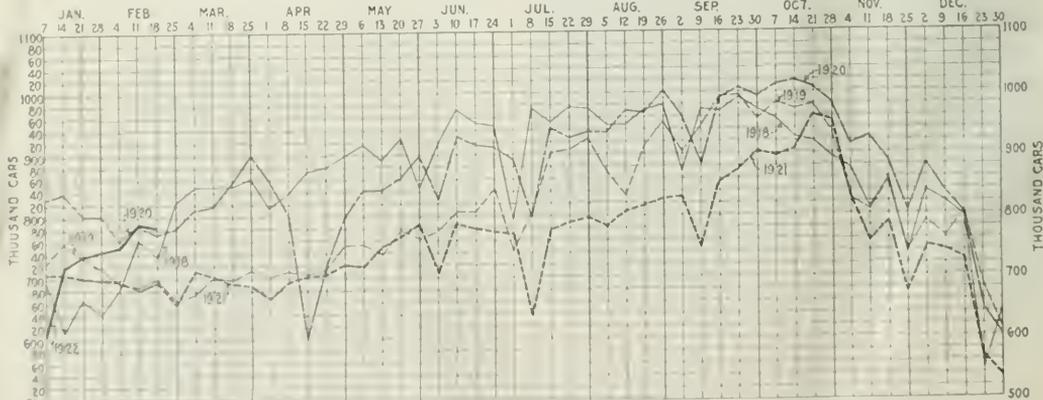

FREIGHT CAR LOADING for the week ending February 18 showed a slight decrease as compared with the preceding week, according to the weekly report of the Car Service Division of the American Railway Association, which is doubtless attributable to the observance of Lincoln's Birthday as a holiday in many parts of the country, but there was a large increase as compared with the corresponding week of 1921 and an increase over 1920. The total was 780,924 cars as compared with 692,007 in 1921 and 772,102 in 1920. The previous week the loading was 788,412. Increases as compared with last year were shown in all districts and in all classes of commodities except coke, forest products and ore. The principal increase was in coal but large increases also were shown in grain and grain products and merchandise and miscellaneous freight. The summary is given in the table below.

The number of surplus freight cars showed another reduction during the week ended February 15 to 278,481, which was 18,178 less than for the previous week. Of these 104,513 were box cars and 112,050 were coal cars.

I. C. C. Orders Increasing Intrastate Rates Upheld

Supreme Court Says Effective Control of Interstate Commerce Must Embrace Incidental Control Over Intrastate Rates

WASHINGTON, D. C.

THE VALIDITY of orders of the Interstate Commerce Commission increasing intrastate rates by the percentages applied to interstate rates in Ex Parte 74 was completely upheld in a unanimous decision of the United States Supreme Court handed down on Monday, February 27, in the Wisconsin passenger fare case, followed by a similar decision in the New York passenger fare case. In these cases the state authorities had contested the commission's orders advancing the intrastate passenger fares to 3.6 cents a mile, in spite of state fare laws providing for a lower rate, on the ground that they were beyond the powers of the commission as provided in the Transportation Act. A committee representing the state railway commissioners had also attacked the constitutionality of the provisions of the act, Section 13 and Section 15-a, under which the commission's orders were issued.

The decision was based on the broad ground that Congress in the Transportation Act had undertaken to insure an adequate system of interstate commerce by providing that the revenues should be adequate and that Congress, as the dominant controller of interstate commerce, may, therefore, restrain any undue limitation by a state authority of the earning power of the interstate commerce system in doing state work. The disparity between state and interstate rates which the commission sought to remove was declared to be plainly an undue, unreasonable and unjust discrimination against interstate commerce "within the ordinary meaning of those words" and the court pointed out that the power to remove such discrimination in pursuit of the effort to provide adequate transportation service for the country does not constitute a centralization of authority over both state and interstate commerce but represents merely an incidental regulation of state commerce upon occasion as part of the regulation of the agencies of interstate commerce.

An interesting feature of the decision is that it finds that a "new power" was conferred upon the commission in the new law to deal directly with discriminatory intrastate rates, whereas many members of Congress who were prominent in the drafting of the law have repeatedly said that they were merely writing into the law the doctrine of the Supreme Court's decisions construing the original act in the Shreveport and other cases.

In both of the cases the state commissions had permitted the increase of state freight rates by the percentages applied by the Interstate Commerce Commission on August 26, 1920, to interstate traffic but had declined to permit increases in intrastate passenger fares because of state statutes fixing the rates, and in the New York case, in addition, because the charter of the New York Central fixed a rate of 2 cents per mile on its main line.

In both cases the higher fares ordered by the federal commission have been in effect under injunctions issued by federal district courts whose decisions are now affirmed. In the Wisconsin case it was estimated that the difference in revenues resulting from the difference between the state rate and that ordered by the commission amounts to \$6,000,000 annually and in the New York case the difference was estimated at \$12,000,000.

The opinions were rendered by Chief Justice Taft. After outlining the history and the contentions of the opposing parties, in which he referred to the enormous increase in expenses of railroad operation during federal control and the purpose of the Transportation Act to provide by Section 15-a for an adequate basis of revenues after the return of

the roads, he said that there are two questions for the court to decide: First, do the intrastate passenger fares work undue prejudice against persons in interstate commerce such as to justify horizontal increases of all of them; and, second, are these intrastate fares an undue discrimination against interstate commerce as a whole which it is the duty of the commission to remove? He pointed out that the orders in these cases are much wider than the orders in the Shreveport and Illinois Central cases. It is also stated that Section 13 "for the first time authorized the commission to deal directly with intrastate rates" when they are unduly discriminatory against interstate commerce—"a power already indirectly exercised as to persons and localities with the approval of this court in the Shreveport and other cases."

Transportation Act a New Departure

"It is manifest," the chief justice said, "that the act made a new departure. The new measure imposed an affirmative duty on the Interstate Commerce Commission to fix rates and to take other important steps to maintain an adequate railway service for the people of the United States. This is expressly declared in Section 15-a to be one of the purposes of the bill. Intrastate rates and the income from them must play a most important part in maintaining an adequate national railway system. Twenty per cent of the gross freight receipts of the railroads of the country are from intrastate traffic and 50 per cent of the passenger receipts. The ratio of the gross intrastate revenue to the interstate revenue is a little less than 1 to 3. If the rates on which such receipts are based are to be fixed at a substantially lower level than in interstate traffic, the share which the intrastate traffic will contribute will be proportionately less. If the railways are to earn a fixed net percentage of income, the lower the intrastate rates the higher the interstate rates may have to be. The effective operation of the act will reasonably and justly require that interstate traffic should pay a fair proportionate share of the cost of maintaining an adequate railway system.

Direct Power to Remove Discrimination Conferred

"Section 15-a confers no power on the commission to deal with intrastate rates. What is done under that section is to be done by the commission in the exercise of its power to prescribe just and reasonable rates, that is, the powers derived from previous amendments to the interstate commerce act, which have never been construed or used to embrace the prescription of intrastate rates. When we turn to Paragraph 4 of Section 13, however, and find the commission for the first time vested with the direct power to remove any undue, unreasonable or unjust discrimination against interstate or foreign commerce, it is impossible to escape the dovetail relation between that provision and the purpose of Section 15-a.

"If that purpose is interfered with by a disparity of intrastate rates the commission is authorized to end the disparity by directly removing it because it is plainly an undue, unreasonable and unjust discrimination against interstate or foreign commerce within the ordinary meaning of those words."

Commerce Does Not Regard State Lines

In reply to the objection that the order violated the specific proviso of the interstate commerce act that the commission is not to regulate traffic wholly intrastate, the court said: "Such orders as to intrastate traffic are merely incidental to

the regulation of interstate traffic and necessary to its efficiency. The effective control of the one must embrace some control over the other in view of the blending of both in actual operation. The same rails and the same cars carry both. The same men conduct them. Commerce is a unit and does not regard state lines, and while under the constitution interstate and intrastate commerce are ordinarily subject to regulation by different sovereignties, yet when they are so mingled together that the supreme authority, the nation, cannot exercise complete effective control over interstate commerce without incidental regulation of intrastate commerce such incidental regulation is not an invasion of state authority or a violation of the proviso."

No Doubt as to Constitutionality

It was stated that counsel for the appellant in the Wisconsin case had not contested the constitutionality of the statute, but that counsel for the state commissioners who had been permitted to file a brief *amicus curiae* had done so. On this point the court said that the principles laid down by this court in the Minnesota, Shreveport, Illinois Central and analogous cases "we think leave no room for discussion on this point. Congress in its control of interstate commerce is seeking in the Transportation Act to make the system adequate to the needs of the country by securing for it a reasonable compensatory return for all the work it does. The states are seeking to use that same system for intrastate traffic. That entails large duties and expenditures on an interstate commerce system which may burden it unless compensation is received for the intrastate business reasonably proportionate to that for the interstate business.

"Congress as the dominant controller of interstate commerce may, therefore, restrict undue limitation of the earning power of the interstate commerce system in doing state work. The affirmative power of Congress in developing interstate commerce agencies is clear. In such development it can impose any reasonable conditions on a state's use of an interstate carrier for intrastate commerce it deems necessary or desirable. This is because of the supremacy of the national power in the field.

"It is said our conclusion gives the commission unified control of interstate and intrastate commerce. It is only unified to the extent of maintaining efficient regulation of interstate commerce under the paramount power of Congress. It does not involve general regulation of intrastate commerce.

"The action of the Interstate Commerce Commission in this regard should be directed to substantial disparity which operates as a real discrimination against and obstruction to interstate commerce and must leave appropriate discretion to the state authorities to deal with intrastate rates as between themselves on the general level which the Interstate Commerce Commission has found to be fair to interstate commerce." Discussing the possible effect of blanket increases in rates in particular localities, where, by discouraging patronage, earnings may be decreased, Chief Justice Taft asserted that should such results follow, the Interstate Commerce Commission would be available for appropriate action.

In this case the order of the district court for the eastern district of Wisconsin was affirmed. In affirming a similar decision of the district court in the New York case the court said that similar questions were involved, the only difference being that in New York the state had a charter contract with one of the roads providing for a two cent fare.

State Commissioners to Ask Modification of Law

This decision means a renewal of the campaign to induce Congress to amend the law to deprive the commission of what the court referred to as the new powers conferred by the act. A large number of state commissioners who had been testifying before the House committee on interstate and foreign commerce on bills to restore the powers of the state

commissions were present in court when the decision was read. The Senate committee on interstate commerce has called a meeting for Saturday, March 4, to consider its action on the Capper and other bills in the light of the Supreme Court's decision.

Valuation Bill Passed by Senate

WASHINGTON, D. C.

THE SENATE on February 23 passed the bill introduced by Senator Cummins, at the request of the Interstate Commerce Commission and the state commissioners, to eliminate from the valuation act the requirement that the commission ascertain and report "separately the original and present cost of condemnation and damages or of purchase in excess of such original cost or present value" of railroad lands. There was practically no debate on the bill, but Senator Cummins had devoted an hour or so to an explanation of it. He explained that the commission had held that it is practically impossible to ascertain the cost of reproducing the land holdings of the railroads but that the Supreme Court had held in the Kansas City Southern case that the road must comply with the law, although in the Minnesota rate case the court held that to estimate what would be the actual cost of acquiring the right-of-way if the railroad were not there "is to indulge in mere speculation."

Senator Cummins said that it is estimated that land constitutes about 12½ per cent of the railway property, or approximately \$2,000,000,000 and that if this were doubled by the application of a multiple, the additional 6 per cent return the public would be expected to pay would amount to \$120,000,000 a year. He showed, however, that since the Kansas City Southern decision the commission has been reporting a figure for the cost of acquisition of land made up by using multiples ranging from 0.55 to 2.

"The commission has practically compromised with the railroad claim by adopting about one-third of the railroad demand," Senator Cummins said, "but even with the additions which are proposed, and which the Interstate Commerce Commission is now pursuing as well as it is able, and if no part of the further railroad claim is conceded anywhere, we will add more than \$2,000,000,000 to the value of the railway lands of the United States, and that means an annual imposition upon the people in the way of railway rates of not less than \$120,000,000; and if under the testimony which is being taken all the while by the Interstate Commerce Commission the railway claim should hereafter be given further consideration, it might add \$4,000,000,000 or more to the value of these lands.

"My position is that when the railway companies receive the benefit of the unearned increment of all the lands in the United States, of which they have been in possession in many instances for more than 50 years, when rights-of-way which were insignificant in their cost at the time of acquisition have quadrupled and multiplied in many instances a hundred times, I think they ought to be content, and should not insist that we should not only give them the benefit of the increased value of their property as a whole, but that we should attempt to ascertain what it could cost to acquire by condemnation or purchase their particular rights-of-way at the present moment. That is the whole purpose of this amendment. It is to strike out the requirement that the commission shall find the excess of cost of present condemnation over present value. They are entitled to present value, and I think the commission ought to be permitted to go its way unhampered by a statute of this sort, to ascertain, according to the rules of the law, what the present value of the lands is."

Senator Kellogg remarked that the fact that the commission is required to ascertain this element of value does not necessarily mean that it would be included in the final value.

G. R. S. Company's Auto-Manual Train Control

A System Which Retains All the Advantages of Visual Signals and of the Enginemen's Brain

THE DRAWINGS and photographic illustrations shown in Figs. 1 to 6, inclusive, illustrate the automatic train control system of the General Railway Signal Company, of Rochester, N. Y., which was described in the *Railway Age* of October 29 last; but which since that time has been improved in various details. An essential element of this system is the arrangement for permitting the engineman,

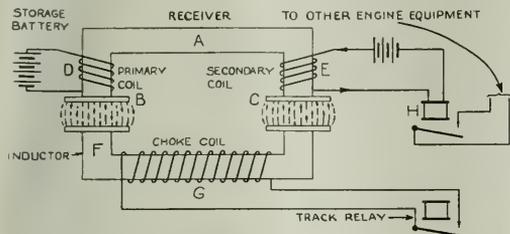

Fig. 1—Inductive Train Control

when alert and watching for and obeying the visual signals, to cut out the automatic brake-setting machinery and thus keep in his own hands full control of his train; and this is the reason for the name adopted, "auto-manual train control." The cutting out device is so arranged that the engineman must have the co-operation of the fireman, thus insuring that it shall not be used unless there are two men alive and active on the locomotive; and the circuit breakers are so combined in a small box that no cut-out can be con-

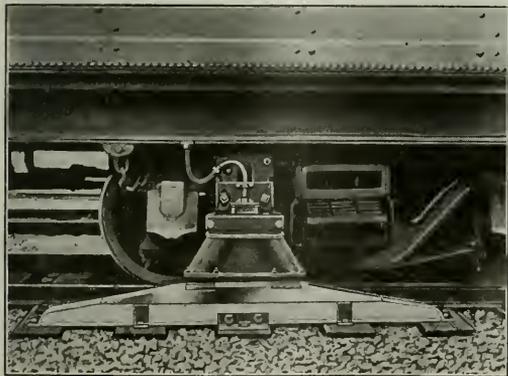

Fig. 2—Receiver on Tender; Inductor on Ties

tinued for a longer time than ten seconds; this to thwart the lazy engineman who might wish to cut out the stop apparatus for a whole run. If an engineman does allow his train to be automatically controlled, it must come to a stop before the control can be released.

From a detailed account furnished by the manufacturer, we condense the following description:

The means by which control is transmitted from the roadway to the moving train is induction, employing the inductor-alternator principle, as illustrated in Fig. 1. The inductor *G* is fixed on the ends of the ties with the pole faces $2\frac{1}{2}$ in.

above the top of the running rails. The receiver or locomotive element *A* is carried on the tender truck so that its pole faces pass about 2 in. above the pole faces of the inductor. On one leg of the receiver is placed a primary coil *D* fed from a storage battery. A secondary coil *E* on the other leg of the receiver includes in its circuit a storage battery and a relay *H*. The magnetic flux in the secondary coil, remaining constant in amount, keeps the flow of current through the relay likewise constant and holds the relay contacts closed. This is the normal condition on the locomotive. When, however, it passes a control point, if the circuit of the choke coil *G* is open, the inductor, partially completing the magnetic circuit of the receiver, will cause a large change of magnetic flux within coil *E*, which in turn will result in a sufficient variation of current to open the relay. The relay, when open, causes a brake application.

If, as the locomotive passes, the circuit of coil *G* is closed

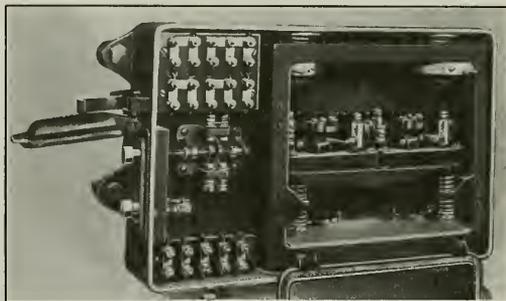

Fig. 3—Reset Key, Battery Switch and Relays

(by the track relay of the track section to which this control applies) this coil will then act as a choke, preventing the magnetic flux from varying materially in the secondary coil of the receiver; the engine relay will not be opened and the train will not be stopped.

It is to be noted that the coil on the inductor is never supplied with energy; the only thing necessary to make the inductor effective to stop a train is the opening of this no-battery circuit. Thus is avoided all trouble or expense to provide a roadside current-supply for train-control purposes. The inductor is of course uninfluenced by sleet, snow, water, etc., and is not affected by stray magnetic fields from passing electric locomotives or current in the propulsion rails. It is on an oak foundation with a manganese steel cap on the top. The manganese steel, being fairly non-magnetic, does not interfere with the proper function of the inductor.

Fig. 2 shows the inductor and the receiver. The receiver is fitted in between the projecting springs and journal box of the truck frame of the tender. It is adjustable vertically to compensate for wheel wear. It is resiliently supported by a cast steel structure fastened directly to the truck frame, in such manner that no car springs intervene between it and the axles.

The engine relay, Fig. 3, is so housed and supported as to be immune to the effects of locomotive vibration. It has a very light, short armature mounted on jeweled bearings. Two relays are employed, a primary and a secondary. The primary relay, designed to be especially rapid in action, takes a

very small amount of energy. The secondary relay need not be rapid in action and is provided with heavy carbon to metal contacts, giving a wide break and is capable of continuous and satisfactory handling of the current taken by the electro-pneumatic valve.

These two relays are resiliently supported in an inner housing, said housing being purposely made heavy, about 70 lb. This inner housing being in turn resiliently supported in the relay box proper, engine vibration is prevented from reaching the relays. The inner enclosure in addition prevents frost troubles and the accumulation of dust on the relays.

The Brake Setting Apparatus

The brake setting apparatus consists of an electro-pneumatic valve, controlling a cylinder which is directly connected to the engineer's brake valve handle (Fig. 6) with a mechanism so designed that the valve will automatically move to the service application position without danger of jumping to the emergency position. The engineer may at any time put on the emergency if he so desires; or, by exerting heavy pressure against the brake handle, he can modify an automatic brake application. Absence of air permits a heavy coil spring within the cylinder to move the brake handle to the service position. The spring is so designed and protected that even if it should break, it would continue to operate reliably.

As before stated, the engineer who permits automatic application of the brakes can release them only after the train has stopped. The reset key, with front and back contacts, is fixed on the side of the tender midway between the front and the back end, and is so connected in the circuit that if operated following an automatic application of the brakes, it will restore the automatic control equipment to normal. If an attempt should be made to lock the key in its release position it would cause an application of the brakes, it being

To make the system "auto-manual" there is provided an "acknowledging contactor" for the engineer and also one for the fireman. A contactor (Figs. 4 and 5) has a normally closed and a normally open contact. The normally open contact is closed when the lever is depressed, and when closed it prevents a brake application. The normally closed contact is controlled by a time mechanism so that it will open after the lapse of ten seconds, thus making it useless for engineer or fireman to attempt to tie or lock the lever down. Ten seconds represents about 900 ft. of train travel at 60 miles an hour.

The two acknowledging contactors are connected in series, so that the engineer and the fireman must operate them

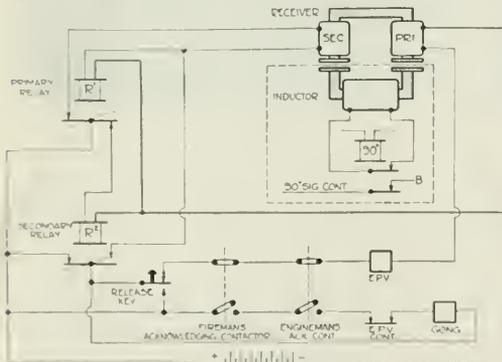

Fig. 4—Circuits of Auto-Manual Train Control

necessary in the process of restoring the automatic control equipment to normal, to first push the plunger in and then allow it to come back to its normal position.

Reversing Switch and Acknowledging Contactors

In order to set up the proper combination so that the engine will not be under control when operating against the current of traffic, a reversing switch is employed, and arranged to be operated by one of the axles of the locomotive or tender. This is so fixed that the direction of rotation of the axle automatically puts into commission the equipment on the right side of the locomotive, with reference to the direction in which it is moving. There is a receiver on each side of the locomotive.

Automatic Cylinder on Brake Valve and Acknowledging Contactors

simultaneously, in order to forestall an application of the brakes. The fireman's lever is under the left window sill and engineer's under the right window sill. To the objection that the fireman's duties would prevent him from operating the contactor it is replied that the direction of the restrictive signals; and on most railroads he is required to call signals, both favorable and adverse.

Current Supply and Speed Control

The current supply for the automatic train control equipment on the locomotive may be taken from the turbo-generator direct or from a storage battery independently charged or from a storage battery of smaller capacity floated across the turbo-generator and provided with the usual reverse current relay to prevent its discharge in case the turbo-generator voltage should fall unduly. There are required about 25 watts continuously while the automatic control is in effect. A cut-out switch is placed in the relay box so that the battery current may be cut off when the locomotive is out of commission.

This system readily provides for permitting a train to move

up to a stop signal without an automatic application of the brakes and without the use of acknowledging contactors, by the use of inductors placed along the road in combination with a time mechanism on the locomotive, the whole so organized that if a train passes from one inductor to the next with speed sufficiently reduced, no brake application will take place. Upon reaching the second inductor, the time

mechanism will again have closed its circuit so that it would not cause a brake application. This speed control arrangement is exceedingly flexible and comparatively simple, involving the same kind of parts as would be used in connection with an automatic stop, except that the time contactors are added. Speed restrictions are instantly removed when, and if the signal ahead shows a more favorable indication.

New Rules for Express Employees Announced

Overtime Provisions Changed—"Split Tricks" Authorized in Revised Code Governing Working Conditions

A NEW CODE OF RULES to govern the working conditions of employees of the American Railway Express Company was announced by the Railroad Labor Board on February 25. Included in the new "national agreement" are provisions for the payment of punitive overtime after the ninth hour of continuous service instead of after the eighth hour, the payment of punitive overtime to employees in train service after 270 hours per month instead of after 240 hours and for the working of "split tricks" where such work can be performed within a spread of 12 hours. The new rules became effective on March 1.

The national agreement with the employees of the American Railway Express Company, formed during federal control, contained 95 rules. The Labor Board's decision contains 17 rules of which eight are reproductions of corresponding rules in the national agreement, one is a new rule governing the effective date, etc., of the decision, seven are revisions of corresponding rules of the national agreement and two are reproductions of old rules with but little modification.

Because the express company and its employees agreed upon practically all of the rules governing seniority, discipline and grievances, and leave of absence, the Board remanded these subjects to the interested parties for settlement. In addition, the decision adds that "the Labor Board believes that certain other subject matters now regulated by the rules of the agreement between the employees and the carrier effective February 15, 1920, may not be covered in all localities by rules of general application, and require further consideration by the parties directly concerned." The rules thus remanded to the parties directly concerned total 76, including the rules of seniority, discipline and grievances and leave of absence.

The changes which have been made by the Board are summarized as follows:

Rules 39 and 90 of the national agreement provide for the granting of transportation to committees of employees handling grievances and to employees and those dependent upon them for support. In the new code, that portion of Rule 39 and all of Rule 90 containing these provisions are eliminated.

The new ruling covering intermittent service and giving the express company the right to employ men on "split tricks" without punitive payments, is exactly the same as the rule recently given to the clerks and to the firemen and oilers and reproduced in the *Railway Age* of January 28 (page 277). Under this new ruling, employees may be used for eight hours of intermittent service within a 12-hour spread.

Under the national agreement "split tricks" could be worked only where five or less employees were assigned at the smaller agencies.

Rule 54 of the expressmen's national agreement provided

for the payment of punitive overtime after the eighth hour. The corresponding rule of the new code provides for the payment of pro-rata rates for the ninth hour and punitive overtime thereafter. In addition, the method of computing overtime for monthly rated employees, which was a part of the old Rule 54, is eliminated in the new ruling.

Under Rule 66 of the national agreement, express employees in train service were paid time and one-half overtime for all work performed above 240 hours per month. The new rule on this point provides for the payment of pro-rata rates for service in excess of 240 hours per month and for time and one-half for service in excess of 270 hours per month.

The same provisions were made for relief, substitute and extra train service employees in Rule 73 of the national agreement and the comparable rule of the new code has been changed to conform with the new Rule 66. In addition, Rule 73 provided that employees in train service performing extra work not in place of any regular messenger and paid no stated salary should be paid 50 cents per hour and helpers 40 cents per hour. These rates of pay are raised in the new code to 60 cents and 50 cents per hour, respectively.

In providing for the payment of employees called to protect a route other than their own, Rule 74 of the national agreement provided that;

"Compensation for time so occupied shall be paid on following basis: For the first eight hours pro-rata, time thereafter at time and one-half time applied to each trip. (There will be a minimum allowance of two hours at time and one-half time for two hours' work or less. If time exceeds two hours but is less than eight hours, the bonus of one hour will continue up to and including the seventh hour)."

The new ruling on this point provides that "compensation for time so occupied shall be paid for on the minute basis at pro-rata rates with a minimum allowance of three hours' pay for two hours' work or less."

The minimum meal period of 30 minutes provided for in Rule 48 of the national agreement is changed in the new code to 20 minutes.

Rule 55 of the national agreement pertaining to punitive payments for calls to perform work not continuous with the regular work period, is changed so that the provisions of this rule apply to such calls either *before* or *after* the regular work period.

The wording of Rule 1 relative to the scope of the rules has also been changed slightly but its effect will be virtually the same.

Included among the rules of the national agreement which have been approved by the Board are those covering payments for reporting and not used, the eight-hour day, fixing and changing starting time, Sunday and holiday work, monthly assignment of employees in train service, overtime for fractional parts of a month of employees in train service and the payment of train service employees in short turn-

around service. In addition portions of several other rules are reproduced unchanged in the new code.

Similar rules relating to overtime payments for calls and monthly assignment and overtime rates for train service employees were also announced by the Board to apply to the Southeastern Express Company.

The questions of working rules and wages for yardmasters will be held in abeyance pending the outcome of conferences now being held between the carriers and their train service employees according to a recent decision of the Labor Board. Accordingly no new rules to govern the working conditions of these employees will be announced at this time nor will the organized yardmasters be a party to the wage reduction hearings which will begin on March 6.

Rules for Supervisors of Mechanics Announced

ANOTHER NEW CODE of rules governing, in this case, the working conditions of employees who are members of the International Association of Railroad Supervisors of Mechanics, was announced by the Railroad Labor Board on February 28. The new rules, which are reproduced in full below, apply to the Baltimore & Ohio (Chicago Terminal); the Boston & Maine; the Colorado & Southern; the El Paso & Southwestern; the Gulf Coast Lines, including the Beaumont, Sour Lake & Western, the Houston Belt & Terminal, the New Iberia & Northern, the New Orleans, Texas & Mexico, the Orange & Northwestern and the St. Louis, Brownsville & Mexico; the St. Louis Southwestern, and the Southern Pacific (Pacific System). They are effective March 1.

The new rules are as follows:

Rule 1. The term "supervisor of mechanics" as hereinafter used, shall be understood to include all foremen below the rank of general foreman supervising mechanics in the maintenance of equipment department.

Rule 2. All supervisors of mechanics, herein specified, shall be compensated on a monthly salary basis.

Rule 3. To determine the daily basis for all employees herein specified, multiply by twelve the regular monthly rate (exclusive of compensation for extra service), and divide the result by the number of days in a year that service has been customarily performed.

Rule 4. Monthly salaried supervisors of mechanics shall be required to remain on duty only a sufficient length of time after the shift of mechanics they supervise have completed their tour of duty, to properly turn over the work to their successors, if on a relief position; or if not on a relief position to see that there are no fire hazards and that everything is in proper place and order.

Rule 5. Supervisors of mechanics will not be required to report for work on Sundays, unless they have supervisory duties to perform, or when attending a conference in the interest of the service.

Rule 6. Supervisors of mechanics whose tour of duty consists of seven days per week, will be granted two days off each month. If for any reason the supervisor is not permitted to have two days off each month, he will be compensated for those days on the pro rata basis, in addition to the regular monthly compensation.

Rule 7. There will be no deduction in the compensation of supervisors of mechanics on account of shops working reduced hours.

Rule 8. The entering of employees in the positions occupied in the service, or changing their classification or work, shall not operate to establish a less favorable rate of pay or condition of employment than is herein established.

Rule 9. When a new position is created the rate of pay will be established to conform to positions of similar character and responsibility.

Rule 10. Foremen temporarily assigned to higher-rated positions will receive the higher rate.

Rule 11. When supervisors of mechanics are required to leave their established headquarters (which will be designated by superior officers), in compliance with the directions of superior officers, they will be paid necessary actual expenses while away.

Rule 12. Employees covered by this schedule and those de-

pendent upon them for support will be given same consideration in granting free transportation as is granted other employees in service.

Rule 13. In filling vacancies or new positions, supervisors of mechanics senior in the service employed on a division or terminal making written application for such position, shall be granted preference where ability is conceded; the superintendent or master mechanic to be the judge.

Rule 14. When a position held by a supervisor of mechanics is abolished, advance notice thereof will be given, and so far as the management is concerned, he may resume his seniority in the craft from which he was promoted.

Rule 15. Efforts will be made to provide suitable employment for supervisors of mechanics who have given long and faithful service and have become unable, on account of age or infirmity, to handle their present positions.

Rule 16. In case a supervisor of mechanics accepts an official position with the carrier, or a salaried position as a representative of the employees, he will retain all seniority rights as provided for in Rules 13 and 14.

Rule 17. This agreement shall be effective as of March 1, 1922, and shall continue in effect until it is changed as provided herein or under the provisions of the Transportation Act, 1920.

Rule 18. Should either of the parties to this agreement desire to revise or modify these rules, 30 days' written advance notice, containing the proposed changes, shall be given and conferences shall be held immediately on the expiration of said notice unless another date is mutually agreed upon.

The new rules are to apply to each of the above-named carriers "except in such instances as any particular carrier may have agreed with its employees upon any one or more of such rules, in which case the rule or rules agreed upon * * * shall apply * * *"

Referring to certain rules proposed by the employees, the decision says:

The Board has eliminated proposed rules relative to classification of shops, classification of supervisors of mechanics, and duties required in case of industrial disputes. These rules shall cease and terminate, except in such instances as any particular carrier may have agreed or may hereafter agree with its employees upon any one or more of such rules, in which case the rule or rules agreed upon by the carrier and its employees shall apply on said road.

All rules regarding the subject of discipline and grievances are left to the carriers and their employees for adjustment, the decision stating that a "substantial number of the carriers and their employees have agreed upon the major part of" these rules. The Board also adds:

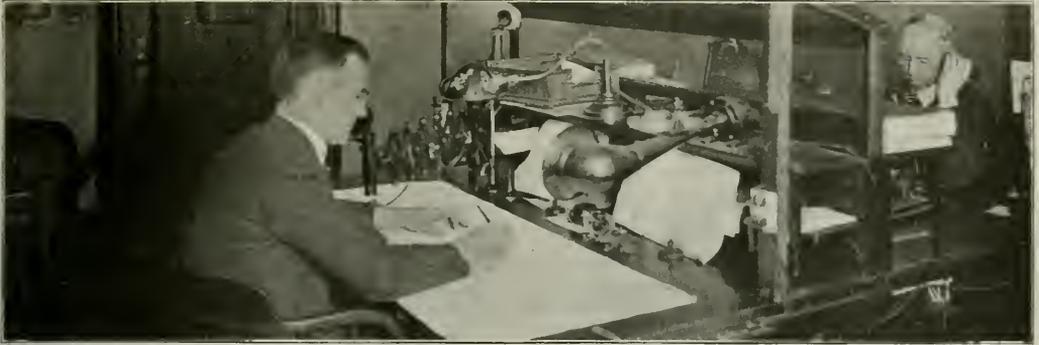

The Labor Board believes that certain other subject matters may not be covered in all localities by rules of general application, and require further consideration by the parties directly concerned.

Similarly the questions of vacations and sick leaves with pay are, according to the terms of this decision, remanded to the carriers and the employees for settlement.

Correction

IN THE correspondence between W. H. Chandler, president of the National Industrial Traffic League and Thomas De Witt Cuyler, chairman of the Association of Railway executives, reproduced in the *Railway Age* of February 25, page 487, Mr. Cuyler is quoted as stating that "when the Railroad Labor Board announced its revision of the shop crafts agreement, it informally estimated that this revision would probably enable the railroads to save \$300,000,000." This should have been \$50,000,000.

THE CHICAGO & NORTH WESTERN has asked for a permanent injunction to restrain the Minnesota Railroad and Warehouse Commission from enforcing what is known as the "car shed law" of that State. The case was taken under advisement by the District Court at Minneapolis, on February 18. The law, which is scheduled to go into effect on September 1, requires railroads to build sheds for the protection of car repairers.

Loud-Speaking Telephone Receiver on Dispatching Circuits

The Telephone in Trunk Line Railroad Service*

A Discussion of the Use of Long Distance and Dispatching Circuits on the New York Central

By Stanley Rhoads

Telegraph and Telephone Engineer, New York Central Lines

THE USE of commercial telephones in railroad service began about 1890, but the privately owned and operated lines, such as dispatching and message lines, were introduced late in 1907. The telephone service on nearly all railroads is supervised by the telegraph department although at present the telephone outweighs the telegraph in importance on many railroads.

The expense of the telephones in railroad service is a quite appreciable item in the cost of operation of a road, as may be judged by the fact that it is estimated that the annual cost of the rented telephone service is between \$7,000,000 and \$10,000,000 for the railroads of the country. This includes the rental of the telephones and switchboards, together with the salaries of the operators, but does not include the cost of maintenance or the annual charges on the railroad-owned long-distance lines, which it is difficult to separate from the costs for other wires. The New York Central Lines costs for telephone rentals, toll calls and operators' wages total over \$800,000 a year in normal times.

There are 9,500 rented telephones on the New York Central Lines, of which 5,500 are connected to 116 private branch switchboards, which require 250 operators; the remaining 4,000 telephones are on direct exchange lines. Each rented telephone costs close to \$100 a year for rent, operator's wages, toll calls and measured service, although the nominal rental on the bill of the commercial telephone company may be but \$3.60 a year. These figures indicate that the railroads probably use more telephones than any other industry in the country.

To give service over private lines of the railroads to the intermediate towns where no railroad exchange is maintained, a semi-local telephone line is provided on some railroads, with rented telephones connected at these towns, so that the division headquarters switchboard can be called directly, or can call these stations for such business as arranging Pullman reservations, obtaining freight or ticket tariffs, etc. It is not as yet economical for all stations to be connected to such railroad semi-local lines because the present rental rate

on the telephones for such use is so high that it is prohibitive.

One switchboard operator can usually handle about 75 local telephones on a railroad private branch exchange, although if the lines are very busy, 25 may be all that can be handled. Two long distance lines may give one operator enough to do if the lines are busy and the conversations are short, for some time is required to make the record of the call. Five long lines are about all that one operator can handle even if their load is light.

Telephone repeaters are an important and indispensable adjunct to railroad long distance telephone service. It would be impossible to give service for distances as great as New York to Chicago with practicable sizes of wire, without them. The repeaters are rented from the American Telephone and Telegraph Co., and it is probably betraying no secret to say that they cost \$1,200 each a year.

Economy of Railroad-Owned Long Distance Lines

Telephone service from New York to Chicago over the commercial telephone lines costs about \$5.80 for the first three minutes and \$1.90 for each additional minute, for particular party calls, such as railroad officers make, and based upon the average length of calls on the New York Central between these points, the cost would be more than \$10 a call. This road has at the present time an average of 32 calls a day over the railroad line between New York and Chicago, averaging 3.75 minutes each. At commercial rates these calls would cost \$231 a day, or \$70,686 in a year of 306 business days. This is equivalent to the interest on \$1,178,100 at six per cent. A line between New York and Chicago at present prices would cost about \$300 a mile, or approximately \$300,000. The interest on this at six per cent would be \$18,000; consequently the railroad line is economical, giving about \$70,000 in service at a cost of \$18,000 a year.

At Cleveland the line is cut through to Chicago only while the connections from New York to Chicago are up. During the remainder of the time the line is used locally east and west from Cleveland. The sum of the through and local service would be equal to that of the through circuit for the

*Abstract of a paper presented before the Western Society of Engineers, Chicago, on February 23.

full eight-hour day. Therefore, the line is worth four times \$70,000 because it is cut through to Chicago only one-fourth of the time for the 32 calls a day, making the total circuit value four times \$70,000 or \$280,000 a year, nearly enough to pay for the line each year.

Another way to state the conclusion is that more calls can be handled for the same money over railroad-owned long distance lines than over commercial lines. Many important matters will be delayed or valuable opportunities lost if railroad officials depend on commercial service because it is well-known that the number of commercial calls will be kept at a minimum by the fear of the large toll bills.

Telephones for Service With the Public

The public makes considerable use of the telephone to obtain information regarding the time of arrivals and departures of passenger trains and rates of fare. This demand has become so large at the big terminals that it has been necessary to provide special equipment to take care of it. A special twelve-position switchboard is provided for this use at the Grand Central Terminal. Telephone requests for Pullman reservations have also increased at the large cities, until special switchboards are required for this service.

Several railroads make use of automatic telephones at locations where operating conditions warrant the separate privately-owned plant. The Illinois Central has an extensive system in Chicago, while the Louisville & Nashville has several installations. The New York Central Lines have two, one on the Michigan Central at Detroit and one at New York City.

Message Telephones

There are at present 48 selector message telephone circuits on the New York Central Lines with 1,464 selectors. These message circuits are like train dispatching circuits in their equipment and are used as dispatching circuits when the latter fail.

Therefore some railroads call them emergency dispatching circuits. It is standard practice to place an operator on them at the division office, who does the ringing for other stations and who is called the monitor.

Messages are handled on these circuits about the same as on telegraph circuits insofar as symbols, form and sequence of filing time, date, address, text, signature and operators' signatures are concerned. It is difficult to eliminate conversational use of such circuits but such use is not encouraged. If the railroad is on the complete telephone basis, all railroad messages to and from way stations are handled on these circuits. Messages are handled just about twice as fast by telephone as by telegraph, according to our experience.

It is only a question of time until the chief trunk line railroads will be on the complete telephone basis on their main lines at least. Even on divisions where the telegraph is still used for message work and the telephone for dispatching, the operators make so little use of the telegraph that they are noticeably out of practice, and object to the use of the telegraph.

Nine-Hour Law Forced Adoption of Telephones

The first cause of the adoption of the telephone for train dispatching was the so-called "nine-hour" law of 1907 which limited the hours of service of telegraph operators to nine hours regardless of the actual work performed. The unlooked for and highly profitable result was that a great deal more work could be done by telephone dispatching than by telegraph and with lessened effort, by the same man on the same circuit.

This was reflected in faster train movements, reduced delays and consequent economies. It has also led to extending the length of dispatching districts in many cases, or to the doubling up of two districts during slack periods. There was some skepticism in the early days regarding the safety

of the telephone for train orders but experience soon caused this to disappear. The results during 15 years of service under all sorts of conditions is the positive and conclusive verdict in favor of the telephone for this use.

There are two telephone train dispatching circuits on the New York Central at New York, on which no one wears a head-receiver, loud speaking telephones being provided at the dispatcher's offices and at all the way stations. Each circuit is about 30 miles long with 12 stations. One extends to Harmon and the other to North White Plains. There is so much traffic in this territory that the operators along the line would have to wear the receivers all the time if the head band type were provided. Trains pass the stations at such close intervals at certain times of the day that it is necessary to report their passing time to the dispatcher by the quarter minute.

The Western Electric Company has furnished a vacuum tube type of loud speaking telephone for the dispatcher on the Harmon circuits. Selectors would be too slow for such circuits, as it is necessary that all stations hear what is said and in this respect loud speaking telephones are the only kind that can compete with Morse telegraph, which of course can be heard at all stations all the time.

An important factor in economical railroad operation is the outlying telephone. One method is to run separate lines from the block stations to the outlying switches, where booths or pole boxes are provided. The train crews use these telephones to tell the block operators when their trains are in the siding, clear of the main track. Other railroads connect these telephones directly to the dispatching circuit and use them at closed stations, or at stations closed part of the day, as well as at switches. Thus the conductors have direct communication with the dispatcher, which permits giving train orders direct to the conductors without the intervention of a third party—the operator—and would seem to lessen the chance for error. It also places the responsibility upon an employee—the conductor—who has had long service, is well versed in the operating rules and is consequently more to be trusted than newly employed operators who may in many cases be young and inexperienced persons.

FIRE, OF UNKNOWN ORIGIN, at the car shops of the Atchison, Topeka & Santa Fe, in Chicago (West 38th street and South Central Park avenue), destroyed two freight cars on February 25. Estimated loss including part of a car repair shed, \$65,000.

Handling Coal in England

Chilean Railways' Electric Passenger Locomotives

Two Types Provided for Express and Passenger Service—
Express Locomotives Will Use Regenerative Braking

A TOTAL of 39 electric locomotives are to be supplied to the Chilean State Railways in the contract which provides for electrifying the section from Santiago to Valparaiso. This includes 6 express passenger locomotives, 11 for local passenger service, 15 for road freight service and 7 switchers.

The contract was awarded to Errazuriz, Simpson & Company, a Chilean firm, and all electrical equipment will be furnished by the Westinghouse Electric International Company. Conditions which must be met and the manner in which electric traction will be used to meet these conditions were described in an article in the January 21, 1922, issue of the *Railway Age*, page 216.

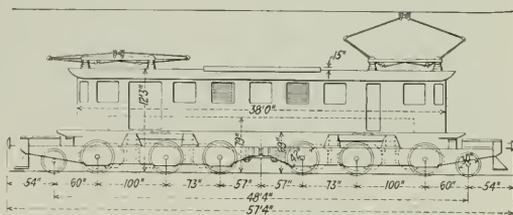

Express Passenger Locomotives

The six electric locomotives which are being built for express passenger service will be capable of hauling 300-ton trains in either direction between Valparaiso and Santiago without the aid of helpers as is now necessary with steam operation on the Tabon grade, between Llai Llai and La Cumbre. This type of locomotive will weigh 127 tons and will have 105 tons on the drivers. It will have a nominal rating of 2,250 hp. corresponding to a speed of 37 miles per hour at a tractive effort of 23,400 lb.

The wheel arrangement will be 2-6-0 + 0-6-2, consisting of two main trucks, each of which has three driving axles and a two-wheel guiding truck. The cab will be of the

Chilean railways will be changed to M.C.B. standard, the Chilean freight cars now use the Continental type drawhooks and for this reason the M.C.B. couplers will be provided with attachments for chain couplers.

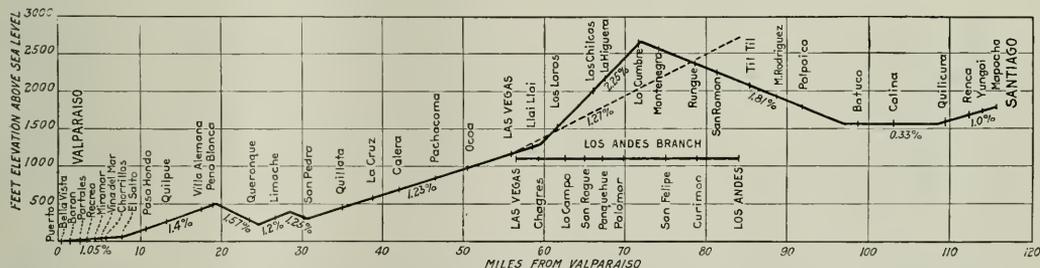

The automatic air brake equipment will be the Westinghouse type 14-EL, a standard similar to that used on the

Side Elevation of Express Passenger Locomotives

present steam locomotives. With this equipment straight air is available for handling the locomotive alone and the automatic feature for both locomotive and train.

The locomotives will be equipped with six 275 hp. driving motors provided with field control and geared direct to the axles by Nuttall flexible spur gears. These motors are de-

Profile of Zone to Be Electrified

single box type and the motors will be geared direct to the driving axles.

DIMENSIONS AND WEIGHTS OF EXPRESS PASSENGER LOCOMOTIVES

Classification	2-6-0 + 0-6-2
Length over buffers	57 ft. 4 in.
Length over cab	38 ft. 0 in.
Total wheelbase	48 ft. 4 in.
Rigid wheelbase	14 ft. 5 in.
Diameter of driving wheel	42 in.
Diameter of guiding wheel	30 in.
Weight of complete locomotive	253,600 lb.
Weight of mechanical parts	160,000 lb.
Weight of electrical parts	93,600 lb.
Weight per driving axle	35,000 lb.
Weight per guiding axle	21,800 lb.

The trucks will be connected at the inner ends by a drawbar held in tension by spring buffers. The frames will be cast steel, bar type, located outside of the wheels, connected by cast steel bumpers and crossies and carried on semi-elliptic springs over the journal driving boxes.

The cab underframe will be of rolled steel longitudinal members connected by cast steel and rolled steel cross members. M.C.B. couplers will be used with Continental spring buffers. Although eventually all drawbar equipment on the

signed for operation two in series on 3,000 volts and will be grouped in three speed combinations, all six in series for low speeds, three in series with two groups in parallel for two-thirds speed and three groups each with two motors in series for full speed. There will be six running positions, the change from one motor combination to another being made by the shunting method of transition.

The control equipment is designed for operation of the locomotive from either end and provision for regenerative electric braking is included. This enables the locomotive to return energy to the overhead system when descending grades. The main motor armatures will be connected in the same combinations when regenerating as when motoring, the excitation for the motor fields during regeneration being supplied by a constant voltage motor-generator set.

There will be two master controllers, one in each end of the cab, and the same controller will be used for both motoring and regulating. This controller will have four levers with a total of 51 notches available in the three combinations. Westinghouse type HLF control establishes the main circuit

connections by the use of individual unit switches operated by compressed air controlled by electro-magnetic valves.

Motor-generator sets will supply low voltage current for the control equipment, blowers and compressors. This is a two-bearing type of machine with a common frame for both motor and generator. The normal rating of the set is 35 kw. at 95 volts with 3,000 volts at the motor terminals.

The current collectors will be spring raised, air lowered and mechanically locked in the lowered position and controlled throughout by compressed air.

On level tangent track these locomotives will have a running speed of 61.5 miles per hour when hauling a 300-ton trailing load. On the Tabon grade, which is 2.25 per cent, the average running speed will be 33.5 miles per hour. The maximum tractive effort based on 25 per cent adhesion will be 32,500 lb. and the maximum speed 62.6 miles per hour. The range of speed in regenerative braking will be 12½ to 50 miles per hour.

Local Passenger Locomotives

In general appearance the 11 electric locomotives for local passenger service will be somewhat similar to the express passenger locomotives. This locomotive will weigh 80 tons and the wheel arrangement will be 0-4-0 + 0-4-0. It will be capable of hauling a trailing load of 350 tons from Puerto to Vina del Mar, 260 tons from Vina del Mar to Llai Llai and return and 300 tons from Las Vegas to Los Andes and return. These locomotives will have a rating of 1,500 h.p. corresponding to a tractive effort of 15,600 lb. at a speed of 31 miles per hour. The maximum tractive effort under standing conditions will be 40,000 lb. and the maximum speed will be 56 miles per hour. The cab will be of the single box type and the motors will be geared direct to the axles. The general dimensions and weights will be as follows:

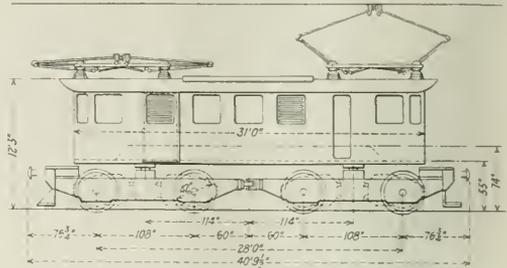

DIMENSIONS AND WEIGHTS OF LOCAL PASSENGER LOCOMOTIVES

Classification	0-4-0 + 0-4-0
Length over buffers	40 ft. 9½ in.
Length over cab	31 ft. 0 in.
Total wheelbase	28 ft. 0 in.
Rigid wheelbase	9 ft. 0 in.
Diameter of driving wheel	42 in.
Weight of complete locomotive	160,000 lb.
Weight of mechanical parts	96,000 lb.
Weight of electrical parts	64,000 lb.
Weight per driving axle	40,000 lb.

The two trucks, each having two driving axles, will be connected at the inner ends by an articulated coupling in the form of a Mallet hinge. The frame and cab construction,

the couplers and the brake equipment will be similar to those of the express passenger locomotives.

The local passenger locomotives will be equipped with four 275 h.p. driving motors provided with field control and geared direct to the axle with flexible spur gears. There will be two combinations by connecting the motors in series and in parallel and additional speed variations will be obtained by varying the fields of the motors.

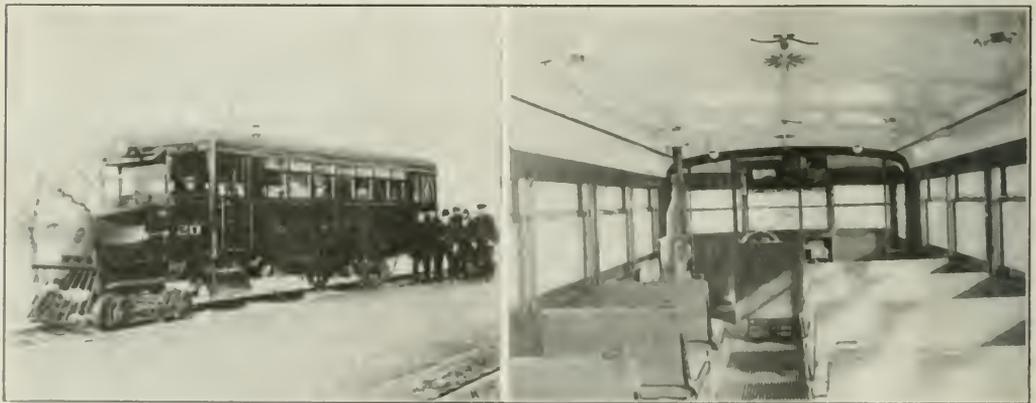

Side Elevation of Local Passenger Locomotives

The control equipment is designed for operation of the locomotive from either end but the grade conditions on the section of line on which these locomotives will operate do not justify the use of the regenerative braking feature. There will be two master controllers, one in each end of the cab, each controller having two levers, namely, speed and reverse, with a total of 23 notches available in the two combinations. The switching equipment duplicates that on the express locomotives.

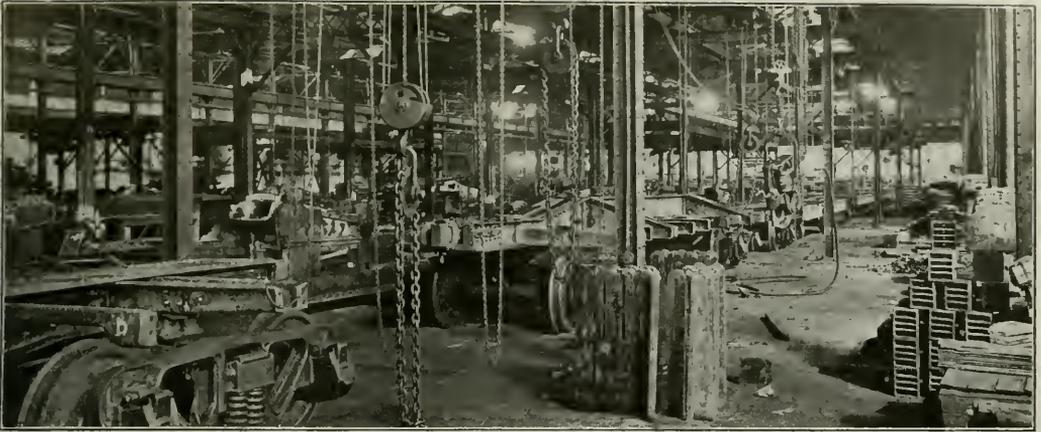

The motor-generator set will be a double armature machine, each armature consisting of a motor and a generator. The normal rating of the set will be 22.5 kw. at 95 volts with 3,000 volts at the motor terminals. The current collectors will be the same as on the express passenger locomotives.

On level tangent track these locomotives will have a speed of 56 miles per hour when hauling a 220-ton trailing load. The maximum tractive effort based on 25 per cent adhesion will be 40,000 lb. A great many of the electrical and mechanical parts are interchangeable between the express and local passenger locomotives.

Gasoline Motor Car on Lewisburg, Milton & Watson town

Exterior and Interior Views of Car Built by J. G. Brill Co., Mack A.C Chassis—Note Seats for Three on One Side of Car—Has Seating Capacity 16. 31' 0" Long Overall and 9 ft. 8.5 in Wide. Passenger Compartment Finished in Cherry-Stained Mahogany

Business Handicaps of the Railway Car Shop

Lack of the Incentive of Competition—Limitations on
Specialization—Absence of Cost Control

By J. W. Roberts

President, The Roberts-Pettijohn-Wood Corporation, Chicago

IN A SERIES of articles which recently appeared in these columns the present writer reviewed the results of a special study of the relative cost of making heavy repairs to freight cars in a railroad shop and in a contract shop. In the case reviewed the cost of the work done in the outside shop was found to be less than that done in the railroad shop, but the question may quite properly be raised as to whether this result is typical, or may not be due to special conditions not generally prevailing.

We know much more of the cost of contract shop work than of railroad shop work. In the former case the volume and the quality of work performed for the money paid out is definitely established by contract and is measurable. In the case of the railroad shop, however, we have, generally speaking, no reliable information either as to the total actual cost, the volume or the quality of the work turned out. Since railroad accountancy does not recognize the cardinal principle of cost accounting—that expense should follow the benefit conferred or the causative responsibility—the ascertainment of dependable railroad shop costs is a difficult undertaking. The question, therefore, cannot be answered by the simple process of demonstration, and we shall be obliged to satisfy ourselves by an analysis of the general situation.

Railroad Manufacturing Ventures

It is often contended that a common carrier strays outside its bailiwick when it engages in manufacturing enterprises. Manifestly a railroad should engage in manufacturing effort, if it be foreign to its nature, only for very good reasons. One good reason would be, for instance, the advantage of definite and enduring economies, if they are thus to be gained. Another would be necessity imposed by isolation from manufacturing centers, or the difficulty attending any other than an internal source of supply. The genuineness of the necessity can be readily tested, but where economy is the

motive it is more difficult to determine whether appearances may be relied on and, if so, for how long a time. How many railroad manufacturing establishments are strictly necessary adjuncts or are definitely known to be paying their way? Most such enterprises live, it is believed, by grace of the management's tolerance.

Railroad management requires special training and a high degree of technical skill because of the peculiar demands of the business. Even so does the manufacturing industry require peculiar skill and ability because it has its own laws and rules of procedure which are as inexorable as those pertaining to the field of transportation. The known advantages possessed by a railroad-fostered manufacturing enterprise, such as transportation at actual cost, an unsolicited patronage, a divided burden as to general expense, and certain other special privileges are, after all, merely incidental benefits. On the other hand it is subjected to handicaps of a fundamental character when compared with private industry. It lacks the spur of vigorous competition, which is the ever-present incentive for the private producer to work efficiently lest his business perish, and we recognize no greater necessity than that of self-preservation.

Now let us briefly examine into the commercial car plant's situation, as compared with the average railroad shop, after which the reader may, it is hoped, be assisted in arriving at his own conclusions.

Relation of Wage Payment Basis to Labor Efficiency

Manufacturers have long since recognized that while the labor wage is an important element of cost, the man-hour output is of even greater importance. Every workman's service costs more than his wage. The additional cost is proportional to the time he expends in the shop. If the wage is based on piece work performance, the individual's pay depends on his output, but the fact remains that the shop time

he consumes further regulates the cost of his production.

For example, a shop operating on a piece-work basis may determine that 100 operations constitute a normal day's work, and may fix a rate of eight cents a piece. An inefficient operator may produce only 80 pieces a day and receive therefor \$6.40; an efficient operator may produce 120 pieces a day for which he receives \$9.60. Adding to these amounts the cost of power, supervision, maintenance of buildings and equipment, depreciation, insurance, taxes and other items of indirect expense, which may total \$5.00 a day for each man employed, it is found that the total cost of 80 pieces produced by the inefficient workman is \$11.40, or 14¼ cents each, while the 120 pieces produced by the expert workman costs \$14.60 or 12½ cents each. The spread represents a difference of 17 per cent. It may be readily perceived that the increased productive costs due to the employment of inefficient workmen may convert the operating results of a shop from profit to loss.

In many instances the piece work idea is carried a step farther in contract shops, and gangs, including their leaders, are paid for piece-work. This not only stimulates the productivity of the individual but promotes co-ordination of effort and produces the maximum results from the group.

The piece-work basis may constitute only a temporary advantage enjoyed by the outside shop, but its unbroken sequence therein has placed the railroad shops under a handicap which they cannot quickly overcome. The contract shops have a corps of skilled workmen who are specialists, a tested method of rewarding special ability and a quick means of determining and disposing of the inefficient. Railroad management is now deterred from taking advantage of these methods of effecting increased output by the restrictions of public control. Furthermore, because of the labyrinth of relationships which must be sustained the problem of securing maximum efficiency from individual workers is a detail which perhaps never can be given the studious attention it merits.

Effectiveness of Supervision

The private manufacturer stresses the importance of effective supervision because he is cognizant of the numerous opportunities for creating expense which will devour his profits if individual effort is not properly directed and all operations fully co-ordinated. He therefore holds his supervisors to strict accountability; he requires that they administer strict discipline. In the railroad shops more laxity is observed with respect to these matters. There is more lost motion because individual accountability and discipline is less exacting. The atmosphere which pervades a properly managed private factory is frequently lacking. These conditions would materially lessen the benefits received by the railroads under the identical wage payment plans used in outside shops.

Effect of Volume of Output on Cost

Volume of output in a railroad shop frequently fails to meet the requirements of economical shop operation. The immediate needs of the transportation business must be promptly served. Even if repair cars are concentrated in large numbers, their progress through the shop may necessarily be interrupted by emergency jobs. On the other hand, repair cars may be purposely shopped in small lots because of the traffic conditions, labor scarcity, shortage of funds, or for other reasons. If the shop operating costs are not under strict control it is easy to overlook the effect which lapse of time has on the cost of output and to allow sub-normal output unduly to increase the proportion of indirect expense.

In this respect the outside shop is unhindered except possibly by its inability to procure business. It is stimulated by a different incentive and follows a different procedure. Its sales force is constantly informed of the status of work in

the shop and is charged with the responsibility of procuring business which will always keep work ahead. The heaviest possible load is kept on the shop because the manufacturer well knows the relation between maximum production and low costs. His fixed charges, which do not fluctuate with production, may be 50 per cent of the cost with low output and only 10 per cent with an output approximating capacity.

The outside shop draws its business from many sources; the railroad shop usually has but a single patron. The car builder may escape some burden of expense in slack periods by closing down his plant, but the railroad shop must maintain its non-productive organization because its shops are frequently used for ordinary repair as well as rebuilding or construction purposes.

Cost Affected by Shop Routine

There are marked differences in the practices of railroad and contract shops. The contract shop is normally organized and equipped to provide for the movement of cars under repair or construction from station to station until the work is completed. At each station the car is subjected to a definite set of operations, and the workmen are skilled in the performance of these operations. Tools and machinery necessary to expedite their performance are conveniently at hand. The materials required are ready in sufficient quantities to prevent delay, and so placed as to facilitate application. By this and similar methods the contract shop enjoys the effect of a high degree of specialization on the volume, quality and cost of output.

Contract shop undertakings are carefully planned and scheduled before the work is begun. The machinery is rearranged, if necessary, to permit a smooth and uninterrupted flow of work through the shop. Tools are made accessible, the material is stored at the proper place to avoid unnecessary handlings and delays and every operation from beginning to end is carefully co-ordinated to avoid lost motion and retarded movement.

Because of demands made on it by the operating requirements of the road, the railroad shop cannot attain a corresponding degree of perfection in its functioning. The variety of its performances and the relatively lesser volume of each, generally preclude the handling of work in the manner above outlined. Improperly laid out plants, inadequate equipment and the lack of skillful workmen are common handicaps.

Shop Arrangement and Equipment

A contract shop specializing in heavy repairs is usually carefully laid out and arranged for the special task for which it is intended. The machinery will be specially designed to fit the work and to reduce productive costs. The shop will be constructed with a view to expansion with the least possible additional outlay of capital. The whole arrangement and equipment will be attuned to a program of undertakings with certain definite limitations.

The average railroad shop is designed for less highly specialized service and expansion is usually effected by a "patching on" process which does not permit of the orderly conduct of operations throughout the shop. Special machinery which would facilitate production and decrease the cost is often absent because it would be used only periodically. It is evident that a railroad shop designed and equipped to carry a peak load of heavy repairs with the greatest efficiency would represent a heavy investment which would be unproductive for a considerable part of the time.

Ordering and Handling Material

The contract shop, except under unusual market conditions, orders construction materials sufficient to meet known requirements only. Shipments are arranged so as to avoid delay to work, as well as to minimize handling and storage expenses. The builders seem to be able to control deliveries to better advantage than the railroads when the latter supply

certain materials, and but little difficulty is experienced in adjusting receipts so as to keep pace with production. Many of the car plants are situated near established market and production centers, which not only expedites delivery, but generally provides loads for the completed cars when homeward bound.

The railroads' situation is somewhat different. The constant need for many kinds of repair material prompts the accumulation of stocks at central stores, from which distribution is made to outlying points of consumption. Many railroad stocks have a very slow turnover. Much expense attaches to the repeated handlings to and from storage, and sometimes delay to shop work ensues. This disadvantage cannot be easily overcome. An extension of the inventories might save back hauls and shop delays, but the increased investment and risks caused by market fluctuations might offset or exceed the gains.

Differences in Character of the Work

The work let to an outside shop is usually defined by a rigid set of specifications, and regulated by constant inspection of the most critical sort. Outside repair work is generally done with a wholesale thoroughness, which creates a uniform physical condition in all of the cars affected. This thoroughness reduces the frequency of general shoppings, stabilizes the repair program and when cars are in demand it reduces the time out of service.

The work customarily done in the railroad shop is less thorough and passes a less critical inspection. A larger element of discretion is permitted as to the extent and character of repairs, as to the quality of materials used and as to the time the cars may be held out of service.

Supplementary Manufacturing in Outside Shops

One of the most disturbing conditions in the car building industry arises from the periodical fluctuation in the volume of available business. Railway purchases are controlled by the condition of the finances as well as the need for equipment. To provide against operating losses which would otherwise occur during periods of light production, many contract shops catering chiefly to car repair or construction work, are equipped to manufacture other things involving the same general processes. These related manufacturing operations serve to employ portions of the plant which would otherwise be idle at times, and reduce the expense of maintaining the business that under other circumstances would need to be borne by the output of new and rebuilt cars.

The railroad shop generally has no such relief. Its losses must be charged against the railroad's revenues, but they are not conspicuously displayed and they frequently escape notice.

Close Control Exercised by the Management

In the average contract shop the managerial influence is not so far removed as in the case of a railroad shop. It is direct and positive and obtains a quicker response. The delegation of responsibility is definite and unevasive. The system of accounting affords a clear insight into each phase of the business. It serves the manager as effectively as the instruments before him serve the driver of an automobile. The manager is not distracted by duties more or less foreign to his principal interest, which is to keep his production up and his costs down. There is no parent enterprise to make good his shortcomings.

The managing head of the railroad shop is often less fortunately circumstanced, through no fault of his own. His opportunities are less extensive, and his freedom of action is more restricted. These handicaps are inherent in his position.

Are Independent Car Plants Necessary?

Whether existing railroad shops that are used for manufacturing purposes are justified or not, the contract car shop

must remain a necessity unless all railroads provide complete facilities for constructing and rebuilding their own equipment. It has already been suggested in these columns that the outside shops now provide a safety-valve for the railway shop labor situation.

If, then, good reason be found for the existence of the independent plants it behooves the railroads not to withhold their patronage without good reason, because the builders' charges must be regulated by their expenses. When their shops are only partially filled or shut down they are a source of expense that in the long run must be paid by the customers. Instead of investing large sums in additional facilities of doubtful economical value, would it not be well for the carriers to divert at least the overflow of heavy work to the outside plants? This could readily be done under a predetermined program for repairs or construction, which would permit of shop space being contracted for in advance.

Any general discussion of this subject cannot be wholly convincing because of the wide differences of conditions in railroad shops. But let the reader remember that as a condition precedent to passing judgment, he should have not only a knowledge of the cost of the outside work, but a thorough understanding of the true cost of doing business in the railroad shop, because judgment requires comparison and discrimination. Without such knowledge he may only guess, and the matter is much too important to be decided by guess-work.

President Urges Co-Operation Between Railways and Steamships

WASHINGTON, D. C.

AN AMENDMENT to the interstate commerce law which will permit railway systems to own and operate steamship lines engaged in other than coastwise trade was advocated by President Harding in his address to Congress on February 28 urging a plan of ship subsidies. "There is measureless advantage," he said, "in the longer shipments, where rail and water shipments are co-ordinated, not alone in the service but in the solicitation of cargoes which ever attends an expanding commerce."

The President also said that American railways must be brought into co-operation with American steamship lines. "It is not in accord with either security or sound business practice to have our railways furthering the interests of foreign shipping lines when the concord of American activities makes for common American good fortune." He added that we can and will make effective the spirit of Section 28 of the Jones act of 1920, providing for preferential rail and steamship rates on through shipments of American vessels.

These questions are also discussed in a report of a study on government aid to merchant shipping prepared under direction of the United States Shipping Board, on which the President's plan for a ship subsidy is based. This report said:

"It is believed by many that considerable indirect aid will result from the making effective of Section 28 of the merchant marine act. The legislation is mandatory and its real worth can only be determined by actual trial. The Shipping Board is making an exhaustive investigation of the practical application of this section as a preliminary to certification to the Interstate Commerce Commission that adequate shipping facilities are afforded by American ships.

"The railroad systems of the United States feel the need of definite import and export working agreements with steamships engaged in foreign trade. A number of such agreements have been made in the past, and some are still in force. They have usually been with foreign steamship lines; such agreements are prejudicial to American shipping. It would seem expedient and wise to permit reasonable working ar-

rangements to exist between railroads and steamships, with special reference to the interchange of traffic between the roads and vessels of the United States.

"The problem of fully and completely co-ordinating our rail and water transportation is acute and important. The solution of this problem will involve extensive research and study of the facts and principles involved. The work, of course, calls for the supervision of the Interstate Commerce Commission as well as of the United States Shipping Board. The suggestion has been made that a group of experts should be created, to be appointed jointly by these two bodies, whose chief duty would be to make full inquiry, and to formulate appropriate rules and regulations providing for such co-ordination, subject to the approval of the Interstate Commerce Commission and the United States Shipping Board.

"At the same time an added impetus can be given the investment of new capital in American shipping and in the possible purchase of vessels from the United States Shipping Board, if railroad interests are permitted to own and develop steamship lines operated exclusively in foreign trade. To do this effectively it would be necessary to modify Section 11 of the Panama Canal act (approved August 24, 1912) to the extent that vessels may be thus owned when exclusively engaged in foreign commerce. The provisions of that act would remain in full force, so far as they prohibit the use of the canal by vessels owned by railroad interests, if the vessels are engaged in traffic between the Atlantic and Pacific coasts of the United States. This would leave intact the main purpose of the original provision, which was to insure the competitive advantages of water-borne intercoastal traffic against the control of trans-continental railroads."

Following the presentation of the President's plan for extending governmental aid to merchant shipping, a bill to carry it out was introduced in both Houses of Congress. The provisions of the administration bill relating to rail and water transportation declare it to be the policy of Congress to co-ordinate fully and completely rail and water transportation, and the United States Shipping Board and the Interstate Commerce Commission would be authorized, empowered and directed to take such steps as may be deemed proper and necessary to bring about such co-ordination. In pursuance of this policy, those government agencies would be directed to create, from among their own personnel, a joint board to study rail and water traffic and conditions, their interrelations and the principles and policies essential to bring about their more complete co-ordination. The board is to formulate and recommend such rules and regulations, not inconsistent with existing law, relating to traffic between railroads and shipping lines, that it may deem proper and necessary to bring about such co-ordination. It is to be the duty of the United States Shipping Board and the Interstate Commerce Commission to make effective, by joint or individual action as the case may require, such rules and regulations as they may respectively approve. Provided, that this shall not authorize the commission to make any rule or regulation affecting shipping, and that all the provisions of Section 19 of the merchant marine act, 1920, shall continue in full force and effect with respect to the commission.

The ninth paragraph of Section 5 of the interstate commerce act (the Panama Canal Act) would be amended by inserting at the end thereof the following:

"Provided, that the provisions of this paragraph shall not apply in any case where such common carrier by water or such vessel is engaged exclusively in trade between any ports not included in the coastwise trade of the United States and not including trade upon the Great Lakes, but including trade between the United States and the Philippine Islands."

The bill also provides that whenever any common carrier by water engaged in interstate or foreign commerce shall enter into any agreement with any common carrier by land engaged in interstate or foreign commerce, each such carrier shall file

immediately with the Shipping Board a true copy, or if oral a true and complete memorandum, of every such agreement or modification, or cancellation thereof, to which it may be a party or conform in whole or in part, relating to the interchange of freight or passengers or the making of joint or through rates or providing warehousing, docking, or other terminal facilities, or providing that the one carrier shall act in any manner as agent or representative of the other carrier or in any manner providing for a co-operative working arrangement between the two carriers. The term "agreement" in this section includes understandings, conferences and other arrangements.

The Shipping Board would be authorized to disapprove, cancel or modify any agreement, or any modification or cancellation thereof, whether or not previously approved by it, that it finds to be unjustly discriminatory or unfair as between carriers, shippers, exporters, importers or ports, or between exporters from the United States and their foreign competitors, or to operate to the detriment of the commerce of the United States, or to be in violation of law, or to be otherwise detrimental to the interest and welfare of the United States, and shall approve all other agreements, modifications or cancellations. Agreements existing at the time of the enactment of this act could be lawful until disapproved by the board, but would be made unlawful to carry out any agreement or any portion thereof disapproved by the board. All agreements, modifications or cancellations made after the enactment of this act would be lawful only when and as long as approved by the board and before approval or after disapproval it shall be unlawful to carry out, in whole or in part, directly or indirectly, any such agreement, modification, or cancellation. For violation of any provision of this section a penalty of \$1,000 for each day such violation continues is provided.

Following another conference between members of the Shipping Board and officers of the Chicago, Milwaukee & St. Paul and the Great Northern at Washington on March 1, at which the Shipping Board renewed its previous efforts to persuade these railroads to arbitrate voluntarily their traffic contracts with Japanese steamship lines, the Shipping Board issued an order stating that it requires a complete cancellation of all such contracts and that failing to realize these cancellations by July 1 next, the board will take such steps as it deems necessary to enforce its views. The railroads were represented by H. E. Byram, president of the Chicago, Milwaukee & St. Paul, and Vice-Presidents W. P. Kenney and L. C. Gilman of the Great Northern. Representatives of the Seattle Chamber of Commerce were also present

A Freight Yard in Berlin

Establishing Icing Facilities on a Large Scale

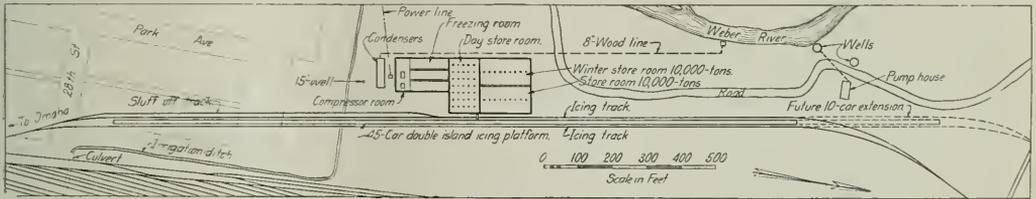

System Recently Inaugurated on Southern Pacific and Union Pacific Gives Highly Satisfactory Results

By W. C. Phillips

General Superintendent Ice Plants, Pacific Fruit Express, San Francisco, Cal.

THE PACIFIC FRUIT EXPRESS COMPANY was organized in 1907 by the Harriman interests for the purpose of providing the necessary refrigerator cars and furnishing refrigeration and ventilation service for the protection of perishable commodities originating on and moving over its lines. This service had formerly been provided by the Armour Car Lines. In 1907 the Pacific Fruit Express Company owned 6,600 refrigerator cars; in 1921 there were 19,200 of its cars in service, with prospects for the immediate construction of 3,000 additional cars. In 1907 this company

plant having a manufacturing capacity of 60 tons daily was owned by the company in 1907 and constituted the nucleus of what is now one of the largest groups of ice manufacturing plants operated by one company. The company now has 12 ice manufacturing plants located on Southern Pacific and Union Pacific lines with a daily manufacturing capacity of 3,500 tons, and a storage capacity for 230,000 tons. The company also owns and operates five natural ice plants with a total storage capacity of 100,000 tons, these plants being located at points where a dependable and economical supply

The General Layout of the Artificial Ice Manufacturing Plant at Ogden, Utah

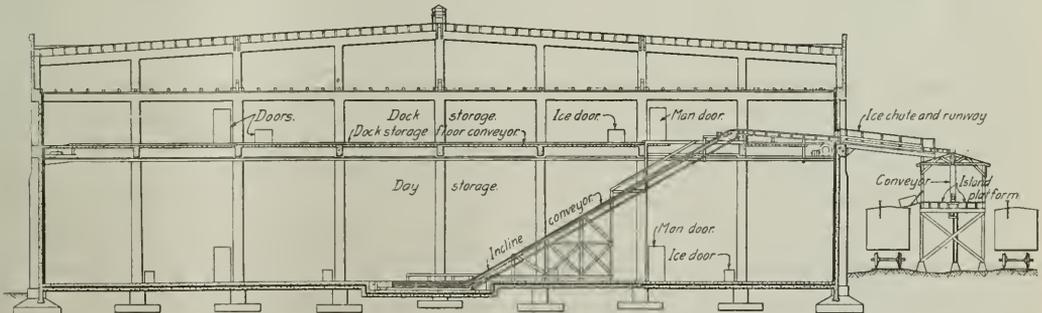

handled 48,900 carloads of perishables, 50 per cent of which were given refrigeration service requiring 250,000 tons of ice. In 1921 the volume of perishables had increased to 170,000 carloads, of which 70 per cent moved with ice in the tanks and required a total of 1,000,000 tons of ice for refrigeration.

Trend Has Been Toward Artificial Ice

In 1907 about 80 per cent of the ice used was purchased from commercial concerns, a very large proportion of this

of natural ice is assured. The remaining ice required is obtained from a number of commercial concerns which operate under contract to furnish a specified tonnage. These plants provide an additional definite supply amounting to 1,300 tons daily, and a storage capacity for 80,000 tons which is held subject to the company's demand.

During the war period the production and distribution of perishable shipments received a considerable impetus. For various reasons, one of which was the impossibility of securing the necessary materials for construction purposes, this

Sectional View of the Day and Dock Storage Rooms of the Ogden Plant

being natural ice. It has been found, however, that natural ice as a general proposition is uneconomical and not dependable, as a result of which the trend has been toward the use of artificial ice. In 1921 fully two-thirds of the ice used for car icing purposes was produced at plants owned and operated by the Pacific Fruit Express Company and only a small percentage of this was natural ice. One artificial ice

increase was not attended by a corresponding increase in icing facilities. This was the condition not only with Pacific Fruit Express Company but with commercial concerns as well. The very heavy increase in perishable shipments from points on the Southern Pacific and Union Pacific systems made it imperative that new and enlarged icing facilities be installed quickly. It was also thought advisable for the

company to own and operate all main line icing facilities to insure more economical and prompt handling.

\$4,000,000 Construction Program Was Authorized

Early in 1920 authority was received to proceed with a construction program which contemplated an expenditure of approximately \$4,000,000 for new and enlarged ice plants and icing facilities. A standard layout plan and design for buildings was adopted and construction started on several plants with company forces as soon as the layout and detail foundation drawings were prepared. This action was taken to prevent delay which would have occurred if work had been held up for complete plans and specifications, and the time necessary to secure bids from contractors. As an example of the dispatch with which work was handled, the ground was broken at Council Bluffs, Iowa, on March 21, 1921, and the plant was placed in operation on August 1. This plant has a daily manufacturing capacity of 250 tons, with a storage capacity of 21,000 tons, also an island car icing platform 2,460 ft. long which will accommodate two trains of 55 cars each. An idea of the general layout of this and other plants may be obtained from the illustrations of the plant at Ogden, Utah.

Reinforced concrete has been used almost exclusively throughout these plants, including the pilaster and curtain wall construction. Pure corkboard only was used for insulating the storage rooms. With the exception of the three steam-driven plants, all ammonia compressors are electrically operated with 150 to 187 r.p.m., 2,300-volt synchronous motors direct-connected to the compressor shafts. Duplicate direct-connected exciter sets were installed, each of sufficient capacity to excite one or both motors. The flooded system was adopted as standard for all freezing tanks. The accumulators, one for each tank, are of the drop leg type, and are placed from 16 ft. to 18 ft. above the tank coils which are 1¼ in. special ammonia pipe, 8 pipes high with extra-heavy return bends. All tank coils are split transversely in the center, thus making two coils placed end to end, each coil provided with a separate feed. All joints are welded with the exception of one flanged fitting on each liquid and suction line to the headers.

Agitators of ample capacity were provided to insure proper circulation of the brine in the freezing tanks, and electric hoist and power-driven cranes were installed. All cans are filled at the dumps, which at most of the plants are of the automatic sprinkler type. Inclined elevators as well as elevating and lowering machines and conveyors are of the company's own design.

The size and capacity of these various plants vary in accordance with the seasonal ice demands at different stations. The largest plant, at Roseville, California, has a daily production capacity of 525 tons, and a total storage capacity for 46,000 tons. In 1921 there was used a total of 165,000 tons of ice at Roseville, the issue for one day running as high as 2,400 tons.

Island Icing Platforms Give the Best Results

All main line icing stations on the Southern Pacific-Union Pacific route are now equipped with island or double car icing platforms accommodating 55 cars on each side, as shown in one of the illustrations. Operations last season have proved conclusively that this type of icing platform makes a decided saving in the economical handling of ice as well as in the time of trains in yards. Shorter icing platforms, causing delays and extra switching of cars, have in the past proved expensive to both the express car line and the railroad. These platforms are frame structures approximately 14 ft. high, with shelter roof and with a platform surface 14 ft wide on which ice is handled. Along the center of the platform for its entire length there are installed mechanically-operated endless chain conveyors.

This plan permits the railroad to handle trainloads of refrigerator cars direct to the icing platform with a road engine, after which the incoming engine and caboose are cut off and the outgoing engine and caboose coupled on. Train inspection is accomplished while icing is under way, and the entire operation is performed without the necessity of again moving the train until it is ready to leave the station, thus greatly decreasing terminal time, and reducing the cost for switching. The general effect of these long icing platforms is to shorten the schedules of through trains, which, in connection with perishable shipments, is especially beneficial.

Provisions for 6 Per Cent Return and Government Loans Expire

WASHINGTON, D. C.

FEBRUARY 28 marked the close of two years since the return of the railroads by the government and also the expiration of two important periods fixed by the transportation act. The proviso in Section 15-a directing the Interstate Commerce Commission to take as the fair return which it is directed to try to allow the railroads in fixing rates a sum equal to 5½ per cent of the aggregate value of the railroads plus ½ per cent in its discretion for improvements, applies only to the two years beginning March 1, 1920. For the future the commission is directed to try to allow the railways "as nearly as may be to a fair return" upon the aggregate value and to "from time to time determine and make public what percentage of such aggregate property value constitutes a fair return thereon," but until the commission does so what little excuse there may have been for referring to these provisions as constituting a "guaranty" ceases to exist.

The commission apparently felt no need for haste in making public the percentage which it shall consider a fair return for the future since the rates which it prescribed in 1920 in the hope they would produce 6 per cent have, under the circumstances, produced only slightly over 3 per cent, and, as no one is proposing that rates now be increased the only object in determining a percentage now would be to end any uncertainty as to what it would consider a fair return. The question of what the percentage shall be is one of the subjects under consideration in the general rate investigation hearings which are to be concluded on March 9 and there are expectations that a decision may be rendered about April 1, so that it is possible the commission may announce the percentage at that time.

The provision for the recapture of net income in excess of 6 per cent is not affected by the expiration of the two-year period. It is contained in another paragraph of Section 15-a not affected by the proviso in paragraph 3 of the section.

The two-year period provided by the transportation act within which applications might be filed by carriers to the Interstate Commerce Commission for loans from the \$300,000,000 revolving fund created by the act also expired on February 28 and therefore no new loans may be made by the commission except upon applications received by that time. The commission may, however, certify to the Treasury additional loans upon applications filed in time but not yet acted upon, as the funds become available, and a large number of applications were filed during the last two or three weeks, as noted in our financial columns.

Practically all of the available amount of the fund has been loaned but it has recently begun to "revolve," as its title indicates that it should, as repayments are made and as interest payments come in. The total fund was not made available for loans as \$40,000,000 was tentatively reserved by the commission to meet claims, judgments, etc., against the Railroad Administration, arising out of federal control,

but more than \$260,000,000 had been loaned at the date of the latest report because the revolving fund had been increased by repayments and interest. The maximum period of loan provided for in the act was 15 years, but many loans have been for shorter periods. The National Railway Service Corporation recently applied for a loan of \$100,000,000 for the purpose of assisting it in the financing of new equipment and the rebuilding of unserviceable equipment. That amount is not now available but the application asked for loans in instalments, if it should be approved by the commission. In its annual report the commission suggested to Congress that if the period for filing applications should be extended approximately \$103,000,000 might be made available for additional loans.

Rate Hearing Nears Conclusion

WASHINGTON, D. C.

TESTIMONY on behalf of shippers in the rate hearing before the Interstate Commerce Commission was concluded this week and after two days of railway rebuttal testimony oral argument in the case was to begin on Friday, March 4. February 23 and 24 were devoted to testimony on petroleum and its products, by representatives of the National Petroleum Association, American Petroleum Institute and Western Petroleum Refiners' Association, who in general asked for a reduction in their rates of 15 per cent plus the 4½ cents per 100 pounds by which the rates were advanced in 1918. The statements made were mainly devoted to showing the effect of the increases in rates in restricting the markets of certain producers.

Some of the witnesses said they could no longer ship by rail for distances over 400 miles, whereas they had formerly been able to ship up to 800 miles. The effect, they said, was to drive the business to water lines and pipe lines. Commissioner Hall asked one of the oil witnesses why, if the Standard Oil Company derived such advantages from the control of pipe lines, the independents did not build pipe lines, and Commissioner Aitchison said that when he was a boy water used to be transported in wagons, whereas now pipes are used. The witness replied that the reason was lack of capital, and that it is now cheaper to send oil by a railroad already built than by a pipe line that would have to be built.

Four days, February 25 to March 1, were devoted to testimony as to other commodities not previously scheduled. This brought out a large number of witnesses who urged reduction in the class rates and rates on agricultural implements, coffee, ice, paper and pulp, box board and paper board, slate, building stone and tile, office furniture, creosote oil, roofing material, burial goods, peanuts, sewer pipe, nursery stock, tan bark, clam and mussel shells, wool, zinc ore, bullion, paints, glass containers, surgical supplies, shoes, salt, seed, rice, clay and coconut oil.

The oral argument is scheduled to be concluded on March 9. The hearing has been in progress, with some adjournments, since December 14. Approximately 8,000 pages of testimony have been taken and over 400 exhibits have been filed.

Commission Asks for Information

The commission on February 21, served notice upon the carriers that it requires certain information in connection with its consideration of the general rate inquiry, and directed them to have the information ready for submission in the time allotted them for rebuttal testimony, as follows:

1. The carriers are requested to furnish separately for the eastern, southern and western groups, the western group to include the mountain Pacific group, and for the United States as a whole, financial statements for a constructive year based upon the operations of the calendar year 1921, modified in

accordance with the most recent available factors of rate changes, volume of traffic and operating costs, including taxes.

2. The railroads and the Pullman Company are requested to furnish, so far as practicable within the time available, an analysis of the revenues and expenses of carrying passengers in Pullman cars as contrasted with passengers handled in other equipment, on both passenger-mile and car-mile bases. Such analysis should show the revenues derived from passengers handled in Pullman cars, indicating separately (a) the revenue from the regular passenger fare, (b) from the surcharge, and (c) from Pullman contracts or other sources. Expenses should, as far as possible, be analyzed on both car-mile and passenger-mile basis to indicate the difference in the expense of handling passengers in Pullman cars as contrasted with the expenses in other equipment. The year 1921 should be used, if possible. If not, such other period for which the data are available should be used.

3. Such analysis also should show a comparison of the number of passengers per car carried in Pullmans and in coaches by months, 1920 and 1921, and by years, 1915 to 1921, inclusive.

4. To what extent did the increased fares established by the Pullman Company May 1, 1920, increase the revenues of the railroads received from the Pullman Company under contractual arrangements, for the calendar year 1921.

5. Statements should be furnished showing for each commodity class used in the regular quarterly reports of commodities, both the number of tons (including tons from connecting carriers) and the freight revenue for the calendar year 1921, from all carriers that regularly compile such information.

6. The carriers are asked to furnish specific information with respect to the effect of rate reductions upon the movement of traffic. Their testimony has consisted largely of opinions of witnesses to the effect that the reductions heretofore made have not stimulated traffic. Specific figures for representative tonnage before and after important rate reductions should, as far as possible, be furnished. Particular attention is called to the reductions on iron ore in eastern territory effective about October 1, 1921, and upon export rates on iron and steel articles effective in the latter part of that year. The effect, if any, that these reductions may have had on the movement of traffic can be furnished by the American Railway Association from their car loading statistics.

Where shippers assert that a reduction in rates has stimulated the movement of traffic, they should furnish figures on which such assertions are made.

Public Opinion Can Restore Railroad Credit and Public Prosperity*

By William Sproule

President, Southern Pacific Company

I BELIEVE PUBLIC opinion will do more than either railroad men or bankers can do to bring about that improvement in conditions, which is the need of the time. The problem is how to reach the people so that the public may be correctly informed and that public opinion, thus enlightened, may move in the direction of national well being. By the public I mean the average man, the man in the street. He desires to know about our business, but he is accustomed to deal in easy and familiar terms, and unless the facts are presented to him in that form which attracts his attention, and which he can understand without serious mental effort on his part, our efforts to inform him fail.

I have heard doubts expressed about the public being fair, and yet I have an abiding faith that if we can get before the people the basic facts of our business, its principles and practice, they will endeavor to do the wise thing, and they are very apt to do the direct and wholesome thing. If we can but get the public to understand our difficulties they will help us.

First, the public should understand that the railroad funding bill now before Congress should pass. But the force of public opinion behind it is needed to have it passed. The public have the notion that it is some kind of a gift to the railroads, a gift of \$500,000,000; instead of which there is

*An address before the forty-seventh annual convention of the American Bankers' Association at Los Angeles, California, October 5, 1921.

no gift about it. It does not propose to give the railroads a single dollar. The fact is that during the time of war the government had the railroads and ran them. The government made large capital expenditures for improvements and the railroad companies had neither the railroads nor the money with which to make the improvements. The government has since returned the railroads to their owners, and still there is no money to pay for these improvements. The railroads are simply asking that the debts be funded as any other public debt would be, so that the payment of the debts may be extended over a period of time upon an interest basis. When the government made the expenditures the amounts were charged up to the railroads, with the intention that these sums should be deducted from the standard return guaranteed to the railroads for the war period. But not only are the railroads not in position to pay these amounts at this time, but the situation is worse than that. For most of the railroads, including most of the great railroad systems of the country, have not so far been able to collect any of the money due them from the government for the guaranty period.

All the railroad companies got out of the federal period is, first, a load of debt because of capital expenditures incurred by the government; second, the promise of a guaranteed return, which promise in large part remains unfulfilled and the railroads are without the money; and third, they were left with a huge labor bill, so huge as to be to the present day a burden upon transportation that is only partly borne by increases in freights and fares, and although but partly borne, is causing keen criticism from the people who pay those freights and fares.

Very few realize what those burdens are. The war period carried the railroads along into 1920 and the United States Railroad Administration, during the brief period of four years, raised wages \$2,230,000,000. This vast increase in payrolls does not represent increase in the public service. No, indeed, it represents 152 per cent increase in railroad operating expenses for wages, to gain not quite 8 per cent more hours of service.

At the same time the railroads are weighted down with these difficulties the burden of taxation has also grown. While contending with all this, an important part of the money gathered in taxes from the railroads has been turned into channels of competition with the railroads.

The trans-continental roads are in the hopeless fix of competing with United States Shipping Board vessels which do business between the ports of this country at a loss and for those losses the railroads have been taxed. The roads were taxed to help build the ships in the first place and are now being taxed to continue their operation at a loss in the second place. These high costs of shipping enter into the railroad difficulties and are part of the increased freights and fares the people have to bear.

Nor is the competition by ship all the competition the railroads have to face. The cities, counties and states have in the past few years built highways of hard foundation and smooth surface largely paid for by taxation of the railroads. Along these highways ply motor buses often holding as many as 40 people, and motor trucks ply in trains of two and three cars big as railroad freight cars and each designed to carry several tons. The railroads were taxed to build these highways and are being taxed to maintain them. In the meantime the highways are being broken down. Built as highways of easy communication for all the people, they have been perverted into highways of transportation for hire and have become in fact free highways for the carriers of freight and passengers, while the steam railroads must still stick to their own right-of-way and pay heavy taxes for the privilege of being "bumped" over roadbeds of their own construction.

Now that the highways are being smashed to pieces under the pounding of these ponderous vehicles the great body of

people who desire to enjoy these highways are beginning to sit up and inquire where they get off; and the answer is more taxes, both for the people and for the railroads. The new slogan is "Build the road to carry the load," and if these people have their say who do their business over these roads for hire, they will build a road that will cause the people of this country to carry a load of taxes under which they will stagger and fret for many a day. They will first have to build a taxpayer who can carry the load.

Thus there are combined against the railroad wartime wages, wartime taxes and increased competition by ship and highway for which also the railroads are taxed, until in 1920 taxes alone against the railroads amounted to \$279,000,000, whereas the return on the capital invested in the railroads amounted in that year to only \$62,000,000. Think of it—\$279,000,000 in taxes against \$62,000,000 in return on the money in the business; four and one-half times as much for taxes.

I submit to you that with the railroads in this fix it is idle to talk of remedy by reductions in rates. The fact is we are face-to-face with the cumulative effect of the Adamson Act and the acts of the United States Railroad Administration in all their bearings, including the so-called "national agreements" to which the railroads never agreed and in which the railroads had no voice whatever.

We have to address ourselves to these cumulative results, and happily if the public be fully informed public opinion will bring about the remedy that is necessary. The Adamson Act is still on the statute book, but let me tell you that the Adamson Act has been superseded for all practical purposes by the Transportation Act of 1920. The rate adjustments and so-called "national agreements" all are superseded by the authority granted under the Transportation Act of 1920 to the United States Railroad Labor Board.

That board is today the national government to all intents and purposes in dealing with disputes between railroad employers and employees regarding wages and working conditions. Today the Adamson Act is in effect and the acts of the United States Railroad Administration are in effect as to wages and working conditions only to the extent that the United States Railroad Labor Board elects to keep them in effect by its own rulings. So long as the board retains them in effect by its rulings, the burden will be borne by the railroads and by the public, and to whatever extent the board releases the railroads from these burdens to that extent only will relief be forthcoming. The relief so far obtained has only been fractional, and the board still has the subject under consideration.

Meanwhile, discussions are going on in the public prints as if the Labor Board decisions on wages and working conditions were to be respected at the whim of the parties interested, or to be thrown out of the window if unsuited to their purposes. But that is not the status of the United States Railroad Labor Board. When the board speaks in deciding wages or working conditions, it speaks as the voice of the public. It is composed of three parts. Three members represent the carriers, three represent the railroad employees and three are selected to represent the public. The President names all nine but at least one of the public three has to concur in any decision handed down; and the sooner we get to a knowledge of the fact that the Railroad Labor Board is the voice of the government, and represents the public at large, the less misunderstanding will there be as to where we stand.

But it takes the support of the public to let the Labor Board know when it does speak for the public. If the public will but realize that the Labor Board represents them and that its wage decisions affect not only the railroads directly, but indirectly the rates of wages everywhere, the public will take more interest in being properly informed, and in adequately informing the Labor Board upon pending questions.

General News Department

The **Reading Dissolution Case** has been restored to the docket of the Supreme Court for reargument on April 10, by an order of the court issued on February 27. The question is on whether the decree in the district court is in conformity with the opinion of the Supreme Court.

The **Pullman System of Railway Car Lighting** was the subject of a paper by Ernest Lunn, electrical engineer of the Pullman Company, which was presented before the Illuminating Engineering Society, Chicago section, at the rooms of the Western Society of Engineers, on February 23. The paper was followed by a general discussion.

The **United States Supreme Court** in a decision rendered on February 27 sustained a decision of the district court in the case of the Western Union against the Louisville & Nashville, which held that the telegraph company had not a vested right in its easement for the placing of telegraph poles upon the right of way of the railroad. The state statute under which the telegraph company had enjoyed this easement had been repealed, but the company had claimed that it had a vested right.

Investigation of Power Brakes

The Interstate Commerce Commission has ordered an investigation to determine whether, and to what extent, power brakes now in general use are adequate and in accordance with requirements of safety; what improved appliances or devices are available for use, and what improvements may or should be made. Hearing at Washington, April 6.

Plans for June Convention

Details of the annual meeting of the Mechanical Division of the American Railway Association to be held in Atlantic City, N. J., June 14 to 21, 1922, are now being formulated. The association has announced that the reports of committees investigating car matters will be received and discussed on Wednesday, Thursday and Friday, June 14 to 16 inclusive, and the reports of committees investigating locomotive matters on Monday, Tuesday and Wednesday, June 19 to 21 inclusive. A circular has been issued giving a list of hotels in Atlantic City and the rates.

Hearing on Automatic Train Control March 20

The Interstate Commerce Commission, at the request of President Aishton, of the American Railway Association, has postponed the date of its order to 49 railroads to show cause by March 15 why an order should not be issued requiring them to install automatic train control. The date was extended to March 20 and a hearing on the order set for that date in Washington so as to enable railway officers who would be required to attend the hearings, also to attend the meetings of the American Railway Engineering Association and the Signal Section of the American Railway Association at Chicago, March 13 to 16.

Changes in Train Control Committee

Two changes have been made in the personnel of the committee appointed by the roads cited in the proposed train control order to represent them in the hearing before the Interstate Commerce Commission (*Railway Age*, February 18, page 442). T. H. Beacom, vice-president and general manager of the Chicago, Rock Island & Pacific and W. M. Jeffers, general manager of the Union Pacific, representatives of the operating division, asked to be released from this committee because of their participation in wage conferences. These vacancies have been filled by the appointment of B. R. Pollock, vice-president and general manager of the Boston &

Maine, and by the transfer of A. M. Burt, assistant to the operating vice-president of the Northern Pacific, from the engineering to the operating division of the committee. Mr. Burt has been succeeded as a representative of the engineering division by W. P. Wiltsee, assistant engineer of the Norfolk & Western.

Hearing on Authority to Permit

Acquisition of Control

The Interstate Commerce Commission heard arguments on February 28 at Washington on the general questions that have arisen in the Pittsburgh & West Virginia case as to the authority of the commission to grant the application for permission to acquire the control of the West Side Belt under paragraph 2 of Section 5 of the interstate commerce act. The arguments presented varying views as to the proper construction, principally as to whether it is mandatory or permissive, pending the commission's consideration and adoption of a plan of consolidation.

P. R. R. Fire Losses Only \$26,000

Pennsylvania Railroad employees (in 1921) extinguishing fires on railroad property with the company's apparatus before the arrival of municipal fire fighters, kept the losses down to less than one-tenth of one per cent of the value of the property imperilled. In 1921 there were more fires but the loss was less in amount than in the previous year. The number of fires extinguished by employees was 288. The loss caused by these fires amounted to only \$26,112.30, while the work of the employee firemen saved railroad property with an insurance valuation of \$30,612,653.

A number of these fires were in buildings worth millions of dollars, but the average loss was about \$90. This record is regarded by the railroad as very creditable to the employees in carrying out the company's fire-prevention regulations.

Mr. Jones and the Dining-Car Business

John J. Jones, a dining car waiter on the Congressional Limited Express of the Pennsylvania Railroad, between New York and Washington, has held that job 25 years, and the brass buttons which, day by day, he takes out of the coat that he takes off and puts into a clean one, have become so worn from thousands of polishings that he has had to ask for a new set. His record is so unusual that the railroad company's advertising department has issued a leaflet containing a little sketch of Mr. Jones' career, with a portrait. He is so continually amiable that passengers remark on the fact; and, to a woman who asked him to explain how he was able to keep smiling he said: "Madam, that is how I make my living. If I am courteous to passengers, they are good to me." Jones has been in the dining car service of the Pennsylvania altogether 35 years, and calculates that he has served 300,000 meals.

The same leaflet containing this little sketch says that the overhead charge in the operating expenses of a dining car amounts to 57 cents a meal; in other words, that average amount has been spent for each passenger whether he orders a slice of toast or a larger meal.

The Pennsylvania has authorized the construction of 20 new dining cars, and when these are completed, in the Spring, there will be in service on the company's lines 128 dining cars, all of steel.

The Pennsylvania now has in its dining car and restaurant department 2,230 employees, two-thirds of whom are waiters, cooks, etc., who are required to undergo a monthly physical examination. In November, and again in December, every one of these examinations proved satisfactory, each person being given an absolutely clean bill of health.

Operating Statistics of Large Steam Roads—Selected Items for the Month of December, 1921,

Region, road and year	Average miles of road operated	Locomotive-miles		Car-miles		Ton-miles (thousands)		Average number of locomotives on line daily				
		Trains-miles	Principal and helper	Light	Loaded (thousands)	Per cent loaded	Gross. Excluding locomotive and tender	Net. Revenue and non-revenue	Service-able	Un-service-able	Per cent un-service-able	Stored

Snow and Ice Paralyze Traffic in North Central States

One train wreck causing the death of five people, property damage aggregating millions of dollars, telegraph, rail communication paralyzed and severe floods have resulted from a snow, sleet and rain storm which passed over the north central states on February 21. Train service in northeastern Wisconsin and northern Michigan was at a standstill for two and one-half days. The storm began with a heavy rain, followed by sleet and blizzards, only to turn to sleet again, and many passenger trains on the Chicago, Milwaukee & St. Paul, the Chicago & North Western and other roads in the storm-bound area had to be annulled. Both passenger and freight trains on these roads were stalled and service was demoralized. Snow plows had difficulty in clearing the tracks. On the Great Northern, a rotary snow plow near Montrose, Minn., about 40 miles west of Minneapolis, collided with passenger train No. 10 eastbound, drawn by two engines, causing the death of five trainmen and the injury of eleven passengers. Traffic over most of the roads except in northeastern Wisconsin, was resumed by February 27.

Railway Returns for December and for Twelve Months

The Class I railroads of the United States in 1921, had a net operating income of \$615,625,619, which was at the annual rate of return of 3.31 per cent on their tentative valuation, according to a statement issued by the Association of Railway Executives. The net operating income hardly more than covered their interest charges and rentals alone, these items amounting to \$603,000,000 in 1920 and somewhat greater than that in 1921. Fifty-four railroads, operating 26,022 miles, had operating deficits in 1921, totaling \$29,114,000.

Operating revenues in 1921 totaled \$5,569,888,000, a decrease of 10.6 per cent as compared with 1920. Operating expenses were \$4,602,425,000, a decrease of 21.1 per cent. Of this \$2,019,985,000 was spent for maintenance, 23.1 per cent less than in 1920.

For December, the net operating income was \$51,510,478, which would be at the annual rate of return of 3.44 per cent. Operating revenues were \$425,044,000, a reduction of 22.8 per cent from 1920, and operating expenses \$348,973,000, a decrease of 31.7 per cent. The Detroit, Toledo & Ironton was again late in filing its report.

The December net lacked \$38,412,522 of being a 6 per cent return. Expenditures for maintenance, \$142,159,256, were 34.8 per cent less than in December, 1920.

Net operating income for 1921 of the railroads in the Eastern district aggregated \$271,820,000 compared with a deficit of \$82,659,000 in 1920. This would be at the annual rate of return of 3.31 per cent on their tentative valuation, but \$220,240,000 below a 6 per cent return. In the Southern district net operating income was \$56,995,000 compared with \$18,443,720, the year before. This was equivalent to an annual return of 2.60 per cent. The Western district had a net operating income of \$286,811,000 (compared with \$123,584,000 in 1920), which would be at the annual rate of return of 3 1/2 per cent.

National Railway Service Corporation

Asks \$100,000,000 Loan

An application to the Interstate Commerce Commission for a loan of \$100,000,000 from the \$300,000,000 revolving fund was filed on February 23 by S. Davies Warfield as president of the National Railway Service Corporation. "To aid the service corporation in financing equipment trust certificates for the purchase of all or any part of the 300,000 bad order freight cars of the country, and for the further purchase of new equipment for the railroads."

The National Railway Service Corporation was organized by the National Association of Owners of Railroad Securities and has acted in financing equipment purchases for several railroads in connection with government loans. Recently the association asked the commission to approve a plan for pooling railroad equipment under its direction. Most of the \$300,000,000 fund has already been loaned but the balance is increased from time to time by repayment and interest. The loan is requested to be made in installments, presumably to find income available. Under the law no new loans from the fund may be made on applications filed later than February 28.

"Through the financial plans of the service corporation, as laid before the commission," a press notice says, "large sums of money will be liberated to the carriers, through the purchase of cars standing unit for use on their tracks; in addition, the money will be provided for rebuilding these cars to meet transportation requirements upon the return of normal conditions. This will give employment to thousands in opening up railroad and car manufacturing and supply shops. The application states that it is submitted that the loan proposed is indispensable to a comprehensive and adequate program for the prompt rehabilitation and rebuilding of railway equipment on terms which the carriers can adopt; that it is made for the acquisition and rebuilding of bad order equipment which, when rebuilt, will be made available, by lease or sale, to any railroad. The National Railway Service Corporation operates without profit in the public interest. The service corporation will issue its deferred and prior lien certificates in the manner heretofore adopted in financing the carriers. The prior lien certificates will be sold; the deferred lien certificates to be taken by the government."

The application states that \$50,000,000 is desired for the acquisition and rebuilding of unserviceable equipment for lease or sale to the railroads when rebuilt, and \$50,000,000 for new equipment. The funds derived from the loan are to be used to cover 25 to 50 per cent of the appraised value of the equipment as rebuilt and as part payment of 40 per cent on the cost of new equipment.

B. R. & P. Proposes a New Economy

The Buffalo, Rochester & Pittsburgh, in its last efficiency circular calls on employees to suggest new ways of economizing, and promises to make suitable recompense. The circular says, in part:

"In the belief that the employees as well as the railroads are vitally interested in every possible economy, the Buffalo, Rochester & Pittsburgh has authorized all departments to place in effect a suggestion bureau to receive and consider suggestions of economies made by the employees. The company has no heart in laying off men, but realizes the demand of an economic force far greater than its desires. We feel that much good will result from an exchange of ideas on economic practices. It may be that the suggestion bureau will be the means of avoiding conditions which have been forced on some other railroads. As it must be a matter of some satisfaction for an employee to realize that he is not only a potent factor in economic production, but personally responsible for creating employment for his fellow men, the company will make suitable cash award for every suggestion which has an economic value and in addition to such award will use the entire amount saved by such suggestion to hire additional employees.

"All suggestions will be handled by a departmental secretary, who will submit the suggestions, with author's name eliminated and nothing to identify it except a serial number, to the bureau for consideration. A suggestion having economic merit will be paid for in accordance with its value and the actual monthly saving converted into additional employment. In addition to cash and increased labor award the name of the suggestor will be displayed on the departmental bulletin board, together with the suggestion made."

Meetings and Conventions

The following list gives names of secretaries, dates of next or regular meetings and places of meetings:

- AIR BRAKE ASSOCIATION.—F. M. Nellis, 165 Broadway, New York City. Next meeting, May 12, 1922, Hotel Washington, Washington, D. C. Exhibit by Air Brake Appliance Association.
- AIR BRAKE APPLIANCE ASSOCIATION.—J. F. Gettrist, The Ashton Valve Company, 348 W. Washington St., Chicago. Meeting with Air Brake Association.
- AMERICAN ASSOCIATION OF DEMURRAGE OFFICERS.—E. A. Pontius, Superintendent of Demurrage and Storage, C & N W Ry., Chicago.
- AMERICAN ASSOCIATION OF DINING CAR SUPERINTENDENTS.—L. A. Simms, C. & E. Ry., Chicago.
- AMERICAN ASSOCIATION OF ENGINEERS.—C. I. Drayce, 63 F Adams St., Chicago. Next railroad conference, March 13, Chicago.
- AMERICAN ASSOCIATION OF GENERAL PASSENGER AGENTS.—F. L. Duncan, 332 So. Michigan Ave., Chicago. Next meeting, June 28 and 29, Minneapolis, Minn.
- AMERICAN ASSOCIATION OF PASSENGER TRAFFIC OFFICERS.—W. C. Hope, C. & E. Ry. of N. I., 111 Liberty St., New York.
- AMERICAN ASSOCIATION OF RAILROAD SUPERINTENDENTS.—J. Rothchild, Room 400, Union Station, St. Louis, Mo. Next convention, August 23-25, Kansas City, Mo.

AMERICAN ELECTRIC RAILWAY ASSOCIATION.—J. W. Welsh, 8 W. 40th St., New York.

AMERICAN RAILROAD MASTER TINNERS', COPPERSMITHS' AND PIPE FITTERS' ASSOCIATION.—C. Borchardt, 202 North Hamlin Ave., Chicago, Ill.

AMERICAN RAILWAY ASSOCIATION.—J. E. Fairbanks, General Secretary, 75 Church St., New York, N. Y. Annual meeting, November, 1922.

Freight Station Section (including former activities of American Association of Freight Agents). R. O. Wells, Freight Agent, Illinois Central Railroad, Chicago, Ill.

Medical and Surgical Section. J. C. Caviston, 75 Church St., New York.

Protective Section (including former activities of the American Railway Chief Special Agents and Chiefs of Police Association), J. C. Caviston, 75 Church St., New York, N. Y.

Telegraph and Telephone Section (including former activities of the Association of Railway Telegraph Superintendents). W. A. Fairbanks, 75 Church St., New York, N. Y. Next meeting, March 21-23, Richmond, Va. Annual meeting, September 20-22, 1922, Colorado Springs, Colo.

Safety Section. J. C. Caviston, 75 Church St., New York.

Division II—Transportation (including former activities of the Association of Transportation and Car Accounting Officers). G. W. Covert, 431 South Dearborn St., Chicago, Ill.

Division III—Traffic. J. Gotschalk, 143 Liberty St., New York.

Division IV—Engineering. E. H. Fritch, 431 South Dearborn St., Chicago, Ill. Next convention, March 16, Chicago. Exhibit of National Railway Appliances Association, March 13-16.

Construction and Maintenance Section. E. H. Fritch.

Electrical Section. E. H. Fritch.

Signal Section (including former activities of the Railway Signal Association). J. T. Murphy, General Store Keeper, New York Central, Collinwood, Ohio. Annual meeting, June 14-16, 1922, Monmouth Hotel, Spring Lake, N. J.

Division V—Mechanical (including former activities of the Master Car Builders' Association and the American Railway Master Mechanics' Association). V. R. Hawthorne, 431 South Dearborn St., Chicago, Ill. Annual convention, June 14-21, 1922, Atlantic City, N. J. Exhibit by Railway Supply Manufacturers' Association.

Equipment Section (including former activities of the Master Car and Locomotive Painters' Association). V. R. Hawthorne, 431 South Dearborn St., Chicago, Ill.

Division VI—Purchases and Stores (including former activities of the Railway Stores Association). J. T. Murphy, General Store Keeper, New York Central, Collinwood, Ohio. Annual meeting, June 19-21, 1922, Hotel Traymore, Atlantic, N. J.

Division VII—Freight Claims (including former activities of the Freight Claim Association). Lewis Filcher, 431 South Dearborn St., Chicago, Ill.

AMERICAN RAILWAY BRIDGE AND BUILDING ASSOCIATION.—C. A. Lichy, C. & N. W. Ry., 319 N. Waller Ave., Chicago. Next convention, October 17-19, 1922, Cincinnati, Ohio. Exhibit by Bridge and Building Supply Men's Association.

AMERICAN RAILWAY DEVELOPMENT ASSOCIATION.—J. F. Jackson, Central of Georgia, Savannah, Ga. Annual meeting, May 10-12, 1922, Denver, Colo.

AMERICAN RAILWAY ENGINEERING ASSOCIATION.—(Works in co-operation with the American Railway Association, Division IV.) E. H. Fritch, 431 South Dearborn St., Chicago. Next convention, March 14-16, Chicago. Exhibit by National Railway Appliances Association, March 13-16.

AMERICAN RAILWAY MASTER MECHANICS' ASSOCIATION.—(See American Railway Association, Division 5.)

AMERICAN RAILWAY TOOL FOREMEN'S ASSOCIATION.—R. D. Fletcher, 1145 East Marquette Road, Chicago. Exhibit by Supply Association of the American Railway Tool Foremen's Association.

AMERICAN SHORT LINE RAILROAD ASSOCIATION.—T. F. Whittlesey, Union Trust Bldg., Washington, D. C.

AMERICAN SOCIETY FOR STEEL TREATING.—W. H. Eiseeman, 4600 Prospect Ave., Cleveland, Ohio. Annual convention, September 25-30, 1922, Detroit, Mich.

AMERICAN SOCIETY FOR TESTING MATERIALS.—C. L. Warwick, University of Pennsylvania, Philadelphia, Pa. Annual meeting, June 26-30, 1922, Chalfonte-Haddon Hall, Atlantic City, N. J.

AMERICAN SOCIETY OF CIVIL ENGINEERS.—E. M. Chandler (acting secretary), 33 W. 39th St., New York. Regular meetings 1st and 3d Wednesdays in month, except July and August, 33 W. 39th St., New York.

AMERICAN SOCIETY OF MECHANICAL ENGINEERS.—Calvin W. Rice, 29 W. 39th St., New York.

Railroad Division, A. F. Stuebing, Managing Editor, Railway Mechanical Engineer, Woolworth Bldg., New York. Next meeting, May 16, 1922, New York, N. Y.

AMERICAN TRAIN DISPATCHERS' ASSOCIATION.—C. L. Darling, 1310-1311 Mallers Bldg., Chicago, Ill. Next convention, June 18, 1923, Chicago.

AMERICAN WOOD PRESERVERS' ASSOCIATION.—George M. Hunt, Chemist, Forest Products Laboratory, Madison, Wis. Next meeting, January 23, 1923, New Orleans, La.

ASSOCIATION OF RAILWAY CLAIM AGENTS.—H. D. Morris, Northern Pacific R. R., St. Paul, Minn. Next meeting, May 17-19, 1922, Montreal.

ASSOCIATION OF RAILWAY ELECTRICAL ENGINEERS.—Jos. A. Andreucetti, C. & N. W., Room 411, C. & N. W. Sta., Chicago. Exhibit by Railway Electrical Supply Manufacturers' Association.

ASSOCIATION OF RAILWAY EXECUTIVES.—Thomas De Witt Cuyler (chairman), 61 Broadway, New York, N. Y.

ASSOCIATION OF RAILWAY SUPPLY MEN.—A. W. Clokey, 1658 McCormick Bldg., Chicago. Meeting with International Railway General Foremen's Association.

ASSOCIATION OF RAILWAY TELEGRAPH SUPERINTENDENTS.—(See American Railway Association, Division I.)

ASSOCIATION OF TRANSPORTATION AND CAR ACCOUNTING OFFICERS.—(See American Railway Association, Division II.)

BRIDGE AND BUILDING SUPPLY MEN'S ASSOCIATION.—D. J. Higgins, American Valve & Pipe Company, 332 C. Michigan Ave., Chicago. Meeting with convention of American Railway Bridge and Building Association.

CANADIAN RAILWAY CLUB.—W. A. Booth, 53 Russhrooke St., Montreal, Que. CAR FOREMEN'S ASSOCIATION OF CHICAGO.—Aron Kline, 626 North Pine Ave., Chicago. Regular meetings, 2d Monday in month, except June, July and August, New Morrison Hotel, Chicago.

CAR FOREMEN'S ASSOCIATION OF ST. LOUIS, MO.—Thomas B. Koeneke, 604 Federal Reserve Bank Bldg., St. Louis, Mo. Meetings, first Tuesday in month at the American Hotel Annex, St. Louis.

CENTRAL RAILWAY CLUB.—Harry D. Vought, 26 Cortlandt St., New York. Regular meetings, 2d Thursday in January, March, May, September and November, Hotel Iroquois, Buffalo, N. Y.

CHIEF INTERCHANGE CAR INSPECTORS' AND CAR FOREMEN'S ASSOCIATION.—W. P. Elliott, Terminal Railroad Association of St. Louis, East St. Louis, Ill.

CHIEF INTERCHANGE CAR INSPECTORS' AND CAR FOREMEN'S SUPPLY MEN'S ASSOCIATION.—D. B. Wright, 34th St. and Artesan Ave., Chicago, Ill. Meeting with Chief Interchange Car Inspectors' and Car Foremen's Association.

CINCINNATI RAILROAD CLUB.—W. C. Cooder, Union Central Bldg., Cincinnati, Ohio. Meetings, 2d Tuesday in February, May, September and November.

EASTERN RAILROAD ASSOCIATION.—E. N. Bessling, 614 F St., N. W., Washington, D. C. Annual meeting May 11, 1922, Railroad Club of New York City.

FREIGHT CLAIM ASSOCIATION.—(See American Railway Association, Division VII.)

GENERAL SUPERINTENDENTS' ASSOCIATION.—C. H. Treichel, Grand Central Station, Chicago. Regular meetings, Wednesday preceding 3d Friday in month, Room 1414, Manhattan Bldg., Chicago.

INTERNATIONAL RAILROAD MASTER BLACKSMITHS' ASSOCIATION.—W. J. Mayer, Michigan Central R. R., Detroit, Mich. Exhibit by International Railroad Master Blacksmiths' Supply Men's Association.

INTERNATIONAL RAILROAD MASTER BLACKSMITHS' SUPPLY MEN'S ASSOCIATION.—George P. White, 747 Railway Exchange, Chicago. Meeting with International Railroad Master Blacksmiths' Association.

INTERNATIONAL RAILWAY FUEL ASSOCIATION.—J. G. Crawford, 702 E. 51st St., Chicago. Next annual meeting, May 22-25, 1922, Auditorium Hotel, Chicago. Exhibit by International Railway Supply Men's Association.

INTERNATIONAL RAILWAY GENERAL FOREMEN'S ASSOCIATION.—Wm. Hall, 1061 W. Wabasha Ave., Winona, Minn.

INTERNATIONAL RAILWAY SUPPLY MEN'S ASSOCIATION.—C. W. Sullivan, Garlock Packing Co., 326 W. Madison St., Chicago. Meeting with International Railway Fuel Association.

MAINTENANCE AND MASTER PAINTERS' ASSOCIATION.—E. E. Martin, Union Pacific R. R., Room No. 19, Union Pacific Bldg., Kansas City, Mo. Annual convention, 1922, Buffalo, N. Y.

MASTER BOILER MAKERS' ASSOCIATION.—Harry D. Vought, 26 Cortlandt St., New York, N. Y. Next convention, May 23-26, 1922, Hotel Sherman, Chicago.

MASTER CAR AND LOCOMOTIVE PAINTERS' ASSOCIATION.—(See A. R. A., Division V.)

MASTER CAR BUILDERS' ASSOCIATION.—(See A. R. A., Division V.)

NATIONAL ASSOCIATION OF RAILWAY TIE PRODUCERS.—Warren C. Nixon, Western Tie & Timber Co., 905 Syndicate Trust Bldg., St. Louis, Mo.

NATIONAL ASSOCIATION OF RAILWAY AND UTILITIES COMMISSIONERS.—James H. Walker, 21 W. Wabasha St., New York. Next convention, September 26, 1922, Detroit, Mich.

NATIONAL FOREIGN TRADE COUNCIL.—O. K. Davis, 1 Hanover Square, New York. Next convention, May 10-12, Philadelphia, Pa.

NATIONAL RAILROADS ASSOCIATION.—C. W. Kelly, People's Gas Bldg., Chicago. Annual exhibition, March 13-16, Coliseum, Chicago, at Convention of American Railway Engineering Association.

NEW ENGLAND RAILROAD CLUB.—W. E. Cade, Jr., 683 Atlantic Ave., Boston, Mass. Regular meetings, 2d Tuesday in month, excepting June, July, August and September.

NEW YORK RAILROAD CLUB.—Harry D. Vought, 26 Cortlandt St., New York. Regular meetings, 3d Friday in month, except June, July and August, at 29 W. 39th St., New York.

PACIFIC RAILWAY CLUB.—W. S. Wollner, 64 Pine St., San Francisco, Cal. Regular meetings, 2d Thursday in month, alternately in San Francisco and Oakland.

RAILWAY ACCOUNTING OFFICERS' ASSOCIATION.—E. R. Woodson, 1116 Woodward Building, Washington, D. C. Annual meeting, June 14, 1922, Cleveland, Ohio.

RAILWAY BUSINESS ASSOCIATION.—Frank W. Noonan, 600 Liberty Bldg., Broad and Resnet Sts., Philadelphia, Pa. Annual dinner, February 1, Waldorf-Astoria, New York.

RAILWAY CLUB OF PITTSBURGH.—J. D. Conway, 515 Grandview Ave., Pittsburgh, Pa. Regular meetings, 4th Thursday in month, except June, July and August, Fort Pitt Hotel, Pittsburgh.

RAILWAY DEVELOPMENT ASSOCIATION.—(See A. R. A., Development Assn.)

RAILWAY ELECTRICAL SUPPLY MANUFACTURERS' ASSOCIATION.—J. Scribner, General Electric Co., Chicago. Annual meeting with Association of Railway Electrical Engineers.

RAILWAY EQUIPMENT MANUFACTURERS' ASSOCIATION.—R. J. Himmelright, 17 East 42nd St., New York. Meeting with Traveling Engineers' Association.

RAILWAY FIRE PROTECTION ASSOCIATION.—R. R. Hackett, Baltimore & Ohio R. R., Baltimore, Md.

RAILWAY REAL ESTATE ASSOCIATION.—R. H. Morrison, C. & O. Ry., Richmond, Va. Next meeting, October 10-13, 1922, Pittsburgh, Pa.

RAILWAY SIGNAL ASSOCIATION.—(See A. R. A., Division IV, Signal Section.)

RAILWAY SUPPLY ASSOCIATION.—(See A. R. A., Division VI.)

RAILWAY SUPPLY MANUFACTURERS' ASSOCIATION.—J. D. Conway, 1841 Oliver Bldg., Pittsburgh, Pa. Meeting with A. R. A., Division V.

RAILWAY TELEGRAPH AND TELEPHONE APPLIANCE ASSOCIATION.—G. A. Nelson, 30 Cortlandt St., New York.

RAILWAY TREASURY OFFICERS ASSOCIATION.—L. W. Cox, Commercial Trust Bldg., Philadelphia, Pa.

ROADMASTERS AND MAINTENANCE OF WAY ASSOCIATION.—P. J. McAndrews, & N. Y., Settling, Ill. Annual convention, September 12-14, 1922, Cleveland, Ohio. Exhibit by Track Supply Association.

ST. LOUIS RAILWAY CLUB.—B. W. Frauenthal, Union Station, St. Louis, Mo. Regular meetings, 2d Friday in month, except June, July and August.

SIGNAL APPLIANCE ASSOCIATION.—F. W. Edmunds, Suburban Electric Manufacturing Company, New York City. Meeting with American Railway Association, Signal Section.

SOUTHERN AND SOUTHWESTERN RAILWAY CLUB.—A. J. Merrill, P. O. Box 1205, Atlanta, Ga. Regular meetings, 3d Thursday in January, March, May, July, September and November, Piedmont Hotel, Atlanta.

SOUTHERN ASSOCIATION OF CAR SERVICE OFFICERS.—E. W. Sandwich, Western Ry. of Ala., Atlanta, Ga.

SUPPLY ASSOCIATION OF AMERICAN RAILWAY TOOL FOREMEN'S ASSOCIATION.—H. S. White, 9 N. Jefferson St., Chicago.

TRACK SUPPLY ASSOCIATION.—W. C. Kidd, Ramapo Iron Works, Hillburn, N. Y. Meets with Roadmasters' and Maintenance of Way Association.

TRAVELING ENGINEERS' ASSOCIATION.—W. O. Thompson, Marine Trust Building, Buffalo, N. Y. Exhibit by Railway Equipment Manufacturers' Association.

WESTERN RAILWAY CLUB.—Bruce V. Crandall, 14 E. Jackson Boulevard, Chicago. Regular meetings, 3d Monday each month except June, July and August.

Traffic News

President Harding has signed the bill, S. 621, extending the time in which shippers may file overcharge claims against the director general of railroads.

A. M. Groscclose, assistant traffic manager of the Northwestern Fruit Exchange, Seattle, Wash., has been promoted to traffic manager, succeeding J. Curtis Robinson, who has resigned.

Edward T. Sicardi, vice-president of the Union Tank Car Company, has been elected president of the company, succeeding William A. Barstow, who died at West Orange, N. J., on February 10.

The executives of the Eastern trunk lines, at a meeting in New York, on February 27, took action under which the legal departments of the roads will seek a review by the courts of the recent decision of the Interstate Commerce Commission, changing, in favor of the New England roads, the division of through rates on freight between New England and points west of the Hudson river.

Coal Production

The production of soft coal dropped back slightly during the week ended February 18, according to the weekly bulletin of the Geological Survey, but the output is estimated at 10,167,000 net tons, a decrease of 150,000 tons when compared with the week preceding. The bulletin says probably not less than 1,000,000 tons of the week's output went into storage.

New England Shippers Ask Removal of Baltimore and Philadelphia Port Difficulties

The Interstate Commerce Commission in a formal complaint filed on February 28 by the principal commercial organizations of New England is asked to issue an order requiring the railroads to establish and apply in the future rates for the transportation of export and import freight between the New England ports and Buffalo and points in differential territory which shall not exceed the corresponding rates contemporaneously maintained between the same territory and Philadelphia or Baltimore, or such other rates as the commission may deem reasonable and just. The complaint was filed by Clark & La Roe, the firm of which Edgar E. Clark, former chairman of the Interstate Commerce Commission, is a member, on behalf of the Maritime Association of the Boston Chamber of Commerce, the Associated Industries of Massachusetts, the New Bedford Board of Commerce and the chambers of commerce of New London, Portland and Providence.

The export and import rates between the New England ports and the large territory west of the Buffalo-Pittsburgh line are higher than the corresponding rates between Philadelphia and Baltimore and the same territory, which are constructed by deducting from the New York rates certain port differentials. The complaint says that by reason of these port differentials import and export freight has been diverted from the New England ports to Philadelphia and Baltimore and that during the months of September, October and November, 1921, Boston handled only 2 per cent of the grain exported from the Atlantic ports. It is stated that during the last 10 years the commission has made no formal review of this rate structure that the limitations on the commission's power which existed when the situation was previously reviewed have been displaced by grants of power deliberately made by Congress to insure complete justice and preservation of the public interest, that the port differentials are entirely arbitrary, not reflecting differences in transportation conditions, but had their origin in rate wars between individual railroads, and that Congress has declared its policy to encourage and develop water transportation and to foster both rail and water transportation not through the ports of Baltimore and Philadelphia, but through all ports of the United States.

Commission and Court News

Interstate Commerce Commission

The commission has suspended from March 25, until July 23, the operation of schedules published by the Missouri, Kansas & Texas which propose to increase rates on horses and mules from points in Missouri and Kansas to Memphis, New Orleans, and points taking same rates.

The commission has suspended from March 2, until June 30, the operation of schedules published by the Hocking Valley, which propose to increase the rates on brick and articles taking brick rates from points on the Hocking Valley Railway Company located in the so-called Hocking group in Ohio to points in Ohio and West Virginia.

Export Bill of Lading

The commission is in receipt of a communication from the United States Shipping Board, recommending certain amendments in part II of the uniform through export bill of lading prescribed by the commission, and has reopened the case for further hearing, such hearing to be limited to the reasonableness and propriety of the suggested provisions for inclusion in part II. The proceeding is assigned for hearing on March 4, at Washington. The commission is advised that considerable work has been done and expense incurred in the matter of printing supplies of the bills prescribed by it, and to avoid delay and confusion, it is provided in the order reopening the case that pending a hearing and decision the order entered on October 21, as modified by order of January 30, shall remain in full force and effect.

An early decision will be rendered. In the event that the further hearing shows that amendments such as are recommended are appropriate, the effective date of any order of the commission prescribing amendments will be such as to allow a reasonable time for making changes, due consideration being given to the supplies of unused printed forms on hand. The reopening of the proceeding does not affect the domestic bill of lading or the live stock contract.

State Commissions

The railroad commission of California, on February 17, instituted an investigation of the surcharge on the fares of passengers riding in sleeping and parlor cars, directing the railroads to show cause why it should not be eliminated in California. The hearing is scheduled for March 22.

The Railroad Commission of Georgia has ordered a general reduction in the freight rates on cotton, hay and grain, including grain products, to be put into effect on April 1. It is said that the new rates are based strictly on mileage and that the reduction amounts to 24 per cent on cotton and about 20 per cent on the other articles. The Commission is engaged in a general investigation of freight rates throughout the state and proposes to make reductions on other important commodities.

Court News

Safety Appliance Act; Steps on Pilot

The Interstate Commerce Commission's order of March 13, 1911, requires locomotive pilots to have one step at each side, but allows railroads to make additional safety rules not inconsistent with the order. A railroad bought an engine equipped with two steps on each side of the pilot, and, after using it for some time, took off the upper step, to comply with the order. In an action for negligent injury, alleging violation of the Safety Appliance Act, the Texas Court of Civil Appeals holds that the use of the two steps was not the adoption of an "additional rule," because it was inconsistent with the commission's order, and that negligence could not be alleged after the removal of one of the steps, because the company was then complying with the order.—Payne v. Albright (Tex. Civ. App.), 235 S. W., 288.

Assessment of Railroads for Street Improvements

The Minnesota Supreme Court holds that, prior to the enactment of Chapter 533, Laws 1919, making railway companies subject to special assessments for local improvements, a city had no power to assess the cost of street paving against a railroad corporation which has paid a gross earnings tax.—*Chicago & N. W. v. City of Marshall (Minn.)*, 186 N. W. 137.

Statute Requiring Enginemen to Look Out

The Missouri Supreme Court holds, in an action for the death of an engineman in a crossing collision, where the evidence showed that the death resulted from the man's failure to comply with the state statute requiring him to see that a crossing is clear before entering on it, that the statute could not be abrogated by a custom making it the fireman's duty to look out on his side.—*Frese v. Chicago, B. & Q. (Mo.)*, 235 S. W., 97.

Grantor of Right of Way Not Entitled to Damage From Overflow

Where a landowner has conveyed to a railroad a right of way over his farm, the Tennessee Supreme Court holds that he cannot recover damages to his farm by a fill and a culvert therein causing an overflow, no negligence of the railroad company in the construction of the track and culvert being shown.—*Knott v. L. & N. (Tenn.)*, 234 S. W., 1003.

Action for Short Delivery Barred by Two-Year Limit

The Circuit Court of Appeals, Fifth Circuit, holds that an action brought January 28, 1921, by the holder of bills of lading for cotton, issued by the Director General in March, 1918, for short delivery, is barred by a provision in the bills requiring such suits to be brought within two years and one day after delivery or within two years and one day after the elapse of a reasonable time for delivery.—*Leigh Ellis & Co. v. Davis*, 276 Fed. 400.

Mere Presence of Johnson Grass Not Unlawful

The Oklahoma Supreme Court holds that the state statute prohibiting the introduction into the state and the sale of Johnson grass does not make the mere presence of such grass on premises unlawful, and mere evidence of the presence of such grass on a right of way, resulting in the death of a cow which strayed on the right of way and ate some, is not sufficient to give a cause of action to the owner of the cow.—*McCormick v. Atchison, T. & S. F. (Okla.)* 202 Pac. 302.

Delay in Calling for Baggage

The decisions are not in harmony as to what is a reasonable time after arrival of passenger's baggage to change the railroad's liability from that of carrier to warehouseman; but, following the decided weight of authority, the Minnesota Supreme Court holds that a delay from the afternoon of arrival until next morning in calling for it is unreasonable, so that, in case of its theft during the night, the railroad's liability is that of warehouseman only.—*White v. Chicago, M. & St. P. (Minn.)*, 186 N. W. 145.

Excessive Damages Ground for New Trial

A verdict of \$10,000 for personal injuries to a member of a gravel train crew, 56 years of age, based largely on the testimony of plaintiff that he earned \$130 a month on a basis of 22½ cents an hour, which would oblige him to work 20 hours each day during a month of 30 days, was held by the Montana Supreme Court to be excessive, on the ground that "it would be an imputation on human intelligence to assume that a jury of reasonable men, after due deliberation, could believe that at his age he could constantly endure a strain so severe," combined with the fact that the plaintiff was, at the time of the trial, managing a restaurant business with little, if any, detriment to his activities from his injuries. The award of damages failed to commend itself to the judicial mind, and a new trial was awarded. *Wegge v. Great Northern (Mont.)*, 203 Pac. 360.

Decisions Under the Federal Employers' Liability Act

The New York Appellate Division holds that one assisting in enlarging the pit of an old turntable, to install a larger one, was engaged in new construction and not in interstate commerce within the act.—*Seaver v. Payne*, 190 N. Y. Supp. 724.

The Illinois Supreme Court holds that a conductor of a freight train, carrying interstate cars, and engaged in interstate commerce, did not depart therefrom by turning his attention to a package containing dangerous explosives, brought to the car by a railroad policeman.—*Moore v. Wabash (Ill.)*, 132 N. E. 814.

Automobile Turning Switch After Collision

A passenger train, at a crossing, in a town, struck an automobile and threw it against a switch stand, turning the switch and turning the train onto a side track, resulting in a collision. In affirming a judgment for the defendant on a directed verdict in an action for the death of a passenger resulting from the collision, the Indiana Appellate Court holds that, though the operators of the train should have anticipated the presence of the automobile on the crossing, they could not have anticipated the unusual result, so that their negligence was not the proximate cause of the passenger's injuries.—*Engle v. Director General (Ind. App.)*, 133 N. E., 138.

Bill-of-Lading Time Limit for Suits

The Connecticut Supreme Court of Errors holds that the provision in the uniform bill of lading requiring suits to be brought within two years and one day after delivery or after the expiration of a reasonable time for delivery, is not unreasonable. It holds a finding of the trial court allowing six months as a reasonable time to be extremely liberal. The only change made by the decision of the Interstate Commerce Commission in *Decker & Sons v. Commission*, 55 I. C. C. 453 (1919), is that where the claim has not been settled before the beginning of the last six months of the two years and a day period, suit may be filed within six months from the date when the claim is definitely declined in writing. This ruling is not retrospective and does not affect bills of lading issued prior to December 2, 1919.—*Humphrey-Cornell Co. v. Hines (Conn.)*, 115 Atl. 561.

Obtaining Possession Without Surrender of B. L.

If a consignee of goods knew that he was not entitled to their possession without surrender of the bill of lading, and that the railroad could not deliver the goods to him without a breach of its obligation to the shipper, and took possession knowing that the delivery to him was unauthorized, and that it would not have been made except for an innocent mistake of fact on the part of the railroad, the Massachusetts Supreme Court holds that a verdict against him for conversion, in an action by the railroad, was justified. His possession of the goods being unauthorized and wrongful, no demand was necessary before bringing the action. Even if the consignee believed that his receipt of the goods was justified because of the railroad's surrender of the actual possession, that belief was no defense.—*N. Y. C. v. Freedman (Mass.)*, 133 N. E., 101.

Decisions Under Federal Employers' Liability Act

Foreign cars, brought into the state ten days before, were being moved within a yard, one for unloading, others for repairs. The Circuit Court of Appeals holds that a conductor of a drill crew, killed while shifting the cars, was not within the act.—*Schauffele v. Director General*, 276 Fed., 115.

A depot truckman assisting in moving a crate containing a planing mill, placed on the platform by another company for transportation out of the state, was held within the act.—*Maher v. St. L.-S. F. (Mo. App.)*, 234 S. W., 1034.

The New York Appellate Division holds that a section man, killed about 3,000 ft. from his work by a backing locomotive, while walking toward his home during the noon hour, was not within the act, the accident not being in the course of his employment.—*Pallocco v. L. V.*, 190 N. Y. Supp., 867.

The rule that a trackwalker assumes the risk of injury by trains operated in the usual manner is not changed by the federal Employers' Liability Act.—*Davis v. P. & R.*, 276 Fed. 187.

Labor Board Decisions

Truck Driver Not Allowed to Assume

Position of Bill Clerk

A truck driver of the American Railway Express Company at Nashville, Tenn., was given a trial as a bill clerk when his former position was abolished and on failing to qualify was dismissed. The employees maintained that he was appointed to the position and had not been given a fair opportunity to qualify. The Board held that the man had not been appointed and denied the claim of the employee.—*Decision No. 683.*

Employee, Incompetent, Not

Entitled to Seniority Rights

An employee of the Atlantic Coast Line was assigned to a clerical position for a two-months' trial, during which he failed to perform the duties satisfactory to the carrier and was discharged. The employees contended that when he was released from this position he should have been given a place in the office or the right to exercise his seniority right to a position for which he was qualified. The Labor Board denied this petition.—*Decision No. 684.*

Pay Not Allowed for Vacations Not Granted

Several clerks employed in the Baltimore & Ohio freight station at Cambridge, Ohio, sought 15 days' pay in compensation for vacations which were not granted in 1920. The national agreement under which these employees were working does not contain any specific rule on the question of pay for time lost on account of sickness or for vacations. The Board held that the instructions of the Director of the division of operation of the United States Railroad Administration of January 30, 1920, which stated that "existing practices as to vacations and sick leave would remain in effect," applied in the case. The Board therefore decided that the employees were not entitled to compensation as, under the past practice, they were not granted vacations during 1920.—*Decision No. 682.*

Representation of Mechanical Supervisory

Forces To Be Determined by Ballot

On May 4, 1921, a communication was addressed to A. P. Titus, general manager of the Chicago & Alton, by a committee representing the International Association of Railroad Supervisors of Mechanics requesting a conference for the purpose of negotiating rules and working conditions in accordance with the provisions of Decision No. 119. The carrier maintained that the organization did not represent a majority of the subordinate officials as designated by the Interstate Commerce Commission, and the organization submitted the question to the Labor Board, filing a petition bearing the signature of 90 foremen, authorizing it to represent them in agreement negotiations. The carrier also made a canvass of the foremen and 98 men, or 76 per cent of the supervisors of mechanics in the maintenance of way, locomotive and car department, signed a petition signifying their desire either to deal with the company direct or through a committee named in the petition. The organization took exception to the method followed by the carrier in canvassing the foremen. The board has decided that the method followed by both parties was in accordance with the intent of Decision No. 119 and that a conference shall be held between representatives of the carrier, of the International Association of Railroad Supervisors of Mechanics, of any other organization representing mechanical foremen, and of 100 or more unorganized employees, for the purpose of arriving at a clear understanding as to the details of making a ballot by which the foremen, by a majority vote, may designate their choice of representation. Separate forms of ballot for the foremen in the mechanical and bridge and building departments are required.—*Decision No. 629.*

Foreign Railway News

Complicated Rulings on Eight-Hour Day in Spain

New rulings on the eight-hour day have gone into effect in Spain, according to the Railway Gazette (London). The underlying principle adopted is 8 hours of work per day with waiting time counted at only half of working time. The runs of train and engine men are to be arranged so as to provide an average of 48 hours per week on duty. In the case of station service, employees' time on duty when held but not working counts as only half-time in determining the eight-hour day. Overtime is paid for generally at time and a quarter, although occasionally at straight rates only.

The railways have notified the government that without some assistance in the shape of increased rates they will be unable to meet the burden imposed on them by the eight-hour day measures, and it is understood that the government is considering a provisional advance of funds, repayable by the railway companies in some form when the Transport bill, which is now in committee, becomes a law.

English Locomotive Coaling Plant

An interesting locomotive coaling plant of small capacity is that of the London & Northwestern at Willesden, London. This plant, which was built by the Mitchell Conveyor and Transporter Company, consists of a rotary tippie driven by a 10 h. p. electric motor, fitted with automatic chock for supporting the side of the car, and also two double chains at one end, which come in contact with the side of the car and prevent the wheels leaving the rails.

The coal falls into a reinforced concrete hopper of 12 tons

L. & N. W. Coaling Plant at Willesden

capacity. This hopper is 9 ft. deep and has an outlet 3 ft. by 2 ft. 7 in. at the bottom, which permits the coal to flow on to a circular feeder, 7 ft. 6 in. diameter, which feeds the coal into a skip. This circular feeder is rotated by a 3 h.p. motor fixed on the surface and connected to the feeder by a shaft and gearing.

The skip, when filled with one ton of coal is lifted by a 10 h.p. motor, the wire rope passing over a pulley on a weighted lever at the top of the plant, and so arranged that

when one ton of coal has been fed into the skip, the lever is depressed and the current to the feeder motor is cut off.

The fuelman, by actuating a switch on the stage, can then raise the loaded skip which tips itself automatically into a 5-ton steel hopper, at the bottom of which is a lever operated gate for distributing the coal onto the locomotive tenders.

Experimental Automatic Stop Device on Great Central, England

The automatic stop device illustrated herewith was developed on the Great Central (England). The principle on which it is based is well shown in the illustration, i. e., when the section is not clear the track instrument operates to place an obstruction in the way of the wooden prop on the locomotive mechanism. If the locomotive passes the track device in such a position, the prop, naturally, is knocked down with the result that the lever, held by the prop in a horizontal position, is released. This ac-

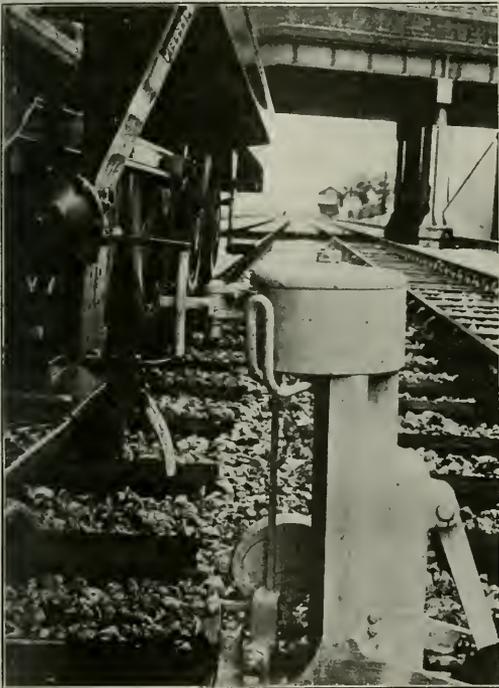

Photo by Kadel & Herbert

tion brings about the application of the brakes. The engineman cannot release the brakes until he has placed another prop under the brake lever.

This device is used in connection with another, placed before it on the track, which gives an audible signal to the engineer when the track is not clear. Only if that signal is disregarded does the device illustrated here come into use.

Further Details on German Railway Strike

LONDON.

The strike of the Imperial Union of German Railway Officials ended on February 8, as a result of negotiations with the government. The German Railway Union and the railway unions in the south and west did not support the strike, but considerable inconvenience was caused in the north of Germany and particularly in Berlin, where on February 4, the municipal employees went out on strike, and the Berlin branch of the German Railway Union went out in sympathy with the strikers. The Imperial

Union of Railway Officials is not a large body but it includes many indispensable employees and is affiliated with the Central Union of German Officials.

The reason for the strike was that the Imperial Union of German Railway Officials demanded a revision of salaries on a greatly increased basis, the previous increases and bonuses granted by the government having left the majority of the minor officials as they were. Objection was also made to two bills now before the Reichstag, namely, the Railway Finance Bill regulating their pay and pensions, and the Hours of Labor Bill, which they thought would endanger the eight-hour day. The Minister of Communications declined to negotiate with the men's leaders on the ground that officials have not the right to strike. The Berlin Municipal Employees went out on strike for the eight-hour day and the right to strike, and it was for this latter reason that the Central Union of German Officials gave its support. The General Federation of Trade Unions and the Railway Workers' Union condemned the strike but issued instructions to its members not to perform strike labor. The government's manifesto prohibiting the strike and imposing severe penalties only aggravated the situation, but a skeleton freight service was put into operation and was gradually extended with the help of the Technical Emergency Corps which was called out. The strike ended on February 8, after an agreement between representatives of the railway officials' union and the chancellor, in which the government agreed that there should be no dismissals en masse, that the Railwaymen's Hours of Labor Bill should be incorporated in a bill affecting all classes of labor, and that there should be an early revision upward of the scales of pay.

Government Railways Ruining Swiss Tourist Business By Julian Grande

GENEVA.

The Swiss Federal Railways have decided to reduce their passenger fares beginning May 1, but only in the case of a minimum distance of 106 tariff kilometers (about 66 miles) third class, 112 tariff kilometers (about 70 miles) second class, and 115 tariff kilometers (about 71½ miles) first class, or in the case of round-trip tickets for twice these distances. In no case will the reductions exceed 20 per cent. According to the Federal Railway statisticians, unless passenger traffic increases the loss entailed by these reductions will be 5,000,000 francs (approximately \$965,000 at the normal rate of exchange).

As regards general season tickets, these are to be reduced by 10 per cent. The following will be the rates for a general season ticket available for one year after May 1, next:

WITHOUT SUPPLEMENT ALLOWING THE HOLDER TO TRAVEL BY EXPRESS TRAINS	
First class.....	1,920 francs (about \$370 at par)
Second class.....	1,440 francs (about \$275 at par)
Third class.....	960 francs (about \$185 at par)
WITH SUPPLEMENT ALLOWING THE HOLDER TO TRAVEL BY EXPRESS TRAINS	
First class.....	2,280 francs (about \$443 at par)
Second class.....	1,720 francs (about \$334 at par)
Third class.....	1,140 francs (about \$220 at par)

How much higher these rates are than those of 1913 may be judged from the following:

COST OF 1913 GENERAL SEASON TICKET FOR ONE YEAR	
First class.....	\$750 francs (about \$145 at normal rate of exchange)
Second class.....	\$25 francs (about \$102 at normal rate of exchange)
Third class.....	\$75 francs (about \$72 at normal rate of exchange)

These 1913 tickets allowed the holder to travel by any train he chose, for it was before the day of express train supplements. In 1913, also, a general season ticket could be and very often was bought in any class for 15 days, 30 days and 45 days, as well as of course three, six or twelve months at proportionate rates.

It is not yet certain whether after May 1 next, general season tickets for 30 days will be reintroduced, but if it should be decided to allow them, they will cost not less than half as much as a three months' general season ticket costs, that is, one will cost about 243 francs whereas in 1913 the cost was only 70 francs.

Apparently the Federal Railways are too nervous to really ever take any initiative. In 1913, the Swiss railways in general, not the federal lines alone, derived 40 per cent of their traffic receipts from passenger traffic, but in 1919, the last

year for which complete figures are available, they derived only 28.6 per cent from this source, and all railways earned far more from their third class passengers than from their first and second put together. The following classifies by percentages, the importance of the various classes for the year 1919:

First class.....	2.5 per cent
Second class.....	16.6 per cent
Third class.....	80.9 per cent

In reality, however, nothing at all is earned from first class passenger traffic, for the rates do not cover the cost of the first class service. The following figures give the percentage of passengers traveling in the different classes for the years 1913 and 1919:

	1913	1919
First class.....	6 per cent	.2 per cent
Second class.....	6.8 per cent	4.1 per cent
Third class.....	92.6 per cent	95.7 per cent

The percentage of first and second class passengers has not increased since the year 1919.

What is astonishing is that the Swiss Federal Railways, which are supposed to be for the Swiss people, do almost everything which the Swiss people do not want. Bureaucracy is not only injuring the finance of the Swiss State Railways, but doing much to ruin the country's tourist traffic on which Switzerland is more dependent than any other country in the world.

The tourist who used to come to Switzerland before the war and buy a 15-, 30- or 45-day general season ticket used to stay in perhaps 25 or 30 different places, and naturally spend money in all of them. Now, however, if any one does come, he usually settles down in one place and stays there until he has to leave, returning by the same route as he came. Anyone with a season ticket who found the weather bad in one part of Switzerland used to leave for another part where weather conditions might very well be quite good, and the visitor did not return home complaining that he had had bad weather all the time. Bureaucracy, however, does not perceive what is to the interest of the nation as a whole, but only thinks of its own musty files and of getting out lists of figures often too late to be of much value. Only gradually can it be realized what a curse state railway management is to a country. On the other hand, the state votes so many million francs for advertising the country as a tourist resort and on the other hand it does all it can to kill the tourist traffic. It is not merely putting barriers in the way of foreign tourists, but actually preventing the Swiss themselves from traveling about their own country. For instance, the supplement now charged in Switzerland for express trains is thoroughly unreasonable in view of the shortness of the distance between the stops, even in the case of the fastest trains. Moreover, the fastest train in Switzerland hardly ever goes more than forty miles an hour. The people grumble and the bureaucrats smile.

S. M. Vauclain on European Conditions

S. M. Vauclain, president of the Baldwin Locomotive Works, in an interview with representatives of the daily press, has given out some impressions of his recent trip through Central Europe.

Aided by a strategic position, between Germany and Russia, Germany's manufactured goods flow in increasing tides across Poland, and nearly Russia is continually buying both from Germany and Poland in enormous quantities, he said. In Germany he visited the Krupp works at Essen and saw their locomotive shops. There, he said, the work is being pursued day and night. There are enough orders ahead to keep the works at full speed for 12 or 14 months.

Russia has ordered 1,000 locomotives from Sweden, Mr. Vauclain said. The Swedish builders are doing all in their power to bring production up to one locomotive each day, and in this effort they are having the aid of Russia. It is very likely that they will be able to meet the demand. He said that in his opinion Poland is destined to arrive at a stage of prosperity earlier than any of the other nations of the New Fast.

It is reported that Mr. Vauclain made arrangements to supply Poland with locomotives in exchange for lumber which he proposes to derive from France.

Equipment and Supplies

Locomotives

THE LEHIGH & NEW ENGLAND is inquiring for 2-8-0 type locomotives.

THE CHICAGO, INDIANAPOLIS & LOUISVILLE is inquiring for 20 locomotives.

THE AKRON, CANTON & YOUNGSTOWN is inquiring for 5 Consolidation type locomotives.

THE TOLEDO, ST. LOUIS & WESTERN has ordered 5 additional Consolidation type locomotives from the Lima Locomotive Works, Inc.

THE CHICAGO, BURLINGTON & QUINCY, reported in the *Railway Age* of January 28, as inquiring for 55 locomotives, has ordered 47 Mikado, Sante Fe and Pacific type locomotives from the Baldwin Locomotive Works and 8 Mountain type from the Lima Locomotive Works.

Freight Cars

THE ATLANTIC COAST LINE is inquiring for 100 phosphate cars.

THE FRUIT GROWERS EXPRESS is building 100 refrigerator cars in its shops at Alexandria, Va.

THE CHICAGO, BURLINGTON & QUINCY, reported in the *Railway Age* of February 11, (page 399) as inquiring for 500 automobile cars, has ordered this equipment from the Pullman Company.

THE PACIFIC FRUIT EXPRESS has ordered 700 refrigerator cars from the General American Car Company. This is in addition to the cars ordered by the same company last week and reported in our issue of February 25.

Passenger Cars

THE CENTRAL OF NEW JERSEY reported in the *Railway Age* of February 25, as having placed orders for 45 cars for passenger service has placed orders for a total of 70 cars as follows: 20 coaches and 10 combination passenger and baggage cars to the American Car & Foundry Co., 30 coaches to the Standard Steel Car Company and 10 baggage cars to the Bethlehem Shipbuilding Corporation, Harlan Plant.

Iron and Steel

THE CHESAPEAKE & OHIO is asking for 150 tons of steel for a bridge.

THE LEHIGH & NEW ENGLAND is inquiring for 400 tons of fabricated steel for seven bridges on its lines.

THE DELAWARE, LACKAWANNA & WESTERN is asking for prices on 500 tons of fabricated steel for various bridges on its line.

THE BALTIMORE & OHIO has ordered fabricated steel for a bridge from the Mt. Vernon Bridge Company and for another bridge from the Fort Pitt Bridge Company; both structures call for a total of about 550 tons.

Signaling

CHICAGO UNION STATION.—This company will receive bids until March 20, for the construction and installation of two large interlocking plants at the north and south approaches to the union station. Bids have just been received for the installation of a pneumatic tube system and bids for 10,000 duct feet of six-way conduits are being received at the present time.

Supply Trade News

The Wood Shovel & Tool Company, Piqua, Ohio, has appointed the Maintenance Equipment Company, Chicago, its agent to handle the distribution of its shovels to the railroads.

Ross F. Hayes, whose appointment as general sales manager of the Curtain Supply Company, Chicago, was noted in the *Railway Age* of February 18 (page 452), was born at

R. F. Hayes

Lewiston, Me. He entered business with the Boston Woven Hose & Rubber Company in 1888, and was in the service of that company for 16 years, during which time he served as salesman in the rubber goods department in New England and New York state and in 1893 was transferred as city sales manager to St. Louis, Mo. After two years service at that point, he was appointed New England representative of the mechanical rubber goods department and two years later manager of the

Philadelphia office, where he remained until 1904. During the latter year he entered the service of the Curtain Supply Company as western representative and since 1907 has served as eastern sales manager with headquarters at New York.

Geo. W. Bender, whose appointment as vice-president of the Argyle Railway Supply Company, Chicago, was noted in the *Railway Age* of February 18 (page 452), was born at

G. W. Bender

Pittsburgh, Pa., on August 20, 1884. Seventeen years later he entered the engineering department of the Pressed Steel Car Company, at Pittsburgh. In 1906 he entered the service of the American Locomotive Company, where he had charge of the extra work order department. He became associated with Mudge & Co., in 1910, as chief draftsman, and subsequently was placed in charge of the mechanical department. Later he was promoted to assistant to the vice-president and in April, 1918, was appointed

eastern manager in the New England and Atlantic Coast states. In September, 1919, he was appointed manager of sales and service, with headquarters at Chicago, the position he occupied at the time he entered the service of the Argyle Railway Supply Company.

John D. Ristine, manager of sales of the Chicago Crucible Company, has been appointed manager of sales of the railroad division of the Service Motor Truck Company, Wabash, Ind. Mr. Ristine has been with the Chicago Crucible Company for the past two years. Previous to that time he served

as assistant to G. B. Robins, vice-president of Armour & Co., before which he was engaged in railway supply work, having been at one time secretary of the Union Draft Gear Company.

The United States Cast Iron Pipe & Foundry Company, Burlington, N. J., has opened a new office in the Interstate building, Kansas City, Mo., in charge of D. W. Pratt, sales agent.

The United Alloy Steel Corporation, Canton, Ohio, announces that John McConnell, who was formerly in the service of the corporation has again entered its service as vice president, in charge of operation.

The O'Fallon Railroad Supply Company, Arcade building, St. Louis, Mo., has been appointed sales agent for the Standard Railway Equipment Company, the Pressed Steel Manufacturing Company, the Imperial Appliance Company and the Union Metal Products Company for the St. Louis district.

Exum M. Haas, formerly manager of the railroad department of the Austin Company and more recently the H. K. Ferguson Company, both of Cleveland, Ohio, and western editor of the *Electric Railway Journal* from 1911 to 1916, has entered the service of the Simmen Automatic Railway Signal Company, Eden, N. Y., in an executive capacity.

Morris A. Zook, formerly resident engineer, Bureau of Valuation, Interstate Commerce Commission, has recently opened offices as a consulting engineer at Plainfield, N. J. He will specialize in examinations, estimates and reports and all matters in connection with the valuation of common carriers. Mr. Zook was educated at the Polytechnic College of Pennsylvania. Prior to his connection with the Interstate Commerce Commission, Mr. Zook served as resident engineer and division engineer on the Norfolk & Western; assistant engineer and engineer on the Pennsylvania, Lines West; the Chicago, Indianapolis & Louisville as engineer maintenance of way and superintendent; and various other railways and other industries in the capacities of special and consulting engineer.

The Meadville Machinery Company, Incorporated, Meadville, Pa., has been organized. William Schlafe, mechanical manager of the Erie at New York has been elected president of the new company, Charles James, who was mechanical superintendent on the Ohio Region of the Erie at Youngstown, is vice-president and W. A. Cotton, of the office of the mechanical manager, is secretary and treasurer. The general offices will be at 50 Church street, New York City. The company was organized to operate the locomotive and car shops of the Erie at the following points: Stroudsburg, Pa., Dunmore, Pa., Avon, N. Y., Meadville, Pa., Galion, Ohio, and Dayton, Ohio; car shops only at Elmira, N. Y., and Marion, Ohio, and locomotive shops only at Cleveland, Ohio; Huntington, Ind., and Hammond, Ind.

American Locomotive Company

The net earnings of the American Locomotive Company for the year ended December 31, 1921, were \$5,083,785, as compared with \$7,111,126 for 1920. After the payment of dividends on both common and preferred stock and setting aside a reserve of \$1,000,000 for additions and betterments, there remained a surplus of \$833,785, as against a surplus of \$1,861,126 for the previous year. Gross earnings amounted to \$35,711,507, as compared with \$66,884,613 for 1920.

The balance sheet of the company as of December 31, 1921, shows an excess of current assets over current liabilities of \$41,725,992, after including in current liabilities a reserve of \$1,244,940 for income and profit taxes. The company on this date had no bills payable. The inventory account on December 31, 1921, was \$4,751,901, as compared with \$15,119,342 at the close of 1920.

President Andrew Fletcher in the annual report says in part:

The gross earnings for the year in comparison with the year ending December 31, 1920, show a reduction of about 46 per

cent. The volume of domestic business was very materially reduced, due to the general depression of business throughout the country. A larger amount of foreign business could have been obtained during the year 1921, but in a number of cases the requested length of time of the deferred credit payments and the securities offered for the protection of the payments were not considered conservative business risks for the company to assume.

During the calendar year there was expended for additions and betterments to the plants \$1,446,109, which has been charged to the reserves created for such purposes.

No construction work was done during the year on the proposed new plant in the St. Louis district and it is the present intention of the company to withhold active development of the property until the general business requirements of the company warrant it.

The unfilled orders for new locomotives, reconditioning of old locomotives and miscellaneous work on December 31, 1921, amounted to \$3,344,300, of which approximately 96 per cent is domestic business and 4 per cent foreign business.

It is difficult to forecast the volume of business of this company for the year 1922. The federal investigation of railroad transportation matters of the country is still continuing and progress is being made. The recent representations to the Interstate Commerce Commission, made by some of the ablest and most experienced railroad chief executives and by the Honorable Secretary of Commerce of the present conditions of the railroads are most impressive and convincing and prove that there was practically no inflation in the railroad transportation business during the war, and that, therefore, there is a much less margin and opportunity for deflation now; that the effective equipment of cars and locomotives of the railroads has not kept pace the past few years with the natural growth and development of the country.

CONDENSED INCOME ACCOUNT OF THE AMERICAN LOCOMOTIVE COMPANY, MONTREAL LOCOMOTIVE WORKS, LIMITED, AND AMERICAN LOCOMOTIVE SALES CORPORATION—COMBINED		
	12 months ended Dec. 31, 1921	12 months ended Dec. 31, 1920
Gross earnings	\$35,711,507.47	\$66,884,613.18
Manufacturing, maintenance and administrative expenses and depreciation	30,106,478.80	58,043,172.53
Gross profit	\$5,605,028.67	\$8,841,440.65

Railway Steel-Spring Company

The annual report of the Railway Steel-Spring Company for the year ended December 31, 1921, shows net earnings amounting to \$1,551,636, as compared with \$4,435,350 in 1920. Dividends of 7 per cent on the preferred stock and 8 per cent on the common totaling \$2,025,000, were paid in both years. The surplus on December 31, 1921, was \$12,468,990.

President F. F. Fitzpatrick in his remarks to the stockholders says:

"During the latter part of the year the plants of your Company were operated at only 35 per cent of capacity. The railroads have purchased only very moderate quantities of new equipment and supplies during the past few years, and it is therefore expected that your purchases through 1922 will be considerably increased.

"The operations of the Canadian Steel Tire & Wheel Company, Limited, were satisfactory. By the establishment of this plant at Montreal, we have been able to render very efficient service to our Canadian customers."

Trade Publications

TRADE STANDARDS IN THE PUMP INDUSTRY. The Hydraulic Society, New York, has recently published a 20-page booklet on trade standards in the pump industry. The text explains what is meant by trade pumps, plain fitted or brass fitted pumps, what is considered standard equipment and what are considered as extras. Typical sizes of trade pumps are shown as well as definitions of terms used in the industry. The subject matter is intended as a guide and represents what the society and its members think is good practice.

Railway Construction

ATCHISON, TOPEKA & SANTA FE.—This company, which was noted in the *Railway Age* of January 28 (page 303), as having closed bids on January 25, for the construction of extensions and improvements to its machine shops at San Bernardino, Cal., the work to include a one-story building 65 ft. by 510 ft., equipped with machinery and cranes, of which the entire cost is estimated at \$250,000, has awarded the contract for this work to C. A. Fellows, Los Angeles, Cal. This same company has awarded a contract to the Hayes-Oser Company, San Francisco, for the construction of a reinforced concrete icing plant at Riverbank, Cal., 84 ft. by 134 ft. The plant will have a daily capacity of 150 tons, with 10,000 tons storage space.

ATCHISON, TOPEKA & SANTA FE.—This company, which was noted in the *Railway Age* of February 11 (page 401), as contemplating the construction of 75 miles of second track between Yampai, Ariz., and Griffith, including the reduction of a grade, has awarded the contract for this work to the Sharp-Fellows Contracting Company, Los Angeles, Cal. A new refrigerating plant estimated to cost approximately \$40,000, for use in its El Tavor Hotel, Grand Canyon, Ariz., is also contemplated.

CHICAGO & WESTERN INDIANA.—This company closed bids on February 28, for the remodeling of its passenger station at 63rd and Wallace streets, Chicago.

CHICAGO, BURLINGTON & QUINCY.—This company contemplates the construction of a new electric power house at Aurora, Ill., estimated to cost \$100,000.

CHICAGO GREAT WESTERN.—This company, which was noted in the *Railway Age* of February 18 (page 453), as accepting bids for the construction of a two-story frame office building at St. Paul, Minn., has awarded the contract for this work to John Jacobson, Marshalltown, Iowa.

GULF PORTS TERMINAL.—This company will complete the construction of an extension to its line from Muskogee, Fla., to Mobile, Ala., there being a remaining distance of 18 miles, giving the railroad a complete line from Pensacola, Fla., through to Mobile. The sum of \$300,000 from the \$500,000 recently raised by a bond issue will be spent for this work, other construction and additional equipment.

ILLINOIS CENTRAL.—This company which was noted in the *Railway Age* of February 4 (page 353), as preparing plans for the construction of a third track from Matteson, Ill., to North Junction, a distance of about 10 miles, and from Tucker to Kankakee, a distance of approximately 5 miles, including a considerable amount of grade reduction work, will accept bids for the same until March 6. This same company is also accepting bids for the installation of a 2 pipe steam vacuum heating system for its freight house at Baton Rouge, La.

ILLINOIS CENTRAL.—This company which was noted in the *Railway Age* of February 18 (page 453), as planning to construct a freight and passenger station at Baton Rouge, La., will accept bids for the same until March 9.

ILLINOIS CENTRAL.—This company, which was noted in the *Railway Age* of February 23, as planning the installation of six miles of 10 and 12-inch pipe lines extending from the city water main in Centralia, Ill., to the company's yards, estimated to cost \$75,000, has awarded a contract for this work to Joseph E. Nelson & Sons, Chicago.

LOUISIANA RAILWAY & NAVIGATION.—This company, which was noted in the *Railway Age* of February 25 (page 502), as having petitioned the commission council of New Orleans, La., for permission to construct a passenger station at South Rampart and Girod streets in that city, estimated to cost \$125,000, has received a franchise for this work. It is expected that bids will be accepted at once.

MINGO VALLEY.—The Interstate Commerce Commission has issued a certificate authorizing the construction of the first 3 1/2

miles of a line from a point on the Monongahela river near the mouth of Mingo Creek, Pa., to a connection with the Montour railroad, 18.2 miles.

MISSOURI, KANSAS & TEXAS.—This company, which was noted in the *Railway Age* of February 4 (page 353), as preparing to construct a brick and stucco passenger station, with a Spanish tile roof, and a 500 ft. platform, at Highland Park (Dallas), Tex., estimated to cost \$17,000, has awarded the contract for this work to Hickey & Montgomery, Dallas.

MISSOURI PACIFIC.—This company which was noted in the *Railway Age* of February 18 (page 453), as receiving bids for the construction of a one-story station building at Winnsboro, La., estimated to cost \$10,000, has awarded the contract for this work to T. S. Leake & Co., Chicago.

MONTREAL WAREHOUSING COMPANY.—This company, which operates grain elevators for the Grand Trunk at Montreal, will shortly ask for bids for the construction of an addition to its storage elevators to take care of 1,000,000 bushels of grain; also for a car dumping plant and an additional conveyor for loading grain into ocean vessels.

PENNSYLVANIA.—This company has under way the demolition of the umbrella terminal-shed which covers all tracks at its Exchange Place Terminal, Jersey City. Platform shelters will be erected. The total cost of the work, for which the Triest Contracting Corporation, New York, has the contract, will be about \$300,000. The company has also awarded a contract to the McLean Contracting Company, Baltimore, for the construction of a ferry slip at Market street, Philadelphia, and to the Arthur McMullen Company, New York, for a similar structure at Camden, N. J. Upon the completion of these slips the company will place two new ferry boats in service between Philadelphia and Camden. The slips and boats will cost in excess of \$500,000.

TENNESSEE CENTRAL.—This company contemplates the construction of three small steel bridges, the entire cost of which is estimated at \$46,000; two coaling stations with cinder pits; and two small station buildings. An application for a loan to cover the above, and a number of additional improvements has been made to the Interstate Commerce Commission.

TEXAS & PACIFIC.—This company is constructing a three-story building at Marshall, Tex., to be used by its apprentices for their instruction and study of car and locomotive work.

TEXAS & PACIFIC.—This company contemplates the enlarging of the terminal facilities of its Trans-Mississippi Terminal at New Orleans, La. No definite decision has been made as to when this work will be undertaken.

WABASH.—This company has been directed by the Missouri Public Service Commission to construct a new freight station at Kirksville, Mo., and also to remodel its present passenger station, and to lay several tracks, all of which has been estimated to cost \$44,000.

LANDSLIDES in Cajon pass, Cal., and heavy snowslips in the vicinity of Dillon, Colo., on February 22, caused a suspension of train operation on both the Atchison, Topeka & Santa Fe and the Colorado & Southern.

CRIMINAL NEGLIGENCE. A jury, of which two women were members, has returned a verdict of criminal negligence against the engineer and conductor involved in the collision at Woodmont, Pa., in December. The government's investigation made it clear that to inflict any punishment on these two men would be grossly unjust. They were mainly responsible for the wreck but the operation of trains under the manual block system was absolutely chaotic. Negligence and laxity existed all along the line and no jury would be competent to fix responsibility in a case of such technical complexity, if, indeed, there was criminal negligence any where. * * * Trials of this kind are usually unsatisfactory, convictions are seldom obtained. The negligence which causes railroad wrecks, even where responsibility can be fixed is not often deliberate or even criminally careless.

Unfortunately the American public is disposed to tolerate all kinds of laxity when things go well but demands a scapegoat when something suddenly goes ill.—*Springfield (Mass.) Republican.*

Railway Financial News

ALABAMA, FLORIDA & GULF.—*Asks Government Loan.*—This company has applied to the Interstate Commerce Commission for a loan of \$100,000 for eight years.

CARROLLTON & WORTHVILLE.—*Asks Government Loan.*—This company has applied to the Interstate Commerce Commission for a loan of \$8,000 for five years.

CHICAGO, MILWAUKEE & ST. PAUL.—*Asks Government Loan.*—This company has applied to the Interstate Commerce Commission for a loan of \$10,000,000 from the revolving fund for 15 years to pay off a note for a like amount to the United States maturing January 1, 1923. The loan of \$10,000,000 was made on June 30, 1920, maturing in 1924. The company has already received a loan of \$25,000,000 payable March 1, 1927.

CHICAGO, PEORIA & ST. LOUIS.—*Asks Government Loan.*—The receivers have applied to the Interstate Commerce Commission for a loan of \$1,000,000 from the revolving fund for 10 years.

CISCO & NORTHEASTERN.—*Asks Government Loan.*—This company has applied to the Interstate Commerce Commission for a loan of \$148,600 for nine years for the purpose of making improvements to its property including new shop buildings and machinery.

DENVER & RIO GRANDE.—*New Bondholders' Committee.*—The formation of a new and independent bondholders' committee will be undertaken on March 3 at the Hotel Savoy, according to a notice sent out by the stockholders' protective committee of the Denver & Rio Grande. The notice was addressed to the holders of first and refunding 5 per cent bonds and to the holders of 7 per cent cumulative adjustment mortgage bonds, or to the holders of certificates of deposit issued against the same. The notice read:

"Among other important matters affecting the value of your securities, the facts bearing upon the methods pursued by the Western Pacific interests in getting possession of \$20,000,000 worth of cash and bonds and \$100,000,000 worth of stock of the Utah Fuel Company belonging to the Denver & Rio Grande will be fully presented for your consideration."

DENVER & SALT LAKE.—*Asks Government Loan.*—The receivers have applied to the Interstate Commerce Commission for a loan of \$6,500,000 from the revolving fund for 15 years to assist the company in building the long projected tunnel through James Peak and to complete the line to its projected terminus at Salt Lake City.

GREEN BAY & WESTERN.—*Dividends.*—This company has declared annual dividends of 5 per cent on its capital stock, 5 per cent on the class "A" debentures and ½ of 1 per cent on the class "B" debentures payable on and after February 27. Dividend on the stock is payable to stockholders of record February 25. Last year an annual distribution of ⅓ of 1 per cent was made on the class "B" debentures.

GULF, MOBILE & NORTHERN.—*Government Loan Approved.*—The Interstate Commerce Commission has approved a loan to this company of \$918,500 for 10 years to assist the company in meeting maturing indebtedness and providing certain additions and betterments.

ILLINOIS CENTRAL.—*Equipment Trusts Authorized.*—This company has been authorized by the Interstate Commerce Commission to assume obligation or liability in respect of \$3,225,000 of equipment trust certificates.

LEAVENWORTH & TOPEKA.—*Asks Government Loan.*—This company has applied to the Interstate Commerce Commission for a loan of \$100,000.

LEHIGH VALLEY.—*Authorized to Abandon Line.*—The Interstate Commerce Commission has issued a certificate authorizing the abandonment of a branch line extending from Ganoga Lake to Ricketts, Pa., 3.83 miles.

MAINE CENTRAL.—Asks Authority to Issue Bonds.—This company has been authorized by the Interstate Commerce Commission to issue \$331,000 of first and refunding mortgage 6 per cent gold bonds, of which \$300,000 is to be pledged as collateral security for a demand note to be issued to the director general of railroads and any of the balance to be pledged in connection with the funding of indebtedness to the United States for additions and betterments made during federal control.

MANONT, ALMA & SOUTHBOUND.—Asks Government Loan.—This company has applied to the Interstate Commerce Commission for a loan of \$84,290 for five years to enable it to purchase rails.

MINNEAPOLIS & ST. LOUIS.—New Directors.—M. A. Taylor and M. L. Bell have been elected directors to succeed H. E. Huntington and E. V. R. Thayer.

MISSOURI, KANSAS & TEXAS.—Chairman.—Henry Ruhlender has been elected chairman of the board.

NEW YORK CENTRAL.—Acquisition.—The Interstate Commerce Commission has issued a revision of the tentative report recommending approval of the acquisition by the New York Central of control of the Chicago River & Indiana and the Chicago Junction, which contains additional conditions, that the companies shall signify their acceptance of the order and of the conditions contained by written agreement and that if any part of the commission's order shall for any reason be adjudged to be invalid, the entire order and the authorizations shall be void, it being the intent of the order and authorization that it shall be effective only in the event that all the conditions and parts of the order and report shall be effective.

PITTSBURGH, SHAWMUT & NORTHERN.—Earnings.—The following figures show this company's operating results in December, 1921, and for the 12 months ending with December, 1921:

	December	12 Months
Average mileage operated during period.....	210	210
Operating revenues.....		
Freight.....	\$78,845	\$1,059,708
Passenger.....	8,800	86,326
Total (inc. misc.).....	110,179	1,195,797
Operating expenses.....		
Maintenance of way and structures.....	\$40,550	\$353,838
Maintenance of equipment.....	228,135	671,692
Traffic.....	1,424	37,782
Transportation.....	41,422	535,554
General.....	5,899	87,554
Total.....	317,433	1,666,485
Operating ratio.....	288.1	139.4
Net from railway operations.....	def. \$207,254	def. \$470,688
Operating income (or loss).....	def. 210,760	def. 498,953
Net after rentals.....	def. 210,214	def. 379,465
Net after rentals 1920.....	def. 36,889	def. 37,202

RICHMOND TERMINAL.—Authorized to Issue Bonds.—This company has been authorized by the Interstate Commerce Commission to issue \$3,380,000 of first mortgage, 30-year, 5 per cent. gold bonds, to be guaranteed by the Richmond, Fredericksburg & Potomac and the Atlantic Coast Line and to be sold at not less than 92 1/2%. The proceeds are to be used to refund certain promissory notes.

SALINA NORTHERN.—Asks Government Loan.—This company has applied to the Interstate Commerce Commission for a loan of \$308,130 for 10 years to enable it to retire indebtedness and purchase equipment and make other improvements.

TENNESSEE CENTRAL.—Asks Authority to Issue Securities.—This company has applied to the Interstate Commerce Commission for authority to issue \$3,000,000 of common stock and \$3,000,000 of first mortgage 25-year 6 per cent bonds. The proceeds are to be used to pay for the property of the railroad taken over following the reorganization, \$1,500,000, and the balance for additions and betterments and purchase of equipment. The application states that it is proposed to sell the securities at 33 1/2 cents on the dollar, that is, each purchaser of bonds is to receive in addition stock to the amount of twice the amount of the bonds in par value to the extent of \$1,500,000 of bonds. The balance of the bonds is to be deposited with the government as security for a loan of like amount which has been applied for or to be held in the treasury in case the loan is not allowed.

UNION PACIFIC.—Asks Authority for Equipment Trust Certificates.—This company has applied to the Interstate Commerce Commission

for authority to assume obligation and liability with respect to \$6,800,000 of 5 per cent. equipment trust certificates, which have been sold to Kuhn, Loeb & Co., at 95, for the acquisition of 4,545 cars at a total cost of \$9,122,800.

VICKSBURG, SHREVEPORT & PACIFIC.—Asks Government Loan.—This company has applied to the Interstate Commerce Commission for a loan of \$408,900 for 15 years to assist the company in rebuilding freight cars and making certain other improvements.

WABASH, CHESTER & WESTERN.—Application for Loan Denied.—The Interstate Commerce Commission has denied this company's application for a loan of \$500,000.

WHEELING & LAKE ERIE.—Asks Government Loan.—This company has applied to the Interstate Commerce Commission for a loan of \$600,000 for 10 years to enable it to meet maturing indebtedness.

Railroad Administration Settlements

The United States Railroad Administration reports the following final settlements, and has paid out to the several roads the following amounts:

Wheeling & Lake Erie.....	\$440,000
San Antonio, Uvalde & Gulf.....	210,000
Western Heater Dispatch.....	50,000
Hamilton Belt.....	20,000
Camas Prairie.....	230,000
Norfolk Terminal.....	4,575
Salt Lake City Union Depot & Railroad Co.....	1,360
Lorain & West Virginia paid Director-General.....	25,000
Sainte Marie Union Dept. Co. paid Director-General.....	2,852
SHORT LINES	
White Sulphur & Huntersville.....	3,500
Tavares & Gulf.....	8,500

The payment of these claims on final settlement is largely made up of balance of compensation due, but includes all other disputed items as between the railroad companies and the administration during the 26 months of federal control.

Dividends Declared

Beech Creek—\$6.50, quarterly, payable April 1 to holders of record March 15.
 Boston & Albany—\$2.00, quarterly, payable March 31 to holders of record February 28.
 Buffalo & Susquehanna—Common, 1 1/4 per cent, quarterly, payable March 31 to holders of record March 15.
 Fond du Lac, Johnston & Gloversville—Preferred, 1 1/2 per cent, quarterly, payable March 15, to holders of record March 10.
 Pittsburgh, Ft. Wayne & Chicago—Common, 1 1/4 per cent, quarterly, payable April 1 to holders of record March 10; preferred 1 1/4 per cent, quarterly, payable April 4 to holders of record March 10.
 St. Louis, Rocky Mt. & Pacific—Common, 1 per cent quarterly; preferred, 1 1/2 per cent, quarterly; both payable March 31 to holders of record March 19.

SCHOLARSHIPS IN TORONTO UNIVERSITY are offered, subject to competitive examination, by the Canadian Pacific Railway Company, to apprentices and other employees enrolled on the permanent staff of the company, under 21 years of age, and to minor children of employees. Scholarships are also granted covering four years' tuition in engineering, etc., in McGill University.

THE UNIFORM BILL OF LADING, new form, is to be put in use on March 15. J. C. Lincoln, manager of the traffic bureau of the Merchants' Association, New York City, reminds shippers that all claims should be presented within six months (or nine months) after the delivery of the property to the carrier. The nine months' period refers to export goods. Another change made in the new bills permits that where loss, damage or injury was due to delay or occurred during loading or in transit by carelessness or negligence, then no notice of claim nor filing of claim will be required as a condition precedent to recovery. The limitation of liability for loss or damage to property transported in open cars, which was formerly provided for, has been eliminated.

Railway Officers

Executive

W. A. Webb has been elected president of the Cambria & Indiana, with headquarters at Philadelphia and Colver, Pa.

S. L. Vaughan, traffic manager of the Grand Rapids, Grand Haven & Muskegon, with headquarters at Grand Rapids, Mich., has been elected vice-president of that road with the same headquarters.

Financial, Legal and Accounting

M. T. Countryman, general solicitor of the Great Northern, with headquarters at St. Paul, Minnesota, has been promoted to general counsel with the same headquarters, succeeding **E. C. Lindley**, resigned.

Mrs. Helen M. Handy has been elected secretary of the Detroit, Bay City & Western, the Port Huron & Detroit, and the Port Huron Southern, with headquarters at Bay City, Mich., succeeding **F. S. Handy**, deceased. **Leo C. Van Laan**, auditor, with headquarters at Bay City, has been elected assistant secretary with the same headquarters.

Charlton Messick, whose election as treasurer and assistant secretary of the St. Louis Southwestern, with headquarters at St. Louis, Mo., was announced

February 25 (page 504), was born on August 22, 1870, at Louisville, Ky. He entered railroad service in November, 1888, as a clerk in the accounting department of the St. Louis Southwestern (at the time the St. Louis, Arkansas & Texas). After holding various clerical positions in that department, he was promoted on August 1, 1893, to chief clerk of passenger accounts, which position he held until July 1, 1900, when he was promoted to chief clerk of freight and ticket accounts. Mr. Messick

was made assistant general auditor on May 1, 1904, and federal treasurer on August 15, 1918. He resumed his duties as assistant general auditor on March 1, 1920, which position he was holding at the time of his recent promotion.

Operating

George Bradshaw, supervisor of safety of the Pere Marquette, with headquarters at Detroit, Mich., has resigned to retire from business.

The position of assistant to the general superintendent of the Grand Trunk, Lines West, with headquarters at Chicago, made vacant by the death of **John Ehrke** on February 21, has been abolished.

W. S. Hall, superintendent of the Cranbrook division of the Canadian Pacific, with headquarters at Cranbrook, B. C., has been transferred to the Portage division, with headquarters at Winnipeg, Man., succeeding **T. R. Flett**, who has been transferred to Cranbrook.

H. H. Brown, assistant general manager of the St. Louis-San Francisco, with headquarters at Springfield, Mo., has

been appointed superintendent of the Northern Division with headquarters at Fort Scott, Kansas, succeeding **C. H. Claiborne** who has been transferred to the Western division, with headquarters at Enid, Oklahoma, who in turn succeeds **W. H. Bevans**, assigned to other duties.

P. T. White, superintendent of the St. Louis division of the Cleveland, Cincinnati, Chicago & St. Louis, with headquarters at Mattoon, Ill., has been transferred to the Cincinnati-Sandusky division, with headquarters at Springfield, Ohio, succeeding **W. G. Bayley**, deceased. He has been succeeded at Mattoon by **E. F. Hayes**, superintendent of the Cairo division, with headquarters at Mt. Carmel, Ill., and he in turn was succeeded by **H. F. Milligan**, superintendent of terminals, with headquarters at Cincinnati, who was succeeded by **E. M. Kelley**, assistant superintendent of the Cincinnati-Sandusky division, with headquarters at Springfield. The position of assistant superintendent of that division has now been abolished.

Traffic

F. W. Hampson has been appointed commercial agent of the Norfolk & Western, with headquarters at Little Rock, Ark.

L. A. Goodrich has been appointed acting traffic manager of the Grand Rapids, Grand Haven & Muskegon, with headquarters at Grand Rapids, Mich.

Bert R. Persels has been appointed general agent of the Great Northern, with headquarters at Kansas City, Mo., succeeding **P. E. Meany**, deceased.

L. A. Sackbauer has been appointed traffic manager of the Wabash, Chester & Western, with headquarters at Chicago, succeeding **A. J. Chouinard**, who has resigned to enter other business.

B. S. Merritt, whose appointment as assistant general freight agent of the Great Northern, with headquarters at Seattle, Wash., was announced in the *Railway Age* of February 18 (page 455), was born at Port Huron, Mich., on January 26, 1876. He entered railroad service on April 15, 1895, as an agent and operator on the Pere Marquette, which position he held at various points on the line until October, 1906, when he left to enter the service of the Great Northern as an agent and yardmaster at Williston, N. D. He was promoted to traveling freight agent at St. Paul, in December, 1908, and in 1910, was made station supervisor at Minot, N. D., and later during that year, traveling freight agent at Billings, Mont. From 1911 to 1913, he was traffic agent at Great Falls, Mont., and from the latter year until 1914, he was in charge of the traffic agency at St. Paul, Minn., for both the Great Northern and the Chicago, Burlington & Quincy. He was promoted to general agent of the Great Northern with headquarters at Great Falls, in 1914, which position he held up to the period of federal control when he was made station inspector. On July 1, 1919, he was made general agent, with headquarters at Spokane, Wash., which position he was holding at the time of his recent promotion.

R. D. Williams, whose appointment as traffic manager of the Sacramento Northern, with headquarters at Sacramento, Cal., was announced in the *Railway Age* of February 11 (page 405), was born at Cleveland, Ohio, on April 12, 1881. He entered railroad service on June 1, 1896, as an office boy in the freight claim department of the Erie Despatch at Cleveland. In 1898, when that office was consolidated with the main office at New York, Mr. Williams was transferred to the latter city where he held various clerical positions in that department until 1906, when he was promoted to take charge of the newly created branch freight claim office at Chicago. In 1908 he was transferred to the traffic department as a representative of the general dairy agent. In 1909, he was transferred to Des Moines, Ia., as a traffic agent, and in 1911, he was promoted to general agent, with headquarters at Los Angeles, Cal., which position he held until August 15, 1916, when his jurisdiction was extended over the entire Pacific coast traffic of that road. He was granted a

C. Messick

leave of absence in 1918 in order that he might organize and manage the traffic department for the housing division of the Emergency Fleet Corporation. In April of the following year he returned to the Erie as general agent, with headquarters at New York, which position he held but a short time when he left to become traffic manager of the California Fruit Exchange at Sacramento, leaving this position to accept his present one.

Mechanical

William Schlafge, mechanical manager of the Erie, and **Charles James**, mechanical superintendent of the Ohio region, have resigned (see item under Supply Trade News elsewhere in this issue).

Engineering, Maintenance of Way and Signaling

F. B. Wiegand, signal engineer of the New York Central, lines West, with headquarters at Cleveland, Ohio, has been appointed to serve in the additional capacity of consulting engineer of the Cleveland Union Terminal Company.

Purchasing and Stores

Edwin H. Gaines, Jr., whose appointment as purchasing agent of the Tennessee Central, with headquarters at Nashville, Tenn., was announced in the *Railway Age* of February 18 (page 456), was born at Nashville, on November 8, 1887. He entered railway service in September, 1905, as a file clerk in the passenger traffic department of the Nashville, Chattanooga & St. Louis at Nashville, and was successively chief file clerk, secretary to the chief clerk and advertising agent in the above named department of that road until February 1, 1909, when he left to become associated with the Charleston Mining & Manufacturing Company. He entered the service of the Tennessee Central at Nashville in July, 1913, since which time he has been invoice clerk in the receivers' office, secretary to the receivers, secretary and chief clerk to the general superintendent, and chief clerk to the receivers, which latter position he was holding at the time of his recent promotion.

Obituary

John Ehrke, assistant to the general superintendent of the Grand Trunk Lines West, with headquarters at Chicago, died on February 21 while on business at Battle Creek, Michigan.

Robert B. Stanton, formerly a division engineer of the Union Pacific, died at a hospital at Stamford, Conn., on February 23. Mr. Stanton was 76 years of age, and well known for his engineering aid in the construction of the "Georgetown loop" and the surveying of a railroad line through the Grand Canyon.

H. C. Blye, general agent of the Trunk Line Association with headquarters at New York, died at Monticello, N. Y., on February 22. Mr. Blye was born in Philadelphia on August 4, 1843. He enlisted in the navy and was retired in 1871 as a lieutenant-commander. He entered railway service as a union ticket agent in the old Astor House, New York. Then successively, until 1877, he was clerk, car accountant, claim agent and contracting agent for various fast freight lines. He entered the service of the Trunk Line Association at its inception and was soon thereafter appointed its general agent, in which position he served 45 years—up to the time of his death.

Walter Galt Barnwell, assistant freight traffic manager of the Atchison, Topeka & Santa Fe, Coast Lines, with headquarters at San Francisco, Cal., died while on business in Chicago on February 28. Mr. Barnwell was born in April, 1865, at Danville, Que. He entered railroad service in 1861 as an agent and clerk in the office of the auditor of freight accounts of the Canada Atlantic (Grand Trunk). He left in 1884 to become an agent in the superintendent's office of the Great Northern, and he was

later promoted to division clerk in the superintendent's office of the Breckenridge division at Breckenridge, Minn., which position he held until 1891, when he left to enter the service of the Southern California (Atchison, Topeka & Santa Fe), as cashier at Redlands, Cal. From the latter date until May, 1898, he was successively agent at Santa Ana, Cal., contracting agent, and commercial agent. He was promoted to general agent of the freight department, with headquarters at Los Angeles, Cal., in May, 1898, and two years later he was made assistant general freight agent of that road, the Santa Fe Pacific, and the San Francisco & San Joaquin Valley, with the same headquarters, those railroads now comprising the Coast Lines of the Atchison, Topeka & Santa Fe. In April, 1905, he was promoted to general freight agent of the Coast Lines, with the same headquarters which position he held until June 1, 1913, when he was made assistant freight traffic manager of the Coast Lines, with headquarters at San Francisco.

John R. Savage, general superintendent of the Long Island, died on February 25 at New York. Mr. Savage was born on April 17, 1869, at Philadelphia. He was graduated from the

University of Pennsylvania in 1889 and entered the service of the Pennsylvania Railroad as a rodman and leveler. He left this position the following year to go with the government engineering corps. In May, 1895, he was appointed engineer of the Seattle & Lake Washington Company. Two years later he returned to the Pennsylvania as an assistant engineer. For several months in 1900 he was employed on surveys for a proposed railway from Cornwall to Highspire, Pa. In 1901 he entered the

service of a steel company, which position he held until 1904 when he became chief engineer of the Long Island. In 1917 he was appointed general manager. In 1920 when the organization of the property was modified he was appointed general superintendent, which position he was holding at the time of his death.

Railway Public Relations Work

THE SUCCESSFUL selling of the railroads and of their service to the public has become mainly a matter of forming and maintaining satisfactory relations between the railways and the public. It goes without saying that unless the best service is rendered and the fairest and lowest rates are made which conditions permit, no amount or kind of public relations work will be of much value. On the other hand, experience has proved only too conclusively that good service and low rates will not win public favor and fair regulation unless the case of the railroads is constantly, adequately and efficiently presented to the public.

Every railway officer agrees that some public relations work should be done. They differ as to the best kind of work to do. As a matter of fact, there are many things that ought to be done, and unless most or all of them are done the relations between the railways and the public will never be made satisfactory and governmental regulation will never become fair or beneficial either to the public or the railways.

The public constantly comes in contact with railway employees. Its attitude toward the railways is influenced by the way it is treated by the employees. There is no form of public relations work more essential than that of training employees to be always helpful and courteous to patrons.

Each year the management of every railway communicates with all its stockholders through its annual report. There are several hundred thousand railway stockholders. They are the real owners of the railways. They are scattered throughout the country. They are usually people of influence in their communities. It would do a great deal of good if the management of each railway, in its annual report, would present to its stockholders not merely the detailed facts regarding the improvements made and the operating and financial results secured during the year, but also the facts regarding the general railroad situation, and urge the stockholders to discuss the railroad problem with those with whom they come in contact, and use their influence to counteract unfair propaganda against the railways and to promote sound regulation.

The late Theodore N. Vail, when he was president of the American Telephone & Telegraph Company, made its annual report the means of giving to the stockholders sound views and arguments regarding government ownership and

government regulation and in this way did some of his most effective public policy work.

The railways serve and have officers or agents in almost every territory and community. These officers and agents have opportunity to participate in all the commercial and civic activities of the various territories and communities. They could so participate in them as to make a large part of the public better realize that the service rendered by the railways is invaluable and that the managements of the railways are anxious, in their own selfish interests, to give service and make rates that will promote the welfare of the country and every part of it. The managements of the railways ought constantly to encourage their officers and agents to thus represent them in every territory and community.

The public is anxious to hear railway facts presented and railway affairs discussed from the railroad point of view. There are innumerable meetings of agricultural and business associations at which this could be done. The large organizations of the railways, ramifying through every part of the country, must contain numerous lawyers, operating men, traffic men and other officers who could effectively participate in the discussions of railway matters which will always occur at these meetings, whether railway officers participate in them or not. Unfortunately, the number of persons in other lines of business who are disposed to criticize the railways is much larger than the number of railway officers who are willing to explain and defend the policies of the managements.

There has never been a time when a large majority of the press of the country has not been willing to give space in its columns to the railway side of every controversy. The advertising columns of the newspapers and magazines are used on a vast scale by almost every class of business concerns in the country to sell themselves and their service to the public. Some railways have in the past carried on and are now carrying on valuable and effective publicity and advertising work.

Unfortunately, however, most of the railways never have employed or developed men who can and do effectively present their cases to the public through publicity and advertising. While most magazines and newspapers are willing to give space in the reading columns to material favorable

to the railways if it has news value, every publication distinguishes sharply between material which it is willing to publish as news and material which it believes should be published, if at all, as advertising. They have a perfect right to do this, and it is only sound business to do it. There is a great deal of information regarding individual railroads and the railroad business as a whole which it is to the interest of the railroads to give to the public, and to the interest of the public to receive, but which ought to be published by the railways as advertising. Some of this advertising would be for the benefit of all the railways and should be done at the cost of all. Some of it is primarily for the benefit of individual railroads and should be done at their cost.

The railways are among the very largest industries in the country, and in their own and the public's interest, should be among the largest advertisers. The attitude of the press and the public toward the railways will never become and remain what it ought to be in the interest of all concerned until the railways advertise on a very much larger scale than they ever have in the past the facts about their service, their capitalization, their rates and all of the other features of their business in which the public is interested.

The return to the use of hard rubber battery jars for car lighting equipment has received considerable attention recently. The majority of the roads discarded the rubber jar years ago because of the large number of jars broken in service. In contrast to this conclusion it is especially interesting to note that

Rubber Jars for Car Lighting Batteries

one large road that operates some 1,250 sets of batteries of 16 cells each on passenger train equipment has continued to use the rubber jar and claims real economy by the practice. Battery jars cannot be grounded if they are made of rubber, nor are the rubber jars subject to leaks caused by chemical or electrolytic action, as in the case of lead tanks. As a result the maintenance costs of batteries using rubber jars are reduced considerably. If lead tanks are used, it is necessary to keep an experienced lead burner at each of several terminals to repair jars that develop leaks. On the other hand, rubber jars may be broken by the growing of the positive plates or by rough handling in crates not properly constructed. The growth of the positive plates can be minimized by so adjusting the charging equipment as not to allow excessive overcharging. However, in spite of the best of precautions the positive plates will often grow and the only alternative is to remove the battery from the car at regular intervals, tear down the cell and trim the plate off to the proper dimensions. Another solution is to adopt a type of positive plate that does not grow appreciably. The successful use of rubber jars on the road in question may be, in a large measure, attributed to the attention given to the design of the crates and care given to secure the proper fit. The records of this road show that for an average covering the last three years the cost for maintenance and replacement of rubber battery jars for a coach is only 30 cents a month and for a sleeping car 34 cents a month. As explained in detail in an article elsewhere in this issue, the road under discussion is evidently securing very good economy from the use of rubber battery jars in car lighting service and it might be well for other roads to check their costs with those given

As outlined briefly on another page some unusually valuable foundation data were developed recently at Chicago as a result of tests made by the engineering staff of the Chicago Union Station. Loading tests were made on full size concrete piers or caissons carried down 65 ft. to a stratum of hardpan, thus

A Public Service

affording information not hitherto available concerning bearing pressures and in particular as to the soil skin friction. The cost of the test to the station company was about \$15,000, an expense more than justified because it may mean a saving of many times that amount in the construction of foundations for the station headhouse. The tests had their inception in a problem confronting the engineers of the station company with regard to foundation piers (caissons) which had been designed and constructed to support a headhouse of the single-story, monumental type. Owing to the fact that it was decided to change the plans to a building of 16 to 20 stories, after the caissons were sunk, the engineers were required to determine if they could safely carry the higher and therefore much heavier structure. The problem of allowable pressures on hardpan is one which has perplexed the structural engineers in the city of Chicago ever since they were required to provide for the loads of tall buildings. In the matter of skin friction, the knowledge of engineers has been based largely on conjecture. But owing to the great cost of comprehensive tests, it was not until money was appropriated for this purpose by the Union Station Company that tangible information has become available. Unlike expenditures for development work carried on by a manufacturer in the perfection of a device in which he is enabled to profit through the granting of a patent, the results of these foundation tests will become public property. The making of these tests, therefore, constitutes a public service for which the officers of the corporation should receive due credit.

With more than 1,200 railway power plants in operation in the United States, consuming many thousand tons of coal annually, the possibilities of economy or waste in converting this coal into power are extremely important and often overlooked. Prominent combustion engineers have frequently stated

Possibilities of Fuel Economy in Power Plants

that the average steam power plant without special attention to economy loses approximately 25 per cent of its fuel due to preventable heat losses alone. There is loss in handling the coal, by incomplete combustion, by air leakage in furnaces, by soot on heating surfaces, by scale in the boiler, by inefficient steam engine units, by power transmission losses and by uneconomical use of power in the shops. Probably few railway power plants are operated so efficiently that attention to these details would not show immediate results in fuel economy, and the man to start things going is the highest mechanical department officer. If the superintendent of motive power and shop superintendent never visit the boiler room or take steps to find out what is going on there, how can the plant engineer or firemen be expected to take much interest in fuel economy? The latter are taught, by inference at least, that it is relatively unimportant. Much of the boiler plant equipment now in service has been used many years and cannot compare in efficiency with modern equipment. The question of installing new equipment, however, becomes the more or less delicate one of balancing possible savings against carrying charges on new equipment, for which capital is not easily obtained in the present state of railroad credit. Flue gas analysers, differential draft gages, pyrometers, steam indicators and other test apparatus cost relatively little. Power plant engineers should be en-

couraged and afforded every assistance in making such tests as will locate fuel wastes in any place where they may occur. Improvements in furnace, boiler, or engine operation can then be made as needed and the railroad fuel bill correspondingly reduced.

That the railroads are endeavoring to aid the country in returning to normalcy, and to the traveling conditions which existed prior to the war, is evidenced

**Passenger Rates
Are
Being Cut**

by recent announcements of the western carriers that, beginning March 7, semi-monthly "homeseekers' rates" will be restored to practically all

western points. These rates will reduce the present cost of a round trip ticket to that of a one-way fare plus two dollars, and, while made partly for the purpose of assisting in the colonization of the sparsely settled western districts, will be open to general purchase. Less than three weeks ago the same roads announced reduced summer tourist fares to western points, approximately the same as before the advance in rates of 1920. It is apparent that the passenger traffic departments of the railroads recognize the need for stimulating travel and are directing their efforts in that direction. So far, the reductions made have been principally by western lines. The eastern roads may follow a like course and reduce summer fares to seaside resorts, etc. It is likewise probable that the low-priced week end local excursion rates, famed in the years gone by, will again be resumed. Just what effect these reduced rates will have on passenger earnings is problematical.

The International Railway Congress at Rome, Italy, April 18 to 30, presents an unusual opportunity for railway officers

**International
Congress
at Rome**

to meet their fellows from all over the world, to discuss their common problems and to benefit from the experience of others. Rome has been well chosen as the meeting place, from the standpoint of the United States and Canada, because England, Belgium, France and Switzerland can be visited on the way with but little deviation from the most direct route. Thus, in addition to the unquestionable value of the discussions of technical problems at Rome and the opportunity afforded to meet railway men from all over the world, the itinerant American railway officer can easily devote some attention to railway practices in several European countries. The experience would broaden any railroad man and might very well suggest to him opportunities for improvement on his own line. Few would challenge the statement that railway development on this continent can, in a general way, be held up to the whole world as one of the greatest achievements in history. Such a statement does not, however, preclude the possibility of our learning many things—to do and to avoid doing as well—from European practice. The officers of railways where electrification is being considered, for instance, could probably find much of interest in Italy and Switzerland, where there is already a considerable mileage of electrified line, and in France where an electrification program of tremendous proportions is in its initial stages. In England our officers could make some observations of the passenger service which is so often held up to us by travelers who claim its superiority over our own. In short, the whole trip could be arranged so that there would be little time spent unprofitably. Moreover, while the excursion would have none of the characteristics of a junket, it would, of course, provide a beneficial relaxation from customary duties which many of our railway officers are ordinarily loath to leave even for a brief vacation.

The law should require, everywhere, that omnibuses filled with passengers be brought to a stop before crossing a railroad at grade. It would seem as though the experiences of the last few years ought to impress the stop-look-and-listen rule on everybody; but the killing of 16 people at Painesville, Ohio,

**The Painesville
Crossing
Disaster**

on the night of March 3 calls attention again to the fact that reckless or ignorant drivers are still very numerous on our highways. This case is unusual in two particulars. The reckless driver ran his omnibus on to the crossing in the face of a watchman's warning signal, given with a hand lantern, in what seems to have been ample season to bring the driver to his senses. And the tragedy occurred in a state in which legislation concerning safety at crossings had been discussed and where, indeed, a law had been enacted; but a law which fell just short of covering a case like this. It requires that where school children are the passengers an omnibus shall be brought to a stop; but other classes of people are not accorded any such protection. In a recent court decision, where passengers riding in an automobile with a careless driver were injured at a crossing, the judge held that not alone the driver, but also the passengers themselves, would be chargeable with negligence if they were in position to check his reckless conduct and did not do so. It is regrettable to burden the statute books with laws which can be enforced only at great expense, or which certainly will be flouted by many otherwise respectable citizens; but in this matter society has no alternative; it must legislate to put the duty of protection where it belongs because only in that way can it relieve itself from an unjust responsibility.

Canada's Heavy Railway Losses

ONE OF THE MOST DIFFICULT problems with which the government of the new Premier of Canada, W. L. MacKenzie King, must grapple is presented by the government railways. The Dominion government is in serious danger of having its credit destroyed by its railroad policy. The Dominion is considering trying to float a large loan in the United States. American investors probably will consider Canada's railway policy before deciding on the desirability of buying its government securities.

We publish elsewhere in this issue the first of two articles on "The Problem of the Government Railways in Canada," by W. T. Jackman, Associate Professor of Economics in the University of Toronto. Mr. Jackman's articles should be interesting to students of railway questions throughout the world, and especially to the people of Canada.

The deficit officially admitted by the Canadian government as having been incurred by its railways in 1920 was over \$70,000,000. This, however, did not include interest on the investment in a large part of the railways owned by it. J. L. Payne, formerly controller of statistics of the Department of Railways and Canals, who is probably the best authority on railway statistics in Canada, estimated the total losses, direct and indirect, at about \$136,000,000.

Complete statistics for 1921 are not yet available. Those that are available, however, indicate that the government railways as a whole failed by at least \$20,000,000 to earn their operating expenses. To this should be added about \$100,000,000 for interest on the investment. Therefore, directly and indirectly, government ownership of the railways last year added to the burdens of the Canadian taxpayer around \$120,000,000.

The government now actually owns about 17,000 miles of railway. It is still carrying on negotiations for the acquisition of the Grand Trunk, which would make the total mileage actually owned and operated by it about 22,500 miles. In view of the enormous deficits which always have been in-

curring by every railway owned by the Dominion government since it acquired the Intercolonial over a half century ago it would seem wise for the people of Canada to do some very hard studying and thinking before they finally take over the title to the Grand Trunk.

There are many Canadians who favor adding the Grand Trunk to the government system, first, because they think it will "round out" that system and give it more business, and secondly, because they believe the net earnings of the Grand Trunk will partially offset the deficits of the other government lines. No reasoning could be more fallacious. In the first place, the Grand Trunk now has traffic arrangements with the government lines which cause it to interchange practically as much business with them as it would if they were under a single ownership and management. In the second place, not only the experience of Canada, but the experience of every democratic country in the world indicates that under permanent government ownership the Grand Trunk itself would become and remain a producer of large deficits.

Deficits always have been the result of government operation of railways in democratic countries. This is not always, or perhaps even usually, due to inefficiency in the official personnel. It is almost always due to the fact that the government owned and operated railways are subjected to influences different from those to which private railways are subjected. These influences are chiefly political. They render it impossible for the management adequately to advance rates when they ought to be advanced, or adequately to reduce the number of employees when it ought to be reduced. In many cases they cause expensive service to be rendered which from an economic point of view ought not to be rendered. No future thing could be more certain than that if the government acquires the Grand Trunk Railway it will in a comparatively short time increase the government's railway deficit and not diminish it.

Now, the railway deficit is becoming an extremely serious thing. Canada has only nine million people and the Dominion government has an annual revenue of only about \$450,000,000. It needs about \$109,000,000 a year to pay expenses due to its participation in the war, including interest, pensions, etc. Its national debt is heavy and instead of declining has been increasing since the war ended. This increase in its national debt has been mainly or entirely due to the deficits incurred by its railways. The government will be positively inviting bankruptcy if it engages in any more railway ventures.

If the people of Canada have any doubt that continued government management of railways, and especially an increase in the mileage of government railways, means a continuance of railway deficits let them consider what has been happening in the rest of the world. Railway deficits are not peculiar to Canada. Large deficits were incurred by the railways of the United States in 1918 and 1919 under government operation. They were not due to the official personnel, which was not much changed, but to the system of management, which was radically changed. The organization and policy always are and always must be different under government from what they are under private management, because the controlling influences are different, and these controlling influences always tend to produce deficits. Since the government guarantees to the railroads of the United States were withdrawn they have incurred losses, but the taxpayers have not had to pay them.

Most of the government railways of Australia incurred deficits before the war. These have been increased since then. The deficits in the year ending June 30, 1921, of the Australian railways for which we have statistics were as follows: Queensland, \$7,694,000; Victoria, \$3,171,000; New South Wales, \$2,808,000; Western Australia, \$2,000,000. The total for the railways of these countries was almost

\$16,000,000. The New Zealand state railways had a deficit of almost \$600,000.

Before the war, under a highly centralized monarchical government, the Prussian state railways earned substantial profits, while the railways of most of the German states did not earn interest on the investment in them. Since the war the German state railways as a whole have been incurring enormous deficits. In 1920 their deficit exceeded fifteen billion marks. Of course, this is in a depreciated currency. For 1921 the deficit was estimated some time ago at seven billion marks, but we shall know better what the deficit really was when complete figures for the year's actual operations are available. There are six private railway companies in Germany. It is a significant fact that between 1913 and 1920 the ratio of their total expenses to their total earnings increased from only 60 per cent to 96 per cent, while that of the state railways increased from 70 per cent to 179 per cent. These figures mean that in 1913 the expenses of the German state railways were 70 cents for every dollar that they earned, while in 1920 their operating expenses were \$1.79 for every dollar they earned.

It is not yet too late for the people of Canada to make some arrangement under which the Grand Trunk can be privately owned and operated in future. They will do so unless they choose to disregard the warning plainly given by their own past experience with government operation as well as with the past experience of the entire world. One thing is certain. The Dominion of Canada cannot afford to operate a railway system of 22,500 miles at a chronic loss proportionate to that which has been incurred on all its railway ventures for over a half century. To do so would be to impose upon the business and the taxpayers of the country an unsupportable burden and completely to destroy the government's credit.

Supreme Court Decision a Doubtful Victory

THE RECENT DECISION of the Supreme Court in the case from Wisconsin involving the power of the Interstate Commerce Commission to advance state rates is a rather doubtful victory for sound regulation.

The court upheld the orders of the Interstate Commerce Commission in litigation, requiring state rates to be advanced to the basis of interstate rates, solely upon the ground that the Interstate Commerce Commission was given power to issue such orders by the Transportation Act. Many of those who claimed that the Interstate Commerce Commission had power to advance state rates which discriminated against or imposed an undue burden on interstate commerce contended that it had been held to have this power by the Supreme Court in the Shreveport case, and that the Transportation Act gave new expression to, but did not increase, its power over state rates. The Supreme Court, in its recent decision, rejected this view. It said in effect that there are two ways in which state rates may discriminate against interstate commerce.

First, they may be unfairly discriminatory because they are lower from one point in a state to another point just within the border of that state than interstate rates to a point just across the border in another state. This kind of discrimination in rates, which puts a shipper who is sending goods to a point just without a state at a disadvantage compared with a shipper who is sending goods to an adjacent point just within the state, is held to be prohibited by the doctrine of the Shreveport case.

Secondly, a state may make all the rates within its borders so low compared with the interstate rates that the revenues derived from the state business will be unduly small com-

pared with those derived from the interstate business. The Supreme Court holds that this *revenue* discrimination is not prohibited by the principle of the Shreveport case, but that it is prohibited by the rate making provisions of the Transportation Act. This act requires the Interstate Commerce Commission to fix rates which will enable the railways to earn a fair return upon the aggregate valuation of their property, taking into consideration the need of the country for adequate transportation. The court upholds the power of Congress to impose this duty on the commission and decides that any state which makes rates which will not contribute their fair share toward the revenues held by the Interstate Commerce Commission to be needed, would unduly discriminate against the burden interstate commerce within the meaning of the Transportation Act.

A reading of Chief Justice Taft's opinion makes very plain that if the Transportation Act had not been passed the states would have power to make any rates which were not absolutely confiscatory, provided they did not work unfair discriminations at border points. The rate making provisions of the Transportation Act have, therefore, derived from this decision a new importance from the standpoints both of those who favor and those who oppose so-called "state's rights" in the regulation of rates. Suppose that the Interstate Commerce Commission should continue to hold that the public welfare requires that the railways be allowed to earn an average net operating income of six per cent on their aggregate valuation. As long as the present rate making provisions of the Transportation Act stand the commission can force state rates to be so made that they will contribute their share toward the revenues necessary to yield this return. On the other hand, if the rate making provisions should be repealed, the states thereafter, so long as they did not unfairly discriminate between persons and places at border points, could fix rates which would yield less than six per cent on state business, unless the courts should hold them confiscatory.

It is highly probable that the decision of the Supreme Court will intensify the struggle already going on between those who would repeal and those who would retain the rate making provisions. These provisions practically vest in the Interstate Commerce Commission exclusive authority to determine what return in excess of one that would be confiscatory the railways of the United States may earn. To repeal the Transportation Act would be to divide this power between the Interstate Commerce Commission and all the state commissions. The result might be that the railways in each state would be allowed to earn a different return from that earned in every other state.

The railways render a national service. Eighty per cent of their freight earnings, one-half of their passenger earnings and three-fourths of their total earnings are derived from interstate business. The country tried for years the plan of having rates independently regulated by the Interstate Commerce Commission and the authorities of the various states. The Interstate Commerce Commission represents the people of every state, being a branch of the federal government. If the power to determine what net return the railways may earn should be vested in governmental authority at all the argument for vesting it in the Interstate Commerce Commission alone seems conclusive.

The state commissions are, however, anxious to recover the authority over revenues derived from state business that they formerly exercised. The advocates of so-called "state's rights" are constantly growing more active and clamorous. It is evident that if the rate making provisions of the Transportation Act are to be retained and the more enlightened policy of regulation they were intending to establish is to be secured, no time should be lost by those who are in favor of their retention in voicing their views and making their influence felt.

Letters to the Editor

[The RAILWAY AGE welcomes letters from its readers and especially those containing constructive suggestions for improvements in the railway field. Short letters—about 250 words—are particularly appreciated.]

Possibilities of Promotion for the Secretary

ON LINE.

TO THE EDITOR:

I have read with a great deal of interest the articles appearing in recent issues concerning the chief clerk, especially the one appearing in the issue of February 25, signed "Operating Official."

I note "Operating Official" states that the chief clerk's work consists principally of general office work and that he does not acquire sufficient knowledge of the road work to warrant his promotion to an operating position. I agree with him that few chief clerks acquire a clear knowledge of the road work; but what of the secretary? Does he not acquire a great deal of learning in the operation of the road during his regular routine of duties? He is necessarily on the road two-thirds of every month in the year, and anyone who is intelligent, quick of perception and willing can certainly acquire a clear working knowledge of the operating conditions. What, then, are his chances for the higher position? You may say he stands in line for promotion to chief clerk. I, personally, would decline the promotion, for it seems to me that after a man once takes a chief clerkship his line of promotion is ended.

From the knowledge a secretary gains in his work I feel that he should be able to hold down the job of assistant trainmaster, and, if he is quick and is under the directorship of an efficient trainmaster, will surely be able to learn all the details within a short time. Are the operating officials willing to give their secretaries that chance? I am not saying that the secretaries are imposed upon, and I heartily disagree with my friend of recent weeks who wrote the letter entitled "The Official Goats." If his boss treats him in that manner there must be some justification for it. I have always enjoyed the confidence and good-will of my boss and my relations with him have always been most pleasant. I would like to see a reply from an "Operating Official" giving his views on the question above. "SOUTHERN SECRETARY."

Mixing Railroadng and Religion

NEW YORK.

TO THE EDITOR:

I have read with deep interest and great pleasure the letter from "Train Dispatcher," published in your issue of February 18 under heading "Will Religion and Railroadng Mix?" because he touches a most important point. His question might well be broadened to read "Will Religion and Any Kind of Business Mix?"

Recently, while at a division point, I was quite unexpectedly invited to attend a dinner of a R. R. Y. M. C. A. Bible class. It seemed to be a regular weekly affair and there were, I believe, upward of a hundred men present. After dinner had been served, which had been interspersed with singing of hymns, an old railroader read a lesson from the Bible and followed it with a brief and interesting explanation. There was plenty of enthusiasm during the singing and rapt attention during the reading and subse-

quent remarks, and I could not help but feel that any effort in the direction of acquainting the men with the principles laid down in the Bible—in brief, with God—must tend to elevate their thinking to a higher level and make them better workers, i. e., teach them to work more conscientiously, not because of fear of losing their jobs or merely to earn some money, but as a matter of principle, realizing that it is right to give an honest day's work for an honest day's pay—or, to put it another way, because only right acting can bring and must bring due and just compensation.

And all this applies to executives as well. By taking God into our business, in humble obedience to the injunction "In all thy ways acknowledge Him and He shall direct thy paths" (Prov. 3:6), and by observing the Golden Rule (Luke 6:31), all classes are reaching a common level on which they can meet in full confidence. What is needed in business—especially in railroading—is more religion and less politics.

All this may sound visionary, but the time will surely come when it will be recognized that religion is not merely a thing for Sundays, but an everyday requirement, and we all shall learn how to apply it practically in everyday affairs and especially in business.

RAILROADER.

Can Railways Earn a Fair Return?

LONDON, England.

TO THE EDITOR:

Permit me to thank you for your criticism of my paper with the above title, which was published in the *Railway Age* of January 28 and commented upon in the same issue. My object in sending it was to evoke discussion. But I seem to have failed to make my point clear.

I assume we shall all agree on two propositions:

(1) If railroads can earn a fair return directly, by all means let them do so; there is no balance to be made up, and we need not therefore discuss how it is to be done.

(2) But railroads are as necessary to the community as highways. If therefore they cannot earn a fair return, the public must in some shape or form make up the deficiency.

Now let me give an example to illustrate my meaning. The New Haven is not earning a fair return. It is necessary to the community. It may be said; let the New Haven rates be further increased. The answer is that it is very questionable whether further increases would produce more net revenue. Certainly they would hamper the trade of the Port of Boston and would handicap New England manufacturers in competition with those in other parts of the country. Probably they would divert further traffic to the motor trucks, and therefore not only further diminish New Haven net revenues, but also increase the cost to the New England public of maintaining the highways.

Broadly, then, my point is that the conditions of competition between traffic by railroad, which is expected to pay total cost, and traffic by highway, which only pays conveyance cost, must be more nearly equalized. You may redress the balance to some extent by calling upon the motor trucks to meet some portion of the total cost beyond the mere conveyance costs. In my judgment in some cases it will be necessary also to relieve the rail-borne traffic of some share of total cost. This is in the public interest because there can be no doubt that, except for high class traffic for short distances, total road cost is greater than total rail cost.

Let me add that I never suggested a "government appropriation to make up railway deficits." What I did suggest was that, in certain cases, the government should assume the responsibility for some portion, or the whole, of the cost of providing the railroad. For instance, taking the New Haven case, I can imagine the states through which this railroad runs contributing, say, \$5,000,000 or \$10,000,000 per annum to meet the interest on New Haven bonds; and then leaving

it to the Interstate Commerce Commission precisely as at present, to fix such reasonable rates as will produce a reasonable return on the balance of the New Haven capital.

W. M. ACWORTH.

"East Brookfield on the Map"

HARTFORD, Conn.

TO THE EDITOR:

Your report, printed last week, of the installation of audible signals on the Boston & Albany at Chatham and at East Brookfield, is an event of importance. With audible signals in use in France for 40 years, and in England for about 20 years, it is a trifle odd, to say the least, that up to the present time this country has done nothing at all in that direction.

It is also interesting to see that East Brookfield is on the map. It is a place where, apparently, something is needed to wake up sleepy enginemen. The recent government report, calling on the Reading road to install automatic train control on a short branch, doing a light business, because a collision had occurred on that branch, is sufficient justification for the principle that remedies for disease ought always to be applied where the disease exists. East Brookfield has been the scene of two notable collisions when careless enginemen of passenger trains ran into freights; and the road has, evidently, determined to take effective measures to prevent a repetition of such disturbing incidents at that point.

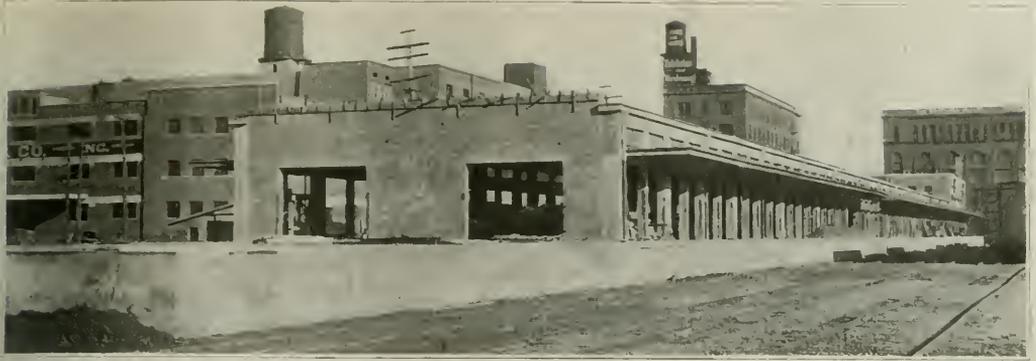

The first of these collisions occurred on Friday, February 25, 1853. The New York afternoon express, drawn by the locomotive "Addison Gilmore," (which engine at that time was the glory of the railroad world, at least in the eyes of New Englanders) ran over a misplaced facing switch and collided with freight cars standing on the side track. Engineman Isaac Wadleigh and Fireman Charles Dresser were, however, the only persons seriously injured.

The second accident was on March 31, 1880, and it occurred to the same train. In both cases the engineman was at fault, the line being straight and the weather clear; but the discipline in both cases seems to have had to do mainly with the station men. In 1880, as distinguished from 1853, there was a power brake by which the train could have been stopped if the engineman had been alert; and there was a state railroad commission to investigate the case. The report of the commission does not indicate that there were any fatal injuries. The switch tender was dismissed and the station agent was requested to resign. As to the time when the air brakes were applied, or how far away the engineman was when he first saw the switch target, the report of the commission contains the usual array of conflicting evidence, such as railroad officers are familiar with today.

You will understand, Mr. Editor, that I am not proposing any particular commendation for the Boston & Albany in this matter. A need which has existed for 69 years must be classed as some need! And, if the warning had not been repeated 27 years later, there is no telling but what it might have been forgotten entirely. To wait 41 years after the second warning certainly cannot be called particularly commendable. So far as concerns prompt recognition of a defect, and effective application of a remedy, this road is not, in this particular instance, to be taken as a model. However, the remedial action has been instituted, and all concerned should be congratulated.

And, if a thought is to be given to the matter of condemnation for slowness, the Boston & Albany is not alone. That shining list of railroads which you designate as Class I (with a big I) contains a large number of very respectable names of roads whose policy is equally slow—or much slower.

B B A.

View of the Freight House From the North End

Katy Builds Freighthouse of Fireproof Construction

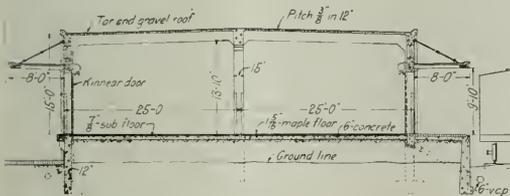

Inbound Terminal, Recently Completed at Dallas, Tex., Is Erected to Modern Standards

A NEW INBOUND freighthouse was recently completed for the Missouri, Kansas & Texas at Dallas, Tex., at a cost, including auxiliary improvements, of \$350,000. The existing outbound house, a frame building, was also moved a sufficient distance to allow space for four tracks between the inbound and outbound houses. Other improve-

ments include the paving of adjacent streets and driveways, with vitrified bricks laid with an asphalt filler on a concrete base, and the extension and rearrangement of the team yard.

The new house is 600 ft. long by 50 ft. wide and one story in height except 100 ft. of the south end, which is two stories high, the second story and the south 20 ft. of the first floor being used for offices, stairways, toilet rooms, etc. An eight-foot platform is provided along the track side of the warehouse, and in addition there is an open platform 100 ft. long by 58 ft. wide at the north end.

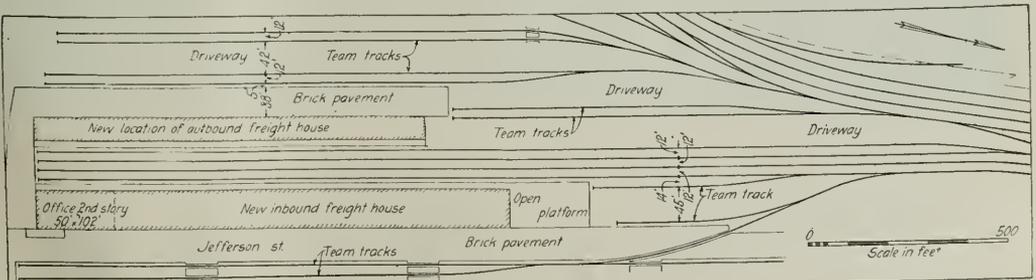

The building is of fireproof construction throughout. The ground floor is supported on a concrete slab, which rests on a fill enclosed by retaining walls, except for a small basement to house a heating plant at the south end of the building. The frame of the structure is of reinforced concrete with a reinforced concrete slab for the roof and for the second floor and a portion of the first floor over the basement. The north end of the warehouse and the south end and second floor of the office building are enclosed with brick walls with wire-glass windows set in standard sheet metal fireproof sash and frames. In the warehouse, owing to the maximum utilization of wall space on the team and track side for doors and windows, the brick work was superfluous, and only the concrete lintels, columns and girders are exposed to view between the wall openings, which are fitted with Kinnear rolling doors with wire glass in Fenestra sash in the transoms. The stairways consist of No. 12 gage pressed steel treads and risers, carried by stringers of 3/16 in. plates. The treads are covered with 1½ in. of concrete and are fitted with Mason safety treads. The office space on the second floor is provided with a plaster ceiling on wire lath and metal

Section Through the Warehouse

ments include the paving of adjacent streets and driveways, with vitrified bricks laid with an asphalt filler on a concrete base, and the extension and rearrangement of the team yard.

The new house is 600 ft. long by 50 ft. wide and one story in height except 100 ft. of the south end, which is two stories high, the second story and the south 20 ft. of the first

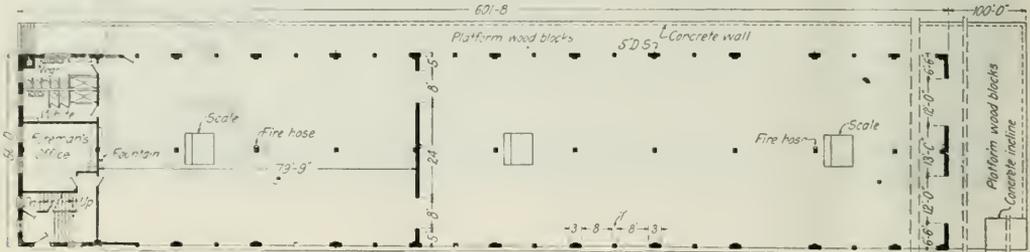

Location of the New Freight House in Relation to Existing Facilities

joists, suspended by metal hangers from the reinforced concrete roof frame.

The building is supported on natural foundations at a depth of a few feet below grade. The warehouse floor and the platforms are at a level of 3 ft. 10 in. above the top of rail. Inside the house the concrete floor is covered with a 1 5/16 in. maple floor with a 7/8 in. sub-floor, carried on 2

The doorways along the roadway side and the platform on the track side are protected from the weather by a continuous canopy projecting eight feet from the wall. This canopy is of frame construction, covered with 7/8 in. tongue and grooved boards and the entire frame is supported from the building by 7/8 in. tie rods anchored into the wall. The roofs of the building are covered with tar and gravel, sloping from the

First Floor Plan of the Freight House

in. by 4 in. sleepers imbedded in the concrete. On the platforms cross-tied wood blocks take the place of planking.

The concrete framing of the superstructures consists of three lines of columns spaced 20 ft. longitudinally and spanned by longitudinal girders. These in turn support transverse beams spaced 6 ft. 8 in. center to center, which carry the roof and floor slabs. For the warehouse doors the 20 ft. panels are cut in two by 12-in. by 12-in. concrete door posts, leaving two openings 8 ft. wide by 9 ft. high for the

longitudinal center line each way to gutters along the two sides of the building, having external downspouts at intervals of 40 ft.

Warehouse scales with platforms 4 ft. 8 in. by 7 ft. 6 in. are installed on the center line of the freight house at intervals of 80 ft. and an automobile scale with a platform 9 ft. by 20 ft. is provided on the platform at the north end where a crane has also been installed to handle heavy shipments. At every fifth column on the center line of the building a fire

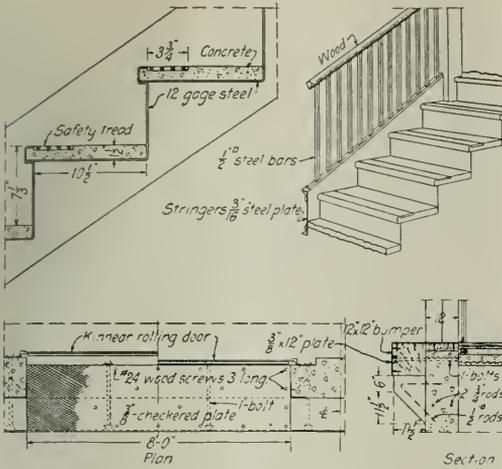

The Freight House Is Well Lighted

rolling doors. All columns and door frames in the warehouse are protected at the corners by 6 in. by 6-in. steel caps extending to a height of 6 ft. above the floor. Along the roadway side of the building a 12 in. by 12-in. bumper tender is provided, supported on reinforced concrete brackets. This tender is covered by a 1/2 in. plate, the top sheet being a hinged safety floor plate.

hose is provided with connection to a Volkhardt valve and base installed in a pit below the floor.

The office portion of the building on both the first and second floors is heated by steam from a plant in the basement, which is of the vacuum return type. Generous natural illumination of the building, both in the offices and the warehouse, is supplemented by a complete system of electric light-

ing. In the freighthouse space this consists of two 200-watt lamps spaced symmetrically on either side of the center line of the building every 20 ft., with a 100-watt lamp under the canopy on either side of the building at the same spacing. Plugs for extension cords are installed in the edge of the

Details of the Metal Stairway and of the Sill Construction of the Driveway Doors

platform on the track side at intervals of 20 ft. for carrying extension cords into cars. The office building is provided with either 60-watt or 100-watt outlets at intervals of 10 ft. in each direction in the ceiling for both the electric lights and electric fans, with floor and wall plugs at sufficient in-

The Office

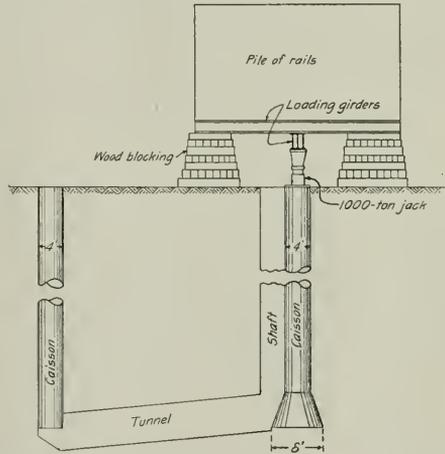

tervals to take care of dictaphones and other motor-operated office equipment.

The inbound house was constructed under contract by Hickey & Montgomery, of Dallas, Tex., and the paving by the McKenzie Construction Company, of San Antonio, Tex. The work was in direct charge of J. M. Metcalf, principal assistant engineer, with S. K. Keller, assistant engineer in charge on the ground, and under the general supervision of F. Ringer, chief engineer.

Foundation Tests Develop Interesting Data

VALUABLE INFORMATION concerning deep foundations was developed by the engineering staff of the Chicago Union Station Company through the aid of some large scale loading tests made at the site of the station on full size concrete caissons. The information developed will be of great value to the constructors of buildings in the business district of Chicago, and certain of the data, especially those concerning the amount of skin friction developed between the sides of the concrete piers and the surrounding earth will be of benefit to engineers the world over. Facts concerning these tests were presented before the Western Society of Engineers on March 6 by J. D'Esposito, chief engineer of the Chicago Union Station Company. Mr. D'Esposito, however, declined to present any general conclusions owing to the limited time at his disposal for studying the test data. However, some facts concerning the information developed are of interest pending the appearance of the formal report of the tests.

These tests had their inception in a problem which arose

Sketch of the Loading Test Showing the Load in Position Over the Larger Caisson

in connection with the foundation for the headhouse of the station. These foundations, consisting of some 200 concrete piers (caissons) carried to a depth of about 60 to 65 ft. below city datum to a stratum of hardpan, were proportioned for a bearing of six tons per square foot under the loads imposed by a structure of the monumental type, that is, a relatively low building like the Pennsylvania station in New York. Subsequent to the construction of these foundations it was decided by the officers of the Union Station Company to erect a building some 16 to 20 stories high, thereby giving rise to loads much greater than those originally provided for. The tests were undertaken to ascertain whether it would be feasible to impose the greater loading on the existing foundations.

The tests consisted in sinking two caissons according to the Chicago method, that is excavating curbed wells to a depth of 60 to 65 ft. and filling them with concrete. Both wells were four feet in diameter, but one of them was belled out at the bottom to a base diameter of eight feet. A pile of 1,200 tons of rails was then supported in turn over these two caissons in such manner that a 1,000-ton jack placed on top of the caisson could be made to transfer any part of the

weight of the rails to the top of the foundation. Under this arrangement sustained loads of gradually increasing amounts were applied to the caissons, while repeated check levels were made to note settlement. These tests showed that the material on which the caissons were supported would carry loads many times in excess of those that were allowed by the building department of the city.

The most interesting part of the test consisted in a further experiment on the smaller of the two caissons, namely the one with the base of four feet diameter. After the bearing test had been completed a shaft was sunk alongside of the larger caisson and a tunnel driven to the other one for the purpose of making an excavation under the bottom of the caisson so as to leave it supported entirely by the friction between the sides of the shaft and the material in which it was imbedded. Upon making loading tests on the caisson in this condition, it was found that it would sustain a maximum load of 250 to 260 tons, solely from the friction on the sides. This superimposed load, together with the weight of the caisson itself, 65 tons, gave a total load of 315 tons, which, divided by the area of the sides of the cylinder, gave an average load of 700 lb. per sq. ft. as the ultimate value for the skin friction. These caissons were dug in the ordinary manner and curbed with wooden lagging, the lagging necessarily remaining in place. More concrete facts concerning this test will be available when the studies now in progress are completed.

Freight Car Loading

WASHINGTON, D. C.

FREIGHT CAR LOADING for the week ending February 25 showed another drop, due to the observance of the holiday on February 22, to 735,286 cars, according to the weekly report of the Car Service Division of the American Railway Association. This compares with 780,924 for the preceding week. However, it represented a considerable increase as compared with the corresponding week of 1921, when the loading was 659,642, although it was less than for 1920, when it was 785,295. As compared with last year, increases were shown in the loading of all classes of commodities except forest products and ore, but the principal increase was in coal, merchandise and miscellaneous.

Increases were shown in all districts except the North Western.

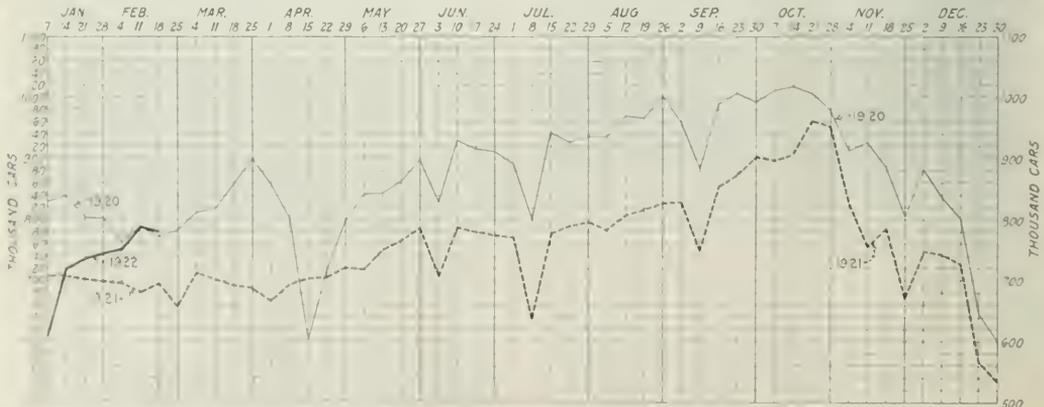

The freight car surplus showed another reduction during the week ending February 23 to 264,814, a reduction in a week of 13,667. Of the total, 105,938 were surplus box cars, while the surplus coal cars numbered 105,570. The number of bad order freight cars on February 15 was 332,014, or 14½ per cent. This was the same percentage as was reported on February 1.

A summary of loadings by commodities and districts is given below, as is a diagram comparing 1922 with 1920 and 1921.

REVENUE FREIGHT LOADED AND RECEIVED FROM CONNECTIONS

Revenue Freight Car Loadings to February 18, 1922

Labor Board Begins Hearings on Wage Reductions

J. W. Higgins and J. G. Walber Present Interesting Data on Payrolls in Other Industries

THE MEN DOING WORK comparable to that done by railroad employees and engaged in 5,327 industries in 28 western states, are now receiving wages much lower than those paid to railway workers. This situation was brought to the attention of the Railroad Labor Board on March 7 by J. W. Higgins, executive secretary of the Association of Western Railways, who, on behalf of 101 western carriers, opened the second nation-wide wage reduction controversy before that body. The hearings on proposed wage cuts were scheduled to begin on March 6, but delays due to the necessity for obtaining a large hall in which to hold the sessions and for a roll-call postponed the real opening of the hearings until the following day.

Mr. Higgins' statement was based on information gathered in a long investigation conducted by committees in all the 28 western states whose researches led them into all industries in any degree comparable to the business of railroading. These data, in the form of an exhibit, also include the wages paid in rural communities and on farms in the territory involved.

The survey showed that of the 318,893 employees of all classes studied in other industries, 247,866, or 77.73 per cent, were getting lower wages in December, 1921, than were paid by the railroads for similar service. There are only four states in the west, Montana, Nevada, Oregon and Wyoming, for which the reports show less than 50 per cent of the employees in other industries paid less than railroad wages, and peculiar conditions exist in these four states not found elsewhere in western territory. In 26 principal cities in the west the investigation shows that out of 125,425 employees in outside industries, 98,814, or 79 per cent, are paid less than the railroads pay for similar work.

"Industrial employers declare that the high level of railroad wages is a direct charge upon them," said Mr. Higgins, "that it is paid by them in transportation rates; that the high level of wages on railroads exerts an influence upon, and artificially stimulates wages for men doing like work in their industries which creates friction and dissatisfaction among their forces. I believe this explains to a large extent the business man's attitude toward railroads and railroad rates.

"The railroads are not asking for the low level of pre-war wages. Indeed, the wages I have read into the record show that for most classes the railroads propose scales 50 to 100 per cent higher than those paid in 1915, and from 30 to 70 per cent higher than the level of 1917."

"Standard" Wage Rates Attacked

Mr. Higgins added that while the roads wish the wages paid to be fair and adequate, it was not believed that the Transportation Act intended a flat rate of wages to prevail throughout the country. Outside industries, he said, never have and do not now pay a flat rate. Furthermore, a flat rate of wages never existed, he declared, in the classes of railroad employees under consideration prior to government control.

The situation, Mr. Higgins suggested, might be met by an order permitting the railroads to pay the going rate of wages, or in any event a rate not less than the preponderating rate paid in the zone for similar work.

"There are great differences in the wages paid by outside industries for the same kind of labor in different parts of the western territory," said Mr. Higgins. "Common labor

in Oregon gets from 31 to 45 cents, while in the central agricultural and industrial states, it receives from 26 to 35 cents, and in Mississippi, Louisiana, New Mexico and Texas, the range is from 10 to 25 cents an hour. Wages for metal crafts also vary as to locations. In the state of Washington the range for machinists in outside industries is from 56 to 75 cents; in Nevada, from 61 to 75 cents; in Illinois, from 41 to 65 cents an hour, and in Mississippi, from 30 to 55 cents an hour."

Mr. Higgins declared with respect to the cost of living that the index figures of the National Industrial Conference Board indicate a downward trend. These figures, he declared, show that the family budget, which includes food, shelter, clothing, fuel and light and sundries, as of February 1, 1922, is 22.9 per cent less than the peak reached in July, 1920.

These figures, Mr. Higgins said, show a remarkable decline in the price of food, which is 43 per cent of the family budget. Food prices for January 15, 1922, show a decrease of 35 per cent from the peak in July, 1920.

In Chicago the investigation disclosed that out of a total of 32,350 employees in other industries whose wages were studied, 24,846, or about 75 per cent, are paid less than railroads pay for similar work. This was shown also as to shop employees and laborers in steel plants at South Chicago, Gary and Joliet.

Wage Decreases Requested by Western Carriers

The wage decreases requested by the western railroads, represented by Mr. Higgins, may be summarized as follows:

For employees paid on an hourly basis, decreases ranging from four cents an hour to 27 cents an hour have been asked. The present wage of these employees, the wage proposed by the western carriers and the amount of decrease, all in cents per hour, are shown in the following table:

Class of employee	Present wage	Proposed new rate	Decrease requested
Skilled Shop Employees—			
Machinists, boiler-makers, blocksmen, electricians, copper and tin workers, coach and body builders and repairers (except on running rep.), loc. carpenters (except on running rep.), pattern makers, cabinet makers, silver platers, wood machine operators (regularly assigned in mills), upholsterers, coach and loc. varnishers, letterers and stippers	77	67½	9½
Regular apprentices (trades above)	34—59	29—54	5
Helper apprentices	54—64	40—54	10—14
Other Shop Employees—			
Freight car body and truckmen (steel and wood); tank car body, tank and truckmen (steel and wood); passenger car truck and platform men (steel and wood); air brakemen (freight and passenger); train yard car inspectors (freight and passenger); passenger car running rep. men (outside rep. shops); tender frame rep. men; men on miscellaneous work; freight car painters	72	50	22
Carmen helpers, including car oilers and material carriers	54	35	19
Carmen helpers, apprentices	54—64	35—45	19
Painters, wood iron and steel pipe work	77	50	27
Stationary engineers (electrical)	77	63½	13½
Mechanics, M. of W., Bridge and Building Departments	58	53	5
Helpers	44	36½	7½
Boiler room water tenders and coal passers	35—47	31—42	4—5
Signalmen, leading maintainers, gang foremen, etc.	78	72½	5½
Signalmen and signal maintainers	73	60—67½	5½—13
Signalmen asst. and asst. signal maintainers	54—68	40—54	14

For employees paid on a monthly basis, decreases ranging from \$10.02 to \$14.28 per month have been requested as indicated in the following table showing the present monthly wage of the employees involved, the monthly wage proposed

by the western railroads and the difference between the present and proposed rates.

Class of employee	Present wage	Proposed new rate	Decrease Requested
Janitors, watchmen, etc.	\$70.00	\$55.72	\$14.28
Office, shore boys, etc.	45.00	30.72	14.28
Bridge and building foremen	125.50	115.00	10.50
Assistants	115.20	105.00	10.20
Track and maintenance foremen	110.20	100.00	10.20
Streetkeepers, clerks, 2 years or more experience	101.78	87.50	14.28
Clerks, less than 2 years experience	87.50	73.22	14.28
Stationary engineers (steam)	120.20	108.18	12.02
Stationary firemen and engine room oilers	110.20	90.18	10.02
Callers, gatemen, etc.	93.62	79.34	14.28

For track and common laborers, laborers in the maintenance of way department, laborers around shops, station and platform employees, performing work which requires little or no skill or training and common laborers in station forces now receiving the wages in cents per hour indicated in the following table, the western railroads have requested authority to pay the prevailing rates in the territory employed.

Class of employee	Present wage
Track and common labor, M. of W. Department	28-40
Laborers around shops	31-43
Station and platform employees, station forces	37-49
Common labor	28-40

In addition, authority is asked to pay drawbridge tenders and assistants, now receiving \$75 a month, the prevailing rate in the territory in which they are employed.

The proposed new rate for car cleaners is set at two cents above the rate paid to track labor in the territory in which these employees are working. The present rate of car cleaners is 42 cents an hour.

New rates for inexperienced clerks, based upon length of service, are also requested by the western railroads. Under present rates these employees are paid from \$67.50 to \$77.50 a month, and the proposed new rates range from \$50 to \$70 a month. Similarly, new rates for inexperienced gatemen and callers have been proposed, these rates ranging from \$50 to \$60 a month.

J. G. Walber Represents Eastern Roads

In presenting the case of the eastern railroads, John G. Walber, executive secretary of the Bureau of Information for those roads, drew attention to the fact that motive power and rolling stock are being maintained for immediate requirements only. "There is an accumulation of bad order locomotives and cars," he said, "which, when business resumes, will have to be put into serviceable condition. This is simply charging against the future that which under normal conditions would have been taken care of currently.

"Since the time when most of the wage conferences were held, the most recently available data on the subject indicate that the cost of living has receded somewhat. Assuming for the sake of argument that the rates of pay established by the board May 1, 1920, were in proper relation to the cost of living then prevailing, the reduction in the cost of living from May 1, 1920, to July 1, 1921, was approximately 20 per cent, as indicated by the governmental and other statistics, yet the reduction in wages effective July 1, 1921, was approximately 11 per cent." Mr. Walber said that exhibits would be introduced showing clearly that the cost of living today is back where it was in 1918. "So far as the cost of living is a factor in determining wages," he declared, "the wages of today should be based upon what the cost of living was in 1918.

"It will be observed from the data placed in detail before the board that for all classes of employees on the eastern railroads (the payrolls of which are approximately 45 per cent of the entire country for the classes affected) the saving effected as a result of the reduction in rates of pay heretofore ordered by the Railroad Labor Board amounted, in the aggregate, to 11.2 per cent, or \$6,923,015.72 a month, and that the saving effected by the changes in rules and working

conditions heretofore promulgated by the labor board amounted, in the aggregate, to 1.2 per cent, or \$748,333.87 a month. In other words, the total saving effected on the eastern railroads as the result of the wage reduction heretofore ordered by this board, plus the saving effected on those roads as a result of the modification of rules and working conditions ordered by the labor board amounted, in the aggregate, to not more than 12.4 per cent, or \$7,671,349.59 a month."

Mr. Walber also submitted an exhibit showing the result of an investigation on the eastern railroads of comparative wage schedules as paid in outside industries and paid by the railroads for comparable labor in more than 3,700 plants and 988 communities in eastern territory. For ordinary unskilled labor comparable to railroad labor in shops, round-houses, etc., this exhibit shows that of 36,865 such employees in outside industries, only 575 received rates of pay equaling or exceeding the prevailing rate of 41 cents an hour paid by the railroads, but the average rate for these outside industries was 30 cents an hour. For car repairmen comparable with rough painters, scourers, primers, etc., of which there were 11,292 employed in the outside industries above referred to, only 143 received rates of pay equaling or exceeding the railroad rate of 72 cents an hour, but the average for such labor was 48.8 cents an hour. For machinists, of whom there were 42,159 in the outside industries studied, only 650 received rates equaling or exceeding the railroad rate of 77 cents an hour, but the average rate paid in the outside industries was 56 cents an hour.

"We submit," said Mr. Walker, "that it is to the greater interest of the railroad employees and the public in general that the employees be placed upon a basis which will permit of working the maximum forces, so providing employment for the greater numbers, increasing the consuming public and in that way contributing to the general revival of business.

"The extent to which the readjustment in other fields has already progressed is strikingly illustrated by the deflation which has thus far taken place in the wholesale prices of commodities. The data compiled by the United States Department of Labor indicate that the highest level of wholesale prices was in May, 1920, when, as related to the average prices of 1913 as the 100 base, the index number of 272 was reached. Since that time there has been a constant recession in prices so that on January 1, 1922, the index number of 148 had been reached; in other words, a decline of 124 points or a reduction of approximately 45 per cent from the May, 1920, peak. It is interesting to note that the deflated level at the present time corresponds with the level prevailing in December, 1916.

"It was natural that the manufacturers and other representatives of the shipping public should feel that as their industries had been undergoing the process of readjustment, and as the railroad industry was still operating on the basis of war time costs, plus the increase in the cost of their labor resulting from decisions of the labor board, the railroad industry should also contribute toward the readjustment. The rates of pay which the railroad industry is paying are public information, and it was only natural that outside industries should make comparisons between the rates which they pay their employees and those which the railroads are paying. The public generally, including wage earners in other industries, should not be called upon to pay transportation charges based on an inordinately high level of railroad wages."

E. J. Manion Protests Wage Cut Negotiations

Immediately following the roll-call, E. J. Manion, president of the Order of Railroad Telegraphers, injected a protest against the manner in which the disputes over wage scales were handled by the railroads. He charged that rep-

representatives of the carriers had informed the members of his organization during their negotiations that wage reductions were being proposed in order to pass along the savings made therefrom to the public in the form of lower freight rates instead of to establish just and reasonable wage levels. In support of this position he pointed out the rate increases authorized by the Interstate Commerce Commission to take care of the wage increase of July, 1920, the subsequent decreases in both rates and wages and added that "the transportation industry is the only inflated industry in the country today and it should be deflated before more is taken away from the lower paid employees now before the Board." The regional negotiations between the carriers and the train service brotherhoods were characterized by Mr. Manion as "petting parties," the inference being that those classes of employees now before the Board are being discriminated against by the railroads.

Labor Leaders Threaten to Delay Hearings

Before Mr. Higgins began his presentation on behalf of the western carriers, B. M. Jewell, president of the Railway Employees Department of the American Federation of Labor, and Martin Ryan, president of the Brotherhood of Railroad Carmen, threatened to delay the hearings by their protests against the conferences which preceded the submission of the wage controversy to the Board. However, Judge R. M. Barton, chairman of the Board, ruled that the hearings should continue, the objections made by these labor leaders to be considered in connection with each dispute as it came before the Board. In addition, Mr. Jewell had previously asked for permission to examine the representatives of several carriers as a preliminary to the actual taking of testimony. After considerable argument as to the procedure to be followed in presenting this case to the Board and the relevancy of his request, Mr. Jewell was allowed to question representatives of the New York Central, the Western Maryland, the Chicago Great Western, the Michigan Central, the Pere Marquette, the Bangor & Aroostook, and the Cleveland, Cincinnati, Chicago & St. Louis as to the extent of their contracts for the operation of shops and the wages and working conditions of employees in contract shops. In each case the representative of the carrier admitted that certain shops were being, or would be, operated under a contract arrangement, but none of the employees in these shops were included in the requests for wage reductions.

The charge of "petting parties" between the carriers and the train service organizations came up again on March 7 when W. L. McMenimen, labor member of the Board, asked Mr. Manion, sponsor of the charges, if he had not sought "a bid" to these "parties." Mr. Manion replied that he had and "got turned down flat." He added, however, that this constituted the best evidence of discrimination.

Industrial Wages in Western

States Below Railroad Wages

The remainder of the session on March 7 was taken up with the presentation of evidence by various railroad officers who had acted as state chairmen in gathering the mass of information filed with the Board by Mr. Higgins. These witnesses outlined the manner in which the information was gathered and presented statistics showing that in certain western states from 60 to 90 per cent of the employees in other industries performing work comparable to railroad work were receiving wages lower than those paid by the carriers.

Representatives of the four train service brotherhoods and a committee representing the western railroads and headed by William Jeffers, general manager of the Union Pacific, are still in session at Chicago considering wages and working conditions. These conferences are in line with the policy of both parties to carry on negotiations on a regional basis as was done prior to federal control.

J. W. Higgins Asks for Graduated

Wage Scale for Shopmen

In summing up the testimony presented to the Board by the various state chairmen, Mr. Higgins asked for a graduated scale of wages for shop employees performing work which does not require the services of skilled mechanics. He said in part:

"I want to point out that our evidence shows conclusively that in every city and state in western territory the great bulk of shop work is performed in outside industry at lower rates than the railroads pay and that much of the rougher shop work for which railroads now pay mechanics' rates is performed in outside shops by specialists, handymen or second-class mechanics at much lower rates than the mechanics receive, and a great deal of it at rates lower even than those we are now offering helper and regular apprentices in the last year of apprenticeship. The consideration that the western roads ask the Board give this situation is this—that in its decision, permit the railroads to adjust, with the men, the rates for such positions, or that it name rates for those positions requiring less skill that are more nearly in accord with the rates paid for similar work in outside industries.

"The western railroads want the 67½ cent rate to supplant the 77 cent rate for skilled shopmen, that is, first class journeymen mechanics; they also want and earnestly request that this Board not impose higher rates for less skilled positions than the rates paid by industries in contiguous territory, nor do they want to be compelled, through classification of work, to use the skilled journeyman mechanic on the rougher and lower grades of work. They ask that this Board fix rates for these lower grades more nearly comparable with the rates paid for like work in other industries in contiguous sections. In other words, they ask that the Board, after fixing the minimum rate for skilled journeymen mechanics, fix rates at a lower level for the lower grades of work, specifying the kind of work and the rate that would be paid for such work and fixing the rates so they will fall within the spread between the minimum rates for skilled journeymen mechanics and the maximum rates for regular and helper apprentices—for example, between the 67½ cent per hour rate we are proposing for skilled journeymen and the maximum 54 cent rate we are proposing for regular and helper apprentices."

The remainder of the Board's session on March 8 were taken up with the presentation of evidence by the chairman of western State and city committees who had supervised the gathering and compilation of the data regarding wages in other industries. In addition, representatives of several western carriers made separate representations outlining conditions peculiar to their properties.

White Creek Bridge, Fraser Canyon, on the C. P. R.

Labor Board Announces

New Rules for Telegraphers

A NEW SET of rules to govern the working conditions of telegraphers, telephone operators (except switchboard operators), agent-telegraphers, agent-telephoners, towermen, levermen, tower and train directors, block operators and other similar employees, was announced by the Railroad Labor Board on March 4. The outstanding features of the new code, which becomes effective March 16, are the provisions for the payment of punitive overtime after the ninth consecutive hour of service, the provision permitting the employment of "split tricks" at one-shift offices provided the actual tour of duty of eight hours comes within a spread of twelve hours, the provisions giving regularly assigned telegraphers a guarantee of one day's pay within each 24 hours, and the provisions prohibiting the employees covered by the new rules from carrying United States mail and parcels post where this work becomes "unduly burdensome" and from attending interlocking or switch lights except to see that they are kept burning.

The rules in this new "national agreement" covering the basic eight-hour day, intermittent service, overtime, punitive payments for calls and free transportation are similar to those which have already been granted by the Board to cover other classes of employees and described in previous issues of the *Railway Age*. The intermittent service rule, giving the carriers the right to employ men on "split tricks" without punitive payments is exactly the same as the rule recently given to the clerks and firemen and oilers and reproduced in the *Railway Age* of January 28, page 277. The overtime rules provide for the payment of punitive overtime after the ninth hour of consecutive service, and the call rule provides for the payment of a minimum of three hours for two hours' work or less when the service performed is not continuous with the regular tour of duty.

Other Rules in the New Code

The remainder of the rules in this new code include the following:

Rule 1. Scope.—This schedule will govern the employment and compensation of telegraphers, telephone operators (except switchboard operators), agent-telegraphers, agent-telephoners, towermen, levermen, tower and train directors, block operators, staffmen, and such agents as may be included by the operation of the second paragraph of this rule, and will supersede all previous schedules, agreements and rulings thereon.

The disputes as to what exclusive agents shall be covered by the rules are remanded to the representatives of the parties on the individual carriers for further negotiation.

Rule 6. Meal Period.—Where but one shift is worked, employees will be allowed 60 consecutive minutes between 11.30 and 1.30 o'clock day or night for meal.

If the meal period is not afforded within the allowed or agreed time limit and is worked, the meal period shall be paid for at the pro-rata rate; and 20 minutes, with pay, in which to eat shall be afforded at the first opportunity.

Rule 7. Starting Time.—Regular assignments shall have a fixed starting time and the regular starting time shall not be changed without at least 30 hours' notice to the employees affected.

Where three consecutive shifts are worked covering the 24-hour period no shift will have a starting time after 12 o'clock midnight and before 6 A. M.

Rule 8. Sunday and Holiday Work.—Employees will be exempt from Sunday and holiday duties as much as the condition of business will permit.

Time worked on Sundays and the following holidays—namely, New Year's day, Washington's birthday, Decoration day, Fourth of July, Labor day, Thanksgiving day, and Christmas (provided after any of the above holidays fall on Sunday the day observed in the United States or by proclamation)—shall be considered as "holidays" and be paid for at the regular hourly rate when the extra number of hours constituting the regular week-day assignment are worked.

When called or called to work on Sundays and the above specified days a less number of hours than constitute a day's work

within the limits of the regular week-day assignment, employees shall be paid a minimum allowance of two hours at overtime rate for two hours' work or less, and at the regular hourly rate after the second hour of each tour of duty. Time worked before or after the limits of the regular week-day assignment shall be paid for in accordance with overtime and call rules.

Rule 9. Basis of Pay.—All employees herein specified will be paid on hourly basis.

Rule 10. Guarantee.—Regular assigned telegraphers will receive one day's pay within each 24 hours, according to location occupied or to which entitled, if ready for service and not used, or if required on duty less than the required minimum number of hours as per location, except on Sundays and holidays.

This rule shall not apply in cases of reduction of forces nor where traffic is interrupted or suspended by conditions not within the control of the carrier.

Rule 11. Discipline—Pay for Time Lost.—If the final decision decrees that charges against the employee are not sustained the record shall be cleared of the charge; if suspended or dismissed, the employee will be returned to former position and paid for all wages lost less amount earned in any other service.

Rule 12. Suspension of Work During Regular Hours.—Employees will not be required to suspend working during regular hours or to absorb overtime.

Rule 14. Classification of Employees, New Position, etc.—Where existing pay roll classification does not conform to Rule 1, employees performing service in the classes specified therein shall be classified in accordance therewith.

When new positions are created compensation will be fixed in conformity with that of existing positions of similar work and responsibility in the same seniority district.

Rule 15. Attending Court—Witnesses.—Employees taken away from their regular assigned duties, at the request of the management, to attend court or to appear as witnesses for the carrier will be furnished transportation and will be allowed compensation equal to what would have been earned had such interruption not taken place and, in addition, necessary actual expenses while away from headquarters. Any fee or mileage accruing will be assigned to the carrier.

Rule 16. Handling Train Orders.—No employees other than covered by this schedule and train dispatchers will be permitted to handle train orders at telegraph or telephone offices where an operator is employed and is available or can be promptly located, except in an emergency, in which case the telegrapher will be paid for the call.

Rule 17. Handling United States Mail.—When the carrying of the United States mail and parcels post by the employees herein specified becomes unduly burdensome, or interferes with the proper operation of trains, they will be relieved from such work.

Rule 18. Handling Switches, Attending Switch Lights, etc.—At stations where section men reside or porters or helpers are employed, employees as per Rule 1 will not be required to attend interlocking or switch lights, but will see that they are kept burning.

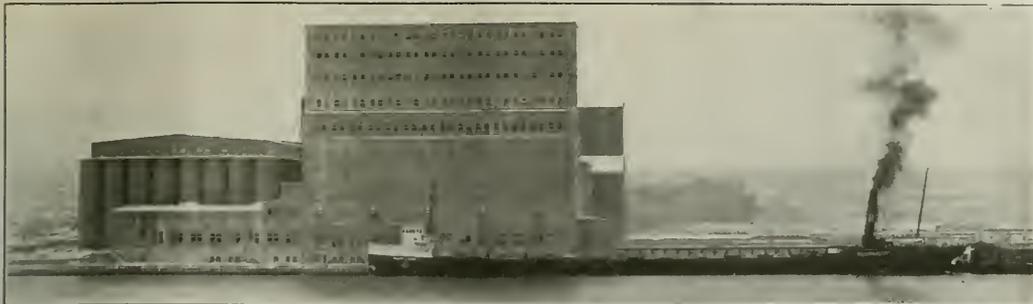

At stations where employees as per Rule 1 are required to care for interlocking or switch lights they will be allowed 75 cents per light per month, with a minimum of \$3 for four lights or less.

Rule 19. Regular Assigned Men Doing Extra Work.—Regularly assigned telegraphers will not be required to perform relief work except in cases of emergency and when required to perform relief work, and in consequence thereof, suffer a reduction in the regular compensation, shall be paid an amount sufficient to reimburse them for such loss, and in all cases they will be allowed actual necessary expenses while away from their regular assigned stations.

Rule 20. Express and Telegraph Commissions.—When express or Western Union commissions are discontinued or created at any office, thereby reducing or increasing the average monthly compensation paid to any position, prompt adjustment of the salary effected will be made conforming to rates paid for similar positions.

Rules governing seniority, promotions, discipline and grievances and vacations and sick leave with pay and "certain other subject matters in dispute" are remanded to the individual carriers and their employees "for the purpose of adjustment under the provisions of Section 301 of the Transportation Act."

THE "I. D. & B. C." (the Edmonton, Dunvegan & British Columbia Railway) has brought to Edmonton, Alberta, during the past six months about 1,500,000 bushels of wheat, oats and barley from Peace River and Grande Prairie districts. 718,624 bushels wheat, 676,983 bushels oats, and 100,699 barley or a total of about 900 cars, or, say, 35 cars a week.

A Government Railway Elevator

Problem of the Government Railways in Canada*

Large Deficit in 1920 Has Led to the Investigation of Expenses, Operation and Management

By W. T. Jackman

Associate Professor of Economics, University of Toronto, Toronto, Can.

AT THE TIME of the acquisition of the Canadian Northern in 1917, through the purchase of the remaining \$60,000,000 of common stock, the government declared its intention of operating this property, for the time being, through the corporate machinery by which it had been operated previously, but under a reorganized board of directors named by the government and free from political influence or interference.

In June, 1919, the Canadian National Railways Act was passed, providing for the administration of all railways that had been or might be acquired subsequently by the government, under a Canadian National Railways Board, to be appointed by the governor-in-council, but although two years have elapsed this board has not yet been formed. Consequently, the management of the former Canadian Northern is still carried on by the old operating staff under a reconstituted directorate. For operating purposes there was added to this railway system the lines of the Intercolonial, the National Transcontinental and the Grand Trunk Pacific, the latter of which has been in the hands of the minister of railways as receiver since March 9, 1919.

Deficit of \$70,000,000 In 1920

The financial results of the management of this system show that for the year 1919 there was a deficit in operating expenses and fixed charges amounting to \$48,242,536, while for the year 1920 the corresponding deficit was almost \$70,000,000. These figures do not take into account any interest on the capital of the National Transcontinental and the Intercolonial. To add \$12,000,000 for the interest on the capital of these lines would bring the deficit up to \$82,000,000 for the government-owned railways; but as the capital for these roads was furnished by the government and interest payments therefore would be made by one branch of the government to another, we may neglect this item entirely. A deficit of \$70,000,000, however, calls for explanation and when we note that the deficit of 1920 was almost 50 per cent greater than that of the previous year we have a condition which demands serious attention.

With these facts placed before the country there was an

insistent demand in Parliament for an investigation of the affairs of these railways. This, together with the fact that the operation of the Canadian government merchant marine was not satisfactory either financially or otherwise, led to the organization of a Committee on Canadian National Railways and Shipping, composed of members from the three parties in the House to inquire into:

1. What information as to the government railways and marines should be given to Parliament, and when and how such information should be given.
2. What system of auditing should be adopted and what details should be given in the annual report.
3. What, if any, improvement could be made in the general plan of management.
4. Whether and for what purposes this committee should be continued.

As will be noted from the terms of reference, there was much contention as to what information should be given to the public. Some were opposed to making public anything more than the main outstanding facts; others considered that, since the people have to finance the railways, complete details should be placed before them as to the methods and results of operation. The chief objections urged by members of Parliament to giving full information to the people were: first, that in this way the railways would become, as the Intercolonial has been, the football of politics, and second, that thereby all the facts would get to the Canadian Pacific and would be used by the latter against its rival, the government-owned system. These difficulties, especially the latter, were given little attention by the management of the government system. To the latter the important reason why certain things should not be made public was because it would make the administration of the national lines much more difficult, when past contracts were made and prices paid, as well as proposed future business, were laid open to the eyes of all.

Reasons For Deficit

It is desirable to note the chief reasons for the increasing railway deficit, as these were brought out in the course of the investigation.

1. *High wages.* For every dollar earned by the Ca-

*This is the first of two articles on this subject. The second will appear in an early issue.

Canadian National Railways, 75 cents were spent for wages, 20 cents for fuel, and 29 cents were required for other materials and miscellaneous expenses in order to earn the dollar. These high wages were due to certain conditions which prevailed in the United States and were made applicable to Canadian railway labor. In 1918, after the government of the United States had taken control of the railways, the "McAdoo award" raised the wages of railway employees, and this was followed by 23 supplements to adjust the wages of the men in the different trades, which added more to the payrolls than the original award. Then in 1920, after further agitation on the part of labor, the "Chicago award," made in September, raised the wages of labor still more and rendered this increase retroactive to May 1. Of course, the railways were allowed to raise their rates after September, but as this was not retroactive the extra wages given from May 1 to that date were equivalent to a hand-out to the men, for which the railways received no return.

To show the extent to which wages have been increased for the various classes of railway labor, the following table of schedule rates of pay is given. It must be emphasized here that these do not include allowances or overtime rates, which have been a source of enormously high wages in many cases without any compensating return to the railways.

Class of employee and rate	Per cent increase									
	1918			1919			1920			
	1917	1918	1919	1917	1918	1919	1917	1918	1919	
Sectionman, hour....	\$0.19	\$0.25	\$0.40	\$0.48	31.6	110.53	155.26	over	over	over
Machinist, hour....	0.37	0.68	0.68	0.85	83.8	83.8	129.7	1917	1917	1917
Agent, Teleg., month.	66.00	85.00	111.00	125.00	28.8	68.2	89.4			
Conductor, passenger, 100 miles.....	2.90	3.35	4.00	4.67	12.1	37.9	61.0			
Conductor, freight, 100 miles.....	4.00	4.82	5.40	6.44	20.5	35.0	60.1			
Brakeman, passenger, 100 miles.....	1.60	2.23	2.66	3.33	39.4	66.2	108.1			
Brakeman, freight, 100 miles.....	2.67	3.72	4.08	5.12	39.3	52.8	91.8			
Engineer, passenger, 100 miles.....	4.11	4.57	5.60	6.40	11.2	36.2	55.7			
Engineer, freight, 100 miles.....	4.53	5.23	6.08	7.12	15.4	34.2	59.4			
Fireman, passenger, 100 miles.....	2.50	3.15	4.00	4.80	26.0	60.0	92.0			
Fireman, freight, 100 miles.....	2.85	3.69	4.24	5.28	29.4	48.8	85.3			

From this table it will be observed that the unitary rate of wages increased in 1920 over that of 1919 by very large percentages. For instance, for sectionmen the increase was roughly 45 per cent; for machinists, 46 per cent; for conductors, 25 per cent; for brakemen, 39 to 42 per cent; for engineers, 19 to 25 per cent; and for firemen, 32 to 36 per cent. But these figures fail to tell the whole story. Before the "McAdoo award" the total yearly wages paid on the Canadian National Railways were \$43,265,881.79. The 23 supplements to that award increased this by \$13,013,954.92. The increase due to the "Chicago award" was \$10,390,895.58. Thus the pay-roll per annum was increased from \$43,265,881 as at June 30, 1918, to \$81,347,880 in 1920; in other words an increase of 88 per cent in two years. This does not take into account the increase in labor that was required to handle the increased business, nor a lot of the overtime conditions which, because they changed from time to time, it was impossible to figure. Moreover, under the retroactive features of the "Chicago award" a gift of \$4,881,885 had to be made to the men.

High cost of fuel and other materials. As we have said, 20 per cent of all earnings had to go for fuel. The average price paid for coal during a succession of years may be set down as follows:

1914	\$6.65 per ton for Canadian Northern System
1915	4.41 per ton for Canadian Northern System
1916	6.60 per ton for Canadian Northern System
1917	6.00 per ton for Canadian National Railways
1918	7.40 per ton for Canadian National Railways

The total increase in the fuel cost of 2,800,383 tons at an average price of \$6.20 per ton in 1919 and 3,066,344 tons at an average price of \$7.40 per ton in 1920 would be \$5,

328,571. The cost of ties also increased from an average of \$3.4 cents to 91.6 each, and this, with the greater use of ties, made the expense bill for ties in 1920 \$512,798.90 more than that of 1919. The cost of most other materials increased even more than that of ties.

Leaving out of account, for the time being, everything else than wages, from what we have already shown concerning the vast increase in the amounts paid for labor, it is easy to account for the increased deficit in 1920 over that of 1919. For if we take the increase in the wage bills in the two years, from \$43,000,000 to \$81,000,000, or an average yearly increase of \$19,000,000 and add to this the amount of the retroactive payment under the "Chicago award," namely \$4,800,000 which is a payment for the year 1920, we shall get \$23,800,800; and this amount added to the \$48,000,000 deficit of 1919 will make up that deficit to over \$70,000,000 for 1920. It is evident, then, that the increase of wages alone is sufficient to account for the increased deficit noted.

But it is thought by many that the increased rates granted to the railways were enough to compensate for the higher wages paid to labor. What were these increases? On December 1, 1916, there was allowed a freight increase of 5 per cent on lines east of the Great Lakes, but no increase on the Western lines. In March, 1918, there was an increase of 15 per cent on all lines. In August, 1918, there was an additional increase of 10 per cent. On September 13, 1920, there was an increase of freight rates of 40 per cent on the eastern lines and 35 per cent on the western lines. But there were a great many commodities to which the increased rates did not apply, and the average increase on the Canadian National System was only 27.45 per cent. This increase in rates was not proportional to the increased costs of labor and materials. Then on January 1, 1921, these rates were automatically reduced 35 per cent on the eastern lines and 30 per cent on the western lines, and the new average yield to the National system was 23.22 per cent. It is manifest, therefore, that the net increase of rates was much less than the gross increase would imply.

3. Another reason for the great deficit of 1920 was the large amount of deferred maintenance charges, and all these were charged to operating expenses, not to capital. During the four years of war a great amount of the expenses for maintenance-of-way and structures and for maintenance of equipment was necessarily postponed, and then when the war was over there had to be much greater expenditures to bring the property up to the operating standard, so as to be in a position to compete with other lines operating through the same country. Then, on the prairies, a large proportion of the lines was originally laid with 60-lb. rails, and with the growth of traffic on some of these lines it has been found desirable to use heavier cars and locomotives, which, in turn, has necessitated replacing the light steel rails with rails of 80 lb. or 85 lb. Of course, part of this expense for heavier rails could be charged naturally to capital. The following comparison of expenditures for the years 1919 and 1920 is instructive:

	1919	1920	Total increase	Per cent increase
Maintenance of way and structures.....	\$48,476,440	\$117,759,133	\$ 69,282,693	22.06
Maintenance of equipment.....	19,540,469	77,945,511	58,405,042	40.15

This increase of \$14,000,000 in the maintenance of the properties and facilities of the National lines for one year represents a heavy drain upon earnings, and, taken in connection with the very high wages and costs of materials and fuel, must have been a potent cause leading to the financial deficit. Then, too, at the close of the war there was a general feeling that public expenditures should not cease immediately, but, on the contrary, should be continued for some time, and acting upon this the directors of the National railways recommend to the government a program of betterments which would improve greatly the position of this sys-

tem from a competitive standpoint. The government acquiesced in these expenditures and the management set to work to develop the property to enable it to provide good service for which everybody was clamoring. This policy provided work for many who would be otherwise without it, and possibly the scale of betterments undertaken was altogether too liberal for the revenues of the lines, though not too generous for the building up of the property as a competitor of the Canadian Pacific.

Political Background

Some have thought that one reason why the National Railways have not paid was because political interference had already become evident in the affairs of the system, and it has openly been stated by at least one of the papers friendly to the government that "the pretense that these railways are now free from politics deceives nobody." To this statement the management of the system gives a categorical denial. The vice-president in charge of operation and maintenance was asked concerning the appointment, promotion or transfer of an officer, "Have you ever been influenced by any person or from any quarter other than your own judgment as to what was in the best interests of the service?" His answer was, "No, I have not." The president was asked, "In the employment of your men, are you approached frequently by members of Parliament or members of the government, or are you being given a free hand, or are you being embarrassed?" His answer was: "We are not the slightest embarrassed at all. Of course, I have got letters." He plainly states that the management of the road is not prejudiced by political intervention even to the slightest extent, and that there is no over-manning of the system by red tape and duplication. It is acknowledged that those who are responsible for the administration of these railways receive letters from members of Parliament offering suggestions as to employees, etc., although not to any extent.

Another viewpoint, however, is presented by one of the board of directors who has stated that, "Until the millennium comes I don't see how it is possible for governments to own railways anywhere in the world without political influence creeping in somewhere." He acknowledged that thus far he had seen nothing of this kind in connection with the National Railways, but that the possibility of it is always present and that he could see no way of getting rid of it. So long as the government appoints the board of directors and can dismiss any or all of them at any time and put others in their place—so long as it can remove any of the officials of the system and substitute others—there will be suspicion in the public mind that the management is not given a free hand. Whether there shall be much or little interference on the part of the government will depend largely on the personnel of the directors and to a less degree on the needs of the railways.

Other Rumors of Influence

There is also the impression in the country that the board of directors of the National Railways is too closely related with other interests to be able to see the welfare of the railways in an impartial way. It would be unnatural that a director of the railways, who was at the same time a director of a railway equipment concern, should not want the railways, when in need of rolling stock, to purchase from the manufacturing firm of which he was a director. It is not necessary that he should profit financially by such a transaction in order to want it consummated; directors are honored according to the success they have had in the administration of corporate enterprises and if they can make their connections in a business way contribute to the up-building of the respective concerns of which they are directors who shall say that it should not be done?

On the board of directors as at present organized there are

members who are also presidents, vice-presidents or directors of 48 other companies, and many of the latter are in position to sell to the National Railways large amounts of the materials and equipment which they would require. We must not be understood as giving any credence to the statement that these relations are made effective in this way; in fact, one of the vice-presidents of the National System denied absolutely that there were any preferred relations between the railway management and the companies which had some of the same directors.

In purchasing supplies the almost universal rule was to call for tenders and the lowest tenderer invariably received the order so long as quality, deliveries, etc., were acceptable. The words of the president are amply confirmatory of this. He said: "The railway company buys everything by tender And I am very sorry that it is so because I think we get it in the neck very often, in regard to our prices. . . . Under the old conditions when we were carrying on as a private corporation we rarely appeared in print as to tenders for this, that and the other thing. It is human nature that when we call for tenders for ties materials that a few of them get together and say, 'Now, they are bound to buy these ties. We cannot all get the contract, but we can fix the price so that we will all be in it somewhere before we get through.'"

This acknowledgment that the public railway system, by buying rolling stock, material and supplies by tenders, frequently paid higher prices than were paid when the Canadian Northern was operating as a private concern, accords entirely with the statements of an officer of the Canadian Pacific who said: "No, we do not (advertise for tenders). We do not think it is wise. It has only one advantage, that is of raising the price to the purchaser because the moment the manufacturers find out the railway is in the market for a large quantity of material, they immediately meet and raise the prices." The system of the National Railways in advertising for tenders is evidently not so economical as the Canadian Pacific system of purchasing through private or personal negotiation, but it has the advantage of carrying on the purchasing in the open market without any ostensible favoritism.

But while, perhaps, it cannot be said with truth that other companies profited from the publicly-owned railways through the community of directors, the words of President Hanna in this connection are well worth pondering: "I should say that under a new administration it would be better for everybody who had anything to do with the National Railway to eliminate themselves from anything else but the National System." If this were done there would be some radical changes both in the directorate and the management, for even some of the latter have very close connections with the corporate life of the country. On the other hand, if, as so many assert, the important thing is to secure a "business administration" by "good business men," it will be impossible to dissociate these railways from the country's industrial, commercial and financial interests.

Contrast With Canadian Pacific

The question has been asked, Why should the Canadian National Railways show a large deficit in 1920 when the Canadian Pacific, subject to the same external influences, paying the same rates of wages and charging the same tariffs for freight and passengers, was able to pay all its operating expenses and fixed charges and have a good balance for the payment of dividends to its stockholders? The answer to this question given by the vice-president of the Canadian National Railways in charge of finance is as follows:

The Canadian Pacific runs through a well-developed territory, while the Canadian National lines are in a large measure pioneer roads put through sections which have only recently been opened up. Consequently, the Canadian

Pacific has a much larger volume of business and when its greatly increased working expenses are spread over a larger tonnage the unitary expense of operation is correspondingly reduced and so the net earnings are maintained or increased.

The Canadian Pacific can also concentrate its traffic into heavier train loads and in this way reduce the actual movement expenses. For instance, its average freight train load in 1920 was 529 tons, while that of the National System was only 383 tons. This was possible because of the much larger traffic density on the private line, which was 1,207,269 tons, as compared with 588,359 tons on the government system. Similar advantages for the Canadian Pacific are found in the passenger business. Its passenger density (that is, the number of passengers carried one mile per mile of line) was 132,233 as compared with 54,075 on the National lines, and the average length of journey per passenger was 102.45 miles as compared with 58.66 miles on the National System.

As a result of these conditions of more economical operation on the Canadian Pacific, its passenger train earnings per train mile were \$2.81 as compared with \$1.73 for its competitor, and its total passenger train earnings per mile of road were \$4,844.78 as compared with \$1,857.77 for its competitor; while the freight earnings per train mile were \$5.50 and the freight earnings per mile of road were \$11,072.83 on the Canadian Pacific as against \$3.76 and \$5,763.27 respectively on the National lines. The heavier train loads on the Canadian Pacific, which can be carried at very little more expense than the lighter train loads of the National system, give a financial economy to the former which is impossible at present to the latter, and is a large factor in making the difference between operating profit and operating deficit. In the words of the above-mentioned official, this is "the whole story."

We are inclined to disagree with the latter statement. It takes more than merely physical operating conditions to make the difference between profit and loss. The clientele which has been built up gradually through the rendering of good service to the public; the allegiance of the whole staff to the directing minds; the pride in the success of the organization—these and many related factors must also be taken into consideration in showing why the Canadian Pacific has been able to meet successfully the recent and present emergency and to show its favorable operating results. In partial extenuation of the unfortunate results on the Canadian National System we must keep in mind that this system maintains and operates a transportation network equal in mileage to the Canadian Pacific, with practically one-half of the traffic, and as the overhead costs relatively to the traffic are necessarily greater the cost of maintenance is likewise very much greater.

Attitude of Government and Management

What has been the attitude of the management and of the government towards these annually increasing deficits on the National lines? The fact that the government appointed a committee to inquire into this railway system would seem to indicate that it was very much alarmed at the results, particularly of the last year. But when we look closely at the subjects into which the committee was to inquire there is nothing in the reference to indicate that the government was at all troubled over the financial condition of the system.

The minister of railways, in making his annual report said, "I hope I have made it clear that the result of the operation of the Canadian National Railways was not worse than obtained generally on the other side of the line (United States) and across (England). Notwithstanding the outlook I have shown, I am still a firm believer in the ultimate success of our National Railways. But success depends on how they are managed." Then he declared that the solution of the problem was to have a conference of the

management and employees in order to reduce wages so that freight rates might be reduced, without which the future advancement of the country would be interfered with.

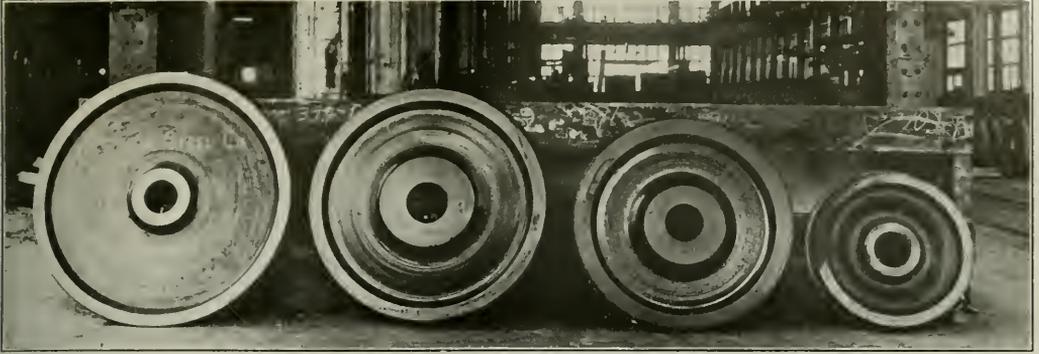

In other words, his policy was to put the whole problem before the management and have them solve it by wage reductions.

Some other members of the government considered that this was a serious matter and that both sides of the house should get together to find a solution of it. But behind all such declarations there seemed to be an attitude of something like indifference, as if they would say: "This is a bad situation, but in a few years when the country grows up this condition will change and everything will come out right in the end." On the part of the management there seemed to be a well-defined conclusion that "the indirect benefit which the country is receiving from the National System will in a large measure offset the temporary loss that the country is suffering in the deficit," but just what the "great many indirect benefits" are was not stated.

Time would be necessary in order to overcome these deficits, for the country would have to grow up to the measure of its transportation facilities before these railways could be put upon a satisfactory basis. The gradual improvement of the system and the progressive development of the country through which these lines run, with the consequent increase of traffic were the ameliorative factors which were emphasized to bring the system out of its condition of chronic deficits and place it upon a firm foundation. But in order to increase the volume of business it was considered necessary that the public should begin to realize that the National System is owned by the people, that it is dependent upon them for traffic and that their co-operation is absolutely necessary for the success of the enterprise.

One of the directors said: "My conviction is there can be no real success for the government railways until the people of Canada thoroughly realize that they are the shareholders and own the road. They do not realize that now." The same viewpoint was expressed by one of the vice-presidents: "I do not think that the people of Canada as a rule appreciate that they own a National System, and if that were thoroughly understood I think that the needs of the National System would largely be taken care of." Even the president had to complain that he "would like to see a better appreciation of the fact that we have a government road" and that the people "fail to give to their own property that consideration that we have every right to expect"; in fact, he "found that in certain sections there is an indifference, and people do not care whether things go well or not." Members of Parliament, the government and its departments, and private citizens made their shipments, sent their telegrams and traveled by the Canadian Pacific when the same facilities and service could be secured by the publicly-owned agencies. If this were at all general, it is not surprising that the management felt "very hot about it." The officials of the National System did not want all the business to go by their lines, they did not want to do anything to injure such a great national institution as the Canadian Pacific. All they wanted was a chance to compete on an even basis with their great rival.

RAILWAY ASSESSMENTS IN NEW JERSEY as affirmed by the Supreme Court on February 21 are reduced materially. About three millions is taken off the valuation of shore-front property on three roads in Hudson County. The local valuations were appealed by the railroads to the County Board, which refused to make any reduction. The reductions by the state board were as follows: Central Railroad, \$16,145,505 to \$14,645,505; Lehigh Valley, \$7,614,545 to \$6,330,487; Pennsylvania, \$6,179,200 to \$6,174,300. The Erie assessment stands at \$1,404,200, the amount fixed by the local assessors.

Four Sizes of Wheels Rolled on the Same Mill; Right to Left, a 33 in. Freight Car Wheel, 44 in. and 50 in. Trailer Wheels and a 53 in. Special Wheel.

Rolled Steel Trailer Wheels for Locomotives

Edgewater Steel Company Produces Large Sizes for This Purpose
—Method of Manufacture

DURING RECENT YEARS rolled steel wheels have come into extensive use where steel tired wheels were formerly employed. The latest example of this tendency is found in the application of special rolled steel wheels on the trailing trucks of locomotives. These wheels have been developed by the Edgewater Steel Company of Pittsburgh, Pa., at the suggestion of an eastern railroad.

This extension of the field of rolled steel wheels is due to advantages in first cost and maintenance coupled with the high degree of reliability demanded for the most exacting service. Formerly steel tired wheels were favored for trailer trucks because the tires could be changed readily. On modern locomotives the trailing axles have outside bearings and the wheels must be dropped to change the tires. It is often cheaper to change the wheels and send the parts to the shop

for turning than to remove the tires and shrink on a new set. Where this is the case, rolled steel wheels are often preferred.

In developing the roller trailer wheels it was found that the requirements for practically all classes of locomotives could be met by two sizes of wheels, 44 in. and 50 in. diameter with $5\frac{1}{2}$ in. by 3 in. rims. The hubs are $8\frac{1}{2}$ in. long and the diameters of the faces, 16 in. and 19 in., the large face being placed inside or outside as desired. The two sizes of wheels mentioned will fit in almost any trailing truck, but other sizes can be made if necessary. One of the illustrations shows four sizes of wheels produced by the Edgewater Steel Company: a 33 in. wheel for freight cars, 44 in. and 50 in. trailer wheels and a 53 in. wheel which was rolled to demonstrate the capacity of the mill.

Although rolled steel wheels are used extensively, few

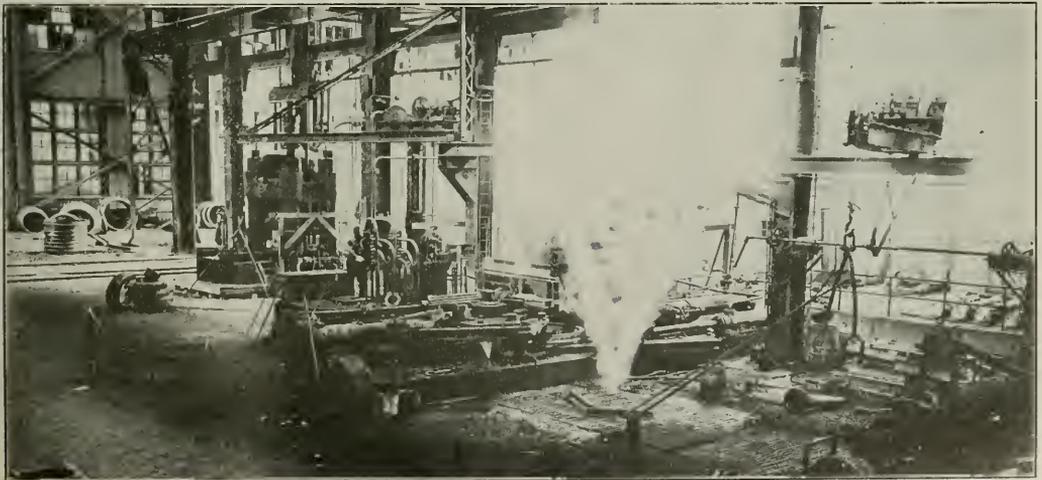

Fig. 1. Special Rolling Mill, Driven by 1,000 Hp. Motor, on Which Wheels and Tires Are Made

railroad men know except in a general way how they are made. The method of manufacture, especially that used by the Edgewater Steel Company, is most interesting.

The first step in producing rolled steel wheels is to make suitable steel. The specifications of the Mechanical Division of the American Railway Association call for the following chemical composition when the steel is made by the basic open-hearth process.

Carbon, 0.65 to 0.85 per cent.
Manganese, 0.55 to 0.80 per cent.
Silicon, 0.10 to 0.30 per cent.
Phosphorus, not over 0.05 per cent.
Sulphur, not over 0.05 per cent.

The Edgewater plant has four open-hearth steel furnaces; two of 75 tons capacity, one of 50 tons capacity, and one of 25 tons capacity. The steel is tapped into ladles and poured into ingot molds which are filled from the bottom in order to reduce the occlusion of gases and insure sound ingots. The composition of the steel is carefully controlled during the making by chemical and physical tests of each heat.

The ingots are allowed to cool and are cut into blocks in slicing lathes, as shown in Fig. 2, the size of the block de-

rolls. These are mounted on a carriage which can be moved toward or away from the main roll at the will of the operator, thus controlling the diameter of the piece being rolled. In this way the diameter of the piece is maintained until the flange and rim are fully formed by the rolls and then increased to the finished size.

The wheel is next transferred to a 2,500-ton hydraulic press where it is dished, giving the hub the required offset from the rim. During this operation the heat number and any other markings required are stamped on the wheel. After the wheels come from the press, they are allowed to cool, after which the hub is bored and faced and the groove showing the limit of wear is cut in the outside of the rim. The wheels are then measured and marked with the tape size, after which they are ready for mounting.

There are two unique features in this method of manufacturing wheels: the piece is developed from the block to the finished wheel in a single heat and the rim is worked on all sides throughout the rolling process. The thorough working of the metal and the low finishing temperature insure the proper structure of the steel in the finished wheel.

The method of making tires for locomotive or car wheels

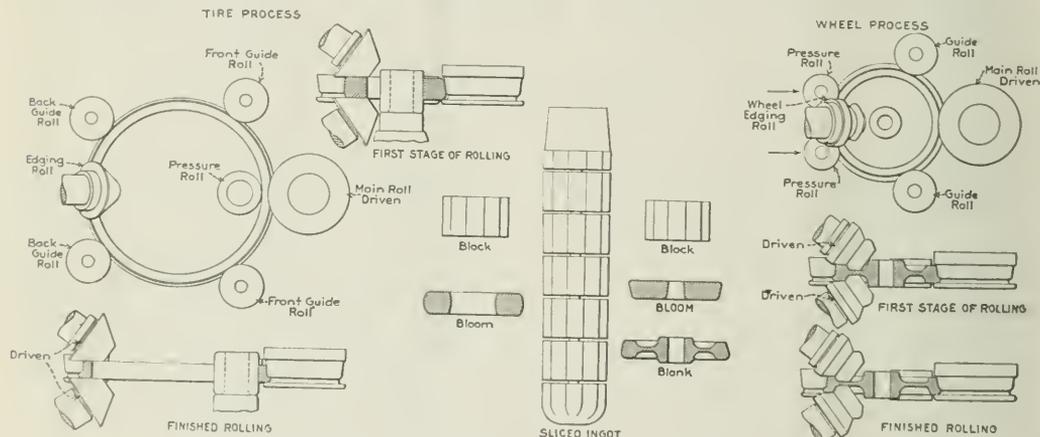

Fig. 2. Successive Steps in Converting an Ingot Into Rolled Steel Wheels or Tires

pending upon the size and type of wheel to be made. The crop end of the ingot is discarded and the blocks are carefully inspected for defects.

The blocks which pass inspection are reheated in a special type continuous furnace which brings the entire block gradually up to a uniform forging heat. From the furnace the block is carried by a semi-automatic conveyor to a 6,000-ton hydraulic press. The first operation on the press is to flatten the block to approximately the width of the wheel rim, this operation serving also to remove the scale. The center is punched out and then the bloom is placed in a set of dies and pressed to the shape of the blank shown in Fig. 2. The blank as it comes from the dies has a hub of the correct dimensions but the diameter over the rim is less than that of the wheel to be made and the rim has no flange.

The finished blank as it comes from the dies is transferred immediately to the rolling mills. One of these mills is illustrated in Fig. 1 the details of the arrangement of the rolls being shown at the right in Fig. 2. By reference to the latter illustration it will be noted that the wheel is held on the rim between seven rolls, the main driven roll shown at the right, two guide rolls, two edging rolls and two pressure rolls mounted between the edging rolls. The actual rolling of the metal is done between the pressure rolls and the edging

is in many respects similar to the process of making rolled steel wheels and the same machinery is used. The various steps in this process are shown at the left in Fig. 2. In preparing the bloom the center hole is enlarged in order that the bloom may be passed over the pressure roll. The flange is formed in the main roll while the top and bottom edging rolls maintain the proper width of the tire. In rolling tires two mills are used, the roughing mill forming the flange and drawing the tire partly to size, after which the rolling is finished in the second mill. In making tires, as in wheels, all sizes are rolled at one heat, thus insuring all the advantages of a low finishing temperature.

VARIOUS RECORDS of the Nashville, Chattanooga & St. Louis were destroyed in a fire which burned a building of that company in Nashville, Tenn., on March 3, estimated total loss \$50,000.

FIFTY PER CENT is the reduction reported by the Philadelphia & Reading in the number of fatal accidents to employees in 1921, as compared with 1920; sixty-eight killed in the last year and 34 in the year before. There was also a material reduction in the number injured.

Arguments Before I. C. C. in General Rate Case

Counsel for Carriers Urge No General Reductions in Rates or Percentage of Return at This Time

WASHINGTON, D. C.

THE RATE HEARING before the Interstate Commerce Commission reached its final stage on Wednesday, March 8, when the oral arguments before the full membership of the commission were begun by the railroads. Eight hours were allotted for argument on behalf of the carriers and 12 on behalf of the shippers and state commissioners, which would bring the hearing to a conclusion on Saturday, March 11. The hearing of testimony was concluded on March 4 after which there was an adjournment for two days. The argument was opened by Henry Wolf Bikle, assistant general counsel of the Pennsylvania, on behalf of the eastern carriers, who said the roads were unanimous in the belief that no general reductions in rates should be made at this time.

H. W. Bikle for Eastern Roads

Mr. Bikle stated that the economic situation now confronting the country has a wider basis than the rates and fares of the railroads. It is a result of the dislocation of industry and the destruction of values produced by the World War, he said and that until this dislocation is corrected and new values created by productive effort, real prosperity cannot return. This return will necessarily be gradual, and any effort to accelerate it artificially by striking at the transportation industry would produce reactions which would defeat the very purpose intended to be accomplished.

He stated that the commission's finding in 1920 as to the aggregate value of the eastern carriers' property indicated that they earned, during 1921, only 3.3 per cent as against the 6 per cent to which they were entitled under the law; that for the last six months of 1921 their earnings were only 4.49 as contrasted with the 6 per cent to which they were entitled under the law; that while expenses of operation have been to some extent diminished, they have not been diminished so as to permit further general reductions in rates, unless preceded by reductions in wages.

The general reductions already made, particularly with reference to farm products, etc., have constituted a substantial inroad on the already depleted revenues of the carriers, and, with the financial condition of the railroads what it is, further experiments of this kind involve the possibility of the most serious consequences to the railroads, as well as ultimately to the public.

Mr. Bikle stated that the evidence showed that a 1 per cent reduction in freight rates would mean something over \$40,000,000 to the carriers of the country; that no one seemed to think that any stimulation of business would result short of at least a 10 per cent reduction, and that it was obvious that such a reduction would be impossible. He further said that the testimony indicated that no stimulation of business would result from reductions of this character since the depression in business had resulted irrespective of the reductions in prices made by producers, and that the small additional reduction which might be possible if the freight rates were reduced would certainly have no more effect than the large reductions in prices already made.

He further contended that, in view of the evidence as to the small profits which the shippers claim to be making, there is little chance of any reduction reaching the pockets of the consumer, and unless it did reach the pockets of the consumer, his buying power would not be increased, and consequently there would be no stimulation in business.

He also stated that the carriers strongly protest against any reduction in passenger fares, since clearly such a reduc-

tion would have no effect on business, referring to the testimony of Secretary Hoover, who had testified that in his judgment, "a decrease in passenger rates is not nearly so vital to the community as freight rates."

When Mr. Bikle said the rule to govern the commission's action in this case is to be found in section 15-a of the law, Commissioner Aitchison asked if he had considered what the commission should do if it should appear that it is impossible to make 6 per cent.

"I understand that is provided for in the law," replied Mr. Bikle. "The requirement is not absolute that the roads should be allowed 6 per cent. The law contains the words 'as nearly as may be.' You are only to try to reach that standard as nearly as possible."

Mr. Bikle said that with rare exceptions the shippers have recognized the serious situation of the carriers and have shown a considerate attitude which the carriers appreciate. He said there would be no justification for the fixing of a lower rate than 6 per cent and that the only evidence against the commission's tentative valuation of \$18,900,000 is that of Mr. Thorne's witness, Fred Pettijohn, who had presented a computation based on the tentative valuation reports already served of 182 roads, representing only about 10 per cent of the mileage. In urging the commission to prescribe 6 per cent he said the courts have recognized 6 per cent as the judicial minimum.

Commissioner Aitchison asked counsel to discuss the suggestion that the commission is not required to state a percentage but merely fix rates from time to time that will produce what it considers a fair return. Mr. Bikle said he thought the law clearly required the commission to state a percentage. Commissioner Hall asked if that meant that there was any dereliction on the part of the commission in failing to name a percentage on March 1. Mr. Bikle said he would not carry the point that far because it was not necessary since the roads were not asking for an advance in rates, but that it would be necessary if rates are to be reduced. The roads are merely asking the commission to continue the rule of Ex Parte 74. He could conceive of no more serious blow at railroad credit than a decision by the commission finding less than 6 per cent to be a fair return.

Commissioner Potter asked how a 6 per cent return for the carriers as a whole gives any assurance to the individual investor, as in the case of the New England roads. Mr. Bikle replied that while there is no guaranty, a 6 per cent aggregate return would at least give the New England investor a greater assurance than a 5 per cent return. Mr. Bikle said we know little about the future except that it is uncertain and he referred to the probable effects of a coal strike in reducing traffic. He said the statements that reductions in rates would be followed by a great stimulation of business are not founded upon evidence but represent rather only a wild guess.

"Does not 15-a require us to speculate?" asked Commissioner Aitchison.

"I think it rather requires you to act in the light of present conditions," replied Mr. Bikle.

Fred H. Woods for Western Roads

Fred H. Wood, commerce counsel of the Southern Pacific, urged the commission not to make any further reductions

in freight rates until there has been a further liquidation of operating expenses owing to the financial condition of the railroads of the country. He spoke for the western roads.

"No greater blow to the credit of the carriers, to the improvement of transportation facilities or to a renewed purchasing power upon the part of the carriers as an impetus to industrial activity, could be imagined than an order by this commission whereby a general reduction in rates is ordered, either as a whole or upon any substantial volume of traffic, whether upon the theory that business would be thereby stimulated, or through the medium of a reduced authorized rate of return," Mr. Wood said. "The maintenance even of present earnings and of the present upward tendency is involved in much doubt and uncertainty.

"Based either upon actual operations or upon the constructive year figures it is manifest that present and prospective earnings fall far below the standard of Section 15-a and cannot be substantially reduced without seriously imperiling the financial condition of the carriers, which has been at such low ebb throughout the entire 16 months since the close of the guaranty period, during which as a whole the average rate of return has been scarcely more than one-half of the standard set by Section 15-a and but little in excess of interest charges, many of which have not in fact been earned by many important carriers.

"The credit and financial position of the carriers has been maintained during this period largely through the hope of better conditions in the future, and it is inconceivable that in the face of the actual results of operation for the past six months and the computations made in the constructive year the commission will, by reason of the slight increase which these figures show over the 16 months' period as a whole, find it either lawful or expedient to neutralize the slight improvement which has already taken place by rate reductions, seriously affecting net earnings. Furthermore, when the figures for the month of January, 1922, the first month which reflects the cumulative effect of rate, wage and price reductions, are taken into account the utter un wisdom, not to say illegality, of orders reducing rates becomes manifest.

"Incomplete reports would indicate that the net operating income of the carriers in the Eastern district in January last were at the annual rate of return of 4.4 per cent on their tentative valuation, those in the Southern district, 2.6 per cent, and the Western district, 1.1 per cent, the average for the country as a whole being approximately 2.2 per cent.

"The cumulative effect of the rate reductions already made is illustrated by the fact that whereas the ton miles in the west show a decrease in January, 1922 of 6.9 per cent the gross revenues show a decrease of 15.8 per cent. Under these circumstances the commission must conclude that even without any allowance whatsoever for deferred maintenance, the past, present and prospective net earnings of the carriers are such that no reduction therein through a reduction in rates of a general character, either as applied to all traffic or any description thereof can safely be made without justice to the carriers or to the interests of the public."

Mr. Wood said that "with due allowance for deferred maintenance the present net earnings as well as prospective earnings indicate that the position of the carriers is substantially as perilous as that which continued through 1921 and little less critical than at the termination of federal control."

The commission will take a great responsibility if it orders a reduction upon the expectation that the traffic will be so stimulated thereby as to offset or more than offset the cumulative effect of such reductions upon the volume of traffic now being moved without the most convincing proof," added Mr. Wood. "If the matter is involved in doubt or left to speculation there can be no warrant for such action."

The usual argument in favor of the reduction in rates

upon the theory of stimulating business is speculative and artificial. The only definite and certain thing present in the situation is that by such reductions the carriers will be driven back to a position as bad or worse than that which faced them at the end of federal control. A business revival can be much more speedily and effectively brought about by a resumption of buying power upon the part of the railroads than by any other single event which can take place in our industrial life, and this buying power instead of being stimulated will be completely destroyed if the theory of those who advocate rate reductions for the purpose of stimulating business are to be governed."

Mr. Wood pointed out that the aggregate amount of money represented by reductions made since 1920 in wholesale prices is 15 times as great as the aggregate advance in freight rates made by the commission in its order effective August 26, 1920, but said that the lower price level had not stimulated demand which remains stagnant.

"To suggest," said Mr. Wood, "that the relatively small further reduction in prices, which might but probably would not follow a reduction in rates, would have this effect is to assume the incredible and to shut the eyes to the fundamental causes of business depression."

Mr. Wood said that exhibits filed with the commission show that there had been a "progressive and continuous drop" since September, 1920, in the prices of metals and metal products, the drop being "manifestly largely in excess of the decrease demanded in freight rates" but added that it has had no "apparent stimulating effect upon demand."

Mr. Wood pointed out that the passage of the transportation act was not an act of favoritism to the railroads but represented a recognition of the fact that production is nothing without distribution and that adequate transportation service is a national necessity.

"If, as believed," Mr. Wood said, "any general reduction would be inconsistent either with the strict letter or with the general purpose of the fundamental statutory provisions, this case comes to an end, and the disposition of rates on individual descriptions of traffic is relegated to the ordinary docket."

As to when reductions in rates may be expected, Mr. Wood said:

"The answer is easy. With a wage bill approximating the pre-war revenues no one has a right to expect pre-war rates. The carriers are now before the Labor Board seeking reductions in wages. The process is necessarily slow and cumbersome. This commission should make it plain to the public that these rates cannot be reduced until operating expenses are reduced through such wage reductions as the Labor Board shall find to be just and reasonable. It would not be right for this commission to anticipate its action. The railroads are on record in giving assurances that rates will be promptly reduced by the amount of any wage reductions."

Some of the commissioners asked Mr. Wood how the rate reductions would be made following a wage cut. He said he assumed the roads would then consider a plan and submit it to the commission for approval. Commissioner Potter remarked that so far as he was concerned, he would object to the railroads bargaining as to what they shall do with any saving they shall make, because the commission has some responsibility as to that.

Frank Gwathmey for Southern Roads

Frank W. Gwathmey, speaking for the Southern roads, said that there was a relatively small amount of testimony by shippers in this case referring to the southern situation. The carriers in the southern territory, he said, have exhibited the most unfavorable returns of any group of roads in the country. Their increases in rates have been less than those of other roads, averaging about 56 per cent, and they received less than they asked in Ex Parte 74. Since September, 1920,

the southern roads in each month have earned a less percentage than the other groups. For 1921 it was only 2.6 per cent. For the last half of 1921 it was 4.04 per cent. In the aggregate they failed to earn interest on their funded debt.

"It would be worse than idle," he said, "to assume that any percentage reduction in rates could have a greater effect on the movement of cotton than the great price fluctuations that have been made. The recent 10 per cent reduction made not even a flutter in the market. The crop is not there to move." There has also been a large shrinkage in the production and consumption of tobacco and fertilizer in spite of reductions in price, he said. Improvement in business in the south must necessarily be gradual, and it would be only slightly influenced by any reasonably possible change in freight rates.

State Commissions Ask Rate Reductions

F. W. Putnam of the Minnesota railroad commission, urged that the railroads "do their share toward the restoration of normal pre-war conditions." He spoke on behalf of a committee representing the western and southern states, asking the commission to find (1) that it is fully authorized to reduce rates on the ground that, under present rates and costs, with normal traffic, the carriers would earn a net railway operating revenue in excess of that contemplated by the act; (2) that the present rates are unreasonable under Section 1 of the act, and (3) that the passenger rates are unreasonable and higher than the traffic will bear and reduced rates will stimulate business and result in maintaining present net return and give a greater public service.

Traffic Officers Say Rate Reductions

Will Not Increase Revenue

The hearing of testimony was concluded on Saturday, March 4, after three days of rebuttal testimony on behalf of the railroads.

T. C. Powell, vice-president of the Erie, said that in the view of traffic officials generally no reduction in rates that could reasonably be made at this time would have any substantial effect in stimulating traffic, because of the world conditions and the lack of demand. He said there was nothing in the testimony offered by shippers to shake that statement, yet, he pointed out, a reduction of 1 per cent in freight rates would reduce revenues by \$50,000,000 a year. He said a maximum increase of 20 per cent in traffic would be required to make up for a 10 per cent reduction in rates but added that he firmly believed such an increase was far beyond anything possible. He introduced a number of exhibits analyzing the traffic in 1921 in various commodities on which rates were reduced by the carriers to show that the reductions had practically no effect. The initial effort of the roads to stimulate business by reducing rates was the reduction in export rates on iron and steel, yet there was practically no change in the traffic after the rates had been reduced 25 per cent.

Mr. Powell had an exhibit comparing the prices of anthracite coal at the mines with the freight rates for the years 1913, 1914, 1915, 1916 and 1921, which showed that in almost every instance the rate was a lower percentage of the mine price in 1921. On domestic sizes the price had increased 100 per cent since 1913 while the rates had been increased about 66 per cent.

Mr. Powell said that the eastern lines desire the Pullman surcharge continued and that their experience has not borne out the statement of the Pullman Company that it has materially decreased traffic. The Pullman Company's statement, he said, failed to take sufficient account of the effect of the business depression on passenger travel, but he thought the surcharge had caused many people to ride in day coaches rather than in Pullman cars.

Certain butter shippers had urged a reduction in their

rates to enable them to compete with butter shipped from Denmark and Australia, yet, he said, Danish butter sells in New York for 4 cents a pound more than American butter, because it is better butter and a freight rate of 4 cents would more than carry it across the country.

Stanley H. Johnson, vice-president of the Chicago, Rock Island & Pacific, produced exhibits to show that some of the principal reductions in rates made during 1921, including livestock, grain, fruits and vegetables, and lumber, were not followed by increases in traffic and the present indications are for a reduction rather than any possible increase in the principal classes of traffic carried by the western railroads in 1922. On the other hand, there have been fluctuations in prices much greater than any changes in rates. He said there is no prospect for anything but a decrease in agricultural tonnage no matter what the freight rate is and that general reductions on any commodity would not stimulate the traffic except as it affected one competitor as against another. Commissioner Aitchison asked if an increase in rates sufficient to produce a 6 per cent return would affect the traffic. Mr. Johnson replied that in his opinion any increase within reason would not, generally speaking, but it would be poor psychology to increase rates.

Mr. Johnson referred to the fact that a large number of shippers have urged reductions in coal rates, but he said that as most manufacturers use coal for fuel this means no more than a general desire on the part of taxpayers for lower taxes or on the part of street car patrons for lower fares. He pointed out that the effect of a general reduction in rates on coal would be felt particularly by the same western railroads which are also the heaviest carriers of agricultural products, on which rates have already been reduced. The reductions in rates on fruits and vegetables, he said, may have prevented some reduction of long haul shipments but had no marked effect on the movement generally. As to grain and livestock, he said, there is not enough traffic in sight in the country to enable the railroads to recoup themselves by increased tonnage for the loss in revenues resulting from the reductions in rates.

"It is my opinion that the granger roads, whose very existence is so bound up by the earnings which they derive from the handling of their relatively large proportion of the total tonnage represented by the movement of the products of the soil, of the field, the forest and the mines, have already contributed their full share in the shape of freight rate reductions," Mr. Johnson said. "Emphasis is laid upon the facts that the comparatively poor showing for November and December last did not include the reductions represented by the commission's grain rate decisions and the 10 per cent reduction voluntarily made by the carriers. If the western carriers are going to continue to properly function, it is earnestly felt that they cannot sustain further rate reductions in the near future."

As to the wheat prospects for 1922, Mr. Johnson said that government estimates made on December 1 last, showed that with the single exception of Illinois, the 1922 prospect is substantially poorer than the 10-year average. "The Department of Agriculture," he said, "has issued no subsequent bulletin but it is a matter of general information that the current condition of winter wheat, due to lack of moisture, has greatly deteriorated since December 1, 1921. This prospect foretells substantial inroads for the last six months of 1922 in the freight earnings of the western carriers, which carriers, including those in the state of Illinois, originate 75.7 per cent of the nation's wheat. A reduction in freight rates obviously cannot stimulate or create the movement of wheat of the crop of 1922, which is not harvested."

Mr. Johnson said most of the 1921 wheat crop had been moved prior to the rate reductions already made, but said the contrary was the case with respect to coarse grain.

"The amount of coarse grain which will be either fed at

home or offered for transportation on or after January, 1922, will approximate the crop of 1921. While there was more or less movement previous to that date, it was probably offset, if not more so, by the large amount of coarse grain carried forward from the crops of 1921 and previous thereto into the crop movement of 1921, so that speaking in approximate terms the carriers are confronted with a shrinkage in their earnings for the year 1922 in the territory described, of 21.7 per cent on an amount of movement of coarse grain approximating the crop year of 1921.

"Grain and grain products represent 11.39 per cent of the total tonnage originating on the western railroads and the prospective curtailed movement of wheat for 1922 and the large percentage of reduction in the rates on coarse grain represent an outlook of distinct discouragement for the western railroads."

The witness pointed out that with cotton as with grain, live stock and other products of the soil, a large quantity has been produced in this country in 1921, and there will be just so much cotton to be transported and its volume cannot well be affected by any freight rate change within reason.

The Warfield Pooling Plan

Daniel Willard, president of the Baltimore & Ohio and chairman of the advisory committee of the Association of Railway Executives, and R. H. Aishton, president of the American Railway Association, told the commission why they did not think much of the Warfield plan for pooling cars under the direction of the National Railway Service Corporation. Mr. Willard said the railroads have not been indifferent to the subject of improving the efficiency of car handling and he described the organization of the advisory committee, the American Railway Association and its Car Service Division and the work they have done. His committee has had one meeting, he said, with the board of economics and engineering of the Warfield organization, had given it assurances of a willingness to co-operate and made arrangements for furnishing it with information requested. The recommendations made by the board, however, he said, were unnecessary, because the objects sought were being accomplished in a more efficient manner by the agencies already in existence which have stood the test of time.

He referred to the Car Service Division, the result of six years of development, and to the accomplishment made in 1920 when the roads handled the heaviest traffic on record, with the co-operation of the Interstate Commerce Commission in the exercise of the emergency powers provided by the Transportation Act. He said the report of the board of the Security Owners' Association suggested collaboration with the American Railway Association but that the new organization could not be superimposed on the existing agencies; it represented a new experimental plan proposed as a substitute. The commission has power in times of emergency to deal with all the freight cars without regard to ownership.

The economics claimed by W. W. Colpitts for the pooling plan, Mr. Willard said, represented merely estimates and some of them could be brought about just as well by existing agencies as by a new one, while others were of doubtful dependability and would require many years to show any results.

Some of the advantages that might result from pooling would be more than offset by other disadvantages. Regarding the claim that it would reduce switching and empty mileage, he said he had not had his attention called to any substantial saving of switching resulting from the pooling of cars during federal control and that the amount of empty mileage is largely governed by the lack of balance in the traffic because a car must move home empty sometime.

In reply to questions by the commissioners as to whether there would not be an advantage in having some agency to

repair cars at the most economical time and have them ready when needed, Mr. Willard said that under ordinary conditions that could be done by the railroads. Now they are deferring repairs in order to be able to meet their payrolls and interest, not merely to make a better earnings showing, but the commission has authorized the railroads to do repair work in dull times and charge it to expenses later when the cars are put into service. When the operating expenses show some improvement that can be done, Mr. Willard said.

As to standardization, Mr. Willard said that the work the railroads had already done in standardizing such things as wheels, axles, couplers, brakes, etc., was monumental as compared with what the Railroad Administration did.

To show the extent to which the railroads are now co-operating by the use of joint facilities, Mr. Willard read a statement summarizing the replies to a questionnaire sent to the Class I roads which showed:

Seventy-six railroads reported 243 engine terminals owned and used jointly;

One hundred twenty-seven roads reported 3,558 points of freight interchange at which inspectors are located;

One hundred twenty roads reported 1,416 interchange points at which joint inspectors are stationed;

One hundred roads reported 1,006 l.c.l. joint freight houses;

One hundred seven roads reported 1,280 joint passenger stations;

Ninety-five roads reported 555 joint yards;

Sixty-four roads reported 554 large bridges jointly used;

One hundred sixty-one roads reported the joint use of 16,251 miles of track under trackage rights;

The report also showed 3,179 separate passenger stations used by two or more railroads.

Mr. Willard said he had been bothered some to understand how the proposed corporation would be sufficiently assured of an adequate income to insure its credit.

Mr. Aishton said that the subject of car pooling had been argued by railroad officers for many years but that the almost unanimous opinion of transportation officers was that car service rules and a per diem system represent the better plan. He took up in some detail the various claims made for the plan and pointed out some practical objections.

The Car Service Division, he said, co-operating with the Interstate Commerce Commission, is now able in times of emergency to create what amounts to a temporary pool of freight cars by directing the movement of cars from parts of the country where there may be a surplus to the districts where shortages exist. He pointed out that the pooling of freight cars during federal control had failed to demonstrate any marked economy. To illustrate the efficiency of freight car use he pointed out that in the fall of 1916, the ton-miles per freight car averaged 506 per day. In the fall of 1918, under federal control, the ton-miles per car per day averaged 556 and in the fall of 1920, under private management, the ton-miles per car per day reached the record figure of 564.

Regarding the proposed retirement of the light cars, Mr. Aishton questioned whether it would be good business to retire them in a few years rather than to retire them gradually in a normal manner, because many of them are fulfilling a useful function and are good for many years of service. He said the empty mileage is largely controlled by traffic tendencies and he thought it better for the necessary empty movements to be made normally by attaching the empty cars to light trains than to have the movement forcibly made by a central agency.

Effect of a 10 Per Cent Reduction in Coal Rates

Replying to various witnesses representing shippers who had contended that a reduction in freight rates on coal is essential to the stimulation of business, H. A. Cochran, assistant coal traffic manager of the Baltimore & Ohio, told

the commission that almost any reasonable reduction that could be made would hardly be reflected in selling prices.

Estimating the average consumption of coal at 5.35 tons per household, Mr. Cochran estimated that a 10 per cent reduction in freight rates would mean an average saving to each householder of only \$1.21 a year.

"Exhibits filed by shippers with the commission show that the freight charges on a ton of coal from Athens, Ohio, to Detroit, Michigan, is \$2.47 per net ton," continued Mr. Cochran. "In constructing an automobile, whose factory price is approximately \$1,000, these exhibits show that about two tons of coal is used. The freight charges on this would be \$4.94. The exhibits show that the freight charges on an automobile from Detroit to Athens would be \$24.83. A reduction of 10 per cent in the freight rate on coal used in constructing the automobile would result in a reduction in the cost of 49½ cents. A 10 per cent reduction in the rate on the automobile would reduce the cost to the consumer by \$2.48.

"In like manner we find that a 10 per cent reduction in the rates on coal from Fairmont, West Virginia, to Allentown, Pennsylvania, would reduce the cost of producing a barrel of cement slightly over three cents while a reduction of 10 per cent in the rate on cement from Allentown to Fairmont would reduce the cost to the consumer by 7½ cents a barrel. A reduction of 10 per cent in the coal rates from Somerset, Pa., to Pinesburg, Md., would result in a saving in the production cost of lime of 7½ cents per ton, while a reduction of 10 per cent in the freight charges on lime from Pinesburg to Somerset would result in a reduction in the cost to the consumer of 26¾ cents per ton of lime."

Mr. Cochran said that a 10 per cent reduction in coal rates would reduce the cost of producing a ton of copper 38¾ cents while a reduction of 10 per cent in the rate on copper would reduce the cost to the consumer by 76 cents.

"Reports of the Bureau of Census for 1914 show the value of manufactured products to have been a little over \$24,000,000,000," the witness said. "In that year the bituminous coal production (422,000,000 tons) was but slightly greater than in 1921. Exhibits already filed show that the coal transported by railroads and used in steel plants, by-products, coke ovens and other industrials amounted to 40.2 per cent of the total production. The bituminous coal produced in 1921 was about 407,000,000 tons; 40.2 per cent of this would be 163,614,000 tons. Freight charges on this at an average rate of \$2.27 per ton would be \$371,403,780. The present index number of the bureau of labor statistics is about 150.

"If the same amount of products was manufactured in 1921, as in 1914, the value would be over \$36,000,000,000. The freight charges on coal used for industrial purposes would therefore be but slightly over one per cent of the total value. A 10 per cent reduction in bituminous coal rates would be equivalent to but one-tenth of one per cent of value of products.

"So far as we can find from the record," the witness said, "not one shipper producing manufactured articles through the use of coal has gone on record as agreeing to translate a rate reduction on coal into a reduction in the selling price of his manufactured articles."

As to the effect of a 10 per cent reduction in coal rates on the manufacture of steel products, Mr. Cochran said that such a reduction would reduce the production cost only 64/100 of one per cent and a 15 per cent reduction would reduce the cost by less than one per cent. "It is not believed," he said, "that so slight a reduction would be reflected in the selling prices to the railroads."

Mr. Cochran also said that even a reduction of 15 per cent on coal rates would mean a saving of only from 23½ cents per ton of pig iron in the Pittsburgh district to 76½ cents per ton in the Chicago district. He also showed that

a 15 per cent reduction in coal freight charges would result in a saving of only from 1½ cents to 4¼ cents per barrel on cement.

Replying to the assertion of J. D. A. Morrow, vice-president of the National Coal Association, that lower rates on coal will reduce the operating expenses of the carriers and that roads which pay freight on their fuel will show an immediate saving, Mr. Cochran said it is self-evident that to the extent the operating costs of some railroads would be reduced the revenues of other railroads would be reduced, and that any reductions in rates on railway fuel coal would have to apply on commercial coal, involving heavy losses in revenue.

Estimating a production of 500,000,000 tons of bituminous per year, railroad consumption at 27.7 per cent would be 138,500,000 tons. At 57 cents per ton, the freight charges on this coal paid by the railroads would amount to \$78,945,000. On the other hand, the tonnage on which freight charges were paid by others than railroads would be 300,500,000. Therefore, a 10 per cent reduction in rates would mean a saving to the railroads which pay freight charges on their coal of \$7,894,500, which would be accompanied by loss in revenue to themselves and other railroads of \$68,213,500 on bituminous coal other than railway fuel. This would be in addition to a loss of \$7,894,500 to the carriers who receive freight charges on railway fuel. The loss would be particularly heavy in the case of such roads as the Baltimore & Ohio; Buffalo, Rochester & Pittsburgh; Chesapeake & Ohio; Chicago & Eastern Illinois; Erie; Pennsylvania; Western Maryland and Wheeling & Lake Erie.

It is impossible, Mr. Cochran said, to forecast with any assurance the f.o.b. mine prices after April 1, but if the operators are to claim profits as indicated by their exhibits for 1921 it is difficult to see how the average selling price after April 1 can be less than from \$2.48 to \$2.60.

"Mr. Morrow estimated prospective reductions in costs of railway fuel coal at from 50 cents per ton to \$1 per ton below the October, 1921, average of \$2.98 per ton. If we take the average of these estimates and assume a reduction of 75 cents from \$2.98, the average mine price for railway fuel after April 1, 1922, would be \$2.23," Mr. Cochran said.

"If we are to accept the proposition that all savings by reason of reduced mine prices of coal are to be translated into reductions in freight rates on coal, then we should also translate all increases in mine prices of coal into increases in freight rates on coal. Applying this theory to the present situation and assuming that the average prices of railway fuel used in October, 1921, and the coal freight rates were at that time properly balanced or related to each other, then the coal freight rates after April 1, 1922, based on Morrow's forecast of the prices that will be available to railroads after that time, would be changed as follows:

"On a 500,000,000 ton annual production approximately 12 per cent or 60,000,000 tons would not be shipped via railroads. Approximately 95,000,000 tons used by railroads would not be subject to freight charges. This leaves 345,000,000 tons, or 69 per cent of the total production as the amount on which freight charges would be paid by railroads and other consumers.

"Coal purchased by railroads (27.7 per cent of the total production) is equivalent to 40 per cent of the coal on which freight charges are paid (69 per cent of the total production). If freight charges should receive the full benefit of all savings in fuel prices f.o.b. mine, then the average rate per ton should be reduced by 40 per cent of the average reduction in fuel prices; that is, for each 10 cents per ton that the fuel price in eastern district is reduced from an f.o.b. mine price of \$2.80 per ton, the average freight rate should be reduced by four cents per ton. If fuel prices after April 1, 1922, average \$2.23 per ton, a reduction of 57 cents as compared with October, 1921, would be equivalent to 5.7 times four

cents or 23 cents per ton. This would represent 10.1 per cent of the average freight rate on coal.

"This merely represents what might be done if the theory is accepted that all reductions in f.o.b. mine prices of coal should be translated into reductions in coal freight rates, and provided that there is any assurance that the mine prices of railway fuel coal after April 1, 1922, will be as low as \$2.23 per ton. Prices already show a tendency to advance, having risen from an average spot price of \$2.207 on January 30 to \$2.220 on February 13. This tendency will doubtless be accentuated by the prospect of a miners' strike on April 1 and further accentuated after April 1 if a strike actually takes place. Such strike would not only tend to increase the fuel costs to the railroads, but would materially reduce the earnings on coal traffic. If the strike be prolonged, it would also result in a substantial loss of revenue on other freight, because of the necessary closing down or curtailment of operations at such mills as do not have an ample reserve supply of coal, or would be unable to secure the required amount of fuel from non-union mines."

J. J. Campion, vice-president of the Carolina, Clinchfield & Ohio, also expressed the opinion that a rate reduction on coal would not stimulate traffic in that commodity. S. G. Lutz, vice-president of the Chicago & Alton, told the commission that any reduction in coal freight rates would "seriously embarrass many western lines and court disaster for some of them." He said 11 western railroads serving important coal districts, as well as agricultural sections, failed to earn their fixed charges in 1921.

A 10 per cent reduction in bituminous coal rates he said would mean a reduction of 69½ per cent in the net operating income of the Chicago & Alton and more than 26½ per cent in that of the Illinois Central. In the case of the Chicago, Burlington & Quincy, it would mean a reduction of nearly 11 per cent, Mr. Lutz said, 19 per cent for the Chicago, Milwaukee & St. Paul, and more than 19 per cent for the Chicago & Northwestern.

"Nothing should be done at this time to rock the transportation boat by experimenting with reductions in the carriers' revenues," Mr. Lutz concluded. "We all recognize that present freight and passenger rates have not produced an adequate return up to the present time. It seems to me the safer course to pursue would be to test the future by experience and make reductions in the carriers' revenue only when it is clearly apparent that their earnings warrant the reductions and when such reductions can be made with the certainty that they will be generally helpful in bringing up a return to normal economic conditions."

Present Basis of Rates and Costs

Affords Less Than Fair Return

That the net operating income of the railroads would still be considerably less than a six per cent return if they were to do over again the business of 1921 at present rates and costs of operation, allowing for the reductions that have been made recently in both, was shown in exhibits filed at the request of the commission by George M. Shriver for the eastern roads, G. W. Lamb for the southern roads and L. E. Wettling for the western roads. These "constructive year" exhibits showed that the eastern roads would have a net operating income of 5.06 per cent, as against an actual 3.09 per cent in 1921, the southern roads 4.25 per cent as against 2.16 per cent, and the western roads 4.49 per cent as against 3.50.

For the roads as a whole Mr. Shriver's exhibit showed a constructive return of 4.8 per cent as compared with 3.25 actually earned in 1921. Based on the tentative valuation including additions and betterments to September 30, 1921. The adjustment included a reduction of revenues of \$142,000,000 because of decrease in rates and a reduction of \$491,000,000 in operating expenses, but an increase of \$56,2

763,322 in taxes. These changes would produce an increase in net operating income to \$907,693,630.

These witnesses also filed a number of additional exhibits, bringing up to date figures that had previously been introduced and facts in answer to statements made by various witnesses for the shippers. Mr. Wettling gave an estimate that if the railroads were able to pay wages comparable to those paid for similar labor in other work they would save \$27,000,000 a month. Some exhibits were also introduced in reply to the assertion by the Pullman Company that the surcharge was keeping people from traveling. One of these showed that although the surcharge has not recently been in effect in Georgia the number of Pullman passengers on the Central of Georgia was less in January, 1922 than in January, 1921, when the surcharge was in effect.

The Railway and Locomotive

Historical Society

LESS THAN 100 years ago the first locomotive was placed in operation in this country. The development of the railroads which followed brought about such rapid progress that in half a century the continent was settled from the Atlantic to the Pacific and girdled with a network of steel which so hastened its industrial development that within the short span of a century the American republic rivaled in wealth and power the leading countries of the old world. This is but one aspect of the influence of the railroads upon the progress of this nation. The complete story, if it could be told, would be more thrilling than fiction, of deeper significance than military campaigns or battles.

The history of the railroads in the United States is recorded only in fragments. There is no record of many of the important details of the early development and as time goes on the present knowledge will be lost unless carefully preserved. Here and there throughout the country will be found a few earnest workers whose interest in railroad history has led them to collect data on the early progress of rail transportation. In order to make their work more effective, about 50 persons interested in early railroad history have formed an organization under the name of the Railway and Locomotive Historical Society.

The first two bulletins of the society have now been issued, and contain some interesting articles which can be judged from the following titles: Yesterdays on the New York Central; The Story of the New England; America's Most Famous Trains; The Fall River Line Boat Train, Eddy Clocks; Some Experimental and Historical Locomotives of the Chicago & Northwestern; The Rival Builders, the last named giving many important particulars of locomotives built by William Mason and the Taunton Locomotive Works.

The officers of the Railway and Locomotive Historical Society are: president, Charles E. Fisher, Taunton, Mass.; vice-president, Heribert Fisher, Taunton, Mass.; recording secretary, C. W. Phillips, Taunton, Mass.; corresponding secretary, R. W. Carlson, Escanaba, Mich.; treasurer, A. A. Loomis, Jr., Berea, Ohio.

THE SUPREME COURT OF ILLINOIS on February 22 enjoined the Cook County Board of Assessors and the Board of Review of the State from levying \$264,915 in taxes against the Illinois Central, on stocks and bonds of lines to other states, amounting in all to \$10,308,000. When the levies were made in 1919, the road challenged the right of the board to make them, asserting that the securities were an indebtedness rather than a taxable asset. The Supreme Court upholds this view.

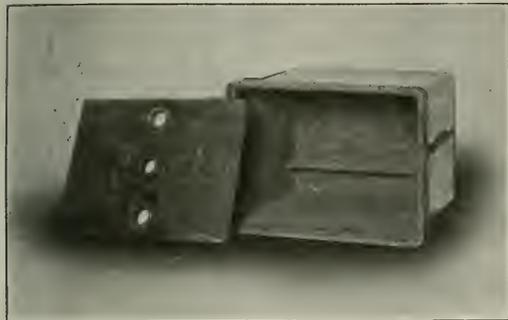

Use of Hard Rubber Battery Jars in Car Lighting

Santa Fe Has Succeeded in Reducing Battery Tank Maintenance
to 30 Cents a Month Per Car

By A. E. Voight

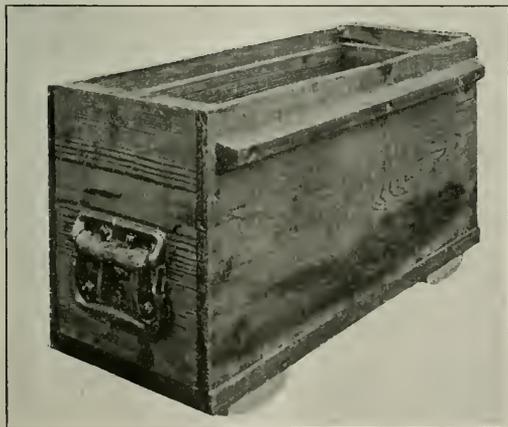

Car Lighting Engineer, Atchison, Topeka & Santa Fe

HARD RUBBER JARS versus lead tanks for use in storage batteries on electrically lighted cars is a popular subject at the present time. In the early days of car lighting quite a few roads used hard rubber jars, but most of

Hard Rubber Battery Tank and Rubber Cover. Bottom Rests Are Molded as a Part of the Tank

them abandoned their use because of the heavy breakages they experienced. The Santa Fe was the only large road that continued their use and went into the subject of overcoming the troubles that were originally experienced; this

The Side of the Crate Is Protected by a Long Wood Strip Instead of the Usual Porcelain Cleats

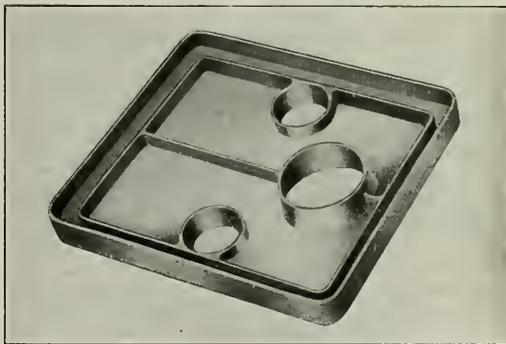

resulted in the making of the jar shown in one of the illustrations.

No doubt a great deal of the trouble that was experienced by some roads was due to their using plates that buckled and grew, thus breaking the rubber jars. This trouble has been

reduced considerably by more modern equipments which protect the batteries from excessive overcharges. If a battery is not subjected to overcharge the plates will not grow much.

The assembly of jars in the crate was found to be an important factor, the best results being obtained where the jars fit snugly so as to give it the benefit of the mechanical strength of the crate. To accomplish this all space around the jar is taken up with thin wood blocks.

The location of side buffers on crates is of importance. We found it good practice to use a wood strip the full length of the crate instead of the short porcelain that was first used, as our experience showed that in cases of accidents or emergency stops the buffer would sometimes be driven through the crate, resulting in the loss of a jar. The crate is made

Lead Antimony Cover for Use With Rubber Jar. Groove Contains Plastic Sealing Compound

of yellow pine and dipped in hot paraffine before and after assembling. The advantages of the rubber jar over the lead tank are as follows:

Lower first cost.

Freedom from grounds.

Freedom from leaks caused by chemical or electrolytic action.

Lower maintenance cost.

Experienced lead burner not required at all terminals to repair leaks.

In support of our statement of lower maintenance cost it may be stated that we have about 1,250 sets of 16 cells of batteries in service and our average jar costs per car per month for the past three years are as follows:

Business Cars	Smokers, Coaches Chairs & Comp. Cars	Diners & Cafe Observation	Pullman Cars
\$0.34	\$0.30	\$0.41	\$0.34

All of our diners and some of our business cars and cafe-observation cars are equipped with 32 cells of batteries. The above figures are about double what they were in 1917, as both the material and breakages went up during the war period. However, the figures show that it is only necessary to replace one jar out of a set of 16 in 13 months.

Another factor in cost that is done away with by the use

of the rubber jar is the side and end rubber liners and plate supports, together with extra amount of labor and equipment that is necessary to assemble them.

The largest item of expense of upkeep experienced with lead tanks is due to leaks caused by electrolytic corrosion. If each lead tank could be perfectly insulated from the other tanks and from the ground this corrosion could be prevented. It is, however, practically impossible to prevent grounds between tanks and the battery box. The wooden trays will become acid soaked and the porcelain skids will become covered with a layer of acid soaked dust, and thus a path for current from the tank to the ground is produced. When two such grounds exist in the same battery, even though of comparatively high resistance, a small amount of current will flow and any small amount of current flowing from one tank to another will start electrolytic corrosion, which will pit the lead tank and cause it to leak. The thin rubber liners used in the lead tanks between the plates and the tank are another source of trouble. The constant rubbing of the plates against the liners will eventually puncture the liners and thus permit the plates to come in contact with the lead tank. This causes internal short circuits, shortening the life of the plates and involving considerable expense for renewing the hard rubber liners.

In sealing our jars we first convex our covers so as to make the vent plug the high point. This prevents dirt and foreign matter from being washed into the jar. We use a form "H" soft rubber bushing of good quality in the cover around the terminal post.

This bushing serves both as a seal and as a buffer, which protects the jar and the sealing compound which holds the cover in place.

A lead antimony cover has recently been placed on the market for use with the hard rubber jars, which has a double groove in which plastic sealing compound is placed; this results in the jar being automatically sealed when the cover is put in place. This lead cover also protects the top of the jar, where most of the breakage occurs.

Finnigan's Automatic Train Control

GEORGE P. FINNIGAN, of Richmond, Va., who made extensive experiments on the Interborough Rapid Transit Lines in New York City in 1910 and 1911, and later for two years on the Pennsylvania Railroad between New York and Philadelphia, is still in the signaling field, and his design of train control apparatus, which was the first to employ a permanent magnet on the roadway, is well known to many signal engineers. He has no installation in service at the present time, but he has favored us with a drawing which illustrates the essential electrical principles of his system. This we shall briefly describe.

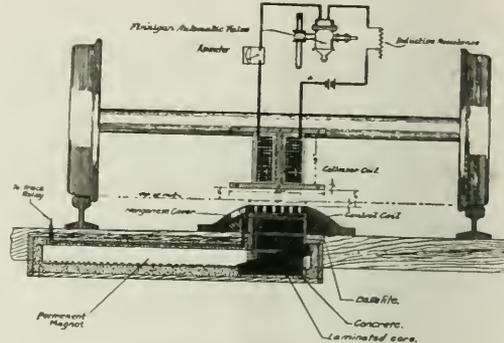

A permanent magnet, in the roadway, when uninfluenced by the condition of the block ahead causes an application of brakes, but when its power is counteracted by an electromagnet, which is energized when the section ahead is clear, the application of brakes is prevented. The arrangement is "normal danger." The permanent magnet is fixed in a wooden box at the level of the ties, the box being packed with cement to afford all necessary protection to the magnet. The box is about 5 in. by 6 in. and about 4 ft. long, extending from the center of the track to the end of the tie at one side. The electro-magnet on the roadway is indicated in the drawing as a "control coil." Its winding surrounds a laminated pole-piece which extends upward, the top of the outer case being at a height 1 in. lower than the tops of the running rails. This winding is energized by a current controlled by the track relay of the section to be protected.

The iron bar, shown in an inclined position, clamps the

pole piece to the permanent magnet. All this apparatus is thoroughly waterproofed.

The collector coil on the locomotive passes at from 4 in. to 6 in. above the roadway apparatus. This collector coil is a part of a closed circuit (energized by a battery consisting of a single dry cell) which controls the Finnigan automatic air valve shown at the top of the drawing. The inductive resistance in this circuit, shown at the right of the drawing is adjustable, and its function is to determine at what speed the train may pass a control point without an application of the brakes.

The track apparatus is, of course, located full braking dis-

Finnigan Automatic Train Control

tance to the rear of the entrance of the section to be protected.

Assuming a train approaching a control point when the track relay governing the roadway magnet at this point is closed (section ahead clear), the current in the electro magnet diverts the lines of force of the permanent magnet so that they do not affect the engine coil (at any speed).

With the governing track relay opened (section ahead occupied by a train) the flux of the permanent magnet, acting on the engine-carried collector coil affects the engine circuit in accordance with three elements: (1) The speed of the train (above or below a predetermined rate), (2) the number of turns of wire in the collector coil, and (3) the volume of the lines of force from the permanent magnet cut by the engine-carried coil.

Assume that trains are not to be stopped unless moving at 5 miles an hour or faster; that at that speed the train generates 1½ volts, and that the engine battery has a potential of 1½ volts; the E M F generated in the train circuit by the passage of the train then will cause the battery to react, and the air valve will function.

At any speed below five miles an hour the E M F generated will be insufficient to affect the engine-carried battery and no brake application takes place.

It will be noted that all these operations take place without requiring the movement of any part, or the opening or closing of any electric contact.

BAGGAGE TRANSFER CHARGES in New York City are the subject of a complaint which has been made by the Merchants' Association to the Public Service Commission of the State, and on which a hearing was held this week. The complaint is that \$1.25 has been charged for carrying a suit case from the Pennsylvania Station to a hotel not far away. To carry a trunk to Brooklyn from a station in Manhattan, a distance of perhaps 2 miles, it is said a charge of \$2 has been made, whereas the normal rate would not be over \$1.40.

Nothing Very New About the Plumb Plan

Only Another Variation of a Delusion Which Has Wrought
Havoc Many Times in the Past

By Charles Frederick Carter

Author of "When Railroads Were New," "Big Railroadng," Etc.

YES, THE PLUMB PLAN has a past; such a large and lurid past that railroad men, having due care for their reputations, should think twice before recognizing it in public.

Glenn E. Plumb, general counsel of the Railway Employees of America, you remember, has claimed to be the originator of a "plan" by which the government, meaning the representatives whom you elected by your votes, is to buy the railroads from their present owners and hand them to the men who work on the railroads to have and to hold till death or the divorce court do them part, or words to that effect. It will cost only twenty billions, more or less. Who pays it? Why, the public. Who's the public? Let's see: In July, 1919, there were 1,894,287 names on the railroad payroll. The average family is 4.5 persons, so these railroad men represent approximately one-eighth of the population of the United States, and so will have to pay a pretty sizeable share of that twenty billion dollars themselves.

Look Before You Leap

That will be easy, say you? The railroad men, being the owners of the roads, will allow themselves generous salaries. They will merely take money out of their left trousers pocket and transfer it to their right vest pocket. The only difficulty about such a financial transaction is that it doesn't work; the change is pretty sure to slip between your fingers in transit. On the theory that it is just as well to look before you leap, lest in getting out of the frying pan you land in the fire, suppose we give this Plumb plan the once over.

In the first place, it isn't Plumb's plan at all. Glenn simply kidnaped it in France and contrived somehow to smuggle it past the immigration authorities. He has dolled it up in mellifluous verbiage, to be sure, and has put a new groove in the skirt and tacked a flounce around the bottom, providing that the government, meaning the elected representatives of the railroad men, and the public, including a large proportion of railroad men, are to have an equal voice with the railroad men who own the roads in their management. These attempts at disguise do not alter the essence of the proposal in the slightest degree. Any one who cares to take the trouble can find the so-called "Plumb plan" photographed, finger-printed, bertillened and pedigreed in the rogues' gallery of history.

"Plumb plan's" maiden name was "syndicalism," which is the French adaptation of socialism, which, in its modern form, was made in Germany. The socialist idea is for the state to own everything, including the people who constitute it; the syndicalist scheme is to use the state as an instrumentality through which to take possession of all property and hand it over to the workmen employed thereon, the men in each particular factory to have all they can make out of it without the formality of paying rent to the owners. It's a beautiful idea from the point of view of the employee who labors under the delusion that he has nothing to lose and everything to gain; but will it work?

Well, let's see what history has to say on this point.

Seventy-four years ago there was another revolution in France. The people had been fascinated by the misrepresentations of glib-tongued persons with a passionate antipathy to work who assured their dupes that all they had to

do was to kill everyone they caught with a clean collar on, after which they would be free to set up a "Dictatorship of the Proletariat." You probably are fed up on this line of talk, somewhat more than enough of which has been heard in these United States. But, any way, those Frenchmen overthrew the government and for the time being "The Proletariat," as Lenine calls people who do manual labor, found themselves in control of the nation's destinies.

The professional agitators had attempted to convert the people to socialism; but those Frenchmen were clever enough to understand that state socialism meant nothing more nor less than state slavery, and slavery in any form did not appeal to them. So they hit upon a new solution.

Plumb Plan in France in 1848

Louis Blanc, a member of the revolutionary government of 1848, believed, or pretended that he believed, that all wealth was produced solely by manual labor, a theory vociferously asseverated in America in 1920. Therefore, everything belonged to labor, not to the state. They would take possession of their own. The factories would be owned and operated by the employees who would have all they could make. The miners were to own and operate the mines and put the proceeds in their own jeans; the railroad men were to own and operate the railroads as their very own, precisely as Friend Glenn would have the railroad men of America do. Every detail of it was worked out in France before Glenn was born. Capital was to be totally abolished, for according to the syndicalist idea, as well as according to socialist doctrine, it had no right to exist.

Being a man of influence Blanc had ample power to give practical shape to his theories. The first thing to be done was to establish the principle of syndicalism, or Plumb planism, as it is known on this side of the Atlantic, by law. This was done by the decree of February 25, 1848, which was as follows:

"The provisional government of the French Republic binds itself to guarantee the existence of the workmen by means of work. It binds itself to guarantee work to every citizen. It recognizes the right of workmen to unite and to enjoy the fruits of their toil."

The next day another decree completing the Plumb plan was promulgated as follows:

"The provisional government of the French Republic decrees the immediate establishment of national workshops. The minister of public works is charged with the execution of this decree."

Tried Out Under Ideal Conditions

Now take particular notice that this syndicalist (Plumb plan) experiment was tried out under ideal conditions. Everything was in its favor. If it did not work failure could not be attributed to any untoward circumstances, but to inherently wrong principles. You need not take my word for the results of this great experiment. Just get down your French histories, or go to the nearest public library and check up my statements.

"Ateliers Nationaux," which is as near as a Frenchman can come to saying "national workshops," were opened at once. The lucky workmen who found themselves men of

property over night, hustled out and obtained certificates that they were inhabitants of the Department of the Seine, which they presented to the mayor, who thereupon gave them an order for admission to a workshop. If the applicant was received and employed by the workshop he immediately received an order for 40 cents for his day's subsistence; if he was rejected he received only 30 cents. This, naturally, made him feel pretty small, after having done his share to abolish capital. From such incidents originated an Americanism much in vogue twenty years ago—to "Look like thirty cents."

Nine and a half hours were to constitute a day's work. Those untutored peasants could hardly be expected to be sufficiently advanced to put the six-hour day, five-day week idea in force at the first crack out of the box. However, the working hours were merely nominal; actually they were a go-as-you-please affair. Naturally this made a hit. Men rushed in from all quarters, so that by June, 1848, the Ateliers Nationaux had enrolled 125,000 workmen.

An Impossible Plan

It would be as needless as wearisome to take up all branches of this grand experiment. Let a single example suffice. The tailor shops started under exceptionally favorable circumstances. The Hotel Clichy, a debtors' prison, was converted into a workshop at government expense and turned over to the workmen free of charge; that is to say, they got their capital for nothing. Next, they received from the government an order for 25,000 uniforms for the National Guard. In other words, they not only obtained capital for nothing, but they did not have to pay for the business ability to seek and to find a market for their product. Finally, they obtained free of charge from the government a supply of cloth, that is, their raw material, so they did not need credit. Could anything more ideal be imagined? Those Israelites who were fed with manna from heaven had nothing on those French workmen in '48, did they? And, naturally, those tailors got rich quick and retired to a country where capital still had a few rights, didn't they?

Not so you could notice it, they didn't. Let me tell you what happened. The ordinary contract price paid under the old dispensation before the workmen had been emancipated from the despotism of capital was 11 francs a suit. The workmen in the Ateliers Nationaux, with no overhead charges, no expenses of any kind to eat into their receipts, obtained the same price as their former masters who had to pay wages, rent, interest and all the rest of it and still make a profit if they could. Furthermore, the workmen in the Ateliers Nationaux received a subsistence allowance of 40 cents a day. When the job was done they were to divide the profits exactly as Friend Glenn proposes that American railroad men shall divide net railroad earnings after they have received them as a free gift from the government and have helped themselves to all the wages they want. The case is in exact parallel. Now observe what happened:

"The accounts were squared. Eleven francs per suit for so many suits came to so much. Subsistence money at 40 cents a day had to be deducted. The balance was to be divided as profit. Alas! The balance was a loss, not a gain. Subsistence money had been paid out equal to rather more than 16 francs a suit, instead of the 11 francs the former masters received, and out of which they paid all expenses, including good wages to their workmen instead of a daily allowance for bare subsistence."

Victor Hugo thus sums up the result. "The national workshops have proved a fatal experiment. The wealthy idler we already knew well; you have produced a person a hundred times more dangerous to himself, the pauper idler."

The same story with minor variations was repeated in all the Ateliers Nationaux until the National Assembly was forced to close the shops. The closing process cost France lives and nights of street fighting in which twenty thou-

sand lives were sacrificed. There you have the story of France's experience with syndicalism, alias the Plumb plan, seventy-four years ago. What do you think of it?

Another Experiment

To clinch the moral listen to this tale of a private experiment with the Plumb plan which was also staged in France. The story is summarized from an account by Thiers, the famous historian. The owner of a great engine factory lent the works to his men and agreed to buy their output at 17 per cent above cost. The men were to manage the works themselves. That is they took over a going concern with a certain market and a certain profit. Pretty soft, eh?

Well, note what happened. The first thing those men did was to increase wages for the poorer paid workers and lower the wages of the better paid ones, as the railroad reformers would have us do. There has been a lot said about the outrageous salaries paid railroad officers here, you know. Also a lot more about the "aristocrats of labor," meaning the enginemmen. In fact, every detail, under which it was tried out, is matched in the pages of history.

The result of these reforms was a daily tumult in the shop. The men took a holiday whenever they felt like it, and they were very careful not to over-exert themselves when they did honor the plant with their presence. But those were ignorant foreigners, you say? My friend, there is just one thing in this world of eternal change which never changes, and that is human nature. As it was in the beginning, it is now and ever shall be. Let us resume Thiers' narrative.

The workmen elected their foremen as they now do in Russia, with the result that they were changed two or three times every fortnight. Under their old employer the payroll aggregated 367,000 francs in three months; under the new dispensation it was only 197,000 francs for the same period, and the rates were much higher, at that. Furthermore, all the good workmen had left; so that at the end of the three months the association of workmen was bankrupt, the experiment was an utter failure, and the capitalist owner, who had been so blithesomely condemned as a worthless excessiveness on the body politic resumed control and the workmen, such as were left, were humbly grateful for a chance to become "wage slaves" again.

Capital Replaced by Poverty

If these French experiments standing alone are not sufficiently convincing, let me remind you of Gladstone's series of Irish land acts which took rights valued at \$30,000,000 from land owners and gave them to tenants. This was syndicalism, that is, Plumb planism, applied to the land, for it took property from capitalists—that is, the land owners—and gave that property to the workers. If the syndicalists and the socialists and the Plumb planists are right, then Ireland ought to have been richer as a result of this operation.

Well, it wasn't. In the thirty years following the Gladstone land acts, 1,200,000 Irish emigrated, the population decreased by 1,000,000 and the country was poorer than before. Gladstone had made the rich poor all right enough, according to formula; but he had also made the poor still poorer. He had destroyed credit and security and frightened capital out of Ireland. Capital was replaced by poverty; for capital no longer competed for labor.

Such incidents are by no means exceptional. The same dreary tale of delusion, failure and misery has been re-enacted many, many times in Europe, in the United States, in South America and elsewhere from the dawn of history to date. Wherever socialism or syndicalism, which are but aliases for the Plumb plan, has been tried the end has infallibly been disaster.

Now what do you think of syndicalism, otherwise known as "The Plumb Plan"?

Observations of a Transcontinental Traveler

Some of the Things on Which the Public Judges the Roads—Their Effect on Traffic

By William S. Wollner

A TRIP of 18,000 miles over seven of the country's most important railway systems gives the observing traveler an opportunity to come in contact with the attitude of the traveling public and railroad employees toward the national rail transportation problem that unfortunately few railroad executive officers are able to secure at first hand. As a matter of choice, or because their work requires it, general officers, and even the more important division and subordinate officers on some roads, travel in business cars isolated from contact with their roads' patrons, unable to learn, or indifferent to the opinion of the service their roads are rendering to the very people who furnish the revenue that makes the road's operation possible.

It should not be lost sight of that while the public judges the roads through its most intimate contact with them (as passengers), it is this same public that in the final analysis will determine whether the roads are to continue under the present form of management and control or whether some other method of operation shall be experimented with. It is also this same public which, as individuals, pays the country's freight bills as shippers, consignees, or consumers.

Assuming that it is a fact that almost all competitive tonnage is secured through "good will," is there any better way in which to impress a prospective shipper with the road's efficiency than when he is a passenger? The things that were observed on this 8,000-mile trip seem to indicate that at least some managers do not appreciate the value of comfortable, courteous passenger service as a feeder of freight tonnage, or that they are unfamiliar with the manner in which their passenger service is being handled.

Are 10,000 Tons Annually Worth Going After?

Nearly 3,000 miles of the trip which these notes cover were made in company with a man who is the head of a firm that ships between 5,000 and 10,000 tons of freight by rail annually and who is prominently connected with other enterprises whose combined tonnage greatly exceeds this figure. In addition, he is a leader in community affairs and a large owner of railroad securities. In view of his status as a shipper, security owner and community leader, this man's reaction to the treatment he received as a passenger is of especial interest. As he was accompanied by his wife and a young daughter, he required the use of a drawing room and an additional section. He was unable to secure these accommodations on the best train between the starting point of his trip and its destination although he allowed a few days choice in the date of starting. As a consequence he was compelled to travel on the next best train, which his family referred to as "limited in name only."

This train leaves its initial station at 6:30 p. m., but when during the first night's unsuccessful effort to sleep upon a mattress with a lump in its center the lady of the party attempted to secure a drink of water, she found that the reservoir was empty. The drawing room was also devoid of towels and it seemed impossible during the trip to get the porter to keep the room supplied. The party had been generously supplied by friends with tropical fruits and other things that required being kept on ice for their proper care but neither the dining car nor train crew could advise how this could be done. It is impossible to believe that a far-seeing management would permit as important a patron and

as influential a citizen to gain the opinion of the operation of its property that this man gained, and it must therefore be assumed that it has no knowledge of travel conditions on this particular train.

It would be unfair to leave unstated the fact that passengers are receiving far better service than they did a year ago. An outstanding improvement is that trains run on schedule and the annoying delays of the past no longer are the order of the day.

Ticket Sellers Not Salesmen

Do railroad managers expect their ticket sellers to be salesmen in the generally accepted meaning of the term or do they reserve this function for "passenger agents?" A man who found that he must make a hurried trip to a destination several thousand miles distant called at a consolidated ticket office to purchase his ticket. The purpose of his trip required that he visit certain cities en route but he found that the ticket seller was unable to tell him how to arrange his trip so as to include these cities. He consulted other ticket sellers with no better success and then informed the writer of his predicament. The writer telephoned to the passenger agent of a road over which a portion of the trip must be made and a traveling agent was immediately dispatched to the prospective passenger's office who furnished him with all the information he required.

This prospective passenger was a man who had held important positions in the engineering department of railroads for years, but he did not know that railroads provided this service for prospective passengers. Subsequent investigation disclosed the fact that travelers are entirely ignorant of the services that city, district and traveling passenger agents are prepared to render them.

Upon arrival in Chicago early one Sunday morning the writer found that the completion of his business there would permit of his leaving for home the following evening. Having planned to travel over a system favorably known for its treatment of passengers, he telephoned to its depot office to reserve space. He was informed that no reservation could be made nor could he even learn if accommodations were available, as all charts were in the consolidated ticket office and the consolidated office was of course closed on Sunday. Later investigation proved this ticket seller's statement true and that no reservations can be made on Sunday for a later date over this particular road.

Calling the following morning upon the ticket seller for this road in the consolidated office he obligingly showed the writer his charts, explaining that he was unable to say whether some of the space that was assigned to other offices would be used, although these offices had not reported its sale. He said that if the writer would return late in the afternoon he would endeavor to learn if the space were available. Upon being informed that arrangements for the trip must be completed before noon and that the traveler would therefore have to travel over another route, the ticket seller turned away from the prospective passenger without comment and replaced the chart in its pigeon-hole. It should be remembered that the writer posed as a "pay" passenger and the ticket he wished to purchase would have cost nearly a hundred dollars.

Later, when the writer applied at the depot ticket office of

the same company to learn if he could secure accommodations on a train leaving at 10:30 p. m. he showed the ticket seller the pass on which he intended to travel and was informed that the rules of the company prohibited the reservation of space until one hour before the time the train was scheduled to leave. The trip that was to be taken over this particular road was over 3,000 miles in length and while the necessity for this rule is understood, it seems unfair to expect a busy railroad man to wait until 9:30 at night to learn whether he will be able to start on a long trip of this kind. Incidentally, if this treatment were accorded a man in a position to route traffic from a connecting road it might lead to a discrimination against the road according to this treatment.

Dining Car Service

The railroads could engender a kindlier feeling on the part of the general public by giving a more popular service in dining cars and, incidentally, they would find this type of service financially more profitable. It seems almost ridiculous to attempt to give a service on a par with the highest grade hotels on a train carrying two standard Pullmans, four or five tourist cars and several day coaches. It is certain that the majority of people who travel in tourist cars and long distances in chair cars are not accustomed to the class of service given in the diner and can ill afford to pay the prices that must be charged when such a service is attempted.

Some of the roads are trying to popularize their dining-car service by serving "plate meals," but the prices placed on these meals are too high to be partaken of by the tourist car and chair car traveler, and on some roads at least the proper equipment is not provided for efficient service. An outstanding exception to this criticism of dining car service is that of the Baltimore & Ohio whose seventy-five cent commercial traveler's club luncheon offers the opportunity for a person to secure an entire meal at this price. Food and service have been especially provided for this excellent luncheon. The dollar and a quarter dinner served on this road, insofar as the writer is aware, has its equal in no other dining car in the United States.

Plain, wholesome meals served in the simplest possible fashion will not only attract diners from the tourist and chair cars, but will prove pleasing to Pullman passengers also and will prove financially profitable and a big drawing card for the road that undertakes to experiment in this direction. Such a service, should, of course, not be attempted on de luxe trains or other trains carrying only standard Pullman equipment.

Morale

The trip which these notes cover was made during the last two weeks of September and the first two weeks of October, or before the brotherhood executives had given their strike ultimatum. As indicative of the state of morale existing on the roads on which he traveled it may be noted that while a train was traveling as a first-section with a second-section following it through the blocks of automatic block signal territory, the rear brakeman was in the smoking room of the second Pullman from the rear of the train with his coat, vest, collar and necktie removed, shaving, while the train conductor was asleep in a chair in the observation car.

A high-speed train left a large terminal four minutes behind its schedule because the fireman did not look back to receive the trainman's signal and the trainman responsible for giving this signal refused to walk several car lengths to give it verbally. At the end of the four minute period the writer suggested to the trainman that he give the signal on the intercommunicating air signal which he did. During this period the fireman was hanging out of his cab window but did not look back for the signal.

Perhaps the best summing up of the state of mind of railroad men toward their job is the statement of the fact that

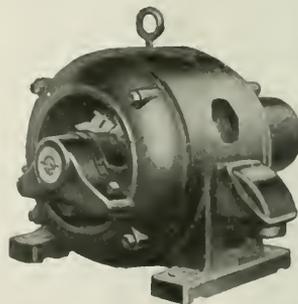

of the several hundreds of railroad employees with whom he spoke, but one mentioned his railroad in the possessive sense. When a rear brakeman was questioned as to the ownership of tracks running out of a large joint terminal, he proudly stated, "Oh, yes, *we* own our own tracks." Although the writer asked many questions designed to give the simple test of whether employees thought of their jobs and roads in the possessive, or the detached sense, this was, as stated above, the only case in which the possessive sense was used.

Conclusion

The public judges the success of the present form of railroad operation and management through its most intimate contact with the service the road renders, that is, as passengers. Freight service must be maintained at its most economical efficiency, but no road can afford to give less than perfect passenger service. The unreasoning public expects trains to be awaiting its bidding at such time as it may desire to travel and to get it to its destination as rapidly and comfortably as it is possible to do so. It is, of course, impossible to give the frequent train service and in some instances the fast passenger service that the public demands, but it is essential to the public's opinion of how railroad management is discharging its stewardship that passengers should be transported comfortably and conveniently and that they should come in contact with nothing but the most courteous employees.

Improved Polyphase Motors

POLYPHASE motors possessing a number of new features have been developed by the Wagner Electric Manufacturing Company, St. Louis, Mo. Improved ventilation is obtained by directing the ventilating air through a large number of definite paths. The coils are wound in phase groups without spliced connections, and they are impregnated

New Polyphase Motor

with insulating compound. Easy connection to external circuits is provided by a pull box attached to the motor into which the motor leads are brought with suitable terminals. An unusually large shaft is provided which decreases deflection and vibration. Quiet operation is obtained by mounting the large shaft in correspondingly large bearings, by arranging the coil slots on a spiral and by clamping the laminations of both stator and rotor under enormous pressure. The bearings are mounted in dustproof housings.

GIVE THE RAILROADS a free hand to work out their own problems. Railroad and coal mining costs must come down before there can be a permanent prosperity, although business is on the upgrade, and has been since July, 1920.—Charles N. Schwenk.

General News Department

The Western Maryland announces that its track repair work has been let to the Dickson Construction and Repair Company, of Youngstown, Ohio, which was formed recently to do similar work on the roadway of the Ohio Region of the Erie Railroad.

The Van Sweringen Company, Cleveland, Ohio, which owns the controlling interest in the New York, Chicago & St. Louis, has acquired control of the Toledo, St. Louis & Western, according to an announcement made by O. P. Van Sweringen at Cleveland on March 8.

The Western Railway Club will hold its next meeting on March 20, at the Great Northern Hotel, Chicago, at which time there will be a further general discussion of the paper, "Some Factors in the Business of Owning Locomotives," which was presented at the February meeting.

The State Highway Commission of Wisconsin has established a railway department, with M. W. Torkelson, former bridge engineer of the commission, in charge. The work of the new department will consist chiefly in the re-location of highways, with special consideration given to the elimination of grade crossings of railroads.

The American Railway Engineering Association will hold its annual dinner in the gold room of the Congress Hotel, Chicago, on Wednesday evening, March 15. The speakers will include General R. C. Marshall, junior general manager of the Associated General Contractors of America, Washington, D. C., and formerly chief of the construction division of the United States army; Hon. James A. Mulligan, K. C., Sudbury, Ontario, and Gus W. Dyer, professor of economics at Vanderbilt University, Nashville, Tenn.

Store Door Delivery

The New York Railroad Club at its meeting at the Engineering Societies' Building on Friday evening, March 17, will have a symposium on store door or direct delivery. The question will be discussed from a variety of angles by men who have had experience with this problem or have given it considerable study.

Commission Asks Information on Power Brakes

The Interstate Commerce Commission, which has ordered a proceeding of inquiry and investigation of the use of power brakes, has addressed an order to the railroads calling for detailed information to be furnished by April 1 regarding the operation, inspection, testing and maintenance of air brake equipment, including statistics regarding accidents resulting from failure properly to control speed of trains on grades.

Atlantic City Conventions in June

Steady progress is being made in developing the programs for the June conventions which will be held at Atlantic City. Division V, Mechanical, A. R. A., will meet from June 14 to 21 inclusive. Division VI, Purchases and Stores, A. R. A., will hold its meeting on June 19, 20 and 21. The Association of Railway Electrical Engineers will hold its spring meeting at the Dennis Hotel on Monday, June 19. The exhibit committee of the Railway Supply Manufacturers' Association met at Pittsburgh yesterday afternoon to assign space to those who have already made applications. Up to March 1, 240 such applications had been received, requiring in the neighborhood of 80,000 sq. ft. of space. A particularly large number of machine tool companies have applied for space in Machinery Hall, and all of the space in this section has been applied for.

Operating Statistics for 1921

The Interstate Commerce Commission has issued its summary of freight and passenger service operating statistics for Class 1 railroads for the year 1921, which shows for 180 roads a total of 344,343,000,000 net ton miles of revenue and non-revenue freight as compared with 499,125,000,000 in 1920. The average miles per car per day for the year was 22.4 compared with 25.1, the net ton miles per car day 389 as compared with 498, the net tons per loaded car 27.6 as compared with 29.3, the train speed 11.5 miles per car as compared with 10.3, the locomotive miles per day 49.9 as compared with 62.5, and the traffic density, the net ton miles per mile of road per day, 4,048 as compared with 5,280.

The Campaign Against the Full-Crew Law

The cost of the full-crew laws of New York, New Jersey and Maryland since they took effect has aggregated \$24,000,000 and active efforts are now going on to secure the repeal of these laws in these states. This and other interesting facts are set forth in a circular which has been issued by the Pennsylvania Railroad. The only definite accomplishments in the three legislative campaigns thus far are a vote in the Senate of the Maryland legislature in favor of repeal of the law; and a similar vote in New Jersey. The full-crew law of Pennsylvania was repealed last year and that of Indiana before that; and in neither of these states has there been any complaint since the regulation of the number of men in crews was put into the hands of the state railroad commission.

Traffic Division—A. R. A.

G. H. Ingalls, New York City, chairman, announces that the general committee of the Traffic Division of the American Railway Association has appointed three standing committees as follows (the first-named, in each, being chairman):

ON STANDAED CONTAINERS, PACKING AND MARKING

R. C. Fyfe, chairman, Western Classification Committee.
F. C. Maelzy, a-sistant general freight agent, A. T. & S. F.
R. G. Fagan, superintendent of freight protection, S. P.
James McDonnes, freight traffic manager, A. C. L.
F. W. Smith, Chairman, Official Classification Committee.
J. E. Crosland, chairman, Southern Classification Committee.

ON WEIGHING AND INSPECTION OF FREIGHT

A. S. Dodge, superintendent, Western Weighing and Inspection Bureau.
George Merkle, manager, Central Weighing and Inspection Bureau.
W. R. Sichel, manager, Transcontinental W. & I. Bureau.
A. B. Cade, manager, Iron continental Weighing and Inspection Bureau.
I. G. Markey, manager, Southern Weighing and Inspection Bureau.
W. J. Edwards, manager, Trunk Line Freight Inspection Bureau.
G. C. Ransom, chairman, Canadian Freight Association.
A. W. Epprecht, superintendent of scales, Pennsylvania Railroad.
Oliver Macey, general supervisor claim prevention, Buck Island Lines.
F. C. Maelzy, assistant general freight agent, A. T. & S. F.
C. H. Mann, superintendent of scales, Southern Railway.

ON CAR SERVICE, DEMURRAGE AND STORAGE

Rob't C. Wright, general traffic manager, Pennsylvania Railroad.
Fred Zimmerman, vice-president, C. I. and L.
B. Campbell, vice-president, N. Y., N. H. & H.
H. E. Pierron, traffic manager, C. M. & S. P.
W. A. Rambach, freight traffic manager, M. P.
G. W. Luce, freight traffic manager, S. P.
A. R. Smith, vice-president, L. & N.
D. W. Longstreet, traffic manager, I. C.
C. T. Airey, vice-president and traffic manager, Central Ga.

Sixteen Killed in Motor Bus at Crossing

Sixteen persons were killed and nine injured at Painesville, Ohio, on the night of March 3, when a New York Central express train, eastbound, crashed into a crowded motor bus at St. Clair street in that city. The railroad company issued a statement

that the crossing watchman was on duty at the time and signaled the driver of the bus with his lantern to stop. The flagman states that he began to give the bus driver this warning signal when the latter was still from 300 to 500 feet from the tracks, and the train had its electric headlight burning bright and clear; its whistle was sounded twice and the bell was ringing automatically. The driver was among the fatally injured.

International Railway Congress

The Ninth Congress of the International Railway Association will be held in Rome, Italy, from April 18 to April 30. Besides the meetings of the five sections into which the Congress is divided the program includes the following: Banquet by the Italian government April 19; reception at the Capotele April 21; excursion to the Terni Hydro-Electric Works and various establishments April 22; excursion to Naples and Pompeii April 29 and 30; departure from Genoa on May 1 and excursion to the electric traction installations in special train to Modane.

The sections of the Congress are as follows: 1. Way and Works; 2. Locomotives and Rolling Stock; 3. Operation; 4. General; 5. Light Railways.

The following who have been appointed as delegates of the American Railway Association have arranged to attend the Congress: L. A. Downs, chairman, Division IV—Engineering (vice-president and general manager, Central of Georgia Railway); D. Z. Dunott, chairman, Medical and Surgical Section (chief surgeon, Western Maryland Railway); J. E. Fairbanks, general secretary; T. De Witt Cuyler, chairman, Association of Railway Executives; W. W. Atterbury, vice-president, Pennsylvania; George Gibbs, chief engineer electric traction, Long Island; W. J. Tollerton, general mechanical superintendent, Chicago, Rock Island & Pacific.

The following who have been appointed reporters for the American Railway Association on the subjects indicated also will attend: W. J. Tollerton, chairman, Mechanical Division, A. R. A. (general mechanical superintendent, Chicago, Rock Island & Pacific Railway); "Passenger Carriages," Earl Stimson, chief engineer, Maintenance of Way, Baltimore & Ohio Railroad, "Maintenance and Supervision of the Track;" Samuel O. Dunn, editor of the *Railway Age*, "Net Cost Rates."

The following will go as delegates of their respective railways—Delaware & Hudson, W. H. Williams, vice-president;

Illinois Central, A. S. Baldwin, vice-president, Hugh Pattison, electrical engineer, Donald Rose, European traffic manager; Lehigh & New England, William Jay Turner, vice-president and general counsel; Rollin H. Wilbur, vice-president and general manager, Henry H. Pease, secretary and treasurer; Long Island, Ralph Pcters, president, George Gibbs, chief engineer electric traction; Pennsylvania System, J. V. B. Duer, electrical engineer, W. B. Wood, general superintendent, Illinois division; R. C. Morse, Jr., superintendent freight transportation, Eastern region, J. O. Hackenbush, superintendent, Schuylkill division; Philadelphia & Reading, A. T. Dice, president, F. M. Falck, general manager; Pittsburgh, Shawmut & Northern, H. S. Hastings, receiver.

George Gibbs is the American reporter on "Electric Traction," A. S. Baldwin on "Terminal Stations for Passengers," W. H. Williams on "Slow Freight Traffic."

Besides those mentioned above, the following American railway men have prepared reports: C. H. Ewing, vice-president, Philadelphia & Reading, "Construction of the Roadbed and of the Track;" W. C. Cushing, engineer standards, Pennsylvania System, "Special Steels;" G. A. Haggender, bridge engineer, Chicago, Burlington & Quincy, "Reinforced Concrete;" Howard G. Kelley, president, Grand Trunk Railway, "Freight Stations;" C. W. Crawford, chairman, General Committee, Section 5—Transportation, American Railway Association, "Interchange of Rolling Stock;" A. F. Banks, president, Elgin, Joliet & Eastern, "Workmen's Dwellings;" H. B. Spencer, former director of purchases, United States Railroad Administration, "Special Methods of Traction on Light Railways."

The headquarters of the American delegates will be at the Grand Hotel, a short distance from the Fine Arts Exposition Palace in which the sessions of the Congress will be held.

Tentative Valuations

The Interstate Commerce Commission has issued a tentative valuation as of 1916 of the property of the Maine Central, in which it finds the final value of the property owned, 642 miles, to be \$44,020,662, and of the property used, 1,131 miles, including leased lines, to be \$61,091,384. This considerably exceeds the capitalization outstanding as of the valuation date, \$34,587,465. In addition there was held by or for the carrier \$2,881,643 of stock and \$2,015,500 of bonds. The in-

I. C. C. SUMMARY OF REVENUES AND EXPENSES FOR DECEMBER AND CALENDAR YEAR 1921

Item	December			12 Months
	1921	1920	1921	1920
Average number of miles operated	235,170.42	234,708.98	234,912.85	234,423.77
Revenues				
Freight	\$288,762,008	\$386,564,007	\$3,918,699,970	\$4,323,650,077
Passenger	188,669,910	211,830,002	2,153,752,002	2,287,423,443
Mail	10,014,096	8,711,525	95,810,755	150,816,975
Express	12,158,008	9,656,470	104,633,598	143,858,272
All other transportation	14,297,406	18,522,426	164,757,085	163,771,798
Incidental	9,686,082	11,769,559	118,799,853	150,470,050

Includes \$32,691,960, sleeping and parlor car surcharge

Includes \$12,014,911, sleeping and parlor car surcharge

Note: Includes late of completion.

vestment in road and equipment as reported by the carrier was \$37,234,525. This is readjusted by the commission to \$35,814,267. The commission has also issued additional tentative valuations in which the final value is stated as follows:

	Used	Owned
Holton Interurban	\$856,349	\$200,349
Portland & Southwestern.....	330,616
Fabor & Northern.....	124,181	120,000
Memphis Union Station.....	2,341,551	2,340,757

Popularizing Safety First

Starting on the first of the year, the Delaware, Lackawanna & Western introduced a system of posters which are issued and distributed weekly and contain, in addition to some pertinent messages on safety, a reproduction of some news event. They are patterned after the news-service picture-placards which are now seen regularly in many store windows and which feature the

Traffic News

Trunk line railroads have filed tariffs with the Interstate Commerce Commission effective on April 1, providing for a reduction of 28 per cent in the rates on iron ore.

C. A. Cairns, passenger traffic manager of the Chicago & North Western, has been elected chairman of the executive committee of the Western Passenger Association for 1922.

Testimony on the "Pittsburgh Plus" case continues to be heard by W. J. Bennett, examiner for the Interstate Commerce Commission, who opened a further hearing at Minneapolis, Minn., on March 6.

The Miami Valley Traffic Club, Dayton, Ohio, has elected the following officers for 1922: President, T. T. Webster; vice-presidents, R. B. Mann, H. T. Ratliff, A. H. Finlay, D. O. Searles and W. W. Winship; treasurer, R. H. Hagerman; secretary, Morris T. Otto.

The Senate committee on interstate commerce, which had called a meeting for March 4 to consider its action on the Capper and similar bills in view of the Supreme Court's decision in the state rate cases, was unable to get a quorum. Chairman Cummins is forming a sub-committee to consider the matter.

The Canadian Pacific and the Minneapolis, St. Paul & Sault Ste. Marie will place in effect on May 15, summer round trip fares from Chicago to Vancouver, Victoria, Portland and Seattle, at \$86, or about \$30 less than last year. Routes are through Canada going and through the United States returning, or vice versa; also a round-trip fare of \$104 has been authorized to California points.

The Chicago Great Western has withdrawn its announcement that it is about to reduce passenger fares between Chicago, St. Paul, and Omaha, as its controversy with competing roads has been settled by their granting to the Great Western and to the Minneapolis, St. Paul & Sault Ste. Marie additional immigrant privileges to and beyond St. Paul and Minneapolis and excursion rights from Chicago and points in Iowa to these northern cities.

Home-seekers' rates of a one way fare plus \$2 for the round trip will be placed in effect on the first and third Tuesdays in each month until November by the Chicago, Milwaukee & St. Paul, the Chicago & Northwestern, the Chicago, Burlington & Quincy and the Chicago Rock Island & Pacific to points in South Dakota and North Dakota; in Washington and Oregon except to certain points in the eastern part; and to all points in Montana and Idaho. The tickets will be open to public purchase and will be good for 21 days, with liberal stopovers.

E. S. Briggs, chairman of the National Perishable Freight Committee, Chicago, has resigned to become manager and secretary of the American Fruit & Vegetable Shippers' Association, with headquarters at Chicago, succeeding R. Cumming. Mr. Briggs has been in railroad service since 1889, serving the Missouri, Kansas & Texas Railway for about 17 years. In 1905 he was made assistant general freight agent of that road at Houston, Texas, and in 1910 was appointed to a similar position at St. Louis. In 1914 he went to the Pacific Fruit Express as traffic assistant at San Francisco; and on May 1, 1917, he was appointed traffic manager of that company. In July, 1920, he was selected by the railroads to take charge of the newly formed National Perishable Freight Committee as its chairman.

Coal Production

The output of soft coal during the week ended February 25 is estimated by the Geological Survey at 10,348,000 net tons, a slight increase over the week preceding in spite of the local observance of Washington's Birthday as a holiday.

LACKAWANNA

SAFETY NEWS SERVICE

HAYS ACCEPTS \$150,000 MOVIE DIRECTORSHIP

Official announcement has been made of the forthcoming resignation of Postmaster General Will H. Hays from Harding's cabinet to accept a \$150,000 salary as head of the American motion picture production industry. Mr. Hays is seen being "shut" after the announcement.

Railroading is normally a safe occupation if men will only let their minds work normally while they are on duty. Heaven protect the man who violates the rules.

latest news events pictorially. The safety message in the Lackawanna posters is printed in large type and in colors. It is short and to the point, as illustrated by that here shown. In this poster, the "news" is in black, and the safety message in bright green. These placards measure about 14 in. by 18 in. and are attracting considerable interest on the part of both employees and the public.

Three Months of Freight Claim Payments

Figures of payments for loss and damage of freight during September, October and November, 1921, have been compiled and summarized recently by the freight claim division of the American Railway Association and are now available for publication. The total freight claim expenditures for the three months amounted to \$18,865,589, of which \$6,640,523 was incurred in September, \$6,441,925 in October, and \$5,783,142 in November, as compared with January, 1921. The November statement shows a decrease of 44 per cent and each month reveals a steady diminution in the amount paid out in claims, \$658,782 less being paid in claims in November than in October, as follows:

September	\$6,640,523
October	6,441,925
November	5,783,142

As compared with January, 1921, November shows a decrease of 44 per cent.

Commission and Court News

Interstate Commerce Commission

The commission has issued an order modifying in certain particulars conditions in its export bill of lading upon recommendations made by the United States Shipping Board.

The commission has suspended until July 3 the operation of certain schedules contained in a supplement to Chicago & Alton and Illinois Traction System tariffs which provide for reductions in rates on grain from points in Illinois to New Orleans, and other Gulf Ports for export.

The commission has issued a decision finding the divisions of joint rates on certain traffic moving between stations on the Chicago & Eastern Illinois and stations on the St. Louis-San Francisco via Chaffee, Mo., unreasonable and inequitable and has prescribed the divisions to be observed for the future.

The commission has suspended until July 1 the operation of schedules contained in Agent E. B. Boyd's tariff which proposes reductions in the rates on sugar from points in Colorado, Idaho, Kansas, Nebraska and Utah to various destinations in Illinois, Iowa, Minnesota, Wisconsin, the Dakotas, Oklahoma, and Upper Peninsula of Michigan.

The commission has reopened the case involving intrastate rates within the state of Illinois, on the petition of the Northern Illinois coal operators for further hearing, for the purpose of determining whether or not the present intrastate rates on coal within the state of Illinois are unduly preferential of intrastate traffic and shippers and of localities within the state, unduly prejudicial to interstate traffic and shippers and to localities outside the state, and unduly, unjustly and unreasonably discriminatory against interstate commerce; and for the purpose of considering whether the orders heretofore made should be modified.

United States Supreme Court

Claim for Express Rates for Carrying Gold as Mail

A claim was made against the government by the New York, New Haven & Hartford for its proportion of express rates for carrying \$5,000,000 in gold from Philadelphia to Boston in 1914, and the passenger fares for seven men acting as guards. The gold was in 1,000 sealed bags, in 167 locked mail pouches. The Treasury prepaid the postage required for fourth class mail matter, at parcel post rates, amounting to \$420. No protest was made by any carrier at the time. The railroad's claim was for \$5,020.65. The Court of Claims dismissed the claim. The Supreme Court of the United States affirms that judgment, rejecting the contention of the railroad that the transaction was not mail service, "the service, rightly or wrongly, was demanded as mail service, was rendered as mail service, and was paid for without protest as mail service"—Opinion by Mr. Justice Holmes. Decided February 24, 1922.

Texas Suit Dismissed

The United States Supreme Court on March 6 dismissed the original suit filed by the state of Texas, which asked the Court to set aside the orders of the Interstate Commerce Commission under the transportation act and decisions of the Railroad Labor Board and which also attacked the constitutionality of the transportation act. The court held that it would set aside original or appeal orders of the Interstate Commerce Commission must be brought in the district courts, and the United States made a defendant. Justice Van Devanter who delivered the unanimous opinion, also said that the bill declared "insuperable obstacles to our entertaining it on any ground." He also directed attention to the fact that many of the questions involved have been disposed

of in the New York and Wisconsin passenger-fare cases decided last week. The bill charged that the commission had placed the carriers of Texas in a territorial rate group and had approved a general increase in their rates regardless of the authority of the state, had authorized the abandonment of certain lines within the state and had exercised a supervision over the issuance of securities. All of these acts, it was alleged, infringed upon the powers reserved to the state. Referring to that part of the bill which sought to question the constitutionality of the provisions providing for the Railroad Labor Board, the court pointed out that the carriers and their employees have put the board's decision into effect and while they would have great concern in any decision of the suit, they were not made parties to the bill.

Unexpected Negligence of Fellow Servant

—Risk Not Assumed

In an action under the federal Employees' Liability Act for the death of an employee, caused by a derailment, held by the court to be due to the negligence of the engineman in disregarding a signal to stop at the derailer, the Supreme Court of the United States has reversed the judgment of the Pennsylvania Supreme Court holding that the deceased had assumed the risk of such negligence. The opinion, by Mr. Justice McReynolds, reads, in part: "In action under the Federal Act the doctrine of assumption of risk certainly has no application when the negligence of a fellow servant, which the injured party could not have foreseen or expected, is the sole, direct, and immediate cause of the injury. To hold otherwise would conflict with the declaration of Congress that every common carrier by railroad while engaging in interstate commerce shall be liable . . . when death results from the negligence of any of the officers, agents, or employees of such carriers."—Reed v. Director General. Decided February 27, 1922.

Thirty Days' Notice of Claim

In an action for personal injuries to a shipper riding on a drover's pass providing for notice of claim to the general manager within 30 days, it appeared that the plaintiff was in a hospital for about 30 days under the care of a doctor employed by the road, but was not disabled from giving the notice. He failed to give it, however. The district court directed a non-suit and its judgment was affirmed by the Circuit Court of Appeals (264 Fed. 664). The Supreme Court of the United States has affirmed that judgment, holding that the requirement as to notice was valid. Knowledge on the part of the railroad's employees was not an excuse for omitting the notice in writing (St. Louis, I. M. & So. v. Starbird, 243 U. S. 522). The only doubt of the court had been as to whether the prohibition, in Act of March 4, 1915, of a requirement fixing less than 90 days for giving notice of claims in respect of goods established a public policy that would affect the present case. "As to goods, a record is kept, yet even there a reasonable prompt notice is necessary as a check upon fraud. There is no record of passengers, and the practice of fraud is too common to be ignored. It is impossible to suppose that Congress, when it was dealing with notices of claims for baggage, 39 Stat. 441,442, should not have thought of passengers' claims for personal injuries, and as it passed them by, we must suppose that it was satisfied to leave them to the Interstate Commerce Commission and the common law."—Opinion by Mr. Justice Holmes.

In a dissenting opinion, in which the Chief Justice and Mr. Justice McKenna concurred, Mr. Justice Clarke thought the statute of 1915 though in terms applying only to damages to goods, should be applied to claims for personal injury; that "the likelihood is much greater that fraudulent claims will be made for injuries to goods, for damages often cannot be discovered until they are unpacked after having left the custody of the carrier, but it must be rare indeed that a passenger can be injured except in the presence of some one or more of the carrier's agents."

The dissenting justices also think the requirement unjust because, "a shipper usually is at least in physical condition to make prompt claim, but many men are so badly injured in accidents that they are wholly incapable of making claim in writing within thirty days."—Gooch v. O. S. L. Decided February 27, 1922.

Labor Board Decisions

Continuous Time Because of Wash-Out Denied

A passenger train crew on the Great Northern was tied up for 46 hours because of a wash-out, after which they were ordered to dead-head back to their initial terminal. They were paid for their services under Rule 20 of the agreement between the employees and the carrier, but they contended that such service should be paid for on continuous time basis. The Labor Board denied the claim of the employees.—*Decision No. 718.*

Classification of Chauffeur as Mechanic Denied

A chauffeur employed by the maintenance of way department of the Terminal Railroad of St. Louis, to operate a truck used to transport maintenance materials, asked for a reclassification as a mechanic, because he made minor repairs on the truck, the railroad having applied increases and decreases in accordance with Order No. 2 and No. 147 respectively on the basis of "laborer employed in and around shops and roundhouses." The claim for reclassification as a mechanic was denied.—*Decision No. 711.*

Penalty Overtime for Turning Trains Denied

Crews in passenger service on the M. K. & T. claimed one hour additional compensation for turning trains because of having been directed to lead around one leg of a wye and back around another leg to the passenger station at Oklahoma City. The Board decided that such train movements before the day's work is completed are not in violation of the rules of the agreement between the carrier and the employees affected, but that the employees in question are entitled to pay on the basis of actual minutes at pro rata rates in addition to all other time or mileage made on the trip from the time the train passes onto the first leg of the wye until it passes onto the main track from the second leg of the wye.—*Decision No. 719.*

Railroad's Right to Demote Employees

The Baltimore & Ohio made changes in its signal organization, which resulted in the demotion of certain assistant signalmen to helpers. The signal employees protested on the ground that an arbitrary change in classification and rating of employees was in violation of the Transportation Act. At the hearing nothing was introduced to show that the men classified as helpers were required to perform any other work than that within such a classification. The Labor Board decided that the carrier had not violated the provisions of the agreement unless the employees in question are assigned to perform the work of maintainers or assistant maintainers; and further that such demoted employees should be credited with the full time served as assistant signal maintainers and rated on that basis when again promoted.—*Decision No. 709.*

Seniority Rights of Minor Not Allowed

An employee of the American Railway Express Company at Fort Scott, Kan., who was under age, was laid off when forces were reduced, although employees with less seniority were retained. The employees claimed that he should have been allowed to displace another employee junior in service but the carrier stated that there was no position available in the service in which, under its rules, a minor could be employed; the carrier also contended that there was no position to which he could have been appointed and for which he was fit. The Board decided that Rule 4, Article 28, which states that "promotions shall be based on seniority, fitness and ability, and where fitness and ability being sufficient seniority shall prevail," covered the case. It, therefore, upheld the position of the carrier.—*Decision No. 687.*

Monthly Rate of Stationary

Engineers Includes Overtime

Stationary engineers on the Colorado & Southern are paid a monthly rate which has been subject to the increases of Decision No. 2 and decreases of Decision No. 147, but was established on Supplement No. 7 to Order No. 27 on a monthly rate obtained by multiplying a 12-hour working period by 365 and then dividing by 12. This rate was not changed when the men were placed on an eight-hour basis. The employees now contend that the present monthly rate should be considered as being on the basis of a 306-day year so that the men would be paid over-time on Sundays and holidays. The carrier's position, however, was that as the monthly rate is now established it is on a basis including work done on Sundays and holidays and that the change suggested would be equivalent to paying the men double time for Sunday and holiday work. The board denied the claim of the employees.—*Decision No. 717.*

Foremen Need Not Be Employed

for the Full Time Laborers Are at Work

A case was presented to the Labor Board with respect to the question of employing a coal chute foreman for a less number of hours and days than the laborers he supervised. Evidence shows that he was employed with a gang of laborers for 365 days a year and ten hours a day. On March 6, 1920, he was instructed to work only on week days and nine hours a day, the laborers continuing on the old schedule. The United Brotherhood of Maintenance of Way Employees and Railway Shop Laborers contended that in Supplement No. 8 to General Order No. 27 no change in hours was authorized and that the foreman must be permitted to work the same number of hours as the men. The carrier contended that this provision of Supplement No. 8 was canceled by the National Agreement with the Brotherhood and that there is nothing in this agreement which requires the carriers to employ a man in excess of eight hours on regular week days, if his services are not required. The contention of the carrier was sustained.—*Decision No. 713.*

Basis of Monthly Rate for Track and Shop Laborers

An engine watchman was, on January 1, 1918, paid the rate of \$67.50 a month. On September 1, 1918, the effective date of Supplement No. 7 to General Order No. 27, an hourly rate of 38 3/4 cents was established and it remained in effect up to March 1, 1920, when it was changed to a monthly rate of \$145 a month, in accordance with Section a-12, Article V of agreement between the Director General of Railroads and the United Brotherhood of Maintenance of Way Employees and Railway Shop Laborers. This rate was increased to \$165.40 a month on May 1, 1920, the effective date of Decision No. 2 of the Labor Board, and was reduced July 1, 1921, to \$145 in accordance with Decision No. 147 of the Labor Board.

The employees contended that the watchman should have received a monthly rate of \$189.64, under Decision No. 2 of the Labor Board, on the claim that he worked 12 hours each night, 365 nights a year at straight-time for 10 hours 365 days a year, and two hours' overtime for 365 days plus 12 hours' overtime for 52 Sundays. The carrier maintained that the actual time put in by this employee and the amount allowed on the hourly basis from August 31, 1918, was slightly less than \$145 a month, and that when the national agreement of the maintenance of way employees, effective December 16, 1919, was received the employee was placed on a monthly rate of \$145, predicated on the average earnings on the hourly basis; that, effective with Decision No. 2 of the Labor Board, the position was increased to \$165.40 a month, and was again reduced to \$145 under the provisions of Decision No. 147 of the Labor Board.

The Labor Board decided that under Section a-12, Article V, of the United Brotherhood of Maintenance of Way Employees and Railway Shop Laborers' agreement, the monthly rate should be predicated on the hours for which payment was allowed, when rated on the hourly basis.—*Decision No. 714.*

Foreign Railway News

Electrical Standardization in England

LONDON.

Owing to the inability of the companies which form the proposed Southern group of English railways, namely the London & South Western, the London, Brighton & South Coast and the South Eastern & Chatham to agree to some form of uniformity in future plans for the electrification of these lines, the Minister of Transport has appointed a committee under an independent chairman to consider this matter. The committee consists of nominees of the respective companies under the chairmanship of Sir Philip Nash. Other members include Sir Alexander B. W. Kennedy, formerly chairman of the Electrification of Railways Advisory Committee, Sir Philip Dawson, and Theodore Stevens, M. I. C. E., consulting electrical engineer.

Further Consolidations in England

A tentative plan for the consolidation of a number of smaller British railways with the Great Western, under the provisions of the British Railways Act, has been announced. The companies affected are the Cambrian, the Cardiff, the Rhymney, the Taff Vale and the Alexandra Docks & Railways. The proposal now goes to the stockholders for their approval. In general the plan provides for issuing to the holders of securities of the companies to be absorbed stocks and bonds of the Great Western of a character and yield similar to those held in the other companies. A novel provision in the proposals is to be submitted to the stockholders of three of the companies is the indemnity payment to the directors of the old companies to compensate them for the loss of their positions.

Sir Henry Thornton Tells of

Railway Conditions in Britain

Sir Henry W. Thornton, general manager of the Great Eastern (England), and formerly general superintendent of the Long Island, in a communication to the New York Herald says in part:

"The railway industry is uniformly in a bad position in almost every country, although I think in some respects we are better off in England than are the American roads, largely because whatever mistakes our government may have made they did not fall into the cardinal error of mixing politics with the working of the railways, and the administration of transportation in England during the war was left almost entirely to those who were suspected of some knowledge of the business. Railway rates and fares must generally be reduced if industry is to get on its legs again.

"No sane railway administrator takes any other position, but this cannot be brought about until working costs are reduced, which in turn depends to a large degree on wages. Materials in this country have already fallen considerably. Wages are moving downward, but, what is more important, a fine spirit permeates the relations between the railway trade unions and the railway companies.

"There has always been a struggle between the railway workers and the railway companies to force wages up on the one hand and reduce them on the other. Until there is born a spirit of mutual confidence in each other, a desire for fair play, sincerity in negotiation and the execution of agreements, and all those things which make for better relations, the problem of adjusting railway wages will be exceedingly difficult and in most cases the results will be unsatisfactory. It will be said that such conditions as I have described are Utopian and impossible of attainment, but in a large measure they have been attained in England, and I can see no reason why they should not be reached elsewhere. At any rate, until there is worked out a cycle of reduced cost of living, lower wages and less taxation the world is going to be in a very bad way."

Equipment and Supplies

Locomotives

THE CHICAGO, MILWAUKEE & ST. PAUL is inquiring for 50 Mikado type locomotives.

THE FLORIDA EAST COAST has ordered from the American Locomotive Company 7 Pacific type and 3, 6-wheel switching locomotives.

THE CHICAGO, INDIANAPOLIS & LOUISVILLE was incorrectly reported in the *Railway Age* of March 4 (page 546), as inquiring for 20 locomotives.

Freight Cars

THE FLORIDA EAST COAST is inquiring for 10 caboose cars.

THE CHICAGO & NORTH WESTERN is inquiring for 2,700 freight cars of various types.

THE TENNESSEE COAL & IRON RAILROAD is inquiring for 150 ore dump cars of 70 tons capacity.

THE CHICAGO WEST PULLMAN & SOUTHERN is inquiring for from 15 to 50 car bodies of 50 tons capacity.

THE NORFOLK & WESTERN has renewed its inquiry for freight cars and is now inquiring for prices on from 2,000 to 4,000 all steel hopper cars of 70 tons capacity.

THE WESTMORELAND COAL COMPANY reported in the *Railway Age* of February 11 as inquiring for 100 cars, has ordered 100, 55-ton hopper cars from the Cambria Steel Company.

THE CHESAPEAKE & OHIO expects to send out inquiries in the immediate future for building 1,500 57½ ton steel bodies, with an option on 4,500 additional, as soon as drawings and specifications are ready.

THE ATLANTIC COAST LINE has ordered 450 steel underframes and superstructures from the Pressed Steel Car Company and 50 from the Chickasaw Shipbuilding Corporation. These are for box cars to be rebuilt in the railroad company's shops.

Passenger Cars

THE NORFOLK & WESTERN is inquiring for 7 dining cars.

THE BOSTON & MAINE is inquiring for 43 coaches, 12 smoking cars and 5 combination baggage and smoking cars all to be 70 ft. long, also for 4 combination baggage and mail cars, 61 ft. long, and 25 milk cars, 51 ft. long.

THE PENNSYLVANIA RAILROAD has authorized the purchase of 250 all steel cars as follows: 190 coaches, 35 combination passenger and baggage cars and 25 combined baggage and mail cars. Bids will be asked for at once, as cars are wanted for use this coming summer.

Iron and Steel

THE GREAT NORTHERN is inquiring for 1,000 tons of reinforcing bars.

THE NORTHERN PACIFIC has ordered 5,000 tons of rails from the Colorado Fuel & Iron Company.

THE ATCHAFALAYA, TOPEKA & SANTA FE has ordered 10,000 tons of rails from the Colorado Fuel & Iron Company.

THE UNION PACIFIC has ordered 180 tons of structural material for a freight shed at Los Angeles, Cal., from the Llewellyn Iron Works, Los Angeles.

THE UNION PACIFIC has ordered 1,500 tons of tie plates from the Colorado Fuel & Iron Company; 350 tons of track spikes from the Inland Steel Company and 200 tons of track bolts from the Kansas City Bolt & Nut Company.

THE MISSOURI PACIFIC has ordered 20,000 tons of 85 and 90 lb. steel rails allotted as follows: 10,000 tons from the Colorado Fuel & Iron Company; 5,000 tons from the Illinois Steel Company; and 5,000 tons from the Inland Steel Company.

Track Specialties

THE MISSOURI PACIFIC is inquiring for 14,000 angle bars for 90 lb. rails and 39,000 angle bars for 85 lb. rails.

THE CLEVELAND, CINCINNATI, CHICAGO & ST. LOUIS closed bids recently for low switch stands, split derails, guard rails, rigid spring and solid manganese frogs, switches and switch points, bids for which were submitted to W. J. Hiner, Cincinnati, Ohio, before 12 o'clock noon of March 6.

Miscellaneous

THE NEW YORK, NEW HAVEN & HARTFORD will receive bids until 12 o'clock noon, March 20, at New Haven, Conn., for approximately 300,000 net tons of high volatile R/M bituminous coal to be delivered at South Boston, Mass., between April 1, 1922, and April 1, 1923.

Signaling

THE NORTHERN PACIFIC is inquiring for automatic block signals for installation on 151 miles of single track and 53 of double track between Dilworth, Minn., and Mandan, N. D.

AT ALLEGRIPPUS, PA., on the steep grade west of Altoona, on the morning of February 15, about one o'clock, occurred an accident which might happen any day, on a four track railroad, but which in fact is exceedingly rare; the partial wrecking of two trains both moving, side by side, in the same direction. The reports indicate that no person was injured. Eastbound passenger train No. 16, the Iron City Express, was moving eastward on track No. 2, and a freight train, moving alongside on track No. 1, was suddenly stopped by the derailment of a box car. The derailed car fell towards the passenger train and several sleeping cars were scraped along the sides, a number of windows being broken. The car "London" was considerably damaged about the front end, the freight car having been wedged between the sleeper and a part of the freight train. No. 16 was delayed about two hours.

Crowds Trying to Enter Subway Station in Berlin During Strike

Supply Trade News

The Stowell Company, South Milwaukee, Wis., has moved its Chicago office from 509 Monadnock Block to 628 McCormick building. E. B. Hansen will continue as manager of the Chicago office.

Charles D. Watson has been elected vice-president of the Watson Engineering Company, Cleveland, Ohio, to succeed H. R. Hadlow, who has retired and R. L. Harding has been elected secretary to succeed W. P. Brown, who has also retired. Wilbur J. Watson will continue as president and S. F. Agnew will resume the position of treasurer, succeeding the late A. R. Warner.

William McClellan, president of the American Institute of Electrical Engineers, has announced the incorporation of the firm of McClellan & Junkersfeld, with temporary offices at 141 Broadway, New York. The work of the new organization will be on power plants, transmission systems, water power developments, electrification of railroads and general industrial and utility engineering and construction.

John Lambert, formerly president of the American Steel & Wire Company, died at Pasadena, Cal., of pneumonia, on March 6. Mr. Lambert was born at Lambertville, N. J., on January 12, 1847. After serving with the New Jersey cavalry in the Civil War, he came to Joliet, Ill., in 1867. In 1879, he began the manufacture of steel wire and after a series of mergers became president of the American Steel & Wire Company.

The Dresser-Minton Company, construction engineers, has been organized by F. J. C. Dresser and J. H. Minton, with headquarters in the Arcade building, Cleveland, Ohio. The company has been formed to engage in general building and contracting with special reference to railroad structures. Mr. Dresser has for the last 18 years been concerned with railroad work and was for a number of years with the Chicago & North Western in charge of terminal and bridge work. He was later manager for the contractor in general charge of the construction of engine and car shops for the Pennsylvania and the New York Central. Recently he served as district manager of the Cleveland district of the Austin Company. Mr. Minton was formerly senior assistant engineer in the office of the chief engineer of construction of the Pennsylvania Lines West, at Pittsburgh, Pennsylvania, and has been engaged in railroad construction work for the past 18 years.

The Whiting Corporation, Harvey, Ill., has established its own branch sales office in New York City at 136 Liberty street, having discontinued its agency agreement with the Wonham, Bates & Goode Trading Corporation, New York City, who formerly represented the Whiting corporation in the East. J. Ross Bates, now a vice-president of the Whiting Corp., is in charge of the new office and will be assisted in the New York territory by D. Polderman, Jr. In the New England states he will be assisted by R. C. Maley, who will open an office at Springfield, Mass. All of these men were formerly associated with the Wonham, Bates & Goode Trading Corporation. The Whiting corporation has opened a branch office in Indianapolis, Ind., 305 Merchants Bank building, in charge of S. E. Stout, formerly at the main office, in Harvey. Mr. Stout will cover southern Indiana and adjoining cities in Ohio and Kentucky. The corporation's Detroit office has been moved from Penobscot building to 206 Stahelin building, 3000 Grand River avenue.

Obituary

Otis H. Cutler, chairman of the board of directors of the American Shoe & Foundry Company, New York, died at Miami, Fla., on March 4.

Railway Construction

ATCHISON, TOPEKA & SANTA FE.—This company contemplates undertaking numerous improvements and betterments to its lines during the current year, among which are the construction of a new division office building, Harvey hotel and railway reading room at Newton, Kan., a new brick outbound freight house at Dallas, Tex., and extensive additions and improvements to the Harvey house at Gallup, N. M. The aggregated total set aside in the 1922 budget for stations and office buildings is \$1,047,919. New power plants will be constructed at San Bernardino, Cal., and Albuquerque, N. M., and hot-water boiler-washout systems will be installed at Cleburne, Tex., and Temple. The funds appropriated for shop buildings, engine houses, etc., amount to \$960,170, and for shop machinery and tools, \$735,901. Bridge renewals are estimated at \$1,519,203. Automatic signals estimated to cost approximately \$600,000 will be installed between Williamsfield, Ill., and Knox; Dumas, Mo., and Medill; Bucklin, Kan., and Ethel; Melvern, Kan., and Ridgerton; Lebo, Kan., and Emporia; Neva, Kan., and Cedar Point; Wagner, Kan., and Braddock; Walton, Kan., and Newton; Gamesville, Tex., and Ardmore, Okla.; Somerville, Tex., and Caldwell; and in the yards at LaJunta, Colo., Dillon, N. M., and Belen, N. M. In addition to the work already mentioned \$567,443 will be spent on the elimination of grade crossings and \$219,828 on water stations.

BASTROP & LAKE PROVIDENCE.—This company has been organized to construct a railroad from a point near Bastrop, La., eastward to the town of Mer Rouge, and from there to Point Pleasant, a distance of about 10 miles. Eventually the road will be extended to Lake Providence, an additional line of approximately 25 miles.

BOSTON & ALBANY.—This company will in the near future build a temporary passenger subway at Springfield, Mass., to cost approximately \$25,000. New bridges will be built at Webster, Mass., to cost approximately \$25,000, and at West Brookfield, to cost approximately \$50,000. Fender work to be done on the Chelsea creek drawbridge will cost in the neighborhood of \$15,000.

CHICAGO GREAT WESTERN.—This company which was noted in the *Railway Age* of January 28, page 303, as receiving bids for the construction of a steel coaling station at Chicago estimated to cost about \$23,000 has awarded the contract for this work to the Roberts & Schaefer Company, Chicago.

CHICAGO, ROCK ISLAND & PACIFIC.—This company has awarded a contract to the Railway Water & Coal Handling Company, Chicago, for several extensions to its fire protection pipe lines at its tie plant at Little Rock, Ark.

Dodge City & Cimarron Valley.—The Interstate Commerce Commission has issued a certificate authorizing the construction of an extension from a connection with the existing line at or near Satanta, Kan., in a generally northwesterly and westerly direction through Haskell, Grant and Stanton counties, 55 miles. The line is to be leased to and operated by the Atchison, Topeka & Santa Fe.

GREAT NORTHERN.—This company is receiving bids for the construction of a 500-ton reinforced concrete coaling station at Minneapolis, Minn.

ILLINOIS CENTRAL.—This company has been requested by the city of Anzola, Miss., through a petition to the Mississippi Railroad Commission to construct a new station at that point.

MISSOURI PACIFIC.—This company will receive bids until March 13, for the construction of a frame and steel combination freight and passenger station, 20 ft. by 71 ft. at Jerome, Ark.

MOBILE & OMAHA.—This company, and the St. Louis-San Francisco, have been asked by the Mississippi Railroad Commission to construct sheds over the platforms of their union passenger station at Tampa, Miss.

NORTHERN, BIRMINGHAM & ST. LOUIS.—This company, the St. Louis-San Francisco, the Southern, the Union, the Louisville & Nashville, and the City of Memphis, Tenn., will construct a re-

inforced concrete subway under the tracks crossing South Bellevue boulevard in that city. This work is estimated to cost \$300,000, of which 80 per cent will be paid by the railroads and 20 per cent by the city. Plans are now being made and work is expected to be started by summer.

OSAGE.—The Interstate Commerce Commission has issued a certificate authorizing the construction of a line from Foraker, (Okla.), into the Osage County oil fields, a distance of 10.44 miles.

PHILADELPHIA & READING.—This company is rebuilding its draw-ridge, including additional interlocking installations, at Darby Creek, Pa. The company is also rebuilding 11 bridges in the neighborhood of Harrisburg, Pa., an overhead bridge at Mill Creek Jct., Pa., a drawbridge at Atlantic City, N. J., and a bridge at Chester Springs, Pa. The company is rebuilding its coal yard at Twenty-third and Arch streets, Philadelphia, and is eliminating 5 grade crossings between Swatara, Pa., and Hummelstown and one at Douglassville, Pa. A new passenger station at Swatara and a passenger and freight station at Coatesville are under contract. The company is also installing new refrigerating machinery at Reading Terminal Market, Philadelphia.

ST. LOUIS-SAN FRANCISCO.—This company, which was noted in the *Railway Age* of February 25, page 502, as contemplating the construction of a second main track between Spring Hill, Kansas, and Paola, a distance of approximately 13 miles, and between Windsor Springs, Missouri, and Valley Park, a distance of about 5 miles, has awarded a contract for the former to the Walsh Construction Company, Davenport, Iowa, and for the latter work to grant Smith & Company, St. Paul, Minnesota.—this to further include grade reduction work at Garnsey, Missouri, and Crocker and the construction of $3\frac{1}{2}$ miles of second track at Swedenborg, Missouri. The same company will reconstruct with company forces part of its freight house at Henryetta, Oklahoma, recently destroyed by fire.

ST. LOUIS-SOUTHWESTERN.—This company has awarded a contract to the Roberts & Schaefer Company, Chicago, for the construction of two 100-ton, electrically operated, reinforced concrete locomotive coaling plants—one at Camden, Ark., and the other at Plano, Tex.

STATEN ISLAND RAPID TRANSIT.—This company has ordered from the American Car & Foundry Company, Wilmington, Delaware, a wooden, side-wheel ferry boat, 143 ft. long with a beam of 34 ft. and a draft of 13 ft. and with a displacement of 618 gross tons. This boat, which will be placed in service between Tottenville, Staten Island, and Perth Amboy, N. J., will be completed in five or six months. The company has recently made some improvements in its passenger terminal at Perth Amboy, including the provision of separate runways for passengers and vehicles and the enlargement of the waiting room.

TOLEDO, ST. LOUIS & WESTERN.—This company has awarded a contract to the Ogle Construction Company, Chicago, for the construction of a 300-ton coaling station at East St. Louis, Ill.

By Sam Kristine Lee-C

Collision Between Winnipeg Flyer and a Snow Plow

Railway Financial News

ARKANSAS CENTRAL.—Taken Over.—This road, which has been operated by the Missouri Pacific for some time, was absorbed by that company on March 1, and will henceforth be known as the Paris district of the Central division. The Arkansas Central's line extended between Fort Smith, Ark., and Paris, 46 miles.

ATLANTA, BIRMINGHAM & ATLANTIC.—Ask Government Loan.—The receiver has applied to the Interstate Commerce Commission for a government loan of \$529,466 for 15 years.

BALTIMORE & OHIO.—New Directors.—Frederick H. Rawson, of Chicago, and Joseph E. Widener, of Philadelphia, have been elected directors to succeed John G. Shedd and W. Averill Harriman, who have resigned in compliance with the Interstate Commerce Commission's ruling on interlocking directorates.

BIRMINGHAM & NORTH WESTERN.—Authorized to Issue Bonds.—This company has been authorized by the Interstate Commerce Commission to issue \$400,000 of first mortgage bonds for the purpose of refunding or retiring an equal amount of first mortgage bonds maturing March 1, 1922.

BUFFALO, ROCHESTER & PITTSBURGH.—Asks Authority to Issue Bonds.—This company has applied to the Interstate Commerce Commission for authority to issue \$8,351,000 of consolidated mortgage 4½ per cent bonds which are not to be sold at present but are to be used to refund existing obligations during 1922 and reimburse the treasury for expenditures. A part of these bonds had been nominally issued before the effective date of the law requiring the authority of the commission and it is proposed to issue an additional amount of \$4,270,000, making the total \$8,351,000.

CANADIAN NATIONAL RAILWAYS.—Notes Offered.—A syndicate headed by Dillon, Read & Co., is offering an issue of \$11,000,000 Canadian Northern three-year 5 per cent notes at 99½ to yield about 5.15 per cent. The notes are a direct obligation of the Canadian Northern Railway Company forming part of the Canadian National Railway system, which is owned by the Canadian Government.

CHICAGO JUNCTION.—Six Months' Guaranty Determined.—The Interstate Commerce Commission has issued a final certificate for the amount of this company's guaranty for the six months' period of 1920 amounting to \$1,563,319. Part of this has been paid and the balance due is \$315,319.

CHICAGO, ROCK ISLAND & PACIFIC.—Court Hearing on Clause in Mortgage.—The Central Union Trust Company and David R. Francis, trustee for this company's first aid refunding mortgage, have been asked to appear before Judge Carpenter in the Federal Court at Chicago on March 11 to show cause why a clause preventing junior encumbrances on the company's property should not be removed from the indenture of that mortgage. The outstanding bonds amount to \$94,941,100. Holders of about \$15,000,000 worth have already assented to removing the clause.

COLUMBUS & GREENVILLE.—Asks Authority to Abandon Lines.—The receiver has applied to the Interstate Commerce Commission for authority to abandon two branches: from Stoneville to Percy, Miss., 23.2 miles, and from Itta Benc to Webb, Mississippi, 34.3 miles.

DENVER & RIO GRANDE.—Bond Deposit Extension.—The Hammond committee, representing holders of the first and refunding 5 per cent bonds and certificates of deposit have extended to March 31, 1922, the time in which bonds may be deposited with the Bankers Trust Company and sub-depositaries signifying approval of the Western Pacific's reorganization plan. The Perkins committee has announced that holders of the first and refunding bonds who have dissented from the plan may deposit their bonds up to March 31 with the Farmers' Loan and Trust Company. The Sutro committee representing the 7 per cent cumulative ad-

justment mortgage bonds has announced that the time of deposit with the American Exchange National Bank has been extended to March 31.

DETROIT, TOLEDO & IRONTON.—Authorized to Issue Bonds.—This company has been authorized by the Interstate Commerce Commission to issue \$451,000 of first mortgage, 50 year, 5 per cent gold bonds to be sold for cash at not less than par and the proceeds to be used in reimbursement of expenditures for additions and betterments.

ERIE.—Asks Authority to Sell Bonds.—This company has applied to the Interstate Commerce Commission for authority to sell \$5,000,000 of Erie Railway consolidated mortgage 7 per cent extended bonds due September 1, 1920, of which it expects to sell about half at this time and to pledge the balance pending the sale as security for short term notes. The proceeds for the sale are to discharge a like amount of three-year 6 per cent secured gold notes maturing April 1.

MINNEAPOLIS & ST. LOUIS.—Ask Government Loan.—This company has applied to the Interstate Commerce Commission for a loan of \$2,000,000 from the revolving fund for a period of five years' duration to enable it to meet maturities and make certain improvements.

MISSOURI & NORTH ARKANSAS.—To Be Sold.—The date for the sale of this road has been set for April 10.

MISSOURI PACIFIC.—Takes Over Small Road.—See Arkansas Central.

NEW YORK CENTRAL.—Asks Authority to Issue Bonds.—This company has applied to the Interstate Commerce Commission for authority to issue \$60,000,000 refunding and improvement mortgage 5 per cent bonds. Of the proceeds \$48,055,000 is to be used to pay indebtedness for additions and betterments, or to reimburse the treasury for expenditures and \$11,945,000 is to pay off bonds of subsidiary companies due July 1. The indebtedness for additions and betterments includes several notes to the director general of railroads. The company has been negotiating with J. P. Morgan & Co., for the sale of the bonds and expects to sell them at not less than 90.

NEW YORK, NEW HAVEN & HARTFORD.—Ask Authority to Issue Bonds.—This company has applied to the Interstate Commerce Commission for authority to issue first and refunding mortgage bonds in an amount equal to whatever loan may be certified by the commission and applied toward the reduction of the European loan debentures which mature on April 1. The bonds are to be deposited with the Secretary of the Treasury as collateral for the loan. The company had previously applied to the commission for a loan of \$31,000,000, sufficient to pay off the European debentures, but it has also been conducting negotiations with the holders on a plan for extending them.

NORTHERN PACIFIC.—Authorized to Abandon Line.—The Interstate Commerce Commission has issued a certificate authorizing the abandonment of a portion of its branch line in Bayfield County, Wis., between Coda and Washburn, 24 miles. The company had applied for authority to abandon the entire branch from Iron River to Washburn, 33.78 miles.

SEABOARD AIR LINE.—Asks Government Loan.—This company has applied to the Interstate Commerce Commission for a loan for 15 years of a certain sum or sums of money to be determined in detail when, as and if approved by the commission, to the extent necessary to enable it to properly serve the public. The application gives a list of items of maturing indebtedness and additions and betterments amounting to \$14,000,000 and the company desires loans to meet such of these as may be approved by the Interstate Commerce Commission.

UNION PACIFIC.—Authorized to Acquire Control.—The Interstate Commerce Commission has authorized the acquisition of control of the railroad operated by the Saratoga & Encampment Railroad Company by an operating agreement with option to purchase.

More Equipment Trusts Sold

The director general of railroads announced on March 6 that he had confirmed additional sales, at par plus accrued interest, of

railroad equipment trust certificates held by the government, as follows:

To Alfred Borden and National City Company, New York
 Lake Erie & Western, 1923 to 1935, incl. \$561,600
 Spokane, Portland & Seattle, 1923 to 1935, incl. 507,000

The total amount of equipment trust certificates sold by the government to date, at par plus accrued interest, is \$220,356,800.

Treasury Payments to Railroads

The Treasury Department has issued a statement showing the total payments made to railroads under the Transportation Act up to February 28 as follows:

(a) Under Section 204, for reimbursement of deficits during federal control.	\$1,374,528.58
(b) Under Section 209:	
(1) To carriers to which final payment of the guaranty has been made under paragraph (c), including previous advances under paragraphs (h) and (i).	5,098,541.23
(2) For advances under paragraphs (h) and (i) to carriers as to which a certificate for final payment has not been received by the Treasury from the Interstate Commerce Commission.	260,510,874.00
(c) Under Section 213:	
(1) For partial payments in respect to the guaranty provided in Section 209.	165,320,275.05
(2) For partial payments in respect to the reimbursement for deficits during the period of federal control provided in Section 204.	1,815,841.15
(d) Under Section 210, for loans from the revolving fund of \$300,000,000 therein provided.	271,154,217.00
Total.	\$705,274,277.01

The statement also shows that loans to the amount of \$47,552,470 from the revolving fund have been repaid by 19 companies.

Dividends Declared

Lackawanna Railroad of New Jersey.—1 per cent, quarterly, payable April 1 to holders of record March 8.
 Lehigh Valley.—Common, 1 3/4 per cent quarterly; preferred, 2 1/2 per cent, quarterly; both payable April 1, to holders of record March 11.

New York, Lackawanna & Western.—1 1/4 per cent, quarterly, payable April 1 to holders of record March 14.

St. Joseph, South Bend & Southern.—Common, 1 per cent, semi-annually; preferred, 2 1/2 per cent, semi-annually; both payable March 15 to holders of record March 11.

Southern Railway (Mobile & Ohio stock transfer certificates).—\$2.00, semi-annually, payable April 1, to holders of record March 15.

Warren Railroad.—3 1/2 per cent, semi-annually, payable April 15 to holders of record April 5.

Western Pacific.—Preferred, 1 1/2 per cent, quarterly, payable April 1, to holders of record March 20.

Trend of Railway Stock and Bond Prices

Railway Officers

Operating

T. C. Herbert, division engineer of the St. Louis division of the Pennsylvania, with headquarters at Terre Haute, Ind., has been promoted to superintendent of the Peoria division, with headquarters at Decatur, Ill.

Traffic

J. A. McGill has been appointed general agent of the Canadian Pacific, with headquarters at Ottawa, Ont.

Frank H. Standifer, traveling freight agent of the Louisville & Nashville, with headquarters at Sheffield, Ala., has been promoted to general agent, with the same headquarters.

Mechanical

C. M. Starke, assistant master mechanic of the Illinois Central, with headquarters at Memphis, Tenn, has been promoted to master mechanic with headquarters at Centralia, Ill., succeeding J. W. Branton, deceased.

George E. Lund has been appointed master mechanic of the Mahoning division of the Erie with headquarters at Youngstown, Ohio. Walter L. Barr has been appointed master mechanic of the Kent division.

Special

G. S. Giles has been appointed fire protection engineer of the Union Pacific, with headquarters at Omaha, Neb.

John A. McGrew, superintendent of maintenance of the Delaware & Hudson, has been appointed general superintendent of equipment and way and his former position has been abolished. Mr. McGrew will continue in charge of all maintenance work, both of equipment and way. Mr. McGrew was born June 8, 1873, at Bridgewater, Ohio, and was graduated in civil engineering from Ohio State University in 1895. Upon his graduation he became assistant superintendent of construction of the Columbus & Westernville Electric and, in 1896, entered the service of the Pennsylvania, in its engineering department, at Wellsville, Ohio. From 1899 to 1901 he was assistant engineer, maintenance of way, at Logansport, Ind., and from 1901 to 1903 he was engineer, maintenance of way, at the same point. He was then transferred to Pittsburgh in the same capacity. For six months in 1904 he was special agent for the general manager of the Chicago, Rock Island & Pacific. Then, until 1909, he was a consulting engineer and contractor at Columbus, Ohio, and, latterly, president of the National Engineering Company. In September, 1909, he went to the Delaware & Hudson as inspector of maintenance of its lines, allied properties and street railways. In 1910, he was appointed superintendent of the Saratoga and Champlain divisions with headquarters at Albany, N. Y. From July, 1917, to February 21, 1919, Mr. McGrew was in military service, first as a consulting quartermaster in the construction division and then as a major in the railway division of the American Expeditionary Forces. In April, 1920, he returned to the Delaware & Hudson as superintendent and was appointed superintendent of maintenance on April 1, 1921, which position he held until February 24, 1922, when his promotion became effective.

Obituary

Joseph Wood, formerly first vice-president of the Pennsylvania, Lines West, and a director of the Pennsylvania railroad, died at his home in Pittsburgh on March 4 as the result of a fall on an icy pavement which he sustained several weeks ago.

A. T. Hemingway, assistant secretary of the Ouachita & North Western, secretary of the Leesville, Slagle & Eastern, and treasurer of the Oakdale & Gulf, died in Kansas City, Mo., on February 24, from the effects of influenza and pneumonia, after a brief illness.

The attendance at the March stated meeting of the Signal section yesterday was much heavier than was anticipated two or three weeks ago. At that time

The Signal Section Attendance

there was a feeling that the meetings of the signal section and also of the American Railway Engineering Association would suffer in attendance because the Interstate Commerce Commission had set March 15 as the latest date on which the railroad's cited in its proposed train control order could show cause why the order should not be made effective, and it was expected that the officers attending these meetings would have to be in Washington for the hearing. When the commission extended the date until March 20, this fear was removed and a large turnout resulted.

The electric wiring of interlocking plants has been done in widely different ways on various railroads. Therefore, the Committee on Power Interlocking is to be commended for the preparation of specifications for this work. The diversity of construction is indicated by the recent recommendations of three roads interested in a certain interlocking reconstruction. One road recommended underground cables in conduit, another preferred trunking on top of the ground as cheaper, while the third road wanted a combination of trunking and cables placed on cable posts. A certain road is now trying paper-insulated, lead-covered cables for control circuits at power interlockings,

A Guide For Interlocking Wiring

while recent information from Australia, where this construction is used extensively, indicates that it is not considered a success. This committee has an opportunity to point out possible economies to the railroads and the new specifications may be considered as an excellent foundation for the wiring of interlockers.

The new committee on Highway Crossing Protection appointed at the meeting of the Signal section last June has an opportunity to save the railroads large sums of money and prevent extensive loss of life. The report of the Interstate Commerce Commission covering railroad accidents in 1920 states that 1,790 persons were killed at highway grade crossings as compared with 584 persons killed in all collisions, derailments and locomotive accidents. The installation and maintenance of automatic highway crossing bells, wig-wags and similar devices have been handled by the signal departments of the railroads for years. Therefore, it would seem that this new committee will fill a long-felt want in the ranks of the committees of the Signal section. The committee has done well to co-operate at once with the Committee on the Prevention of Accidents at Highway Grade Crossings and Trespassing of the A. R. A., adopting its standard signs for use for fixed approach warning signs. It has also produced a specification for the banner to be used on automatic movable highway crossing signals. The committee has made a good start and railroad officers concerned should give it full assistance.

Members who have attended conventions regularly during the last ten years will note the absence this year of any report by the Committee on Conservation of Natural Resources. This committee went out of existence with the presentation of its report at the last convention, it being the decision of the directors that the purpose for which the committee was organized had been fulfilled. This committee was created in 1910 in conformity with a growing appreciation on the part of the American people of the value of their natural resources, thanks to the impetus given this movement by the late President Roosevelt. Just what part the railroads could play in this scheme for natural conservation was, of course, problematical. In fact, it may be said that the answering of this question was the prime responsibility with which this committee was charged upon its formation. With each succeeding report of the committee at the annual conventions there came a general realization that conservation in so far as it concerned the railroads implied the practice of simple economy in the use of all things required for the construction and operation of the railroads. Obviously, this is not the responsibility of one committee, but of all those having anything to do with the business of running a railroad; for as each member of the association

The Committee on Conservation

The Committee on Conservation

595

don't remember. One word "economic" occupies an important place in paragraph 11 of the constitution, which states the object for which the association was organized.

A Good Time to Start Work

MANy INDICATIONS POINT TO THE present as the most suitable time for carrying out construction work since before the world war. As an example of the present trend of developments, slightly more than a month ago a consulting engineer representing a certain city and two large railroads requested proposals for the construction of a 1,500-ft. reinforced concrete viaduct over 23 tracks in the municipality in question. He had, at the completion of preliminary plans last year, estimated the cost of this project at \$220,000. Three weeks ago, however, he revised his former estimates to conform to the changed conditions in the labor and material markets, and informed his clients that the cost of the structure at this time should not exceed \$140,000. When 20 bids were opened on the first of this month he was surprised to find an array of figures ranging from \$92,732.50 to \$211,000, with the low bidder claiming that he was quoting at practically pre-war prices. There has been a notable reduction in the cost of many materials. Then labor conditions generally have improved in most localities. But the one great factor contributing to the lowering of the high cost of construction has been the prevailing "cutthroat" competition among contractors, many of whom now bid for work at cost in order to maintain their organizations. In fact, the writer was recently informed by one contractor that exactly \$7.50 was made on the construction of a depot 1,000 miles from his headquarters, this sum to be divided among his partners and the overhead expense of an office force. Work has been scarce and the railroads have been flooded with requests for opportunities to bid on even small jobs. Why should not the roads take advantage of the present opportunity to start some of their long-deferred work, especially since it is the general belief that prices of materials will again rise and a few months will see an end of low bidding?

Reasons for Optimism

IT NOW REMAINS THE ALMOST entire absence of construction activities on the part of the railways during the last two or three years, the statement of an engineer of over 40 years' experience on one of the leading roads of the country a few days ago, that although he had seen many declines and recoveries in railway construction, he had never regarded the future as optimistically as at present, so refreshing and encouraging to the members of the engineering association as they gather for their convention. To one who recalls the activities of 1905 and 1906 with their widespread programs of extension and improvement, and who contrasts this condition with that of the more recent past, a feeling of redudity is excusable. However, there are now more developments in support of the statement referred to above than is generally realized. Even more encouraging is the common understanding that the work authorized is only the forerunner of even larger programs which are advancing to the point of actual inauguration. There is much justification for the opinion that by the middle of the summer we shall be in the midst of an active construction season which will be the forerunner of putting out a few of the projects that already have been announced and without any further delay. We will refer to some of the more important ones which have been authorized in recent weeks.

The first of the many projects is that of work on construction. It is significant that public opinion has already been made in the intention to construct over 500 miles of new lines this year and contracts have already

been let for at least half of this mileage. Among the projects already authorized are an extension of 55 miles on the Atchison, Topeka & Santa Fe from Saranta, Kan., west, and a line 40 miles long from Pawhuska, Okla., to Owen, which are understood to be the first of several projects which this road has in contemplation. The Dallas-Terrell, a Texas road, has awarded a contract for the construction of 34 miles of line; the Portland, Astoria & Eastern is now building a 32-mile extension at a cost of \$2,600,000; the Chicago, Milwaukee & Gary (Chicago, Milwaukee & St. Paul) will build 29 miles of line between Joliet and Gary at a cost of \$2,700,000; the Minarets & Western has let a contract for 55 miles of new line to cost \$2,500,000; the Kansas & Oklahoma Southern has been authorized by the Interstate Commerce Commission to build 71 miles and the New Holland, Higgsport & Mount Vernon has received permission from the same source to build 35 miles of line.

With reference to second track, the Santa Fe has announced that it will reduce grades and provide an additional track between Yampai, Ariz., and Griffith, 75 miles; the Great Northern will build 47 miles of second track in Washington and elsewhere; the St. Louis-San Francisco has awarded contracts for 20 miles; the Chicago & Alton has started work on 11 miles north of Alton, Ill., which is estimated to cost \$362,000, and the Illinois Central has appropriated \$2,000,000 for the construction of a third track, the reduction of grades and other improvements between Matteson, Ill., and Kankakee.

In so far as terminal facilities are concerned, the Pere Marquette has appropriated \$1,400,000 for the construction of locomotive shops at Grand Rapids, Mich.; the Missouri, Kansas & Texas has awarded contracts for the construction of a new gravity classification yard and shops at Denison, Tex., at an estimated cost of \$3,000,000; the Santa Fe has undertaken the construction of additions to its shops at San Bernardino, Cal., estimated to cost \$224,000; the Erie has awarded a contract for a large pier on the Hudson river at Weehawken, N. J., and the Canadian Pacific has announced its intention of proceeding with the construction of a large ocean terminal on Burrard Inlet, Vancouver.

Among miscellaneous projects may be noted the Canadian Pacific's addition to its Hotel Chateau Frontenac, Quebec, for which \$3,500,000 has been appropriated; the Santa Fe's enlargement of its Alvarado hotel at Albuquerque, which is estimated to cost \$300,000, and a new icing station for the Belt Railway of Chicago, which it has announced will cost \$350,000. The New York Central has awarded a contract for the elimination of grades through North Tonawanda, N. Y., at an estimated cost of \$500,000; the Illinois Central is working on plans for the immediate reconstruction of its bridge across the Ohio river at Cairo, for which \$8,500,000 has been set aside, while the New York Central has advertised for bids for the construction of a high bridge over the Hudson river below Albany, N. Y. The Delaware, Lackawanna & Western has requested manufacturers to furnish estimates of the cost of electrifying its lines near Scranton, Pa., which will cost about \$5,000,000.

In this summary no attempt has been made to present a complete list of the larger projects which have been authorized or those which are in contemplation but concerning which no specific announcement has yet been made, or to include the many smaller projects, such as shops, yard extensions, coaling stations, water treating plants, etc. The list enumerated is, however, sufficient to demonstrate conclusively that the railways are viewing the future with more optimism and are availing themselves of the first opportunity to improve and expand their lines in a manner which will enable them to cope with the next surge in traffic.

C. H. Niemeyer, acting engineer maintenance of way of the Central Pennsylvania division of the Eastern Region of the Pennsylvania, with headquarters at Williamsport, Pa., died on March 4 from an attack of appendicitis.

* * *

The annual meeting of the National Railway Appliances Association will be held in the restaurant of the Coliseum at 11 o'clock this morning for the election of officers and the transaction of such other business as should come before this meeting.

* * *

L. A. Downs, president of the American Railway Engineering Association, was host to the members of the Board of Direction, the Committee on Arrangements and past presidents, a total of 25, at a dinner at the Chicago Athletic Club at 7 o'clock last evening.

* * *

Delegates of the various railway sections of the American Association of Engineers held a business meeting in the Green room of the Congress hotel yesterday to discuss administrative matters of the organization. The conference was concerned primarily with ways and means of developing a more closely knit organization of the railway members of the association.

* * *

C. Y. Tu, a representative of the Chinese Government Railways, who is in this country making a study of railway signal apparatus for his government, attended the Signal section meeting Monday. Mr. Tu has been accepted as a member of the Signal section and intends to follow up the activities of this association.

* * *

From the middle of the Pacific to Chicago for the primary purpose of attending the convention and the N. R. A. A. exhibit is the interesting thing about W. D. Cleveland, Honolulu, unless perchance it is the additional fact that an absence of seven years from the convention has but made him all the more intent upon getting here before another year passes by. Mr. Cleveland is signal supervisor of the Oahu Railway & Land Company, a Class I road of 114 miles, operating between Honolulu and Kuku on the Island of Oahu.

* * *

The annual dinner of the American Railway Engineering Association will be held in the Gold Room of the Congress Hotel tomorrow evening. The speakers will include General R. C. Marshall, Jr., general manager of the Associated General Contractors of America, Washington, D. C., and formerly chief of the construction division of the United States Army; Hon. James A. Mulligan, K. C., Sudbury, Ontario,

and Gus W. Dyer, professor of economics at Vanderbilt University, Nashville, Tenn.

* * *

William John Jackson, division engineer of the Minnesota division of the Chicago & North Western, with headquarters at Winona, Minn., died on March 13 from pneumonia. Mr. Jackson was born at Chicago, Ill., on January 7, 1873, and was educated at the University of Illinois. He began engineering work with the Chicago & Northwestern as a tapeman on April 1, 1899, and served as rodman, instrumentman and assistant engineer until he was appointed acting division engineer of the Minnesota and Dakota division on May 15, 1909. He was promoted to acting division engineer of the Ashland division on April 1, 1912, and division engineer of the Madison division on January 11, 1913, being transferred to the Minnesota and Dakota division on May 12, 1913, where he remained until his death.

The A. R. E. A. Program

The twenty-third annual convention of the American Railway Engineering Association will open in the Florentine room this morning. The program for the three days is as follows, morning sessions extending from 9 to 12:30 and afternoon sessions from 2 to 5:30.

First Day—Tuesday, March 14

President's Address.	
Reports of Secretary and Treasurer.	
Reports of Standing and Special Committees:	
XXIII. Shops and Locomotive Terminals.....	Bulletin 241
XIV. Yards and Terminals.....	Bulletin 239
XXII. Economics of Railway Labor.....	Bulletin 243
II. Ballast	Bulletin 239
XV. Iron and Steel Structures.....	Bulletin 240
Special. Standardization	Bulletin 240
X. Signals and interlocking.....	Bulletin 240
III. Ties	Bulletin 240
Special. Stresses in Railroad Track.....	Bulletin 241

Second Day—Wednesday, March 15

V. Track	Bulletin 243
XXIII. Shops and Locomotive Terminals.....	Bulletin 241
I. Roadway	Bulletin 241
XVI. Economics of Railway Location.....	Bulletin 241
XVIII. Electricity	Bulletins 239, 241
XI. Records and Accounts.....	Bulletin 242

Adjournment.	

Signal Section Program

The following reports will come up for consideration at the meeting of the Signal section at the Drake today:

- Committee II—Mechanical Interlocking.
- Committee XIX—Railway Economics.
- Committee XII—Contracts.
- Committee XIII—Electrical Testing.
- Committee XV—Valuation.
- Committee XVIII—D. C. Track Circuits.

2. R. E. A. Board of Direction in Session Yesterday

The Association's Opportunity for Service

New Conditions in the Railway Field Offer Larger Responsibilities
and Greater Possibilities for Organized Work

WITHIN THE LAST FEW YEARS a marked tendency towards co-ordination of activities has been evident among the organizations in the railway field. This has been evidenced by the amalgamation of a number of associations with the American Railway Association. In the engineering field it has appeared in the form of a co-operative arrangement. The motive prompting this development has been the desire to eliminate duplication of effort and to promote unified action in efforts to increase efficiency of railway operation. Becoming a part of a larger organization interested in all branches of railway operation has tended to stimulate the associations to greater activity along broader lines. This tendency has been particularly marked in the American Railway Engineering Association, for of late it has given more attention to the broader phases of engineering in transportation than ever before. In the first of the two papers which follow, R. H. Nishton, president of the American Railway Association, points out the responsibility which the American Railway Engineering Association (the Engineering Division of the American Railway Association) bears to the railway industry, while in the second paper, L. A. Downs, president of the engineering association, touches on some of the work which the association is now doing in this direction.

What the Association Can Do

By R. H. NISHTON

President, American Railway Association

The period of the world war and the boom which followed was an orgy of spending, much of it necessary, some of it unnecessary. In a way it was a draft made upon the future earning of our country, which, like all other drafts, has to be paid, and the time of payment is now here or past due. Hence the insistence and appeal of the "bal" which has gone out for greater thrift, greater efficiency and greater economy in all lines. Thrift in business, and especially in large business, calls particularly

for the knowledge and training of the engineer, and this was never more so than at the present time. Especially is this true of the engineer whose specialty is in transportation problems.

The costs of transportation as represented in charges for that service are so widely distributed that it is perfectly natural that there is a great or greater interest on the part of the public generally as to whether the railroads are managed economically and efficiently than in other lines of business. This thought has impressed itself upon Congress, as is indicated in the legislation enacted to provide the means under which the railroad corporations were to take over their properties at the end of the period of federal control, which legislation placed upon the carriers the express duty of operating their properties in an honest, efficient and economical manner, and placed upon the Interstate Commerce Commission the necessity of considering this question in fixing the measure of return.

There is no other business so subject to publicity and scrutiny as that of the railroads. This is nothing new, for it has existed for a very considerable number of years. The railroad business, the manufacture of transportation, is an industry by itself, and there are no methods of comparison with other industries that are conclusive. The records made by the railways in safety, in economy and in efficiency have been a continuously progressive movement and the engineer has had a very large part, both individually and through associations such as the American Railway Engineering Association, in the development of this forward movement.

The individual railroads have always striven for the greatest economy of operation. That must be perfectly patent to the average business man from the mere appreciation of the fact that, regardless of their public functions, the railroads are private property, supported and dependent upon private capital, and must therefore show earning capacity. This requires at least the same measure of economy and efficiency as is required of other private

business also engaged in the respectable project of making money for its owners, and of the exercise of courage, initiative and research continually to bring about conditions that will produce greater economies.

The railroads of this country really anticipated the specific obligation which has been laid upon them by the Transportation Act of 1920 back in the early eighties, because it was appreciated many years before the enactment of the present law that the day would come when the railroads of this country could no longer be handled solely as individual units of private property. Arrangements and plans were then made for co-operative effort along lines that were productive of better service, greater efficiency and more economy. The foundation underlying the establishment of the American Railway Association, in the first place, and of all the various associations of men skilled in the different problems entering into transportation has been the recognized necessity for better methods, greater economies, larger efficiency and a better service to the public. The tendency for the last two or three years has been to a further co-ordination of all of these various activities centering through one channel, the American Railway Association, which is now operated really as a divisional organization, having in mind the co-ordination of the efforts of all these various activities in the one direction—economy, efficiency, service.

It has often been said that one defect of committee work is that it requires so much compromise as never to secure the best thought of all members of the committee in the long run, but merely an average. Admitting the partial truth of this statement, the experience of the reorganized American Railway Association thus far would seem to indicate quite clearly a very beneficial result to the railroads. While the standard practices which have been recommended (and this applies particularly to the engineering divisions) may not always have embodied what was considered the best thought on the subject on each individual railroad, it has embodied what was found by the majority action of the various divisions to be the best practice in each case. The recommendation of the association, and it must be understood that the power of the association goes only to recommendation (which, however, means in practically all cases adoption in some form), has resulted in the utilization in many cases of methods and practices which individual railroads, left to their own initiative and experiment, would perhaps have not been able to adopt in the first instance.

The work of the reorganized American Railway Association has only just begun. It is to be expected that it will develop, and develop very rapidly, in the near future. It is perfectly patent that even without the requirement of the statute, the public attitude toward the railroads would have required them so to co-ordinate their efforts in many features of operation and management as to reduce waste and to produce the greatest economy and efficiency. It is quite apparent from the beginning made that there is plenty of room in which yet to turn and a multitude of opportunities for the engineering profession. Much as that profession is already specialized, it is probably true that greater specialization is still possible and advisable, particularly with respect to railroads.

In this rather short sketch of the situation facing the railroads, and the manner in which the roads individually are meeting it, I have endeavored to place before you the important part that the American Railway Engineering Association and the Engineering Division of the American Railway Association have had in the development that has taken place on these lines in the past, and to indicate as my opinion that there never was a period where there were greater opportunities for constructive service in the broader phases of engineering and trans-

portation than the present and the period that lays immediately ahead of this nation.

What the Association Is Doing

By L. A. Downs

President, American Railway Engineering Association

The American Railway Engineering Association, embracing within its membership as it does the leading engineers of the principal railways of the United States and Canada, has an unusual opportunity for service to the railways of this country. Through the personnel of its committees all the varied conditions of the country are represented, and a wide range of information is collected, dissected, digested and distributed for the benefit of all railways.

In addition to its efforts in the direction of distinctly engineering problems connected with the location, maintenance and operation of railways, it has in recent years taken up the study of some problems confronting railway owners to which engineering principles and knowledge can be applied to advantage.

Undoubtedly the question of the economical operation of railways is of more urgent importance at present than at any time in their history. The very existence of many properties is at stake and is dependent on the solution of some of the problems confronting railway managers today.

Among these there can be little doubt that the foremost is the labor question in its widest sense. For the purpose of studying some phases of this question the association has actively at work two committees, one on the Economics of Railway Labor, and another on the Economics of Railway Operation. This latter committee is giving very careful study to such subjects as Methods for Increasing the Efficiency of Employees, Methods for Increasing the Traffic of Railways, and the Effect of Speed of Trains on Cost of Operation. Other committees, such as those on "Yards and Terminals" and "Shops and Locomotive Terminals," are giving very careful study to the problem of producing plants which will facilitate the use of equipment in good order and reduce delay in restoring equipment in bad order to service.

Another committee whose work is tending to produce economy of operation is that on "Standardization." This work is designed to reduce the multiplicity of specifications for the various materials required in daily use on railways, and permit of the production of so-called "standard" materials at very much less cost than is possible under present practices.

A committee whose work should result in economies of much magnitude is that on "Stresses in Railroad Tracks." More exact and complete knowledge than has heretofore existed of the forces which have to be resisted by railway tracks will be available from their work, and this knowledge should make it possible to provide for them with certainty and without waste.

During the past year the necessity for effecting the greatest economies possible has been more pressing than ever before, and I believe the work of the association can well be directed in a large degree in the future to the study of the broad questions of economies of railway operation.

Purdue Luncheon

The annual luncheon in honor of visiting Purdue members attending the American Railway Engineering Association's annual meeting will be held at the Chicago Engineers' Club, 314 Federal Street, at 12:15 p. m. Wednesday, March 15. Dean Potter and others from the University will be in attendance.

Signal Section in Session Yesterday at the Drake Hotel

Signal Section Holds Its March Stated Meeting

Large Number in Attendance at Opening Session in the Drake Hotel Yesterday Morning

DEPARTING FROM THE PRACTICE in the past, the ninth annual session of the Signal Section dispensed with all opening business yesterday morning. The meeting was called to order at 10:15 a. m. by Chairman F. B. Wiegand, signal engineer, New York Central, Lines West, and the reports of committees were taken up immediately for consideration. During the afternoon session F. A. Westbrook, field engineer, Habirshaw Electric Cable Company, gave an illustrated lecture. Ten committees presented reports for action at the meeting yesterday, including those on Maintenance Rules and Instructions; Editing; D. C. Relays; Oils; Highway Crossing Protection; Batteries; Power Interlocking; Standard Designs; D. C. Automatic Block Signals; and Signaling Practice.

The committee on Editing found it necessary to review the General Provisions in the Manual because of the fact that there is now in the Manual a form of contract for block signal and interlocking work, a form of invitation to bidder on block signal and interlocking work, and specifications, which by slight amplification, will cover all of the details under the heading, "General Provisions." The committee also found that Standard Section No. 4 needs consideration. The result of the deliberations were submitted to the meeting. It has also been noted that the question of clearance, or clearance diagram requirements, are referred to in many specifications, so that the committee appended recommendations to its report to cover this deficiency. The identification for a Requisite

Sheet, whether it be part of a Major or Unit Specification, was given consideration, and recommendations are included in the report. There has been some discussion about the Warranty Clause used in the several specifications now in the Manual and recommendations on this subject were also included in the report.

F. B. Wiegand
Chairman

Report of Committee on Signaling Practice

THE COMMITTEE SUBMITTED reports on the following subjects:

The report on colors for signals will be found in the proceedings of the Signal section, pages A-300 to A-409, July, 1920, and the committee recommends that the subject be closed.

The Effect of Electric Headlights on Signals

But little difficulty has actually been experienced due to the effect of locomotive headlights and this has been largely eliminated with the abandonment of the arc light and the use of incandescent lamps in the headlights, with the consequent reduction in candlepower as well as the difference in characteristics of the two lights. The difficulties remaining are of three types:

1. The preventing of a locomotive engineer on one train reading the signals which govern him on account of the headlight on a train in the opposing direction blinding him.
2. Account of headlight on a train in the opposite direction showing through the colored glass on a dwarf signal other than the one in front of the lamp and so giv-

ing a wrong indication. 3. Account of light from locomotive headlight on a train being reflected back from a signal and so giving a wrong indication.

The first of these difficulties has been obviated where they occur, which was mostly on multiple track territory, by having the enginemen dim the headlights when approaching trains running in the opposite direction. The second difficulty has been obviated by arranging a shield on dwarf signals behind the colored glass of spectacles which are not in front of the lamp. The third difficulty has been obviated by either: (a) Adjustment of signal. (b) Use of convex roundels which will obviate the trouble should the signal not be in proper adjustment.

The committee recommended: 1. That a shield be installed on dwarf signals behind the colored roundels, not

in front of the lamp. 2. That convex roundels be used on all new work and renewals.

The committee recommended that the report be accepted as information.

Committee: W. J. Eck (Southern), chairman; W. M. Vandersluis (I. C.), vice-chairman; W. E. Boland (S. P.), A. M. Burt (N. P.), C. A. Christofferson (N. P.), C. E. Denney (N. Y. C. & St. L.), C. A. Dunham (G. N.), W. H. Elliott (N. Y. C.), J. V. Hama (K. C. T.), C. J. Kelloway (A. C. L.), H. K. Lowry (C. R. I. & P.), J. C. Mock (M. C.), F. P. Patenall (B. & O.), J. A. Peabody (C. & N. W.), F. W. Pfleging (U. P.), A. H. Rudd (P. R. R.), T. S. Stevens (A. T. & S. F.), E. G. Stradling (C. I. & L.), F. B. Wiegand (N. Y. C.).

Discussion

The report was accepted without discussion.

Report on Maintenance Rules and Instructions

In the preparation of rules for signal maintenance, this committee this year submitted those for motor cars, hand cars and velocipedes. Instructions for signal maintenance at mechanical interlockings and general rules for interlocking were also presented. The motor car instructions prescribe the manner in which this equipment must be handled and the precautions which should be taken by the men operating them. The rules for general maintenance at interlockings covers, among other things, the instructions which should be given a new leverman and the inspections necessary around the machine and on the ground.

G. K. Thomas
Chairman

G. K. Thomas has been the chairman of this committee since its organization two years ago. In September, 1911, Mr. Thomas was promoted from signal maintainer on the Atchison, Topeka & Santa Fe to signal foreman, later being advanced to the position of assistant signal engineer of the Santa Fe System. He is an advocate of maintenance rules and instruction as a means of not only increasing the efficiency of the field forces but also as a proper guide for new men entering the service and can present logical proof that proper rules accomplish the desired results. His work along this line on the Santa Fe particularly fits him to act as chairman.

THE COMMITTEE submitted for consideration reports on rules for signal maintenance and on examination papers on signal maintenance. The reports covering motor cars, track circuits and mechanical interlocking were adopted in 1920 and are now in the Manual. In line with the assignments at that time, these reports were presented under the general titles of Examination Papers on Signal Maintenance.

Rules for Signal Maintenance

MOTOR CARS, HAND CARS, VELOCIPEDES, ETC.

- 201. Safety is of the first importance in the operation of motor cars, hand cars, velocipedes, etc.
- 202. Cars are provided to facilitate work and must be used for railroad business only.
- 203. Under no circumstances may anyone be carried on motor or other cars without a permit from the proper official, except employees in the regular performance of their duty.
- 204. Privately owned cars must not be operated without authority from
- 205. Except in cases of emergency, cars must not be operated after dark, nor during storms or foggy weather.
- 206. When necessary to use hand, push or motor cars at night, great care must be taken. A white light must be displayed to the front and red light to the rear.
- 207. Cars must not be run through tunnels except when authorized by, and then only after complying with local requirements.
- 208. Cars must not be run over foreign lines unless authorized by
- 209. When necessary to operate two or more cars connected together, rigid couplings must be used and the propelling car must be in advance. Side drive cars must not be so connected.
- 210. Cars must not be overloaded.
- 211. Heavily loaded cars must be protected by flag.
- 212. Material and tools must be so loaded and secured that

- none can fall off or interfere with moving parts of the car.
- 213. Employees must not get on or off a moving car from the front or side.
- 214. Motor cars must be run with traffic except as covered by local rules.
- 215. Hand cars and velocipedes must be run against traffic except as covered by local rules.
- 216. Motor cars must not be run through spring frogs under power. They must be lifted over, when necessary, thus preventing damage to wheels, boxings and axles.
- 217. Cars must be run slowly over frogs, switches, details, railroad crossings and other danger points.
- 218. Cars must run slowly through towns and over highway crossings and be prepared for immediate stop.
- 219. Cars must be under control and prepared for immediate stop when approaching gangs of workmen.
- 220. Motor cars must be pushed past station when platforms are occupied.
- 221. Motor cars must not be run past standing passenger trains.
- 222. Employees in charge of motor cars must keep themselves informed as to train movements, on constant lookout, and occupy the track only when it is safe to do so.
- 223. Employees in charge of cars must keep constant lookout for other cars occupying the track.
- 224. When a line-up of train movements is obtained it must not be considered final because operating conditions may require running of additional trains.
- 225. When two or more men are with a car, they should flag at curves and cuts where the view is obstructed or the side clearance is not sufficient to take off the car. If the car is operated with but one man, he must proceed with extreme care (walk if necessary), keeping a constant lookout for trains and motor cars in both directions.
- 226. A distance of at least 400 ft. should be maintained between hand cars and a distance of at least 1,000 ft. between a motor car and any other car or the rear end of a moving train.
- 227. Switches must not be thrown to run hand cars, empty cars, or light motor cars to or from the main track.

228. All persons riding on hand cars must be in a standing position, except when side seats are provided.
229. All persons riding on motor cars must be seated.
230. Side drive motor cars must not be run backwards unless they are designed and adjusted so that this movement can be made with safety.
231. The speed of cars must not exceed 5 mi. an hr. when adjacent track is occupied by a moving train.
232. Side drive motor cars must not exceed a speed of 20 mi. an hr.
233. Center drive motor cars must not exceed a speed of 25 mi. an hr.
234. When two or more men are with a car, they should have a thorough understanding as to what part each will take in removing it from the track in emergency.
235. Lookout must be kept for torpedoes on the rail. When such are found, steps should be taken to avoid exploding them, but if exploded, they must be replaced.
236. Motor cars should not be shipped in baggage cars except when it is absolutely necessary, and when so shipped, the fuel tanks must be carefully drained and all tank caps screwed down tightly.
237. Cars must not be left on the track unprotected. If necessary to leave car for any reason, it must be placed at least 6 ft. clear of the nearest rail and locked. Cars must not be left on public highways.
238. Motor cars, when not in use, must be kept under cover. When not in sheds, use canvas cover.
239. Changes in design or the use of special devices are not permitted without authority of
240. If it is necessary to carry an extra supply of gasoline, this must be in a properly constructed gasoline tight container painted red, with tops tightly screwed down.
241. Open lights of any description must not be used near gasoline receptacles.
242. Cars must be kept clean and properly lubricated. All bolts, nuts, screws, and connections must be tight, brakes must be kept in perfect condition and the car must be in gage and alignment. Excessive lost motion must not be allowed and all parts must be kept in good repair.
243. Before use, a motor car must be inspected to see that it is in good condition, a proper supply of gasoline and lubricating oils provided and the necessary tools, lights, tuses, torpedoes, etc., in place.
244. Study the instructions that come with the car. Do not make long runs with a new car. Stop often, lubricate freely and let motor cool.
245. In no case should more than six dry cells be used. Greater voltage may burn out or injure the coil.
246. To attain the best results with two cycle air-cooled motor car engines, oil and gasoline should be mixed thoroughly before it is put into the car, using about one-half pint of proper grade of oil to one gallon of gasoline. Do not mix oil with the gasoline for four cycle engines.
247. If a starting crank is provided it must be pulled upward when the charge is being compressed in the cylinder to avoid personal injury in case the engine should back fire.
248. The radiator and other parts of the cooling system of water-cooled engines must be protected from freezing. They must be drained when not in use.

Rules for Signal Maintenance Interlocking

GENERAL

1001. Levers or other operating appliances of an interlocking plant should not be operated except for inspection or test and then only after a thorough understanding has been reached with the leverman.
1002. The operating lever of a device temporarily inoperative must be blocked and, or marked so that it is easily distinguishable.
1003. When repairs affecting operation are to be made, a thorough understanding must first be had with the leverman, who must again be notified when repairs are completed.
1004. If necessary to disconnect a switch, derail, movable point frog facing point lock, detector bar or its equivalent, all switches, derails and movable point frogs affected must be secured for safe train operation and notified.
1005. When a switch or movable point frog is disconnected, it must be securely spiked with two or more spikes, which are to be placed in the first and second ties back of the point at the closed position.
1006. When a derail is disconnected, it must be securely spiked and fastened in the required position.
1007. If necessary to take one end of a crossover, the other end must be spiked in the corresponding position.
1008. The locking of an interlocking machine must not be changed or removed from the machine, except upon authority of

1009. If the locking of an interlocking machine becomes disarranged or broken, signals affected must be set to display their most restrictive indication; switches, etc., in the route affected, must be secured until repairs are made. In all such cases must be notified.
1010. A new leverman should be given the following instructions:
- How to disconnect and secure switches, derails and other units in an emergency, so as to provide for the safe train operation.
 - How to operate time leases and other forms of special apparatus.
 - How to read the indicators, lights, etc.
 - How to handle levers with special reference to the danger of forcing the lever when the switch points may be obstructed or other dangerous conditions are liable to exist.
 - Any other information which appears to be necessary to the efficient and safe operation of the plant.
1011. Frequent inspection and tests must be made to insure that all signal appliances, including machine locking, etc., are in proper condition.
1012. Bolts, dowels, pins, nuts, nut locks, etc., must be in place and in good condition.
1013. Interlocking machines must be kept in good mechanical and electrical condition, clean, free from excessive lost motion, and bearing parts free and properly lubricated.
1014. Sufficient compression should be kept in latch springs to assure the proper movement of locking.
1015. Special apparatus used in connection with interlocking machines, such as time locks, lever locks, circuit controllers, etc., must be properly sealed or locked and must be opened and inspected upon authority of
1017. When the condition of switches or track does not admit of the proper operation or maintenance of the interlocking plant, must be notified.
1018. If the ties under the switch points are not in proper condition and maintained so that the switch points ride evenly on all tie plates, the track department should be called upon to correct the condition.
1019. The maximum allowable gage of track at interlocked switches, derails, movable point frogs and detector bars is $\frac{1}{2}$ in. wider than standard. When exceeded, the track department must be called upon to correct the condition.
1020. Interlocked switches, split point derails and movable point frogs must be kept so adjusted that they cannot be locked when one $\frac{1}{4}$ in. rod is placed between stock rail and a point 6 in. back from switch point. There must be no excessive spring of point or connections. When the point is open, there must be at least 4 in. between the point and the stock rail.
1021. If the points of an interlocked switch do not fit up to the stock rails properly, adjustments should be made at the switch adjustment. When the points fit properly, the lock rod should be adjusted so that holes are in proper position for the plunger. When adjustments are completed jam nuts must be set up tight.
1022. Switch and lock movements must have full stroke both normal and reversed. Plungers or locking dogs must be kept tight on the slide bar.
1023. Lock rods should enter plunger stand or locking brackets at right angles to the plunger. Holes or notches must have square edges and be no more than $1/16$ in. larger than the plunger.
1024. Detector bar must be maintained so that it will rise a minimum of $\frac{3}{4}$ in. above the top of rail at every point before the function is unlocked and rest a maximum of $\frac{1}{2}$ in. below the top of rail at every point when the stroke is complete. When lever or switch machine is on center, the motion plates or links should be on center. Bar must be straight, without kinks and lie evenly along rail. Rail clips and motion plates and studs must be tight, rollers working freely, all parts free from dirt and excessive grease, and all bearing parts lubricated. Battered rail must be trimmed to prevent interference with the operation of the bar.
1025. Signals must be clean, properly painted and lubricated and working freely. Blades must assume the full position of each aspect.
1026. Circuit controllers on switches, split point derails or movable point frogs must be so adjusted that the contacts will not function when $\frac{1}{4}$ -in. rod is placed between point and stock rail 6 in. back from the point.
1027. Circuit controllers on lifting type derails must be so adjusted that contacts will not function until the derail is within $\frac{1}{2}$ in. of its full non-derailing position.
1028. Machine locking should be lubricated sparingly with oil only.
1029. The prescribed lubricant only must be used in buffers, signal mechanisms and other special parts.
1030. Where no special lubricant is prescribed, black oil or

..... should be used and care taken not to apply it to excess nor on parts which do not require lubrication.

Rules for Signal Maintenance Interlocking

MECHANICAL

1066. If necessary to disconnect a pipe-connected device, this should be done at the first crank nearest the operated device.

1067. A circuit controller operated by a lever latch on a mechanical machine must be adjusted so that a normal contact will open before the latch block has reached a point about $\frac{3}{8}$ in. from its normal position and a reverse contact will not be closed until the latch block is within about $\frac{3}{8}$ in. of its reverse position.

1068. A circuit controller operated directly by a lever on a mechanical machine must be adjusted so that a normal contact will open before the lever is one inch from its normal position and reverse contact will not close until the lever is within one inch of its reverse position.

1069. Leadouts should be kept clean and maintained so as to have no excessive wear in cranks, pins or bearings and aligned so that movable parts do not interfere.

1070. Pipe lines must be kept free from weeds and dirt, in good condition and alignment and at least $\frac{3}{4}$ in. clearance must be maintained between pipe and base of rail. Rivets must be in place.

1071. Broken pipe and loose couplings or rivets must not be permitted. These can usually be detected by the presence of rust.

1072. Pipe carrier foundations should be level, rigid and in alignment.

1073. Pipe carrier foundation tops should be kept clean, level, securely attached to foundations and not less than 2 in. above ground.

1074. Pipe carriers must be clean and securely fastened, all parts in place and rollers free.

1075. The minimum allowable stroke in main pipe lines is as follows:

- (a) For facing point lock and switch and lock movement 8 in.
- (b) For signals 7 in.
- (c) For switches, derails and movable point frogs 6 in.

1076. When the stroke of a pipe in main pipe lines is less than the allowed minimum, it must be increased at the lever.

1077. If necessary to decrease the stroke at a pipe connected device, this should be done by re-drilling the crank nearest the operated device.

1078. Cranks, compensators and deflecting bars should be clean, in alignment with pipe line, pins and rollers free and properly lubricated. Moving parts should not interfere nor have excessive lost motion.

1079. Cranks, compensators and deflecting bars should be in the position determined by compensation chart when lever is on center.

1080. The plunger of a facing point lock should have at least 8 in. stroke, and when its lever is in the normal position the end of the plunger should clear the lock rod 1 in. The end of the plunger must have square edges.

1081. When the signal lever is normal, the signal bar of a bolt lock should be up against the stop, the notch in signal bar should not exceed 2 in. in length. The notches must have square edges and the lock rod must enter the stand at right angles to the signal bar.

(a) Bolt locks used with switches, split point derails and movable point frogs should be so adjusted that the signal will not clear when a $\frac{1}{2}$ -in. rod is placed between the point and the stock rail 6 in. back from the point.

(b) Bolt locks used with lifting type derails should be so adjusted that signals will not clear until derail is within $\frac{1}{2}$ in. of the full non-derailing position.
