Now many of the people of the United States are disposed to complain about their railway service. A further fact is that they have less reason to complain about the service they get than almost any other people in the world. It is useful, therefore, to publish in the United States actual experiences on the railways of other countries, not in any spirit of captious criticism of other railways, but to help Americans who do not travel abroad to appreciate reasonably the favorable situation they are in with respect to railway service. Of course, many of the shortcomings of service in Europe are due to the aftermath of the war; but that does not make it any less true that they exist.

Shortage of Sleeping Car Service

One of the most outstanding features of railway service on the continent at present is the extreme shortage of sleeping cars. Practically all the sleeping car service is rendered by the International Sleeping Car Company, the headquarters of which are in Brussels, Belgium. Most of the Americans who came over here to attend the International Railway Congress arrived on the continent between the beginning and the middle of April. They were all somewhat startled to find that it would take some days to get sleeping car accommodation to Rome. The large party that came on the *Mauretania* arrived in Paris on April 11. Its members were advised that they could not get sleeping car reservations of any kind to Italy for at least a week!

At that time there was a rush of people going to Rome for Easter; but in spite of that it was somewhat of a shock to persons accustomed to American railway service to encounter such a condition of affairs. There never was a time as far back as I can remember, even during the war, when one could not within 24 hours get at least an upper berth on some train running between any two large cities in the United States. The upper berth in an open Pullman

car has its disadvantages; but it has great advantages over no berth at all.

A specific incident will perhaps best illustrate the sleeping car situation over here.

The president and the general manager of a certain American railway, and their wives, sought sleeping car reservations from a border point in France to Rome. They were told all space was sold a few days ahead. The president suggested that an extra sleeping car should be put on one of the trains. As the president himself tells the story, the railway employee to whom he made the suggestion, threw up his hands and exclaimed,

"It could not be done without a special decree from the King!"

So the American railway president and general manager and their wives arrived in Rome after having spent a sleepless night sitting up in a first class compartment.

This shortage of sleeping cars is a chronic condition. Persons desiring to leave Rome for Paris after the Railway Congress found all space on one train sold out for fifteen days ahead and the other trains completely sold out on all days of the next ten except two. Yet, curiously enough, there often are ways of getting sleeping accommodation even under these conditions. The tipping of employees in the offices of the International Sleeping Car Company prevails on a large scale; and a big enough tip paid to the right persons frequently causes entire compartments to spring up where not a single berth grew before.

Overcrowded Trains

The question will naturally be asked how, being unable to get sleeping accommodation, the visitors got to Rome. Some, as already indicated, sat up all night in day cars; others traveled by day, and got off and stayed at hotels in cities along the way at night. Whether they traveled by day or night, however, they found all trains overcrowded. The writer, since arriving on the continent, has traveled about 3,000 miles, east, south, west and north, on railways in France, Switzerland and Italy. Only for short distances in two instances—from Paris to Rheims and return on the Eastern Railway of France and from Lausanne in Switzerland to the northern border of Italy—has he ridden on day trains that were not overcrowded. By "overcrowded" is meant a train in which all the seats were taken and many persons were standing or sitting on their baggage in the corridors.

Before the war it was always possible to get seats in first class, and usually in second class, compartments on most European railways and many persons were expected to stand in the third class compartments. Now even in the first class compartments there almost always are more passengers than there are seats for.

Bedevilmnt of Passengers at Frontiers

Passenger cars in Italy are especially crowded. In that country on almost every day train all the seats are taken and the corridors are so filled with people that it is difficult to move through them.

Needless to say, this shortage of passenger equipment is largely due to the war. It was impossible for the railways

to keep up their equipment during that long and dreadful conflict.

Other conditions are encountered, however, which are not so easy to explain or excuse. International through car service has not been satisfactorily re-established even between countries which were allies during the war, or between former belligerent and neutral countries. Imagine, for example, leaving the women of your party peacefully reading their magazines at a point on the border between Switzerland and Italy while you run forward along the platform to see what the customs officials do with your trunks, and finding on your return that the women, hand baggage, coats, books, canes and umbrellas have been unceremoniously dumped out on the platform. This was done to cut out a Swiss car and replace it with an Italian car.

Before the war, hand baggage was inspected in the cars. Now, on entering Switzerland, Italy or France, it usually must be taken out of the car, and passengers must go trooping into the customs office in the station to see it put through a perfunctory examination. Meantime your train is unnecessarily delayed an hour or more, and (under your breath) you curse all the bureaucrats of Europe, and rejoice that you live in a country so large that you are not bedevilled every few miles by customs officers who seem to exercise their ingenuity to make staying at home a pleasure.

The passengers on many trains are obliged to get up and visit the customs offices or frontier points in their night gowns and pajamas, in the middle of the night. To the traveler, one of the worst results of the disintegration of some European countries is the increase in the number of national boundaries and custom houses.

Inadequate Toilet Facilities

The very worst feature of railway service in some parts of Europe is the toilet facilities. These facilities on many day coaches in America are bad enough; but our worst cars are immaculate in this respect compared with many in Europe. The toilets in the first class cars of the better French railways are clean, and are provided with towels, soap and paper. As one travels eastward and southward the towels give out, and then the soap. The toilets of even first class cars in Italy often have neither towels, soap nor paper, and are too dirty and unsanitary for description. Italy is a very mountainous country, and the Italian railways are a fine product of engineering skill. They are at present among the leaders in electrification. It is painfully evident, however, that the management has devoted and now devotes very little attention to sanitary engineering. The station—many of them handsome structures—need sanitation even more than the cars.

Regarding "de Luxe" Trains

The traveler can obtain very good accommodation on the "de luxe" trains between principal cities if he makes reservation several days in advance. These trains are made up entirely of sleeping cars; and the sleeping cars usually are clean and comfortable. But the difficulty of getting space on the "de luxe" trains never ceases. The Rome express, from Paris to Rome, for example, runs every day in the early spring, when tourists are flocking to Italy, and is always crowded during that season. Early in May, when travel to Italy becomes lighter, instead of being run every day, it is run only three days a week, with the result that reservations on it still must be made days ahead. The International Sleeping Car Company takes no chances of running with any empty berths.

A "de luxe" train on the continent does not mean the same thing as in the United States. Take, again, the Rome Express, which is one of the best examples of such trains. The distance between Paris and Rome is somewhat over 900 miles—not very much different from what it is between

New York and Chicago, or better Chicago and New Orleans. The better trains between these points in the United States make their run from 20 to 24 hours. The schedule time of the Rome Express is 30 hours. All these trains of this class in the United States have buffet-smoking cars, and some also observation cars. Such cars are virtually unknown in Europe.

American and European Sleeping Cars

In addition to open sleeping cars with ordinary upper and lower berths, the better trains in the United States have compartments and drawing rooms with complete toilet facilities, which are roomy and luxurious beyond anything known in continental Europe. The sleeping cars on the continent are all divided into small compartments with upper and lower berths for two, and sometimes three, persons and equipped with wash bowls, the rest of the toilet facilities being at the ends of the cars, and being used by both men and women.

There is one respect, however, in which the sleeping cars of Europe are distinctly superior to those of America. When the berths are made up in the daytime, they afford seats which are much more comfortable than the seats in the American sleeping car. The seats in our Pullman sleeping cars are, in fact, extremely uncomfortable. There is no problem the management of the Pullman Company could solve with more satisfaction to its patrons than that of making its cars as comfortable to ride in by day as are the sleeping cars of Europe. It is curious that this problem should have been solved so much better in Europe than in America, in view of the fact that people ride in sleeping cars by day so much more in America than in Europe. It might be added, in this connection, that the seats in the first and second class compartment of most of the day coaches of Europe are far more comfortable to ride in than the seats in the day coaches of most cars in the United States. In fact there is no means of transportation in the world that is more comfortable than a first class compartment on a European train if it is not overcrowded. The car builders of Europe do know how to make seats to fit the human back—an art that has not been acquired in all parts of the world.

A party of Americans returning from the International Railway Congress had a novel experience on the Rome Express. They left Rome on April 30, and awakened on the morning of May 1 to find that because this was the "Labor Day" of Europe the enginemans and trainmen of the Italian State Railways had "struck work" and left the train in the station at Turin at 4:30 a. m. Here this "crack" train remained until about 6 o'clock a. m. on May 2—over 25 hours. The passengers were not warned before leaving Rome that any such thing was likely to happen; and they remained all day in Turin without any official advice as to when the train would start moving again. The only information they could get was the very unofficial opinion of the sleeping car guards that the "strike" would last 24 hours. The situation was not made less uncertain and exasperating by the fact that other trains were moving in and out of the station all day. Just why other trains ran while the Rome Express stood still it was impossible to learn, but apparently it was because the bolshevistic Italian railway employees desired especially to harass the "millionaires" who ride on "de luxe" trains.

High Speeds Again Made

It would do injustice to leave the impression that the comparatively slow schedules of the "de luxe" trains to Southern Europe represent the best speeds now being made on the continent. The French railways made high speeds between important points before the war; and in this respect their service has been practically restored to normal. The lines of the Eastern Railway between Paris and Rheims and of the

Northern between Paris and Calais were fought over and largely destroyed repeatedly during the war. Their tracks and their service have been so completely restored that express trains over them in which the writer rode made speeds upward of 60 miles an hour and averaging over 50 miles an hour for long distances with entire comfort to the passengers. The "de luxe" trains also make good speeds on the Paris-Lyons-Mediterranean.

The Cost of Travel

In Europe, as in America, the war caused very large advances in railway rates of all kinds. It has been extremely difficult since the war to state European rates in United States money because of the great fluctuations in the rates of exchange. It would appear, however, from my own computations, based on current rates of exchange that, stated in American money, first-class fares in Europe now average about the same as in the United States. For example, the distance from Cherbourg to Paris is 230 miles, and the rate actually paid in American money was \$7. This makes an average of 3.5 cents a mile. The distance from Paris to Lausanne—partly over the Paris-Lyons-Mediterranean of France and partly over the Swiss Federal Railways—is 348 miles, and the fare paid was \$11.60. This gives an average of 3.53 cents a mile. Computations based on the amounts paid between other points give somewhat similar results.

The cost of a sleeping compartment for two persons for a night trip such as that between Florence and Rome—196 miles—is about \$7 and between Rome and Naples—155 miles—is about \$6. Passengers starting on such a trip, on a train leaving at midnight, cannot get into the car at, say, 10 o'clock and go to sleep, as at many places in the United States. They must get in just before the train starts, and get out as soon as it reaches its destination. A sleeping compartment and lunch and dinner for two persons on the Rome Express costs about \$38, of which about \$6 is for the four meals. Before the war the table d'hote lunch or dinner served in the restaurant cars of continental Europe cost about 50 cents. Now these meals cost from \$1.50 to \$2. Anybody who studies these figures will conclude that it now costs practically the same to travel first class in Europe as in the United States, and this is true. The increase in the cost of traveling—including emphatically that of staying at hotels—has been, measured in United States money, relatively greater than in America, except apparently in Germany and elsewhere in central and eastern Europe.

Will Not Tend to Increase Good Feeling

Perhaps the facts, based upon personal observation and experience, which have been given in the foregoing will explain why the writer began this letter by implying that this season's invasion of Europe by American tourists will not tend to increase the good feeling between Europe and America. Almost everywhere the American tourist finds expenses greater than he has expected and encounters conditions which cause him discomfort and annoyance. Americans are very far from being as popular in the countries of their recent allies as they were when the war ended; and when they protest and swear about expenses that surprise them and conditions that make them angry they do not increase their popularity. But, as estimated at the beginning of this letter, this American invasion is quite certain at least to have the good effect of making those who participate in it appreciate their own railway service more when they return home.

A NEW ICING STATION of the Southern Railway at Macon, Ga., to facilitate the prompt movement of the rapidly increasing shipments of fruits and vegetables from points in South Georgia and Florida accommodates 26 refrigerator cars at one time, and has an overhead conveyor by which ice is brought directly to the platform from the plant of the Atlantic Ice and Coal Corporation.

Hearing on Power Brakes by Interstate Commerce Commission

IN CONFORMITY to order No. 13528 of the Interstate Commerce Commission, dated February 20, 1922, and supplementary orders in connection therewith, an important hearing in regard to power brakes and appliances for operating power brake systems was started in Washington on Wednesday, May 17. The object of the inquiry and investigation is to determine whether, and to what extent, such brakes and appliances now generally in use on locomotives and cars are adequate and in accordance with requirements of safety, what improved appliances or devices are available for use, and what improvements may or should be made to obtain increased safety in train operation.

Large Attendance at Hearings

The hearing is being held before Examiner Mullen. The air brake manufacturers and the American Railway Association are represented by counsel and on account of the importance of the case the sessions are being attended by from 80 to 100 men, among whom are most of the air brake supervisors of the largest railroad systems.

The first subject taken up was the air brake apparatus which has been developed by the Automatic Straight Air Brake Company, New York. In substantiation of its claims for the need of such a system and that it was superior to the Westinghouse air brake system now in general use, Clark and La Roe, counsel for the Automatic Straight Air Brake Company, have called a number of witnesses and submitted many exhibits. The first witness examined was Robert Burgess, southeastern manager of the Westinghouse Air Brake Company. The questions centered around a paper presented by Mr. Burgess before the Southern and Southwestern Railway Club in November, 1919, relative to the empty and load brake.

The next witness examined was S. D. Hutchins of the Westinghouse Air Brake Company, who was questioned in regard to a memorandum relative to the automatic straight air brake which he sent to M. A. Kinney, superintendent of motive power, Hocking Valley. Mr. Hutchins was followed by W. S. Bartholemew, vice-president, Westinghouse Air Brake Company, who was questioned in regard to a similar general memorandum.

Automatic Straight Air Brake

The next witness called was M. E. Hamilton, field engineer, Automatic Straight Air Brake Company. His testimony covered the operation of the automatic straight air brake both in solid trains and when mixed with Westinghouse brakes, as observed on the test rack and on various railroads where this system has been applied. Evidence showed that an earlier design of the brake was tested on the Virginian in 1918 and subsequently removed. The apparatus of this company is now in service on the following equipment: 100 coal cars on the Norfolk & Western; 40 coal cars on the Denver & Salt Lake; 11 passenger cars on the Chicago & Eastern Illinois; 48 passenger cars on the Erie, and 6 passenger cars on the New York Central. Additional orders now on the books included brakes for the New York, Chicago and St. Louis, Pere Marquette, Rock Island, Erie, Norfolk & Western, Missouri, Kansas & Texas, and El Paso & Southwestern.

A number of enginemen and brakemen of various roads who have operated trains on which automatic straight air brakes were in use have been called to testify as to the operative results obtained.

From present indications it appears that the hearing will be thorough and will last for some time as many additional witnesses are to be called.

Freight Car Loading

WASHINGTON, D. C.

FREIGHT CAR LOADING during the week ended May 13 showed another large increase to 777,359, which was 26,173 more than the loading for the corresponding week of 1921, and an increase of 23,000 as compared with the week before. This was in spite of a reduction as compared with last year of 82,109 cars of coal. With this added to the actual loading the total would have exceeded that for

which showed a decrease of 10,092 cars, and all showed increases over the preceding week except livestock and merchandise, i. e.

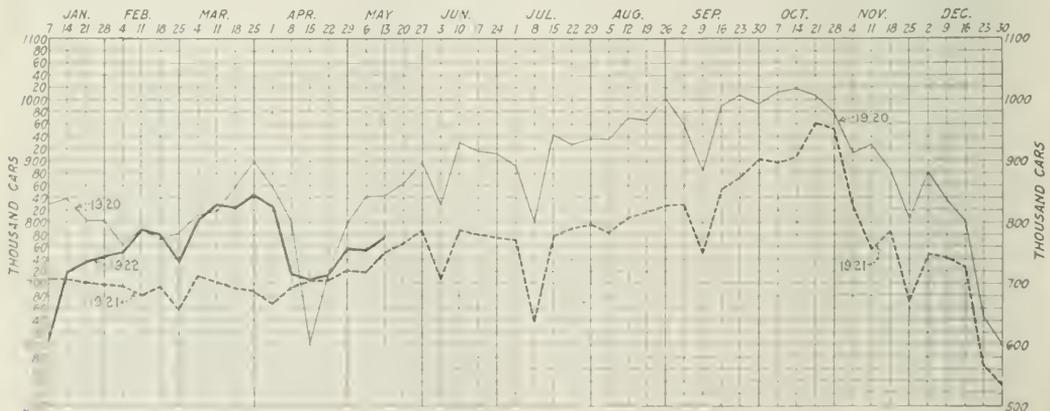

The summary as compiled by the Car Service Division of the American Railway Association is given below:

The number of surplus freight cars for the period from April 30 to May 8 showed a decrease of 18,299 cars, as compared with the period ending April 30, to 353,239. Of these, 86,604 were box cars, a decrease of 8,049, while the surplus coal cars amounted to 226,276, a decrease of 8,801.

Revenue Freight Car Loadings Up to May 13, 1922

the corresponding week of 1920, which was 84,145. Coal loading was the heaviest it has been since the beginning of the strike and an increase of nearly 4,000 cars as compared with the previous week. All other classes of commodities showed increases as compared with last year, except iron,

there was also a decrease in the number of coke and stock cars. For the following week, ending May 15, there was a further decrease in surplus to 343,689.

The number of bad order cars for the two weeks ending May 1 was 537,704, or 14.3 per cent.

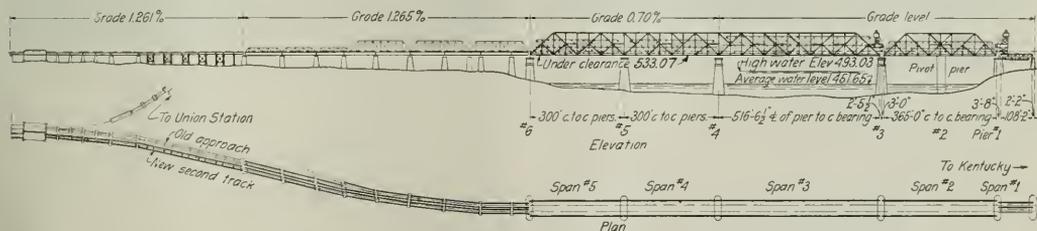

After Supporting These Single Track Spans for 45 Years, the Piers Now Carry a Heavy New Double-Track Superstructure

Double-Track Spans Placed on Single-Track Piers

Utilize Forty-Five Year Old Substructure in Renewal of the Cincinnati Southern Bridge Over the Ohio

THE RENEWAL of the Cincinnati Southern bridge over the Ohio, now nearing completion, is noteworthy as the only large railway bridge project in progress for some time. Aside from this it merits the attention of engineers because of the many original and ingenious methods employed in meeting the problems imposed in this important reconstruction project. Chief among these is the utilization

favorable to cantilever erection. The erection followed the rather common procedure of building the new spans around the old trusses, but according to methods that are essentially original. Provision for a high water channel opening for river transportation requiring a vertical headroom of only 13 ft. more than that afforded by the fixed spans was fulfilled by a 365-ft. vertical lift span, and this short lifting

General Plan and Elevation of the New and Old Structures

of the original piers, built in 1876 for single-track spans, to carry a new superstructure several times as heavy and designed for double-track. This, of course, reflects well earned credit on J. H. Linville, the designer of the original bridge. However, it was only through the exercise of a high degree of engineering skill on the part of those responsible for the reconstruction work that these old piers could be adapted to their present use.

The new superstructure represents the fourth instance of trusses continuous over three or more supports to be built in America during the last five years, a further evidence of the advantages of this form of construction for conditions

distance afforded opportunity for the development of elevating equipment essentially different from that normally employed in bridges of the vertical lift type.

Bridge Owned by City of Cincinnati

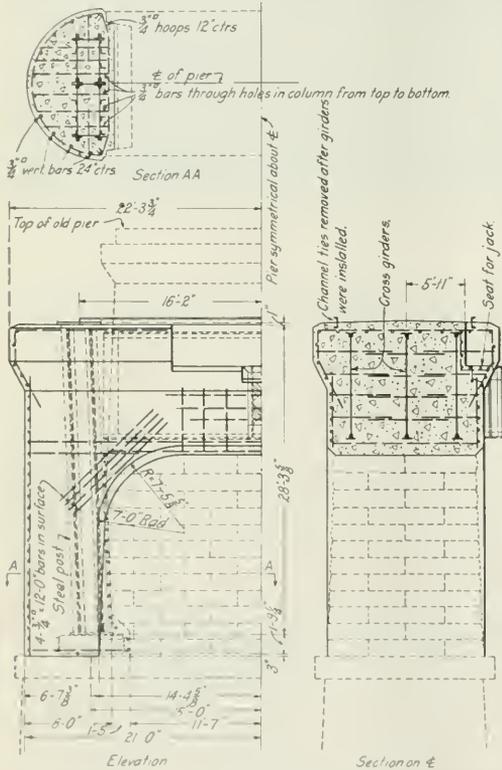

Aside from the structural considerations considerable interest is attached to the Cincinnati Southern bridge because of its ownership by the city of Cincinnati as a part of the Cincinnati Southern, one of the few municipally owned steam railroads in the United States. The property is under lease to the Cincinnati, New Orleans & Texas Pacific, a line controlled by the Alabama Great Southern, which in turn is

controlled by the Southern Railway. The line is operated as a part of the last named system and the bridge renewal project has been financed by the sale of five-per cent gold bonds of the city of Cincinnati, the obligation of which the leasing railroad has assumed by the payment of the annual interest and an annual installment of one per cent against the principal.

The old bridge consisted of four river spans. Two of these were simple fixed spans of 300 ft., the third was a fixed channel span of 519 ft. and the fourth was a symmetrical swing span of 370 ft. center to center of rest piers, this swing span being intended for use at times of high water when there would be insufficient clearance under the 519 ft. span. All of the spans were of wrought-iron, Whipple trusses on

to impose restrictions on the loading of the bridge, as a consequence of which road engines were cut off trains at the south end so that the trains could be hauled across the river by locomotives weighing not over 65 tons. The cars also were restricted to such as had a gross weight not in excess of 115,000 lbs.

As stated above, the bridge has been renewed with a new superstructure on the old piers. In the case of the three fixed spans, continuous trusses have been provided, extending from Pier 3 to Pier 6. In the place of the swing span a vertical lift span has been provided spanning from Pier 1 to Pier 3, thus eliminating the pivot pier. All the spans have been made the same depth, this being determined primarily by the requirements of the long span. The depth was kept the same primarily for convenience of erection equipment operated on the top chords of the trusses. An idea of the difference between the new and the old superstructure is to be had from the cross section showing the plan of erection. The new trusses are nearly twice as deep and are spaced more than twice as far apart as the old trusses. The new spans

How the Tops of the Piers Were Strengthened and Enlarged to Receive the New Spans

limestone piers carried to rock (blue limestone) foundation by the open coffer dam process. The design and details were of a character such that the construction of this bridge marked an important milestone in the progress of bridge engineering in America, particularly as the 519 ft. span was at one time the longest simple truss span in this country. The south approach comprised one 112-ft. truss span, while the north approach embodied 1,660 ft. of viaduct, partly on masonry piers and partly on viaduct towers.

Use of Old Bridge Restricted

Obviously, a structure designed 45 years ago developed limitations on its loading capacity with increases in the weight of railway equipment. This had made it necessary

Erecting One of the Steel Columns Used to Strengthen the Piers

average 8,200 lb. per lin. ft. of bridge, while the old 519-ft. span averaged 4,500 lb. per ft. of bridge. The design loading for the new span is Cooper's E-60; the old spans were designed for a live load of 1,800 lb. per lin. ft. of bridge.

The spans are riveted throughout except for I-bars in the closing panel of the 519-ft. span and a few diagonals in the web system. The main panel lengths are about 74 ft., so that with subdivided panels the stringer span is 37 ft. All riveted members except the bracing are of silicon steel. The I-bars are heat-treated, high-carbon steel.

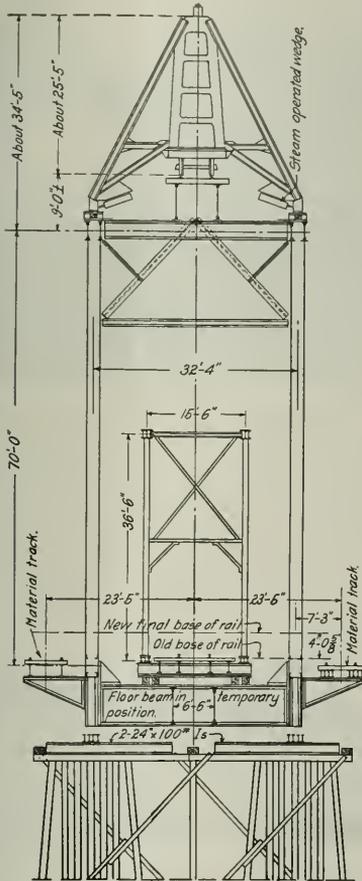

In the north approach, the old through truss spans have been replaced by deck plate girders on masonry piers for double track, covering a total length of 921 ft. Of these the longest span is 120 ft. For a length of 658 ft. the existing single track viaduct is supplemented by a new single track viaduct alongside.

Spans 1, 2 and 3 of the bridge are level; the other two spans are on a grade of 0.7 per cent rising to the south. Owing to the fact that the floor of the new bridge is four feet deeper than the old floor and it was necessary to maintain the

established under-clearance, the track grade on the new bridge is four feet higher than on the old one. This necessitated considerable change in the viaduct structure which was subjected to further change because of a raise of seven feet in the grade of the approach at Gest street, where a new reinforced concrete viaduct has been provided. The entire project required the fabrication and erection of 8,200 tons of structural steel, of which 3,914 tons are in the three con-

ting coping was removed and enough of the pier ends cut away to make room for heavy steel columns and grillage footings to take the end bearings of the new trusses. To apply the load as far from the end of the pier as possible, these columns were inclined inward so that the bases are 14 in. closer to the center line of the bridge than the tops of the columns, the resultant outward thrust at the top being resisted by tie members extending across the faces of the piers and connecting the tops of each pair of columns. However, application of the superstructure load is to be further distributed (following the removal of the old spans) by taking down enough of the pier top between the columns to permit the introduction of three cross girders. These will serve as diaphragms connecting the two columns of each pair and will be wedged up on the masonry so that a considerable portion of the column load will be distributed to the center portion of the pier.

The top of the piers will be jacketed with concrete to enclose the structural steel and provide a bridge seat and

tinuous spans and 1,251 tons are in the lift span, exclusive of the towers and machinery.

Work on the Piers

To support trusses spaced 32 ft. 4 in. center to center on piers having a top length of only about 28 ft. over the coping was by no means the least of the problems imposed in the renewal of the bridge. Fortunately, the over-all length of the piers at the top of the starting, 30 ft. below the coping, was about 42 ft., thereby offering a solution in the reconstruction of the pier above that point. The great concentrations to be imposed by the new span, together with the need of supporting the existing span during erection of the new work, called for the use of structural steel bents as a means of applying the new load to the piers. The star-

coping. The drawing shows how this will be accomplished with a maximum consideration of the finished appearance of the pier.

At Pier 3 an additional complication is introduced in providing a seat for the lifting equipment required for the movable span. This necessitated a pair of cantilever girders projecting from the side of the pier as shown in the drawing. Pier 1 at the south end of the lift span is on pile foundation and has been completely encased in a heavy concrete jacket, also on pile foundation.

Erection Methods Original

Spans 2 and 5 were erected on falsework while Spans 3 and 4 were erected by the cantilever method with the closure in the center of Span 3. The use of continuous trusses for Spans 3, 4 and 5, provided the necessary continuity over Piers 4 and 5 for erection purposes. This was provided over Pier 3 by temporary connections between the top chords of Spans 2 and 3. As shown in one of the photographs, this consists of girders provided for use in the north approach viaduct equipped with temporary end details as re-

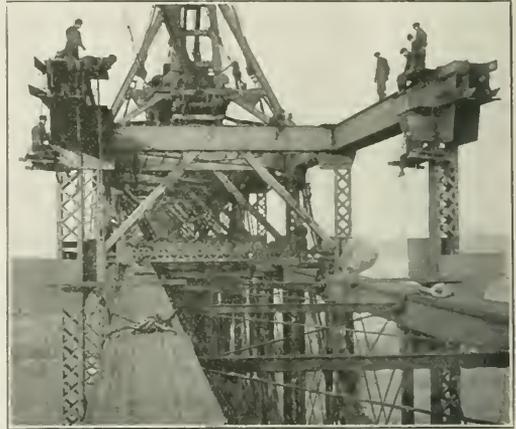

quired for pin connection to the hip-joints of the two adjacent spans.

Obviously, the cantilever method of erection imposed conditions requiring the erection equipment to travel on the top of the structure, but instead of using a creeper traveler running on the top chords, two standard-gage, 60-ton bridge derrick cars with 70-ft. booms were used for this purpose, traveling on a track supported by a floor system composed of bridge stringers spanning between the cross struts of the top lateral bracing. These were the stringers provided for the two outside lines of the stringers in the floor system, as only the two inside stringers were erected at once in final position. The only special equipment provided for the derrick cars was an A-frame designed to provide side bearings and tie downs on the top chords when loads were being lifted. The application and release of the side bearing was accomplished by hydraulic-operated wedge blocks as shown in the drawing and photograph.

The placing of these two derrick cars in position to start work at an elevation 74 ft. above the track level on the old bridge was no mean problem. It was solved as shown in one of the photographs. Four-post platforms were erected just beyond the ends of the two end spans with their tops at a level with the top of the new spans and the first pair of girders for the erection track was placed on these towers, following which the ties and rails were installed and the derrick car assembled piecemeal with the aid of locomotive cranes equipped with 110-ft. booms.

The material for the new trusses could not be delivered on the operated track of the old bridge because it was impossible to pass the large chord members through the framing of the old trusses. For this reason material tracks were provided at the level of the bottom chords on cantilever brackets outside the new trusses on either side. On one side of the bridge these brackets were necessary to provide a sidewalk, but on the other side they served only for erection purposes. In all 801 tons of structural steel was used for the erection of this bridge which was not required in some way as a part of the permanent structure. The mate-

time came for wrecking them. These beams and two lines of stringers were assembled complete in the temporary position with the bottom lateral system and the beams were equipped with special brackets to receive the lateral plates in the absence of the bottom chords, while short diagonal struts were introduced to connect the bottoms of the floor

The New Cross Bracing Had to Lie Erected in a Temporary Position to Clear the Old Spans

beams with the chord members as a means of transmitting the longitudinal thrust of the lateral system into the chords.

This plan had to be modified to some extent in the end panels of the trusses owing to the fact that end floor beams could not be inserted because of interference with the bridge piers. These beams were omitted until the old trusses were removed and the piers cut down as previously explained.

Closing the Gap in Span 3—Note the Kinks in the Bottom and Top Chords at the Ends of the Closing Panel

rial was delivered on these material tracks on standard-gage car, but to avoid undue loading a light narrow-gage locomotive was used to handle the cars. This necessitated the use of a third rail in the material tracks and an offset coupling for connecting the locomotive with the cars.

The erection of the new span around the old one introduced certain considerations to avoid interference of the new members with portions of the old structure. The floor beams had to be erected so as to hang below the old floor and thereby provide a means of supporting the old spans when the

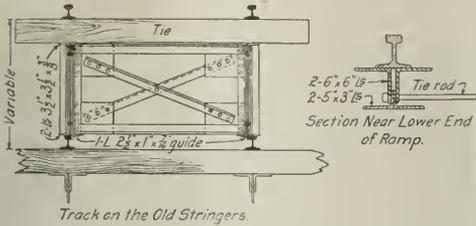

The portals and cross-frames also interfered with the old trusses, as a consequence of which the upper portions of the cross frames were omitted temporarily and the lower portions erected in a raised position. This is clearly shown in some of the photographs which show only the lower part of the X-bracing in position.

How Span 3 Was Closed

Extensometer measurements were made in the top chords of the trusses over Piers 4 and 5 during the course of erec-

tion and the results checked very closely with the calculated stresses for various stages of the work. Thus, readings of 26,000 lb. per sq. in. were obtained for conditions under which the calculated stress was 25,000 lb. per sq. in. The adjustment of bearings on Span 4 after the erection had reached Pier 4 was accomplished by the use of jacks at that

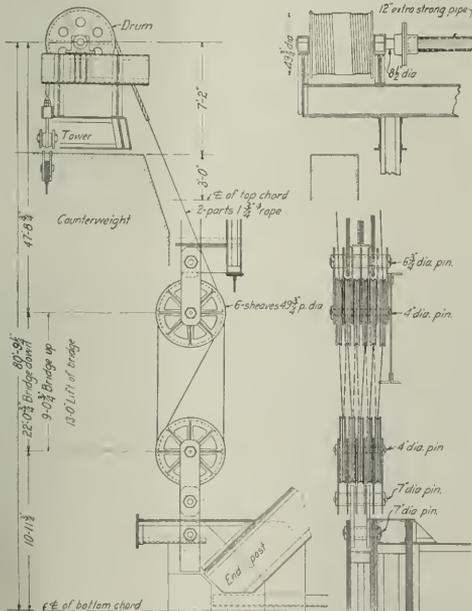

end of the south cantilever was above final position through the adjustment of jacks at the south end of Span 2 on Pier 1. This arrangement allowed a sufficient clearance for the entrance of the closing members in the gap between the ends of the two cantilevers. With the members in position the south end of Span 2 was slowly raised, thus lowering the end of the south cantilever. This action served to shorten the top chord length and gradually introduced compression in the closing member of the top chord. This in turn served to raise the outer end of the north cantilever until Span 3

Two Sections Through the Ramp Used While the Old Floor System Was Being Removed

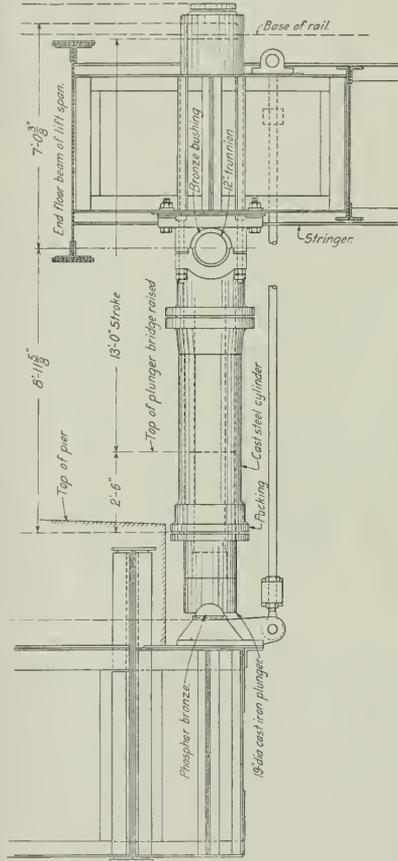

pier, after which no changes were made in the levels at Piers 4, 5 or 6 in connection with the closing of Span 3. This was accomplished entirely by adjustment in elevation at Pier 1 in connection with a unique method of inserting the members in the closing panel.

The closure was made in the central panel on this span

as shown in the photograph, the closing members comprising bottom chord eyebars and diagonals with slotted pin holes and a top chord member having butting ends planed on a slight chamfer so that only about the middle third of the member was in bearing. As erected the outer end of the north cantilever was below final position, while the outer

gradually assumed the elastic curve for the condition of continuity over Pier 4 and simple support at Pier 3.

Following the erection of the new trusses complete the old spans were blocked up on the new floor and the old trusses cut apart and removed. The members were lowered and loaded by the derrick cars from the erecting track on top of the new spans, the material being loaded on to cars standing on the operated track within the bridge. After this work was completed there remained the removal of the old floor and the raising of the new floor to the final level. This work was carried on simultaneously for about four stringer panel lengths at a time, making two or three changes per week. This was complicated by the fact that there was

a difference of four feet between the new and old rail levels, this difference being taken up temporarily by a ramp 150 ft. long, supported on the top of the rails of the old floor and shifted forward each time that a section of the floor was changed. Each time that a change of floor was made the new floor was supported at each panel point by fall lines, while the floor beams were disconnected from the posts. This completed, they were hoisted to the new level, carrying up the old floor system with them. The old floor beams had previously been cut off close to the stringers at each side and had been cut in two between the stringers. The track was then hoisted clear of them and the old stringers were "snaked" out from under the floor on either side, after which the track was let down onto the new stringers.

This process was complicated to some extent at the piers where the new floor could not be installed complete at the lower level as previously explained. This change in floor system was made at intervals between trains and was handled without interference with traffic.

Lift Span of Unusual Design

One of the unique features of the bridge is the lift span for the high water channel between Piers 1 and 3. The lift is only 13 ft., but the piers supporting the span are relatively high in proportion to the lift. Advantage has been taken of these conditions to introduce several innovations, chief among which is the provision of hydraulic power in the form of two large jacks or rams for the lifting equipment, these jacks being of sufficient power to lift one-half the weight of the span owing to the fact that the span is counterbalanced for only one-half its weight. Another interesting detail is the use of multiple part counterweight tackle, as a result of which half the weight of the span is counterbalanced by counterweights weighing only one-tenth the weight of the span. This, of course, implies that the travel of the counterweights is 65 ft. for the 13 ft. travel of the span. The jacks are cast steel cylinders 19 $\frac{1}{4}$ in. in diameter receiving cast iron plungers. One of these jacks is mounted on the center line of the span at each end of the bridge so as to exert a thrust between the loading pocket

on the pier and two loading girders set between the two inside stringers of the end panels of the span.

To allow for change in the length of the span due to changes in temperature the rams are hung in trunnions 12 in. in diameter attached to the loading girders with a hinge joint at the bearing in the loading pocket. The jacks will be operated by oil at a pressure of approximately 3,000 lb. per sq. in., the pressure being supplied from a pump located centrally in the span from which pipes will be connected to each jack through the center of the trunnions. To guard against dropping the span in case of failure of the pumps or the circulating pipes, check valves are placed in the pipes close to each ram. The estimated time for raising the span is five minutes.

Work on the reconstruction of the bridge was started on March 1, 1921, beginning with the construction of the approach piers. This work proceeded to a point where the steel reinforcement of the river piers could be inserted by July 1. The erection of the new trusses, which was started on September 26, progressed continuously and was virtually completed with the closing of the channel span on December 21. Following this, work was started on the removal of the old span, which was completed on February 1, except for the changes in the floor system.

The entire reconstruction project has been carried on under the direction of Ralph Modjeski, consulting engineer, Chicago. The interests of the railroad company are represented by T. H. Gatlin, chief engineer of construction, Southern Railway, Washington, D. C. M. B. Case was the resident engineer for Mr. Modjeski until December, 1921, when he was appointed senior resident engineer on the Delaware River bridge at Philadelphia, Pa., and was succeeded at Cincinnati by Charles Hahn. The new superstructure was fabricated and erected by the American Bridge Company, Emil Larsson, assistant chief engineer.

TWO THOUSAND EMPLOYEES of the Georgia Southern & Florida held their annual picnic at Valdosta on Saturday, May 20. Automobiles to carry the visitors from the railroad station to the fair grounds were furnished by the Rotary and Kiwanis clubs.

I. C. C. Prescribes 10 Per Cent Rate Reduction

Credit for Decreases Already Made Reduces Estimated Cut
to \$225,000,000—Rate of Return Fixed at 5.75 Per Cent

WASHINGTON, D. C.

THE INTERSTATE COMMERCE COMMISSION made public on Wednesday morning, May 24, its long awaited rate decision, in which it finds that 534 per cent on the aggregate value of the railway property will be a fair return after March 1, 1922, and that existing freight rates and charges, including charges for switching and other accessorial service and all other charges applicable to freight service which were increased in Ex Parte 74, will be, on and after July 1, unjust and unreasonable to the extent that they may respectively include more than stated percentages of increase over the rates in effect prior to August 26, 1920. The new percentages prescribed effect a general 10 per cent reduction except that rates reduced as a result of the commission's decisions in the western grain and livestock cases and the southern hardwood lumber case and by the voluntary 10 per cent reduction on agricultural products made by the carriers, are not to be further reduced, but are continued in effect. Where rates have been changed since August 26, 1920, primarily by way of readjustment to remove discriminations, prejudices or discrepancies without material effect upon the aggregate level, the 10 per cent reduction is to be applied to the new rate in order to preserve relationships. A 10 per cent reduction on all freight revenues would amount to approximately \$400,000,000. It is estimated that the exceptions and reductions already made will decrease the amount of the reduction now proposed to about \$225,000,000 a year. The reduction in the rate of return reduces the amount which the commission finds should constitute a reasonable net operating income for the carriers from \$1,134,000,000 to \$1,086,000,000.

Decision Dated May 16

The decision bears the date of May 16, indicating that it was reached prior to the President's conference with the railway executives at dinner at the White house on Saturday evening, at which he and Secretary Hoover urged the railroads to make voluntary reductions on certain basic commodities. It has been stated officially at the White House that the commission could not on the record made in its general rate investigation apply the amount of the reductions which it found warranted to specific commodities only, but must apply them generally and that the carriers had been offered an opportunity to substitute an immediate voluntary reduction for one to be ordered by the commission. The commission's report is not in the form of an order, but states that the respondents should advise it promptly and not later than May 31, if possible, whether its findings will be carried into effect without formal order or orders. A committee of railway executives appointed following the White House dinner which had conferred with the commission on Monday morning was to meet with the commission again on Thursday and apparently the decision leaves it open for them to propose a program of voluntary commodity reductions as a substitute for a general order. The commission's report contains no indication as to how such a proposal would be regarded, however, and statements from the White House indicate that the President was not optimistic following his conference with the railroad executives that they would be able to reach an agreement that would comply with the wishes of the administration for substantial reductions on basic commodities rather than a smaller reduction spread over all traffic.

The commissioners were unanimous that rates should be re-

duced and the majority opinion finds that the reductions should be general. Four of the commissioners, however, in concurring and dissenting opinions, favored reductions on basic commodities. Commissioner Eastman expressed the opinion that the decision should have been deferred until after the Labor Board has acted. The majority opinion finds no reductions in passenger fares warranted, but Commissioners McChord, Potter and Cox thought that passenger rates should be reduced.

Fair Return 5.75 Per Cent

The 10 per cent reduction is proposed to be effected by the findings that rates will be unreasonable to the extent that they exceed more than 26 per cent above the rates in effect on August 25, 1920, in the eastern group and between points in Illinois territory and between Illinois territory and the eastern group, instead of the 40 per cent increase authorized in Ex Parte 74. In the western group and between the western group and Illinois territory the 35 per cent increase of Ex Parte 74 is reduced to 21½ per cent. In the southern and Mountain-Pacific groups the 25 per cent is reduced to 12½ per cent and on interterritorial traffic the 33⅓ per cent is reduced to 20 per cent.

The commission finds that such rates will enable the carriers in the respective rate groups under honest, efficient and economical management, with reasonable expenditures for maintenance of way, structures and equipment, to earn an aggregate annual net railway operating income equal as nearly as may be to a return of 5.75 per cent upon the aggregate value as taken for the purpose of this proceeding and the railway property of such carriers held for and used in the service of transportation.

The majority opinion says that a fair return of 5.75 per cent, representing income arrived at after deducting the federal income tax on a return of 6 per cent, would be approximately the equivalent of a fair return of 6 per cent, out of which the federal income tax was payable. Commissioner Potter, in his concurring opinion, says the rate should have been fixed at 6 per cent.

The commission finds that since the advance of August, 1920, the carriers have failed by a considerable margin to earn the authorized return. Not that it appears reasonably certain, with increased traffic and lowered operating expenses that the net railway operating income of the carriers in 1922 would be more favorable under present rates than in 1921. The commission does not find that the high rates caused the business depression. "Manifestly," it says, "the depression of 1921 resulted primarily from causes other than transportation charges, but it does not follow that under present conditions existing high rates do not tend to retard the return to a more normal flow of commerce. We are of the opinion that general reduction in the rate level as substantial as the condition of the carriers will permit, will tend not only to lessen the transportation burden, but also to equalize and stabilize the condition under which commerce and industry are carried on, with consequent full assurance to the carriers of realizing the fair return contemplated by the law." An abstract of the report follows:

Report of the Commission

The important questions for determination are whether present rates, fares, and charges, in the aggregate, as a whole or in the several rate groups defined in Increased Rates, 1920, or upon

sideration of these later items or not, the difference would be reflected only in fractions of per cents of the returns hereinafter indicated as the results of operation.

Revenues and Expenses

The net railway operating income for 1921 of Class I carriers, including large switching and terminal companies, yielded returns of 3.30 per cent in the eastern group, 2.60 per cent in the southern group, 3.50 per cent in the western and mountain-Pacific groups, and 3.31 per cent for the United States as a whole, on the valuation for all roads taken by us, for the purposes of that proceeding, adjusted by the carriers to cover Class I roads only, together with additions and betterments on Class I roads aggregating \$605,000.00 for the year ended December 31, 1920.

The decrease in net railway operating income shown between October, 1920, and July, 1921, was due to decline in traffic. The marked increase in that income during the last six months of 1921 was due to increased traffic and lowered operating costs. Deficits were experienced in January and February, 1921, in the eastern group and in January, 1921, in the western district. In the southern group the rate of return in those months was less than 1 per cent, although the tonnage handled in January was high as compared with the remainder of the year, bearing in mind ordinary seasonal variations. Ordinarily, except in the southern group, traffic begins to increase in the spring months and reaches its peak in the harvest months, August to October. In the south traffic during the summer months is light and the heavy months are October, November, and December. The principal reductions in costs accomplished during 1921 were brought about by reductions in force, wage reductions ordered by the Railroad Labor Board effective July 1, and gradually receding prices of materials and supplies. As the combined result of the higher level of rates, fares, and charges and of these reductions in operating costs, the net railway operating income of the carriers as a whole for 1921 was substantially greater than that for 1920, although the ton-mileage in 1921 was less than in any year since 1915 and approximately 25 per cent below that of 1920.

Efficiency and Economy in Operation

One of the matters for consideration is the extent to which net income can be increased by enhanced economy and efficiency in operation. The record indicates that the railroads individually, and collectively through their associations, have been and are devoting their attention to this matter. Substantial progress has been made in standardizing the various parts of equipment, thus increasing their interchangeability and promoting economy in equipment repairs. Committees of these associations are engaged upon plans to lower the unit cost of car repairs, fuel, and other items, and to reduce loss and damage. The evidence indicates realization of certain savings and improvements in operation. We are investigating methods of increasing economy and efficiency of operation.

During the war various governmental agencies, in co-operation with shippers, brought about material increases in car loading. The carriers direct our attention to the fact that the loading per car during the 12 months ended September 30, 1921, was 28.5 tons, which is substantially the same as that during the war years. Since February, 1921, for various causes, some of which are temporary in character and beyond carriers' control, the average car loading has declined.

The percentage of empty-car mileage to loaded-car mileage was greater during the 12 months ended September 30, 1921, than during any corresponding period within the past nine years. The carriers' existing car-service rules are based upon ownership and control by each carrier of its cars. The increase in the movement of empty cars resulted from the carriers' practice, then, and now, of returning cars empty to the owning carrier when loads are not available. The business depression which then prevailed prevented the usual number of loaded movements, and thus brought about the increase in empty-car mileage.

Representatives of owners of railroad securities appeared and urged adoption of a plan which contemplates co-ordination and unification of operations of carriers, more particularly with respect to the purchase, repair, distribution, and control of freight cars. Respondent carriers introduced little testimony with respect to this plan and gave no indication of intent to adopt any similar plan. It is evident that the full economies predicted would not be immediate, that there would be difficulties in attainment, and that heavy expenditures of capital would be required. If the purpose of section 15a to afford carriers a reasonable return is to be attained, earnest efforts toward reduction of operating expenses in all possible ways consistent with good service must be continued. The far-reaching importance of such proposals calls for a more intensive study by carriers and the proponents than appears to have been made.

Consideration is being given by the carriers to co-operation in the use of facilities. The joint use of facilities established dur-

ing federal control has been continued in many instances, and some progress is being made in the direction of further co-operation. The record does not disclose any general lack of efficiency.

Maintenance

The significance of the return of 3.31 per cent given above for Class I railroads during 1921 depends to a considerable extent on whether the maintenance charges for that year represented adequate upkeep. Certain executives testified that the net railway operating income which resulted from the operations of 1921 was obtained only by forced economies which are neither in the public interest nor susceptible of indefinite continuance; that these economies took the form of inadequate maintenance; that the hours of labor consumed and the quantities of material applied in maintenance of way and structures on certain lines was less in 1921 than during the average of years in the test period; and that in general no more was done than was necessary to keep the lines in a condition safe for operation.

The carriers generally seem to have taken the fact of under-maintenance during 1921 for granted rather than to have undertaken to prove it. Individual carriers have proved its existence in their own properties. Maintenance charges of Class I roads aggregated \$2,017,700,867 in 1921, more than in any preceding year except 1920, when the total was \$2,623,985,448. The decrease of 1921 under 1920 was \$606,284,581, or 23.1 per cent. The volume of traffic in 1921, as measured by ton-miles, was about 25 per cent less than in 1920. Unusual features in the operations of 1920 make that year unreliable as a measure of what the annual outlay for maintenance should be. It was a period of peak prices, when the greatest ton-mileage and passenger-mileage in the history of the railroads moved under most adverse conditions. Moreover, labor and material costs were lower in 1921 than in 1920. In relation to total operating expenses, maintenance charges in 1921 were almost the same as in 1920, the percentages being 43.6 and 44.1, respectively.

The record does not disclose whether the actual quantities of material applied were as great in 1921 as in previous years. It does not appear that, taking the country as a whole, such applications in 1921 compare unfavorably with those of 1920, or of the test period. Returns from carriers representing more than half of the tie and rail applications for 1920 indicate that their 1921 applications are within 1 per cent of those of 1920, the East and South being greater than in 1920, and the West being less. In a year in which the movement of traffic is light, somewhat less maintenance is required than in years of heavy traffic, although it would be in the public interest if surplus from prosperous years were expended on maintenance in years of light traffic.

When we consider the conditions which prevailed during 1921, the carriers' contention that current maintenance was deferred may have basis, but they have not supported their contention with such facts of record as would warrant us in making a definite finding of to the extent to which it was deferred. Carriers could not and did not escape the compelling influences which affected other forms of industry during that lean year. The number of their employees was reduced by a fifth, sometimes more; outgo was pared and upkeep skipped where possible; the "bad-order" figures cover an increasing number of cars requiring heavy repairs, as well as the obsolete and obsolescent, which were not being replaced to the requisite extent; and, in brief, we are left with the abiding, if composite, impression that, on the whole, the railway plant of the country was not at the end of 1921, and is not now, in as good condition as it should be, and is far from ready to meet the demands which will come with resumption of general business activity. There are, of course, some notable exceptions.

We are of opinion that if the return of 3.31 per cent for Class I roads for the year 1921 were corrected, such corrected return would not vary so materially from 3.31 per cent as to make unsafe or unreliable the adoption of that figure as approximating the result of actual operation in 1921.

Constructive Year

Rapidly changing conditions since August, 1920, make the actual results of operation and the percentage earned of little value as a guide for the future, unless viewed in the light of present and prospective conditions. The carriers in response to our request introduced statements indicating what the results of the operations of Class I roads would be for a constructive year, based upon the traffic of 1921, under rates and costs prevailing in February, 1922. The statements reflect net railway operating income here of \$443,609,800, or a yield of 5.06 per cent on a valuation of \$8,775,000,000 for the eastern group; \$95,350,869, or a yield of 4.25 per cent on a valuation of \$2,243,499,045 for the southern group; \$368,732,961, or a yield of 4.49 per cent on a valuation of \$8,206,000,000 for the western district; and \$907,693,630, or a yield of 4.72 per cent upon a total of \$19,224,499,045 for Class I carriers in the United States as a whole. The valuation used is that taken by us in Increased Rates, 1920, supra, for all railroads, as ad-

justed by them in their estimates to cover Class I roads, with additions and betterments of \$330,000,000 to September 30, 1921, a total of \$778,449,045.

Passing from the constructive year to the prospects for the immediate future, the carriers estimate that the revenue tonnage for 1922 will not exceed that of 1921. In support of this position they assert that in the Middle West the winter wheat crop of 1922 will be less than that of 1921; that there is prospect of a considerable decline in the California citrus crop due to damage by frost; and that in the South the acreage of cotton has been reduced by various factors. We are not ready to accept February crop estimates as accurate, but, even if their forecasts of these three crops are realized, this is far from conclusive that the aggregate tonnage of agricultural products will be decreased. Yields of various crops vary from year to year. Some are good and others are poor, and large yields of other crops may more than offset and deficiency in these three. Moreover, facts of record indicate that in the South cotton growing is being supplanted to some extent by diversified farming.

The carriers asserted that there was no evidence of a revival of business sufficient to warrant a prediction of increased traffic in the near future. Since the second week in January the number of cars of revenue freight loaded had been steadily increasing, but this the carriers in part discounted on the ground that the increased car loadings were caused largely by emergency shipments of coal designed to guard against the contingency of a strike in the coal fields on April 1. The strike has occurred and still continues; and the revenue freight loaded has somewhat decreased.

Taking the charted trend as normal, freight traffic for 1921 was subnormal. We feel justified in accepting increased revenue car loadings as foreshadowing an increased volume of freight traffic. The effect of the coal strike, which began April 1, cannot be forecast. It may affect traffic other than coal and coke. The increase in loading for all freight traffic during the first three months of 1922 was 11.9 per cent over that of 1921.

The increase was general, and not confined to coal and coke. It appears reasonably certain that, with increased traffic and lowered operating expenses, the net railway operating income of the carriers in 1922 would be more favorable, under present rates, than in 1921.

Freight Rates and Charges

The average revenue per ton-mile in 1921 was greater than that for the fiscal year ended June 30, 1914, by the following percentages: Eastern district, 96.1; southern district, 61.4; western district, 59.3; and United States as a whole, 76.2. In 1914 the average-distance haul per revenue ton per road was 155 miles and in 1921, 187 miles.

General reductions ranging from 10 to 22 per cent ordered by us with respect to carload rates on grain, grain products, and hay in the western and mountain-Pacific groups became effective during January, 1922, and upon our recommendation rates on live stock in the same groups in excess of 50 cents per 100 pounds had been reduced 20 per cent, but not below 50 cents, in October, 1921. Practically all other carload rates upon products of the farm, garden, orchard, and ranch throughout the country were reduced 10 per cent in January, 1922. All of these reduced rates, other than those on grain, grain products, and hay in the western and mountain-Pacific groups, expire by tariff limitation on June 30, 1922. Only in these three instances have reductions been made covering the entire country, or the whole of any one or more rate groups, since the increases of 1920 became effective.

Many rate adjustments, resulting in reductions, have been made since the increases of 1920. Some affected a substantial volume of traffic such as export grain, bituminous coal to Lake Erie ports for the Northwest, sand and gravel in eastern territory, ore, lumber, and petroleum and its products. In some instances the volume of traffic after the reduction was less and in others more than before the reductions. Protests, usually alleging undue prejudice, have been filed by shippers against many of these readjustments, and in some cases have resulted in suspension proceedings. Some readjustments have been made hastily under pressure from particular shippers, or for the purpose of retaining traffic or detaching it from one group of carriers to another.

In their constructive year, which is based on 1921 tonnage, the carriers calculated the net effect of the reductions in the revenue of Class I roads at \$189,700,000, distributed as follows: Eastern group, \$75,000,000; southern group, \$15,200,000; western district, \$99,500,000. This estimate represents but 47 per cent of \$3,963,500,000 the freight revenue for 1921, as adjusted by carriers to cover rate reductions made prior to January 1, 1922. The total amount paid by shippers and passenger for transportation has also been reduced by the amount of the transportation taxes, reported January 1, 1922 which in 1921 aggregated approximately \$1,500,000,000.

The opinions of shippers and representatives of the public in this proceeding are diverse. Many urge immediate radical reductions, contending that rates in the aggregate or on particular com-

modities are unreasonable; that the increases of 1920 contributed to the depression which followed by a few months the date of their establishment; that notwithstanding some readjustments and reductions subsequently made, the existing rate level is preventing a revival of commerce, and, by diminishing the flow of traffic, defeats the desired end of producing adequate net return for the carriers. Others urge that rates be reduced as soon as possible, but express no opinion as to whether reductions should now be made. Most of the general commercial and shippers' organizations urge that reductions when made should apply generally to all rates, as did the increases of 1918 and 1920, but no shipper or shippers' organization urged reductions in fares as well as in rates. Numerous state commissions in the West and South contend that reductions should be made both in rates and in fares. The representatives of certain industries and of a few general organizations urge that reductions be applied only to basic commodities, the staples which are recognized as most important to the economic situation of the country, and which usually constitute low-grade freight.

The carriers are unanimous in the opinion that increased rates have not caused the business depression, which they attribute to generally recognized world-wide readjustments resulting in unfavorable trade and credit conditions, restricted purchasing power, contraction of consumption, and, in many instances, collapse of demand. The carriers contend that the increased rates were not even an important contributing factor in the lessening of traffic in 1921, and that reduction in rates will not restore normal traffic. They admit that rates are too high and must come down, but they insist that rates can not be further reduced until the costs of transportation are further reduced.

Rates generally have been increased twice in the past four years, the increase of 1920 alone having been intended to produce more than one billion dollars additional revenue from the transportation of freight. As wages and cost of materials have been materially reduced since the increases of 1920, it is the position of shippers generally that the inability of the carriers to earn a fair return since these reductions were made is due largely to the failure of traffic to move in normal volume, and that the most important problem before us is to devise rates that will move more traffic and at the same time be compensatory to the carriers. It is generally recognized that existing high rates are a burden upon commerce, and many shippers insist that they are forcing movement to other forms of transportation, tend to restrict traffic, and in some instances to prevent particular movements. Many complaints are also made relative to the disturbance of relationships between producing or consuming districts due to the manner in which rates have been increased, and to partial readjustments which have subsequently taken place. The belief is general that traffic has been localized and the radius of distribution reduced.

Numerous shippers sought reductions in rates on commodities manufactured or handled by them. Most of these shippers contended that their commodities are basic and accordingly entitled to first consideration; or that, if any reductions are to be made, such reductions should apply upon their commodities quite as much as upon commodities generally characterized as basic. Some shippers stressed the relatively high level of class rates, and pointed to increases therein as well as in classification ratings of many articles, in addition to general increases. They stated that the net result of the various changes has been to widen unduly the differences between carload and less-than-carload rates, and urged that to widen further these differences by reducing carload commodity rates and not class rates would have a serious effect. Some of the miscellaneous commodities move generally on class rates, others on commodity rates. Commodities which move on class rates in some territories move on commodity rates in others. The wide range of evidence presented, the numerous and diverse interests concerned, and the competitive relationship of many commodities, accentuate the difficulty of selecting individual commodities for specific reductions.

Passenger Fares

According to statistics compiled by us from annual reports of Class I roads the operating ratio in 1920 for passenger and allied services was more favorable than that for freight service. For the 12 months ended September 30, 1921, the situation was reversed, and, except in the southern district, the operating ratio for the freight service became the more favorable of the two. This is readily explained by the greater increase in freight rates than in passenger fares and by the fact that decline in traffic permits of greater reduction in freight-train than in passenger-train mileage.

Many causes contributed to the decrease in revenue passenger-miles in 1921. They include the business depression, the increased use of motor vehicles, the improvement of highways, and the high level of passenger fares. Reduction in fares would no doubt increase travel somewhat, but the record does not warrant the conclusion that under existing conditions this stimulus would suffice to offset the resulting loss in revenue. Eastern carriers

estimated that restoration of the passenger fares of August 25, 1920, a reduction of 16.2/3 per cent, would result in a revenue loss of \$176,560,000 annually in the whole country, and that to offset that loss an increase of 20 per cent in passenger traffic would be necessary, allowing nothing for the added expense incident to the additional traffic.

The Pullman Company sought removal of the surcharge, contending that it tended to reduce travel in sleeping and parlor cars. A sharp decline in such travel followed the application of the surcharge. Fluctuations since September, 1920, in the number of Pullman passengers carried have almost paralleled those in the number of all revenue passengers carried.

The record indicates that travel in sleeping and parlor cars has not decreased in substantially greater ratio than travel generally, and does not warrant a conclusion that the decrease in travel in sleeping and parlor cars is traceable to the surcharge.

Conclusions

The carriers take the position that we must be guided solely by those things which are definite and certain in the past. With this we can not agree. Our function under the law is not that of mere computers and can not thus be atrophied. The duty to prescribe rates for the future carries with it the obligation to exercise an informed judgment upon all pertinent facts, present and past, in order to forecast the future as best we may.

When we decided Increased Rates, 1920, supra, the country was still in a period of steadily rising prices. We then resolved doubts as to future operating costs in favor of the carriers. In recent months costs have been declining and traffic increasing. Rates of pay for employees have been reduced to an extent which, based upon the light traffic of 1921, is estimated by carriers to aggregate more than \$350,000,000 per annum. The Railroad Labor Board has estimated that the reduction exceeds \$400,000,000 per annum, without taking into account changes in rules and working conditions. The tendency is toward increased revenues, lowered costs, and higher net income for the carriers.

Under the adverse conditions of 1921 the net railway operating income of Class I carriers of the United States totaled \$614,810,531. Based upon the subnormal traffic of that year, and the wage rates, and prices of materials and supplies, prevailing at the end of the year, the carriers in their constructive year estimated an aggregate net railway operating income of \$907,693,630, equal to 4.72 per cent upon the valuation used by us as adjusted by carriers to cover Class I roads only, including additions and betterments since January 1, 1920, amounting to \$778,499,045. Adopting the ratio of net railway operating income of all carriers to that of Class I carriers in 1915 and 1916 as being approximately correct for 1921, the net railway operating income in the carriers' constructive year would be for all carriers \$923,783,340, or 4.89 per cent upon the valuation.

We do not accept the adjustments made by carriers in their constructive year as correct or complete. We have indicated that further adjustments are necessary in order better to reflect probable expenditures for federal income tax, fuel, and materials and supplies. Reductions in rates will carry with them reductions in operating expenses of carriers through lessened transportation charges paid by them on their fuel and materials and supplies. Thus it is estimated that a reduction of 10 per cent in transportation charges on coal would effect a saving of over \$7,000,000 on the amount of coal consumed by Class I carriers in 1921.

The net railway operating income of all carriers has exceeded \$900,000,000 in only two years, 1916 and 1917. In 1916, the most prosperous year in the history of the railroads, it aggregated \$1,051,543,860, and during the three years of the test period the average for Class I carriers was \$906,524,492, approximately the amount which accrued as annual rental to the carriers under federal control.

The figures heretofore given include no estimate for increased traffic over that of 1921, which clearly was subnormal. We do not anticipate return to the tonnage of 1920 for some time to come, but there are many indications of greater tonnage than in 1921. The car loadings for February and March, 1922, exceeded those of the corresponding months in 1921 by 11.7 per cent and 19.9 per cent, respectively. During the first three months of 1922 car loadings exceeded those of the same period of 1921 by 11.9 per cent.

Any additional tonnage realized should be handled under a favorable operating ratio. It appears that under present rates, and with an increase of 10 per cent or more in traffic over that of 1921, not only would the net railway operating income of the carriers as a whole for the next 12 months be substantially in excess of the fair return herein determined, but it would greatly exceed the corresponding figure for any year in the history of railroad operation.

In 1920 we authorized large increases in rates and fares designed to produce the necessary revenues under the conditions then prevailing. There was then little doubt of the ability of industry to

bear the increased charges. The situation has since changed. High rates do not necessarily mean high revenues, for, if the public can not or will not ship in normal volume, less revenue may result than from lower rates.

Shippers almost unanimously contend, and many representatives of the carriers agree, that "freight rates are too high and must come down." This indicates that transportation charges have mounted to a point where they are impeding the free flow of commerce and thus tending to defeat the purpose for which they were established, that of producing revenues which would enable the carriers "to provide the people of the United States with adequate transportation." In 1921, freight traffic was only slightly more than 10 per cent in excess of that in the year ended June 30, 1915, which was not an unusual year. But the charges for moving freight traffic in 1921 totaled nearly four billion dollars, or about two billion dollars in excess of 1915. Railway operating revenues in 1921 aggregated about 5½ billion dollars, or more than 2½ billion dollars in excess of 1915. If the traffic in 1921 had equaled that indicated as normal by the trend during the 26-year period preceding the war, freight revenues and total railway operating revenues would have exceeded those of 1915 by approximately 2½ billion and 3½ billion dollars, respectively. Without any allowance for pyramiding of transportation charges in goods passing from hand to hand, these figures are significant as explaining, at least in part, existing wide spreads between the amounts received by producers and these paid by consumers.

Manifestly the depression of 1921 resulted primarily from causes other than transportation charges. But it does not follow that under present conditions existing high rates do not tend to retard the return to a more normal flow of commerce. Deflation has taken place to a greater or less extent in wages and origin prices of commodities in nearly all branches of industry but most transportation charges are still near the peak.

Practically all agree that stability of freight rates is highly desirable and that normal traffic may not well be expected until the present widespread expectation of rate reductions is realized or dispelled. To assume that rates can or should be stabilized on the present high basis is futile. As already observed, the anticipation of a falling market tends to restrict purchases, and until the public is convinced that there is little likelihood of immediate further material reductions in prices or transportation charges, the confidence necessary to normal business will to that extent be impaired. The period of deflation has been in progress more than 15 months; demand is reviving; prices are showing a tendency to stabilize upon a level much below that of 1920 but above that of pre-war years; and conditions of the agricultural and manufacturing industries have greatly improved in the past few months.

We are of opinion that general reduction in the rate level, as substantial as the condition of the carriers will permit, will tend not only to lessen the transportation burden but also to equalize and stabilize the conditions under which commerce and industry are carried on, with consequent fuller assurance to the carriers of realizing the fair return contemplated by the law.

The raising of the rate level by the director general of railroads in June, 1918, and again under our authority in August, 1920, were necessitated by increases in operating expenses. The latter have now partially receded. The rate increases were general and justified by the increase in general cost of service, and with decrease in that cost a rate decrease, also general, is justified. The justification for decrease is to be found in the rate structure as a whole rather in individual rates, or in rates on individual commodities. It is true that the prices of some commodities have receded more rapidly and to a greater extent than others, even as some went up more rapidly and to a greater extent than others. The needs of commerce can not be met if rates are to fluctuate with market prices of commodities. In bringing down the rate level to meet lowered expenses a similar process should be followed and the reduction made generally upon all commodities in substantially equal ratio.

Under the circumstances described in paragraphs (a), (b), and (c), below, carriers should consider existing freight rates and charges as representing those made effective by authority of Increased Rates, 1920, supra, and shall apply the reductions herein prescribed accordingly, even though in such instances some individual rates or charges may be higher and others lower than those which would result from exact application of the bases above prescribed:

(a) Where, since August 26, 1920, rates or charges have been readjusted primarily to remove discriminations, prejudices or discrepancies without material effect upon the aggregate level of the rates or charges so adjusted. This does not apply to rates or charges which have been reduced since August 26, 1920, primarily for the purpose of removing all or a part of the general increase of 1920.

(b) Where previously existing recognized rate relationships were maintained in applying the increases of August, 1920, or where rates have been readjusted since August 26, 1920, to restore previously existing recognized rate relationships. In these cases,

such recognized rate relationships should be maintained in applying the reductions herein prescribed; or, if that is impracticable in the first instance, the rates should be readjusted to restore such relationships as soon as practicable.

(c) Where, pursuant to decisions by us, rates or charges shall have been changed since August 26, 1920. This does not apply to rates resulting from Rates on Grain, Grain Products, and Hay, 64 I. C. C., 85; National Live Stock Shippers' League v. A. T. & S. F. Ry. Co., 63 I. C. C., 107; Southern Hardwood Traffic Assn. v. I. C. & R. Co., 61 I. C. C., 68.

Where outstanding decisions require changes in rates or charges subsequent to June 30, 1922, the rates or charges existing on June 30, 1922, shall be reduced as herein provided, effective July 1, 1922. In proceeding thereafter to comply with such outstanding decisions, the rates or charges which would result therefrom shall be considered as those effective by authority of Increased Rates, 1920, supra, and the reductions herein prescribed shall be applied thereto, except that this provision shall not apply to rates on brick and related articles as prescribed for application between points in the eastern group in National Paving Brick Mfrs. Assn. v. A. & V. Ry. Co., 68 I. C. C., 213. Those rates are not required to be further reduced hereunder.

Where rates on live stock have been reduced pursuant to our recommendations in National Live Stock Shippers' League v. A. T. & S. F. Ry. Co., supra, and are now less than the rates herein prescribed, the expiration date thereon should be canceled and the rates maintained in effect.

Separate Opinions

Chairman McChord assented to the report in so far as it results in a reduction of rates, but stated that he was not in full accord with it. He was opposed to fixing the rate of return at this time and thinks if a rate is to be fixed at all it should not exceed $5\frac{1}{2}$ per cent. He also expressed the opinion that the times and conditions plainly demand reductions in rates on all materials and products that are basic to a level that business interests will recognize as the lowest available for some time to come, saying that nothing less will quiet the prevalent unrest and agitation for lower transportation costs and encourage the needed healthy flow of traffic. In his judgment, the general reductions decreed fall short of full attainment of the desired end, and the mutual interests of both industry and transportation demand a 50-50 readjustment of the further material rate increases made under Ex Parte 74. If reductions are to be made on all classes and commodities and a still greater reduction if confined to selected commodities. Reductions on that general basis should also be applied to passenger fares, he said.

Commissioner Eastman, in a concurring opinion, repeated his objection made at the time of Ex Parte 74 that any valid determination of aggregate value is impracticable and it was his judgment that it would have been wiser and better if the commission had announced several weeks ago that its decision would be deferred until after the Labor Board had acted so that it might be assured that the rates prescribed would be the lowest possible under the law and the most likely to remain stable for some considerable period of time.

Commissioner Potter concurred in the conclusion that reductions should be made, saying that if later the commission is convinced that its estimate is not warranted, existing rates can be restored to the extent which then seems necessary. He continued in part:

Nations and the need, which is decreasing, for lower rates, I am not certain that I can render a real service to the shipping community by reductions unless and until there is further evidence of operating excess. Freight transportation is more important than passenger traffic. Better service was the desire of the general public in summer of 1921. The increases then authorized were applied generally, but our complaint relative to passenger traffic will bring its demand for better service and its pressure to readjustment. I approved and it is true that it will readjustment, and after some time and some more readjustment to the continuance of present rates. For passenger traffic, if more results is not upon us. The transportation in question I believe the return we may allow for a while. We must accord to Congress the proposed limit of that return.

All the members of the report have the support of the public, and the commission as most nearly representing the

consensus of opinion, it is apparent from the individual expressions to a considerable extent the views of the majority differ. I call attention to certain respects to which I have preference for different conclusions. Assuming that there is a prospective excess earning available for rate reduction, I think different treatment was required for the following reasons:

1. The percentage increases authorized by Ex parte 74 resulted in disproportionate increases upon long-haul traffic. Therefore, when called upon to eliminate a portion of the increases authorized by Ex parte 74 we should first correct the injustice of that decision by giving preference in reduction to carload and long-haul traffic.

2. The theory upon which reductions have been made since Ex parte 74 on certain traffic, instead of on all, was that such reductions were required in justice to the traffic to which they applied, and in order to bring such traffic into proper relation with traffic as a whole. No unlawful preferential treatment was intended when such reductions were made. The reductions now required do not increase the reduction heretofore made upon agricultural products, live stock, and certain other commodities. As the reductions heretofore made were to remove injustice and establish a proper level and relation as between commodities, it seems to me that in distributing the prospective surplus now available for reduction, such commodities should share.

3. I favor a reduction in passenger fares other than commutation fares and without removing the Pullman surcharge.

4. There are not many, familiar with the conditions in the financial world, who would question the propriety of naming 6 per cent as a fair return upon the property values of the carriers which are devoted to the public service. We should have fixed the return at 6 per cent. We should not be influenced in naming a fair return by our views upon the subject of taxation. Our function is to name a fair return without regard to how much of it the government may decide to take from time to time in taxes.

During the early stages of our deliberations, I was impressed with the notion that in making reductions we should give preferential consideration to a selected list of so-called basic commodities. Further consideration developed objections to this course which to my mind are convincing. It appears impossible at this time to select a list of so-called basic commodities to which reduction could consistently and lawfully be limited. Concluding that there is a prospective surplus available for rate reductions, I know of no theory on which that surplus, resulting largely from hauling certain traffic, can be made the basis for a finding with respect to the reasonableness of rates on other traffic. If we were to select a list, our difficulties would not be reduced. Some situations are more acute than others. Different commodities and different conditions require different treatment. Some rates are not high enough; others are too high in varying degrees. We would not do justice in requiring horizontal reductions limited to particular commodities. If I were persuaded of the practicability of limiting reductions to the so-called basic commodities, I would favor an announcement of the amount available for rate reduction and have a further hearing upon the question as to how specific application should be made. The record is not sufficient to show what selections should be made.

Commissioner Lewis in a dissenting opinion, said that the decision that rates be reduced is unanimous, but his dissent was limited to what appears to him to be "unjustified economic waste." "The margin available for reductions or adjustments that may be required by us is not sufficient," he said, "if spread over the entire freight traffic, to give to the country the relief and to business and industry the stimulation that is urgently needed. A 10 per cent reduction will, in the case of many commodities, have no perceptible influence in lowering costs of living, stimulating industry, ameliorating economic conditions, or bringing us into more favorable and equitable relationships at home and abroad. On the other hand, there are commodities and raw materials that are basic to existence, to industry and to readjustment, on which transportation charges are relatively and absolutely too high. Making these more cheaply available to consumers and manufacturers would contribute to reduction of costs of living, relief in the housing situation, maintenance of productivity of the soil, increased employment and stimulation of buying."

Commissioner Cox, dissenting, concurred to the extent that a measure of relief has been granted to the public generally, but expressed the opinion that the amount available for reduction should have been applied to agricultural products, raw materials and basic commodities.

President Urges Voluntary Rate Reduction

Asked to Cut Charges on Basic Commodities and Given Opportunity to Forestall I. C. C.

By Harold F. Lane

WASHINGTON, D. C.

WITHOUT ANY decision having been announced by the commission as the result of its general investigation ordered on November 23, on which hearings were begun on December 14 and concluded on March 13, as to whether and to what extent, if any, further general reductions in rates can lawfully be required, 19 leading railway executives at a dinner at the White House on Saturday evening were urged by President Harding and Secretary Hoover voluntarily to reduce rates "more particularly on such basic commodities as may be found necessary to speed industrial development."

After explaining the difficulties of railway management under present conditions, the railway executives expressed a desire to do everything consistently possible toward restoring and maintaining prosperity and voted to have a committee named to take up the problem and recommend what action could be taken.

Railway Executives Confer With Commission

Later Daniel Willard, Fairfax Harrison, Hale Holden, H. E. Byram, Charles Donnelly, W. H. Finley and Edward Chambers were appointed as the committee and on Monday morning they met the Interstate Commerce Commission by appointment for a conference. The discussion of the railroad situation continued for about two hours, after which it was announced that it had been adjourned to meet again on Thursday for the purpose of giving the subject further consideration.

The railroad executives emerged from the White House about 12:30 a. m. Sunday, after which the newspaper men were called in to see the President and given a statement that he had invited the railroad presidents and board chairmen to dine with him "and to confer concerning further relief in railway service along particular lines somewhat similar to the voluntary reductions made in some commodities some months ago, more particularly relief on such basic commodities as may be found necessary to speed industrial betterment."

Statement From the White House

"Naturally the whole railway problem was discussed," the statement continued, "and the difficulties of railway management under existing conditions were presented. The railway presidents voiced their unanimous desire to make the fullest possible contributions to restore and maintain prosperity. Of course, the various aspects of the transportation problem were discussed, particularly the necessary preparations in providing new or repaired equipment to amply serve the country when normal commerce is restored.

"The President made it clear he was attempting none of the duties of rate-making nor recommendations, but that he felt that much could be accomplished in a conference and that helpful results must attend a full co-operation of the railway heads with the government body charged with the duty of regulating rates.

"After two hours of discussion the presidents voted to have a committee named from their membership to take up the problem and recommend what action could be taken."

The railroad men who attended the dinner were: A. H. Smith, president, New York Central; Carl R. Gray, president, Union Pacific; W. H. Finley, president, Chicago &

North Western; W. B. Storey, president, Atchison, Topeka & Santa Fe; Edward Chambers, vice-president, Atchison, Topeka & Santa Fe; C. H. Markham, president, Illinois Central; R. S. Lovett, chairman of board, Union Pacific; H. E. Byram, president, Chicago, Milwaukee & St. Paul; Samuel Kea, president, Pennsylvania; Hale Holden, president, Chicago, Burlington & Quincy; Howard Elliott, chairman of board, Northern Pacific; Charles Donnelly, president, Northern Pacific; Ralph Budd, president, Great Northern; Julius Kruttschnitt, chairman of board, Southern Pacific; F. D. Underwood, president, Erie; S. M. Felton, president, Chicago Great Western; Daniel Willard, president, Baltimore & Ohio; E. E. Loomis, president, Lehigh Valley; Fairfax Harrison, president, Southern.

Most of the executives remained in Washington and held a long conference on Sunday at which the committee was appointed, but made no announcement and declined to amplify the President's statement.

Commissioners Visit White House

It has been apparent that the President has been keeping in close touch with the progress being made by the commission, as several of its members have been at the White House both before and since his announcement that he had invited the railroad executives to dinner. Chairman McChord has called on the President several times recently, and was at the White House for a short time on Saturday before the dinner.

It has been understood for a number of weeks that the commission had decided that railroad earnings or the prospects for the year were such as to warrant reductions in rates and it has been stated several times that it had "practically" reached a decision, but it is now stated that the important point of difference among the commissioners has been as to whether the reduction should be general or should be confined to a few specific commodities.

It was stated at the White House that the President had been anxious to secure further relief in rates on basic commodities, but that it was his understanding that this could not be done quickly except by the voluntary action of the railroads because the Interstate Commerce Commission could not, as a result of its general hearing, order reductions on a few specific commodities but must go through a long process of separate hearings on the specific commodities. This point had been raised by various witnesses during the rate hearings who had contended that any reduction should be a horizontal percentage, on the ground that only a few hours of the hearing had been devoted to some commodities, whereas many days would be required to deal with them in a specific complaint case. The commission, it was stated, could not, even after determining that rate reductions are warranted, order cuts in specific commodities at a single sweep.

President Appreciates Difficulties

The President realizes, however, that the desire for reductions on basic commodities presents a very difficult situation to meet and that it is difficult to harmonize the railroads on such a question because some commodities affect some roads more than others. For example, certain roads are almost exclusively coal roads and the effect of a large reduction in coal rates would be concentrated upon them, while roads

depending on a greater variety of traffic would still be on a higher level of rates.

The President has let it be known that he considers that the railroad men at the dinner showed a fine spirit and a disposition to co-operate to the best of their ability but he also appreciates some of their troubles, which they presented to him with great earnestness, and he is less enthusiastic about the result of the railroad dinner than he was about the dinner at which he urged the establishment of the eight-hour day in the steel industry. He was represented as doubtful as to whether the railroads are able to work out the problem in the way the administration desires. If nothing can be accomplished by the railroads, it was said, the entire question would be up to the Interstate Commerce Commission.

The commission was said to have reached a conclusion that earnings are now such as to warrant some reduction in rates but to have divided on the question as to whether it could legally order anything but a general reduction on the present record, or as to what specific commodities should be selected for relief. Those advocating reductions apparently have been considerably influenced by the showing made in March when many eastern roads earned a larger net than they have for some years and the eastern roads as a whole showed a return of 7 per cent, but the President has been told also that a different situation was presented by many western roads and also that the good showing made in the East in February and March was largely due to a rush of coal purchases for storage in anticipation of the strike and that the results since March are much less favorable.

Wage Reductions Declared Essential

The President draws a distinction between what he has been trying to do and any idea of interference with the decision of the rate case. He takes the position that he has been merely discussing general policies for the public good with the railway executives and that, while the rate case is entirely within the province of the Interstate Commerce Commission, if the railway managers step in voluntarily to do what is desired the commission should welcome their co-operation. He has not urged reductions in class rates nor rates on the higher grade commodities. When the railroad executives went to the dinner not many of them knew just what was to be put up to them. They had had a conference among themselves beforehand and had prepared themselves to discuss the general situation from many angles. Naturally the wage question was taken up and the railroad men argued that a wage reduction was essential to a freight rate reduction on the ground that the horizontal increases in rates made in 1917, 1918 and 1920 were made directly to meet wage increases.

President Desires New Legislation

While the question of new legislation was not discussed at the dinner the President has frankly let it be known that he believes that certain changes in the Transportation Act are vitally necessary, but that they cannot be taken up until after Congress begins a new session in December. He is convinced for one thing, as he has said before, that the Labor Board should be brought from Chicago to Washington so that a closer point of contact may be established between the body that deals with wages and the one that deals with rates. Nothing has been given out as to any intention on the part of the administration to try to expedite the decision of the Labor Board in the wage case but it was announced that the President has no present intention of conferring with the railroad labor leaders.

The latest move of the administration follows nearly a year of efforts to persuade the railroads to reduce rates in view of the fact that they have never in any month since the law was passed earned as much as 6 per cent. Last August the Interstate Commerce Commission issued a report

recommending reductions in western livestock rates, which the railroads made, and then entered upon a hearing involving western rates on grain and grain products. While this proceeding was pending the railroads were urged by members of the commission and other representatives of the government to reduce rates both as a means of reviving business and to improve their relations with the public.

Progress of the Rate Case

On October 7 and 8 the executive committee of the Association of Railway Executives came to Washington and conferred with the President, Chairman McCord of the commission, Secretary Hoover, Chairman Cummins of the Senate committee, Chairman Winslow of the House committee and Chairman Anderson of the Joint Commission on Agricultural Inquiry, all of whom urged the railroads to reduce rates even at a sacrifice. On October 14 a general meeting of the member roads of the Association of Railway Executives was held at Chicago at which the executive committee recommended a 10 per cent reduction in rates on agricultural products but this plan was not adopted by the meeting and it was decided to ask a further reduction in wages with the understanding that the benefit of the reduction should, with the concurrence of the Interstate Commerce Commission, be passed on to the public in the reduction of rates, except insofar as such reductions should have been made in the meantime.

On October 22 the commission made public a report in the grain case, which did not specifically order reductions in grain rates, but declared the existing rates unreasonable and said it would expect prescribed reductions to be made by November 20 and that an order would be issued if necessary. The railroad executives then went to Washington and had a conference with the Interstate Commerce Commission, after which at a meeting in New York on November 16 they decided on a 10 per cent reduction on agricultural products and a petition to the Interstate Commerce Commission to withdraw its grain order and conduct a general inquiry as to whether further reduction in rates could or should be required until a substantial reduction could be secured in the labor and other costs of operation.

The commission on November 21 issued a formal order in the grain case effective on December 27 and on November 23, the date that the railway petition was filed, issued its order for the general inquiry. It then permitted the 10 per cent reduction to be made but later declined to withdraw its order in the grain case. Meanwhile the railroads had made thousands of reductions in rates voluntarily at the request of shippers and in co-operation with the Interstate Commerce Commission, to meet individual situations, some of them of considerable extent, and they took the position at the hearing that further reductions should only be made in the same way until wages could be further reduced than they have been up to the present.

President Sees Business Revival

Even before the railway dinner the President had called attention in a speech before the Chamber of Commerce of the United States and in other ways to the reports received at the White House indicating the general improvement of the business situation. The administration has not taken the position with the railroads that a rate reduction would show immediate or big results in the way of stimulation of business. It has rather taken the position that rates are out of line with the prices of many commodities and that railroad earnings on the more important roads have reached or should soon reach a level where they can afford to do something to help the revival of business. The effect on the situation of the expected decision of the Railroad Labor Board has also been discussed but to what purpose has not been made public.

Some Notes on Railway Refrigerator Cars*

Survey of Existing Equipment; Efficiency of Insulation; Special Systems of Refrigeration

By W. H. Winterrowd
Chief Mechanical Engineer, Canadian Pacific

IN AN ENDEAVOR to sense the trend of refrigerator-car design, proportions, and construction, the writer addressed an inquiry to a number of railways and private-car owners. A comparison of the most interesting returns makes a very interesting study, although the fact must not be overlooked that possibly some of the railroads or owners, if building equipment today, might modify their designs.

Every road or owner represented owns at least one thousand cars. As far as possible the cars were chosen from quantities built in comparatively recent years. Many of the old timers, really not refrigerator cars at all, were omitted. Even so, some of the cars built in recent years provoke question.

During the past three years car building or re-building has been at a minimum. Even so, it is of great interest to note that many of the cars built within this period, or being designed or constructed today, embody in great measure those principles which make for an efficient and economical unit.

Types of Cars and Ice Containers

Generally speaking the cars can be divided into two types: one, equipped with brine tanks and generally used for carrying meats; the other, equipped with bunkers, and used principally for carrying commodities such as eggs, butter, vegetables and fruit.

In connection with this distinction, based on ice containers, it is interesting to note that Dr. Pennington has stated that a car of the basket bunker type, such as the U. S. Railway Administration Standard, will carry meat hung from rails quite as successfully as a car built especially for meat. The statement is also made that there is not visible in practical results the advantages supposed to accrue from the retention of the brine, provided coarse rock salt is placed on top of the ice in the bunker and so forced to bore its way through the whole mass before finding an exit.

But there is a very important problem in this connection that must not be overlooked if salt is to be used with ice in a basket bunker, and that is the method of disposing of the brine. It is common knowledge that if brine falls on journal boxes, side frames, arch bars or other truck parts, as well as upon rails, tie plates, bridge members, etc., the resulting damage is great and a factor involving heavy maintenance cost.

The subject is so important that the American Railway Association interchange rules specify that after July 1, 1922, no car carrying products which require for their refrigeration the use of ice and salt and which are equipped with brine tanks, will be accepted in interchange unless provided with a suitable device for retaining the brine between the icing stations.

If salt is to be used with ice in basket bunkers, a practical and economical arrangement is necessary to retain the brine so that it can be disposed of between icing stations.

The data submitted do not show any car of the basket bunker type equipped with overhead meat racks. They show

that cars built for carrying meats and products requiring a low temperature are equipped with brine tanks.

Twenty-seven railroads and owners are represented in the replies. Out of this number the principal cars of 16 are equipped with bunkers, and the remainder are equipped with brine tanks. Out of the 16, 11, or practically 69 per cent, are of the basket type; the remaining 5, or approximately 31 per cent, are of the box type. The majority of the cars recently built, or now under construction are equipped with the basket type of bunker. The demand for refrigeration and the special-service car, as well as greater efficiency of the permanent basket type, appear to be decreasing the demand for the collapsible bunker.

Bulkheads

The majority of the cars tabulated are equipped with solid bulkheads. These are either built into place or are hinged from the walls or ceiling so that they can be swung open. A few cars are equipped with the syphon system, in which the bulkhead consists of a framework holding a series of galvanized iron louvres supposed to direct the air back and down into the bunkers. The theory is that air entering the bunker over the top of the bulkhead becomes chilled, and in its downward motion creates a suction or siphoning effect which draws air from the body of the car into the bunker through the openings in the bulkhead. Although this system is on some cars of fairly recent origin it is significant that many railroads or owners who used it on their older cars have abandoned it in favor of the solid bulkhead.

The prevailing trend of construction indicates a recognition of the value of solid and insulated bulkheads.

In the matter of efficient refrigeration the distance between bulkheads is an important one. The tabulation shows that this varies between 28 ft. 8 in. and 38 ft. 10 in. The general trend is between 32 and 34 ft.

Difficulty in obtaining proper temperatures at the center and top of the lading has been responsible for the thought that longer cars and less deep loading would bring better results. Longer cars have been demanded also as the result of a desire to increase their capacity.

The principle has been emphasized that heat transmission varies directly as the number of square feet of surface enclosing the car space. A study of some of the long cars indicates that this principle has not been followed closely in determining the kind and amount of insulation.

Floor Racks

Space between the top of the floor rack and the floor of the car averages between 4½ and 5 in. The majority of the modern cars are equipped with these racks, but an examination of the tabulation would indicate that their importance is not fully recognized. This fact is borne out by an examination of hundreds of refrigerator cars at a fruit- and produce-distributing station. Many of the cars with long slats or runners fastened to the floor are of such construction and equipped with such types of bulkheads that floor racks could be applied easily and cheaply.

An impression seems to prevail that the life of a railway refrigerator car is about 6 to 8 years. In 1919 a committee

*Conclusion of abstract of a paper presented before the American Society of Mechanical Engineers at New York on May 16. The first part of the paper was abstracted in the issue of May 20, page 1173.

of the Mechanical Section of the American Railway Association reported that the average life of railroad-owned wooden refrigerator cars, dismantled, was 17.1 years, and of private-line wooden refrigerator cars, dismantled, 21.9 years, making the average life for all wooden refrigerator cars, dismantled, 19.4 years. It was also stated that the average life of railroad-owned wooden refrigerator cars was largely affected by two lines reporting the dismantling of a large number of cars of an average life of only 15 years; by excluding these two lots of cars, the average life for railroad-owned wooden refrigerator cars was 21.3 years, and for private-line-owned cars 21.9 years.

The life of refrigerator cars equipped with steel underframes or steel framing and superstructure is a matter upon which there are little data, because such cars are comparatively modern. There seem to be no reasons, however, barring those of possible evolution, why such cars should not have a long life and require little for maintenance by reason of their better design and construction.

It is not difficult to appreciate the causes responsible for the high cost of maintenance of old wooden cars; the refrigerator type does not stand alone in this class. But in addition to more severe traffic conditions, this type of car has required attention on account of the difficulty in keeping moisture away from the insulation as well as from the wooden framing and flooring. If the insulation becomes broken, wet or sags so that air can circulate around it, the car rapidly loses its efficiency.

Floors

The chief problem in floor construction is to make the structure waterproof, as well as a good insulator. Moisture and water finding its way through the floor or along the floor boards into the walls of the car, have been responsible for much trouble and expense.

The insulating value of all materials that absorb moisture is greatly decreased when water is absorbed. In addition, water causes most of the insulating materials popular in refrigerator construction to become mushy and sag or drop out of place. It also causes wood floors, lining and framing to decay and weaken, thereby making it more difficult to keep the general structure tight.

Nearly all the modern or at least recently built floors employ a construction involving cork as an insulating material. To keep moisture away from the cork various waterproofing compounds or waterproof materials are used. Fig. 5 shows a photograph of the floor and manner of applying insulation.

In past years it was the opinion that floor insulation with intervening dead-air spaces gave the highest insulation value in walls and roofs as well as in floors. More recent opinion differs because experience has shown that unless unusual methods of construction or maintenance are used, it is very difficult to keep the air spaces tight. To be insulators, they must be dead-air spaces; once circulation starts their efficiency is destroyed.

Walls

In connection with a waterproof structure, it is interesting to note the various methods employed at the junction of the floor and side walls to keep water from getting past the lining and into the insulation. This point has been a source of great trouble.

An exceedingly interesting example of waterproof construction is contained in some all-steel refrigerator cars designed by W. F. Keisel, mechanical engineer of the Pennsylvania Railroad. The body of the car consists of an all-steel container placed within an outer container, the space between the wall being filled with insulation. At the floor, the sections of the inner container are welded together, thus making the floor practically one piece and water tight and

thereby affording maximum protection to the insulation.

Inspection of the various cross sections indicates a general trend toward massing wall insulation and eliminating air spaces between the layers of insulation. As a rule the insulation is applied in a continuous strip from door post to door post. The advantage of applying insulation in this way lies in the fact that a continuous or unbroken surface presents no joints or openings through which air can pass or circulate. It has been the experience that where insulation is applied in sections, unusual construction is required to prevent eventual air circulation. Wall insulation is rarely less than 2-in. thick on the most recent cars. In some cases

Fig. 5—Method of Applying Insulation and Waterproofing in Floor

this insulation is applied in two massed layers. In one case the single layer is 2-in. thick. In the majority of cases four massed layers of 1/2-in. insulation are used.

Roofs

The tendency is to apply massed insulation in the roofs. As a rule the most modern cars have 2 to 2 1/2 in. of insulation applied in this way.

Some cars are equipped with a carefully designed double-board roof with waterproofing compound between the layers. There are many advocates of this type of roof, but it is interesting to note the number of outside-metal roofs that are applied to cars of this type. The advocates of the outside-metal roof claim a saving in weight and greater protection to the sub-roofs and insulation from moisture, claiming that with proper insulation the metal roof has no effect on the interior temperature of the car.

Miscellaneous

Doors and Hatches.—Doors and hatches are being made with more insulation and are being strongly and properly constructed so that they will fit the door openings tightly, and not permit any loss of refrigeration due to leakage. In this connection, any other openings into the car should be so constructed that they can be kept tightly in place and easily maintained. An efficient door-locking device is no small item in keeping doors tight, and thereby maintaining the efficiency of the car.

Painting. Refrigerator cars should be kept well painted in order to preserve all exterior surfaces. This is in the

interest of obtaining long life for the car. Metal parts should be given particular attention in this respect.

The writer believes that refrigerator cars should be painted with a light or non-heat absorbing color. Dark colors absorb heat. An inquiry addressed to the owners of white and

eliminating it entirely. Comparative results are shown in Table 1. The car cross-sectioned in Fig. 6 is used as an illustration of good construction and relatively high efficiency. The car shown in Fig. 7 is used in comparison in order to show the greater rate of heat transmission or lower efficiency caused by different methods of insulation and construction.

Materials and Workmanship

Proper materials are a very important factor in refrigerator car construction. The right grade of lumber should be used wherever required, and it should be properly dried before being placed in the car. Workmanship should be of the best. Insulation should be handled carefully, care

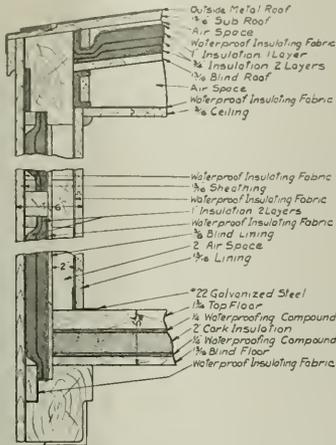

Fig. 6—Type of Construction Giving High Insulating Efficiency

yellow cars indicated that no specific data existed on the subject, but it was the general belief that the light colors were an advantage in this respect.

Insulation

The paper discusses at some length the properties desired in an insulating material and the thermal conductivity of various materials and compound structures. After giving

TABLE 1
Comparison of B.T.U. per sq. ft. per deg. diff. F. per 24 hr. in cars shown in Fig. 6 and Fig. 7

	Including air space		Excluding air space	
	Fig. 16	Fig. 27	Fig. 16	Fig. 27
Roof	1.702	2.328	1.953	3.112
Wall	2.172	2.80	2.388	3.768
Floor	2.46	2.544	2.46	3.24

being taken to see that it does not become torn or damaged. Such insulation placed in a car makes a weak link in a possibly otherwise strong chain. Some care in initial construction with attention to these details makes for an efficient car, as well as one that will have a longer life and lower maintenance cost than a car not receiving such attention.

While on the subject of materials, it is important to note the growing interest in the use of car lumber which has received preservative treatment. Lumber so treated has received considerable attention from car builders and car owners for several years, and much of it is now in service. Sufficient time has not elapsed to indicate what increased life can be obtained, but experience to date indicates treated lumber to be more durable, and one that will resist moisture and decay.

The Marsh Refrigerator Service Company has used creosote-treated lumber in certain parts of its refrigerator cars, such as sills, sub-floors and roof boards, and appears to be the pioneer in the use of treated lumber in refrigerator cars. The writer has been advised that this lumber is giving excellent service, and that no objection can be made to it on account of any odor caused by treatment. The treated lumber in these cars is submerged for a number of hours in hot creosote oil, after which it is placed in a driprack and permitted to drain. It is estimated that this treatment will result in large saving, doubling the life of the roofing boards and sills, and effecting considerable saving in labor that would otherwise be necessary to properly maintain these parts in the course of time.

An interesting report in connection with the use of treated lumber for use in the construction of cars was presented recently before the American Wood Preservers' Association. This report calls attention to the fact that decay is the principal cause of failures in lumber, and that great economy is possible by the use of a preservative.

It is evident that if some of the wooden parts of a refrigerator car can be made moisture proof or highly resistant to moisture, the efficiency of the car can be maintained at a much higher average.

The writer has been advised that some refrigerator cars are in service in which Balsa wood is the principal insulating material. This wood is very light in weight, having in its natural state a density of 7.1 lb. per cu. ft. It is a South American wood that grows very rapidly, and is of cellular structure. It has a thermal conductivity of 7.5 in its natural state and 8.3 when treated with waterproofing compounds.

It would be of great interest to know if treated or untreated Balsa wood is used between the ordinary walls of a car as insulation, or if the material figures largely in the construc-

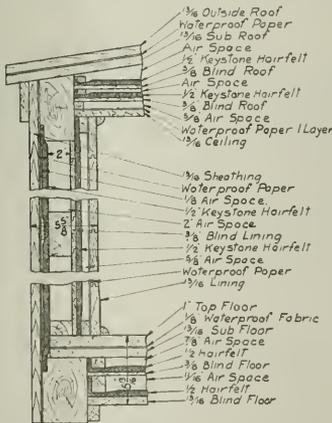

Fig. 7—Heat Transmission Through Cars of This Type Is Much More Rapid Than for the Car Shown in Fig. 6

the formulas for heat transmission the amount of heat transmitted through the walls of two typical refrigerator cars is compared.

The calculations were made in two ways: first, by assigning an insulating value to the air space, and second, by

tion of the superstructure of the car, such as lining and sheathing. Its strength is insufficient for its use in framing. It would also be of interest to know if the material is durable and efficient in this class of service, if any modification of car structure is necessary for its use, and if any reduction of car weight can be accomplished by its employment.

Some Other Systems of Refrigeration

A previous statement indicated that some reference would be made to other systems of refrigeration. In the cars described, refrigeration is accomplished by means of air circulation, the air being cooled by contact with ice or ice containers placed at the ends of the car.

One modification of this system is a car in which ice containers are placed just below the roof and in the center of the car. In this system it is claimed that maximum refrigeration can be applied where the air within the car is at its highest temperature.

There do not appear to be a great number of cars of this type in modern service. The principal objections to such a system are decreased head room in the center of the car, weight of ice near the roof of the car, and difficulty of adopting this system for use with meat racks placed below the ceiling of the car.

Another system consists of a brine tank built into the roof at each end of the car. These tanks extend about 9 in. below the ceiling and are heavily insulated on top, sides and bottom. The tanks at each end of the car are connected to each other by pipes hung about 2 or 3 in. below the ceiling. The pipes are not insulated. In each tank is a partition

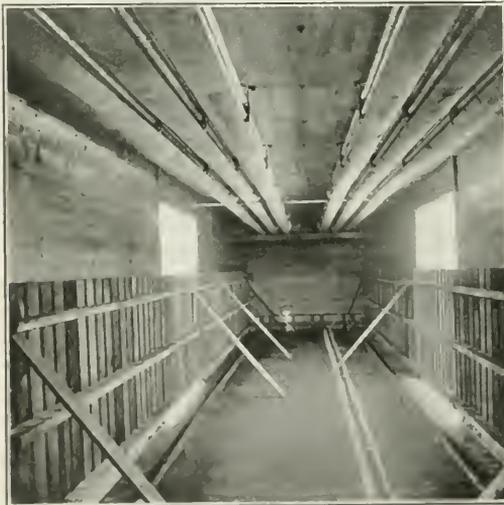

Fig. 8—Car with Overhead Brine Tanks, Showing Also Heater Pipes on Floor

running lengthwise of the car. In one partition are some check valves opening to the right, in the other partition some check valves open to the left. The theory is that when ice and salt are placed in the two tanks the swaying of the car in motion automatically circulates the brine through the pipes, refrigeration being accomplished by contact of the air within the car against the surface of the pipes connecting the two tanks.

Comparatively speaking, this system has not been in service a very great length of time. The advantages claimed

for it are increased loading space, decreased consumption of ice, uniform temperatures, and a car that can easily be changed from a refrigerator to a heater car. The writer understands that these cars are being tested in various fields of service. It would be interesting to have some information regarding the ability of this system to supply refrigeration when the car is not in motion, and what the system can accomplish in the way of quick pre-cooling when the car is placed at the loading shed or platform.

The interior of such a car is shown in Fig. 8. This illustration shows the floor racks propped up against the side walls so that the piping along the floor beneath the racks can be seen. This piping is used when the system is used to heat the contents of the car. Canvas troughs are placed beneath the piping located beneath the ceiling in order to catch any condensation or frost slush that may drop from these pipes.

Pre-Cooling

The importance of pre-cooling the lading and the resulting economy in the use of ice and labor were mentioned in a preceding paragraph. There are two distinct methods of pre-cooling cars and lading. The first is known as shippers' pre-cooling; and the lading is placed in cold storage rooms in which the proper temperature is maintained, and where the lading is allowed to remain until it cools to the proper temperature, after which it is loaded quickly into cars that have been pre-iced. The second method is known as the carriers' pre-cooling, and generally consists of a system in which the car is loaded, after which the interior of the car and the lading are pre-cooled by mechanical means.

Great economies are possible due to pre-cooling. Where small tonnage originates little pre-cooling has been done by mechanical methods on account of the high cost of the plant and equipment. Most mechanical pre-cooling is done where large tonnage originates. At such points the shippers frequently combine to build such a plant. Pre-cooling is receiving more and more attention in connection with various commodities and additional economy in the way of ice and labor may be expected.

General Conclusion

The inquiries upon which these few notes on railway refrigerator cars are based, indicate that a very great improvement has been made in refrigerator car construction and design, particularly within the last few years, but there is also evident indication that the field of investigation in connection with cars of this type is still a most fertile one. Some fairly recent cars indicate that the subject of refrigeration in transit is not appreciated in some quarters as it should be. The subject of efficient refrigeration is a most important one, because cars that can be kept in continuous service with a minimum cost of maintenance and which are sufficiently efficient to protect the lading in transit, mean dollars and cents to the railways.

TWENTY-EIGHT CITIES report that, in the year 1921, the number of fatalities in automobile accidents within their limits was smaller than in 1920; and some of the differences are striking. In Detroit the number was 134 as compared with 240 in the earlier year; St. Louis 97 as compared with 192; Buffalo 27 and 77; Indianapolis 56 and 98; Milwaukee 53 and 79; Newark, N. J., 44 and 70; Akron, Ohio, 13 and 26. These figures are given out by the National Automobile Chamber of Commerce, New York City which finds that, for the nation as a whole, there was an increase in fatal accidents in 1921, though the total in proportion to the number of motor vehicles in use, was less than in preceding years. For 1921 the number of cars registered was 10,448,632; number per thousand of population ⁹⁹, and automobile deaths per 100,000 of population 11.

Fuel Association Holds Annual Meeting

Heavy Program Includes the Consideration of Many Operating Problems Affecting Fuel Economy

EVIDENCES OF THE interest in and support of the railway fuel conservation movement on the part of executives and operating officers and an interest in the relation of fuel costs to other operating factors characterized the fourteenth annual convention of the International Railway Fuel Association, which was held at the Auditorium

Hotel, Chicago, on May 22 to 25 inclusive. After the usual opening exercises the meeting, with over 450 members in attendance, was addressed by L. W. Baldwin, vice-president, Illinois Central, followed by the address of W. L. Robinson (B. & O.), president of the association. Mr. Baldwin spoke in part as follows:

L. W. Baldwin's Address

THE CONSERVATION of fuel rests largely with these two principles: 1. Interesting and educating the men who place fuel on the fires, and 2. Developing and using proper machinery. My experience has taught me that each of these constitutes a vast field of opportunity.

Coal means more now than it did prior to the war. The increased cost has made it necessary for us to get our coal burned in such a way as to use a minimum amount and get maximum efficiency. On the railroad of which I am an officer we maintain an organization to educate our men to burn coal scientifically. This organization has a car fitted up for holding fuel conservation classes and is constantly visiting the terminals, large and small alike. The men doing this educational work are peculiarly fitted for their duties. They have studied fuel production and uses from various angles, and they impart their experience to the men, display films, make replies to questions, and exchange views on all phases of fuel conservation in their meetings, in fact so impress officers and men that they actually appreciate it is a crime to waste fuel.

The education of the men and the carrying out of good practices cover a wide scope of endeavor on the part of those in charge of and who are to teach fuel conservation. Great care must be taken to insure the selection of men for such positions who are qualified by experience, are natural enthusiasts and in whom all who should be concerned in fuel economy have confidence.

We have distributed a book entitled "Fuel Economy on Locomotives" which deals with the subject at length, but we can't depend on the book to do the work. To get the best results, it is necessary to employ the personal contact method.

In addition, we have a General Fuel Conservation Committee, consisting of the general superintendent of transportation, the general superintendent of motive power, the engineer maintenance of way, the purchasing agent, the auditor of disbursements, and the superintendent of fuel conservation, and fuel committees on each division consisting of division officers, enginemen, trainmen and others. This General Fuel Conservation Committee has to do with purchase, inspection, storage and handling of coal, including all feasible economies that can be effected. The duty of the division fuel conservation committees is to study in more detail the ideas of the General Fuel Conservation Committee and general officers, circulate the results obtained by individuals as well as to instruct as to best methods to be used.

On the Illinois Central System we conducted a fuel conservation campaign throughout September and October, 1921. Enginemen and trainmen on the same terminals competed with one another, and divisions competed for rank. Daily reports of fuel consumed in freight, passenger and yard service were obtained from all divisions, and reports showing the number of pounds of coal consumed per 1,000 gross ton miles, per 100 passenger car miles and per yard engine mile for all divisions were promulgated daily. The campaign

was an interesting and successful one and produced a saving on our lines of 30,000 tons in one month alone. I attribute the success of the campaign to the initial interest taken by enginemen, trainmen and other employees concerned in fuel consumption, and the spirited competition which resulted from posting individual accomplishments. Of course, the local officers must be duly credited for the intensive interest developed in preparing for and during the campaign.

I do not want to be quoted as saying that fuel conservation results are entirely in the hands of the men and local officers. There are a great many things for the managements of the railroads and other properties to consider and act upon. We must have fuel inspection at the mines, and, where coal is placed in storage, it must be scientifically handled to insure economical and proper results. Our purchasing departments must surround the purchase of coal with recommendations made by men competent to pass upon the grades and preparation of coal. Power plant and station use of coal on some railroads warrant specialized supervision, with a man in charge who is thoroughly trained in power plant operation.

Distribution of coal needs close supervision. It is sometimes necessary to burn various grades of coal on a railroad. Under such conditions the distribution should be regular. Proper tonnage rating of locomotives is a factor. Where engines can be assigned to individual enginemen it will go a long way toward conserving fuel because of the personal interest the enginemen manifest in the condition of the engines assigned to them. Efficient yard operation and dispatching of engines and trains, as well as not overloading the tenders, are important features. In fact, nearly every phase of operation is directly or indirectly related to fuel consumption, and it is this relation that must be considered to get the desired result.

Our mechanical departments must understand that they are largely responsible for fuel conservation or waste, at least to the extent that they are permitted to spend money. An engine that does not economically burn coal should be kept out of the service until conditioned. We have on the market a number of devices and improvements which have been demonstrated as coal savers. All may not agree on the merits of these devices, but I think it is well worth every mechanical man's time to watch and study the development and performance of every improvement and device designed to save coal.

Stationary boilers must be kept in good condition and a systematic method of inspection and to insure economical operation, and the results obtained posted to promote interest of the operators.

Further, roundhouse equipment, such as hot water boiler washing plants, water treating plants, plenty of ash pit room and modern coaling stations are important. These, of course, are expensive items, but the savings produced as a result of such expenditures have demonstrated that it is money well spent.

Our existence today depends upon coal. It moves our commerce. It prepares our food. It heats our offices and homes. Just because we see it in large volume should not detract from its value. It should be indelibly impressed on the minds of everyone that fuel conservation is needed and

can be accomplished to a large extent, and that the money so saved can be applied to the general good of the properties upon which we and our families are dependent for a livelihood.

President Robinson spoke in part as follows:

President's Address

FUEL ECONOMY was long considered purely a mechanical department matter, but this association has for years advocated the policy of arousing all the departments to a realization of their share in the responsibility. There are at present many of our members, who may be classed as transportation or operating officers and much has been gained through papers and addresses delivered at previous meetings by general managers, general superintendents and other operating officers.

It is most encouraging that the executives of our railroads through the American Railway Association have so fully recognized the magnitude of the fuel problem and have urged and encouraged all departments toward greater interest in fuel conservation.

The Fuel Association's Committee on Fuel Tests in conjunction with the University of Illinois, and the United States Bureau of Mines, completed during 1917 at the locomotive testing laboratory of the University of Illinois, a series of tests of six sizes of coal from the same mine located in Franklin County, Ill. These tests developed that on a modern Mikado locomotive at the high rate of evaporation the 1 1/4 inch screenings are worth only 94 per cent as much as 2 in. screenings for stoker firing; and 2 in. screenings only worth 87 per cent as much stoker fired as mine run hand fired.

It was the original intention that similar and additional tests be made of coal from the various fields throughout the country. Due to the war, the matter has been held in abeyance, but within the past year the Special Committee has suggested to the American Railway Association that a continuation of the tests would be desirable and it is hoped that favorable consideration will be given this matter at an early date.

While little accurate data has been made public other than the University of Illinois tests, already referred to, concerning the relative efficiency of various sizes of coal, it can be stated that the matter of size depends to a large extent on the description of the coal considered, whether low or high volatile coking or non-coking. However, from the results of the laboratory tests at University of Illinois as well as various road tests, it may be definitely stated that the physical characteristics of coal constitute a factor equally as important as the B. T. U. value in so far as concerns the effective burning of coal on grates in locomotives. The coal mining interests can do much to assist the railroads in reducing fuel consumption through decreasing the stack loss, by furnishing them coal with as low per cent of fineness as practicable.

It would appear that the railroads can with profit frequently conduct road tests to determine sizes best suited to their needs, and some roads have given consideration to this feature.

It may be of interest to mention briefly the results of some road tests which may serve as suggestions for further checking by laboratory tests, similar to those which have already been mentioned.

Comparison of Two Varieties of Coal in Two Sizes: A Mikado locomotive, 60 in. by 32 in. cylinders, 64 in. drivers, 34,877 lb. grate, effort, equipped with superheater arch and Street stoker was tested on the road with dynamometer car and hot conditions controlled as closely as practicable. Two varieties of coal in two sizes for each variety were used stoker fired in order to determine their relative econ-

omy. Description, proximate analyses and comparative performance of the coals were as follows:

	Fairmont high volatile		Myersdale low volatile	
	1 1/4 in. N. P. & S.	3/4 in. Slack	Mine run	1 1/2 in. Screenings
Moisture	1.33	1.57	0.75	0.81
Volatile	36.47	35.74	18.17	17.52
Fixed carbon	53.04	52.78	69.07	70.06
Ash	8.36	9.91	12.01	11.61
Sulphur	2.59	3.3	3.33	2.11
B. T. U. (calculated)	13,100	12,600	13,800	13,850
Lb. coal per ave. h.p. hour	3.74	4.19	4.14	4.89
Equip. evap. lb. water per pound of coal	6.71	5.98	6.62	5.50
Efficiency of boiler	46.6	41.9	46.1	38.0
Lb. coal per sq. ft. grate per hour	57.78	65.89	59.55	74.28
Value based on 11,500 B. T. U. & S. 1,000	1.00	0.89	0.99	0.82

These tests indicate clearly the desirability of high volatile coal of as large size as permissible on stoker locomotives requiring screenings, unless length of haul or other factors make ultimate cost of low volatile coal equal or less.

Comparison of Two Mine Run Coals from Different Mines in Same Region: Similar tests were made of mine run coal (crushed by stoker in firing) from two mines producing from the same vein of coal but from different parts of the field. The coals were similar in analysis and heat content.

The results obtained showed that coal A was decidedly more economical. Consumption of coal B was about 15 per cent in excess of coal A per D. B. H. P. Hour. Equivalent evaporation with coal A was 17 per cent greater than with coal B. Boiler efficiency with coal A was about 16 per cent higher than with coal B. Coal B was the more friable coal running about 75 per cent slack, which is characteristic of the coal while coal A ran about 45 per cent slack.

Mine Run Coal Versus Two Inch Screenings: Dynamometer car tests were run with a Mikado locomotive of recent design under comparative conditions in slow freight service to determine the relative economy of high volatile mine run coal and N. P. & S. screenings from the same mine when the locomotive is equipped with the duplex stoker. The mine run coal averaged 45 per cent slack, the N. P. & S. screenings averaged 65 per cent slack, with average proximate analyses very nearly the same.

The results showed the following relative performance:

	N. P. & S.	Mine run	Per cent in favor
			Mine run
Pounds coal per h.p. hour	5.68	2.71	54.1
Pounds water per lb. coal train and at 212 degrees F.	8.44	6.50	13.6
Efficiency of boiler	58.18	66.04	11.5

These tests would indicate that stokers of type that can be supplied with mine run coal, might profitably be substituted for one requiring a special size coal or screenings.

The cost of fuel and the wages of train and engine crews totals 50 per cent or more of the expense of our railroads for conducting transportation. (Cost of haul of fuel over own lines is not included in total audited cost, but is a considerable item in connection with conducting transportation expense.) The fact that the volume of traffic at present being offered for movement does not by a material amount approximate the capacity of the available transportation facilities, results in present average operating conditions under which congestion is largely eliminated.

The opportunity to reduce overtime wages and standby fuel consumption through reduction of delays on line of road and extension of locomotive runs through intermediate terminals is presented by these conditions and many railroads

are taking advantage of this opportunity to reduce the transportation expense.

Caution is required, however, to insure that the increase in speed of movement is not made at the expense of too great

a reduction in the train load. The index of gross ton mileage produced per unit of combined wage and fuel expense should be employed as a check to determine the relative economy of performance.

Locomotive Feed Water Heaters

IN ORDER that definite information might be obtained as to the operation and maintenance of the Locomotive Feed Water Heaters, a questionnaire was compiled and sent to the presidents of 137 railroads in the United States and Canada. Answers were received from 78 of these roads, 20 roads having feed water heaters.

In 1920 there were seven roads using feed water heaters. There are now 28 American roads with five types of heaters on order or in service. The number of the different types of heaters in use or on order are as follows:

The Superheater Company's feed water heater.....	93
Worthington feed water heater.....	156
Weir feed water heater.....	1
Simple Blake Knowles feed water heater.....	3
Local type.....	1
Total heaters applied or on order.....	234

The advisability of extending the use of locomotive feed water heaters is strongly recommended by five railroads; the other roads consider that the process of development is yet in the experimental stage and are waiting until further tests show that the economy derived will justify further application.

The application of feed water heaters has not been limited to any single class of power or service. The largest locomotive equipped with a feed water heater is a Mallet type of 107,961 lb. tractive effort, while the smallest is an American type of 24,000 lb. tractive effort. Other types of locomotives to which feed water heaters have been applied are Mikado, Pacific, Consolidation, Mountain and locomotives in suburban service. These locomotives operate in both passenger and freight service on mountainous and rolling territory. Both coal and oil are used for fuel.

One of the most important considerations in the selection of the type of feed water heater to be used, is the character of the water in the territory through which the locomotive is to operate. In bad water districts, the open type heater seems to be preferred, as the scale deposits on the tubes of the closed type heater retard the heat transmitted and reduce the efficiency of the heater, and there would be less danger of boiler trouble from oil due to the frequent washouts. No road has reported trouble from oil from the feed water in the boiler. Roads where the boiler washout period averages 30 days generally prefer the closed type of feed water heater.

Three roads have reduced the size of the exhaust nozzles on application of feed water heaters and one road has enlarged the nozzle. The reduction in the size of the nozzle is done in order to offset the loss in superheat temperature which occurs when a feed water heater is applied to a locomotive. This is not considered advisable, as the reduction of the size of the nozzle increases the back pressure, which will probably offset any saving that would be effected by the increased superheat.

There has been no difference reported in the amount of boiler scale in boilers equipped with feed water heaters over the other engines.

The open type heater has in all cases gone from shopping to shopping without cleaning, regardless of the water conditions. While going through the shop the scale deposit is scraped from the inside of the heater, no acid or cleaning solution being used.

In good water territory, the closed type of heater is cleaned each time the locomotive is shopped. The usual method of doing this is to dip the tube nest into a lye vat to remove any oily deposit which may have formed on the outside of the tubes. In districts where the water conditions necessitate more frequent cleaning, the deposit is either washed

out by flushing the heater with water or, if the scale is not soluble, a dilute solution of muriatic acid is pumped through the heater for a short time and then water is pumped through to clean out the acid. The strength of the acid varies from 20 to 33½ per cent, depending on the nature of the scale.

The highest cost of cleaning the feed water heater is \$170.00 per year, both labor and material, and the lowest cost is \$2.31. In one case the heater is cleaned by the use of dilute muriatic acid. The other, by a basic solution. An average of the cost data submitted by all the roads for cleaning by the acid process is \$62.19 per heater per year, which includes both labor and material.

The cost of other maintenance of the heater proper per year is practically nothing on both the open and closed types. Where weak acid solutions are used, none of the heaters cleaned show any signs of deterioration due to the use of the acid. The territory in which locomotives equipped with feed water heaters operate, includes the greatest range of climatic conditions possible. No serious difficulty has been encountered with any of the feed water heater systems freezing up. Drain valves and telltale pipes have frozen up, but these have given no further trouble after properly lagging.

Failures of the heater proper while in service have occurred, due to tubes bursting or becoming loose in the tube sheet, heater heads cracking with the closed type of heater, and a crack developed in the cylinder near the discharge valve on the open type of heater. The brass tubes in the closed heater have been replaced by copper tubes, which are more ductile than the brass and a better joint can be made when the tubes fasten into the header. Some trouble has been experienced with the boiler checks pounding out or breaking off with the use of feed water heater equipment. This has been largely overcome by using larger boiler checks with reduced lift.

The boiler feed pump has given good service with all types of heaters. The most common defects which have been encountered are the pump piston rod packing leaking, rods wearing, water valve springs breaking, water cylinder scoring, top head pump gasket leaking, abnormal lift of intake and outlet valves, and valves stuck or leaking. The average cost of maintenance per pump, taken from the data submitted, is \$55.16 per year, which includes both labor and material.

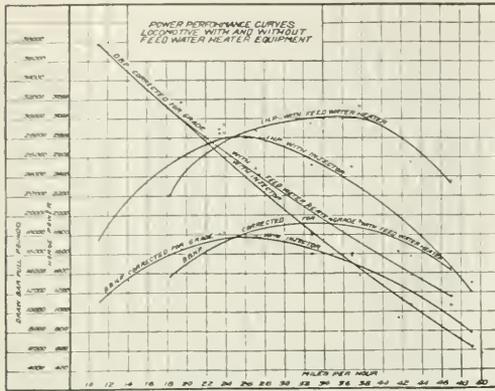

The cost of maintenance of the feed water heater apparatus complete averages \$97.15 per locomotive for labor and material per year. This figure was determined by averaging the maintenance costs submitted by all the roads, regardless of the type of heater used.

As all the locomotives, which are equipped with feed water heaters, have an injector, no engine failures could be attributed to the operation of the feed water heater apparatus, as the injector was used to supply the boiler in case of the failure of the feed water heater.

Where feed water heaters are applied, the enginemen should be personally instructed relative to the operation of the equipment in order that the highest efficiency may be obtained. The feed water heater pump should only be used to supply the boiler when the engine is working steam, as the exhaust steam from the auxiliaries is not sufficient to heat the water hot enough to show a saving, and the introduction of the cold water into the boiler would tend to cause serious strains in the flues and flue sheets. The rule to pump locomotives with feed water heaters only when

working steam, is in force on very nearly all the roads using this device.

It has been possible to eliminate some water tank stops

Results of Dynamometer Tests With and Without Feed Water Heaters

when the condensate from the feed water heater is returned to the boiler.

On tests made on feed water heater locomotives, the feed water heater shows a saving of between 10 and 16 per cent in fuel, based on the evaporation performance of the locomotive. On two roads where dynamometer car tests had been conducted on feed water heater locomotives, there was a saving of approximately 10 per cent based on fuel consumption per drawbar horsepower. On a thousand ton mile basis, the saving as shown by the different roads varies from 4 to 11 per cent.

The accompanying power performance chart is based on data taken on dynamometer car tests. It shows that with the feed water heater locomotives, there is an increase of both indicated and drawbar horsepower. This increase in horsepower is due to the back pressure being decreased by diverting about 12 per cent of the exhaust steam from the cylinders

A Division Superintendent's Interest in Fuel Conservation

By S. U. Hooper

Division Superintendent, Baltimore & Ohio

LET IT BE definitely understood that this is strictly a non-technical paper. The very nature of the subject makes it desirable that it be treated in a non-technical way. Bearing in mind that many of our largest railroad systems still cling to what is generally termed the divisional form of organization, oftentimes putting at the head of a divisional unit a man whose sole claim to shouldering that responsibility is his *general* ability to co-ordinate, regulate and stimulate all of the numerous phases which go to make up successful operation, it will be seen that there is a decided place for the general or non-technical treatment of fuel conservation.

It requires the mechanical specialist and the fuel expert to determine the proper grade of fuel and the proper design of locomotive. But the battle is then only partially won. It also requires the competent road foreman, the able supervisor, backed up by the operating officer, to insure the successful operation of correctly designed and maintained locomotives supplied with the carefully selected and prepared fuel. Too much stress, therefore, cannot be laid upon the well established policy of this association in getting its purpose before, and in arousing the interest of, every so-called strictly operating officer.

to the feed water heater, thus increasing the steaming capacity of the locomotive at high speeds. This increased horsepower will permit an increase in the tonnage rating and average speed of the locomotive, either in time freight or passenger service.

In its present form the locomotive feed water heater has passed through the experimental stage in this country and the results indicated in this report are typical of what may be anticipated from the application of feed water heaters on other railroads, barring unusual local conditions.

At the present time, the exhaust steam injector as extensively used abroad is being considered as an alternative to the open type of locomotive feed water heater. One American firm is already engaged in the manufacture of this device, and arrangements are being perfected for supplying the railroads in this country with a type of exhaust steam injector that has been successfully used on an extensive scale in England and her colonies.

The report was signed by E. E. Chapman, chairman (A. T. & S. F.); J. R. Alexander (Penn.), E. A. Averill (Superheater Company), J. A. Carney (C. B. & Q.), J. N. Lammedee (Worthington Pump & Mch. Corp.), L. P. Michael (C. & N. W.), Geo. E. Murray (Grand Trunk), C. B. Peck (Railway Age), L. G. Plant (Railway Review), G. B. Von Boden (Sou. Pac.), W. H. Winterrowd (Can. Pac.).

Discussion

H. B. Oatley (Superheater Company), called attention to the fact that feedwater heating has been practiced as long as the injector has been used to feed the locomotive boiler, although in the line steam injector the heat is taken direct from the boiler and is not reclaimed. He then referred to the exhaust steam injector, which has been used extensively in England and the British Colonies, and said that from seven to eight pounds of water could be passed from the tank to the boiler for each pound of steam condensed in the injector; the exhaust steam alone at one, three and five pounds pressure being capable of delivering against boiler pressures of 150 lb., 165 lb. and 180 lb. respectively. A small amount of line steam is required to supplement the exhaust steam for delivery against higher pressures. Mr. Oatley suggested that the possibilities of heat reclamation with the exhaust steam injector compare favorably with those of other types of feed water heaters.

Now comes the question of the relative importance of the fuel problem from a superintendent's viewpoint.

Operating economy consists primarily in keeping down his wage and fuel costs, and, of these factors, fuel cost amounts to approximately one-third of the total expense. Is it any wonder, therefore, that the subject should be rightfully given a very considerable proportion of the operating officer's study and attention? And is it not self-evident that the subject is so large, and so important, that it should be handled by the boss himself? He is the father of his entire divisional organization, and particularly that important part known as his staff. His main function is to educate, to devise ways and means whereby the most up-to-date methods and the most advanced tactics can be effectively placed before his subordinates, on whom he must rely to pass the gospel to the men. It lies largely with him whether harmony is going to exist in his family, and genuine success is not going to be his unless the representatives of all his departments pull together. It is not only his prerogative, but his duty, to press constantly on the identity of interest until the various members of his staff are co-operating for the accomplishment of what is best for the division and the railroad as a whole, burying everything which might savor

of department influence. It rests with him to determine such delicate matters as inter-departmental relationships. One department must not be allowed to profit in showing at the expense of another. Specifically illustrating, fuel conservation must not be sacrificed in order that maintenance expenses may show a reduction.

The success of any movement lies in getting the objects to be accomplished, and the methods whereby they are to be accomplished, to the men who are actually performing the work. As the superintendent comes in frequent close contact with the men who are handling his trains, he is indeed in a position to reinforce the educational measures of his staff officers and can do much towards stimulating, on the part of the men, a genuine interest and desire to carry out the program.

It is scarcely necessary to deal in detail with the many other ways in which the superintendent can prove himself the actual leader of his division in fuel conservation. It is fitting, however, to emphasize again the importance of the road foreman's monthly fuel meetings, for these occasions bring to the superintendent a glorious opportunity not only to familiarize himself thoroughly with what is transpiring on the division, but the chance of getting directly before his employees an expression of what can be done in the saving of coal. On such divisions as enjoy superintendent's staff meetings, open also to the employees, fuel conservation subjects should invariably occupy a prominent place on the program. It will sometimes be found surprising, as well as gratifying, to note how much interest can be aroused by an enumeration in simple form of divisional operating statistics, especially as affected by fuel costs, savings, etc. The employees feel that they are entitled to this information and in possessing in their identity of interest with the employer is materially strengthened. An occasional remark showing that the superintendent is familiar with the enginemen and firemen who are making the noteworthy fuel performances is oftentimes productive of real interest and competition on the part of the employees.

As the direct connecting link between the division and the general officers, the superintendent is in the best possible position to call attention to, and urge such improvements in, the physical condition of his division as will bring about additional fuel economies.

Among the many possibilities which the present day holds

for progress in fuel conservation should be named the proper relation of tonnage to speed in producing fuel efficiency. The endeavor to find the economic speed at which a locomotive will produce the least expensive transportation has not yet achieved complete success. In the solution of this problem alone the results to a superintendent should more than repay all his efforts. Granting that wages and fuel constitute by far the major portion of train operating expense, tabulating the results of a series of experiments, the varying factor in which will alone be the train tonnage, should, and does, place us in a position to determine what train rating will produce the lowest wage and fuel expense per thousand gross ton miles. It has, within the past few months, been the privilege of the writer to engage in studies of this nature, but, unfortunately, the fluctuating traffic conditions have thrown our computations, thus far, badly out of line.

Closely allied to these tonnage experiments, is another evolution of transportation improvement, namely, increasing the length of through freight and passenger runs. The idea is by no means a new one, but its recent adoption by many of our most progressive railroads shows that operating officers are today leaving no stone unturned. Logically, a locomotive should be operated over the longest possible territory that good maintenance of power will permit. An investment such as is represented in the modern locomotive should be producing transportation as great a proportion of the twenty-four hour period as proper maintenance will allow. Recent experiments have shown conclusively that with proper attention at the dispatching terminal, engines can easily be prepared to withstand longer runs, intermediate terminals can be dispensed with, engine mileage increased, and a decided fuel economy effected.

It is in the solving of such problems that a superintendent can perhaps do his most constructive work for fuel conservation. The opportunity is his, for he alone has all the necessary machinery at his disposal.

In conclusion, let the superintendent ever remember that unless he is thoroughly acquainted with the fuel problems on his division, and unless he takes such an active part in the solution of those problems, his subordinates and employees will not be impressed with the importance and possibilities of fuel conservation, and can not be censured if they do not display a whole-hearted interest in the subject.

Front-Ends, Grates and Ashpans

THE REPORT of the committee was chiefly a summary of and comment on existing conditions and recommended practice as presented in previous reports.

Front-Ends

Master Mechanics' Standards.—The Master Mechanics' Association in 1906 recommended standards for front-end design. The great increase in the size of locomotives has brought about departure from these standards even in locomotives using saturated steam, and the widespread use of superheaters has necessitated still greater deviation. There are comparatively few roads which now adhere to the standards recommended by the Master Mechanics' Association 16 years ago.

Bridged Nozzles.—The committee has previously recorded its opinion that a bridge in the nozzle is useless. It has recommended that in cases where it is desired to sharpen the draft, the nozzle tip be replaced by a plain tip of smaller diameter instead of applying a bridge to the old tip; and it has maintained that better results can be obtained from a plain circular tip than from a bridged tip of equal net area. There continues to be, however, a decided difference of opinion on this point and there are still a great many advocates of nozzle bridges.

Height of Nozzle and Stack Entrance.—The exhaust jet

acts by entraining the gases along its surface, and the committee in 1916 pointed out that we get the maximum entraining surface, and consequently the maximum efficiency of the jet, by having the jet as long as possible. It suggests therefore a low table plate and low exhaust nozzle combined with a stack placed with its lower edge as high as practicable. It pointed out also that this practice has an incidental advantage, in that a low table plate allows the maximum netting area. A study of current designs indicates, however, that there are numerous deviations from these recommendations, the reasons for which would doubtless be of interest.

Adjustable Draft Pipes.—In the report of 1916 the committee expressed its preference for the extended drop stack as compared with the separate draft pipe, and it supports this view thus: "The adjustable petticoat or draft pipe seems to be disappearing, and this we believe to be consistent. Under some conditions it is possible that a double draft pipe may improve an otherwise faulty design, but under no conditions is it believed that results can be obtained by their use which are as successful as the more modern arrangement. In place of the petticoat pipe the extended or drop stack is employed, with a generous flare at the bottom, and run as high above the nozzle as can be done and still clean the table plate. With this plan we do not believe that over-draft is necessary or desirable."

Special Front-end Arrangements.—The committee has at various times called attention to special front-end arrangements, especially to those using radically different arrangements of the netting and nozzles of unusual shape or cross-section. Special forms referred to in previous reports are the Slater or Mudge-Slater front-end, a front-end in use on the Burlington "differing widely from that of other railroads so far as form is concerned, having a basket form over the exhaust pot," the so-called "Unit Spark Arrester" on the Rock Island, and the Lewis front-end.

Air Leaks.—While it is generally understood that leaks into the front-end cut down the available draft and entail losses in efficiency which must ultimately be paid for in coal, it is nevertheless not uncommon to find front-end air leaks.

One of the commonest and most serious front-end leaks in modern locomotives occurs at the point where outside steam pipes pass through the front-end shell. F. P. Roesch, in his paper in 1919, suggested a method of stopping this leak which is in use on several roads. It consists of welding a ring of thin sheet iron around the pipe at this point. The Union Pacific System, for example, uses a sheet of iron of about No. 16 gauge, which has circular corrugations to give it flexibility, and which fits snugly about the steam pipe. It is placed inside the shell and is welded to both the shell and the pipe.

Grates

Air Openings in Grates.—The committee has previously recommended that for the majority of coals in use, the air openings through the grates be as great as is compatible with the mechanical strength of the grate bars. The data secured by the committee for its reports of 1915 and 1916 show that on locomotives burning bituminous coal the air opening in the grates in service runs as high as 70 per cent, although this is rare. Fifty per cent air opening is not uncommon, and the average of the designs reported to the committee was about 40 per cent. On locomotives burning anthracite coal the prevailing air opening averaged nearly the same amount, although the maximum was only 45 per cent.

It is obvious, however, that with certain fine and friable coals maximum grate opening will entail undue waste of coal through the grates; and it is unfortunate that many such coals, like lignite for example, are the very ones which, from the point of view of good combustion alone, ought to have maximum air supply and the greatest air opening in the grates. Such coals clearly call for a compromise in designing the grates. An interesting solution of this difficulty has been made by the Union Pacific in some of its locomotives burning a light fragile coal resembling lignite. In order to prevent excessive waste of coal through the grates, the grate openings have been kept moderate in size. The air drawn through the grates is consequently insufficient for good combustion, and in order to supply the necessary additional air they provide a small air door which opens into the firebox above the fire. When the locomotive is in operation this door is open.

It is clear that the air opening through the grates must continue to be determined with some reference to the kind of coal in use, and that for many kinds of fuel grate design must be a compromise between the desire to obtain maximum air opening and the necessity of avoiding undue waste of coal. Under the circumstances, probably no positive recommendations can be made with respect to air openings which would be generally applicable and satisfactory for all fuels.

Table Grates vs Finger Grates.—While the committee's investigations seem to show a tendency to substitute table grates for finger grates, there is little evidence to prove that under all circumstances there is any clear superiority of one type over the other. Each type can be so designed as to provide adequate air opening and strength; but there remains much difference of opinion as to the relative merits of the two, and it seems probable that the choice between them must be made with regard to the kind of coal in use.

Composition of Grate-bar Iron.—The proper chemical composition of grate-bar iron seems to have received but little attention and apparently the majority of roads have no standard specifications and accept any foundry mixture, notwithstanding the general belief that many grate-bar failures are traceable to unsuitable material. The committee in 1916 suggested a tentative mixture which had proven satisfactory.

Ashpans

The committee has previously presented data concerning such features of ashpan design as pan volume, dumping arrangements, slope of the sides, guards for preventing fire being thrown from the pan, and so forth. Most of these features are largely controlled by the general design of the locomotive.

Ashpan Air Openings.—The most important feature of ashpan design from the point of view of performance, and the one which is generally well within the designer's control, is the amount of air opening into the ashpan. On this point we have laid great stress and made definite recommendations, namely, that the area of this opening be not less than 14 per cent of the grate area. There are hundreds of locomotives in service in which this standard is not attained and where the ashpan opening does not amount to much more than half of the 14 per cent proposed. We wish again to emphasize the importance of complying with this standard.

General

Standards of Older Locomotives.—While gratifying progress has been made in the design of drafting arrangements in the last ten years, and while the majority of recently built locomotives have well designed front-ends, grates and ashpans, we would call attention to the fact that no such progress has been made in re-designing these parts on older locomotives. There is a profitable field for improvement here in bringing up to modern standards such fundamental features of design as grate opening, ashpan opening, etc.

In concluding its report the committee wishes to emphasize the fact that, in designing and maintaining locomotives, front-ends, grates and ashpans must be given equal consideration. They make up, together, the drafting system of the locomotive and consideration of the one cannot safely be divorced from that of the others. Excellent front-end arrangements may be rendered ineffective by poor grates or by poor ashpan design.

The report is signed by Edward C. Schmitt (University of Illinois), chairman; W. J. Bohan (Nor. Pac.); M. C. M. Hatch (M. K. & T.); V. L. Jones (N. Y., N. H. & H.); G. R. Likert (U. P.); John P. Neff (American Arch Co.); F. C. Thayer (Southern); G. A. Young (Purdue University), and F. Zeleny (C. B. & Q.).

Discussion

M. H. Haig (A. T. & S. F.) emphasized the necessity of taking the ash pan seriously in designing new locomotives, rather than fitting in whatever can be gotten in after the rest of the design is complete. Not only is it necessary to provide ample air opening, but the sides should slope under the mud ring sufficiently to prevent an accumulation of ashes which will restrict the openings when the engine is in service. He suggested that it would be worth while to modify the trailer truck and frame design as well as the mud ring slope, if necessary, in order to secure a good ash pan design.

Papers were also presented by G. M. Basford, on Locomotive Fuel, by J. B. Davenport on Effects of Speed and Tonnage Rating on Fuel Consumption, by O. S. Beyer on Incentives for Promoting Fuel Economy and by D. C. Buell on Educational Work for Fuel Economy. Other committee reports were presented on Fuel Accounting and on Firing Practice. These papers and reports will be published in future issues. Proceedings of the later sessions of the convention will appear in next week's issue.

N. Y. Central Surplus After Dividends, \$9,747,588

Operating Expenses Reduced 26 Per Cent from 1920. Transportation Ratio for 1921 Only 38.53

THE NEW YORK CENTRAL'S annual report, issued on Thursday of the present week, shows a net after interest and other fixed charges of \$22,295,686, and after the 5 per cent dividends and sinking fund appropriations, a surplus carried to profit and loss of \$9,747,588. There was, however, included in the income amount for 1921 items aggregating \$5,613,183, representing adjustments in that year which related solely to the federal control and guaranty periods. If these items be deducted from the 1921 figures the surplus for the year would be \$4,134,404. The 1920 surplus after dividends was \$1,250,256. In 1916 and 1917, the last two years before the advent of federal control, the Central's surplus after dividends was respectively \$30,692,606 and \$13,004,054.

The operating results obtained by the New York Central in 1921 approach the spectacular as compared with 1920. In 1921, as compared with 1920, the road had to contend with a falling off in its revenue tonnage of 33 per cent and a reduction in total operating revenues of 13.73 per cent. On the other hand it reduced its operating expenses 26.47 per cent. In 1921 the road had an operating ratio of 78.24 per cent, while the transportation ratio was 38.53.

The year 1921 was signalized on all railroads by the drastic manner in which operating expenses were taken in hand and the degree by which they were reduced through lower costs of materials, lower wages and greater efficiency. The New York Central's reductions were in even greater proportion than those of other roads, except in the case of maintenance of way. Its reduction of 26.47 per cent in total operating expenses compared with a decrease, as compared with 1920, on all the Class I roads, of 17.8 per cent. Its reductions in expenses for maintenance of way figured out at 13.02 per cent; the Class I roads' average was 23.4. Maintenance of equipment was reduced 30.91 per cent; the Class I roads' reduction in this item was 18.4 per cent. The Central's reduction in transportation expenses was 29.30 per cent. The Class I roads, as a whole, decreased their transportation expenses in 1921, as compared with 1920, 17.4 per cent. The foregoing figures are those for the New York Central Railroad and exclude those for the Boston & Albany which are shown separately in the report.

Approximated Pre-War Operating Results

The final result of all this was, that in spite of the unfavorable 1921 conditions, the New York Central approximated its pre-war average earnings from its own operations. The New York Central's standard return was \$55,802,630, excluding additional compensation accrued on account of completed additions and betterments. In 1918 and 1919 it fell short of wholly earning its governmental rental. In 1920 it had a net after rentals approximating \$4,000,000. This amount, however, was lowered by certain maintenance equalization reserve charges of over \$7,000,000, which, upon the elimination of this reserve in 1921 were credited in the 1921 accounts. The 1921 net after rentals was \$54,938,035. Excluding the credit items to maintenance, just noted, this would have been about \$47,000,000, in either case a very substantial increase. This result was, of course, obtained with higher rates—the receipts per ton per mile were 1.208 cents in 1921 and 0.93 cents in 1920—but with greatly reduced tonnage and with extremely rigid control over operating expenses. It indicates the Central's earning power and its ability to come through under adverse conditions.

The 1921 net railway operating income, representing the results of the New York Central Railroad's own operations, made up about two-thirds of the company's total gross income. This figured up to \$75,097,499 and compared with \$61,788,441 in 1920. The earnings of the affiliated New York Central properties—those controlled by majority stock ownership—are shown in the New York Central's report under "other income," which, in 1921 totaled \$20,121,944. Included in this there was dividend income of \$6,316,257; income from funded securities, \$3,171,613, and from unfunded securities, \$2,783,073. The leased, but separately operated, Boston & Albany, had a deficit after its rental payment of \$1,351,943. The peculiarity of the New York Central's large financial structure is its comparatively large interest charges. Of the total deductions from gross income in 1921 of \$52,801,813, there was included \$33,598,469 interest on funded debt, \$7,196,207 interest on unfunded debt and \$6,703,481 rent for leased roads. The 5 per cent dividends at a rate of 5 per cent total \$12,479,641. It seems to be a consensus of opinion among students of the New York Central affairs that the interest charges of the property are not at all excessive. It is frequently observed, on the other hand, that the dividend obligations are comparatively low considering the earning power of the property. The 1921 operating results seem to bear out this contention and, if the contention is correct, it means that with the restoration of more normal times in American railroading, the New York Central should find itself in a very favorable condition from the standpoint of raising new capital.

The total tons of revenue freight carried on the New York Central Railroad, exclusive of the Boston & Albany, in 1921, were 74,475,185, as compared with 110,753,433 in 1920. In other words, there was a reduction of 32.76 per cent. The New York Central has a very diversified tonnage and the reductions in 1921 were general in nearly all classes of commodities with the exception of the classifications given under products of animals. The road gives figures both for car loads and tons. The reduction in bituminous coal traffic was from 727,724 cars in 1920 to 481,869 in 1921. The tonnage in 1921 was 24,819,033, a decrease of 11,796,997 from 1920. The road also had a very drastic cut in its iron ore traffic, as is shown by the fact that in 1921 it moved 45,178 cars, or 127,970 less than in 1920. Shown in tons this reduction was 7,167,030.

Reserves for Maintenance Equalization

The road's total railway operating revenues were \$292,130,995, as compared with \$338,624,456 in 1920, a reduction of \$46,493,461, or 13.73 per cent. As has been previously noted the reduction in operating expenses was 26.47 per cent, the actual figures being in 1921 \$228,571,355 and in 1920, \$310,870,826, the difference as between the two years being \$82,299,471. These figures of operating expenses, as given, eliminate the adjustments for equalization of maintenance which the New York Central made in 1920. The report explains the situation by saying that "in arriving at the operating income for the guaranty period, the Transportation Act required that the maintenance allowance should be fixed with reference to the standards and price levels of the test period. The company worked out a tentative factor which resulted in charges to maintenance in excess of the actual expenditures and the carrying forward of a reserve at the end of 1920. This factor, however, has

proved to be larger than the government is likely to accept. Therefore, entries were made in December, 1921, closing out balances in the maintenance reserves which had been accumulated in 1920 . . . The larger part of the maintenance reserve in question was in maintenance of way. The 1920 statement of primary accounts showed an item, "equalization of maintenance," \$6,928,347, and the 1921 accounts, a credit of \$6,802,965. If the equalization items were included in the total operating expenses as a debit in 1920 and a credit in 1921, the figures would show total operating expenses in 1921 of \$221,768,390; in 1920, \$317,799,163, a reduction of \$96,030,783, or 30.22 per cent. In this use also the operating ratio for the year would be 75.91, as compared with 93.84 in 1920. If the equalization items be excluded the operating ratio for 1921 would be 78.24.

The expenses for maintenance of way were reduced from \$40,956,006 in 1920 to \$35,621,006 in 1921 or a reduction of \$5,334,300. These figures eliminate the equalization of maintenance items. The New York Central does not give, in its report, any figures showing the amount of material used for maintenance but it is shown in classified expenses that more money was spent in 1921 than in 1920 for ties, rails and other track material and that the reduction in ballast was small, which indicates that the savings in maintenance were due to increased efficiency and lower costs.

The expenses for maintenance of equipment for 1921 totaled \$64,435,871, a reduction of \$28,840,877 from the 1920 figure of \$93,296,748. The larger part of the reduction was in repairs to locomotives and cars. The steam locomotive repairs in 1921 were \$7,749,517 and freight car repairs were \$21,128,117. The result is shown in a figure for May 1 of 19.3 per cent bad order cars and of 30.9 per cent locomotives out of service for repairs requiring over 24 hours. These figures are unusually high. The average bad order car percentage for all roads on the date given was 14.4 and the unserviceable locomotive per cent, 20.2. The New York Central's high percentage figures indicate, if one judges correctly, that the road has before it some large expenses to be met for repairs or retirements of equipment. It is understood, however, that the road at present is handling its traffic extremely well and is not having any operating difficulties due to car or locomotive shortage.

Present Operating Efficiency

It was noted above that the New York Central in 1921 had a transportation ratio of 38.53, which indicates operating efficiency of a high order. The 1920 figure was 47.01. The transportation expenses in 1921 were \$112,561,539, as compared with \$159,203,029 in 1920, a reduction of \$46,641,490. This saving, which amounted to 29.3 per cent, was primarily due to the reduction in revenue tonnage and to savings in wage and fuel costs. The savings in fuel for locomotives totaled approximately \$10,000,000.

This is a good place to bring out some rather interesting points in connection with the New York Central's present operating efficiency. It is, of course, worthy of more than ordinary attention that a concern the size of the New York Central should have been able to take such a drastic hold upon its expenses as it did in 1921. The New York Central further has been doing some rather remarkable work in connection with its fast freight service. The road is rapidly regaining its former strong position in fast freight service between New York and the West and at the present time it is giving the other competing lines some interesting competition. The road, of course, has an advantage in this fast freight service because of its lack of grades, and it now is in a position to secure the advantage of the large equipment purchases which it has made in the past several years. This point is worth bearing in mind in connection with the statement made above that the percentage of unserviceable locomotives at present is unusually high. The locomotive

condition is certainly not being reflected in the manner in which the fast freight service is being handled. It is our understanding that shippers are extremely well pleased with the New York Central service.

Earnings in 1922 Should Be Good

The evidence would be that the New York Central should be able to do much better in 1922 than it did in 1921, and it will be remembered that in 1921 it came close to operating on a pre-war basis. In March of this year the road had a net after rentals of \$4,555,930, as compared with \$3,072,946 in March, 1921. Its three months' figure was \$11,612,442 as against \$3,008,576 in the first three months of 1921. The operating ratio for the first quarter of 1922 was 79.30.

The road's coal traffic is at present running very low on account of the coal strike. Since April 1 the weekly loadings of coal had been about 200 or 300 cars weekly, whereas in March and April last year they were nearer 1,500 or 2,000 weekly. Nevertheless, in spite of the lack of coal traffic the total loadings are considerably in excess of those of the comparative period last year. This bears out the theory of the optimists that business is now meeting its revival and makes one feel rather optimistic also about New York Central. The whole thing, of course, is involved in the result of the rate decision. The road, however, should be able easily to make up in increased tonnage what it may lose in the 10 per cent reduction in rates.

It is a peculiar feature in New York Central operations that the company always seems to be engaged in doing something unusual on a large scale. For the past few years the leading element in this connection has been its large purchases of equipment. It has continued these purchases in 1922, its orders for 17,000 freight cars for the entire system having recently been reported in the *Railway Age*. Another very important development which has recently been put under way is the new bridge over the Hudson river at Castleton, N. Y., and the accompanying facilities. This project will cost some \$20,000,000. An article concerning it appears on another page of the present issue.

Another interesting feature in recent New York Central development is its acquisition of the Chicago River & Indiana and the Chicago Junction which will greatly improve the system's position at Chicago. The Commission's decision approving, with certain conditions the proposed acquisition, will be found on another page. Details have appeared in the *Railway Age* concerning the passenger terminal development at Cleveland.

Big Four and Toledo & Ohio Central

The New York Central has offered to acquire additional stock in the Cleveland, Cincinnati, Chicago & St. Louis. This company has outstanding \$9,998,500 preferred and \$47,028,700 common. The Central at present owns \$30,207,700 of the Big Four's common stock, or 52.97 per cent of all its outstanding stock. It has offered to purchase the remaining Big Four stock on a basis of one share of New York Central to one share of the Big Four's \$9,998,500, 5 per cent preferred and at the rate of 80 shares of Central for 100 shares of Big Four common. Stockholders have authorized the issue of \$23,478,500 common stock for the purpose. The application to the Interstate Commerce Commission is still pending.

The New York Central board of directors, on December 14, 1921, authorized a lease of the Toledo & Ohio Central and also leases of the Kanawha & Michigan, the Kanawha & West Virginia and the Zanesville & Western. These companies are now made parts of the New York Central system by entire stock ownership, except a few shares of the Kanawha & Michigan. The proposed leases will have the advantage of offering the possibility of substantial economies in operation and accounting.

Edmund Pennington Becomes Chairman of the Soo

The New President Is George R. Huntington, Formerly Vice-President and General Manager

FOLLOWING OUT an intention entertained for a considerable time, Edmund Pennington, president of the Minneapolis, St. Paul & Sault Ste. Marie, appeared before the board of directors on May 16 to announce his desire to retire from active service, and to request that he be relieved of the responsibilities of chief executive which he has carried for 11 years. In acceding to this request the board elected as his successor G. R. Huntington, vice-president and general manager, and elected Mr. Pennington to the newly created position of chairman.

Edmund Pennington

In turning over the active control of this property to a younger man Mr. Pennington, who is 74 years of age, rounds out more than half a century of continuous active railway service, 38 years of which have been with the Soo Line and

Toronto and the east. A 260-mile extension was also soon built from Glenwood, Minn., to Noyes, forming a second connection with the Canadian Pacific and a short line between St. Paul and Winnipeg. Lines were built from Brooten, Minn., to Duluth and from Plummer, Minn., to Moose Lake to afford outlets for grain from central and northern North Dakota respectively to the head of the lakes at Duluth.

The Soo Line has also competed actively with the Great Northern for the control of traffic in northern North Dakota, building a line from Thief River Falls, Minn., west 300 miles to Kenmare, N. D., parallel to and midway between the main line of the Great Northern and the international border, which intersected 11 branch lines of the latter road. A short time later it then built another extension west from this point 136 miles into eastern Montana parallel to and a

Edmund Pennington

G. R. Huntington

its predecessor properties. During this period, largely under his direction, the Minneapolis, St. Paul & Sault Ste. Marie has expanded from a road of approximately 800 miles as formed in July 11, 1888, by the consolidation of the Aberdeen, Bismarck & Northwestern; the Minneapolis & Pacific; the Minneapolis & St. Croix and the Minneapolis, Sault Ste. Marie & Atlantic, to a system of some 4,400 miles.

The Soo Line is controlled by the Canadian Pacific; its development has therefore been designed to supplement the facilities of the parent system. Thus one of the earliest lines built in the program of expansion was that from Hankinson, N. D., northwest 350 miles to Portal, on the Canadian border, where connection was made with the Canadian Pacific, affording an alternate route south of Lake Superior for grain and other traffic moving from points in western Canada to

short distance south of the border. It was while Mr. Pennington was vice-president that the Soo Line acquired an entrance into Chicago through the lease of the Wisconsin Central, a property of approximately 1,000 miles extending from Chicago to St. Paul and Minneapolis, with branches to Ashland, Wis., and Duluth, Minn. The most recent addition to the property was made on August 1, 1921, when the Wisconsin & Northern was acquired to provide a shorter route for traffic moving between the upper peninsula of Michigan and points south, including Chicago.

Mr. Pennington's career on the Minneapolis, St. Paul & Sault Ste. Marie, is inseparably connected with an era of widespread railroad expansion in the northwest, during which the property of which he has been chief executive, has established itself as an important transportation system in

the Lake Superior region and north Mississippi valley. With trunk lines extending from Portal, N. D., through the Twin Cities to Sault Ste. Marie, Ont., and from Chicago to Noyes, Minn., near Winnipeg and with a considerable mileage of branch lines in the timber and grain producing areas of the north, this road has become an important element of the trans-continental system of which it is a subsidiary.

While not a man of unusually wide acquaintance, Mr. Pennington has commanded the esteem of those who have come in contact with him. Although he has in general been conservative to the point of persistency, holding out against the adoption of some practices on the lines under his jurisdiction which have been readily adopted elsewhere, he has been aggressive in other respects, as in the development of the local freight terminal facilities at Chicago, which were the most modern in that city when completed in 1913. He has used his practical experience to good advantage throughout his administration and the comparative freedom with which each department manages its affairs and projects its work, evidences an especially conspicuous trait of Mr. Pennington—that of constantly endeavoring to encourage initiative in the organization, and to develop responsibility on the part of the officers. He has fitted well into the period of expansion from which the lines under his jurisdiction are emerging and as a result of his administration the organization is in good condition to enter the period of more intensive development.

The career of Mr. Pennington affords another instance of a man working his way up through the ranks and bears further evidence of the continuing opportunities in this country for success and achievement by young men of purpose and application. He was born in LaSalle, Ill., on September 16, 1848, and began his railway career in his twenty-first year as a warehouse man in the employ of the Chicago, Milwaukee & St. Paul. A year later he became a brakeman in the train service of that road. Two years later he was promoted to conductor and then in 1875, after rounding out five years in train service, he was appointed a roadmaster. He held this position until 1877, when he was promoted to superintendent of construction, a position from which he rose in 1879 to that of general roadmaster. After three years as general roadmaster, he was promoted to assistant superintendent on the Iowa & Dakota divisions and finally after 15 years of continuous service with the Chicago, Milwaukee & St. Paul, he resigned in 1884 to become a superintendent on the Minneapolis & Pacific. His connection with the Minneapolis, St. Paul & Sault Ste. Marie dates from the consolidation of the Minneapolis & Pacific with that road at the time of its reorganization in 1888, since which he served as superintendent until April 15, 1898; as general superintendent from April 15, 1898, to February 1, 1899; as general manager from February 1, 1899, to July 31, 1905; and as vice-president and general manager from July 31, 1905, to March 11, 1909, when he was elected president. Since that time, in addition to serving as president of the Minneapolis, St. Paul & Sault Ste. Marie, he has also acted as president of the Wisconsin Central; the Central Terminal Company; the Duluth, South Shore & Atlantic; the Mineral Range and the Spokane International.

The career of Mr. Pennington thus represents a continuous record of 52 years in railway service, of which over 35 years were spent with the Minneapolis, St. Paul & Sault Ste. Marie and 11 years as its president. As indicating the continuity with which he has applied himself to railway work, the statement is made that for 35 years, with the exception of a week of sickness, and trips away on business, he has been in his office every day including Sundays.

George R. Huntington

As Mr. Pennington's successor, George R. Huntington enters upon his new duties with a long period of responsible

experience to his own credit, and in the estimation of his former chief, a thorough knowledge of the property of which he assumes control, coupled with ability that make him qualified to carry the administration through a trying period in its history.

In common with other roads in the vicinity, the Soo Line is suffering acutely from the business depression. The states traversed by its lines have experienced a series of crop failures which has greatly reduced the shipment of agricultural products outbound and by reducing the purchasing power of the farmers has similarly curtailed the shipment of agricultural implements and other products inbound. At the same time the shut-down of building throughout the country has reduced the shipment of lumber on the Pacific Coast. This resulted in the road earning a deficit of approximately three and a half million dollars in 1921. That the road will come back with the resumption of business is certain. That the problem at the present is trying and will tax the ability of the new executive is equally evident.

Mr. Huntington was born at New Lisbon, Wis., September 10, 1868, and entered railway service in 1882 as an office boy in the employ, as in the case of Mr. Pennington, of the Chicago, Milwaukee & St. Paul. Consecutively from 1882 to 1884 he was an office boy, an operator, and an agent on this road until 1884, when he was promoted to train dispatcher.

He entered the service of the Minneapolis, St. Paul & Sault Ste. Marie in 1888 as train dispatcher and served in that capacity until June 25, 1899, when he was promoted to superintendent. He was promoted to general superintendent on November 1, 1900, and in July of the following year was made general manager, with jurisdiction over the Minneapolis, St. Paul & Sault Ste. Marie and the Wisconsin Central (of which control had just been acquired). Mr. Huntington then continued as general manager of these properties until the roads passed into the hands of the government during the war, when he was made federal manager of the Minneapolis, St. Paul & Sault Ste. Marie; the Duluth, South Shore & Atlantic; the Mineral Range; the Copper Range and the Lake Superior Terminal & Transfer Company, in which capacity he continued until their return to their owners in 1920, when he became general manager of the Minneapolis, St. Paul & Sault Ste. Marie; the Duluth, South Shore & Atlantic, and the Mineral Range.

On March 10, 1920, he was also elected a vice-president of the Minneapolis, St. Paul & Sault Ste. Marie (including the Wisconsin Central) and the Duluth, South Shore & Atlantic, and continued as vice-president and general manager of these roads and general manager of the Mineral Range Railroad until the date of his recent election as president, May 16. Mr. Huntington thus enters the office of president at the age of 54, after a continuous career of 40 years in railway service, of which 23 years have been spent in the employ of the Minneapolis, St. Paul & Sault Ste. Marie and all of which has been spent in the northwest, where he has acquired a wide acquaintance among railway men and the shipping public.

THE BALTIMORE & OHIO RAILROAD ACCOUNTING ASSOCIATION has been organized at the general offices of that road in Baltimore, Md. and it is proposed to hold meetings regularly on the third Friday of every month. The object is to exchange views on railroad accounting problems and in general to promote inter-departmental cooperation. The membership is confined to the officer, chief clerks, head clerks and secretaries in the accounting, treasury, claims and relief departments, all of which are under Vice-president George M. Shriver. The membership of the association numbers already about 100. The principal speaker at the first meeting was John J. Ekin, comptroller. The president of the association is F. F. Lollman, and the secretary J. M. Finn.

C. & N.W. Revenue Tons Decreased 34.92 Per Cent

Loss for Year 1921 Totals \$10,070,708 After Dividends on Preferred and Common Stock

THE CHICAGO & NORTH WESTERN pays seven per cent on its preferred stock and five per cent on its common stock. These dividends totaled in 1921, \$8,825,275. The property had for the year a net loss after fixed charges of \$1,245,433, or, after the payment of dividends, a balance for the year in red of \$10,070,708. The reason for this is explained in a reduction in revenue tonnage of 34.92 per cent. The North Western reported for 1921 a revenue tonnage of 39,227,758 as compared with 60,275,207 in 1920.

The road's tonnage in 1921 was divided as follows: Products of agriculture, 19.80 per cent; products of animals, 5.59 per cent; products of mines, 37.57 per cent; products of forests, 13.48 per cent, and manufactures and miscellaneous, 18.42 per cent. The most decisive decrease in 1921 as compared with 1920 was in products of mines. The 1920 tonnage in this group was 29,731,546, or 49.33 per cent of the total tonnage; in 1920 this tonnage was reduced to 14,737,114—a reduction of 50.43 per cent. The tonnage of bituminous coal in 1920 was 10,254,478; in 1921 it was 6,235,916, or 39.19 per cent less. Bituminous coal in 1921 made up 15.9 per cent of the total tonnage. Iron ore showed a reduction of 74.19 per cent; whereas in 1920 it made up 13,978,103 tons or 23.19 per cent of the year's total tonnage, in 1921 it made up only 3,607,582 tons or 9.2 per cent of the total. The decrease in iron ore was also reflected under manufactures and miscellaneous in pig iron and steel products. Pig iron showed a reduction of 71.55 per cent; bar and sheet iron, etc., a reduction of 68.85 per cent. Practically the only commodities in which increases were shown as between the two years, were wheat, corn, packing house products, wool, etc., but with the exception of corn none of these represent a very considerable proportion of the North Western's total tonnage.

Taking the situation as a whole and noting particularly the degree of the reductions above noted, it was to have been expected that the North Western's results for the year would have been far from satisfactory. Because of the fact that the greatest reductions were in the classes of tonnage which load most heavily and are handled at the lowest costs per ton, it is also to be expected that the conditions mentioned should be reflected in the operating statistics, notably in the manner of decreased train load, or car load, etc.

"Due to the reductions in traffic handled," says the annual report, "substantial results in operating costs were effected, but it was impossible to reduce the operating costs in proportion to the loss in traffic. The total loss in tonnage was 34.92 per cent. Freight train miles were reduced 15.73 per cent; freight switching locomotive miles were reduced 25.45 per cent; loaded car miles were reduced 20.92 per cent; while empty freight car miles were reduced less than one per cent." The revenue train load in 1921 was 383 tons as compared with 458 in 1920. The revenue car load was 24.16 as compared with 26.31 in 1920.

The freight revenues of the North Western in 1921 totaled \$95,687,013 as compared with \$110,500,758 in 1920, a decrease of \$14,813,745. The passenger revenues for 1921 were \$33,770,082, a decrease of \$3,616,521. Total operating revenues were \$144,775,476 as against \$165,692,399 in 1920. There was, in other words, a reduction of \$20,916,924. The decrease in operating expenses was \$28,018,772. For 1921 the operating expenses totaled \$129,091,428 as compared with \$157,110,200 in 1920. The North Western operated at a ratio of 89.17 in 1921; in 1920, at 94.82. The decrease in operating expenses in 1921 as compared with 1920, in-

cluded decreases of \$6,974,044 in maintenance of way; of \$6,055,533 in maintenance of equipment, and of \$14,620,231 in transportation. With reference to maintenance of way, it should be noted that there were 126 miles of track renewed with new rail in 1921 as compared with 253 in 1920; 2,667-562 ties were put in as compared with 2,543,892 ties in 1920. The equipment condition is best indicated by a percentage of bad order cars on April 15 of but 7.6 per cent as compared with the country's average on that date of 13.9 per cent, this showing for the North Western a very favorable condition.

With further reference to expenses, it should be noted that the corporate income account includes a debit item under rental income of \$324,993. This is due to a charge to rentals of \$957,824, representing the cost of replacing the grain elevator at Chicago which suffered from an explosion on March 19, 1921. "At the time of the explosion," the report says, "approximately 7,000,000 bushels were in the elevator. As soon as the operators were able to remove this grain, the work of reconstruction was begun and it has progressed at favorable speed, and the elevator will be in shape to receive grain this season."

Acquisitions of Equipment

It has been suggested that the railway annual reports might well include in their pages some reference as to what the railroad is doing in the way of acquiring more equipment, etc. This is done in the Chicago & North Western report and the number of cars and locomotives mentioned is rather imposing. The North Western was allocated by the Railroad Administration 2,250 box cars and 1,000 gondola cars and 35 six-wheel switching locomotives. In 1920 it placed orders for 500 ore, 500 stock, 250 refrigerator and 50 caboose cars, for 62 passenger cars and for 40 Mikado and 20 Pacific type locomotives. It has since placed orders for additional passenger equipment totaling 50 cars to be delivered before June 30, 1922. In the *Railway Age* of May 6 it was further reported as having placed orders with the American Locomotive Company for 20 Mikado, 20 six-wheel switching and 10 Pacific type locomotives and in the *Railway Age* of April 29, as having placed orders with various car builders for 1,250 box, 500 flat, 500 stock, 250 gondola, 250 refrigerator and 300 ballast cars.

In 1921 the North Western resumed work on its grade separation work at Clinton, Iowa. It completed an 840-ft. extension to its ore dock at Ashland, Wis., several important bridges were constructed, etc., all of which indicate that although 1921 was a very poor year, the road did make some progress.

The North Western is another of those roads which was severely hit by federal control and it has not yet made considerable progress towards recovery. The road had a standard return or compensation for operation by the government of about \$23,000,000, of which in 1918 and 1919, it earned only about one-half. In 1920, when it had standard return for two months and guaranty for six, it had a deficit after rentals of \$1,609,232. In 1921 it earned a net after rentals of \$6,651,137. For the first three months of 1922 it had a net after rentals of \$1,712,169 as against a deficit for the first three months of 1921 of \$1,261,337, which indicates improvement, although not in great degree. Its loadings at present are running slightly ahead of those at this time last year, but the evidence on the whole is that the revival in business which is beginning to show itself has not yet

reached the North Western to the extent the road needs to give it a reasonably good year for 1922. There is but little question, however, but that it will be prepared to handle the business when it does come.

C., St. P., M. & O. Also Shows Deficit

THE CHICAGO, ST. PAUL, MINNEAPOLIS & OMAHA is in much the same position as its parent company, the Chicago & North Western, which controls it through majority stock ownership. The Omaha is paying seven per cent on its preferred stock and five per cent on its common stock. The dividends on these issues totaled in 1921, \$1,715,986. The company had a net loss after fixed charges for the year of \$285,677 and a loss after dividends of \$2,001,663. This compared with a profit after dividends in 1920, in which year the road had poorer operating results than in 1921, which, however, were compensated for by standard return and guaranty.

The North Western owns \$5,380,000 of the \$11,259,859 outstanding Omaha preferred stock and \$9,540,000 of its \$18,559,087 common. The total dividend income of the parent company in 1921 was \$2,577,208, of which about one-third was derived from its Omaha shares. The Omaha in 1921 did not have as sharp a reduction in its traffic as the parent company. Its tonnage was reduced 21.85 per cent as against the North Western's 34.92 per cent. The reason for the lesser reduction was that the Omaha does not have a large tonnage of coal, iron ore and products of iron, in which classes of tonnage the North Western had its greatest reductions.

The Omaha is more of a granger road. This is shown by the fact that in 1921 products of agriculture made up 37.05 per cent of its total tonnage, whereas coal constituted only 8.95 per cent of the total tonnage; products of mines, as a whole, only 16.62 per cent, and manufactures and miscellaneous, only 17.44 per cent. The reductions in the Omaha's tonnage in 1921 as compared with 1920 were general. There was an increase in corn, however, of 67.58 per cent. Corn with a total movement in 1921 of 639,505 tons, made up 7.36 per cent of the total tonnage. The wheat moved totaled 730,631 tons, or 8.41 per cent of the total and was 10.69 per cent less than in 1920.

The revenue tons carried by the Omaha in 1921 totaled 8,691,370 as compared with 11,121,752 in 1920, a reduction, as above noted, of 21.85 per cent. The revenue ton-miles totaled 1,345,870,353, a decrease of 24.45 per cent, the greater proportionate decrease being due to a reduction in the average haul from 160.18 to 154.85 miles. The 1921 freight revenues totaled \$19,285,657, a decrease from 1920 of \$1,573,222. The passenger revenues of \$6,865,280 represented a reduction of \$1,433,347. The total operating revenues in 1921 were \$28,137,408 as compared with \$31,955,612 in 1920, this being a reduction of \$3,818,205. Operating expenses were reduced \$4,042,194. The 1921 total was \$24,392,314; the 1920, \$28,434,508. The operating ratio in 1921 was 86.69; in 1920, 88.98 per cent.

The Omaha's net after rentals in 1921 was \$2,065,349. This was slightly better than the figure for 1920, but not as good as in 1918 and 1919, when the road was being operated by the government. The 1918 and 1919 net after rentals further was only slightly over one-half the standard return which was fixed at about \$5,000,000. In view of the fact that the 1921 figure was only \$2,065,349, this means that the Omaha, like its parent company, the North Western, is thus far making but small progress in its return towards normalcy. The Omaha is doing slightly better proportionately. In 1920 it did not operate with a deficit after rentals as the parent company did and in 1921 it did not suffer as severe a falling off in its tonnage.

The Omaha's present position is quite like that of the North Western. It also has been making rather disappointing progress in restoring itself to its pre-war earnings standard. There has been some improvement shown in its condition thus far in 1922. In March it had a net after rentals of \$274,192 and for the three months, a net of \$259,297. This compared with a deficit in the first three months of 1921 of \$264,268. In the first three months of 1922 the operating ratio was 88.4, so the nature of the improvement over last year's first three months' figure cannot be termed peculiarly striking.

New York Central Authorized to Acquire Chicago Junction

WASHINGTON, D. C.

THE INTERSTATE COMMERCE COMMISSION, on May 18 made public its report authorizing the acquisition by the New York Central of control of the Chicago River & Indiana by the purchase of its capital stock for \$750,000 and the acquisition by the Chicago River & Indiana of control of the Chicago Junction by lease at a rental of \$2,000,000 a year, subject to 17 conditions. This proceeding has been pending since December 28, 1920. The application of the New York Central was opposed by eight trunk line roads entering Chicago from the east and southeast and by a group of Chicago shippers and the Chicago Railway Terminal Commission. Another group of shippers took a neutral position and in addition there were filed separate written endorsements of individual corporations and firms comprising about 90 per cent of the 400 shippers served by the Junction and the River road urging the commission's approval of the proposed plan. About 30 of these were subsequently withdrawn. Four of the commissioners, Commissioners Meyer, Aitchison, Eastman and Cox, signed dissenting opinions, while Commissioners Daniels, Campbell and Hall filed separate concurring opinions.

In support of its application, the New York Central showed that the New York Central lines are in need of downtown terminals in Chicago which they cannot now build up for themselves and that to bring under a common control the properties of the Junction and River roads and the Indiana Harbor Belt would greatly promote the public interest by providing the necessary balance between the inner industrial movement afforded by the former and the transfer, interchange and classification facilities available and potential on the rails of the latter. The territory served by the two roads is entirely within the Chicago switching district and besides serving the central manufacturing district and the stock yards district, the two roads handle traffic to and from all of the 23 trunk lines entering Chicago.

The intervening carriers contended that the plan was contrary to public interest because the two roads are now neutral and open to all carriers and shippers on equal terms and that the plan would substitute monopoly of these facilities for the present neutrality of operation. They took the position that they had an equity in the properties by reason of having contributed to the Junction's earnings by the absorption of switching charges and they offered to combine with the Central in a joint control of the properties on the basis of their fair value.

The shippers intervening in opposition expressed the belief that they would not under the proposed plan continue to enjoy existing routing privileges or receive equal service from all trunk lines entering Chicago, but would be forced to route over the Central as a matter of self-preservation. The second group of shippers desired to preserve the present organization of the Junction and the same impartial service

which they now enjoy and that the Central bind itself to accept certain conditions designed to insure that result. The Chicago Railway Terminal Commission feared that the project might prove deterrent to the adoption of the city's plan, not yet formulated, for the unification and co-ordination of all Chicago terminals.

Questions were also raised at the hearing as to the value of the properties. The Central offered proofs tending to show that the present cost of reproduction of the River road exceeds \$3,000,000 and a present cost of reproduction for the Junction properties, including the value of its leases, of considerable more than \$33,000,000. The commission's Bureau of Valuation has not yet completed its tentative report on these properties. The majority report of the commission says in part:

The Commission's Majority Report

Under all the circumstances it is not feasible to make a definite finding of value in this proceeding which shall be taken and accepted as a final judgment in the matter, and the conclusion herein reached renders such a finding unnecessary.

On all the facts of record, it is concluded that for the purpose of this proceeding only, we may accept the position of the Central that the market value of the properties to the Central and its affiliated companies at this time is such as to justify the payment of a rental based on something more than the value for capitalization or rate making purpose. That is by no means saying, however, that its figures are to be accepted as the basis for permanent capitalization or for rate making, or that the Central is to be permitted to capitalize the intangible values by paying, through the River road, permanent fixed charges on the basis of the market value claimed. Since the values are not at this time capable of definite settlement, it follows that such part of the application as relates to the purchase of the capital stock or the physical properties of the Junction will not be granted herein, but will be reserved for future treatment at such time as the Central may desire to renew its application in that respect, following the final determination of values under section 19a of the act.

There are grave objections to an unconditional approval of the plan under consideration. Much testimony was adduced at the hearings, and divergent opinions were expressed, as to the relative merits of cooperative, singly controlled and independently controlled terminals. That discussion need not be reproduced here. The policies and plans of the city with respect to the general terminal situation have not yet fully developed, and it is obviously impossible for any one to determine at this time the ultimate goal which ought to be attained. It is believed, however, that pending final determination of future policies, the greatest good can be attained by the continuance, for the time being, of the competitive terminal situation. This can be best accomplished by bringing the present neutral Junction properties into closer relation with a trunk line like the Central. The Central's terminal facilities are relatively inadequate as compared with the competitor eastern trunk lines, but the Central controls extensive facilities for classification and interchange which are complementary to the Junction properties. The stronger competition and the connection between the Junction properties and the Harbor Belt facilities which would thus be brought about, would not only insure to the shippers of the Junction the necessary expansion and elasticity of facilities, together with the assistance of an interested trunk line in times of car shortage, and other emergencies, but would also remove congestion from the closely hemmed-in district served by the Junction and thus open facilities for expedition in the handling of traffic in and out, and also for handling traffic from one part of the city to another. It has been held that where such a transaction as the present one would clearly facilitate the movement of traffic through a highly congested district, the circumstances that other carriers would suffer a loss of revenue is not controlling.

There are in the record ample grounds for the belief that the Junction can no longer solve its problems without outside assistance. On the other hand, it is believed that the benefits pointed out by the Central can be made to accrue to the public by the consummation of the proposed plan. A prime factor in the situation is the circumstance that the general policy on all terminals in Chicago is that of equal opportunity afforded to all connecting carriers irrespective of the ownership or control of a given terminal property by a single trunk line or by a group of trunk lines. Traffic is handled for all carriers in the same way and on the same terms, so that a shipper on terminals owned by a single carrier has the utmost freedom in routing via competing lines and apparently receives the same measure of service whether his shipment moves over the lines of the owning carrier or those of a competitor. Those shippers who appeared in opposition express the fear that they will not be accorded like treatment by the Central. The

present management of the Central disclaimed any intention of making any changes in the method of handling competitive traffic or the general plan of operating the Junction properties, and those assurances may be taken at their face value, especially since the contrary policy would clearly be against the self interest of the Central, in that it would thereby lose the good will of the shipper. There is, of course, every indication that the Central will be able to build up its own line-haul traffic as the result of its connection with the management of the Junction, and it by no means follows that harm to the public may result from legitimate effort and initiative to that end.

Commission Sets 17 Conditions

But we are not prepared, in any event, to authorize the consummation of the plan without making assurance doubly sure by the imposition of certain conditions. Those conditions relate partly to the method of operation of the property and partly to the treatment of the transaction by the corporations participating therein. Among the number are those matters enumerated by the shippers who have asked an approval of the plan with the understanding that certain agreements already made by the Central will be adhered to. Other matters are suggested by the group of shippers who took a neutral attitude at the hearing, such matters being agreed to on the record by the applicant; and still others suggest themselves from the standpoint of an administrative body, as stated in order to safeguard the public interest in the future. Set out concretely, they are:

1. The Central will be required to maintain a separate corporate identity and organization for the combined properties of the Junction and River Road so that the two shall constitute a separate operating entity with a responsible management located in Chicago in order to preserve for the shipper the present direct access to the railroad officials.
2. The present neutrality of handling traffic in and outbound by the Junction and River Road organization shall be continued so as to permit equal opportunity for service to and from all trunk lines reaching Junction rails, without discrimination as to routing or movement of traffic which is competitive with the traffic of the Central, and without discrimination against such competitive traffic in the arrangement of schedules.
3. The present traffic and operating relationships existing between the Junction and River Road and all carriers operating in Chicago shall be continued, in so far as such matters are within the control of the Central.
4. For the purpose of assessment of switching charges, the Junction and River Road shall continue to be treated as a single line to the same extent as at present, so that the carrying out of this plan will not in and of itself result in increasing the charge to any shipper for the service.
5. Subject to subsisting car service regulations, cars made empty on the rails of the Junction and River Road shall be available for outbound loading in the same manner and to the same extent as at present, irrespective of routing.
6. Whenever additional cars are required for outbound loading, because of inadequacy of available car supply on the Junction and River Road rails at any given time, for any cause, orders for such additional cars shall be accepted from the shipper by the local Junction organization and by it promptly transmitted to the designated trunk line without discrimination, and all cars ordered by and delivered to the Junction shall be promptly moved to the shippers by the Junction without discrimination on account of proposed routing.
7. The Junction shall accept, handle and deliver all cars in and outbound, loaded and empty, without discrimination in promptness or frequency of service as between cars destined to or received from competing carriers and irrespective of destination or route of movement.
8. The National Code of Demurrage Rules, as in effect from time to time, including the average agreement, shall be applied by the Junction and River Road to each industry served by either of them on all in and outbound cars irrespective of what carrier or carriers may be interested in the line-haul.
9. Shippers served by the Junction and River Road shall be entitled to the same basis of switching charges as prevails in the Chicago switching district generally, and no attempt shall be made to establish any different basis of local or connecting line switching charges than that which prevails in the Chicago switching district generally for the same or similar service under substantially similar conditions.
10. No change shall be sought in the present method of basing rates to and from the Chicago switching district as a single point upon which rates are now based without regard to the character of the movement in and out of such district.
11. Present trap car arrangements for the transfer of l. c. l. freight at the Junction union station, at connecting line freight stations, or at connecting points reached by the Junction and River Road, shall be continued, but this condition shall not apply

to routine changes in management and operation of trap car service.

12. Continuance of present operating arrangement on the Junction properties shall include the maintenance of existing shipping and billing arrangements at the Junction union freight station, in so far as such arrangements are within the control of the Junction.

13. The Junction shall, if ordered by us, establish station facilities for the receipt of inbound l. c. l. freight at a point convenient and accessible to shippers wishing to make use of the same, to which freight may be delivered by all trunk line carriers, without discrimination, and there distributed through the medium of the Junction's operating force.

14. Neither the approval of the purchase by the Central of the stock of the River Road for the sum specified, nor of the leasing to the latter of the properties of the Junction, shall be taken as establishing or tending to establish the fair value of the respective properties in any other proceeding, nor shall anything herein contained be construed as a finding that the annual rental to be paid by the River Road for the lease of the Junction properties is just and reasonable.

15. The carrying out of the plan as authorized herein shall be taken to be without prejudice to the adoption of any plan or plans in the future by the city of Chicago, by us or by any other public agency, for unified or coordinated terminals, and neither the Central, the River Road nor the Junction shall urge the authority herein given or the situation resulting therefrom as a ground for opposition to such plan or plans of said city, our plans or those of any other public agency.

16. Nothing contained in this authorization shall be taken as permitting the River Road and Junction properties to be considered as a part of a single system with that of the Central for

any of the purposes of section 15a or section 20a of the act.

17. Any party or any person having an interest in the subject matter may at any future time make application for such modification of the above conditions, or any of them, as may be required in the public interest, and jurisdiction is retained to reopen the proceeding on our own motion for the same purpose.

Subject to the observance of the above conditions, we find that the acquisition by the Central of the capital stock of the River Road and the leasing to the River Road of the properties (owned and leased) of the Junction will be in the public interest.

Original Conditions Numbered 18

The commission at one time served a tentative report stating 17 conditions which should be imposed, most of which presented conditions which were assented to by the New York Central, although it objected somewhat to an additional order. Later a revised tentative report was served imposing 18 conditions. The New York Central objected in principle to the 17 conditions, but it objected particularly to Condition 18, which provided that the commission's order authorizing the transaction might at any time be cancelled for good cause shown, and this has been omitted.

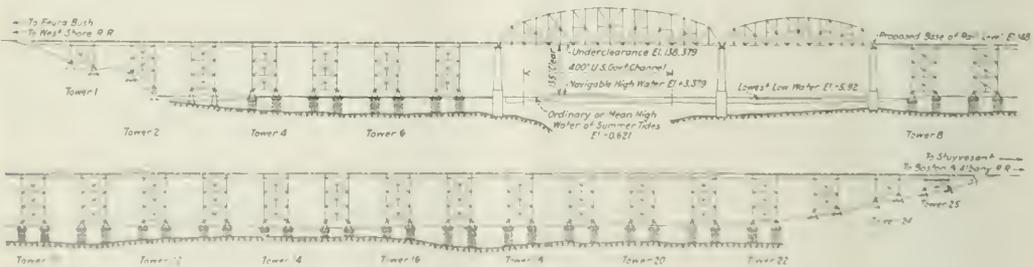

Commissioners Daniels and Campbell held that a certificate of public convenience and necessity should have been incorporated in the order entered and Commissioner Hall said that the facts warrant grant authority without elaboration of conditions.

Castleton Bridge and Freight Cut-Off Started

New York Central Commences \$20,000,000 Project to Relieve Operating Difficulties at Albany, N. Y.

CONSTRUCTION WORK will commence at once on the Castleton bridge and cut-off improvement of the New York Central, under plans providing for rapid work on a scale that will bring it into operation within two years. The bridge, connecting tracks, yards, etc., call for an ultimate expenditure of approximately \$20,000,000. The new bridge, located about 12 miles south of Albany, N. Y., near

amount of through freight traffic of New England and New York now passing through the Albany gateway, where conditions restrict rail facilities, causing uneconomical operation and in times of heavy business serious congestion and delays. In normal past years there has been an average interchange of 1,000 freight cars each way between the west and the Boston & Albany every day, and a daily interchange of 600

Plan of the Castleton Bridge

Schoelck Landing, will be the second high level structure to span the Hudson River, and larger than its single predecessor at Poughkeepsie, N. Y. Extending from it will be three tangents of double-track line, aggregating 20 miles, creating shorter and level connections between the main line of the New York Central and the Boston & Albany and the West Shore Railroad. The beneficial results forecast include a great increase in passenger carrying and freight tonnage capacity and a possible substantial reduction of average time in transit of freight between the North Atlantic seaports and the Middle West.

The new connection will provide easy flow for a vast

amount of through freight traffic of the New York Central, all of which must be moved through at Albany every 24 hours.

Operating Difficulties at Albany Will Be Obviated

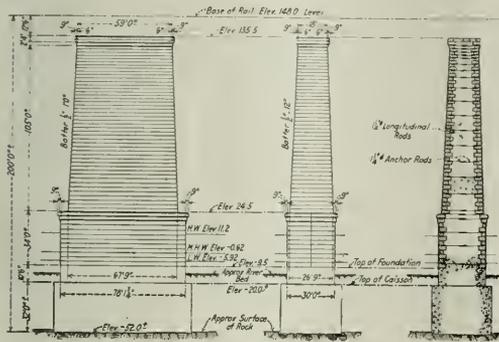

The Albany gateway of the New York Central is comparable to a "small neck of a large bottle." The major accomplishment of the Castleton improvement is relief from the obstacles to easy movement of heavy freight trains existing at Albany. The railroad has been able to handle efficiently no more tonnage than could be accommodated by the low drawbridges, and particularly the heavy grade west-

ward from West Albany to Karner, N. Y. Here for eight miles to the west is the steepest grade on the entire system.

Under present operating conditions freight trains of 80 cars can be brought solid from New York City for 140 miles on the water-level route along the Hudson, but before crossing the low drawbridge at Albany they have to be cut into sections, and each section supplied with a "pusher" for the long up-grade westward to Karner. All of the sections have been subject to various delays, often being held up by an open drawbridge in navigation season, while the reassembling of the sections has involved an additional expenditure of time and labor. During the busy navigation season the Albany drawbridges are turned 40 times a day.

A High Level Bridge With 138 Feet Clearance

The preliminary studies for the bridge involved extensive investigations and tests to find solid rock foundations beneath the river at locations where the currents and shore line topography were adaptable and land available. This required investigation of the river bed and banks over a

Elevation, End View and Section of Center Pier

great distance. At the Castleton location the three main supporting piers of the bridge, each 200 ft. in height, will be carried down below the river bed to a depth of 40 ft., 50 ft. and 70 ft., respectively, to solid rock. They will be faced with granite and limestone.

The structure across the Hudson will consist of two steel truss spans, 600 ft. and 400 ft. in length, flanked by steel viaducts on either side, the total length of the structure being approximately one mile. It will be built to carry two tracks but provision has been made in the design for expansion to four tracks when desired. The supporting piers for the main spans are three in number and, as stated, are 200 ft. high from base to bridge seat. This gives an under clearance of 138 ft. above high water level, slightly greater than the clearances of the high level bridge at Poughkeepsie, N. Y., or at the suspension bridges across East river at New York City. The tracks will be 150 ft. above the water line. The viaduct approaches to the main spans will be supported by rectangular steel towers, 25 in number, each carried on four concrete piers on piles driven to rock. Towers, center to center, are 164 ft. apart, the supports being in the form of a square, 64 ft. on a side.

At present the single existing navigable channel at the bridge site is 400 ft. wide between the government dikes, and as this will be blockaded during part of the construction work, the railroad will be compelled to dredge a second channel for a distance of over two miles, this to be a permanent and straight channel, and run beneath the secondary span to permit flow of navigation without any interruption.

The routing of the 20 miles of rail connections involves the crossing of highways at 24 points, 16 on the east shore

and 8 on the west shore, but the construction is so arranged that at all of these places the tracks pass either above or below the roads without a single crossing at grade. To the west of the bridge the new trackage will extend inland across level farm lands for eight miles to a connection with the West Shore at Feura Bush, N. Y., where there will be constructed a large gravity freight classification yard. On the east shore the tracks will extend four miles with very slight grades to connection with the Boston & Albany at Van Hoesen, N. Y. The third lateral will make connection with the New York Central main line just north of Stuyvesant, N. Y., the new tracks skirting the bluffs for 12 miles southward from the bridge to accomplish easy grade. Maximum grades will be 0.35 per cent.

Double Track Rail Connections and

Classification Yard to Speed Up Movement

The improvement includes a large gravity freight classification yard with an over-all length of about six miles located at Feura Bush, where cars will be classified for movement eastbound and westbound. Eastbound classification will permit direct movement of solid trains over the West Shore tracks to Weehawken, N. J.; across the Castleton bridge to the New York Central main line and thence to terminals on Manhattan Island; and to connections with the Boston & Albany for deliveries in New England. In this yard may be concentrated the classification work now carried on in the smaller and inadequate yards at West Albany, Karner, Ravena and other points.

The yard comprises new engine terminal facilities with at least two enginehouses of 30 stalls, one of which will be built at the present time. The yard tracks will be arranged into tonnage and fast freight tracks each with its individual complement of receiving, classification and advance yards and winter and summer humps. About 60 per cent of the layout will be constructed immediately, as may be seen from the following typical items. The westbound receiving yard will have ultimately 24 tracks, each holding 45 to 100 cars of which 13 tracks with capacities of 50 to 90 cars, 1,000 car total, will be built at present. Westbound classification will have 32 tracks ultimately of which 28 tracks, 3,200 car capacity, will be built now, the corresponding yard eastbound to have ultimately 36 tracks and 28 at present.

All Legal Obstacles Now Removed

The Castleton cut-off was first definitely planned by the New York Central in 1910, and during succeeding years it has continuously been before public commissions, the courts or other authorities seeking the necessary official sanction. The opposition was launched and sustained throughout by residents of the City of Albany, the cut-off establishing a shorter new route between East and West that detours to the south of the city. The opposition to the bridge contended that if it were built in two spans the supporting pier in the middle of the river would constitute an obstruction to deep-draught shipping and also cause ice gorges and floods. The railroad contended that a bridge with a single 1,000-ft. span would cost a prohibitively higher sum, which was unnecessary, wasteful and impracticable from the railroad standpoint. All legal and legislative barriers have now been cleared away. A new act passed by Congress provides that the bridge and connections shall be completed and in operation by February 15, 1925, but the railroad's schedule calls for completion a year earlier.

The work is under the immediate direction of the engineering department of the New York Central, G. W. Kittredge, chief engineer; J. W. Pfau, engineer of construction; H. T. Welty, engineer of structures, and R. E. Dougherty, designing engineer. Contracts for the fabrication and delivery of the steel were let to the McClintock-Marshall Company, Pittsburgh, Pa., and for the grading and masonry to the Walsh Construction Co., Davenport, Iowa.

General News Department

The Interstate Commerce Commission has fixed June 15 as the date for the resumption of hearings at Washington on its tentative plan of consolidation as it applies to the Southeastern district.

Fewer Accidents—More Money

The board of trustees of the Brotherhood of Railroad Trainmen, because of the large decrease in the number of casualties to railroad employees, has recently recommended that members of the brotherhood be insured for \$2,700 at the rate heretofore paid for a \$2,000 policy; a 35 per cent increase in insurance without any additional cost.

Association of Railway Claim Agents

This association held its thirty-third annual convention at Montreal, Canada, on May 17, 18 and 19. The officers elected for the ensuing year are: President, R. H. Doolittle (C. & S.); first vice-president, W. H. Failing (C. of N. J.); second vice-president, S. R. Brittingham (S. A. L.); third vice-president, F. R. Haney (C. P. R.); secretary, H. D. Morris (N. P.).

New Line Chartered in Arkansas

The Arkansas state railroad incorporation board has granted a charter to the newly organized "Arkansas Short Line Railroad Company," which plans to operate a railroad between the town of Truman in Poinsett county and McDonald in Cross county, a distance of approximately 32.6 miles. The company is capitalized at \$200,000, all of which has been subscribed. The incorporators are the Poinsett Lumber & Manufacturing Company, which owns the controlling interest.

Southern Pacific Veterans' Reunion

The annual reunion and banquet of the Southern Pacific veterans was held in the Palace Hotel, San Francisco, Cal., on May 10, the 53rd anniversary of the driving of the last spike at Promontory Point, Utah, in 1869. A number of prominent pensioners were present from various points on the system. This company has pensioned 1,775 employees, of which 834 are living, and has paid out \$4,269,356 in pensions since the present pension policy was adopted in 1903.

Minnesota Car Repair Shed Law Declared Invalid

A statute passed by the Minnesota legislature requiring railroads and other concerns who build or repair cars and car trucks to provide shelters for the protection of workmen from inclement weather, was declared null and void in a decision rendered by Federal Judge W. F. Booth at Winona, Minn., on May 15. The decision grants the Chicago & North Western a permanent injunction restraining the Minnesota Railroad & Warehouse Commission and the attorney general of the state from enforcing the statute in question.

Our Regulating Machinery

There is more truth than just in the assertion that about the only function left to railway management is the borrowing of money to make up deficits. There are ninety-nine agencies which make it a part of their duties to "regulate" the railways; 48 state legislatures, a like number of state commissions, Congress, the Railway Labor Board and the Interstate Commerce Commission. Most of these are not overlooking any opportunities to "regulate." Last year the legislatures of 42 states were in session. They passed 161 laws regulating railroads and having to do with railway affairs; and measures introduced but not enacted into law numbered 411. Some of the 572 measures introduced were: To require railways to fence the entire right of way; making it a felony to keep employees of a railway from holding public office;

prohibiting smoking on trains; prohibiting the use of paint-spraying machines; prohibiting advertising during threatened or actual strikes; prohibiting locomotives from running backwards; requiring all passenger trains to stop at all county seats; requiring railways having tracks along moving streams to keep the channels of such streams clear; requiring railways to transport all pupils in schools, high schools and night schools, at half fare.—*Central of Georgia Circular.*

U. S. Chamber of Commerce Opposes

Amendment of Commerce Act

The following resolution was adopted at the annual meeting of the Chamber of Commerce of the United States in Washington on May 18:

"The Transportation Act of 1920 placed in the interstate commerce law enactments which are of high importance, and which were advocated by the chamber. The interstate commerce act as it now stands should not be amended, and none of its basic provisions should be repealed, until there has been more opportunity for the law to be tested by experience under more normal conditions than yet exist. Opposition should be continued against proposals for the repeal of such basic provisions of the law as confer upon the Interstate Commerce Commission power to correct intrastate rates that unreasonably discriminate against interstate commerce, and give the commission the guidance of a rule for rate-making intended to secure for the public adequate transportation facilities and services."

Carl R. Gray, president of the Union Pacific, was elected a director of the chamber representing the transportation and communication department.

Pensions Capitalized

W. A. Winburn, president of the Central of Georgia, finding that employees do not fully understand and appreciate the benefit of being promised a pension on retirements from the service, has issued a letter briefly explaining the retirement plan and calling attention to what a pension costs the employer. He says, in part:

"The basis for pension allowance is one per cent for each year of service. . . . For example, an employee who had served continuously for 25 years, and whose average pay for the last ten years of service was \$200 a month, would receive 25 per cent of \$200 or \$50 a month; if in service 30 years he would receive \$60 a month. In other words, the company has set aside the sum of \$12,000 for the benefit of that 30-year employee and the interest at the rate of 6 per cent per annum on that sum, goes to the employee in the form of a pension. The man who earns more receives more and the man who earns less, has less; but every employee who complies with the requirements participates in the benefits.

"It should certainly be an incentive to faithful and continuous service to know that liberal provision is made for us.

We should regard the length and continuity of our service records with a pride second only to the pride in doing well whatever we have to do."

Manhattan Produce Yard

This is the name of a new freight delivery yard, with eleven team tracks holding 511 cars, which has just been completed by the Pennsylvania Railroad at South Kearney, near Meadows, N. J., five miles from the ferry terminus at Jersey City. The work has been done in five weeks at an expense of \$250,000, under the supervision of E. D. Davis, division engineer.

This yard is to be used for the delivery of perishable food-stuffs for distribution in New York City, and marks what may be considered the first step to provide facilities for the delivery of freight in conjunction with the proposed vehicular tunnel under

the North River connecting New York and New Jersey, the construction of which is expected to commence shortly. For the present consignees' trucks will have to cross the river by ferry. The new yard will assist materially in relieving the congestion at the piers on the New York side, which often results in hundreds of carloads of perishables missing the daily wholesale produce markets and auctions, and makes it necessary to embargo much freight.

For the immediate present the new yard will be used only for the delivery of watermelons, of which, between now and September 1, the Pennsylvania expects about 3,500 carloads.

The yard covers 28 acres. There are five macadamized driveways for motor vehicles, averaging 2,000 ft. in length and 66 ft. wide. Each driveway is electrically illuminated with three lamps—1,000 watt—suspended 50 ft. in the air. The office building is 25 ft. by 60 ft.

Tentative Valuations

The Interstate Commerce Commission on May 22 announced a number of additional tentative valuations, including a report on the Virginian Railway as of June 30, 1916, in which it placed the final value of the property owned, including 470 miles of first main track and 657 miles of all track, at \$52,750,314 and of the property used, including 474 miles of first track and 697 miles of all track at \$55,862,622. The outstanding capitalization as of the valuation date was \$89,663,500, of which \$59,226,500 was stock and \$30,437,000 was funded debt. The investment in road and equipment, including land, as stated in the company's books was \$87,604,302. The report says that if readjusted this would be increased to \$87,683,906, of which \$77,487,693 consists of the par value of securities issued, the money value of which is not determined. The original cost was not ascertained but it is stated that the recorded money outlay did not exceed \$44,931,594. In addition the carrier issued \$7,387,693 par value of securities for common carrier property.

The cost of reproduction new of the owned property is given as \$49,497,678 and the cost less depreciation as \$43,513,419. The cost of reproduction new of the used property was given as \$51,779,449 and the cost less depreciation as \$45,456,204. The final value of the property of the Virginian Terminal Railway, whose stock is owned by the Virginian, was placed at \$2,670,000. The company has outstanding \$3,500,000 of stock and bonds.

The final value of the carrier property owned by the Central Vermont as of 1917 was placed at \$16,592,724 and of the used property at \$22,665,787. The capitalization was \$14,257,000 and the investment in road and equipment as shown by the carrier's books was \$16,997,915, readjusted by the commission to \$15,968,989. The final value of the Bethel Granite was placed at \$87,500 and of the New London Northern at \$5,281,892.

The commission has also issued other tentative valuations stating the final values as follows:

	Property Owned	Property Used
Fort Street Union Depot Co.	1915 \$2,195,779	\$2,212,336
Carolina & Tennessee Southern	1915 377,077
Oregon Trunk Line	1916 15,049,086
Maryland, Delaware & Virginia	1915 2,266,312	2,696,312
Puget Sound & Cascade	1917 427,902
Baltimore, Chesapeake & Atlantic	1915 3,217,309	3,567,309
Shenandoah Railroad	1916 364,194	389,493
Magma Arizona	1917 319,560

Amendment of Transportation Act Opposed

Bruce Scott, general solicitor of the Chicago, Burlington & Quincy, testified on May 23 before the House Interstate and Foreign Commerce Committee that enactment of either the Sweet or Hoch bills would prove a misfortune to interstate commerce. Those measures propose a limitation on the so-called Shreveport doctrine and would bring about such an uncertainty in commerce as to hurt business at a time when every effort is being made to restore normalcy.

Under the Sweet bill, it is proposed to repeal section 15a of the Transportation Act while under both the Sweet and Hoch bills it is proposed to limit the jurisdiction of the Interstate Commerce Commission over intrastate rates.

These acts would start a new series of litigation on every hand for the purpose of construing the law and would unsettle business for years. Since the enactment of the law conditions have been abnormal so that the act has not been given an opportunity to prove its practicability. It has been argued that the states have been deprived of power over intrastate rates. The carriers have

never argued in support of such a contention. Before the Supreme Court they contended that the Interstate Commerce Commission had power over such rates only when they discriminated against interstate commerce; and the court upheld this contention.

Mr. Scott also said that 34 federal judges who have passed on the act have been unanimous in sustaining the interpretation of the act as given by the railroads and the Interstate Commerce Commission. The federal commission in administering the law recognized the national character of the transportation systems in its order making a general increase in freight rates on August 26, 1920.

Under the common law the carriers are entitled to a "fair return." It cannot be contended that a return of 6 per cent is excessive; yet the railroads in 1921 only earned 3½ per cent. The Interstate Commerce Commission in its decision in the hay and grain rate case held that freight rates were not responsible for the business depression. Experience has shown that reductions in rates have not stimulated traffic or buying.

Mr. Scott called attention to the fact that so far as his observation went no shipper had appeared before the committee in support of either bill but that support of the proposed legislation had come entirely from representatives of the state railroad commissions.

The Senate Committee on Interstate Commerce met on May 23 to consider its report on the Capper and other bills to amend the Transportation Act, but adjourned to meet later without taking definite action.

C. P. R. Memorial to Fallen Employees

Lord Byng, Governor-General of Canada, recently unveiled in the Windsor Street Station of the Canadian Pacific at Montreal a memorial to the 1,100 employees of that company who lost their lives in the war. The accompanying photograph portrays the unveiling ceremonies with Lord Byng speaking and E. W. Beatty,

Unveiling the Memorial

president of the company, standing at his right. The guard of honor was composed of employees who had been in the service. At the same time that this memorial was unveiled, similar ones were unveiled at Winnipeg and Vancouver. Likewise 25 bronze tablets were at the same time unveiled at various points along the C. P. R. as well as at the company's American, European and Asiatic offices.

Traffic News

A bill to repeal Section 15-a of the interstate commerce act and to restore the rates in effect prior to the increases of August 26, 1922, was introduced in the House by Representative Huddleston on May 22.

The Union Pacific will put on a new passenger train from Pocatello, Idaho, to West Yellowstone, Mont., on June 20, leaving Pocatello at 9 a. m. The operation of the "Yellowstone Special" from Salt Lake City, Utah, to West Yellowstone will be resumed. This train will carry a through sleeper from Chicago.

The Merchants' Association, New York City, announces that freight rates from New York to Chicago and Milwaukee, by Hudson river, the barge canal and lake vessels, have been reduced; the new tariff being on a basis of \$1.21½ first class; sixth class 40½ cents per 100 lb. and other rates in proportion. The first class rate is 36 cents less than the rate by all rail, and sixth class 12 cents less.

The Transportation Club of Evansville, Ind., was recently organized and it has a membership of 80. The officers are as follows: President, J. C. Keller, traffic commissioner of the Furniture Manufacturers' Association; vice-president, E. E. Wieland, general agent of the Chicago & Eastern Illinois; and secretary and treasurer, W. H. Orr, chief clerk in the general freight office of the Louisville & Nashville.

The Canadian Pacific has announced the inauguration of the "Empress Steamship Special," a solid vestibule passenger train operating between Chicago and its Empress steamship docks at Vancouver, B. C. The initial trip of the train will be made on June 12, and departures will thereafter continue to connect with each steamer for Yokohama, Hong Kong, and other oriental points, there being two such sailings each month. The same company has also resumed the operation of its "Trans-Canada Limited" which will run daily between Montreal, Toronto, and Vancouver. A through passenger train, to be known as the "Soo-Pacific Express" operating between Vancouver, Minneapolis, St. Paul and Chicago, will also be placed in service beginning June 4.

Coal Production

Having risen close to the 4,500,000-ton mark, the production of soft coal shows no further increase, according to the weekly bulletin of the Geological Survey. Production of anthracite remains practically zero.

The revised figures for the sixth week of the strike (May 8-13) indicate 4,421,000 tons of bituminous coal and 7,000 tons of anthracite. Up to the close of the sixth week the total output since the strike began was 23,826,000 tons of bituminous coal and 39,000 tons of anthracite, the anthracite mines were working to capacity and the 11,816,000 tons which they produced, added to 29,329,000 tons contributed by the bituminous mines which remained in operation, gave a total for the six weeks of 41,145,000 tons. Following is the condensed record:

	1st Week	4th Week	6th Week	7th Week
Missouri	11,445	12,711	13,118	13,399
Texas	11,919	12,377	13,266	12,726
West Virginia	11,437	11,622	13,445	13,421
Kentucky	14,000	17,981	13,266	13,283
Florida	11,766	11,367	11,757
Other States	11,298	11,431

The record suggests no marked change in the number of men on strike. No further increase is reported in shipments out of Southeast Kentucky and Tennessee, the only district where any considerable number of striking union miners have gone back to work. The market has quietened as is indicated by rising spot prices.

Visitors at the Philadelphia & Reading, numbering, with their families, about 1000 were taken by the company last Saturday, May 20, on an excursion to New York City and by train up the Hudson River.

Commission and Court News

Interstate Commerce Commission

The commission has vacated its order relating to intrastate rates in Georgia, the railroad commission of that state having amended its order so as to approve increases similar to those ordered by the federal commission.

The commission has suspended until September 19 the operation of schedules which propose to reduce from \$1.35 per 100 lb. to 74½ cents the rates on sash and doors, from Pacific Coast points to New York, via Southern Pacific and Morgan Line.

The commission has suspended until September 21 the operation of schedules which propose for backhaul or out of line service on cars of grain, hay, straw and seeds for inspection and disposition orders, at points in Texas, an additional charge based on the extra mileage involved the same as those now applicable on shipments reconsigned or diverted.

The commission, on petition of the city of Detroit, has reopened the standard time zone case for further hearing upon the question of whether the orders of the commission, insofar as they define the boundary line between the standard Eastern time zone and the standard Central time zone, should be so modified as to include the city of Detroit, and any western portions of the state of Michigan. The hearing will be held at Detroit, May 29, before Commissioner Aitchison.

State Commissions

Protest Abandonment of Memphis D. & G.

On April 26 and 27 a hearing was held by the Arkansas Railroad Commission, at the request of the Interstate Commerce Commission, to consider the petition of the Memphis, Dallas & Gulf, for leave to take up its tracks between Nashville, Ark., and Hot Springs, 87 miles. Since that time the state body has been preparing a report; and this report says: "On May 5 we inspected the railroad from Hot Springs, Ark., to Murfreesboro, 72 miles, and found the roadbed in good condition, the line and curvature good, and the rails for the most part likewise in good operating condition. The territory adjacent is now being developed. There are numerous business enterprises, such as gins, stores, truck farms and sawmills, which at present are practically valueless on account of the railroad not being operated. The country traversed by this railroad is adapted to the growing of cotton and is rich in undeveloped mineral resources; and . . . in our opinion no part of the road should be abandoned as we feel that under normal conditions and times the road as a whole could be operated at a profit to its owners. . . ."

Court News

Highway on Railroad Right of Way

Where a railroad company has by act of Congress a 400-ft. right of way, the Kansas Supreme Court holds that the laying out of a parallel highway inside of its boundaries 50 ft. from the track does not extinguish the company's right to the strip on the farther side of the highway.—Union Pacific v. Heger (Kan.), 204 Pac. 1008.

Railroad Not Liable as Garnishee for Wages

Earned During Federal Control

A railroad company is not liable for wages earned by an employee, while he was employed by the Federal Railroad Administration in operating the company's properties, and such a railroad company cannot be required to respond as garnishee of funds from which such earnings are alleged to be due.—Heuermann v. Heuermann (Missouri Pacific, Garnishee) (Mo. App.), 237 S. W. 83.

Foreign Railway News

Locomotive Exports in February

During February 39 steam locomotives were exported as follows: Eight to Honduras (\$62,575); one to Cuba (\$22,200); 19 to Argentina (\$856,100); five to Brazil (\$240,710); two to China (\$9,450), and four to Hongkong (\$78,130), giving a total value of \$1,269,165. These figures were compiled by the Bureau of Foreign and Domestic Commerce.

Car Exports in February

Only one passenger car, valued at \$1,000, was exported in February. This car went to Mexico. Forty-one freight cars were exported, valued at \$50,236, as follows: 12 to Mexico (\$10,686); 22 to Cuba (\$20,300); one to Dominican Republic (\$520); and six to Australia (\$18,730). These figures were compiled by the Bureau of Foreign and Domestic Commerce.

Belgian Firm Secures Finnish Contract

A contract has just been concluded between the Finnish State Railways and the Belgian firm, Société Anonyme des Acieries d'Angleur, for the delivery of 15,142 tons of rails. Tenders were received from Belgian, English, French and German firms, one firm in Luxemburg also competing. The Belgian tenders were lowest in price. The French, German and Luxemburgian firms were from 9.5 per cent to 16.7 per cent higher than the Belgian firm's quotations, and the English quotations were from 21 per cent to 44 per cent higher.

February Exports of Car Wheels and Axles

Car wheels and axles weighing 1,533,486 lb. and valued at \$64,700 were exported in February, according to the compilations of the Bureau of Foreign and Domestic Commerce. Detailed figures by countries follow:

Countries	Pounds	Countries	Pounds
Canada	154,182	Dominican Republic	2,359
Guatemala	1,658	Brazil	8,123
Honduras	16,781	Chile	35,597
Panama	24,008	Peru	9,509
Mexico	679,091	Venezuela	2,681
Barbados	42,800	British India	137,600
Trinidad and Tobago	19,936	Other Brit. East Indies	6,059
Cuba	15,943	New Zealand	1,938
Japan	231,838	British South Africa	1,014
Kwantung	49,905	Other countries	1,492
Philippines	50,000		
Australia	42,972		
		Total	1,533,486
		Value	\$64,700

Powerful Combine of British Supply Manufacturers

An interesting engineering combine has just been registered under the title of the Power & Transport Finance Company. The firms represented in the combine are Cammell, Laird & Co., Ltd., shipbuilders; Sir William Arrol & Co., Ltd., machinery manufacturers; the English Electric Company, Ltd., electrical manufacturers; John Brown & Co., Ltd., shipbuilders; the North British Locomotive Company, Ltd., locomotive builders; and the Prudential Assurance Company, Ltd. The board of directors consists of W. L. Hichens of Cammell, Laird & Co., Sir John Hunter of Sir William Arrol & Co., Lord Meston and P. J. Pybus of the English Electric Co., Sir Hugh Reid of the North British Locomotive Co., John Sampson of John Brown & Co., and Sir George May of the Prudential Assurance Company. The object of the company is to undertake and, if necessary, to finance large contracts for railway construction, rolling stock, power stations, docks and harbors and, in general, all other aspects of power production and transport work. The new company has established headquarters in Kingsway, London, W. C. The initial capital is £250,000.

Track Material Exports in February

Rails exported in February were valued at \$508,460 and tonnage was 14,093. Exports of rail joints, splice bars, fish-plates and tie-plates were valued at \$48,508; of switches, frogs and crossings at \$54,567; of track spikes at \$27,756; and of bolts, nuts and washers at \$9,624. These figures were compiled by the Bureau of Foreign and Domestic Commerce. Details by countries follow:

Countries	Rails, Tons	Rail Joints, Splice Bars, Fish Plates, Pounds	Switches, Frogs and Crossings, Pounds	Railroad Spikes, Pounds	Railroad Bolt, Nuts, Washers, etc., Pounds
Spain	1,783	131,500	10,500		615

The Trans-Zambesia Railway

The recent completion of the Trans-Zambesia Railway from Beira, a seaport in Portuguese East Africa, northward to the Zambesia river opens up a vast area of rich natural resources. The Trans-Zambesia touches the river at Chindio. Northward from this point to Blantyre, in the Nyasaland Protectorate (about 100 miles south of Lake Nyasa), the Shiré Highlands Railway was already in operation. Bids have been asked, according to the Times (London) Trade Supplement, for the extension of the line to Lake Nyasa. When this is completed vast territories in South Central Africa will have direct connections with the sea.

Attention should be drawn to the fact that while the Shiré Highlands Railway is in British territory, the recently completed Trans-Zambesia is not. Instead it is in Portuguese territory. Notwithstanding this the Nyasaland government was so desirous of securing rail connections with the sea that it guaranteed the interest on the railways bonds for a period of 25 years and furthermore will retire half of them at its own expense within 20 years.

The Trans-Zambesia Railway was financed and built by a British company. A British contractor built the line for £810,000, including one important bridge and stations, culverts, telegraph lines, etc. Construction of the new railway was begun in September, 1920.

From Beira the new railway uses the line of the Beira-Mashonaland Railway to Dondo Junction, 18 miles from Beira. Thence it extends northward 157 miles (which is the extent of the new construction involved) to the Zambesia river. The ferry run across the river to Chindio is 2½ miles where the Shiré Highlands Railway begins. From Chindio to Blantyre is 173½ miles, making the total distance from Beira to Blantyre by rail and ferry 351 miles.

The gage of the line is 3 ft. 6 in., which is almost universal in Southern Africa, and 60 lb. rails were used. With the exception of one bridge of five 90-ft. spans there were no great natural obstacles to construction. It is planned eventually to carry the railway further up the Zambesia river where a bridge will be built, thus avoiding the ferry.

Little American equipment was purchased for the new line, the bulk of the orders going to British concerns, although the Pressed Steel Car Company was awarded contracts for a number of box cars, cattle cars and gondolas.

Equipment and Supplies

Locomotives

THE UNITED SUGAR COMPANIES of South America, Los Moches, Sinaloa, Mexico, has ordered one Mikado type locomotive from the Baldwin Locomotive Works.

THE NORFOLK SOUTHERN, reported in the *Railway Age* of May 8 as inquiring for 5 Consolidation type locomotives, has ordered this equipment from the Baldwin Locomotive Works.

THE PEORIA & PEKIN UNION, reported in the *Railway Age* of May 6 as inquiring for six 6-wheel switching locomotives, has ordered this equipment from the Lima Locomotive Works.

THE CHICAGO & EASTERN ILLINOIS, reported in the *Railway Age* of May 20 as contemplating the purchase of 6 Pacific type locomotives, has sent out inquiries for the same. In addition to its inquiry for passenger locomotives this company is accepting bids for 10 Mikado type locomotives.

Freight Cars

THE KANSAS CITY SOUTHERN is inquiring for 1,000, 40-ton box cars.

THE BUREAU OF MINES will receive bids until May 31 for two mine rescue cars.

THE UNITED STATES ARMY is inquiring for a U. S. R. A. box car equipped with air compressor.

THE WABASH is reported to have ordered 750 car bodies from the Standard Steel Car Company.

THE BETHLEHEM CHILE IRON MINES COMPANY is inquiring for 25 hopper ore cars of 50-ton's capacity.

THE BELT RAILWAY OF CHICAGO has ordered 100 hopper cars from the Western Steel Car & Foundry Company.

THE BALTIMORE & OHIO is inquiring for 1,000 hopper car bodies of 50 tons' capacity and 500 box car bodies.

THE MISSOURI, KANSAS & TEXAS has ordered 200 refrigerator cars from the American Car & Foundry Company.

THE FORT SMITH & WESTERN has ordered 125 steel center constructions from the Western Steel Car & Foundry Company.

THE NEW YORK CHICAGO & ST. LOUIS has ordered 100 steel center constructions from the Illinois Car & Manufacturing Company.

THE UNION REFRIGERATOR TRANSIT COMPANY, Milwaukee, Wis., has ordered 350 refrigerator cars from the American Car & Foundry Co.

THE SEABOARD AIR LINE is inquiring for 900 steel underframe, ventilated box cars of 40 tons' capacity also for 100 phosphate cars of 50 tons' capacity.

THE NEW YORK CHICAGO & ST. LOUIS, reported in the *Railway Age* of April 29, as inquiring for 400 refrigerator cars, has ordered this equipment from the Merchants' Dispatch.

THE CHILE EXPLORATION COMPANY, New York City, reported in the *Railway Age* of May 20 as inquiring for 50, 70-ton ore cars, has ordered 50 steel ore cars from the Pressed Steel Car Company.

THE CHICAGO NORTH SHORE & MILWAUKEE in addition to its order for 15 merchandise dispatch cars from the Cincinnati Car Company, reported in the *Railway Age* of May 13, has purchased one motor line car from the same company.

THE BALTIMORE & OHIO is having repairs made to 25 refrigerator cars at the shops of the Standard Steel Car Company and to 25 at the shops of the American Car & Foundry Co., and 25 coke cars at the shops of the Koppel Car Repair Co.

THE FLORIDA EAST COAST, reported in the *Railway Age* of April 8 as asking for prices on 400 refrigerator cars, has ordered 175 of these cars from the Mount Vernon Car Manufacturing Company. The company is asking for prices on 20 tank cars of 10,000-gal. capacity.

THE ERIE, reported in the *Railway Age* of May 6 as contemplating having repairs made to a large number of freight cars, is now having repairs made to 100 refrigerator cars at the shops of the Standard Steel Car Company and is asking for prices on the repair of about 3,000 cars.

THE ATCHISON, TOPEKA & SANTA FE, reported in the *Railway Age* of May 13 as inquiring for 2,000 steel-underframe, double-sheathed box cars of 40 tons' capacity, has ordered this equipment as follows: From the Pullman Company, 1,000 cars; from the American Car & Foundry Co., 500 cars; and from the Standard Steel Car Company, 500 cars.

Passenger Cars

THE SEABOARD AIR LINE, reported in the *Railway Age* of April 8 as inquiring for 5 dining cars, has ordered 10 dining cars from the Pullman Company.

THE MISSOURI, KANSAS & TEXAS, reported in the *Railway Age* of April 15 as inquiring for 30 passenger cars, has ordered 30 steel passenger coaches from the American Car & Foundry Co.

ST. LOUIS-SAN FRANCISCO, reported in the *Railway Age* of April 22 as inquiring for 6 chair cars and 8 coaches, has ordered 6 steel chair cars and 8 steel coaches from the American Car & Foundry Co.

Iron and Steel

THE INDIANAPOLIS UNION is inquiring for 500 tons of 85 lb. rails.

THE IMPERIAL GOVERNMENT RAILWAYS of Japan have ordered 10,000 tons of 60-lb. rail and 600 tons of accessories, through Mitsubishi Shoji Kaisha, Ltd., New York City, from the Consolidated Steel Corporation.

Machinery and Tools

THE WHEELING & LAKE ERIE has ordered one 48-in. car wheel borer from the Niles-Bement-Pond Company.

THE ATCHISON, TOPEKA & SANTA FE is inquiring for a portable motor-driven bolt lathe with quick change gears and taper attachment. This same company is soon expected to distribute orders for its large outstanding machinery inquiry.

Signaling

THE LONG ISLAND has bought from the Union Switch & Signal Company a Saxby & Farmer interlocking machine, 12 levers, with connections and other material for installation at Jekyl Island, N. Y.; also an electro-pneumatic interlocking machine for Flat-bush, N. Y., 31 working levers.

Miscellaneous

THE TEXAS & PACIFIC has ordered three 100-ton turntables from the American Bridge Company.

THE IMPERIAL GOVERNMENT RAILWAYS of JAPAN are inquiring through New York City export houses for a large amount of air brake parts.

THE CLEVELAND, CINCINNATI, CHICAGO & ST. LOUIS will accept bids until June 2, for seven 90-lb. manganese frogs and 151 switch stands with accessories.

THE NORFOLK & WESTERN will receive bids until 12 o'clock noon May 31, at Roanoke, Va., for 70 cast steel rigid side frames, 50 cast steel flexible side frames and 2,500 steel bulb angles.

Supply Trade News

O. H. Dallman, formerly with the Vanadium Alloy Steel Company, Latrobe, Pa., and the mechanical department of the Pennsylvania Railroad at its Fifty-fifth street shops, Chicago, has joined the sales force of the **Independent Pneumatic Tool Company, Chicago**.

Wesley W. Burden, formerly with the Bird-Archer Company as chief mechanical engineer and assistant to the president, has resigned to become vice-president and treasurer of the **Wilbur G. Hudson Corporation**, engineers and constructors, with offices at 50 Church street, New York. This company specializes in coal, coke, ash, and ore handling systems, steel, timber and reinforced concrete structures, railroad shops, roundhouses, terminals, and railroad coaling stations.

A. W. Bowie and **J. J. Lydon**, who have for the past 25 years been connected with Westinghouse, Church, Kerr & Company, and their successors, Dwight P. Robinson & Company, have recently resigned from that organization and have organized the firm of **Bowie, Lydon & Company, Inc.**, to handle railroad and industrial construction, with offices at 340 West Harrison street, Chicago. **W. G. Bied**, president of the Chicago & Alton, has been elected president of this company and **M. P. Tilley**, formerly with Westinghouse, Church, Kerr & Company and more recently with the Lustbader Constitution Company, has been added to the staff.

Westinghouse Electric & Manufacturing Company

The gross earnings of the Westinghouse Electric & Manufacturing Company from sales billed for the year ended March 31, 1922, as shown by the company's annual report, were \$99,722,026, compared with \$150,980,106 in the previous fiscal year. The net income available for dividends was \$5,837,389, as against \$12,617,536 in 1921. Dividends on the common and preferred stocks for total year totaled \$5,984,895. The surplus, as of March 31, 1922, was \$42,324,085.

Guy E. Tripp, chairman, in his report to the stockholders says: "The general business depression during the past year is reflected by the reduced volume of business, but an extreme depression in certain important departments reduced the net profits to a greater proportional extent than would be usual on the diminished amount of business.

"Due to the low volume of business taken during the year, the value of unfilled orders in hand has been reduced from \$65,621,000 as shown in last year's report, to \$50,740,696 as of March 31, 1922. The contraction in orders booked continued throughout the year until January, 1922, when there began a substantial improvement which has since been maintained. In addition to the favorable indications for an increasing demand for the regular lines of your company's product, a large demand for radio telephone receiving apparatus has recently developed with a prospect of its continuance for an indefinite period. It should be pointed out, however, that the ensuing year promised to be a period of keen competition."

The consolidated general balance sheet follows:

ASSETS	
Property and plant	\$47,942,797
Investments	17,029,221
Cash	9,966,631
United States bonds and Treasury notes	7,886,309
Cash on deposit for matured bonds, etc.	64,492
Notes receivable	5,660,841
Accounts receivable	18,146,790
Inventories	55,027,059
Other assets	5,345,746
Total	\$167,069,886
LIABILITIES	
Capital stock:	
Preferred	\$3,998,700
Common	70,813,950
Funded debt	36,249,000
Current liabilities	11,400,121
Reserves	2,384,030
Profit and loss—surplus	42,324,085
Total	\$167,069,886

Railway Construction

BALTIMORE & OHIO.—This company has awarded a contract to the Ferro Construction Company, Chicago, for the erection of the steel superstructure of a bridge to be erected over Salt creek, east of Vigo, O. The new bridge is of two single-track, through-truss spans, each 144 ft. from center to center of end pins. These spans have a total weight of about 416 tons and were fabricated by the Mount Vernon Bridge Company, Mt. Vernon, Ohio. This new bridge is on the main line between the Atlantic seaboard and Cincinnati and St. Louis and the erection will be performed without interference to scheduled traffic.

CHICAGO UNION STATION.—This company is calling for bids for additional foundation work under the head house required to meet a new type of building and for construction of the first section of the head house known as "Canal Street Space," this work to include the preparation of site foundations, retaining walls, rough floor construction, erection of steel work and building of roadway and sidewalks below and some distance on either side of Canal street between Jackson and Adams streets. This work also includes the installation of plumbing, lighting and heating to adapt the space for use as a temporary passenger station.

DENVER & SALT LAKE.—This company is giving immediate consideration to plans looking to the early commencement of the construction of a tunnel through the continental divide and to the extension of its present line from Craig, Colo., in a north-westerly direction through the Uintah Basin to Provo or Springville, Utah, as the result of the action of the governor of Colorado in signing the Moffat tunnel bill on May 12, providing for the financing of this project. This tunnel will be approximately 6½ miles long, to construct which the law authorizes a bond issue of \$6,720,000. Provisions are contained in the law for the tunnel to accommodate telegraph and telephone lines, power and water lines and vehicles as well as the railroad. A board of five commissioners is to be appointed by the governor, with full power under the law to prescribe all regulations concerning tunnel.

ERIE.—This company has applied to the Interstate Commerce Commission for a certificate authorizing the construction of an additional track from Sparrowbush, N. Y., to Lackawaxen, Pa., about 20 miles.

LOUISVILLE & NASHVILLE.—This company has placed an order with the Roberts & Schaefer Company, Chicago, for N. & W. type cinder plant for installation at Corbin, Ky.

NEW YORK CENTRAL.—This road has awarded contracts to the Walsh Construction Company, Davenport, Iowa, for the grading and masonry in connection with the Castleton bridge and cut-off work.

NORTHERN PACIFIC.—This company, which was reported in the *Railway Age* of May 13 as authorizing the construction of a tunnel and other work on its Phileman line change in western Montana, to cost approximately \$107,000, has awarded the contract for this work to Clifton, Applegate & Toole Company, Spokane, Wash.

PENNSYLVANIA.—This road is asking for bids for the construction of a single-track, half-through girder bridge to carry the tracks of the Bellefonte branch, Williamsport division, over the state highway, Route No 18, east of Lewisburg, Pa. Approximate quantities of materials are as follows: 600 cu. yd. roadway excavation under track; 1,200 cu. yd. foundation excavation; 400 cu. yd. foundation masonry; 290 cu. yd. abutment masonry; 21 cu. yd. reinforced concrete floor and 45,000 lb. erecting superstructure. The work will be in charge of George Patton, assistant engineer, Milton, Pa.

FOR NEW TERMINAL FACILITIES, the Canadian government is to lend to the Harbor Commissioners of Montreal \$5,000,000. A loan of \$1,500,000 will also be made to the Quebec City Harbor Commissioners for a similar purpose.

Railway Financial News

BALTIMORE & OHIO.—Authorized to Issue Bonds.—This company has been authorized by the Interstate Commerce Commission to issue \$1,840,000 of refunding and general mortgage 6 per cent bonds to be pledged as collateral security for short term notes.

BANGOR & AROOSTOOK.—Authorized to Abandon Line.—The Interstate Commerce Commission has issued a certificate authorizing the abandonment of operation of a branch line extending from a point near Brownville Junction to Katahdin Iron Works, Me., 8.85 miles.

BOSTON & MAINE.—Protest Against Tentative Valuation.—This company and its subsidiaries have filed their protest with the Interstate Commerce Commission against the tentative valuation issued on March 18 in which the company claims that the total value of the properties comprised in its system is not less than \$37,729,860, whereas the commission stated the final value of the used properties as \$234,189,816. The company says that the reported final values, so-called, of the property have been determined arbitrarily and without proper consideration of relevant facts and of all the properties which should be included and represent much less than the true value. The company states that the value of the property wholly owned and used as of the valuation date, June 30, 1914, was not less than \$323,089,000, whereas the commission's tentative figure for property wholly owned and used was \$101,712,972. The protest also claims not less than \$41,576,037 for property used and not owned, \$6,656,600 for property operated as agent, \$154,111 for property used by the Western Union, \$220,360 for property used by the St. Johnsbury & Lake Champlain, \$27,454 for property used by the Central Vermont and \$6,100 for property used by the Conway Electric Street Railway. These items make the total of \$371,000,000 given above. Details of the corrections which the commission is asked to make are given in the protest and the various items of the amounts claimed are set up in parallel columns.

CAMBRIA & INDIANA.—Asks Authority to Issue Bonds.—This company has applied to the Interstate Commerce Commission for authority to issue \$1,000,000 of general mortgage 6 per cent bonds, the proceeds to be used to pay promissory notes. The bonds have been conditionally sold to Brown Bros. & Co., of Philadelphia.

CHICAGO & EASTERN ILLINOIS.—Authorized to Abandon Line.—The Interstate Commerce Commission has issued a certificate as to interstate and foreign commerce authorizing the abandonment of the Chicago & Indiana Coal Railway division, which extends from Brazil, Ind., to a point on the Indiana-Illinois state line, with a branch, comprising in all 162.1 miles of main track. The certificate was issued in spite of the numerous protests that large investments have been made in various business enterprises along the line and many industries have been established that require railroad facilities and have no other railroad connection. It was shown that there were grain elevators at 29 stations and there are some 48 towns and villages along the line, of which 32 are not served by any other railroad. For many years block coal constituted approximately 70 per cent of the coal traffic originating on the road and there is now practically no such coal handled by it as the coal fields are substantially worked out. The report says the physical condition of the road is such as to make operation over it very expensive and it appears reasonably clear that the territory traversed is not productive of sufficient traffic to justify its operation as an independent line and that there is no reasonable expectation that the territory ever will produce sufficient tonnage to enable the property to pay its operating expenses. The commission says the issuance of the certificate will not preclude or prejudice making of arrangements for the taking over of the road or parts of it by any carrier or persons able to finance its continued operation.

CHICAGO & NORTH WESTERN.—Annual Report.—This company's annual report for 1921 is reviewed in an article elsewhere in this

issue entitled "C. & N. W. Revenue Tons Decreased 34.92 Per Cent." See also excerpts from annual report on adjacent pages.

CHICAGO, PEORIA & ST. LOUIS.—Partial Payment Certified.—The Interstate Commerce Commission has certified to the Secretary of the Treasury a partial payment on account of this company's six months guaranty of \$55,000.

CHICAGO, ROCK ISLAND & PACIFIC.—Equipment Notes Offered.—Freeman & Co. and Hayden, Stone & Co. are offering \$2,345,000 Chicago, Rock Island & Pacific Railway 6 per cent equipment trust notes which have been stamped as subordinate in lien to \$4,690,400 prior lien notes now outstanding. The notes mature annually from January 15, 1923, to January 15, 1935, and are offered at prices to yield from 5.25 to 5.75 per cent.

This is the first offering of this kind of the notes which the director general of railroads has sold. During recent months there has been sold to bankers more than \$250,000,000 in equipment trust notes. About \$100,000,000 of these notes represented two-thirds of the cost of equipment purchased by the government for the railroads, the remaining one-third of these issues being stamped as subordinate in lien, in accordance with a special supplemental agreement. These stamped notes were taken by the government and have been held since the sale of the prior lien obligations. The bankers have selected the notes of the Rock Island as the most attractive of the subordinated notes.

CHICAGO, ST. PAUL, MINNEAPOLIS & OMAHA.—Asks Authority to Sell Bonds.—This company has applied to the Interstate Commerce Commission for authority to sell at not less than 93½, \$2,700,000 of its 5 per cent debenture gold bonds of 1920 now held in the treasury, to reimburse the treasury for expenditures.

Annual Report.—This company's annual report for 1921 is reviewed in an article elsewhere in this issue entitled "C. St. P. M. & O. Also Shows Deficit."

CLEVELAND, CINCINNATI, CHICAGO & ST. LOUIS.—Authorized to Abandon Line.—The Interstate Commerce Commission has authorized the abandonment of the present line from Glenn to St. Clair, Ind., 3 miles, incident to a relocation which will substitute a line of 4.6 miles.

CLEVELAND, CINCINNATI, CHICAGO & ST. LOUIS.—Dividend Resumed.—The directors have declared a dividend of 2 per cent on the common stock, payable June 15 to stock of record June 2, the first dividend disbursement since September, 1910. The action of the directors was announced merely as a dividend, without mention of any definite period. The earnings on the common stock in 1921 have been estimated at around \$8 a share.

GEORGIA, ASHBURN, SYLVESTER & CAMILLA.—Organization Formed.—This company, which was authorized to purchase that part of the Hawkinsville & Florida Southern from Ashburn to Camilla, Ga., a distance of 51 miles, as noted in last week's issue, has elected the following board of directors: J. N. Pidcock, C. W. Pidcock, J. R. Hackett, J. J. Hill, C. W. Pidcock, Jr., L. G. Cox, all of Moultrie; T. C. Jeffords and C. W. Hillhouse, Sylvester; George Petts and J. L. Evans, of Ashburn; J. W. Butler, J. E. Brooks, and G. L. Wade, of Camilla.

Service on the Hawkinsville & Florida Southern was suspended last November. Plans for resuming service are being hurried by the new company and it is expected that trains will be in operation early in June.

HAWKINSVILLE & FLORIDA SOUTHERN.—Part of Line Purchased.—See Georgia, Ashburn, Sylvester & Camilla.

MARSHALL & EAST TEXAS.—Hearing on Application to Dismantle.—A final hearing has been set for June 12 at Texarkana, Texas, by the United States Court for the Eastern District of Texas, on the application of Bryan Snyder, receiver, for authority to dismantle and dispose of the remaining property of the Marshall & East Texas for the benefit of its creditors.

MORENCI SOUTHERN.—Authorized to Abandon Line.—The Interstate Commerce Commission has issued a certificate authorizing this company to abandon as to interstate and foreign commerce its narrow gage line from Guthrie to Morenci, Ariz., 18 miles. Following the decision of the Supreme Court in the Eastern Texas railroad case, the commission's finding and order will deal only with interstate and foreign commerce.

NEW YORK CENTRAL.—Authorized to Lease Chicago Terminal Properties.—The Interstate Commerce Commission has issued an order approving and authorizing the acquisition by the New York Central of control of the Chicago River & Indiana by the purchase of its capital stock and the acquisition by the Chicago

River & Indiana of control of the Chicago Junction by lease, subject to 17 conditions. The commission denied authority to the New York Central to purchase the capital stock of the Chicago Junction or its physical properties without prejudice to future proceedings. (Further details regarding report of commission are published elsewhere.)

Annual Report.—This company's annual report for 1921 is reviewed in an article on another page of this issue, entitled "N. Y. Central Surplus After Dividends \$9,747,588." See also excerpts from annual report on adjacent pages.

NEW YORK, NEW HAVEN & HARTFORD.—Extension Plan Operative.—President Edward J. Pearson has informed noteholders of the 4 per cent 15-year European Loan of 1907, that the extension provided in the agreement of March 8, 1922, is operative. Under the terms the noteholders are entitled to a 10 per cent cash payment, with interest payable at the rate of 7 per cent. Holders of certificates of deposit are asked to deposit them with the depository on or after May 22, 1922, to receive the new certificates and the cash payment. The time within which holders of undeposited obligations may become parties to the agreement is extended, subject to termination without notice.

NORTHERN PACIFIC.—Annual Report.—The annual report issued this week shows the following income account for the year ended December 31, 1921:

	1921	1920
Average mileage operated.....	6,658	6,653
Operating revenues.....	\$94,538,059	\$113,084,408
Operating expenses.....	77,630,867	100,983,874

Minimum compensation, two months, 1920.....	513,365
Additional compensation received from U. S. Government for rent during years 1918, 1919 and two months, January and February, 1920.....	2,308,095

Net income carried to profit and loss.....	5,245,827	3,287,462
Average mileage in operation.....	520	524

*Corporate operation, March to December.

Asks Authority to Issue Bonds.—This company has applied to the Interstate Commerce Commission for authority to issue \$909,000 of first mortgage 5 per cent, 50-year gold bonds to be pledged with other collateral as security for a note for \$2,000,000 to the director general of railroads. The company has also asked authority to guarantee a similar amount of bonds to the Virginian Terminal Railway, which that company also asks authority to issue.

WESTERN PACIFIC.—Authority to Acquire Sacramento Northern Denied.—The Interstate Commerce Commission has denied without prejudice to a new application, the application of this company for authority to acquire control of the line of the Sacramento Northern Railroad upon its transfer to the Sacramento Northern Railway by the purchase of the capital stock of the latter and the purchase of the bonds of the railroad. The denial is based on the ground that the Sacramento Northern, which operates an electric line of 165 miles in California, is a carrier which must make application to the commission for authority to issue securities and not merely an electric interurban railroad, and that until application of the new Sacramento Northern Railway for authority to issue its securities is made, the commission is unable to pass upon the public interest involved in the acquisition of control in such company by the Western Pacific. Commissioner Daniels filed a dissenting opinion.

WISCONSIN CENTRAL.—New Directors.—A. L. Osborne, of Oshkosh, Wis., has been elected a director. G. W. Webster has been elected a director to succeed C. E. Wales, resigned. Edmund Pennington has retired as president to become chairman of the board.

Railroad Administration Settlements

The Railroad Administration has announced this week final settlements for the federal control period and has paid the amounts named to the following companies: Pacific Fruit Express, \$2,925,000; Piedmont & Northern, \$100,000; Durham & Southern, \$75,000; Pueblo Union Depot & Railroad Co., \$7,700.

Dividends Declared

Cincinnati, New Orleans & Texas Pacific.—Preferred, 1¼ per cent, quarterly, payable June 5 to holders of record May 25.
 Fonda, Johnstown & Gloversville.—Preferred, 1½ per cent, quarterly, payable June 15 to holders of record June 10.
 Hocking Valley.—2 per cent, semi-annually, payable June 30 to holders of record June 9.
 New Orleans, Texas & Mexico.—1½ per cent, quarterly, payable June 1, to holders of record May 23.
 Chicago, Rock Island & Pacific.—Six per cent preferred, 3 per cent, semi-annually, seven per cent preferred, 3½ per cent, semi-annually; both payable June 30 to holders of record June 9.
 Chesapeake & Ohio.—2 per cent, semi-annually, payable June 30 to holders of record June 2.
 Mobile & Birmingham.—Preferred, 2 per cent, semi-annually, payable July 1 to holders of record May 31.

Trend of Railway Stock and Bonds Prices

	Last May 23	Last Week	Last Year
Average price of 20 representative railway stocks.....	66.64	64.31	54.71
Average price of 20 representative railway bonds.....	86.65	85.87	74.10

AT THE THIRD TRIENNIAL convention of the Brotherhood of Railway Clerks, Freight and Express Handlers and Station Employees, held recently in Dallas, Tex., E. H. Fitzgerald of Cincinnati, Ohio, was re-elected grand president, and R. F. Dee, New Orleans, La., J. H. Sylvester, Spokane, Wash., G. H. Harrison, St. Louis, Mo., G. C. Milam, Kansas City, Mo., and C. R. Briceland, Pittsburgh, Pa., vice-presidents. G. S. Levi, grand secretary-treasurer, was also re-elected, as was P. E. Ziegler, editor and manager of "The Railway Clerk," official publication of the organization. The convention discussed a proposition to erect a building in Cincinnati for the purpose of establishing a bank and the national headquarters of the order. The next convention will be held in Kansas City, Mo., in 1923.

Annual Reports

Sixty-second Annual Report of the Chicago and North Western Railway Company

REPORT OF THE BOARD OF DIRECTORS

To the Stockholders of the Chicago and North Western Railway Company:

The Board of Directors submits herewith its report of the operations and affairs of the Company for the year ending December 31, 1921.

Average mileage of road operated, 8,402.28.

OPERATING REVENUES:	
Freight	\$95,687,013.19
Passenger	33,770,081.94
Other Transportation	12,924,037.70
Incidental	2,393,442.69
	\$144,775,475.52

OPERATING EXPENSES (89.17 per cent of Operating Revenues) 129,091,427.62

Net Revenue from Railway Operations

Railway Tax Accruals (5.85 per cent of Operating Revenues)

UNCOLLECTIBLE RAILWAY REVENUES

EQUIPMENT AND JOINT FACILITY RENTS—Net Debt

Net Railway Operating Income

NON-OPERATING INCOME:

Compensation for Lease of Road to U. S. Government

Rental Income

Dividend Income

Income from Funded Securities

Income from Unfunded Securities and Accounts, and Other Items

Gross Income

DEDUCTIONS FROM GROSS INCOME:

Rental Payments

Interest on Funded Debt

Other Deductions

Net Loss

DIVIDENDS:

7% on Preferred Stock

5% on Common Stock

Balance Loss for the Year

GENERAL REMARKS

In his last annual report it was stated that the account with the Director General of Railroads for the period of Federal control had not then been settled. During the early part of the year 1921 the Company received cash payments on this account totaling \$9,000,000.00, and in September, 1921, the Board of Directors, a final settlement was made under which the Company received \$6,500,000.00 in cash. The settlement was in full for all claims of the Director General against the Company for expenditures made by him for additions and betterments, liabilities and expenses paid and all other transactions due by the Company under the provisions of the contract, and for all claims of the Company against the Director General for balance due in compensation, cash and other assets taken or collected by him, deficiency in material and supplies, road and equipment retired, accrued depreciation, under-maintenance, etc.

With this settlement the Company is in nowise indebted to the United States Government for matters growing out of or incident to Federal control.

The settlement of the accounts under the guaranty provisions of the Transportation Act, 1920, has not been made. All reports and information requested by the Interstate Commerce Commission to enable it to determine the amount due have been furnished and it is expected that this matter will be closed out in the near future.

The effect of the war and the attendant high level of prices and wages still exercise an influence of the greatest importance in keeping operating expenses at an abnormally high level. Some reduction has been possible. Effective July 1, 1921, the United States Railroad Labor Board promulgated a new scale of wages which averages about 11% lower than the scale established by it in 1920. This new scale was accepted and put into effect by the Company by every particular and the reductions were accepted by the employees. The Company likewise made proportionate reductions in the wage scales of such of its employees and subordinate officials as were not embraced in the order of the Labor Board.

These reductions in wage scales were not, however, sufficient to fully offset declining revenues and further reductions in payrolls were necessary and were brought about by reducing forces.

The total amount included in Operating Expenses during the year for labor was \$77,844,144.00. This compared with \$100,550,396.00 included in the year 1920. This railway company, along with practically every other in the United States, is at the present time before the Labor Board seeking to have further reductions in the wage scales of employees. At the present time the average wage scale is 6% above that of 1917.

The year 1921 was a year of widespread business depression, which naturally had its effect upon the affairs of your Company. Manufacturing and merchandising throughout the country declined greatly, and as a result

the traffic in manufactured products and in raw materials used in their manufacture was reduced correspondingly.

The volume of iron and steel traffic handled declined from 13,978,103 tons in 1920 to 10,627,582 in 1921, a loss of 74.19%. The volume of bituminous coal handled declined from 10,254,478 tons in 1920 to 6,235,916 tons in 1921, a loss of 39.19%. During the year 1920 these two items constituted 40% of the tonnage shipped over the road. Forest products declined from 6,883,662 tons in 1920 to 5,288,176 tons in 1921, a loss of 23.18%. The volume of manufactured products declined from 11,233,090 tons in 1920 to 7,225,477 tons in 1921, a loss of 35.68%. Products of agriculture moved in greater volume during the year 1921 than in 1920; the total tonnage in 1920 was 7,418,564 and this was increased to 7,767,958 in 1921, or 4.71%. This increase was due almost entirely to the great increase in the amount of corn marketed during the year 1921. Animals and animal products decreased slightly from 2,333,186 tons in 1920 to 2,194,666 tons in 1921, while the volume increased, the total tonnage was only 7,418,564 tons in 1920 compared with 52,856,643 tons of other traffic, so that the gain in tonnage of agricultural products was insignificant in comparison with the losses in ore, coal, forest products and manufactured products.

Due to the reduction in traffic handled, substantial reductions in operating costs were effected, but it was impossible to reduce the operating costs in proportion to the loss of traffic. The total loss in tonnage was 34.92%. Freight train miles were reduced 25.75%; freight switching locomotive miles were reduced 25.45%; loaded car miles were reduced 20.92%; while empty freight car miles were reduced less than 1%.

The kinds of traffic which suffered the heaviest loss were of the character that can be loaded most heavily and handled with the least amount of station service. Proper service demands that trains be run at sufficiently frequent intervals, regardless of whether or not they can be loaded to capacity. Owing to the fact that the volume of agricultural products remained normal, whereas the movement of other products declined from 25% to 50%, the traffic was unbalanced, and this contributed to the empty car mileage in a very marked degree, and the relation of empty car miles to the total rose from 33% in 1920 to 38% in 1921.

Passenger traffic likewise declined, not, however, as much in proportion as the decline in freight traffic. The total number of passengers carried dropped from 40,692,627 in 1920 to 35,685,702 in 1921, a loss of 12.30%.

On March 19, 1921, an explosion occurred in the Company's Chicago Terminal elevator, the result of which was seriously damaged. As soon as the grain contained therein could be salvaged and the debris cleared away the work of restoration was started. More complete details concerning the matter are contained in the report in the remarks pertaining to construction and maintenance. Under the rules of the Interstate Commerce Commission, the cost of replacement of this property is chargeable to Income Account, therefore, such expenditures made during the year, amounting to \$957,824.37, are included in the item "Rental Income," as shown herein, thereby reducing the Net Income for the year by that amount.

PENSIONS

During the year, 177 employees were retired from the service of the Company and granted pensions. Of these retirements, 82 were on account of employees having reached the age of 70, and 95 were on account of employees having suffered permanent physical disability.

On December 31, 1921, there were 1,190 retired employees receiving pensions. The average monthly pension in force on that date was \$32.80. The amount paid in pensions during the year was \$430,922.96.

Since the inauguration of the pension system, the total payments made from January 1, 1901, to December 31, 1921, was \$4,243,951.34.

FEDERAL VALUATION

The work of valuation of the property by the Interstate Commerce Commission has progressed, but has not been completed. The engineering report of the Commission has been finished, but has not been served upon the Company. The Land and Accounting Sections have not completed their work, and it is anticipated that it will be considerable time before a tentative final valuation will be completed and served. During the year 1921, \$303,920.13 was expended by the Company. Since the commencement of this work \$2,134,856.07 has been expended on it by the Company.

CONSTRUCTION AND MAINTENANCE DURING THE YEAR 1921

Expenditures for construction were held to the minimum necessary to provide for the most urgent demands. This was because of the continuing high cost of labor and material. The following were the principal items of work carried out during the year:

Chicago Terminal Elevator.—The explosion of March 19, 1921, caused damage to various parts of the structure above the foundation throughout the entire building, as well as adjacent buildings. At the time of the explosion approximately seven million bushels of grain were in the elevator. As soon as the operators were able to resume work, the work of reconstruction was begun in order to get the elevator in operation as early as possible. The elevator will be in shape to receive grain this season.

Clinton, Iowa.—During the fall, work was resumed on the grade separation project by commencing construction of a subway in Fourth Street carrying the tracks of the Chicago & North Western Railway, Burlington and the Chicago, Milwaukee & St. Paul Railways. This is of the best construction. The excavation work and a large portion of the concrete retaining walls and abutments have been completed.

Kenosha, Wisconsin.—The work of building a viaduct over the tracks leading to the Simmons Company and the Rainier Company plants, which is being carried out in connection with the construction by the City of Kenosha of a new bridge over the river at Main Street, was carried forward and the viaduct proper was completed.

Racine, Wisconsin.—As a result of the project being carried forward by the City of Racine involving the straightening and widening of Sixth Street and the rebuilding of a new viaduct bridge to carry Sixth Street over the Road and the rebuilding of a new viaduct to rebuild its subway at Sixth Street. The plan required the construction of a new abutment at the north end of the subway and the moving and lengthening of the present span. About 50% of the work was finished during the year. The City of Racine will pay about 80% of the cost of the work.

Chicago, Illinois.—Additional facilities in the Erie Street coach yard, consisting of a two-story brick building 22' x 102' to provide quarters for car repairers and wash cleaners, a brick oil house 20' x 30', and a concrete

wheel pit were provided, 3,000 lineal feet of additional coach storage tracks were also added to the yard.

Chicago, Illinois.—A new steam heat plant to serve the Wells Street Annex building and the American Railway Express Company building was installed in the basement of the Annex building. Heat was formerly secured for these buildings from the old power house at Kinzie and Kingsbury Streets. A saving of about 50% in operating cost will result.

Proviso, Illinois.—The wooden floor and trestle approaches of bridge 1614, carrying a highway over Proviso yard, were destroyed by fire in August, 1921. The structure was restored. The work consisted of building 950 lineal feet of pile trestle approach and providing new floor for the steel structure 810 feet in length.

Ashland, Wisconsin.—The 840-ft. extension to ore dock No. 3, referred to in the last annual report, was completed. This extension is of timber construction of the same character as the existing dock, and adds 140 pockets to the dock, making its total capacity 340 pockets.

West Chicago, Illinois.—A modern mechanical coating chute of 300 tons capacity was built to replace the former coating chute, which was destroyed by fire.

Casper, Wyoming.—Approximately 13,000 feet of storage tracks were built to provide additional storage room for oil tank cars so as to care for additional business of the refineries located at this point. The capacity of this additional track is 300 cars.

During the year the following important bridges were constructed:
Fremont, Neb. Bridge B-8—Eight additional concrete piers were built to replace present pile piers.

Owanka, S. D. Bridge 1888—60' single track shallow through plate girder on concrete piers, replacing 4 spans of 23 span pile bridge. Sub-structure completed.

Oral, S. D. Bridge H-87—85' single track deck plate girder with concrete slab deck on concrete abutments to replace 11 span pile bridge. Sub-structure completed.

Ida Grove, Iowa. Bridge 1290—90' single track, shallow through plate girder span on pile piers. 3 span pile bridge to replace a 126' through Howe Truss span and 2 pile piers. Sub-structure completed.

Battle Creek, Iowa Bridge 1310—90' single track, shallow through plate girder span on pile piers and 3 span pile bridge to replace 126' Howe Truss span and 2 pile piers. Sub-structure completed.

Wausau, Wis. Bridge D-37-B—Second-hand steel spans on cylinder piers and concrete abutments to replace Pony Howe Truss spans on timber and pile approach. Sub-structure completed.

Woodbine, Iowa. Bridge 920½—60' double track shallow through plate girder span on concrete abutments, replacing 2 span pile bridge, 2 span deck plate girder and I-beam, 1 span pile bridge. Sub-structure completed.

Bando, Ill. Bridge 1863—Two 85' deck plate girder spans, shifting 60' deck plate girder span and constructing one concrete abutment and two concrete piers to replace portion of 14 span pile and frame bridge. Sub-structure completed.

Bando, Ill. Bridge 1948—One 40' and two 85' single track deck plate girder spans on concrete abutment and two concrete piers to replace Section 1 of 18 span pile and frame bridge. Sub-structure completed.

Creston, Ill. Bridge 117—64' double track through plate girder with concrete slab deck on present masonry to replace 64' double track through plate girder span. Completed.

DePere, Wis. Bridge 1272—Second-hand steel spans on cylinder piers and present masonry remodeled to replace Section 1 of 8 span Pony Howe Truss Bridge. Sub-structure completed.

Benid. Ill. Bridge 2008—Approximately 80,000 yards of filling was placed. This brings the filling up to within about 10 feet of the track; it being proposed to eventually fill this portion of the structure up to the track.

RAIL RENEWALS

126.41 miles of track were renewed with new rail and 225.68 miles were renewed with relay rail.

TIE RENEWALS

2,667,562 cross ties were laid in renewals in main and side tracks.

NEW EQUIPMENT

During the year the equipment, which it was stated in the last annual report had been arranged for, was delivered and put into service. This equipment consists of the following:

- 40 Class "M" Mikado type freight locomotives.
- 20 Class "E" Pacific type passenger locomotives.
- 500 Steel ore cars.
- 50 Steel underframe caboose cars.
- 250 Steel underframe refrigerator cars.
- 500 Steel underframe stock cars.
- 25 Steel vestibule passenger coaches.
- 9 Steel vestibule smoking cars.
- 2 Steel postal cars.
- 23 Steel baggage cars.
- 3 Steel combination baggage and mail cars.

In addition to the foregoing, the Company has awarded contracts for the following passenger equipment to be delivered prior to June 30, 1922:

- 20 Steel vestibule passenger coaches.
- 10 Steel vestibule smoking cars.
- 3 Steel vestibule chair cars.
- 3 Steel combination smoking and baggage cars.
- 9 Steel baggage cars.
- 5 Steel combination baggage and mail cars.

MILES OF RAILROAD

The total number of miles of railroad owned December 31, 1921, was: 8,328.86 miles

In addition to which the Company operated under Trackage Rights:

- In the City of Peoria, Illinois..... 2.02 miles
- (Peoria & Pekin Union Railway)

Churchill to Ladd, Illinois.....	2.80	"
(New York Central Railroad)		
Broadway Station, Council Bluffs, Iowa, to South Omaha, Nebraska.....	8.73	"
(Union Pacific Railroad)		
Blair to Omaha, Nebraska.....	24.70	"
Elroy to Wyeville, Wisconsin.....	22.79	"
In Sioux City, Iowa.....	2.28	"
(Chicago, St. Paul, Minneapolis & Omaha Railway)		
Sioux City to Wren, Iowa.....	10.10	"
(Illinois Central Railroad)		

73.42 "

Total Miles of Railroad Operated December 31, 1921..... 8,402.28 miles

The above mileage is located as follows:

In Illinois.....	824.53	miles
" Wisconsin.....	2,160.12	"
" Michigan.....	510.90	"
" Minnesota.....	650.30	"
" Iowa.....	1,632.55	"
" North Dakota.....	14.28	"
" South Dakota.....	1,230.45	"
" Nebraska.....	1,100.80	"
" Wyoming.....	278.35	"

Total..... 8,402.28 miles

CAPITAL STOCK

The capital stock and scrip of the company held by the public has been reduced \$40,225.00 during the year as follows:

By the purchase of common stock scrip.....	\$225.00
By the purchase of special stock.....	40,000.00
	\$40,225.00

The capital stock authorized by the company is two hundred million dollars (\$200,000,000.00), of which the following has been issued to December 31, 1921:

Held by the Public:

Common stock and scrip.....	\$145,156,903.82
Preferred stock and scrip.....	22,395,120.00
Special stock.....	25,000.00

Total stock and scrip held by the public..... \$167,577,023.82

Held in Treasury:

Common stock and scrip.....	\$2,342,737.15
Preferred stock and scrip.....	3,834.56

Total stock and scrip held in Treasury..... 2,346,571.71

Total capital stock and scrip, December 31, 1921 \$169,923,595.53

FUNDED DEBT

At the close of the preceding year the amount of funded debt held by the public was..... \$235,616,500.00

The above amount has been decreased during the year ending December 31, 1921, by bonds and equipment trust certificates redeemed as follows:

C. & N. W. Ry. 30-year Debentures, 5%.....	\$9,944,000.00
M. L. S. & W. Ry. Consolidated First Mortgage, 6% (including \$12,000 unrepresented and transferred to "Current Liabilities").....	4,996,000.00
M. L. S. & W. Ry. Extension and Improvement Sinking Fund Mortgage, 5%.....	22,000.00
C. & N. W. Ry. Sinking Fund of 1879, 6%.....	411,000.00
C. & N. W. Ry. Sinking Fund of 1879, 5%.....	109,000.00
C. & N. W. Ry. Sinking Fund Debentures of 1933, 5%.....	158,000.00
C. & N. W. Ry. Serial Notes, 5½%.....	300,000.00
C. & N. W. Ry. Equipment Trust Certificates of 1913, 4½%.....	
Series A.....	300,000.00
Series B.....	300,000.00
Series C.....	397,000.00
	997,000.00
C. & N. W. Ry. Equipment Gold Notes of 1920, 6%.....	664,900.00

Total Funded Debt redeemed..... 17,601,900.00

\$218,014,600.00

And the above amount has been increased by Bonds and Equipment Trust Certificates sold during the year, as follows:

C. & N. W. Ry. 15-Year Secured Gold Bonds, 6½% (secured by General Mortgage Gold Bonds of 1987).....	\$15,000,000.00
C. & N. W. Ry. Equipment Trust Certificates of 1920, Series J and K, 6½% (secured by equipment Series J and K of the Equipment Trust of 1920).....	5,436,000.00
	20,436,000.00

Leaving Funded Debt held by the public, December 31, 1921..... \$238,450,600.00

BONDS IN THE TREASURY AND DUE FROM TRUSTEE

At the close of the preceding year the amount of the Company's unpledged Bonds and Equipment Trust Certificates in the Treasury and due from Trustee was..... \$17,766,000.00

The above amount has been increased during the year ending December 31, 1921, as follows:	
C. & N. W. Ry. General Mortgage Gold Bonds of 1987 received, or due from Trustee, in exchange for bonds redeemed during the year	15,035,000.00
Other bonds redeemed during the year exchangeable for C. & N. W. Ry. General Mortgage Gold Bonds of 1987, viz:	
M. L. S. W. Ry. Extension and Improvement Sinking Fund Mortgage, 5%	\$21,000.00
C. & N. W. Ry. Sinking Fund of 1879, 6%	411,000.00
C. & N. W. Ry. Sinking Fund of 1879, 5%	8,000.00
C. & N. W. Ry. Sinking Fund Debentures of 1933, 5%	153,000.00
	593,000.00
C. & N. W. Ry. General Mortgage Gold Bonds of 1987, due from Trustee on account of Construction Expenditures made during the year	1,000,000.00
C. & N. W. Ry. Equipment Trust Certificates of 1920, Series L, 6 1/2%, issued	2,805,000.00
	<u>\$37,199,000.00</u>

And the above amount has been decreased during the year, as follows:	
C. & N. W. Ry. Equipment Trust Certificates of 1912, Series C, 4 1/2%, matured and canceled	\$3,000.00
C. & N. W. Ry. Equipment Trust Certificates of 1913, 4 1/2%, matured and canceled:	
Series D	400,000.00
Series E	485,000.00
Series F	115,000.00
C. & N. W. Ry. Equipment Trust Certificates of 1917, 5%, matured and canceled:	
Series G	422,000.00
Series H	400,000.00
Series I	178,000.00
C. & N. W. Ry. General Mortgage Gold Bonds of 1987, 5%, deposited as part security for the C. & N. W. Ry. 15-Year Secured Gold Bonds sold during the year	17,985,000.00
	<u>19,991,000.00</u>
Total December 31, 1921, unpledged	<u>\$17,208,000.00</u>

The following bonds owned by the Company and pledged as security for the C. & N. W. Ry. 10-Year Secured Gold Bonds and C. & N. W. Ry. 15-Year Secured Gold Bonds:	
C. & N. W. Ry. General Mortgage Gold of 1987, 5%	\$20,488,000.00
C. & N. W. Ry. First and Refunding Mortgage, 6%	15,000,000.00
Total December 31, 1921, pledged	<u>\$35,488,000.00</u>

LANDS

During the year ending December 31, 1921, 1,040.48 acres and 41 town lots of the Company's Land Grant lands were sold for the total consideration of \$23,191.89. The number of acres remaining in the general Grants December 31, 1921, amounted to 264,909.86 acres, of which 39,891.39 acres were under contract for sale, leaving un sold 225,018.17 acres.

Acknowledgment is made to all officers and employees of their loyal and efficient co-operation and service.
Appended hereto may be found statements, accounts and statistics and the condition of the Company's affairs on December 31, 1921.
By order of the Board of Directors.

W. H. FINLEY, President.

Chicago, April 18, 1922.

1922 41

New York Central Railroad Company—Annual Report

To the Stockholders of

THE NEW YORK CENTRAL RAILROAD COMPANY:

The Board of Directors herewith submits its report for the year ended December 31, 1921, with statements showing the income account and the financial condition of the company.

Road operated

	Mileage operated: 1921	Miles	Increase Miles
Main line and branches owned.....	3,699.19	3,699.19
Leased lines	1,946.64	1,946.64	.02
Lines operated under trackage rights	452.37	452.37	20.00
Total road operated.....	6,098.20	6,078.21	20.02

The increase in the mileage of leased lines is the result of corrections in measurements of the Beech Creek Railroad. Mileage operated under trackage rights has been increased by the acquisition of rights over the Buffalo Rochester and Pittsburgh Railway from Rossiter to Clearfield and Mahoning Junction, Pennsylvania, 18.33 miles, providing a new route for coal traffic from the mines on the Beech Creek Extension Railroad, and by changes in the mileage of the Cherry Tree and Dixonville Railroad, 1.67 miles.

Traffic conditions

The year 1921 was one of business depression, reflected in the decreased freight and passenger traffic of the company. The tonnage fell off one-third in volume and the passenger traffic approximately one-tenth as compared with 1920. This situation was met by economies in operation.

In co-operation with the federal government in its effort to lower costs of foodstuffs, voluntary decreases in rates on certain agricultural products were put in effect during the year. There was no general reduction in other freight rates but arrangements were made from time to time to remove inequalities. The company has co-operated with state authorities in a readjustment of rates on road-making material for the purpose of stimulating the building of good roads and to meet the unemployment situation.

There was a decrease in the volume of passenger rates but the practice which obtained prior to federal control of putting into effect reduced excursion rates during the summer months was re-established to some extent. By an order of the Interstate Commerce Commission made pursuant to the provisions of the Transportation Act, 1920, the company's rates were given the full benefit of the increase in fares under the Commission's order of July 29, 1920, Ex Part 74, notwithstanding the limitation in the New York statute of way passenger fares between Albany and Buffalo to two cents a mile.

Account with Railroad Administration

The company's account with the Railroad Administration covering the period of federal control will be completed in the early part of 1922.

Claim against United States upon the guaranty

The company's claim against the United States based upon its guaranty for the period March-August, 1920, is approaching completion. It has been necessary to re-state this claim several times in accordance with tentative formulas. It will be ready for presentation in the early part of 1922.

Wages

Effective July 1, 1921, the United States Labor Board issued its Decision No. 147 reducing the rates of pay for employees by an amount which aggregated approximately eleven per cent of the payroll. A revision of rules and working conditions for shop employees so modified the lines of demarcation between the various crafts that it is now possible to use a common rate on work of no incidental work of another craft. The Board also discontinued the requirement that time and one-half be paid for necessary Sunday service, thus permitting the use of engine terminal and car repair forces for such necessary Sunday work without the payment of a punitive rate. During the federal control period and up to July 1, 1921, all overtime for maintenance of way employees was paid for at the rate of time and one-half, but, under the decision of the Labor Board, the ninth and tenth hours of service may now be paid for at the regular hourly rate. Pending final decision of the Board, certain other classes of employees for whose overtime rates established by the Director General of Railroads are now receiving the pro rata hourly rate for such overtime. Notwithstanding the reductions in rates of pay and changes in rules above mentioned, the average earnings per employee for the last six months of 1921 as compared with the corresponding period of 1920 are still much higher than prior to the federal control period. The company is negotiating with its employees looking to further reductions in pay and further changes in working rules and in some cases these matters have been referred to the Labor Board.

Modified agreement for operation of Providence Webster and Springfield Railroad

Prior to February 1, 1921, this company, as lessee of the Boston and Albany Railroad, paid as rental for the use of the Providence Webster and Springfield Railroad 25 per cent of the gross earnings of the line. By agreement of a date subsequent to the Providence Webster and Springfield Railroad Company and the Boston and Albany Railroad Company, the rental was revised so as to limit the annual rental to a maximum of \$15,000. The new arrangement is effective for three years, and thereafter until terminated by either party on ninety days' notice.

Stock of The Pittsburgh McKeesport and Youghiogheny Railroad Company
During the year the company acquired ten shares, par value \$500, of the common stock of The Pittsburgh McKeesport and Youghiogheny Railroad Company. Its total holdings of this stock at the close of 1921 were 19 shares, par value \$31,347 shares, par value \$1,567,350, or 39.6 per cent of the amount outstanding. The Pittsburgh and Lake Erie Railroad Company owns a like amount of this stock.

Stock of The Mahoning Coal Railroad Company

During the year the company acquired 575 shares, par value \$28,750, of the common stock of The Mahoning Coal Railroad Company. Its total holdings of this stock at the close of 1921 were 1,925 shares, par value 7,990 shares preferred, par value \$399,500, or 60.4 per cent of the amount outstanding, and 17,893 shares common, par value \$894,650, or 59.6 per cent of the total amount outstanding.

Purchase of stock by employees

Under authority of the Board of Directors the company adopted a plan under which its employees are given the opportunity to purchase shares of the company's stock at the market price, the purchase price of the stock being deducted from the payroll in equal monthly installments over a period of not exceeding two years.

Chicago River and Indiana Railroad—Chicago Junction Railway

In the latter part of 1920 this company entered into an agreement with the Chicago Junction Railways and Union Stock Yards Company, subject to approval of the Interstate Commerce Commission, to acquire the Chicago Junction railway properties by the purchase of all of the capital stock of the Chicago River and Indiana Railroad Company and the lease thereto

of all the properties of the Chicago Junction Railways Company. Pursuant to this agreement, this company has made application to the Interstate Commerce Commission for authority to consummate the acquisitions referred to. The application is still pending before the Commission.

Pensions

In the operation of the Pension Department 333 employees were retired and placed upon the pension rolls. Of these retirements 202 were authorized because of the attainment of seventy years of age, and 131 because of permanent physical disability. One hundred and ninety-five pensioners died during 1921. At the close of the year, 1,914 retired employees were carried upon the pension rolls. The average monthly pension allowance of these is \$30.70. The total amount paid in pensions during the year was \$686,354.92.

Changes in property investment accounts

Charges for owned railway property, net.....	\$6,224,193.89
Charges for equipment net.....	18,924,398.20
Miscellaneous physical property.....	2,068,097.14
Total.....	\$27,216,689.23
Improvements on leased property (net credit).....	1,981,713.77
Net increase in property investment accounts during the year.....	\$25,234,975.46

Capital stock

There was no change in the capital stock of the company during the year. The total number of stockholders at the end of the year was 34,328, of whom 33,824 were in the United States and 504 abroad. The par value, on which dividends were paid, held by those in the United States was \$246,053,395 and by those abroad \$3,539,500, the average holdings being 77 shares and 70 shares, respectively.

The following table shows the growth in the number of stockholders from 1915 to 1921, both inclusive:

Date	Total		In United States		Abroad	
	Number	Average holding	Number	Average holding	Number	Average holding
Dec. 31, 1915.....	25,042	100	22,270	104	2,772	64
Dec. 31, 1916.....	25,912	111	23,536	112	696	56
Dec. 31, 1917.....	27,102	92	24,924	92 1/2	331	69
Dec. 31, 1918.....	28,693	87	28,395	87	298	69
Dec. 31, 1919.....	30,445	82	30,180	82	265	67
Dec. 31, 1920.....	32,396	77	32,173	77	223	64
Dec. 31, 1921.....	34,328	73	33,824	73	504	70

In 1916 the company authorized the issue of \$25,000,000 of its capital stock to be sold at not less than par, the company's stockholders being given the right to subscribe for this stock at par. Shortly after the issue of this stock was authorized the price of the company's stock fell below par and only \$258,900 was disposed of. By resolution adopted on December 14, 1921, the Board amended the previous resolution for the \$25,000,000 stock issue so as to limit the amount of capital stock authorized thereby to the total of \$28,000,000. By the same resolution, the Board authorized the issue of not exceeding \$23,478,880 of stock for the acquisition of capital stock common and preferred, of The Cleveland, Cincinnati, Chicago and St. Louis Railway Company, the plan for which is described elsewhere in this report.

Changes in funded debt

There were issued during the year, but classified as nominally outstanding, \$7,000,000 of the company's 6 per cent refunding and improvement mortgage bonds, series B. These were pledged as collateral for a promissory note like amount given to the Director General of Railroads in part payment for additions and betterments made by him during federal control.

Additional notes amounting to \$155,400 were issued under the equipment trust known as Equipment Trust No. 44 and given to the Director General of Railroads in full settlement of the equipment allowed to the company during the period of federal control and described in the annual report for 1920. The total cost of the equipment was \$18,468,507.59, of which \$13,829,400 was financed by equipment notes.

Under the terms of the agreement of 1911 of the Merchants Despatch Transportation Company amounting to \$450,000, hitherto carried in suspense, were transferred during the year to the company's funded debt, as directed by the Bureau of Accounts of the Interstate Commerce Commission.

The changes in the funded debt of the company, in detail, were as follows:

The amount on December 31, 1920.....	\$748,354,477.42
has been increased as follows:	
N Y C R R Co Equipment Trust 6 per cent notes of January 15, 1920, given to the Director General of Railroads.....	\$155,400.00
Merchants Despatch Transportation Company Equipment Trust of 1911, 4 1/2 per cent certificates.....	450,000.00
	605,400.00

and has been reduced as follows:

Payment of notes:	
Two-year promissory note—Gary Land Company.....	\$211,759.04
Serial note—Secretary of the Treasury of the United States.....	78,567.21
Payments falling due during the year and on January 1, 1922, on the company's liability for principal installments under equipment trust agreements, followed by:	996,000.00
N Y C Lines Trust of 1907, installment due November, 1921.....	1,492,884.74
N Y C Lines Trust of 1910, installment due January, 1922.....	1,406,413.74
M D T Co Trust of 1911, installment due July, 1921.....	75,000.00
N Y C Lines Trust of 1912, installment due January, 1922.....	688,398.90
Boston & Albany Trust of 1912, installment due October, 1921.....	500,000.00
N Y C Lines Trust of 1913, installment due January, 1922.....	742,117.61
N Y C R R Co Trust of 1910, installment due January, 1922.....	1,117,000.00
Trust No. 43 of January 15, 1920, installment due January 15, 1921.....	911,600.00
N Y C R R Co Trust of April 15, 1920, installment due April 15, 1921.....	1,153,167.33
	9,366,908.57

leaving the funded debt on December 31, 1921 \$739,592,968.85

Loans and bills payable

In addition to the finished bills there were outstanding on December 31, 1921, the following loans and bills payable:	
Secretary of the Treasury	\$6,500,000.00
Director General of Railroads	26,500,000.00
Miscellaneous	13,000.00
Total	\$33,013,000.00

The indebtedness to the War Finance Corporation of \$17,500,000 and all but \$13,000 of the indebtedness of \$2,432,866.68 to banks, trust companies and individuals, included in the list of loans and bills payable in the annual report for 1920, was paid during 1921.

The company gave to the Director General of Railroads, in reduction of its indebtedness to him for additions and betterments during federal control, its demand note for \$10,500,000, thereby correspondingly decreasing the amount due him for additions and betterments and increasing the amount due him on notes from \$7,000,000 to \$26,500,000.

Loans and bills receivable

Included in loans and bills receivable, amounting to \$13,303,954.37, are United States Certificates of Indebtedness aggregating \$12,999,480.99 representing a temporary investment of moneys held to provide for certain authorized additions and betterments from time to time as made.

SUMMARY OF FINANCIAL OPERATIONS AFFECTING INCOME

(SEPARATE STATISTICS FOR BOSTON AND ALBANY RAILROAD WILL BE FOUND AT THE END OF THIS REPORT)

	Year ended Dec. 31, 1921 5,704,27 miles operated	Year ended Dec. 31, 1920 5,684,25 miles operated	Increase or Decrease 20.02 miles

	802,122.92
BALANCE TO CREDIT OF PROFIT AND LOSS, DECEMBER 31, 1921..	\$99,149,306.53

Comparison of revenues, expenses and freight and passenger statistics

The following comparison of revenues, expenses and freight and passenger statistics for 1921 are with those of 1920, including in the latter year similar items of the United States Railroad Administration for January and February.

Revenues, tonnage and passengers

The total operating revenues for 1921 were \$292,130,995.06, a decrease of \$46,493,461.44. These and the following figures exclude the results of operation of the Boston and Albany Railroad, which are separately tabulated in another part of this report.

Freight revenue was \$179,170,832.03, a decrease of \$30,621,376.08. The total revenue tonnage decreased 36,278,248 tons. The principal items making up the decrease in tonnage were anthracite and bituminous coal and coke, 13,865,357 tons, and iron ore, 7,167,030 tons. The remainder of the decrease is well distributed among the other commodities.

Passenger revenue, \$30,432,126.11, decreased \$4,169,514.32. The total number of passengers carried was 54,188,310, a decrease of 6,494,341.

The heavy falling off in freight and passenger traffic during the year more than offset the benefit in earnings from increases in rates which went into effect August 26, 1920.

The revenue from the transportation of mail was \$6,508,491.20, a decrease of \$4,939,966.70. The mail traffic of the company increased in 1921. The decrease in mail revenue is the result of the inclusion in 1920 of large amounts for adjustments covering additional compensation for the entire period of federal control.

Express revenues amounted to \$6,311,135.91, a decrease of \$5,386,344.02, which was due not only to the business depression but also to the operation of the new contract with the American Railway Express Company, effective September 1, 1920.

Rents of buildings and other properties decreased \$1,096,040.49. The greater part of this decrease is due to a change in classification of certain rentals in the Grand Central Terminal.

The decrease of \$1,108,634.05 in miscellaneous revenue is largely in the revenue from the handling of ore at the docks at Buffalo and Ashabula, a direct result of the business depression.

Operating expenses

In arriving at the railway operating income for the guaranty period the Transportation Act required that the maintenance allowance should be fixed with reference to the standards and price levels of the test period. The company worked out a tentative factor which resulted in charges to maintenance in excess of actual expenditures and the carrying forward of a reserve at the end of 1920. This factor, however, has proved to be larger than the government is likely to accept. Therefore, entries were made in December, 1920, closing out balances in the maintenance reserves which had been accumulated in 1920; and as operating expenses for that year had been over-accrued by the amount of the reserves, it was necessary to adjust operating expenses in 1921 to the extent of the overcharge and preserve the continuity of the accounts. In making this adjustment the amount tentatively charged against the government for guaranty period operations was reduced and a corresponding charge was made against non-operating income, as a result of which the net corporate income for 1921 was not affected.

The operating expenses for 1921 by groups as compared with those for 1920, eliminating these adjustments, were as follows:

	1921	1920	Increase
Maintenance of way and structures	\$35,671,705.75	\$5,334,299.80	28,337,405.95
Maintenance of equipment	61,455,870.94	28,840,872.28	32,614,998.66
Traffic	3,504,504.23	3,507,637.67	—\$3,133.44
Transportation	112,561,539.17	46,641,490.21	65,920,048.96
Miscellaneous	3,894,433.90	315,588.88	3,578,845.02
Transportation for investment—	292,614.66	290,418.55	2,196.11
	\$228,571,354.68	\$82,299,470.77	\$146,271,883.91

^aIncrease.

The substantial decrease in operating expenses reflects the falling off in traffic, the economies effected by the company during the year, and reduction in wages and in cost of material and fuel.

Claims for loss and damage to freight

The charges to operating expenses for loss and damage to freight during the year amount to \$7,204,044.77, an increase of \$236,040.67 over 1920. Of the claims settled during 1921 only about 25 per cent accrued during that year, the balance being for account of the period prior to federal control, the guaranty period, and the last four months of 1920.

Railroad tax accruals—Equipment and joint facility rents

Separate tables setting forth the details of these accounts will be found in another part of this report.

Miscellaneous operations

In 1921 the results of operation of the stockyards at East Buffalo were included in miscellaneous operations while in 1920 they were included in

other accounts. This is the principal reason for the decrease in the net miscellaneous operating income of \$108,008.77.

Non-operating income

Pursuant to the final certificate of the Interstate Commerce Commission, the annual compensation for the possession, use and control of the property of this company and its leased lines under the contract with the Director General of Railroads for \$4,227.60. This is an increase of \$1,619.92 over the amount stated in the contract and accrued during federal control. This increase and additional compensation, representing interest on completed additions and betterments put in service prior to February 29, 1920, amount for the item to \$4,281,607.57 shown in the income account as additional compensation and adjustment of standard return.

The increase of \$382,777.32 in income from lease of road is mainly attributable to a redistribution in the accounts extending back to March 1, 1920, and to an increase in the Indiana Harbor Belt Railroad for trackage between Ivanhoe and Dune Park.

Miscellaneous rent income shows an increase of \$2,313,059.05. Of this the greater part is accounted for by an adjustment extending back several years in method of distribution of bills for rental in connection with property in the Grand Central Terminal area and West Side Improvement property in New York City, these rentals having been included in other accounts in 1920.

The account "separately operated properties—profit" shows a decrease of \$1,000,866.84. This decrease is due to a deficit from operation of the Pittsburgh, McKeesport and Youghioheny Railroad during 1921, as compared with a surplus in 1920.

Dividend income decreased \$338,993.67. This is explained by the receipt of reduced dividends on the stock of The Mahoning Coal Railroad Company. Increase in income from funded securities of \$2,162,570.31 is mainly due to income received from additional loans to affiliated companies and to the fact that income from such loans in 1920 was included in income from unfunded securities.

The increase in income from other loans and investments is made in compliance with a ruling of the Bureau of Accounts of the Interstate Commerce Commission.

Income from unfunded securities and accounts shows a decrease of \$1,077,955.84. A substantial part of this decrease is due to the change in distribution of income from loans to affiliated companies as above explained and the remainder is accounted for by a decrease in interest accrued on deferred payments of compensation due from the Railroad Administration.

The decrease in miscellaneous income of \$1,062,113.70 is due in part to a rearrangement, for purposes of comparison, of the figures shown in the 1920 report and in part to adjustments in connection with the guaranty period March-August, 1920.

Deductions from gross income

The rental for leased roads decreased \$466,701.91. Due to the falling off in freight traffic during the year, a dividend based on gross revenues, paid under the lease of the Mahoning Coal Railroad and this was partially offset by an increase in the amount charged to this account for rental of the Lake Erie and Pittsburgh Railway as a result of changing the status of that road in the accounts from a joint facility to a leased line, pursuant to a ruling of the Bureau of Accounts of the Interstate Commerce Commission. The increase resulting from the Lake Erie and Pittsburgh adjustment is offset by corresponding changes in other accounts.

Miscellaneous rents increased \$418,674.50. This increase is principally accounted for by an account change in the amount of charges for several past years in connection with West Side Improvement property, New York City, and which charges had been included in other accounts.

Miscellaneous tax accruals increased \$107,875.56, largely due to increase in assessments during the year.

The increase in charges account "separately operated properties—loss," was \$1,055,626.74 and is attributable to the fact that in the year 1921 a loss of \$1,351,943.08 in operation of the Boston & Albany Railroad was included as against a loss of \$118,241.92 for the year 1920, or the last four months of 1920 the Boston & Albany showed a loss of \$448,963.62 which was partially offset by the surplus accruing during the federal control months (January and February) and the guaranty period.

The increase of \$2,861,557.75 in interest on funded debt is caused by the accrual of five per cent interest upon the notes given to the United States Government for the loan of December 23, 1920, and on \$25,000,000 collateral trust gold bonds issued September 1, 1920.

The increase of \$1,419,786.71 in interest on unfunded debt is chiefly attributable to an increase in interest on indebtedness to the Director General of Railroads for additions and betterments to road and equipment and on other accounts.

The increase of \$113,755.47 in amortization of discount on funded debt is principally accounted for by the charge-out of a full year's proportion of the discount and expenses in connection with the \$35,000,000 issue of ten-year collateral trust gold bonds.

The decrease of \$247,408.56 in corporate general expenses is due to the inclusion in the expense of maintaining the corporate organization in January and February, 1920, during which period the transportation property of the company was under federal control. Expenses of a similar character subsequent to February, 1920, have been included in railway operating expenses.

The increase of \$535,116.53 in miscellaneous income charges is due in part to a rearrangement, for purposes of comparison, of the figures shown in the 1920 report and in part to adjustments in connection with the guaranty period.

Net corporate income

The net corporate income of the company was \$295,685.78 from which were declared dividends of 5 per cent, amounting to \$12,479,641.01. There were appropriations for sinking fund purposes of \$68,457.20. After these deductions, there remained a surplus of \$9,747,587.57, or an increase over the surplus for 1921 of \$8,497,331.24.

If, however, additional compensation credited during the year under the contract with the Director General of Railroads and additional amounts credited in connection with the guaranty under the Transportation Act, 1920, aggregating \$5,613,183.45, are excluded from the income account, the amount representing the surplus on the basis of actual operation of the property would be \$4,134,404.12.

Improvements

Important improvements completed or under way during the year, or contemplated for the near future, are as follows:

Completion of Mail Service and Office Building:
The thirteen story addition to this building has been practically finished and the railroad forces formerly in the main station and post office buildings have moved into the new quarters, and a portion of the former quarters converted into commercial tenements.
New apartment buildings—290 Park Avenue and 300 Park Avenue:
Continuing the development of the use of air-right space above the Grand Central Terminal tracks, two high class buildings occupying the blocks between 48th and 50th streets and 49th and 50th streets, respectively, on the west side of Park Avenue, were completed.

Power plant and transmission improvements, Port Morris and Grand Central Terminal:

The increased demand for electric power for train service and for the new buildings in the Grand Central area has caused the need for additions to the present power facilities. A new 20,000 K.W. turbo generator was installed in the Port Morris power plant and an additional 11,000 volt high tension circuit was installed between Port Morris power station and Substation No. 1 at 50th Street, Grand Central Terminal. The other three direct current plants of 500 K.W. and one 500 K.W. generator have replaced three 500 K.W. generators.

Viaduct across tracks at Mott Haven:
On account of the antiquated condition of the highway bridge over the tracks at Mott Haven, it has become necessary to reconstruct it. The structure has been lengthened to permit the expansion of the company's track facilities. The work was started in 1917 in conjunction with the Interborough Subway extension. The roadway and one sidewalk terminal on the old bridge is to be retained. It is expected that the work will be finished during the spring of 1922.

Castleton, N. Y. Hudson River Connecting Railroad:

The Hudson River Connecting Railroad Corporation was incorporated in 1913 to build a bridge, with approaches, across the Hudson River connecting the West Shore Railroad at Feura Bush with the New York Central Railroad just north of Stuyvesant, together with a branch to connect the Boston and Albany Railroad. The proposed high level bridge route is for the purpose of relieving congestion at the Albany gateway and of obviating the frequent opening of the drawbridges over the Hudson River and of obviating the long and steep grades which must be overcome in crossing the Hudson Valley at this point. The improvement will greatly facilitate the movement of freight to and from points in New England and New York City. During the year work was commenced on the building of six piers on the east side of the river.

Cleveland, Ohio. New passenger terminal:
The Interstate Commerce Commission has approved the application for the year 1920 for the construction of a new and improved passenger terminal on the Public Square at Cleveland and negotiations with the Cleveland Union Terminals Company for the prosecution of the work have been completed. An engineering organization is being formed to proceed with construction.

Detroit, Mich. Elimination of highway grade crossings:

The separation of grades at various streets in Detroit under contracts with the City, the first of which was made in 1900, was suspended during the war, permitting the city to make grade crossings rapidly, especially in the southwesterly portion, and the highway traffic became so heavy over certain streets that the separation of grades was essential. During the year grade separation work has progressed at Livernois, Dix and Waterman avenues. In addition, the City has undertaken at its own expense the widening of Military Avenue and the widening of the street.

Elimination of grade crossings. Various points in state of New York:

Eliminations of grade crossings at various points under orders of the Public Service Commission were under way or completed during the year. Work at East Bridge, Adirondack Division, Fairview and Auburn Branch, and reconstruction of an existing undercrossing at Martisico, Auburn Branch, were completed during the year. Work on four crossings at Stageries, River Division, and Poland, Adirondack Division, was in progress and will be completed in 1922.

Proposed purchase of capital stock of

The Cleveland, Cincinnati, Chicago and St. Louis Railway Company

There is outstanding \$9,988,500 of the 5 per cent preferred stock and \$47,028,700 of the common stock of The Cleveland, Cincinnati, Chicago and St. Louis Railway Company, not including \$1,500 of the 5 per cent stock and \$27,600 of common stock nominally issued but held in the treasury of that company. The New York Central Railroad Company owns 30,207,700 of the common stock but none of the preferred, or 52.97 per cent of all of the outstanding stock. Pursuant to the terms of the purchase agreement, on December 14, 1921, made an offer, subject to the approval of the Interstate Commerce Commission, to the holders of preferred and common stock of The Cleveland, Cincinnati, Chicago and St. Louis Railway Company to purchase the stock of that company by the following basis:

One share of this company's stock for one share of the preferred stock of The Cleveland, Cincinnati, Chicago and St. Louis Railway Company; Eighty shares of this company's stock for one hundred shares of the common stock of The Cleveland, Cincinnati, Chicago and St. Louis Railway Company.

Thereupon application was made to the Commission for its approval of the acquisition of such stock or so much thereof as might be offered upon the terms stated, and for authority to issue the company's stock up to \$23,478,880 for the purpose of such acquisition.

Proposed lease of the railroads of

The Toledo and Ohio Central Railway Company and its subsidiaries

The Board of Directors of the company, by resolutions adopted on December 14, 1921, authorized, subject to the consent of the holders of one-third of the capital stock of the company and the approval of the Interstate Commerce Commission, the taking by the company of a lease, to be effective January 1, 1922, of the property and franchises of The Toledo and Ohio Central Railway Company, and the term of the lease to be ninety days, subject to termination of such lease by the lessee upon ninety days' notice. The proposed lease will include an assignment by the lessor of the leaseholds proposed to be acquired by it, through lease or assignment of lease, of the properties 92 miles in length to be operated by the lessee, to-wit: the Kanawha and West Virginia Railroad Company and The Kanawha and West Virginia Railway Company, such leaseholds to be effective January 1, 1922, and to be for the corporate existence of the respective lessors, subject in each case to termination by the lessee upon ninety days' notice.

The lease will provide for the payment, as rentals, of the fixed charges and taxes of the lessor companies, and in addition thereto amounts annually equal to the net income of The Toledo and Ohio Central Railway Company for the properties 92 miles in length to be operated by the lessee, the stock of The Kanawha & Michigan Railway Company, with provision that the rentals beyond fixed charges and taxes may from time to time be applied by the lessee so far as necessary for payment of indebtedness of the lessors. This company contracts to purchase the stock of the lessor companies except a few shares of the stock of The Kanawha & Michigan Railway Company. The lease of these properties will effect substantial economies in the expense of operation and accounting.

Changes in organization

On January 26, 1921, Mr. Abraham T. Hardin was elected a Director to fill the vacancy caused by the death of Mr. William K. Vanderbilt, Jr. Mr. Samuel Mather resigned as a Director of the company on February 9th, 1921, and Mr. J. C. Mather was appointed to succeed him as an officer and employee of their loyal and efficient co-operation and service.

For the Board of Directors,
ALFRED H. SMITH,
President.

Railway Officers

Executive

Pursuant to the acquisition of control of the Lake Erie & Western by the Van Sweringen interests, new officers have been chosen as follows: **O. P. Van Sweringen**, chairman of the board of directors; **J. J. Bernet**, president; **M. J. Van Sweringen**, **C. E. Denney**, **J. R. Nutt** and **John Sherwin**, vice-presidents; **W. A. Colston**, vice-president and general counsel; **Lewis A. Bell**, comptroller; **C. C. Collister**, secretary and general treasurer, and **B. E. Morgan**, traffic manager. Headquarters will be Cleveland, Ohio.

Financial, Legal and Accounting

B. D. Warfield, district attorney of the Louisville & Nashville for Kentucky, and **E. Woodward**, general attorney, have resigned to engage in general practice in Louisville, Ky., under the firm name Woodward & Warfield, in which association they have been appointed district attorneys for Kentucky, effective May 15. Effective May 17, **George W. Jones**, district attorney for Alabama and **Judge E. Perry Thomas**, assistant district attorney, have become associated under the firm name of Jones & Thomas, and have been appointed district attorneys for Alabama. Effective the same date, **R. Tate Irvine** and **William H. Stuart**, associated under the firm name of Irvine & Stuart, have been appointed district attorneys for Virginia, with offices at Big Stone Gap, Va. **Harold R. Small** has been appointed district attorney for Missouri with offices at St. Louis, Mo., and **H. K. Rogers** has been appointed district attorney for Ohio, with offices at Cincinnati, O.

Operating

E. Van Dyne has been appointed district superintendent of the Pullman Company with headquarters at Buffalo, N. Y., succeeding **E. G. Kirk**, retired under the company's pension regulations.

R. N. Young, superintendent of telegraph of the Canadian Pacific, with headquarters at Vancouver, B. C., has been transferred to Calgary, Alta., to succeed **D. L. Howard** transferred to Vancouver.

P. J. Flynn, superintendent of the Buffalo division of the Lehigh Valley with headquarters at Buffalo, N. Y., has at his own request been transferred to a similar position on the Mahanoy and Hazelton division with headquarters at Hazelton, Pa. Mr. Flynn's position at Buffalo has been assigned to **F. M. Barker**, superintendent of the Wyoming division with headquarters at Wilkes-Barre, Pa. **P. T. Reilly**, heretofore superintendent at Hazelton, has been transferred to Wilkes-Barre to succeed Mr. Barker.

W. D. Pearce, supervisor of bridges and buildings on the Northern Pacific, with headquarters at Glendive, Mont., has been promoted to general manager of the Walla Walla, a subsidiary of the Northern Pacific, with headquarters at Walla Walla, Wash., effective May 16, to succeed **C. S. Walters** resigned. Mr. Pearce entered the service of the Northern Pacific on May 16, 1906, as a rodman. He was promoted to instrumentman on November 25, 1908, and on April 23 of the following year was advanced to assistant engineer, which position he held until 1915, when he was promoted to supervisor of bridges and buildings. He left this work on November 25, 1918, to enter the operating department as trainmaster at Forsyth, Mont., but resumed the duties of supervisor of bridges and buildings, with headquarters at Glendive, on April 15, 1921, continuing in this position until his recent appointment.

M. A. Wallace has been appointed first chief train dispatcher of the Southern Pacific and **T. F. Custer** has been

appointed second chief train dispatcher at Dunsuir, Cal. Other appointments as first, second and third chief train dispatchers are: At Portland, Ore., **C. H. Spencer**, first, **F. W. Cantrell**, second, and **C. H. Eva**, third; at Roseburg, Ore., **J. I. Love**, first, and **C. W. Grubbs**, second; at Marshfield, Ore., **R. C. Harden**, first; at Sacramento, Cal., **O. T. Stackpoole**, first, and **D. A. Neelley**, second; at Oakland Pier, Cal., **C. E. Norton**, first, **D. Blake**, second, and **C. C. Davison**, third; at Ogden, Utah, **Wm. Johnson**, first, and **F. M. Kelley**, second; at Sparks, Nev., **R. E. Beach**, first, and **H. G. Valleau**, second; at Bakersfield, Cal., **E. F. Wasem**, first, and **R. M. McLeod**, second; at Tucson, Ariz., **J. J. Cowin**, first, **J. Shakespeare**, second, and **H. G. Bonorden**, third; at Los Angeles, Cal., **J. A. Day**, first, **T. W. McKinley**, second, and **G. H. Marsh**, third; at Stockton, Cal., **M. A. Michelson**, first, and **C. R. Rice**, second; at San Francisco, Cal., **I. J. Onyon**, first, and **J. T. Bell**, second; at San Luis Obispo, Cal., **G. Merritt**, first, and **D. W. Brophy**, second.

C. E. Carson, whose appointment as superintendent of the Southern division of the Chicago Great Western, with headquarters at Des Moines, Iowa, effective May 15, was reported in the

C. E. Carson

Railway Age of May 20, page 1204, was born at Portsmouth, Ohio, on January 9, 1870, and entered railway service immediately following his graduation from Carleton College, Syracuse, Ohio, on June 13, 1888, as a switchman on the Kansas City Southern at Kansas City, Mo. Thereafter he was employed on the Kansas City Southern and the Missouri Pacific at Kansas City, Mo., successively as switchman, brakeman, conductor, yardmaster and trainmaster until 1903, when he entered the service of the Terminal Railroad Association of St. Louis as chief clerk in the superintendent's office. He was promoted to superintendent of the Missouri Pacific, with headquarters at Kansas City, in 1897, and consecutively thereafter served as superintendent of the Missouri Pacific, first at Kansas City and later at St. Louis, from 1897 to 1903; as superintendent of the Colorado & Southern at Denver, Colo., from 1903 to 1906; as superintendent of the Missouri Pacific at Kansas City from 1906 to 1908; as superintendent of the Mexican Central at Tampico, Mex., from 1908 to 1911; as superintendent of the Chicago Great Western at St. Paul, Minn., from 1911 to 1913, and as superintendent on the Fort Dodge, Des Moines & Southern at Boone, Iowa, from 1914 to 1917, when he entered military service, where he acted as chief transportation officer of the District of Paris from 1917 to 1919. In October, 1919, he re-entered the service of the Fort Dodge, Des Moines & Southern as general agent with headquarters at Chicago, where he remained until September, 1921, when he became manager of the Traffic Club of Chicago, the position he held at the time of his recent appointment.

Traffic

John F. Fox, traveling immigration agent of the Northern Pacific, with headquarters at Chicago, has been promoted to assistant general immigration agent with headquarters at St. Paul, Minn.

W. Ray Wilson, traveling freight agent of the Gulf Coast Lines, with headquarters at Chicago, Ill., has been promoted to commercial agent, with headquarters at Pittsburgh, Pa., effective May 15, to succeed **L. B. Williams**, resigned.

A. G. Albertson, general agent of the Canadian Pacific, with headquarters at Minneapolis, Minn., has resigned, effective May 1, to become freight and passenger agent of the Royal

Mail Steam Packet and the Pacific Steam Navigation companies, San Francisco.

Paul P. Hastings, formerly assistant general freight agent of the Atchison, Topeka & Santa Fe at San Francisco, and for the last two years a member of the Rate Committee of the Transcontinental Freight Bureau, has been appointed to the newly created position of general freight agent, with headquarters at San Francisco, Cal.

W. L. Donaldson, assistant general freight agent of the Lehigh Valley with headquarters at Buffalo, N. Y., has been appointed general freight traffic agent with headquarters at New York. **Ira F. Auch**, district freight agent with headquarters at Philadelphia, has succeeded Mr. Donaldson at Buffalo. **C. W. Murphy**, general agent at Pittsburgh, has been transferred in a similar capacity to Philadelphia and **C. C. Dailey**, commercial agent at Buffalo, has been appointed general agent at Pittsburgh.

William L. Donaldson, who has been appointed general freight traffic agent of the Lehigh Valley with headquarters at New York, was born on December 4, 1881, at Detroit, Mich. He attended grammar school, high school and the classes of Detroit Business University at Detroit and entered railway service as a clerk-stenographer for the Grand Trunk in the division freight office at Detroit. He served in this position for three years and was subsequently employed, first, in the superintendent's office of the Wabash for six months and, next, eighteen months in the office of the general agent of the Chicago & North Western—as a clerk-stenographer and in Detroit in both cases.

W. L. Donaldson

In April, 1903, he became a soliciting freight agent at Detroit for the Michigan Central-Lehigh Valley route. Three years later he was transferred in a similar capacity to Sayre, Pa., for the Lehigh Valley. From March, 1907, to September of the following year he was stationed at Auburn, N. Y. He was then promoted to general traveling agent of the Lake Shore-Lehigh Valley-Michigan Central route, with headquarters at Buffalo, N. Y. From August, 1909, to May, 1911, he was agent for the Lake Shore-Lehigh Valley route at Chicago. In May, 1911, he was appointed soliciting freight agent and westbound agent of the Lehigh Valley at Chicago and served in this capacity until March, 1915, when he became chief clerk to the general freight agent at New York. On January 1, 1916, he was promoted to assistant general freight agent at Buffalo and served in that position until his recent promotion.

C. H. Pumphrey, division freight agent of the Baltimore & Ohio, with headquarters at Youngstown, O., has been appointed division freight agent at New York, succeeding **M. J. Bevans**, who has resigned to take up the practice of law. **P. S. Phenix**, division freight agent at Cumberland, Md., has been transferred to New York in a similar capacity. **C. F. Farmer**, division freight agent at Akron, takes Mr. Pumphrey's place as division freight agent at Youngstown, O. **R. J. Beggs**, chief rate clerk in the general freight traffic department at Baltimore, has been promoted to division freight agent at Cumberland, Md.

J. R. Hayden has been appointed assistant traffic manager of the Atchison, Topeka & Santa Fe, with headquarters at San Francisco, Cal., effective May 6. He was born at Bennville, Ind., March 13, 1872, and entered railway service in 1894 as an operator for the Kansas City, Fort Scott & Memphis. He was employed at various points on this road as operator,

agent and dispatcher until 1899, when he entered the service of the Atchison, Topeka & Santa Fe as an agent. After serving as agent at various points until 1906, he was promoted to traveling freight agent, with headquarters at Los Angeles. A year later he assumed the title of industrial agent, in which capacity he served until 1913, when he was promoted to assistant industrial commissioner. He was promoted to general industrial agent, with headquarters at San Francisco in 1918, since which time he has devoted his attention to industrial, agricultural, colonization and general development matters under the direction of the general manager and freight traffic department until his recent promotion.

J. A. McNeill, whose promotion to assistant freight traffic manager of the Tennessee Central, with headquarters at Nashville, Tenn., was reported in the *Railway Age* of May 13, page 1154, was born in New York City, N. Y., November 20, 1881, and entered transportation service on September 1, 1902, as chief clerk to the superintendent of the Clyde Steamship Company, New York. On February 1, 1904, he was promoted to commercial agent, with headquarters at Atlanta, Ga., and on October 1, 1907, was promoted to manager of the Clyde-Charleston Fast Freight Line, where he remained until June 1, 1918, when he entered government service as agent of the United States Shipping Board at Philadelphia. He left this service on March 1, 1919, to engage in the electrical business in Newark, N. J., where he remained until November 15, 1920, when he re-entered transportation service as assistant to the freight traffic manager of the Munson Steamship Line at New York, the position he held until his recent appointment as assistant traffic manager of the Tennessee Central.

M. E. Newell, whose promotion to freight traffic manager of the Tennessee Central, with headquarters at Nashville, Tenn., was reported in the *Railway Age* of May 13, was born at West Newbury, Mass., on August 26, 1868, and entered railway service in July, 1886, as a clerk for the Railway Car Service Association at Boston, Mass. Thereafter he served as clerk in the car service department of the Atchison, Topeka & Santa Fe at Topeka, Kan., and the Chicago, Rock Island & Pacific at Chicago until September, 1890, when he entered the service of the Lake Shore & Michigan Southern as a clerk in the freight office at Chicago. He served in this and other clerical capacities until December, 1897, when he was promoted to northwestern freight agent, with headquarters at St. Paul, Minn., a position he held together with that of agent for the Lake Shore-Lehigh Valley route until January 1, 1900, when he entered the service of the Chicago Great Western as a general agent, with headquarters at Pittsburgh, Pa. He was appointed a division freight agent, with headquarters at Fort Dodge, Iowa, in May, 1904, and resigned in March, 1909, to become associated with the Alberta Clay Products Company, Medicine Hat, Alta. He re-entered railway service on July 1, 1910, as commercial agent for the Tennessee Central, with headquarters at Chicago, and continued in this position until April 1, 1914, when he was promoted to general freight agent, with headquarters at Nashville, Tenn., holding this position until the time of his recent promotion; excepting during the period of federal control, when he served as division freight agent at Nashville.

Mechanical

F. B. Stafford has been appointed master mechanic of the Houston Belt & Terminal, succeeding Fred Hooker, resigned.

H. E. Smith has been appointed engineer of tests of the New York Central Lines with headquarters at New York, effective May 15.

J. McKenzie has been appointed general car inspector of the Pere Marquette with headquarters at Grand Rapids, Mich., succeeding **W. F. Crowder**, who has been promoted to shop efficiency engineer.

Purchasing and Stores

R. M. Nelson, whose appointment as purchasing agent of the Chesapeake & Ohio was announced in the *Railway Age* of April 29, page 1046, was born in Hanover county, Vir-

ginia, on November 6, 1873, and was educated at McGuire's University School, Richmond, Va. After having completed his schooling in 1890, he entered the service of the Chesapeake & Ohio (then the Newport News & Mississippi Valley) as a clerk in the store department at Lexington, Ky. During the following year he served in the same capacity in the freight office and then in the auditor's office at Lexington. In 1892 he went to Ashland, Ky., as a clerk in the freight office and during the same year was transferred to Lexington in the same capacity. In 1901 he was promoted to traveling auditor and, in 1904, was appointed chief clerk in the freight office at Newport News, Va. In January, 1912, he became chief clerk to the purchasing agent at Richmond, Va., and in January, 1916, was promoted to assistant purchasing agent. He was appointed assistant to the director of purchases and stores in April, 1921, and was serving in that position at the time of his recent promotion.

Obituary

E. F. Meedham, retired superintendent of motive power of the Wabash, died in Boston, Mass., on May 12.

Albert F. Rust, consulting engineer of the Kansas City Southern, died at his home in Kansas City, Mo., May 11, at the age of 73.

J. B. Turner, mail superintendent of the Chicago & Alton, and an employe of the company continuously for 49 years, died in Chicago, Illinois, on May 20, after an illness of three months.

John D. Hardin, vice-president and general manager of the East Tennessee & Western North Carolina, with headquarters at Johnson City, Tenn., died at his home in Johnson City, May 21, after having been connected with this railroad for 40 years.

Edward A. Williams, at one time general mechanical superintendent of the Erie, died at his home in Glen Ridge, N. J., on April 29. Mr. Williams was born at Wiscasset, Me., on October 4, 1848. He attended public school at Milwaukee, Wis., and learned the machinist's trade in the Milwaukee shops of the Chicago, Milwaukee & St. Paul. From 1877 to 1880 he was roundhouse foreman for this road at Prairie du Chien, Wis., and thereafter, until 1886, general foreman at Wells, Minn. From 1886 to 1890 he was assistant general master mechanic at Milwaukee. Then, until 1893, he was master mechanic of the Minneapolis, St. Paul & Sault Ste. Marie with headquarters at Minneapolis. He was then promoted to mechanical superintendent, which position he left in 1901 to become superintendent of rolling stock of the Canadian Pacific with headquarters at Montreal. In 1904 and 1905 he was assistant general manager of the Erie and in November, 1905, became general mechanical superintendent, in which position he served until the time of his retirement in 1907.

George W. Smith, until 1920 foreign freight agent of the Pennsylvania, died at his home in Chicago on May 16, after a short illness. Mr. Smith was born in Minnesota on December 10, 1869, and entered railway service on August 16, 1885, as an employe of the Chicago, Milwaukee & St. Paul, where he remained until May, 1903, when he entered the service of the Erie & Western Transportation Company, operators of

the Anchor Steamship Line. From December, 1905, to August 1, 1910, he was associated with the Star Union Steamship Line, and from the latter date to January, 1914, he represented this line and the Anchor line at Chicago. He became foreign freight agent of the Pennsylvania on the latter date and held this position until September, 1920, when he became a representative of the allocated lines of the United States Shipping Board, and it was this position which he held at the time of his death.

Alfred W. Gibbs, chief mechanical engineer of the Pennsylvania with headquarters at Philadelphia, died suddenly from heart failure on May 19 at his home in Wayne, Pa. Mr. Gibbs was born at Fort Filmore, N. M., on October 27, 1856. He attended Rutgers College Grammar School, New Brunswick, N. J., and Rutgers College (the latter institution in 1873 and 1874) and then entered Stevens Institute of Technology, Hoboken, N. J., from which institution he was graduated in 1878. In March of the following year Mr. Gibbs entered the service of the Pennsylvania as a special apprentice in the Altoona shops and continued as such until June 1, 1881, when he became a draughtsman. For

A. W. Gibbs

months later he left the Pennsylvania to become a draughtsman for the Richmond & Danville (now the Southern). In 1886 he was promoted to master mechanic and served in that position on several divisions until 1890, when he was appointed superintendent of motive power of the Central of Georgia. Two years later that position was abolished and he returned to the Richmond & Danville as master mechanic. In July, 1893, Mr. Gibbs returned to the Pennsylvania as assistant mechanical engineer and served in that position until September, 1902, when he was appointed superintendent of motive power of the Philadelphia, Wilmington & Baltimore (a subsidiary of the Pennsylvania). On January 1, 1903, he was promoted to general superintendent of motive power of the Pennsylvania Railroad and on July 1, 1911, was appointed to the newly created position of chief mechanical engineer, in which capacity he was serving at the time of his death. Mr. Gibbs was one of the managers of the Franklin Institute, Philadelphia. He served for many years as chairman of the Committee on Tank Cars of the Mechanical Division of the American Railway Association. He was a member of the advisory committee of the Locomotive Cyclopedia for each edition of that volume excepting that of 1912 and at the time of his death was chairman of this committee. Mr. Gibbs played a prominent part in the mechanical design of the electric locomotives built for the Pennsylvania Railroad's electrification at New York.

John J. Cotter, engineman of northbound passenger train No. 517, of the Greenwood Lake division of the Erie Railroad, on the afternoon of May 13, at Riverdale, N. J., 28 miles from New York, saved the life of a little girl, seventeen months old, by crawling to the pilot of his engine and picking her up a second before she would have been struck. The child was Adele Cushman, granddaughter of Ira M. Meade, an Erie engineman. She had crawled to the track from her home nearby, and was on or close to the rail. Seeing that she did not realize her danger, and estimating that it would be impossible to stop before reaching her, Cotter set the brakes and then crawled forward and reached the pilot just in time. By that time the train had been brought almost to a stop, and Cotter jumped off and ran ahead. The front wheel stopped about 30 feet beyond the child.

All railroads have today a special duty to make friends of their patrons. There are many ways in which this may be done, but above all things it must be

A Railroad Appreciated by the Public

remembered that actions speak louder than words. Basing its remarks on a news item, to the effect that the Long Island Railroad has killed no passenger

in a train accident in three years, the New York Herald prints a 300-word editorial congratulating the officers and employees on their skill and fidelity throughout these 36 months. Moreover, C. D. Baker, general superintendent of the road, does his part to make the editorial effective by re-printing it in full, with a message to employees, commending the conscientious effort and hearty co-operation which have made this good record. In the last analysis it must be admitted that it is a great thing to conduct an enormous passenger traffic with the highest degree of safety, even if occasionally a brakeman does forget his manners, or a baggage-man delays your trunk. And the Herald's editorial is to be commended for its intelligence and sanity. The number of passengers carried by the Long Island Railroad in the three years was 212,317,406.

The Railway Accounting Officers' Association will hold its annual meeting this year at Cleveland, June 6 to 9. The meeting will be the same busy affair that the Accounting Officers' conventions usually are. The agenda this year is a document of over 350 pages.

Accounting Officers' Meeting

For the first time in the history of the organization, one committee has covered subjects numbering over the 100 mark, the committee on freight accounts having reported on 103. At its 1921 meeting the R. A. O. A. took the important step of making mandatory a sizable portion of its interline accounting rules and it adopted an unusually large number of new accounting forms. The 1921 meeting was one of the best in the association's history. This year, among the leading factors of interest, are the recommendations relative to the standardization of station accounting forms and practices, a matter of special importance. The meeting will give considerable attention to the requirements of the Interstate Commerce Commission as to the reports it requires from the railroads. It has had a large amount of correspondence with the bureau of statistics during the past year relative to a proposed change in the compilation of freight commodity statistics. The bureau has suggested that it might require the carriers to report, in addition to the tonnage of their various commodities carried, the number of car loads, the ton-miles and the freight revenue, which proposal the association has argued against on the basis of its cost and the feeling that the increased information might not be sufficiently valuable, or that it might lead to mistaken conclusions as to the figures of the different roads. Another interesting proposal that will be advanced this year is the scheme to modify the present classification of railway operating expenses. The committee on disbursement accounts has proposed a very considerable reduction in the primary accounts and the creation of a new general account under the name of "Casualties" which will include damage to property, freight loss and damage, injuries

to persons, etc. This is an important step and one which will be watched with great interest by railway men in other departments as well as by those in the accounting department.

Whether the summer season this year is to bring in large increases in passenger revenues or not is a matter of conjecture. The potential traffic during the vacation season is, of course, immense. How much of it will actually materialize, however, is another matter and one which is largely up to the

To Increase Passenger Business

excursion and tourist rates are being offered in pleasing number by most roads, but in many cases these could be largely extended. Tourist and excursion rates have two results—one, increased business, and, the other, better feeling toward the railroads on the part of the public. One feature of American practice in running excursions is rather difficult to understand, i.e., excursions are run almost entirely on holidays and Sundays when business would normally be high even at regular rates. Then on week days traffic moves only in fractional volume. The extra cars and locomotives which are called into service on Sunday spend six days in idleness. American roads have never gone as far in stimulating travel by reduced rates as have the British railroads. Conditions in the two countries vary greatly, of course, but the full utilization of existing passenger equipment could scarcely help being remunerative. An outline of the reduced rates offered by the British railways will be found in the Foreign Railway News column of this issue. This information should be of value to American railway officers who are studying situations where they may profitably apply excursion and tourist rates.

If a division superintendent in charge of a fairly heavy traffic division on which trains are operated under the manual block system and on which each freight train is delayed an average of one hour because of the length of blocks, was told that this meant a loss of \$87,600 a year for every ten freight trains receiving such a delay daily, he would be negligent indeed if he did not attempt to improve conditions. The records compiled on one road showed the cost of delays to freight trains to average 40 cents a minute. In order to overcome the defects of the manual block system with its long, irregular blocks, automatic signals were installed and the average freight train time over the division was reduced from 10 hr. 29 min. to 8 hr. 49 min. The saving in this case, on the basis of 40 cents a minute, amounted to \$40 a train or \$400 a day for ten trains, the equivalent of \$146,000 a year. Under these conditions it is easy to see that such installations would pay for themselves quickly. Unfortunately, the division superintendent has so many and such varied duties to perform that he cannot devote the time he should to such studies. However, those who have had opportunity to do so have found that a proper signal installation will yield a

Cost of Delays to Trains

high return on the original investment and are sold to the idea because the improved operating results redound to their credit. It would appear that every division superintendent would be well repaid for investigating the results which may be accomplished by such installations on his division, if automatic signals are not yet in service.

Every railroad officer who is fully alive to his responsibilities and his privileges is today constantly on the lookout for opportunities to show his friendliness toward the public. Years of un-

**Faithful
Are the Wounds
of a Friend**

friendliness in the past must be obliterated (and without stopping to consider whether it is your road or some other road that is responsible for failures to give the public satisfactory service). And, what is equally important, every citizen who *thinks* that the railroads have not been fair to him must be placated. But in the midst of these efforts to please the prospective patron there may be a stern duty to do things that will displease him—but which are for his good. A correspondent in Tennessee calls our attention to the fact that the law of that State requiring automobiles to be stopped at railroad crossings contains a section (Sec. 3) preserving the right of people struck at crossings to sue the railroad for damages. An auto driver may deliberately disobey the law requiring him to stop, and yet in the following week go before a dozen sympathetic jurymen, if he has been hit by a train, and do his best to wheedle them into deciding that the railroad was to blame for his injury. Every railroad lawyer in Tennessee is in duty bound to advocate the repeal of that Section 3; but, as we have suggested, that simple plea for justice would be interpreted by many persons as an unfriendly act; a move of the wicked railroad to fatten its treasury. "Faithful are the wounds of a friend;" but the railroad officer who inflicts that kind of wound and who expects the public still to class him as friend, has a big task on his hands. One optimistic railroad officer, commenting on the New York and Pennsylvania rules requiring common-carrier automobiles to stop at crossings, classes these rules as laws "with teeth in them." But he will have to admit that whoever causes these teeth to bite, whether state officer or railroad policeman, will have difficulty in maintaining his reputation as a true friend of the public. Actually to make drivers stop at crossings would require an elaborate campaign.

Motor truckmen and ship owners charge certain sums for conveying goods and passengers. Highways and waterways

**The Subsidized
Agencies of
Transport**

are provided and maintained by taxing the public. The cost to society of highway and water transport, then, is not only the sum paid to these agencies in freight and passenger charges but is that sum plus the cost to society of the highways and waterways. In many cases, then, where ships and motor trucks are taking business away from the railroads, they are doing so not because their form of transport is more economical, but because the public is subsidizing them out of the public treasury. A few shippers secure the benefit of lower rates but the people as a whole by allowing themselves to be taxed for highways and waterways are making possible the operation of uneconomic systems of transportation. These are the general conclusions brought out at a meeting of the British Institute of Transport, which is reported in an article on another page of this issue by Samuel O. Dunn, editor of the *Railway Age*. Champions of the motor and ship-owning interests attacked these conclusions but, according to Mr. Dunn, they were unable to meet squarely the criticism that they must justify themselves on a basis of total cost to the

public, and not upon the rates they charge without taking into account the use of a right-of-way which they have practically free of cost to themselves. The competition of motor trucks and buses and steamers on the inland waterways is not so serious a matter for the railways of this country as it is for those of Great Britain, but it is serious enough even in this country and one upon which the public is not well informed. The meeting of the Institute of Transport brought out many arguments on both sides of the case and the article we publish can be read with profit by all railway officers who desire to meet the arguments of the propagandists for the subsidized forms of transport—the motor truck and the steamboat.

One of the principal reasons why many railroads still buy shop tools and equipment on a price basis is because mechanical department officers fail to convince those higher up that poor tools

**The Ultimate
Cost of
Poor Tools**

waste annually, and sometimes monthly, many times their first cost. Standardized small tools, such as twist drills and reamers, may be taken as an example. Because of keen competition, drill manufacturers must be thoroughly familiar with their competitors' drills. They know which of the companies are producing good drills and which are cutting the corners here and there, producing less efficient drills at a lower price. The average hole-producing capacity of the various makes of drills and reamers are known to the individual manufacturers, and when the latter observe that the railroads place orders time after time, not with the standard drill manufacturers, but with some little company which cuts the corners and then cuts the price, their opinion on railroad buying can better be imagined than expressed. One drill manufacturer, in explaining the situation and pointing out the false economy of buying shop tools solely on a price basis expresses himself very fairly as follows: "You can scarcely blame the railroads, handicapped as they have been by the lack of actual cash, if they should have adopted this policy (price buying) for a few months or a year, but now it has been going on for a little over a year and there seems to be no let up in it. Not only in our line but in many lines the railroads are actually losing money by this short-sighted policy." The cost of unit producing, rather than the cost of unit purchase, is what counts in buying railway shop machinery and tools. Every effort should be made to impress this fact as strongly as possible on railroad executives and department heads responsible for the actual placing of orders. It is obviously poor business to save five per cent on the cost of a drill or other tool and send it to the shop where it breaks on the first trial, produces no useful work, and has to be sold for scrap. Twist drills are typical of many other standard and special shop tools in which quality is the first consideration, the ultimate cost of the tools being a function of work done rather than first cost.

Some of the movements for the improvement of the railroad service seem to be all right except in the one particular that they do not go far enough. A new station building sometimes comforts the superintendent in such an extremely

**Big Questions
for Small
Station Agents**

satisfactory way that he temporarily forgets the fifty shabby stations that are on his mind night and day—or ought to be. He has done well, but he has not gone very far. The letter of the Local Freight Agent printed in this issue reminds us of this aspect of railroad progress. He does not know how to apologize for a slow claim department and a severely strict treasury department. He gets no satisfaction when we tell him that freight claims are being settled much more promptly

than they were four years ago. His problem is to answer the dissatisfied patron *now*, concerning *present* practice. Should not the improvement of this feature of the service be pushed ten times harder than it has yet been pushed? And the refusal to give credit on freight bills—would not a local banker give much more detailed and thorough attention to this point than you are giving to it, Mr. Railroad Treasurer? If you must be strict with farmers because your country station agent is a small-size business man, or is inexperienced, is it not a duty to explain that point much more carefully than is usually done? Getting into touch with the public in a really sympathetic way involves a heap of work, every day!

Reduction of the "Fair Return"

VERY MUCH the most unsatisfactory feature of the Interstate Commerce Commission's decision in the recent general rate case is the part of it relative to the percentage of net return the railways will be allowed to earn.

The opinion specifically holds that the record does not show any general inefficiency in management. It states that continuance of the commission's investigation of the value of the railways has tended to confirm the tentative violation made by it in the rate decision in 1920. These findings should help to create a healthy public opinion regarding railway matters and to stabilize railway securities.

The finding reducing the average rate of return allowed to be earned from 6 per cent to $5\frac{3}{4}$ has an exactly opposite tendency. On the basis of the valuation made in 1920 it reduces by \$47,250,000 the amount of net return that may be earned annually. This is 6 per cent on eight hundred million dollars. It is, therefore, equivalent to a reduction of eight hundred million dollars in the amount of new capital which the railways can raise.

The commission evidently believed that the railways, if allowed $5\frac{3}{4}$ per cent, could raise enough new capital. Past experience and present conditions seem to demonstrate that this belief is unfounded. The experience of the last fifteen years has indicated that under normal conditions the railways need to earn approximately $5\frac{3}{4}$ per cent on their *property investment* in order to raise enough new capital. Their valuation is less than their property investment and therefore experience indicates that they need to earn more than this percentage on their valuation. Furthermore, this experience antedates the "recapture" provisions of the Transportation Act. Under these provisions all railways which in any year earn more than 6 per cent must pay over one-half of the surplus to the government. Thus $5\frac{3}{4}$ per cent on the valuation probably would not yield the railways as a whole more than $5\frac{1}{4}$ per cent on their valuation. This as an average, year by year, would certainly have been too low under the financial conditions before the war.

The present general financial conditions are no more favorable. At the present time only very good railway bonds are selling in the open market on a five per cent basis. A higher rate would have to be paid on additional and poorer secured bonds. The best railway stocks are selling on a basis that yield six to seven per cent. Railways with only average credit would have to pay higher rates than these to issue new securities, while railways with poor credit would have to pay very much more, if, indeed, they could finance them at all. The prices of the securities of railways which already are earning approximately the return which the commission holds should be earned as an average seem to make clear that if the railways as a whole did earn this average they could not under present conditions raise the new capital needed adequately to develop their facilities.

The situation would be improved if railway managers and investors could feel any assurance that even the $5\frac{3}{4}$

per cent return would be allowed to be earned as an average, over a period of years. The unfortunate, but incontrovertible fact, however, is that never since the Hepburn act went into effect sixteen years ago has the Interstate Commerce Commission "made good" on its own findings regarding what the railways should be allowed to earn. It so regulated the rates that the percentage of net return earned declined almost constantly during the ten years, 1906 to 1916. The commission in its opinion in the recent rate case frankly recognized the fact that the development of the railways has fallen far behind what it should have been. The commission's policy in regulating rates has contributed more toward arresting their development than all other causes combined. The older members of the commission probably will not admit this. It must be plain to the newer members.

The commission has made a mistake in reducing the "fair return." The law makes it its duty to allow the railways under efficient and economical management to earn enough net return to enable them to furnish sufficient railway transportation for the people of the United States. The railways cannot even hope to do this unless they are allowed to earn a net return averaging at least $5\frac{3}{4}$ per cent in both good years and bad years. That means, of course, that if they earn less than $5\frac{3}{4}$ per cent in bad years they must be allowed to earn equal additional amounts in good years. It is most doubtful if even then the railway facilities of the country could be adequately developed.

The railways should not accept this part of the commission's decision without the most vigorous protest. It would be easy under normal business conditions to correct a reduction of rates made to produce an *adequate* return if the reduction of rates proved too great. It would probably prove far more difficult to secure an advance in a rate of return held to be reasonable once it had been both established by the commission and tacitly accepted by the railways. A return of six per cent is the very minimum which the railways should be asked to accept. It is the least under which it is conceivable that they can raise enough new capital adequately to develop their facilities. Therefore, it is the least to which in the public interest the commission should have even considered restricting them.

Equipment Orders in May

THE DOMESTIC orders for freight cars reported in the four issues of the *Railway Age* in May totaled 18,427; for passenger cars, 235, and for locomotives, 99. Among the important freight car orders were included 3,000 for the Chesapeake & Ohio, 6,140 for the Southern, 2,300 for the Katy, 2,000 for the Santa Fe, etc. The passenger car orders included among others, 100 for the Southern, 63 for the Chesapeake & Ohio and 30 for the Katy. The leading locomotive purchases were 30 for the Chicago & North Western and 20 for the Atlantic Coast Line. The orders of freight cars, passenger cars and locomotives reported in May were, in each case, less than in April but greater than the figure for any previous month of 1922 except April.

The real news in the equipment figures, however, is contained in the five months' totals, and particularly the freight car totals. Since the beginning of the year the *Railway Age* has reported in its equipment and supplies column the placing of orders for a total of 77,053 freight cars, 1,195 passenger cars and 460 locomotives. The buying movement that is exemplified in the freight car figure is the interesting detail, for a comparison with previous years shows that in the case of freight cars we are now observing the largest buying movement of rolling stock for domestic service that we have had for a period of no less than 10 years. The five months' total for 1922—77,053 cars—compares with a figure for all 12 months of 1921 of but 23,346; of 1920, 84,207 (which the 1922

orders will soon exceed): of 1919, 22,062, and of 1917, 79,367. In 1912, to go back to the beginning of the ten-year period, the domestic freight car purchases totaled 234,758. The best year since 1912 has been 1916, in which year 170,054 cars were ordered. Orders for 1922 to date are considerably ahead of 1916, for in the first five months of 1916 the orders totaled 49,551, or 17,500 less than in the first five months of 1922.

	DOMESTIC ORDERS					
	Locomotives		Freight cars		Passenger cars	
	1922	1916	1922	1916	1922	1916
January	5	231	7,960	14,613	235	...
February	8	272	14,771	9,323	160	...
March	76	634	6,550	14,233	25	...
April	272	178	29,345	7,228	540	...
May	99	248	18,427	4,154	235	...
Total 5 months	460	1,563	77,053	49,551	1,195	736

The total passenger car orders for the first five months of 1922 has been 1,195, which compares with a figure for the first five months of 1916 of 736. In 1916, as a whole, the passenger car orders totaled 2,544, but this total ran about 500 behind the totals for 1913 and 1915. The locomotive orders have not been doing so well comparatively as the car orders. The 1922 first five months' figure of 460 compares with 1,315 for the first five months of 1916. The total domestic locomotive orders in 1916 were 2,910, that year being the best from 1913 to date.

The First of the Wage Reduction Decisions

IN THE FIRST of the series of decisions on the petitions of the roads for a reduction in the wages of certain classes of their employees, the Railroad Labor Board has authorized decreases of approximately 13 per cent in the rates for maintenance of way forces. Additional decisions affecting the shop crafts and clerical and other employees are expected within a few days. These reductions will all become effective on July 1.

It is estimated that the decision already announced will save the roads approximately \$48,000,000 annually and with the reduction of nearly \$150,000,000 in the maintenance of way payroll of a year ago, will reduce the expenditure for maintenance of way labor nearly \$200,000,000 annually from the high point of 1920. The reduction which has just been made public follows closely after the decrease in freight rates announced by the Interstate Commerce Commission on May 24, also effective on July 1, which it is estimated will reduce the revenues of the roads by approximately \$225,000,000.

It is evident that the reductions in wages already announced and those yet to appear will go far in offsetting this loss in revenue.

This decision is in accordance with the general trend of wages. It follows the decline in the cost of living and also reduces the differential between the wages which the roads have had to pay and those for which they can secure their labor in the market. It is this differential which has given the impetus to the contracting of much work in recent months.

Coming as it does at the season when maintenance of way work is at its height, this reduction will do much to stimulate activity.

The board has acted wisely in reducing the wages of track foremen less than those of the laborers in their gangs and thereby increasing the spread between the pay of the two groups. It is in the interest of economy for the roads to pay

their foremen a sufficient rate to make this position attractive to men of the proper caliber. There is a sentiment in some quarters that the roads should not take advantage of any reduction in the wages of their foremen, but should hold them where they are and thereby attract a better class of men as the wages in other industries and in other branches of railway service decline. In contrast with the action with reference to track foremen, the Labor Board has decreased the spread slightly between skilled mechanics and their foremen.

The reduction of a year ago removed the increase given unskilled labor in July, 1920, and the present reduction takes away 5 of the 12 cents granted the men in Supplement No. 8 to General Order No. 27 of the Railroad Administration, issued in September, 1918. Insofar as skilled labor and foremen are concerned, the new rates will be approximately the same as those established in July, 1920.

This decision again emphasizes the impracticability of fixing uniform wages which are equally applicable over a wide area, because of the wide variation in local conditions and the constant change in these conditions from day to day. In most localities, the roads can take advantage of the reductions authorized and still retain their forces because of the fact that the new rates will still be considerably above those prevailing in other industries. However, in the industrial centers where activity is becoming more marked there are already indications of a shortage of labor, even with the rates now paid, and predictions are now being made freely that the roads will not only not be able to take advantage of the reductions authorized in these centers, but may even be forced to raise their rates to secure the necessary men. In other words, as the wages of railway employees are gradually approaching those in other industries, it is evident that they must be fixed as they always have been fixed by the relation between the supply and demand in each locality if the roads are to secure the quality and numbers of men they require at reasonable rates.

New Books

Mechanical Appliances for Handling Railway Traffic, by George Bulkeley. 132 pages, 5 in. by 7½ in., illustrated, bound in cloth. Published by the Railway Gazette, London, England.

As the importance, and in many cases the absolute necessity, of material handling devices is being more clearly recognized every day, any book as suggestive as this will be of interest to many. While the author, who is connected with the Great Western Railway, has evidently had in mind primarily the needs of freight houses, transfer points, terminals and docks, many of the devices and methods shown are also of use at storehouses, shops, roundhouses and other places.

Of the 94 illustrations, the majority show different types of material handling machinery in actual service moving various materials under diverse conditions. In addition to these application photographs there are several diagrams showing principles involved; also methods and arrangements that have been found to be successful. Such commonly employed devices as wedges, jacks, chain and rope blocks, hand cranes, winches, ropes, hooks and derricks are treated first. Following this is a chapter on portable devices, including hand trucks, industrial power trucks, tractors, trailers, portable cranes, stackers and various types of portable conveyors. The next chapter treats of cranes, continuous conveyors and various combined appliances. Electric telfers and overhead carrier systems are described and shown in use. Chapters on highway cartage, dock working and the equipment for medium sized freight stations and storehouses complete the book.

Letters to the Editor

[The RAILWAY AGE welcomes letters from its readers and especially those containing constructive suggestions for improvements in the railway field. Short letters—about 250 words—are particularly appreciated. The editors do not hold themselves responsible for facts or opinions expressed.]

“Stop” versus “Danger” at Highway Crossings

BALTIMORE, Md.

TO THE EDITOR:

What is the meaning of the word “Danger?” The traveler on the highway encounters a variety of signs such as “DANGER—CURVE AHEAD,” or “DANGER—SCHOOL—GO SLOW,” or “DANGER—ONE WAY BRIDGE.” The motorist becomes so accustomed to seeing these signs, that he seldom pays attention to them other than perhaps to slightly reduce the speed of his car. In fact, the observance of the word “danger” as applied to these warnings appears to mean merely driving at reduced speed.

A railroad crossing is always dangerous; but a crossing signal displaying the restrictive indication means but one thing—*train approaching, stop!* The motorist seeing the word “danger” displayed is likely to use his own judgment as to whether the situation is dangerous enough for him to stop his car. The word “stop,” however, has but one meaning; it can leave no doubt in his mind. “Stop” is a command addressed to the motorist personally. The word “danger” is merely descriptive of conditions as they exist at that point. It is impersonal.

A signal indication, to be effective, should be as simple and readable as possible. The word “danger” contains so many letters that it must necessarily be printed in smaller type than would be needed for a shorter word. It therefore cannot be read as easily or from as great a distance as this simple word, containing only four letters, displayed in large type—STOP.

CHARLES ADLER, JR.,

Signal Engineer, Maryland & Pennsylvania R. R.

Educate the Public as to Motor Truck Competition

ILLMO, Mo.

TO THE EDITOR:

Motor truck transportation on highways built and maintained at public expense, has been discussed from various angles in the technical journals, the magazines, and in the dailies. Some classes of people even take the view that the motor truck has come to displace the railways and that the latter are about to lose the pre-eminent place that they have held in the transportation field.

Numerous problems remain to be solved in the transportation field. As regards railroad transportation, stockholders, officials and employees do not always agree as to the solution of the varied problems; this is particularly true of questions relative to working conditions and compensation. There is, however, every reason why all three parties should agree as to just what our policy should be regarding highway construction.

Highway programs of large magnitude are going forward at a rapid pace. Should these highways, built at public expense, be designed and constructed to take care of transpor-

tation that is not now adequately furnished by the railways, thus making them feeders to the railways, or should they be designed and constructed with a view to making them competitors for the transportation that is now taken care of by the railways?

If motor truck transportation is as economical, or more so, than rail transportation, we could ignore the issue altogether; but if rail transportation is the more economical, should not the army of men interested in railroads make their views known to the public, with a united front, as to what they are paying for motor truck transportation? This has no reference to short hauls, which is the legitimate field for the motor truck.

Again, should not the army of men interested in railroads use their influence on the public to get more adequate license fees for vehicles using the highways so as to transfer a more just proportion of original cost and maintenance from the taxpayer to the user who receives the benefits? Certainly no large body of our citizens are better fitted to educate the public along these lines than those interested in the railroads. If this feature of the highway problem is put before the public on the basis of the economics involved, results should be obtained that will benefit us all. Each individual acting independently would have some effect but united action should be certain of success.

AN EMPLOYEE.

Some Queries from a Station Agent

PRAIRIE PLAINS, U. S. A.

TO THE EDITOR:

I hope it is not true, as you seem to imply in your editorial note (May 6, page 1049) that the Central of Georgia never has to apologize for poor service except in connection with the quality or quantity of its locomotive service; for any road which was so nearly perfect as that would exercise a baneful influence—in the envy which it would inspire in the breasts of the men on other railroads who have to meet the public. Most of us have to try to utilize the “human equation” in a good many different directions to make up for all sorts of equations, human and other, which are not up to the mark.

You expect us local agents to have a lively imagination; but where are we to get the material for it to feed on? When our freight claim department takes three months to decide whether or not to pay a damage bill that I know ought to have been paid within a week, I confess that my imagination is not equal to making up a suitable excuse. I want a full explanation from the general manager, worded just as he would word it if the claimant were a friend of his (he is a friend of mine) and called in person at headquarters. I can, of course, expatiate on the virtues of our road, and claim that its love for its patrons is so great that a three months' wait for a \$50 damage bill ought to be forgotten; but still I want to see the general manager's exact words—not a brief hint which he has never taken the time to put on paper.

Refusing to trust a consignee for a freight bill, or to accept his check, when he is a reputable citizen who is trusted everywhere else, is another feature in which an agent has to be able to spin out a large story of railroad virtues if he is to offset the determined ill-feeling of the patron. The man's freight bill may not be more than \$25. Someone ought to estimate how much money is lost in a year, or a series of years, by a road which allows its local agents some discretion in this matter.

Please answer these questions. Then I will send you some more.

L. F. A.

But the Traffic Is Not Always Light

SALT LAKE, Utah.

TO THE EDITOR:

The editorial in the issue of April 22, "Light Traffic an Aid to Construction," is interesting but some suggestions to the construction man may also be to the point. It is conceded that to a certain extent, at least, the use of the existing track is of great benefit in the construction of second track. However, under certain heavy traffic conditions work may be organized to avoid the use of the operated main line for construction purposes and in a way that may effect a saving in construction costs by eliminating delays to work trains attempting to use the operated main line.

The writer has in mind the closing of the gaps in the second track on the Union Pacific east of Granger in 1917, where a section 52 miles long was built with very little use of the existing main track. Traffic had reached over 70 train movements per day on single track. The schedule of passenger trains was such that the larger part of the day, from about seven in the morning until six in the evening, was free of passenger trains on this 52 miles. Naturally, the operating officers took advantage of this for freight train movements. A flock of seven or eight freight trains would reach one end of this piece of single track about 7 a. m. ready to be driven across. No sooner would the last one reach the other end of the single track than a flock from the opposite direction would take its turn.

The plight of the construction engineer with one or two work trains loaded with men and material can well be imagined. Five or six hours of this for a day or two soon brought him to time. He could get the chief dispatcher or the trainmaster on the telephone, but the voice on the other end, already with tears in it, would come back something like this: "Well, Mr. Man, you may know your construction end—we assume you do—but the general manager has told us what will happen if we do not get these trains over the road." The construction engineer had been an operating officer and understood "the language." On the other hand, that same general manager had said to the construction engineer that this piece of second track was worth something like a thousand dollars a minute to him.

The grading was therefore done by contractors with very little use of existing tracks. A Harris tracklayer was quickly installed at one end and an improvised tracklayer for handling rails with a bunch of teams for hauling ties, at the other. Everybody was happy at once. The tracklaying showed regular progress each day. Temporary bridges allowed the tracklaying to proceed with little delay; these were replaced later when time was easier. The cost of work incident to work train delay was eliminated.

It is well and good to do work when traffic is light but perhaps the gentleman at the head who furnishes the sinews of war is not always able to match up his "psychological moments." It is then up to the field man to meet the condition, and with a little ingenuity he may do this and perhaps show good progress.

W. R. ARMSTRONG,

Assistant Chief Engineer, Oregon Short Line, Salt Lake City, Utah.

Educating and Training Railroaders

MILWAUKEE STOPS, Wis.

TO THE EDITOR:

With reference to the letter from Chas. E. Parkes published on page 512 of your issue of March 4, in which some doubt is expressed as to what was meant by a certain statement in my paper on "Education" published in your issue of January 21, the paper in question was written for the Western Railway Club and your version of it was a considerably abbreviated one.

Had Mr. Parkes heard the full paper read, my meaning

would have been made clear to him. The paper was an answer to a question arising out of a previous paper on "Regulation—Super-regulation—Strangulation." What I had in mind was that railroads were unable to obtain the assistance from educational institutions, which, for instance, the engineering, medical or legal professions might. The railroad situation is so complex that a man given any stereotyped course of training is not likely to be able successfully to grapple with its problems.

For instance, it is a comparatively simple matter to design and construct a car to carry a certain load, but when drawings are made it is found there are many requirements of the safety appliance law to be met and this will alter the design; next shippers' requirements enter into its construction, and when these have been met it is found that the cost of loading and unloading have been increased, and moreover changes must be made to permit of the car being repaired at small points where facilities are poor; and so on through various changes until the car has increased in weight and greater braking requirements become necessary; ultimately the average weight of a train has grown so as to interfere with track conditions, bridge strains, etc. Larger engines are necessitated, coal bills become higher, round-houses have to be altered, turn-tables increased in length, etc., etc.

In every phase of railroading this dove-tailing throughout every move will be found until one realizes that it is necessary to have a very wide knowledge of railroad work in all departments before one can hope to attain success in his own particular branch. For this reason I believe it is simpler to take experienced railroad men and educate or teach them the requirements of modern improvements, altered designs and changed conditions than it is to take men who have had a good college or university education and teach them the various phases of railroading.

At the same time I strongly believe that the young man entering the railroad who has attended an up-to-date technical school is well equipped to commence learning the varied phases of railroading and I further believe that our educational institutions could develop a special course of training that would even better fit those wishing to take up this work.

In regard to Mr. Parkes' remark that most of the educational schemes yet inaugurated in railroads have failed I would say that we have no intention of allowing our scheme to collapse. It has been in operation for nearly four years now and by preparing and spreading the information among our employees and then holding monthly examinations, the results of which are duly recorded and used as a basis for promotion, we are going to continue to find among our employees men whose ability can be turned to mutual profit, that would otherwise remain in obscurity.

C. G. JUNEAU,
Master Car Builder.

PRESIDENT HARDING has reached the conclusion that action in Congress on a St. Lawrence waterway must await the conclusion of a treaty between the United States and Canada. The Canadian government is evidently not very keen about pushing the international waterway project. Montreal doubts its value, and from an economic point of view Canada as a whole has little to gain from trying to extend direct ocean-going traffic into the distant interior. Our lake states have also very little to gain. They are obsessed by empty dreams of maritime grandeur. Postponement in Congress of this costly and vague project will help to clear away illusions. If such a route is to be opened at national expense it should be made perfectly clear that the whole nation will profit by it and that the enterprise will come within at least long range of paying for itself. No serious efforts have been made yet in that direction.—*New York Tribune*.

Motor and Inland Water Versus Rail Transport

Necessity for Each Paying Its Way, Instead of Burdening Taxpayers, Emphasized at Transport Meeting

By Samuel O. Dunn
Editor of the *Railway Age*

LONDON, May 19.

ATTENDANCE at the three-day Congress of the British Institute of Transport, which ended today, would have convinced any American student of transportation that, at least when rival means of transport are involved, human nature is precisely the same in Great Britain as in the United States.

There were papers and discussions on both motor highway transport and inland waterways, as well as specifically on railway matters. There were speakers who emphasized the principle, as is done in the United States, that in comparing the cost of water or motor transport with that of railway service the total cost incurred, not merely the rates charged the shipper, should be compared. It was emphasized that the rates charged the shipper do not measure the total economic cost of water or highway transport, because waterways and highways are built and maintained mainly from taxes paid by the general public, and these taxes must be added to the rates paid by the shipper before any fair comparison can be made between the costs of water, motor and railway transport.

On the other hand, as is almost always the case in the United States, the advocates and defenders of inland water and highway transport persistently evaded the issue thus squarely presented. None of them would discuss the question whether, including the expense of providing and maintaining inland waterways or highways, the total cost of transportation for considerable distances by them actually is more or less than the total cost by railway. They preferred—as is always true in the United States—to dwell upon the general advantages derived by the public from taxing itself to provide and support waterways and highways—as if even greater general advantages are not derived from the development of railways, especially if and when the development of the railways results in passengers and goods being transported at a lower total cost than they can be transported by other means.

Moved to Generosity With Another's Funds

The defenders of motor transport service rendered largely at the expense of the taxpayer dwelt so much upon the supposed indirect benefits derived by the public from it that they caused Sir Alexander Gibb to tell a story. He said they reminded him of the Scotchman who on a Sunday morning was so moved by the parson's sermon on the duty of generous giving that he emptied his neighbor's purse into the collection plate. Automobile manufacturers and shippers in Great Britain have the same generous willingness as in the United States to empty the taxpayer's pocket to increase their sales and reduce their freight bills, largely regardless of whether thereby the total cost incurred by the nation as a whole is reduced or increased.

As waterway and motor highway transportation, in comparison with transportation by rail, are the subjects of animated discussion in both the United States and Great Britain and as motor transport especially is relatively much more highly developed in the latter country than in most parts of our own, a summary of the papers and discussions on these subjects at the Congress of the Institute of Transport will be of considerable interest to many readers of the *Railway Age*.

Great Increase of Taxes for Highways

"The Finance of the Modern Highway—A Problem and a Solution" was the subject of a paper presented by Dixon H. Davies. Mr. Davies said that freight shipped by railway in Great Britain pays probably eight to twelve times as much toward the provision, upkeep and renewal of the road upon which it travels as does freight shipped by motor truck. On the other hand, he said, it is probably twice as expensive to provide, maintain and renew a suitable track for heavy motor traffic as to provide, maintain and renew a first-class railway. To a great and increasing extent the difference is not made up, but, on the contrary, the maintenance and renewal of the highways is running into arrear. This is occurring in spite of the fact that an increasingly heavy expenditure from local taxes is being made on the highways. The sum annually provided from this source is now about £40,000,000 annually. This is three times what it was in 1913; and other speakers pointed out that in 1913 there had been a large increase since a few years before. "The call upon the rates" (local taxes), Mr. Davies said, "has reached the dimensions of a grievous burden. . . . The Ministry of Transport is receiving applications from all parts of the country for the closing of roads against motor traffic. The roads approaching the part of London are so inadequate that the movement is reduced to an average of five miles an hour, and is subject to occasional blocks so that it is impossible to predict how long it will take to reach a particular dock.

Cost \$22,500 to \$450,000 a Mile

"The mileage of the English and Scottish roads is 177,306, of which 36,589 miles are already listed as classified roads. The cost of reconstructing a road for motor traffic varies from £5,000 to £100,000 (\$22,500 to \$450,000 in American money at the present rate of exchange) varying according to local circumstances and the weight of the traffic passing. It is difficult to see how any satisfactory scheme for equipping the country with motor roads could be carried through for a capital expenditure less than 500 millions sterling (about \$2,250,000,000). The cost of this on a 5 per cent basis, with a provision for renewal every ten years would be about 65 millions (\$292,500,000) per annum, and this would be required in addition to the revenue from rates (local taxes) which would be no more than sufficient for the ordinary maintenance and the costs of other unclassified roads. It is hardly to be expected that the country can be equipped with a complete system of arterial communication adapted for fast moving and heavy mechanical traffic for much less than two-fifths of the cost of the railway system, constructed as that was when wages and prices were very much lower."

Mr. Davies expressed the opinion that the public would never be willing to pay in taxes the sums necessary to provide and maintain such a system of highways. "One is driven to the conclusion that the only sound method is a direct charge on the traffic itself, which can be passed and ultimately met as part of the price paid for the articles carried. It is submitted that it is quite without reason or justice that the manufacturer, or the packer, or the printer who receives cotton or cotton goods by rail should be charged for the provision and upkeep of the road over which they

have travelled, and that the trader who receives corresponding goods by motor lorry should have a present made to him of nearly the whole amount of these costs."

He pointed out that under such a system there would be a natural tendency for more and more freight to leave the railway and go by the highway; that the railways would be forced, in consequence, to raise their rates on the remaining traffic; that this would drive still more traffic to the highway, preventing development of the railways and increasing the cost of the highway maintenance and the burden on the taxpayers; that finally the public would refuse to pay any more taxes to maintain the highway, the result being its deterioration and destruction under the increased business; and that thus finally transportation both by the railways and by motors on the highways would become inadequate and demoralized.

Tax on Motor Vehicles Should Be Greatly Increased

The only preventive of this ultimate outcome, he contended, is to make motor traffic contribute its fair share of the cost of providing, maintaining and renewing the highway. A motor truck now pays a tax of 30 pounds (\$135) a year, which, on the assumption that it runs 30,000 miles a year, makes it a contributor to the roads to the extent of $\frac{1}{4}$ of a penny ($\frac{1}{2}$ cent, American money) per ton mile. In order to equate the position between road and rail this obviously inadequate tax should be raised to about 360 pounds (\$1,620). There are at present approximately 180,000 commercial vehicles on the road, and the number is increasing so that a tax of 360 pounds would produce the 65 millions a year required, allowing for a considerable rebate upon commercial passenger vehicles.

"The objection to a heavy vehicle tax is that it bears so hardly upon those who do not keep their vehicles in regular occupation; for them the fairest tax is unquestionably the petrol tax. A good many of the objections raised to a petrol tax levied at the source might be met by the device of a recording petrol meter attached to the car."

As a means of making the total cost of transport by highway less than it is now, Mr. Davies suggested the making of "plateways" on and off which vehicles using the highway could move at their pleasure. He suggested the provision of these plateways by private capital which would be allowed to charge a toll for their use.

Sir William Acworth's Opinions

Sir William Acworth concurred in the principle that commercial traffic, moved by highway, like railway traffic, should be made to contribute its fair share toward the interest and maintenance charges of the highway. He advocated taxing highway vehicles on the basis of the mileage run by them as being the fairest to all classes of users of such vehicles. Several shippers and persons interested in the manufacture of motor vehicles or interested in their operation for commercial purposes vigorously attacked Mr. Davies' proposition that taxes should be levied on such vehicles in proportion to their use of the highways. They contended the levying of the present taxes already had had an adverse effect upon the motor industry. They claimed the burden put upon the taxpayers for the maintenance of the highways was exaggerated. The highways, they contended, are provided and maintained for the general welfare, and it would be inequitable to single out a particular class of users and make them pay in proportion to their use. At no point in the discussion did any of those who took this position meet squarely the proposition that it is inequitable and contrary to public policy for those who provide one means of transportation (railway) to be forced to charge rates sufficient to cover the cost of providing and maintaining the highway, as well as cost of carriage, while those who provide another means of transportation (by motor) are furnished a highway virtually

at public expense and enabled to take traffic from the railway by making rates which cover the cost of carriage only.

Railway Seeks Power to Conduct Highway Transport

While this discussion was going on at the Congress of the Ministry of Transport, a Select Committee of the House of Commons was taking testimony on a bill promoted by the London & Northwestern Railway to give it the right to render motor transport service by highway. The bill is opposed by some shippers and others on the ground, among other reasons, that the London & Northwestern might so conduct its highway transport business as unfairly to compete with and drive out independent concerns furnishing motor transport. The London & Northwestern has agreed to the insertion of various provisions in the bill to safeguard against this. There is fear that if the bill is passed it will contain so many restrictions on the railway's freedom of action that it will not be very helpful in enabling it to meet motor truck competition.

Discussion of Inland Waterways

The trend of the discussion on inland waterways was the same as that of the discussion on motor transport.

Neville Chamberlain, a member of Parliament, presented a paper entitled "Inland Water Transport—A Practical Policy." Mr. Chamberlain is known in Great Britain as a politician who has advanced his career largely by his persevering advocacy of inland waterway development. He recalled that the report of the Royal Commission on Canals and Waterways in 1906 made a series of recommendations involving state ownership and state-assistance of waterways on a very considerable scale. He believed that if the recommendations of the commission had been carried out "the country would have recouped itself for the cost before now, but," he added, "there is no doubt that the very size and boldness of the conceptions defeated their own ends by frightening off the government and public of the day. Still less," he said, "would such proposals be likely to command assent today when costs have so enormously increased and when everyone is seeking how expenditures may be diminished rather than how new fields of enterprise may be developed. What we want is a new policy adapted to our times and likely to commend itself by its soundness and prudence to men of business.

A policy of waterway improvement must be founded upon expectations of increased business sufficient to give an adequate return upon the capital invested. But, he admitted, "there are no sufficient data in existence to enable anyone to make a reliable estimate of what that increase (in traffic) will be." Therefore, waterway development should proceed by steps, not all at once. The data secured as a result of each step will afford surer and more solid ground for the next advance. The waterway system of the country was divisible into a series of groups, each consisting of a central main route, fed by a number of auxiliaries. No "alarming sum" would be required to make the central artery a satisfactory waterway for barges of 100 to 120 tons.

Conditions of Successful Water Transport

He laid down three conditions which must be fulfilled. 1—Central management and control of each group of waterways. This would involve transferring from the railways the numerous canals they now control. 2—Properly equipped terminals. This would involve the expenditure of capital. Fortunately, the development of road transport in recent years had made it practical to construct great inland ports at a distance of several miles from the center of an industrial city from whence goods could be distributed either by rail, road or water. 3—Regular and punctual service, "the absence of which has been one of the principal causes of the failure of canals to give satisfaction to the

trader." He said he would prefer "that the whole thing should be left in the hands of private enterprise," but a large amount of capital must be invested, and he feared the returns may be for some time delayed, although he anticipated a very large indirect return in the additional prosperity of the localities served and the consequent increase in the wealth of the nation. "Therefore," he said, "the whole burden cannot be placed upon private enterprise, but there is a good case for inviting the co-operation of the principal local authorities interested, and, following the continental practice of the state itself."

Is Transport by Water Cheaper Than by Rail?

The discussion that followed forcibly recalled discussions of the same subject in the United States.

Sir William Acworth, whose writings on transportation are well-known in America, challenged the assumption underlying all the pro-waterway arguments in Europe as well as in America, that transportation on canals and canalized rivers is cheaper than by rail. From the standpoint of the public welfare he pointed out the cost of shipping by water that should be considered is not merely the rate paid by the shipper, but the *total cost*, including the interest on the investment in the waterway and the expense of maintaining it, which usually are defrayed from taxes paid by the public. He cited statistics based on European experience to show that in Germany and France this *total cost* by inland waterway almost always is greater than the corresponding total cost by rail.

As is usually true in the United States, this argument was ignored or evaded by the waterway advocates. Mr. Chamberlain answered that, in spite of Sir William Acworth's statistics, the people of Germany and France went on developing waterways. Was it to be assumed that they were ignorant of the facts about the results, or such imbeciles as to go on developing waterways when by so doing they were losing money which could be saved by shipping by rail? The influences exerted by politicians seeking to advance their careers by promoting waterways, and by business men desiring to save their own money by shipping partly at the taxpayer's expense, were ignored.

Canals No Longer Built by Private Enterprise

Sir William Acworth called attention to the striking fact that before the day of railways private enterprise had built canals because it could then operate them at a profit on the investment made in them, but that this has never been done since the advent of the railway.

The obvious implication was that a canal built without government aid could not be operated at a profit in competition with a railway likewise built without government aid, and that, therefore, differences of service considered, actual experience had shown that railway service could be rendered more cheaply. The advocates of waterways had no answer to this. Mr. Chamberlain finally dismissed foreign experience by contending that whether Great Britain's inland waterways could be made a success could be determined only by investing several millions of pounds in the more promising. He outlined a number of projects which he believed should be carried out, one after another.

The Work of the Institute of Transport

The Institute of Transport, at whose congress these discussions occurred, is an organization which was formed a few years ago and which is without a counterpart in the United States. Its membership consists of persons interested in all the various means of transport—by railway, waterway, highway and even airway. The papers and discussions deal with the problems of all these various means of transportation, and as discussions are participated in by representatives of all these various interests, the advantages

and disadvantages of each means of transportation are presented by men who are entirely competent to do so. In the United States the railway, automobile and waterway interests have many separate organizations, but no common one in which they present their claims and counterclaims face to face where they can be at once challenged and analyzed.

One of the most interesting features of the Institute of Transport's sessions is the prominence of the men who take part in its sessions. The recent congress was not one of theorists. Several men famous for their writings and lectures on transportation matters actively participated, but there were also present and participating successful "practical" men representing all the branches of transport.

Besides the papers mentioned, there was one by Col. J. W. Pringle, Chief Railway Inspector of the Board of Trade on "Safety in Railway Operation," an abstract of which will be published separately in the *Railway Age*. "Wireless as an Aid to Transport" was discussed in a paper by Capt. H. Riall Sankey, "Foreign Railway Practice" by Prof. J. Carlier; and "The Operation of Heavy Suburban Passenger Services on a Steam Railway with Particular Reference to Density of Service, Terminal and Other Facilities" by F. V. Russell.

Railroad Y. M. C. A. to Celebrate Fiftieth Anniversary

ON JUNE 11, 1872, a reading room was opened in the Cleveland, Ohio railroad station and placed in charge of George W. Cobb, an active Y. M. C. A. worker. This was the first step in developing the Railroad Y. M. C. A., which now operates 269 buildings and has a total membership of over 125,000. In the fall of 1875 the Cleveland association temporarily released its secretary to interest other railroads in starting associations. As a result the work was started on several systems, including the Baltimore & Ohio at Baltimore, the Pennsylvania at Altoona and Jersey City, the New York Central at New York, Detroit, Columbus and Erie, and the New Haven at Springfield, Mass. Arrangements are now being made to celebrate the fiftieth anniversary of the Railroad Y. M. C. A. at the local associations on June 11, 1922, or sometime during that week. There will be a special observance at the Union Station in Cleveland, also a luncheon at the Hotel Commodore, New York, on June 16, at which President Truesdale of the Lackawanna will preside.

The following facts about the present scope of the work of the R. R. Y. M. C. A. are taken from a statement which has been issued in connection with the celebration of this anniversary.

The Association at Work

"Visitors to the various types of R. R. Y. M. C. A. buildings, ranging from the great ones in New York, St. Louis and Philadelphia to the small establishments in such towns as Hanley, W. Va., Field, B. C., and Hoxie, Ark., remark upon the strong place these hold in the affections of the men. They see the reason in the fact that these organizations—operating on a 24-hour schedule, and always open to railroad workers—provide homelike creature comforts, and acceptable, stimulating programs for mental and moral development and for physical recreation. And, seeing these things they rejoice that those in whose direct care lies the safe transportation of travelers and goods are not left to shift for themselves at isolated division points; but rather that they have a homelike place and care "at the other end of the run," to insure proper rest, wholesome environment and stimulus to the qualities that make for sound character.

"From the beginning the Railroad Y. M. C. A. has under-

taken a service to the sons and families of railroad men. In the early days this work was naturally limited, but during the years as the association has grown in numbers and extent, it has expanded accordingly, until at the present time many of the associations located in the smaller railroad communities are conducting very definite programs to the

A FEW FACTS FROM THE FIFTY YEARS' RECORD

	1875	1880	1890	1900	1910	1921
Number R.R. Y. M. C. A.'s	10	52	82	151	234	269
Total members	790	2,096	17,453	37,074	83,881	125,047
Value buildings and equipment			\$410,002	\$1,035,600	\$3,991,980	\$8,627,500
Operating expenditures	\$3,600	\$27,677	\$126,607	\$350,086	\$1,216,758	\$6,570,472
No. social and entertainments				1,116	2,477	5,049
Dormitories, times used			100,000	345,286	2,275,067	3,509,000
Restaurant, meals served				997,654	4,930,100	9,374,000
Average daily attendance			4,730	23,500	50,933	63,072
In Bible classes			1,050	2,500	7,088	10,937

families of railroad men and others as well as to the men distinctly in railroad employ.

"The association is not limited in its service to railroad men to the great cities, but very frequently finds its largest opportunities for helpfulness at the isolated and out of the way division points over a system. The physical features, such as dormitories and game room, have always been well patronized, but this does not constitute the entire service, which also includes educational work, social work and religious work—the secretary often being the only religious leader in the community—and other forms of association effort, such as work with the boys in the community, have made the association a centre from which has radiated all that is wholesome and best.

"Another phase of association service is the physical work particularly with reference to health and recreation. Programs of group games, such as volley ball, quoits, etc., during the comparatively few minutes at noon hour, which are available to shop men, prove to be very popular. These and other games similarly organized for the road service men and office men prove interesting and helpful to large numbers of railroad men.

"The railroad men of tomorrow are the boys of today. The railroad associations realize that here is an opportunity for a service, the influence of which it is impossible to describe adequately. Through well organized boys' work, reaching these sons of railroad men in groups ranging from 12 to 18 years of age, the railroad departments conducting this program are endeavoring to hold before these coming railroad operators and managers the highest ideals of American young manhood."

What Men Who Know Say

"Eighteen years of association with the Railroad Y. M. C. A. has convinced me that nothing too good can be said about the work of this splendid organization. The ten branches established on these lines are ten centres of inspiration for all that is best in railway life—healthy exercise, comradeship, mental improvement, and the atmosphere of home. The high standard of citizenship which prevails among the railway men of Canada is due largely to the influence of the Y. M. C. A., the efforts of which to promote the mental and moral, as well as the physical well being of its members, have been highly successful"—*E. W. Beatty, president Canadian Pacific.*

"The Railroad Young Men's Christian Association serves the most useful purpose in bringing together the men of the various departments in a mutually helpful way, and also in throwing together in its varied program men and executives, thereby promoting a more friendly feeling which is of real value in the working out of our co-operative interest"—*Thos. B. Morton, moulder, Southern Railway, (president, Federated Shop Crafts).*

"I have been a member of the Railroad Y. M. C. A. for 15 years and cannot speak too highly of its work. It is a veritable haven and a source of comfort and strength. While the 'Y' ministers to physical needs it does not forget to minister to the spiritual. Many a man can thank the 'Y' for a helping hand and encouraging work when he was down and out, bracing him to face the battle of life once more. Would that all railway men would become members of this splendid organization and realize the benefits to be derived therefrom."—*William J. Swift, engineer, Michigan Central.*

"I feel that it has been of great service in many respects. Our officers are all enthusiastic in their praise of the results which have been accomplished by the Y. M. C. A. work. While it is impossible to assess a money value to the results which have been obtained, yet I do feel that there is a very high money value and which I feel satisfied is far in excess of the amount which the Company has paid towards helping maintain these institutions."—*W. J. Harahan, president, Chesapeake and Ohio.*

"I can heartily commend the work which the Railroad Department of the Y. M. C. A. has done in the past 50 years. There can be no doubt that it is a lasting influence for good in developing and raising the standards of life of the employees of the transportation systems of the country, and those responsible therefor can well be proud of their enviable record over this long period of years. The sphere of usefulness of the Railroad Y. M. C. A. has continually broadened to the mutual advantage of the railroads and their employees, and I know of no activity that has contributed more to establishing a closer and more cordial relationship between railroad men."—*Samuel Rea, president, Pennsylvania System.*

"By personal observation I know that the practical service which it so unselfishly renders contributes a very important part in successful operation, and if only from a purely business viewpoint, the branches inaugurated on our line 22 years ago have proved a paying investment. The Association work has constantly grown in favor, and is of inestimable value to both the railroad company and its employees."—*William T. Noonan, president, Buffalo, Rochester & Pittsburgh.*

IN A REAR COLLISION on the Ulster & Delaware near Grand Gorge, N. Y., on May 26, six employees on a work train were killed. A freight train ran into the rear of the work train, crushing the caboose, in which the men were riding.

Fast Freight on Boston & Albany Wrecked Near Southville, Mass., by Bandits Whose Designs Were Against a Mail Train Due About the Same Time

Converting a Tunnel Into an Open Cut on a Busy Line

Bessemer & Lake Erie Adopts Interesting
Measures to Effect This Improvement
Without Delaying Traffic

By W. S. McPetridge,

Principal Assistant Engineer, and R. Ridgefield,
engineer, Bessemer & Lake Erie, Greenville, Pa.

While the Work Was in Progress

THE BESSEMER & LAKE ERIE is now converting a double track tunnel of limited clearance into an open cut without interfering with traffic in a manner which has given rise to a number of interesting problems. This tunnel is located near Culmerville, Pa., on the main line of the Bessemer & Lake Erie. It was built in 1897 and is 394 ft.

In 1909 a 5 ft. by 5 ft. timber-lined drainage tunnel was driven through the hill west of and parallel with the tunnel and about on a level with the crown of the arch, which relieved the situation somewhat in respect to water. This work was followed by a renewal of a part of the brick lining, and on the completion of the relining and the repointing of the brick, the tunnel was grouted.

Pipes three inches in diameter were put through the brick lining at the crown of the arch and cement grout was pumped through the pipes into the crevices and openings back of the lining by means of a grout gun. The pumping was continued at each pipe until no more grout could be forced into the cavities, the pipes being spaced from 25 to 50 ft. apart. About 2,000 barrels of cement and 75,000 brick were used in the above repairs.

This expedient proved effective for some time but in the winter of 1920-1921 bricks again began to spall out and the tunnel showed signs of a slight distortion. As a precaution-

Steam Shovels Working Over the Tunnel

long and 26 ft. wide at the springing line. The tunnel was designed for two tracks, although the clearance is very limited for present equipment.

The permanent lining consists of cut stone walls up to the springing line and a six-ring brick arch, with cut stone facades at the portals. The lower part of the tunnel is in shale rock but the overlying material is a mixture of clay, loam and soft shale.

Tunnel Has Given Trouble for Many Years

The tunnel is in a saddle in the hills and has always given trouble because of the seepage of water through the lining. The ground above the tunnel is bad and liable to slide, especially when wet. Considerable trouble was encountered with slides in building the tunnel and it was necessary to place a timber lining first and then build a permanent lining within the timber. Trouble was also encountered after the tunnel was in service and in 1909 a settlement in the arch required that heavy timber bracing be put in.

Removing the Arch at the North End of the Tunnel

ary measure a further timber lining was put inside of the brick and the tracks were gauntletted through the tunnel. Studies were then made to determine whether to permanently reline and enlarge the tunnel or to make an open cut at the place by removal of the tunnel. The latter plan was adopted and on September 3, 1921, a contract was made with the Arthur McMullen Company of New York, for all the work

in connection with the removal of the tunnel, with the exception of the structural steel in the highway bridge, which was awarded to the American Bridge Company.

Highway Traffic Created Special Problem

At the time of the original construction the tunnel was probably cheaper than an open cut and it is more than likely that the conditions above the tunnel, involving litigation with property owners and extensive highway changes, influenced the decision for the tunnel. These same conditions exist today for five improved highways converge into one road crossing over this tunnel. The traffic over these roads is very heavy; on July 4, 1921, 87 pedestrians, 18 horse-drawn vehicles and 3,887 automobiles crossed over the tunnel. No detour for this road was possible during construction and, finally, the highway had to cross the cut on a bridge, practically in its original position, near the center of the tunnel.

Among the first considerations in opening up the work was

The Timber Lining in the Tunnel

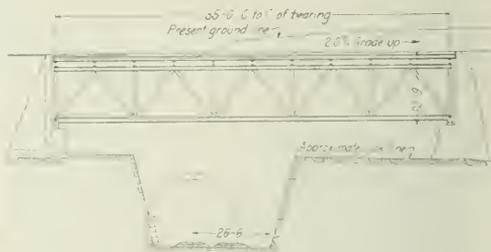

the provision for the handling of highway traffic while building the highway bridge. A temporary road was graded across the south end of the tunnel and this road was used from the beginning of the work in September, 1921, until traffic was turned over the new bridge on April 1, 1922. No change is made in the location of the main tracks and the work has to be carried out so as not to interfere with traffic on the railroad. As the tunnel is on the main line with very heavy traffic and with no possible detour in case of a blockade of the tracks, the contractor is not allowed to use the tracks or to interfere with them in any way.

The method of procedure was to make the excavation in the cut down to the rock line from the north portal to the temporary road over the south end of the tunnel. When this excavation was completed in December, the work was in such shape that the abutments for the highway bridge could be built, these abutments being completed late in January. The steel bridge work was erected by the American Bridge Company during February, very little excavation being done in the cut while the bridge was being built.

The highway bridge is to have a reinforced concrete floor or pavement and as the winter weather prevented this

from being placed at once after the erection of the steel work only the forms for the floor and the reinforcing bars were placed at that time and a temporary floor of 7 in. by 9 in. bridge ties was laid so that traffic could be turned over the bridge in order to release the temporary road and allow the work of excavation in the cut to be continued.

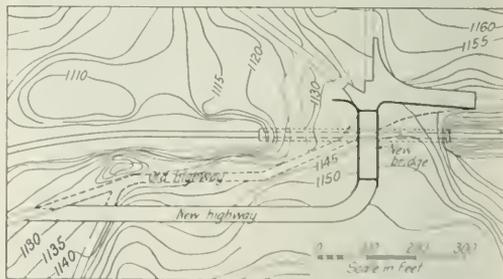

The permit for building the highway bridge required that the bridge be opened for traffic before the temporary road was removed and as there was no way of making a detour for the road it was necessary to get the permanent highway bridge in service as early as possible. For this reason the temporary floor was laid and the bridge put into service.

Cross Section of the New Cut at the Location of the Bridge

This floor is laid so that one-half can be taken up and the concrete floor put in while the other half is in use. After the half floor of concrete is sufficiently cured traffic will then be turned over it and the other half built.

The abutments for the bridge are of a general U shape with curved wings to provide easy approaches to the bridge. The abutments are both of the gravity type and the bridge is centered over the center line for four tracks or off center for the present two tracks, thus providing for the widening of the cut for two more tracks on the east of the present tracks whenever four tracks become necessary without further

It Was Necessary to Relocate Five Highways

changes in the bridge. The concrete was placed during the winter months but, owing to the open season, elaborate methods for preventing freezing were not required, the ordinary precautions of heating all of the materials and keeping a canvas cover over the concrete with fires around the abutments and steam lines under the covering sufficed for the work. The foundations were placed in the shale rock found in the lower part of the excavation, the berm between the rock slope and the earth slope being about at the top of the foundation course. The entire construction of the bridge is much heavier than ordinarily used as it provides for future electric cars in addition to the 16-ton trucks which are now permitted for highway traffic.

During March good progress was also made in the widening of the east slope of the cut south of the tunnel, the material above the rock line being excavated with traction shovels and auto trucks. Since April 1 the excavation of the cut over the tunnel has also been pushed to the limit of the amount of plant which can be handled economically in the limited area. Also, beginning at the north portal of the tunnel, where the top excavation was completed several months ago, the work of stripping the brick arch of the tunnel has been in progress. This work has been done by hand below the rock line, the material being loaded in skips and handled to the dinky cars by stiff leg derricks erected on the rock berm of the cut.

The Removal of the Tunnel Arch

The stripping of the arch has been of particular interest because of the fact that it revealed the results obtained by pumping the grout in behind the arch in 1910. It has been found that, except in a few places just over the crown, the entire tunnel excavation behind the lining was a solid mass of concrete, in which the original timbering and the stone packing between the timbering were imbedded.

The method used in opening up the tunnel has been to remove the original rock and shale material to expose the concrete encasing the tunnel arch. A row of holes is then drilled around the arch through the concrete but not extending into the brickwork and the grouted concrete is broken up by very light shooting. The material can then be removed by pick and shovel, leaving the brick arch exposed. The brick arch is then drilled and a section about three feet long around the arch is shot off by light charges in the holes. This shooting is done very lightly and is intended to loosen the brick so that they can be handled by pick and shovel men working on top of the arch. All but the inner ring of brick is being removed in this manner, this last ring being knocked down onto the track where the material is thrown to the sides at once, to be picked up later as the opportunity between trains affords. The timber lining is removed later, or at the time the brick is torn down. It is to be noted, however, that the timber rings inside the tunnel serve as a support so that a considerable length of one ring of brick has been left standing during a day when a section of the brick arch is being taken down. This work of taking down the brick arch has been done on Sundays when it has so happened that the traffic on the railroad has been very light, but it can be carried on at any time.

Various features of this work have proved of special interest. In taking out the top lift of the excavation the improved highways were utilized by the contractor who secured various dumping grounds along these roads and used auto trucks loaded by traction shovels to remove and dispose of a great deal of the excavated material. The sand and

coarse aggregate for the abutments were also brought to the work by auto trucks and delivered at the mixer by the dealers supplying the material. This material was only supplied as fast as required so that no large amount accumulated on the work, which was desirable on account of the work being done during winter weather.

The main dumping ground for material excavated on this work is located about half a mile north of the tunnel and is reached by a dinky track laid on the railway right-of-way. All of the material excavated below the rock level is being hauled to this dump.

It was first planned to take practically all of the excavated material to this dump but owing to the possibility for the use of auto trucks to handle it the contractor arranged with various owners of property having low grounds along the improved highways, to fill in their property for them, and thus disposed of a large portion of the top cut, the improved highways furnishing excellent roads to haul this material over. Owing to the poor quality of the material over the tunnel and on account of its running and sliding qualities when wet, none of it was dumped in the railroad embankments, and all of it was wasted, or used in filling low ground.

The work embraced 100,000 cu. yd. of excavation in cut, 12,000 cu. yd. of excavation for changes in highways, 285,000 lb. of structural steel, 2,000 cu. yd. of foundation excavation, and 1,700 cu. yd. of concrete. The entire work will be completed this spring.

This work has been handled under the direction of the writers and under the general supervision of H. T. Porter, chief engineer of the Bessemer & Lake Erie. Thomas McGuire, superintendent for the Arthur McMullen Company, contractors, is in direct charge of the work and is responsible for the development of many of the methods described above.

The "Prosperity Special"

THE BALDWIN LOCOMOTIVE WORKS, which has recently completed for the Southern Pacific fifty 2-10-2 type freight locomotives, oil burners, has sent 20 of them in a single special train to East St. Louis, Ill., over the Pennsylvania Railroad; and it is expected that they will arrive in that city on Monday, June 5. From East St. Louis they will be sent over the St. Louis Southwestern to Corsicana, Tex., where they will be delivered to the Southern Pacific.

This train left Eddystone, near Chester, Pa., on May 26 at 11 a. m., and should arrive at East St. Louis on Monday, June 5, at 6 p. m. The movement was by way of Wilmington, Del.; Perryville, Md.; Harrisburg, Pa.; Altoona, Pa.;

Special Train of Twenty Locomotives Leaving Eddystone, Pa., on May 26

Pittsburgh, Pa.; Crestline, O.; Ft. Wayne, Ind.; Richmond, Ind.; Indianapolis, Ind., and thence to East St. Louis.

Except on steep grades the train is being moved by three Pennsylvania locomotives, two in front and one pusher. Around the Horse Shoe Curve, six or more engines are required, divided between the front, middle and rear of the train. This train is nearly a half mile long, each locomotive with its tender measuring about 100 ft. in length. The train weighs, exclusive of the locomotives propelling it, over 6,000 tons.

The train travels only in the daytime and, to promote the object suggested by its name the locomotives are to be exhibited at the principal cities on its route, circulars being sent in advance calling the proposed exhibition to the attention of boards of trade, school authorities, public officers and citizens generally.

At Eddystone on the departure of the train there was an impressive ceremony at a specially erected grandstand alongside the Pennsylvania railroad tracks. Messages from Governor Sproul and President Harding were read by J. P. Sykes, vice-president of the Baldwin works. Speakers at the demonstration in addition to Mr. Vauclain were Elisha Lee, vice-president of the Pennsylvania; Richard Weglein, president of city council, and John P. Sykes, superintendent of the Baldwin works. Senator G. W. Pepper sent a letter explaining that he was unable to be present as he had planned, and conveyed the congratulations of President Harding.

The fact was recalled that in 1898 the Baldwin works shipped a long train of locomotives for the Chicago Elevated Railroad in similar fashion. Those were small engines of the Forney type.

Railroads Act on Commission's Freight-Rate Decision

THE EASTERN railroads—about 60 executives being present—voted on May 29 to comply with the decision of the Interstate Commerce Commission issued last week (*Railway Age*, page 1221) calling for a general reduction in freight rates, but to protest against the decision fixing 5¼ per cent as a reasonable annual income for the railroads. Following the conference L. F. Loree, chairman of the conference, issued a statement saying:

"* * * Since the commission finds that rates in excess of those determined by it shall be unreasonable after July 1, 1922, it was felt that the roads had no alternative except to put the rates in effect without a formal order.

"The roads also determined to enter a formal protest of the finding of the commission that on and after March 1, 1922, the fair return, as contemplated by the Transportation Act, will be 5¼ per cent, believing that this return is lower than is required by law and will not enable the railroads to finance themselves to the extent that they should be able to do in order to render adequate service to the public. * * * If the future demonstrates the need for additional revenues, the railroads feel confident that the commission will take steps to grant relief."

Southeastern Roads Accept

Executive and traffic officers of the southeastern roads, at a meeting in Washington on Monday, May 29, decided to put into effect the reductions in rates prescribed by the Interstate Commerce Commission without the issuance of a formal order, and a letter was addressed to the commission advising it of that fact. The roads do not concede that the reduction was justified but see no object to be gained in compelling the commission to go to the length of issuing a legal order. They also express the hope that the increase in traffic which

has been in progress for some time will continue so as to enable them to stand the reduction, even if the reduction itself does not cause any increase in business. W. R. Cole, president of the Nashville, Chattanooga & St. Louis, presided at the meeting. Consideration was also given to the details of getting tariffs ready for publication to become effective on July 1 on ten days' notice.

The Southern carriers in their letter to the commission said they do not accept all the reasoning by which the commission reached its judgment and specifically they except to the finding of the commission that a fair return is or will be 5.75 per cent. "They further specifically except to the conclusion that a general reduction in rates in the Southern group is at this time justified and can only express the hope that further reductions in labor costs where warranted and a substantial increase in traffic will yield results more nearly approximating a reasonable return upon the aggregate property value and so justify their action in the premises."

Conference with I. C. C.

The committee of railroad executives appointed following the White House dinner at which the President urged voluntary reductions in freight rates on basic commodities, held a further long conference with the Interstate Commerce Commission at Washington on May 25, pursuant to appointment made before the issuance of the rate decision, but no announcement was made except that "further discussion of the questions under consideration continued, including the bearing and effect of the recent decision of the commission relating to reductions in freight rates." At the conclusion of the meeting the railroad executives stated that the subject would be reported to their associates in the several portions of the country, at meetings to be held early this week, for further consideration, but that before leaving Washington it was their purpose to call upon the President "so as to express their appreciation of his interest in the general subject." The executives then went to the White House, where they remained about 15 minutes.

Secretary Hoover, who is credited with having inspired the effort of the President to induce the railroads to agree on a program of voluntary reductions in the rates on basic commodities in place of the general reduction prescribed by the Interstate Commerce Commission, expressed considerable disappointment with the outcome, although recognizing some of the difficulties of the situation. In commenting on the rate decision, he said he was inclined to agree with the minority members of the commission who favored reductions in basic commodities rather than spreading the reductions over all traffic. He said that a reduction of ten per cent in rates on silk, for instance, will do no good and that as far as the higher grade articles and luxuries are concerned "the money would better be used to employ labor to repair cars." If the commission cannot reduce rates in accordance with the value of commodities and at the same time give proper consideration to the earning power of the railroads, he said, the fact emphasizes the need for an entire readjustment of the rate structure. He thought probably some of the railroad executives might ask relief from the decision as to the rates on high grade articles.

Mr. Hoover said, however, that the Interstate Commerce Commission was faced with many difficulties because of the complexity of the situation and the differing degrees of dependence of different roads upon different commodities.

Secretary Mellon of the Treasury Department was quoted in the press as having suggested a five-year holiday from rate regulation, on the ground that if freed from restrictions the railroads could adjust their rates to meet varying conditions.

As we go to press the only word from the Western roads is that they will further consider the decisions of the Eastern and Southeastern lines before taking definite action.

Labor Board Cuts Wages of M. of W. Employees

Reduction of Five Cents An Hour for Unskilled Workers Effective

July 1. Labor Group Dissents

AFTER JULY 1, the rates of pay of maintenance of way employees and railway shop laborers will be reduced slightly more than 13 per cent under the terms of the first of a series of wage reduction orders announced by the Railroad Labor Board on May 28. The lower rates of pay were agreed upon by the three railroad representatives and the three public representatives on the Board, the two groups constituting the majority necessary to hand down the ruling.

The three labor members on the Labor Board voted against the ruling and attached thereto a lengthy dissenting opinion vigorously denouncing the decision of the majority.

The Board's decision adopts as a base the rates fixed in Decision 147, the last wage decrease, from which the following decreases per hour are authorized:

- "Sec. 1. Bridge, building, painter, construction, mason and concrete, water-supply, and plumber foremen (except water-supply and plumber foremen coming under the provisions of Sec. 1 of Article IV, Decision 147.).....5 cents
- Sec. 2. Assistant bridge, building, painter, construction, mason and concrete, water-supply, and plumber foremen, and for coal wharf, coal-chute, and fence-gang foremen, pile-driver, ditching and hoisting engineers and bridge inspectors (except assistant water-supply and plumber foremen coming under the provisions of Sec. 1 of Article IV, Decision 147).....5 cents
- Sec. 3. Section, track and maintenance foremen, and assistant section, track and maintenance foremen.....3 cents
- Sec. 4. Mechanics in the maintenance of way and bridge and building departments (except those that come within the scope of agreements with the Federated Shop Crafts).....4 cents
- Sec. 5. Mechanics' helpers in the maintenance of way and bridge and building departments (except those that come within the scope of agreements with the Federated Shop Crafts).....1 cent
- Sec. 6. Track laborers, and all common laborers in the maintenance of way department and in and around shops and round-houses not otherwise provided for herein.....5 cents
- Sec. 7. Drawbridge tenders and assistants, pile driver, ditching and hoisting firemen, pumper engineers and pumpers, crossing watchmen or flagmen, and lamp lighters and tenders.....5 cents
- Sec. 8. Laborers employed in and around shops and round-houses, such as engine watchmen and wipers, fire builders, asphalt men, flue borers, coal passers (except those coming under the provisions of Sec. 3 of Article VIII, Decision 147), coal-chute men, etc.....5 cents
- Sec. 9. For miscellaneous classes of foremen and other employees named in connection with a carrier affected by this decision, but not specifically listed under any section in the classified schedules of decreases, deduct an amount equal to the decreases specified for the respective classes to which the miscellaneous classes herein referred to are analogous.

Wages of M. of W. Employees Have Not Been Standardized

In discussing the new wage scale, the Board in its decision said in part:

The wages of this class of employees have not been standardized and made uniform throughout the country, as many people seem to think. Prior to Decision No. 2, they were not so standardized, and the increases made by that decision were arrived at by adding to the various existing rates a uniform increase of a certain number of cents per hour.

To illustrate the "absence of uniform standardization of the wages of the classes of employees herein covered" the Board cited the rates prevailing under Decision 147 on the Illinois Central, the Southern, the Chicago Great Western, the Northern Pacific, the New York Central and the Atchison, Topeka & Santa Fe and showing that the rates of pay of track laborers, for instance, range from 28 cents per hour to 40 cents per hour.

"As a matter of fact, the 28 cent rate is found on only a

few roads and applies to a comparatively small number of employees," the Board added.

Reduced Rates of Pay Still Above Industrial Levels

The decision continues:

The Labor Board is of the opinion that after the reductions made under this decision, common labor on the railroads will still be receiving, as a rule, a wage in excess of that paid to similar labor in other industries, and that the same will be true of all other classes of labor covered by this decision. The Board is of the opinion, however, that the hazards and hardships of the employment, the training and skill required, the degree of responsibility to the public, and other elements mentioned in the statute combine to justify the payment of a better wage to these employees than is paid to similar labor in outside employment.

On a very considerable number of the roads, the foremen and section men are furnished living quarters and fuel by the carrier.

Moreover, the Board is not in sympathy with the idea that a governmental tribunal, empowered to fix a just and reasonable wage for men engaged in serving the public in the transportation industry, should be controlled by the one consideration of the low wages that may be paid to other labor in a period of temporary depression and unemployment. It is but just to say that railway managements have indicated no desire for such a result.

Based upon the evidence before the Board, the statistical department of the Board has made a study of the comparative purchasing power of the wage herein fixed for so-called common labor and the purchasing power of the wage paid such labor on the railroads in December, 1917, immediately prior to government control of the carriers; in January, 1920, just prior to the termination of federal control; on May 1, 1920, the effective date of the decision No. 2; on July 1, 1921, the effective date of Decision No. 147; and in March, 1922.

The result of this study is as follows:

Average Hourly Rates	
December, 1917.....	19.3c.
January, 1920.....	37.7c.
May, 1920.....	46.3c.
July, 1921.....	37.7c.
Under present decision.....	32.7c.
Percent of Increase in Average Hourly Rates Over December, 1917	
January, 1920.....	95.3%
May, 1920.....	139.9%
July, 1921.....	95.3%
Under present decision.....	69.4%
Increase in Cost of Living Over December 1917	
January, 1920.....	40.0%
May, 1920.....	52.0%
July, 1921.....	26.7%
March, 1922 (latest available Government data).....	17.2%
Percent of Increase in Purchasing Power of Earnings of Subsequent Dates as Compared with December, 1917	
January, 1920.....	39.5%
May, 1920.....	57.8%
July, 1921.....	54.1%
Under present decision.....	44.5%

Although average hourly earnings of this class of employees are below the earnings prior to Decision No. 2 by five cents per hour, their value is 3.6 per cent greater due to the decrease in cost of living. The cost-of-living figures set out in the foregoing tables have been compiled by the reports of the United States Department of Labor and are for the latest date for which such data are available.

Regulations Governing the Application of the Decision

Among the general regulations governing the application of this decision, are the following provisions:

Sec. 1. The provisions of this decision will not apply in cases where amounts less than \$30 per month are paid to individuals for special service which takes only a part of their time from outside employment or business.

Sec. 2. Decreases specified in this decision are to be deducted on the following basis:

(a) For employees paid by the hour, deduct the hourly decrease from the hourly rate.

(b) For employees paid by the day, deduct eight times the hourly decrease from the daily rate.

(c) For employees paid by the month, deduct two hundred four (204) times the hourly decrease from the monthly rate.

Sec. 4. It is not intended in this decision to include or make

decreases in wages for any officials of the carriers affected except that class designated in the Transportation Act, as "subordinate officials," and who are included in the act as within the jurisdiction of this Board. The act provides that the term "subordinate officials" includes officials of carriers of such class or rank as the Interstate Commerce Commission shall designate by regulation duly formulated and issued. Hence, whenever in this decision words are used, such as "foremen," etc., which may apply to officials, such words are intended to apply to only such classes of subordinate officials as are now or may hereafter be defined and classified by the Interstate Commerce Commission as "subordinate officials" within the meaning of the Transportation Act.

The decision of the Board with respect to the wage reductions, as outlined in the specific paragraphs given above, is effective on those roads and with respect to those particular classes of employees that were specifically named in the submissions made to the Board by the various railroads. The decision includes a long list of all railroads indicating in each case what classes of employees are affected.

Dissenting Opinion of the Labor Group

The dissenting opinion, signed by A. O. Wharton, Albert Phillips and W. L. McMenimen, labor representatives on the Board, gave the following as specific reasons for the refusal of these members to join in the majority opinion:

(1) The rates of pay established under this decision as the basic minimum rates of the transportation industry will merely perpetuate the low level of purchasing power possessed by this large class of workers in pre-war years. The opinion expressed in the majority decision, that "The Board is not in sympathy with the idea that a governmental tribunal, empowered to fix a just and reasonable wage for men engaged in serving the public in the transportation industry, should be controlled by the one consideration of the low wage that may be paid to other labor," would seem to indicate a feeling that the decision should not perpetuate the injustices of a former unregulated period. We show clearly the fallacies of attempting to show that the rates of the decision will mean increased purchasing power over pre-war levels.

(2) The rates of pay established under this decision will mean annual earnings far below any minimum standard of subsistence which has been formulated, even below those of most conservative employer groups.

(3) The rates of pay established under this decision are not based upon the human needs of the hundreds of thousands of families involved. They are insufficient to provide these families with the absolute essentials. The earnings of this large group of railroad employees will not provide the father of a family with as much food as is allowed convicts in the Cook County, Ill., jail.

(4) The pre-war standard perpetuated by this decision was the product of inequitable wage bargains. It was considerably below the level recognized at that time as necessary for the maintenance of health and energy.

This opinion, much more voluminous than the decision itself, also includes a lengthy analysis of part of the majority decision in part as follows:

The statistical study of the comparative purchasing power of the wage for common labor fixed by this decision and the purchasing power of the wage paid such labor in December, 1917, which serves as the major justification in the majority report, is unfair and misleading.

In the first place it fails to take account of the change in the number of hours constituting the basic working day as between the two periods. During the period covered, the basic day was reduced from 10 hours to 8 hours. According to Wage Series Report No. 3 issued by the Labor Board, the average daily rate of pay for this class of labor was \$1.93 in December, 1917, and will be \$2.62 under this decision. This shows a wage increase amounting to 35.8 per cent, not 69.4 per cent as stated. This would bring a consequent reduction in the figure for the increase in the value of earnings from 44.5 per cent, the figure in the majority report, to 15.9 per cent, which is the correct figure.

The Railroad Labor Board has decided that 8 hours shall constitute the basic day for this class of labor, and it must, therefore, in good faith, recognize that the basic earnings of these employees under the decision will be only 35.8 per cent above the level of December, 1917, meaning an increase in purchasing power of only 15.9 per cent instead of 44.5 per cent as stated in the majority report.

In the second place, consideration of the entire comparison leads one to the conclusion that the period chosen presents an unfair picture. During the period 1915 to 1917 the cost of living had been rising far more rapidly than the wages of this class of

employee. In other words, the \$1.93 per day representing the average wage in December, 1917, meant a lower purchasing power than the average wage in 1915.

It is hardly necessary to point out that a fairer comparison would have gone back to 1915. In that year, according to the Interstate Commerce Commission, the average hourly earnings of section men were 15 cents. For the 10-hour day this meant earnings of \$1.50. Comparing this with the earnings for the standard pay under the majority decision—namely, \$2.62—we find that the level of money wages will be 74.4 per cent above the 1915 level. According to United States Department of Labor reports the cost of living in March, 1922, was approximately 60.5 per cent above the average for 1915. Combining these two figures we arrive at the correct per cent by which the value of a section man's wages under the majority decision will exceed the value of his wages in pre-war days. It amounts to only 8.7 per cent instead of 44.5 per cent as indicated in the majority report.

There is a third way in which the majority report fails to show the real effect of this decision upon the value of the wages of common labor in the maintenance of way department. The statistics presented deal only with section men. There are roughly 100,000 other unskilled workers who will also be affected by the decision. In the Interstate Commerce Commission classification these are classed as "other unskilled laborers." In the Labor Board's Wage Series Report No. 3 the number of "other unskilled laborers" is set down as 108,977.

According to the Interstate Commerce Commission report for 1915, this group received an average hourly rate of 18.2 cents in that year. Under the majority decision this same group will average approximately 35.9 cents per hour. Extended to a daily basis this will mean \$2.872 for the standard work day compared with \$1.82 in 1915. In other words, the money wages of this group of employees under the decision will be only 57.8 per cent above those which they received in 1915. This contrasts with an increase in the cost of living, already noted, of 60.5 per cent, showing a decrease of 1.7 per cent in value of their earnings.

Combining the two classes of unskilled employees in the maintenance of way department, we have approximately 180,000 men who will receive money wages for the standard day under the decision only 69.7 per cent above those which they received in 1915. In other words, the increase in the real value of the wages of this group as between the two periods will only amount to approximately 5.7 per cent.

New Rates of Pay Correspond With Minimum Wage for Women

There followed a long argument, replete with statistics, to show that the minimum rates of pay established by this decision correspond closely with the minimum wage for women without families to support as established in different states and that the pre-war wages of these employees were "inadequate."

"It is obviously unjust to expect the railroad employees," the minority opinion continued, "who should be responsible for the maintenance of families to endure wages at a level designed as the minimum for the support of single women. Such a comparison shows the inherent absurdity of expecting a male employee to renew his strength and to maintain his home from day to day on the wages provided in the majority decision."

The pre-war wages of this class of workers were established in a labor market which to all intents and purposes was subject to no regulation. The carriers bought this labor as a commodity at the lowest possible figure. Just and reasonable wages could not result from such a process which is the very antithesis of the function which the Labor Board is supposed to perform under the Transportation Act. It seems strange that a responsible body created to establish just and reasonable wages, with certain clearly defined principles laid down, should arrive at wage rates so closely approximating the value of those arising in an utterly unregulated labor market.

"Living, Subsistence and Saving" Wages Discussed

The dissenting opinion then launches into an extensive discussion of "living," "subsistence" and "saving" wages, budgets for the employees involved (even to the point of quoting specific menus, the number of calories therein necessary to maintain a worker and his family), and closing with the statement that "the most important grounds for dissent from the majority decision lie in the contrast between the wage therein provided and any minimum standard of sub-

sistence which has ever been suggested whether by governmental or state departments, investigators for charitable institutions, city bureaus, or by representatives of labor. The wages provided in the decision will enable the average employee of this class to secure little more than one-half of the necessities specified in the majority of these budgets as absolutely essential. This decision will provide the section men with only about two-thirds of the goods provided by the lowest budgets of the National Industrial Conference Board. As a matter of fact the minimum rates under this decision will scarcely buy the food part of the minimum subsistence budgets which will be cited, with nothing left for clothing, rent, furniture, heat, light and other essentials.

"It is clear, then, that on the basis of the rates of pay established under the majority decision, some quarter of a million railroad employees, an entire class, must forego the thought of a family in order to be sure of enough food to keep themselves from actual starvation. With the development of families under-nourishment will immediately appear."

Labor's Reaction to the Order

The usual quota of comments by labor leaders and railroad executives followed the announcement of the Board's wage cut order and by Wednesday attention was centered on what reception the new rates of pay will receive from the officers of the union whose membership is involved. The latest report from the Detroit headquarters of the United Brotherhood of Maintenance of Way employees and Railway Shop Laborers indicated that the executive council of that organization favored the rejection of the lower rates of pay and the submission to its membership of a strike ballot. E. F. Grable, grand president of the Maintenance of Way Brotherhood, had previously predicted that a strike vote would be ordered but explained that a strike would be called only if the referendum of the brotherhood membership favored it. It is probable that the action of the maintenance of way organization will depend upon the action taken by

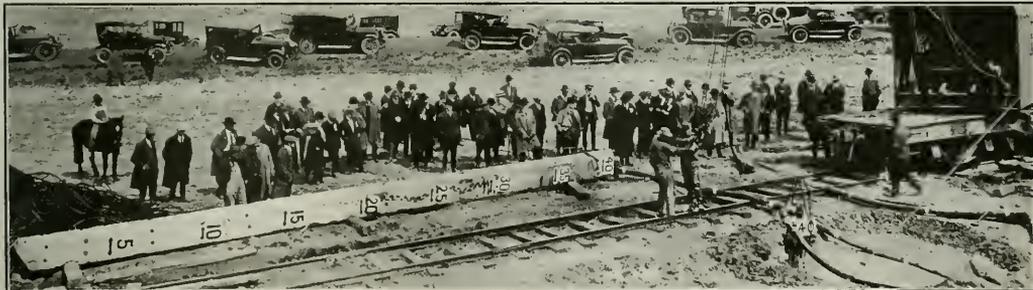

and the third on the question of reduced rates of pay. All of the strike talk carries the threat of a general walkout on the part of those railway employees affected by the Board's recent decisions some time between July and September.

Wage reduction orders of the Labor Board do not follow the recent freight reduction order as "the effect of cause." Chairman B. W. Hooper of the Board has frankly stated that the Interstate Commerce Commission's order would in no way influence the Board in reaching its wage decision. Wage reduction orders involving all other classes of railway labor involved in the recent controversy over wage scales will be issued in time to become effective on July 1 according to representatives of the Board.

Pile Jetting Tests Show Unusual Results

A REMARKABLE DEMONSTRATION of pile jetting was conducted on April 26, near Omaha, Neb., in the presence of a large crowd of spectators, including a number of prominent railway officers. The piles employed in this test were the Bignell reinforced concrete piles which have been in use for a number of years in locations where the use of reinforced concrete was desirable and where conditions made jetting of the piles imperative or of considerable advantage. The test was conducted by the Woods Brothers Construction Company of Lincoln, Neb., for the purpose of showing the advantage of this form of piling.

The Bignell piles are equipped with a four-inch pipe extending through the center for the entire length which is attached to a one-inch nozzle at the bottom and with small outlets on all four sides at intervals throughout the entire length. Thus, water delivered through this pipe not only serves to bore a hole to receive the pile in its downward movement but also insures thorough lubrication throughout its entire length. As a consequence, these piles will sink

After the First Sheet Pile Was Sunk, the Second Was Driven Beside It

the Federated Shop Crafts who are facing a comparable or larger cut in their rates of pay as the result of another order of the Board which is to be handed down in the immediate future. B. M. Jewell, president of the Federated Shop Crafts, has already termed the cut in wages of maintenance of way employees as "unwarranted" and "indefensible." Mr. Jewell opened his campaign against the impending wage cut by requesting a conference with the members of the Railroad Labor Board at which a formal request was made for immediate action on all charges of violations of the Board's orders by various carriers. Mr. Jewell has indicated that the strike ballot which he will send out will embody three questions: The first on the contracting of shop work; the second on the elimination of time and one-half for overtime for the ninth and tenth hours of consecutive service;

of their own weight as long as the water is kept running where the soil conditions are in any way favorable for jetting.

One photograph shows the Bignell sheet pile for use in sea wall, dock construction, etc. The one shown in the picture is 10 in. in thickness and has a 20-in. face. The sheet piles may be made in any thickness, width and length that accords with reasonable requirements. They are reinforced and are sunk in the same manner as the other Bignell piles. The tongue of one fits into the groove of the other making a water-tight wall. If it is desired, thin wood sheets may be inserted in the groove and as these expand with a greater content of moisture they afford a further assurance of water-tight construction. The point of the pile is bevelled somewhat which tends to force it against the pile

previously driven as it makes its way downward to the desired depth.

The demonstration was made in Missouri river bottom land. The first test was the sinking of 40-ft. sheet piles, 10 in. by 20 in. in section, reinforced by $\frac{7}{8}$ -in. bars and woven wire, and weighing 4.2 tons. The first sheet pile was sunk under water pressure of 175 lb. per sq. in. to a penetration of 30 ft. in $1\frac{1}{2}$ min. The water pressure was turned off and this pile remained stationary in its position during the sinking of the second pile. The time required in sinking the second pile was 4 min., the same water pressure being applied.

The second test was the sinking of a 45-ft. foundation pile, 16 in. by 16 in., weighing 5.7 tons, supported by an inclined scaffolding at an angle of $12\frac{1}{2}$ deg. from the vertical. This pile made a penetration of 43 ft. in four minutes and maintained the same degree of inclination as the scaffolding.

Interested Spectators Witnessed the Demonstration

The third test was the sinking of a pile of the same dimensions perpendicularly to a depth of 84 ft. in nine minutes under a pressure of 250 lb. Each of the piles was withdrawn under somewhat reduced water pressure for use elsewhere, with the exception of one of the 45-ft. by 16-in. by 16-in. piles which was sunk nearly its entire length and upon which a heavy weight was placed as a test of its supporting strength.

The fourth test was that of placing a pile 20 ft. by 14 in. by 14 in. which is the standard size of the anchor piling used in the river protection work along navigable streams. The weight of this pile is $2\frac{1}{4}$ tons. It was sunk to a depth of 70 ft. in six minutes under 250 lb. water pressure.

THE NEW YORK, ONTARIO & WESTERN announces that its locomotive shops will be operated with full forces beginning June 5. Since early in April, large numbers of men have been laid off because of the light freight traffic following the strike of the coal miners.

“The Commission Declares Its Independence”

THIS IS THE title of a circular to members, issued by the Railway Business Association on May 24, and signed by A. B. Johnson, president, which reads in part as follows:

Railway managers are justified in feeling and we understand do feel that the compromise announced by the Interstate Commerce Commission on May 24 warrants hopeful confidence and a steady enlargement of purchases for maintenance and additions. By dating the reduction in freight rates July 1, the date when the Labor Board decision is generally expected, the commission has employed perhaps the only expedient properly available to it for practically synchronizing the rate and wage adjustments. This will inspire railway managers with confidence in continued improvement of income. We have urged that the commission should in some way make clear that the rate level to go into effect July 1 is intended to be stable for a considerable period.

Attention on the Labor Board

Attention will now be focused upon the Labor Board. Whether that Board is to enjoy favorable public opinion will depend upon the degree to which it co-ordinates its forthcoming action with that of the commission.

By clipping off $\frac{1}{4}$ per cent from the rate of the return at which its regulation will be aimed the commission makes a concession which may be accepted as responsive by those who have urged that 6 per cent was too much. Time must test this adjustment.

By making the decision horizontal the commission gives its answer to those who through political pressure have attempted to obtain reductions on selected commodities. The victorious horizontalists were represented by the National Industrial Traffic League, which rigidly restricted its efforts to testimony presented in an orderly manner before the commission and deprecated the enlistment of political leaders for exertion of influence. There are impartial economists who favor a permanent policy under which certain grades of commodities would be carried at lower rates than has been the American tradition and certain other grades at rates higher than our usage. By initiating its own reductions in its own way the commission has asserted its independence and thereby given the country new reason for holding it in respect. Appeal to the railroads from the commission's judgment not only is repugnant to the law but portends destruction of the commission as a quasi-judicial body. There is no middle ground. Either the task of restoring railway credit as a basis for railway rehabilitation is the task of the Interstate Commerce Commission or it is not. If it is, then every attempt to evade acquiescence in the judgments of the commission is a repudiation of judicial process and a proclamation of private warfare in the settlement of disputes.

We have no means of verifying current reports imputing to candidates for re-election an effort to make railway rate reductions a claim for consideration at the polls. We would prefer to discredit them. If, however, there are even a few candidates who have a confused idea of what ought to win the approval of constituencies we counsel them to draw wisdom from this latest refusal of the commission and the railroads to surrender their independence of judgment.

The best advice to give candidates for office from now until November is that they give the railroads, the industries, the farmers and the commission an opportunity to work out the rehabilitation of the transportation machine upon which depends upon prosperity and preparedness for future traffic.

Proceedings of the Fuel Association

Later Sessions Dealt with the Relations of the Railroads to the Coal Mining Industry

DURING the later part of the fourteenth annual convention of the International Railway Fuel Association, which was held at the Auditorium Hotel, Chicago, May 22 to 25 inclusive, a number of papers and addresses were presented which dealt with the coal mining industry

in its various relations to the railroads and the public. The earlier part of the program, which dealt more directly with the problems of the railroads with respect to the economical use of fuel, was presented in last week's issue of the *Railway Age*, page 1233.

Status of the Coal Mining Industry

Addresses discussing the present status and future prospects of the bituminous coal mining industry were delivered during the convention by F. S. Peabody, chairman of the board, Peabody Coal Company, and by T. H. Watkins, president, Pennsylvania Coal and Coke Corporation. Mr. Peabody discussed the subject of idle day cost and Mr. Watkins dealt with the relations of the government with the coal industry. In a paper on the over-development of the industry to transportation, C. E. Leshner, editor of the *Coal Age*, pointed out that the over-development has not been without its benefits to the consumer because of the effect on selling price of the desperate competition thereby effected.

Mr. Peabody's Address

Mr. Peabody, using the operations of his own company as a basis, estimated the capacity of the bituminous mines actually developed in the United States, working 300 days a year, to be 1,000,000,000 tons a year. The total investment in the bituminous mining industry, on the same basis, was estimated to be approximately \$2,000,000,000 with about 700,000 men employed in the industry. The average output of the bituminous mines runs between 450,000,000 and 500,000,000, the mines working approximately 200 working days, leaving 100 working days idle. The annual loss on the capital because of the 100 idle days amounts in the aggregate to \$123,912,000. This total is made up of \$40,000,000 interest, \$51,968,000 for labor and supplies required in the maintenance of the mines during the idle days, a depreciation charge of \$26,666,000 and taxes and insurance amounting to \$5,278,000. The depreciation is charged on a basis of an average life of the mining property of 25 years before exhaustion.

Mr. Peabody estimated the average wage of mine employees, including all classes of labor, at \$4.00 a day. For 700,000 employees this amounts to a total annual loss of \$280,000,000 for the 100 idle days, an economic loss which could have been saved if the surplus labor represented by the idle time had been employed in other productive work.

Mr. Peabody expressed the opinion that neither the repeal of the Sherman anti-trust law or government control of the industry would prove to be the solution of its present difficulty, but advocated unrestricted competition as the best means of ultimately restoring the industry to its proper relation to the public demand. This would result in the elimination, through bankruptcy, of excess mines and a gradual discharge and redistribution of the excess labor. Mr. Peabody expressed the opinion that ten years will be required to bring about such a readjustment but that in the long run this is the cheapest way out of the situation from the public standpoint.

Mr. Watkins' Address

An abstract of Mr. Watkins' address follows:

I fully agree with the statement made by our former

Fuel Administrator, Dr. Harry A. Garfield, that "when basic necessities are involved, government, representing and speaking for the entire public, must charge itself with responsibility to see that capital does not impose upon labor, nor labor upon capital, nor either or both of them upon the public."

Today our laws restrict and prohibit certain activities of capital; trade agreements are not yet clearly defined. On the other hand, labor associations have by statute been made exempt from anti-trust laws. The responsibility of labor organizations has not been defined. Organized labor has by statute been made a privileged class. This great crisis may bring the people of the nation to a realization that labor organizations, together with capital, must be bound by proper and reasonable restraints.

Too often has it been the case in the past that orders for railroad coal are placed where five or ten cents a ton difference in the price has been the controlling factor in shifting hundreds of thousands of tons from one mine to another, or worse, from one district to another. Too often has the temptation of a guaranteed car supply offered to certain operators resulted in breaking the whole market structure.

You might quite easily say, that the purchasing agent's duties are to buy his coal as cheaply as possible. But how seldom the purchasing agent or the superintendent of motive power, who may have the decision, considers in the shifting of his orders the effect that it has on the working men and the communities dependent upon those particular mining operations. The tonnage consumed by our railroads is of such magnitude that displacement of any considerable amount from district to district, year by year, contributes enormously to the unrest and discontent with earnings and working conditions in the coal mines.

Railroads in many instances, owing to the desirable character of the traffic, have encouraged the development of new fields in advance of the market's normal requirements. The result of over-development and supply in excess of the market requirements has been costly, causing many wasteful practices in the mining, distribution and selling methods. Intermittent operation at the mines increases costs enormously, also making it extremely difficult to handle the mine labor problem satisfactorily either to the operator or the miner.

From the standpoint of production there is no other industry, taking the country as a whole, wherein the production is as uniform as between summer and winter seasons as in the coal industry. Anthracite is practically uniform throughout the year, very little fluctuation in the production having occurred for many years. Bituminous shows that the production in the so-called summer months, running from April first to October first, has not fallen below 45 per cent of the total annual production for nine years. There were local districts where these percentages did not apply. It would be impracticable to try to improve to any

great extent on the present situation as far as production and demand as a whole are concerned.

What is needed above all else in order to stabilize production and demand is a method of handling our labor problems both on the railroad and at the mine by which strikes or threatened strikes will be avoided. Then, within the industry stabilization will come about naturally without risking dangerous experiments.

The enormous amount of intermittency of employment which has existed for the past year has been due to the fact that through the award of the Bituminous Coal Commission the union operators of the country were forced into a contract, binding upon them up to the first of April, which compelled them to pay a rate of wages from 30 to 40 per cent in excess of the wages of non-union operators, which naturally resulted in the displacement of great volumes of tonnage from one district to another union operators and miners losing tonnage to their competitors, whole communities thrown out of gear, railroad facilities idle, while in other sections the opening of new mines, increasing the capacity of old mines, was rapidly proceeding.

The union operators subject to the competition referred to would fail in their duty to their own interests, to the public interests, and to their employees if they should agree to repeat the mistakes of the past, or to abide by arbitration that did not settle a wage basis for their competitors as well as for themselves. I do not see how this fact can be ignored. The union leaders do not ignore it; they are waging a battle to control the non-union fields of the United States; they seek domination of the whole industry. Whether they can secure it or not remains to be seen. If they do, what then will be the policy of this government? Will that aggregation of labor be left free under the present liberal construction of labor's rights to tell the country how it is going to secure its coal, at what price and when?

In the fixing of wages a general principle should be admitted. The wages in any industry must bear some fair relation to the wages in related industries. It would inevitably follow that a material departure from this standard in the way of high wages for any particular class results in attracting to that industry a surplus of labor, finally resulting in short time employment or lower earnings. In other words, the law of supply and demand is inexorable, and follows into the wage structure as it does into the price of commodities.

I can think of no other solution, as applied to basic industries, than one that is based upon fair wage standards of related industries with a minimum wage that takes into consideration the cost of living and the nature of employment. Neither the government, nor any other agency of inquiry, investigation or arbitration, would be able to build up a wage structure satisfactory to the miner, operator or the public. The only way to a solution lies between miner and operator on the principle of collective bargaining, bearing in mind at all times the economic and competitive situation surrounding the industry. From these general principles the union organization has departed. Operators generally have not believed that the industry can be controlled in a practical manner by any national policy. So that the practical solution is the return to district agreements. The laws now on our statute books leave that method as the only practical procedure.

Mr. Leshner's Address

After citing statistics to show that the coal mining industry is over-developed, Mr. Leshner stated that the public interest in this fact centers largely around its effect on labor on the reduced opportunity of the individual to work and the high unit wage required thereby to insure a sufficient annual income. He called attention, however, to the effect of the excess of mines as a safeguard to the consumer of soft coal against high prices, stating that few bituminous coal mines

have reached the happy state of a steady profit year in and year out. To demonstrate that the charge carrying the excess capital invested in coal mines is not a direct tax on the consumer, Mr. Leshner referred to a recent statement of T. T. Brewster, an Illinois coal operator, in which he estimated that the price of the coal at the mine should be \$1 over the combined labor and material cost in order to take care of capital charges. Since the \$1 was calculated on the basis of an annual output of 500,000,000 tons and the production in 1921 was but 407,000,000 tons, the \$1 actually becomes \$1.23 a ton. This was actually 55 cents more than was received in the average selling price of \$3.04. In other words, the consumer of coal in 1921 saved nearly a quarter of a billion dollars because of the competition in the bituminous coal industry, resulting from its over-development.

Mr. Leshner then sketched the relation of the railroads to the development of coal mines, showing that the desire for traffic has led railroads to build branch lines into all districts carrying coal deposits, as a deliberate policy, partly to develop traffic for immediate handling and partly to protect the individual interests of the railroads in future mining developments. The availability of the transportation, however, encouraged over-development in the mining industry. Continuing, Mr. Leshner said: "Because the soft coal mines out at the ends of the feeders can load more coal than these feeders can carry and because these feeders can carry more coal than the main line, assembling yards, junction points, and terminals can handle, a car shortage arises when all the mines try to run full time. Cars are portioned out in accordance with capacity of the mines. It, therefore, happens that an operator who desires to be assured of a given output per day every day, say 1,000 tons, must build a mine with a capacity of 2,000 tons per day. The rules of car distribution during periods when cars are short, and those of the times when everyone is calling for coal, force over-development.

"There is one way to avoid such over-capacity and yet get coal to market in times of tight car supply. That way is to own cars. Privately owned cars are not subject to the rules of distribution affecting the cars of the railroad, unless they are what are known as assigned cars. Thus the coal operator who would be assured of always putting a given minimum of coal to market each day or week must either double his mining capacity or own a string of open top cars. His extra investment is about the same in either event."

Mr. Leshner then discussed the possibility of effecting a cure for the evils of over-development in the industry and dismissed the proposal that this be done in a reduction of the number of men employed in the mines as impracticable because of the fact that it would still leave the burden of excessive capitalization on the industry. He then took up the suggestion that the improvement be effected by the elimination of mines, that is, of capital investment, and stated that the specific development to be selected for elimination may be determined by one of two methods, either the arbitrary action of a super-authority appointed by the government or the process of natural law. There is a choice of two criteria in carrying out the arbitrary method of elimination. One is to select the newest mines and the newest fields, because these are the units of production that have been superimposed on the industry. But these are the most profitable units, with the lowest operating costs and their elimination would, therefore, raise the average cost of production of bituminous coal by 25 per cent. The other method is the selection of the mines with the shortest running time for elimination. This would leave the more economic fields in operation but obviously would meet with much opposition from the industry itself, if its accomplishment were attempted by arbitrary methods.

Taking up the process of natural law, Mr. Leshner said: "The Transportation Act of 1920 has already provided for calling a halt to indiscriminate encouragement of coal

field development. We appear to have passed that hazard. One with half an eye and any belief in the future growth of this country must see that the over-development of today in this basic industry may become the under-development of the next decade. That is exactly what happened to the railroads, to our national sorrow. I believe the growing pains of the industry are about over, that it is entering the period of sturdy young manhood. It will shortly be decided whether it is to reach maturity under the tutelage of government or under the guidance of private initiative and enterprise. The United Mine Workers and the operators are now striving for the control of the industry. The union will never be

permitted to secure that control directly. The operators would much prefer that the government have their mines. . . .

"This over-development is not an unmitigated evil. I hope we never remove it completely, for that would be poor national policy. We trust that it is halted now, for the rate of growth of the past five years was leading in the wrong direction. It would, however, be good public policy to introduce measures designed steadily to reduce it. These measures will be feasible and sane only when they look to make operation unprofitable for some mines and thereby put them out of the running and provide for keeping them out of the running during boom periods."

The Relation of the Maintenance of Way Department to Fuel Conservation

By W. S. Burnett

Engineer, Maintenance of Way, Cleveland, Chicago, Cincinnati & St. Louis

On the Big Four, the maintenance of way department handles the coaling stations. There is not much opportunity at these stations to conserve coal, unless it be to watch the loading of engine tanks, to see that these are not overloaded, that coal spilled at the dock is kept picked up and all coal is cleaned out of the cars. If the dock is operated by steam, careful firing of the boiler is required to avoid extravagant fuel consumption. The fuel compartment of the dock should be cleaned regularly, so as to avoid accumulation of fine coal and consequent waste if this fine coal is loaded to engine tanks; also to avoid loss by spontaneous combustion if the coal should take fire in the dock.

Coal dock attendants should keep a sufficient supply of coal in the dock so that the breakage of coal will be reduced to a minimum. If the coal is permitted to fall from a considerable height it will break up and locomotives will be furnished too large a proportion of fine coal. This has been the cause of numerous complaints from engineers. By keeping the docks nearly full there is less likelihood of the lumps rolling away from the fine coal and causing a decrease in value of the fuel when used on engines.

Neither the locomotive engineer nor the fireman can be held responsible for all of the coal consumed on the engines while they are on duty, because of the indirect responsibility of officials and other employees. The maintenance of way department carries a lot of this responsibility and I will mention a few instances where it can greatly aid in the conservation of fuel.

The work in connection with maintenance of tracks and bridges in many instances requires slow orders for the safety of trains. These slow orders mean greater fuel consumption, more especially if the speed is restricted below 30 miles per hour. The laying of new rails and the reballasting of the tracks mean reduced speed. The program of the work should be carefully considered, so as to prevent the stopping or slowing up of trains. In laying rail this can be partly avoided where there is double track by using single track during the hours the work is in progress. On single track the best time between trains should be selected so that a considerable stretch of track can be laid in a short time and full spiking and bolting carried on under traffic. While reballasting tracks care should be taken not to strip too far ahead of the gravel supply so as to avoid skeleton track. The track should be in shape for the passage of all scheduled trains during work period, and if filled with ballast should be left in condition for full speed during the night.

Where slow orders are placed on bridges for the protection of workmen and not required for the safety of the structure, these orders should be maintained during working hours only.

Due to increased tonnage of trains the question of extending passing tracks is continually arising. When deciding on

the question of extension of passing tracks, consideration should be given to the saving of fuel, as the doubling over of a few trains greatly increases operating expenses.

Industrial tracks should be planned to consume the smallest amount of time in switching, and this can be done by seeing that the grades are easy and curvature low. In placing yard tracks the grade should be laid so that the cars will require a minimum amount of power from engines. The location of the ground selected for yards is sometimes favorable to this, but if not, with a small additional expense for grading the cars can be made to run by gravity, at least for movement in one direction. The fuel saving here will be enormous and more than compensate for the extra cost of grading.

The failure to properly consider the arrangement of signals results in delays to or stopping of trains, more especially when interlocking plants are closely located and do not work in unison. It is, of course, apparent that the maintenance of interlocking plants should be followed up closely, renewals anticipated and every effort made to keep them in continuous service.

The operation of work trains under the jurisdiction of the maintenance of way department is another factor which materially affects fuel consumption. Representatives of the maintenance of way department in charge of work trains should keep in very close touch with the dispatcher so that they can efficiently conduct their work with the least possible delay to their own or to other trains. This is especially important when work is being done on track where the grade is heavy or in yards where several switch engines are working. The stopping of passenger or local freight trains to unload maintenance of way employees or maintenance of way material should be watched carefully and unnecessary stops avoided.

In addition to handing coal at coaling stations, the maintenance of way department also distributes coal for other facilities, such as water stations, power plants, etc. They also unload the coal for use at passenger and freight stations and for offices. Most of the coal consumed at these points comes from that picked up on the line, principally in yards where there is a large movement of coal. A large number of hopper cars are dumped in yards, either through rough handling or defective equipment. It is the duty of the maintenance of way men to pick up this coal. It should be reclaimed promptly and loaded free from dirt and cinders. In the event of an excess of this coal, it may be used for the coaling of locomotives and the inclusion of dirt and cinders will greatly reduce its economical use. Lumps of coal falling from engine tanks or cars should be picked up currently and free from dirt.

At maintenance of way steam plants, boilers should be assigned to the best advantage for the work to be performed.

These boilers should have regular inspection and be kept free from leaks and other fuel wasting items. The grates, dampers, flues, etc., should be given special attention so that the most economical service can be maintained. Maintenance

of way employees should be instructed to report to the miner, the mine operator and the railroads. Steady and regular mine operation at capacity production means lower cost as compared with intermittent operation and lessened production."

Report of Committee on Storage Coal

Although a large amount of coal has been stored during the year by many industries and by the railroads, particularly during the latter part of 1921 and the early part of 1922, owing to the expected suspension at the coal mines, there are few significant developments to report since the last report of the committee was made in May, 1921, in regard to new methods or appliances for storing coal.

W. L. Robinson reported to the committee regarding the storage of coal on the Baltimore & Ohio railroad for 1921 that a program covering the storage of 180,000 tons of 34-in. carefully selected lump high volatile steam coal was worked out. The coal was from selected mines operating the Pittsburgh Seam in the Fairmount and Ohio No. 8 field. Typical proximate analysis as follows:

Moisture	0.80
Volatile	40.50
Fixed carbon	52.50
Ash	6.20
Sulphur	2.50

The method of unloading into storage by dropping the doors of hopper cars, dragging out the coal and lifting track on the coal was adopted on account of the relatively low cost of this method.

The detailed instructions as to storage coal were as follows:

The pile should not be over 15 ft. in height, the base to be approximately 60 ft., the leveled off portion on top of pile to be 15 ft. With these sectional measurements, the pile will run about 14 tons per lineal foot.

If more than one pile is made, a distance of 20 ft. is to be maintained between piles for purposes of installing track for reloading.

As soon as pile is completed, the track will be moved from the top of pile to the surface level and parallel with the storage pile, thus making provision for quick removal of any portion of pile that might fire, by use of standard railroad non-revolving steam shovel, American type railroad ditcher, or locomotive crane for reloading the coal, either in case of emergency, heating or for current use.

The reloading track should be maintained, readily accessible for prompt use in event of spontaneous firing, and the shovel, crane or ditcher kept readily accessible and in condition to be used.

The storage was made at six locations remote from the mines, the work was let on contract and supervised by the local superintendents, the initial placing of unloading tracks having been done by company forces and the subsequent track raising by contractor's forces. Unloading of coal was started on September 7 and completed on December 29. A total of 190,000 tons was stored, the largest single storage being 50,000 tons.

The cost of unloading, including contract labor and supervision, work train service and coal used, crane service and coal used and excluding initial cost of track which was of used material, averaged 13.1 cents per ton.

President Harding recognized the importance of the storage of coal as a stabilizing agent in his message to the American Mining Congress when he said: "Is there no way of regulating the demand so as to distribute it more uniformly over the 12 months? Is it not possible to provide storage reservoirs which will enable the large consumers and large producers to accommodate their conditions to a need of a more continuous rate of production?"

In commenting on this suggestion of the President, Doctor H. Foster Bain, Director of the United States Bureau of Mines, said in part: "The adoption of a general policy which will provide reservoirs of bituminous coal to be drawn upon in times of great demand or of low production is entirely a commercial question. A lower reasonable price could

be brought about by concessions on the part of the miner, the mine operator and the railroads. Steady and regular mine operation at capacity production means lower cost as compared with intermittent operation and lessened production."

Under date of January 5, 1922, Mr. James M. Kinkead, division engineer, Trenton Division, Pennsylvania Railroad, reported the storage of approximately 81,000 tons of coal at Runyon, near South Amboy, N. J., which was received from mines in Cambria County, Pa., and is known as the Miller vein. The chemical analysis is as follows:

	No. 1	No. 4
Moisture	.53	.41
Volatile matter	21.09	17.94
Fixed carbon	72.49	77.12
Ash	5.89	4.53
Sulphur	per cent .82	.69
British thermal units	14766	15085
Sesquioxide of iron in ash	3.82	3.61
Softening point of ash	above 2,600 deg. F.	2,600 deg. F.

The storage was started on October 3, 1921, in three piles averaging 13 ft. in height by 35 ft. to 40 ft. width at the base and was unloaded by dropping the car doors and jacking up the track. The coal was very slack and one of the piles ran a temperature of 150 deg. F. for a length of 600 ft. out of a total length of 3,200 ft. The heated coal was turned with a steam shovel.

An interesting example of under-water storage, under practically unfavorable climatic condition, was that in connection with the storage plants of the United States Government at Balboa and Cristobal, in the Canal Zone. These plants were illustrated and described in detail in Bulletin 116, Engineer Experiment Station, University of Illinois, page 122. It is interesting to note that after using both ground storage and under-water storage, under the conditions prevailing in the Canal Zone, the United States Government has felt justified in giving up the under-water storage, and while no direct statement has been made, this would seem to indicate that the government considers that ground storage is safe.

One of the mining companies in central Illinois reported to the chairman of the committee during the year that upon shipping to a customer a car of coal that had been in storage under water, the customer reported back that the coal burned faster than the freshly mined coal. The coal was removed from the water pit by a centrifugal pump and the mining company has reported that the small bits of pyrites and fire clay seem to have been separated from the coal and to have gone to the bottom of the pit, thus making the reclaimed coal really purer than that which was stored.

Stocks of Coal Held by Railroads

According to statistical reports of the United States Geological Survey the stocks of coal held by the railroads for several years past and at various times since the last report of the committee were as follows:

Date	Tons
January 1, 1919	11,740,847*
March 1, 1920	13,503,385
June 1, 1923	2,808,057
January 1, 1921	51,147
April 1, 1922	540,180
November 1, 1921	8,058,380
January 1, 1922	13,000,000
March 1, 1922	14,850,000**

*Taken from U. S. Geological Survey Bulletin dated November 1, 1921. A Bulletin of the U. S. Geological Survey dated January 1, 1922, gave the amount in storage January 1, 1919, as 13,644,000 tons.

**Under date of March 1, 1922, the U. S. Geological Survey Bulletin said

"The American Railway Association has courteously supplied information

as to the quantity of coal held by the carriers on March 1 for railroad fuel and all other railroad use. The roads already heard from had a total of 14,850,000 tons, and it is expected that complete reports will show over 16,000,000 tons. As the largest stocks of record in the past are 13,640,000 tons on January 1, 1919, it will be seen that the railroads have accumulated what is for them an enormous reserve of coal. It is sufficient to last on the average of 42 days at the present rate of consumption. The stocks on the day of the armistice were sufficient for only 31 days, part of the difference being the greater requirements of the roads at that time."

Under date of April, 1922, the monthly supplement of the Commerce Reports gave the amount of coal in storage by railroads as 22 per cent greater than on January 1, 1919.

Coal Storage Literature During the Year

In the Factory for April 15, 1921, after the last report of the committee had been printed, W. L. Abbott, chief operating engineer, Commonwealth Edison Company, had a very interesting article upon general principles of coal storage and the appliances used. Mr. Abbott has been one of the foremost advocates of coal storage, and under his direction the Commonwealth Edison Company of Chicago has successfully stored hundreds of thousands of tons for a number of years past. Mr. Abbott concludes his article as follows:

Coal may also be stored so that it surely will take fire—notice I say, will—if kept in storage during a few months of warm weather. The way to obtain this generally undesirable result is to select for the purpose mine-run coal which will ordinarily contain about 20 per cent of fine coal which would go through a ½-in. screen. Handle this coal into storage with a crane. Drop each successive bucket of coal on the top of the pile already formed, for by doing so, the fine coal will remain in the center and the coarse coal will roll down to the edge of the pile. When your pile is complete, you will have coarse coal around the edges and the lower slope of the pile; in the center of the pile all the way from the top to the bottom will be most of fine coal; there will also be a zone about half way up the side of the slope where the coarse and the fine coal are mixed. In the central section of the pile, the mixture is so well proportioned and so densely packed that air cannot circulate to support combustion. Along the outer edge and the lower slope the coal is too coarse to heat, but about the middle of the slope or higher up the voids between the coarse coal are partially filled with fine coal and through the remaining portion of the voids air can circulate just freely enough to support the slow oxidizing which is going on, and not too freely to carry off the heat. It is along in this zone at a depth of from five to eight feet, that the greatest heating occurs.

Mr. Abbott's specifications for storing coal so that it will

surely take fire are pertinent because they represent the practice of too many railroads.

Bulletin No. 128, Engineering Experiment Station of the University of Illinois, by Ray W. Arms, entitled "The Ignition Temperature of Coal," is an important contribution to the subject of spontaneous combustion. At the present time an investigation is in progress under the direction of F. R. Wadleigh, chief of the Fuel Division, Bureau of Foreign and Domestic Commerce, Washington, D. C., in regard to the operating and maintenance costs of coal storage. No definite statement has yet been made as to just what will be included in this investigation.

The report is signed by H. H. Stock, chairman (University of Illinois); A. H. Davies (Belmont Coal Co.); C. G. Hall (Walter Bledsoe & Co.); O. H. Hertel (Old Ben Coal Corporation); O. P. Hood; J. B. Hutchison (Pennsylvania System); W. J. Overmire (Big Four); B. P. Phillippe (Pennsylvania System); R. E. Rightmire (Consolidation Coal Co.); A. P. Wells (Central of Georgia); H. Woods (Colorado & Southern), and S. L. Yerkes (Griider Coal Sales Agency, Inc.).

Discussion

The discussion brought out a number of instances where coal in storage piles built up according to the best known principles, had fired and when the same coal stored under much more adverse conditions had not fired. In closing the discussion Professor Stock made no attempt to explain these instances, saying that the best that the committee could do was to gather all available information concerning the circumstances surrounding as many storage piles as possible, and recommend as safe practices those which in the majority of cases have met with success. Two conditions were most stressed by the members taking part in the discussion as being of the greatest benefit in preventing spontaneous combustion. These are the avoidance of wet coal in the piles or the location of the pile on wet ground and avoiding as far as possible the mixing of different coals in the same piles. Coal high in sulphur and ash was considered most undesirable for storage purposes, especially if piled in wet weather.

Educational Work for Fuel Economy

By D. C. Buell

Director, Railway Educational Bureau

Education on a railroad is so intimately bound up with supervision that the two are almost synonymous. One of the present indications of the realization of the importance of educational work is the endeavor being made on many railroads to relieve their supervising officers of office work and keep them out on the road mingling with the men as much as possible. In the past few years the greatest advance in educational work on our American railroads has been due to the practice, which has become almost universal, of holding frequent staff meetings at which matters of vital importance to the operation of the property are discussed by the officers and the men together. These staff meetings started first as an outgrowth of the safety movement and later developed into general meetings with splendid results.

In spite of the universal mental unrest of officers and men of our railroads during and following the period of federal control, there has been a willingness on the part of railroad men to take advantage of educational opportunities of a practical nature which have been presented. This willingness is growing month by month and the prediction is made that during the next ten years railroad men will not be willing just to get by with their job, but will welcome and take advantage of any practical opportunities offered them to in-

crease their knowledge and become more proficient in their work.

From the very nature of the case the greatest economy in the use of fuel on railroads is directly in the hands of the locomotive fireman. In the old days, a man was not allowed to fire a locomotive until he had served his apprenticeship in the roundhouse or on the ash pit, or in some capacity where he became somewhat familiar with firing practice, but the present method is merely to hire the most likely looking man applying and put him right to work as a fireman without previous training or experience other than a couple of road trips for the purpose of breaking him in to his new work.

It is believed that the growing realization of the importance of educational work on our railroads will result in certain definite methods of procedure in the not too distant future, as follows:

The establishment at large railroad centers of schools for the training of new firemen. At these schools, men selected for the position of fireman will be given thorough instruction on fuel and its use. Dummy fire boxes will be set up where men can be given actual practice in shoveling coal and be taught the proper handling of a scoop, and the proper plac-

ing of coal in the fire box. At these schools men also will be taught the principles of various types of stokers and stoker operation, as well as the flagging rules, the giving and interpreting of hand, lamp, and other signal indications, the principles of the injector, etc. A week or ten days' intensive instruction along these lines will mean much during the following years that the applicant holds the position of locomotive fireman.

Supervising officers will be relieved more and more of clerical work, attendance at meetings, and other duties which reduce the amount of time they spend on the work with the men in actual supervisory and instructional work.

Moving pictures will be used to a much greater extent than at present and with regularity to instruct men in fuel economy as well as in the other phases of railroading that they must learn as they progress as firemen. These moving pictures will interest and improve the service of older firemen and engineers.

Supervising officers will encourage their men to take advantage of other educational opportunities which may be offered from time to time and will work with the men to help them take advantage of such educational opportunities.

There is a possibility that, as this educational problem assumes more importance, the railroads will select from among their employees those who are best informed to act as instructors and will perhaps find it economical when the

right kind of man is available to use such a man as an instructor on the division on which he is employed.

Discussion

In presenting his paper Mr. Buell said that about ten per cent of the men in railroad service are studying to better themselves through personal ambition, while 90 per cent must be induced to study by some outside means. This necessary inducement can be brought into effect by the local fuel organization, by some form of bonus, by competition through the natural satisfaction which all individuals feel in the knowledge of a good job well done and by progressive examination. He expressed the opinion that compulsory educational work is not likely to be highly successful.

That the most difficult task is not that of educating the men, but educating the higher officers to the requirements of fuel economy, was expressed by a number of those who took part in the discussion. This was illustrated by the experience of the Southern Pacific in its campaign for fuel economy in stationary plants. For a year or two emphasis was laid on the education of the men operating the plants, but with very meagre results. The matter was then taken up with the division superintendents, the performance of the plants on each division being rated competitively, with the result that last year the co-operation of the superintendents was obtained and a marked improvement effected.

Report on Fuel Accounting

The committee concurred in the recommendation of the Purchases and Stores Division of the American Railway Association that locomotive fuel be accounted for by individual locomotives, both as to quantity and value chargeable to each account by divisions, main and branch line districts, freight and passenger service and by states, for yard switching service; also, a charge for quantity and value by accounts for all fuel used for miscellaneous purposes, and submitted the following conclusions on the three points carried over from the 1921 meeting:

1. Other than locomotive fuel; 2. coal picked up in yards and on right of way, and 3. coal removed from overloaded commercial cars.

1. Fuel used for all purposes other than locomotive operation, such as stations, elevators, power plants, etc., should be charged out to the facility and in the month in which it is used. Fuel ticket and department invoice, properly received, should be required to cover the issue.

2. Coal picked up in yards and on right of way and fuel oil reclaimed in sump should be charged to the service in which it is used and locomotive fuel account credited, as it is the clearing house for all such over and under charges.

The labor cost of recovering such fuel should be charged as follows:

(a) "Roadway Maintenance" ("General Cleaning") if outside of shop yards and used for other than locomotive operation, or recovered in hump or classification yards.

(b) "Shop Expenses" if within shop yards and used for other than locomotive purposes.

(c) "Fuel Station Operation" if such fuel, after being recovered, is used on locomotives.

3. The overload removed from commercial cars may be used by the company for its own operations, and payment made to the shipper for the actual amount of coal removed at a price agreed upon, with deduction covering cost of labor, switching and reweighing. Where car is returned to mine from scale for lightening by the shipper a switching charge should be assessed.

The report was signed by J. N. Clark, chairman (Sou. Pac.); C. N. Beverly (B. & O.), E. E. Chapman (A. T. & S. F.), R. R. Hibben (M. K. & T.), R. E. Jones (D. & I. R.), Joseph McCabe (N. Y., N. H. & H.), Hugh McVeagh (Big Four), C. F. Needham (Grand Trunk), and W. J. Tapp (D. & R. G. W.).

Report on Firing Practice

Mechanical firing on locomotives, like hand-firing, is subject to careless and extravagant practices. Correct supervision is as necessary here as in hand-firing. The successful and economical performance of a stoker depends, first, upon the proper condition of its parts, and, second, on proper operation (granting of course, that the locomotive may be in proper condition). The things that constitute proper firebox conditions on hand-fired locomotives similarly apply to stoker-fired locomotives.

It should be understood that a mechanical stoker is in no sense automatic.

For economy in firing locomotives which are equipped with mechanical stokers, the committee recommends the following practices:

Before a fire is built in a locomotive, the distributing features of the stoker should be inspected and known to be in proper condition. The fire should be free from clinkers and banks when the locomotive is delivered to the engine crew.

The stoker should not be used in building up the fire, either by roundhouse force or engine crew. Build up the fire by using the hand shovel. Commence the operation of the stoker as soon after starting the train as conditions require.

The fire should be maintained with the hand shovel when standing, drifting or doing short switching.

Use shovel to build up spots in the firebed which may be thin or undersupplied by the stoker. In that way maintain a uniform distribution of coal over entire grate surface. Every square foot of burning surface requires coal.

Because of the thinness of the fire on stoker-fired locomotives greater care should be exercised when shaking the grates than is required on hand-fired locomotives. If practical, grates should be shaken only when the locomotive is not using steam.

Attention should be given coal as it feeds into conveyor; removing any foreign material which would tend to clog or interfere with the operation of the stoker.

Frequently observe the condition of the fire to know that it is properly maintained. Best results are obtained by continuous stoker operation, care being taken not to crowd the fire.

See that the locomotive, the fire and the firing apparatus are properly adjusted to produce the minimum amount of smoke.

When approaching grades the fire should be properly prepared, to meet the heavier demands. Do not wait until the train is on the grade before speeding up the stoker.

Before beginning a descending grade or before taking on coal the conveyor slides should be closed.

In case the stoker stops, due to clogging by foreign matter, the stoker throttle should be closed before any attempt is made to remove the obstruction. The fire should be maintained by hand until opportunity presents itself to remove the obstruction.

When approaching terminal, have all slide plates closed. This should be done at a sufficient distance so that without waste all coal may be worked out of conveyors. The engine crew should close all valves of stoker apparatus before leaving the locomotive.

To supervising officers who give attention to fuel, firing practice will always consist of two distinct things: first, the methods themselves for securing practical economy, and, second, the maintenance of those methods in practice. Proper

methods are at hand. To develop in every-day routine the habitual use of those proper methods is the unending work of supervising officers.

Habitual clinkers and "banks" in a locomotive fire at terminals usually indicate improper firing, or improper engine handling if no mechanical defects exist. A supervising officer may select one of these extreme cases and proceed to improve the performance. A fair improvement, if permanently effected, could easily save five per cent in coal consumption. Now, since a freight crew burns approximately \$15,000 to \$20,000 worth of coal a year, the five per cent improvement would amount to \$750 or more per case improved. If a supervisor did nothing else but improve five habitual "bankers," this alone would save \$3,750, a sum which would go some distance toward paying his salary. But, who would work on only five cases a year? This illustration shows that lack of supervision means waste while well directed supervision means saving.

But it is not only the fireman who sometimes relaxes. Let us consider the engineer. Since the stoker is inanimate, an engineer may become indifferent, and perhaps his fireman too, though he may smile at his escape from a firing abuse that is now borne by a machine instead of by his back. With a locomotive equipped with a mechanical stoker the engineer may not now be able to overburden his fireman, but he is still able to "punish" the engine and the coal pile. Supervision can correct these faults.

The report is signed by M. A. Daly, chairman (Nor. Pac.); D. C. Buell (Railway Educational Bureau); M. Cavanaugh (C. St. P. M. & O.); B. F. Crolley (B. & O.); Chas. P. Dampman (P. & R.); J. W. Dodge (I. C.); J. C. Harris (Sou. Pac. Lines); L. R. Pyle (Locomotive Firebox Co.); F. P. Roesch (Standard Stoker Co.); A. N. Willsie (Locomotive Stoker Co.), and James Wilson.

Indirect Losses From the Use of Poor Quality Coal

By Earl Cobb

President, Southwestern Coal Company

In advocating the selection of coal of the most suitable quality for a specific purpose, Mr. Cobb stated that neither the policy of buying on price or on heating value alone, was likely to produce the lowest fuel costs per unit of service. He called attention to the fact that two coals with the same heating value might differ widely in the moisture content, the per cent of volatile and in the clinkering character of the ash. Mr. Cobb then illustrated the effect of these differences by assuming two coals, one with 11,500 B.t.u. and a combined ash and moisture content of 20 per cent, the other with a heating value of 13,500 B.t.u. and a combined ash and moisture content of ten per cent, the latter selling at \$2.70 at the mine and the former at 40 cents a ton less, on an equated B.t.u. basis. This, he said, is a difference which is not uncommonly found in coals coming from the same district, especially in the Southwest. In this case the saving from the use of the higher quality coal is of two kinds, first, the direct dollars and cents saving and, second, the reduction in engine failures, delays and the possible effect on the length of locomotive runs resulting from the difference in the amount and clinkering character of the ash.

Assuming an average haul of about 200 miles on the home rails in each case, at six mills per ton-mile, the cost of the haul amounts to \$1.20 a ton. The difference between 20 per cent and 10 per cent of combined moisture and ash content, therefore, effects a saving of 12 cents a ton in favor of the better quality of coal in the cost of movement on the home rails alone. Most western roads receive at least a part of their coal from off the lines at an approximate cost of \$1.50 a ton in freight. Here then is an additional saving

of 15 cents a ton in favor of the better quality of coal. To this must be added to the cost of handling the additional 10 per cent waste material through the coal chute to the locomotive tender and the loss of heat utilization due to the additional moisture content, to which, Mr. Cobb said, few railroads give the attention its magnitude deserves.

Taking up the indirect savings, and assuming the average cost of an engine failure as \$200, it is evident that one engine failure due to the poorer quality coal would cost enough to pay the difference in price of 500 tons of the better quality coal.

The practice of many purchasing agents of buying coal on price rather than on a cost of service basis, Mr. Cobb said, is not an indictment of the purchasing agent but of the fuel supervisor and others who use the coal and understand the importance of service value, but fail to present their case to the purchasing agent in a sufficiently convincing manner.

Discussion

O. J. Brown (Boston & Maine) concurred in Mr. Cobb's presentation. He stated that the Boston & Maine had adopted a policy of buying coal on a quality basis with the result that during the year ending April 31, 1922, there had not been a single engine failure due to poor coal, whereas the coal failures during previous years had run from a minimum of 435 to a maximum of 1,380. Furthermore, there had been an increase of four locomotive miles per locomotive hour and a saving of \$46,000 in the time of firemen cleaning fires on the road.

Incentives for Promoting Fuel Economy

By O. S. Beyer, Jr.
Consulting Engineer

If we simply consider as incentives those administrative devices which managements in the past have designed and applied in order to secure the interest and support of the engine crew in fuel saving, my task would be largely a descriptive one. But in my estimation such a consideration of the subject would be too narrow. It seems to me more important to get at the bottom of this question of incentives, and determine, if possible, what the motivating forces are which create an interest in and desire for fuel economy—on any other type of economy for that matter—on the part of railroad workers.

The first aspect encompasses individual fuel performance records, as applied to enginemen and locomotives, or the maintenance of individual efficiency records jointly with the usual discipline, health and reliability, or service records. This aspect would also include extra records in the form of individual bonuses or premiums for economical performances. Such special types of recognition as assigning a locomotive to an engineer and naming it for him, or painting the number plate red, or polishing up the cylinder head casings, are in this class too.

We recognize, on the other hand, as constituting the second aspect of incentives, the tendencies making for a community of interest in or mutuality of concern for better fuel performance on the part of the groups composing the human element of the railroad industry, namely, the workers, the supervision, and the investors. These tendencies come into being not so much by virtue of any special bit of administrative technique which management may devise, but rather by virtue of basic policies as established largely by the groups at interest. These are the result of deeper and more fundamental attitudes and actions. They arise automatically, spontaneously, i. e., as the interests concerned get together and lay the necessary foundations towards such ends.

The reception accorded most attempts to establish incentives when considered simply as devices for intriguing the individual engineman's interest in fuel economy has usually been characterized by apathy and indifference on the part of the rank and file. Some good has been done, nevertheless, by the utilization of these methods for stimulating economical fuel utilization, sometimes positive, but usually negative. The positive good which followed resulted from the added detail information furnished with regard to individual performance of the crew or locomotive in question. This detail information, when trustworthy, makes an appeal to his pride of craftsmanship, his instinctive desire to do well in his chosen work.

The negative good accomplished came from the revelations with reference to the absence of much needed data and means for securing it in order that genuine confidence and sound judgments might be developed with reference to the constituent elements concerned, namely, the locomotives and their operators. Among other things, the necessity for weighing devices at fueling stations was thus shown up. The result has been that some roads, at least, are now finding it worth while to introduce such devices as rapidly as circumstances will permit. In other words, the attempt to measure individual performance for the sake of securing a greater measure of co-operation from the rank and file in the direction of economies disclosed the fact that railroad managements were really operating in the dark owing to inadequate measuring facilities. They were not able to present evidence sufficiently detailed and accurate to convince any individual of the quality of his particular performance.

More important than all of this, however, is the revelation which has followed attempts to introduce incentive devices

in respect to the limits within which good in the direction of improved fuel economy may be hoped for as a result of introducing them. And this in turn has emphasized the very profound interrelation which exists between the two aspects of the subject here considered. It is chiefly because basic conditions have been unsatisfactory that most of these "interest creating schemes" have been received with only a temporary show of concern, or, as more frequently happens, with conspicuous apathy.

What are the practical things which can be done, the next steps which might be taken, in order that incentive devices may yield worthwhile results? These steps consist in developing a greater community of interest between the management and the workers for the sake of their mutual benefit. This requires first the recognition that the railroad workers have as great an interest at stake in the welfare of steam transportation as those whose capital is invested in the industry, and second, by this token, that the workers are as greatly concerned as the investors in the economy and efficiency with which the railroads are operated.

Assuming that this basic conception is acknowledged and understood by those who supervise as well as those who disburse the fuel, how, then, are we to proceed in order to develop this potential will for improved fuel consumption? The answer is to recognize the workers' inherent right to a voice in the conduct of his industry consistent with the degree of responsibility he and his associates collectively are able to exercise in respect to the operation of the industry. This implies dealing with the workers—in our case, for instance, with the local district and regional organizations of the enginemen and firemen—in the interest of fuel economy as well as in the interest of wages, hours of work and working conditions.

However, this opportunity for co-operation is none too prevalent at the present moment. On most roads the managements barely tolerate the existence of only a few of the workers' organizations and are more or less openly hostile to the majority of them. The relationship which exists between management and those workers' organizations which are tolerated is furthermore chiefly concerned with what are usually known as "labor problems." Unfortunately the continual emphasis on this phase of railroad operation has quite successfully precluded a thorough and interested consideration of the possibility of developing a deeper concern for economical fuel utilization via the route herein considered.

It is not inconceivable that the chief prerequisite necessary to make possible the development of a genuine interest in incentive for better fuel performance, namely, stabilized wages, employment and working conditions consistent with American standards, may some day come into being. At least on such roads where this is accomplished the next step will be in order. And this step will be the co-operation of the workers and the supervision in the direction of betterments in fuel consumption. When this becomes possible then, and only then, will detail devices for promoting the individual interest of the engineer and the fireman in the efficient use of coal acquire real value and achieve lasting results.

Other Papers

The following reports and papers were also presented: Report of Standing Committee on Fuel Stations; Standard Form of Contract Covering Purchase of Railway Fuel, by W. J. Tapp (Denver & Rio Grande Western); Locomotive Fuel as a Comparative Performance Unit for Different Railroads, by Harrington Emerson; Fuel Conservation from the

Standpoint of the Locomotive Engineer, by C. J. Barnett (Illinois Central); Effect of Circulation on Locomotive Boiler Efficiency, by F. G. Lister (El Paso & Southwestern); Colloidal Fuel, by Linden W. Bates, and Assigned Cars for Railroad Fuel, by C. G. Hall (Walter Bledsoe & Co.).

Election of Officers

The following officers were elected for the coming year: J. N. Clark (Sou. Pac.), president; M. A. Daly (Nor. Pac.), P. E. Bast (D. & H.), and J. W. Dodge (Ill. Cent.), vice-presidents; O. J. Brown (Boston & Maine), E. E. Chapman (A. T. & S. F.), Robert Collett (N. Y. C.), J. R. Evans (M. K. & T.), and T. Duff Smith (Can. Nat.), members of the executive committee.

Exhibitors at the Fuel Association Convention

AT THE ANNUAL MEETING of the International Railway Supply Men's Association, held at the Auditorium Hotel, Chicago, on May 23, the following officers were elected for the coming year: V. W. Ellet, Hunt-Spiller Manufacturing Corporation, president; C. W. Sullivan, Garlock Packing Company, vice-president; A. W. Clokey, American Arch Company, secretary, and A. C. Beckwith, Ohio Injector Company, treasurer. At a board of directors' meeting it had been decided to honor the past presidents of the association with permanent badges. These badges were presented to F. N. Bard, Barco Manufacturing Company, first president and organizer of the association; C. W. Floyd Coffin, Franklin Railway Supply Company, second president; W. G. Clark, Locomotive Stoker Company, third president; C. L. Mellor, Barco Manufacturing Company, fourth president, and to the retiring president, G. E. Ryder, The Superheater Company.

The following is a list of exhibitors at the 1922 convention of the International Railway Fuel Association at the Auditorium Hotel, Chicago:

American Arch Company, New York.—Represented by J. T. Anthony, T. M. Mahar, Chas. Pfeiffer, E. L. Mulcahy, W. W. Neale, M. L. Smith, F. G. Boomer, J. Brondon, A. M. Suceese, H. Darby, J. P. Neff and W. L. Allison.

Barco Manufacturing Company, Chicago.—All-metal engine and tender connections, reservoir joints, smoke box blower fittings, power reverse gear, and crosshead and shoes. Represented by F. N. Bard and C. L. Mellor.

Boss Nut Company, Chicago.—Lock nuts, bolts and rivets. Represented by J. W. Fogg and A. W. MacLean.

Dearborn Chemical Company, Chicago.—Literature. Represented by Geo. R. Carr, I. H. Bowen, L. P. Bowen, O. H. Rehmyer, I. H. Beebe, N. F. Dunn, J. G. Arn and H. P. Ross.

Detroit Lubricator Company, Detroit, Mich.—Literature. Represented by A. G. Machesney.

Edna Brass Manufacturing Company, Cincinnati, Ohio.—Lubricators, injectors, boiler fittings, reflex gages, fire extinguishers, cold water squirt. Represented by H. A. Glem and F. S. Wilcoxon.

Fairbanks, Morse & Co., Chicago.
Franklin Railway Supply Company, New York.—Power reverse gear. Represented by W. H. Coyle, J. L. Randolph, H. M. Evans, M. H. Roberts, Paul Willis, J. A. Talty and J. L. Bacon.

Garlock Packing Company, Palmyra, N. Y.—Asbestos packings for locomotives and general railway supplies. Represented by John L. Fisher and Stanley McDale.

Hudson Grate Company, Keokuk, Ia.—Locomotive grate equipped with shaking dump gate. Represented by A. W. Hulson and J. W. Hulson.

Johns-Manville, Inc., New York.—Pipe and boiler insulation, monolithic baffle walls, steam traps, packings and gaskets, high temperature cements. Represented by P. R. Austin, L. S. Wilbur, H. J. Crowe, P. C. Jacobs and A. H. Purdon.

Locomotive Firebox Company, Chicago.—Thermic syphon. Represented by C. M. Rogers.

Locomotive Stoker Company, Pittsburgh, Pa.—Working model of stoker. Represented by A. C. Deverell, A. M. Willis, J. B. Ball, I. C. Jordan, C. F. Fahler, V. B. Emerick, E. F. Milbank and E. R. Funk.

Manning, Maxwell & Moore, Inc., New York.—Gages, safety valves, inspirators, boiler checks and other locomotive appliances. Represented by C. L. Brown, J. Soule Smith and C. W. Corning.

Nathan Mfg. Company, New York.—Injectors, lubricators, boiler checks, water column, gage cocks, water gages, coal sprinkler, fire extinguishers, boiler washer and tester whistles. Represented by Richard Welsh, Frederick C. Davern and Fred Ehredt.

National Railway Devices Company, Chicago.—Radial and vertical fire door. Represented by Jay G. Robinson and E. J. Gunnison.

Ohio Injector Company, Chicago.—Lubricators, automatic drifting valves, automatic flange oiler, injectors, fire jet, boiler check, low water alarm. Represented by William S. Furry, Frank W. Edwards, W. H. Malone, F. B. Farnsworth, N. W. Barker and A. C. Beckwith.

Okadee Company, The, Chicago.—Valves, water glass protectors, front end hinges, cylinder cocks. Represented by W. H. Heckman, G. S. Turner, Chas. R. Long and A. G. Hollingshead.

Peabody Coal Company, Chicago.—Photographs and moving pictures of coal production. Represented by J. H. Westervelt, F. E. Sammons and W. F. Royce.

Railway Review, Chicago.—Publications. Represented by L. G. Plant.

Roberts & Schaefer Company, Chicago.—Photographs of locomotive coaling plants and cinder conveyors, and combination portable coaling and cinder handling and storage plant. Represented by Clyde P. Ross and David E. White.

Simmons-Boardman Publishing Company, New York.—Publications. Represented by L. B. Sherman, C. B. Peck, Homer Beach and J. M. Rutherford.

Standard Stoker Company, New York.—Literature and photograph of locomotive equipped with stoker. Represented by F. P. Roesch.

Superheater Company, The, New York.—Feed water heating apparatus and steam pyrometer. Represented by G. E. Ryder, J. E. Mourne, R. M. Osterman, H. V. Jones, C. H. True, H. B. Oatley, Geo. Dolan, R. R. Porterfield, Bard Browne, W. A. Buckley and R. J. VanMeter.

Vissering & Co., Harry, Chicago.—Packing and sanders. Represented by W. H. Heckman, G. S. Turner, Chas. R. Long and A. G. Hollingshead.

Worthington Pump & Machinery Corporation, New York.—Photographs and literature on locomotive feed water heater. Represented by John M. Lammede.

The Development of Welded Flexible Staybolts

THE INCREASE in the size of boilers, accompanied by higher pressure, led to considerable trouble with staybolts in the breaking zone of the firebox. This difficulty was almost entirely overcome by the development of the flexible staybolt, consisting of a threaded sleeve screwed into the sheet, a bolt having a spherical head seating in the

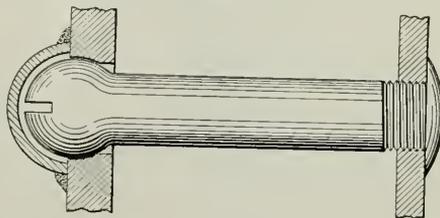

Fig. 1

sleeve and screwed into the other sheet, and a cap covering the sleeve. This type had certain disadvantages principally due to the necessity of making a threaded connection that would remain absolutely steam tight. Steam-tightness in a threaded sleeve requires perfect threads, which in turn necessitates the use of steel sleeves, regardless of the fact that steel

sleeves are subject to crystallization and consequent breakage when caps are removed at inspection intervals or when fire-boxes are being renewed. The use of sleeves of the threaded type also demands the cutting of large holes in the wrapper sheet which is detrimental. These holes must be carefully reamed and threaded with straight and taper tools. This is an expensive operation and if not properly performed will cause continuous trouble or possible failure in service.

To overcome these difficulties and to obtain a rigid, steam-tight connection, R. S. Mennie early in 1914 conceived the idea of utilizing the electric welding process as a means of making an absolutely steam-tight connection for the wrapper sheet housing of a flexible staybolt. In his original patent, Mr. Mennie covers broadly all forms of welded-on flexible

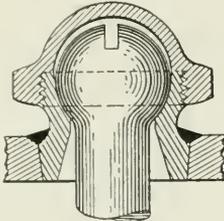

Fig. 2

staybolt connections. His first welded staybolt application is shown in Fig. 1 and while exceedingly simple has the objection that staybolt inspection is not provided for. To overcome this defect the staybolt head was enclosed in a sleeve or housing which was welded to the sheet. This construction is shown in Fig. 3 except that Mr. Mennie used a flat head bolt and cap to correspond.

In 1915 the Flannery Bolt Company patented a tapered sleeve type, the sleeve being secured by arc welding and providing a recess in which rested the head of the flexible bolt. The sleeve was also provided with a removable cap for inspection purposes, as shown in Fig. 2.

The original Mennie type had shown possibilities in

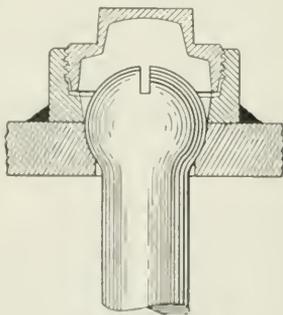

Fig. 3

eliminating two great defects in the threaded type of flexible staybolt; namely, the large hole in the sheet and the great number of sleeves required to take care of all angles in the sheets. It was found that the tapered welded sleeve possessed these two great defects of the threaded type of sleeve, as practically as large a hole and as many different sizes of sleeves were required. The large opening in the boiler sheets has been objected to, particularly in combustion chamber areas, and in crown sheet installations, in which it was

it was attempted to meet the A. S. M. E. Boiler Code Committee formula with the threaded sleeve.

A modification of the Mennie type was made, as shown in Fig. 3, in which the bolt rested in a counterbored recess in the sheet and was enclosed in a housing welded to the sheet and provided with a removable cap for inspection

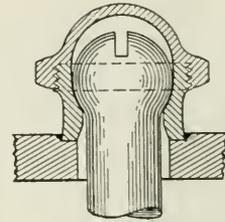

Fig. 4

purposes. This type was confined to flat surfaces and was not applicable to curved sheets and bolts set at an angle with the sheet. A sleeve resting on the sheet, as shown in Fig. 4, and a sleeve in the sheet but having a shoulder resting on the sheet, Fig. 5, and secured by welding were tried but lack of simplicity, economy and other disturbing factors

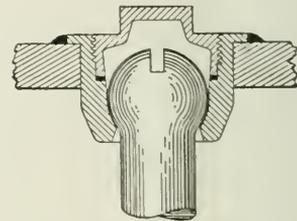

Fig. 5

finally led to their rejection. Numerous other types followed without success.

Continued investigation brought out the universal type, Fig. 6, which provided a sleeve with a seat formed as a segment of a sphere resting in a corresponding counterbore in the sheet. This accommodates itself to any curvature

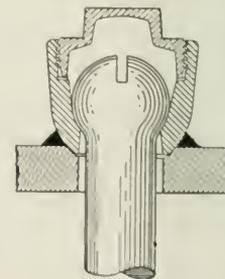

Fig. 6

of the sheets, and to any degree of angle at which stays are ordinarily applied, the opening in the boiler sheets being only sufficient to provide clearance for the size of bolt used. Where there is not enough clearance for the head outside the sheet the special flush type, shown in Fig. 7, is used.

The welded flexible staybolt, with a sleeve having a

spherical seat in the sheet, was first publicly introduced in 1919 and has been widely used since that time. In this type a single size of sleeve replaces the many styles and standards formerly required. The sleeve is also more satisfactory because being forged from the ductile material it does not

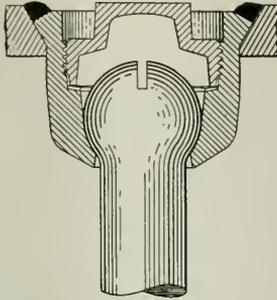

Fig. 7

crystallize and crack, does not require the expensive care and skill for application that was needed with the threaded type and eliminates the leakage troubles experienced in that type.

With the introduction of the welded flexible staybolt in 1919, the question was raised by some users whether the electric weld might be injurious to the sheets. It was pointed out that for several years built-up bosses were welded on the wrapper sheet to give a better threaded surface where the

bolts enter the outside sheet at an excessive angle. Thousands of locomotives in daily service for a long period had unquestionably demonstrated that the sheets are not injured by the bosses and inasmuch as far less welding is required for a flexible welded sleeve than has been the practice in building up bosses, it follows that the small amount required for the welded sleeve should not be injurious.

A typical application of the universal type is illustrated by the boiler for a Santa Fe type locomotive, shown in Fig.

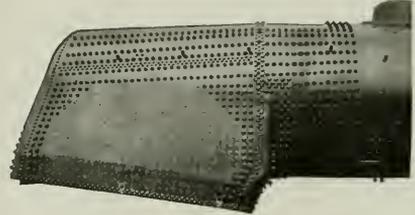

Fig. 8

8. With the exception of seven flush sleeves in the back head, the entire installation of 1,160 bolts in each boiler requires only the one style universal sleeve. The manner in which this type adapts itself to installation in seams and flanges is noteworthy, the sleeve being but little larger than the rivet heads and the hole only sufficient to provide clearance around the bolt, practically no larger than is used for rivet holes. This aids in maintaining maximum strength.

Northern Pacific Ton-Mileage Cut 33 Per Cent

Has Surplus After 7 Per Cent Dividends of \$4,705,399 Due to Burlington's Extra Disbursements

THE MOST IMPORTANT question in reference to Northern Pacific is as to how soon it may be able to restore its former annual dividend rate of 7 per cent on its stock. This statement is based on the presumption that the company has in mind to restore the 7 per cent rate and that the reduction to 5 per cent, made last March, was a temporary step taken because of the Northern Pacific's earning position at that time. The company has been paying dividends at a rate of 7 per cent since 1903.

At the meeting in March, the quarterly rate was made $1\frac{3}{4}$ per cent and Howard Elliott, chairman of the board, made the following statement: "In declaring a dividend of $1\frac{3}{4}$ per cent . . . the directors feel that they are best serving the interests of the stockholders and are hopeful that conditions will warrant the resumption of the rate of $1\frac{3}{4}$ per cent quarterly in the future." More recently, Mr. Elliott wrote in reply to a stockholder, that "at the recent meeting of the directors, at which the dividend was reduced, it was decided that it would not be conservative, in view of the prevailing conditions of uncertainty, to pay the full rate. I cannot say when it will be restored, but at that time the board hoped that business would resume next autumn to such an extent as to justify that action. The returns of the Northern Pacific for the first three months of this year are discouraging. Business is better, but there are still many elements of uncertainty."

The Northern Pacific was enabled to pay its 7 per cent dividends in 1921 because of the extra dividends which it received on its Burlington shares, which extra payments ag-

gregated \$13,000,000 more than Northern Pacific will receive from the Burlington this year. The road's annual report showed for the year an income balance after dividends of \$4,705,399, as compared with \$1,734,183 in 1920. The 7 per cent dividends totaled \$17,360,000. The explanation of the size of the 1921 surplus was an increase in dividend income, as compared with 1920, of \$17,505,094. In 1920 the road's dividend income was \$4,353,552, whereas in 1921 it was \$21,858,646. It was this increase which enabled the road to make up for the extremely poor showing which it had in its railway operating results.

Has Not Been Doing Well Since 1918

The road had not been doing very well since 1918. It had a standard return or compensation for operation by the government during federal control of approximately \$30,000,000. In 1918 it nearly earned this amount with a net after rentals of \$28,000,000. In 1919, however, it earned for the government only \$18,000,000. In 1920, operating for two months under federal control, six months with the benefit of the guaranty, and four months "on its own," it realized on an extremely heavy traffic to the extent only that it was able to earn a net after rentals of \$7,949,458. The 1921 revenue ton-mileage was 32.64 per cent below the 1920 business but the road was able to come through the year with a net after rentals of \$10,843,826. This is one-third of the amount that it would need to be on something like the pre-war basis of net income.

In view of these facts, it is not hard to understand why the

Northern Pacific directors should have decided to decrease the dividend rate from 7 to 5 per cent. If it had not been for the Burlington's extra dividend declarations, the deduction would have presumably had to be made much sooner than it actually was made, although, of course, the fact still remains that the road might have maintained the regular dividends and paid them from surplus. The Northern Pacific directors, however, prefer to adopt the conservative course.

In the statement which Chairman Howard Elliott recently made to one of the stockholders, as above noted, Mr. Elliott commented upon the fact that business had not enabled the road to show very good earnings for the first quarter of 1922. The actual figures showed for March a net after rentals of \$1,100,077, as compared with a deficit of \$261,017 in March, 1921. The March, 1922, earnings, however, were in rather sharp contrast with the earnings in January and February with the result that the three months net after rentals was only \$338,802. This compared with a deficit of \$861,880 in the first three months of 1921, but it can easily be seen that the Northern Pacific earnings are far from being on a rate which properly called for a 7 per cent dividend basis. Of course, there is also the circumstance that the roads in the northwest make the better part of their earnings in the latter half of the year and the earnings for the first few months of the annual period must be regarded with that in mind.

The Northern Pacific car loadings at the present time are picking up in fairly good shape. They are running ahead of the loadings for the corresponding period of last year and this is another factor which must be taken into consideration. The Northern Pacific does not seem to be hurt very much by the present coal strike; in fact, its coal business is not such a very essential part of its total traffic. The lumber business, however, is showing a very pleasing improvement. The ore traffic has not yet begun to show any sign of life.

Northern Pacific No Exception to Other

Roads in Northwest

One of the most striking features of railway operations in 1921, as a whole, was the rather unfortunate manner in which the depression of 1921 was reflected in the operation of the roads serving the northwest. The Northern Pacific, the Great Northern, the St. Paul, and even the North Western, went through a very similar sort of year. Each of them had difficulties of a very unusual sort. The Great Northern, because of the year's operations, has been put in a position where it is looked upon with more or less uncertainty, particularly since it decided to put its dividends on a semi-annual instead of a quarterly basis. The St. Paul, with a problem of its own, approached the dangers of receivership. The Northern Pacific was compelled to reduce its dividend rate. The details of what it did during the year may be summarized as follows:

The road's revenue tonnage in 1921 was 17,670,162, as compared with 23,448,182 in 1920. This was a reduction of 24.64 per cent. There was a reduction in revenue ton-mileage of 32.64 per cent, due to a decrease in the average haul from 334.9 in 1920 to 299.4 in 1921. The decrease in freight revenue was 14.61 per cent, this lesser proportionate decrease being due to an increase in the receipts per ton mile from 1,033 cents in 1920 to 1,309 cents in 1921. The reductions in the passenger business were equally severe, the decrease in number of revenue passengers being 26.87 per cent; in revenue passenger miles, 29.71 per cent, and in revenue, 19.53 per cent.

The Northern Pacific divides its total tonnage into that originating on the road and that received from connections. The 1921 tonnage, as was noted above, totaled 17,670,162. Of this total 14,125,875 originated on the Northern Pacific's own rails and 3,544,287 was received from connections. This points out the degree to which the Northern Pacific

originates its own tonnage. The reductions in tonnage which took place in 1921 as compared with 1920 were general, except that there was an increase in the tonnage of grain. The 1921 grain figure was 2,657,431 tons, an increase of 374,350 over 1920. Products of agriculture totaled 4,545,776, an increase of 143,529 over 1920. The tonnage of products of animals in 1921 was 302,120, a decrease of 136,441 from 1920. The decrease in products of mines was decisive; the 1921 figure was 4,667,842, as compared with 7,328,036 in 1920, a decrease of 2,660,194 tons. This decrease was embodied primarily in the reductions of traffic in coal and ore. The 1921 bituminous tonnage of 2,896,070 compared with 4,264,262 in 1920 and the ore tonnage of 517,034 compared with a 1920 figure of 1,377,337. The tonnage of products of forests in 1921 was 5,525,854, as compared with 7,253,665 in 1920, a reduction of 1,727,811. The manufactures and miscellaneous tonnage carried in 1921 totaling 2,032,244 compared with 3,194,497 in 1920.

Revenues and Expenses

The Northern Pacific's 1921 freight revenues were \$69,246,505 as compared with \$81,090,390 in 1920. The total revenues in 1921 were \$94,538,059 as compared with the 1920 figure of \$113,084,408. As against a decrease of \$18,546,348 in railway operating revenues, which amounted to 16.4 per cent, there was a decrease of \$23,353,007 in operating expenses. The actual operating expenses in 1921 were \$77,630,867, as compared with \$100,983,874 in 1920. The reduction was 23.3 per cent. In 1921 the road operated on a ratio of 82.12, as compared with 89.3 in 1920. In 1917, the last year before government control, the road had a ratio of 60.41. This indicates what has already been said above concerning the fact that the Northern Pacific is far from being on a pre-war basis in net earnings, but at the same time, it indicates a rather favorable condition because it must be borne in mind that this reduction in operating expenses and in the operating ratio, was made in the face of reductions of nearly one-third in freight and passenger traffic.

The reductions in operating expenses were made as follows: The charges for maintenance of way were \$14,312,916, a decrease of \$6,699,882, or 31.88 per cent. Maintenance of equipment was \$21,825,817, a decrease of \$3,768,106, or 14.72 per cent. Transportation totaled \$35,797,967, a decrease of \$12,641,035, or 26.10 per cent. The reductions in maintenance were, to some extent, due to lesser work being done, as well as to economies through decreased cost of wages and materials. In 1921 the road relaid 26 miles of rail, as compared with 154 in 1920. It ballasted 183 miles of track as compared with 238 in 1920. Main line tie renewals were 1,072,530 as compared with 1,395,094 in 1920, and a proportionate reduction was made in branch line tie renewals. The larger part of the road's main line is laid with 90-lb. rail. The maintenance of equipment condition, which evidences the result of the reductions in maintenance expenses, is shown by a percentage of bad-order cars on the Northern Pacific on May 1 of 10.4 per cent, which compared with the country's average on that date of 14.4. The unserviceable locomotive percentage on the same date was 19.2, as against the country's average of 20.2. This indicates savings in maintenance of equipment such as were evidenced in the case of maintenance of way, but the Northern Pacific is in better shape than the average of the roads of the country.

Students of Northern Pacific railway affairs are watching with interest the progress which the company is making with reference to oil traffic from the fields along its line. The annual report says that "during 1921 there was marked progress in oil exploration in Montana. . . The Cat Creek field continued to be a large producer. During the year 1,317,143 barrels were produced and shipped from 68 wells, making a total since the first shipment in August, 1920, of

1,547,261. In the Devil's Basin field there are two producing wells. In February, 1921, the Soap Creek oil field, in southern Bighorn County, was discovered. Drilling is actively in progress in both the Devil's Basin and Soap Creek fields, as well as in a number of other localities in central and eastern Montana. So far the production of oil from any lands owned or controlled by your company has been very small. The company, however, owns a large acreage

in districts, the geology of which indicates oil possibilities."

One of the reasons for the recent change in the fortunes of the southwestern carriers has been the oil development along their lines. The situation as to Northern Pacific, however, does not yet seem to partake quite of that character. The total crude petroleum traffic which it originated in 1921 totaled only 1,178 tons, which shows that oil traffic is not yet very evidently much of a factor in earnings.

Turbine Locomotive Saves 52 Per Cent in Fuel

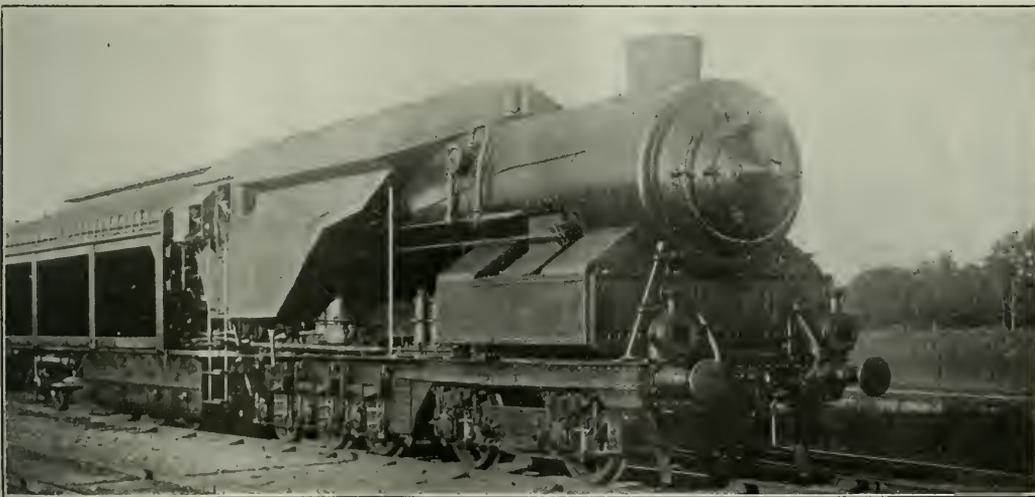

Design Brought Out by Ljungstrom Turbine Company of Sweden
Has Many Novel Features

A CONDENSING TURBINE locomotive, designed by F. Ljungstrom and constructed by Aktiebolaget Ljungströms, Angturbin, Stockholm, Sweden, was placed in service on the Swedish State Railways a few months ago. According to reports, the locomotive has performed satisfactorily and has shown remarkable economy in fuel. Complete details of the construction are not yet available but the photograph shown herewith indicates that it is a radical departure from conventional locomotive design.

The turbo-locomotive designed by Mr. Ljungstrom is intended to displace the Pacific type locomotives now used in

barrel of the boiler being made up of large flues, each of which carries a superheater element, thus giving a high degree of superheat.

Another innovation is the arrangement for heating the air supplied to the fire. The space between the mud ring and the ashpan is tightly closed and the air needed for combustion passes through a special air preheater under the smokebox, where the temperature is raised by escaping gases from the smokebox. Draft is created by a fan propelled by a small turbine. A damper connected with the firebox door shuts off the draft when the door is open, thus preventing unnece-

Turbine Locomotive on the Swedish State Railways

passenger service on the Swedish State Railways. It is not a mere adaptation of the turbine to reciprocating locomotives, but is a new design in all respects. Unlike ordinary steam locomotives, there is no driving machinery under the boiler. Instead it is supported by two trucks, the forward with two and the rear with three axles. The driving machinery is located under the tender unit, which also contains the condenser and the necessary fans for aiding in condensation. The coal supply is carried in bunkers placed above and on each side of the cab, having a capacity of seven tons. The boiler is of the ordinary fire-tube type, carrying 285 lb. pressure. It has no small tubes, the heating surface in the

sary cold air entering the firebox flues. The exhaust steam is not discharged from the stack but is led to a condenser on the tender.

The driving machinery consists of a high-speed turbine suitably geared to the six-wheel connected running gear which has drivers 58 in. in diameter and is located under the tender. The condensing tank has a capacity of 3,650 gallons but only half of that amount has been carried on the trial trips and has been found sufficient as the exhaust steam is not wasted through the stack but returns to a hot well from which it is pumped into the boiler as feedwater. As the feedwater is used over and over, very little scale will

be formed in the boiler. The preheating of the air for combustion should also add to the life of the firebox.

The locomotive is being used in passenger service out of Stockholm on turn-around trips of 66 kilometers, or about 41 miles, each way. The time between the departure from Stockholm and the return is 2 hrs. 30 min. As no information is given as to the time at the turn-around point or the length of the stops en route, no estimate can be made as to the speed while on the road.

On a local run on this route with a passenger train weighing 603 tons, the coal consumption was 20.8 kilograms (45.8 lb.) per 1,000 ton kilometers, or about 67 lb. per 1,000 gross ton-miles. In through service the consumption was reduced to about 11.6 kilograms (25.6 lb.) per 1,000 ton kilometers, or 37.4 lb. per 1,000 gross ton-miles. Considering that this performance was obtained during the winter season the figures are indeed remarkable. Compared with the reciprocating superheated Pacific type locomotives used on the same run, the turbine locomotive shows a reduction of 52 per cent in the consumption of fuel. Further details of the locomotive will be published in a later issue.

Separation of Southern Pacific and Central Pacific Ordered

WASHINGTON, D. C.

REVERSING the decision of the district court for the eastern district of Utah the United States Supreme Court, in a decision handed down on May 29, directed that a decrease be entered severing the control by the Southern Pacific of the Central Pacific by stock ownership or by lease. Action to effect the dissolution was begun by the federal government in 1914, the defendants being the Southern Pacific and Central Pacific companies, the Union Trust Company of New York and the directors of the Southern Pacific. The government asked that the lines of the Southern Pacific and the Central Pacific be decreed to constitute competitive systems and that the Southern Pacific be required to dispose of its ownership of stock and relinquish any control over the Central Pacific. A large part of the opinion by Justice Day reviewed the history of the organization of the roads and the case in which the separation of control of the Union Pacific and Southern Pacific was required, holding that the Southern Pacific-Central Pacific case does not differ from the former in principle.

"Such combinations," the court said, "not the result of normal growth and development but springing from the formation of holding companies or stock purchases resulting from the unified control of different roads or systems naturally competitive, constitute a 'menace and a restraint upon that freedom of commerce which Congress intended to recognize and protect and which the public is entitled to have protected.'"

After citing a number of cases as supporting this principle the court said: "These cases collectively establish that one system of railroad transportation cannot acquire another nor a substantial or vital part thereof, when the effect of such acquisition is to suppress or materially reduce the free and normal flow of competition in the channels of interstate trade." It added that proof was ample that the policy of the Southern Pacific system has been to favor transportation on its lines by securing for itself, whenever practicable, the carriage of freight which would normally move eastward or westward over the shorter line of the Central Pacific for its own much longer and wholly owned southern route, and reached the conclusion that the stock ownership in the Central Pacific acquired by the Southern Pacific is violative of the Sherman act within the principles settled by the court in previous cases.

So far as compatible, the court said, the mortgage lien of the Union Trust Company of New York should be protected.

The several terminal lines and cutoffs leading to San Francisco Bay, which have been constructed or acquired during the unified control of the two systems for convenient access to the bay and to the principal terminal facilities about the bay, should be dealt with, the court declared, "either by way of apportionment or by provisions for joint or common use, in such manner as will secure both companies such full, convenient and ready access to the bay and to terminal facilities thereon that each company will be able freely to compete with the other, to serve the public efficiently and to accomplish the purpose of legislation under which it was constructed."

A like course should be pursued, Justice Day added, "in dealing with the lines extending from San Francisco Bay to Sacramento and to Portland, Ore."

"The Central Pacific with its eastern connection at Ogden, forms one great system of transportation between the East and the West," the opinion stated, "and the Southern Pacific with its roads and connections and steamboat lines forms another great transcontinental system for transportation from coast to coast. The Central Pacific constitutes some 800 miles of transcontinental line, of which it is a part. The Southern Pacific system has practically its own line of railroads and steamboat connections to New York, via Galveston and New Orleans."

The acquisition of the Central Pacific stock by the Southern Pacific was held to be unlawful under the opinion of the court in the Union Pacific case, "unless justified by the special circumstances relied upon" for that purpose, but the court after analyzing the special circumstances discarded them as not justifying the control.

"These two great systems are normally competitive for the carrying trade in some parts from the East and Middle West to the Coast," Justice Day said, "and in greater volume for the traffic moving to and from central and northern California, including a great volume of the ocean-borne traffic which lands on the coast destined across the continent to the Atlantic seaboard and intermediate Western and Eastern points or is destined from the latter points to foreign ports via San Francisco or other Pacific coast points." The court said the roads "were always separate and distinct corporations. They were so recognized in the acts of Congress making land grants to them . . . and otherwise conferring rights on them which only Congress could confer."

"For a good part of the time," it added, "the roads had boards of directors not consisting of the same persons. At times the majority of the stock was separately held."

The court refused to accept the theory of prior practical consolidation as a justification for a violation of the Sherman act. The bearing of the 99-year lease of the Central Pacific, made in 1885, was reviewed, the court reaching the conclusion that it could not have been legally made without authorization by Federal legislation, which was never given.

"We find nothing in these leases to the Southern Pacific company," the justice said, "which justifies the continued control of the Central Pacific by the Southern Pacific after the Sherman act became effective."

In a dissenting opinion Justice McKenna said he considered the decision of the court unjust; that there was no thought in anyone's mind that the acquisition of stock by the Southern Pacific would be a restraint upon competition or a detriment to the public interest.

The tentative consolidation plan issued by the Interstate Commerce Commission last year leaves the Central Pacific in the proposed Southern Pacific-Rock Island system, although Professor Ripley in his report had recommended that the Central Pacific be made a part of the Union Pacific-Chicago & North Western system.

Canadian Political Situation and Railway Policy

Progressives Hold the Balance of Power in Parliament and Favor Nationalization of Railways

By J. L. Payne

CANADA IS NOW definitely committed to public ownership of railways on a large scale. There was some doubt after the general elections of December last as to what would be the policy of the new Government; but that doubt no longer exists. The administration has announced its determination to follow pretty closely the course laid down by its predecessor. At all events the departures are few and unimportant.

The political situation as it bears on railway policy is somewhat extraordinary. The Liberals, under Hon. W. L. MacKenzie King, are in power, yet they have not a majority in Parliament. The key is held by a group of 65 Progressives, representing the same interests as does the "farm bloc" at Washington. Among the Liberals there is a strong feeling against public ownership. It is understood, for example, that the Quebec contingent, representing more than half of the entire Government strength, is a unit on that point. The Conservatives are about evenly divided on the issue; but they make up not more than 55 in a House of 235. The Progressives, standing somewhat aloof, hold the balance of power, and they are practically to a man in favor of nationalization. Speaking broadly, they represent the farmers of the country, although chiefly those of the western provinces.

Parliament Has Never Sanctioned Nationalization

The foregoing explanation is perhaps necessary in order that the Canadian situation may be understood by American readers—I mean the situation in Parliament. As for the people at large, it would be quite impossible to say where they stand on the question of railway policy. They have never declared themselves. They have never once had an opportunity to do so. Although two general elections have been held since nationalization was tacitly begun in 1914—one of them since that policy was definitely adopted in 1918—the matter has not been an issue before the electorate. That may seem extraordinary; but it is strictly true. The Conservatives, who held the reins of power from 1911 down to December last, were overwhelmingly defeated at the polls; yet that defeat could not be construed as a rebuke for their attitude in respect of public ownership, for the sufficient reason that it was scarcely mentioned in the campaign.

To outsiders it must seem inexplicable that a nation like Canada, intensely democratic in sentiment, could be committed to a course of action quite radical in its broad features, and involving the assumption of enormous liabilities, without public approval. The facts of the case rather intensify the anomalous aspect of what has happened; for it might be said that this important policy was fastened on the Dominion without even the direct sanction of Parliament. The positive steps in the matter were taken by Government, and all that can be said is that Parliament did not intervene. The Government at that time had a numerically strong majority at its back, and in this negative, or passive, position of its supporters one gets a vivid flash of the party system.

Progressives in Control

The pivotal position of the Progressives at the present time is well illustrated by an occurrence which may be of interest to American readers. In 1897 the Canadian Pacific desired a loan of \$3,300,000 to finance the building of its

Crow's Nest Pass line in the west, and the Minister of Railways of that day took advantage of this need to drive a bargain. He required the Canadian Pacific to make certain specific reductions in rates in return for the loan; and that was done. The Railway Commission did not come into existence until six years later. Freight tolls actually moved downward in slight degree until 1916, and then in 1918 they moved violently upward. Under the War Measures Act the whole question of rates was referred to the Railway Commission, and the Crow's Nest Pass agreement was suspended by that Board until July 7 next. With tolls 65 per cent higher than in 1897, the Progressives are now tacitly demanding that the agreement in question shall become operative in July next. Of course, on analysis, it has developed that there are both legal and other difficulties in the way, and the whole matter is being considered by a committee of Parliament; but one gets in this incident a glimpse at the general attitude of these western Progressives toward railway policy. When that agreement was made the Canadian Pacific operated about 8,000 miles of lines, as compared with nearly 14,000 at the present time, and it was the only trunk line in the west. Now there are three.

When the first session of the present Parliament began, with a new Government at the helm, there was great uncertainty as to what would be done in the matter of public ownership; but all doubt was dispelled by the announcement made at the formal opening, and confirmed later by definite statements from the Minister of Railways and Canals. All changes in contemplation were comprehended within the somewhat indefinite term of "co-ordination." It transpired that this did not mean very much—certainly nothing which would in any material way alter the policy that had been followed ever since nationalization received its first demonstration. When explanations came to be made, it was found that Government merely proposes to abolish the old Canadian Northern board and the Grand Trunk board and have but one executive body. This will be done under the Canadian National Railways Act of 1919; so that there is no room for surmise as to the precise nature of the administration under which the public railways of Canada will be carried on.

The Canadian National Railways Act provides for a board of directors which will not only be appointed by Government, but will be at all times, and under all circumstances, answerable to the Minister of Railways. The minister may remove any member of the board at will "for cause." That term is so comprehensive and elastic, there is no question whatever that the door will remain wide open for political control. It had been urged in the public press that steps be taken to place a board in charge which would have the power and courage to make sweeping changes, especially in the removal of wasteful parallels in the west; but that appeal has not been heeded. All the evils and drawbacks which attached to the public railway system since its inception, with the measuring of all administrative policy in terms of political expediency, may be perpetuated.

It is not suggested that the lessons of experience will be disregarded; but there can be no doubt that the way is clear for the assertion of the same measure of direct political control which obtained from 1914 downward. In other words, "co-ordination" simply means the substitution of an obvi-

ously practicable form of executive organization for one which was irregular and contrary to the statute. It does not, however, place an independent board in charge.

It would also appear that the enforced absorption of the Grand Trunk has been ratified by the new Government, in which matter we see again the play of political expediency. The Quebec members, numbering 65 out of a total of 117 on the Liberal side, was understood to be strongly opposed to the wrenching of the Grand Trunk out of the hands of its corporate owners. But the Progressives favored that step, and, as has been pointed out, the farmers' party holds the balance of power in the House. The Grand Trunk cannot contribute anything of value to the government system. On the contrary, it stands a good chance of adding to its weakness by being ruined.

The Grand Trunk Question

There are serious objections to the taking over by Government of this pioneer Canadian road, which held a unique position in that it had not received that generous measure of public aid which had been lavished on enterprises of modern date. In the first place, it was not bankrupt. It was in a stronger financial situation than is, for example, the Chicago, Milwaukee & St. Paul at the present time. It was simply embarrassed by reason of its endorsement of the securities of its subsidiary, the Grand Trunk Pacific, and if Government had relieved it of that liability it could have gone ahead indefinitely.

But that is not the most serious matter. The Grand Trunk must be regarded as more of an American than a Canadian road. Its western terminal is at Chicago and its eastern at Portland, Maine. It owns and operates nearly 1,700 miles of line in the United States. It derives 70 per cent of all its revenue from its American connections. Will it be able to maintain that valuable traffic, which is its very life-blood, when owned and operated by the Canadian government? Another objection is that its absorption by Government creates in the east a new series of those deadly parallels which make economical operation of public railways practically impossible in the west. Nor does it better matters to have the English shareholders crying out over what they call "the confiscation" of their stocks without a penny of compensation.

This reference to the American aspect of the Canadian railway situation suggests a matter of some importance which has not up to this moment been considered on its potential merits. With the taking over of the Grand Trunk, the Dominion Government becomes the owner and operator of 2,000 miles of line in the United States. It will be seen that this changes quite vitally the comity which has hitherto prevailed. That is to say, there is a material difference between the railway corporations of one country operating within the territory of the other country and the government of either country doing so. The question of rights of eminent domain may arise at any moment. Rivalries for traffic between Canadian and American companies, on both sides of the line, is one thing, and competition between American companies and the Canadian government on United States soil may be quite another. I am not raising this point. It has been definitely raised by influential journals in the United States, and put forward as a possible ground for serious international complications. In it we must all see one of the drawbacks which attach to the venture of the Canadian government into public ownership of railways.

Results of Government Operation

What has been the result thus far of the operation of 22,500 miles of railway by the Canadian government? Not encouraging. On the contrary, very discouraging. The deficit for 1921, as recently announced to Parliament, was placed at \$72,500,000. For 1920 it was \$70,300,000. On the oper-

ating side there was a betterment of about \$20,000,000; but that was more than counterbalanced by the increase in fixed charges. Of course, the actual shortage on the government system was much larger than that given out in the public statement, since it omitted probably \$60,000,000 of fixed charges on 4,000 miles of line and a capitalization of considerably more than a billion dollars. It must be understood that Government has bookkeeping methods which are all its own. There was some talk a few months ago about deferred charges, in order to help out the situation as to unemployment, and the facts in that regard are to be brought down.

There was a fair demonstration of economy on the government lines; yet that must be measured against the room that existed for retrenchment. Nothing is clearer than that the public railways in 1920 and 1921 were not only over-manned, but that they paid more for labor and got a much lower return in service than did the corporate roads. For example, on the Canadian Pacific, operating side by side with the Canadian Northern, which is the chief unit of the government system, the number of ton and passenger miles handled per employee in 1920 was 222,495, as compared with 153,019 on the latter.

The average trainload on the Canadian Northern was 350 tons, as against 529 tons on the Canadian Pacific, although the former has a much more favorable grade. Perhaps the most conspicuous difference between the two roads was in the matter of employees. When traffic began to fall off seriously between 1918 and 1919, the Canadian Pacific met the situation by reducing its working staff by 2,596. The Canadian Northern actually added 8,052. In government hands, by every reasonable and accepted test, efficiency on the Canadian Northern seriously declined, and it was certainly bad to begin with.

Perhaps the most alarming aspect of the entire public railway situation is the rapid rise of fixed charges. Government has been pouring out money by hundreds of millions on the capital side. Since 1914 the payments to meet deficits for extensions, equipment, standardization of lines and so on, has exceeded \$600,000,000. The Canadian Northern has been the chief beneficiary. These advances to public railway units have passed into the Dominion debt, which has not been a comforting thing for a nation of less than nine millions of people already heavily burdened by their participation in the war. Nor is the outlook hopeful. There may come a time, with traffic buoyant, when the operating deficit will be balanced by earnings; but meanwhile the accumulation of capital liability will inevitably make the problem of ultimate solvency more difficult. The national credit is beyond question, although as high a financial authority as the Wall Street Journal has published "A Friendly Warning to Canada," in which the rather obvious truth in that regard was plainly discussed.

Not a Failure of Private Ownership

The defenders and advocates of public ownership insist that the Canadian railway problem was created by the failure of private ownership. They are only technically on good ground. The assertion of state control followed the collapse of the Canadian Northern and the Grand Trunk Pacific, both of which were on the surface like any other railway corporation. But only on the surface. When the veneer of corporate status is removed, it is discovered that they were wholly government enterprises. They were essentially political roads in every respect, and it was political expediency which lay back of the insane additions to mileage that brought about their downfall under their own weight.

One fact alone should determine their proper classification. They did not have to finance their capital on the merits of their undertaking. Not at all. Practically every penny of their hundreds of millions of outstanding bonds

were endorsed by Government, in which case the purchasers were absolutely indifferent as to whether or not the railways themselves ever earned a farthing. They were secure. And the very moment the inflow of public money ceased—not after years of struggling and then being pinched by adverse circumstances—these roads were cast at the door of Government. Why? Because Government, as the guarantor of their liabilities, was the real owner. Government also subsidized them heavily, and, in the case of the Canadian Northern, gave a large grant of public lands.

This being the plain and incontrovertible truth, it is in the last degree misleading to speak of public ownership being forced on the Canadian government because of the failure of corporate ownership. The Canadian Northern would have remained a relatively small and obscure railway if it had been dependent on its own resources, and the Grand Trunk Pacific would never have been heard of at all. These two roads were financed entirely on the credit of the country, and their merits as legitimate railway enterprises were wholly subordinate to their value in the winning of elections. There is not a shadow of doubt about that.

The outlook is not stimulating. The hope aroused by the primary announcement that a substantial reduction in the operating deficit had been won in 1921 was crushed by a later statement as to the large increase in fixed charges.

Freight Car Loading

WASHINGTON, D. C.

FREIGHT CAR LOADING again increased during the week of May 20 to 792,459 cars, which was 15,100 more than the total for the week before and compares with 770,991 during the corresponding week of last year and 862,074 in 1920. Increases as compared with the week before were shown in all classes of commodities except livestock and increases as compared with the corresponding week of last year in all classes except coal and ore. In the Pocahontas and Southern districts, which are enjoying a heavy coal traffic during the strike, the total loadings were in excess of those of 1920, but in the Eastern, Alleghany and Southwestern districts the loading was less than that of last year. The coal loading for the week was 81,967 cars, an increase as compared with the week before, but 78,665 less than for the corresponding week of 1921. With this amount of coal added the loading for the week would have exceeded that of 1920 as it was more than offset by the increase of 62,540 cars in the loading of miscellaneous freight and 26,797 in merchandise, L. C. L. In two weeks the total increase in loading has been over 36,000. The summary as compiled by the Car Service Division of the American Railway Association follows:

REVENUE FREIGHT LOADED

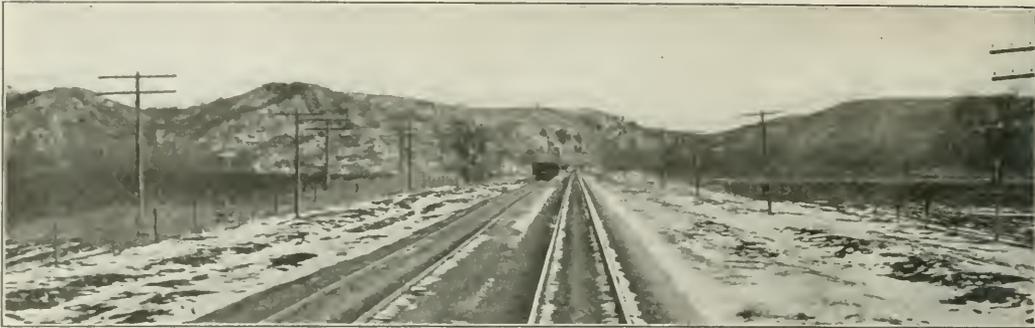

SUMMARY—ALL DISTRICTS, COMPARISON OF TOTALS THIS YEAR, LAST YEAR, TWO YEARS AGO. WEEK ENDED SATURDAY, MAY 20, 1922

Districts	Year	Grain and grain products	Live stock	Coal	Coke	Forest products	Ore	Mdse. L.C.L.	Miscellaneous	Total revenue freight loaded

Competent and sympathetic students of the facts of the case would have preferred an increase in the operating loss if it had been counterbalanced by a decrease in fixed charges. For the current year, there has thus far been a reduction of about \$10,000,000 in gross earnings; but "with no general election in hand," as a member of Parliament observed the other day, there has been leeway for a practically corresponding cutting down of expenses. Meanwhile, the whole railway problem is receiving an increasing amount of public attention, in Parliament and out. It was created amid absolute indifference, because the war excluded the consideration of all other topics.

The freight car surplus during the period from May 15 to 23 averaged 329,634, a decrease in a week of about 14,000. Of the total 79,534 were box cars and 208,691 were coal cars.

TWENTY CENTS A MEAL, or a total of \$163,000, was the loss sustained by the Chicago, Milwaukee & St. Paul in the operation of its dining cars for the year 1921. About 817,000 meals were served and the average amount received was \$1.05. It appears, however, that the cost, \$1.25, was calculated without including the interest on the investment—say \$50,000 per car—or the cost of hauling the cars.

On the Gulf, Colorado & Santa Fe Near the Washita Canon, Okla.

Santa Fe Back on Pre-War Earnings Basis

Income Available for Dividends, \$39,331,662. Best Year But One in Company's History

THE ATCHISON, TOPEKA & SANTA FE's net corporate income available for dividends and surplus, amounting for the year ended December 31, 1921, to \$39,331,662, made 1921 the best year in the company's history with the exception of 1919, in which year the net corporate income was \$43,098,658. This means that the Santa Fe must be awarded the distinction of being one of the first large systems to report its return to normalcy, which statement, of course, is made with due regard to the fact that the Santa Fe still has its problems of high wage costs, and that in 1921 it suffered, like all the other carriers of the country, a reduction in traffic.

The improvement which the Santa Fe showed in 1921 as compared with 1920 is not particularly marked. This is about what is to have been expected, for the simple reason that the system did not at any time lose as much ground as was the case with practically every other carrier in the country. In other words, the Santa Fe has not had as long a distance to travel to restore its net to its standard return level. The Atchison, Topeka & Santa Fe was one of the very few carriers of the country which earned for the Railroad Administration its compensation during the 26 months of federal control. For that period its standard return was about \$95,000,000. Its net after rentals for that period, however, was \$98,919,277. This is the outstanding feature which must be borne in mind in analyzing Santa Fe operating results.

In 1921 the system had a net after rentals of \$41,268,307 as compared with \$37,380,591 in 1920, an increase of \$3,887,717. The 1921 results were not quite as good as were obtained during the federal control period; in 1918 the figure was \$44,206,339; in 1919, \$42,025,618. Presumably, if the road had had more traffic in 1921, it would have exceeded its federal control record.

The business handled in 1921 was less than in 1920. The total tonnage for the year was 29,059,538 as compared with 36,850,553 in 1920. Reductions were made in almost all commodities with the exception of wheat, concerning which more will be noted below. The actual reduction in ton miles was 17.64 per cent. The freight revenues naturally were not reduced in the same proportion because of the increased rate per ton-mile. The freight earnings were \$160,217,450 or \$8,254,679 less than in 1920. The total

operating revenues were \$228,925,070 or \$25,323,932 less than in 1920. The operating expenses totaled \$173,217,915, a reduction of \$31,484,224 as against the 1920 figure. There was a reduction of \$8,387,514 in maintenance of way; of \$5,902,986 in maintenance of equipment and of \$18,231,691 in transportation.

Large Credit Per Diem Balance

The Santa Fe is fortunate in the matter of equipment. In 1921 it had a net credit for equipment rents of \$1,165,608 as against \$897,998 in 1920, which item further improved its net railway operating income. During 1921 the

Views on the Gulf, Colorado & Santa Fe

road acquired 50 locomotives and 3,459 freight cars, etc. On the other hand, it retired 79 locomotives and 1,373 cars. At present its percentage of bad order cars is one of the lowest for any road, which indicates a favorable condition of equipment maintenance.

The Gulf, Colorado & Santa Fe

One of the most interesting developments during the year was the change in the fortunes of the Gulf, Colorado & Santa Fe, the system's line to Galveston, and the results of which are included in the totals given above. This part of the Santa Fe has a mileage of 1,908. It has a standard re-

turn of \$2,828,218, which it did not quite earn during the period of federal control. In 1920, however, it had the poor fortune to have a deficit after rentals of \$1,072,202. In 1921 it accomplished the spectacular by bringing into the system a net after rentals of \$6,339,396. This reflects the prosperity of the southwest, if nothing else, but the increase in net was primarily due to the manner in which the grain movement from the central west was directed towards the gulf ports and particularly Galveston.

It will be remembered that the car loadings of grain in 1921 were considerably in excess of those for 1920. This was due, for one thing, to the fact that a large part of the 1920 crop moved in the early months of 1921. Further than that, the movement was directed towards the gulf ports rather more than towards the east as had been the tendency in the past. All of the lines serving the ports along the gulf will show this same increase in grain movement and naturally, because of its position and affiliations, the Gulf, Colorado & Santa Fe was in a specially advantageous situation.

As a matter of fact, it will be found that the Gulf, Colorado & Santa Fe is one of the very few railroads of the country which showed a higher total of net ton-miles in 1921 than it did in 1920. The actual figure of net ton-miles, including revenue and non-revenue freight, was 2,012,101 as compared with 1,784,350 in 1920. We believe this is the only important Class I railroad which showed a similar result. The effect on gross earnings can be readily appreciated. Combined with the reductions which were made through economies in operation, reduced wages, etc., it is not hard to explain the reason for the great increase in net as shown.

The situation of the Texas lines or the Texas subsidiaries of the large systems in the west and southwest has always been an interesting problem of American railroading. The Gulf, Colorado & Santa Fe, as a subsidiary of the Atchison, Topeka & Santa Fe, has been no exception. An analysis of the figures of the other Texas lines will show that they also succeeded in 1921 in returning to the parent companies sizable net income and in most cases much in excess of that for 1920. While it is true that the grain movement in 1921 was a development singular to that year, the other changes in traffic and operation which have taken place because of the development of the states of Texas and Oklahoma have apparently put an entirely new aspect on the situation which will be watched in future months with great interest.

The Gulf, Colorado & Santa Fe is a real part of the Atchison, Topeka & Santa Fe System. It will be found to have the same excellent standards as the parent company, and the illustrations which are given of Gulf, Colorado & Santa Fe track will presumably be studied with interest.

The Corporate Net Income

The Santa Fe's corporate net available for dividends in 1921—\$39,331,662—was, as noted above, the best in the company's history with the exception of one year, 1919. The company's dividends are at the rate of 5 per cent on the preferred stock—\$6,208,685—and 6 on the common, making \$13,518,420 or a total for dividends of not quite \$20,000,000. In 1921, in other words, the corporate net was equal to double the amount required for dividend payments, as in fact has been the case for a long period of years. It is further worth noting that interest on bonds in 1921 was only \$11,953,002, which amount is less than it was in 1907; in 1912 bond interest approached \$14,000,000. Figures of this kind give one a ready picture of the Santa Fe's remarkable financial position. They indicate further how extremely favorably situated the road will be with reviving traffic.

In 1919 the company's corporate net available for dividends totaled \$43,098,658. This high figure for 1919 is of more than ordinary interest, for it was the unusual for the

road to increase its corporate net while it was being operated by the government at a certain rental. The reason for the improved corporate net in 1919 in the Santa Fe's case was "Other Income"; namely interest and dividends on securities owned in companies the transactions of which are not included in the system accounts and similar income. Unfortunately, the Santa Fe does not give its stockholders further details concerning this factor. At any rate, in 1918 this other income totaled \$4,310,952; in 1919 it was \$18

ATCHISON, TOPEKA & SANTA FE SYSTEM			
Comparison of Operating Results			
	1921	1920	Increase or decrease
Mileage	11,678	11,584	94
Operating Revenues:			
Freight	\$160,217,450	\$168,472,129	—\$8,254,679

Uncollectible railway revenues	77,318	50,435	26,883
Railway operating income	\$40,793,563	\$37,492,287	\$3,301,281
Equipment rents—Net—Credit	1,165,608	897,998	267,611
Joint facility rents—Net debit	690,869	1,009,694	—318,825
Net railway operating income	\$41,268,307	\$37,380,591	\$3,887,716

Note—The operating expenses reported above exclude maintenance equalization charges and credits, so as to reflect actual expenditures applicable to each year.

denly increased to \$15,100,116, which great increase was explained at the time by the meagre statement that: "The income account in this respect does not reflect a normal year's showing but constitutes a record of income credits, applying in part to prior years, received or determined during the year." The other income in 1920 was \$9,842,116, and in 1921 but \$5,293,888, which again emphasizes the favorable character of the 1921 railway operating results.

The Matter of Equalization Charges

The Santa Fe in 1920 included in its maintenance expenses certain so-called equalization charges amounting to a total of \$13,374,976 "for the purpose of approximating the amount of maintenance expenses to which the company was entitled under the Transportation Act." The charge was shown in an item under maintenance of way and structures as "Equalization-Way and Structures, \$8,711,056" and under maintenance of equipment as "Equalization-Equipment, \$4,663,919." In the 1921 income account there appears an item of \$2,612,564, "equalization charges four months ending December 31, 1920, and offsetting credit in 1921." With reference to this item the report states:

"In the last annual report reference was made to the setting up of an equalization reserve for maintenance of way and structures and maintenance of equipment for the purpose of approximating the amount of the maintenance expenditures to which the company was entitled under the Transportation Act. This practice was carried over into the year 1921, but owing to the great difficulty of definitely determining a monthly proportion of the normal amount of annual expenditures under the fluctuating conditions which subsequently developed, the practice was discontinued and under instructions of the Interstate Commerce Commission the unexpended balance in the reserve was written off by credits to operating expenses during the remainder of the year. This has resulted in an abnormal credit to the income of the current year of \$2,612,564, being the portion of the reserve applicable to the four months ending December 31, 1920. The remainder of the reserve, viz., \$10,762,412, which pertained to the guaranty period, while credited to the current expenses, is offset by a charge to income of a corresponding amount as an adjustment of amount due under Section 209 of Transportation Act, 1920."

General News Department

The American Association of Passenger Traffic Officers will hold its annual meeting at the Seelbach Hotel, Louisville, Ky., on Tuesday and Wednesday, October 10 and 11.

Wage Reduction for Shop Men to Be Announced Soon

The Labor Board's decision regarding the reductions to be made in the wages of shopmen has been completed and will be announced as soon as a dissenting opinion which will be signed by the three labor members on the board has been completed. Unauthorized reports indicate that the scale of reductions for shopmen will range from 5 to 9 cents per hour, the wages of apprentices and laborers to be cut 5 cents an hour, of mechanics and passenger carmen 7 cents an hour and of freight carmen 9 cents an hour. The leaders of the sixteen railroad unions have been requested by E. H. Fitzgerald, president of the clerk's organization, to meet in Cincinnati on June 6 to discuss the future attitude and action of the organization as the result of the recent orders of the Board.

Election on the Pennsylvania

Clerks and miscellaneous employees of the Pennsylvania Railroad have recently completed their second election, by secret ballot, for representatives on the joint committee which deals with the officers of the road in questions of mutual concern. They were to fill vacancies and the places of representatives whose term of office expires this year. Approximately 15,000 employees in the Eastern Region were concerned in the elections. The results indicate that the plan is working with increasing satisfaction. The spirit in which the elections were carried on gives evidence of keen interest on the part of the employees. For the 72 places, 120 candidates were nominated. The number of candidates for each office varied from one to seven. Candidates were nominated by petition and the ballots were counted by tellers representing the employees and the management; and the results were certified by the Regional Joint Committees.

President Harding Endorses

Careful Crossing Campaign

The American Railway Association publishes the following statement issued by President Warren G. Harding relative to the four months' campaign for safety at highway crossings:

"The complete success of such an effort would mean the saving of thousands of lives, the prevention of many more thousands of injuries and, incidentally, the prevention of a great property loss. Of course, the ideal solution is elimination of grade crossings, to which all possible energy and means should be unceasingly directed. But the extent of our country and its railroad mileage make apparent that not for many years of utmost effort could this be affected. There should be constant pressure for elimination of these danger spots, particularly in the more populous areas; pending which there is need for just the kind of preventive effort that your association is planning. Among these measures, the most effective would seem to be to arouse in the minds of drivers a sense of their personal responsibilities. When thoughtlessness is allowed to usurp the place of vigilance, as too often happens, the scene is set for tragedy. Reminders and still more reminders of the need for caution at railway crossings are needed.

"Surely, the effort you are undertaking is appealing and it ought to have the most generous and general support."

Preliminary Report of April Earnings

A preliminary compilation of reports just received by the Interstate Commerce Commission from 137 Class I railroads show that in April those roads had a net operating income of \$35,239,000, compared with \$21,886,000 during the same month last year.

Total operating revenues for the 137 railroads amounted to

\$297,300,000, a decrease of 4.6 per cent compared with April, 1921, while their operating expenses totaled \$240,533,000, or a reduction of 11 per cent, compared with the same month one year ago. The roads from which reports have already been received represent a mileage of 169,586 miles.

Reports from 66 railroads in the Eastern district showed that their operating revenues in April totaled \$150,897,000, a decrease of 3.8 per cent, while their operating expenses totaled \$120,489,000, a reduction of 10.6 per cent under April, 1921. The net operating income for those 66 roads totaled \$19,931,800, compared with \$12,671,900.

Reports from 19 roads in the Southern district showed that their total operating revenues were \$29,524,400, an increase of only two-tenths of 1 per cent, while their operating expenses amounted to \$23,004,700, which was a decrease of 13.4 per cent. The net operating income of those 19 roads in April totaled \$4,748,400, compared with \$1,338,600 in April one year ago.

Fifty-two railroads in the Western district had operating revenues totaling \$116,878,400, which was a decrease of 6.7 per cent, while the operating expenses of those same roads totaled \$97,039,300, a reduction of 11 per cent. The net operating income of those roads totaled \$10,559,300, compared with \$7,875,500.

Complete reports for the Class I railroads of the country are expected to be available late this week.

A Safety Message by Radio

Of the various editors of "safety first" news in this country one of the best is the Insurance Department of the Pennsylvania Railroad; and a brief message from this source was sent out by radio telephone on the evening of May 17 from the Westinghouse broadcasting stations in Pittsburgh, Chicago, Newark, N. J., and Springfield, Mass. Some of the things said were the following:

During the last 10 years 84,000 people have been killed and injured in this country while trespassing or walking on railroad tracks and trains; and 9,000 of this great army of killed and injured were children under 14 years of age; 12,000 were between 14 and 21 years; 9,000 were hoboes and tramps and 54,000 were useful members of society. Notwithstanding the unavoidable hazards of railroad operation nearly one-half of all the fatal injuries that occur on the railroads is chargeable to trespassing. This needless waste of human life is a sad reflection upon the intelligence of the American people; it will be stopped when public spirited citizens in every town become awakened.

Indeed, great improvement has already been made. Prior to 1916 trespassers killed and injured on the railroads numbered about 10,000 a year, but during the last three years this has been reduced to an average of about 5,000 a year, notwithstanding a large increase in population and in railroad business. This great result, preventing untold suffering, is directly due to safety education in the home, the schools, the mines, the manufacturing enterprises and to the general influence of the safety first movement; and particularly to the untiring efforts put forth by the railroads through their police departments to keep persons off the tracks. Teachers, preachers, and all public-spirited citizens are urged to use their influence in securing attention to the simple rules many times published [and quoted in the message].

Grand Trunk Rally at Stratford

At Stratford, Ontario, on the evening of May 18, about 2,200 employees of the Grand Trunk Railway participated in a grand re-union in the Stratford Armory; and about 800 others, unable to get into the building, held an overflow meeting at the Avon Casino. Sir Joseph Flavelle, chairman of the board of directors, W. D. Rebb, vice-president, and other prominent officers of the road were present, and there was a brief address by Chair-

man Flavell. Superintendent W. J. Piggott was chairman of the meeting.

A bronze tablet, in memory of employees who gave their lives in the Great War, was unveiled, and an ambulance, presented to the railway company, for use in Stratford, by an association of employees, was on exhibition. The presentation of medals and other trophies as rewards in athletic and other contests also formed a feature of the meeting.

Stratford is the location of large shops of the company and employees in the shops and other departments of the service presented a musical and literary program.

Program of the Mechanical Division Convention

The program of the third annual meeting of Division V—Mechanical—of the American Railway Association, which will be held at Atlantic City, N. J., June 14-21 inclusive, is as follows:

First day (Wednesday, June 14, 1922)—Opening exercises; association business; discussion of reports of the following committees: Nominations, Safety Appliances and Scheduling of Equipment through Repair Shops.

Second day—Discussion of reports on Prices for Labor and Material, Arbitration, Tank Cars, Loading Rules, Train Lighting and Equipment.

Third day—Discussion of reports on Car Construction, Couplers and Draft Gears, Brake Shoe and Brake Beam Equipment, Train Brake and Signal Equipment, and Car Wheels.

Fourth day (Monday, June 19, 1922)—Discussion of reports on the Manual, Specifications and Tests for Materials, and Locomotive Headlights and Classification Lamps; election of officers.

Fifth day—Discussion of reports on Locomotive Construction, Feed Water Heaters, and Modernization of Stationary Boiler Plants.

Sixth day—Discussion of the report on the Design and Maintenance of Locomotive Boilers; topical discussion; Closing Exercises.

No reports will be received from the following committees: Autogenous and Electric Welding; Design, Maintenance and Operation of Electric Rolling Stock; Engine Terminals, Design and Operation; Lateral Motion on Locomotives; Mechanical Stokers; Standard Blocking for Cradles of Car Dumping Machines; Train Resistance and Tonnage Rating; and Car Repair Shop Layouts.

Lumber Standardization Proposed

Representatives of the American Railway Association, the American Electric Railway Association, and the wood manufacturing industries met with manufacturers, wholesalers and distributors of lumber, architects and building engineers at the Department of Commerce in Washington on May 26, and concurred in the decision previously arrived at by the last named groups regarding the subjects of standardization of lumber sizes, simplification of grades, guaranties of quantity and quality and national inspection.

It was resolved:

"That all organizations representing producers, distributors and consumers of lumber, be invited to appoint representatives to meet in general conference on the call of the National Lumber Manufacturers' Association, with the assistance of the departments of Commerce and Agriculture, for the purpose of arranging for holding meetings in as many sections of the United States as may be deemed necessary in order to arrive at definite recommendations concerning the three subjects here under discussion. Such recommendations to be placed before another general conference of all interests involved after the series of sectional conferences shall have been concluded."

Another resolution which was adopted included national inspection in the matters to be brought before this committee. It is intended to proceed expeditiously with the creation of this committee and it may be able to hold its first meeting within 30 days.

W. F. Kiesel, Jr., (P. R. R.) speaking for the American Railway Association, said that his association was in entire accord with the proposed lumber trade reforms, in all the fundamentals.

V. R. Hawthorne, secretary of the mechanical division A. R.

A., endorsed Mr. Kiesel's statement; the association had for a number of years devoted much attention to the problems of standardization and simplification.

F. Tingley, Washington, representing the American Electric Railway Association, pledged the co-operation of that organization.

Mechanical Division Issues Manual of Standard and Recommended Practice

The standard and recommended practice of the former American Railway Master Mechanics' and Master Car Builders' Associations has been consolidated and harmonized by appropriate committees of the Mechanical Division, American Railway Association, and together with practices adopted since amalgamation with the American Railway Association incorporated in a loose-leaf volume, designated "Manual of Standard and Recommended Practice, Mechanical Division, American Railway Association." This work has been done under the direction of the Committee on Manual.

This manual contains text and drawings for all standards and recommended practice adopted by letter ballot by the former Master Car Builders' and American Railway Master Mechanics' Associations and the Mechanical Division, American Railway Association, and is arranged in 12 sections, as follows:

- A—Specifications for Materials.
- B—Gages and Testing Devices.
- C—Car Construction—Fundamentals and Details.
- D—Car Construction—Trucks and Truck Details.
- E—Brakes and Brake Equipment.
- F—Locomotive Wheels, Tires and Miscellaneous Locomotive Standards.
- G—Safety Appliances for Cars and Locomotives.
- H—Train Lighting, Headlights and Classification Lamps.
- I—Rules for Fuel Economy on Locomotives.
- J—Inspection and Testing of Locomotive Boilers and Rules and Instructions for Inspection and Testing of Steam Locomotives and Tenders.
- K—Specifications for Tank Cars.
- L—Miscellaneous Standards and Recommended Practice.

The pages in each of these sections are numbered consecutively and each section is provided with separate index. There is also a general index of the contents of the entire manual with proper reference to section and page.

The Code of Rules Governing the Condition of and Repairs to Freight and Passenger Cars for the Interchange of Traffic, and the Rules Governing the Loading of Lumber, Logs, Stone, etc., and Loading and Carrying of Structural Materials, Plates, Rails, Girders, etc., while adopted standards are not published in this manual.

The manual contains nearly 1,000 pages of text and drawings and is bound in special hinged back binder, so that it may be kept up to date by issuing from time to time corrected pages without the necessity of printing the entire book. It will also be possible to secure separate sheets covering only such matter as is desired without the necessity of purchasing the entire book.

This manual will be supplied on requisition at the following prices:

To members of the association:

Manual complete, including binder, per copy.....	\$6.00
Separate sections complete, self-covered in paper, per copy50
Separate sheets, each05

To other than members of the association the manual is sold at double the prices quoted.

Meetings and Conventions

The following list gives names of secretaries, dates of next or regular meetings and places of meetings:

- AIR BRAKE ASSOCIATION.—F. M. Nellis, 165 Broadway, New York City. Next convention, June 19-21, Hadden Hall Hotel, Atlantic City, N. J. Exhibit by Air Brake Appliance Association.
- AIR BRAKE APPLIANCE ASSOCIATION.—J. F. Gettrust, The Ashton Valve Company, 318 W. Washington St., Chicago. Meeting with Air Brake Association.
- AMERICAN ASSOCIATION OF DEMURRAGE OFFICERS.—F. A. Pontious, Superintendent of Demurrage and Storage, C. & N. W. Ry., Chicago.
- AMERICAN ASSOCIATION OF DINING CAR SUPERINTENDENTS.—L. A. Stone, C. & E. I. Ry., Chicago. Annual meeting, Oct. 17-20, San Francisco, Cal.

AMERICAN ASSOCIATION OF ENGINEERS.—C. E. Drayer, 63 E. Adams St., Chicago.

AMERICAN ASSOCIATION OF GENERAL BAGGAGE AGENTS.—E. L. Duncan, 332 So. Michigan Ave., Chicago. Next meeting, June 28 and 29, Minneapolis, Minn.

AMERICAN ASSOCIATION OF PASSENGER TRAFFIC OFFICERS.—W. C. Hope, C. R. R. of N. J., 143 Liberty St., New York. Annual meeting, October 10 and 11, Seelbach Hotel, Louisville, Ky.

AMERICAN ASSOCIATION OF RAILROAD SUPERINTENDENTS.—J. Rothschild, Room 400, Union Station, St. Louis, Mo. Next convention, August 23-25, 1922, Kansas City, Mo.

AMERICAN ELECTRIC RAILWAY ASSOCIATION.—J. W. Welsh, 8 W. 40th St., New York.

AMERICAN RAILROAD MASTER TINNERS', COPPERSMITHS' AND PIPE FITTERS' ASSOCIATION.—C. Bercherdt, 202 North Hamlin Ave., Chicago, Ill.

AMERICAN RAILWAY ASSOCIATION.—J. E. Fairbanks, General Secretary, 75 Church St., New York, N. Y. Annual meeting, November, 1922.

Division I.—Operating.
 Freight Station Section (including former activities of American Association of Freight Agents). R. O. Wells, Freight Agent, Illinois Central Railroad, Chicago, Ill.
 Medical and Surgical Section. J. C. Caviston, 75 Church St., New York.
 Protective Section (including former activities of the American Railway Chief Signal Agents and Chiefs of Police Association). J. C. Caviston, 75 Church St., New York.
 Telegraph and Telephone Section (including former activities of the Association of Railway Telegraph Superintendents). W. A. Fairbanks, 75 Church St., New York, N. Y. Annual meeting, September 20-22, 1922, Colorado Springs, Colo.

Safety Section.—J. C. Caviston, 75 Church St., New York.

Division II.—Transportation (including former activities of the Association of Transportation and Car Accounting Officers). G. W. Covert, 431 South Dearborn St., Chicago, Ill.

Division III.—Traffic. J. Gottschalk, 143 Liberty St., New York.

Division IV.—Engineering. E. H. Fritch, 431 South Dearborn St., Chicago, Ill. Exhibit by National Railway Appliances Association. Construction and Maintenance Section. E. H. Fritch.

Electrical Section.—E. H. Fritch.

Signal Section.—(Including former activities of the Railway Signal Association). H. S. Balliet, 75 Church St., New York, N. Y. Next meeting, March 13 and 14, Drake Hotel, Chicago. Annual meeting, June 14-16, 1922, Monmouth Hotel, Spring Lake, N. J.

Division V.—Stores (including former activities of the Master Car Builders' Association and the American Railway Master Mechanics' Association). V. R. Hawthorne, 431 South Dearborn St., Chicago, Ill. Annual convention, June 14-21, 1922, Atlantic City, N. J. Exhibit by Railway Supply Manufacturers' Association.

Equipment Painting Section (including former activities of the Master Car and Locomotive Painters' Association). V. R. Hawthorne, 431 South Dearborn St., Chicago, Ill.

Division VI.—Purchases and Stores (including former activities of the Railway Storekeepers' Association). J. P. Murphy, General Store Keeper, New York Central, Collinwood, Ohio. Annual meeting, June 19-21, 1922, Hotel Traymore, Atlantic City, N. J.

Division VII.—Freight Claims (including former activities of the Freight Claim Association). Lewis Pilcher, 431 South Dearborn St., Chicago, Ill.

AMERICAN RAILWAY BRIDGE AND BUILDING ASSOCIATION.—C. A. Lichty, C. & N. W. Ry., 319 N. Waller Ave., Chicago. Next convention, October 17-19, 1922, Cincinnati, Ohio. Exhibit by Bridge and Building Supply Men's Association.

AMERICAN RAILWAY DEVELOPMENT ASSOCIATION.—A. Leckie, Industrial Agent, Kansas City Southern Ry., Kansas City, Mo.

AMERICAN RAILWAY ENGINEERING ASSOCIATION.—(Works in co-operation with the American Railway Association, Division IV.) E. H. Fritch, 431 South Dearborn St., Chicago. Exhibit by National Railway Appliances Association.

AMERICAN RAILWAY MASTER MECHANICS' ASSOCIATION.—(See American Railway Association, Division V.)

AMERICAN RAILWAY TOOL FOREMEN'S ASSOCIATION.—R. D. Fletcher, 1145 East Marquette Road, Chicago. Exhibit by Supply Association of the American Railway Tool Foremen's Association.

AMERICAN STRAIGHT TIE AND MECHANICS' ASSOCIATION.—Whitelsey, Union Trust Bldg., Washington, D. C. Annual meeting, May 10, Washington, D. C.

AMERICAN SOCIETY FOR STEEL TREATING.—W. H. Eisman, 1600 Prospect Ave., Cleveland, Ohio. Annual convention, Oct. 27, 1922, General Motors Building, Detroit, Mich.

AMERICAN SOCIETY FOR TESTING MATERIALS.—C. L. Warwick, University of Pennsylvania, Philadelphia, Pa. Annual meeting, June 26-30, 1922, Chalfonte Hotel, Atlantic City, N. J.

AMERICAN SOCIETY OF CIVIL ENGINEERS.—E. M. Chandler (acting secretary), 33 W. 39th St., New York. Regular meetings 1st and 3d Wednesdays 10 o'clock, except July and August, 33 W. 39th St., New York.

AMERICAN SOCIETY OF MECHANICAL ENGINEERS.—Calvin W. Rice, 29 W. 39th St., New York.

Railroad Division A. F. Stuebing, Manager Editor, Railway Mechanical Engineer, 1614 North Blvd., New York.

AMERICAN TRAILING CARRIAGE ASSOCIATION.—L. L. Darling, 1110-1111 Mallers Bldg., Chicago, Ill. Next convention, June 18, 1923, Chicago.

AMERICAN WOOD PRESERVERS' ASSOCIATION.—S. D. Cooper, A. T. & S. Fe R. R. T. Co., Kan. Next meeting, January 23, 1923, New Orleans, La.

ASSOCIATION OF RAILWAY CLAIM AGENTS.—H. D. Morris, Northern Pacific R. R., St. Paul, Minn.

ASSOCIATION OF RAILWAY ELECTRICAL ENGINEERS.—L. A. Andreucetti, C. & N. W. Ry., 319 N. Waller Ave., Chicago. Next meeting, June 19, Deoria Hotel, Atlantic City, N. J. Exhibit by Railway Electrical Supply Men's Association.

ASSOCIATION OF RAILWAY ELECTRICIANS.—Thomas De Witt Chrysler (chairman), 411 Broadway, New York, N. Y.

ASSOCIATION OF RAILWAY SHUFFLE MECHANICS.—A. W. Clarke, 1858 McCormick Bldg., Chicago, Ill. Meeting with International Railway General Foremen's Association.

ASSOCIATION OF RAILWAY TRIPWIRE SUPERINTENDENTS.—(See American Railway Association, Division I.)

ASSOCIATION TO REGULATE AND CAR ACCOUNTING OFFICERS.—See American Railway Association, Division II.

AMERICAN ROAD AND BRIDGE BUILDING ASSOCIATION.—J. H. Hoop, American Road and Bridge Builders' Association, 31 S. Michigan Ave., Chicago. Meeting with National Association of American Railway Bridge and Building Ass'n.

AMERICAN RAILWAY TOOL FOREMEN'S ASSOCIATION.—See American Railway Association, Division V.

AMERICAN RAILWAY TOOL FOREMEN'S ASSOCIATION.—W. A. Fairbanks, 75 Church St., New York, N. Y. Annual meeting, September 20-22, 1922, Colorado Springs, Colo.

CAR FOREMEN'S ASSOCIATION OF ST. LOUIS, MO.—Thomas B. Koeneke, 604 Federal Reserve Bank Bldg., St. Louis, Mo. Meetings, first Tuesday in month at the American Hotel Annex, St. Louis.

CENTRAL RAILWAY CLUB.—Harry D. Vought, 26 Cortlandt St., New York. Regular meetings, 2d Thursday in January, March, May, September and November, Hotel Ironopolis, Buffalo, N. Y.

CHIEF INTERCHANGE CAR INSPECTORS' AND CAR FOREMEN'S ASSOCIATION.—W. P. Elliott, Terminal Railroad Association of St. Louis, East St. Louis, Ill.

CHIEF INTERCHANGE CAR INSPECTORS' AND CAR FOREMEN'S SUPPLY MEN'S ASSOCIATION.—D. B. Wright, 34th St. and Artesian Ave., Chicago, Ill. Meeting with Chief Interchange Car Inspectors' and Car Foremen's Association.

CINCINNATI RAILROAD CLUB.—W. C. Cooder, Union Central Bldg., Cincinnati, Ohio. Meetings, 2d Tuesday in February, May, September and November.

EASTERN RAILROAD ASSOCIATION.—(See American Railway Association, Division I.)

FREIGHT CLAIM ASSOCIATION.—(See American Railway Association, Division VII.)

GENERAL SUPERINTENDENTS' ASSOCIATION OF CHICAGO.—C. H. Treichel, Grand Central Railroad, Chicago. Regular meeting, Wednesday preceding 3d Friday in month, Room 1414, Manhattan Bldg., Chicago.

INTERNATIONAL RAILROAD MASTER BLACKSMITHS' ASSOCIATION.—W. J. Mayer, Michigan Central R. R., Detroit, Mich. Annual convention, August 5-17, Hotel Commodore, New York, N. Y. Exhibit by International Railroad Master Blacksmiths' Supply Men's Association.

INTERNATIONAL RAILROAD MASTER BLACKSMITHS' SUPPLY MEN'S ASSOCIATION.—George F. White, 747 Railway Exchange, Chicago. Meeting with International Railway Tool Foremen's Association.

INTERNATIONAL RAILWAY FUEL ASSOCIATION.—J. G. Crawford, 702 E. 51st St., Chicago. Exhibit by International Railway Supply Men's Association.

INTERNATIONAL RAILWAY GENERAL FOREMEN'S ASSOCIATION.—Wm. Hall, 1061 W. Washaba Ave., Winona, Minn.

INTERNATIONAL RAILWAY SUPPLY MEN'S ASSOCIATION.—C. W. Sullivan, Garlock Packing Co., 326 W. Madison St., Chicago. Meeting with International Railway Fuel Association.

MASTER BOILER MAKERS' ASSOCIATION.—Harry D. Vought, 26 Cortlandt St., New York.

MASTER CAR AND LOCOMOTIVE PAINTERS' ASSOCIATION.—(See A. R. A., Division V.)

MASTER CAR BUILDERS' ASSOCIATION.—(See A. R. A., Division V.)

NATIONAL ASSOCIATION OF RAILWAY TIE PRODUCERS.—Warren C. Nixon, Western Tie & Timber Co., 905 Syndicate Trust Bldg., St. Louis, Mo.

NATIONAL ASSOCIATION OF RAILWAY UTILITIES COMMISSIONERS.—James B. Walker, 399 Lafayette St., New York. Next convention, September 26, 1922, Detroit, Mich.

NATIONAL FOREIGN TRADE COUNCIL.—O. K. Davis, 1 Hanover Square, New York.

NATIONAL RAILWAY APPLIANCE ASSOCIATION.—C. W. Kelly, People's Gas Bldg., Chicago. Annual exhibition at convention of American Railway Engineering Association.

NEW ENGLAND RAILROAD CLUB.—W. E. Cade, Jr., 683 Atlantic Ave., Boston, Mass. Regular meetings, 2d Tuesday in month, excepting June, July, August and September.

NEW YORK RAILROAD CLUB.—Harry D. Vought, 26 Cortlandt St., New York. Regular meetings, 3d Friday in month, except June, July and August, at 29 W. 39th St., New York.

PACIFIC RAILWAY CLUB.—W. S. Wollner, 64 Pine St., San Francisco, Cal. Regular meetings, 2d Thursday in month, alternately in San Francisco and Oakland.

RAILWAY ACCOUNTING OFFICERS' ASSOCIATION.—E. R. Woodson, 1116 Woodward Building, Washington, D. C. Annual meeting, June 7, 1922, Hotel Cleveland, Cleveland, Ohio.

RAILWAY BUSINESS ASSOCIATION.—Frank W. Noxon, 600 Linnery Bldg., Broad and Chestnut Sts., Philadelphia, Pa. Annual dinner, February 1, Waldorf-Astoria, New York.

RAILWAY CLUB OF PITTSBURGH.—J. D. Coway, 515 Grandview Ave., Pittsburgh, Pa. Regular meetings, 4th Thursday in month, except June, July and August, at 300 W. 10th St., Pittsburgh, Pa.

RAILWAY DEVELOPMENT ASSOCIATION.—(See Am. Ry. Development Assn.)

RAILWAY ELECTRICAL SUPPLY MANUFACTURERS' ASSOCIATION.—J. Scribner, General Electric Co., Chicago. Annual meeting with Association of Railway Electrical Engineers, New York.

RAILWAY EQUIPMENT MANUFACTURERS' ASSOCIATION.—R. J. Himmelright, 17 East 42nd St., New York. Meeting with Traveling Engineers' Association.

RAILWAY FIRE PROTECTION ASSOCIATION.—R. R. Hackett, Baltimore & Ohio R. R., Baltimore, Md.

RAILWAY REAL ESTATE ASSOCIATION.—R. H. Morrison, C. & O. Ry., Richmond, Va. Next meeting October 10-13, 1922, Pittsburgh, Pa.

RAILWAY SIGNAL ASSOCIATION.—(See A. R. A., Division IV, Signal Section.)

RAILWAY STOREKEEPERS' ASSOCIATION.—(See A. R. A., Division V.)

RAILWAY SUPPLY MANUFACTURERS' ASSOCIATION.—J. D. Conway, 1841 Oliver Bldg., Pittsburgh, Pa. Meeting with A. R. A., Division V.

RAILWAY TELEGRAPH AND TELEPHONE APPLIANCE ASSOCIATION.—G. A. Nelson, 30 W. 39th St., New York.

RAILWAY TREASURY OFFICERS' ASSOCIATION.—L. W. Cox, Commercial Trust Bldg., Philadelphia, Pa.

ROADMASTERS AND MAINTENANCE OF WAY ASSOCIATION.—P. J. McAndrews, 100 N. W. Ry. Station, Ill. Annual convention, September, 1921, 1922, Hotel Statler, Cleveland, Ohio. Exhibit by Track Supply Association.

ST. LOUIS RAILWAY CLUB.—B. W. Fraubenthal, Union Station, St. Louis, Mo. Regular meetings, 2d Friday in month, except June, July and August.

SIGNAL APPLIANCE ASSOCIATION.—F. W. Edmunds, Sunbeam Electric Manufacturing Company, New York City. Meeting with American Railway Association, Signal Section.

SIGNAL AND SUPPLY OFFICERS' RAILWAY CLUB.—A. J. Merrill, P. O. Box 1305, Atlanta, Ga. Regular meetings, 3d Thursday in January, March, May, July, September and November, Piedmont Hotel, Atlanta.

SOUTHERN ASSOCIATION OF CAR SERVICE OFFICERS.—I. L. Carrier, Car Serv. Art. Term. Cent. Y. S. Ry., 319 Southern Ave., North Nashville, Tenn. Regular meetings, September 19, St. Augustine, Fla.

SUPPLY ASSOCIATION OF AMERICAN RAILWAY TOOL FOREMEN'S ASSOCIATION.—H. S. White, C. N. Jefferson St., Chicago.

TRACK SUPPLY ASSOCIATION.—W. C. Kidd, Ramapo Iron Works, Hillburn, N. Y. Meets with Roadmasters' and Maintenance of Way Association.

TRAVELING ENGINEERS' ASSOCIATION.—W. O. Thompson, 1177 East 98th St., Cleveland, Ohio. Annual convention, September 12-15, Hotel Sherman, Chicago. Exhibit by Railway Equipment Manufacturers' Association.

WESTERN RAILWAY CLUB.—Bruce V. Crandall, 14 E. Jackson Boulevard, Chicago. Regular meetings, 3d Monday each month except June, July and August.

Traffic News

The State Department has communicated to the Canadian government its willingness to begin negotiations in connection with the St. Lawrence Canal project, the governments of the United States and Canada having on January 21, 1920, referred to the International Joint Commission for investigation and report all questions relating to the importance of the St. Lawrence river between Lake Ontario and Montreal, both for navigation and the development of water power.

The railroad commission of Alabama announces that an order will be issued requiring that all intrastate freight rates which were advanced 25 per cent during the war in conformity with the order of the Interstate Commerce Commission, shall be reduced 12½ per cent on July 1, when the new interstate rates become effective. The order provides that the rates on velvet beans, velvet bean products, and mixed feed for animals and poultry must be given the same reduction. It also provides that no change shall be made in the rates on raw materials for furnaces, which the commission refused to permit the railroads to increase when the last advance was authorized.

New England Rate Decision Sustained

In the federal court at New York City on May 25 Judges Hough, Manton and Mayer denied the application of the trunk line railroads for an injunction restraining the Interstate Commerce Commission from putting into effect its order of January 30 increasing by 15 per cent the divisions allowed the New England lines on through freight.

The petitioning lines contended that the order of the commission was discriminatory and contrary to the purpose of the Interstate Commerce act. The reason for increasing the rates in behalf of the New England lines was to help them financially, and in effect the order of the commission, if executed, would take money from one group of railroads in order to aid another group.

The opinion of the court calls attention to the heavy costs of operating the New England lines because of terminal characteristics, a density of branch lines, stations, switches, yards, etc., and states that the standardization of wages on railroads by the War Labor Board had increased the cost of operation of the New England lines relatively more than other lines, and that their fuel expense was heavier than that of roads within easy reach of the coal producing territory.

It states that nothing was found in the record to justify any claim of abuse of discretion in rate making. "We are satisfied," the opinion continues, "that a reasonable investigation was made by the commission. . . ."

Coal Production

The eighth week of the coal strike opened with a decided increase in production. The returns so far received indicate an output of soft coal close to 5,000,000 tons, according to the weekly bulletin of the Geological Survey. Production of anthracite, however, remains practically zero.

Final reports for the seventh week of the strike (May 15-20) show an output of 4,472,000 tons of bituminous coal and 8,000 tons of anthracite, a total of 4,480,000 tons.

The increase during the week of May 22-27 may be judged from the fact that car-loadings on Monday exceeded by 652 cars the highest figure previously reported since the strike began. An increase on Tuesday carried loadings above the 15,000 mark.

NUMBER OF CARS LOADED, BY DAYS

	1st Week	3d Week	5th Week	7th Week	8th Week
Monday	11,445	7,898	11,598	13,366	14,688
Tuesday	11,019	10,041	12,160	12,830	15,026
Wednesday	11,437	11,088	12,861	13,422	14,684
Thursday	11,090	11,193	12,487	13,445	14,612
Friday	11,296	11,596	12,778	14,036
Saturday	8,888	10,194	11,265	12,357

The increase is said to be largely in response to higher prices and more active demand, calling into production mines which have hitherto been working only part-time in the districts not affected by the strike.

Commission and Court News

Interstate Commerce Commission

The commission has suspended from June 1 until September 29 the operation of schedules, which propose increases in rates of 3 cents per 100 pounds on grain products, carloads, from Montana points to various California points.

The commission has suspended until September 23, the operation of schedules which propose to increase from 75 cents per 100 lb. to \$1.08 the rate on iron and steel from Utah common points to various California points.

The commission has suspended until September 29, the operation of schedules No. 21 which propose increase in minimum weight on grain and seeds, beans, peas, or pop corn in mixed carloads. At present 30,000 lb. minimum is applicable.

The commission has vacated its order in the Nebraska interstate rate case, the Nebraska State Railway Commission having by order on May 5 set aside its order which prevented the railroads from applying the rate increases authorized by the commission in Ex Parte 74.

The commission has suspended from June 1 to September 29 the operation of schedules, which propose changes in routing of shipments of grain, grain products, cereals and cereal products, carloads, on traffic originating in Colorado, Iowa, Kansas, Missouri, Nebraska, and Wyoming, destined to Idaho, Montana, Oregon, Utah, Washington, Wyoming and British Columbia.

The commission has suspended until September 23, the operation of tariffs on dried and evaporated fruits between points in Arizona, California, Nevada, Oregon and Utah on the one hand and points in Utah, California, Wyoming, Nevada, Idaho, Montana and Oregon on the other hand which propose to increase by 25 per cent the rates on these commodities in case of failure on the part of shippers to observe proposed box specifications and requirements.

The commission has rescinded its order in the railway mail pay case of November 18, 1921, in so far as it modifies Section 8 of its order of December 23, 1919. This is now modified to provide that whenever a regular authorization is exceeded on 50 per cent or more of the trips in any calendar month the appropriate higher unit shall be authorized. This rule is never to be used in the month of December. This is in response to a joint petition of the postmaster general and the carriers.

The commission has suspended from June 1 to September 29 the operation of Southern Pacific schedules, which propose to establish proportional round trip basing fares from Long Beach, Los Angeles, Ontario, Pasadena, Pomona, Colton, Riverside and San Bernardino, California to Ogden, Utah, to be granted passengers holding or who purchase round trip excursion tickets from Ogden, Utah, to West Yellowstone, Montana.

The following will serve to illustrate the effect of the suspended fares:

Regular summer excursion fare, Los Angeles to Ogden, \$48.82.
Proportional basing fare, Los Angeles to Ogden, \$44.17.

The commission has issued a decision finding not justified the proposed joint proportional rates on grain and grain products from Minneapolis and other points in the Northwest to points in trunk line territory and New England which had been filed to become effective on November 1. The schedules had been suspended and are now ordered cancelled. At the time the suspended rates were originally determined upon they represented substantial reductions in the then existing rates. Subsequently the proportional rates east of Chicago were reduced by eastern lines and the proportionals west of Chicago were reduced following the commission's decision in the Western grain case. At the present time the schedules would not lower the existing combination rate on wheat and would accomplish only slight reductions in the rates on grain products and coarse grains. The re-

port says that the railroads concede that these reductions would not affect the situation very materially or afford marked relief to Minneapolis shippers who expect at some future date to propose other rates.

Conference Ruling on Creosoted Lumber

The commission has amended conference ruling 232 to read to the effect that for creosoting lumber a transit privilege of eighteen months is not excessive. The commission has heretofore expressed the view that a transit privilege extending through a period of more than one year is *prima facie* unreasonable; but experience has shown, that as applied to the creosoting of lumber a period of 24 months is not unreasonably long, provided full local rates on the inbound material are required to be paid.

Southern Freight Rate Investigation

At the hearing in the southern class rate investigation now being conducted by Commissioner Eastman at Atlanta, Ga., the commissioner has announced that hearings will be discontinued after presentation of the carriers' case, on or about June 20, until July 12, at which time opportunity will be afforded at Atlanta for cross examination of the carriers' witnesses. Subsequent hearings will be held in Atlanta, Asheville, New Orleans, Chicago and New York, for the presentation of evidence by others than the carriers. These hearings will not be held prior to September 1. Shippers and other interested parties are requested to advise the commission as to the probable amount of time they will require and as to whether they desire to present evidence as to intraterritorial and interterritorial rates at one time.

Personnel of Commissions

J. C. Roth has been promoted from assistant director, Bureau of Service, to director, Bureau of Service, Interstate Commerce Commission, effective on June 1; vice, Colonel F. G. Robbins, who has been elected vice-president of the Chicago & Erie, with headquarters at Chicago.

United States Supreme Court

Reading Dissolution Decree to be Modified

The Supreme Court on Monday directed that the decree of the district court for the eastern district of Pennsylvania, which ordered dissolution of the Reading system, be modified and the case remanded for further proceedings and hearings before the district court in conformity with the opinion. The court said the case presented the questions, first, whether a decree of the district court entered under a mandate from the Supreme Court was in accordance therewith, and, second, whether it did equity to the appellants. The court said the difficulty in the separation of interest of the Reading Company, and of the Reading Coal Company was that the lien of the general mortgage covered much of the property of the Reading Company, and all the stock and property of the coal company, and that the general mortgage was not redeemable until 1907. It said the plan required the railroad company to assume the whole liability of the general mortgage. The case had to do wholly with the method of carrying out the dissolution previously ordered.

Saying that since the time of settling the decree a change for the better has come in the financial situation of the country, Chief Justice Taft said:

"We think the plan should be changed in accord with the following suggestions. The district court should, after a hearing of all interested parties, determine the respective values of the properties of the merged Reading Co. and the coal company which are subject to lien of the general mortgage. Then the decree should direct that the liability of each on the bonds and the pledge under the mortgage shall be modified as between the mortgagee and the mortgagor, so that the liability of the Reading Co. on the bonds and mortgage, and the lien of the mortgage upon that property, properly to secure them, shall be reduced to an amount proportionate to the ratio of the value of its pledged property to the value of all the property pledged including that of the coal company. The obligation of the coal company upon such bonds and the lien upon its property to secure them should

be reduced in corresponding proportion. The amount that each company is to pay as interest should be similarly fixed and specific provisions for foreclosure of these separate liens on default and requisite machinery and other necessary changes to carry out the result will be made by the district court in its discretion. By this arrangement the interests and joint obligations of the Reading Co. and the coal company will be completely severed and the purpose of this court carried out.

"The Reading Co.'s first plan contemplated the securing of a voluntary release of the coal company's property by the bondholders through payment of 10 per cent of the par value of his bonds to each bondholder, but the proposal did not meet with favor. We leave it to the district court to determine what, if any, injury to the security this modification of the terms of the debt and mortgage may cause and to compensate for it by such a payment to the bondholders by both or either of the bondholders as may seem equitable and convenient.

"The changes involved in these suggestions may interfere with, or make inapplicable the provisions of the present plan looking to a proper working capital for the Reading Company. Authority is, therefore, given to the district court to amend the plan in any way which seems wise to leave the Reading Company properly financed to meet its obligations to the public.

"It does not seem necessary to change the general form of that feature of the plan by which through the distribution of certificates of interest to the stockholders of the old Reading Company in the stock of the new coal company, the stock relations of the old Reading Company and the present coal company are to be ended, though we would not limit the power of the district court in this regard. The adopted plan was nicely adjusted to secure a practical working basis for both companies, and we would not embarrass the district court, after a full hearing of all the parties in the detailed changes which it may find practically necessary to adopt in following the general outlines of our modification of the plan.

"We think it not unreasonable to accept the suggestion made at the bar, namely, that not only shall the stockholders of the coal company upon receiving and registering their stock be required to make affidavits that they have no stock ownership in the Reading Company and are not acting for, or representing, any one who has, but also that the merged Reading Company shall be required to adopt a by-law effective till the further order of the court permitting registration of transfers of shares of its capital stock in the names only of persons who shall make affidavit that they are not stockholders, registered or actual, in either the new or the old coal company, and have not been and are not holders of proxies to vote shares of stock therein.

"As to the New Jersey Railroad Company and the Wilkes-Barre Coal Company, we have heard no criticism and the provisions as to them are approved. By the decree the new coal company, its officers and directors are enjoined from voting the coal company stock so as to form a combination between the coal company and the Reading Company. The Reading Company and all persons acting for or in its interest are perpetually enjoined from acquiring, receiving, holding, voting or in any manner acting as the owner of any shares of the new coal company, and the new coal company and all persons acting for it are enjoined from acquiring, or voting, any of the shares of the Reading Co.

"The coal company shall be permanently enjoined from issuing to the Reading Company, and the Reading Company from receiving, any stock, bonds, or other evidences of corporate indebtedness of the coal company. On default the trustee of the mortgage is required to vote the coal company stock so as not to bring about a recurrence of the conditions condemned in this case, and if it shall be necessary to sell the properties they are to be sold to different interests. The attorney general and his successors in office are given by the decree full opportunity to keep watch upon the relations between the two companies and to appeal to the court for prompt enforcement of the injunctions of the decree as they may be advised. The court retains large control of the decree, with power to assure its continued efficacy by the summary remedy of contempt. With these restrictive provisions and the modifications of the plan outlined above, we think that the independence of the four companies will be fully achieved.

"The decree of the district court is affirmed with modifications already indicated and the case is remanded for further proceedings in conformity to this opinion."

Foreign Railway News

Locomotive Exports in March

Fourteen steam locomotives were exported from this country in March, valued at \$112,243. Seven of these, valued at \$49,716, went to Canada; one (\$5,350) to Guatemala; one (\$12,377) to Cuba; one (\$20,000) to Chile; three (\$21,100) to China; and one (\$3,700) to British South Africa. These figures were compiled by the Bureau of Foreign and Domestic Commerce.

Concession for 2,400 Miles of Railway in Peru

Press dispatches from Lima, Peru, carry the information that a concession has been granted to a financial syndicate calling for the construction of 2,400 miles of railway. The syndicate also receives a grant of 25,000,000 acres of land with valuable mineral and petroleum rights and a 33-year monopoly on the nation's tobacco business.

Another British Equipment Combine

An amalgamation of great interest is that of the Vacuum Brake Company in France, Belgium, Spain and Portugal, with Tyer & Company, manufacturers of signal equipment, in the same countries. The new firm will be known as the Société Anonyme des Appareils de Sécurité de Chemins de Fer. As is well known the vacuum brake is largely used on British freight trains, a fact which may influence the adoption of this form of brake for continental railways, inasmuch as when freight cars are exchanged either by train, ferry or the proposed Channel tunnel it will be the British cars that will have to be used, since they can travel without alteration on continental railways, whereas the continental freight cars are too large for English clearances.

Rate Reductions in Britain

A number of important rate reductions have been made by British railways. These include:

1. Restoration of pre-war demurrage regulations.
2. Reduction of increase over pre-war rates from 100 per cent to 75 per cent on coal, coke, iron and steel and raw materials used in making iron and steel, and reduction in flat rate on coal from 6d. per ton to 4d.
3. Varying reductions in fuel handling charges at railway docks and ports.
4. Warehouse charges reduced and free time increased.
5. Shippers' tickets issued for £600 of business instead of £1,000.
6. Unsold exhibits of machinery at agricultural shows returned to owner at one-half regular rates.
7. Lower rates on milk.
8. Lower rates for passenger train parcel service.

Electric Traction on Norwegian Railways

The work of electrifying the line of the Norwegian State Railways from Lulea to the northern Norwegian border at Riksgränsen is proceeding again after being suspended by war-time conditions. The total length of the line from Lulea to Riksgränsen is 263 miles, and there is a continuation of the line across the northern part of Sweden, a distance of 24 miles, to Narvik, an Atlantic port.

The original electrified section was 80 miles long and extended from Kiruna to Riksgränsen. This was described briefly in the July 11, 1919, issue of the *Railway Age*, page 61.

The electrified section was extended southward from Kiruna to Nattavara, a distance of about 90 miles. This work was completed in October, 1921. By the first of this year the electrified section had been extended to Boden, about 74 miles farther south, and it is expected that the remaining distance to Lulea will be under electric operation by the first of July this year.

The part of the line which extends across the northern part of Norway, known as the Ofot Railway, is also being electrified

and it is expected that this work will be completed by the first of October, 1922. The greater part of the entire line is north of the Arctic Circle.

The Drammen line from Christiania to Drammen, Norway, a distance of 32 miles, has just been converted and put under electric operation early in May of this year.

Car Exports in March

But one passenger car, valued at \$4,000, was exported in March. It went to Mexico. Freight car exports, however, totaled 149, valued at \$136,665, as follows: 19 to Canada (\$17,884); 59 to Mexico (\$8,706); 17 to Cuba (\$14,680); one to Argentina (\$1,500); 30 to Peru (\$18,900); and 25 to Portuguese East Africa (\$74,995). These figures were compiled by the Bureau of Foreign and Domestic Commerce.

March Exports of Car Wheels and Axles

Exports of car wheels and axles in March weighed 4,019,524 lb. and were valued at \$116,802, according to the compilation of the Bureau of Foreign and Domestic Commerce. Detailed figures follow:

Countries	Pounds	Countries	Pounds
Belgium	227,000	Jamaica	32,183
France	226,700	Cuba	190,837
England	8,925	Brazil	6,300
Canada	477,405	Chile	22,500
Costa Rica	48,055	Colombia	2,500
Guatemala	73,620	Ecuador	15,171
Honduras	5,528	British Guiana	10,483
Mexico	1,073,132	Japan	1,421,509
Peru	6,796	Australia	27,172
Venezuela	2,958	British South Africa	3,585
British India	13,300	Other countries	1,752
Chosen	120,079		
New Zealand	2,133		
		Total	4,019,524
		Value	\$116,802

\$8,000,000 Placed in Contracts for

French Electrification

A quantity of equipment for electrifying 125 miles of main line, including 80 freight locomotives and 80 passenger motor cars, is to be furnished to the Paris-Orleans Railway by a group of French manufacturers headed by the Compagnie Française Thomson-Houston. The Paris-Orleans Railway is one of the six large systems of France which operate something more than 5,000 miles of route. The Compagnie Française Thomson-Houston is the representative of the International General Electric Company. The 1,500-volt direct current system will be used and, according to dispatches received recently, this installation is the beginning of a more extensive program. The greater part of the equipment will be manufactured in France, but it is understood that considerable material of American manufacture will also be required.

The locomotives will be used on an extension of the original electrification, made about 25 years ago by the French Thomson-Houston Company. The first section of the new 1,500-volt section will cover 125 miles of main line between Paris and Vierzon. The motor cars will replace and extend the present suburban steam service out of Paris.

According to plans, high speed, through passenger service from Paris to Vierzon will be handled by 1,500-volt, direct current electric locomotives weighing 125 tons each and capable of regular running speeds of between 80 and 85 miles an hour. These locomotives are not included in the contracts thus far awarded, but the railway company is expected to announce the placing of this business at an early date and to give consideration soon to the purchase of additional locomotives for use in the Central Plateau Region.

Earnings of Chinese Railways

From the standpoint of earnings Chinese railroads do not suffer by comparison with the best American roads, according to the *Wall Street Journal*. In 1918, the last year for which accurate figures are available, average earnings a mile of all Chinese government railroads was: Gross, \$22,700; operating expenses, \$10,400; net operating revenue, \$12,300; deductions, \$2,890; net income, \$9,410.

The Peking-Mukden line showed a net income per mile of \$23,107 for 1918. These extraordinary earnings were made by roads which are practically without branches, feeders or connections. Each Chinese road originates its own traffic. When

branch lines and links between existing lines shall have been built it is reasonable to suppose that an astonishing increase will show in earnings.

According to Merle R. Walker, who made an extensive study of Chinese railroad conditions and prospects, Chinese railroads operate for less than any other in the world. The average operating ratio for all government roads in 1918 was 44.2 per cent. The Peking-Hankow road (with average miles operated of 815) showed as low as 33.5 per cent, while the Peking-Mukden (with average miles operated of 605) showed an operating ratio of 33.1 per cent.

This discrepancy in the amount of gross revenue consumed may be accounted for by the enormous saving of labor costs. A Chinese section hand is paid approximately \$100 a year.

Chinese roads are used intensively. Although they are greatly under-equipped and the cars and locomotives are much smaller than those in use on American roads, nevertheless freight and passenger densities are astonishing. Average capacity for all freight cars is 22 tons, comparing with 42.2 tons in the United States. The average tractive effort of Chinese freight locomotives is 22,300 pounds, against 64,500 pounds on American roads.

In 1916 the Canton-Sanshui line had a passenger density of 1,447,030. The Shanghai-Nanking line showed over 1,272,000 in 1918. The passenger density for all railroads in China in 1918 was nearly 424,000. Average freight density for all Chinese government railroads is 616,126.

A great many miles of road have been projected and an era of rail construction is not far off. China is theoretically committed to government ownership of railroads. This has been probably the chief factor in the great cost of these roads. But so widespread is the need for transportation that no matter how costly the road or poor the judgment shown in its location, it is bound to pay. Total mileage does not exceed 7,000 and a network of 275,000 would be inadequate to serve the needs of the country.

British Railways Announce Great Extensions in Tourist and Excursion Services

Last year from various causes, summer excursion and tourist services were not introduced in Great Britain until late in July. This year, for the first time since 1914, holiday train service is inaugurated at the beginning of June on a liberal scale and will gradually be augmented until July when the full summer service will be in operation. The railways will provide, in addition to the ordinary train services, all descriptions of excursion trains and will give cheap fare facilities so numerous as to suit not only large numbers of people, but individuals and small pleasure parties as well.

It is the hope of the railways that with the special facilities for traveling which will be provided, those members of the public who are able to do so will find it to their advantage to take their holidays in the month of June or early in July, when the days are long and accommodation at pleasure resorts can be more readily obtained than in August during the school holidays.

On the first day of June the earlier holiday movement began with the introduction of tourist tickets, the issue of which will be continued until the end of October. This form of ticket provides for breaking the journey en route and resuming the tour at any time during the two months for which the ticket is available. Tours in the most picturesque parts of the country have been arranged and there will be a wide choice to suit every taste. Tickets will be issued at a single fare and two-thirds.

Throughout the season frequent day and half-day excursions at about a single fare for the double journey will be provided by special trains to many favorite resorts. It is also the intention of the railways to run excursion trains to any town where a local event of sufficient importance is being held. Long period excursions for a week or a fortnight at about a single fare and a third for the round trip are being arranged, and will in certain cases commence on Friday, June 9.

Long distance excursions have been arranged to run over two or more railway systems, and it will be possible to travel from towns in England to pleasure resorts in Scotland and Ireland; the north of England to the Midlands, Wales, the Southern and Western counties and in the reverse direction. There will be a restoration of the popular cross country excursions, and excursions from and to large industrial centres.

Guaranteed day, half-day and long period excursion trains, a popular feature of railway travel before the war, will again be revived. Under this system the Railway companies will provide a special train by arrangement with organizers who will guarantee not less than 300 adult excursion fares. In pre-war days these excursions were frequently organized on behalf of societies, schools, factories and even whole towns on holiday bent. Where the fare is not less than ten shillings a guarantee of 200 adult fares will be accepted.

Amongst the novelties in cheap fare facilities will be the issue of return tickets at a reduced rate by specified regular trains to individual passengers traveling on early closing days from towns to holiday resorts within a radius of 60 miles. Cheap tickets by specified regular trains will also be issued in connection with important local events. Attractive day and half-day bookings will be given enabling passengers to take combined rail, road, river and sea trips, rail and river tours, and many other pleasure excursions. Certain companies will also issue combined hotel and travel tickets. Other arrangements embrace the collection, conveyance in advance, and delivery of passengers' luggage at a small inclusive charge.

Pleasure parties, members of clubs and associations (minimum number 12 adult tickets) will be able to take day trips at a reduced charge of about a single fare and a third for the double journey by any regular train by prior arrangement with the railway involved. The popular Saturday to Monday tickets will continue to be issued between any two stations by regular train at about a single fare and a third for the double journey. Minimum fare 5 shillings third class and ten shillings first class. Improved facilities will be provided in connection with the regular train services, i. e., express trains will be duplicated or strengthened as required, additional through cars run between distant points, and other improvements introduced.

Exports of Track Materials in March

In March 26,066 tons of rails were exported, valued at \$1,431,004. Other track material exports were: 2,995,042 lb. of rail joints splice bars, fish plates and tie plates (\$104,084); 525,223 lb. of switches, frogs and crossings (\$40,808); 1,437,263 lb. of spikes (\$40,808); and 602,476 lb. of bolts, nuts, washers and lock nuts (\$28,571). These figures were compiled by the Bureau of Foreign and Domestic Commerce and are in detail:

Countries	Rails, Tons	Rail Joints, Splice Bars, Fish Plates, and Tie Plates, Pounds	Switches, Frogs and Crossings, Pounds	Spikes, Railroad Pounds	Bolts, Nuts, Washers and Lock Nuts, Pounds
Denmark	14,907
Spain	36	26,716
Switzerland	50,695
England	702	8,500	1,495	5,812
Canada	587	75,662	133,883	110,100
Costa Rica	104	19,331	20,000

Total valuation	\$1,431,004	\$104,084	\$40,806	\$40,806	\$28,571

State Co-operation Proposed for Spanish Railways

LONDON.

In consequence of the difficulty experienced by the Spanish railways in maintaining a service adequate to the public requirements the state has declared itself willing to co-operate in the manner laid down in a Project of Law of April 4, 1922, which has been presented to the Cortes.

According to the proposed law, which was published in the "Gaceta de Madrid" of April 5, 1922, the operation of the railways shall be regulated as follows from the date of its promulgation:

The state shall organize at its own expense any work of development or improvement, and shall acquire any material which may be considered necessary in order to adapt to public requirements the railways of public service at present in existence, even though they may be the object of concessions, if the improvements, etc., have not already been put in hand by the concessionaires. The joint undertaking (the result of the co-operation) shall be managed by the concessionary companies, but in accordance with standards set by the Railway Board (a newly-formed body). These standards, while safeguarding the interests of the state, shall leave as free as may be possible the management of the railway companies.

The Railway Board, among other powers, may propose re-distribution of the lines, either by means of transferring the working or administration, or by redeeming the concessions, or other means, the rights of the concessionary companies being always considered. They may propose the buying up of the remainder of a concession, and may supervise the technical, economic, and financial management of the companies and their respective railways. (A delegation shall be formed for this purpose, which shall attend meetings of shareholders, etc., and can apply for the intervention of the Board if anything illegal or detrimental is noticed in the management).

The Board shall also approve of the railway tariffs, taking into consideration certain expenses. The rates may last for a period not exceeding six years.

As regards profits, the costs of operation and pensions shall be deducted from the gross receipts, and the remainder shall be divided between the companies (in proportion to the actual and present value of the business, the working of which belongs to them during the period concerned) and the state (in proportion to the actual and present value of the share of capital contributed by it). In both cases the Board will fix the value, taking as basis the effective capital invested by the concessionary company. The actual value to the concessionary shall in no case exceed capitalization at 5 per cent of the average net proceeds during the previous fifteen years. The company are to have $\frac{1}{2}$ per cent of the remainder above-mentioned for their services in managing the joint undertaking, this claim being given priority.

In certain cases, however, when the actual value of the business, the working of which belongs to the concessionary, exceeds the nominal capital of the mortgage bonds guaranteed by the business and issued before the establishment of the joint undertaking, the first expenses to be deducted from the remainder of proceeds each year shall be the interest and the money for amortisement of the said bonds. In this case the concessionary shall have the right of preference not exceeding 3 per cent of the difference between the actual value of its participation in the business and the nominal value of the bonds in circulation when the joint undertaking came into being. An account shall be opened, called the "Redeemed Bonds Account," to be divided between the concessionary and the State, the latter's share being repayable by the concessionary to the state.

The concessionary shall be subject to the provisions of this law, including those relating to the redemption of the concession or the consolidation of national ownership of the railways, and if the concession was conceded in perpetuity, the working of the same shall be reduced to 99 years, counting from the date on which the state assistance began.

The consolidation of national ownership may anticipate the expiry of the respective concessions, and shall include everything used in connection with the railways, their working or administration, but shall not include mining concessions or works belonging to the concessionary companies, although the produce is consumed by the railways.

The amount to be paid annually to the concessionary when the concession is redeemed before expiry shall be fixed by the Consejo de Ministros on the proposals of the Railway Board, taking into consideration the proceeds of the working in the past and the estimates for the future, not counting the portion brought by the state.

Equipment and Supplies

Locomotives

THE ERIE is having 5 2-10-2 type locomotives repaired at the shops of the Baldwin Locomotive Works.

THE NASHVILLE, CHATTANOOGA & ST. LOUIS is inquiring for 5 Mountain type and 5 Mikado type locomotives.

JOHN MARSCH, INC., Chicago, has ordered four 6-wheel switching engines from the Baldwin Locomotive Works.

THE AKRON, CANTON & YOUNGSTOWN has ordered 2 Consolidation type locomotives from the Baldwin Locomotive Works, Philadelphia.

THE BROWNELL IMPROVEMENT COMPANY, Chicago, has ordered two 4-wheel locomotives from the American Locomotive Company.

THE PACIFIC STATE LUMBER COMPANY, Tacoma, Wash., has ordered 1 Mikado type locomotive from the Baldwin Locomotive Works.

THE ARGENTINE STATE RAILWAYS have ordered 8 Mountain type locomotives and 1 Pacific type locomotive from the Baldwin Locomotive Works.

Freight Cars

THE BUFFALO & SUSQUEHANNA is inquiring for 100 gondola car bodies.

THE PITTSBURGH CRUCIBLE STEEL COMPANY is inquiring for 15 flat cars of 100 tons' capacity.

THE CHICAGO GREAT WESTERN is inquiring for repairs to 245 box cars of 40 tons' capacity.

THE UNION REFRIGERATOR TRANSIT COMPANY, Milwaukee, Wis., is inquiring for 150 steel underframes for 40-ton refrigerator cars.

THE PERE MARQUETTE, reported in the *Railway Age* of May 13 as inquiring for 500 box cars, has ordered this equipment from the Pressed Steel Car Company.

KANSAS CITY SOUTHERN.—The notice in the *Railway Age* of May 29 that this road was inquiring for 1,000 40-ton box cars was premature. The road is not in the market for these cars at the present time.

THE BALTIMORE & OHIO has ordered 1,000, 70-ton low-side gondola cars from the Cambria Steel Company, and will have repairs made to 1,000 gondola cars and 1,000 hopper cars at the shops of the Pressed Steel Car Company; also to 1,000 coke cars at the shops of the Standard Steel Car Company.

THE SEABOARD AIR LINE, reported in the *Railway Age* of May 27 as inquiring for 900 steel underframe ventilated box cars of 40 tons' capacity, and for 100 phosphate cars of 50 tons' capacity, has ordered the box cars from the Pressed Steel Car Company and the phosphate cars from the Magor Car Corporation.

THE CHESAPEAKE & OHIO has arranged for the purchase of 300, 40-ton box cars in addition to the 1,400 already ordered as noted in the *Railway Age* of April 29. The company expects, also, to place orders early in June for the 500 ventilated box cars mentioned in the *Railway Age* of May 13. Specifications are now being made for 50 refrigerator cars.

Passenger Cars

THE NEW YORK, CHICAGO & ST. LOUIS, reported in the *Railway Age* of April 22 as inquiring for 5 coaches and 2 steel baggage cars, has ordered 7 cars from the Pullman Company.

Iron and Steel

THE PENNSYLVANIA is inquiring for 300 tons of plates, bars and sheets.

THE ST. LOUIS-SAN FRANCISCO is inquiring for 300 tons of structural steel.

THE WABASH is inquiring for 1,000 tons of draft arm plates and channel plates.

THE ILLINOIS CENTRAL has ordered 123 tons of steel from the Kenwood Bridge Company for signal bridges.

Machinery and Tools

THE SOUTHERN PACIFIC has ordered a 200-ton overhead traveling crane from the Niles-Bement-Pond Company.

THE DELAWARE & HUDSON has ordered a 42-in. center drive car wheel lathe from the Niles-Bement-Pond Company.

THE CAMBRIA & INDIANA has ordered a 79-in. driving wheel lathe and a thirty six-inch planer from the Niles-Bement-Pond Company.

THE ILLINOIS CENTRAL is inquiring for 28 lathes of various types, four steam hammers and a power hammer, four carwheel borers, four grinders of various types, two sets of bending rolls, two vertical boring mills, two forcing presses, two drill presses, two forging machines, a slotter, a slab miller, a punch and shear, a crank shaper, a hack saw, a bolt threading machine and a heavy duty planer.

Track Specialties

THE BALTIMORE & OHIO is inquiring for 5,000 kegs of spikes.

THE TOLEDO, ST. LOUIS & WESTERN has ordered 13,000 Continuous joints from the Rail Joint Company.

THE AURORA, ELGIN & CHICAGO has placed an order with the Rail Joint Company for 6,400 Continuous joints.

THE HOCKING VALLEY has placed an order with the Rail Joint Company for 1,500 insulated and compromise 100 per cent rail joints.

Signaling

THE SOUTHERN PACIFIC has ordered from the General Railway Signal Company a Saxby & Farmer interlocking, 8 levers, for Houston, Texas.

THE DELAWARE & HUDSON has ordered from the General Railway Signal Company an electric interlocking, 8 levers, for installation at Watervliet, N. Y.

THE CHICAGO, ROCK ISLAND & PACIFIC has ordered from the General Railway Signal Company an electric interlocking, 20 levers, for installation at Des Moines, Iowa, together with 13 switch machines.

Miscellaneous

THE ARGENTINE STATE RAILWAYS are inquiring for 1 dynamometer car.

THE EVANSVILLE, INDIANAPOLIS & TERRE HAUTE will receive bids until June 12 for 15 bridge spans.

THE CLEVELAND, CINCINNATI CHICAGO & ST. LOUIS, will receive bids until June 12 for 15 bridge spans and 1,500 barrels of Portland cement to be supplied for the period from June 1 to September 1.

THE NORFOLK & WESTERN will receive bids until 12 o'clock noon, June 7, at Roanoke, Va., for its requirements of steel springs from July 1, 1922, to December 31, 1922, also for 2,500 pounds of wire fence staples.

Supply Trade News

Walter R. Pfästerer has been appointed agent of the Track Specialties Company, New York. Mr. Pfästerer's office will be at 527 Manhattan building, Chicago.

The Mt. Vernon Car Manufacturing Company, Mt. Vernon, Ill., recently let a contract for the construction of a one-story foundry building to cost equipped \$250,000.

The Dressel Railway Lamp & Signal Company, Arlington, N. J., has been incorporated with A. D. Hobbie, president and treasurer, F. Hallett Lovell, Jr., vice-president, F. W. Dressel, vice-president, and L. L. Pollak, secretary.

A. D. Hobbie

The new company succeeds the Dressel Manufacturing Corporation, formerly known as the Dressel Railway Lamp Works, New York City, originally established in 1882, with factory formerly located at 3860-80 Park avenue, New York City. All the officers of the new company have for a long time been identified with the railroad lighting and signal field. Increased facilities and equipment have been acquired at the new plant located at Arlington. The company recently developed and made improvements in electric headlights, switch and signal lamps and intends to bring out in addition a number of new devices. A. D. Hobbie is also vice-president and general manager of F. H. Lovell & Co., Arlington, and he has been active in the railroad field for over 20 years. F. Hallett Lovell, Jr., is president and treasurer of F. H. Lovell & Co., and was president of the Klaxon Company until it was taken over by the General Motors Company. F. W. Dressel has a long record as a lighting expert in signal and maintenance of way departments and was for a number of years president of the Dressel Lamp Works. L. L. Pollak has been for a number of years, production manager of F. H. Lovell & Co.

F. W. Dressel

The Mississippi Valley Structural Steel Company has been formed by a merger of the Decatur Bridge Company, Decatur, Ill., and the Christopher & Simpson Iron Works Company, St. Louis, Mo.

W. B. Murray, for the past 12 years chief engineer of the Miller Train Control Corporation, Danville, Ill., has been elected a vice president, which position he will assume in addition to his present duties as chief engineer.

The National Bronze & Aluminum Foundry Co., Cleveland, Ohio, is building an addition of 150 ft. to its new plant at

East Eighty-eighth street and Laisy avenue, and is in the market for a few molding machines and some miscellaneous foundry equipment.

M. G. Snow, formerly assistant engineer in the valuation department of the New York Central, Cleveland, Ohio, has resigned to become cost engineer of the **Froehlick & Emery Engineering Company**, Toledo. This company is at present appraising all interurban railways operating in Michigan for the public utilities commission.

Philip L. Maury has been elected a vice-president of the **Detroit Graphite Company** with headquarters at Detroit, Mich. He will have direct charge of all activities of the

P. L. Maury

company pertaining to its paint and varnish business with railroads. Mr. Maury was born in Denver, Colo., on October 5, 1884. After leaving school he entered the paint business and has been connected with that industry ever since, having served for many years with the Sherwin-Williams Company as manager of railway and industrial sales, which position he leaves to take up his new duties with the Detroit Graphite Company. During the war he was in charge of the government activities of the Sherwin-Williams

Company and was closely identified with the work of the War Service Committee of the Paint Manufacturers' Association.

J. M. Duncan, whose selection as general sales manager of the **Detroit Steel Casting Company**, with headquarters at Detroit, Mich., was announced in the *Railway Age* of May 20 (page 1196), was born at Toronto, Canada, on February 22, 1888. Mr. Duncan has entered the railway supply field on November 27, 1905, in the employ of the Detroit Steel Casting Company. He was later made "follow-up engineer" of this company in which position he personally followed every important shipment to its destination to see how the castings were applied, and to ascertain whether more satisfactory results could be obtained by closer co-operation between the management and the user. He was

J. M. Duncan

serving in this capacity at the time of his recent promotion.

A. R. Ludlow, vice-president in charge of sales of the **Air Reduction Company, Incorporated**, New York, has been elected first vice-president; M. W. Randall, secretary, has been elected vice-president and secretary; Herman Van Fleet, chief engineer, has been elected vice-president and operating manager and Dr. F. J. Metzger has been elected vice-president in charge of research and development.

The **Railroad Buyers' and Sellers' Service Bureau** has been organized with W. H. Hassett, general manager and J. L. Newman, editor in chief, with headquarters in the Railway

Exchange building, Chicago. Its service will include a condensed weekly review of market conditions, a department of scientific research, a personal emergency service for clients who require immediate information, and a telephone directory and buyers guide of Chicago and adjacent territory.

John F. Schurch, vice-president of the T. H. Symington Company, with office at St. Paul, Minn., has left that company and has been elected a vice-president of **Manning, Maxwell & Moore, Inc.**, New York. He will be in charge of sales in the middle west and west, with headquarters at Chicago, 27-29 North Jefferson street. Mr. Schurch was graduated from the University of Minnesota in 1893. He entered the service of the Minneapolis, St. Paul & Sault Ste. Marie the same year, serving consecutively in the office of the auditor and of the general superintendent and in the transportation department, resigning in 1905 after having attained the position of chief clerk to the vice-

J. F. Schurch

president. From 1905 until 1914 he was associated with the Railway Materials Company of Chicago. In February, 1914, he was elected vice-president of the **Damascus Brake Beam Company** with office in Cleveland, Ohio, and in June, 1914, he was elected president of the same company, which position he resigned the same year and was elected vice-president in executive charge under President T. H. Symington, of the Symington Company. Mr. Schurch is president of the **Railway Supply Manufacturers' Association**, which has in charge the exhibits at Atlantic City in connection with the meetings this month of Division V—Mechanical, and Division VI—Purchases and Stores, A. R. A.

At a meeting of the board of directors of the **Joliet Railway Supply Company** held in Chicago this week, **Burton Mudge** and **Fred A. Poor** were elected directors. **Burton Mudge** was elected president to succeed **Frederick L. Sivyer**, who remains as a director. Messrs. Mudge and Poor have acquired a controlling interest in this company, but Mr. Sivyer and his associates and the **Northwestern Malleable Iron Company** will continue to hold a substantial interest in the company and will be represented on its board. Mr. Mudge states that this is a preliminary step in the reorganization of the business and in the enlargement of the personnel and facilities of the company to handle properly its growing business. He adds that there will be no change in the direct management of the business, **James H. Slawson**, first vice-president, continuing as heretofore in charge of manufacturing and all other departments, and **Charles A. Carscadin**, vice-president in charge of sales. The company owns and operates a steel fabricating plant in Chicago where it manufactures car truck bolsters and brake beams. Its general offices are in the Railway Exchange, Chicago.

Changes in Baldwin Personnel

Several changes in the official personnel of the **Baldwin Locomotive Works** were made recently; **J. P. Sykes**, vice-president in charge of manufacture, has been appointed senior vice-president in charge of plant and manufacture; **C. A. Bourgeois**, works manager, has been appointed vice-president in charge of manufacture; **J. L. Vauclain**, in the plant and equipment department, has been appointed vice-president in charge of plant and equipment. **Harry Glaenzler**, chief mechanical engineer, has been appointed vice-president in charge of engineering to succeed **Kenneth Rushton**, deceased, and **W. A. Russell**, purchasing agent, has been appointed vice-president in charge of purchases.

Railway Construction

ATCHISON, TOPEKA & SANTA FE.—This company has authorized the construction of a new boiler and tank shop at Albuquerque, N. M., to cost approximately \$400,000; also the construction of boiler washing plants at Amarillo, Texas and Winoka.

ATCHISON, TOPEKA & SANTA FE.—This company is receiving bids for station extensions and alterations at Lobbock, Texas, and Waynoka, Okla., to cost approximately \$15,000 at each place and has awarded a contract to Jerome Moss, Chicago, for the construction of bunk houses at Ottawa, Kans., Cherryville and Strong City, Kansas, and at Newkirk, Oklahoma, to cost approximately \$37,000.

CHICAGO, BURLINGTON & QUINCY.—This company will soon close bids for the construction of a passenger station at Mitchell, Neb., and for station extensions at Thermopolis, Wyo. The company has awarded a contract to A. J. Armbruster & Company, Aurora, Ill., for the construction of a passenger station at Aurora to cost approximately \$100,000.

ERIE.—This company expects in the near future to call for bids for an extension to its shops at Hornell, N. Y.

ILLINOIS CENTRAL.—This company has awarded a contract to W. J. Zitterall, Webster City, Iowa, for the construction of a brick station at Ziegler, Ill.

PACIFIC FRUIT EXPRESS.—This company is accepting bids for the construction of artificial ice plants at Nampa, Idaho, and Poacello, each of which will involve the expenditure of approximately \$50,000.

PENNSYLVANIA.—This company is asking for bids on raising tracks and change of line near Phoenix, Md. Approximate quantities include about 135,000 cu. yd. excavation, 1,300 cu. yd. of masonry, two miles of track material unloaded, distributed and laid, 20,000 cu. yd. cinder fill removed, 10,000 lin. ft. track removed, 4,600 lin. ft. raised, 5,000 cu. yd. ballast unloaded and surfaced, etc. This company is also asking for bids for work necessary to complete the engine terminal facilities at Hagerstown, Md., on the Cumberland Valley division. Approximate amount of materials includes about 13,500 cu. yd. excavation, 2,000 cu. yd. concrete masonry, 32,000 cu. yd. cinders unloaded, 7,000 cu. yd. cinder ballast, 2.5 miles track material unloaded and laid, 28 turnouts in place, etc. Bids will be received up to June 7. J. W. Craig, assistant engineer, Baltimore, Md., will be in charge of the former, and W. K. Martin, engineer of construction, Harrisburg, Pa., of the latter work.

PERE MARQUETTE.—This company has resumed the construction of its Flint Belt line, started last year, and expects to complete the work this season, the total cost of which will approximate \$650,000.

ST. PAUL UNION STATION.—This company will close bids on June 14 for approximately \$5,000,000 of construction work on the new Union station at St. Paul, Minn., this work to involve the completing of the third and fourth periods of the project, for each of which separate bids are being called. The work will involve extensions to the waiting rooms, track elevation and street subway.

WESTERN MARYLAND.—This company has awarded a contract to the M. A. Long Company, Baltimore, for the erection of a 100 ft. by 300 ft. Mallot locomotive repair shop at Port Covington, Baltimore. The shop will be fully equipped with cranes and other machinery.

WICHITA FALLS & OKLAHOMA. The Interstate Commerce Commission has issued a certificate authorizing the construction of an extension from Byers, Texas, to a point on the Texas-Oklahoma state line, 5.8 miles, and authorizing the Wichita Falls & Oklahoma of Oklahoma to construct a line from a connection with that extension to Waurika, Okla., 7½ miles.

Railway Financial News

CAROLINA & GEORGIA.—*Authorized to Issue Bonds.*—This company has been authorized by the Interstate Commerce Commission to issue \$350,000 of first mortgage 6 per cent gold bonds, \$135,000 to be exchanged for outstanding bonds and the remainder to be sold at 85, the proceeds to be used in constructing and equipping the road.

CENTRAL OF NEW JERSEY.—*Authorized to Issue Equipment Bonds.*—The Interstate Commerce Commission has authorized an issue of \$2,000,000 of 6 per cent equipment bonds in connection with the procurement of 25 locomotives, 50 passenger coaches, 10 combination cars and 10 baggage and express cars.

CENTRAL PACIFIC.—*Southern Pacific Must End Control.*—See article on another page entitled "Separation of Southern Pacific and Central Pacific Ordered."

CHICAGO & NORTH WESTERN.—*Asks Authority to Sell Bonds.*—This company has applied to the Interstate Commerce Commission for authority to sell \$1,815,000 general mortgage gold bonds of 1987 now held in the treasury and to issue and sell \$418,000 of similar bonds to reimburse the treasury for expenditures.

CHICAGO UNION STATION.—*Bond Sale.*—Kuhn, Loeb & Co., Lee, Higginson & Co., The National City Company and the First National Bank of New York, and the Illinois Trust & Savings Bank of Chicago have purchased, subject to the approval of the Interstate Commerce Commission, \$6,150,000, face value, Chicago Union Station Company first mortgage 5 per cent gold bonds, series B, due July 1, 1963. The bonds have been placed privately.

CLEVELAND, CINCINNATI, CHICAGO & ST. LOUIS.—*Authorized to Assume Liability.*—The Interstate Commerce Commission has authorized this company to guarantee principal and interest of \$2,118,000 of first mortgage 4½ per cent bonds of the Evansville, Mt. Carmel & Northern which are to be used for acquiring certain securities issued by the Peoria & Eastern.

CLEVELAND, CINCINNATI, CHICAGO & ST. LOUIS.—*Application to Acquire Stock of Peoria & Eastern Dismissed.*—The Interstate Commerce Commission has dismissed the application of this company to purchase additional capital stock of the Peoria & Eastern, of which it already owns a majority, and its outstanding bonds in the amount of \$4,000,000. The report says the purchase of the remaining stock will not give the applicant any other or further control than that which it acquired prior to the enactment of the new law and that the application is not within the scope of Paragraph 2 of Section 5 of the Interstate Commerce Act.

COLUMBUS & GREENVILLE.—*Authorized to Abandon Line.*—The Interstate Commerce Commission has issued a certificate authorizing the abandonment as to interstate and foreign commerce of two branch lines from Stoneville, to Percy, Miss., 23.26 miles, and from Itta Denia to Webb, Mo., 24.38 miles.

ILLINOIS CENTRAL.—*Authorized to Issue Preferred Stock.*—The Interstate Commerce Commission has authorized the issue of \$10,929,000 of preferred stock to be sold at not less than par for cash and the proceeds to be used for construction purposes in connection with the electrification and enlargement of its Chicago terminals.

INTERNATIONAL & GREAT NORTHERN.—*Reorganization Plan Announced.*—The reorganization plan of the International & Great Northern, in receivership since August, 1914, has been announced by J. & W. Seligman & Co. and Speyer & Co. The plan has been accepted by the committee of holders of the company's three-year 5 per cent notes of which Frederick Strauss is chairman.

The plan gives the new company a capitalization of \$44,150,000. The fixed charges will be \$1,179,000 as compared with the present company's fixed charges of \$1,597,175, a reduction of \$418,175. The contingent interest charges on the new company's adjustment mortgage bonds will be \$1,020,000. Under the plan there will be authorized \$40,000,000 first mortgage bonds, \$25,000,000 adjustment mortgage bonds, interest on which will be cumulative after January 1, 1925, and \$7,500,000 common stock. For the present there will be issued \$10,000,000 of the first mortgage bonds in Series A at 6 per cent and maturing July 1, 1952. Of this amount

\$2,750,000 will be used to secure a note of \$2,400,000 to the director-general of railroads. The amount of adjustment mortgage bonds to be issued will be \$17,000,000, Series A, paying 6 per cent and with a 30-year maturity. Speyer & Co. and J. W. Seigman are forming a syndicate to underwrite the cash requirements of the plan which are estimated at approximately \$18,000,000. The plan provides a working fund of approximately \$4,000,000 for the new company. The deposit of bonds by the various classes of holders is asked under the plan, the limit of time for such being set at July 1.

Under the terms of the plan the stock of the new company is to be assigned to Willard V. King, James Speyer and Frederick Strauss as trustees to be held by them jointly subject to a trust agreement for a five-year period.

Holder of the various classes of International & Great Northern securities who agree to the terms of the reorganization and deposit their holdings will, on completion of the reorganization, be entitled to the following:

For each \$1,000 International & Great Northern first mortgage gold bond with coupon maturing November 1, 1922 (amount outstanding \$11,290,500), \$1,000 first mortgage 6 per cent bonds, Series A, of the new company, carrying interest from July 1, 1922, and \$35 in cash.

For each \$1,000 Colorado Bridge Company first mortgage gold bond with coupon maturing November 1, 1922 (amount outstanding \$130,000), \$1,000 first mortgage 6 per cent bonds, Series A, of the new company, carrying interest from July 1, 1922, and \$57.50 in cash.

For each \$1,000 International & Great Northern Railroad Company three-year note with coupon maturing August 1, 1914 (amount outstanding \$11,000,000), \$1,222.92 adjustment mortgage 6 per cent bonds, ranking for interest from January 1, 1923, and \$222.92 in common stock.

For each \$1,000 International & Great Northern Railroad Company first and refunding mortgage bonds with coupons maturing May 1, 1914, and all subsequent coupons (amount outstanding \$1,108,000), \$978.34 adjustment mortgage bonds ranking for interest from January 1, 1923, and \$467.50 in common stock.

Provision is made in the plan to pay off in cash at maturity November 1, 1922, holders of first mortgage bonds of the International & Great Northern Railroad Company and the Colorado Bridge Company who do not elect to deposit their securities under the plan.

MISSOURI, KANSAS & TEXAS.—*Annual Report*.—The annual report issued this week shows the following income account for the year ended December 31, 1921:

	1921	1920
Operating revenues.....	\$63,020,975	\$72,914,737
Operating expenses.....	50,055,784	69,880,879
Taxes, etc.....	2,624,764	2,106,352
Operating income.....	10,340,427	927,506
Other income.....	4,525,705	761,013
Gross income.....	14,866,132	1,688,519
Interest, rents, etc.....	8,964,783	8,989,899
Net income.....	5,901,349	Def. 7,301,376

NEW YORK, NEW HAVEN & HARTFORD.—*Equipment Notes Offered*.—Edward B. Smith & Co., Halsey, Stuart & Co., and Edward Lower Stokes & Co., of New York, are offering \$2,561,000 6 per cent equipment gold notes at prices to yield from 5.00 per cent to 5.70 per cent according to maturity. The notes are dated January 15, 1920, due \$197,000 per annum, January 15, 1923, to January 15, 1935, both inclusive. They are part of an authorized issue amounting to \$4,438,500.

NORFOLK & WESTERN.—*Equipment Trust Certificates Authorized*.—The Interstate Commerce Commission has authorized this company to assume obligation and liability in respect of \$6,700,000 of equipment trust certificates to be issued by the Commercial Trust Company of Philadelphia, to be sold so as to net not less than 97 3/4 per cent.

NORTHERN PACIFIC.—*Annual Report*.—This company's annual report for 1921 is received in an article on another page of this issue entitled "Northern Pacific Ton-Mileage Cut 33 Per Cent." See also excerpts from annual report on adjacent pages.

PHILADELPHIA & READING.—*Six Months' Guaranty Certified*.—The Interstate Commerce Commission has issued a final certificate stating the amount necessary to make good this company's guarantee for the six months of 1920 at \$9,509,080, of which \$1,656,060 was still to be paid.

PORTLAND TERMINAL COMPANY.—*Authorized to Issue Bonds*.—The Interstate Commerce Commission has authorized an issue of \$195,000 of first mortgage 5 per cent bonds to be guaranteed by the Maine Central and to be pledged with the director general of railroads in connection with the funding of indebtedness to the United States.

SOUTHERN PACIFIC.—*Control of Central Pacific Ended*.—See article on another page entitled "Separation of Southern Pacific and Central Pacific Ordered."

WICHITA FALLS & SOUTHERN.—*Authorized to Issue Securities*.—This company has been authorized by the Interstate Commerce Commission to issue \$161,000 of common stock, \$644,000 of non-cumulative preferred stock to be sold at not less than 80, and \$688,000 of first mortgage, 6 per cent gold bonds to be sold at not less than 85. The common stock is to be issued in part payment of advances for capital purposes and the proceeds

of the preferred stock and bonds for construction and equipment and to discharge certain indebtedness.

More Equipment Trusts Sold

The director general has announced additional sales at par plus accrued interest, of railroad equipment trust certificates maturing January 15, 1923, to January 15, 1935, inclusive, held by the government, to:

Potter & Company, New York City, and Cassatt & Company, Philadelphia, Pa., Toledo, St. Louis & Western Railroad Company, approximately two-thirds of each annual maturity from January, 1923, to January, 1935, inclusive.....	\$682,500
Commercial Trust Co., Philadelphia, Pa., Minneapolis & St. Louis Railroad Company, two-thirds of each annual maturity from January, 1923, to January, 1935, inclusive.....	873,600
Edward Lower Stokes & Co., Philadelphia, Pa., Halsey, Stuart & Co., New York City, and Edward B. Smith & Co., Philadelphia, Pa., The New York, New Haven & Hartford Railroad Company, approximately two-thirds of each annual maturity from January, 1923, to January, 1935, inclusive.....	2,561,000
Alfred Borden, New York City, and The Chase National Bank of New York, New York City, Chicago, Rock Island & Pacific Railway Company, approximately one-third of each annual maturity from January, 1923, to January, 1935, inclusive, being the portion heretofore subordinated under the plan mentioned above.....	2,344,550
Chesapeake & Ohio Railway Company, one-third of each annual maturity from January, 1923, to January, 1935, inclusive, being the portion heretofore subordinated under the plan mentioned above.....	3,283,800
Alfred Borden, New York City, Chicago Junction Railway Company, approximately one-third of each annual maturity from January, 1923, to January, 1935, inclusive, being the portion heretofore subordinated under the plan mentioned above.....	137,800
	<hr/> \$9,883,250

The total amount of equipment trust certificates sold by the government to date, at par plus accrued interest, reaches the total of \$263,258,750.

Tentative Valuations

The Interstate Commerce Commission has issued tentative valuation reports, in which it states the final value as follows:

	Property owned	Property used
Bonlee & Western.....	1916	\$7,300
Augusta & Summerville.....	1916	71,121
Washington Western.....	1917	164,310
		<hr/> \$79,721

Dividends Declared

Beech Creek.—\$50, quarterly, payable July 1 to holders of record June 15.
 Boston & Albany.—\$2.50, quarterly, payable June 30 to holders of record May 31.
 Buffalo & Susquehanna.—Common, 1 3/4 per cent, quarterly; preferred, 2 per cent, semi-annually; both payable June 30 to holders of record June 15.
 Cleveland, Cincinnati, Chicago & St. Louis.—2 per cent, payable June 15 to holders of record June 2.
 New York & Harlem.—Common and preferred, \$2.50, semi-annually, payable July 1 to holders of record June 15.
 Pittsburgh, McKeesport & Youngstown.—\$1.50, semi-annually, payable July 1 to holders of record June 15.
 Reading Company.—2d preferred, 1 per cent, payable July 13 to holders of record June 25.

Trend of Railway Stock and Bonds Prices

	May 29	Last Week	Last Year
Average price of 20 representative railway stocks.....	67.22	66.64	55.41
Average price of 20 representative railway bonds.....	86.28	86.65	73.86

W. J. HARAHAH, president of the Chesapeake & Ohio, officiated in the office of the Richmond Dispatch on the evening of May 25 as broadcaster, to send out a radio message calling attention to the Careful Crossing Campaign which is being conducted by the American Railway Association.

RADIO EXPERIMENTS made on a passenger train of the St. Louis-San Francisco between Oklahoma City and Lawton, a distance of about 100 miles on May 31 were very successful, music and other communications being received in a satisfactory fashion throughout the trip.

Annual Report

Twenty-Fifth Annual Report of the Northern Pacific Railway Company

Office of the
NORTHERN PACIFIC RAILWAY COMPANY,
St. Paul, Minnesota.

April 5, 1922.

REVENUE TRAIN MILEAGE

Revenue passenger train miles during the year were 9,925,634, a decrease of 52,319 miles compared with the previous year.
Revenue freight and mixed train miles during the year were 8,893,013, a decrease of 3,017,442 miles.
Revenue special train miles during the year were 11,525, a decrease of 1,295 miles.
All revenue train miles during the year were 18,830,170, a decrease of 3,065,065 train miles.

EARNINGS.

FREIGHT BUSINESS.

Freight revenue was \$69,316,505.06, a decrease of \$11,843,884.57, or 14.61 per cent compared with the previous year.
The revenue train miles of revenue freight were moved one mile, a decrease of 2,563,061,399 tons one mile or 1.64 per cent compared with the previous year.
The average earnings per ton mile increased from 0.1013 to 0.1019.
The revenue train miles of freight, increased from 659.66 to 594.82 tons. The total train miles of freight, increased from 761.31 tons to 700.49.
The number of miles run by revenue freight trains was 8,702,829, a decrease of 1,011,170 or 12.88 per cent.

PASSENGER BUSINESS.

Passenger revenue was \$17,017,153.15, a decrease of \$4,128,522.79 or 19.51 per cent compared with the previous year.

Mail revenue was \$1,699,835.15, a decrease of \$1,191,234.25 or 41.20 per cent; making allowance for hack mail pay received, there was an increase of \$273,640.82, or 24.19 per cent.
Express revenue was \$2,081,541.60, a decrease of \$244,535.30, or 10.51 per cent.

Sleeping car, parlor and chair car, excess baggage and miscellaneous passenger revenue was \$881,763.72, an increase of \$80,236.50, or 10.01 per cent.
Total revenue from persons and property carried on passenger and special trains was \$21,675,295.62, a decrease of \$3,484,085.84, or 20.19 per cent compared with the previous year.

The number of passengers was 6,178,296, a decrease of 2,269,670 over the previous year, and the number of passengers carried one mile was 505,701,937, a decrease of 213,744,024, or 29.71 per cent.
The number of miles run by revenue passenger trains was 9,925,632, a decrease of 52,328, or .52 per cent.
The average rate per passenger mile was 3.365 cents against 2.939 cents last year.

EARNINGS AND EXPENSES PER MILE OPERATED.

PASSENGER EQUIPMENT

On December 31, 1921, the Company owned 1,154 passenger train cars, an increase of 113 cars, consisting of 135 express refrigerator cars transferred from freight equipment, less 22 other passenger cars transferred to other classes of equipment during the year.
Of the 1,154 cars owned, 774 were not due in shops for two months or more.
During 1921, 63 passenger train cars had steel underframes, steel platforms and steel sheathing applied; 102 cars are being remodeled in 1922. By July 1, 1922, all passenger train cars in transcontinental trains will have been strengthened and remodeled. The purchase of 70 passenger train refrigerator cars has been authorized and these cars will be delivered in 1922.

FREIGHT EQUIPMENT

The purchase of freight train cars has been authorized as follows and cars will be received during 1922:

Box	1,000
Refrigerator	1,000
Coal	250
Stock	250
Hart Convertible	250
Total	2,750

BAD ORDER CAR SITUATION ON DECEMBER 31ST.

Track ballasted (patch or repairs)	144,906	121,630
Embankments	107.60	72.66
Cross, bridge and switch tie renewals, main line	1,395,094	1,072,502
Cross, bridge and switch tie renewals, branch lines	973,303	734,065
Timber bridges replaced by permanent structures and embankments	28	53
Equal to	1.11	1.13
Timber bridges renewed	134	115
Timber culverts renewed	24	24
Timber culverts replaced in permanent form	173	370
New stock fences constructed	80.27	46.32
New snow fences constructed14

BRIDGES

During the year 173 bridges were replaced, of which 115, 11,539 feet in length, were replaced by timber structures, and 5 permanent and 53 timber structures were replaced in permanent form as follows:

Replaced by embankment

Replaced by steel viaduct, plate girders

I-beams and reinforced concrete trestles

Total

In addition to changes referred to above, one temporary and one permanent bridge were abandoned, 37 temporary and 42 permanent structures were added; 127 culverts were rebuilt, 37 in temporary form and 140 in permanent form.

There are now under construction 535 lineal feet of steel girder I-beam spans for single track, 54 lineal feet for double track, 32 lineal feet for three tracks, 145 lineal feet of steel truss for single track, and 32 lineal feet of reinforced concrete trestle for double track.

BUILDINGS AT STATIONS

New buildings and structures or increased facilities have been provided at the following stations:

- Minnesota: Bald Eagle, Hinckley, Cluett, Brainerd.
- North Dakota: Jamestown, Sentinel Bluff, Dickinson, Beach.
- Montana: Laurel, Logan, Trout Creek.
- Washington: Ellensburg, Spokane, Olympia.

BLOCK SIGNALS AND INTERLOCKINGS

An eight lever section was added to interlocking plant at Sauk Centre, Minnesota.

No additional automatic lock signals were installed.

WATER SUPPLY

Additional or increased facilities have been provided at the following points:

Minnesota: Brainerd.

Washington: Cooper, Lester, Yakima, Sumas.

GENERAL

FINANCIAL RESULTS OF OPERATION

1921 was a very poor year for the railroads, particularly in the country between Lake Superior and Puget Sound.

The volume of passenger business was 26.87 per cent and of freight business 24.64 per cent less than in 1920. The freight business was the smallest since 1912, except for the year 1915, when the amount was practically the same. In consequence the operating revenues of the Company decreased \$18,546,348.34, or 16.4 per cent. Expenses were taken hold of vigorously and were reduced \$23,353,006.96, or 23.13 per cent. Net operating revenue increased \$4,806,658.62, or 39.72 per cent.

CLAIMS FOR BALANCE DUE FROM GOVERNMENT

As stated in the last annual report there was received from the Director General, \$2,000,000 in account of settlement with the contract with the Government for the period of Federal Control ended February 29, 1920. Since then there has been received \$1,599,914.03 in final settlement.

The claim of the Company for payment for the Guaranty Period of six months ended August 31, 1920, is before the Interstate Commerce Commission; \$12,000,000 has been received on account and it is expected a final adjustment will be made in the year 1922.

VALUATION WORK

The Bureau of Valuation continued the work of valuing the property and land in 1921; filed its preliminary engineering report. Your officers are of the opinion that some of the quantities and unit prices used in this

report are inadequate. A statement of objections has been filed with the Bureau and it is hoped that some increases will be obtained before the Interstate Commerce Commission serves its tentative valuation.

The preliminary land and accounting reports have not yet been filed by the Bureau of Valuation, but it is expected that they will be received some time during the summer or fall of 1922.

The number of company employees engaged in this work at the present time is ninety-six, and the total expenditure for the Company's proportion of the work up to December 31, 1921, was \$1,698,091.97.

LAND DEPARTMENT

The operations of the Land Department for the year 1921 are shown in the report. The depression in business, and particularly in agriculture in the territory served by your lines, was even more pronounced and its effect upon the business of the Land Department more widespread than last year. It was necessary to continue the policy of cancellation of contracts and although a considerable acreage of land was sold, there were included in cancelled contracts exceeded the acreage in new sales by 76,293.56 acres. Attention is directed to the fact, however, that the payments made under these cancelled contracts are retained and the lands may be resold. Although it is unfortunate that conditions have required the termination of such a large number of contracts in the last few years, it may be possible that in the long run the present apparent monetary lull may be overcome to a certain extent, at least, by resale at higher valuations. The deficit in the net proceeds is caused by the heavy cancellations. Payments of principal and interest under outstanding land contracts are less than in the previous year. The money has not been available for contract holders to make the necessary payments under their contracts.

OIL DEVELOPMENT

During 1921 there was marked progress in oil exploration in Montana. New wells to the number of 190 were commenced and at the end of the year drilling was in progress on 27 wells. Three wells were completed in three fields were producing oil; 3 wells were being used as water wells; 80 wells had been abandoned. The Cat Creek field continued to be a large producer. During the year 1,317,143 barrels were produced and shipped from 68 wells, the majority being in the field since the first of 1921. In 1,547,261 barrels. In the Devil's Basin field there are two producing wells, but, lacking pipe line connection, the oil has been used for fuel in the field. In February, 1921, the Soap Creek oil field, in southern Bighorn County, was discovered. Three wells have been drilled to date. The oil is chiefly valuable for fuel and appears in considerable quantity. Drilling is actively in progress in both the Devil's Basin and Soap Creek fields, as well as in a number of other localities in Central and Eastern Montana. Large quantities of oil from any lands owned or controlled by your company has been very small. The Company, however, owns a large acreage in districts, the geology of which indicates oil possibilities.

The Alsaroka Oil Development Company, which was organized last year under the control of your company, was active throughout the year. A large acreage in the territory was reported upon by its geological parties and although in its first season's operations no oil has been found, a large amount of valuable information has been obtained which will be of assistance in the future. Arrangements were effected with a number of other companies for drilling test wells in various localities and that work is now in progress.

REFUNDING OF NORTHERN PACIFIC-GREAT NORTHERN, C. B. AND Q.

COLLATERAL, JOINT 4% BONDS

As indicated in the last annual report, the joint 4% bonds issued in 1901 were retired on July 1, 1921, by proceeds of issue of joint collateral bonds of the Northern Pacific and Great Northern Railway Companies to the amount of \$340,000,000, payable in 15 years, bearing interest at 6 1/2 per cent annum and convertible to the extent of \$115,000,000 each, into Great Northern General Mortgage 7% Gold bonds, Series A, due July 1, 1936, or Northern Pacific Railway Company Refunding and Improvement 6% Mortgage bonds, Series B, due July 1, 1947, and redeemable as a whole at the option of the Northern Pacific Railway Company on or after July 1, 1936, at 110% and accrued interest.

The Great Northern proposition of \$115,000,000 of these bonds was converted into its 7% General Mortgage bonds. Of the Northern Pacific portion of these bonds only \$9,950,400 was converted as of December 31, 1921, leaving a balance of \$105,049,600 which will doubtless be converted in due time. Steps are now being taken to convert all the outstanding 6 1/2% bonds and it is thought the conversion will be completed within a few months.

Through the issue of these bonds, the Company owns 830,102 shares of Chicago, Burlington and Quincy Railroad Company stock, and the dividends received pay the interest on the bonds.

FREIGHT RATES AND PASSENGER FARES

Increased rates and fares authorized by the Interstate Commerce Commission August 26, 1920, were in effect at the beginning of the year, except as to certain intrastate rates in North Dakota and Montana, but numerous reductions have been made during the year. Some reductions were proposed by the carriers on commercial conditions, and some were made by order of the Interstate Commerce Commission over the rates on rates on agricultural products and livestock. The general level of rates for 1922 is, therefore, below that in effect for 1921.

COMPARATIVE STATEMENT OF PAYROLLS

During the year there has been a reduction in payrolls due to some reductions in wages authorized by the United States Labor Board and decrease in the number of employees and smaller amount of work done.

Comparison for a period of years follows:

Total payroll for year ending June 30, 1915	\$24,846,852.00
Total payroll for year ending December 31, 1916	28,204,669.00
Total payroll for year ending December 31, 1917	35,877,879.00
Total payroll for year ending December 31, 1918	49,632,127.00
Total payroll for year ending December 31, 1919	52,605,396.00
Total payroll for year ending December 31, 1920	66,503,794.00
Total payroll for year ending December 31, 1921	50,643,526.00

SECURITY OWNERS AND EMPLOYEES

There are now about 37,000 owners of stock, 30,000 owners of bonds of the Company. The average number of employees in 1921 was 28,911 and on March 15, 1922, 27,475.

TAXES

The tax question is serious for all forms of business and bears heavily upon the railroad. The following statement shows the increase since 1917:

State	1917	1918	1919	1920	1921
taxes	\$5,169,742.57	\$5,865,666.69	\$6,913,707.44	\$8,453,990.33	\$9,339,049.60
Federal	1,727,242.85	2,264,762.40	2,055,483.31	1,620,591.91	638,983.26
Canadian	13,742.77	26,654.17	31,546.72	34,104.14	36,087.64
miscellaneous					
Totals	\$6,910,728.19	\$8,157,083.26	\$9,000,737.47	\$10,108,686.38	\$9,014,120.50

CHANGES IN DEBT

During the year the Company paid off \$9,183,000 of debt, including \$6,000,000 6% note due the Government. This results in an annual saving in interest of \$501,540. There is an increase of \$8,637,500 in the bonds in hands of the public issued to represent the Chicago, Burlington and

Quincy stock owned; the dividends from that stock pay the interest on these bonds.

By order of the Board of Directors,
 HOWARD ELLIOTT, Chairman. CHARLES DONNELLY, President.

GENERAL BALANCE SHEET, DECEMBER 31, 1921

Railway Officers

Executive

G. W. Webster, whose promotion to vice-president of the Minneapolis, St. Paul & Sault Ste. Marie, with headquarters at Minneapolis, Minn., effective May 15, was reported in the *Railway*

Age of May 20, page 1204, was born in Oshkosh, Wis., on December 1, 1870, and entered railway service on September 1, 1886, as a clerk on the Milwaukee, Lake Shore & Western. He was employed in various clerical capacities on this road until September 27, 1893, when he became secretary to the receiver of the Wisconsin Central. Thereafter he was consecutively the secretary to the receiver and chief clerk to the president from July 1, 1899, to October, 1906, and secretary of the corporation from that time to Sep-

tember 21, 1909, when he was also elected secretary of the Minneapolis, St. Paul & Sault Ste. Marie, the latter road having acquired control of the Wisconsin Central by lease a few months earlier. Thereafter he continued as secretary of these properties until March 1, 1920, when he was promoted to assistant to the president and elected secretary of the corporation controlling the Minneapolis, St. Paul & Sault Ste. Marie, the Duluth, South Shore & Atlantic and subsidiary companies, which position he occupied until his recent election to vice-president.

Franklin G. Robbins, director of the Bureau of Service of the Interstate Commerce Commission, has been elected vice-president of the Chicago & Erie. Mr. Robbins

was born at La Crosse, Wis., on February 15, 1876. He attended the public schools at Minneapolis, Minn., and the Shattuck School at Fairbault, Minn. He began railroad work in 1888 with the Minneapolis, St. Paul & Sault Ste. Marie, working during school vacations as a messenger and later as a rodman and operator. After leaving school in 1896 he entered the employ of Kenneth Hopkins & Company on the Chicago Board of Trade and in 1906 entered the service of the Chicago, Burlington & Quincy as special car agent. He then served consecutively

as traveling yardmaster, assistant trainmaster, trainmaster, assistant superintendent and superintendent for the same company, and in 1913 became superintendent of the Elmira, Corning & Waverly (an Erie subsidiary). In 1916 he was appointed general superintendent of the Erie at Chicago. In 1917 he resigned this position to enter the army as a major. Later he was promoted to lieutenant-colonel. In 1920 he was appointed director of the Bureau of Service of the Interstate Commerce Commis-

sion, in which position he was serving at the time of his election to the vice-presidency of the Chicago & Erie.

W. E. Brown has been elected president of the Cowlitz, Chehalis & Cascade with headquarters at Chehalis, Washington, succeeding **C. L. Brown**, who has been elected vice-president.

Robert S. Parsons, general manager of the Erie with headquarters at New York, has been elected vice-president in charge of operation with the same headquarters. Mr. Parsons was born at Hohokus, N. J., and attended Rutgers College. He began railroad work in 1895 as a rodman for the Erie and the following year was promoted to assistant engineer. In 1899 he was appointed division engineer of the New York, Susquehanna & Western. He returned to the Erie in 1913 as engineer maintenance of way and three years later was promoted to assistant general superintendent. He was appointed superintendent of the Susquehanna division in 1907 and three years later was transferred to the New York division, in

the same capacity. On January 1, 1913, he was appointed assistant general manager of the lines east of Buffalo and Salamanca with headquarters at New York. The following year he was appointed general manager of the Ohio grand division (the Erie's western lines) with headquarters at Cleveland, Ohio. In January, 1916, he was appointed chief engineer. The following year he became assistant to the president and chief engineer and in November, 1917, he was appointed assistant to the president and general manager. Under the Railroad Administration he served as chief engineer and, in 1920, became general manager.

R. S. Parsons

Financial, Legal and Accounting

Louis A. Bell, auditor of the New York, Chicago & St. Louis, has been elected comptroller with headquarters at Cleveland, Ohio, effective May 29.

W. T. Hughes, vice-president and associate publisher of the Courier-Journal, Louisville, Ky., has been elected to the newly created position of general attorney of the Chicago, Rock Island & Pacific, with headquarters at Chicago, effective June 1, to represent the road in federal matters.

G. J. Bunting, assistant director of the Division of Finance of the Interstate Commerce Commission, has been elected comptroller of the Illinois Central, with headquarters at Chicago, effective May 15, to succeed **W. D. Beymer**. **L. A. Harkness**, assistant to vice-president in charge of accounting, has been appointed general auditor.

Traffic

V. P. Summerfield has been appointed assistant general freight agent of the Pennsylvania, Eastern region, and **J. T. Carbine** has been appointed coal freight agent, both with headquarters at Philadelphia. **J. S. Murphy** has been appointed division passenger agent at Atlantic City, N. J. These appointments were effective June 1.

Richard B. Lend has been promoted to chief of the tariff bureau of the Chicago, St. Paul, Minneapolis & Omaha, with headquarters at St. Paul, Minn., to succeed **H. A. Mintz**, who has been promoted to assistant general freight agent, with headquarters at St. Paul, to succeed **L. A. Mitzener**, resigned. Effective the same date, **Thomas J. Kenniff** has been promoted to assistant general freight agent.

G. W. Webster

F. G. Robbins

Operating

A. S. Brainard has been appointed second chief train dispatcher of the Southern Pacific with headquarters at San Francisco, succeeding J. T. Bell, assigned to other duties.

I. B. Sinclair, whose appointment as superintendent of the Delaware division of the Pennsylvania was announced in the *Railway Age* of April 22, page 998, was born at Bernard Castle, England, on April 2, 1879. He entered the employ of the Pennsylvania as a clerk in the office of the general superintendent of transportation at Philadelphia on April 18, 1898. He remained in that position until April 1, 1907, when he was transferred as a clerk to the office of the superintendent of freight transportation of the Eastern Pennsylvania division. On November 1, 1909, he became an assistant section foreman (a position in the car service department equivalent to that of assistant chief clerk) on the Eastern Pennsylvania division and on April 1, 1911, became a clerk in the same department. In May of the same year he was appointed timekeeper and, the following November, to assistant foreman again. On July 1, 1912, he went to the office of the general superintendent of transportation in the same capacity. On August 1 he was appointed a special agent in the same department and on June 1, 1913, was promoted to inspector. On June 7, 1915, he was transferred to the Maryland division in the same capacity and on December 18, was promoted to assistant trainmaster. He was promoted to freight trainmaster on February 1, 1918, and to assistant superintendent of the Philadelphia division on March 1, 1920. He was serving as assistant division superintendent on this division at the time of his recent promotion.

I. B. Sinclair

Mechanical

S. B. Riley has been appointed superintendent of motive power of the Western Maryland with headquarters at Hagerstown, Md., succeeding G. F. Wieseckel, resigned.

Engineering, Maintenance of Way and Signaling

E. L. Martin, engineer maintenance of way of the Missouri, Kansas & Texas, has resigned effective June 1, to become vice-president of the Hutt Contracting Company, Kansas City, Mo., in which he has purchased a substantial interest. Mr. Martin was educated at the Texas College of Agriculture and Mechanics Arts, immediately following his graduation from which in 1899 he entered railway service as an axman on the Texas & New Orleans. He remained in the service of the Southern Pacific in Texas and Louisiana consecutively as rodman, instrumentman and assistant engineer on various projects until 1902 when he entered the employ of the Kansas City Southern as assistant engineer, with headquarters at Pittsburg, Kan., a position he held until August, 1905, when he became division engineer on construction on the Gulf, Colorado & Santa Fe. He continued in the service of the latter road consecutively as division engineer and assistant construction engineer on the building of about 200 miles of line in Louisiana and Texas until 1912 when he resigned to handle the location and construction of 20 miles of line for an industry. Upon the completion of this work he re-entered railway service as district engineer on the Missouri, Kansas & Texas of Texas, a position he held until May, 1916, when he was placed in charge of the construction of the San Antonio, Tex. terminals of this company. Upon the comple-

tion of this project in 1917 he was promoted to engineer maintenance of way of the Texas Lines and held this position in Texas and later in Kansas until March 1, 1919, when he was made chief engineer, under the Railroad Administration, of the Missouri, Kansas & Texas, the Missouri, Kansas & Texas of Texas, the Missouri, Oklahoma & Gulf and the Wichita Falls & Northwestern. At the termination of federal control he was appointed assistant chief engineer in charge of maintenance of way of the Missouri, Kansas & Texas lines, the title of which position was later changed to engineer maintenance of way, which he carried until his resignation.

Obituary

J. E. McNeil, inspector of track and roadway of the Atchison Topeka & Santa Fe, Coast lines, died on May 28.

Harry C. Howe, freight claim agent of the Chicago & North Western with headquarters at Chicago and an employee of this company for more than 37 years, died May 24 at his home near that city at the age of 57.

Arthur F. Morris, for the past two years auditor of capital expenditures on the Chicago & North Western, with headquarters at Chicago, and an employee of that company continuously for 19 years, died May 22, at his home in Oak Park, Ill., after a three months' illness. Mr. Morris was born in Chicago in 1880 and was graduated in civil engineering from Princeton University in 1903, immediately following which he entered the service of the Chicago & North Western as a chairman. He served consecutively with that road as chairman, rodman, instrumentman and assistant engineer on location, construction, maintenance, track elevation and valuation until 1918, when he was appointed engineering auditor, in which capacity he served until 1920, when he was promoted to auditor of capital expenditures, the position he held at the time of his death.

Albert F. Rust, consulting engineer of the Kansas City Southern, with headquarters at Kansas City, Mo., whose death at his home in Kansas City, Mo., May 11, was reported in the *Railway Age* of May 27, page 1264, was born in Fultonville, N. Y., on April 29, 1849, and was educated at Ripon College, Ripon, Wis., from which he was graduated in 1871. He entered railway service in 1872 as an axman on the Sheboygan & Fond du Lac (now a part of the Chicago & North Western), where he remained for a year, when he entered the employ of the New York Central as a rodman. Consecutively thereafter he was rodman and assistant engineer on the Midland Pacific from 1874

A. F. Rust

to 1876, assistant engineer on the Union Pacific from 1876 to 1885, and division engineer on the Missouri Pacific thereafter until 1887, when he left railway service to engage in private practice at Omaha, Neb. He re-entered railway service in 1889 as division engineer on the Missouri Pacific and was consecutively a division engineer on the Kansas City, Pittsburg & Gulf (now Kansas City Southern) from 1893 to 1894, assistant engineer on the Missouri, Kansas & Texas from 1894 to 1895, resident engineer on the Kansas City, Pittsburg & Gulf from 1895 to 1897, and engineer maintenance of way on the same road from 1897 to 1899. He entered the service of the Kansas City Southern in 1899, as chief engineer, in which capacity he served until 1911, when he became consulting and valuation engineer. He was relieved of the duties of valuation engineer in 1918, and thereafter continued as consulting engineer until the time of his death.

A train dispatcher, in a laudable endeavor to avoid delay, recently instructed an operator *by message* (which was unwarranted by rule or practice) to change a "31" train order to a "19"

Save Minutes Safely

order. A head-on collision in which two employees were killed and four passengers and two employees were

injured was the result. This was the toll paid in an effort to save a few minutes' delay to an extra train. If others learn a lesson from this accident it may be worth the price. This dispatcher, in an effort to be a "Hundred Point" man, defined by Elbert Hubbard as "one who is true to every trust," attempted to save minutes—but not safely. It was the desire of the railroad that trains should be moved with dispatch, but still there was no adequate block system in operation. Such a system would have acted as a check against errors. The moral is obvious. The time is approaching when progressive managements, in an effort to provide a "Hundred Point" system as well as "Hundred Point" men, will operate their trains by an adequate block system, without train orders and—save minutes safely.

One of the most serious handicaps under which the maintenance of way department has labored from time immemorial has been the practice of deferring the

inauguration of its program of seasonal work until the spring is far advanced.

Maintenance Work Should Be Pushed

For many years the termination of the

fiscal year on July 1 caused many roads to postpone heavy expenditures until after that date. With the changing of the fiscal year to conform to the calendar year several years ago this incentive for delaying the work was removed, but the habit of long standing was hard to break and some roads have still continued it. While the large expenditures which have been authorized in recent weeks for new equipment and for improvements to the physical property indicate the railway managements are facing the future with more optimism than in recent years, there has still been a tendency to delay routine maintenance work to such an extent that prompt action is now necessary. The reduction in the wages of maintenance of way employees announced last week and effective July 1, is estimated to reduce the cost of labor approximately 13 per cent, and will naturally stimulate activity. The elimination of penalty overtime for the ninth and tenth hours a year ago offers an incentive for the return to the ten-hour day where this has not already been done. There are increasingly numerous indications that the roads will soon face a labor shortage, for it is already being felt in the industrial centers. With the harvest season approaching it is to be expected that heavy inroads will be made upon the track forces in the agricultural areas. In view of the impending shortage of labor and because of the outlook for steadily increasing traffic with the correspondingly heavier demands upon the track and structures, it is important that the roads organize at once to get as much of their season's work done as possible while a sufficient number of men are still available. Prompt action is necessary if the maximum and most economical results are to be secured.

We have received from the traffic department of the Lehigh & New England an attractive little booklet called "Locating the Factory." This pamphlet is not advertising matter in the ordinary sense; it is not devoted to singing the praises of plant sites along the lines of the Lehigh & New England. Instead it is a rather thorough study of the various angles of the problem of factory location and is filled with sound theory and practical suggestions. The concluding chapter of the book is devoted to a free offer of expert advice and assistance to manufacturers who are seeking favorable locations for their plants. The mere fact that the Lehigh & New England has issued such a booklet is not the most interesting point, however; the company is securing distribution for it by advertising in industrial papers. We have not had any figures on the number of inquiries there have been for this book to date, but it seems reasonable to suppose that there will be a heavy demand for it which should lead to many requests for direct personal assistance by the railroad's traffic officers. The results should be beneficial to all concerned—the railroad, the manufacturer, and the cities selected for industrial development. The Lehigh & New England is to be congratulated not only for having issued such a commendable book, but for advertising it and for offering expert advice to those who seek it.

"Locating the Factory"

Five members of the New York Central's police department at Buffalo, N. Y., were recently convicted in that city of

Corrupt Railroad Police

the stealing of contents from their company's freight cars. One of these men carried the title of police inspector, and another that of captain, supposedly responsible and executive positions. These two men were given sentences of 10 years each, while their three accomplices received prison terms ranging from two to seven years. From the evidence uncovered at the trial it was learned that a car burglarizing gang had been operating in the New York Central's freight yards for some time under the protection and direction of its "railroad police leaders." This was the second of two groups to be tried and convicted within the last month on a charge of stealing from the New York Central's freight cars and it is also probable that other members of the department who have been indicted will soon be convicted. It is unfortunate that such a condition should exist and it causes one to wonder if it is prevalent within railroad organizations. Such exhibitions of flagrant disloyalty are sometimes hard to believe, but this recent escapade should serve as a warning. Car robberies, a wasteful and extravagant cause of loss of revenue which claim an annual toll of millions of dollars, should and must be curbed. Assuming that the New York Central's case is not unusual, it would seem that the remedy for this difficulty lies in the selection of the proper personnel for a railroad police department, for the situation mentioned above could not have developed if the same type of men had been in charge of police protection as are selected for executive positions in the operating, traffic or engineering departments. The chiefs of police,

chief special agents or superintendents of police, as they are usually called, are directly responsible for the administration of that department and their position is, or should be one of importance requiring the services of first-class men. It is not always necessary for a carrier to secure men for this position from outside sources, for there are men in railroad service who have had years of experience in railroad police protection work, in both legal and field practice, and who are able to organize and maintain a police department of efficient, honest men. The extensive powers of patronage accompanying a position of this kind make it an absolute necessity that it should be held by one who will be most discriminating in the choice of subordinate officers, who in turn will be equally careful in picking their men. Unfortunately, the class of men seeking employment of this nature is frequently not the best. Therefore, unless stringent precautions are exercised in selection, trouble will follow. Judge Howe, in sentencing the guilty New York Central police officers, stated: "I firmly believe the New York Central Railroad Company would suffer fewer losses if it would discharge its entire police department." A rather broad statement, but nearly true, as a partially efficient and somewhat dishonest police department could hardly be called a protective body. The best insurance against this evil is the maintenance of close supervision over the department and careful selection of the personnel, from chief on down.

Reductions of Wages and Strike Talk

THERE IS WIDESPREAD talk of a strike because of the recent decisions of the Railroad Labor Board authorizing reductions in wages of maintenance of way and shop employees on July 1. This talk is accompanied by statements regarding the effect of the decisions which, if allowed to go unchallenged, will mislead the public. Some of these statements are based upon data presented by the labor members of the board in their minority opinions.

The majority members of the board in making the award in the maintenance of way employees' case expressed the opinion that "after the reductions made under this decision common labor on the railroads will still be receiving as a rule a wage in excess of that paid to similar labor in other industries and that the same will be true of all other classes of labor covered by this decision." They said practically the same thing regarding the new wages fixed for shop employees. They believed, however, that the conditions of railway employment justified the payment of higher wages to railway employees than to men in other industries. The average hourly rate of common labor which will be paid under the award after July 1 will be 32.7 cents an hour. This represents an increase of 69.4 per cent over the average hourly wage in effect in December, 1917. The difference between the cost of living in December, 1917, and March, 1920, was 17.2 per cent. Therefore the majority estimated "the increase in purchasing power of earnings under the present decision as compared with December, 1917," as 44.5 per cent. Computing in the same way they estimated the purchasing power of the new wages of the machinists will be 19 per cent and those of carmen 46 per cent greater than in December, 1917.

The labor members challenged this conclusion in both cases. In their dissenting opinion on the maintenance of way case they said that eight hours has been established as the basic day. The average daily earnings of maintenance of way employees in December, 1917, were \$1.93. On an eight hour basis the average daily earnings under the new wages would be \$2.62. Therefore, the minority argued, this showed a wage increase amounting to only 35.8 per cent. This would make the purchasing power of the new wages only 16 per cent more than in 1917.

Of course this is based on the assumption that the employees will work only eight hours. But the board has authorized the railways to pay common labor the same wages in the ninth and tenth hours as in the first eight. When conditions justify it the railways will employ the men ten hours a day if they are willing to work that much. In many cases this is being done already. On the ten-hour basis a wage of 32.7 cents per hour would, of course, yield daily earnings of \$3.27, or, as the majority of the board said, 69.4 per cent more than an employee could earn in ten hours at the average wage of December, 1917.

If the employees refuse to work ten hours, why will they do so? 'Because they value two hours of leisure more than they do two hours' pay. But if they decide that eight hours' work for \$2.62 and two hours' leisure is worth more to them than ten hours' work for \$3.27, how can they justly complain if they do not get the 69.4 per cent higher earnings than in 1917 which they could get by working ten hours? The minority members of the board argued that a reduction of hours should not be counted as an increase in pay. But if two hours' leisure is worth more than two hours' pay, why should a man complain because he gets the two hours of leisure instead of the two hours' pay? Of course, if the additional work would be injurious to the employee the case would be different, but maintenance of way work on railroads is not arduous or unhealthful work. On every farm by a railway right of way men work more hours than this.

The minority members of the board also say that in determining the relative purchasing power of the new wages, the board should have gone back to 1915. They figure that a ten-hour day in 1915 yielded earnings of \$1.50, while an eight-hour day after July 1 will mean earnings of \$2.62, or an increase in money wages of 74.4 per cent. The cost of living is approximately 60.5 per cent more than in 1915. Therefore as compared with 1915, the wages of these men after July 1, they conclude, will show an increase of only 8.7 per cent. But if the men work ten hours a day their earnings will be 118 per cent greater than in 1915, and the purchasing power of the wages not 8.7 per cent, but 36.5 per cent, more than in 1915.

The main ground upon which the labor members attack the decisions in which the public and railway members have joined, however, is that the earnings which the employees involved can make under the new wages will be insufficient to enable them to maintain an "average American family of five" according to a reasonable standard of living. It cannot be denied that railway employees can earn more under the new scales fixed than is earned by most employees in other industries doing similar work. It cannot be denied that railway employees, by working the same number of hours as in 1917, can under the new scales make earnings which will buy them much more food, clothing and other necessities and comforts than they could buy with the wages they received five years ago. In fact, the earnings of most of them, even though they work only eight hours a day, will have substantially greater purchasing power than the earnings they made five years ago while working ten hours a day. Now, the Transportation Act specifically makes the wages paid in other industries and the cost of living the two principal standards for determining the reasonableness of railway wages. It has always been assumed that if the wages fixed will yield the employees earnings having greater purchasing power than their earnings before government regulation of wages began, the board would have given the consideration to the cost of living which the law requires.

The labor members reject this view. The cost of living which the board should consider, they contend, is the amount which will enable a railway employee to maintain a family of five according to what they call a "minimum decency standard." The average earnings required to maintain this standard according to evidence introduced by representatives

of the labor unions is \$2,637 a year, and the labor members virtually take the position that this is the cost of living which the board should adopt in applying the cost of living measure to wages.

It is easily demonstrated that industry in general, including the railroads, could not under present conditions pay this high an average wage without being speedily bankrupted. The wages of industry annually would then greatly exceed the largest total production of the country in any past year. Since industry in general could not afford to pay this average wage it necessarily follows that if it were paid to railway employees they would be favored far above any other class of workers. The railroads would have to charge much higher rates than at present which means, of course, that the high wages of railway employees would be paid at the expense of other workers who are receiving much lower wages.

No intelligent or humane person will challenge the statement that it is desirable that all working men should be paid wages of greater purchasing power than those provided for in the decisions of the Labor Board. But it will never be possible to do so without a very large increase in the total annual production of the country. The decisions of the Labor Board simply require railway employees, under the conditions actually existing at present, to bear their share of the downward readjustment of money incomes which other people have been, or are being, required to bear. They will, in fact, be better off than other classes of men doing similar work after the reductions of wages go into effect. In these circumstances it seems probable that reason will prevail and that there will be no serious strikes. The employees cannot hope to gain anything by striking. On the contrary, by striking they are sure to cause heavy losses to themselves and others.

Record-Breaking Shipments of Most Commodities

THE STATISTICS regarding the number of carloads of freight which have been shipped within recent weeks are highly significant in some important respects.

Because of the coal strike the loadings of coal have been small. It is a remarkable fact, however, that in every week of the four weeks ending with May 21 the number of cars loaded with commodities other than coal has been larger than in the corresponding week of any other year since car loading statistics have been published. The loadings of commodities other than coal in these four weeks of the last four years have been as follows: 1919, 2,362,310 cars; 1920, 2,675,832 cars; 1921, 2,349,883 cars; 1922, 2,771,674 cars. The loadings of commodities other than coal in these weeks in 1922 represent the following increases over those for the same weeks of the other years mentioned: 1919, 409,364 cars; 1920, 95,842 cars; 1921, 421,791 cars.

The loadings of coal in these weeks were as follows: 1919, 660,608 cars; 1920, 673,531 cars; 1921, 608,627 cars; 1922, 312,179 cars. It will be seen that the loadings of coal in 1922 represent a decline of more than one-half as compared with those of any of the other years mentioned. If the loadings of coal had been as large this year as in either of the preceding years, the number of cars of all kinds of freight shipped would have been larger than in any of the preceding years.

The average number of tons shipped per car probably was somewhat smaller than in preceding years, but in spite of this the figures indicate that if there had been a normal movement of coal the total freight handled in this period would have equalled any previous record.

If the increase in shipments shown had occurred after the

reduction in rates which has been ordered by the Interstate Commerce Commission had gone into effect, those who have claimed that high rates have been preventing a revival of business would have attributed it to the reduction of rates. But changes in rates, actual or prospective, had nothing to do with it. It was obviously due to an improvement in general business conditions, just as the decline of traffic in 1921 was due to bad general business conditions.

Probably the coal strike will not last many weeks longer. After it is ended the railways will have to handle very largely increased shipments of coal to offset the deficiency in coal supply caused by the strike. The total amount of bituminous coal produced this year to the end of May was slightly greater than last year in spite of the strike, but business activity, and especially manufacturing activity, is much greater than a year ago. If this continues to be the case the demand for coal and the amount of it the railways will have to transport will be much larger in the latter half of this year than in the latter half of last year.

If other commodities continue to move in relatively a large volume as recently, and it becomes necessary for the railways to handle, say, two and one-half times as much coal as at present—a conservative estimate—it is evident that their operating officers will have their hands full. It seems not altogether improbable that the country may even get some more experience with traffic congestions and car shortages.

Nobody now looks forward with much fear to the coming of such a condition of affairs. The railways have suffered so long from an acute shortage of traffic and earnings that they would welcome a large traffic and the large gross earnings which would result, even though for a while they did not have enough cars to meet all demands. They still have over 500,000 idle freight cars, of which about 330,000 are in good repair and ready to serve anybody who can furnish loading for them. If, however, traffic in general continues to increase as rapidly as it has recently, it will not be many months until shippers will be quite as much interested in the question of how they are going to get enough railway service as they have been recently in how they could get lower rates.

Giving Force to a Hackneyed Word

ONE HEARS NOWADAYS a lot of talk on "co-ordination." It is unfortunate for a word which means so much to come into such common use that it loses its force. Most of us have heard so much about the "co-ordination of rail and highway transportation," and the same of railways and merchant ships, that we become weary of the terms and bored at the outpourings of statesmen and others who often speak of them. And yet anyone who sees the competition between motor trucks and busses and the railways must realize that "co-ordination" is sadly lacking. One gets the same impression when he sees the fleets of lighters in New York harbor carrying freight from railroad piers to steamships simply because so many railway terminals and steamship terminals have been developed with no thought of each other and with no provision for direct transfer from car to ship, and vice versa. Fortunately some few steps are being taken to co-ordinate rail transportation with highway and water transportation. Such movements, however, are unconscionably slow.

There is one effective method of bringing about co-ordination of the different agencies of transportation which has never been given a thorough trial. That is the working of these several agencies by the same company.

The advocates of store door delivery have made out a good case for the co-operation of the motor truck people and the railways in local deliveries. If the railway should own and

operate these trucks or should be closely associated with the operators, there would be no logical reason why shipments offered to either the railroad or motor truck line and accepted by them for movement beyond the local zone could not be turned over to the other agency if it could handle the shipment with greater economy. This is the kind of co-ordination which would make savings for carriers and ultimately for the public generally.

Similarly, if our merchant ships and railroads were under the same management, we should find more railroad piers with ocean vessels alongside, instead of separate railroad and steamship piers with lighters plying between them. If a few large trunk line railroads should own and operate ocean vessels, co-operation would soon effect such economies that co-ordination would become general, a means of self-preservation for competing railway and steamship lines.

Unfortunately, present legislation does not permit such co-ordination. The ship subsidy bill now before Congress, however, authorizes railway ownership of ships not using the Panama Canal, the Great Lakes or in the coastwise trade. This provision of the bill is worth fighting for.

The professional railroad baiters will probably contest a provision of this kind just as they would any proposal to allow the railways to engage in highway transportation on any considerable scale. Such vehement opposition to measures of this kind is difficult to understand when one bears in mind that if there were any clear indication that the railways were using these other agencies to bring about unfair competition, it would be a very easy matter for Congress to regulate rates by motor or ship as they do such rates on the railroads.

The irretrievable loss brought about by lack of co-ordination is too important a problem to be perpetuated simply because of a vague fear that bringing it about might involve the solution of other problems. Without co-ordination we have a constant loss which is not recoverable. If we do co-ordinate motor, rail and ocean transportation we may have a problem of determining a just distribution of the savings effected. Most readers of the *Railway Age* will agree, we believe, that the constant loss due to present methods is more serious than the problem of distributing the savings once the losses are ended.

New Books

Proceedings of the Thirty-first Annual Convention of the American Railway Bridge & Building Association. Edited by the Secretary; 268 pages, illustrated, 6 in. x 9 in. Bound in cloth and paper, Published by the Association, C. A. Lichty, secretary, Chicago & North Western, Chicago.

This volume contains the proceedings of the thirty-first annual convention of the American Railway Bridge & Building Association, which was held in New York on October 18 to 20, 1921. In addition to a record of the business transactions of the association, including the opening address, etc., it contains the complete reports of eight technical committees, together with the discussion following their presentation. These reports cover tool equipment for pile driver outfits, the recruiting of bridge and building employees, the repair of leaks in water mains, the construction and maintenance of cinder pits, the lining of tunnels under traffic, and the construction and maintenance of passenger platform. There is also an address by C. M. Taylor, superintendent of timber preservation, Central Railroad of New Jersey, on treated timber. Owing to the fact that the larger part of the members of this association are concerned with maintenance and actual construction rather than design, the subjects are treated largely from the standpoint of the man in the field, rather than the office. The volume is well illustrated and the typography is good.

The Story of the Rome, Watertown & Ogdensburgh Railroad; by Edward Hungerford. 269 pages. 5 in. by 7½ in. Robert M. McBride & Co., 7 West Sixteenth Street, New York.

This is not a mere brochure devoted to the railroad named in the title; it is, rather, a quite detailed railroad history of the whole of northern New York State west of the Adirondack wilds and north of the New York Central main line. The author looks first at the human side of every event and incident, and one gets the impression that he is determined to make a vivid story, whether cold history can keep up with him or not; but he seems to have kept his feet on the ground.

The keynote of the book is perhaps best expressed by the frontispiece, a halftone reproduction of an old photograph of the passenger locomotive "Antwerp." The "Antwerp" was one of those handsome flyers—a wood burner with 6 ft. drivers—which gave to the American people of 1845-1865 a conception of the iron horse and its mission that combined utility and poetry in a way never seen elsewhere—or since.

The first chapter of this book sketches transportation history from 1829, and the next four outline the three principal railroad efforts—the Ogdensburgh & Lake Champlain, the Potsdam & Watertown, and the Watertown & Rome. The enlarged company, the R. W. & O., had its ups and downs—glorious ups and severe downs; these vicissitudes, and the absorption of the Utica & Black River, occupy the next five chapters. Charles Parsons, the chief owner of the R. W. & O. from 1883 until he sold out to the New York Central, brought to the road a new general manager, H. M. Britton; and Parsons and Britton were, we judge, the most notable figures after the early pioneers. The New York Central took control in March, 1891, and thenceforward the people of northern New York had to make a virtue of necessity and pretend that the swallowing of their pride was an agreeable process. However, the notable improvements that were made gradually tended to obscure the past, and the successive superintendents sent up there by the New York Central are characterized as brilliant managers.

While Mr. Hungerford writes like a novelist, the reader finds constant evidence of as careful attention to details and to essential business facts as would be expected from a civil engineer or an accountant. Evidently he was brought up in that part of the country from his infancy, and he knew the locomotives, the locomotive runners, the local freight conductors, the telegraphers and all hands; and whatever interesting facts about these people he has had to take second-hand are put together so skillfully that the whole seems to be the narrative of an eye-witness.

This is not saying that the book is chiefly a compendium of roundhouse gossip or a summary of local newspaper stories. The author evidently was acquainted with railroad promoters, presidents and attorneys, as well as with the rank and file and the gossips. The name of the first president of the Watertown & Rome was Orville Hungerford, which suggests that probably our author absorbed all sorts of railroad ideas with his mother's milk.

Being at heart a romancer the author had a difficult task; for the railroad—and also the towns whose fortunes were largely affected by the good or the ill which came to them through the railroads—went through some rather violent changes from prosperity to despair, and vice versa; so that fidelity to the truth made it necessary now and then to tell unpleasant facts and to skim lightly over others too unpleasant to be mentioned. It is even admitted that some of the New York Central superintendents were not paragons.

Not the least interesting feature of the work is to be found in the appendices, one of which is a copy of the flowery prospectus issued by the directors in 1847. The book lacks a map. Most of its readers will be people who know the country perfectly with their eyes shut; but a good map is often useful, even for a study of one's native town.

Letters to the Editor

[The RAILWAY AGE welcomes letters from its readers and especially those containing constructive suggestions for improvements in the railway field. Short letters—about 250 words—are particularly appreciated. The editors do not hold themselves responsible for facts or opinions expressed.]

"Locomotive Engineer" Comes Back

CHICAGO.

TO THE EDITOR:

I seem to have started something. In the issue of May 13 a "Dispatcher" took a crack at me and in that of May 20 we hear from another. I had no idea that dispatchers are so thin-skinned. However, I did not intend to start any argument as to the relative merits of dispatchers and engineers, but hoped that what I had to say would be accepted as constructive criticism, which I believe to be good for business generally, the same as an honest confession is good for the soul. I'll concede everything the Minneapolis dispatcher says of some engineers, for it would be folly to claim that of over 200,000 engineers there are no poor ones. But that only strengthens my plea for better dispatchers and yardmasters, for if an army has some poor privates, it certainly is not going to help the situation to put poor officers over them. I have a deep and profound respect for a good dispatcher, for I can realize what they are up against. And I have worked under enough of them to know a good one by his work, having served upon 16 different divisions of seven roads, from the Great Lakes to the Gulf and from Kansas to the Alleghenies. But please don't confuse me with the old type of "booze-hoisting boomer," for I never was one of that class, always giving the best I had and always leaving a clear record. I'm merely cursed with itching feet.

There are two sides to the issue of breakdowns. While admitting without argument that there are engineers who are lost in such cases, the large majority do know what is wrong and what to do. I've had plenty of them myself and have had an awful time with some, trying to explain to the dispatcher what the trouble was, but could not get it through his head simply because he was not mechanically educated enough to understand. But that is not to his discredit—he has enough to do without knowing the anatomy of a locomotive.

Your Minneapolis correspondent makes a broad assertion when he says that the engineer of today would rather be proficient in brotherhood schedules than in machinery. There are some like that (more shame to them) but they are in the minority. An engineer positively has to know something to run the engines of today and if additions and appliances keep being added, it will soon take a graduate mechanical engineer to run them; they have already reached a point where they are no longer locomotives; they are power plants on wheels.

But if we have some poor engineers now just sit tight and wait a few years and there will be far worse to be seen, except upon those roads which are using the mechanical stokers. The rising generation is getting a better education, and an educated young man absolutely will not take a job firing the present-day hogs with a scoop. I don't blame him—I wouldn't do it for a dollar a mile. Therefore, as firemen, we are already commencing to get men who would not have been considered as anything but common labor for such jobs as track repair work a few years ago. We have some right now who cannot speak clear English and have to ask the engineer to write their names on the time-slip as

their own chirography is illegible. Can you imagine the type of engineers they are going to make?

The correspondent says there is no doubt as to my preferring old methods. I distinctly stated in my letter that I do not. He mentions indefinite terminal delays. Preparatory time we shall always have, for it takes 30 minutes to get a big engine ready to go. As to 30 minutes for eating and 30 more for adjusting suspenders, etc.—if such conditions exist on his road, it is sadly in need of some new operating officers. In all my travels I have never seen a place where anybody could get away with that kind of delay, with one exception. A new superintendent changed that in just two weeks.

Now for the thing which seems to stir the dispatchers most. For reasons of my own, I'm not going to mention the particular road where so many trains were operated over single track, but I have covered enough ground to be able to cite an example to convince the "doubting Thomases" that it can be done. The winter of 1912-13, I worked over a piece of single track from Ft. Worth to Whitesboro, Tex., jointly operated by the T. & P. and the M. K. & T. If my memory is correct, the distance is 71 miles. I can recall coming out of Ft. Worth as high as the 10th or 12th section of a schedule and still carrying "green"; and meeting one to three trains at every siding from there to Whitesboro, to say nothing of letting a couple of passenger trains by. I never saw finer dispatching anywhere than right there, for when you had a meet with a train, the other fellow was either there or in sight when you arrived. Also, they didn't give you five minutes on a first-class train when she was 35 minutes late—they gave it all to you, provided, of course, that the connecting divisions gave them correct figures on when to expect them. Things certainly went well there, though some fellow would frequently upset calculations by stalling on Black Riley or Brickyard hills.

I'll not make any statement as to the number of trains operated, but will ask some officer of the T. & P. at Ft. Worth to let us know through this column, what the average and record high numbers of trains moved per 24-hour period were during the winter of 1912-13.

LOCOMOTIVE ENGINEER.

The Control of Segregation in Rail Steel by Use of Silicon or Titanium

NAGARA FALLS, N. Y.

TO THE EDITOR:

In view of the interest which is being aroused among railway engineers in the prevention of segregation in rail steel, a consideration of the possible means of attaining this object might be worth while at the present time. The main principle is to produce a steel which solidifies perfectly quietly in the molds, without any gas evolution. Then practically all the segregate which is formed in the selective freezing of the alloy is held in minute particles between the branches of the dendritic crystals throughout the ingot, instead of being swept up into one large body at the center of the top of the ingot by rising gases, or concentrated in somewhat smaller amounts in the blowhole cavities. The addition of a deoxidizer in sufficient amount to the liquid steel is a simple means of securing the desired quiet solidification in the molds, and the question resolves itself into a choice of which deoxidizer should be used, aluminum, manganese, silicon or titanium.

Aluminum is ruled out by most of the rail specifications, because of the probability that steel in which it is used will be seriously contaminated by its infusible oxide, alumina. Manganese is used in all steel on account of its effect on sulphur, but its deoxidizing power is not strong enough to insure thoroughly "killed" steel by its use alone, even when

it is present to such an extent that the steel becomes too hard and brittle for rails. This leaves silicon and titanium as the two practical deoxidizers on which reliance is ordinarily placed for the production of sound, quiet-setting steel.

Silicon is, of course, used to a certain extent in all rail steel, but generally in too small quantities to insure thorough deoxidation, because of the fear that larger quantities will cause too deep a pipe in the ingots. The opinion is prevalent that segregation may be readily controlled by this element, but unfortunately this is not always the case. Some interesting data on this point are given in rail report Bulletin No. 7, published in 1914 by the Titanium Alloy Mfg. Company. On page 4 there is a summary of the analyses of all the rails exhaustively tested for this series of bulletins, and the degree of segregation in each rail is shown by the difference between the low and high values for carbon. The silicon contents are also given for each rail, so that the degree of segregation corresponding to each silicon content may be conveniently studied by rearranging the data for the 17 untreated rails according to the table given below. The rails are here classified into five groups according to their silicon contents, determined by averaging the high and low values given in the bulletin, and the percentage of segregation as shown by the carbon determinations is given for each group.

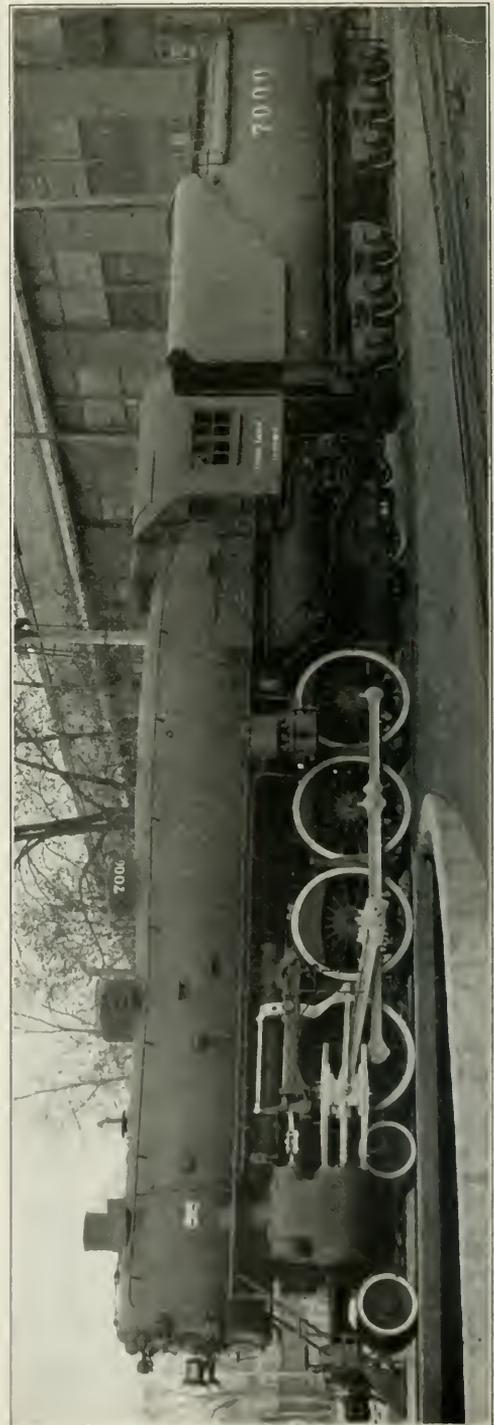

Sample No.	Silicon content	Carbon determinations		Per cent segregation
		Low	High	
13	.193	.55	.82	..
1	.175	.64	.89	..
9	.160	.58	.90	..
Average	.16 to .20	.59	.87	47.
5	.150	.70	.95	..
15	.141	.64	.88	..
6	.135	.67	1.03	..
8	.135	.63	.84	..
Average	.13 to .16	.66	.93	41.
7	.120	.54	.76	..
3	.117	.71	.93	..
4	.111	.65	.95	..
Average	.11 to .13	.63	.88	40.
11	.109	.64	.71	..
15	.108	.53	.81	..
10	.105	.63	.89	..
12.	.100	.64	.92	..
Average	.10 to .11	.61	.83	36.
14	.074	.64	.88	..
17	.054	.43	.64	..
16	.053	.38	.57	..
Average	.05 to .10	.48	.70	46.

This table shows that in this series of 17 representative heats from various mills and rollings the rails with the highest silicon content were the most segregated, and differed very little in segregation from those with the lowest silicon. The least segregated rails were those of the group with the next to the lowest silicon content. Thus it is evident that the degree of segregation in these rails had no definite relation to the silicon content of the steel, and the conclusion seems inevitable that it is not safe to rely on a minimum limit for silicon as an assurance that dangerous segregation will be avoided.

The effect of titanium-treatment on segregation has been investigated more thoroughly, and shows more interesting and consistent results. This subject is discussed in detail in the Titanium Alloy Mfg. Company's rail report bulletins 8 and 9, and the results have also been published in the technical press. Out of 401 titanium-treated A-rails from various mills and rollings only six showed segregation over 12 per cent, while among 111 untreated rails rolled at the same time 66 were segregated to that extent. Furthermore, the only two treated rails that were seriously segregated (over 15 per cent) showed less than the minimum titanium content (0.005 per cent) which is normal for a properly treated heat. Titanium-treatment, therefore, checked by a determination of residual titanium content, gave a truly effective safeguard against excessive segregation in this large series in which it was investigated. This deoxidizer does not contaminate the steel with its oxidation products, as aluminum and silicon do, and it is unquestionably efficient in controlling segregation.

G. F. COMSTOCK,

Metallurgist, The Titanium Alloy Manufacturing Co.

Union Pacific Mountain Type Locomotive for Heavy Passenger Service

A Mountain Type Locomotive for High Capacity

New Union Pacific Locomotive Is Lightest Per Unit of Power of Any 4-8-2 Yet Built

THE FIRST Mountain type locomotive to be employed on its line was recently delivered to the Union Pacific by the American Locomotive Company. This locomotive is the lightest in proportion to maximum horsepower capacity, of any locomotive of this type which has yet been built and the design is the result of an unusually painstaking study both by the railroad staff and by the builders.

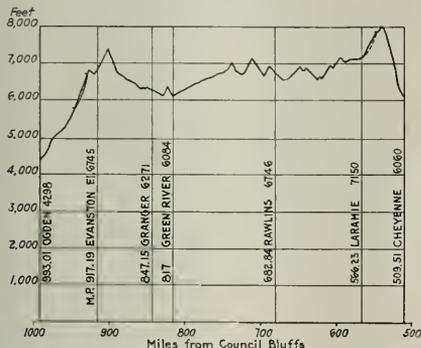

The locomotive has a total weight of 345,000 lb. of which 230,000 lb. is on the drivers. It has a maximum tractive effort of 54,800 lb., and, using Cole's ratios as a basis of comparison, has a maximum horsepower capacity of 3,030

Rawlins to Green River and from 30.9 to 36.4 miles an hour from Green River to Evanston. Eastbound the schedules call for average speeds of from 33.4 to 36.1 miles an hour between Evanston and Green River, 34.3 to 36.6 miles an hour from Green River to Rawlins and 35 to 37 miles an hour from Rawlins to Laramie. Few stops are called for on any of the overland trains except at division points.

To maintain these schedules with Mikado type locomotives it has been necessary to resort to high running speeds on the down grades to make up for the comparatively low speeds on the heavy up-hill pulls. This has had a marked effect in increasing track maintenance and to some extent the cost of locomotive maintenance. The Mountain type locomotive with its high sustained capacity is expected to bring the maximum and minimum operating speeds more nearly to the average which, in addition to its effect on maintenance costs will produce more economical locomotive operation and facilitate the operation of the road generally.

The design of a locomotive of this type was first considered in the fall of 1920. During the preliminary stages many valuable suggestions were received both from the Baldwin Locomotive Works and the Lima Locomotive Works, Inc., as well as from the American Locomotive Company. The final design, however, was worked out practically complete in detail by the railroad's own staff.

In general the boiler is similar in capacity and dimensions to the boiler of the Union Pacific 2-10-2 type locomotive. It is conical in form with an outside diameter of 84 in. at

Max. Up Grade	West Bound	0.6	0.82	0.82	0.82	0.82	.82	1.55
East Bound		1.14	0.82	0.82	0.82	0.82	.82	D

Profile of the Line Over Which the New Mountain Type Locomotive Will Operate

with a 98.5 per cent boiler and a grate area about 4 per cent greater than that called for by Cole's ratios, in proportion to the evaporative capacity. The locomotives will burn a semi-bituminous coal, low in ash but high in moisture, which has a heat value of about 12,000 B.T.U. per lb. In point of weight per unit of capacity the new locomotive compares very favorably with No. 50000, the American Locomotive Company experimental Pacific type. This engine established a record of 110.8 lb. total weight of locomotive in working order per cylinder horsepower, by Cole's method of calculation. The new Union Pacific locomotive weighs 113.9 lb. per cylinder horsepower and 115.8 lb. per boiler horsepower. The No. 50000, with a 92 per cent boiler, weighs 120.5 lb. per boiler horsepower.

The new Mountain type locomotive is intended primarily for use in passenger service between Cheyenne, Wyo., and Ogden, Utah, a distance of 484 miles over which, because of the long and frequent grades encountered, passenger trains are now handled by Mikado type locomotives. The character of the line is shown in the accompanying profile. With trains varying from 8 to 13 cars the time card calls for schedules averaging from 28 to 31 miles an hour between Cheyenne and Laramie and from 26 to 32½ miles per hour between Evanston and Ogden.

Although the net difference in elevation between Laramie and Evanston is not as great as on either of the above named districts, the grades are long and numerous. Westbound the schedules vary from 33.3 to 43.7 miles an hour between Laramie and Rawlins, from 35 to 42.4 miles an hour from

The Firebox Side Sheets and Crown Sheet and Combustion Chamber Are All in One Piece, the Throat Sheet Being Welded in as Shown by the Light Line

the front barrel course, increasing to 96 in. at the combustion chamber course. The firebox measures 126 in. by 96 in. at the grate and includes a combustion chamber the length of which is such as to provide for tubes 22 ft. long. One of the notable features in the design of the boiler is the location of the steam dome on the conical course at a point above the center of oscillation of the water in the boiler. This provides a uniform steam space under all conditions of grade, considerably removed from the zone of violent ebullition over the crown sheet. The firebox is fed by a Duplex stoker and the boiler is fitted with a 48-unit superheater.

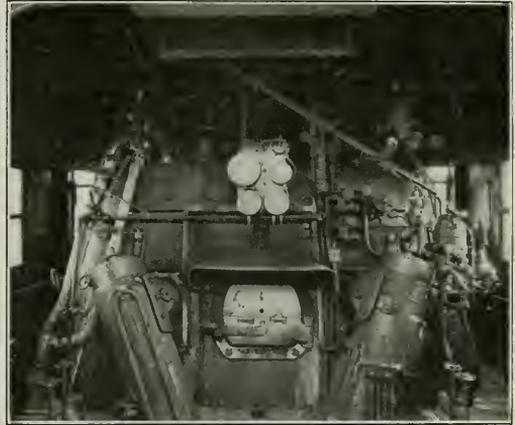

The boiler shell courses are of ¾-in., 13/16-in. and 7/8-in.

material, respectively, and the wrapper sheet is 9/16 in. thick. The firebox crown, sides and the combustion chamber are of 3/8-in. sheets, with a 1/2-in. throat connection sheet welded in between the side sheets and the combustion chamber. The form of this sheet is shown in one of the photographs. The firebox is fitted with F.B.C. welded staybolt sleeves and bolts of reduced body diameter.

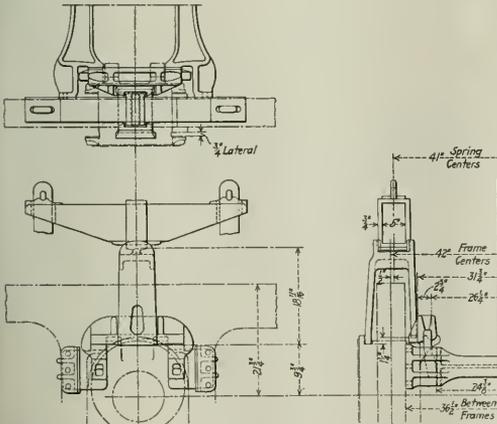

Steam distribution is controlled by the Young valve gear, and the Alco power reverse gear. The Young valve motion provides a maximum travel of 9 in. and drives a 14-in. piston valve. The locomotive is also equipped with a Fetters automatic drifting valve. This device insures the constant admission of a small supply of saturated steam to the cylinders as long as the locomotive is in motion with the throttle closed. The admission of saturated steam is controlled by a diaphragm operated valve, one side of the diaphragm being loaded at a pressure of 40 lb. per sq. in. by a small oil pump driven from the valve motion link trunnion, and the other acted on by the dry pipe pressure. Either the opening of the throttle or the stopping of the engine cuts off the saturated steam supply, thus making the device entirely automatic.

The frames are of straightforward, rugged design, in general following the practice of the builders as to the dimensions of the sections. Between the cylinder saddle and the front pedestal the frame takes the form of a deep slab section. This, however, has been lightened by coring out the middle portion of the slab for a part of the thickness on the outside, the reduction in the mass of metal at this point being of considerable advantage in the foundry. The binders of the main pedestal are fitted with three bolts, and

genius bell crank arrangement, the trunnions of which are carried on lugs projecting from the top of the box inside the frames. The horizontal arm of this bell crank extends laterally across the top of the box and forms the seat for the inside leg of the spring saddle. Normally, it rests on the top of the box. The vertical arm of the bell crank is carried down on either side of the axle, lugs on the lower ends fitting in recesses between the inside face of the frame and flanges on the cross braces bolted to the pedestal faces. The clearance in these recesses permits the movement of the box outward without operating the bell crank. Inward movement of the box, however, causes the engagement of the lugs

The Fittings Inside the Cab Are Unusually Well Arranged

New Design of Woodard Lateral Motion Driving Box

heavy toes have been provided on the front and main jaws.

A notable feature of the frame construction is the location of the furnace bearer-supports directly under the sides of the mudring, these supports forming a part of the cradle casting. The furnace bearers are fitted with compression grease cups.

Several features of the running gear are of particular interest. The forward pair of drivers are fitted with the Franklin lateral motion device, which has recently been redesigned to effect a material saving in weight. The forward driving boxes are not joined together, as was the case in the former design, each being provided with a limited lateral movement by spreading the shoe and wedge flanges of the boxes to provide clearance both inside and outside the frame jaw. When not operating under lateral thrust each box is retained in a normal central position by means of an in-

ward movement of the box against the flanges of the cross braces and results in raising the horizontal arm of the bell crank up from the top of the box. This tilts the spring saddle and creates a load which, acting through the bell crank, resists the lateral displacement of the box. This device is shown in one of the drawings.

The main driving journals are fitted with long driving boxes, the design of which provides for the use of a spring saddle, rather than seating the spring directly on the cross equalizer. Instead of delivering the load at a single point at the center of the box this design permits the load to be applied equally at the two ends of the long main box the same as in the cases of boxes of the usual type located symmetrically with respect to the center line of the frame. Driving boxes are fitted with Franklin automatic wedges.

The engine truck is of the Woodard constant resistance type and Woodard constant resistance rollers have been incorporated in the design of the trailer truck.

The side rods are fitted with spherical bushings on the front crank pins and a floating bushing has been applied at the main crank pin connections. Annealed carbon-vanadium steel has been used in the side and main rods, piston rods, driving and trailing truck axles and in the main crank pins. The piston heads are of Z-section cast steel, faced with phosphor bronze poured in place. The cylinder are of Hunt-Spiller gun iron.

The following table shows the weights of the reciprocating parts:

Piston rod (hollow).....	334 lb.
Piston head.....	305 lb.
Packing rings.....	100 lb.
Total weight of piston complete.....	939 lb.
Main rod, complete.....	864 lb.
Crosshead, with shoes.....	640 lb.

At a speed of 60 miles an hour this locomotive produces a dynamic augment of 27 per cent. At a speed of 73 miles an hour, which is equal to the diameter of the drivers, the dynamic augment is 39 per cent.

One of the notable features in the design of this locomotive is the care which has been exercised in locating the cab fittings and the piping, and in securing rigidity in the attachment of air drums, piping and other apparatus commonly secured to the running board. All the apparatus on the back boiler head and all piping on the locomotive was carefully located in the drawing room. One of the photographs shows the resulting neat and uncrowded appearance of the back head. It will be noted that the operating handles of the valves controlling the admission of steam from the turret to the auxiliaries have been carried out by means of flexible shafts to a location at a convenient height above the head of a person standing on the cab deck, where they are all supported in a horizontal rack, each one identified by a

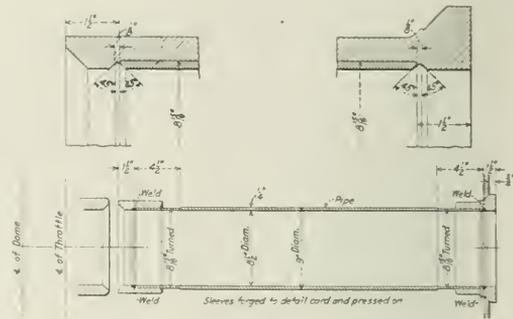

A Front View of the Locomotive

suitable label. All outside piping has been located under the running board, as little in evidence as possible, an arrangement which not only improves the appearance of the locomotive but offers an opportunity for the employment of effective clamps, subjected to the minimum of vibration. The main reservoirs are located well down under the barrel of the boiler, to which they are securely attached. The distributing valve, instead of being attached to the running board where it is subjected to considerable vibration, is carried on a heavy plate bracket which is secured directly to the cradle casting. The driver brake cylinders are bolted to pads which are cast integral with the main frames, each forming in effect an extension of the inside face of the frame just back of the cylinder casting.

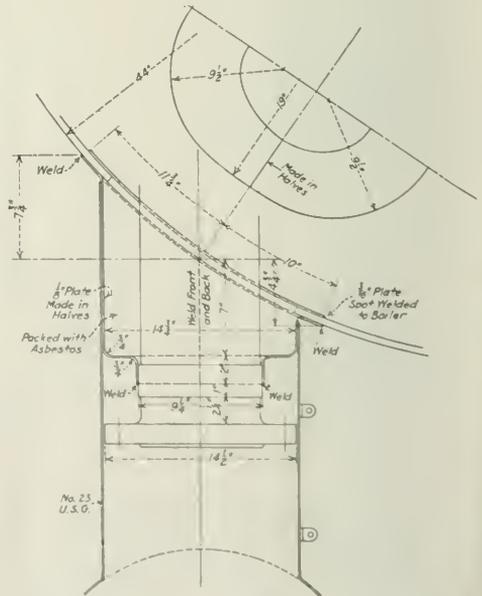

Each side of the cab in front of the window opening is hinged at the front and may be opened outward to facilitate staybolt work or other jobs requiring access to the narrow space at the sides of the boiler. When the locomotive is in service and the doors do not need to be opened they are permanently closed with bolts.

The tender is of the Vanderbilt type with a water capacity of 12,000 gal. and a coal capacity of 20 tons. The tank is carried on a Commonwealth cast steel underframe. The transverse members of the underframe, which form the tank saddles, are cored out to receive thin filler blocks of wood which are accurately surfaced to conform to the contour

Method of Welding the Dry Pipe

of the tank. The tank is secured to the underframe by cast steel brackets of angle section the vertical flanges of which are bolted to the cross members of the underframe. The tender is carried on Commonwealth six-wheel trucks with 6-in. by 11-in. journals and 33 in. wrought steel wheels.

Arrangement of Outside Steam Pipe Casing Gland

The engine and tender are connected by Unit safety draw bars and are fitted with Radial buffers.

Among the specialties with which the locomotive is equipped are Pyle-National headlight equipment, Nathan non-lifting injectors and lubricator, Paxton-Mitchell piston and valve rod packing, and Okadee blow-off valve, feed water strainers, cylinder cocks and smokebox hinges. The locomotive

is also equipped with a Madison-Kipp force feed lubricator.

The principal dimensions and data of the locomotive are as follows:

GENERAL DATA

Service	Passenger
Fuel	Semi-bituminous coal
Tractive effort	54,800 lb.
Weight in working order	345,000 lb.
Weight on drivers	230,000 lb.
Weight on leading truck	59,000 lb.
Weight on trailing truck	56,000 lb.
Weight of engine and tender in working order	582,800 lb.
Wheel base, driving	19 ft. 6 in.
Wheel base, total	41 ft. 3 in.
Wheel base, engine and tender	79 ft. 1 1/2 in.

RATIOS

Weight on drivers ÷ tractive effort	4.19

Journals, diameter and length	6 in. by 11 in.
Water capacity	10,000 gal.
Coal capacity	10 tons

*Equivalent heating surface = evaporative heating surface + 1 1/2 times superheating surface.

Freight Car Loading

WASHINGTON, D. C.

THE NUMBER OF CARS loaded with revenue freight showed another large increase during the week of May 27 to a total of 821,121 as compared with 795,335 in the corresponding week of last year and 898,169 in 1920. This was an increase of 28,000 in a week. With a normal coal movement the total would have been greater than that for 1920. All classes of commodities except coke showed an increase as compared with the week before and all except grain and grain products, coal and ore showed increases as compared with last year. Decreases as compared with last year, however, were shown in the Eastern, Allegheny, Central Western and Southwestern districts. The coal loading, 91,370 cars, was the largest since the beginning of the strike, an increase of over 9,000 as compared with the week before, but this was a decrease of 74,241 as compared with last year. The summary as compiled by the Car Service Division of the American Railway Association follows:

REVENUE FREIGHT LOADED

SUMMARY—ALL DISTRICTS, COMPARISON OF TOTALS THIS YEAR, LAST YEAR, TWO YEARS AGO. WEEK ENDED SATURDAY, MAY 27, 1922

Districts	Year	Grain and grain products	Live stock	Coal	Coke	Forest products	Ore	Mdse. L.C.L.	Miscellaneous	Total revenue freight loaded

Valuations Served on 231 Railroads

FIGURES COMPLETE to May 12, 1922, show that tentative valuations have been served on 231 railroads by the Interstate Commerce Commission. This statement is taken from a bulletin prepared by Frederick H. Lee for the Presidents' Conference Committee. This indicates that 47 tentative valuations have been issued since the last previous statement on this matter which was abstracted in the *Railway Age* of February 18, 1922, page 433. Some of the valuations are for railroad systems which include a number of properties so that the tentative valuations actually served include 326 properties with a total of 32,987 miles of road and 46,349 miles of track. In addition to the tentative valuations, 248 preliminary engineering reports, 260 land reports and 153 accounting reports have been sent to the carriers for examination and informal objection or protest.

Most of the carriers served with valuations have filed protest. The principal objection to the estimated cost of reproduction is due to the application of low unit prices, improper classification, inadequate quantities and insufficient estimates for interest during construction and general expenditures. The carriers also claim that the amount reported as the present value of lands is too low, that the excess cost of acquisition as reported by the commission but not included in the figure of final value should be added thereto. The status of valuation work is expressed in the first of the following tables showing mileage for Class I, II and III carriers on which the tentative valuations have been served.

The large table gives valuation data on the railroads which have been served tentative valuations subsequent to January 20, 1922, and supplements similar tables published in the *Railway Age* of August 1, 1921, page 288 and February 18, 1922, page 433.

Number of carriers and mileages on which tentative valuations have been served to May 12, 1922, together with the percentage relation the complete mileage bears to the total mileage of railroads in the United States.

	Number of tentative valuations	Number of carrier properties	*Miles owned (Used and not used)		Percentage relation completed		Mileage of railroads in the U. S. from 1916, 1918 and 1919 I. C. C. Statistical Vals.	
			Road	All tracks	Road	All tracks	Road	All tracks
Class I and Leased Lines	34	125	27,376	39,389	114%	10%	232,411	375,425
Class II	51	53	3,428	4,214	20	18%	16,967	22,832
Class III	69	90	1,874	397	26	21%	7,195	9,994
Terminal Companies	40	40	108	20	6	7 1/2%	17,05	5,138
Electric Companies	2	2	16	20	None	Not reported
Unclassified	15	16	185	214	3	...	6,088	Not reported
	231	326	*32,987	*46,349	13%	11%	264,366	413,889

*These figures are very close approximations. A small amount of undivided joint mileage is included in the mileage of some of the joint owners and not allocated. To this extent a slight duplication of mileage occurs in the totals.

TENTATIVE VALUATIONS

STATEMENT SHOWING ORIGINAL COST TO DATE; COST OF REPRODUCTION; ORIGINAL COST, PRESENT VALUE AND EXCESS COST OF LANDS, ETC.; "FINAL VALUE"; INVESTMENT IN ROAD AND EQUIPMENT AND CAPITALIZATION AS STATED IN THE VALUATIONS BY THE INTERSTATE COMMERCE COMMISSION.

Note 1.—Italics ours in these tabulations. Valuations are not being made by systems.
 Note 2.—Items in "Capitalization" column should not be totaled, as some duplications are present.
 Note 3.—Where a number of carriers are included in one valuation docket the details of the property "Used but not Owned" are not in all cases set up in the name of the owner, but the total amount is included in the totals for this classification.
 Note 4.—The figures in the column "Accounting Section's Restatement" represent the amount reported by the Commission after an examination of the carriers' books, and an attempted restatement of Account 701 in conformity with its present accounting rules and methods. This column should not be totaled.
 Note 5.—Unit prices used in estimating cost of reproduction new and cost of reproduction less depreciation are those termed normal prices as of June 30, 1914.
 These figures are very close approximations. A small amount of undivided joint mileage is included in the mileage of some of the joint owners and not allocated. To this extent a slight duplication of mileage occurs in the totals.

THE DELAWARE & HUDSON COMPANY is reported a loser to the amount of \$50,000 by a flood in the valley of the Lackawanna river, Pennsylvania, on June 3 and 4, the total losses of which are said to aggregate more than a million dollars. The loss of the Hudson Coal Company is given as \$600,000.

J. S. DENNIS, head of the natural resources department of the Canadian Pacific, has been engaged by the provincial government of British Columbia to make a survey of the natural resources of the territory adjacent to the Pacific Great Eastern Railway. This

line is now in operation from Squamish, B. C., at the head of Howe sound, northeast to Quesnel, in the heart of the Cariboo district, and has recently been graded between Quesnel and Prince George, on the Grand Trunk Pacific. The government is considering a proposal to build from Prince George into the Peace river country to a connection with the Edmonton, Dunvegan & British Columbia, which is now being extended from Spirit river, Alberta, to Pouce Coupe, B. C. Reports on the engineering, operating and traffic conditions of the P. G. E. have already been submitted.

Report on Collision Near Plains, Kan.

THE INTERSTATE COMMERCE COMMISSION has issued a report on a collision of passenger trains—No. 311 westbound and No. 312 eastbound—on the Chicago, Rock Island & Pacific near Plains, Kansas, on April 19, in which both engines were killed and four passengers and two employees were injured.

Improper handling of a train order at Kismet, seven miles west of Plains, is given by the inspector as the cause of the collision, which occurred about 2 a. m. in clear weather; yet both locomotives had electric headlights burning brightly and the line of road is perfectly straight for seven miles or more.

Each train consisted of a locomotive and three cars and was moving at something between 20 and 40 miles an hour. In each train the baggage car was telescoped by the tender for the full length of the tender; but the passenger cars were not damaged. The locomotives were damaged but remained upright. The firemen were thrown off, or jumped off, and were seriously injured. Each of them said that he knew nothing of the approach of the opposing train until he felt the application of the air brakes, at which time the opposing train was only a few rods distant; and neither could give any reason for the failure of the enginemen sooner to set the brakes.

The enginemen and firemen of both trains, before departing from Plains and from Kismet, respectively, observed the headlight of the opposing train and in each case commented upon the fact; and thought that the opposing train was waiting at the next station.

The inspector's account of the sending and delivery of the train orders is long and filled with many details. The order in question was No. 211, form 31. Orders on this form are made complete as soon as repeated, and the station operator is responsible for getting the conductor's signature. When the train-order signal is displayed, a train must not leave without a clearance card specifying the numbers of the orders which are delivered with it; and if the orders are on form 31, the operator must repeat this clearance card, including the numbers of the orders, to the dispatcher before delivering it; but with form 19 this repetition is not required.

The trouble occurred at Kismet. Eastbound stock train, extra No. 1913, was waiting at Kismet for train No. 311.

To help 1913, Train Dispatcher Forsyth had telephoned to Operator Noland, at Kismet, at his house, requesting him to report for duty at the station. When Noland reached the office, about 2 a. m., order No. 210, form 31, was issued providing that trains 1913 and 311 should meet at Plains. Forsyth next issued order No. 211, form 31, changing the meeting point of the passenger trains from Kismet to Plains, and permitting the freight to run ahead of No. 312 from Kismet to Plains. Then, a little later, he sent a message to the operator at Kismet to regard this last order as form 19; and this allowed Noland to deliver the order to No. 312 without having his clearance card approved by the dispatcher.

After order No. 211 was delivered, the conductor of the freight decided that he must go behind the passenger train. When the dispatcher learned this he issued order No. 212, form 31, addressed to the operator at Plains, and to the operator and the freight at Kismet, annulling orders 210 and 211; but in the meantime train 312 departed, expecting to meet train No. 311 at Plains, according to order 211.

Operator Noland said that in view of the fact that order No. 212 was addressed only to himself and to the freight he overlooked the fact that it also affected train No. 312. Not until he reported the departure of train No. 312 was the error discovered. The train dispatcher and Operator Noland gave conflicting statements as to the conversations which they

had held, and it appears that Forsyth intended to have order No. 211 delivered as form 19 only to the freight; for the passenger train he expected it to be delivered as a 31 order; and it did not occur to him that he had authorized it to be delivered to both trains as a 19. The operator at Plains received the annullment order just in time to deliver it to No. 311 at 2:26 a. m.

As to whether the message changing the form of order No. 211 confined this authority to the freight train, the dispatcher and the operator tell conflicting stories; but whether the operator did or did not make an error in copying the message, the changing of the status of the order by any other method than the transmission of a new order, was entirely unwarranted; therefore it is held that the dispatcher must bear the responsibility for the collision. The informal message was irregular, but the operator and the passenger conductor are not criticized for acting on such instructions from the dispatcher, their immediate superior officer.

Had Noland been alert he probably would have discovered the dangerous situation; but if his mind was not bright the condition is held to be explainable by the fact that he had been called out of bed that night once before, at 11 o'clock. His regular tour of duty is from 8:30 a. m. until 5:30 p. m., with one hour out for luncheon. When Noland reached his office at two o'clock he failed to light the lamp in the train order signal, or to display any light indicating that he had train orders to be delivered. This practice of awakening operators from their sleep is denounced as dangerous.

The report concludes with the statement that the dispatcher was a telegrapher of experience. He had been train dispatcher about 10 months.

I. C. C. Air Brake Hearing Adjourned Until July

DURING THE SECOND WEEK of the hearing, Spencer G. Neal, chief engineer, Automatic Straight Air Brake Company, was on the stand for two days. He was followed by J. E. Grant, special agent of the Bureau of Explosives. Other witnesses called by the Automatic Straight Air Brake Company were H. B. McFarland and George L. Fowler, consulting engineers, and A. J. Schuyler, general car inspector, Virginian Railway.

The first two witnesses presented by the Westinghouse Air Brake Company were W. S. Bartholemew, vice-president, and George W. Wildin, general manager. They were followed by T. W. Dow, Erie; J. F. Gannon, New York Central; P. J. Langan, Delaware, Lackawanna & Western; and George E. Terwilliger, New York, New Haven & Hartford. The Westinghouse Air Brake side of the case was closed with evidence by Prof. S. W. Dudley, Yale University (formerly chief engineer W. A. B. Co.), and C. C. Farmer, director of engineering, W. A. B. Co. The only witness for the New York Air Brake Company was B. J. Minnier, local manager.

Others who appeared were J. H. Phillips, who described a metallic hose connector, and W. H. Sauvage, who requested permission to describe his air brake system and also the automatic slack adjuster made by the Gould Coupler Company.

The hearing was adjourned on Monday night, May 29, to a date to be fixed some time in July. This recess will enable the railroads to go over the record and prepare their case.

THE CHICAGO GREAT WESTERN has moved its division headquarters in St. Paul from the Commerce building to its new building at Robert and Wood streets.

Shifting of Bridge Pier Stopped After 35 Years

Interesting Story of Efforts to Abate Movement Under Large Span, Caused by an Unstable Hillside

By M. F. Clements

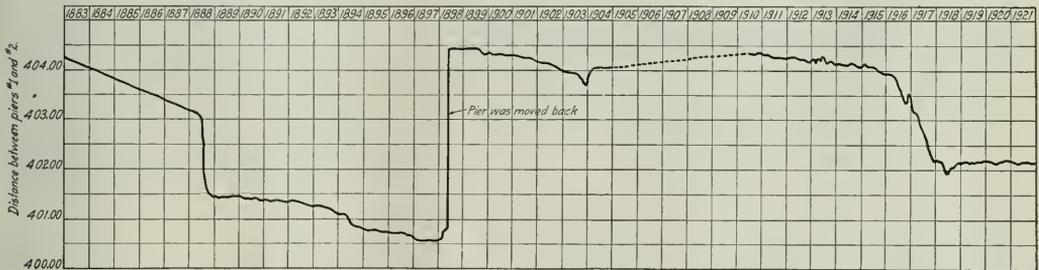

Bridge Engineer, Northern Pacific, St. Paul, Minn.

THE NORTHERN PACIFIC was built into Bismarck, Dakota territory, in 1873 and was constructed west from Mandan in 1880. In 1881 the location of a bridge over the Missouri river was fixed, and the substructure started and in 1882 the bridge was completed. The bridge, as first built, consisted of three 400-ft. through pin-connected whipple truss spans, two 113-ft. deck pin connected spans and 1,500 ft. of timber trestle. The trestle was filled later.

Long spans were selected on account of the absence of rock in the river bed as a foundation for the piers, the government requirement for a clearance of 50 ft. above water level and conditions which exist at the time the ice breaks up in the river. Cross sections of the Missouri river a number of miles north and south of this crossing show a bluff on one side of the river and a flat on the opposite side, with a bluff beyond. At the Bismarck bridge the bluff is on the east side, and a low flat on the west side extending into the valley of the Heart river at Mandan. The bed of the river consists

Portland cement concrete footing. Its base as first constructed was 50 ft. by 24 ft. and 18 ft. thick. The pressure on the base was 5,690 lb. per sq. ft. The excavation was carried down through a hard, dense blue clay for the full depth without the use of a pump, although the bottom of the base was 16 ft. below the water surface.

Practically from the date of completion of the bridge Pier I has moved intermittently toward the river. There was no settlement in the pier which could be measured and the whole movement was horizontal. A chart shows the total movement of the pier from 1883 to date. From 1883 to 1888 the measurements were not made accurately for individual months or years. From 1888 to 1905 the measurements were made at the ends of trusses with no adjustment for temperature. The record from 1905 to 1910 is incomplete, but in 1910 measurements were taken with a tested tape and the change in method of measuring accounts for the eastward movement recorded on the chart. The expansion

Graphical Record of the Movement of the Pier

of a fine sand and silt on top of a hard blue clay which lies from zero to 100 ft below the surface of the water.

Unusual ice conditions exist, caused by the different climatic conditions on the head waters of the Missouri and Yellowstone rivers. In the spring of the year the Yellowstone and the Missouri above the mouth of the Yellowstone, break up two or three weeks in advance of the Missouri river at Bismarck and the result is a succession of ice gorges and accompanying high water. The ice gorges, which sometimes measure 20 ft. in depth, cause a very heavy scour in the sand bed.

The piers supporting the 400-ft. spans were founded as follows:

- Pier I on blue clay 16 ft. below low water.
- Pier II on blue clay 48 ft. below low water.
- Pier III on blue clay 47 ft. below low water.
- Pier IV on pile foundation 6 ft. below low water

Immediately after the completion of the bridge, the Bismarck waterworks was established. A pumping plant was built near the river bank, adjacent to the bridge, and a pipe line was placed in a tunnel just east of the approach span and leading to reservoirs placed on the bluff east of the bridge. The reservoirs were completed in 1886.

Pier I was constructed of granite masonry resting on a

rollers for the original east span were on Pier II and wood blocks were inserted between the spans to prevent movement early in the life of the bridge.

The movement of Pier I was gradual from 1883 to 1888, when a very marked increase was noted. In August, 1888, it became necessary to remove the wooden blocks between the spans on Pier II and move the center and easterly spans westward. The east span was moved $17\frac{3}{4}$ in. at one time and a few weeks later was moved an additional 3 in.

Situation Became Serious in 1888

In September, 1888, a frame bent was built on the east side of the pier to carry the approach span, and in August, 1888 the supply pipe between the pump house and reservoir of the Bismarck waterworks pulled apart and the bluff was flooded with water. The movement of the pier became serious that year and an attempt was made to stop it.

It was assumed that the movement occurred on a plane surface at some point below the bottom of the pier and plans for stopping the movement have been based on that assumption. The original soundings located an 18-in. vein of lignite coal about four feet below the base of the pier and it was assumed that the surface of the coal was the plane of sliding.

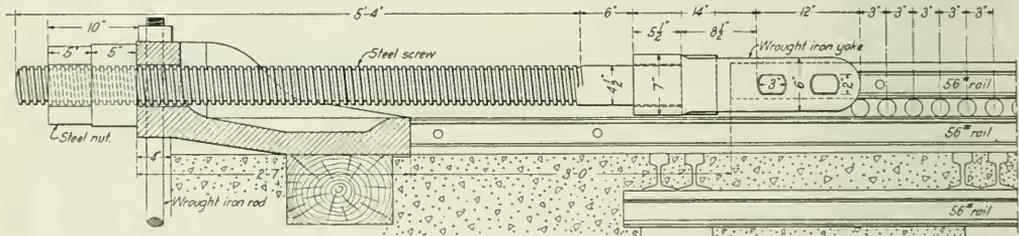

The plan suggested for stopping the movement of the

bluff was to construct large concrete dowels which would extend above and below the plane of sliding and tie the upper mass to the lower. In addition, it was thought best to divide the slide by excavating a cut into the bluff, dividing the north side of the bluff, where the movement was greatest, from the south side. The excavated material, a total of 24,000 cu. yds., was deposited on the river side of Pier 1 to counteract the movement of the bluff.

In making the excavation for the concrete dowels, it was reported that directly on top of the coal was a slippery, muddy clay from $\frac{1}{2}$ to 1 in. thick. It was assumed that this substance lubricated the top of the coal so that the overlying material could slide. The dowels were located east of Pier 1, 24 ft. and 30 ft. and 25 ft. and 40 ft. on either side of the center line. They are 25 ft. square and contain approximately 400 cu. yd. of concrete each. They were reinforced with railroad rails set vertically in the concrete. The bottom of the dowels were 12 ft. below the bottom of the pier.

At this time, an effort was made to drain the water that collected in the crevices in the bank. On the completion of the work it was found that the pier continued to move, but it was assumed that such movement would stop when the material back of the dowels became thoroughly compressed. The assumption proved to be erroneous and the pier continued to move.

From 1888 to 1895 the movement was gradual. In 1895

Screw Rig Used to Move Back the Pier

it became evident that the leakage of water from the Bismarck waterworks reservoirs on the bluff was causing trouble. A series of tests indicated a leakage of 60,000 gal. daily and test wells showed that the water was collecting in hidden cavities and drains were constructed to carry it to the river. In 1897 three pipes were sunk to determine the plane of sliding and the rate of movement and the pipes broke from the movement below the bottom of the pier. In that year the movement had reached a maximum of 44 in., the approach span was supported on cribbing built up from the ground, and the 400-ft. span was resting on the edge of the bridge seat.

Decide to Move the Pier Back

To make the pier serve again as a support for both steel spans and correct a further movement, it was decided to rebuild the pier or place a new footing under the old and move it back to its original position. It was assumed that a pier of greater depth which penetrated the material below the lignite coal would be permanent. Consideration was given to various means of replacing the pier. If the pier was rebuilt, it meant placing both spans adjacent to it on falsework. A plan for moving the pier was adopted and the work was finally completed along those lines.

The material on which the pier was founded consisted of a hard blue clay. Laboratory tests on one-inch cubes, when dry, indicated that it had a compressive strength of 58 lb. per sq. in. when dry. The material was ideal for tunnel op-

erations and the method adopted for excavation beneath the footing of the pier consisted of tunneling.

The tunnels were driven under the pier in the direction the movement was to take place. The openings were 5 ft. 6 in. wide and 13 ft. deep and were 5 ft. apart. The bottom of the pier was smoothed off by stone cutters. Four 56-lb. rails were bolted together and placed in an inverted position under the pier in each section. The excavation in each section was filled with concrete and four 56-lb. rails, bolted together, were placed on the concrete so that the rails top and bottom were separated by 2-in. by 18-in. steel rollers with a clear space of one inch between them. The upper rails were filled with concrete before placing them and they were jacked into position and grouted to the masonry. Considerable difficulty was experienced in getting the rails to bear on all rollers and a maximum variation of $\frac{1}{32}$ in. was obtained. Five tunnels were driven in all, each having two sets of rollers, there being a total of 1,020 rollers. When the tunnels were completed, the space between them was excavated and filled with concrete up to a point 2 ft. 6 in. from the bottom of the pier, its weight being transferred to the rollers. One-inch wood blocks were placed between the rollers until the pier was ready for movement.

The movement was effected with the aid of ten screws, $\frac{1}{2}$ in. in diameter and with a $\frac{7}{8}$ in. pitch. One end of these screws was bolted to the upper rails and the other to steel nuts $\frac{9}{16}$ in. in diameter, on which were fitted cast iron

wheels 27 in. in diameter, equipped with sockets for inserting levers.

The first concrete was placed in January 1, 1898, and it was completed on May 29. At the time of moving the pier, the wooden blocks between the rollers were removed and force was applied to the hand wrenches. It required two minutes to move the pier $\frac{1}{4}$ in., six minutes to move it 1 in. and nine minutes to move it 2 in. A cave then occurred in the bank on the west side of the pier and the pressure from the earth completed the movement of the pier. In 12 min. it had moved 5 in. and it continued unaided, stopping at approximately the original location. After the movement it was found that 163 rollers, or 16 per cent of the total were loose. These were removed and all spaces under the pier filled with concrete. The west end of the approach span was placed on rollers so that the pier moved under it.

The original height of the pier was 82 $\frac{1}{2}$ ft. The new height is 95 $\frac{1}{2}$ ft. The total load on the rollers was estimated at 8,172,000 lb., or 532 lb. per in. of rollers. The concrete in new footing totaled 840 cu. yd.

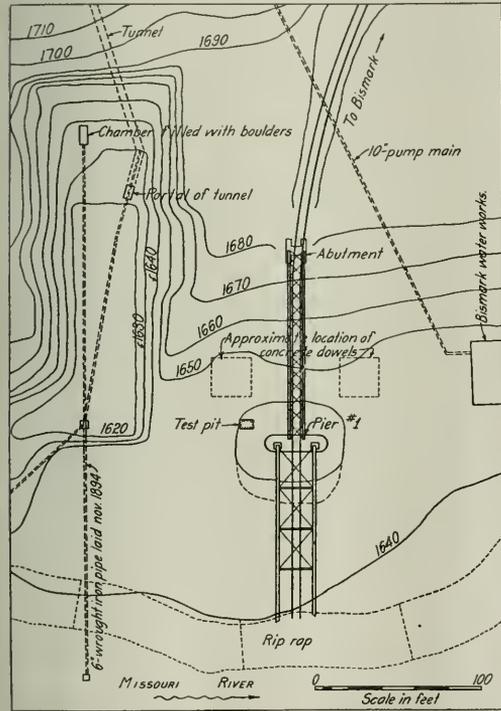

The Movement Continued

Although the new pier was of greater depth and penetrated the coal seam, the movement continued. In 1899 it was $\frac{3}{16}$ in. and in 1903 it had increased to 9 $\frac{11}{16}$ in. The excavation around the pier remained open for a time, but it gradually filled up so that the pressure of the moving bluff acted against it. To relieve the pressure, an excavation

was again made in 1904, when the pier readjusted itself and moved back $5\frac{1}{8}$ in., leaving a total displacement at the top of $4\frac{9}{16}$ in. A test pit sunk at the south end of the pier to the junction of the new and the old footings exposed a crack between them and it was assumed that the footing course had not been moved.

In June, 1903, a test disclosed a leakage of 100 cu. ft. per hour in the water company's reservoirs. The supply pipe to the reservoirs passes under the track east of the bridge in a tunnel. A movement of the bluff caused the pipe to pull apart in September, 1903, and the leakage found its way into cracks in the hillside and a movement of $2\frac{1}{2}$ in. in six weeks was noted.

In the winter of 1903-1904 a drainage system was in-

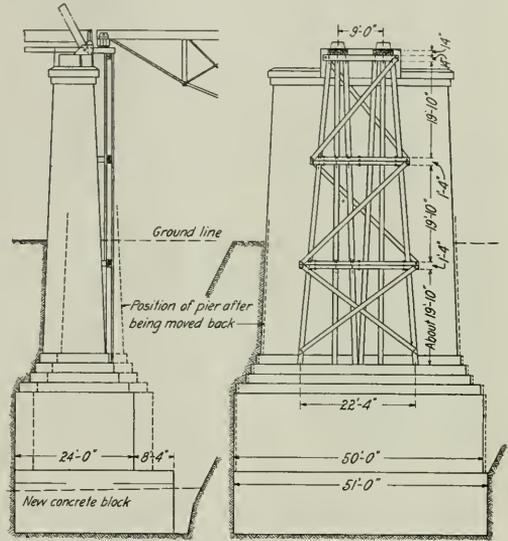

Contour Map of the Pier Site

stalled which consisted of two lines of perforated pipe extending from the surface and ending in tunnels built into the bluff. The pipes were to collect the water leaking from the reservoirs and carry it away through a drainage system into the river. The total length of main tunnel was 1,180 ft. and extended from the foot of the bluff on the north side of the track to a point near the reservoir, where it branched off on either side. The tunnel was lined with timber and when first built, the bents were four feet apart, with plank lagging behind. There were originally 180 bents in the main tunnel, 132 in the north branch and 114 in the south branch. In making repairs, intermediate bents were placed and in certain parts they are now together, so that lagging is not required.

Between 1904 and 1911 there was practically no movement in the pier. In the meantime the superstructure had become too light for heavy power and new steel designed for E-52 loading was placed in 1905. All of the old masonry

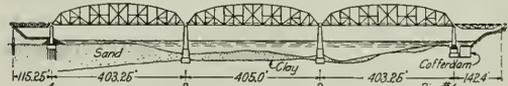

except the east abutment was used to support the new steel but the sliding of the bank made it necessary to lengthen the east span and it is now supported on piling capped with a timber grillage. The slope beyond the steel span is taken care of by a 15-ft. timber span.

For a number of years after 1904 the open pit back of Pier I was maintained, but it finally became filled with wash material from the slope and pressure was again brought against the pier. Previous to 1904 all measurements of move-

Pier 1 Before and After Moving Back

ment were taken from the steel work. After the new steel was placed no movement was detected in the roller bearings and a record of movement was not maintained, but in 1912 it was decided to institute monthly measurements made along standard lines with adjustments for temperature. From 1912 to 1917 Pier I moved 12 in. In 1917 it moved 12 in.

General Elevation of the Bridge Showing Conditions Since 1917

more. During the winter months the pier was stationary, so that in 1917 the movement exceeded one inch per month.

Movement Again Serious

It became evident that something would have to be done to stop the movement, or a support provided for the spans meeting on the pier. The expansion bearings of both spans rest on Pier I and the movement was taken care of by adjusting the rollers. Plans were prepared for building a new pier east of the present one and joining the two at the top with a concrete girder, which would provide a flat surface 30 ft. long that could move under the supports of the span.

The excavation for such a pier was made, requiring a pit 50 ft. by 40 ft. for the full depth of the foundation. By constructing a cofferdam in such a way that pressure does not bear against the existing pier, it has remained stationary

and the pit will be left open during the life of the timber in the cofferdam. This method of maintaining the pier has proved very satisfactory. There has been no movement from December, 1917, to date. The question of building a new sliding pier is still open and future developments will determine whether it is best to build such a pier or renew the cofferdam.

The early methods used to maintain the pier were based on the assumption that the bluff is moving on a plane surface and that the movement has been aggravated by the leakage of water from the city reservoirs. There is no doubt that the bluff is moving and that the water, either from springs or the reservoirs, has had something to do with the rate of movement, but the theory that the movement is on a plane surface is probably erroneous. The movement of the bluff is greatest at the surface and decreases to zero somewhere near the bottom of the pier. This is clearly shown by the fact that a 16-ft. timber span at the east end of the 140-ft. span moved about 14 ft. from 1904 until 1917 and the bottom of the pier moved 26 in. during the same period of time.

The movement has been zero in the winter months, with the greatest monthly movement immediately after the spring break-up of ice. It is probably caused by the deep scouring of the sand which, for short periods, is scoured to the surface of the clay and deposited again as the high water recedes. During the time the pressure of the sand is removed, the bluff seeks a new position of equilibrium by moving towards the river. The movement is in the nature of a flow with the greatest movement at the surface. Efforts to stop the movement of the bluff have proved to be of no avail and the problem of maintaining the pier can only be met by removing the pressure against it.

Railroad Legislation in Congress

WASHINGTON, D. C.

THREE RAILWAY BILLS were passed by the House of Representatives last week but practically no progress is being made toward action on the various bills to amend the Transportation Act, which have been rather numerous and which have been the subject of extensive hearings before House and Senate committees; and it now appears certain that no action will result at this session. The bills passed by the House were the valuation bill, already passed by the Senate, to strike out of the valuation act the requirement that the Interstate Commerce Commission report the cost of condemnation or of purchase of railroad lands; a bill to punish commercial bribery, which includes penalties against bribing switchmen, etc., to furnish cars, and an amendment to the law which deals with freight pilfering so as to provide that the interstate character of a shipment may be established by waybill evidence. The latter two bills have not yet been passed by the Senate.

The Senate committee on interstate commerce held another meeting on June 3 to discuss the Capper and Nicholson bills designed to reach the rate provisions of the transportation act and restore the powers of state commissions; but it took no action and it is understood that members of the committee have decided informally to make no report on these bills. Senator La Follette has given notice that he proposes to move that the committee be discharged from the consideration of these bills so that they may be brought up on the floor of the Senate. The House committee has held leisurely hearings on the Hoch and Sweet bills, of a similar character, and on Tuesday heard Bruce Scott, of the Chicago, Burlington & Quincy, as one of the railroad witnesses in opposition to the bills, but a majority of the members of the committee show no desire to hurry the proceedings. The committee has decided to report out a bill providing for reduced rate mileage

books but it is also understood that it is not intended to hasten its passage.

The House on June 2 passed by a vote of 49 to 18 the bill previously passed by the Senate, S. 539, to strike out of the railroad valuation act the requirement that the Interstate Commerce Commission ascertain and report "separately the original and present cost of condemnation and damages or of purchase in excess of such original value," of lands. This was substituted for the House bill, H. R. 6043. The legislation was requested by the Interstate Commerce Commission and the state commissions. Representative Merritt of Connecticut vigorously opposed the bill on the ground that it is an attempt to settle a judicial question by legislation and he pointed out that under the present law the commission is required only to take the information into consideration.

Until directed to do so by the Supreme Court in the Kansas City Southern case the commission had not included in its valuation reports any figure representing the excess cost of acquisition of land, stating that it was impossible to give anything more than an unreliable estimate of what it would now cost the railroads to acquire their lands. Since the decision it has been reporting such a figure, based on a system of multiples applied to zones of land of various kinds. There has been no evidence, however, that it has given much weight to the figure so ascertained in its consideration of the elements on which it bases its findings of final value, and shortly after the court decision it asked Congress to relieve it from reporting the excess cost. It has been argued, therefore, by those who favored the bill just passed, that it was useless to require the commission to make such a finding; but the railroads, at the hearings on the bill, insisted strongly that such a figure should be stated by the commission for the benefit of what weight might be attached to it in judicial proceedings affecting a valuation, and that without such a finding a court might delay the valuation work by ordering a report to be made over again.

The bill, H. R. 10,768, passed by the House on June 1, to punish the larceny of freight in interstate commerce, amends the act of February 13, 1913, to provide that "to establish the interstate or foreign commerce character of any shipment in any prosecution under this act the waybill of such shipment shall be prima facie evidence of the place from which and to which such shipment was made." The purpose of the bill is to make it unnecessary to call witnesses from long distances to prove the interstate character of the shipment.

The House on June 1 passed without discussion the bill, H. R. 10,159, to further protect interstate and foreign commerce against bribery and other corrupt practices, without a debate.

The mileage book bill reported was that passed by the Senate, which leaves the rate per mile to be determined by the Interstate Commerce Commission, with an amendment authorizing the commission to require railroads to issue scrip coupons, leaving to the determination of the commission the amount of mileage to be contained in mileage books and authorizing the commission to exempt any carrier from the provisions of the act if conditions warrant such action. Also, the word "interstate" was taken out of the bill.

Representative Newton of Minnesota has introduced a bill, H. R. 11,822, to amend section 15-a of the transportation act so as to leave out any provision for a definite percentage of return but stating that the carriers are entitled to the opportunity of earning a fair return providing the commission shall have reasonable latitude to modify any particular rates which it may find to be unjust or unreasonable.

TEN THOUSAND HORSES, or more, are sought in western Canada for shipment to Russia. Albert Champagne, ex-member of the Dominion Parliament, is expected to tour the provinces shortly, for this purpose, acting for a British syndicate.

Shopmen's Wages Cut Five to Nine Cents an Hour

Labor Board Authorizes Lower Rates of Pay for Mechanical Forces Effective July 1

THE RAILROAD LABOR BOARD, on June 6, authorized wage reductions of seven cents an hour for machinists, boiler makers, blacksmiths, metal workers, electrical workers, carmen (except freight carmen), molders, cupola tenders, and coremakers (including those with less than four years' experience), regular and helper apprentices and helpers of all classes; nine cents an hour for freight carmen, and five cents an hour for car cleaners. The decreased rates of pay go into effect on July 1, simultaneously with the decreases previously ordered in the rates of pay of maintenance of way employees. The Labor Board also found that the duties and responsibilities of shop supervisory forces are such as not to justify a decrease in the wages of this class of employees at the present time.

In analyzing the wage reductions so ordered, the board said in part:

The Labor Board is of the opinion that after the reductions made under this decision, shop employees on the railroads will still be receiving, as a rule, a wage in excess of that paid to similar employees in other industries.

The decreases have the effect of maintaining the uniform rates for the respective classes which were continued by Decisions Nos. 2 and 147. It will be noted that the differential between "freight carmen" and the other classes has been increased two cents per hour by providing a decrease of nine cents per hour for this class as compared with seven cents per hour for the other crafts named. The Board recognizes that there are certain branches of carmen's work that require the service of skilled mechanics, and for the classes so considered this decision provides a decrease of seven cents per hour. It is, however, believed that the work of "freight carmen" is not of a character which requires the service of men as skilled as in the other branches of work coming within the scope of carmen's work; therefore, the differential between the minimum rates of "freight carmen" and of the other shop crafts under this decision will be increased to seven cents per hour, which it is felt is just and reasonable considering the character of service performed and the rates of pay and working conditions applicable to this class of employees prior to the issuance of any wage order by the United States Railroad Administration.

It will be further noted that no decrease is provided herein for "supervisory forces." The Board, after due consideration, feels that the duties and responsibilities of these positions are of such a character as to warrant the maintenance of the present rates.

The "Real" Wages of Machinists and Carmen

Based upon the evidence before the Board, the statistical department of the Board has made a study of the comparative purchasing power of the wage herein fixed for certain of the shop crafts and the purchasing power of the wage paid such employees on the railroads in December, 1917, immediately prior to government control of the carriers; in January, 1920, just prior to the termination of federal control; on May 1, 1920, the effective date of Decision No. 2; on July 1, 1921, the effective date of Decision No. 147; and in March, 1922.

The results of these studies are as follows:

AVERAGE HOURLY RATES

	Machinists	Carmen
December, 1917	50.5c	37.7c
January, 1920	72.3c	68.0c
May, 1920	85.3c	81.0c
July, 1921	77.3c	73.0c
Under present decision	70.3c	64.4c

PERCENTAGE OF INCREASE IN AVERAGE HOURLY RATES OVER DECEMBER, 1917

January, 1920	43.2%	80.4%
May, 1920	68.9%	114.6%
July, 1921	53.6%	93.6%
Under present decision	39.2%	70.8%

INCREASE IN COST OF LIVING OVER DECEMBER, 1917

January, 1920	40.0%
May, 1920	59.0%
July, 1921	26.7%
March, 1922 (latest available Government data)	17.2%

PERCENT OF INCREASE IN PURCHASING POWER OF EARNINGS OF SUBSEQUENT DATES AS COMPARED WITH DECEMBER, 1917

January, 1920	2.3%	28.9%
May, 1920	11.1%	41.2%
July, 1921	20.8%	52.8%
Under present decision	18.8%	45.7%

Although average hourly earnings of machinists are below the earnings after Decision No. 2 was applied by 15 cents per hour, their value is 6.9 per cent greater due to the decrease in the cost of living.

The average hourly earnings of carmen are below the earnings after Decision No. 2 was applied by 16.6 cents per hour, but their value is 3.2 per cent greater for the same reason.

The cost of living figures set out in the foregoing tables have been compiled from the reports of the United States Department of Labor and are for the latest date for which such data are available.

Application of the New Wage Scales

The decision of the board, as outlined above, is effective on those roads and with respect to those particular classes of employees that were specifically named in the submissions made to the board by the various railroads and the various organizations. The decision includes a long list of railroads, indicating in each case the classes of employees affected.

The decreases specified in the decision are to be deducted on the following basis:

- (a) For employees paid by the hour, deduct the hourly decreases from the hourly rates.
- (b) For employees paid by the day, deduct eight times the hourly decrease from the daily rates.
- (c) For employees paid by the month, deduct 204 times the hourly decrease from the monthly rate.

Labor Group Append Lengthy Dissenting Opinion

A lengthy dissenting opinion signed by the three labor members on the board, A. O. Wharton, Albert Phillips, and W. L. McMenimen, was attached to the board's decision, this group summarizing the reason for their dissent as follows:

(1) The wage structure for the transportation industry which is being built up in this series of decisions rests upon no consideration of the human needs of the employees affected. These human needs were set forth by data and witnesses at the recent hearings with compelling force. The majority have not considered the evidence on this point, nor have they met the issue raised. Their failure to give this, the most vital element, consideration and to inform the public impartially on the subject, vitiates the whole decision.

(2) The evidence submitted in the present hearings tended to show that an income based on the 77-cent per hour rate does not enable representative shop-craft families, with the most economical management, to procure enough food for their families, or to maintain their own efficiency. This evidence included a tentative standard of living expressed in terms of goods and services to which mechanics naturally feel themselves entitled. At the current prices an increase in pay would be necessary to enable these employees to secure such a standard. Without any attempt to show that the employees affected by this decision are not entitled to such a standard, and further without any attempt to show how families can make good the food deficits, the majority decision further reduces the ability of these employees to meet the needs of their families. The undersigned dissenting members feel that the Labor Board must initiate a study which shall determine the amount necessary to meet some recognized standard, that it must use the results as a basis for its decisions, and that it must through this decision transmit this information to the public.

(3) The rates of pay contained in the award, being insufficient to provide for a family of five, tend to substantiate the position taken by the management to the effect that wages need not be established with reference to the needs of a family of this

size. The most careful and comprehensive investigation on this subject shows that wages which do not provide for a family of that size mean that 72 per cent of all children in families receiving this wage will be inadequately provided for during at least five critical years of their lives. Permanent traces of this malnutrition will be left on the physique of the next generation.

(4) The failure of the majority to consider the real merits of the case has created a wage structure which has no relation to any existing standards. Based on evidence in possession of the Labor Board, the minimum for the industry should have been nothing less than fifty cents per hour. Without, for the moment, questioning the justice of the differentials resulting from the majority decision, this would place the mechanics' rate at least as high as 87 cents per hour.

(5) The ordering of a larger decrease in the case of freight carmen is unjust and wholly inconsistent with former decisions of the Labor Board. In ordering such a change, the majority disregard the fact that any difference in skill which may exist has been already provided for in the 5 cent differential which dates from the days of the United States Railroad Administration. They also disregard the fact that under the classification rules of the Board freight carmen are mechanics and as such are entitled to the minimum rate for mechanics.

(6) The rates of pay established in this decision will mean to the employees affected lower purchasing power and lower standards as compared with pre-war years. From December, 1917, to the present decision, inclusive, the maintenance of equipment forces have suffered a constant deficit, their wages at all times failing to keep pace with living costs. The figures cited by the majority to the contrary effect are a misrepresentation of the true facts as to the relative earnings involved.

(7) The savings to the railroads, as a result of the decisions of the Labor Board and of the lay-off of men, far exceed anything justified by the savings to the public in reduced rates. The employees covered by this decision alone have had their payroll cut to the extent of \$371,817,996 per year, as hereinafter set out, based on number of employees in service as of December, 1917, while the total payroll cuts due to decisions alone total half a billion dollars. During the last six months of 1921, the total payroll slash, including the lay-offs, was running at the annual rate of \$1,300,000,000. This diminished purchasing power of the employees as a group appears in strong contrast with the increasing prosperity of the railroads noted by the Interstate Commerce Commission in its recent opinion and by the financial press.

(8) The increasing antithesis between profits and just wages will result in lower morale among the railroad employees; thus the present wage reductions will not result in economies and will prove contrary to the real needs of efficient and economical management.

(9) The majority have failed to carry out the function for which the Labor Board was created. Such decisions, containing no explanation of the process by which the majority arrive at the rates established, give the public an impression that these rates are not founded upon a careful consideration of the facts. A strong contrast is presented with the decisions of other wage boards, not only in this country but in other parts of the world, as well as with the decisions of the Interstate Commerce Commission, which show the public at considerable length how the evidence was weighed and the conclusions reached.

In the light of the Transportation Act it is the clear duty of the Board: First, to act as a constructive, impartial body in providing means whereby railroad employees can have their legitimate human needs satisfied without recourse to stoppages; and, second, to enlighten the public so that through the disordered state of unregulated industry and the confusion of propaganda, they shall be able to see the real facts as they affect the holy politic. The decision in question fulfills neither of these duties.

Board Estimates "Savings" at \$59,669,547.32 a Year

There followed an extensive analysis of the reasons for the dissenting opinion, including a discussion of workers' budgets, the basis for the present wage structure, an alleged lack of justification for the majority decision, the purchasing power of the employees involved, the present financial situation of the carriers and their ability to pay higher wages, the effect of the decision on the morale of the employees and the proper functions of the Railroad Labor Board as conceived by the minority. The length of these discussions and the involved manner in which they are presented, prohibit their presentation either in whole or in part, at this time. However, the basis for the dissenting opinion is completely outlined in the portion quoted above.

A memorandum prepared by the statistical department of

the Labor Board estimates the savings that will accrue to the carriers per year by these decreases, based on the hours worked during December, 1921, and January and February, 1922, will be \$59,669,547.32. The same statement shows that after the new rates are placed in effect, the rates of pay of supervisory forces will be five cents above their rates on February 29, 1920, the rates of pay of skilled workers (except freight carmen) and regular and helper apprentices and helpers of all classes, will be two cents per hour below their rates on February 29, 1920, the rates of pay of freight carmen will be four cents an hour below their rates on that date and the rates of car cleaners will be ten and one-quarter cents an hour below their rates on that date.

Labor Leaders Meet at Cincinnati to

Formulate Future Policies

With wage reduction orders involving practically all railway employees in the maintenance of way and mechanical departments and effecting as they do a majority of railway employees, scheduled to go into effect on July 1, interest is now centered in Detroit where the Brotherhood of Maintenance of Way Employees and Railway Shop Laborers has its headquarters and in Cincinnati, where all of the railway leaders except those of the train service organizations gathered on June 6 to formulate their future policy toward the recent decisions of the Labor Board.

The latest reports from Detroit indicate that the maintenance of way brotherhood leaders are carrying out their announced intention of submitting a strike ballot to the membership as the result of the Labor Board's wage cut order last week. The returns on this strike referendum will be complete by July 1, E. F. Grable, president of the brotherhood, said. The attitude of these employees toward wage reductions was indicated at a meeting of general chairmen representing these employees on the western railroads who met recently at Chicago and voted unanimously to reject the Board's decision. Approximately 75 union officers representing 18 railroad systems centering in Chicago, attended this meeting and messages were received from representatives of the men on many other roads supporting the stand taken by Mr. Grable in calling for a strike ballot.

In calling the meeting of labor leaders at Cincinnati on June 6, B. M. Jewell, president of the Railway Employees Department of the American Federation of Labor, said:

"The question of acceptance or rejection of the decisions now being issued by the Labor Board rests entirely in the membership of the different organizations. A decision reducing wages, which are today insufficient to provide the barest essentials of family life, is of vital importance to the employees affected and there can be no question about the duty of the union executives to submit the matter to them in such a way that they may determine upon the action which will best protect their interests.

"The meeting in Cincinnati is for the purpose of enabling the executive officers to advise with each other as to how, in conformity with the laws of their respective organizations, the matter shall be submitted to the membership for their action upon it."

The net result of the Cincinnati meeting was a decision to send out a strike ballot to the shop employees affected by the Board's last decision and to take similar action in regard to the other classes of employees whose wage scales are now under consideration by the Board if that body orders reductions in their rates of pay.

The submission of a strike ballot to the shopmen was authorized on June 7 by the executive council of the Federated Shop Crafts in session at Cincinnati. In announcing the ordering of a strike vote B. M. Jewell, head of the Federated Shop Crafts, said in part:

"A strike vote is now being sent out returnable June 30. "By no stretch of the facts can this decision be justified.

It is obvious that the decision was not reached through any consideration of the merits as contained in the evidence submitted. I am astonished that a body of the Board's prestige and dignity should be willing to send out such a hastily dressed up and obviously unfair apology for the rates of pay awarded. The Board was offered evidence as to the amount necessary to obtain the necessities of life for families in railroad communities. The rates which result from the decision are so far below those necessary that this evidence must have been ignored.

"At this early date I can forecast but two of the effects of this decision:

"The first will be an immediate confirmation of the belief among our membership and among railroad employees in general that the Labor Board is not an impartial court created to dispense justice but is a body created to help the railroads carry out their labor policy.

"Railroad employees cannot view these decisions separately. The highest paid man must be ready to fight for the lowest paid man."

Indications at the Labor Board are that the decision affecting the wages of telegraphers, the next class of employees to be dealt with in a wage order, would not be available for some time and undoubtedly would not be issued in time to become effective on July 1. The principal question to be decided in the telegraphers' case is not how much money shall be paid but how inequalities of pay on the different roads shall be settled, and it is believed that this problem will take considerable of the Board's time for several weeks.

The Board's reply to Mr. Jewell's request for action on disputes between the shop crafts and various carriers and involving alleged unauthorized wage cuts, piece work and the farming out of shop work was given on June 6, the Board setting aside June 8 and 26 for the hearing of evidence in these cases.

Pennsylvania—Labor Board Dispute

Before Appellate Court

The legal controversy between the Pennsylvania and the Labor Board, the developments in which have been described in previous issues of the *Railway Age*, was re-opened on June 2, when hearings were held in the United States Circuit Court of Appeals at Chicago, as the result of an appeal from the recent decision of Federal Judge George T. Page. Judges Baker, Alschuler and Evans heard the arguments by Messrs. Blackburn, Esterline and W. D. Riter, representing the Railroad Labor Board, and T. J. Scofield and J. B. Heiserman, representing the Pennsylvania.

In making the closing argument on behalf of the Board, Mr. Esterline held that the Board is an arm of the government, analogous to the president or committees of Congress and that, therefore, the Board could not be sued or enjoined. He pointed out that the injunction issued by the Circuit Court, restraining the Board from issuing a decision inimical to the Pennsylvania's interests, stated that the Board's powers were only advisory. He therefore declared advisory powers could not be enjoined any more than the President could be enjoined from submitting a message to Congress or a congressional committee from reporting its recommendation.

These contentions apparently did not meet with the approval of Judge Baker, who frequently took issue with Mr. Esterline and said:

"I do not consider that that question is involved. The fundamental question is whether the Board acted within its jurisdiction in its order to the railroad and, if it did, whether or not the power under which it acted is constitutional."

Mr. Scofield and Mr. Heiserman for the Pennsylvania, argued that the Board acted without jurisdiction in issuing the order and while admitting the right of the Board to prescribe just and reasonable rules, denied the Board's power to direct how the rules governing employees should be made.

The arguments of the railroad's and the Labor Board's attorneys followed the arguments which have been made in previous hearings in this case and which have been outlined in other issues of the *Railway Age*.

The court subsequently took the case under advisement and Mr. Esterline announced that if the Pennsylvania's injunction is upheld by the court of appeals, the Board will carry the case to the United States Supreme Court.

Lovett Denies Railroads Controlled by Bank Combine

WASHINGTON, D. C.

ROBERT S. LOVETT, chairman of the board of the Union Pacific, testifying on June 1, before the Interstate Commerce Committee of the Senate in connection with the railroad inquiry, branded as "a fabrication without any foundation in fact," charges recently made before that committee by W. Jett Lauck on behalf of the railroad unions that a group of New York bankers and financiers dominate the railroads of the country and the Association of Railway Executives and direct the railroad managements in the purchase of fuel, equipment and supplies and in their attitude towards labor.

"The statement made by Mr. Lauck, so far as it relates to matters within my knowledge, is the most misleading and deceitful narrative I ever have read," said Judge Lovett, who added that Mr. Lauck's "ingeniously worked out diagrams and charts designed to show the alleged control of bankers over the principal transportation systems are from beginning to end an invention and fabrication without any foundation in fact."

"I know of no men," he continued, "in any important business which they do not themselves own, who are as independent and free from control by bankers, boards of directors and others (except commissions and many other public regulatory authorities and the various labor organizations) than the presidents of the principal railroad systems of this country in all matters relating to the maintenance and operation of the railways in their charge, the purchase of materials and supplies therefor, and the wages paid and relations with labor employed thereon; and this same independence is, of course, carried by each executive when he acts as a member of the Association of Railway Executives."

Judge Lovett said in the 18 years he has been connected with the Union Pacific not one of the 15 banking and financial institutions mentioned by Mr. Lauck has ever exerted or sought to exert the slightest influence with respect to purchases of equipment or supplies, wages paid or the policies to be pursued, or in any other respect whatsoever.

"Eleven of the 15 named do not, according to our records of stockholders, own a single share of the stock of any of the roads composing the Union Pacific system, and the remaining four own altogether \$1,618,200 par value of the preferred and \$61,900 of the common stock out of a total aggregate outstanding of \$321,836,600, though I believe and hope that the life insurance companies and others acting as trustees own large amounts of our bonds," said Judge Lovett. "The stock of the Union Pacific is widely scattered and is held by over 50,000 different owners. No one person, firm, corporation or institution owns as much as 2 per cent of our capital stock.

"I state now and as broadly and as emphatically as I can that during all the years I have been a director and officer of the railroad companies named, the management and policies of each system have been in its own interest alone, as distinct from the other systems, and have been as separate in all respects as if there had been no common directors; that there has been no combination or common control or direction of

them; that none of the banks or financial institutions mentioned by Mr. Lauck or shown on his exhibits, and no other bank, banker or financial institution or groups of such have controlled or sought to control them, or had anything to do with the policies or management or with the business or affairs of any of said railroad companies, so far as I know or believe except in lending them money or buying their securities. Where bankers were on the boards, they were there as individuals, the same as other directors and with no more influence except perhaps as to when and how best to raise new capital, as to which they were, of course, experts, and their expressed opinions were heard with interest but not always accepted."

Judge Lovett said that he was unable to find in Mr. Lauck's testimony or exhibits any facts or evidence "to support his unqualified and sweeping charges that a 'New York bank combine' through a 'spread of control of 25 railroad directors linked together 99 Class One railroads operating 211,280 miles or 82 per cent of the country's steam transportation systems.'"

"I am, however, not surprised at such lack of evidence for I know the charge is absolutely untrue and consequently there is no real evidence to support it," said the witness.

Judge Lovett said that Mr. Lauck apparently based his charge wholly upon the fact that some directors who are among the directors of one company are also directors of others.

"The witness fails utterly to distinguish between association and combination," said Judge Lovett. "No body supposes for a moment that because men belong to the same church or to the same club or play golf together or reside in the same community, or commute on the same train, or otherwise associate themselves, that they are in a common conspiracy against somebody and that all their separate interests are brought into the combination. If two rival and competing merchants or bankers happen to have an interest in some other enterprise—a street car line, or a light and power plant for example—or are elected directors of it to represent their interest, no one supposes that their separately owned stores or banks are thereupon combined or cease to compete.

"No banker on any board of directors, or committee, or in other circumstances, or at any time, or place, has ever given me any advice or sought in any way to influence me as to the 'deilation of wages' of railroad labor, or as to what wages should be paid to, or what working rules and regulations should be established for, or what if any contract should be made with railroad labor, or had anything whatever to do with the policy of railroad management with respect to railroad labor. All the bankers with whom I have had anything to do or with whom I have come in contact, on or off railroad boards, or in railroad management, have shown a friendly attitude toward labor, and union labor at that, so far as I ever heard any expression from them on this subject.

"The fact is that the bankers are no more concerned about railroad labor than are other wide-awake citizens and manifest no more interest in this subject. The larger private banking firms in New York at which much of the denunciation has been levelled, and other investment bankers, own little if any railroad stocks. These bankers do not buy stocks to keep but to sell just as the merchant buys goods to sell. They sell as quickly as possible after they buy in order to buy again, for their profit is in the turn-over. What interest have they, therefore, in the railroad wage question, more than any other citizen? It is the stockholder, and on weak roads, sometimes the bondholders, who are interested in wages and working rules and conditions, because as they had been going in recent years these expenses may mean the loss of their property.

"No board of directors nor banking firm or group of financiers can manage a large railroad system. Only dis-

aster would follow such an effort. No board of directors on which I have served has tried. In no business is organization more important or necessary. It would be folly and disastrous to the property for a board of directors, without any request from the president for its advice and suggestion, to interfere with his initiative and instruct him how to deal with wage schedules, working rules, train operations, freight rate adjustments and other matter of operation, which neither the board of directors nor the president alone can settle since they are all matters of agreement with others, after infinite and most complicating negotiations and controversy.

"With reference to Mr. Lauck's charges that this alleged 'inner group of New York bankers and financiers' have combined, through control of directorship, the coal industry, the railroad equipment industry and other industries, so that the railroads pay without protest exorbitant prices for such materials, I will state that so far as it refers to any company of which I am director and, as I believe, to any others, it is absolutely untrue. We have paid exorbitant prices in recent years, as has every individual who has bought anything, but only because we could not avoid it."

"Some of our directors (I think not over three) prior to the effective date of the Clayton law were directors of manufacturing concerns among the many from which we sometimes buy materials. Two are still directors and interested in such concerns but in one such case we buy upon public bidding under the act, and as to the other we discontinued buying because I was anxious for the director to remain on our board.

"No director of the Union Pacific or any of its subsidiaries since my connection with it has ever influenced or sought to influence the purchase of any of our equipment, rails or materials and supplies of any kind. As a matter of fact railroad directors as a rule do not know when or from whom or how railroad purchases are made except in some cases such as the purchase of engines and cars.

"The only function the board ever exercises within my experience with respect to compensation is to require its approval of salaries in excess (usually of \$400 or \$500 per month and exceptions are made even as to this in the case of train service employees, some of whom earn that much."

Missouri & North Arkansas Resumes Operation

Dormant for Ten Months—Restores Service In Five Counties Without Transportation

By K. H. Koach

One of the Mills Left Without Transportation

ON JULY 31, 1921, the Missouri & North Arkansas, a railroad extending from Joplin, Mo., in a southeasterly direction to Helena, Ark., a distance of approximately 368 miles, suspended operation, following a long series of difficulties which culminated in a strike of its employees. The suspension of activities by this carrier left more than 145,000 people without transportation service and literally paralyzed all business in an area of nearly 10,000 square miles, with property valued at more than \$10,000,000; it was also a detriment to an equal additional area in that state, and a somewhat smaller area in southwestern Missouri.

This is the only railroad that passes through Carroll, Searcy, Van Buren, Stone and Cleburne counties, and is also the only rail facility available for the citizens of a con-

During the nine months that the line has been dormant several attempts have been made to revive it, citizens in northern Arkansas and southwestern Missouri volunteering to patrol the tracks and guaranteeing to prevent further destruction of bridges and other properties of the railroad by the strikers and their sympathizers. Some effort was even made to raise a three-months payroll by popular subscription to move the materials on hand, but this also failed.

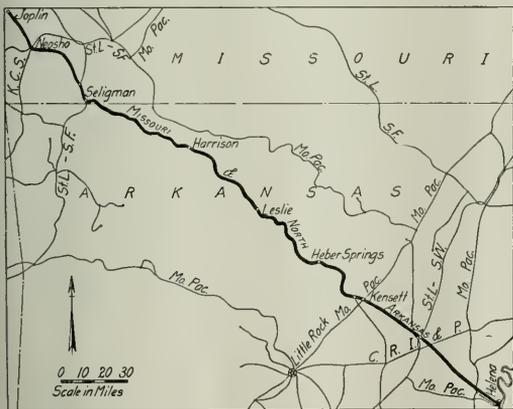

Final action leading to the restoration of service was taken in two hearings held before the Interstate Commerce Commission in December and January, respectively, the second of which resulted in a 25 per cent increase in rate divisions and a loan of \$3,500,000. The Labor Board soon after authorized a 25 per cent decrease in wages, and still more recently the Arkansas Railroad Commission consented to an increase in rates on grain, grain products, petroleum, cement, brick, fertilizer, ties, salt, packing house products, merchandise and coal. With these concessions the company set about to place the road in operation. Upon inspection, the property was found to be in better condition than was anticipated, and service was re-established on June 1.

The M. & N. A. Has Had a Checkered Career

The Missouri & North Arkansas, with all its trials and tribulations, has had an interesting and unusual history. It first came into existence on February 27, 1882, when a company known as the Eureka Springs Railway was chartered to construct a line approximately 20 miles in length, extending from Seligman, Mo., on the St. Louis-San Francisco, to Eureka Springs, Ark., a popular health resort. When completed, it was the only railroad tapping a territory which comprised nearly one-fifth of the entire state of Arkansas, although, of course, the road was of comparatively slight importance when considered in connection with the territory as a whole.

About 1899 new financial interests acquired control of the Eureka Springs Railway and prepared plans to extend the line from that point to Leslie, Ark., a distance of 111 miles, which extension was completed in September, 1903. The new owners also changed the name of the road to the St. Louis & North Arkansas. Nearly \$2,400,000 had been expended on the line up to that time, and, with an inadequate financial return derived from the investment during the few years following, the venture was deemed a failure. Nevertheless, the project was revived in 1906 by the reorganizers of the St. L. & N. A., and the line was again extended, this time to Helena, Ark., on the south, a distance of about 178 miles, and on the north, from Seligman, Mo., to Joplin, a distance of 61 miles, the extensions being completed for through operation by the summer of 1909. The company also entered later into equal joint ownership in the Joplin Union Depot Company with the Atchison, Topeka & Santa Fe, the Missouri, Kansas & Texas, and the Kansas City Southern.

The road has never been a consistent paying proposition.

Map Showing the Missouri & North Arkansas

siderable portion of White, Faulkner, Conway, Hope, Madison, Benton, Boone, Marion, Baxter and Independence counties. To reach another railroad many have been compelled to go 40 to 75 miles over roads that are almost impassible except during the late spring, summer or early fall. The Missouri Pacific is the nearest road on the north, paralleling the M. & N. A. about 15 to 60 miles away. On the south, where these two lines extend in the same general direction, the intervening distance varies from approximately 60 to 100 miles.

Federal Control Causes Collapse

The period of federal control was the direct cause of the collapse of the Missouri & North Arkansas. The Railroad Administration practically doubled the payroll of that company and, after having entangled the operation of the road in other ways, could not relinquish its hold too quickly.

This may possibly be attributed to the supposition that it was built for speculative purposes, rather than for efficient operation, as was the case with many small roads built in that section of the country, or to the fact that the territory traversed by the line did not warrant its construction. Supporters of the latter theory believe that feeders or extensions from the neighboring trunk lines would have been sufficient and would have been built if the original road had not been constructed. Some have also wondered why the road has never been taken over by one of the larger trunk lines. As a matter of fact several roads have made inspection of the property with this object in view, but these investigations showed that it was poorly located and constructed, with many sharp curves and heavy grades.

The road was sold under foreclosure on May 29, 1906, and on August 4 of that year the company was reorganized and chartered for 50 years in Arkansas under the name of the Missouri & North Arkansas Railroad. From that date until 1911, the Missouri & North Arkansas continued to accumulate annual deficits, the net operating deficit for the fiscal year ended June 30, 1911, being \$20,652.

On April 1, 1912, upon the application of the St. Louis Union Trust Company, trustee of the first mortgage bonds amounting to \$8,340,000, dated July 1, 1906, the road went into receivership with W. S. Holt, George L. Sands and Jesse McDonald as receivers. On March 4, 1914, John Scullin, who was president of the Missouri & North Arkansas for a number of years, was appointed a receiver to succeed Mr. Sands, who had resigned, and, on July 1, 1916, Festus J. Wade, president of the Mercantile Trust Company, St. Louis, Mo., was appointed sole receiver to succeed the three above named. From that date until the end of 1917, Mr. Wade operated the road, during which period a surplus was shown at the end of both years, after paying operating expenses and interest on the receiver's certificates.

The government assumed control of the road on January 1, 1918, and three months later raised the standard of wages to conform to that of the trunk lines generally. At the end of another three months the federal authorities returned the M. & N. A. to its owners by telegram. Upon taking charge the receiver found the forces disorganized, no money on hand, wages greatly increased, unadjusted demands for back pay increases, and operating expenses in general greatly in excess of the operating revenues. Conditions went from bad to worse until a few weeks later the director general of railroads offered to lease the road from the receiver for \$175,000 per annum. This was not entirely satisfactory to the owners, who claimed that their original investment was more than \$8,500,000 in addition to which there were outstanding receiver's certificates of more than \$2,000,000, without considering accumulated interest. Notwithstanding this, however, the lease was made.

Under federal control for the year ended December 31, 1919, the road sustained a deficit of \$633,557, the property having incurred a total deficit of \$956,482 up to and including that year. In March, 1920, the road was again turned back to the receiver, this time under the six months' guaranty provision in the Transportation Act. The new wage scale was still in effect, the labor costs having increased to almost twice what they were before the Railroad Administration acquired the road. Apparently regarding the situation as hopeless, Mr. Wade resigned as receiver and on March 6 of that year C. A. Phelan was named receiver and general manager to succeed him. For the year ended December 31, 1920, there was a total deficit of \$378, the smallness of this figure being accounted for by the fact that \$265,000 was received from the government under the guaranty provision.

Strike Brings Climax to Difficulties

The receiver, recognizing the need for drastic economy, ordered wage reductions, effective February 1, 1921, after

having applied for and received permission for this action from the federal judge of the Eastern district of Arkansas, under whose jurisdiction he served. The reductions were contested immediately by the employees of the company, who brought the controversy before the United States Labor Board. When the Board remanded the dispute to a conference between the management and representatives of the men, the latter immediately notified the officers of the road that the employees would walk out unless the wage reduction order was rescinded. This threat materialized on February 27, when the enginemen, trainmen, telegraphers and station agents left their work.

The strike was attended with considerable violence and the property of the company was seriously menaced and damaged, although traffic was resumed on March 24, under armed guards, and with many of the regular employees replaced by strike breakers. During the reign of terror which followed a number of the strikers were given from one to six months' jail sentences for abusing the strike-breaking employees. Locomotives were damaged frequently, sometimes by the use of explosives, and firearms were brandished and used in regular outlaw fashion. At first the citizens within the territory served by the Missouri & North Arkansas were extremely antagonistic towards the strike breakers, their sympathy being with the original employees who had lived in that country for years and who had a comparatively large sum of money invested there. However, inconvenience soon changed their minds and it is said that a number of the labor agitators were later deported from that section under threat of death.

Receiver Phelan, after a nervous breakdown, resigned on July 14, and J. C. Murray, then traffic manager, was appointed in his place. He immediately encountered difficulty in raising the July payroll of \$28,000 and was forced to announce on July 22, by authority of the federal court, that the road would cease to function on the last day of the month. This gave barely one week's notice to thousands of people that they were to be deprived of their only rail transportation. The Western Tie & Timber Company was left with 250 carloads of ties and other forest products on hand awaiting shipment which it has been unable to move since last July; the White County Lumber Mills, a subsidiary company, had 200 cars; the National Lumber & Creosoting Company between 100 and 400 cars, and several coopeage concerns reported similar shipments of perishable forest products awaiting transportation. It has been estimated that altogether more than 3,000 carloads of freight were ready to be shipped when operation was stopped.

M. & N. A. Not a Logging Road

The Missouri & North Arkansas is not to be classified as a logging road, although the lumber industry is its principal source of traffic. The tonnage of forest products originating on this line increased from 60,951 in 1908, to 395,390 in 1913, and then declined to 234,108 in 1919. Outside of the lumber industry, several counties served by the M. & N. A. are rich in mineral deposits; Joplin, Mo., is a lead and zinc mining center. The area between Neosho, Mo., and Wayne, produces live stock, wheat, flour and strawberries. From Seligman, Mo., as far south as Leslie, Ark., live stock, ties, lumber, vehicle materials, fence posts, dairy products, poultry and general farm produce originate in considerable quantities. From Leslie south cedar posts and live stock, and from Boone and Carroll counties, orchard products and strawberry shipments are received.

Joplin and Helena are the two largest cities on the line, Helena being the third largest city in Arkansas. Harrison, the next largest town served by this road, is located midway between Joplin and Helena and has a population numbering but a few thousand; further south is Heber Springs, a health resort of considerable renown.

Plans for Resumption of Operation

The security holders of the Missouri & North Arkansas applied to the Interstate Commerce Commission last December for a loan of \$3,500,000 and an increase in their division of rates, pledging the entire railroad property as security for the loan, and stating that the money was to be used to pay the receiver's certificates and debts, place the road in condition to operate, and provide working capital. The first hearing before the commission failed because eight connecting lines, the Missouri, Kansas & Texas; the Missouri Pacific; the St. Louis-San Francisco; the St. Louis Southwestern; the Atchison, Topeka & Santa Fe; the Kansas City Southern; the Yazoo & Mississippi Valley and the Chicago, Rock Island & Pacific, opposed the increased divisions, denying the claim of the petitioner that the Transportation Act permitted such action.

The M. & N. A. was then asked to provide further information, the substance of which was presented at a second hearing held in Washington, D. C., from January 16 to 20. At this time the road testified that if it could secure a 25 per cent increase in rate divisions and a 25 per cent decrease in labor costs, it could operate at a profit and repay its debt to the government.

It was necessary—those interested in the Missouri & North Arkansas claimed—that favorable decisions be received from both government bodies if the road were again to resume operation. This was finally accomplished, the United States Railroad Labor Board allowing a 25 per cent reduction from the present wage scale, and the Interstate Commerce Commission a 25 per cent increase in the division of rates, and a loan of \$3,500,000. The commission's order for increased divisions is alone expected to provide additional revenue of \$250,000 to \$275,000 annually. In the Labor Board's decision provision was made for any surplus remaining after operating expenses, taxes and interest on the government's loan have been paid, to be divided among the employees up to the amount of the wage scale paid by other carriers.

A new application of the Transportation Act was advanced in this hearing before the Interstate Commerce Commission by the attorneys for the petitioning railroad. It was pointed out that the Missouri & North Arkansas was included in a group of railroads whose total valuation was considered as the basis for the establishment of such rates as would yield an average return of six per cent on the combined investment. The petitioning carrier, it was stated, had earned nothing on its investment, while the connecting lines had thereby benefited by this provision of the Transportation Act, and had received more than their share. This was held to be true even during the past year when the road has been out of service, since the M. & N. A.'s valuation was included in the group's total, upon which each road's earning capacity was based in so far as fixing rates is concerned. The attorneys further contended that the Transportation Act contemplated that the small independent carrier was to receive the same return upon its investment as the larger railroads, and that this return should be equalized within this group, the same as would have been done if the Missouri & North Arkansas had been a branch of one of the larger trunk lines.

Of the \$3,500,000 borrowed from the government, \$750,000 is being spent to place the property in normal condition. All legal matters were settled on April 10, when the road was sold at public auction at Harrison, Ark., to the Missouri & North Arkansas Railroad Company, which has been incorporated under a new 50-year charter and, on May 6, when the commission authorized the issuance of \$3,000,000 of common stock, consisting of 30,000 shares of \$100 par value each, and of \$5,000,000 first mortgage 15-year gold bonds, the latter to be pledged with the secretary of the treasury as further collateral security for the government loan.

Several hundred men have been re-employed, although the

local labor organizations have refused to abide by the decision. However, there is no longer a possibility that outside union labor will decline to handle interchange freight as was first reported. Trainmen on the connecting lines state that the striking employees surrendered their right to sympathy when they refused to accept the decision of the United States Railroad Labor Board. Many of the former employees have returned to service, and the Harrison shops are now being operated with the full quota of 135 men.

On May 15 Mr. Murray announced the inauguration of mixed train service for freight and passengers destined to and from points on the line between Seligman, Mo., and Kensett, Ark., and service was restored over the whole line by June 1. The public has welcomed the return of its only railroad as a means to prosperity and normalcy in place of the primitive mode of living to which they have been subjected. With the support of the people it serves, combined with the awards from both government regulating bodies, the Missouri & North Arkansas should have no further difficulties in performing its function as a common carrier.

**Accident Investigations—
October, November and December**

THE INTERSTATE COMMERCE COMMISSION has issued its tenth quarterly summary of accident investigations made by the Bureau of Safety, covering the reports completed in the three months ending with December, 1921. This pamphlet of 27 pages contains reports on 12 train accidents; and also a tabular list giving condensed information concerning all of the accidents investigated during the 12 months ending with December 31.

The preceding quarterly summary was reported in the *Railway Age* of December 10, 1921, page 1145; and the one before that in the issue of September 3, page 459.

The 12 accidents now reported, together with one (Saybrook) not included in the pamphlet, occurred as follows:

Deraiment.....	Pennsylvania	Edinburg, Ind.	Sept. 17
Deraiment.....	N. Y., N. H. & H.	Saybrook Junc.	Oct. 7
Collision.....	Pennsylvania	Sunbury, Pa.	Oct. 7
Collision.....	Long Island	Bay Ridge, N. Y.	Oct. 26
Collision.....	Pennsylvania	Manhattan Tr., N. J.	Oct. 28
Deraiment.....	Baltimore & Ohio	Green Ridge, W. Va.	Oct. 29
Collision.....	Delaware & Hudson	North Albany, N. Y.	Oct. 31
Collision.....	Texas & Pacific	Addis, La.	Nov. 9
Collision.....	Texas & Pacific	Camps, Tex.	Nov. 10
Collision.....	Salt Lake & Utah	Taylorville, Utah	Nov. 18
Collision.....	Oregon-Washington	Celilo, Oregon	Dec. 1
Collision.....	Illinois Central	Woodmont, Pa.	Dec. 5
Deraiment.....	Phil. & Reading	Chicago, Ill.	Dec. 14

Following are abstracts of the Bureau's reports:

The first report is that of a derailment on the Pennsylvania near Edinburg, Ind., on September 17, 1921, concerning which the chief of the Bureau of Safety, after making an investigation, disallowed the statement of the railroad company as to the cause, declaring that it was the failure of a bridge pier, when the railroad company said that the derailment of the train before it reached the bridge, from some cause unknown, was the real explanation.

The train was northbound passenger 327, which left Edinburg at 8:52 p. m., and shortly after was derailed at bridge No. 18, while running at about 30 miles an hour. The engineman was killed and three mail clerks and two employees were injured. The locomotive and the mail car, with the bridge floor, were overturned to the right. The trouble was a weakness in the center pier of the bridge. This pier, built of native limestone, because of long exposure to the elements, had been weakened by exfoliation and disintegration. This masonry was built 67 years ago. By successive stages of high water some of the mortar of the interior of the pier had been washed away and mud had taken its place.

The theory of the railroad officers that the locomotive had

left the rails before entering upon the bridge is declared to be unfounded, no satisfactory evidence being adduced to support it. The report issued by the commission contains halftone engravings of photographs of the broken face of the center pier of the bridge and other photographs showing disintegration of limestone ashlar masonry in the faces of the abutment.

On the New York, New Haven & Hartford, near Saybrook Junction, Conn., on the morning of October 3, about 2 o'clock, the eastbound Boston night express, No. 32, was thrown off the track at the derailing switch at the approach to the bridge over the Connecticut River, and the engine slid down a bank and lodged on its side. The train was moving at about 30 miles an hour and five cars ran off the track; but no person was seriously injured.

The signal for this train was clear, but the derailing switch had been maliciously loosened by some person or persons unknown. The interlocking had been overhauled two or three months before the occurrence of this derailment and the government inspector found it to be in good condition. Examination of the derail shortly after the derailment disclosed that the cotter pins had been taken out of the throw rod, the bolt lock and the facing point lock; and the facing point plunger had been removed.

The trains in collision on the Pennsylvania Railroad near Sunbury, Pa., on October 7, were an eastbound freight and a following train consisting of two locomotives, 1676 and 1097, moving backwards. The locomotives ran into the rear of the freight, crushing the caboose and doing other damage; and the fireman of one of the locomotives was killed. This collision occurred in a dense fog about 5:40 a. m. The freight, moving toward Sunbury yard, had entered a middle siding and had stopped; and the locomotives, which should have passed on the main track, entered the siding, the engineman on the leading engine not being aware that he was on the wrong track. He had passed the switch on the indication given by an interlocking signal, the arm of which, when inclined 45 degrees from the horizontal, governs movements to either track. The signalman had neglected to change the switch after the passing of the freight train, although he had ample time to do so. The inspector places the blame on the engineman of engine 1676 (he seems to have had control of both of the locomotives) for not knowing on what track he was moving, and failing to move under control while on the siding, as required by the rules. The engineman admitted that his failure was the main cause of the collision.

The collision of October 26 on the Long Island occurred in a freight yard; one employee was killed and two injured. The cause was failure to control the train (a locomotive and a caboose, moving backwards), the conductor being responsible for the lookout.

The collision at Manhattan Transfer on the Pennsylvania, October 28, a rear collision of passenger trains, was charged to the negligence of an engineman and a flagman, the engineman running past three signals. This collision was reported in the *Railway Age* of December 31, page 1328. Among the passengers injured in this collision were two government officials, the postmaster general of the United States and a member of the Interstate Commerce Commission.

On the Baltimore & Ohio, near Green Ridge, W. Va., on October 29, eastbound freight extra No. 4415 was derailed and one car—the 37th car in the train, which was thrown off by the breaking of one of its wheels—fell on the westbound track and was run into by westbound train No. 29, consisting of a locomotive and 21 express cars; and the engine of No. 29 fell down a bank. The engineman was killed.

The inspector finds that the wheel which failed had been heated very hot, but he cannot determine certainly whether this was due to a hand brake having been set, or to a stuck air-brake. The train had been on the road about one hour,

from Cumberland, and it appears that the brakes were not properly inspected at that point; and an inspection of the triple valve of the 37th car after the derailment indicated that when the brakes were applied, before the train started from Cumberland, the engineman probably did not release those on this car. The triple valve, it is believed, was stuck in such a position that communication was established between the brake pipe and the brake cylinder.

The brakes in the train were not properly tested at Cumberland and there was no report made to the conductor as to the percentage of brakes in operation; in fact, no one had any definite knowledge as to the condition of the brakes in the train. The inspector finds that this kind of neglect has been common. The train was being made up about 7:00 a. m., and the night inspector, going off duty at that time, did not properly finish his task; nor did he give suitable notice to the day inspector. This loose practice is recommended to the immediate attention of the officers of the road.

The collision on the Delaware & Hudson at North Albany, N. Y., on October 31, was between a train of empty passenger cars and a switching locomotive; the fireman of this locomotive was killed. The accident occurred about 5:40 p. m. The empty cars were being pushed, and the locomotive, which had been switching on a side track, was carelessly backed out a little too far so that it struck a passenger car in the side. A flagman had been out while the switching was going on, to flag the train of empty cars, but he had been called in. The switcher was being managed by the fireman, the engineman sitting on the other side of the cab; and the inspector is unable to say why the fireman allowed the engine to foul the main track. The conductor was on or near the engine, where he could see the whole situation, and it is held that he and the engineman should have taken prompt measures to see that the engine did not foul the main track.

The collision on the Texas & Pacific on November 9, near Addis, La., occurred at a crossing, a locomotive from a sugar plantation on the sugar company's track being run into by westbound passenger train No. 23. The passenger engine was overturned and the other one was badly damaged. The plantation engine was moving slowly, but the view of the passenger train was obscured by a field of sugar cane. The engineman had run this engine on the sugar tracks about two months each year for the past three annual sugar seasons and had had no accident of this kind before; but he failed to stop before passing over the main line. He admitted that he had been in the habit when moving a locomotive without cars, to ignore the rule requiring a stop at the crossing. There were some indications that his steam brake may have been out of order. The engineman of the passenger train was killed and one passenger and three trainmen were injured.

The collision on the Texas & Pacific at Camps, Tex., November 10, between a westbound passenger train and an eastbound freight, was due to disregard or forgetfulness of a train order on the part of the passenger train. This collision was reported in the *Railway Age* of February 11, 1922, page 374.

The trains in collision on the Salt Lake & Utah (electric) Railroad, near Taylorsville, Utah, on November 18, were southbound passenger No. 3 and northbound passenger No. 2, each consisting of a single motor car. The southbound train was waiting on a gravel pit spur track to meet the other train; and that train came on at 25 miles an hour and, passing over the misplaced switch, collided with No. 3, badly damaging both cars. The motorman of No. 3, an assistant train master and an electrician, were killed and 28 passengers and seven employees were injured. The conductor of the standing train had gone to the switch to straighten it, but in sweeping away snow he forgot the switch; and forgot it so completely that he signaled by hand to the northbound train to come on. That train had slackened

speed; but, on receiving the motion, put on more power; and the motorman evidently did not see the switch target, although it was in plain view. The rule requires all trains to approach all switches under control, and for not doing so the motorman of No. 2 is censured.

The collision on the Oregon-Washington at Celilo, Oregon, on December 1, was briefly reported, with an illustration, in the *Railway Age* of December 17, page 517. An abstract of the report of the Bureau of Safety will be found in the issue of April 29, page 1031.

The collision on the Philadelphia & Reading at Woodmont, Pa., on December 5, was reported in the *Railway Age* of December 10, page 1163; and the report of the Bureau of Safety was abstracted in the issue of January 14, page 173.

The train derailed on the Illinois Central at Thirtieth street, Chicago, on December 14, was southbound suburban passenger No. 379 on track 5. One passenger was killed and another fatally injured; and 17 other passengers and

one employee were injured. Northbound suburban passenger train No. 400, on track 6, moving at about 40 miles an hour, had its cars scraped the entire length of the train by a car of the southbound train which was derailed and fell toward track No. 6. The derailment of the car in the southbound train was due to the pulling out of the coupler or drawbar of the tender, immediately in front of this car; and this failure was due to the breaking of one of the plates composing the extension shank of the coupler. The fracture was concealed by the end sill. There had been an old fracture. The investigation developed that the fractured plates were of smaller size than are now standard. The repair shop foreman testified that the couplers on locomotives of this class are removed, inspected and supplied with new rivets every 90 days. The coupler in question had been removed at the regular inspection period on August 8. The plate which failed was $1\frac{1}{8}$ in. in diameter, or $\frac{3}{8}$ in. less than the latest standard.

To Make Railroad and Highway Signals Consistent

Conference at New York to Improve Highway Signals—

A. H. Rudd Outlines Railroads' Attitude

A MOVEMENT to standardize colors for [street] traffic signals was begun in New York City recently by the American Engineering Standards Committee, and the plan, as formulated, includes consideration of the same subject as related to signaling in railroad and steamship operation, and also in aerial service, the purpose being to seek the establishment of codes so differentiated, one from another, that there shall be no inconsistency, and no conflict in practice, as between these different fields of transportation. Pursuant to this end the Signal Section of the American Railway Association was invited to be represented at the meeting of this committee; and A. H. Rudd, chief signal engineer of the Pennsylvania Railroad, acted as the representative.

This meeting was held at 29 West 39th street, New York City, on May 23, Dr. P. W. Agnew, chairman of the Standards Committee, serving as chairman of the conference. Other interests invited to this conference were the American Association of State Highway Officers; automobile interests, electric light and insurance interests, the Safety Institute of America and in general all classes officially or professionally interested in safety on the highways. The conference was called at the request of the Illuminating Engineering Society and the International Traffic Officers' Association. Resolutions were adopted expressing it as the sense of the meeting that an attempt should be made to standardize colors, as proposed, with a view to covering not only highway traffic of all kinds, but emergency exits of buildings and all lights and signs by which the public is guided.

Mr. Rudd presented his conclusions, not as an official statement from the American Railway Association, but simply as logical deductions from incontrovertible facts. He spoke, in part, as follows:

The railroads are interested in eliminating the use of the red light for purposes other than that of indicating danger or stop and desire that any scheme devised may conflict as little as possible with their own signal systems. The unification of colors for traffic signals should be undertaken and laws should be promulgated and enforced for the observance of the systems adopted; everyone interested should attempt to mold public opinion, as enforcement or non-enforcement of the law depends largely upon the state of public opinion. Uniformity is not only desirable but absolutely necessary;

but it is only the beginning of the solution of the problem of accident prevention. The most difficult problem is to guide public opinion.

Signal systems of railroads differ but the fundamentals are largely standardized and the results have been remarkably successful. But, even with these systems and skilled and disciplined engineers, accidents occur. The railroads are attempting to educate their employes in self-preservation. The underlying cause of most accidents is the apparent inherent disposition of the American people to take chances. Uniformity is desirable but uniformity will not cure the trouble. To satisfy the traveling and shipping public, passenger trains must be run at high speed, and it cannot be expected that such trains may be stopped ordinarily when an automobile stalls on a crossing.

[Mr. Rudd then went on to give an interesting and detailed summary of the record of automobile accidents and their causes on the Pennsylvania System in five months ending with February last, during which time accidents of this class resulted in 55 persons being killed and 251 injured. The total number of such accidents was 576, of which 406 did not result in bodily injury and therefore would never be heard of in any vital statistics. He then continued:]

It would seem that, for the good of the country, the regulations should be such that no incompetent or criminally careless driver should be permitted to operate a machine; that, if uniform colors are established, drivers should be required to pass a test for acuity of vision and color perception; and that the violation of traffic signals at street intersections, or at highway crossings of steam and electric lines, and exceeding speed limits in towns and villages, should incur penalties, backed up by public opinion.

The American Railway Association, in connection with a committee of the National Association of Railway and Utilities Commissioners, and representatives of some of the automobile associations some years ago adopted four standards: (1) An approach sign for railroad crossings to be erected on the highway by the public authorities. Co-operation of public authorities in erecting these would be of great assistance. Some States require them by law; others by order of Commissions. They ought to be adopted universally and the people made to regard them. (2) Crossing gates (where

used) striped black and white. As most of the railroads use these stripes, they should be reserved for this purpose. Penalties should be enacted for the careless breaking of gates. (3) Red lights on gates and in the hands of crossing watchmen. Their use should be extended. (4) Stop signs [disks, not flags] in the hands of crossing watchmen. This disk should be made universal.

With these provisions enforced there remains, as far as the railroads are concerned, only the standardization of the automatic highway crossing signal. This is now in the hands of the Signal Section of the American Railway Association, and it is expected that the matter will be discussed and perhaps sent to letter ballot at its meeting on June 14. If some uniform arrangement is recommended, as seems possible, and then adopted by the American Railway Association, it may well be embodied in the requirements of this body, and its use reserved solely for the purpose indicated. Automatic apparatus at crossings should give the stop sign only when trains are approaching. The use of gates should be reduced to a minimum. Gates unattended and standing erect during certain hours of the day are a potential menace instead of a safeguard, as they encourage people to cross. The colors of signals used on the railways are, generally: red for danger (stop), yellow for caution and green for clear (proceed). The public is primarily generally educated along the line that red means danger, but the color has been so misused that its significance has been greatly weakened. We believe it should be restricted by general agreement to that for which it is best adapted, namely, danger, and that it should not be used for any other purpose. The use of a red light for fire exit in a theatre is absolutely wrong in principle. The light should indicate Proceed instead of Stop.

If a movement toward uniformity is to be carried to a successful conclusion, the work will have to be divided among various committees and subcommittees. This is no place to submit details, but we have gone into the matter far enough to be convinced that the principles underlying railway signaling may be applied absolutely and correctly to the signaling of highway traffic, industrial plants, and the marking of dangerous points, etc., without undue complication, except in some cases, the chance of the enginemans of high speed trains possibly mistaking lights on highways for their own signals. The ideal arrangement, of course, would be to have the colors entirely different, but Nature has not provided us with a spectrum sufficiently long. If all men believed as I do confusion would be eliminated by giving railroad signals by position and highway signals by color; but there is no chance of this arrangement being adopted for many years and, therefore, we must take the situation as we find it.

This body should, we believe, adopt—

1. The principle of red for stop everywhere unless qualified by a more favorable indication; that is, at highway crossings with railroads if a train is approaching, at street intersections, both in fixed signals and in the hands of traffic officers; at the ends of streets, and possibly to indicate excavations, in the streets.
2. Yellow for tail lights of automobiles, possibly for excavations in streets, and for calling policemen, or for any other purpose where caution is required; possibly at busy street intersections to indicate that the traffic lights will be changed from red to green, or from green to red.
3. Green lights for fire escapes; for Proceed at street intersections and [at other places] to indicate the way is clear

TO ADVERTISE IN FRANCE—The Canadian Government is said to be preparing to send an exhibition train through France this year. An item of \$40,000 to cover the cost of the train has been approved by the House of Commons. Both agricultural and industrial exhibits will be shown.

Educational Transportation Institution Proposed

WASHINGTON, D. C.

THE JOINT COMMISSION of Agricultural Inquiry in its report on transportation will recommend "the establishment of a private research and educational institution under disinterested auspices for the purpose of promoting education in the principles, operation and practices incident to transportation."

Sydney Anderson, chairman of the commission, discussing this recommendation said: "There are approximately \$50,000,000,000 invested in transportation in this country, including steam railways, electric railways, highways, automobiles, motor trucks, waterways and shipping. These agencies of transportation, which should function as a co-ordinated system in the aid of commerce, have come into existence without relationship to transportation facilities already existing. There is no agency through which the basis of fact and principle necessary for the co-ordination of these transportation facilities so as to give the most efficient service at the lowest cost, can be secured. There is no place today where the business of transportation can be learned except in the apprenticeship of the business itself. An institution such as the commission suggests would furnish a means of definitely establishing the facts and principles of transportation upon which sound decisions respecting transportation policies can be predicated; the relationship of the different agencies of transportation to each other, and the relationship of these agencies to agriculture, industry, trade and commerce. It would also furnish a means for the dissemination of education in the principles, operation and practices incident to transportation."

Mr. Anderson further said in discussing this recommendation, "I understand that the organization of a National Transportation Institute is under way, and I believe that the organization of such an institute should and will deserve the co-operation and support not only of the transportation agencies, but of the people generally who use these agencies and are primarily interested in the services which they render."

One of the principal causes of increased living costs in the United States as found by the Joint Commission of Agricultural Inquiry and to be fully disclosed in the final section of the commission's report, soon to be rendered to Congress, consists of an unwieldy system of marketing and distribution which includes relatively inefficient means and uneconomic methods, coupled with wasteful buying habits and practices on the part of the consuming public.

"We have now reached a point," said Chairman Sydney Anderson, "where it costs more to distribute and serve than it costs to produce. Commodity values are lost in a mass of service costs and the time has come for a consideration of the fundamental problem of the economic distribution of the essentials of living."

"The commission is convinced that the problem of distribution is one of the most important economic questions before the American people. Only through its correct solution can there be an equitable adjustment of the relations of agriculture, industry, transportation, labor, finance and commerce as among themselves and as correlated with the interest of the public."

Chairman Anderson said that the commission found no fundamental data of a governmental or public character with respect to marketing and distribution, and it was, therefore, necessary to undertake a pioneering effort to secure from the original sources the basic facts of the problem. For this purpose the commission secured the technical assistance and the co-operation of trades and industries covering the manufacture or conversion and the wholesale and retail distribution of more than 200 essential commodities.

"We have found no single factor in this complex price structure," said Chairman Anderson, "which can be held to be solely responsible for the spread between producers and consumers. Neither is the commission able to point out a remedy, legislative or economic, which of itself will reduce this spread.

"The commission will be able, however, to make certain suggestions which it believes will indicate the method by which improvements and economies can be made in our distributive system.

"The Joint Commission does not believe that Congress can correct the faults of existing conditions and methods of distribution. We believe that the responsibility rests on the entire people to make such readjustment of custom and habit as will permit the development of a system of economic distribution which will result in a more equitable relationship between what the producer receives and consumer pays.

"The cost of distribution is made up of an endless number and variety of costs of material and service, each of which influences the others and all of which combine to make the price which the final consumer pays. These factors

vary in influence upon one another and upon the final price from year to year and month to month and even day to day. Each of them is part of a complex and flexible price structure which is extremely sensitive to fundamental economic and psychologic forces such as taxes, interest rates, freight rates, custom, habit, usage and practices of producers, consumers, manufacturers and distributive agencies.

"The distributive situation will be better appreciated when consumers realize that out of 41,614,248 people engaged in gainful occupations, 29,570,867 are engaged in manufacture, transportation, distribution and allied activities. There is hardly a commodity in daily use that does not reflect the joint services of several million people. All of us need to realize more clearly that not only must the producer receive proper compensation for the raw materials, but that out of the charge for service along the way to the consumer the men who operate railroad trains, the men who drive trucks, the men who operate machines, the men who nail boxes, the men who wrap packages and the men who make deliveries must be enabled to purchase their share of the finished commodity for their families."

Reorganized I. & G. N. Will Need Much Improvement

Not in Good Physical Shape—Should Be Able to Meet Lowered Fixed Charges

By Charles W. Foss

THE INTERNATIONAL & Great Northern has been in receivership since August 11, 1914. Last week a plan was announced for its reorganization (*Railway Age*, June 3, page 1312). This plan proposes a reduction in the company's fixed charges of \$418,175. The fixed interest charges of the old company were \$1,597,175; for the new company they will be \$1,197,000. In addition, there will be contingent interest charges on an issue of \$17,000,000 of adjustment mortgage six per cent bonds, which interest charges will total \$1,020,000, making the total fixed and contingent interest charges \$2,199,000. Judging by the results which have been obtained since the beginning of the receivership, it is apparent that the new company should be able without any particular difficulty to earn its fixed interest charges. As to whether it can earn the contingent charges on its adjustment bonds is, however, a question. The reorganization is termed a drastic one. The characteristics of the property, physical and otherwise, require it to be.

The International & Great Northern is far from being a rich road. It needs a great deal in the way of improvements and for some reason it does not seem to have had that expansion of earnings which has been more or less general in the case of the other lines in the southwest. The road, however, serves a good territory which is expanding in wealth and prosperity in fairly large degree. It also has its importance as a connecting carrier serving Houston, Galveston, etc., and one of the most interesting features of its location are the possibilities in case traffic with Mexico is restored to anything like its pre-revolutionary importance. The line to Laredo, Tex., at present is not one of the important links in the system. The importance of Laredo as a border point is shown by the fact that 72 per cent of all the land movement from the United States into Mexico passes through this point. The I. & G. N. has competitors at Laredo, as well as at the other places where United States carriers connect with the National Railways of Mexico, but it should be in a preferred position because of its relationships with the Texas & Pacific

and the Missouri Pacific in what is known to passenger men as the Sunshine Route.

It is, of course, a familiar fact that the railroad mileage of Texas was built much ahead of the growth of population and the agricultural and other production of the state. In recent years, however, this situation has been remedied in considerable extent because of the rapid growth which the state has experienced and also largely because of the prosperity which accompanied the development of oil. The International & Great Northern, however, does not seem to have had a full part in this development up to the present time. Further than that, it is confronted with a large amount of competition. This is not particularly unusual for the lines in Texas, but, nevertheless, the situation wherein practically every important town served by a railroad is also served by two or three competing lines, is not without its drawbacks.

The I. & G. N. serves Houston with its own lines, and Galveston by means of trackage rights. There is much friendly rivalry between these two cities. Houston has a ship channel and has aspirations of being a port in its own right. It is of interest to point out that the I. & G. N. has a large amount of property along the south side of this channel and that its position in that city is benefited thereby.

The I. & G. N. Lines

The mileage of the International & Great Northern totals 1,160 inclusive of trackage rights. The Gulf division extends from Longview to Houston, 232 miles. Connection with the Texas & Pacific is made at Longview and access to Galveston is obtained by trackage rights from Houston over the Galveston, Houston & Henderson, 48 miles. The San Antonio division includes the line from Palestine to Laredo, 413 miles. The Fort Worth division is a diagonal line extending from Spring on the Galveston division, crossing the San Antonio division at Valley Junction, and then north to Fort Worth, where another connection is made with the Texas & Pacific. The road has a number of branches but

it is an exception to most of the roads in the southwest in that its branch lines constitute but a relatively small proportion of its total mileage.

The road has maximum grades up to 1.25 per cent, except on the line from Fort Worth to Houston, where the maximum grade is only 0.7 per cent, this being the lowest grade line between north and south Texas. The road receives a large proportion of its traffic from connections. In 1920, which was the best year in the company's history from the standpoint of tonnage, it carried a total tonnage of 4,973,659, of which it originated 2,174,893 tons, and received from connections 2,798,766 tons. Its leading commodities are wheat, cotton, lumber and petroleum, both crude and refined.

Traffic Characteristics

The wheat tonnage is almost entirely received from connections; in the case of cotton, something about two-thirds. The road, however, serves a rich cotton territory; cotton is raised in every county in Texas which is reached by the International & Great Northern. In the cotton year of 1921 it handled into Galveston, a total of 1,230,000 bales. In 1920 the cotton tonnage carried by the International & Great Northern totaled 274,020 tons, but the revenue from the transportation of cotton was, of course, much greater than the tonnage figures would indicate.

Lumber is received on its own lines in east Texas and there is an equal amount received from connections. The

thence to the north Atlantic ports by sea. Large agricultural areas are being brought into production yearly, to a great extent because of new irrigation projects. The I. & G. N. will presumably secure the benefit of this future development.

Long Haul

From what has been said, it should be evident that the International & Great Northern has the advantage of securing a long haul on a large proportion of its tonnage. The actual figures show that the average haul in recent years has averaged about 185 miles. Further than that, it receives a comparatively high revenue per ton-mile; this figure in 1920 was 1.516 cents; in 1919 it was 1.4 cents. As this is written, the 1921 figure is not available, but it is to be supposed that it will show for the year a slightly higher figure even than in 1921.

Passenger Service

The leading feature of the I. & G. N.'s passenger service results from its being a part of the so-called Sunshine Route and also because of the passenger service which it handles in connection with the National Railways of Mexico through Laredo, Tex. About 70 per cent of the road's total revenues are derived from freight service, which will give some idea of the relative importance of the passenger service to all the service performed by the road. The Sunshine Route is constituted by the line of the Missouri Pacific from St. Louis to Texarkana, the Texas & Pacific from Texarkana to Longview, and the I. & G. N. from the latter south to San Antonio and Houston. The Sunshine Special, which operates over this route, is one of the best trains in the southwest. This train was established in the latter part of 1915; it is an all-steel train. For a time the I. & G. N. had no steel cars of its own and had to pay equipment rentals to the other two lines. In 1916, however, it ordered 11 steel cars as its quota. The service in connection with the National Railways of Mexico is constituted in the cars which are run from San Antonio to Mexico City and to Tampico.

Physical Condition

The road, as would be expected from the general underlying conditions, is not built to high physical standards. It lacks heavy rail. Its motive power is not of high standard and its general physical appearance is not good. Immediately after the receivership was established in 1914, the first things that were taken in hand were the equipment situation and roadway. In a communication which is published with the reorganization plan, J. W. Kendrick makes the statement that since the beginning of receivership some \$5,000,000 has been spent on the property and this largely for ballast and for widening cuts and fills. It should be understood that while \$5,000,000 will cover a fairly large amount of work, the International & Great Northern has not been able by any means to carry out the same sort of an improvement program as the Katy, for instance, is now bringing to a completion.

The International & Great Northern annual reports give a considerable amount of information as to exactly what has been done with reference to the road's physical improvement during the receivership. Unfortunately the 1921 report is not yet available so that such figures as are given will relate to the road's physical condition as of December 31, 1920; it is to be presumed, of course, that a large amount of work may have been carried out during 1921.

On June 30, 1915, of the road's main line mileage of 916 (the road's total owned mileage is 1,106), 62 per cent was dirt ballast. The figure in miles at that time was 566; 217 miles was ballasted with gravel, 49 with shell, 38 with cinders and 35 with stone. On December 31, 1921, the ballast condition had been changed so that of the main line mileage only 144 miles still had dirt ballast, this including 91 miles of the line between San Antonio and Laredo and

TONNAGE CARRIED IN 1920

Commodities	Originating	Received	Total
Wheat	49,121	474,088	523,209
Corn	38,987	40,157	79,144
Cotton	114,043	159,977	274,020
Cott used and products, except oil	100,922	24,552	145,474
Other fresh vegetables	55,373	77,644	133,017
Total products of agriculture	473,011	1,050,844	1,523,855
Cattle and calves	58,453	40,303	98,756
Total products of animals	123,782	74,459	198,241
Bituminous coal	26,144	137,719	163,863
Lignite	285,653	60,925	346,578
Clay, gravel, sand and stone	242,723	89,428	332,151
Crude petroleum	68,205	161,400	229,605
Total products of mines	677,705	723,345	1,401,050
Lumps, posts, poles and cordwood	137,955	31,950	169,905
Lumber, timber, box shooks, etc.	188,919	220,383	409,302
Total products of forests	347,008	284,339	631,347
Refined petroleum and its products	104,297	128,179	232,476
Cement	45,979	16,088	62,067
Lime and plaster	38,433	8,898	47,331
Total manufactures and miscellaneous	438,299	566,275	1,004,574
Grand total, railroad traffic	2,695,805	2,699,762	4,755,567
Merchandise—All I. & G. N. freight	119,088	99,004	218,092
Grand total, carload and I. & G. N. traffic	2,174,893	2,798,766	4,973,659

oil traffic is received at various points; one of the most important sources is that from the Trinity & Brazos Valley at Houston for movement to Texas City. There is also a large movement to refineries at San Antonio, notably in the case of the traffic received from the T. & B. V. at Jewett. Another important part of the road's tonnage is lignite coal, which is peculiar in view of the fact that the road is in a territory which has large sources of fuel oil. The lignite is secured at various points along the line, such as Crockett, Rockdale, at points south of San Antonio, and near Palestine. It is largely used for local consumption in cotton gins, office buildings, etc. and traffic in it varies with the price of competing fuel oil.

Products of agriculture, outside of grain and cotton, also represent a very considerable part of International & Great Northern traffic. Fresh vegetables originate primarily in the territory immediately north of Laredo. The Laredo district is an important onion production center and the 1922 crop was expected to reach 4,000 cars with about 2,000 cars to the territory north of that immediately adjacent to Laredo. There was also a considerable tonnage of cabbage and squash. The I. & G. N. gets a large proportion of this production and, in addition, gets a long haul on the traffic because a large proportion of it moves to New York by rail, the I. & G. N. via Longview, having the short route to St. Louis. A small part of the tonnage moves to Galveston and

about 53 miles in the center of the Fort Worth division. The mileage of gravel ballast had been increased to 589; the shell ballast had been increased to 136; the cinder ballast was only 19, and stone had been reduced to a total of but 2. The attention given to track foundation is the outstanding improvement which has taken place in the International & Great Northern's physical conditions since receivership.

Rail

Considerable attention has been given to the matter of rail also, but far from the amount of attention that should be given this important factor. The report of the executive officer to the receiver for 1920 contains this important statement: "Approximately 300 miles of new 90-lb. rail should be provided, extending over a period not to exceed three years, for laying between Palestine and Houston, and Palestine and San Marcos, releasing 75-lb. rail for relaying on other portions of the line, particularly between San Antonio and Laredo." This indicates, at least, that there is still a large amount of work to be done and that this is one of the first things which the reorganized company will have to take care of.

However, it should be pointed out that there was some improvement made in this respect during the receivership.

ballasting; of course these cars can be used for revenue coal traffic as well. The above cars were the only new freight equipment which was acquired during the eight years of receivership.

The locomotive purchases were equally small. No new power was secured until October, 1921, when orders were placed for 4 Mikado locomotives and 4 six-wheel switching locomotives. In the rush of 1920 the road had to rent locomotives. The larger part of the road's motive power is of comparatively light weight. Prior to the purchase of the new locomotives just mentioned, the largest locomotives on the road were 16 Consolidations—22 in. by 30 in. cylinders with 182,000 lb. on the drivers. The road has made the best of what it has had in the way of motive power, however. In 1914 it did not have a single locomotive with a superheater; it has succeeded in putting superheaters on a considerable proportion of its locomotives; at present all of its heavier power is superheated, the actual figures being 48 superheated locomotives, including the eight new ones recently obtained. The locomotives on the road total 182.

The road needs new cars—that is, if its heavy per diem charges are any criterion. Further than that, it reported on May 1 a bad order car percentage of 18.1, which is rather high. Its percentage of locomotives held out of service for

INTERNATIONAL & GREAT NORTHERN OPERATING STATISTICS, 1912-1920

Year ended	Freight revenue	Total operating revenue	Total operating expenses	Net operating revenue	Operating ratio	Revenue tons	Revenue ton miles	Average haul	Revenue per ton per mile, cents	Revenue train load	Revenue car load	Ton miles per mile of line
June 30												
1912	\$7,408,670	\$10,389,499	\$7,585,832	\$2,809,999	73.01	3,269,554	583,658,153	179	1,269	205	13.51
1913	8,074,686	11,284,722	8,572,700	2,712,102	75.97	3,896,793	695,410,311	176	1,161	213	14.96
1914	7,024,295	9,963,408	8,062,467	1,900,940	80.92	3,556,382	580,827,567	163	1,209	215	13.60	500,929
1915	6,674,082	9,083,626	7,871,449	1,212,177	86.66	3,592,579	637,154,661	177	1,045	249	14.40	549,508
1916	6,869,511	9,420,291	7,339,224	2,081,067	77.91	3,767,900	680,160,833	181	1,010	271	15.66	586,599
Year ended Dec. 31												
1916	7,673,765	10,766,945	7,786,049	2,980,895	72.31	4,049,264	719,621,355	178	1,066	271	15.77
1917	8,582,335	12,588,224	8,649,954	3,938,230	68.71	4,140,037	751,526,133	182	1,142	312	17.66
1918	8,859,715	13,476,888	11,643,003	1,833,885	86.39	3,949,854	691,239,368	175	1,282	323	14.87
1919	10,061,736	14,410,290	15,189,587	Def. 779,297	105.40	3,902,256	718,629,643	184	1,400	320	20.31	619,729
1920	13,988,645	19,514,093	20,027,879	Def. 513,786	102.63	4,973,659	922,502,143	185	1,516	336	21.10	795,603
1921	13,178,384	17,639,782	16,254,947	1,384,835	92.15

On June 30, 1915, of the road's total owned mileage of 1,106, 4.7 miles were laid with 85-lb. rail, 37.6 with 80-lb. rail, 723.7 with 75-lb. rail, 14.2 with 70-lb. rail, 171.2 with 56-lb. rail, and 154.6 with 52-lb. rail. On December 31, 1920, the mileage of the different weights was as follows: 13.6 miles of 90-lb.; 66.1 miles of 85; 34.4 miles of 80-lb.; 700.3 of 75; 15.3 miles of 70; 171.5 miles with 56 and 124.8 miles with 52. The percentage of rail, 70-lb. or less, on June 30, 1915, was 30.8. On December 31, 1920, this had been reduced to 26.4. On June 30, 1915, the proportion of 75-lb. rail was 65.4, whereas on December 31, 1920, this had been changed to 63.3. In other words, the road has not made a very considerable amount of progress in improving its rail condition during these years. It is further of interest that all of the 52-lb. rail is to be found on the line between San Antonio and Laredo. This rail has been in track some 46 years.

Equipment Condition

On the first inspection trip which the officers took over the road after the creation of its receivership, they found that in addition to its poor ballast condition, the road had a poor equipment condition. There were found to be a large proportion of bad order cars and one of the first steps taken was the adoption of a program for their repair. In the latter part of 1915 it was deemed essential to secure a large number of new cars and there were purchased 500 steel frame box cars of 40-ton capacity, 200 steel underframe stock cars and 300, 50-ton combination ballast and coal cars. The purchase of the last named equipment is noteworthy because it shows the importance the new officers gave the matter of

repairs requiring over 24 hours on the same date was 13.8; this is considerably lower than the country's average on that date.

Increases in Train Load

The International & Great Northern in 1920 had a revenue train load of 336 tons. In the first report to the receivers, this statement occurs: "During the first year of the operation of the property by the receivers, strenuous efforts were also made to reduce the freight train miles by increasing the freight train loads. . . . Little attention seems to have been paid to this feature in the past, but a decrease in the freight train miles has been brought about in spite of an increased movement of freight traffic, and a material increase has been made in the net train loads. Statistical information for the operating officers, to enable them to know exactly what results they were getting in this respect, was sadly wanting. Amongst other things a weekly tonnage report has been compiled showing the weight of trains moved on each freight train district on all divisions, which is distributed promptly to superintendents, train masters and others in order that they may see the weak points and each see what the other is doing, thus creating the spirit of generous rivalry between divisions."

The work which was started at that time has been continued to the present with the result that in each year of the receivership there has been a steady and progressive increase in the average revenue train load. The average train load for the year ending June 30, 1914, was 215. In the first year of operation by the receiver this was increased 16 per cent, or 249 tons. In 1916 the average had become 271; in

1917, 312; in 1918, 322; in 1919, 320, and in 1920, 336. The revenue train load for 1921 is not yet available but there is available a figure of net tons per train, including both revenue and non-revenue freight, which shows for 1920, 413, and for 1921, an increase to 434.

The interesting feature is that these increases were brought about without the acquisition of new and heavier motive power; they were the result of improved operating supervision and a realization of the importance of this matter. The average train load for the International & Great Northern as compared with the other lines in the southwest is low. The figure of 434 net tons per train in 1921 compared with an average for the southwestern region of 514. The Gulf Coast Lines in 1921 had an average of 610; the Gulf, Colorado & Santa Fe, 468; the Missouri, Kansas & Texas, 473.

The road has had an increase in average car load similar to that which it has had in revenue train load. In 1914 its revenue tons per loaded car were 14.45. In 1920 this had increased progressively to 21.10. The 1921 figure for revenue car load is not available, but that for net tons per loaded car is; in 1920 the I. & G. N. had a net tons per loaded car of 24.5, and in 1921 of 24.7. The average for the southwestern region for the year was 25. Car miles per day in 1921 were 22.1 as against the average in the southwest of 22.9; in 1920, however, the I. & G. N. figure was 30.9 as against the region's average of 23.5. The locomotive miles per locomotive day in 1921 was 69.9 and in 1920, 92.8, whereas the average for the district was respectively 57.1 and 67.5.

Earning Power

An analysis of the International & Great Northern earning power is complicated by the factor of federal control and by the necessity of reconciling the results of the high costs of labor and material characteristic of the past three or four years. The road did not do well while it was being operated by the government. It had a standard return of \$1,394,946.

The International & Great Northern has practically no other income than that received from the operation of its own property. This brings us to the important fact that the government compensation of \$1,394,946 was about \$200,000 less than the interest charges on the property, which, for the past several years have run above \$1,500,000 annually and which, as of June 30, 1922, are placed at the exact figure of \$1,597,175. The fixed interest charges of the new company are set at \$1,179,000, a reduction from the present interest charges of \$418,175. The road has been operating at a deficit running from \$300,000 to \$400,000 and the evidence on the whole is that the property, even without any great expansion of traffic, should be able to earn its fixed charges without difficulty.

There is a certain interest in examining what the road did during the period of federal control, although the great improvement which has been made since that time gives these figures, at present, largely an academic interest only. The year 1917 was the best year in the company's history. It had a net after rentals in that year of \$3,254,787. In 1918, the first year of federal control, the road had a net railway operating income of \$1,378,645 or, in other words, it approximated its standard return. In 1919, however, there was a deficit of \$1,404,787, and in 1920, a further deficit of \$1,749,257, which latter deficit the government had to make up partly through standard return for two months and guaranty for six.

Difficulties in 1921

The year 1921 was not a good year for the company. It had a sharp falling off in traffic. In September it experienced an extremely severe storm in the San Antonio and Brazos Valley district which resulted in 72 washouts varying from 15 ft. to 5,000 ft. in length. The traffic was restored

in eight days, but the operating expenses were increased \$225,000 for repairing the damage and the road, in the meantime, lost a considerable volume of traffic which it otherwise might have carried. The International & Great Northern had a private train service strike of its own at the time of the general strike threat last November. Nevertheless, even with all these difficulties, the road came through the year with a deficit after rentals of \$324,441; a deficit to be sure, but an amount \$1,400,000 less than the deficit in 1920.

The corporate income account for 1921, when it is issued in the near future, will very likely make a poor showing for the year but this will be explained by the special conditions of a very trying year, the like of which presumably will not be experienced again in the same degree. The matter of revenues and expenses is complicated by the varying freight rates and varying costs. Because of this situation it seems hardly advisable to attempt an analysis of the figures. They are, however, given in the table in some detail. The revenues show the usual increase over a term of years resulting from a combination of increased traffic and an increased rate per ton per mile, whereas the expenses show a similar or even greater increase due to increased labor and material costs.

An interesting feature is the operating ratio. In 1914 this was 80.92; in 1915, 86.66, but in 1916 it reduced to 72.31, and in 1917, to 68.71. It increased in 1919 to 105.40. In 1921 the figure was 92.15.

J. W. Kendrick's Opinion

J. W. Kendrick, in his communication which is included with the reorganization plan, estimates that the property should be able, in 1923, to have a net income available for interest and dividends of \$3,031,512; in 1924, of \$3,178,135, and in 1925, of \$3,326,821. "If my recommendations with respect to operation and management are adopted," he says, "it will in my judgment be practicable to operate the road for not to exceed 76 per cent of its operating revenue, as stated in my report. Allowing eight per cent for taxes, hire of equipment and rental of joint facilities, in accordance with the results that have been obtained in the past, 16 per cent of the gross earnings would be available for interest charges and dividends."

Mr. Kendrick adds: "There is absolutely no reason why the results indicated in my report cannot be obtained, or why the International & Great Northern System cannot take a place with the best of the southwestern and Texas railroads as far as quality and economy of its operation are concerned."

At present the International & Great Northern is doing very much better than it did at this time last year. It operated in March with a net after rentals of \$61,701 as compared with a deficit in March of 1921 of \$178,005. For the three months it had a net after rentals of \$87,853 as compared with a deficit in the first three months of 1921 of \$534,112. Its operating ratio in March was 84.7; for the three months, 88.1.

THE GASOLINE purchased by the Illinois Central in 1921 was enough to have run an automobile, at the rate of 20 miles to the gallon, more than 400 times around the earth. It would keep the car going continuously 24 hours a day at 20 miles an hour for more than 50 years.

THE INTERNATIONAL BROTHERHOOD OF LOCOMOTIVE FIREMEN AND ENGINEEMEN has been holding a convention in Houston, Tex., which, it is estimated, has cost \$52 a minute. There was one delegate present from each of the 904 lodges and his pay was \$8 a day besides expense money amounting to \$6. The convention of this organization in 1919, which was held in Denver Colo., cost more than \$600,000. It was in session 32 working days.

General News Department

The Freight Claim Division of the American Railway Association will hold its thirty-first annual convention at Denver, Colo., June 20, 21 and 22.

Clifford Thorne, of Iowa, ran for the United States Senate in the Republican primaries in that state on June 5. The votes, when counted, showed that he came in a poor second. He received less than one-fifth of the total number of votes cast and less than 40 per cent of the number received by the successful candidate.

Fines Amounting to \$500 and costs were imposed on the New York, New Haven & Hartford Railroad in the Federal Court at New Haven, Conn., on June 1, for violation of the hours of service law in connection with working time of trainmen. The government brought suit on 12 counts, but on seven of them the prosecution was abandoned.

President W. G. Lee of the Brotherhood of Railroad Trainmen has been re-elected, defeating Vice-Presidents Fitzpatrick and Whitney. W. N. Doak, vice-president, was elected senior vice-president to succeed Mr. Fitzpatrick. T. R. Dodge, assistant to president; A. E. Kind, general secretary and treasurer, and D. L. Cease, editor, were re-elected by acclamation. Messrs. Lee and Dodge have been officers of this organization uninterruptedly for 27 years, and secretary King for 25 years.

The Newfoundland Railway resumed train service on May 23, after a suspension of eight days, owing to lack of funds to pay the wages of the trainmen. The management of the road said that the financial difficulty was due to the neglect of the government to make payments which had been agreed upon. It appears that the resumption of service follows a temporary advance of money by the government, made with the expectation that a permanent settlement of the difficulty would be reached by June 3.

The California Limited, No. 3, westbound, and the "Scout," No. 10, eastbound, of the Atchison, Topeka & Santa Fe, collided about 4 a. m. on May 29, near the bridge across the Mississippi river opposite Fort Madison, Iowa, and the engineer of the Limited and the fireman of the "Scout" were killed. The two other members of the engine crews sustained severe injuries and a number of the passengers received minor injuries. Both engines and two baggage cars were derailed and badly damaged. Preliminary investigation indicates that the collision was due to the westbound train running past a stop signal.

The Wrecking of an Automobile on a crossing by the westbound Pacific Express, No. 7, of the Erie Railroad, in Binghamton, N. Y., on the morning of June 6, resulted in the serious scalding of the engineer and fireman, burning gasoline having been thrown over them at the moment of collision by the explosion of the tank of the automobile. The automobile was a truck, stopped on the crossing because of an obstacle in the shape of an ash cart, and the driver and two other men on the truck were killed. The report that the locomotive was derailed in this accident appears to have been incorrect.

Columbus & Greenville Abandons Branch Line

Train service over the Webb branch (34 miles in length) of the Columbus & Greenville, was discontinued on May 27, the Mississippi Railroad Commission having granted authority for the abandonment. Very little traffic has been handled over this line in recent years, except during the cotton season. An application is now pending in the federal court for authority to sell the road at public auction. A meeting of the citizens of Leflore county who are served by the Webb branch was held last week and steps were taken to raise the necessary funds to purchase the line.

Station Agents to Meet

The Freight station Section of the American Railway Association, formerly the American Association of Freight Agents, will hold its annual meeting at the Bellevue-Stratford hotel, Philadelphia, Pa., beginning on June 20. The program for this meeting, besides the reports from both the standing and special committees, provides for a list of topics on which sectional organizations have prepared papers for a general discussion.

Imprisoned Trainmen Pardoned

Charles L. Evans and Walter Yeakel, conductor and engineer, who in March last were sentenced to imprisonment—9 months and 6 months respectively—and were fined \$500 each, on account of their responsibility for the disastrous collision on the Philadelphia & Reading at Woodmont, Pa., on December 5, 1921, were pardoned by the governor of Pennsylvania on May 31. The action of the governor was recommended unanimously by the State Pardon Board, following an inquiry in which the railroad company signified its willingness to give employment to the two men. It is said that the jury which convicted Evans and Yeakel was out all night and took more than 200 ballots.

Unions May Be Sued for Damages

The United States Supreme Court on June 5 handed down a decision to the effect that under sections 7 and 8 of the Sherman anti-trust law labor unions are suable; and that actions may be brought against them for damages for which they may be responsible by illegal conduct in connection with strikes. The court held that funds collected for strike purposes are assessable to pay the damages. This decision was rendered in the case of the United Mine Workers of America against the Coronado Coal Company of Arkansas. The court held, however, that in this case the national organization was not responsible for the damage and it ordered a retrial of the case against the district organization of the union.

Officers of Master Boiler Makers' Association

At the Thirteenth Annual Convention of the Master Boiler Makers' Association, which was held in Chicago on May 23-26, the following officers were elected: president, Thomas Lewis, general boiler inspector, Lehigh Valley, Sayre, Pa.; first vice-president, E. W. Young, general boiler inspector, Chicago, Milwaukee & St. Paul, Dubuque, Ia.; second vice-president, Frank Gray, general foreman boiler maker, Chicago & Alton, Bloomington, Ill.; third vice-president, Thomas F. Powers, assistant general foreman, boiler department, Chicago & North Western, Oak Park, Ill.; fourth vice-president, John F. Raps, general boiler inspector, Illinois Central, Chicago; fifth vice-president, W. J. Murphy, general foreman boiler maker, eastern region, Pennsylvania System, Allegheny, Pa.; secretary, Harry D. Vought, 26 Cortlandt street, New York; treasurer, W. H. Laughridge, general foreman boiler maker, Hocking Valley, Columbus, Ohio.

Decision in Stoker Infringement Suit

In the suit brought by the Locomotive Stoker Company against the Elvin Mechanical Stoker Company in the United States District Court for Delaware a decision has recently been rendered by Judge Morris which sustains the claim of infringement advanced by the Locomotive Stoker Company under its Street Patent No. 1,130,443. Claims 1 and 2 of this patent were urged and both of them were held valid and infringed by the Elvin Stoker. These claims read as follows:

1. In a locomotive, the combination with the boiler furnace and its firing door of a mechanical stoker apparatus mounted on the locomotive and comprising a fuel receptacle below the firing door, an elevator for conveying the fuel from said receptacle

to a point above the level of the fuel bed, and means for delivering the fuel therefrom into the furnace.

2. In a locomotive and tender, the combination with the boiler furnace of a mechanical stoker apparatus mounted on the locomotive and comprising a fuel receptacle below the firing floor, means below said floor for delivering fuel from the tender into said receptacle, an elevator for conveying the fuel from said receptacle to a point above the level of the fuel bed, and means for delivering the fuel therefrom into the furnace.

Judge Morris also decided that the Gee Patent No. 1,082,419, which was involved in this suit, was not infringed, and dismissed the bill as to it. The Elvin Mechanical Stoker Company states that it will take an appeal from the decision, as to the Street patent.

Program of Purchases and Stores Meeting

The program of the third annual meeting of Division VI—Purchases and Stores, American Railway Association, which will be held at the Hotel Traymore, Atlantic City, N. J., June 19, 20 and 21, is as follows:

MONDAY, JUNE 19

Opening exercises, including addresses by R. H. Aishton, president, American Railway Association; W. G. Besler, first vice-president, American Railway Association; Elisha Lee, vice-president, Pennsylvania System, Eastern Region; and by the chairman of the Division, H. E. Ray, general storekeeper, Atchison, Topeka & Santa Fe.

Reports of the following committees:
General committee.

Subject 1, Stores Department Book of Rules.

Subject 2, Classification of Material.

Distributing and Accounting for Gasoline, by L. V. Hyatt.

TUESDAY, JUNE 20

Reports on

Subject 4, Material Accounting and Mechanical Facilities.

Subject 21, Unit Piling of Materials and Numerical Numbering System (moving picture illustration of unit piling).

Subject 16, Supply Train Operation.

Subject 10, Scrap Classification—Handling and Sales.

Subject 12, Purchasing Agents' Office Records.

Subject 3, Reclamation of Material.

Inventories, by D. C. Curtis.

WEDNESDAY, JUNE 21

Reports on

Subject 13, Forest Products.

The Need of a Sinking Fund to Care for Deterioration, Obsolescence and Other Losses Incidental to the Handling, Use and Distribution of Materials, by H. H. Laughton.

Subject 15, Buildings and Structures and Facilities.

Office Routine in Purchasing and Stores Departments, by E. W. Thornley.

Stationery, Including Repairs to Typewriters, by C. B. Tobey.

Educating Employees of the Store Department for Their Duties, by V. S. McKelligon.

The Human Equation in Railway Service of Supply, by M. J. Wise.

Subject 19, Fuel Conservation Joint Committee.

Report of Memorials Committee

Election of officers.

The meetings will convene sharp at 9:00 a. m. Morning sessions only will be held, in order that the members may have ample opportunity for visiting the exhibits on Young's Million Dollar Pier.

"Prosperity Special" Attracts Crowds

The "Prosperity Special," the train of 20 monster locomotives (reported in the *Railway Age* of June 3) which was sent from the Baldwin Locomotive Works, Eddystone, Pa., on May 26, to the Southern Pacific Company, reached East St. Louis, Ill., on schedule and is now on the second lap of its journey which will end at Corsicana, Tex., where the locomotives will be turned over to the Southern Pacific. In Pennsylvania and Ohio, along the route followed by this half-mile train, thousands of men, women and children including state and city officials, school

teachers and students, members of chambers of commerce, boards of trade, manufacturers, etc., were on hand to see the train as it went by. At Mansfield, Ohio, the train stopped a half hour while the Chamber of Commerce, manufacturers and school children in a body conducted a review. At Fort Wayne, the engines were placed at Schiney Park where a grand stand and music pavilion had been erected. Here the president of the Indiana Chambers of Commerce addressed 4,000 people. At Indianapolis the locomotives stood at the passenger station over the week end and a "prosperity" celebration was held at which Governor McCray of Indiana and former Senator A. J. Beveridge of that state spoke. Similar celebrations occurred at numerous other stops. At St. Louis the train was transferred from the Pennsylvania to the St. Louis Southwestern. A luncheon was served on Tuesday to railroad officials, state and city authorities and leading manufacturers, following which motion pictures were taken of these men in official review of the train. The train left East St. Louis on June 7 and travelled by the main line of the Cotton Belt through Jonesboro, Ark., Pine Bluff, and Texarkana. It is scheduled to arrive at Corsicana on June 12.

April Earnings 3.93 Per Cent

The railroads in April had a net operating income of \$50,256,800 which on an annual basis represented a return of 3.93 per cent on their tentative valuation, according to reports filed with the Interstate Commerce Commission. In April, last year, their net operating income amounted to \$29,856,600, or at the annual rate of return of 2.33 per cent, while in March this year it was \$83,511,400, or 3.83 per cent.

The tabulations are based on reports filed by 201 Class I railroads, having a total mileage of 236,167 miles.

Operating revenues in April totaled \$416,853,600, or 3.8 per cent less than for the same month last year; operating expenses \$336,178,400, or 10½ per cent reduction.

Fifty-nine roads—28 in the Eastern district, 2 in the Southern and 29 in the Western—had operating deficits in April. In March there were 36.

For the first four months this year, the net operating income of the railroads totaled \$211,278,394, compared with \$57,408,900 during the same period last year. This is at the annual rate of return of 4.36 per cent, compared with 1.18 per cent during the first four months in 1921.

By districts the operating revenues for April were: Eastern \$206,104,100, a reduction of 2.8 per cent; operating expenses \$165,773,700, a reduction of 9.4 per cent; net operating income \$26,607,700, or at the annual rate of 4.42 per cent.

Southern, operating revenues, \$57,571,000, an increase of 1.1 per cent; operating expenses, \$43,875,900, a decrease of 12.3 per cent; net operating income, \$9,712,300, or at the annual rate of return of 5.62 per cent.

Western, operating revenues, \$153,178,300, a decrease of 6.9 per cent; operating expenses, \$126,528,770, a decrease of 11.1 per cent; net operating income, \$13,936,700, or at the annual rate of return of 2.76 per cent.

New Merger of Three Steel Companies

Announcement is made of the adoption of a plan by which the properties of the Midvale Steel & Ordnance Company, the Republic Iron & Steel Company, and the Inland Steel Company will be unified in the ownership of the Midvale Steel Company whose name will be changed to the North American Steel Company, or some other appropriate name. The terms of the plan are as follows: All existing obligations of the three companies are to be assumed by the unified company. Existing preferred and common stocks will be changed into preferred and common stocks of the unified company. The new preferred stock is to have a par value of \$100 per share, is to be 7 per cent cumulative is to be redeemable at \$115 per share and accrued dividends, and is to be convertible for twelve years into new common stock at the rate of five shares of new common for four shares of new preferred. The common stock is to be without par value.

All assets of the three companies are to be owned by the unified company, except the Nicetown plant (the armor-making, ordnance and forging plant) of the Midvale Steel Company, which is to be transferred to a separate company with a capital of 500,000 shares without par value.

Participation in the new stock will be as follows:

Under the plan Midvale Company stockholders are to receive 75 per cent in new common stock and 25 per cent in stock of the company formed to take over the Nicetown plant.

Republic Iron & Steel preferred stockholders are to receive dividends in cash up to the date when the new preferred dividend begins to accrue, and 100 per cent in new preferred stock.

Republic Iron & Steel common stockholders are to receive 170 per cent in new common stock.

Inland Company stockholders are to receive 25 per cent in new preferred stock, which is to be purchased from them at \$95 per share, and 70 per cent in new common stock.

It is intended to provide \$20,000,000 additional cash working capital by the sale of common stock. Negotiations are pending for the acquisition of other properties, but, irrespective of the outcome of these negotiations, Midvale, Republic Iron & Steel and Inland propose to proceed with the plan. Messrs. Kuhn, Loeb & Co. have agreed to act as bankers for the plan.

A statement was subsequently sent to the stockholders of three companies, in part as follows: It is proposed that the Midvale and Inland companies will consolidate and merge and take the name North American Steel Corporation. This corporation, hereinafter called the company, will acquire, subject to its liabilities, the assets of the Republic Company. Before the unification of the properties, Midvale will place its Nicetown plant and certain assets and liabilities connected with the operation of it in a separate corporation, stock of which will be distributed pro rata among the stockholders of the Midvale company, as hereinafter stated. This separate corporation will thereafter continue as a separate enterprise for the manufacture of the ordnance, armor plate and special steel products to which it is adapted.

Upon the consummation of the plan, the issued capital will be as follows: Bonds and other fixed charge obligations, \$79,173,500; new preferred stock of \$100 par value, \$50,331,475; shares of new common stock with a par value of \$3,309,612.

The \$79,173,500 bonds and fixed charge obligations will consist of \$60,599,500 bonds and guaranteed obligations of the Midvale Company, or its subsidiaries; \$13,357,000 bonds and other obligations of the Republic Company or its subsidiaries; and \$5,217,000 bonds and other obligations of the Inland Company, all of which, in addition to the other liabilities of the three corporations, are to be assumed by the company.

The \$50,331,475 preferred stock is to be 7 per cent cumulative and is to be convertible into 1,934,000 shares of common stock at the rate of four shares of preferred stock for five shares of common. It is to be redeemable at the option of the company at 115 per cent and accrued dividends. Of the amount to be presently issued, \$25,000,000 par value is to be issued to provide in part for the acquisition of the properties of the Republic Company, and \$25,331,475 par value is to be issued and the proceeds thereof, amounting to \$24,064,901, is to be paid by the company to the stockholders of the Inland Company.

The 3,309,612 shares of no par value common stock are to be issued as follows: To Midvale shareholders, 1,500,000 shares; to provide in part for the acquisition of the properties of Republic Iron & Steel Company, 510,000 shares; to inland shareholders, 709,281 shares; to be sold for cash, 599,331 shares.

On completion of the plan, each holder of one share of stock of Midvale Company will be entitled to receive: (1) Three-fourths of a share of the new common stock; and (2) one-fourth of a share of stock of the corporation which is to take over the Nicetown plant. Each holder of one share of stock of the Inland Company will be entitled to receive: (1) \$23.75 in cash, and (2) seven-tenths of a share of the new common stock. Each holder of one share of stock of the Republic Company will be entitled to receive: (1) with respect to each share of preferred stock, one share of new preferred stock and an amount of cash necessary to provide for the then unpaid dividends on such preferred stock of the Republic Company; (2) with respect to each share of common stock, one and seven-tenths shares of new common stock.

It is intended that a syndicate will be formed to provide for the cash requirements of the plan, including the provision of \$20,000,000 additional cash working capital, which will make the total working capital of the company over \$100,000,000.

Messrs. Kuhn, Loeb & Co. have agreed to act as bankers for the plan.

The plan contemplates that the company will sell to Mr. Thomas L. Chadbourne, for services rendered, 25,500 common shares at \$10 per share, and to Messrs. Kuhn, Loeb & Co., 59,500 common shares at \$10 per share.

At the consummation of the plan, the fixed charges of the company will amount to \$3,913,085 per annum (which is about 74 cents per ton of rated input capacity) and the preferred stock dividends to \$3,253,203 per annum (which is about 67 cents per ton of rated input capacity). The total rated input capacity of the company will be 5,249,000 tons per annum.

The book value as of December 31, 1921 (which is far below the present replacement figures) of total net assets of the Midvale, Republic and Inland companies, including the \$20,000,000 new cash working capital (but excluding the Nicetown plant) totals about \$284,000,000.

The earnings of these three companies (exclusive of the Nicetown plant earnings) applicable to dividends on the preferred and common stock, that is, net of the deduction of bond and other interest, federal and other taxes and adequate depreciation, as compiled from the annual accounts for the ten years ending December 31, 1921, averaged \$20,462,248 per annum and were as follows:

1912.....	\$7,435,421	1917.....	\$60,257,399
1913.....	10,164,892	1918.....	34,598,221
1914.....	3,799,545	1919.....	16,612,487
1915.....	13,702,110	1920.....	22,429,534
1916.....	52,595,325	1921.....	(Loss) 11,552,446

Since the year 1916 the three companies have expended more than \$120,000,000 for improvements and additional facilities, greatly increasing capacity and reducing operating costs so that the earnings reported for the past ten years do not fully reflect the earning power of the three companies as now situated.

Traffic News

The Southern Pacific reports the shipment from San Francisco for New York on June 4, of a trainload of silk, 351 tons, en route from Japan. This silk is valued at \$5,600,000, and occupies 19 cars.

Senator Capper of Kansas has introduced in Congress a bill to repeal Section 28 of the Jones merchant marine act, which provides that preferential rates by railroad on export and import freight shall be restricted to traffic carried on the ocean by American vessels. The Shipping Board is now holding hearings in various parts of the country regarding the method of enforcement of this provision of the law.

The Federal Sugar Refining Company of New York has entered suit in the Hudson County Supreme Court at Jersey City, N. J., against the Lehigh Valley Railroad to recover \$611,331 for sugar lost in the Black Tom explosion and fire of July 31, 1916. The refining company contends that the railroad was negligent in allowing the sugar to be stored at Black Tom when it was known there was danger of an explosion.

The movement of coal from the mines on the Cumberland Valley division of the Louisville & Nashville, which has been very heavy since the beginning of the countrywide strike in the bituminous mines, broke all records on May 29, the number of cars sent to Cincinnati on that day totaling 1,229. In normal times the number of cars loaded daily at the mines on the Cumberland Valley division is about 800.

Coastwise steamship lines operating between New York and Gulf of Mexico ports expect a lull in freight until July 1. These lines, while carrying freight generally at a lower rate than do the rail carriers, are similarly affected by the cut and shippers who ordinarily maintain a steady flow of commodities will probably hold off until the new rates become effective. After July 1, according to a representative of one of the larger coastwise lines, there is prospect of a very large business. Representatives in the south have been sending excellent reports as to prospects for the summer and fall business.

Observation cars are to be restored on August 1 on the fastest limited trains of the Pennsylvania System running between New York, Philadelphia, Baltimore and Washington on the east, and Chicago and St. Louis on the west. These cars were discontinued as a war measure in December, 1917. The trains are the Broadway Limited, east and west bound, the St. Louisan, and the New Yorker. Observation cars will be continued in service until December 1, when they will be withdrawn for the winter. A similar improvement is announced for the Twentieth Century Limited, of the New York Central.

Coal Production

The ninth week of the coal strike (May 29-June 3) will show a decrease in production, largely because of the observance of Memorial Day, according to the Geological Survey. The returns so far received point to an output of between 4,550,000 and 4,750,000 tons. Production of anthracite remains practically zero.

For the eighth week (May 22-27) complete returns indicate an output of 4,856,000 tons of bituminous coal and 10,000 tons of anthracite.

Loadings on Monday of the ninth week were 15,082 cars, the largest for any Monday since the strike began. Following is the daily record:

	1st week	5th week	7th week	8th week	9th week
Monday	11,445	11,598	13,366	14,772	15,082
Tuesday	11,019	12,160	12,830	15,085	11,142
Wednesday	11,437	12,861	13,442	14,677	15,067
Thursday	11,090	12,487	13,445	14,573	13,823
Friday	11,296	12,778	14,036	15,202
Saturday	8,898	11,265	12,357	12,662

No great change in the number of men on strike has yet occurred. Production is increasing very slowly in the Connells-ville region, and more rapidly in southeastern Kentucky and Tennessee.

Commission and Court News

Interstate Commerce Commission

The Interstate Commerce Commission has issued a decision finding rates on grain, grain products, hay and straw and related articles taking the same rates or rates basing thereon from points in Oklahoma to points in Texas to be unreasonable and unduly prejudicial and it has prescribed a scale of reasonable and non-prejudicial rates.

The commission has suspended from June 1 until September 29 the operation of schedules, which propose increases in rates on hosiery from Beaver Dam and Waupun, Wis., to Ohio River points, Elkhart, Indianapolis and Terre Haute, Ind. The present rate to Ohio River points is 70 cents per hundred pounds. The proposed rates range from 101½ to 128½ cents per hundred pounds.

Potato Embargo Cancelled

Division 5 of the Interstate Commerce Commission, Commissioners Aitchison and Potter sitting, held an informal conference on June 5 with representatives of the Pennsylvania Railroad, of the Port of New York Authority, and other New York interests upon a protest filed by the Port of New York Authority against an embargo issued by the Pennsylvania Railroad against the delivery of potatoes at Pennsylvania stations in New York, Jersey City and Brooklyn, to go into effect at midnight on June 5. A similar embargo was levied about two weeks ago and was cancelled, before becoming effective, at the request of New York interests.

After full discussion Division 5 expressed the opinion that the embargo ought not to be retained without further conference because it would seriously disrupt long established conditions. It suggested that the embargo be cancelled and that suggestion was accepted by the Pennsylvania under protest.

The commission's director of its Bureau of Service, John C. Roth, will investigate the situation on the ground.

The embargo was ordered because of serious congestion at the principal delivery piers, the total number of cars of potatoes received by the Pennsylvania at New York in the month of April having been more than 5,000. To relieve this congestion the road has just established a new delivery yard at Kearney, N. J., about five or six miles west of New York, and had requested consignees to send their trucks to that place for their freight. Potato merchants, in their protest, complain that such a change in the place of unloading would be very costly to them, and express doubts as to whether the ferryboats could accommodate the large number of trucks which would be necessary to move their wagons. They complain also that the railroad is offering no reduction in the transportation rates while it would shorten its haul about five or six miles. The Port Authority is trying to provide additional pier room for delivery of perishable freight, so as to relieve the congestion at piers 27, 28 and 29.

Court News

Application of Florida Fencing Law

Injury to animals from failure to fence makes the railroad liable under the Florida fencing statute only when the injury is inflicted by the operation of the company's engines, cars or trains. The statute does not apply to an injury to a horse whose foot was caught in a defective switch connecting a main and a side track while the horse was attempting to cross the tracks—*S. A. L. v. Coxeter* (Fla.), 90 So. 469.

United States Supreme Court

The Supreme Court of the United States on June 5, at the request of counsel for the Southern Pacific, granted leave to file within (4) days a petition for a rehearing in the Southern Pacific-Central Pacific merger case.

Labor Board Decisions

Pay of Foremen While Gang Is Laid Off

A case arose on the Buffalo, Rochester & Pittsburgh in connection with an extra gang that was laid off one day each week, the foreman contending that he was exempt from deductions from his monthly pay on this account. The decision of the board is that if the foreman is compensated on a monthly basis for all service rendered, including time worked in excess of the regular working hours or days assigned, he should receive not less than the monthly rate so established, provided he was ready and available. If on the other hand the foreman is compensated on the monthly basis but is paid overtime for work performed after eight hours and for all work performed on Sundays and holidays, no valid claim can be made for time lost under the provisions of Section 8 Article V of the agreement.—*Decision No. 896.*

Back Pay for State Holiday

Members of the Brotherhood of Railway and Steamship Clerks, etc., employed by the Southern Pacific at freight stations in San Francisco, requested back pay for "Admission Day," September 9, 1921, on which date they were notified not to work, the day having been proclaimed a holiday by the governor of California. The Labor Board quoted rules 56 and 64 of the clerks' national agreement in which seven holidays are listed of which either the employees or the employer may take advantage, unless other holidays are mutually agreed upon. The Board believed that the carrier would have been well within its rights in seeking the employees' concurrence in treating Admission Day as a holiday. However, in the absence of any such agreement, the Board decided that the daily-rated employees involved in this dispute are entitled to pay for that day.—*Decision No. 960.*

No Overtime for Employees Required

to Sleep on the job

A case was recently presented to the Labor Board in which two employees of the American Railway Express Company requested overtime pay for sleeping in the express office each night for a period of approximately six months. The employees say that they were required to spend the nights in the office of the company in question at Rouses Point, N. Y., after the expiration of their regular day assignment. They were required to report every night at 11:30 p. m. to sign for all valuables which were to be delivered to morning trains and to remain at the office in charge of fires, lights, etc., until 6 a. m. the time their regular tour of duty commenced. The employer contended that for a number of years it had been the custom to have employees a certain offices remain in the building at night in the capacity of guards. Suitable and proper quarters are furnished free of charge to employees agreeing to this arrangement. The carrier further stated that this proposition was fully understood by all employees who availed themselves of these sleeping quarters. The Railroad Labor Board denied the claim of the employees.—*Decision No. 907.*

Train Dispatcher Ordered Reinstated

A case was brought before the Labor Board by the American Train Dispatchers' Association requesting the re-instatement of a dispatcher at Pine Bluff, Ark., who had been dismissed by the St. Louis Southwestern on September 27, 1920, for alleged responsibility in connection with a failure to issue a slow order and which failure was said to have resulted in a derailment. Testimony developed that about 8 p. m. September 13, 1920, a message was filed at Camden, Ark., directing the issuance of a slow order requiring all trains to reduce speed to 10 miles an hour, three to five poles south of M. P. 325. It was claimed that the message was not transmitted to the relay office at Pine Bluff until 10:35 p. m. and that it lay in the latter office until 11:45 p. m. when it was delivered to the night chief dispatcher. It was then claimed that the message was placed before the second

trick dispatcher (who was dismissed from the service) or the third trick man. The second trick dispatcher consistently denied having seen it and the night chief did not state definitely that he placed the message before the second trick dispatcher. The carrier claimed the Labor Board had no jurisdiction in this dispute but the board decided that it had, and ordered the second trick dispatcher to be re-instated with seniority rights unimpaired; and that he be reimbursed for pay lost, less any amount earned in other employment.—*Decision No. 967.*

Sheet Metal Workers in M. W.

Department Included in Shop Crafts

The Federated Shop Crafts brought before the Labor Board the cases of two employees in the maintenance of way department of the Northern Pacific who were working under the master carpenter, contending that these men should be classified as sheet metal workers and should be represented by the federated shop crafts. Both men were rated as bridge carpenters, one doing tinner's work and the other pipe work in connection with water service. The road contended that these employees performed other mechanic's work as it was assigned to them from day to day. The Labor Board ruled that these men are sheet metal workers in the sense in which this term is commonly understood, and that they come properly under the jurisdiction of the Railway Employees' Department of the Federated Shop Crafts. Dissenting opinions were filed by J. H. Elliott and Horace Baker. In the dissenting opinions it is pointed out that these men have been employed in the bridge and building department for several years. The fact was also emphasized that the character of the work there and of that done in the locomotive department are entirely different and that the line of demarcation between employment in these departments has long been kept distinct. In their opinion the ruling of the Labor Board will create confusion between the work of the two departments.—*Decisions 946 and 947.*

Rules Can Be Revised Only by Agreement

In June, 1921, the Chicago Great Western announced its intention of abrogating the existing rules governing its clerical and station employees, which intention was carried out the following month. The employees state that a majority of their number are members of the Brotherhood of Railway and Steamship Clerks, etc.; that the rules promulgated were not agreed upon by the railroad and representatives of the employees, or established in accordance with the provisions of the Transportation Act; and that a conference was held between representatives of the employees and the management which the latter soon terminated with a statement that it did not propose to have another signed agreement similar to that of March, 1920. In the original submission to the Labor Board, the employees requested that the rules of the clerks' national agreement be restored, but at the hearing this request was amended to the restoration of rules of the agreement dated March 30, 1920, pending a conference. The carrier contends that it has never had any contract relations with the brotherhood in question, nor does it admit that such an organization has the privilege to legislate or make agreements for all or even a majority of the employees concerned; that a committee from the brotherhood stated in conference that it was prohibited from consenting to any changes in the existing rules, except those in the form of further concessions from the carrier; and that the committee further refused to approve a continuation of the rules that had been in effect since January 1, 1920, in the form that the management was willing to confirm, thereby forcing the latter to publish the new set of rules; which it believed to be just and reasonable. The carrier further contended that since the publication of its new set of rules there has been no indication on the part of the employees that the rules incorporated therein are unjust or unreasonable and that, therefore, a dispute within the meaning of the Transportation Act does not exist between the parties in question. In its decision the Labor Board stated that the carrier acted without authority when it published a new set of rules in lieu of the agreement of March 30, 1920, and that the matter should have first been referred to and decided upon by the Labor Board. Therefore the agreement of March 30, 1920, is still effective until changed by an agreement with the employees in the manner provided by law.—*Decision No. 963.*

Foreign Railway News

The American Monument to Brazil

Brazil will celebrate the centennial of her freedom by an international exposition to be held at Rio de Janeiro beginning September 1. The principal nations of the world will be officially represented, the United States government having appropriated \$1,000,000 for America's exhibits and official expenses. In connection with the exposition American friends of Brazil—especially those who have had commercial dealings there—are planning to give a monument to the country as a token of friendship. This monument is shown in the accompanying illustration. The large figure is called "Amicitia," the Latin word for friendship, typifying

"Amicitia"

the good feeling which exists between Brazil and our country. In one hand she bears a laurel wreath and in the other the flags of the two nations. The smaller figures represent four patriots—Washington and Lincoln of our country and Jose Bonifacio and Rio Branco of Brazil. The committee looking after the details of the presentation of this monument is made up of such men as Samuel Vaulain, C. M. Muehnic, Judge Elbert H. Gary, Newcomb Carlton, Kermit Roosevelt and others. Americans who wish to be represented among the contributors toward this project may make the necessary arrangements through John L. Merrill, president of All America Cables, Inc., 89 Broad street, New York.

Equipment and Supplies

Locomotives

NEW YORK, CHICAGO & ST. LOUIS contemplates buying about 10 locomotives.

THE CENTRAL OF BRAZIL has ordered one Pacific type locomotive from the American Locomotive Company.

THE CENTRAL OF GEORGIA has ordered 2 Mountain type locomotives from the American Locomotive Company.

THE MISSISSIPPI CENTRAL is having one locomotive repaired in the shops of the American Locomotive Company.

THE WESTERN MEAT COMPANY (Swift & Co., Chicago) has ordered one 0-6-0 type locomotive from the American Locomotive Company.

THE BOYNE CITY LUMBER COMPANY, Boyne City, Mich., has ordered one 2-6-2 saddle tank locomotive from the American Locomotive Company.

Freight Cars

THE MISSOURI PACIFIC is inquiring for 250, 50-ton ballast cars.

THE PHILADELPHIA & READING contemplates buying about 1,000 gondola cars.

THE WESTERN PACIFIC is said to be considering the purchase of a large number of refrigerator cars.

THE ST. LOUIS SOUTHWESTERN is reported to be contemplating purchasing new equipment next month.

THE ASSAM-BENGAL RAILWAYS (India) are inquiring through the car builders for 250, 12-ton box cars.

THE INDIAN STATE RAILWAYS are inquiring through the car builders for prices on 250 four-wheel steel box cars.

THE CHICAGO, MILWAUKEE & ST. PAUL is reported to be contemplating the early purchase of 2,000 refrigerator cars.

THE CHICAGO GREAT WESTERN is inquiring for 500 box cars and will have repairs made to 527 miscellaneous type box cars.

THE UNITED STATES METALS REFINING COMPANY has ordered 7 dump cars of 20 tons' capacity from the Magor Car Corporation.

THE WARASH is now inquiring for 1,500, 40-ton steel under-frame automobile box cars; also for 2,050, 50-ton gondola car bodies.

THE NASHVILLE, CHATTANOOGA & ST. LOUIS is inquiring for 500 box cars and 150 stock cars of 40 tons' capacity and for 100 flat cars of 50 tons' capacity.

THE NEW YORK, CHICAGO & ST. LOUIS will receive bids until June 12 for 1,000 single sheathed automobile cars and for an alternative of 1,000 double sheathed box cars.

THE BALTIMORE & OHIO, reported in the *Railway Age* of May 27 as inquiring for 500 box car bodies, has ordered 1,000 box car bodies from the Standard Steel Car Company.

THE ROXANA PETROLEUM CORPORATION, St. Louis, Mo., has ordered 25 insulated tank cars of 10 tons' capacity from the General American Tank Car Corporation. The cars will hold 8,000 gal.

THE PENNSYLVANIA SALT MANUFACTURING COMPANY, Philadelphia, has ordered 10 chlorine tank cars of 15 tons' capacity equipped with 40-ton trucks, from the General American Tank Car Corporation.

THE CHEFFAQUE & OHIO, noted in the *Railway Age* of May 13 as inquiring for 500 ventilated box cars of 40 tons' capacity, has ordered this equipment from the Newport News Shipbuilding & Dry Dock Company.

THE ERIE, reported in the *Railway Age* of May 27 as asking for prices on the repair of about 3,000 cars, will have 1,000 box cars repaired by the Standard Steel Car Company and 500 box cars repaired by the Illinois Car Company.

Passenger Cars

THE CANADIAN NATIONAL has ordered two 30-passenger gasoline motor cars from Ledoux, Jennings, Ltd., Montreal.

THE FRANKFORD ELEVATED RAILWAY, Philadelphia, Pa., reported in the *Railway Age* of May 6 as asking for bids on 50 steel passenger cars, has ordered this equipment from the J. G. Brill Company.

THE ATLANTIC COAST LINE, reported in the *Railway Age* of May 6 as inquiring for 20 express cars and 10 coaches, has ordered this equipment from the Bethlehem Shipbuilding Corporation, Harlan Plant.

Track Specialties

THE MISSOURI PACIFIC is inquiring for 2,500 kegs of heat treated track bolts.

THE CHICAGO ROCK ISLAND & PACIFIC has placed an order with the Rail Joint Company for 10,000, 100 per cent joints.

THE MISSOURI, KANSAS & TEXAS is inquiring for 800,000 tie plates, 300,000 of which are for 66-lb. rails and 500,000 for 85 to 90-lb. rails.

Machinery and Tools

THE DETROIT UNITED RAILWAY has ordered a 36-in. lathe from the Niles-Bement-Pond Company.

THE SOUTHERN PACIFIC has ordered a 15-ton crane with 75 ft. span from the Niles-Bement-Pond Company.

THE ILLINOIS CENTRAL, in addition to its inquiry for 58 machines as reported in the *Railway Age* of June 3, is now inquiring for 17 lathes of various types, eight draw cut-shapers, eight grinders, three drill presses, three milling machines, two threading machines, two driving wheel presses, one bolt heading and forging machine, one radial drill and one combination punch and shear.

Miscellaneous

THE CHICAGO & NORTH WESTERN will receive bids until June 23 for 493 barrels of machine oils of various brands, 50,000 gallons of burning oil, approximately 200,000 gallons of kerosene and 63 cases of polar cup grease, all of which are to be supplied for a period ending December 31 of this year.

Signaling

THE DELAWARE, LACKAWANNA & WESTERN has placed an order with the Union Switch & Signal Company for automatic block signaling and electro pneumatic interlocking equipment required in connection with the East Orange elevation work now under construction between Newark, N. J., and Orange. On the three track section the middle track will be signaled for movements in both directions. The Roseville avenue mechanical interlocking will be superseded by an electro-pneumatic plant of 31 levers. All main line signals are to be color-light.

THE CHICAGO UNION STATION'S block and interlocking signals to be installed by the Union Switch & Signal Company, as reported in the *Railway Age* of May 20, page 1197, will include altogether 115 signals. All signals are to be of the position light type. The electro-pneumatic interlocking machine at the south approach will have a frame for 151 levers, 69 levers for 42 switches and 38 double slips with M. P. frogs, and 52 levers for 88 signals. At the north approach there will be a 95-lever frame; 41 levers for 39 switches and 15 double slips and 33 levers for 57 signals. The machines will have lever lights and illuminated track models of the spot-light type. Route locking is to be provided throughout with sectional release, and stick locking for all signals. All track circuits will be alternating current. The signal company will also install a complete train starting system.

Supply Trade News

A. L. Pearson, secretary of Mudge & Co., Chicago, has been appointed assistant to the president in addition to his secretarial duties.

A. D. Halporn, who has been associated with the Philadelphia sales staff of the **Combustion Engineering Corporation**, New York, for some time, has now become a member of its New York sales force.

C. E. Meyer has been placed in charge of railway sales of the railroad department recently organized by the **Parish & Bingham Corporation**, Cleveland, Ohio. This new department

has been formed for the purpose of manufacturing pressed steel car parts and other railway specialties. **P. O. Krehbiel**, a former engineer of the same corporation, has been appointed chief engineer of the railroad department. Mr. Meyer started in the railway supply business in 1911 with the **National Malleable Castings Company** at Cleveland. He left the employ of that company in February, 1913, to enter the stores department of the **Damascus Brake Beam Company**, Cleveland. With the exception of

eighteen months in the military service in this country and in France, he has been in the continuous service of the latter company in its purchasing, operating and sales departments until his recent appointment as above noted.

Harry B. Snyder, who recently returned from the foreign branch service of the **Baldwin Locomotive Works**, has been appointed assistant to the president of the **Pilliod Company**, 30 Church street, New York City.

The **United Alloy Steel Corporation**, Canton, Ohio, recently bought the **Canton Sheet Steel plant**. The plant will have a capacity of around 60,000 tons of ingots a month. This company's products now include common and alloy steel, blooms, slabs, billets, plates, bars, rods, sheets and anti-corrosive **Toncan iron**.

Frank Phalen, manager of sales of the **New York district** for the **Republic Iron & Steel Co.**, for the past 15 years, has resigned to associate himself with his brother **Charles G. Phalen** in the firm of **Phalen & Co.**, 342 Madison avenue, New York City. This firm handles railway equipment and specialties, also iron and steel products.

The **Firth-Sterling Steel Company**, McKeesport, Pa., has opened a branch office in **Los Angeles, Cal.**, at 336 East Third street, under **E. S. Jackman & Co.**, who will look after all of this company's business west of **Pittsburgh**. **William Ely Nelson**, Pacific Coast representative, is in direct charge of the work. **Fred J. Kuhlman**, **L. W. Mead** and **C. D. Moore** will assist Mr. Nelson.

Ralph Templeton, for several years manager of the **Whitman & Barnes Manufacturing Company's** New York office and store, will on **July 1** assume an important position in the company's executive offices in **Akron, Ohio**. Mr. Templeton entered the employ of the **Whitman & Barnes organization** in 1898 and has served it in various capacities continuously since that time. He was at first in the **Akron office**, then **Detroit representative**, and since 1910 manager of its **New York store**.

Joseph H. Perry, Jr., has been appointed **Philadelphia representative** of the **Edgewater Steel Company**, Pittsburgh, Pa. Mr. Perry will have his office in the **Finance Building**. He was for a number of years with the engineering department of the **Pennsylvania Railroad** at Pittsburgh. **M. Roy Jackson**, who was formerly vice-president in charge of the **Philadelphia office**, has resigned.

The **Pittsburgh Testing Laboratory**, Pittsburgh, Pa., has opened a sales office with a complete inspection bureau, at 1864 **Railway Exchange building**, **St. Louis, Mo.**, and has appointed **Colonel N. C. Hoyles** as district manager. He is a graduate of **Queens University**, and took a post-graduate course at the **University of Toronto**. In 1908 he entered the service of this company as an inspector at its **Birmingham office** and in 1912 was promoted to manager of that office. Two years later he was transferred to the **Vancouver office**; and at the breaking out of the war, he entered the service of the **Canadian Army**, serving with the **British Pioneer Engineers Corps** in France. He received decorations from both the **French and British governments**, and upon his release from the Army in 1919, he was appointed assistant sales manager at **Cleveland**. Since that time he has been consecutively assistant sales manager at **New York** and manager at **Cincinnati**, until his appointment to the new position above mentioned.

W. B. Murray, chief engineer of the **Miller Train Control Corporation**, with headquarters at **Danville, Ill.**, has been elected vice-president of that organization in addition to his present office. Mr. Murray was born at **Dunkirk, N. Y.**, on **August 5, 1875**. He entered railroad service in 1893 and was successively a fireman and engineer of the **Portland Mt. Tabor Railway**, **Portland, Ore.**, until 1897. From that date until 1899 he was engaged in engineering studies at **New Haven, Conn.** In 1900 he entered the service of the **Hill & Miller Electrical Company**, **Washington, D. C.**, as construction engineer. Two years later he became chief engineer of **Palais Royal** and in 1905 he

was general manager of the **Murray Engineering & Construction Company**, while from 1907 to 1911 he was a consulting engineer. He first became connected with the **Miller Train Control Corporation** in 1909, and since 1911 he has devoted his entire time to this organization.

Federal Trade Commission Opposes Steel Merger

The **Federal Trade Commission** has issued a formal complaint against the **Bethlehem Steel Corporation** and the **Lackawanna Steel Company** charging that the merger of the two companies will constitute an unfair method of competition in that it contains a dangerous tendency unduly to hinder competition and restrain commerce. The commission has reported to the Senate that the details of the plan are being carefully followed and so soon as the commission is in possession of sufficient information it will make a further report as to the proposed merger of other steel companies.

Obituary

I. B. Lesh, general superintendent of the **Railway Materials Company**, Chicago, with headquarters at **Toledo, Ohio**, died in that city on **May 22**.

Isaac Joseph, who was the founder of the **Edna Brass Manufacturing Company**, **Cincinnati, Ohio**, and its president for over 20 years, died on **May 23**.

W. B. Murray

Railway Construction

AMERICAN RAILWAY EXPRESS.—This company has called for bids for the construction of a brick building at Waukegan, Ill., to cost approximately \$12,000.

BALTIMORE & OHIO.—This company has awarded a contract to the Vang Construction Company, Cumberland, Md., for the construction of a girder bridge at Gary, Ind., to cost approximately \$50,000.

BOSTON & ALBANY.—This company is contemplating the rebuilding of 17 culverts along its line. The company has recently completed a first-aid building at its Allston, Mass., shops, an additional baggage room at Natick, Mass., and additional accommodations for express traffic at Brookline, Mass. Steel trusses to carry air hoists for steel coach work have been installed at the Allston shops and a gas pumping plant has been installed at Charlton, Mass. A new water line and a new steam line have been put in at West Springfield, Mass., and a new tie yard at the same point. A new rest room, locker room and machine shop have been built at North Adams Jct. and a new caller's office and caboose supply store at Rensselaer, N. Y. An additional well has been provided for locomotive water supply at Chatham, N. Y. A new house and pit for a heavy track scale are being installed at Beacon Park yard.

CANADIAN PACIFIC.—This company has awarded a contract to the John Hayman & Sons Company, London, Ont., for the construction of a new freight shed and office building at Windsor, Ont. The office portion of the building will be 40 ft. by 60 ft. and the freight shed portion 40 ft. by 304 ft. The building will rest on concrete foundations and a basement will be provided under the office structure. The trucking and office floors will be finished entirely with hard maple and the roof throughout will be of tar and gravel.

CANADIAN NATIONAL.—This company closed bids on May 31 for the construction of a cast-iron pipe line three miles long at Kindersley, Sask., and for the construction of a four-mile line revision on the Grand Trunk Pacific between Ansell, Alta., and Bickerdike; also for a four-mile connection between the Bashaw and Battle River subdivisions near Camrose, Alta., and for a two-mile connection between the Viking and Battle River subdivisions at Ryley, Alta.

CHESAPEAKE & OHIO.—This company is calling for bids for the construction of a five-stall brick addition to its roundhouse at Peru, Ind., to cost approximately \$30,000.

CHESAPEAKE & OHIO.—This company is calling for bids for the construction of terminal facilities at Peach Creek, W. Va., involving a five-stall engine house addition, a shop and store-room and a power house.

CHICAGO, BURLINGTON & QUINCY.—This company will partially replace this season its bridge over the Platte river near Oreapolis, Neb., with a steel and concrete structure to cost about \$400,000, the steel for which has been ordered from the American Bridge Company. The company has awarded a contract to B. J. Martin, Billings, Mont., for the construction of station extensions at Thermopolis, Wyo., as reported in the *Railway Age* for June 3.

CHICAGO UNION STATION.—This company, which was reported in the *Railway Age* of May 27 as calling for bids for the construction of the first section of the head house of its station along with other work, has awarded the contract for this work to the R. C. Wieboldt Construction Company, Chicago, and is calling for bids for the construction of the superstructure of the power plant.

COLORADO & SOUTHERN.—This company has obtained authority from the Interstate Commerce Commission and will undertake in the near future the construction of an extension of its Wichita Falls and Oklahoma line north from Iyers, Tex., a distance of 13.3 miles, to Waurika, Okla., where a connection will be made with the Chicago, Rock Island & Pacific to provide a shorter

route for traffic into that section of the country tributary to Wichita Falls.

DELAWARE & HUDSON.—This company has awarded a contract to the Roberts & Schaefer Company, Chicago, for the construction of a 500-ton, two-pocket, four-track, automatic electric, reinforced concrete locomotive coaling station and sanding plant at South Junction, near Plattsburg, N. Y., this plant to provide overhead coal crushing facilities and to cost approximately \$50,000.

DELAWARE, LACKAWANNA & WESTERN.—This company has undertaken the elimination of a number of grade crossings on its Black Rock branch.

GREAT NORTHERN.—President Budd of this company is reported to have announced plans to electrify the company's lines in the Rocky mountains, the work probably not to begin until 1924.

GULF PORTS TERMINAL.—The Interstate Commerce Commission, which on August 18, 1921, denied this company's application for a certificate authorizing an extension in Baldwin and Mobile counties, Ala., has reopened the proceeding at the request of the Alabama Public Service Commission and has dismissed the case on the ground that no certificate is required. It appears that the construction of the proposed extension was begun several years ago and that by 1914 the clearing, grubbing and grading on 18 miles from the track end to the east side of Mobile Bay had been done and piles for trestles had been driven. Various delays were encountered which prevented the completion but, the report says, there is nothing to indicate that the construction of the extension was ever definitely abandoned.

ILLINOIS CENTRAL TERMINAL.—This company has awarded a contract to the Great Lakes Dredge & Dock Company, Chicago, for the construction of an earth filled bulkhead to extend 435 ft. into Lake Michigan from the present shore line opposite Twenty-third street and on the center line of the proposed South Park boulevard viaduct, to the property line acquired by its company from the city of Chicago pursuant to its electrification program. This bulkhead to involve the placing of about 100,000 yards of excavation from the lake bottom and to permit in conjunction with an extension to be made by the city the filling in of all submerged property acquired from the city.

ILLINOIS CENTRAL.—This company is asking for bids for the installation of a mechanical hump and track scale, including a scale house and foreman's house, at Centralia, Ill., the work to cost approximately \$30,000.

NASHVILLE, CHATANOOGA & ST. LOUIS.—This company, jointly with the Mobile & Ohio, is receiving bids for a brick and stucco passenger station at Union City, Tenn., to cost approximately \$20,000.

ST. LOUIS-SAN FRANCISCO.—This company has awarded a contract to the T. S. Leake Construction Company, Chicago, for the construction of a passenger station at Jennings, Okla., to cost approximately \$12,000.

YAZOO & MISSISSIPPI VALLEY.—This company is accepting bids for the raising of its freight house at Vicksburg, Miss., including some filling and the placing of concrete team pavements, the total work to cost approximately \$30,000.

THE BOSTON & ALBANY has completed the new subway at the station at Springfield, Mass., and it was put in service on June 5. The subway connects the two stations on the north and south sides of the tracks, and has stairways leading to the three passenger platforms used by the trains at this station. The subway is eight feet in height and ten feet in width, and is constructed as a solid timber box, which has been waterproofed to keep the water out, the water being taken care of by a complete system of drainage below, so that it should be dry at all times. The timber box is plastered on metal lath on the inside, with an air space behind the plaster. The new subway is reached by stairs from each of the three platforms. The stairs are easy—two short flights in each stairway, and are equipped with Aluminum anti-slip treads. The walls and ceiling are of cement plaster and the floor is of asphalt. The subway is lighted by electricity. The tracks are carried over the subway on an independent steel structure, which takes the weight entirely off the subway. The subway was built by the New England Construction Company, Springfield.

Railway Financial News

ATLANTIC COAST LINE.—Asks Authority to Acquire Control.—This company has filed an application with the Interstate Commerce Commission which has been set for a hearing for authority to acquire the Rockingham Railroad, which extends from Gibson to Rockingham, N. C., by purchase of more than 50 per cent of its stock.

CENTRAL RAILROAD OF NEW JERSEY.—Annual Report.—The annual report issued this week shows the following corporate income account for the year ended December 31, 1921:

	1921	1920
Operating revenues	\$52,660,998	\$45,151,049
Operating expenses	43,621,696	47,180,812
Net operating revenue	9,039,301	Def. 2,029,763
Non-operating income	21,652,817	7,421,490
Total income	30,692,118	5,391,727
Tax accruals	3,017,327	2,997,392
Rent for leased roads	2,329,646	1,962,685
Interest on funded debt	2,906,888	2,460,500
Net income	21,336,232	Def. 5,228,451
Dividends	3,841,152	2,743,680
Balance for the year	17,514,080	Def. 5,272,161

*Ten months ended Dec. 31.

CHEESAPEAKE & OHIO.—Annual Report.—The income account for the year ended December 31, 1921, follows:

	1921	1920
Operating revenues:		
Freight	\$67,367,983	\$72,433,294
Passenger	11,739,627	11,814,187
Total operating revenues, including other	83,687,958	90,190,745
Operating expenses:		
Maintenance of way and structures	12,170,021	12,850,938

Railway operating income	14,382,012	9,446,264
Net railway operating income	13,660,926	11,158,326
Corporate net railway operating income	13,660,926	14,259,189
Gross income	14,781,677	16,160,773
Interest on debt	9,691,402	9,953,407
Total deductions from gross income	10,589,075	10,174,314
Net income	4,192,601	5,986,458

CHICAGO & NORTH WESTERN.—Asks Authority for Equipment Trust Certificates.—This company has applied to the Interstate Commerce Commission for authority to assume liability for \$5,250,000 of 15-year, 5½ per cent equipment trust certificates for the purchase of \$7,025,637 of equipment, including 1,250 box cars, 500 stock cars, 500 flat cars, 250 refrigerator cars, 250 gondolas, 300 Hart convertible cars, 20 freight locomotives, 10 passenger locomotives, and 20 switching locomotives. The company expects to invite bids for the certificates and to sell them at not less than 97½.

CHICAGO & WESTERN INDIANA.—New Director.—Franklin G. Robbins has been elected a director to succeed A. E. Wallace.

CHICAGO JUNCTION.—Commission Asked to Modify Order.—The trunk lines entering Chicago that protested against the acquisition by the New York Central of the Chicago Junction and the Chicago River & Indiana have filed a petition with the Interstate Commerce Commission asking for a modification of its recent order authorizing the acquisition, asking the commission to find specifically whether the order was issued under paragraphs 18 to 20 of Section 1, or under paragraph 2 of Section 5 of the Interstate Commerce Act. They also asked a finding as to whether the acquisition involves the consolidation of the carriers into a single system for ownership and operation and object because no certificate of convenience or necessity was included with the report.

CHICAGO UNION STATION.—Asks Authority to Issue Bonds.—This company has applied to the Interstate Commerce Commission for authority to issue and sell \$6,150,000 of first mortgage 5 per cent gold bonds guaranteed by the Chicago, Burlington & Quincy, Pittsburgh, Cincinnati, Chicago & St. Louis and Chicago, Milwaukee & St. Paul. These bonds have been sold subject to the commission's approval at 97.

ERIE.—Annual Report.—The corporate income statement for the year ended December 31, 1921, follows:

	1921	*1920
Operating revenues	\$113,539,098	\$49,066,924
Operating expenses	108,157,156	43,931,676
Net from railway operations	5,381,942	5,135,249
Railway tax accruals	3,738,449	1,204,268

Income balance transferred to profit and loss	766,704	2,210,996
Corporate net profit and loss for 1920	766,705	2,210,996
Net profit and loss—corporate	766,704	1,387,708

ILLINOIS CENTRAL.—Authorized to Issue Common Stock.—The Interstate Commerce Commission has authorized an issue of \$10,929,600 of common stock in conversion of a like amount of preferred stock, the issue of which was authorized by the commission's order of May 23. The preferred stock will contain a provision entitling the holder to convert it at his option into common stock after September 1 on the basis of share for share.

INTERNATIONAL & GREAT NORTHERN.—Operating Study.—See article on another page of this issue entitled "Reorganized I. & G. N. Will Need Much Equipment."

LONG ISLAND.—Authorized to Issue Equipment Trust Certificates.—The Interstate Commerce Commission has authorized this company to assume obligation and liability in respect of \$980,000 of equipment trust certificates in connection with the procurement of 50 passenger cars.

MINNEAPOLIS, ST. PAUL & SAULT STE. MARIE.—Six Months' Guaranty Certified.—The Interstate Commerce Commission has certified the amount of this company's guaranty for the six months' period of 1920 as \$5,127,467, of which \$592,467 was still to be paid.

MISSOURI & NORTH ARKANSAS.—Operation Resumed.—See article on another page of this issue.

MOBILE & OHIO.—Authorized to Issue Equipment Notes.—The Interstate Commerce Commission has authorized an issue of \$366,000 of equipment notes in connection with the procurement of 10 Mikado locomotives.

NEW ORLEANS, TEXAS & MEXICO.—Asks Authority to Acquire Stock.—This company has applied to the Interstate Commerce Commission for approval of a contract to purchase from P. S. Sterling the stock of the Dayton-Goose Creek Railway for \$750,000 and \$250,000 of N. O. T. & M. 5 per cent income bonds.

NEW YORK CENTRAL.—Asks Authority to Issue Bonds.—This company has applied to the Interstate Commerce Commission for

authority to issue \$25,000,000 of refunding and improvement mortgage 5 per cent bonds, series C, to be redeemable by October 1, 1931 at 105, the proceeds to be used to retire a like amount of 10-year, 7 per cent collateral trust gold bonds dated September 1, 1920, thereby reducing the interest charge. It is desired to call the 7 per cent bonds at 105 on September 1. The company is in negotiation with J. P. Morgan & Co. for the sale of the bonds and unless the market changes expects to sell them to net not less than 90.

READING COMPANY.—New Directors.—Samuel M. Curwen, president of the J. G. Brill Company, William A. Law, president of the Pennsylvania Mutual Life Insurance Company, and Ira A. Place, a vice-president of the New York Central, have been elected directors. They succeed Hugh L. Bond, Jr., and Henry Pratt McKeane, deceased, and Albert H. Harris, resigned.

Modification of Dissolution Decree Ordered.—See *Railway Age*, June 3, 1922, page 1306.

An order has been entered by Judges Bufington and Thompson of the United States District Court at Philadelphia permitting the Continental Insurance Company and the Fidelity-Phoenix Fire Insurance Company of New York to withdraw their petitions filed December 9, 1921, to set aside the sale by the Central Railroad of New Jersey of the Lehigh & Wilkes-Barre Coal Company stock to the Reynolds syndicate, under the Reading dissolution plan. The insurance companies had asked leave to withdraw in a motion they filed February 28, 1922. The decree also provides that the Central of New Jersey and representatives of the Reynolds syndicate be given ten days in which to file answer to the Starr petition.

TENNESSEE, ALABAMA & GEORGIA RAILWAY.—Asks Authority to Issue Securities.—This company, which has been organized to take over the property of the Tennessee, Alabama & Georgia Railroad, has applied to the Interstate Commerce Commission for authority to issue \$400,000 of common stock and \$400,000 of preferred stock.

TOLEDO, ST. LOUIS & WESTERN.—Annual Report.—The income account for the year ended December 31, 1921, follows:

	1921	1920
Average miles of road operated	454	454
Operating revenues:		
Freight	\$8,737,449	\$10,766,900
Passenger	365,358	461,017
Total, including other	9,503,970	11,758,921
Operating expenses:		
Maintenance of way and structures	1,531,323	2,317,092
Maintenance of equipment	1,966,428	2,371,601
Traffic	243,932	178,056
Transportation	1,383,736	4,425,344

Total operating expenses	7,319,662	9,492,917
Net revenue from railway operations	2,184,908	2,265,804
Railway tax accruals	338,369	350,150
Railway operating income	1,746,432	1,915,654
Total non-operating income	490,647	2,261,091
Gross income	2,237,079	4,176,283
Interest on funded debt	697,679	*1,146,228
Total deductions from gross income	1,093,088	3,314,807
Net income	1,143,991	361,476
Income applied to other reserve funds	700
Income balance transferred to credit of profit and loss	1,143,290	361,476

*Includes interest on A. & B. sold bonds of 1917, amounting to \$461,080 defaulted.

TOLEDO TERMINAL.—Asks Authority to Issue Bonds.—This company has applied to the Interstate Commerce Commission for authority to issue and sell to its proprietary lines \$321,000 of 4½ per cent first mortgage gold bonds at 91.78.

VIRGINIA & WESTERN.—Asks Authority to Issue Bonds.—This company has applied to the Interstate Commerce Commission for authority to issue \$1,500,000 of first mortgage 5 per cent 50-year gold bonds guaranteed by the Virginian, the proceeds to be used to pay for the construction of a line now practically completed from Virvest to Glen Rogers, W. Va., 14.45 miles, now being operated by the Virginian.

Treasury Payments to Railroads

Since last announcement, dated May 1, 1922, payments under Sections 204, 209, 210 and 212 of the Transportation Act of 1920, as amended, have been made by the Treasury as follows:

(Continued on page 1367)

Annual Report

Thirty-eighth Annual Report of the Southern Pacific Company and Proprietary Companies for the Year Ended December 31, 1921

**SOUTHERN PACIFIC COMPANY
REPORT OF THE BOARD OF DIRECTORS**

New York, N. Y., June 1, 1922.

The Stockholders of the Southern Pacific Company:
Your Board of Directors submits this report of the operations and affairs of the Southern Pacific Company and of its Proprietary Companies for the year ended December 31, 1921.

TRANSPORTATION OPERATIONS

As stated in last year's report, your properties were operated by the Director General of Railroads during the first two months of 1920, and by the Company during the last ten months of that year. In the following table is shown which shows the net railway operating income for the year 1921 compared with that for the year 1920, the 1920 figures include the results from operation for the entire year, regardless of the change in control.

	Year Ended December 31, 1921	Year Ended December 31, 1920	Increase Decrease	Pct.
Average miles of road operated	41,187.90	41,151.68	36.22	.1
RAILWAY OPERATING REVENUES:				
Freight	\$11,460,617.77	\$18,141,634.10	\$-6,680,916.33	1.00
Passenger	6,443,511.7	7,701,617.76	\$-1,258,106.06	11.52

*Credit.
The figures for the year 1921 shown in the foregoing table, do not represent the actual results from operations during the year, because the accounts, as stated, include estimates of unadjusted items, such as loss and damage claims and reparation claims, appertaining to operations during the guaranty period (March to August, 1920, inclusive). In the case of many of these items the Company's liability cannot be definitely determined in advance of final decision by State Commissions, by the Interstate Commerce Commission or by the courts. They are included in the current accounts, because the Interstate Commerce Commission decided on December 15, 1921, that the operating income accounts for the guaranty period should be closed as of December 31, 1921, and that no item would be considered in connection with the Company's claim under the guaranty provision of the Transportation Act of 1920 unless taken into the accounts as of that date upon an

actual or an estimated basis. If these guaranty period items were eliminated from the accounts, the net railway operating income for the year ended December 31, 1921, would amount to \$39,827,756.48. It should be understood, however, that, although these guaranty period items reduce the *Net Railway Operating Income*, they do not affect the *Net Income* for the year (line 56 of the income statement), because the result is a corresponding increase in our claim against the Government on account of the guaranty, which is included in the account Miscellaneous Income appearing on line No. 41 of the income statement.

The following summaries result from transportation operations for 1921 compared with 1920, also compared with the Federal control years, 1918 and 1919, and with 1917:

Operating revenues	\$266,494,365	\$282,269,504	\$239,657,272	\$221,611,206	\$193,971,490
Relative to 1917 (100)	139	146	124	114	100
Operating expenses	212,572,262	242,113,720	188,385,172	162,722,372	120,601,823
Relative to 1917 (100)	176	201	156	135	100
Net revenue from railway operations	56,922,103	40,155,715	51,271,200	58,888,834	73,369,667
Relative to 1917 (100)	78	55	70	80	100
Operating ratio, per cent.	78.88	85.77	78.61	73.43	62.18
Traffic units (ton miles plus 3 times passenger miles), thousands	17,451,417	22,010,458	20,198,015	20,836,033	20,876,908
Relative to 1917 (100)	84	105	97	100	100

Operating revenues were seriously affected by the national-wide business depression that began about the close of 1920 and continued throughout the year 1921, aggravated in your company's lines by diversion of transcontinental business, by much lower rates offered by the Panama Canal route, and by the competition on the highways of motor trucks substantially free from taxation and regulation. The traffic units handled show a decrease of 20 per cent. in the income statement, because of the result of a corresponding increase in our claim against the Government on account of the guaranty, which is included in the account Miscellaneous Income appearing on line No. 41 of the income statement.

The following summaries result from transportation operations for 1921 compared with 1920, also compared with the Federal control years, 1918 and 1919, and with 1917:

Operating revenues were seriously affected by the national-wide business depression that began about the close of 1920 and continued throughout the year 1921, aggravated in your company's lines by diversion of transcontinental business, by much lower rates offered by the Panama Canal route, and by the competition on the highways of motor trucks substantially free from taxation and regulation. The traffic units handled show a decrease of 20 per cent. in the income statement, because of the result of a corresponding increase in our claim against the Government on account of the guaranty, which is included in the account Miscellaneous Income appearing on line No. 41 of the income statement.

The following summaries result from transportation operations for 1921 compared with 1920, also compared with the Federal control years, 1918 and 1919, and with 1917:

tions were made to stem the tide of wholesale diversion of transcontinental traffic to the steamship lines operating through the Panama Canal. In 1921, the number of steamship voyages through the Panama Canal between Atlantic and Pacific ports of the United States increased 80 per cent, and the volume of freight increased 83 per cent, over the preceding year. Freight shipped by direct sailings between the Pacific Coast and Europe, and by direct sailings between Atlantic ports and trans-Pacific ports, much of which was formerly handled by transcontinental railroads, is not included in these increases. The steamship lines operating through the Panama Canal enjoy conspicuous advantages, because their rates, which are not subject to regulation by the Interstate Commerce Commission, may be freely

1921	1920	1919	1918	1917
\$266,494,365	\$282,269,504	\$239,657,272	\$221,611,206	\$193,971,490

changed from day to day. If these vessels are exempted from the payment of tolls, as pending legislation contemplates, their advantage will be increased at the expense of the entire country of the entire country. This competition is supplemented by barge lines operated by the Government on the Mississippi and Warrior rivers, which carry freight at reduced rates between interior points and Gulf ports in connection with the Canal steamship lines. The railroads have not made much progress toward securing a better competition for transcontinental freight, because of the unfair handicaps to which they are subjected. To make rates to or from Pacific Coast ports to secure a share of the traffic fostered by the railroads, for which the Canal steamship lines are exempted, the railroads are required by the long and short haul provision of the Interstate Commerce Law to reduce rates to the same basis as maxima at all intermediate points (where they are not necessary to meet the water competition), unless relief from that requirement is granted by the Interstate Commerce Commission, and even if such relief should be eventually granted, the railroads are subjected to the same loss of coast traffic during the many months consumed in hearings, argument, consideration, and decision. Applications made in June and August, 1921, have not yet been decided after nearly a year's delay.

Maintenance of way structures decreased \$6,266,582.67, or 12.93 per cent. Although the labor cost of maintenance was substantially decreased, the properties were satisfactorily maintained during the year. This is evidenced by the following table showing materials used in repairs and renewals in 1921 compared with 1920, and compared also with the Federal control years 1919 and 1918, when there was deficient maintenance on a part of your lines.

MATERIAL USED IN REPAIRS AND RENEWALS				
	1921	1920	1919	1918
New steel rail, miles	427.43	527.76	473.73	408.44
Ties, number	4,721,542	4,887,913	4,173,774	3,888,687
Tie-plates, number	4,112,875	3,169,915	3,672,221	1,910,311
Filing, linear feet	847,817	737,731	94,455	75,476
Lumber, feet b.m.	23,557,715	23,710,582	15,402,035	6,354,463

Maintenance of equipment decreased \$10,360,249.01, or 17.40 per cent. Locomotive mileage decreased 9.73 per cent, and total car mileage decreased 10.21 per cent. In the annual report for 1920 reference was made to the fact that at the close of Federal control 87.5 per cent of the company's box cars were on other railways. The deplorable condition of this equipment owing to the neglect of current repairs when away from home during Federal control was not realized until we regained possession of our cars in the fall of 1921. The following table shows the condition of freight equipment at the beginning and at the end of Federal control, on September 1, 1921, by which time most of our cars had been returned; at the close of 1921; and at May 1, 1922:

	May 1, 1922	Dec. 31, 1921	Sept. 1, 1921	Mar. 1, 1921	Dec. 31, 1920
All freight cars on line (including foreign and private)	63,545	67,463	66,411	69,335	63,702
All freight cars in shops or awaiting repairs	5,069	6,158	8,341	2,996	2,260
Per cent. of all freight cars in shops or awaiting repairs, to all cars on line	8.10%	9.13%	12.56%	4.32%	3.55%

Traffic expenses increased \$691,633.61, or 19.81 per cent, due to restoration of traffic agencies and increased activity to regain traffic diverted during Federal control; the increased expenditures being effective for twelve months ending in August, 1921.

Transportation expenses decreased \$12,483,761.50, or 10.65 per cent. Train mileage decreased 7.63 per cent, but there was an increase of 6.8 per cent in the average price of fuel. The consumption of fuel per thousand ton miles (oil equivalent) on the basis of four barrels of oil to one ton of coal) showed a decrease both in passenger service and in freight service, the combined saving through greater fuel efficiency compared with previous years, amounting to \$1,458,661. The improvement in use has been constant from year to year. It was thought about a saving of \$7,973,903 in the operating expenses of that year compared with 1920. The average car load decreased 4.55 per cent, largely due to an increase in the movement of products in refrigerator cars, where the car load is light, and to a decrease because of a decrease in grade heavy commodities. For this reason, and inability to fully load cars (on account of the heavy fall freight cars, due to relocation of cars to owning lines after their dispersion, due to common cars) during Federal control, the tons of freight per train decreased 7.83 per cent, but the gross ton miles per train increased 1.36 per cent.

Miscellaneous operations decreased \$1,455,412.07, or 25.95 per cent, following decreased incidental revenues.

General expenses increased \$408,887.47, or 5.04 per cent, due to increased charges for Federal taxation work, increased accounting requirements, and allowances for pensions.

The increase in taxes for 1921 over 1920 is \$747,405.53. This increase is the result of an increase of \$1,893,052.10 in state and county taxes, due, principally to an increase in the rate of taxation on gross earnings in California from 5 1/2 per cent to 7 per cent, under the King Tax Law capital stock tax; and to a decrease of \$1,316,233.50 in Federal income and profits tax for the year 1921. The increase in this report does not press the large increase in taxes of \$747,405.53, or 5.05 per cent, over 1920 seems trivial in com-

After the return of the roads and the passage of the Transportation Act, your company joined other railway companies in applying to the United States Railroad Labor Board to readjust wages to meet changes in living costs, and to equalize wages paid by others for skilled and unskilled labor for like work in the territory in which your lines are operated. Modification was also requested of the unjust and onerous working rules of National Agreement made by General Agents of the close of Federal control, whereby unearned wages and excessive amounts for overtime were paid. These applications have been granted in part, but a great many onerous conditions remain which increase expenses compared with those previous to 1920. The Federal control agents are seeking to remedy the same. On July 1, 1921, the Labor Board rendered a decision which lowered wages about 12 per cent, reducing by more than half the increase of 22 per cent. granted May 1, 1920. According to a statement recently issued by the Labor Board, railway wages are still nearly 60 per cent. higher than they were in December, 1917 when the roads were taken over by the Government. Whether justified or not, this higher scale profoundly affects expenses compared with the cost of operation previous to Federal control. The following table shows the average monthly wages earned by specified classes of employees on Southern Pacific line under the new scale. Notwithstanding the half of 1921, compared with the same period of 1920 when higher wages were effective, and compared with wages earned in the year 1916, the year preceding the passage of the Adamson Act, which increased wages by shortening the measure of a day's work for train service employees:

AVERAGE MONTHLY WAGES EARNED BY REPRESENTATIVE CLASSES OF EMPLOYEES 6 MONTHS ENDING						
	DECEMBER 31		YEAR		RELATIVE	
	1921	1920	1916	1921	1920	1916

Total employees	\$130.57	\$154.85	\$79.45	164	195	100

The decrease of \$12,775,138.92, equivalent to 4.53 per cent, in operating revenues, in the face of increased freight and passenger rates which became effective during the latter part of preceding year, is principally attributable to the great increase in the cost of fuel, which has resulted in a depression of business, and which is reflected in a decrease of nearly 11 per cent in the aggregate operating revenues of the principal railroads of the country.

Revenue from passenger business was further diminished by a dearth of large conventions such as were held on the Pacific Coast during the preceding year, and by a substantial increase in travel by automobiles for which money is being appropriated by the Federal and State governments for the construction of highways that usually parallel the very railroads which are handicapped to provide an alternative mode of transportation.

Decrease in revenue from mail is due to a large payment by the Government for previous years, included in the year 1920, with which comparison is made.

Freight revenue has been adversely affected by the smallest cotton crop in Texas and Louisiana that has been produced in twenty years, and by reduction in the acreage of rice planted in the same states; and by reductions of rates on such important commodities as beans, canned goods, dried fruit, fruit, lumber, apples, caneloupes, and vegetables. Some of these reductions were made in deference to public sentiment, and in response to the producers' plea that they required such assistance to market their products. Other reductions were made to restore market relationships that had been disturbed by previous horizontal increase, and again other reduc-

parison with the taxes for the first four months of 1922, which amount to \$6,393,726.28, an increase of 35.76 per cent. over 1921. At this rate taxes for the year 1922 will aggregate \$19,181,178.84, or 93 per cent. of the dividends distributed to stockholders for 1921. Taxes amounted to \$8.60 for every hundred dollars of freight revenue during the year 1921, and to \$12.42 for every hundred dollars of freight revenue during the first four months of 1922.

The total Railway Tax Accruals for the year consumed \$15,539,469.20, or 27.3 per cent., of the \$56,922,102.54 of Net Revenue from Railway Operations. With an increase of 138.76 per cent. in the miles of road operated over the miles operated in 1921, the first year of operation, taxes have increased \$14,679,964.14, or 1,707.96 per cent.

The heavy passenger travel in motor vehicles has introduced an element of great danger at railway grade crossings, as shown in the following state-

ment giving the casualties to persons in automobiles at crossings on your company's steam lines:

	1921	1920
Number of persons killed.....	76	57
Number of persons injured.....	360	293

Several states now require motorists to stop before attempting to cross railroad tracks. It is gratifying to observe the rapid recovery from the conditions that prevailed during Federal control towards normal conditions of safety in the operation of your property in 1921, the first complete year of operation after Government control. In the three years of the test period ending in 1917, one fatality to employes in train accidents occurred to every 8,333,333 locomotive miles run; in the years of Federal control, to wit, 1918 and 1919, the fatalities were one to every 6,250,000 and 2,000,000 locomotive miles run.

(b) Other income	6.11	3.04	-	2.33
(c) Total	8.91	10.57	-	1.64

*Debit. †Credit. In arriving at the figures for per cent. of railroad income and per cent. of other income on outstanding capital stock, an estimated apportionment of net income was made by allocating, as nearly as possible, the items relating solely to that class, the remaining items being apportioned between the two classes on an estimated basis.

respectively; in 1921 they were one to every 14,333,333 locomotive miles run. Not a passenger was killed in a train accident in the three test years, but under Government control the number killed was one to every 3,703,000 locomotive miles run in 1918, and 1 to every 10,000,000 locomotive miles run in 1919. In 1921 the number was only 1 to every 50,000,000 locomotive miles run.

The extent to which maintenance of way and equipment was neglected on the lines in Louisiana and Texas during Federal control is shown thus:

During the three years of the test period the number of derailments caused, principally by defective track and equipment was 1 to every 280,000 locomotive miles run; during 1918 and 1919, under Federal control, it was 1 to every 150,000 and 96,000 locomotive miles run respectively; in 1921, the first entire year of private operation, it fell to 1 to every 205,000 locomotive miles run.

The attention of the Federal Railroad Administration was directed to the neglect of maintenance and the unsafe condition of these lines by your corporate officers and by the Louisiana Railroad Commission, but without substantial remedy.

OPERATING INCOME

As stated in last year's report, your properties, during the months of January and February, 1920, were operated by the U. S. Railroad Administration under the Federal Control Act, and for that period your Company received the standard return rental as fixed in the agreement with the Director General of Railroads. During the ten months, March 1 to December 31, 1920, your properties were operated by your Company, and the amounts reported in the column headed "Year Ended December 31, 1920" (lines 1 to 24), represent the operating results for those ten months. The operating results for the entire year 1920, regardless of the change in control compared with the operating results for the year 1921, are shown in the table appearing at the beginning of the report.

The \$1,193,162.39, shown in the 1920 column as Miscellaneous Operating Income (line No. 39) represents the operating income for January and February, 1920, of the Fuel Oil Department which was sold to the Southern Pacific Land Company on February 29, 1920.

NONOPERATING INCOME

The item of \$8,043,288.03, shown in the 1920 column as Income from Lease of Road—Standard Return (line No. 31), represents the proportion for January and February, 1920, of the standard return rental as fixed in the agreement with the Director General of Railroads. For the year 1920, \$852,740.80, shown in the 1921 column (line No. 31), is made up of \$1,859,646.63, representing the approximate amount of additional compensation for the use of additions and betterments, new equipment, and road extensions completed during the period of Federal control, less \$1,006,905.83, representing the amount deducted from the standard return as fixed in the agreement with the Director General of Railroads and taken into account by the Company during the period of Federal control) resulting from changes and corrections made by the Interstate Commerce Commission in the accounts for the test period which were used as the basis of the standard return.

The increase of \$343,634.45 in Miscellaneous Rent Income (line No. 33) is due, principally, to the rental received this year, from Associated Oil Company and from Pacific Oil Company, for the use of oil pipe line formerly used by the Fuel Oil Department.

The increase of \$594,617.04 in Income from Unfunded Securities and Accounts (line No. 39) represents interest on U. S. Government Certificates of Indebtedness, and income from bank deposits held during the year from the sale of the California Oil Properties mentioned in last year's report.

The item of \$20,490,427.50, shown in the 1920 column as Miscellaneous Income—U. S. Government Guaranty (line No. 41) represents the estimated amount due from the Government, under its guaranty, for the six months ended August 31, 1920, such estimate having been based on figures available at December 31, 1920, as explained on page 8 of last year's report. The item \$3,648,602.47 shown in the 1921 column (line No. 41) is made up of \$2,380,965.34, representing estimates of unaudited items taken into account this year for the year ending on page 7, less \$2,323,362.87, representing an adjustment in the amount of the Government guaranty as booked to December 31, 1920, due to the adjustment made by the Interstate Commerce Commission in the amount of the standard return rental, as explained in the third paragraph above.

The decrease in Other Miscellaneous Income (line No. 42) is the result, principally, of charges made during the year by the U. S. Railroad Administration representing adjustments on account of revenues prior to January 1, 1918, credited to the Company during the period of Federal control.

DEDUCTIONS FROM GROSS INCOME

The decrease of \$2,128,564.01 in Interest on Funded Debt—Bonds and Notes (line No. 48), is made up of a decrease of \$2,024,614.79 resulting from the conversion of Southern Pacific Company Four and Five Per Cent Twenty-Year Convertible bonds into capital stock; a decrease of \$278,912.15 resulting from the retirement of bonds and equipment trust certificates maturing during the year; a decrease of \$85,757.87 resulting from the retirement of bonds through sinking funds; a decrease of \$294,894.17 resulting from the acquisition of bonds by Southern Pacific Company and Proprietary Companies; and an increase of \$504,583.33, resulting from a full year's interest, this year, on Southern Pacific Equipment Trust Certificates, Series E, issued as of June 1, 1920.

The increase of \$1,938,744.71 in Interest on Funded Debt—Nonnegotiable Debt to Affiliated Companies (line No. 49) represents, principally, interest on deposits with Southern Pacific Company made by Southern Pacific Land Company, resulting from the sale of oil properties by the latter company to the Pacific Oil Company.

The increase of \$108,128.79 in Interest on Unfunded Debt (line No. 50) is made up, principally, of interest on money borrowed before the proceeds from the sale of the oil properties were available, and of interest allowed on freight claims.

The decrease of \$68,737.18 in Amortization of Discount on Funded Debt (line No. 51) is the result of the conversion, during the year, of \$17,929,500 of Southern Pacific Company Five Per Cent Twenty-Year Convertible bonds into common stock, and of the retirement of \$1,841,000 of Southern Pacific Equipment Trust certificates maturing during the year, the unextinguished discount thereon having been charged to Prepaid Interest.

The decrease of \$570,392.99, in Miscellaneous Income Charges (line No. 53) is the result, principally, of a decrease in the charges to that account for lap-over items of expenses appertaining to the period prior to January 1, 1918.

The dividends paid for 1921 were appropriated from the profit and less surplus, and therefore do not appear in the income account. They amount to \$20,639,249.82, an increase, compared with dividends paid for 1920, of \$2,428,653.00. This increase is caused by the dividends paid on \$17,939,500 of capital stock purchased this year against a like amount of Five Per Cent Convertible bonds retired, and a full year's dividends this year on capital stock issued last year against the retirement of such convertible bonds. The figures for this year include \$54.00 and those for last \$316.00, representing dividends on the stock of Proprietary Companies held by the public.

The Southern Pacific Company does not take into its income the interest on advances made by it for the construction of new railways by companies incorporated in its interest, or for the acquisition of new lines, until the

principal included in the cost of such railways is the amount authorized to be charged to such cost under the accounting regulations of the Interstate Commerce Commission.

On December 31, 1921, the principal of advances to the Southern Pacific Railroad Company of Mexico amounted to \$38,742,150.34. The interest accruing on these advances has not been taken into the income of the Southern Pacific Company.

CAPITAL STOCK

The capital stock of the Southern Pacific Company outstanding at the beginning of the year amounted to \$326,441,405.64 issued during the year:

Common stock issued in exchange for a like amount of Five Per Cent Twenty-Year Convertible Gold Bonds surrendered and cancelled 17,939,500.00

Amount of Southern Pacific Company capital stock outstanding December 31, 1921 \$344,380,905.64

There was no change during the year in the capital stocks of the Proprietary Companies.

The amounts outstanding December 31, 1921, were as follows:
Preferred stock \$29,400,000.00
Common stock 317,432,400.00 346,832,400.00

Amount of capital stocks of the Southern Pacific Company and of its Proprietary Companies outstanding December 31, 1921 \$691,213,305.64

Held as follows:

In hands of public:
Capital stock of Southern Pacific Company \$344,380,905.64
Capital stock of Proprietary Companies 62,000.00 \$344,443,105.64
Owned by Southern Pacific Company \$346,470,200.00
Owned by Proprietary Companies 300,000.00 346,770,200.00
\$691,213,305.64

FUNDED DEBT

The funded and other fixed interest-bearing debt of the Southern Pacific Company and of its Proprietary Companies outstanding December 31, 1920, was as follows:

Southern Pacific Company \$159,158,160.00
Proprietary Companies 443,157,610.93

Total outstanding December 31, 1920 \$602,315,770.95

Retired during the year:

SOUTHERN PACIFIC COMPANY
San Francisco Terminal First Mortgage Four Per Cent Bonds:
Purchased from payments to sinking fund \$7,000.00
Five Per Cent, Twenty-Year Convertible Gold Bonds:
Retired in exchange for a like amount of common stock issued 17,939,500.00
Four and One-half Per Cent. Equipment Trust Certificates:
Series B, Due March 1, 1921, paid off \$1,012,000.00
1921, B, Due September 1, 1921, paid off 201,000.00
Series C, Due December 1, 1921, paid off 117,000.00
Series D, Due May 1, 1921, paid off 511,000.00
Six Per Cent Temporary Equipment Gold Note, Due January 15, 1921, paid off 187,600.00 2,028,600.00

CENTRAL PACIFIC RAILWAY COMPANY

First refunding Mortgage Four Per Cent. Bonds:
Purchased from payments to sinking fund \$34,500.00
Three and One-half Per Cent. Mortgage Gold Bonds:
Purchased from proceeds of sale of lands \$105,000.00
Purchased from payments to sinking fund 32,500.00 137,500.00
Four Per Cent, Thirty-five Year European Loan of 1911:
Adjustment account difference in exchange 7.04 172,007.04

HOUSTON & TEXAS CENTRAL RAILROAD COMPANY

General Mortgage Four Per Cent. Bonds, matured:
Redeemed and cancelled \$42,000.00
Acquired and held alive by Southern Pacific Company 4,119,000.00 4,161,000.00

Carried forward \$24,308,107.04 \$602,315,770.95
Brought forward \$24,308,107.04 \$602,315,770.95

Retired during the year—Continued.

LOUISIANA WESTERN RAILROAD COMPANY
First Mortgage Six Per Cent. Bonds, matured 2,240,000.00
SOUTH PACIFIC COAST RAILWAY COMPANY
First Mortgage Four Per Cent. Bonds:
Purchased from payments to sinking fund 262,000.00
SOUTHERN PACIFIC RAILROAD COMPANY
First Refunding Four Per Cent. Gold Bonds:
Purchased from payments to sinking fund 15,500.00

TEXAS & NEW ORLEANS RAILROAD COMPANY		
Payment to State of Texas account of School Fund Debt	4,695.44	
Total retired during the year	26,830,302.48	
Amount of funded and other fixed interest-bearing debt of the Southern Pacific Company and of its Proprietary Companies outstanding December 31, 1921:		
Southern Pacific Company	\$139,183,060.00	
Proprietary Companies	436,302,408.47	\$575,485,468.47
Held as follows:		
In hands of public:		
Funded debt of Southern Pacific Company	\$139,183,060.00	
Funded debt of Proprietary Companies	322,181,990.90	\$461,365,050.90
Owned by Southern Pacific Company	\$98,084,417.57	
Owned by Proprietary Companies	1,359,000.00	
Held in sinking funds of Proprietary Companies	14,497,000.00	114,120,417.57
Total		\$575,485,468.47

RATIO OF CAPITAL STOCK HELD BY PUBLIC TO FUNDED DEBT AND TO TOTAL CAPITAL HELD BY PUBLIC

During the five years ended December 31, 1921, the ratio of capital stock of your companies held by the public to the funded debt of your companies held by the public, increased 53.31 per cent; and the ratio of capital stock

to the total capital of your companies held by the public, increased 30.53 per cent, viz:

	CAPITAL STOCK AND FUNDED DEBT HELD BY PUBLIC			
	December 31, 1921	December 31, 1916	+Increase -Decrease	Per Cent.
Capital stock held by public	\$344,443,105.64	\$272,905,505.64	+\$71,537,600.00	26.21
Funded debt held by public	461,365,050.90	560,398,362.71	-99,033,311.81	17.67
Total capital held by public	\$805,808,156.54	\$833,303,868.35	-\$27,495,711.81	3.30
Ratio of capital stock to funded debt	74.66	48.70	+	25.96
Ratio of capital stock to total capital	42.75	32.75	+	10.00

The increase in capital stock is the result of the issue of \$71,538,000.00 par value, capital stock of Southern Pacific Company against the surrender and cancellation of \$77,709,650.00, par value, Four and Five Per Cent. Convertible Bonds, less \$20,400.00, par value, capital stocks of Proprietary Companies acquired by Southern Pacific Company. The decrease in funded debt is the result of the retirement of \$77,709,650.00, par value, Southern Pacific Company Four and Five Per Cent. Convertible Bonds against the issue of capital stock, the retirement of \$21,410,831.83, par value, bonds of Southern Pacific Company and its Proprietary Companies redeemed out of general funds of the companies and by sinking funds, and the acquisition by Southern Pacific Company of \$17,726,779.93, par value, bonds of Proprietary Companies, less \$17,814,000.00, par value, Southern Pacific Equipment Trust obligations issued for the acquisition of new equipment.

(a) The outstanding capital stock and funded debt include capital stocks and funded debt of Proprietary Companies of the par value of \$346,770,200.00 and \$114,120,417.57, respectively, a total of \$460,890,617.57, which securities are owned by the Southern Pacific Company or by Proprietary Companies, or are held in sinking funds of Proprietary Companies. The cost of these securities is included in the investments shown under "Investments in Affiliated Companies." Of said amount, stocks of the par value of \$249,653,161.00, which stand charged on the books at \$232,932,667.41, are pledged against the issue of Southern Pacific Company stock and bonds. (d) Represents accrued depreciation on electric power plants and substation, general office building at San Francisco, wood preserving works, Sacramento rolling mill, oil storage plants, grain elevators, and similar facilities. (e) Represents, principally interest on construction advances which have not been repaid, as explained in the last paragraph but one under the heading "Income Account."

EQUIPMENT

All the equipment included in Southern Pacific Equipment Trust, Series E, mentioned in last year's report, has been received and placed in service. The tank steamer Tamaha, also mentioned in last year's report, was completed and placed in service November 22, 1921.

The following new equipment was completed at company shops during the year, or was under construction at company shops at the close of the year:

- 37 locomotives
- 281 freight-train cars
- 3 passenger-train cars
- 86 roadway service cars.

The cost of this equipment will be about \$1,900,000.

THE SUIT INVOLVING THE RIGHT OF THE SOUTHERN PACIFIC COMPANY TO OWN THE STOCK OF THE CENTRAL PACIFIC RAILWAY COMPANY

In last year's report it was stated that this case was, after all argument, submitted in the Supreme Court of the United States on April 19, 1921, and

by the Court taken under advisement. Two members of the Court were to be disqualified to take part in the decision of the case. After the submission the number of the justices qualified to consider the case was still further reduced by the death of Chief Justice White. The case was then assigned for reargument on April 10, 1922, and was reargued at length. On May 29th a decision was handed down by the Supreme Court to the effect that the common control of the Central Pacific and other Southern Pacific lines, which originated more than half a century ago, and in violation of the Sherman Anti-trust Law of 1890, and the termination of such common control was decreed. As the opinion of the Supreme Court was received on the day this Annual Report was to be placed in the hands of the printer, all that can be said at the present time is that it is believed from the usual procedure in such cases that time and opportunity will be afforded to carry out the decree of the Court with a minimum of injury and loss to the railroads concerned. The fact that the Interstate Commerce Commission is now engaged in regrouping the railroads of the country into a limited number of enlarged systems, under the Transportation Act of 1920, may require a delay until the Commission has determined its plan of consolidation for the railroads in the Western transcontinental region.

CONTROVERSY ARISING OUT OF THE OREGON & CALIFORNIA RAILROAD'S LAND GRANT

This is an accounting suit brought in 1917 by the United States seeking to offset against the compensation of \$3.50 per acre, due the Company for the unsold lands, moneys received by the Company, in excess of \$2.50 per acre, by reason of past sales, leases, and otherwise, as well as taxes levied since the forfeiture decision in 1913 and voluntarily paid by the Federal Government to the State of Oregon. The trial of this case is still going on.

ASSOCIATED PIPE LINE COMPANY

Since the incorporation of the Associated Pipe Line Company, in 1907, the capital stock of that company has been owned one-half by Southern Pacific Company and one-half by Associated Oil Company. The Pipe Line Company owns oil pipe lines running from the Southern California oil fields to various points on Southern Pacific Company's lines, and to tidewater, which have been used recently by Southern Pacific Fuel Department and by Associated Oil Company. Following the sale of the California oil properties to the Pacific Oil Company, mentioned on page 26 of last year's report, that company opened negotiations looking to the acquisition by it of a one-third interest in the Associated Pipe Line Company. As a result of these negotiations the capital stock of the Pipe Line Company was increased from \$7,000,000 to \$10,500,000, the \$3,500,000 of increased stock being sold to the Pacific Oil Company at par. The retention by your company of a one-third interest in the Southern Pacific Fuel Department, and by the delivery of fuel oil at points on its lines where it will be readily available, at a minimum cost for transportation.

PORTER FUEL COMPANY AND DURANGO LAND COMPANY

As of December 31, 1921, the Southern Pacific Company acquired the entire outstanding capital stock of the Porter Fuel Company and of the Durango Land Company. These companies own about 21,500 acres of high grade bituminous coal lands in southwestern Colorado, and the properties were acquired to provide a source of future fuel supply for your railroads.

SOUTHERN PACIFIC RAILROAD COMPANY OF MEXICO

The value of property damaged or destroyed from the beginning of the Madero revolution in 1910 down to December 31, 1921 (including the estimated cost of restoring the Alamos and Tonichi Branches and the main line from Acaponeta to Tepic, the operation of which it was necessary to abandon in the spring of 1913), now amounts to 11,535,260 pesos equivalent to \$5,767,630.

At December 31, 1921, the company's claims against the Mexican Government on account of revolutionary disturbances, stated in brief, were as follows:

Damage to or destruction of, property as mentioned above.....	11,535,260 pesos
Rental for, and maintenance of, road and equipment while under Government operation.....	9,838,850 "
Freight and passenger transportation furnished on Government orders.....	5,980,469 "
Materials and supplies furnished to or confiscated by various military authorities, telegraph service furnished, and other miscellaneous items.....	520,848 "
In addition to the foregoing claims the company has subvention and interest claims against the Mexican Government as follows:	
Unpaid portion of subvention of 12,500 pesos per kilometer, payable in ten equal annual installments commencing with July, 1912, as provided in the concession under which the company's line was constructed.....	3,591,354 "
Unpaid interest to December 31, 1921, on past due payments of above subvention.....	1,260,678 "
Unpaid interest to December 31, 1921, on Mexican Consolidated Public Debt bonds owned by the company.....	112,813 "
Total claims against Mexican Government.....	32,840,272 pesos
Equivalent, in U. S. currency, to.....	\$16,420,136

Of the foregoing claims, amounting to 32,840,272 pesos, claims to the amount of 26,781,100 have been filed with the proper departments of the Mexican Government, and the remainder will be filed as rapidly as the congested condition of the departments will permit. Since the inauguration of President Obregon on December 1, 1920, payments aggregating 672,851 pesos have been made on account of these claims, while claims to the amount of \$2,387,407 pesos have been approved for payment but have not yet been paid.

The average miles of road operated during the year was 1,054.70 miles as compared with 1,001.47 miles for 1920. Only such maintenance work has been carried on, however, as was found necessary for the operation of trains over these portions of the line open for traffic.

STATUS OF ACCOUNTS WITH U. S. RAILROAD ADMINISTRATION

The status of the accounts of your company and its Proprietary Companies with the U. S. Railroad Administration incident to the period of Federal operations, as booked to December 31, 1921, is shown in the combined balance sheet. The accounts as stated, however, do not include any charge either on account of under-maintenance during the period of Federal operations, or on account of the delinquency in material and supplies returned by the Director General at the end of Federal control.

Your company's claim for under-maintenance was filed on August 26, 1921, and a general claim, covering the balance due your company on all accounts with the U. S. Railroad Administration, including claims for under-maintenance and for delinquency in material and supplies, was filed September 18, 1921.

The U. S. Railroad Administration has completed its investigation of all items in your company's claim except the item of under-maintenance and the item of material and supplies. Administration engineers and accountants have been investigating these two items for several months, and it is hoped that they will complete their investigation in the near future.

STATUS OF ACCOUNT WITH U. S. GOVERNMENT UNDER ITS GUARANTY

As stated in last year's report, the Interstate Commerce Commission, on October 18, 1920, issued an order requiring each carrier which had accepted the guaranty offered by the Government, to file a statement showing the amount due the carrier under the Government's guaranty as computed by the carrier. On December 1, 1921, your company filed such a statement in accordance with such order and subsequently received partial payment aggregating \$5,891,000, pending a complete review of the claim by the Commission.

On December 15, 1921, the Commission issued an order prescribing the course for computing the maintenance allowances to be included in operating expenses for the guaranty period, fixing December 31, 1921, as the time as of which all accounts pertaining to the guaranty period should be closed, and requiring each carrier to file with the Commission a final claim covering the amount due from the Government under its guaranty. Final claims were filed on or about January 1, 1922, and the Commission acted on March 24, 1922, and it is hoped that an early settlement will be obtained.

FEDERAL VALUATION OF RAILROADS

The Act of Congress, known as the Federal Valuation Act, approved March 1, 1913, directs the Interstate Commerce Commission to determine the value of the transportation properties of each railway corporation in the United States engaged in interstate commerce and subject to the Interstate Commerce Act.

In connection with the valuation of any property, the Act directs the Commission, among other things, to ascertain the original cost of such property to date of valuation, cost of reproduction new, cost of reproduction new less depreciation, present value of lands, present cost of acquiring lands, through condemnation proceedings or by purchase, in excess of present value, and numerous other factors set out in the statute and assumed to have a bearing upon the question of valuation. The Interstate Commerce Commission, in making such valuation, to take into account any and all elements of value which may be found to exist.

Upon the completion of the valuation of any property the Commission is further directed to prepare, and serve upon the owning carrier, a tentative valuation wherein shall be set forth the value placed upon such property by the Commission, together with the Commission's findings of fact concerning the matters hereinbefore enumerated. This tentative valuation is thereafter subject to appeal by the carrier, in which event provision is made for formal hearing and determination.

Immediately upon the passage of this Act a valuation organization was perfected for your company, and this organization has actively co-operated with the Federal Valuation Commission in the preparation of a complete field inventory of all the transportation properties of your company. In addition to this work, the valuation organization of your company, in anticipation of the receipt of the Commission's tentative valuation, has prepared a complete field inventory of the same, with application to the inventory, for purpose of comparison with the unit prices fixed by the Interstate Commerce Bureau of Valuation, and to serve as the basis of any protest thereto which may be necessary to the protection of the company's interest. For these purposes your companies have expended to December 31, 1921, the sum of \$3,213,354.42, of which the sum of \$628,330.19 was expended during the current year.

By reason of the enormity of the task involved, the Interstate Commerce Commission has not yet fixed a final value upon the properties of any railroad company, and the same is not expected to be done until the spring drawing to a conclusion, and it is anticipated that tentative valuations covering the properties of your company may be expected within the not distant future.

The importance of valuation work has been enhanced by the provisions of the Transportation Act, under which the basis of rates in the several rate groups, established by the Commission, is dependent upon the aggregate value of all properties therein, as found by the Commission, which valuations, as thus found, shall govern the capitalization of any consolidated companies which may be created under the provisions of the Transportation Act.

PURCHASE OF SOUTHERN PACIFIC COMPANY CAPITAL STOCK FOR EMPLOYEES

In December, 1921, the Executive Committee approved a plan extending to all employees of Southern Pacific Transportation System lines the privilege of purchasing the capital stock of the company, a limited amount of its capital stock, to be paid for in monthly installments, the company advancing the funds required to purchase the stock. Under this plan, which became effective February 1, 1922, an employ may purchase from time to time, from one to fifteen shares of stock, paying therefor the sum of \$5.00 per month for each share purchased. Additional shares may be purchased upon the same terms, provided, however, that in no event will the company, at any one time, carry more than fifteen shares in the aggregate for any one employee.

The company, at the request of an employee, purchases the required amount of stock at the current market price in the New York Stock Exchange, making no charge, however, for its services. Pending payment of the advances made for its purchase the stock is held by a trustee as security for such advances, the account of the employee, in the meantime, being charged with the purchase price at the rate of \$1.00 per month. Dividend payments, and credited with the dividends accruing on the stock held for his account. When advances for the purchase of the stock have been fully repaid, the stock will be registered in the employee's name and a certificate therefor delivered to him.

At the close of business May 1, 1922, six hundred and eighty-five employees had subscribed for an aggregate of 2,428 shares under this plan.

GENERAL

Dividends on the capital stock of your company were declared during the year, payable as follows:

1 1/2 per cent. paid April 1, 1921.....	\$5,142,198.99
1 1/2 per cent. paid July 1, 1921.....	5,165,569.67
1 1/2 per cent. paid October 1, 1921.....	5,165,713.58
1 1/2 per cent. payable January 3, 1922.....	5,165,713.58
Total.....	\$20,639,195.82

Your Board announces with sorrow the death, on August 22, 1921, of Colonel Epes Randolph, President of the Arizona Eastern Railroad Company, of the Southern Pacific Railroad Company of Mexico, who, for twenty-four years, served your companies with conspicuous ability and unwavering fidelity. The Board has caused to be entered in its minutes of its meeting a resolution reciting Colonel Randolph's long, faithful, and efficient service.

Under the pension system put into effect January 1, 1921, there were carried on the pension rolls at the end of the year 1,072 employees. The payments to pensioners for the year amounted to \$513,867.62, which is equivalent to six per cent per annum on an investment of \$8,564,000.00.

By order of the Board of Directors,
JULIUS KRITTSCHNITT,
Chairman of the Executive Committee.

Total payments account of said guaranty	435,821,216	
(c) Under Section 210, for loans from the revolving fund of \$300,000,000 therein provided	307,091,080	
Total		\$746,234,041
Repayments to the loan fund amount to \$74,750,355.		

Dividends Declared

Albany & Susquehanna.—\$4.50, semi-annually, payable July 1 to holders of record June 15.
 Atchison, Topeka & Santa Fe.—Preferred, 2½ per cent, semi-annually, payable August 1 to holders of record June 30.
 Lehigh Valley.—Common, 1½ per cent, quarterly; preferred, 2½ per cent, quarterly; both payable July 1 to holders of record June 17.
 New York, Chicago & St. Louis.—Common, 2½ per cent, payable June 30 to holders of record June 19; 2nd preferred, three quarterly dividends of 1¼ per cent, payable June 30, September 30 and December 30, to holders of record June 19, September 19 and December 19, respectively.
 St. Louis, Rocky Mountain & Pacific.—Common, 1 per cent, quarterly; preferred, 1¼ per cent, quarterly; both payable June 30 to holders of record June 17.

Trend of Railway Stock and Bonds Prices

	June 3	Last Week	Last Year
Average price of 20 representative railway stocks	65.01	67.22	54.41
Average price of 20 representative railway bonds	86.06	86.28	73.86

BAGGAGE INSURANCE POLICIES are now offered by the Canadian Pacific. These policies are particularly designed for Atlantic and Pacific steamship traffic and cover all risks of transportation and navigation, except while in the permanent residence of the assured.

REDUCTION OF TAXES is demanded in a suit brought by the New York Central in Supreme Court at New York City on the ground that the property has been assessed this year at \$149,366,150, whereas the real value is only \$135,937,320, and assessments against other New York City realty average only 90 per cent of the actual value. The petition says the railroad has been taxed for tunnel support under public parks and thoroughfares where there should be no tax, and for footbridges constructed for the benefit of the owners of adjacent property.

Railway Officers

Executive

A. B. Ramsdell, who has been promoted to assistant vice-president of the Chicago, Rock Island & Pacific in charge of labor matters, was born at Tama, Iowa, on October 3, 1873,

A. B. Ramsdell

and entered railway service on July 1, 1891, as a clerk in the auditing department of the Chicago, Rock Island & Pacific. He was a clerk in this and the passenger department until March 15, 1893, when he became chief clerk to the superintendent of the Chicago Terminal. He was appointed trainmaster of the Chicago Terminal on February 15, 1904, and held this position at Chicago until May 1, 1906, when he was transferred to the Colorado division, where he remained until December 1, 1906, when he was transferred to the Iowa division. On January 1, 1909, he was transferred to the Illinois division, where he remained until December 15, 1909, when he was promoted to superintendent of the Chicago Terminal division. Consecutively from that time he served as superintendent of the Chicago Terminal division from February 1, 1912, to January 8, 1913; as superintendent of the Kansas division during the following year; and as superintendent of the Illinois division from June 1, 1914, to May 31, 1916, when he was promoted to assistant general manager of the First district with headquarters at Des Moines, Iowa. He was appointed assistant to the vice-president and general manager on April 1, 1919, and held this position until the time of his recent promotion to the newly created position of assistant vice-president in charge of labor.

A. E. Wallace, manager of the Chicago region of the Erie, with headquarters at Chicago, has been appointed general manager of the Minneapolis, St. Paul & Sault Ste. Marie,

A. E. Wallace

with headquarters at Minneapolis, Minn., effective June 1, to succeed G. R. Huntington. Mr. Wallace was born at Nashua, N. H., on March 2, 1879, and was educated at Harvard University, from which he was graduated with the degree of bachelor in arts in 1902. He entered railway service in November of the same year as a clerk on the Great Northern at Larimore, N. D., and remained at that point as a clerk and timekeeper until January, 1904, when he entered the employ of the Chicago, Rock Island & Pacific as yard clerk. He served in the consecutive capacities of yard clerk, timekeeper and chief clerk on the Rock Island until January, 1907, when he entered the service of the Chicago, Burlington & Quincy, with which he was employed

consecutively as special inspector, assistant extra gang foreman, foreman, assistant roadmaster and trainmaster until February, 1911. Thereafter he was special inspector from February, 1911, to September of the same year, and a member of the staff of the second vice-president and, later, assistant superintendent from September, 1911, until July, 1912, when he re-entered the service of the Chicago, Rock Island & Pacific as superintendent. He became connected with the Erie in January, 1918, as general superintendent with headquarters at Chicago and held this position until June, 1918, when he was transferred to Youngstown, Ohio, as assistant general superintendent and continued as assistant general superintendent until March, 1920, when he was promoted to manager of the Chicago region, the position he held at the time of his recent appointment on the Minneapolis, St. Paul & Sault Ste. Marie.

John C. Sesser has been appointed assistant vice-president of the Cuba Railroad with headquarters at Camaguey, Cuba.

C. S. Lake, assistant to the president of the Chesapeake & Ohio, with headquarters at Richmond, Va., has been appointed assistant to the president of the St. Louis Southwestern, with headquarters at St. Louis, Mo., and with jurisdiction over all departments, effective June 5.

B. L. Winchell, long a railway executive and under the Railroad Administration regional director of the Southern region, has been elected president of the Remington Type-

B. L. Winchell

writer Company. Mr. Winchell began his railroad career in July, 1874, as a clerk in the office of the superintendent of machinery of the Hannibal & St. Joseph (now a part of the C., B. & Q.). In 1875 he was transferred to the auditor's office of the same road and remained there until November, 1877, when he was promoted to chief clerk in the general freight and ticket office. In 1879 he was appointed assistant general passenger agent of the Atchison & Nebraska (now a part of the C., B. & Q.). From April 1 to June 1 he was assistant chief clerk in the general passenger department of the Kansas City, Fort Scott & Gulf (now a part of the Frisco) and the Kansas City, Lawrence & Southern Kansas (now a part of the A., T. & S. F.). He was then promoted to assistant general passenger agent of those roads. In May, 1895, he became general passenger agent of the Union Pacific, Denver & Gulf (now the C. & S.). From May 1 to December 1, 1898, he served the St. Louis-San Francisco in the same capacity and was then elected vice-president of the Colorado & Southern. On October 15, 1900, he was elected president and general manager of the Kansas City, Fort Scott & Memphis (Frisco). In 1902 he returned to the St. Louis-San Francisco as vice-president and general manager. He became first vice-president in October, 1903, and from then until April 5, 1904, he also served as third vice-president of the Chicago, Rock Island & Pacific and vice-president of the Chicago & Eastern Illinois and the Evansville & Terre Haute (now a part of the C. & E. I.). He was then elected president of the Chicago, Rock Island & Pacific and served in that capacity until December 1, 1909, when he returned to the St. Louis-San Francisco and the Chicago & Eastern Illinois as president, remaining as such until 1913 when he became one of the receivers of the St. Louis-San Francisco. Shortly thereafter he resigned to become director of traffic of the Union Pacific. During the period of federal control he served as director of the Southern region and thereafter was elected vice-president of the Pure Oil Corporation in charge of the railroad department.

Financial, Legal and Accounting

Wallace T. Hughes, whose election to the newly created position of general attorney of the Chicago, Rock Island & Pacific, with headquarters at Chicago, effective June 1, was reported in the *Railway Age* of June 3 (page 1317), was born in

W. T. Hughes

Kentucky in 1877 and studied law at the University of Louisville. Following the completion of his law studies he engaged in publication work as an associate editor of the Louisville Courier-Journal until 1909, when he entered the law department of the Chicago, Rock Island & Pacific, specializing in questions relating to federal regulation. After serving in this capacity until 1919 he returned to Louisville, Ky., to become vice-president and associate publisher of the Courier-Journal and its afternoon subsidiary, the Times, in which occupation he was engaged until June 1, 1922, when he reentered railway service in the newly created position of general attorney of the Chicago, Rock Island & Pacific, in which capacity he will devote special attention to interstate commerce matters.

H. B. Dike, general counsel of the Minneapolis, St. Paul & Sault Ste. Marie with headquarters at Minneapolis, Minn., retired from active service on June 1 after 35 years in the continuous employ of that road and is succeeded by

Henry S. Mitchell, assistant general counsel. Mr. Dike was born in Wales, on November 20, 1847, and received his law education by private study.

He entered railway service in 1887 as Wisconsin attorney for the Minneapolis, St. Paul & Sault Ste. Marie and continued in this capacity until May, 1894, when he was promoted to assistant general solicitor. He was advanced to general solicitor in March, 1908, and in October, 1912, was appointed assistant to the president, holding this position until January 1, 1918, when he became general solicitor in charge of the law department under the United States Railroad Administration. He was elected general counsel on March 1, 1920, following the period of federal control and, while intending for some time to retire, continued to represent the road in this capacity until June 1 of his 75th year, as noted above.

H. B. Dike

W. R. Kettering, office engineer of the Chicago & North Western at Chicago, has been promoted to auditor of capital expenditures, with the same headquarters, effective June 1, to succeed A. I. Morris, deceased. Mr. Kettering was born in DeWitt, Iowa, in 1880, and was graduated from Cornell College, Iowa, in 1902, after which he entered railway service as an instrumentman in the track elevation department of the Chicago & North Western. He was promoted to division engineer on construction in 1907 and from 1908 to 1911 served as division engineer on the construction of the passenger

terminal in Chicago. Thereafter he served in the maintenance department at Boone, Iowa, and later in various capacities in the valuation department until the period of federal control in 1918, when for a year he was assistant in the office of the corporate engineer. Following the termination of federal control in 1920 he was appointed office engineer, which position he held until the time of his recent promotion.

L. Albert Harkness, whose promotion to general auditor of the Illinois Central, with headquarters at Chicago, effective May 15, was reported in the *Railway Age* of June 3

L. A. Harkness

(page 1317), was born in London, England, on November 22, 1874, and entered railway service in September, 1891, as a messenger on the Illinois Central. Thereafter he served consecutively as messenger, clerk, statistician and chief clerk in the office of the vice-president in charge of accounting, with headquarters at Chicago, until July, 1912, when he left the service of the Illinois Central to become assistant auditor of the Insular government of Porto Rico, with headquarters at San Juan. After engaging in this work for two years, he re-entered the service of the Illinois Central at Chicago in May, 1914, as assistant to the comptroller, and continued in this position and later as assistant comptroller until June, 1918, when he was promoted to comptroller for the corporation during federal control. Following the termination of federal control on March 1, 1920, he assumed the duties of assistant to the vice-president and continued in this service until the time of his recent promotion.

G. J. Bunting, whose appointment as comptroller of the Illinois Central with headquarters at Chicago, effective May 15, was reported in the *Railway Age*

G. J. Bunting

of June 3 (page 1317), was born at Portsmouth, Va., July 14, 1881, and entered railway service in 1900 as general accountant for the Cashie & Chowan, in North Carolina, a position which he later relinquished to become associated in an accounting capacity consecutively with the Audit Company of New York and the Indiana Audit Company, in which service he remained until May, 1909, when he was appointed examiner of accounts for the Interstate Commerce Commission. He re-entered railway service on July 15, 1911, as general accountant for the Chicago, Milwaukee & St. Paul, with headquarters at Chicago, a position which he held until March 15, 1913, when he was promoted to assistant general auditor. He left the service of this road on November 1, 1920, to become assistant director of the Bureau of Finance of the Interstate Commerce Commission, in which capacity he was engaged in effecting settlements between the carriers and the government for the guaranty period until May 15 of the current year, when he resigned to become comptroller of the Illinois Central as noted above.

Operating

T. R. Tompkins has been appointed supervising agent of the Michigan Central with headquarters in the general superintendent's office at Detroit, Mich., effective May 20.

O. H. Frick, whose promotion to superintendent of the LaCrosse division of the Chicago, Milwaukee & St. Paul, with headquarters at Portage, Wis., effective May 1, was reported in the *Railway Age* of May 6 (page 1046), was born at Manitowoc, Wis., on September 25, 1879, and was graduated from the University of Wisconsin in 1902. He started his railway career the same year as a levelman on the Louisville & Nashville, and a short time later became an assistant engineer for the Chicago, Rock Island & Pacific, which position he held until 1904, when he became resident engineer for the Missouri, Oklahoma & Gulf. Leaving this position in September, 1904, he was employed for two months as resident engineer for the Apalachicola Northern and thereafter entered the service of the Chicago, Milwaukee & St. Paul, serving continuously with the road in the consecutive capacities of assistant engineer, pilot engineer and field engineer on valuation work until April, 1919, when he was promoted to district engineer, with headquarters at Milwaukee, Wis., the position he held at the time of his recent promotion.

Traffic

F. E. Pennington has been appointed traveling passenger agent of the Missouri Pacific at Birmingham, Ala.

W. Ray Wilson has been promoted commercial agent of the Gulf Coast Lines, with headquarters at Pittsburgh, Pa., effective May 15, to succeed L. B. Williams, resigned.

J. R. Chisman has been promoted to general agent of the Nashville, Chattanooga & St. Louis, with headquarters at Memphis, Tenn., effective June 1.

J. M. Mallory, industrial agent of the Central of Georgia, will henceforth be designated as general industrial agent and **J. F. Jackson**, agricultural agent, will henceforth be general agricultural agent.

H. J. Earley has been appointed assistant general freight agent of the Denver & Rio Grande Western with headquarters at Denver, Colo., with charge over the issuance of tariffs, division sheets and the quotation of rates.

John V. Mahon, has been promoted to general agent of the Chicago, Minneapolis & Omaha, with headquarters at Duluth, Minn., effective May 16, to succeed **T. J. Kenniff**, promoted to assistant general freight agent.

Arthur W. Large, chief clerk to the agricultural agent of the Chicago, Rock Island & Pacific, has been promoted to agricultural agent, with headquarters at Chicago, effective June 1, to succeed **Alexander Jackson**, deceased.

B. W. Herrman, general freight agent of the Norfolk & Western with headquarters at Roanoke, Va., has been appointed assistant freight traffic manager with the same headquarters. **G. F. Butler** succeeds him as general freight agent. **O. W. Cox**, division freight agent at Roanoke, has been appointed coal freight agent, succeeding **W. A. Huse**, who has been appointed assistant general freight agent. **F. H. Pitman** succeeds Mr. Cox as division freight agent. **J. H. Wilson** has been appointed assistant general freight agent with headquarters at Roanoke and **G. C. Vanzandt** to a similar position at Cincinnati, Ohio. **F. W. Jones** has been appointed general agent at Cincinnati. **S. F. Thacker** has been appointed commercial agent at Bristol, Tenn.

Ira S. Auch, whose appointment as assistant general freight agent of the Lehigh Valley, with headquarters at Buffalo, N. Y., was announced in the *Railway Age* of May 27, page 1263, was born at Chalfont, Pa., on May 24, 1881. He entered railway service with the Philadelphia & Reading as a clerk in the freight claim department in 1899 and in 1902 was promoted to rate clerk in the general freight office of the same company. In 1906 he went with the Lehigh Valley as soliciting agent at Philadelphia. In 1909 he returned to the

Philadelphia & Reading as assistant chief clerk in the general freight office where he remained until 1913, when he was appointed general agent of the Erie at Philadelphia. He served there until the closing of the office in 1918, when he was transferred to the Erie headquarters at New York and remained there until January, 1920, when he went to Bethlehem, Pa., to organize the Nazareth Traffic Bureau. On March 1, 1920, he was appointed district freight agent of the Lehigh Valley and remained in that position until the time of his recent promotion.

Harry A. Mintz, whose promotion to assistant general freight agent on the Chicago, St. Paul, Minneapolis & Omaha, with headquarters at St. Paul, Minn., to succeed L. A. Mitzner, was reported in the *Railway Age* of June 3 (page 1317), was born in St. Paul, Minn., in 1889, and entered railway service on October 1, 1908, as an employee in the tariff bureau of the Chicago, St. Paul, Minneapolis & Omaha, in which department he served in various capacities until his recent promotion.

T. J. Kenniff, whose promotion to assistant general freight agent of the Chicago, St. Paul, Minneapolis & Omaha, with headquarters at St. Paul, Minn., was reported in the *Railway Age* of June 3 (page 1317), was born in Marquette, Mich., on February 16, 1883, and was educated at the Wisconsin Normal College, which he left in 1903. After spending some time on railway construction work in the employ of contractors, he entered railway service in 1901 as an employee on the Lexington-Jefferson City branch of the Missouri Pacific, where he served for a year, when he was transferred to the White river line of that road. He entered the service of the St. Louis-San Francisco in 1902 and worked with that road at St. Louis and later at Memphis until 1905, when he was engaged on the construction of the Emporia-Ottawa cutoff of the Santa Fe for a year. He left railway service in 1906 to spend a year in irrigation work on the Platte river in Nebraska and Wyoming, following which he re-entered railway service as an engineering assistant on the Western Pacific in Nevada. He became connected with the Chicago, St. Paul, Minneapolis & Omaha in 1908 as a clerk and served continuously on that road in the consecutive capacities of clerk, agent, soliciting freight agent, commercial agent and general agent until his recent promotion.

Mechanical

F. C. Simpson, master mechanic of the Southern with headquarters at Bristol, Va., has been transferred in a similar capacity to Knoxville, Tenn. **M. D. Stewart** succeeds Mr. Simpson at Bristol.

J. P. Roquemore, acting superintendent of motive power of the International & Great Northern since May 9, and prior to that mechanical engineer of the same company, was on May 30 appointed superintendent of motive power. **L. E. Temple** has been appointed mechanical engineer.

Engineering, Maintenance of Way and Signaling

H. A. Israel, assistant engineer of the Missouri Pacific, with headquarters at St. Louis, Mo., has been promoted to division engineer of the Kansas City Terminal division, with headquarters at Kansas City, to succeed C. A. Hewes.

H. Coppertwhait, assistant supervisor of signals of the Central of New Jersey, with headquarters at Elizabeth, N. J., has been promoted to supervisor of signals, with headquarters at Long Branch, N. J., effective May 24, to succeed **F. A. Rooney**, transferred to Phillipsburg, N. J., to succeed **J. F. Jacobs**, deceased.

Purchasing and Stores

B. W. Griffith has been appointed general storekeeper of the Michigan Central with headquarters at Detroit, Mich., succeeding **G. T. Dunn**, resigned.

C. R. Painter has been appointed assistant to the general purchasing agent of the New York, New Haven & Hartford with headquarters at New Haven, Conn., succeeding **B. L. Northam**, resigned.

Obituary

E. F. Needham, formerly superintendent of motive power of the Wabash, whose death on May 18 in Boston, Mass., was reported in the *Railway Age* of May 27 (page 1264), was born at Batavia, Ohio,

E. F. Needham

on December 25, 1864, and entered railway service in 1880 as a repair track laborer on the Wabash at Butler, Ind. Shortly thereafter he became a boilermaker's apprentice at the Fort Wayne, Ind., shops, and at the conclusion of his apprenticeship in 1894, was promoted to foreman of the boiler shops at Fort Wayne. He was transferred to Springfield, Ill., as boiler foreman in January, 1899, was advanced to assistant master mechanic with headquarters at Decatur, Ill., on December, 1901, and held this position at Decatur and, after April, 1902, at Ashley, Ind., until October, 1902, when he was promoted to master mechanic with headquarters at Fort Wayne, Ind., having supervision over the Detroit, Peru and Buffalo divisions. He was transferred to Springfield, Ill., as master mechanic in charge of the Decatur and Springfield divisions in March, 1906, and on September 1, 1907, became superintendent of motive power, a position he held until June 1, 1920, when he resigned on account of ill health.

William C. Edes, ex-chairman and former chief engineer of the Alaska Railroad Commission, died on a train near Merced, Cal., May 25, at the age of 65 years. Mr. Edes was born at Bolton, Mass.,

Wm. C. Edes

on Jan. 14, 1856, and was educated at the Massachusetts Institute of Technology, from which he was graduated in civil engineering in 1875. He entered railway service three years later as a member of a railway location party on the Southern Pacific and continued in the employ of this company in various engineering capacities in Arizona, New Mexico and Texas until 1882, when he entered in private practice in Massachusetts. He re-entered railway service in 1886 as assistant engineer on location and construction for the Southern Pacific and continued in that work for 10 years, during which time he had charge of the construction of a portion of the Oregon & California. He became chief assistant engineer of the San Francisco & San Joaquin Valley in 1896, and in 1901 re-entered the service of the Southern Pacific as assistant engineer, where he was engaged in locating new lines and supervising the reconstruction of other lines, including the Central Pacific from Rocklin, Cal., to Truckee, until 1905, when he became district engineer maintenance of way, with headquarters at San Francisco. A year later he was appointed chief engineer of the Northwestern Pacific. In May, 1914, he was appointed chairman and chief engineer of the Alaskan Engineering Commission. In 1919, he assumed the title of consulting engineer, a position he relinquished in March, 1920, to engage in private consulting work.

Entered at the Post Office of New York, N. Y., as mail matter of the second class.

Subscriptions, including 52 regular weekly issues and special daily editions published from time to time in New York, or in places other than New York, payable in advance and postage free; United States, Mexico and Canada, \$6.00. Foreign Countries (excepting daily editions), \$8.00. Foreign subscriptions may be paid through our London office in £ s. d. Single copies, 25 cents each.

WE GUARANTEE that of this issue, 12,000 copies were printed; that of these 12,000 copies, 10,300 were mailed to regular paid subscribers to the Railway Age and Railway Mechanical Engineer; 110 were mailed to advertisers; 490 were provided for counter and news companies sales, new subscriptions, bound volumes, samples, copies lost in the mail and office use; 1,100 copies for distribution at Atlantic City.

THE RAILWAY AGE is a member of the Associated Business Papers (A. B. P.) and of the Audit Bureau of Circulations (A. B. C.)

It is hard for business and industry to settle down to normal after the jolts that they received from the World War. Time will, of course, iron out the wrinkles, but much discomfort and even suffering may be relieved if the underlying economics of the situation are carefully studied and intelligent steps are taken to improve the conditions. The necessity for studying economy and promoting efficiency in all lines of endeavor was never so great; moreover, while this country is particularly favored, it has drawn upon its natural resources with too lavish a hand and must awaken to a full realization of the necessity for conserving these resources to a far greater extent than it has in the past. In considering our resources, however, we too often stress unduly the material resources. One of our greatest extravagances has been the carelessness with which human effort has often been utilized. Comparatively little study has been given to personnel problems. This applies with special force to the railroads, although it would be unfair to say that they are very far behind the average industry or business in this respect. Incidentally, one of the greatest mistakes that has been made has been the haphazard way in which foremen have been selected, trained and supervised. These men are the keystone of the arch and must measure up to a high standard if they are successfully to interpret the spirit of

The Keystone of the Arch

the management to the men, and hold the confidence of the men. If in some way this truth, and what it means to the railroads in the way of improved efficiency and economy, could be deeply impressed upon the minds of the higher officers, the results would be astounding.

The Railway Supply Manufacturers' Association, in placing a 350-page pocket notebook in the hands of each member of the railway associations meeting on the pier during the next two weeks, has provided the railroad men with a real convenience. One of the pages is devoted to each exhibitor, whose name, with a description of the exhibit, is printed at the top. These pages are arranged alphabetically so that each one may be located without difficulty. Notes kept in this book will be in excellent form for later reference, which in itself will add considerably to their value. But the distribution of this convenient notebook also carries with it a suggestion. The exhibit should be taken seriously and not considered as a rather elaborate form of entertainment. It has been brought together at large expense and it offers an educational as well as a business opportunity to railroad men which fully justifies the expense, but only if the opportunity which it offers is seriously and consistently utilized. Let the notebook be liberally used.

A Convenience and a Suggestion

There is always a certain amount of car work which necessarily must be done on small repair tracks with simple, inexpensive devices. Work done at these outlying points is costly, but oftentimes they are allowed to handle work that could have been done much more cheaply by a large shop with better facilities. A typical example is the changing of wheels on passenger cars. How often wheels near the condemning limit are allowed to run until the inspector at some out-of-the-way terminal finds that they take the gage. Then the repair track force has a job on its hands. The body has to be jacked high to roll out the trucks and the trucks in turn must be jacked up to remove the wheels. At a larger shop, where a drop pit is available, the work could be done in one-fifth the time. Is this not typical of what goes on every day? There seems to be a need for a different viewpoint with regard to the methods and facilities for car repairs. As much of the work as possible should be done at the principal shops. At the more important points the work should be systematized and an effort should be made to apply power operated devices and efficient tools instead of doing the work by an extravagant expenditure of manual labor.

Keep Work Off the Small Repair Track

The supply of skilled shop mechanics is not being recruited nearly as rapidly as it should be to take care of future requirements. Steps should be taken at least to make sure that each shop maintains its full quota as provided for in the national shop agreement. Moreover, it is important that measures be taken to insure that the best possible mechanics will be made from the boys who are now enrolled in apprenticeship courses. One superintendent of motive power, a skilled observer and a man of vision, indicates that the following are essential features of an apprenticeship course: (1) Follow the progress of each apprentice through the shops and see to it that he does not stagnate on any one class of work; (2) determine, if possible,

Suggestions as to Apprentices

what class of work he is best suited to and develop him accordingly; (3) make the drawing room work interesting and if possible have the more advanced apprentices work on drawings that are actually to be used in connection with their shop assignments; (4) allow both the regular and the helper apprentices to assist in work in connection with the making of locomotive indicator tests and similar special work.

The advent of the radio broadcasting station has focused more attention upon wireless communication during the past year than has ever been given to it during the entire 25 years since its inception. The reason lies obviously in the successful development of the radio telephone by which wireless transmission of speech has been made possible. Prior to this development general interest in the art was restricted to a limited number, largely boys, who would take the trouble and time to learn the telegraph code. The radio telephone has changed all this and subsequent applications of this new invention bid fair to reach no mean proportion. On railroads, experiments showing the possibility of communication between stationary and moving equipment have proved to be most successful. Just what these experiments may ultimately lead to, is more or less a matter of conjecture. If there is a demand for public communication facilities on moving trains, such facilities will certainly be installed. From a purely operating standpoint, there is great likelihood of establishing communication between dispatchers and train crews, and on long freight trains between locomotive and caboose. The value of such communication is difficult to estimate, but it is almost a certainty that over a period of time it would prove to be an important factor in expediting the movement of trains. For roads employing tug boats, wireless communication between dispatchers and boats will prove to be of inestimable value. It has already proved its value for emergency conditions. Just what lies in the immediate future as regards the adoption of radio communication by the railroads is difficult to predict, but there can be no longer any doubt that the subject is one deserving of careful consideration.

From the theoretical standpoint the superiority of friction draft gear over draft springs is easily demonstrated. The capacity of springs is so low that they can take up the energy in a car only if it is moving at extremely low speeds and they do not give the proper protection to heavy cars. Nevertheless it is a fact that some roads maintain that springs give as good results as friction gears, which suggests that the springs may have some advantages that are not apparent from the theoretical standpoint. The explanation is probably to be found in the condition of many of the friction gears in service. A spring exerts a considerable force to return to normal position. Observation shows that friction gears often have free slack or "stick" so that the travel and capacity are reduced. The statement has been made that the coupler key bearing on the sill often takes the shock of pulling and hitting, but this is probably a rare condition. Granting that friction gears sometimes are ineffective, the gear is not entirely to blame. A friction draft gear is a machine for dissipating energy. Like any machine it cannot operate properly for an indefinite period without attention. Would it not be worth while to inspect and it

necessary overhaul friction draft gears periodically to get the benefits that can be obtained from these devices when they are operating properly?

The members of the Railroad Labor Board who are attending the conventions in a body deserve to be congratulated on the wisdom and discrimination shown by them in their recent decision in the shop crafts wage case in refraining from awarding any reduction in the compensation of supervisory officers in the mechanical department. For years most supervisory officers of railways were paid too little in proportion both to the salaries of the officers above them and the wages of the employees whose work they directed. In the long run this was bound to have a bad effect on railway efficiency. It discouraged many supervisory officers and in some cases made it difficult to get the most competent men to accept such positions. The most capable men available are needed in supervisory positions, both because of the immediate importance of their work and because an ample supply of able and experienced men should always be available for promotion from supervisory positions to higher and more responsible places in the railway organization. The board has done not only the supervisory officers, but the railways, a good service by using its influence to cause the former to be paid as they should be.

One of the most noticeable recent developments of transportation methods has been the application of the light gasoline engine driven car for handling passenger and baggage traffic on branch lines or other places where the amount of business has not been sufficient to meet operating expenses of a locomotive and one or two cars. To be sure somewhat similar attempts were made a number of years ago but the anticipated economies were not realized. This lack of success was due partly to the fact that the gasoline engine was then in the early stages of its development, and partly to a failure to realize the limitations of this type of prime mover. Since that time the gasoline engine has been highly developed and is used in an enormous number of automobiles and trucks; the size of such engines, however, still remains at less than 75 hp. Auxiliary devices, such as transmission, clutches, etc., have also reached a high stage of development. A few years ago several railroads converted road motor trucks or busses to rail use by substituting special wheels and making a few other changes. Some of the truck builders soon saw that here might be a new field for business and built a number of similar converted busses. Later on other cars were constructed, the design of which was worked out by co-operation between railroad engineers and the truck builders. In a general way the results have been highly encouraging and it would appear that there is a field where such vehicles can replace a steam-operated train with decided economies in operation and with satisfaction to the public. In considering new applications of such motor cars the vital necessity of keeping the weight of every part of the car down to a minimum and the utilization of highly developed engines of the size now used in road motor trucks should not be overlooked. With these limitations, however, the seating capacity of the cars will not exceed 35 or 40 persons. Future developments will doubtless be along the line of improvements in details of construction, particularly in running gear.

The Present Status of Piecework

UNDER THE RAILROAD Administration all railroad shops in the United States were put on a day-work basis and a uniform rate of pay given for similar work, irrespective of the relative efficiency of the men, their geographical location, or variable living costs. Without doubt the abolition of piece work was one of the most serious mistakes of the Railroad Administration and one which entirely disorganized many shops throughout the country, changing them from smooth-running organizations with high production to shops in which the men were continually dissatisfied and patently endeavoring to curtail production. Admitting that certain features of piece work are undesirable and admitting that some railroad men of considerable prominence can be found who do not favor the system, piece work, or some equivalent method of paying men in proportion to their industry and skill, is absolutely essential to bring shop production up to the point where it ought to be and reduce correspondingly the cost of locomotive and car repairs.

When there is a surplus of labor there may not be a great need of piece work because the desire to hold their jobs provides men with the incentive necessary to produce a fair day's work. When the shoe is on the other foot, however, and there is more work than men, production naturally tends to fall off. It is simply a case of psychology. Not one man in a thousand ever works just for the love of working. There must be some incentive, whether desire for advancement, hope for greater remuneration, or fear of losing one's job.

The stock arguments against piece work are many, and yet most of them can be refuted by other arguments which stand the test of common sense. One of the principal difficulties and one which perhaps influenced the Railroad Administration more than any other in its decision to eliminate piece work, was the difficulty of determining a proper basis upon which to raise the piece work rates. This is perhaps the most serious objection to piece-work but it would seem that some system could be devised of expressing definite operations on a time basis rather than a price basis. If necessary, as a result of changes in the cost of living, to reduce the rate of compensation, the general wage rate could be reduced correspondingly without making any change in the time rate for the operation. This would indicate to the shop men just where and why the necessary reduction was made and there would be no feeling that the time rate for the individual job was being cut.

It has been said that inferior work is done under piece-work systems, and the answer is that a careless workman will do careless work under any system, *if he can get away with it*. The most effective way to checkmate him is for the inspector to discover one or two defective jobs and make him do them over again at his own expense. One or two examples of this kind are usually sufficient. The arguments that work will be hidden away and that some work may be paid for twice can doubtless be substantiated in a few cases, but it is safe to say that in the main, with competent inspectors and rates fairly set, piece-work represents the best system of wage payment from the standpoint of both management and men which has yet been tried. Within recent months the Labor Board has removed the inhibition against piece-work and at the request of a large proportion of the men certain shops have gone back on the piece-work system of payment, in one case at a 25 per cent increase over 1917 piece-work rates. In view of the good showing of railroad and contract shops operated on a piece-work basis and because of the need for reducing expenses, it will be interesting to note the success attained by those shops which are now reinstating piece-work systems.

Program for This Week

THE MEETINGS of Division V—Mechanical, American Railroad Association, will be held in the Greek Temple on the Million Dollar Pier. The official headquarters of the Division will be at the Marlborough-Blenheim Hotel. The sessions will open at 9.30 a.m. and the members are requested to be in their seats promptly.

Wednesday, June 14, 1922
9:30 a. m. to 12:30 p. m.

Prayer.
Address of Welcome by Mayor of Atlantic City.
Opening Exercises, Including Address by Chairman.
Action on Minutes of Annual Meeting of 1920.
Appointment of Committee on Subjects, Resolutions, Correspondence, Obituaries, etc.
Unfinished Business.
New Business.
Report of General Committee.
Discussion of Reports on:
Nominations.
Safety Appliances.
Scheduling of Equipment Through Repair Shops.

ENTERTAINMENT

10.30 a. m.—Orchestral Concert, Entrance Hall, Million Dollar Pier.
3.30 p. m.—Orchestral Concert and Impromptu Dancing, Entrance Hall, Million Dollar Pier.
4.30 p. m.—Tea will be served in Entrance Hall.
9.00 p. m.—Informal Dance including Special Features, Ball Room, Million Dollar Pier.

Thursday, June 15, 1922
9:30 a. m. to 12:30 p. m.

Discussion of Reports on:
Prices for Labor and Material.
Arbitration.
Tank Cars.
Loading Rules.
Train Lighting and Equipment.

ENTERTAINMENT

10.30 a. m.—Orchestral Concert, Entrance Hall, Million Dollar Pier.
3.30 p. m.—Orchestral Concert with Impromptu Dancing, Entrance Hall, Million Dollar Pier.
4.30 p. m.—Tea will be served in Entrance Hall.
9.30 p. m.—Grand Ball, Ball Room, Million Dollar Pier.

Friday, June 16, 1922
9:30 a. m. to 12:30 p. m.

Discussion of Reports on:
Car Construction.
Couplers and Draft Gears.
Brake Shoe and Brake Beam Equipment.
Train Brake and Signal Equipment.
Car Wheels.

ENTERTAINMENT

10.30 a. m.—Orchestral Concert, Entrance Hall, Million Dollar Pier.
3.30 p. m.—Orchestral Concert with Impromptu Dancing, Entrance Hall, Million Dollar Pier.
4.30 p. m.—Tea will be served in Entrance Hall.
9.00 p. m.—Informal Dance, Canadian Night with Special Features Ball Room, Million Dollar Pier.

Saturday, June 17, 1922

Entire Day Set Aside by Mechanical Division V to View the Exhibits.

ENTERTAINMENT

10.30 a. m.—Orchestral Concert, Entrance Hall, Million Dollar Pier.
3.30 p. m.—Orchestral Concert with Impromptu Dancing, Entrance Hall, Million Dollar Pier.
9.00 p. m.—Informal Dance, Carnival Night with Special Features by H. T. McConnell of Chicago, Ball Room, Million Dollar Pier.

Long Distance Telephone Service

A SWITCHBOARD with necessary operators will be established on the Pier in connection with several long distance booths, conveniently located in different sections of the pier.

Cornell Dinner on Monday

THE DINNER of the Cornell alumni, which is a regular feature of convention week, will be held Monday evening, June 19, at the Traymore. All who expect to attend should register with A. F. Stuebing at the *Railway Age* booth.

Post Office and Mail

UNITED STATES MAIL addressed care of Secretary's Office, Million Dollar Pier, Atlantic City, N. J., will be taken care of and distributed to exhibitors' booths.

Members are requested not to send general circular matter for distribution to other exhibitors, as this is a violation of the association rules.

R. S. M. A. Annual Meeting and Election

THE ANNUAL meeting of the Railway Supply Manufacturers' Association will be held in convention hall on the pier at 12 o'clock Saturday. District meetings for the election of executive committee members will be held Saturday morning from 10:30 to 11:30 o'clock.

President Schurch, of the Railway Supply Manufacturers' Association, has appointed the following members to serve as a nominating committee to select the Association's officers for the following year: S. P. Bush, chairman; Sam Allen, Horace Parker, Frank Lanahan, Burton Mudge, George L. L. Davis and Walter B. Leach.

This is Flag Day

TODAY IS THE 145th anniversary of the adoption of the national flag by the Continental Congress. It may be properly observed by displaying a small American flag in your buttonhole. Several members of the Mechanical Division have made a point of religiously observing this day in past years and have felt that more of the convention attendants should recognize it. To make sure that the matter would not be overlooked, the *Daily News* two years ago commissioned R. D. Smith, superintendent motive power and rolling stock of the Boston & Albany, to see that this important event was not overlooked in the *News* this year. He has discharged his duty faithfully and we hope that the result will be a generous display of flags.

Railroad Club Secretaries Meet Tomorrow

THE SOCIETY OF RAILWAY CLUB SECRETARIES will hold its annual meeting at the Marlborough-Blenheim tomorrow, Thursday morning, at 10:00 a. m. It will be followed by a "round-table luncheon" immediately after the adjournment of the meeting of the Mechanical Division, or about 1:00 p. m. The "round-table luncheon" was started several years ago and allows the secretaries and their guests to have an informal discussion on matters relating to the growth and development of the clubs. Each secretary is privileged to invite to this luncheon as a guest of the Society the president of his club or the next highest ranking officer who may be present at the

convention; also the chairman of the subjects committee. Several of the clubs have incorporated new features in their programs during the past two years and have taken important forward steps. It is anticipated, therefore, that a discussion of this sort will be most fruitful. Since the last annual meeting of the Society of Railway Club Secretaries the Western Railway Club has resumed its membership in the organization.

Rolling Chairs

THE TRANSPORTATION COMMITTEE will provide rolling chairs for members and guests of the convention wearing official badges within the time limits and at the places mentioned below.

Convention chairs are not allowed to wait more than fifteen minutes. The Transportation Committee will consider it a favor if members or guests of the associations will report to the committee any inattention on the part of an attendant. If the number on the chair is given, it will facilitate checking the complaint.

Unoccupied chairs may be stopped at any point on the boardwalk, except between the Marlborough-Blenheim and the pier, and they may be used in either direction.

Rolling chairs will be provided from the following stations, between the hours indicated, from June 14 to June 21, inclusive:

The Pier	A.M.	P.M.
Marlborough-Blenheim	9:00 to 6:30	9:00 to 6:00
Traymore	9:00 to 6:00	9:00 to 6:00
Chalfonte Hotel	9:00 to 6:00	9:00 to 6:00
Chelsea Hotel	9:00 to 6:00	9:00 to 6:00
Alamac Hotel	9:00 to 6:00	9:00 to 6:00
St. Charles Hotel	9:00 to 6:00	9:00 to 6:00
The Breakers	9:00 to 6:00	9:00 to 6:00
Ambassador Hotel	9:00 to 6:00	9:00 to 6:00
	P.M.	P.M.
To all Entertainments on Pier	8:30 to 10:00	

Enrollment Regulations

THIS YEAR special badges have been set aside for the officers and members of the executive or general committees of the various associations involved in the Atlantic City meetings. This applies also to the committee men of the Railway Supply Manufacturers' Association. All those included in these classifications should request the special badges when they enroll; this will be of great assistance to the Enrollment Committee and will facilitate the handling of registration.

Any mechanical department officer of the rank of general foreman or above is entitled, upon presenting proper credentials either in the form of a letter from his company instructing him to attend the conventions, or his annual transportation, to receive a Division V, Mechanical, membership badge. Guest badges will be issued to those below the rank of general foreman.

In the case of Division VI—Purchases and Stores, all officers in these departments having the title of assistant storekeeper or higher will be entitled to membership badges. Guest badges will be issued to those below the rank of assistant storekeeper.

Badges positively must not be loaned and no badges will be given to any one to be delivered to someone else.

Enrollment started on Monday afternoon at two o'clock. The enrollment booth will be open, during the conventions, as scheduled below.

	Morning	Afternoon	Evening
Wednesday, June 14	9 to 11	2 to 6	7 to 8
Thursday, June 15	9 to 11	2 to 6	7 to 8
Friday, June 16	9 to 11	2 to 6	7 to 8
Saturday, June 17	9 to 12	2 to 4	7 to 9
Sunday, June 18	11 to 12		7 to 8
Monday, June 19	9 to 11	2 to 6	8 to 9
Tuesday, June 20	9 to 12	2 to 5	
Wednesday, June 21	9 to 11

Railway Supply Manufacturers' Association

Pier Not Large Enough to Accommodate Exhibit; Many
Prospective Exhibitors Turned Away

THE PROBLEMS that the Railway Supply Manufacturers' Association had to solve in arranging for this year's conventions were both numerous and difficult. No convention was held last year, and at the time the decision was reached to hold one this year business was bad, and there was little assurance that it would get much better.

In consequence, many concerns hesitated about exhibiting at all, and considered sending only a much-reduced representation here. The confidence shown and the work done by the officers and members of the executive committee helped to arouse interest; and, of course, the interest rapidly became intensified when railway earnings began to improve and many lines began to come into the market for cars, locomotives and supplies of all kinds.

The result is that the convention will open today with the largest exhibit of equipment and supplies in history. In this connection it may be stated that the executive committee greatly regrets its inability to accommodate all those who applied for exhibit space. The pier simply was not large enough.

It is hardly necessary to say this is largely due to the fact that within the next ten days the Purchases and Stores Division convention, the Air Brake Association and the

Railway Electrical Engineers' convention, as well as the Mechanical convention, will be held here. The equipment and supply interests never before had opportunity to show their goods to officers in so many branches of the railroad business at one time and place, and as a result of the strenuous and efficient work of the officers and executive committee of the Railway Supply Manufacturers' Association, the exhibit is not only ready unusually early, but is one of the best, if not actually the best, ever given.

The object in preparing the entertainment program has been to incur as little expense as is compatible with providing pleasing and satisfactory entertainment in the intervals between sessions daily, throughout the time the conventions are in session. While the expenditure made for entertainment will not be large, it is believed the program will prove to be all that could be desired.

The conventions follow immediately on the heels of the worst business depression in 50 years—a depression in which many railway equipment and supply concerns that have been successful for years encountered serious financial difficulties. It would not have been surprising, therefore, if the exhibit had been comparatively small and other arrangements of the Supply Association in connection with the conventions had been made on a correspond-

ingly limited scale. The fact that this is not the case is due not only to the natural optimism of the supply fraternity, but to the courage, energy and ability with which the officers and members of the executive committee have shouldered their responsibilities and done their work.

John F. Schurch was elected president of the association at the 1920 meeting and because there was no meeting last year, has had to head up the organization during two difficult years—troublesome because in 1920, after making all arrangements for the convention and a big exhibit, it was thought necessary to cancel them, and this year because of the difficulty in organizing the exhibit after missing a year. Mr. Schurch has been a most active worker in the association for many years, and with his associates is to be heartily congratulated upon the success of the big exhibit this year.

Mr. Schurch is a vice-president of Manning, Maxwell & Moore, Inc., in charge of sales in the middle west and west, with headquarters at Chicago. He is brand new on the job, having assumed this position June 1. He is a graduate of the University of Minnesota, going directly from that institution in 1893 to the Minneapolis, St. Paul & Sault Ste. Marie. He remained with that road until 1905, serving in the office of the auditor, the general superintendent, and in the transportation department, finally attaining the position of chief clerk to the vice-president. For the next eight or nine years he was associated with the Railway Materials Company of Chicago. He was elected vice-president of the Damascus Brake Beam Company in February, 1914, and in June of that year was elected president of the company. He resigned later in the year, however, to become vice-president of the Symington Company and remained with that company until the first of this month.

The vice president of the association is Charles D.

Jenks, president of the Damascus Brake Beam Company, Cleveland, Ohio.

The secretary-treasurer, John D. Conway, has officiated in that capacity for many years, making his headquarters at Pittsburgh, Pa. Naturally a large part of the detail work of the organization devolves upon his shoulders.

Executive Committee

The executive committee consists of the president, vice-president and twelve members who represent seven geographical districts. Several of the members of the executive committee are chairmen of sub-committees, although three important committees—entertainment, enrollment and transportation—have chairmen who are not members of that committee.

The names of the members of the executive committee and the districts they represent are as follows:

First district (New England states and Canada) one member: George W. Denyven, George W. Denyven & Co., Boston, Mass.

Second district (New York and New Jersey) three members: Charles W. Beaver, Yale & Towne Manufacturing Company, New York; W. K. Krepps, Crucible Steel Company of America, New York; and H. G. Thompson, American Radio & Research Corporation, Medford Hill-side, Mass. (Mr. Thompson has moved outside the district since the 1920 meeting).

Third district (Pennsylvania) two members: W. H. S. Bateman, The Parkesburg Iron Company and the Champion Rivet Company, Philadelphia, Pa.; and John M. Gillespie, Lockhart Iron & Steel Company, Pittsburgh, Pa.

Fourth district (Ohio, Indiana and Michigan) two members: George A. Cooper, Frost Railway Supply Company, Detroit, Mich.; and Edward M. Savercool, S. F. Bowser and Co., Inc., San Francisco, Calif. (Mr. Saver-

G. A. Cooper

C. W. Beaver

Members of Executive Committee, Railway Supply Manufacturers' Association

cool moved out of the district since the 1920 meeting).

Fifth district (Illinois) two members: L. B. Sherman, *Railway Age*, Chicago; and L. S. Wright, National Malleable Castings Company, Chicago.

Sixth district (Delaware, Maryland, District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Kentucky and Tennessee) one member: George L. Morton, Galena-Signal Oil Company, Atlanta, Ga.

Seventh district (states west of the Mississippi river, including Louisiana, Minnesota and Wisconsin) one member: S. H. Campbell, Western Railway Equipment Company, St. Louis, Mo.

The members of the executive committee who were elected at the 1920 convention were Messrs. Denyven, first district; Krepps, second district; Savercool, fourth district; Sherman, fifth district, and Campbell, seventh district.

Three new members will be elected this year to suc-

- W. A. McWhorter, Bradford Draft Gear Company, Chicago.
- A. R. Miller, The B. F. Goodrich Rubber Company, New York.
- C. R. Naylor, T. H. Symington Company, Chicago.
- N. C. Naylor, Railway Steel-Spring Company, Chicago.
- George A. Nicol, Jr., Johns-Manville, Inc., New York.
- Leslie R. Pyle, Locomotive Firebox Company, Chicago.
- S. Worcester Sargent, American Steel Foundries, Philadelphia, Pa.
- Gardner W. Taylor, The R. T. Jones Lumber Company, Inc., New York.
- H. A. Varney, Sunbeam Electric Manufacturing Company, Chicago.
- Fred W. Venton, Crane Company, Chicago.
- Kal. R. Walsh, The Glidden Company, Chicago.
- W. M. Wilson, Flannery Bolt Company, Pittsburgh, Pa.

Enrollment Committee

The work of this committee is difficult and arduous. The committee is comparatively small for so difficult and tedious a task. It works in several shifts. The members are:

- F. H. Smith, Chairman, Gold Car Heating & Lighting Co., Brooklyn, N. Y.
- G. A. Baden, King Pneumatic Tool Company, Chicago.
- C. L. Bates, Railway Review, New York.
- J. E. Brown, O'Malley-Bear Valve Company, Chicago.
- J. E. Dodson, United States Rubber Company, Baltimore, Md.
- Arthur Haller, American Locomotive Company, Chicago.
- F. C. Koch, Railway Age, New York.
- S. I. Leslie, The Leslie Company, Lyndhurst, N. J.
- H. V. McKedy, The Glidden Company, New York.

H. E. Daniels

R. J. Himmelright

F. H. Smith

Chairmen of the Transportation, Entertainment and Enrollment Committees of the Railway Supply Manufacturers' Association

ceed Messrs. Beaver and Thompson of the second district, and Cooper of the fourth district.

Exhibit Committee

This committee, which has charge of all exhibit arrangements, is composed of five members, all of whom are also members of the executive committee. Charles W. Beaver is chairman, and the other members are John M. Gillespie, H. G. Thompson, Edward M. Savercool and L. B. Sherman.

Entertainment Committee

This committee, as its name implies, has charge of all entertainment features. Each of the various important events is entrusted to a sub-committee. The members are:

- R. J. Himmelright, Chairman, American Arch Company, Inc., New York.
- Charles L. Brown, Manning, Maxwell & Moore, Inc., Chicago.
- Lewis O. Cameron, Edgewater Steel Company, Washington, D. C.
- W. J. Carrigan, International Machinery & Supply Company, Ltd., Montreal, Que.
- J. Cizek, The Leslie Company, Lyndhurst, N. J.
- W. G. Cook, Garlock Packing Company, Philadelphia, Pa.
- R. P. Cooley, Vapor Car Heating Company, New York.
- C. W. Floyd Coffin, Franklin Railway Supply Company, Inc., New York.
- R. L. DeArmond, Lowe Brothers Company, Dayton, Ohio.
- W. J. Doherty, Continental Iron & Steel Company, New York.
- Arthur N. Dugan, Bronze Metal Company, New York.
- Clark D. Eaton, American Car & Foundry Company, New York.
- D. L. Euhank, Galena Signal Oil Company, Cincinnati, Ohio.
- T. W. Fogg, Boss Nut Company, Chicago.
- George E. Haas, Pyle-National Company, Chicago.
- Oscar C. Hayward, Williams-Hayward Company, Chicago.
- L. D. Hiner, Joseph T. Ryerson & Son, Chicago.
- Arthur G. Johnson, Armspear Manufacturing Company, New York.
- Webb G. Krauser, Union Draft Gear Company of Chicago, Montreal, Que.
- L. J. McCoombs, The Patterson-Sargent Company, Boston, Mass.

- L. D. Mitchell, Detroit Graphite Company, Chicago.
- H. S. Patterson, Walworth Manufacturing Company, Boston, Mass.
- G. E. Ryder, The Superheater Company, New York.
- R. Van Steenburgh, The Okonite Company, Passaic, N. J.
- C. W. Sullivan, Garlock Packing Company, Chicago, Ill.
- H. K. Williams, Safety Car Heating & Lighting Company, New York.
- Edward Wray, Railway Purchases & Stores, Chicago.

Transportation Committee

The transportation committee looks after the assignment of rolling chairs and other local transportation matters. Its members are:

- H. E. Daniels, Chairman, West Disinfecting Company, Chicago.
- W. S. Atkinson, Cook Paint & Varnish Company, Kansas City, Mo.
- G. E. Anderson, The Duff Manufacturing Company, St. Louis, Mo.
- C. Beaumont, Boss Nut Company, Baltimore, Md.
- G. R. Boyce, A. M. Castle & Co., Chicago.
- Ralph Brown, The Curtain Supply Company, Chicago.
- T. F. Clifford, Globe Seamless Steel Tubes Company, Chicago.
- H. A. Clark, The Garlock Packing Company, Montreal, Que., Canada.
- Howard P. Cook, Columbia Nut & Bolt Company, Bridgeport, Conn.
- F. E. Finley, La Glede Steel Company, St. Louis, Mo.
- F. J. Coolidge, The Buckeye Steel Castings Company, Chicago.
- F. M. Cmidt, Fairbanks, Morse & Co., Chicago.
- C. D. Derby, The Joyce-Gridland Company, Dayton, Ohio.
- Frank B. Flinn, Griffin Wheel Company, Chicago.
- E. C. Folsom, The Railway Materials Company, Chicago.
- J. N. Gallagher, O'Malley-Bear Valve Company, Chicago.
- C. H. Gaskill, Baldwin Locomotive Works, Philadelphia, Pa.
- E. L. George, Pratt & Lambert Co., Chicago.
- C. J. Gorman, Union Draft Gear Company, Chicago.
- William Hickey, Magnus Metal Company, Chicago.
- Cyrus J. Holland, The Wine Railway Appliance Company, Chicago.
- George Hannaway, The National Refining Co., Chicago.
- W. A. Houston, Joseph Dixon Crucible Company, Baltimore, Md.
- J. W. Hackett, The Okonite Company, Passaic, N. J.
- S. M. Hamilton, The Bettendorf Company, Chicago.
- W. J. King, Hewitt Rubber Company, Chicago.
- Henry S. LaBare, H. B. Channon Company, Chicago.
- George J. Lawrence, J. B. Ford Company, Wyandotte, Mich.
- Floyd K. Mays, Bradford Draft Gear Company, New York.

- A. J. McNeil, General Electric Company, Chicago.
- J. A. M. Farnham, The B. & O. V. Co., St. Louis, Mo.
- J. J. N. Brown, G. B. Sealless Steel Tubes Company, New York.
- Braze K. Owens, Magnus Metal Company, Chicago.
- H. A. J. Stre, Liberty Manufacturing Company, Pittsburgh, Pa.
- H. R. Parfitt, The Superheater Company, Chicago.
- T. J. Pave, Galena Signal Oil Company, St. Louis, Mo.
- H. D. Richardson, American Steel Foundries, New York.
- A. E. Biers, Grip Nip Company, Chicago.
- W. B. Russ, Edwin S. Woods Company, Chicago.
- George H. Snyder, American Steel Foundries, St. Paul, Minn.
- E. E. Thalen, Duff Manufacturing Company, Chicago.
- J. H. Trent, Johns-Manville, Inc., St. Louis, Mo.
- G. S. Turner, Harry Vissering & Co., Chicago.
- A. H. Weston, T. H. Sington Company, New York.
- W. F. Walsh, Galena Signal Oil Company, Chicago.
- S. C. Workman, Southern Wheel Company, Atlanta, Ga.
- R. R. Wells, U. S. Metal Packing Company, Philadelphia, Pa.
- T. H. Williams, Chicago-Cleveland Car Roofing Company, Chicago.

Other Committees

There are several other important committees which are made up entirely of members selected from the executive committee.

The finance committee includes George A. Cooper as chairman, W. K. Krepps and George W. Denyven.

The badge committee consists of L. S. Wright, chairman, George W. Denyven and Sterling Campbell.

The hotel committee consists of W. K. Krepps, chairman, L. S. Wright and W. H. S. Bateman.

The by-laws committee consists of George L. Morton, chairman, W. H. S. Bateman and Sterling Campbell.

Chairman Tollerton on His European Trip

W. J. TOLLERTON, chairman of the Mechanical Division, has recently returned from Europe, where he attended the ninth congress of the International Railway Association, held at Rome, Italy, April 18 to 28, inclusive. During the trip Mr. Tollerton traveled some 4,000 miles over the railroads of England, Belgium, France, Switzerland and Italy, and had a splendid opportunity to compare railroad practices in Europe with those in America.

Commenting on the wide differences in the character of equipment and methods of the railroads of the two continents, Mr. Tollerton said that, generally speaking, they have been developed under such widely different commercial and traffic conditions that, in fairness both to Europe and to America, no direct comparison can be made and that if one looks far enough he will find that there are just as good reasons for the light freight trains and small cars of the Continental railroads as there are for the heavy trains of large capacity cars common in America.

"Take the fuel situation in Italy as an illustration," he said. "This country is an extensive producer of raw silk. Mulberry trees are grown for the leaves, which are stripped from the branches as food for silkworms. As soon as the leaves are harvested, the trees are cut back and the year's growth of branches is carefully collected and used on the bare stumps of the trees to season. These branches are practically the only native fuel; the entire coal supply is imported. In Milan coal retails for 700 lire, or about \$42 a ton, American money, and is distributed in pounds, not in tons. Few dealers could afford to purchase coal in 50 ton lots, and the small 10-ton cars commonly used are as large as are justified by the economy of the trade.

The respect of the Italians for coal is indicated by the frequency with which loaded coal cars are covered with tarpaulins," he continued. "When not protected in this way, the tops of the loads are invariably covered with a coat of whitewash to detect and discourage pilfering."

To the American railroad man probably one of the most

marked differences between the practices of the two continents is in the weight and character of passenger equipment. Mr. Tollerton was the American reporter on the subject of passenger carriages at the Rome meeting of the International Railway Association, and says that in the discussion of this subject the European railway delegates objected to the American type of passenger car construction as being entirely too heavy. In France, before the introduction of steel underframes, the weight of passenger cars averaged about 400 lb. per passenger carried, and since the introduction of steel underframes the average does not exceed 600 lb. per passenger, which is considered to be the practicable limit. In this country the weight of coaches per passenger seating capacity seldom runs below 1,400 lb. and in sleeping cars is as high as 6,000 lb. All consideration for the convenience and safety of passengers seems to be entirely omitted in the design of coaches on the Continental railroads, but here again a strict comparison can not be made with our cars because the average journey, except on De Luxe trains, is much shorter in Europe than in America.

In Europe, Mr. Tollerton says, first cost is a greater factor in determining the character of equipment than it is in this country. Continental European roads show a marked preference for gas lighting rather than electric lighting in passenger cars. They admit the economy of operation of the electric lighting equipment, but stick to the gas lighting system because of the greater expense of installing the electrical equipment.

Generally speaking, Mr. Tollerton found passenger car conditions rather poor on the Continent, but motive power conditions very fair, particularly in France, England and Belgium, the cost of fuel compelling attention to the motive power in the interests of fuel economy. In this connection most train schedules have been very greatly lengthened in order to reduce the fuel consumption, a practice which is made possible by the fact that all employees in the train service are paid either on a weekly or a monthly basis.

"The trip was most interesting," said Mr. Tollerton in conclusion. "We were received with the utmost courtesy by railroad officials in every country we passed through, who did everything that conditions would permit to make our journey a pleasant and comfortable one."

Mr. Tollerton is accompanied to the convention by Mrs. Tollerton, and they are at the Marlborough-Blenheim.

Special Train From Chicago

THE SPECIAL ATLANTIC CITY convention train over the Pennsylvania Lines left Chicago at 1:40 o'clock Monday p. m. It ran in two sections and the story goes that if the Pennsylvania officials had not been handicapped for passenger equipment, they would have run the train in three sections. The make up of the two sections was almost identical—1 baggage, 1 buffet, 2 dining, 3 sleeping, 1 compartment and 1 observation car.

Though the starting time was slightly delayed, both sections arrived in Atlantic City at 10:45 o'clock yesterday A. M., practically on time.

The journey to the seashore was without incident all the passengers enjoying the trip.

New Purchasing Officer for the Frisco

A. H. LARIE has been appointed assistant to the vice-president and chief purchasing officer of the St. Louis-San Francisco with headquarters at St. Louis, Mo.

Conventionalities

"Uncle Bill" Lewis arrived early, hale and hearty, having fully recovered from a rather serious accident last winter. He joined the Master Car Builders' Association in 1878, when it was eleven years old.

Clement F. Street is celebrating the fact that it is thirty years since he attended his first convention. He was at Saratoga in 1892, and has missed only one convention since. This was in 1904, when he was in Australia.

W. B. Storey, president of the Atchison, Topeka & Santa Fe, arrived yesterday to attend the convention. Mr. Storey is the A. R. A. executive committee member for the Mechanical Division and is therefore, especially interested in the conventions and the exhibit.

Charles R. Ellicott of the Westinghouse Air Brake Company will be missed at the conventions this year. He has found it necessary to seek relief from business activities for a short time and is now on a trip in the west; it is expected he will follow that plan of recreation during the remainder of the summer.

Robert B. Rasbridge, superintendent car service, Philadelphia & Reading, one of the workers of the Mechanical Section, arrived early and is at the Dennis. Mr. Rasbridge's many friends at the convention greatly regret the passing by death of Mrs. Rasbridge, some two weeks ago.

Mr. and Mrs. George A. Barden, Philadelphia, were among the early arrivals. It is their twenty-first convention. This year Mr. Barden is announcing his new business connection—that of district manager of the King Pneumatic Tool Company, with headquarters at Philadelphia.

R. H. Aishton, president of the American Railway Association, is expected to arrive in Atlantic City on Sunday. He will attend a meeting of the executive committee of the A. R. A. in New York on Thursday, and it is thought that some other members of the executive committee will come down with him.

Leslie R. Pyle, of the Locomotive Firebox Company, is among those whose plans for attending the convention went wrong. Mr. Pyle went out on the Southern Pacific to be present at a test of the thermic syphon, and the work has been delayed so he will spend the convention weeks on the Pacific Coast instead of on the Boardwalk.

John Hennessey and John Lentz, two old-time conventionalities known to all, are here as usual. "J. H." has fully recovered from an operation two years ago when he missed the 1920 gathering of the clans. He is now enjoying good health. "J. L." seems to be minus his market basket and umbrella and his many friends are mystified thereat.

Charles D. Jenks, vice-president of the Railway Supply Manufacturers' Association, will be a late arrival at the convention. At his home in Cleveland he is making a full recovery from a serious abdominal operation performed some five weeks ago in a Cleveland hospital. Mr. Jenks expects to join his many friends here within a few days.

C. F. Giles, superintendent of machinery of the Louisville & Nashville, reports that traffic recently has picked up remarkably on his railway and that it is now handling a large business. The northbound movement of fruits, vegetables and other perishables is especially heavy. The Louisville & Nashville's territory plainly is entering a new period of prosperity.

George Cooper came early with news about a long day's drive in an automobile he took the other day and a reduction of his weight. There was some confusion at first as to whether he said he drove 290 miles in one day and formerly weighed 364 pounds, or vice versa. The matter finally has been cleared up. Just before he left he drove from Detroit to Traverse City, Mich., 364 miles in a single day. It wasn't the drive that caused it, but he announces also that he recently has been wasting away, his avoirdupois having declined from 290 pounds to a trifle of only 266. Even at this rate, it will take George some time to qualify as a featherweight.

E. M. Harshbarger, formerly assistant manager of the St. Louis district office, also in charge of railway sales in that district for S. F. Bowser & Co., Inc., manufacturers of oil storage systems, has been appointed manager of the railroad sales department, with headquarters at the home office in Ft. Wayne, Ind. During the war it was necessary for the Bowser Company to devote almost its entire facilities to the requirements of the government. Since the war its railroad department has been reorganized on a basis which now makes it possible to extend engineering and sales service to railways from any and all of its branch offices, which are located in every large city in the United States. This is Mr. Harshbarger's first convention, but it will not be his last.

A. W. Lemme, who completed his apprenticeship as a moulder in the Bloomington, Ill., shops of the Chicago & Alton in 1892 and who since that time has had a very wide foundry experience in various capacities, has recently joined the staff of the O'Malley-Bear Valve Company, Chicago. He was for eleven years general superintendent of the Chicago Bearing Metal Company and will function in his new connection as a bearing metal specialist in charge of the O'Malley-Bear journal bearing and locomotive brass casting service. Mr. Lemme is a past president of the Chicago Foundrymen's Club and is acting as a member of the Fuel Auxiliary of the Illinois Manufacturers' Association.

J. M. Davis, president of Manning, Maxwell & Moore, Inc., will come to the convention today as a railway supply man for the first time. He was elected to his present position a year ago, after having been in railway service almost exactly 30 years, and after having climbed the ladder all the way from a freight brakeman on the San Antonio & Aransas Pass to vice-president in charge of operation of the Baltimore & Ohio. Few men have as broad a knowledge of general railway conditions in North America as Mr. Davis, since he worked at different times as an employee or officer on the San Antonio & Aransas Pass; Gulf, Colorado & Santa Fe, Mexican Central, Great Northern, Erie, Oregon Short Line, Southern Pacific, of which he was general superintendent, Cincinnati, Hamilton & Dayton, and Baltimore & Ohio Southwestern, of which he was general manager, and Baltimore & Ohio, of which, as already indicated, he was vice-president. He left the Baltimore & Ohio in 1919 to become president of the Rock Hill Iron & Coal Company and associated corporations, including the East Broad Top Railroad & Coal Company.

Exhibit Characterized by Many New Devices

Machine Tool Exhibit the "Best Ever"; Large Track Exhibit; Important Developments in Specialties and Equipment Since 1920

THE RAILWAY SUPPLY MANUFACTURERS' ASSOCIATION and its exhibit committee made a record this year. Shipments of exhibits arrived earlier than usual in Atlantic City and were promptly taken to the pier and installed with clock-like precision. Everything worked smoothly and on time. Last evening the final touches were given, the cleaning up finished, and all was in readiness for this morning.

The scope of the exhibits is without question the largest in the history of the R. S. M. A. It ranged from the many new features in small equipment devices for cars and locomotives to the complete cars and locomotives themselves. The track exhibit on Mississippi avenue near the Boardwalk shows a number of locomotives and passenger and freight cars. A careful inspection and study of this exhibit should be made by all convention people before they leave Atlantic City.

At one time during the past winter it looked as if the entire space in Machinery Hall would not be used by the manufacturers of machinery and tools. Subsequently, however, every square foot of space was taken and today there is presented for the inspection of the railway men the most complete machine tool exhibit ever made. In order to take care of such an exhibit it was found necessary for operating purposes to increase the air and electric power service more than 50 per cent over previous years.

Ninety-six thousand square feet of exhibit space—all the available space on the pier, except the balcony, which has been found to be not desirable—is being used this year by 341 exhibitors—and it was found some time ago

less space to applicants than had been asked. Many of the larger companies in the full convention spirit of co-operation, readily cut down their requirements for space in favor of those who had none. Even at that it is a regrettable fact that 75 applications for space could not be granted.

List of Exhibitors

Aeroil Burner Company, Inc., Union Hill N. J.—Portable oil burners; thawing outfits for track and maintenance departments; kerosene blow torches; blue flame kerosene gas burners; pitch and asphalt kettle burners; locomotive and steel car repair torches; combination soldering iron and blow torch. Represented by George P. Kittel and Gustav Kittel. Space 704.

Air Reduction Sales Company, New York.—Demonstrations of Airco-Davis-Bournonville specially designed machines for automatic oxy-acetylene welding and cutting (radiograph, oxygraph and camograph) and of hand welding and cutting torches; cylinders of Airco oxygen and Airco acetylene and various other units of Airco and Airco-Davis-Bournonville manufacture. Represented by B. U. Law, E. M. Sexton, R. T. Peabody, J. L. Anderson, H. H. Melville, W. H. Ludington and A. Blaser. Spaces 639 and 700-701.

Ajax Manufacturing Company, The, Cleveland, Ohio.—New model upsetting forging machine with automatic self-adjusting safety pitman; samples of railway forgings made by Ajax forging machine methods. Represented by I. R. Blakeslee, H. D. Heman, A. L. Guilford and J. A. Murray. Spaces 65-67.

Allegheny Steel Company, Brackenridge, Pa.—ASCO hoodless type A. R. A., and hood type M. C. B. journal box lids; ASCO standard A. R. A. truck spring plates, miscellaneous pressed steel stampings for railroad work. Represented by L. W. Hostetter and B. E. Eudy. Spaces 170-171.

American Abrasive Metals Company, New York.—Feralun brake shoes and structural safety car step treads; anti-slip floor plates; heat resisting castings; Brenabon, Vitulcon and Alumalun safety treads and saddles. Represented by H. Weaver Mowery and Ralph C. Davison. Space 620.

American Arch Company, New York.—Locomotive arch brick. Represented by L. Grand Parish, William J. Allison, J. P. Neff, R. T. Himmelright, J. T. Anthony, George Wagstaff and G. M. Lean. Spaces 414-416-422-424.

American Automatic Connector Company, The, Cleveland, Ohio.—Latest improved American automatic connectors, special lug location for attaching automatic hose connectors as applied to the A. R. A. type D. car coupler. Represented by M. A. Barber, F. R. Bolles and L. C. Sprague. Spaces 362-363-364-365.

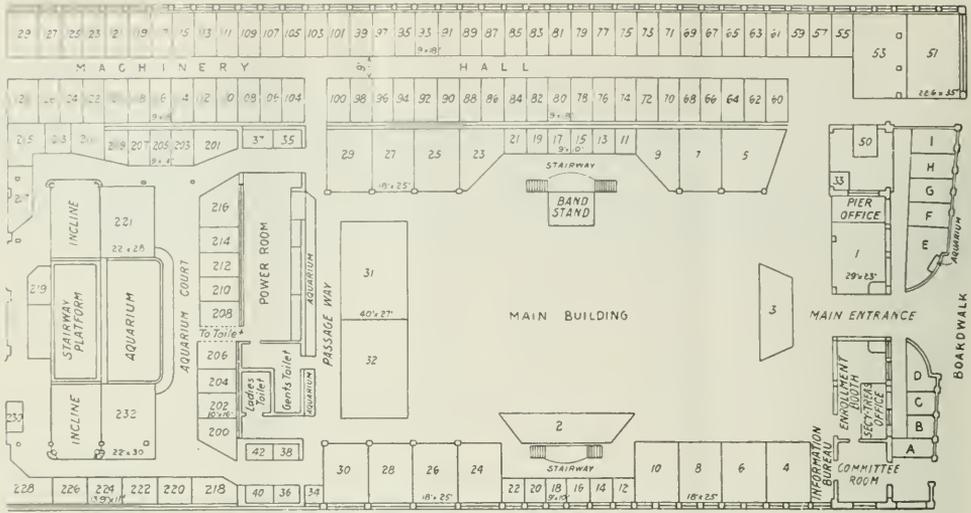

American Brake Shoe & Foundry Company, New York.—Standard patterns and types of locomotive and car brake shoes. Represented by Thomas Finigan, William B. Given, Jr., F. W.

that there was not enough space to go around and make every exhibitor happy. In many instances, therefore, the exhibit committee was simply compelled to allot much

- Sargent, E. L. James, M. N. Trainer, R. E. Holt and F. H. Coolidge. Space 418.
- American Car & Foundry Company, New York.—Three-electrode Berwick electric rivet heater; two-path Berwick electric rod heater; Berwick electric drop-forging heater. Represented by F. C. Cheston, J. W. Sheffer, W. M. Earl and J. S. Helt. Space 144.
- American Chain Company, Bridgeport, Conn. Reading car replacers; Reading rail benders; all types of railroad chains. Represented by A. P. Van Schaick, G. C. Isbester, A. H. Weston and H. M. Bridgewater. Spaces 305-307.
- American Locomotive Company, New York.—Alco reverse gear; Alco reduced body and flexible staybolts with threaded and welded sleeves. Represented by A. Fletcher, L. Bert, J. Davis, J. B. Ennis, D. W. Fraser, W. F. Weller, W. P. Steele, O. P. Parsons, G. Weiler, W. F. Weller, A. W. Bruce, W. E. Corrigan, J. Kindervater, J. Partington, C. J. Mellin, F. Dickinson, R. Anderson, C. C. Jones, H. J. Downes, A. Haller, C. P. Robinson, C. M. Muehnic, A. Hamilton, E. N. Boswell, L. S. Carroll, W. K. Farrell, H. Swoyer, G. Curry, H. C. Butler, R. H. White, J. Magarvey, J. H. Link, C. T. Markel, D. Van Alstyne, A. M. Sheffer, J. G. Blunt, S. Miller, R. Rennie, C. H. Apps, H. C. Penticost, R. J. Finch and J. J. Jones. Space 614.
- American Malleable Castings Association, Cleveland, Ohio.—Exhibit descriptive of the mechanical and physical properties of malleable iron castings; miscellaneous line of general castings for car construction. Represented by Frank J. Lanahan. Spaces 110-112-114.
- American Mason Safety Tread Company, Lowell, Mass.—Stanwood car steps for passenger and baggage cars; Karbolith composition car floorings; Mason safety car tread brass base; Mason safety car tread steel base. Represented by E. F. Kummerle. Space 544.
- American Steam Gauge & Valve Manufacturing Company, Boston, Mass.—American special locomotive, steam heat and air brake gauges; open and muffled locomotive pops; dead weight gauge testers. Represented by H. B. Nickerson, G. A. Binz and C. A. Allen. Space 380.
- American Steel Foundries, Chicago.—Cast steel bolsters, side frames and couplers; Davis cast steel wheels; Simplex clasp brakes; Ajax and Hercules brake beams; coupler yokes; Economy cast steel draft arms and miscellaneous castings. Represented by G. E. Scott, R. H. Ripley, W. J. Lynch, J. V. Bell, Theodore C. Cook, J. W. Dalman, R. F. Darby, F. B. Ernst, George G. Floyd, W. R. Gravener, T. H. Hopkirk, D. T. Harris, L. E. Jones, R. E. Janney, T. D. Kelley, P. A. Martin, F. S. McNamara, A. H. Peycke, H. D. Richardson, G. F. Slaughter, W. S. Spieth, W. S. Stearns, J. H. Stuart, J. H. Tinker and W. G. Wallace. Spaces 149-151.
- American Tool Works Company, The, Cincinnati, Ohio.—Fourteen-inch lathe, with complete tool room equipment; 24-in. heavy pattern lathe; 12-in. lathe with four-step cone head; 3-ft. and 6-ft. Triple-Purpose radial drills; 3-ft. high speed sensitive radial drill; 24-in. heavy service shaper. Represented by F. L. Stubenroth, J. C. Hussey, Robert Alter, L. S. Alter, H. W. Shatz, J. W. Barr and E. R. Conners. Spaces 57-59-61 63-65.
- Anchor Packing Company, The, Philadelphia, Pa.—Packing; mechanical rubber goods; asbestos products. Represented by B. J. Miller, J. P. Landreth, A. G. Benson, J. D. Robb, W. R. Haggart, D. J. P. Murray, L. E. Adams and Frank S. Bulkiety. Spaces 366-367.
- Ashton Valve Company, The, Boston, Mass. Master Mechanic standard style locomotive muffled and open pop safety valves; locomotive, steam heat and air gages; quadruplex air brake gages; locomotive driving wheel quartering gage; standard test gages; weight gage testers; portable boiler test pump; wheel press recording gages; protected dial gages; locomotive whistles; three-speed air brake inspector's recording gages; air brake appliances; illuminated dial master pressure and pilot gages. Represented by E. F. Boyle, H. O. Fettingier, J. F. Gettrust, G. E. Knight, J. W. Motherwell and H. J. Tierney. Space 518.
- Association of Manufacturers of Chilled Car Wheels, Chicago.—Standard 33-in. A. R. A. car wheels as follows; 650-lb. for 30-ton car; 700-lb. for 40-ton car; 750-lb. for 50-ton car; 850-lb. for 70-ton car. Represented by George W. Lyndon. Spaces 301-303.
- Atkins & Co., E. C., Indianapolis, Ind.—“Silver” steel saws of all kinds; foundry plates; Kwik-Kut power hacksaw machines; metal band saw machines; Cantol saw belt dressing; machine knives. Represented by Edward Norvell, Lewis Okey and R. H. Hunter. Space 40.
- Atlantic Hand Brake Corporation, Buffalo, N. Y.—Worm gear hand brakes. Represented by J. H. Weidmiller. Space 540.
- Baker R & L Company, The, Cleveland, Ohio.—Three-wheel electric tractor; elevating platform trucks; three-way crane (locomotive type). Represented by Nathaniel Platt, M. A. Watter-son, H. B. Greig and W. F. Hebard. Space 336.
- Baldwin Locomotive Works, The, Philadelphia, Pa.—Oil-burning locomotive of the Santa Fe type built for the Southern Pacific Lines and equipped with superheater, feedwater heater and booster. Represented by G. Greenough, Charles Riddell, A. H. Ehle, A. S. Goble, S. McNaughton, Jr., and C. H. Gaskill. Space on exhibit track.
- Barco Manufacturing Company, Chicago.—Power reverse gear; crosshead and shoes; metallic engine tender connections; metal passenger car steam heat connections; joints for locomotive piping; joints for roundhouse blower and blow-off; metal connections for stations and yards; automatic smokebox blower fittings; large joints for expansion lines. Represented by C. L. Mellor, A. S. Lewis, F. H. Stiles and W. J. Behlke, Jr. Space 641.
- Barrett Company, The, New York.—Roofing; waterproofing; paving; creosoting. Represented by William S. Babcock and Walter Buehler. Space 621.
- Bastian-Blessing Company, Chicago.—Space 707.
- Beandry & Co., Inc., Boston, Mass.—Working model of Beandry hammer. Represented by A. Parsons. Space 209.
- Besly & Co., Charles H., Chicago.—Pattern makers' grinder; taps. Represented by Edward P. Welles and Charles A. Knill. Space 108.
- Bettendorf Company, The, Bettendorf, Iowa.—Bettendorf swing motion caboose car truck; 40, 50 and 70-ton Bettendorf T-section and U-section side frames; 40, 50 and 70-ton cast steel truck bolsters. Represented by J. W. Bettendorf, J. H. Bendixen, C. J. W. Clasen, K. M. Hamilton, E. J. Bettendorf, F. K. Shults and Peter P. Beck. Spaces 218-220-222.
- Billingsley Company, The, P. L., Cincinnati, Ohio.—“Flexway” woodworking machine, with attachments for sawing, boring, routing and planing; rotary spoke shave and emery wheel. Represented by P. L. Billingsley. Space 165.
- Bird-Archer Company, The, New York.—Polarized chemicals; Anti-foam; blow-off cocks; washout plugs; Harter circulator plate. Represented by P. B. Bird, C. A. Bird, L. F. Wilson, T. A. Peacock, John Barnes and J. A. McFarland. Space 31.
- Black & Decker Manufacturing Company, The, Baltimore, Md.—Portable electric grinder; portable electric drill; electric valve grinder; electric screw driver; bench drilling stands. Represented by R. D. Black, H. G. Smith and G. R. Lundane. Space 217.
- Blackall, Robert H., Pittsburgh, Pa.—Blackall ratchet brake lever; improved Lindstrom brake lever; Blackall ratchet. Represented by Robert H. Blackall, D. K. Coyle and Harris Potter. Space 627.
- Boss Nut Company, Chicago.—Boss lock nuts. Represented by J. A. McLean, F. K. Shults, J. W. Coleman, J. W. Fogg, C. Beaumont, W. G. Willcoxson and T. W. Callahan. Spaces 370-371.
- Bowser & Co., Inc., S. F., Fort Wayne, Ind.—Complete equipment for oil and gasoline storage at central oil houses; underground outfit for installation along the right-of-way. Represented by T. D. Kingsley, W. T. Simpson, E. M. Harshbarger and L. E. Porter. Space 28.
- Bradford Draft Gear Company, New York.—Bradford rocker type draft gear; Bradford three-spring draft gear; Bradford draft arm; Bradford boltless truck column; Chambers throttle valve. Represented by Horace Parker, Floyd K. Mays, Harry F.

Arrangement of Exhibit Spaces at the Boardwalk End of the Pier

Lowman, Frank H. Clark, W. W. Rosser, W. A. McWhorter, H. C. Priebe, E. H. Smith, J. C. Keene, E. L. Nusz and E. J. Barnett. Spaces 554-555.

Brewster, Inc., Morris B., Chicago.—Packings for piston rods, valve stems and air pumps; Security wrist pin. Represented by Morris B. Brewster. Space 610.

Brill Company, The J. G., Philadelphia, Pa.—One 42-ft. 6-in. combination passenger and baggage gasoline rail car; standard steam car seat. Represented by C. J. McPherson and George Frey. Space G.

Brown & Co., Inc., Pittsburgh, Pa.—Samples of staybolt and engine bolt irons. Represented by J. Wallace Mitchell, L. E. Hassman and E. R. Mason. Space 530.

side frames; 120-ton Virginian Railway gondola car, equipped with Buckeye six-wheel trucks. Represented by J. G. Bower, F. J. Cooledge, G. A. Macpherson, S. P. Bush, G. T. Johnson, M. S. Simpson, E. W. Campion, J. C. Larsen and J. C. Whitridge. Spaces 603-605 and track exhibit in Philadelphia & Reading yards, foot of Mississippi avenue.

Bucyrus Company, South Milwaukee, Wis.—Spreader plows; railway wrecking cranes; excavating machinery; unloading plows. Moving picture films of equipment in operation. Represented by E. G. Lewis. Space 334.

Buffalo Brake Beam Company, New York.—Brake beams and brake beam parts. Represented by S. A. Crone, A. E. Crone,

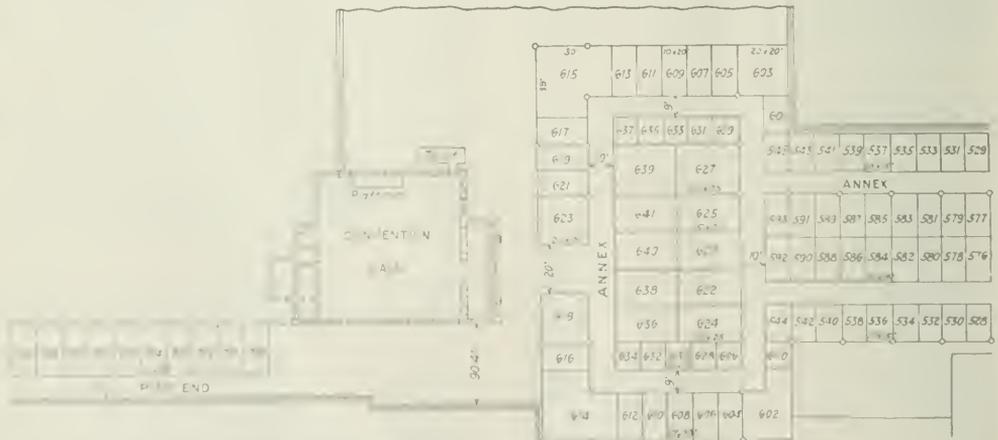

Exhibit Spaces at the Convention Hall End of the Pier

Brusher & Fox, Company, W. I., New York.—Special boiler tank traps. Represented by W. Seale Rose, J. A. W. Brubaker, R. F. Hook and H. B. Morrison. Space 504.

Buckeye Steel Castings Company, Columbus, Ohio.—A. R. A. type "D" coupler and Major coupler, cast steel yoke, bolsters and

E. C. Larlow, E. Strassburger, A. Gordon Jones, C. R. Busch and F. F. Gladwell. Spaces 548-549.

Burden Iron Company, The, Troy, N. Y.—Staybolt iron, engine bolt iron, iron boiler rivets, hollow staybolts. Represented by John C. Kuhns. Space 219.

Burry Railway Supply Company, Chicago.—Side bearings and center plates. Represented by V. J. Burry and O. E. Quinton. Space 526.

Cambria Steel Company, Philadelphia, Pa.—See Midvale Steel & Ordnance Company. Spaces 590-591.

Camel Company, Chicago.—Full sized models of box car door fixtures; box car door locks; door starting and closing arrangements; automobile car door fixtures; steel doors for freight cars; door repair parts. Represented by P. M. Elliott, H. E. Creer, H. H. Hendricks, A. B. Wegener, B. D. Jones, Arthur Allan, W. W. Darrow. Spaces 532-534-536.

Carbo-Oxygen Company, Pittsburgh, Pa.—Oxy-carbo-hydrogen cutting and welding apparatus; carbo-hydrogen gas and carbo-oxygen gas. Represented by F. S. Austin and H. A. Wellings. Space A.

Carborundum Company, The, Niagara Falls, N. Y.—Carborundum refractories, including Carbofrax, brick, tile, muffles; refractory cements; Carborundum and Aloxit grinding wheels. Represented by C. E. Hawke, R. S. Marvin, Walter Meek, F. E. Gridley, J. W. Fraser and S. C. Courter. Spaces 582-583.

Carnegie Steel Company, Pittsburgh, Pa.—Engine truck wheel; freight and passenger car wheels; pair of 36-in. wheels which have given an aggregate of 581,139 miles of service under a passenger car. Represented by W. G. Clyde, John E. Woods, C. L. Wood, L. C. Bihler, N. B. Trist, C. Orchard, R. W. Steigerwalt, J. A. Ralston, G. R. Schreiner and R. L. Twitchell. Space 420.

Champion Railway Equipment Corporation, New York.—Universal car and hose coupler; standard flexible compound. Represented by A. A. Anderson, A. B. Bellwood, C. M. Kidd, J. H. Funk and W. R. Black. Space 368.

Chase & Co., L. C., Boston, Mass.—Goat brand mohair upholstery plush; Chase renovator for cleaning upholstery; Chase Leatherwove. Represented by H. T. Wight and W. P. Underhill. Space 10.

Chicago-Cleveland Car Roofing Company, Chicago.—Car roofs; carlines; pressed steel car parts. Represented by H. F. Finney, T. H. Williams, J. L. Stark, R. C. Munro, T. N. Russell, R. C. Dudley and F. A. Jacobs. Space 506.

Chicago Pneumatic Tool Company, New York.—Portable pneumatic and electric hammers; drills; air hoists; portable electric drills; spike driving, rail bonding and drilling devices; sand

rammers; hose couplings. Represented by A. C. Andresen. Space 623.

Chicago Railway Equipment Company, Chicago.—Brake beams; brake beam supports; side bearings. Represented by E. B. Leigh, A. C. Moore, F. T. DeLong, G. N. Van Swearingen, E. E. Griest, R. J. Sheridan, E. A. LeBeau and E. G. Busse. Space 640.

Clark Company, West Pittston, Pa.—Retainer valve and brackets. Represented by E. L. Clark. Space 157.

Clark Car Company, Pittsburgh, Pa.—Photographs of 30-yd. extension side dump cars; catalogues. Represented by H. E. Chilcoat and R. L. Mason. Space 625.

Clark Tractor Company, Buchanan, Mich.—Clark Truklift; tractor model of Clark Tractor. Represented by Louis J. Schneider, A. S. Rampell and W. B. Eldred. Space 137.

Cleveland Car Specialty Company, Cleveland, Ohio.—Pressed steel carlines. Represented by J. A. Costello and A. B. Hummel. Space 374.

Cleveland Pneumatic Tool Company, The, Cleveland, Ohio.—Riveting and chipping hammers; air drills and grinders; sand rammers, sand hammers; core breakers; oscillating valve grinders; portable bench and lathe grinders; angle gears; Cleco air fittings; and seven types of Cleco pressure seated air valves; Bowes couplings. Represented by H. S. Covey, Arthur Scott, F. E. Schwarze, R. B. Van Norman, G. Gregory and C. D. Garner. Spaces 329-331-333-335.

Cleveland Steel Tool Company, The, Cleveland, Ohio.—Punches; dies; chisels; rivet sets. Represented by R. J. Venning, George L. Connelly, W. J. Devlin and W. F. Delaney. Spaces 153-155.

Cleveland Twist Drill Company, The, Cleveland, Ohio.—Reception booth. Represented by Harley G. Smith, John G. Ladrick and Harry P. Jenson. Space 224.

Cochrane-Bly Company, Rochester, N. Y.—Duplex universal vertical miller and shaper; metal sawing machine; automatic saw sharpening machine, all motor driven. Represented by W. H. Welch. Space 107.

Commonwealth Steel Company, St. Louis, Mo.—Models, drawings and illustrations of cast steel underframes, end frames, and four and six-wheel trucks for passenger-train cars; pilots; pilot beams; engine and tender trucks; cradles and trailer truck frames; tender frames; ash pans. Represented by H. M. Pfaffger, George E. Howard, B. V. H. Johnson, C. S. Shallenberger,

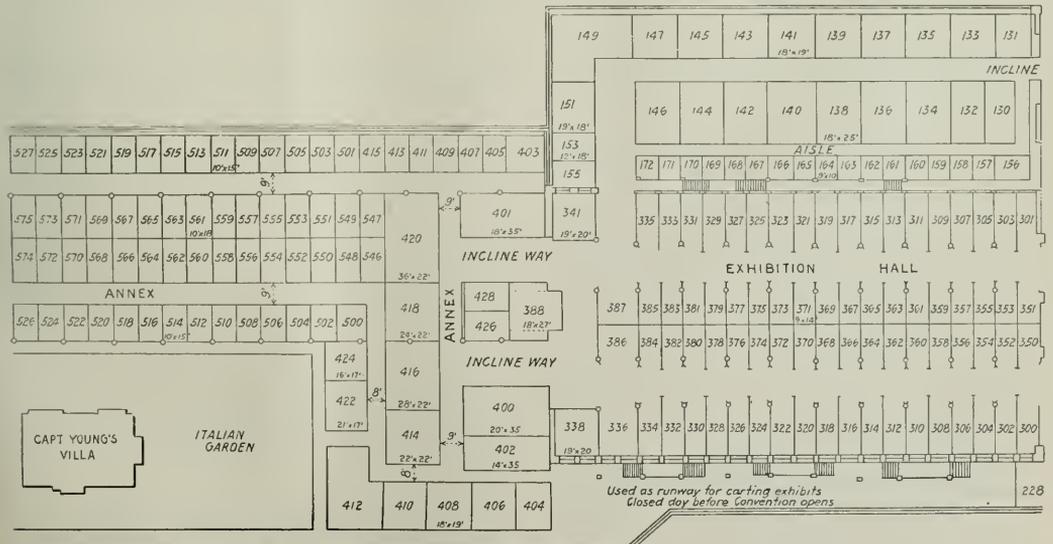

Exhibit Spaces in Exhibition Hall, Machinery Hall Extension and Part of the Annex

- George H. Gibson, C. F. Frede, C. P. Whitehead and H. R. Bartell. Spaces 386-387.
- Continental Works Company, Chicago.—Lucas car roof cement applied to various types of surfaces; test panels exposed to acids, brines, blow torch, etc.; graphic charts showing various applications of cement. Represented by Arthur B. Chapin, George Sutherland and H. T. Hutchinson. Space C.
- Covington Machine Company, Inc., Covington, Va.—Hose dismantling and assembling machine; miniature of No. 6 punch; photographs of other machines. Represented by E. H. Arcœur, S. A. Patterson and Edgar H. Archer. Space I.
- Craft, Inc., New York.—Cleveland light weight railroad inspection car. Represented by F. W. Edmunds, Albert J. Leonard and W. T. Manogue. Spaces 321-323.
- Crosby Steam Gage & Valve Company, Boston, Mass.—Steam gages; safety, blow-off and globe valves. Represented by John J. McCormick and E. L. Taylor. Space 632.
- Curtain Supply Company, The, Chicago.—Car curtains; Rex vestibule curtains; Rex automatic release handles; Rex opening shields and roller bearing hooks; Rex canvas and steel diaphragms, brass sash, weatherstripping and deck sash ratchets. Represented by T. W. Holt, Ross F. Hayes, Ralph Brown and T. P. O'Brien. Space 638.
- Dale Machinery Company, Inc., New York.—Lassiter-Millholland model "B" horizontal staybolt machine; Nos. 2 and 6 Colburn heavy duty manufacturing drill presses; 42-in. new type Colburn heavy duty vertical boring and turning mill; 26-in. Betts Bridgeford heavy duty screw cutting lathe; modern chaser grinder. Represented by J. J. Dale, R. R. Lassiter, J. W. Blackford, H. W. Breckenridge, William Brown, M. D. Neady and Alfred Trosch. Spaces 95-97-99-101.
- Damascus Brake Beam Company, Cleveland, Ohio.—Forged brake beam fulcrums and Brasscott freight car ladders. Represented by C. D. Jenks. Space 559.
- Davis Boring Tool Company, Inc., St. Louis, Mo.—Expansion car wheel and machine shop boring tools; expansion reamers; cutter grinding attachment; grinding arbors. Represented by O. L. Chapman and Burney Davis. Space 201.
- Davis Brake Beam Company, Johnstown, Pa.—Davis solid truss brake beams for freight cars, passenger cars and locomotive tenders; pressed steel journal box lids. Represented by Frank J. Lanahan, George W. Fox, Charles F. Perkins, C. K. Stillwagon and W. E. Fowler, Jr. Space 625.
- Dayton Pneumatic Tool Company, The, Dayton, Ohio.—Champion riveting hammers; new Dayton chipping and caulking hammers; jam riveters; hose couplings and accessories. Represented by L. B. Smyser, A. B. Clausen, A. B. Inness, George C. Towle and I. B. George. Space 324.
- DeArbom Chemical Company, Chicago.—Scientific water treating preparation; No. oxid rust preventive. Represented by Robert F. Carr, George R. Carr, Grant W. Spear, J. D. Purcell and W. H. Kinney. Spaces 68.
- Detroit Injector Company, Detroit, Mich.—Bulls-eye locomotive lubricators; automatic lube oils; air cylinder lubricators; transfer lubricator; automatic exhaust nozzle covers. Represented by A. G. MacIntosh and C. H. Perrine. Spaces 205-207.
- Detroit Tool & Die Company, Detroit, Mich.—Drill, reamer and reamer centers, "DD" drill. Represented by H. T. Scott, W. E. Smith, J. J. Smith and R. D. Winslow. Space 156.
- Industrial Machine Company, Providence, P. I.—Heavy duty face grinder, top "C" surface grinder; polly grinder, wet tool grinder, center drive floor grinder, ball bearing disc grinder; ball center grinder. Represented by George S. Squibb, Luther Barrill and Morris Slepjak. Spaces 113-115-117.
- Dixie Iron Works, Inc., Chicago.—Smoke jacks for enginehouses, exhaust fans for small buildings; Aerolis roof ventilators for enginehouses and shops; cast iron exhaust head, model of engine exhausts with smoke jacks and ventilators. Represented by A. L. Laska, H. Knutson and K. E. Cates. Space 203.
- Dixson & Sons, Inc., Henry, Philadelphia, Pa.—Metal cutting circular saws and metal cutting hand saws in operation; metal saws of all kinds, files and tools. Represented by Joseph L. Dorrington, L. M. Willard and Edward Ludy. Space 141.
- Dixon Crucible Company, Joseph, Jersey City, N. J.—Graphite productions; silica-graphite paint; pencils; crucibles. Represented by L. H. Snyder, J. J. Tucker, William Ernst, W. A. Houston and H. A. Nealley. Space 24.
- Dressel Railway Lamp & Signal Co., New York.—See F. H. Lovell & Co.
- Duff Manufacturing Company, The, Pittsburgh, Pa.—Duff high speed ball bearing screw jacks, journal box jacks, car separator jack and car sill jack; genuine Barrett car and track jacks; drop forgings and trench braces. Represented by G. E. Anderson, E. A. Johnson, T. A. McGinley, C. A. Methfessel, W. G. Robb, C. N. Thulin and G. E. Watts. Space 401.
- Eagle Manufacturing Company, Wellsburg, W. Va.—Seamless welded steel oilers and oil containers. Represented by S. O. Paul and J. B. Webb. Space 380.
- Edgewater Steel Company, Pittsburgh, Pa.—Locomotive tires and rolled steel wheels. Represented by W. V. D. Wright, J. H. Baily, L. O. Cameron and C. H. Sherburne. Space 509.
- Edison Storage Battery Company, Orange, N. J.—Storage battery cells cut away to show parts and construction; map showing railroads using Edison batteries; car lighting battery box with installation of Edison batteries; model of Railway Storage Battery car; seven-cell battery for signal service; five-cell battery for portable lighting; three, four and five-cell batteries for car lighting. Represented by F. D. Fagan, D. B. Mungan, A. S. Knox, D. C. Wilson, Paul Sutcliffe, R. Baird, W. F. Bauer, W. W. Coleman and J. A. Cassedy. Space 636.
- Edna Brass Manufacturing Company, The, Cincinnati, Ohio.—Locomotive injectors, lifting and non-lifting; locomotive lubricators, hydrostatic and forced feed types; locomotive water column; cold water coal sprinkler; Reflex water gage. Represented by E. O. Corey, B. I. Kaufmann, D. B. Joseph, R. B. Buram, H. A. Glenn, F. S. Wilcoxon and W. W. Fetner. Space 308.
- Edson Manufacturing Corporation, Boston, Mass.—Various styles of genuine Edson diaphragm pumps; special suction hose, couplings and strainers; improved diaphragms. Represented by J. W. Wickwire and W. S. Courtney. Spaces 564-565.
- Edwards Company, Inc., The O. M., Syracuse, N. Y.—Window fixtures; trap doors; sash balancers. Represented by O. M. Edwards, R. Harold Edwards, J. J. Edwards, E. F. Chaffee, C. H. Rockwell and A. J. Horgan. Spaces 527-529-531.
- Electric Arc Cutting & Welding Company, Newark, N. J.—Rivet cutting apparatus; welding and cutting apparatus; electrodes; supplies. Represented by C. J. Holslag, J. E. Gunning, J. I. Mitchell and E. J. Knapp. Space 37.
- Electric Controller & Manufacturing Company, Cleveland, Ohio.—E. C. & M. control, consisting of push button operated automatic starting compensators and across-the-line starting switches, with thermal overload relays; direct-current automatic starters and machine tool controllers, contactors, relays, etc. Represented by R. G. Widdows and H. K. Harlecastle. Space 85.
- Electric Service Supplies Company, Philadelphia, Pa.—Golden Glow locomotive headlights, reflectors and floodlights; Keystone turbo generators, headlight switches, classification and marker lights, gage lights, rear tender lights and roundhouse lighting fixtures. Represented by Charles J. Mayer, A. H. Englund, I. W. Porter, J. R. McFarlan, I. A. Darling, T. M. Childs, W. H. Smaw and H. J. Garham. Spaces 312-314.
- Electric Storage Battery Company, Philadelphia, Pa.—Exide body hung axle light equipment with Exide battery in operation; Exide batteries "A" and "B" for railway signal service, industrial trucks, starting and lighting equipment for automobiles, and radio service. Represented by H. B. Marshall, J. L. Woodbridge, T. J. Mount, F. G. Beem, H. E. Hunt, R. I. Baird, H. M. Beck, W. C. Hooven, George Hayes, H. S. Mills, M. C. Pope, Jr., A. W. Pierce, P. G. Downton, I. F. Lighton and H. W. Beedle. Space 624.
- Elvin Mechanical Stoker Company, New York.—Elvin mechanical stoker. Represented by A. G. Elvin, E. W. Flegelbright, A. B. Fahnestock, F. H. Elvin, H. D. Eckerson and H. J. Charles. Space 146.

- Elwell-Parker Electric Company, Cleveland, Ohio.—Type CK crane platform truck; TL tractor; EG elevating platform truck; truck power plant; Elwell-Parker combination trailer-platform. Represented by Lucian C. Brown, George W. Brown, Charles C. Dietz, W. C. Kershaw, C. E. Cochran, F. B. Neely, R. C. Howell, C. B. Cook and J. M. Brown. Space 341.
- Emery, E., Pittsburgh, Pa.—Self-locking brake shoe keys; Standard machined taper pins and keys, and full machined channel pins manufactured by the Standard Horse Nail Company. Represented by E. Emery. Space 19.
- Enterprise Railway Equipment Company, Chicago.—Models of various types of hopper and gondola cars; door operating mechanisms for load discharging cars; Ingoldsby door latches; grain doors and grain discharge for box cars; combination hingebutt and hopper brace castings for hopper cars. Represented by Argyle Campbell, A. E. Zimmer and W. L. Gunnison. Spaces 584-585.
- Everlasting Valve Company, Jersey City, N. J.—Flatplug valve for enginehouse service; Everlasting valve for locomotive boiler off; Everlasting tandem valve for power plant blow-off; Everlasting tender tank valve. Represented by John H. Allen and Edward N. Corning. Space 17.
- Ewald Iron Company, Louisville, Ky.—Solid and hollow staybolt iron. Represented by Baylor Hickman, G. O. Boomer, S. F. Sullivan, J. P. Bourke, E. V. Shackelford and R. F. Kilpatrick. Space 535.
- Fireboard Company, Boston, Mass.—Bullseye dust guards. Represented by William E. Eaton and Midgley & Borrowdale. Space 42.
- Fire-Gun Manufacturing Company, Inc., New York.—Fire-Gun carbon tetrachloride extinguishers from one quart to one and a half quart capacities; Fire-Gun type B soda and acid extinguisher, 2½-gal. capacity. Represented by Henry L. Heulings and Harry E. Tunnell. Space B.
- Flannery Bolt Company, Pittsburgh, Pa.—Tate flexible staybolts; F B C welded flexible staybolts; Reacock nuts and grease cups; Flannery rigid stays, taper head crown stays and button head stays. Represented by J. Rogers Flannery, E. S. Fitzsimmons, W. M. Wilson, R. W. Benson, F. K. Landgraf, M. M. McCallister and Ethan I. Dodds. Spaces 592-593.
- Ford Company, J. B., The, Wyandotte, Mich.—Wyandotte metal cleaner, with equipment showing how metals and repair parts are cleaned with it. Represented by B. N. Goodell, G. E. Gordon, W. E. Ratz, G. J. Lawrence, C. S. Thompkins, W. P. Scott and H. M. Green. Space 519.
- Forged Steel Yoke Corporation, Chicago.—Forged steel draft yoke. Represented by LeRoy Kramer, C. R. Naylor and A. J. Canfield. Space 572.
- Fort Pitt Malleable Iron Company, Pittsburgh, Pa.—Freight car and locomotive castings; dump cars; tank car fittings. Represented by Frank J. Lanahan, J. S. Lanahan, E. H. Holmes, Joseph H. Kumer and P. S. Aaron. Space 625.
- Fort Pitt Spring & Manufacturing Company, Pittsburgh, Pa.—Locomotive and car elliptic and coil springs; springs for industrial concerns. Represented by William McBride, Fred A. Meckert, Robert L. Leitch and Lewis O. Cameron. Space 550.
- Foster Company, The, Walter H., New York.—Improved turning and threading machine equipped for radial, crown and side stays, turning and threading from forged blanks; semi-automatic valve finishing machine for triple and other valves used on air brake equipment. Represented by Walter H. Foster, J. A. Eden, Jr., and H. L. Kenah. Spaces 87-89.
- Four Wheel Drive Auto Company, Clintonville, Wis.—FWD railway two-car unit; seating capacity 52 passengers, with baggage, express and mail compartments about 88 sq. ft. Represented by W. A. Olen, H. B. Dodge, C. J. Cassese, H. M. Daniels, L. H. Jones, R. W. Pachaly, George E. Reynolds and A. L. Foote. Space 35.
- Franklin Railway Supply Company, New York.—No. 8 and No. 9 firedoors; driving box spreader; automatic wedge; Precision reverse gear; booster; lateral motion device; Ragomnet reverse gear; McLaughlin joint and ball joint models; Radial buffer and Unit safety bar; Unit safety bar. Represented by J. S.
- Coffin, Samuel G. Allen, H. F. Ball, W. H. Coyle, J. L. Randolph, H. M. Evans, W. T. Lane, Paul Weiler, Paul Willis, J. A. Talty, M. H. Roberts, F. R. Peters, C. W. F. Coffin, J. L. Bacon and C. J. Burkholder. Spaces 414-416-422-424.
- Frost Railway Supply Company, The, Detroit Mich.—Harvey friction spring gears; Detroit metal weather strip. Represented by Harry W. Frost, George A. Cooper and George L. Harvey. Space 560.
- Futrell Coupler Company, Streator, Ill.—All-metal train pipe connector. Represented by Thomas J. Futrell, John H. Haseroth and W. H. Crowell. Space 230.
- Galena-Signal Oil Company, Franklin, Pa.—Reception booth. Represented by L. J. Drake, L. F. Jordan, W. A. Trube, W. P. Wescott, G. L. Morton, W. J. Walsh, J. E. Linahen, T. J. Powell, P. G. O'Hara, R. P. Birtel, C. W. Hochette, G. E. McVicar, W. F. Walsh, P. H. Stack, W. O. Taylor, D. L. Eubank, E. G. Johnson, Charles McNair, J. S. Brown, S. S. Shields, J. W. Bunn and J. C. O'Connor. Space 32.
- Garlock Packing Company, The, Palmyra, N. Y.—Packings for locomotive throttles, air pumps, power reverse gears, shop machinery, and slip, ball and expansion joints, boiler and pipe flange gaskets; rubber pump valves. Represented by W. G. Cook, Phil Arnold, C. W. Sullivan, H. J. Ramshaw, R. J. Hinkle and P. D. Miller. Space 508.
- Geist Manufacturing Company, Atlantic City, N. J.—Wiederwax compressed air or steam non-carbonizing crude oil burners; Wiederwax non-carbonizing kerosene oil torches; Wiederwax preheater for acetylene welding. Represented by Carlton Geist, P. E. Wicke and A. O. Leeds. Space 702.
- General Electric Company, Schenectady, N. Y.—Various applications of industrial control apparatus in operation; semi-automatic electric arc welding equipment in operation. Represented by J. G. Barry, E. P. Waller, F. S. Hartman, A. H. Armstrong, C. K. West, John Roberts, C. Dorticco, W. J. Clark, C. F. Lawrence, R. S. Bennett, J. J. Liles, D. K. Frost, C. H. Williams, F. P. Jones, L. W. Shugg, P. O. Noble, R. D. Reed, C. W. Kenyon, John Eaton and C. C. Peirce. Spaces 119-121-123-125-127-129.
- Giessel Company, Henry, Chicago.—North Pole sanitary drinking fountains; water filters for dining cars. Represented by Arthur W. Barth, Frank N. Grigg, S. W. Midgley, C. H. Kadie and C. G. Elliott. Spaces 40-42.
- Gill Railway Supply Company, Peoria, Ill.—Grisco cooling compound; emergency hose clamp. Represented by S. S. Pinkney, E. H. Hartenstein and A. F. Buescher. Space 325.
- Gold Car Heating & Lighting Company, Brooklyn, N. Y.—Vapor and other systems of car heating; automatic temperature regulation for railway cars, buildings, etc.; pressure regulators; ventilators. Represented by Edward E. Gold, E. B. Wilson, A. B. Strange, F. O. Bailey, J. O. Brumbaugh, F. R. Cooper, F. W. Dearborn, W. J. Roehl, Allen Sheldon, F. H. Smith and A. D. Stuver. Spaces 350-353.
- Gould Coupler Company, New York.—Couplers; truck bolsters; truck side frames; journal boxes, slack adjusters; friction draft gears; electric car lighting equipment with batteries; locomotive headlight generator. Represented by Charles A. Gould, W. F. Richards, W. F. Bouche, G. B. Young, W. B. Osborne, M. R. Shedd, D. C. Davis, G. R. Berger, G. F. Collins, C. W. Gould, W. H. Sauvage, J. W. Reifsnyder, H. C. Johnstone, P. H. Simpson, William Garstang, W. L. Kraemer and F. J. Beard. Space 221.
- Gray Company, G. A., Cincinnati, Ohio.—Gray maximum service plunger. Represented by August Marx, Tell Berna and Phillip Leisinger. Space 51.
- Griffin Wheel Company, Chicago.—Chilled iron car wheels. Represented by C. K. Knickerbocker, G. D. Casgrain, A. A. Hale, F. B. Flinn, J. L. Grant and E. T. Cassidy. Space 620.
- Grip Nut Company, Chicago.—Grip lock nuts; Grip locomotive nuts; Grip unit and holding nuts. Represented by W. E. Sniar, A. B. Chadwick, H. E. Passmore, Albert Roberts, B. R. Radcliffe, H. J. Tierney, J. B. Whitenack, J. E. Weatherford, C. S. Carter, C. W. Cross and W. R. Richards. Space 142.
- Hagy Waste Works, The J. Milton, Philadelphia, Pa.—Wool journal box and armature packings; cotton wiping and polishing

- waste; washing and polishing cloths. Represented by Ralph L. Hays, J. Milton Hays and H. P. Ogdan. Space 311.
- Hale & Killbuck Corporation (American Motor Body Company, successor), Philadelphia, Pa.—Car seats, steel doors; mouldings. Represented by R. D. Day, H. L. Beyer, W. M. Swope, H. R. Rochester, A. F. Old, J. B. Killbuck, W. L. Jefferies, E. A. Thernwell and W. D. Jenkins. Spaces 408-410.
- Hall Air Lock & Railway Supply Company, Chicago—Safety pocket coupler; continuous rail manganese frog; one-piece guard rail. Represented by B. A. Johnson and J. J. Connors. Space 133.
- Hall Draft Gear Corporation, Watervliet, N. Y.—Friction draft gears; cast steel yokes. Represented by C. W. Sherman, J. M. Hall, G. H. Gordon and E. C. McDowell. Space 372.
- Hammett, H. G., Troy, N. Y.—Metallic piston rod and valve stem packing; locomotive bell ringers; triple valve bushing rollers. Represented by H. G. Hammett and A. O. Van Dervort. Space 512.
- Hanna Locomotive Stoker Company, The Cincinnati, Ohio.—Improved Hanna locomotive stoker, type H-2. Represented by W. T. Hanna, C. D. King and G. D. Feverall. Space 139.
- Harrington, Son & Co., Inc., Edwin, Philadelphia, Pa.—Chain hoist; I-beam travelers; multiple spindle drill. Represented by Roger Sherron, A. M. Harrington and W. J. Somerset. Space 143.
- Hartford Tap & Gauge Company, Hartford, Conn.—Taps; gages; thread milling machine samples; spline milling machine samples; vertical milling machine samples; forgings. Represented by Joel W. Johnson. Space H.
- Heald Machine Company, The, Worcester, Mass.—Rotary surface grinding machine; cylinder grinding machine; two styles of internal grinding machines. Represented by J. N. Heald, S. T. Massey, A. R. Sleath and J. L. Moran. Spaces 69-71.
- Hendey Machine Company, Torrington, Conn.—Lathe and shaper. Represented by E. E. L. Taylor and P. A. Rebok. Spaces 109-111.
- Heywood-Wakefield Company, Wakefield, Mass.—Coach seats in various upholsterings, special exhibit showing stages of upholstery; motor-driven reversing mechanism. Represented by Bertin Berry, Frank N. Grigg, Edward Baker, C. G. Elliott, W. E. Foreman, E. F. Boyle, G. F. Cornwall, C. A. Van Derveer and E. Copeland Lang. Space 520.
- Howell Electric Motors Company, Howell, Mich.—Polyphase induction motors; stationary motor showing detailed construction. Represented by Charles F. Norton, H. N. Spencer and O. A. Reed. Space 161.
- Hunt Spiller Manufacturing Corporation, South Boston, Mass.—Locomotive parts made of Hunt-Spiller gun iron: cylinder bushings and packings; rod pistons; piston bull rings; piston valve bushings and packing; tie rings; crosshead shoes; knuckle pin bushings for freight service, air pump bushings, driving boxes; pedestal bars and wedges; eccentrics and eccentric straps. Represented by W. B. Leach, J. G. Platt, F. M. Weymouth, V. W. Platt, A. B. Root Jr., E. J. Fuller, C. L. Galloway and F. B. Hartman. Spaces 502-563.
- Hutchins Car Roofing Company, Detroit, Mich.—Model of Hutchins all steel day loading roof; Hutchins chamel steel ends for box and open top cars; Hutchins uncoupling device, model of Burtitt reinforced box car end. Represented by F. C. Dunham, M. T. Ryan, C. F. Cape, A. R. Wilson, J. F. Comee and W. D. Thompson. Space 616.
- Hyatt Roller Bearing Company, New York—Large aluminum model showing operating details of Hyatt roller bearings; glass coated Hyatt bearings showing lubrication features; Hyatt bearings for railway cars, baggage wagons, trucks, locomotive turntable mechanism, gasolene-propelled cars, hand cars and power traction hoists. Represented by D. Gløsen, P. C. Campbell, W. B. Wachtler, H. K. Porter, W. J. Hoff, and J. F. McGinness. Space 4.
- Illinois Steel Company, Chicago.—Track spikes and bolts; screw spikes, rail joints, tie plates. Represented by C. B. Friday, Grant Monk and C. R. Moffatt. Space 420.
- Independent Pneumatic Tool Company, Chicago.—Complete line of Thor pneumatic and electric tools for railway use, including latest developments. Represented by John D. Hurley, R. S. Cooper, R. T. Scott, Adolph Anderson, H. F. Keller, A. L. Seuhl and W. H. Rosevear. Spaces 356-357.
- Individual Drinking Cup Company, Inc., Easton Pa.—Dixie penny cup vending machine and cups; Dixie cup dispensing machine for parlor cars; Dixie cups and silver holders for club and dining car use; cloth towels and towel vendors. Represented by A. R. Lilliecrapp and M. E. Morrison. Space 373.
- Ingersoll Milling Machine Company, Rockford, Ill.—Ingersoll slabbing and channeling cutters; motion pictures of Ingersoll horizontal spindle and vertical adjustable rotary milling machines milling locomotive rods. Represented by A. A. Braid. Spaces 87-89.
- Ingersoll-Rand Company, New York.—Air compressor; pneumatic riveting hammers; chipping hammers; close-quarter drills; staybolt tapping machines; motor hoists; grinders; wire brush cleaning machines and jam riveters. Represented by George A. Gallinger, W. A. Johnson, J. F. Kroske, L. W. Schnitzer, J. R. Randle and George C. Williams. Space 53.
- International Motor Company, New York.—Mack rail car leading truck; rear axle; rubber shock insulated spring suspension; motor and transmission parts. Represented by E. M. Post, Jr., R. A. Hauer and R. M. Newbold. Space 326.
- International Signal Company, The, New York.—Webb automatic train stop. Represented by Jean F. Webb, Jr. Space F.
- Inter-State Safety Appliance Company, Inc., Norristown, Pa.—Safety attachment for freight car hand brakes. Represented by Vincent M. Haas, Irvin F. Kershner and William Wagenhorst. Space on exhibit track.
- Jacques, H. W., Philadelphia, Pa.—Shovels, scoops, spades, railroad tin and galvanized ware; locks of all kinds for railroad use. Represented by H. W. Jacques, Harold Cunningham and C. H. Gibbs. Spaces 328-330.
- Jenkins Brothers, New York.—Brass globe, angle, gate and Y-blow-off valves; mechanical rubber goods; Selco blower valve, marine, rapid action valve and air gun. Represented by B. J. Neely and George Royal. Space 317.
- Johns-Manville, Inc., New York.—Roofing, building and water-proofing materials; asbestos shingles; J-M industrial floorings; Transit and ebony asbestos wood; Transit asbestos wood smoke jacks and ventilators; pipe coverings; high temperature and asbestos cements; locomotive boiler lagging; passenger refrigerator and tank car insulations; spiral locomotive pipe insulation; power reverse gear packing sets; I-M air brake cylinder expander rings; steam traps; brake band lining; asbestos-metallic friction brake blocks; friction tapes and splicing compounds; "Success" fire extinguishers; packings and gaskets. Represented by J. E. Meek, G. A. Nicol, J. C. Younglove, P. C. Jacobs, J. H. Trent, C. E. Murphy, H. G. Newman, F. J. Horne, R. A. Hamaker, H. Flannagan and George Christenson. Spaces 580-581.
- Johns Pratt Company, The, Hartford, Conn.—"Vulcanston" air pump packing sets; J-P combination air pump packing sets, Mallet compound locomotive packing, C-C locomotive throttle valve packing, red fibre sheet packing, molded union washers, pump valves, rope packing and asbestos groove packing; Noark cartridge end-seal tissues; Noark cutout bases. Represented by Hudson Dickerman. Space 708.
- Johnson Bronze Company, New Castle, Pa.—Small brass castings; brake bushings; balance wheel glass protector. Represented by F. H. Babcock. Space 528.
- Joliet Railway Supply Company, Chicago.—Huntton brake beams and truck bolsters; Joliet brake beams and journal boxes. Represented by C. A. Carscaden, James E. Simons, Hamilton Vose, Jr., and Charles Benz. Space 611.
- Jones & Laughlin Steel Company, Pittsburgh, Pa.—Nails, wire and wire products; hot rolled sections; tin and black plate tubular products; beams, channels and angles; spikes and concrete reinforcing bars; woven wire fencing. Represented by A. A. Wagner, J. D. Allen, E. D. Batcheler, R. T. Rowles, Boyden Kinsey, Roland Gerry, G. C. Fogwell, C. W. Gage, R. M. Kilgore and T. G. Roberts. Spaces 409-411.

- Joyce-Cridland Company, The, Dayton, Ohio.—All kinds of lifting lowering, pushing, pulling and traversing jacks. Represented by W. F. Bippus, C. D. Derby, A. S. Beattys, R. L. Skidmore, W. I. Clock and H. Brock. Spaces 607-609.
- Keller, Inc., William H., Grand Haven, Mich.—Pneumatic riveting, chipping, calking, scaling, flue beading and staybolt riveting hammers; portable pneumatic drills and wood boring machines; pneumatic sand rammers, holders-on, rivet busters, jam riveters, etc. Represented by W. F. Delancy, W. J. Devlin, J. C. Campbell, C. W. Gellinger and L. H. Olsen. Spaces 153-155.
- Kerite Insulated Wire & Cable Company, The, New York.—Insulated wires and cables. Represented by B. L. Winchell, Jr., Azel Ames, P. W. Miller, J. W. Young, J. A. Renton, R. E. Butrick, W. H. Fenley, E. L. Adams, J. A. Hamilton and Carl Reeb. Spaces 523-525.
- Key-Bolt Appliance Company, Orchard Park, N. Y. Space 162.
- Keycoke Railway Equipment Company, Chicago.—Murray all cast steel friction draft gear and several designs of cast steel coupler yokes. Represented by George C. Murray and R. J. Cook. Space 309.
- King Pneumatic Tool Company, Chicago, Ill.—King molybdenum steel sleeve valves for riveting hammers; King molybdenum steel riveting and chipping hammers; King molybdenum steel rivet cutters; King rivet cutter chisels; King rivet sets, hose couplings and accessories; King electric drills. Represented by George A. Barden, H. O. King, H. A. Torson, W. H. S. Bateman, C. E. Walker and J. E. Otis, Jr. Spaces 375-377.
- Landis Machine Company, Waynesboro, Pa.—Four-inch Landis pipe threading and cutting machine; 1½-in. Landis double-head pipe and nipple threading machine; Landis chaser grinder; five sizes of new type of Landis automatic die heads. Represented by C. F. Meyer, C. N. Kirkpatrick, F. C. Delcher, G. A. Mid-dower and W. F. Ruppert. Spaces 79-81-83.
- Laughlin-Barney Machinery Company, Pittsburgh, Pa.—New tube shearing machine. Represented by Harry Barney, W. E. Amberg, T. A. Oakley and H. C. Watson. Space 705.
- Lehman Machine Company, St. Louis, Mo.—Twenty-two inch geared head lathe. Represented by L. A. Carter and P. Lehman. Space 92.
- Lehon Company, The, Chicago.—Mule-Hide plastic car roofing; canvas car roofing; insulating paper; roll roofing; insulating fabric; asphalt shingles; miniature car model. Represented by Tom Lehon, John Eipper, F. T. Carpenter and E. A. Leonard. Space 18.
- Lewis-Shepard Company, Boston, Mass.—Jacklift elevating truck; Lewis-Shepard "stacker" self-loading warehouse trucks; platforms for elevating trucks. Represented by G. E. Squier and J. H. Burwell. Space 302.
- Libbey Glass Manufacturing Company, The, Toledo, Ohio.—High pressure gage and lubricator glasses; bulls-eye glasses; reflex gage glasses; lantern globes and lenses; battery jars. Represented by J. A. Carson. Spaces 304-306.
- Liberty Manufacturing Company, Pittsburgh, Pa.—Liberty locomotive tube cleaners; Lagonda locomotive tube cleaners; new type superheater flue cleaner. Represented by H. A. Pastre and W. A. Darrow. Space 131.
- Loco Light Company, The, Indianapolis, Ind.—Headlight turbo-generator in operation; headlight case. Represented by H. H. Tomlinson. Space 202.
- Locomotive Firebox Company, Chicago.—One full-sized firebox with two complete Nicholson thermic syphons installed; one working model demonstrating circulation features and the other advantages gained by use of Nicholson thermic syphons. Represented by John L. Nicholson, Leslie R. Pyle, C. M. Rogers and Harry Clewer, Jr. Spaces 382-383-384-385.
- Locomotive Stoker Company, Pittsburgh, Pa.—Full size type "D" Duplex stoker and one-third size model; slope sheet coal pusher. Represented by W. S. Bartholomew, J. J. Byrne, O. B. Capps, W. G. Clark, A. C. Deverell, H. B. Gardner, J. J. Hannahan, N. M. Lower, L. V. Stevens, A. L. Whipple, A. N. Willisie and H. C. Woodbridge. Spaces 403-405-407.
- Logan Iron & Steel Company, Philadelphia, Pa.—Reception booth. Space 319.
- Long, Jr. Company, Chas. R., Louisville, Ky.—Samples of railway paints, paint panels; paint films. Represented by Charles R. Long, Jr., Harry Vissering, G. S. Turner, J. M. Monroe, J. S. Lemley, W. H. Heckman and Samuel W. Russell. Space 575.
- Lovell & Co., F. H., Arlington, N. J.—Lighting equipment for locomotives, cars and maintenance of way; switch classification, marker, signal and bridge lamps. Represented by A. D. Hobbie, F. W. Dressel, L. L. Pollak, H. S. Hoskinson and B. P. Claiborne. Spaces 631-633.
- Lowe Brothers Company, Dayton, Ohio.—Red lead lute; Metal-cote; signal enamel; varnishes; freight car paints. Represented by J. A. McFarland, E. T. Wade, George A. Barden, Langley Ingraham, R. L. DeArmond, R. H. Blackall, H. R. Potter and D. K. Coyle. Space 629.
- Lunkenheimer Company, The, Cincinnati, Ohio.—Valves, lubricators, oil and grease cups and other engineering appliances. Represented by W. Morgan Hood, W. W. Beal, Andrew Lauterbach and Howard J. Evans. Spaces 313-315.
- MacRae's Blue Book Company, Chicago.—MacRae's Blue Book. Represented by Thomas H. MacRae, D. N. Peirce, W. F. Miller and F. L. McCabe. Space 22.
- McCabe Manufacturing Company, Lawrence, Mass.—Working model flanging machine with flanged flue sheets, heads and car parts. Represented by red H McCabe and Hugh McCabe. Space 310.
- McConway & Torley Company, The, Pittsburgh, Pa.—Car couplers; quadruple shear yokes; uncoupling arrangements for passenger couplers. Represented by William McConway, Jr., Stephen C. Mason, I. H. Milliken, J. J. Hughes, W. H. Graul and Robert Huff. Spaces 501-503-505.
- Machinery, New York.—Engineering publications as follows: Machinery; Machinery's Handbook, Encyclopedia, Books on Shop Practice, Library for Machinists, Library for Toolmakers, Library for Designers and Draftsmen, Dollar Books and Fifty Cent Books; exhibit of machine tool advertising. Represented by Erik Oberg, J. N. Wheeler and Victor Brook. Space 360.
- Madison-Kipp Corporation, Madison, Wis.—Locomotive lubricators. Represented by Thomas E. Colman and William B. Wheeler. Space 36.
- Mahr Manufacturing Company, Minneapolis, Minn.—Mahrvel rivet forges, torch, outfits, babbitt furnaces, spring furnaces, calorimeters, safety automatic shut-off valves and blast gates; Mahrvac torch. Represented by W. M. Horner, W. G. Barstow, R. B. Ecker, W. H. White and J. L. Edwards. Space 134.
- Main Belting Company, Philadelphia, Pa.—Complete car lighting belt, belting and belt fasteners. Represented by H. W. Lyndall. Space 234.
- Manning, Maxwell & Moore, Inc., New York.—Hancock inspirators; Hayden & Derby injectors, ejectors, high pressure valves and oil cups; Ashcroft steam and hydraulic gages; Consolidated safety valves; Tabor engine indicators; Putnam double axle lathe, 54-in. vertical boring mill, 48-in. car wheel borer, and 26-in. by 14-ft. traverse shaper; two types of Woodward & Powell 24-in. crank planers; Columbia 32-in., 24-in. and 16-in. shapers; Snyder 25-in. and 36-in. vertical drills; National wedge grip heading and forging machine, automatic hammer header, double staybolt cutter, and die sharpener; electric rivet header; Cone Automatic Machine Company's 3½-in. screw machine. Represented by J. M. Davis, P. M. Brotherhood, H. D. Carlton, E. M. Moore, John F. Schurch, B. T. Williston, C. H. Graesser, Joseph Wainwright, T. S. Stephens, John Dunn, W. C. Chapman, J. S. Whalen, F. M. Maley, Norman Alderdice, H. J. Hair, E. F. Winship, R. S. Dean, L. E. Brayton, L. A. Gluckler, E. D. Garfield, Joseph Bush, H. E. Eddy, W. H. Williston, J. Soule Smith, C. L. Brown, P. H. Ryan, J. C. Blanton, James Briscoe, Phillip G. Darling, E. B. Crocker and O. W. Heise. Spaces 60-86, inclusive.
- Massachusetts Mohair Plush Company, Boston, Mass.—Mohair plush for car seats. Represented by W. W. Melcher and A. B. Mason. Spaces 635-637.

- Mercury Manufacturing Company, Chicago.—Mercury twin-three tractor; Mercury freight house trailer; motion pictures of "The Trackless Train" operating in railroad passenger and freight terminals. Represented by C. H. Clare, J. S. Kunkle and L. J. Kline. Space 404.
- Merrill Company, Chicago.—Merco Nordstrom plug valve. Represented by H. P. MacGregor, Thomas Jabine and Confort E. Brown. Space 164.
- Metal & Thermit Corporation, New York.—Materials, appliances and samples of Thermit welding, including a new application of Thermit welding to locomotive superheater tubes; specimen of a section cut through weld in a large crank shaft. Represented by W. R. Hulbert, F. W. Cohen, J. H. Deppeler, H. D. Kelley and H. S. Mann. Space 136.
- Midgeley & Borrowdale, Chicago.—Water coolers and filters; weather-stripping; dust guards; steel and malleable iron castings. Represented by S. W. Midgeley. Space 42.
- Midland Company, The South Milwaukee, Wis.—Midland, Wilbern and anti-friction baggage car door hangers; safety stop for baggage car doors. Represented by C. P. Nourse and I. W. Davis. Space 332.
- Midvale Steel & Ordnance Company, Philadelphia, Pa.—New Symington wrought steel side frame; complete truck with wrought steel side frame; reproduction of Knobbling furnace for making charcoal iron with samples of lump bloom pile, etc., showing different stages in manufacture of charcoal iron; solid rolled steel pistons and piston center; rolled steel wheels; tire for cushion wheels for railway auto-buses; stone ties from old Portage Railroad with cast iron rail chair and bolts, and section of English rail rolled about 1832. Represented by William Aertsen, H. E. Rowe, James Connor, H. W. Hibsham, R. E. Sharp, H. P. Hubbell, R. E. Dexter, J. C. C. Holding, Stuart Hazelwood, Ward Miller, L. B. Morris, Walter Smyth, A. C. Howell G. A. Richardson. Spaces 588-589.
- Milburn Company, The Alexander, Baltimore, Md.—Acetylene welding and cutting equipment, including acetylene welding generators; welding torches; cutting torches; combination welding and cutting torches; pre-heaters; portable carbide lights for railroad, repair and construction work. Represented by A. F. Jenkins, C. R. Pollard, C. E. Mitchell, E. P. Boyer, G. B. Malone and F. Knecht. Space 217.
- Milwaukee Tank Works, Milwaukee, Wis.—Hand pump for use at section tool houses; lubricating and paint oil battery tanks and pumps; power driven automatic barrel filling pump; waste saturating tank and pump. Represented by Leo Davis and Thomas E. Cbatto. Space 376.
- Miner, W. H., Chicago.—Friction draft gears; side bearings; safety hand brakes; refrigerator car door fasteners; drawbar yokes. Represented by A. E. Biddle, Bradley S. Johnson, G. O. Lewis, J. H. Link, C. F. McCuen, J. R. Mitchell, J. F. O'Connor, W. F. Robertson, H. F. Schwartzberg, Keith Williams, A. P. Withall and George A. Johnson. Spaces 586-587.
- Minieh Railway Appliance Corporation, Philadelphia, Pa.—Super Safety hand brake and parts. Represented by R. H. Minieh, Harry E. Karr, Alex. L. Cummins, Walter J. Burns, N. S. Kenney, J. Bayard Embick, W. Harding Davis and John L. Cornog. Space 369.
- Morton Manufacturing Company, Chicago.—Buffing mechanism for top of vestibule diaphragm face plate; canvas and steel vestibule diaphragms with hoods and attachments; vestibule curtains and fixtures; folding tail gates; safety treads for steps; step boxes for passenger cars; brake steps for freight cars; steel doors and Aft-Pinch door hold; window curtains and fixtures; car window weatherproofing; steel flooring; pressed and drawn steel shape of all kinds. Represented by H. U. Morton, C. D. Morton, William Wampler, G. H. Ord, H. B. Chamberlain, C. A. Keating and F. N. Grigg. Spaces 568-569.
- Morton Manufacturing Company, Muskegon Heights, Mich.—Special railroad draw cut shaper for machining driving boxes, with attachments for planing shoes and wedges, rod brakes and driving box bolts, photographs of draw cut cylinder planer and boring machine. Represented by Harry E. Morton and George F. Goble. Space 50.
- Nathan Manufacturing Company, New York.—Injectors; sight feed lubricators, mechanical lubricators, water columns, boiler checks; balanced starting valves; coal sprinkler; water gages; gage cocks; locomotive fittings. Represented by Otto Best, J. F. Farrell, A. Kassander, Richard Welsh, William Wesh, William E. Brumble and W. D. Jenkins. Spaces 578-579.
- National Boiler Washing Company of Illinois, Chicago.—Reception booth. Represented by Frederick A. Gale, T. G. Dalton and Fred W. Gale. Space 608.
- National Brake Company, Inc., Buffalo, N. Y.—Two types of Peacock blind end baggage car brakes; Peacock freight car and passenger car brakes. Represented by F. D. Miller and W. D. Brewster. Space 322.
- National Car Wheel Company, Pittsburgh, Pa.—Arch plate A. R. A. wheels of 650, 700, 750 and 850 lb.; new 850-lb. arch plate reinforced flange Star Special wheel for 70-ton cars; similar wheel after five years' service under car of 70 tons capacity. Represented by J. H. Yardley, J. S. Bucknam, J. F. Weisbrod, E. H. Chapin, H. L. Garvin and H. E. McClumpha. Spaces 516-518.
- National Lock Washer Company, The, Newark, N. J.—Models of car curtains, curtain fixtures and rollers; car window fixtures including sash locks, balances and anti-rattling devices; National rib lock washers. Represented by C. H. Loutrel, J. Howard Horn, Daniel Hoyt, R. B. Cardozo, G. LaRue Masters, A. W. Preikschat and F. B. Archibald. Space 543.
- National Malleable Castings Company, The, Cleveland, Ohio.—Couplers; journal boxes; draft gears; miscellaneous railroad castings. Represented by T. W. Aishton, A. J. Bazeley, A. O. Buekings, Jr., J. J. Byers, R. W. Chambers, W. E. Coffin, E. H. Schmidt, E. H. Fathauer, C. Garspar, H. W. Gilbert, J. H. Jascha, C. H. Krakau, H. T. Krakau, E. V. Stihler, J. A. Slater, S. L. Smith, F. K. Leyake, W. C. Lewis, O. W. Loomis, G. V. Martin, H. L. Mausk, L. H. McCrea, B. Nields, G. R. Rasmusen, F. Snyder, H. L. Spence, E. O. Warner and L. S. Wright. Spaces 613-615.
- National Railway Appliance Company, New York.—Reception booth. Represented by B. A. Hegeman, Jr., W. C. Lincoln, Charles C. Castle, W. C. Peters, Fred C. J. Dell, Harold A. Hegeman and R. B. MacDonald. Space 622.
- National Railway Devices Company, Chicago.—Shoemaker radial and vertical firedoors. Represented by Jay G. Robinson and E. J. Gunnison. Space E.
- National Tube Company, Pittsburgh, Pa.—Reception booth. Spaces 546-547.
- Nazel Engineering & Machine Works, Philadelphia, Pa.—Nazel motor driven air hammer. Represented by Ralph W. Nazel and C. H. Wackernagel. Space 73.
- Neville Lubricator Company, Pittsburgh, Pa.—Lubricator for air pumps. Represented by Louis W. Garratt. Space 528.
- Newton Machine Tool Works, Inc., Philadelphia, Pa.—Crank planing machine; continuous milling machine. Represented by N. P. Lloyd, R. G. Holmes and W. B. Zietz. Spaces 91-93.
- New York Air Brake Company, New York.—Samples of new centrifugal air pump strainer; new oil atomizing lubricator. Represented by Scott R. Hayes, C. E. Leach, George Kleifges, N. W. Lyon, B. Hyanes and N. A. Campbell. Space 30.
- Nicine Company, Chicago.—Absorbent, deodorant, disinfectant and germicide in bottles and cans. Represented by H. R. Millard and J. J. McCarthy. Space 318.
- Niles-Bement Pond Company, New York.—New type turret tool post for wheel lathes, new 32 in. shaper for driving box work; new 25-m. lathe; N. B. P. Right Line radial drill; gages and small tools. Represented by William G. Flag, Edward L. Leeds, Charles I. Kyle, George C. Mills, Paul Renno, John Ross, D. H. Teas, N. C. Walpole and H. F. Welch. Spaces 116-118-120.
- Norton, Inc., A. O., Boston, Mass.—Improved self-lowering speed controlled jacks; ball-bearing bridge and wrecking jacks; ball-bearing journal jacks. Represented by H. A. Norton, F. I. Gormley, G. R. Law, C. H. Smith, Jr., R. D. Bates and W. R. Kelly. Space 551.
- Norwalk Iron Works Company, The, South Norwalk, Conn.—Air and ammonia compressors. Represented by C. L. Thompson, A. R. Betts and Don B. McCloud. Space 138.

- Nuttall Company, R. D., Pittsburgh, Pa.—Heat treated gearing and miscellaneous parts for various applications; BP treated gearing for electrified steam roads. Represented by J. E. Mulen and R. F. Fiske. Space 94.
- Okadee Company, Inc., The, Chicago.—Blow-off valves; blower valves; water glass protectors; tender hose couplers; automatic cylinder cocks; automatic drain valves; reflex water gages; model of Okadee front end hinge. Represented by A. G. Hollingshead, G. S. Turner, W. H. Heckman and J. M. Monroe. Space 573.
- Okonite Company, The, Passaic, N. J.—Rubber covered wires and cables for railroad service; varnished cambric covered wires and cables; insulating tapes. Represented by W. R. Van Steenburg, F. J. White and J. D. Underhill. Space 538.
- Oldham & Son Company, George, Baltimore, Md.—Pneumatic riveting, chipping and scaling hammers, foundry rammers, jam riveters, holders-on, and accessories. Represented by H. J. Bannister, R. W. Nelson, J. T. Biles, P. J. Christy, F. W. Gau and F. R. Fraser. Space 320.
- Oliver Electric & Manufacturing Company, St. Louis, Mo.—Plugs and receptacles; train line connectors; headlight switches; tender signal lamps; portable hand lamps; cab light fixtures; classification and marker lamps; flexible conduit couplings; safety-first switches; miscellaneous wiring devices; terminal and junction boxes. Represented by J. A. Amos and W. A. Ross. Space 316.
- O'Malley-Bears Valve Company, Chicago.—Multiplate globe, angle, check and special locomotive valves; Multiplate Dullex blowoff cocks; Perfection gage cocks and water glass drains; driver brasses; engine castings; journal bearings. Represented by Thomas O'Malley, J. N. Gallagher, J. M. Pigott, A. W. Lemme and J. E. Brown. Space 133.
- Otis Automatic Train Control, Inc., Spokane, Wash.—Automatic train and speed control; automatic brake setting valves and train line on small engine; ramp for operating brake setting valves automatically. Represented by A. F. Gammond, John T. Dickinson, A. L. Gesche, George Schweitzer and R. C. Miller. Space 706.
- Oxweld Railroad Service Company, Chicago.—Oxy-acetylene equipment. Represented by M. C. Beymer, R. R. Browning, G. M. Crowover, Fred Gardner, H. V. Gigandet, F. C. Hasse, O. D. Hays, William Hogan, William Leighton, A. N. Lucas, J. P. McWilliams, C. B. Moore, C. M. Mendenhall, R. Rivett, E. S. Richardson, L. C. Ryan, H. W. Schulze, George Thompson and A. W. Whiteford. Space 2.
- Page Steel & Wire Company, Bridgeport, Conn.—Page Armco welding rods and electrodes; Page Armco signal bond wires, line wire and strand; wire mesh for refrigerator car construction; panel partitions for store and stock rooms. Represented by W. T. Kyle, C. A. McCune, W. H. Bleecker and E. L. Schaeffer. Spaces 305-307.
- Paige & Jones Chemical Company, New York.—Water softening tanks; boiler feedwater treatment. Represented by Fred O. Paige, Lucius A. Fritze and C. B. Flint. Space 358.
- Pantasote Company, The, New York.—Agasote panels, wainscoting, ceilings, roofs; Pantasote artificial leather. Represented by John M. High, William Anderson and William A. Lake. Space 400.
- Parish & Bingham Corporation, Cleveland, Ohio.—Pressed steel car parts. Represented by P. O. Krebbel and C. E. Meyer. Space D.
- Parkesburg Iron Company, Parkesburg, Pa.—Samples of genuine charcoal iron boiler tubes for locomotive boilers; sample of Parkesburg iron tube removed after 42 years of continuous service. Represented by I. A. Beale, Jr., George Thomas, 3rd, W. H. S. Bateman, J. R. Wetherald, G. W. Denyven, R. J. Sheridan, J. F. Wiese, G. H. Woodroffe, W. P. Canby and G. A. Cardwell. Space 388.
- Paxton-Mitchell Company, Omaha, Neb.—Metallic piston rod and valve stem packing. Represented by James L. Paxton, E. L. Chollman, J. J. Kellner and W. S. Murrian. Space 533.
- Peerless Machine Company, Racine, Wis.—Peerless 6-in. by 6-in. universal and plain metal sawing machines; 13-in. by 16-in. plain metal sawing machine. Represented by R. T. Ingalls and Charles Rasmussen. Space 215.
- Pels & Co., Inc., Henry, New York.—Universal punch, plate, shear, bar, angle, tee, beam and channel cutter; combined punch, splitting shear, bar, angle and tee cutter; gate shear; double ended bar and angle shear; single ended coping machine. Represented by R. W. McPhee, T. C. Sternblad and C. A. Miller. Spaces 122-124-126.
- Penn Iron & Steel Company, Creighton, Pa.—"Lewis" staybolt, engine bolt and chain iron, hollow staybolt iron and double refined iron. Represented by Charles J. Nieman and Wenman A. Hicks. Space 552.
- Philadelphia & Reading Railway Company, Reading, Pa.—Consolidation type locomotive; Pacific type locomotive; hopper car; passenger coach. Space on exhibit track.
- Pilliod Company, The, New York.—Baker locomotive valve gear; sillind low water alarm. Represented by Burton Mudge, J. J. Donovan, William McGee, R. H. Weatherly and Harry Snyder. Spaces 576-577.
- Pilot Packing Company, Inc., Chicago.—Pilot packing for various uses; Ripken automatic steam drifting valve. Represented by Joseph Sinkler and Robert Sinkler. Space 542.
- Pittsburgh Steel Foundry Company, Pittsburgh, Pa.—Reception booth. Represented by H. V. Seth, John Allison and E. R. Williams. Space 168.
- Pittsburgh Testing Laboratory, Pittsburgh, Pa.—Specially designed compression testing machine for testing samples of sand and cement in compression; specially designed brass molds for making test specimens used by the machine. Represented by James Milliken, A. R. Ellis, H. B. Landerbaugh, H. W. Bates and H. M. Wey. Space 33.
- Pocket List of Railroad Officials, The, New York.—Pocket List of Railroad Officials. Represented by J. Alexander Brown, Harold A. Brown and Charles L. Dinsmore. Outside of space 5.
- Porter-Richards Machinery Company, Philadelphia, Pa.—Cisco 18-in. lathe; Clark portable electric drills, reamers, screw drivers, toolpost grinders, hand and suspended surface grinders; Clark electrically driven drill presses and emery grinders; Sweetland lathe chucks. Represented by S. G. Porter, E. I. Porter and J. R. Richards. Space 75.
- Pratt & Lambert, Inc., Buffalo, N. Y.—Vitalite railway enamel system. Represented by J. P. Gowing and E. L. Georger. Space 521.
- Pressed Steel Car Company, New York.—Reception booth. Represented by N. S. Reeder, J. F. MacEmuly, C. E. Postlethwaite, K. C. Gardner, H. H. Gilbert, C. C. Clark, J. G. Morrissey, F. L. Johnson, H. S. Hammond, J. S. Turner, W. H. Wilkinson, C. H. Jackman, J. T. Markham, J. F. Streib, H. P. Hoffstot, and F. O. Schramm. Spaces 545 and 601.
- Princeton Foundry & Supply Company, Princeton, W. Va.—Perfection cone stove sand drier. Represented by C. J. Hilty and W. H. Golden. Space 163.
- Production Machine Company, Springfield, Mass.—Cylindrical (centerless feed) polishing machine; automatic flat polisher; combined disk grinder, surfacer and polisher; Miller & Crowningsfield hand millers; F. O. Wells Company broaching tools, taps, dies and screw plates. Represented by W. S. Howe and A. H. Behnke. Space 103-105.
- Pugh, Inc., Job T., Philadelphia, Pa.—Augers and bits; hollow mortising chisels. Represented by M. H. Fussell, Jr. and E. T. Wade. Space E.
- Pyle-National Company, Chicago.—Turbo-generators; cast aluminum cases, complete with reflectors and focusing device; Armco iron headlight cases; back-up lamps; steam turbine; 10-in. portable lamp; switch engine headlight case; adjustable flood and searchlights; fan; Nonglare and crystal glass reflectors; 10-in. flood light. Represented by R. C. Vilas, J. Will Johnson, William Miller, T. P. McGinnis, Crawford P. McGinnis, George E. Haas, R. L. Kilker, L. H. Steger and Walter Smith. Spaces 602-604-606.
- Racine Tool & Machine Company, Racine, Wis.—New Racine Junior metal cutting machine; high speed metal cutting machine

- with three-speed attachment; heavy duty metal cutting machine; Racine high speed portable rail cutting machine; Racine broach slitter and keyseater. Represented by E. Erskine, William Reinhardt and Thomas A. Hyde. Space 130.
- Railroad Herald, The, Atlanta, Ga.—Reception booth. Represented by F. C. Laird. Space 20.
- Railway Devices Company, St. Louis, Mo.—Perfection brake catches; Western angle cock holders; spiral pipe clamps; "iron horse" or pedestal; Sta-Kite release rigging attachments. Represented by Louis A. Hoerr and Sterling H. Campbell. Space 618.
- Railway Materials Company, The, Chicago.—Railway brake shoes. Represented by W. M. Sumpson, E. C. Tolson, George Huefle and Gustave Bluemel. Space 561.
- Railway Purchases & Stores, Chicago.—Magazines. Represented by Edward Wray and H. B. Kirkland. Space 11.
- Railway Review, Chicago, Ill.—Copies of Railway Review. Represented by Harold A. Smith, A. E. Jooven, Charles L. Bates, Willard A. Smith, L. G. Plant and J. E. Gougeon. Spaces 12-14.
- Railway Storage Battery Car Company, New York.—Reception booth; data and information covering operation of Edison storage battery cars. Represented by L. Klopman and F. N. Kozell. Space 634.
- Ralston Steel Car Company, The, Columbus, Ohio.—Reception booth. Represented by F. E. Symons, B. C. Hanna, C. S. Rea, and Charles P. King. Space 558.
- Reading Iron Company, Reading, Pa.—Full weight genuine wrought iron pipe; charcoal iron boiler tubes; genuine wrought iron railway signal pipe, nipples and couplings. Represented by Samuel L. Shoher, Jr. Space 228.
- Reed-Prentice Company, Worcester, Mass.—Reed-Prentice high speed 14-in. geared head lathe with apron, gear box and head-stock units; 14-in. new type cone head lathe; 4-ft. arm radial drill. Represented by F. W. McIntyre, F. O. Hoagland, J. A. Benson, F. K. Hendrickson and P. K. Dayton. Spaces 88-90.
- Regan Safety Devices Company, Inc., The, New York.—Regan automatic train control devices; animated technical drawings of the train control devices. Represented by J. Beaumont and F. J. L'Prean. Space 402.
- Republic Iron & Steel Company, Youngstown, Ohio.—Reception booth. Represented by W. B. Topping and W. H. Oliver. Space 517.
- Rivet Cutting Gun Company, Cincinnati, Ohio. Cincinnati rivet cutting guns. Represented by L. K. DeBus and J. M. Crowe. Space 513.
- Roberts Automatic Connector Company, Ltd., Sarnia, Ont.—Automatic steam and air pipe connector for passenger and freight service. Represented by John W. Roberts, Thomas Robinson and William F. Saylor. Spaces 159-160.
- Robinson Connector Company, The, New York. Automatic connector. Represented by Joseph Robinson and G. E. Matheson. Space 703.
- Rolling's Sons Company, John A., Trenton, N. J.—Gas and electric welding wire, steel and copper telephone and telegraph wire, zinc wire, etc.; wire rope from 1/8 in. to 3 in. diameter; wire rope contributions; wire rope fittings; wire rope splices; wire rope and hardware; ball and barrel cord; wire cloth for wire screens; window screening, etc.; insulated wires and cables; reduction tools. Represented by H. E. Dean, A. E. Connor, L. Grayson, Mr. Nelson, A. W. Miller and E. A. Bennett. Space 14.
- Rothell Company, The, Baltimore, Md.—Adjustable cross-neck and post-in hub rings. Represented by Theodore Reigtsma and George M. Harrison. Space 169.
- Four Iron Mills, Inc., New York.—Sample specimens of staybolt and pin-and-rod iron. Represented by B. A. Clement and C. C. Orin. Spaces 414-416-422-424.
- Rubberair Company, Newark, N. J.—Rubberized paint and varnish brushes. Represented by A. I. Heltzman. Space 16.
- Ryerson & Son, Joseph T., Chicago.—Ryerson-Conradson motor driven engine lathe; Ryerson flue shop model; Ryerson-Lennox rotary bevel shear model; Ryerson-Lennox rotary splitting shear model; Ulster Special seamless hollow staybolts; Ulster iron. Represented by J. P. Moses, H. T. Bradley, A. G. Moler, E. W. Kavanaugh, C. F. Barton and John Craigie. Space 132.
- Safety Car Heating & Lighting Company, New York.—Car lighting equipment (electric and Pintsch); batteries and lighting fixtures; electric fans, water coolers and water heaters. Represented by W. L. Conwell, W. L. Garland, J. H. Rodger, R. H. Harvey, S. I. Hopkins, H. D. Donnell, A. B. Mills, H. K. Williams, G. Scott, J. H. Henry, L. W. Siple, G. E. Hulse and L. Schepmoes. Space on stairway platform, Aquarium Court.
- Sargent Company, Chicago.—Loedige quick-acting blower valves; safety water gages; safety water glass gaskets; water columns; Renu gage cocks. Represented by George H. Sargent and L. L. Schultz. Space 600.
- Schaefer Equipment Company, Pittsburgh, Pa.—Schaefer truck lever connections, drop forged truck levers and brake rod jaws; collapsible stake pockets. Represented by F. A. Barby, H. G. Doran, S. M. Hindman, J. C. Little, Frederic Schaefer and E. J. Seales. Space 511.
- Sellers & Co., Inc., William, Philadelphia, Pa.—Locomotive injectors; locomotive valves and other accessories; annular disk boiler check; locomotive fire extinguisher; locomotive boiler tester. Represented by John D. McClintock, James R. New, Phillip E. Raymond, Edward L. Holljes and Charles T. Wilson. Space 627.
- Sharon Pressed Steel Company, New York.—Corrugated car roof sections; Sharon Brute trailers; Bluenose hand trucks; Bear-cat dollies; Sharon pressed steel castr; Sharon pressed steel wheel. Represented by C. K. Strausbaugh, H. F. Ziegler, H. W. Torry and R. B. Reid. Space 232.
- Sherritt & Stoer Company, Inc., Philadelphia, Pa.—Hendey new model lathe and other machine tools. Represented by M. A. Sherritt, P. A. Rebek, H. M. Shaw, J. C. Carlton and G. A. Ebelhare. Space 109.
- Silumite Products Corporation, Philadelphia, Pa.—Silumite paint for iron and steel. Represented by David V. Ault and George N. Ault. Space 502.
- Simmons-Boardman Publishing Company, New York.—Railway Age; Railway Mechanical Engineer; Railway Maintenance Engineer; Marine Engineering and Shipping Age; Railway Electrical Engineer; The Boiler Maker; Car Builders' Cyclopaedia; Locomotive Cyclopaedia; Shipbuilding Cyclopaedia; Maintenance of Way Cyclopaedia; Material Handling Cyclopaedia; books on transportation subjects. Represented by S. O. Dunn, R. V. Wright, A. F. Stuebing, R. E. Thayer, C. B. Peck, C. N. Winter, A. G. Oehler, E. L. Woodward, R. C. Angus, C. J. Corse, F. W. Kraeger, J. G. Lye, A. E. Orthinghaus, E. A. Rohm, E. A. Simmons, L. B. Sherman, C. R. Mills, F. H. Thompson, F. C. Koch, R. H. Smith, J. M. Rutherford, H. L. Burrells, George Slate, H. B. Bolander, E. A. Lundy, J. F. Anderson, P. Traeger, J. F. Taylor, C. H. Knowlton, R. E. Duysters and J. Currie. Space 1.
- Simonds Manufacturing Company, Fitchburg, Mass.—Solid and inserted tooth metal cutting saws; wood cutting saws; planer machine knives; hack saw blades and files. Represented by Charles H. McKay, R. D. Baldwin and Spencer Patterson. Space 204.
- Spic & Co., James B., Bridgeville, Pa.—Reception booth. Represented by R. F. Rogers. Space 215.
- S. K. F. Industries, Inc., New York.—Deep groove ball bearings; self-aligning ball bearings; Atlas steel balls. Represented by W. J. Butt, S. B. Taylor, R. H. DeMott, H. E. Brunner, H. A. Allen and R. C. Byler. Space 147.
- Smith Locomotive Adjustable Hub Plate Company, The, Chicago, Ill.—Adjustable hub plates for locomotives. Represented by A. J. Smith, J. Will Johnson and C. P. McOmbs. Space 602.
- Southern Wheel Company, St. Louis, Mo.—Reception booth. Represented by F. C. Turner, J. B. Spencer and S. C. Watkins. Space 418.
- Southwark Foundry & Machine Company, Philadelphia, Pa.—Southwark Mason washer cutting press, die welder; bushing

- press; models of hydraulic spring banding press and continuous furnace mechanism. Represented by W. H. Harman, F. G. Schranz, G. H. Case, W. A. Lacke, W. L. DeLaney, F. M. Kepler, S. Bolling and J. T. Lee. Space 135.
- Stafford Roller Bearing Car Truck Corporation, Lawton, Mich.—Standard M. C. B. arch-bar type, 40,000 lb. capacity truck, equipped with Stafford roller bearings (shown in motion) and journal boxes. Michigan Central 80,000 lb. capacity box car, with trucks equipped for the past 20 months with Stafford roller bearings and journal boxes. Represented by L. K. Stafford and O. F. Packer. Space 206 and on exhibit track.
- Standard Car Truck Company, Chicago.—Barber lateral motion truck device; Barber roller side bearings; Barber universal coupler carrying iron. Represented by L. W. Barber, James T. Milner, F. L. Barber and E. W. Webb. Space 510.
- Standard Coupler Company, New York.—Various types of Sessions-Standard friction draft gears and Laughlin roller side bearings. Represented by A. P. Dennis, W. Eckles and E. G. Goodwin. Space 500.
- Standard Electric Crane & Hoist Company, Philadelphia, Pa.—New type of short-headroom monorail electric hoist of two to three tons capacity. Represented by H. S. Valentine, E. C. Roop and P. G. Basehore. Space 73.
- Standard Forgings Company, Chicago.—Stanforge friction draft gear; Stanforge forged steel yoke; standard A. R. A. journal box wedges; drop forged steel center plates. Represented by E. W. Richey, O. L. DeLano and M. A. Metzger. Space 535.
- Standard Railway Equipment Company, Chicago.—Murphy roofs, carlines, running board extensions, steel ends, release rigging, centering device; hopper doors; National side door. Represented by W. P. Murphy, A. A. Frank, S. G. Rea, George Cooke, A. C. Murphy, G. G. Gilpin, A. G. Bancroft, V. E. Sisson and T. J. Cralley. Spaces 426-428.
- Steele Fabricating Corporation, The, Michigan City, Ind.—Photographs and descriptive matter of Steco ready-to erect structural steel buildings for industrial purposes. Represented by A. C. McGuire, George C. Jones and C. K. Drury. Space 42.
- Stone-Franklin Company, New York.—Standard single battery car lighting equipment (running exhibit); detail parts of equipment. Represented by R. G. Coburn, J. L. Hays, C. E. Walker, W. L. Gray, H. D. Rohman, R. E. Gallagher and R. Gerrard. Space 406.
- Stowell Company, The, South Milwaukee, Wis.—Wilbern adjustable door hangers for warehouses and factory doors. Represented by I. W. Davis. Space 332.
- Street, Clement F., Greenwich, Conn.—Street locomotive starter. Represented by Clement F. Street. Space 167.
- Stucki Company, A., Pittsburgh, Pa.—Frictionless side bearings; side bearing testing machine; side bearing after eight years' continuous service under 100-ton car. Represented by A. Stucki, A. B. Severn and W. C. Hansen. Space 539.
- Sunbeam Electric Manufacturing Company, Evansville, Ind.—Turbo-generator; standard locomotive headlight; cast metal headlight; cast metal cab lamp fittings; Sunbeam airtight headlight. Represented by F. W. Edmonds, W. T. Manogue and J. Henry Schroeder. Spaces 321-323.
- Superheater Company, The, New York.—Stationary superheater; marine superheater; exhaust steam injector; pyrometer; closed type feedwater heater; cab heater coil; system of superheater unit repairs. Represented by G. L. Bourne, F. S. Schaff, G. E. Ryder, R. M. Ostermann, C. H. True, H. B. Oatley, R. R. Porterfield, C. A. Brandt, W. A. Buckbee and Bard Browne. Spaces 422-424.
- Superior Steel Castings Company, Chicago.—Steel and malleable iron car castings. Represented by S. E. Doster and W. R. Gilmore. Space 38.
- Swanson Automatic Flange Lubricator Company, The, Denver, Colo.—Automatic flange lubricator; air-pump piston swab nut lock. Represented by O. W. Swanson and A. T. Arthur. Space 166.
- Swind Machinery Company, Philadelphia, Pa.—Gray 36-in. maximum service planer; Bradford 26-in. geared head lathe; Fordick 4-ft. radial drilling machine; No. 121 Baker boring and drilling machine. Represented by L. H. Swind, H. Wright, G. Helling, William J. Powers and R. W. Burk. Space 51.
- Symington Company, The, T. H., New York.—Freight and passenger car journal boxes; wrought steel truck bolster; wrought steel side frame; swivel butt coupler; Farlow draft attachments. Represented by T. H. Symington, C. J. Symington, LeRoy Kramer, D. S. Barrows, R. H. Gwaltney, T. C. deRosset, I. O. Wright, A. H. Weston, H. K. Smith, A. W. Brown, C. R. Naylor, Hlynck Sparks and H. W. White, Jr. Spaces 570-571.
- Talmage Manufacturing Company, The, Cleveland, Ohio.—Talmage system aspirin cleaner; Talmage ratchet hand brake; Talmage grease cup; Talmage blow-off valve; Talmage steam chest; Talmage cylinder lubricating drifting valves; Cleveland low water alarm. Represented by Frank M. Roby, H. B. Thurston, and Alfred F. Letherer. Spaces 354-355-356-357.
- Torchweld Equipment Company, Chicago.—Torchweld non-flash oxy-acetylene cutting and welding equipment. Represented by W. A. Slack and A. F. Dillon. Space E.
- Tuco Products Corporation, New York.—Flexolith plastic composition car flooring; National standard treated roofing canvas; National and Universal trap doors and locks; Resisto hair felt insulation; Tuco mineral insulation for car floors; Rockwul jacket insulation; Imperial car screens; Royal adjustable shoe car screens; Eclipse deck sash ratchets. Represented by David W. Pye, Frank N. Grigg, Thomas L. Miller, R. F. O'Leary, George Hricovsky, James C. Coleman and Frank A. Barbey. Space 628.
- Underwood Corporation, H. B., Philadelphia, Pa.—Locomotive boring bar for cylinders and valve chambers; circular planer tool for locomotive driving boxes; portable valve seat rotary planer; locomotive cylinder and dome facing machine; locomotive crank pin turning machine; link or curve planer attachment; flue cleaner; 3-hp. vertical engine. Represented by George A. Graham, George C. Flannigan and W. Weidermann. Spaces 379-381.
- Union Draft Gear Company, Chicago.—Cardwell friction draft gear type "G," classes 11-A, 25-A and 11A Duplex. Represented by J. R. Cardwell, L. T. Canfield, H. Barnard, J. W. Hathaway, J. E. Tarelton, W. G. Krauser, C. J. Gorman, F. E. Schmitz and J. A. King. Spaces 413-415.
- Union Metal Products Company, Chicago.—See Standard Railway Equipment Company.
- Union Spring & Manufacturing Company, Pittsburgh, Pa.—Reception booth. Represented by L. G. Woods, A. C. Woods, A. Pancoast, D. R. Warfield, F. E. Schaeffer, W. L. Jeffries and J. W. Chandler. Space 553.
- U. S. Light & Heat Corporation, Niagara Falls, N. Y.—USL car lighting equipment; car lighting generator with shaft drive; USL Planté type storage battery; USL regulator panel; USL 200 and 300-ampere portable arc welders. Represented by H. A. Matthews, W. L. Bliss, W. A. Turbayne, E. Bauer and O. R. Hildebrandt. Space 338.
- U. S. Metallic Packing Company, The, Philadelphia, Pa.—King metallic packing; King cylinder cock; King grease plug; King sanders; Leach track sanders; Gellmar bell ringer. Represented by Elliott Curtis, R. A. Light, L. B. Miller, R. R. Wells, J. T. Luscombe, J. S. Mace and H. E. Hyslop. Spaces 566-567.
- United States Rubber Company, New York.—Mechanical rubber goods; packings; hard rubber train lighting battery jars and accessories. Represented by G. A. Gardner, A. B. Means, F. E. Dodson, Thomas Plunkett, W. B. Wise and M. P. Junkin. Space 7.
- Universal Boring Machine Company, Hudson, Mass.—Original Tri-Way universal (horizontal) boring machine; universal precision level. Represented by Donald C. Watson. Space 77.
- Universal Draft Gear Attachment Company, Chicago.—Reinforcing draft arms; Rivles yokes; keyed yokes; riveted type of yokes; tandem draft castings; draft lugs; hand brake attachments. Represented by C. J. Nash, C. C. Kinsman, H. I. Wigley and H. E. Bartsch. Space 515.
- Universal Packing & Service Company, Chicago.—Spring journal packing. Represented by J. P. Landreth, G. H. Green, W. T. Davis and T. P. Williams. Space 501.

- Vanadium Alloys Steel Company, Latrobe, Pa.—Samples of high speed, alloy and carbon steels and tools made therefrom. Represented by John Theis, William R. Mau, A. F. Chilcott, H. E. Bardwell and H. P. Edison. Space 300.
- Vanadium Corporati-n of America, New York.—Ferro-Vanadium, cold bent sections of normalized carbon vanadium steel locomotive forgings made by The Erie Forge Company and The United Alloy Steel Corporation. Represented by Merrill G. Baker, George N. Norris and Charles E. Fritz. Space 5.
- Van Dorn Coupler Company, Chicago.—Automatic couplers. Represented by J. McWilliam Stone. Space 38.
- Vapor Car Heating Company, Inc., Chicago.—Vapor system of passenger car heating; locomotive specialties for train heating, including pressure reducing valves; vertical coils for baggage and mail car heating; flexible metallic steam conduits for passenger cars; steam hose couplers; end train pipe valves; steam traps; specialties for hot water heating systems; auxiliary heating stove; miscellaneous fittings. Represented by E. H. Gold, J. E. Buker, R. P. Cooley, N. F. Burris, W. L. Garland, F. A. Purdy, H. I. Lowman, F. F. Coggin, E. A. Russell, E. E. Smith, L. H. Gillick, L. B. Rhodes, C. E. Lowell, P. B. Parks, H. D. Donnell. Spaces 208-210-212-214-216.
- Verona Tool Works, Pittsburgh, Pa.—Railroad jacks; mechanical department tools; track tools; track levels; rail springs; nut locks. Represented by E. Woodings, John S. Winerantz, W. W. Glosser, Porter L. Laughlin and William F. Hart. Space 617.
- Vissering & Co., Inc., Harry, Chicago.—Viloco lead lined sanders; Leach type sanders; Viloco bell ringers; Vil co duplex engineers' valve; Viloco bell ringer throttle valve; Viloco uncoupling lever attachment; Viloco rail washer; Viloco portable cylinder head crane; Crescent metallic piston rod and valve stem packing. Represented by Harry Vissering, G. S. Turner, W. H. Heckman and J. M. Monroe. Space 574.
- Walworth Manufacturing Company, Boston, Mass.—Genuine Walworth Stillson wrench; Kewanee unions and specialties; Walworth valves; cast and malleable iron fittings. Represented by L. F. Hamilton, H. S. Patterson, H. C. Goodwin and W. P. Kerr. Space 412.
- Waugh Draft Gear Company, Chicago. Models of draft gears; draft gears with auxiliary; platform buffers; Chaffee centering devices; freight car truck spring. Represented by J. M. Waugh, H. V. Conine, S. T. Rowley and C. E. Combs. Space 612.
- Wayne Tool Manufacturing Company, Waynesboro, Pa.—Car builders; bridge and locomotive reamers; drill chuck for salvaging broken twist drills. Represented by William H. Strauss, R. C. Gordon and E. H. Stickels. Space 172.
- West Disinfecting Company, New York.—Disinfectants; sanitary appliances; fumigators; liquid soap; metal polish; paper towels; steam sterilizers for water coolers; Holdem rat catcher. Represented by H. F. Daniels, E. C. Daniels and C. P. Williams. Space 26.
- Western Railway Equipment Company, St. Louis, Mo.—Western brake jaws, Top Notch journal bearing wedges. Represented by Louis A. Hoerr and Sterling H. Campbell. Space 618.
- Western Steel Car & Foundry Company, New York.—see Pressed Steel Car Company.
- Westinghouse Air Brake Company, Pittsburgh, Pa.—Motor driven compressor of 300 cu. ft. capacity; Wabco brake cylinder packing cup; new automatic lubricator for air compressors; rounded main reservoirs; friction draft gear. Represented by W. S. Barthelme, G. W. Widm, S. G. Down, C. C. Farmer, C. J. Olmstead, C. H. Beck, Robert Burgess, J. B. Wright, R. E. Adreon, C. P. Cass, A. K. Holmyer, F. H. Whitney, H. A. Waldert, T. W. Swaburn, J. S. V. Fralich, J. C. McInne, C. D. Stewart, F. B. Farmer, G. B. Pierce, R. W. Williams, J. F. Craig, F. H. Park, A. L. Berghane, C. H. Larimer, L. G. Desoe, F. W. Armstrong, L. Wilcox, R. J. Cunningham, H. H. Burris, F. B. Johnson, W. M. Sleet, A. G. Huston, M. H. Burchard and F. C. Young. Spaces 24-25-27-29-100.
- Wheatley Electric & Manufacturing Company, East Pittsburgh, Pa.—Portable arc welding outfit in operation, portable equipment in operation, locomotive headlight generator and equipment, overhead line material, drum controllers, automatic starting panels, motor starting switch box; industrial lighting exhibit. Represented by C. C. Pender, A. M. Candy, W. F. Cargo, F. W. Carter, R. L. Clegg, S. B. Cooner, J. L. Crome, A. L. Harvey, C. W. Hensley, H. A. Hinton, H. D. James, A. M. Jones, C. R. Jones, G. T. Keech, R. H. Kalner, H. D. Lynch, W. R. Marshall, J. C. McQuiston, Paul Orr, L. C. Paul, L. N. Reed, W. W. Reddie, R. J. Ross, E. F. Scels, W. R. Stinemetz, N. W. Storer, A. D. Turner, E. M. Wise and F. E. Wynne. Spaces 21-23-25-27-29-96-98-100.
- Wheel Truing Brake Shoe Company, Detroit, Mich.—Abrasive brake shoes. Represented by J. M. Griffin and F. F. Griffin. Space 507.
- White American Locomotive Sander Company, Roanoke, Va.—Graham-White Perfect sander with new operating valve. Represented by James Frantz and W. L. Ranson. Space 209.
- White Company, The, Cleveland, Ohio.—Gasoline rail cars. Represented by O. M. Crotty and D. B. Bugg. Space 709.
- Whiting Corporation, Harvey, Ill.—Model of locomotive hoist and crane trolley; photographs, drawings, etc. Represented by R. H. Bourne and A. H. McDougall. Spaces 359-361.
- Widgeon Company, J. M., Norfolk, Va.—Simplex reverse gear. Represented by J. M. Widgeon and A. W. Calcott. Space 709.
- Wilbert Manufacturing Company, Chicago.—Piston rod lubricator. Represented by J. J. McCarthy. Space 318.
- Willard Storage Battery Company, Cleveland, Ohio.—Standard two-compartment unit in rubber jars, with parts; special panel showing plate details; railway signal cells, sealed glass and hard rubber jar types; radio "A" and "B" batteries. Represented by A. E. Harrold and Louis Sears. Space 34.
- Williams Tool Corporation, Erie, Pa.—Power pipe threading machines with new Williams patent receding die head. Represented by Leslie S. Hall. Space 226.
- Wilson-Imperial Company, Newark, N. J.—Imperial interior and exterior car cleaners; Removerine flush cleaner; re-dyes; Imperial process for cleaning and re-dyeing plush seats and backs and pantasote shades and curtains. Represented by Frank Sherritt, D. J. Giles, C. A. Beaumont and Joseph Kempf. Space 200.
- Wine Railway Appliance Company, The, Toledo, Ohio.—Side bearings; steel ladders; ventilators; working models of drop door locks, showing application to gondola as well as hopper cars. Represented by W. F. Cremean, Peter P. Beck, Cyrus J. Holland, R. F. Tillman, W. E. Wine and W. M. Bosworth. Space 630.
- Wolfe Brush Company, Pittsburgh, Pa.—Wall brushes; varnish, whitewash and stencil brushes; car wash brushes; painter duster. Represented by H. R. Potter and D. K. Coyle. Space 629.
- Wood Iron & Steel Company, Alan, Philadelphia, Pa.—Special articles made of plates and sheets; "AW" Diamond pattern rolled steel floor plates for platforms, steps, locomotive aprons, running boards, etc. Represented by Charles O. Hadly, Willard S. Haring, F. C. Carter and J. R. Jones, Jr. Space 9.
- Woods & Co., Edwin S., Chicago.—Anti-friction center bearing; Tip Roller body side bearings for locomotive and freight cars; Counterbalance truck side bearings for freight cars; Pullman type and spring-controlled passenger car side bearings. Represented by A. G. Welch, W. B. Ross and H. M. Perry. Space 617.
- Worthington Pump & Machinery Corporation, New York.—No. 2 and No. 3 Worthington locomotive feedwater heaters. Represented by Thomas C. McBride, John M. Lammedee, D. R. Coleman, Paul B. Fenlon and H. E. Troutman. Spaces 13-15.
- Wright Manufacturing Company, Lisbon, Ohio.—High speed chain hoists; standard screw chain hoists; differential chain hoists; steel trolleys. Represented by William F. Wright and E. B. Low. Space 327.
- Wyoming Shovel Works, The, Wyoming, Pa.—Red Edge scoops; testing machines. Represented by H. T. Potter, N. E. Brooks, W. C. Wright and F. L. Ruby. Space 211.
- Yale & Towne Manufacturing Company, The, Stamford, Conn.—Electric crane truck; electric chain hoist with manual control; same hoist with push button control; spur geared chain block; screw geared chain block; differential chain block; plain and geared trolleys; I-beam track; samples of tested chain and hooks; railroad padlocks; guard locks; general exhibit of builders' locks. Represented by Charles W. Beaver, R. P. Anderson, James C. Morgan, H. J. Fuller, H. A. White and F. Juraschek. Spaces 104-106.
- Zapon Leather Cloth Company, New York.—Special vestibule curtain material, car curtain material; Zapon leather cloth; Zapon lacquers and enamels. Represented by G. Gurske, W. M. Lador, A. A. Atchison and W. H. Dawson. Space 158.

Railroad Labor Board at the Conventions

IT IS GRATIFYING to both railway men and equipment and supply men that the members of the Railroad Labor Board have been tendered and have accepted an invitation to attend this year's conventions and inspect the exhibit. All the members of the board will be here.

With the exception of the Interstate Commerce Commission, the Labor Board is the most important body for the regulation of the railroads ever established in the United States. It deals only with the relations of the roads and their employees, but, of course, there are no railroad problems more difficult or important at present than those arising out of the relations between the roads and the employees.

The board, as most readers of *The Daily* know, is composed of three members representing the railways, three the employees, and three the public. The railway members are Horace Baker, formerly general manager of the Queen & Crescent; Colonel J. H. Elliott, formerly general manager of the Texas & Pacific, and later a colonel of the Transportation Corps in France, and Samuel Higgins, formerly deputy president of the Brotherhood of Railroad Hartford. The labor members are A. O. Wharton, formerly president of the Railroad Employees Department of the American Federation of Labor; Albert Phillips, formerly vice-president of the Brotherhood of Locomotive Firemen & Enginemen, and W. L. McMenimen, formerly deputy president of the Brotherhood of Railroad Trainmen. The public members are Ben W. Hooper, formerly governor of Tennessee, who is now chairman of the board; Judge R. M. Barton, formerly its chairman, and G. W. W. Hanger, who long served as a member of the federal Board of Mediation and Conciliation.

The board has had to settle some of the most important labor controversies that have ever arisen on the railways since it came into existence early in 1920 when the railways were returned to private operation. Among these have been controversies between the mechanical departments and the employees in the shops over both wages and the rules in the national agreement made under government control. The members of the board evidently believed that it would be helpful to them in their work to hear the reports and discussions at the conventions, to inspect the exhibit and to observe generally what goes on here, and in this they are undoubtedly right.

The Mechanical Division of A. R. A. and the Railway Supply Manufacturers' Association have been glad to welcome them and have arranged to do whatever is possible to make their visit pleasant and profitable.

New Devices Among the Exhibits

Electric Trucks and Tractors

AN ELECTRIC CRANE TRUCK is being exhibited by the Baker R. & I. Company, Cleveland, Ohio, which is constructed on principles similar to those used in the construction of locomotive cranes. The complete equipment consists of a three-movement crane mounted on the standard type QUQ utility truck, built by the Baker Company. The truck drives and steers on all four wheels and is driven by a 24-volt motor with a 72-ampere rating at 115. or. p. m. The motor has a 300 per cent overload capacity for thirty minutes; it is connected to the wheels through single reduction worm drives, with

position on the operating platform, can control the three movements of the crane and hoisting mechanism with three push-button control switches located on the dash. The three movements consist of raising and lowering the hook, raising and lowering the boom, and swiveling or slewing the crane and hoisting mechanism through an arc of 370 deg. All of these movements may be performed simultaneously.

The hook and boom are operated by two identical special Sprague one-ton hoists with spur and worm gear reduction. The motors mounted on these hoists are 24-volt, series wound, totally enclosed motors which are provided with electric brakes. A smaller, similarly designed motor is used for slewing, this motor being connected through a worm gearing to a spur pinion which travels around a large stationary bull-ring gear mounted on the

Elevating Platform Truck, Type DELQ

four-pinion differentials of the bevel gear type, radial and thrust ball bearings, dished wheels with knuckle pivots over tire center lines, and full troller and brake pedal-floated drive shafts. The controller is of the drum type which permits three speeds forward and reverse, and an automatic switch is provided which interlocks the

Three-Movement Electric Crane Truck

Three-Wheel Tractor, Type DTS

controller and brake pedal. The brake is of the external contracting type operating on the worm shaft. A horizontal roller steering handle is used and all steering levers and handles are fitted with removable bushings.

The hoisting mechanism is self-contained with the battery compartment, the battery serving as a counterweight to the hoisted crane. The operator, without leaving his

truck platform. The boom and hook are operated by their respective motors through double reduction spur and worm gearings.

The hoisting mechanism has a capacity of 2000 lb. load on the hook with a 7-ft. boom radius, the height under the hook for this radius being 10 ft. The hoisting speed of the hook is 45 ft. per minute with no load and 16 ft. per minute with a load of 2000 lb. The time required to raise the boom through its complete travel is from 12 to 20 seconds with loads varying from nothing to 2000 lb. The crane can be swung through an arc of 270 deg. in 20 seconds, and the truck operates at a speed of about six miles an hour. The weight of the outfit without battery is 6000 lb.; with 12 cells of 21-plate Ironclad battery it is 6840 lb., and with 24 cells of G-11 Edison battery, 6710 lb. The rated capacity of hoisting and crane mechanism given above do not depend upon the use of outriggers to give the machine stability.

The other two machines being exhibited by the Baker Company are its type DTS 3-wheel tractor, and its type DELQ elevating platform truck. The tractor has been developed during the past year-and-a-half and a few of them are now in operation in industrial service.

The elevating platform truck is similar to those which have been marketed for several years past except that

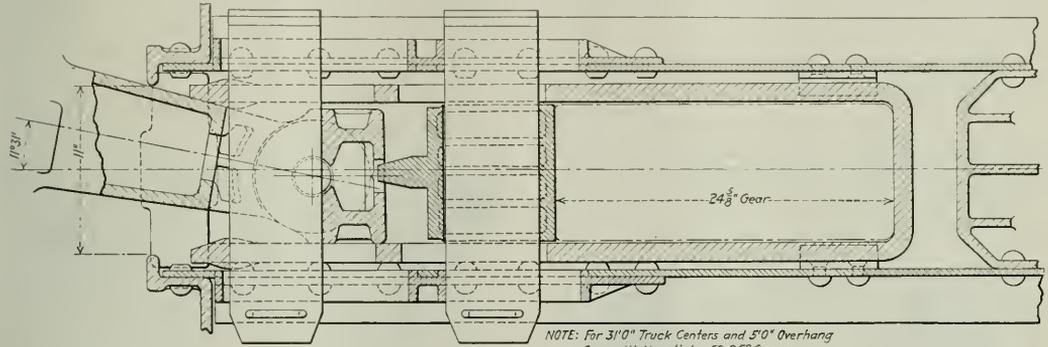

in its present form it embodies several minor improvements and one new feature, namely, the method of mounting the running gear to the frame through compensating adjustable ball connections. This feature is now incorporated in all of the three machines on exhibit.

The Swivel Butt Coupler

THE T. H. SYMINGTON COMPANY, New York, has developed and is exhibiting an articulated or swivel butt freight coupler with standard length of shank. It has been claimed that the present standard rigid shank coupler, because of its necessary angular side movement

of the draft yoke. For freight cars generally and for usual main line curves, this inherent defect of the rigid butt coupler is not so apparent because of the slight angularity possible between adjacent couplers. Nevertheless, angularity between adjacent couplers does result in unequal stresses in the two sides of the yoke loop under pull and in eccentric and concentrated bearing pressure between the coupler butt and draft gear under buff.

The swivel butt coupler corrects these conditions, permitting the coupler shank to swivel freely in a horizontal plane on the pivot pin connecting the shank and butt. Under buff, regardless of coupler shank angularity, the swivel butt of the coupler bears uniformly against the friction draft gear and over an area much greater than that

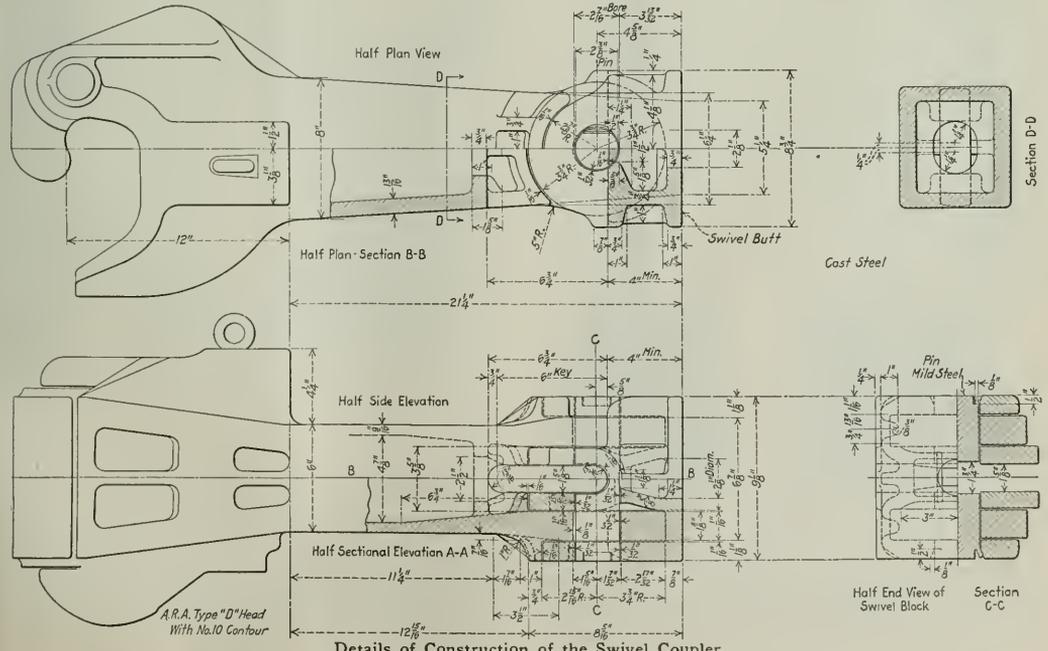

NOTE: For 31'0" Truck Centers and 5'0" Overhang Cars will Negotiate 52.25° Curve

Swivel Butt Coupler in Extreme Angular Position

on short radius curves, bears only on one edge against the front end of the draft gear or follower under buff, while under pull the entire load is concentrated on one loop

provided by the A. R. A. standard shank, while under pull the coupler key maintains its normal position with full bearing and with substantially uniform pressure against

Details of Construction of the Swivel Coupler

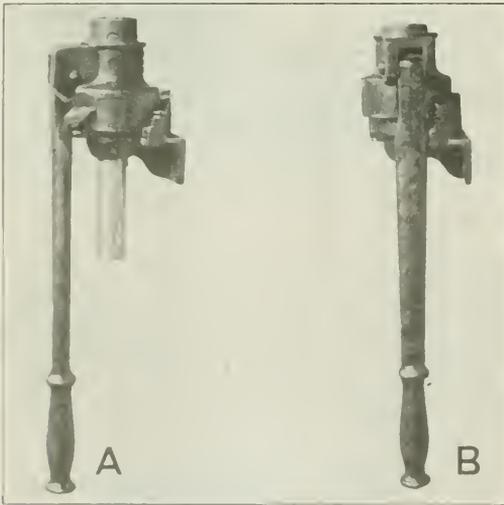

A.R.A. Type "D" Head With No. 10 Contour

both yoke loops regardless of the amount of coupler swing.

It is stated that the swivel butt coupler develops under test a strength of pivot connection 25 per cent greater than the strength of the plain shank coupler and with its use the effective strength of the key and yoke is greatly increased through the equalization of stresses. This coupler should also materially increase the effective life of friction draft gears through the elimination of any angular pressure tending to close the gear irregularly or to subject the friction elements to any transverse forces. This coupler is a self-contained unit which may be applied or removed in the same manner as any ordinary coupler and requires no change in the carry iron or key or any additional guides. A standard 6 in. by 8 in. shank type D coupler can be used for replacement if necessary.

Blackall Ratchet Hand Brake

A NEW RATCHET HAND brake, featured by a positive back-off arrangement, is being exhibited by Robert H. Blackall, Pittsburgh, Pa. The device is made of malleable iron with the exception of the lever, which is a drop forging. The back-off feature is obtained by a set of teeth in the upper part of the revolving ratchet

Ratchet Hand Brake with Positive Back-Off Arrangement

operating in conjunction with the teeth on the lower end of the cup which is attached to the shaft. These teeth, being opposite to the one used for applying the brake, the lever can be revolved in a direction to unwind the chain by simply lifting the revolving ratchet and moving the lever in the release direction of the shaft. In former types the teeth on the revolving ratchet operated on a round pin inserted through the shaft.

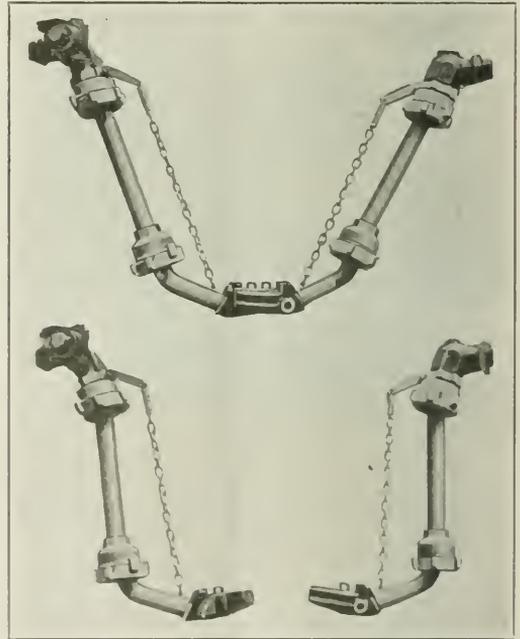

Another advantage of the Blackall brake is that the lever will always remain in the position shown unless held in some other position by the operator, since the dropping of the lever has nothing to do with the release of the ratchet. The release is accomplished by double sets of release lugs, one being on either side of the device to

prevent the possibility of the revolving ratchet cocking on the shaft.

Seven substantial teeth are provided on both the ratchet and attached shaft and a corresponding number on the revolving ratchet, or housing, thus tending to insure strength and long life for the device. The teeth are protected from sleet storms, obviating difficulties from this source. The Blackall ratchet hand brake is shown in application position at *A* in the illustration, the release position being shown at *B*.

Improvements In Passenger Car Steam Heat Connections

FOR A NUMBER of years all-metal steam heat connections for passenger cars made by the Barco Manufacturing Company, Chicago, have been in use on railroads. During this time they have been under observation and test which have demonstrated the advantages of this type of connection. Recently improvements have been

Barco Steam Heat Connections, Showing Method of Supporting Head in Uncoupled Position

made in the design which eliminates some of the troubles to which steam heat connections are subject.

In the latest construction these connections are provided with a combination lock and support. The lock prevents the connections from unscrewing from the end valve and is provided with an arm to which the holding device is attached. The holding device does not in any way interfere with the operation of the connections, or with other hose between cars, but supports the connection when uncoupled and prevents it from dropping down and striking obstructions along the track.

The advantage of this arrangement is readily apparent

as large numbers of hose connections are torn off due to the coupling head being caught in cross-over switches or striking the rails or crossing planks when not hung up in place by the train men.

The Barco steam heat connection can be used wherever pipe locations and end valves conform to A. R. A. standards. They are designed to work in conjunction with any standard steam heat coupling head or end valve. They can be coupled readily with other Barco connections or with the ordinary rubber steam hose on adjacent cars. Coupling is accomplished more readily than with hose and the connections will stand full boiler pressure, making them especially suitable for high-pressure service.

It is stated that the Barco connections will operate throughout the season without attention and with the replacement of gaskets from time to time will last as long as any other part of the heating equipment.

Brill Renitent Car Window Post

UNTIL RECENTLY IN constructing the window system of an electric or gasoline rail car built with steel upper framing, it was customary to attach to the T-posts wooden runways for sashes and curtains and also the wooden pilaster. This construction was early discovered to be not thoroughly efficient due to the fact that the wood has a tendency to swell when subjected to dampness and moisture. This inefficiency of the window system was far from being compatible with the entire practicability of steel car framing, the advantages of which over wooden construction never have been questioned. Thus the was a reasonable one. The result has been the Brill Reni-

without the use of tools is of considerable importance, as ordinarily removing a sash from its casing involves careful handling of tools by a mechanic and consequently a loss of some little time. The Brill Renitent post permits the sash to be taken from its casing by simply pulling it out. This means that the operation is one that can be performed by anyone and does not require the services of a mechanic. However, the sash cannot be removed from its casing as a result of the casual pressure exerted by a passenger in raising or lowering the window. Also, no wind pressure, no matter how great, can disturb the sash.

Another advantage of the Renitent post is that rattling is prevented by the elastic pressure which is exerted upon the sash stiles by the spring brass runways. This feature also guarantees the passenger against accidents to hands or arms that may be resting on the window sill and which might be injured by the sash dropping suddenly; should the catches become unfastened, the sash will drop gradually. Still another advantage due to this check on dropping is that the sashes cannot be racked or the glass broken by careless handling.

The spring brass casing gives a uniformity which does away with fitting sashes individually into their runways as must be done with sashes which are constructed to slide in wooden runways. Consequently the sashes are interchangeable from window to window and from car to car where the window specifications are the same.

Still another advantage, and by no means the least important, is that the post casing may be readily removed from the T-post, thus making the latter easily accessible should it be necessary to make inspections or to make repairs in case of collision. The Renitent post is made in a range of sizes covering every width of post.

Window Sash May Be Removed from the Renitent Post Casings without the Use of Tools

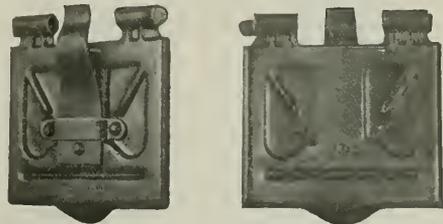

tent post, which has in its favor the advantages of making the sash water-tight, rattle-proof, interchangeable, safe against sudden dropping and of being easily removed from its runways without the use of tools.

The post, which gets its name from its feature of offering elastic resistance to pressure, consists of a casing of spring brass, attached to the T-post by clips fastened to the casing and fitting into stirrups riveted to the post. The feature of the post making the sash readily removable

Hoodless Lid for Journal Boxes

THE PRINCIPAL FEATURES of the Asco hoodless type, A. R. A. standard journal box lid, made by the Allegheny Steel Company, Brackenridge, Pa., are the side and bottom flanges, integral turn-down scrolls and chrome-vanadium alloy steel spring. This lid covers the box face clear across the top as well as at the sides and bottom. The Scroll is a part of the lid itself and locks the pin which holds the lid in place. The pin required for this lid has no head, slot or cotter, being simply a piece of 3/4-in. round bar, 7 1/2 in. long, which is held in place by the turn-down ends of the scroll.

The lid is equipped with a specially designed, extra-heavy chrome-vanadium steel spring which is removed

A Journal Box Lid with Several New Features

from all strain on the rivet hole by the use of a double-riveted strap, which also provides a bearing across the entire 2 1/2-in. width of the spring. The spring exerts sufficient pressure to prevent the lid from "dancing" on the box

face, elongating the pin hole and riding away at the top of the box. The lids are shipped with a strip between the spring and the body of the lid which holds the spring out sufficiently to permit the application of the lid without the use of a spring compressor and with no tool but a hand hammer. To apply the lid it is only necessary to lay it on the box face, insert the pin, turn down the scroll on one end of the lid, and release the piece under the spring, all of which can be done by one man in less than three minutes. The lid complete with spring weighs but 4½ s lb., and the pin 1 lb.

Two-Path Electric Heater

VARIOUS FORGING OPERATIONS demand the heating of material in some cases on the ends, and in other cases at points along the length of the material some distance from the ends, this heating to be accomplished without burning or melting the metal at any point.

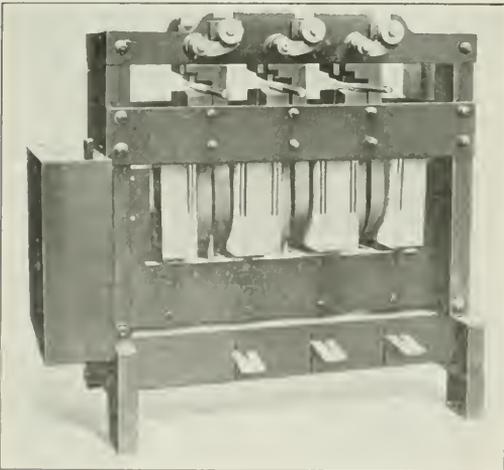

The Berwick two-path electric heater, illustrated, has been developed for the above purpose by the American Car & Foundry Company, New York. Two separate electrodes are provided, each properly insulated from the other. The right-hand electrode has at its two upper ends projecting blocks which overhang but are not allowed to touch the left-hand one. The left-hand electrode is sta-

face of the electrode being set on an incline so that when the top electrode is dropped into position, contact is assured at four points on the material.

This machine may be built in any number of electrodes up to five. To date single, double and triple electrode machines have been built, while machines carrying more electrodes are in the process of manufacture. As the heaters are now designed, stock can be heated from 1 in. to 8 in. long or from 3 in. to 11 in. With a slight change from the standard heater, this length could be increased to 16 in. or 18 in. For high production on the No. 3 type heater, the stock should be from ¾ in. to 7/8 in. in diameter. To get a high hourly production, in heating 7/8-in. and 1½-in. stock, it is advisable to use the No. 4 type heater. The time of heating is greatly reduced by the use of the two-path method and since the current has four points of entrance rather than two, there is no marring of the stock.

Tests on the Berwick No. 3 two-path heater have been made, the data shown in the accompanying tables being submitted as the results of these tests.

It will be noticed that in some instances the heaters were operated on 440 volts and in other cases on 220 volts. In figuring out the capacity of a heater, it is better to obtain the hourly capacity on a single electrode and then provide the heater with a sufficient number of electrodes to give the desired hourly heats. On these test figures the range of work is from 1/8 in. to 7 in. long.

Berwick No. 3 Two-Path Electric Heater

Bracket for Automatic Connector

THE AMERICAN AUTOMATIC CONNECTOR COMPANY, Cleveland, Ohio, has improved the method of suspending the American connector and is now using a U-type bracket with a two-point suspension instead of the former method of connecting to the drawbar by a one-point suspension. This makes a stronger installation and permits of a central location for the safety chain which supports the connecting head.

In order to apply this type of bracket two lugs with cord holes are cast on the standard A. R. A. coupler shank. It is stated that this change is made by the coupler manufacturers without additional cost to the purchaser. The lugs do not interfere with the operation of the coupler whether automatic connectors are used or not.

tionary, so far as vertical motion is concerned, but may be adjusted horizontally by means of two stud bolts on the rear of the heater.

The top, or right-hand electrode, is arranged so that it may be adjusted horizontally and at the same time be moved in a vertical direction. Horizontal motion is provided by sliding the electrode clamping device along the slot provided for the purpose, while vertical motion is imparted to the electrode by downward pressure of the pedal, thus causing rotation of the shaft, which in turn, through gears, raises the short-circuiting electrode. The material to be heated is inserted between the top and bottom electrodes, and due to the double-path the time of heating is reduced and the possibility of marring is not so great.

Flexibility of the rear portion of the bottom electrode is provided by a spring on the rear of the heater, the top

New Gold Car Heating Devices

AMONG THE NEW devices shown this year by the Gold Car Heating & Lighting Company, Brooklyn, N. Y., are a packless end valve, No. 1220, and an improved electric hermostatic control.

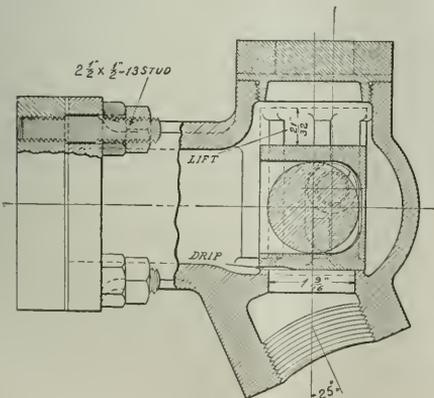

The No. 1220 packless end valve was designed for use in connection with a drawbar arrangement whereby all steam and air connections swing with the drawbar. The object of having the valves swing with the drawbar is to maintain the same hose connection centers on curves and cross-overs as are obtained when coupled on a straight track. This arrangement will also maintain the same height of steam heat hose couplers and clearances between the various couplers and hose at all times in train service.

This valve is made with a flange connection to facilitate its application and removal, four 1/2-in. studs being used to secure the valve to the train line pipe flange. The oper-

Outside View of End Valve

ation is similar to that of the Gold No. 1126 end valve and employs the well-known cam and piston principle which has been used for years. The packless feature, which eliminates all leaks around the stem, is one of its main features. An automatic drip for the relief of condensa-

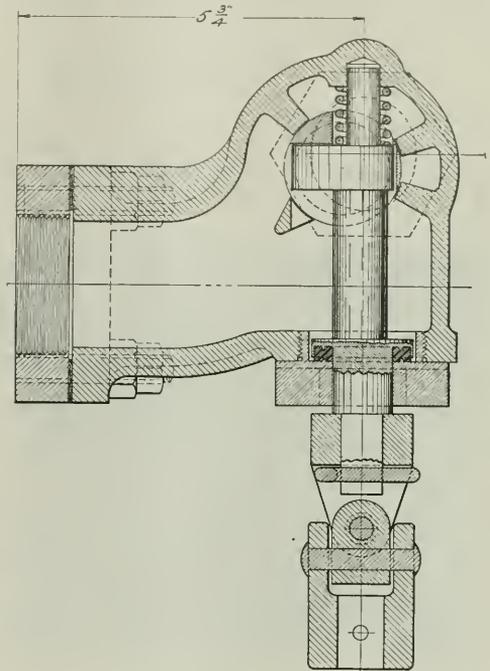

Vertical Section Showing Cam and Piston

tion at the rear end of the last car is provided as shown in the vertical cross-section. A universal joint with handle is furnished with each valve, so arranged that the vibration of the train will not open or close the valve in service. The valve was constructed with a view to low maintenance cost

and those now in service are said to have proven entirely satisfactory.

Several new types of thermostats have been added to the line manufactured by the Gold Car Heating & Lighting Company. In the new types for railway cars the electric

Horizontal Section Through End Valve

parts are entirely enclosed leaving only the temperature sensitive element outside, protected by a substantial perforated metal case. Several railway types are on exhibition to care for all classes of service and the preferences of the railway engineers. These consist of the following: "standardizing setting" 68 to 70 deg., no adjustment; "night and day" giving a 70 deg. setting at one position

Thermostat

Electro-Magnetic Valve

and 60 deg. at the other point; "service and layover" giving 70 deg. at service point and 52 deg. at layover point. These new types have been thoroughly tested and have demonstrated their practicability. The manufacturers state that they have found from tests and experience that

a standard setting thermostat with a range of 68 to 70 deg. will save approximately 35 per cent of the steam in service and from 50 to 75 per cent of the steam in the yards during the layover period. The complete equipment for a passenger coach consists of one thermostat and two magnetically operated valves as shown in the illustrations.

Mercury Tractor and Trailer

AMONG THE EXHIBITS of the Mercury Manufacturing Company, Chicago, is the type L tractor, embodying an improvement in industrial tractor construction by means of what is known as the Twin-3 steering arrangement, illustrated in Fig. 1. Instead of a single wheel carried in a fork with no provision for spring

Fig. 1—Mercury Type L Tractor with Twin-3 Steering Arrangement

suspension, this tractor has two front wheels connected by a short axle. The axle in turn is connected to a bracket by two semi-elliptic springs, the bracket supporting the front end of the tractor and being directly attached to the steering lever.

Fig. 2—Type A-132 Freight House Trailer

This trailer is good to possess the same simplicity in design and the same short turning radius as the single front wheel machine formerly made by the Mercury Com-

pany. In addition, the important advantage of full spring suspension both front and rear is provided.

The Mercury freight house trailer, type A-132, is by no means new but has been improved in many points since being first put on the market. For example, a plate type caster is now used, permitting a 10 in. caster wheel to run under a platform only 14 in. high. The face of the caster revolves on a ball race filled with $\frac{5}{8}$ in. ball bearings.

The trailer is equipped with a patented spring draft rigging which takes the strain of starting and stopping the load from the framework of the trailer. This draft spring rigging has been designed along the lines of the best automotive trailer construction. The coupling device is a flat stock forging, the arrangement being such that when not in use a single motion lifts it in an upright position and locks it there.

The end and side stake pockets are forgings of exceptional depth, imbedded and bolted in the sills in such a way as to give a firm foundation for the pipe racks and not loosen under heavy strain. This trailer is usually provided with Hyatt roller bearings and fitted for the Alente system of lubrication.

Flexway Woodworking Machine

AN INTERESTING MOTOR-DRIVEN portable machine, designed to perform many different woodworking operations, may be seen at the booth of the P. L. Billingsley Company, Cincinnati, Ohio. This machine is made in two sizes, No. 1 and No. 2, for relatively light and for heavy work. In general, the driving motor and oper-

Flexway Machine Equipped for Ripping with Rip Gage

ating parts are mounted on a small but sturdy four-wheel truck, which runs on a track the full length of the carpenter's bench. Work such as planing, dadoing, beveling, ripping and mortising can all be done with the same machine by simply attaching the required tool.

The mechanical connection between the tool and the motor is by means of a universal joint with the power transmitted by two belts. The weight of the parts is carefully counterbalanced by means of two adjustable weights clearly shown in the illustration. It is stated that the machine is both accurate and powerful, enabling it to machine fibrous and knotty lumber with ease. All tool changes are made easily and in an average length of time not exceeding a few seconds.

While the Flexway woodworking machine is ordinarily mounted on tracks it has been found convenient for certain types of work to place it on a wood table mounted on wheels which can be moved rapidly about the shop, at the same time keeping the machine at a convenient height from the floor. The Flexway machine is not limited to the use of tracks but can be worked directly on a lumber pile thereby saving the handling of heavy timbers.

A Sturdy Platform Trailer

A NEW PLATFORM TRAILER with a load-carrying capacity of 6,000 lb. and weighing 600 lb. (making it extremely light for its capacity) is being shown at the booth of the Elwell-Parker Electric Company, Cleveland, Ohio. This wheeled platform trailer, as it is called, is designed especially for interchangeable use with Elwell

Elwell-Parker Wheeled Platform Trailer

Parker electric elevating platform trucks and tractors. The construction, as indicated in the illustration, is extremely sturdy, the main top platform consisting of a pressed corrugated open hearth steel plate. Deep aprons on either side make a substantial support for the load and the heavy 4 in. longitudinal channels all tied into malleable corner castings provide a construction which is both light and strong.

Two long steel caster fork pillars carry graphite bushed bearings at the upper end. The ball swivel bearings and roller caster wheel bearings are retained in deep recesses in the malleable corner castings. Fixed wheels on roller bearings are carried in forged steel yokes, riveted to the top and side. All bearings are provided with pressure lubrication, the casters being 10 in. in diameter and the fixed wheels 15 in. in diameter. End or side standards with the coupler are provided.

When used as trailers the unit is furnished with hook or eye couplers, or with "y" or "x" chain couplers. When

desired, this trailer is equipped with four casters instead of two wheels and two casters. Wheels may be provided with 10 and 15-in. solid rubber tires of the pressed iron type if preferred.

When the wheeler platform is used with electric lift trucks, clearance is provided between the wheels in order that the lift truck platform may be driven beneath. When the truck lifts the load, the weight is supported on the truck platform by two longitudinal channels underneath the wheeled platform.

Master Pressure and Master Pilot Gages

A MONG THE NEW devices exhibited by the Ashton Valve Company, Boston, Mass., are master pressure and master pilot gages which are especially adapted for use in large power plants. The master pilot gage is intended to be connected direct to the main steam header and located where it can be readily seen at any part of the boiler room. To increase the size of the graduations, they are usually limited to from 15 lb. below to 15 lb. above the highest working pressure, so that the slightest variation can be readily observed. This is an important advantage in power plants equipped with batteries of boilers, as the standard size boiler pressure gages with smaller diameter dials and finer graduations are not easily read, do not show sensitive pressure fluctuations, and only indicate boiler pressure and not the more important pressure in the main header.

The master pilot gages are made either with dials on one or both sides. The illuminated dial style with semi-transparent opal glass dial and fittings for electric lamps in the case is more generally used, although plain silvered brass dials can be furnished if desired.

The master pressure gage is similar to the master pilot gage in style and diameter of dials, but has all graduations from zero to maximum pressure. This gage is for use in large power houses where it is desired to have dials with prominent graduation figures by which the boiler pressure may be readily read from a distance.

Improvements in Little Giant Motors

THE EXHIBIT of the Chicago Pneumatic Tool Company, New York, includes among other pneumatic tools a Little Giant drill motor with an improved toggle connecting the piston rod to the crank-pins. This toggle is designed for the minimum weight consistent with strength so as to prevent crystallization in the companion parts and enable it to stand up under the severe and continuous service required of these small high-speed motors. Constant lubrication direct to the crank-pin is also afforded by means of this new toggle. There are no rights or lefts, inside or outside, as heretofore, but each one is the same, designed for easy assembling or disassembling and reduced drill maintenance expense. The stock of these parts which must be carried for spares is also greatly lessened.

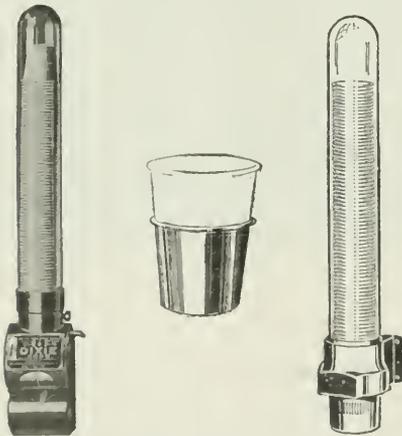

A patented breather tube has also been developed for these drill motors, said to cut the annual cost of lubrication to the extent of \$90.70 per drill. Heretofore these drills and all other similar tools have required lubrication twice daily, but with the breather tube the period is lengthened to one week. Several tests have been conducted in which drills were operated for 30 days with one lubrication, but lubrication once a week is recommended.

The Little Giant motors are of the four-cylinder, single-acting type, and a small amount of air escapes by the pis-

tons into the crank case where splash lubrication is provided. There must be a breather to receive this air and heretofore, with the use of a ball valve, the escaping air through the breather valve carried a small amount of lubricating oil with it. The new breather pipe throttles the lubricant and permits the air only to escape. These two improvements have also been incorporated in Little Giant grinders. The same style of toggle is used but the device that separates the lubricant from the air is operated by means of centrifugal force through a tunnel arrangement surrounding the vent tube which is driven at spindle speed.

Dixie Cup Vending Machine

THE EXHIBIT THIS year has a new model Dixie cup vending machine. The Individual Drinking Cup Company, Inc., the original makers of the paper cup, having in mind the usage to which these machines are put, have designed a vendor economically suitable for railroad work. This machine is the result of careful study of railroad needs, built to withstand the exacting use and at the same time attractively designed to harmonize with the finest interiors in either cars or stations. All parts are die

Dixie Cup Container and Vending Machine

cast. The machine is fitted with Yale locks, the cups being protected in a heavy flint glass tube. Over 150 railroads have been using Dixie cup vendors.

This company has also on exhibition this year cups for parlor and sleeping car use and also an attractive service for club and dining cars, both of which are distinct innovations.

Improved Metal Band Saw

SEVERAL CHANGES have recently been made in the Adams No. 3 metal band saw, made by L. C. Atkins & Co., Indianapolis, Ind., to produce a machine for fast, smooth, accurate and economical cutting. To increase the accuracy of the machine a new adjustable saw guide has been added. This insures an accurate cut in all sizes and quantities of metal up to the full capacity of the machine, when properly adjusted. Hyatt roller bearings are now used in the hubs of the two band wheels, thus doing away with wear in these parts and lengthening

the life of the machine. Other important features of the machine are the quick-acting vise, the gravity feed, the automatic stop, the hinged table and the automatic tension guide. The machine is intended for general shop use for all sizes and classes of metal up to 12 in. by 14 in. sections.

Silumite Paint

WHEN THE NUMBER of paint manufacturers is considered and when the large amount of literature and reports on protective coatings for iron and steel are recalled, it would seem as though the subject must have been nearly exhausted by this time. However, it would appear that the Silumite Products Corporation, Philadelphia, Pa., which is exhibiting at this convention for the first time, has something distinctly new to offer in its silumite paint. This is a non-corrosive and plastic compound which is particularly suited for painting steel freight cars, bridges and other structural work.

The possible value of the pigment used in this paint was suggested by the digging up of a bolt in a cut on an abandoned railroad. Although it had been buried for many years, there was no corrosion even on the threads. The deposit, found to consist of almost equal parts of silicon and aluminum oxides, has been named Silumite.

The pigments which form the base of all paints may be divided into two general groups. The first includes those chemically active in that they are attacked more or less by heat, acids, alkalis, water, various chemicals and the weather. In this group are included white and red leads, zinc oxides and ordinary dry colors. The second group includes those chemically inert. Among them are silica, barytes, asbestine and china clay, all of which have the disadvantage of being more or less transparent when ground in oil, and nothing fully equal to linseed oil has ever been found as vehicle or binder for paint.

Silumite belongs in the group of inerts and possesses the advantage of opaqueness and high-covering capacity. In the dry form it is a light grey, but when ground in oil becomes a dark grey, almost black. The paint dries with a hard surface but retains its elasticity indefinitely. As it is not affected by changes in temperature and as its expansion qualities are greater than the expansion of steel, it will adhere to steel cars without cracking and will not be loosened by jar or vibration. It also possesses the advantage of withstanding sulphuric acid, alkali and salt water conditions. It is ready mixed, spreads and covers well, and is equally suitable for application by brush or spraying machine.

Galena Air Brake Compound

THE GALENA-SIGNAL OIL COMPANY, New York, announces the marketing of a new product for the lubrication of air brake cylinders with which extensive laboratory and service tests have been made during the past year.

"Galena air brake compound" is of a rich reddish-brown color, of such consistency that it may be freely applied with a brush and is claimed to possess the highest melting point yet reached in this class of lubricant. It is free of acid and has no detrimental effect upon leathers. It will not separate and shows exceptional adhesive qualities in clinging to cylinder walls. Before placing the new product on the market the Galena Company first submitted it for trial and test to the leading manufacturers of air brake equipment, who found it equally efficient in the highest and lowest cylinder temperatures met in train operation.

Entered at the Post Office of New York, N. Y., as mail matter of the second class.

Subscriptions, including 52 regular weekly issues and special daily editions published from time to time in New York, or in places other than New York, payable in advance and postage free; United States, Mexico and Canada \$6.00. Foreign Countries (excepting daily editions), \$8.00. Foreign subscriptions may be paid through our London office in £ s. d. Single copies, 25 cents each.

WE GUARANTEE that of this issue, 12,000 copies were printed; that of these 12,000 copies, 10,300 were mailed to regular paid subscribers to the Railway Age and Railway Mechanical Engineer; 110 were mailed to advertisers; 490 were provided for counter and news companies sales, new subscriptions, bound volumes, samples, copies lost in the mail and office use; 1,100 copies for distribution at Atlantic City.

THE RAILWAY AGE is a member of the Associated Business Papers (A. B. P.) and of the Audit Bureau of Circulations (A. B. C.)

One of the railroad delegations attending at the Mechanical Division meetings has adopted the practice of discussing the reports to come up at each session in an informal meeting of its own some time before the session convenes. This offers a splendid opportunity for each representative of the road in attendance to take part in the discussion with a well-defined idea of the relation of the report to the interests of his own road. It also insures that each representative of the group will get the greatest possible benefit from the report itself and from the discussion of other members on the floor of the convention. The general adoption of this practice by other groups would give point to the formal discussion and lead to a more rapid crystallization of ideas on the floor with a saving of time of the sessions. Have you tried it?

The corrosion of steel cars has been an important matter ever since this type of equipment was introduced. At one

**Corrosion of
Steel
Cars**

time the Master Car Builders' Association had a committee on this subject. Numerous compounds for coating the interior of the car to prevent rusting were tried but were found to be worthless. Since attempts to protect the surface have failed the only recourse seems to be in the development of non-corrosive plates. The trials conducted by the American Society for Testing Materials show that there is a considerable difference in the rate of corrosion of various kinds of iron and steel. Some railroads are specifying the materials which showed up best in these tests for use on freight cars. Other roads feel that the only satisfactory tests are those made on cars in actual service. The reduction of corrosion in freight cars means so much to the railroads that the question should be settled conclusively and as promptly as possible. Is not this a subject which the Mechanical Division might well consider?

The essential difference between a schedule shop and a shop operating without a schedule is the difference between order and disorder. No one can compare the two shops to the disadvantage of the latter and yet shop schedules have not been installed as generally as seems desirable. It is difficult to understand why so many railroad men fail to appreciate and benefit by the advantages of this system. One general foreman said recently: "I don't need a shop schedule with a schedule supervisor telling me how to run things. I am on the job at six o'clock in the morning, two hours before the men arrive, and I know how everything is going by personal observation." Obviously, attention to details is not the function of the general foreman and besides it is absolutely impossible for one man to know all the details of the work as carried on in a large railroad shop. Production can never be brought to the desired point until some system is installed for co-ordinating the work of the different departments, making sure that material is received and repair work completed as needed. Men often, and in fact usually do, work harder in non-schedule shops than in those provided with a schedule system; also with less to show for their work. The trouble is that they are not all working for the same thing at the same time. In general, the object of the shop schedule is to co-ordinate the work of the different departments and eliminate lost time, thereby increasing shop production. Delays for material are largely prevented and the supervising officers are relieved of a mass of details, enabling them to give their attention to more important problems of personnel.

**Why
Have A
Shop Schedule?**

We suggested yesterday that the foreman or the subordinate officer who comes in direct contact with the men is the most vital link in a railroad organization. In other words, these men are key men. Is this fact always recognized when they are selected for these positions? How do you select them? What kind of men do you promote to these positions? To deal properly with the men the foremen should be thoroughly imbued with the spirit of the organization and fully informed as to its purposes, and as to why certain practices or methods are used or are to be used. Do you coach them along these lines? Are

**How Do You
Select
Foremen?**

Do you select them? What kind of men do you promote to these positions? To deal properly with the men the foremen should be thoroughly imbued with the spirit of the organization and fully informed as to its purposes, and as to why certain practices or methods are used or are to be used. Do you coach them along these lines? Are

they fitted intelligently and patiently to represent the organization in dealing with the men under them? Do you promote them because they are master workmen and that possibly in addition to this they are respected by their fellows, or do you look first for qualities of leadership—qualities which include self-control, a practical understanding of human nature, and a spirit of fairness. No matter how thoroughly a man understands the detail operations of his department, he is sure to fail in greater or less degree unless he is fully qualified to lead his men as well as direct them. You may say that such arguments are purely academic and that you know how to pick a boss, but do you? How many failures have you made in picking men and could not some of these failures have been overcome if you had not relied too much upon superficial observation or a hunch, but had taken steps to study and analyze each man critically before you decided to promote him?

The officers and committees of the Railway Supply Manufacturers' Association, and especially President J. F. Schureh and Chairman Charles W. Beaver, of the Exhibit Committee, deserve praise and congratulations for having got the exhibits so completely in place before the opening of the conventions. In addition, the attractiveness of the decorations merits mention. When the procession, headed by Chairman Tollerton, of the Mechanical Section, and Mr. Schureh, marched through to the meeting hall yesterday morning, almost everything on the pier was in its proper place and ready for inspection. The ballroom looked especially attractive. The A. R. A. is composed of Canadian as well as United States railways, and the Exhibit Committee had very appropriately had the Canadian flag draped with the Stars and Stripes around the ballroom. Those who have read the entertainment program have noticed that a new departure has also been made by arranging for Friday night to be "Canadian Night." The work done by the officers and committees of the Railway Supply Manufacturers' Association in making the arrangements for the convention, and the splendid exhibit made by the railway equipment and supply manufacturers immediately following a prolonged period of almost the worst business in their lines ever known, illustrate the ability, enterprise and courage with which the railway equipment and supply industry always is managed. No industry suffers more ups and downs; it is usually feast or famine with it. At the same time, no industry is managed with more uniform steadiness and progressiveness. Those in it have learned by long experience that the normal condition of the industry is either what seems abnormal depression or abnormal prosperity, and go along year by year pretty much as if they are always ready for either.

Chairman Tollerton's address yesterday morning brought out some interesting facts concerning railroad electrification. He showed that some of the European railroads have been paying at least five times as much for coal as have the roads in the United States. There is an abundance of potential and developed water power in Europe, and this, coupled with the high price of fuel, in a number of cases

has made electrification imperative. In this country the fuel saving possible by electrification is well worth consideration, but it is not as important a factor as that of dealing with conditions of heavy traffic and congestion. Mr. Tollerton also spoke of criticism which has appeared in publications of wide circulation to the effect that our railroads are not progressing as rapidly in the use of electricity for traction as are European railroads. In spite of indications to the contrary, American electric locomotive design is ahead of all countries in many respects because of difficulties encountered and overcome in designing locomotives which will transmit large power from the motors to the driving wheels. The design of machines utilizing small amounts of power is one thing, but when that amount of power is increased to unprecedented proportions, the problem takes on a very different aspect. No European equipment as now developed would be adequate to handle trains on the Norfolk & Western or on the Chicago, Milwaukee & St. Paul. Added to this, it should be said that both the split-phase alternating current and the 3,000-volt direct-current systems, together with the machinery that has made them possible, were developed in the United States. These two systems are probably the only ones which can meet all the electrification requirements of American railroads. The requirements of this country demand a different development, but we are in no sense behind.

In commenting on American railroad equipment a British engineer recently paid a tribute to the railroads of this country for the careful and thorough research which he stated had been an important factor in establishing American equipment as representing the highest development of engineering skill applied to rolling stock. The value of work such as has been done at Perdue and at Altoona is recognized the world over and it has unquestionably been instrumental in raising the standard of efficiency to the point which it has now reached. In the past research has usually been conducted by individual roads and because of the large expenditure involved the work has lagged when business conditions were unfavorable. In recent years comparatively little of this work has been done and at present there are many important innovations waiting to be tested. Some of these are radically different from prevailing types, but seem very promising. In the interest of economy they should be tried out as promptly as possible to determine whether they possess any merits. Probably no road is at present in position to test such radical innovations as, for example, turbine driven or Diesel engine locomotives, although to the railroads collectively such equipment might mean a saving of tens of millions of dollars. The logical method for handling such investigations would seem to be a co-operative research bureau as mentioned by Chairman Tollerton in his opening address. By this arrangement the expense could be fairly distributed among the roads, so that the cost to each road would be comparatively small and duplication of work could be avoided. As suggested by Mr. Tollerton, any central research bureau should not be carried to the point where it would destroy initiative on individual roads. Perhaps the method should be confined to more extended investigations, but this is a question that should be easily settled. The important thing is to develop an organization that can carry on much of the constructive research

Different Progress, Not Less

potential and developed water power in Europe, and this, coupled with the high price of fuel, in a number of cases

Co-operative Research Needed

which the individual roads are not in a position at the present time to undertake.

In carrying on a manufacturing enterprise, no matter how good the product may be and no matter how well it may meet the needs of the purchasing public for which it is designed, successful operations for any extended time will be impossible unless all the activities of both the manufacturing and the sales departments are based on an accurate knowledge of all items of expense from the purchase of the raw materials to the shipment of the finished product.

The absolute necessity of an accurate, detailed knowledge of costs has brought out in recent years highly developed cost accounting systems suitable for all kinds of manufacturing enterprises. In a period which is now only a memory, it was possible for many concerns to get along without such a detailed knowledge of costs and yet make substantial profits. Such examples are now few and far between. Many of those who neglected to install a proper cost accounting system, or who afterwards failed to govern their activities by the knowledge thereby obtained either went through the hands of a receiver or were driven out of business. These cases served as effective warnings and caused others to see the handwriting on the wall. In the operation of railroad locomotive and car shops, mechanical officers have not been forced to compete with other shops and they have not had the same incentive as manufacturing concerns to investigate their operating costs. Moreover, the reports which are called for by the government do not disclose the necessary factors. As a consequence, the mechanical officer usually knows very little about the complete detailed costs of doing work in his shops and commonly overlooks a number of elements which enter into overhead. In other words, his training has not caused him to think continuously in terms of cost. There is, fortunately, a growing interest in the subject—small as yet, but still a start. In this matter railroad men might often learn a valuable lesson from supply and other manufacturing concerns which would enable them to inaugurate many changes which would make it possible to decide intelligently whether it was to their advantage to make or to purchase certain articles and how to operate their plans with considerably greater efficiency than is now being done.

Observing the satisfactory operating results obtained from the use of light gasoline rail motor cars, a number of railroad men have publicly expressed the opinion that a car which would seat from 50 to 70 people should be built to meet the requirements of certain sections of their lines. This opinion is unquestionably well founded and there is no doubt of the fact that such a car would have a wide field of usefulness provided it could be operated at a decidedly lower cost than a small steam operated train. Unfortunately the problem involved in the design of such a car is radically different from that of the smaller car and a number of new factors are introduced. Low operating costs of the small car have been predicated upon extremely light weight and the utilization of engines perfected for use in road vehicles. An increase in the length of the car body beyond that of the small car adds much more in weight than in seating capacity. The same dead-weight

**The Call for
Large Motor
Passenger Cars**

of car per passenger cannot be obtained in a car seating some 60 persons that is now possible in one seating only 35 persons. Then, to drive a larger and heavier car at the necessary speeds would require a larger engine than has yet been used by any truck builder. To be sure gasoline engines of sufficient power have been built for aeroplanes but these are of high first cost and although of light weight, are short lived. These characteristics were of secondary importance for aeroplane service but are prohibitive when applied to passenger car propulsion. A satisfactory gasoline engine of larger size could probably be developed by the engine builders but this would take time and they are apparently loath to tackle the problem until assured that there will be an extended sale for such engines if designed. The fact remains that at present no suitable engine is available. For such larger cars a gasoline-electric drive may be better adapted than a gasoline-mechanical one. In studying the problem of the larger unit motor car, or one capable of hauling a small trailer, other types of motive power, such as Diesel engines, must be considered and even the high-pressure steam engine should not be overlooked. The problem might well be taken under consideration by a special committee of the Mechanical Division of the American Railway Association.

operating expenses become necessary. To a certain extent it is inevitable that the maintenance departments bear more than their proportion of such retrenchments, because maintenance work can be deferred without immediately destroying the effectiveness of the transportation machine. But the very defenselessness of the department against the principle has led to its too extensive application, with results clearly set forth by Mr. Tollerton in his address yesterday morning, when he said that "invariably operating expenses of a railroad are effected in inverse ratio of the ratio of maintenance of equipment expenditures. * * * Injudicious savings in maintenance result in actual loss through the increase in transportation costs and heavier later costs for deferred maintenance." There is a most intimate and inextricable relationship between the expenses controlled by the mechanical and the operating departments. The relation between these accounts in the aggregate is well known, but few railroads have developed satisfactory systems of analysis to determine their relative effect on unit costs of train service. Unrelated studies of this kind have been made in a number of cases, the best example of which is probably the statistical work of the fuel departments, where these departments are well organized. Operating officers also give close attention to analyzing crew wage costs. In neither case, however, has much attention been given to the maintenance accounts beyond a check on their aggregate amount. They are as worthy of analysis on a unit cost basis as are any of the other operating expenses, and any system of control of the cost of train operation which does not take into account this important element is likely to be misleading. If the analysis of individual accounts has proved to be of value, is it not reasonable to expect an equally good return by expanding such work to cover all expenses in a co-ordinated statistical department? Its work would make a quantitative knowledge of the relationship between all factors of train operating cost available to the officers of all departments.

There is a pronounced tendency to make the mechanical department the goat whenever heavy retrenchments in

Program For Today

DIVISION V.—MECHANICAL, American Railway Association, is holding its meetings in the Greek Temple on the Million Dollar Pier. The program for today follows:

Thursday, June 15, 1922
9.30 a. m. to 12.30 p. m.

Discussion of Reports on:

Prices for Labor and Material.
Arbitration.
Tank Cars.
Loading Rules.
Train Lighting and Equipment.

ENTERTAINMENT

10.30 a. m.—Orchestral Concert, Entrance Hall, Million Dollar Pier.
3.30 p. m.—Orchestral Concert with Impromptu Dancing, Entrance Hall, Million Dollar Pier.
4.30 p. m.—Tea will be served in Entrance Hall.
9.30 p. m.—Grand Ball, Ball Room, Million Dollar Pier.

The Entertainment Yesterday

YESTERDAY'S ENTERTAINMENT features consisted of a morning concert on the pier by the Albert Taylor orchestra of New York, an afternoon concert including informal dancing and the serving of tea at 4:30 o'clock, followed in the evening by dancing in the ball-room and a pleasing program of musical selections.

The program of the evening was in charge of Subcommittee Charles L. Brown, of the Entertainment Committee, and his fellow workers, J. Cizek, C. W. Floyd Coffin, W. G. Cook, D. L. Eubank, J. W. Fogg, Oscar C. Hayward, Webb G. Krauser, W. A. McWhorter, N. C. Naylor and S. Worcester Sargent.

Fifteen-Cell Batteries for Car Lighting

PHILADELPHIA, Pa.

To the Editor:

The editorial entitled "The Wrong Man Again" which appears in the June issue of the *Railway Electrical Engineer*, while expressing well founded criticism of the lack of co-operation or even actual antagonism which occasionally exists between the mechanical and electrical departments of some railroads, presents the particular case used as a text in such an incomplete form as to be very misleading in regard to the results obtained with 15-cell car lighting batteries.

In the illustration used in this editorial, reference is made to the unsatisfactory results obtained by omitting one cell from the usual 16-cell car lighting battery. It might be inferred that this was the only change that was made and that in all other respects the equipment was identical and included lamp regulators in both cases; but this fact is not specifically brought out, and the casual reader might with the impression that a 15-cell car lighting battery calls for special low voltage lamps. This, of course, is absolutely contrary to the facts, as there are many axle lighting equipments in service on some of the Great trunk line railroads using 15 cells of battery where the same standard lamps are used as with all other equipments on the system, and the illumination obtained has elicited especially favorable comments from the traveling public. These results have been due to the use of the constant voltage system and the omission of the lamp regulator

To quote the words of the editorial above referred to, "Any electrical man knows" that the minimum drop of voltage in an ordinary lamp regulator in average operating condition will more than offset the voltage of one cell of battery, so that with an equipment which eliminates the lamp regulator, 15 cells of battery will give at least as good, and in most cases, better illumination than that obtained from an equipment requiring a lamp regulator with 16 cells of battery. The usual form of lamp regulator, consisting of a pile of carbon disks under more or less compression, is permanently connected between the battery and the lamps and introduces a loss of voltage which is always deducted from the battery voltage applied to the lamps. Equipments which do not require a lamp regulator eliminate this loss and permit the omission of one cell of battery.

J. LESTER WOODBRIDGE,
CHIEF ENGINEER, THE ELECTRIC STORAGE BATTERY COMPANY.

[The writer of the editorial in an effort to show the need of good electrical men in railroad service, chose an example with which he was familiar to illustrate the point in question. The railroad which made the effort to operate with 15 cells of lead battery was using an equipment with a lamp regulator in which there was a minimum drop of about two volts. This fact was not mentioned and it was assumed that the electrical reader would understand that the effort was made to use 15 cells with equipment designed for 16 cells. It is true that some manufacturers of car lighting apparatus maintain that 16 cells are desirable under all circumstances and it is also true that others build equipment designed to operate with 15 cells and get results which to the users, the maintainers and the traveling public are highly satisfactory.—Editor].

C. I. C. I. & C. F. Association Meeting

WM. P. ELLIOTT, secretary of the Chief Interchange Car Inspectors & Car Foremen's Association, announces that a meeting of the executive committee will be held at the Park Street Hall, which is on the ground floor of the Marlborough-Blenheim Hotel, on Thursday afternoon at 3 P. M. All members of the association are invited to attend.

Please Wear Your Badge, Always

WE HAVE all been cautioned about wearing our badges at all times, particularly when on the pier. Please be careful about this, for you will greatly aid the executive committee in its labors to protect the welfare of the members. And when you visit the pier, chiefly on the nights when important functions are scheduled, wear badges where they can easily be seen.

Exhibit Notes

THE TORCHWELD EQUIPMENT COMPANY, Chicago, has transferred its exhibit from Space E on the porch to Space No. 11 in the main exhibition hall.

The Laughlin-Barney Machinery Company of Pittsburgh was listed in Wednesday's *Daily* as being located in Space 705. This company has moved to Space 131.

A typographical error was made in the *Daily* for Wednesday with regard to the Fibreboard Company, Boston, Mass. This company is located in Space 42.

The Production Machine Company's address was incorrectly stated in Wednesday's *Daily* under the list of exhibitors. The general office of this company is located in Greenfield, Mass.

Vice-Chairman J. Coleman

Chairman W. J. Tollerton

Secretary V. R. Hawthorne

American Railway Association—Division V—Mechanical

Chairman Tollerton's Address and Report on Scheduling Feature Opening Session

AFTER AN ABSENCE of two years the members of the American Railway Association—Division V—Mechanical met again Wednesday, June 14, 1922, in their Third Annual Convention in the Greek Temple at Young's Pier, Atlantic City, N. J. The meeting was called to order at 9:45 by W. J. Tollerton, general mechanical superintendent of the Chicago, Rock Island & Pacific, and chairman of the division. Chairman Tollerton invited members of the United States Railroad Labor Board, who were present, to come forward during the opening exercises. Doctor Newton W. Cadwell, pastor of the Olivet Presbyterian Church, then opened the convention by invoking the Devine blessing. The address of welcome was delivered by Edwin F. Bader, mayor of Atlantic City.

Mayor Bader's Address

Mayor Bader said in part: This is a proud moment for me today. I made my maiden welcoming speech in this hall two years ago. While I have not improved in speechmaking, I have always a feeling of good fellowship for all the boys here, the majority of whom I know. I want to say, that of all the conventions coming to Atlantic City, this is the biggest and best. As mayor of

this town, representing its citizens, I would like to sit in the conference that you hold when planning for another convention. Before deciding on any other city, I would like to know it. Give me a chance. I can't talk before a large public gathering, but I can say a few things around the round table. Our idea is to give you a good time while here, and I know you have it.

So there will be no trouble around, I have assigned to your organizations—it was a pleasure for me—at least ten special detectives, not to watch over you, but to look after you.

I am going to give the chairman the key. He can go wherever he likes. So can everyone else, but I will hold the ten detectives responsible for your actions while here. Of course you can have all the privileges. Everything is free—if you can find it. If any of our people do not do the right thing by the members of your association I hope you will let me know. With an organization of this kind we don't want any of you to go away and say you were not treated right.

On behalf of the members of the American Railway Association, chairman Tollerton expressed thanks and appreciation for the consideration and welcome always accorded the Association, when coming to Atlantic City.

Chairman W. J. Tollerton's Address

The present day and the near future should go down in history as a period of especial progress in the development of devices and design of equipment to bring about the greatest efficiency in railroad transportation service combined with the utmost economy in maintenance and operation.

Passing without comment the generally bad business conditions of the past year or two, the railroads are confronted with a field of competition in the form of automobiles and auto trucks, which is having a serious effect on local traffic, both passenger and freight. In so far as auto trucks are concerned they are in position to operate at a very low cost, practically on a government subsidy, having no other expense than a small tax for investment in or maintenance of roadway, terminal and other station requirements, so they can establish rates and short time deliveries which make the most keen competition. The railroads, in fact, are frequently placed in the peculiar position of paying a heavy portion of both the investment and maintenance of these highways. Concrete roads are constructed by districts or counties, sometimes under state legislation, whereby the territories lying adjacent thereto are designated as "benefit districts," upon which special improvement taxes are levied. When these roads parallel the railroad tracks, as they commonly do, the railroad is expected to pay this improvement tax and its share of the taxes to keep up the highway, notwithstanding the fact that instead of being benefited it is seriously injured by the competition which takes away local passenger and freight business.

The traffic through the Panama Canal in possible competition with the railroads of the United States has been increasing greatly, and in a nine months' period of 1921 compared with the same period of the previous year increased about thirty per cent, representing a probable loss in tonnage to the transcontinental railroads running well into the billions of net ton miles. With these conditions confronting us, the need for the greatest economy combined with increased efficiency in the handling of traffic will be readily realized.

Railway Prospects Brighter

Here I wish to touch on what I consider one of the most important problems before us, that of harmony and co-operation. Closer association between the executives, local or subordinate supervisory officers and the employes is steadily becoming more freely established, and its fulfillment will undoubtedly have far-reaching effects. This is being accomplished, first, by right general interest, to wit, deeper interest in the welfare of the employes and, second, the most rational selection and education of supervisory officers to carry out an efficient shop system. I have abounding faith in the capability of the officers of the American railroad organizations, and also in the rank and file of employes, to solve these problems to the entire satisfaction of themselves and our real employer, the American public.

We have had many serious obstacles to overcome in the past and there is gratification in the knowledge that some of the troubles, which were felt at the time to be practically insurmount-

able, have been overcome and in a general way have started a healthful reaction for the ultimate benefit of the railroads.

We have been through the war period, the reconstruction period, and at the present time a governmental regulation period, which appeals to me as one which is based on an earnest endeavor of our statesmen to rise above the persecutions that characterized some of the earlier policies of regulation, particularly in individual states. With the increased facilities for education through the school systems of this country and the ever extending publication of newspapers and magazines, public opinion is becoming more powerful and effective every year. There is no question but that the general public has been brought to a sharp realization of the fact that in the interference with efficient operation of the transportation systems the public itself is the real sufferer.

The record which has been made within the last two years in reducing the operating expenses of the railways in spite of the many unfavorable conditions should cause pride and gratification to railway officers. In the first three months of the year 1917 the average operating expenses of the railways of the United States were about \$7,250,000 per day. There was a great increase during the next three years, and in the first three months of 1920, during two months of which the railways were under government control, the average expenses were \$13,772,000 a day. There was a further increase later in the year 1920, owing to large advances in wages and other causes, and in the first three months of 1921 the average expenses per day were \$13,633,000. Throughout last year most drastic economies were made, and it is interesting to find that in the first three months of 1922 the average operating expenses per day had been reduced to \$11,366,000, which was \$2,267,000 a day less than in the same period of 1921, and about \$2,406,000 a day less than in the first three months of 1920. When it is considered that the freight traffic handled in the early part of 1922 was somewhat larger than in 1921, the significance of these figures becomes apparent. They show the extent to which the pre-war efficiency of operation is being restored.

In our particular field, the maintenance of equipment, there has been a constant endeavor to effect economies by the adoption and application of admitted improvements to the limit of available funds. The present abnormal conditions should not be permitted to interfere with this policy.

Co-operative Research Suggested

The suggestion has been offered, and is worthy of very earnest consideration of the proper committees, that some arrangement be promulgated by the American Railway Association for co-operative tests of railway appliances. This would involve the advisability of establishing some central system for joint investigation, so that tests which would require heavy expenditures could be carried on at the expense of the association and would make available to all railroads, at a minimum expense, information and data as to devices which promise economy in maintenance and operation. Procedure of this kind would be of great benefit, but care should be exercised to see that it would not have the effect of destroying initiative on the part of individual roads who are

in position to originate or advance the development of economical designs and appliances.

Reduction of Expenses Not Always Economy

When we speak of economies we should be very careful not to apply or think of this term as merely a reduction in expenses, if they are of such a nature that the ultimate expenditures may suffer an increase in consequence thereof. My observation has been that, invariably, operating expenses of a railroad are affected adversely by the ratio of maintenance of equipment expenditures. Sufficient expenditures for proper maintenance of equipment make economical transportation costs. Injudicious savings in maintenance result in actual loss through the increase in transportation costs and the heavier later costs for deferred maintenance.

It is readily to be understood that, unless equipment is properly maintained, locomotives kept in condition to give maximum hauling capacity with minimum fuel consumption, and freight cars in condition to give a maximum period of service with the lowest consistent time held on repair tracks, we cannot hope for economical operation on the part of the transportation department.

Study and Develop Fuel Saving Devices

Locomotive fuel, representing nearly 35 per cent of the cost of train operation, is in itself a question of major importance in the entire transportation problem and, due to its volume in proportion to the total expense, is naturally an item of greatest

an accumulation of defective conditions to be repaired at a needlessly heavy expense when returned to the owners.

Owing to the great number of freight cars on foreign lines during the past few years, under-maintenance of cars, heavy trains and the considerable number of old types of cars without reinforcements still in service, the Arbitration Committee has had to consider and decide a large number of important cases during the past year. This committee is asking relief from the numerous trivial questions and is recommending that in the future all questions submitted to the committee be jointly submitted, as arbitration cases in accordance with the provisions of Interchange Rule 123. This committee is also recommending restoring to the Rules of Interchange rules governing the responsibility for damage to foreign cars based on combination of defects denoting unfair usage, in addition to the present rules governing unfair usage based on cause.

The Committee on Locomotive Headlights and Classification Lamps is recommending important additions to the standardization of these devices.

The Committee on Specifications and Tests for Materials is recommending for your approval as recommended practice, an entire revision of the present specifications covering paints and paint material.

The Committee on Loading Rules is recommending some detail revision of these rules, which is the result of conferences held throughout the year with shippers of the various materials represented.

C. E. Chambers

Members General Committee, Division V—Mechanical—A. R. A.

opportunity for effecting economies. Having this in mind, I would commend for your special consideration that fuel saving devices should have most careful study and development.

What the Committees Are Doing

We will have a report from the Committee on Car Construction, which will no doubt accentuate interest in car repair work and design. Observation and study of the bad order cars on repair tracks will indicate those parts which are most frequently failing and in need of repairs. In many instances these failures can be overcome by application of improved designs; in others, metal instead of wooden construction will eliminate failures which result in keeping freight car equipment on repair tracks, to say nothing of the excessive delay to trains en route, which is very expensive in transportation costs.

This committee offers for your approval this year a design of special rolled section center sill. As in a great measure the final presentation of acceptable plans for standard cars depends on settling the matter of underframe design, an affirmative letter ballot vote on this proposition is recommended.

Another very important consideration is that of giving more attention on each railroad to the proper maintenance of freight cars of other railroads. Neglect of minor repairs required on foreign cars invariably leads to more extensive damage, and this is probably one of the greatest causes of deteriorated freight car equipment. Your Committee on Prices for Labor and Material has given consideration to this in endeavoring to arrive at just and fair rates of compensation for repairs to freight cars to induce an interest in repairing foreign cars. It is certain that means must be determined upon so that freight cars will receive necessary attention when off the home lines, thereby preventing

The Committee on Scheduling of Equipment Through Repair Shops in its report is presenting recommendations and information which should be given careful thought and consideration by the members, in view of the economies which might be effected.

The railroads should individually supplement the work of our Committee on Shop and Terminal facilities, Structures and Machinery, with earnest thought to inaugurating and extending the best shop practices and availing themselves of labor saving equipment to obtain the greatest returns for maintenance of equipment expenditures.

With proper regard for local conditions, consistent improvements should be vigorously advocated. Installation of power plant machinery and boilers of proved merit, electrification of shops, using individual motor drives on large machines and group drives on smaller ones, portable motor driven machines to avoid unnecessary loss of time of mechanics traveling back and forth between erecting floors and machine shop, and use of power driven truck transportation for handling material around shops and between storehouses and shops, are all productive of economical and efficient results far more than offsetting the original costs and should not be overlooked in your deliberations.

The Standard and Recommended Practices of the division have not been published in complete form since 1918. The several committees of the division under the general supervision of the Committee on Manual have codified and published the complete Standard and Recommended Practice of the former Master Car Builders' and American Railway Master Mechanics' Associations as harmonized and brought up-to-date, including practices since adopted by the Mechanical Division, American Railway Association. These standards and recommended practices are contained in one loose leaf binder in very convenient form and are

now available to the members for reference. The committees participating in this work deserve commendation for the splendid way in which this Manual is arranged.

I have just returned from Rome, after having the honor of serving as a representative of the American Railway Association at the International Railway Congress. The trip was very interesting. Many papers were discussed and conclusions reached which have been published very fully in the *Railway Age*. Fourteen languages were spoken at the Congress, although officially all discussions were in English, French and Italian. The attendance was very large and the Italian railway officials were very courteous and obliging, doing everything they could to make our stay in Rome as pleasant as possible.

From a railway standpoint little may be said, but I would like to suggest to anyone desiring to criticize the American railroads, their equipment and methods of handling the public, that they first journey on some of the railroads of continental Europe. Intended criticisms of American railroads would, I am sure, be changed to words of highest commendation.

Why European Railroads Are Electrifying

In this connection a word might be said on the subject of electrification. The Swiss and Italian railways, and to a lesser extent the French railways, are engaged in making and carrying out plans for the electrification of certain of their lines. Some criticism has appeared in publications of wide circulation to the effect that our railways are not progressing as rapidly in the use of electricity for traction as these European railways. The visitor to Europe is especially impressed by the difference between some important conditions in some of the countries of Europe and in the United States. The Italian railways have been paying upward of \$25.00 a ton, measured in American money, for coal. The average price paid by the Paris-Lyons-Mediterranean of France in 1920 was 266 francs, or at the present rate of exchange, about \$26.00. Even in 1921 its coal cost it, at the present rate of exchange, about \$18.00 a ton. The cost of coal to the Swiss railways is also extremely high. The average cost of coal to the railways of the United States in February, 1922, including freight charges for its transportation, was only \$3.56 a ton. You will see, therefore, that, at the minimum estimate, coal costs the railways of Southern Europe on the average five times as much as it does those of the United States. On the other hand, these countries, especially Switzerland and Italy, have large supplies of natural water power, while in many parts of the United States such power is not available. It follows that the savings in fuel cost to be made by electrification in some of these countries of continental Europe is much larger than in this country, and we should not allow this important fact to be overlooked in discussions of the subject.

This is the last meeting at which I am to have the honor of

presiding as Chairman of the Mechanical Division, and I wish to express my deep appreciation of the splendid support you have given me at all times. I must particularly express my appreciation of the assistance of the General Committee. I know that this organization has before it a very bright and productive future and that you will extend to my successor the same hearty cooperation you have given me.

Association Business

The minutes of the 1920 annual meeting were approved and Chairman Tollerton announced the selection of committees as follows: Committee on Subjects, John Purcell, chairman; R. L. Kleine, Willard Kells, C. E. Fuller, and C. F. Giles. Committee on Resolutions, C. E. Chambers, chairman; F. W. Brazier and H. T. Bentley.

Tribute to A. W. Gibbs

C. E. CHAMBERS: Owing to the recent loss of A. W. Gibbs, chief mechanical engineer of the Pennsylvania System, one of our very important members, a man who gave this Association a great deal of valuable service for a long period of years, and who was also chairman of the Tank Car Committee for a great number of years, I wish to offer this resolution: (A memorial resolution giving a brief sketch of Mr. Gibbs' life was here presented.)

J. SNOWDEN BELL: It would be, it seems to me, unnecessary to say a word with regard to the mechanical ability or the personal character of Mr. Gibbs, and I only want to pay one word of personal tribute to his character. I never had the pleasure of meeting a more amiable gentleman and a kindlier gentleman to others than Mr. Gibbs. Once I heard this remark made about him, which I think is as fine a remark as could be made about anyone. A man said, after meeting Mr. Gibbs, "He is the kind of man who is always going out of his way to help somebody."

THE CHAIRMAN: Are there any further remarks in regard to this resolution on the death of our esteemed member, Mr. Gibbs? If not, I would like to suggest to the members that the resolution be adopted, standing, and that the members remain with bowed heads for one minute, as a testimonial of respect to Mr. Gibbs.

(The members then stood for one minute and the resolution was thereby adopted.)

Report of General Committee

SINCE THE LAST annual meeting, the General Committee has held meetings on the following dates: July 21, 1920; October 20, 1921; March 30, 31, 1921; October 26, 27, 1921; March 14, 1922 and June 13, 1922.

The membership of the Division at the present time includes 206 railroads, representing 379 memberships in the American Railway Association, and in addition thereto, 100 railroads, associate members of the American Railway Association. These railroads have appointed 788 representatives in the Mechanical Division. In addition there are 1,529 affiliated members and 126 life members in the Division.

The last session of the Division was held June 9-16, 1920. Since that time the General Committee has taken action on several important subjects. This action is outlined in the following report and your approval is respectfully requested.

ANNUAL MEETINGS, 1921

A SUMMARY of annual conditions prevailing, meeting of the Division was not held in 1921. The report of the committees for 1921 upon which action was taken by your committee will be included in the printed proceedings for this year.

LETTER BALLOTS, 1920

Recommendations from Committees received at the 1920 annual meeting and ordered submitted to letter ballot of the members were sent to the members in separate circulars containing the recommendations from each Committee and result announced by circulars to the members.

LETTER BALLOTS, 1921

Recommendations from the following Committees were received in 1921 and submitted to letter ballot of the members: Specifications and Tests for Materials; Car Construction; Brake Shoe and Brake Beam Equipment; Tram Brake and Signal Equipment; Tank Cars and Loading Rules.

The letter ballot circular containing the recommendations from these committees was sent to the members under date of August 20, 1921, as Circular No. DV-215. The result of this letter ballot was announced to the members in Circular No. DV-225, issued January 25, 1922.

MANUAL

The Standard and Recommended Practice of the Division has been brought up to date and compiled under the direction of the

Committee on Manual. The Manual contains the standards and recommended practices adopted by the former Master Car Builders' and American Railway Master Mechanics' Association, harmonized and brought up to date, and the standards and recommended practices since adopted by the Mechanical Division, American Railway Association.

INTERCHANGE RULES

The recommendations of the Arbitration Committee and the Committees on Prices for Labor and Materials and Depreciation for Freight Cars, approved at the 1920 annual meeting, were incorporated in a revision of the Rules of Interchange for 1920. The recommendations from the Arbitration Committee and the Committee on Prices for Labor and Materials contained in the reports of these committees for 1921 were considered by your committee and approved, with the exception of recommendations for changes in Rules 32, 43 and 70, which involved changes in well established principles, and incorporated in a revision of the Rules of Interchange for 1921. In addition, as necessity arose, your committee has approved revisions of detail rules which have been issued as supplements to the Rules of Interchange.

LOADING RULES

The recommendations from the Committee on Loading Rules considered at the annual meeting for 1920 and approved by letter ballot of the members, were incorporated in a revision of the Loading Rules for 1920. The recommendations from the Committee on Loading Rules for 1921 were considered by your committee and submitted to letter ballot of the members. Those changes which were approved by letter ballot were issued to the members as a supplement to the Loading Rules for 1920.

MAXIMUM LOAD MARKINGS ON FREIGHT CARS

The letter ballot ordered taken on this subject in 1919, as result of report from the Committee on Car Trucks, resulted in this proposition being approved by more than the required two-thirds majority. Conferences have been held with representatives of the Traffic and Transportation Divisions to arrange for the necessary adjustment in tariffs. This subject has been considered also by your committee at practically every meeting, but due to difficulties that have been encountered the committee is not prepared at this time to make any definite recommendations as to further action. This decision was covered in Circular S, III-191, issued February 15, 1921.

CHANGE IN NAME OF SECTION III—MECHANICAL

As a result of revised Articles of Organization and By-Laws of the American Railway Association adopted in 1920, and the following resolution adopted at your 1920 annual meeting, the name of your organization has been changed from Section III—Mechanical to Division V—Mechanical, Master Car Builders and Master Mechanics.

MECHANICAL INSPECTION DEPARTMENT

Your committee has approved recommendation for the establishment of a department to investigate repairs to foreign cars and billing therefor. This department at the present time consists of a chief inspector and five inspectors acting under the direction of the General Committee.

FUEL CONSERVATION

At the request of the Board of Directors for the formation of an organization within the American Railway Association, to consider and make recommendations on Fuel Conservation, the General Committee, in co-operation with the General Committees of the Operating and Purchases and Stores Divisions, appointed members to represent the Mechanical Division on the Joint Committee on Fuel Conservation, which reports direct to the Board of Directors. The Committee on Fuel Economy and Smoke Prevention of the Mechanical Division has been discontinued.

JOINT INSPECTION OF STANDARD MATERIAL

A joint committee to study the subject of joint inspection of standard materials has been appointed by your General Committee

in co-operation with the General Committee of the Purchases and Stores Division. Final report from this committee has not yet been received.

JOINT INSPECTION OF EQUIPMENT

The General Committee, in co-operation with the General Committee of the Transportation Division and the Car Service Division, appointed a special committee on the subject of joint inspection of Equipment. Recommendations from this committee have been approved by letter ballot of the railroads as recommended practice, covered in Circular No. 2247, issued April 13, 1922, by the General Secretary.

LOCOMOTIVE AND CAR BUILDERS' CYCLOPEDIAS

The General Committee has appointed special committees to collaborate with the publishers of the Car Builders' and Locomotive Cyclopedias.

SAFETY APPLIANCE HAND BOOKS

Your committee has arranged with the publishers of the small handbook of U. S. Safety Appliances for Cars and Locomotives for an A. R. A. edition. This action is in response to the demand for these safety appliances in handy pocket form, and the books will be supplied to railroads on requisition at cost.

JOINT COMMITTEE ON AUTOMATIC TRAIN CONTROL

Your committee has appointed representatives of the Mechanical Division to serve on the Joint committee on Automatic Train Control with representatives from the Operating and Engineering Divisions and Signal Section.

INVESTIGATION OF POWER BRAKES AND POWER BRAKE SYSTEMS

Your committee also arranged through Mr. R. H. Aishton, President, for the Committee on Safety Appliances to handle matters for the Association in connection with the Investigation of Power Brakes and Power Brake Systems before the Interstate Commerce Commission, and further arranged for the Committee on Train Brake and Signal Equipment to assist the Committee on Safety Appliances in this matter.

EXTENSION OF EFFECTIVE DATES OF RULES AND REGULATIONS

As occasion has arisen during the past two years, your Committee has, upon recommendation of the proper committees of the division, extended the effective dates of certain provisions of the Rules of Interchange and Loading Rules. These extensions have been covered by circular issued to the members.

COMMITTEE ON NOMINATIONS

The committee recommends that no ballot be taken this year for members of the Committee on Nominations, and that the present committee be continued with the exception of Wm. Schlafke, who has left railroad service, and that W. J. Tollerton, (Chicago, Rock Island & Pacific), be appointed to fill this vacancy. The Committee on Nominations will then be as follows: F. W. Brazier (Chairman), New York Central; H. T. Bentley, Chicago & North Western; J. J. Hennessey, Chicago, Milwaukee & St. Paul; C. E. Chambers, Central Railroad of New Jersey; and W. J. Tollerton, Chicago, Rock Island & Pacific.

[The lists of new life members and of members who have died during the year, contained in the report, will be found elsewhere in this issue.]

Discussion

C. E. Chambers: By reason of the action taken by the General Committee as to the omission of the letter ballot, not being in conformity with the constitution, I move that the Association approve their action in that respect. *(The motion was duly seconded, put to vote and carried. The committee report as a whole was also ordered approved.)*

Report of Committee on Nominations

IN ORDER to avoid the necessity of electing an entire new set of officers and General Committee, your Committee on Nominations recommends that the terms of these officers and members of the General Committee expiring June, 1922, be extended to June, 1923; and that officers and members of the Committee only be elected at this time to fill the vacancies created by those whose term of office expired in 1921 but who were continued in office until June of this year, and of those who have left railroad service and are no longer eligible for office in the Division.

Your committee recommends that the term of office of the Vice-Chairman and the following members of the General Committee be extended to June, 1923:

J. S. Lentz, Lehigh Valley; C. E. Fuller, Union Pacific System; H. L. Ingersoll, New York Central; J. J. Tatum, Baltimore & Ohio, and Willard Kells, Atlantic Coast Line.

Your committee also nominates W. J. Tollerton, Chicago, Rock Island & Pacific, for member of the General Committee, to serve for the unexpired term of John Purcell which ends June, 1923; and H. C. Oviatt, general mechanical superintendent, New York, New Haven & Hartford, to serve for the unexpired term of Wm. Schlaefge which ends June, 1923, as Mr. Schlaefge has left railroad service.

Your committee nominates the following to serve until June, 1924:

For chairman, J. Coleman, assistant to general superintendent motive power and car department, Grand Trunk System.

For members of General Committee, C. F. Giles, Louisville & Nashville; T. H. Goodnow, Chicago & North Western; A. Kearney, Norfolk & Western; J. T. Wallis, Pennsylvania System; W. H. Winterrowd, Canadian Pacific; C. E. Chambers, Central Railroad of New Jersey, and L. K. Silcox, Chicago, Milwaukee & St. Paul.

For Vice-Chairman (to serve unexpired term of Mr. Coleman which ends June, 1923); J. Purcell, Atchison, Topeka & Santa Fe.

The report is signed by F. W. Brazier (Chairman), N. Y. C.; H. T. Bentley, C. & N. W.; J. J. Hennessey, C. M. St. P., and C. E. Chambers, C. R. of N. J.

Discussion

F. W. Brazier: The Committee offers the following resolution: Resolved that the report of the Nominating Committee be accepted and that the recommendation of the Committee to extend the terms of office of those officers and members of the General Committee expiring June 1922 to June 1923 be approved, and that a formal ballot be taken covering the recommendation of the Committee for officers and members of the General Committee with terms expiring June 1924 and to fill the vacancies of unexpired terms of those members of the General Committee who have left railroad service and whose terms have been extended to June, 1923. (F. W. Brazier moved the foregoing resolution which was seconded, put to vote and carried).

Scheduling Equipment Through Repair Shops

This committee was originally appointed to report on methods for scheduling and routing work in locomotive repair shops. In 1920 the committee submitted a report which outlined the advantages of scheduling systems and described the detail procedure for applying such a method to locomotive repairs. In the discussion following the presentation of the report considerable interest was manifested in the question of scheduling and routing as applied to car repair shops and the committee was continued to make a study of

car department methods and recommend blanks or forms to take care of that branch of the work.

As pointed out in the report, scheduling is not considered applicable to all classes of car repairs, but it is believed that where this method of handling work is suitable, it will show the same beneficial results that are obtained by scheduling locomotive repairs. The report is particularly timely because of the large number of cars now in need of heavy repairs, which can well be handled by a scheduling system.

THE LAST REPORT from this committee was made in June, 1920, and covered the scheduling and routing of locomotives through repair shops. This report considers the scheduling and routing of passenger and freight equipment under repairs. Very little has been done to promote systematic scheduling methods when repairing equipment. One road in Canada has this work highly perfected and claims are made for a considerable increase in output with decreased costs due to its adoption. At least one road in the United States has recently introduced scheduling and routing practices in their passenger car repair shops and indicates point to an increase in understanding and appreciation of method widely used in contract shops and which are equally applicable to railroad shops.

In general the plans outlined for scheduling and routing locomotives (report of the committee for June, 1920) are employed for cars, passenger and freight. These classes of equipment will be considered separately and scheduling systems recommended in more detail. Passenger cars, like locomotives, are repaired in units. But freight cars, by reason of the large number of repairs and kinds of delivery, do not conform to passenger car methods. Groups of cars are scheduled as a unit and "days" of time are further subdivided into "hours," morning and afternoon. Gang work is recommended for passenger car repairs, but not to the extent suggested for freight repairs. In other re-

spects freight car operations and material are scheduled, routed and checked in practically the same manner as other equipment.

Although a discussion of personnel does not properly come under the subject of this report, yet it is important to indicate the close relation existing between labor gangs and correct scheduling and routing plans. The same may be said of shop layout and design. Systematic repair methods may be applied to any existing plant, large or small, with good results, but the greatest benefit obtains when shops and tracks are laid out to suit an orderly and well planned scheduling system. Proper switching may be somewhat beyond the scope of this report, but no system can operate successfully unless instructions governing the selection and spotting of incoming cars are closely followed.

Details covering the following items incident to installing shop systems were fully covered in the report of this committee for 1920 and apply essentially to passenger and freight equipment: Schedule supervisor and assistant, experience and duties; location of schedule office; description of schedule and planning boards; shop blackboards and slide rules. This information will not be repeated here.

PASSENGER EQUIPMENT

The committee recommends considering only those classes which include all repairs having a labor cost of \$50.00 and over.

KEY TO SYMBOLS USED IN CHART

*—Guide days; these days will be marked on shop blackboard.
 A—Operation to be performed during afternoon period.
 N—Operation to be completed by noon.
 T—On dynamo cars trucks are to be under by noon of 10th day. Steamfitters and Bottom Painters' finishing day will be on 9th and Air Brake on 10th day.
 W—On dynamo cars trucks are to be under car by noon.

NOTE

This chart is a summary of the passenger car schedules of January 11, 1921, and is put in this form for the convenience of the supervisors.

Approved:

L. B. JENSEN,
 Shop Supt. Car Dept.

C. M. & St. P. Ry. Co.
 Milwaukee Shops

Separate master schedules should be prepared for coaches, mail, baggage, express, combination, dining, parlor and sleeping cars. These schedules should be further subdivided for wood or steel construction. All master schedules should show exterior, interior and paint work separately, also work in all other participating departments, such as the tin and pipe shop, electrical department, air brake shop, etc. (See exhibit 1.) Any convenient combination of figures and letters may be used to designate particular schedules. For example, a "1-A-2" repair schedule would indicate a class 1 heavy exterior repair, class A heavy paint repair and a class 2 medium interior repair.

CAR SCHEDULE

REMARKS	

Exhibit No. 2

Schedule and planning boards or loose sheets may be used to advantage in the schedule supervisor's or foreman's office. Shop sheets, blackboards or bulletins conveying dates transferred from master schedules to department foremen will be found useful and are recommended. A calendar slide rule will greatly shorten the work of assigning actual dates on shop sheets. Exhibit 2 illustrates a shop bulletin sheet which is displayed on or near one end of the car under repair. Daily delay sheets should preferably be made from colored paper to distinguish them from other forms. (See exhibit 3.) Departments recommended for separate shop and delay sheets are as follows: Erecting and paint shop, tin and pipe shop, cabinet shop, smith shop, truck shop, upholstery and plating shops and electrical department.

The committee is of the opinion that passenger car repair delays are to a large extent governed by schedules for painting and recommend examination of report by the American Railway Association, Section III, Equipment Painting Division, Committee 8 for 1920. "Classification of painting repairs and comparison of equipment." The intent is to eventually coordinate and standardize painting and repair schedules in so far as this may be possible. The operation of a passenger car repair shop scheduling system confirms generally to procedure already described in the report of this committee for 1920. The schedule superintendent issues shop sheets to departments and checks all work daily, recording delays which are posted or sent to firemen foreman. Supervisor also directs the initial rating work. Delay per car per day, or per month, or departmental delays may be tabulated weekly or monthly in any convenient form and forwarded to the supervisor to better shop sheets for information or action.

FREIGHT EQUIPMENT

The committee suggests that only heavy repairs should be considered in any discussion of freight car scheduling. Such

repairs require 20 man-hours and over. Separate master schedules should be prepared for flat, coal, box and refrigerator cars, these to be subdivided for wood or steel construction. The above separation may be varied to some extent when cars are repaired under a group system with specialized shifting gangs.

It is not possible at this stage of development to define arbitrary rules for scheduling freight equipment. Shop tracks and buildings are lacking in uniformity and a majority of shops and tracks are not at present so arranged that practices giving excellent results in one shop will work equally well in another. In general it may be definitely stated that some easily understood and workable system can be adapted to any shop, large or small, which turns out heavy repairs. It is generally conceded that individual cars should not be scheduled, the cost would be prohibitive even if thought advisable, but groups of cars of the same type and class of repairs may be scheduled successfully. Close attention should be paid to segregation of incoming cars if best results are to obtain. The stripping operation is important and should be given careful study.

Exhibit No. 3

Constructive information pertaining to freight car scheduling is very meagre, but one large shop has perfected the following plan: Incoming cars are switched to three or four parallel tracks, having regard for the type of car and nature of repairs required. Highly specialized gangs are started on track No. 1 (see exhibit 4) and as fast as each gang completes the work assigned they pass to track No. 2, proceeding in turn to track No. 3, etc. The exhibit shows sixteen gangs and the time in hours each gang is expected to start and finish their special class of work. The stripping operation is shown shaded in order to make the gang movements more easily understood.

By the above method it is possible to schedule 10 or 15 cars in a group on one track as a unit. The time for each gang may be predetermined and stated on a master schedule exactly as outlined for passenger car units. This schedule, with hours, dates and duties inserted, should hang in a conspicuous position near the head of each working track where foremen and inspectors may check the progress of the work and quickly locate each gang, or each man, at any hour of the day. (See exhibit 5.) Under this shifting gang plan, when one gang loses time and another gang gains, those ahead may be used temporarily to help those behind their schedule.

The usual arrangement, where one foreman supervises all men on two or more parallel tracks and cars are switched in or out as fast as needed or finished, should be studied carefully, and it will be apparent that a good system for expediting repairs may

if they are present. Mr. Juneau of the Chicago, Milwaukee & St. Paul, supplied the first matter showing the schedule as in operation on his road. That is Exhibit No. 1, and also Exhibit No. 2.

C. Juneau (C. M. & St. P.): With regard to Exhibit No. 1, the cars, when they come into the shop, are inspected, and the work necessary to be done on these cars is laid out as shown in Exhibit 2. You will notice from Exhibit 2, that we have a board at the head end of each track in the shop, indicating the number of days that it is estimated the car will be in the shop undergoing repairs.

The first crew that gets to work on the car to be repaired is the strippers and the washers, and these are followed by the carpenters, then the cabinet makers, then the tinsmiths, and then the painters. These in turn are followed by the steamfitters and electricians. It is our aim to keep the different crafts working on the passenger equipment separately avoiding their getting in each other's way. By pursuing that method, we accomplish the work satisfactorily and no one craft bothers the other while the car is undergoing repairs.

The shop schedule, as shown in exhibit 1, which indicates what is to be done and how the work is to be followed out, gives very satisfactory results. We also schedule the material for the work on the particular car. Each supervisor who has charge of the work—forgings, or any particular class of work on the car—has a schedule which he is expected to follow, and if there is an operation lost the supervisor in charge of the lost operation receives a pink slip. Each morning these lost operations are caught up.

The supervisor, who has lost a certain number of operations which may delay the work and make it necessary to set the car back, is reprimanded, usually by the shop superintendent, and we have found in carrying out this plan that there are few of the supervisors who care to receive the pink slip, showing that they have lost an operation. The schedule is simple, and we have reduced the costs of repairs and expedited the movement of the car through the repair shop. In my opinion there is not much more explanation necessary than what is shown in Sheet 1. The work to be followed through is shown on "Repair Schedule of Car in Shop," Exhibit 2.

Mr. Fuller: I may not be very bright this morning, but I notice in the repair schedule for work in the shop that start is indicated by "1" and finish by "1" in the case of strip. What does that "1" mean there?

Mr. Juneau: I will call on Mr. Jensen to explain that No. 1.

Mr. Fuller: Mr. Jensen, will you kindly advise for the benefit of those of us who do not understand this just what is meant. On your blackboard you have two columns "Start" and "Finish." The first is "Strip: Start 1" and then "Finish 1." Then under "Note" you have "O.K. 1." What does that mean?

L. B. Jensen (C. M. & St. P.): We strip the car the first day. (start and finish stripping) That is the first day in the shop. We wash the car on the second day. (start and finish washing)

The carpenters start on the 3rd day and finish on the 6th. Platform work is started on the 3rd day and finished on the 8th. The cabinet makers start on the third day on the inside of the car and finish on the 5th. The tinsmith starts on the third day and finishes on the 10th. We give him all the latitude possible so he can work in between. That is the meaning of those numbers.

Mr. Fuller: Then you have painter. You have "Out 6-16" and "In -615."

Mr. Jensen: That means the outside.

Mr. Fuller: Outside and inside?

Mr. Jensen: Yes, sir. We paint and finish the car in nine days. That is probably just a repainted job. I don't know what kind of a car this is on the board, although I think it is an open platform car.

The Chairman: 4161.

Mr. Jensen: A coach.

Mr. Fuller: At the top of the sheet you have a row of numbers, which I understand signify the days of the month.

Mr. Jensen: No, sir, the days the car is in the shop. The three X's under 1, 2 and 3, indicate the three days the car was in the shop (this car on this board). That is the third day that particular car was in the shop.

Mr. Fuller: Then you mark it up each day?

Mr. Jensen: Yes, each day is checked off.

Mr. Fuller: You have down at the bottom airbrake, uphol-

sterers, machinists, platers, without any date for the start, but you have 18, 19 and 15.

Mr. Jensen: That is the day they are supposed to be done with the car.

Mr. Fuller: They are to have their work done on the 18th?

Mr. Jensen: Yes, they work in between.

Mr. Fuller: It is the 18th day the car is in the shop?

Mr. Jensen: Yes, sir.

Mr. Fuller: Not calendar days?

Mr. Jensen: No, sir.

Mr. Fuller: All right, sir, I do not want to ask too many questions but I would like to know about this.

Mr. Jensen: We feel we have a very complete and simple system.

Mr. Fuller: Can you explain this Schedule 1, a little clearer, passenger car schedule constants? Exhibit 1. Working day on which operations are due? I do not quite get these figures clear. Will you explain it alphabetically and then numerically?

Mr. Jensen: We have different schedules shown by the letter. That schedule allows for the number of days that car is in the shop. We have different classes of schedules, of course, for different classes of cars.

Mr. Fuller: Can't you explain that a little bit, just what you mean by different schedules?

Mr. Jensen: On each schedule we have allowed a certain number of days for the car in the shop.

Mr. Fuller: Just carry us through one schedule.

Mr. Jensen: There is what we call the repainted car. It would be under a certain letter, and would be allowed possibly 12 days, depending upon the class of car that is undergoing repairs under that schedule.

Mr. Fuller: To get that clear, take color No. 2, under schedule E. Under Column E, color No. 2, at the top is the figure 14. Does that mean it is 14 days in the shop?

Mr. Jensen: The 14-day schedule, yes sir. A is an eight-day schedule, C is a ten-day schedule.

Mr. Fuller: You are not looking at the same column. Take color No. 2 on your operation under E. At the head is 14, E-2, 5, 7, and down to 8. What is 8?

Mr. Jensen: That is the 8th day that that car must be colored; the 8th day that it is in the shop the color must be applied.

Mr. Fuller: As I understand this blank, under that same inquiry, it is up to someone to see that the work has progressed so that on the 8th day color No. 2 has been applied to the car?

Mr. Jensen: Yes, sir. We have a schedule man who follows that up through the shop daily, checks up each board and each car in the shop.

Mr. Fuller: How is this schedule put out in the shop? You schedule this car out, and you make up this schedule. How is that schedule posted or handled?

Mr. Jensen: Each supervisor has a set of schedules. When he sees a 14-day car, he looks up his schedule on that which is Schedule E, and he knows just what procedure to follow under that schedule for that date.

Mr. Fuller: Who makes up the schedule for the cars to come into the shop.

Mr. Jensen: The schedule man.

Mr. Fuller: Is there a man specially for that?

Mr. Jensen: The schedule man goes through with the general foreman and decides what schedule is to be applied to that car.

Mr. Fuller: If the schedule is not up to date, the foreman in charge of that department furnishes a blue slip himself?

Mr. Jensen: No, sir, the schedule man furnishes it. He is the man who puts the black mark against us, and he turns that slip into my office, with an explanation as to why he is behind. It may be a question of material, or anything else, of course. If the excuse is legitimate it is all right, but if it is not it is all wrong.

Mr. Fuller: You will pardon me for asking so many questions, but I wanted to get at the bottom of this. He knows beforehand, to a certain extent, especially if it is material, that he is going to be behind on his schedule?

Mr. Jensen: Yes, sir.

Mr. Fuller: What does he do then?

Mr. Jensen: He reports to me.

Mr. Fuller: On any particular form?

Mr. Jensen: No, sir. If he knows that he is to run short of

material, he comes and reports to me, and I, of course, endeavor in turn to get the material from the stores department.

Mr. Fuller: Suppose they do not furnish it?

Mr. Jensen: Then the car is set behind and it is charged to the stores department.

Mr. Fuller: Do they ever resent it?

Mr. Jensen: Yes.

Mr. Fuller: They do not like it?

Mr. Jensen: No, sir.

Mr. Fuller: I want to thank you very much for what you have given me.

G. P. Kempf (P. & W. Va.): I understand this blackboard schedule and Schedule H are one and the same. H is the 19-day schedule. That compares with the photographs shown on Schedule 2. It will be noticed that the washout side shows two days; also on the blackboard it shows two days. I believe you can follow all the way through just how that is worked out.

Mr. Jensen: In other words, this car was under Schedule H?

Mr. Kempf: You will notice on touch-up, down at the bottom of painter, next to the last item. Under the 19-day schedule it says 18-A, and there is a notation for A. It says: "Operation to be performed during afternoon period," which is probably the latter part of the day and will go out the following day. All the way through I think these dots show explanations in the key.

I think the schedule is very simple. While it may seem complicated, I believe that with a little study, its workings will be readily understood. I know previous to my leaving the Milwaukee road I had something to do with the schedule system up there, and it facilitated the work all the way through. You will find that the foremen in general will oppose this schedule system; they won't like it. They think that you are going to make more work for them, but you will find, after the system has been put in operation and you get it working, they will be right back of it, every one of them. It helps them in the work and the schedule supervisor can do more for those foremen than you have any idea. I know I found it to be effective, and that the foremen all over the plant were in hearty co-operation with the system in every way.

T. H. Goodnow (C. & N. W.): To get off the schedules for a minute and get down to the practical work of putting in a schedule system, we have been attempting to inaugurate a schedule system for passenger equipment for about 16 months now; the scheduling of passenger equipment through shops will, of course, be dependent upon the number of shops involved and the extent of your passenger equipment. Those having larger numbers of cars will necessarily have to be governed by somewhat different conditions in their work of scheduling. Where they have more shops the conditions will be different, and for that reason I think that the committee has put the finishing touches on first. They say that the scheduling of the passenger equipment is dependent upon the paint shop. It has been our experience that it is just the opposite; the paint shop simply takes the cars as they come to it from the other shops and finishes them up. It depends to a great extent upon the drying of the paint and varnish.

We started out first with a system something like this and other systems. We asked the various railroads for and got their blanks, and in applying them it soon developed that it was simply a matter of timing. In other words, it did not bring out the real efficiency of the work. This scheduling does not indicate the efficiency of the shopmen, but of the foremen, and it puts it up to the foremen to get the efficiency from their shops. As the result of our experience at the start in attempting to schedule, we had to change and in making that change we had to develop a schedule of work. In other words, have different classes of cars coming into your shop; you have wood and steel cars mixed on which the work is different, and a foreman in one shop may be getting wooden cars and foreman in another shop steel cars. To make any judgment of the work to be performed, we had to develop very nearly a piece-work system. In other words, it was a time study of work, the renewal of parts, tearing down and putting back, and on that we had to base the scheduling of our passenger equipment. In doing so, knowing the class of cars that is going through a certain shop and what the foreman is handling, you have some idea of the work he has to do on those cars; he marks up the schedules of those cars through the shop according to what time he thinks he can get them out. Your man who is checking has the schedule of time for the various major operations at

least, and he knows whether or not that foreman is marking his car up as he should.

With more than one shop handling the passenger cars, and knowing the kind of cars in each shop, you know whether each foreman is marking the car up for the best results. We found it necessary to develop a scheme of that kind, and at the present time the scheduling of equipment in our shop is marked up on that basis. It has cut down the man-hours on passenger equipment remarkably, but I do not believe a schedule of passenger equipment, based on a passenger car shop, will produce what you are really after.

So far as the scheduling of freight equipment is concerned, I have not much sympathy for that except when the roads are shopping their freight equipment by series and have the repairing done under a certain classified system of work. I believe that the majority of roads are not doing that and it is really time lost to have a classification such as we are considering here; that is, to have the work done according to these classified schedules. Where you are simply passing your freight equipment through the main shops, and making such repairs as are necessary I do not believe that the scheduling of equipment is advisable; that is, in the case of freight equipment. It takes up time without accomplishing much. I will admit, however, that where you are making freight car repairs by classified series there are many advantages in the system and there are advantages along the same lines when you make track repairs on the outside. From actual experience, however, I can say that the proper scheduling of passenger equipment will accomplish results both with respect to the time of the cars in the shop and in securing greater efficiency in making the repairs. With respect to that efficiency on the part of your men, you simply get that from putting one foreman's record against another.

J. J. Tatum (B. & O.): I note that there are 14 letters in Exhibit 1, following the word schedules. I was wondering if that means that you have 14 different classifications of repairs on passenger cars?

Mr. Jensen: Yes, 14 schedules.

Mr. Tatum: I take it that for Class A repairs, you have eight days allotted for the car to remain in the shop, and so on for the balance of the schedule.

Mr. Jensen: Yes.

Mr. Tatum: Who designates the class of repairs in any particular shop?

Mr. Jensen: The schedule man and the gang foreman make an inspection of the car, designating the class of repairs the car is to receive.

Mr. Tatum: The schedule man and the general foreman go out into the yard before the car goes into the shop, and decide what class of repairs the car is to receive?

Mr. Jensen: Yes.

Mr. Tatum: The schedule man turns it over to the gang foreman and assistant foreman to determine whether that car receives A schedule repairs, or B schedule repairs?

Mr. Jensen: The schedule man follows the work through the shop daily, checking up and seeing that each craft is meeting the dates on the cars.

Mr. Tatum: If you select a car for A class of repairs, your Exhibit No. 2 is marked accordingly, and if they select J class of repairs, your Exhibit No. 2 is also marked accordingly, and each class of workmen is required to meet the dates set.

Mr. Jensen: Yes.

Mr. Fuller: On what basis did you select your schedule man; from what class of employees? Are they car men, or clerks, or what are they?

Mr. Jensen: The schedule man that we have was simply a bright young man, formerly a clerk, and we brought him into that class of work, and we feel that in that regard we have done much better than if we selected a craftsman.

Mr. Fuller: My reason for asking the question is this: A car comes in and the inspector and general foreman inspect the car. Does the general foreman say what work must be done on the car and he and his schedule man then mark up the schedule on which the car will go through? The general foreman has the last word?

Mr. Jensen: Yes.

H. C. Oviatt (N. Y. N. H. & H.): Do we understand that the scheduling engineer assigns the particular schedule to the car, or does the general manager do that? Is the number of days that

the car will be included, for instance, under General Classification A, a matter for the foreman to decide?

Mr. Jensen: He makes out the schedule in conjunction with the inspector and the scheduling engineer.

A. C. Kells (A. C. L.): How do they decide whether a car will be in eight days or ten days or twelve days? What is the basis for making such a decision?

Mr. Jensen: That is determined according to the class of equipment. In the case of an open platform car it would be 8 to 10 days, and in the case of a steel car, 19, 20, 21 or 22 days. It is the class of equipment that governs to a certain extent.

Mr. Kells: Then you use your past experience as a basis for figuring?

Mr. Fuller: The class of equipment, plus the class of work to be performed?

Mr. Jensen: That is correct.

Mr. Tatum: The general foreman decides what kind of work you are going to give to certain equipment? If it is a wooden frame, with open platform car, it received a certain work, and you have a schedule representing the work that car is to receive?

Mr. Jensen: The general foreman assigns one of these 14 letters to each class of equipment when it is brought into the shop for repairs. After that is done, he assigns the different craftsmen to perform their work. They must get through with it by the time set. These dates mean that in the case of cars going through the shop, if the repairs call for machine shop work, the work must be ready on the date set so that the car may be finished in time to go out at the end of the period allotted for the repairs.

Mr. Oviatt: There should be a key covering each one of the schedules; that should be included in the report.

The Chairman: That key is printed at the bottom of the sheet on which Exhibit I appears for the various work on each classification.

Mr. Fuller: Mr. Oviatt has referred to a subject I have been thinking about for some time. You compare the cars that go out on the different schedules continued along with each other. You have a schedule in ordinary operation that will take 24 days, we will say, and then for example you have to remove the sheathing and you find the sill has rotted, and it is necessary to remove the sill. That necessity was not discovered until after the car went into the shop. For this reason, the time of that car in the shop will exceed your schedule. What note do you make, or how do you deal with that matter in order to determine that Gang 2 consumed six or eight days more turning the car out.

Mr. Jensen: We often find cars coming into the shop as you say. We do not find that condition to exist until we have stripped them and then we discover the rotten sill and it is necessary to change the schedule. Of course, we allow for much more time for putting in a new end sill, and we have to increase the schedule accordingly.

Mr. Fuller: That is what I wanted to get clear. You have to start with a given schedule, and then you encounter an obstacle which was unforeseen and find that you must make up another schedule.

Mr. Tatum: I think that the committee could have made this report more helpful if they had printed these schedules so that the various railroads could apply them in making comparisons between the repairs to one set of cars, and the repairs to another set of cars. I think if this character of information could be given by the committee in its next report it would be very helpful. These remarks are not intended in any way as a criticism but simply as a suggestion to show how the report could be improved, in my opinion.

Mr. Juneau: What Mr. Goodnow said with regard to scheduling freight equipment through the shop, calls to mind that the committee as a whole was of one voice as far as the scheduling of freight cars through the shop is concerned at the present time. It is almost an impossibility unless you are having schedule repairs to a certain class of equipment done. Of course, you could lay out a classification, as has been done in the case of the passenger equipment. We will say that the repair card would indicate heavy repairs, and you are applying betterments to that car, which will require at least four days; if you put 14 or 15 cars on the repair track, the heavy repairs would require from four to five days, depending on the length of the schedule.

The committee when it met and talked over the schedule of freight equipment felt that it would be almost an impossibility to

schedule freight cars properly unless the repairs were exceptionally heavy or in a case of rebuilding the cars.

Frank McManamy (Manager, Department of Equipment, United States Railroad Administration): The committee in this excellent report has no doubt covered all the ground that was intended to cover, but it occurs to me that there is one thing of primary importance in any scheduling system. We have here in one of the conclusions of the committee a brief statement of what an adequate scheduling and routing plan aims at: "To plan the work and proportion the forces for maximum production with minimum cost."

If we are to have the maximum of production and the minimum of cost, we must have a means of making comparisons, not only comparisons between the shops on your own lines, but between the shops on your line and some other line. Before we can do that, it is essential that we shall have a uniform classification of repairs, a classification that will apply to both freight cars, passenger cars and locomotives.

This is probably a little bit aside from the report of the committee, although it seems to me there is another reason—a very good one—why we should have a uniform classification of repairs. We find that the American Railway Association, of which this body is a Division, is now keeping and furnishing to the Interstate Commerce Commission and other governmental agencies records of the number of bad order cars, divided between heavy and light, etc. Without a standard classification of repairs, these reports do not mean much, for the reason that a light repair to a freight car requires less than 20 man-hours, whereas in the case of heavy repairs it may cost \$100 or \$1,000.

These reports cover not only the number of units of equipment repaired, the different classes of equipment repaired, but also the number of man-hours required to make the repairs.

These records are now being kept and an attempt is being made to include a record of the relative efficiency of different shops in the performance of labor in making these classes of repairs. As that matter stands today, the records are not sufficiently comprehensive in detail, and it seems to me, in view of the fact that these matters are being considered and eventually there will be an application of a uniform classification of repairs, that it behooves this organization to give very careful attention to this subject.

This division is the body which should lend its efforts in securing a proper classification of repairs for general application, so that when we make comparisons with some other roads we will be speaking the same language. As it is now, we are talking in different tongues, and unless we standardize the classifications of the repairs on different roads, the reports will not mean what they should.

Mr. Goodnow: There is one question I would like to ask the committee. Suppose you have a schedule and then you have a number of cars due for different kinds of repairs and want to get out 15 or 30 cars, in a month. Your schedule man must watch his schedule of the different operations or some of these operations will be bunched. For example, if the carpenters' work has to be done in 15 days instead of 30 days, the carpenters have to go double speed for a part of the time and the rest of the time they have not so much to do. It seems to me that will be something hard to adjust. To spread the work out so it would cover the month, and yet have nothing delayed.

Mr. Tatum: I move that the report of the committee be accepted and the committee continued in its work.

C. T. Ripley (Santa Fe): Anyone adopting a schedule system will find within a short time that there are certain difficulties with regard to the application of the plan. First, after the practice is started, a difficulty which will be encountered is the balancing of the gangs. It will be found that certain gangs will have more men than they should have and other gangs will be short of men. The foreman will have to redistribute the men. The second result will be found to be an insistent demand from the foreman for labor-saving devices.

A third point is the matter of having material delivered on time. Very often there is considerable trouble in that direction and it is a matter which requires constant attention to see that the material is on the job when required.

A fourth difficulty will be found in that blame is often placed on the mechanical engineering department for not furnishing drawings of the repairs to be made to the cars in accordance with the schedule.

All of these elements tend to decrease the output of the shop. Mr. Goodnow: I move that the committee be continued and inclusion in its next report optional classifications of schedule, so far as passenger car equipment is concerned.

C. E. Chambers (C. of N. J.): Is there any reason why this committee should not be so constituted that it could take into its work not only passenger and freight car equipment, but locomotive equipment? There is a great opportunity for the improvement of classification of locomotive equipment. For instance, Class 3 repairs on the same type of engine may vary from \$3,000 to \$5,000, by reason of additional material and work. I think that the classification of locomotives should be carried into a subdivision, so that certain repairs would be known as 3-a, 3-b, 3-c, so as to show why it costs more for repairs in one Class 3 engine than on some other Class 3 engine. The same thing applies to Class 2 engines. Class 2 may be a locomotive having a firebox rebuilt or one having one or more boiler sheets applied. While classifications 1 to 5, inclusive, are satisfactory, they should be subdivided so as to show an explanation for the difference in cost of repairs in the different classes of engines.

J. Hall (So. Pac.): On our road, in the case of a car needing repairs, the general foreman proceeds to inspect the car on arrival. The class of repairs are discussed at that time with the car inspector and then the general foreman goes to his office and writes out the schedule. Each foreman and gang foreman in charge of the necessary work to the car, under the respective headings, receives a copy of a notice of the repairs necessary to the car. This notice is placed on the end of the car, and each foreman, as the work proceeds, keeps in mind the date when the car is to be repaired and ready to get out. The general foreman passes through the shop, looks over the car and he has also a schedule of dates showing when the car is to be put in service again. He immediately proceeds, by consulting the order issued for the repair of the car, to see how it is getting along. That is done every morning and when that practice is followed, we have no trouble in following a pre-arranged schedule which we have adopted, because each foreman is trying to get out of the other foreman's way. If one department is behind, for instance the finishers, we can draw from the cabinet shop and assist the department that is behind and in this way we avoid the congestion of certain workmen on certain lines of work and it works out admirably.

I think those who have visited the Southern Pacific shops can bear me out as to the fact that it is a relatively simple operation to carry out a system of scheduling if the details are properly worked out and there is adequate supervision of the work being done. You can see just how the situation is each morning when you pass through the shop. The superintendent of motive power or the superintendent of repairs in the car department goes through the car, observes the date when the operations began and when that car should go out. The cars must be in readiness three days ahead of the finishing date so as to give the air brake men a chance to do their work. The plan is very effective.

Mr. Tatum: Do I understand that Mr. Chambers wants to add to the motion I made that the classification of repairs to locomotives be considered along with the car work?

Mr. Chambers: That is my thought. In my opinion there is no use in having a schedule for passenger equipment when it could take in all classes of equipment.

Mr. Tatum: I am willing that the classification of locomotives should be considered along with the classification of cars.

Mr. Hall: I would like to add one thought further, and that is with regard to the furnishing of materials for the repairs. Each foreman in the respective shops has received a schedule notice with regard to the car which is undergoing repair in the shop, and they are sure that their part of the work is to be done at a certain date. If they are to supply certain material and it is too early we do not need a motion in getting the department to furnish the material, and it is necessary.

I S. Reynolds (C. C. C. & St. L.): It seems to me the schedule list of passenger work is a good one. There are some practical difficulties connected with it, of course. In one case we get a certain amount of work done and we may have 12 men in the shop at that time, so that instead of another car we only have six and on the next morning we have to employ the full complement of men in getting each car through the shop schedule and classification.

Mr. Goodnow made a very good point and that is that you must consider the amount of labor to be put on that car in eight days and he raised the same point that one car may require eight days, another six and another four and the speed with which these cars are repaired varies. The man hours consumed is what talks.

The only reliable way I know of to compare this work is to take the old piece-work schedule. There is no especial work for a man to do. It does not say he must put a flowing coat of varnish on in one hour or one day but you can take your piece-work system and find just where you are and what he is doing. Mr. Goodnow is absolutely correct, the amount of time required in the paint shop to put on a coat of varnish is nothing compared to the time the car must remain on the track.

Mr. Tatum's motion, as amended by Mr. Chambers, was then put to vote and carried.

Report of Safety Appliance Committee

The next business was the report of the Committee on Safety Appliances, presented by Chairman C. E. Chambers, superintendent of motive power and equipment, (C. R. R. of N. J.) as follows:

"No advance report was made or printed by the Committee on Safety Appliances, the condition in general being the same as it was in June 1920. At that time the latest figures obtainable showed 60170 cars to be equipped. No later figures have been obtained, and it is presumed that all of these cars in service have been equipped by this time. No condition has arisen in the last two years which has made necessary any special work for the Committee on Safety Appliances and therefore no action has been taken."

A motion that the report be received was duly seconded, put and carried.

On motion, the meeting adjourned.

The New Life Members

FIFTEEN NEW life members have been added to the list of the Mechanical Division since the last annual meeting was held in 1920. These men automatically become life members under the rules of order of the section, because of a membership in the Mechanical Division or one of its predecessors of 20 years or over. The list is as follows:

Date	Name	Title and Railroad
1902	Carson, G. E.	D. M. C. R., New York Central.
1901	Emerson, G. H.	Chief of M. P. & F., Baltimore & Ohio.
1892	Fitzmorris, J.	Supt. Motive Power, Chicago Junction.
1902	Hammett, P. M.	Supt. Motive Power, Maine Central.
1901	Hogan, C. H.	Manager, Dept. of Shop Labor, N. Y. C.
1909	Kudrly, W. F.	General Supt., Southern.
1902	Manchester, H. C.	Supt. M. P. & F., D. L. & W.
1902	Nichols, L. T.	Supt. Carolina & No. West.
1902	Ramsdell, T. M.	Master Car Builder, Oregon-Wash. R. R. & Nav. Co.
1901	Rehling, D. J.	Assistant Supt. Motive Power, P. & L. E.
1911	Sullivan, J. L.	Supt. Machine v. Nash, Chatt. & St. Louis.
1902	Thompson, W. D.	Gen. Supt. Rolling Stock, New York Central.
1902	Watson, S.	Dist. Supt. Motive Power, New York Central.
1902	Young, C. B.	General Mech. Excr. C. B. & Q. R. R.

Registration Figures

THE FOLLOWING FIGURES show the registrations for 1920 and 1922. The figures for 1920 show the registrations up to midnight the first day for book Number 1 and those for 1922 show the registrations up to four o'clock yesterday, the closing time for book Number 1:

	1922	1920
Members Mechanical, A. R. A.	360	355
Purchases and stores	13	9
Special Guests	107	102
Railroad Ladies	148	251
Supply Ladies	281	354
Supply Men	1,140	1,517
Totals	2,049	2,588

 Nowell, H. T., Mech. Supt., Central of Vermont, Haddon Hall.

Railway Club Secretaries Meet Today

THE SOCIETY OF RAILWAY CLUB SECRETARIES will hold its annual meeting in Room 449 at the Marlborough this morning, at 10 o'clock.

Reduction of Car Surplus

THE *Daily's* Washington correspondent wired yesterday that in the week ended May 30 the freight car surplus showed a reduction of over 24,000 cars, being 305,198. This included 195,439 surplus coal cars, a reduction of over 13,000 and 69,714 surplus box cars, a reduction of over 9,000.

Breaks in the Ranks

DEATH has claimed an unusually large number of members of the Mechanical Division since the last meeting was held in 1920. Among them are several widely known men who have been leaders in its affairs and those of its predecessors, the Master Car Builders' and American Railway Master Mechanics' Associations.

John W. Marden, who died on May 27, 1922, had been a member of the Master Car Builders' Association since 1877. Mr. Marden was one of the group of car men who took an active part in the pioneer development of the standards which have since become such an essential factor in the interchange of traffic between the railroads, and he served as president of the association in 1903.

F. F. Gaines, who died on August 26, 1921, has long been an active worker in the associations and served as president of the American Railway Master Mechanics' Association for the year 1914-15.

A. W. Gibbs has been chairman of the Tank Car Committee since its organization following the 1911 meeting of the Master Car Builders' Association. Under his administration the present standards of tank car construction were formulated, and adopted, and, this year's report of the committee was prepared under his direction.

The following is the list of obituaries read in report of the General Committee yesterday morning:

NAME	Died
Acker, S. B., Gen. Car Foreman, P. S. & N. Ry.	
Harstow, Wm. A., Pres., Union Tank Car Co.	Feb. 10, 1922
Beattie, A. L., Napier, New Zealand	
Best, W. N., New York City	April 11, 1922
Hoss, E., Supt. Motive Power, C. I. & W. R. Ry.	Dec. 11, 1921
Branton, J. W., Master Mechanic, Illinois Central R. R.	
Brooke, I. D., Minneapolis, Minn.	April 10, 1922
Brown, T. A., Supt. Motive Power, La. & Ark. Ry.	Oct. 11, 1921
Gaines, F. F., U. S. Railroad Administration.	Aug. 26, 1921
Gibbs, A. W., Chief Mech. Engr., Pennsylvania System.	May 19, 1922
Hartigan, Bert, General Foreman, Rutland R. R.	Oct. 14, 1921
Herman, A. O., Gen. Fore. Car Dept., Panama Canal	
Hodgins, G. S., New York City	
Leyonmark, J. H., Mech. Engr., Chicago & Alton R. Ry.	Aug. 1, 1921
Marden, John W., Waltham, Mass.	May 27, 1922
Montgomery, Wm., Master Mech. Cent. R. R. of New Jersey	May 21, 1921
Needham, E. F., Boston, Mass.	May 12, 1922
Oakes, Chas. E., Shop Supt., Kansas City Southern Ry.	Oct. 13, 1921
Robinson, W. A., Hamilton, Ontario.	Sept. 20, 1921
Robinson, M., Master Mechanic, A. T. & S. F. Ry.

Half-Rate Pullman Transportation

LAST YEAR A NUMBER of the members of the Mechanical Division were disappointed in securing half-rate Pullman transportation because they failed to obtain receipts when they purchased the Pullman accommodations. The conductor's check and receipt must be presented to obtain these reduced rates.

From Europe to the Conventions

F. A. POOR, president of the P. & M. Company, Chicago, accompanied by Mrs. Poor, arrived in New York from Europe on the Majestic Tuesday, and came down yesterday to attend the conventions.

Mr. Poor comes with a new interest in railway mechanical matters, since he and Burton Mudge recently bought control of the Joliet Railway Supply Company, Mr. Mudge having been elected president of this company.

Mr. Poor went to Europe about two months ago. He attended the convention of the International Railway Association at Rome, and was subsequently met by Mrs. Poor in Paris. They later returned to Italy.

"My own observations of railway conditions in Europe are similar to those which have been already published in the *Railway Age*," said Mr. Poor. "It is difficult to get sleeping car accommodations and trains generally are crowded. The railway service is much better in France than in Italy, and as was the case before the war, is best of all in England. In fact, in England some excellent new passenger equipment has been provided, there is very little crowding of trains, and the trains are being operated generally at pre-war speeds.

Mr. Poor took the aeroplane route from Paris to London, and later flew back from London to Paris. He enjoyed these experiences immensely and is very enthusiastic about the air as a means of transportation. He says, however, he is very glad to get back to the U. S. A., and is quite willing to use American trains for traveling for some time to come.

W. B. Storey Comments on the Convention

THIS IS THE FIRST visit that W. B. Storey, president of the Santa Fe, has made to the mechanical convention. He is now A. R. A. executive committee member for the Mechanical Section, but he came up in railway service through the engineering department. He was long active as a worker in the American Railway Engineering Association, and is a past president of that organization.

"I have taken much interest in observing the mechanical convention and the exhibit," said Mr. Storey yesterday. "There is no doubt that the reports and discussions in the convention, and the inspection of the exhibits by railway men do much good.

"Some of the executives of the railways have questioned whether an exhibit is necessary in connection with the convention, and whether Atlantic City is the best place to hold it. The expense involved is substantial and some have thought it may be too large.

"I have not had time to make observations enough to reach definite conclusions regarding these matters.

"I could see this morning that the convention is conducted much like others I have attended; and there is no doubt that the interchange of information and ideas that takes place in the sessions broadens those attending and makes them better able to do their work. The exhibit is excellent and railway mechanical men who carefully go through it cannot fail to learn many things about the development of equipment and appliances which it will be advantageous for them to know.

"The purpose, of course, is contribute toward increasing the efficiency and economy of railway operation. Everything done should be done to accomplish that object, and it should be done in the way that will accomplish it most effectually. The railways in the eastern

part of the country can without difficulty send a good many of their officers to Atlantic City. It is not so easy for railways west of Chicago, for example, to do so because of both the greater expense and the greater time required. To get the greatest benefit at reasonable cost they must select carefully the men they send."

Mr. Storey's entire attitude was that of a much interested observer who had not reached any definite conclusions regarding the matter under observation and did not intend to until he was sure he knew the entire situation thoroughly. The Santa Fe always has been well represented at the conventions.

Being himself very familiar with and a believer in the convention work of the American Railway Engineering Association, it may safely be anticipated that any recommendations Mr. Storey may make will be intended and will tend to, increase the value and effectiveness of the work of the Mechanical Section.

Mr. Storey leaves for New York this morning to attend a meeting of the executive committee of the American Railway Association. He expects to start for Europe the latter part of June for a two months' trip.

Enrollment

THE ENROLLMENT BOOTH at the main entrance to the Million Dollar Pier will open today from 9:00 a. m. to 1:00 p. m., 2:00 p. m. to 6:00 p. m., and 7:00 p. m. to 8:00 p. m.

I. C. C. Power Brake Hearing

THE POWER BRAKE hearing before the Interstate Commerce Commission at Washington, which was adjourned on May 29, subject to call at a date to be announced in the future, will be convened again on July 17, at which time examination of witnesses for the air brake manufacturers will be resumed.

New York Railroad Club Nominates Officers

THE NOMINATING COMMITTEE of the New York Railroad Club has decided upon the following nominations for the next fiscal year, beginning November 1, 1922:

President, two year, F. T. Dickerson, secretary-treasurer, Central Railroad of New Jersey.

First vice-president, W. F. Jones, general storekeeper, New York Central, West Albany, N. Y.

Second vice-president, John J. Mantell, regional manager, Erie Railroad, New York.

Third vice-president, W. G. Gove, superintendent equipment, Brooklyn Rapid Transit System, Brooklyn, N. Y.

Treasurer, D. W. Pye, president, Tuco Products Corporation, New York.

Member of executive committee, three years, Elliott Sumner, superintendent motive power, Pennsylvania Railroad, New York.

Member of finance committee, three years, Charles C. Castle, vice-president, National Railway Appliance Company, New York.

Conventionalities

Among the convention visitors this year from far-away lands is W. D. Hollan, master mechanic of the National Railroad of Haiti.

F. S. Wilcoxon, fuel supervisor of the Chicago Great Western, has recently left that position to go with the Edna Brass Manufacturing Company, and is attending the convention this year in that capacity.

R. L. McIntosh is attending the convention in a new capacity this year. He has recently joined the staff of the Locomotive Finished Materials Company of Atchison, Kansas.

Harry C. Buhoup, for 40 years connected with McConway & Torley Company and a regular convention attendant, finds it impossible to attend the meeting this year.

W. H. Winterrowd, chief mechanical engineer of the Canadian Pacific and member of the General Committee of Division V, made but a flying trip to the convention. He arrived Tuesday and left Wednesday evening for Montreal. He will not be able to return.

Mr. and Mrs. Frank McManamy motored over from Washington on Tuesday. They have with them this year a nephew, Carl McManamy, who is just about to be graduated from Georgetown University.

Orris Bilger, mechanical engineer of the Kansas City, Mexico & Orient is here from Wichita, Kans., with his wife and seven-year old son. This is Mr. Bilger's first visit to the Atlantic City conventions.

Charley Gayetty is looking for a job. For two years chairman of the enrollment committee and for a number of years a most active committeeman, he feels lost with nothing to do but "roam the Pier." He received a rousing reception from his previous enrollment associates as he entered on his "new" duties Wednesday morning.

R. S. Cooper, general sales manager of the Independent Pneumatic Tool Company, has just returned from a trip to England and the Continent to attend the conventions. He reports poor but improving business conditions on the other side. England is in about the same position as regards trade as the United States was last fall.

The printer got his wires crossed yesterday and made *The Daily* say that Samuel Higgins, of the Railroad Labor Board, was formerly "deputy president of the Brotherhood of Railroad Hartford." Mr. Higgins is one of the railroad members of the board, and what *The Daily* meant to say was that he was formerly general manager of the New York, New Haven & Hartford.

Mr. and Mrs. Burton Mudge were joined at the convention yesterday by their son, Burton, Jr., who has just completed his freshman year at Princeton University. Burton, Jr., is now western junior golf champion of the United States, and has been captain of the freshman golf team at Princeton.

John M. Lammedee is attending the convention as a full fledged supplyman this year. Drawn from ranks of the railway pro, he is now sales engineer in the locomotive fuelwater heater department of the Worthington Pump & Machinery Corporation for the middle west. Mr.

Lammedee is a graduate of Purdue University and before his editorial work was with the Pennsylvania Railroad.

At any gathering of this sort the "old guard" is always in evidence. They spend a lot of time swapping yarns and proving seniority in years of attendance. Among those present here this year are C. E. Postlethwaite and his side-partner, W. H. Wilkinson, both of the Pressed Steel Car Company. While neither flew over the battle lines in France, nevertheless they are known as "aces," being a pair that's hard to beat.

Charles A. Schroyer, one of the oldest members of the railway mechanical association and for many years superintendent of the car department of the Chicago & North-western, came early in order to enjoy meeting and visiting with his many friends. Mr. Schroyer is taking things rather easy these days, and in this connection it may be stated that he probably brought with him to Atlantic City his golf clubs.

"Doc" W. H. S. Bateman of the R. S. M. A. executive committee, returned to Philadelphia on Wednesday to attend the commencement exercises of the University of Pennsylvania. His son, Stanley L. Bateman, graduated from the Wharton School of the University. Stanley, who with his older brother, Husten, has attended the conventions in former years, has just received his commission as second lieutenant, U. S. A. Reserve Corps.

Mr. and Mrs. J. W. Bettendorf and Mr. and Mrs. J. H. Bendixen arrived early from Davenport, Iowa. Mr. and Mrs. Bettendorf motored to Atlantic City from their home and enjoyed the trip greatly. At Lafayette, Ind., they were joined by their son, William, who is taking a course in mechanical engineering at Perdue. Mr. and Mrs. Bendixen have as their guest, Mrs. Harry Kleeberg, of Davenport. The entire party is stopping at the Traymore.

The many friends of C. E. Chambers will be glad to learn that his son, James, is rapidly regaining his strength after an operation for appendicitis. Young Mr. Chambers received his degree from Stevens Institute of Technology this year and after graduation went to Schenectady, where he was suddenly taken with a severe attack of appendicitis. Friends took him to a hospital at once, where the operation was performed. His father went to Schenectady, returning a few days ago, after all danger was over.

Harry T. Bentley comes to the convention this year, accompanied by Mrs. Bentley, in his new official capacity as general superintendent of motive power and machinery of the Chicago & North Western. During the past year Mr. Bentley made a flying visit to England, renewing his long-standing friendship with his English railway brothers. He visited the Crewe shops of the London & North Western, the largest railway shops in England, where he first entered railway work. He was accompanied by his daughter, Miss Emily Bentley, who unfortunately was ill with appendicitis during her entire visit on the other side.

Jose Urgelles, general master mechanic, and Jose C. Perez, superintendent of shops of the Cuba Railroad at Camaguey, Cuba, registered as special guests yesterday afternoon. They are representing J. W. Small, superintendent of motive power of the road, who is unable to attend this year. Mr. Small was formerly superintendent of motive power of the Seaboard Air Line and served as mechanical staff officer for the Southern Region of the United States Railroad Administration. Neither Mr. Urgelles nor Mr. Perez has attended the convention before.

R. L. Kline, assistant chief of motive power, Pennsylvania Railroad, arrived early Wednesday morning at the Dennis with his son, H. J. Kline, who was graduated Tuesday as mechanical engineer from Lehigh University. Mr. Kline, Jr., is to make railroading his career. At the university he was president of the Railroad Society and is now serving as special apprentice on the Pennsylvania Railroad at Altoona. He has served part of his time in this course during previous summer vacations and has but two more years to complete the course. He has had a fine start in railroad life and with the lessons to be learned from the successful career of his father, we anticipate a great future for him.

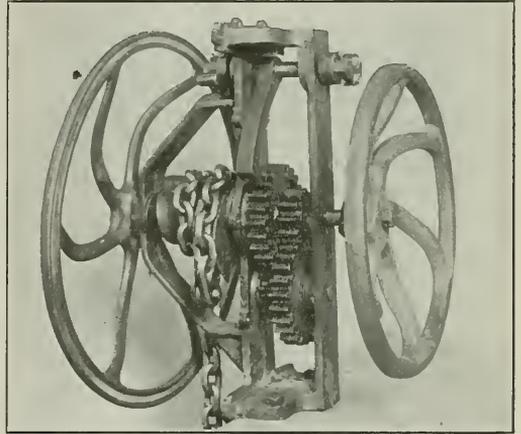

Friends of B. B. Milner, formerly chief mechanical engineer of the New York Central and a very active member of the mechanical associations, will be interested in learning that the Imperial Hotel at Tokyo, Japan, where he was making his headquarters, was partly destroyed by fire on April 17. It was at first reported that Mr. Milner had lost all of his belongings, but a notation from him on a copy of a special edition of a paper describing the fire indicates "nearly every thing saved". The hotel ordinarily can accommodate about 150 guests comfortably, but at the time of the fire there were 165 guests, fifty of them being members of the suite of the Prince of Wales and officers of the H. M. S. *Renown*. Mr. Milner after leaving the New York Central, spent one year in the Orient for Sale & Frazar, Ltd. He returned to this country last fall, but went back to Japan early this year and is now making his headquarters at Tokyo.

J. A. Miller, Superintendent motive power, Florida East Coast, a member of the association since 1890, is here from St. Augustine, Fla., to maintain an almost continuous attendance at these conventions. Mr. Miller is in the unique position of being with a road presenting ideal operating conditions. The Florida East Coast is a water level route of something over 500 miles in length. Oil is used exclusively for fuel on all locomotives. The line is primarily single track, which requires high speed service by both freight and passenger trains. These features have permitted Mr. Miller to establish one class of locomotive for both passenger and freight service and have given him an opportunity for standardization which in his 30 year's experience with that road has not been neglected. All road locomotives have 68-in. driving wheels. They are of the Pacific type, weighing about 200,000 lb., with 22-in. by 26-in. cylinders. This high degree of standardization in power is visibly reflected in cost of maintenance, which is substantially lower than that of other roads in this country.

Peacock Brake for Blind End Cars

A NEW DESIGN of Peacock geared hand brake for baggage, express, mail, and all kinds of so-called blind end cars, is one of the features of the exhibit of the National Brake Company, Inc., Buffalo, N. Y. This design was first used on Canadian Pacific baggage cars but is suitable for general use.

It is the enclosed type and is built of steel throughout. The frame is a one-piece steel casting and is designed for installation in the wall of the car so that all the gears are enclosed by the car wall and protected from dirt and weather. The brake is equipped with a second wheel so that it may be operated from the inside of the car as well as by the larger wheel outside the car. The brake wheel and the chain-winding drum, with a small portion of the frame, is all that is visible from the outside of

Peacock Geared Hand Brake for Blind End Cars

the car so that the brake is not only neat in appearance, but meets the requirements which the severe weather in Northern Canada imposes. The tripping device is so designed that the pawl may be operated from either outside or inside the car. The gears of the brake give a double reduction and are so proportioned that a 100-lb. pull on the outside wheel will yield approximately 3,500 lb. on the brake chain.

Southern Pacific 2-10-2 Type Locomotives Ready for Shipment at the Eddystone Plant of the Baldwin Locomotive Works

New Devices Among the Exhibits

Wrought Steel Truck Side Frame

ONE OF THE remarkable exhibits of this year's convention is a wrought steel truck side frame formed in one piece from open-hearth steel plate. The construction of this frame, developed by the T. H. Symington Company, New York, is entirely different from

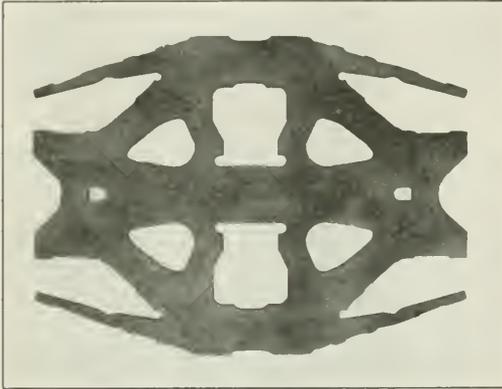

Fig. 1—The Sheared Blank from which the Side Frame Is Made

any other pressed steel truck side frame previously manufactured.

The blank for the entire frame is produced from a steel plate in one piece and at one operation by shearing between dies under a hydraulic press of high capacity. The blank after the shearing operation is shown in Fig. 1.

After flanging, the blank is folded along two lines parallel with, and on either side of the longitudinal center line, following which operation the flanges around the bolster opening and the journal box seat are in contact as shown in Fig. 3. The flanges are then welded together at all points of contact. Bolster wear plates and journal box reinforcing pads are welded in position, brake hanger brackets riveted on and the journal box holes drilled. Cross sections of the frame at various points are shown in Fig. 4.

The journal boxes used with this side frame are the A. R. A. standard arch bar type. The journal box tie bars are integral with the frame and formed in a channel section, which adds materially to the stiffness of the frame. The A. R. A. recommended truck bolster can also be used.

The Symington wrought steel side frame is designed for use with either a rigid or a flexible truck, depending

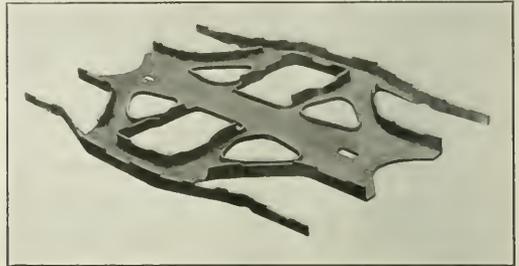

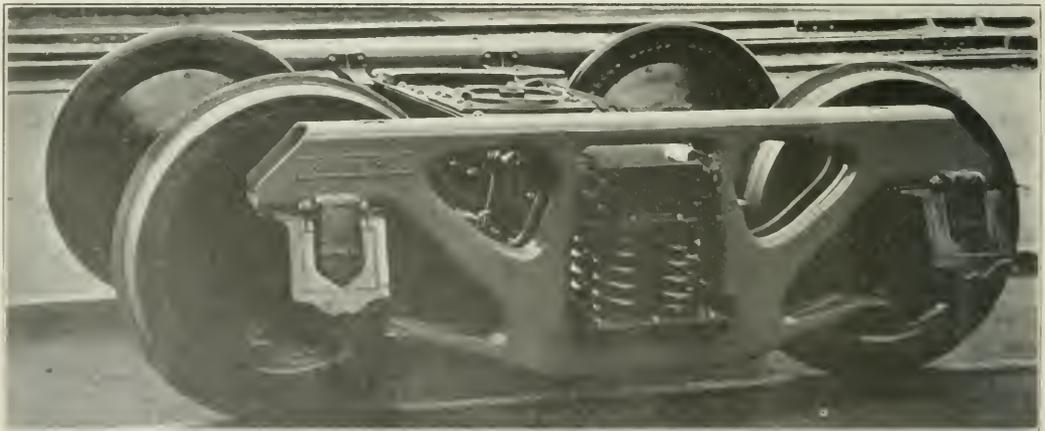

Fig. 2—Flanges Pressed Around Edge of Blank

upon the arrangement of the spring plank. The spring plank seat is not riveted to the side frame but is dropped into place at the bottom of the bolster opening. The

A Freight Car Truck with Symington Pressed Steel side Frames

The sheared blank is then formed in flanging dies to the shape shown in Fig. 2, flanges being formed along the edge and around all of the principal openings.

standard seat has a boss at the center to permit the spring plank to swivel if desired. To make the truck rigid it is only necessary to rivet the spring plank to the seat as

shown on the completed truck. This arrangement makes a rigid truck which can be readily assembled or taken apart.

Renewable wear plates are welded to the faces of the columns, thus preventing any wear of the column proper by the bolster. The brake hanger brackets are of malleable iron, riveted in the standard locations and arranged to take the regular hanger and pin.

The strength of rolled plates is very uniform and the method of manufacture of this side frame insures freedom from imperfections of material. The completed structure is well adapted to withstand repeated impact

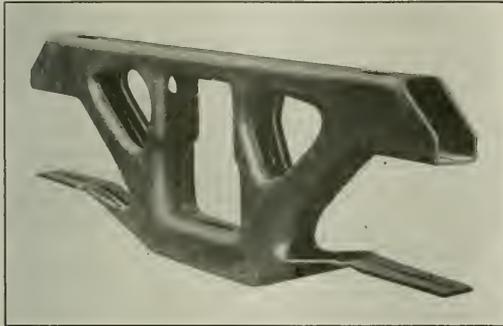

Fig. 3—Frame Folded Ready for Welding

and reversals of stress. It is stated that tests show the frame will carry a static loading equal to any frame now in general use, while the resistance to dynamic stress is greater.

The 55-ton side frame weighs about 300 lb. per car less than the 55-ton cast steel frame of the U. S. R. A. type

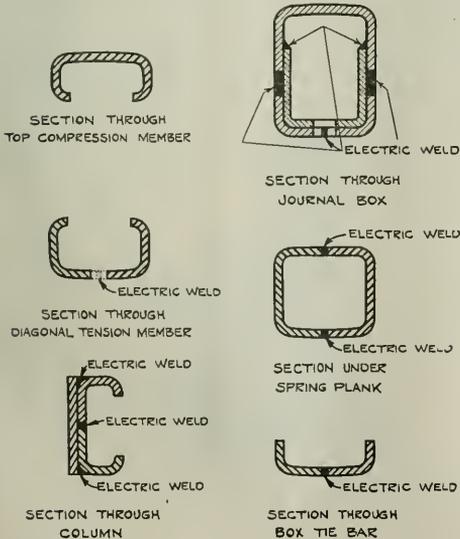

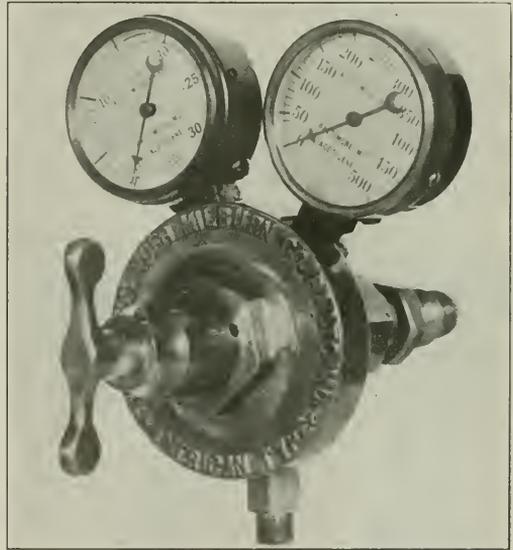

Fig. 4—Typical Sections Through the Frame

and 450 lb. per car less than the A. R. A. design of arch bar side frame of the same nominal capacity. The 55-ton frame is now in production at the works of the Cambria Steel Company and the 40-ton and 70-ton frames will be available shortly.

High Pressure Gas Regulator

FOR THE CONTROL and delivery of acetylene, oxygen, hydrogen and other high pressure gases, the Alexander Milburn Company, Baltimore, Md., has developed the gas regulator shown. Features of this device are said to be simplicity, ease of assembly, direct action and accurate regulation.

The regulator comprises a front cap containing an adjusting key, top spring button and tension spring. The body contains a flexible metal diaphragm in front, soldered in place. Over the diaphragm is screwed a bronze diaphragm plate or spring button to hold the tension spring. Inside the body is a fixed nozzle, containing a loose operating pin. Over the nozzle is loosely assembled the valve sleeve which has a row of gas ports

Milburn High Pressure Gas Regulator

drilled around its circumference and carries the valve seat. The seat closes against the nozzle by initial gas pressure on the valve sleeve and the pressure of a compensating spring resting in the recessed back cap.

The loose operating pin inside the nozzle is actuated at one end by a depression of the diaphragm and at the other end by pressure of the valve seat.

The seat of the regulator closes *with* instead of *against* the pressure, enabling the seating to be effected by a sealing pressure of several pounds instead of hundreds of pounds with attendant risk of damaging or splitting the seat, as in the case of regulators where the seat is yoked to the diaphragm. The closing of Milburn seat is independent of the diaphragm.

The valve is closed by the rear pressure of the compensating spring, assisted by initial gas pressure. When the adjusting key is turned to the right, the tension spring depresses the diaphragm, moving the loose pin, which forces the sleeve back, unseating the valve and permitting gas to enter through ports in the sleeve. The gas then passes through the nozzle to the diaphragm chamber and thence to the low pressure gage and through the outlet port. When multiplied gas pressure exceeds the tension of the

adjusting key spring, the diaphragm is released, permitting the loose pin to advance and letting the valve sleeve close the valve by pressure of the rear compensating spring.

The main operating part of this regulator, comprising only the pin and nozzle and a seat-carrying sleeve, is almost immediately accessible for examination, cleaning or renewal. The seat is subject to slight wear, as the spring closing the seat exerts only a pressure of several pounds in order to effect the regulation of the gas. If it becomes necessary to renew the seat, the sleeve carrying it is easily removed so that a spare sleeve can be immediately inserted, or the seat can be reversed. Every effort has been made in the design of this regulator to secure reduced size and weight with the least number of parts consistent with the function to be performed.

Bradford Boltless Truck Column

A NEW TYPE of boltless truck column has been designed by the Bradford Draft Gear Company, New York, to interchange with bolted columns now used in Diamond arch bar trucks. This column is made of cast steel and has double the cross sectional area of the standard column bolts now used. It is constructed with an opening at the top to admit the upper arch bar at an angle of 45 deg., with a boss cast in this opening that fits into the drilled hole of the arch bar and which locks the column to the arch bar when the column is placed in a normal, vertical position. This column is then locked to the lower arch and tie bars with a cast steel lock which is riveted to the spring plank in the usual way with two $\frac{7}{8}$ -in. rivets.

A double-holed nut, both holes being threaded, made in one piece of cast steel or drop forged, is used for the journal box bolts; the box bolts are then screwed into this double nut from the square head of the bolts. This prevents loss of nuts or loosening of box bolts.

Clark Air Brake Retaining Valve and Bracket

THE CLARK COMPANY, West Pittston, Pa., is showing an air brake pressure retaining valve of novel design. It is not a complete device but consists of a weighted valve which can be substituted for the ordinary weighted valve which was universally used for many years before the introduction of the spring type of retainers. The Clark valve is made of a specially prepared rubber composition which the maker claims will remain elastic, will not cut or corrode the seat, and will not stick to the seat when cars are standing idle. The object of the device is to avoid the expense of discarding the old weighted type retainers and substituting those of the spring type. Old retainers can be converted by substituting a Clark valve and it is claimed that such retainers then become reliable under all conditions.

Two means are provided for adjusting the retained pressure to the desired amount. One provision consists of a screw in the top of the valve stem which can be screwed up or down to secure the desired lift and retained pressure, this adjustment being made on a test rack before the valve is placed in service. The objection to this is that the cap will probably have to be taken off and replaced several times before the exact adjustment is secured. To avoid this objection an adjusting and a lock screw can be put in the cap or weight cap and adjustment then obtained without the necessity of renewing the

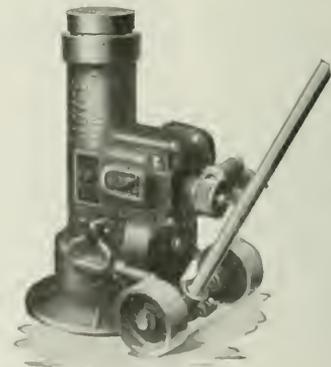

Another device shown is a retaining valve bracket which is permanently bolted to the car. It consists of a steel plate with two lugs and studs holding cars. To apply a retaining valve it is simply set in place, the stud nuts loosened, the cars allowed to drop down over the brackets on the retaining valve body and the nuts then tightened. By using this bracket and placing a union in the pipe below the retainer, it can be more easily applied or removed than by the method of attachment ordinarily followed.

Self-Lowering Ball-Bearing Jack

THE NEW JOYCE jack, illustrated, is made by the Joyce-Cridland Company, Dayton, Ohio, and is designed with its own bracket and wheels attached. The wheels are 5½ in. in diameter and sturdily built and attached, so that they cannot be easily knocked off. The operating lever is inserted in a socket and is used for a handle in wheeling the jack about. This also enables the operator to spot the jack directly under the jacking point and eliminates much exertion in pulling and tugging at the jack to get it directly under the load.

The jack is built in either the inverted or upright style, depending upon whether a large head or a small head is required. All shafts run in bronze bushings and the entire lowering mechanism runs in an oil bath which insures constant lubrication to all parts. It is only necessary to oil the jack about every six months, when the oil should be changed as in the crank case of an automobile. The jack is made in 50 and 75-ton capacities and over 50 per cent of the parts of different capacities are interchangeable; all parts, with the exception of the base, sleeve and cap of the inverted type, are interchangeable with the upright type. This is advantageous where various tonnage jacks of both inverted and upright types are used on the same road.

The Joyce jack is designed to stand an overload of 20 per cent. No exertion is required in lowering the load

Joyce Self-Lowering Ball-Bearing Jack

which is controlled by a small lever at the side of the jack through a system of worm and wormgears. Lowering is said to be under the absolute control of the operator who can at all times stop the load within the fractional part of an inch.

Coupling Devices

TWO DEVICES of especial interest have been brought out recently by the McConway & Torley Company, Pittsburgh, Pa.; these are a quadruple shear coupling connection for passenger cars and locomotive tenders and an uncoupling device for type D passenger couplers.

The former of these devices, as will be observed by an inspection of the booth where it is exhibited, is a coupler and yoke connection providing greater strength and bearing surface than is ordinarily afforded in the common type of tail pin connection. The end of the coupler passes through three lugs on the yoke and is connected by a tail pin, inserted from below. This tail pin is held in place by a retaining plate and a split cotter, both of which are readily accessible. This arrangement enables the draft gear followers and yoke to be assembled in a unit, an important advantage. Obviously the tail pin is in quadruple shear.

The uncoupling device for passenger cars can be used with type D couplers fitted with underneath release. It has several important advantages, including simplicity in design, a section of ample proportions, easy application and removal and rigidity. The coupling may be disconnected from either one or both sides of the car if desired. The uncoupling rods clear all train pipes and platform attachments. They rotate for uncoupling in accordance with the usual practice on freight cars, eliminating the possibility of train partings due to short or bent pull rods. The uncoupling rods work independently of each other, the one in use at the time of uncoupling not operating the one on the other side.

Tank Car Valves

WITHIN THE LAST few years a number of complaints have been made of the failure of the present A. R. A. standard type outlet valve to prevent leakage, particularly of volatile products. Investigation has disclosed in the majority of cases that the trouble was due, aside from the "breathing" of the tank, to grit, straws, patches of gummy residue, etc., lodging on the valve seat and preventing the valve from going solidly into place. Investigation further disclosed the fact that when the valve seat was properly wiped off or cleaned the trouble with leakage generally disappeared. With a knowledge of the above conditions the American Car & Foundry Company, New York, designed the two valves described below.

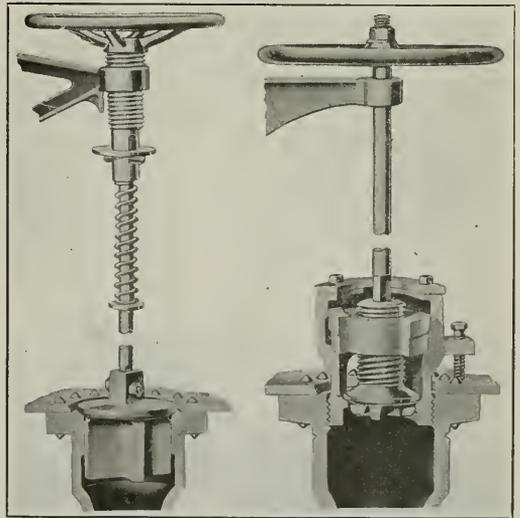

In applying the self-grinding valve, shown at the left of the illustration, the A. R. A. outlet chamber and valve are not changed nor is it necessary to throw away the valve rod and the valve rod spring. It is necessary, however, to cut off the upper part of the valve rod, cut the old valve rod bracket off the dome, apply a new threaded bracket, and substitute for the cam and handle the new type handwheel, all of which may be done at a small expense.

The principal feature of this valve is the property it possesses of wiping or cleaning the valve seat every time the valve is opened or closed, so that any foreign matter is dislodged and swept into the outlet chamber. Assuming the valve to be closed tightly on its seat, to open it the handwheel is turned to the left. This revolves the valve on its seat and the resultant wiping or cleaning effect continues until the lower end of the slot in the shank of the handwheel comes into contact with the 3/8-in. pipe thimbles riveted to the valve rod. Any further revolution of the handwheel to the left results in raising the valve from its seat.

To close the valve the handwheel is revolved to the right until the valve touches its seat. By revolving the handwheel further the spring is compressed and this compression serves to hold the valve tightly in place. During these latter revolutions the wiping or cleaning effort is again obtained. The function of the spring is to take care of variations in height from the valve to the handwheel bracket, these variations being due to the "breathing" of the loaded tank while in transit.

In addition to the wiping or cleaning effect which is a characteristic of the self-grinding valve, the positive self-locking valve, shown at the right, has the advantage of a positive lock. By this is meant that when this valve is finally seated it is absolutely impossible to force it off its seat by the upward pressure of a bar or any other instrument inserted in the outlet chamber. Furthermore, the locking and wiping mechanism is at the bottom of the tank and, as the valve rod slides freely in the valve dome bracket which, in the case of this valve acts as a guide only, the "breathing" of the loaded tank in transit cannot lift the valve from its seat and permit valve leakage. The positive self-locking valve also embodies practically all the desirable features for a bottom outlet valve as outlined on page 52 of the A. R. A. tank car specifications of 1920.

The substitution of this valve to existing tank car equipment fitted with the standard A. R. A. type of outlet valve necessitates replacement of the outlet chamber with one of a new type. The rivet spacing in the flange of

Self-Grinding and Self-Locking Tank Car Valves

the new outlet chamber agrees, however, with that on existing standard American Car & Foundry Company outlets, so that the old outlet may be removed and the new one applied without punching or drilling any new holes in the tank shell. New valve rods and handwheels are also required, as the old style cam and handle is not suitable for this type valve. It is not necessary, however, to replace the valve rod dome bracket, as almost any type bracket can be used.

To open the valve the handwheel at the top of the valve rod is turned to the left. This imparts a vertical downward movement to the wing nut, but the valve does not yet rise from its seat; it simply turns in the same direction

and at the same speed as the handwheel until about three complete revolutions have been made. By this time the wing nut is bottomed on the lower shelf inside the valve cage, and any further revolutions of the handwheel result in raising the valve off its seat.

To close the valve the handwheel is turned to the right, this movement resulting in a downward vertical travel of the valve until the bearing surface comes into contact with the valve seat in the cage. When this occurs the wing nut begins to move upward and the valve itself completes the three wiping or cleaning revolutions on its seat until the wing nut comes into contact with the upper shelf in the valve cage. Any further revolution of the handwheel simply increase the tightness with which the valve is forced to its seat.

Both valves can be readily adapted to the discharge of tank cars without removing the dome covers, by extending the valve rod through a stuffing box located on top of dome and when so operated these valves should always be used with the newly designed A. C. & F. Co. vacuum valve, the use of which automatically prevents the formation of a vacuum inside the tank.

Bucyrus Caterpillar Shovel

THE BUCYRUS COMPANY, South Milwaukee, Wis., has recently announced that it is prepared to equip all sizes of railroad-type shovels with caterpillar traction. The principal advantages of mounting a shovel of this type on caterpillars may be summarized as follows: no time lost in moving up, an ordinary move requiring about 10 sec. only; no rails to lay, no jacks to release and set and no stops during operation to reset jacks; may be quickly and easily moved back out of the way, or turned around; can always dig at most effective distance from bank; lighter work for pitmen and fewer men required.

This mounting consists in general of two forward caterpillars, replacing the jack arm, and two rear caterpillars mounted under the rear end of the shovel. Both front caterpillars are drivers and are so designed that they can swivel and adjust themselves to unevenness of the ground. The rear caterpillars consist of two units

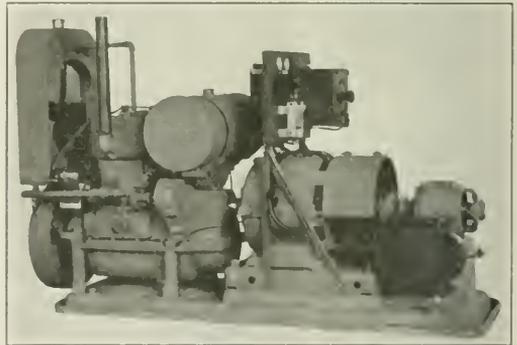

engages a pinion on a vertical shaft and is driven by an independent center-valve, reverse-type engine, suspended underneath the frame. This engine may be operated either from the operator's stand or from the ground alongside the rear caterpillars. Steering in curves of large diameter may be done by the swinging of the boom without the steering mechanism.

Propelling is accomplished through the front caterpillars. Both may be driven together or each one independently, forward or backward. The propelling speed is about half a mile an hour. The tractive effort is sufficient to enable the shovel to climb 15 per cent. to 20 per cent. grades with ease. For transportation by rail, railroad trucks may easily be substituted.

Electric Welder With Gas Engine Drive

A COMPACT OUTFIT for electric arc welding, consisting of a gas engine, a welding generator, and control panel, has been developed by the Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. This outfit should be adaptable for use on maintenance of way trains or for use in any place where it is desirable to employ arc welding or cutting, and where electric power is not available.

The gasoline engine is a 2-cylinder, slow-speed, marine type, and the outfit is completely self-contained, the engine

A Self-Contained Gas Engine-Driven Electric Welding Outfit

and generator equipment being mounted on a substantial baseplate, together with the oil and gasoline tanks and a radiator for cooling the engine. Forced feed lubrication is used, making it unnecessary to level the machine before placing it in operation.

Plush Renovator

A LIQUID CLEANSER, known as Chase plush renovator, has been developed by L. C. Chase & Co., Boston, Mass., makers of Mohair car plush. This compound is in concentrated form—a small quantity to a plentiful supply of water makes an ideal solution for ordinary soiled surfaces. Where dirt is more stubborn, a stronger solution can be made; even though used full strength, it is guaranteed harmless. It is said that it will not start the dyes nor impair the surface beauty, is non-inflammable, contains no harmful ingredients such as gasoline, and has practically no odor.

Railroad Type Shovel With Caterpillar Traction

mounted on the same frame and are designed with sufficient strength to permit the crossing of holes and ditches without the delay incidental to filling in.

Steering is accomplished through the rear caterpillars, the steering arm being integral with the pinion of the rear trucks. It carries a heavy gear segment which

Entered at the Post Office of New York, N. Y., as mail matter of the second class.

Subscriptions, including 52 regular weekly issues and special daily editions published from time to time in New York, or in places other than New York, payable in advance and postage free; United States, Mexico and Canada \$6.00. Foreign Countries (excepting daily editions), \$8.00. Foreign subscriptions may be paid through our London office in £ s. d. Single copies, 25 cents each.

WE GUARANTEE that of this issue, 12,000 copies were printed; that of these 12,000 copies, 10,300 were mailed to regular paid subscribers to the Railway Age and Railway Mechanical Engineer; 110 were mailed to advertisers; 490 were provided for counter and news companies sales, new subscriptions, bound volumes, samples, copies lost in the mail and office use; 1,100 copies for distribution at Atlantic City.

THE RAILWAY AGE is a member of the Associated Business Papers (A. B. P.) and of the Audit Bureau of Circulations (A. B. C.)

The steadily increasing use of Diesel engines is one of the noticeable changes now taking place in engineering practice. American engineers have been followers in this field rather than leaders. For marine work it was left for European builders to make extensive applications of Diesel engines for propelling ships before American builders finally woke up to the fact that in many instances such motor ships were being operated at noticeably lower costs than similar modern ships using steam propulsion. Diesel engines are now being installed in American ships and the number so equipped would doubtless be much greater if the shipbuilding industry were not at present in a dormant condition. The Diesel engine has reached a high level of development and can be operated at a remarkably low cost for fuel and lubricating oils. Moreover, at present a number of European rail motor cars are being driven by such engines and they are reported to be highly satisfactory as regards reliability and operating costs. The most extensive applications have been in Sweden where transmission has been of the electric type. In view of the increasing demand in this country for larger rail motor cars than can be propelled by gasoline engines thus far developed for highway trucks, the ad-

vantages of the Diesel engine should be thoroughly investigated. Such engines would appear to be well suited for this particular service.

It is to be hoped that Chairman Tollerton's invitation to the younger men to take an active part in the meeting will encourage some of the members who are not so well known to present their views on the floor. Nothing contributes more to the value of the meetings than free discussion and often men out on the line can give valuable suggestions from their intimate knowledge of the problems met in everyday operation. Apparently the younger members are diffident about talking on the floor, for a list of those who discuss the papers would usually read like a directory of superintendents of motive power and master car builders. Possibly this is partly due to the fact that committee work is delegated almost entirely to the higher officers. Would it not be a good thing to cut out some of the duplication in committees and give the younger men a chance?

Now is the time to prepare for the demand for coal cars that is sure to come with the settlement of the coal strike and the increase in business that regularly comes in the late summer and early fall. Why not line this strike cloud with silver and use the enforced idleness of the cars to put them in real serviceable condition? Such a small amount of coal is being carried now that there has been no opportunity for the usual storage for winter use, and when the strike is settled there is sure to be a great demand for cars. Making the repairs now when there is plenty of time and opportunity for doing the work will permit of making economical repairs, will mean a large saving in revenue when the rush comes and will greatly relieve congestion caused by defective equipment. Business is on the up-grade. Be sure you are ready to handle the peak load when it comes.

Watch the Car Situation

It would at times almost appear as though the railroads must have recruited many of their mechanical officers from the state of Missouri, and in addition must have limited applications for positions to those whose ideas had become fixed. This, at least, seems to be the impression frequently gained by the man who is trying to introduce some new mechanical device to the railroad field. If this attitude stopped with the demand for a statement as to what advantages might accrue from the use of the device and an investigation as to how the results arrived at were to be obtained, all would be well. Frequently, however, the attitude of mind goes further and no one appears to be willing to buy or even try something that has not yet become a demonstrated success on some other road—a fear of making a possible mistake that someone will find out about. No matter how well conceived any device may be, the records of the past show that very few ever amounted to anything until after they had passed through a long stage of development, and success was finally built up on the foundation of failure. Conservatism has a

place, but a fear to try anything because it might possibly not turn out well never accomplished anything except to act as an impediment to progress. Much greater advancement might be accomplished by a greater willingness to aid in necessary development work from which all would benefit.

The report on train lighting equipment and practice presented yesterday morning was a carefully prepared report

Why Present Electrical Reports?

that contained a fund of valuable information, but as is usual with an electrical report presented to the Mechanical Division, it provoked no apparent interest. It was ably presented by E. W. Jansen, electrical engineer, Illinois Central, but he was the only one who discussed it. The report included data on car lighting, generator belts, specifications for lamps and lamp regulators, and outlined the present status of direct drive for car lighting generators. The report stated that at the present time there is no type of direct drive which does not include features that are objectionable to the extent of practically prohibiting its general use. At the same time it stated that there was a place for such equipment and it is entirely probable that apparatus will be developed which will meet all requirements. In his discussion Mr. Jansen showed how it was possible to save real money by improving the present method of belt drive, but this statement apparently fell on deaf ears. The same report will be presented before the Association of Railway Electrical Engineers, where, as usual, it will undoubtedly provoke lively discussion. What is the answer? The electrical department or departments on every railroad are growing rapidly and reports on electrical matters are becoming of ever-increasing importance, but apparently a meeting of the Mechanical Division is not the place to present them.

There is a wide difference of opinion among the railroads as to what constitutes the most economical type of open

Composite or All-Steel Car Construction?

top car construction. For a period of about 20 years, ending with our entrance into the European war, the all-steel type of construction gained steadily in prestige. A shortage of steel for other than war purposes then forced the extensive building of cars of the composite type. Since the end of the war there has been evidence of a growing disposition to question the supremacy of the all-steel coal car, because maintenance costs have proved to be much higher than was expected when the type first received serious consideration. The maintenance characteristics of steel and wood cars differ widely. Cars with wood superstructures require frequent light repairs and, if well designed, can be given a general overhauling at a comparatively moderate cost. The all-steel car, on the other hand, requires comparatively little attention beyond running repairs until wear and corrosion necessitate extensive renewal of the side and hopper or floor sheets, when the mill are also frequently found to be badly corroded. This frequently entails completely rebuilding the car body, at a cost under current prices often greater than the original cost of the car. Both types require paint protection. The maintenance of a proper protective coat is much more difficult on the steel car and very much more important than on the car of composite construction, and consequently it is much more generally neglected. Furthermore, rail-

road repair points are much better fitted to take care of the composite cars. Where the life of the steel car does not exceed eight or ten years before rebuilding becomes necessary—and this is not exceptional—it becomes a serious question whether the composite type would not prove to be the more economical. Under conditions such that the steel car will operate for 15 years, the comparison may be much more favorable to the all-steel type of construction. The dissimilarity in the characteristics of the two cars makes a true comparison of the ultimate maintenance costs somewhat difficult, and in this connection it should be pointed out that the small but frequent repair jobs required on a car of wood or composite construction tend toward wastefulness which is less readily checked than in the case of the more extensive repairs usually required when the steel car comes into the shop. This question is one which cannot be answered except on the basis of a careful study in which differences in the local conditions are taken into consideration. Opinions formed without such a study are as likely to be wrong as to be right.

There appears to be considerable interest in several European countries in the subject of roller bearings as applied

Roller Bearings for Car Trucks

to use on passenger and freight car journals. Several designs of such bearings are in service at the present time, and although it can not yet be said that any of them has passed the experimental stage, the results thus far obtained with some of them are quite encouraging. There has been a slight interest in the matter in this country also, although by no means as much as its importance would seem to warrant. There is no doubt that a successful adaptation of roller bearings here would effect noticeable economies in the costs of train operation. The ability to run for relatively long periods of time without additional lubrication and without danger of hot boxes or need of frequent inspection would be a step forward that would be welcomed by all. Despite the attractiveness of the proposition, and the fact that roller bearings have been successfully applied in many other fields, railroad men have fought shy of the innovation. Possibly this is because of a knowledge that several designs have been offered to them which looked well and did work well for a time, but eventually gave considerable trouble after sufficient time had elapsed to allow the results of fatigue to become manifest. The perfecting of a design of roller bearings for car trucks is bound to take some time, but little will be accomplished until the railroads attack the problem seriously and are willing to carry on a considerable number of tests for developmental purposes.

It may be true that, owing to the extremely rapid spread of autogenous welding, much of the work formerly sent to the railroad blacksmith shop now

Forging Machines Demonstrate Value

never leaves the erecting shop. Granting that this loss of work has a tendency to lessen the importance of the blacksmith shop, this department has more than held its own on a production basis because of the machine and drop forging work. Many locomotive and car parts are made at a minimum cost by the use of production forging machines, an interesting example of these operations being described in the December, 1921, *Railway Mechanical Engineer*. This article told of the machine forging work at the Elizabethport

shops of the Central Railroad of New Jersey, but the work is typical of that carried on at many other points. Bolts are made in great numbers and all sizes on forging machines. Truck cross-ties, draft sills, reinforcement channels, drawbar yokes, air brake levers and hundreds of small parts for use on locomotives and cars are produced in quantity by efficient forging machines. The quality of the work is excellent and its cost compares favorably with that of other methods of manufacture. The field for drop forging work also is very large and one which has not been developed as fully as it should in railroad shops. It is essential in all this work that dies be properly designed and carefully heat treated. Railroad men responsible for the design of these dies are to be congratulated on the mechanical ingenuity and knowledge of the flow metal under pressure which is often displayed. The reduced labor cost due to manufacturing more or less complicated parts at a single stroke of the hammer is self-evident and this work should be extended.

There is probably no lack of agreement on the proposition that all freight cars should be maintained as defects develop. In fact, this is the purpose of

**Penalty Prices
in
the Rules**

Rule 1 of the interchange code. Likewise, it is unquestionably a fact that foreign cars are quite generally neglected until it becomes necessary to return them home in bad order for heavy repairs. No incentive seems to have been found, however, to make the provisions of Rule 1 more than a pleasing fiction. The RAILWAY AGE has advocated the adoption of a schedule of billing prices for labor and material deliberately fixed to include a fair commercial profit from all operations performed under the price rules. This, it is believed, is sound in principle. There is no more reason to expect the railroads, which are essentially private corporations organized for profit, to perform at cost a service involving large expenditures for labor and material and requiring an extensive investment in facilities, than it would be to expect them to perform transportation service on the same basis. One of the objections which has been raised to this suggestion is that it would not prove effective, since the responsibility for financial results and the performance of maintenance operations is so widely separated. In this connection it is interesting to note in the report of the Committee on Prices for Labor and Material the application of this very principle in the establishment of prices for journal box lids with a differential intended to make the application of the A. R. A. standard lid profitable, and the application of other lids unprofitable. No doubt these are difficulties which would have to be overcome in establishing a set of prices in which a profit is included. But these do not include a lack of effectiveness as an incentive to improve the general standard of car maintenance.

In selecting a foreman or an officer of any railroad it is important to keep in mind not only his qualifications as

**The Foreman
and the
Public**

a leader of the men under him, but also his potential possibilities for making friends for the railroad. Remember that these men, because of their official connection, are looked upon by the public as integral parts of the railroad management. Then, too, the influence that they may have

upon the men under them will be reflected as the men themselves deal with the public, of which they form a large part in many communities. It is true that the type of man that will make a good leader will in most cases be one who can make a favorable impression upon the public. He cannot, however, make good in a large way unless he is fully informed as to the spirit of the management and of the facts about the road's operation, financing, etc., which may be misunderstood or misinterpreted by the public. If every railroad foreman and subordinate officer were fully informed as to facts about the railroad and its relations with the public, they could render invaluable service in these troublesome days. It is the force of public opinion, after all, that makes our Congressmen and public servants "toe the mark." Fortunately, or unfortunately, whichever way you may view the matter, public opinion forms and crystallizes slowly; it requires a long, slow and sometimes tedious program of education to change it. It is vital if the railroads are to prosper—and the prosperity of the entire country depends upon them—that railroad foremen, dealing as they do with the men in the ranks and holding responsible positions in the eyes of the public, should be selected and trained to interpret the spirit of the railroad and present the facts concerning it to the workmen and the public.

In any consideration of plans for conserving fuel it should not be forgotten that railway power plants, numbering over 1200 in the United States, are large fuel consumers. Do power

**Spotting
Power Plant
Fuel Wastes**

plant engineers and higher mechanical officers give these plants the continuous attention without which economy in fuel consumption will never be secured? It has been estimated that the average power plant wastes 25 per cent of its fuel in preventable heat losses while burning and these losses will never stop by themselves. They will never stop until some one in authority develops a definite plan for locating the losses, stopping them and keeping them stopped. A method of accomplishing these three objectives is outlined by Joseph W. Hays in an intensely practical little book entitled, "How to Build Up Furnace Efficiency," which passed through its tenth edition in 1916. Mr. Hays states that the only equipment necessary for "spotting" fuel wastes consists of some tallow candles, a flue gas analyzer, a sensitive differential draft gage and high temperature thermometer or pyrometer. With the idea of checking up fuel wastes the following questions are put directly up to each power plant engineer.

"What is the efficiency of your boiler furnaces? What draft in your boiler furnaces will carry your load and burn the least coal? Have you calibrated your boiler dampers and the main breeching damper? Have you equalized the draft among the boilers? How much air is leaking through your boiler settings? When is an air leak an aid to efficiency? Where are the air leaks that are injuring efficiency? How much too much air are your firemen permitting to flow through the fuel bed? Do your firemen admit more air than is necessary at the furnace either above or below the fire? How much excess air from all sources are you heating and sending up the chimney? How thick should the particular coal you are burning be carried on the particular grates you are using? Are you using the coal best adapted to your conditions? Are you using the grates best adapted to your conditions? Should the coal you are using be fired dry or wet for greatest economy? Is the grate surface just right for the highest economy? How much and what kind of combustible is passing up your chimney? What are the specific causes of the smoke you are making? Is the low evaporation of which you complain due to the boiler, the furnace, the coal or the fireman? If you don't know why the evaporation is low, how will you proceed to increase the evaporation? How much coal is your poor fireman wasting and how much more can your best fireman save? Will you state under oath that the boiler headers are always properly packed and the setting and baffling always in proper condition before your boilers are put into service?"

A satisfactory answer to these questions will be impossible unless most of the fuel wastes have been "spotted," and if any plant engineer does not know how to answer the questions, he should either resign or take a course in combustion engineering.

Yesterday's Entertainment

THE ENTERTAINMENT activities of yesterday ended at an early hour this morning. An orchestral concert was given in the ballroom on the pier in the morning, followed by an informal dance in the afternoon and tea at 4:30 o'clock.

At 9:30 in the evening the formal hall of the week was opened. To the music of an enlarged orchestra the grand march, so dear to the hearts of the "old guard" of M. C. B. and M. M. times, commenced. The large floor of the ballroom was completely occupied by the marchers. On all sides in the exhibit booths and in the balconies there were throngs of ladies and gentlemen who did not take part in the march, but who were interested spectators. Dancing followed the grand march and was prolonged to a late, or rather an early hour.

Great credit belongs to the Entertainment Committee Chairman R. J. Himmelright and his co-workers and to the following sub-committee which was in charge last night: C. W. Floyd Coffin, chairman; Lewis O. Cameron, W. G. Cook, J. W. Fogg, G. A. Nicel, Jr., F. W. Venton, W. R. Walsh and W. M. Wilson.

Chief Interchange Inspectors to Hold Annual Meeting in Chicago

THE CHIEF INTERCHANGE Car Inspectors' & Car Foremen's Association has decided to hold its annual convention in Chicago August 22-24. The hotel in which the meetings will take place has not yet been selected. The subjects to be discussed, in addition to the usual consideration of the rules of interchange and loading rules, include the following: Car department apprenticeship, freight claim prevention, train yard repair conditions and preparing cars for flour loading.

Enrollment

THE ENROLLMENT booth at the main entrance to the Million Dollar Pier will be open today from 9.00 a. m. to 1.00 p. m.; 2.00 p. m. to 6.00 p. m.; and 7.00 p. m. to 8.00 p. m.

New President for Standard Coupler Company

COL. DOUGLAS I. MCKAY is attending the convention this year as president of the Standard Coupler Company, having been elected recently to that position. Colonel McKay was born in New York in 1883. After completing a course in the public schools he attended the College of the City of New York for three years and then entered West Point Academy, from which he was graduated with highest honors in 1905. He was commissioned a second lieutenant in the Coast Artillery and was promoted to first lieutenant in 1907. In 1908 he resigned to enter civil life and was appointed deputy chief of state constabulary. After a few months' service in this capacity he was promoted to chief in which position he served for three years.

In 1911 he was appointed first deputy police commissioner of the City of New York, having charge of the business administration of the department and direct command of the uniformed force. In 1913 he was appointed police commissioner. Colonel McKay resigned from the police department in 1914 to become assistant to the

president of J. G. White & Co., of which organization he became vice-president in 1915 and a director in 1916.

Shortly after this country entered the war Colonel McKay resigned to enter the army and was commissioned a major in the Ordnance Department. In December, 1917, he was promoted to lieutenant colonel and assigned to the general staff. In March, 1918, he was made a colonel and continued on general staff duty until August, when he was assigned to the position of emergency director of artillery ammunition production. He received his discharge at the end of 1918 and was elected president of the International Pulverized Fuel Corporation and Pulverized Fuel Equipment Corporation. Colonel McKay is a director of the Botany Worsted Mills, the International Agricultural Corporation and the Atlantic Trust Company of Baltimore.

John Woodrow Marden

JOHAN WOODROW MARDEN, for many years superintendent of the car department of the Boston & Maine, died on May 22 at his home in Waltham, Mass., at the age of 82. Mr. Marden entered the employ of the Concord Railroad as a repair man and later went to the Norwich & Worcester as general foreman. He left this position to become master car builder of the Fitchburg Railroad. He later acted for that road in the capacity of superintendent of rolling stock, superintendent of motive power, and superintendent of bridges and buildings. When the Fitchburg Railroad became a part of the Boston & Maine, he was made general foreman of the Fitchburg division and was later promoted to superintendent of the car department, which position he held up to the time of his retirement. Mr. Marden was a past president of the Master Car Builders' Association and also of the New England Railroad Club.

Train Control Order Reissued

THE INTERSTATE COMMERCE COMMISSION today made public its order to 49 railroads to install automatic train stops or train control devices upon designated portions of their roads comprising at least one full passenger division substantially in the form of the tentative order of January 10, except that the date for filing report and completing the installation is extended six months, so that the installation is required to be completed by January 1, 1925.

The specifications and requirements appear to be substantially as in the tentative order. Each road is required to file with the Commission on or before January 1, 1923, complete plans of its signal systems and the number and types of locomotives on the designated portion of the line, and to proceed without unnecessary delay to select and install the device; also to file by January 1, 1923, and each month thereafter reports of progress made, with reference to preparation for and installation of the device. However, the Pennsylvania, Panhandle, West Jersey & Seaboard, Long Island and Norfolk & Western will not be required to file the plans and reports until July 1, 1923, for the installation between Lewistown and Sunbury, Pa. The Commission's report says it has eliminated the provision in the specifications of the joint committee under which engineman would be permitted, if alert, to forestall the automatic brake application and proceed.

It has decided not to limit the order to roads or portions of roads already equipped with automatic block signals because it has no desire to discourage efforts to control trains automatically without the use of fixed wayside signals.

American Railway Association—Division V—Mechanical

Presentation of Five Committee Reports With Discussion Following Each Occupy Busy Session

Chairman Tollerton called the meeting to order at 10 a.m.

Report on Prices for Labor and Materials

Aside from reductions in the wheel prices, few revisions in the prices for materials have been made by the committee this year. The labor rates have been reduced 10 cents an hour from the present \$1.20 an hour in Rule 101 and \$1.45 an hour for tank car repairs in Rule 107.

The principal work of the committee has been in revising the time allowance in Rule 107 to compensate for increases in labor efficiency since 1920. These revisions are based on a 20 per cent improvement in output under day-work conditions. The allowances for more than 50 items

have been increased, principal among which are 38 items dealing with sill renewals. The committee recommends that no change be made in the time allowances for air brake repairs.

Additional allowances of \$100 for cast steel wheels and \$125 for rolled steel wheels are recommended in the settlement prices for destroyed cars under Rule 112. The committee expects to include further revisions in material prices in the 1922 code, if further price declines take place before the new code becomes effective.

THE COMMITTEE SUBMITS the following report under Freight Car Rules 101, 107, 111 and 112, and Passenger Car Rules 21 and 22:

The material prices recommended are the same as those reported under Supplement No. 1 of May 1, 1922, with the exception of certain items which have been adjusted due to market conditions. They are based on the average purchase price as reported by seven large roads during January and February, 1922, as well as current quotations of several large railway supply companies. The material prices include transportation charges, direct and indirect storeroom expenses, manufacturing cost wherever involved, and interest on stock investments, which is based on the average monthly inventory balance, multiplied by interest rate and result divided by total annual material disbursements. Scrap credits were based on the average current scrap material prices.

These material prices are recommended with the understanding that if there is any further decline before 1923, same would be

adjusted to existing conditions prior to the 1922 rules going into effect.

The present labor allowances were based on time studies conducted during 1915 and 1916, with proper adjustment for decreased productivity of labor on day work basis as compared with piece work basis which existed when the present allowances were established. A recent study conducted on three large roads developed that the time at present required to perform freight car repairs made necessary, due to improved efficiency of labor on day work, the removal of part of the adjustment referred to, in order that the labor allowances might reflect present day work productivity, and the labor allowances that were adjusted in 1920 have been reduced approximately 20 per cent. In recommending these allowances due consideration was given to the fact that the majority of repairs to foreign cars is being done on a day work basis.

The labor rate per hour (Item 175, Rule 101) is recommended at \$1.10 per hour, which is based on a study of 20,006 men, being

the weighted average hourly rate paid repairs on wooden, steel and composite freight train cars by eight large roads, plus the average direct and indirect overhead of 62 per cent as reported by six representative roads.

Preserving the present differential, the labor rates per hour (Items 19 and 20 of Rule 21) are recommended at 85 cents per hour for labor on lubrication and \$1.20 per hour for labor repairs to passenger train equipment.

Any reduction in the basic hourly rate before 1923 is to be adjusted before the rules go into effect.

The committee also recommends under Items 458, 459 and 460, Rule 107, a charge for dismantling all-steel constructed cars, which at present is being charged at actual cost. The recommendations are the average results based on the study of 123 cars submitted by three large roads, and covers all necessary cost of cutting, handling, sorting and weighing the scrap.

The present charges under Rule 111 are to remain, as the reductions are very slight and the committee felt that no reduction ought to be made at the present time.

The pound prices for cars in Rule 112 is based upon statistics furnished by the President's Conference Committee. With the rapidly declining market, your committee, in the absence of complete figures from the President's Conference Committee on new car costs for the full year of 1921, made an arbitrary reduction of 30 per cent, effective from May 1, 1922, which was covered by Supplement No. 1, dated May 1, 1922. Any further reductions before the 1922 rules go into effect, obtained either from the market conditions or through the obtaining of complete data from the President's Conference Committee on the 1921 cost of new equipment, will be adjusted and included in the 1922 rules, which go into effect as of January 1, 1923.

An additional allowance of \$100.00 for cars equipped with cast steel wheels, and \$125.00 for cars equipped with rolled steel wheels, is recommended under Rule 112, which represents the difference in value over the cast iron wheels, due consideration being given the lower scrap credits for these kind of wheels.

The committee also proposed changes in the scrap and service metal charges for new wrought steel wheels, Rule 98, as follows: Scrap value for metal inside the condemning limit reduced from \$5.55 to \$1.90; service metal value reduced from \$2.21 for each 1-16 inch to \$1.52. The labor charge of 1.8 hours allowed for restoring the standard contour is also reduced to 1.4 hours in question No. 3 under the interpretation of this rule. The revisions in material prices in Rules 101 and 22 were almost entirely confined to wheels. Items 190, 190-A and 190-B, Rule 101, covering charges for stenciling, have been transposed to Rule 107, Items 376, 376-A and 376-B.—EDITOR.]

The report is signed by A. E. Calkins (chairman), N. Y. C.; Ira Everett, Lehigh Valley; J. H. Milton, C. R. I. & P.; C. N. Swanson, A. T. & S. F.; T. J. Boring, Penn. System; E. H. Weigman, L. & N.; I. N. Clark, Grand Trunk; H. G. Griffin, Morris & Co., and A. E. Smith, Union Tank Car Co.

Discussion

A. E. Calkins (N. Y. C.): Under Rule 98 you will see it is practically a repetition of last year's rule except that we have adjusted the prices so as to hit the present cost price of wrought steel wheels on account of the lowering of those wheels. Rule 107, as you see, sets forth the labor charge as \$1.10 per hour for freight cars, and \$1.35 per hour for tank cars, (Item 443). The notes on Rule 21 I have already mentioned in the summary of the report.

C. E. Fuller (U. P.): I do not think there is any subject before this convention that is as important as the Price Committee Report. It is dollars and cents for all of us. There is more or less criticism during the year relative to prices. The question of repairing foreign cars and being able to get out even is discussed, and I hate to see this convention close this report without having some of the men who are repairing cars tell us something about it. We cannot hope to get 100 per cent, but we can get nearer 100 per cent if we get the expression of the men who are doing this work.

It is my feeling that car men themselves are the ones who should give us the information, men who are right on the ground floor and doing the work, and while I do not see

anything about this report that I can criticize, I am sure there are gentlemen here who will criticize it and have criticized it, and now is the time to do it. Let us all get some light on the subject.

Mr. Calkins: I think with all the inquiries we will undoubtedly get during the year there ought to be some questions today. I know that our dockets every meeting are pretty well loaded with inquiries as to how to apply these prices. It would be of help to the committee to hear some expressions today.

T. H. Goodnow (C. & N. W.): I would like to ask the chairman of the committee why there is a special allowance for steel wheels. Is not that covered in the committee's costs, the same as other specialties on cars? That is referred to on the last page where you make a special allowance for settlement price for cars equipped with steel wheels. Do not you set these figures up the same as the other materials used on the cars?

Mr. Calkins: The reproduction costs for new cars is taken from the President's Conference Committee on the basis of cast iron wheels. The prices are based all the way through on a plain car with certain allowances for the specialties, but the only specialty which was recommended by the President's Conference Committee was the wrought steel and cast steel wheel.

Mr. Goodnow: Why do you recognize that and no other special features?

Mr. Calkins: Because it was referred to us by the President's Conference Committee.

Mr. Goodnow: The car with steel wheels is being specially favored apparently. There are lots of items on cars that cost about the same that should have been brought to the attention of the committee, if it was known that we were going to set up individual prices.

Mr. Calkins: Take the item of roofs. You have the base price on the ordinary car roof and the other types of roof are rated accordingly.

Mr. Goodnow: These arbitrary figures in the settlement of cars, with reference to special items on the car, are going to draw in other things on the car. I think if you are going to establish that principle, you must go further and make it apply to everything of a special character on the car.

Secretary Hawthorne: When the Depreciation Committee's report was presented they included wrought steel wheels as a special addition to the destroyed car settlement. When that report was presented on the floor, Mr. Giles offered a resolution that the cast steel wheels should be given consideration. That resolution was approved by this body at that convention and acted on by the Price Committee, but the rules have not been printed containing that feature.

F. W. Brazier (N. Y. C.): This committee, if you notice, is made up of representatives of railroads located in the north, south, east and western sections of the United States and Canada. They have gone into this work very carefully and the work which they undertook to do is very trying and difficult. I want to compliment the committee for the hard work done. It is easy for men to come to the conventions who are not on the committee and read the report and get some of the benefits of the information contained. They do not necessarily have any appreciation of what is involved in the preparation of the report, however.

J. E. Mehan (C. M. & St. P.): I have been looking through the report to see if there is anything inserted in the report covering the reproduction cost. For instance, in the case of a tank car made by the tank car builders, there is included in the reproduction cost the freight charges for getting the tank to the owners. We have had cases where the car owner in setting up his cost has

added to the cost the freight charges of getting the tank to the manufacturing plant empty. Then they have added that freight charge to this reproduction cost. I was trying to find something that referred to this freight charge, and was wondering if that point had been covered definitely.

Mr. Calkins: I do not think that point is covered.

Mr. Meehan: I think it should be settled definitely as that point does come up. They claim that their books show a charge for the shipment of the car and that they should be compensated for this charge. I think while the report is before us something definite should be put in so we will know just where we are.

E. Miller (B. & M.): I have been looking through the report and fail to find any reference to the cast steel wheel, what is known as the one-wear wheel. Has the committee given that any attention?

Mr. Calkins: In the case of cast steel wheels, in the settlement for the car, we have an additional allowance of \$100 for cars equipped with cast steel wheels. Cast steel and wrought steel are both recognized in reproduction costs.

As to the point Mr. Meehan brings up, that can be covered. The rule does not say you can include the freight charge, neither does it say that it is prohibited. That point can be covered in the rules later.

There is one point which the committee would like to bring to your attention and that is that the committee desires to get information from all sections of the country, and when our sub-committee sends out inquiries for information for the use of the committee, it is difficult many times to get a sufficient number of answers to our inquiries, which will make the information presented in our reports as full as we desire to have it. I think that the members of the association should take individual interest in keeping their records so that they can give the members of the committee the benefit of their prices, the labor conditions, or whatever we are asking for. In this way we may obtain truly representative figures instead of having the information which we present confined to a large degree to the roads represented on our committee.

Secretary Hawthorne: Referring to Mr. Meehan's question, that subject was considered by both the Arbitration Committee and the Price Committee at different times and the queries of members in those respects were answered during the year. The answer included the prices set by the arbitrary settlement figures, giving the additional allowance which would be applicable in the case of cars new from the plant to the car owner.

Mr. Meehan: Was that ruling sent out universally?

Secretary Hawthorne: Not in any printed statement, but the information was given to the people who raised the question.

Mr. Meehan: That is the point. It only goes to certain people, but it should be put in the rules so that everybody would know what the situation is in that respect.

R. L. Kleine (Pennsylvania): I feel like Mr. Brazier that this committee has done its work so well, and as the prices set forth are average prices covering the returns from a large number of roads, there is little to discuss. They have also shown how they arrived at these prices. I therefore move that the report of the committee be accepted, and the amendment made to the rule.

(The motion was seconded.)

C. J. Wymer (C. & E. I.) I would just like to say a word in regard to this decision. We have had a number of cases reported to us by railroads in controversies giving us a decision from the Arbitration Committee that we knew nothing about, and we have to write the Arbitration Committee to find if such a decision had been made. They had not been universally sent out. It seems

to me when a decision is made the roads ought to be notified. We had a number of decisions quoted to us of which we knew absolutely nothing until we took it up to find out if such a decision had been made.

Chairman Hawthorne: Mr. Wymer, your question is covered in the report of the Arbitration Committee as you will see when that report is brought up. Before calling for the question, I would like to ask Harry Griffin if he won't say a few words relative to the prices of labor and material as applied to private cars. Mr. Griffin, won't you come forward and say how this committee's report applies to you?

H. G. Griffin (Morris & Co.): Under the present system of making these prices, you can ask for an analysis of any price and we can tell you pretty well what it is. I do not think there is anything that we could criticize in the report.

G. W. Rink (C. of N. J.): I would like the committee to explain what they had in mind in connection with Item 104, Rule 101, which involves a charge of 25 cents.

IDENTIFICATION TABLE FOR A.R.A. TRUSSED TYPE BRAKE BEAMS
 ANY BEAM WITH A SINGLE DIMENSION OR REQUIREMENT LESS THAN THAT SHOWN SHALL BE CLASSIFIED EITHER NON A.R.A. OR ONE CLASS LOWER, AS CASE MAY BE

Proposed Form of Table to Replace Present Table in Rule 101 (Page 115, 1921 Rules)

(Referred to in Text on Page 1440.)

There is a note underneath that item which states: "This charge was reduced to encourage the use of the A. R. A. standard specification lid as per item 104-A." I cannot just place the lid, but we probably would not consider it as an A. R. A. lid.

Mr. Calkins: That is what we among ourselves term a penalty price for not using the A. R. A. standard lid which is covered by a specification standard journal box lid to discourage the use of the standard journal box cover, or any lid that does not meet the specifications.

(The motion to accept the report was put to a vote and carried.)

Report of the Arbitration Committee

It is doubtful if any committee of the Mechanical Division has as many and as exacting duties to perform as the Arbitration Committee. The burden of answering questions or interpreting the rules informally has been heavy and the committee will no longer render decisions except on those questions or controversies which are submitted formally according to the procedure outlined in Rule 123.

Another duty of the committee involving a large amount of work is the passing on the mass of suggestions for changes in the rules, originating with railroad clubs, foremen's associations and others, all of which must be carefully weighed

by the committee before its recommendations to the Mechanical Division can be formulated. The interests of the railroads are so universally affected by the application of these rules that ill-advised changes would soon lead to chaos in their interchange relations, and a heavy responsibility rests on this committee which, in effect if not technically, determines what modifications shall be made from year to year. One of the significant changes this year is the reintroduction of combination defects under delivering company responsibility in Rule 32. The last of the combinations formerly appearing in Rules 37 to 42 inclusive, disappeared from the Rules in 1918.

DURING THE YEAR Cases 1184 to 1232 inclusive, have been decided and copies sent to the members. A copy of these decisions is made part of this report. A vote of concurrence in the decisions is respectfully requested by the Committee.

With the approval of the General Committee, your committee has continued the rendering of interpretations of such questions as have been asked by the members regarding the Rules of Interchange. The more important of these interpretations have been issued to the members in Supplement No. 1 to the 1921 Rules of Interchange.

Under date of September 8, 1919, the Arbitration Committee issued Circular No. 60 outlining certain requirements to be followed in presenting questions for interpretation in connection with the Rules of Interchange, as well as regular arbitration cases for decision. In many cases there has been more or less disregard of the instructions referred to. The situation has become so burdensome that the committee considers it necessary to discontinue the practice of furnishing direct interpretations. Therefore, in the future, questions or controversies arising under the Interchange Rules on which a decision is desired should be regularly submitted in the form prescribed in Rule 123.

All recommendations for changes in the Rules of Interchange submitted by members, railroad clubs, private car owners, etc., have been carefully considered by the committee and, where approved, changes have been recommended.

Recommended Changes in the Rules of Interchange

As far as possible the changes and additions in the text of the rules are shown in italics.

RULE 2

In order to eliminate conflict between Car Service Rules and Interchange Rule 2 it is recommended that the second paragraph and sections (c) and (d) of this rule be modified in accordance with proposed form shown below:

Second Paragraph—Empty cars offered in interchange must be accepted at any interchange and *be available for some combination* that can be loaded in the car, the receiving road to be the yard.

Owners may receive their own cars, when offered home for repairs, at one point on their line, subject to the provisions of Interchange.

Loaded cars furnished in order for *storage* loading must be in accordance with *condition* for such loading, the receiving road to be the yard.

Section (c)—*Loaded cars* from car delivered under load, if load is considered or indicated *in any way* direct, may be received or delivered, *line* properly *substantiated* on both sides with a *load* or *weight* indicator, or *other* when *car* yard, showing *weight* or *load* for which the car was transferred or returned, in which case it must be accepted unless the receiving line has a

direct physical connection with the car owner at that point or where delivery can be made to the car owner at that point through an intermediate switching line, car ferry or float.

Section (j)—Eliminated.

RULE 3

The use of coupler yokes with pull depending entirely on the rivets should be prohibited and the committee recommends that a new paragraph be added to Section (b) as follows:

"After January 1, 1924, cars equipped with couplers having riveted yoke without lugs will not be accepted in interchange."

The committee recommends that Section (c), second paragraph, be modified to read in accordance with proposed form shown below; to permit the use of No. 2 or No. 2 plus beam as recommended by the Committees on Brake Shoe and Brake Beam Equipment, Train Brake and Signal Equipment and Car Construction; also in connection with changes recommended in Rule 17, Section (c).

"Section (c) second paragraph—Cars built after January 1, 1917, or cars receiving general repairs after October 1, 1918, must be equipped with metal brake beams of not less than the capacity of the No. 2 A.R.A. brake beam."

The committee recommends that the effective date of Section (d) second paragraph, be extended to January 1, 1924. The present situation justifies this extension.

The committee recommends that Section (f) be modified to read in accordance with proposed form shown below, the effective date being extended to January 1, 1923:

"Section (f)—After January 1, 1923, no refrigerator car equipped with brine tanks will be accepted in interchange unless provided with suitable device for retaining the brine between icing stations."

The committee recommends that the effective date of Section (g) be extended to January 1, 1923 and the section modified in accordance with proposed form shown below:

"(g) After January 1, 1923, cars will not be accepted from owners unless stenciled showing month and year built, or bearing a load plate giving this information. Cars built prior to 1895 may be stenciled "Built prior to 1895" or bear a badge plate giving this information." (Reference to tank cars eliminated.)

The committee recommends that the effective date of Section (h) be extended to January 1, 1923, and the section modified in accordance with proposed form shown below:

"(h) After January 1, 1923, cars will not be accepted from owners unless the body is stenciled light weight and capacity in pounds as provided for in Rule 86. Tank cars shall be weighed and stenciled by the tank car companies only, or by authorized representatives of the tank companies."

The committee recommends that Section (j) be modified to read in accordance with proposed form shown below.

"Section (j) Refrigerator cars not equipped with door hooks and fasteners or *other efficient device* to secure the doors in an open position will not be accepted in interchange."

It is felt that the use of any efficient device for this purpose should be permitted.

The committee recommends that the time limit in the second sentence of Section (1) be extended to January 1, 1924. It is considered advisable to allow additional time in which to comply with this requirement.

The committee recommends that the answer in interpretation of No. 4 be modified in accordance with proposed form shown below:

"A.—If a tank car is equipped with safety valves, the valves must be tested and the record of the test stenciled on the tank, as required by the Tank Car Specifications, regardless of the commodity carried. *Test of safety valves is required at intervals as follows:*

	lb. per sq. in.	Time limit for test
Class I	12 and 25	2 years
Class II	12 and 25	2 years
Class III	25	2 years
Class IV	25	6 months
Class V	200	2 years

RULE 4

The committee recommends that the second paragraph of this rule be modified in accordance with proposed form shown below. It is felt that the rewording of this rule will bring about the desired improvement in avoiding the issuance of unnecessary defect cards.

"Defect cards shall not be required for any *slight damage (new or old), that of itself does not require repairs before reloading of car. Defect card shall not be required for raked or cornered sheathing, roof boards, fascia, bent or cornered end sills, if defects are old.*"

RULE 9

The committee recommends that the item showing information required on billing repair card under the heading "Air Brakes Cleaned" be modified in accordance with proposed form shown below:

- "R&R K-1 or K-2, convertible or non-convertible.
- "Name of road and date of last previous cleaning.
- "Work performed, per Rule 60."

The committee recommends that a new item be added under the heading of "General Information," to be shown on billing repair card as follows:

"Size of Bolts and Nuts"

This will make it possible to check the weight of such material. The committee recommends the following interpretation of this rule:

"Q.—Is it necessary to specify dimensions of forgings and springs on billing repair card in addition to weight?"

"A.—No."

This interpretation seems necessary on account of certain railroads insisting that this information be furnished although not specified in the Rules.

RULE 12

The committee recommends that the following be added as the second paragraph of Rule 12:

"At points where it is impracticable for a railroad company to obtain joint evidence, the evidence of car owner shall be sufficient provided it is furnished by a competent representative of the railroad company after actual inspection has been made by him."

The car owner should be afforded the means of establishing the existence of wrong repairs in the many instances when it is impracticable to secure joint evidence.

RULE 17

To permit the use of No. 2 or No. 2 plus brake beams as recommended by the Committees on Brake Shoe & Brake Beam Equipment, Train Brake & Signal Equipment and Car Construction, the committee recommends that Section (e) of this Rule be modified in accordance with proposed form shown below:

"(e) A. R. A. No. 2 or A. R. A. No. 2 plus brake beams may be used in repairs to all freight equipment cars equipped with non-A. R. A. A. R. A. No. 1, A. R. A. No. 2 or A. R. A. No. 2 plus brake beams, charges and credits to be on basis of beams applied and removed. A. R. A. No. 3 brake beam must be replaced in kind."

The committee recommends that Interpretation No. 11 of Rule 17 be modified to read in accordance with the proposed form shown below:

"Q.—Owing to the great demand for equipment, it has become necessary in a number of cases to repair truck bolsters and pressed steel side frames by riveting patches, which makes a reasonably substantial job. Is it proper to bill car owner for this work?"

"A.—The patching of bolsters and truck side frames generally is not considered good practice. However, in the case of pressed or structural steel bolsters and pressed or structural steel side frames, patching of flat surfaces or tension side by riveting on plates, in a substantial manner, is permissible, and may be considered permanent repairs, provided this patching restores original strength of bolster or side frame."

In order to clarify the matter of exchanges of various types of triple valves the committee recommends the following interpretations to be added to this rule:

"Q.—What types of triple valves are standard? What types convertible and what types non-convertible?"

"A.—The only A. R. A. standard triple valves are the K-1 and K-2.

"The only triple valves that are convertible to the "K" type are those having removable check valve case.

"Triple valves having check valve case cast integral with triple valve body and not removable are non-convertible to the "K" type.

"Q.—Is it considered wrong repairs, to substitute one type of non-convertible triple valve for another non-convertible type?"

"A.—No. Provided car was built prior to January 1, 1919, and is stenciled showing a non-convertible type valve as standard or where car is not stenciled showing what type of valve is standard. Cars built after January 1, 1919, must have "K" type of triple valve applied."

RULE 32

The suggestion to include in Item 1, discharge valve caps missing from tank cars, as delivering line responsibility, was not approved. These caps may and do work out of position and lose from cars in fair service.

The committee recommends that the following combination of defects denoting unfair usage be added to this rule immediately following the present first paragraph:

"Delivering company will be responsible for damage to ear when the following combinations of sill damage exist, regardless of cause or physical condition of sills.

"Wooden Underframe.—Six or more longitudinal sills broken.

"Composite Underframe.—Two continuous metal center sills, broken or bent, together with three or more other longitudinal sills, broken or bent, when necessary to straighten, splice or renew.

"All-Steel Underframe.—Four metal longitudinal sills, broken or bent, when necessary to straighten, splice or renew.

"Tank Cars with Two Metal Longitudinal Sills only.—Two continuous metal longitudinal sills, broken or bent, when necessary to straighten, splice or renew; provided such damage is accompanied by the shearing of all tank anchor rivets or bolts.

"Note—A sill is regarded as "broken" when necessary to splice or renew, even though breakage was due to decay, elongated bolt holes, or other old defects.

"Note—A sill is only regarded as "bent" when necessary to remove from car to straighten.

"Note—Shearing of all tank anchor rivets or bolts means the "shearing" of either those securing the anchorage to the underframe or tank to the anchorage or both."

The committee recommends that present Section (d) of this rule be eliminated in view of above recommendation for combinations of defects denoting unfair usage.

The committee recommends that a new item, to be designated as item (c), be added to the causes of damage denoting unfair usage as follows:

"(c) Telescoping superstructure above the sills due to mounting of adjacent car"

The committee recommends that the last paragraph of Rule 32 be revised to read in accordance with proposed form shown below:

"Defect cards shall not be required for any slight damage (new or old) that of itself does not require repairs before reloading of car. In no case shall defect card be required for raked or

cornered sheathing roof boards, fascia, bent or cornered end sills, if defects are old."

The committee recommends the elimination of present Interpretation No. 7 and the modification of present Interpretation No. 4 to read as follows:

"Q.—Does the damage to a car under any of the conditions enumerated in this rule carry with it the same responsibility for damage occurring to other cars in the same train or draft?

"A.—Derailment is the only cause for which the same responsibility applies to any damage sustained to other cars at same time in same train or draft, except as otherwise provided in Rule 33."

RULE 33

The committee recommends the addition of the following paragraph to this rule:

"Where running boards on tank cars are spliced, the joint must be located over the running board support and a steel plate of not less than 3/8 in. by 8 in. by 10 in. must be either riveted or bolted to the running board support, and the running board secured by not less than four bolts."

RULE 43

The committee recommends the elimination of the present notes under this rule account of the recommendation for combinations denoting unfair usage under Rule 32.

RULE 58

The committee recommends that the words "Cars offered in interchange with" in the first line of this rule be eliminated from the rule. As these parts are frequently reclaimed for further use, they should be replaced at the expense of the handling line.

RULE 59

The committee recommends that the words "Cars offered in interchange with" in the first line of this rule be eliminated from this rule. As these items are frequently reclaimed for further use, they should be replaced at the expense of the handling line.

The committee recommends the addition of a new paragraph to this rule, under the bracket "Delivering company responsible," as follows:

"Missing steam heat hose or air signal hose, complete, where cars are stenciled that they are so equipped."

It was felt that the car owner should be protected for such missing hose when car is so stenciled.

RULE 60

To insure a higher maintenance standard for retaining valves, dirt collectors and pipe strainers, the committee recommends the addition of the following new paragraphs to this rule, to follow the present first paragraph and read as follows:

"Charge is not permissible for cleaning triple valve or cylinder unless the triple valve, cylinder, retaining valve, dirt collector (or pipe strainer) are all cleaned at same time."

"If either the retaining valve or dirt collector (or pipe strainer) are cleaned, charge may be made therefor even though cylinder and triple valve are not cleaned at same time. The cleaning of these items must be shown separately and bill rendered in accordance with Rule 111."

RULE 70

The committee recommends that the following note be added to this rule:

"Note.—Defect cards should be attached to car at time and place wrong wheels are applied. Failure to do this obligates the road delivering car in interchange to issue its defect card. Before rendering bill on authority of such defect card, however, the car owners must investigate their records to ascertain if possible the road on which wrong wheels were applied. If by such investigation the owner fails to locate application, a statement to that effect must accompany bill, on the defect card. In the event the application is located by car owner, settlement must be made by the road responsible, in which case the defect card issued under Rule 70 must be canceled. Subsequent receipt of repair card by owner after bill has been rendered on authority of defect card carries the same obligation."

Car owners should be protected as far as possible against the substitution of cast iron wheels for wrought steel or cast steel wheels, and the penalty should be assessed wherever possible against the line making wrong repairs instead of against delivering line.

RULE 86

The committee recommends that the effective dates of the third and fourth paragraphs of Section (b) of Rule 86 be extended to January 1, 1924. Account of the large number of these axles

in service, it is felt that more time should be allowed to effect their retirement.

The committee recommends that the third paragraph of Section (b), Rule 86, be modified in accordance with proposed form shown below:

"Non-American Railway Association Standard axles may be used to replace non-American Railway Association Standard axles in kind until January 1, 1924, subject to condemning limits of such axles, except that non-American Railway Association Standard axles must not be applied to tank cars of private ownership."

As tank cars are built to comply with the Specifications of the A. R. A., which provide for the use of standard axles, it was felt that such cars should be protected against the substitution of non-A. R. A. axles.

RULE 88

The committee recommends the following addition to the first paragraph of this rule:

"Except that when the following substitutions are made, defect cards must be issued for material and labor of correcting, regardless of responsibility for the repairs: Wrong truck side; arch bars in place of truck sides; wooden draft timbers in place of metal draft arms extending beyond bolster; wooden roof in place of metal roof; wooden end in place of all-steel end on house cars."

The owners should have full protection against improper repairs of the items specified.

RULE 91

The committee recommends that (b) and (c) under the note in Rule 91 be modified in accordance with the proposed form shown below:

"(b) No bills should be returned for correction on account of incorrect car numbers, but shall be passed for payment at once and the alleged errors in car numbers brought to the attention of the company rendering same within 60 days from date bill is passed for payment, but in no case exceeding six months after first receipt of bill.

"The billing company shall furnish correct car reference, or shall issue within 30 days countercharge authority as per form shown on page 176. If it is alleged car was not on repairing road on date claimed, the car owner must show location of car on such date.

"(c) No bills shall be returned for collection on account of other error or questionable charges unless the net amount involved exceeds 10 per cent of the total amount of the bill, but shall be passed for payment at once and the alleged error brought to the attention of the billing company within 60 days from date bill is passed for payment, but in no case exceeding six months after first receipt of bill. The billing road must furnish proper explanation or shall issue within 30 days countercharge authority on form shown on page 176. If objections to bill does not amount to 25 cents in aggregate, no exception shall be taken, but bill shall be passed for payment as rendered."

There should be a time limit on exceptions on car repair bills where there has been an unusual delay in payment of same.

RULE 101

It is recommended that the words "Special Section" be inserted in the identification table for solid brake beams in connection with the 17 lb. per ft. channel, in order to clear up apparent inconsistency in the table.

It is recommended that the table shown be substituted for the present identification table for trussed brake beams. It is felt by the Committee on Brake Shoe and Brake Beam Equipment that showing the depth of truss will make the table in question less confusing to inspectors.

(See Illustration of table on page 1137.)

RULE 112

The committee recommends the following interpretation of this rule:

"Q.—From what date shall depreciation be figured in the case of a tank car where the underframe and tanks were built new on different dates?"

"A.—In cases of tank cars with underframes and tanks constructed on different dates, the oldest date built on the car, whether tank or underframe, shall be the basis of settlement for figuring the depreciation."

The committee considered carefully recommendations to restore separate settlement for rebuilt cars under this rule, but decided that no change should be made at this time. The persons

making these suggestions are referred to the reasons shown in report for 1921.

PASSENGER CAR RULE 18

The committee recommends the elimination of reference to Freight Car Rule 32, Section 4, because of the modifications recommended in Freight Car Rule 32.

The committee recommends that Rule 18 be modified in accordance with proposed form shown below:

"Settlement for passenger equipment cars destroyed shall be based on cost of reproduction in kind at date of destruction. Depreciation shall be figured at 3 per cent per annum from the date originally built (straight depreciation basis), not to exceed 30 per cent of reproduction cost."

This change is recommended because the present rules do not fully reimburse car owner for car destroyed and in order to bring method of settlement in line with the freight car rules.

The report is signed by T. H. Goodnow (chairman), C. & N.; J. J. Hennessy, C. M. & St. P.; J. Coleman, Grand Trunk; F. W. Brazier, N. Y. C.; T. W. Demarest, Penna. System, and G. F. Laughlin, Armour Car Lines.

Discussion

Mr. Goodnow: There is shown an analysis of the various changes in the rules that have been recommended for adoption on your part and the issuance of the rules for the ensuing year. The Arbitration Committee held a meeting yesterday afternoon to give all an opportunity to express themselves on these changes and it is to be assumed that any questions that might arise in connection with them were fully presented at that time. As a result of the evident divided opinion regarding responsibility for damage to cars, as covered by Rule 32, the Arbitra-

tion Committee in executive session following the open meeting, considered it best to recognize that, and to withdraw its recommendation under Rule 32—that portion of which refers to the setting up of the combinations. So that in acting on the Arbitration Committee's report, it will be understood that the Arbitration Committee has withdrawn that portion of its report, at least for the ensuing year, and will continue present Rule 32 so far as that portion of the rule is covered. It can be understood that the further recommendations in connection with Rule 32 are still a part of the Committee's recommendation to be acted upon at this time.

Similar action, of course, will follow on the passenger car rule. That portion of the rule which refers to action on this rule, the same as the change in Rule 32, will be withdrawn on account of withdrawing the recommendation for the freight car rule. The other rules that were questioned, or as to which suggestions were made at yesterday's meeting, were fully considered by the committee and the committee continues the recommendation as made in the report. The only change that they make is the one that I have referred to in Rule 32.

Mr. Calkins: Do I understand with the change in Rule 32 the committee withdraws its recommendation to eliminate the notes in Rule 43?

Mr. Goodnow: Any change that is effected by the change in Rule 32 will continue the same as at present. I did not refer to all the rules.

J. J. Tatum (B. & O.): I move that the report of the Arbitration Committee be accepted as amended.

(The motion was seconded, put to a vote and carried.)

Report of Committee on Tank Cars

This is one of the most important committees of the association. The rapid increase in the quantity of the highly volatile and dangerous casinghead products, and the disasters which have resulted from their shipment in defective or unsuitable equipment, have created for the committee numerous problems which have been and are not only physically exceedingly difficult to solve but, because of the conflict of interests involved, require the exercise of the utmost patience and tact in their handling.

The work of the committee has not been en-

tirely free from controversy, but it is safe to say that every interest affected will agree without reservation that a never failing spirit of fairness has characterized this work during the chairmanship of the late A. W. Gibbs. This year's report, which was prepared under Mr. Gibb's direction shortly before his death, indicates that steady progress is being made toward the solution of two of the most difficult tasks before the committee, i. e., the development of a satisfactory safety valve and a satisfactory bottom outlet valve.

THE TANK CAR Committee during the past year has continued its efforts to secure improvement of those tank car features which reports from the Bureau of Explosives and others indicate are the principal sources of trouble, viz., safety valves, dome closing arrangements, heater coils, and the bottom outlet.

Safety Valves

A safety valve was developed at Altoona in which the contour of the seat, valve and huddling chamber followed very closely the design of a valve submitted by one of the manufacturers of locomotive safety valves which had been previously tested. Some modifications were also made in the form of the wings of the valve disk to reduce the restriction of the discharge area, and the spring was made with six coils instead of five as in the standard design. The test of this valve indicates that the question of discharge capacity at the popping pressure has been satisfactorily solved, as practically

full discharge is obtained at the initial pop. This is important in that while the tanks are required to be designed for a bursting strength of 300 lb. per sq. in., this strength does not hold good when the tanks are heated to high temperatures by external fire.

Following this test the valve manufacturing concern has prepared three experimental valves along the same lines and they are now at Altoona for test. It is hoped that these valves will show also a great improvement in the matter of tightness up to the popping pressure. Until the results of these tests are available the Committee is not prepared to make its recommendations as to changes in standard design.

Advices from users of tank cars indicate that great improvement in the performance of the present standard design of valve as to leakage, etc., may be obtained by proper care and maintenance.

The committee recommends that the dimension of the spring follower of the 5 in. standard safety valve, (Fig. 9-A, Tank Car

Several designs for the rim and ribs may be reduced from 5 1/2 to 5 in. to permit fitting between the spring and the follower.

Experiments have shown that the present six months' test period for safety valves on Class IV tank cars may be safely lengthened, the Committee recommends that the first paragraph of Section 24, Tests of Safety Valves, Class IV Specifications, be amended to read:

Safety valves shall be tested and, if necessary, adjusted at intervals of not less than one month.

The action of the Committee has been called to the fact that reports of leakage conditions some concerns still have on hand a model of safety valve castings of the 1920 design. Committee recommends that provision be given to place in service any valves cast or turned out that it is required that the patterns be changed at once so that future castings will comply with the requirements of Specification No. 1 to the specifications for tank cars (effective January 1, 1922).

Bottom Outlet Valves

The report of the sub-committee which is handling this feature states in part as follows:

Up to March 1, 1922, 28 different designs have been considered, of which 17 are modifications of the present plunger type, nine of the plug type, one a sliding disk and one a rotating disk.

Four designs in present state were recommended for further trial, 13 were authorized for further trial only with the understanding that the designs must first be changed; 9 were eliminated from further consideration. One was authorized for trial November 19, 1921, but has not yet been tried out. One was authorized for trial September 13, 1921, but trial has been suspended pending reports on tests of the lubricating device, which is a feature.

None of the designs we have studied can be considered to have solved the problem of leakage. The four designs in first group, however, show considerable improvement over the present type.

We believe that a valve will not be satisfactory or practical which requires two seats, the aid of gaskets, or a complication of levers and springs. The operating mechanism should be simple, strong and positive in action. Troubles due to sticking appear to be characteristic of valves of the plug and piston type.

The work of this sub-committee will be continued during the coming year.

Extension of Bottom Outlet Below Sills

The committee in its 1921 report recommended that "the bottom outlet pipe when applied to tank cars having center sills shall not project below the bottom line of sills more than the threaded length necessary to permit the application and removal of the bottom outlet cap." The committee obtained the views of various associations representing tank car users, and after discussion of the subject with representatives of the car builders recommends that Section 7 (c), Specification for Classes I and II cars, be amended to read as follows:

7 (c) The bottom outlet pipe, in the case of replacements on existing cars, shall not project below the bottom line of sills more than the threaded length necessary to permit the application and removal of the bottom outlet cap. The bottom outlet pipe shall not be more than 4 in. (Fig. 2).

7 (d) With cap and plug or combination cap and valve on 4 in. outlet—

1. With cap and plug—Cap, rubber cap and plug or combination cap and plug.

2. With valve—Cap, rubber cap and plug or combination cap and plug. No projection of cap or attachment shall be secured to the car.

3. No projection of cap or attachment shall project below the bottom line of sills more than being a handle.

The above recommendations that Section 7 (d), Specifications for Classes III and IV cars, be amended to read:

7 (d) The bottom outlet pipe, in the case of replacements on existing cars, shall not project below the bottom line of sills more than the threaded length necessary to permit the application and removal of the bottom outlet cap. The bottom outlet pipe shall not be more than 4 in. (Fig. 2).

7 (e) With cap and plug or combination cap and valve on 4 in. outlet—

1. With cap and plug—Cap, rubber cap and plug or combination cap and plug.

2. With valve—Cap, rubber cap and plug or combination cap and plug. No projection of cap or attachment shall be secured to the car.

3. No projection of cap or attachment shall project below the bottom line of sills more than being a handle.

The committee also recommends that the following be added to the Specifications for Classes I and II cars, Section 7 (c), Specifications for Classes I and II cars, to read:

7 (c) The bottom outlet pipe, in the case of replacements on existing cars, shall not project below the bottom line of sills more than the threaded length necessary to permit the application and removal of the bottom outlet cap. The bottom outlet pipe shall not be more than 4 in. (Fig. 2).

7 (d) With cap and plug or combination cap and valve on 4 in. outlet—

1. With cap and plug—Cap, rubber cap and plug or combination cap and plug.

2. With valve—Cap, rubber cap and plug or combination cap and plug. No projection of cap or attachment shall be secured to the car.

Dome Closing Arrangements

Several designs have been submitted and approved for trial to meet the requirement adopted last year that after July 1, 1922, the dome cover for Class IV cars, if external, shall be secured by bolts; or if internal, by yoke and screw.

The committee recommends that the drawing of Fig. 1, (Approved method of automatically venting pressure on starting removal of dome cover) be made to show the lead gasket projecting not less than 1/8 in. beyond the face of dome cover flange in order to insure the gasket bearing on the dome ring. (The present drawing shows the gasket flush with the cover surface.)

Heater Pipes—After careful consideration and consultation with the American Petroleum Institute the committee recommends that the following requirements be made part of the Tank Car Specifications:

Heating systems in new tank cars and new installations in existing tank cars shall comply with the following general principles:

1. Where heater pipes are installed not less than 2 in. extra heavy pipe and fittings shall be used. All piping shall be properly secured to permit the necessary expansion and contraction and so installed as to provide for self drainage.

2. Cast iron, malleable iron or cast steel return bends shall not be used. Return bends may be forged or made by bending the pipe and using threaded sleeve coupling, forged unions or welded joints. A minimum number of connections shall be used.

3. Single or multiple heater systems may be installed, but the latter is preferable.

4. The steam inlet preferably should be through the top of tank or through dome; the outlet may be either in the end or through the bottom of tank; but both shall be safeguarded by an approved form of cock, cap or plug. Where the discharge is through the bottom of tank, no part of pipe shall extend below bottom of underframe.

Where inlet or outlet pipes pass through the shell of tank, the opening shall be reinforced by suitable pads riveted on inside or outside. The pipe connection preferably shall be expanded or welded, or both, into pad. The outside connection shall not be an integral part of the heater, but it shall be secured to the pad by an approved design.

5. On new installations the heater pipes shall be tight at a hydraulic pressure of 200 lb. The same test shall be applied when the tank is retested.

6. Each compartment of a compartment-tank shall be treated as a separate tank and comply with the foregoing requirements.

7. Designs of heater systems shall be submitted to the American Railway Association for approval before application.

Compliance With Specifications in Case of Rebuilding Cars or Making Extensive Alterations—In view of instances of non-compliance with the specifications and of the very bad workmanship where tank cars have been rebuilt or extensive alterations have been made, the committee recommends that the following requirements be added to Section 25, Inspection, of the specifications for all classes of tank cars.

In case of extensive alterations or rebuilding of tank cars a Certificate of Compliance with the specifications, similar in form to that for new cars, page 47, shall be furnished to the car owner and to the Chief Inspector of the Bureau of Engraving.

Tests of Jackets of Class IV Cars—The committee recommends that the fourth paragraph of Section 23, Tests of Tanks, Class IV Specification, be amended to read as follows:

All tests shall be made by completely filling the tank with water of a temperature which shall not exceed 70 deg. F. during the test, care being taken not to spill any water on the tank and that all fittings are tight. The pressure may be applied in any suitable manner. The tank shall hold the prescribed pressure for not less than 20 minutes without leak or evidence of distress, with the source of pressure disconnected. While the tank is under pressure it shall be carefully inspected for evidence of leakage. If the jacket is to be removed, a drop in pressure shall be evidence of leakage, and a reduction of the jacket and insulation shall be removed as may be necessary to locate the leak and make repairs. After the repairs have been made the tank shall again be subjected to the prescribed test.

In this connection attention is called to the desirability of using some form of alk wash or graphite paint on the outside of the tank and inside of the sheet iron jacket in order to prevent the insulating material from sticking fast and being damaged so that it can not be removed when it is necessary to remove it for any purpose.

Protection of Pipes Near Dome Head—The Bureau of Engraving has called attention to the hazards involved by loading or unloading pipes projecting through the dome head. While the committee is not prepared at this time to recommend a limit to the height of such pipes, it calls attention to the desirability that the projection shall be restricted to a minimum.

Method of Securing Dome Cover—During the past year there was submitted to the committee a design for the transportation of liquid chlorine in 15 one-ton containers secured in cradles on a flat car.

While the Tank Car Committee has in the past restricted itself to the consideration of cars coming under the definition of "Tank Car" given in the Tank Car Specifications, it was felt in view of the dangerous characteristics of this product that the arrangement should be passed upon from the railroad standpoint, and the Committee, therefore, considered and approved the method of securing the containers to the car.

In this connection, if it is desired that the committee shall consider designs for cars of this type, or cars with wooden tanks for handling muriatic acid, etc., and possibly special cars for other products where the conventional design of tank car is not applicable, it should be definitely advised to that effect.

The report is signed by A. W. Gibbs (Chairman), Penn. System; C. E. Chambers, Central Railroad of New Jersey; Samuel Lynn, P. & L. E.; John Purcell, T. & S. F.; Geo. McCormick, Southern Pacific; F. K. Tutt, M. K. & T.; Col. B. W. Dunn, Bureau of Explosives; A. E. Smith, Union Tank Car Company; Geo Hartley, Semet-Solvay Company, and C. W. Owsley, The Texas Company.

Discussion

Geo. E. Tiley (General Chemical Company): I believe the Tank Car Committee should be given authority to include all types of tank cars within the scope of their investigations. The time has come when there are special types of tank cars being considered which are not now covered in the tank car specification. About two years ago a number of the acid manufacturers were in consultation with the Bureau of Explosives on the design of a special car for the transportation of hydrochloric or muriatic acid, which cannot be transported in either wooden or steel cars. The General Chemical Company ships this particular acid in very large quantities and we are at present using a wood lined car with the interior of the wooden tank prepared with a special tar and pitch mixture as a coating and an intermediate filler of about two inches of the same material to prevent the acid getting through the steel shell if it works its way through the wooden lining.

The average life of the tanks of those cars is about three years at the most and at times they create a very nasty situation for the railroads when they spring a leak en route, because it means in every case either sacrificing the acid or moving the car by a special movement to the nearest plant where it could be unloaded, regardless of the customer to whom it was consigned. Colonel Dunn and myself discussed the proposition and finally a special committee was appointed which is now at work upon it.

One acid concern, for illustration, has in service at the present time as an experiment a steel tank with a hard rubber lining; also a semi-hard rubber lining. We have two experimental cars with transverse wooden tanks, the insides of which are first fitted with canvas backing and then with a soft rubber lining. There are a number of other types of muriatic acid cars under experiment at the present time, and that is what the Tank Car Committee has in view in bringing this matter to your attention.

I believe in view of the special conditions which are being encountered in the acid business, as well as some of the other businesses, the time has come for the Tank Car Committee to consider tank cars of all descriptions and that the definition of the tank car should be modified accordingly.

Mr. Tatum: I would like to ask the Tank Car Committee if it has given any consideration to the fact that when tank cars are built and prepared for the heater pipe system, and the heater pipe system is not applied, plugs are applied to the outlets of the pipes. There is a method by which those plugs may be held in place to keep them from working out when cars are under load with such materials as act as lubricants upon the thread of the plug. We find from experience that these plugs become lubricated by certain materials and by the vibration of the tank they work loose and discharge their contents. We

find also that cars sometimes are bought with heater pipes in them for certain commodities and then are sold to other persons who do not have use for the heater pipes. These pipes are then removed and plugs applied to the holes through which the pipes pass. The same plugs become lubricated by the materials hauled in the tank cars and work out and discharge the load.

We had an experience a short time ago where a car was loaded with cotton seed oil. The car was received at interchange apparently with all plugs tight and in good condition. The vibration of the tank and the lubricant acting on the plug resulted in a leak taking place at the plug. The car inspector seeing the leak attempted to tighten the plug, but it was so near out of the cistern that it discharged the entire contents and had to be paid for. But worse than that, the inspector was almost drowned in the oil; he could hardly get out in time to save himself. It seems to me there should be some method by which these plugs could be secured so they would not work out, just as we double-nut bolts or have a lock nut to prevent them from working off. I would like to ask the Tank Car Committee if that has been given consideration.

Mr. Chambers: There was some action on that at the 1920 convention. Perhaps you do not have it in mind so I will read it. On page 690 of the 1920 proceedings, through a question raised by you, this answer was made: "Where heater pipes are used it is frequently the practice to make an opening in the one head of the tank for handling the pipes in and out. This opening, as a rule, is closed by a plug, screwed through the sheet or through a flanged fitting. There have been a number of failures of these plugs involving, in addition to loss of contents of the tank, injury and loss of life. In all cases it developed that the failure was due to the use of a cast plug cored on the inside for lightness.

"The committee recommends that the specifications require that where plugs are used in the heads of tanks of new tank cars, or as replacements in the case of existing cars, they shall be solid, of a good grade of grey cast iron, standard pipe thread and taper, and of a length which will screw at least six threads inside the face of fitting on the tank."

Mr. Tatum: Is it the opinion of the Tank Car Committee that the plug will not work out?

Mr. Chambers: I do not see how it will work out more than any plug you have in other places, and will not take lubrication if you tighten it.

Mr. Tatum: We tighten bolts, but even then we have them fall off. The matter, as it appears to me, is a very important one, and there should be some positive lock for the plugs, so that they cannot work out even though the inspector or repair man fails to screw it in tightly.

Mr. Chambers: I ask how many instances Mr. Tatum knows of where this failure occurred?

Mr. Tatum: I know of one instance where it cost \$10,000, and other instances where it did not cost so much, but I do not believe that the Baltimore & Ohio, from my observations of other railroads, is the only road that has had such experiences.

Mr. Chambers: That is the first time I have heard of such accidents to tank cars in handling. You will find in Section B that this was referred to letter ballot, but I can say for Mr. Tatum's benefit that we will very thoroughly consider this subject at our next meeting, and if we can find enough justification to make any change, we will do so.

Chairman Tollerton: Now is the opportunity to air your views and get important information from the Committee on Tank Cars and from others using tank cars. Considerable improvements are being made in tank cars for the shipment of explosives and it is important that you should get all the information you can. Full discussion of

this question is very desirable. We have with us today some representatives from the private tank car lines, and I would like to hear from Mr. Hartley.

G. Hartley (Semet-Solvay Company): I am also a member of the Tank Car Committee. I do not believe it is necessary to say anything more than what we have covered by our reports. I certainly would suggest, however, that in the case of any tanks offered for transportation after the test date has expired, that railroads should not transport such cars. When this is done disastrous results sometimes follow. In one case that I have in mind a car loaded with what is called pure ammonia (30 per cent) was put on the road and a few days afterward the inspector found that the test date had expired and he attempted to test the safety valve. In doing this he used a gage which showed 90 deg., and lifted the valve at 25 lb. pressure. The commodity inside the tank had generated a pressure and was also expanded up above the outlet for the safety valve. When the safety valve did lift, the ammonia rushed out and caused a loss of life. There is certainly no good reason for testing a safety valve which generates pressure under a load, after the test date has expired, as you have that indeterminate pressure on the other side of the valve. The tank car should not be accepted unless the safety valve is well within the test date shown on the car, which test date will not expire for a reasonable time.

Chairman Tollerton: Is Mr. Smith, of the Union Tank Car Company present?

A. E. Smith (Union Tank Car Company): I am a member of the committee and I would like to say that we are trying to provide the safest transportation we can supply and have constantly studied the tank car situation. In the case of any improvements which have been developed in the service of the car, we are glad to submit them to the Tank Car Committee.

Mr. Goodnow: I ask the Tank Car Committee, now that they have included in the specifications the heater piping, whether or not any consideration was given to the number of feet of radiation which should be provided, taking into consideration the number of commodities carried in the tank cars. That question is up with us. The number of feet of tank car heater piping affects the car capacity. It seems to me that there cannot be any difference in the heating pipes provided in a car. They should be included as a part of these specifications, so as to hold it to a minimum and maintain the carrying capacity of the car to as great a degree as possible.

Mr. Chambers: The heater pipe question has been considered by the committee for two or three years from every angle from which it could be approached. We do not feel it is within our province to tell a builder or a user how much piping must be used. We can only make specifications on the pipe and fittings. The man who loads the material will know what the radiation must be in order to unload it. And if it does not conform to those requirements, the users would make a protest. I do not feel that is a subject within our province. We have at the present time a sub-committee composed of members of the American Petroleum Institute which co-operates with us in all this work very fully.

(A motion that the report be received and submitted to letter ballot was duly seconded, put to a vote and carried.)

Chairman Tollerton: Your attention is called to the fact that this motion just adopted does not dispose of the question covered in the recommendation of the Committee on Safety Valves. Therefore, an additional motion will be necessary to cover that question. I will read it: "The committee recommends that permission be given to place in service any valves now on hand, but that it be required that the patterns be changed at once, so the

future castings will comply with the requirements of Supplement No. 1.

Mr. Fuller: How many castings are there on hand, and to what extent would it hurt the car owners if that recommendation was not carried out? Have you any information at hand to know the number of castings in stock of the old design?

Mr. Chambers: It is only a limited number. The secretary says, as he recalls it, it would take about two years at the present rate to use them up.

Mr. Fuller: Would it be a hardship to scrap them? My thought is this: We have been told to extend the time and we have done so in the case of a great many things, but if this particular proposition as to the amount of old valves on hand is not of any great magnitude, the question is, would it not be better to go into the use of the steel valve as early as possible?

Mr. Chambers: Our thought and action in regard to material which may happen to be on hand has always been to not show a wasteful tendency. I do not know that it would be an extreme hardship if we set the date from which time on the new pattern will have to be used. This would mean the scrapping of a number of the old valves, but I do not think that it would amount to a great deal.

Mr. Fuller: I believe it has been your observation, as it has been mine, that we have had many requests for extensions of time with regard to the application of materials to tank car work when the materials could have been used for something else. Take the thickness of the plate used in the construction of the tank itself. This association continued to make extensions when the new application should have been put in force. A few years ago we were confronted with the fact that the manufacturers were building tanks that would not comply with the specifications. We have to consider, of course, the question of the waste of material, but at the same time we feel that if certain recommendations are designed for the improvement of the equipment we should benefit by that improvement as soon as possible.

Mr. Chambers: I am sure the committee would gladly accept any time limit the association wishes to place on this, and we will act accordingly.

Mr. Hartley: I believe that all the tank car builders about two or three years ago bought as much material required in the construction of tank cars as they could get, because they felt that there might be a scarcity in the future. I know that considerable material has been purchased and included in the stocks held at the present time, in the way of accessories. These materials and accessories were very high in price. I think that fact should be borne in mind and that time should be given for the tank car builders to use up that material.

I think the Tank Car Committee has in mind, while they are trying to better these accessories and conditions, to allow these people to use up some of this material which they bought at a high price. This question was considered by the committee last summer, in fact, during the past year of depression, and it was not thought that hardship would be imposed on any concern in the matter of saving money. That is, there would not be any unnecessary burdens added to the manufacturers in the way that has been referred to, if it was felt that the committee in permitting the use of the older material, was not endangering tank car service.

Mr. Fuller: I think it is important there should be a time limit set. I think it is too wide open to let it stand until all the castings are used up. It has been my observation, and the observation of others, that the patterns are not changed. We find that even after the time limit has expired they are still using castings of the old pattern to

a greater or less degree, and I think a time limit should be stated and adhered to.

I will make a motion, embodying an amendment to the report of the committee, and I would like the benefit of the information from the committee as to what they know of the amount of castings now on hand of the old pattern. Of course we have had certain information on that point but I now move as an amendment, that the time limit be set as either January, 1923, June, 1923, or January, 1924, whichever date may meet the ideas of the committee. My idea is to make the time limit as early as possible and if necessary it can be extended, but I do not think it should be left wide open. I will make my motion more definite and move that June, 1923, be set as the time.

Mr. Chambers: The Tank Car Committee will make recommendations to the General Committee, very shortly, as to what the rate should be.

Chairman Tollerton: With that understanding, we will pass without formal motion.

The chairman of the Tank Car Committee also calls attention to the last paragraph of the report, and desires that the convention give some instructions from the floor as to the policy of the committee with regard to an investigation of the various types of tank car construction.

Mr. Goodnow: I move that the duties of the Tank Car Committee be extended to cover such other classes of tank cars as have been referred to and that any others may be added from time to time in connection with their work.

Chairman Tollerton: Do you think that motion covers the field you have in mind, Mr. Chambers?

Mr. Chambers: I think it does, Mr. Chairman.

(The motion was duly seconded, put to a vote, and carried.)

Mr. Chambers: Mr. Grant, of Colonel Dunn's department, was not in the room when you called for him, but came in immediately after we closed the subject, and he has given me permission to use some correspondence which passed between Colonel Dunn's bureau and the Commission at Washington on the particular case that Mr. Hartley mentioned, about the testing of a car of ammonia while loaded, resulting in a man's death.

When Colonel Dunn learned of this accident which resulted in a fatality he wrote Mr. Doyle, explosives agent of the Interstate Commerce Commission at Washington, as follows:

June 7, 1922.

Mr. L. I. DOYLE, Explosives Agent,
Interstate Commerce Commission.

Answering your letter of June 3, file 3666 relative to proposed amendment of paragraph 402 of the revised regulations, I agree with you on the suggested wording as follows:

"Safety valves on tank cars must not be tested while these cars are loaded with dangerous articles. Whenever this test is due on a loaded car while in transit, the car must be allowed to continue to destination bearing a defect card with the following notice:

Safety valves overdue for test. Moving under I. C. C. 402.

Prompt report of such movements must be made by carriers issuing the defect cards to the chief inspector, Bureau of Explosives, 30 Vesey Street, New York City."

Having made some inquiries of representatives of car owners and railroad inspection forces I find such a ruling will be favor-

ably received by them. I am also advised that if we can be reasonably sure that this amendment will be adopted, steps will be taken by the Arbitration Committee of the American Railway Association to provide suitable changes in their mechanical rules to harmonize with the use of defect cards as outlined in this amendment.

The A. R. A. Mechanical Section holds its annual meeting next week at Atlantic City and it seems desirable, if possible, that we inform them before that time if this amendment will be adopted, so that their action may be taken then.

Kindly advise at your earliest convenience.

COL. B. W. DUNN,
Chief Inspector.

Mr. Chambers: I will read the answer from Mr. Doyle, as follows:

COL. B. W. DUNN,
Chief Inspector.

Referring to your letter of June 7, concerning the amendment of proposed paragraph 402 of the revised regulations:

It cannot be stated at this time what action the Commission will take as an assurance to the A. R. A., Mechanical Section, but the inquiries which you have made and your recommendation indicate the value and propriety of the regulation and it will be recommended for the Commission's adoption. No reason is now seen for refusal of the Commission to give necessary approval, and though more definite advice on the subject cannot now be given it is suggested that changes might be prepared in A. R. A. rules to be effective upon receipt of the Commission's approval of the regulations. Presumably this approval, if given, may be expected by the first of July, or soon thereafter.

L. I. DOYLE, Explosives Agent.

Proposed Addition to Rules of Interchange on Tank Cars

Mr. Chambers: In view of that the Tank Car Committee would like to recommend to the section—to be placed before the Arbitration Committee—that this be added to the rules of interchange on tank cars:

"Safety valves on tank cars must not be tested while under load. Whenever this test is due on a loaded car while in transit, the car must be allowed to continue to destination bearing a defect card with the following notice: 'Safety valve overdue for test. Moving under I. C. C. 402.'

"Prompt report of such movements must be made by the carriers issuing the defect cards to the Chief Inspector, Bureau of Explosives, 30 Vesey Street, New York City."

It may be that a number of people have not been confronted with a request to move a car already loaded on which the test date has expired, but in districts where competition is keen and business is sought after, many times a little pressure on a road has caused it to move a car when it knew it was in violation of some rule, with the threat made in this manner: "Well, all right, if you don't take it, so and so will"—and many times so and so does.

So I think this is a proper safeguard to cause a car to be moved.

C. F. GILES (L. & N.): I move, Mr. Chairman, that resolution be approved.

(The motion was seconded, put to a vote and carried.)

Mr. Calkins: Would the issuing of a defect card under those conditions penalize the delivering line with the cost of making the test?

Mr. Chambers: That is something the Arbitration Committee should work out. I would say that would not enter into this materially because whoever makes the test bills the owner for the cost of it, so nobody will lose and nobody will gain.

Report of Committee on Loading Rules

The preparation of rules governing the loading of freight cars has been an important part of the work carried on by the Master Car Builders' Association and its successor, the Mechanical Division of the American Railway Association. The committee has been in existence many years but changing conditions require additions and modifications in the rules and the members still find a broad field for their activities as the numerous revisions submitted in this year's report demonstrate.

The preparation of the loading rules may seem

an easy matter to anyone making a casual examination of the code. However, the necessity for considering clearances, stability and stresses introduces problems which often require considerable ingenuity for solution. The need for adhering to methods of securing loads that are simple and inexpensive and employ only material that can be easily obtained makes the work still more difficult. The committee since its inception has performed an important service in improving operation which has often not received due recognition.

THE COMMITTEE HAS considered all suggestions for modifications of and additions to the Loading Rules presented by the members of the association as well as shippers and has held joint conferences with the latter to the end that the Loading Rules may be kept up to date and take care of any new methods of loading that may be presented. As a result of this procedure, the committee submits the following recommendations for approval and

100 lb. as total weight for car and lading (100,000 lb. capacity car) to conform with Interchange Rule 86.

PROPOSED REVISION OF RULE 9-E, FIRST PARAGRAPH PROPOSED FORM

RULE 9-E. For twin or triple loads of long flexible material such as plates or similar lading requiring more than two sliding-pieces in addition to the bearing-pieces (See Figs. 67 and 68) the

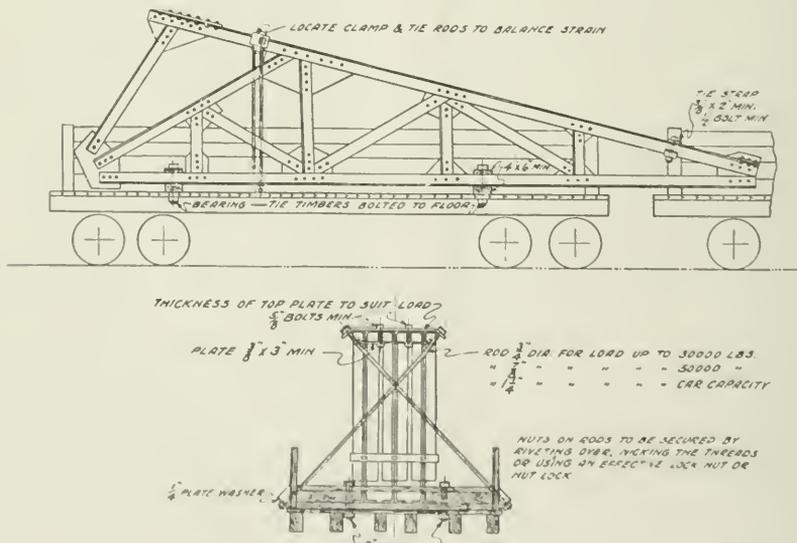

Fig. 50—A

submitted to Letter File for adoption as standard of the association.

RULE 5

PROPOSED REVISION OF TABLE OF LOAD WEIGHTS PROPOSED FORM

Material	Total Weight of Car and Lading	Load Weight
Maximum Capacity of Car	100,000	100,000 less weight of car.
Explanation—	Table revised to show 100,000 lb. in place of 161,	

weight of lading must not exceed two-thirds the capacity of car and the total weight of lading must not exceed 150,000 lb. For materials of less flexibility such as heavy channels and I-beams requiring two sliding-pieces in addition to the bearing-pieces as per Figs. 65 and 66 or for rigid materials, as per Figs. 62 and 64, requiring two bearing-pieces and no sliding-pieces, the weight of lading shall be determined by the location of bearing-pieces as per Rules 6, 9 A, 9-B and 9 C.

Explanation.—Rule revised to more clearly define loads of flexible material and to increase allowance load of flexible and semi-flexible material.

RULE 13

PROPOSED CHANGE IN TABLE RULE 13

In the table, it is proposed to increase the allowable width of load for loads having overhang of 19 ft., 6 in. and above. The

vided, but a group of cars must have at least one accessible and operate hand brake for each multiple of three cars or fraction thereof. There must be a clearness of at least six in. between the brake wheel and lading, this clearance to extend the width of the car.

Explanation.—Reference to hand brakes as shown on the various cuts has been added to the rule to clarify same.

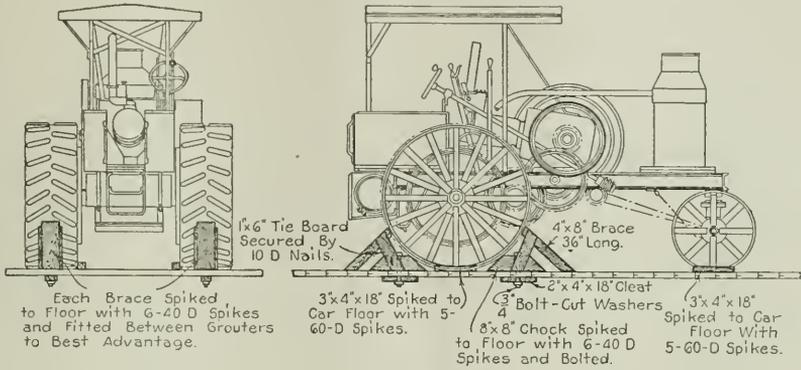

Fig. 104—Manner of Loading Gasoline Tractor Engines on Flat Cars

clause "but shipments may contain pieces overhanging as much as 24 ft. provided the average length of overhang of the total load does not exceed 18 ft." preceding the table to be indicated in heavy type to direct attention to same in connection with increased width allowance.

PROPOSED FORM			
Length of Overhang C	Width of Load W	Length of Overhang C	Width of Load W
9 ft. 0 in.	9 ft. 5 in.	18 ft. 0 in.	8 ft. 1 in.
10 ft. 6 in.	9 ft. 2½ in.	19 ft. 6 in.	7 ft. 9 in.
12 ft. 0 in.	9 ft. 0 in.	21 ft. 0 in.	7 ft. 5 in.
13 ft. 6 in.	8 ft. 9½ in.	22 ft. 6 in.	7 ft. 1 in.
15 ft. 0 in.	8 ft. 7 in.	24 ft. 0 in.	6 ft. 9 in.
16 ft. 0 in.	8 ft. 4 in.		

Explanation.—Increased width for loads having long overhang can safely be permitted if the average length of overhang of the total load does not exceed 18 ft.

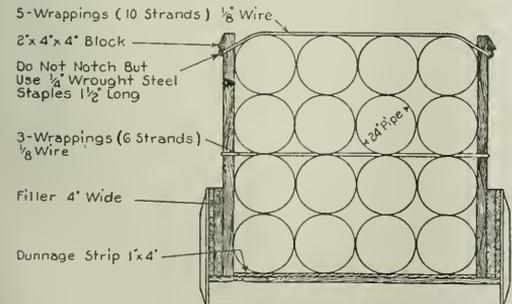

Fig. 81-A—Loading Wrought Pipe on Gondola Cars. Pipe 24 in. in Diameter

ADDITIONS TO TABLE UNDER RULE 23
MAXIMUM WEIGHT OF LOAD—FOR LOADS AS PER Figs. 7, 8, 9, 23, 24, 52, 54 AND 55

Length of Car Over End Sills	Average Length of Material	Capacity of Cars 60,000 lb.	Capacity of Cars 80,000 lb.	Capacity of Cars 100,000 lb.	Capacity of Cars 140,000 lb.
42 ft.	42 ft.	75,000 lb.	80,000 lb.	100,000 lb.	140,000 lb.
	44 ft.	71,000 lb.	77,000 lb.	97,000 lb.	137,000 lb.
	46 ft.	67,000 lb.	73,000 lb.	93,000 lb.	133,000 lb.
	48 ft.	64,000 lb.	70,000 lb.	90,000 lb.	130,000 lb.
	50 ft.	61,000 lb.	67,000 lb.	87,000 lb.	127,000 lb.
48 ft.	52 ft.	58,000 lb.	64,000 lb.	84,000 lb.	124,000 lb.
	54 ft.	55,000 lb.	61,000 lb.	81,000 lb.	121,000 lb.
	56 ft.	52,000 lb.	58,000 lb.	78,000 lb.	118,000 lb.
	58 ft.	49,000 lb.	55,000 lb.	75,000 lb.	115,000 lb.
	60 ft.	46,000 lb.	52,000 lb.	72,000 lb.	112,000 lb.

Explanation.—Limits for 42 ft. cars of 80,000 lb. capacity and

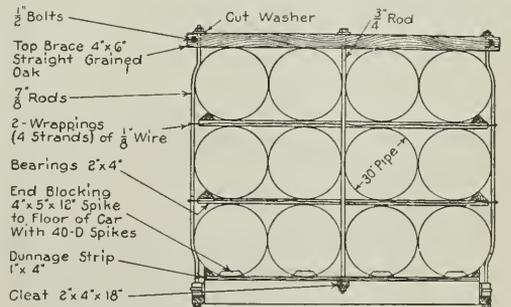

Fig. 81-B—Loading Wrought Pipe on Flat Cars. Pipe 30 in. in Diameter

48 ft. cars of 100,000 lb. capacity added to table to take care of existing equipment not covered by the table.

PROPOSED REVISION OF RULE 18
PROPOSED FORM

RULE 18. The location and number of hand brakes shown in the various cuts is not necessarily the hand brakes that are to be pro-

PROPOSED REVISION OF RULE 27
PROPOSED FORM

RULE 27. Where the dimensions of bearing-pieces or sliding-pieces are not otherwise specified, they must be of sufficient thickness to keep the lading four in. from the floor or end gates of

carrying car and idler, and must extend the full width of car. Bearing-pieces more than five inches high may be built up of lumber of ample strength or take the shape of cribbing or rolled or built-up steel construction. Bearing-pieces, sliding-pieces, chocks, head-blocks, etc., must have a width at least equal to their height. For structural and similar material, the bearing-pieces must be securely fastened to the floor of the car as shown in Figs. 48 or 53. For number, logs, telegraph poles, piling and props and similar material on open cars loaded as per Figs. 8,

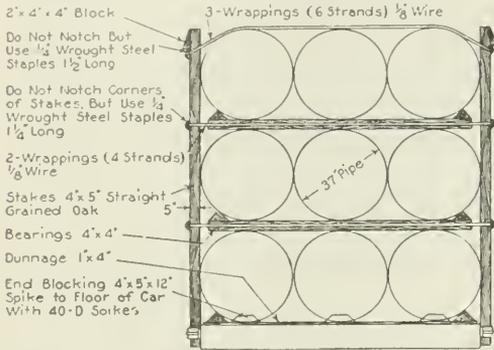

Fig. 81-C—Loading Wrought Pipe on Flat Cars. Pipe 37 in. in Diameter

11, 12 and 13, the bearing-pieces must be securely held in place by cleats, as per Fig. 2.

Explanation.—Reference for manner of securing bearing-pieces changed from rule 207 to Figs. 48 or 53 to cover both methods of securing bearing-pieces.

RULE 102—PROPOSED PARAGRAPH TO BE ADDED

RULE 102. *Proposed Additional Paragraph:* Where timbers of different sizes are loaded, they should, when possible, be

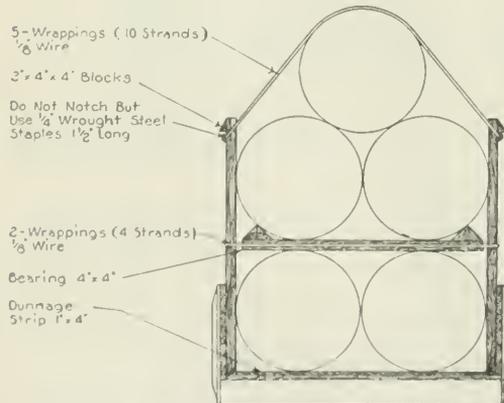

Fig. 81-D—Loading Wrought Pipe on Gondola Cars. Pipe 43 in. to 49 in. in Diameter

arranged in layers of uniform thickness across the car and having strips used as prescribed in the first paragraph of this rule. Where the sizes will not permit of uniform layers across the car the height of load must be restricted to four feet above floor of flat cars and three feet above top of sides of gondola cars.

Explanation.—Loads of this description have given trouble by becoming disarranged enroute and falling from cars, therefore, a new paragraph has been added to specifically cover the method of loading such timbers

PROPOSED CHANGE IN RULE 200

RULE 200. In the ninth line of this rule it is proposed to change the wording "sixteen-penny nails" to "ten-penny nails."

Explanation.—Changed to conform with the requirements of General Rule 15.

PROPOSED CHANGE IN FIG. 43-A

FIG. 43-A. It is proposed to specify 1 in. by 5 in. tie boards and diagonal braces in place of 1 in. by 6 in. as shown.

Explanation.—Size of tie boards and braces changed to conform with Fig. 42.

PROPOSED REVISION OF RULE 202—THIRD PARAGRAPH PROPOSED FORM

Supplementary Report

RULE 202. Third Paragraph: Determine number of posts required by dividing total weight of lading by load allowed per post. There must be a minimum of two posts per pile. *Two by six inch hardwood timbers extending from top of car side to top of lading must be used to prevent creeping of the plates. These timbers shall be spiked to the post and in addition shall be secured at the top by the diagonal tie rod.* Total weight of

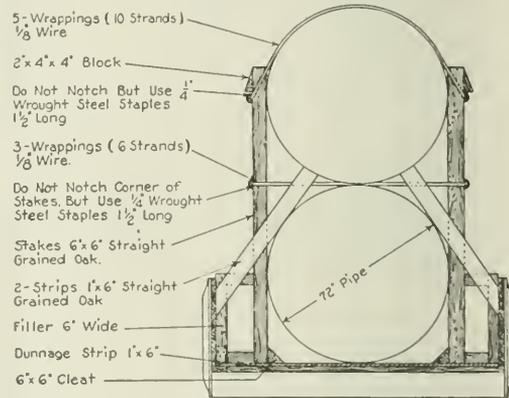

Fig. 81-E—Loading Wrought Pipe on Gondola Cars. Pipe 72 in. in Diameter

plates loaded diagonally must not exceed 75 per cent of the load weight as per General Rule 5. Short material may be loaded on car floor, if equally distributed over entire floor; total weight of entire lading must not exceed the load weight as per General Rule 5. Upright posts may all be staggered as shown in Fig. 44. Bearing-pieces spiked to the floor and sides of the car, may be used at the lower edge of plates as may be required by loading and unloading facilities. When used, the size of bearing pieces is optional but they must be located opposite each post and longitudinal shifting of the plates prevented either by stop blocks spiked to side and floor of car, stop blocks bolted to side of car or horizontal tie rods across the car.

Explanation.—Paragraph has been revised to provide 2 in. by 6 in. timbers secured to outside face of supporting posts to prevent creeping of the plates, and to provide an alternate method for securing stop blocks by bolting them to side of car.

PROPOSED REVISION OF RULE 202—LAST PARAGRAPH PROPOSED FORM

RULE 202. Last Paragraph: Round plates flat or flanged, may be loaded as per Figs. 44-B, 44-C or 44-D. This manner of loading is the same as for ordinary plates, except that when loading according to Figs. 44-B and 44-C a 4 in. by 8 in. horizontal bearing-piece is bolted at top of posts to form a rest for the plates. Longitudinal shifting of the plates to be prevented either by stop blocks spiked to side and floor of car, stop blocks bolted to side of car or horizontal tie rods across the car.

Explanation.—Paragraph revised to provide an alternate method for securing stop blocks by bolting them to side of car.

(See Fig. 50-A on page 1446.)

RULE 208. PROPOSED PARAGRAPH TO BE ADDED

RULE 208. *Proposed Additional Paragraph:* An alternate method of loading open girders, half roof trusses and similar material by using rod and plate material is covered by Fig. 50-A.

Explanation.—Alternate method of loading is provided at the suggestion of steel shippers in order to permit use of rod and plate material available at the mills.

PROPOSED REVISION OF RULE 221
PROPOSED FORM

RULE 221. The idlers used with loads as shown in Fig. 52 must be flat cars unless the width of the overhanging load is less than the width given for each length of overhang in the table of General Rule 13, by an amount equal to the difference between 11 ft. 0 in. and the inside width of gondola car used.

Explanation.—Rule has been revised to govern width of overhanging load by inside width of the gondola car used as an idler. This arrangement makes the rule more flexible and will permit wider loads when wide gondola cars are used.

PROPOSED REVISION OF RULE 227-D
PROPOSED FORM

RULE 227-D. Binders consisting of two vertical hardwood pieces of timber, 6 in. by 8 in. in section with 1/2 in. bolts and suitable washer under head and nut in each end to prevent splitting, drawn together by means of two 1 1/4 in. rods, one on top and one below load, shall be applied to all loads as follows:

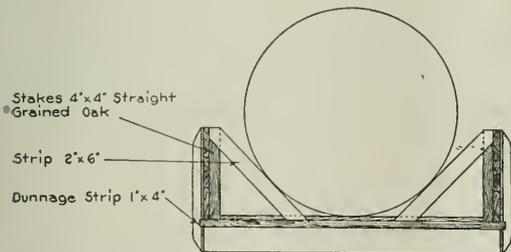

Loads up to four feet in height, one binder located midway between bearing-pieces.

Loads four feet and not over six feet in height, two binders, located between bearing-pieces, each binder to be located three feet from bearing piece.

Explanation.—Rule has been revised to permit two binders in place of three binders on loads five feet and not over six feet in height and location of binders has been specified to be between bearing pieces and three feet from the same instead of either side of bearing-piece and six in. from same. Test loads were followed to destination which established the safety of the proposed change in number and location of binders on these loads.

PROPOSED CHANGE IN RULE 230

RULE 230. Proposed Change: Substitute "General Rule 27" for "Detail Rule 227" in the next to last line of this rule making the last sentence of the rule read as follows: "The bearing-pieces must be secured to the car in the manner described in

NOTE.—Not less than three pair of braces to each length of pipe.

Fig. 81-F—Loading Wrought Pipe on Gondola Cars. Pipe 84 in. to 96 in. in Diameter

General Rules Nos. 26 and 27 and the material must be clamped together in the manner described in Rule 231 to prevent it from shifting."

Explanation.—Reference to Detail Rule 227 is an incorrect reference.

PROPOSED CHANGE IN FIG. 61

FIG. 61. It is proposed to change the size of lateral braces shown on this cut from 3 in. by 8 in. to 2 in. by 8 in.

It is proposed to change the top clamp from 4 in. by 6 in. to 6 in. by 8 in. and show 1/2 in. bolts in ends to prevent splitting.

Explanation.—Size of braces changed to conform with braces shown on Figs. 56 and 57. Top clamp changed to conform with top clamp shown in Fig. 53.

PROPOSED CHANGE IN FIGS. 62, 63 AND 67

FIGS. 62, 63 AND 67. It is proposed to eliminate the dimensions of bearing-pieces from these figures and substitute a notation reading "Bearing-Pieces as per Rule 227."

FIGS. 63 AND 67. It is proposed to eliminate the dimensions of metal sliding plates from these figures and substitute a notation reading "Dimensions of Sliding Plates Must Conform with Rule 230."

Explanation.—Reference is made to Rule 227 for size of bearing-pieces in order to cover both sizes that are permissible. Reference is made to Rule 230 for dimensions of metal sliding plates in order to cover both sizes that are permissible.

PROPOSED CHANGES IN FIGS. 64, 65, 66 AND 68

FIGS. 64, 65, 66 AND 68. It is proposed to eliminate the dimensions of bearing-pieces from these figures and substitute a notation reading "Bearing Pieces as per Fig. 61."

It is proposed to eliminate the dimensions of metal sliding plates from these figures and substitute a notation reading "Dimensions of Sliding Plates Must Conform with Rule 230."

Explanation.—Reference is made to Fig. 61 for size of bearing-pieces in order to cover both sizes that are permissible. Reference is made to Rule 230 for dimensions of metal sliding plates in order to cover both sizes that are permissible.

(See Fig. 104 on page 1447.)

PROPOSED CHANGE IN FIG. 104

FIG. 104. It is proposed to eliminate the longitudinal blocking at front wheel and apply more substantial blocking at rear wheels to prevent any longitudinal motion.

Explanation.—The longitudinal blocking at front wheel has been removed to prevent bending of the king pins.

PROPOSED REVISION OF RULE 309

PROPOSED FORM

RULE 309. If box cars are used for loading heavy machinery such as lathes, planers, boring machines, etc., each machine should be blocked by securely nailing or bolting to floor of car 2-in. by 4-in. hardwood strips fore and aft. Machinery resting on legs should be securely braced and propped at ends, but in no case should the legs be blocked or in any way secured to the car floor. Where there is danger of the legs becoming broken they should be removed and the machine crated when practical. The legs to be secured in same crate with the machine.

Explanation.—Rule revised to provide more definite instructions for loading machinery to overcome breakage of legs.

The committee has been advised recently by pipe manufacturers that wrought pipe or tubing ranging from 24 in. to 96 in. in diameter is being offered for shipment to the railroads. The present pipe loading rules do not cover these larger sizes of pipe and after conference with the shippers revised rules and cuts have been worked out to cover this loading.

The following revision of the pipe loading rules, with new cuts to cover these shipments, are submitted for your approval at this time.

REVISION OF RULE 249

RULE 249. First sentence of first paragraph. There should be not less than three pairs of stakes to each pile, when the material is 23 ft. or less in length, the top of each pair of stakes to be held together by not less than six strands equal to three wrappings of good 3/8 in. diameter wire resting on the pipe, in addition to any intermediate wiring or dunnage strips for character of shipments, as provided for in succeeding paragraphs.

Explanation.—Rule revised to cover additional wiring at top of stakes as used in loading large sizes of wrought pipe.

REVISION OF RULE 255, PROPOSED FORM

RULE 255. First Sentence. Gondola or Flat Cars. All cast iron pipe 24 in. or more in diameter must be loaded in pyramidal form, with the bell ends interlocking each other.

Explanation.—Rule changed to omit reference to wrought iron pipe account of same being covered in new Rule 251-A.

RULE 251-A—PROPOSED NEW RULE

RULE 251-A. Flat and Gondola Cars: Wrought iron pipe 24 in. or more in diameter when loaded on flat or gondola cars should be loaded in accordance with Figs. 81-A, 81-B, 81-C, 81-D, 81-E or 81-F.

Explanation.—New paragraph and cuts added to cover the loading of large size wrought iron pipe.

The report is signed by R. L. Kleine (Chairman), Pennsylvania Railroad; J. J. Burch, Norfolk & Western; E. J. Robertson, Soo Line; J. E. Mehan, Chicago, Milwaukee & St. Paul; Samuel Lynn, Pittsburgh & Lake Erie; Ira Everett, Lehigh

Valley, T. O. Sechrist, Louisville & Nashville; E. N. Harding, Illinois Central and G. R. Lovejoy, Detroit Terminal.

Discussion

R. L. Kleine (Penn. R. R.): It has been found that the bottom plates creep up over the posts and extend into the clearance limits, and the committee formerly had in the rule a vertical 2 in. by 8 in. bolted to the post to prevent this creeping. The rule was afterwards modified as that was considered unnecessary, but since we have taken it off we have found that these plates creep and therefore a provision of that kind has been re-inserted in the rule. Some of the shippers, since we made this suggestion, have tried out that method and on account of their loading facilities find that they cannot swing the plates into place

on the cars because of this projecting piece, and I suggest that the convention allow an alternate provision to be inserted in the rules to read as follows: Add the following after the word "rod" in twelfth line: "As an alternate method to prevent creeping, plates 24 in. long, 6 in. wide and not less than $1\frac{1}{2}$ in. thick, secured to the outside of post by the diagonal tie rod and by one $\frac{5}{8}$ -in. bolt to prevent turning, may be used."

These various shipments have been tried out, followed to destination and found to carry alright.

Mr. Brazier: I move that the report be accepted and submitted to letter ballot, and the recommendations outlined in the report be adopted.

(The motion was seconded and carried.)

Committee on Train Lighting and Equipment

The committee has accomplished two things in its report on train lighting and equipment. First, the status of direct drive for car lighting generators is set forth by brief historical notes and by an outline of what the functions of direct drive equipment should and should not be. Second, standards are recommended for train lighting lamps which reduce the number of lamps required for the greater part of car lighting service to four. Regulation limits for lamp regulators are also included.

Belts are good and efficient form of drive, for car lighting generators but due to wear and break-

age an average of five or six belts must be applied on a car each year. The report includes an interesting and informative table on belts from which belt costs are derived.

Many forms of direct drive are described briefly in the report, which were more or less successful but which developed weaknesses before reaching the point at which they could compete with belts. It describes others in the development stage. Only those which are now under test on the road or in the shop are included in the following abstract.

SO FAR as the committee is aware, the solution of the problem has been attempted by the following, approximately in the order given, although information on this point is not definite

1. W. L. Bliss.
2. E. L. Deutsch.
3. E. M. Fitz.
4. The Gould Compler Co.—Chain Drive.
5. The Safety Car Heating and Lighting Co.
6. The Gould Compler Co.—Shaft Drive.
7. W. A. Pitt.
8. A. H. Matthews.
9. United States Light and Heat Corporation.

"Safety Car Heating and Lighting Company's" Drive

The "Safety Co.'s" second drive consists of two axle bushings, they being mounted on the axle a little inside the wheel fits. Each bushing carries a collar to which eye bolts are secured.

The eye bolts are connected by means of a helical spring, normally under tension, to a lug on a hollow shaft, the springs being arranged parallel with the longitudinal axis of the axle.

The hollow shaft has a diameter internal diameter to permit the axle to rotate freely without touching the shaft.

This shaft is split and is supported at each end by the outer raceways of four ball bearings, the inner raceways of which are secured on one end only, carried by the gear housing.

The gear housing is split and is carried by seats turned on each end of the hollow shaft, and is prevented from turning by lugs formed by cross bars fastened to the axle generator suspension track.

Mounted on the hollow shaft is a split gear meshing with a pinion which is mounted on a short shaft carried on ball bearings, parallel to the axle.

Mounted on the short shaft is a bevel gear meshing with a pinion carried on a second shaft, also carried on ball bearings, perpendicular to the axle.

This second shaft is connected to the armature shaft by means of a split coupling, no universal joints being provided, as the generator is carried on suspension irons attached to the truck frame.

It should be noted that this drive does not require a special axle, and also that no provision has been made for maintaining the pitch circles of the bevel gear and pinion in contact.

So far as is known this drive has never been used in actual service.

The "Gould" Drive

The "Gould" Shaft Drive, shown in cuts, Figs. 1 and 2, requires the use of a special axle. A circular key $\frac{1}{2}$ inch wide and $\frac{1}{4}$ inch high is machined on the axle midway between two bearings fits $4\frac{1}{2}$ inches long. A second key $\frac{1}{2}$ inch by $\frac{1}{2}$ inch and $5\frac{1}{2}$ inches long is fitted in a keyway cut in the axle parallel with the axis of same.

The first key acts to center the split gear on the axle and the second serves to drive the gear. The bearing fits on the axle serve as a seat for the gear box.

The 52 tooth spur gear mounted on the axle meshes with a 36-tooth spur pinion mounted on a shaft, parallel to the axle in the gear box, this shaft being carried on ball bearings.

On this shaft is a 28-tooth bevel gear, meshing with a 20-tooth bevel pinion on a second shaft perpendicular to the axle. This second serves to drive the gear. The bearing fits on the axle serve and at the outboard end carries one part of a universal coupling.

The gear box is split on the horizontal diameter of the axle and is prevented from turning by a member which connects the end of the gear box to the end frame of the truck.

A telescoping shaft carrying on one end the balance of the first universal joint and on the other end a portion of a second universal joint serves to transmit the power to the armature shaft.

Mounted on the armature shaft is a safety device consisting of a coupling carrying a shear pin so that if the generator becomes overloaded in any way that will throw an excessive load on the drive, the pin will shear, permitting the drive to run free. This

safety device also forms the balance of the second universal coupling.

Disconnecting this safety device permits the generator to be operated as a motor for testing purposes.

The generator is mounted rigidly on the under frame of the car body with the armature shaft parallel with the longitudinal axis of the car.

Provision is made whereby the position of the bevel pinion can be adjusted so as to maintain the pitch lines of the bevel gears and pinion in contact.

The record of this drive as applied to a car on the D. L. & W. Railroad is as follows:

January 17, 1918. Car No. 582 came out of shop and went in service on local runs.

January 19, 1918. Car journal ran hot, causing car to be cut out for repairs. The opportunity was taken for inspection of internal mechanism and it was found that locking device for jack shaft adjustment had failed, and the locking pin had fallen out

show point at which teeth were coming into mesh to be properly adjusted. No adjustment necessary on jack shaft.

Main Bearings.—Wear slight, not enough to permit passing of 1/64 inch shim 3/8 inch wide. Thrust surface clearance about 1/8 inch, slightly more than on previous inspection.

Dust Guards. In good shape, allowing no dirt to enter.

Universals. No wear apparent.

Telescope Joint. No wear apparent.

Suspension on Linkage. No wear apparent and free to swing.

Since the above inspection nothing has been done on this equipment. No expense or repairs other than lubrication and inspection has been necessary to date. At all times the drive has functioned properly, maintaining a steady voltage and amperage output according to the setting of the regulator. No noise is made by the device when operating and the performance up to date has been very satisfactory. A mileage of approximately 100,000 has been attained and the shock and strain due to hard suburban service have been withstood without faults developing. Some improve-

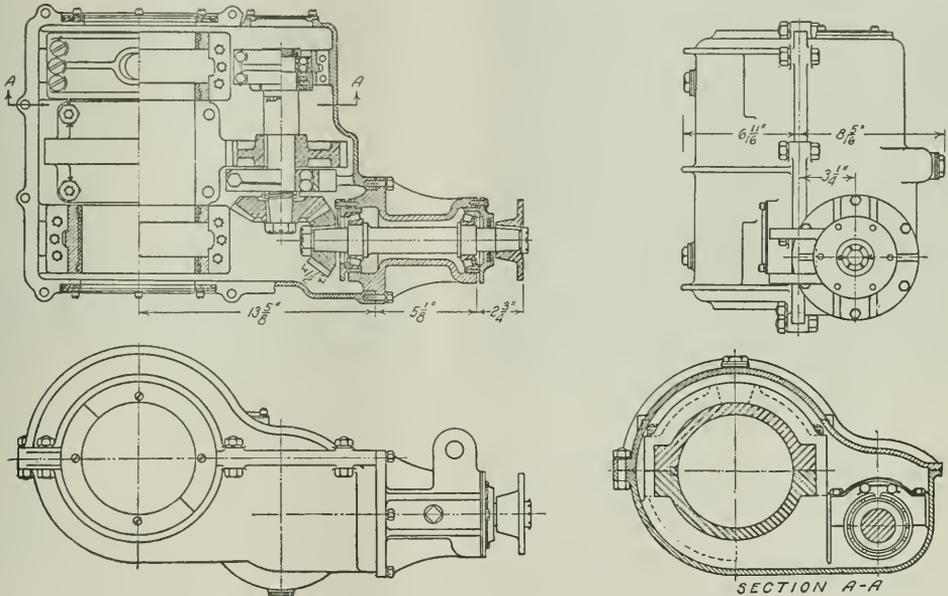

Fig. 1—Assembly Drawing of Main Part of Gould Drive

and into the grease. From here it traveled with the grease and got into the gears, cutting them badly before it was finally cut to pieces, but damage to gears did not necessitate removal or repair, and after cleaning out all grease and installing an improved locking device, the car went back in service on February 13, 1918, no further trouble with the locking device being experienced.

April 24, 1918. Universal on the generator was greased.

September 16, 1918. Both universals greased, and five pounds of grease put in gear box.

July 19, 1919. For purpose of investigation and inspection, the device was opened up, grease cleaned out and all parts checked up for wear. No wear was noticeable on gears, axle bearings, universals, shock absorber or hangers. No dirt or residue of any kind noted in gear case. Back lash on gears normal and all parts functioning properly. All screws and bolts tight and no apparent strain in any part. Refilled with fresh grease and put back in service.

February 20, 1920. Greased universals and put five pounds of grease in gear box.

July 14, 1920. Car came out of shop and the device was opened up for general inspection. After cleaning out the grease, conditions were found as follows:

Gears. Back lash normal, wear insignificant, just enough to

ment as to reducing weight may be possible as well as reduction in size, the present outfit being claimed large enough to drive 15 H. P.

The following is a record of the performance of a similar drive on C. & N. W. diner 2868, applied April, 1920.

Equipment operated satisfactorily until the latter part of July 1920, when the brass collar for adjusting the rear shaft bearing became loose. Repairs were made and the drive worked satisfactorily until the latter part of September, 1920, when the adjusting collar again worked loose. Repairs were made and operation was satisfactory until February 15, 1921, when car was taken in shop, at which time it was found that the adjusting nut had again worked loose.

The equipment was transferred to diner 2888, which is still in shop.

From the time of application to diner 2868 until its renewal, there was no failure of lights.

“United States Light & Heat Corporation” Drive

The “U. S. L.” Drive, as shown in Figs. 3, 4 and 5, consists of a 17-inch split steel pulley secured to a standard axle by means of through bolts.

These pulleys drive by contact two 10-inch pulleys or friction

wheels which are made of rubber tires molded on steel rims, the rims being pressed on the center hub of the pulley.

These tires are the standard tire as used on industrial automobile trucks. These pulleys are mounted on the ends of a short shaft, parallel to the axle, this shaft being supported by two sets of ball bearings which are carried from housing pivoting about a horizontal cylindrical bar in a position approximately vertically above the pulley shaft.

This bar in turn is supported by a steel casting mounted on a member which is supported by the truck frame.

This casting is arranged so that it will pivot in the horizontal plane about a bolt, equalizing the pressure of the friction wheels on the pulleys.

At the center of the shaft carrying the friction wheels a worm wheel is mounted which meshes with a worm mounted on a second shaft perpendicular to the axle. The second shaft is also carried on the ball bearings which are mounted in a casting which

Pressure between the pulleys and friction wheels is assured by a bar attached to the housing midway between the pulley, curved so as to pass over the axle and extending beyond the end sill of the truck and having a thread cut on the end.

Beyond the truck frame this rod passes through a helical spring

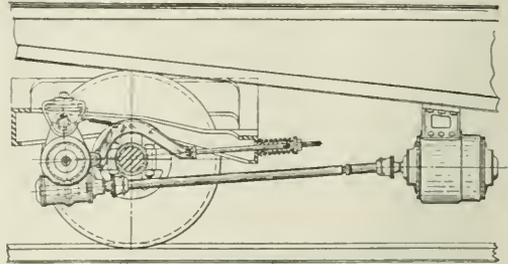

Fig. 3—Side Elevation of U. S. L. Drive

and the pressure between the pulley and friction wheel is adjusted by the amount that this spring is compressed.

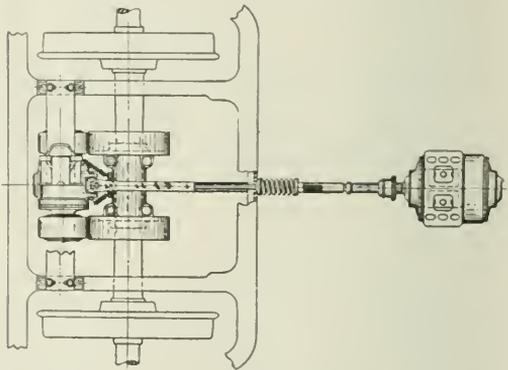

Fig. 4—Plan of U. S. L. Drive

This drive has been operating for some time in experimental service in the shop, but has never been used in service on the road.

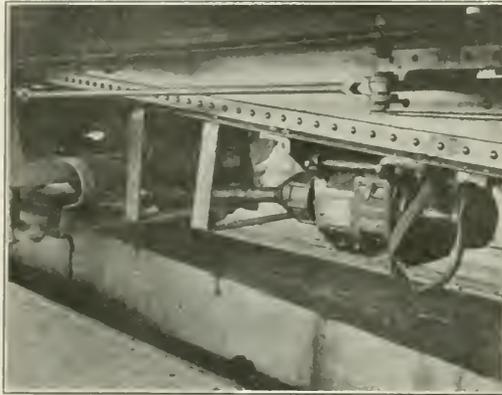

Fig. 2—Gould Direct Drive Equipment Mounted on D. L. & W. Car

is bolted to the casting forming the housing for the worm wheel.

This second shaft is connected by means of a universal joint to an extension shaft provided with a sliding joint, and this in turn is connected to the armature shaft by a second universal joint.

The worm shaft is connected to the shaft of the axle generator, which is mounted longitudinally under the car body by means of two universal couplings and an extension shaft with a sliding joint

Advantages and Requirements of Direct Drive Equipment

It will be conceded by all who are familiar with present-day operation of axle generators that, at the present time, failure of the drive is the cause of a larger number of failures of light than any other one item.

The records of the company operating the largest number of axle generators show that 18.4 per cent of the lighting failures and 25.2 per cent of the equipment failures are due to the drive.

The causes of the trouble experienced with belt drive are many and various, but they are not germane to the subject assigned.

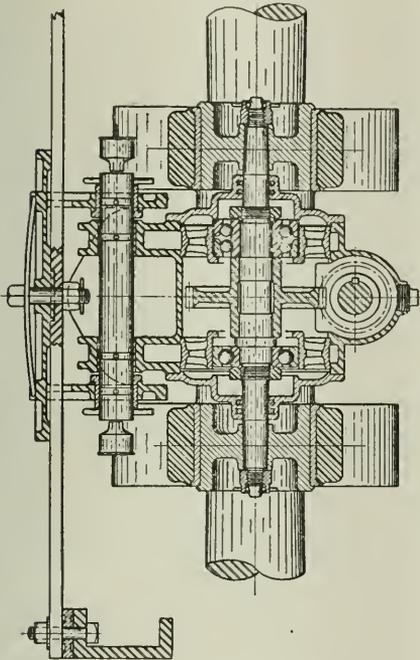

Fig. 5—Section Showing Details of Construction of U. S. L. Drive

Their effect on car lighting, however, is and has been so detrimental that, as has shown, repeated efforts have been made to design a satisfactory positive drive which eliminate the belt.

The advantage of such a form of drive are:

1. Decreased liability of failure of drive, resulting in.
2. Decreased liability of failure of light.
3. Decreased liability of deterioration of battery, due to undercharging of battery on account of the belt slipping and sulphating on account of battery becoming discharged and standing in that condition.
4. Decreased liability of having train detentions.
5. Decreased liability of annoyance to passengers, due to flickering of lights caused by belt slipping and to failure of lights due to loss of belt.
6. Positive drive under all conditions of weather.
7. Elimination of belt tension device, simplification of suspension, with consequent reduction in first cost and cost of maintenance of these parts of the equipment.

The disadvantages of such a form of drive are:

1. Increase in first cost of drive.
 2. Increase in cost of application.
 3. Increase in length of time of train detention when drive does fail.
 4. Increased difficulty in testing generator by motoring.
- To be really successful, the direct drive should, of course, in

addition to its advantages over the belt drive, be capable of being operated at a total cost comparable with the total cost of operating the belt drive.

In order to determine what the cost of operating a belt drive might be, your Committee presents the accompanying data as fur-

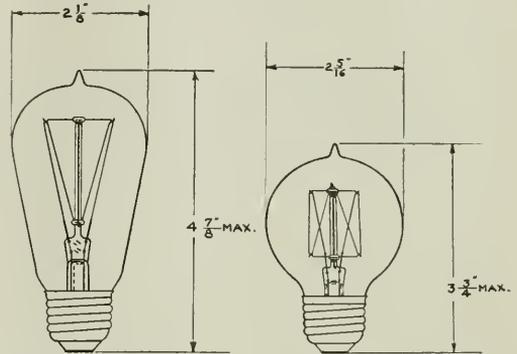

Fig. 6—15-Watt, 30-34-Volt, S-17 Mazda B Lamp Fig. 7—15 and 25-Watt, 30-34-Volt, G-18 1/2 Mazda B Lamp

nished by various railroads, from which it will be noted that the mileage per belt varies from 5,132 to 84,775, and that the average percentage renewals per belt per month vary from 5.8 to 85.6.

As the data on belts given in the large table varies so widely on the several railroads, each railroad should, when making such a comparison, make use of its own data.

However, as a guide to arrive at a figure which might represent the cost of operating, we submit the following:

ASSUMPTIONS

Miles service per belt	10,000
Miles service per month per car	5,000
Length, width and ply of belt .14 ft. 0 in. by 4 in. by 5-ply	
Cost per foot of belt.....	\$0.4725
Type of belt fastener.....	Crescent
Cost of fasteners per belt.....	\$0.155
Axle pulley bushing life, cost.....	.20 yrs. \$ 4.95
Axle pulley life, cost.....	10 yrs. 18.00
Armature pulley life, cost.....	3 yrs. 12.00
Armature pulley times turned, cost per turning	
3 yrs.....	.90
Labor to cut and apply belt, time, cost.....	.20 min. .28
Difference in cost of suspension, including belt tension device	75.00
Cost per year based on above Assumptions.	

OPERATION

6 14 ft. 0 in. by 4 in. by 5-ply belt, at \$0.4725	
per ft.	\$39.69
6 sets of fasteners, at \$0.155 per belt.....	.93
6 by 20 minutes for application belt, at \$0.85	
per hour	1.70
Cost of one turning of armature pulley.....	.90
	<hr/>
	\$43.22

DEPRECIATION

Axle pulley bushing, \$0.05 by \$4.95.....	\$0.25
Axle pulley, \$0.10 by \$18.00.....	1.80
Armature pulley, \$0.33 by \$12.00.....	4.00
	<hr/>
	\$6.05

INTEREST

Axle pulley bushing at.....	\$ 4.95
Axle pulley at.....	18.00
Armature pulley at.....	12.00
Belt at.....	2.84
Fasteners at.....	.06
Difference in cost of suspension.....	75.00
	<hr/>
Interest at \$0.06 on \$112.85.....	6.77
Total	\$56.04

Therefore, as an economical proposition, considering the drive of the direct drive, on the basis of the figures used in making this comparison, should be capable of being operated at a total cost, counting in operation, maintenance, depreciation and interest, at not more than \$56.00 per year.

There are, however, other items of expense due to the use of the belt drive which must be considered in making a true comparison.

These items are:

1. Cost of charging current at terminals necessitated by car arriving with batteries discharged due to belt slipping or being lost.
2. Depreciation of battery due to sulphation on account of battery being discharged and remaining for a greater or less time in that condition, due to belt slipping or being lost.
3. Depreciation of battery due to "reserve" material being formed into "active" material before needed, due to sloughing off

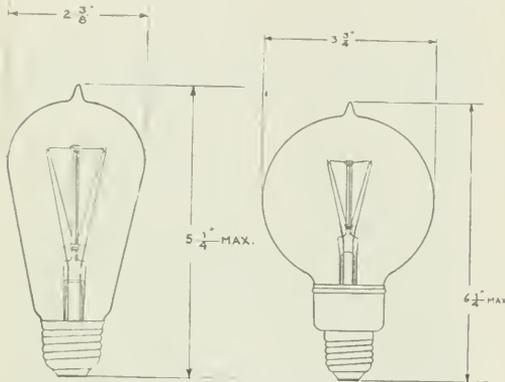

Fig. 8—50 Watt, 30-34-Volt, S-19 Mazda B Lamp
Fig. 9—50-Watt, 30-34-Volt, G-30 Mazda B Lamp

5. That the generators should be so mounted as to provide a maximum of accessibility.

6. That means should be provided by which the generator may be readily "motored."

The committee feels that at the present time there is no type of direct or positive drive which does not include features that are objectionable to the extent of practically prohibiting its gen-

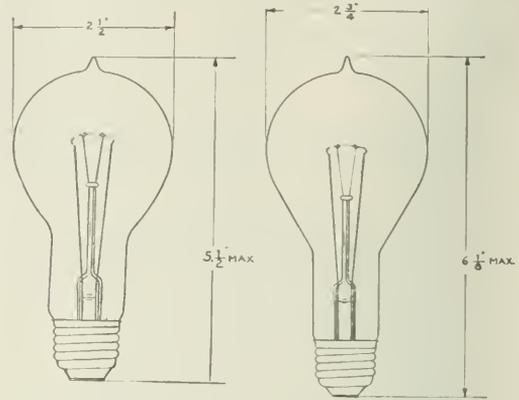

Fig. 10—50-Watt, 30-34-Volt, PS-20 Mazda C Lamp
Fig. 11—75-Watt, 30-34-Volt, PS-22 Mazda C Lamp

eral use, nor does any drive possess all of the points that we consider necessary.

The committee is, however, of the opinion that the advantages of the direct drive are of such importance as to justify its further development, and further that its use would be justifiable even at a cost in excess of the belt drive.

The committee believes that there is a demand for a direct or positive drive, and that its development should be encouraged by all concerned.

of sulphated active material and "forming" charge resulting from local current to battery caused by slipping of belt.

4. Loss of patronage due to annoyance to passengers caused by the "lickering" or failure of the lights due to defects of the belt drive.

Objections 1, 2 and 3 do not necessarily apply to generators designed to operate with slipping belt.

The points that, in the judgment of your committee, should be avoided in designing a positive drive for axle generators are:

1. Construction which necessitates the use of a "special" axle.
2. Construction which in any way changes a "standard" axle.
3. Construction which necessitates the removal of the wheel from the axle in order that the equipment may be applied.
4. Construction which uses a helical spring in a plane other than that perpendicular to its axis.
5. Construction which, on account of wear, necessitates scraping of material other than the material worn.
6. Construction which does not provide for maintaining pitch correct of bevel gears in contact.
7. Construction which does not readily permit the turning of wheels in order drive wheel lathes.
8. Construction which does not provide for the full movement of the axle in all planes.
9. Construction that does not provide efficient lubrication and protection to all working surfaces from dirt and grit.

The general character of the judgment of the committee, should be provided for the positive drive for axle generators are:

1. Construction which can readily be removed.
2. Mounting of the axle generator on the truck or underframe in such a position as to be readily accessible.
3. That the contact points, if used, should be in a true angle to the axle in direct or indirect contact with the axle, and that they are not only in contact on the curve of least resistance, but also capable of moving in a true condition.
4. That a safety device should preferably be provided which will tend to break the connection between the drive and pin gear, in the event of the drive tending to become overloaded.

Specifications for Axle Generators—1920 Report

Recommended Practice

There has been more or less criticism of regulation limits as given for the lamp regulator in these specifications under the heading "6. Lamp Regulator (i), 1 and 2."

As I now reads, the greater the load on the regulator the greater the permissible drop in voltage.

Due to the characteristics of the battery, the terminal voltage of the battery also decreases as the load increases.

Therefore, we have incurred a double drop in lamp voltage, while what is actually desired is a constant lamp voltage.

As this condition is impossible of attainment under the conditions given, i. e., a battery voltage of 31 volts or less, the obvious thing to do is to set a limit for the maximum conditions which will give the greatest drop permissible and for any conditions less than the maximum the drop in voltage will then be less.

The committee have therefore agreed that paragraph 6 i. 1 should read as follows, the words in parentheses being those of the present text that we eliminate:

"6 i. 1. With the battery discharging and with the battery voltage 31 volts or less, the drop in voltage across the terminal of the lamp regulator resistance shall not exceed 1 volt (per 25 amperes flowing) for the connected lamp load."

Paragraph 6 i. 2 gives certain voltage limits for a current value to be specified by the railroad company and the note recommends that this current value be 125 per cent of the connected lamp load. There is no necessity for specifying a load greater than will be connected in service.

The committee has therefore agreed that paragraph 6 i. 2 should read as follows, the words in parentheses being those of the present text that we eliminate:

"6 i. 2. With armature r. p. m. increasing at an approximately uniform rate from minimum full load speed

to maximum speed in not more than five minutes and again decreasing to its original value, the voltage shall be maintained at . . . volts plus or minus one volt (at any current value not exceeding . . . amperes) at any current value equal to or less than the connected lamp load."

Train Lighting Lamps

The present recommended practice shows only the limiting dimensions of two sizes each of two types of bulbs, i.e., the "G" bulb in the 18½ and 30 size and the "S" bulb in the 17 and 19 size.

This information does not fully describe the lamps, and furthermore the type "C" lamp has now been developed and with it a new style of bulb has been introduced.

The committee therefore deems it advisable to present a full schedule of train lighting lamps divided into two portions, a standard or regular schedule and a special or intermediate schedule.

From the point of view of cost of manufacture, as well as stocks to be carried by the railroads and the lamp manufacturers, it is desirable to reduce the number of kinds of lamps used for train lighting purposes to a minimum consistent with meeting the requirements for illumination of the various classes of passenger train cars. Table I covers the standard or regular schedule of tungsten train lighting lamps as listed by the lamp manufacturers. Table II covers the special or intermediate schedule of tungsten train lighting lamps which represent lamps that are available but that are not regularly listed by the lamp manufacturers.

TABLE I.
STANDARD OR REGULAR SCHEDULE

Size in Watts.	Voltages.	Type and Size of Bulb.	Vacuum (B) or Gas Filled (C).
10	30-34	S-17, G-18½	B
15	30-34	S-17, G-18½	B
25	30-34	S-17, G-18½	B
50	30-34	S-19, G-30	B
50	30-34	PS-20	C
75	30-34	PS-22	C

TABLE II.
SPECIAL OR INTERMEDIATE SCHEDULE

Size in Watts.	Voltages.	Type and Size of Bulb.	Vacuum (B) or Gas Filled (C).
15	30-34	PS-16	C (Diffusing Bulb)
20	30-34	S-17, G-18½	B
25	30-34	PS-16	C (Diffusing Bulb)
50	30-34	PS-20	C (White Bulb)
100	30-34	PS-25	C
15	60-65	S-17, G-18½	B
25	60-65	S-17, G-18½	B
50	60-65	S-19, G-30	B
75	60-65	PS-22	C
100	60-65	PS-25	C

The committee believes that the following sizes will meet the general requirements of train lighting service, and that the railroads should confine their demands to these as far as possible.

Size in Watts.	Voltages.	Type and Size of Bulb.	Vacuum (B) or Gas Filled (C).
15	30-34	S-17	B
25	30-34	S-17	B
50	30-34	PS-20	C
75	30-34	PS-22	C

The straight side or "S" type bulb is recommended in place of the round or "G" bulb on account of its much lower cost. The 50-watt, PS-20 tungsten gas filled or "C" lamp is a comparatively new development, but is recommended in place of the vacuum lamp in that it provides 50 per cent more illumination without increase in current consumption.

The accompanying figures, 6 to 11, inclusive, show the dimensions and shapes of the different styles of bulbs.

The committee recommends:

1. That that portion of their report pertaining to the direct or positive drive on which a report was ordered be accepted.
2. That the proposed change in paragraphs 6 i, 1 and 2 of the specification for axle generators be referred to letter ballot as Recommended Practice.
3. That the schedule of Train Lighting Lamps, together with the limiting dimensions as given, be referred to letter ballot as Recommended Practice.

The report was signed by J. R. Sloan (chairman), Pennsylvania; C. H. Quinn, Norfolk & Western; E. W. Jansen, Illinois Central; L. S. Billau, Baltimore & Ohio; A. J. Farrelly, Chicago & Northwestern; H. A. Currie, New York Central, and E. Wana-maker, Chicago, Rock Island & Pacific.

Discussion

Mr. Jansen: Your committee in writing this report has described all the various drives of which it had knowledge at the time and included, as will be seen from the report, a drawing showing each drive. The drawings submitted

were unfortunately of such a character that they did not lend themselves to reproduction by photographic process and it was, therefore, considered advisable to omit all except those drives which were in commercial use. We have since learned of two other drives, one by D. C. Wilson and one by G. G. Milne, but neither of these has been developed, so far as we know, beyond the patent stage. We have also given a list of what we consider to be the essential features that such a drive must possess, and also a list of the features we consider should be avoided.

With regard to the Gould shaft drives in service, as mentioned in the report, we are advised that the one on the C. & N. W., "has not been opened or touched since March 15, 1921, and has been performing in an entirely satisfactory manner."

The record of the one on the D. L. & W. since July 14, 1920, is,

Jan. 25, 1921: Regreased gear box and universal shaft drive joints.

July 25, 1921: Regreased gear box and universal shaft drive joints.

Feb. 23, 1922: Regreased gear box and universal shaft drive joints.

Two hours labor and eight pounds of grease were used each time.

The equipment has been inspected subsequent to May 24, and considerable wear was found between the main axle and the intermediate gear teeth. The bevel gear showed practically no wear and was in good condition. The wear on the main gear was evidently due to its not being hardened as was the bevel gear.

In the 1918 report your committee recommended that the axle pulley bushing, if one is used, be 7.5 in. in diameter, and not less than 8.5 in. long. Apparently these dimensions were not sufficient, as we learned there is a considerable number of various types and sizes of the bushings called for, the variation between them being slight. This condition tends to increase the cost, and prevents the manufacturer from manufacturing for stock.

Considerable interest is now being manifested in the so-called wide face pulley, the advocates of the same claiming that its use conduces, especially with body-hung generators, to increase the mileage obtained from the belt.

It has been suggested that the committee investigate these two subjects as part of their next year's work and the committee would so recommend.

I want to call your attention especially to the fact that all roads, where they can, should make use of straight-side lamps; they cost considerably less than round lamps. At present the tendency is to get the generators off the truck and on the car body. Members of this committee developed first a heavy cast pulley that occupied the entire axle length. They have changed that and are getting out a pressed steel pulley 18 in. in diameter and are mounting the generators so that the generator pulley is on the center line of the car. I think all railroads should come to that, because it will result in reducing belt loss practically one-half. A test was made on a 23-deg. curve, 224-ft. radius, and on the sharpest point of the curve the belt had still two inches to go before it struck the pulley. The belt at all points rested on the axle pulley, and if it had been a straight-faced axle pulley the outer edge would be against the flange and it would have tended to go over.

The truss rod was offset so as to get the pulley on the center line of the car. A sort of S-form that was at least 1½ in. in diameter and about 6 in. wide was used to take up the strain, and as it was believed that it would not in any way interfere with the brakes, the brake beam was also offset.

The present cost of car lighting can be cut down by taking care of body-hung generators and getting a proper

axle pulley. We are now using 17-in. and 20-in. pulleys, but I believe all roads could go to 18½-in. pulleys, and if they get their clearance for the brake rigging and can get the pulley on the center line of the car and it will greatly reduce the cost. The manufacturers now want you to pay three or four hundred dollars for the necessary dies.

Chairman Tollerton: Any further remarks? If not, the motion that the report be accepted and the changes recommended submitted to letter ballot is now in order.

Mr. Tatum: I move that the report be accepted and submitted to a letter ballot. *(The motion was seconded, put to a vote and carried.)*

(On motion of Mr. Tatum the meeting adjourned.)

A Brave Attempt to Rescue Drowning Man

AT 6:30 o'clock last evening a thrilling scene occurred off Young's Million Dollar Pier in full view of hundreds of convention people. A man who later gave his name as F. A. Basford, of New York City, attempted to commit suicide by drowning. He was unobserved at the moment by hundreds of people. He mounted the railing and jumped headlong into the ocean. A life boat did not appear; it remained for a railroad man to prove himself every inch a hero. He was E. S. Smith, master car builder of the Florida East Coast. Mr. Smith hastily stripped off his outer clothing and shoes and, seizing a life preserver, dived headlong from the pier, swimming splendidly 200 ft. towards the drowning man. He had nearly reached him when a life guard boat appeared from the shore and rescued the would-be suicide and took also aboard his courageous rescuer. Mr. Smith deserves untold praise for his splendid efforts, which would have been successful in almost another moment. At the Atlantic City Hospital last night the man Basford was in a precarious condition.

Basford late last night denied that he had attempted suicide. He said he was ill, became dizzy and fell off the pier.

Railway Club Secretaries Meeting

MEMBERS OF THE Society of Railway Club Secretaries, which has done so much good practical work for the organizations it represents, were in annual session for several hours yesterday morning at the Marlborough. W. E. Cade, Jr., of the New England Club, who has been chairman for the past two years, presided. All the railroad clubs of the country were represented either by their secretaries or by proxy. Daniel M. Brady, founder of the society, was also in attendance.

Problems with which the secretaries have to deal from time to time and endeavor to solve for the advantage of the clubs were as usual a subject of much general discussion. Conclusions were reached which must be recommended to the executive committees of the clubs. If approved and made effective corresponding benefits are expected to follow. The biggest question that came up was the broadening of the work in hand. It had been suggested that a larger society of greater usefulness might be developed for co-operation and mutual helpfulness. The idea met with cordial endorsement and later on a plan of organization will be considered. This will probably be in the latter part of July at a meeting to be held in New York City.

The following officers were elected for the ensuing year:

Chairman, W. A. Booth, Canadian Railway Club, Montreal; vice-chairman, Bruce V. Crandall, Western Railway Club, Chicago; secretary-treasurer, Harry D. Vought, New York and Central Railroad Clubs, New York.

After adjournment the secretaries and a number of their superior officers had a delightful round-table luncheon at the Blenheim.

Registration Figures

THE FOLLOWING figures show the registrations for 1922 and 1920. They show complete registrations up to four o'clock of the second day of the respective conventions:

Members, Mechanical, A. R. A.	1922 478	1920 490
Purchases and stores	16	24
Special Guests	180	190
Supply Men	1,771	1,955
Railroad Ladies	337	344
Supply Ladies	384	490
Totals	3,166	3,493

Program for Today

DIVISION V—Mechanical, American Railway Association, is holding its meetings in the Greek Temple on the Million Dollar Pier.

Friday, June 16, 1922

9:30 a. m. to 12:30 p. m.

Discussion of Reports on:

Car Construction.

Couplers and Draft Gears.

Brake Shoe and Brake Beam Equipment.

Train Brake and Signal Equipment.

Car Wheels.

ENTERTAINMENT

10:30 a. m.—Orchestral Concert, Entrance Hall, Million Dollar Pier.

3:30 p. m.—Orchestral Concert with Impromptu Dancing, Entrance Hall, Million Dollar Pier.

4:30 p. m.—Tea will be served in Entrance Hall.

9:00 p. m.—Informal Dance, Canadian Night with Special Features, Ball Room, Million Dollar Pier.

Exhibit Notes

THE NAME OF Charles F. Pierce is to be added to the list of representatives of the Railway Storage Battery Car Company.

The Midvale Steel & Ordnance Company has added to its list of representatives the name of George E. Thackray. The name of Mr. Aertsen was incorrectly spelled in Wednesday's issue. It is Guiliam Aertsen.

The Van Dorn Coupler Company is exhibiting a car-air-electric coupler at Space 38 instead of an automatic coupler as noted in Wednesday's issue.

Rodger Made Vice-

President of the Safety

J. H. RODGER, western manager of the Safety Car Heating & Lighting Company, is receiving congratulations from his friends on his election on Wednesday of this week as a vice-president of the Safety Car Heating & Lighting Company. He will continue to have charge of the western business of his company, maintaining his headquarters in Chicago. He has been with the Safety Company for 11 years.

President Salinas of Mexican Railways at the Convention

LEOON SALINAS, of Mexico City, executive president of the National Railways of Mexico, and F. P. de Hoyos, general agent of these lines at New York, have been attending the convention and looking over the exhibits.

"I have been very much interested in the exhibit," said Mr. Salinas yesterday. "Of course, our railways buy practically all their equipment and supplies in the United States, and the multiplicity of things we are interested in that can be seen on the pier is remarkable.

"The railways of Mexico have largely recovered from the effects of the destruction done during the revolutionary period," Mr. Salinas continued. "We now have about 50 per cent more locomotives than we had before that time and practically an adequate supply of freight cars. There is, however, much of our equipment which is still in need of repair, and we are particularly interested in getting the machinery necessary to be used in making repairs. We have ordered a good deal of it, and will order more as we are able. During the revolutionary period there naturally was not much new machinery bought and the old machinery deteriorated, which of course accounts for our present needs in this respect. Many of our shops also still require reconstruction or repairs.

"Those of our tracks which were destroyed have been entirely rebuilt, and the tracks generally are in satisfactory condition. We have had to get the money for reconstruction and improvements entirely from earnings, and of course this has made our progress in restoring normal conditions slower than it otherwise would have been."

Registration, American Railway Association, Div. V, Mechanical

- Allen, L. L., M. M., Gulf Coast Line, Arlington.
- Baker, G. T., G. C. Insp., Penn., Washington.
- Bassett, H. M., Genl. O. E., N. Y. C., Marlborough.
- Bawden, Wm., S. M. P. Term. R. Assn., Princess.
- Beaghen, Thomas Jr., Mexican Petroleum Corp., Strand.
- Bennett, R. C., S. M. P., Penn., St. Charles.
- Bentley, W. F., Sp. Insp. Cars, B. & O., Bouvier.
- Bibb, Arthur, Chf. Car Drafts., D. & H., Dennis.
- Bishop, G. C., S. M. P., L. L., Chelsea.
- Boyd, H. H., Asst. Insp. Mch., G. P., Dennis.
- Brandt, C. A., Chf. Eng., Superheater Co., Marlborough.
- Breaker, E. R., Supt. M. P. M. of Way, S. A. U. & G, 1925 Pacific Ave.
- Brenaman, H. A., Asst. Wks. Mgr., Penn., Loraine.
- Brenholtz, Thos., S. M. P., A. C. R. R. Co.
- Brittain, W. M., Chief Acct., Penn., Grammercy Apt.
- Bronz, J. E., S. S., L. V., Monticello.
- Broughton, M. C., Div. Prt. Agt., Penn.
- Buch, G. S., Gen. Car Wks., Penn., Breakers.
- Buechler, John A., M. M., D. B. C. & W., 130 St. James Place.
- Buist, C. P., M. M., N. O., Public Belt, Traymore.
- Burton, T. L., A. B. Engr., N. Y. C., Marlborough.
- Butterworth, J. A., Chf. Clk., Southern, Penn., Chalfonte.
- Buzard, E. V., Trav. Insp., P. & R., Dennis.
- Canon, J. M., Retired Mgr., Pullman Co., Kendrickton.
- Carlton, E. T., C. Insp., L. I., Strand.
- Chadron, G. J., Gen. Car Insp., N. & W., Pennhurst.
- Clancy, T. P., Genl. Mgr., C. N. Y. S., St. Charles.
- Clark, F. H., Marlborough.
- Coffey, J. E., For. Pass. Equip., C. R. R. of N. J., Lyric.
- Craig, Insp., B. & M., Chelsea.
- Crewe, H. M., A. C. & Y., Sterling.
- Cromwell, O. C., Asst. Chf. M. P. & Equip., B. & O., Chalfonte.
- Darden, C. M., M. E., N. C. & St. L., Dennis.
- Davidson, Guy H., Solicitor Legal Dept., Penn., Traymore.
- Davis, M. J., Asst. Engr. of M. P., Penn., Chalfonte.
- Deeter, Harry E., Asst. For., P. & R., Russel House.
- Detley, J., Asst. Boiler For. Insp. Cent. R. of N. J., Edison.
- Delaney, John, S. M. P. Cum., Penn.
- Dequire, Geo. N., Asst. Mgr., Dept. of Equip., U. S. R. A., Marlborough.
- Dickert, C. L., M. M., C. of G., Haddon Hall.

- McClelland, W. J., Mgr. Rolling Stock R. Dept., A. Hecker Co., Haddon Hall.
- McCaughy, D. J., S. M. P., G. T., Traymore.
- McCue, Thomas B., Asst. For., P. & R., Stanley.
- McMullen, John, S. C. Dept., Erie, Traymore.
- McMullen, John Jr., Insp., Erie, Traymore.
- McVeigh, A. S., Maintainer, Tel. & Sig., Penn., 3 S. New Hampshire.
- Meelching, J. S., M. P., Penn., Craig Hall.
- Midghead, W. H., Div. Car For., Erie, Penhurst.
- Miller, John B., Asst. For., Atlantic City Ry.
- Mitchell, John, G. F., C. R. R. of N. J., Pennhurst.
- Monfies, A. J., S. M. P., Birmingham, Penn., Craig Hall.
- Morse, W. L., Spec. Asst. Eng., N. Y. C., Marlborough.
- Moses, E. P., Gen. Insp., N. Y. C., Penhurst.
- Murray, G. P., E. & M. Eng., G. T., Marlborough.
- Myers, Harry, E. M. M., L. V., Traymore.
- Needman, P. J., M. E. & E., G. T., Ambassador.
- Nolan, T. E., Asst. Ch. C. Insp., C. R. R. of N. J., Y. M. C. A.
- Norham, B. L., Dennis.
- Nosler, Geo., For. Supt., Am. Ry Exp. Co., Marlborough.
- O'Brien, Peter, Chelsea.
- Owen, W. J., Chf. Int. Insp., Peoria & Pekin Union, DeVille.
- Owens, A. C., Ch. Eng., C. R. R. of N. J.
- Plicht, I. T., Gen. Overhd Insp., N. H. & H., Haddon.
- Paine, Donald E., Clk. Trans. Dept., P. & R.
- Pardue, W. J., M. C. R., Seaboard Air Line, Traymore.
- Parker, G. E., M. E., M. C., Brighton.
- Perez, José Cent. Shop Supt., Penn., Haddon Hall.
- Perkinson, T. F., M. M., B. & O., Chalfonte.
- Perrine, W. M., M. C. R. R. of N. J., Alamac.
- Pitchey, John A., M. E., N. & W., Chalfonte.
- Poole, P. L., Dist. M. P. Insp., P. & R., O., Chalfonte.
- Porcher, Samuel, Gen. P. A., Penn.
- Pratt, L. S., M. M., S. P., Shelburne.
- Prendergast, A. D., G. M. Insp., C. of G., Traymore.
- Price, C. P., E. S., Canadian National, Penn.
- Quinn, M. H., G. S. C. R., Erie, Pennhurst.
- Rice, W. L., S. S., P. & R., Dennis.
- Riggs, David, Breakers.
- Riggs, J. R., M. M., Penn., Breakers.
- Rinberg, E. C., Asst. to M. E. B. & A., Shelburne.
- Ritz, A. L., Asst. C. F., A. C. & Y.
- Roberts, John, Supt. M. P., G. T., Traymore.
- Romig, T. S., Asst. M. M., Penn.
- Scheffele, Leonard H., Mach. P. & R., Sterling.
- Schum, H. J., G. F., Penn., Loraine.
- Schuyler, A. S., G. C. Insp., Virginian, Strand.
- Scott, W. L., M. M., Penn., Princess.
- Sealy, Garrett T. L., Asst. Elect. Engr., P. & R., Clarendon.
- Shackford, Jas. M., Chf. Drafts., D. L. & W., Marlborough.
- Shelby, C. K., M. M., Penn., Chelsea.
- Sevard, E. C., Pres. Union Truck Car Co., Traymore.
- Sindall, G. E., M. Asst. Gen. For. Cleaning House, Penn.
- Sisco, G. E., M. M., Penn., Breakers.

Conventionalities

Among the visitors at the convention and exhibit yesterday was George C. Taylor, president of the American Railway Express Company.

John Kruttschnitt, assistant mechanical engineer of the Southern Pacific, who is attending the conventions, is one of the three sons of Julius Kruttschnitt, chairman of the Southern Pacific Company.

T. D. Kingsley, sales manager of S. F. Bowser & Co., Ft. Wayne, Ind., will spend the entire week attending the conventions. Mr. Kingsley has succeeded E. M. Savercool, who is now manager of the San Francisco district.

J. B. Michael, master mechanic, Southern Railway, a member of the Master Mechanics' Association since 1887 is here from Selmer, Ala., maintaining his perfect record of attendance in all these years. He has been with the Southern Railway for 37 years.

Mr. and Mrs. W. E. Sharp's sudden departure from the convention on Thursday afternoon caused real regret on the part of their many friends here. They left for Chicago where they were called by the serious illness of an official of Mr. Sharp's Company.

Col. E. M. Hadley, vice-president of the Chicago-Cleveland Car Roofing Company, is attending the convention this year for the first time and pronounces it a grand success. Col. Hadley is actively interested in the Chicago Association of Commerce, being a member of the Illinois Relations Committee.

J. E. Fairbanks, general secretary of the American Railway Association, and Mrs. Fairbanks, expected to attend the conventions, but V. R. Hawthorne, secretary of the Mechanical Division has received a telegram from Mr. Fairbanks saying that he fears because of pressure of other business they will not be able to come.

Ellsworth Haring, like Mr. Gayetty, is having a real vacation this year. It is the first time for many conventions that he has not to do some tall hustling as a committee man. Nevertheless he seems to be doing more than his full part in helping to make things move. Mrs. Haring, as usual, is backing him up in good work.

Two old timers associated with S. F. Bowser & Co., Alvin A. Bowser and W. T. ("Bill") Simpson, have not missed a convention for the last 25 years. Mr. Bowser has been connected with the mechanical and engineering departments at Ft. Wayne for 35 years. Mr. Simpson has served in the railroad sales department for 17 years.

The General Agent is represented this year by a new mechanical superintendent, H. T. Nowell, who is here with his wife, and a new mechanical engineer, W. C. Harris. Mr. Nowell was formerly with the Boston & Maine and Mr. Harris came from the Delaware & Hudson. Harris previously served with the American Locomotive Company.

Mr. and Mrs. W. I. Tyler are here for the convention. Mr. Tyler who was director in operation of the Personnel Administration in 1919 and Tyler vice president of the Northern Pacific, is now vice-president and general manager of the National Safety Appliances Company, with three in Chicago. Mr. Tyler was in ill health for some time, but now believes he is fully recovered.

F. A. Schaff, vice-president of the Superheater Company, is one of the convention visitors who recently have returned from Europe. He went over to attend the International Railway Congress at Rome; and after the Congress travelled in various countries. He had a good trip in many ways, but like most recent American visitors to Europe is quite satisfied to be back home.

One of the convention visitors for many years who will be missed this year is C. Haynes Williams. Mr. Williams who was vice-president of the Chicago Railway Equipment Company, died some months ago, after having bravely done his work in spite of serious ill health for a long time. His most intimate friend for years was A. Clark Moore, and Mr. Moore, is also his successor as vice-president of the Chicago Railway Equipment Company.

Superintendent of motive power and equipment J. A. Power, of the Southern Pacific lines, Houston, Texas, and mechanical engineer J. S. Netherwood, of the same road, are attending the conventions. Mr. Power, coming from the country where real honest-to-goodness watermelons grow, refuses to order the luscious fruit at his hotel. He says he is putting in readiness for the watermelon crop 3,000 stock cars and that every car will soon be loaded and sent on its way to the northern markets.

The editor of the *Railway Age*, Samuel O. Dunn, likes nothing better than a good joke himself. His friends are "kidding" him on the loss of an overcoat and perfectly good straw hat somewhere between Chicago and North Philadelphia. The overcoat followed him to Atlantic City, but up to last night the straw hat had not returned. If any one is wearing a hat that doesn't belong to him and the size therein is seven, he will confer a favor on S. O. D. by leaving it at *The Daily* on the Million Dollar Pier. No questions will be asked.

The perfect air ventilation in the ballroom on the pier has been commented on by many this year. Just before the opening of the convention the B. F. Sturtevant Company, Boston, made a generous offer to install ventilating fans above the balconies on both sides of the ballroom. The offer said the company would be pleased to furnish the material and do the work entirely without cost to the R. S. M. A. or the pier people. Ten large fans, five on each side, were promptly installed and are now doing the work. The fine work of the Sturtevant company is greatly appreciated.

W. L. Day thinkathat! H. A. Houston, railway mechanical engineer of the Westinghouse Electric & Manufacturing Company, arrived in the city yesterday with a blushing bride leaning on his arm. Yes! Married Wednesday. After graduating from Purdue, where he held the master mechanics' scholarship from 1907 to 1911, Mr. Houston took his M. S. degree from the University of Illinois and then spent five years with the Frisco and five and a-half years with the Rock Island before he joined the Westinghouse Company in charge of heavy traction locomotive design. Sure thing, have a cigar.

Sir Arthur Conan Doyle, the English novelist, with Lady Doyle and their three children—looking extremely fit—honored the convention Thursday noon by examining the exhibits. Sir Arthur expressed great surprise at the rapidity with which the exhibits were put in operating condition, having witnessed the chaos on the pier but a few days before. His one lament on Atlantic City in general was its "driveness"—and he was not speaking of the weather. May we suggest and urge that he put in a hurried call for Sherlock Holmes!

New Devices Among the Exhibits

Bullseye Dust Guards

HAIR FIBRE dust guards which are said to be superior to and more durable than the old type of wood guards in car and locomotive truck journal boxes, and yet which can be furnished at approximately the same cost, have been brought out by the Fibreboard Company, Boston, Mass. These dust guards, to which the name "Bullseye" has been applied, are furnished in three styles; plain composition felt, the same guard waterproofed, and one with the hair fibre reinforced on both sides by a jute fibreboard. The last type is recommended for railroads which desire a rigid and long-wearing dust guard.

These guards have been and are now being tested out by a number of railroads. They are said to be giving satisfactory service and are being shown at Atlantic City by Midgley & Borrowdale, Chicago, the Western representatives of the manufacturers.

Top Vestibule Buffing Mechanism

THE MORTON MANUFACTURING COMPANY, Chicago, is exhibiting an outside buffing mechanism for the top of vestibule diaphragm face plates. The face plate is extended the proper distance from the carline and a bracket is bolted to it as its center. Two connecting rods extend from this bracket diagonally back to two plungers or pistons which work against $\frac{1}{2}$ -in. by $2\frac{1}{2}$ -in. springs,

revolvably mounted and the side-sway action is taken care of through the angularity of the connecting rod and plunger, while the inward and outward movement is controlled by coil springs. It eliminates annoying noises within cars caused by the pounding and hammering of face plates and buffing mechanism in the hoods, or grinding and scraping of springs on the carline. This is possible because the blows or strains on the device are received angularly at six points. There is no grinding because each piston receives less than one-sixth of the blow from the face plate. The travel of the piston in its bushing at the carline does not exceed 1 in. to $1\frac{1}{2}$ in. when the face plate is fully driven back.

This device has been tested in service for practically one year, and is said to have stood up satisfactorily under six months of winter service and six months in which the cars were switched and the train made up twice a day, without any of the parts showing appreciable wear.

Hand Brake Safety Attachment

A SIMPLE SAFETY attachment for hand brakes on freight cars is being shown by the Inter-State Safety Appliance Company, Inc., Norristown, Pa. It consists of a ratchet wheel and pawl on the underside of the stepboard, the teeth of the ratchet wheel facing in the opposite direction from those on the regular ratchet

Outside Connected Top Diaphragm Buffing Mechanism

$7\frac{1}{2}$ in. long, which are held in brackets bolted to the carline. This device is simple and is applicable to all cars, new or old, used in passenger train service. It can be readily and economically installed, as all parts are in plain view and accessible. This also simplifies inspection and replacements.

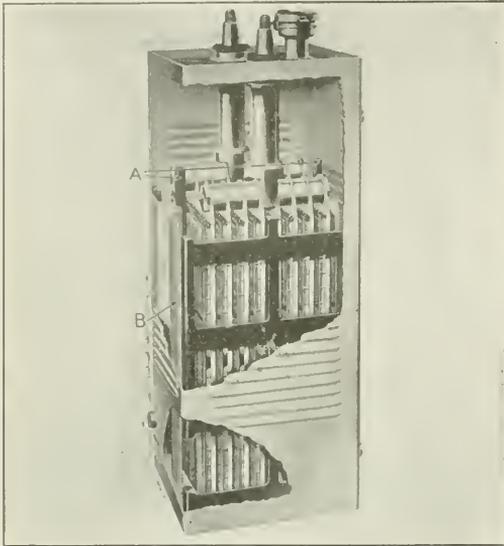

The mechanism is so constructed that it compensates for the action of the face plates due to the swinging, swaying and bouncing of the cars when rounding curves, passing over rail joints, switches, crossings, etc. For the up-and-down motion of the car, the buffing mechanism is

wheel above the step-board. A large foot pedal on the step board serves to hold the safety pawl out of contact with the wheel and compresses a spring.

If, while setting up the hand brakes, a brake chain or other connected part should break, the handwheel would start to turn freely. However, the instant the exertion of power on the pedal is released, the spring forces the safety pawl into the teeth of the wheel and prevents further rotation of the hand wheel. As the brakeman would naturally cling to the handwheel, the operation of this safety device would save him from falling.

Improved Edison Car Lighting Battery

THE EDISON STORAGE BATTERY COMPANY, Orange, N. J., is exhibiting its high-wide cell for car lighting batteries, which is now being introduced to the railroad field. The "HW" type of cell was developed as the result of recommendations made by railroad car lighting

Edison "HW" Cell for Car Lighting Service

authorities and a study of conditions of practical operation which a battery must meet.

The cell is designed with increased space for electrolyte. The design also permits better circulation. These provisions lessen the possibility of high concentration of the solution, and the evils resulting from operation with insufficient electrolyte.

A Forged Steel Coupler Yoke

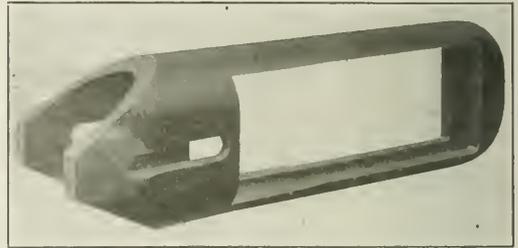

A FORGED STEEL DRAFT yoke of the vertical type is one of the innovations at the convention and is being exhibited by the Forged Steel Yoke Corporation, Chicago. This yoke is made by piercing a solid billet under high pressure in a powerful hydraulic press and without any welding or hammering operations. This method of manufacture produces a very dense, close-grained steel. After the yoke has been brought to finished form, it is heat-treated in oil to neutralize any internal strains resulting from the forging operation.

The forging and heat treatment insure yokes of uniform quality, the average physical characteristics of test specimen being as follows: Ultimate tensile strength, 90,000 lb. per square inch; elastic limit, 60,000 lb. per square inch, reduction of area, 34 per cent, and elongation, 22 per cent. With material of the above characteristics, the forged steel yoke has an ultimate breaking strength approximately twice as great as yokes now in use. After heat treatment the ultimate tensile strength is approximately 1,000,000 lb., and the elastic limit about 600,000 lb.

The forged steel yoke meets all A. R. A. requirements

as to minimum area and limiting dimensions, being strictly interchangeable with standard cast steel yokes. The straps, which are the points of minimum sectional area, contain 11 sq. in. of metal. The weight is approximately the same as that of cast steel yokes. The standard yoke has a gear opening $24\frac{5}{8}$ in. long. Luts can be made in shorter lengths or special sections for repair work.

The Forged Steel Yoke Corporation is also manufacturing drop forged steel draft lugs. These are lighter than those of cast steel but have more rivet bearing area

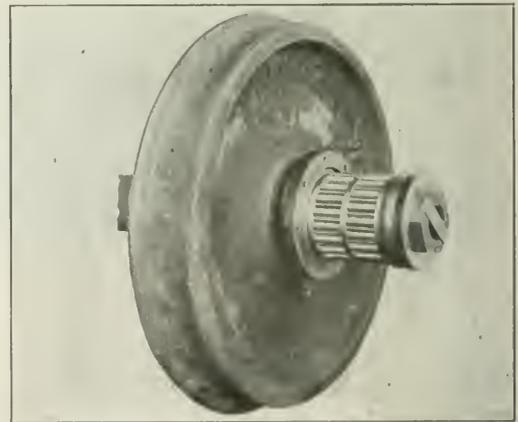

Coupler Yoke Formed from a Solid Steel Billet

and are designed to insure properly driven rivets. This is accomplished by a conical ring around each rivet hole which is forced into intimate contact with the web of the center sill when the lug is bolted up and eliminates the possibility of rivet collaring between the draft lug and sill while being driven.

Roller Bearing Truck

THERE ARE a number of obvious advantages which would be obtained from the use of a satisfactory roller bearing for freight and passenger car journals, provided there was full assurance of high durability. A new design of a roller bearing is being shown this year by the Stafford Roller Bearing Car Truck Corporation,

Roller Bearing and Thrust Plates Mounted on Axle

Lawton, Mich., and will naturally attract attention. The rollers for the radial load are mounted in a double-squirrel cage. For a 5-in. by 9-in. journal there are 36 rollers, two sets of 18 each, $3\frac{1}{2}$ in. diameter and $2\frac{1}{2}$ in. long.

These rollers are of chrome steel, oil-treated. Beyond the roller cage toward the end of the axle is a roller thrust bearing which is held between two bearing plates. The entire assembly is secured by a nut on the end of the axle, this nut being secured by a bar lock held by two screws. These parts are shown clearly in one of the photographs. Next to the wheel will be noticed the back cover, oil ring and dustproof plate. The appearance of

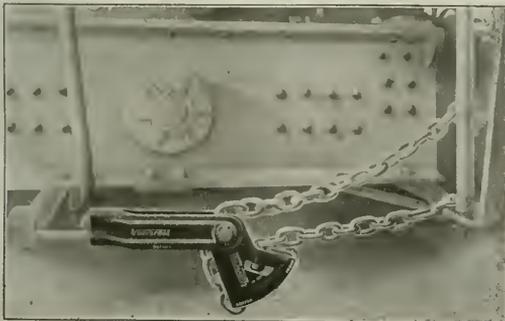

Appearance of Arch Bar Truck with Stafford Roller Bearing Boxes

the sealed enclosing box and cover will be noted from the photograph of the complete truck.

A Michigan Central flat car was fitted with Stafford roller-bearing trucks in December, 1920. After making 3,731 miles in transfer yard and logging service, the trucks were transferred in June, 1921, to a gondola car, which made 990 miles in sand and gravel service that season. In January, 1922, the trucks were again transferred to a box car—the one being shown at Atlantic City—and up to April 1 this car had made 3,654 miles in mixed train service. The total distance run has consequently been 8,375 miles. During the period these bearings have been in service they have given no trouble whatever; no hot boxes have developed and no repairs have been found necessary either on the bearings or the journal boxes.

Universal Hand Brake Attachment

THE ORDINARY HAND BRAKE is commonly an ineffective piece of mechanism, in that it fails to bring the brake shoes into contact with the wheel with the same degree of force as does the air brakes. The hand

Position in Full Release

brake attachment furnished by the Universal Draft Gear Attachment Company, Chicago, was designed to

obtain an effective hand brake, for tank and high capacity cars. This is secured by inserting a properly proportioned cam lever between the ordinary brake staff and the hand brake rod. With this device the slack is quickly

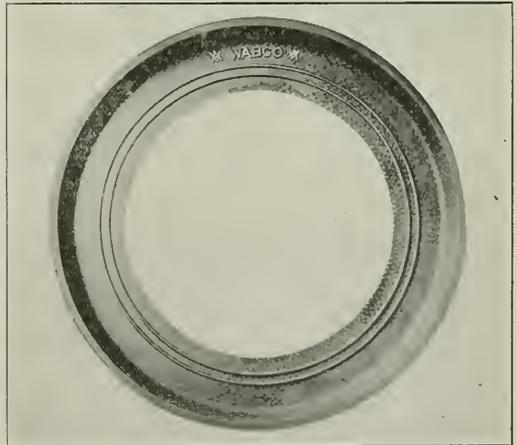

Position When Brakes Are Applied

taken up and rapidly released and there is at the same time a considerable increase in the pull delivered to the brake rod. The Universal hand brake attachment is arranged for attachment on the end of the hand brake rod, as shown in the illustration. It is simple, easily attached and effective.

Brake Cylinder Packing Cup

UNTIL QUITE RECENTLY, leather has been used extensively for packings in air brake cylinders. It has however, been found difficult to keep cylinders absolutely air-tight over extended periods with packings made of even the best grades of leather and treated by

WABCO Brake Cylinder Packing Cup

the best possible methods, due to the presence of disintegrating elements such as oil, water, rust, heat, and dirt. Efforts to evolve a substitute material possessing the good qualities of leather with none of its disadvantages have culminated in the development of the WABCO packing

cup by the Westinghouse Air Brake Company, Pittsburgh, Pa.

This packing consists of a special oil-proof composition in combination with a strong open-mesh cord fabric. The fabric is uniformly distributed throughout the section of the cup, each thread being thoroughly imbedded in the composition and the whole accurately molded. The composition offers remarkable resistance to elements which have proven more or less destructive to other forms of packings. Its structure is compact and uniform; air cannot penetrate it either when the packing is first installed or after long hard usage. It is impervious to the action of the usual lubricants and cleaning agents, will not break down under conditions where unusual heat prevails; is tough and durable, and able to resist wear for long periods.

The fabric, around and through which the composition is molded, serves as a skeleton framework to give body to the packing, prevents cracking of the composition under service conditions, adds resiliency and increases the tensile strength. The finished cup is homogenous, tough, sturdy and resilient. It does not become flabby, but is so formed and constituted as to maintain an airtight contact with the cylinder wall by its own body.

WABCO packing cups are not strictly new but have not been shown at a previous convention; wherever they have been applied, and a number of railroads are already using them exclusively, it is stated that substantial savings in brake cylinder maintenance and improved air brake operation have been noted.

Record of a Carnegie Rolled Steel Wheel

THE CARNEGIE STEEL COMPANY, Pittsburgh, Pa., in addition to its display of new rolled steel wheels is showing a pair of wheels which were installed in September, 1912, under an all-steel passenger coach weighing 149,200 lbs. They remained in service until finally removed in May, 1921, during which period the wheels were turned four times. The total mileage secured was 581,139 miles. The complete record of service follows:

Period	Cause of removal	Average Loss of Tread		
		Wear	Turning	Mileage
1	Shod flat	.02 in.	.39 in.	2,339
2	Worn flange	.18 in.	.22 in.	102,225
3	Worn flange	.20 in.	.11 in.	90,984
4	High flange	.28 in.	.08 in.	126,880
5	High flange	.54 in.	—	258,711
Total		1.22 in.	.71 in.	581,139

Side Bearing Testing Machine

THE ILLUSTRATION shows an interesting and novel machine which has been designed and built by the A. Stueck Company, Pittsburgh, Pa., to show the resistance to the swivelling of the truck due to the friction on the side bearings.

It consists of body and truck bolsters, loading arrangement and measuring apparatus. The truck bolster is placed on a frame at a convenient height for observation, while the body bolster swivels on top of it, pivoted by the usual center plates. Instead of placing the load on top of the bolster, provisions have been made to pull the bolster downward by calibrated springs, which can be tightened or released at will so as to get any desired load at the side bearings. Arrangements have also been made so that different side bearings of the frictionless type, as well as the old-fashioned friction blocks, may be inserted between the two bolsters and the force necessary to swivel the

body bolster is registered on a gage by means of an interposed oil cylinder and piston.

The results obtained have, of course, developed nothing radically new, as the great amount of friction at the side

Machine for Determining The Frictional Resistance of Truck Side Bearings

bearings is known to the railroad world; the machine simply confirms the judgment of railroad officials in using a frictionless side bearing, thereby saving the rails, wheels, power, and avoiding costly derailments.

Sliding Door Controller

ONE OF THE NEW devices shown by the O. M. Edwards Company, Inc., Syracuse, N. Y., is a sliding car door controller. This not only locks the door in a closed position but automatically holds the door in various open positions. It prevents the door from sliding shut during emergency brake applications or for any other of the various causes for door sliding either open or closed which frequently causes injury to baggagemen and express messengers. The door can be kept partially open for ventilation by use of this device and still be held in a stationary position. It is operated by a handle, and a pull in either direction allows it to be easily moved.

Certain maintenance of way operations have been conducted by using the main track since the earliest days. To adopt other methods would add so greatly to the cost as to be prohibitive.

The Economy of Modern Work Equipment

With the growth of traffic the interference of work equipment with revenue trains has increased proportionately with the result that it has become increasingly important to select equipment which will cause the least interference and result in the minimum delay to regular revenue trains. This has stimulated the development of the ditcher, the pile driver, the dump car, the spreader, and other forms of construction equipment until today much of it differs widely from that of a few years ago. This not only increases the value and the range of applicability of this equipment for railway service, but it is hastening the retirement of the older types. It is told of Andrew Carnegie that an employee in charge of the design and construction of a steel mill remarked to him on the completion of the mill that if he had the work to do over again he could design the mill in a way that would save a large part of its cost annually. "If you can do that," Mr. Carnegie replied, "we will begin work on a new plant at once and dismantle the one just completed." Many roads can apply the principle implied in this incident to much of their work equipment and discard the obsolete and inefficient types that they now have for more modern equipment the savings from which over the old will yield a good return on the investment. If this theory is good business for a steel company it is equally good for a railroad.

Three collisions described in the Interstate Commerce Commission's report, abstracted in this issue (Warner Junction, Montrose and Welch), with three reported in the issue of June 10, page 1343, and a fourth on page 1332, make a strong dose of a kind of medicine which is very unpalatable, but which

The Lesson of Seven Collisions

evidently is still needed. And why should not these seven cases be studied as carefully as though they were like Porter or South Byron or Mount Union? We have grouped these seven together for the purpose of emphasizing the lesson that for all of them the complete block system is the rational remedy; and the only satisfactory remedy. The government reports have set forth in each case the rules that have been violated and the mistakes that have been made, and the railroad superintendent in each case has, no doubt, imposed suitable punishments (except where the men at fault have themselves been killed by the collision). But this is the same treatment that has been in vogue for many years, with only partial success; while all the time the other lesson—what might be called the master lesson—seems in many cases to be neglected, or is acted on only after years of delay. "Complete block system" is a term which ought to receive much more consideration than it does. Any operating officer who will re-read these seven reports will be reminded—what he ought already to know pretty well—that, taking the country as a whole, there is a good deal of satisfaction felt in a false reputation for using the block system when in

reality it is not used. Some railroad officers seem to concentrate their attention (in this matter) exclusively on two points: (1) the *automatic* block signals that they have and (2) the automatics that they *intend* to have. But a collision on a line for which automatics cannot be provided for five years yet, shows this attitude to be extremely short-sighted. This side-stepping of the question, with the widespread employment of a mixture of old-style time-table rules and the space interval, and falsely calling the arrangement the block system, indicate two very weak spots in our mental roadbed.

The Railroad Labor Board in its recent opinion awarding reductions in the wages of shop employees, did not authorize reduction of the compensation of supervisory officers. This was in accordance with justice and sound policy. As the *Railway Age* repeatedly has pointed out, most supervisory officers were not

The Pay of Supervisory Officers

paid enough, absolutely or in comparison with what the employees working under their direction were paid, before government control was adopted, and have not since then been given advances in pay which put their compensation relatively where it should be. The course of the board in leaving their compensation untouched, while reducing that of the employees, largely remedies an unfair and unhealthy situation. The supervisory officer cannot command needed respect from employees who know they are receiving as much or more pay as he is. Furthermore, when supervisory officers are paid relatively low, it is often difficult to get the best available men to accept and retain these positions. These things militate against securing the greatest economy and efficiency. The higher railway officers should, in future as in the past, be chiefly men promoted from the ranks of the supervisory officers, and in compensation and all other respects supervisory positions should be made such as to attract capable men, and especially able, energetic and ambitious young men, to them.

For the last 20 years or more American railway bridges have been designed for live load stresses imposed by the

Is the Cooper Loading Obsolescent?

so-called Cooper loadings, a series of hypothetical trains consisting of two consolidation locomotives followed by a uniform load. The particular advantage of this series lies in the fact that the loading effect produced by any particular train of this series is exact in proportion to its index number, that is, an "E 50" is five-sixths as heavy as an "E 60." The system has proved very convenient and has come into almost universal use for design, and also for the classification of old structures, and with its continued use, operating officers also are beginning to have some conception of the Cooper classification as applied to the old bridges. As the weights of actual locomotives and train loads have increased, bridge designers have gradually pushed up the Cooper classification used in designs so that, whereas, "E 40" was the one most commonly used in earlier days, the "E 60" and "E 70"

classes are now the usual live load loading called for by the design specification, but in spite of the increase in proportionate loading thus effected it is found that the heavier load no longer constitutes an accurate equivalent of the actual locomotives of today. A chief difficulty is that the modern locomotive is much longer than the consolidation of the early nineties and that the weights of the locomotives of today are heavier in proportion to the train load than is the case with the Cooper loadings. In other words actual loadings of today that are equivalent to one Cooper loading for one span length may approximate an entirely different Cooper loading for some other span length. This situation has led to rather frequent proposals for new standard bridge design loadings to supersede the Cooper series but these suggestions have met with scant favor because of a reluctance to give up what has become a thoroughly established standard. However, the subject is now given renewed interest because of the appearance in the Proceedings of the American Society of Civil Engineers for May of a paper by D. B. Steinman in which he proposes a new design loading based on a painstaking study of seven of the heaviest locomotives now used in this country. The proposed loading has much to recommend it, particularly as applied to design. It more nearly represents the future developments in train loading to be expected in this country and, therefore, insures a more uniform design of bridges. In view of the present universal use of the Cooper loading it may well be continued for the classification of old structures in spite of some of the shortcomings pointed out by Mr. Steinman, but there is clearly a need for the application of something other than the short consolidation locomotives of the Cooper series when it comes to the proportioning of the parts of a new bridge.

Assurance that the revenue provisions of the transportation act, which have been under continuous attack in and out of Congress ever since the law was passed early in 1920, will not be repealed or amended at this session of Congress is given in the decision of the House committee on interstate and foreign commerce on Tuesday to postpone further hearings on the Hoch and Sweet bills until the December session. The Senate committee on interstate commerce, which held protracted hearings on the similar Capper and Nicholson bills, has taken no action upon them and it is understood to have agreed informally that it will not, although Senator La Follette has threatened to move to discharge the committee from further consideration of the bills in order to take them up on the floor of the Senate. In the present state of legislation there is little to fear from such a threat, even if La Follette were not more potent as an obstructionist than as an active force. Therefore it appears certain that the experience of the year 1922, which promises to be more nearly normal than its two predecessors, will be added to that of the year of depression, 1921, and the boom year, 1920, in affording a thorough test of the law which has received so much of both praise and criticism and which has been so generally misunderstood. Less of the extreme criticism of the provision in the law which attempts to give the railroads a stated percentage of return has been in evidence since it has been shown that rates may be reduced in spite of it and that business could improve even before a general rate reduction. The kind of criticism that now remains is mainly that of the professional railroad critics. On the other hand those who have looked for the way in the way of beneficial results from this part of the law have yet to see their hopes realized. The principal organized advocates of the bills which have failed to emerge from the two committees has been that of the state railroad commissioners who object to the curtailment of their power

to make rates without a too careful regard for their effect on interstate commerce, and they have thus far failed to convince the committees that the difficulties of which they complain cannot be remedied by co-operation between the states and the federal commission.

The Careful Crossing Campaign is the most prominent item of railroad news in the daily press at the present time; prominent by reason of the great number of articles, long and short, poetic, prosaic and otherwise, appearing all over the country. These are literally too numerous to mention. From the railroad standpoint the principal thing to be said is that the A. R. A. Committee evidently has thus far been very successful in its activities looking to uniformity of action on the part of all railroads. These various newspaper articles help one to appreciate the magnitude of the problem. The Northern Pacific, for instance, has 10,000 crossings to look after. The Pennsylvania has distributed 140,000 posters, and will use a million stickers on letters. By getting all classes of employees interested it is possible to introduce some variety. On the Charleston division of the Baltimore & Ohio the employees fixed up an automobile truck as a make believe passenger locomotive, and made a hit in the Memorial Day parade on May 30, at Weston, W. Va. The safety motto of that division is "THINK ABOUT IT." Superintendent W. Trapnell opened the campaign at Weston by an address in the Methodist Church on Sunday evening. Committeemen will be cheered by the fact, emphasized in the circular issued by the Pennsylvania, that warnings given to automobile drivers at crossings and sent to them in writing by mail have already had "a marked effect" in limiting the list of fatalities at crossings. On the other hand, the Monday morning newspapers continue to feature crossing horrors on the front page in a way to have a marked effect on readers—if the readers can be made to fix their minds on the lesson which the facts convey.

A station agent recently undertook to examine the crates of glass brought to him for forwarding during one month.

In one shipment of 70 boxes of window glass he found 15 panes broken and in another of 17 boxes he found seven panes broken; in fact, of all the glass offered for shipment during that month only five contained no broken panes. By this additional labor he saved his company a considerable amount of money, for if the shipments had gone through as usual without investigation the carrier in question would have been called upon to pay for a large amount of damage which it did not cause. This is a problem which is especially serious on lines remote from glass manufacturers, where such products are forwarded from distributing points for the most part without examination. For the year ending December 31, 1921, the sum of \$2,153,291 was expended by the railroads of the United States for claim payments on glass, glassware and crockery. Perhaps, as this case indicates, a number of carriers contributed to this amount who were guiltless of any damage done, and likewise it is more than likely there were roads which escaped paying for damage which they actually caused. There is a still further supposition that at least part of the blame is due to defective products or careless packing or handling on the part of glass companies' employees. Nevertheless, we know that glass is an easily breakable article and that large panes of glass are expensive. It would, therefore, seem advisable for re-

Rate Law Amendments Postponed

Avoid Damage Claims

ceiving agents to examine shipments of glass and similar commodities in order to insure that the responsible party should bear the expense of this damage. If such methods are adopted it is fair to presume that a number of roads will find their claim payments materially reduced as in the case of the carrier mentioned above which, through the efforts of its vigilant station agent, has now decided to investigate all glass shipments received at its distributing points.

Great Reduction of Railway Expenses

PERHAPS THE MOST significant thing which has occurred since the railways were returned to private operation has been the reduction in the number of employees. The labor policy which has been followed has, of course, been widely different from that under government control. There was a very large increase in the number of employees under government control. This was the chief, although, of course, by no means the only, cause of the large increase in operating expenses which took place.

The Railroad Administration's labor policy has been vigorously attacked and stoutly defended. We have not heard the last of the question of government ownership. Smith W. Brookhart, a very radical advocate of government ownership, has just been nominated for the United States Senate by the Republicans of Iowa. This is a portent which shows that facts illustrating the difference between the efficiency of government and private operation cannot be too often presented. No other facts illustrate it more forcibly than the great increase in the number of employees which occurred under government operation and the remarkable decrease which has occurred since private operation was resumed.

When the government seized the railways in December, 1917, they had 1,703,748 men on their payrolls. It operated them until the end of February, 1920, and the average number of men employed in the first three months of 1920 was 1,993,524 and the total payroll was \$795,616,330. One year later, in the first quarter of 1921, the number of employees had been reduced to 1,691,471. Although meantime an average increase of nearly 22 per cent in wages had been granted, the total payroll for this smaller number of employees was only \$757,325,356.

Still another year has now gone by. The statistics of the Interstate Commerce Commission regarding the number of employees and wages paid in the first quarter of 1922 are now available. They show that in this period the average number of employees was 1,555,737, and the total payroll \$616,406,474. The reduction in the number of employees since the first quarter of 1920 is 437,787, and the reduction in the payroll over \$179,000,000, or at the rate of about \$60,000,000 a month. This reduction in total wages paid was secured in spite of the fact that the hourly rates of pay per hour and per day of the employees were higher than in 1920. It was due principally to reduction of the number of employees, but also largely to the adoption of various measures for the elimination of overtime which had to be paid for at punitive rates. It was also due to some extent to changes made by the Railroad Labor Board in the rules in the national agreements which two years ago were operating to prevent the railways from getting efficient work and to force them to pay for work not done at all.

The heavy decline of traffic in 1921 rendered it possible as well as necessary for the railways to make a large part of the retrenchments in the payroll and in other expenses which have been effected. Experience makes practically certain, however, that no reductions in payroll approaching these would have been made under government control. In the early part of 1919, under government control, the traffic

declined but the number of employees continued to increase.

The heavy reduction in the number of employees has inflicted severe hardships on those who have been laid off, but the labor policy which their own leaders got adopted under government control caused the payroll to be inflated, and it was inevitable when efficiency was restored that many men would be discharged. Furthermore, the insistence of the labor leaders upon the payment in a period of profound depression of the highest wages ever known forced the railways drastically to curtail maintenance and improvements, and thus threw many men out of employment. Being forced to pay excessive wages to those they had to keep on the payroll, they were obliged to reduce the number kept on the payroll as much as was physically possible. Many of the men who have been thrown out of work may thank for their unemployment labor leaders who succeeded in compelling the railways to pay wages so high that they could not pay them to a normal number of men without bankrupting the railway industry.

The reduction which has been made in the payroll is reflected in a striking way by the operating expenses. In the first three months of 1920 total operating expenses were \$1,253,200,000, or about \$13,772,000 a day. In the first three months of 1921 they were \$1,227,000,000, or about \$13,633,000 a day. In the first three months of 1922 they were \$1,023,000,000, or about \$11,366,000 a day, a reduction compared with the first three months of 1920 of over \$2,400,000 a day.

These statistics demonstrate that there has been a great increase in the efficiency of operation under private management. The advocate of government ownership is likely to say, however, that this increase in efficiency has merely benefited the railways at the expense of their employees and to denounce the results gained under the Transportation Act as of no benefit to the public. Let us see. The total amount paid by the public for railway transportation in the first three months of 1920, *including the deficit incurred as a result of government operation*, was \$1,497,600,000, or \$16,440,000 a day.

In the first three months of 1922 the total amount paid by the public for railway transportation was \$1,271,500,000, or at the rate of only \$14,100,000 a day. In other words, the reduction in *operating expenses* effected between the first quarter of 1920 and the first quarter of 1922 was about \$2,400,000 a day, and the reduction in *what the public paid* for railway transportation was about \$2,340,000 a day. Meantime there was an increase of over \$86,000 a day in the taxes the public collected from the railways. Thus it appears that the public, in reductions in the amount it pays for transportation and in increases in the taxes it collects from the railways, has actually got benefits exceeding all the reductions in wages and other operating expenses which the railways have made. And now reductions of rates have been ordered on July 1 which will be absolutely out of the question except for the economies which have been effected.

In view of such facts as the foregoing it is extremely difficult to understand how any intelligent man can argue that government operation is more efficient than private operation, or that the public does not benefit by the superior efficiency of private operation. But, then, men do not have to be intelligent to advocate government operation. Mr. Brookhart, who has recently been nominated for senator from Iowa, estimated in testimony before a Senate Committee in Washington in December, 1917, that railway operating expenses would be reduced over \$400,000,000 a year under government control. The policy he advocated was adopted and operating expenses increased over \$1,000,000,000 the first year. Mr. Brookhart apparently knows just as much about railway matters now as he did before government control was adopted.

A Proposed Revision of the Operating Expenses Classifications

THE INTERSTATE COMMERCE COMMISSION has requested the co-operation of the Railway Accounting Officers' Association in the matter of a proposed revision of the various railway accounting classifications. It is proposed to begin the work with the classification of operating expenses and the association has prepared a plan around which the discussion will commence. The subject is being given prompt attention. A meeting with representatives of the I. C. C. Bureau of Accounts was scheduled to begin this week. Because of the importance of the matter, the plan, as presented to the R. A. O. A. by its committee on disbursement accounts, is given in full on another page, as well as a brief analysis of the ideas by which the work will be guided.

It will be noted from the plan that the basic element in the proposed changes is simplification. There is first of all a reduction in the number of primary accounts from 197 to 69. One will notice in particular the treatment given depreciation. Under maintenance of equipment, for instance, the one primary account, "260, Depreciation" appears where in the present classifications there are 19 primary accounts. Whereas the 19 showed depreciation and retirements separately for different classes of equipment, in the new single account these are all lumped together in a single figure.

In the transportation accounts the outstanding factor is the simplification or the segregation into station, yard and road service; fuel, it is noted, is given special consideration. Another interesting development in the proposed classification is the creation of a new general account, "Casualties," including damage to property, freight loss and damage, personal injuries, etc., or, in general terms, loss or damage to property of others than the carrier.

It is rather evident that the proposed classification is likely to be the subject of much argument on the part of the commission because the plan can hardly be said to follow out the ideas expressed by Alexander Wylie, director of the I. C. C. Bureau of Accounts, in his letter opening the matter, and Mr. Wylie on the floor of the convention said that the commission had hardly expected such a drastic reduction in the number of accounts.

The *Railway Age* does not believe that the desired result in this work is a further refinement and sub-division. As a matter of fact, it is only too evident that the present classifications are too refined as they are and that there is such a mass of details that it is very difficult to use the figures to greatest advantage. This has been evidenced in the rate cases and in cases before the Railroad Labor Board, where it was found that in spite of all the present details the basic facts that were desired were not easily to be ascertained. On the other hand, the *Railway Age* is not unduly impressed by what the R. A. O. A. disbursement committee has offered. It is, in truth, unable to agree with those who believe that the proposed changes represent progress, nor does it believe, under the circumstances, that with its present plan the R. A. O. A. will "get to first base" insofar as the Interstate Commerce Commission is concerned.

Of course, everybody will agree that simplification and economy are highly desirable. We have already spoken of the present degree of refinement and the inability to put this refinement to practical use. We do not believe, however, that simplification alone is a necessary remedy in the present case.

Insofar as concerns particular matters of detail, attention is drawn to the steps taken with the depreciation accounts particularly in the case of equipment. Depreciation in railroad accounting is distinguished, somewhat falsely, it is true, from retirements, primarily for the reason that in the past the charges for depreciation were not sufficient to take up all

but the salvage value of the equipment. However, admitting that fact, it must also be admitted that the retirement accounts at present have a special value because of the contemporary bad-order car and unserviceable locomotive percentages. Many of these locomotives and cars are awaiting retirements instead of repairs. They will be retired as soon as the situation can permit of charges to retirement account. It might further appear that the primary accounts will have a value in this connection that will be largely lost if the charge is made to an all inclusive depreciation account.

The proposed general "Casualties" account, we venture to suggest, will be a much disputed affair. First of all, the name of the account is a poor one. It seems to have a reference to personal injuries alone; the war is not well far enough behind us to keep it from having that connotation. Further, the contention is made that casualties are an element which must be expected and received like the weather, or, in other words, that such items "do not have a direct bearing on transportation expenses." This is a question. We believe that they do and, in fact, it is for that reason that this paper has noted so favorably the attention which has been given to freight loss and damage campaigns. The argument, as a matter of fact, works both ways. It might be a question as to whether the freight loss and damage people will not be highly honored by the special attention given their work because freight loss and damage will make up much the larger proportion of the total casualties account. In fact, at first we thought that this recognition was what was intended. The accounting officers, however, have advised us otherwise.

A great deal is made of the argument that any changes in the classification should reflect the new position which is given the Interstate Commerce Commission by the Transportation Act. The classification should be such that it is of greatest value to the carrier, to the I. C. C. and to the public. As the resolution passed by the R. A. O. A. meeting itself said, "The accounts should afford a prompt and accurate method of controlling expenditures for labor, fuel and material." It is difficult to see how the reduction in the number of accounts and the questionable innovation of a new casualties journal account will succeed in securing the desired result.

The proposed new classification further adds nothing new to railway accounting procedure. It gets nowhere at all in that important matter of enabling a student to determine, for instance, whether the road is properly maintained or not. We are not prepared to assume that it might be possible to put it in the operating expense classifications but, nevertheless, the fact remains that we have no contribution whatever as to the argument about contract work, contract shops, etc., and other similar matters of leading importance under present conditions.

These criticisms, we feel, are possibly a bit destructive rather than constructive. They prove, at any rate, that the R. A. O. A. and the Bureau of Accounts have no simple task before them. We hope, however, that the issue will be argued out on some other basis than that of simplification or expansion. The problem is not to be solved in as easy a manner as that.

THE NEW JERSEY BOARD OF TAXES and Assessments has refused to make material reductions in the railroad assessments for 1922. Hearings on the appeals have continued through many weeks and the railroads submitted voluminous testimony regarding the value of railroad property in New Jersey. Aggregate valuation of these properties for taxes for 1922 was \$415,135,518. The tax involved is \$14,740,628, of which \$5,684,789 will go to municipalities and \$9,055,839 to the State. The board sustains the assessment with the exception of minor adjustments, which resulted in a total reduction of \$1,535,020.

Classification Yard, West from Cemetery Street Viaduct

New Haven Builds Freight Yards at Providence

New Terminal Forms Important Unit in Broad Improvement Program to Effect Operating Economies

THE NEW YORK, New Haven & Hartford, in completing its new Northrup Avenue freight terminal at Providence, R. I., to meet present operating requirements, has taken another step in the development of the broad yard and terminal improvement plans which it has had under way for several years. This terminal is of the hump type with the same general characteristics of design, except as herein-

of convergence of a large number of branch lines. This section is served almost exclusively by the New Haven, and it is estimated that it contains approximately one million population. Previous to the construction of this yard, traffic conditions had reached a point where it was imperative that the delivery of cars at freight houses and bulk yards be expedited, train delays reduced and terminal restrictions avoided. The congested situation then existing was aggravated further by the increased per diem rates—there being an average of about 50,000 foreign cars on the New Haven's line daily—by high wages, the eight-hour day, time and one-half for overtime, and a possible shortage of labor.

The New Haven has often been called a terminal railroad. The outstanding reason for this expression is that this road delivers to destination on its rails, about 92 per cent of all the tonnage received at its gateways; while its mileage is only about one per cent of the mileage of the country, it serves almost entirely without competition, about 3¾ per cent of the population.

Permanent Location of Main Line Tracks at Cemetery Street Viaduct

after outlined, as the Cedar Hill project at New Haven, Conn., which was described in the *Railway Age* of July 30, 1920.

The Northrup Avenue yard will have a capacity, when entirely completed, for receiving, classifying and forwarding 2,500 cars per day, and will have ample facilities for the prompt dispatching of carload and less-than-carload freight as well as for the efficient handling of inbound and outbound power. It is one of three projects started by the New Haven previous to government control, to improve operating and traffic conditions and thus secure heavier train loading, increased train miles with a decrease in switching and other terminal expenses.

New Yard Serves a Congested Territory

The new yard is located partly in Providence and partly in Pawtucket in the center of freight train, transfer and switching movements in and out of the terminal from the numerous directions served. Providence is the center of a dense manufacturing section of New England, and the point

Interchange at Harlem River and Maybrook

The greater part of this interchange freight is received at the Harlem River yards at New York City via car-float and the Hell Gate bridge connection with the Pennsylvania, the Hell Gate bridge with the Long Island, and car float with the Lehigh Valley and the Central of New Jersey. Other freight in quantity is received at Maybrook, N. Y., moving east across the Hudson River over the Poughkeepsie bridge. Interchange at this point is with the Erie, the Lehigh & New England, the New York, Ontario & Western and through the connecting link of the Lehigh & Hudson River with the Delaware, Lackawanna & Western, the Central of New Jersey, the Philadelphia & Reading and the Baltimore & Ohio. Large numbers of cars are also interchanged at various junction points on the system with the Boston & Albany, which includes that from the New York Central, and with the Boston & Maine.

Formerly this freight was classified almost entirely at Harlem River and at Maybrook for points east, the classification being limited, however, on account of lack of facilities, to groups destined for intermediate yards located at numerous points on the system where it was re-classified for further destination or yards. There was little opportunity under

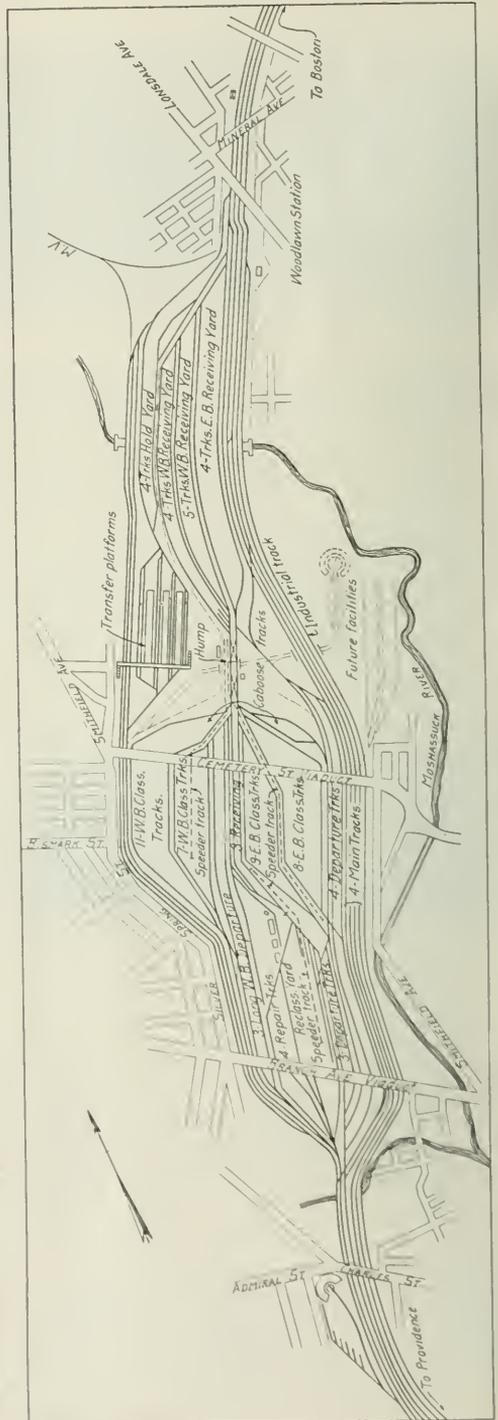

this method for consolidation of freight movement into solid trains of heavy tonnage. Classifications at Harlem River for instance, were made for Boston, Providence, Worcester, Midway, Springfield, Hartford, New Haven, Waterbury, Bridgeport and other points. Similar classifications were made at Maybrook. These were far from sufficient for the straight train service necessary for transportation economy and quick dispatch of traffic. With the construction of the Cedar Hill and Providence yards, these classifications at Harlem River and Maybrook were largely reduced, and traffic was forwarded more rapidly. Excluding the perishables and New York City proper freight for Boston which moves in solid through trains, all freight destined for points east or north of Cedar Hill is now grouped into one classification and forwarded to that terminal. Freight at Maybrook is handled in like manner. As a result switching movements at Harlem River and Maybrook have been reduced 45 or 55 per cent. Likewise, switching movements at the many other points named have been greatly reduced, and in some instances, notably Midway, a former transit classification yard, they have been practically eliminated.

Thus the New Haven has, in a way, consolidated itself into one main and one sub-group; Cedar Hill serving with direct classification, the greater part of western New England as well as the system as a whole, and Providence, serving in like manner, although on a lesser scale, eastern New England. The inauguration of these terminal improvements has brought about many operating as well as other economies. Hitherto contemplated extensions to existing yards are no longer necessary, while considerable benefit has been derived from the greatly decreased switching movement, the heavier train loadings, the increased train miles and the lessened interference to passenger movement, the latter being a factor of marked importance on the New Haven. Some figures appearing in the last annual report reviewed recently in the *Railway Age* are indicative of the progress made along this line. In comparing 1915 with 1921, the report showed that although the ton-miles had increased 10.2 per cent, the increased traffic had been handled with a reduction under 1915, of 21.15 per cent in freight train miles, and 22.9 per cent in freight switching miles.

The Northrup Avenue Terminal

The new terminal at Providence, as constructed, is substantially two miles long and about one-sixth of a mile wide, extending from Woodlawn, a station in Pawtucket, to a point west of Branch avenue in Providence. The project occupies about 180 acres, and, differing from Cedar Hill, involves an arrangement of receiving tracks for both east and west-bound trains in the upper, or Woodlawn end, with a single hump, as nearly every train contains cars for all directions and routes; a large classification cluster and eastbound departure tracks. Westbound trains are dispatched from the classification tracks. The hump, located approximately midway of the yard, is provided with summer and winter gradients for the classification of both eastbound and westbound freight by gravity. The receiving yards are interconnected at the summer and winter humps through the medium of a diamond cross-over. There is a similar cross-over installation in the leads from the hump to the classification yard, thus securing a maximum flexibility in operation.

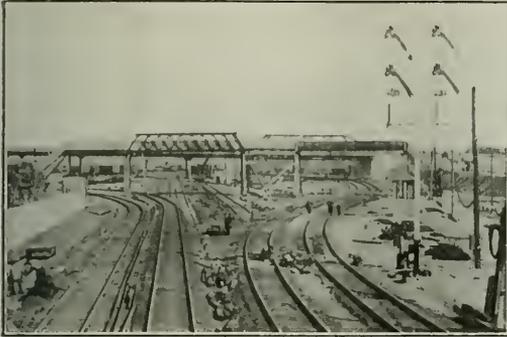

The descending grade approaching the hump reverses to one per cent for 690 ft. to the hump, from the apex of the hump to the scales it is 4.43 per cent for 70 ft., descending from this point on a 4.4 per cent grade for 38 ft., thence on a 2.45 per cent grade for 122 ft., and then on a one per cent grade for 600 ft. through the classification yard switches beyond which the grade continues to descend at the rate of 0.35 per cent through the yard. This involves a total drop from the hump to the end of the yard of 30 ft. or an average grade of about 0.65 per cent. The grades are

A Sketch Plan of the Track Layout

established with the view of running cars to the lower end of the yard at speeds slow enough so that they can be controlled readily at all points.

Adjoining the hump is a small group of buildings designated for certain definite purposes. The first is the car riders' building, containing a rest room, locker room and toilet facilities, with a speeder car garage in the lower story. This building is so located as to be readily accessible to a point where the car rider should climb the car and test the brakes

East and Westbound Main Tracks on Temporary Locations to Permit Yard Construction

before it has reached the hump. The next is the hump conductor's office, where a man is located who controls the car cutter and signals for the movement of the hump engine. The third building in sequence is that of the hump master, located directly opposite the scales. It contains the weighing beam, a control heating plant, and also serves as general headquarters. The fourth building is the hump tower, where one man controls the electro-pneumatic interlocking for all the switches at the head end of the classification yard.

Two speeder tracks have been installed, one for each unit of the main classification yard. These tracks are standard gage and extend from the car riders' building down to the

free running engines are used for this purpose, and an average round trip is made in from three to four minutes.

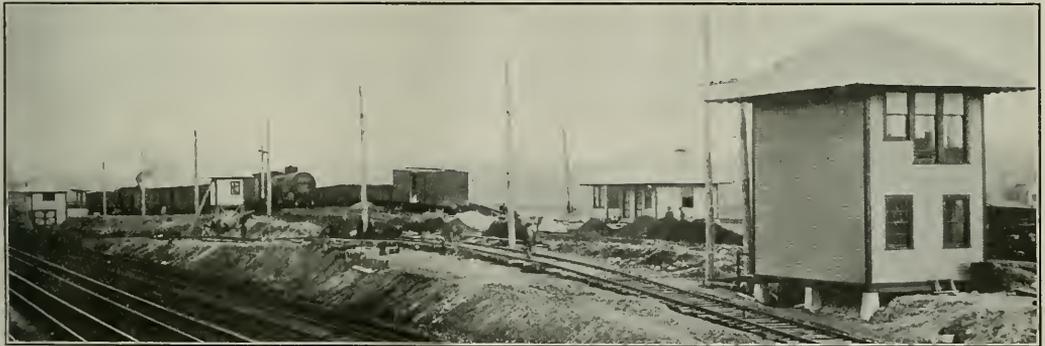

Traffic Conditions Necessitate Provision for Additional Facilities

Conditions of traffic in this section necessitate much reclassification, but as additional space was not available in the main layout because of topographical conditions, for the large number of classification tracks that would have been desirable (50 to 60), this will be met by the construction later of an auxiliary hump and classification yard located near the south end of the main layout. This unit will have the same facilities as the larger units, such as speeder tracks, offices, interlocking tower, controls, etc., and can be operated independently or by temporary transfer of the forces from the main unit, as may be desired.

Other general features of the terminal include the provision for caboose tracks, the arranging for tracks in the classification yard to take cars requiring light or minor repairs, where such cars may be placed adjacent to the mill buildings fully equipped to handle this class of work. The plan involves the provision for future construction of three 30-ft. platforms, 1,000 ft. long for handling and transferring l.c.l. freight, certain tracks being set off in the classification yard for receipt of cars of this nature. Provision also has been made for an engine terminal adjacent to the hump, served by engine tracks passing under the hump, other tracks, and the main line by means of subways, thus insuring a free movement of power without interference to or suffering a restriction from the yard movements. A further development contemplates the construction of a coach yard with a capacity for about 250 passenger cars.

In constructing this terminal it was necessary to take care of two streets which crossed the site. Previous to this work these streets had been carried over the existing tracks, and this procedure was followed in the final plan. The Cemetery Street viaduct which passes over the widest portion of the yard was re-located and is an entirely new crossing. It is interesting chiefly through the fact that it was built out of an old bridge and consists of a series of spans on concrete piers.

The original location of the main line tracks was some-

Hump Tower, Hump Master's Building, Hump Conductor's Building, and Car Riders Building

throat of the yard where they are carried under the tracks in concrete tunnels and thence down through the yard between the leads of each unit. This construction and arrangement is similar to that employed at Cedar Hill. Thus the maximum number of tracks which a car rider must walk across in order to secure conveyance back to the hump is not more than nine or ten, depending upon the number of tracks in each half of the unit. Gasoline motor cars with

what diagonally through the center of the tract of land. Thus in construction it was necessary to confine the grading operations to the side of the main line, to cut over the east-bound tracks to the southeasterly side of the yard in the location of the permanent tracks, and to place the westbound tracks on temporary locations at the northwest side of the yard before any appreciable area was available for the laying of 30 odd classification tracks. Partial re-arrangement

Hungarian Locomotive, Built at the State Railroad Shops

Hope for Normal Railroading in Central Europe

Free Movement of Traffic Over International Boundaries Seen as
Result of Portorose Conference

By Brice Clagett

Formerly Assistant to the Director General, U.S.R.A.

OUTSIDE OF THE EXCHANGE situation probably the greatest obstacle to the restoration of "normalcy" in Europe since the war has been the disorganized state of the railroads. This has been particularly true in Central Europe. There the disorganization which has come to railroads throughout the world, as a result of high war costs and inefficiency, has been intensified by the breaking up of the formerly thoroughly synchronized railroad systems of the old Austro-Hungarian empire. Parts of that old empire were given by the treaties of peace to seven so-called "succession" states and with the ceded territories have gone parts of the railroad systems. The results have been disastrous to the orderly conduct of the railroad business. Until within the last few months no definite beginning had been made towards the adoption of remedial measures.

The greatest step forward and one which gives the richest promise for the future, has come as the result of the initiative of an American, Colonel C. B. Smith, of the American army, who for many months served as the American unofficial delegate, or "observer," on the Austrian section of the Reparations Commission. Colonel Smith realized early in his work the need for bringing harmony out of the chaos in Central Europe and proposed that the states which had become the heirs of the Austro-Hungarian empire should sit down in conference and settle their differences. The result was the Portorose Conference, held recently in Italy, the results of which may now be assessed.

New States Afraid to Let Cars Leave Their Borders

This conference dealt with a variety of questions bearing upon the commercial and economic relationship between the succession states, but probably the greatest question facing

it was the railroad situation. The railway mess resulting from the division of the old Austro-Hungarian empire is almost inconceivable to Americans, where the exchange of cars between lines has been long regulated and where the only international problems have to do with the minor questions affecting Canada and Mexico. This was true likewise in Central Europe before the war but had altogether changed after the peace.

Since the earliest days of development of railway communications the idea that the run of freight cars should not be limited by the boundaries of the various railway administrations of different nations has been one of the most important foundations of business management. Before the war there existed in Europe agreements for the interchange of railway cars. After the war there was an irresistible need for modernizing these agreements and, as a result, the association of German railway administrations and of the administrations of the other countries made a new agreement known as the "Government of Stresa," which took effect on January 1, 1922. Under this agreement a modern basis was reached for the circulation of freight cars between the lines of the railway companies to which they belonged, and their free movement and the uses to which they might be put was considerably extended.

Within the territory of the succession states of Austria and Hungary, however, there was a serious difficulty. The "Government of Stresa" could only apply to those freight cars which belonged to a state and were its unquestionable property. There was no recognized ownership to most of the rolling stock formerly belonging to the Austro-Hungarian empire. The division of this rolling stock was provided for in the treaties of St. Germain and Trianon and had been

entrusted to a commission which has been at work ever since. It was clear that the division of 200,000 freight cars, 32,000 passenger, baggage, service and mail cars, and 12,000 locomotives would require a long time. Up to the present the ownership of approximately 40,000 freight cars and 3,000 locomotives only has been settled.

Ownership of Cars in Doubt—Car Hoarding the Result

The difficulty in Central Europe has been caused by the remaining equipment. Each nation has held the equipment actually in its possession for fear it might be kept if permitted to go into another country. This fear gave rise to car hoarding which ended in an almost complete stoppage of circulation between national boundaries. In many cases when a loaded freight train arrived at one boundary the originating country would not permit it to go in a neighboring state until an equivalent amount of equipment had been delivered at the boundary. The resulting chaos need not be described.

It is also unnecessary to recite the very earnest efforts made to remedy this situation prior to the Portoroze Conference. It is sufficient to indicate that none of them were completely successful.

It is greatly to the credit of the American, Colonel C. B. Smith, that the Portoroze Conference settled many of these outstanding questions and placed others on the route to settlement. At this conference a series of special agreements were drawn up which are to affect all the seven countries concerned.

The New Agreement

Without going into irksome details it may be indicated that the most important agreement reached had as its object to facilitate national passenger travel and transportation of baggage and freight. The principal provisions of this first agreement are as follows:

1. The setting up of a general obligation to do away with difficulties in the way of passenger and freight transportation in Central Europe, particularly to open the most important border states for international communications.
2. The provisions that in case of limitations of communications in one country, the railway administrations are to give to each other mutual assistance in the way of maintaining import and export and transit. The transportation of persons and goods of foreign nationality is not to be hampered or restricted more than that of the country itself.
3. The restoration of through international trains for passenger traffic and of through cars.
4. The obligation of the contracting states to make agreements for long haul freight and in regard to hastening the transport of special shipments, especially of necessities such as food, cattle, fuel, etc.
5. The obligation to restore through rates as soon as is practicable, and, in the meantime, to take measures to make possible a reliable estimate of the cost of international passenger traffic and of the transportation of at least the most important commodities.
6. The obligation that the rates of exchange fixed by the collecting railway administrations shall as hitherto regulate payment, but that they shall not be so used as to favor or prejudice any particular route.
7. The highly important provision that customs inspection at the boundaries shall be conducted so that goods may be cleared in any hour of the day or night and also on Sundays and holidays. (That goods in transit shall not be subject to customs formalities, and the mutual recognition of customs seals. Perishable goods sent by express are to enjoy the same privileges as traveler's baggage.)

The arrangements above-mentioned are to go into effect between any two states as soon as both have ratified it and there is every indication that such ratifications will follow shortly.

Special Agreements

In addition to this general agreement there were five special agreements adopted by the conference, the broad provi-

sions of the three most important of which are shown in the following:

(a) Jointly owned cars, now in the actual possession of each individual state, shall be provisionally marked as the property of that state without regard to their ultimate definite allotment by the commission established for that purpose. These cars, as well as all others previously marked with the sign of a nation on the basis of any presumptive or actual ownership, shall from January 1, 1922, be treated internationally as if they were the rightful property of the state in question. This agreement also contained provisions for the settlement of car debts between the succession states and also for rentals. A provision was made that the cars taken by the ex-enemy powers from foreign countries as war booty shall, until their final ownership is decided, remain in the domestic trade of the country now possessing them. Finally, a committee of technical experts was set up for carrying out these agreements and the same committee is to consider necessary corrections in the accounts of war rentals.

(b) The governments shall restore to their former owners the private cars in their possession.

(c) Cars belonging to car renting companies, not claimed as war booty and with regard to which there is no new rental contract, shall be restored to their owners and not marked with any new sign of ownership.

115,000 Cars

As has been pointed out by railroad experts in the succession states, the chief importance of these agreements lies in the fact that they make international agreements in regard to the reciprocal use of cars applicable to some 115,000 cars of the combined stock. While these cars hitherto could only be used within the territory where they happened to be, in the future they will be subject to exactly the same regulations as the rightful property of each individual railway administration. Here again there are strong indications that these agreements will be carried out practically and in a spirit of mutual confidence different from the antagonism hitherto existing since the war.

In addition to these definite agreements, other miscellaneous railroad problems were considered at the Portoroze Conference, but probably the outstanding achievement was that the officials running the railroads in the succession states were enabled to sit down together, talk over their problems and agree on common methods for beginning at least the restoration of normal railroad conditions in Central Europe.

Board Hears New York Central Piece Work Dispute

Hearings on the charge made by Mr. Jewell that the New York Central had illegally established piece-work in several of its shops were held before the Labor Board on June 9 and 10. J. F. McGrath, vice-president of the Railway Employees department of the American Federation of Labor, charged that the shop employees involved on the New York Central were coerced into accepting piece-work in violation of the rules of the Labor Board, and the intent of the Transportation Act.

Jacob Aaronson, attorney for the New York Central, contended that 98 per cent of the men in the shops involved in the controversy had voted in favor of piece work. A similar contention was made by representatives of the employees on June 10, and the case is now in the hands of the Board.

The shop crafts' strike ballot will be counted in Chicago, beginning on June 25, Mr. Jewell announced recently. The executive committees of the six shop crafts organizations will convene in Chicago on June 24, preparatory to canvassing the vote which has been made returnable June 25, instead of June 30, in order to make the results known to the men involved before July 1, when the lower rates of pay go into effect.

Revision of Operating Expense Classification

Now Under Consideration by I. C. C. Which Is Receiving
Co-operation of Accounting Officers' Association

A PROPOSED REVISION of the operating expenses-classifications was one of the leading matters offered for consideration before the thirty-fourth annual meeting of the Railway Accounting Officers' Association at Cleveland, Ohio, June 6 to 9. The matter was taken up by the Accounting Officers' Association in response to a communication from the I. C. C. Bureau of Accounts, advising that that bureau was considering proposed revisions of the various railway accounting classifications and asking the co-operation of the Railway Accounting Officers. The plan, which is offered for consideration, was prepared by the R. A. O. A. committee on disbursement accounts. The association has appointed a special committee headed by John Hurst, assistant comptroller of the Pennsylvania Railroad at Pittsburgh, and is also in the hands of the committee on general accounts. The matter was scheduled to be taken up with the Interstate Commerce Commission representatives this week.

In the communication mentioned above from the Bureau of Accounts, Alexander Wylie, the director, said in part:

"The co-operation of the Accounting Officers' Association has been an invaluable aid to the commission in the original compilation of the steam road accounting classifications and in the revisions which have heretofore been made. In the revision which is now being undertaken, the same helpful co-operation of the association is confidently counted upon.

"Much of the necessary preliminary detail work has already been accomplished by this bureau. It is desirable, however, in advance of the completion of this phase of the work, to determine the extent of the steam roads sub-accounts in some of the primary operating expense accounts, by which a separation may be uniformly provided between the cost of labor, material and other items, and perhaps a further subdivision of these items of expense may be between freight, passenger and commut.

"I would greatly appreciate the views of the association in this connection, and would be glad to be favored with its recommendations as to other changes which it feels should be incorporated in the revised classifications.

Mr. Wylie's letter was dated March 31, 1922. In reply to it, under date of April 4, President J. J. Ekin of the association, answered in part as follows:

Your letter of March 31st has just come to hand. The kind expressions in regard to the co-operation and aid to the Commission on the part of the Accounting Officers' Association in the original compilation of the steam roads accounting classification and in the revisions which have been made, are indeed very pleasing to me, and I know will be appreciated by the members of our association. In the revision which you now state is being undertaken, it is the earnest wish and desire of our association to co-operate with you to the fullest extent.

You will recollect at our conference of February 4, 1922, we discussed this subject in considerable detail, and I then expressed the opinion that it was not a refinement and further extension of the classification that was desired. At that time, and in our subsequent discussions, I mentioned the fact that the nearer we can have the disbursements accounts reflect the current expenditures for labor—payrolls—fuel, and material and supplies, the more useful the accounts will become as a check and record of these items of cost, and I strongly urged that the revised classification should show separately, with as few accounts as possible, the direct items of expense for labor, fuel, and material and supplies, the aggregate of which constitutes the cost of maintaining and operating the railroad properties. The fact was very forcibly impressed on me through the requirements of the Interstate Commerce Commission in the recent rate hearings, the Senate Investigation, and the preparation of data before the United States Railroad Labor Board.

The revision of the disbursement classification should be approached in the light of present conditions prevailing under the Transportation Act. The accounts should afford a prompt and accurate method of controlling expenses represented by disbursements for labor, fuel and material, and the classification should directly reflect these elements. There should be decided reduction, instead of an expansion, in the number of accounts. The Standing Committee on Disbursements Accounts of this association has been giving the subject of revision and simplification of the disbursements classification earnest study during this year, and your representative has participated in these discussions.

As you are aware, consideration has and is now being given to the subject of statistical requirements of the Interstate Commerce Commission and other Federal and State Boards or Commissions. The statistics should logically flow from the accounts, and for that reason I believe we should commence with the disbursement classification so that the physical and other statistics will naturally coordinate with the accounts, reflecting in a simple and direct manner the facts developed relating to maintenance and operation of the property.

Mr. Ekin's letter, besides serving to give the Interstate Commerce Commission the benefit of the ideas of the association, was also used as a guide by the disbursements committee in preparing its plan. Probably the most striking feature of the plan as presented was the reduction in the number of primary accounts from 197 to 69. The plan received considerable discussion on the floor of the conven-

tion. Mr. Hurst, chairman of the sub-committee, pointed out that it was thought that the proposed revision would permit access to the figures most demanded and that it would allow such access without the necessity of special study. He also mentioned the fact that it would permit of greater economy in railway accounting work and that there would be less of the hair splitting now required in allocating the expenses to the particular accounts.

Mr. Wylie, director of the I. C. C. Bureau of Accounts, who was present at the convention, was requested to state the views of his bureau. He said that one of the principal reasons for a revision of the accounts was that the Transportation Act, by putting new responsibilities upon the Interstate Commerce Commission, created requirements which made changes necessary to suit new conditions. He expressed the idea that his bureau was prepared to take up the work at an early date and explained that he wanted an expression of the views of the association as a whole concerning the proposed revision. He added, however, that the Interstate Commerce Commission had hardly expected such a radical cut in the number of the primary accounts as the committee had proposed. The action of the association was to refer the matter to its committee on general accounts and in response to Mr. Wylie's request for an expression of opinion, the association put the latter in a resolution.

Reduction in Number of Primary Accounts

As above noted, the proposed revision as made by the R. A. O. A. disbursements committee, reduces the number of primary accounts from 197 to 69. In particular, it cuts down the number of depreciation accounts and shows under maintenance of way one depreciation account in place of the present 34, and under maintenance of equipment, a single depreciation account in place of the present 19 retirement and depreciation accounts. Another feature is the creation of a new general account headed "Casualties" and throughout the entire classification one will notice an attempt to segregate labor and material and in the case of transportation expenses, station, yard and road service. Because of the importance which this matter bears to all departments of railway service, the plan of the disbursements committee is reproduced in full.

Your committee has undertaken to prepare some suggestions in connection with the contemplated revision, by the Interstate Commerce Commission, of the Classification of Operating Expenses, prescribed by the commission for steam roads—with a view of reducing the number of primary accounts and preparing a classification of accounts more comprehensive in scope than that now in use.

The present classification, which became effective July 1, 1914, was built up from the classifications in use by individual carriers before the Interstate Commerce Commission undertook the regulation of the accounting systems for steam carriers, in accordance with Section 20 of the Interstate Commerce Act. The revision of 1914 constituted an enlargement of the classification prescribed by the commission in 1907 and did not change the general viewpoint of the system of primary accounts. The principal change in 1914 was in the matter of providing accounts for depreciation applicable to each material account which covered the maintenance of fixed improvements.

In the revision proposed by your committee, fifty depreciation accounts are eliminated.

The general make-up of your committee's suggested classification follows the lines heretofore in use; that is to say, departmental general accounts have been provided, which are fundamentally a part of the American system of railway accounting.

In the use of the proposed classification, it is intended that a separation shall be made, for the primary accounts, of the elements of labor, material, and miscellaneous items, this information hav-

ing been found necessary in a great many instances, and your committee believes it to be of paramount importance looking to the economical and efficient operation of the railroads.

The commission requires a separation of the primary accounts of expenses as between passenger and freight services, and a similar requirement may be made in connection with the revised classification of operating expenses.

The present requirements of the commission are that the maintenance of way and structures expenses be divided between road and yard. It is the opinion of your committee that this division cannot be measured with even approximate correctness, in view of the joint use made of the tracks in yards by both road and switching services, and recommends that this division be not required.

A few of the important changes under the general account headings are as follows:

1. MAINTENANCE OF WAY AND STRUCTURES

It will be noted that the four principal material accounts are not changed, it being the intention to carry, in one account, all the labor applying and renewing these materials. The opinion of your committee is that an accurate separation of the labor costs of applying ties, rails, ballast, and other track materials, is a practical impossibility.

A general grouping has been provided for the maintenance of buildings and other structures instead of the separation of this account into seventeen different items. There seems to be no particular reason or advantage in a separation of the different classes of structures.

The item of insurance has been continued for the reason that it is intended the premiums for insurance upon the company's own property shall be included in the general accounts to which that property applies.

2. MAINTENANCE OF EQUIPMENT

No particular changes are proposed in the accounts under this general head except the merging of the depreciation and retirement accounts and the consolidation of the steam and other locomotives and miscellaneous equipment.

3. TRANSPORTATION—RAIL LINE

In the treatment of the transportation accounts consideration has been given to the thought that they embrace three kinds of service—station, yard, and road—and the proposed classification has been prepared so as to concisely group the expenses incident to these three classes of service.

It was deemed advisable, however, to have separate accounts for locomotive fuel, as this constitutes a very important element of the cost of operation.

4. CASUALTIES

In the present classification, the principal items covering casualties are grouped following the expenses of transportation, and it seemed to your committee that it would be much better to deal with them in a separate general account for the reason that such items as damage to property do not have a direct bearing on transportation expenses.

It is intended that this general account shall contain only expenditures made in connection with loss or damage to property of others than the carrier.

One account has been provided herein to include injuries to all persons instead of separating this item among the other general accounts.

It is intended that all payments for insurance or accruals to an insurance fund to cover losses of the above character shall be included in the appropriate primary accounts under this general account.

5. TRANSPORTATION—WATER LINE

No changes have been proposed in this general account.

6. MISCELLANEOUS OPERATIONS

The expenses incident to operation of sleeping cars have been transferred from transportation expenses, and a number of minor items have been consolidated in "Other Miscellaneous Operations."

7. TRAFFIC

The position of this general account has been changed for the purpose of bringing it nearer to the general expenses, as it constitutes a part of the "overhead expenses" of operating the railroad.

8. GENERAL

Your committee does not consider it necessary to continue the separation of the salaries and expenses of general officers, clerks, and attendants, the account as now proposed being analogous to the supervision accounts provided under the other general accounts.

9. TRANSPORTATION FOR INVESTMENT

No change is proposed by your committee except the assignment of a primary account.

The following is a list of the primary accounts recommended by your committee, together with self-explanatory notes with respect to certain eliminations:

CLASSIFICATION OF OPERATING EXPENSES

Proposed Primary Accounts

Present Primary Accounts

I. MAINTENANCE OF WAY AND STRUCTURES

- 201 Superintendence.
- 202 Ties.
- 203 Rails.
- 204 Ballast.
- 205 Other track material.
- 206 Roadway and track labor.
- 207 Other roadway and track maintenance.
- 208 Bridges and elevated structures.
- 209 Signals and interlockers.
- 210 Telegraph and telephone lines.
- 211 Electric power systems.
- 212 Buildings and other structures.
- 213 Insurance.
- 214 Depreciation.

- 215 Station and office buildings.
- 216 Fuel stations.
- 217 Shops and engine houses.
- 218 Grain elevators.
- 219 Storage warehouses.
- 220 Wharves and docks.
- 221 Coal and ore wharves.
- 222 Gas producing plants.
- 223 Miscellaneous structures.
- 224 Insurance.
- 225 Roadway depreciation.
- 226 Underground power tubes, depreciation.
- 227 Tunnels and subways, depreciation.
- 228 Bridges, trestles and culverts, depreciation.
- 229 Elevated structures, depreciation.
- 230 Rails, depreciation.
- 231 Other track material, depreciation.
- 232 Ballast, depreciation.
- 233 Right of way fences, depreciation.
- 234 Snow and sand fences and snow sheds, depreciation.
- 235 Crossings and signs, depreciation.
- 236 Station and office buildings, depreciation.
- 237 Fuel stations, depreciation.
- 238 Water stations, depreciation.
- 239 Shops and engine houses, depreciation.
- 240 Grain elevators, depreciation.
- 241 Storage warehouses, depreciation.
- 242 Wharves and docks, depreciation.
- 243 Coal and ore wharves, depreciation.
- 244 Gas producing plants, depreciation.
- 245 Telegraph and telephone lines, depreciation.
- 246 Signals and interlockers, depreciation.
- 247 Power plant dams, canals, and pipe lines, depreciation.
- 248 Power plant buildings, depreciation.
- 249 Power transmission systems, depreciation.
- 250 Power distribution systems, depreciation.
- 251 Lower line poles and fixtures, depreciation.
- 252 Underground conduits, depreciation.
- 253 Miscellaneous structures, depreciation.
- 254 Paving, depreciation.
- 255 Removing snow, ice and sand, 256 Assessments for public improvements.
- 257 Bridges, trestles and culverts.
- 258 Elevated structures.
- 259 Signals and interlockers.
- 260 Telegraph and telephone lines.
- 261 Power plant dams, canals, and pipe lines.
- 262 Power plant buildings.
- 263 Power transmission systems.
- 264 Power distribution systems.
- 265 Lower line poles and fixtures.
- 266 Underground conduits.
- 267 Right of way fences.
- 268 Snow and sand fences and snow sheds.
- 269 Crossings and signs.
- 270 Station and office buildings.
- 271 Fuel stations.
- 272 Water stations.
- 273 Shops and engine houses.
- 274 Grain elevators.
- 275 Storage warehouses.
- 276 Wharves and docks.
- 277 Coal and ore wharves.
- 278 Gas producing plants.
- 279 Miscellaneous structures.
- 280 Insurance.
- 281 Roadway depreciation.
- 282 Underground power tubes, depreciation.
- 283 Tunnels and subways, depreciation.
- 284 Bridges, trestles and culverts, depreciation.
- 285 Elevated structures, depreciation.
- 286 Rails, depreciation.
- 287 Other track material, depreciation.
- 288 Ballast, depreciation.
- 289 Right of way fences, depreciation.
- 290 Snow and sand fences and snow sheds, depreciation.
- 291 Crossings and signs, depreciation.
- 292 Station and office buildings, depreciation.
- 293 Fuel stations, depreciation.
- 294 Water stations, depreciation.
- 295 Shops and engine houses, depreciation.
- 296 Grain elevators, depreciation.
- 297 Storage warehouses, depreciation.
- 298 Wharves and docks, depreciation.
- 299 Coal and ore wharves, depreciation.
- 300 Gas producing plants, depreciation.
- 301 Telegraph and telephone lines, depreciation.
- 302 Signals and interlockers, depreciation.
- 303 Power plant dams, canals, and pipe lines, depreciation.
- 304 Power plant buildings, depreciation.
- 305 Power transmission systems, depreciation.
- 306 Power distribution systems, depreciation.
- 307 Lower line poles and fixtures, depreciation.
- 308 Underground conduits, depreciation.
- 309 Miscellaneous structures, depreciation.
- 310 Paving, depreciation.
- 311 Removing snow, ice and sand, 312 Assessments for public improvements.
- 313 Bridges, trestles and culverts.
- 314 Elevated structures.
- 315 Signals and interlockers.
- 316 Telegraph and telephone lines.
- 317 Power plant dams, canals, and pipe lines.
- 318 Power plant buildings.
- 319 Power transmission systems.
- 320 Power distribution systems.
- 321 Lower line poles and fixtures.
- 322 Underground conduits.
- 323 Miscellaneous structures.
- 324 Insurance.
- 325 Roadway depreciation.
- 326 Underground power tubes, depreciation.
- 327 Tunnels and subways, depreciation.
- 328 Bridges, trestles and culverts, depreciation.
- 329 Elevated structures, depreciation.
- 330 Rails, depreciation.
- 331 Other track material, depreciation.
- 332 Ballast, depreciation.
- 333 Right of way fences, depreciation.
- 334 Snow and sand fences and snow sheds, depreciation.
- 335 Crossings and signs, depreciation.
- 336 Station and office buildings, depreciation.
- 337 Fuel stations, depreciation.
- 338 Water stations, depreciation.
- 339 Shops and engine houses, depreciation.
- 340 Grain elevators, depreciation.
- 341 Storage warehouses, depreciation.
- 342 Wharves and docks, depreciation.
- 343 Coal and ore wharves, depreciation.
- 344 Gas producing plants, depreciation.
- 345 Telegraph and telephone lines, depreciation.
- 346 Signals and interlockers, depreciation.
- 347 Power plant dams, canals, and pipe lines, depreciation.
- 348 Power plant buildings, depreciation.
- 349 Power transmission systems, depreciation.
- 350 Power distribution systems, depreciation.
- 351 Lower line poles and fixtures, depreciation.
- 352 Underground conduits, depreciation.
- 353 Miscellaneous structures, depreciation.
- 354 Paving, depreciation.
- 355 Removing snow, ice and sand, 356 Assessments for public improvements.
- 357 Bridges, trestles and culverts.
- 358 Elevated structures.
- 359 Signals and interlockers.
- 360 Telegraph and telephone lines.
- 361 Power plant dams, canals, and pipe lines.
- 362 Power plant buildings.
- 363 Power transmission systems.
- 364 Power distribution systems.
- 365 Lower line poles and fixtures.
- 366 Underground conduits.
- 367 Miscellaneous structures.
- 368 Insurance.
- 369 Roadway depreciation.
- 370 Underground power tubes, depreciation.
- 371 Tunnels and subways, depreciation.
- 372 Bridges, trestles and culverts, depreciation.
- 373 Elevated structures, depreciation.
- 374 Rails, depreciation.
- 375 Other track material, depreciation.
- 376 Ballast, depreciation.
- 377 Right of way fences, depreciation.
- 378 Snow and sand fences and snow sheds, depreciation.
- 379 Crossings and signs, depreciation.
- 380 Station and office buildings, depreciation.
- 381 Fuel stations, depreciation.
- 382 Water stations, depreciation.
- 383 Shops and engine houses, depreciation.
- 384 Grain elevators, depreciation.
- 385 Storage warehouses, depreciation.
- 386 Wharves and docks, depreciation.
- 387 Coal and ore wharves, depreciation.
- 388 Gas producing plants, depreciation.
- 389 Telegraph and telephone lines, depreciation.
- 390 Signals and interlockers, depreciation.
- 391 Power plant dams, canals, and pipe lines, depreciation.
- 392 Power plant buildings, depreciation.
- 393 Power transmission systems, depreciation.
- 394 Power distribution systems, depreciation.
- 395 Lower line poles and fixtures, depreciation.
- 396 Underground conduits, depreciation.
- 397 Miscellaneous structures, depreciation.
- 398 Paving, depreciation.
- 399 Removing snow, ice and sand, 400 Assessments for public improvements.
- 401 Bridges, trestles and culverts.
- 402 Elevated structures.
- 403 Signals and interlockers.
- 404 Telegraph and telephone lines.
- 405 Power plant dams, canals, and pipe lines.
- 406 Power plant buildings.
- 407 Power transmission systems.
- 408 Power distribution systems.
- 409 Lower line poles and fixtures.
- 410 Underground conduits.
- 411 Miscellaneous structures.
- 412 Insurance.
- 413 Roadway depreciation.
- 414 Underground power tubes, depreciation.
- 415 Tunnels and subways, depreciation.
- 416 Bridges, trestles and culverts, depreciation.
- 417 Elevated structures, depreciation.
- 418 Rails, depreciation.
- 419 Other track material, depreciation.
- 420 Ballast, depreciation.
- 421 Right of way fences, depreciation.
- 422 Snow and sand fences and snow sheds, depreciation.
- 423 Crossings and signs, depreciation.
- 424 Station and office buildings, depreciation.
- 425 Fuel stations, depreciation.
- 426 Water stations, depreciation.
- 427 Shops and engine houses, depreciation.
- 428 Grain elevators, depreciation.
- 429 Storage warehouses, depreciation.
- 430 Wharves and docks, depreciation.
- 431 Coal and ore wharves, depreciation.
- 432 Gas producing plants, depreciation.
- 433 Telegraph and telephone lines, depreciation.
- 434 Signals and interlockers, depreciation.
- 435 Power plant dams, canals, and pipe lines, depreciation.
- 436 Power plant buildings, depreciation.
- 437 Power transmission systems, depreciation.
- 438 Power distribution systems, depreciation.
- 439 Lower line poles and fixtures, depreciation.
- 440 Underground conduits, depreciation.
- 441 Miscellaneous structures, depreciation.
- 442 Insurance.
- 443 Roadway depreciation.
- 444 Underground power tubes, depreciation.
- 445 Tunnels and subways, depreciation.
- 446 Bridges, trestles and culverts, depreciation.
- 447 Elevated structures, depreciation.
- 448 Rails, depreciation.
- 449 Other track material, depreciation.
- 450 Ballast, depreciation.
- 451 Right of way fences, depreciation.
- 452 Snow and sand fences and snow sheds, depreciation.
- 453 Crossings and signs, depreciation.
- 454 Station and office buildings, depreciation.
- 455 Fuel stations, depreciation.
- 456 Water stations, depreciation.
- 457 Shops and engine houses, depreciation.
- 458 Grain elevators, depreciation.
- 459 Storage warehouses, depreciation.
- 460 Wharves and docks, depreciation.
- 461 Coal and ore wharves, depreciation.
- 462 Gas producing plants, depreciation.
- 463 Telegraph and telephone lines, depreciation.
- 464 Signals and interlockers, depreciation.
- 465 Power plant dams, canals, and pipe lines, depreciation.
- 466 Power plant buildings, depreciation.
- 467 Power transmission systems, depreciation.
- 468 Power distribution systems, depreciation.
- 469 Lower line poles and fixtures, depreciation.
- 470 Underground conduits, depreciation.
- 471 Miscellaneous structures, depreciation.
- 472 Insurance.
- 473 Roadway depreciation.
- 474 Underground power tubes, depreciation.
- 475 Tunnels and subways, depreciation.
- 476 Bridges, trestles and culverts, depreciation.
- 477 Elevated structures, depreciation.
- 478 Rails, depreciation.
- 479 Other track material, depreciation.
- 480 Ballast, depreciation.
- 481 Right of way fences, depreciation.
- 482 Snow and sand fences and snow sheds, depreciation.
- 483 Crossings and signs, depreciation.
- 484 Station and office buildings, depreciation.
- 485 Fuel stations, depreciation.
- 486 Water stations, depreciation.
- 487 Shops and engine houses, depreciation.
- 488 Grain elevators, depreciation.
- 489 Storage warehouses, depreciation.
- 490 Wharves and docks, depreciation.
- 491 Coal and ore wharves, depreciation.
- 492 Gas producing plants, depreciation.
- 493 Telegraph and telephone lines, depreciation.
- 494 Signals and interlockers, depreciation.
- 495 Power plant dams, canals, and pipe lines, depreciation.
- 496 Power plant buildings, depreciation.
- 497 Power transmission systems, depreciation.
- 498 Power distribution systems, depreciation.
- 499 Lower line poles and fixtures, depreciation.
- 500 Underground conduits, depreciation.
- 501 Miscellaneous structures, depreciation.
- 502 Insurance.
- 503 Roadway depreciation.
- 504 Underground power tubes, depreciation.
- 505 Tunnels and subways, depreciation.
- 506 Bridges, trestles and culverts, depreciation.
- 507 Elevated structures, depreciation.
- 508 Rails, depreciation.
- 509 Other track material, depreciation.
- 510 Ballast, depreciation.
- 511 Right of way fences, depreciation.
- 512 Snow and sand fences and snow sheds, depreciation.
- 513 Crossings and signs, depreciation.
- 514 Station and office buildings, depreciation.
- 515 Fuel stations, depreciation.
- 516 Water stations, depreciation.
- 517 Shops and engine houses, depreciation.
- 518 Grain elevators, depreciation.
- 519 Storage warehouses, depreciation.
- 520 Wharves and docks, depreciation.
- 521 Coal and ore wharves, depreciation.
- 522 Gas producing plants, depreciation.
- 523 Telegraph and telephone lines, depreciation.
- 524 Signals and interlockers, depreciation.
- 525 Power plant dams, canals, and pipe lines, depreciation.
- 526 Power plant buildings, depreciation.
- 527 Power transmission systems, depreciation.
- 528 Power distribution systems, depreciation.
- 529 Lower line poles and fixtures, depreciation.
- 530 Underground conduits, depreciation.
- 531 Miscellaneous structures, depreciation.
- 532 Insurance.
- 533 Roadway depreciation.
- 534 Underground power tubes, depreciation.
- 535 Tunnels and subways, depreciation.
- 536 Bridges, trestles and culverts, depreciation.
- 537 Elevated structures, depreciation.
- 538 Rails, depreciation.
- 539 Other track material, depreciation.
- 540 Ballast, depreciation.
- 541 Right of way fences, depreciation.
- 542 Snow and sand fences and snow sheds, depreciation.
- 543 Crossings and signs, depreciation.
- 544 Station and office buildings, depreciation.
- 545 Fuel stations, depreciation.
- 546 Water stations, depreciation.
- 547 Shops and engine houses, depreciation.
- 548 Grain elevators, depreciation.
- 549 Storage warehouses, depreciation.
- 550 Wharves and docks, depreciation.
- 551 Coal and ore wharves, depreciation.
- 552 Gas producing plants, depreciation.
- 553 Telegraph and telephone lines, depreciation.
- 554 Signals and interlockers, depreciation.
- 555 Power plant dams, canals, and pipe lines, depreciation.
- 556 Power plant buildings, depreciation.
- 557 Power transmission systems, depreciation.
- 558 Power distribution systems, depreciation.
- 559 Lower line poles and fixtures, depreciation.
- 560 Underground conduits, depreciation.
- 561 Miscellaneous structures, depreciation.
- 562 Insurance.
- 563 Roadway depreciation.
- 564 Underground power tubes, depreciation.
- 565 Tunnels and subways, depreciation.
- 566 Bridges, trestles and culverts, depreciation.
- 567 Elevated structures, depreciation.
- 568 Rails, depreciation.
- 569 Other track material, depreciation.
- 570 Ballast, depreciation.
- 571 Right of way fences, depreciation.
- 572 Snow and sand fences and snow sheds, depreciation.
- 573 Crossings and signs, depreciation.
- 574 Station and office buildings, depreciation.
- 575 Fuel stations, depreciation.
- 576 Water stations, depreciation.
- 577 Shops and engine houses, depreciation.
- 578 Grain elevators, depreciation.
- 579 Storage warehouses, depreciation.
- 580 Wharves and docks, depreciation.
- 581 Coal and ore wharves, depreciation.
- 582 Gas producing plants, depreciation.
- 583 Telegraph and telephone lines, depreciation.
- 584 Signals and interlockers, depreciation.
- 585 Power plant dams, canals, and pipe lines, depreciation.
- 586 Power plant buildings, depreciation.
- 587 Power transmission systems, depreciation.
- 588 Power distribution systems, depreciation.
- 589 Lower line poles and fixtures, depreciation.

- 689 Other track material, depreciation.
- 690 Ballast, depreciation.
- 691 Right of way fences, depreciation.
- 692 Snow and sand fences and snow sheds, depreciation.
- 693 Crossings and signs, depreciation.
- 694 Station and office buildings, depreciation.
- 695 Fuel stations, depreciation.
- 696 Water stations, depreciation.
- 697 Shops and engine houses, depreciation.
- 698 Grain elevators, depreciation.
- 699 Storage warehouses, depreciation.
- 700 Wharves and docks, depreciation.
- 701 Coal and ore wharves, depreciation.
- 702 Gas producing plants, depreciation.
- 703 Telegraph and telephone lines, depreciation.
- 704 Signals and interlockers, depreciation.
- 705 Power plant dams, canals, and pipe lines, depreciation.
- 706 Power plant buildings, depreciation.
- 707 Power transmission systems, depreciation.
- 708 Power distribution systems, depreciation.
- 709 Lower line poles and fixtures, depreciation.
- 710 Underground conduits, depreciation.
- 711 Miscellaneous structures, depreciation.
- 712 Insurance.
- 713 Roadway depreciation.
- 714 Underground power tubes, depreciation.
- 715 Tunnels and subways, depreciation.
- 716 Bridges, trestles and culverts, depreciation.
- 717 Elevated structures, depreciation.
- 718 Rails, depreciation.
- 719 Other track material, depreciation.
- 720 Ballast, depreciation.
- 721 Right of way fences, depreciation.
- 722 Snow and sand fences and snow sheds, depreciation.
- 723 Crossings and signs, depreciation.
- 724 Station and office buildings, depreciation.
- 725 Fuel stations, depreciation.
- 726 Water stations, depreciation.
- 727 Shops and engine houses, depreciation.
- 728 Grain elevators, depreciation.
- 729 Storage warehouses, depreciation.
- 730 Wharves and docks, depreciation.
- 731 Coal and ore wharves, depreciation.
- 732 Gas producing plants, depreciation.
- 733 Telegraph and telephone lines, depreciation.
- 734 Signals and interlockers, depreciation.
- 735 Power plant dams, canals, and pipe lines, depreciation.
- 736 Power plant buildings, depreciation.
- 737 Power transmission systems, depreciation.
- 738 Power distribution systems, depreciation.
- 739 Lower line poles and fixtures, depreciation.
- 740 Underground conduits, depreciation.
- 741 Miscellaneous structures, depreciation.
- 742 Insurance.
- 743 Roadway depreciation.
- 744 Underground power tubes, depreciation.
- 745 Tunnels and subways, depreciation.

NOTES

Labor Leaders Again Plan Appeal to President

WITH STRIKE BALLOTS in the hands of maintenance of way and shop employees, returnable before July 1, and with a delay in the announcement of the Labor Board's decision as to the reductions to be made in the pay of various other classes of employees on July 1, there has been a lull in the railroad labor situation during the past week.

From Cincinnati, where the leaders of the railroad labor organizations other than the train service brotherhoods, met recently to formulate a plan of concerted action against further reductions in their wages, comes the report that the whole wage controversy will again be laid before the President, as have practically all of the major controversies of the last five years. Leaders of 11 railway employees' organizations agreed to outline a letter to President Harding, presenting their arguments for higher wages or at least no further reductions. A committee of union officers was appointed by B. M. Jewell, president of the Railway Employees department of the American Federation of Labor, to draft the letter.

The employees' protest, it is reported, will contend that the new wage scales fixed by the Labor Board, are inadequate to maintain an "American standard of living." It is the intention of the union leaders in the letter to President Harding, to demand whether he thinks these wages are sufficient to "maintain an American standard of living and properly sustain a family."

In a later executive session, it was decided that the committee appointed to draft the letter should call in statistical and economic "experts" to outline the wage situation and its relation to the minimum wage scale before the letter is forwarded to the White House. This additional data will require at least a week for preparation, they pointed out.

The threat of a nation-wide strike of railway employees is apparently causing little alarm either on the part of the public or railroad executives. Both have become accustomed to the threats of a general tie-up of transportation, to appeals to the President and to promises of dire happenings and consequently the predictions of a walk-out within three weeks is meeting a cool reception from the public and in the press.

Railway Executives Outline Attitude Toward Threatened Strike

The attitude of railway executives toward the present strike threats was outlined recently in a statement signed by H. E. Byram, president of the Chicago, Milwaukee & St. Paul, Hale Holden, president of the Chicago, Burlington & Quincy, W. H. Finley, president of the Chicago & North Western, J. E. Gorman, president of the Chicago, Rock Island & Pacific, C. H. Markham, president of the Illinois Central, and S. M. Felton, president of the Chicago Great Western. This statement said in part:

Threats of a strike made by leaders of the railroad labor unions, are appearing with such frequency in the newspapers that the time seems opportune for questioning the soundness of their talk. There is a very good reason for doubting whether the men themselves, that is the railroad employees, really are in sympathy with resistance to the decisions of the United States Railway Labor Board. The truth is that the men have been expecting a reduction in their wages and, as would be the case among any other body of intelligent men, they have made or are making preparations to meet the new scale. There is no talk of strike among the men. The disturbing statement read by the public are prepared by leaders of the unions, whose viewpoint has been distorted by months of effort before the board to resist the inevitable downward trend of wages. The employees, on the other hand, are in the main sincerely interested in taking care of their jobs and their homes, and few employees in any industry have more good reasons for doing so

B. M. Jewell, spokesman for these railroad labor unions, has severely criticised the decision of the railroad labor board awarding the reduction in wages of shop employees. Jewell says the decision will cause employees to believe the board is "not an impartial court created to dispense justice, but a body created to help the railroads carry out their labor policy." He attacks the wage award also on the ground that the proposed scales are lower than the minimum required to support the average family according to American standards. The constant allusion to "average families" is misleading. The average family is no different now than it was before the war, and comparisons are being made on that basis. It should not be forgotten that the men in railroad service work under much more favorable conditions than in outside shops and industries. Indeed, no class of men doing such work in any industry has better homes and surroundings.

The existence, and the policy of the labor board have benefited railroad employees because the board has prevented these reductions in wages until long after the wages of men doing similar work in other industries had been cut.

The public should not overlook the fact that in deciding the proposed wages of these employees, maintenance of way and shop, the labor board, which is a government body, said "After the reductions made under this decision * * * these employees on the railroads will still be receiving as a rule a wage in excess of that paid to similar employees in other industries." The board held in its opinion that measured by the present cost of living, the average hourly wages of machinists, for instance, after July 1, will still have 19 per cent more purchasing power than in December, 1917; those of car men 46 per cent more purchasing power, and those of common labor 45½ per cent more. That is to say, measured by the cost of living their wages will still be these percentages higher than at the end of 1917.

The records show that the proposed scale of wages for the classes of employees involved in the two wage reduction orders already issued would practically restore the scale in effect at the end of federal control in 1920, which carried an increase for these employees of 119 per cent over the wages paid in 1916. The cost of living as shown by the Department of Labor in Washington for March, 1922, was 42 per cent above 1916. The railroads proposed no hardships for their men in these reductions in pay. When wages were raised in July, 1920, more than \$720,000,000 at one time, an amount unheard of in wage scales up to that time, not a word was uttered by the leaders of the railroad labor unions. But now, when the roads and the railroad labor board propose adjustments to bring their wage scale more nearly to the level paid for the same kind of work in other industries, strike threats are heard.

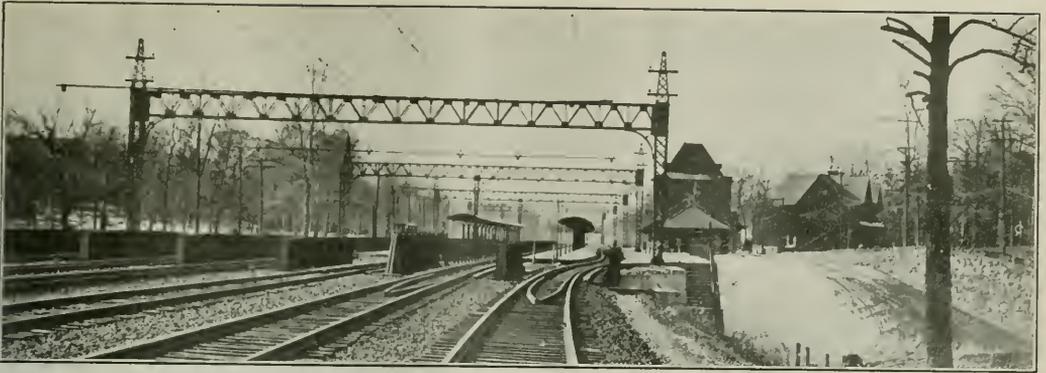

The important fact which should not be overlooked by the public because it may have a very important bearing upon its business and comfort, is that whereas rate reductions amounting to more than \$250,000,000 have been ordered by the Interstate Commerce Commission, the cut in wages, according to the decisions thus far rendered, amounts to only \$110,000,000.

These reductions in wages of railway employees simply mean that they must bear some part in the readjustments made necessary by changed business conditions. Farmers and business men have been compelled to accept lower prices. The railways having not yet emerged from a serious financial crisis have been ordered to make reductions in rates which they cannot stand without reductions of their wages and other expenses.

To leave railway wages on their present high basis would be to make railway employees a favored class at the expense of shippers and all other classes of people, including other working men.

The decision of the Supreme Court of the United States in the Coronado case, coming simultaneously as it did with the threat of the nation-wide strike of railway employees, will probably result in a revision of the plans of the labor leaders, and will undoubtedly lend an entirely different atmosphere to a strike crisis if it does materialize. Rumors are being freely circulated that the labor organizations now threatening a strike will hurriedly incorporate or transfer their headquarters and funds to Canada in an effort to evade the responsibility which would be theirs under the application of the provisions of the Supreme Court's ruling. This decision is also a contributing factor to the apparent lull in the controversy over reduced rates of pay.

THE BUFFALO EXPRESS train (No. 975) of the Pennsylvania Railroad was derailed on the evening of June 7, at Brillharts, Pa., three miles south of York, and the fireman was killed. Several passengers were injured, but, according to the report none of the injuries were serious.

Six Track Trunk Line of N. Y. N. H. & H. Electrification

New Single Phase Equipment for the New Haven

Two Master Controllers Installed in Trail Cars Permit
Operation From Any Car in Train

By Walter H. Smith

Railway Equipment Engineer, Westinghouse Electric & Mfg. Co.

THE NEW YORK, New Haven and Hartford electrification has been in operation since July, 1907, and at present comprises 83 miles of route with 570 miles of electrified track. In February, 1910, the first regular multiple-unit train service was put into operation between Port Chester and New York. The equipment at that time consisted of four motor cars and six trail cars, each motor car being designed to handle two trail cars.

This electrification has expanded until it now represents one of the largest single-phase electrifications of a steam railroad and is one of the most extensive examples of multiple-unit and locomotive service in operation today. In this electrified zone there are at present 106 locomotives, 27 motor cars and 50 trail cars. This railroad recently placed an order for 8 new motor cars and 14 trail cars which makes a total of 35 motor cars and 65 trail cars in service. This new equipment is now in operation. The table following gives some of the principal dimensions of the new motor cars:

Length over buffer face plates	71 ft. 11 in.
Length over buffer channels	70 ft. 7 in.
Length over end sills	61 ft. 4½ in.
Distance between truck centers	47 ft. 7¼ in.
Wheel base of motor truck	8 ft. 1 in.
Wheel diameter	42 in.
Height from top of rail to top of car	13 ft. 3¼ in.
Weight fully equipped	177,000 lb.
Seating capacity	84

The trail cars have the same dimensions except as follows:

Wheel base of truck	8 ft.
Wheel diameter	36 in.
Weight fully equipped	103,000 lb.

Like most of the other New Haven multiple-unit cars, the new equipment has series motors for operation on both alternating and direct current. When operating over the New York Central tracks the direct-current system is used and power is taken directly from the third rail through collecting shoes, while on the New Haven and New York Connecting Railroads, the alternating-current system is used and power is taken from an overhead trolley wire at 11,000 volts. It is then reduced by means of a transformer to the voltage required for the main motors and other auxiliary apparatus on

the car. The main motors are permanently connected two in series and the groups may be connected in series or in parallel for d. c. operation.

The new motor car equipments (excepting two) will employ four 175 hp. (hour rating) Westinghouse type 409-D single-phase, 25-cycle, series motors. The frame is a one piece steel casting of box construction. At the ends are large machined openings for receiving the bearing housings

N. Y. N. H. & H. Multiple-Unit Car Fully Equipped

and to permit the removal of the armature. The armature is of the drum type, lap wound, coils cross connected and with resistance leads between the commutator bars and coil leads. The spur gears are of the flexible type, the ratio being 27:73. The rims of these gears are made from high grade steel forgings, accurately machined with a 5¼-in. face. The gear is pressed on and without key.

The new equipment was designed for multiple operation with the cars already in service. All of the trail cars are

equipped with two master controllers duplicates of those on the motor cars, a control train line and the necessary details for operation of the train from a trail car as well as from a motor car. This permits the operation of a trail car at the head of the train when desirable.

The Westinghouse type "HB" (hand operated battery) electro-pneumatic multiple-unit control system is employed. The energy for operating the magnet valves of the control and auxiliary apparatus is taken from a motor-generator set and storage battery at 30 volts. The storage battery consists of 25 Edison type B-4-II cells connected in series.

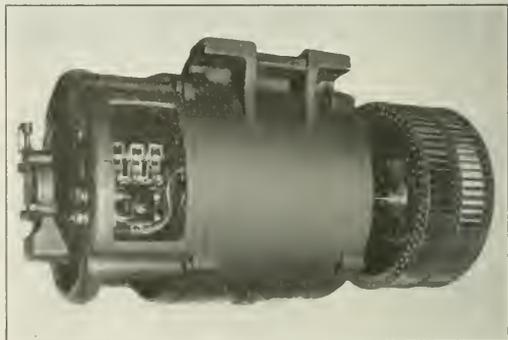

The motor cars are provided with two sliding shoe pantagraph trolleys, having automatic, self adjusting action to conform to various trolley wire heights such as are encountered under bridges and along the open line. The pantagraph is raised and held in position by spring pressure and is lowered by compressed air from the control reservoir. These cars are also provided with four pneumatically operated third rail shoes. These shoes are located on each side of the trucks on wooden beams and are used when operating in the direct-current zone over the New York Central tracks. The operation of both pantagraphs and third rail shoes is controlled from a push button set located in the motorman's compartment and two magnet valve sets located under the car body.

The main motors are protected from overload and short-circuit when operating in both the alternating and direct-current zones. When operating in the direct-current zone the usual standard series type of overload relay actuating

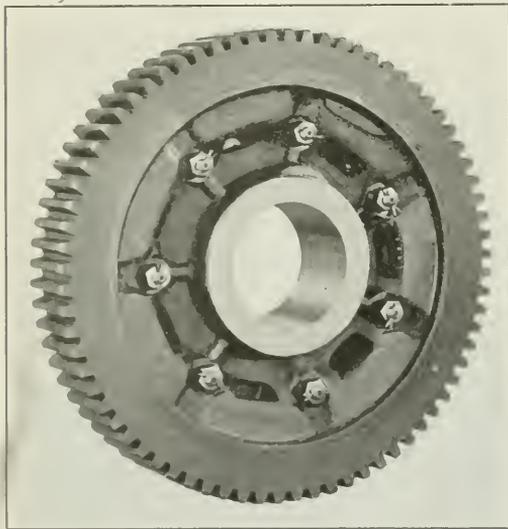

assembled coils with inter-leaved joints and clamped tightly between cast steel end frames. The transformer is provided with ventilating ducts and is cooled by the flow of air from the blower system. The ventilating air enters the low tension end of the transformer and is discharged at the high tension end. The ventilating system will be described later.

The control system employs 15 electro-pneumatically operated switches assembled in two groups of seven and eight switches respectively. Most of these switches are used for both alternating and direct-current operation. There are seven accelerating points for a. c. operation and thirteen accelerating points for d. c. operation. The switches are of the standard railway construction and are provided with blow-out coils.

The main circuit arrangement requires only one set of

Type XB-45-N Blower Motor and Fan (Mounted Position)

Flexible Gear Assembled Complete

the line switch is employed for this protection, while in the alternating current zone an oil circuit-breaker is employed. This oil breaker is provided with a time element relay to delay its opening on an overload, ground or short-circuit until the line has been cleared by the power house breaker. The high tension side of the main transformer is then disconnected from the trolley. This time element relay is controlled from a series transformer inserted in the high tension lead of the main transformer between the oil circuit breaker and pantagraph.

The main transformer is of the standard railway air blast type. The laminations are built up closely around the as-

sembled grids for acceleration on both alternating and direct current. These grids are assembled into five frames and suspended from the underframing of the car body. By the use of the a.c.-d.c. control changeover switch the sequence of switches is arranged so that the grids are correctly and efficiently employed for both kinds of power.

There are two reversers of the drum type, one for each group of two motors in series. These devices govern the direction of flow of current through the main motor fields with respect to the armatures and accordingly determine the direction of armature rotation and consequent forward or reverse movement of the car or train. The drums are rotated from one position to the other by means of two opposed air cylinders which are provided with magnet valves. The control circuits governing these drums are interlocked with the switches so that power cannot be applied to the two motors controlled by a drum, unless the latter is in the correct position for movement of the car or train in the direction indicated by the reverse handle of the master controller.

The wires comprising the control train lines are run throughout the entire length of both motor and trail cars and are connected between cars by means of jumpers. Each car is provided with a switchboard panel located in a cabinet in one of the vestibules. This panel board has mounted on it all of the control switches for the lighting and auxiliary apparatus required by the system.

Both motor and trail cars are provided with independent main and auxiliary lighting systems. These lighting systems are protected by fuses in the panel board cabinet and comprise 36 lights, the auxiliary row down the center of the car and a main row down each side of the car. Each side row consists of two circuits, each containing six 25-watt, 110-volt lamps connected in series, and the center row is a single circuit of twelve 25-watt, 32-volt lamps connected in parallel. The main lighting circuits receive power direct

from the line on d.c. and from the main transformer on a.c. The auxiliary or center circuit is supplied with current from a 500-watt lighting transformer at 32 volts, when the car is operating in the a.c. zone and from the storage battery when operating in the d.c. zone. The changeover is automatically made when passing from the d.c. to the a.c. zone and vice versa. The battery charging system is provided with an ampere-hour meter and disconnecting switch, so that when the battery has been fully charged it is automatically

Annual Meeting of Signal Section, A. R. A.

THE SIGNAL SECTION of the American Railway Association held its annual meeting at the Monmouth Hotel, Spring Lake, N. J., on Wednesday, Thursday and Friday of this week with an attendance of about 340. This was the fourth annual meeting of the Signal section and the 27th annual convention of what was formerly the Railway Signal Association. Chairman F. B. Weigand (N. Y. C.) presided. The principal business of the first day, after the chairman president's opening address, consisted of the reports of the committee of direction and the secretary and the celebration of the fiftieth anniversary of the closed track circuit.

Chairman Weigand, in his opening address, complimented the membership on the active part taken by them in the work of the association and told of the interest of this Section in the subject of automatic train control. Mr. Weigand pointed out how this Section was co-operating with the American Engineering Standards Committee which was organized as a national clearing house for industrial standardization. Attention was called to the means provided by the American Railway Association whereby the various divisions and sections are co-operating to eliminate duplication of effort. Regarding standardization, Mr. Weigand called attention to two important subjects which have apparently been neglected: (1) Approach and route locking circuits and (2) circuits for power signals at mechanical interlocking plants. He recommended that the committee of direction assign these subjects to a committee for careful study, with a view to recommending typical circuits, from the simplest to the most complex.

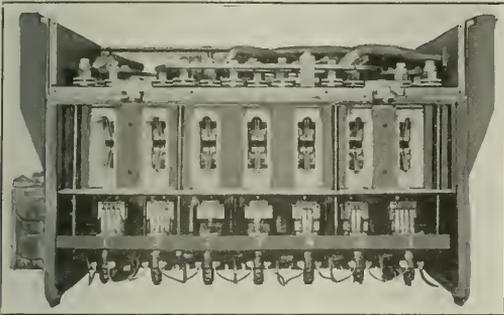

Following Mr. Weigand's address the committee of direction submitted its report. H. S. Balliet, (N. Y. C.), secretary, in his report stated that a total of 276 members were enrolled during the year and 14 were reinstated, while there was a loss, from various causes, of 234. In reporting on committee work he said that 59 subjects had been reported on by standing committees during the past year.

Highway Crossing Protection

Committee No. 20, reported on this subject. It believes that its recommendations, if adopted, will form a basis for the universal standardization of highway crossing protection, which at present is anything but uniform throughout the country. It is realized that some of the recommendations may conflict with existing state laws or orders of state commissions. The cross-board crossing sign, which is recommended, will comply with the laws of many states. It is believed, however, that if these recommendations are presented to public authorities with the explanation that they represent an effort on the part of the American Railway Association to recommend uniform practice throughout the country there will be little difficulty in getting existing state rules modified. The use of the automobile for long journeys has made highway traffic interstate almost as completely as railroad traffic and the great desideratum is to make the aspects of all good signs of possible or existing danger uniform throughout the country.

Memorial of Dr. William Robinson

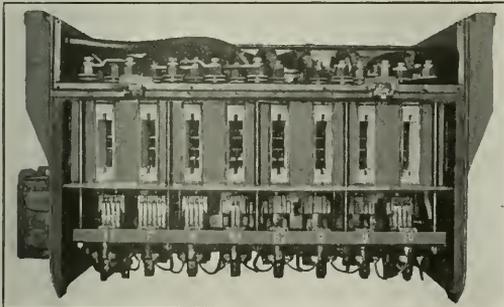

In commemoration of the fiftieth anniversary of the invention of the closed track circuit by Dr. William Robinson, a special committee presented a report on the invention of the track circuit which was also a memoir of Dr. Robinson. This report was in three parts. Part 1 was Robinson's own story of his invention. Part 2 was devoted to W. A. Baldwin, a former general superintendent of the Pennsylvania Railroad, who was responsible for the first installation. Part 3 was devoted to a description of the track circuit.

cut off from the motor-generator and the motor-generator disconnected from the line.

The ventilating system for cooling the main transformer and motors is supplied from a blower. The ventilating air is taken into the system through louvres at the sides of the car and is delivered by the fan to a longitudinal air duct (formed by the center channels of the car body and top and

Front View of Type 268-A-2 Switch Group, Covers Removed

bottom plates) through which it is distributed to the intakes of the transformer and main motors.

The blast wheel of this blower unit is a double inlet wheel 20 inches in diameter mounted on the shaft of its driving motor. The blower unit is mounted near the center of the car body and is suspended from the under framing. The motor is of the series type and is supplied with current at 380 volts from taps on the main transformer and runs at a speed of 1,400 r.p.m. The blower unit is not used when the car is operating over the New York Central tracks in the d.c. zone.

THE ILLINOIS CENTRAL has designated June as "no exception month"; all hands must endeavor to prevent the causes of freight claims by giving careful attention to every shipment. Freight claims paid by the Illinois Central in 1921 amounted to \$2,449,275.

Better Terminal Market Facilities Urged

WASHINGTON, D. C.

WHY THE HOUSEWIFE pays so much and the farmer gets so little for fruits and vegetables is one of the questions that will be answered by the Joint Commission of Agricultural Inquiry in a report soon to be tendered to Congress, and the report finds many other causes aside from the cost of transportation.

One reason for the wide spread between consumers' and producers' prices for fruits and vegetables has been found by the Joint Commission in lack of proper terminal market facilities. "The movement of fruits and vegetables has increased about four-fold in the last 20 years," said Chairman Anderson, "and most of the terminal markets have long since outgrown their facilities. Chicago furnishes a conspicuous example of how things ought not to be done. Some 27 trunk line railroads and several boat lines pour in the fruit and vegetable supplies for nearly 3,000,000 people. These are chiefly sold in a section of five or six city blocks on a narrow thoroughfare.

"This market is wholly inadequate in size, but the worst feature of the situation is its location at a distance of from two to four blocks from principal rail and water terminals. Most of the fruits and vegetables must be handled by wagon or motor trucks over rough streets through the most congested portion of the city. None of this carting or rehandling adds in any way to the value of the product, but it does add materially to the cost of distribution.

"At this market fruits and vegetables must be unloaded and then reloaded and are frequently backhauled over the same routes by the dealer purchasers. No inconsiderable portion is actually carted back to the same railroad yard or depot from which it was taken to the wholesale market. Obviously mere relocation of Chicago's wholesale district will not materially help its unfortunate situation. The city's great need is a wholesale railroad terminal for fruits and vegetables to which all carriers would have access and about which a sufficiently commodious wholesale district could be established.

"In New York, the greatest need is for a unification of docks. These should be as closely contiguous as possible in order to centralize and unify the wholesale district, and there might be an advantage in setting aside special docks for the handling of given lines of produce.

"Pittsburgh is more fortunate with respect to terminal facilities for fruits and vegetables than most American cities. It shows the advantage of centralizing the wholesale market about a single terminal, with consequent elimination of cartage and rehandling.

"Adequate, organized and correlated terminal markets, together with a reduction of unnecessary movement of commodities from terminal to terminal or from terminal to central market should materially reduce the expense involved in unnecessary equipment and the employment of an unnecessarily large number of men."

Out of the fluctuating wholesale price there are certain fixed charges in distribution, such as freight, storage, cartage, interest, insurance, and the semi-fixed charge of labor, all of which must be paid before the producer gets anything or before the wholesale distributor can be paid for his services, or gets his money back on goods purchased. "Changes in cost of distribution," said Chairman Anderson, "up to the time goods are sold at wholesale, are largely reflected in the producer's net return. For example, increased transportation charges, in the first instance, at least, are largely borne by producers, since production of fruits and vegetables, particularly tree fruits, cannot be quickly regulated to meet new conditions. Once produced, the crop will probably be sent to market even if the returns will yield only a little more than the costs of distribution, including transportation, etc., and irrespective of cost of production."

Freight Car Loading

WASHINGTON, D. C.

THE NUMBER OF CARS loaded with revenue freight during the week ended June 3 shows a drop of 70,000 due to the holiday on May 30. The total was 750,645 as compared with 693,903 in the corresponding week of 1921 and 828,907 in 1920. As compared with the corresponding week of last year there were increases in the loading of all classes of commodities except grain and grain products and coal. The coal loading showed a slight decrease as compared with the week before on account of the holiday, but the loading of coke and ore was greater than that of the week before. The average daily loading excluding the holiday was also greater than that for the week before. The summary as compiled by the Car Service Division of the American Railway Association follows:

REVENUE FREIGHT LOADED

SUMMARY—ALL DISTRICTS, COMPARISON OF TOTALS THIS YEAR, LAST YEAR, TWO YEARS AGO. WEEK ENDED SATURDAY, JUNE 3, 1922.

One of the Oil Developments on the Southern Pacific System—A View at Mexia, Tex. (Houston & Texas Central)

Southern Pacific Issues Interesting Report

System Not Yet Back on Pre-War Earning Basis—Net Railway Operating Income in 1921 \$35,946,791

THE SOUTHERN PACIFIC annual report which was issued last week is another one of the comparatively small number of stockholders' reports which succeeds in giving to the readers a really adequate idea of the operations for the period with which the report deals. The report contains many things of leading interest, notably such matters as the improvement in the operating conditions of the carrier in 1921, some rather interesting material concerning the matter of taxes, a brief analysis of the effect of the decision of the Supreme Court with reference to the Central Pacific, etc. There can be little question, however, that the most interesting feature of all is the form in which the report is rendered.

The report is a document of 96 pages. It contains the usual tabulations of figures which will be found in annual reports with the exception that it has to give also a great mass of data relative to the many proprietary lines. The body of the report itself, however, deals with the Southern Pacific Company as a whole and the analyses which are given relate to the operations of the system as a combined property. The value of the figures and the analyses thereof is further enhanced by a series of graphic charts, two of which are reproduced in the present article. But the real element of interest and of value is the form of the remarks of Julius Kruttschnitt, chairman of the executive committee. The report shows on its first page a table giving the net railway operating income for 1921 with comparative figures for 1920—in other words, the report gives a proper recognition to the new importance which this figure has been given by the Transportation Act. On the second page there is a brief summary of the transportation operations for the five years 1917 to 1921 showing the operating revenues, operating expenses, net revenue from railway operations and the traffic units in their actual figures and in a percentage relation to the 1917 figures as 100.

The third page of the report contains details of monthly wages for 1921, 1920 and 1916 for several representative classes of employees. The fourth page continues the idea by giving a table showing in some detail the material used in repairs and renewals in way and structures for the years 1918 to 1921. This is followed by a similar table showing for maintenance of equipment: all freight cars on line; cars in shop or awaiting repairs, and per cent of cars in shop or awaiting repairs for specific dates, namely: December 31, 1917; March 1, 1920; September 1, 1921; December 31,

1921, and for May 1, 1922. Similarly, the report contains brief statements relative to business conditions generally and in Southern Pacific territory, to wage and rate matters, Panama Canal competition, maintenance during federal control, and as above noted, taxes and the Central Pacific case. Of course, the corporate income account is given in the usual form with a detailed analysis of the changes which appear therein in comparison with 1920. All the factors described herein may be noticed in the excerpts from the annual report which appeared in last week's issue of the *Railway Age*. They are pointed out here because they seem to be in line with what the *Railway Age* has said editorially about this important subject of railway annual reports (*Railway Age* of April 15, 1922, page 901.)

Net, After Rentals in 1921, \$35,946,791

The report of the Southern Pacific System shows for 1921 a net railway operating income of \$35,946,791 as compared with a net in 1920 of \$21,312,344. The 1921 figure as thus given, however, includes estimates of unaudited items such as loss and damage claims and reparation claims appertaining to operations during the guaranty period which were included in the 1920 accounts on the basis of the ruling of the Interstate Commerce Commission last December. The report states that if these guaranty period items were eliminated from the accounts the 1921 net railway operating income would have been \$39,827,756. This figure has more of a value by comparison with the years previous to 1920 rather than with that year alone. A comparison with the preceding years will show that while the road had a much increased net in 1921 over what it had in 1920, it has not yet succeeded in restoring its operations to its federal control standard of earnings or to the earnings of the test period ending June 30, 1917, on which the standard return was based. The system had a standard return slightly in excess of \$48,000,000. In 1918 it earned for the government a net of \$55,925,278, or \$7,757,935 in excess of its rental. In 1919 it earned for the government \$43,910,305, or \$4,334,355 in excess of its rental for that year. This will give something of an index as to the 1921 operations of the property.

Corporate Net 8.93 Per Cent on Stock

Insofar as concerns the corporate income account the figures show a net after fixed charges in 1921 of \$29,515,218

which figures out to 8.93 per cent on the outstanding capital stock. In 1920 the net after fixed charges was \$31,016,329, or 10.57 per cent on the capital stock. There was, however, an increase in the capital stock itself, this having been increased during the year in the amount of \$17,939,500, representing stock issued in exchange for 5 per cent 20-year convertible bonds. The dividends in both years totaled 5 per cent, the total for 1921 in dollars being \$20,639,196. With further reference to this matter of the increase in capital stock it might be mentioned that the reports show that there has been a total increase in the amount of capital stock outstanding since December 31, 1916, of \$71,537,600, or 26.21 per cent, whereas in the same period there was a decrease of \$99,033,312, or 17.67 per cent in funded debt. The increase in capital stock was the result of its being issued against the surrender and cancellation of 4 and 5 per cent convertible bonds and this explains in part the reduction in the amount of funded debt. The remainder represented bonds retired through the redemption out of the general funds of the system and by sinking funds, etc. This matter is of more than ordinary interest at this time and in this case is marked because on December 31, 1916, the ratio of capital stock to total capital was 32.75, whereas on December 31, 1921, it was 42.75. On the latter date the stock outstanding totaled \$344,443,106, the funded debt, \$461,865,051 and the total, \$805,808,157.

Transportation Operations

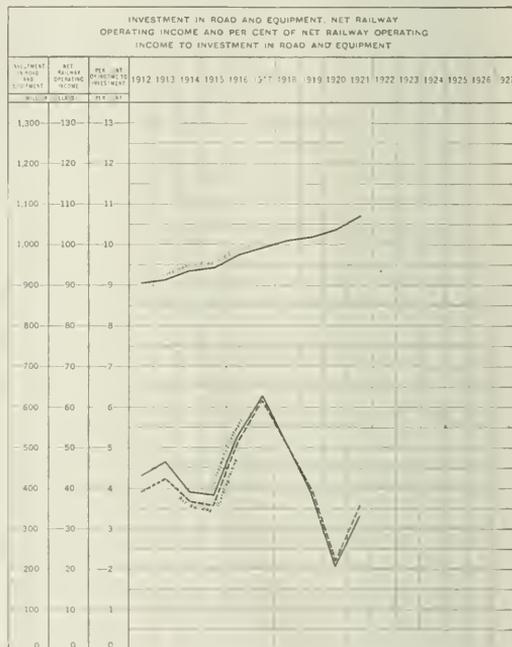

The actual transportation operations of the system show for 1921 a 1.09 per cent reduction in freight revenues as compared with 1920, a 11.52 per cent reduction in passenger revenues, and a 4.53 per cent decrease in total railway operating revenues. The operating expenses for the year decreased 12.2 per cent. This reduction in operating revenues and the comparatively greater reduction in operating expenses is fairly typical of what was done on almost every railroad in the United States in 1921. The distinguishing feature insofar as the Southern Pacific is concerned is the fact that the reductions were not as great as those made by most other carriers. In the report the officers of the road explain that the reduction in operating revenues was due to the nation-wide business depreciation, "aggravated on your company's lines by diversion of transcontinental business, by much lower rates offered by the Panama Canal route, and by the competition on the highways of motor trucks substantially free from taxation and regulation." The report further points out that the freight revenue was adversely affected by the smallest cotton crop in Texas and Louisiana that has been produced in 20 years; by a large reduction in the acreage of rice planted in the same states; and by reductions of rates on such important commodities as beans, canned goods, dried fruit, live stock, lumber, apples, cantaloupes and vegetables. The report gives some rather pertinent information concerning Panama Canal competition, one of the most cogent facts being that in 1921 the number of steamship voyages through the Panama Canal between Atlantic and Pacific ports of the United States increased 80 per cent and the volume of freight increased 83 per cent over the preceding year.

Reduction of 15.87 Per Cent in Tonnage

The figures in the report show that the actual tonnage of revenue freight carried in 1920 totaled 38,206,878 as compared with 45,416,021 in 1920, a reduction of 15.87 per cent. The reductions were fairly general in all classes of traffic except that there was an increase amounting to 3.72 per cent in products of agriculture due to the increased traffic of grain and citrus fruits. The Southern Pacific tonnage is very diversified and the percentages for 1921 were as follows: Products of agriculture, 21.41; of animals, 2.41; of mines, 29.71; forests, 20.16; and manufactures and

miscellaneous including l. c. l., 26.31. The road's coal traffic in 1921 made up only 2.33 per cent of its total tonnage. Crude petroleum, however, made up 5.05 per cent and refined petroleum and its products, 4.90. The tonnage of both of these represented reductions from 1920 of slightly over 20 per cent. The Southern Pacific gets a long haul on its traffic, the average distance in 1921 being 264 miles. This was less than in 1920, because in that year the figure was 285.

The actual freight revenues in 1921 were \$171,788,880 as compared with \$176,714,390 in 1920. The passenger revenues in 1921 were \$63,442,251, a decrease as compared with 1920, as has above been noted, of 11.52 per cent. It is explained in the report that "the amount of passenger business was diminished by a dearth of large conventions such as were held on the Pacific Coast in 1920 and by a substantial increase in travel by automobiles." "Much money is being appropriated," the report says, "by the feder-

Investment in Road and Equipment, Net Railway Operating Income, and the Per Cent of Income to Investment, 1912 to 1921

al and state government for the construction of highways that usually parallel the very railroads which are heavily taxed to provide and maintain them."

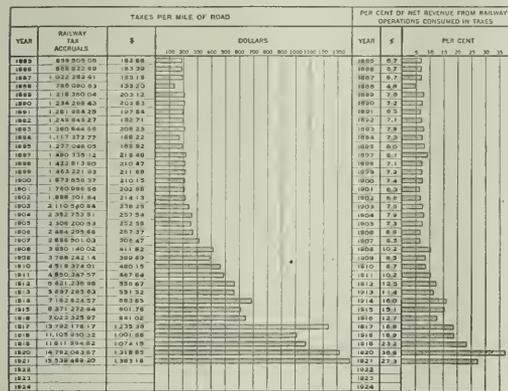

The report contains some very interesting figures, giving comparisons by years. Taking 1917 as a base of 100, the report points out that the operating revenues in 1921 figured out at 139 per cent, the expenses at 176, and the net revenue from railway operations at 78. It also shows that the traffic units (compiled on a basis of ton miles plus three times the passenger miles) would show for 1921, 84 and for 1920, 105.

The total operating expenses for the year were \$212,572,263. This compared with a total of \$242,113,790 in 1920 and the reduction figures out at \$29,541,527, or, as above noted, 12.2 per cent. The report explains that the system had to contend with slightly higher average wages in 1921

than in 1920, the various increases of 1920 and the decreases of 1921 averaging out to that result. It also says that prices of fuel and other material in 1921 averaged more than in 1920. The combined effect of higher wages and higher material costs increased the 1921 operating expenses by \$5,292,000 which, of course, was compensated for by the decreases due to less traffic and, as the report says, "This net result reflects the improvement forecast in last year's report as progress is made in substituting the incentive of self-interest of private management, and the increased efficiency and more cheerful service of the entire operating staff, for the apathy and blight of government management." Before speaking further of this matter of operating expenses it is advisable to point out that in 1921 the system operated at a ratio of 78.88. This compared with 85.77 in 1920, but in 1919 the figure was 78.61, in 1918, 73.43, and in 1917, 62.18.

Maintenance Details

The reduction in operating expenses in 1921 included decreases of 12.93 per cent in maintenance of way, 12.93 per cent in maintenance of equipment, or an average of 15.39 per cent in total maintenance. The reduction of transpor-

Southern Pacific Taxes 1885 to 1921, One of the Charts Shown in the Company's Annual Report

tation expenses was 10.65. With reference to maintenance of way the report gives some unusually adequate figures. It shows that in 1921 there was an actual decrease of material used for maintenance purposes, but apparently not of sufficient amount but that the properties were satisfactorily maintained during the year. Actually there were laid in 1921 427 miles of new steel rail as compared with 528 miles in 1920. In the case of ties 4,721,542 were put in track as against 4,887,913. With reference to equipment the report shows a rather satisfactory condition. It gives these figures of the per cent of freight cars in shops or awaiting repairs: On December 31, 1917, 3.55 per cent; on March 1, 1920, 4.32 per cent; on September 1, 1921, 9.13 per cent, and on May 1, 1922, 8.10 per cent. In addition figures are given explaining the difficulties which were met during 1920; at the end of federal control, 87.75 per cent of the company's box cars were on other railways with the result that "the deplorable condition of this equipment, owing to the neglect of current repairs when away from home during federal control, was not realized until we regained possession of our cars in the fall of 1921."

Taxes

With reference to taxes the report reads as follows:

The increase in taxes for 1921 over 1920 is \$747,406. This increase is the result of an increase of \$1,893,052 in state and county taxes, due, principally, to an increase in the rate of taxation on gross earnings in California from 5 1/2 per cent to 7 per cent under the King Tax Law which became effective July 1, 1921; to an increase of \$170,607 in capital stock tax, and to a decrease of \$1,316,253 in federal income and excess profit taxes, due, principally, to an assessment in 1920 of excess profits tax for the year 1917. As this report goes to press the large increase in taxes of \$747,406, or 5.05 per cent, over 1920, seems trivial in comparison with the taxes for the first four months of 1922, which amount to \$6,393,726, an increase of 38.26 per cent over 1921. At this rate taxes for the year 1922 will aggregate \$19,181,179, or 93 per cent of the dividends distributed to stockholders for 1921. Taxes amounted to \$8.60 for every hundred dollars of freight revenue during the year 1921, and to \$12.42 for every hundred dollars of freight revenue during the first four months of 1922.

The total railway tax accruals for the year consumed \$15,539,469, or 27.3 per cent of the \$56,922,031 of net revenue from railway operations. With an increase of 138.76 per cent in the miles of road operated over the miles operated in 1885, the first year of operation, taxes have increased \$14,679,964, or 1,707.96 per cent.

Presumably one of the most important features in connection with the Southern Pacific at the present time is the matter of the recent decision of the Supreme Court, calling upon the Southern Pacific to rid itself of its control over the Central Pacific. For the moment, however, this seems to be of somewhat academic interest only because the whole question is involved in the matter of consolidations. Professor Ripley, in his plan, put the Central Pacific with the Union Pacific, but the Interstate Commerce Commission amended the professor's idea and left the Central Pacific with the Southern Pacific. The whole thing seems to be something of conflict between ideas about railroading that were extant in the nineties with those which have received acceptance today. It is too early as yet to figure out what the final decision may happen to be, but there does not seem to be any particular reason for worrying about what will happen to the Southern Pacific if it loses the Central Pacific until something more concrete has been developed with reference to the situation. In this connection reference is made to an item which appears on another page of the present issue quoting some remarks of President Sproule on the matter.

**Accident Investigations—
January, February and March**

THE ELEVENTH quarterly issue of the Summary of Train Accident Investigations, prepared by the Bureau of Safety of the Interstate Commerce Commission, which is for the months of January, February and March, 1922, was issued on May 31. This report covers four collisions and two derailments, as follows:

- Collision—Mo., Kan. & Tex. Warner Junction, Tex. Jan. 13
- Collision—Baltimore & Ohio. Noble, Ill. Jan. 31
- Collision—Great Northern. Montrose, Minn. Feb. 22
- Collision—Northern Pacific. Welch, Mont. Mar. 17
- Derailement—Kansas City Southern. Fuller, Kans. Mar. 27
- Derailement—Atlanta, B. & Atlantic. Woodbury, Ga. Mar. 28

Following are abstracts of these reports:

The trains in collision on the Missouri, Kansas & Texas near Warner Junction, Tex., on January 13, were south-bound passenger No. 5 and a work train which was at a standstill. One employee was killed and 11 passengers and three employees injured. The collision occurred a short distance south of the Red river, and 2,000 ft. north of Warner Junction. From signal No. 20, about two miles north of Warner Junction, all trains are run by signal indications regardless of time-table rights, there being two junctions in the territory, one north of the Red river and one south of the river. Signal No. 20, an interlocking signal at North Frisco Junction, was clear and the engineman of No. 5 appears to have assumed that this assured him of a clear indication at signal No. 6561, about a mile south of there; and he ran at high speed until he collided with the work train. The engine and cars of the work train were pushed back so far that the inspector was convinced of excessive speed, notwithstanding the claims of the enginemen and testimony to the contrary. The engineman had no reason for assuming that signal No. 20 gave any indication concerning

signal 6561 except that it had been customary for the signalman at North Frisco Junction to hold signal 20 against a train when he knew that 6561 was in the stop position; this to avoid delays on the bridge and at the junctions. Moreover, No. 5 had a train order from the dispatcher requiring speed to be reduced to 15 miles an hour over the Red river bridge, and to Warner Junction, because of the pressure of the work train. A flagman had been sent out by the work train, but he had not gone far; he is censured for not properly protecting his train, having had 22 minutes in which to do so. If he had gone further, to the end of a curve, he no doubt would have been able to attract the attention of the engineman of No. 5 in season to enable him to stop. After sighting signal 6561, the engineman made an emergency application of the brakes; but it is probable that this was nullified by a prior service application which had been made. The train dispatcher said that he would have ordered the passenger train held at North Frisco Junction, as was the usual practice, had not the signalman at that point told him that the track was clear. The signalman, however, said that he told the dispatcher (in response to inquiries) that the work train was still on the main track; and the signalman's version is confirmed by three men who heard his conversation with the dispatcher; one, a signalman (off duty) in the cabin, one the operator at another station and the third a brakeman of the work train who was at Warner Junction, listening at the telephone.

The trains in collision on the Baltimore & Ohio at Noble, Ill., on January 31, were westbound freight extra No. 2500 and eastbound passenger No. 62. They met at about 10 p. m. on the main track near the middle of the long passing siding, and the engineman and fireman of the passenger train were killed. Nine other persons were injured. Engineman Smalley, of the passenger train, had a meeting order which required him to enter the side track at Noble, but he continued on the main track at about 40 miles an hour and met the freight, making a bad wreck. Smalley had received the order at Flora, 14 miles west of Noble, and had commented on the fact that he would have to take the siding for the freight; and he also had been warned by the air-whistle, sounded by the conductor, on approaching Noble. The switch light and the light of the approaching freight train were also plainly visible; the night was clear and there was a good view for a mile. Two trainmen said that Smalley was in the habit of approaching stations at high speed; but the conductor said that during the 20 days that he had been on that run, "he had been doing very well in learning the landmarks."

The collision on the Great Northern near Montrose, Minn., on February 23, was between eastbound passenger No. 28, first section, and a westbound extra, pushing a snow plow. Five employees were killed and four passengers and five employees injured. The engineman of the extra was killed. At Delano, about seven miles east of Montrose, the snow plow had been engaged for some time in clearing the side track and remarks made by the conductor and the engineman show that both of them noted the fact that train No. 28, which was about six hours late, was still due; and they had no orders against it. At about 4.40 p. m. they received an order making a meeting point with the second section of No. 28, but giving no right against the first section. But after receiving a number of orders, the conductor forgot about No. 28 and gave the order for his train to proceed. After going into the caboose and showing his orders to two brakemen and after the orders were read by them and inquiries made, the conductor realized that he had overlooked No. 28, and he immediately applied the brakes. He brought the train to a stop, but not soon enough to prevent the collision. How the engineman came to forget No. 28 can only be conjectured. Both men were experienced.

The collision on the Northern Pacific at Welch, Mont.,

on March 17, occurred during a snowstorm, about 7.51 a. m., and it was between the switches at the station where the trains had been ordered to meet and pass. Westbound passenger No. 1, having right to the road, was run into by eastbound passenger No. 220, at about 15 miles an hour. The fireman of train No. 220 was killed and one trespasser also was killed; 40 passengers and six employees were injured. Train No. 220 had the order to meet No. 1 at Welch and to take the siding. Later, when ten miles short of Welch, another order, order No. 210, form 19, was received, making a meet with train 651 at Spire Rock, about five miles east of Welch. The fireman, who also was a qualified engineman, received these other orders by hoop and read them; and, answering an inquiry from the engineman, said that their meeting with No. 1 had been changed to Spire Rock. The fireman immediately handed this and the other orders to engineman Nielsen; but Nielsen did not read them; he accepted the erroneous information given him by the fireman, folded the orders and placed them in his pocket, with the intention of reading them later. He had received notice to be on the lookout, on this part of the road, for fallen rocks; and, having his mind on this, he neglected to read the orders.

On this part of the road the grade is steep, descending, and Nielsen's applications of the brakes deceived the conductor so that he thought the engineman was intending to enter the side track. Nielsen thought that the whistle communication from the conductor—three blasts—meant stop at Welch station, the impression being still on his mind that the meeting point with No. 1 had been changed. Because of sharp curves, with rocks at the side of the line, together with the falling snow, neither engineman had more than a very brief view of the opposing train before the collision occurred.

The conclusion of the inspector is that Nielsen is "primarily" responsible; there being no excuse for not reading the orders. No statement could be obtained from the fireman prior to his death.

The train derailed on the Kansas City Southern near Fuller, Kans., on March 27, was northbound freight No. 56, consisting of locomotive 557, with 51 cars and a caboose. Moving at about 25 miles an hour, the train ran over a misplaced switch and entered a coal mine spur; and the locomotive was overturned and the engineman and one brakeman were killed. The time was about 10 p. m. The inspector finds that the switch had been opened, apparently, with malicious intent; but the engineman had disregarded the rules; for, both on account of the switch being within yard limits and the light having been extinguished, the speed should have been kept under control. A work train had run through the switch southbound, without noticing that it was mis-set.

The work train had passed about 9.30; and all of the members of its crew admitted that they had not noticed the position of the switch target, or whether or not the lamp was burning.

The derailment on the Atlanta, Birmingham & Atlantic near Woodbury, Ga., on March 28, resulted in the death of two employees and the injury of one. The train was eastbound fast freight No. 92 and the derailment occurred at 11.28 p. m. A rail had been loosened; and, after a careful examination of the locomotive, the cars and the track, the inspector reports the cause as malicious tampering with the track.

J. H. WINFREY, yard switchman on the Southern Railway at Hayne, S. C., detected a bent axle recently under an empty refrigerator car in a freight train, and in connection with the report of the incident Superintendent William Maxwell remarks that Switchman Winfrey probably holds the record for having discovered more bent axles than any man connected with the Southern Railway; nineteen since September, 1915.

Opening Session of the Accounting Officers Meeting

Railway Accounting Officers Meet at Cleveland

Simplification and Economy in Accounting Procedure Theme of
Interesting Convention

“THE POINT I wish to emphasize is that it is not the higher accounting end on which we need to lay stress, but we should look to our primary accounting, the detail work, and bend our efforts towards having it performed in a simple, direct and positive manner.” If the thirty-fourth annual meeting of the Railway Accounting Officers Association, held at Cleveland, Ohio, June 6 to 9, could be said to have a theme, it was the emphasis placed upon the desirability of bringing about simplification and increased economy in railway accounting procedure as is brought out in the foregoing excerpt from the address of J. J. Ekin, comptroller of the Baltimore & Ohio and president of the association. The meeting took action on approximately 300 subjects, which amount of work it succeeded in accomplishing in a three-day convention characterized by its continuing interest. In line with the theme which has been mentioned above, the meeting gave a great deal of attention to such matters as simplified divisions, the standardization of station accounts and forms, etc. Two subjects of leading importance were: (a) a proposed change in the present classification of railway operating expenses, and (b) the matter of statistics, particularly as relates to the requirements of the Interstate Commerce Commission concerning statistical reports.

The Railway Accounting Officers Association conducts its annual meetings in a manner somewhat different from that with which most other railway conventions are conducted. It is the practice of the association to have a small

number of important committees. These meet at different times during the year and their findings are presented in the form of a book, having the title of Agenda, copies of which are sent to all the members of the association prior to the meeting. Further, on the day preceding the actual opening of the convention, these committees hold meetings open to all members of the association who desire to attend them and if any of the decisions as reported in the Agenda are changed or modified, the result is given to the convention in the form of mimeographed supplementary Agenda. This explanation is given to explain how it is that the convention can cover such a large amount of ground and still carry on an interesting meeting. The result is that there is no subject needing discussion that does not receive adequate and satisfactory attention while, on the other hand, time is not taken up with unnecessary discussion of subjects concerning which the committee report in the Agenda is approved without further argument.

The address of J. J. Ekin was characterized by the manner in which it pointed out the problems concerning the railway accounting field and suggested remedies for their solution. The meeting was also addressed by Samuel O. Dunn, editor of the *Railway Age*, by S. Ennes, vice-president and general manager of the Wheeling & Lake Erie, by W. A. Colston, formerly director of the I. C. C. Bureau of Finance and now vice-president of the Nickel Plate and also by representatives of government departments. These addresses will be published in a later issue of the *Railway Age*.

President's Address

THE SHARP DECLINE in railroad traffic which commenced in the closing months of 1920, continued throughout 1921, and only recently has there been indications of a revival. This, and the fact that the accounting department had to carry on the work of stating the federal, guaranty period and corporate accounts, as well as the new statistics required in enforcing the act and furnishing the data for the special investigations and rate hearings, has made the life of the accounting officers anything but easy and pleasant.

The large increase in clerical forces and the expense thereof has been the subject of a great deal of discussion

and criticism, and there has been apparently a tendency to attribute it all to accounting and statistical requirements, which is misleading for the reason that a large proportion of the forces now classified as clerical in the reports to the Interstate Commerce Commission are not engaged in accounting and statistical work. This applies to forces in the general offices as well as on the line of road.

The great war and federal control of railroads brought about many changes in accounting methods and practices. In 1917 the railroads had one set of accounts and books. Most of them now have three: federal control, guaranty pe-

riod and corporate, and this condition adds vastly to the expense of accounting by requiring separations between different interests, for both receipts and disbursements.

Hearings Required Special Statistical Data

Since March 1, 1920, there have been almost constant rate hearings, both state and interstate; there have been numerous investigations, for example, hearings before the Committee on Interstate Commerce, United States Senate, and the Agricultural Inquiry; there have been continual wage hearings and the negotiations with employees; all of which have required the preparation of a large amount of detail data at a great expense on the part of the accounting and statistical forces.

Among the causes contributing to the cost of accounting today are changes in rates, complicated divisions, adjustments in wages of employees, and settlement of accounts with the government covering federal control and guaranty periods. The stabilization of transportation rates and employees' wages, the use of simple divisions for apportioning revenues, and the settlement of federal and guaranty accounts will result in a marked reduction in the cost of accounting.

There is no mystery in railroad accounting. It is simply auditing into the treasury the receipts from the sale of transportation through the medium of tickets and freight bills and auditing out of the treasury, through the medium of time cards, material orders and service bills, the cost of producing this transportation as represented by labor, fuel and material and supplies.

The trouble and complications we have are largely of our own origin; to illustrate, expensive methods of timekeeping and distribution, antiquated methods for handling material accounts, and a too refined and extended classification for stating these simple elements of cost.

Again on the income or revenue side we lack definite classification of commodities. We do not have clear and concise tariffs. We do not have, in many instances, simple and agreed upon divisions for apportioning revenues, as a result of which many of the carriers have long standing items of adjustment in their interline accounts, and claim channels are choked with overcharge and other claims.

Should Be Performed in a Simple,

Direct and Positive Manner

The point I wish to emphasize is that it is not the higher accounting on which we need to lay stress, but we should look to our primary accounting, the detail work, and bend our efforts towards having it performed in a simple, direct and positive manner. It is the duty of this association to see that this is done. It must be done in order that we, as accounting officers, in charge of one of the single largest groups of railroad employees, may do our part in having the railroads operated in an efficient and economical manner. There is a crying need today in many instances for proper instruction of the forces now engaged in the detail work.

We must not forget that accounting regulations and requirements enter into the minutest details of railroad operation; into the timekeeper's work, the material clerk's work, the agent's work—both ticket and freight. There must be the closest co-operation between the traffic, operating and accounting officers, if the desired results in operating these vast properties are to be obtained.

This is the great work of the accounting officer, his great opportunity, the embracing of which has rendered his position so important and added so much to his prestige—the simple telling of the truth, not in a critical but in a helpful manner.

The first thing we must realize is that there has been a radical change in social and economic conditions in this country and throughout the world. This has had a tremen-

dous influence on railroad operation and costs. There has been an increase in the volume of traffic as measured by passengers one mile and tons one mile, but the real increase is in the expense measured by the expenditures to meet the demand for more ease and comfort, better dining car and other features in passenger service, the highly specialized service in handling perishable freight, and the great increase per capita in small shipments of merchandise, all of which has added so much to the station, operating and accounting costs of the railroads.

The increased demand for transportation in a refined instead of what may be termed a raw state, has been one of the principal factors in producing the increase in overhead expense, made up largely in wages paid clerical forces. It should be remembered it requires the same outlay, probably more, to bill, collect and account for a shipment of 50 lb. of merchandise, as it does to bill, collect and account for 50 tons of coal handled as a carload.

It is for this reason that I urge we get back to first principles, start at the beginning in this transportation game and see how we can best account for these millions of transactions which produce our revenues, and the equally numerous transactions which constitute our expenses.

The real problem, from an accounting standpoint, is not one of handling the income account, the profit and loss account, and the balance sheet, but a simple, uniform, direct and efficient method of verifying and stating the millions of items that compose the receipts from, and the cost of, transportation.

Some Suggested Aids to Uniformity and Economy

As an aid to uniformity and in producing economy I would suggest:

1. A plan of arbitration be put into effect for settling disputes relating to divisions of joint rates similar to that now in effect for settling disputes between carriers relating to apportionment of loss and damage and overcharge claims.
2. The carriers should develop and put into effect standard methods for accounting for passenger and freight receipts, both local and interline. This should embrace practice in making and handling way bills, station forms and methods, reporting by agents, and settlements as between carriers.
3. Carriers should develop and put into effect standard methods of timekeeping, material accounting and stating of disbursements.
4. The Interstate Commerce Commission, working jointly with this association, should revise the classifications. The work is already under way with respect to operating expenses, and it is highly important that this classification be completed and put into effect January 1, 1923. I consider this the foundation of all of our constructive work.

The revision of the disbursement classification should be approached in the light of present conditions prevailing under the Transportation Act. The accounts should afford a prompt and accurate method of controlling expenses represented by disbursements for labor, fuel and material, and the classification should directly reflect those elements.

The nearer we can have the disbursement accounts show the current expenditures for labor payrolls, fuel, and material and supplies, the more useful the accounts will become as a check and record of these items of cost, and I strongly urge that the revised classification should show separately, with as few accounts as possible, the direct items of expense for labor, fuel, material and miscellaneous, the aggregate of which constitutes the cost of maintaining and operating the railroad properties. This fact was very forcibly impressed on me through the requirements of the Interstate Commerce Commission in the recent rate hearings, the Senate investi-

gation, and in the preparation of data for submission to the Labor Board.

There should be a decided reduction, instead of an expansion, in the number of accounts. It is not a refinement and further extension of the classification that is desired. The accounts, as few in number as possible, should be constructed so that a distribution can be made from the details of timekeeping, material disbursements, etc., with the least amount of additional expense. The thought is that with the proper timekeeping records and material and fuel disbursements a direct classification can be made in relatively few accounts, showing separately, the expenditures for labor, fuel, material and miscellaneous, under the general headings of

Management
Maintenance, and
Operation.

The revised classification for disbursements should apply to each and every common carrier railroad without respect to its class or size.

5. The Interstate Commerce Commission and all other federal and state commissions should revise their reports and statistical requirements so as to conform with the summaries regularly prepared from detail records, in conformity with the revised classification, and should be confined to the annual report, monthly income account and the standard statistical units of comparison developed for each road. The annual reports to the commission, to the states, and to the stockholders, should be harmonized so that one form will answer the requirements of all.

The situation with respect to statistics has reached that point where it seems to me desirable that this Association of Accounting Officers co-operating with representatives of the Interstate Commerce Commission, formulate a system of

Report of Committee on General Accounts

THIS COMMITTEE, headed by A. J. County, vice-president of the Pennsylvania System, reported that during the year it had held three meetings not including the one held on the day preceding the convention. The total number of subjects upon which it reported action was 21. These included a number of special importance, notably: A proposed change in the requirements of the Interstate Commerce Commission as to the compilation of freight commodity statistics; a proposed modification of the monthly report of revenues and expenses; the matter of reports furnished the Interstate Commerce Commission and the state commissions, etc. It also discussed a proposed revision of the Interstate Commerce Commission's accounting classifications, notably with reference to the classification of operating expenses. This subject was also covered by the committee on disbursements accounts and the suggestions of the latter are given in detail in a separate article on another page of this issue.

An analysis of the action taken on some of the matters of leading interest before the committee follows:

Settlement of Inter-Road Bills and Accounts

Where desirable or practicable, the committee recommended that individual agreements or arrangements should be made with specific carriers to facilitate or simplify inter-road settlements. The committee suggested a plan for consideration by those carriers that desire to enter into such an arrangement with other roads. In conclusion it said that, "In view of this action being purely recommendatory, there can be no objection to any road agreeing with another road that one net settlement be made monthly of all bills of every character that the company may find expedient.

statistics that may be generally used by the individual carriers—the summaries to be furnished the commission for its information and as a guide in determining whether the properties are being operated efficiently and economically.

The statistics required by the Interstate Commerce Commission and the state and federal bodies should be on a basis of maximum of essential operating data, with a minimum of detail.

The object of statistics is to establish facts. Let us not waste our energies to the preparation of a lot of useless, meaningless statistics, compiled at great expense, which cannot be utilized in producing results that will add one penny to the net revenue or be the means of improving the service. I have conferred with Commissioner Potter and know how much in earnest he is in regard to this subject.

A working basis has been established with the Interstate Commerce Commission for the purpose of solving this problem. It remains for the railroads to get together and adopt the best methods in handling the details of accounting, discontinuing anything of questionable value now prepared, and eliminating the numerous disputes and sources of expense, caused by lack of proper through rates and properly constructed divisions for apportioning revenue.

Let us finish as quickly as possible the work of settling the accounts for federal control and guaranty period operation, and then declare perpetual holiday in the production of useless statistics and reports.

I have the greatest respect for what has been accomplished by this association in the past, and I am thoroughly in accord with the thought so ably expressed, that we should hasten slowly in making changes. But I firmly believe we now have in our grasp the greatest opportunity ever offered to do constructive work in revising our detail practices at home and in working out with representatives of the Interstate Commerce Commission a revision of the existing classifications and statistical requirements.

Value of a Unit of Equipment as Rebuilt

Approval was reported of an interpretation given in a letter dated July 5, 1921, from Alexander Wylie, director of the I. C. C. Bureau of Accounts for the secretary of the association. The letter said in part:

The instructions at the top of page 33 of the Classification of Investment in Road and Equipment, relating to the rebuilding of equipment, have been the subject of considerable correspondence between carriers and this Bureau, especially with respect to the determination of when work in connection with the rehabilitation of equipment shall be considered in the nature of repairs and be charged to operating expenses, or in the nature of rebuilding requiring the retirement of the old unit and the reinstatement of the new.

The rule referred to is an adaptation from somewhat similar instructions appearing in the Classification of Expenditures for Additions and Betterments first revised issue, effective on July 1, 1910. The second paragraph on page 39 of that classification reads in part as follows:

"When any equipment is in such physical condition that it must be practically rebuilt in order to fit it for service, or when any equipment requires repairs which, if made, would constitute the major portion of its value, it should, when taken out of service, be considered as retired and be written out of the accounts."

The purpose of the classification will be served and the accounting for equipment repairs perpetuated on a correct basis if the word "value" as it appears in the second line of the instructions referred to be interpreted as pertaining to the current or so-called market value of a unit for the reason that this interpretation would continue the objective of having the measure of repairs determine whether the unit shall be retired, rather than to have the money value of the repairs determine that question. It should be understood that this process of determining whether a unit should be retired has no bearing on the value at which the unit shall be written out of the investment account, the retirement value being the lesser value or cost, estimated if not known. The procedure outlined will not conflict with the later provisions of the instructions which require that the appraised cost of the new unit shall be included in the investment account. In other words, for the purpose of determining whether the unit shall be written out of the accounts, the current or market value of the unit shall be considered, but in determining the figure at which the reconstructed unit shall be entered in the property accounts the fundamental principle of the classification shall be adhered to, that entries shall be on basis of actual cost.

Compilation of Freight Commodity Statistics for 1922

Discussion of this subject has been going on since last July and originated in a letter dated July 13, 1921, from Dr. M. O. Lorenz, director of the I. C. C. Bureau of Statis-

ties, in which he offered for consideration by the association a proposal for a special compilation of freight commodity statistics for the year 1922. Mr. Lorenz's letter said in part:

The Interstate Commerce Commission is now publishing quarterly a statement of the number of carloads and the number of tons for each of 73 classes of commodities. Nothing is known about the revenue derived from each of these classes.

The problem of how far it is advisable to go in the periodical freight commodity statistics is an old one. The carriers themselves differ widely in their own statistical practice. The Commission has frequently been asked why it does not require carriers to make reports that will reflect the monthly movement of the principal commodities and why it does not show the average earnings from the various classes of commodities. The answer has been that the expense of compilation is very large.

It must be recognized that the Transportation Act imposes new duties on the Commission in observing the adequacy of railroad revenues. In any comprehensive survey of freight rate adjustments that would seem undeniable that it is illuminating and helpful to know the amount of freight revenue from various sources.

The following proposal for additional statistics is made after much deliberation of what will be most useful to the Interstate Commerce Commission in its work and at the same time not prohibitive in cost to the carriers:

Outline of Proposed Additional Commodity Statistics

There should be reported for the separate months of January, April, July, and October, 1922, the number of carloads, tonnage, freight revenue and ton miles of each of the sixty-nine carload classes of commodities now in use, local and interline business being separated:

Commodity Class	Number of carloads		Number of tons		Ton miles	Respondent's freight revenue
	Originating on line	Received from connections	Originating on line	Received from connections		
	Local.	Interline.	Local.	Interline.	Local.	Interline.

Wheat
Etc. for each of 69 carload classes

This subject was also considered by the committee on freight accounts, which committee reported as follows:

Your committee has given consideration to the proposal submitted by the Director, Bureau of Statistics, Interstate Commerce Commission, for a special compilation of freight commodity statistics for the calendar year 1922, and is of the opinion that these statistics should not be required for the following reasons:

(1) Based on the best available information, your committee estimates that the cost of compiling these statistics, by Class I carriers, for four so-called representative months in any one year, will be at least one million dollars. Such an added expense would be incompatible with the policy of cutting down operating expenses and reducing forces, in connection with the retrenchment in the cost of industry.

(2) These statistics would be of little, if any, practical value to the carriers generally, and, in the judgment of your committee, any use that could be made of the statistics by the carriers generally would not justify their compilation.

(3) In the judgment of your committee, such statistics would be subject to misuse in a manner that would be detrimental to the railway industry and unfair to the public; also, the statistics would be susceptible of such inaccuracies and erroneous conclusions as to discredit the statistics.

The movement of freight traffic in the United States embraces a very large area and is diversified in its nature. The methods of waybilling necessarily vary, in that some traffic is waybilled from point of origin to destination, while other traffic is rewaybilled one or more times; still other traffic of large volume moving under transit arrangements of various kinds, by which the nature and the name of the commodity may change. Rates for certain parts of the haul are low, and others high. It is, therefore, believed that any revenue ton mile figures produced in totals, and without regard to geographical movement, would be very unreliable unless accompanied by voluminous explanations of such detail as to make the practical use of such statistics very doubtful.

The statistics could not equitably or practically be used in rate cases or rate studies, until and unless supplemented by such detail as to constitute virtually a special study for that particular purpose.

The compilation of the suggested statistics would necessitate increased clerical forces, added stationery costs, enlargement of office space, additional machinery, etc. Even in the case of those carriers that now compile, for their own purposes, information similar to that suggested, there would be usually an additional expense, generally of a material amount, in order to meet the suggested requirements.

By requiring the data for only four so-called representative months, the statistics could be obtained at the minimum estimated cost of one million dollars by spreading the period of compilation to that extent which would make the figures available far distant from the period that they cover; that would detract from any usefulness the compilation might possess. Even four months selected under any conditions would not always be representative and, in many cases, would certainly be misrepresentative.

Modification of Monthly Report of Revenues and Expenses

The following is letter of September 15, 1921, from Dr. M. O. Lorenz, Director, Bureau of Statistics, I. C. C.:

It is proposed to modify items 10 and 11 in the monthly report of revenues and expenses as follows, beginning with January, 1922:

- 10. Maintenance of Way and Structures:
 - Accounts 201-279
 - Account 280 —Equalization adjustment
 - Total Maintenance of Way
- 11. Maintenance of Equipment:
 - Accounts 308-313—Locomotives
 - Accounts 314-316—Freight train cars
 - Accounts 317-319—Passenger-train cars
 - Accounts 301-337—Excluding preceding
 - Account 338 —Equalization adjustment
 - Total Maintenance of Equipment*

* Includes \$.....for contract repairs.

I would ask that this matter be brought to the attention of the appropriate committee.

Your committee is of the opinion that if the information mentioned is to be required, it should be as a separate special report, and should not be included in the monthly report of revenues and expenses.

Minimum for Addition and Betterment Charges

This subject came up because of a conflict in the requirements of the Bureau of Accounts of the I. C. C. and the Bureau of Valuation. The former allows a \$100 minimum for additions and betterments but the latter does not, with the result that the economy which the rule of the former allows is not permitted in the case of the latter and with the result, also, that two sets of books must be kept. The secretary of the association was directed to communicate with the I. C. C. for an interpretation eliminating the conflict and to request the I. C. C. to relieve the carriers of the reports of items of less than \$100 to the Bureau of Valuation.

Reports for the I. C. C. and the State Commissions

This subject is one of the most important subjects which is now before the railway accounting officers. It was brought to the attention of the R. A. O. A. by the Association of Railway Executives and is being studied by the general accounts committee through a sub-committee headed by E. M. Thomas, comptroller of the Chesapeake & Ohio. One of the most interesting features of the discussion was a letter sent to Mark W. Potter, member of the Interstate Commerce Commission, by Slason Thompson, director of the Bureau of Railway News and Statistics. Mr. Thompson, in his letter, pointed out that from 1895 to 1920 there had been an increase of 441 per cent in the number of clerks, whereas

in the same period there was an increase of but 147 per cent in the number of passengers carried, 231 per cent in the number of tons of freight carried, 103 per cent in the net capitalization, etc., or that there had been an increase of 1148 per cent in this period in the compensation of railway clerks, as compared with an increase of 481 per cent in operating revenues and 720 per cent in operating expenses. He followed out this idea by showing that this increase in number and compensation of clerks was due to the increasing volume of statistical reports required primarily by regulating bodies, all of which he points out in great detail. The latter part of his letter is a suggestion for what he terms "reformed accounting" or a "new arrangement for statistical requirements." In these suggestions he gives in great detail a proposed classification of accounts of various kinds and the major element in his suggestions is primarily a reduction in the number of classifications.

The accounting officers have not yet arrived at any definite conclusions in connection with Mr. Thompson's letter or in connection with submissal of that letter to the association by Mr. Potter. The matter is still being considered by the sub-committee working in co-operation with the commission.

Forms Relating to Income Tax Returns

A sub-committee was appointed to confer with Internal Revenue Department on the subject of simplifying

the forms for income tax returns. The sub-committee reported that it was preparing a form for use by railroads for the year 1922 returns. It requested suggestions and said that it had already received a large number. With reference to the general matter of taxation, it added:

It is the view of your sub-committee that the great and continued increase in railroad taxation, both federal and state, should be kept before the attention of the railroad executives by the accounting officers. It is evident to your sub-committee that because of high taxation and the limited return that railroads have been permitted to earn for many years past, combined with the construction of new highways and the use of the motor truck, and to some extent the waterways, the carriers are continuing to operate many miles of railroads and facilities that are not self-sustaining, and unless there is some relief in the matter of taxation, as well as in other expenses, continued operation of such lines might not be justified. To your sub-committee it seems equitable that so long as railroad earnings and returns are limited by law and the railroads are required to divide profits, if earned, with the government, a corresponding limitation of taxation should be urged for the railroads.

Tax Accruals

The committee reported its opinion that taxes should be charged to Account 532 each month on basis of 1/12 of the estimated taxes for the year, except that in the case of railroads whose traffic is largely or wholly seasonal and who deem it necessary to account for taxes on some other basis, such cases should be permitted by the Interstate Commerce Commission rather than to impose a method not adapted to the earning or financial experience of such railroad companies.

Report of Committee on Freight Accounts

THIS committee, the chairman of which was W. B. Kraft, auditor of revenues of the Pennsylvania Railroad at Philadelphia, reported that the committee had met on four occasions for a total of 14 days, not including the meeting preceding the convention nor the meetings of the several sub-committees chosen to cover specific subjects. The committee's report in the Agenda for the annual meeting covered 103 subjects and required 126 pages. In supplementary agenda three more subjects were added, bringing the total to 106. The 1921 freight committee covered 77 subjects which was the record up to that time. In view of these facts any analysis of the committee's work must be severely abstracted. Among the important subjects considered were the following:

Revenue Accounting, Forwarded

Basis vs. Received Basis

The report discussed the general features of each plan and in its conclusion said that to reverse the plan in general use—that is, the received basis—would add to the expense of accounting. Therefore, the committee recommended the use of the so-called received basis for accounting of freight revenues as the standard plan of the Railway Accounting Officers Association.

Station Freight Accounting by Automatic Machines

This subject was carried over from 1921. The committee expressed the opinion that the plan of station accounting with the use of punched cards and tabulating machines is impracticable for general use. However, the plan is practicable where the volume of traffic warrants its installation, and the committee is of the opinion that no economy can be effected where the number of items handled at a station is less than 25,000 per month. A plan was proposed as to the method of doing the work.

Standardization of Station Accounts and Forms

The association at its 1921 annual meeting left this subject with the committee on freight accounts for further consideration and report. The committee recommended for adoption a suggested plan of station freight accounts. The

plan pointed out that station accounting represents an important fundamental of revenue freight accounting. "Obviously, all railroads must have station accounting. The variations on different roads are variations largely in detail. There are some broad, general principles of station accounting, both as to forms and methods, that are applicable to all conditions alike. The Railway Accounting Officers Association has endeavored to embody those principles in the forms and method hereinafter contained for the benefit of all who are now or may hereafter be concerned with station accounting." The plan also states: "The association recommends a daily system of station freight accounting; and in recognition of the trend to this system by all carriers, the forms constituting the R. A. O. A. plan of station freight accounts have been primarily predicated on the daily system. Sufficient elasticity, however, has been allowed in the forms to permit the advantageous use of them in connection with a monthly system of accounting."

Method of Adjusting Items on Loss and

Damage on Bills Against U. S. Government

The committee recommended for adoption by the association the following:

Resolved, That all claims presented by the United States government against a carrier, in connection with a bill rendered by that carrier against the United States Government, be sent by the government to the officer of the carrier in charge of the rendition of bills, instead of to freight claim agent in charge of overcharge or loss and damage claims. After the necessary notation has been made against the records of the office to whom sent the claim papers are to be forwarded to the appropriate freight claim agent or investigated and adjusted in accordance with the practices of the carrier against whom filed.

Shipper's Order Notify Bills of Lading

The committee expressed the opinion that paragraph 129 of the R. A. O. A. 1921 Synopsis should be changed to read:

129. Bills of lading should be signed only by an agent or bonded employee, the signature to be written in ink or indelible pencil. Carriers should exercise care in policing the endorsement on bills of lading.

Two-Figure Per Cents—Interline Waybills

The most important development in this very important matter during the year was a reference of this question to the attention of the association of railway executives. The

committee's report submitted as information the following letter dated March, 1922, from J. J. Ekin, president of the R. A. O. A.; to the chairman of the executives' association:

The universal use of joint through freight rates, and simplified divisions for apportioning freight revenue among the interested carriers, would save the carriers of the country more than five million dollars (\$5,000,000) annually in clerical expense. This saving is arrived at from figures furnished by the individual carrier.

Joint through rates and simplified divisions are indispensable in efficiently and economically adjusting interline or through waybillings if freight from point of origin to destination, which method materially improves the service rendered by railroads to the public, lessens the time required for transporting freight; is helpful in the operation of junction agencies, reduces the number of overcharge claims; and facilitates the investigation of loss and damage, as well as overcharge claims. These advantages are separate and apart from, and are in addition to, the economy heretofore mentioned.

The traffic department makes the rates and divisions, but it is an accounting function to apply those divisions in the settlements with other carriers. The divisions are stated in such a complicated manner, as to bring about unnecessary clerical expense in the accounting application of those divisions.

The accounting officers advocate divisions of that degree of simplicity which will afford adequate protection to the revenues of the interested carriers, and which will readily apply to the clerical labor necessary in making the voluminous and complicated calculations month after month, year after year. Regardless of how the division may be stated, and how many calculations may be necessary, it will be obvious that each carrier, after all, receives a certain percentage of the revenue involved.

The term "Simplified Divisions" means stating the divisions as straight percentages. To illustrate: The rate would represent 100 per cent of the revenue, and each carrier's proportion would be expressed as a percentage of the joint through rate.

The benefits to be derived from the use of simplified divisions have passed the experimental stage and are an established fact. Simplified divisions are, to some extent, in use, but the carriers are deprived of the full efficiency and economy to be obtained, until and unless simplified divisions are completely and universally put into effect.

This question, during recent months, has been given special study by a committee appointed for that purpose, and the subject is of such pressing importance and concern that we commend it to you for consideration as being worthy of submission to the Railway Executives.

The Railway Accounting Officers Association, and the accounting officers individually, stand ready to cooperate with the traffic officers and traffic association in every possible way in connection with this matter.

This letter is written by direction of, and is, therefore, an expression on behalf of this Association.

Various members of the association reported that considerable progress had been made in the matter of simplified divisions during recent months. One member said that the Southern Railway had adopted two-figure per cents on all system business and had shown large savings. A memorandum was read saying that the western executives had recently appointed a committee of six traffic officers headed by C. E. Spens, vice-president in charge of traffic of the Burlington, to consider the question and that accounting officers had been asked to co-operate.

Legible Interline Waybills

The committee submitted as information a copy of a circular sent to members of the association under date of October 4, 1921, in accordance with a recommendation of the committee.

Preventing of Overcharges and Undercharges

The committee submitted the following suggestions as means for preventing overcharges and undercharges, with the recommendation that they be embodied in the Synopsis:

1. Simplification of tariffs and division bases.
2. Some general plan of a structuring divisions under which it would be possible to place division bases in the hands of junction agents and others interested before the tariffs become effective.
3. Extension of joint through rates.
4. Extension of interline billing.
5. Proper instructions and advice to new or inexperienced agents billing and revising clerks, station and revolving bill collectors and at destination, by means of junior station employees, or by traffic or accounting representatives, to see that all information in work of this nature.
6. Establishing an audit office, revising clerks at important interline junctions, or a system of audit points advantageously located, thus insuring proper revision by competent rate men prior to delivery of freight and bill to the carriers at the latter stations of this duty as far as practicable.
7. Inspection of all tariff files and recheck of station revision by means of the inspectors or rate clerks, generally assigned to and qualified for work of this nature.
8. Having a complete audit of a number of waybills, particularly on less car loads, with a check of total car weights and reports to be made to the traffic department, if necessary, but preferably by the revising clerks, station or revolving bill collectors in work of this nature.
9. Extension of the revision work to some adequate system of advice to revising clerks, station or revolving bill collectors, if revision prior to delivery of freight to the carrier is not a part of their duties, and in such a manner as to be of benefit to the carrier.
10. Extension of the revision work to the Overcharge Office and Waybill Keying Division, both of which are stations of review under which the carrier's bill is checked for all errors before it is developed in the hands of the carrier.
11. A complete list of interline and inter-carrier errors accepted

and of overcharge claims paid, showing as to each the number and amount chargeable to faulty work at each station, separated as to causes, such as—

- Errors in rates,
 - " " classification,
 - " " description of freight,
 - " " weight,
 - " " routing,
 - " " extension, etc., etc.,

Shipments not rated through, such analysis to be tabulated in statement form, showing comparison by stations, for distribution to station agents and others. With the causes for overcharge set up in this manner, corrective measures can be concentrated on the principal causes.

Refunding Freight Overcharges Discovered by Verification of Waybills in Freight Auditor's Office

The committee found that carriers generally are refunding overcharges detected in the audit office, but there is lack of uniformity in the method of notifying parties to whom overcharge is to be refunded.

The committee recommended that all agents be required to carefully revise the waybills as to description of articles, weight, classification, rate and extension before taking into account, and that a careful revision be made of the waybills in the audit office.

Overcharges detected in the audit office should be covered by waybill correction, or by special form if used for that purpose, and re-checked before being forwarded to the agent who collected the transportation charges. If the agent is unable to effect refund on account of freight bill having been remitted to the shipper, or for other reasons, the agent should obtain full address of the shipper or party to whom the refund is due, and submit the information to the audit office without delay. Upon receipt of this advice the audit office should notify the party to whom refund is due to submit claim supported by the original paid freight bill or original paid bill of lading.

It should be impressed on all concerned that it is as important to refund overcharges as to collect undercharges.

Unit Passing Report

This subject was brought before the attention of the committee by a communication explaining the methods followed by the Central of Georgia with reference to passing reports. The committee expressed the opinion that, in addition to the present R. A. O. A. Standard Form No. 119, Junction Passing Report of Interline Waybills, a Unit Passing Report be also adopted. The use of either form is optional.

Junction point at which unit passing report is made should be left to the individual carrier for reason that facilities to obtain such information may be available at one point and not at another.

However, it would seem preferable to obtain the record at the going off junction for reason that, when tracing for settlement, next connection delivering record can be positively furnished.

Accounting requirements of the individual carriers would determine whether the unit passing report should be printed in one or more parts.

Division Sheet Reference to be Shown on Tariffs

The committee recommended that division sheet reference be shown on tariffs when published and requested the secretary to advise the traffic associations of this action.

Standard Form of Waybill Envelope

The committee met with the sub-committee on railroad business mail of the A. R. A. transportation division and agreed to recommend a standard form of envelope for mailing merchandise waybills. The envelope is to be 12½ in. by 9½ in. and to have a half-inch border on both sides in red ink in order that it can always be identified as an envelope containing waybills.

Miscellaneous Charges on Waybills

The committee reported that it had given thorough consideration to the necessity of properly describing in detail,

miscellaneous services in transit, so that the destination agent can fully describe this information on the freight bill to obviate complaints of consignees and refusal of payment for the charges and, therefore, it recommended changes in the present rules to cover the situation.

Empty Cars Short-Routed

Empty cars, when short-routed in accordance with car service rules, should be moved on empty car waybill, the road arranging for the service to pay the charges through bill and voucher plan.

The committee was also of the opinion that, under no circumstances, should revenue waybill be issued with charges.

Waybilling to Stop in Transit to Finish Loading, Etc.

This matter was brought up because it was felt that there was a lack of uniformity with reference to the manner in which various carriers waybill carload shipments that are stopped in transit to finish loading, partly unload, or in conformance to other privileges authorized by tariffs. The committee submitted the following conclusion:

On the R. A. O. A. standard waybill forms now used for car-load freight, a space is provided at the top, immediately above the car initials and number in which to enter for the benefit of conductors, instructions covering cars to be stopped in transit. Your committee feels that if instructions are shown in this space by the waybilling agent, the troubles due to carrying such shipments beyond the "stop" point will be practically eliminated. Furthermore waybilling to the "stop" point would involve possibility of agent neglecting to show the final destination and would make necessary a change of waybill heading for every stop.

Report of Committee on Passenger Accounts

THE COMMITTEE ON passenger accounts, the chairman of which was W. A. Meglery, auditor of passenger accounts of the Louisville & Nashville, reported that it had held three meetings for a total of eight days. It covered 51 subjects and its report on these subjects required 60 pages of the Agenda. Two of the important subjects which it discussed were related to the accounting procedure for surcharge on pullman fares and the standardization of station accounting forms and practices. It also reported on some further details in connection with the uniform and simplified basis for the division of the interline passenger fares. A brief analysis of the work of the committee follows:

Uniform and Simplified Basis for the

Division of Interline Passenger Fares

A plan covering this situation was presented to the 1920 meeting. The committee said that it had hoped to be able to include in its report some figures in the form of a comparison of the revenue that would accrue under the simplified basis and under the present basis. The matter is being studied further and the committee recommended that all carriers of the association whose interline ticket sales average \$25,000 per month or more, should be asked to make a comparison covering the month of February, 1922, including also a statement of the possible saving under the new plan.

Accounting Procedure for Surcharge on Pullman Fares

This matter caused considerable discussion on the floor of the convention. The matter was considered also in 1920 and had been left with the committee for further report. The committee recommended the following resolution and proposed also a detailed plan for securing better results in connection with the matter.

The committee recommended that shipments consigned to be stopped in transit to partly unload, to finish loading, etc., be waybilled in accordance with current waybilling instructions to the destination to which consigned (or to junction point if through billing unauthorized). Instructions to conductors showing where cars are to be stopped to be entered on waybill in space provided.

Simplification of Accounts

The importance of this subject is pointed out by the fact that 21 pages were devoted to it in the Agenda. The committee took up the consideration of the subject in conformance with a letter addressed to it by the president of the association last January. The committee resolved itself into three sub-committees and the work which it submitted in the form of plans, methods, recommendations and comments in the interest of the simplification of accounting, may be summarized in the following topical analysis:

1. STANDARD FORMS AND PLANS FOR STATION ACCOUNTS.
 - Zone Plan of Accounting.
 - Machine Station Accounting Plan.
 - General.
2. (a) USE OF BLANKET WAYBILLS.
 - (b) THE ACCOMPANYING OF WAYBILL WITH FREIGHT.
 - (c) MULTILATION OF WAYBILLS.
3. AUDITING THE DOLLAR OF LOCAL REVENUE INTO THE TREASURY.
 - Audit Office Settlement of Interline Waybills.
4. SETTLING INTERLINE ACCOUNTS.
 1. Separate Abstracts for Each Commodity.
 - (a) Settlement of L. C. L. Traffic on Gateway or Zone Per Cents.
 2. Minimum Amount for Which Correction Shall Be Issued by Agents of Audit Office.
 3. Rendering Interline Accounts Later than the 18th of the Following Month.
5. SIMPLIFIED DIVISIONS.
6. LIMITATION OF THROUGH WAYBILLING.
7. BEST METHOD OF EXISTING CO-OPERATION OF TRAFFIC OFFICERS IN SIMPLIFICATION OF RATES, DIVISIONS AND CLASSIFICATIONS.
8. RESTRICTING CLASSIFICATION TO THREE CLASSES FOR L. C. L. SHIPMENTS.
9. DIVISION SHEET REFERENCE TO BE SHOWN ON TARIFFS WHEN PUBLISHED.

Final Date for Reports from Agents

to Accounting Department

This matter was brought to the attention of the association by the American Association of Railroad Ticket Agents who pointed out that the requirements as to the dates the monthly reports should reach the accounting departments frequently result in considerable overtime work in order to get them out on time. The committee recommended no change from the existing practice, which provides that ticket reports from all agencies be forwarded as promptly as possible after the close of the month, and points out that the varying conditions would not make it practicable to prescribe a fixed date that could be observed at all stations. The matter should accordingly be left with the individual carriers.

Attention is directed to the fact that some relief can be afforded by permitting agents at the larger offices to render semi-monthly reports of interline ticket sales.

Standardization of Station Accounting

Forms and Practices

The importance of this matter is indicated by the fact that in the Agenda 25 pages were devoted to it. The committee offered for adoption several standard forms with which it submitted a description of their proper use.

Publication of Transfer Charges at Junction Points

The committee submitted the following for adoption by the association:

Whereas, The Act to Regulate Commerce as amended provides that all charges to be collected for transportation must be shown in tariffs filed with the Interstate Commerce Commission, and

Whereas, It has been found that when transfer charges are so published it would prove a convenience to agencies who are not provided with a complete set of tariffs if they were shown in the Official Guide as a matter of information, and

Whereas, This information can be published in the Guide without charge, be it

Resolved, That this association recommends that all transfer charges which are to be collected from passengers be shown in tariffs regularly published and filed with the Interstate Commerce Commission, and be it further

Resolved, That when such charges are published in tariffs compilers solely publishers of the Guide in order that the charges may be shown in that publication as a matter of information, and be it further

Resolved, That a copy of this resolution be sent to the Secretary of the American Association of Passenger Traffic Officers and the chairmen of the several Territorial Passenger Traffic Associations.

Dating Tickets Sold in Advance

The committee expressed the opinion that the most satisfactory manner of handling interline tickets sold in advance is to require the agents to stamp these with their regular dating stamps showing the actual date of sale, endorsing or stamping across the face of the contract of ticket and each coupon, "Not good for passage until., 19." indicating the date on which such tickets are good for passage.

Double dating stamps at large offices, indicating the same information on each coupon and contract of tickets, are used to advantage in this respect.

Report of Committee on

Disbursement Accounts

The most important subject before this committee was the proposed change in the classification of operating expenses which has been covered in a separate article in this issue. The committee was headed by F. C. Uhlman, general auditor of the Western Maryland. The work of the committee is largely a matter of determining to what accounts various expenses should be charged, but in recent years the committee has gone beyond this and has accomplished work of a more general character as is evidenced, for instance, in what it has done in connection with the operating expense classification.

The committee reported on a total of 52 subjects. Some of the important subjects discussed by the committee included the following.

Percentage Covering Supervision, etc.,

to be Added to Bills

The committee expressed the opinion that when not in violation of contract provisions and when not in violation of A. R. A. (M. C. B.) rules, 10 per cent for labor and 15 per cent for material are reasonable and equitable percentages to be added to bills rendered by one carrier against another carrier to cover supervision, use of tools, etc.

The committee recommended that the individual accounting officers bring the foregoing to the attention of their respective managements, with a view of having the 10 and 15 per cents made generally effective and operative.

Settlement of Car Repair Charges

The association adopted the following as an addition to its disbursement recommendatory rules.

The subject was brought to the attention of the committee by R. L. Harris, auditor of disbursements of the Atchison, Topeka & Santa Fe.

The committee recommended the addition of the following to the disbursement recommendatory rules:

Car repair bills rendered under A. R. A. (M. C. B.) code of rules shall be paid in one monthly summary if R. A. A. standard form is used. This monthly summary, together with all bills included therein, shall be rendered not later than the last day of the succeeding month.

For the purpose of draft settlement summaries may be accepted as correct until they are called to verification and adjustment through the A. R. A. code of car repair rules. Settlements under the A. R. A. code of car repair rules which may be subject to draft settlement of the second succeeding month.

The committee recommended that the new rules should be made mandatory, but after considerable discussion, the association voted to make them recommendatory only. Mr Harris who explained his ideas, said that some roads have car

repair bills running from \$100,000 to \$500,000 monthly. He showed further that billing of car repairs usually was averaged about 45 days after the work was completed although some roads take a longer time, but he said that in his experience the average time in which it took to get payment on the bills—that is for the checking and payment of bills—required 78 days and that some carriers do not pay until the expiration of six months. He pointed out that there was too much diversity of practice and too much correspondence requesting payment, etc., and that the whole thing was largely a matter of proper equity. Those who objected to the proposal said that the difficulty was that on the whole the bills were not properly rendered and it was stated in no uncertain terms that there was apparently considerable padding and erroneous charging, although strenuous objection was made to such allegation. The final result, however, was that the association refused to make the rule mandatory and suggested that carriers, if they desired, could make individual arrangements with other roads.

The committee also submitted a detailed plan concerning interroad car repair billing and bookkeeping methods and forms.

Report of Committee on Overcharge Rules

The subjects discussed by this committee headed by J. F. Schutte, auditor of freight claims of the Baltimore & Ohio, were largely of a technical character. One of the subjects of more general interest, however, was that relating to the cause and prevention of overcharge claims, which has already been referred to above.

The committee expressed the opinion that the large number of overcharge claims discovered as a result of the revision of freight bills by the traffic men of large shippers, and by the numerous auditing bureaus and claim collecting agencies for the smaller shippers clearly indicate necessity for more complete revision by carriers before the charges are collected, not only for the purpose of preventing such overcharges, but in order that an almost equal number of undercharges which are not now called to its attention may be collected. The cost of increased revision would be largely taken care of by the additional undercharges collected, and by decrease in expense in claim offices, and much of the irritation resulting from overcharges and from demand for payment of undercharges months after the freight has been delivered would be removed.

The committee, therefore, recommended the employment of expert rate clerks under the jurisdiction of the accounting department at the large terminals and at the larger rate breaking or interchange points, whose duty it shall be to carefully revise the billing and correct the charges to the proper basis before delivery of the freight.

The committee further recommended that the fullest cooperation be established between the office adjusting claims and the revision clerks, so that errors which may have escaped detection may not be repeated.

Report of Committee on

Terminal Companies' Accounts

The chairman of this committee was George E. Campbell, auditor of the Union Railroad. The most interesting feature of its work consisted of its recommending plans and uniform blanks for handling lost and found articles, and it also made some interesting recommendations relative to parcel room checks.

Election of Officers

The association elected as its president for the coming year, L. G. Scott, vice president of the Wabash; as its first vice president, A. J. County, vice president of the Pennsylvania Railroad, and as second vice president, E. M. Thomas, comptroller of the Chesapeake & Ohio.

Michigan Central Reflects Increasing Prosperity

Net After Fixed Charges in 1921, \$7,725,337, Despite
16.95 Per Cent Decrease in Revenues

THE MICHIGAN CENTRAL in recent years has had somewhat the same sort of a change for the better in its fortunes as has characterized the recent history of the Pere Marquette. This statement, of course, is made with due regard to the fact that the Michigan Central has had somewhat of a different financial history from that of its neighbor carrier. Both roads, nevertheless, have been able to realize rather handily on the increased prosperity of the state of Michigan which has resulted primarily from the centering of the automobile industry in that section.

In the year ended December 31, 1921, the Michigan Central reported a net after fixed charges of \$7,725,337 as compared with \$3,805,785 the preceding year. In 1920 its dividends totaled 4 per cent, or \$749,456. In 1921 the total was 6 per cent or \$1,124,184. This meant that in 1920 the road carried a surplus to profit and loss of \$3,056,329, and that in 1921 it increased this surplus to \$6,601,153. It might be suggested that because of the various adjustments made as between the two years, that these figures should possibly be averaged in order to secure a proper basis for comparison. In whatever way they may be regarded, they indicate a very favorable financial condition for the Michigan Central. The adjustments referred to as between the two years are principally those relating to the reserves for maintenance which were set up in 1920 but which were eliminated or credited in 1921. There was, for example, a charge to equalization of maintenance of way in 1920 of \$1,212,936 and to equalization of maintenance of equipment, \$2,696,790. The inclusion of these reserves in the 1920 accounts increased the maintenance charges to the extent named and their being credited in 1921 reduced the 1921 accounts accordingly. This matter was pointed out in rather complete detail in the recent editorial review which appeared in these columns of the New York Central operations, so it is not necessary to enlarge upon the matter here except insofar as it is necessary to point out the effect on the 1921 income statement. Another factor of interest in the 1921 income account is the inclusion of a figure of \$621,874 representing additional compensation and adjustment of standard return under the contract with the director general for the operation of the property during federal control.

The Michigan Central did extremely well for the government during the period of federal control and this is the factor which emphasizes more than almost any other one thing the change in the fortunes of the road which was pointed out above. The road had a standard return of \$8,052,127 excluding the adjustments which were made later. In 1918 it earned for the government a net railway operating income of \$13,692,236. In 1919, when nearly every other road was doing the opposite, it increased this net to \$16,969,157. The figures for 1920 and 1921 were complicated by the debit in one year and the credit in the other of the charges for equalization of maintenance. In the December statement to the Interstate Commerce Commission, the figure for 1920 was \$4,395,633, and for 1921, \$15,403,271. Bearing in mind the amount of the equalization credits for the latter year, it appears, nevertheless, that the Michigan Central is on a very much different earning basis from that on which its standard return was based, which again goes to prove the point which was made above concerning this factor.

32.22 Per Cent Cut in Tonnage

The favorable result secured in 1921 was due primarily to the severe economies which were instituted in that period.

The road suffered during the year a reduction of 32.22 per cent in its revenue freight tonnage and an even greater reduction in its revenue ton mileage. Increased rates, however, compensated for this in a measure, but, nevertheless, the reduction in freight revenues was 17.18 per cent, and of total revenues, 16.95 per cent. Such improvement as was made during the year was the result of a decrease of 29.79 per cent in operating expenses, this figure being worked out with the elimination of the adjustments of the expenses for equalization of maintenance.

The tons of revenue freight carried during the year totaled 20,471,263 as compared with 30,203,776 in 1920, the reduction being 9,732,513, or, as above noted, 32.22 per cent. The reduction in tonnage was general. The most important elements in the road's traffic are products of mines and manufactures. Of the total tonnage in 1921, 9,476,640 was products of mines and 5,418,397, manufactures and miscellaneous. The bituminous coal tonnage makes up about one-half the total products of mines and in 1921, the figure of bituminous coal tonnage was 4,710,600, as compared with 8,174,625 in 1920. In other words, there was a falling off in bituminous coal tonnage of 3,464,025. The figure given above for manufactures and miscellaneous, 5,418,397, compared with 10,285,407 in 1920, and represented a reduction of 4,867,010. It is interesting at this point to indicate that the Michigan Central also has a large traffic in anthracite coal. In 1921 it carried 1,409,000 tons, received from connections at the Niagara Frontier.

Car Loadings Increase

This tonnage was slightly larger than the 1920 figure. These figures have an interest at present because it happens that the Michigan Central car loadings are running considerably better than they ran in the corresponding period of 1920. The increase has been shown in l.c.l. traffic and in manufactures. In other words, it reflects the reviving prosperity which has recently been characterizing the automobile business. It might be pointed out that the road originates only about one-half its total traffic and further, that its traffic received from connections has also been showing an encouraging betterment.

The freight revenues in 1921 totaled \$45,728,135 as compared with \$55,215,123 in 1920, a decrease of \$9,486,988. The total revenues for 1921 were \$72,911,852 as compared with \$87,790,799 in 1920, a decrease of \$14,878,947. This decrease compared with a reduction of \$16,809,927 in operating expenses.

Any analysis of operating expenses for the year 1921 is complicated by the maintenance equalization charges which have been mentioned several times previously. If the equalization charges are included, the figures show a reduction in operating expenses of \$24,588,614. They also show an operating ratio for 1920 of 87.87 and for 1921 of but 72.08. Excluding the equalization charges, however, we have the figure previously given and an operating ratio for 1921 of 77.38. This ratio is high, which makes one believe that the 1922 report of the Michigan Central should be able to show a marked improvement over 1921.

With further reference to the decrease in operating expenses it should be noted that there was a decrease of \$2,452,508 in maintenance of way and structures, but that there were sizeable increases in the primary accounts of ties, rails and other track material, which rather plainly indicates that such savings as were made were due to lower wages and

increased economy on the part of labor generally. The reduction in maintenance of equipment was \$5,797,600 and the 1921 figure was \$14,385,253. It appears that in this case the road made its principal savings largely because of locomotive and car repairs. There was, in fact, a reduction from \$6,367,461 in 1920 to \$4,502,434, or, \$1,865,027 in the primary accounts of repairs to locomotives. The charges of freight car repairs were decreased \$3,245,982, or, from \$9,061,387 in 1920 to \$5,815,405 in 1921. The final result is shown in a rather marked increase in the percentage of bad-order cars. The Michigan Central reported on May 15 a bad-order car percentage of 19.8 as against the country's average at that time of 14.7. This seems to indicate that operating expense accounts will probably have to reflect some rather heavy expenses in coming months for freight car repairs. The un-serviceable locomotive percentage on May 15

was 16.8 which is high but not as high as many other roads had reported.

The general thought with reference to Michigan Central would be that this property has become a prosperous part of the New York Central system. The thought would also be that if the road was able to meet such a large reduction in its operating revenues as it succeeded in meeting without particular difficulty in 1921, it should show a very interesting effect in 1922 in the form of a realization on the rapidly improving prosperity of the territory which it serves. This idea is further emphasized by the April report of earnings. For the month the road shows a net after rental of \$1,206,327 as compared with \$952,401 in April, 1921. For the four months, the net after rentals was \$3,784,616 as against \$2,318,211 in the first four months of 1921. For April this year the road operated at 74.1. for the four months, at 77.4.

Burlington Has Large Net After Extra Dividends

Dividend Payments Totaled \$44,925,917 of Which \$19,300,382
Were Paid from Year's Income

ONE OF THE MOST interesting features of American railway finance in 1921 was the attention given, in connection with the refunding of the Burlington joint 4½'s, to the unusual earning power of the Chicago, Burlington & Quincy. The recently issued annual report of the property puts this factor again in the foreground. In 1921 the Burlington carried 25.3 per cent fewer revenue ton-miles than it carried in 1920, in spite of which it was able to operate at a ratio of 76 per cent and to show an income balance, even after the large payments which were made in dividends, of \$6,014,948. It was the Burlington's extra dividend declarations in 1921 which enabled the Great Northern and Northern Pacific to maintain their dividends during that year. The Burlington was very much of an exception to its two proprietor lines. It also had a sharp falling off in traffic but was able to come through the year without this condition being reflected in its net. In fact, the opposite was the case because, by means of drastic reductions in operating expenses, the Burlington was able to show a much greater net from railway operations than it showed in 1920.

All of the large amount declared by the Burlington in dividends during the year was not charged to income account. A considerable portion was paid from surplus. The actual declarations were 2 per cent on the original capitalization of \$110,839,100. This capitalization was increased by a stock dividend of 54.13 per cent, or \$60,000,000, making the total stock outstanding \$170,839,100. On this new capitalization two dividends of 5 per cent were declared from income account and 15 per cent from surplus. This meant that the total dividends for the year were \$44,925,917, of which \$19,300,382 were paid from the income for the year, and \$25,625,535 from accumulated surplus.

The dividends declared in 1920 totaled \$8,867,128, and in 1920 the property had a surplus after dividends of \$13,826,158. In 1921 the dividends paid from income were, as already noted, \$19,300,382, and the road had a surplus for the year after dividends of \$6,014,948. This evidence of the Burlington's unusual strong financial and earning position adds little to what we already know about the property, except that in a measure it brings up to date some of the facts which were given prominence at the time the refunding of the Burlington bonds took place.

The Burlington's earning power is also shown in connection with the figure of net after rentals and the evidence is

that in spite of the sharp falling off in traffic in 1921, the Burlington was able to approach its pre-war level of net earnings. The Burlington had a standard return of \$33,360,683. During the period of federal control it earned for the government a net after rentals of about \$22,000,000 annually. In 1920 the adverse conditions permitted the road to earn a net after rentals of but \$8,100,104, inclusive of reserves. This figure in 1921 was changed to \$29,145,007. This means that the Burlington is again an exception from most of the roads in its territory. It is true that it did not suffer as severe a decrease in its traffic as some of its neighbor lines, but there was none of them which was able to make quite this exceptional and favorable showing.

Revenue Ton-Miles Decreased 25.3 Per Cent

The Burlington in 1921 carried 36,116,089 tons of freight, as compared with 47,233,256 tons in 1920. In other words, there was a reduction of 11,117,167 tons or 23.54 per cent. The 1921 revenue ton-miles totaled 10,554,788,351, a reduction from 1920 of 25.30 per cent. The decrease in freight revenues was, however, 15.66 per cent, the reason being an increase in the rate per ton-mile from 0.92 cents to 1.163 cents. It may be added that of the total tonnage of 36,116,089, the Burlington originated 26,416,793 tons. In 1921, as compared with 1920, the road carried considerably more grain and products of agriculture as a whole. The total grain tonnage in 1921, nearly all of which was originated on the Burlington's own lines, was 3,049,202 tons, or 73,951 cars. This grain constituted 8.44 per cent of the total 1921 tonnage and exceeded the 1920 traffic by 24.10 per cent. There was an increase also of 28.63 per cent in corn. The total products of agriculture made up 8,847,124, constituting 24.5 per cent of the total tonnage and being 3.64 per cent in excess of 1920. Another important Burlington traffic is live stock. The total traffic in products of animals in 1921 was 227,802 carloads of which 202,267 originated on the C. B. & Q. lines. The tonnage of 2,537,321 made up 7.03 per cent of the total tonnage and was 15.53 per cent less than in 1920. It is interesting to note that the larger part of the tonnage under the classification of products of animals was in live stock, there having been handled in 1921, 84,183 cars of cattle and calves, 13,759 of sheep and goats, and 82,532 of hogs. The Burlington is one of the largest carriers of live stock in the country.

Coal also constitutes a considerable share of the Burling-

ton's total tonnage. The 1921 figure was 251,933 cars—11,991,724 tons—or 33.2 per cent of the total tonnage. This was a reduction of 4,342,987 tons, or 26.59 per cent from 1920, which is of interest because the Burlington has been rather severely hit by the present coal strike. For the past several weeks it has been loading approximately 300 carloads of coal a week, whereas in the corresponding period of 1921 it was averaging from 3,500 to 4,000 cars weekly. The Burlington car loadings are showing the effect of the elimination of the coal traffic. Since the beginning of the strike the total loadings have been slightly below those of the corresponding weeks of last year. There has been a slight increase in grain traffic, a slight decrease in live stock, and a rather sizeable increase in merchandise and miscellaneous, which increase, however, has been more than balanced by the decrease in the coal tonnage. Presumably the road will be called upon later in the year to handle the coal tonnage which it is not now receiving. Should the coal finally begin to move about the same time as the harvested products, it will complicate matters somewhat.

The Burlington's freight revenues in 1921 totaled \$122,716,630 as compared with \$130,076,370 in 1920, there being a reduction of \$7,359,739, or 5.66 per cent. The total revenues for 1921 were \$168,712,268 as compared with \$185,270,768 in 1920, a reduction of \$16,558,500, or 8.94 per cent. The reduction in operating expenses was \$35,801,098, or 21.83 per cent. The annual operating expenses in 1921 were \$128,216,290 as compared with \$164,017,388 in 1920. The operating ratio in 1921 was 76.10. In 1920 the road operated at 88.52.

Coal Traffic Cut by Strike

It is hardly necessary to analyze the reasons for the reduction in operating expenses. It will be the usual story of rigid economy, decreased costs of fuel and other materials; it will reflect the decreases in wage rates which were made, as well as the reduction in overtime payments which was a typical feature on all roads in 1921. It may be noted, however, with reference to maintenance of way, that the road did not lay as much rail in 1921 as it did in 1920. The figure for 1921 was 281 miles of new 90-lb. and 100-lb. rail as against the 1920 figure of 340 miles. As concerns maintenance of equipment, it should be pointed out that the Burlington's percentage of bad order cars on May 1 was 9.1 and its percentage of unserviceable locomotives was 18.6. The bad order car percentage is not what the Burlington officers presumably would like it to be, but it is much below the country's average. The percentage of unserviceable locomotives was slightly below the country's average and the road had, on the date mentioned, 159 locomotives stored. The final result is that the 1922 operating expenses will presumably have to reflect increased charges for either repairs or retirements, but that there will probably be no difference so far as service is concerned.

To carry the figures of operating revenues and expenses further, it should be noted that net operating revenues in 1921 totaled \$40,495,978 as compared with \$21,253,380 in 1920, an increase of \$19,242,598. The figures of net after rentals have already been quoted. The point should be made in this connection that the Burlington in 1920 had a debit equipment rent balance of \$2,070,140, which had decreased in 1921 to a debit of \$598,330, a reduction of \$1,471,810. Similarly joint facility rents which in 1921 had a debit balance of \$1,009,017 were \$1,176,458 less. There was an increase of \$912,811 in taxes.

Operating Statistics

With the falling off in traffic it is natural that the road should have suffered a decrease in its revenue train load, revenue car load, etc. Its revenue train load in 1921 was 591 tons as against 661 tons in 1920. The revenue tons per

loaded car totaled 23.54 tons as against the 1920 figure of 24.86. This decrease was a familiar story on most roads in 1921, so the Burlington was able to continue its position as having one of the highest train loads in the western district. With the decrease in tonnage per train, there was an increase in average train speed from 10.8 miles in 1920 to 12.3 miles in 1921. The net ton-miles per train hour for the year averaged 8,861 as against 8,260 in 1920. There were very few roads in western territory that exceeded this figure. The miles per car per day in 1921 were 29.2 as compared with 32.1 in 1920, which reduction again was to have been expected because of the large proportion of idle cars.

The Burlington is another of those roads which has adopted the praiseworthy idea of showing in its annual report what it may be doing in the matter of purchasing new equipment, etc. The Burlington was allocated by the Railroad Administration 500 box and 1,000 gondola cars, and 15 heavy Mikado, 10 heavy Santa Fe, 10 six-wheel switching and 10 eight-wheel switching locomotives. In 1920 it supplemented these acquisitions by the purchase of 31 freight locomotives, 5 switching locomotives and 500 stock cars, a portion of which equipment was received during 1921. In 1921 there were orders placed for 40 freight locomotives, 95 passenger train cars and for 1,500 box, 500 automobile, 1,000 refrigerator, 500 stock and 2,000 coal cars. The Burlington also reported in 1921 various other improvements of which the most notable was with reference to the Chicago Union Station, in which the Burlington has one-quarter interest. There was a new locomotive terminal at Centralia, Ill.; work was carried on in connection with track elevation at Aurora, Ill., 66 miles of automatic block signals were installed, etc.

The Burlington earnings in 1922 will depend largely upon what finally develops in connection with the coal strike, for the reason that coal represents a rather important part of the Burlington business. In the first four months of 1922—which brings us up to the end of the first month since the beginning of the present coal strike—the road had a net after rentals of \$7,651,058 as against a 1921 figure for the same period of \$6,578,051. In April the road had an operating ratio of 79.90 and for the four months of 76.10.

Southern Pacific Protests Against Separation of C. P.

THE attitude of the Southern Pacific Company toward the dismemberment of its System by the recent order of the Supreme Court was made public this week in a long statement issued to the press by President William Sproule, the main portion of which is given below, supplemented by a statement from the Union Pacific.

Equities of the Southern Pacific's Position

The tentative grouping of the country's railroads by the Interstate Commerce Commission under authority granted by the Transportation Act provides the basis under which the Southern Pacific-Central system may be continued despite the decision of the Supreme Court. Although the Supreme Court's ruling carries the full weight of judicial authority on the issue before the court new constructive aspects of the subject have to be considered. The Supreme Court in passing upon the legal question involved presumably has not concerned itself with the possible consequences to follow from that decision under a law which is superseded by the Transportation Act, 1920, as to the railroads, whenever the Interstate Commerce Commission takes jurisdiction. The public have nothing to gain by breaking up these properties. It is not a question of unmerging two roads separately devel-

oped but afterward put together. The roads have developed into a single unit of growth and service throughout half a century. The great public interest is best served by recognizing that even a technical violation of the Sherman Act is of small detriment to the public when compared with the large and extended and convenient service given to that public by the present railroad system of the Southern Pacific Company under existing regulative control of the commissions, state and federal.

Continuing, Mr. Sproule says: "There seems, therefore, to be proper motive for direct appeal to these commissions to the end that power lodged in the Interstate Commerce Commission under the Transportation Act of 1920 be exercised to maintain the operations of this transportation system as a unit justified by the general experience of the people served; and if necessary for this purpose a new power might well be created by appropriate legislation.

"The Central Pacific has been leased to the Southern Pacific for 37 years, by unanimous vote of all the stockholders present or represented, who constituted more than five-sixths of the entire capital stock. The Southern Pacific has been the actual owner of the entire capital stock of the reorganized Central Pacific for 22 years. The Central Pacific and Southern Pacific were held in common ownership as early as October, 1870. The growth has been of one system and not two. It is and has been responsive to the needs of coast communities and producers. Whichever company could get the money most readily was the company in whose name the railroad lines were extended. The Central Pacific carried a heavy burden of debt to the government and the Southern Pacific had to come to its aid. Thus the two companies did what one company could not do under the circumstances of the time. * * * The only question of present interest to the public is whether or not the public is hurt by having this development done by a single control under two corporate names, instead of having it done by single control with a single corporate name. * * *

"The Transportation Act of 1920 is now the governing federal law for the railroads of the United States. It expressly provides that with consent of the commission it shall be lawful for two or more carriers by railroad to consolidate their properties into one corporation.

"The tentative grouping by the Interstate Commerce Commission tends to remedy the unfortunate legal situation presented by the Sherman Act standing alone. The grouping indicated by the commission provides the remedy by which one of the principal transportation systems of the nation need not be torn asunder. The government control of railroads has so increased and the policies of the government so changed since the suit in question was begun in 1914 that the situation needs to be dealt with in the light of present conditions and not the conditions that prevailed from 1895 to 1899. Every essential factor in the railroad business is supervised by commissions created to protect the general public interest. * * * We recognize that whatever is to the public interest in light of experience up to the present time is likely to prevail. * * *

Union Pacific Pleads for Its Pioneer Line

President C. R. Gray of the Union Pacific this week issued a statement calling attention to the fact that the Union Pacific and the Central Pacific, constituting the first trans continental line, were constructed under the Pacific Railroad Acts of Congress which provided for a continuous line of railroad from the Missouri River to the Pacific Ocean to be operated and used for all purposes of communication, travel and transportation, as far as the Public and Government are concerned, as one connected, continuous line. They were operated under common control from 1901, when Mr. Harriman, for the Union Pacific, bought

control of the Southern Pacific, to 1913, when the Supreme Court decided that the control by the Union Pacific of the Southern Pacific was in violation of the anti-trust law, and required its release. The Union Pacific in that case sought to justify its control upon the ground that it had to buy the Southern Pacific in order to get control of the Central Pacific, and prevent discrimination against it by the Southern Pacific in favor of the latter's southerly line via New Orleans and Galveston. But the Supreme Court held this defense insufficient, and pointed out that under the Pacific Railroad Acts, discrimination against the Union Pacific, the owner of the line from Ogden to the Missouri River, by the westerly end of the line from Ogden to San Francisco, would be a violation of the acts under which the entire line was built, and observed that—"the obligation to keep faith with the Government continued, as did the legislative power of Congress concerning these roads, notwithstanding changed forms of ownership and organization." And the government proceeded, by the suit decided last week, to complete the job of making the first trans-continental line formed by these two links entirely independent, and free from rival control, which had only been partially accomplished by the decision in the Union Pacific case.

Continuing, Mr. Gray said:

"Although there was a clear recognition by the Supreme Court of the special interest of the Union Pacific in the Central Pacific, as the owner of one-half of the line built under the Pacific Railroad Acts, with the aid of government bonds and land grants, the Union Pacific, notwithstanding the policy of the Southern Pacific to favor the Southern Route, as stated by the supreme court decision, has refrained thus far from taking any part in the litigation between the government and the Southern Pacific. But we have been apprehensive that in case the Supreme Court should decide in favor of the Southern Pacific, it would yield to the temptation to route even more traffic in favor of its longer route through El Paso. This apprehension has been very greatly increased by the tentative consolidation plan promulgated by the Interstate Commerce Commission, leaving the Central Pacific with the Southern Pacific and providing for the merging of the Rock Island with the Southern Pacific.

"The interest and right of the Union Pacific is to see that the westerly half of the Federal railroad system from the Missouri River to the Pacific Ocean shall perform its share of the duties imposed by the Pacific Railroad Acts, which provide for the operation of said System as—'one connected continuous line'—without discrimination of one against the other by whomsoever operated * * * The Union Pacific is willing to buy the Central Pacific from the Southern Pacific, if fair and reasonable terms can be agreed upon. But it is not seeking to buy the Central Pacific, and it is not necessary for a compliance with the decree of the Supreme Court that it should. If the Central Pacific is to be merged into any System, by the Interstate Commerce Commission, it should be merged with the Union Pacific. * * * There is very active propaganda in California for the purpose of working up public sentiment, with the idea, presumably, of influencing the Interstate Commerce Commission to exercise some very doubtful power in the premises. * * * According to reports it has gone beyond the bounds of possibility in representing the alleged detrimental effect that would result from carrying out the Supreme Court decree. The rates would not be more, or the service less, if the Central Pacific were made an independent and competing line as ordered by the Supreme Court, and, as for the possibility of the Central Pacific being merged with the Union Pacific, no line has ever come under the control of the Union Pacific which has not been improved in service and facilities to the public, and there is no reason why the present instance should constitute an exception in this respect."

General News Department

President Harding signed the valuation bill, S. 539, on June 7.

The Twentieth Century Limited express train of the New York Central has now been running between New York and Chicago 20 years, and on the anniversary, June 15, the platform at the Grand Central Terminal, New York, leading from the concourse to the train, was covered with a red carpet and the passage decorated with trees and flowers.

The Central of New Jersey has been denied permission by the New Jersey State Board of Commerce and Navigation to construct a four-track, steel bridge across Newark Bay according to the plans submitted. It was the commission's opinion that the construction of such a bridge would interfere materially with the comprehensive port plan for the New York harbor that it is trying to put into execution. The City of Newark, N. J., is vitally interested in the development of a harbor and desires to see the bridge eliminated.

At a Grade Crossing near Atlantic City, N. J., on Saturday afternoon, June 10, a whole family—John H. Stratton, wife and four children—was killed when their automobile was struck by a train of the Pennsylvania Railroad. On Monday, the Board of Freeholders of the county, issued a "finding" to the effect that the responsibility for the deaths was chargeable to the railroad company and the Public Utilities Commission of the state. The finding stated that the Board, last November, adopted and sent to the authorities a resolution calling for the installation of a gate at this crossing.

Floods at Syracuse and other points in central New York on Sunday morning, June 11, were reported as doing damage amounting to \$1,000,000; and the tracks of the New York Central, about one mile east of the Syracuse station, where the line passes beneath the Erie Canal, was covered with six feet of water. Westbound passenger train No. 59 of the New York Central, the Western New York Express, leaving New York at 11:10 p. m., ten cars was stopped in this flood (before it had reached its height) and the passengers, said to have numbered 200, had to be taken out in boats and across improvised bridges, some of those from the sleeping cars dressing themselves after they had reached high land. They were taken in automobiles to hotels in the city.

Firemen's Brotherhood Condemns Harding

A resolution condemning President Harding and declaring that all members of the organization should work to prevent his re-election, was passed recently at the convention of the Brotherhood of Locomotive Firemen and Enginemen in Houston, Tex. The resolution says that Mr. Harding has in many ways shown himself to be a consistent and unrelenting enemy of organized labor in particular and of the working classes in general; and that when the train service employees had determined to exercise their economic power in resisting an entirely unjustifiable reduction in wages, he declared he would crush their organizations if they went on strike.

President Harding denies that he has ever made any suggestions as to a course of action to the Railroad Labor Board or any of its members. This was given out officially at the White House this week in reply to a question by a newspaper man as to whether the President intended to suggest further wage reductions to the board. It was stated that the President would like to have it known that the only message he has ever given to the board or to any of its members was last fall, when a strike was threatened, when the board was told that under the law it was expected to deal with the railroad labor situation; and that the government would support it with all the power at its command.

Wage Statistics for March

The Interstate Commerce Commission's summary of wage statistics for the month of March, 1922, shows an increase of 25,118, or 1.6 per cent, in the number of employees as compared with the number reported for February, 1922. Total compensation increased \$22,180,581, or 11.4 per cent, owing principally to the fact that there were 27 working days in March and only 23 in February.

Compared with those for February, 1922, the returns for March, 1922, indicate the following increases or decreases (D) by employee groups:

Executives, officials, and staff assistants.....	D96
Professional, clerical, and general.....	D673
Maintenance of way and structures.....	13,138
Maintenance of equipment and stores.....	7,933
Transportation (other than train, engine, and yard).....	1,056
Transportation (yardmasters, switch tenders, and hostlers).....	85
Transportation (train and engine service).....	3,605
Net increase.....	25,118

A comparison of the number of employees and their compensation, by months, for the period covered by the new classification follows:

Month	Number of employees	Total compensation
July, 1921.....	1,634,872	\$214,359,385
August, 1921*.....	1,679,927	227,745,895
September, 1921*.....	1,718,330	223,972,822
October, 1921*.....	1,754,136	237,602,959
November, 1921*.....	1,732,353	235,304,006
December, 1921*.....	1,637,151	214,921,396
January, 1922*.....	1,532,014	205,178,639
February, 1922*.....	1,545,400	194,523,427
March, 1922*.....	1,570,158	216,704,408

*Excludes Detroit, Toledo & Ironton Railroad.

Railway Earnings for April

The Interstate Commerce Commission's summary of revenues and expenses for Class I roads for April is as follows:

Item	April		Four months	
	1922	1921	1922	1921
Average number of miles operated.....	235,167.22	234,713.97	235,154.67	234,720.98
Revenues:				
Freight.....	\$288,848,724	\$304,773,803	\$1,214,184,485	\$1,235,067,976
Passenger.....	183,461,307	190,649,150	321,307,625	381,686,749
Mail.....	7,512,568	7,762,455	29,614,593	33,600,757
Express.....	13,053,662	9,217,858	35,233,667	27,101,568
All other transportation.....	14,364,463	12,263,243	52,679,002	50,337,227
Incidental.....	8,802,505	9,200,280	32,809,456	40,085,191
Joint facility—Cr.....	989,326	655,932	3,206,610	2,628,716
Joint facility—Dr.....	163,935	184,648	688,595	778,059
Railway operating revenues.....	416,868,620	433,398,073	1,688,406,843	1,769,730,125
Expenses:				
Maintenance of way and structures.....	59,122,465	59,998,686	207,602,342	236,128,651
Maintenance of equipment.....	96,038,448	101,420,846	387,726,060	441,068,964
Traffic.....	6,988,010	7,121,916	28,130,402	28,861,017
Transportation.....	157,672,060	188,828,167	669,923,634	822,738,452
Miscellaneous operations.....	3,734,699	4,078,972	14,699,746	16,821,523
General.....	13,060,140	14,889,968	52,767,920	59,155,619
Transportation for investment—Cr.....	437,400	641,843	1,750,079	2,088,845
Railway operating expenses.....	336,178,422	375,696,312	1,359,100,045	1,602,685,378
Net revenue from railway operations.....	80,690,198	57,701,761	329,306,798	167,044,747
Railway tax accruals.....	24,604,143	21,946,290	94,290,482	87,446,915
Uncollectible railway revenues.....	112,910	90,115	418,237	317,355
Railway operating income.....	55,973,145	35,664,956	234,598,079	79,280,477
Equipment rents—Dr. balance.....	4,344,331	4,283,592	17,746,546	15,165,059
Joint facility rent—Dr. balance.....	1,356,949	1,524,724	5,558,140	6,706,486
Net railway operating income.....	50,271,865	29,856,640	211,293,393	57,408,932
Ratio of expenses to revenues (per cent).....	80.44	86.69	80.50	90.56

†Includes \$2,533,597, sleeping and parlor car surcharge.

‡Includes \$2,748,698, sleeping and parlor car surcharge.

§Includes \$9,483,200, sleeping and parlor car surcharge.

¶Includes \$10,383,612, sleeping and parlor car surcharge.

REVENUES AND EXPENSES OF RAILWAYS

MONTH OF APRIL AND FOUR MONTHS OF CALENDAR YEAR 1922—CONTINUED

Name of road.	Average mileage operated per period.	Operating revenues—			Operating expenses—			Operating ratio.	Net from railway operations.	Operating (or loss).	Net after rental.	Net after rental.

Further Cuts in Wages

The Railroad Labor Board this week announced reductions effective July 1, 1922, in the wages of clerical and station forces; signal department employees, stationary engine and boiler room employees, etc. The decreases announced were as follows in cents per hour: Switchboard operators are guaranteed \$85 per month; those receiving lower rates are not to be reduced.

ARTICLE II—CLERICAL AND STATION FORCES

- Sec. 1. Storekeepers, assistant storekeepers, chief clerks, foremen, sub-foremen, and other clerical supervisory forces.....3 cents
- Sec. 2. (a) Clerks with an experience of two or more years in railroad clerical work, or clerical work of a similar nature in other industries, or where their cumulative experience in such clerical work is not less than two years.....3 cents.
- (b) Clerks with an experience of one year and less than two years in railroad clerical work, or clerical work of a similar nature in other industries, or where their cumulative experience in such clerical work is not less than one year.....4 cents.
- Sec. 3. (a) Clerks whose experience as above defined is less than one year.....4 cents.
- (b) Clerks without previous experience heretofore entering the service will be paid a monthly salary at the rate of \$60 per month for the first six months, and \$70 per month for the second six months.
- Sec. 4. Train and engine crew callers, assistant station masters, train announcers, gatemen and baggage and parcel room employees (other than clerks).....3 cents.
- Sec. 5. Janitors and elevator operators, office, station and warehouse watchmen and employees engaged in assorting way bills and tickets, operating appliances or machines for perforating, addressing envelopes, numbering claims and other papers, gathering and distributing mail, adjusting telephone cylinders and other similar work.....4 cents.
- Sec. 6. Office boys, messengers, chore boys and other employees under eighteen years of age, filling similar positions and station attendants.....4 cents.
- Sec. 7. Station, platform, warehouse, transfer, dock, pier, store room, stock room and team track freight handlers or truckers and others similarly employed.....4 cents.
- Sec. 8. The following differentials shall be maintained between truckers and the classes named below:
 - (a) Scales, scalers and fruit and perishable inspectors, one cent per hour above truckers' rates as established under Section 7.
 - (b) Stowage or stowage, callers or loaders, locators and coopers, two cents per hour above truckers' rates as established under Section 7. The above shall not operate to decrease any existing higher differentials.
- Sec. 9. All common laborers in and around stations, storehouses and warehouses, not otherwise provided for.....4 cents

ARTICLE VIII—STATIONARY ENGINE (STEAM) AND BOILER ROOM EMPLOYEES

- For the specific classes of employees listed herein and named or referred to in connection with a carrier affected by this decision, use the following schedules of decreases per hour:
- Sec. 1. Stationary engineers (steam).....2 cents.
 - Sec. 2. Stationary firemen and engine room boilers.....2 cents.
 - Sec. 3. Boiler room water tenders and coal passers.....2 cents.

ARTICLE IX—SIGNAL DEPARTMENT EMPLOYEES

- For the specific classes of employees listed herein and named or referred to in connection with a carrier affected by this decision, use the following schedules of decreases per hour:
- Sec. 1. Signal foremen, assistant signal foremen, and signal inspectors, No reduction.
 - Sec. 2. Leading maintainers, gang foremen, and leading signalmen, 5 cents.
 - Sec. 3. Signalmen, assistant signalmen, signal maintainers, and assistant signal maintainers.....5 cents.
 - Sec. 4. Helpers.....6 cents.

ARTICLE X—FLOATING EQUIPMENT EMPLOYEES

All disputes remanded to interested parties.

ARTICLE XI—OTHER SUPERVISORY FORCES

For the specific classes of employees listed herein and named or referred to in connection with a carrier affected by this decision, use the following schedules of decreases per hour:

- Sec. 1. Train dispatchers.....No reduction.

ARTICLE XII—MISCELLANEOUS EMPLOYEES

- The same ruling is to apply as in Decision 147, namely:
- Sec. 1. For miscellaneous classes of supervisors and employees in the heretofore named departments properly before the Labor Board and named in connection with a carrier affected by this decision, deduct an amount equal to the decrease provided for the respective classes to which the miscellaneous classes herein referred to are analogous.
 - Sec. 2. The intent of this article is to extend this decision to certain miscellaneous classes of supervisors and employees submitted by the carrier not specifically listed under any section in the classified schedules of increases and decreases for such employees in the same amount as provided in the schedule of decreases for analogous service.

DAMAGE to the amount of \$1,925 will be asked by the Southern Pacific in a suit which it has entered in the Superior Court at Los Angeles, Cal., against Coe & Whitaker, proprietors of a motor truck, for crashing into a locomotive and derailing its tender, on April 9, last.

Traffic News

The Canadian Government has advised the United States Government that it does not regard the present as an opportune time to negotiate a treaty looking to the improvement of the Great Lakes-St. Lawrence waterway.

The Railroad Commission of Georgia has ordered a general reduction of ten per cent in freight rates, to go into effect on July 1, the date when interstate rates are to be reduced by the similar order of the federal commission.

The Southern Pacific reports the shipment recently from Nogales, Arizona, of 92 cars of garbanzos (Mexican beans) with an average load of 75,296 lbs. per car. The cars were loaded to 102.62 per cent of their rated capacity.

Charles L. Cable, superintendent of Public Works of the State of New York, reports that the traffic on the main line of the Barge Canal, Buffalo to Albany, has thus far been more than three times the volume of traffic in the same month last year.

Live stock shipped from Montreal to Liverpool in the past season totaled about 5,000 head. It is said that most of these animals came from points in the United States, and that Chicago shippers are preferring this route for freight formerly sent via New York.

Five cars of machinery—a turbo-generator, including one piece, on one car, weighing 54 tons—shipped by D. P. Robinson & Co. from Schenectady, N. Y., on April 27 were moved to New Orleans, La., in seven days; and, deducting a delay due to a crippled car, made the journey of 1,643 miles in 5 days, 6 hours, equal to 313 miles a day or 13 miles an hour. The route was the New York Central and the Big Four to Indianapolis, 716 miles and thence by the Illinois Central and the Y. & M. V. to destination, 927 miles.

The "National Travelers' Protective Association" held its annual convention at Atlantic City, N. J., last week and elected the following officers: President, H. L. Ramey, Champaign, Ill.; vice-presidents, G. Armour, E. L. Kerley, J. Adcock, H. L. Scarborough, and G. E. Brown. The secretary and treasurer is T. S. Logan, St. Louis, Mo. The next convention is to be held at St. Paul, Minn. Resolutions adopted by this body refer to the Interstate Commerce Commission as an "oligarchy that is repugnant to a free people." The convention asked Congress to reinvest state railroad commissions with "full power" to deal with transportation, and to order the discontinuance of the 50 per cent surcharge on passengers riding in sleeping and parlor cars.

Scott Describes Effect of Hoch Bill

Enactment of the Hoch bill would bring about chaos in the rate structure of the nation that would require 10 years to remedy. This was the gist of a statement of Bruce Scott, general solicitor of the Chicago, Burlington & Quincy, before the House Interstate and Foreign Commerce Committee, which is conducting hearings on the bill. The bill would amend the Transportation Act so as to limit the jurisdiction of the Interstate Commerce Commission over intrastate rates where they discriminate against interstate commerce. One proviso in the bill would reopen all cases that have already been decided by the Interstate Commerce Commission involving the question of discrimination by intrastate rates, and would necessitate the commission making new orders in all of those cases. The proper procedure is through the courts. Under this bill, in order to show that rates fixed by state commissions discriminate against interstate commerce, it would be necessary for either the railroads or the shipper to prove them confiscatory; but it is a difficult job for the carrier to prove that a rate is confiscatory and it is absolutely impossible for a shipper to do so.

In response to an inquiry by Representative Newton of

Minnesota, Mr. Scott said the Hoch bill, as it stands now, would nullify the so-called Shreveport case in which the Supreme Court in effect held that the Interstate Commerce Commission has jurisdiction over intrastate rates where they discriminate against interstate commerce.

Replying to statements made by the governor of Iowa and other witnesses who appeared recently before the committee in support of this bill, and who said that they came to Washington to get relief from existing freight rates, Mr. Scott said that Iowa at all times has had full control over rates within that state, and only recently reduced rates on coal and certain other commodities.

Coal Production

Recovering from the holiday depression, the production of soft coal in the tenth week of the strike is expected to pass 5,000,000 tons. Production of anthracite, however, remains practically zero, according to the weekly bulletin of the Geological Survey. In the ninth week of the strike (May 29-June 3) the combined effect of the Memorial Day holiday and of a pay day reduced production of bituminous coal to 4,623,000 tons. The quantity of all coal raised was 4,631,000 tons. A year ago production, including anthracite, was 8,400,000 tons; in the year before that, 11,100,000 tons, yet in neither of the years preceding was the output at this season normal, for in 1921 the business depression was at its acute stage, and in 1920 the market demanded more coal than could be delivered.

On Monday of last week (June 5) loadings were only 14,576 cars, but on Wednesday loadings passed the 16,000-car mark, for the first time since the strike began.

The largest elements in the increase appear to be heavier shipments from the Connellsville region, from eastern Kentucky and Tennessee, and from the New River district. The accumulation of unbilled coal at the mines has fallen rapidly during the last week.

Ship Subsidy Bill Revised

The administration's ship subsidy bill, which has been the subject of extensive hearings before a joint committee of the House and Senate has been redrafted by a sub-committee and the modified form of the bill was reported to the House on June 14, where strenuous efforts will be made by the administration to have it passed at once. President Harding has indicated that if the bill is not passed at this session he will immediately call Congress into extra session to consider the bill. A statement by Representative Edmonds, chairman of the sub-committee which revised the bill, explains the provisions relating to relations with the railroads as follows:

It is endeavored in the bill to bring about an understanding between the Interstate Commerce Commission and the United States Shipping Board by arranging for a joint committee to clarify the situation in regard to through freight, so that something approaching the correlation between rail and water carriers in foreign countries can be covered in this country by our connecting rail and water lines.

The bill also clarifies the Interstate Commerce Act by describing under what conditions a railroad can become interested in vessels.

It also arranges to enlarge the powers given the board by the shipping act of 1916 in Section 15 so that a thorough record of agreements between shipping companies, or between shipping companies and other carriers, shall be subject to the approval of the board; this covers all common carriers by water and includes the Coastwise business. This section is subject to a heavy penalty for violation.

In order to make Section 28 of the merchant marine act, 1920, operative the bill has clarified the section, and it is believed that all delay in placing this section in operation should now be eliminated. As this gives preferential railroad rates to American vessels it will go a long way in assisting in securing cargo both of imports and exports for American ships.
